facture aluminium foils for industrial purposes. The Government of India has granted an industrial licence for the purpose. Foreign exchange to the tune of Rs 1.5 crores has been allotted for the purchase of plant and machinery from West Germany. The plant is likely to go into production by October, 1963. The factory will be set up in Mirzapur, Uttar Pradesh.

Southern Industrial Corporation

The Southern Industrial Corporation has announced the issue of 90,000 equity shares of Rs 10 each. Out of this issue, 16,500 shares are to be allotted on a firm basis. The balance of 73,500 shares has been offered for public subscription. The subscription list will open on 22 February and close on 27 February or later at the discretion of the directors. The proceeds of the issue will be utilised to finance the expansion programme of the company, which is now manufacturing wood screws and the new lines of manufacture proposed to be undertaken.

Bhagwan Devi Paper

Bhagwan Devi Paper Mills Limited will enter the market in the near future for raising capital. The company is expected to offer, for public subscription, Rs 1.50 lakhs in equity shares of Rs 10 each. The company has proposed to establish a pulp and paper mill at Dumraon, Shahabad district, Bihar, with a capacity of 1,800 tons per annum of printing and writing paper.

Indo-French Time Industries

A new company Indo-French Time Industries Private Limited, will be set up in the public sector at Bangalore to manufacture watches. French participation will be to the extent of 50 per cent. The authorised capital will be Rs 50 lakhs and the issued capital Rs 40 lakhs. In lieu of financial participation, the French collaborators will supply the Indian company the complete plant, machinery, tools, dyes and other equipments. The factory will have a capacity of 310,000 complete units and production can be stepped up, if need be. The price of which will be between Rs 50 and Rs 100 each, subject to final costing.

Associated Industries (Assam) Limited

The Associated Industries (Assam) Limited a new concern, has proposed to erect a cotton spinning mill and an integrated plant for the manufacture of sulphuric acid, sulphur dioxide, superphosphate and mixed fertilizers in Assam. The cost of the project is estimated at Rs 1.12 crores and the Government of Assam will participate in the share capital. A public issue of the Ordinary share capital is expected to be made soon. Production may begin by the end of this year.

Indian Rayon

Subject to the consent of the Controller of Capital Issues, the Indian Rayon Corporation Limited has proposed to issue 1,45,000 equity shares and 30,000 preference shares, both of Rs 100 each. The rate of dividend on the preference shares is proposed to be changed from 7 per cent tax-free to 10 per cent, subject to deduction of tax. The 'proceeds' of the issue will be utilised for installing machinery for the pulp plant with a capacity of 15 tons per day. There will also be an increase in the cost of buildings and requirement of indigenous machinery. The total capital outlay is estimated at Rs 4.20 crores.

INVESTMENT NOTES

West Coast Paper Mill

The shares of the West Coast Paper Mills Limited have moved up by more than 20 points during the past few days, to quote presently at Rs 202. The sustained interest in these shares can be attributed partly to the talks which the management is having with the Canadian technical team regarding the proposed expansion scheme and partly to the company's decision to pay a maiden dividend of Rs 6 per share, subject to deduction of tax, for the year ended 30 June, 1960. The company has already paid the arrears of dividends on the preference shares for the period up to 30 June, 1959.

Bengal Coal

It is learnt that the Bengal Coal Company Limited has proposed to issue Debentures, at par, to the tune of Rs 60 lakhs, carrying an interest of 6½ per cent, subject to deduction of tax. These Debentures are redeemable, at par, in 15 years. The proceeds of the issue will be utilised for financing the company's expansion programme. The issue is expected to be made in the near future.

Travancore Rayons

The Travancore Rayons Limited has been permitted to increase rayon production capacity by another 5 tons per day. The company has also plans to raise the production of transparent cellulose film from 4,000 to 6,000 tons per year. This may enable the company not only to meet the growing internal demands of the consumer goods industries, but also to export substantial quantities. The company's programme for manufacturing pulp out of cotton linters is being implemented. It is expected that the new plant will commence production by the end of the year.

IN BRIEFS

Indian Steel Rolling Mills Limited, Madras, has proposed an interim dividend of 5 per cent, taxable, for the fifteen months ended 31 March, 1961, the official year being changed to 31 March.

Andhra Scientifics have proposed a taxable dividend of 6½ per cent for the year ended 30 June, 1960 as against nil for the previous year.

STOCK EXCHANGES Recent Firmness Maintained

Watch-Dog Writes:

DESPITE the fact that hardly a week is left for the presentation of the Union Budget, stock markets have been giving a satisfactory performance during the past two weeks, although support is being given to only a few selected counters. There is a growing belief that the Finance Minister may present a realistic budget by providing relief wherever necessary and shape up his budget in a manner which will be well received by all sections of the community. Sentiment is also aided by the excellent flow of corporate news and expectations of dividends.

Cheerful conditions were again in evidence on the Calcutta Stock Exchange where further all-round gains in prices were recorded with more attention directed towards the Coal section.

The Bombay Stock Exchange provided a few bright features.

Although the general pattern of trading was hesitant, equity prices on the Madras Stock Exchange were well maintained.

Wall Street closed firm with a fair distribution of gains extending mostly to one dollar or more.

★

CALCUTTA

Friday Evening.

THE week under review was short of three working days, due to intervening holidays. During the period the stock exchange remained open, there was a steady and gradual improvement in prices accompanied by more broad-based enquiry even in the hitherto neglected counters, reflecting the growing optimism about the approaching Central Budget.

Resuming the week on a promising note, equities, met with selective support, largely speculative, depending on the nature of the gossip over the Union Budget. Bulls appeared to have gathered strength on an optimistic view of the budget prospects. The only factor supporting them was a new-found hope that the Finance Minister would not impose any harsh levies in the year before general elections.

The absence of any unpleasant surprise in the Railway Budget was taken to mean that the Union Finance Minister might not also cause serious upsets to the stock markets by his new taxation proposals. Sentiment was further assisted by hopes of adequate foreign aid to finance the Third Five-Year Plan. Excellent corporate news provided further encouragement. Although there was a general disposition to book profits at the higher levels, the underlying sentiment was well maintained.

The recent improvement, noticed in the Gilt-edged section, made further progress. This was mainly due to the decision made by the Reserve Bank to raise the buying rates of some short-dated issues. State Loans ruled remarkably firm. 3 per cent 1986 Conversion Loan changed hands at Rs 73.85 to Rs 74.12.

Bank shares were fully steady with Punjab National hardening to Rs 20 from Rs 19.87. United Commercial were a steady feature at Rs 85.25.

An outstanding feature of the week's trading was a further sharp recovery made by selected Coal shares. The main contributory factor was the growing belief that some of the companies were doing very well and the industry might soon obtain foreign financial assistance. Bengal Jorjed ahead to Rs 346 from Rs 335; Equitable to Rs 31.25 from Rs 30.87; New Beerbhoom to Rs 21.50 from Rs 20.56; Central India to Rs 13.12 from Rs 12.50 and Western Bengal to Rs 8.56 from Rs 8.06. Burrakur, after touching a new high of Rs 20.59 from Rs 19.62, finished at Rs 20.25 on profit-taking.

The only weak spot was the Jute section, where dealings were few and far between. Professional operators as well as investors seemed to be worried about the semi-official threat to requisition jute and gunny stocks and impose stricter controls on trading. The only three exceptional features were Howrah, Birlas and New Centrals, which were enquired up to Rs 22.25, Rs 29.37 and Rs 19.31 from Rs 22; Rs 28.62 and Rs 18.87 respectively, thanks to support from interested quarters. Kinnison were firm at Rs 144.50 and so also Nuddea at Rs 44.50 and Anglo-India at Rs 186.50.

Tea shares came in for selective buying. Activity was, however, confined to only shares of the Dooras gardens on reports of higher prices obtained by these estates in 1960 as compared to 1959. Dealings were prominent in Brooke Bond changing hands at Rs 16.56 to Rs 16.69; Bormah Jan at Rs 16.50 to Rs 17.12; Hantapara at Rs 142 to Rs 149 Jayshree at Rs 17.19 to Rs 17.56 and Telotjan at Rs 24.25 to Rs 24.50. New Dooras came in for some enquiry up to Rs 310 and Patrakola at Rs 153.

In the Textiles section, sentiment looked bright in view of the fact that the offtake of cloth had been showing continuous improvement. It was also thought that production might increase due to the availability of cheaper and more abundant raw material. Jayshree met with business at Rs 15.94 to Rs 16.31; Dunbar at Rs 25.25 to Rs 26.12; Kesoram at Rs 29.25 to Rs 30 and J. K. Rayon at Rs 15.62 to Rs 16.25. Elgins were pushed up to Rs 21 from a low of Rs 18.62 on reports of excellent working results for last year although the dividends were maintained at Rs 1.15 per share on the Ordinary and Vendors' shares.

Sugar shares remained generally depressed in view of the anxiety with regard to the accumulation of stocks with the factories. The only firm feature were Dyer Meakins at Rs 27.44 as against Rs 26.87 quoted in

the previous week on reports that the company's liquor business was expanding. SKG had some buyers at Rs 13.62 to Rs 13.75. Cawnpore were rather quiet at Rs 12.50 against Rs 12.81 due to scattered liquidation.

In the Engineering section, Indian Irons remained in the background, activity this week being restrained by the delay in the official announcement with regard to the steel retention price. On the opening day of the week, price movements in the scrip were mostly influenced by settlement considerations. Later on, however, the scrip attracted some attention on prospects of diversification of the Company's activities. Against the previous week-end closing of Rs 24.74, Indian Irons opened lower at Rs 24.61 and, after touching a fresh low of Rs 24.60, improved gradually to Rs 24.71, to finish the week at Rs 24.75. Jessop were a special feature in this section, having shot up to Rs 22.25 from Rs 20.50 on prospects of further expansion of the company's business. Burn moved up to Rs 442 from Rs 437 with Britannia changing hands at Rs 13.44 to Rs 13.56; Marshalls at Rs 4.87 to Rs 5.00 and Dalmia Iron at Rs 10.06 to Rs 10.22. TEXMACO were rather sticky at Rs 23.05.

The Miscellaneous section provided many outstanding features, as will be clear from the price trends of a few selected shares:

★

MADRAS

THE general tone in Madras stock exchange looked better today due to a small broadening of activities. Moderate buying was the feature in the Banking counter. Sugars closed higher. Selective buying, particularly in tea and coffee shares, was the feature in Plantings. Textiles proved strong in parts and a small business occurred in this section. Miscellaneous remained good as ever with particular stress on Chemical shares.

Plantings: There was some transaction in Attikhan shares at Rs 2.95. Blue Mountain was slightly improved to Rs 3.92. Chandramalai was unchanged at Rs 2.96. Chembra ex-right was priced at Rs 3.75. Cochin Malabar improved to Rs 7.60. Coffee Lands was better this week at Rs 20.60 and Cons. Coffee was quoted better at Rs 23.15. Coonoor did not change at Rs 28.00. Kil Kotagiri was lower at Rs 5.07. Mysore Plantation gained at Rs 2.26.

Nelliampathy's gain was only two nP at Rs 2.56 Nilambur declined by 25 nP to Rs 16.50. Ossoor was fancied at Rs 3.42. Ouchterlony lost 10 nP at Rs 4.62. Periakaramalai was transacted higher at Rs 3.60. Rajagiri's decline was ten nP at Rs 18.90. Rajendra x d remained at Rs 13.02. Stanes Amalgamated continued to be quoted at Rs 14.78. Thirumpadi was available at Rs 1.77 and Thamarapally at Rs 28.00 T.R. & T. was lower at Rs 9.10. Tropical was available at Rs 19.00. Waterfall was quoted 11 nP lower at Rs 3.19.

★

BALANCE-SHEET BRIEFS

Angelo Brothers Limited has reported a higher net profit of Rs 8.64 lakhs for the year ended 31 August, 1960 as against Rs 6.17 lakhs for the previous year. The dividend is raised from 20 to 25 per cent, taxable.

Despite a substantial decline in the net profit from Rs 7.78 lakhs to Rs 2.47 lakhs, the Calcutta Steam Navigation Company, Limited has maintained the dividend at 10 per cent, taxable, for the year ended 30 June, 1960.

The Thirumbadi Rubber Company Limited has reported a lower profit of Rs 2.56 lakhs for the year ended 30 September, 1960 as against Rs 3.35 lakhs. The Ordinary dividend is, however, maintained at 7 per cent, taxable.

The net profit of A. V. Thomas & Company (India), Limited has increased to Rs 87,927 for the year ended 30 June, 1960 from Rs 52,004 in 1958-59. Apart from the payment of the current preference dividend on the revised basis, the arrears of dividends for 1950-51 and 1951-52 are recommended. There are still arrears of dividends for the years 30 June 1953 to 30 June 1958 to be paid.

The net profit of the KCP Limited has risen from Rs 20.76 lakhs to Rs 37.84 lakhs for the year ended 30 June, 1960. The dividend is, however, maintained at 15 per cent, subject to deduction of tax.

The Gangapur Sugar Mills Limited has incurred a loss of Rs 5.87 lakhs for the year ended 30 June, 1960 as against as much as Rs 25.66 lakhs for the previous year. The dividend is passed.

The net profits of the Canara Banking Corporation Limited for the year ended 31 December, 1960, including Rs 14,360.81 brought forward from the previous year's account, amount to Rs 8,89,197.75. Out of this, Rs 1,35,000 has been placed to Statutory Reserve Fund. The balance of Rs 5,54,197.75 is available for distribution and the Directors have recommended the following appropriations:

To provision for taxes, Rs 2,80,000; to pay a dividend at Rs 3.25 and Rs 2.93 per share on 5 per cent and 4½ per cent First Preference Shares respectively and 15 per cent per annum on the Equity Shares, all dividends payable being subject to deduction of Indian Income-tax in terms of Section 18 of the Indian Income-tax Act, Rs 2,62,948.12; and to carry forward to next year's account Rs 11,249.63.

Company Reports

Alliance Jute Reports: Higher Profits

THE rise in sales from Rs 2.00 crores to Rs 2.30 crores is reflected in the working results of the Alliance Jute Mills Company Limited for the year ended 31 May, 1960. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 9.46 lakhs as against Rs 6.75 lakhs for the preceding year.

In respect of allocations, a sum of Rs 2.65 lakhs is provided for Development Rebate Reserve, while the Depreciation amount is raised to Rs 2.97 lakhs from Rs 1.84 lakhs. The directors have not recommended any final dividend on Ordinary shares. The interim dividend was Rs 6.00 per share. No dividend was recommended for the previous year.

The paid-up capital is Rs 45 lakhs divided into 15,000 Ordinary shares and 15,000 six per cent Cumulative Preference shares, both of Rs 100 each. Against this, Machinery Renewals Reserve stands at Rs 2.50 lakhs and Development Rebate Reserve at Rs 2.94 lakhs.

The directors have, in their report, stated that the prospects for the current year are not encouraging, as the price of manufactured goods has not risen to the same extent as the price of raw material.

For further modernisation of the Fine Side of the Mill, an application has been submitted to the National Industrial Development Corporation Limited for a loan of Rs 21.49 lakhs. In the meantime, an import licence has been received for certain additional machinery to improve the working of the Sacking Weft Side of the mill.

New India Sugar Maintains Dividend

The New India Sugar Mills Limited has maintained the Ordinary dividend at Rs 3.65 per Ordinary share despite a decline in the net profit from Rs 5.93 lakhs to Rs 4.52 lakhs. Sales are, however, higher at Rs 1.41 crores against Rs 1.36 crores.

The directors have set apart Rs 2.42 lakhs (Rs 2.02 lakhs) for Depreciation; Rs 4.45 lakhs (Rs 4.70 lakhs) for Taxation; Rs 1.08 lakhs (Rs 68,027) for Development Rebate Reserve and Rs 75,000 (Rs 2.50 lakhs) for general Reserve.

During the year, the factory worked for 148 days and crushed 42,70,529 maunds of sugarcane as against 112 days and crushing of 32,88,397 maunds. The recovery was lower at 9.16 per cent against 9.8 per cent in the previous year. During the current season, a crushing of about 55 lakh maunds of cane is expected.

New Savan Sugar Pays More

Thanks to the development programme that had been undertaken by the lessee, the New Savan Sugar & Gur Refining Company Limited has reported an increase in the quantity of cane crushed from 2,022,403 maunds to 2,847,570 maunds for the year ended 31 May 1960. For the 1960-61 season, the factory started crushing on 9 November 1960 and has since been working satisfactorily. The total estimated crush for the current season is over 3,000,000 maunds of cane and recovery of about 9.6 per cent.

The directors have stated that the lessees have exercised their option to renew the lease agreement for the New Savan Sugar Mills for a further period of five years from 1 June 1960.

Meanwhile, the accounts reveal a net profit of Rs 1.03 lakhs as against Rs 96,547 for 1958-59. Apart from providing a sum of Rs 50,000 for General Reserve, the Depreciation amount is raised to Rs 95,901 from Rs 66,050 and provision for Taxation to Rs 53,000 from Rs 6,000. A taxable dividend of 50 nP per share is recommended against 37 nP per share last year.

Secretaries:—Karam Chand Thapar & Bros. (Private), Ltd.

†=Revised.

INDUSTRIES ACT Revised List has 44 Industries

The Government of India has revised the lists of industries which, under the Industries (Development and Regulation) Act, would ordinarily be approved or rejected without reference to the Licensing Committee.

The revised lists will be in force up to 30 September, 1961 and will be subject to revision every six months.

The list of industries, where applications will ordinarily be approved, will now consist of 23 engineering industries and 21 non-engineering industries. The engineering industries are boilers and steam generating plant, i.e., all items falling under serial No. 3 of the First Schedule to the Industries (Development and Regulation) Act, conveyors-chain, belt and screws; construction machinery; electrical switch gear; fabricated structural (heavy); garage equipment and garage tools; hosiery and knitting machinery; industrial machinery, i.e., all items falling under serial No. 8 (A to C) of the First Schedule to the Industries (Development and Regulation) Act, except air compressors; instruments of all types such as metres, measuring instruments, drawing and surveying instruments, scientific and optical instruments, ice making machinery; machine tools; malleable castings and c.f. casting; machinery for milk and dairy industry; precision industrial instruments, i.e., all items falling under serial Nos. 13 and 16 of the

First Schedule to the Industries (Development and Regulation) Act, radio components (excluding valves and transistors); small tools such as cutters, cutting tools; sluice gates; steel forgings; structural ropeways; twist drills; transmission towers; tungsten carbides brazin of tips; and winches.

The non-engineering industries, in respect of which licences will be normally issued, are:

Abrasives grains; bicycle tyres and tubes; basic refractories; camel back (type retreading material); crystal glass collieries in the public sector for production of coal; finished leathers; glass shells; glass lined equipment; hollow building blocks; laboratory glassware; plate glass; rubber/canvas footwear; rubber prophylactics sintered magnesite; special firebricks for steel and glass industry; solvent extraction from cotton seed and cake, provided the State Governments concerned certify the availability of oil seeds and cakes in the area; S. W. pipes; table and pressed-ware of heat resisting glass; technical gelatine, edible gelatine, photographic gelatine and V and fan belts.

Government has also revised the list of industries where applications for licences under the Industries (Development and Regulation) Act, would ordinarily be rejected without reference to the Licensing Committee. The engineering industries numbering 40 are:

ACSR and all aluminium conductors; air compressors; automobile instruments; aluminium foils; bare copper conductors; bearings thin walled;

bifurcated rivets; bicycle and bicycle parts and accessories other than rims, saddles, B. B. fittings, forkhead fittings and freewheels; circles, sheets, rods and utensils of non-ferrous metals and stainless steel; conduit pipes; copper wire for non-electrical purposes; collapsible tubes and rigid containers; domestic refrigerators; drums and barrels and tin containers, excepting those where the manufacture is for making the applicant's own requirements; expanded metal; metal; earth moving machines; flash light and torch containers; ferromanganese; general lighting lamps; hurricane lanterns (except on a small-scale); ordinary type wood screws as indicated in part 1/54(B) of ITC Schedule; paper cones and tubing bobbings; piston assemblies; radio receivers except components; room air-conditioners; road rollers except expansions; railway wagons; steel pipes and tubes (below 6" diameter) 3.8 colon spark plugs; steel doors and windows (unless made from indigenous steel) stranded wire (unless drawn from wire manufactured by applicant); tungsten carbide tips from powdered ore; or ore; VIR and PVC cables; welding electrodes; wheels and rims; wire ropes; welded wire mesh (unless drawn from wire manufactured by applicant); wire nails (unless from wire manufactured by applicant); zinc strips; and radiators.

The non-engineering industries, for which no licences will be issued will be:

Asbestos cement sheets and ordinary pipes, i.e., non-pressure pipes; activated bleaching earth; acetic acid except for captive consumption; antibiotics, viz., Penicillin, Streptomycin, Tetracyclines; Bismuth salts; chloral hydrate; calcium carbide; calcium carbonate (precipitated); cigarettes; cotton mesh fabrics; dyestuffs based on imported intermediates; derivatives of 8-hydroxyguanine, viz., 8-7 di-iodo and 5-chloro, 7-iodo, East India tanned (semi-tanned), kips and skins; fireworks and paper caps; glass and mineral wool; hollow-ware, including table and pressed-ware made on semi-automatic machines; hydrogen peroxide; liquid glucose; match industry; myrobolam extract; oxalic, citric and formic acids; photographic raw film and paper; potassium chlorate; phenol formaldehyde moulding powder; soaps; super-phosphate; sulphur drugs; synthetic hormones; surgeon's requisites, viz., catgut sutures, adhesive tapes, plaster of paris bandages; silicic acid, sodium sulphite and by-sulphite; sodium thiosulphate; sulphur dioxide, sodium aluminate sheet glass including wire and figure glass; textiles made of artificial silk, urea formaldehyde resins urea formaldehyde moulding powder; vegetable oils (other than cottonseed oils); vitamin 'A'; vitamin 'C'; vacuum brake hoses; vanaspathi; waterproof fabrics and zinc oxide.

Applications for diversion of existing cotton spindles and looms to work on art silk will be ordinarily rejected, without reference to the Licensing Committee. Similarly, applications for licences to carry on the business of existing undertakings for the manufacture of copper, and brass, sheets, circles and rods from units which were not in existence on 1 October, 1958 or which had not

taken effective steps to set up their undertakings on or before that date, will not be considered. In the case of copper and brass utensils, applications for licences for taking over the business of existing undertakings from units, which had not been in existence on 1 March, 1957 or which had not taken effective steps to set up their undertakings before that date will also ordinarily be rejected without reference to the Licensing Committee.

TAX Simplified Procedure

The Central Board of Revenue has clarified that the newly introduced simplified procedure for determining the income-tax payable by persons who derive small incomes from business is applicable also to persons deriving income from a profession or vocation.

The essence of the new procedure which was initiated in November 1960, consists in doing away, in the case of small assessee, with the examination of accounts at the income-tax office. It is designed to cut short the time spent in the assessment of cases which produce very little revenue. The scheme will not apply to cases where losses are declared or where the income includes profits from speculation.

Diesel Tractors Made in India

A manufacturing licence to produce in India the Diesel tractors of Massey-Ferguson Ltd., of Coventry, England, has been issued to Tractor and Farm Equipment (Private) Ltd., Sambiam, Madras. Massey-Ferguson has a substantial minority interest in newly formed company.

A spokesman for the British firm said that initial production would be at the rate of 3,500 tractors yearly on a single-shift basis. The first model to be produced will be the MF-35, a medium-horsepower tractor of which there are already some 16,000 operating in India.

The Indian company is to build a modern plant near Madras. Plans provide for complete indigenous production after the first two or three years. The programme, in which agricultural implements will progressively be included, is expected to offer employment eventually to about 3,000 people.

AUTOS Record UK Output

Britain's motor industry had a record output in 1960, with a total production of 1,352,728 cars. In 1959 the figure was 1,189,973. Exports increased from 568,971 in 1959 to 569,916 last year—another record figure.

Production of vans, trucks and buses reached an all-time high of 457,972, compared with 370,484 in 1959. Exports, too, were a record, with 146,134 vehicles (worth more than £104,000,000) being shipped.

The total value of all the motor industry's exports for 1960 was nearly £618,000,000, states the Society of Motor Manufacturers and Traders.

West Bengal Budget

THE chief talking—and thinking—points in the West Bengal Budget for 1961-62 are to be sought more in Dr Roy's speech introducing it than in the figures it contains. The figures themselves follow the now fashionable pattern of underestimated receipts and (to a smaller extent) expenditure, revenue deficit left uncovered, a modest beginning for the Third Plan and no new taxes. As the table elsewhere in this issue will show, the current year's revised estimate of revenue is put at Rs 102 crores against a budgeted figure of slightly over Rs 88 crores. And yet, Dr Roy has estimated only a little over Rs 95 crores as revenue receipts for the coming year. Against the anticipated expenditure of Rs 89 crores on revenue account for the current year, the revised estimate is higher by over Rs 8 crores at Rs 97.66 crores. Against an anticipated deficit on revenue account for the current year of a little over Rs 1 crore, the revised estimate hopes for a sizable surplus of Rs 4.54 crores. It is therefore more than likely that the deficit of Rs 3 crores budgeted for 1961-62 will not materialise, especially in view of the promised plugging of loopholes in the Sales Tax Act. The overall budgetary position is estimated to result in a deficit of nearly nine crores of rupees with a "negative cash balance" at the end of the year. The State hopes to raise a loan of Rs 7 crores from the market apart from a smaller loan contemplated by the State Electricity Board. And though Dr Roy has made a vigorous plea for greater central assistance and a greater share, as of right, of central revenues, he has been conservative in his expectations in actual budgeting. Therefore, the deficit need hold no terrors.

The Third Plan is putting in a rather tentative appearance in the budget figures. This is inevitable since the formal Plan itself is still to emerge and crucial uncertainties like availability of foreign exchange are still awaiting clearance. The Planning Commission has therefore asked the States to make a beginning with a fifteen per cent allocation of the total outlay. West Bengal, consistent with its stand throughout, has interpreted this to mean 15 per cent of its own estimate of the minimum outlay (Rs 341 crores) and not the Planning Commission's (Rs 250 crores.) Consequently, the outlay on Plan projects for the coming year is put at Rs 50.82 crores. The outlay is mostly on the 'spill-over' projects from the Second Plan and a beginning in solving Calcutta's chronic problems is also provided for. Capital expenditure for the year is estimated at Rs 42.13 crores and among the more important items included herein are provisions for a fertiliser plant in Durgapur (Rs 1.15 crores), the Durgapur complex of coke oven, gas grid and power plants (Rs 6.99 crores) and the greater Calcutta milk scheme (Rs 95 lakhs).

Dr Roy's speech was a sustained brilliant performance in which he presented West Bengal's case with great persuasiveness. He traced his now familiar argument with the Planning Commission about the size of the State's plan. Though he was cautious in his own budgeting, he pointed to buoyancy in revenues—though the example he chose was income tax—as indicative of the Planning

Commission's chicken-heartedness. He said that the Third Plan estimates were projections from the actuals for the year 1958-59 which, at least as far as West Bengal is concerned, have been far outstripped by the subsequent year's performance. He drew attention to the State's performance in the Second Plan in which, according to him, the State provided, despite increase in its non-Plan expenditure, more than the estimated surplus from current revenues for Plan purposes. Making use of certain telling modes of comparison, he argued that the State is having a rawer deal than other States from the Centre. On the basis of population—which he assailed in the context of sharing of central taxes—West Bengal's Plan outlay at Rs 60 per capita ranks only ninth. In terms of percentage of increase in State's outlay permitted for the Third Plan, West Bengal (with 58.5 per cent) has been relegated to as low a position as fourth from the bottom. In terms of matching central assistance, West Bengal (with Rs 1.78 for each rupee raised by the State) has not had the luck of certain other States. Now arguments of this kind don't carry one very far, for other States will be able to think up other criteria to prove an equally scurvy treatment at the hands of the Centre and the Planning Commission. The six criteria for eligibility for inclusion of projects in the Plan which Dr Roy discussed elaborately in the context of West Bengal's own needs can with equal justice, if not skill, be presented by Finance Ministers of other States for urging their own special needs. In fact, Dr Roy has presented with characteristic vigour and persuasive finality all the arguments that they themselves would want to use. Only all such arguments will cancel each other out and the Centre will be able to smugly point out the impossibility of everyone having a larger share of the limited cake.

This does not mean that Dr Roy's arguments for a larger Plan for West Bengal is special or specious pleading. West Bengal's special claims arise from a variety of causes, economic, political, sociological, and more recently, strategic. The economic reasons are undoubtedly the most persuasive, at any rate in the context of planning. In this connection, Dr Roy drew pointed attention to what is surely the most agonising dilemma in planning—the choice between developing comparatively neglected regions and pressing on with the gains already achieved in a relatively developed area. Obviously "take off" implies a gathering together of momentum already generated for the decisive break-through. Too wide a dispersal of developmental impulses will therefore be self-defeating. Though the brunt of basic industrialisation is borne by the Centre, the ancillary obligations of a developed region devolving on the State Governments can hardly be shirked. Further, if Dr Roy's anticipations about resources turn out to be correct, the distinction between resources in sight and resources round the corner may not be the transparent evasion that it seems at first blush. The Finance Commission, to whom Dr Roy has provided some very useful pointers, has an invidious job. But it can hardly deny the force of West Bengal's claims.

Loss Experience

In one important respect, West Bengal has failed to strengthen Dr Roy's hands in his indefatigable attempts at converting the Planning Commission to his views. The performance of State enterprises, with the exception of one or two departments like the State Transport, has been depressing. The anticipated loss from such undertakings for the coming year is nearly Rs 70 lakhs on a capital outlay of slightly over Rs 28 crores. The greatest single disappointment has been from the Durgapur projects. However, it must be conceded that the quantum of such losses is progressively diminishing. From Rs 89 lakhs in 1959-60, it has come down to Rs 55 lakhs (revised estimate) in 1960-61 and in 1961-62, it is estimated to come down to Rs 27 lakhs. It is true that these are notional losses in one sense, since the project has not yet started yielding. Still a good part of the Third Plan's hopes are pinned on increased profits from State enterprises. Dr Roy himself would prefer profits to taxes as a source of developmental finance and his hopes of a Plan of the size of Rs 341 crores are surely based as much on a better showing by these enterprises as on greater assistance from a supposedly unwilling Centre. A better showing here will make the Centre's attitude even less tenable.

Maharashtra Budget

THE first full-fledged Budget of Maharashtra presented to the Legislative Assembly last week by Mr S. K. Wankhede, the State's Finance Minister is noteworthy as the only Budget of the season so far to have come out with proposals for fresh taxation. New taxation measures designed to raise an additional revenue of Rs 1 crore have been put forward by the Finance Minister. This amount will be realised by enhancing the passenger tax from 10 to 15 per cent (expected yield: Rs 60 lakhs), by the withdrawal of the exemption on kerosene oil and by imposing a sales tax of three per cent on it and raising the sales tax on groundnut from 1.5 per cent to 2 per cent (expected yield: Rs 40 lakhs). As the bulk of the additional tax burden falls upon the poorer sections of the people, the new Budget is bound to cause some disappointment.

The Budget estimates for 1961-62 show revenue receipts of Rs 110.62 crores while the revenue expenditure is placed at Rs 110.69 crores, leaving a deficit of Rs 0.7 lakhs. The revenue receipts provided for a payment of Rs 6.14 crores from the State's share of Central taxes to Gujarat. The increase in the revenue receipts for 1961-62 over those of last year was mainly on account of larger collections anticipated under sales tax and larger grants anticipated from the Centre for Plan schemes. The share in the Central taxes, was estimated at Rs 17.61 crores. Other large items of revenue were Rs 6.93 crores under land revenue, Rs 5.3 crores under forests, Rs 5 crores under taxes on vehicles, Rs 31.98 crores under sales tax, Rs 9.02 crores under other taxes and duties.

The revenue expenditure as shown in the estimates did not show any substantial increase over last year's estimates as no provision was included for entirely new Plan schemes proposed to be taken up next year, pending finalisation of their details. The increase, however, under police, medical and public health and civil works is counter-balanced by reduction under land revenue education, industries and stationery and printing. The estimates, however, include a provision of Rs 11.41 crores on continuing Plan schemes which were included in the Third Five-Year Plan of which Rs 2.79 crores represent expenditure of a capital nature but met from Central grants, sugar cane cess fund, Central road fund reserves and Central road fund allocations.

The Finance Minister, while reviewing the progress made during the last decade, stated that the State has made considerable headway in industrial and agricultural spheres. In the field of agriculture the net increase in the sown area amounted to 6.8 per cent while the production of food grains looked up to 23 per cent from the estimated 21 per cent. In the production of pulses, however, the trend during the past few years has turned out to be disquieting. At a time when the need for stepping up of pulses was growing, the decline in production as well as in acreage is distressing. The authorities will have to pay particular attention to eliminate this downward trend.

There has been satisfactory expansion in irrigation facilities in the State. In the field of minor irrigation, apart from 0.32 million acres of potential created during the past ten years, the works in progress will yield an

additional potential of nearly 0.2 million acres. The Finance Minister also pointed out that the banded area increased to 0.22 million acres from 0.18 million acres.

The Community Development programme introduced in 1952 has taken rapid strides in the State and according to the Finance Minister the entire area in the State will be covered by the end of 1963. Another programme which has had a powerful impact on the rural life was the co-operative movement. The number of co-operative societies rose from 18,515 in June 1953 to 28,640 in 1960. It is to be noted that out of the total societies 21,787 were agricultural co-operative societies. The membership of these societies has also increased by 67 per cent and their working capital has shot up to Rs 236.83 crores from 103.16 crores.

Industrial production has also showed an uptrend especially in vegetable products, sugar and diesel engines. The sugar production recorded an increase of 100 per cent while that of diesel engines was to the extent of 300 per cent. Progress made in the sphere of mineral production according to Mr Wankhede was "striking".

In the field of social services also the State's achievement is more pronounced. Notable advancement has been made in providing more educational facilities. Medical facilities which were hitherto concentrated in cities and towns have been extended to far flung areas in the State. The building up of district health organisations to provide proper medical attention to the rural areas have proved to be beneficial to the people and attractions offered for those who work in those areas have to some extent succeeded in enlisting the services of doctors.

The present Budget can be considered tentative to a considerable extent, for the Third Plan for Maharashtra has not yet been finalised and a full picture will be available only when the supplementary demands are presented to the next session of the Legislature. Yet, considering the experience of the First and Second Plans the Finance Minister's buoyant outlook about the Third Plan is not unjustified. The total outlay of the Third Plan is fixed at Rs 390 crores and the fulfilment of the outlay, as pointed out by the Finance Minister, will depend on the ability of the State to raise resources to the tune of Rs 220 crores and the Centre's ability to contribute an amount of Rs 170 crores.

According to present estimates, the State's resources for the next Plan, at existing levels of taxation and capital receipts, will amount only to Rs 168 crores. This amount will be made up of Rs 30.6 crores from public loans, Rs 66.8 crores from the State's share of small savings, Rs 9 crores from unfunded loans, Rs 15.3 crores from balance of miscellaneous capital receipts and Rs 9.4 crores in the form of contributions from public enterprises. The deficit is likely to go up when the new schemes embodied in the Third Plan are launched. The final position of the next Plan will depend on the recommendations of the Third Finance Commission and Mr Wankhede pleaded for a sympathetic consideration of the problems of the State which has large tracts of undeveloped and undeveloped area.

The Government's decision to appoint a committee within the Finance Department to revise the pay scales of Government employees will be widely acclaimed by the employees. Their demand for higher pay scales considering the high cost of living naturally deserves sympathetic treatment. The Government has

25 February 1961

decided to accept the scheme for merging bulk of the dearness allowance with basic pay. The minimum wage will be kept at the existing level of Rs 75 and a further upward revision is rendered impossible as it is likely to affect the entire pay structure and the cost involved will be beyond the resources of the State.

For the successful implementation of the Third Plan a reorganisation of the administrative machinery and simplification of procedures seem inescapable. To ensure maximum efficiency from the staff, the Finance Department will be reorganised in a way that finance officers attached to the administrative department would be in a position to appreciate properly the financial aspects of the proposals in the initial stages of formulation.

ICICI

New Role in the Investment Market

THE share markets, which till September last had been booming in India, appear to have entered a period of consolidation, though the pre-Budget optimism has been responsible for a mild upward flurry in prices. But the boom, especially as applicable to new issues, has clearly levelled off; and the reasons both for the boom and its aftermath that Mr G. L. Mehta has given in his statement issued with the accounts of the Industrial Credit and Investment Corporation of India Ltd for 1960 make interesting reading.

If the capital market was very active during 1960, it was mainly because the new issues mainly represented offers of equity; and the investor, it would appear, has been moved by the prospects of growth rather than by considerations of yield. Partly, it may be that the investors drawn from the higher-earning groups are enticed by hopes of growth, because the tax they pay on yields as such is so high. Partly, undoubtedly, ordinary shares are thought to be the best possible hedge (always excepting gold) against inflation. Besides, there are these qualifications to the phenomenon that Mr Mehta enumerates:

It is likely that a part of the demand for the new issues was based on short-term considerations of quick capital appreciation, as frequently happens in a rising market. Moreover, with investors failing to secure required shares in one issue, it was often the same applicant and perhaps the same money chasing successive issues. Besides, as over-subscription became a common phenomenon, people may have tended to apply, even with borrowed funds, for larger amounts than their investment requirements, in order to ensure at least a part allocation on their application.

It follows, therefore, that the floating slack constituted by investors' surplus funds may now, with the spate of new issues successfully put through, have been taken off the capital market; and this may account for the somewhat reduced enthusiasm for new issues, a fact that Mr Mehta has himself made note of. Nevertheless, we may agree with the inference made by ICICI's Chairman that there has been "a substantial increase in genuine investment demand for industrial securities." But will the investment habit, assuming that it has been engendered by the new issue boom, long endure? Mr Mehta's answer is that "the intensity of its manifestation is bound to vary with market psychology and the general climate." For our part, we believe that the relatively favourable treatment accorded to

capital gains, as distinct from the taxation of other forms of income, has been an important factor contributing to the new issue boom. So, should the Finance Minister decide to tinker with the capital gains tax, we are afraid that new issues will no longer be the fantastic successes they have in recent months been.

Mr Mehta is not happy about the quantum of equity capital that, in many cases, the individual entrepreneur decides to have for his company. Very often, he says, "the

it hard to sell its products, the servicing of debt becomes well-nigh impossible; and, in hard times, when borrowing may be the only way out, the existence of debt obligations will prevent or reduce the capacity of a company to borrow. Logically, therefore, Mr Mehta is right in asking that capital structure should be strengthened, especially through the issue of equity capital. But surely it is obvious that no entrepreneur is prepared to carry out what may be tortuous negotiations, enter into advantageous agreements and see every prospect of profit and prosperity—and then to lose control of his company, when the time comes to raise capital. Unless the enterprising industrialist is safeguarded from dispossession, that will leave him high and dry, the entrepreneur has no alternative to "buying" his security by keeping the equity capital small and maximising his reliance on loan capital. While in theory, therefore, the tendency of companies to start out with low equity capital is to be deprecated, no solution is possible unless the relevant provisions in the Company Law contain adequate safeguards for the well-intentioned, but financially not too resourceful, entrepreneur.

Possibly, a spread of the investment habit, with its implication of widely diversified and small holdings in companies, may in due course enable the enterprising industrialist to secure both his mandate and his needs of capital from the investing public, without the danger of being swallowed up. And in the evolution of such an investment market, the ICICI has an important part to play. By offering to undertake the underwriting of the smaller issues, encouragement would be given to a new class of small industrialists. We do not mean to suggest that this financial institution has not contributed anything so far to the national economy; on the contrary, what it has already done to foster investment is a considerable achievement, and it is that which makes us wish that it could take upon itself an even more significant role. ICICI's operations during 1960, as reported by Mr Mehta, attest to the help and assistance that the institution has been extending. Assistance sanctioned during 1960 amounted to Rs 13.43 crores, and "a large proportion of this assistance was in the form of foreign exchange loans". The catalytic character of ICICI's assistance is suggested by the fact that, while it provided Rs 11.21 crores to 39 companies for new projects, the total amount invested in the 39 companies was nearly five times that figure at Rs 55.22 crores. The higher tempo of ICICI's operations has been responsible for an increase in earnings, and the dividend to shareholders is also consequently raised to 5.75 per cent subject to tax, which restores to the shareholders the cut in return arising from the new structure of corporate taxation.

Coal Movement

THOUGH in the early years of the Second Plan the outlook for coal production looked bleak with the public sector tending to fall behind schedule, there is now a gratifying assurance from the Union Minister for Steel Mines and Fuel, of the country having passed from shortage to adequacy in coal production. Speaking in the Lok Sabha early this week, Sardar Swaran Singh stated that production of coal has already exceeded the rate of 60 million tons a year which was the target fixed for the industry under the Second Plan. That in such a state of sufficiency there should be scarcity of coal at industrial centres of which there is irrefutable evidence, is seemingly surprising. This is to be attributed to defects of distribution and particularly to

ICICI's OPERATIONS	
The total of operations sanctioned as at the end of 1960 (in lakhs of rupees) is shown in the following table.	
	(In Rs Lakhs)
Rupee Loans and Guarantees	6,55
Loans in Foreign Currency (Rupee Equivalent)	12,63
Underwriting of Ordinary and Preference Shares and Debentures	9,87
Direct Subscription to Ordinary and Preference Shares	2,56
TOTAL:	31,41

ICICI's BALANCE-SHEET	
Important Figures in the Balance-Sheet as at 31 December 1960 are brought out in the following table.	
	(In Rs Lakhs)
Capital	5,00
Reserves and Surplus	74
Investments	6,77
Loans and Advances	5,62
Cash Balances	4,67

ICICI's PROFIT AND LOSS	
ICICI's gross income went up sharply from Rs 57.95 lakhs to Rs 73.31 lakhs. While the income by interest on securities and bank deposits declined somewhat, there was a strident advance in income by interest and dividends (industrial assistance) from Rs 30.24 lakhs to Rs 53.62 lakhs; and underwriting commission and brokerage fetched more than double at Rs 6.75 lakhs against Rs 3.23 lakhs. Surplus of Rs 24.87 lakhs on sales of investments (after provision for capital gains tax) has not been shown in the profit and loss account, and is taken direct to the Capital Reserve in the balance-sheet. With the acquisition of the new building, the provision for depreciation has gone up ten-fold. The General Reserve receives Rs 9 lakhs against Rs 4 lakhs in 1959.	

amount of equity capital fixed is based not on the requirements of the project but on the financial resources of the entrepreneur, with the result that where an entrepreneur takes up a very large project and tries to retain controlling interest, he keeps the equity low and seeks to obtain the balance of the cost of the project by means of borrowings." The ICICI Chairman decries the "excessive reliance on loan obligations in the capital structure". And there can be no doubt that such an entrepreneur, and a company with such capital structure may run into grave difficulties. For example, in the event of the company finding

shortfall in railway transport capacity. The Railway Board Chairman has, however, put out the claim that the railways during 1960-61 would have carried nearly 42 million tons of coal which is in excess of the railways target for coal movement by one million tons. In the light of the current scarcity experienced by industrial units, the target for coal movement at 41 million tons can clearly be seen to have been an under-estimate. It may be pointed out that figures supplied by the Indian Mining Association for movement of coal during 1960 in the West Bengal and Bihar areas disclose a glaring gap between requirements and allotments made by the railways. Whereas the requirements were estimated at 6,000 wagons a day by the Coal Controller for this region, allotments made by the railways amounted to much less than 5,000 wagons a day. It may also be mentioned that the Railway Budget presented last week carried evidence of the upset of anticipated schedules of coal movement by railways. It has been observed that in respect of coal for users other than the steel plants in the public sector, railways now expect to handle an extra four million tons over original anticipations, involving an additional 2,000 million ton miles. The artificiality of the present coal shortage and the inadequacy of the wagon allotment as the main cause for coal scarcity stand clearly proved.

But, as Sardar Swaran Singh has recognised there is more in coal shortage than mere inadequacy of wagons. The allocation of sources of supply without reference to the economics of transport may be mentioned as one of the factors that contributed to coal shortage. The difficulties faced by the industrial units in Maharashtra and Gujarat in securing their requirements of coal may have flowed from the present faulty allocation of sources of supply. It may also be noted that some months back there were complaints from industrial interests in Andhra of coal from Singareni collieries being diverted to areas outside Andhra Pradesh to the detriment of local interests. It is clearly anomalous that industrial areas in the eastern region should have their coal supplied to them from distant Bihar and Bengal fields while coal from neighbouring Central India should be diverted to far away places. A reallocation of sources could do much to mitigate regional shortage and also relieve the strains on railways by shortening the haulage of coal. Sardar Swaran Singh's reference to proposals for a reallocation of sources of supply presages welcome change, but it should be made clear that such reallocation would be ineffective in ensuring sufficient supplies if attempts are not made to match regional targets of production with regional demands.

The development of the coal crisis has also brought to light grave defects in the system of wagon allotment by railways. The Bengal Chamber of Commerce has on the basis of a sample survey of wagon allotment by railways revealed grave shortfalls in allotment against the recommendations of the Coal Controller. Another serious shortcoming to which accumulation of stocks at pitheads bears evidence is the failure to maintain supplies at a steady and sustained level. Inordinate delays and discrimination in allotment have been reported by industrial units. A more coordinated arrangement is certainly suggested by such complaints. In this circumstance, it has also to be asked whether the railways cannot consider an upward revision of the present time limit for coal loading at pitheads. The present time limit at 5 hours a day cannot permit efficient and full utilisation of the limited transport capacity allowed for coal movement.

The wagon supply position is expected to improve slightly from July onwards following the increased allotment that is being considered now. The overall supply to the Bengal-Bihar region which is the important centre of coal production, is expected to be stepped up from 5,000 wagons to 5,200 wagons and the increase will enable larger supplies to Uttar Pradesh, Delhi, Punjab and Rajasthan which are served by the Moghalsarai line. However, Sardar Swaran Singh clearly recognises the inadequacy of this addition to cope with the vastly increased demand for coal and in this sense suggests alternative means of transport such as road and coastal shipping. Considering the higher target for coal movement that the industrial schemes in the Third Plan entails, such resort to road and coastal shipping for movement of coal may become indispensable. Such a development is to be desired for the reason that dispersed distribution would ensure timely supplies and the saving in distance in the case road transport may also lead to saving in transport costs. The fillip to the development of road and coastal transport may also be a significant gain.

Railways in 1959-60

THE working of the Indian Railways, as described in the latest annual report can be called satisfactory, though the figures are a year old and developments make calculations concerning the future doubtful. The rise in Capital-at-Charge is, of course, more important than any other point at present in view of what has been said about putting a brake on the diversion of goods traffic to road transport or of the intrusion of long distance bus services in competition with railways. The average length of the passenger-journey is put at 30.2 miles and it is also obvious that the tax on fares and adjustments consequent to a switch over to the metric system have made third class travel more costly than a trip by a big bus. So, the rival attraction has to be quicker movement and the speed-up of trains seems, therefore, the most urgent item on the agenda. That depends on many factors including track improvement and coal supply.

Any analysis of financial results must take note of the definite superiority of the Indian railway system to that of the UK or Australia. There is, however, the fact that the depreciation funds and reserves are not enough in present conditions. It is argued that an annual outlay of Rs 120.85 crores (in 1959-60) does not provide enough for extensions. The net actual investment of Rs 74.69 crores in a year is hardly comparable with the new investment made by big industrial firms in the UK from their own earnings.

The problem for the State as investor is to maximise current investment from profits, to finance development out of revenue by earmarking funds rather than reducing current outlay. This is becoming impossible because of increasing costs. Working expenses in 1960-61 rose and the trend will continue, because of the increase in capital. There is, however, no specific limit to railway development in the conditions of a growing economy and the railways have to meet the demands of new industrial units for ore and fuel.

The usual analysis of traffic suggests that the increase in ore exports in 1959-60 helped the railways. Priority is now assured for ore exports. Industrial production or import trades have influenced traffic only to some extent because the increase under sugar is not so pronounced as the increase noted under the

tonnage of cement handled in 1959-60. The fall under cotton will have continued into 1960-61 as also under oil seeds and jute manufactures. There will be some satisfaction in finding that traffic in smalls has not fallen in 1959-60 because of an increase in the number of wagons in use. The running of express goods trains, the use of two engines on heavy trains in 1959-60 on important sections had a hand in the rise in the comparative goods traffic and it may be claimed that quick transit has come to stay.

The stock exchange will note that the names but not the results of light railways find a place. The list is now smaller and only Dehri Rohtas appears to be prosperous, to go by current indications. The largest company line is the Shahdara Delhi Saharanpur line which received a grant of land. Whether these relics of private enterprise should linger after so many constitutional amendments is a point to be considered when unification of railways is the aim not only here, but in the USA. The only country where a State system competes with private enterprise is Canada. The CNR is longer, has a larger traffic and a smaller profit because of a bigger wage bill and a higher operating ratio. The Canadian Pacific has shipping and air lines to make it distinct from all railways. Whether the profits on the sidelines make the international stocks superior to railroad stocks need not be examined. In any case, light railways in India are an offshoot of District Boards and their record after the war is calculated to produce pessimism, as attested by the closure of one line after another in Bengal where motor traffic has bitten deep into the available business. Acquisition, as in the case of the Darjeeling-Himalayan railway, may be considered appropriate, not least by the shareholders of the surviving companies.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

EXCHANGE RESERVES

Third Plan to Start With Rs 175 crores?

In 10½ months of the fiscal year 1960-61, the depletion in India's foreign exchange reserves has been kept down to a bare Rs 31 crores. Imports have been known to be heavy, and the balance of trade steeply unfavourable. Hence it is certain that foreign aid in very considerable proportions has been received throughout the year. During this period, particularly large receipts appear to have added to our foreign exchange reserves during the weeks ended 8 July and 2 December 1960, and 10 and 17 February 1961. The increase in the foreign exchange holdings of the Reserve Bank, in these four weeks, exceeded Rs 35 crores. Of particular interest is the fact that, suddenly, as the fiscal year nears its end, substantial accretions should be recorded.

For, a few months ago, consequent upon a meeting of the World Bank's "Aid India Club", it was made known that India should try to start the Third Plan with foreign exchange

reserves at minimum of Rs 175 crores. It seemed at the time extremely unlikely that we would so succeed, for, even in the export-heavy months of October/December, the rise in reserves was pitifully small. It is now reasonable to infer that friendly foreign countries are pouring in aid, at a rather quickened pace, in order that India may be enabled to build up the exchange reserve to the targeted figure of Rs 175 crores. With around six weeks remaining, we may take it for granted that the exchange reserve will prove perhaps even to exceed Rs 175 crores.

An interesting inference is that the latest receipts of foreign assistance appear to be "untied" loans. For, otherwise, the aid would merely have gone to finance specified imports, and no rise in exchange holdings would have been possible. At long last, therefore, India's reiterated pleas for "free" loans have been heeded. It is possible, however, that this is only a temporary phenomenon, and aimed strictly at achieving the objective of raising the exchange reserve prior to the inauguration of the Third Plan. We are afraid that, except for any drawings that we may make upon the facilities of the International Monetary Fund, aid will be with strings. Normally, this should not unduly worry us, since we require foreign aid primarily to finance capital and developmental imports.

Unfortunately, there is also the problem of meeting the cost of maintenance imports. These can be paid for only from export earnings, and our ability to increase the volume and value of exports seems disappointingly poor. Indeed, there is the prospect that the Third Plan may be a success, from the point of view of adding to installed capacity of various industries; but may be rather less of a success, from the standpoint of rise in industrial production. For, production may suffer from lack of foreign exchange for import of industrial raw materials, and it is barely possible that there should be a great deal of idle capacity during the next Plan period.

It is in such a context that the present move to raise the exchange reserve to Rs 175 crores assumes importance. For, there is now a little in reserve—or will be, when the Third Plan starts—for purchase of industrial raw materials from abroad. For the first six months or so of the Third Plan, production may maintain the rate of growth that was witnessed during the Second Plan generally.

So, a little breathing time has been obtained. We consider it of the utmost importance that India should display drive and energy in formulating a policy for export promotion. We trust that the Finance Minister will have something constructive to say on the subject. For, huge though our needs of foreign assistance for the Third Plan are, there is now more than a reasonable chance we will not be disappointed in our great expectations. But, we repeat, the financing of maintenance imports is going to be our crucial problem, and we cannot plan on meeting their cost with the help of "untied" foreign loans. Our payment for such imports can only be from export earnings.

We consider it possible that, during the Third Plan, a scheme for the earmarking of a specified percentage of production for ex-

ports will be drawn up and implemented. Such a scheme would of course create other problems. To the extent that output is not available for satisfying internal demand, the pressure on prices will be upward. But austerity in internal consumption is the price we will have to pay, to ensure that the industrial capacity created in our strenuous planning endeavours is not allowed to lie idle.

CANARA BANKING CORPN.

Higher Profit, Dividend Maintained

THE Canara Banking Corporation Ltd, Udipi, has reported a rise of just over Rs 28 lakhs in Deposits from Rs 8.45 crores to Rs 8.73 crores, in its balance-sheet as at 31 December 1960. What distinguishes the accounts is the fact, probably in contrast to any other banking result that may be released this year, that the total of Advances is shown to have declined by Rs 1.93 lakhs to Rs 4.89 crores; and equally interesting is the rise of Rs 3.33 lakhs in holdings of Government securities, in a year when banks have generally disinvested.

The profit and loss account has a satisfactory state of affairs to disclose. The rise in the income by interest and discount is a handsome one of Rs 7.56 lakhs to Rs 48.63 lakhs, and commission, exchange and brokerage have fetched Rs 1.64 lakhs more at Rs 11.09 lakhs. Although interest paid has gone up quite steeply—by Rs 5.29 lakhs to Rs 30.89 lakhs—and salaries and wages have absorbed Rs 1.65 lakhs more at Rs 14.87 lakhs, the balance of profit is nevertheless better by Rs 0.68 lakhs at Rs 6.75 lakhs. The improvement in the profit, working out to 11.2 per cent over the previous year, appears to be substantial; but it has to be noted that the provision for tax has been marked up by an amount almost exactly equivalent to the rise in profit. Hence, the profit after taxes is practically unchanged.

Taxation, as noted, absorbs Rs 0.70 lakhs more at Rs 2.80 lakhs, and the Reserve and Contingent Funds get Rs 0.45 lakhs less at Rs 1.35 lakhs, the transfer of Rs 0.45 lakhs to

Comparative Figures of Canara Banking Corporation Ltd, Udipi.

Balance-Sheet	1959	1960	Change	Change
(In lakhs of rupees)				%age
Deposits & Other Accounts	844.65	872.72	+28.07	+ 3.3
Cash Inc. Money at Call	112.08	106.76	— 5.32	— 4.7
Cash as per cent of Deposits	13.3	12.2	...	...
Government Securities	349.67	353.00	+ 3.33	+ 0.9
Govt. Sec. as per cent of Deposits	41.4	40.4	...	...
Total of Advances	490.65	488.72	— 1.93	— 0.4
Adv. as per cent of Deposits	58.1	56.0	...	...
Profit and Loss Account:				
Interest and Discount	41.07	48.63	+ 7.56	+18.4
Commission, Exchange and Brokerage	9.45	11.09	+ 1.64	+17.4
Gross Income	50.63	59.95	+ 9.32	+18.4
Gross Income as per cent of Deposits	6.0	6.9	...	...
Interest Paid	25.60	30.89	+ 5.29	+20.7
Salaries & Allowances	13.22	14.87	+ 1.65	+12.5
Balance of Profit Appropriations:	6.07	6.75	+ 0.68	+11.2
Taxation	2.10	2.80	+ 0.70	+33.3
Reserve & Contingent Fund	1.80	1.35	— 0.45	—25.0
Dividends	2.09	2.63	+ 0.54	+25.8

the Contingent Fund being skipped. The dividend on ordinary shares is maintained at 15 per cent, but the amount required for distribution, owing to the larger number of shares now eligible for the payment, has risen by Rs 0.54 lakhs to Rs 2.63 lakhs.

It may be noted that gross income as a ratio of Deposits has improved from 6.0 per cent in 1959 to 6.9 per cent in the year under review.

BANK RETURNS

Currency Contracts, Rupee Coin Returns

There has again been a rise in Balances Held Abroad, as shown in the returns of the Reserve Bank for the week ended 17 February. The latest figures of the central banking institution are moreover noteworthy for the fact that they disclose the contraction in currency that, even in the middle of a busy season, appears to occur in the third and fourth weeks of a month.

Notes in Circulation are lower by Rs 8.15 crores at Rs 1,940.66 crores. Rupee Coin has returned from circulation, though in the nominal amount of Rs 0.37 crores. As a result, the Reserve Bank's cash in the till has improved by Rs 8.52 crores to Rs 18.70 crores.

In the return of the Banking Department, the most important change is the rise of Rs 5.08 crores to Rs 29.55 crores in Balances Held Abroad; this accretion has been recorded after a rise of similar proportions in the week ended 10 February. It is of course possible that we are at present enjoying an export surplus of satisfactorily large size; but hardly probable. Hence, it is almost certain that, as we approach the beginning of the Third Plan, there is a slight stepping-up in the rate of foreign aid receipts.

The Central Government has reported a rise of Rs 12.91 crores to Rs 72.77 crores in its Deposits. There is no indication that the State Governments have made some payment to the Centre; their balances are lower only by Rs 0.54 crores at Rs 21.30 crores, though their indebtedness to the Reserve Bank, for ways and means borrowings, has also been reduced by Rs 1.51 crores to Rs 37.71 crores. Secondly, there does not appear to have been deficit financing, despite the fact that Investments are higher by Rs 12 crores at Rs 142.86 crores. For, the State Bank is known to have sold securities worth roughly Rs 10 crores during the week, and this is what probably has got reflected in the Reserve Bank's holdings of Investments in the Banking Department.

ment. Therefore, it appears likely that the Centre may have benefited from large tax receipts; but, then, the heavy tax payments are made during March rather than in February. So, again, tax receipts may be possibly, but are not, probably, the reason for the rise in the Centre's balances. By a process of elimination, we may see that there is a likelihood that the State Bank's repayment of the February instalment of Rs 12 crores, in respect of counterpart funds of the US Embassy that it had held, may have been passed on direct to the Centre.

The slight respite from busy season pressure is suggested by the fall of Rs 6.33 crores to Rs 150.70 crores in the Other Loans and Advances of the Reserve Bank; indeed, banks' Reserve Balances are slightly higher by Rs 0.95 crores at Rs 71.39 crores. However, it may be noted that the Reserve Bank's advances against usance bills have climbed by another Rs 2.65 crores to Rs 26.90 crores. There is therefore the faint possibility that other entities whose borrowings from the Reserve Bank are shown under the composite head of "Other Loans and Advances" may have repaid part of their indebtedness. Here, again, however, improbable.

The return of the State Bank for 17 February shows that the month's instalment of Rs 12 crores, in respect of counterpart funds in process of being made over to the Reserve Bank, has been paid in the week under review. This is suggested by the fall of Rs 9.93 crores to Rs 550.48 crores in Deposits, as also by the fact that there is a counter-vailing fall of Rs 10 crores in the State Bank's holdings of gilt-edged. The pause in busy season pressure, because it is the middle of a month, is indicated by the moderate rise of Rs 0.85 crores to Rs 263.09 crores in the total of Advances. Borrowings are slightly down at Rs 1.74 crores, and cash in hand and with Reserve Bank higher by Rs 0.71 crores at Rs 21.10 crores.

There has been a welcome steadiness in Deposit resources of Scheduled Banks, according to the statutory statement for the week ended 10 February. Net Demand Deposits (that is, excluding borrowings from banks) are lower by Rs 5.66 crores at Rs 778.82 crores, but net Time Deposits have improved by nearly Rs 3 crores to Rs 1,088.19 crores. The net decline is thus of the order of Rs 2½ crores. But the rise in the total of Advances is a steep one of Rs 16.49 crores to Rs 1,255.31 crores. Hence, borrowings from the Reserve Bank have had to be increased by Rs 2.67 crores to Rs 61.40 crores, and balances with that institution lower by Rs 4.28 crores at Rs 69.77 crores. The disinvestment in gilt-edged—the portfolio is lower by Rs 8.85 crores at Rs 597.13 crores—is almost wholly on account of the State Bank.

UNITED KINGDOM

Sterling is Convertible

By
Paul Einzig

AS from 15 February sterling has become convertible under the rules of the International Monetary Fund. It still remains inconvertible in the pre-War sense of the term. Before the first world War convertibility meant that holders of sterling were at liberty to withdraw gold either in the shape of coins or in bullion. Between 1925 and 1931 it meant that sterling was freely convertible into bullion and of course, into any foreign currency. From 1931 till 1939 sterling was no longer convertible into gold but it remained convertible into foreign currencies. Throughout the War and for a long time after the War, sterling was inconvertible for any purpose. It became gradually convertible into foreign currencies to an increasing but limited degree as and when various restrictions were removed or mitigated. Since December 1959 sterling has been fully convertible to non-residents for current transactions and for certain types of capital transactions.

The present change will not make any difference from the point of view of the extent of sterling's convertibility. British residents and residents of the Sterling Area will remain subject to exchange control, and even non-residents will only be able to liquidate their investments through the market in security sterling. The significance of the change lies in the fact that from now on the British Government will not be in a position to revert to exchange control without permission by the International Monetary Fund. This means that there will be an even more imperative necessity than before to defend sterling with the aid of the conventional devices of high Bank rate and credit squeeze. Hitherto it was possible to reinforce sterling's defences with a stroke of the pen by restoring exchange control measures. It is true, the Conservative Government was opposed to such measures but the fact that it was at liberty to apply them was not entirely without significance.

In any case, however, the present Government would only consider the idea of reverting to exchange control in extremely difficult circumstances, and there is no reason to suppose that, should such circumstances arise, the International Monetary Fund would refuse its consent to such a move. On the other hand, it is conceivable in case there should be a Labour Government in office that it might decide to revert to exchange control as a matter of expediency without being forced into that decision by irresistible pressure. In such a situation the right of the International Monetary Fund to veto its decision might assume considerable significance. From this point of view the change will tend to discourage a Labour Government from embarking on irresponsible inflationary policies in the certain knowledge that if the worst came to the worst it could always defend sterling by means of exchange restrictions. The International Monetary Fund's consent could not be safely taken for granted. And the chances that the price of inflationary policies might have to be paid in the form of devaluation would have to be borne in mind. For this reason the legal convertibility of sterling must be regarded as a step in the right direction.

Notes

AGRICULTURE

Grounds for Hope

In the light of the priority accorded by the Planning Commission to self-sufficiency in foodgrains, there appears to be legitimate warrant for an optimistic forecast of the prospects for increasing foodgrain production to the level of 100 million tons fixed in the Plan. Initially there were differences of opinion between the Planning Commission and the State Governments in regard to the allotments for agricultural production in the Third Plan with the Planning Commission going for a lower figure than what the State Governments submitted. There has, however, been subsequent upward revision of the allotment for agriculture. Speaking at the All-India Farmers' Council meeting held in Calcutta, Mr Sriman Narayan, Member, Planning Commission disclosed that the allotment for agriculture in the Third Plan has been increased by Rs 50 crores from the amount estimated in the Draft Outline to Rs 1,072 crores. The increased allocation should naturally enable more intensified and vigorous implementation of the development schemes in the agricultural sector. From the point of view of increasing production, the most important measure which the

Third Plan envisages is the setting up of one fertilizer factory for each State. The Plan also lays emphasis on other traditional means of improving performance in the agricultural front such as popularisation of green manure, distribution of improved seeds through multiplication of seed farms, and greater resort to minor irrigation. With the according of priority to the agricultural sector's demands for iron and steel, there should also be wider use of improved agricultural implements in the programme of intensive cultivation.

An important problem which the Agricultural Ministry will be faced with, should the anticipated increase in production materialise, is the impact of the production on agricultural prices. No doubt the state trading machinery has been created for the purpose of averting extreme price fluctuations and a buffer stock is being built up to facilitate selling and purchasing operations in periods of glut and scarcity. But considering that the state trading machinery could be brought into operation only after a fall or rise in price has already registered itself, it may be incapable to avert the damage that would already have been done to agriculturists. In this context the system of crop insurance scheme assumes importance for ensuring a minimum level of prices to the agriculturists so that the incentive for increasing production shall not get blunted by anticipated fall in price in the wake of rise in production. Both Mr Sriman Narayan and Dr Punjab Rao Deshmukh have laid considerable stress on the need for such a crop insurance scheme. Absence of any such scheme in the agricultural programmes envisaged in the Draft Outline is a basic deficiency which should be made good in the interest of achieving progressive increase in production.

—And for Misgivings

If the Maharashtra Land Ceiling Bill now before the State Assembly has aroused widespread criticism, it is because it threatens to disrupt the working of one of the well-organised industries in the State. The Bill proposes to bring into its purview the lands both owned and held on lease by the sugar companies operating outside the co-operative sector. There are 13 such companies having sugar farms attached to them. The farms have been developed by the companies by dint of hard

work and by the money pumped in for ensuring uninterrupted supply of cane to their factories. Their efforts have proved to be quite rewarding as they have been able to get good quality cane which, in its turn, has brought them a rich dividend in the shape of a high production efficiency. It is this farm-factory organisation that has made the Maharashtra sugar companies compare favourably with the sugar factories elsewhere in the world known for their productive efficiency. All this will, it is genuinely feared by the industry in Maharashtra, be a thing of the past if the sugar farms are taken away from the factories.

Ever since it was known that Government intended to make no distinction between lands managed by the sugar companies and other lands in the matter of applying ceilings, the sugar companies have been raising their voice of protest. Many others besides the sugar companies consider the bill misconceived and against principles enunciated by the Planning Commission itself in this behalf. The Indian Merchant Chamber, Bombay Chamber of Commerce and Maharashtra Chambers of Commerce have sent a joint memorandum to the Planning Commission. The growing public concern about this aspect of the land bill is apparently beginning to trouble the conscience of the Government and they have come out with a white paper on the bill with particular reference to the provision for bringing the sugar farms under its purview. This lengthy document does not contain much new information which is not already known or made known to the public by the sugar factories. It is argued that there is need for finding as much land as possible for distribution to the landless peasants and the 100,000 acres under the control of the sugar factories could hardly be left out of the purview of the Ceiling Bill. The Government asserts that it is convinced that the taking away of the farms will not adversely affect the competitive condition of the companies. What is being taken away is nothing but "an adventurous and unconnected element of profit". The white paper has hardly succeeded in convincing the general public of the justness of their action.

It is not denied that the Maharashtra State Government like other State Governments, is obliged to bring in ceiling legislation. But one is certainly justified in expecting the State Governments to fashion their land ceiling measures in a manner that does not harm productive efficiency. At a time when everyone including the Government is emphasising the need for more efficient production, it is strange that a State Government should want to cripple a well-organised industry by striking a crushing blow at one of the vital points of its organisation.

FARMING

Fresh Woods

Like other States, Madras too had received the proposals put forward by the Central Government. The proposals were discussed by the State Co-operative Farming Board, Mr R. Venkataraman, Minister for Co-operation, presiding.

According to the proposals circulated by the Centre, these pilot projects are to be started in one or two Development Blocks. Each farming society is to get financial assistance of Rs 12,200 which the Madras Board feels is not quite sufficient. The State now gives subsidies and loans for land reclamation, irrigation, pump set installation and for purchase of bulls and farm implements. The free services of the Agricultural Department are always available to these societies as to other agriculturists.

Madras is also not in favour of having the pilot projects only in one or two blocks but wants to have it spread over all the districts. It is proposed to have one hundred and twenty farming societies on a co-operative basis attached to a dozen pilot projects in the State during the Third Plan. Each pilot project will get for itself ten societies for experimentation. The only condition that will be insisted upon is the existence of a suitable climate of opinion and enthusiasm. The societies will not be handicapped by Government of India's parsimonious aid, as the State will make good the shortfall.

Currently there are eighteen co-operative joint-farming societies in Madras. Tenant-farming societies in cultivating temple lands number 74. There are 28 land

colonisation societies and 6 ex-servicemen's societies. It was decided that nothing should be done to give the impression of coercion in the formation of these societies. It was also decided that 20 per cent of the net income of these societies should be distributed among workers on the basis of work done by them. It is the success of these societies, and not assertions on platforms that will make the idea of co-operative farming a living reality.

GERMANY

Pastures New

The advent of independence may induce Tanganyika to turn to Germany rather than the UK for the development of its minerals. The colonial movement in Germany earned a bad name but the new interest in East Africa shown by the Federal Republic is of a different order. Development aid to Tanganyika is envisaged after the

recent visit of Dr Julius Nyerere, the Chief Minister to Germany. A German delegation is to go out to East Africa in March. The advance to self-government means that Germany thinks that the old connection can be gradually restored and the calm in Tanganyika (in contrast with the confusion in Kenya) makes the former particularly attractive. A three-year plan to increase trade and develop industry may help to provide raw materials for Germany. Irrigation from Lake Victoria may lead to bigger crops of cotton and coffee. Germany may take more sisal also and if imports from Africa increase, the Asian sources may become less important.

Consultations with Dr Erhard may lead to East Africa's taking advice as well as technical aid. Investment in local ventures may follow if the execution of contracts indicates that East Africa is safe. Germany entered the Sudan after independence and is eyeing hopefully prospects in Burma and Thailand. The setting up of a

sawmill in Burma with German aid is a prelude to help in mining and cement. The East African prospects may, however, be reckoned more important, for Germany has an old connection with the plantations in the country and may be able to bring into being an oilseeds industry with success. The fact that the German republic looks to East Africa instead of South Africa may acquire some significance on account of political changes. But if Tanganyika retains its connection with the Commonwealth, the larger sale of raw materials should help the UK also to some extent.

WHO The Healing Touch

Among the many international organisations set up by the United Nations Organisation, World Health Organisation had come to

occupy the foremost place in its efforts to improve the conditions of the people all over the world. The enormous benefits that have flowed from this agency of the UN were highlighted by Dr A. Lakshman Mudaliar in his presidential address to the 14th meeting of the Assembly in New Delhi recently. This is the first time the Assembly meets in any Asian country. Dr Mudaliar paid a glowing tribute to those, who by their dedicated service, enabled the organisation to spread its message of hope and cheer to the remotest corners of the world and to carry to the people in the distant lands the initiative to put an end to all the conditions that militated against the health and happiness of the people.

The present session, which is well attended by officials and the Experts from more than 100 countries, will review the health projects undertaken in 145 countries and territories and will plan future work in both traditional and new fields in which assistance is required. It is a pity that the work of WHO does not attract as much attention as the conflicts and controversies in General Assembly or Security Council. This is, in a sense, a blessing for the comparative freedom from cold war politics makes it possible for WHO to achieve substantial results. In the Congo, for example, the UN representatives met with a lot of trouble in the political field, but WHO rendered valuable assistance in maintaining the health situation at a satisfactory level.

The WHO acts as the directing and co-ordinating authority of international health programmes. Its activities include rendering assistance to Governments, on their request, in strengthening health services, promoting research in medicine and public health, establishing and recommending international standards regarding pharmaceutical and biological products and health statistics. Besides, it also sets up international health regulations governing travel and trade and encourages exchange of knowledge through technical publications, expert meetings and seminars on health. As a general rule only those countries who contribute to WHO's budget are entitled to its services. But it also provides assistance to non-member countries with the co-operation of the UNICEF.

Despite the fact that the activities of WHO are world-wide, the problems of countries whose standards of health are unfortunately low, naturally attract special attention. Though the problems of these areas are far from solved progress of WHO's work in these regions has been phenomenal. In particular, its malaria eradication programme has been very successful and its efforts at eradicating smallpox is also meeting with success.

India is one of the earliest beneficiaries of WHO's assistance. Soon

after the organisation was set, its help was requisitioned in the Terai area in the Himalayan region, where a resettlement programme met with disastrous failure on account of malarial infection. Since then the organisation's activities have branched into various fields—like control of tuberculosis, leprosy and cancer. The experiments that were carried out recently in Madras reveal that by domiciliary treatment tuberculosis can be controlled and its spread properly checked. Moreover the remedies that have been discovered for leprosy have showed that the obvious manifestations of infection can be cured and by suitable treatment and rehabilitation the unfortunate victims can be restored as useful members of the society.

It can be legitimately asserted that no organisation is so single mindedly devoted to the welfare of humanity as WHO. As avowed by Dr Mudaliar, as the organisation is inspired by these high and noble ideals it will grow in strength day by day by commanding the sympathy and support of all the countries in the world.

JABALPORE

The Mischievous Hand

The outbreak of violence in Jabalpure and other places in Madhya Pradesh is a painful reminder that the blind forces of communal animosity are still powerful in the country. To a nation conscientiously striving to build up an integrated national identity, the wave of mob fury let loose by senseless misbehaviour by some individuals has come as a rude shock. The authorities have acted with great promptitude and quelled the disturbances and brought the situation under control.

At any time President Ayub Khan's reported reflections on the events would have been unwarranted. They are particularly irresponsible when things are returning to normalcy. It is difficult to explain this outburst except on the hypothesis of an unbecoming desire to exploit the situation in order to embarrass a neighbour with whom one has other scores to settle. President Ayub Khan has so long been parading himself as different from the Pakistani politicians he displaced. But his preposterous comparison of events in Madhya Pradesh with the events in the Congo bears a family resemblance to the antics of the former rulers of Pakistan. Simulated concern over the fate of the Muslim minority in India whom he described as "neglected, politically completely neutralised and economically almost finished" has even more disreputable antecedents. His latest outburst goes to confirm suspicions about his tendency to try to bully and placate India alternately. It also falls into pattern with his

PLEASE MAKE YOUR TRUCK TYRES LAST LONGER!

The present maximum output of the Tyre Industry in India is not enough to ensure sufficient truck and bus tyres for the country's needs.

It is not a matter of distribution. Adequate steps have been taken by Tyre Dealers to arrange that such supplies as are available are strictly allocated at our recommended retail prices to those who need them most.

New tyre factories are in the course of construction, and existing units have expansion programs, but it will be some time before supply catches up with demand.

In the meantime, what - ?

We believe that this scarcity—which is a source of continuous anxiety to all of us—can be eased to some degree by every truck tyre user taking all possible steps to get the MAXIMUM SERVICE from the tyres he already has. There are many ways that MILEAGE—and, therefore, LIFE of the tyres can be INCREASED. Here is ONE WAY.

MAINTAIN CORRECT INFLATION PRESSURES AND DON'T OVERLOAD YOUR TYRES

LOOK AT THIS CHART

It shows you how overloading and/or under-inflation destroy mileage—kill tyres—and make the tyre scarcity even more acute.

fishing in troubled waters over the Sino-Indian border issue. If President Ayub Khan imagines that he can embarrass us into appeasing him over Kashmir, he is doomed to further exasperation.

ORISSA

End of an Affair

The collapse of the Congress-Ganatantra Parishad coalition in Orissa will not come as a surprise to those who have been in touch with the politics of that State. Indeed the odd part of it is that it did endure so long. At no time was it anything more than a marriage of convenience; and though the members of the ministry themselves seem to have hoped to give it a past-facts respectability, neither the Pradesh Congress Committee nor the organisational wing of the Ganatantra Parishad appears to have found it a very satisfactory state. When the coalition was thought of, the Congress was in a precarious position in Orissa and the Ganatantra Parishad was not strong enough to speak out as Orissa's true political voice. Dr Hare Krishna Mahatab and the Congress High Command seemed to have swallowed their pride, and come to terms with a party they used to deride as reactionary. The Ganatantra Parishad, for its part was willing to meet them more than half way

by making suitable 'socialistic' gestures. However, the internal pressures within the party seem to have been too powerful for the coalition. Mr Bijoyananda Patnaik has been steadily fretting away the foundations of the coalition for well over a year now and has at last succeeded in destroying it. He has always been of the view that the Congress has been too defeatist in its rating of its chances of success at the polls and in any event it was time that the Congress broke away from the coalition if it wanted to appear before the electorate as a distinctive alternative to other parties in the State. The Ganatantra Parishad has some reasons to complain about the manner and the timing of the dissolution of the coalition. In fact, a few months ago, the Utkal Pradesh Congress Committee had openly declared its intention of ending the coalition after the Budget session. Meantime, however, matters have been brought to a head by the election as President of the Pradesh Congress Committee of Bijoyananda Patnaik defeating his rival who was a supporter of the coalition. The upshot of all this has been to bring about the end of the coalition ministry despite the declared wish of the Congress High Command that the coalition should continue at least till after the presentation of the Budget.

The resignation of the Hare

Krushna Mahatab ministry has created a political void in Orissa and it is not clear yet how the situation will develop. Congress party in Orissa is riven by personal and factitious squabbles. The chances of a Government of congressmen are remote and the only alternative seems to be either President's rule or general elections advanced a few months earlier.

THE PUNJAB

A New Beginning

Mr N. V. Gadgil's address to the Punjab State Legislature was more or less like a progress report on the State's tasks in the Second Plan. Striking progress in multi-purpose projects naturally had the pride of place in the list of achievements. Work on the Bhakra Dam project is progressing at a rapid rate and it has already reached the final stage. Another important project launched in the Second Plan is the one on the Beas. These two projects, when commissioned, will enhance enormously the irrigation facilities and power supply in the State.

The Government has succeeded in rehabilitating the displaced persons following the border settlement between the Punjab and West Pakistan. Steps adopted to provide adequate help and

facilities for the uprooted families have yielded satisfactory results. The introduction of Panchayat Raj has apparently passed off without creating any political complications.

Special emphasis has been laid on generation and distribution of power, flood control and anti-water logging measures, expansion of industries and spread of technical education during the Third Plan period. The target for food production has been fixed at 5.85 million tons as against 5.64 million tons in the Second Plan. The Governor also announced the Government's decision to launch an ambitious project for providing free and compulsory education for the age group 6-11 from next April. A liberal allotment of Rs 5.85 crores has been made in the Third Plan for the expansion of technical education in the State as against Rs 1.7 crores in the Second Plan. This includes a sum of Rs 1.5 crores for extending financial assistance to deserving students by way of loans and scholarships.

The problems of the Punjab have been rendered more difficult of solution because of the political unrest in the State which is diverting the attention of the people from their real tasks. The State is riven by a wholly artificial schism based on linguo-communal bigotry. Now that the Akalis are in a more reasonable frame of mind, efforts should be directed towards making the people conscious of their economic tasks. A holiday from agitational politics may give a chance for the talents of a resourceful, hard-working and self-reliant people.

GUJARAT

A Useful First Year

The remarkable progress made by Gujarat during the first year of its existence was highlighted by Governor Nawab Medhi Nawaz Jung while inaugurating the Budget session of the State Legislature. The Governor stated that the Government has taken adequate measures to ensure that the schemes covered by the Second Plan were successfully implemented. The Third Plan envisaging a total outlay of Rs 244 crores has been finalised. Assistance from the Centre will be to the tune of Rs 122 crores and the remaining amount will have to be raised from within the State.

A liberal allocation amounting to 67 per cent of the total outlay of the Third Plan has been provided for the schemes relating to agriculture, irrigation, power and community development. Land reform measures have gathered momentum. Tenancy laws have been streamlined and the Land Ceiling Bill has received its first reading.

Production of foodgrains during the current season suffered a severe setback owing to devastations caused by

floods, failure of monsoon and locusts. The Government has offered all help to the peasants for increasing agricultural production. Modern methods of agriculture are being popularised by distribution of improved seeds. Already 128 seed farms have been opened and 30 more will be located in the immediate future. More irrigation schemes will be implemented for enhancing the irrigation facilities in the State.

Increased attention is to be paid for the promotion of industries also. The Government contemplates to locate 12 industrial estates with a view to assisting entrepreneurs in starting new industries. The authorities also favour the formation of industrial estates through co-operative societies and private corporations. A State Advisory Council of Industries has been set up for advising the Government an industrial policy.

The inadequate facilities existing in the education field, particularly in technical education and women's education, has attracted the attention of the Government. To provide more opportunities for imparting technical instruction to the deserving candidates, Government has decided to start another engineering college, three polytechnics and seven industrial training centres. A special programme for women's education will also be introduced in the Third Plan.

The Governor has presented an array of facts and figures regarding the co-operative movement in the State. But, how far they have benefited the poorer section of the society is not clear. The Governor has recalled with gratitude the enthusiasm shown by the people and the efficient manner in which the authorities have handled the problems that cropped up in the wake of the birth of the new State. The initial difficulties have been overcome and the administrative machinery is geared to its new tasks and the people at large are fired with an enthusiasm for a State they have long fought for. The Third Plan is thus off to a flying start.

NEIGHBOURS

No Common Ground

The Indian and Chinese teams which were holding high level talks on the border question have, as the report submitted by the teams have made evident, failed to discover any common ground for agreement. The report has brought to light wide divergence of views between the two teams on where the Sino-Indian border lies. But the Indian evidence assembled in the report in support of our stand is impressive qualitatively and quantitatively and exposes the lack of objectivity and consistency on the part of China on the border question. It is noteworthy that while in his talks with Mr Nehru in 1956 Mr Chou En-lai expressed his Government's desire to recognise the McMahon Line,

IBRD

From Strength to Strength

The International Bank for Reconstruction and Development has reported that its reserves had risen by \$47.6 million in the first six months of the current financial year to a total of \$556.5 million.

The additions to reserves in the six-month period ending 31 December 1960 are made up of net earnings of \$33.4 million which were placed in the Supplemental Reserve against losses on loans and guarantees, and loan commissions of \$14.2 million which were credited to the Special Reserve. On 31 December the Supplemental Reserve totalled \$377.4 million and the Special Reserve was \$179.1 million.

Gross income, exclusive of loan commissions, was \$83.3 million. Expenses totalled \$49.9 million and included \$42.9 million for interest on the Bank's funded debt, bond issuance and other financial expenses.

During the period, the Bank made 12 loans totalling \$292.4 million—in Colombia, El Salvador, India (two loans), Israel, Japan (two loans), Mexico, Norway, Pakistan, Panama and Peru. This brought the total number of loans to 277 in 54 countries and raised the gross total of loans signed to \$5,473 million. By 31 December as a result of cancellations, repayments and sales of loans, the portion of loans signed still retained by the Bank had been reduced to \$4,062.5 million.

Disbursements on loans were \$180.2 million, making total disbursements \$4,101.4 million on 31 December.

The Bank sold or agreed to sell the equivalent of \$83 million principal amounts of loans. At 31 December the total amount of such sales was \$894 million, of which all except \$69 million was without the Bank's guarantee.

Repayments of principal received by the Bank amounted to \$48.6 million. Total principal repayments amounted to \$747.5 million on 31 December; this included \$386.5 million repaid to the Bank, and \$361 million repaid to the purchasers of borrowers' obligations sold by the Bank.

The funded debt of the Bank amounted to \$2,158.4 million on 31 December 1960, reflecting a net increase of \$85.4 million over the past six months. In this period new bond issues and private placements of Bank obligations amounted to the equivalent of \$167.8 million. They consisted of a public bond issue of Sw fr 80 million (\$14 million) and three private placements: a \$30 million 4% Three Year Note; \$100 million of 3½% Two Year Bonds; and \$23.8 million of 4½% Bonds of 1960,

due 1968-72 (DM 100 million drawn down under arrangement made in August 1960 to borrow DM 500 million). Outstanding debt was increased a further \$32 million as the result of delivery of \$4.2 million of bonds which had been subject to delayed delivery arrangements, the drawing down of an additional \$23.8 million equivalent from the Deutsche Mark borrowing of December 1959, and the revaluation of outstanding Canadian Dollar Bond Issues by \$4 million. Funded debt maturing amounted to \$105 million, and sinking

and purchase fund transactions amounted to \$9.4 million.

Pursuant to the increase in the authorized capital of the Bank from \$10 billion to \$21 billion on 15 September 1959, 60 members have doubled their subscriptions and 27 members have subscribed to \$1,359.9 million in addition to their 100% increase. In November and December 1960, Cuba and the Dominican Republic withdrew from membership in the Bank. The subscribed capital of the Bank amounted to \$19,902.2 million on 31 December 1960.

SUMMARY OF INCOME AND EXPENSES.

	In Million Dollars

THE INDIAN BANK LTD.,
(Head Office: FIRST LINE BEACH, MADRAS-1.)

the Chinese have now staged a volte face and have described Nehru's report of the 1956 talks with Chou En-lai as a distortion. It is also characteristic of the shifting attitude of the Chinese that they should seek to give new interpretation to earlier Chinese stand on the question of India's special relations with the principalities of Bhutan and Sikkim. India's special relations with these countries were presumed to have been recognised by China in the light of Chou En-lai's earlier assurance to Nehru. However,

the Chinese team even declined to discuss the question of demarcation of the boundaries of these countries with the Indian team on the ground that Chou En-lai's assurance implied only recognition of "proper relations."

That there can be no prospect of an early settlement of the question should be clear from the lack of regard shown by the Chinese to objective data presented by the Indian side. Throughout the discussion, the Chinese have been harping on the need for a fresh delimitation of the bound-

aries without reference to the strength of evidence against the need for any such delimitation. For, the Indian team has conclusively proved with a mass of historical material that the long traditional boundary shown on Indian maps was clear and precise, conformed to unchanging natural features, had support in tradition and custom as well as in the exercise of administrative jurisdiction right up to it, had been recognised for centuries and had been confirmed in agreements. For all the three sectors, the Indian team was also able to point to treaties to prove Indian rights. For the western sector there were the treaties dated 1684 and 1842, for the middle sector there were communications of 1819, 1914, and 1950 and also the agreement of 1954, and for the eastern sector there was the formalisation of the boundary in 1914. The Indian claims as the report shows, are further strengthened by the evidence contained in the writings of Chinese, Tibetan and English authors. It is, however, interesting that while on the question of the eastern sector and the Mc Mahon Line, the Chinese deny Tibetan rights to have direct dealings with India or Britain, they rely on Tibetan records to advance their claims on the western sector. In the light of the evidence that is recorded in the report, it is clear that the Chinese are not keen on a peaceful settlement of the problem. The report is valuable for what it reveals about the working of the Chinese mind on the border issue and exposes the expansionist ambitions of the People's Republic of China.

RECONNAISSANCE World Bank

The World Bank's fact-finding Mission has been touring the country for over two months and was in Madras recently. Its purpose was to inform itself of the progress made by India in its efforts at economic development and to sort out the pattern of further assistance from the Bank. Mr G. Stewart Mason, the Leader of the Mission indicated in Madras last week the way the mind of the Mission was working on the subject. He said that plans of national character would get preference. This accords with the policy of the World Bank in the past as witnessed in their interest in railway and port developments. Mr Mason also indicated that the Bank would continue to take interest in Madras port development. This is interpreted in Madras that further loans besides the 14 million dollars already made for the development of the Madras port will be available.

Explaining the Bank's tentative ideas on priority, Mr Mason said that the Mission was interested, first, in agricultural projects. Strengthening of the road system came next and then came power

projects. The World Bank is also interested in providing assistance for equipping private mines and this subject is likely to be discussed by the Mission with the Joint Working Committee of the Mining Federation. The Bank's assistance is also likely to be available for road development—national highways getting preference—and minor irrigation and tube-well schemes in the agricultural sector. Mr Mason made mention of the Bank's readiness to finance private industry. This will be done through the agency of the Industrial Credit and Investment Corporation of India, which has so far distributed about 40 million dollars by way of loan to small industries. The World Bank's line of credit to the ICICI is expected to be further extended. Official circles in Madras are hopeful of World Bank assistance for Parambikulam project included in the Third Plan.

Italy

The Italian Trade Mission was in Madras recently in the course of their tour of the country. It discussed with private entrepreneurs and officials the possibility of increasing and improving the opportunities of trade between India and Italy. One of the questions often raised in this discussion by Indian entrepreneurs was the possibility of long-term Italian credit to India. Mr Emilio Battista, leader of the mission indicated some of the difficulties in the way of such credits. He pointed out that the Italian law still prohibited long-term credits to other countries. However, he was confident that steps will be taken to increase Indo-Italian trade in the near future. This trade at the moment is not as extensive as it could be. According to one source the total exports from India to Italy for the year 1959 was Rs 5.69 crores and the imports from Italy to India stood at Rs 25.86 crores leaving an adverse balance of Rs 20.17 crores. Commodity-wise the chief exports to Italy have been coffee, tea, spices, hides & skins, leather goods, etc. The volume of this export has been erratic and the possibility of increasing the quantum of export of hides & skins and leather goods was discussed in Madras by the Mission. From about Rs 9 lakhs in 1957 the value of exports of tanned leather goods has gone up to about Rs 75 lakhs in 1960. At the same time, there has been a progressive fall in the quantum and value of exports of undressed hides and skins. The comparative success in the export of leather goods is attributable to the reduction in export duty from 13 to 5 per cent. Mr Nagappa Chettiar, Vice Chairman of the Leather Export Promotion Council, suggested that the insignificant levy of 5 per cent duty be abolished in the interest of increased export of this commodity.

Possibilities of absorbing in an increasing measure Italian technical skill by collaboration were also

Indian Finance

25 February 1961

explored in the course of personal and informal exchange of views. Italian collaboration in South India in aluminium industry is already known. There is a possibility of the mission discussing manufacture of small cars in India. It is understood that Fiat Motors have already submitted final plans for the manufacture of a low cost car on the lines suggested by the Government of India. A decision on this, will of course, depend upon the number of related matters including other designs submitted by other parties.

Australia

Mr G. M. Carr, the Australian Trade Commissioner in Bombay was in Madras recently and discussed problems of mutual interest with members of the Chambers of Commerce here. Among the subjects that came up was the lack of direct shipping between India and Australia which was a serious handicap in the development of trade between the two countries. The possibility of increased Australian assistance in the form of supply of capital goods was also discussed. Mr Carr referred to the most significant recent news item relating to Indo-Australian Trade. The Australian Aluminium Production Commission has signed a long-term contract with the Bombay Mineral Supply Company Private Limited, for the supply of bauxite to Bell Bay, Tasmania. The contract, was negotiated through the State Trading Corporation. This, by the way, is a sphere of activity of the STC that deserves grateful recognition by the private sector. The contract will ensure regular supply of bauxite to Australia from the bauxite deposit of Saurashtra. Meantime, Australia is providing 13200 tons of Sulphate of Ammonia valued at 339,000 Australian pounds under the Colombo Plan. Total Australian assistance upto the end of December 1960 was over 12 crores, all of which, it is interesting to note, is in the form of outright grants. The assistance was utilised largely for agricultural and dairy projects, and, for purchase of rail wagons and diesel rail cars. Another matter for gratification is that this assistance has been almost fully utilised. It is expected that during the Third Plan period collaboration between India and Australia will increase even more significantly. Trade potentialities should also be exploited more fully in the coming years.

RAILWAYS Projects Ahead

The memorandum issued with the latest Railway Budget makes it plain that of the Rs 260 crores to be spent in 1961-62 only Rs 48.31 crores represents outlay on new lines. The distribution of expenditure as between Depreciation Fund and Development Fund is linked with current ac-

counting procedure. The bulk of the outlay, Rs 216.54 crores, is only meant to continue work in progress. This includes Rs 67.88 crores on rolling stock, including Rs 17.96 crores on locomotives and Rs 26.57 crores on wagons. The greater part of the supplies will be got at home. This means more demand for steel, and good business for engineering concerns, though it is said that profits may be limited by the procedure adopted.

The completion of the Khandwa-Hingoli branch (linking north and south by metre gauge) at a cost of Rs 12.5 crores is perhaps of less interest than the replacement of the Baraset-Basirhat and the Bukhtiar-pur-Rajgiri lines by new broad gauge sections on the Eastern Railway. An extension from Robertsganj in the UP to Garhwa Road is one of the Northern Railway schemes similar to the one from Ghaziabad to Tughlakabad. The Dandakaranya Project, is to benefit by projects to be finished in 1962. The ore export trade is a sufficient reason for the three projects in hand.

Electrification of the Durgapur-Gaya branch may lead to a saving in coal but fuel economy is not the main reason for the Howrah-Kharagpur electric traction scheme. The quicker movement, vital for industry in Calcutta, is a compelling argument at present. So is the track improvement on the Southern Railway to accommodate the longer and heavier trains. The expansion of the Chittaranjan Loco works to include a steel foundry calls for mention, as also the provision made for the loco components factory at Varanasi at an anticipated cost of Rs 4.8 crores. The memorandum may interest contractors even more than engineering concerns, but the main point is that some capital at charge is going

up, the Railways must earn more in order to spend more.

OIL Great Expectations

The reported statement of the project administrator in the Rudrasagar area of Assam about the existence there of commercial quantities of oil has been dismissed as a premature estimate by Mr K. D. Malaviya, Union Minister for Oil. The project administrator's report was based on the result of drilling one well and it has been pointed out by Mr Malaviya that conclusions about quantitative aspects of possibilities at such early stages are likely to be misleading. While it is necessary to be cautious in the estimate of oil reserves from unproved sources, the fact that one well drilled has shown traces of oil should invite more efforts for ascertaining possible quantum of oil reserves. Import of oil makes large drafts on our meagre foreign exchange and apart from Naharkatiya and Cambay areas, there are as yet no other possible sources from which oil could be produced in commercial quantities. Further, the additions from Naharkatiya and Cambay to the country's total production would go only a small way in meeting the growing requirements: the gap in terms of crude oil by the end of the Third Plan will be something like 9 million tons. In this context, the negotiations now being carried on by the Government of India with the foreign oil companies for oil exploration is to

be welcomed as a heartening development. It has been learnt that the ESSO Standard Eastern of the USA and the State-owned Italian Oil Company, "Ente Nazionale Idrocarburi" two leading foreign oil companies have sought exploration rights in the Jaisalmer area of Rajasthan, Kutch and Gujarat. Differences between the Union Ministry for Oil and the foreign companies on the terms for participation in exploration seem to be holding up a deal. The Government's terms include reasonable participation in the share capital, non-commitment in respect of refining and marketing of oil to be found by the foreign explorers and a higher ratio of profits than the traditional 50:50. While the Union Ministry considers the terms as reasonable, the companies would seem to feel that in view of the royalty to be paid to the State Governments, independent of any share to the Centre out of the profits of crude oil production, the latter should not insist on more than 50 per cent. Whether the foreign companies would accept the terms of the Union Government remains to be seen. But about the need for foreign help in oil exploration there can be no doubt. Both in technical know-how and financial resources, the Union Ministry is ill equipped for early and thorough exploration of oil bearing areas which is spread over more than 40,000 sq miles.

The potentialities of Cambay and Ankleshwar have now been fairly well assessed and experimental production is expected to be started in October. It has, in this connection, been stated by Mr Malaviya that about 25 million

cubic feet of gas per day would be produced in these areas. This would also make it possible to start gas based industries such as fertiliser and carbon industries.

UNIVERSITIES Indifferent Performance

The report of the University Grants Commission for 1959-60 contains enough warnings and predictions about higher education in India. The increase in the number of Universities to 40 and the addition to the number of colleges and students do provoke many fears and doubts. A comparison with Israel that has only three Universities at present is scarcely justified, for Israel has immigrant talent in plenty. The fact that Quebec has two Universities, one offering courses in French, is hardly a parallel. But the indiscriminate expansion purely for reasons of regional loyalty or prestige is wasteful of scarce funds. The UGC points that transport, public health and

housing require more urgent attention than, for example, rural universities.

There is also the point that the products of Universities are of indifferent quality. The first consideration is efficiency and future investment must be guided only by results. Upgrading of salaries to get the best staff possible needs only brief but approbatory mention. Grants for libraries are far more appropriate than for opening new courses leading to diplomas of doubtful value. Though argument over the language of college education has interfered with normal progress, the retention of English is so widely favoured that a special study group appears superfluous.

The approval of correspondence course leads one to ask whether the tutorial institutes present or projected can come up to expectations. The autobiography of H. G. Wells refers to William Briggs and the University Tutorial Press as a model for those with ideas of self-improvement. As at present, tutorial institutes are very far from approximating these two famous blessings of the poor with intellectual hunger.

TARIFF INQUIRY Titanium Dioxide

Though the titanium dioxide industry has made considerable progress in the last few years it has been in existence, if appears that it will take some few years longer for it to stand on its own legs. The tariff protection it has been enjoying for the last seven years has had a big part to play in the commendable headway it has made, and the industry has asked for continuance of protection for another three years from 31 December, 1961, when protection is due to expire. The industry is as yet of small dimensions, comprising only one unit with a current capacity of 2,947 tonnes per year. But it is growing fast. The existing unit is already well advanced in its expansion programme which, when completed, will give it a capacity of 3,658 tonnes. A new unit in Maharashtra has recently been licensed to produce 4,471 tonnes of titanium dioxide. When the two units go into full production, the total capacity is expected to increase to 11,075 tonnes by 1963. As the Deve-

lopment Wing estimates the annual domestic demand by 1964 at only 9,144 tonnes, the building of capacity sufficient to meet internal demand may not present much of a problem in the next three or four years. But till the additional capacity already sanctioned is put up, imports have to fill the gap. In this connection it is also to be noted that it may be profitable to plan even now for a considerable expansion of the industry as it is possible that titanium dioxide can be used in place of other white pigments which are now imported. The immediate objective, of course, should be the meeting of the domestic demand in full. Mr K. R. P. Aiyangar, Chairman of the Tariff Commission, has pointed out that it should be possible for the industry to think in terms of export as well considering its geographical advantages for raw materials and technical know-how it has already secured. As a product used by the paints, rubber and textile industries, titanium dioxide will be in increasing demand internally. Given good quality and competitive prices it can win overseas markets also. Qualitatively the indigenous titanium dioxide seems to have met with passable success though consumers are not prepared to accept it as completely free from defects. It is imperative that the domestic product attains a standard of excellence that will make it an acceptable substitute for the imported variety. Good quality titanium dioxide will also be able to find its way into foreign markets easier.

BOLTS AND NUTS Idle Capacity

Every industry has its quota of problems these days and they are of a pattern. Transport difficulties and scarcity of raw materials are the most usual complaints. The bolt and nut industry, has, besides excess production capacity. Though one of the oldest engineering industries, it was only during the last world war that it showed rapid growth. Its capacity which was of meagre proportions before the war had expanded to 30,000 tons by the end of the war. Since then its development has been even faster and today its capacity is about 97,000 tons. This does not include an estimated 25,000 tons accounted for by the small scale sector.

According to Mr K. L. Chowdhary, president of the Indian Bolt and Nut Manufacturers Association, the industry is troubled by the unplanned expansion of capacity. Attracted obviously by the bright prospects for bolts and nuts in the inter-war and post-war years, entrepreneurs had gone about setting up plants without much thought either for the quality or the potential demand for the products they intended to manufacture. The enthusiasm of State Governments for small industries has perhaps further complicated the position.

25 February 1961

It is time something was done about this idle capacity. Not much can perhaps be done to reduce capacity already created thoughtlessly, but further accumulation of idle capacity can certainly be stopped if there is coordination between the State Governments and the Centre. Mr Chowdhary referred to the tendency among State Governments to want sufficient number of units of the industry to meet the demand in their regions. This is to be discouraged if only to ensure that the industry as a whole does not suffer serious financial losses.

Mr Chowdhary pleads that permission should not continue to be granted for the import of bolts and nuts to the extent of 24 per cent as at present in view of idle domestic capacity. In the absence of full information on this point it is not possible to assess how far this is reasonable or practicable. Imports may have been necessitated by special requirements. But where no such considerations operate, the case for banning imports is strong both on general grounds of foreign exchange conservation and on special grounds of the needs of the industry. But the picture is not all bleak. The industry has cheerful news on the export front. From about Rs 33,000 in 1958, export earnings have sizably increased to Rs 4,67,577 in 1960. The foreign off-take can be further increased if our products can compare favourably with competitors' products both in quality and price. Given concerted action and strict quality control there is no reason why the excess capacity which is now idle should not be utilized to produce more for export.

MADRAS Techno-Economic Survey

The main feature of the economy of Madras that is brought out in the Techno-Economic Survey conducted by the NCAER is its relative poverty of material resources of development. In spite of a well developed agricultural base, crop yields well above the all-India average and a head start in industrialisation, per capita output in the State is 13 per cent less than the figure for India as a whole. The per capita output of Madras in 1955-56 works out to Rs 227 against Rs 261 for all-India. The incidence of unemployment and underemployment is among the highest in the country. The pressure on land is exceptionally heavy. The density of population is twice that of all-India. The State has already reached the limit of exploitation of its irrigation and power potential. The State has no mineral resources, to speak of. The centres of coal and iron ore are located far away in the North and supplies are hampered by chronic transport difficulties.

Nevertheless, the report indicates the possibility of overcoming the handicaps by the adoption of a suitable strategy of economic development, with emphasis on skills rather than on resources. The report has suggested a list of 'candidate industries'—large, medium and small—which can be established in the State given adequate transport and supply of power. Apart from the industrial centres of Madras and Coimbatore, the report envisages the emergence of three nuclei of industrial growth—the Neyveli (fuel-cum-chemical) complex, the Salem (iron and aluminium) complex and the Tuticorin (marine chemical) complex.

The investment required to carry through the suggested programme of agricultural and industrial development is placed at about Rs 1,600 crores over the next ten years. This will enable the State to increase the net output by 56 per cent and per capita output to roughly Rs 361 by the end of the Fourth Plan. Out of the total investment of Rs 1,600 crores, Rs 950 crores would be in the public sector, the State's share being Rs 680 crores. The State, it is expected, would be in a position to meet its share of the cost of the suggested development programme, if central assistance is forthcoming on the same scale as during the First and Second Plans, when it was approximately equal to the State's own financial resources.

The shortage of power that is likely to develop even before the end of the Third Plan and lack of new sources of irrigation emphasise the need for inter-zonal co-operation. Recent attempts in this direction have not been conspicuously successful. It is as well to recognise that inter-zonal development of irrigation and power has to rest on a basis of mutual advantage that is equally evident to all the States concerned. It is to be hoped that the Techno-Economic Surveys of the other States in the Zone, which the NCAER has undertaken, will identify these economic bases of fruitful co-operation.

USA In Two Minds

As was to be expected, proposed US membership in the projected 20-nation Organization for Economic Co-operation and Development (OECD) has elicited both support and opposition in strong measure.

The Senate Foreign Relations Committee is conducting public hearings on US adherence to the OECD convention. As a treaty, the convention will require a two-thirds majority vote of the Senate for ratification. It is scheduled to become effective in September 1961, with the requisite ratification of the governments concerned.

In support of the convention, government witnesses have stressed the importance of OECD to economic relations among the free nations. The new body in effect would succeed the Organization for European Economic Co-operation (OEEC), made up of 18 Western European nations and

concerned primarily with intra-European questions. OEEC would now bring into full membership these 18 nations, plus the US and Canada.

Basically, OECD has two chief goals. One is the promotion of policies designed to attain and to maintain the highest sustainable rate of economic growth and development among its member nations and around the world. The second and related objective is the expansion and improvement of financial and technical assistance to developing lands.

OECD could well serve to stimulate an enlarged flow of trade around the world on a multilateral and non-distributive basis. However, as government officials have pointed out in the committee hearings, trade matters expected to be dealt with by OECD will involve largely problems between Europe's two trading groups—the six-nation common market and the seven-nation European Free Trade Association.

Thus, the new organization would have nothing to do directly with tariff-making, or with the establishment of broad international trade codes. These, in the US view, are properly to be advanced within the framework of the 38-nation General Agreement on Tariffs and Trade (GATT).

Nevertheless, it is this question of trade around which most of the opposition to OECD seems to be centered. Groups and individuals with protectionist leanings have charged, for instance, that US participation in OECD would reduce the tariff-setting authority of Congress. Much of this authority has been delegated to the President under the Trade Agreements Act for specified periods, and it is under this act that the US participates in GATT.

In answer, government officials have pointed out that not only will OECD not involve itself with tariff setting but that it carefully recognizes the constitutional requirements of the US. As a matter of fact, decisions of OECD will be by unanimous vote, giving the US or any other member ample opportunity to establish any strong objections to a proposed action.

On a more positive plane, OECD presents rather promising possibilities for relaxation of member nations' balance of payments difficulties. This could well be the result of a closer co-ordination of the economic policies of the 20 member nations.

As one example, Secretary of Treasury Douglas Dillon told the Senate Committee that co-operation and co-ordination between US and European monetary authorities could have helped alleviate the seriousness of the US payments deficit last year. That deficit was fed by the gap between the higher interest rates in Europe and the lower interest rates in the United States, which had the effect of sucking short-term assets out of New York and into financial centres in Europe.

This is not to say that all imbalances would necessarily disappear as a result of OECD's operation. However, as economic expansion and the international flow of aid and other capital accelerate, and as the trading world becomes increasingly accustomed

to dealing with convertible currencies, the desirability of a forum such as OECD could become increasingly apparent. These are points that proponents of OECD are hoping to get in public discussions, such as the current Senate Committee hearings.

INDUSTRIAL INDIA Scindia Steam

The shareholders of Scindia Steam Navigation who have already seen the results for the year ended June 1960 will derive some satisfaction from the Chairman's assurance that tonnage carried is rising and there is now an agreement among shipping lines to rationalise freights. Apart from the complaint that coastal trade is stagnant, and competition is keen, the Chairman has made it clear that the slow expansion of shipping in India is a problem as much for the Government as for the Company. The increase in overseas trade by the addition of new, efficient vessels will probably assist a recovery in income. Indian shipowners are convinced that the real problem in India is not surplus tonnage but the indifference of shippers to the needs of the national shipping industry. The performance of Scindia Steam in a difficult year offsets the usual calculations based on the provision of dividend from the general reserve. Though shipping shares are neglected at present, there is in the speech enough to convey the impression that Scindia Steam, as a share with a resounding record, will come again to the foreground, even like BIC whose shares have improved rather sharply after the end of 1960.

Simon Carves

The speeches delivered by Mr D. T. Baritt, Joint Managing Director and Mr H. Pratt, General Manager, Simon-Carves Ltd, on the occasion of laying the foundation stone of the new office building at Transport Depot Road recalled the long association of the Company with industrial development in India. Since 1908 when the Company built the first coke oven battery at Giridih for the East Indian Railway, it has built well over 1,000 coke ovens with a total carbonising capacity of approximately six million tons of coal a year. The company has also expanded the scope of its activities to cover diverse aspects of modern steelworks and has lately added new specialities such as nuclear power plants, and fertiliser plants. The participation of Simon-Carves as one of the consortium of firms in the ISCON in the building of the Durgapur Steelworks is, of course, well-known.

The speakers also referred to the establishment of the Company's Drawing and Design Sections. When these sections are fully established, the Company will be in a position to execute most of the design work in India. The Company will provide increasing opportunities for Indian nationals to acquire experience and knowledge of the various specialities of the Company.

IN ASSOCIATION WITH B.O.A.C. AND QANTAS

The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosene, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates

that demand for Kerosene will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that,

for tomorrow's needs we must act today

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

DR ROY'S Budget speech was a tour de force of sustained argument in which he used every resource, overt and hidden, open to a persuader. It is with the virtuosity of his performance rather than with the validity of his conclusions that I shall concern myself here. (Elsewhere in this issue, you will find the latter examined in some detail.) There was much good sense in it, a little rallying and a little bullying, and some pointed advice to the Third Finance Commission. Dr Roy used statistics deftly and on the whole justly and there were portions of his speech which many another State Finance Minister would enviously wish he had written. The Centre comes out of it all rather bruised and the Planning Commission pretty battered. The Centre is told pleasantly but firmly that it is only a residuary legatee of revenue nominally central, and that it is, in another sense, only a bailee for the States. A distinction is to be made between grants-in-aid and the sharing that is done, "as of right." Dr Roy's little excursus in the constitutional field was again directed at a Centre that was probably taking too much for granted. And as for the Planning Commission, it was delightful to watch Dr Roy wielding the very weapons that it has forged for use in other contexts. Pessimism about resources, for example, is scouted by the Planning Commission in its more extravagant moods, by reference to higher index of production and buoyant revenues. Dr Roy points to the same to prove that the Centre is underestimating its share of assistance to the States. Again, I don't know whether I am singular in seeing a certain element of irony in Dr Roy's detailed discussion of the half a dozen criteria formulated by the Planning Commission for a project's inclusion in the Plan. What Dr Roy does is very simple and very effective. He takes the Planning Commission at its word and totes up the cost of projects that indubitably qualify in terms of the criteria erected and arrives at the figure of Rs 341 crores. He is then able to turn round and say how "arbitrary" the Planning Commission is in slashing this to Rs 250 crores. This operation-reductio-ad-absurdum is rendered somewhat easy by certain inherent contradictions in the criteria themselves. Indeed, such contradictions are the central

dilemma of planning on scarce resources. Planners are easy targets in a situation in which competing urgencies are to be accommodated willynilly. For example, it is obvious that "deriving full benefits from assets and services already created" may conceivably stand in the way of "developing sectors that are lagging behind." In the national context, these two criteria may pull in different directions—a consequence that Dr Roy is quick enough to spot. He says with some justice that "diversion of resources from naturally favourable areas to less favourable areas by artificial means is fraught with the risk of reducing total output." This does not, however, prevent him from using the latter criterion in his reckoning of the needs of the "less developed sectors" in West Bengal itself! And Dr Roy is not wrong in ignoring this "inconsistency" any more than the Planning Commission is, for the simple reason that it is inherent in the situation. Were we to be strictly logical, we should give up planning, for by a parity of reasoning, foreign capital should flow elsewhere rather than into India. Indeed, there are people in the West who argue along these lines, though their number is mercifully small.

Not many find it in their hearts to grieve for the Communist party's ideological and other embarrassments. For over a year now, it has been trying to square the circle with comical results for the onlookers. But it must be wearing business for the members themselves, especially when they have to pretend that it is a geometrical possibility. First, there is the Sino-Russian ideological wrestling in which the betting has to be pretty close. I find that Edward Crankshaw has come by a transcript of the proceedings at Bucharest on the basis of which he conclusively proves what has long been suspected—the bitter Sino-Russian clash that preceded the final triumph of the Khrushchev line. Even now the Chinese are putting a gloss on the final resolution that must be maddening to Khrushchev. Nearer home, the Chinese have put the Indian communists in a spot and split them in two. And there can be little doubt that the internal convulsion has cramped their agitational style more than somewhat. Though the broad outlines of the schism are

known—Bengal and the Punjab and The New Age standing for Peking's infallibility and Maharashtra standing closer the national mood in considering the Chinese blatant aggressors—it is difficult to be sure which front will be presented to the public. At one time it seemed that the pro-Chinese faction was on the defensive. Later it was reported that Dange was in disgrace. Now apparently the honours are even and the policy makers have come out with an equivocal suggestion that talks should continue. Holding the scales rather ostentatiously even, they have refused to evaluate the evidence that the two sides have collected. Meantime, the party has other more urgent worries. Membership is falling off, according to one estimate, by about a fifth. With the elections just round the corner, it is a parlous situation for a party to find itself in.

A don's idea of paradise, as some one has or must have said, is Oxford without undergraduates. Professors at Oxford, at least the touchier among them, have been finding their pupils an infernal nuisance and a distraction from the more serious business of electioneering. (There is a four-cornered contest for the Chair of Poetry being bitterly fought at the moment.) Meantime, the undergraduates have been needling the proctor, who has been obliged to "kill" a series of reviews on

university lectures in the suitably sneering manner of the weekly journals slated to appear in the Isis. The subversive nature of the project is obvious enough: and though hearts are doughty at Oxford, skins are apparently thin. In India, it would have led to a professors' strike. I know of at least one professor who considered questions an impertinence. Students here may, on general principles, approve of the undergraduate action and may even be moved to burn the effigy of the proctor in front of the British High Commission. But they would be less ready to sympathise if they knew that in that blessed abode, lectures are compulsory for professors and optional for students! What, they might ask their comrades (in more senses than one) across the sea, are you beefing at? You can drop a lecture, can't you, if you wish—which is more than what we can do here.

Though nothing like a week-end dissection of one's lectures bothered earlier generations of dons, they had apparently their share of trouble. Not all had the built-in defence against a bored audience that the Warden of New College, the redoubtable Dr Spooner had. In his eyes, weary benches appeared as beery wenches. But even he, the gentlest among men and dons, was once moved to protest against undergraduate indifference. Only, in his exasperation, he said more than what he meant: "You have hissed all my mystery lectures. In fact you have tasted two whole worms. You must leave Oxford this afternoon by the town drain."

Tax and Private Investment Studied

In 1957 the National Council of Applied Economic Research brought out a study on Taxation and Foreign Investments. It has recently brought out a companion volume dealing with Taxation and Domestic Private Investment. The findings of the study have received wide publicity and have been commented upon from various angles. The comments naturally concentrate on specific recommendations. The NCAER, however, considers that for a proper appreciation of the implications of the recommendations, these should be viewed against the scope and the underlying assumptions of the study.

The scope is defined by two basic assumptions, which were repeatedly stressed by Dr P. S. Lokanathan, Director-General, NCAER, at a Press Conference last Monday. First, the social ends of our fiscal system should be clearly recognised as part of our concept of a socialistic pattern of society which has become an accepted goal in India. Secondly, since the private sector will continue to play a significant role in our present mixed economy, no fiscal system should operate in such a way as to militate against its efficient working. Starting with these assumptions the study sought answers to two major questions: (1) Is the tax system as a whole operating so harshly as to have seriously impaired the capacity and incentive to invest? (2) What are the specific features of the tax system which tend to militate against the growth of savings and investment in the long run, and how can they be reformed, without prejudice to the socially agreed goals, so as to enable the economy to function more efficiently?

Managing Director.

One of the main findings of the study is that, in spite of the higher tax burden imposed in recent years, the incentive to invest of businessmen has not been materially affected. The adverse effects of taxation seem to have been offset by a number of favourable factors. The National Council has, therefore, pointed out that "on the whole, the tax-expenditure programmes of the Government, taken one with another, have afforded the scope for, and in fact probably helped achieve, a rate of growth of the private industrial sector that can be generally considered satisfactory in terms of the targets set under the First and Second Plans". In the light of the evidence examined, the Council did not find much force in the contention that incentives in the private sector as a whole have been seriously impaired or that the sources of supply of funds are drying up. Accordingly the National Council did not feel it necessary to recommend any major change in the tax system; on the contrary, it broadly accepted the basis and structure of the existing system.

At the same time the study has pinpointed certain disquieting features in the situation. The rate of savings in the economy has obviously not been keeping pace with the rate of investment. Even the savings of public and private limited companies do not exhibit a definite upward trend. Signs of buoyant expansion are not evident in all fields. Capital formation by big public limited companies has not been rising at an increasing or even a steady rate.

The study also points out that, in spite of the more or less steady increase in tax revenues, the savings of Government have been declining. Government savings currently finance only a very small portion of Government net investment. The Council considers that, in the coming years, a large part of public investment will have to be financed by private savings.

Particular aspects of the tax system have been examined against the background of the findings set out above. While recognising that the virtual ceiling on wealth-holding imposed by the combined operation of income and wealth taxes, is in keeping with, and substantially helps to achieve the objectives of keeping inequalities within socially defined limits, the Council has stressed that the ceiling should be consciously chosen after full deliberation, as the disincentives to saving make themselves felt as soon as disposable income begins to diminish. At the same time the Council has discarded the plea of some businessmen that there should be a ceiling of 80 per cent of income placed on the total direct taxes paid by an assessee. Such a step, it is pointed out, would mean that the very wealthy would

pay little or no wealth tax; moreover, any such tax ceiling would prevent the tax system from checking indefinite accumulation. The ceiling of 100 per cent to be applied only to income and wealth taxes, which has been suggested by the Council, is not open to these drawbacks. It has also been suggested that reduction of inequalities without imposing handicaps on economic growth can be achieved through progressive death duties rather than income taxes.

In the realm of corporate taxation, the National Council has expressed the view that the basic corporate tax at 45 per cent is eminently fair and reasonable, and recommended only marginal changes. One is the abolition of tax on bonus shares, which penalises a company which accumulates more and distributes less. The application of the tax to capitalisation of share premium accounts, it is emphasised, is even more illogical, because the Government itself insists on the issue of shares at a premium. The Council has also recommended some reduction in the tax on inter-corporate dividends in order to encourage both foreign and domestic investment through corporate device. Another recommendation is that a degree of flexibility should be introduced in the administration of Section 23-A of the Income-Tax Act, to take account of the special problems of the small and growing enterprises, which need for the growth of honest and legitimate business a higher retention of profits than is permitted by law.

The implementation of the reforms, the Council feels, would not involve any substantial loss of revenue. Moreover they can be introduced gradually. The present report has not gone into the question of increasing or reducing the quantum of resources to be raised through direct taxes, but has concerned itself particularly with such readjustments as would make the structure of taxation more in keeping with the requirements of growth. The Council has not ruled out suitable adjustments in the basic tax rates, as for instance in the capital gains tax, if there is imperative need to raise more revenues in the immediate future.

Foreign exchange resources for the Third Plan and Government's policy and procedure on joint ventures were among the topics discussed by the Committee of the Federation of Indian Chambers of Commerce and Industry, when they met officials of the Ministries of Finance and Commerce and Industry on 15 February. On the next day a new organisation—The Indian Investment Centre—which has set before itself the task of clearing the lines for foreign investments was inaugurated by the Finance Minister, who described it as "one of the most important steps for fulfilling our task" of economic development of the country. He spoke with enthusiasm of the great contribution he expected of the Centre towards lightening his work as Finance Minister.

The Indian Investment Centre, which was registered as a Society under the Societies Registration Act

(1860), with headquarters in New Delhi, has been set up with the active support of the US Technical Co-operation Mission. Under the Project Agreement of June 1960 between the Governments of the United States and India, the US Technical Co-operation Mission will make available \$780,000 to cover foreign exchange expenditure on contract services, training facilities and equipment and Rs 22 lakhs from PL480 Funds to meet the local expenses during the first two years of the Centre's operations. Mr G. L. Mehta is the Chairman of the Governing Body consisting of distinguished representatives of business, banking, financial institutions and officials, nominated by Government last September. Other members of the Governing Body are:

Sir A. Ramaswami Mudaliar, Mr Kasturbhai Lalbhai, Mr George David Woods, Mr William George Pullen, Mr P. C. Bhattacharyya, Mr K. R. K. Menon, Mr S. Ranganathan, Dr B. K. Madan and Mr G. L. Bansal. Mr R. S. Bhatt, who was till recently a member of the Tariff Commission, is the executive Director of the Investment Centre whose office is located in National Insurance Building, Parliament Street, New Delhi—1.

The Chairman, Mr G. L. Mehta, said that the Investment Centre expects to "act as a catalytic agent for bringing the two parties—the Indian entrepreneur and the foreign investor together". It will act as a clearing house for information relating to investment in India and advise Indian industrialists (particularly those engaged in small and medium industries who have no means of access to their counterparts in foreign countries) on matters necessary to attract foreign private capital. Referring to the procedural delays which hold up joint ventures, Mr Mehta suggested that they might be able "in due course to devise methods whereby projects, which are processed by the Investment Centre are brought up to such a stage that subsequent formalities of licensing under the Industries Development and Regulation Act, import of capital goods and control of capital issues, may be completed in as short a time as possible."

The Thirty-fourth Annual Session of the Federation of Indian Chambers of Commerce and Industry will be inaugurated on 25 March by the Prime Minister. The Committee of the Federation, which held a two day meeting in New Delhi last week, decided that resolutions be drafted on the following subjects: Third Plan, Export Promotion, Streamlining of Administrative Machinery, Transport Capacity and Movement Bottlenecks and Coal Production and Movement. The Committee also finalised a communication to be addressed to the Government of India on price regulation and return on capital. The Federation has already taken up with the Commerce and Industry Ministry the point that the recommendations of the price fixing authorities do not always take note of the needs of the industry to provide for a fair return to the investors and for rehabilitation and expansion of plant and equipment after meeting the growing operational expenses.

25 February 1961

Markets

JUTE More Controls?

TRADING in the jute and gunny markets has been rather cautious this week. The subdued mood is probably due to the renewed widespread attention that is being given to market conditions. In his inaugural address to the conference of Presidents and Directors of the recognised Associations sponsored by the Forward Markets Commission in Calcutta, last week, Mr Nityananda Kanungo, Union Minister of Commerce has indicated that Government will not hesitate to clamp down further drastic measures to stamp out speculation, if there is no improvement in the situation. Marketmen believe that speculation has been brought under control, but Mr Kannungo has his own doubts "as to how far speculation on the part of the industry has been stamped out". The Minister has revealed that the continuance of conditions which are not conducive to healthy forward trading in the jute trade and industry is one of reasons for Government's decision to bestow increased powers on the Forward Markets Commission by means of the recent amendment of the Forward Contracts (Regulation) Act. Next week's meeting in New Delhi between the representatives of Government and the industry may perhaps go some further way towards restoring stability to the jute and gunny markets without the necessity for further control measures from Government.

Although Mr Kanungo has warned of drastic controls, it may not be wide of the mark to assume that nobody, not even the Government, wants to see the jute trade and industry hemmed in on all sides by controls and regulatory measures. Drastic controls may not be objectionable in the case of commodities which are mainly consumed within the country; but a similar principle will not hold good in respect of commodities which have a large export market. Foreign traders, especially those in the United States, our hessian's biggest market, would rather pay high prices than submit to excessive control in business. Mr Willis D. McLean, Chairman of the Bulap Business Relations Committee of the Textile Bag Manufacturers' Association pointed out in Calcutta this week that, while it is necessary to bring down prices of jute goods to more attractive levels if India were not to lose fresh ground in the American market, businessmen in his country may not like the idea of doing business in an atmosphere thick with controls. But one thing is quite clear: our jute goods prices have to be considerably reduced. Mr McLean has referred to the growing habit of consumers in US to

switch over from burlap to paper bags and other packaging materials. With consumer resistance to burlap increasing, bag manufacturers and importers are chary of extending commitments. Mr McLean thinks that, unless prices decline before the end of the current year, some of the big consumers like the feed mills are likely to convert their packaging plants to paper or bulk handling. The changeover, Mr McLean points is irreversible once a big burlap consumer changes to substitutes or bulk handling methods, his custom is lost to burlap once and for all.

The outlook for lower prices for jute goods, as far as one can discern from present indications is rather bleak. The chances are that prices will continue to be as high as now, if not higher, during the next few months. Till it can clearly be seen that raw jute next season will be in plentiful supply, this position is bound to continue. Such an inference is strengthened by quantum of raw jute arrivals during the last month. Arrivals of raw jute into Calcutta and mill stations during January 1961 have declined to 593,692 bales from 627,840 bales in the corresponding month of the previous year. While arrivals of Indian jute improved from 546,994 bales in January 1960 to 556,046 bales last month, imports of Pakistani fibre fell sharply from 80,846 bales to 37,646 bales. During the seven months ended January 1961 jute arrivals were also substantially lower at 3,301,098 bales compared to 3,774,857 bales in the corresponding period ended January 1960. The sharp fall in imports from Pakistan last month is evidently due to the exorbitant prices for cuttings prevailing in that country for the past two months and more.

TEA Outlook

THERE is a growing belief that the Dooars gardens have done better in 1960 than in 1959. Their output has not been affected much by the drought in April and May 1960, while the average prices for their teas have improved. Although it is not known with regard to the size of the increase in internal consumption of these teas, there are indications that the rise in production must have been substantial.

As for the South Indian gardens, the outlook is said to have generally improved. The crop in 1960 is estimated to have an all-time record of 169 million pounds. An encouraging feature in this connection is the overall improvement in quality, thanks to more careful plucking and manufacture. But, it is learnt that the average prices realised have not shown much change.

According to tea circles in Calcutta, stocks of tea in warehouses in Calcutta fell sharply to 946,090 chests at the end of last month from 1,076,450 chests at the close of January last year. Stocks in public warehouses declined from 690,530 chests to 589,950 chests as did those in private warehouses from 385,920 chests to 356,140 chests.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 72,000 packages. There was a strong general demand. The autumnal CTC types on offer were a strong feature of the sale and were generally dearer; but the plainer sorts were between 15 nP to 30 nP per kilo easier. The fibrous secondary CTC grades were generally up to 15 nP easier. Legg-cut Dooars were irregular and sometimes 10 nP to 15 nP easier.

Medium BOPs received fair support, but the more expensive kinds were generally 20 nP to 30 nP easier, while the remainder were firm to occasionally dearer especially the brighter liquoring sorts. Medium broken were a little easier, while medium Fannings were at times considerably higher. Black Dooars BOPs again received very good support and these were fully firm, while similar Fannings were generally dearer.

"Teas for price" and plain Fannings were in strong demand although sometimes irregularly easier, while plain broken were sold at about last rates. Whole Leaf grades were also an irregular feature, the more stylish kinds selling well. Darjeeling teas were easier, while the few Tippy teas on offer were in good demand. Following rates (per kilo) were quoted:—Clean Black Pekoe Rs 5.20 to Rs 5.50; Plain BP Rs 4.60 to Rs 4.70; Plain Fannings Rs 4.70 to Rs 4.90; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.90 to Rs 5.10; Best Assam CTC BP Rs 5.80 to Rs 6.20 and Best Assam CTC Fannings Rs 5.90 to Rs 6.40.

In the Internal Sale, offerings were 21,978 packages of Dusts. There was a good general demand. Orthodox descriptions came to an easier market, particularly towards the close when they were sometimes difficult of sale. Legg-cut teas were irregular with the bright lines selling well. Medium CTC sorts with a clean leaf appearance, though generally registering an advance, were irregular. Fibrous teas in this category, however, once again declined in value. Good CTC varieties were a strong feature of the sale and were dearer with the best selling at considerably dearer rates. Following rates were quoted:—Plain Orthodox Dust Rs 4.70 to Rs 4.90; Medium Assam Dust Rs 4.80 to Rs 5.20; Legg-cut Dust Rs 5.05 to Rs 5.40; Medium Assam CTC Dust Rs 5.06 to Rs 5.90 and Good Assam CTC Dust Rs 6.20 to Rs 6.60. There was a good general demand for the 1,857 packages of Leaf grades offered.

In the Cochín market, offerings were 395,000 kgs of Leaf teas. Quality showed no change. Compared to the previous week's offerings, there were a few invoices where slight improvement was noticeable.

Despite the rise in crop outturn in South India, shipments from Cochín to foreign countries have not been much higher in 1960 than in 1959. In the former year, 8.9 million pounds was shipped as against 8.7 million pounds in 1959. There has, therefore, been more internal buying. The overall quantity sold through Cochín auctions has risen by 20 million pounds to 80 million pounds in 1960 as compared with 1959.

In spite of a smaller outturn in December 1960, tea production in Ceylon for the whole of last year increased to the record level of 434.7 million pounds from 413.1 million pounds in 1959.

A much better tone prevailed in the Mining Lane tea auction. Offerings were 73,921 packages. Competition was stronger and prices in many instances were dearer. The best liquoring invoices among the North Indian offerings, for example, were in particular request and often showed gains of 1d to 3d per pound. Ceylon teas were generally dearer, notably BOP Fannings, while African sorts also shared in the improvement, especially the better liquoring types. South India descriptions were fully steady to sometimes dearer.

COTTON Narrow Price Movements

CONDITIONS in the Bombay Cotton futures market during the past week continued to be desultory on account of lack of confidence at higher levels. Prices fluctuated within narrow ranges. The reluctance of mills to increase their stocks of raw cotton reflected in the restricted turnover.

Cotton futures started on a depressed tone at Rs 556.50 against the previous closing of Rs 563.25. Prices declined further owing to the continued selling pressure and the absence of support. But the trend showed a feeble rally to Rs 563 from Rs 544 during the middle of the week. This recovery was attributed due mainly to short covering by Akola interests and the fresh buying from Ahmedabad. The long awaited announcement about the export quota of 50,000 bales of Bengal Deshi cotton failed to impress the market. As the quantity allotted was far short of the trade expectation the futures section did not evince any rise in values after the official announcement. The absence of any announcement relating to the export quota for Kalagin and Wagand also contributed to the subdued tendency in the market. Moreover the trade circles were rather irritated by the method adopted by the authorities for the distribution of export quota and they consider it as unfair and unjust to many of them. The favourable treatment provided for the shipper who did not take part in

the previous quota has caused embarrassment to some of the traders. It is reported that the trade will resort to legal remedy and seek a change in the present pattern.

Demand in the spot section during the first part of the week decreased and the offtake was moderate in volume. As the week progressed conditions turned out to be fairly active and almost all the varieties met with improved demands. Consequently confidence in the market was restored to a satisfactory level as was evident from the all round improvement in the prices of ready lots. Surti, Wagand, Kalyan and CO2 met with keen demand. Despite the release of export quota Bengal Deshi did not pick up as the shippers have covered their requirements. A notable development during the period under review was the increased attention paid on Laxmi by mills as they were not satisfied with the quality of Vijay and Digvijay.

In the foreign section imported growths attracted little interest. Sporadic sales of small quantity of East African, Sudan and Egyptian

styles were reported. According to the statistical information compiled by the Textile Commissioner consumption of foreign cotton by Indian mills depicted a downtrend. Total consumption of foreign cotton by Indian mills depicted a downtrend. Total consumption of foreign cotton in December last amounted to 6,107 million bales as against 6,108 million bales in November. With the availability of ample supply of Indian cotton, consumption of indigenous cotton, looked up and in December totalled 0.325 million bales.

The international cotton conference held at Egypt, failed to produce any concrete results. No progress was reported to have been made over the complicated problem of compulsory arbitration at Alexandria which Egypt had been insisting. The attention of delegates centred mostly on the discussion over the official discount rate of 6 per cent uniformly allowed on all cotton exports in the current season. The delegates expressed their disapproval at the 15 per cent discount provided by Egypt. Although this contention was offi-

cially denied, it was pointed out that a particular line had just been sold to Prague at a discount of 16 per cent. It was reported that Egypt has expressed its willingness to sell over at cheaper rates to the United Kingdom for a larger deal.

The cotton piecegoods market depicted active conditions during the past week. This was mainly due to fair demand and restricted supply of goods particularly of quality goods.

In the domestic sector the demand from upcountry centres was well maintained even though it was a shade lower than the previous week. The slight fall in demand was attributed to high premium for goods. This was clearly noticeable in the popular styles. But on account of the strict vigilance of authorities and trade organisations the premia declined. The premia on coarse cloth dropped to 6-8 per cent and on higher medium goods to 4-6 per cent. Rumours were also current in the market that the prices of cloth will be slashed further. Medium, coarse, and fancy goods and shirtings were eagerly sought after. Delhi, Madhya Pradesh, Saurashtra, Calcutta and Bihar turned out to be the most prominent consuming centres.

On the export front the UK evinced keen interest in the usual varieties though the offtake was very moderate. Sudan appeared to be quiet during the period under review. West Germany was the largest purchaser of Indian goods and total destination accounted for fair offtake of grey leopard both for prompt and February-March shipments. Aden and West Asian countries were satisfied with a moderate quantity of gin and grey sheetings. East European countries diverted their attention toward grey clothings. All other destinations were practically inactive.

Mixed Trends in Grains Prices

PRICES of Foodgrains have shown a mixed trend in the Hapur market. While Wheat prices have tended to decline on good crop prospects, Gram and other coarse grains have been showing an upward tendency. The market for Pulses remains dull.

Wheat average quality has declined to around Rs 17 and the farm variety to Rs 18.50 a maund during the week under review. Arrivals of the commodity from the rural areas have continued to be small and stocks are poor due to the approaching end of the "rabi" season. But, new crop prospects are considered to be bright due to sunny weather after good winter rains.

The Rice section remains depressed, as demand is slack and the supply position is satisfactory. Gram prices have, however, risen by about 50 nP a maund and this is attributed to small stocks with the trade, at about 2,000 maunds. The firmness in prices is also attri-

buted to the fact that the new crop will take about two months more to arrive in the market. Although maize prices have gone up to Rs 14.56 from Rs 13.75, traders are not inclined to bring in fresh supply of the commodity on the fear that the demand is likely to become slack again. Stocks of Peas are reported to be small. As the demand, too, is slack and crop prospects are bright, prices are ruling quiet. Urad and Moong prices have improved on good consumer's demand in the face of poor stocks.

In the Bombay grains market, Wheat was conspicuous for its firmness and the volume of business was satisfactory as arrivals were lower due to an acute shortage of wagon supply. Indigenous Rice firmed up with the gains ranging from Rs 3 to Rs 5 per quintal. Off-take continued to be satisfactory even at rising levels, while the inflow further decreased following an acute shortage of wagon supply. In the coarse grains section, a steadier tendency in prices was noticed.

SUGAR

Sugar markets are ruling quietly steady. At Hapur, the rate is quoted around Rs 111.75 per bag. Although the supply position is easy, expectations of early export to the USA are responsible for keeping the prices firm. Production is also going on vigorously and is expected to touch a new level of 2,700,000 tons this season.

It is reported that stocks with the factories are on the steady increase. It is feared that the industry's resources will be greatly strained if stocks increase to around one million tons. In order to maintain a high level of output, exports will have to be stepped up. There can also be decontrol over distribution of the commodity, so that the traders can stock larger quantities. Usually, the trade maintains stocks for about 200,000 to 300,000 tons of sugar. With increasing purchasing power, sugar consumption is bound to increase, though at a slower rate. The whole situation must be carefully watched.

GUR

In the Hapur market, Gur prices have tended to decline, as daily arrivals have increased to an average of 2,000 to 2,500 maunds and loading remains suspended. Stockists are the only buyers. Local stocks are reported to have swelled to 42,000 maunds, the last year's corresponding figure being 30,000 maunds. Many gur crushers are lying idle due to the shortage of cane supply at Rs 1.12 per maund. Pansera quality is quoted at Rs 13.25 to Rs 13.62 a maund.

KHANDSARI

Khandsari prices have also fallen slightly during the week as demand from East Uttar Pradesh and Madhya Pradesh has become

slack. The Uttar Pradesh Government are reported to have issued instructions to sell damaged sugar out of the 1959-60 season's production in the open market. This also accounts for a fall in Khandsari prices, which are quoted at Rs 30 to Rs 34.50 for the superior grade and at Rs 25 to Rs 29.50 for the inferior quality.

CHEMICALS & DYES

Conditions in the Bombay Chemicals and Dyes markets have continued to remain depressed. While supplies are adequate with stockists and prospects of further arrivals are good, demand has almost dried up due to the stringency in the money market and the unwillingness on the part of consumers to accumulate stocks in a falling market.

Increased imports by the State Trading Corporation of certain items of Chemicals have caused uneasiness among stockists. With the result, prices have declined. In the case of

Dyes, fears that some indigenous factories may be compelled to suspend their production of certain dyes are responsible for the steady trend in prices in spite of the absence of demand. This is particularly true in the case of Naphthols. In sympathy with the indigenous products, foreign varieties have also looked up.

YARN

Conditions in the Bombay Yarn market were as unsatisfactory as in the previous week. The easy trend in prices was attributed to liquidation by bulls, who feared an increase in excise duty on staple fibre and art silk yarns in the year 1961-62. With only a few days left for the Central Budget, there was a general disposition to liquidate a part of the holdings.

Ready markets also showed a very poor turnover, as there was a general tendency on the part of weavers not to augment stocks of their raw material.

Enquiries for Cotton yarn were, however, on the increase due to

sustained demand from Surat, Benares and Bhagalpur. Coarse and medium counts continued to be quoted about a rupee per bundle above the Federation's prices. Fine and superfine counts were also in good demand on rumours that mills had limited stocks of Sudanese and Egyptian cottons.

In the Amritsar market, Woollen Yarn prices have declined further by 25 nP to 31 nP per pound. Nearly 275 smaller units, manufacturing woollen fabrics, have threatened to close down their business for an indefinite period from 24 February. The Small-Scale Woollen Manufacturers' Association has urged the Government of India to take necessary steps to ensure adequate supply of woollen yarns at fair and equitable prices to the industry.

PEPPER

The Pepper market in Cochin remained firm as both buyers and sellers were found to be cautious in committing themselves, expecting

SET FOR A BIG JOB

The Britannia — D.P.E. 'JOBBER', manufactured for the first time in India in collaboration with Dawson, Payne & Elliott Limited, England has been specially designed for economy, efficiency and minimum of maintenance. Powered by a simple constant speed motor with 3 quick-change pulleys for variable speeds, it has a single lever on the operating side which does the Starting, Inching and Braking. Sheet delivery is done by chain grippers, printed side of the sheet remaining untouched during operation.

fresh incentives. The rate was quoted at Rs 396 per quintal.

Although the London market observers say that the recent sales of 2,000 tons of black Malabar pepper to the Communist block is the only stabilising influence, many of them expect an early fall in prices, especially when the demand from the USA, normally a brisk buyer at this time, is weak. Moreover, the imminence of the new season in Sarawak, which starts in May, is not encouraged by the market view that prices are still affected by the artificial level created in 1959 by the success of a Singapore Holders' Syndicate in "squeezing" the market. Pepper is considered to be still above its 1959 price level by 1sh to 1sh 6d a pound.

Again, the Singapore market is reported to be in doldrums in view of the sizeable stock in Indonesia, Sarawak and Singapore. Weakness in rubber has also proved to be a discouraging factor and has brought forth some liquidation in white pepper. Most of the holders are exhibiting anxiety to liquidate their holdings at every rise in prices.

The New York market also shows irregular trend in prices without any definite indication for the future. Grinders there are on the sidelines in expectation of a drop in prices.

RUBBER

The rubber estates in Kerala have been facing serious difficulties in raising the output of a badly-needed raw material in order to meet the growing demands of the manufacturers of rubber goods. It is estimated that there is now a gap of 25,000 tons annually and it has been necessary to permit large imports of both natural and synthetic rubber. With the rising trend of consumption, it is feared that even with the coming into production of the synthetic rubber plant now under construction at Bareilly, there will be a shortage and there may be need for stepping up the output of synthetic rubber by setting up new units in other parts of the country.

Meanwhile, the planting interests and the Kerala Government are upset over reports that the Planning Commission is thinking in terms of dropping the replanting subsidy. It was only recently that the announcement came from the Central Government and the Rubber Board that, in order to create sufficient enthusiasm in favour of large-scale replacement of their worn-out rubber trees with high-yielding strains, the subsidy would be raised from the present rate of Rs 400 to Rs 1,000 an acre. Latest reports are that the Planning Commission is coming round and has started appreciating the plea for a subsidized replanting scheme.

GOLD & SILVER

After registering small improvements during the initial period, prices on the Bombay Bullion Exchange receded under heavy selling pressure and liquidation. Following weak advices from Jodhpur and other up-country centres, increased arrivals in the local market and selling in gold by Delhi, both the metals finished the week on a quiet note.

Silver arrivals amounted to 25 bars against an offtake of only 10 bars.

Unrefined metal receipts amounted to 35 bars. Silver (below .996) changed hands at Rs 206.05 to Rs 207. Gold receipts amounted to 6,000 tolas against an offtake of 4,500 tolas. Unrefined metal receipts amounted to 6,000 tolas. Gold Ready moved between Rs 120.85 and Rs 121.85, while Sovereign remained firm at Rs 93.75.

OILS & OILSEEDS

Thanks to the emergence of support at the recent low levels, the Bombay market for Oils and Oilseeds presented better conditions during the week under review. The proposal of the Maharashtra Government to raise Sales Tax on groundnut by half per cent to two per cent was considered to be a bullish factor. It was thought that this increase in sales tax on groundnut would raise the price of groundnut oil by about Rs 5 per ton. Moreover, the firmness in seeds and oils was influenced by the buying interest shown by vanaspati interests. Ready Groundnut Bold ready was quoted at Rs 50.00 and Groundnut Oil at Rs 20.62.

In the Castorseed section, sentiment turned bright on good export news. Shippers were hopeful of putting through business with the USA despite increasing competition from Brazil. Ready rate was quoted at Rs 33.75 and Castor Oil, commercial quality, at Rs 14.00.

Prices of Linseed showed a spectacular rise following the news of shortage of rapeseed oil in Northern India. Crushers were active buyers in Bombay as well as upcountry centres. Ready was done at Rs 35.12 and Linseed Oil at Rs 16.10.

Despite reports of increasing arrivals of the new crop in Surat, Ahmedabad and Vidarbha areas, prices of Cottonseed were well maintained due to renewed enquiries at lower levels.

In the Calcutta market, the price of Linseed has improved further to Rs 30.25 from Rs 30.00 a maund quoted last week. Business is restricted due to shortage of supplies. As upcountry sellers are reserved, crushers are not able to obtain their full requirements even by paying higher prices.

The price of Linseed Oil is ruling steady and the turnover is limited due to smaller stocks. The price of Oilcake has also become steadier on reports of foreign enquiries.

Prices of Groundnut displayed a firmer tendency due to keen interest shown by vanaspati manufacturers. Conditions in the Castorseed section also remained steady on talk of some business done in oil with the UK.

As of last week, the upward trend in the prices in the Madras groundnut oil and kernels markets was kept up. The main parties interested in the groundnut oil were Calcutta and local dealers. With poor arrivals of groundnut kernels at the rate of 50 tons daily in the City and about 100 tons in the South and North Arcot markets, the price of both kernels and oil in these places went up.

HIDES & SKINS

Inquiries for goatskins of good quality were good in the market uniformly throughout the last week.

TBR 4236 ATLANTIS (EAST) LIMITED (Incorporated in England)

Particularly the 11/12 lb average seemed to be in better demand. Since internal demands for lower fitts had tapered off, the selling position proved difficult for stockists of this commodity. Light weight leathers quoted at 17sh to 17½sh had moderate absorption.

There is no material change in respect of cowhides arrivals from tanneries and prices proved to be the same as of last week.

Good demand in tanned cow calf skins was responsible for immediate sale of stocks on arrival. Also in tanned buffalo calf skins, there was

better USA inquiry. For a while the price of this commodity continues to be high.

The following are the prices of tanned skins per lb: Tanned cow prime 5/5½ lb Rs 2.75 to Rs 2.87; 6/6½ lb Rs 2.62 to Rs 2.75; 8/8½ lb Rs 2.50 to Rs 2.56; 10/12 lb Rs 1.12 to Rs 2.25; Cow calf 1½/2 lb Rs 2.87 to Rs 4.00; Buffalo calf 1½/2 lb Rs 2.87 to Rs 3.00; Goat Prime 8/9 lb Rs 10 to Rs 10.50; Sheep Ord. 6/7 lb Rs 6.75 to Rs 7; 5/6 lb Rs 9 to Rs 9.25; Sheep Prime 6/7 lb Rs 12.50 to Rs 14; Buffalo 12/13 lb Rs 1.75 to Rs 1.87.

The Scindia Steam Navigation Company Limited

Cargo Carried Increases by 200,000 tons, but

—Earnings Fall Due to low Freight Rates

Mr Dharamsey M. Khatau, the Chairman, Speaks on World Tonnage Position

Address of Mr Dharamsey M. Khatau, Chairman, The Scindia Steam Navigation Co., Ltd., at the 41st Annual General Meeting of the Shareholders of the Company, on 22 February 1961.

IN his address to the Shareholders of The Scindia Steam Navigation Co., Ltd., at the 41st Annual General Meeting, Shri Dharamsey M. Khatau, Chairman of the Company, referred to the performance of the Company during the year ended 30 June, 1960 that while the cargo carried was higher by over two lakh tons and the freight earnings were higher by over Rs 1.75 crores, as compared to the previous year, there was a fall in the net earnings due to the low level of freight rates and increased expenditure directly attributable to the increased calls made at different ports, charter hire and direct expenses by way of stevedoring, marine and canal dues. Excluding the provision for special depreciation amounting to Rs 101 lakhs and not taking into account the surplus on sale of assets of Rs 6.74 lakhs, the working of the Company showed a profit of Rs 74.53 lakhs which, under the depressed conditions in the shipping industry the world over, could not be regarded as unsatisfactory.

The Dividend proposed is 60 nP. per share, subject to deduction of tax, to be paid out of the General Reserve.

The low level of freight rates in the overseas trades, the Chairman remarked, was due to severe impact of general depression in shipping, continued low level of tramp rates and the increased competition by tramp and liner vessels which called at Indian ports en route while engaged in international trades not directly connected with India. There was also the competition offered by tonnage bringing foodgrains and fertilizers to Indian ports which could offer to carry cargoes on the way back without regard to economic rates of freight. Shri Khatau, confirming the recent arrangements between different Liner Companies engaged in the India/U.K.-Continent trades, referred to the discussions between the Scindia Company, India Steamships and the other Conference colleagues and observed that the shipping services have been reappraised in the light of modern developments and measures aimed

at co-ordinating the services of the Member Lines taken to ensure the best utilisation of ships employed and to provide optimum coverage for loading/discharging ports. This he added was a scheme of rationalisation no different from what is normally followed in any other well organised group of industries and was meant to give a more satisfactory and efficient service.

Referring to the criticism levelled against the efforts made by under-developed countries in the matter of expanding their national shipping, by the General Council of British Shipping recently, Shri Khatau said it was unfair to foist

the responsibility for the present day difficulties experienced by shipping the world over on countries like India. Shri Khatau stated that the difficulties presently experienced by shipping in the international field had been brought about by over-acquisition and over-building of tonnage year by year by traditional maritime nations who should have had a better appraisal of the situation and should have taken precautions to adjust their tonnage from year to year to the world trade requirements. He instanced an increase in tonnage by some of the countries as under:—

TONNAGE AS AT	IST JULY each year:				
	(In millions of G.R.T.)				
	1948	1955	1958	1959	1960
WORLD TOTAL OF WHICH ...	80.3	100.6	118.0	124.9	129.8
U.K. & Northern Ireland ...	18.0	19.3	20.3	20.8	21.1
U.S.A. ...	26.9	23.9	23.1	22.8	22.3
Countries of Europe other than Scandinavia & U.K. ...	8.1	14.7	18.5	19.6	20.1
Scandinavian countries ...	7.3	11.7	14.7	16.3	17.2
Greece ...	1.3	1.2	1.6	2.1	4.5
Liberia ...	...	3.9	10.1	11.9	11.3
Panama ...	...	2.7	3.9	4.4	4.6
Japan ...	...	1.0	3.7	5.5	6.9

In commenting on the future trend, Shri Khatau referred to the decrease in the world laid-up tonnage from 8.7 million G.R.T. in October 1959 to 3.3 million G.R.T. in January 1961, but observed that the rates of freight had however not registered any increase to justify an inference that the imbalance between world tonnage and world trade had been sufficiently adjusted.

Dealing with the coastal and adjacent trades Shri Khatau referred to the diversion of salt and coal cargoes by rail, delays to coastal shipping both at loading and discharging ports owing to slow despatch consequent upon the inefficiency of unloading operations and lack of wagons. These factors coupled with restricted loading due to unsatisfactory drafts in the Hooghly River meant a considerable wastage of shipping tonnage employed on the coast. These problems, he said, had been placed before the National Shipping Board and also before the Neogy Committee. He urged the need for a proper co-ordination of

all modes of transport and an early solution of the difficulties which the coastal shipping had to face.

Referring to the tonnage programme, Shri Khatau said, that efforts had been made to improve the efficiency and competitiveness of the Company's services by adding new and recently built vessels to the fleet.

Shri Khatau stressed the urgent need for establishment of War Risk Insurance Scheme by the Government of India by which it would be possible to save foreign exchange presently spent abroad. He pleaded for an early adoption of the proposals before the government. Shri Khatau referred to the increasing cost of building new tonnage and rise in the cost of operations and pleaded for a suitable policy in the matter of economic rates of freight for shipping either employed in the coastal or international trades. He said, in making this plea the shipowners asked for nothing more than what was conceded to every shore industry of importance. Shri

Khatau further emphasised the need to bring about the expansion of Indian tonnage on a planned basis so as to ensure maximum utilisation of the available tonnage and to avoid wasteful and unhealthy competition between Indian Lines and with this end in view, he pleaded that further licensing of vessels should be only for routes either new or not adequately covered by Indian Lines presently. In referring to the operations of the subsidiary companies Shri Khatau stated that B.S.N. (1953) Pr. Ltd., which operated on the Konkan coast had made a further loss of Rs. 6.95 lakhs, which brought the cumulative loss to Rs. 28.63 lakhs. He hoped that the Government of India will arrive at an early decision on the report recently submitted by the Konkan Shipping Services Committee. The Scindia Workshop Pr. Ltd., showed a small net profit of Rs. 1,673. Shri Khatau referred to the acquisition of one of the Ship Repair Firms in Bombay by the Government and urged that there should be no change in the usual practice of the Government shipping Corporations to invite tenders from all the workshops for ship repair work and to entrust to the lowest tenderer as hitherto, thus ensuring that the Corporations enjoyed the benefit of economic repair costs. Operation of the Jalanath Insurance Ltd., he observed, had brought an increase in insurance premium by about Rs. 1.88 lakhs and added that effective from 1st January 1961 the Company had been able to enter into reciprocal treaty arrangements in the U.K.-Continent and Far Eastern Countries which would benefit the Company further.

In conclusion Shri Khatau thanked Dr. Subbarayan, the Minister for Transport, Shri Raj Bahadurji, Minister of State for Shipping, the Secretary to the Ministry of the Transport, and the Director General of Shipping and his Officers for their efforts in furthering the cause of Indian Shipping. He further thanked all the Company's patrons, shippers and consignees at home and abroad and looked forward to their increased support to the Company's services.

Note: This does not purport to be a record of the proceedings of the above Annual General Meeting.

The Industrial Credit & Investment Corporation of India Limited

Genuine Investment Demand for Industrial Securities

Excessive Reliance on Loan Obligations Deplored

Mr G. L. Mehta, the Chairman, Reviews Role of ICICI in Developing Capital Market

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163, Backbay Reclamation, Bombay 1, on Thursday, March 23, 1961, at 4 p.m. The following is the Statement by the Chairman, Mr G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1960.

I have great pleasure in welcoming the Shareholders to the new premises of the Corporation, to which the Corporation's registered office was transferred in May, 1960, and in placing before them the Sixth Annual Report of the Board of Directors of the Corporation for the year ended December 31, 1960.

2. In many ways, 1960 marked an important stage in the planned development of India. After the foreign exchange difficulties in 1957 and 1958, the country was able to consolidate its position in this sphere, thanks partly to the aid of friendly countries. Industrial production increased by about 15 per cent over the level reached in 1959—the result of completion of earlier efforts. Available reports indicate a favourable situation as regards agricultural production. Credit which appeared plentiful at the beginning of 1960, however, became subsequently scarce. Inflationary pressures in the economy have been largely contained. The situation has improved sufficiently to embolden Government to plan on a larger scale for the Third Plan period, an effort underpinned by the successful negotiation of a large and long-term agreement for the import of food grains and other agricultural commodities from the U.S.A.

TRENDS IN INDUSTRIAL FINANCE

3. Of more immediate interest to this Corporation were developments in the field of industrial finance. The upsurge in investment of whose beginning I had referred in the last year's statement, assumed much larger proportions during 1960. This upsurge was reflected in the capital

market both in the number of new issues floated on the market and in the heavy over-subscription of these issues of capital and the premiums quoted on new shares. A gratifying aspect of this trend was the widening of interest in industrial shares, as evidenced by the large number of applications made for the issues. I would also refer to the fact that the interest apparently was confined to variable dividend securities rather than to fixed interest bearing securities. Considerations of growth appear to have outweighed considerations of yield.

4. This phenomenon has, however, to be interpreted with some qualifications. It is likely that a part of the demand for the new issues was based on short-term considerations of quick capital appreciation, as frequently happens in a rising market. Moreover, with investors failing to secure required shares in one issue, it was often the same applicant and perhaps the same money chasing successive issues. Besides, as over-subscription became a common phenomenon, people may have tended to apply, even with borrowed funds, for larger amounts than their investment requirements, in order to ensure at least a part allocation on their application.

5. But even after allowing for staggering of new issues, double-counting of many applications and inflation of demand, it is possible to infer that there was a substantial increase in genuine investment demand for industrial securities. The upsurge has proved to be transient as the results of more recent issues indicate; nevertheless, the shift in investment habit, once acquired, is likely to have an enduring impact, although the intensity of its manifestation is bound to vary with market psychology and the general climate.

6. There are one or two aspects of this phenomenon which are of importance from the view-point of sound industrial development. There seems to be a strong demand for equity participation in industrial enterprises, more so where there is foreign collaboration. In this connection, I should like to welcome the recommendation of

the Committee appointed by Government to invite, as an experiment, minority public participation in a few selected public sector companies. The success of this experiment, however, will depend upon the choice of issues, their timing and the care bestowed on details as well as adequate preparation for ensuring satisfactory public response. Unduly high expectations about public subscription to such issues should not be entertained in the initial stages; the benefits of this policy will be realised over a period of years.

7. In the private sector also, it is necessary that the present opportunity be used to improve the gearing of share capital. There are various factors which appear to favour an increasing resort to debt-financing in private industry. A smaller equity base considerably improves the profitability of a company. Very often, the amount of equity capital fixed is based not on the requirements of the project but on the financial resources of the entrepreneur, with the result that where an entrepreneur takes up a very large project and tries to retain controlling interest, he keeps the equity low and seeks to obtain the balance of the cost of the project by means of borrowing. Most finance institutions also cater to supplying loan capital rather than providing assistance in the form of underwriting or subscribing to share capital. Finally, foreign exchange, because of its shortage, is available mostly by way of loan capital (except to the extent financial participation is forthcoming from foreign collaborators) instead of being purchased with rupees raised on the capital market, as was previously the case.

8. I cannot help feeling, however, that excessive reliance on loan obligations in the capital structure, particularly of new companies, has its risks which entrepreneurs are, in their optimism, prone to overlook. Such borrowings lead to an accumulation of interest charges in the early non-productive (construction) years of a new enterprise, which can be avoided by raising equity. Moreover, while in prosperous times it may be apparently

easy to service debt obligations, when the winds of competition blow, such enterprises would be hard put to meet their growing commitments. Further, the existence of debt obligations may reduce the capacity of a company to borrow in difficult times when borrowing alone may be possible and becomes unavoidable.

9. It would, therefore, be prudent for private industry to raise the required resources by way of share capital when circumstances permit. Times like the present should be used to strengthen the capital structure rather than to seek capital appreciation by keeping equity low. Financial institutions should have the necessary flexibility for providing assistance in this direction.

10. I am aware of the fact that there are different views on this subject. Undoubtedly, the capital structure appropriate for a company depends upon several factors such as the nature of its business, the magnitude of its requirements, the stability of its operations over a period of time, and the climate of the capital market. What I have tried to indicate are some of the considerations relevant to sound finance which should not be overlooked when we desire not merely rapid but also healthy industrial development.

WIDENING OF THE FINANCIAL MARKET

11. The investment market is being broadened by the expansion of the functions of finance institutions. Many commercial banks have started giving medium-term loans; the existence of the Refinance Corporation should further strengthen this development. Commercial banks have also entered the underwriting field. As regards finance for small industries, the benefit of the guarantee scheme operated by the Reserve Bank of India, available to commercial banks, has been extended to State Finance Corporations.

12. The widening of the financial market is also indicated by the growing practice of giving guarantees. Guarantees are now being given by one set of financial institutions to another: as, for

25 February 1961

example, by commercial banks on behalf of Indian borrowers to foreign financing agencies like the Export-Import Bank and the Development Loan Fund as well as to Indian financing agencies; or by finance institutions on behalf of Indian purchasers to foreign suppliers of machinery as by the Industrial Finance Corporation for deferred payments.

13. ICICI's contribution to these developments has to be judged in relation to its resources: it is, therefore, more qualitative than quantitative. ICICI has always kept in view a broader objective, namely, to help foster the growth of a capital market in India. To this end, it has consistently tried to keep in touch with other finance institutions, to exchange information on matters of common interest and to take up joint underwriting and other financing operations. We have done joint financing also in respect of foreign exchange loans thereby augmenting the foreign exchange resources available to the country. We have done so in cases where we could have met all the requirements ourselves and although it was not necessary to invite other institutions to participate. We consider such operations to be also in the interest of ICICI in so far as they help to reduce risk by spreading it.

ICICI'S OPERATIONS

14. ICICI's own operations during 1960 reflect some of the trends noted earlier. ICICI benefited from the upsurge in investment activity in the country, as shown by the total volume of assistance, Rs 13.43 crores, sanctioned by it. A large proportion of this assistance was in the form of foreign exchange loans since, with the acute scarcity of foreign exchange, ICICI became an important source of foreign exchange for industry. At the same time, as a result of its policy of limiting its stake in any one unit (which, in view of foreign exchange shortage, often took the form of foreign exchange loans) and because of the buoyancy of the share market (which reduced the need for underwriting and encouraged other finance institutions to take up such business as became available), ICICI's own rupee operations, although higher than during 1959, tended to grow less rapidly. With indications of hardening money conditions and a slackening of demand for shares, ICICI's rupee operations during 1961 may well rise further.

15. The amount of gross assistance sanctioned by ICICI during 1960, as already mentioned, was Rs 13.43 crores to 44 companies, consisting of rupee assistance of Rs 5.81 crores and foreign exchange assistance of Rs 7.62 crores. Of this, an amount of Rs 11.21 crores was sanctioned to 39 companies for new projects. A finance institution is a catalyst in the sense that it helps bring into being

investment much larger than the amount of its own assistance. For example, the total amount of investment in the new projects of the 39 companies assisted by ICICI in 1960 would be Rs 55.22 crores (of which Rs 43.69 crores would be for fixed assets)—almost five times the figure of ICICI assistance. The foreign exchange component of the fixed investment of Rs 43.69 crores was Rs 17.84 crores, of which ICICI provided about 40 per cent; the balance of the foreign exchange requirements was met from Government releases of foreign exchange to the companies concerned, participation by foreign collaborators and deferred payment terms given by suppliers. The turnover of these projects when completed is estimated to amount to about Rs 39 crores.

16. The companies financed this total fixed investment of Rs 43.69 crores by raising ordinary share capital of Rs 18.75 crores, preference share capital of Rs 2.15 crores and long-term loans of Rs 21.22 crores; working capital requirements of Rs 11.53 crores were more than fully covered by bank credit and internal cash accruals of Rs 13.10 crores. I would like to add that the larger reliance on long-term loans in these cases was partly due to the fact that a substantial part of the requirements was in foreign exchange which, except in the case of cash licences or foreign participation, can be obtained only by way of loans; besides, old companies can more safely go in for preference shares or loan commitments than new companies.

NEW LOANS TO ICICI

17. With the increasing tempo of ICICI's operations, it was found necessary to augment our resources, particularly of foreign exchange. The Second Loan from the World Bank was fully committed during 1960, much earlier than originally anticipated. I am glad to report that during the last year ICICI obtained a further foreign exchange loan of U.S. \$20 million from the World Bank. This is the third and the largest foreign exchange loan obtained by ICICI, the first two being of U.S. \$10 million each. We are grateful to the World Bank for its increasing confidence in this Corporation. I would take this opportunity to thank the distinguished President and the staff of the World Bank for their understanding and co-operation. We are also obliged to the Government of India for its helpful attitude, and particularly for its guarantee to the World Bank in regard to the Third Loan.

18. ICICI has also successfully negotiated during the year a loan of \$5 million from the Development Loan Fund of the United States Government. Some formalities remain to be completed in regard to this loan, and it is hoped the agreement would be signed at an early date. I take this opportunity

to thank the officials of the Development Loan Fund for this loan and for the interest they have evinced in the activities of this Corporation.

WORKING RESULTS

19. Reflecting the rising tempo of operations, the Corporation's profits before tax increased from Rs 50.66 lacs in 1959 to Rs 62.60 lacs in 1960. After providing for tax (Rs 26.94 lacs), the balance carried to revenue appropriation account is Rs 35.66 lacs in 1960 against Rs 28.23 lacs in 1959. As required by Clause 163 of the Corporation's Articles of Association, we have set aside Rs 9 lacs out of this to the General Reserve; we have also transferred the entire amount of realised profit on investment, being a sum of Rs 24.87 lacs (net), to Capital Reserve.

20. The directors recommend a dividend at the rate of 5.75 per cent. After deduction of tax at source, this leaves in the hands of shareholders an amount slightly above 4 per cent. Thus we have been able to restore to the shareholders the cut in dividend necessitated by the change in the system of company taxation. We have represented to the Government that the present tax system bears heavily on finance institutions of which there are about twenty at present, which do not benefit from the various tax incentives like development rebate and tax holiday made available to manufacturing concerns. It would therefore be equitable to extend to these institutions tax concessions as has been done in some countries. In view of the need to encourage the saving and investment habit in the country and in recognition of the catalytic impact of finance institutions on industrial development, I trust the Government will see its way to extending these reliefs to finance institutions.

GENERAL

21. I should finally like to refer to two matters of general interest to investors, in which ICICI played an important role. A legislative measure of considerable importance to the investor—the Preference Shares (Regulation of Dividends) Act 1960—was enacted during the year under review. While the Bill was under discussion, your Corporation, as a matter of public service, jointly with other institutions, made representations to the Finance Minister as also to the Select Committee. The Government has seen its way to grant some relief to shareholders as a result of these efforts.

22. I had referred last year to the proposal to form an Investment Centre. I am glad to report that the Indian Investment Centre has now been set up in New Delhi. ICICI has played a prominent part in its establishment. The Government has chosen five Members of the Governing Body of the Centre from among the

Directors of ICICI; I have the honour to be the first Chairman of this body. I have every hope that, as a result of the Centre's activities, the flow of foreign investment to India will increase.

23. The staff have carried out their duties loyally and efficiently. I take this opportunity to thank them for their valuable services.

JESSOP AND COMPANY LIMITED

Notice is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an additional dividend for the year ending 31st October 1960 at the rate of Rs. 1.50 per share subject to deduction of Tax in accordance with the provisions of the Finance Act currently in force.

The Preference Shares Transfer Books will be closed from 27th February to 2nd March 1961, both days inclusive. Dividends will be paid only to the Registered Shareholders or their mandatees.

By Order of the Board

A. P. SARKAR
Member, Board of Management.
63, Netaji Subhas Road,
Calcutta-1.
18-2-1961.

MARTIN BURN LIMITED.

NOTICE.

The Board of Directors of Martin Burn Limited has to-day recommended payment of dividend at the rate of Rupees Two and Seventyfive nP. per share on the Ordinary Share Capital of the Company ranking for dividend for the year ended 30th September, 1960. This dividend awaits the sanction of the Shareholders at the ANNUAL GENERAL MEETING to be held on Monday the 27th March, 1961, at 12 noon. The dividend if declared will be paid under deduction of tax at the prescribed rates on or after the 17th April, 1961, to the Ordinary Shareholders whose names are on the Company's Register of Members on the 27th March, 1961 or to their mandatees.

The Ordinary SHARE REGISTER and TRANSFER BOOKS of the Company will be closed from the 13th to 27th March, 1961, both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY

Secretary.

12, Mission Row,
Calcutta,
17th February, 1961.

For the Investor

INVESTMENT GOSSIP Steady Sentiment

THERE has been a two-way movement in equity prices this week and at the time of writing, sentiment seems to be somewhat subdued. Nevertheless, to judge by market behaviour, one would hardly think that the Central Budget was only three days away. Friday's slight erosion in values of the more speculative counters will no doubt be attributed to some last minute adverse "khabar from usually knowledgeable quarters". But the fact remains that the generality of operators is not unduly perturbed over the Budget. Evidently, no one anticipates anything alarming, especially in respect of additional direct taxation. Indeed, it is difficult to find anyone in the market who has not taken it for granted that there will be no increase in direct taxation. Certainly, the trend disclosed by the Railway and State Budgets does encourage such optimism. Since this column appeared last week, some more State Budgets have been presented—West Bengal's is one of them—and except for Maharashtra, none has tried to cover its deficit by fresh taxation. The State and Railway Budgets seem to lend support to the theory that Government's main tax effort both at the Centre and the States to finance the Third Plan is not likely to manifest itself until the general elections are safely out of the way. As for the next week's Budget, the general belief is that Mr. Morarji Desai will set himself a modest target for mobilisation for the first year of the momentous Third Plan. He will be able to do this from indirect taxation and that too, in a way that the masses will not feel the hurt. The expectation is still nurtured that the tax on bonus shares may be abolished. It also stands to reason that with the present buoyancy in Government Revenues, tax effort for next year need not be too strenuous.

In this week's bag of rumours was found an old but perennially interesting item: steel retention price. Once again the report lacks official confirmation but this time Dalal Street seems to be much impressed with it. Here in Lyons Range it has produced but a ripple—evidently because that particular horse been ridden to death already.

NEW ISSUE NOTES Fit Tight Nuts

It would be recalled that the Fit Tight Nuts and Bolts Limited was recently converted into a public limited company with an authorised capital of Rs 1 crore divided into 100,000 ordinary shares of Rs 100 each. This company has now proposed to enter the market next month for raising new capital. The new issue will be for Rs 25 lakhs in 25,000 ordinary shares of Rs 100 each. Of this, 7,800 shares will be taken up by the promoters, directors and their friends. The ICIC will take shares worth Rs 2.50 lakhs. The balance of the issue, amounting to Rs 14.70 lakhs, will be offered to the public, at par. The proceeds of the new issue will be utilised for the company's expansion programme.

British Paints

It is learnt that the recent ordinary share issue of the British Paints (India) Limited has been oversubscribed eight times. The basis of allotments is made in the following manner:—

	Shares each.
For 100 shares ..	15
For 200 shares ..	25
For 300 shares ..	35
For 400 shares ..	45
For 500 shares ..	55
For 600 shares ..	65
For 700 to 900 shares ..	75
For 1,000 shares ..	80
For 1,100 to 1,900 shares ..	90
For 2,000 shares ..	95
For 2,100 to 5,000 shares ..	101
For 10,000 shares ..	201

The allotment letters and refund orders will be ready for posting on 28 February, 1961.

Graham Firth Steel

A new company, known as Messrs Graham Firth Steel Products (India) Limited, an Indo-British joint venture, has been formed to manufacture bright cold rolled steel strips. The authorised capital of the company will be Rs 50 lakhs. The capacity of the plant will be 3,600 tons. Production will begin by the end of the year. Messrs Graham Firth Steel Products Limited of England will subscribe one third of the capital and supply complete plant, machinery, tools and also technical know-how.

Mysore Kirloskar

The Mysore Kirloskar Limited has proposed to offer for public subscription in the near future. Rs 40 lakhs, divided into 15,000 Ordinary shares and 25,000 Redeemable Cumulative Participating Preference shares both of Rs 100 each. It is believed that the company has obtained the Government sanction to issue the shares at par. Meanwhile, there is a proposal to capitalise Reserves and issue bonus shares in the proportion of one share for every four shares held.

Amalgamated Electricity

The Amalgamated Electricity Company Limited has decided to issue 84,375 equity shares of Rs 10 each, at par, to the existing shareholders in the proportion of one share for every 10 equity shares held. Transfer Books will remain closed from 6 to 11 March, 1961.

INVESTMENT NOTES Asian Cables

According to the first annual report released by the Asian Cables Limited, the company is making satisfactory progress in respect of the commissioning of the plant. The buildings are expected to be ready shortly. A major portion of the machinery has already arrived and most of the balance equipment is expected to be received by the end of next month. The plant will be ready for initial production by the middle of this year.

Andaman Timber

The Andaman Timber Industries Limited, Calcutta, is said to be making satisfactory progress. The new factory of the company in Andamans went into production during the middle of last year. The company has acquired 20 bighas of land at Bihala, near Calcutta, for its new factory, which will undertake the finishing process for the products of the Andamans factory. The company has also obtained a fresh dollar loan for Rs 7.20 lakhs to finance its scheme for the installation of a chip-board plant. The company hopes to attain full production of both the factories by the end of this year.

Inarco Factory

The new factory of the Inarco Private Limited at Thana, Bombay, was inaugurated this week. The factory will manufacture high-grade synthetic rubber cots and aprons for the textile industry. This company is a joint venture of the Associated Rubber Industries Limited and the Armstrong Cork Company of the UK.

New City Mill

Negotiations are said to have been completed for the sale of large block of the shares of the New City of Bombay Manufacturing Company Limited to Mr. Nandalal Kanoria. This will be the third and last cotton mill, under the management of W. H. Brady & Company Limited to change hands in the last 12 years.

Sen & Pandit

The directors of Sen & Pandit Industries Limited report that the scheme for bottom bracket has been operating on a commercial scale. A major part of the rim plant is in the process of installation and part delivery of the cycle tube valve plant is expected in March.

STOCK EXCHANGES Pre-Budget Caution

Watch-Dog Writes:

CONDITIONS in stock markets have continued to remain generally steady on sustained hopes that the Central Budget may not contain any nasty surprises. There is, however, a general reluctance to restrict commitments until the Budget uncertainties are out of the way. This is reflected in the profit-taking at every small rise in prices.

Trading on the Calcutta Stock Exchange was highlighted by some features.

Although prices on the Bombay Stock Exchange firmed up further, higher levels attracted some realising pressure.

A mixed trend in prices was noticed on the Madras Stock Exchange.

CALCUTTA

Friday Evening.

DESPITE the fact that hardly two days are left for the presentation of the Union Budget, prices on the local stock exchange displayed a steady to firmer tendency, reflecting the continued optimism of the bull operators. Sentiment was also aided by the expectation that the steel retention price might be raised by Rs 45 per ton.

Nevertheless, operators were reluctant to extend commitments until the Budget uncertainties were out of the way. There was a general anxiety to know whether there would be any streamlining of direct taxes and whether many of the existing anomalies would be removed. It was also feared that a good beginning might be made in respect of the tax effort needed to implement the Third Plan. There was, therefore, a general disposition to book profits at the higher levels.

The Glitged market was well maintained with demand concentrated on short and medium-dated issues.

25 February 1961

Still the main support for the market seemed to be from the Reserve Bank, while the institutional buying helped State Loans. 3 per cent 1986 Conversion Loan moved narrowly between Rs 74 and Rs 74.10.

Bank shares remained steady. United Commercial changed hands at Rs 85.50 to Rs 86.50, while Punjab National were rather quiet at Rs 19.87 against Rs 20 on lack of fresh support.

Jute shares continued to be neglected under the impact of jitters about the possible requisitioning of jute and jute goods and the imposition of stiffer controls to check speculative trading in them. Rumours of a Government proposal to fix maximum prices for both the commodities were another contributory factor. Even then, prices of a few selected shares were well maintained, thanks to sustained support from interested quarters. Prominent amongst them were Birias, Howrah and New Central having buyers at one time upto Rs 30.69; Rs 22.37 and Rs 20.25 from Rs 29.25; Rs 22.25 and Rs 19.44 respectively. Anglo-India, however, came in for offer at Rs 184 against Rs 187, while Fort William were enquired up to Rs 22.56 from Rs 21.87 and India up to Rs 15.06 from Rs 14.87.

Coal shares, which had been ruling very firm, during the past few weeks, turned quiet. The recent firmness was influenced by the hope that the industry would be encouraged to expand its production rapidly and foreign aid would be forthcoming for the expansion plans. But now, a growing feeling, that American team's report recommending depletion allowances to the industry would not be given straightaway, induced some caution in the minds of the operators, resulting in a slightly reactionary tendency in prices. The disappointment over the maintenance of the dividend by Burrakur was also a contributory factor to a steady setback in prices. Bengal slipped down at one time to Rs 337 from Rs 346 (Rs 342); Burrakur to Rs 19.81 from Rs 20.31 (Rs 19.94); New Beerboom to Rs 21.19 from Rs 21.50 (Rs 21.19); Central India to Rs 12.29 from Rs 13 (Rs 12.81) and Western Bengal to Rs 8.37 from Rs 8.62 (Rs 8.62). Figures shown within brackets were the week's closing rates.

A notable feature of the week's trading was the marked enquiry in the Tea section. As prices had remained subdued for long, there was a general enquiry in selected shares, particularly of companies whose gardens were located in Assam and Dooars. It was thought that, in view of the fair output and higher prices obtained at the auctions, the Dooars gardens in general and some of the Assam gardens would be able to maintain their dividends for 1960. Betjan forged ahead to Rs 25.69 from Rs 25.12; Bishnauth to Rs 21.75 from Rs 21.06; Jutilbari to Rs 27.62 from Rs 27.37; Rungamattee to Rs 60 from Rs 57.50; Tezapore to Rs 16.94 from Rs 16 and Jayshree to Rs 18.50 from Rs 18.00. Birpara scored another Rs 3 at Rs 172 although Hasimara reacted to Rs 22.81 from Rs 23.19 on profit-taking.

Sugar shares were selectively firm on prospects of exports of the sweet commodity. Belsund changed hands

at Rs 11.81 to Rs 12; Cawnpore at Rs 12.62 to Rs 12.81; SKG at Rs 13.87 to Rs 14.00 and Dyer Meakin at Rs 27.25 to Rs 28. Raza/Buland, after a long time, came in for business at Rs 13.75 against Rs 13.25 with Balmapore quiet at Rs 2.94 against Rs 3.00.

In the Textile section, sentiment looked bright in view of the fact that the offtake of cloth had been showing a continuous improvement and the mills might be able to increase their output due to the present availability of abundant raw material. Higher levels could not, however, be maintained till the close due to general profit-taking. Kesoram forged ahead to Rs 31.37 from Rs 29.75 (Rs 30.87); J. K. Mayon to Rs 17.25 from Rs 16.25 (Rs 16.62); Elgins to Rs 21.12 from Rs 20.87 (Rs 20.81); Bowreah to Rs 195 from Rs 192 (Rs 189); Jayshree to Rs 16.25 from Rs 16.06 (Rs 16.06) and Dunbar to Rs 26.37 from Rs 26.25 (Rs 25.75).

In the Engineering section, price movements were rather irregular. With the Budget so near, speculative operators were eager to take quick profits, resulting in any rise in prices being checked. The retention price "scoop" was again utilised to keep the price of Indian Irons fairly steady. Against the previous week-end closing of Rs 24.75, Indian Irons opened higher at Rs 25.17 and, after advancing further to Rs 25.20, receded at one time to Rs 24.96 before finishing the week at Rs 25.06. Jessop were pushed up to Rs 22.25 from Rs 22.19; TEXAMACO to Rs 23.50 from Rs 23.05 and G. K. Williams to Rs 41 from Rs 39.87, to close finally at Rs 21.50; Rs 23.35 and Rs 41 respectively. Britannia hardened to Rs 14.06 from Rs 13.62 and so Indian Standard Wagon to Rs 92.50 from Rs 89. Burn scored more than ten points at Rs 452 with Marshalls and Kumardhubi almost maintained around last levels.

The Miscellaneous section provided several firm features on various considerations although profit-taking erased some of the extreme gains towards the close, as will be clear from the following price trends of a few selected shares:—

	PRICE TRENDS

MADRAS

Buying at all prices, notably in textile section was the feature of week's Madras Stock Exchange. Banks had sustained support, while Sugars and Breweries continued its firm note, most particularly the Deccan sugar scrips. Planting shares stood at higher levels. Tea and Coffee shares prices moved up closing with firm tone. Rubber had continued support. Textiles firmed up considerably. Automobiles had great support in the industrial counter.

Government Securities: The 1962 Government of Madras 3½% Loan moved up to Rs 99.00 and the 4½% loan continued to be quoted at Rs 100.00. 4% Mysore Government 1953/63 was available at Rs 101.35. The 4% 1971 Loan of Mysore Government stood at Rs 98.00. Others were in the listed prices.

Banks: The Indian Bank Rs 100 paid remained at Rs 171.00 and the Rs 80 was at Rs 143.00. The Indian Overseas improved by 50 nP to Rs 188.50. The Punjab National was available at Rs 20.60 and the Pandyan was quoted at Rs 33.00.

Electrics: South Madras gained a five nP lead to be listed at Rs 9.95. Negapatam was at Rs 8.75 and Salem-Erode was the same at Rs 12.25.

Sugars & Breweries: Cauvery was Rs 133.80, Deccan improved to Rs 14.25 and E.I.D. gained 20 nP more at Rs 40.80. There was a declaration of 30% dividend (taxable) by Mysore Sugars whose rate remained unchanged at Rs 58.25. United Breweries was at Rs 112.00.

Plantings: Gains were broad in this section. Blue Mountain was bought at an improved quotation of Rs 9.30. Cochin Malabar was in demand at Rs 7.86. Coffee Lands went up to Rs 21.25 and Cons. Coffee was quoted at Rs 24. Devashola remained at Rs 31.00. Haileyburia was fancied at the higher level of Rs 14.20. Kailas Rubber was also in keen demand at the improved price of Rs 5.10. Kil Kotagiri was priced at Rs 5.20. Lucky Valley was negotiated at Rs 13.82 and Midland was offered ten nP higher at Rs 12.10. Mysore Plantation gained a couple of nP to be bought at Rs 2.25. Nelliampathy was however lower at Rs 2.50. Ouchterlony Valley with 13% dividend declined to Rs 4.60. Periakaramalai was at Rs 3.70. Rajagiri was fifteen nP lower at Rs 18.75. T.R. & T was quoted at Rs 45. South India Viscose was Rs 1.46 and Waterfall went upto Rs 3.30.

Textiles: Adoni was lower by 15 nP at Rs 9.80. Coimbatore Cotton was a rupee higher at Rs 17.00 while Coimbatore Spinning was higher at Rs 54. Dhanalakshmi was unchanged at Rs 216. Kothari was unaltered at Rs 12.40. Lakshmi Rs 100 paid was quoted at Rs 155 and Lakshmi Rs 25 paid share was bought at Rs 75. Madura gained 25 nP at Rs 36.50. Radhakrishna was at Rs 29.50. Ranga Vilas went up by two points

at Rs 45. Suoth India Viscose was quoted at Rs 150. Travancore Rayon was better at Rs 35.60.

Miscellaneous: Aluminium Industries was quoted at Rs 23.40, ten nP lower. Andhra Cement was at Rs 10.03. Ashok Leyland was higher at Rs 8.98. F.A.C.Ts continued at Rs 10.30. India Cement did not change at Rs 6.15. Mysore Ch. and Fertilizer was quoted at Rs 10.95. Orissa Cement was available at Rs 13.55. Rallis gained three rupees at Rs 143. Seshasayee Paper improved to Rs 4.25. W. I. Plywood was listed at Rs 240.

INVESTMENT BRIEFS

Burrakur Coal Company Limited has proposed a final dividend of 8 per cent, making a total of 13 per cent, taxable, for the year ended 30 June 1960, the same as in the previous year.

Martin-Burn Limited has maintained the dividend at Rs 2.75 per share, taxable, on the Ordinary shares for the year ended 30 September, 1960.

Mysore Sugar Company Limited has maintained the dividend at 30 per cent, taxable, for the year ended 30 June, 1960.

Ouchterlony Valley Estates have reduced the dividend from 15 to 13 per cent, taxable, for the year ended 31 October, 1960.

BALANCE-SHEET BRIEF

The net profit of the Standard Batteries Limited, for the year ended 30 June 1960, has nearly doubled from Rs 11.69 lakhs to Rs 22.24 lakhs. A taxable dividend of 15 per cent is recommended on the increased ordinary capital.

Loyal Textiles Limited has reported a net profit of Rs 6.79 lakhs for the year ended 30 June 1960 as against a loss of Rs 3.17 lakhs. After paying the dividend on the Preference shares, the balance has been utilised to reduce the debit balance to Rs 3.23 lakhs from Rs 5.29 lakhs.

The Bababudin Coffee & Produce Company Limited has incurred a loss of Rs 33,335 for the year ended 30 June 1960 as against a net profit of Rs 1.32 lakhs for 1958-59. The Ordinary dividend is reduced from 12½ to 8 per cent.

Company Reports

Excellent Results of Elgin Mills

INCREASED productivity, concentration on lines which yield maximum results from available equipment and a good performance on the export front, all these factors are fully reflected in the working results of the Elgin Mills Company Limited for the year ended 30 September, 1960. Sales at Rs 4.00 crores against Rs 3.56 crores are the highest recorded in the post-war period. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 28.07 lakhs as against Rs 21.72 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 5.65 lakhs from Rs 4.50 lakhs; Taxation provision to Rs 24.50 lakhs from Rs 19 lakhs; Rehabilitation Reserve to Rs 18 lakhs from Rs 12.61 lakhs and Development Rebate Reserve to Rs 1.24 lakhs from Rs 30,893. The dividends, both on the Ordinary and Vendor's shares, are, however, maintained at Rs 1.15 per share, subject to deduction of tax.

The paid-up capital is shown at Rs 78.20 lakhs divided into 4,80,000 Ordinary shares of Rs 10 each; 1,50,000 Vendors shares of Rs 10 each; 11,000—8 per cent Cumulative Preference shares of Rs 100 each and 42,000—5 per cent "B" Cumulative Preference shares of Rs 100 each. Against this, reserves and surplus stand at Rs 1.42 crores. The gross block at Rs 2.13 crores is depreciated by Rs 1.59 crores to show a net block value of Rs 54.59 lakhs.

According to the directors' report, the company's No. 2 mill has been making satisfactory progress. As a result of large-scale renovations and reorganisation of the various departments, it is now working on a rationalised basis. The outlook for the current year is regarded as satisfactory despite the reduction in prices and implementation of the Wage Board recommendations.

Angelo Brothers Pay More

Angelo Brothers Limited has produced encouraging working results for the year ended 31 August, 1960, reflecting the increased interest shown by overseas consumers, the expanded use made by some of the industries and the firmness that prevailed for shellac. Sales have risen to Rs 2.01 crores from Rs 1.72 crores, while the net profit is higher at Rs 8.64 lakhs as against Rs 6.17 lakhs for the preceding year.

Apart from providing Rs 50,000 for General Reserve and a like amount for the Pension Fund, the Depreciation amount is raised to Rs 1.03 lakhs from Rs 94,414; Taxation provision to Rs 7.30 lakhs from Rs 5.40 lakhs and Development Rebate Reserve to Rs 6,526 from Rs 5,467. In spite of these increased allocations, the directors have found it possible to raise the dividend from 20 to 25 per cent, taxable.

The directors look forward with confidence to another year of satisfactory trading. Indications are that the current season should be no less satisfactory than the one under review.

Against the paid-up capital of Rs 30 lakhs, General Reserve stands at Rs 25.84 lakhs; Plant Replacement Reserve at Rs 6 lakhs; Stock Reserve at Rs 5.00 lakhs and Development Rebate Reserve at Rs 5 lakhs. The gross block amounts to Rs 37.09 lakhs; net depreciation to Rs 26.35 lakhs and the net block to Rs 10.75 lakhs.

Calcutta Steam Maintains Dividend

Despite a substantial decline in the net profit from Rs 7.78 lakhs to Rs 2.47 lakhs, the Calcutta Steam Navigation Company Limited has maintained the dividend at 10 per cent, subject to tax, for the year ended 30 June, 1960.

Apart from a sum of Rs 50,000 provided for General Reserve, the Fleet Reserve is raised to Rs 13,870 from Rs 3,400. The Depreciation amount is lower at Rs 3.25 lakhs against Rs 4.10 lakhs; Taxation provision at Rs 96,000 against Rs 4.20 lakhs and Development Rebate Reserve at Rs 11,000 against Rs 35,000.

The paid-up capital is Rs 12.00 lakhs divided into 1,26,000 shares of Rs 10 each. Against this, General Reserve is shown at Rs 5.74 lakhs; Development Reserve at Rs 71,000; Contingency Reserve at Rs 4.18 lakhs and Fleet Reserve at Rs 3.44 lakhs. The gross block at Rs 77.68 lakhs is depreciated by Rs 40.54 lakhs leaving a net block of Rs 31.14 lakhs.

25 February 1961

Eastern Investments Repeat

Eastern Investments Limited has reported a slightly higher net profit of Rs 10.25 lakhs for 1960 as against Rs 9.19 lakhs for the preceding year. In respect of allocations, the Taxation amount is raised to Rs 8.23 lakhs from Rs 7.53 lakhs and General Reserve to Rs 2.00 lakhs from Rs 50,000. The dividend on the Ordinary shares is just maintained at 14 per cent, taxable.

The company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs 78,168. The total of the market value of the investments for which rates are available together with unquoted investments as valued by the directors exceeds the book value, at 31 December 1960, by Rs 67.90 lakhs.

The paid-up capital is Rs 76.26 lakhs divided into 76,260 Ordinary shares and 15,000—5 per cent taxable Cumulative Preference shares, both of Rs 100 each. Against this, Reserves and surplus stand at a slightly lower figure of Rs 59.20 lakhs.

Lower Profits for Thirumbadi Rubber

The Thirumbadi Rubber Company Limited has reported a lower net profit of Rs 2.56 lakhs for the year ended 30 September 1960 as against Rs 3.35 lakhs for the previous year. A sum of Rs 32,886 (Rs 31,095) is set apart for Depreciation; Rs 1.22 lakhs (Rs 1.87 lakhs) for Taxation and Rs 30,000 (Rs 25,000) for General Reserve. The dividend is, however, maintained at 7 per cent, subject to deduction of tax.

The Supreme Court of India recently held that upkeep charges on immature areas are an allowance expenditure under the Kerala Agricultural Income-Tax Act. As a result of this, upkeep charges on immature areas will no longer be an allowance expenditure for the purpose of computation of the Agricultural Income. In view of this, provision for taxation for this year has been made on the same basis as for the previous year.

The company has reported a crop of 323,807 kilogrammes of rubber for the year as against

328,991 kilogrammes for 1958-59. The crop for 1960-61 is estimated at 352,000 kilogrammes.

Against a paid-up capital of Rs 9,15,300, General Reserve stands at Rs 5.05 lakhs and Debenture Redemption Reserve at Rs 1 lakh.

Higher Profits of K. C. P.

Thanks to the rise in sales from Rs 3.63 crores to Rs 3.76 crores, the K.C.P. Limited of Madras has reported a substantial rise in earnings for the year ended 30 June, 1960. The net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 48.81 lakhs as against Rs 33.75 lakhs for the preceding year. The Depreciation amount is increased to Rs 15.56 lakhs from Rs 13.36 lakhs.

After transferring a sum of Rs 4.75 lakhs from Dividend Equalisation Reserve, the directors have raised the Development Rebate Reserve to Rs 3.00 lakhs from Rs 2.25 lakhs, apart from providing a sum of Rs 24.75 lakhs for Taxation. The directors have recommended a dividend of 15 per cent on the increased Ordinary capital as against 15 per cent on the original capital.

In this connection, it may be mentioned that the company issued 1,96,205 right equity shares, as on 4 November 1959, in the ratio of one new share for every two shares held by them. Out of the above, so far, 1,94,586 shares have been allotted and the balance of 1,619 shares will be allotted to the heirs of deceased shareholders if they produce the necessary evidence in time. The company also issued, during the year, 40,000 second preference shares of Rs 100 each, which was oversubscribed.

The company's sugar factory commenced crushing on 6 December 1959 and closed on 8 April 1960. During the said period, 231,397 tons of sugarcane were crushed and 22,354 tons of sugar were produced. The recovery of sugar for the season was 9.56 per cent as against 8.88 per cent in the previous season.

The Government of India have not so far fixed the basis on which the bonus payable to cane-growers under price linking formula is to be calculated. However, in respect of the cane crushed during 1958-59 season, a tenta-

tive provision is made. Provision in respect of 1959-60 season, if necessary, will be made at an appropriate time.

The cement factory at Macherla produced 458 tons against 58,320 tons in the previous year. The second stage of the factory is expected to go into production in the latter half of 1961.

The company's workshop at Tiruvottiyur has made satisfactory progress during the year under review despite delays in securing electric power and import licences. The heavy machine shop and the steel foundry are expected to go into production during the current year.

During the current year, the company's sugar factory is crushing at over the rated capacity of 2,500 tons of cane per day and is expected to produce about 30,000 tons of sugar.

For reasons stated earlier, the capital, as at 30 June 1960, stood at Rs 1,01,84,360 as against Rs 16,68,090 as at 30 June 1959. Reserves and surplus are shown at Rs 97.32 lakhs. The gross block at Rs 4.18 crores is depreciated by Rs 78.55 lakhs, leaving a net block value of Rs 3.39 crores.

In spite of pressing demands for investigations in the field of mineral exploration and engineering geology, a total area of 13,472 square miles was mapped on the scale of 1" to 1 mile in parts of Andhra Pradesh.

The recovery of lead and zinc concentrates amounted to 5,822 tonnes and 8,958 tonnes as compared to 5,855 tonnes and 8,909 tonnes

respectively, in the corresponding period of the preceding year.

Lead concentrates are sent to the lessee's smelter at Tando in Bihar State for extraction of lead and silver while zinc concentrates are shipped to Japan for smelting of zinc, as there is no zinc smelter in India at present.

The production of lead metal during January-November 1960 was 3,342 tonnes as compared to 3,648 tonnes in the corresponding period of 1959.

SILK

Exports to UK

With silk regaining its place as the most glamorous fashion fabric in Britain, India's exports to the United Kingdom market have more than trebled over the last three years.

For the first 11 months of 1960, India's exports to Britain totalled 38,711 sq. yds. of silk fabric, compared with 22,589 sq. yds. for the whole of 1959 and 13,193 sq. yds. in 1958.

Britain's output of silk fabrics last year is put at 4,600,000 sq. yds., compared with 3,200,000 sq. yds. a year earlier, according to latest estimates.

An official of the Silk Centre in London said that the silk trade in Britain was booming, with increased demand not only for women's dresses but also for men's ties and shirts as well. "The revival in England is quite startling," he said. "People are moving away from man-made fabrics because they realize that silk, with its intrinsic value, has a special something. This is particularly apparent among younger people." The demand is expected to rise even higher this year.

Textile Research

Coming to India as adviser to the South India Textile Research Association is Mr Cyril Underwood, a senior research officer in the British industry. He will advise the director of the association in initiating, organizing, and co-ordinating research activities in various fields affecting the Indian textile industry. His appointment, under the Technical Co-operation Scheme of the Colombo Plan, is for a period of two years.

The South India Textile Research Association hopes to take up the study of problems relating to the improvement of handloom techniques and Mr Underwood hopes to assist in this.

CREDIT

Bank of UK Move

To promote the availability of medium-term credit for British export business, the Bank of England announced on February 6 that new arrangements had been made. The announcement was made after discussions between the bank and a committee of London clearing banks and representatives of banking organizations in Scotland and Northern Ireland.

"Where members of these bodies have given credit for a term of three

years or more, repayable by instalments and covered by the Export Credits Guarantee Department, the Bank of England will stand ready to re-finance those instalments of such credits which are within 18 months of maturity," the statement said.

"Because of this facility, the banks concerned will be able to transfer the portion of their export credits which it covers to their liquid assets. The banks consider that this arrangement will be of considerable help to them in maintaining the flow of finance for exports on medium credit terms."

"Insofar as other banks give medium-term finance for exports on similar lines as a normal part of their business, the Bank of England will be ready to discuss the extension to them of similar re-financing facilities."

Foreigners in India

As on November 1, 1960, as many as 61,044 registered foreigners were reported to be resident in India. On December 1, 1959, their number was 55,653.

These figures do not include children below the age of 16 years, nationals of Commonwealth countries and foreign diplomats and officials, etc. who are not subject to registration.

Among the residents registered were: Tibetan—16,833; Chinese—12,460; Afghan—6,920; American—4,688; Iranian—4,079; German—3,434; Burmese—1,685; Russian—1,625; Italian—1,161; Portuguese—1,157; and French—982.

TRADE

UK Bought £64 million Worth of Tea

India's adverse trade balance with Britain was less than £1,000,000 in 1960, according to figures released by the Board of Trade in London.

India last year bought from Britain goods worth £150,194,000, and it sold Britain products valued at £149,286,000.

For the month of December 1960, India had a favourable balance of £3,598,000 in its trade with Britain. The corresponding figure for December 1959 was £3,991,000.

India's exports to Britain for the month had a total value of £15,740,000, and its imports £12,142,000. In December 1959, India exported goods valued at £17,437,000 and imported £13,445,000 worth.

India's chief export to Britain in 1960 was tea, of which Britain bought £63,992,000 worth.

Other principal exports included £14,548,000 worth of cotton yarns and woven fabrics (an increase of more than £3,000,000 over 1959); £13,020,000 worth of leather; £9,192,000 worth of tobacco (an increase of more than £1,000,000 over the previous year); £2,654,000 worth of sheep's and lambs' wool; and £3,161,000 worth of metalliferous ores and metal scrap, showing an increase of over £500,000 since 1959 (the main contribution under this division was manganese ore, of which £1,916,000 worth was exported).

India also exported £4,081,000 worth of miscellaneous animal and vegetable crude oils, the chief of which was linseed oil; and chemicals to the value of £1,919,000, showing an increase of £500,000 over 1959.

Machinery (electric and non-electric), road vehicles and aircraft, iron and steel, and chemicals were among the major British exports to India in 1960. The value of these exports last year was: non-electric machinery £43,434,000; electric machinery, apparatus and appliances £14,839,000; road vehicles and aircraft £22,399,000; iron and steel £14,830,000; and chemicals £14,066,000.

EXPORTS

Engineering Goods

"The export of engineering goods during November, 1960, by sea routes only was valued at Rs 1.27 crores against Rs 64.32 lakhs in the corresponding month of the previous year."

The cumulative earnings from the export of these goods during the first 11 months of 1960 rose to Rs 7.86 crores from Rs 5.0 crores in the corresponding period of the previous year.

Exports of non-ferrous metal manufactures increased in value from Rs 1.93 crores in January-November, 1959, to Rs 2.44 crores in the period under review; manufactures of iron and steel from Rs 1.01 crores to Rs 2.15 crores; machinery from Rs 89.49 lakhs to Rs 1.18 crores; electrical goods from Rs 57.41 lakhs to Rs 1.03 crores; transport equipment from Rs 12.12 lakhs to Rs 48.29 lakhs; and manufactures of all metal from Rs 30.82 lakhs to Rs 45.54 lakhs. The earnings from miscellaneous manufactured articles, however, declined from Rs 15.7 lakhs to Rs 12.34 lakhs.

Some of the commodities, which contributed substantially to the increase in the export of engineering goods, were sewing machines, electric fans, oil mill machinery, builders' hardware, G. I. pipes, stainless steelware, tinplate products, marine transport equipment and tea machinery.

Exports of sewing machines from India were valued at Rs 6.97 lakhs in November, 1960, against Rs 6.58 lakhs in the corresponding month of the previous year.

Earnings from this source in the first 11 months of 1960 totalled Rs 50.89 lakhs against Rs 26.62 lakhs in the corresponding period of the previous year.

The marked rise in sewing machine export was mainly, due to increased offtake by Egypt, which imported goods worth Rs 21.63 lakhs in January-November, 1960, against Rs 2.59 lakhs in the corresponding period of the previous year.

Other important buyers of Indian sewing machines during the period under review were the UK with an offtake of Rs 8.15 lakhs, followed by Ceylon which lifted goods worth Rs 3.68 lakhs. Pakistan imported sewing machines worth Rs 2.34 lakhs, Yugoslavia worth Rs 2.13 lakhs, Afghanistan worth Rs 1.94 lakhs and Sudan worth Rs 1.3 lakhs.

Sewing machine exports to Burma, which had taken goods worth Rs 5.04

lakhs in the first 11 months of 1959, however, were very negligible at Rs 12,890 during the first eleven months of 1960.

MISCELLANY

Leather Boards

A process for the manufacture of leather boards has been evolved at the Central Leather Research Institute, Madras, on a pilot plant scale.

Leather boards, used in the footwear industry, as insoles, stiffeners, midsoles and heel lifts are made from tannery and shoe factory waste materials like shavings and trimmings, for which formerly there was no use except as manure. Only limited quantities of such boards are manufactured in India.

Mica

Effect of addition of mica powder in exterior house paints has been investigated at Calcutta.

Mica considerably improves the effective life of exterior house paints by increasing their corrosion resistance and durability. It has no detrimental effect on other useful properties like drying time, consistency or colour of the paints.

The addition of mica is most beneficial in the finish coat, less in the undercoat and least in the primary coat. The maximum effect of mica addition is obtained by incorporating it in all the three coats.

Calcium Carbonate

Conditions for the production of special-grades calcium carbonate (suitable for use in pharmaceutical and rubber industries) from calcium chloride, a bye-product, have been standardised at Central Salt Research Institute, Bhavnagar.

The product, prepared in bench-scale experiments, has been tested and found to be satisfactory by rubber and pharmaceutical industries.

Ripe Arecanuts

Ripe arecanuts during storage by conventional methods (pit storage, water storage, etc.) undergo heavy microbial damage.

An improved process of storage has been developed at Central Food Technological Research Institute, Mysore, by which arecanuts in husk retain their original colour of skin, fruit firmness, colour, structure, flavour and taste of edible kernel.

The process consists in blanching and steeping arecanuts in low concentrations of mixed preservatives in sealed containers. Preliminary experiments have shown that nuts in husk, stored for 2-3 months, if hygienically packed in polythene bags have a shelf life of over a month for purposes of transport and retailing. The edible kernel after six months of storage contains preservatives well below the permissible limits.

As an extension work, conditions have been established for convenient and safe storage of ripe arecanuts in husk in earthenware pots. Consumer evaluation of the 6-month stored product is satisfactory.

25 February 1961

NEARING ACHIEVEMENT

India's ambitious Durgapur Steelworks project is well on the way to completion. ISCON, the consortium of famous British engineering and electrical manufacturing companies, has been most successful and the end of the job is in sight.

Rolling mills, melting shop, blast-furnaces, coke oven batteries and cooling towers have transformed the skyline. The birth of this new industry has already brought new employment to West Bengal. A steel city has been carved from paddy fields and jungle by people of two different nationalities and background, but working as a team with a single purpose. The result is a triumph for British industry and a better tomorrow for the people of India.

Painless Extraction

THE Budget for the first year of the Third Plan has been admirably drawn up by Mr Morarji Desai. The worst of the apprehensions, about new proposals that the Finance Minister might have had, has failed to materialise, though the distinction between the taxation of earned and unearned income in the higher reaches is now to go. At the same time, there is refreshing evidence of Government seeking to provide incentives where they were necessary and to offer relief where relief was called for. Most important of all, the Finance Minister has nevertheless managed to raise new revenues such that the revenue Budget deficit, on the basis of existing taxation, is fully covered. As a result of the new tax proposals, the overall deficit for 1961-62, to be met by the issue of Treasury Bills, has been practically halved. If recent experience repeats itself, there is even the prospect that the traditional proneness of Government to underestimate revenue and overestimate expenditure will mean that 1961-62 may end with a capital Budget surplus, avoiding altogether any recourse to deficit financing: the Budget estimate of the deficit on revenue account in 1959-60 was just over Rs 59 crores; according to the revised estimate given by Mr Desai in February last year, the deficit had dwindled to Rs 15.39 crores; and it is now found, in the Explanatory Memorandum on the Budget for 1961-62, that the actuals for 1959-60 show a revenue surplus of Rs 42.55 crores.

Much of the new money, as was to be expected, is to be raised from excise duties and from countervailing import duties. Union excise duties are to fetch Rs 28.60 crores, while the contribution from customs, inclusive of the countervailing duties, will be Rs 29.27 crores. There is a comprehensiveness about the excise duty net that Mr Desai has spread that would seem to suggest that, in the future, increases in revenues will be possible mainly from rises in rates or in production. Indeed, with matches and betel nut, kerosene and cotton textiles all subject—among many another manufactured article—to excise, it is possible to hold the view that the common man is being asked increasingly to contribute to the costs of our planning endeavours. But that is as it should be. On the one hand, it is fair and just that the individual to the extent of his capacity to pay should add his mite to the resources needed for putting the plans through. On the other hand, the very fact that excises, in many cases, are being levied to inhibit consumption would suggest that the increase in demand is itself indicative of an improvement in living standards. If the saturation point has been reached in direct personal taxation—and that it has, few even in authority will deny—the only resource left to Government is to enlarge the range and coverage of excise duties. For our part, we had thought that the case against the excise levy on kerosene, was strong because of its impact on the purse of the common man. But Mr Desai is reported to have stated that the levy is to be only on superior kerosene, and the common man's fuel is to cost no more than it used to: it is the jet plane rather than the Janata Stove that seems to be the target of the new excise levy. The difference is one which

the retailer in the corner shop seems conveniently to ignore, but Mr Desai has promised to take adequate steps to see that his true intentions are not frustrated by people who make every budget a new excuse for mulcting a long suffering public.

The reduction in the rate of taxation of the capitalisation of reserves is the concession that stands out in a Budget that has not a few reliefs to offer. Even here, however, Mr Desai remarks that the rate is being reduced so that revenues may accrue to Government; as we had pointed out two weeks ago, this particular relief would have been gladly afforded by Government since, the while it adds to incentive as part of the investment climate, it also holds out the prospect of enlarged revenues for central coffers. Rationalisation in the tax on inter-corporate dividend and a reduction in the tax on royalties payable are both intended, obviously, to induce more foreign investment in India. So also, the "tax-free" period of three years for foreign technicians can be expected to attract know-how and expertise. The fact that development rebate is to be lower at 20 per cent may also conceivably be greeted rather than hooted: the disposable profit, available for dividend distribution, will accordingly be larger, and the profit assessable to tax, from the viewpoint of Government, greater.

Incidentally, with the increase in the import duty on machinery and components, the loss to companies as a result of the reduction in the rate of development rebate to 20 per cent is likely to be negligible. The rise in the one will inflate accordingly the landed cost of imported machinery, and the reduction in the other may merely offset a portion of the larger sum that might otherwise have had to be provided for development rebate. Moreover, it is arguable that the increase in import duty on machinery will provide a fillip to the machine-making industry within the country. In that case, however, there will be a smaller concession with the reduction of development rebate—unless, of course, the indigenous manufacture happens to cost as much as landed imports (inclusive of the higher import duty) would have been priced at.

Industrial housing for employees in the lower income brackets is to be encouraged by liberal depreciation incentives; other housing too is to get a fillip by deductions in annual value computation. The export duty on tea has been reduced, and we may take this as evidence that Government is determined to institute a real export drive. With such an array of cheerful news, it is not surprising that the stock markets have reacted favourably. Though the actual quantum of taxation has been higher than what their earlier optimism envisaged, its deployment has been such as to make it acceptable.

Thus, there are not a few concessions that Mr Desai has been able to produce from his portfolio; but he has asserted at the same time that for the Third Plan to be put through there will be greater calls on sacrifice and austerity and restraint in consumption. What the itinerant dentists in America once professed to do, Mr Desai has in fact done: his extractions have been painless, and the body economic is going to be the better for it.

*Effect of Budget Proposals.

Madras Budget

THE Madras Budget for 1961-62 presented in the Legislative Assembly last Saturday by the State Finance Minister Mr C. Subramaniam, bears a close family resemblance to most of the State Budgets presented so far. A revenue deficit of Rs 2.85 crores is anticipated, with receipts and expenditure being put at Rs 87.50 crores and Rs 90.35 crores respectively. It has been explained by Mr Subramaniam that the shortfall is entirely due to withdrawal of the Central assistance for increasing the emoluments of low-paid Government employees. Central assistance for this purpose was being given from 1957 onwards and the State Government has drawn Rs. 2.34 crores on this account in the current year. The Union Government has decided to withdraw this assistance from the next financial year onward rejecting the State Government's request to continue it till the recommendations of the Third Finance Commission came into effect. The other adverse factor is the Central Government's decision to withdraw grants in respect of revenue expenditure on Second Plan projects already completed. The deficit of Rs 285 lakhs is, however, not covered by the imposition of any new taxes. Perhaps the only tax measure, if it can be called that, is the extension of the facility of compounding in sales-tax for small dealers with a turnover of not more than Rs 50,000 year.

The fact that no attempt has been made by Mr Subramaniam to cover the deficit under-

lines the apparent identity of views among the State Finance Ministers, this year in the matter of levying new taxes. One explanation is that the Budgets have been framed with an eye on the coming election. It is generally believed that the real effort for mobilising the internal resources for the Third Plan will begin only with the next year's Budgets. There may be other reasons why the Madras Finance Minister did not think it fit to impose additional taxation to fill the gap between receipts and expenditure. It is quite on the cards that when the final accounts are drawn up for 1961-62, there will be a sizable surplus rather than deficit of Rs 2.95 crores as estimated in the Budget. For it would appear that receipts have been consistently under-estimated deliberately or otherwise in the recent past. The Accounts for 1959-60 show that receipts were at Rs 81.11 crores and the expenditure at Rs 77.72 crores leaving a surplus of Rs 53 lakhs. The Budget for 1960-61 estimated the expenditure at Rs 81.21 crores, receipts at Rs 80.87 crores leaving a revenue deficit of Rs 34 lakhs. The revised estimates indicate however that there will be a surplus of Rs 123 crores.

The buoyancy of revenue may be expected to become more pronounced in the budget year as a result of increase in production both in industry and agriculture as a direct result of the completion of many Second Plan projects. On the expenditure side there is an increase of Rs 2.29 crores as compared with the current year contributed mainly by the head education. Madras State can justifi-

ably be proud of its achievements in the field of education. An indication of the importance given to this field of activity is the rapid rise in expenditure on education. From Rs 12 crores in 1953-57, expenditure on education is expected to reach a level of Rs 20 crores by 1961-62. From next year, educational concessions will be on the basis of economic backwardness and education will be free up to XI Standard to all poor children irrespective of caste or creed. This is a step in the right direction as the manner in which the announcement was greeted by the members of the State Assembly indicated.

In other ways too, Madras has given a lead in education. To mention only a few: By the end of the current year, every village with a population of more than 300 will have an elementary school. A sum of Rs 1.35 crores is expected to be spent on the midday meals scheme in 1961-62 and one-third of the children have already been covered by the scheme. This idea has apparently caught on, largely owing to the publicity Mr Nehru gave it and State Governments are following the example. Seventy five per cent of the children in the age-group 6-11 are going to school now, the percentage being only 45 at the beginning of the First Plan. During the Third Plan it is proposed to bring all children in this age group to school.

The Capital Budget for 1961-62 provides for an expenditure of Rs 18.10 crores, a substantial part of which is absorbed by capital outlay on Roads and Buildings (Rs 4.73 crores), Parambikulam project Rs 3.77 crores, Industrial development Rs 3.01 crores and Social Minor Irrigation (Rs 1.46 crores). The revised estimate for capital expenditure in 1960-61 shows an increase of Rs 4.63 crores over the budget figure. Expenditure is now expected to reach Rs 15.49 crores as against Rs 10.85 crores estimated in the Budget. The main items contributing to the increase are Parambikulam project, Zamindari abolition, co-operation and road transport.

Power development occupies the pride of place in capital expenditure having absorbed Rs 14 crores in the current year. The outlay on Power in 1961-62 is fixed at Rs 15.41 crores. Madras has always been in the forefront of power development. In rural electrification the State stands at the top of the list. 12,000 villages are getting electricity now and the average per capita consumption of electricity has risen to 60 units from 12 units in 1951. Even so, supply is not adequate to meet fully the demand which is expected to reach 15,40,000 kilo watts in 1966. As against this, the dependable firm capacity throughout the year is only 9,62,000 kilo watts.

The State is now hard put to it to build additional capacity because it has nearly exhausted its hydro-electric resources. The way out is the exploitation of unutilised hydro-electric resources in the Western Ghats. It is in this context of power shortage in the Madras State that the plea for the setting up of one or more Nuclear power stations in this region gains strength. On augmentation of power supply depends the realisation of the State's ambitions in industrialisation.

The need for a rapid development of industry is keenly felt in Madras and the State Government has not been slow in giving concrete expression to the wishes of the people. Abiding interest characterises Government's attitude to industrialisation and Madras is one of the States where the private entrepreneurs, big and small, are getting all the necessary encouragement and assistance. Industrial estates are springing up all over the State. The Guindy industrial estate is already well known even in western countries as an example of an ideal organisation for fostering small industries.

Chief among the major industries in the process of establishment is the Neyveli integrated project with provision for ancillary and subsidiary projects. Other projects are the raw film factory in the Nilgiris, the Surgical instruments factory in Guindy, a teleprinter factory, and a prototype factory. It is expected that a heavy electrical plant will be set up in the State during the Third Plan. Progress by private sector industries has been very impressive indeed. Many major projects are in the offing and a few of them are already well past the planning stage. Among these are the Madras aluminium plant, the Seshasayee paper factory, fertiliser factories at Neyveli, Tuticorin, Madras, Cuddalore and Coimbatore. Such rapid strides in expansion are to be attributed to the ready cooperation the State Government offers the enterprising industrialist in the State.

Andhra Budget

THE Budget of Andhra Pradesh for 1961-62 presented to the State Legislature last week, discloses a total deficit of Rs 3.94 crores. Revenue receipts and revenue expenditure being estimated at Rs 85.13 crores and Rs 87.63 crores respectively the deficit in the revenue budget is of the order of Rs 2.50 crores and this has been left uncovered by any new taxes. As compared with revised estimates of revenue receipts for 1960-61 at Rs 87.80 crores, revenue receipts for the budget year reveal a shortfall of Rs 2.67 crores and is explained by Mr Brahmananda Reddi, the State's Finance Minister, as being due to anticipated fall under Income Tax and Central aid for increase in dearness allowance to low-paid Government servants. Revenue expenditure at Rs 87.63 crores for the budget year is however higher by Rs 1.51 crores against revised estimates of revenue expenditure for 1960-61. The revenue expenditure for the budget year includes an amount of Rs 7.50 crores toward the cost of maintenance of schemes completed during the Second Plan period while another amount of

Rs 12.51 crores is accounted for by the revenue element of the State Plan outlay for 1961-62.

The capital outlay for the budget year provides for a total expenditure of Rs 34.55 crores which compares with revised estimates of capital expenditure at Rs 32.44 crores for the fiscal year ending 1960-61. The Plan part of the capital outlay works out to Rs 27.44 crores while the balance of Rs 7.11 crores represents allocations for non-Plan schemes like Zamindari Compensation, Fertiliser Factory, Administrative Buildings etc. The Budget takes credit for Rs 12 crores by way of fresh public loans while an amount of Rs 2.50 crores is anticipated from small savings. The net result of the transactions in the capital budget will be a deficit of Rs 1.44 crores.

The increase in revenue receipts at Rs 87.80

crores which the revised estimates for 1960-61 disclose against original estimates at Rs 81.72 crores indicates the inherent buoyancy of the State's finances of which more resounding evidence is provided by Second Plan experience. While original calculations fixed the State's ability to raise resources at Rs 48.3 crores, the total contribution is now estimated to amount to Rs 84.13 crores. Improvement has occurred mainly under current revenue surpluses which witnessed windfalls from the recommendations of the Second Finance Commission. Against original estimate of current revenue surplus at Rs 5.10 crores, accruals from this source added up to Rs 24.30 crores. Realisations from additional taxation are also shown to have exceeded expectations and against original estimates at Rs 9.60 crores realisations have amounted to Rs 24.49 crores. Mr Brahmananda Reddi has claimed achievement of the principal objectives of the Second Plan and the economic trends during 1960 would reflect the rising tempo of activity in all spheres. Industries are shown to have registered substantial gains during the year. The increase in production was as high as 43.7 per cent for the paper industry while rayon, cement and coal registered increases in production of the order of 34.4 per cent, 22.5 per cent and 11.8 per cent respectively. The decline in the case of jute, glass and vanaspati was negligible compared with improvements in other industries, but the fall in piecegoods production by 34.7 per cent should be a matter for concern.

With the successful implementation of the Second Plan, the Budget for 1961-62 is necessarily focussed on the schemes connected with the Third Plan which envisages outlay at Rs 305.00 crores against Rs 180.59 crores expended during the Second Plan period. The comparative statement of distribution of the Plan outlay reveals substantial increase for agriculture and power development schemes.

Heads	Second Plan (Rs in Crores)	Third Plan (Rs in Crores)
Agricultural Programmes	36.58	73.08
Irrigation	58.01	76.23
Power	34.69	64.94
Industries and Supplies	10.44	19.43
Transport	5.90	11.96
Social Services	32.30	55.51
Miscellaneous	2.67	4.25
Total	180.59	305.00

The increases provided for various heads of development are only a meagre measure of the scope for progress. Industrial backwardness is particularly glaring. But the Government seems to have preferred to concentrate on irrigation and power and to rely on private sector for progress in industrial development. Even the fertiliser factory at Kothagudem is proposed to be handed over to the private sector which has been assured of valuable incentives such as concessional rates of electric supply, suitable adjustment of sales tax and the making available of land. The State Government's participation in the industrial development would, according to present indications, be limited to expansion of the undertakings in its hands, notable of which is the Government-owned Andhra Paper Mills, and establishment of three Government Corporations namely, the Andhra Pradesh Industrial Development Corporation (for large and medium industries) Small Scale Industrial Development Corporation and the Andhra Pradesh Mineral Development Corporation.

The Budget outlay of Rs 48 crores for the first year of the Third Plan reflects a modest start since the annual average on the basis of Rs 305 crores works out to Rs 60 crores. But considering that the Planning Commission has counselled caution the small outlay for the first year of the Third Plan cannot be taken to indicate a timid approach on the part of the Andhra Pradesh Government in implementing the Third Plan. The successful implementation of the Second Plan schemes, on the contrary, should spell favourable prospects for the execution of the Third Plan also. However, in gearing the State's finance to the Third Plan schemes, it is necessary that the Government bestow early attention to correct the current adverse trend in the ways and means position. The expectations under this head have been belied and 1960-61 is expected to close with a minus cash balance of Rs 7.81 crores. In this context the decision to leave the deficit in the Budget for 1961-62 uncovered appears to be hardly wise.

Pakistan Economy in 1959-60

THE Report on Currency and Finance for the year 1959-60 prepared by the Research Department of the State Bank of Pakistan testifies to the strident march of the Pakistan economy to higher levels of activity during 1959-60. Barring the general level of prices, the major economic indicators reflect improvements and consequently Pakistan's real national income is shown to have risen by 4.7 per cent over the previous year.

Both industry and agriculture have registered substantial gains in production. The rise in industrial production estimated at 11 per cent for 1959 looks impressive as compared with the 6.3 per cent of annual increase shown for the preceding two years. The first quarter of 1960 is reported to have witnessed further improvements with the index of production moving up by 15.8 per cent to 202.6 points (1954=100). The increase has come in the wake of measures taken by the Pakistan Government to stimulate exports under the Export Bonus Scheme. The larger allocation of foreign exchange for import of industrial materials, machinery, spare parts etc provided by the Pakistan Government tended to produce the same effect. The significant role being played by the Pakistan Industrial Development Corporation in encouraging industrial progress may also be mentioned as one of the factors leading to rapid industrial progress during

1959-60. During the year ended June 1960, the PIDC completed six new projects and at the end of the year has taken up six new projects for consideration of their feasibility.

Foodgrain production has fared equally well and shows a rise of 12.9 per cent over the previous year. While this, together with other measures taken by the Government such as larger internal procurement and imports, ensured larger availability, the abolition of food rationing to which the Government was led by the increase in production was followed by rise in foodgrain prices. By the end of June the price of coarse rice had gone up by Rs 2-8 while the price of rice of medium variety had increased by Rs 4-4.

Even apart from foodgrain prices, the general price level is shown to have traced an upward course. Consequently the cost of living average for Karachi, Lahore and Narayanganj were higher by 5.9 per cent 7.3 per cent and 5.1 per cent respectively over the last year. In the context of the rise in industrial and foodgrain production recorded for 1959-60, the rise in the general price level would seem to represent an aberrant trend and is attributed to lifting of controls on foodgrains and the institution of the Export Bonus Scheme which made inroads into internal supplies.

The report also highlights the considerable improvement that has taken place in Pakistan's balance of payments position. The net surplus for 1959-60 is placed at Rs 12.74 crores against a surplus of Rs 3.50 crores for 1958-59. Export receipts disclose a 22 per cent rise during 1959-60. The increase in earnings is traceable to the incentives provided by the Government under the Export Bonus Scheme while the measures taken to reduce the volume of Government expenditure abroad are also claimed to have contributed to the improvement in the balance of payments during 1959-60. The improvement in the gold, dollar and sterling reserves of Pakistan from Rs 104.32 crores at the end of June of 1959 to Rs 116.96 crores on 30 June 1960 is also remarkable. Considering that during the year Pakistan was called upon to make payments to the International Monetary Fund of a sum of Rs 5.95 crores, the improvement in foreign trade is seen to be quite substantial.

The banking situation during 1959-60 reflected the developments in commodity markets, foreign trade and foodgrain production. The general tendency in the commodity market during 1959-60 was toward a firming up of prices. Owing to smaller production, raw jute prices registered substantial advances, while in the case of cotton, the production of which went up by 5.8 per cent, larger foreign sales and increased internal consumption made for a bullish impact on prices. This led to the commodity market together with the liberalisation of imports and the transfer of foodgrain trade to private hands put up a substantial demand for funds. The result was that even with a Rs 35.75 crores expansion in bank credit, stringency in the market was not relieved. On this point, the report draws attention to the unusually high rates for inter-bank call money which prevailed from December onwards. The demand for funds was such that the scheduled banks had to draw down their reserves by as much as Rs 20.53 crores while increasing their indebtedness to the State Bank of Pakistan by Rs 16.38 crores. The pressure of demand for funds together with the surplus in foreign trade entailed expansion in money supply to the extent of Rs 29.60 crores.

The tone of the stock market during 1959-60 is shown to have been generally satisfactory. While in the Giltedged section of the Karachi Stock Exchange, the sentiment throughout

1959-60 was bearish, marked improvement particularly in the first half of 1959-60 is reported in the shares market. During this period, the provision in the Central Budget of tax incentives to local and foreign investors for the fiscal year 1959-60, lifting of price control from 50 items of consumer goods in August 1959 and the steady improvement in the economic situation of the country induced a bullish sentiment. But since February 1960, the imposition of credit restrictions by the State Bank of Pakistan on speculative transactions and the severe seasonal stringency in the money market led to a levelling off in share prices. The result for a majority of shares is however shown to be a net advance over the previous year.

With larger provision for development expenditure and reduced resort to deficit financing, Pakistan's public finance can also be considered to be in better shape than in the past. Development expenditure during 1960-61 is placed at Rs 172.19 crores which compares with Rs 162.90 crores for 1959-60 and the annual average of Rs 105.42 crores for the preceding four years. The improvement in finance is further reflected in the record revenue surplus of Rs 16.52 crores for West Pakistan during 1959-60.

The report relates to 1959-60 and, therefore, its findings have their inevitable limitations. But, in the Central Budget of 1960-61, the Pakistan Government has sought to give further fiscal incentives embracing rationalisation of customs duties with a view to reducing cost of imported raw materials and has made changes in company taxation involving large concessions to encourage savings and investment. More recently, there has been further relaxation of controls. These measures, in their sum, represent a very proper concern for increased production.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

CAPITAL BUDGET

Treasury Bills Fall by Rs 35 Crores

BOTH an increase in revenue receipts and a reduction in revenue expenditure are responsible for the revenue deficit for 1960-61, as shown in the revised estimate for the year, being lower at Rs 33.66 crores against Rs 60.70 crores. Similarly, though for different reasons, variations are to be observed in the capital Budget for the current year. The most important of these is the changed procedure in respect of accruals under Public Law 480 agreements. From 12 May 1960, all fresh deposits under the head are kept no longer with the State Bank, but with the Reserve Bank instead: the explanatory memorandum notes that the Reserve Bank invests such funds "in special securities of the Government of India on which interest at 1½ per cent is payable." Non-negotiable, the securities are payable on demand. In 1960-61, the quantum of such investment is estimated at Rs 240 crores, the Budget for that year having taken no such credit. This includes Rs 108 crores transferred from the State Bank under agreement. Nevertheless, the changed procedure has contributed Rs 240 crores to capital receipts. On the other hand, new loan receipts are somewhat smaller, the revised estimate being placed at Rs 523.84 crores against the Budget figure of Rs 581.21 crores. Market loans fetched Rs 230.70 crores (including Rs 50 crores on account of a funding operation) as compared with the Budget estimate of Rs 250 crores. Foreign loan receipts, according to the revised estimate, are Rs 50 crores lower than the budgeted figure. Small savings collections have registered a small improvement. As a result, the capital deficit to be met by expansion of Treasury Bills has been greatly reduced from Rs 153 crores to Rs 15 crores. Indeed, after the funding operation of Rs 50 crores, there is a net fall of Rs 35 crores in outstandings of Government of India Treasury Bills. It is almost certain that outstandings will, in the actuals, show an even sharper drop. For, the experience of recent years shows that the deficit anticipated in the revised estimate itself may prove to be an overestimate.

For the Budget year, new loan receipts are expected to be Rs 620.95 crores. Market loans, including sales of Prize Bonds, are estimated to bring in Rs 235 crores; and this suggests that the Finance Minister has correctly assessed the money market situation. For, maturing loans amount to Rs 135 crores, and the new money sought is thus only Rs 100 crores. Unless monetary stringency eases, and unless banks have resources for supporting new loans of Government, it is unlikely that an ambitious programme can be put into effect. For relief from its present over-extended position, the banks have to hope for one of two developments, or a combination of them. On the one hand, growth in bank deposits, which was pronounced from around the beginning of 1957 till the end of 1959,

needs once more to be experienced. On the other hand, the rate of growth in industrial production, which has been a high one from the start of 1960, needs to abate somewhat. Our own view is that, as happened during the Second Plan, roughly half of the Third Plan period might witness conditions conducive to a respectable borrowing effort by Government. The beginning and the end of the plan period will probably be marked by relatively stringent monetary conditions.

The anticipation from foreign loans in the Budget year is Rs 385.95 crores. This is only Rs 54 crores higher than the Budget estimate for 1960-61, though higher by Rs 104 crores as compared with the revised estimate for that year. But, with the very considerable spillover of foreign aid already authorised, but not utilised, there is better prospect that the Budget expectation in respect of foreign assistance will be fulfilled. The main source of foreign assistance continues to be the USA, receipts for the Budget year being estimated at Rs 181.74 crores against Rs 137.77 crores in the revised estimate for 1960-61.

Capital disbursements are to go up from Rs 1,116.22 crores in the revised estimate for 1960-61 to Rs 1,254.90 crores. Capital outlay on the railways is to be higher by Rs 36.38 crores at Rs 160 crores. Spending on industrial development is budgeted to be higher by Rs 3.45 crores at Rs 107.15 crores. Discharge of debt is about Rs 38 crores more at Rs 164.33 crores. Another head which shows a sharp rise is Advances to States, which go up by over Rs 60 crores to Rs 395.18 crores.

Net receipts from Treasury Bills are put at Rs 125 crores for the Budget year. But, since the new proposals will wholly cover the revenue deficit of Rs 60.60 crores, it may be expected that the contribution of Treasury Bills to the Centre's resources will be halved. Again, it is almost certain that there will be another funding operation during 1961-62, for perhaps Rs 50 crores. Finally, according to the experience of previous years revenue receipts should be larger, and revenue expenditure lower. So, it is possible to infer that, during the first year of the Third Plan, recourse to deficit financing will be altogether avoided, in the sense of outstandings of Treasury Bills not showing a net rise.

It needs to be remarked here that much of the capital disbursements in 1961-62 will relate to spillover of Second Plan projects. Nevertheless, the tempo of plan expenditure is being maintained. However, the minimised reliance on deficit financing may well mean that growth in bank deposits will not be experienced for another year, at least in the form in which it was known during more than half of the Second Plan. Also responsible for a perhaps continued monetary stringency should be the tendency of governmental revenues to turn even more buoyant. An instance in point is the expected realisation from the tax on bonus issues. The Finance Minister expects, may be, a crore of rupees from this source. But a bonus boom is possible, and, in that case, collections under this head may be bountiful.

The excise duty increases and the enhancement of import duties may both be expected

to give an upward impetus to the price situation. This would be partly offset by the falling trend in agricultural prices. The prospect, unfortunately, is for the index of wholesale prices to continue to rise during 1961-62.

It is clear that, from the point of view of the plan Budget, the dependence on foreign assistance is over-whelming. The financing of maintenance imports may be a crucial problem. In this context, it is heartening that West Germany should have announced, as its first instalment for the Third Plan, assistance of the order of Rs 45 crores; and it is even more satisfactory that a quarter of this amount is to be made available in an "untied" fashion—that is, some Rs 10 crores will go to add to exchange reserves and for being spent on maintenance imports.

STATE BANK

Rs 150 Crores of PL 480 Funds to Remain?

The middle of the month pause in the busy season monetary stringency has continued. According to the returns of the Reserve Bank for 24 February, Active Note Circulation is sizably lower by Rs 15.33 crores at Rs 1,925.33 crores. Rupee Coin has returned from circulation for Rs 0.95 crores. Rupee Securities and Foreign Securities, in the Issue Department, are unchanged. So, the Reserve Bank's cash in the till has benefited and is higher by Rs 16.27 crores at Rs 34.97 crores.

The return of the Banking Department also suggests some relief in the busy season pressure. The Other Loans and Advances of the Reserve Bank are lower by Rs 3.07 crores at Rs 147.64 crores, and it is also to be noted that Reserve Balances of member banks have risen by Rs 5.59 crores to Rs 76.98 crores. Thus, banks were able to reduce—though by a small amount—their indebtedness to the Reserve Bank, and they have added to their balances with the Reserve Bank—though a large portion of the rise, or Rs 4.48 crores, is ascribable to the State Bank. Indeed, the Reserve Bank's advances against usance bills are slightly lower by Rs 0.75 crores at Rs 26.25 crores.

The Centre's balances have fallen by Rs 11.72 crores; and this of course is mainly due to the considerable commitment of Government in respect of maturing Treasury Bills which had been held by the Reserve Bank in its portfolio of bills purchased and discounted. Deposits of State Governments are also seen to be lower, by Rs 2.92 crores at Rs 18.99 crores, their indebtedness to the Reserve Bank in the form of ways and means borrowings being practically unchanged at Rs 37.77 crores. The Investment portfolio shows a small rise to Rs 143.60 crores.

Once again, Balances Held Abroad have been added to, the latest week's accretion being one of Rs 1.94 crores to Rs 31.49 crores. At this level, and with five weeks or so to go, Government is Rs 15 crores short of its target of Rs 175 crores as the level of foreign exchange reserves with which the Third Plan should start.

The return of the State Bank for 24 February is interesting for the fact that it indicates, in a footnote, that US Funds account for Rs 201.79 crores of the total Deposits of

Rs 553.45 crores. Before the end of the fiscal year 1960-61, another instalment of about Rs 12 crores will be paid in to the Reserve Bank; and the Finance Minister has said in his Budget speech that a further Rs 26 crores would be receivable from the State Bank in the fiscal year 1961-62. This means that agreement has apparently been reached that counterpart funds amounting to roughly Rs 150 crores would continue to be kept with the State Bank. It also follows that the tendency of the State Bank to disinvest in gilt-edged will be halted, after about another Rs 50 crores of securities are sold. Deposits, in the latest return, have improved by Rs 2.97 crores to Rs 553.45 crores. Gilt-edged holdings are more or less unchanged at Rs 251.09 crores. The total of Advances has risen by another Rs 1.79 crores to Rs 264.89 crores, and with borrowings lower by Rs 1.31 crores, cash in hand and with the Reserve Bank has gone up by Rs 4.48 crores to Rs 25.58 crores.

The return of Scheduled Banks for 17 February shows a fall of Rs 1.50 crores in Deposits net of borrowings. But it has to be borne in mind that, in the relevant week, the State Bank made over its February instalment of counterpart funds in process of being paid back to the Reserve Bank, and this fact resulted in the State Bank's Deposits falling by Rs 9.93 crores. Hence, the inference is that banks other than the State Bank experienced a rise of nearly Rs 8½ crores in their Deposits. Borrowings from the State Bank are slightly higher, but indebtedness to the Reserve Bank has been reduced by Rs 7.12 crores to Rs 54.27 crores. There is a fall of Rs 2.13 crores in Balances with the Reserve Bank. The decline of Rs 11.56 crores in the gilt-edged portfolio is clearly on account of disinvestment by the State Bank for making over its February instalment of Rs 12 crores against counterpart funds. Finally, the total of Advances has again risen, though by the rather smaller amount of Rs 4.85 crores, to Rs 1,250.17 crores.

BANK PROFITS

Allahabad Bank

The profit of the Allahabad Bank Ltd, including the balance brought forward, is Rs 21.27 lakhs for 1960. Interim dividend for the half-year to June 1960 absorbed Rs 3.19 lakhs, and Rs 1 lakh has been transferred to Staff Pension Fund. It is proposed to pay the dividend on preference shares at 7.80 per cent, including arrears for three half-years at 1.80 per cent in accordance with the provision of the Preference Shares (Regulation of Dividends) Act 1960. The dividend on ordinary

shares is maintained at 12 per cent plus bonus at 6 per cent per annum. Bonus to staff absorbs Rs 8.70 lakhs, and the carry forward is at Rs 5.04 lakhs.

The Bank of Rajasthan Ltd.

The Bank of Rajasthan has had a rather better year in 1960. Net profit (before providing for taxes) is Rs 3,63,262/- subject to audit, as against Rs 2,60,415/- in the preceding year showing a rise of 29 per cent over the profits of last year. The Directors propose to raise the dividend to 10 per cent subject to tax against 8 per cent given last year. This will absorb Rs 92,000/-.

A sum of Rs 91,129/- has been transferred to Reserve Fund as against Rs 53,000/- last year, taking the Reserve Fund to Rs 3,00,000/-. A sum of Rs 41,000/- has been set aside for Bonus, to staff against Rs 37,000/- in the previous year.

Deposits of the Bank have gone up to Rs 5.36 crores as against Rs 4.92 crores in the previous year showing a rise of Rs 44 lakhs which is 9 per cent over the deposits figure of last year.

Help to Underdeveloped Countries

By

Paul Einzig

THERE has lately been a growing volume of publicity about the need for economic assistance to underdeveloped countries. The new Washington Administration fully appreciates the importance of continuing such assistance on a large scale in spite of the balance of payments deficit of the United States but insists that other countries should contribute their share. This is, however, easier said than done as far as Britain is concerned, since it is suffering from balance of payments difficulties which are much worse than those of the United States, owing to the size of the deficit on visible trade. West Germany would be, of course, in a much better position to contribute substantially and has repeatedly declared its intention to do so, but the actual extent of its contributions has been so far well below what it can afford. As for the Soviet Union, its contribution, inflated by skilful publicity, is really negligible. Actual and impending

Indian Finance

troubles in Africa do not exactly encourage economic assistance in the form of private investment, and there is a limit to the extent to which taxpayers in any country can be persuaded to endorse a policy of assistance with the aid of public funds.

Above all, there are no indications that the substance of the problem has been realised anywhere. Trade unions throughout industrialised Western countries continue to press for higher wages and shorter hours, even though it is a matter of simple arithmetic that in doing so they tend to reduce the surpluses that would otherwise be available for the assistance of under-developed countries. The very same people who favour higher wages and shorter working week pay lip service to the imperative need for helping backward peoples and hardly anybody ever takes the trouble of denouncing their hypocritical inconsistency. It is quite obvious that their policy tends to widen further the gap between the standard of living of the masses in advanced and backward countries.

Given the limitations of the resources available for assistance, their allocation is a matter of first rate importance. In my opinion, priority should be given to the urgent requirements of India, owing to the outstanding importance of preventing it from falling under Communist domination. The danger of the Soviet bloc succeeding in securing bases in Africa or Latin America fades into insignificance compared with that of absorption of the Indian sub-continent into the Communist bloc. The setback in the progress towards a higher standard of living in China that was recently officially admitted gives India and the West time for co-operation to raise the standard of living of the Indian people. The Chinese Communist authorities blame a series of droughts and floods for the setback, though to some extent at any rate it must have been due to inefficiencies inherent in their system, which they cannot admit without loss of face. Even to the extent to which the setback has been really due to droughts and floods, it may well be asked whether this unprecedented run of misfortune is not a piece of retribution the Chinese people have brought upon themselves by supporting or tolerating a regime that has challenged Divine Providence by waging ruthless warfare against religion in Tibet. This is an aspect of the situation which needs emphasising in view of the inevitability of gradualness of raising the standard of living.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 28 February 1961. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.310 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.750 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 6 March 1961. Successful tenderers should make payment on Friday, 10 March 1961. Other conditions are as usual.

During the week ended 24 February 1961 Government of India Treasury Bills for Rs 20,72,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 22 to 25 February 1961 amounted to Rs 1,02,00,000.

4 March 1961

Notes

FOREIGN AID Dollars

The Draft Outline of the Third Plan has put the total requirements of external assistance for the Plan at Rs 2600 crores. From figures available in the brochure on External assistance recently published by the Government, a sum of Rs 370 crores, (or roughly 1/7 of this amount) has already been authorised by various foreign Governments and agencies. The Outline itself has not been unmindful of the magnitude of the difficulties in securing assistance on this scale. While emphasising the necessity for making commitments in regard to foreign exchange expenditure only on the basis of external resources clearly in sight, it has been made clear that projects involving foreign exchange outlay should nevertheless be kept ready to be taken up for execution as soon as foreign exchange is available.

In recent months there has been growing confidence that the required quantum of external assistance will be made available by friendly foreign nations: the election of Mr Kennedy as the President of the US has encouraged further this optimism. It will be recalled that one of his earliest acts on being elected was the

creation of a task-force to report on assistance to India. The recommendations of this task-force have been made public this week. Its main feature is the assurance of a minimum of \$2,500 million for India's Third Plan. It has urged President Kennedy to take the lead in granting assistance to India with a view to encouraging other friendly countries to follow suit. Another salient feature is the recommendation to give fairly advance indications of the quantum of assistance that will be available to the Third Plan as a whole. If the task-force's suggestions are accepted, the US will be underwriting more than half of our requirements of foreign exchange for the Third Plan. The task-force has also indicated how the remaining half can be mobilised. Among the other countries, West Germany, is certainly placed in a very strong position to extend its helping hand to India, if only to find an outlet for its surplus funds seeking investment elsewhere. The payments difficulties that the US is currently facing is not expected to make much of a difference to Mr Kennedy's expressed intention of helping developing countries like India. During the past week, there has been, as will be seen from the subsequent notes, a series of events affording evidence of the goodwill from friendly foreign countries towards India's attempt at accelerating the pace of its economic growth. When the Aid to India Club meets in April, fuller details of the extent of likely assistance for the Third Plan will become available. Meantime, such indications as we have had, would suggest that the Third Plan is assured of a most propitious start.

Roubles

Competition in giving aid to India is illustrated in the Soviet Union's new credit for Rs 60 crores. The loan is being made for specific projects and not as a credit to pay for essential imports from other countries. The six schemes drawn up by the Mission will supplement the drug and other projects for which aid is already assured. The offer of help for development of oil resources implies a desire that the public sector should overshadow the private sector in a decade. This may, well happen, if Italian aid supplements Russian aid. The promise of power for Gujarat will satisfy those who pitched hopes high after the oil strike at Cambay. The coal washery at Kathara in Bihar

will be of material help to the steel plants. Equipment and technical aid are envisaged in the agreement signed lately. Russian machinery exports will increase, if the performance at the new plants is satisfactory. In Tsarist times there was little or no trade with Russia. The position is now different because of industrial revolution in Russia which makes it the second largest producer of metals and metal manufactures. Russia has at its call Czech and other resources for stepping up machinery exports. The offer of aid is made without any reference to the strained Sino-Indian relations. The dispute apparently makes no difference to Moscow. The latest credit will make Russia the second largest source of foreign aid and conveys assurance that the Third Plan is of special interest to Russia also, though it may be said that the World Bank's view of India's experience and prospects has influenced Moscow's decision to step up aid. The problem of paying for development loans may be solved by an increase of trade with Russia and of exports of mineral ores to East Europe. Some increase in India's exports of manufactured goods may also be expected, if the Russian policy of raising domestic consumption continues.

Marks

Prospects of increased financial aid from West Germany during the Third Plan were highlighted by the recent visit of the West German financial experts' delegation to this country. Dr Hans Wilhelmi, the West German Minister for Federal Property, who is the leader of the delegation, in a press conference held last week in the West German pavillion at the National Agricultural Fair in Calcutta, disclosed that larger assistance would be forthcoming from his country during the Third Plan period. The delegation will proceed to New Delhi to discuss with the Union Finance Minister details of technical and economic collaboration and the terms and conditions of the credit. Though the leader did not mention anything about the quantum of aid, he stated that assistance would be given on a year to year basis.

Among other points to be discussed with Mr Morarji Desai are the expansion of Rourkela steel project and expansion of trade between the two countries. Another important issue which the delegation will take up with the Finance Minister is the possibilities of providing facilities for West German investors to join hands with Indian industrialists in the field of trade and industry.

Referring to manufacture of cheap cars Dr Wilhelmi stated that discussion between the Government of India and German collaborators is still under way. There have been other offers from abroad—the Italian Mission in

India mentioned that "Fiat" manufacturers have submitted a proposal to Government—and a decision on this question will depend on a number of factors. Meantime, there is no dearth of lines in which West German assistance can be utilised by us.

West German assistance already earmarked for the Third Plan is of the order of Rs 28 crores. West Germany's unique position as a country with "excessive prosperity" at home singles it out as a nation peculiarly fitted to lend a helping hand to developing nations. In the pattern of multi-lateral aid to India envisaged by President Kennedy, Germany has, therefore, a special place.

Dinars

Talks are also proceeding in New Delhi for the utilisation of the 40 million dollar credit given by Yugoslavia, between a delegation from Yugoslav Chamber of Foreign Trade and a team of Indian officials. The Yugoslav delegation, which represents important industrial and business interests, is led by Mr Drausnik Jurica, Director-General of INGRA, the Association of Manufacturers of Power and Industrial Plants and Equipment. After preliminary discussions, joint committees have been set up for examination of the various proposals. These committees will examine Yugoslav participation in power projects, shipping, fisheries, food processing, equipments for steel industry and equipment for Oil and Natural Gas Commission. Other committees will study possibilities of Yugoslav collaboration in the private sector, banking and expansion of trade between the two countries. The members of

the delegation will be leaving next Saturday on a tour of important industrial centres including Bombay, Bangalore, Madras and Calcutta. Discussions will be resumed after they return to Delhi on 8 March.

Dollars

Allocations out of the \$25 million of Canadian Aid for 1960-61, which were agreed upon following discussions between India and Canadian officials, are as follows: \$7 million for import of wheat; \$11.7 million for import of urgently needed non-ferrous metals; \$3.5 million for the third stage of Kundah Hydel project; and \$0.6 million for the completion of the Canada-India Reactor project. Discussions are proceeding for the allocation of the balance. In respect of aid given in the form of commodities, Government of India has agreed to establish counter-part rupee funds out of the sales proceeds, and these funds will be

utilised to finance the local costs of projects agreed upon by the two Governments.

SUGAR

Sweet

Addressing the thirtieth meeting of the Indian Central Sugarcane Committee at Coimbatore last week, Mr S. K. Patil, Union Minister for Food and Agriculture, appealed to the agriculturists to take advantage of the improved techniques of sugarcane cultivation evolved by the Indian Central Sugarcane Committee so that the per acre yield of sugarcane could be raised to 30 tons. With surplus production of sugar during 1960-61 and in the light of the export programmes chalked out for the sugar industry, the problem of improving cane yields assumes considerable urgency. While performance on the industrial side has been flattering with

sugar production having already exceeded the Second Plan target, per acre yield of sugarcane have tended to be stagnant. During the Second Plan period the total sugarcane production is estimated at 78 million tons and with sugarcane acreage during the period at 5 million acres, the per acre yield works out to a low figure of 15 tons. The result in terms of competitive prices in world markets is indicated by the fact that while world price of sugar is on the average at Rs 400 per ton, the Indian cost of production works out to Rs 700 per ton. On the basis of the present disparity between Indian and world sugar prices, exports of sugar from India would call for a subsidy of Rs 300 per ton. For the current year, surplus sugar available for export is estimated at one million tons. In view of the US gesture in offering us 50 to 60 per cent more than the world price, the element of subsidy on exports may

be considerably reduced. But on a long-term basis there can be no alternative to intensifying development programmes for quantitative and qualitative improvements in sugarcane production.

The present low yields are in part a reflection of the uneconomic concentration of sugarcane cultivation in UP and Bihar where the climatic and other factors are less favourable for the cultivation of sugarcane than in the Deccan area or the South. Even in these States implementation of development schemes has lagged behind though results of prize competitions organised in various parts have demonstrated considerable scope for improvement in yields. The main factors in improving sugarcane cultivation are provision of timely water supplies and improved seeds and fertilisers. The responsibility of the State Governments in encouraging and stimulating better cultivation of sugarcane cannot be overemphasised. State Governments presently collect sizable amount of revenue by means of a cess on sugarcane produced for the factories. It is however strange that they have so far tended to be rather half-hearted in utilising collections from sugarcane cess for purposes of improving cultivation. The major part of collections from cane cess has gone to swell the general coffers of State revenue. It is time that the State Governments evince a keener interest in the development of sugarcane cultivation.

Bitter-Sweet

Interesting issues relating to sugar have been raised by Mr T. S. Venkataraman, in his capacity as Chairman, while addressing the ninth annual general meeting of the Cauvery Sugars and Chemicals Ltd last week. Two of them concern an anomalous situation in taxation, and both as affecting shareholders. Although The Preference Shares (Regulation of Dividends) Act 1960 is now law, a company such as Cauvery Sugars is still perplexed, because it is a company which has agricultural income. How does Section 4 of that Act, dealing as it does with rebate on grossing up of dividend in cases where a company's income is also derived from agriculture, apply? Mr Venkataraman has stated that the matter has been referred to the solicitors, and has promised that the final dividend on preference shares, for the year ending 30 June 1960, "will be declared and paid as soon as we receive some definite advice." As with all new legislation, loopholes there are, difficulties persist and perplexities abound.

Secondly, where a company is eligible for tax relief under Section 15C, what is the rate at which tax should be deducted on dividends? Cauvery Sugars has apparently been advised by the tax

Indian Finance

4 March 1961

authorities that 20 per cent of the profits of the company will not attract tax; and tax is therefore being deducted on 80 per cent of the dividends. Unfortunately, the final assessment of the company's liability to tax for the year to 30 June 1960 will be determined only at some future date. To the extent that, at the time, "the profits exempted under Section 15C prove to differ materially from the Provisional Assessment," says Mr Venkataraman, "the Income Tax authorities will make the appropriate adjustments in the individual assessment of shareholders." Every new law, even when its intention is to afford relief, has a twist and a turn that baffle and confound.

Another law it is, though impending and not as yet enacted, which compelled Cauvery Sugars to take to decision to sell the lands—448 acres, at a book value of Rs 8.96 lakhs—it owned. The Madras Land Ceilings Bill is now with the Select Committee, but the company had some doubt whether its holdings, though it was agricultural land, would be exempted. Mr Venkataraman considers it doubtful "whether exemption will be given in cases where the factory does not own and operate its farms." Almost exactly three-quarters of Cauvery Sugars' lands have been sold for Rs 8.18 lakhs, and therefore the company stands to make a profit, despite the remaining lands being of "comparatively poor quality." When it is reckoned that yields of sugarcane improved satisfactorily to a range of 35-40 tons per acre, it is obvious that companies should be encouraged to have the production of the raw material under their tutelage.

The improvement in acre-yield comes at a welcome and opportune time. For, it looks as if negotiations with America for sale to that country of Indian sugar may be fruitful; and raising the yield of sugarcane is, apart from improving the quality of the cane, the best possible way of bringing down costs of sugar production.

ASSAM

Heart-Searching

Inaugurating the Budget session of the State Assembly, General S. M. Srinagesh, the Governor of Assam, stressed the paramount importance of shedding all differences and creating an atmosphere congenial for the development of the State. The border trouble, internal tensions, limitation of resources and the menacing Naga trouble—all these had their effects on the progress of the current Plan. Referring to the July riots, the Governor stated that the State had passed through a very trying period causing considerable anxiety and concern to all. Those disturbances have caused tremendous loss to life and property and

have uprooted thousands of families. The authorities were put to severe strain in restoring law and order. The rehabilitation of the displaced persons is progressing satisfactorily, though its cost, a totally needless burden on the already exiguous resources of the State, has been heavy. It is, however, heartening that a great deal of introspection has been going on among the people and the citizens have fully realised the need for eschewing violence in urging one's views and claims in a democratic set up.

The riots have also brought to sharp focus certain weaknesses in the administrative machinery. These are being remedied. The Third Plan for the State has been finalised with a total outlay of Rs 120 crores. The authorities contemplate to increase food production by at least 400,000 tons annually in the next Plan. More attention will be paid for promoting industries with a view to creating more employment opportunities for the people. Political stability in the State is a sine qua non of the success of these enterprises.

KERALA

High Endeavour

Mr V. V. Giri does not answer to the conventional description of a Governor. He is far too energetic and inventive for what is usually considered an ornamental office. As Governor of Kerala he has been promoting the interests of the State as actively as the rather staid requirements of his office permit. Very recently he addressed in Bombay a conference intended to interest entrepreneurs in enterprises in Kerala. In his address to the Kerala Legislative Assembly last week, Mr Giri not only surveyed the State's achievements and prospects, but also threw out a number of interesting suggestions. Among these was a demand for the establishment of heavy industry in Kerala. On the face of it, it appears a surprising suggestion, especially when it is linked up with the problem of unemployment in the State. Heavy industries are capital-intensive and their ability to solve unemployment problem is very limited. However, it would appear that the idea is to create a large volume of local employment in ancillary industries that are bound to grow up along with these industries. In any event, opportunities for private entrepreneurs in Kerala with its maritime importance and vast body of educated labour force can hardly be underestimated.

In the course of his review of last year's events, Mr Giri made a reference to the effect on the morale of the people of the State of the closure of the Palai Central Bank. There is no doubt, that this event has had an adverse effect on the economy of the State where

important institutional sources of credit for agricultural and other operations have since been drying up owing to a fall in deposits. It is of utmost importance that the situation should be improved and confidence restored as early as possible.

The food situation in Kerala has shown an improvement during the year. But the State Government has to bear a heavy burden in the form of subsidy. It was stated that from the year 1960-61 the subsidy was of the order of Rs 1.45 crores. Obviously, subsidy cannot but be a temporary solution and it is necessary to increase agricultural production to the highest possible point. The Third Plan assigns great importance to this task; irrigated areas are expected to increase by over 300,000 acres and to produce an extra 500,000 tons of rice per year by the end of the Third Plan. Forestry is one of the more important limbs of Kerala's economy. Mr Giri stated that the Third Plan proposes to have fresh plantation of 25,000 acres of teak 150,000 acres of softwood and 150,000 acres of eucalyptus. Besides, cultivation of medicinal plants for the proposed pyro-chemical plant at Nariyamangalam has also been started. During the Second Plan, the State has achieved notable success in major irrigation schemes but power projects have not made the same degree of progress. Technological education is to be specially fostered in the coming years and a new regional engineering college at Calicut is to come into being in the course of next year. A medical college is also expected to start functioning soon.

The National Council of Applied Economic Research has submitted its report on the techno-economic survey of the State. This will provide the background data for further formulation of economic policies in the State. But the most important asset of Kerala is its manpower. Concerted efforts at optimum utilisation of both human and material resources will transform much of State's current political frustration into a useful developmental force.

COMPANY FINANCE

Inner Strength

Speculators in shares may not find much use for the type of studies of company finances brought out by the Reserve Bank of India at regular intervals. For the results pertain to the corporate sector as a whole and reveal conditions that obtained a year or two ago. But they are of abiding interest to the investors and students of company finances.

The latest RBI study deals with the finances of 460 public limited companies the accounting periods of which ended during the quarter October-December 1959. These account for 35 per cent of paid-up capital and 34 per cent of total net

assets of the RBI sample of 1,000 companies studied on previous occasions. The main industrial sub-groups covered by the study under review are cotton textiles, engineering, mineral oils and tea plantations. The results revealed should be deemed to be quite encouraging by any reckoning. There has been substantial increase in fixed assets, sales, profits and dividends. A substantial portion of the profits has been ploughed back. The picture, however, is not wholly bright: the expenditure side has also showed an upward trend, owing to increasing wages and the ever-spreading net of excise duties. Sales which form the main item on the income side recorded a rise of 6.1 per cent from Rs 719.9 crores in 1958 to Rs 764.0 crores in 1959. On the expenditure side raw materials consumed and other manufacturing expenses rose slightly by 0.3 per cent from Rs 410.14 crores to Rs 411.43 crores. Salaries and wages in 1959 rose to Rs 134.4 crores recording an increase of 5.3 per cent from Rs 127.55 crores in 1958. The uptrend on the expenditure side so far as salaries and wages are concerned may become further pronounced in 1960 since further wage increase has taken place due partly to Wage Board awards in respect of the cement, the textile and the jute industries. More such awards are in the offing in the coming years. Manufacturing expenses also may be found to have increased sizably in the next year as the trend in raw material prices, especially of cotton and raw jute, has been upward.

The profitability of equity capital indicated by the ratio of profits after tax to net worth showed a marked improvement from 5.8 per cent in 1958 to 10.4 per cent in 1959, while the ratio of dividends to net worth rose from 5.2 per cent in 1958 to 6.9 per cent in 1959. Dividends are higher in 1959 at Rs 24.14 crores as compared to Rs 17.05 crores but it is to be noted that the 1959 dividend figure includes tax cut at source on dividend income of shareholders. Total assets formation amounted to Rs 48.6 crores with the gross fixed assets formation at Rs 29.6 crores. In the pattern of sources of funds in assets formation, external sources comprising fresh capital, borrowings and trade dues and other current and non-current liabilities accounted for 30.5 per cent as against 34.8 per cent for the previous year. Fresh issue of share capital has accounted for only Rs 4.1 crores indicating the small part played by the general investing public. The two main contributors among internal sources are depreciation and free reserves.

THE DOWN AND OUT

MORE PIPES
to meet the
nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

THE INDIAN IRON & STEEL COMPANY LIMITED

WORKS AT BURNPUR & KULTI

policy. The Bharat Sevak Samaj is going to lease the building which will be set up with a central grant made available to the State Government. A charge of ten nP per night will be made to the people who use it. The model of a Rowton House in Ahmedabad will be copied by many cities in many States hereafter. Indeed, the best memorial to Lord Rowton is the doss-house in London. Philanthropists here will not miss his example, after the Government has given a lead. There are many working men who are without shelter at night. The cold wave passing this year is a good reason for starting a scheme that will help not only casual workers but those unable to get accommodation for a night. The 208 beds may not be enough at all but the BSS can expand by collecting donations for a worthy cause of putting a roof over the heads of poor people for a brief

period. The existence of night shelters for vagrants, the jobless and others alleviate the plight of the poor in big cities. The searing record of a Down and Out given by George Orwell is one reason for the Ahmedabad venture to be commended. The other is that in Calcutta many have suffered badly because of lack of clothing and shelter and the advantages offered to the poor by vast temple courtyards in the South are not available in North India where the climate is also hostile to the poor. The Ahmedabad experiment should spur many civic bodies to think of shelters rather than stadiums, to collect donations and to get a load off the conscience of good citizens.

SCIENCE

Many Inventions

The National Research Development Corporation of India, registered

as a wholly Government-owned body in December 1953, aims at stimulating development of patents and inventions arising out of researches conducted in the various research institutions and, where feasible, also of patented inventions from individuals.

Since its inception the NRDC has instituted 20 developmental projects to prove and demonstrate the commercial possibility of the processes and inventions developed by young Indian scientists and technologists. The projects, costing Rs 41.4 lakhs, cover paper, sugar, cement, food and chemical industries. Of these, baby foods from buffalo milk and pine oil from Indian turpentine are now produced on commercial scale.

Research in 35 National Laboratories and other institutions and establishments in the past few years has resulted in nearly 400 inventions. (These include four inventions by private individuals). The National Chemical Laboratory at Poona tops

the list with 71 inventions and the Central Leather Research Institute at Madras is next with 45. Some 39 inventions have resulted from schemes launched by the Council of Scientific and Industrial Research. Among the other laboratories and institutions a number of inventions have emerged from the National Physical Laboratory, New Delhi, the Central Electro-Chemical Research Institute, Karaikudi, the Regional Research Laboratory, Hyderabad, the Central Fuel Research Institute, Joalgora, the National Metallurgical Laboratory at Jamshedpur, the Central Glass and Ceramic Institute at Calcutta, the Central Food Technological Research Institute at Mysore, the Shri Ram Institute for Industrial Research in Delhi, and the Indian Institute of Science, Bangalore.

The NRDC has negotiated a number of licences for production of materials by the application of many of these inventions. Already, 37 of the inventions have been applied in commercial production. Almost all the products being commercially produced are contributing towards conservation of foreign exchange. Production of baby foods at Anand, in Gujarat, alone is expected to result in an annual saving of nearly Rs 1 crore in foreign exchange.

The latest projects sanctioned include a prototype plant for the production of proteins from groundnuts at an estimated cost of Rs 14.70 lakhs and the establishment of a unit for experimental production of aromatic chemicals at a cost of Rs 6 lakhs. An important invention is "Suri Transmission", the development of which by a leading German firm has reached an advanced stage. Suri Transmission, developed by a young Railway engineer, is expected to effect a saving of 10 per cent in fuel cost in diesel locomotives.

The Corporation has no statutory powers of compulsory acquiring patents and inventions; it can only do so by agreements and negotiations. A number of inventions have been released to industry without payment of any royalty. In respect of some others, technical details have been published for commercial exploitation. The number of such invention comes nearly to 80. The Corporation also negotiates the development and patenting of Indian inventions in foreign countries, including the United Kingdom, the United States of America, France, Canada and West Germany.

N. RHODESIA

Stalemate

The Rhodesian round table talks have ended in a stalemate. South Rhodesia does not mean to give power to the Africans in the way that Kenya will soon give. The self-governing colony does not at all like Mr Macleod's plan to save the Federation and the three leaders, Banda, Kaunda and Nkomo are left to ponder over the failure of the conference. The Rhodesian conference held for a month threat-

ens to become like the Cyprus conference. But in Cyprus, the Archbishop won at the end, and time is on the side of the African leaders. The idea of a multi-racial society in East Africa must have its effect on Rhodesian settlers also, and the problem may be settled by the attitude of outside mining interests rather than by the Colonial Office. The danger of unrest spreading from the Congo will be kept in view by the Colonial Office at any rate and the British attitude to Africa must change after the mission of US Senator to the Congo. Nationalism is a new force in Africa opposed as much to exploitation as to the rampant racialism. Though London has the initiative, copper-mining companies will be worried over the immediate outlook. The South Rhodesian settlers can be perhaps brought into line by a hint from the big buyers of tobacco. To apply economic sanctions may be expedient, if only to reassure African leaders that the review of the Federation's working is not a formality. The future of Africa, however, rests on the new free countries like Nigeria which, like Tanganyika, may attract US capital and German skills and leave North

Rhodesia high and dry. Nyasaland may stop supply of labour, and recruiting in Portuguese territory may be impossible in view of the unrest that has cracked Colonial rule in Salazar's empire after the Santa Maria incident.

RUBBER

Many Uses

The progress made by the Indian rubber industry was briefly reviewed by Mr Lal Mohan Jammadas, the President of the Indian Rubber Industries Association while inaugurating the fourth exhibition of rubber goods in Calcutta. The articles on show clearly demonstrate that our products are in no way inferior to goods manufactured in other countries. India at present manufactures all kinds of rubber goods required for transport industries and agriculture, besides medical and surgical goods, and the industry can process most of the synthetic elastomers.

The rubber industry got real impetus during the Second World War. The country is at present exporting a large quantity of

rubber goods and with proper encouragement, our exports can be stepped up considerably. The main handicap of the industry is the high cost of production compared with that in other manufacturing countries. The high price of raw rubber is responsible for the increased cost of production. The present arrangement for importing raw rubber equivalent to dry rubber contents of rubber goods has failed to provide a solution to the problem. The delay in issuing licences has more often than not deprived manufacturers of the anticipated advantage of compensatory import of raw rubber at lower world prices against their exports. The President, therefore, requested the Government of India to grant licences to the manufacturers in advance on the basis of their export targets and to constitute a Rubber Export Promotion Council.

Another difficulty which the rubber industry is facing is the severe competition from modern plastics by way of replacement of certain rubber items by those made of plastics. To avoid competition Mr Jammadas suggested that the two industries be brought under one Development Wing and

that manufacturers be asked to produce specific rubber goods should be allowed to manufacture similar goods made of plastics and vice versa.

The yawning gap between supply and demand in rubber in India has already caused some anxiety. In 1960 the consumption of rubber is estimated at about 50,000 tons while the production totalled only to about 24,000 tons. To bridge this gap to a certain extent licences has already been sanctioned for the setting up of two synthetic plants. Undoubtedly India is still dependent on foreign countries for its raw rubber requirement. Steps should be taken to increase local production.

PORTS

Haldia

The Government of India's decision to develop an auxiliary port at Haldia 63 miles away from Calcutta has reached a fairly advanced stage. The biggest hurdle for the implementation of the plan appears to have been overcome, for, the World Bank is reported to have promised to provide the foreign exchange component of total expenditure on the development of the port. The importance of Haldia cannot be overemphasised since the Calcutta port has already reached the saturation point in its handling capacity. The progressive silting of the river Hooghly is preventing the access of modern ships to Calcutta. The paramount necessity for developing Haldia as a satellite port to relieve the pressure on Calcutta port was also stressed among others by the Hoffmann Committee. Accordingly the Government of India has accorded top priority to the Haldia port project and also consented to take up the matter of establishing a rail link from Haldia to connect the interior areas.

The Calcutta Port Commissioners' report advocates for the development of dock system in Haldia considering the currents, tidal ranges, weather, possibilities of cyclone and navigation. The main advantage of Haldia lies in the fact that it will have no bends and bores to contend with and being downstream of the 12 and 14 bars will facilitate ships to load to deeper draughts. It is to be noted that from the hinterland served by Calcutta, 40 per cent of the country's imports and 45 per cent of its exports flow through it. The export trade through Calcutta accounts for nearly 50 per cent of the total foreign exchange revenue. When the proposed Haldia port comes into being, it will provide easy access to ships of any length. The unlimited scope for expansion can also be exploited with a view to providing adequate facilities for laying ships for repair works, the need for which will be intensively felt with the growth of India's mercantile fleet.

The Bank of India Ltd.

Transacts all kinds of Banking Business including Foreign Exchange.

IFC—

Amendment To Charter

Robert L. Garner, President of the International Finance Corporation (IFC), announced on 24 Feb. that a resolution to amend the Corporation's charter to permit it to make investments in capital stock is being submitted to the Corporation's Board of Governors for action.

IFC is an international investment institution with capital of \$96 million subscribed by 58 member governments. It is closely affiliated with the World Bank, but its operations are distinct, as IFC deals exclusively with private business. Its purpose is to further economic growth in its developing member countries by investing—without government guarantee—in productive private enterprises in association with private capital and management. As on 31 January, 1961 investment commitments had been made in 35 enterprises in 17 countries amounting to nearly \$42 million, in which private participations and sales totalled \$6 million.

Under its charter at present, IFC is prohibited from investing in capital stock or shares. IFC came into existence in July 1956, with the hope that this prohibition against investing in capital stock would not unduly restrict its operations. The experience of 4½ years has now convinced the Directors and Management of IFC that this restriction is in practice a serious handicap both to the growth of IFC's operations

and the mobilization of private capital for foreign investment.

Mr Garner emphasized that "The ability to do equity financing, where appropriate, would provide wide flexibility of financing so as to meet the varying needs of private enterprise in the developing countries and to attract private investors to participate with IFC. It would substantially assist IFC in increasing the scale of its operations, and thus increase its contribution to economic development." The proposed action to amend IFC's charter does not involve further capital subscriptions by member countries.

Given the power to invest in capital stock, IFC would be in a position to:

- (1) strengthen by its own investment the capital structure of enterprises;
- (2) encourage private investors to join in with it in taking either preferred or common stock;
- (3) share in the risks and profits of an enterprise in traditional form;
- (4) negotiate investment terms on simpler and more acceptable lines;
- (5) make more effective use of options and convertible securities;
- (6) and cooperate with local institutions in the development of capital markets

by underwriting issues of convertible securities and share capital for public subscription.

IFC would not go into the business of selling shares to the public; that would be done by private bankers and brokers. IFC would be in a position to assure that the required funds would be forthcoming as needed, pending the time when public investors could subscribe to such shares.

IFC feels strongly that it should not exercise control over, nor participate in management of, private business. It has not participated in management or even named a director on the board of any enterprise in which it has invested. It would not ordinarily wish to vote stock held by it. IFC's purposes would be served if it could invest in stock which it would be prohibited from voting except in cases of jeopardy or other special circumstances. (Article III, Section 4, of the IFC Articles of Agreement confers a general power to take such action and exercise such rights as it may deem necessary for the protection of its interests in the event of default or jeopardy.)

The sole purpose in requesting this right is to enable IFC more adequately to meet the needs of worthwhile private business in forms more acceptable to businessmen and investors.

Olympus

In Parliament

PANDIT Govind Ballabh Pant's illness cast a deep shadow over the Lok Sabha as it unanimously voted the motion of thanks on the President's address after listening to the Prime Minister's reply to the four day debate last week. With their minds elsewhere, the members were not in a position to respond with enthusiasm, or even to take in the Prime Minister's detailed account of the border dispute, the assurance that adequate steps had been taken to halt further aggression or his description of the many-sided progress of the national economy. Mr Nehru himself was not his usual self and the signs of strain were even more evident when he inaugurated the AINEC session two days later. Referring to the progress of planned development, Mr Nehru had said that, while agriculture was moving in the right direction, as regards industries the spectacle was "not merely satisfying but electrifying." He had instanced the outstanding record of the handloom industry, heavy military trucks rolling out of defence factories at a rate of 120 a month which will increase in a few months to 150, and the attainment of targeted capacities for steel and coal.

There is no dispute that in spite of setbacks, targets of capacity have been reached or surpassed in a wide range of industries. But at the same time it is also evident that the tempo of production has

not kept pace with the growth of manufacturing capacity. In the concluding year of the Plan, realisation of targets of output has been frustrated by serious shortage of coal and other essential raw materials and power. With reports of embarrassing accumulations of coal at pit-heads, on the one hand, and the universal cry of coal shortage from consumers all over the country, it is not difficult to identify inadequacy of transport as the main factor responsible for current difficulties; the Railways have naturally become the target of angry criticism. The repeated statements of their spokesmen, in Parliament and outside, that the Railways have completely fulfilled their commitments under the Plan have only served to exasperate the critics. Statistics of wagon offers or availability put forth by either side only serve to add to the confusion, as the figures quoted refer to different periods and places. Both together lead to the conclusion that, when the Railways are able to provide an adequate number of wagons there is no coal for loading, at any rate of the type for which the wagons were allotted, and when the coal is ready there are no wagons to carry it to consuming centres.

There may be extenuating reasons—the Railways have their grievances against both producers and consumers—why they were not able to provide sufficient number of wagons to move coal and other commodities in time. The "unexpected" expansion of demand for transport does not provide a satisfactory explanation. For the fact remains that there is a gap of eight million tons between the actual goods movement and the traffic expected in the current year on the basis of which the Railway plan was presumably drawn up. This has resulted in a short fall of Rs 12 crores in freight earnings below budget anticipations. Wherever the responsibility lies, it is not possible to avoid the conclusion that planning for transport during the Second Plan was seriously defective—a fact acknowledged by the Prime Minister when Acharya Kripalani raised the point.

As far as coal movement is concerned, it is possible that Railways would have been able to provide sufficient number of wagons, if the demand had been only spread out over the entire Plan period. But actually things have turned out quite otherwise. After a long period of preliminary fumbling, when the NCDC patiently, endured the taunt that public sector collieries could not deliver

the goods, the NCDC collieries have displayed a sudden burst of activity which has taken everyone by surprise. In the course of the last three months, the NCDC collieries have doubled their output from the level of 6.5 million tons per annum in October 1960 to 12.5 million tons per annum in January 1961. And they have in effect turned round on the Railways with the challenge: "Here is the coal, where are your wagons?" The Railways have allowed themselves to be caught napping. Either there has been a failure in co-ordinating the detailed programmes of production and transport or the Railways' plan was too rigid to respond to changes in production trends.

An inquest into past failures is neither necessary nor is it at all helpful in devising an adequate transport policy for the Third Plan period. Nor will it be advisable to wait for the recommendations of the Neogy Committee. This Committee after eighteen months of cogitation, has produced an elaborate questionnaire on which experts on transport can sharpen their teeth for years to come; but not much help can be expected from that quarter in drawing up an adequate plan for the Third Plan period. As we cannot afford to wait for the perfect transport policy to be formulated after the Neogy Committee has investigated all the pros and the cons and the things in between, we should be content for the time being with the second best. The statement made by the Minister for Mines, Steel and Fuel, in answer to a Calling Attention Notice in Lok Sabha, which shows a realistic appreciation of the situation offers a ray of hope. "Since we cannot expect immediately to expand the transport capacity by rail to meet in full the vastly increased demand," said Sardar Swaran Singh, "we are considering alternative modes of transporting coal, such as increased use of road transport in specified zones, as also other measures to meet the situation. The question of moving coal by sea to coastal States is being considered. . . . There is a further proposal that considers in the western part of India, as in Ahmedabad, need not transport all their coal all the way from Bengal-Bihar Coal fields, which means a long haul of 1100 miles, but they should switch over completely to coal from the Central India fields." The use of furnace oil by those users who can afford to do so will not only release coal but also transport. The Railways are also expected to implement their programme for speeding up movement by introducing large-sized wagons in block rakes for through transport of coal from collieries to coal dumps located at suitable centres. If consideration of the proposals does not take too long, the logistics of coal supplies may be expected to be placed on a fairly satisfactory basis before

the Third Plan has completed the first year.

Apart from the transport bottleneck, another reason for the shortage of coal for steel plants was the delay in setting up washeries to increase the quantity of coal for metallurgical use. The difficulties experienced by steel plants last year have emphasised the importance of making adequate provision for washeries to meet the requirements of the expanded programme of steel production. A washery for coking coal with capacity for 3 million tons a year at Kathara is one of the Projects which will be financed by the latest Soviet credit of Rs 60 crores. The agreement for the utilisation of this amount was signed in New Delhi last week.

With the signing of this agreement, the total assistance authorised by the Soviet Union for India's economic development since the beginning of 1955 amounts to Rs 385.41 crores. Of this the total amount of credit is Rs 384.25 crores and the balance of Rs 1.16 crores consists of grants. As in the case of all Soviet credits, the rate of interest is 2.5 per cent per annum, and repayments in rupees, to be completed in twelve annual instalments, will begin after the delivery of machinery and equipment supplied against the credits is completed. The rupee payments will be utilised for financing the import of Indian goods into the Soviet Union.

The enterprises and projects which will be financed through this credit are:

1. Hydro-electric Power Station on the right bank of Bhakra with a total capacity of 4,80,000 kW (four generators of 1,20,000 kW each).
2. Oil Refinery in Gujarat with a capacity for refining two million tons of crude oil per year together with a Thermal Plant for the Refinery.
3. Washery for Coking Coal with a capacity of 3 million tons of coal per year at Kathara in Bihar.
4. Refractories Plant near Bhilai for production of about 1,25,000 tons of magnesite and fireclay products per year.
5. Exploration, development and production of oil and gas by the Oil and Natural Gas Commission in Cambay, Ankleshwar and in other areas.
6. Production of Pumps and Compressors—Preparation of techno-economic report.

The Soviet organisations will prepare detailed project reports and working drawings required for the establishment of the above enterprises and projects, supply equipment, machinery and spare parts and other materials as well as render technical assistance in the establishment of the projects and putting them into operation.

Markets

JUTE

Maximum Price for Jute

ALTHOUGH upto last week-end sentiment in the jute and gunny markets appeared to be quite steady, prices, especially in the heavy goods section, have started falling since Monday this week. It is evident that market men have correctly guessed that the New Delhi meeting between the representatives of Government and the jute goods industry will be productive of concrete measures to curb runaway prices. They had not to wait too long to verify their hunch. In a Press Note issued on the day after the meeting, the Indian Jute Mills Association has detailed the measures that have been decided upon as a result of discussions in Delhi.

The Government of India, will shortly issue regulations under the Essential Commodities Act which will, inter alia, empower it to fix statutory maximum prices for raw jute and jute goods. These powers however are not to be exercised except in respect of requisitioning of raw jute and, in certain circumstances, of jute goods. These conditions will apply only if the IJMA is able effectively to operate a voluntary scheme for a maximum price for raw jute. The regulations also contemplate a scheme for licensing of raw jute dealers.

The IJMA has undertaken to introduce a scheme for a maximum price for raw jute based on Rs 62 per maund for Assam Bottoms, with other grades and qualities in proportion. This scheme will provide for the compulsory registration of all contracts for raw jute with the IJMA and will be reinforced by requisitioning of raw jute stocks by the Jute commissioner both from sellers and if necessary, from mills.

Although no voluntary maximum price is being fixed for jute goods, the IJMA has undertaken to see that limits are imposed on the amount of unsold ready goods that may be held by its members. Provision is also made for requisitioning goods in excess of the limit allowed by the Jute Commissioner in case mills fail to honour the voluntary arrangement. It is explained that this new arrangement with regard to jute goods is mainly due to the fact that prices of raw jute and jute goods are out of parity and are largely determined by overseas demand.

The problem of raw jute supply from the early next season is to be tackled from now on. The Government has agreed to licence the import of jute from Pakistan in order to take advantage of the Pakistan jute crop being earlier than the Indian crop.

The decision not to impose a ceiling on the prices of jute goods may also be due partly to the fact that such controls are frowned upon by foreign buyers. Moreover by ensuring that whatever production is obtained from month to month will be made available to the market without giving any chance for hoarding or other attempts at creating an artificial scarcity, it may be possible to effect a reduction in prices. A sizable decline has already taken place.

It is however to be hoped that the period of restriction and controls will not last long. Once raw jute supply become sufficient many of the current problem facing the industry will automatically disappear although it is quite on the cards a different set of problems may crop. From indications available, the next Indian jute crop may turn to be a bumper one. In the first place, the high returns obtained by the cultivator in the current year has made him quite eager to extend the area under jute. Secondly, Government and the agencies responsible for the promotion of jute production may be expected to take concerted measures to provide all the facilities needed by the cultivators with a view to obviate even adverse weather conditions. In this connection it is of interest to note that the Indian Central Jute Committee has drawn the attention of the cultivators in the Eastern India (mainly West Bengal and Orissa) to the bright prospects of taking a first crop of jute from their low and mid-land holdings before transplanting their aman paddy. It points out that conditions this year seem particularly propitious for effecting this change in the cropping pattern. The presence of sufficient soil moisture due to the last few February showers and irrigation facilities in DVC, Mayurakshi, Hirakud and Delta areas offers a good opportunity to jute growers in large parts of West Bengal and Orissa to make a start with double cropping this year of aman paddy land.

TEA

Export and Excise Duties

THE Tea industry will be thankful that, at long last, the need to reduce the tea export duty has been recognised. The export duty on tea has been reduced by 9 nP per kilo. Excise duty on package tea has been reduced from 46 nP to 40 nP, while other excise duties are increased as below (per kg.):—

Zone	Existing	Proposed
I	4.5 nP	10 nP
II	9.0 nP	15 nP
III—A	18.0 nP	25 nP
III—B	27.0 nP	35 nP

Tea consumption in the UK in 1960 amounted to 505 million pounds; and this was 8,500,000 pounds more than in 1959 when, in spite of the hot dry summer, British tea drinking decreased. The International Tea Committee's figures show that the UK is still by far the world's largest tea market. Of other non-tea producing countries, the USA is the next biggest consumer, importing at the rate of 118 million pounds against 107 million pounds in 1959.

According to the Board of Trade, London, tea supplies to the Britain in the whole of 1960 were higher at 529.27 million pounds as compared with 517.78 million pounds in the previous year. Excepting India and Pakistan, all supplying countries exported more tea to the UK with supplies from Ceylon rising to 151 million pounds from 137.36 million pounds in 1959 and those from Indonesia to 10.03 million pounds from 9.31 million pounds.

Official sources in New York state that the total imports into the USA last year rose to 116.08 million pounds from 108.41 million pounds. Excepting India, almost all the major tea producing countries increased their supplies of tea to the USA. Arrivals from India fell sharply from 28.51 million to 25.54 million pounds.

A recent decree issued by the Government of Iran will give a filip to tea exports from India to that country. The decree laid down that, with effect from 21 March, 1961, the deficit of tea required by Iran shall be imported from tea producing countries who have an agreement for exchange of goods with Iran. India has already a Treaty of Commerce and Navigation with Iran; but as the Iranian Government does not consider it sufficient for the purpose of this decree and favours a formal trade agreement, the question of signing such an agreement is being considered by the two Governments.

Trade circles in Calcutta expect that India will shortly be able to regain her original position in the Iranian market. But, it will be necessary to ensure that the prices remain competitive. Indian tea is much superior in quality. It is, therefore, feared that any noticeable increase in price may have an adverse reaction. India's main competitor for export of tea to Iran is Ceylon. Exports from that country have been progressively increasing over the past few years.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 70,651 packages. There was a strong and general demand. The best CTCs with bright liquors again met with good support and were sometimes dearer; but those with more ordinary liquors were, however, occasionally 20 nP per kilo lower. Secondary grades were the strongest feature of the sale and they met with very keen competition and prices often showed considerable advances.

Medium Assams with bright liquors were well supported; but the plainer types were often easier. Dooars BOPs and all clean black BPs and PFs were well supported at about last rates. The more ordinary types were occasionally up to 10 nP easier. "Teas for price" were sold well. Leaf grades met with good demand, the better types being sold well. The few Darjeeling teas, on offer, were generally easier. Following rates were quoted:—Clean Black Pekoe Rs 5.20 to Rs 5.50; Plain BP Rs 4.60 to Rs 4.70; Plain Fannings Rs 4.70 to Rs 4.90; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.80 to Rs 5.10; Best Assam CTC BP Rs 5.80 to Rs 6.20 and Best Assam CTC Fannings Rs 5.90 to Rs 6.40.

In London auction, offerings were 24,354 packages including 22,513 packages from Northern India. A very strong market was in evidence with brisk bidding for all descriptions. Good medium teas showed advances of 1d to 2d per pound, while for the better kinds of 2d to 4d above last week. Good plain teas also shared the better market, but not quite to the same extent. The rate for Plain Broken Pekoe was quoted at 3sh 10½d per pound.

Tea stocks in London, as on 17 February, were 143.67 million pounds as against 142.32 million pounds in the previous week. The total quantity to be landed on the same date was 24.38 million pounds. Total afloat was 24.01 million pounds including from Calcutta 17.90 million pounds; from Chittagong nil; from Coochin 2.49 million pounds; from Ceylon 1.02 million pounds and from other Ports 2.60 million pounds. Average price realised at the auction during the week ended 17 February, 1961 was 54.63d per pound against 54.04d in the previous week and 52.68d a year ago.

COTTON

Futures Rally

The cotton futures market seems to have shaken off its nervousness and made an impressive rally during the past week mainly due to the revival of buying interest at low levels. The emergence of fresh buying was prompted by the reports of low cloth stock with the mills and the rising trend of raw cotton consumption. Higher advices from spot section also fanned the buying enthusiasm. The Jarilla April contract has improved from Rs 558 to Rs 575 per three quintals on up-country mill support.

In the spot section there was a revival of mill interest in almost all the popular varieties. Vijay, Digvijay, Surti, Kalyan and CO2 were in great demand and the prices of

these styles went up by about 10 to 15 per cent.

Reports emanating from the cloth market indicate an acute shortage of popular style made from medium counts of yarn. The mounting demand for cloth has enabled many mills and wholesale dealers to secure high prices for their stocks. Some varieties were reported to have commanded an unofficial premium over the prices fixed by the Federation.

The recent proposal of the Indian Cotton Mill's Federation to buy cotton for stockpile has also, to a considerable extent, helped the bullish sentiment in the market. The Committee of the Federation is expected to meet in Bombay in the second week of this month to examine the scheme for stockpiling of cotton.

Fresh developments in the import sector was conspicuously absent. Interests in imported styles were subdued. The quantity of cotton licensed for import from 1 September to 4 February totalled about 0.5 million bales. But the actual arrivals during that period amounted to approximately 0.4 million bales.

The export front also displayed listless conditions. The cotton exporters are inclined to voice their grievances against the method adopted for distributing the export quota for Bengal Deshi. Rumours are also current of the possibility of releasing another instalment of export quota for 25,000 bales of Bengal Deshi which will be distributed among genuine shippers.

Alexandria.

No fresh development was reported in the Alexandria cotton market. The futures prices declined to some extent on account of lack of foreign enquiries. The quotations received from different shippers varied widely. Many shippers are still basing their quotations on the 6 per cent official export rate while a few shippers are allowed by the Egyptian Government to sell at prices which work out to a discount of approximately 16 per cent. The differences in prices naturally resulted in undermining the confidence in Egyptian values in the foreign consuming centres. Possibly this is one of the contributing causes for the

decline in Egyptian exports to free world countries.

Sudan.

The report that the UAR and Sudan Governments have consented to co-ordinate their marketing policy has been officially denied by the Sudan Gezira Board.

According to the Gezira Board the yield in cantars per Feddan is estimated at 3.29 for new crop and the total production is likely to total 368,900 bales.

East Africa

At the auction held on 16 February all the 2,000 bales of BR qualities offered were taken up, but all the 15,750 bales of AR cotton offered were left undisposed.

Piecegoods

The conditions in the Bombay piecegoods market, barring a slight activity witnessed by the end of the week, remained subdued. Demand for goods in both the export and import fronts dwindled into an insignificant trickle on account of high prices. The tight credit conditions

also scared consumers away from the market. A steep fall in the demand from upcountry centres was visible. Consequently the turnover declined to a mere 25 per cent of what it was in the previous months. The reduced demand and the move of trade circles and authorities brought down the premia on most of the varieties to a low of five per cent over the ex-mill prices.

A notable development in the market was the increased demand for quality goods. Mills, however, were reluctant to part with their stocks at low rates. This resulted in the short supply of this variety.

Fancy goods attracted fairly good demand. Superfine goods, bleached long cloth, quality voiles and printed fabrics were repeatedly sought after. The main consuming centres were Kanpur, Bihar, Punjab, Delhi and Calcutta.

The dull trading in the export front was attributed to the general apathy of overseas buyers to purchase at higher prices. Scattered enquiries from the UK for grey goods were reported. Ethiopia accounted for a modest quantity of greys and sheetings. All other destinations remained inactive.

SUGAR Bid for Large Exports

It is encouraging to note that serious efforts are being made to build up a sizeable export trade in Sugar. Two representatives of the Indian sugar industry who are now in Washington, have reported that their arguments for US purchase of Indian sugar are favourably received. The US administration has been sympathetically examining India's request to sell 600,000 tons in US markets during the current year.

The output, during the current season, is expected to be around 2,700,000 tons. In view of the fact that the carryover into the current season was fairly large at 500,000 tons, it is now expected that there will be a surplus of 500,000 to 600,000 tons. This quantity can be disposed of only if there is a spurt in exports and internal consumption also increased significantly. The needs of the home market are presently around 2,200,000 tons.

Until such time internal demand catches up with production, there will be a sizable surplus and the problem will relate to the effective utilisation of our capacity for production and the ability of the industry to bear the losses on exports. Efforts should also be made to stimulate internal consumption by liberalising the restrictions on sales and rationalising the movement of the sweet commodity.

The International Sugar Council has announced that sugar export quotas are to be reduced by 24 per cent to 824 per cent of basic tonnages. It has also decided to relieve member Governments of the obligation to declare shortfalls during the remainder of 1961 which will mean that there will be no re-distribution of shortfalls for the year. These decisions are taken in order to re-

establish an equilibrium between supplies and requirements. Having reviewed the market situation and all other factors effecting supply and demand, the Council has estimated that supplies available to the market in 1961 have exceeded requirements by about one million tons.

According to the Indian Sugar Mills Association, sugar production last month was 528,000 tons as against 498,000 tons in the corresponding month of last year. This brings the total production for the season 1961 up to 31 January to 1,294,000 tons as against 1,140,000 tons produced last season by this date. The offtake from factories during January was 164,000 tons as against 170,000 tons. Total despatches including despatches for exports up to 31 January, 1961 were 478,000 tons as against 472,000 tons by the same date last season. The closing stock, as on 31 January, 1961, was higher at 1,357,000 tons as against 810,000 tons on the corresponding date of last year.

Sugar markets have continued to rule steady. In the Hapur market, the rate is quoted at Rs 111 per bae.

FOODGRAINS

Prices in the Hapur Foodgrains market showed a mixed trend. While

BHARAT COLLIERIES LIMITED

NOTICE

The Sixteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Thursday, the 30th March, 1961 at 11-30 A.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June 1960.
- (2) To elect a Director in place of the retiring Director Shri. K. P. Khaitan, who being eligible, offers himself for re-election.
- (3) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

The Share Transfer Books of the Company will be closed from 22nd March, 1961 to 30th March, 1961 both days inclusive.

By Order of the Board of Directors,
for SAHU JAIN LIMITED
A. K. JAIN
Managing Director
Managing Agents.

Calcutta.

Date: 22nd February, 1961.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

Wheat prices declined due to bright prospects, those of Coarse grains were steady on poor stock position. Pulses were marked up.

Wheat prices declined slightly to Rs 16.75 a maund for the Dara quality and to Rs 18 for the farm produce. Wheat sold by the Uttar Pradesh Government fetched Rs 16.25 due to inferior quality, while that received from the Punjab under permit was transacted at Rs 18 a maund. Daily arrivals from the rural areas were, however, small at an average of 50 maunds.

Despite comfortable supply position and slack demand, Rice prices remained steady in sympathy with coarse grains. Gram was steady. Seasonal demand for Maize was reported to be dwindling; but prices were quietly steady. Bajra was sluggish at Rs 14.75 to Rs 15.25. Among Pulses, Peas and Arhar were listless owing to dormant trade demand. Crop prospects are, however, favourable and harvesting of peas will begin early next week and the new crop peas will reach the market in mid-March. Prices of other pulses showed a rising trend due to poor arrivals.

CHEMICALS & DYES

Conditions in the Bombay Chemicals and Dyes markets took a slight turn for the better and prices moved within narrow limits. It appeared that the markets were stabilising at the current levels for a number of reasons. The proximity of the import policy for the next licensing period imparted cautiousness among both consumers and stockists. While the supply position was comfortable due to the regular imports through the State Trading Corporation and under the export promotion scheme, the demand was restricted to immediate requirements, being influenced by the stringency in the money market and the uncertain outlook.

There were, however, a few exceptions to the overall sentiment. Owing to short supply from the STC, certain Chemicals improved by about a rupee. Menthol and Camphor attracted increased attention from consumers and made appreciable improvement in prices. A sharp rise in Camphor from Rs 17.75 to Rs 20.25 was caused by the increased vigilance on the part of the authorities on smuggling and the depleted stocks in the market. In the Dyes section, Vat colours were firm due to the paucity of supplies and the demand from Ahmedabad and the South.

YARN

In the Bombay Yarn market, Rayon presented a firm front. This was attributed to fears of heavy excise duty on rayon yarn and cloth next year. Some upcountry operators thought it wise to augment their stocks of yarn before the presentation of the Central Budget. Fears of a cut in imports of yarn also aided the bullish sentiment. Some actual users apprehended that their quota might be reduced in the April-September period.

The rising trend in rayon yarn prices was shared by Acetate and Nylon yarns also. Among Nylon yarns, Amilon had buyers up to Rs 33 against Rs 31.50 per pound quoted in the previous week. The Cupressa Bamberg yarn continued to be easy with the February delivery declining further by Rs 10 to Rs 2,435 in the absence of speculative support.

MARTIN BURN LIMITED

NOTICE

The Annual General Meeting (being the Fifteenth Ordinary General Meeting) of the shareholders of Martin Burn Limited will be held on Monday, 27th March, 1961, at 12 noon at the Registered Office of the Company, 12, Mission Row Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1960, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS.

- (A) To consider the re-appointment of Mr. Saradindu Gupta as a Managing Director of the company for a further period of four years with effect from the 1st May, 1961 and in this connection to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:—

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the re-appointment of Mr. Saradindu Gupta as a Managing Director of the company with effect from the 1st May, 1961, on the terms and conditions contained in an Agreement dated the 29th December, 1960 and made between the company of the one part and Mr. Saradindu Gupta of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Sir Narayan Raghavan Pillai."

- (B) To consider the appointment of Sir Narayan Raghavan Pillai as a Managing Director of the company for a period of four years with effect from the 1st March, 1961 and in this connection

Ready Cupressa lost ground further from Rs 11.31 to Rs 11.14 per pound. In the Cotton yarn section, trading was of a routine nature and prices remained unchanged in most cases despite good upcountry demand for fine and superfine varieties of yarn. Among 20s, Maduras were placed at Rs 23.25 per bundle. Mahindra 80s was quoted at Rs 70.70 per pound.

to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the appointment of Sir Narayan Raghavan Pillai as a Managing Director of the company with effect from the 1st March, 1961 on the terms and conditions contained in an Agreement dated the 17th day of February, 1961 and made between the company of the one part and Sir Narayan Raghavan Pillai of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Sir Narayan Raghavan Pillai."

The Ordinary Share Register and Transfer Books of the Company will be closed from 13th to 27th March, 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

A. G. GIDLEY
Secretary.

Calcutta,

27th February, 1961.

NOTE—The Dividend, if sanctioned, will be paid on or after 17th April, 1961, to those shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 27th March, 1961, or to their mandatories. No application for dividend warrants will be necessary.

An EXPLANATORY STATEMENT as required under the Companies Act, 1956, has been forwarded to the members of the Company.

We Share Your Disappointment too!

The overwhelming demand for Philips Quality Lamps is pleasing to us, but what a pity we can't meet it. And how disappointing it is for our dealers who, with sad faces, do their best!

All of us know that the lamp industry is more self-sufficient than many others. Yet there is a small but vital content in lamp manufacture which has to be imported. That is where foreign exchange restrictions creep in. So the supply becomes difficult.

Certain positive steps are being taken in the Third Five-Year Plan

to ease the position. Until supplies become plentiful again we request you to bear with us.

Meanwhile, while wishing you happy lighting, here is a list of our retail prices to help you the next time you want to buy Philips Quality Lamps:

	Retail price per piece
25W. Vacuum clear ...	Rs. 1.25
40W. Gasfilled clear ...	Rs. 1.44
60W. Gasfilled clear ...	Rs. 1.56
100W. Gasfilled clear ...	Rs. 2.00
150W. Gasfilled clear ...	Rs. 3.50
200W. Gasfilled clear ...	Rs. 5.12
60W. Argenta (inside white) ...	Rs. 1.75
100W. Argenta ...	Rs. 2.25
150W. Argenta ...	Rs. 3.94
4 ft. 40-Watt Fluorescent ...	Rs. 9.69

These prices are inclusive of excise duty but exclude sales tax and local taxes

PHILIPS lamps

THERE ARE NONE BETTER

NON-FERROUS METALS

On the London Metal Exchange, the price of Copper has now risen to £230½ from £219 per ton and Tin to £803½ from £784 quoted on 1 February. Reports from all producing countries indicate that the output of copper is now running ahead of consumption and stocks are accumulating. Notwithstanding higher production, there is a feeling of bullishness due to the growing political disturbances in Africa. If the flow of supplies is not disturbed, there should be enough copper to go round.

The rise in Tin prices is reinforced by a feeling that consumption of the metal may rise in the coming months and cause a squeeze on supplies which are already quite tight. Indications are that consumption is running at an even higher level than that recorded in the opening months of 1960. A recovery in the American tinplate industry is also thought to be on its way. The stocks of cans are said to be low and, with the spring packing season close at hand, business is expected to improve from now on.

The Indian prices of non-ferrous metals have been ruling very steady during the past few weeks. Except during periodic shortages arising out of import restrictions, prices here are not generally expected to be far different from the international ones; because the domestic requirements are still largely met by supplies from abroad. In the Bombay market, Copper is quoted at Rs 392.

The price of Zinc is steady as leading producers have cut their production. But Lead still suffers from excessive supplies. In the London market, Zinc is quoted at £84½ and Lead at £86½ per ton.

BANGALORE SILK

The Silk market maintained a steady trend in the prices of flature raw silk during the week ended 24th February, 1961 at levels identical to those previous week. While flature silk of 20/22 Dr. was quoted between Rs 80.48 and Rs 83.23 per kgm., cottage basin silk ruled between Rs 71.65 and Rs 73.65 per kgm. No change was noticed in the prices of Charka silk which continued to be quoted between Rs 51.80 and Rs 69.44 per kgm. Supplies of raw silk in the market were restricted owing to paucity of cocoons.

There were slight fluctuations in the rates of reeling cocoons which were quoted between Rs 3.74 and 4.75 for Mugur area cocoons, between Rs 4.00 and Rs 5.40 for Channanapatta area and between Rs 4.95 and Rs 5.50 per kgm. for Sidlaghatta area cocoons.

Mysore race seed cocoons moved upward to be quoted between Rs 7.00 and Rs 10.00 per 1000, while Foreign race seed cocoons declined, rates being quoted between Rs 6.00 and Rs 10.00 as against Rs 6.00 and Rs 13.00 per 1000 last week.

*
GOLD & SILVER

In rather restricted activity, prices on the Bombay Bullion Exchange were maintained. With the approach of the "Holi" festival, bulls preferred to book profits on every small rise. Despite favourable advices from Calcutta, the trend was indecisive due to reports of more arrivals. Arrivals and offtake of Silver were estimated at 37 and 7 bars respectively. Phagun delivery moved between Rs 206.70 and Rs 206.80 and Chaitra between Rs 206.40 and Rs 106.45.

Indian Finance

Gold prices were well held in somewhat irregular dealings. Although advices from the ready section were satisfactory, spot houses preferred to realise at every modest rise. Support from upcountry centres was also less pronounced. Gold Phagun moved between Rs 121.50 and Rs 121.60 and Chaitra between Rs 121.60 and Rs 121.75. Sovereign remained firm at Rs 94.

*
OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange showed a mixed trend. The only feature of the week's trading was that the Groundnut May contract touched the ceiling of Rs 220 per 250 kilogram, with the result that trading in that contract automatically came to a standstill. The spurt

in prices was attributed to the falling arrivals of the new crop from the producing areas and the speculative support lent by vanaapati interests, who tried to augment their stocks of the raw material. Ready Bold was quoted at Rs 51 and Groundnut Oil at Rs 20.85.

In the Castorseed section, May delivery looked up from Rs 171.50 to Rs 172.87, to finish at Rs 172. The initial firmness was influenced by the news of good export business put through with Continental countries. London was reported to be the main buyer, having absorbed about 300 tons of castor oil for the March/April delivery. Reduced arrivals of the new crop also aided sentiment. Castor ready was quoted at Rs 34 and Castor Oil, commercial quality, at Rs 14.20.

ORIENT PAPER MILLS LIMITED.

Regd. Office: BRAJRAJNAGAR (Orissa).

NOTICE is hereby given that an Extra-ordinary General Meeting of the Orient Paper Mills Ltd. will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Thursday, the 30th March, 1961 at 4-30 P.M. to consider and if thought fit to pass with or without modification, the following resolutions:—

AS SPECIAL RESOLUTION:

1(a). "RESOLVED that the Company hereby approves of purchasing from Century Spg. & Mfg. Co. Ltd. and Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd., associates of M/s. Birla Brothers Private Ltd., the Managing Agents of the Company, Salt Cake, Sodium Sulphate, Glauber Salt, Sulphuric Acid and other chemicals and also supplying paper and board to the said associate companies from time to time upon the terms:

- (i) that the prices or amounts charged to or received by the Company shall be at rates current in the market at the time of supply;
- (ii) that payment for the goods purchased and/or supplied shall be made within one month from the date of supply or sale of the goods."

AS ORDINARY RESOLUTIONS:

1(b). "RESOLVED that (1) the letting out of Company's Electric Fan Manufacturing Factory situated at 6, Ghore Bibi Lane, Narkeldanga, Calcutta to its subsidiary, Orient General Industries Ltd, be and is hereby approved and the same shall be deemed to have been granted with the approval of this Company in general meeting and (2) the directors of the Company be and they are authorised from time to time to vary, modify and/or abrogate any of the terms of the tenancy for the time being in force as the directors may consider proper."

1(c). "RESOLVED that the Board of Directors be and they are

hereby empowered to borrow from time to time moneys upto a total of Rs. 15 crores remaining outstanding on account of principal at any time for the purposes of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say the reserves not set apart for any specific purpose."

1(d). "RESOLVED that the Board of Directors be and they are hereby authorised to contribute and/or subscribe to any institution or fund for any national, charitable, benevolent, public or general purposes, not directly relating to the business of the Company or to the welfare of its employees, from time to time, such amounts upto a total of Rs 10 lacs in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the Company's average nett profits as determined in accordance with the provisions of the Companies Act, 1956 during the three financial years immediately preceding whichever is greater."

By Order of the Board,

B. K. VYAS.

Secretary.

8, India Exchange Place, Calcutta, the 28th February, 1961.

N.B. (1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) Explanatory Note under section 173 of the Companies Act, 1956 in respect of the items stated in the above Notice has been forwarded to the members of the Company".

4 March 1961

For the Investor

INVESTMENT GOSSIP
A Budget to Cheer

Mr Morarji Desai has, by and large, fulfilled expectations, at least as far as the stock market men are concerned. He has no doubt spread his net wider than was thought would be the case; all the same, the sector of his activity is as was prophesied by most people. A large number of them, however, had rather underestimated the quantum of additional money that will be mobilised by fresh indirect taxation. Nevertheless, operators seem to be quite pleased with the way in which Mr Desai has decided to go about the business of closing the deficit gap. The fact that excise and customs duties have been both enhanced and made applicable to new articles and commodities is evidently not considered to be a matter for concern to operators although the common man is apt to think that Mr Desai has made his slogan "sweat and sacrifice" specially applicable to him.

There are some pinpricks for the corporate sector too. The reduction in the development rebate and the rising of special surcharge of 5 per cent on earned incomes over Rs 1 lakh to 10 per cent of basic tax may be deemed disincentives to investment while some of the customs levies may tend to inflate production cost. But the stock market operator is not worrying about these just now.

The reduction of the tax on new bonus issues from 30 per cent to 12½ per cent is by far the one positive measure that has given universal satisfaction. It is true that many would like to see the tax abolished completely but the importance of the concession granted now is not minimised. There is every reason to expect that companies which have accumulated large reserves will be finding it practicable now to issue bonus shares. It is unlikely that further reduction or complete abolition will be decided upon in a hurry especially since Mr Desai has emphasised the revenue aspect of the reduction of the tax on bonus issues.

Apart from these welcome changes in taxation and other regulations affecting corporate working, there is much to enthuse the investor in Mr Desai's Budget speech. The economy, in both the public and private sectors, has gained a new dynamism that augurs well for the Third Plan.

Here in Lyons Range, there is some satisfaction that the export duty on tea has been reduced. It has been a long standing demand from the tea industry that the export duty be abolished. The reduction now made should help the industry to compete in world markets on more favourable terms than was the case hitherto. It

is, however, to be noted that many of Indian tea's competitors have no export duty to pay.

*
NEW ISSUE NOTES
Southern Industrial Corporation

The recent public issue by the Southern Industrial Corporation, Madras, is reported to have been over-subscribed by nearly three times. The basis of allotment is expected to be announced in the next few days.

Aluminium Industries

The Aluminium Industries Limited has received the sanction from the Controller of Capital Issues for the issue of 45,000—7 per cent Debentures of Rs 100 each.

Travancore Chemicals

The Travancore Chemicals & Manufacturing Company, Limited has proposed to issue 20,000 equity shares of Rs 10 each, at par, payable in full on application to the holders of equity shares as on 1 March, 1961, in the proportion of two shares for every 13 equity shares held. The new shares will rank for dividend from 1 April, 1961.

*
INVESTMENT NOTES
ACC

The Associated Cement Companies Limited is said to have completed negotiations with Kaiser Industries Corporation to take over the two cement factories which they have in Pakistan. It is said that this deal has the approval of the Pakistan Government as well as the Government of India. Thus, the issue, which was hanging in the balance for a number of years, has now been smoothly and profitably settled.

Baroda Rayon Corpn.

The Chairman of the Baroda Rayon Corporation Limited has stated that the company's project will cost about Rs 7 crores, whereas the equity capital, issued by the company, is only Rs 3.50 crores. Thus, it is necessary for the company to raise additional funds of about Rs 3.50 crores to finance this project. The Industrial Finance Corporation of India has agreed to give a loan of Rs 2.43 crores to the company on the security of a first charge created on the capital assets of the company, whereas the company's bankers have been approached to give accommodation up to a sum of Rs 1 crore on the security of a second charge created on such assets. It is hoped that the company's plant will go into production in the beginning of next year.

Indian Rayon

The Chairman of the Indian Rayon Corporation Limited has stated that the necessary financial arrangements for securing the foreign exchange needed by the company have been brought to an advanced state of negotiations with the financial institutions. It is hoped that the arrangements will be finalised in about six weeks.

Premier Tyres

Premier Tyres Limited has sought the permission of the Government of India to raise the production capacity of tyres and tubes from 240,000 units each to 600,000 units each per annum. The additional capital outlay involved is estimated at Rs 1 crore. Election work is expected to be completed by the end of May and regular production will start by the end of this year.

Punalur Paper

The Madura Mill's Company Limited has proposed to sell 7,000 Ordinary shares of the face value of Rs 25 each in Punalur Paper Mills

Limited to A & F Harvey Limited, at Rs 35 per share cum-dividend. It is considered that the sale of these shares, out of an investment of 16,907 shares held by the company, will be in the best interests of the company.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office: 2, India Exchange Place, Calcutta—1.

NOTICE

Notice is hereby given that the Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 20th day of March to Wednesday, the 5th day of April, 1961, both days inclusive.

By Order of the Board,

S. T. SADASIVAN

General Manager.

Calcutta,

the 2nd March 1961.

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-fourth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Tuesday, the Twenty-eighth day of March, 1961, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To elect a Director in place of Mr. S. B. Bose, who retires by rotation and being 72 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that a're limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of high special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is appended below as required under Section 173 of the said Act.

TO BE PROPOSED AS AN ORDINARY RESOLUTION:—

"That the restriction as to age limit prescribed by Section 280 of the Compa-

nies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

4. To elect a Director in place of Mr. D. L. V. Rowe who retires by rotation at this Meeting.
5. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 14th March, 1961, to 28th March, 1961, both days inclusive.

By Order of the Board

LOVELOCK & LEWES.

Secretaries.

Registered Office:

4, Lyons Range,

Calcutta,

27th February, 1961.

NOTE:—

- (1) Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.
- (2) Explanatory Statement under Section 173 of the Companies Act, 1956, in respect of item No. 3 of the above Notice has been forwarded to the members of the Company.

Jam Ranjit Mills

Jam Shri Ranjitsinghji Spinning & Weaving Mills Company, Limited has initiated an elaborate scheme of modernisation, involving a capital expansion of Rs 27.50 lakhs. The National Industrial Development Corporation has approved the scheme and granted a loan of Rs 25 lakhs, the balance being met from the resources of the company.

INVESTMENT BRIEFS

In the Brady group, the Brady Engineering Company, Limited has stepped up the dividend from Rs 4.00 to Rs 5.50 per share for 1960. Claridge & Company, Limited has maintained the dividend at Rs 20 per share. The New City of Bombay Manufacturing Company, Limited has passed the dividend for the year. Consideration of the dividend by the Empire Dyeing has been postponed to a later date.

MARTIN BURN LIMITED

Convertible Notes.

Notice is hereby given that the Transfer Book and Register of Holders of Convertible Notes of the Company will be finally closed with effect from the 16th March, 1961, for redemption of the outstanding Convertible Notes on the 31st March, 1961.

Interest for the half-year ending 31st March, 1961 will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1961, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY
Secretary

Registered Office
12, Mission Row,
Calcutta, 1.
1st March, 1961.

Parry's Confectionery has proposed a taxable interim dividend of 10 per cent for the year ended 31 March, 1961.

Anapara Estates have reduced the dividend from 25 per cent to 20 per cent, taxable, for the year ended 30 June, 1960.

Vaikundam Rubber has declared a final dividend of 15 per cent, making a total of 30 per cent for 1960 as against 25 per cent previously.

Kil Kotagiri has proposed a final dividend of 17 per cent, making a total of 25 per cent for the year ended 31 October, 1960 as against 35 per cent previously.

Mercara Rubber has maintained the dividend at 20 per cent, taxable, for the year ended 30 June, 1960, the same as in the previous year.

BALANCE-SHEET BRIEFS

The net profit of the Burrakur Coal Company, Limited is slightly lower at Rs 18.3 lakhs for the year ended 30 June, 1960 as against Rs 19.57 lakhs for the previous year. The dividend is maintained at 13 per cent taxable.

The working of the Sirpur Paper Mills Limited has moved up sharply to Rs 19.28 lakhs for the year ended 30 June, 1960 from Rs 83.40. The dividend is, however, maintained at 65 nP per share, subject to deduction of tax.

Shree Changdeo Sugar Mills Limited has reported a slightly lower net profit of Rs 23.43 lakhs for the year ended 30 September, 1960 as against Rs 24.34 lakhs for 1958-59. The dividend is reduced from 22½ per cent to 20 per cent.

The profit of the Brihan-Maharashtra Sugar Syndicate Limited amounts to Rs 13.37 lakhs for the year ended 30 June, 1960 as against Rs 11.80 lakhs. The directors have proposed a taxable dividend of 20 per cent.

The Phalton Sugar Works Limited has earned a net profit of only Rs

22.12 lakhs for the year ended 30 September, 1960 as against Rs 27.89 lakhs. The dividend is reduced from Rs 13.50 to Rs 12.00 per share, subject to deduction of tax.

Raza-Buland Sugar Company, Limited has earned a higher profit of Rs 30.68 lakhs for the year ended 31 October, 1960 as against Rs 7.16 lakhs. The profit is subject to taxation. A taxable dividend of 12½ per cent is proposed on the increased capital.

The working of the Mysore Match Company, Limited, Shimoga, has resulted in a surplus of Rs 2,316 without providing for Depreciation. After making sundry adjustments, there is still a debit balance of Rs 1.70 lakhs, which is carried forward.

Company Law Administration

The Registrar of Companies West Bengal writes:—Some of the difficulties experienced by companies and this office in the administration of the Companies Act can be avoided, if the following procedure is invariably adopted:—

(i) In all correspondence with this office, companies should invariably give the number given in the certificate of incorporation of the company. In case of very old companies or where fresh serial numbers are given every year in the certificate, they may quote the number which is given in our letters to the respective companies.

(ii) Companies are advised to remit their fees by Cheque in case of local companies and by Draft or Pay Orders in the case of mofussil companies or by treasury challan. Payment by cash should be avoided. They should be drawn in favour of the Registrar of Companies, West Bengal. Section 611 of the Companies Act has been amended and now the Registrar is given the discretion to receive documents after due dates provided penal fee is paid. In view of this provision, it may not be possible for the Registrar to accept documents after due dates unless the penal fee is paid to him. Companies are, therefore, advised to stick to the time limit prescribed by the Act in filing documents.

(iii) The Government of India has recently issued some Press Notes and circulars to various Chambers of Commerce etc indicating the main changes in the Act and the action to be taken by companies. It is understood that copies of the Companies (Amendment) Act, 1960 are available with the Manager of Publication, Government of India, and companies are, therefore, advised to obtain them and get themselves acquainted with the provisions thereof.

(iv) The Regional Director, Company Law Administration, Eastern Region, Calcutta, his Solicitor and the Registrar will be only too happy to clarify the provisions of the amendment Act.

STOCK EXCHANGES Markets Greet Budget

By Dog Writen:

NEVER in recent times have the stock markets greeted the Central Budget as in this year. Because of the widely-held belief that the taxation efforts, if any, would have to be concentrated on indirect levies, the markets experienced an unusually bullish phase before the presentation of the Budget.

Naturally, the markets have greeted the Budget proposals with an all-round buoyancy when the new levies are mostly in the indirect field and the much-convassed reduction in bonus issue tax has come about with the reduction of rate from 30 to 12½ per cent. Higher levels were, however, not maintained till the close of the week due to profit-taking, induced by the thought that industries may suffer from the impact of heavier excise duties.

With operators taking an optimistic view of the Budget, buoyant conditions were noticed on the Calcutta Stock Exchange despite restricted activity due to operators being in the "Holt" mood.

Industrial shares made brisk headway and recorded new high levels for the year on the Bombay Stock Exchange due to hectic buying, generated by the news that there was little change in direct taxation. The spectacular advance in prices was, however, checked by realising pressure.

The Central Budget was well received by the Madras Stock Exchange. Though there was no unrestrained buying fervour, selected stocks moved up.

CALCUTTA

THE local stock exchange started the week on a firm note, reflecting thereby operators' optimism about Budget prospects. They were inclined to feel that the Central Budget might not contain any nasty surprises. It was thought that there was not much scope for increases in direct taxation and the Union Finance Minister would have also to make some adjustments in the tax structure in order to encourage a larger inflow of foreign capital. Anticipations were that the taxation efforts, if any, would have to be concentrated on indirect levels. The industry was also confident that it could face the effect of excise duties without much difficulty in view of the increasing personal incomes. With the result, sizable bull activity was noticed on the eve of the Budget, although the rise in prices varied from scrip to scrip.

When the Budget proposals were actually announced, they were well received. The initial reaction was one of relief, as it was felt that many of the industries would not be seriously affected and it would be possible to pass on the incidence of most of the indirect levies fully to the consumer. The reduction in tax on bonus issues also enthused the

operators on the belief that those companies, who had so long been withholding the issue of bonus shares, would now make their decision unhesitatingly.

The reduction in the export duty on Tea was also welcomed as it was thought that it would increase the capacity for competition in foreign markets.

Support to the Textile shares was, however, halting on account of the fresh burden imposed on the industry. The proposed levy of excise duty on cotton yarn caused serious concern to the mills, particularly the composite units.

Among Engineering shares, Guest, Kean, Williams were a prominent feature, having touched a fresh higher level on expectation of a bonus issue shortly in view of the reduction in the tax on such issues. Indian Irons moved up in sympathy although profit-taking erased some of the extreme gains toward the close.

In the Jute section, trading was colourless on the report that the industry was now working out a scheme of maximum price regulation on the basis of Rs 62 per maund for Assam Bottoms. Nevertheless, Howrah were a shade better, thanks to speculative activity.

Selected Coal shares met with a revival of activity.

Paper shares remained unaffected despite the increase in the excise duty on paper goods.

Sugar shares were selectively firm, especially of those companies manufacturing liquor and spirits. Prospects of exports of the sweet commodity to the USA were another contributory factor.

The Miscellaneous section, exhibited several bright features. In view of the fact that the reduced tax on bonus issues may not impinge heavily on the bigger companies, such of those as are in a position to issue bonus shares may elect to do so. This factor induced selective buying of shares at enhanced levels. In this respect, Dunlop Rubber were very prominent. The concession for companies having foreign collaboration also induced buying of some of the recent new issues.

Gilt-edged securities were fully maintained. The short and medium-dated securities improved in values on support extended by the Reserve Bank as well as by the LIC.

Bank shares remained steady. The following table gives an idea of the extent of the rise in the prices of a few selected shares in the post-Budget session:—

	Pre-Budget	Post-Budget	Week Closing

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place, Calcutta-1.

NOTICE

NOTICE IS HEREBY GIVEN that the EIGHTEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 5th April, 1961, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1960 and Profit & Loss Account for the year ended 31st December, 1960;

2. To declare a dividend;

3. To appoint four Directors in place of Mr. I. P. Goenka, Mr. Y. N. Mafatal, Mr. R. L. Nopany and Mr. M. L. Tapuria who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;

4. To appoint Auditors for the Bank and its branches for the current year and to fix their remuneration;

5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION: "That the Articles of Association of the Company be altered in manner following:

(a) The first paragraph of Article 87 of the existing Articles shall be deleted and the following paragraph inserted in its place: Each Director shall be paid out of the funds of the Company by way of remuneration for his services a sum not exceeding Rs. 100 for each Meeting of the Board or any Committee of the Board attended by him.

(b) At the end of the second paragraph of Article 87 the following sentence shall be added: The Directors shall further be entitled to be reimbursed and/or paid all expenses that may be incurred or paid by them in connection with any business of the Company."

Note:

1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 20th March, 1961 to Wednesday, the

5th April, 1961, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 6th April, 1961, to those Members whose names appear on the Company's Register on the 5th April, 1961.

(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

The item of Special Business to be transacted at the Annual General Meeting to be held on the 5th April, 1961 is to consider and pass a Special Resolution seeking to alter Article 87 of the Articles of Association of the Company.

By a special resolution passed on the 5th April, 1958 the remuneration of a Director was changed from a fee not exceeding Rs. 100 for each Meeting of the Directors or any Committee of the Directors attended by him to a fixed remuneration of Rs. 500 per month. By virtue of Section 39(2) of the Companies Act as amended by the Companies (Amendment) Act, 1960, monthly payments to Directors are prohibited. The proposed alteration is to bring the Article in conformity with the provision of the Companies Act by reinstating the method of remuneration in force prior to the 9th April, 1958.

The second paragraph of Article 87 as it stands at present refers only to expenses incurred in connection with Meeting. It is proper that other expenses, e.g. charges for trunk telephone calls and cost of cables, which may be incurred by the Directors in connection with the business of the Company should be defrayed by the Company. The proposed addition at the end of the second paragraph is intended to enable this to be done.

All the Directors are interested in the proposed amendments to the extent that they relate to the payment of Directors' fees and expenses.

By virtue of Section 35(B) (1) (a) of the Banking Companies Act, 1949, the present amendments regarding the remuneration payable to the Directors require the approval of the Reserve Bank of India, which will be sought after the company gives its consent to the Special Resolution.

By Order of the Board,
S. T. SADASIVAN
General Manager,
Calcutta,
1st March, 1961.

Company Reports

Voltas Repeats

DESPITE an increase in earnings, Voltas Limited has maintained the dividend at 13 per cent, taxable, for the year ended 31 August, 1960. The total of Sales and Services at Rs 19.86 crores is higher by about Rs 2.74 crores when compared with the previous year. Despite foreign exchange restrictions, the volume of imports handled by the company at Rs 13.4 crores has shown a small improvement, the bulk of these imports comprising essential machinery required for the country's industrial expansion or plant and machinery connected with the Second Plan projects.

The net profit for the year, before providing for Depreciation and Taxation, amounts to Rs 1.23 crores as against Rs 1.00 crore for the preceding year. The following appropriations have been made:—Depreciation Rs 5.68 lakhs against Rs 4.41 lakhs; Taxation Rs 60 lakhs against Rs 51.50 lakhs; Capital Reserve Rs 2,450 against Rs 2,477; General Reserve Rs 15 lakhs against Rs 9.00 lakhs; Development Reserve Rs 5.59 lakhs against nil and Development Reserve Rs 1.69 lakhs against Rs 68,786.

Mg. Director:—Mr S. K. Handoo.

Bhopal Sugar Reduces Dividend

Although the Bhopal Sugar Industries Limited has reported a slight rise in the net profit from Rs 12.89 lakhs to Rs 13.45 lakhs for the year ended 30 September 1960, the directors have recommended a taxable dividend of only 22½ per cent as against 25 per cent last year.

In respect of allocations, the Depreciation amount is raised to Rs 2.01 lakhs from Rs 1.92 lakhs and General Reserve to Rs 1.50 lakhs from Rs 63,115. The provision for Taxation is, however, lower at Rs 4.50 lakhs against Rs 5.10 lakhs.

The company's application for expanding the crushing capacity of the factory from 750 tons to 1,250 tons has been approved by the Government of India. According to the first phase of the expansion programme, the crushing capacity has been increased to 1,000 tons per day by additions of new machinery. The machinery has already been installed and will be brought into use during the current season. This will result in efficient crushing of cane during a short period and higher recovery.

Bababudin Coffee Incurs Loss

The Bababuddin Coffee & Produce Company Limited has incurred a loss of Rs 47,778 for the year ended 30 June, 1960 as against a net profit of Rs 73,398 for the previous year. The adverse results are due to poor blossom showers and unsatisfactory weather conditions. The crop harvested during the season was only 2,253 cwts against 3,301 cwts last year.

A sum of Rs 14,443 (Rs 14,906) is provided for Depreciation. No provision is made for Taxation against Rs 43,514. The directors have, however, recommended a taxable dividend of 8 per cent on the equity shares after transferring a sum of Rs 45,000 from General Reserve and Rs 47,000 from Dividend Equalisation Reserve. This compares with a dividend of 12½ per cent paid for the previous year on an increased capital.

The paid-up capital is Rs 7 lakhs divided into 80,000 equity shares of Rs 5 each and 30,000-6 per cent Cumulative Preference shares of Rs 10 each. Against this, Reserve stands at Rs 1.00 lakh and Dividend Equalisation Reserve at Rs 63,000.

Radio Caps

About two and a half million ceramic capacitors manufactured in a pilot plant in the National Physical Laboratory, New Delhi, have found their way into radio sets, amplifiers, hearing aids, weather balloons, fluorescent light fittings and other electrical and electronic gadgets.

The process developed at NPL for producing ceramic capacitors (used in receivers) utilises titanium dioxide. 11,700 minerals abundantly available in the beach sands of Kerala are the principal ores of titanium dioxide and constitute the raw material par excellence for the production of capacitors.

Every radio receiver requires 15 to 25 capacitors, commonly known as 'caps', depending on the type of circuit and the number of valves used in the design. It is estimated that 5 million 'caps' are annually imported by the Indian radio receiver industry alone. The fluorescent tube lamps, which are being increasingly used in the country for lighting in homes and offices, are a source of interference to radio reception, but such interference can be annulled by the use of capacitors.

The total capacitor requirement of the lamp industry is estimated to be three times that of the radio receiver industry. Equipments, such as amplifiers, hearing aids and measuring instruments, also need capacitors. Here is one instance of the utility of the ceramic capacitors and the manner in which their use contributes to improved radio reception. A common defect in radio sets, particularly small ones, is the 'drift' whereby the tuning to a desired station tends to shift, and the knob has to be frequently adjusted to ensure an uninterrupted reception. This is due to the rise in temperature of radio components and consequent change in capacitance. Temperature-compensating ceramic capacitors have been developed and their use in radio sets ensures freedom from drift.

The process developed by the NPL consists in mixing or wet grinding in a ball mill, titanium dioxide along with the desired additions of alkaline earth oxides. The ground mixture is granulated and pressed into flat discs in an automatic press. The discs are dried and sintered in electric furnaces, capable of giving temperatures up to 1,400°C. Silver electrodes are then fired on, and the leads soldered.

Finally, the capacitor units are coated with bakelite (phenolic resin), cured, and vacuum-impregnated with micro-crystalline wax. The equipments—high temperature furnaces, ovens, and ball mills—have been fabricated at the NPL.

A notable feature of this process is that commercial grades of titanium dioxide and other raw materials are

utilised. The production cost, as worked out on the basis of pilot plant runs of 1,500 units per day, comes to 13 nP per capacitor of 100 pF (pico-farad, a unit of capacitance).

Automatic Fire Alarm

While working on ceramic capacitors, the Section developed an entirely new type of thermal capacitor, known as thermocaps, as sensitive as a thermometer to temperature changes, but with difference that it can communicate, by remote control, the recorded temperature through radio waves.

Its potentialities are immense. A transmitter fitted with thermocaps can be used as a self-operating fire alarm. It sends out a note of a frequency which varies with the temperature. Such a gadget can be placed in a godown where inflammable materials are stored. A whistle on a receiving set would indicate the degree of temperature and a fire could be noticed before any damage is done.

JUTE

Better Way of Growing

Now, that jute growing is firmly established in the cropping pattern of Eastern India, it is time the cultivators thought of taking a first crop of jute from their low and midland holdings before transplanting their aman paddy. The presence of sufficient soil moisture due to the last few February showers and irrigation facilities in DVC, Mayurakshi, Hirakud and Delta areas offer a good opportunity to jute growers in large parts of West Bengal and Orissa to make a start with double cropping of aman paddy land this year. A first crop of jute can also be grown in the irrigated areas of Bihar and Uttar Pradesh where, at present, only the aman paddy is cultivated.

Making these observations in their Jute Extension Bulletin No. 2, Indian Central Jute Committee state that getting annually only one crop, whether jute or paddy, is not making economic use of land and resources.

Occupying as it does the best part of both kharif and rabi season, aman paddy, transplanted from the middle of July to mid-September depending upon the intensity of rainfall necessary for the puddling of land and harvested in November-December, interferes with the growing of other crops in either season. The time before transplanting aman paddy seedlings is rarely sufficient for any grain crop to mature while the land following the harvest of the crop is too dry to be of any use. That is why farming in most aman paddy land in West Bengal and Orissa is restricted to the production of only one crop which occupies about five to six months, leaving the land fallow for the rest of the year.

White jute (Capsularis) is the lone cash crop which offers a way out of this difficulty by releasing the land in time for the main paddy crop while at the same time ensuring its better and more profitable utilization. The special advantage of the jute plant is that it can yield fibre at a relatively earlier stage of growth. Secondly, the peculiar characteristics of the white variety of jute, namely, its capacity to withstand droughty conditions at the early stages and water-logging at the later stages of growth, and its tendency to flower, regardless of the sowing date, when the days begin to be shorter in August—all predisposing it to early sowing—make the plant an ideal first crop in a double cropping programme for the aman paddy land.

The climatic requirements of jute as first crop in a double cropping programme seem to fit in well with those of the transplanted aman paddy as second. A jute crop sown in March or April can very well be harvested by the end of July or at the beginning of August. Aman paddy, like jute, is season-bound and will flower, irrespective of the date of transplanting, sometime in October. Transplantation about the middle of August will, therefore, provide a sufficiently long vegetative growth period for the crop to ensure a high yield of paddy.

The highest yield of jute fibre is obtained when the plant is harvested at the pod stage at about 135 days' growth. Harvesting at the small pod stage gives the best combination of yield and quality. An economic yield of jute in terms of fibre is possible even if the crop is allowed to grow for a minimum 85 days.

Subject to the moisture retentivity of soil, precipitation and distribution of rainfall, level of land, and time and degree of water-logging, attempts should always be made to sow jute as early as possible. However, the exact sowing time, between February (earliest) and the third week of May (latest), will have to be worked out for each region separately.

Many benefits to follow from the practice of double cropping paddy land with jute and paddy are:

(1) Same land will produce two crops instead of one, ensuring higher return;

(2) In the event of one crop failing due to seasonal vagaries, the other will bring in some income;

(3) The considerable leaf fall from the growing jute plants will help to maintain the soil fertility. Only a small supplement of fertilizers (20-30 lbs N per acre) will be necessary for the paddy crop;

(4) The growing of jute will make preparation and puddling of land for paddy transplantation easier and less expensive; and

(5) The land will remain relatively free from weed infestation and help both jute and paddy crops.

As a first crop in a double cropping programme, the most suitable variety of jute is JRC 321 which grows in all low and early rainfall areas, matures early, gives high yield and produces fibre of very high quality. The other varieties also recommended for the purpose are JRC 212 and D 154. Expert advice in seed matters is given by State Agriculture departments.

Indian Finance**INVESTOR'S SUPPLEMENT****Sentiment Cheerful in February**

Trading on the stock markets during February was characterised by lack of any undue anxiety about the Central Budget. Consequently the undertone throughout the month was steady with prices all along the list gaining ground toward the close. The main reason for this was the fact that most operators appeared almost certain that Mr Morarji Desai would show himself generally sympathetic toward the corporate sector on the Budget Day. It was generally believed that for various reasons, especially buoyant Government revenues and the proximity of the General Elections, further direct taxation would not be resorted to. Moreover there was a consensus in the country and among financial experts that there was little scope for any increase in direct taxation. There was however no tendency to ignore the fact that additional revenue had to be found by the Union Finance Minister but he was expected to get what he wanted from indirect taxation. As the Budget Day drew near, guestimates of the additional taxation effort during the first year of the Third Plan began to appear and many of them put the figure at around Rs 50 crores. A rise in indirect taxation did not seem to worry operators very much, as increase in excise duties and the like will only affect the consumer. Most importantly, it was the expectation that Mr Morarji Desai would do something favourable to the stock market in respect of the bonus tax that was responsible for the cheerfulness noticeable in later dealings. The 30 per cent tax on bonus issues had resulted in immobilisation of large reserves which could have been put to productive use. Many would have nothing except a total abolition of the tax and forecasts from the second part of the month about the tax were increasingly tended to indicate a desire or hope for total abolition.

Apart from the fact that a large number of market prophets have somewhat underestimated the quantum of additional money that would be mobilised by fresh taxation, the Central Budget which was made known on the last day of the month had largely fulfilled expectations. As expected the reduction of the tax on new bonus issues from 30 per cent to 12½ per cent was the one feature of the Budget proposals that attracted most attention. The reduction in the export duty on tea was another which was received with some enthusiasm by Lyons Range. The duty is generally held to have an adverse effect on tea exports from our country. The reduction announced in the Budget should however help the industry to compete in world markets on more favourable terms than was the case hitherto.

During the month rumours about the steel retention price were frequently in the air and in the first half of the month, such rumours resulted in abortive attempts at pushing up prices especially of speculative counters. As far as Lyons Range was con-

month it was officially announced that the retention price had been increased by Rs 45 per ton) any bullish effect would be but temporary. For, it was argued that unless concerted measures were taken to improve both the quality and quantity of the metallurgical

N.T.—No transaction took place.

cerned the retention price rumours did not have much effect presumably because of the fact that the retention price increase had been fully exploited by operators even earlier. It was also thought that even when the rumours were confirmed (toward the close of the

coal supply to the steel companies, steel production might continue to be unsatisfactory.

The question of coal supply to industry in general was also causing considerable concern in the country. There were sharp differences of opinion as to who was

responsible for the muddle between the two Ministries concerned. Latterly, however, indications could be seen that the problem was being faced, instead of being evaded in mutual accusations. It was assured in the Lok Sabha that considerable improvement in coal movement would be effected within the next few months.

Sectionwise, coal shares were a firm market almost throughout the week. Some disappointment in corporate news and the general feeling that the depletion allowance, recommended by the American team would not be made available to the industry were responsible for occasional setbacks but the section closed on a firm note in anticipation of World Bank aid to the private collieries.

Jute shares ruled most of the time rather quiet in view of the uncertainty surrounding the outlook of the industry caused mainly by shortage of raw jute and the consequent speculation which in its turn had invited strict government vigilance over the industry and trade. There were persistent rumours that Government had decided to fix maximum and minimum prices for raw jute as well as manufactured goods. Selected shares however were found to have sustained buying. With the announcement of the arrangement entered into between the Government and the Indian Jute Mills Association as regards voluntary steps to be taken by the industry to curb speculation (a ceiling was announced on price of raw jute: Rs 62 per maund beyond which jute mills would not buy raw jute basis Assam Bottoms), sentiment turned rather quiet.

Tea shares which ruled subdued during the first part of the month met with marked enquiry from the beginning of the third week. The revival of interest was generally limited to companies located in Assam and Dooars presumably on the assumption that those companies would be able to maintain the dividend for 1960. With the Central Budget bringing the good tidings of a reduction in the export duty on tea, interest further broadened.

Engineering shares were generally steady though price movements in the section were often determined by the fluctuations in Indian Irons. Rumours about the retention price had a good deal of influence throughout the month.

Textile shares met with sustained interest especially in the second half of the month on reports of good offtake of cloth on the one hand and the improved raw cotton supply position on the other.

Many firm features were noticeable in the Miscellaneous section.

(a) After transferring Rs 275,000 from General Reserve.

(b) After transferring Rs Rs 125,000 from Dividend Equalisation Reserve and Rs 30,311 from Capital Reserve.

(c) After transferring Rs 72,950 from Development Rebate Reserve.

(d) After transferring Rs 200,000 from Stores and Spare Parts Reserve and Rs 100,000 from Debenture Redemption Reserve.

(e) After transferring Rs 112,500 from Dividend Equalisation Reserve and Rs 34,843 from Investment Realisation Surplus.

(f) After transferring Rs 45,000 from General Reserve and writing back Rs 104,280 being excess provision for depreciation.

(g) After transferring Rs 550,000 from General Reserve.

(h) After transferring Rs 2,865,218 from General Reserve No. 1.

(j) After transferring Rs 31,000 from General Reserve.

(m) After writing back Rs 85,000 from Development Rebate Reserve; and after transferring Rs 75,000 from Reserve for Machinery Reserve.

(n) After transferring Rs 500,000 from Taxation Contingencies Reserve.

(p) After transferring Rs 5,33,375 from General Reserve.

(q) Includes Rs 971,500 being Refund of Contribution to Pension Fund and interest and Rs 83,317 being refund of I.T. and B.P.T.

(s) After transferring Rs 7,00,000 from Reserve No. 1.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After writing back Rs 1,00,000 from provision against jute stocks and jute contracted for.

(v) After writing back Rs 163,400 from Development Rebate Reserve.

(w) After writing back Rs 63,282 being excess provision and adjustments and Rs 11,585 being sundry balances.

11 March 1961

An Irreparable Loss

PERHAPS nothing was so characteristic of Mr Govind Ballabh Pant as the heroic battle he gave Death. It certainly was no easy victory for the fell sergeant, though he had an immense unfair advantage in his adversary being a mere mortal. Other sergeants, human and with less outrageous odds in their favour, have had poorer "luck". Mr Nehru feelingly recalled to correspondents in London how thirty one years ago, Mr Pant and he were brutally battered with lathis with a disastrous permanent injury to Mr Pant. (It has been averred by some that the blow was received by him in a gallant attempt to ward it off a woman volunteer at whom it was aimed.) The policeman that bashed Mr Pant's head made him a semi-invalid physically but he failed to make any dent in his will to live and serve the country he so dearly loved. Never a one to force himself, leadership sat on him naturally. Curiously, he was a rather late convert to Gandhism, though he was in the Congress long before Gandhiji made it his chosen instrument for working out his and India's salvation. Mr Pant's early affiliations were Swarajist and alone among even senior Congress leaders, he has probably had the longest legislative experience. He contested the 1920 election held under the Montagu-Chelmsford dispensation, but lost it. Later in 1923, he won it as a Swarajist candidate and Motilal Nehru made him the leader of the party in the UP Legislature. But before long the gathering storm of Gandhian politics swept him along as it did Motilal Nehru. It was in the protest-demonstration against the Simon Commission—of which, coincidentally, Lord Attlee who is now in India and who paid a moving tribute to him, was a member—that Mr Pant received the terrible blow mentioned earlier.

It was really in the Central Assembly of the early thirties that Mr Pant came into his own. Along with Bhulabhai Desai and Satyamurti, he constituted the spearhead of an opposition for which an exceptionally able Treasury Front-Bench had a wholesome respect. The late thirties saw Mr Pant as the unquestioned leader of the UP. Indeed it would be difficult to think of the UP then or at any other time without Mr Pant. The short-lived Congress Ministry had to fight on two fronts: there was the fairly straight and openly declared war of nerves with the British and there was also the other and far more harassing guerilla warfare against Muslim communalists instigated by Mr Jinnah. The struggle found Mr Pant in the thick of the battle and he had to undergo the inevitable incarceration. Independence brought him back to the UP to take up the threads from where he left. Though Mr Nehru tried to draft him for the Centre more than once, Mr Pant steadily refused to leave the UP scene because he realised that he had his work cut out in the UP in keeping the warring factions in some semblance of order. It was only after Sardar Patel's death that Mr Pant found it impossible to resist Mr Nehru's importunities.

But once in Delhi, he quickly established himself as an indispensable counsellor to not only the Prime Minister and his other colleagues

but also to the innumerable people who wanted guidance on countless things. Easy accessibility was indeed his chief characteristic, which some times led to rather unthinking sneers about the "Pant Durbars". To the Prime Minister he was a never failing source of strength, especially after Maulana Azad's death. Mr Nehru, for all his apparent self-sufficiency, has always had a tacit conscience-keeper and countervailing ballast for his impatience of one sort or the other. And after Maulana Azad's death, he had come to lean more and more heavily on Mr Pant. It is no great secret that over the Sino-Indian dispute in which his responsibility as Home Minister was only marginal, Mr Pant has been an indefatigable and resourceful adviser to the Prime Minister. Other colleagues, particularly Finance Ministers, have had the good sense to pick his brain, for his detailed grasp of financial problems has been known since his Central Assembly days.

But it was as Home Minister and parliamentarian that he made the most profound impact on public mind. In many ways, he was an unusual Home Minister, an office that has Bismarckian rather than Butlerian antecedents in India. He brought a certain patriarchal aura to the office as though he were the Karta of a rather noisy and unruly Hindu Undivided Family of whom none was overtly afraid, but whose authority, nevertheless, none in the family dared challenge. His parliamentary finesse was the admiration and envy of his less gifted colleagues. The impetuous he allowed to walk into traps of their own hasty contrivance from which he thereafter disentangled them with good humour. The pompous he allowed to maunder on until the moment came for deflating their windy eloquence with a sharp fact or a keen witticism. Serene and imperturbable, he could be firm as a rock when the occasion demanded it. But once the occasion for ruthlessness disappeared, he could be the gentlest of opponents: The strike by Central Government employees, was an occasion on which the Home Ministry had to mobilise all its resources to frustrate a far-flung challenge to its authority and it is a matter of recent history how thoroughly it did its job under Mr Pant's guidance. But once the strike was withdrawn, the Home Minister was, unlike many of his more vindictive aides, anxious to refrain from tribal sacrifices. As recently as a week ago, the Home Ministry was trying to undo the harm done by some departmental heads by unnecessary harshness to erring employees.

In this as in so many other things, Mr Pant showed his essential humanity. Over many another controversial matter like the Official Language and Preventive Detention, many zealots have wished that they had a less reasonable opponent. Surely, it is rare tribute to a Home Minister that the communists should genuinely share the nation's sense of loss at his death. Lately, events in Assam and his own beloved UP had saddened him, but nothing could ruffle his serenity. The benign eyes and the ferocious walrus moustache were, in their different ways, misleading about a warm but stout heart. The country is irredeemably poorer for its ceasing to beat.

Exports: Performance Under Incentives

SINCE 1957, when the country was caught in a severe foreign exchange crisis, various measures have been taken to increase exports, such as relaxation of export controls, abolition or reduction of export duties, simplification of procedure for drawback of customs/excise duties, concessions in railway freight and special incentive schemes for particular commodities and industries. But the trend of exports over the years suggests that the promotional measures adopted by the Government have yet to yield satisfactory results when viewed against the requirements of the development effort envisaged under the Third Plan.

Though exports during the last three years have responded in some measure to the stimulus, the trade gap has also grown wider. During 1960 the adverse balance was growing at the rate of nearly one crore of rupees per day. Imports during this period have increased in value from Rs 878 crores in 1958 to Rs 940 crores in 1959 and further to Rs 980 crores last year. Exports on the other hand have increased to a much smaller extent. Against imports last year of Rs 980 crores, exports amount to only Rs 638 crores and the adverse balance of Rs 342 crores is the second highest on record.

Total exports in 1960 are now valued at Rs 638 crores against Rs 621 crores in 1959 and Rs 562 crores in 1958. But to arrive at a correct appreciation of the trend of exports it will be necessary to take into account the quantities exported in addition to the value. The small increase in the total value is the result of higher prices fetched by a smaller volume of exports. While superficially this may appear gratifying as indicating an improvement in the terms of trade, the position is far less satisfactory if we consider the long-term trends against the inescapable need to step up the level of export earnings.

Publicity for the promotional activities of Government naturally concentrates attention on the development of new export items. We learn with gratification of the remarkable progress in the exports of sewing machines, and of other engineering goods finding markets in the advanced industrial countries of the West. While the enlargement and diversification of the pattern of exports that has taken place is satisfactory so far as it goes, and there should be no relaxation of measures to carry them further, it will not be realistic to encourage exaggerated ideas of the actual contribution that non-traditional exports can make in the short run, that is to say, during the next five years, to the country's export earnings. In the case of many of these developing lines, we are still in the transitional period of making our products known in foreign markets.

Exports of non-traditional items account for only about eight per cent of the country's total exports and the rising trend is yet scarcely perceptible. Export of non-traditional items for the first ten months of 1960 at Rs 31.68 lakhs is less than in the corresponding period of the previous year when exports of these items amounted to Rs 32.03 lakhs. For the maintenance of export earnings at adequate levels we have still to fall back on traditional items and the trends disclosed do not leave any room for complacency. During last year, though the value of traditional exports shows a small increase, there is

a slide back in 14 items which contribute about three-fifths of the total. Even in respect of the eighteen items in which there has been progress as compared with the previous year, the increase in value, as indicated above, does not mean larger volume of exports.

More than half the total exports is made up of four items: tea, jute manufactures, cotton piecegoods and mineral ores. In recent years, tea has figured as the leading earner of foreign exchange and continues to occupy that place. But owing to the dual forces of reduced production and increased internal consumption, exports have shown a marked decline in 1960, both in volume as well as in value. Exports for the year are now estimated at 435 million pounds valued at Rs 122.6 crores as against 472 million pounds in 1959 valued at Rs 126.5 crores. The decline has been continuous since 1956 when tea exports set up a record level of Rs 146 crores. The heavy burden of taxation carried by tea exports has given a sharper edge to the competition that Indian teas, especially the common varieties, have to face in foreign markets from countries that have newly entered the field. According to the Federation of Indian Chambers of Commerce & Industry, the net relief from reduction of export duty in the Budget for 1961-62 is almost negligible if taken along with proposed increases in excise duty in different zones and the State taxes. And the Federation has emphasised that a complete revision of the structure of export and excise duties and other levies of State Governments is urgently necessary. The official view that the main difficulty as regards tea exports is not taxes but inadequate production reflects inadequate appreciation of the problem of expanding exports.

As a result of higher prices fetched by jute manufactures, exports show a slight increase as compared with the previous year. But progress has been hampered by shortage of raw material—jute prices reached an all-time high in January 1961 and the industry has been obliged to reduce working hours from 45 to 42½ hours per week with effect from the end of that month. The efforts of the Forward Markets Commission to bring about a reduction of prices have not been very helpful in expanding exports.

The setback in exports is most clearly evident in the case of cotton piecegoods. As against the Second Plan target of 1,000 million yards for the year, it is estimated that exports of mill made piecegoods in 1960 may not exceed 690 million yards. The decline in quantity, as compared with the 815 million yards exported in 1959, may not affect foreign exchange earnings, which may be at about the same level in the two years. But the higher prices realised by Indian textile exports cannot afford much comfort on a long term view, when set against the fact that one of the main reasons for the decline in exports of Indian piecegoods has been the rise in prices during 1960. As in the case of mill made cotton piecegoods, exports of yarn, and handloom cloth, have also declined. The total export of yarn during 1960 is estimated at 14 million pounds valued at Rs 3.77 crores against 21.34 million pounds valued at Rs 3.8 crores in 1959. Owing to the tight supply position, exports of raw cotton, record a substantial decline and may not be more than half the quantity exported in 1959.

As regards minerals, manganese ore has declined since 1957. In contrast to other commodities, the decline in value is sharper than the fall in volume. Iron ore is the only item which has recorded steady progress. Exports have increased from one million tons in 1954 to 2.6 million tons in 1960. But the

development of the full potential has been hampered by inadequacies of rail transport and port facilities. Apart from these limitations, the price factor also weakens the competitive capacity of Indian ores in world markets. The C&F cost of Indian iron ore works out to 143 sh. as compared with 121 sh. for Brazilian ore and 108 sh. for Swedish ore.

The Government cannot fairly be accused of lack of realisation of the importance of exports for the success of the Plan; and the conditions for a successful export drive are also fairly well known. These include sustained increase in production, stable prices, and effective incentives. The first two form part of the general developmental effort; the last is directly relevant to export promotion.

The most pressing requirement in regard to incentive schemes is the streamlining of procedures. While the schemes are formulated with the best of intentions, the incentives are very often transformed into actual disincentives through cumbersome procedures. The extended coverage of excise and customs duties in the Budget for 1961-62 makes the simplification of procedures all the more necessary and urgent. As a result of increased duties, a wide range of Indian goods will be priced out of foreign markets unless effective steps are taken to streamline the procedures and administration of schemes for drawback of customs/excise duties. Similar is the case with freight concessions. With the Railway Minister's announcement of extension of concession to 13 new items, the total number of commodities entitled to freight concessions is now 38. But not many exporters find it easy to avail of this concession, which is administered by the Standing Inter-Ministerial Committee consisting of the officers of the Railways, Ministry of Commerce & Industry, the Finance Ministry and the Planning Commission.

Quite apart from simplification of the procedure, the incentive schemes, particularly those relating to currency retention by exporters, should be made more comprehensive and less rigid in their application. At present most of the incentives of this type apply to non-traditional items only and are available only to exporters who are themselves manufacturers. The items that may be imported and their subsequent utilisation are also rigidly laid down. For these reasons the schemes have not yielded the expected results. In any export promotion scheme it is only reasonable to expect that the incentives offered will be available to the trading firms which have extensive experience of foreign trade. These firms are now being squeezed out of existence under the dual pressure of shortage of foreign exchange and the official efforts to push manufacturers into the unfamiliar field of exports. Only a very few of the big manufacturing units in a few industries could set up their own establishments for export to foreign markets and avail of the facilities under the incentive schemes provided by the Government. The majority of the manufacturers who lack the resources remain indifferent. The proposal for compulsory exports, which is often discussed, does not promise to improve the situation, though there may be limited scope for resorting to this expedient in the case of certain commodities which have to be exported at a loss. The more effective way will be to give the trading firms a direct interest in export promotion by bringing them under the scope of the incentive schemes. Immediate consideration must be given for devising a scheme under which the manufacturers and exporters are enabled to utilise a part of their export earnings, on a wider basis than at present, for import of permissible items on the import list.

If the incentive schemes are to be really effective, they should not be restricted to the manufacturers, but should also be equally available to traders or export houses. The incentives should also be applicable to exports of both traditional or non-traditional commodities, though the percentages of foreign currency allowed to be retained by the exporter may be fixed at different levels according to the type of commodity, and the promotional effort required to push it in foreign markets.

PATTERN OF EXPORTS (Value in Crores of Rupees)				
	1958	1959	Jan.-Oct. 1959	1960
Exports of 18 traditional items in which there has been progress ...	230	258	211	245

July-Dec. ...	452	341	—111	
Total ...	980	638	—342	

Note: The total imports and exports for 1960 (January-December) as published by the D.G.C.I. & S. Calcutta in the Press Note for December, 1960 are Rs 1,000.40 crores and Rs. 635.69 crores.

Such items of exports for which only limited quotas are allowed may be wholly excluded. If the incentive schemes are made comprehensive on the lines suggested, the country's productive apparatus can be made export-oriented with greater facility than otherwise.

In formulating its incentive schemes, Government so far has shown no response to proposals involving income tax relief, a method adopted in various countries to promote exports. The Federation in their memorandum have suggested that rebate at the rate of

10 per cent on total export sale should be given to the Indian exporter and manufacturer exporter as is done, for instance, in Japan or West Germany. Or, alternatively, profits made on exports may be taxed at a lower rate than profits made on internal sale. The effect of allowing such concessions have no doubt, to be balanced against revenue considerations, and the increased complexity of assessments. Still the chance that proposals of this type may meet with greater consideration than in the past are strengthened by the fact that the last Budget contains clear evidence of the recognition of the crucial role of tax concessions in building up the sinews of economic growth.

Prototype Centre For Small Industries

THE Prototype Production and Training Centre, which was inaugurated by the Prime Minister at Okhla this week, marks an important step in upgrading the technological competence of India's engineering industries in the small scale sector. Small industries have been assigned an important place in the national economy and Government has put into action a many-sided programme of assistance for the development of the small scale sector. The growing demand for machinery and machine tools of different types has also focussed attention on small scale units as the most suitable agency for the manufacture of the types of machines which require skill but for which demand is limited. Small scale industries already manufacture a wide range of goods including, agricultural implements, builders' hardware, bicycles and parts, sewing machines and parts, sports goods, surgical instruments, diesel and oil engines, domestic electric appliances, small machines and machine tools. While this achievement indicates the potential of the small scale sector, the working of the programmes of promotional assistance has also revealed the deficiencies in the matter of equipment techniques and training which handicap small units in catering to the vast market that is opening out for their products. A sample survey conducted by technical experts in respect of these deficiencies recommended that facilities for training workmen and higher executives, as also for production of prototypes of modern machines and machine tools should be provided. On the basis of these recommendations Government decided to set up Prototype cum-Production Centres. It is planned to set up at least one Centre in every State. The National Small Industries Corporation has been entrusted with the work of establishment of two such Centres, one at Rajkot and other at Okhla. Besides these two Centres, the Governments of West Bengal and of Madras are establishing similar Centres in Howrah and at Guindy. The Howrah Centre is being set up with help from the Japanese Government and the Centre at Guindy is being established with assistance from France.

Of the two Centres entrusted to the National Small Industries Corporation, the one at Rajkot set up with collaboration of the US Technical Co-operation Mission has been functioning for some time. The Centre at Okhla is an Indo-German venture which had its origin in the offer made by the Foreign Minister of the West German Government when he visited India in March 1957, to assist in the establishment of a prototype workshop and training Centre for small scale industries. Subsequently a tentative scheme drawn up by two German experts who made

an on-the-spot study of the possibilities of improving the manufacture of machines and machine tools by small units in this country. An agreement covering the scheme for the establishment of the Centre was signed in October 1958 after details were finalised in negotiations between representatives of the two Governments. Under the agreement the Government of West Germany has provided assistance in the form of machinery, equipment, training aids, tools and spare parts worth about Rs 40 lakhs. The services of a German Director and instructors and specialists have also been made available. The Government of West Germany has also secured the licence rights for certain items of machinery to be manufactured at the Centre and passed on free of cost to the NSIC. The cost of buildings and the recurring expenditure of the Centre, which is located on a 40-acre plot near Okhla Industrial Estate, are met by the Government of India.

The Centre's main objective is to manufacture prototypes of machines and machine tools and impart training to skilled workers and managers from the small scale units. The prototypes designed and developed at the Centre will be passed on to selected small scale units who will be assisted for the commercial production of the machines. To start with it is proposed to develop the prototypes of machines like bench type lathes, medium size and hand lever type milling machines, planing and thickening machines and other wood working machines, universal tool and cutter grinder. As mentioned above, the Government of West Germany has secured licence rights from three different machine tool manufacturing concerns in West Germany for the manufacture of "STEINEL" milling machine, "WEILER" lathe and "IAHN & KOLB" universal tool and cutter grinder which they have passed on the NSIC. The Centre will supply the selected small units with prototypes along with designs, drawings, processing instructions etc.

The Centre also undertakes to provide technical training to workers deputed by the small scale units in addition to the workers and technical staff of the Central Small Industries Organisation. The Centre is equipped to provide training to 500 workers every year in batches of 250 every six months. The trainees drawn from small scale units will be paid during the training period a stipend of Rs 50 per month in addition to free accommodation.

It is a matter for regret that the value of the training facilities provided by the Centre has not yet been appreciated by the small units in the industry. The Chairman of the NSIC mentioned that so far very few small units have come forward to depute their workmen for training at the Centre. Most of the trainees at the time of the inauguration appear to be drawn from the Small Industries Organisation. One reason for the reluctance of the small units to send their workmen for training may be the fear that the workers, after completing their course, will no longer be willing to continue in their old jobs, at any rate not at the old wages. But entrepreneurs who look ahead should be able to realise that a worker who has received systematic training in modern techniques under competent instructors will be worth far more than the higher wages he will be entitled to as compared with others who have picked up traditional routines of the workshop.

The range of training that will be available at the Okhla Centre can be gauged from the fact that it has eight departments: Design Department; Basic Training and Forge; Main Shop; Sheet Metal and Welding Shop; Foundry Shop; Wood Working and Pattern-making;

Material Testing Laboratories; and Electro-plating shop. The Design Department has four subsections and the Main Shop ten. The trainees will be imparted theoretical as well as on-the-job training.

Gujarat Budget

Increased taxes on motor spirit, kerosene, groundnut, entertainment, electricity and stamp duty characterise Gujarat's Budget for 1961-62. Revenue receipts and revenue expenditure being estimated at Rs 54.25 crores and Rs 58.12 crores respectively, the Budget anticipates a revenue deficit of Rs 3.87 crores. With net capital expenditure in the Budget being estimated at Rs 15.40 crores and with receipts outside the revenue account being placed at Rs 10.37 crores, the overall deficit amounts to Rs 8.90 crores. This contrasts with the small revenue surplus of Rs 13 lakhs revealed in the revised estimates for the eleven months of the current year and the overall deficit of Rs 4.25 crores.

In the light of the distinctly adverse turn in the State's finances indicated in the Budget, justification for the increased taxes, which will necessarily impinge on the purse of the common man, cannot be denied. It has, however, to be recognised that the tax effort implied in the increased levies which are expected to fetch a revenue of Rs 80 lakhs is as nothing compared to the target of additional taxation at Rs 29 crores prescribed by the Planning Commission for the State for the Third Plan period.

Overlooking the financial limitations, the Budget unfolds new vistas for economic development and among the major aims seeks to give a fillip to industrialisation. The capital expenditure for 1961-62 provides an outlay of Rs 1.53 crores for industrial development. Great store is also set on implementation of power development schemes for accelerating industrial progress. The provision of Rs 8.75 crores for irrigation in the capital budget testifies to concern for increasing agricultural production. The Third Plan for Gujarat assigns the highest priority for agriculture and particularly foodgrains in which there is marked deficiency in production.

Kashmir Budget

THE Kashmir Budget for 1961-62 presented to the State Assembly by Mr Girdhari Lal Dogra, the State Finance Minister, is notable for the absence of any fresh levy. The Budget reveals a surplus of Rs 3.36 crores on the revenue side, revenue receipts being estimated at Rs 17.19 crores and the expenditure chargeable to revenue being put at Rs 13.8 crores. Expenditure not charged to the revenue is estimated at Rs 10.10 crores and after taking into account the anticipated assistance from the Central Government to the tune of Rs 6.5 crores, the Budget shows an overall deficit of Rs 98.97 lakhs. This is proposed to be met by market loans.

The Finance Minister revealed that the State's Third Plan is yet to be finalised. The Planning Commission has cut down the Plan outlay to Rs 75 crores from the outlay of Rs 169 crores demanded by the State authorities. An additional amount of Rs 4 crores might be obtained from the Centre for the implementation of certain schemes. Though the Planning Commission has not yet finalised the State's Third Plan, Mr Dogra stated that provisions made under various heads of development for the first year have been agreed to. The major items of expenditure pertaining to the first

year of the next Plan are on agriculture, animal husbandry, irrigation, generation of power and mining. Besides enhancement of educational facilities, the speedy completion of rehabilitation work and the implementation of flood-protection schemes have also been given due attention.

Reviewing the progress of the Second Plan, the Minister stated that despite the devastation caused by floods, the difficulties of obtaining foreign exchange and the troubles engineered by hostile elements the targets in many fields have been achieved.

Punjab Budget

PUNJAB's Budget for 1961-62 presented to the Vidhan Sabha by Dr Gopichand Bhargava, the Finance Minister, discloses a revenue deficit of Rs 96 lakhs at existing levels of revenue and expenditure. The receipts for the Budget year are estimated at Rs 63.77 crores and the expenditure is estimated at Rs 64.73 crores. The deficit is bound to go up further to Rs 1.33 crores with the introduction of free education upto the ninth standard and the enhancement of dearness allowance to Class IV employees by Rs 5 per mensem. The employees will not, however, get the immediate benefit of the additional emoluments, for, the additional amount is to be invested in small savings in the name of each employee.

Fresh taxation announced by the Finance Minister will raise an amount of Rs 1.31 crores. The enhancement of sales tax from four to five per cent and the entertainment tax from 32 nP to 38 nP will fetch an additional revenue of Rs 1.20 crores and Rs 11 lakhs respectively.

On the capital side expenditure is estimated at Rs 19.44 crores. The overall deficit is finally placed at Rs 6.5 crores resulting in the depletion of cash balance which will stand at minus Rs 90 lakhs as against the opening balance of Rs 1.55 crores. It needs to be remarked here that the current year will close with a revenue deficit of Rs 1.55 crores as against the estimated surplus of Rs 1.52 crores, Punjab's experience being somewhat at variance with that of most other States whose Budgets have so far been announced. The heavy expenditure incurred on flood relief works were mainly responsible for converting the surplus into a deficit.

The capital expenditure registered a decline of Rs 7.25 crores to Rs 22.84 crores. Advances and recoveries too recorded great variation. According to the original Budget, advances were placed at Rs 6.04 crores indicating a net debit of Rs 9.35 crores. The estimates place the advances at Rs 20.74 crores and recoveries at Rs 6.5 crores resulting in a net debit of Rs 14.21 crores.

From the explanatory memorandum attached to the Budget it is evident that the strain on resources from 1962-63 onwards is bound to increase because the interest on the loan for the construction of the Bhakra Nangal Project, which at present is being capitalised, will have to be paid from the resources of the State. The need for strengthening the financial position is obvious. Additional taxes will have to be imposed. But much ingenuity will have to be exercised to see that the burden is distributed as widely as possible among the people. This perhaps is the reason that led the Finance Minister to enhance sales tax as well as entertainment taxes for 1961-62.

Expressing satisfaction at the progress of the current Plan, the Finance Minister observed that the final calculation would show that the performance of the Plan was more than 93 per cent of the Rs 192 crores Plan. The progress

of the Plan would have been more impressive if the political unrest in the State had not rendered the State's problems even more difficult of solution. In the industrial sphere Punjab made rapid progress especially in 1960. Big increase in production was registered in sugarcane, cement, paper and cycle industries. Cotton textiles also maintained steady progress. The progress of woollen industry was hampered by persistent paucity of woollen yarn.

Having achieved satisfactory progress in the Second Plan, it is only natural that the Government should confidently launch the Third. The next Plan for the State has already been finalised with a total outlay of Rs 231 crores. Out of this total, Rs 134 crores will be contributed by the Centre and the remaining portion will have to be raised from within the State. In accordance with the Planning Commission's directive to restrict development expenditure in the first year to roughly 15 per cent of the total outlay, the expenditure for the first year has been fixed at Rs 39 crores, of which assistance from the Centre will be of the order of Rs 19 crores.

Among the various programmes included in the Third Plan those relating to generation and distribution of power, development of industries and the introduction of compulsory free education in the lower age groups require special mention. The proposal to introduce crop insurance for sugarcane, wheat, cotton and gram will be another useful step that will directly benefit the cultivators. The Government's decision to promote the growth of industries on a regional basis is bound to yield rich dividends in more than one way. The proposals to start new sugarcane factories, cement factories, paper mills, and textile mills are bound to have far reaching effects on the State's economy.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

World of Finance

GERMAN MARK

Significance of Revaluation

IT was not surprising in the least that the Anderson Mission to West Germany, as representing one of the last endeavours of the Eisenhower Administration, received a rude rebuff. All that Mr Anderson as US Secretary of the Treasury succeeded in doing was to have ridicule heaped upon America. Germany, clearly, was not prepared to yield to pressure. In each of the two preceding autumns, the eve of the annual meeting of the International Monetary Fund was notable for the speculation in the world's money market. Dollars in particular, though the West European currencies in general, tended to be sold for the purchase of German marks. The conjecture always was that, as had happened on an historic occasion, in 1949, the IMF meeting would be used as pretext for announcing an important change in the value of a currency: in the event, the German financial authorities were obdurate, and the only beneficiaries were the exchange brokers who profited from the extraordinarily high turnover.

That, in relation to other currencies, the German mark has for some years been exceptionally strong, there can be no doubt. It displaced the dollar as the most sought-after currency. But the West German view apparently has been that the economy had not achieved such strength as to justify a higher par value vis-a-vis the IMF. In the face of the weakness of the dollar against the mark, the period since the beginning of the American presidential campaign in the middle of last year has produced recurrent rumours that, in the event of a Democratic victory at the polls, the dollar would be devalued. During the campaign, Mr Kennedy vigorously denied that he would do any such thing, but the fact remains that, in terms of the dollar, the price of gold went up to \$40 and more in London. Since his inauguration, President Kennedy has been even more emphatic in his insistence that the dollar would be defended and strengthened—but not devalued.

It now appears as if President Kennedy has won a tactical victory, by persuading Germany to revalue the mark. The flight of the dollar will to some extent at least cease; indeed, it was just recently that America had, for the first time since July last year, a week in which there had not been a net outflow of gold. Speculative pressure in favour of the mark, and which had acted against the dollar, has now abated. The fortuitously strengthened dollar may pave the way for an American recovery from its recession.

Germany of course is entirely justified in revaluing the mark. Its reluctance to do so, until now, is also understandable. But huge payments surpluses—and by no means the bulk of it constituted by inflow of hot money—over a period extending to years made it inevitable that, with the IMF's consent, the mark should appreciate in value by 4.75 per cent. The timing of the decision is such as to

suggest that it is not purely economic—the political undertone is there, in the sense of ensuring harmony thereby in relations with America. It will no doubt be freely canvassed that President Kennedy's persuasiveness won, whereas Mr Anderson's pressure tactics were unavailing. But it would be wrong on our part to rule out the possibility of a German decision voluntarily taken, though with due regard for the help it might incidentally render to the dollar.

For India, the revaluation of the mark is a mixed blessing. German goods, in terms of rupees, will cost more; planning for Third Plan projects is likely to go awry, to the extent that large-scale collaboration with and purchases from Germany had been decided upon. But then, as Germany has recently shown, it looks as if that country will, as America had long done and until recently, extend a good deal of assistance that is "untied" in the sense that purchases there-against need not by stipulation be made in Germany. If, in fact, more of German aid in the future takes the form of "untied" loans, there is then a silver lining of great significance. More foreign exchange, in terms of rupees, should be available for India to spend, not only on developmental but on maintenance imports as well.

It remains to add one thing. In respect of projects already embarked upon, but against which deliveries from Germany have not yet been received, it is to be trusted that India has the benefit of the escape "escalator" clauses. For, otherwise there is the prospect that Second Plan projects not yet completed and which rely on German assistance or imports from that country are going to cost us a pretty penny—should it be pennings?—more.

ALLAHABAD BANK

Rise in Profits, Dividend Same

The accounts of The Allahabad Bank Limited for 1960 have, it is clear, respected the old banking tradition or convention that there should not be sudden or sharp changes under the main heads; and it is indeed this fact that causes one aspect of the profit and loss account to stand out in such a way that it will almost certainly not be paralleled in the figures of any other bank.

HIGHLIGHTS OF ALLAHABAD BANK FIGURES.

Balance of Profit	...	16.27	17.35	+ 1.08	+ 6.64

Deposits of the Bank improved by Rs 1.82 crores to Rs 51.95 crores, the rise over the year being one of 3.63 per cent. With the total of Advances rising by 12.59 per cent to Rs 31.93 crores, cash balances have been drawn down by nearly Rs 1 crore, and apparently the Bank did not use the proceeds from its holding of the loan maturing last year for investment in the new loan. In the result, the Advances/Deposits ratio has gone up from 56.57 per cent at the end of 1959 to 61.46 per cent; and it is apparent that the Allahabad Bank has probably one of the lowest such ratios among the Indian Scheduled Banks.

The income by interest and discount has risen substantially by Rs 14.28 lakhs (or 5.98 per cent) to Rs 252.93 lakhs. Commission, exchange and brokerage have also fetched in the larger amount of Rs 38.76 lakhs, being Rs 3.42 lakhs or 9.68 per cent higher than the relevant figure for 1959. The increase in the gross income works out to Rs 17.89 lakhs; and, as expressed as a ratio of Deposits, gross income is better at 5.66 per cent against 5.51 per cent for 1959.

The expense incurred in salaries and wages has gone up sizably, by Rs 8.84 lakhs to Rs 96.46 lakhs; this possibly is at least in part due to the branch expansion the Bank has undertaken, two having been "established for the first time in South India".

By far the most significant item in the Allahabad Bank figures relates to the amount absorbed by interest paid. Despite the rise of Rs 1.82 crores in Deposits, interest paid is actually lower, though nominally so, at Rs 135.29 lakhs against Rs 135.38 lakhs. In the current banking situation, there is a certain inexorableness about the tendency of interest paid to rise. But it would appear that Allahabad has eschewed the payment of higher interest rates in order to chase futilely after Deposits; this, coupled with a tight control on Advances thus avoiding recourse to costly credit from the Reserve Bank, has undoubtedly enabled interest paid to be kept at a low and reasonable figure.

In the result, the balance of profit has gone up by Rs 1.08 lakhs, representing an increase of 6.64 per cent, to Rs 17.35 lakhs. In view of the enactment whereunder some relief is afforded to preference shareholders, the Allahabad Bank has proposed to pay additional dividend on the preference shares at 1.80 per cent for the three half-years to June 1960, and to propose the final dividend on the preference shares for 1960 also at 7.80 per cent. The ordinary dividend, however, is unchanged at 18 per cent (including Bonus at 6 per cent).

The satisfactory improvement in the Bank's performance is seen reflected in an increase in the appropriation for Bonus to staff from Rs 7.55 lakhs to Rs 8.30 lakhs; and, besides, there is a transfer of Rs 1 lakh to the Staff Pension Fund against nil last year.

It may be added, in conclusion, that the balance of profit, as has long been customary for the Allahabad Bank, is shown net of the liability to tax.

MERCANTILE BANK

Sharp Rise in Profits

Two facts stand out in the accounts of Mercantile Bank Limited for 1960. The first is, that the total of Advances has risen sharply by £6.29 million to £36.96 million; the rise over the year works out to 20.51 per cent. Meantime, Current Deposit and Other Accounts (including Inner Reserves and other provisions) have fallen by £0.64 million to £64.24 million. Cash in hand, balances with other banks, balances with the Hongkong and Shanghai Banking Corporation and money at call have as a result been steeply drawn upon, by £4.91 million to £7.98 million; the fall exceeds 38 per cent over the year. Furthermore, investments in Government securities show a drop of £1.75 million or 12.95 per cent to £11.76 million. In the result, most

Balance-sheet:	(In millions of pounds)			
	31-12 1959.	31-12 1960.	Change	Change %age
Current Deposit and other Accounts including Inner Reserves and Provisions	64.88	64.24	— 0.64	— 0.99
Cash in hand, balances with other Banks, balances with Hongkong and Shanghai Banking Corporation and money at call	12.89	7.98	— 4.91	—38.09

Advances as per cent of Deposits	47.27	57.53	+ 10.26	+21.71

BANK RETURNS

Busy Season Rise in Active Notes

Beginning of the month disbursements and the continued pressure of the busy season have shown their impact on the latest banking returns. According to the statement for the Issue Department of the Reserve Bank for the week ended 3 March, Active Note Circulation has expanded sharply by Rs 21.82 crores to Rs 1947.16 crores, and there has been outflow of Rupee Coin in the sizable amount of Rs 1.80 crores. With both Rupee Securities and Foreign Securities unchanged, the Reserve Bank's cash in the till has been drawn down by Rs 22.63 crores to a level of Rs 11.34 crores.

There is evidence, in the Banking Department, of the Central Government having recourse to deficit financing. During the week, the State Bank has not figured as a seller of securities, and the rise of Rs 10 crores, to Rs 154.12 crores, in Investments must be taken to indicate sales of ad hoc Treasury Bills in favour of the Reserve Bank by the Central Government. Partly, it will have been the pressure of month-early disbursements. Also,

unusually in an exchange bank's balance-sheet, the ratio of Advances to Deposits has gone up from 47.27 per cent to 57.53 per cent. We may take this to indicate the money market stringency that has apparently been experienced in the countries in which Mercantile Bank operates.

But, of course, increase in Advances is immediately beneficial; the balance of profit, after providing for taxation, inner reserves, etc., is sharply higher at £326,103 against £300,566; and this is the second fact of importance, since exchange banks do not normally show sharp deviation in their figures of profit and loss. The increase in profit has been utilised to augment the amount written off Bank Premises to £100,000 from £75,000 last year. The dividend, including the interim already paid, is maintained at 12½ per cent for the year. The carry forward is about £1,000 higher than the amount brought in.

however, we are nearing the end of the fiscal year, and heavy payments by Government are to be expected. Indeed, if the Finance Minister's revised estimate of outstandings of Treasury Bills is to materialise, deficit financing in the period till 31 March 1961, as from the week ended 3 March, may be as high as Rs 150 crores.

Despite such replenishment of resources, the Centre's balances are lower by Rs 9.60 crores at Rs 51.44 crores. Balances of State Governments are also shown lower by Rs 3.68 crores at Rs 14.70 crores, and the States have besides increased their ways and means borrowings from the Reserve Bank by Rs 3.85 crores to Rs 41.62 crores.

The strain experienced by the banking system, as a result of month early disbursements and busy season commitments, is suggested by the rise of Rs 7.89 crores to Rs 155.53 crores in the Other Loans and Advances of the Reserve Bank; and Reserve Balances of member banks, moreover, have declined by Rs 5.12 crores to Rs 71.68 crores.

Incidentally, it may be remarked that the heavy drain on the Centre's balances has been partly on account of a maturing liability of around Rs 12.50 crores in respect of Government of India Treasury Bills purchased and discounted by the Reserve Bank and which matured during the week.

Indian Finance

Finally, Balances Held Abroad have not kept up their recent encouraging trend of a week-by-week rise: they have fallen by Rs 2.20 crores to Rs 29.29 crores—and the target of Rs 175 crores as the exchange reserve with which the Third Plan should start is a good Rs 18 crores to go.

Europe and the Commonwealth

By Paul Einzig

AT a meeting of Foreign Ministers of the Western European Union in Paris on February 27, Mr Edward Heath, the Minister in charge of European questions, announced a new departure in the British attitude towards the European Common Market. Britain is now prepared to concede a reduction of Commonwealth preference for the sake of establishing a link with the Common Market. She is prepared to renounce the advantages of the preferential tariff for British goods in the Commonwealth countries, even though she insists on admitting Commonwealth goods free of duty or at preferential rates.

This is an astonishing concession, having regard to Britain's adverse trade balance. As it is, Britain's share of the imports of many Commonwealth countries has been declining, and the application of the concession is bound to result in a further decline. It is highly doubtful whether the advantages derived from a limited participation in the European Common Market would compensate Britain for the resulting decline in her exports to the Commonwealth. From the point of view of the Commonwealth countries the British concession is a free gift, because their exports to the United Kingdom would be unaffected, while they might gain access to the European Common Market, and they would be able to buy Western European goods instead of British when this appears to their advantage.

It is difficult to understand why the British Government should consent to such unilateral sacrifices. The trouble is that this whole question of participating in the Common Market has been overemotionalised and sentimentalised, and a large section of the British public opinion has come to attach exaggerated importance to it. Fortunately for Britain there is no danger of this generous offer being accepted, by the Common Market countries. At any rate France is most unlikely to accept anything short of full participation on the basis of the Rome Treaty. This would mean jettisoning Commonwealth preference and throwing British agriculture to the wolves. There is no reason to suppose that the Government would be prepared to go so far. In any case even if it were prepared to sign on the dotted line of the Rome Treaty it is quite certain that President de Gaulle would invent additional conditions to keep Britain out of the Common Market. The basic fact of the situation is that France has no wish to include Britain on any terms, though it is just conceivable that under pressure from Germany and other Common Market countries, she might be induced to take a less intransigent attitude.

Actually Britain holds quite a few trumps because she has an import surplus on her trade with France. This should enable the Government to adopt a firmer line, especially if the growing extent of tariff discrimination against her by the Common Market increases her adverse trade balance. What is needed is not unilateral sacrifices but a tougher attitude which would make France realise that she cannot have it both ways.

(Copyright).

Notes

COMPANIES

Progress in the South

The review of the working of the Companies Act 1956 in the Southern region for the quarter ending 31 December 1961, reveals that 133 companies with an authorised capital of Rs 30.75 crores have been registered in the region comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. 13 of these are shown to be public companies with an authorised capital of Rs 12.47 crores, the rest with the exception of one which is an Association not for profit, being private companies. With 94 registrations Madras accounts for the largest share. While the balance is fairly evenly distributed among the other States it is noteworthy that public companies are conspicuously absent in the new registrations in Andhra Pradesh and Mysore. In contrast, of the 14 new companies registered in Kerala 6 are public companies.

Industry-wise break-up reveals a marked concentration under transport the number of companies coming under this category being 64 out of a total of 133. Nine companies viz Pipes and Tubes Limited for the manufacture of iron and tubes, Madras Rubber Factory Private Limited for the manufacture of

rubber and rubber goods, Hindustan Photo Films Manufacturing Company Limited, for the manufacture of photographic goods, T I Miller Private Limited for the manufacture of lamps, Tractors and Farm Equipment Private Limited for the manufacture of tractors, Kothari Sugars and Chemicals Limited for the manufacture of sugar, Limac Limited for the manufacture of heavy machineries and earth moving equipments, Southern Cables Corporation Limited for the manufacture of insulated wires and cables, and the Hindustan Teleprinters Limited, for the manufacture of teleprinters figure as the new giant floatations in Madras. Notable among the new companies registered in Kerala are the Malabar Iron and Steel Works Limited for the manufacture of roll, re-roll, steel sections cast iron, steel and non-ferrous castings and machine tools and the Electric Motors and Appliances Limited for the manufacture and dealings in electric motors. The Andhra Pradesh Industrial Development Corporation Limited to promote, improve, establish and develop industries with an authorised capital of Rs 3 crores represents the major industrial venture in Andhra Pradesh.

During the same period 12 companies were struck off the Register of Companies as defunct. The 178 prosecutions reported to have been launched against certain companies and their officers testify to rigorous enforcement of the Company Law.

MYSORE

Many-Sided Progress

The progress of Mysore in many directions was reviewed by the Governor when addressing the Legislature. Coming after the restoration of Congress unity, it is evident that the Ministry feels quite sure of itself. Mysore's minerals, other than gold, will help to raise India's exports. But improvement to ports on the Konkan coast is wanted now and the Hassan-Mangalore rail link is a project backed now by all shades of public opinion. Other States too have argued that Mangalore must be made an all-weather port because the recovery of Margao is indefinitely put off. The power needs of growing industries will be met by the Sharavati project, which will go down in history as Mr Basappa Jatti's memorial. The US aid available already for the project will help. The Malnad development schemes will take on a new meaning, if cheap power is assured. Last year's food shortage appears less relevant than the progress of agriculture to which Mysore gives

attention because more cotton as well as more rice is needed at present.

The opposition staged a walk-out after tendering an explanation. Mr Nijalingappa composed his differences with Mr Jatti. That may be due to a consciousness of election needs as well as urgent directions from Delhi. The PSP forgets that party unity must be kept up in order to take the field. The objection to the re-entry of four former Ministers is somewhat specious, considering that the UP Ministry is seeking to expand in order to promote party discipline. The problem for the PSP, allied with Congress in Kerala, but adamant in other States, is really one of finding a cause for protests. And bringing Ministers back does not seem to be cause for much alarm. The infusion of trained administrators is required in a State that is enlarged by addition of Bellary, South Kanara and other districts. There are regional claims to be considered, and Mr Jatti by blending the old and new areas, is entitled to be called the maker of the bigger and better Mysore.

CO-OPERATION

Rural Vistas

Speaking at the golden Jubilee celebrations of the Vidarbha Co-operative Bank, Mr H. V. R. Iengar, Governor of the Reserve Bank, dealt at length with the role of co-operative rural credit in increasing agricultural production. Problems relating to the development of rural co-operative credit are many, not the least being the extremely limited volume of credit now available. Over the last decade, under the guidance and participation of the Reserve Bank, there has occurred considerable expansion in the quantum of credit dispersed by co-operative societies. From Rs 18½ crores in 1947-48 agricultural credit provided by co-operatives has gone up to Rs 150 crores. A further substantial rise is envisaged during the Third Plan. For short term and medium term credit the Third Plan target has been fixed at Rs 480 crores. Credit is however only a means to an end and the success of the co-operative programmes will be judged by the extent to which gains in production are enabled through the activities of the co-operative societies. In this context it is necessary that credit is provided according to requirements. The package programme for increasing agricultural production in selected districts in States has a special significance for cooperative credit for the credit requirements of the cultivators of the areas in which the programme is being put into effect are to be met by cooperatives. The principle of providing credit on the basis of the share capital of the members has not been found to be satisfactory in providing all the credit requirements of the cultivators. For this it is essential to strengthen the resources of the societies. The Committee on Cooperative Credit appointed by the Government of India in September 1959 had suggested State participation in share capital or grant of subsidies for a limited period.

While this may force the pace, healthy growth can only be ensured by trying to augment members' capital. The cooperative movement at present shows wide variations in performance as between different States. It would be useful to consider whether offer of higher and attractive rates of interest would not bring a wider spread to the movement especially in those States where progress is relatively slow. Mr Iengar has also drawn attention to the existence of a number of weak and inefficient units in the cooperative structure. He has stated that nearly 64.9 per cent of the societies audited in 1957-58 were found to be badly run. Efficient working raises a number of questions relating to the size of societies the quality of personnel available to man the institutions etc. There is also inadequate appreciation of the need to prevent diversion of credit provided by the societies to non-productive uses. Overdues in primary societies estimated at 20 per cent of the outstanding loans for 1958-59 suggests the existence of tendency to misuse credit. Provision of facilities for storage and marketing of agricultural produce will enable a better compliance with repayment schedules by the cultivator.

LIGHT METAL

Poor Relation

A symposium on light metal industries organised by the National Metallurgical Laboratory at Jamshedpur, a couple of weeks ago has underlined the importance of integrated development of metal industries in the country. Growth of these industries has hitherto tended to be one-sided with progress being outstanding mainly in the heavy sector. Perhaps the fact that light metal industries are of recent growth would explain their slow progress and their present comparatively insignificant

position. Only aluminium among the more important of these industries has made notable progress though even in this, present production does not measure up to actual requirements. It is unfortunate that the Third Plan which lays so much stress on industrialisation does not envisage self-sufficiency in respect of aluminium production. The schemes for expansion of aluminium industry in the course of the Third Plan are drawn up to enable a final capacity of 83,000 tons of aluminium to be reached by 1965-66. At the present

rate of increase in demand, consumption of aluminium by the end of the Plan would be considerably in excess of the Plan target for production.

Apart from aluminium there are other light metals and alloys such as magnesium, titanium, beryllium and zirconium for which the country has not enough capacity to meet internal requirements. In view of the anticipated rise in demand for these products particularly from the defence industry, the Third Plan has laid considerable emphasis on their expansion during the next five years.

Light metal alloys have many industrial uses and in view of their bearing on general industrial progress, their rapid development is essential. Prof. M. S. Thacker in the course of his inaugural address to the Symposium has drawn attention to the piecemeal and uncoordinated nature of the exploration work that is being done in these fields. The National Metallurgical Laboratory has a good record on the research side. Attention has however to be directed to ensure that the results of research find immediate practical application.

No liveried footmen or blazing chandeliers remain to proclaim the grandeur and gaiety that once pervaded the large red brick mansion that still stands in Calcutta's Hastings Street and which Warren Hastings, India's first Governor-General, built for his charming wife as her town house. For many years this fine residence was the scene of glittering assemblies and balls, the entrée to which was considered a high social privilege.

In 1827, No. 7 was acquired for the purpose of its business by the old established engineering firm of Burn & Company which occupied it for almost a century. By reason of its expanding business, Burn & Company found this historic building with its cobbled carriage drive and spacious rooms too small, and in 1925, the Company was forced to sever its link with this house of memories and moved to larger premises in Clive Street, where it joined hands with Martin & Co.

Today, the activities of Martin Burn Ltd. cover a wide range of engineering interests including those brought to it by the renowned firm of Burn & Company all of which are vital to the rapid development of India's industrialisation.

EXCISES

The Dim Silver Lining

The duty on human blood plasma at 30 per cent is of little immediate importance to the public. Some machinery bearing duty at 10 per cent will not be subject to an increase in levy: this news also leaves the public cold. But hardly any item of importance is still left uncaught by the excise net. Hence, prices for glass ware as well as China are going up because of the new excises. The usual explanation about taxes in relation to prices has come with a warning against profiteering, and, 'nice' calculations about the maximum justified rise have been sent out over the week-end. It is argued that package tea should not cost more as only loose tea is to bear a higher excise. It is pointed out that the higher duty on coffee should raise the price by only 14 nP. per kilogram and the price of vana should be up only by 2.8 nP. per kilogram. These calculations are unrelated to reality. The price-raising operations conducted after the Budget in the case of arecanuts or matches despite an official assurance that the higher rate on the latter item will fall on the factories alone show how these things work in practice. As for cigarettes, a new price list has been issued by the major manufacturers and the customer knows where he stands, though the stockists have other ideas sometimes. The new prices mean that the grower will not be affected and the consumer alone will have to pay for pleasure or for forgetting the pain of the mounting cost of living. Hookahs will, of course, be cheaper but a hookah cannot go into a pocket and there is a fire hazard of sorts for many.

The Customs notifications relating to the Budget bring in malt. The excises become supplementary duties in effect, on all items from plastics to radio receivers. The duty on cosmetics at 25 per cent or on patent medicines at 10 per cent can be avoided by sheer abstinence, derived from strength of mind. The cosmetics listed are face cream, power, hair lotions and pomades. They bear now a duty of 25 per cent, if made in India. There is one omission after shave lotions based on alum or other astringent articles. And it may be added that if there is a duty on steel, there is none yet on blades. That means there is no tax on shaving—a ritual, to whose dread, nothing has mercifully been added. Women too, have cause for small satisfaction and some compensation for more expensive make-ups—no excise on glass bangles as yet. The share market has ignored the higher duty on rayon yarn at the rate of Rs 3 per kilo and Rs 1.50 per kilo for the lower quality of yarn, mainly because the trader will collect it for the benefit of the manufacturers, who in turn will hand over it over to the excise.

For manufacturers or traders the important intelligence is that the import duty on paints is 50 per cent, on rubber tyres 50 per cent and on

timber also 50 per cent. The last is perhaps meant to encourage forestry by tariffs. As there is a duty of 75 per cent on all stationary, the conservation of paper will be enjoined, and not least by the token import quota promised. The duty on printing machinery too is up to 15 per cent and the same duty is payable on components. A point to note is that the duty on cars and cabs is up to 100 per cent or Rs 6,000 whichever is higher plus the countervailing excise. This means an extra dose of protection which explains also why motor shares are preening themselves here. (In contrast, in London motor shares are out of favour now). Sportsmen will be chagrined by the duty of 100 per cent on firearms as well as cartridge cases. But for the ordinary citizen, what matters is the duty on arecanuts at Rs 3 per k.g. and that on dry fruits at 50 per cent. Differential duties on wines and spirits of foreign origin are due to the higher central excise. The effective rate is 170 per cent which may well be taken as a bull point for soft drinks as against hard liquor and so on. The search for the dim silver lining is thus an unending quest.

CALCUTTA PORT
A Small Surplus

Budget estimates for 1961-62 for the Calcutta Port Commissioners indicate a surplus of Rs 2 lakhs. On the basis of an estimated traffic of 10,250,000 metric tonnes, the income for 1961-62 has been estimated at Rs 14.41 crores. Against this, the expenditure for 1961-62 is placed at Rs 14.39 crores. The revised estimates for 1960-61 reveal shortfalls against original estimates in respect of both income and expenditure. While the original estimated income for 1960-61 was Rs 13.77 crores, the income shown in the revised estimates is Rs 13.64 crores. It is significant that the revised estimates of traffic for 1960-61 shows a shortfall of 408,480 metric tonnes against original estimates.

The shortfall in expenditure in the revised estimates at Rs 52 lakhs is put down to reduction of expenditure on maintenance and repairs on labour accounts and slow withdrawals of the World Bank Loan. The revised estimates for 1960-61 shows a credit balance of Rs 1.80 crores on capital account. Expenditure on works in progress and firm contractual commitment is estimated at Rs 8.25 crores.

For 1961-62 the credit balance on capital account is estimated at Rs 17 lakhs. The capital budget takes credit for a loan of Rs 1.5 crores. The Budget proposals for 1960-61 included borrowing Rs 3.65 crores from the Government, Rs 4 crores from the International Bank for Reconstruction and Development in addition to the contribution of Rs 50 lakhs from the year's revenue surplus. For 1961-62, the Budget envisages borrowing Rs 4 crores from the Government and Rs 7 crores from the IBRD. The expenditure for 1961-62 provides for a sum of Rs 29 lakhs to implement the Chaudhury Committee's recom-

mendations, Rs 50 lakhs to implement the Pay Commission's recommendations and Rs 30 lakhs to cover the cost of introducing the modified piece rate scheme. The bulk of the expenditure for 1961-62 however falls under works in progress, the estimate under this head being Rs 10.55 crores. Against this, estimates of expenditure for new works is Rs 2.06 crores.

Despite increase in revenue, the anticipated surplus is small and this shows that the finances of the port need a careful watch. Attempts to improve operational efficiency should be made, if the increases in labour and maintenance costs are to justify themselves in the narrow and wider contexts of the port's and the nation's economy.

MADRAS PORT
Thriving

The promise of more foreign aid for improvements to Madras Port conferred extra interest on the Port Trust report for 1959-60. The income for the year exceeded

Rs 2.28 crores, while expenditure amounted to Rs 1.68 crores. The operating ratio was 63.44 per cent against 65.07 per cent in 1958-59. The Trust's revenue surplus is shown at Rs 3,27,990, while its reserves standing at Rs 4.28 crores were nearly equal to its debt to Rs 4.41 crores. There is in addition a loan for 14 million dollars bearing 5½ per cent on which instalments of repayment are due from April 1963. But only Rs 70.88 lakhs had been drawn out of the World Bank loan. The increase in trade passing through Madras was made possible by extension. This is reflected in both the tonnage of exports and imports during 1959-60 despite a fall in grain shipments received. The increase in iron and manganese ore shipments continued, but groundnut and oil shipments were lower. However, shipments of oil cake rose by 400 per cent owing to increased quotas. As a passenger port Madras is still declining in importance but income from the P. T. Railway rose further owing to the rise in traffic, re-

flected also in wagon charges. The Port Trust's capital programme, includes a wet dock for which construction equipment has already been acquired. Additional berths for ores and coal were commissioned after the year ended, as also warehouses and marshalling yards. A new giant dredger from Hamburg is on order but depths in the harbour were maintained with available craft and plant. The bulk of the P. T. purchases was made in India. The wage bill for the year exceeded Rs 1.05 crores in addition to Rs 19.2 lakhs charged to project works. Only two fatal accidents were noted and compensation was paid. The accounts indicate that capital investment on harbour amounted to Rs 12.00 crores, while liabilities amounted to Rs 5.41 crores only. The excess of assets over liabilities certainly makes for confidence about the future and the approval of the World Bank Mission may be easily traced to this, among others, indication of sound financial health of the Madras Port.

THE JAVA BENGAL LINE'S OFFICE
AT CALCUTTA

LIGHTING BY PHILIPS

When one enters the recently renovated offices of the Java Bengal Line in Calcutta's premier business area, there is an almost breathless hush of amazement at the unusual elegance which presents itself. The reason is, at once, obvious. The evenly spread out and gentle lighting lends an atmosphere of dignity and efficiency.

And naturally, the lighting is by Philips.

The diffuse and even high level lighting, free from shadows and glare, has been achieved through recessed fluorescent lamp fittings. These Philips' exclusive fittings produce lighting that totally eliminates eye-strain and increases staff efficiency.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the evergrowing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.

PHILIPS

quality lighting for ultimate economy

PHILIPS INDIA LIMITED

FRB—

New Departure

The United States Government has embarked on a new departure in monetary policy, one that could play the dual role of stimulating the domestic economy while reducing deficit in the US international balance of payments.

This is the evident purpose behind the decision of the US Federal Reserve Board (FRB), the nation's chief monetary manager, to move

decisively into the open markets to buy US Government bonds with maturities of up to five years or longer.

This move reserves a long-standing FRB practice. It marks the first time in nearly a decade in which the Board has bought long-term US securities, except when it felt called upon to correct so-called "disorderly market" condition—something that has happened only three times since 1951, and then only for brief periods.

Heretofore, the Board has confined its open market activities largely to

short-term bills of three to six-months' maturity, leaving the prices of longer-term securities to be determined by market conditions. It was the FRB contention that its short-term technique was the most efficient and most orderly way of conducting a flexible monetary policy geared to the needs of the time—leading either to ease or restraint in money and credit availability.

Abandonment of this old position seemingly reflects the belief that a new situation calls for a new response. The new situation, to which President Kennedy has repea-

tedly called attention is this: a recession in general business activity, accompanied and abetted by a lag in capital investments at home, coupled with a persistent outflow of gold and dollars, accompanied and abetted by a movement of short-term investment funds abroad.

To meet this new challenge, it has become the policy of the Kennedy Administration—one in which the FRB evidently concurs—to encourage long-term and short-term rates to move in opposite directions. This means forcing long-term rates down as a means of reducing the cost of borrowing and investing, and thus stimulating economic activity at home, while holding short-term rates up as means of halting or reversing the flow of funds abroad and thereby easing the balance of payments position.

To understand how this could be done, one must examine the operations of the Reserve Board, which is continually buying and selling government securities. These transactions affect the reserves of commercial banks, and hence their ability to lend. When the Board buys more than it sells, it increases the commercial banks' reserves; when it sells more, it decreases them. For each \$1,000 million increase in reserves, it is estimated that the nation's banking system as a whole can expand its loans by more than \$6,000 million.

Moreover, when the FRB buys bills or securities, it helps push the price up and the yield, or interest rate, down. The reverse is the case when it sells.

During a period of business slow-down such as now, therefore, the FRB normally would buy more than it would sell to make more money and credit available. As long as it dealt almost exclusively in short-term bills, however, it would directly affect only short-term rates. This could serve as an excellent economic stimulant, but continued lowering of short-term yields would run the risk of inducing more dollars—some of them bound to be transferred into gold—to move a foreign capital markets to take advantage of higher yields. And this would mean bigger deficits in the international payments balance of the United States.

The new policy, if successful, would pull the Reserve Board out of this dilemma. The Board would not buy as many short-term securities as it otherwise might, and it could keep money easy and stimulate economic expansion by buying long-term securities.

A basic question, of course, is: will the new technique work? There is some difference of opinion on this, but the Reserve Board apparently is bent on trying it. It is interesting that when the announcement of the new FRB policy was first made less than a week ago, there was a slight reduction in yields on long-term securities as prices showed signs of moving up a little. Investment bankers and other specialists are now cautiously predicting further declines in long-term rates.

Indian Finance

11 March 1961

Another question concerns the position of the Federal Reserve Board itself. Does this latest move mean that the Board is being forced to surrender its traditional and desired independence? The evidence at hand points to an answer in the negative, and there appears to be no change in FRB relations with other government agencies.

It is significant that FRB chairman William McChesney Martin has on a number of occasions consulted with President Kennedy and other government officials on the question of monetary policy. Furthermore, the new Under-Secretary of the Treasury, Robert V. Roosa, was an official of the New York Federal Reserve Bank, one of the 12 district banks of the federal system, before assuming his new duties.

Finally, in making the announcement of its new policy departure the FRB indicated that political considerations were not a factor. It attributed the move to "conditions that have developed in the domestic economy and in the US balance of payments with other countries."

PAKISTAN

Method in Madness

To judge by the unhappy incidents in Karachi, the meeting between the Prime Minister of India and the President of Pakistan has been forgotten. President Ayub Khan's comment on the Jabalpur troubles, though irresponsible, did not provide the immediate provocation for the student demonstrations. That the anti-Indian outburst took place in spite of the Army being in control of Pakistan's affairs will only suggest that the incident was not wholly spontaneous. The Madhya Pradesh Government has promised an elaborate enquiry into the recent riots. That is perhaps not enough for the hotheads in Karachi. An attack on a legation is a breach of international law, that requires some explaining. The most suggestive indication is that it was Friday prayers that touched off the attack on the High Commissioner's office. And local police could not or would not, act to prevent the stone-throwing. There may be a method in this masterly inactivity, as in the post-factor survey of damage. But it is patent that the Pakistan Government does not believe in starting a new chapter even after Mr. Nehru's vigorous defence of the transfer of a part of Berubari union over the protests of the West Bengal Government. The satisfaction given as regards canal waters has not induced Pakistan to revise her attitude towards India. The idea of good neighbourly relations is still foreign to the foreign policy of Pakistan and outsiders like Lord Attlee who plead for a detente in the sub-continent will

do well to note that Pakistani feeling is still inflammable. They should also not miss the significance of the fact that Pakistan is trying to deal with the Communist block in spite of its alliance with the U.S.A.

IFC

Collaboration

The International Finance Corporation has announced a commit-

ment to invest US \$210,000 in KSB Pumps Private Ltd., of Bombay, India, to help finance the construction and operation of a plant at Pimpri, near Poona, for the manufacture of special-purpose pumps.

Principal shareholder is Klein, Schanzlin & Becker AG (KSB) of Frankenthal, Germany. This firm was formed in 1871 and is today a leading manufacturer of a wide range of pumps, compressors, and valves. Other shareholders are: The Industrial and Prudential Investment Co., Ltd., of Bombay;

The New India Development Corporation (Private) Ltd.; and a private investor.

KSB will be responsible for construction of the plant, and for the Indian company's management and technical direction.

Production is planned at about 800 pumps annually, and is expected to begin in 1962.

Total cost of the project is estimated at \$730,000 in U.S. dollars and dollar equivalent.

The IFC investment of \$210,000 is in unsecured dollar notes bear-

ing 7 per cent payable in dollars, and maturing between 1966 and 1971. IFC will also be entitled to receive additional interest in rupees related to profits.

IFC's commitment is subject to completion of the necessary legal formalities.

SUGAR Self-Sufficiency

The increase of sugar production from 1,00,000 tons a year to 2,00,000 tons to meet all the needs of the State is the declared purpose of the Madras Government. The starting of three co-operative

sugar mills in addition to three already commissioned is meant not only to help cane-growers but to increase rural employment. The optimum unit of 1,000 tons crushing capacity, commanding a cane area of over 4,000 acres and working for over 150 days a year, will cost Rs 140 lakhs of which Rs 90 lakhs is required for buying machinery locally. The advantage to the engineering industry is obvious. In the South both KCP and Binny's Engineering are now equipped to produce sugar mill machinery, and as cane output has risen to 4.1 million tons in the current year, the new mills can count on a steady supply. The average yield of cane is put at

25.91 tons per acre, as against the all-India average of 14.7 tons. The Finance Minister hopes for higher yields by the use of better strains and more fertilisers.

The budget speech incidentally contains some news about fertiliser factories, both those licensed and projected. The shortage experienced last year will be overcome if the area plant at Neyveli supplies 3,50,000 tons of ammonium sulphate. Efforts are being made to set up another fertiliser plant at Tuticorin by Kotharis. The budget speech reviewed economic prospects fully and stressed the importance of the project of Parry at Ennore. Factories to be set up

Indian Finance

at Cuddalore and Coimbatore will add to the supply of superphosphate. There is a plan to start a new factory in Tanjore which hopes to set up another sugar mill under co-operative auspices. Sugarcane cultivation will ensure a quick demand for fertilisers and Parry's present interests range from sugar to superphosphate. The prospects of sugar self-sufficiency in Madras are certainly such as to make mouth elsewhere water.

MOROCCO Smooth Succession

The precautions taken in Morocco to ensure the smooth succession to the throne are due perhaps to a fear of Berber chiefs in the hills and, the interior. The Sherifian dynasty is old and respected. The new Emperor has experience of high office at home and ample contacts abroad. His accepted position is not challenged by kinsmen as is usual in most Moslem countries and there is no question of his being in the shaky position of the Shah. It is rather a fear of Algerian nationalist infiltration that constrains the Moroccan authorities to adopt very tight security measures against Pashas as well as the Istiqlal party.

The Agadir catastrophe has left many scars and Morocco's ambitions are limited at present. There is no desire to revive the vague authority of the Caliphate against the larger designs of Col. Nasser and Morocco may be keen on keeping US friendship for a period. The survival of French influence may be suspect in some eyes, but Mr Bourghiba's studious response to General de Gaulle's overtures proves that Tunisia, like Morocco, is ready to promote a settlement in Algeria, with honour satisfied on both sides. The FLN cannot hope to drive the French settlers out or break completely. The hopes may be nourished by a new Sultan in Rabat who will find, that even if Mauretania is lost, the old Protectorate is gone and the Moghret is safe for the dynasty. The last Sultan's quarrel with the French will be forgotten for the Fifth Republic has other views on emergent Africa and the spread of Islam may be the overriding aim, so far as the liberated colonies go.

The Moroccan struggle for freedom was a muted one with the Sultan getting soon on top of the tribal chief, encouraged by the local French Army for its own purposes. That may lead to a more generous view of Morocco's defence needs and ore trade. The Germans may try to take a hand in development, though not, one hopes, for the reasons for which William II regarded Morocco; as a sphere suited for German influence.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

The much heralded Economic Times has made its bow and I extend my fraternal greetings to it on the occasion. Journalism is supposed to be a dog-eat-dog kind of calling in which you cannot say a good word about your fellows without hurting yourself. This is all nonsense, of course. In any event, I welcome the Economic Times—and the Financial Express, due in a week's time—for purely professional reasons. Financial weeklies have been holding their baby for too long a period now and would like to hand it over. One of the most harrying decisions that we have had to take all these days is the proper allocation of space and thought for our factual and interpretative functions. The amount of economic "reporting" that has to be done has grown fantastically in recent times. International institutions, national planning bodies, Government agencies, Chambers of Commerce, stock and commodity exchanges have important things to say. (They have unimportant things to say too, but that is not the point I am making now). The piles on my table, some of them, I regret to say, unopened, are a mute reproach to a man, on the whole conscientious. But they deserve to be used by the new dailies for giving the intelligent layman a proper background to evaluate what they and the weeklies have to say. All these days, the weeklies have been doing their not very satisfactory best to do this. Now that the dailies are there, they may legitimately be expected to take on this, their proper, job. The weeklies themselves can now devote themselves with a clear conscience single-mindedly to their proper task—evaluation. Indeed, they can hardly evade it any longer. It is the weekly's function to provide the perspective and the depth, the calm appraisal of the inter-relationship of things. This division of labour has fairly well crystallised in political journalism where the daily papers, with their traditional political orientation, have always provided the kind of coverage that economic dailies are now to provide for economic and financial subjects. It is the realisation of the inadequacy of the commercial page in the daily papers to meet the needs of the times that has supplied the motive force for the new kind of dailies. Of course, it is possible, that like the British dailies, economic dailies may find

it expedient to go in for one reason or the other for "features". In that case, they would be "poaching" to a certain extent on the "magazine preserves." But that, I suppose, is part of the game.

Earl Attlee who is fond of projecting a "persona" or brand image of the "man in the omnibus" for himself, is in reality an uncommon kind of individual. For every hundred persons who know that he is simply crazy about Agatha Christie, there is hardly one who knows that he is so fond of Gibbon that he got through the several volumes of his Decline and Fall in two weeks. Many people, who ought to know better, have underestimated him only to realise too late that he knows his way about a lot better than themselves. Churchill, to whom some nasty cracks about Attlee are attributed was one of them. Surely, it was a stroke of genius to have thought of Lord Mountbatten as the one man who could liquidate the British Empire in India with both competence and charm. Many will recall Earl Attlee's exhilarating television interview entitled "A Prime Minister Remembers" in which, among other things, he sized up Jinnah pretty accurately, much to Pakistan's chagrin. For sometime now, Earl Attlee has been interesting himself in the possibility of a World Government. In his recent Azad Memorial Lectures and subsequent speeches and press conferences in Madras and Calcutta, he has been outlining in some detail the shape of such a Government to which nations will have to surrender a part of their authority. The fact that Earl Attlee is taken up with the notion is, to my mind, prima facie evidence of its practicability. Certainly, the way he put it at the English Speaking Union the other day did make me wonder uneasily whether our habitual cynicism about it was not a little too lazy. We have given up today, he said, private armies: two centuries ago it would have looked a monstrous deprivation of the right of self defence. Sir Robert Peel had a tough time making England get used to the notion of a policeman and yet today, a cop is part of the landscape. If a bobby can separate drunken roughs without seeming to be a busybody, why can't an

international policeman call to order nations that are guilty of disorderly conduct and indecent exposure?

Bernard Shaw had a rather impressive argumentative ploy by which he used to prove how socialist our life has become and how ridiculous it was to strain at a mere word after having swallowed the fact. I think it is true to say that we have reached a stage in our quest towards a World Government which can roughly be equated to municipal socialism in national economics. I did not realise, until I read Oppenheim recently, the extent to which nations have already surrendered their sovereignty in such matters like aviation and postal arrangements. Many of the apparently "harmless" UN bodies like the International Law Commission have been quietly undermining national sovereignty by the simple expedient of gathering together impressive evidence of how in fact it has been surrendered already. Of course, it has been voluntarily done and theoretically, it can be resumed. But it is less easy to do it than you may fancy. Mrs Grundy may yet succeed where Gilbert Murray failed and the sheer necessity of keeping up appearances may make World Government a reality some day, if, that is, there is a world left to govern.

Policy on Capital Issues

IF the usual pre-Budget excitement was not in evidence on 28 February, the debate on the Budget will now be conducted by a House in mourning for Pandit Govind Ballabh Pant, whom Dr F. Subbarayan has described as the best Parliamentarian our country has possessed. The Finance Minister, it is felt, is not likely to be seriously inconvenienced by the criticisms that have been advanced against his tax proposals. An indication of his standpoint was given to members of the Informal Consultative Committee of Parliament for the Ministry of Finance which met on 2 March. The official view appears to be that the increase in indirect tax rates on a number of commodities and imposition of new levies will not make any noticeable addition to the cost of living of the common man. This view has been sought to be reinforced by calculations of the incidence of particular new taxes. There is, however, some slight indication that the effect of the new levy on superior kerosene may be reviewed and adjustments may be made if the Finance Minister is convinced that it will cause hardship to the poor.

But the Budget was not the only topic that figured on the agenda of the Committee. Suggestions made by some members have resulted in eliciting clarification of the Ministry's position on some topics of great interest to the Corporate Sector. For instance, it has been emphasised that all aspects of Government's policy regarding Capital Issues are governed by the main consideration of broadening the base for investment in joint-stock companies. While there is no ban on existing companies branching off into new lines when there is some relation between the two and such proposals are viewed constructively, it is at the same time felt that, where such relation is lacking, the objective of extensive public participation will be better served by the formation of a new company with the public taking up the majority of the holdings. This course will be more advantageous to the Government from the tax angle, and also discourage unhealthy speculative trends which are set in motion when there are rumours of diversification by strong companies.

In urging a review of the policy regarding capital issues, the fol-

lowing suggestions were also made:

- (1) Exemption from Capital Gains Tax of any profits from sale of holdings of old shares provided that the amount so realised is invested in new enterprises within a certain period; and
- (2) Rights Issues should be sanctioned at par or at a reasonable premium.

As regards the first, it was pointed out that, in view of exemptions given in respect of the Capital Gains Tax, the acceptance of the proposal will only benefit shareholders who are well to do and are in need of no such concession. Moreover, it is not considered necessary to provide such exemption on the lines suggested as a measure to encourage investment, as there does not appear to be any shortage of funds for subscribing to capital issues.

As regards Rights Issues, the policy pursued by the Government, it was explained, is attuned to the market. The question of premium arises only if the existing shares are changing hands at, or are worth, substantially above the par value. More than two-thirds of recent Rights Issues have been at par. The Government's approach, it is claimed, involves no financial loss or injustice to the shareholder, but merely aims at reducing windfall profits which add to inflationary pressures.

The deterrent effect of the policy pursued by the Government regarding royalty payments to foreign firms was raised by some members, who stated that with a tax burden of 10 per cent, a five per cent royalty was hardly likely to attract the foreign investor.

Government's policy it is explained, is a flexible one, the quantum of royalty depending on the nature and importance of the product, the availability of similar techniques or processes elsewhere, the possibility of exports of the articles produced and the indigenous content in the product. In a number of cases, Government has approved royalties in excess of 5 per cent which is normally regarded as the ceiling. Taxation of royalties is not peculiar to India. And it is further emphasised that there is no point in allowing royalty payments to go free of tax if they are to be subjected to tax at the full rates in the recipient's country. In assessing the burden of the tax on royalties borne by the foreign firm, account should also be taken of arrangements for double taxation relief. In order to facilitate foreign investment in India, the Govern-

INDUSTRIAL MACHINES

ON

INSTALMENT PAYMENT BASIS

THE NATIONAL SMALL INDUSTRIES CORPORATION offers to entrepreneurs with a capital investment in land, buildings and equipment not exceeding Rs. 5 lakhs, a wide variety of industrial machines and machine tools on liberal terms of hire-purchase for production of capital goods, consumer goods, components required by large units as also for undertaking processing work for them.

Recently Development Loan Fund Credit of \$10 millions has been made available to the Corporation for the import of machines for the purpose. The Corporation is operating three schemes for the utilisation of the credit on the terms as indicated below:—

	Normal Hire Purchase Scheme	Bank Guarantee Scheme	Special Hire Purchase Scheme
Earnest money	20%	20% (For balance the applicant will give Bank guarantee.)	40% (In two instalments; 20% at the time of acceptance of applications and 20% before delivery of machines).
Rate of Interest	6%	6%	6%
Period of Repayment for balance.	13 half-yearly instalments; first instalment after one year of delivery of machines.	4 equal annual instalments.	5 equal annual instalments.

The Corporation renders its entire services for a nominal charge of 5 per cent of the value of machines.

For full details regarding terms and conditions of supply, please write to:

THE NATIONAL SMALL INDUSTRIES CORPORATION LTD.

DA 80/740

ment of India has already concluded agreements with Pakistan, Ceylon, Sweden, Norway, Japan, the Federal Republic of Germany and Denmark for the avoidance of double taxation and negotiations for the conclusion of similar agreements with other foreign countries are on the way. A similar agreement has also been entered into with the USA, but it is subject to ratification by the US Senate. India has also entered into arrangements for double taxation relief (as distinguished from double taxation avoidance) with the Governments of Kenya, Tanganyika, Uganda, Zanzibar, etc. The effect of the arrangements concluded is that either the royalty income will not be taxed in the foreign country or the foreign Government will give credit for the Indian tax not exceeding the tax payable in the foreign country. In the case of the UK, there is no double taxation relief agreement. But the UK Government gives unilateral relief for the Indian tax not exceeding the UK tax paid by

a British Company on royalties received from India.

Apart from royalty as such, a distinction is made in regard to payments attributable to technical assistance or research contribution. This research contribution is worked out on the basis that the Indian Company's payments to the total expenses incurred by the foreign company for carrying on research work as the Indian company's output bears to the total output of the foreign company. Payments for technical services rendered outside the country are free of tax to the extent that the services are performed outside India. As regards technical services rendered in India, the actual expenses incurred by the foreign collaborator in rendering such services in India is deductible in computing the total taxable amount.

Government in the Ministries of Finance and Commerce and Industry has also taken steps to expedite disposal of applications for

The Chartered Bank

A Year of Steady Progress

Record Balance Sheet Total

Mr. V. A. Grantham's Review of Widespread Operations

The 107th Annual General Meeting of The Chartered Bank will be held on March 29 at 38, Bishops Gate, London, E.C.

The following is an extract from the Statement by the Chairman, Mr. V. A. Grantham, which has been circulated with the report and accounts of the year 1960:

THE BANK'S BALANCE SHEET
During the accounting period to which this statement relates the bank has continued to make steady progress and our subsidiary, The Eastern Bank Limited, has contributed to the favourable results which have been achieved by the group. The record figure of £270,390,101 set up in last year's balance sheet has soon been outstripped, for the accounts now placed before you reflect the further expansion of the Bank's business by an increase of £45,813,097, producing a new record total of £316,203,198.

The Consolidated Balance Sheet total of £362,759,636 shows an increase of £45,737,927 over that of last year.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

We have adopted the practice of the leading banks in the City of London by making all allocations to Premises Account, Pensions and other Staff Funds, before arriving at our published profits and last year's figure has been adjusted accordingly.

In the current year our profit of £761,916 is arrived at after deducting £155,000 (1959—£145,000) on account of Pension Fund and Widows' and Orphans' Fund and £250,000 (1959—£250,000) on account of Bank Premises so that in comparison with 1959 the profit shown has been increased by £142,220.

In September last we paid an interim dividend of 8 per cent, less income tax absorbing £245,000 and it is now proposed that out of the balance available a final dividend of 7½ per cent, less income tax, on a capital which has been increased during the year to £5,500,000 be now paid at a net cost of £252,656.

We have transferred £250,000 to Reserve Funds, bringing the total of those Funds up to £5,750,000, and there remains to be carried forward a balance of profit of £506,254, an increase of £14,260 over that for last year.

THE IRANO BRITISH BANK

For our associate in Iran the year under review has been a period of

consolidation rather than expansion, but the proposed branch at Ahwaz, to which I referred in my last address, is now functioning successfully and a small sub-office, for the convenience of private customers, has been opened in the northern part of Tehran. Trading conditions during most of the year were difficult and the general tightness of money in the bazaar was reflected in a shortage of working funds available. However, the accounts at the end of the Iranian half-year disclosed an all round increase in business and the trading result was not unsatisfactory.

A report on Iran is included in the Oversea Survey.

OVERSEA SURVEY

During 1960 international trade continued on a substantial scale. A rising standard of living in the world, an ever-increasing population and increased industrial development everywhere, would appear to point to continued trade expansion, but certain signs are appearing which indicate a possible halt in this trend and perhaps the most important immediate factor is the likelihood that business turnover in the United States may not increase as quickly as anticipated. Unless conditions in the American market improve in the coming year and stimulate demand for industrial raw materials, the export earnings of the primary producing Asian countries, in which the Chartered Bank group is established, must be adversely affected. Another deterrent to the growth of international trade is the chronic shortage of foreign exchange in many countries, particularly in the East, which, with a desire to protect new manufacturing industries, has led to the imposition of far-reaching import restrictions. Often these restrictive measures are imposed by force of circumstances but one cannot view with equanimity efforts to protect local manufacturing units which have little hope of ever becoming economic propositions able to compete on equal terms in international markets.

In fact, for some years it has seemed likely that the emphasis placed on industrialisation by the younger countries in particular, and often at the expense of agriculture on which their economies depend, designed primarily to have the effect of reducing imports, may in these coming days of balanced trade, make it increas-

ingly difficult for them to find buyers for their own export products.

It is within this involved situation that our government, like that of the United States and many other highly-industrialised countries, is now launching an export drive but we find that the growing awareness in this country of the necessity to export is not, so far, being translated into efforts to find new markets. It is a common complaint by officials and businessmen in a number of Eastern countries that the United Kingdom shows little interest in their markets, which they point out is in marked contrast to the attitude of the Germans, the Japanese and others. There is undoubtedly some truth in what is said for it often seems that either our good and usual exporters have already sufficient buyers for their products, and cannot devote the time to smaller and less known markets, or there is an instinctive feeling that too much risk is involved. Sometimes there is risk but usually, with competitive prices and a willing buyer, means can be found to arrange shipments on a satisfactory basis and by its advice on this, and with the knowledge of markets gained from one hundred and ninety branches in twenty-six countries, it is felt that the Chartered Bank group should be able to do much to aid materially the efforts of our exporters.

CYPRUS

Economic prospects are perhaps more promising than might appear from the substantial trade deficit, for the Republic's export earnings, equivalent to less than half the total imports, are substantially supplemented by British government expenditure on its armed services based on the island.

The new government has wisely refrained from introducing any extreme measures to meet the economic situation with which it was confronted and is evidently hoping for a return of confidence which will be reflected in a general improvement in business.

LEBANON

Trade continued to improve and customs receipts suggest that there is a gradual return to the volume handled before the 1958 disturbances. Modest industrial expansion, building activity and interest in the tourist trade continued

throughout the year but Beirut in particular needs a greatly improved road system and indications are that because of the municipalities' low budget the country, like many other Middle East states, is looking towards Kuwait for a long-term loan for this purpose.

IRAQ

The return towards normal trading conditions continued throughout 1960. Increased royalties from oil brought I.D. 95 millions to the government against I.D. 86.5 millions in 1959, but unfortunately this was to a great extent offset by another poor harvest, the third such in succession. Notwithstanding this setback, which meant very small exports of barley, and wheat having to be imported, the government adopted a more liberal import policy. This led to some diminution of foreign assets but, with buoyant oil revenues and the promise of good grain and date harvests, there should be no foreign exchange difficulties and the long-term economic outlook is favourable.

THE GULF

No general economic changes took place in this area during 1960. Last year I mentioned reports that the government of Kuwait was contemplating the issue of a separate Kuwaiti currency. The necessary decree was passed in October last and appointments to the new Currency Board have been made.

It is understood that the Kuwaiti dinar, equivalent to the pound sterling, will not be brought into circulation until April or May at the earliest. The effects of this change on the area as a whole will be watched with interest.

Bahrain. The year 1960 was uneventful, with trade on the whole rather dull owing to past overstocking. Local oil production during 1960 was steady at about the 1959 level, but with an increase in crude imports, refining throughout rose by ten per cent.

Doha. The year 1960 was calm and uneventful, but business was dull throughout the year, merchants generally being overstocked and short of funds.

Oil exports were at about the same level as in 1959 and marine drilling made good progress. **Sharjah.** There was little change in business conditions during the year. Oil prospecting continues at Tarif.

HADHRAUT

Mukalla. Business showed some slight improvement, as more merchants are now trading direct with foreign countries instead of doing their business through Aden. Oil has not, however, been found in the Northern desert, and exploration there has ceased on the breakdown of the negotiations for the renewal of the concession.

ADEN

Since last August, when new legislation came into force withdrawing the right to strike and setting up an industrial court for the settlement of trade disputes, there have been no strikes. This was in sharp contrast to the earlier months of the year when a serious strike in the oil refinery resulted in a setback in the Colony's trade. Fortunately figures for the second half show a marked improvement, particularly in connection with oil.

Generally there is a feeling of prosperity in the Colony, but this to a substantial extent stems from the expenditure by the armed forces and from a high level of activity in the building industry; favourable factors which will not necessarily continue indefinitely.

IRAN

On the economic side the country is passing through a difficult period. Excessive imports over the last three years have caused balance of payment difficulties, with a consequent running down of foreign exchange reserves. For a short period in the summer authorised dealers were forced temporarily to suspend remittances in payment of imports as they were unable to obtain sufficient foreign exchange cover from the authorities. Throughout the year, however, government have been progressively tightening their control with a view to stabilising both the external financial position and the internal economy. Very high import taxes on non-essentials were imposed in September; strict regulations have been laid down prohibiting borrowings by government departments and municipalities during the next three years; and the Bank Melli have very severely curtailed their advances to the private sector. The resultant credit squeeze is already very apparent in the Tehran bazaar but its effect in the long run will, it is hoped, be beneficial.

INDIA

India is now on the threshold of the third five-year plan, which starts in April. It is no exaggeration to say that the critical phase has been reached in the enormous task of raising within the constitutional framework of parliamentary democracy the living standards of a population now estimated to number approximately four-hundred and thirty millions. It is generally agreed that the first and second five-year plans have successfully laid the foundations necessary for further economic

advance, and the various criticisms so often voiced of this or that aspect of Indian planning policy must not be allowed to obscure the magnitude of what has already been achieved.

The success of the third five-year plan can only be relative to India's ability to raise the necessary foreign exchange for the point has now been reached where future development is dependent upon external credits and aid funds. So far, official visits abroad have resulted in pledges covering approximately one-quarter of the external cost of the projects in the plan, but no doubt considerably larger grants will be forthcoming as it seems clear that the governments of the West will have to help India for many years to come. India can itself contribute to the success of its ambitious plan by increasing exports but can save little on imports which are now no more than sufficient to keep industry going. In time the manufacturing industries developed under previous plans can be expected to make a useful contribution to export earnings providing costs can be kept down, but for some time to come reliance for help in this direction will have to be placed on the traditional exports, tea and jute.

PAKISTAN

Sound leadership, political stability and a pragmatic approach to its problems made 1960 a good year for Pakistan.

The authorities have shown a welcome flexibility in meeting current economic problems. Foreign aid is still required but generally the situation is favourable. Agricultural production has increased partly due to weather conditions favouring crop production, but for some years to come the country's export earnings will continue to depend on raw jute and, to a lesser extent, cotton. An improvement in the level of exchange reserves has enabled the government to liberalise imports in furtherance of its policy of reducing the price of consumer goods and of providing raw materials sufficient to keep industry operating on the basis of a one shift capacity.

In the long run the future living standards of the population are going to depend very much on the success or otherwise of the second five-year plan, which came into effect last July. Laying the emphasis as it does on agricultural development, the plan is a realistic effort to meet present needs in the light of the domestic financial resources available and of the foreign aid that is likely to be forthcoming.

CEYLON

Foreign exchange reserves which have shown a downward trend for four years, are reaching the point where there is no longer any surplus available for financing the development programme although a more encouraging feature has

been the reduction in the trade deficit shown by the latest available figures. A marked improvement in the production and shipment of tea, which is still the country's principal exchange earner, and an increase in the volume and value of rubber shipments have enabled exports to cover increased imports: not so encouraging is the fact that the increase in imports is largely accounted for by consumer goods at perhaps the expense of capital goods required for the expansion of production. Labour last year was less unruly although it is possible that the elections have merely had the effect of postponing union demands. With freedom from strikes the situation in the port of Colombo was a good deal better but the freight surcharges, although reduced, have not yet been completely removed and shipping operators consider there is room for further general improvement in conditions.

BURMA

U Nu took office again as Prime Minister after elections held in February, in which his party gained an over-whelming majority. The outgoing caretaker government headed by Ne Win, had brought about many improvements in conditions in Burma, an outstanding feature being the success achieved in curbing terrorist activities in up-country areas.

The country still depends on rice for seventy per cent. of its export earnings, and although production is gradually coming back to pre-war level, the area under paddy is still two million acres less than in earlier years. Fortunately, however, oversea demand seems as strong as ever and it is reported that the 1961 rice crop has practically all been sold, with buyers including China, India, Pakistan and Indonesia. Before the war there were various products, apart from rice, which made significant contributions to Burma's export earnings but so far progress in restoring output of these has been disappointingly slow.

Despite good export figures in 1960, increased imports, particularly in textiles, resulted in a reduction in the exchange reserves, which nevertheless still remain at a comfortable level.

SINGAPORE

The fundamental economic problem in Singapore is to provide adequate employment opportunities for a rapidly increasing population, approximately half of which is under the age of twenty-one. To meet at all successfully the coming demand it is essential that the entrepot trade, long the mainstay of the economy, be maintained.

The other important factor for the provision of employment will be the measure of progress made in Singapore's own industrial development, and in this connection it is promising that the government has been strong enough to

come to grips with what have hitherto been major obstacles to progress, that is irresponsible trade union activities and bad labour relations generally. The Economic Development Board, whose proposed formation I mentioned last year, may soon be in action. It is not so much an abundance of planning that is required at this stage, however, but rather determined action to build and run the manufacturing units which are to produce the good quality goods for home consumption and for abroad.

I do not think that anyone would deny that the record of the present government in Singapore over nearly two years of office is of a high order and has shown a realistic approach to a situation, political and economic, which at times must have been far from easy to handle.

FEDERATION OF MALAYA

In most respects fortune favoured the Federation during 1960. The official ending of the emergency in July after twelve years, an increased trade surplus and the first overall budgetary surplus since 1956 were all notable features in an exceptional year.

The ending of the emergency has enabled the Finance Minister to halve, in his 1961 budget, the estimate for expenditure on internal security, a fortunate saving which can now appropriately assist in financing the increasing government expenditure required for the second five-year plan. There has been considerable progress in industrial development and a wide range of industries and products are benefiting under the Pioneer Industries (Relief from Income Tax) Ordinance. The whole of the area of Petaling Jaya set aside for industry has been taken up and new industrial zones are planned in Johore, Ipoh and Butterworth. Progress in these areas will depend a great deal on adequate electrical power, largely from the Cameron Highlands hydro-electric scheme, which is ahead of schedule and is expected to cost less than originally estimated.

In spite of the fall of rubber prices the Federation enters 1961 with favourable prospects, but in the long term the country's future depends very much on steady expansion of production to the extent necessary to maintain already good living standards for a population whose rate of natural increase is one of the highest in the world.

NORTH BORNEO

Indications are that when final figures are available North Borneo's trade turnover in 1960 will have exceeded \$400 millions: a considerable increase over 1959 figures which were themselves a record. Timber was again the Colony's most valuable export and also the largest source of government revenue. Substantial revenue was also received from the rubber industry and although shipments were down

world prices were good and valuable exchange was earned.

BRUNEI

Because of falling production and the lower level of prices in international markets, the state's income from oil has been reduced, but oil reserves are estimated to be adequate for about another twenty years. The present position, therefore, is more than comfortable, but in the long run a planned programme will be necessary to develop a more broadly based economy and so lessen the present almost complete dependence on the oil industry.

SARAWAK

Rubber continues to provide more than half Sarawak's export earnings and the increased shipments in 1960, with continued favourable world prices, ensured good overseas figures for the second year in succession. The other substantial contribution was from timber exports which have more than doubled in value since 1958. With exports well above normal government revenue from commodity duties reached a record figure last year and this allowed the appropriation of a further \$25 millions for development purposes. As a result government has been able to approve increases in the 1959/63 programme.

INDONESIA

An analysis of the country's external position suggests that exports should continue to balance essential imports and that foreign aid from a number of sources should care for industrial development. In 1960 final figures will probably show exports to be slightly down on 1959, mainly due to a reduction in earnings from petroleum and to disappointing rubber shipments at a time when good world prices were obtainable.

The Indonesian authorities are keenly interested in expanding existing and developing new international markets for the country's staple exports, and realise that an improved monetary situation at home will help to make their products more competitive abroad. Steps are, therefore, being taken to curb government spending in excess of budgetary revenue. The halting of inflation which has done so much harm to the Republic's economy, may be possible in the coming year and, if sustained, would have a decisive effect in promoting the economic recovery of, potentially, the richest country in South East Asia.

THAILAND

The energetic endeavours of Field-Marshal Sarit's administration not only improved conditions generally within the country, but thereby assisted in the record exports, which allowed the retention of that rarity a free economy with unrestricted imports. The export figures owe much to good world prices for rubber and earnings from this commodity are now greater than from rice. The ton-

nage of rice shipped last year was higher than in 1959 but world prices were lower and finding oversea buyers is becoming increasingly difficult and Thailand is taking steps to get rid of future exportable surpluses by improving the quality of its rice.

In common with neighbouring countries Thailand is anxious to encourage industrial development and the country's first development plan, covering a period of six years and based on recommendations by an International Bank of Reconstruction and Development team, is to begin in October 1961. Already approval for the establishment of a number of light industries has been given. There is, however, an acute shortage of local capital with consequent high interest rates, which prevents any enterprise of size being set up without either government support of foreign investment.

VIETNAM

Subversive activities tended to increase during the year, but efforts to undermine the present regime are likely to be unsuccessful unless there is a general feeling that austerity and controls are bearing too heavily on the people. It would be tragic if the encouraging progress made in recent years in restoring the national economy were to be jeopardised by political instability.

An indication of the extent of this progress is the reduction in American aid for whereas a few years ago export earnings represented only about twenty per cent. of the import bill, in 1960 they represented about thirty-eight per cent. and, with present progress, there is no reason why a year from now the figure should not be fifty per cent. This improvement in the trade situation has been brought about by the continued good exports of rubber and by a very marked increase in the exports of rice which, at 350,000 tons, makes the best year since the war and is in marked contrast to 1956, when there were no exports at all.

CAMBODIA

Pursuing its policy of strict neutrality between the major international power blocks, Cambodia continues to receive aid from any source provided it is free from political conditions.

The country's major sources of export earnings are still rubber and rice and, to a lesser extent, maize. With favourable prices in international markets, rubber shipments have increased significantly in value and the latest figures available show that the overall value of exports has been running at a higher level than in 1959. On the other hand, imports have increased to an even greater extent, particularly from France and from countries such as Japan and the Soviet bloc with which Cambodia has bi-lateral trading agreements. Foreign aid has more than covered

the trade deficit. However, and the country's exchange reserves increased over the year.

THE PHILIPPINES

By April continuing improvement in the economic situation in the Philippines allowed the monetary authorities to embark on the first phase of a decontrol programme. In September, with the international reserves once more at U.S. \$200 millions, the second phase of decontrol was introduced, bringing the free market rate to three pesos to one United States dollar, widening its application and reducing the exchange margin to twenty per cent. This exchange tax, which transferred Pesos 273 millions in the year to official funds, is undoubtedly being retained as part of the government's policy of endeavouring to control inflation. The introduction of a better, flexible tax for this purpose is no doubt difficult, but the present exchange tax unduly intensifies the effects on the banks and the business community of the government's already drastic tight money policy.

Although a favourable showing in exports, particularly sugar shipments to the U.S.A., assisted by a quota readjustment in respect of Cuba, helped to build up the international reserves, there is a growing realisation that a greater diversification of international trade is necessary. Determined efforts were made to attract foreign investment and many official pronouncements were directed to allay the fears of established and intending foreign investors.

HONG KONG

The dominant impression the visitor receives of Hong Kong is still of a bustling, thriving community, crowding through the streets with an object in life and this impression would correctly reflect the vitality and the intensive application to the task in hand of a people that once again have given the Colony a prosperous year with increased exports and trade turnover. An indication of the remarkable industrial progress of recent years is that locally manufactured products now account for over seventy per cent. of export earnings and the range of local manufactures is steadily widening and finding expanding markets abroad. There are weaknesses in the economy and the tendency of some of the new under-capitalised and ill-equipped manufacturers to lower standards of shipments may affect Hong Kong's good name in oversea markets and have serious repercussions. An example of this was to be seen in the garment industry which, after meteoric expansion, faced claims and large cancellations of orders in the middle of the year. The textile industry generally has, however, been outstanding in increasing its productive capacity and textile exports as a whole showed an appreciable rise during the year.

CHINA

Recent official announcements confirm that food crops in China, for the second year in succession, have suffered extensive damage from floods and drought. The effect of these national disasters was probably the main reason for the shift of official emphasis from industrial to agricultural development. The necessity of supplementing food supplies by grain imports will impose additional strain on the country's foreign exchange reserves and thereby reduce the hoped for expansion of trade between China and countries outside the Soviet bloc. The United Kingdom's share of this increased fifty per cent. during 1960 but is still only two per cent. of China's total trade. Our Shanghai office continues to work smoothly.

JAPAN

The impressive development of the Japanese economy in recent years has raised the general standard of living to an extent which was unknown in even the best of pre-war years. Once again a record rice harvest has made the country virtually self-sufficient in this staple foodstuff, an achievement of vital importance in view of the rapidly expanding population which has now reached ninety-three millions, and particularly meritorious in view of the scarcity of good agricultural land. Exports for the year rose to a record level, the most notable aspect of which was the doubling of shipments to the United States.

The success of Japan's trade and industry in expanding exports has not led the authorities to minimise the stiffening competition in international markets. The remarkable effort which has been made in opening up new markets for Japanese goods all over the world still continues with undiminished vigour, while connections are also being developed with areas such as the Persian Gulf and South America, which can provide the oil and iron ore required in increasing quantities by Japanese industry.

NEW YORK

In many respects last year proved disappointing for trade and industry in the United States because the boom, which had been so confidently predicted failed to materialise. Nevertheless, there was a strong demand for American goods in foreign markets and now that the government has announced a renewed export drive, American competition in the international field is likely to increase, particularly as industry is not at present working at full capacity.

Last October the bank's agency in New York moved to new and more advantageously situated ground-floor premises in the heart of the financial district.

HAMBURG

German exports and imports have continued to expand. There is little, if any, unemployment and with wage levels and personal incomes rising and industrial expansion continuing at a rapid pace, the authorities have been at pains to check incipient inflation. Unfortunately, the orthodox expedient in such circumstances of raising interest rates caused an influx of foreign funds, which reinforced the trade surplus to the extent that the country's accumulation of foreign exchange has become a major international problem.

The increased business handled by our Hamburg agency necessitated a move last December to more modern and convenient premises.

CONCLUSION

This review emphasises the extent to which most of the countries of the East are dependent upon foreign aid and investment for the success of their development plans. It indicates, too, the tendency of these countries to hem themselves in with trade and other restrictions but what it does not show is the repercussion of these policies on the ordinary trading activities of foreign business. The Chartered Bank, which has operated in many of these countries for nearly one hundred years and has always identified itself with the local economy, is prepared, as I am sure other British enterprises are, to co-operate with the authorities and assist in their national aspirations and it is all the more disappointing, therefore, to find increasing discrimination against our participation in trade and commerce. On the sanctity of existing capital and the treatment of existing commercial undertakings must largely depend the advent of new capital, for new capital can be expected mainly from those who know the territory and have confidence in it, i.e., existing investors and traders. To add to the difficulties encountered through governmental action is the excessive competition arising from the over-banking of many cities in the area. In not all places is this as chronic as in Hong Kong, where there are now over eighty banks, but the general tendency of international banks to open branches in our territory and of small local banks to spring up overnight, often with the encouragement of large banking interests in this country, means a regrettable lowering of banking standards. This trend must finally be to the disadvantage of the country concerned for, not only is encouragement given to the under-capitalised and often inefficient to set up industries, usually to become poor shippers and bring the country a bad name in overseas markets, but the general lowering of commercial standards may unfortunately mean losses on the part of the public.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

ANNOUNCEMENT:

The Annual General Meeting of the Members of the Company will be held on Wednesday the 22nd March 1961 at 2.30 P.M. at the Registered Office, 34 Chowringhee, Calcutta, 16.

Notice of the Meeting together with the Annual Report and Accounts have already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 18th March 1961 to 22nd March 1961 both days inclusive.

By Order of the Board
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED
Secretaries.

1st. March, 1961.

JARDINE HENDERSON, LIMITED

NOTICE IS hereby given that a general meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1 on Thursday the thirtieth day of March 1961, at 11 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following Resolutions:

1 (As a Special Resolution). "That subject to the sanction by special resolutions passed at separate meetings of the holders of the issued Preference Shares of the Company and of the holders of the issued Ordinary Shares of the Company respectively being obtained within three months from the date of passing of this resolution, Article 4 of the Articles of Association of the Company be deleted and the following Article 4 be substituted in place thereof:—

"The Capital of the Company is Rs. 3,50,00,000 divided into 3,00,000 Ordinary Shares of Rs. 100 each and 50,000 Preference Shares of Rs. 100 each, and the said Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 5 per cent per annum without deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under Section 18 (3D) of the Indian Income-tax Act, 1922, or any statutory modification thereof, on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of dividend, whether declared or not up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any further

right to participate in profits or assets, nor confer any voting rights."

2 (As an Ordinary Resolution). "That for the purpose of giving effect to the modification of rights in the manner specified in the foregoing special resolution an Agreement be entered into between the Company of the first part, Mr Girdharilal Mehta representing the holders of Preference Shares of the Company of the second part and Mr Chhedi Lal Gupta representing the holders of Ordinary Shares of the Company of the third part in terms of the draft placed before and approved by this meeting and for purposes of identification signed by the Chairman thereof and that the Board is hereby authorised to affix the Common Seal of the Company to the Agreement and that such Agreement be executed on behalf of the Company in the manner provided in the Articles of Association of the Company."

3 (As an Ordinary Resolution). "That the Board is hereby authorised to take the necessary steps to obtain sanction to the Agreement and to the modification of rights envisaged therein at separate meetings already convened of the holders of the issued Preference Shares and the holders of the issued Ordinary Shares of the Company respectively to pass the necessary special resolutions thereat."

4 As an Ordinary Resolution of which special notice as required by section 281 of the Companies Act, 1956, has been received by the Company, viz:—

"That pursuant to the provisions of section 281 of the Companies Act, 1956, the Hon. Sushil Kumar Sinha who has attained the age of sixty-five years in June 1960 and who in accordance with the provisions of section 280 of the said Act (prior to its amendment) vacated his office as a Director of the Company on 22nd December 1960, be and is hereby appointed a Director of the Company and it is hereby specifically declared that the age limit for directors prescribed by section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600 for each Meeting of the Board attended subject to a maximum in the aggregate of Rs. 6,000 per annum."

5 (As Special Resolutions)—

(a) "That with effect from the commencement of the Companies (Amendment) Act, 1960, and in compliance with the provisions of section 314 of the Companies Act, 1956, as amended thereby consent be and is hereby accorded to Mr Sree Lal Mehta, a relative of Mr Girdharilal Mehta, a Direc-

tor and a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant in the Company carrying a total monthly remuneration of five hundred rupees or more viz:—

Basic Salary in the time scale: Rs. 350—25—500—50—1,000, per month (with annual increments.)
Basic Allowance—Rs. 200 p.m.

Dearness Allowance—65% of the aggregate of Basic Salary and Basic Allowance.

Provident Fund—up to 15% of Basic Salary, the Company making a similar contribution limited to 10% of Basic Salary."

(b) "That with effect from the commencement of the Companies (Amendment) Act, 1960, and in compliance with the provisions of section 314 of the Companies Act, 1956, as amended thereby consent be and is hereby accorded to Mr Surendralal Girdharilal Mehta, a relative of Mr Girdharilal Mehta, a Director and a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant in the Company carrying a total monthly remuneration of five hundred rupees or more viz:—

Basic Salary in the time scale: Rs. 225—25—500—50—1,000 per month (with annual increments.)

Basic Allowance—Rs. 200 p.m.

Dearness Allowance—40% of the aggregate of Basic Salary and Basic Allowance.

(in the event of his marriage he would be entitled to receive 60% of the aggregate of Basic Salary and Basic Allowance up to and including Basic Salary of Rs. 250 p.m. and thereafter at 65% of the aggregate of Basic Salary and Basic Allowance.

Provident Fund—up to 15% of Basic Salary, the Company making a similar contribution limited to 10% of Basic Salary."

6 (As Ordinary Resolutions)—

(a) "That pursuant to the provisions of section 294 of the Companies Act, 1956, the appointment of Messrs R. Donaldson & Co., in terms of an agreement executed by the Board on 18th October 1960 as the Company's sole selling agent for jute goods in Australia be and is hereby approved."

(b) "That pursuant to the provisions of section 294 of the

Companies Act, 1956, the appointment of Gollin and Company Limited, in terms of an agreement executed by the Board on 9th February 1961 as the Company's sole selling agent for jute goods in New Zealand be and is hereby approved."

(c) "That pursuant to the provisions of section 294 of the Companies Act, 1956, the appointment of Aldo Luzzati S.R.L., Ltda., 25, De Mayo 294 Buenos Aires 3, in terms of an agreement executed by the Board on 23rd February 1961 as the Company's sole selling agent for jute goods in Argentina, Uruguay and Paraguay be and is hereby approved."

Notice is also given that the Share Transfer Books of the Company will be closed from the 27th March to the 30th March 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

Of the four offices expected to be opened during 1980, two were established for the first time in South India at Hyderabad, the capital of Andhra Pradesh and at Bangalore, the capital of Mysore State, on the 18th and 19th October, 1980, under the charge of Sarvashri Jagat Narain Sharma and Ram Saran Das Narang respectively, two of the Bank's most able and experienced officers. The opening of another office has been postponed owing to building delays and the other project was abandoned for reasons outwith the Bank's control. Negotiations are in progress for the opening of further offices.

The continued improvement in working results has been due mainly to a higher level of advances, although increasing overheads have again narrowed the profit margin. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

Under Article 115, Maharajahdiraja Bahadur Sir Uday Chand Mahtab, K.C.I.E., B.A., of Burdwan, retires from office by rotation but is eligible for re-election. Sir Iqbal Ahmad also retires from office by rotation but is not offering himself for re-election.

Mr. I. G. Thomson and Mr. G. D. Longhurst were appointed Directors to fill the vacancies caused by the resignations of Mr. W. F. MacDonald and Mr. J. W. Anson.

Mr. W. W. Smith was appointed a Director to fill the vacancy caused by the resignation of Mr. M. J. MacLaren, consequent on his departure to the United Kingdom on furlough. On return from furlough Mr. M. J. MacLaren was re-appointed to fill the vacancy caused by the resignation of Mr. W. Smith. Auditors will have to be appointed for the year ending 31st December 1961.

1961.

By order of the Board,
I. G. Thomson,
Chairman.

M. J. MacLaren,
General Manager.

CALCUTTA,
The 24th February, 1961.

feature. Following rates (per kilo) were quoted:—Clean Blak Pekoe Rs 5.20 to Rs 5.50; Plain EP Rs 4.60 to Rs 4.70; Plain Fannings Rs 4.60 to Rs 4.80; Medium BP Rs 4.70 to Rs 4.90; Medium Fannings Rs 4.80 to Rs 5.10; Best Assam CTC BP Rs 5.90 to Rs 6.30 and Best Assam CTC Fannings Rs 5.90 to Rs 6.40.

In a communication addressed to the Union Finance Minister on Monday, the Committee of the Tea Association of India has expressed its appreciation of the cut in the export duty on tea. The Committee has, however, expressed its deep concern over the heavy increase in the excise duty on loose tea. It has pointed out that the excise duty on export of loose tea being non-refundable, the present increase will not only counteract the relief proposed for export of teas; but also increase the prices of teas sold for consumption within the country. Thus, the proposed measure, the Committee has stated, can in no way improve the overall position of the Indian tea industry and may hamper tea exports.

The Committee has stated that India's common teas are generally consumed within the country and as such teas produced in Zones IIIA and IIIB are exported. While the export duty has been reduced by 9 nP. per Kilogram, the excise duty on such teas has been raised by 7 and 8 nP. per kilogram respectively which, according to the Committee of the Association, shows that there has actually been no relief for the teas exported. The net result is that the increase in excise duty for Zones I and II would raise the internal price of teas and as regards teas in Zones IIIA and IIIB, their competitive position in the world markets would remain unimproved. The Committee has, therefore, suggested to the Government to reduce the excise duty in respect of teas for internal consumption and to make refundable the excise duty paid on teas exported.

In the Internal Sale, offerings consisted of 23,149 packages of Dusts and 2,351 packages of Leaf grades. There was a good general demand for Dusts at lower rates. Orthodox descriptions came to an easier market and declined by 10 nP. per kilo and sometimes up to 20nP. except for the smaller types, which found better support. Legg-cut types declined in value by up to 20nP. and, towards the close, there were some withdrawals.

Medium CTC teas with clean leaf appearance were sold at irregular rates; but the fibrous lines registered a further drop and proved rather difficult of sale. Good CTCs were a strong feature with buyers following quality closely and a few selected lines realised much dearer rates. Following rates were quoted:—Plain Orthodox Dust Rs 4.60 to Rs 4.80; Medium Assam Dust Rs 4.70 to Rs 5.10; Legg-cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs

5.50 to Rs 5.90 and Good Assam CTC Dust Rs 6.20 to Rs 6.60. There was a good general demand for Leaf grades, which were sold at generally dearer rates.

In the Colombo market, offerings were 7,247,969 pounds. There was a strong general demand. High-grown broken teas from western districts were irregularly dearer where quality was improved. Uva varieties advanced by about 5 cents per pound. Medium broken teas were slightly easier at the opening; but prices firmed up as the sale progressed. Low-grown broken teas were in good demand at about last week's rates.

In the Cochin market, offerings were 218,000 kgs of tea dusts. Against a fair demand, the prices were 20 nP. to 30 nP. per kilo easier for all descriptions.

COTTON Sluggish Trend in Futures

The initial firmness in the cotton futures market proved short-lived and suffered a sharp drop on heavy long liquidation and bear pressures. The main provocation for the easy trend in the market was provided by the additional taxation on cotton textiles by way of excise duty on cotton yarn, increase in duty on 'A' grey medium cloth and processed goods, fresh excise on dyes and chemicals and extra levy on production of automatic looms. Jarilla August Contract has declined to Rs 566 from Rs 582 per three quintals. The new contract (ICI August) also shed Rs 19 from Rs 591 of the previous week. The spread between Jarilla April Contract and ICI August contract widened by Rs 5 to Rs 17 per three quintals on account of the tendency among the operators to switch over from the old contract to the new contract.

The spot market at Sewri also fell in sympathy and shed Rs 10 per candy. Despite the fact that the prices of export varieties were brought down by Rs 15 per candy, those styles did not attract the attention of buyers. Mills also evinced their reluctance to lend fresh support owing to the panicky conditions in the market following the Finance Minister's decision to impose additional levy on cotton yarn. Majority of the mills doubt whether they will be able to pass on the additional burden to consumers by enhancing the prices on cloth. They are, therefore, disinclined to increase their stocks of cotton unless and until the exact implications of the new impositions are made available.

The Chairman of the Indian Cotton Mill's Federation has stated that the new taxation policy will increase cost of production by about three to four per cent. Reports emanating from the capital indicate that the whole burden will fall upon the textile industry and the authorities are opposed to the idea of revising the price list.

The new crop is arriving in the market at an increased rate. Ac-

cording to present calculations nearly sixty-five per cent of the season's output has been marketed so far. Mills have already purchased 2.7 million bales of indigenous cotton out of a total quota of 3.9 million bales allotted to them. Authorities seem to be emphatic on their insistence that mills should cover all their allotments before applying for fresh quotas.

The Indian Central Cotton Committee which met in Bombay recently has decided to recommend to the Planning Commission a cotton production target of 7.2 million bales per year by the end of the next Five Year Plan.

The Government of India has decided to stop with immediate effect issuing licences to the trade and/or mills on the first come first served basis announced in December last for import of raw cotton against the export of manganese ore under the barter agreement between the four bartering firms in the USA and the State Trading Corporation of India. The Commodity Credit Corporation Washington has amended all the four barter contracts and has permitted the import of cotton stapling 1-1/16 inches and above. The press note issued by the Government of India in this connection states that licences to import such cotton will be issued with immediate effect only to mills on the basis of the quota letters by the Textile Commissioner. Mills applying for licences to import cotton of 1-3/16 inches and above will be required to pay a premium at the rate of Rs 160 per bale of 400 lbs. to the State Trading Corporation. In either case the mills will submit bids to the Commodity Credit Corporation for quantities within the staple and specified in the import licence.

Total consumption of cotton by the Indian mills from 1 September to 30 November aggregated 1,276,587 bales as against the 1,294,275 bales of the corresponding period in 1959. The following table will furnish a detailed account.

Description.	(In bales of 177,808 kgs.)	
	1960.	1959.

Trading in the Bombay piecegoods market depicted a sluggish trend during the period under review especially after the announcement of excise duties on finer medium grey cloth, processed cloth, yarn and dyes. It was rumoured that the mill prices of higher medium cloth would increase by at least Rs 50 per bale and of other styles by at least Rs 30 to Rs 40 per bale due to the new imposts. It will, however, be incorrect to mention that the announcement of new taxes was solely responsible for the indolent tone, for even before the announcement the market had developed signs of inactivity due to the abatement in consumer demand.

Indian Finance

The upcountry demand fell down to a low ebb during the fortnight before Holi. Prices, however, were well maintained on account of the short supply of goods. Quality goods commanded a fair premium on ex-mill prices while a repression in the premia was noticeable in other varieties. Punjab, Delhi, Kanpur and MP figured as the main consuming centres. Though last week's transactions were confined to immediate requirements, coarse, medium and some superior styles met with fairly good request.

The disparity in prices presumably have thrown cold water in the activities on the export front. Stray business was done with the UK in grey cloth. Sudan accounted for a small quantity of usual goods. Business on a limited scale was done with East Africa in coating, gadlapat and grey. A few enquiries from Ethiopia in grey sheetings were reported. All other destinations remained inactive.

Reaction to Budget Proposals YARN

THE proposed increase in the excise duty on Rayon Yarn and Staple-Fibre Yarn has imparted a bullish tone to the yarn market in Bombay. The Union Finance Minister has raised the excise duty by Rs 1.20 to Rs 3.00 per kilo on deniers below 75; by 90 nP. to Rs 2.20 per kilo on deniers between 75 and 100 and by 60 nP. to Rs 1.50 per kilo on deniers above 100. As a result, the April contract in staple fibre yarn shot up, after the announcement of the proposals, from Rs 832 to Rs 848 and the April contract in Bamberg yarn from Rs 2,800 to Rs 2,825 on hectic speculative support. Although the prices reacted later to Rs 832 and Rs 2,810 respectively on profit-taking, the undertone was considered to be bullish in view of the acute shortage of indigenous as well as foreign rayon yarn. Most trades are of the view that the countervailing import duty on rayon yarn and staple fibre will also go up simultaneously.

The trade and the industry have received the measure with a feeling of disappointment in view of the heavy existing burden of excise duties on both yarn and fabrics. Most observers feel that the industry will be unable to pass on the latest increase in its burdens to consumers in the context of the prevailing market conditions. Moreover, there is some confusion over the countervailing import duties, which are also simultaneously raised. The market authorities have asked for official clarification on this point.

Though the excise duty on Cotton yarn has been raised, it is not certain whether spinners will be permitted to raise their prices of yarn. At first, it was taken for granted that the duty on yarn would be levied only in

11 March 1961

respect of sales mainly to power-looms and hosiery units. The low yield from the duty was also taken to mean that only direct sales of yarn of counts over 40s would be taxed.

It is now stated, however, that the duty on yarn will have to be paid also by mills consuming their own yarn. Sales of mills in the Coimbatore area are reported to have been suspended, pending clarification. Stocks are also reported to be accumulating without the prices being stamped. The Indian Cotton Mills Federation has urged that the yarn duty and the one on automatic looms should be withdrawn.

CHEMICALS & DYES

Confusion prevails in the Bombay market for Chemicals and Dyes. The new imposts on certain items of chemicals and coal tar dyes, proposed in the Union Budget, have come as a surprise to the trade. The proposed duty on Soda Ash is Rs 2; on Caustic Soda Rs 4 and on Glycerine Rs 17, all per quintal. These duties, it is felt, are likely to increase their prices in the internal market. It is expected that the burden will be passed on by the manufacturers to the consumers.

The ad valorem duty of 15 per cent on coal tar dyes is considered to be exorbitant by the trade which fears that the new impost will place the indigenous manufacturers in an unfavourable position with the foreign products. Business has, therefore, been practically at a standstill. While sellers are reserved due to the conflicting views in regard to the new levies, buyers are reluctant to enter the market as prices had shot up after the budget announcement. The proximity of the import policy for the next licensing period is also another factor for the restricted demand. Camphor maintains a firm trend due to the shortage of supplies. Menthol continues to be strong on increased demand from Northern India.

NON-FERROUS METALS

The new excise levy of Rs 300 per ton on Copper and Zinc has brought with it some uncertainties and the trade and the industry are awaiting further clarification to assess the actual implications of the impost. In Bombay, prices of Brass sheets have shot up by Rs 16 per 100 kgs to Rs 500. It is feared that the excise levy will push up free market prices further. With the result, the utensil manufacturers and the small-scale industries will be penalised. The actual users' import quota for copper has been already reduced by 20 per cent to 70 per cent.

The estimate of the anticipated revenue from the new levy on copper and its alloy at Rs 72.20 lakhs has created doubts as to the actual impact of the duty on the different copper alloys. Based on an annual output of 72,000 tons of brass sheets and 6,000

tons of copper sheets, the Rs 300 per ton duty will attract about Rs 2.40 crores from sheets alone and the duty deprived from other copper alloys will be in excess of this. Against this, the estimated revenue is only Rs 72.20 lakhs. Therefore, either the expected receipt has been considerably under-estimated or if the estimate is near the correct figure, the impact on copper sheets will be much below Rs 300 per ton. Probably, an early clarification is called for to solve the uncertainty that prevails on the subject.

According to the Indian Bureau of Mines, the production of Copper Ore during 1960 was 448,000 tonnes. This represents an increase of about 11 per cent as compared to the output of 404,000 tonnes in the preceding year. The entire production of copper ore was reported from Singhbhum district of the Bihar State. The production of copper metal, during the year, was also higher at 8,910 tonnes as against 7,674 tonnes in 1959.

On the London Metal Exchange, the prices of both copper and zinc have been showing a steady rise due to the uncertainty about the political situation in Africa. Zinc has picked up a little from £79 to about £84 per ton, though this is still a good £15 below the price quoted a year ago. Two factors appear to have been mainly responsible for the recovery in zinc. First and probably more important, it is anticipated that production controls on Zinc will be imposed again when the Lead-Zinc Study Group meets shortly. The controls were lifted a year ago, because supplies were tight. But Zinc production has expanded since then and this has been the main reason for the fall in prices. Secondly, the demand for the metal has improved slightly since the British motor industry has recovered from its recent recession.

GOLD & SILVER

Mixed trends in prices were noticed on the Bombay Bullion Exchange. There was a sharp rise in gold, while Silver was a shade easy. In the Gold section, there was a revival of speculative support, while advices from Calcutta were also encouraging. Arrivals amounted to 6,000 tolas as against an offtake of 4,000 tolas. Ready rates moved between Rs 123.75 and Rs 123.95. Sovereign remained very firm at Rs 94.75.

Lack of fresh support was reflected in the Silver Section, which remained quiet. Advices from Calcutta were also not encouraging. Arrivals amounted to 45 bars against an offtake of 16 bars. Silver (below 996) changed hands at Rs 207.70 to Rs 208.20.

OILS & OILSEEDS

Conditions on the Bombay Oilseeds Exchange presented a steady appearance with prices moving within narrow limits.

Turnover was limited in the absence of fresh developments abroad.

Groundnut evinced good interest from vanaspathi manufacturers. Although the excise duty on vanaspathi was raised, manufacturers were confident of passing it on to the consumers. Groundnut Ready Boid was quoted at Rs 51.75 and Groundnut Oil at Rs 21.60.

The Castor section lacked fresh support. There was no export demand as Indian prices were stated to be above world parity. Castor Ready was quoted at Rs

23.75 and Castor Oil, commercial quality, at Rs 14.05.

In the Linseed section, trading was listless with the ready rate quoted at Rs 35.62 and Linseed Oil at Rs 16.05.

GUR

Conditions in the Hapur Gur remains depressed due to restricted loading facilities and slack demand. Local stocks are estimated at 55,000 maunds. The rate for Fansera quality is quoted at Rs 12.75 to Rs 13.19 and Balti at Rs 13.25.

Bullish Fervour

There is now no mistaking the reaction of the stock market to the Central Budget. The cheerfulness noticed in the special post-Budget session has continued unabated over the week-end and throughout the current week also there has been little to indicate that the so called second thoughts on the Budget are having any weakening effect on the bullish sentiment generally.

But, as noted in this column last week, the corporate sector too has had to give up something in the shape of a lower development rebate. The initial jubilation over the reduction in the export duty on tea has steadily diminished during the past few days; for, when this is taken together with the increase in the excise duty on the commodity, the net result seems to leave very little actual gain. This explains the rather subdued trend now prevailing in the tea section in contrast to the bullish fervour that characterised trading in this section earlier.

Stock market operators have considered it unnecessary to bestow much of their valuable time on thoughts about the possible repercussions of the new excise and customs levies presumably on the assumption that any increase in prices will be passed on to the consumer. But some at least in the market place will in course of time be making a note of the fact that the Federation of Indian Chambers of Commerce and Industry has expressed the fear that the increase in excise duties and the imposition of fresh excise duties on as many as 18 articles including raw materials would push up industrial costs. The reduction of the bonus tax from 30 per cent to 12½ per cent too seems to be losing its attraction to some who think that the quantum of reduction of the tax is not large enough to give encouragement to companies even with sizable reserves to come out with bonus issues in view of the still large amount that will be absorbed by the tax. The fact that the Bombay Stock Exchange authorities have deemed it necessary to impose restrictive measures to stem the bullish tide last week itself has served as a reminder that a runaway boom in shares may not be to the liking of New Delhi.

Trading on the Calcutta Stock Exchange, however, has not shown any indication so far that a reaction is in the offing in the near future. On the contrary, the general impression one gains is that the present steady trend will continue for some time. The market appeared to pause on Wednesday but it was solely due to short-lived rumour about the steel retention price which for most market men is a matter that has already been settled.

NEW ISSUE NOTES

Pesticides Limited

Pesticides Limited has announced the issue of 5 lakhs equity shares of Rs 100 each. Of this, promoters, directors and their friends will subscribe for 2.55 lakh shares. The balance of the issue amounting to Rs 24,50,000 has been offered for public subscription. The subscription list will open on 14 March and close on 20 March, but not earlier than 16 March, 1961.

Blue Mountain Estates

The Blue Mountain Estates Limited has decided to issue 10,50,000 right shares in the proportion of one share for every three shares held to those shareholders whose names stand on the books of the company on 5 April, 1961. The right shares are to be issued at a premium of 45 nP per share. Transfer Books will be closed from 28 March to 5 April, 1961.

Tube Suppliers

Tube Suppliers Limited, Madras, will shortly enter the market with an equity issue of 8.70 lakhs shares of Rs 10 each. The subscription list is likely to open in the middle of next month. Of the proposed issue, 27,000 equity shares are on "firm allotment" to underwriters. Thus, the actual offer to the public is Rs 6 lakhs divided into 60,000 equity shares of Rs 10 each. A sum of Rs 2.50 is payable with application and Rs 2.50 on allotment. The balance of Rs 5 is payable in subsequent calls. The entire issue has been underwritten. Production is expected to start by the end of this year.

Kirloskar Oil

Kirloskar Oil Engines Limited has announced the issue of 2,50,000 Redeemable Cumulative Participating Preference shares of Rs 10 each, at par. The subscription list will open on 13 March and close on 16 March or later, at the discretion of the directors. The whole issue has been underwritten. The proceeds of the issue will be utilised for financing the expansion schemes of the company.

Indian Steel Rolling

The Indian Steel Rolling Mills Limited has decided to issue additional Ordinary capital amounting to Rs 25 lakhs and Debentures for Rs 8 lakhs. The new shares are to be offered to the existing shareholders in the ratio of one share for every share held.

INVESTMENT NOTES

Premier Automobile

The Premier Automobiles Limited has applied to the Government of India for permission to produce 100

Valuable Protection

for Valuables

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?

The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.

Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.

By depositing your valuables in the State Bank, you will save yourself the worry about their safety.

Please contact the nearest Branch Agent for further particulars.

STATE BANK OF INDIA
INDIA'S LEADING BANK

cars a day in two shifts, which will enable it to meet the requirements of the market as also bring down substantially the price of the car. The matter is still under consideration and the Government's approval is awaited. The company has also decided to step up the production of trucks and this will involve considerable capital expenditure of about Rs 25 crores. Part of this expansion scheme will have to be financed through loans obtained from the Development Loan Fund of the American Government or through other organisations. The company may have to increase its capital too.

Hindustan Lever

It is learnt that the Hindustan Lever Limited has received a licence from the Government for undertaking the manufacture of skimmed

milk powder. The company proposes to set up a plant for this purpose in Uttar Pradesh and the capacity of the plant is placed at 215 tons a month. The capital outlay of the project is expected to exceed Rs 1 crore. The plant is likely to go into production by the end of 1962.

TISCO Production

According to the figures released for February by the Tata Iron & Steel Company, Limited, the output of Saleable Steel has declined to 94,200 metric tons from 117,600 metric tons in January; Pig Iron to 125,900 metric tons from 144,200 metric tons and Steel Ingots to 126,500 metric tons from 149,300 metric tons.

IISCO Production

In the case of the Indian Iron & Steel Company Limited, the produc-

11 March 1961

tion of Saleable Steel shows a small decline to 70,966 metric tons from 71,540 metric tons in January. The output of Pig Iron amounts to 96,791 metric tons against 112,649 metric tons and of Steel Ingots to 72,839 metric tons against 83,787 metric tons. Despatches of Saleable Steel are also lower at 74,111 metric tons against 74,157 metric tons.

The steadily increasing demand for the company's various products is reflected in the working results of the Union Carbide of India Limited for the year ended 25 December, 1960. Earnings, before taxes and after development rebate, amount to Rs 1.45 crores on gross sales of Rs 8.23 crores as compared to Rs 1.36 crores on sales of Rs 7.70 crores. The provision for taxation absorbs Rs 61.38 lakhs against Rs 64.61 lakhs, while that for Development Rebate Reserve is maintained at Rs 2.30 lakhs. A sum of Rs 30.00 lakhs is transferred to General Reserve. The directors have recommended a final dividend of Rs 1.05 making a total of Rs 1.80 per share on the increased capital as against Rs 1.80 per share paid on the reduced capital.

BALANCE-SHEET BRIEFS

The net profit of J. K. Steel Limited has shot up from Rs 9.74 lakhs to Rs 19.55 lakhs for the year ended 30 June, 1960. The dividend on the Ordinary shares is raised from Rs 1.50 to Rs 2.00 per share, subject to deduction of tax.

The working of J. K. Chemicals Limited has resulted in a loss of Rs 1.87 lakhs for the year ended 30 June, 1960 as against a loss of Rs 25,558 for the preceding year. A debit balance of Rs 1.62 lakhs is carried forward.

In the case of the Alkali & Chemical Corporation of India Limited, there is a jump in the net profit from Rs 57.69 lakhs to Rs 162.43 lakhs for the year ended 30 September, 1960. The Ordinary dividend has been increased from 9½ to 12 per cent, taxable.

The Indian Aluminium Company Limited has proposed a slightly higher dividend of Rs 1.50 per share for the year 1960 as against Rs 1.20, thanks to a net profit of as much as Rs 1.2 crores against Rs 80 lakhs for 1959.

Tungabhadra Industries Limited has reported a sharp decline in earnings from Rs 11.51 lakhs to Rs 7.31 lakhs for the year ended 30 September, 1960. No dividend is again paid on the Ordinary shares.

The Madura Mills Company Limited has earned a higher net profit of Rs 78.92 lakhs for 1960 as against Rs 40.51 lakhs. The dividend is raised from 12½ to 15 per cent, taxable.

The Kesar Sugar Works Limited has made a net profit of Rs 10.59 lakhs for the year ended 31 July 1960 as against Rs 4.47 lakhs. The directors have proposed a taxable dividend of Rs 9 per share.

The Manager, The Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:—

"At the Annual General Meeting of Stockholders, 29 March, Directors will recommend final dividend 7½ per cent actual less Income-tax. This year, all allocations to pre-

mises account, pensions and other staff funds amounting to £405,000—have been made before arriving at the published profits of £761,916. This compares with last years adjusted figure of £619,696—after allocations of £395,000. In the consolidated accounts of The Chartered Bank and its wholly-owned subsidiaries, £250,000—has been transferred to Reserve Fund, leaving £506,254—to be carried forward".

STOCK EXCHANGES

Post-Budget Mood Continues

Watch-Dog Writes:

AFTER starting the week on a steady note, stock markets have recorded fresh advances in prices on renewed bull support, although profit-taking has erased some of the extreme gains at the close. If shares with possibilities of a bonus issue are prominent in the steepness of rise in prices, others have managed to register handsome gains, either for particular reasons or in sympathy.

With the speculative shares encountering sustained support, brisk trading was again noticed on the Calcutta Stock Exchange.

Trading on the Bombay Stock Exchange continued to depict firmness as sellers refrained in view of the continued rising trend.

The Madras Stock Exchange remained active with enquiry being well-spread in the several sections.

Business on the London Stock Exchange was still on a sizable scale although industrials failed to establish any decided trend.

Prices on Wall Street closed steady with changes ranging mostly to one dollar or more.

CALCUTTA

Calcutta, Friday Evening.

CONDITIONS on the local stock exchange continued to remain buoyant with prices pushed up to new high levels. Turnover was fairly large. There was, however, a tendency to confine buying activity to only those shares having bonus possibilities or early capital appreciation.

Again, there was an anxiety to know to what extent the various industries would be able to pass on to the consumer the incidence of the new taxes. Above all, with the tight conditions prevailing in the money market and with the fears entertained in certain quarters about the possibility of official intervention in order to check excessive speculation, there was a general disposition to book profits at bulges.

The Gilt-edged section, maintained a steady front. Enquiry for short-dated issues and selected State Loans continued to persist. 3 per cent 1966 Conversion Loan moved between Rs 73.93 and Rs 74.

With the publication of satisfactory working results by some of the banks, the Banking section remained very steady. Punjab National changed hands up to Rs 21 from Rs 20.75 and United Commercial up to Rs 87 from Rs 85.50.

Although the reasons behind the buying movement were not clear, the

Jute section showed a further expansion in the volume of business. Anglo-India were boosted up at Rs 214 from a low of Rs 202; Birlas up to Rs 34.50 from Rs 31.62; Fort Williaff up to Rs 24.12 from Rs 22.87; Kelvin up to Rs 163 from Rs 157 and Nuddea up to Rs 48.75 from Rs 47. Howrah were, however, a narrow market around Rs 22.37 with New Central moving between Rs 19.50 and Rs 20.06.

Hopes of higher production induced a revival of activity in the Coal section where almost all shares recorded fresh higher levels for the week. But, the anxiety expressed with regard to the wagon shortage and the accumulation of stocks at various pitheads, induced some profit-taking towards the close. Amalgamated were at one time taken up to Rs 23.75; Equitable up to Rs 31.50; Central India up to Rs 14.75 and South Karanpura up to Rs 12.76, to close finally at Rs 23.62; Rs 31.37; Rs 14.44 and Rs 12.56 respectively on profit-taking. Bengal were, however, enquired up to Rs 358 from Rs 352; Burrakur up to Rs 20.62 from Rs 20.31 and Western Bengal up to Rs 9.19 from Rs 8.75.

Tea shares, after initial buoyancy, lost some ground towards the close. This was mainly due to the fact that opinion was now gaining ground that the net effect of the recent changes in the export and excise duties would be very little. It was thought that the tax burden might actually increase unless much more of the commodity could be exported or sold in packages. Brooke Band changed hands at Rs 17.50 to Rs 18.19 (Rs 17.81); Bishnauth at Rs 22.62 to Rs 24 (Rs 23.50); Bormah Jan at Rs 17.75 to Rs 18.12 (Rs 17.87); Hasimara at Rs 23.62 to Rs 23.87 (Rs 23.81); Hantapara at Rs 149 to Rs 154.50 (Rs 150); Jaysree at Rs 20 to Rs 20.75 (Rs 20.31) and Tezore at Rs 17.69 to Rs 17.87 (Rs 17.87). Figures shown within brackets were the closing rates for the week.

Sugar shares were selectively supported. Dyer Meakins were a special feature, having forged ahead to Rs 31.62 from Rs 30.75 on reports of the possibility of a bonus issue. Carew were neglected around Rs 11 on reports of the dividend being passed over. SKG met with business at Rs 14.25 to Rs 14.62, to finish the week at the lowest level.

Although Textile issues recorded an impressive advance initially, they were subjected to heavy profit-taking. The proposed levy of excise duty on cotton yarn seemed to have caused serious concern. Cawnpore were done at Rs 7.31 to Rs 7.50 (Rs 7.31); Dunbar at Rs 26.04 to Rs 28 (Rs 27.94); Kesoraf at Rs 31.37 to Rs 32.69 (Rs 32.12); and J. K. Rayon at Rs 18.00 to Rs 18.75 (Rs 18.75). Jaysree were, however, firm at Rs 16.81 against Rs 16.31.

In the Engineering section, price movements in Indian Irons were rather erratic due to alternate bouts of buying and selling. After opening at Rs 26.46, Indian Irons moved down at one time to Rs 26.27 at which level renewed bull support caused the scrip to recover to Rs 26.73, to close finally at Rs 26.56. In sympathy, TEXMACO moved up to Rs 24.55 from Rs 24.05 (Rs 24.20); Britannia up to Rs 15.12

from Rs 14.62 (Rs 15); Jessop up to Rs 23 from Rs 22.56 (Rs 22.62); Kumardhubi were boosted up at Rs 6.87 (Rs 7.31); Marshalls up to Rs 5.62 from Rs 5.12 (Rs 5.44) and Dalmia Iron up to Rs 11.00 from Rs 10.56 (Rs 10.87). Dealings were prominent in Guest, Keen, Williams and the scrip spurred to Rs 48.50 from Rs 44.50 on prospects of an early bonus issue to finish the week at Rs 47.75.

The Miscellaneous section, provided several bright features on prospects of bonus issues and capital appreciation. The following table shows the price trends of a few selected shares:—

	Week's Week's Week's

Managing Agents.

6th March, 1961,
8, Dalhousie Square East,
Calcutta.

N.B.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote at the Meeting instead of himself and a proxy need not be a member.

Company Reports

Burrakur Coal Repeats

DESPITE a rise in sales from Rs 2.95 crores to Rs 3.25 crores, the Burrakur Coal Company Limited has reported a slightly lower net profit, after providing for Depreciation and Taxation, of Rs 18.20 lakhs for the year ended 30 June 1960 as against Rs 19.57 lakhs for the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 12.19 lakhs from Rs 11 lakhs and Taxation provision to Rs 16.12 lakhs from Rs 14.50 lakhs. The provision for Statutory Development Rebate Reserve is, however, reduced to Rs 2.28 lakhs from Rs 3.50 lakhs and General Reserve to Rs 1.00 lakh from Rs 1.50 lakhs. The dividend on the Ordinary shares is just maintained at 13 per cent.

Raisings are higher at 1.29 million tons against 1.17 million tons and so also despatches at 1.27 million tons against 1.17 million tons.

As a result of representations made by the industry, Government has now agreed to grant subsidies to those collieries specially handicapped by adverse factors, such as depth, gas and the heavy incidence of pumping. It is anticipated that the company's collieries will benefit by the payment of this subsidy.

The subscribed capital is Rs 1,18,42,280 divided into 9,99,248 Ordinary shares of Rs 10 each; 45,000-6 per cent Second Cumulative Preference shares of Rs 10 each and 22,998-7 per cent Cumulative Preference shares of Rs 100 each. Against this, reserves and surplus stand at Rs 1.42 crores. The gross block at Rs 4.33 crores is depreciated by Rs 2.29 crores, leaving a net block of Rs 2.04 crores.

Okayti Tea Reports Lower Profits

The result of working of Martin Burn Limited remains unchanged for the year ended 30 September, 1960. While there is an appreciable increase in the earnings by way of managing agency commission, this is offset by a decline in the profits earned by the trading departments.

Sales are shown at Rs 7.49 crores against Rs 7.87 crores, while the net profit amounts to Rs 49.37 lakhs against Rs 49.49 lakhs. Apart from General Reserve which is maintained at Rs 5 lakhs, the Depreciation amount is raised to Rs 2.35 lakhs from Rs 1.81 lakhs and Taxation to Rs 35.50 lakhs from Rs 35 lakhs. The dividend is maintained at Rs 2.75 per share on the Ordinary shares.

Against a paid-up capital of Rs 2,06,96,250, reserve and surplus are shown at Rs 1.19 crores. The gross block stands at Rs 57.24 lakhs; total depreciation at Rs 18.19 lakhs and the net block at Rs 39.05 lakhs.

New avenues of progress

The rapid development of India's road transport has opened up new avenues of progress. Diesel trucks, lorries and buses now link every part of the country...carry goods and people to once-remote areas. With the growth of road transport has grown demand for High Speed Diesel Oil. Today over 1 million tons are consumed. By the end of the

Third Plan the country's needs will be 3 million tons—three times as much as they are today. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth, and Burmah-Shell believes that

for tomorrow's needs we must act today

Recipe for Banks' Ailments

RECENT happenings pertaining to banking are such as to suggest that Government are concerned about imbuing the system with the attributes that will be necessary in order to ensure that banking finance for industry will be made available in sufficient measure during the Third Plan. The magnitude of Government's anxiety is to be inferred from the fact that Mr Morarji Desai, the Finance Minister, felt it desirable to refer to the banking situation in his Budget speech. Of course, it may have been that the failure of the Palai Central Bank compelled such a reference by the Finance Minister. But the meeting called by Mr Desai last week in Delhi and the reported trend of discussions, on the one hand, and the speech delivered by Mr H. V. R. Iengar at the annual general meeting of the Refinance Corporation, on the other, would seem to indicate that Government's awareness is being translated into swift and expeditious action.

A start was made by the Reserve Bank in the autumn of last year, when a directive was issued to the effect that banks were required to raise the rates they charged for Advances by 0.5 per cent, and to prescribe a minimum rate of 5 per cent. This measure was clearly intended to augment banking earnings, so that both published and inner reserves could be added to. It is, unfortunately, all too true that banking reserves are meagre: the balance-sheet of one of the major banks for 1960 discloses that depreciation in gilt-edged holdings of the order of Rs 25 lakhs could not be covered from inner reserves. The need for reserves is all the greater today, because banks, in a developing and industrialising economy, may in the national interest find it necessary to extend accommodation (as for example to small industries) that, according to strict canons of banking, may not have been altogether approvable. Even while the Reserve Bank was grappling with the problem of how best banking reserves could be increased, banks in India faced another difficulty.

That is, that bank Deposits, which had so spectacularly risen in the period from the beginning of 1957 to the end of 1959, suddenly began to be scarce. One apparent reason for stagnancy in Deposits is that public confidence in banking has been undermined as a result of the Palai Central closure; after all, two or three banks thereafter experienced runs of differing severity. Another reason advanced is that the interest rates offered on Deposits are unattractive: surplus funds are finding their way into small savings rather than into banking accounts. Government apparently believes that it is these two reasons which, if not solely, at least mainly account for the failure of banks to attract new Deposits.

Consequently, though with less swiftness than we would have liked, a scheme for the insurance of bank Deposits has been drawn up and is now in an advanced stage. It is believed that Deposits up to Rs 1,500 will be insured under the scheme. We would rather that the figure had been fixed higher at, say, Rs 5,000. In any event, that we can now be almost certain of the scheme's implementation is to be welcomed. The second measure taken is an increase of banking interest rates, under the inter-bank agreement, which has accordingly been revised. We cannot agree with the

view that an increase in Deposit rates will of itself ensure the inflow of accretions on a larger scale. For, there is no proof that a more enticing interest rate will, in fact, entice; on the contrary, the inter-bank agreement, when it became effective in October 1957, implied a reduction in the interest rates; and a further reduction was effected in September 1958; but Deposits nevertheless continued to pour in.

Not that we mean to suggest that a rise in the interest rate structure could have been altogether avoided; with the three-tier bank rate, with the tremendous expansion in bank Advances, and with the acute stringency of the money market, the existing interest rates had got out of alignment, and an orderly structure there no longer was. But, if and when the stringency should pass, it is important that there should be a downward revision of the interest rates, since they otherwise would be unnecessarily and undesirably high.

Mr Iengar appears to believe that monetary stringency may not be a temporary phenomenon. We agree. For, such a reading of the monetary situation is based on certain other factors, which indeed may have contributed importantly to the slackness in new Deposit accruals. Firstly, there is the fact of buoyancy in governmental revenues, and the resultant reduction in the quantum of deficit financing. Although plan disbursements are large, the siphoning off of vast amounts, by way of taxes and excise levies and the rest, has caused Government spending to have less of an impact on the growth of bank Deposits. Secondly, the import surplus on private sector account has been large, and has correspondingly had a contractionist influence on bank Deposits. The third and fourth reasons remain, as before, the disrupted confidence in banking and the pressure in favour of small savings. Then, on the other side, with the strident advance in industrial production, and the prospect that growth in the future will be sustained, bank finance both for industry and trade will be of considerable proportions. Put simply, there is the possibility that, at least for some time to come, the rate of growth of Deposits will fail to keep pace with the rate of expansion in Advances.

But will such monetary stringency continue for long? It would seem to us that, if bank Deposits are to be expected to resume their pronouncedly upward trend, reliance has to be placed on two measures. Undoubtedly, the introduction of the insurance of bank Deposits may be expected in due course so to restore confidence in banking, that small depositors, who may have preferred the small savings schemes of Government, can be lured back. In the second place, we consider that the mobilisation of resources in "unmonetised" areas is necessary, and can be done only if branch expansion is carried out with more energy and endeavour. It follows that, in our view, the Third Plan will, in fashion similar to the experience of the Second Plan, witness alternating periods of monetary stringency and slackness. But the first half of the Plan, as far as can be gauged now, is likely to prove stringent; if relief there is to be, we can expect it only in the last year or two of the Third Plan.

Up and up soars the edifice of Life Insurance.
In the second year of its Five-Year Plan,
the Life Insurance Corporation is at the half-way
mark to its target of Rs. 1,000 crores in
1963, with yet another new business record of

Rs. 496,00,00,000

Year after year, the L.I.C. has improved
upon past records. In 1960, it advanced by
Rs. 68 crores upon its 1959 high of Rs. 428 crores.

Thus, since 1956, the L.I.C. has multiplied
its new business intake nearly two and a half times.
From Rs. 200 crores to close on Rs. 500 crores
...in five years.

Figures speak volumes—they point to the increasing
trust and confidence placed in the L.I.C. as an
institution. They speak of the growing belief by the
average breadwinner that Life Insurance—and
Life Insurance alone—can provide his family with the
complete security he wishes for them—a security in
which funds are guaranteed for a man's old age,
for his son's education, his daughter's marriage, or
for his family in case they should lose him.

**Life Insurance
Corporation of India**

Cost of Tax Collection

THE total tax revenue of the Government of India has more than doubled itself in the last decade from Rs 404.53 crores in 1950-51 to Rs 863.97 crores in 1960-61. But the cost of collection has also shown the same rising trend from Rs 10.25 crores to Rs 22.69 crores with the result that the increase in net tax revenue has been from Rs 394.28 crores to Rs 841.48 crores.

A study of the collection of cost of the major items of revenue reveals interesting trends. Let us first take excise, the largest single source of revenue. In 1950-51, excise revenue was Rs 67.54 crores and the cost of collection was Rs 4.11 crores. But in 1955-56, when excise revenues had gone up to Rs 145.25 crores, the cost of collection was lower at Rs 3.04 crores. Since then, collection cost has steadily increased:

EXCISE REVENUE			
	(In Rs Crores)	Gross Cost of	Cost of
		collection.	collection.
1956-57	...	190.43	5.10
1957-58	...	273.62	5.61
1958-59	...	312.94	5.64
1959-60	...	360.65	6.18
1960-61 (Revised)	...	394.98	6.82

As regards customs, it is interesting to see that the cost of collection was unchanged at Rs 1.80 crores both in 1950-51 and 1951-52 when the revenue amounted to Rs 157.15 crores and Rs 231.69 crores respectively. But, significantly, when customs revenue was much lower at Rs 163 crores, the cost of collection was Rs 3.83 crores.

In regard to income tax and corporation tax, a similar trend is noticeable till the beginning of the Second Plan. In 1950-51, the gross collections amounted to Rs 173.25 crores, the cost being Rs 2.44 crores while in 1955-56 the cost had gone up to Rs 3.81 crores for a revenue of Rs 168.41 crores. The trend in the subsequent years is shown in the following figures:—

TAXES ON INCOME (including Corporation Tax)			
	(In Rs Crores)	Gross Cost of	Cost of
		collection.	collection.
1956-57	...	202.92	4.26
1957-58	...	219.84	4.65
1958-59	...	226.34	5.02
1959-60	...	255.41	5.33
1960-61	...	285.00	5.49

Among other taxes of the Central Government, the tax on wealth is the most important from the revenue point of view. The Wealth Tax Act provides for the levy of a tax on the net wealth of every individual and Hindu undivided family at certain specified rates. The revenue from this source increased steadily from Rs 7.04 crores in 1957-58 to Rs 9.66 crores in 1958-59 and Rs 12.11 crores in 1959-60, but in 1960-61 the revised estimate is lower at Rs 7.50 crores because of the withdrawal of the wealth tax on companies. No details are given regarding the cost of collection for 1957-58, 1958-59 and 1959-60. For 1960-61, however, the cost of collection is estimated at Rs 16 lakhs.

The Expenditure Tax Act 1957, as amended by the Finance Act 1959, provides for the levy of expenditure tax on the taxable expenditure incurred by assesses (individuals and Hindu undivided families) and their dependents in the previous year provided the net aggregate income of the assessee and his dependents after deduction of the other taxes

payable on that income exceeds Rs 36,000. The revenue from this tax rose from Rs 64 lakhs in 1958-59 to Rs 79 lakhs in 1959-60 and Rs 90 lakhs in 1960-61. The cost of collection in 1960-61 is estimated at Rs 2 lakhs, corresponding figures for the earlier years not being available.

On the Gift Tax also, the collection cost is placed at Rs 2 lakhs for 1960-61 for a revenue of Rs 80 lakhs.

The tax on railway passenger fares rose sharply from Rs 2.24 crores in 1958-59 to Rs 13.67 crores in 1960-61, the rise in the cost of collection being from Rs 6 lakhs to Rs 10 lakhs. However, as recommended by the Railway Convention Committee, the tax on railway fares is going to be abolished with effect from 1 April 1961 and merged with the basic fares.

It appears from the above analysis that there is no definite correlation between the amount of tax collected and the actual cost of collection. It is clear, however, that the cost of collection is steadily increasing and as far as possible an attempt should be made to economise in this direction. The Third Plan envisages a massive tax effort where about Rs 1,800 crores is proposed to be raised over a five-year period. It is important therefore to ensure that the tax administration is made more efficient so that more revenue is available for development purposes. The following table reveals the trend in the total tax revenue and the cost of collection since the commencement of the Second Plan.

TOTAL TAX REVENUE					
	(In Rs Crores)	Gross Collection	Cost of Collection	Net Revenue	(3) as a ratio (2) of %age
(1)	(2)	(3)	(4)	(5)	(6)
1956-57	...	573.13	14.45	558.68	2.5
1957-58	...	695.77	16.55	679.22	2.4
1958-59	...	719.12	19.44	699.68	2.7
1959-60	...	812.28	20.83	791.45	2.6
1960-61	...	863.97	22.69	841.48	2.6

Rajasthan Budget

THOUGH the Budget estimates for 1961-62 for Rajasthan show a deficit, the fiscal measures announced indicate the possibility of a balance being achieved at the end of the next year. Revenue receipts and revenue expenditure for 1961-62 have been estimated at Rs 46.98 lakhs and Rs 49.48 lakhs respectively. While this leaves a deficit on revenue account of Rs 2.50 lakhs, the over-all deficit, on the basis of capital expenditure and realisations on capital account at Rs 25.00 lakhs and Rs 24.23 lakhs respectively, amounts to Rs 3.27 lakhs. It is noteworthy that greater emphasis is laid on economy measures than on a tax effort for covering the deficit. The new tax measures spread under different heads such as entertainment, non-judicial stamp duties, diesel and hydrogenated oil, motor transport, etc., are expected to bring in additional revenue to the tune of Rs 1.35 lakhs. The economy measures announced in the Budget provide for the abolition of revenue divisions, substantial reduction of Class IV staff, cut in the allocation of travelling allowance, reorganisation of the Industries Department and abolition of the posts of Zonal Development Officers and Panchayat Extension Officers in the Community Development Department. The deficit left after taking into account the effect of the new tax and economy measures is placed at Rs 1.64 lakhs consisting of Rs 37 lakhs on the revenue account and Rs 77 lakhs on capital account. Further austerity measures are envisaged for taking care of this deficit.

Indian Finance

Revised estimates of revenue receipts for 1960-61 reveal a shortfall of Rs 29 lakhs and this is contrary to experience in other States. Expenditure on the capital side also shows a shortfall of Rs 2.71 lakhs and is put down to shortfall under the allocation for the Rajasthan canal.

Second Plan implementation has also fallen short of the target to the tune of Rs 6 crores, but achievement in terms of physical targets is claimed to be satisfactory. The Third Plan outlay for the State is Rs 2.36 crores and the outlay for the first year of the Plan has been fixed at Rs 34 crores. The State's share of the Third Plan outlay is Rs 80 crores. This excludes all non-Plan expenditure and spill-over expenditure of the Second Plan. Provisional estimate of the State's resources for the Third Plan includes Rs 20 crores from public loans, Rs 10 crores from small savings, and Rs 12 crores from capital receipts. The balance of Rs 32 crores is expected to be met from new taxation as well as economy measures.

Madhya Pradesh Budget

THE 1961-62 Budget for Madhya Pradesh was presented to the State Vidhan Sabha on 6 March 1961 and estimates revenue receipts and revenue expenditure at Rs 73,79.72 lakhs and Rs 80,26.76 lakhs respectively. While, on this basis, the Budget reveals deficit on revenue account of Rs 6,47.04 lakhs, the over-all deficit, after taking into account the effect of the transactions outside the revenue account, will be Rs 5,56.59 lakhs. Mr Mishrilal Gangwal, the State's Finance Minister, has held out hopes of the deficit being wiped out and announced new taxation which is expected to bring in additional revenue of Rs 3 crores. The details of the taxation measures envisaged for the Budget year are not known, and how the balance of deficit, after taking into account Rs 3 crores of new tax realisations, is to be covered has also not been made clear. But, considering that revenue realisations have been consistently underestimated in the last two years, there is the distinct possibility of the estimates of revenue for 1961-62 also being exceeded. "Surplus" receipts for 1959-60 and 1960-61 due to such under-estimate were of the order of Rs 4,95.94 lakhs and Rs 7,42.27 lakhs respectively. It is also noteworthy that an anticipated minus closing balance of Rs 62.95 lakhs for 1960-61 has been converted into a surplus revenue balance of Rs 4,89.70 lakhs though expenditure charged to revenue showed a rise of Rs 1,89.62 lakhs against original estimates.

The satisfactory position of the State's finances is, however, not corroborated by Second Plan implementation and the outlay incurred under the Second Plan discloses a shortfall of Rs 40.85 crores. While the outlay envisaged originally was Rs 190.90 crores, actual expenditure is now estimated to amount to Rs 150.05 crores. The shortfall in expenditure is attributed to administrative dislocation caused by the State's reorganisation scheme as also inadequacy of revenue resources. But physical achievements indicate commendable advance in various directions. Increase in foodgrains production by 1 million tons, rise in irrigation potential by 779,000 acres, completion of the Gandhi Sagar Dam and the Gandhi Sagar Power Station, increase in the installed capacity of power from 78 MW to 147 MW represent some of the notable triumphs of the Second Plan for Madhya Pradesh. Satisfactory progress is also recorded

18 March 1961

in respect of the three units in the public sector, namely, the Spinning Mill, the Power Alcohol Factory and the Solvent Extraction Factory.

The achievements of the first two Plans though not spectacular, could be considered to have laid the foundation for accelerated progress under the Third Plan, which envisages an outlay of Rs 300 crores against Rs 199 crores fixed for the Second Plan. The distribution of the Third Plan outlay as revealed in the following table does not show any marked shift in priority as compared with the Second Plan:

	Rs in Crores
Agricultural Programme	53.95
Community Development	22.50
Irrigation	41.80
Power	76.00
Industry and Mining	10.50
Roads and Road Transport	17.80
Social Services	68.65
Miscellaneous	8.80
Total	300.00

The priority accorded to agriculture and irrigation flows from the primacy of agricultural development for industrial progress. The crop-wise targets of additional production for the Third Plan are: foodgrains 1.67 million tons, cotton 184,000 bales, oilseeds 125,000 tons and sugarcane 973,000 tons. The Plan expenditure during 1961-62 on agricultural development is fixed at Rs 2,81.08 lakhs out of which Rs 1,68.82 lakhs has been earmarked for agricultural production and Rs 93.89 lakhs for minor irrigation. Popularisation of improved agricultural implements represents a significant aspect of the Third Plan endeavour in the agricultural sphere and Mr Mishrilal Gangwal has indicated the possibility of some workshops being established for the manufacture of these improved agricultural implements.

In the field of irrigation, the Third Plan schemes envisage raising the potential by 1.97 million acres. The Third Plan schemes for irrigation include two new major projects, namely the Hasdeo project in Bilaspur district and the Halali project. Emphasis is on medium and minor projects and the outlay on these two amounts to Rs 26.30 crores out of the total outlay of Rs 40.30 crores.

Power development in the Third Plan will raise the installed capacity by 420 MW. Some of the important Second Plan projects are on the way to completion and prospects of power supply for more rapid industrial development during the Third Plan are bright. The techno-economic survey of Madhya Pradesh conducted by the National Council for Applied Economic Research provides the basis for industrial programmes under the Third Plan. Prospecting for iron ore, bauxite, and coal deposits is one plank of the Third Plan industrial programmes. The licences already issued for the manufacture of sulphuric acid and super phosphate, cement, paper, caustic soda, sugar mill machinery, high tension galvanised steel wire, and straw board and hard board indicate the scope for diversified growth of industries. The fertiliser factory with an outlay of Rs 20-crores, to produce nitrogen, ammonia and urea, which is now under the consideration of the Government is one of the important projects. Development of feeder and ancillary industries around the Bhilai steel and the heavy electrical plants is another significant aspect of the Third Plan programmes for industrial development. The Third Plan schemes also envisage setting up of industrial areas, industrial estates for small industries, rural indus-

trial estates, rural work sheds, financial assistance, surveys, quality control, training and common facility services.

Of the total outlay of Rs 300 crores for the Third Plan, the Centre's share in the shape of loans and grants is placed at Rs 207 crores while the balance of Rs 93 crores is expected to be met from the State's own resources. The estimate of State's resources includes an element of Rs 48 crores to be raised by additional taxation during the next five year period. After taking into account Rs 3 crores expected to be realised from new taxes for 1961-62, the annual average of taxation for the next four years works out to Rs 11 crores.

Assam Budget

BARRING the additional levy on petrol and diesel oil, the Assam Budget for 1961-62 presented to the Assembly by Mr Fakruddin Ali Ahmed, the State Finance Minister, does not contain any fresh taxation. The Budget discloses an anticipated deficit of Rs 14 lakhs, the revenue receipts being placed at Rs 36.87 crores and expenditure being estimated at Rs 37.01 crores. The obvious reason for the imposition of additional tax on petrol and diesel oil of 2 nP per litre (estimated yield, Rs 14 lakhs) is to wipe out the deficit. The capital expenditure for 1961-62 is placed at Rs 16.22 crores.

The revised estimates for 1960-61 reveal a receipt of Rs 40.41 crores and an expenditure of Rs 40.66 crores. Compared to the revised estimate of Rs 40.41 crores in the current year, the revenue receipts of Rs 36.87 crores for 1961-62 indicate a shortfall of Rs 3.54 crores. The decrease in the revenue receipts for the Budget year was consequent on the deduction of Rs 89 lakhs in grants provided by the Union Government for border relief schemes, an ad hoc increase in the dearness allowance by Rs 18 lakhs, reduction of Rs 2.23 crores in the transfers from contingency fund and minor and counter-balancing variations under other heads.

Adverting to the menacing disturbances in the current year, Mr Ahmed stated that the State was plunged into an embarrassing situation which had hampered and dampened all development activities. He deplored the fissiparous tendencies and narrow-mindedness of citizens who engineered the destructive activities instead of harnessing their energies for the economic development of the State and prosperity of the people. For the rehabilitation of the displaced persons, the Government had to incur an expenditure of Rs 60.2 lakhs and the amount deployed on relief works aggregated Rs 7.5 lakhs. Yet, there is no room for despondency, for, the situation has been brought to normalcy and adequate steps are being taken to remedy the weakness in the administrative machinery which was glaring during the troubles. The authorities and the people can, therefore, concentrate their attention on the building up of a prosperous Assam.

Kerala Budget

ATTRIBUTABLE mainly to the rising tempo of expenditure, the Kerala Budget features a large revenue deficit of Rs 6.76 crores. Revenue receipts for 1961-62 have been estimated at Rs 47.25 crores against Rs 46.21 crores in the revised estimates for 1960-61. Revenue expenditure for 1961-62 is placed higher at Rs 54.01 crores as compared with Rs 47.25 crores revealed in the revised estimates for 1960-61. An element of Rs 4.5 crores in the estimates of revenue expenditure for 1961-62 is represented by committed ex-

penditure on Second Plan schemes. The Budget combines additional taxation with fiscal reliefs and concessions the net effect of which will be to reduce the extent of revenue deficit from Rs 6.76 crores to Rs 5.35 crores. Considering that realisations from new taxation proposals are fixed at Rs 1.98 crores, the value of the tax reliefs and concessions granted in the Budget works out to Rs 57 lakhs. The beneficiaries of the tax reliefs will be small dealers and companies paying super tax on agricultural income at the rate of 37 nP per rupee on income above Rs 20 lakhs. For small dealers the Budget allows compounding of sales tax, while for companies subject to super tax on agricultural income the highest rate has been fixed at 31 nP in the rupee. A third item of relief included in the Budget relates to the super tax payable by undivided Hindu families the highest rate of super tax payable by them being brought down from 41 nP to 34 nP per rupee. Apart from these tax reliefs, the only concession granted in the Budget is the grant of house rent allowance to non-gazetted officers at the rate of Rs 5 monthly to those drawing a pay not exceeding Rs 150 a month and Rs 7 to other non-gazetted officers.

The tax measures proposed in the Budget include an additional land tax at the rate of Rs 2 per acre subject to the condition that the total land tax including the new tax shall not exceed one fifth of the gross produce from land, increase in the State transport fares from the present 3.44 nP per mile to the rate charged by private transport undertakings, enhancement of the sales tax on foreign liquor from 25 per cent to 40 per cent, a new tax on buildings completed since March 1961 and finally a one per cent single point sales tax on foodgrains except those distributed through fair price shops.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

A SYMBOL OF SERVICE

United Bank of India Ltd.

World of Finance

Banking Results

THE flood of bank balance-sheets being released shows that, almost invariably, profits have risen sharply; some of the balance-sheets are analysed in this issue. As a result of the pressure on space, the study of bank returns is held over. It may be mentioned that, in last week's review of Allahabad Bank's accounts, the transfer to Staff Pension Fund in 1959 was shown as nil, whereas it is Rs 2 lakhs. We may start off with the accounts of an eastern exchange bank, before proceeding to the Indian scheduled banks.

THE CHARTERED BANK

The Chartered Bank has chalked up another record year; it may be recalled that 1959 saw new peaks being achieved in the balance-sheet total, etc., and these have been surpassed in 1960. The balance-sheet total has mounted by £45.8 million to £316.2 million; and the consolidated balance-sheet has risen by £45.7 million to £362.8 million. The profit for 1960 has been published after providing for Premises, Pensions and other Staff Funds; and, in comparison with 1959, the relative figure (at £761,916) is higher by £142,220. An interim dividend of 8 per cent was paid in September, and the proposed final dividend is 7½ per cent, both less income-tax; and it may be remarked that the distribution is on a capital that has increased during the year to £5.5 million.

In the statement circulated with the accounts, Mr V. A. Grantham, The Chartered Bank's Chairman, has rightly laid stress in the introductory paragraphs on the impact upon trade of the chronic foreign exchange scarcity experienced by developing countries in Asia and the Far East. A nice point he has made is that, "unless conditions in the American market improve in the coming year and stimulate demand for industrial raw materials, the export earnings of the primary producing Asian countries... must be adversely affected." In recent years, unfortunately, though inflationary trends might have obtained in industrially advanced countries, prices of primary commodities have tended to be depressed; a commodity boom in prices is almost invariably in response to stock-piling programmes or some such sudden and sharp demand. An exception this year is the high prices fetched by jute goods, but that is because so short is the supply of raw jute, that a rise in the cost of the raw material has pushed up the price of finished goods.

To be sure, the industrially advanced countries have little to gain, if primary commodity markets do not keep firm or steady. An erosion in their earnings merely compels the developing countries to cut their imports, and so the exports of the industrial nations to that extent are affected. The other alternative is a massive reliance on foreign assistance. It would appear, at the moment, that the prospect of countries like India participating in enlarged world trade will depend on export credits being extended. Mr Grantham has stated that the Chartered Bank group "should be able to do much to aid materially the efforts of our exporters." But the inference is

that this relates mainly to advice. The question is, can or will the exchange banks help in providing medium-term foreign exchange loans for financing industrial growth?

STATE BANK

A more remunerative use for its money has enabled the State Bank of India to report a much higher profit for 1960, so much so that the dividend has been raised as largely to compensate the shareholder for the loss in yield arising from the abolition of grossing up of dividend and its replacement by a system of deducting the tax at source.

It would appear, on the face of it, that the State Bank's Deposits have fallen over the year by Rs 4.85 crores to Rs 576.32 crores. But we must have regard for the fact that, since July 1960, the State Bank has been in process of returning counterpart funds which had been deposited with it. Hence, the State Bank has on the account suffered a drain in Deposits to the extent of Rs 72 crores, since a monthly repayment of Rs 12 crores as from July was agreed to. Hence, it would appear that the State Bank's Deposits, net of transactions connected with PL 480, have risen considerably during 1960. In any event, the making over of counterpart funds has entailed disinvestment in giltedged, and the fall of Rs 77.78 crores roughly corresponds to the amount paid over to the Reserve Bank. But, as a result, the ratio of giltedged investments to Deposits has shrunk sharply from 62.4 per cent to 49.5 per cent. Meantime, with the smart and abiding rise in industrial production, the demand for accommodation from the State Bank has been considerable: the total of Advances has risen by Rs 65.36 crores (or 39.2 per cent) to Rs 232.24 crores; and, at that level, the Advances/Deposits ratio has gone up sharply from 28.7 per cent to 40.3 per cent.

The high level of Advances has enabled the gross income to rise by almost exactly Rs 1 crore to Rs 19.53 crores, and the ratio of gross income to Deposits has moved up slightly from 3.2 per cent to 3.4 per cent. Though interest paid has absorbed Rs 17 lakhs more, and salaries and allowances have cost Rs 32 lakhs more, the balance of profit is steeply risen by Rs 31 lakhs to Rs 2.18 crores.

The transfer to Reserve has been raised by Rs 5 lakhs to Rs 25 lakhs. Bonus to Staff and transfers to various staff funds take up Rs 9.83 lakhs more at Rs 64.29 lakhs. Dividend at 22.75 per cent absorbs Rs 1,27.97 lakhs, and the amount carried forward is Rs 56.21 lakhs against Rs 55.87 lakhs last year.

Balance-sheet	31-12-59	31-12-60	Change	%age

BANK OF INDIA

Contrary to the experience of most Indian banks during 1960, the Bank of India Ltd in its latest balance-sheet discloses a commendable rise of Rs 8.75 crores, representing 8.7 per cent, to Rs 109.44 crores in Deposits. Nevertheless, such Deposit accretion was insufficient in relation to the size of the demand for Advances. Hence, the bank has disinvested in giltedged for Rs 9.51 crores, and the ratio of giltedged holdings to Deposits has slipped from 26.0 per cent to 15.3 per cent. The magnitude of the rise in Advances is Rs 15.92 crores, and, at this level, the credit-Deposits ratio has gone up to 78.8 per cent. The expansion in Advances over the year works out to 23.4 per cent.

Having regard to the size of the credit expansion, it is hardly surprising that gross income should have shown a smart rise of Rs 68.12 lakhs (or 15.0 per cent) to Rs 5,23.21 lakhs. The bulk of the increase in income is contributed by interest and discount, which have fetched Rs 49.26 lakhs more at Rs 4,40.02 lakhs. As a result, the ratio of gross income to Deposits has improved from 4.5 per cent to 4.8 per cent. However, the better performance in respect of earnings is partly offset by higher expenditure. Interest paid has marked a rise of Rs 17.48 lakhs to Rs 2,17.03 lakhs, and salaries and allowances have absorbed Rs 12.47 lakhs more at Rs 1,43.36 lakhs. Nonetheless, the balance of profit (after deducting the provision for tax—Rs 18 lakhs in 1959 and Rs 25 lakhs in 1960) shows a steep rise of Rs 13.69 lakhs (representing an increase of 21.2 per cent) to Rs 78.37 lakhs.

Bonus to staff absorbs Rs 1 lakh more at Rs 18 lakhs, and the dividend payment has been raised from 16 per cent to 20 per cent, both subject to deduction of tax. The carry forward is slightly higher at Rs 12.85 lakhs against Rs 12.48 lakhs brought in.

CANARA IND. & BANK. SYND.

THE annual report of the directors and the audited accounts of the Canara Industrial and Banking Syndicate Limited for the year ended 31-12-1960 make impressive reading. Despite the adverse conditions in the money market, the Syndicate was able to maintain a steady rise in deposits, which increased to Rs 18.87 crores during the year under review from Rs 17.09 crores in the previous year. The pattern of deposits remained almost the same, and a notable feature was the preponderance of time deposits over demand deposits.

Total advances including Bills discounted recorded an increase of 12 per cent and

18 March 1961

amounted to Rs 12.12 crores. Gross earnings during the same period totalled Rs 1.34 crores due mainly to the improvement in advances. Interest received on advances and investments and discounts on Bills discounted accounted for 91 per cent of the Syndicate's earnings. The net earnings of the Bank, which are placed at Rs 25.22 lakhs, indicate a rise of 26 per cent over the previous year's total. Thirty per cent of the net earnings amounting to Rs 7.50 lakhs has been transferred to Reserves and twenty five per cent aggregating Rs 6.35 lakhs has been earmarked for paying dividends to shareholders.

It needs to be remarked that the Bank was the first institution to introduce a separate department known as the Investors Agency Department with a view to providing expert financial guidance through its specially trained personnel to enable the investor to invest his surplus in remunerative shares and securities.

DENA BANK

Advances Expand, Gilt Holdings Fall

THE first impression, from a study of the Dena Bank's accounts for 1960, is that there has been a substantial, even steep, increase in the profit as compared with the previous year. A more detailed examination, however, shows that the improvement in profit, after the tax provision, is of more reasonable proportions.

In the balance-sheet as at the end of 1960, Deposits and other accounts are shown to have risen modestly by Rs 43 lakhs to Rs 35.81 crores. But the demand for funds was so considerable, that the total of Advances has risen by Rs 4.88 crores (or 25.1 per cent) to Rs 24.34 crores. This has been financed largely by disinvestment in giltedged, the portfolio declining by 24.5 per cent (or Rs 3.75 crores) to Rs 11.57 crores. So much so, the Dena Bank, which had had in the 1959 balance-sheet, an unusually high Investments/Deposits ratio and a rather low ratio of Advances to Deposits, shows both these ratios at more normal levels. Giltedged holdings form 32.3 per cent of Deposits (against 43.3 per cent last year), and Advances work out to 68.0 per cent of Deposits against 55.0 per cent on the basis of the 1959 balance-sheet.

The profit and loss account discloses a satisfactory rise in the income. Interest and discount have fetched Rs 36.70 lakhs more, in rising by 28.9 per cent over the relative figure for 1959. The income by way of commission, exchange and brokerage has improved by 5.20 lakhs, or 23.6 per cent over the previous year. As a result, the ratio of gross income to Deposits shows a marked improvement to 5.6 per cent from 4.4 per cent.

However, interest paid has mounted by Rs 13.61 lakhs, and salaries and allowances have risen by Rs 14.52 lakhs (an increase of 35.1 per cent over the previous year). As a result, the balance of profit for 1960 is shown at Rs 23.55 lakhs, subject to taxation, which receives Rs 9 lakhs. The balance of profit for 1959 was net of any provision for taxation and was placed at Rs 13.05 lakhs. Hence, the net profit, after tax, is at Rs 14.55 lakhs against Rs 13.05 lakhs, and the rise works out to 11.5 per cent.

The transfer to Reserve is Rs 2 lakhs higher, and the Reserve Fund is now at Rs 60 lakhs against the subscribed capital of Rs 50 lakhs. The dividend payment is maintained at 8.76 per cent subject to deduction of tax, and absorbs Rs 4.38 lakhs. Bonus to Staff receives Rs 2.65 lakhs.

DEUTSCHE MARK

"Cold Blood" Revaluation

By Paul Einzig

IT seems that the revaluation of the Deutsche Mark has created more problems than it has solved. An adjustment of 5 per cent has not restored equilibrium, and in all probability the abnormal surplus in the West German balance of payments will continue to disturb the international monetary system, though to a smaller degree than it would have in the continued absence of a revaluation. Nor has the measure solved the immediate foreign exchange problem. So far from reversing the trend of the international movement of short-term funds, it seems to have given additional stimulus to the flow of funds to Germany and Switzerland. This is because a further revaluation of the D Mark and a revaluation of the Swiss franc is now widely anticipated. Official denials by the two Governments concerned, and also by other Governments "suspected" of intending to revalue their currencies, have failed to impress the markets. After all, until the last minute, the West German Government emphatically disclaimed to have any intention to change the D Mark's parities. The significance of its decision to revalue its currency lies in the fact that, for the first time since the War, a parity has been changed, "in cold blood". Hitherto, all changes in Bretton Woods parities of the major currencies have been made under irresistible pressure, but this time a change was made as a matter of deliberate policy decided upon as a matter of expediency. This opens up the possibility of similar deliberate changes, in either direction, and denials of intending to

make such changes are likely to encounter even more scepticism than before.

The immediate effect of the change has been a buying pressure on the D Mark and a selling pressure on sterling. The dollar has been affected both ways. On the one hand, the German move reduced the likelihood of a dollar devaluation and mitigated therefore the wave of distrust against the dollar. On the other hand, the anticipation of further revaluations tends to divert funds from New York to various continental centres. On balance, the spot dollar as well as the spot sterling have been under selling pressure, but while forward sterling has been weak, the forward dollar has been firm. Therein lies the main threat to sterling. If an appreciation of the forward dollar should make it too costly to maintain covered arbitrage commitments in London, there would be a large-scale withdrawal of funds entailing a large-scale decline in the gold reserve. Hence the official intervention aiming at bolstering up forward sterling, in order to retain arbitrage funds a little longer in London. This may only mean deferring the evil day when they are withdrawn. But if, in the meantime, the British balance of payments can be put right, then the withdrawal of "hot money" could be faced with comparative calm.

Will there be further revaluations? It is difficult to say. All I can say is that there ought to be some. The D Mark ought to have been revalued by at least 10 per cent. The Swiss franc, French franc and Italian Lira, too, could well stand a revaluation. It would greatly assist in the restoration of the international monetary equilibrium. But possibly narrow and selfish considerations will prevail, in which case we must envisage a prolonged drain of funds and unsettled conditions in foreign exchanges.

Notes

WEST BENGAL Population Explodes

The preliminary results of the 1961 census undertaken in West Bengal has revealed an explosive rise in the course of the last decade. While the population in 1951 was 26,302,386, the latest census reveals population at 34,967,634. The increase, estimated at 32.9 per cent, is the highest on record in the last sixty years, and is attributed mainly to decrease in the death rate from 13 to 8.5 while the birth rate between the two dates is shown to have ranged from 21.9 to 25.5. Part of the rise is explained by the large influx of refugees from East Pakistan, while under-enumeration in some areas in the previous census is held partly responsible for the unprecedented magnitude of the rise. But making allowance for the deflation of figures due to under-enumeration, the implications of the staggering rise to efforts for stepping up food-grains production in which West Bengal is chronically deficient should be clear. Grave apprehensions have already been expressed on this score in the State Legislature. The sex-wise classification

of the population reveals a rise in females per one thousand males in the latest census. While, in 1951, there were 865 females to every 1,000 males, the 1961 census shows that there are now 879 females per 1,000 males.

Efforts to reduce the rate of growth should naturally take into account the variations in rates disclosed in different districts. Cooch Bihar has registered the highest rate of 5.19 per cent while Calcutta with a rise of 8.4 per cent has the lowest rate. Calcutta also claims the largest percentage of literacy with 58.5 per cent. For the whole of West Bengal, literacy is shown to have increased by 5.1 per cent, the number of male literates and female literates in the latest census being 7,435,305 and 2,745,373 respectively.

The census also reveals the depressing housing conditions in the State of West Bengal. For the whole of the State's population at 34,967,634, the number of houses is shown to be 6,607,397, and it is significant that even improvised sheds have been taken as houses. The deterioration in housing as compared with conditions in 1951 is evident from the fact that, while the average number of persons per occupied house was 4.6 in 1951, the figure for 1961 is put at 5.3.

*

MADRAS Propaganda for the Plan—or the Party?

The Budget session of the Madras State Legislative Assembly is over. Opposition speakers, as usual, made many charges against the ruling party. Commonly, it was alleged on the floor of both the Assembly and the Council that the Congress organisation was collecting funds for party purposes with the election coming near. Going through the debate generally, one noticed the use of the House more as a pre-election forum with the majority party in power confidently asserting its position as the correct one.

It was also contended on behalf of the opposition that the Ministers used officials for party purposes. Mr C. Subramaniam, Finance Minister, in his reply to the four-day debate, firmly refuted this suggestion.

One of the most interesting issues was that the party allegedly

used the Information Department for its advantage. Certainly, for publicising the five-year Plans, the State Government did appoint Publicity Officers at the district level. In this regard it may be stated that the persons so appointed do not necessarily possess merits of excellent publicity experience; rather, they have been recruited from the ranks of journalists with varied experience at the desk and in reporting. The opposition allegation is that the publicity officers, from the district level onwards, are being used for party purposes. The reply of the Finance Minister to this charge was that the district publicity officers and their assistants had to be appointed to educate the people as to the achievements of the Government. This, the Minister thought would be an effective reply to those who accused the Ministry with having done nothing for the people during the Plans.

There has been some confusion in this regard so far as the Minister's reply goes. Certainly, Mr Subramaniam knows that Five Year Plans are not mere State Plans but Plans of a national character. Why should the Madras Government alone take upon itself the responsibility of defending the Plans? Why should the Congress Party affiliate itself with such propaganda machinery? But the opposition did not have a clear rebuttal of the necessity for such a large State-wide publicity organisation.

Mr Subramaniam stressed the point that the Congress was trying to strengthen democracy through democratic means. For example, it was alleged that the Ministers take officials also during tours for fund collection purposes. The charge might be quite baseless, and surely frivolous. But with the election time getting closer and closer, it would have been wiser on the part of the Minister to have straightaway answered this point to the satisfaction of the non-Congress opposition. Instead of again effectively trying to answer the widely prevalent idea that the Congress Party has been collecting funds for election, the Government spokesmen merely said that the other parties were doing nothing different. What the other parties do without being in power and what the party in power is doing about influencing trade and business to subscribe liberally to the election pool of the Congress are entirely different.

Mr Subramaniam felt elated—quite naturally—about the per capita income of the State having gone up and Madras having moved up to occupy the fourth place in India. A decade ago, Madras was at the bottom. He defended the exodus of people from rural to urban areas and felt that this indicated the progressive industrialisation of the State. As they progressed, more urbanisation was bound to take place.

Adverting to the Second Plan achievements of Madras, Mr Subramaniam stated that the number of companies registered with a capital of over Rs 50 lakhs each was 7 in 1956-57 and it had gone up to 18 by 1959-60.

One admission the Minister made was about price control. He stated that Government wanted to control prices at least of essential commodities. The choice was between an economy in which the prices were statutory without economic progress and that in which there was some rise in prices and at the same time acceleration of industrial production. His preference was for the latter course. In this view, preference had been given to basic industries in this State.

*

Progress, yes, but Patience Wanted

While Mr C. Subramaniam answered, in the Legislative Assembly, charges levelled against the ministry on a political level, Mr R. Venkataraman, Industries Minister, replied in the Council to certain questions pertaining to the industrialisation of the State.

Because of the skill and ability of Madras, rather than on the score of backwardness, they were able to persuade the Centre to set up new industry in the State. The location of the Integral Coach Factory at Perambur was instanced by him as valid testimony to what he said. Even for the location of big industries in Madras, Mr Venkataraman told the Council, Madras did not depend upon the tactics

18 March 1961

implied in a reference to its backwardness. Rather, with ability and skill found in abundance, more basic and heavier industries could be easily located. (The Kerala State Chief Minister issued more or less a threat to the Centre the other day during the State Assembly Budget debate that, if a heavy industry, particularly the electrical plant industry, was not to be located in Kerala, it would rouse the Keralites.)

Lack of steel and coal naturally handicaps the State's progress. Added to this is the transport bottleneck. The Centre is being pressed to avoid this by dispatch of goods by sea, and the urgency of starting at least a steel re-rolling mill in Madras is also being stressed by the State.

On the rapid development of the Tuticorin Port depended the quick transport of coal to the South by sea and of salt from the South to the North, and therefore this, too, was sought to be expedited.

The Minister told the Council that those members insistent upon the State's rapid industrialization should take a hundred rupee share each in each of the industrial undertakings in the State and added that the need of the day was the creation of an overall investment climate.

Mr Venkataraman was not for transferring the Neyveli project to the State from the Centre, since every other State would ask the Centre for similar privilege, with the result that Bhilai steel, Sindri fertilizers and the coal produced in other Northern States would not be available to this State at a common pool price. If there was a common pool price for the cement produced in the South, the Minister pointed out, there was also the same policy in regard to the iron produced in the North.

Certain members complained that no new industries were going to be started in the South, particularly Madras. Rejecting this suggestion, the Minister stated that, in the Neyveli integrated project, there was going to be a fertiliser plant, a thermal power station, clay washing and briquette-making industries. The thermal station is now proposed to produce 400,000 kilowatts of power instead of 250,000 k.w. A surgical instruments plant, a raw film plant, a teleprinter factory and the expansion of the ICF are all included in the State's immediate industrial future.

Mr Venkataraman reiterated the State's desire to afford financial aid to industries through the State's Industrial Financial Corporation.

Madras today produces 1.4 million tons of cement with scope to produce more. Cement scarcity was only a symptom of the growing economic development of the State.

As for the charge that the Salem iron and steel plant was

not being pushed, Mr Venkataraman disclosed that the East German experts had informed them that more time than earlier anticipated would be needed to complete the tests. Possibly, it would take till the end of 1962, but Madras Government has requested the East German experts that, somehow, the experiments should be expedited. New industries depending upon minerals to be exploited naturally take time even in advanced countries. From those who complain of delay in Madras, particularly about the raising of a steel plant in Salem, patience is needed. The Government of Madras did not delay matters.

As for the petroleum find in the Cauvery basin, the Minister counselled patience if the members did not want the repetition of America's experiences of losing billions of dollars on the search for oil.

In a note placed on the table of the Assembly, it was stated that an outlay of Rs 8 crores has been made for small-scale industries and Rs 3.2 crores for industrial estates in the Third Plan. The provision for small-scale industries includes Rs 1.08 crores for pilot production centres, Rs 1.27 crores for financial assistance by way of block loans, Rs 1.7 crores for industrial cooperatives, Rs 77 lakhs for common service facilities, Rs 61 lakhs for tool rooms, Rs 85 lakhs for organisation staff and other technical aids, Rs 50 lakhs for rural workshops and Rs 50 lakhs for training.

Preliminary work by the State's Public Works Department has begun in Ootacamund for the erection of a raw film factory which is expected to begin functioning by the middle of 1962. Also, acquisition of land is under progress for the surgical instruments factory near Madras.

Hindustan Teleprinter Company has been formed by the Centre to start a factory in Guindy. Even before the structure has been raised, it has been proposed to undertake certain Assembly and manufacturing operations in the factory provided by Madras Government in the Industrial Estate, Guindy.

As for the possibility of finding oil, the note stated that initial investigations conducted by the geological survey in the Cauvery basin had disclosed that the marine strata found in the basin underlying the Cuddalore sand stones were favourable for oil formation.

*

TEA What the Right Hand Gives . . .

Addressing the annual meeting of the Indian Tea Association in Calcutta last week, Mr N. S. Coldwell, the Chairman, outlined the various difficulties the tea in-

dustries had to face. While gratefully appreciating the Finance Minister's fine gesture in reducing the export duty, the Chairman expressed grave concern over the additional levy in the central excise duty for every fiscal zone. The rate of duty is unfortunately heavy in Cachar, which in the previous year had suffered heavily from severe drought.

The declining trend in India's tea exports is a serious matter to reckon, especially when the country's foreign exchange has reached a low level. This is particularly distressing when the exporting countries like Indonesia, Ceylon and African States have entered the international market with renewed competitive ability. The high cost of production of Indian tea is acting as a deterrent in stimulating our exports. All the exporting countries, save India and Pakistan, have exported larger quantities of tea last year to the United Kingdom which is the largest single consumer. This trend is also visible in the international markets. Our share of exports fell from 45 per cent in 1956 to 43 per cent in 1959. In the same period, Ceylon and East Africa exported larger quantities and their share rose from 31 to 35 per cent and from 5 to 7 per cent respectively.

An ambitious target of 900 million pounds has been fixed for the Third Plan as against 750 million pounds in the Second Plan. It needs to be recalled that the increase in production postulated in the next Plan will have to come largely from the plants which are already in the ground, since it takes five years for tea plantings to yield. The need for stepping up the yield from the existing bush is, therefore, evident. But the inadequate supply of fertilisers has already precipitated a serious bottleneck. Besides, the non-availability of requisite coal and transport facilities has also entailed great difficulties for the industry. An increase in output demands constant flow of supplies, peaceful labour conditions and uninterrupted communications and a market for finished products with a fair price for the producers.

The imperative need for reducing the cost of production of our tea has been highlighted by the Irish Tea Delegation which visited the country recently, when it expressed the possibility of Ceylon tea flooding the Irish markets if India fails to bring down the cost of production. The Government should provide adequate incentives to estates for enhancing their output by supplying fertilisers and loans for replantation purposes. Side by side with increase in the quantity, the qualitative aspect should also be strongly emphasised. The report of the Food and Agriculture Organisation forecasts a large surplus of 100 million pounds of tea in 1966. The need for increasing the competitive ability of Indian tea becomes all

the greater. The future of the country's largest foreign exchange earner cannot be left at stake.

*

OIL Outlook Obscure

A heartening development in the oil industry in recent times is the signing of the Indo-Soviet agreement under which Soviet Russia has offered assistance for the exploration, development and production of oil and gas in Cambay, Ankleshwar and other areas in the country. The agreement also provides for Soviet assistance for the erection of the oil refinery in Gujarat with a capacity of 2 million tons of crude to be refined per annum. Even before the signing of this agreement, Soviet interest in the development of India's oil industry had been evident in the offer of the Rs 11 crore credit for the erection of the Barauni refinery and the agreement to supply 1½ million tons of petroleum products during the next four years. India's annual oil requirements by the end of the Third Plan have been estimated at 14 million tons and it is clear that the greater part of it will have to be secured through imports. It is, however, interesting that Mr Murray Scott of the Burmah Shell Oil Company should observe in the course of his address to the Rotary Club of Bombay that India could plan for self-sufficiency in oil by 1966 on the basis of Rs 500 crores' investment. Evidently, he must be having in mind only self-sufficiency in refinery capacity. Self-sufficiency in crude oil production is something that is impracticable in five years' time, and that too with only Rs 500 crores investment. One may recall, in this connection, the estimate made some months back by the Assam Oil Company's Chairman, Mr W. B. Metre, which envisages self-sufficiency by 1988 on the basis of Rs 400 crores investment per annum.

In respect of refineries, the Third Plan schemes envisage creation of capacity which will meet nearly 75 per cent of the requirements by the end of the Plan. It has been disclosed by Mr Malaviya, Union Minister for oil, that the Nunmati refinery would be ready by the end of 1963. The foreign oil companies have evinced keen interest in the expansion of refinery capacity, but Government's policy excludes scope for further expansion in the private sector. Mr Murray Scott has underlined the benefit of foreign exchange saving that would accrue from permitting foreign oil companies to expand refinery capacity. Though negotiations between the Government and the foreign oil companies have not yet ended, the latest statement of Mr Malaviya in the Lok Sabha on the subject does not encourage any hope of a change in the Government's policy.

USA Compacts Compete with Imports

With a full year's production and sales now behind them, it is clear that the new US-made "compact" cars have carved a sizable and respectable niche for themselves in the American automobile market. It seems to be a niche, moreover, from which these smaller and more economical cars will not soon or easily be dislodged.

There is now a full complement of 10 separate automobile "makes" bearing the compact designation, put out by all five of the American automobile makers. There are the Falcon and the Comet, put out by Ford; the Plymouth Valiant and the Dodge Lancer, by Chrysler; the Chevrolet Corvair, the Pontiac Tempest, the Oldsmobile F-85, and the Buick Special, by General

Motors; the Lark, by Studebaker; and the Rambler, by American Motors—the last-named the pioneer of American compacts.

These makes, in the aggregate, accounted for nearly 25 per cent of all cars registered in the US in 1960, jumping to a total of 1,621,719 from about 605,000 in 1959.

Part of this marked increase undoubtedly was due to the rise in total output and sales of all kinds of US automobiles in 1960. Total passenger car registrations rose from 6,041,275 in 1959 to 6,576,650 in 1960. This made 1960 the second-best year for automobile sales in US history, second only to 1955, when more than seven million cars were registered.

This total increase, however, falls far short of fully explaining the compact car growth. The fact is that these smaller cars appear to be gaining steadily in popularity with the American people—a popularity which is reflected in the patterns of the automobile industry's operations.

Opinions differ as to the reasons for the growing demand for compact cars. To the sociologist, it may signify a reverse kind of "status symbol," with emphasis on the small and utilitarian rather than the large and ornate. To the economist, it may signify a new interest on the part of the American people in the advantages of economical operation and ease of handling and parking afforded by the smaller cars.

Whatever the reason or reasons, the compacts appear to be continuing their assault on the total automobile market this year. The industry consensus is that the smaller cars, in the aggregate, will account for close to 40 per cent or more of 1961 calendar year production.

The actual number produced and sold, of course, still will depend in large measure on the vigour of consumer demand for automobiles in general. Significant in this regard is a survey of consumer attitudes and buying intentions for 1961 conducted re-

cently by the US Federal Reserve Board.

This study, made in January, contains some significant hints of an impending upturn in automobile sales from the present relatively low levels. The percentage of families planning, as of January 7, to buy new or used cars within the next six months was at about the same level recorded in a similar survey conducted in January 1960. Yet, as recently as last October, the survey had uncovered plans for reduced automobile purchases.

One question that naturally arises is where this new consumer interest in American-made compact cars leaves the foreign-made imported automobiles, which generally are competitive with the smaller US models. Last year, 444,452 imported cars, valued at \$512,974,986 were sold in the United States. This number compares with about 600,000 in 1959, before US-made compacts became a significant factor in the American market.

While there may be a tendency to see in this trend a permanent contraction of the US market for imported cars, foreign manufacturers and exporters are far from pessimistic; after all, 1960 still represented a healthy US market for foreign cars, and a year that was the second-best in the comparatively short history of mass importation of automobiles into the United States.

By way of comparison, a decade ago, foreign cars in the US virtually were confined to the luxury trade, with only about 16,000 imports entering the country annually.

It is not surprising, then, to find foreign automobile producers viewing the US market as one well worth keeping, and one that offers an excellent future for imported vehicles despite the 1960 sales decline under the initial impact of full-scale American production of the new compact cars.

BONUS

Curse of Employment

A high-power bonus commission in accordance with the directive of the Supreme Court has been asked for by Mr B. A. Forsyth, Chairman, Employers' Federation of Southern India, in the course of his address to the annual meeting of the Federation in Madras.

Mr Forsyth told the meeting that the bonus as existent in India was not known in the West.

The profit-sharing bonus mooted by labour, has been the headache of almost every well-established industrial enterprise. Most strikes arose out of demand for it, and the anxious employers' attention was engaged annually to meet and combat what he called the curse of the world of employment.

He deplored the lack of a scientific approach to the question.

That the "epidemic should have spread even to the public sector, Mr Forsyth stated, was evidence by the Government's nominating a Commission. He added that this Commission had its own "disconcerting history."

As for the personnel of the Commission, Mr Forsyth regretted that it had neither the representatives of labour nor employers. It was but natural, that the employers' organisations should raise a very strong protest over the way the Commission had been named.

The Supreme Court has given an indication for such a high-powered Commission, in one of its judgments. In such high-powered Commission, it was thought by leaders of industry that some decision would be arrived at by collaborating with representatives of labour and employers. According to Mr Forsyth, such a Commission should consist of a Supreme Court Judge, sitting or retired, an independent accountant and an outstanding economist, all unconnected in the past with the bonus issue. Such persons would bring into the Commission a fresh and unbiased outlook.

Mr Forsyth was of the emphatic view that vital issues were at stake and that the Supreme Court's mandate to appoint a high-powered Commission should be obeyed, giving representation to all interests involved.

The strike by the Central Government employees at any rate opened the eyes of the Government to the difficulties of industrial employers and the need not merely for sympathy, generosity and tact in dealing with threats of strike but also for firmness and determination.

As for the adoption of codes of discipline, Mr Forsyth said that the evaluation and implementation machinery had become powerless. These codes, drafted with the best of motives in the interest of industrial peace, required the necessary sanctions, without them, they remained incapable of enforcement.

Mr Forsyth ended his speech on a note of caution as to the problems facing employers on the labour front. A comparatively small labour force must be considerably reduced and streamlined if they ever hoped to succeed with the employment of a large labour force in the Third Plan.

DELHI

Allocation for Third Plan Halved

The Third Plan for Delhi has at last been finalised with a total outlay of Rs 81.75 crores. The Administration's original demand was for an allocation of Rs 167.93 crores, but the Planning Commission has pruned it to the present level. Out of the total outlay, Rs 51.20 crores has been earmarked

for the implementation of Municipal Corporation schemes. The targeted expenditure for these schemes was Rs 102.46 crores. The Budget of the Delhi Administration was also slashed to Rs 27.49 crores from the original estimate of Rs 57.06 crores. The New Delhi Municipal Committee will receive an amount of Rs 3.05 crores during the next Plan period.

The local administrative body has submitted supplementary demands aggregating about Rs 4.50 crores under four schemes. Out of the total, Rs 3 crores will be expended for the development of land for industrial purposes. For financing experimental flatted factories project, an amount of Rs 1 crore will be allotted. The remaining Rs 50 lakhs will be utilised for the expansion of Irwin Hospital by constructing a new bloc with 350 beds. It is to be noted that these projects along with the weavers' colony scheme are under the consideration of the Planning Commission. The programmes relating to agri-

culture, welfare and water supply, too, suffered by the slashing of the Third Plan. Consequently, the original target of Rs 70.84 lakhs for agriculture has been reduced to Rs 28 lakhs, and welfare works get only an allocation of Rs 73 lakhs as against the original demand for Rs 2 crores. The corporation's original demand for health and allocation for health and water supply has been scaled down to Rs 12.63 crores from Rs 31.16 crores. The only programme that is left unaffected by the pruning is the one relating to generation of power which will be carried out according to the original schedule.

UNION CARBIDE

The Plastics Age

The inauguration of the chemicals and polyethylene plant of Union Carbide at Trombay by Mr Manubhai Shah, the Union Minis-

ter for Industries, constitutes an important landmark in the industrialisation of the country and bears eloquent testimony to the phenomenal growth of the Company since its formation in 1905. Built at a cost of Rs 4.5 crores and possessing a capacity of 15 million pounds of polyethylene resins and organic chemicals, the plant signifies the entry of Union Carbide in the field of manufacture of basic chemicals and plastics.

A notable feature of the new plant at Trombay is the utilisation of alcohol, which is a by-product of the sugar industry, is the basic raw material for the manufacture of basic chemicals which were hitherto largely imported. The indigenous production of these essential raw materials required for the developing industries will help save the country foreign exchange to the tune of Rs 2 crores per annum. The plant will not be confronted with the scarcity of alcohol, for, a large quantity of its

initiative from the shop floor

The manufacture of crowbars in Tata Steel's Agrico factory in Jamshedpur involved a number of time-consuming and uneconomic manual operations. Ratan Singh, a foreman, decided to do something to improve matters. Carefully studying the problem, he designed a die which cut down work, improved the product and substantially increased turnover at reduced cost. For his brilliant work, Ratan Singh received an award of Rs. 3,000.

In the ten years up to 1960, Tata Steel employees have put forward a total of 10,165 major and minor suggestions—an average of three a day. In the latest year, 445 suggestions were received, 54 of which have merited rewards.

Thus, initiative from the shop floor is helping to improve productivity at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR

requirements will be supplied by the Maharashtra Government's distillery at Chitaili.

The key to the future prosperity of our plastic processing industry lies in the development of raw materials from wholly indigenous resources. In this regard, the Trombay plant is a step in the direction and, in due course, is bound to help the development of the plastic industry in the country.

Union Carbide's endeavour to keep pace with the industrialisation of the nation is evident from

its diversified production. With continued increase in production facilities, improved processes and technology based on research and development, the Company will be in a firm position to cater to the needs of the rapidly developing industries. As averred by Mr. Shah in his inaugural address, the Trombay plant symbolises a new decade for plastics in India and, within the next ten years, the country would cover the entire gamut of plastics in both quantity and quality.

COMPANY LAW

A Four Years' Balance-Sheet

THE fourth report of the Department of Company Law Administration reviews the working and administration of the Company's Act 1956 with reference to its major provisions and aims. The report does not claim achievement of the broad social purposes and objectives underlying the various provisions of the Act. But, having regard to the nature of changes envisaged in the new Act as well as the organisational limitations under which the Act has to be enforced, it will be appreciated that four years will be too short a period to allow marked progress being registered in this matter. In the circumstances, the working of the Company Law can be judged only from the point of view of enforcement of its provisions, and in this the report claims improvement. It is shown that, during 1959-60, 131,462 statutory documents including annual returns, special resolutions, charges and their satisfaction, returns relating to directors, managing agents, secretaries and treasurers were received by and filed with the Registrar of Companies. This compares with 113,319 for the previous year and the increase revealed for the fourth year may seem to point to greater compliance being secured for the provisions of the Act. It is also significant that, during the year, there was definite falling off in the complaints received by the Registrar from the shareholders, ex-employees, ex-directors, etc. The relevant figures for 1959-60 and 1958-59 are 800 and 1,292. While this may be taken to indicate an improvement in business behaviour consequent on the enactment of the new law, the report itself is reluctant to draw any such inference.

One aspect of corporate activity in respect of which the working of the new Act can claim substantial results is that which relates to the working of managing agencies. The system of managing agencies has generally been disapproved as an undesirable form of business management by the Government. A gradual elimination of this sys-

tem is one of the objectives of the Company Law. Four years of enforcement of the provisions of the Company Act with respect to managing agencies has produced a substantial reduction in their number. While, in 1955, there were 5,000 companies under the management of managing agents, their number is now shown to have come down to 1,345.

The number of prosecutions launched also testifies to the stricter vigilance maintained by the Company Law Department in enforcing the provisions of the Act. During the four-year period, the Department launched 4,14 prosecutions for defaults of Company law provisions. The number of such prosecutions is shown to have increased from 10 in 1956-57 to 70 in 1957-58, 1,187 in 1958-59 and 4,115 in 1959-60. The report, however, brings to light continuance of, unsound practices in the management of companies. The instances of such malpractices noted in the report relate to the payment of minimum remuneration to managing agents without approval, deposit of moneys with banks in which directors are interested, display of investments as stock-in-trade in accounts, distribution of dividends without setting off losses, non-inclusion of accountants' report in the prospectus, allotment of fractional share, declaration of fractional share, etc. In spite of such infringements, the report holds out the hope that stricter enforcement of the provisions of the law for one or two more years may lead to a new tradition of regular and timely compliance with the provisions of the law. The efforts being taken by the Department to promote principles of management accountability and modern accounting methods in the public and private sector should also have a beneficial impact on business performance in the corporate sector.

A gratifying feature of the report is the increase that is disclosed in new company registrations during the year. Contrary to apprehensions originally held of possible adverse repercussions

*Rs. Crores.

on business enterprise of the new changes incorporated in the Act, company floatations have revealed a steady upward trend. A record rise is reported for the year under review, the total number of registrations being 1,452 with an aggregate authorised capital of Rs 160.5 crores. This compares with 1,095 new companies registered during 1958-59 and 961 new registrations for 1957-58. Of the new companies, 1,365 are shown to be private companies and their authorised capital is estimated at Rs 93.4 crores.

State-wise and regional distribution of the new registrations reveals the rapid strides being made by the Southern region comprising Madras, Kerala, Andhra Pradesh and Mysore in new company formations. It is remarkable that while till last year the number of company floatations in this region was lower than in the other three regions, for the year under review the number of new companies for the Southern region comes very close to the total number of registrations for the Eastern region which has always been in the forefront in new company formation. The headway made by the Southern region is not a little due to the pro-

nounced increase registered in the Madras State, which records a rise of nearly 232 companies as compared with the previous year. State-wise distribution discloses marked concentration of new floatations in the four States of West Bengal, Bombay and Madras and the union territory of New Delhi. As in previous years, these four regions together account for an overwhelming proportion of the new companies registered during 1959-60. The industrial pattern of the new companies shows a predominant number under the head of processing and manufacturing and commerce the respective shares being 614 and 367. Among the remaining groups, Transport, Communications and Storage recorded 283 new registrations. The share of Government companies in the new registrations was 23 which included one subsidiary of a Government Company, and their total authorised capital was Rs 30 crores. Comparable figures for the preceding two years are 16 and 18. Three of the 23 new Government companies came under Central sponsorship, and the Indian Oil Company was one of them. With one being a subsidiary of a Central Government, the remaining 19 were sponsored by State Governments.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE New Frontiers are really very old. At least some of them, like the Peace Corps, are. Mr. Kennedy's idea is partly Jeffersonian and partly Jamesian. (William, the philosopher and not Henry, the novelist.) Described in deadpan officialese as a "pool of trained American men and women proposed to be sent overseas by the US government or through private organisations and institutions to help foreign countries meet their urgent needs of skilled manpower", it is an exciting idea. These young men and women are quite unlike the tax-holidaying experts and technicians we are familiar with. Members of the Corps are expected to rough it out on no salary except a subsistence allowance barely sufficient to meet their basic needs. Teaching in primary and secondary schools, participation in malaria eradication programmes and other public health projects are the more important jobs awaiting them. I am not surprised to hear that the response has been enthusiastic, for the appeal of the idea is, in different ways, to something that is basic in human nature. There is the lure of the strange, the Faustian hunger for new experience. There is again the urge to be useful to our fellows which is present in the most self-centred among us. In the American context, the imaginativeness of the idea arises from its being devised to free the mind of the young American—and it is to the young that the idea is specially addressed—from two of the most pervasive influences that oppress it: a cold war psychosis and a barbarism quite alien to the founding fathers. To learn to do without not only the teevee and the washing machine, but also possibly, the chewing gum, may well appeal to a nation sated with the "good things" of life. The slogan is no longer: "Go West, young man", but "Go East, or South." American pioneerism has lain dormant under a thick crust of status-seeking and conformism too long now. Mr. Kennedy's idea may well stir ancient memories of Louis and Clark whom Jefferson sent out to explore Louisiana. This is one strand of the idea. The other is the Jamesian prescription of "moral substitutes for war". James, who never lived to see even the first world war, was primarily thinking of individual character-building by the "subli-

mation" of the combative instincts in man by directing them into a "battle against Nature." In our own days, the finding of acceptable substitutes for war and states of mind that make it possible have literally assumed the urgency of a matter of life and death. Mr. Kennedy was not able to exempt members of the Peace Corps from "selective service." As the Commander-in-Chief of the US Armed Forces he could hardly be in a position to do so. But even in its incomplete form, a voluntary peace corps as a psychological, if not actual, substitute for conscripted national service is a big step forward. James in the shades is sure to approve.

Inadequacy of coverage by world news agencies of Asian and African news is a familiar enough complaint to which a recent and influential voice has been added. The UNESCO's Director-General reporting on Freedom of Information says, "insufficient efforts have been made to cultivate an interest in Asian news among readers of other regions, unless the news is of a sensational nature." This is true enough, but the fault, dear Brutus, I am tempted to misquote, is not in our stars or in the news agencies, but in ourselves that we are underlings. What prevents the coming into being of an Indian or Asian world news agency that will do what the present predominantly Western news agencies do not or will not do? My complaint about neglect is slightly different in emphasis from what it usually is when it proceeds from Asian sources. It is not that my amour propre is hurt. If people in the rest of the world are not informing themselves about us, it is their affair and I am losing no sleep. If they care enough, they can ask the world news agencies to account for their indifference. My grouse is that my education is being neglected and I am being kept in the dark about stirring things around me. For if I want to know about what is happening in the Congo, I have to depend on Reuter. I know all about the difficulties in setting up a news agency of our own, the chief of which, of course, is money. But I don't think that cash cannot be found if we really care. Meantime, something must be done about the chaotic structure of cable rates that makes even

the present flow of news an exiguous trickle. Not only are different rates prevalent in different countries, but they differ "for messages sent in the reverse directions." And in many places they are absurdly expensive. A message from Jakarta to Bombay, for example, costs 50 naye paise a word and that from Beirut costs Rs 1.02 a word! This is hardly likely to make me more knowledgeable about Indonesia or Lebanon. The Commonwealth press rate of six naye paise a word is an admirable example which others should follow.

No one took seriously public relations pretence about South African membership in the Commonwealth being only one of the many preoccupations of the Premiers in London. But there was a general expectation,—hopeful or fearful depending upon your attitude to the question—that the press might be cheated of sensational copy. Sudden realisation on the part of some members of glass houses of their own was stated to be one of the reasons why the protests against Apartheid would be muted. Though this

was not so, the conference did try hard to find an acceptable compromise, but Dr. Verwoerd would have none of it. The responsibility for South Africa's leaving the Commonwealth is now squarely on his shoulders. All he did was to implacably pick holes in every formula that was put up. Mr. Macmillan, who had his own Salisbury flank to defend, did his best, but he must be feeling pretty flapped today. Mr. Diefenbaker, despite earlier reports, seems to have tried hard to avert a show down. He is reported to have tried to buy time by separating the issue of Apartheid from that of the continued membership of South Africa in the Commonwealth club, a device thought up by Mr. Macmillan also. But unlike Mr. Macmillan, he suggested postponement of decision on the second till South Africa had in fact become a republic in May. This did not find favour, among others, with Dr. Verwoerd himself. The Canadian Prime Minister then came out, Mr. Nehru actively co-operating, with the suggestion of a Commonwealth charter. This was to affirm the concept of the Commonwealth as a multi-racial community believing in complete equality inter se. Here again time was offered to South Africa, but Dr. Verwoerd was not buying. The press was after all not cheated of its copy, thanks to Dr. Verwoerd's "dramatic" withdrawal of his application for membership.

EXPORTS

Compulsion in the Offing?

INDIAN manufacturers are now engaged in examining, with a microscope, export prospects to the ECAFE region. The 17th Session of the Economic Commission for Asia and Far East, inaugurated last week by President Rajendra Prasad, is not the only reason. The speeches made at the Session could have helped Indian businessmen to assess export prospects if the delegates from the countries of the region, instead of confining themselves to balanced philosophical statement on the concept of Regional Co-operation, had each given a list of commodities which his country was in a position to export as well as those which it had to import. As it is, the speeches give the impression that, while everyone would like increased intra-regional trade, none of them is prepared to come to actual grips with the problem.

The Executive Secretary's report has indicated, in general terms, that there are vast possibilities for expansion of India's trade with the ECAFE region. For instance, a large proportion of India's imports consists of consumption goods and materials for producing consumer goods. These include a large proportion of foodgrains and raw materials such as cotton, which can to a considerable extent be supplied by countries of the region. While this is no doubt true, India's ability to pay for the imports has also to be taken into account. Currently, imports of foodgrains and raw cotton are mostly from those countries which are prepared to accept payment in rupees. Trade is a two-way traffic. India's ability to increase imports from the ECAFE region, of foodgrains and industrial raw materials, will depend on the success achieved in stepping up its exports to other countries of the region. And the report is not exactly encouraging as far as export prospects are concerned.

As regards cotton textiles, the

principal item of India's exports, the facts brought together in the report do not make a cheerful picture. It is evident that the position is likely to grow worse rather than better. India and Japan have both planned to export annually a combined total of about 2,450 to 2,550 million yards of cloth by 1961-62. In addition, China (Taiwan) and Pakistan, which used to import cotton textiles, have made substantial progress in textile production, and hope to export sizeable quantities of cloth in the near future. The four countries together (not to mention Hong Kong, which is the principal exporter of cotton cloth but whose future plans are unknown) have based their plans on expected exports of the order of 2,600 to 2,700 million yards. Meanwhile, a number of traditionally importing countries have also undertaken cotton textile production on a large scale, and some of them are aiming at self-sufficiency. The present level of imports of these and other importing countries is about 800 million yards. If these trends persist, says the report, it is evident that the major producers will have either to find additional markets outside the region or to revise downwards their targets of cotton textile production. As far as India is concerned, it may not be necessary to reduce targets of textile production in view of domestic demand, but it will be necessary

to explore possibilities of replacing exports of cloth by exports of hardware. It is, however, as well to recognise that it will be a long time before the products of the engineering industry are able to make up for the loss of textile markets. With the region as a whole, and with most of the countries in the region, India's trade is in deficit.

The question of stepping up exports to fill the gap is of particular importance to Indian manufacturers, especially in view of the threat held out by the Minister for Commerce and Industry, in his address to the Export Promotion Advisory Council, to resort to a policy of compulsory exports. The Minister's reference to expansion of the role of the STC left many businessmen laughing in their sleeves. With all respect to this rapidly growing organisation, and its achievements, so far it has been able to show results only in fields where it is not called upon to face competition. The STC does not cut a convincing figure as the agency for pushing up India's exports in the highly competitive markets of the ECAFE region.

But the Minister's suggestion that the industries that cater to the Indian market must earn their own foreign exchange to meet their import bill for materials and components, is altogether a different cup of tea. Though Mr Lal Bahadur Shastri said that Government was seriously thinking of putting this policy into action, it is learnt that it has not yet arrived at a firm decision. The problem of enforcing compulsion bristles with numerous difficulties. It may also create complications in the relations with those whose goodwill the Government is anxious to cultivate. The World Bank, it is said, takes a dim view of such desperate expedients of earning foreign exchange.

Nevertheless, the fact that Government is now thinking in terms of introducing a policy of compulsory exports is a measure of the failure of the "incentives" on which it has relied so far. The actual position regarding export promotion measures was clearly and succinctly stated by the Minister for Commerce and Industry in his address to the Export Promotion Advisory Council. Rejecting the demand for more incentives, he said, "Whatever incentives or benefits the Government might give, it would never make exports more profitable than sales in the sheltered and highly profitable internal market." A special effort, therefore, has to be made by units in an industry and industry as a whole, to ensure that exports do take place. Where exports have to be made at reduced profit or even at a loss, there is justification for a measure of compulsion to spread the loss equitably among all the units engaged in the industry.

Markets

JUTE

Uptrend, despite Control Order

AS indicated in the Press Note of the Indian Jute Mills Association of 28 February announcing the voluntary fixing of a ceiling on raw jute prices and other steps to curb speculation, the Government of India promulgated with immediate effect last Friday the Jute Licensing and Control Order under the Essential Commodities Act. The Order provides for the licensing of dealers in raw jute and jute manufactures, fixation of maximum and minimum prices both for raw jute and jute goods, regulation of stocks of jute held by mills and requisitioning of raw jute and jute goods. Under the Order, the Jute Commissioner is authorised to issue licences to dealers, in raw jute and jute goods from year to year. In granting the licence, the stock of raw jute or jute goods available in the locality, the volume of business ordinarily carried by the applicant and other relevant factor would be taken into consideration. The Order also empowers the Licensing Authority to suspend or cancel licences under certain circumstances. The Jute Commissioner is further authorised to fix maximum and minimum prices at which raw jute and jute goods may be purchased or sold. The maximum quantity of raw jute, which the manufacturers may buy or have in their possession will also be prescribed by the Jute Commissioner. The Jute Commissioner has been authorised to requisition stocks to ensure the equitable distribution of raw jute and jute goods. He will also have the power of entry and inspection to ensure compliance with the Control order. Those who contravene the provisions of the Order will attract punishment under Section 7 of the Essential Commodities Act.

It will not be correct to say, therefore, that the promulgation of the Order is a new step by Government in the direction of checking the rise in price of raw jute and jute goods. It is only a continuation of the action agreed upon at the joint meeting of the IJMA and the Government. The Order confers far-reaching powers on the Jute Commissioner, but the IJMA Press Note has pointed out that "it is not however intended to use these powers, except those in respect of the requisitioning of raw jute and in certain circumstances, of jute goods provided the IJMA

can effectively operate a voluntary scheme for a maximum price for raw jute." The Order, however, will further strengthen the hands of the IJMA, as it clearly details what will happen in case the voluntary price regulation scheme fails. It would appear that the task of the IJMA is by no means easy, as its experience in regard to the quota system for raw jute is reportedly not very happy. Says the Jute Bulletin of the Indian Central Jute Committee in its February issue: "Had it (the quota system) operated half so effectively as claimed from influential quarters, the stock discrepancies between the different units of the industry would by now have been nearly evened out. The system has run on a purely voluntary basis. And breaches have been reportedly widespread. The measure of individual restraint necessary for successful operation of a self-regulatory scheme at times of crises is rarely forthcoming in jute trade." Referring to price behaviour for standard goods, the Bulletin observes: "The squeeze on ready goods in the Calcutta bazar would have relaxed appreciably had the mills come forward to release part of their large unsold stocks." One of the voluntary measures announced by the IJMA on 28 February is its undertaking to impose limits on the amount of unsold ready stocks that may be held by its members. Judging from the fact that Assam Bottoms is being quoted for the past fifteen days or so at the prescribed maximum level and that prices of jute goods, too, are somewhat subdued (they are, however, displaying a hardening tendency lately), it is to be inferred that the new voluntary regulatory measures of the industry are helping keep the situation under control.

In the meantime, the figures pertaining to stocks of jute goods at the end of February, production of jute goods during the month and US Burlap consumption and stocks are of a variety that tend to exert an upward pressure on the prices of jute goods. Total stocks at 83,800 tons show a decline over the previous month of 900 tons. At 2,400 tons, hessian stocks show a decline of 4,500 tons, indicating increased foreign offtake. The other two categories, sacking and other goods, are each higher by 1,800 tons at 47,600 tons and 12,200 tons respectively. There has been a rather steep fall in production, which is placed at 77,400 tons for all categories put together. This compares with 86,200 tons in January. The decline in February

output is explained by the fact that mills had worked only 161.5 hours as compared with 189 hours during the previous month. Apart from February being a short month, mills' working had been reduced to 42½ hours a week from the first of the month. There had also been a further loss of 8.5 hours due to the strike of workers in most jute mills on 13 February. Although US burlap consumption in February had amounted to only 72.9 million yards as against 73.7 million yards in January and 75 million yards in the corresponding month of the previous year, the market is reacting to the news quite bullishly. Presumably, it is thought that at the present high prices for hessian the figure is to be deemed satisfactory. Moreover, since stocks at the end of the month have been run down to 246.5 million yards from 257.1 million yards at the end of the previous month, the expectation is that US buying will show an uptrend during the current and succeeding months.

The jute goods market ruled fairly steady during the early part of the week, but following the promulgation of the Jute Control Order last Friday, sentiment was depressed with a consequent decline in the rates. The onset of the reactionary trend is inexplicable because the Control Order had been clearly foreshadowed in the IJMA Press Note of 28 February. As the week progressed, however, sentiment improved with goods prices regaining most of the lost ground, recovery having been aided by the very good statistical position as revealed by the figures for stocks, production and US burlap consumption during February.

The raw jute market ruled unchanged with business passing at the maximum rates. The outlook for the next jute crop seems to be getting brighter and brighter. There are indications that sowings will be both early and large in India. In Pakistan also, efforts are being made to harvest a big crop. The Pakistan Government has planned to produce 7.4 million bales of jute and concerted measures are likely to be made to obtain sowing even in excess of the target fixed.

TEA

Fall in Exports

ACCORDING to figures released this week, exports of North-East Indian tea have declined sharply to 23.2 million pounds in February from 33.9 million pounds in the corresponding month of last year. Total shipments in the eight months ended February 1961 are also lower at 310.37 million pounds as compared to 331.51 million pounds in the corresponding period ended February 1960.

While tea shipments to the UK are nominally lower at 211.51 million pounds during the period from July 1960 to February 1961 against 212.98 million pounds in the eight months ended February 1960, those to all other countries have fallen sharply to 99.88 million pounds from 118.54 million pounds.

There was a substantial decline in exports to the Middle East area. Exports to the European countries have also shown a decline. Shipments to the USA and Canada have also fallen to 11.64 million pounds and 8.03 million pounds from 14.2 million and 8.54 million pounds respectively in the corresponding period ended February 1960. Exports to the USSR have, however, improved from 15.76 million pounds to 16.8 million pounds and to Iran from 6.21 million to 7.6 million pounds.

Meanwhile, in the export sale held in Calcutta this week, offerings were 36,173 packages. The majority of the offerings comprised end-of-the-season teas. There was a strong and general demand; but prices were very irregular. All clean and well-made orthodox teas and "teas for price" came in for strong competition and were quoted fully firm to firmer.

The few bright best liquoring CTC teas were also sold at dearer

A VERY PROFITABLE INVESTMENT

Small Monthly Deposits steadily growing into a substantial saving after 46 months.

G. S. SUNDARAM,
SECRETARY.

rates, while residual types in this category were in good demand. The poorer plain Fannings, however, declined by 5 nP to 10 nP per kilo. No rates are issued this week, as there are insufficient quotable teas on offer.

In the Internal Sale, offerings consisted of 21,994 packages of Dusts and 1,603 packages of Leaf grades. There was a good general demand for dusts. Orthodox descriptions ruled fully 10 nP to 15 nP per kilo easier although the small and selected teas in this category were better supported. Legg-cut teas were irregularly easier and, where leaf was fibrous, prices registered a drop of up to 20 nP. CTC dusts were irregular and demand was selective with quality and leaf appearance, the poorer sorts being easier particularly the fibrous kinds which were virtually neglected.

Clean mediums were, however, sold readily at prices which were up to 15 nP below last rates. The

small and powdery descriptions met with better support. The good and the best CTCs were keenly competed for and were sold at enhanced rates. Following prices were quoted:—Plain Orthodox Dust Rs 4.55 to Rs 4.70; Medium Assam Dust Rs 4.65 to Rs 5.00; Legg-cut Dust Rs 4.85 to Rs 5.20; Medium Assam CTC Dust Rs 5.40 to Rs 6.00 and Good Assam CTC Dust Rs 6.20 to Rs 6.60. Leaf grades were sold at irregular rates.

There will be no export sale next week. The final clearing-up sale will be held on 27 March 1961.

In the Cochin market, a total of 463,000 kgs of Leaf tea was offered for export. Against good general demand, plain and low medium teas were fairly steady. Medium and good medium sorts were firm and sometimes dearer. Nilgiri teas were very irregular.

In London auction, offerings were 21,322 packages including

20,686 packages from Northern India. There was a quieter tone and, except for standout teas, prices eased slightly, particularly towards the close of the sale.

There is now a growing feeling that the effects of the cut in the export duty have been exaggerated considering the rise in the excise duty. The net benefit of the export duty reduction, after allowing for the excise duty increase, works out to 2.5 nP a kilogram for tea grown in Zone I; 3 nP a kilogram in Zone II; 2 nP a kilogram in Zone IIIA and 1 nP a kilogram in Zone IIIB. It looks as if the latest fiscal changes will bring negligible benefit, if any at all, to the tea industry as a whole. The quality tea producers from Zone IIIB will be much worse off if they sell their tea in India, but only slightly better off if they sell it abroad. The Commonest tea producers from Zone I may be slightly better off, but only to the extent that they export their tea or sell

it in packages. In fact, however, most of the cheapest teas are sold loose and will, therefore, bear a heavier duty. All the Finance Minister has done is to give some minor incentives to export more tea and to sell more of it in package form.

COTTON Smart Recovery in Futures

COTTON futures staged a smart recovery during the past week thanks to renewed buying, and short covering. The prospects for an early amendment to by-law 61 of the East India Cotton Association relating to the invoicing of back rates in respect of rejected tenders and the consequent frantic buying was the main supporting factor for the sudden spurt in prices. The Indian Cotton Mills Federation's decision to stabilise cotton prices in the country by making suitable purchases from time to time also fanned the enthusiasm. Sentiment was also influenced by the growing realisation among the traders that there would be fewer tenders in the maturing contract. The previous week's unpropitious news of enhanced excise duty on some varieties of cloth and cotton yarn was completely discounted by the new factors which guided the sentiment. The announcement of the new deal for the import of 0.3 million bales of US cotton under PL 480 failed to produce any effect on the market. Jarilla April after opening last week at Rs 559 languished for a while and came down to Rs 568.50 and later rose to Rs 591 but on Wednesday last declined to Rs 588 per three quintals. The newly started August contract also exhibited a small rise in prices but the difference between the two contracts narrowed considerably as the week advanced.

Trading in the spot market at Sewri was fairly active owing to sustained mill demand. In the initial stages, the mills remained inactive due to the imposition of new duties but the demand picked up gradually. Demand was centred mainly on Vijay, CO 2, Laxmi and Kalyan cotton at firm prices. The deterioration in the quality of Southern long staple crop prompted interest in these varieties.

In the foreign section prices of African growths ruled easy partly due to the easier advices from Kampala and partly on account of the eagerness of holders to liquidate their stocks at current levels. Sudan prices firmed up consequent to the higher prices realised at the auctions held at Khartoum.

The Committee of the Indian Cotton Mills Federation is reported to have decided to request the Government of India to withdraw the new levies since it considers the new imposts would not only land the trade in difficulties

but also impede production. The Committee considered the problem of stabilising the prices of Indian cotton in the interest of the growers and authorised the Chairman to resort to adequate measures including the purchase of such quantities and qualities of cotton as he thought necessary. Relating to the quotas of foreign cotton, the Committee is of opinion that quotas should be based on all allocations made to mills in the 1959-60 season.

Mr Lal Bahadur Shastri, the Union Minister for Commerce and Industries, in his address to the Export Advisory Council, has warned the industry of its failure to contribute its mite in the matter of exports and briefly outlined the measures by which the Government intends to rectify this none too happy situation. He further stated that if the situation fails to show any marked improvement, the Government will be forced to impose cuts in import allocations by compelling such industrial units to earn foreign exchange by a higher level of export by stepping up their production. He pointed out that the industry is leaning heavily on the sheltered domestic markets and hence its indifference to stimulate exports.

Imports of foreign cotton into India from 1 September to 25 February totalled 988,291 quintals as against 452,061 quintals in the corresponding period in 1959-60.

Description	1959-60	1960-61
American	61,114	670,742
Sudan	97,114	65,951
Egyptian	204,287	64,170
East African	75,126	141,967
Pakistan	7,946	4,722
Other Sorts	6,474	40,739
Total	452,061	988,291

Exports of Indian cotton to foreign countries during the same period aggregated 132,470 quintals indicating steep fall of 65,226 quintals from the relevant figure in the previous season.

Countries	1959-60	1960-61
UK	2,893	450
Continent	13,924	7,780
Hongkong	6,828	13,192
Japan	160,434	110,465
USA	11,352	10,480
Other Countries	2,265	123
Total	197,696	132,470

PIECEGOODS

Active conditions were visible in the Bombay piecegoods market with the end of the Holi festival. This trend was fairly evident in the domestic sector and most of the buyers resumed their purchases, although the offtake was not up to the expectations. Bihar, UP and South India accounted for a larger quantum of these styles. Their interest covered almost all the seasonal goods like mulmul, doria, cambric, and fancy fabrics. The mills utilised this opportunity

to dispose of a great part of their old stocks. The main reason for withholding the new stocks was the new imposts levied by the Finance Minister. Unless the mills are clearly apprised of the implications of the new tax proposals, the movement of the goods will be restricted and a possible shortage of the goods in the market cannot be ruled out.

The disparity in prices left the exports featureless. The prevailing prices of Indian goods are reported to be 5 to 10 per cent higher than the estimate of the buyers. Consequently, the business transacted was pronouncedly meagre, though enquiries were considerable. Stray business was done with the UK in the usual styles at a slightly higher price. Sudan's interest was confined to sheetings, voiles and other inferior varieties. East Africa accounted for a small quantity of drills, sheetings and processed cloth. Ethiopia and Eritrea focussed their attention on sheetings and drills. Singapore was

reported to have purchased a small amount of bleached long-cloth, grey sheetings and canvas. Indonesia showed some interest in piecegoods but nothing came of it.

COFFEE Record Coffee Output

THE increase in the duty on Coffee is an unfortunate one. With a 50,000-ton crop in view and the steep fall in world prices, the Coffee Board is faced with the almost impossible task of selling more than two-thirds of the crop at a price which will sustain growers' interest in coffee. An expanding internal market is the obvious solution and the increase in the duty on coffee by 33 per cent is a very harmful step.

Coorg is yet to complete picking; but blossoms have appeared only in scattered patches. Planters'

estimate of the current coffee crop for Coorg is higher than the earlier Board estimate and the figure quoted at 20,000 tons is the highest ever to be harvested in this district.

According to the annual report issued by the Coffee Board, 1959-60 was another milestone in the progress of coffee production in India, with the final estimates of the crop being placed at 49,380 tonnes—the highest production ever recorded. Receipts into the Pool totalled 49,006 tonnes including 2,146 tonnes of Arabica Plantation seeds. The export allocation crossed the 20,000 tonnes mark during the period under review.

Estimates of the 1960-61 coffee crop are 53,355 tonnes, made up of 31,340 tonnes of Arabica and 22,015 tonnes of Robusta. If these estimates are to materialise, Indian coffee production will be crossing the 50,000 tonnes mark for the first time. The stock position, as on 31 July 1960, showed a balance

The Birthday Gift

Mother stitched a pair of trousers for his birthday and sent them to the laundry so that they would look fresh, crisp, new. But they shrunk—she had forgotten to look for the label 'Sanforized'!

If only she'd taken a little more care in the selection of the fabric, these trousers would have retained their immaculate fit even after many, many washings.

Make certain you get the full measure of value of the material you buy—

Look for

on the label

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2

Accurate cost accounting begins with HONEYWELL FLOW METERS

HONEYWELL FLOW METERS
HANDLE THESE AND
MANY OTHER FLUIDS

Fluid materials

Brown Recording-Integrating Flow Recorder

What is the cost of process flows for the various production departments of your plant? You must have accurate records of the quantities of steam, water, air, chemicals, fuel oil and other fluids supplied to each department to know where your money goes and why. Honeywell Flow Meters aid cost accounting by providing the information you need.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products—more than 13,000 of them—fall into these three principal categories:

Honeywell
First in Control

P585-100/1-6

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

of 32,193 tonnes. A quantity of 12,004 tonnes was to be sold for export out of the allocation. A salient feature of the period under review was the decision to hold Pool sales in at least one important centre in each State.

The Coffee Board has released 298,800 kilograms of coffee for export to bilateral account countries and 2,370,600 kilograms for export to non-bilateral countries out of the 1960-61 crop. The quantities consist of:—To bilateral countries—Plantation A 298,800 kilograms; To non-bilateral countries—Plantation A 1,642,500 kgs; Plantation B 142,200 kgs; Arabica Cherry 197,400 kgs and Robusta Cherry Flats 165,000 kgs. The last date for the tender is 23 March 1961.

Unexpected sales of 42,000 bags of Robusta at the reserve price of 126sh per cwt by the Uganda Coffee Board have given new life to the belief that a price-fixing agreement among African producers is again imminent. A good deal of this is believed to have been sold for forward shipment, up to June/July and a large proportion is thought to have gone to a very few purchasers. Almost all sales were reported to have been made to Mombasa shippers.

Although the world's coffee supply, with better crops expected from Africa and Brazil, is moving rapidly ahead of demand, the discount on futures positions in London is extremely small. This is taken as indicative of market caution. Dealers are thought to have adequate, if not excessive, stocks on hand.

PEPPER

Conditions in the Cochin Pepper market have remained quiet due to the absence of foreign demand. The USA used to be a brisk buyer at this time of the year. Strangely enough, it is now sitting on the fence and watching the trends in the markets of origin. The rate is quoted at Rs 391.25.

The disposal of the 1960-61 crop, estimated at 25,000 tons, has made very little headway so far. Competition from Singapore is believed to be responsible for the apathy of the US buyer toward Indian pepper. According to some reports, the Sarawak Government is encouraging liquidation of stocks in view of the proximity of the new season, which starts in May. Market circles at Cochin have expressed the doubt whether the little strength Indian pepper gained from the recent orders from the Communist countries can be maintained. It is, therefore, felt that, unless substantial orders are coming from other countries, the market is likely to weaken.

In New York, the black pepper market is displaying a steady tone, reflecting continued grinder offtake in spot and nearly afloat positions in the face of tightness of stocks in these positions by

sellers here. Some sources say that grinders have permitted holdings to drop to low levels and are now forced to cover. Malabar/Lampong black spot is quoted at 50 cents per pound.

RUBBER

According to the monthly report of the Rubber Manufacturers' Association, New York, consumption of new rubber in the USA for the month of January amounted to 122,351 long tons as compared with 111,967 long tons in the previous year. Natural rubber consumption came to 35,225 long tons as compared with 31,891 long tons. Consumption of all types of synthetic rubber, in January, amounted to 87,126 long tons as against 80,076 long tons.

Synthetic rubber accounted for 71.21 per cent of total new rubber for the month of January, the corresponding figure for December 1960 being 71.52 per cent. Production of synthetic rubber was 105,877 long tons as against 104,659 long tons in December. Reclaimed rubber consumption for January was estimated at 22,650 long tons as against 19,921 long tons.

FOODGRAINS

Thanks to poor arrivals of "Rabi" crop, steadier conditions were noticed in the Hapur Foodgrains market. Wheat and Gram registered modest gains, while other grains were steady. With the beginning of new peas arrivals, the Pulses section remained quiet.

Wheat prices rose by 37 nP a maund, to be quoted at Rs 17 for dara quality and at Rs 18 for the farm variety. Wheat imported from the Punjab was lifted at Rs 17.50 and that sold by the Uttar Pradesh Government at Rs 18.25. The Rice section was quietly steady as consumers' demand was gradually increasing with the change of the season.

Gram prices recorded fractional gains on firmer advices from the Punjab. Stocks left with the traders were also reported to be small. Maize was quoted slightly lower at Rs 13 for the red quality. Jowar eased fractionally on advices from the producing areas of the South. The quality of new peas reaching the market was damp and was lifted at Rs 12.87 a maund.

SUGAR

Sugar markets remained generally steady. In the Hapur market, the rate was quoted at Rs 112.50 a bag.

KHANDSARI

The market for Khandsari remained depressed and prices sought lower levels, as stocks were

Economy and Speed of Construction at a New Township

At the New Township at Nahorkatiya being built by Oil India Private Limited, the flat roofs of the buildings consist of 2" to 2½" thick x 14" wide precast prestressed concrete planks of span 12 to 20 ft. placed butting against each other. In-situ concrete 1" to 2" thick was laid over the planks to form a composite roof slab of 3" to 4½" thick. Foam concrete 2" to 4" thick was laid over the roof for additional heat insulation. The roof was finally waterproofed with Stp "Tarfelt". Precasting and absence of shuttering have enabled each bungalow to be completed in all respects within a month.

reported to be mounting and demand was not very active.

GUR

The market for Gur also remained depressed. Daily arrivals in the Hapur market were at an average of 2,000 maunds, while loading was completely stopped except on Sundays. Demand for the commodity was slack from the consuming areas of Gujarat as it was being met from the producing areas of the South where the quality reaching the market was reported to be better.

CHEMICALS & DYES

Following the imposition of the new excise duties and countervailing customs duties, an air of confusion prevailed in the Bombay market for Chemicals and Dyes. Even though the market had prepared itself for absorbing the shock of the new imposts long before

the actual announcement, it could not grasp the exact implications of the proposals largely because of the different interpretations.

Meanwhile, the two leading manufacturers, Amar-Dye and Atul, instructed their distributors to raise the prices of their products to the extent of the duties imposed. As a result of the market being amply supplied with stocks and of the general apathetic attitude of the consumers at the higher levels, the full extent of the new duties could not be absorbed in the prices. There was, therefore, a rise from 5 to 15 per cent effected in the sale prices by the dealers.

Another leading manufacturer, ICI, is expected to announce its new prices very shortly. In view of the new import policy expected by the end of the current month, the stockists are not willing to enter into new commitments. The volume of business became restricted in consequence.

18 March 1961

YARN

Following the revaluation of the German Mark by 4.75 per cent, there was a further extension of the speculative rise in the prices of Yarn on the Bombay market.

The confusion that prevailed over the question of customs duty and excise duty has not been officially cleared up. This has kept the powerloom and handloom weavers away from the cotton yarn market.

Meanwhile, the Silk and Art Silk Mills' Association is expected to send a deputation to New Delhi to impress upon the Union Finance Minister that the duty on yarn is not passed on to the weaver and that the countervailing import duty on yarn is removed.

BANGALORE SILK

During the week under review, there was no change in the prices of filature raw silk. The prices for 20/22 Dr. continued to be quoted between Rs 80.48 and Rs 83.23 per kgm. Prices of cottage basin silk and charka silk registered a further increase of about Rs 1.10 during the week due to inadequate supplies to the market from the production centres. Cottage basin silk was quoted between Rs 73.85 and Rs 76.06, while charka raw silk of different grades ruled between Rs 52.91 and Rs 71.65 per kgm. There was moderate demand for raw silk during the week.

Rates of reeling cocoons maintained a steady trend, being quoted between Rs 3.40 and Rs 4.70 in Mugur area, between Rs 4.25 and Rs 5.00 in Channapatna area and between Rs 4.50 and Rs 6.00 per kgm in Sidlaghatta area. There was only moderate harvest of cocoon crops during the week, although the weather conditions had improved.

Mysore race seed cocoons showed a decline of about Rs 1.75, being quoted between Rs 5.00 and Rs 8.00 per 1,000, while Foreign race seed cocoons registered an increase of about Re 1.00, rates being quoted between Rs 5.00 and Rs 11.00 as against Rs 4.00 and Rs 10.00 per 1,000, quoted last week.

GOLD & SILVER

Price movements on the Bombay Bullion Exchange were rather irregular on alternate buying and selling. Indecision prevailed all over and operators were unable to judge the course of the prices by the deceptive performance of the spot market.

The Calcutta report that the Government would sell in the open market 100 tons of silver induced heavy liquidation. Calcutta, to which the market here was looking for inspiration, was unable to despatch anything. Moreover, unencouraging advices from that end also caused stagnation. Arrivals showed a decline at 14 bars as against an offtake of 20 bars. Silver (below .998) changed hands at 203.15 to Rs 203.40.

In the Gold section, arrivals were 6,000 tolas as against an offtake of 4,000 tolas. Chaitra delivery showed a decline of 80 nP to 122.45. Ready rates moved between Rs 122.10 and Rs 122.15 with Sovereign ruling very firm at Rs 95.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange developed a hardening tendency. The bullish spell was attributed to reduced offerings in the face of a keen demand. In the case of Groundnut, the upward trend in prices gathered fresh momentum due to paucity of supplies. With the arrivals of the new crop declining fast, crushers and vanaspathi interests had been finding it difficult to obtain their supplies. It was feared that many of them might be compelled to stop production in the near future or to switch over to other oilseeds and oils.

Reports from Madras indicated a shortage of supplies. Saurashtra advices were also distinctly bullish. No trader was inclined to anticipate any appreciable fall in the groundnut prices, at least before the end of April when arrivals of the summer crop seeds in Madras would commence.

The soaring prices of groundnut seeds and oil appear to have caused some anxiety in official circles. The Forward Markets Commission was reported to be considering the desirability of applying the Forward Markets Regulation Act to

non-transferable specific delivery contracts. Trade circles, however, felt that such a measure would only add fuel to the fire by diverting the future demand to the ready market. In the meanwhile, Groundnut Bold ready was quoted at Rs 54.50 and Groundnut Oil at Rs 22.25.

Prices in the Castorseed section spurted smartly with the Madras quality changing hands up to Rs 35. Bleak export prospects together with anticipations of increased arrivals from Hyderabad, however, checked the rise in the early part of the week. The rally towards the close was attributed to increased speculative support. While the recent devaluation of the Brazilian Cruzeiro was considered to be a bearish factor for Indian exports of castor oil, a section of the trade initiated strong rumours that Brazil had little castor oil to offer. In the absence of any reliable information regarding the latest supply position in that country, sellers rushed to cover their sales; and this imparted fresh strength to the market. Around firmness in the prices of seeds and oils, lower estimates of crops, slow arrivals at the terminal centres and a steady rise in the price of castor oil in the UK over the past few weeks induced professional speculators to take a bullish view of the commodity. Castor Oil, commercial quality, was quoted a Rs 14.90.

The market for Oilcakes was listless, but steady in sympathy with the seeds market.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,
We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1960.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, the Balance Sheet is a full and fair one, containing all the necessary particulars and report (i) that, in so far as to exhibit a true and correct view of the affairs of the Bank, according to the best of our knowledge and the explanations given to us and as shown by the Books of the Bank; (ii) that we have been satisfied; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The Audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

9th February, 1961.

THE BOMBAY DYEING & MANUFACTURING COMPANY LIMITED

NOTICE

The Annual General Meeting of the Bombay Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 6th April 1961, at 4-30 P.M., to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Accounts for the year ended 31st December 1960.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election, and to consider, and if thought fit to pass, the following Resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company, (and the relative Explanatory Statement for which is annexed hereto as required by Section 173 of the said Act):—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 71 years and who retires by rotation, be and he is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in the place of Mr. N. K. Petigara who retires by rotation, and being eligible offers himself for re-appointment.

5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

6. AND for the purpose of considering, and if thought fit to pass, (with or without amendment as may be permissible), the following Resolutions as Special Resolutions and/or Ordinary Resolutions as specified below:—

SPECIAL RESOLUTIONS

I. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Airfreight Private Limited, Bombay, (who are or may be

deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by one month's notice given by either side to the other, in respect of the supply or rendering of any service by Messrs. Airfreight Private Limited to the Company including the rendering of service as carriers of goods and travel agents; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Airfreight Private Limited, subject to the condition that all payments to be made to the Company by Messrs. Airfreight Private Limited shall be made within one month from the date of the sale or supply or any property or article or the supply or rendering of any service by the Company to Messrs. Airfreight Private Limited."

II. "RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft letter placed before the Meeting, and, for the sake of identification, initialled by the Chairman, purporting to be from Messrs. Gherzi Eastern Private Limited, Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to the Company, for the rendering of services by the former to the latter by way of planning a complete reorganization of the Spinning and Weaving Departments of the Spring Mills of the Company adopting modern processing and working methods, in consideration of which services the Company will pay a fixed fee of Rs. 1,97,800/-, and also a daily fee of Rs. 100/- per technician actually employed by Messrs. Gherzi Eastern Private Limited on the work, and conveyance and medical expenses as set out in the draft aforesaid."

III. "RESOLVED that, pursuant to Section 360 of the Companies Act, 1956 (as amended), and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Gherzi Eastern Private Limited (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by three months' notice given by

either side to the other, in respect of the supply or rendering of services as Textile and Engineering Consultants and Experts, by Messrs. Gherzi Eastern Private Limited to the Company; and in respect of the sale or supply of any property or any article produced, dealt in or owned by the Company and the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, subject to the condition that all payments to be made to the Company by Gherzi Eastern Private Limited shall be made within one month from the date of the sale or supply of any property or article or the supply or rendering of any service by the Company to Messrs. Gherzi Eastern Private Limited, and that payments made by the Company to the said Messrs. Gherzi Eastern Private Limited for services to be rendered by them shall be such as are deemed reasonable by the Board of Directors having regard to the nature of the services asked for."

ORDINARY RESOLUTION

IV. "RESOLVED that, pursuant to Clause (d) of sub-section (1) of Section 283 of the Companies Act, 1956 (as amended), and all other enabling provisions (if any), the consent of the Company be and is hereby granted to the Board of Directors of the Company be and is hereby granted to the Board of Directors of the Company borrowing moneys for the purposes of the Company from time to time, notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business), will or may exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose but so that the total amount up to which moneys may be borrowed by the Board of Directors shall not at any time exceed Rupees ten crores."

Explanatory Statement under Section 173 annexed in respect of the above Resolutions.

The drafts of the contracts and letter referred to in Special Resolutions Nos. I, II and III are open for inspection by any member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,
NOWROJEE WADIA & SONS
(PRIVATE) LTD.,
NEVILLE N. WADIA
Director

Managing Agents

UNITED BANK OF INDIA LIMITED

Regd. Office: UNITED BANK BUILDINGS
4, CLIVE GHAT STREET, CALCUTTA

NOTICE

NOTICE IS HEREBY GIVEN that the next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the UNITED BANK BUILDINGS, 4, Clive Ghat Street, Calcutta, on Monday, the 10th April, 1961 at 11 a.m. to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year 31st December, 1960;
2. To declare a Dividend;
3. To elect a Director in place of Sri J. M. Dutt who retires but offers himself for re-election and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

"Resolved that Sri J. M. Dutt who has completed 73 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

4. To elect a Director in place of Sri N. C. Datta who retires but offers himself for re-election and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

"Resolved that Sri N. C. Datta who has completed 82 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

5. To elect a Director in place of Dr. S. B. Dutt who retires but offers himself for re-election and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

"Resolved that Dr. S. B. Dutt who has completed 66 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

6. To elect a Director in place of Nawab Sir K. G. M. Farouki Kt. who retires but offers himself for re-election;
7. To elect a Director in place of Sri S. N. Ray who retires but offers himself for election and to consider and, if thought fit, to pass the following Resolution as an Ordinary Resolution:

"Resolved that pursuant to the relevant provisions of the Companies Act, 1956, Sri S. N. Ray be and is hereby elected and appointed a Director of the Company."

A notice in writing under Section 257(1) of the Companies Act, 1956, has been received by the Company in this connection.

8. To appoint Company's Auditors and fix their remuneration and to authorise the Board to appoint Branch Auditors and fix their remuneration under Section 228(3) of the Companies Act, 1956 as amended by Companies (Amendment) Act No. 65 of 1960.

SPECIAL RESOLUTION

The following Resolution will be moved as Special Resolution:—

9. "Resolved that the Board is hereby permitted if they so desire, to appoint Sri C. R. Sen, Chartered Accountant of 4, Clive Ghat Street, Calcutta, who is a relative of Sri B. K. Datta, Managing Director of the Company, as one of the Branch Auditors to audit some of the branches on a remuneration as paid in the last year or

with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

London, 1st January, 1961.

S. N. K. SUNDARAM,
Managing Director.

*Has Safe Deposit Vault.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have examined the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the audited returns of 4 branches and the unaudited returns from all the other branches not visited by us for the purposes of this report. Exemption from audit of these Branches has been obtained by the Bank from the Department of Company Law Administration, Ministry of Commerce and Industry, Government of India, New Delhi.

We report that—

- We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from Branches of the Bank;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Canara Industrial & Banking Syndicate Limited

Record Progress in all Directions

Unique Service to Investors

Mr T. M. A. Pai, the Chairman, on Banking Trends

The following is the statement of the Chairman, Mr. T. M. A. Pai, circulated with the Report and Accounts to the Shareholders.

Nineteen Sixty was a year of record progress and accomplishment for The Canara Industrial & Banking Syndicate Ltd. with an all-time high in net income, deposits and loans.

DEPOSITS AND ADVANCES

Total deposits of the Syndicate increased from Rs. 17.09 crores to Rs. 18.87 crores during the year, in spite of the adverse conditions of the money market. The increase represents a 10.4% rise over the previous year's figures. It is noteworthy that during the last 5 years the deposits have shown a very substantial improvement each year, and the deposit figures as on 31st December, 1960 were more than double of the 1956 figures. The pattern of deposits has almost remained the same, the preponderance of time deposits over demand deposits being a feature of our deposits. Time deposits were 67% of our total deposits in 1960 against 68% in 1959 and 66% in 1958. The percentage of Savings Deposits to total Deposits has risen from 17% in 1959 to 19% in 1960, which is a welcome feature as providing an index to the response of the people to the efforts that the Bank has been making to pool small savings.

The total advances including Bills Discounted stood on 31-12-60 at Rs. 12.24 crores and were 134 lakhs higher than last year's figures, and represent a rise of 12%. The total advances have been maintained judiciously at about 60% of the aggregate of capital, reserves and deposits of the Bank, the percentage for the 3 years 1958, 1959 and 1960 being 59%, 61% and 62% respectively. The proportion of secured advance to total advance has registered a rise during the year from 80% for 1958 and 1959 to 84% in 1960 which is again a welcome feature, in the light of the recent directives regarding clean credit. Our Advances now make up 60% of our earning assets and our Investments in Government and other securities and shares which stood at Rs. 6.17 crores, form 30% of our earning assets.

EARNINGS, EXPENSES AND DIVIDENDS

Gross earnings for 1960 amounted to Rs. 1.34 crores against 1.10 crores for 1959, and were 22% higher than in 1959 due to the improvement under advances. Interest received on advances and investments and discount on Bills discounted together account for

91% of the bank's earnings, the percentage being the same as in 1959. The earnings under commission, exchange and brokerage were 6% of the total earnings, and registered an increase of 20% over last year's earnings under the head, reflecting another welcome feature of an increase in collection business handled during the year. The net earnings of the bank which were at Rs. 25.22 lakhs amounted 19% of the gross earnings as against 18% last year and were 26% higher than last year's figures. Interest paid on deposits and borrowings accounts for a smaller proportion of the gross income at 39% for 1960 as against 42% for 1959 reflecting particularly the bank's relying more on its own funds for investments and advances and relying less on borrowings from other sister institutions. Establishment charges have taken up a higher percentage of the gross income at 30% for 1960 against 28% for 1959. The rise of Rs. 9.40 lakhs over 1959 figures under this head reflect both a growth in the number of staff which rose from 1402 in 1959 to 1606 in 1960 as well as increases in salaries paid from the previous year. Out of the net earnings for the current year 30% amounting to Rs. 7.50 lakhs has been transferred to Reserves and 25% amounting to 6.35 lakhs is to be paid out as dividends to shareholders and 38% amounting to 9.63 lakhs is set apart for payment of taxes. This represents 6%, 5% and 7% respectively of the gross earnings as against 7%, 4% and 5% under the same heads for 1959. The dividends payable to the shareholders as a percentage of the capital and reserves will be 7% this year as against 6% for 1959.

CAPITAL AND RESERVES

The Capital and Reserves of the Bank now stand at Rs. 89.71 lakhs as against Rs. 55.46 lakhs as on 31st December, 1958 and constitute 4.8% of the total deposits against 4.2% as on 31st December 1958. As providing an improvement in protection to depositors and a source of strength for the bank, the increase in the percentage of capital and reserves to deposits is another feature which is welcome.

INVESTORS AGENCY DEPARTMENT

During the year, the bank pioneered a unique investment service, the first of its kind to be introduced by any bank in India. A separate department known as the Investors Agency Department was inaugurated on the 30 April, 1960 for rendering this investment service. The Department aims at giving to the Investor expert financial guidance through its specially trained personnel to enable him to invest his surplus funds in sound and remunerative shares and securities and envisages accumulation of the periodical income thereon to be re-invested similarly. The investment scheme which works on compound interest tables would enable a building up of an investment of Rs. 1,38,000/- for an annual investment of Rs. 10,000/- over 35 years with the yield at 7%. The response to the scheme has been very encouraging particularly from middle class investors who have been quick to appreciate the merits of an organised investment programme with expert guidance.

STAFF TRAINING

The Staff Training College of the Bank has been doing very useful work in the training of

young men and women for absorption into the Bank's service. During the year 83 candidates trained by the College were taken up by the Bank into regular service. Since its inauguration in July 1957 the College has been able to train up 272 persons seeking services in the Bank, and its services in providing these men and women with the necessary technical knowledge and inculcating in them a spirit of service have been most invaluable. Attention is also being given to training of the higher personnel. Mr H. N. Rao, a Divisional Manager of the Bank was sent abroad to participate in the deliberations of the 13th International Summer School held in Noordwijk, Holland and to receive advance training in banking.

BANKING TRENDS

Coming now to the general banking conditions in the country, I would like to make the following observations.

The failure of one or two banks during the year was not only a failure of these banks but of the Indian Banking System as well to some extent, which after the Banking Companies Act and the control and regulations of the Reserve Bank of India had considerably toned up and continued to build up growing public confidence in itself over the past decade. This resulted in a number of smaller Banking Institutions in some parts of the country coming to grief and brought about a state of mind in the vast majority of the people which is not conducive for the development of banking in the country. In spite of all efforts that all the banks in this country have put in over the last several decades, even now 85% of the people in this country have little to do with modern banking. Growth in the habit of thrift and accumulation of savings and channelising them through an organised banking system continues to be a task and responsibility of the Banking system in this country as well. Anything therefore that comes in the way of this should be considered as a set-back. Banks in India have failed to keep up the tempo of rising deposits in the year 1960 which they experienced in the earlier years of 1958-59. Nor have the State Bank of India or the State Subsidiary Banks been successful in diverting large deposits from the Banks in the private sector to themselves. As long as Banks have to work in the private sector, it is their duty to see that they voluntarily assume responsibility for any weakness inherent in the banking system at present. Failure to do so would be to make the people of this country feel that safety of their funds could only be guaranteed by the banks being taken over by the public sector and identify safety and security only with the idea of state management. Judged from that point of view, I have often reflected

whether the tragedy that befell the banking system in Kerala could have been possibly averted or mitigated by the bigger banks in India willingly coming forward and helping the Reserve Bank of India to formulate a constructive policy in rescuing them. Confidence that has been shaken now in the system deserves to be reinforced and could be done not only by thinking of re-organisations and amalgamations, merely with the idea of eliminating the smaller substandard units so that the recrudescence of the trouble that we experienced this year might not be repeated, but through a positive assumption of the responsibility by all the bigger banks in this country that they stand guarantee for the safety of every rupee in the banking system in this country. This should be done by the Indian Banks' Association speaking for all the major banks in this country with the active assistance and guidance of the Reserve Bank of India. Recently there have been attempts in certain amalgamations of the smaller banking units with bigger banking units. One of the major problems facing this process would be the integration of the staff of these various units. These amalgamations also should not result in the bigger banking units closing down offices in the smaller places as with the increased emoluments given to the new staff and the maintenance of their own standards of management, many of the branches might become uneconomic. If the mergers and amalgamations are to result in closing down such uneconomic branches, many of the places which are now served by banking institutions however inadequately, would be deprived of this facility. The mergers also should take place in an atmosphere of goodwill and perfect understanding. The smaller banking institutions have had their own place in the scheme of things. Unless the bigger banking institutions which take them over are willing to adapt themselves to the needs of the smaller places and the small type of accounts which are now being catered to by the smaller institutions, the vast majority of the people would not consider amalgamations favourably. There has been an unconscious fear among the public that they might even be deprived of normal banking facilities which they are now enjoying. By the very nature of the business transacted by the banks in this country, no bank can develop by identifying itself exclusively with any region or caste. With the growth of industry and commerce in dynamic proportions in recent years, banks are being called upon increasingly to handle different types of business with ever increasing resources. And it is only big institutions with larger resources that are finding themselves at an advantage in discharging these responsibilities. With the increasing control of the Reserve Bank of India and the

Companies Act there is no attraction for running smaller banking institutions nor are there the prospects of the shareholders getting more attractive dividends through the maintenance of their small size. They have to be competitive, offering higher rates of interest on deposits and enter into field of losing competition in the matter of advances. The desire of the bank personnel to be treated alike wherever they are serving, be in a smaller or bigger institution, cannot be resisted for long, unless the smaller institutions are willing to lose their able personnel for the bigger ones by and by. All these difficulties should help smaller banks to make up their minds to lose their identity with bigger ones voluntarily at the present stage of development of banking in this country, so that the adjustments that are brought about are smooth, effective and to the advantage of all.

If we have to get all the smaller institutions to merge with bigger institutions now, my own suggestion is to have another bank floated specifically for this purpose, the capital of which could be shared equally between the Government of India. The Reserve Bank of India, State Bank of India and all the Scheduled Banks. Each Scheduled Bank may be asked to contribute by law if necessary, capital proportionate to its own capital and reserves. This institution must see that every depositor of smaller institutions which find themselves in difficulties, sometimes not of their own making, is assured of the safety of his deposits by taking over all assets and liabilities of these institutions guaranteeing their deposits in full and taking over their staff. This might facilitate the integration of the staff also and create immediately the confidence in the Banking System itself. I wish the Indian Banks' Association takes a lead in this matter. Banking in this country has to evolve itself in a manner most advantageous to the economic and industrial development of this country; consistent with safety it has to continuously adapt itself to the changing conditions and changing values. In a rapidly developing economy things which had no value before, are getting economic values and the banker has to play a more effective role in national re-construction through his intimate knowledge, experience and enterprise of men and matters. Very often trouble has arisen because the Banking system in this country has either identified itself with the interests of the shareholder, which of course is regulated through the Companies Act or with the depositor which is sought to be looked after by the Banking Companies Act, but nothing positive has been done to identify it with national interests. It has to be realised that only through a well organised and effective and efficient banking system, country's needs which are ever changing and complex, could

be met and therefore whenever the State Governments enact legislations like the Debt Relief Acts or similar legislation, effects of such legislations on the banking system should not be lightly treated. It is the Kerala Debt Relief Act that was to a very large extent responsible for some of the grief of banks in Kerala which overnight found frozen the security and the advances in several cases, making many transactions sticky and converted short term advances to long term ones. The concept of liquidity is the ability of the banker to realise the security readily without loss in the market. Now this concept of liquidity could be varied by necessary changes in law. In several parts of this country, one cannot ignore that the people's savings are preserved mostly through investment in landed property and their habits in investing in shares or government securities, however desirable it may be from many other points of view, have been slow-growing. Therefore very often whether it be the industrialist or business man, whenever he has to provide any security for advance, what he offers is the landed property or buildings that he has. Banks are finding it difficult to accept them because of the difficulties of realisation of these assets which could be done only by going to a court of law involving themselves in very lengthy and costly legal processes. I do wish necessary changes in legislation are brought about which could enable such securities like landed property given to Bank easily realisable without recourse to a court of law. It is also necessary that wherever litigation for the realisation of the dues to the Banks are involved, delay involving court orders as it often happens now-a-days should be cut short, so that the security may not depreciate in value or the ability of the borrower is not adversely effected on account of this delay. In short, there should be a better appreciation of the role that banks play in the economic development of this country and help them to do so effectively. They should be thought of not only to keep people's monies safe, but as a dynamic organisation to canalise them for productive purposes in the country.

I wish to express my sincere thanks to our valued customers for their continued patronage and to the Bank's Directors, Shareholders and Employees for their loyalty and efforts. I am also deeply appreciative of the enthusiasm, ability and hard work that our General Manager Sri T. A. Pai has given to the institution and the continued support and co-operation which our employees have shown during the year, but for which our progress during 1960 might not have been as encouraging as it has been. I am confident that with this continued support and zeal the Syndicate will reach yet another landmark in the coming year.

For the Investor

INVESTMENT GOSSIP Renewed Support

TRADING on the stock market is showing a firm trend since Wednesday. During the first half of the week it appeared that operators were having second thoughts on the Budget after all—second thoughts which were inducing caution. There is no gain saying the good points of the Budget but not all are agreed that the heavy indirect taxation will leave the corporate sector completely unscathed, considering the fact that a high proportion of the additional revenue has been sought to be obtained from levies on industrial machinery and capital goods imports.

It has been argued that production cost would go up with a consequent reduction in industrial profits because of some of the indirect taxation measures. There is also the lurking fear that Authority may suddenly clamp down some regulatory measure on the stock market if price levels continue to scale new highs. The imposition of making-up prices for some shares by the Bombay Stock Exchange Authorities points to the existence of such a danger. It would appear that reports of a further incursion by the Chinese into Indian territory has been partly responsible for weakening the bullish fervour.

Above all, the bankers' decision to increase deposit interest rates coupled with the indication of a rise in banks' lending rates seem to have cooled off the buying spree that had continued unabated from the beginning of the month. Even so, there has been nothing in the trading pattern to indicate that the bull phase is coming to an early end. For, there has been a fairly powerful offsetting influence in the shape of some good corporate news. A large number of companies having completed their expansion plans during the Second Plan period are on the threshold of substantially increased production and many others are fast reaching a stage that offers interesting possibilities.

From the pattern of trading during the past few days it is clear that interest is mainly confined to two categories of shares. Shares of companies which are considered to be most likely to issue bonus shares continue to occupy a prominent place. The other group of companies receiving the buyers' attention lately are some which have been newly listed. It is evident therefore that bonus share and growth prospects are the major influences governing trading at the present juncture.

The revival of bullish fervour since Wednesday is probably due

to the further encouragement the stock market has received this week from Mr Morarji Desai. In the course of his reply to the Budget debate in the Rajya Sabha the Union Finance Minister has reiterated his earlier conviction that there is little scope for direct taxation in the country. Continuing this line of thought he has pointed out that the bulk of the Rs 1150 crores of additional taxation for the Third Plan has perforce to be got from indirect taxation. He has also ruled out the possibility of excess profits tax as a measure which will amount to penalising efficiency in corporate working. It is not surprising, therefore, if operators have concluded that Mr Desai has considerably lessened the Budget uncertainties for the entire period of the Third Plan.

★

NEW ISSUE NOTES

Ceat Tyres

Ceat Tyres of India Limited has proposed to raise additional capital by issuing 161,000 new equity shares of Rs 100 each, at a premium of Rs 25 per share, in the proportion of 7 shares for every 5 shares held. Application has been made by the company to the Controller of Capital Issues for necessary permission. The company has been permitted to raise its installed capacity to 1,000 metric tons of tyres and tubes per month from 325 metric tons monthly at the present moment.

Permanent Magnets

The directors of Permanent Magnets Limited have finalised the basis of allotment for the recent new issue of equity shares in consultation with the authorities of the Bombay Stock Exchange. In the case of those who have applied for 5 shares, 688 applicants out of 1,670 received have been allotted 5 shares each. In the category of 10 shares, 502 applicants out of 586 have been allotted 5 shares each. The basis of allotment for the other categories is as follows:—Those who have applied for 15 to 30 shares will get 5 shares each; for 35 to 100 shares 10 shares each; for 105 to 500 shares 15 shares each and for over 505 shares 20 shares each.

Spun Silk Mill

With a view to utilising the silk wastes which are now being exported, the West Bengal Government seems to be considering a proposal for erecting a spun silk manufacturing mill. The estimated cost of the proposed project will be Rs 1 crore. The State Government will subscribe 50 per cent of the capital cost of the company, while the balance will be offered for public subscription.

Selected Satgram Collieries

The Selected Satgram Collieries Limited has proposed to raise its authorised capital from Rs 50 lakhs, made up of 50,000 equity shares of Rs 100 each, to Rs 2 crores divided into 100,000 Ordinary shares of Rs 100 each and 100,000 unclassified shares of Rs 100 each, to be issued as and when required for the business of the company.

Aruna Sugars

Aruna Sugars Limited is expected to enter the capital market early next month for raising new capital. The company proposes to issue 850,000 Ordinary shares of Rs 10 each. Of this, the directors and their friends will take up shares worth Rs 20 lakhs, while the sugarcane growers will be allotted shares to the value of Rs 5 lakhs. The LIC will subscribe for shares worth Rs 10 lakhs and the Madras Industrial Corporation will take up shares worth Rs 15 lakhs. The balance of the issue amounting to Rs 35 lakhs will be offered for public subscription. The entire public issue is proposed to be underwritten. The company will set up a factory at Pennadam, South Arcot District, Madras State.

★

INVESTMENT NOTES

Bengal Coal

The Bengal Coal Company Limited has proposed to issue Debentures worth Rs 60 lakhs in stocks of Rs 1,000 each, carrying taxable interest of 6½ per cent. Firm applications for stock worth Rs 30 lakhs have been received and they will be given allotments. The rest will be offered for public subscription, at par, on 22 March, 1961. The Debentures are redeemable between 1964 and 1975 in lots of Rs 5 lakhs each year from 1964. For the purpose of redemption, the company will constitute a Sinking Fund and contribute, each year, at least Rs 4 lakhs out of the distributable profit.

Assam Bengal Cement

It is learnt that the Assam Bengal Cement Company, Limited is conducting negotiations with an industrial organisation, recognised by the Pakistan Government, for the transfer of its cement factory in Chhatak (Pakistan) on terms mutually agreeable to the Governments of Pakistan and India. Meanwhile, the company has incurred a loss of Rs 6.20 lakhs during the year ended 31 March, 1960 as against a loss of Rs 8.44 lakhs for the previous year.

West Coast Paper

The West Coast Paper Mill Limited has started off in fine fashion in the first full year of working. The company is now thinking in terms of large-scale expansion. A licence has been received by the company for the manufacture of 90 tons per day or 27,000 tons per annum of rayon-grade pulp and paper. The financial implications of this scheme are being examined and the preliminary approach has already been to inter-

national finance agencies for loan of the amount necessary to import the capital equipment.

Asian Cables

The Chairman of the Asian Cables Corporation Limited has stated that the plant for the manufacture of low tension insulated wires and cables will commence production in about five months. The company has also obtained a licence for the manufacture of an additional item, viz., low tension plastics-covered wires and cables. The foreign exchange necessary for importing the additional plant and equipment will be obtained from the ICIC, which has agreed to grant a loan equivalent to Rs 5 lakhs.

Standard Motors

The Standard Motor Products of India Ltd. has taken on hand an expansion programme, estimated to cost more than Rs 1 crore. To meet the cost of the additional equipment capital, expected to be of the order of Rs 12.50 lakhs, the firm proposes to raise a loan or alternatively issue Debentures.

K.C.P. Limited

The last date for the receipt of applications in respect of the issue of 100,000 equity shares of Rs 10 each, at par, has been extended from 15 March to 19 April, 1961.

Indo-Commercial Bank

It is understood that the moratorium granted to the Indo-Commercial Bank Limited will be lifted on 25 March and that the institution will be merged with the Punjab National Bank. The arrangements for creating individual accounts with the balances can be operated upon are being completed.

★

INVESTMENT BRIEFS

Walchandnagar Industries Limited has reduced the dividend from Rs 20 to Rs 15 per share, taxable, for the year ended 30 September 1960.

The New India Industries Limited has proposed to maintain the dividend at Rs 25 per share, taxable, for 1960.

Trichy Mills Limited has raised the dividend from 12½ to 13½ per cent, taxable, for 1960.

Indian Bank Limited has proposed a final dividend of 7½ per cent, making a total of 15 per cent, taxable, for 1960, the same as in the previous year.

★

BALANCE-SHEET BRIEFS

The Hindustan Lever Limited has reported a substantial rise in the net profit from Rs 2.08 lakhs to Rs 2.50 lakhs for 1960. The directors have recommended a taxable dividend of Rs 2.60 per share.

The Bengal Jute Mills Company Limited has earned a net profit of as much as Rs 6.06 lakhs for the year ended 30 June 1960 as against Rs 3.88 lakhs for the previous year. The dividend on the Ordinary shares is repeated at 50 p per share, subject to deduction of tax.

The working of the National Pipes and Tubes Company Limited has resulted in a profit of Rs 11.93 lakhs

for the year ended 30 September 1960 as against Rs 6.76 lakhs. The dividend is raised from 15 to 20 per cent, taxable.

Shri Ambica Mills Limited, Ahmedabad, has recorded a substantial rise in the gross profit from Rs 1,22.49 lakhs to Rs 1,42.67 lakhs for 1960. The dividend is raised from Rs 45 to Rs 50 per share, subject to deduction of tax.

The Mahindra Mills Limited, Ahmedabad, has made a gross profit of Rs 34.93 lakhs for 1960 as against Rs 34 lakhs. The dividend is raised from Rs 8.00 to Rs 12.00 per share, taxable.

Thanks to a net profit of Rs 4.20 lakhs, the Magnesite Corporation of India Limited has wiped out entirely the accumulated losses and is left with a small surplus of Rs 16,441 at the end of June 1960.

Mahindra & Mahindra Limited has reported a net profit of Rs 22.40 lakhs for the year ended 31 October 1960. The dividend is maintained at Rs 1.25 per share, taxable.

The net profit of the Kamani Metals & Alloys Limited has shown a marked fall from Rs 9.55 lakhs to Rs 5.16 lakhs for the year ended 30 June 1960. The dividends, both the Ordinary and Preference shares, have been skipped.

The Bombay Dyeing & Manufacturing Company Limited has shown a net profit of Rs 20.97 lakhs for 1960 as against Rs 22.70 lakhs. The directors have proposed a total dividend of Rs 3.50 per share, subject to deduction of tax, the same as in the previous year.

The working of the Nizam Sugar Corporation Limited has resulted in a net profit of Rs 63.62 lakhs for the year ended 30 June 1960, representing an increase of Rs 38.05 lakhs over that for the previous year. The dividend is raised from Rs 5.40 to Rs 5.75 per share.

The Mysore Sugar Company Limited has reported a higher net profit of Rs 34.03 lakhs for the year ended 30 June 1960 as against Rs 28.12 lakhs. The dividend on the Ordinary shares is maintained at 30 per cent, subject to deduction of tax.

STOCK EXCHANGES

From Boom to Boomlet

Watch-Dog Writes:

THE buoyancy in stock markets does not seem to show any sign of flagging. As a matter of fact, the bullish sentiment appears to have gathered strength although attention has been mostly directed towards the blue chips of outstanding merit. Sentiment is assisted by the hopes of bonus issues by various concerns and the release of excellent results.

Buoyant conditions were noticed on the Calcutta Stock Exchange where substantial around gains in prices were recorded.

The Bombay Stock Exchange ended the current accounting period on a firm note.

The boomlet, which was noticed last week, was extended to selected counters on the Madras Stock Exchange.

Wall Street, however, closed with an irregularly lower tendency, ranging mainly to one point.

CALCUTTA

ALTHOUGH profit-taking was noticed at every bulge of higher values, equities made a further advance on balance on the local stock exchange during the week under report. Activity was, however, confined to those shares affording bonus possibilities or early capital appreciation. Prices in other sections moved up in sympathy.

It looked as if most of the operators were not even cautious in extending commitments and the trend of prices was more or less a one-way movement. The bullish fervour was accentuated by the release of excellent corporate results. Moreover, the outlook for those companies, which are in the midst of expansion or about to embark on fresh schemes, was considered to be promising. But for the worry over the developments, taking place in the money market

and the fears entertained in some circles with regard to the possibility of a rise in lending rates, the market would have finished at the highest levels for the week.

With broadening demand for short-dated issues, there was clear improvement in the tone of the gilt-edged market. 3 per cent 1986 Conversion Loan improved steadily to Rs 74.10 from the recent low of Rs 73.90, to finish the week at Rs 74.06.

Bank shares continued to display a firmer tendency due to support from investors following the encouraging working results of most of the banks for last year.

After a rather prolonged spell of dullness, Jute shares came in for good support at steadily improved levels. This was due to the endeavours being made by the Government on the one hand and the LJMA on the other to solve the problem of shortage of the raw material. It was thought that the mills might now be in a position to make a fair margin of profits at the current level of raw jute prices. Anglo-India forged ahead to Rs 220 from Rs 217 (Rs 217); Bally to Rs 225 from Rs 214 (Rs 223); Birlas to Rs 36.50 from Rs 36.12 (Rs 35.75); Fort William to Rs 24.50 from Rs 24.25 (Rs 24.12); Megna to Rs 13.06 from Rs 12.25 (Rs 13.06) and Nuddea to Rs 50.75 from Rs 49.50 (Rs 50.75).

Howrah, however, moved narrowly between Rs 22.25 and Rs 22.37 and New Central between Rs 19 and Rs 19.25. Figures shown within brackets were the closing rates for the week.

Although Coal shares continued to receive good attention, higher levels could not be retained till the close. This was mainly due to profit-taking, being influenced by an anxiety with regard to the possibility of output at various collieries being affected by the current shortage of wagons. Amalgamated were pushed up further to Rs 23.87 from Rs 23.50 (Rs 23.69); East Indian to Rs 34.56 from Rs 34.25 (Rs 34.31); Equitable to Rs 31.75 from Rs 31.37 (Rs 31.50); Central India to Rs 14.37 from Rs 14.19 (Rs 14.09) and Western Bengal to Rs 9.31 from Rs 9.00 (Rs 9.00). Bengal, however, remained very firm at Rs 360 with Burrakur fluctuating irregularly between Rs 20.19 and Rs 20.62 on alternate buying and selling.

Tea shares were generally subjected to profit-taking at every rise in prices. The main contributory factor was the growing feeling that the net effect of the recent changes in the export and excise duties would be very little. It was thought that the tax burden might increase unless much more of the commodity could be exported or sold in packages. Brooke Bond changed hands at Rs 17.44 to Rs 17.69 (Rs 17.56); Bishnauth at Rs 24.75 to Rs 25.44 (Rs 24.81); Gungaram at Rs 153.50 to Rs 161 (Rs 158); Hasimara at Rs 24.87 to Rs 25.25 (Rs 25.19); Hantapara at Rs 145 to Rs 150 (Rs 145) and Jayashree at Rs 20.37 to Rs 21.06 (Rs 20.56).

Sugar shares came in for selective demand. Dyer Meakins were an outstanding feature, having spurred to Rs 32.62 from Rs 32 on hopes of an early bonus issue. Despite the dividend being skipped, Carew were enquired up to Rs 11.37 from Rs 10.94. Ramnugger Cane remained almost

steady at Rs 27 with SKG moving narrowly between Rs 14.06 and Rs 14.19. Champaran were on offer at Rs 18.87 to Rs 19.00 against Rs 19.44 quoted in the previous week.

Textile shares continued to remain buoyant, being influenced by the prospects of large cotton supplies and the possibility of bigger yarn and cloth production. Profit-taking, however, erased some of the extreme gains towards the close. Jayashree met with business at Rs 16 to Rs 16.37 (Rs 16); Cawnpore at Rs 7.12 to Rs 7.37 (Rs 7.37); Kesoram at Rs 32.06 to Rs 33 (Rs 32.94); J. K. Rayon at Rs 18.12 to Rs 19.31 (Rs 19.31) and Dunbar at Rs 27.37 to Rs 28.62 (Rs 28.50).

In the week's dealings, the lead to the general rise in values was given by the speculative issues under the influence of Indian Irons. Against the previous week-end closing of Rs 26.50 Indian Irons opened higher at Rs 26.91 and, after receding at one time to Rs 26.37 due to selling pressure on lower Bombay advices, recovered again to Rs 27.20 to close finally at Rs 27.10. TEXMACO closed lower at Rs 23.00 after touching a high of Rs 24.40. Guest Keen, Williams met with some realising pressure, resulting in the scrip being marked back to Rs 46.50 from the recent high of Rs 48.50. Britannia advanced at one time to Rs 15.50 from Rs 15.12; Braithwaite to Rs 36.75 from Rs 34.50; J. K. Steel to Rs 27.25 from Rs 25.56 and Jessop to Rs 22.44 from Rs 22, to close finally at Rs 15.12; Rs 36.62; Rs 28.75 and Rs 22.25 respectively on profit-taking. The new issue, Escorts, came in for good demand up to Rs 21.37 from Rs 20.50. Kumardhubi hardened to Rs 7.25 from Rs 6.94 with Marshalls moving narrowly between Rs 5.56 and Rs 6.00.

Of all the sections, the Miscellaneous was the most active, thanks to the flow of excellent corporate results and hopes entertained with regard to the issue of bonus shares by concerns having large reserves. As the existing blue chips had already attained such heights as to be out of reach of investors of modest means, the new scrip even with the considerable premium they were commanding at the present movement, attracted considerable support on the long-term view. The following table shows the price trends of a few selected shares:

	As on 11 Mar.	High-est 17 Mar.	As on 17 Mar.
British Paints	26.75	28.50	28.31
Isaac Holden	10.44	13.12	12.94
Union Carbide	55.75	57.75	57.50
Asso. Battery	38.12	39.37	38.75
Phillips Carbon	18.50	18.87	18.87
Aluminium Corp.	18.37	19.69	19.44
Alkali Chemicals	38.31	40.87	40.87
NICCO	37.58	39.12	37.50
Orient Paper	42.00	42.50	41.25

Facts & Figures

PRICES

Slight Decline

The official wholesale price index (with the year ended March, 1953 as 100) declined by 0.2 per cent to 126.4 during the week ended 25 February, 1961 as compared with 126.6 for the previous week. The index was higher by 0.2 and 6.0 per cent respectively when compared with the corresponding week of the previous month and that of a year ago. The monthly average for February, 1961 worked out to 126.6 as compared with 125.6 for January 1961 and 119.5 for February 1960.

The index for 'Food Articles' receded by 0.3 per cent to 115.6 as compared with 116.0 (revised) for the previous week due to a fall in

Group and Sub-group

*=Estimated	†=Revised
-------------	-----------

the prices of Jowar at Mohal (-20%), Fish (-5%), Gur (-4%), Potatoes and Milk (-3% each), Eggs, Chillies and Turmeric (-2% each) and Wheat; Bajra, Barley, Gram, Bananas, Cashewnuts, Mustard oil and Black Pepper (-1% each), although the prices of Jowar at Nagpur (+1.8%) and at Gulbarga (+7.7%), Mung, Onions, Oranges, Groundnut oil and Salt (+2% each) and Rice, Maize, Urad, Gingellyoil, Tea and

Beteinuts (+1% each) showed advances. The index for 'Tobacco' receded by 2.6 per cent to 107.9 due to re-appearance of price quotations for Flue-cured tobacco at a lower level.

The index for the 'Fuel, Power, light and Lubricants' group remained stationary at its earlier week's revised level of 120.0.

The prices of Rapeseed at Kaithal (+15%), Linseed (+4%), Castorseed and raw Hides (+2% each) and raw Wool and Groundnuts (+1% each) showed advances, while those of Rapeseed at Delhi (-10%), Tanning Materials (-3%) and Cottonseed and Lac (-2% each) moved down and the index for 'Industrial Raw Materials' stood at 159.7 as against 159.5 (revised) for the previous week.

Higher prices of Linseed oil and Tin (+2% each) and Rayon yarn and lead (+1% each) raised the index for 'Intermediate Products' by 0.4 per cent to 134.9 as compared with 134.3 for the earlier week.

The index for 'Finished Products' stood unchanged at its previous week's level of 128.4. Items which showed variations during the week were: Cement (+4%), Bricks and Tiles (+2%) and General Chemicals (-1%).

*

WAREHOUSES

Increased Use

The percentage of cultivators among depositors at Central Warehouses rose to 21 per cent in January, 1961 from 10 per cent in December, 1960. A study of the custom handled during the month shows that the percentage of producers at Davangere (Mysore) Central Warehouse was as high as 85 per cent. At other Central warehouses such as Amravati, Sangli and Akola (Maharashtra) Warangal and Guntur (Andhra Pradesh) Gadag (Mysore) and Theog (Himachal Pradesh) percentage of producers among depositors exceeded 60.

The Central Warehousing Corporation last month opened warehouses at Trichur (Kerala) and Nadiad (Gujarat). Steps are being taken to open warehouses at Hyderabad and at Sheoraphulli and Sainthia in West Bengal. After these warehouses are opened, the Central Corporation would have a total of 38 warehouses. At the end of January last, Central warehouses had a total storage capacity of about 15,92,000 mds. Stocks stored in these warehouses totalled about 10,60,000 mds.

A feature of the activities of the Central Warehousing Corporation is the steady rise in the custom handled during the last few months. The average occupancy which was 57% in November rose to 63% in December and 66% in January.

MISCELLANY

Latex Cement

A simple process for the manufacture of latex cement (adhesive for leather) from rubber latex has been developed at the Central Leather Research Institute, Madras. Indigenously produced of such adhesives is meagre and imported products are expensive.

In the process, natural rubber latex is mixed with a solution of casein in ammoniacal water and treated with formalin and dye. Preparation of the adhesive has been tried extensively on pilot plant scale (5-gal. batches) and manufacturing conditions have been standardized.

The Government Footwear Centre, and the Central Footwear Training Centre at Madras have found the adhesive satisfactory for manufacture of footwear.

The raw materials required, namely natural rubber latex, casein, ammonia, formalin and water soluble dye, are readily available in the country.

The process requires just a few vessels and an oven. A unit with a capacity of 30 gallon per day would involve a total capital outlay of about Rs 25,000. With simplified equipment, a 10-gallon per day unit would need only Rs 10,000 as capital outlay.

Surface Coatings from Castor Oil.

Investigations have been successfully completed at Regional Research Laboratory, Hyderabad, on the modification of rosin-castor oil condensates to obtain light-coloured varnishes with good drying characteristics.

The process consists in heating castor oil with rosin till a desired acid value is obtained. Maleic anhydride is added to the condensate and heating continued for a further period. Glycerol is then added and the esterification is completed by continued heating at a fixed temperature. Any remaining hydroxyl groups in the product are dehydroxylated by heating with anhydrous sodium bisulphate.

A notable feature of this process is that a set of reactions comprising esterifications, adduct formation, dehydroxylation and inter and intra-polymerization leading to extensive cross linking, all take place *in situ*. The stability of rosin esters, hardness, pale colour, colour retention and durability of maleic resins, rapid drying characteristics of dehydrated castor oil and plasticizing property of branched chain retinoleic acid esters are all imparted to the product in a single process. The product is unaffected by basic pigments such as zinc oxide, lead sulphate and white lead.

Bauxite Refractories.

Investigations carried out at the Central Glass and Ceramics Research Institute, Calcutta for the preparation of refractories from Katni and Shevroy bauxites (without any additions) have shown that refractories suitable for use in industrial furnaces could be produced from bauxites alone after proper calcination above 1,500°C and grinding to 60 mesh B.S. sieve particle size. The refractories should be formed at high pressure and fired above 1,600°C.

AHEAD OF SCHEDULE ONCE MORE

Durgapur's 2nd Medium Section Mill has beaten the target date and has now commenced rolling. It will produce a range of products required for structural work and for the railways.

This is the fourth unit of the Rolling Mill plant at Durgapur Steelworks and the fifth and final unit—the Merchant Mill—is also well on the way to completion.

Troubled Times for Jute

FLUCTUATING fortunes are no new experience to the Indian jute industry, but it is doubtful if it had even before faced such a serious challenge to its existence as it is presently encountering. The emergence of Pakistan as a manufacturer of jute goods, the growing tendency on the part of erstwhile importing countries to become self-sufficient in jute goods, the increasingly fierce competition from substitutes like paper bags and the steady growth of bulk handling methods in countries which have been traditionally using jute bags have tended to reduce the importance of jute goods in world markets in recent years. These developments have served to bring home forcibly to the jute industry an important truth: if jute goods are to retain even their present reduced position, they will have to set at competitive prices besides catering to the changed and changing needs of the overseas consumer.

Urgent though these problems are, they have been relegated to the background by the all important problem of raw jute supply. This is no new problem that the industry is confronted with. Ever since partition put the mills in India and East Bengal in Pakistan, raw jute supply has been unsatisfactory. Strenuous efforts at increasing jute production have yielded fair results, and recently production in India had reached a level which allowed our country to figure as an exporter of raw jute after a lapse of ten years. But the happy position has not lasted long.

In 1959-60, the Indian jute crop declined sharply and the succeeding year has been no better. Though no official estimate of the 1960-61 crop has yet been made available, there is every evidence to show that there is an acute shortage of jute even at the present time, with some five months to go before the next jute year's crop comes on the market. It is not surprising therefore that at the last week's annual general meeting of the Indian Jute Mills Association, Mr. D. C. B. Pilkington has devoted the major portion of his address to an examination of this problem of raw jute supply to the industry. Pointing out that the difficulty faced by the jute industry stems directly from one factor and one factor only—an acute shortage of raw jute—he explains that he has deemed it necessary to emphasise what is self-evident to his audience because "there still appears to be an obstinate belief that the jute shortage is a figment of the imagination and that the rise in prices which has caused so much concern to the industry and its customers has somehow been engineered solely by speculation." In his view, speculation is not the cause but only an effect and the steep rise in prices is not merely confined to India; prices in Pakistan for instance have risen even more sharply.

In between the shortage theory and the belief that speculation is responsible for the shortage scare, there are those who hold the view that both shortage and speculation

have equal responsibility. Strictly speaking, speculation cannot be the prime cause of the high prices but it does certainly exaggerate a comparatively small shortfall in production, causing much disequilibrium in the markets, and these will take a considerable time to be brought back to normal. In this view, Government is perfectly justified in taking all the steps it has taken so far to curb speculation in the jute markets. It is not clear why it is thought that speculation in howsoever small a degree is inevitable. It is understandable that there should be reasonable scope for hedging facilities, and the forward markets are intended to fulfil such a need. But there can be no justification for allowing speculation to hold sway in any market. This is particularly true in the case of commodities like jute, as the raw material for an important foreign exchange earning industry. One can understand Government's anxiety to make it clear, especially to our foreign consumers, that it has not left any stone unturned in its drive against speculation. Probably, the various regulatory measures that have been brought into force during the past few months have caused some inconvenience both to the traders and the industry, but they will be borne patiently if the good of the industry and trade in the long run is kept in view. It is of the utmost importance to ensure that overseas buyers are made to feel that they will not be obliged to contend with anything like the recent fluctuations in prices.

The genesis of the present trouble, according to Mr. Pilkington, is to be found in the fact that there have been two small crops in succession, after the bumper crop of 1958. As a result of the depressed prices toward the close of 1958, the sowing was adversely affected in 1959, and the next year it was the turn of nature to take a hand in the proceedings. A larger import of cuttings from Pakistan at the end of 1959 and the stopping of the export of raw jute from India at the same time would have certainly stood us in good stead. But, as Mr. Pilkington himself has said, the acute scarcity now felt could not have been foreseen twelve months ago, and hindsight has only a limited value.

It will serve no useful purpose to try to apportion blame for what has already come to pass, but the experience of the past year can be made to yield valuable lessons for every one concerned. One thing is clear: the first task is to ensure that the vagaries of the weather do not have a big say in the matter of raw jute supply to our mills. In the case of jute, which so much depends on favourable weather conditions, one must be prepared to have an inadequate crop now and then even with the best of efforts toward promotion of jute production. The building up of a buffer stock deserves to be examined carefully. Concerted efforts have yet to be made to increase the yield per acre and the extent of the leeway to be made in this regard will become evident if it is noted that, in India yield per acre is still much lower than in Pakistan.

ECAFE Focus on Regional Co-operation

Discussions at the 17th session of ECAFE, lately in session in New Delhi, have focussed attention on the problem of regional co-operation which formed the principal item on the agenda. The Rome Treaty and the Stockholm Agreement have stimulated study of prospects for similar arrangements to serve the needs of the countries of the ECAFE region. The continuing deficit in its trade with the outside world, the weakness of primary commodities which form such a large proportion of the region's exports in world markets and the growing need to find resources for development have provided added incentives to the examination of the prospects of regional co-operation. The feeling is widespread that trade deficits can be reduced, prices of primary commodities stabilised and economic and industrial development of the region accelerated through suitable measures for increasing intra-regional trade. As yet, it is only a feeling. The first purposive effort to endow it with substance was the report prepared for the Karachi session of the Commission on Asian and Far Eastern Affairs of the International Chamber of Commerce. In the meantime, the 16th session of ECAFE at Bangkok last year had adopted a comprehensive resolution on regional economic co-operation and called upon the Executive Secretary to initiate studies and report on possibilities. On the basis of a preliminary report prepared by the Secretariat, the question was considered by the Committee on Trade at its fourth session last January. The Committee, which examined the various forms of trade co-operation, such as economic union, customs union, free trade area and preferential tariff and trading arrangements, as well as the structure of economic integration in Europe and Latin America, reached the conclusion that conditions in the ECAFE region were in essential respects different from those of other regions and referred the question back to the Secretariat for further studies. The discussions have led to a realistic appreciation of the nature and magnitude of the problems involved in devising a pattern for greater intra-regional trade.

Trade within the region accounts for only about a third of the total world trade of ECAFE countries. If Japan, which differs in many respects from the other countries of the region, is excluded, the proportion will be much less than one-third. The present trading patterns are the result of the former colonial status of most of the countries which has left its imprint on their economic structures. These are more competitive than complementary. The present requirements of development add to the difficulties of effecting a rapid change in the direction of trade. The problem has been complicated by the political fragmentation of what were compact economic units along with the advent of independence. Before the vague desire for regional co-operation, which undoubtedly exists, can crystallise into practicable programmes, the bases on which the structure of regional co-operation can be erected must be identified and accepted by the countries involved. The Committee has, therefore, shown wisdom in confining its positive recommendations to specific fields where immediate action is

possible, such as promotion of intra-regional trade talks, coordinated customs administration, promotion of regional fairs and exhibitions, and continuation of studies urging measures of commercial arbitration.

The discussions at the plenary session, when representatives of different countries urged the need for cautious and tentative approach to the topic of regional integration, also bear out this conclusion. Speaking for India, Mr. Satish Chandra, Deputy Minister for Commerce and Industry, underlined the basic elements in the economic situation of the countries which have to be kept in the forefront. For the region as a whole and for all the member countries in varying degrees, trade with the rest of the world is of vital importance. The preponderant part of the total trade of the region is with countries outside the region. The trading policies of the member countries have thus to take into account (i) the world demand and supply of the particular primary commodities on which they specially depend; (ii) the need to improve their terms of trade; and (iii) the requirements of imports, investments and technical know-how from the highly developed countries. Any device calculated to raise the value of trade and the level of export earnings has to be carefully formulated with reference to its impact on the trading pattern as a whole. The member countries are individually engrossed in the difficult task of raising the living standards of their respective areas. For countries at lower levels of development, it will not be possible for some time to depend on the economic growth and specialisation in other countries of the region.

The Commission on Asian and Far Eastern Affairs of the ICC at its last session adopted a resolution which among other things makes the following recommendations:

- (1) The feasibility of the ECAFE countries extending the most favoured import and export tariffs applicable to any country in the world to all the countries of the region should be explored, and the countries of the region have the opportunity of entering into multi-lateral agreements in this regard.
- (2) The countries of the ECAFE region should consider the desirability of liberalising imports of the goods of the other countries of the region, and that the countries liberalising quotas should be enabled to obtain long-term credits to the extent that liberalisation affects their balance of payments position by working out a scheme for an Asian Development Bank for Trade and Industrial Development and that a working party should be set up to examine whether free trade could be allowed in selected commodities between the countries of the region and whether uniform export and import tariffs should be worked out.
- (3) Greater emphasis should be laid on regional trade and that a scheme be devised for the exchange of surplus commodities among the countries of the region without upsetting their present trade or placing any extra burden on their foreign exchange resources.

In approaching the problem on the lines suggested above, it should be borne in mind that for the countries in the region promotion of intra-regional trade is not an end in itself but only the means to rapid economic

Indian Finance

mic development for raising per capita incomes and outputs. The answer to the question, how far a policy of trade promotion among the countries of the region stimulates production or helps raise the levels of living, is not readily arrived at, and different Governments may arrive at different answers. As Mr. Philippe De Seynes, Under Secretary for Economic and Social Affairs, of United Nations, said in his speech on the opening day, "the general and over-hasty removal of all tariff protections within the Asian region would probably tend to increase and perpetuate the gap between industrialised countries and primary producing countries and would probably not be in the interest of rational growth." On the other hand, "a policy—or absence of policy—which would bring into being a large number of relatively inefficient industries, each operating within a highly protected market, would certainly not make for harmonious development in the region." The scope that exists between these two extremes for regional or sub-regional arrangements which will increase the rate and diversification of production has to be revealed by patient and protracted negotiation among the countries involved—a process which has not yet started.

Mr. De Seynes has also emphasised that such arrangements will have to be conceived in a long term perspective. That is to say, "they must be geared less to the existing geographical division of labour than to the future structural pattern indicated by demand trends and by the prospects for the development of natural resources." In assembling the material for forecasting demand trends and assessment of development prospects, the ECAFE Secretariat can make the most fruitful contribution to the growth of regional co-operation.

The examination of the problem so far undertaken indicates that trade promotion cannot proceed very far without coordination of the development plans of the countries of the region. And this is a far more difficult proposition than rationalisation of trade on regional basis. The Secretary's report has suggested that targets and priorities might be fixed to prevent unnecessary duplication or overlapping. But agreement on what constitutes overlapping or duplication will not be easy to reach. As the French delegate has pointed out, "every development policy must have as its cornerstone the human factor and respect for national traditions and aspirations."

States and Their Tax Effort

By A Special Correspondent

An informed guess about the Planning Commission's views on the need for supplementary taxation, in the States particularly, will provoke doubts about the way to do it. The States are going to get some unpalatable advice to raise revenue.

In the Madras Legislature, the Finance Minister spoke of equity in allocating shares to the States from the Pool and argued that the States had transferred resources for convenience of collection. The whole idea of subventions is an obstacle to fresh thinking about taxes and outlay. Of course, the Centre, as in most federations, is getting powerful and securing most of the extra revenue. It is able to make grants as well

25 March 1961

as loans to the needy units, as and when necessary. The gap between outlay and tax revenue under the Plan is cited as a reason for a new effort soon. But the increase in the public debt of the States is not an irrelevant consideration. The decade of planning has seen the debt go up, without an adequate rise in revenue. And if the States are asked to raise more money, it must only be through non-tax revenue.

Irrigation and electricity charges may be raised to conform to the conditions of monopoly. But doing that in an election year will be inexpedient except in Orissa where the Governor can be easily ordered to revise royalties paid for forests on modify charges paid for water and power from Hirakud. The Draft Outline of Third Plan suggests that only 3.5 per cent of the national income is absorbed by taxation today, and the right ratio should be 11 per cent. The target for extra taxation is Rs 1,650 crores over the period 1961-66 under the Third Plan but the outline is not certain about the way to raise the extra money. If advice about direct taxation being superior to deficit financing has already been followed in the Union Budget concerned with cutting home consumption of tea, tobacco and coffee to obtain more for export, the Planning Commission has argued also that future benefits are more important than immediate sacrifice.

The usual points about taxing land by betterment levy, water cess and encouraging full use of irrigation facilities are made already by the Plan outline, as the financial return from the Plan projects is deemed very moderate. This indeed re-inforces the suggestion that the States will try to get more indirect revenue by water and electricity charges on the scope of higher operating costs. Higher yields from land may justify the adoption of a new tariff for water or power supplied by the State. A fortiori local bodies may try to do the same thing in their areas by increasing charges for lighting and water in growing towns.

The idea of State monopoly for liquor and tobacco corresponding to the present opium monopoly, has not been put forward so far; but, as in the case of matches, the State can embark successfully on production and trading and derive profits from prices jacked up to suit the circumstances of a monopoly. Many countries have relied on tobacco for money, and if the wide extent of tobacco cultivation in India is an obstacle, the acquisition of factories to help pay for the Plan can be thought of.

Excisable articles like liquor or tobacco can be engrossed by the Government; and the units rather than the Union can think of operating profitable enterprises and match production with consumption. So far, heavy industries are thought of as best for the scheme of State management, and no attention has been paid to any issue except road transport by State monopolists on the other hand, the working of State monopoly lies in Sweden—a Socialist country—will indicate that, by control of distilleries, the State can at once promote temperance and obtain revenue. There is no competition from wine-making, and the suppression of illicit distillation in dry areas can be achieved easily. The recurring plea from the State Governments about growing needs and inelastic revenues can be met by a hint regarding take-over of distilleries, and in areas making sugar, the existing distilleries can be taken over by a payment to the mills than can rely on sugar, not spirit. The use of power alcohol can also be encouraged. But the major advantage will

be the monopoly of vend. In the case of matches or cigarettes, the State can tax tissue paper as well as tobacco by creating a chain of nationalised factories and the growth of export trade will not depend on the success of the factors. However, the projected monopoly can ship cigarettes to Afghanistan or Burma through a bilateral arrangement and the case for monopoly rests largely on prewar European experience also.

It has been urged that in the States current taxes on motor vehicles and motor spirit can be raised. Articles of consumer consumption should be taxed higher and it may be claimed that tax rates have been kept down by order. The normal rate of increase is modest: the bigger rate of development will entail recourse to higher taxes on cars, not used for essential purposes. The growth of "company" cars used for pleasure is perhaps a decisive reason for pleading that cars must pay more even if trucks do not, because the bill for road repairs is going up.

As for nationalising some industries for the sake of revenue, not for ideology, the case will rest on foreign example and precedent. There are so many Boards now that one to deal with (or in) excisable articles seems appropriate. The tax will fall on the consumer: it is not all who go in for tobacco or liquor and the traffic can be strictly controlled, exports stimulated to Ceylon or Yugoslavia which may like rum or tea. The sale of power may justify the manufacture of electric appliances and machinery. The former can be made to meet the increasing needs, and, apart from excise, good profits can be made on lamps or fans by a State monopoly. Only Mysore has a State electric factory: others too can think of it, if it is ascertained that pricing policy in future will mean big profits, also that competent managers for State enterprises are available. That brings one back to Professor J. K. Galbraith's view that today men count more than capital. The State can get money by increasing taxes, but it cannot make certain of able managers within its own organisation. There is a deficit of skills to which politicians are perhaps alive. So, Socialist fervour is restrained for the present.

Mysore Budget

The Mysore Budget presented to the State Legislature last week, discloses a rising trend in revenue receipts as the outstanding feature of the State's finances in recent years. From Rs 58,49.08 lakhs in 1958-59, revenue receipts have gone up to Rs 66,38.55 lakhs in the revised estimates for 1960-61 and is estimated at Rs 66,60.40 lakhs for the Budget year. But the increase in revenue receipts will not avail to meet the growth of expenditure, which estimated at Rs 73.91.92 lakhs, has outpaced revenue receipts considerably. It is significant that the deficit disclosed for the Budget year 1961-62 marks a departure from the earlier pattern of Budgets for the previous years.

The rise in expenditure for the Budget year has been put down to a number of causes such as commitments on account of the Second Plan schemes, debt service charges revision of scales of pay, educational concessions, increase in mileage of roads for maintenance, etc. In the context of the Third Plan schemes, it is to be expected that the upward trend of expenditure should be further accentuated, and for this reason, the state of the finances reflected in

the Budget cannot be considered satisfactory. The Mysore Finance Minister has announced new tax measures such as a levy of surcharge on land revenue and an increase in the tax on electricity for certain classes of consumers. These measures will bring in Rs 170 lakhs of additional revenue, and the major part of the deficit of Rs 4,31 lakhs will remain uncovered. This, clearly, does not mark a good beginning for the Third Plan which requires resource mobilisation on a far greater scale than has hitherto been done. The Third Plan fixed the outlay at Rs 2,50 crores, and the State's share is placed at Rs 1,10 crores. (In Rs crores)

Balance from current Revenue	10.00
Loans from the Public	14.70
Small Savings	10.00
Unfunded Debt	4.30
Withdrawals from Reserves	15.00
Contribution from Public enterprises including local bodies	13.00
Additional taxation	43.00
	110.00

Judging from the experience in respect of revenue receipts in the previous years, it is clear that the credit taken for Rs 10.00 crores from current revenue will be fulfilled in more than the expected measure. It may be stated that both in 1959-60 and 1960-61, original estimates of revenue receipts have been proved by revised figures to be gross underestimates. For 1959-60, the revised and actual figures were Rs 55.59, 40 lakhs and Rs 58,49.08 lakhs respectively, while for 1960-61, the Budget and revised estimates of revenue receipts were Rs 63.70, 97 lakhs and Rs 66,38.55 lakhs respectively.

The target for additional taxation has been fixed at Rs 43.0 crores and how this is going to be fulfilled remains to be seen.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

STRINGENCY

Bank Financing of Industry

"...ON any view of the matter, it would appear to me that monetary stringency, as a general pattern, will remain with us for quite a few years, although its severity may vary from time to time."

—H. V. R. IENGAR.

At the annual general meeting of the Refinance Corporation, Mr Iengar in his capacity as Chairman had occasion to express such a view as regards money market prospects in the immediate and short-term future. The context in which Mr Iengar thus foresaw monetary stringency was the manner in which industries could be expected to find resources for carrying through their expansion programmes in the Third Plan. In absolute terms, the magnitude of the task before private sector industry is undoubtedly awesome. For, from Rs 236 crores in the First Plan, the outlay of the private sector on industry and mining went up to Rs 675 crores in the Second Plan, and the target for the Third Plan is Rs 1,050 crores. Mr Iengar has stated that internal resources (that is, depreciation, free reserves and surplus) accounted for 60 per cent of gross assets formation during the First Plan, the relative ratio declining in the first four years of the Second Plan to 42 per cent. Partly, it is the fact that the capital market, responsive to a new issue boom, has found the money for new companies from around May 1957. Partly, also institutions such as the ICICI, the IFC and the World Bank have extended one form or another of loan capital. But, equally importantly, Mr Iengar suggests that "there has been a pronounced trend of late for bank assistance to be rolled over increasingly for financing expansion programmes of industry." Indeed, as long ago as 1956, this journal had noted that the essentially short-term accommodation constituted by bank Advances was then being put to medium term use, and this was one of the reasons why we had supported the need for the setting up of an organisation like the Refinance Corporation. It would appear that the monetary stringency in the current busy season arises to a degree from the tendency of companies again to utilise bank credit for assets formation.

To some extent it may be expected that the Refinance Corporation, once it gets into stride, will be able to disembarass the banking system of such medium term advances. But, having regard to the magnitude of investment envisaged in the private sector during the Third Plan, it would seem there will inevitably be need for industry to depend quite considerably not only for legitimate enlarged demand for working capital, but also for the financing of fixed assets formation.

We would suggest that, after the Refinance Corporation "uses up the resources already promised to it—some Rs 26 crores of counter-part funds arising from Public Law 480 agreements with America—an approach should

be made for an even larger allocation. For, the fact of the matter is that counterpart funds are being built up to colossal proportions, and the bulk of them is lying idle. So long as these deposits were accruing with the State Bank, the private commercial banks argued that they were being unfairly discriminated against. Though, obviously, not in deference to such complaints, the new procedure in regard to counterpart funds is that they accumulate directly with the Reserve Bank. In the light of the near certainty that monetary stringency is likely to be with us for some time, we should think that counterpart funds could most usefully be channelled into the banking system, through the Refinance Corporation. In such wise, the PL 480 accretions of counterpart funds would serve one most desirable purpose: alleviating monetary stringency, and at the same time ensuring that finance is made available for productive enterprise in the private sector.

CENTRAL BANK

Profit Sharply Higher in 1960

The Central Bank of India Limited has reported a sharply increased profit for 1960. This was enabled by the considerable rise in the Advances extended to constituents.

The Bank's Deposits have risen by Rs 19.26 crores, or 10.7 per cent, to a shade under the Rs 200 crore mark at Rs 199.52 crores. Cash balances are slightly higher by 1.8 per cent at Rs 22.69 crores, but the ratio of cash to Deposits has declined from 12.4 per cent to 11.4 per cent. The Central Bank must be one of very few banks indeed which added to their gilt-edged portfolio during 1960. Investment in Government securities has risen by Rs 1.43 crores, or 3.1 per cent, to Rs 47.11 crores though the investment/Deposits ratio has come down from 25.3 per cent to 23.6 per cent. It needs to be remarked, however, that, with the fall in the gilt-edged market last year, the book value of Central Bank's investments in Government securities exceeds their market value by something like Rs 26 lakhs. The improvement in Deposits has mainly gone to the financing of the bank's constituents, Advances

Balance-sheet: (In Rs Crores)

	31-12-1959	31-12-1960	Change	Change percentage
Deposits	180.26	199.52	+19.26	+10.7

Cash as percentage of Deposits	12.4	11.4		
Gilt Investments	45.68	47.11	+1.43	+3.1
Gilt as percentage of Deposits	25.3	23.6		
Advances	101.11	129.07	+17.96	+17.8
Advances as percentage of Deposits	56.1	64.7		

Profit and Loss: (In Rs Crores)

	31-12-1959	31-12-1960	Change	Change percentage
Interest and Discount	7.43	9.00	+1.57	+21.1
Commission, Exchange and Brokerage	1.38	1.68	+0.29	+21.0
Gross Income	9.00	10.78	+1.78	+19.8
Gross Income as percentage of Deposits	5.0	5.4		
Interest paid	3.86	4.34	+0.48	+12.4
Salaries and Allowances	3.34	3.66	+0.32	+9.6
Balance of Profit	0.99	1.33	+0.34	+34.3

being marked up sizably by Rs 17.96 crores (17.8 per cent) to Rs 129.07 crores. As a result, the credit/Deposits ratio has climbed from 56.1 per cent in the 1959 balance-sheet to 64.7 per cent as shown in the latest accounts. Borrowings are also shown sharply higher at Rs 15.77 crores against Rs 2.81 crores in the 1959 balance-sheet.

Income by interest and discount has improved by 21.1 per cent to Rs 9.00 crores, or a rise of Rs 1.57 crores over the previous year. Commission, exchange and brokerage have brought in Rs 0.29 crores more at Rs 1.67 crores. Gross income, in rising by 19.8 per cent, has crossed the Rs 10 crore mark in being placed at Rs 10.78 crores. The ratio of gross income to Deposits has gone up from 5.0 per cent to 5.4 per cent.

Interest paid has cost Rs 0.48 crores more at Rs 4.54 crores, and salaries and allowances have absorbed Rs 0.32 crores more at Rs 3.66 crores. The balance of profit, net of tax, was Rs 0.99 crores in 1959. In the 1960 accounts, after providing Rs 60 lakhs for tax, the balance of profit shown is Rs 1.33 crores.

There is a transfer of Rs 8 lakhs to Contingency Fund, against nil last year; the transfer to Staff Gratuity Fund is maintained at Rs 1.0 lakhs. Bonus to staff is substantially higher at Rs 51 lakhs against Rs 33.75 lakhs, but, then, a special Jubilee Bonus had to be provided for. The dividend for the year is 12.88 per cent net, and, moreover, a special Jubilee Bonus of 2 per cent subject to deduction of tax has been proposed.

It will be seen that a good part of the increased profits in 1960 was absorbed by special bonuses connected with the Jubilee year.

UNITED BANK

Deposits Rise by 8.5 Per cent

In its balance-sheet as at 31 December 1960, the United Bank of India Limited is able to disclose a number of changes that do not strictly follow the pattern of general banking experience during the year under review. For example, Deposit resources have risen by the considerable sum of Rs 4.06 crores, or an increase of 8.5 per cent over the previous year, to Rs 51.74 crores. Secondly, cash balances, including money at call, have not only been added to (they are higher by Rs 1.28 crores at Rs 7.04 crores); the ratio of cash to Deposits is also shown to have improved from 12.1 per cent to 13.6 per cent. In the third place, though the bank has participated in meeting the large demand for funds consequent on industrialisation programmes, a vigilant eye has been kept upon liquidity and the Advances/Deposits ratio. The Advances portfolio has expanded by Rs 4.10 crores, or 14.7 per cent, to Rs 31.62 crores; but the ratio to

	31-12-1959	31-12-1960	Change	Change percentage
Deposits	180.26	199.52	+19.26	+10.7

Balance of Profit	0.99	1.33	+0.34	+34.3

25 March 1961

Balance-sheet: (In Rs Crores)

	31-12-1959	31-12-1960	Change	Change percentage
Deposits	47.68	51.74	+4.06	+8.5
Cash in hand and money at call	3.76	7.04	+3.28	+87.5
Cash as percentage of deposits	12.1	13.6		
Gilt Investments	14.85	13.59	-1.26	-8.5
Gilt as percentage of deposits	31.1	26.3		
Advances	27.52	31.62	+4.10	+14.9
Advances as percentage of deposits	57.7	61.1		

Profit and Loss: (In Rs Lakhs)

	31-12-1959	31-12-1960	Change	Change percentage
Interest and Discount	197.58	215.59	+18.01	+9.1
Commission, Brokerage and Exchange	34.43	39.02	+4.59	+13.3
Gross Income	246.57	269.81	+23.24	+9.4
Gross Income as Percentage of Deposits	72.48	79.15	+6.67	+9.2
Interest Paid	124.53	135.27	+10.74	+8.6
Salaries and Allowances	14.29	14.63	+0.34	+2.4
Balance of Profit	5.2	5.2		

Deposits, although it has gone up from 57.7 per cent, is still at a low 61.1 per cent.

The profit and loss account shows that income by interest and discount is better by 9.1 per cent at Rs 215.59 lakhs, and that commission, exchange and brokerage have fetched Rs 4.59 lakhs more at Rs 39.02 lakhs. The improvement in the gross income is one of improvement in the gross income to Deposits, 9.4 per cent (or Rs 23.24 lakhs) to Rs 269.81 lakhs, and the ratio of gross income to Deposits is unchanged at 5.2 per cent. However, interest paid has mounted by Rs 6.67 lakhs to Rs 79.15 lakhs, and salaries and allowances have absorbed Rs 10.74 lakhs more at Rs 135.27 lakhs. In the result, the balance of profit (net of tax) is slightly higher by 2.4 per cent at Rs 14.63 lakhs.

The transfer to Reserve is stepped fractionally to Rs 2.93 lakhs from Rs 2.90 lakhs. The dividend payment, at 4.3 per cent subject to deduction of tax, absorbs Rs 11.44 lakhs. The carry forward is higher at Rs 2.08 lakhs against Rs 1.82 lakhs brought in.

In a year when it would have been easy to produce spectacular results, United Bank has obviously chosen to exercise control on its Advances portfolio and is therefore satisfied with steady, and not flashy, progress.

BANK RETURNS

Foreign Balances Rise Again

After the steep rise in active Note Circulation during the week ended 10 March, the returns of the Reserve Bank for the latest week disclose that Notes in Circulation have fallen by almost exactly Rs 8 crores to Rs 1,971.97 crores. Furthermore, there has been return of Rupee Coin for Rs 0.54 crores, after there had been outflow in the previous week for an amount exceeding Rs 2 crores. In the result, with both Rupee Securities and Foreign Securities unchanged, notes held mark a rise of Rs 8.48 crores to Rs 90.89 crores.

The return of the Banking Department seems to suggest that the fiscal year-end receipts of the Government are buoyant. The balances of the Central Government have improved by Rs 17.27 crores to Rs 72.70 crores. It may be noted in this regard that the rise of Rs 12 crores to Rs 130.72 crores in Investments would suggest recourse to deficit financing. However, the State Bank is known to have sold securities for such an amount in the week under review. Hence, created money as a source of the affluence of the Centre may be ruled out.

Balances of the State Government are also higher by nearly Rs 12 crores at Rs 18.12 crores. The Reserve Balances of member banks, on the other hand, are lower by Rs 2.11 crores at Rs 71.76 crores; and, at the same time, there seems to be a sharp rise of over Rs 10 crores in their indebtedness to the

	31-12-1959	31-12-1960	Change	Change percentage
Reserve Bank, whose Advances are higher by such an amount at Rs 168.81 crores. That this is largely on account of Scheduled Banks is suggested by the increase of Rs 6 crores in the Reserve Bank's advances against usance bills.				
Lastly, Balances Held Abroad, which had risen in the previous week by Rs 1.55 crores, have further improved in the latest week by Rs 1.35 crores to Rs 32.19 crores. At this level, foreign exchange reserves are short of the target of Rs 175 crores by something like Rs 15 crores; and two weeks remain before the Third Plan is to start.				
The return of the State Bank for 17 March, in disclosing a fall of Rs 14.54 crores in Deposits to a level of Rs 542.83 crores, may be said to incorporate the making over of the March instalment of Rs 12 crores in respect of counterpart funds being handed back to the Reserve Bank. As a consequence, the State Bank has disinvested in gilt-edged for a little over Rs 13 crores. With continued busy season pressure, Advances have risen further by Rs 2.84 crores to Rs 277.11 crores.

REVALUATION AFTERMATH

Calmer Foreign Exchanges

By Paul Einzig

The excitement caused by the revaluation of the D. mark has proved to be a seven-day wonder. After the hectic dealings that followed the change, the markets settled down to more or less normal activities. Even though the crop of official denials of intentions to revalue or devalue was taken at first with a grain of salt, a limited degree of confidence in the existing parities gradually developed. A second revaluation of the D. mark is no longer considered imminent. Having regard to the time the German authorities had taken in making up their mind to revalue by 5 per

cent, a second move in the same direction is not now expected to be undertaken without mature consideration, and certainly not before the long-range effects of the present revaluation have become evident. Switzerland can afford to abstain from following the German and Dutch examples, for among all countries it is in the best position to resist inflation resulting from the influx of funds. As for France, it would not be keeping with President de Gaulle's character to forgo an opportunity of increasing its power by accumulating a large gold and dollar reserve as a result of the undervaluation of the franc. Belgium is still in the throes of the Congo troubles and could ill afford to weaken the defences of its franc by revaluing. And in spite of the improvements of the situation in Italy, there is still unemployment in the South, so that nothing is likely to be done to discourage the industrial boom in the north.

In spite of such second thoughts, the forward exchanges of the Western European countries are still at a wide premium in relation to sterling, and to some extent in relation to the dollar. This is partly because the prospects of sterling are looked upon with pessimism, but largely because the possibility of revaluations is not ruled out altogether, even if they are no longer assessed as high they were immediately after the revaluation of the D. mark and the guilder. Although the acute anticipation of currency changes has abated, the chronic uncertainty created by the German decision continues to prevail. It is likely to flare up into acute revaluation and devaluation scares from time to time. In spite of the improvement of the British balance of payment in February, sterling is looked upon with pessimism. On the other hand, the wise moderation exercised by President Kennedy has strengthened confidence in the dollar, which again is a bear point for sterling.

One of the reasons why most Governments would think twice before deciding in favour of revaluation is that the world market has become in recent years distinctly a buyers' market for most kinds of exports. If the post-war sellers' market continued to prevail it would be tempting to improve the terms of trade by revaluations. As it is, it seems doubtful whether the benefit from such improvement would not be more than offset by the decline in the competitive power of the countries whose currencies are revalued. A revival of the post-war boom might change the situation once more, the resulting reduction of exportable surpluses might make it appear advantageous to secure better terms of trade. But we are a long way off from that state of affairs. (Copyright).

Here's Another Way to MAKE YOUR TRUCK TYRES LAST LONGER!

At its present maximum output the Tyre Industry in India cannot manufacture sufficient truck and bus tyres to accommodate the needs of every vehicle owner.

It is not a matter of distribution. Throughout the country, authorized Tyre Dealers have taken the proper action to ensure that tyres are allocated at the published retail prices on a strict priority basis to those whose need is greatest.

Some time will still elapse before new tyre factories start production and before the expansion schemes of the present manufacturers bear fruit.

In the meantime, what - ?

WE BELIEVE that this scarcity condition can be eased if every truck tyre user takes greater care of his tyres—so that they can be RETREADED for further mileage and longer life. Remove tyres from service for retreading before it is too late!

SUGAR EXPORTS

Who is to Bear the Loss?

The sugar surplus arising from a rise in India's output to 2.6 million tons in 1960-61 has thrown into relief the fact that the industry lacks the capacity to compete with the tropical islands that ship sugar easily. The infant industry has not become an adult, because tariff protection was conceived as a means of "feather-bedding" growers of sugarcane. Of course, the industry must be kept going, because of the excise and the sales tax. But its inability to export even to Pakistan or Ceylon is now conceded, and the Government by means of control can only keep up prices at home. But it cannot try dumping abroad and the difference between a new developing trade in ore or a competent and mature industry like textiles is made patent again. Sugar mills can be made to contribute quotas for export at a loss because the courts will approve such action.

The State Trading Corporation will be authorised to ship sugar and freight for Indian bottoms may be earned. A point that will be put forward is whether the big

profits made by the STC every year, say, on cement cannot be made to absorb the loss on sugar exports. There is no reason why the investors in sugar mills should suffer, because of exports made at a loss merely because home consumption cannot go up as expected owing to high prices mainly due to cane prices or taxation. The consumer at home pays up, and it is but right that the Government through the STC should also pay —by shouldering the loss.

The means to improve cane output and lower prices have been recommended often, but it is only if the Government itself feels the loss from the expansion of the industry that it will feel when and how its calculations and assumptions are wrong. The jute mills seal looms and cut hours and incur a loss to the shareholders' detriment. In the same way, the STC may also be forced to accept a loss for a time in order to get foreign exchange. There is, of course, the other issue, whether a market can be had when world sugar output and quotas do not permit the entry of a new exporter. It is evident that the USA may prefer to buy from Latin American countries excepting Cuba and decline offers made from India. Then, the problem would be to fight for a place in the Middle East against sugar put in by the Soviet trade monopoly in Persia or Afghanistan which would probably like cane sugar instead of beet sugar from Russia. The old issue of bounty-fed sugar dumped abroad will have to be dealt with by a trade treaty that will also ensure a normal outlet for Indian sugar, say, in the Far East. Commercial diplomacy will then have to be sharper and more effective and India can hope to make sure of a quota for sugar as well as tea and coffee. It is possible to offer sugar plus tea to Egypt or other out-markets. It is clearly a case for some statesman as smart as Dr. Schacht.

FUELS

Old King Coal

With a rising output of coal, India cannot think of other fuels. More oil may be had in the future, but as the limit of hydel development has been reached India must rely on coal for producing electricity. The conclusion may not help the mining industry very much, but the expert view is now as always in favour of coal. And atomic energy is not cheap at all,

though States that lack coal are asking readily for atomic power-stations. The by-products of coal from chemicals to distillates, like the fertilisers derived from coke-ovens, are of course one reason for the preference that coal can claim. Government policy as illustrated by the transport muddle has been derived from planning, and it was only the US experts who could say that by long starving the private sector in coal, the Government had placed itself and others in a tight corner. Nationalisation or even the merger of small collieries in big units may appear a distant remedy.

A point to bear in mind is that some coal companies may be induced to buy wagons, if the own-your-wagon scheme is given a reasonable trial for a long period. Buying second-hand collieries or chartering them for coastal trade may not be impossible for old-established coal-mining groups that are still interested in export to near-markets like Ceylon. The mining experts' view that labour should be trained to produce more at the pit, that the efficient collieries should be managed by trained engineers only cannot be disputed after Mr Shome's outline of what ails coal mining today. The consumers in India certainly are not against coal and the experts are ardent advocates of washed coal for many uses.

The Draft Outline of the Third Plan calls for more coking coal and also second grade coal from Orissa, MP and other areas. It hopes that an outlay of Rs 138 crores will help to provide more coal and open-cast mining will ensure a regular supply for non-essential industries. The scarcity of fire-wood or forest fuel is the clinching argument for helping mines to raise more coal.

THE PRESS 164836 Not Malicious

A panicky report of mishap at the first oil well at Rudrasagar, on which an Adjournment Motion was sought to be moved in the Lok Sabha, has been rejected by Mr K.D. Malaviya as "absolutely baseless in all its details." Accurate information which was received subsequent to his initial statement on the subject in the Lok Sabha recently, he declared, "confirms that the report published in the Hindustan Times is absolutely baseless in all its details. The well has not caved in, exploration has not been abandoned, no loss has occurred and time schedule of the Commission in that region will not be disturbed in any way. In fact, there is no mishap whatever."

While this information will be received with a general sense of relief and satisfaction, the most interesting part of the Minister's statement is where he expatiated on the role of the press in relation

to undertakings in the public sector. He said in the course of his statement:

"You Sir, directed me yesterday to find out how the newspaper concerned has published the news that was described as baseless. While I would have been glad to undertake such investigations, in my own interest, and that of the Commission which is doing such a splendid work, I think Sir, that in a democracy which is dedicated to freedom of press, one has to put up with baseless reports even though they sometimes become malicious. I think, Sir, through this process of patience and perseverance, public opinion will be educated to a satisfactory standard when newspapers in their own interest will become more careful in publishing the news. I further think, Sir, that such sporadic anger of the critics of the public sector will not stop the onward march of its progress."

The very vehemence of Mr Malaviya's statement reveals the extent to which he was rattled by the report, and we can make allowances for his psychological state. But, nevertheless, it appears rather uncharitable to read malice into what is after all a bona fide mistake. It will be impossible for the press to function effectively as it ought to in a democracy, if all criticism of public enterprises is attributed to anger against the public sector, even if the criticism is based on imperfect appreciation of facts. It is not the press alone that makes mistakes. There have been occasions when Ministers have made statements in Parliament, which they subsequently found it necessary to correct.

CREDIT WORTHINESS

Indian Rating High?

In the Lok Sabha last week, Mr Morarji Desai, the Finance Minister, denied that India's credit abroad was going down, and said, "I am happy to say our credit is high and higher than that of any other country. I am prepared to make a challenge in this respect." Such a bold, categorical statement may invite scrutiny at least abroad. Dr Franz Pick may pick a hole by appraising the relation between gold and gilts in India's present claims to superior price of diamonds, and the limited success of the savings movement. There are no sterling loans quoted in the London market at present to say what jobbers make of India's present claims to superior credit status. Regular and frequent recourse to borrowing is not calculated to raise the credit status. The Government's surplus of assets over liabilities or the returns available from investment at present may not impress the BIS for instance. Such a statement officially recorded will have to be tested by trying for loans in Basle or Zurich, but it may be noted that the Dutch in the past got better terms from the World Bank than the Indian Government, also that the big oil companies like Shell constructing tankers had arranged credits on more convenient terms in Amsterdam. India has no relation with foreign financial centres and reliance on the IMF or the IBRD is different from going to Wall Street for arranging accommodation. The fact that the loan taken for Rourkela from Germany is not being repaid but postponed is, of course, not a symptom of growing financial debility. But the statement made has not inspired great confidence in the stock exchange and convinced local people that India is affluent: it can of course, be called fluent, because there is an incessant stream of statements meant to convince friends but ineffective so far as opponents are concerned. The stout defence of borrowing may be justified by many, though the claim as regards credit status must be treated as only a sign of Ministerial descent to the level of angry young men. The Desai declaration is, of course, a hint that tighter money will not be created so as to bring down the price of Government securities and impair credit status, and to that extent may be welcome.

The one country that got good marks in the past was Finland, which paid the USA and obtained economies, just because big countries like Britain and France did not pay instalments due on the war debts. That kind of praise has not been secured by India so far, though the sterling balances helped to liquidate the debt due to Britain well ahead of

the due date. But that may not help very much at present, and a disinterested, neutral expert may be inclined to argue that the big import surplus is a hindrance to a large borrowing abroad now, and the Government must make good its boast by asking for, say, £100 millions in London, Frankfurt or Zurich or even try to raise a good loan at home in the Gaulist style. If that is done, the statement will be treated as something better than an obiter dictum thrown off in debate.

*

THIRD PLAN

Criticism of Transport Target—

The problems posed by economic development, particularly in the context of the programmes drawn up for the Third Plan, were examined in some detail by Mr S. C. Gupta, Chairman of the Bengal National Chamber of Commerce, and Mr Badriprasad Poddar, Chairman of the Bharat Chamber of Commerce, on the occasion of the annual general meetings of these organisations. The Third Plan, it is known, envisages a total financial outlay of Rs 10,400 crores in both the public and private sectors. The most doubtful aspect, by all accounts, of the Third Plan is that which relates to raising Rs 1,650 crores by way of additional taxation as has been postulated in the estimates of resources for financing the Plan. That there is hardly any unanimity on the feasibility of this target for tax effort is a matter of common knowledge. Doubts arise particularly because of the fact that direct taxes have been exploited to the full and will not lend themselves to increased realisations by either increase in rates or new imposts. A substantial portion of the additional taxation will, as pointed out by Mr Gupta, have to be obtained through indirect taxes. The latest Central Budget, which includes a variety of customs and excise levies, furnishes proof of this orientation of future taxation. In this connection, the question arises whether the increase in indirect taxes will not put up the price level and affect the growth of industries in view of the possible cuts on consumption which increased indirect taxes will involve. To the extent this happens, the fiscal efforts of the Third Plan will prove to be defeatist of the broad objectives and aims of the Third Plan.

Even apart from the financial limitations, it is the contention of Mr Gupta that the Third Plan schemes suffer from serious imbalance in particular sectors and he gives transport as an instance. The target for goods traffic for railways

at 230 million tons at the end of the Plan is considered to be low and inadequate to the anticipated growth in traffic. With road transport being assigned a minor role in the Third Plan, transport problems are expected to assume alarming proportions by 1965-66. Prior provision of transport facilities is, as Mr Gupta points out, a pre-requisite for accelerated progress and the Third Plan schemes for transport are open to the criticism of having no relevance to reality and requirements.

BRITISH OVERSEAS AIRWAYS CORPORATION
IN ASSOCIATION WITH AIR-INDIA AND QANTAS

—And Taxation of Small Firms

The theme of Mr Badriprasad Poddar's speech at the annual general meeting of the Bharat Chamber of Commerce was the difficulties faced by small and medium firms in charting progress in the face of competition from bigger firms. Mr Poddar states that the economic strains and stresses of the last several years and the

legislative and administrative restraints and controls practised have been more dampening for the small and the medium than for the large firms. One serious handicap of the small firms is the restricted access these have to the organised capital market for raising funds. A study of the sources of funds for the small firms made in the Madras State has disclosed that 66 per cent of the enterprises obtained their initial capital from their own savings, 13 per cent from loans and only 8 per cent from selling shares. For working capital, the same study shows that less than 33 per cent of the enterprises obtained their requirements from commercial banks while the rest had to depend on money lenders and private banks or credit from the suppliers and advance from the wholesalers. With such handicaps in respect of sources of funds, the uniform rate of tax at 45 per cent, which the small firms have to pay in common with bigger rivals, works to the comparative detriment of the small firms. On these arguments, Mr Poddar builds a powerful case for sympathetic consideration of the problems of small firms and urges effective steps to increase their competing power as against the bigger firms. The fact that middle and small units constitute the overwhelming majority of business enterprises in the country, strengthens the argument for encouraging the progress and development of the small and middle firms.

FICCI

Fair Return on Capital

For about a year, the Federation of Indian Chambers of Commerce and Industry has been strenuously arguing about relating retention prices to an optimum return on capital invested. Now that the Railway Convention has been revised and the P&T Board allowed financial independence, the views on average costs and fair selling prices may be due for revision. Since managing agency remuneration is restricted by order, the case for letting shareholders obtain a better reward is patent and the use of reserves for expansion is also an argument, though it will be said unit costs may be lower through the fact of expansion. But what will really help is direct experience by Government of industrial enterprise and the advice of independent auditors about the proper return on capital so as to ensure profits for expansion in fertiliser plants, coal mines or steel works.

The FICCI has set out a case for 24 per cent on capital mainly because the profits from trade are distinct from industry tend to be higher. It is ironical that traders' margins are substantial and secure as compared with industry,

with its inherent risks and cyclical fluctuations due to import control among other factors today. The higher cost of borrowing from financial institutions is also a factor to be taken into account and it is clear that, as the argument is not ended, the Tariff Commission looking into the cases before it will be able to deal fairly with sugar mills as well as woollen mills that have to produce more cloth in order to use the larger quantity of tops. But it may be argued that gearing of capital in the steel or any other industry may be, treated as a reason for limiting profits by controlling prices.

The major point, however, is the need for extra capital for expansion. External capital today can be attracted only by high return, if not high dividend, and everybody knows that Germany for long borrowed Swiss funds easily as the return on investment was high. There are always rivals for any available capital, though one may guess that US funds will not go forth readily into Rhodesia or South Africa in the near future and may prefer India or Nigeria in view of the recommendations made by experts in their favour. The real strength of the case may lie not in the data presented by trade associations but in the need for exports of manufactures by private interests. Keeping up a bigger margin for export may entail some loss at home and compensation may be required in the case of engineering goods as well as paints or bicycles. The restrictions imposed on profits of utility companies, assured of a local monopoly, may not be appropriate to companies that have to advertise abroad and pay commission to factors and agents in trying to enter new markets.

EXCISES

Price Trends as Justification

The price trends of selected commodities in 1960 may go to explain the choice of tea, coffee and tobacco for additional imposts in the latest Budget. With 1952-53 as the base the table recording price movements found in the RBI bulletin for February indicates that the price of mineral oil rose by 12 points only. This makes a tax on kerosene logical in expert eyes. In the case of tobacco, the price rose by 13.4 points during 1960. But restraint of consumption by excise is officially approved and if cigarette makers are left with more for export, the Government will be pleased. In the case of tea, the index number fell by 3.7 per cent during 1960 and in the case of coffee the price index fell by 2.3 per cent. Nothing is said as to liquor, foreign or Swadeshi, but taxation is always linked with the cause of temperance. The rise by 6.7 per cent under cotton yarn

during 1960 perhaps sustains the case for a levy on coarse yarn while the rise of 13.7 per cent in the case of jute manufactures misses clearly the shortage of jute and the difficulties of the mill industry. As the prices of chemicals tended downwards in 1960, the selection of the item for an excise appears sound from the revenue angle. The advance in the price of metals last year, but not in the case of iron and steel, is perhaps the reason for an excise similar to that applying to steel and aluminium. But indices cannot be utterly reliable and wholesale prices do not signify much to consumers. However, a fall under the price of tea internally consumed can be reckoned a reason for recent adjustment of excise. But the table on the whole is quite disturbing, as it fully establishes the fact that cotton and oil seeds are dearer like jute and the finished products are bound to be dearer. If the official view that the commodity price index rose by 6 per cent only in 1960 is correct, the inflation was milder than presumed and prices of grains are supposed to have fallen. But statistics cannot give the whole story, though they can be cited to prove that Central Government employees were misguided enough to stop work owing to undue delay in relief. The fact that prices of manufactured goods rose by 10.4 per cent while raw materials rose by 17.9 per cent may be regarded as a factor limiting profits and contradicting the case for reviving the Excess Profits Tax.

CORPORATIONS Madras Asks for More

The Madras Corporation has entered a plea for liberal aid because of a big deficit due mainly to salary revision, engendered by the Pay Commission's proposals. The growth of normal revenue is insufficient for needs, and non-tax revenue is small. The population is up to over 1.7 million, the citizens clamour for amenities and the capacity to borrow is limited, though the civic assets exceed Rs 12.15 crores. Adverse balances in recent years, coupled with rising outlay, make the Corporation eager for extra revenue. Rating reform is overdue, but the point to bear in mind is that slum clearance and other tasks are undertaken mainly at the instance of Government, and the claim for a share in the Motor Vehicles Tax revenue has not been met as expected, though road repairs cost more of late, with materials costlier than before. And education cannot be paid for by the ratepayers in view of the promises made to voters by the Government about free schooling.

There is a debt of over Rs 1.5 crores already, and the City Coun-

cil cannot try to test the capital market. It may be added that menials are so ill-paid that normal efficiency is hard to attain. These are facts to be faced by the Government, which has to rely on the Corporation in regard to medical relief and public health in the City, and that is one good reason for extra help. The deficit can be met by revision of property assessments by an independent official who will value Government property also at current rates. That is a point to which all Mayors will draw attention. Municipal trading or banks are out of the question at present, but bigger rents can be had from markets only if competition from hawkers is ended, and private markets are taken over by the Corporation. The enquiry into congestion and confusion in City markets has been so far without results. A drive to raise licence fees paid by those using the street for unloading materials and a special enhancement for obnoxious callings or trades are the subject of legal argument, and it is patent that the Corporation must try new town duties. But that means higher prices and the line of least resistance may be found only in the imposition of graduated license fees for shops and hotels whose higher tariffs may induce the Corporation to enhance license fees. A local income-tax as a surcharge on existing direct taxation is not impossible, if the City Council can really produce a new deal for citizens—whether in Calcutta or in Madras at present.

And so does Calcutta

The Calcutta Corporation's Budget for 1961-62 prepared by the Standing Finance Committee and placed before the Councillors last week showed a deficit of Rs 77,27,000, the estimated income amounting to Rs 8,20,77,000 as against the expenditure of Rs 8,98,04,000. But the Committee has pointed out that if some of the proposals contained in the draft were accepted, the Budget would become a surplus one. The hope was not belied, for, when the Budget was finally passed, a revenue surplus of Rs 18,50,000 is indicated, the receipts coupled with opening balance has been showed at Rs 8,98,17,000 while the expenditure has been slightly pruned down to Rs 8,79,67,000.

The principal source of revenue to the Corporation is the consolidated rates and the collection under the head is expected to amount to Rs 5,02,00,000, Rs 63,00,000 higher than in the previous year. But after the amendments to the Finance Committee's proposals, the estimated revenue receipts would go up by Rs 36,00,000 from the supplementary bills of the consolidated rate.

Adverting to the capital section of the Budget, Mr G. Basu, the

Chairman, stated that the Committee had endorsed its view that all capital expenditure should be met out of borrowed funds. But it should not be forgotten that the Corporation's borrowing capacity is restricted to its revenue surplus. And the proper administration of the city's civic needs would entail approximately Rs 35 crores annually, while the Corporation's capacity to raise resources comes hardly to a third of the required amount. It would be really unfortunate for the country if Calcutta's problems were shelved or distorted, for, the city is posing a serious challenge to modern India. The accumulation of garbage on the streets, the appalling poverty of the masses and their shocking living conditions, the insufficient water supply, inadequate transport facilities and the like cannot be left as they are. At least, a minimum standard of services will have to be assured to the citizens. The Union Government's strange apathy to the needs of the city can hardly be justified, especially when the State Government is helpless about making any improvements in this matter.

PARTY POLITICS Setting Fractures

Fractures in the Congress Party are mended by expansion of the Cabinet in Mysore and Andhra Pradesh alike. The dissidents are placated: the Chief Minister stays on, till there is a chance to move out to Delhi. The arrangements hailed by Mr Sadiq Ali are both temporising and temporary, and it is clear that Mr Pant's death has forced the Congress President to proceed hastily along the line of least resistance. The Opposition comments do not matter much, for, the elections are not far off and the great need is to maintain party amity for the nonce. And that also means suppressing differences between the distinctive regions in the reorganised States. How far trouble is due to local prejudice or groupism need not be debated, for, the trouble of faction is most acute in the homogeneous Uttar Pradesh and the most that can be said about Andhra is that a colleague criticised in the Court made the Chief Minister yield to the colleagues who would not go along with him. The point must be stressed, as a resignation has been averted in order to preserve the balance of power in the Cabinet. The differences arising from territorial or case grouping suggest only that Madras is better off in spite of its separatist slogans and sects. Also, that the Chief Minister's personality is what matters, and, except in West Bengal, there is no Chief Minister whose power and influence are undisputed. The Congress Party in the States has a deficit in leaders, and that is an election issue to be faced by the five-man panel to

pick the candidates that can get in on their own record. The internal problem does not help the Left; that may be argued out, but the fact stands out that, in Orissa and Kerala, the Congress had to work for a coalition to keep office and the party has to come to terms with diverse elements in Madhya Pradesh or Assam where the party will be tested by the resurgence of tribal feeling in spite of Mr A. P. Jain's certificate.

SOUTH AFRICA Like My Gold, Like Me

The future of Kaffirs will be hotly debated on the Bourses. The South African decision to cut the painter may be explained. Ireland did the same, but Ireland is an agricultural country that ships surplus labour as well as butter. The South African problem even now is one of attracting or retaining foreign capital, and Dr Verwoerd has hit the capitalists hard. But then, from Kruger's time, the Boers have been mistrustful of high finance and economic development alike. It is not likely that the Union of South Africa will leave the sterling area, but it may try to sell gold in new quarters. That may shake the stability of sterling, even more than speculation in Europe. And it is patent that minerals gave Dr Verwoerd the confidence shown against his critics and to think of a new pattern of relations, not with Holland, but with the USA perhaps. The US Administration will not give much help, it will be argued, and the Treasury will get South African gold on its own terms.

The year of decision in Africa is 1961 (not 1960 as believed), for the rise of self-government in East Africa is followed by a shock to Britons. It is certain that South Rhodesia will have to think of its future in new terms, also that the three Protectorates under Britain will be exposed to new strains. Of course, the Tomlinson plan can be worked out, if the Protectorates are absorbed, and South Africa may look for just that. There will be watchful waiting, and Germany may make a move towards Africa for practical reasons; so will Japan, which may find a market for machinery and get South African gold to supplement its dollar reserves. That Australia or New Zealand will help with export of food is to be inferred. That means South Africa will have no serious food problem, though its secondary industries will grow slowly and import control cannot be a big prop. The future of either British banking or insurance is to be rated obscure, and the Nationalists may rely on extension of autarchy, in case wool or hides do not find a ready market in Britain. The real shock may come only if all countries give up the

monetary use of gold at once, but that is remote. But if South Africa sells more gold at a premium in the Middle East, the Indian bullion market will experience no change, because the depreciation of paper money or rather the demand for gold in the face of a very limited supply is the basic factor.

PERSIA Real's Real Worth

The Queen's visit to Persia is regarded generally as a tonic for the Shah's regime. A new Cabinet is now installed, and the heir to the Throne is a factor in restoring Royal prestige. The status of the Persian Real in the Exchanges does not depend on import control or exchange control. The official rate is 210 reals to the £ which only means that the war enforced drastic devaluation. The dollar quotes at 75 reals and the most remarkable thing about Persia is the prevalence of gold coinage—sold by the value of metallic content, not the face value.

Token coinage of bronze or silver alloy stands today on a different footing, for, the most interesting feature about Persia is not the multitude of State-managed banks or the small number of private banks or even the acceptance of the metric system, which only means that the Real, equal to 100 dinars, is like the Japanese yen—paper money that is not kept for long.

The banks and the oil monopoly try to gather dollars when they can, but the import surplus does not help to raise external reserves though the Oil Consortium contributes regularly. But in a country that is poor and in the throes of planning, gold is at a premium always, and the gold coins in circulation are prized. In that respect, Persia differs from the Gulf principalities or Saudi Arabia, where gold is a commodity only imported to be exported, just as in Beirut.

The gold coins current in Persia include the British sovereign, the Russian ten rouble piece and the Turkish pound. The local Pahlavi, quoted at 680 reals (£4 sh. 4) but the British gold coins quoted over 750 reals. That is to say, the usual premium was kept up, though small gold bars also were available for sale in Persia. The central banking institution has reported that bullion fluctuations were small in 1960, but that may have been altered after or by the gold rush in November.

The increase in note circulation since 1953 in Persia is a factor in the monetary situation, explaining why gold is up and why 5 Pahlavi pieces are sought for hoarding like Napoleons in France. The conclusion then is that a gold coinage or even the transfer of Crown jewels plus the Peacock Throne as a currency reserve for the Persian

Government is no real safeguard against inflation. In a backward area, the rage for gold will remain, progress can be measured only by indifference to gold.

THE BIBLE Publishing Plum

A good quarrel is now brewing up over the Bible. The Queen's Printers, Eyre and Spottiswoode, feel that the Oxford University Press has got away with that plum of publishing business—the Bible. Three hundred years of public reading has made the public keen on the new translation of an old text. And the Bible and Foreign Society keep the standard flying in other lands. And a new translation which the others, Collins or Cambridge, cannot put out any more than Eyre and Spottiswoode, becomes an advertisement for Oxford where the great Chancellor's memory is preserved by the Clarendon Press. Who has the patent or copyright is the question for a Judge, but Mr. Graham Greene, as literary adviser to Eyre and Spottiswoode, will say that the heart of the matter lies in the prospective sale of a million at a guinea each, with parsons putting the new 20th Century Oxford Bible in every parish. A new Primate cannot give a ruling about a legal point, and Convocation cannot help, nor the Dean of Arches. Eyre and Spottiswoode may be stodgy publishers on the Right with few best sellers, but there is in the book trade some prejudice against the University Presses that collect prestige and pelf alike. And the Bible as Everyman's Book, cannot be cornered by one publisher, as the Restrictive Practices Court might conceivably hold. The SPCK will feel that it has lost good custom. The copyright claim may require to be tested right up to the House of Lords because the privileged University presses that did not fall under censorship in Stuart times are still thriving on the Certificate Examinations and are now getting State subsidies to provide cheap books for India. Mr Norrington of the Oxford Press can well say with A. H. Clough, Say not the struggle naught availeth, because the OUP has got the best seller for its Spring list and is not liable for royalties to pay to any author today.

US ECONOMY Down: So Up in the Future

Economic developments often are not what they seem, and it behoves analysts to take a close look at the bare statistical data to determine just what they mean. So it is, that two superficially adverse reports—one concerning

25 March 1961

consumer activity and the other: business outlays—are being widely interpreted, on closer examination, as essentially optimistic and as harbingers of better things to come. Both reports were issued by US Government agencies within the past week.

The first, just published by the Federal Reserve Board, reveals that the amount of consumer instalment credit outstanding declined in January, for the first month-to-month drop in more than two years. On a seasonally adjusted basis, instalment credit payments of \$3,972 million exceeded new instalment credit extensions by \$103 million. This would seem to indicate a declining consumer interest in shouldering new financial burdens at this time, and to that extent it presents a discouraging picture of consumer buying intentions.

From a longer-range point of view, however, the fact that new instalment credit extensions have fallen below repayments can be considered decidedly encouraging. The resultant liquidation of a portion of outstanding indebtedness indicates that consumers are putting their financial houses in order, and offers the basis for expecting a reasonably active consumer buying surge with the end of the current recession. That end is widely expected within the next few months.

Past records show that liquidation of a portion of outstanding indebtedness historically has been a pre-requisite to the development of another long-term instalment buying rise. Such a rise would normally lead or accompany a marked increase in over-all consumer activity, which is an important factor in a general economic expansion.

Since credit is used largely to finance the purchase of durable goods, automobiles in particular, it can be presumed that these goods would be the principal beneficiaries of a new expansion of instalment credit buying. Interestingly enough, it was a sharp dip in automobile instalment loans that was mainly responsible for the January decline in consumer credit.

It may be of some significance, in this connection, that automobile purchases picked up noticeably during the latter part of February.

The other report, issued jointly by the Commerce Department and the Securities and Exchange Commission (SEC), shows that business expenditures for new plant and equipment in 1961 are likely to dip three per cent below the 1960 level. The totals projected by the Government survey of business plans are \$34,800 million this year, compared with \$35,700 million last year.

But what is most important in these findings is the prospective trend of capital spending. What is in view, according to present business schedules, is a continua-

tion of a moderate downtrend through mid-year, to be followed by an upturn during the second half of the year.

This, coupled with the fact that outlays will be only three per cent below the 1960 pace, is considered an essentially favourable sign. Capital investment in new plant and equipment is regarded as a major element in total economic activity, as it contributes to a widening chain of new orders for many kinds of goods and services.

Moreover, as is the case with consumer instalment credit, historical precedent provides a sound basis for optimism. Trends in business spending traditionally lag behind changes in the economy. In the 1958 recession year, for instance, capital spending rates reached a low point during the third quarter before turning up, while total output of goods and services—the gross national product—hit its low point in the first quarter.

On this basis, it is especially significant that an upturn in capital outlays back in 1958 skidded 17 per cent, in contrast to the 1961 prospect of a mere 3 per cent decline.

LATIN AMERICA Quick Follow-up

The inaugural Message of President Kennedy to Congress made mention of the urgent needs of America. The Cuban problem is viewed as a compelling reason for action. Brazil and Argentina are still hard up, and the USA knows that Chile has not got over the earthquake disaster. The Russian trade aims or programmes matter very little as compared with the restoration of economic order in Venezuela, and the economic recession at home can be countered only by spending funds allotted on US goods and services. That, too, is part of the good

neighbour policy applied in new conditions, and Mr Kennedy's programme will be better than trying to isolate Cuba or promoting hemisphere solidarity. Bigger buying of minerals may hit some exporting nations, India included but Latin America is the big field of US investment for four decades, and a ten-year plan may supplement the Treaty of Montevideo meant to promote inter-regional trade. The US version of a Colombo Plan should impress others, including British Honduras, about opportunities. The restoration of democracy by driving out dictators (especially in the Dominican Republic and Haiti) can come only if economic progress is assured, and it is no accident that Costa Rica like Uruguay has all along shaped better than Peru or Bolivia.

The emphasis on investing in Europe to build up export industries may be relaxed in view of the use to be found for special

Save with the simplicity of HONEYWELL TEL-O-SET® Miniature Instruments

- Tel-O-Set Features**
- Quick-connect mounting
 - Unit construction
 - Versatile operation
 - Wide range of reset rates
 - Low air consumption
 - High precision
 - Exceptional compactness
 - Chart re-roll

NEW and improved Tel-O-Set miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell Tel-O-Set indicators, recorders and controllers are today's most advanced miniature instruments.

credits granted already for Latin America's benefit. The foreign aid programme is extended, but the dollars will not be spent abroad, and if the primary object is to patch up Brazil after the election, the distant aim is to stabilise prices for coffee, tin ore and other items. All primary producers that live by exports to Europe stand to gain definitely, though some countries may lose their share of the US market for metals. The insulation of South America against the intrusion of Communism is an idea that Republicans will approve, and Mr Eisenhower's own failure may be viewed as a reason for a bold new programme, more so as aid given to many Asian countries has yielded indifferent results to date. The crisis in Laos and the cracks in Saigon point to the poor results of dollar diplomacy on the old model.

★

HIND MOTORS

An Auditorium for workers

The name of Birlas is a by-word for business enterprise. There is hardly a field in which they have not set their mark. And among the Birla group of undertakings, Hindusthan Motors has claims to be considered outstanding not only in size but also as being of strategic importance for the development of the country's economy. Though Premiers of Bombay stole a march over the Birlas in having pioneered automobile manufacture in the country, Hind Motors have taken the lead in the percentage of indigenous components manufactured in their factory. The striking feature of the factory is the aspect of spaciousness which the entire lay-out presents. The forge shop, the machine shop, and the foundry shop are fitted with the best and most modern machines and emphasis on productivity informs almost every stage of production in the factory of Hind Motors. The approach to the problem of labour welfare in the Hind Motor factory accords with the modern principles of human relations and few undertakings in the country can claim a comparable record with Hind Motors in this field. An auditorium for workers was inaugurated this week by Dr B. C. Roy, West Bengal Chief Minister, and is a worthy addition to the many other amenities already provided for workers in the factory. Conceived and executed in the grand style, and with accommodation for nearly 3,000 workers, the auditorium would put into the shade many of Calcutta city's entertainment houses. It was but merited tribute which Mr G. L. Nanda, the Union Labour Minister, paid when he stated in his message that employers elsewhere in the country would do well to emulate the example set by the management of the Hind Motors.

MADHYA PRADESH

A Four Years' Balance-sheet

THE four-year progress report prepared by the Directorate of Economics and Statistics of the Madhya Pradesh Government underlines the advance made by the State in various directions in the course of implementation of the Second Plan schemes. Out of a total Plan provision of Rs 190.90 crores for the five year period, expenditure in the first four years is shown at Rs 109.18 crores. The pace of expenditure has been rather slow, particularly in the early years, being only Rs 18.87 crores in 1956-57 against Rs 30.79 crores in 1959-60. It is also noteworthy that the actual expenditure for the four years reveals a shortfall of Rs 15.16 crores as compared with the Plan ceilings approved by the Planning Commission and is attributed to the administrative dislocation caused by the States' reorganisation scheme.

The report claims top performance in respect of irrigation and power which, by virtue of their centrality for economic progress, were assigned the largest share of allocations. Irrigation accounted for Rs 16.17 crores of the total Plan outlay excluding allocations for multi-purpose projects and minor irrigation schemes. Actual allocation for irrigation for the four years amounted to Rs 5,27.44 lakhs against which expenditure was placed Rs 5,43.83 lakhs representing 103.11 per cent of the allocations. The irrigation potential created as a result of schemes taken up during the four years also reveals a remarkable increase to 2,04,200 acres during 1959-60 from 81,237 acres during 1956-57. Progress under minor irrigation was, however, tardy and actual expenditure incurred under this head works out to only 68.92 per cent of the allocation for the four year period.

Power development for Madhya Pradesh during the Second Plan period included schemes to raise the installed capacity by 116,000 kw with a provision of Rs 24.18 crores. The Plan allocations for the first four years amounted to Rs 17.85 crores. Against this, an amount of Rs 14.69 crores has been utilised, representing 82.25 per cent of the allocation. The Korba thermal power station was the most important of the schemes in the power sector included in the Second Plan and was intended to meet the power requirements of the Bhilai Steel Plant and the collieries developed by the National Coal Development Corporation at Korba. The project is reported to be in an advanced stage of progress. Apart from the completion of the civil works, the boiler Nos 1, 2, 3 and 4 and turbo-alternator Nos 1, 2, and 3

are shown to have been commissioned.

For development of power and irrigation, the Second Plan also included two multi-purpose schemes, namely, the Chambal project and the Tawa project. The Chambal project was a continuing scheme since the First Plan while the Tawa project was a new one taken up during the Second Plan period. The Chambal scheme is estimated to cost Rs 71.69 crores and is expected to yield 475,000 tons of additional foodgrains annually by irrigating 1,400,000 acres of land in 12 tahsils of Madhya Pradesh and 19 tahsils of Rajasthan and generate 210,000 kw of power. Under the Second Five Year Plan, a provision of Rs 28.68 crores was made for the project which included Rs 21.01 crores for the irrigation sector and Rs 7.67 crores for the power sector. Expenditure during the first four years is shown to have aggregated Rs 23.19 crores, including Rs 17.02 crores on irrigation and Rs 6.18 crores on power programmes. For the Tawa project, the State's Second Plan provided an outlay of Rs 3.04 crores. The project is expected to irrigate 750,000 acres of land and generate 20,000 kw of power to meet the requirements of Hoshangabad, Narsimhapur, Jabalpur and Bhopal.

Agricultural production and land development came second in priority in the Second Plan programmes for Madhya Pradesh and account for an allocation of Rs 6.27 crores and Rs 6.52 crores respectively. The Plan allocation for agricultural production programmes for the first four years was of the order of Rs 4.48 crores. Expenditure during the same period, placed at Rs 1.97 crores, reveals a large shortfall. This gap in performance in the agricultural sphere is put down to various causes, of which the most important are the dislocation caused by States' reorganisation, non-availability of technical personnel, non-unification of the integrating units, non-receipt or late receipt of sanctions, etc. A relieving feature is the progress made in extending rural co-operation and in the field of Community Development schemes. The volume of agricultural

finance provided by the Co-operative Banks has increased from Rs 3.65 crores as on 30 June 1956 to Rs 13.54 crores. Another feature of progress in the co-operative sector is the organisation of 610 large-sized cooperative societies covering 7,592 villages with a total membership of 131,350. These societies are also disclosed to have been given financial assistance of Rs 85.02 lakhs by way of share capital contribution, loans, and subsidies for construction of godowns, etc. In respect of community development, actual expenditure at Rs 13.72 crores working out to 97.69 per cent of the total allocation of Rs 14.04 crores represents remarkable progress. There are at present 282 blocks in operation in the State covering about 50,000 villages, 93,000 square miles of area and 16.2 million persons.

The Second Plan also laid down ambitious programmes for the industrial development of the State. The Bhilai steel project and the Heavy Electricals at Bhopal are two major schemes that have considerable significance for future industrial progress. The development of the Korba coal fields by the National Coal Development Corporation has also enlarged the scope for industrial progress. Besides, there were three schemes taken up in the State sector for completion during the Second Plan. These are the cotton spinning mill at Sanawad, the solvent extraction plant at Ujjain and the power alcohol distillery at Ratlam. These projects are expected to be launched into production by the beginning of the Third Plan. The first four years have also witnessed a host of new schemes in the small-scale sector. The industrial position of Madhya Pradesh does not compare with more advanced States like West Bengal or Maharashtra. The Techno-economic survey undertaken by the National Council for Applied Economic Research has indicated scope for development on the basis of utilising the State's unexploited reserves of minerals. A great handicap in this field has been the relative shortage of power. The completion of schemes now under way for stepping up power development, particularly the multipurpose projects, should enlarge the base for industrial progress.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

Both India and the US have been fortunate in their respective envoys at the other's capital. The tradition dates back to pre-independence days when Roosevelt had as his personal representatives at Delhi persons that understood our aspirations well enough to incur Churchill's wrath. Mr Elsworth Bunker who has just completed his assignment at Delhi is thus in distinguished and warm-hearted company. A spare and even austere figure, he is farthest removed from the popular myth about a diplomat, whom it invests with an aura of spivverry and illicit glamour. No bustling trouble-shooter he, his tenure nevertheless saw the quiet strengthening of Indo-American relations at below-the-ground level. He was, to be sure, helped by the latter-day abeyance of the Dulles Doctrine, but the unprecedented ovation that greeted Eisenhower at Delhi was a measure of Mr Bunker's success in erasing earlier images of America on the Indian mind. Mr S. K. Patil's success in arranging long-term aid for meeting India's chronic shortage of agricultural products owes not a little to Mr Bunker's active collaboration. And yet, specific achievements are not Mr Bunker's chief claim to our respect and admiration. He had a curiosity about our country deeper than that of many another diplomat. Vinoba Bhave, whom he once very perceptibly compared to Johnny Appleseed, the almost legendary American who walked about the Ohio Valley broadcasting love and appleseed, he vastly admired. And I think he was the only diplomat who met the Sringeri Sankaracharya. He had a subterranean sympathy with many of our ways and values which made it easy for him to understand not only our virtues but our failings, and that made him such a good friend of India.

★

Professor Galbraith who is succeeding Mr Bunker in New Delhi is no stranger to India or to these columns. Only the other day he gave many in this country a much-needed jolt about the quantum of socialism in our planning. For about ten days, "Post Office Socialism" was on everybody's lips. But he had said much the same thing years ago in an article in Foreign Affairs Quarterly which I had discussed at length in these columns. As an economist who is

also witty, he has a certain amount of "Establishment" prejudice to contend with, as was demonstrated by the hitch over his nomination. Mr Galbraith's chief asset is a remarkable freshness of outlook that he brings to bear on every problem. His principal academic preoccupation has been with the nature of American capitalism. (Incidentally, his unself-conscious use of the expression rehabilitated it from the status of a dirty word to which it had sunk.) His interest in under-development is more recent and less severely academic, which is not to say that it is superficial. As one of Mr Kennedy's New Frontiersmen, (the phrase is, of course, his brain-child) he can be legitimately expected to share his chief's preoccupation with development of countries like India. And yet he is no sloppy philanthropist with a bad conscience about his comparative affluence. In an article in Foreign Affairs Quarterly recently, he listed four fairly stiff conditions for qualifying for foreign aid. India, he expressly stated, does qualify. In view of his own interest in this country and his chief's declared policies, he must be considering his new assignment as the most important yet in his life. And as an old but undeluded friend, he is bound to be welcomed at Delhi. And once he is ensconced, I do hope, for our own sake, there will be a lot of informal picking of his brain.

★

I wonder whether Mr Manubhai Shah was conscious of the rather dubious historical associations of the phrase "open door policy", when he used it to describe Indian attitude to foreign collaboration at the inauguration of the Trombay Project of the Union Carbide Company. On the whole, I am inclined to think that he was not and that he was only unconsciously employing a vernacular idiom indicative of our traditional hospitality. Nevertheless, there is historic irony in the use of this expression. The essence of the doctrine as it was originally enunciated was that the door was kept open not by the owner of the house but by the trespassers. It is a measure of the changes that have come over the world that the phrase should have been employed, however unconsciously, in the opposite and normal sense of the owner having a say in who shall cross his threshold. When the US

Secretary of State John Hay formulated it in 1899, he was not talking about keeping open his country's door, but China's. And what will sound even more curious to modern ears, he was not making the suggestion to China, which would be presumptuous enough, but to Great Britain, Germany and Russia! Readers may recall that the policy came as the culmination of—and to a lesser extent as a corrective to—what is perhaps the most shameful piece of exploitation of a nominally free country by European powers. The Anglo-Chinese war of 1840-42 was followed by treaties by which any privilege that China granted to any country automatically extended to every country having a "most favoured nation" relationship with it. This paved the way for extensive and competitive exploitation of China by European powers (including Russia), and later to annexations and unconscionable leasehold rights. The US had, of course, nothing to do with this, but its trade was affected by the preferential rights enjoyed by the European powers. So it came out with the suggestion that there was no reason why the door should be shut against its face by those who were sitting pretty inside. Matters came to a head after the Boxer Rebellion and in 1900 the US reiterated its policy and succeeded in getting its acceptance by the major powers. Curiously, there was a positive consequence to this policy in that the territorial and administrative integrity of China had to be recognised as a corollary. After all, as Chesterton would say, a trespasser is the most sincere believer in Private Property.

★

The Indian "open door policy"—I do wish Mr Shah had thought up a different phrase, for the associations bother me—is a different kettle of fish altogether. High praise for it came from Mr Kenneth Rush, Vice-President of the Union Carbide Company. He said that

"his company operated over fifty units in twentyfive countries but in no country had his company received better co-operation from a Government than in India." I cannot believe that this is just a piece of gobbledegook. I have always found that practising entrepreneurs, as distinguished from onlookers and general pedlars of advice, are able to see that our selective incentives like sections 15-C and 56A of the Income Tax Act and development rebates are both generous and sensible. I have never understood the demand for blanket tax-holidays like those granted in Puerto Rico and now reportedly offered by Ghana. I remember Ursula Hicks pointing out some years ago how Puerto Rico was losing revenue to the tune of 5300 million dollars without anything to show for it in increased production. What foreign participants would like to be assured of, I believe, is a reasonable return on capital, safety for their capital and comparative mobility, first for their profits, and in the last resort, for their capital. These are assured in India. Apart from this, I think the time has come to stress "opportunities" rather than "incentives," which, curiously, was not the case even as recently as five years ago. Take any publication that attempts a "census of manufacture" in however crude a form. You will be amazed at the kind of things we are turning our hands to. Since January 1960 the monthly statistics of production of selected industries in India has added seventyone new industries to its coverage. The four pillars of policy that Mr Shah enunciated viz. building more machines, self-sufficiency in raw materials, importing the least and exporting the maximum indicate more than anything else that Indian Industrial Revolution has come of age and should be, on its own right, of supreme interest to anyone with special skills and capital to spare. Some countries can do without them and others are not ready enough. India is one of the few just poised to use them. That is why Mr Rush finds the Government of India so eagerly co-operative.

ECAFE

Atomic Power Economic?

THE daily press in our country is always keen to publicise news or views having any bearing on the atomic power programme for which the Third Plan has made a provision of Rs 50 crores. It is therefore surprising that an important statement on the subject made by Mr D.A.W. Fischer (Director, Division of External Liaison & Protocol) of the International Atomic Energy Agency at the ECAFE Session last Saturday has passed practically unnoticed. The IAEA representative made the statement during discussion on item 15 of the agenda, Technical Assistance. At the outset, Dr Fischer referred to the great significance of atomic energy for the ECAFE region as source both of power as well as of isotopes. Regarding power, he said that latest developments in the field indicated that nuclear power will become more competitive, as compared with conventional power.

The assessments of the economics of nuclear power have been subject to frequent alterations and have varied from country to country.

Mr Fischer recalled that the first general conference on the peaceful uses of atomic energy had approached the subject with great optimism. Later, experience of countries which had gone in for atomic power on a large scale led to a sober reassessment of prospects in 1958. The latest assessment of the economics of power reactor programmes showed a slightly more optimistic trend. This refers only, or mainly, to large reactors operating at very high temperatures and pressures. The prospects of small reactors are still hidden in the mists of the future. Referring to the ECAFE region, he said that atomic power derived from large reactors may be economic in areas away from sources of conventional power and where demand for power was large enough to enable the reactors to operate at full load.

This statement of the representative of the IAEA is of considerable significance in view of the controversy over the subject in this country. The atomic power programme has been included in the Third Plan on the assumption that the cost of atomic power generation (estimated at 3.5 to 4 nP per kilowatt-hour) will be comparable with coal-fired stations in areas remote from coal fields. But the validity of these cost estimates,

has been questioned. It is understood that there are two views in the Planning Commission on the advisability of diverting scarce resources to this costly field of investment. The British financial journalists who visited this country last December have made critical comments about this aspect of India's development plans and those have been widely reproduced. The World Bank Mission is understood to have questioned the costs worked out by the Atomic Energy Commission which has made its calculations on the basis of an interest rate of 4½ per cent on the capital. This criticism has been answered by Dr Bhabha who pointed out, at his press conference in New Delhi a few weeks ago, that 4½ per cent was the rate charged by the Government of India on funds advanced to public enterprises.

In justification of the atomic power programme, it has been further emphasised that the cost of power generation is not the sole consideration. The main argument is based on the need to take effective measures to meet the shortage of power that this country will be faced with by 1986 as indicated by projections of demand for and supply of power from conventional sources. According to authoritative estimates, the position by 1986 will be as follows:

	Million Kws
Total requirements (installed capacity)	50 to 60
Hydro capacity	25
Thermal (coal) capacity	15

The deficit of 10 to 20 million kilowatts will have to be met from non-conventional sources, that is, atomic energy. And if we are to be in a position to build up capacity of 10 to 20 million kws of atomic power by 1986, the start has to be made right now to develop the necessary design, manufacture and construction skills. Conceding that the atomic power stations that are built now may be expensive in terms of both capital and production costs, it should be remembered that these stations will not only provide power which is very badly needed now, but will also help to develop the technology and the technicians for large-scale expansion which will be unavoidable in the future. The reactors will also produce the plutonium necessary for the exploitation of extensive thorium deposits in this country. Technical backwardness in other fields has been for years the major obstacle to rapid industrialisation. In the field of atomic energy, we are in the fortunate position, thanks to the able hand of scientists led by Dr Bhabha, of being able to catch up with the advanced countries, if we are prepared to make the effort.

The Atomic Energy Commission has estimated that, in regions remote from coalfields or hydel sources, atomic power will be competitive with conventional power even on the basis of developments

two or three years ago. It must, indeed, be a matter of great satisfaction to Dr Bhabha that the case for atomic power stations will be further reinforced by the latest findings of the IAEA.

In his statement to the ECAFE Session, Mr Fischer said that the IAEA was prepared to extend technical assistance in all ranges of reactor operation. They could undertake studies on the economics and techniques of nuclear power programmes, location, evaluation of hazards, etc. The Agency, he said, is also prepared to supply fuel elements or to arrange for such supplies.

The extent to which the assistance offered by the IAEA could be utilised by the developing countries will depend on the manner in which the Agency's system of safeguards is applied to individual projects. In the view of India and several other countries which rejected the safeguard procedure, these provisions give the Agency, or the countries giving assistance, power to interfere in the internal affairs of States. They constitute an infringement or limitation of the national sovereignty of States. For safeguarding the interests of the world community, the limitation may be accepted, provided it is applied by all countries equally and not merely to those receiving assistance from the Agency. As Dr Bhabha had stated at the Conference on the Statute held in New York, besides the States which already have atomic weapons, there are a number of States which have the technical and material resources to push forward their own atomic programmes without any aid from the Agency and to make atomic weapons, if they so wish. The safeguards will in no way stop their progress.

The safeguards procedure was submitted to the Fourth General Conference which met in Vienna during September-October 1960. It was supported by the countries of the Western bloc and its supporters, while it was rejected by 19 countries including India, other countries similarly situated, and the countries of the Eastern bloc. The nations opposing the system of safeguards took the position that there would be an infringement of national sovereignty and that the safeguard system would not help in preventing many countries from developing atomic weapons as those countries which could develop them would not ask for Agency assistance. India, it has been repeatedly emphasised, has not been at any time against a system of safeguards, inspection, accounting or control. But it has also been made clear that the system which is formulated must apply equally to all countries. That being the case, the wide range of assistance the IAEA is prepared to offer to countries in the ECAFE region, according to its representative, is not likely to be of much help to India or other countries which share its views.

Indian Finance

25 March 1961

Markets

JUTE

Early Crop And Large, Too?

THE decline in prices in the jute and gunny markets noticeable during the past few days seems to have directly stemmed from the growing belief that the next jute crop in India and Pakistan would be both early and large. Pakistan has set a target of 7.4 million bales for its jute production in the season 1961-62 and reports from the country speak of good progress having been already made in midland and highland sowings. It would appear that on present indications a bumper crop in Pakistan is very likely. There have been early rains in most of the jute growing areas in India also and this factor has been largely responsible for the expectation that the next year's jute crop will be considerably bigger in size than the current year's crop. Mr D.C.B. Pilkington, Chairman of the Indian Jute Mills Association, has pointed out in the course of his address at the annual general meeting of the association last week that "there are reasonable grounds for expecting a good jute crop this year." Emphasising the need for urgent action in the direction of maximising jute production, he has drawn attention to the fact that there has been virtually no increase in the yield per acre which still averages only about 2½ bales as compared with about 3½ bales in Pakistan. It is to be expected therefore that concerted measures will be taken to promote the production of jute by various agencies. There is a new sense of urgency permeating the Central and such of the State Government as have a sizable acreage under jute. The Indian Jute Mills Association has already set up a special jute development section with the principal object of establishing areas of intensive cultivation in the jute growing districts to show the cultivators, in a practical way, what can be achieved by the use of improved seeds, modern cultivation techniques and the proper application of fertilisers. The Indian Central Jute Committee is making available to cultivators the results of its research and is also giving valuable guidance in jute cultivation in recent weeks through periodical press releases.

most for granted that the IJMA's scheme for building up a buffer stock of jute will be put into earnest operation, perhaps with Government blessing. This IJMA scheme is designed not only to build up reserve stocks of jute for the mills but also to prevent jute prices from falling to unremunerative levels. It is now realised on all hands that if jute production is to keep pace with the demand, the cultivator should be assured of an economic price for his jute. The IJMA Chairman has revealed that the buffer stock scheme is to be kept ready to be implemented when there is a surplus jute.

Mr Pilkington thinks that, with an adequate supply of raw jute in the coming season, the industry's present troubles would largely disappear before the end of the year. He admits that the next few months are going to be difficult, but the long term prospects are bright. The basis for his optimism is the increasing demand for jute products in the US and the continued upturn in the consumption in India.

The jute goods market developed an easier trend during the past week largely in sympathy with the raw jute section where prices were tending to be lower than maximum fixed levels. Overseas buyers seemed to be reluctant to enter into commitments presumably due to the expectation that prices were bound to fall further in view of the favourable crop reports from the growing areas both in India and Pakistan. Mills also were sellers in marked contrast to their reserved attitude not long ago. There has thus been a sizable decline in rates over the past seven days. Hessian 40" x 10 oz Ready which was quoting at Rs 67.85 last Thursday has steadily lost ground to be placed at Rs 65 at close of business this Thursday. B Twills Ready likewise has come back to Rs 190 from Rs 202.50.

In the raw jute section conditions a week ago were fairly steady but for the past three or four days sentiment has become distinctly easier. The fact that there have been beneficial rains in the jute growing areas in this country coupled with the report of fair progress in sowings in Pakistan seems to have been mainly responsible for inducing the reactionary trend. While mills have not been showing much interest in the market, holders are freely offering jute at 50 nP to Re 1 below the maximum rates.

The rates remained unchanged at the controlled rates of Rs 62 for Assam Bottoms; Rs 61 for Northern Bottoms and Rs 64 for Dalsee Bottoms (all per maund for March-April delivery).

★

TEA

Production and Arrivals

ALTHOUGH Tea fetched higher prices in 1960, many estates in North-Eastern India are not expected to report good working results as a result of the severe damage to crops in the drought. The average prices until the middle of January this year have been Rs 5.81 per kilogram for Assam tea (against Rs 5.88 in the earlier season); Rs 4.66 per kilogram for Cachar tea (Rs 4.41); Rs 6.89 per kilogram for Darjeeling tea (Rs 6.88); Rs 4.90 per kilogram for Doars tea (Rs 4.63) and Rs 4.86 per kilogram for Terai tea (Rs 4.61). But total production in North-East India is only 527.03 million pounds, showing a fall of 34.2 million pounds from the 1959 figure. The world crop (excluding China) is expected to be about 10 million pounds lower than in 1959 and the demand is more

or less level with the world supplies.

Arrivals of tea into the Calcutta Port have shown an increase to 81,030 chests in February from 35,550 chests in the corresponding month of last year. Despite this improvement, arrivals in the eleven months ending February 1961 are lower at 4,424,728 chests as compared to 4,540,032 chests in the corresponding period of last year.

While tea arrivals by air and road have increased from 68,493 chests and 12,040 chests in April/February 1960 to 164,357 chests and 206,972 chests respectively in the similar period ended February this year, tea imports by rail and river have declined from 1,253,214 chests and 3,206,283 chests to 1,229,701 chests and 2,823,698 respectively.

Meanwhile, no export sale was held in Calcutta this week. The next export sale, which will be the final clearing-up sale of the season, will be held on 27 March. It is expected that the regular auctions of the new season's teas will begin in early June, although a few parcels of Darjeeling teas may be sold towards the middle or end of May.

In the Internal Sale, offerings were 22,648 packages of Dusts and 405 packages of Leaf grades. There was a good general demand for Dusts. Orthodox descriptions declined by 10 nP and sometimes 15 nP per kilo except for the smaller and brighter lines which met with better support. Legg-cut teas, though generally easier, met with quite good demand and the small and bright varieties were sold well.

Medium CTCs came to a strong market and were generally sold well above last rates except for the extremely fibrous descriptions, which were neglected. Good CTC teas were the strongest feature of the sale and fetched considerably enhanced prices. Following rates were quoted:—Plain Orthodox Dust Rs 4.45 to Rs 4.60; Legg-cut Dust Rs 4.70 to Rs 5.20; Medium Assam Dust Rs 4.55 to Rs 4.90; Medium Assam CTC Dust Rs 5.80

Space donated by:

to Rs 6.20 and Good Assam CTC Dust Rs 6.40 to Rs 7.00. There was a good demand for Leaf grades.

A total of 431,000 kgs of Leaf tea was offered in the Cochin market. Against good demand at lower rates, plain and low medium teas were 10 nP to 20 nP a kilo lower than last week's rates. Medium and good medium sorts were 10 nP easier. Nilgiri teas were neglected, while black leaf teas were firm.

In a memorandum submitted to the Union Finance Minister, the Calcutta Tea Merchants' Association has pointed out that the small quantum of reduction in export duty by 9 nP per kilogram will not serve as an incentive to more exports and greater earning of foreign exchange. The Association adds that, unless the total imposition on tea, particularly on producers, is reduced, the competitive position of the industry can hardly improve.

The President of the UPASI Mr H. C. Kothari, has also stated that the Finance Minister's proposals are most unlikely to achieve the objects he has in view. He says that, in the case of high-grown Nilgiris teas, which are in Zone III-A, the reduction of 9 nP in export duty will be almost offset by the increase of 7 nP in excise duty, leaving the net benefit at 2 nP per kg only. This brings the actual reduction to less than 4 per cent on the previous duty and not 17 per cent as stated by the Finance Minister. The relief in the case of teas in Zones I and II, similarly, will amount to 5.7 per cent and 6.6 per cent respectively only. He says that it will be quite wrong, therefore, for any-

one to think that the tea industry is getting a substantial concession of 17 per cent in duty.

The position in regard to "package teas" also should be clarified in view of the Finance Minister's announcement of a reduction of 6 nP in the excise duty on such teas. Package teas paid an excise duty of 46 nP per kg up to the end of 28 February 1961. It is now reduced to 40 nP. But package teas released from estates also paid the appropriate duty for loose tea on the zonal basis. Thus, the total duty paid by package teas in Zone I was 50.5 nP; those in Zone II 55 nP and those in Zone III-A 64 nP. The corresponding figures now are 50 nP, 55 nP and 65 nP respectively. While package teas in Zone I get a relief of 0.5 nP, there is no relief in respect of package teas in Zone II and those in Zone III-A actually pay 1 nP more. So far as the sales of package teas are concerned, the reduction in excise duty is, therefore, hardly worth mentioning.

The less assured tone, recently evident in the Mincing Lane tea auction, has persisted this week. Price recessions are, in fact, rather more pronounced with medium and high-grown Ceylon descriptions, especially those light in cup, showing considerable irregularity and frequent declines of 1d to 4d per pound. Although demand in the aggregate has been fairly good, competition from the large United Kingdom distributors is reported to be on a reduced scale. The entire price structure covering plain to quality invoices is lower, ranging from 3½ sh to 6sh 2d per pound as compared with 3sh 7d to 6sh 7d in the previous week.

COTTON New Quota for Bengal Deshi?

THE Bombay cotton futures market displayed steady conditions during the past week and the maturing contract was pushed up to a level of Rs 593.50. The week's trading pattern was characterised by switch-over operations from maturing contract to the distant contract. The improvement in futures was attributed to short-covering and renewed buying by local and upcountry centres. Enthusiasm was enthused by the report that the balance of Indian cotton quota will be released to the mills in the immediate future. Sentiment was also influenced by the continued firm support from the spot market and the report of satisfactory offtake in the cloth market.

A sustained improvement was visible in the August Contract which warmed up to Rs 604.50 after opening at Rs 599.50 but declined to Rs 598.50 in earlier dealings. At the close of the week, however, it was quoted at Rs 604.25.

The bullish sentiment was fanned by rumours that Government of India would immediately release a fresh export quota for Bengal Deshi. Consequently, prices of Bengal Deshi in the ready cotton market went up by about Rs 20 per candy. Export prospects of this growth were considered bright as Japan was reported to be an anxious buyer of Indian short staple cotton. Rumours were also afloat that the authorities were considering exports of Kala Gin, and Wagad varieties of cotton. But this has been refuted by official sources with the result that prices of these growths remained unchanged.

Trading in the spot market continued to be brisk, and spinner's interest was conspicuous in all the varieties of indigenous growths. Khandesh, CO 2, Vijay Digvijay, L 147 and Berar were eagerly sought after and prices of all these varieties moved up considerably. Spinners were prepared to offer higher prices for cotton in view of the increased offtake of cloth. Export inquiries for cloth were reported to have been increasing at a fast rate, although actual offtake was below expectations.

The pace of arrival of new crop cotton has been well maintained. Sixty per cent of the season's crop has been already marketed. Arrivals were mostly from Gujarat, Madhya Pradesh, Punjab, Karnataka, Saurashtra and Andhra areas. It appears that the busy season in cotton will be over within a fortnight or so.

Many of the short sellers preferred to cover their sales in order to safeguard their position. They were afraid that they would be asked to pay the actual difference between the ready and forward

price as a penalty for non-tendering cotton. The normal penalty is reported to amount to Rs 30 per candy.

The import section during the period under review continued to remain listless. In spite of the fair interest showed in American cotton, actual business transacted was below expectations. Good enquiries for East African were reported presumably due to the fall in prices. Demand for Sudanese and Egyptian cotton, however, remained static. The turnover in the imported varieties was restricted.

The Government of Gujarat has decided to continue its vigorous measures to help the cotton cultivators in the State to make substantial improvements in the quality of the crop. The rigorous measures adopted to stop the practice of mixing the inferior variety with the certified styles are bound to result in producing remarkable results in the produce in the coming season.

PIECEGOODS

Cheerful conditions prevailed in the Bombay piecegoods market. Demand for superior varieties was brisk. Inquiries from upcountry centres were not encouraging. The leading upcountry buyers were UP, Bihar, Punjab and Delhi. In the export section, many of the traditional buyers kept away from the market due to the high prices.

India's total exports from January to November 1960 aggregated 89.6 million yards. Out of this, grey bleached cloth accounted for 365 million yards. Our exports to the United Kingdom, Belgium, West Germany and Northern Rhodesia during the period under review were on the increase.

GOLD & SILVER

Prices on the Bombay Bullion Exchange showed a mixed trend. While the price of Silver made some improvement from the recent low levels, there was a setback in the price of Gold.

The improvement in the price of silver was attributed to the absence of further selling pressure. The decision of the Board of the Bombay Bullion Association to seek permission of the FMC for allowing trading in both the Vaisakh and Jeth contracts encouraged the bulls, although the continuing disparity between the arrivals and offtake weighed heavily on the minds of the speculators. Arrivals amounted to 12 bars as against an offtake of 17 bars. The rate for spot Silver (below 996) moved between Rs 202.45 and Rs 202.95.

OILS & OLSEEDS

Prices on the Bombay Oils and Oilseeds Exchange displayed a slightly reactionary tendency. Reports of increased receipts of seeds in upcountry markets, lower advices from the bullion market and selling of about 12,000 candles in castor by bull operators were the main factors which dampened sentiment. While

the bulls in futures were inclined to reduce their commitments, buyers in the ready market were prepared to wait in anticipation of a further fall in prices. The reports, that the authorities might act at any moment to curb the rise in prices, were also current in the market.

Reports from the terminal centres indicated that the arrivals of Groundnut might gather further momentum in the coming weeks. The summer crops of groundnut in the South will start coming in by the end of April and are likely to induce increased offerings by stockists and farmers. Ready Bold was quoted at Rs 55.25 and Groundnut Oil at Rs 22.70.

Although there was considerable speculative activity in Linseed futures, the reports of a possible special margin on trading had a restraining effect on prices towards the close of the week. Linseed ready was quoted at Rs 39.50 and Linseed Oil at Rs 17.75.

Although prices in the Castorseed section suffered a sharp setback on reports that Brazil had been good sellers in international markets at prices which were lower than the prices quoted in India, speculative activity continued to persist. This was due to a general feeling among the traders that no useful purpose would be served by checking the rise in prices of castor oil, which had lagged behind for a long time. There was also a feeling that the needy countries were bound to buy castor oil from India sooner or later as the international prices were steadily going up. Ready Castor was quoted at Rs 35.50 and Castor Oil, commercial quality, at Rs 15.50.

Groundnut oil and kernels are still at the higher range of prices in the Madras Seeds and Oils Exchange. Groundnut oil touched the peak price of Rs 501 per candy of 500 lbs at the beginning of this week and then slightly declined. Calcutta has not shown much interest for two weeks, but with the price increase in mustard oil to almost the level of groundnut oil, Calcutta began buying groundnut oil in quantities in Madras. Arrivals of groundnut kernels in the local market improved to hundred tons this week. This also helped bring down price of oil and kernel both of which were ruling very high during the last fortnight and continue near about the same levels.

That the demand continues on an expanding scale is evidenced by the groundnut oil price increase. With the impact of the last census figures, which speak of increase in population by about 25 per cent in the country, it has got to be recognised that the bigger population is also responsible for the increasing prices of oils and seeds. Necessarily, they reflect the higher standard of life of the people. As far as the trade could see, no big vanaspathi factories or other wholesale dealers stockpile oil or seed, but if there could be hoarding of the raw stock, it is being practised by the ryots at the source expecting higher prices for these products. The several weeks of seeds and oil price fluctuation point to the urgent need to maximise production rather than resorting to price control. As things appear now, the Third Plan Target of 9.5

million tons of seeds should be quite inadequate to meet domestic requirements. Rather, the higher figure of over 10 million tons might possibly allay the growing demands by 1965 or so.

Latest prices are as follows:—
Groundnut oil per candy of 500 lbs ex-Madras godown Expeller Ready 3 per cent FFA: Rs 498 sellers Rs 491/492 buyers.

March, April and May Rs 190 per quintal, each position.

Groundnut kernels per candy of 531 lbs: coromandel Rs 252, Peanut Rs 241/242.

Castor oil per candy of 500 lbs Tirupattur Rs 350.
Coconut oil per tin Rs 42 to Rs 42.50.

Gingelly oil per tin Rs 31.50.
Gingelly seed per bag Rs 107/108.

While the forward positions including March delivery remained at Rs 190, being the ceiling and not permitted to go higher than this, spot goods was quoted consistently around Rs 500 and went up to even Rs 501 by the week-end.

Small arrivals of both groundnut oil and seeds continued in the southern side markets. By April end, sizeable

quantities of summer groundnut crop is expected to move into the North and South Arcot market points. The peanut variety is due to arrive even earlier because of its earlier maturity. This year's summer crop expectation from this region is about 60,000 tons kernels and this will be available between April and June. Groundnut oil ruled very high in the districts.

Gingelly seed and oil continued to rule very high during this week due to small stock. Firm outlook was maintained by castor oil while only a small improvement could be seen in coconut oil prices.

'ENGLISH ELECTRIC'

HIGH RUPTURING CAPACITY HEAVY DUTY FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction—
Non-deteriorating—
ASTA certified for 35 MVA rupturing capacity—
Visible indication of operation—
Ratings up to 300 amps.

COMBINATION FUSE-SWITCHES

Ratings from 30 to 750 amps—
Rugged construction, fully shrouded and interlocked—
Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

Incorporating Combination Fuse-Switches upto 750 amps—
Robust and compact construction—
Readily modified and extended—
Type tested for 35 MVA rupturing capacity.

DISTRIBUTION FUSE-BOARDS

Robust, dust and moisture proof construction—
Type tested for 35 MVA rupturing capacity—
Ratings from 15 to 100 amps.

Flexibility of power distribution—
Can be installed without disturbing existing layout or production—
Avoids chasing of floors for ducting—
Approved by Fire Insurance Authorities.

OVERHEAD BUSBAR EQUIPMENT

A complete range of distribution equipment manufactured at the Madras Works of The English Electric Company of India (Private) Ltd.

OBJECTS
The main object of the Company is to manufacture and deal in all kinds of pulp, paper, paperboards and paper products, and the particular object is to construct and erect near Darbhanga (State of Bihar) a factory for the production of 15,000 tons per annum of manufacture and necessary Pulp therefor.

SITE
The Pulp and Paper Mills will be located at (RAME-SHWARA NAGAR) about five miles to the south of Darbhanga township in North Bihar. Land measuring 320 acres is under acquisition and Memorandum of Agreement proceedings as per Declaration Extra-Ordinary dated September, 10, 1960, and will be delivered to the Company soon.

MATERIALS
The main fibrous materials to be used are sugarcane bagasse and bamboo. Sugar mills in the vicinity of the site of the proposed Mills can supply adequately the present and future requirements of bagasse for the Mills. The Company has entered into an agreement with The Durbhanga Sugar Co. Ltd., Lohat, for supply of at least 100 tons per annum of bagasse.

PROSPECTS
There is a great demand for paper in the country at present. The demand is likely to increase in future. Considering the capacity of the plant and the prospects for paper industry in India the prospect is quite bright.

STAFF OF THE MILLS
The Mill is expected to go into production in 1963.
PROFITS
The Paper Industry in India for long has been a lowly high. Having the advantage of upto-date plant and machinery and modern methods and processes of manufacture of production. The Directors are, therefore, of the opinion that on the basis of the existing prices and market conditions the Company should have substantial savings in the cost of production. The Directors are, therefore, of the opinion that on the basis of the existing prices and market conditions the Company should have substantial savings in the cost of production.

circumstances, the Company should be in a position to make sufficient profits so as to pay reasonable dividends to the Shareholders after meeting all costs and overheads.

IMPORT LICENCES OBTAINED: FOREIGN EXCHANGE ARRANGED

The Company has been granted by the Government of India Licence for import of machinery valued at Rs. 255 lakhs C.I.F. from France and Rs. 50 lakhs C.I.F. from the U.S.A. respectively.

PLANT AND MACHINERY
Messrs. ETUDES ET MATERIELS POUR L'INDUSTRIE DU PAPIER ET DE LA CELLULOSE (EMPACEL) Paris, France, reputable French Consultants and Engineers, have signed an agreement dated September 23, 1959 with the Company for supply of major portion of plant and machinery and for the design and layout of the entire plant.

Messrs. EMPACEL have undertaken to guarantee the output of the whole integrated pulp and paper plant using a variable combination of bagasse, bamboo and sabai grass, with a 24 hours production capacity of 50 long tons of good commercial grade Writing and Printing Papers.

TECHNICAL COLLABORATION: ERECTION: PLANT MANAGEMENT

The Company has entered into a separate agreement dated September 23, 1959 with Messrs. EMPACEL for the erection and installation of the whole plant.

Messrs. EMPACEL have also undertaken to depute trained & qualified Engineers for the purpose of erection of the Mills, planning and supervising the entire erection work who will remain at the Mills till the fulfilment of the guarantees for the erection, performance and production.

FOREIGN INVESTMENTS: DEFERRED PAYMENTS

Messrs. COGEMIC have agreed to invest Rs. 30,00,000/- (Rupees thirty lakhs) in the Share Capital of the Company by subscribing 3,00,000 Equity Shares of Rs. 10/- each. These Equity Shares will be allotted to them against payments by them to Messrs. EMPACEL of an equivalent amount against the delivery of the plant and machinery to be supplied to the Company by Messrs. EMPACEL.

The Company has obtained reasonable terms of payment from Messrs. EMPACEL for the plant and machinery of Rs. 17,25,000/- (pound sterling seventeen lakhs and twenty-five thousand) equivalent to approximately Rs. 2,30,00,000/- (Rupees twenty three lakhs and twenty thousand) equivalent to approximately Rs. 2,00,00,000/- (Rupees twenty lakhs) is payable in ten equal six-monthly instalments the first of which being payable nine months after the date of consignment of the last shipment of the plant and machinery. The balance of Rs. 2,25,00,000/- (pound sterling two lakhs and twenty-five thousand) equivalent to rupees thirty lakhs will be paid to Messrs. EMPACEL by Messrs. COGEMIC in French Francs in France.

Permission has been granted by the Exchange Control Department, Reserve Bank of India, for the above foreign investment. The said two agreements of the Company with M/s. EMPACEL and the said one agreement with Messrs. COGEMIC have been approved by the Governments of India and France.

GUARANTEE OF DEFERRED PAYMENT AND LOAN OF Rs. ONE CRORE BY THE I.F.C.

The Industrial Finance Corporation of India has agreed to guarantee on behalf of the Company to M/s. EMPACEL the payments of the instalments of the aforesaid deferred payments and of the interest thereon aggregating to Rs. 17,70,000/- (pound sterling seventeen lakhs seventy thousand) but not exceeding Rs. 2,36,00,000/- (Rupees two crores thirty six lakhs).

The Company has received also the I.F.C.'s sanction for a loan of Rs. one crore and the necessary documents therefor are expected to be executed in due course. The rate of interest is 7% per annum with rebate facility of 1% in case of due and punctual repayments of the respective instalments by the Company.

CAPITAL OUTLAY

The Capital outlay is estimated as follows:-	
1. Land, Buildings etc.	75,00,000/-
2. Plant, Machinery and equipments & spares including freight, customs dues, insurance, import duty, erection expenses etc.	4,52,75,000/-
3. Other fixed assets.	5,00,000/-
4. Preliminary & Issue expenses including brokerage and underwriting commission.	8,00,000/-
5. Provision for contingencies.	4,25,000/-
6. Working capital.	50,00,000/-
Total	5,95,00,000/-

CAPITAL RESOURCES

The total funds available to the Company are estimated to be as follows:-

1. Share Capital already subscribed and/or agreed to be subscribed by Promoters, Directors, and their Associates & friends	60,00,000/-
2. Share Capital agreed to be subscribed by M/s. COGEMIC of Paris, France	30,00,000/-
3. Share Capital now being offered by this issue	1,35,00,000/-
4. Deferred payment for plant and machinery as per agreement with M/s. EMPACEL	2,00,00,000/-
5. Loan from the I.F.C. of India.	1,00,00,000/-
6. Borrowings from Banks and receipts from other sources	70,00,000/-
Total	5,95,00,000/-

MINIMUM SUBSCRIPTION

With reference to the above mentioned Capital outlay, in addition to the Share Capital of Rs. 60,00,000/- already subscribed and agreed to be subscribed, the minimum subscription in respect of the present issue upon which the Director will proceed to allot shares is 8,00,000 Equity Shares of the face value of Rs. 80,00,000/- payable in cash.

UNDERWRITING COMMISSION

Underwriting and/or guaranteeing commission at the rate of 2 1/2% of the face value of the shares underwritten or guaranteed is payable to the Underwriters and Guarantor.

BROKERAGE

A brokerage at the rate of 10 nP. per Equity Share and Re. 1/- per Preference Share will be paid on allotments in respect of application forms bearing the stamp of a Bank or member of recognised Stock Exchange.

APPLICATIONS AND SUBSCRIPTION FOR SHARES

Application for Equity Shares must be made for a minimum of fifty shares or a multiple of fifty shares and application for Preference Shares must be made for a minimum of five shares or a multiple of five shares.

Application for shares must be made on the application form enclosed with the Prospectus or on a printed copy thereof and must be delivered, accompanied by the full amount payable on application, to any of the Bankers to the Company at their offices set out on the back of the Application Form during banking hours on any working day before the close of the subscription list. The application money must be paid separately for each application by cheque or bank draft Money Orders and postal orders shall not be accepted Cheques drawn on Banks at places other than those mentioned in the Application Form must include a sum (minimum 75 nP.) at the rate of 25 nP. per cent of the amount remitted to cover Bank commission and charges.

Copies of the Prospectus and Application Forms can be had from the offices of the Brokers as mentioned herein and of the Bankers at Calcutta, Bombay, Madras, Delhi, Ahmedabad, Allahabad, Bangalore, Nagpur, Lucknow, Patna and Muzaffarpur.

has been acquired by the Government of Bihar and delivered to the Company.

THE CENTRAL BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1960, and also the foregoing Profit and Loss Account of the bank for the year ended on that date in which are incorporated the returns of the 57 branches audited by us, 17 branches audited by other auditors and the unaudited returns from 243 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 228 of the Companies Act, 1956.

We report that—

- We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- the reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report;
- in our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1960 and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

Record Production and Profits

Mr. J. M. LALL on the Role of Retained Profits—The Confidence of the Private Investor Abroad

Speech delivered by the Chairman, Mr. J. M. Lall at the 24th Annual General Meeting at Calcutta on Wednesday, 22nd March, 1961.

GENTLEMEN,

The Audited Accounts and Directors' Report have been in your hands for sometime, and with your permission, I shall take them as read.

The results shown by these accounts need no emphasis from me; the figures speak for themselves as evidence of the most successful year in the Company's history so far. How have these highly satisfactory results been achieved?

PRODUCTION

In the year under review we had the benefit of a full year's production of polythene granules for the first time. The Polythene Plant, you will remember, has an installed capacity of 3,500 tons but, largely as a result of a methodical, scientific study of the working of the Plant, we were able to achieve an output of 4,000 tons. A notable increase was also achieved in the output of Paints and here again scientific study of the processes and increased efficiency in production planning were largely responsible. Even more paint could have been produced had it been possible to import a larger quantity of raw materials. We must expect this scarcity of imported materials to continue and we are, therefore, constantly seeking and evaluating raw materials produced in this country.

While the major increases in production have come from the two Plants I have mentioned, all other Plants also contributed.

SALES

Sales which, as you know, are made through our Selling Agents, Imperial Chemical Industries (India) Private Limited kept pace with this increased production and the final figures achieved were Rs. 5.4 crores as against Rs. 3.4 crores in the pre-

vious year. Throughout the year demand for all our products was in excess of our ability to supply and a ready market exists for any increases in output which we are able to achieve this year. An important part in the development of demand for our products, and particularly such materials as polythene and high quality paints, is played by the Technical Service organisation of our Selling Agents which provides a comprehensive service to all our customers and helps them to use our products economically and with good and sound technical results.

APPROPRIATIONS

Let me turn now to the proposals your Directors have made as to the use to which the available surplus of approximately Rs. 88.5 lacs is to be put. They have recommended allocations of Rs. 48 lacs to Reserves and Rs. 39.2 lacs to dividends.

Some of you may well ask why the Board have not recommended distribution of a larger part of the profits in dividends. The Board considered this matter very thoroughly and in their deliberations were guided by the following factors:—

- Last year we withdrew from the Dividend Equalisation Account Rs. 13.8 lacs, the entire amount standing to the credit of that Account. In addition, a sum of Rs. 10 lacs was withdrawn from General Reserves to make up the amount required for dividend on Ordinary Share Capital. The Board are of the opinion that these withdrawals should now be made good and the Reserves brought up to levels commensurate with the Company's activities.
- The Company's indebtedness to Banks stood at Rs. 1.24 crores at the end of the year.
- We have on hand a large programme of expansion which will require about Rs. 6 crores during the next 3 years or so.
- A progressive but consistent

dividend policy is essential for the strength of the Company and prestige of its stock in the market.

Your Directors believe that self-generation of resources is as important for the growth of a company as it is for the economy of a country. In achieving a state of "take-off" as the modern economist puts it, retained profits have a very important role to play. Nevertheless, your Board are fully conscious of their duty to the Shareholders and hope that you will not regard a dividend of 12%, before tax, as inadequate.

The provisions in the recent Budget if accepted by Parliament will materially affect your Company in the current year and in the future. Apart from the reduction from 25% to 20% in development rebate and increases in duty on the import of plant and machinery, substantial new excise duties have been imposed on polythene and caustic soda, and the duty on paints has been increased. For the year to September 1960 your Company paid excise duty amounting to approximately Rs. 12 lacs. For the current year which will only have 7 months of the new and enhanced duties, the excise bill will be Rs. 45 lacs and for a full year's operations the total excise duty may amount to as much as Rs. 70 lacs. As you will appreciate no Company can absorb such a large debit and the bulk of this must perforce be passed to consumers. We must realise, however, that competition in these products is growing and to increase prices to recover such a large amount from consumers is not likely to be easy.

I would like, at this stage, to refer briefly to the delay which occurred in the payment of the half yearly Preference Dividend which normally occurs in April and October of each year. The withdrawal of Section 18(3E) of the Indian Income Tax Act, 1960 raised certain difficulties in connection with the payment of Preference Dividends and there arose

also considerable uncertainty as to Government's intentions regarding the treatment of tax-free Preference Dividends. In these circumstances, your Board thought it prudent to defer payment until the position was clear beyond doubt, but this clarification took a long time to achieve and amending legislation was not passed until the end of 1960. A full year's dividend has now been paid in conformity with this legislation but my colleagues and I would like to express to Preference Shareholders our regret at the considerable inconvenience which was caused to them.

All our shareholders will, I think, be glad to hear that we have now been able to arrange with our Bankers that all future dividends can be paid at par at any of their branches.

PROSPECTS

So much for the past. What of the future? Production and sales in the current year have been satisfactory so far, and in line with the increased targets which we have set ourselves. Methodical studies of the working of each of our Plants and improvements in preventive maintenance are enabling us to increase production still further. In our caustic soda business the Government has taken note of our difficulties arising from the substantial rise in the price of salt and has acted promptly to authorise us and other caustic makers to charge a higher price.

I referred in my speech last year to our plan for making various chemicals for the rubber industry at Rishra at a cost of Rs. 2 crores. Work is proceeding steadily on this project.

I have already referred to increases in output of polythene granules achieved by the application of Work Study techniques without any additional capital investment. Demand for polythene in India has grown so quickly that it has become urgently necessary to extend our capacity. Government has now agreed that we may expand our capacity by more

than 2½ times and this expansion is being pushed forward as matter of the highest priority. As with the first Plant our technical consultants are Imperial Chemical Industries Limited, London, and I would like to record our gratitude for the prompt and effective help which they have given and are giving us, in order to bring this extra capacity into production within the shortest possible time.

I have also referred to the substantial increases which we have been able to achieve in the output of our high quality paints. Despite this, demand within India is increasing so rapidly as a result of the country's general industrialisation, that it is urgently necessary to put in a substantial increase in capacity. This extra capacity will enable us to meet internal demand and, what is equally important, help us to expand the valuable export business in paints which we have been able to develop over the last year or so. Our proposals to increase our paints capacity are at present under discussion with the Government and we have every

hope that the outcome will be successful.

In addition to these projects we are also actively investigating plans to increase our production of chlorine, caustic soda and hydrochloric acid.

These plans for new projects or substantial expansion of existing projects are made possible largely because of the readiness of our associates in the U.K., Imperial Chemical Industries Limited, to provide sterling finance for the import of plant and machinery.

Shortage of foreign exchange is one of India's major problems. I know that the Government of India are doing everything possible to find a solution to this problem and are meeting with a fair measure of success in arranging Government to Government or World Bank loans. I would like to suggest, however, that the Private Sector of the economy also is playing a very important role in this endeavour. Willingness of foreign private investors to come into a country without any political pressures is indicative of the strength and stability of the economy of the

country. Admittedly, the aggregate of such foreign private investment in any one of the years of the second plan is small in comparison with governmental aids but I maintain that the real effect of this foreign private investment in these years is seen not in the quantum but in the climate it has created. Governmental thinking overseas must be influenced to quite an extent by the independent expression of confidence by the foreign private investor.

STAFF AND WORKERS

May I turn now to the most valuable asset which your Company possesses, although you will not find it in the Balance Sheet; I refer of course to our staff and workers, without whose loyal support and conscientious work, machines, no matter how efficient or well designed, can achieve nothing.

Throughout the year we have laboured to build up a team spirit and a sense of common purpose among all sections of our employees. On the whole these efforts have been successful and the relationship between Management and Workers has

been reasonably good. Differences there have been and still are but they are all, in my view, capable of a right and just solution if they are approached by both sides in a spirit of goodwill and with a genuine desire to find agreement. That such solutions should be found and found quickly is of importance not only to the employees themselves, to the Company and to its shareholders but, above these three, to the country as a whole.

During the year we were able to complete improved amenities for our workers by building more quarters for them, and arranging for subsidised accommodation in the West Bengal Government's Housing Project at Baldiyabati.

Training is, of course, of vital importance to your Company and indeed to the country as a whole at this time of rapid development. To help meet the need for trained fitters and the like we have established a Craft Apprentice Training School, the aim of which is to provide your Company with a steady supply of skilled craftsmen. We have also undertaken to train such men on behalf of the Government of India as a contribution to the country's needs. Our policy of appointing Indian staff to responsible management positions has been assiduously pursued and I am happy to be able to report to you that with the exception of the Technical Director at Rishra the entire management of that complex chemical manufacturing site is in the hands of Indian staff and they are discharging their responsibilities most efficiently.

We had the privilege, a few weeks ago, to welcome to Rishra Mr. S. P. Chambers who is now the Chairman of Imperial Chemical Industries Limited, London. You will, I know, be pleased to hear that he was greatly impressed by all he saw at your Factory and paid particular tribute to the high morale and enthusiasm which he found there.

These then were the achievements of your Company in the year ended September, 1960. The years ahead hold out a great challenge to all who are concerned with the development of a vigorous and prosperous chemical industry in this country. They will bring their problems and their difficulties but they will also, I am sure, bring great achievements. In the building of this chemical industry your Company has an important part to play. We face that future with sober confidence.

Note: This does not purport to be a record of the proceedings.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE

The Preference Share Registers of the Company will be closed from 4th April 1961 to 8th April 1961 both days inclusive.

Braithwaite & Company (India) Limited

Record Tonnage Output

Progress in Exports—Increase in Dividend

Statement by Sir John Brown

The Thirty-first Annual General Meeting of the Company will be held on the 13th April, 1961. The following is the statement by the Chairman, Sir John Brown, circulated along with the Directors' Report and Balance Sheet of the Company:

In order that shareholders may be given a more detailed account of the Company's activities and its development plans, it has been considered desirable to circulate with the Balance Sheet as at 31st December last and the Accounts for the year then ended, this statement by myself as Chairman. It is felt that this is a more satisfactory way of acquainting the general body of shareholders with the Company's position and prospects, than through the Chairman's speech at the Annual General Meeting since that Meeting is normally attended by only a handful of shareholders and it is possible, in a statement such as this, to deal with a number of matters more adequately than can be done in the formal statutory report of the Directors which is, of course, also circulated with the Accounts.

PROFITS

The profits for the year, after providing Rs. 4,01,566 for depreciation, Rs. 17,00,000 for taxation and transferring to Development Reserve the sum of Rs. 72,859 as required by Explanation 2 to Section 10(2)(vib) of the Indian Income-tax Act, 1922, amounted to Rs. 20,72,316. This represents an increase of some Rs. 3.5 lacs over the corresponding figure for the previous year when, however, the transfer to Development Reserve was Rs. 2.04 lacs. As forecast in the report of the Directors which accompanied the 1959 accounts, production in the Structural Shop at Clive Works was maintained at a satisfactory tempo throughout the year and, in fact, resulted in a record tonnage output. So far as railway wagons are concerned we were severely handicapped by a shortage of steel of weldable quality and by lack of supplies of components to be imported on our behalf by the Railway Board so that the tonnage output in the Wagon Shop showed a decline for the third year in succession. The other principal activity of the Company heretofore, viz. the production of pressed steel tanks, continued and towards the end of the year a record production was being obtained. As plates become more freely available from ind-

genous sources it is expected that the output can be still further increased in the future. The profit for the year may be considered satisfactory, having regard to the interruptions to production in the Wagon Shop and to the fact that nothing was contributed to profits from the Company's Angus Works, to which I shall make more detailed reference later in this statement. The balance sheet and the profit and loss account figures reflect the increasing scale of the Company's activities.

You will see that an increased dividend of Rs. 2.50 per share is proposed to be paid out of the year's profits as compared with Rs. 2.25 in respect of the previous year. This is equivalent to a net dividend of Rs. 1.75 after deducting tax at 30% which, it will be noted, is still less than the net dividends totalling Rs. 2.25 paid immediately before the revised corporate tax structure was introduced. Payment of the increased dividend will still permit the transfer to reserves of Rs. 6 lacs and a small increase in the amount to be carried forward. There is no doubt that investment in buildings and machinery during the next few years will require a lot of money and, in these circumstances, it is necessary to retain out of profits each year a substantial sum. In this connection, I would observe that the amounts transferred to reserves and set aside as depreciation during the five years ended 31st December last totalled no less than Rs. 48.57 lacs; during the same period the Company's capital expenditure has amounted to Rs. 43.00 lacs.

PRODUCTION, DEVELOPMENT AND EXPANSION

Clive Works: The Structural Shop was principally engaged in the fabrication of structural steelwork for the Wheel, Tyre and Axle Plant at Durgapur and for the manufacture of water tube boilers, cement making machinery and other heavy plant. Both of these orders embodied the new heavy rolled section beams, imported into India for the first time. Fabrication of the larger standard bridge spans required for railway development, particularly in North East India, continued throughout the year but apart from the making of the necessary jigs, fabrication of our share of the steelwork for the new Brahmaputra Bridge bet-

ween Pandu and Amingaon was delayed through shortage of the necessary high quality steel. The same shortage retarded development of the use of welding as opposed to rivetting for structural fabrication generally but nevertheless the trend towards this practice was increasingly evident during the year.

In the first half of 1960 production in the Wagon Shop consisted principally of bogie underframes for railway passenger coaches. In May we turned over to the production of the new heavy mineral wagons, popularly known as BOX wagons, each of which carries 55 tons of coal or ores. These have a vital role to play in solving the problem of transporting the huge quantities of raw materials required for the country's expanding iron and steel industry. After initial difficulties to which I have already referred, production is developing satisfactorily. We have continued to produce tank wagons of various types.

As I have already stated, the tonnage output of railway wagons has been falling in recent years, but this has been compensated by the fact that the wagons which are being produced have a higher cost and sale value; apart from anything else, they are very much bigger and this has necessitated the extension of the production bays. This work will be completed this year but there is in addition a certain amount of balancing machinery and welding equipment required if an uninterrupted flow of work is to be achieved. We are endeavouring to obtain the necessary import licences.

The Fitting Shop has been re-sited and is now equipped to serve more adequately the increasing requirements of these Works. The opportunity has been taken to increase garage capacity and work is at present in hand to expand the Stores. We are badly pressed for office space and extensions to the General Office and to the Works Time Office have been sanctioned, together with an extension to the Workers' Canteen which is necessitated by the increased numbers now being employed and also by the fact that night-shift working has increased.

Angus Works: The Company took over the running of the Angus Works on the 1st February, 1960 and the terms of 99-years' lease have recently been agreed. It is

our intention to develop these Works as a first class mechanical engineering works. We have recently had a visit from our Foundry Consultants and steps will be taken to give effect to their recommendations. We have submitted or in the process of submitting applications for licences under the Industries (Development & Regulation) Act for the manufacture of various types of cranes and we expect to receive a number of licences shortly. In addition we have applied for an increase in our licensed capacity for the fabrication of heavy structural. We are in the process of finalising our plans for crane manufacture, which is proposed to be undertaken in collaboration with two well known United Kingdom companies. We are also in negotiation with a foreign manufacturer of ancillary blast furnace equipment, while some useful orders have recently been received for components for machinery, the manufacture of which has been undertaken by an associate company. We have in the past year been developing the manufacture at Angus of components for the railway wagons which we are manufacturing at Clive Works. This has proved of great assistance in eliminating bottlenecks which have frequently in the past restricted wagon output through failure to obtain delivery of bought-out components.

From the number of enquiries which we have received from foreign companies which are interested in undertaking manufacture of their products in India in collaboration with a company such as ours, it is clear that we shall have no difficulty in finding work; the problem rather is to devise a pattern of production which will ensure, as far as possible, that the maximum use is made of our machinery and that management effort is not dissipated over the production of relatively small numbers of too many products.

We have already paid for the stocks and work in progress which we took over from the Angus Company Ltd. and are in the process of completing orders which were outstanding at the date when we took possession. Although the machinery which we have leased is in good condition, much of it is old and it will be necessary to replace some of it with modern machines to enable us to satisfy the exacting standards demanded for the products which we shall manufacture. We shall also have

THE SWATANTRA BHARAT MILLS AT DELHI

LIGHTING BY PHILIPS

The Swatantra Bharat Mills, one of the well-known D.C.M. Group of Textile Mills, have used Philips lighting. The Management of this mill has been so impressed with the performance of Philips lighting that they have, as before, relied exclusively on Philips to refit the entire unit, covering the large area of over 3½ lakh square feet and maintaining the high efficiency of nearly 5,000 workers.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips'

scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible plus of Philips' international experience and know-how.

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau

PHILIPS quality lighting for ultimate economy

PHILIPS INDIA LIMITED

to extend the buildings at these works and modernise the electrical installation as well as instal a range of additional machinery. Much of the preparatory work involved in all this is already in hand but it is not yet possible to state with any degree of exactness the estimated overall cost. It is anticipated, however, that during the coming year plans for the development of these Works will be finalised. Our financial position is a strong one and I do not anticipate undue difficulty in raising the necessary funds for expansion.

EXPORTS

As was mentioned in the Directors' Report for 1959, an encouraging start was made during that year with the export of some of the Company's products. Progress in this field was sustained during 1960 when an increased tonnage of plates for the manufacture of pressed steel tanks was exported. We are intensifying our export effort and in recent months have dealt with an enquiry for a bridge in Thailand as well as for railway wagons in other countries. The principal difficulties which face us as exporters are concerned with supplies of raw materials and components which are products of allied industries. I feel that if the export drive in manufactures such as your Company's is to succeed, much more will have to be done to provide manufacturers with the raw materials and components which they require at prices which are not inflated by duties and levies, which must be considered as appropriate only in the case of materials for internal consumption. Like a number of other companies endeavouring to develop new exports, it is already evident that we cannot expect to make large profits or even any profits at all on that proportion of our production which we export; but we fully accept our obligation to do what we can to augment the country's export earnings and you may be sure that we shall continue to do our utmost in this direction.

LABOUR

The year that has passed has not been without its difficulties so far as relations with our labour force are concerned. This was almost inevitable in the circumstances in which we were working at times but, on the whole, there was a satisfactory measure of co-operation between labour and management and where production schedules were not met, it was more often due to lack of materials or components than to any fault on the part of our workers. To them I extend on your behalf our thanks for the part they have played in achieving the results which are before you.

A few weeks ago we learned of the outcome of our appeal to the Supreme Court against the award by the Labour Tribunal of five months' basic wages as bonus to

our workers for 1957. Our reason for contesting this award was that on an average, in respect of the year 1957, the equivalent of some 14½ months' basic wages was paid as production bonus; in the case of our lowest rated workers the equivalent was no less than 19 months. We felt that the large sum of money involved should be taken into account in determining the overall distribution of surplus between the workers on the one part and the Company and its shareholders on the other. Unfortunately, the decision of the Supreme Court was against us. I cannot, however, help observing that if bonuses on this scale are to continue, combined with the comparatively high level of corporate taxation to which we are subject, much of the incentive to management to improve production methods and so increase the earnings on the Company's fixed assets as well as the opportunities for workers to earn more from production is thereby removed. As you all know, this question of bonus to workmen has blighted employer/employee relations in India for a good many years now and I feel it is a step in the right direction that a Bonus Commission has been set up by the Government of India to go fully into the matter. I trust that the terms of reference of the Commission and also its composition, when finally settled, will enable an objective survey of the whole position to be undertaken and in particular that the effect of bonuses on the scale which I have mentioned on the ability of industry to finance its development in the long term will be fully reviewed.

MANAGEMENT & PERSONNEL

We have for some years been building up our resources of administrative and technical personnel and we now have a young team of engineers whose pride it is to maintain the standards of workmanship for which this Company is well known. For their assistance in training some of our young men at their works in the United Kingdom, we are indebted to our friends, Braithwaite & Co. Engineers Ltd. The acquisition of Angus Works and their development imposes new demands on our senior staff and on your behalf I would assure Mr J. E. Bingham, our Managing Director, and his colleagues that we are very grateful to them for their efforts in challenging circumstances.

Apart from their assistance in training personnel, Braithwaite & Co. Engineers Ltd. have continued to serve us as our Technical Consultants and we are grateful to them for their advice and assistance in various directions. It was a particular pleasure to welcome back to Calcutta recently Mr H. W. T. Hain, a former Managing Director of our Company and now on the Board of Braithwaite & Co. Engineers Ltd. Mr Hain's visit afforded us the opportunity for a

full exchange of views on the subject of future development and was most valuable.

PROSPECTS

We face 1961 with a satisfactory order book so far as the Wagon Shop is concerned but already it is clear that activity in the Structural Shop at Clive Works must be on a reduced scale for most of the year. We have plenty capacity but we are short of orders and the steel to fabricate them. However, this is, I hope, a temporary phase as a number of tenders in which we are concerned either directly or through our associates. The Braithwaite, Burn & Jessop Construction Co. Ltd., have recently been opened and we have good hopes that the competitive prices quoted will result in a number of useful orders. This will absorb our drawing office staff later in the year but I fear that none of these orders can be translated into output by the end of it.

Our experience during the past year has emphasised the necessity for the Company to concentrate on the fabrication of the heavy and more specialised steel work to the highest standards. Competition from the many smaller concerns entering the structural engineering field is making it difficult for an organisation such as ours which maintains a large specialist staff and a completely integrated Design and Drawing

Office to keep our costs competitive in order to obtain an adequate share of the lighter type of work. The implications of this situation are, I can assure you, engaging the attention of the management.

We are building up our organisation at Angus Works and while I cannot foresee a spectacular increase in turnover this year I am hopeful that before it is out, subject to our receiving import licences for the necessary plant, we will have made substantial progress in reorganising the foundry and increasing its output as well as getting ourselves set up for the manufacture of at least some types of cranes.

While it is early in the year to make any forecast, we would expect increased activity in the Wagon Shop at least to offset the reduced tempo in the Structural Shop and, therefore, provided raw materials and wagon components are available, to maintain our profits. It will be some years yet before we can expect that Angus Works will make any material contribution to profits but we can foresee steady progress there. So far as the further future is concerned, from what I have already stated you will appreciate that the policy of the Board is to achieve a measure of diversification of its activities without, however, sacrificing the homogeneity of the business or diluting standards of management and supervision.

BRAITHWAITE & COMPANY (India) LIMITED

Notice is hereby given that the Thirty-first Annual General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday the thirteenth day of April, 1961, at 11-45 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1960.
2. To declare a Dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

"That Article 95 of the Articles of Association be deleted and the following Article substituted in its place:—

"95. Unless otherwise determined by the Company in General Meeting, each Director, other than the Managing Director, shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board, a fee

of Rs. 350/- per meeting of the Board attended by him subject to a maximum of Rs. 3,000/- for each Director per annum and the Chairman shall similarly be entitled to receive Rs. 550/- per meeting of the Board attended by him subject to a maximum of Rs. 4,800 per annum."

The Transfer Books of the Company will be closed from the 30th March to the 13th April, 1961, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such Dividend as may be declared will be made on or after the 21st April, 1961 to those members whose names are on the Company's Register on the 13th April, 1961.

By Order of the Board
Y. S. TAYAL
Secretary
Calcutta,
3rd March, 1961

An Explanatory Statement pursuant to the provisions of Section 173 of the Companies Act, 1956, is annexed to the Notice convening the meeting.

Indian Finance

The Indian Mining Association

Centrality of Coal in Industrial Progress

Crisis Stems from Uneconomic Price Structure

Age Old Problem of Insufficient Transport

Mr R. H. Wright, The Chairman, speaks of the Opportunity ahead for the Coal Industry

The following is the speech delivered by Mr R. H. Wright, the Chairman of The Indian Mining Association at the Annual General Meeting of the Association held in Calcutta on 24th March, 1961 at the Bengal Chamber of Commerce and Industry:

GENTLEMEN,

It is indeed a great pleasure to welcome you to this the 69th Annual General Meeting of the Indian Mining Association. We are particularly pleased to have with us today the Hon'ble Minister for Steel, Mines and Fuel and the fact that he has been able to come down from the Capital for this meeting is a great source of encouragement to us all. Sardar Swaran Singh has been at the helm of the affairs of our industry for a number of years, and in fact during the period when our major expansion has taken place, and we are grateful for the fair and considerate treatment which we have always received from him. It is also most gratifying to see so many other distinguished visitors, including representatives of the Railways, the Coal Board, the Mines Department, the Coal Mines Welfare Organisation and other bodies whose work is of such importance to our industry. In particular, we are delighted that our Coal Controller and Chairman of the Coal Board, Mr. Zaman, has been able to attend this meeting. Now-a-days he has to spend a great deal of his time away from Calcutta placating the many State Governments and important consumers, who feel that only he can be responsible for their present coal troubles, and we are quite certain that throughout these many meetings and negotiations he maintains always the sense of humour without which he could not hope to maintain his level-headed approach to each and every problem. The assistance and advice which we have received from Mr. Zaman have not always been palatable, but as an industry we are extremely and most sincerely grateful to him for all the constructive and untiring efforts which he has directed towards solving our problems.

It is the usual practice at these Annual General Meetings for your Chairman to review the main events of the past twelve months, but on this occasion I propose to preface this review with a brief summary of the progress which we have made over the past five years. The period of the Second Five-Year Plan comes to an end in a matter of a few days and it is important that we should learn all that we can from both the failures and achievements, in order

that such experience may be applied to our progress during the coming Third Plan. I suppose that it is only natural that on the occasion of each speech from this Chair there should be a feeling that the Indian Coal Industry has never before held such an important position in the affairs of the country as a whole, but such a feeling must be literally true today when numerous industrial units throughout the country are lacking their basic fuel—coal. I am sure that each lump of coal being raised today, whether it be from our high grade Dishergarh and Selected Jharia seams or however lowly, would blush, if it could, in realising the importance attached to its raising, movement and consumption.

Second Five-Year Plan

All-India coal production during 1955 amounted to 38.25 million tons, of which the private sector produced 33.8 million tons. We, the private sector, were expected to produce 45 million tons by the end of the Plan, and our actual output during 1960 amounted to less than 43½ million tons. There was thus a shortfall in our actual production of about 1½ million tons out of the total shortfall of over 8 million tons, and we must face the fact that the targets have not been achieved whatever may have been the cogent reasons and however impossible it may have been to transport all the coal raised had the targets been reached. We all know the basic reasons for this shortfall—and, as I have said before, the experience gained in the Second Plan must be applied to ensure that the tremendous targets of the Third Plan are fulfilled. It is good to know that Sardar Swaran Singh shares our desire to pursue with vigour this question of planning in great detail for our future requirements. A great deal has been achieved and let us take credit for the fact that during the course of the past five years we have been able to raise the annual level of coal production by over 13½ million tons, or by 35%. Having said that there has been a shortfall during 1960, I must point out that the actual coal output of the private sector during the 12 months ended 28th February, 1961, has amounted to 44½ million tons—a mere half million tons below its target.

We have suffered by reason of severe restrictions on our development plans, labour policy has not always been helpful, individual necessities such as explosives have been in short supply on occasions, but undoubtedly the most important reason for the shortfall in production has been the

acute foreign exchange position which has denied to the industry sufficient licences for the import of spare parts, quite apart from the new plant and machinery so urgently required. Any visitor to the coalfields today will see numerous coal cutters, haulages and other vital items of equipment lying idle owing to lack of some essential spares. Such machinery represents a considerable quantum of unremunerative investment by the collieries concerned. I must state emphatically at this stage, however, that the industry as a whole believes that the foreign exchange which has been made available has been utilised by the Coal Controller's office and by our Import Controller to the best possible advantage. But it has just not been sufficient.

Foreign Exchange

It was, therefore, most gratifying when the industry was advised towards the end of last year that the International Bank for Reconstruction and Development more generally known as the World Bank, has indicated the possibility of granting assistance by way of foreign exchange to enable the private sector of our industry to import requirements for its Third Five-Year Plan expansion. Detailed discussions have since taken place with Members of the World Bank Team who have been with us for a number of weeks, and we were all tremendously impressed with the vigorous and detailed examination which they undertook both at the collieries and here in Calcutta. The Team has now returned to Washington and we eagerly look forward to hearing the details of the assistance which the World Bank will be rendering us. A special foreign exchange allocation of about Rs. 28 crores would ensure that all our requirements of imported plant and machinery and spare parts could be met during the next five years, to enable us to achieve our agreed target of an additional 17 million tons per annum by 1965-66.

I would stress the fact that even though our coal exports have had to be reduced very considerably to the present level, such exports are still earning sterling to the extent of approximately Rs 5 crores yearly. This means that even at the present low level of coal exports we should earn Rs. 25 crores to foreign exchange over the next five years.

Third Five-Year Plan

The Third Plan coal production target has been fixed at 97 million tons per annum, and the private

sector will have to increase its level of output from the present figure of 45 million tons to 62 million tons per annum, while the public sector will produce the balance 35 million tons. Our Minister has stated that these targets will not be made too rigid, but that Government are keen that every unit participating in the increased production should maintain its individual phased target. This Association welcomes this increased attention to detailed planning, since we know that a number of new projects on which we are now embarking will continue to expand well into the Fourth Plan. This detailed planning should, therefore, be extended further, and we should by now be assessing the coal requirements in 1970, with necessary attention being given to the new projects required by that time.

It is understood that in the case of much of the increased coal to be obtained by N.C.D.C., contracts for the new projects will be given to various foreign organisations who will be responsible for opening out the new mines on behalf of N.C.D.C. It is not for us to question official policy on this matter, but I would like to point out that we already have in this country technical "know-how" of the very highest calibre which has had experience of the most difficult mining operations in India over the past year. I am quite sure that Government will not overlook the possibility of utilising such indigenous technical experience in their new projects.

Any failure in our Third Plan coal production targets will automatically result in shortfalls in the progressive expansion of the industrial might of the country, and the coal industry must, therefore, have its full requirements of transport, imported plant and machinery and explosives, all of which have been referred to elsewhere. There is one other most important aspect which is being considered at the highest level—power. A number of collieries who have recently applied for increased supplies of energy to meet their expansion plans have been told that the necessary power just will not be available, since the additional generating capacity being installed in the industrial area is already earmarked for other requirements. One need hardly add that this obstacle must be removed as quickly as possible.

N.C.D.C.

We are, indeed, glad to have with us today senior representatives of the National Coal Development Cor-

poration, and I would like to offer them our sincere congratulations on their remarkable achievements over the past twelve months. Such achievements have been due in a great measure to the dynamic outlook of their Managing Director and Deputy-General Manager, Messrs. R. C. Dutt and J. G. Kumaramangalam, and it has been a pleasure to note that their approach to many of the problems of the industry is identical to ours. N.C.D.C. produced during the last calendar year of the Plan almost 6 million tons, thus doubling the output existing at the commencement of the Plan, and this is a great achievement even if we do not dwell on the recent rather misleading use of the expression "production at the rate of..."

The opening out by N.C.D.C. of new mines in virgin areas, and the rapid rise in production from such areas, is indeed a creditable performance which has today placed N.C.D.C. as the largest single producer of coal in the country. Whilst there is no doubt that N.C.D.C. will now go from strength to strength, it must be remembered that they have had hitherto the advantage of exploiting deposits at shallow depths and that during the coming 5 years the Corporation will be required to tackle more difficult and deep deposits.

The Second Five-Year Plan commenced with the adoption by Parliament in April, 1956, of the Industrial Policy Resolution, which by virtue of restrictive interpretations has undoubtedly retarded coal development in the private sector without ensuring that the deep deposits of high grade coal would be worked by the public sector. I am sure that our friends in the N.C.D.C. will agree with the basic statement that there is plenty of room for us both: they have taken vast coal areas for their own workings; let them now leave to the private sector the areas which have been held by Companies in reserve and which, having been fully prospected, are now ready to be worked. It was unfortunate that earlier appeals from this chair for a more realistic and pragmatic approach went unheeded until the coal crisis was upon the country, but we have been reassured to a considerable extent by the statements on this subject made by our Hon'ble Minister since October, 1960. We are to be allowed to expand into certain proximate areas. Whilst this has been accepted, we would like to see the prompt implementation of these assurances by the issue of the licences required both to re-open collieries and to work the proximate virgin areas.

Coal Prices

Although the question of coal prices has been described as the 'hobby-horse' of the Coal Industry, I make no excuse for stating once again that the very root of the present coal crisis is the fact that we have for years had to operate on an uneconomic price structure so far as our high grade coals, mined under difficult conditions, are concerned. There is no denying the fact that many units are today making adequate profits from opencast quarries and shallow seams, but our friends in the

Public Sector would confirm my statement that the present price structure does not cover the cost of working difficult seams.

Although the public sector's share of All-India coal production has now increased to almost 17%, they are producing less than 2% of the selected grade coals mined; the balance 98% is being produced by the private sector. In the years to come the N.C.D.C. will realise the very high cost involved in working the difficult seams, and it behoves us all to press for some real incentive which will encourage all collieries to mine high grade coal. It has been assessed that the cost of Grade I coal benefited by washing to 15% ash is well over Rs 10 per ton in excess of the present controlled price for the highest grade of coal, Selected "A". It is obviously in the national interests that every encouragement possible should be given to mine Selected Grade coals wherever available, and even with a substantial incentive, the cost to the consumer would be very much less than the cost of coal washed to the equivalent grade.

Difficult Mining

A year ago from this chair I welcomed the introduction of the scheme for the grant of subsidies to collieries working the deep, gassy and difficult seams, normally yielding high grade coal. Even though the subsidy will meet only a small fraction of the extra cost of working such difficult seams, the scheme has been welcomed by the industry as a sign of the sincere desire of Government to encourage such mining. Our appreciation must end here, however, since the delay in implementing the scheme must be quoted as an unfortunate example of the treatment which we have been accustomed to receive. The recommendation to subsidise difficult workings was made by the Coal Prices Revision Committee as long ago as December, 1958; although it was accepted by Government in August, 1959, the arrangement for the distribution of the subsidy was not finalised until October, 1960, and collieries eligible for assistance submitted their claims many months ago. The finalised scheme envisages the reference of each and every application to New Delhi, where the Ministry is already overburdened, whereas the implementation of this agreed policy could so easily be undertaken by the Coal Board in Calcutta. Today, 27 months after the scheme was proposed by the Coal Prices Revision Committee, not a single colliery has received one naya paisa from the cess, already collected from consumers to the extent of well over Rs. 1 crore.

I would appeal most sincerely to those in the Capital who are responsible for our destiny: please let us have a rather more dynamic approach to our problems, rather less delay in attending to each and every matter, and a greater desire to seek the industry's advice, in confidence, before policy decisions are made. Whilst on this point, it gives one pleasure to express our appreciation of the efficient co-operation which we have received from the Coal Board.

Coal Quality

The mention of high grade coal brings me to the vexatious question of the quality at present available for supply throughout the country. We have all seen and heard recently of the apparent deterioration in the quality of coal supplies, particularly to the Railways and the Steel Plants. To the uninitiated it might appear from all these reports that the coal industry is deliberately reducing the quality of these supplies, for reasons unspecified, and I must, therefore, say just a few words on this subject. With the present stress on utilising to the full the available reserves of high grade coal, selective mining is discouraged and sandstowing is encouraged to the full: both admirable measures from the national point of view. Large quantities of floor and roof coal which could previously be left are now having to be raised, and it is virtually impossible to ensure that sand is completely eliminated from the raisings at stowing collieries. Let us face the fact, therefore, that the overall quality of coal available has deteriorated because the more easily available of the quality seams have been worked out. The Railways were hitherto accustomed to using a very considerable proportion of the high grade coking coals which have now been diverted to the Steel Plants, and they are having to consume the lower grades. The Steel Plants were hitherto taking only the natural make of slack from the many coking coal collieries but they are now obliged, to meet their greatly increased demands, to take crushed lump coal, where the ash content is certainly higher than the slack from the same seam. There is only one solution—washeries. I need not dwell on this point since we all know that many of our transport problems would now be solved if we had many more washeries, both for metallurgical coal and for the requirements of the Railways.

Today the overburdened rail transport capacity of the country is carrying each year many millions of tons of impurities which could have been removed by washing. As a very general statement it can be said that one wagonload of 15 per cent ash coal is worth to a consumer two wagonloads of 30 per cent ash coal: this statement is supported by facts and figures submitted some years ago by the late Mr A. Farquhar, who is so rightly known as the father of Coal Washing in India. I am not for one moment suggesting that all the wagons available should today be allotted to the collieries producing higher grades of coal in order to ensure the maximum utilisation of available transport, since this would be a very shortsighted policy when we realise that from a long-term point of view encouragement must be given to the producers of low grade coals, whose output will continue to be just as important from the national point of view.

To summarise this question of the quality of coal, therefore, I would ask our customers, the many consumers of coal throughout the country, to appreciate our problems and to accept our assurance that we try to give them the very best coal which can be supplied from the seams provided by nature.

Rail Transport

Throughout the history of the Indian Coal Industry there has been too frequent a pattern of insufficient transport to move the coal available. One leading unit of the industry has still in its possession a telegram, dated 18th June, 1857, from its harassed representative at Ranigunge reading "You say, send coal, I say, send more wagons". What was true 104 years ago is true today, as is borne out by the fact that coal stocks lying at pitheads are very much larger than they were at the beginning of the Second Plan and amount to over 3½ million tons, quite apart from the enormous stocks at the collieries of NCDC of which you have recently read so much. Owing to their pithead stocks having reached unmanageable proportions, many collieries have in recent weeks restricted their raisings by as much as 30 per cent.

Nobody can deny the fact that there has been a general shortage of wagons, or of movement capacity, or of both. The Railways have been unable to achieve even the reduced target for the movement of 51 million tons of coal per annum by the end of the Second Plan. Let us not forget, however, the very real difficulties which they have had in obtaining rolling-stock, increased line capacity, etc., and despite this they have increased the average daily coal loadings in West Bengal and Bihar coalfields from a level of 3,262 wagons daily in 1955 to 4,335 wagons daily in 1960. This is an achievement of which any organisation can be justifiably proud. And yet, rail transport is just not sufficient. The time has now come when the level of coal production and supply should be settled by the joint co-operative efforts of the Industry, our Ministry and the Railways, meeting together at high level.

By far the major portion of the coal production in the country falls within the areas of the Eastern Railway and the South Eastern Railway. We meet the senior representatives of these two Railways at very regular intervals—they sometimes complain, in jest perhaps, that such frequent meetings reduce the time available for solving operational problems—and I would like to say how much we in the Industry appreciate the very considerable measure of co-operation which we have received from the two General Managers, the Chief Operating Superintendents and others. We have developed an atmosphere in which both sides can place their problems quite frankly and freely. Our sincere thanks are due to them and I can assure the Railways of the continued full co-operation of the Coal Industry in achieving the goal of sufficient rail transport to carry the coal available. We must have as soon as possible at least 6,000 wagons allotted each day for coal loading in West Bengal and Bihar, as against the present level of only 4,700 wagons.

During the course of the next few days we will have an opportunity of meeting the World Bank team who have recently arrived in this country to examine the future needs and requirements of the Indian Railways. It is earnestly hoped that they will be able to make certain specific re-

commendations whereby increased movement can be obtained from existing resources. An impartial examination from Railwaymen of the very greatest experience could well pinpoint certain restrictions and obstacles which can be removed without difficulty. At the same time, it is earnestly hoped that the good offices and financial assistance of the World Bank will be available in implementing the vast expansion of the Railway network of the country, without which the targets for greatly increased industrial expansion are completely meaningless.

Alternative Means of Transport

On the basis that rail transport will for some years lag behind the requirements for coal movement, Government have recently been giving considerable thought to ways and means of increasing the transport of coal by other means. Detailed examination is being made of projects for the movement of coal from large individual points of production to individual consumers by means of piping, mono-rail construction and other devices which are entirely new to us. At the same time, every effort will be made to double the quantity of coal moved via Calcutta Docks by steamer to the Southern and Western States. Here, the limiting factor will be the capacity of the Calcutta Coal Docks, and it is quite

JESSOP AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the TWENTY-NINTH ANNUAL GENERAL MEETING of the Members of Jessop & Co. Ltd. will be held in the Committee Room No. 2 of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, on Thursday, the 20th April, 1961 at 11.00 a.m. for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors for the year ended 31st October, 1960.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 8th April to 20th April, 1961, both days inclusive.

By Order of the Board
K. S. BASU
Secretary.

63, Netaji Subhas Road, Calcutta, 9th March, 1961.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

evident that steps will have to be taken immediately to ensure the maximum utilisation of the capacity of the existing seven loading berths where the rate of loading has deteriorated very considerably over recent years.

The most substantial increases can be obtained by the greater use of road transport although it is impossible to assess with any real accuracy the number of additional trucks which can be made available for this purpose in the immediate future. This Association has been pressing for a number of years for an immediate programme of repairs to the connecting roads in the coalfield areas, and the present crisis dictates that every priority must be given to this work. Far more important still is the need for immediate attention to the main artery—the Grand Trunk Road—between the coalfields and Calcutta, since the Railways will not be able to maintain even the present level of transport to industrial units in the Calcutta area if they have to transport an additional one million tons per annum to Calcutta Docks for coastal shipment. An immediate improvement in this vital link can be obtained, I am sure, if the Police authorities institute forthwith a system of detailed patrols, whose task it will be to ensure that individual lorry drivers cease to regard the highway as their own private property on which they can risk not only their own necks but those of other users of the road; strict enforcement of traffic regulations can remove numerous obstructions and ensure the free movement of greater quantities of coal and other materials along the road. This is, however, only a short-term solution, and we must have without further delay the construction of the Durgapur Expressway which must then be continued to Asansol. This construction, if put on a priority basis, could be completed within 18 months, providing considerable employment and without any reliance on foreign exchange, and such an Expressway could permit of the additional movement of about 2 million tons per annum between the coalfields area and Calcutta.

Labour Relations

Labour relations during the past year have generally been satisfactory although we have experienced sporadic outbreaks of violence at collieries. The Code of Discipline certainly appears to have had a stabilising effect and it is now up to employers and employees to realise their responsibilities towards ensuring the settlement of each and every dispute by reasoned negotiation rather than by adopting extreme measures. The Labour Unions have demanded a complete revision of the wage structure of the coal mining industry. This matter is due to be discussed within the next few days and when this is being done it is hoped that all concerned will bear in mind the many facilities which are available to our mine workers. Our modern hospitals, free dispensary services, T.B. Clinics, Rehabilitation Centres, Holiday Homes, Multi-purpose Institutes, Adult Education Centres and Holiday Tours, etc., are all excellent institutions, of a stand-

ard far higher than enjoyed by the workers in any other comparable industry. Both employers and labour owe a debt of gratitude to our most active Coal Mines Welfare Organisation directed by Brigadier Bag Singh. All these facilities together with the extension as quickly as possible of the provision of housing, supply of satisfactory water and other benefits can ensure the contented labour force which is so necessary for our future.

As regards the Gorakhpur Labour Organisation, it is gratifying to note that at a recent meeting held in New Delhi under the Chairmanship of the Minister of Labour and Employment, a co-operative and constructive approach has been taken to this problem. It is hoped that the implementation of the agreed proposals subsequently accepted will result in an end of the antagonism which our Trade Unions have had to the employment of the highly productive Gorakhpur Labour.

The series of meetings with the Chief Inspector of Mines, to which I referred in my address last year, have continued and have been accepted as most beneficial to both sides. Our sincere thanks are due to the Chief Inspector for the full co-operation which we have received and these continued meetings illustrate so clearly the fact that safety in our mines must be a joint enterprise covering the Mines Department, the workers, colliery owners and our technical Managers.

Other Minerals

Turning now to minerals other than coal, the expansion of production in these minerals has more or less paralleled the increase in coal production, as a consequence of the broadening demand arising out of the progressive implementation of the Second Five-Year Plan projects, Iron ore, limestone, dolomite and bauxite

have all registered substantial increases and mines producing these minerals are being geared to fulfil the calls that will be made on them in accordance with the targets set up for the Third Plan. The supplies of the raw materials needed for the refractory industry, for which a substantially increased target has been set for the next Five-Year Plan, have also recorded a significant expansion during the year under review.

Unfortunately, so far as exports are concerned, progress has been disappointing since competitive sources of supply together with reduced demand overseas have resulted in a reduction in the exports of manganese ore and kyanite. In the case of manganese ore, this has also been partly due to shortage of rail transport which has made it impossible for shippers to make available to buyers their needs to suit requirements.

General

Gentlemen, the years that lie ahead of us hold out a great opportunity for the coal industry. The tremendous target of at least 97 million tons to be raised annually by 1965-66 poses a splendid challenge for us. The private sector of the industry is ready to face this challenge as an equal partner with the public sector, and let us resist any temptation from any quarter to consider the joint progress as more than friendly competition. To all the many other bodies, both official and otherwise, so closely connected with our affairs, one would suggest that constructive discussions can achieve far more than destructive criticism. I know you will all join me when I say that the co-ordinated and concentrated effort of all concerned we will be able to face with confidence the challenge of this great opportunity.

Note:—This does not purport to be a record of the proceedings.

DLF through the IFC. The fixed capital expenditure is estimated to be Rs 1 crore. The plant is expected to go into production by the end of 1962.

Traco Cable

Traco Cable Company Limited has finalised arrangements for the public issue of Rs 25,00,000 equity capital in shares of Rs 10 each, at par. Of the issued capital of Rs 40 lakhs, the Government of Kerala will take up Rs 10 lakhs and the promoters and their friends Rs 5 lakhs. A sum of Rs 5 is payable with the application and the balance on allotment. Applications must be for a minimum of 25 shares or multiples thereof. The subscription list is likely to open on 3 April 1961.

Indian Steel Rolling Mills

The Indian Steel Rolling Mills Limited is raising additional capital for Rs 25 lakhs in equity shares in the proportion of one equity share for every share held. As already indicated in these columns, the amount is being raised for doubling the capacity for manufacturing wire products to 7,200 tons per annum and repaying the Debenture Loan of Rs 5 lakhs to the TISCO. The balance of Rs 14 lakhs will be utilised for renovation and modernisation of machinery.

STOCK EXCHANGES Best Levels Not Maintained

Watch-Dog Writes:

THE buoyancy in stock markets has had a fresh lease of life during the week and equities, over a wide front, have forged ahead on hectic speculative buying. A general feeling, that the market is overbought, has, however, brought forth a corrective reaction towards the close.

After recording new peak levels in the middle of the week, prices on the Calcutta Stock Exchange suffered a moderate setback due to profit-taking.

Irregular price movements characterised trading on the Bombay Stock Exchange.

Activity on the Madras Stock Exchange was rather restricted. A general tendency to book profits was visible at the higher levels.

Wall Street closed irregular with gains and losses evenly divided and ranging to one point or so.

CALCUTTA

Friday Evening.

BARRING some corrective realising, the local stock exchange did not show any sign of a flagging tendency. The real flip to the present competition for recovery was the continued flow of encouraging corporate news, indicating the brilliant performance being made under

the impact of expansions taking place in different units.

The other stimulating factor was the general hope that companies having large reserves might soon issue bonus shares. Reports, that the Government had decided to release P.L. 480 funds to provide a larger financial assistance to the private sector through the ICICI also contributed to the sustained bullish sentiment. But for slight profit-taking, the market would have retained its best levels for the week.

Giltedged securities remained generally steady although the improvement in prices was confined to the short and medium-dated issues. There was buying enquiry from institutional investors; but offerings were scanty.

Bank shares met with good support on prospects of better earnings during the current year in spite of the revision of deposit rates, thanks to the increasing bank credit.

For the third week in succession, Jute shares tended to record fresh higher levels. This was mainly due to a growing feeling that, although the short-term prospects were not encouraging, the long-term outlook was quite promising due to the possibility of a good jute crop in the 1961-62 season. Anglo-India forged ahead to Rs 226 from Rs 220 (Rs 220); Birlas to Rs 36.12 from Rs 35.37 (Rs 35.62); Delta to Rs 178 from Rs 170 (Rs 177); Kamarahatty to Rs 158 from Rs 154 (Rs 156); Kinnison to Rs 188 from Rs 179 and Nuddea to Rs 54.50 from Rs 50.75 (Rs 54.25). New Central fluctuated irregularly between Rs 19 and Rs 19.37 and so also Megna between Rs 13 and Rs 13.37. Howrah were almost maintained at Rs 22.37. Figures shown within brackets were the closing rates for the week.

Although Coal shares continued to enjoy good support on prospects of obtaining foreign loans for expansion, profit-taking reduced some of the extreme gains towards the close. This was mainly due to an anxiety with regard to the wagon shortage and the possibility of out-

put being curtailed following the accumulation of stocks at various pit-heads. Amalgamated had buyers at Rs 23.44 to Rs 23.62; Burrakur at Rs 20.31 to Rs 20.50; Equitable at Rs 32.12 to Rs 32.37; New Beerbhoom at Rs 21.87 to Rs 22.12; Central India at Rs 13.87 to Rs 14.19 and Western Bengal at Rs 8.94 to Rs 9.19. Bengal turned rather quiet at Rs 356 against Rs 360 on lack of fresh support.

In the week's dealings, activity in the Tea section was very prominent and the shares of those companies having large reserves were keenly sought after at enhanced levels on hopes of bonus issues although profit-taking intervened and reduced some of the extreme gains at the close. Jay Shree scored more than three points at one time to quote Rs 24 on reports of the company, having applied to the Controller of Capital Issues for issuing bonus shares in the ratio of one for four shares held. This is probably the first company to take advantage of the recent cut in the bonus share tax. Hasimara came in rank next and the price shot up to Rs 28.87 from Rs 25.19 on prospects of an early bonus issue. Bishnauth were wanted up to Rs 25.62 from Rs 24.62; Brooke Bond up to Rs 18.25 from Rs 17.50; Bormah Jan up to Rs 18.62 from Rs 17.87; Baghmari up to Rs 24 from Rs 20.62; Betjan up to Rs 30.75 from Rs 28 and Tez-pore up to Rs 18.50 from Rs 17.25. Methoni and Hantapara were nearly maintained at Rs 19.50 and Rs 145 respectively.

Sugar shares came in for selective demand. Despite the dividend being skipped again for last year, Carew were enquired up to Rs 13.25 from Rs 11.75 on prospects of improved working during the current year and the possibility of the Dar-sana factory being sold to Pakistan. Dyer Meakins had buyers at Rs 31.25 to Rs 32.25 with SKG turning ex-dividend and changing hands at Rs 13.08 to Rs 13.19. Raza/Buland met with some business upto Rs 13.69 from Rs 13.37.

MEETINGS AND DIVIDENDS PROPOSED

Companies	Meeting Date	Dividend Proposed (Rs Per Share)	Transfer Books Closed
CALCUTTA:			
Burrakur Coal	March 27	13%	10/3/61 to 27/2/61
Martin Burn	March 27	2.75	13/3/61 to 27/3/61
Phosphate Co.	March 27	35.00	13/3/61 to 27/3/61
Asso. Battery	March 28	1.00 (final)	15/3/61 to 28/3/61
J. K. Steel	March 30	2.00	16/3/61 to 30/3/61
National Pipe	March 30	2.00	16/3/61 to 30/3/61
Bharat Collieries	March 30	Nil	22/3/61 to 30/3/61
Carew & Co.	March 30	Nil	23/3/61 to 30/3/61
Orissa Minerals	March 30	36%	15/3/61 to 30/3/61
Bengal Jute	March 30	0.50	23/3/61 to 30/3/61
India Machinery	March 30	4%	23/3/61 to 30/3/61
Jayshree Textiles	April 21	1.00	1/4/61 to 21/4/61
BOMBAY:			
Kamani Metals	March 28	Nil	15/3/61 to 28/3/61
MADRAS:			
Madura Mills	March 27	15%	28/2/61 to 27/3/61
Mercara Rubber	March 29	20%	23/3/61 to 31/3/61
Anapalai Estates	March 30	20%	23/3/61 to 30/3/61
Mysore Sugar	March 30	30%	16/3/61 to 30/3/61

Textile shares continued to rule firm on reports of bigger supplies of raw cotton now available and the encouraging advices from the piece-goods market. It was also felt that the new taxes on cotton yarn might not impede production on account of the brisk off-take of cloth. Jay Shree were in demand up to Rs 18.50 from Rs 16.50 due to growth prospects and the announcement of a higher dividend. J. K. Rayon crossed the Rs 20 mark for the first time and after touching Rs 20.12 from Rs 19.05, finished the week at Rs 19.12. Kesoram recovered partially to Rs 33 and Dunbar to Rs 29.12 after touching low levels of Rs 32.50 and Rs 28.62 respectively.

The shares on the forward list failed to maintain the exuberance, as most of the operators were found to be concentrating their attention only on shares of outstanding merit. Indian Irons were, however, an exception and the scrip, after recording a new peak level of Rs 27.25 from the previous week-end closing of Rs 26.94, finished the week lower at Rs 26.83 due to selling pressure. Braithwaite remained very firm at Rs 36.87 following the encouragement derived from the Chairman's speech. J. K. Steel met with business at Rs 27.63 to Rs 28.62; Jessop at Rs 22.06 to Rs 22.62; Britannia at Rs 14.87 to Rs 15.25 and Guest, Keen, Williams at Rs 43 to Rs 45.12 to close finally at Rs 27.75; Rs 23.37; Rs 15.12 and Rs 44.31 respectively. TEXMACO continued to be the only weak spot in the season and the scrip was on offer at Rs 22.35 to Rs 22.60 on rumours of lower profits and reduced dividend for last year.

The Miscellaneous section was highlighted by many bright features, specially the newly-listed shares. As the existing blue chips had already attained such dizzy heights as to be out of reach of average investors, the new shares, even with a considerable premium they were commanding, attracted the attention on the long-term view. Following were the price trends of a few selected shares:

	As on 18 Mar.	High-est 24 Mar.	As on 24 Mar.

AHEAD OF SCHEDULE ONCE MORE

Durgapur's 24" Medium Section Mill has beaten the target date and has now commenced rolling. It will produce a range of products required for structural work and for the railways.

This is the fourth unit of the Rolling Mill plant at Durgapur Steelworks and the fifth and final unit—the Merchant Mill—is also well on the way to completion.

Brighter Prospects for Coal?

WE do not yet know the extent to which the Second Plan's implementation was affected by the failure of the country to produce enough coal. But, so central is coal to industry and industrialisation, that it is reasonably certain that achievements would have been much more commendable and heartening, if only enough coal had been available. It is, in this regard, even possible to suggest that the hardly satisfactory performance of the Railways, in the last year of the Plan, may have been owing at least in part to the deterioration in the quality of the coal that they had to make do with. In retrospect, it is clear to Government, though it was always patent to industry, that the Second Plan started with the serious handicap of an ideological hurdle in the way of the private sector producing more coal. The revised industrial policy statement of 1956 seemed to imply that the State would reserve to itself the responsibility for opening up new coal-fields; the scope that the private sector in coal was left with was defined by the target of some 12 million additional tons to be found from working the existing collieries. The private sector has done its bit: As Mr R. H. Wright pointed out last week at the annual general meeting of the Indian Mining Association, in the year to February 1961, private sector coal output was a scant half a million tons short of the target of 45 million tons; and it is even possible that, when the figures for the year to March 1961 are published, the private sector will have been found not wanting. Meantime, much the more difficult job was undoubtedly that of the National Coal Development Corporation, since a good deal of the additional output in the State sector had to come from new fields. It may be remarked, incidentally, that coal production in the private sector is of such magnitude despite some collieries, as Mr Wright has revealed, having had in recent weeks, owing to non-availability of wagons and to pithead stocks rising dangerously high, to restrict their raisings by as much as 30 per cent.

It is, perhaps, the late and uncertain start to planning in coal as also the lack of co-ordination in the schemes for transport and coal which have been responsible for the present-day crisis. For, Mr Wright has rightly complimented the NCDC on achieving a production of 6 million tons during 1960, or double what State sector output at the beginning of the Plan was. Side by side, of late, there seems a serious attempt by Government to get rid of any doctrinaire views that it may still have had. Mr Wright says the industry has "been reassured to a considerable extent by the statements on this subject made by our Hon'ble Minister (for Steel, Mines and Fuel) since October, 1960." As against the earlier complete embargo on new workings, the private sector is now "to be allowed to expand into certain proximate areas." Inferentially, such proximate area may also be virgin. But there still remain problems, and unless the answers can be found, the Third Plan target will be as hard to hit as the Second Plan's. Most important of all, there is need for the allocation of foreign exchange of sufficient proportions. A good deal of machinery was perforce idle, during the Second Plan, owing

to foreign exchange not being available for buying a spare or a component. Mr Wright himself thinks—and, surely, he should know—that "the most important reason for the short-fall in production has been the acute foreign exchange position which has denied to the industry sufficient licences for the import of spare parts, quite apart from the new plant and machinery so urgently required." Prospects today in this regard are not so black as they were. For, the World Bank, long preoccupied as it has been with the difficulties on the transport front, lately turned to a study of coal, and a recent Team that visited India has apparently come to the conclusion that World Bank assistance should be made available for the coal industry. The IMA Chairman reckons that all it would need is some Rs 28 crores of foreign exchange for enabling the private sector to produce the additional 17 million tons of coal that is its target; and Mr Wright is careful to mention, almost parenthetically, that in spite of coal exports having had to be reduced, the earnings therefrom in the next five years will still be of the order of Rs 25 crores.

The second need is power. That India prospectively, if not already, faces a power famine, is a well enough known fact. But let it be realised that the top priority has to be given to meeting the demands of the coal industry, since otherwise another basic raw material for industrialisation—coal—will also be in pariously short supply.

Mr Wright feels sorry, it would appear, that he has, like IMA Chairmen before him, to complain of the discouraging price policy. As matters stand today, the price fixed for high grade coal does not even cover the cost of production; and the bulk of such quality coals—98 per cent of it—is presently being mined by the private sector. If Grade I coal is benefited by washing, the cost would work out to Rs 10 more than the fixed price per ton of Selected "A". Obviously, there is no incentive for producing the quality grades.

Even should Government provide the incentive for the greater output of quality coals, the need would remain for the establishment of a number of washeries. To the extent that the Railways carry coal with high-ash content, they carry so many million tons of impurities quite unnecessarily. Mr Wright reckons that one wagon of "15 per cent ash coal is worth to a consumer two wagonloads of 30 per cent ash coal". So, not only would the quality of coals available for industry, for the Railways and the steel mills, improve as a result of more coal being washed; the strain on the Railways for the carrying of coal freight would correspondingly be relieved.

The basic fact, of course, is that the Railways, though their accomplishment in the Second Plan is awesome, have still fallen short of what they needed to do. No good can come of continuing to discuss whether the Railways did not provide sufficient wagons, or the rest; what is needed is best summed up by Mr Wright: "The time has now come when the level of coal production and supply should be settled by the joint co-operative efforts of the Industry, our Ministry and the Railways, meeting together at high level."

CAPITAL MARKET

Evidence of the Boom

Supplementing an earlier study made in August 1956, there is in the February issue of the Reserve Bank of India Bulletin a detailed analysis of capital issues in the private sector. Whether control discouraged enterprise, whether the trend of profits stimulated new issues, whether the stock helped to create a good reception for offerings of new shares, can be ascertained by a careful student of trends and developments. But the main impression left is that under the Second Plan, the private sector was given its head, so to say, and new floatations not take-overs of old enterprises were the feature. The new Company law was not an inhibiting factor, and in fact investors developed more confidence through the provisions of legislative safeguards. Leaving bonus issues out, it is computed that new capital issues permitted aggregated Rs 555 crores of which debentures totalled Rs 63 crores. A number of issues below Rs 10 lakhs were made, and they may be now said to supplement the formation of capital just like the reserves allocated for development of old undertakings.

The preponderance of equities is in part due to the desire for capital appreciation. Books on investment deride preference shares, and argue that ordinary shares alone can be called today a hedge against creeping inflation. The estimate that invested capital rose by Rs 42 crores a year suggests that the capital market is growing in India and those who feel that investment now is everybody's business, as Hartley Withers might say, will be reassured by the major sign of economic growth—the response to the challenge of shortages due to import control.

The Reserve Bank analysis relates the increase in new issues to the extra protection available for indigenous industry. What is called an "indigenous angle" in official parlance, settles the quota of imports allowed. Major industries helped by the influx of capital were steel, chemicals and cotton because of a new interest in rayon. By comparison, paper and cement lagged behind. New concerns came on the scene along with old concerns seeking extra funds through the offer of fixed interest stocks. Texmaco was one of the latter like Kesoram Cotton. Big debenture placings were also common for financing development, and if Tata Chemicals in 1957 made a rights issue of ordinary shares to holders, it had previously issued debentures.

The boom in new issues last year is, of course, in the background of the analysis. It is noted that the 10-rupee share is in trade vogue: some companies have converted their 100-rupee preference shares or ordinary shares into 10-rupee shares. Mettur Chemical, India Cement and Andhra Cement have done so to ensure a wider market. However, the 2-rupee planting shares familiar in the postwar boom were not common, except in the case of companies that became public in 1959 as indicated by the listing of Lingapur, Oosoor and Wartyhully-coffee companies under the management of Peirce Leslie.

Issues made at a premium met with a flattering response promptly. The pricing of

new issues is not left to the discretion of the promoters, but to the Government which may hold the view that the premiums got may help to reinforce reserves as in the case of the EID & SF whose fertiliser scheme demands large outlay in addition to the institutional aid available. Technically it is a

Capital Issues Control. Consents granted and utilised 1951-59.

sterling issue made at 50 per cent premium, so that the RBI article does not mention it as one of the big rights issues of 1960.

The fact that 17.4 per cent was put up by promoters for assorted issues will suggest that big capitalists are backing new ventures and the professional director is hap-

pily not to the fore. Also, foreign participation determines largely the success of new floatations and the overwhelming success of the capital issues made in 1960. The precaution of underwriting was far more common than in the prewar period not only because of the rise of institutions like the ICIC. But the underwriters did not fare uniformly well as 14 per cent of the new issues were left with the underwriters. Of course, unloading later on was or is a possibility and the supply to the market of certain shares has been always supplemented by the liquidation carried out by the ICIC or other agency. The LIC may not sell but the ICIC does and that is, in a way, a brake on the boom that goes on. If banks are also active in the field and brokers are "managing" new issues, it is because of a tradition that goes back a long way. The decline and fall of managing agents may also be linked by some with the rise to power of the IFC, LIC, SFCs and other alphabetical agencies. There is also an RFC but that should not be compared with the US Reconstruction Finance Corporation set up under the New Deal as the Indian counterpart is very small potatoes.

The fact that the private sector gets help from public institutions and the State Governments so far is an argument often employed by socialists of the chair to deny the vigour of capitalism. But the real point to grasp here and now is the size of the market, the emergence of Delhi and Ahmedabad as new financial centres, and the reduced reliance on debenture capital. Mortgages are resorted to when money has to be readily raised during a depression: when shares are preferred, equity capital can be got easily from the investor to whom an appetite may come with eating.

They are so neat!

These mechanised Statement of Accounts! They save the customers so much time and bother.

The Bank's Head Office and some branches supply them regularly. More and more branches will be supplying them soon.

Amongst the Banks in India the UNITED BANK is in the van of mechanization.

World of Finance

INDIAN BANKS ASSOCIATION

Mr Bhabha Bows Out

After serving six years as Chairman of the Indian Banks Association, Mr C. H. Bhabha has bowed out, yielding place to Mr Tulsidas Kilachand. Mr Bhabha's occupancy of the gadi has more or less coincided with the Second Plan, and it is natural therefore that he should have taken the opportunity offered at the annual general meeting, held last week in Bombay, generally to assess banking developments. So, it is surprising that there is only an oblique reference to the failure of Palai Central Bank, Mr Bhabha stating that there were "problems that confronted some banking institutions during the past year, resulting in the closure of two banks." No attempt has been made to find out what went wrong. Mismanagement is of course condemned; presumably, Palai Central met with its just deserts. Two prospective measures to strengthen banking are discussed. The first is the scheme for the Deposits of banks to be insured which, "while imposing a heavy burden on well managed units, will inspire public confidence towards banking in India." The IBA's views have, reports Mr Bhabha, been made known to Government, with whom the responsibility for decision and action now rests. The second is the proposal that fresh capital be issued by banks which, as a basic principle, "is very sound." But the retiring Chairman of IBA apparently doubts that banks will be able to attract capital from investors. While once bank shares were "regarded as semi-giltedged securities", they are no longer sought after, and prices of bank shares have, far from participating in the general rise in share values, actually shown a declining trend. Mr Bhabha thinks it worth while to examine the reasons why bank shares have fallen in popularity, but has added that "this is not the occasion to do so."

Mr Bhabha has further asked, and we fully support his plea, that a percentage of the gross profits be permitted to be transferred to inner reserves without any tax being paid thereon. For, there can be no doubt that both inner and published reserves of the banking system stand in need of considerable strengthening. One major bank, in its 1960 balance-sheet, has been compelled to disclose the book value of its giltedged holdings as exceeding the market value by Rs 26 lakhs—which could surely have been obviated if inner reserves had existed and could have been drawn on to set off the depreciation.

In this context, Mr Bhabha, it is true, has made reference to the directive whereunder the Reserve Bank prescribed maximum rates that could be paid by banks on certain kinds of Deposits; no mention is made of the central banking institution's action in also specifying, simultaneously, that the rates charged for Advances be increased all along the line by 0.5 per cent and to a minimum of 5 per cent. Quite clearly, the Reserve Bank's intention was that banking profits could be accordingly enlarged—but for the purpose of adding to

reserve. Unfortunately, with the need for banks to approach shareholders, at some time in the future, for fresh capital, it also became necessary for banks to try and restore to the investor that quantum of return that was, in the new form of taxation of dividends, lost to him. As such, what has characterised banking in 1960 is not so much an enlargement of transfers to Reserves (unless it is to inner reserves) as a restoration of the dividend rate to the level of, say, two years ago. If the inter-bank agreement on rates of interest payable on Deposits had remained unchanged, it could have been hoped that even larger profits in 1961 would have enabled the strengthening of reserves to be undertaken as from the current year. But it is certain that, for quite another reason, Deposit rates are headed upward.

INDIAN BANK

Deposits Fall, But Profits Rise

The Deposits of the Indian Bank Limited, as shown in the balance sheet at 31 December 1960, disclose a fall of Rs 3.99 crores (or 9.2 per cent) to Rs 39.48 crores. The Bank has obviously sought to keep a higher liquidity, since cash balances are only nominally lower at Rs 4.99 crores, with the result that the cash/Deposits ratio has improved to 12.6 per cent from 11.5 per cent. The Indian Bank, unusually for a banking institution in 1960, reports a rise of 4.4 per cent in its giltedged portfolio, so that the giltedged/Deposits ratio has gone up substantially from 31.8 per cent to 36.6 per cent. Advances in fact have declined by Rs 1.58 crores to Rs 27.27 crores, though the ratio to Deposits is somewhat higher at 69.1 per cent against 66.4 per cent.

The profit and loss account reveals a rise of Rs 18.68 lakhs to Rs 2,68.99 lakhs in the gross income. In this regard, the contribution of interest and discount was higher by Rs 13.82 lakhs at Rs 2,29.67 lakhs and that of commission, exchange and brokerage larger by Rs 4.11 lakhs at Rs 51.02 lakhs. The ratio of gross income to Deposits has risen smartly from 6.1 per cent to 7.2 per cent. Interest paid has cost a trifle less, in being lower by

Rs 1.61 lakhs at Rs 1,14.87 lakhs, but salaries and allowances have absorbed Rs 10.84 lakhs more at Rs 91.83 lakhs. Consequently, the balance of profit (subject to tax) is marked up by Rs 3.48 lakhs at Rs 40.32 lakhs. The provision for tax is unchanged at Rs 23 lakhs, so that the net profit, in going up from Rs 13.84 lakhs to Rs 17.32 lakhs, has improved by 25.1 per cent. The sinking fund gets a total of Rs 4 lakhs from 1960 profits, the dividend for the year (including bonus) is 15 per cent subject to tax, and Rs 1.36 lakhs is carried forward against Rs 0.80 lakhs brought in.

CANARA BANK

Capital Increase In the Offing

Canara Bank Limited has reported a rise of Rs 1.89 crores to Rs 30.82 crores in Deposits, and the increase works out to 6.5 per cent. There has been a hefty addition to cash balances, including money at call, which are marked up by Rs 2.40 crores (or 79.7 per cent) at Rs 5.41 crores. As such, the cash/Deposits ratio has risen sharply from 10.4 per cent to 17.6 per cent. On the other hand, there is Rs 1.55 crores of disinvestment in giltedged, the portfolio now standing at Rs 9.96 crores, and the ratio to Deposits has declined from 39.8 per cent to 32.3 per cent. A moderate rise of Rs 0.75 crores to Rs 16.63 crores in Advances is responsible for the credit ratio declining somewhat from 54.9 per cent to 54.0 per cent.

Interest and discount have fetched Rs 10.38 lakhs more at Rs 1,29.69 lakhs, and commission, exchange and brokerage have contributed Rs 32.78 lakhs, or a rise of Rs 4.62 lakhs over the previous year. Thus, gross income has mounted by Rs 16.72 lakhs to Rs 1,72.48 lakhs, and the ratio to Deposits is better at 5.6 per cent against 5.4 per cent. Though there has been a tight rein kept on interest paid (which is actually lower by Rs 2.31 lakhs at Rs 78.52 lakhs), there is a sharp rise of Rs 12.84 lakhs (by 34.3 per cent) to Rs 50.22 lakhs in salaries and allowances. In the result, the balance of profit (net of the provision for tax) is a little lower at Rs 12.65 lakhs against Rs 13.55 lakhs. The provision for tax has gone up to Rs 7.65 lakhs from Rs 4.75 lakhs. Inner Reserves are credited with Rs 3.50 lakhs against Rs 5 lakhs transferred to Reserve in 1959. Bonus to staff absorbs Rs 3.10 lakhs against Rs 2.40 lakhs. The dividend payment is reduced, the amount absorbed being Rs 5.40 lakhs (at 15 per cent subject to deduction of tax) against Rs 6.10 lakhs.

The Directors' Report points out that the Bank intends, in order to improve the capital/Deposits ratio, to put forward a proposal during 1961 to increase the capital.

BANK RETURNS

Bank Credit: Over Rs 1,300 Crores

In the last week but one of the fiscal year 1960-61, there is clear and irrefutable evidence of hefty governmental disbursements. There is the indication that the Central Government has had recourse to deficit financing for Rs 30 crores, there is evidence, adduceable from the State Bank's return, that governmental payments may already be getting reflected in an increase in banking Deposits.

In the week ended 24 March, there has been a fall of Rs 3.27 crores to Rs 1,968.70 crores in Active Note Circulation, and Rupee Coin has flowed back from circulation in an amount of Rs 0.94 crores. With Foreign Securities and Rupee Securities in the Issue Department both being unchanged, the Reserve Bank's cash in the till has improved by Rs 4.21 crores to Rs 24.09 crores.

The rise of just under Rs 30 crores to Rs 160.34 crores in Investments in the Banking Department is undoubtedly an index of the money created during the week under review. Part of the reason for such replenishment of resources by the Centre was because payments have been made to State Governments, whose balances are higher by Rs 15.52 crores at Rs 33.63 crores; and the States have besides reduced their ways and means borrowings from the Reserve Bank by Rs 8.81 crores to Rs 42.18 crores. Again, there was the commitment in respect of Government of India Treasury Bills Purchased and Discounted which matured during the week—the relevant portfolio is lower by Rs 8.69 crores at Rs 30.04 crores. Thirdly, there appears to have been some special

transaction, since Other Deposits show a rise of Rs 8.41 crores to Rs 98.51 crores. As an end result, the Centre's balances are lower by Rs 19.33 crores at Rs 53.37 crores.

Banks are continuing to feel the monetary stringency. The Other Loans and Advances have further risen by Rs 4.37 crores to Rs 173.17 crores, and the advances against usance bills have risen by a shade under Rs 2 crores to Rs 37.15 crores. There is an apparent improvement of Rs 2.71 crores in Reserve Balances, but the State Bank showed a rise of Rs 4.13 crores in cash in hand and with Reserve Bank in the pertinent week, so that other banks must have drawn upon their cash with the central banking institution.

There is now scant hope that foreign exchange reserves will be placed at Rs 175 crores at the beginning of the Third Plan. For, with only one week to go, there has in fact been a drop of Rs 8.65 crores to Rs 25.54 crores in Balances Held Abroad, and the total in both Departments just about exceeds Rs 153 crores.

The return of the State Bank for 24 March is mystifying in that a steep increase of Rs 13.47 crores to Rs 560.90 crores in Deposits has been recorded. Is this merely the impact of Government's end of fiscal year disbursements? Or has there been any special transaction connected with Public Law 480, of which the general public is unaware? Or, yet again, have Deposits of some banking institutions been merged with those of the State Bank? We are unable to answer the question, and are content to pose it. The busy season is responsible for another rise of Rs 3.10 crores to Rs 280.21 crores in Advances; the gilt-edged portfolio is Rs 2 crores higher; cash balances have improved by a little over Rs 4 crores; and there is an unusual increase of almost exactly Rs 7 crores in Other Assets.

The return of Scheduled Banks for 17 March is notable for the fact that the total of Advances has, in rising by Rs 14.52 crores to Rs 1,307.17 crores, crossed the Rs 1,300 crore

mark. The making over of the March instalment of counterpart funds by the State Bank is duly reflected in a fall of Rs 18 crores in net Time Deposits, though it may be added that net Demand Deposits have also shrunk by Rs 4 crores. There is a sharp of Rs 11.50 crores to Rs 78.29 crores in borrowings from the Reserve Bank. The disinvestment in gilt-edged amounting to Rs 15 crores is largely on account of the State Bank.

BANK RATE

An Ineffective Weapon, Unless...

By Paul Einzig

Is Bank rate policy out of date? Many people who ought to know better seem to have arrived at that conclusion largely as a result of Britain's experience in 1960. Throughout the last year, the Bank rate was maintained at a very high level, and in spite of this the balance of payments deficit, so far from being corrected, grew from bad to worse. The high Bank rate did not prevent an orgy of unwarranted wage claims most of which were granted. But the reason why the Bank rate was ineffective in this sphere was that it was only too effective in attracting hundreds of millions of pounds of hot money. Sterling displayed an artificial strength, and the steady increase of the gold reserve generated an atmosphere of optimism amidst which the high Bank rate was unable to produce its effect on the domestic economy.

It is an oft-repeated text book platitude that the international effects of a Bank rate change are in conflict with its domestic effects. This need not be so, however. The authorities have the means of preventing unwanted international effects of a high Bank rate in order to enable it to produce its domestic effects. They can do so by the simple device of intervention in the foreign exchange market to maintain the forward rate at a level at which covered interest arbitrage ceases to be profitable. In the instance of Britain in 1960, such intervention would have served its purpose, because the volume of funds that came to London through uncovered interest arbitrage was incomparably smaller than that of funds that found its way to London through covered interest arbitrage.

If only the authorities had been selling forward sterling on a sufficiently large scale to make the covering of the exchange risk on arbitrage funds too expensive, they would have prevented the unwanted influx of "hot money." This is one of the instances in which official intervention in the forward exchange market would have been both feasible and effective. So long as forward sterling remained overvalued—that is, so long as its discount was not sufficiently wide to make up for the difference between interest rates in London and in New York—it remained profitable to engage in covered interest arbitrage. The prolonged over-valuation of forward sterling during 1960—it still continues to be over-valued right up to the time of writing—was entirely abnormal, so that official intervention in this instance would not have created an artificial situation but would have corrected an existing artificial situation.

Notes

LIC

Expense, Lapse Ratios Lower

When life insurance was nationalised in 1956, there were not a few in this country who genuinely believed that the Life Insurance Corporation would turn out to be a failure. They were, however, soon disillusioned as the LIC, despite the teething troubles inherent in a taking over of the business of a large number of companies with widely differing standards of efficiency, has been able to record a sizable uptrend in new business from the very first year of its existence. This is not to say that the LIC's working has been above reproach. Even now, its service to the policy holders leaves much to be desired. But in the matter of popularising life, insurance among the people, it has achieved signal success.

Encouraged by its success, the LIC set its sights high some two years ago under a five year plan of development. The target is Rs 1,000 crores of new business to be completed in the year 1963. Last year was the second year of this plan, but already it has reached the half-way mark of this target, having completed in 1960 new business of Rs 495.99 crores.

As compared to the previous year, the increase in 1960 works to be 15.4 per cent. The figure of Rs 495.99 crores includes new business of Rs 484.47 crores completed in India, Rs 9.70 crores in foreign countries and Rs 1.82 crores in the form of Janata policy business. Thus, the LIC has almost doubled its business within the past six years, business completed being Rs 238 crores. Business in force has also gone up from Rs 12,000 crores to Rs 24,000 crores during the same period.

The first place in the matter of increase in business over 1959 figures goes to the northern zone comprising Rajasthan, Delhi, Punjab, Himachal Pradesh and Kashmir, which shows an increase of 34.8 per cent over its previous year's business. In respect of percentage of completion, the pride of place is taken by the Eastern zone comprising West Bengal, Assam, Orissa and Bihar completing 91.9 per cent of introduced business. It is, however, to be noted that, in respect of percentage of completion for the LIC as a whole, 1960's record is lower than in the previous year at 87.5 as compared with 88.2.

Although business under joint life policy has been steadily increasing during the past few years—it amounted to Rs 16.21 crores in 1957, Rs 32.70 crores in 1958 and Rs 47.53 crores in 1959—the LIC has been obliged to withdraw this plan because the rate of female mortality in this regard had shown a sharp rise in recent years. The Janata policy is yet to take root in most parts of the country but in the Eastern States it continues to make headway and it has rightly been decided by the Corporation to continue it in this region.

It is gratifying to note that both the expense and lapse ratios have shown a downward trend during the past year. Mr P. A. Gopalakrishnan, Chairman of the LIC, has done the correct thing in promptly scotching the hope that, with progressively increasing efficiency, there should be a reduction in premium rates. A downward revision in premium rates requires consistently good experience over a long period.

MADRAS

Quick Decisions, Fast Development

Quick decisions have characterised the work on many of the

schemes that Madras State has included in the Third Plan. The Central Government's co-operative and appreciative attitude towards this State's normal aspirations should be no mean contribution for getting on with the developmental work of the State.

The Sethusamudram project was hanging fire for some time. But, the other day, the Madras State's Works Minister announced to the members of the Legislative Assembly that boring operations in connection with the Project are to start soon. The South is extremely keen about this Project. Questions were answered both in the State legislature and the Lok Sabha. It is now beyond that realm of airy imagination, and concrete steps have been taken.

A British expert recently investigated the project. After his report to the Indian Government, the Hydrographic Department of the Indian Navy made the INS Jamuna available for survey, and preparation of a large-scale chart of the Sethusamudram route is under way.

This project is expected to cost about Rs 30 crores, though, after some pruning, the cost might be somewhat reduced.

The State Government want the Tuticorin Port development to be taken up first, but with this important project also taken on hand, there is no more suspense, the Government of India having finally agreed to take it up in the Third Plan. And so the preliminary work connected with the Sethusamudram project augurs well for port development work in this State.

Another demand on which the Government of Madras is insistent is an atomic power station in this region. There seems to be encouraging hope about this also. The State Minister for Electricity, Mr V. Ramaiah, told one questioner at the current session of the Legislative Assembly that the Indian Government has genuinely recognised the power-shortage rapidly developing Madras and, in view of the Central Government's decision to set up several atomic energy plants in the country, the hope that Madras State would have one is bright. This recognition of Madras's need for increasing its power supplies by the Union Government stems not from any political pressure—there is something of this, too—but from the pressing requirements of new industries which are rising rapidly in this area. It was refreshing to be told by the Electricity Minister that the Centre was doing its best to get a plant for Madras. Of course, the decision to set up an atomic power station in Madras is governed by many factors, one of which will be the final verdict of experts as to whether or not to set up more than one atomic energy plant in the country. The Minister stated that Madras could certainly hope to have one plant located in this region.

Another hopeful sign in the Southern Region's industrial expansion is in regard to the Neyveli Lignite project.

After a year's negotiations, State-owned Neyveli Lignite Corporation has signed an agreement with a German consortium for supply of machinery worth Rs 20 lakhs for establishing a briquetting and carbonisation plant.

The contract was signed last week-end by Mr A. Srinivasan, Deputy General Manager of the Neyveli Lignite Corporation, on behalf of the Corporation and by Messrs Keuhn and Lipp of Bueau Wolf, Messrs. Hager and Lange of Lurgi and Messrs Wilhelms and Beyer of the Siemens and Mr H. Scharbau of Messrs Protos Engineering Company Bombay.

The agreement provides for the annual production of 380,000 tons of carbonised briquettes using 1.3 million tons of lignite in raw condition.

The Plant required for the recovery of by-products like kerosene, carbolic acid, fuel oil and other carbon products will also be supplied by the Consortium.

The recent visit to India and to the South by a Soviet Russian Engineering team has been fruitful in that they have agreed to supply machinery for the 100 megawatt Mettur Tunnel hydro-electric scheme, one of the five major electric schemes in the Madras Power Grid. Machinery and equipment according to discussed specifications costing Rs 2 crores would be supplied by the Soviet Government in about two years. The Rs 60 lakhs first stage scheme of the Mettur Tunnel Scheme is expected to produce 40,000 k.w. and will be commissioned next year.

Equally encouraging should be the promise of the Governor of Kerala State who, while inaugurating the Rs 25 crore Sabari Project in Kerala's Pamba River last week, said that Madras could very well be a large beneficiary of the power development of Kerala. He pointed to Kerala's immense power potentiality and, with its exploitation, all regions in the South would be immensely benefited. The Sabari project envisages six generators to produce Rs 226,000 k.w. costing less than Rs 1,000 per k.w. The net revenue estimated out of this project is Rs 195.14 lakhs with an ultimate percentage return of 8.13.

Simultaneously with all these pronouncements about the developmental work in the South came the assurance from Mr Raj Bahadur, Union Minister of State for Transport and Communication, at Trivandrum that work on the construction of the second shipyard at Cochin would not suffer for, lack of funds. This is important news for Kerala, which has been expressing feeble doubts about the continuance of work on Cochin shipyard's second stage.

As much financial provision as was needed would be provided, according to the assurance given by the Minister while talking to reporters at Trivandrum last week. Mr Raj Bahadur stressed the Government's intention to complete the Cochin Shipyard project by the Third Plan. Towards this purpose, the Government of India was engaged in securing foreign collaboration for the project.

ROAD TRANSPORT

Niggardly Provision, Says Mr Santhanam

Expressing great satisfaction at the rapid progress made by the nation's motor car and ancillary industries during the Second Plan, Mr T. S. Santhanam, Chairman of the Motor Vehicles and Allied Industries Association, pointed to the inadequate provision of merely Rs 250 crores for Motor Transport in the Third Plan as against a provision of Rs 1,200 crores for the railways.

Mr. Santhanam, of the well-known TVS Motor Transport organisation in the South, is an ardent supporter of a well developed road transport system for the welfare of the people both of the rural and urban areas. His firm has shown the way practically by running exceedingly smooth transport services in the Southern districts. More recently, their cargo service has been of great value to the public both in speed and punctuality. Naturally, his views carry great weight in the industry.

He said that the automobile industry would reach target figures

of the Second Plan by March 1961. So also, the ancillary industry had made very rapid strides and the production rate at the end of the Second Plan was estimated at several times the figure at the end of the First Plan.

Only limited foreign exchange made available under the Second Plan was made use of by the industry, and Mr Santhanam stated the Third Plan targets were reasonable and the industry expected to reach the targets.

Allied to the rapid production of automobiles is the problem of provision of good roads and more roads. But congestion and bottlenecks exist in major cities where industries are rapidly springing up. If sufficient thought in the planning for road development is not bestowed in the suburban areas of industrial and other big cities, there will be considerable slowing of traffic as well as slowing down of the tempo of industrialisation.

On the question of road development, Mr. Santhanam referred to the recent Chief Engineers' Conference's recommendation that at least Rs 590 crores as a minimum be allocated for roads, and said the railways had not been able to carry all the traffic that had been generated under the Second Plan. At the end of the Third Plan, it is estimated that the Railways' share of the long distance haulage, excluding feeder traffic, would be 235 million tons as against the total estimated needs of the country of 300 million tons of all modes of transport. It is doubtful whether the Railways can reach that target figure, the gap between the total needs and the allocation for railways has to be made up mainly by road transport.

Mr Santhanam then referred to the Masani Committee's recommendation of greater attention and flexibility towards road transport industry, because of the inherent advantages of lower cost and practically no pilferages and asserted road transport was at least four times speedier than the railways. But the Road transport industry is today disorganised, and the owners of the 225,000 trucks and buses—there were several thousands—are not strongly knit. The average yearly mileage done by a commercial vehicle has gone up by the end of the Second Plan to 30,000 miles bringing in a gross return of nearly Rs 140 crores to the Central and State Governments by way of taxation in all forms. He, therefore, pleaded for treatment of these bus and truck owners as entrepreneurs as in any other industry.

Why has the Government of India been slow in implementing the recommendations of the Masani Committee? After all, following that Committee, the Neogy Committee in an interim report has said that one of the first tasks is to determine the extent and the nature of competition offered by

EXPORTS

Engineering Goods Fare Well

The export performance of engineering goods in 1960 looked up considerably in unison with the progress of engineering industries. The total value of exports from India in 1960 amounted to Rs 88,856,589 as compared to the targetted figure of Rs 8.5 crores. Exports to all the principal regions increased appreciably as shown in the table given below.

	1959	1960	Percentage increase
(In Rs Lakhs)			
South East			
Asia ..	203	263	26.1
West Asia ..	174	227	30.5
Africa ..	83	129	55.5
North, Central and South America	106	169	59.9
Europe ..	32	148	362.6
Others ..	12	14	16.6
Total ..	610	950	54.5

This outstanding performance was highlighted by the remarkable increases in export to highly industrialised countries like the UK, the USA and West Germany which bears eloquent testimony to the high quality of our products. Our exports during the period under review totalled forty items of which the most important are bicycles and accessories, brass and copperware, dry batteries, electric fans and parts thereof, industrial machinery, razor blades, sewing machines and parts thereof, stainless steelware and weighing scales and weights. While our traditional goods would continue to form the core of our exports to these countries for many years to come, the export of engineering goods to European countries which moved up sizably to about Rs 1.7 crores in 1960 from Rs 32 lakhs in 1952 was a rare achievement of which the industry could be legitimately proud. It is true that the increase was due mainly to the export of steel to Holland, Italy, West Germany, and the UK.

mechanised road transport on important routes.

It has been proved that the tax per ton mile by road is greater than the freight per ton mile by railway. If it was the aim of the railway not to be a profit making proposition as stated by the Neogy Committee, he wanted the public at large and the policymakers to determine whether the railway investment was a commercial enterprise or a public utility.

There is the pertinent observation by the Neogy Committee that the increase in the railway earnings in the first two Plan periods had not been commensurate with the increase in their capital at large.

But this must not be taken into account to belittle the performance of fabricated and processed items like sewing machines, diesel engines, cycles, wood screws, nuts and bolts etc., which in the year under review registered a remarkable increase.

Giving due credit to all the items that have been exported, certain items like electric fans, sewing machines, electrical accessories and tin plate containers require special mention here, for they were mainly responsible for fulfilling the target. The corresponding figures for 1959 and 1960 are shown below:

	Exports 1959	Exports 1960
(Rs Lakhs)		
Electric Fans ..	39	89
Sewing Machines ..	31	52
MS Pipes ..	2	21
Screws ..	0.5	12
Stainless Steelware ..	4	13
Tinplate Containers ..	2	9
CI Pipes & other castings ..	12	22
Diesel Engines ..	13	22
Electrical, accessories ..	3	8

No doubt, there is much scope for substantial earnings from exports of engineering goods, as is clearly evident from the Rs 30 crores' target fixed for the Third Plan. A notable feature of the programme in the next Plan is the increased stress laid to step up exports to the industrially advanced countries of the West. The optimism as regards our ability to enhance exports to these countries is presumably based on certain advantages we have over other exporting countries like cheaper raw materials and overhead charges and the improving quality of our products as reflected by their greater intake by buyers abroad. With proper publicity abroad and rigid quality control, the target fixed for the Third Plan will not be elusive.

The question was, according to Mr Santhanam, whether the railways would be a commercial proposition or not. In any case, the demand on transport will far exceed the transport capacity of the railways in the Third Plan, and the only alternative form of transport is by road.

To avert any possible breakdown of the country's road transport, Mr. Santhanam pleaded for a rethinking of the transport position in the Third Plan. Road transport had an important role to play. In a country like ours, where there was need for more employment in towns and villages, Mr. Santhanam said that there

was greater justification and force in permitting the road transport industry to expand to meet the increased needs of the nation under the Third Plan.

ROYALTIES

Where Should the Tax Be Levied?

The International Chamber of Commerce has been informed by the Indian National Committee that the taxation of royalties must provide for the avoidance of double taxation. The International Chamber of Commerce in its study of treatment of royalties in various countries reached the conclusion that the country from which the knowledge or patent was made available has the right to tax. It argued also that the management of intangible property constitutes an economic activity and the source of income is to be found in the place where the owner has the centre of his activities. The statutory monopoly now extending to technical knowledge is applied. The Indian National Committee, however, took the line that the country which pays royalty has the right to levy tax. It pleaded that royalties should be deemed income and it is open to the country exporting capital (in the shape of knowledge) to refrain from taxation or give rebate to its nationals. Applying the same principle, the Indian National Committee of the International Chamber of Commerce urged that the interest and dividends payable at a fixed rate should be taxable in the country of origin where the income originates.

A special committee reviewed the problems in detail for the International Chamber in January 1961 and concluded that double taxation can be avoided by the allocation of exclusive taxing rights to the country paying out royalties. But the Indian National Committee, of which Mr G. P. Kapadia was a member, argued that countries which are anxious to attract foreign capital should not rely on special tax incentives of a temporary character. It has urged that it is more important to maintain an attractive fiscal climate by equitable treatment of corporate entities and the avoidance of practices which discourage either the growth or mobility of capital or the employment of foreign managers and technicians. It has also emphasised that countries prepared to encourage investment abroad should afford exemption from tax in respect of income over which the right to tax belongs to another country. The Indian National Committee of the ICC has certainly provided a counsel of perfection which helps the Government to limit royalty payments.

ROPE

Not Enough Manila, Sisal

In his presidential address to the tenth annual general meeting of the Indian Rope Manufacturers Association held in Calcutta, Mr H. D. Wahi leaned heavily on the need for a liberal policy in the import of manila and sisal fibres which are two indispensable raw materials required by the rope industry. He maintained that the policy followed by the Government of India in the import of these essential raw materials has adversely affected the working of the industry with the result that, more often than not, the industry had to work well below its capacity. In this context, the reduction in the value of licences for imports can hardly be justified. The Export Promotion Scheme also failed to help the industry to tide

over the difficulty, as import licences allowed amounted only to 75 per cent of the foreign exchange received in payment of the f.o.b. value of the industry's products exported. Consequently, export performance of the industry did not come to expectations. The need for a liberal import policy is, therefore, obvious, especially at a time when Burma has emerged as a serious competitor in the Far Eastern consuming centres.

At the same time, the paramount importance of augmenting the production of indigenous fibre should not, however, be minimised. The present supply of indigenous sisal and also fibre amounts only to 4,000 tons whereas our requirements come approximately to 12,000 tons a year. Even the supply of domestic fibre is irregular, since it is not grown on a commercial scale. Just to eliminate this avoidable factor, Mr Wahi suggested that, if the cultivation of fibres was done under the supervision of the Government

the indigenous supply can be stepped up to a considerable extent and timely supplies can be made to the manufacturing units.

Mr Wahi deprecated the Government's decision to license the construction of a new factory at Jaipur, particularly when there was capacity lying idle for want of raw materials. Issue of import licences to the new factory would further curtail the meagre foreign exchange allowed to the existing units in the organised sector. Moreover, the installed capacity of the industry is quite sufficient to meet the demand in the country.

It is a matter for regret that our shipping companies tend to cover their requirements of rope from foreign markets. Though a slight difference in prices is the main attraction, it will be of immense benefit to our rope industry if the shipping concerns extend their support to it. The desirability of co-ordinating the expansion envisaged in the next Plan with

the manufacturing capacity of the rope industry thus looms large in our minds.

FLOUR MILLING Again, Idle Capacity

Thanks to the PL 480 agreement for the import of 17 million tons of foodgrains during the next four years, the flour milling industry in West Bengal has now been enabled to work to its full capacity. Till recently, a quota system was in force and the quantity allotted much less than required with the result that flour mills in this region have been obliged to keep a large proportion of their capacity idle. According to the spokesmen of the industry, it has been able to work at only 66 per cent of its milling capacity. Inadequate allocation, however, does not seem to be its only handicap. The allocation and supply are said to have been irregular, and there were restrictions as regards extraction percentages of wheat products, and "quality" and "quantity" clauses.

With the improvement in wheat supplies in the country, some of these restrictions have been relaxed, but Mr G. E. Howit, Chairman of the Calcutta Flour Mills Association, has pointed out that the fact that the extraction percentages of wheat products continue to be dictated by Government largely nullifies the effect of the abolition of the quota system. He is of the view that the flour mills in Calcutta can adequately take care of the requirements of the public by altering their extraction percentages in accordance with the demands of the market. It would appear that the West Bengal Government also seems to appreciate the mills' point of view, but would rather study the result of the removal of restrictions on the inter-district movement of wheat products before considering the advisability of abolishing the extraction percentages.

While the removal of the restriction on inter-district movement of wheat products has certainly been beneficial to the industry in West Bengal, it is felt that only when the inter-zonal restrictions on the movement of wheat products are abolished that it will be enabled to utilise its milling capacity in full. Representations in this regard have been made to the Central Government by the Roller Flour Mills Federation of India. It is evident that the Central Government will have to go into the matter in conjunction with the State Governments before a decision can be arrived at. In the meantime, the flour mills in the different parts of the country are obliged to work within restricted fields while there was no such restriction at the time of their establishment or when they fur-

ther expanded their milling capacity. The zonal restrictions have resulted in the present unhealthy state of the industry as a whole. The flour milling industry in West Bengal has long been the main source of supply to consumers in West Bengal and the adjoining States like Assam, Bihar, Orissa and Andhra. Under the new dispensation, flour mills have been allowed to be set up in the regions which used to be traditional outlets for the West Bengal units. It is definitely more economical to allow the West Bengal mills to continue to cater to the needs of the entire region than to put up new mills in Assam and Orissa. But perhaps it has not been possible for the Central Government to ignore the demands for regional industrial development.

PAPER Bagasse as Raw Material

The utilisation of bagasse, which is an important by-product of the sugar industry, for the manufacture of paper is a long canvassed proposition. Already, experiments have been successfully made in this field and a unit has been working in the Mysore State on the basis of a mixture of paper pulp and bagasse supplied from the Mandya sugar factory. Another unit in the Madras State has also made a successful debut in the production of paper utilising bagasse as the raw material. The seminar on Small Scale Paper Manufacture organised by the Development Council for Pulp Paper and Allied Industries has underlined the need for further encouragement of paper production utilising bagasse. Bagasse is presently consumed by the sugar factories as fuel and its replacement by coal by the sugar factories would release a substantial quantity of bagasse for paper manufacture. The scheme for the utilisation of bagasse for paper manufacture will initially pose technical difficulties for sugar factories. And factories in Maharashtra have voiced concern on this score. Even apart from the technical difficulties involved in the switchover to coal, whether replacement of bagasse by coal will be a net gain to the sugar industry will have to be ascertained. One difficulty that the sugar factories will face in the proposed switchover will be in respect of movement of coal which, unlike bagasse, will have to be transported to the sugar factories from long distances. Mr Manubhai Shah's assurance of the early solution of the present movement problem for coal will not allay fears. But longterms considerations relating to the stepping up of paper production will warrant the diversion of bagasse for paper manufacture as desirable and

necessary. Utilisation of bagasse will solve one of the important problems of the paper industry, namely, sufficiency of raw materials. Bamboo plantations are concentrated in particular areas and scope for increasing bamboo supplies to present and potential paper units is extremely limited. This, combined with the growing consumption of paper in the country, makes unavoidable dependence on alternative raw materials for paper production. In respect of bagasse, there can be no question of short supplies as the present production in the sugar factories is substantial. It is also an advantage that utilisation of bagasse would help paper manufacture to be organised in small scale units.

BHILAI Training Facilities

The Technical Institute of the Bhilai Steel Project started functioning with effect from 8 June 1959, when the training of skilled worker trainees was started. Prior to the functioning of Bhilai Institute, training was being given in the USSR in the case of Engineers and Operatives, and in the engineering firms in India in the case of skilled-worker trainees. In 1960, as the major departments of the steel plant went into production, the foreign training scheme tapered off and sending of skilled worker trainees to the engineering firms was also stopped.

The original contract for training of 686 persons in the USSR has been completed with the exception of one person who is being sent now. Subsequently, it was also agreed to send 50 more trainees to the USSR for training. Against this, 34 engineers and operatives have already gone to the USSR.

The Institute has drawn up a detailed training programme for 1961 and subsequent years for various classes of trainees. 100 graduate-apprentices, per year will be recruited and will undergo a two-year training. 100 operatives similarly recruited, will have the same period of training. Besides refresher courses for 200 operatives will be run. Other categories are courses for artisan-trainees, evening class trade-courses, employees training and trade-testing, and vacation training.

In addition, the Institute will now also undertake to train the personnel required for expansion and it is also expected to train part of the personnel required for the fourth Steel Plant at Bokaro. During 1960, 101 Graduate Apprentices completed their training in the Bhilai Institute. So far, 258 Graduate Apprentices have completed two years' training in the Institute and have been promoted as Junior Engineers.

In view of the commissioning of the major departments of the Bhilai Steel Plant, a two-year scheme of training involving general training in the first year and specialised training in the second year coupled with a minimum of theoretical class-room lectures, has been started in Bhilai itself. Graduate Apprentices attend the Technical Institute for two days in a week in the first year of their training for laboratory work, colloquium and other theoretical work, and for the remaining four days they take practical training in different departments of the Steel Plant. After completion of the first year, the Graduate Apprentices are allotted to the different departments by a High Power Committee, on the basis of their aptitude and actual performance during their training period. In the second year, they work in their particular department the whole day and attend lectures on plant production problems, cost accounting, management, labour and industrial relations, etc., for three evenings a week. The emphasis during the training period is laid more on practical work than on theory. It has been decided to train 100 Graduate Apprentices a year in the Institute.

The training of skilled workers started in the Bhilai Technical Institute on 8 June 1959. Their training comprises one-day a week at the Institute for theoretical lectures on engineering drawing, work-shop mathematics and general science and trade theory, etc., and the remaining five days in practical training in different shops in the Plant. This scheme is now being wound up as it was intended to meet the initial requirements of skilled workers. Some 289 trainees completed their training in Bhilai itself during 1960 as against 115 in 1959, and 15 workers were sent to engineering firms during the year under review, as against 268 sent in 1959. So far, 954 skilled worker-trainees have completed their training and have been absorbed in regular strength.

The training of Artisan-Trainees for the permanent phase started in August 1959 and 51 artisan trainees completed their training in 1960. These trainees were trained exclusively in the Training Shop of the Technical Institute. One of the fundamentals of this training is that these trainees are given compulsory basic bench fitting training for two months, after which they are put to their own regular trades. From this year, the training period of these trainees has been raised from one year to two years for craftsmanship certificate-holders and three years for raw matriculates. The training of 150 "DGRE" and 50 matriculates has been started in 1961 and the same number is likely to be recruited in 1962.

The Bhilai Technical Institute has trained 54 trainees for the

Indian Finance

1 April 1961

Durgapur Steel Project, and 55 vacation trainees sponsored by different Engineering Colleges in India.

USA End of Recession in Sight?

The portents that usually signal an improvement in the United States economic climate are becoming more numerous and more pronounced.

The past week, for instance, brought favourable news about such basic business barometers as industrial production, housing and retail sales.

The big news about industrial production—the output of factories, mines and utilities—is that it held virtually steady in February, thus ending a six-month slide that began last summer. The Federal Reserve Board has reported that its index of industrial production in February was 102 per cent of the 1957 average, about the same as in January.

The changes in the index's various categories were rather small, but some significant developments were evident. The major increases were in the output of utilities and a number of manufacturing industries, including steel. Their gains offset declines in the production of automobiles, furniture and some building materials, among others.

Iron and steel output rose for the second consecutive month, and in February stood at the highest level since last October. Moreover, the year-long decline in the production in machinery appears to have halted in February, with gains registered for the second month in a row in the production of electrical equipment.

Even automobile output is not without its brighter side. The 6 per cent decline in February was a far cry from the 20 per cent drop of January. And while some further cutbacks in automobile assemblies may be apparent in the March statistics, it is noteworthy that some car manufacturers have now begun to step up their production schedules in response to a brightening sales picture.

As for housing, a report by the census bureau shows construction begun during February on 77,000 privately financed homes and apartments. After allowing for seasonal influences, this worked out to an annual rate of 1,154,000. While this was still a substantial 16 per cent below the pace of February 1960, it was 7 per cent above January, which in turn had been 10 per cent higher than the rate of last December.

Meanwhile, the Federal Reserve Board was reporting that department store sales in the week ended 11 March ran 9 per cent ahead of

those in the like week of last year. Significantly, this was the fourth consecutive week of sales increases over 1960.

Sales comparisons are being helped, however, by the fact that the Easter holiday falls this year on 2 April—two week earlier than last year—which may help account for the increased buying tempo. Nevertheless, after statistical allowance is made for this earlier shopping build-up, sales in the week ended 11 March still topped those of the same week of 1960 by about 6 per cent. Over-all, despite a rather slow 1961 start, sales so far this year are running about 2 per cent ahead of the comparable period of 1960.

Also on the decidedly optimistic side is the trend in new orders for paper board, widely used packaging material. Historically, paperboard orders have tended to move in advance of general business activity, and they rose quite sharply in February, continuing a trend that began last December.

According to knowledgeable analysis, this upward thrust in new paperboard orders—which seems to be continuing in March—is characteristic of the final stage of a business recession and the early stage of a business recovery.

With these and other factors in view, many Government and private experts have begun to talk openly about an end to the recession which began some nine months ago. All this talk is still couched in rather cautious terms, however, as some important economic indicators have yet to demonstrate the desired upturns.

An example is the trend in the total personal income of all Americans, which declined in February by some \$700 million to an annual rate of \$405,900 million. Mainly responsible was a drop of nearly \$1,000 million from January in payments of wages and salaries—a drop that was only partly offset by a rise of some \$200 million in unemployment compensation benefits and other "transfer pay-

ments" from Government trust funds.

A number of experts are explaining the February income decline in terms of the generally poor midwinter sales. Thus, it may be that the current signs of a pick-up in business and consumer demand with the arrival of better weather could be reflected in higher employment and income totals in the months ahead.

Another encouraging aspect is the fact that personal income, despite the February decline, still has fallen less than one per cent from its October 1960 peak, and actually is running at an annual rate of \$10,000 million, or better than 2 per cent, above the rate of February a year ago.

There is another reason for optimism that should be kept in mind. The economy has yet to feel the impact of the Kennedy administration's moves to counter the recession and spur economic activity. Presumably, these moves

Rugged hands on the plough of steel—steel biting the earth in furrows straight and deep—steel is preparing the land for the seed. Primitive? Primitive his method may be, but it has the new touch of steel—steel which has replaced the old wooden plough and is helping him to get a better yield for a little less labour. Soon, he will have the surging power of tractor to work for him; soon his land will be yielding a harvest, more abundant than ever before. Soon all this will be his and ours, as there is a little more steel for each of us. Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

THE

AND STEEL
COMPANY
LIMITED

INDIAN IISCO STEEL

—which include aid to housing, the extension of unemployment compensation benefits, and a number of other measures—could help accelerate a general economic upturn.

The fact that no such upturn is clearly visible as yet, despite the obvious improvements in many economic sectors, may help explain the administration's interest in seeing its economic programmes put into effect as speedily as possible.

★

SINGAPORE

Oil and Beer

The opening in 1960 of two oil refineries in Singapore, one by Shell and another by Maruzen Toyo of Osaka is not due merely to tax concessions provided for pioneer enterprises. Shell's own name (for the curious) is derived from the island of Pulau Bukom (Malaya for Shell Island) and the refinery is located on the island. The biggest storage, packing, and bunkering base in Asia that can treat a million tons of oil is now off Singapore and land reclamation has made Pulau Bukom safe. Singapore was picked for the new refinery as it is truly the crossroads of Asia. The smaller Japanese refinery is expected to treat up to 500,000 tons of crude a year and will concentrate on local distribution through retail outlets. Crude oil from Kuwait will be used and the entry of Japan into refining abroad is not at all surprising as Japan can get Persian oil also. Fuel oil will be the main product and local industry will gain, though it is clear that Indian coal will not be needed if Singapore changes gradually to oil. The Shell skyscraper-the headquarters for South East Asia—will be the base for business expansion as industrial gases and chemicals will be made available.

The investment of over \$100 million is a sign of the foreigner's confidence in Singapore after the political changes of 1959. Among Singapore's rising industries is brewing, and two big breweries make Singapore independent of imports, although a good deal of British and Danish beer still comes in. In two decades, the Malayan Breweries Limited have successfully produced beer in bottles and cans and a big export trade with Aden, Okinawa, Pakistan and Mauritius has been built up. It is noteworthy that no beer from India is imported by Singapore, where the public preference is for larger beer. The Company intends soon to set up a brewery in Kuala Lumpur to reach the market in the mainland. It has been claimed that 1960 was a very good year for business for Singapore in spite of a fall in rubber exports and the contraction of trade with India was a feature of the trade returns which point however, to expansion of trade

with Japan and China. Perhaps, there is a lesson for India which cannot provide either food or timber or oil, as Burma can for Malaya

★

ACCII

Another Record Year Chalked up

The Alkali and Chemical Corporation of India Limited has chalked up another record year with production, sales and profits touching new highs. Production of polythene granules during the year under review amounted to 4,000 tons and output of paints showed a sizable increase. The quantum of paints produced would have been even greater had it been possible to import an adequate quantity of raw materials. As the difficulty is likely to continue for a considerable time, the Company is striving to secure raw materials of quality from within the country.

The rise in production naturally resulted in improved sales and the products of the Company fetched the much longer sum of Rs 5.4 crores as against Rs 3.4 crores obtained in the previous year. The demand for quality paints exhibited a rising trend, a fact which amply testifies to the general industrialisation of the country. With a view to meeting the internal requirements, the company is contemplating an expansion in its capacity. The plans for expansion were made possible by the readiness of the Company's associate in the UK, Imperial Chemical Industries, London, to provide sterling finance for the import of plant and machinery. These plans for expansion are under the consideration of the Government of India, and Mr J. M. Lall, the Chairman of the Company, is quite optimistic of the outcome. He also stated that the willingness of foreign private investors to help our industries is indicative of the strength and stability of the Indian economy.

The relations between labour and management were on the whole "reasonably good." The employees' loyal support and their conscientious work were chiefly responsible for the increased production. The improved amenities made available to them also require special mention. The Company's Craft Apprentice Training School is providing technical training not only to its own employees but also to those attached to Government of India undertakings. The programme of Indianisation of management has shown excellent results, so much so that, barring the post of Technical Director at Rishra, the entire management of that complex chemical manufacturing site is entrusted in the hands of Indian staff.

BRAITHWAITE

Encouraging Debut in Export

Increased profit and record tonnage output are the two notable features of the working of the Braithwaite & Company Limited that are revealed in the speech of the Chairman at the annual general meeting of the Company. The profit for the year, after providing for depreciation, taxation and transfer to Development Rebate, is shown at Rs 20.72 lakhs which is Rs 3.5 lakhs more than the corresponding figure for the previous year.

Production at the Structural Shop at Clive Works is shown to have been maintained at a satisfactory tempo throughout the year. But, in the production of pressed steel, there was a decline for the third year in succession, and this was due to the shortage of steel of weldable quality. But an offsetting feature was the production of wagons of bigger size, and this has contributed to an increase in the value of sales. It has, in this connection, been stated that the company has successfully turned over to the production of the new heavy mineral wagons popularly

known as BOX wagons each of which carries 55 tons of coal or ores.

The taking over of the Angus Works by Braithwaite on 1 February 1960 has considerably expanded the scope of the Company's future activities. The Chairman has observed that these Works would be developed as a first class engineering works. Crane manufacture figures in the list of the Company's projected activities and plans for this are reported to be in the process of finalisation. Expansion of capacity for the fabrication of heavy structurals is also reported to be under consideration.

The Chairman has assessed the prospect for 1961 as likely to be satisfactory. In respect of capacity, there is no room for worry. But insufficient orders and shortage of steel will, as the Chairman pointed out, pose problems. In exports, in which the company has made an encouraging debut in 1959, competition is foreseen from many smaller concerns. But the Chairman has forecast increased activity in the Wagon Shop, which will offset the reduced tempo in the Structural Shop. No great store is set on the Angus Workshop for any contribution to the profit.

1 April 1961

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I don't know whether it's the right note to strike with bankers worried about stagnant deposits, but I must say that I find the seven million teen-age savers of West Germany a profoundly unsympathetic (in the Gallic sense) lot. According to a recent survey, 43 per cent of all persons under 21 years of age had savings accounts and 28 per cent of all savings accounts belonged to persons of this age-group. When I mentioned my feelings on the subject to a friend, he ticked me off properly for talking of juvenile thrift as though it were juvenile delinquency. I tried to explain that I approved of thrift, on general principles. ("Yes," he interposed rudely, "In the manner of Jerome K. Jerome vis-a-vis work. It fascinates you. You like to sit and watch it in others.") And I do not hold with teddy-boys and Stilyagis. But I simply cannot warm up to a teen-ager who salts away his pocket money and tells his father that he prefers his birthday present in cheque, account-payee. He said that I was simply prejudiced, which perhaps is true up to a point. My own acquaintance with my pocket money in my youth—or with money at any time for that matter—was like the Dickensian gentleman's with the five-pound note: polite but brief. There was a famous occasion when even the postman who used to bring the customary remittance from home was moved to tears. I like to think it was more for my sake than his. The duns had taken away the crisp notes, brought in the right denominations, even before he could get his customary buksheesh. There was then a short spell when I was avoiding a favourite bookshop because of what advertising experts will call a piece of "impulse buying"—on credit. (It was a jolly good book, though.) But looking at it objectively, I am appalled that youngsters who ought to be collecting stamps and birds' eggs are collecting bank balances instead. These eager savers have certainly digested the moral of the Grasshopper and the Ant, but the point of the parable of the Prodigal Son is sure to leave them baffled.

★

There are certain psychological impediments to a developing country discussing the general principles of foreign aid. Such inhibitions are more of good form than

of logic. The logic itself, fortunately, is irresistible and has been presented persuasively by those who have no such inhibitions. It is a measure of the idealism that is still available in a world living under the shadow of threats of various sorts that this should be the case. The case for foreign aid to developing countries is not only not allowed to go by default but has been canvassed by those whom it is likely to hurt in a narrow sense. President Kennedy's message to the Congress on foreign aid is an inspiring document not only for its sense of history, but for the detailed analysis of what precisely is involved in the endeavour. Over the last two years, there have come about certain changes in emphasis for which Mr Kennedy himself was largely responsible and which his message underscores. The responsibility for aid is to be shared by a greater number of developed nations. This principle with an unexceptionable logic of its own, has received further fortuitous force because of the quantum of US spending abroad and consequent payment embarrassments. Assent to this principle is now general and the Development Assistance Group (which, interestingly, includes Portugal) about to meet in London is expected to give some concrete evidence. (It will, if it follows the brilliant lead given by the Economist in its editorial of last week.) The second principle enunciated by Mr Kennedy is that fairly long-term commitments should be made and the doling out in annual dribbles should cease. This isn't the piece of reckless improvidence it seems at first sight, for what is asked for is not appropriation but commitment—something that accountants describe as a contingent liability. The merit of the suggestion is that it makes possible long-term planning by the receiving nation, which, as Mr Kennedy himself recognises, is the key to his entire programme. Thirdly, the emphasis should be on "country plans" and not on a "series of individual unrelated projects." This means that what might be called the "World Bank Approach" is to yield place to one more suited to the needs of developing nations. The foreign exchange embarrassments of a country like India in the Third Plan are more likely to arise over maintenance imports than over imports for specific pro-

jects. At the back of the minds of people who oppose blanket appropriations and untied aid is the fear of misuse and waste of funds. But the way to set about preventing it is not to hold the purse strings and to be looking constantly over the shoulder but to ensure in advance that the beneficiary is capable of intelligent use of aid. That assured, it must be allowed to prove its mettle.

★

Cynicism about statistics comes easily to the common man and two sets of official figures of agricultural production for the same period are not helping any to remove it. On the contrary he merely finds in the circumstance further confirmation of his view that they are a specially damnable species of lies. The National Sample Survey's latest estimate of food production is 96 million tons whereas the Union Ministry of Food and Agriculture puts it at 75 million tons. The reasons for such fantastic variations were recently examined by Dr P. S. Lokanathan in an extremely interesting address he delivered at the annual meeting of the Indian Society of Agricultural Statistics. He was anxious that the impression should not get abroad that he was merely carping or that he was unmindful of much useful work that has been done by the existing agencies for collecting and collating information. But a great deal more had to be done before we can have reliable tools for projections of trends in the economy. Among the defects listed by Dr Lokanathan were: complete absence of data on some important topics, insufficient coverage, deficient data, lack of uniformity in definition and classification, lack of comparability over space and time. "The divergence in figures supplied by various agencies leads to defects in planning and co-ordination. The method of presentation of data is also sometimes defective. In addition, there are defects of tabulation and

processing. These shortcomings, together with the delay in collection and publication of the data diminish their utility to both the government and the people." Even on such things as the total area of a village or district there is no unanimity in records. Different agencies, and more curiously, same agencies in different contexts, use the same expressions for different concepts. For a nation that has put through two Plans, our statistical tools, especially in agriculture, are appallingly primitive. There is no comprehensive primary data about holdings, and yet extensive land-ceiling legislation involving assumptions about concentration of agricultural wealth has been put through. But the crucial defect has been excessive reliance on the sampling technique on the ground that the more thorough technique is time-consuming and we cannot afford to wait. The hazards of the former technique are realised and avowed in technical contexts, but reminders thereof are unconsciously suppressed when the conclusions derived through its use are used for policy inferences. There are again, whole series of essential data that are simply left alone by statisticians. For example, there has been no attempt at evaluation of input-output coefficients, and we have nothing but our vague general impression of unutilised resources to go by. The minimum programme for improving the situation suggested by Dr Lokanathan is designed "to ensure that (a) the statistics of land utilisation and area under different crops become available in respect of the entire geographical area of the country. (b) The estimates of production are made available for all important crops, including fruits and vegetables and minor commercial crops and are based on sample crop-cutting experiments for all parts of the country." No one can call this a hopelessly ambitious programme. With the strengthening of the machinery of collection at the village level, we ought to be having in five years time a more reliable guide for planning than has been the case so far.

THE INDIAN BANK LIMITED, MADRAS

(ESTD. 1907)

Registered Office: "Indian Bank Buildings" 17, North Beach Road, Madras-1
(To be placed before the Shareholders at the ensuing Fifty-Fourth Annual General Meeting to be held on 7th April 1961 at the Registered Office of the Bank, The Indian Bank Buildings, 17, North Beach Road, Madras-1).

DIRECTORS' REPORT

ONE HUNDRED AND SEVENTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December 1960. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 40,32,000-48, and together with the sum of Rs. 60,143 carried forward from the previous year's account, makes a total of Rs. 1,00,46,243-07.

3. Out of this sum, the Directors have made the following provision for taxes:

To transfer to Sinking Fund Rs. 30,988 00

To transfer to Bank's building account Rs. 1,86,238 07

To carry forward Rs. 41,12,224 07

An ad-interim dividend at the rate of 5% and a Bonus of 24% (subject to deduction of tax at the prescribed rates) was paid which absorbed Rs. 6,22,500 00

To transfer to Sinking Fund Rs. 2,00,000 00

The Directors now recommend that the following further appropriations may be made:

To pay a final dividend of 5% and a Bonus of 24% (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15% Rs. n.p.

To provision for taxes Rs. 6,22,500 00

To transfer to Sinking Fund Rs. 2,00,000 00

To transfer to Bank's building account Rs. 30,988 00

To carry forward Rs. 1,86,238 07

To transfer to Sinking Fund Rs. 41,12,224 07

4. The Bank rate remained unchanged at 4%.

5. Offices of the Bank were opened during the year at Muthialpet (Madras) Neyveli, Vishakapatnam and Willingdon Island.

6. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Sec. 256 of the Companies Act, 1956, four Directors, Messrs. R. Sundram Iyer, T. S. Kachapikessa, Mudaliyar, Kumararajah M. A. M. Muthiah Chettiar of Chettinad and R. K. Venkatchalam retire this year by rotation and they, being eligible, offer themselves for re-election.

7. Sri K. Arunachala Mudaliar resigned his seat on the Board on 2nd December 1960. In his place Sri C. Ramasubban was co-opted as a Director on 20th January, 1961.

3,82,266	23		(ix) Due from Banking Companies	1,83,371	63

I have visited twenty-five branches in the Bank and have examined the books of Account and cash and securities as at the time of my visit to the Branches so visited, twelve of which have been audited in December 1960 and the other thirteen Branches on 31st December 1960 and after. Adequate and satisfactory arrangements for scrutiny and check at regular intervals of the accounts of the Branch Offices by responsible officers of the Bank are in force and their inspection reports have been made available to me at the time of audit of the Bank.

By its order No. 1 (7) CL VI/61 dated 2-2-1961, the Government of India, vide G.O. No. 228 of 1960, has exempted all the Companies Act with in pursuance of Sub-Section (4) of Section 228 of the Companies Act with clause (d) of Sub-Rule (1) of Rule (4) of the Companies (Branch Audit Exemption) Rules 1961, has exempted the undermentioned Branches (which, however, include some of the Branches omitted by me) from the provisions of Sections (1) and (4) of Section 228 of the said Act in respect of the year ending 31st March 1961:—(1) Fort Bombay, (2) Mandvi Bombay, (3) Girgaon Bombay, (4) Dadar Bombay, (5) Bandra Bombay, (6) Dadar Bombay, (7) Sion Bombay, (8) Mazagaon Bombay, (9) Worli Bombay, (10) Matunga Bombay, (11) Chembur Bombay, (12) Byculla Bombay, (13) Kalyan, (14) A/c's Section, Bombay, (15) Bhandarkar Road, Bombay, (16) Ulhasnagar Kalyan, (17) Mohane Kalyan, (18) Shivajinagar, (19) Sholapur, (20) Bhavnagar, (21) Navari Nagpur, (22) Sitabadi Nagpur, (23) Vizimabad, (28) Warangal, (29) Vijayawada, (30) Adoni, (31) Chicla Mangalore, (32) Chickmagalur, (33) Shimoga, (34) Davangere, (35) Mandya, (36) Belgaum, (37) Dhwarwad Market, (38) Dhwarwad Malmaddi, (39) Hubli, (40) Karwar, (41) Sirsi, (42) Bantwal, (43) Coondapoor, (44) Udipi, (45) Mulki, (46) Karkala, (47) Hampanakattatta Puttur, (49) City Mangalore, (50) Bundar, Mangalore, (51) Bellary, (52) Gadag, Mangalore, (52) Mercara, (53) Gulbarga, (54) Tumkur, (55) Madras, (56) GN St. Madras, (61) Bellary, (58) Raichur, (59) Foreign Depot, (60) Edode, (64) Oppn. St. Coimbatore, (65) Avasthi Rajah, (66) Salem, (67) Tirunelveli, (68) Payyanur, (68) Cannanore, (69) Kozhikode, (70) Coshing, (71) Karaikal, (72) Tellicherry, (73) Calcutta.

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of audit. (b) Such information and explanations have been found to be satisfactory. (c) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank. (d) The Returns received from the branches have been found adequate for the purposes of my audit. (e) The Bank's Balance Sheet and Profit and Loss account dealt with by this Report are in agreement with the Books of Accounts and Returns. (f) In my opinion and to the best of my information according to the explanations given to me the said Accounts give a true and fair view of the state of the Bank's affairs as at 31-12-1960 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31-12-1960. (g) In my opinion proper Books of Account as required by law have been kept by the Bank so far as appears from my examination of these Books.

The Bank of India Limited

Sir Cowasjee on Government's Capital Expenditure

The following is an extract from the Speech of the Chairman, Sir Cowasjee Jehangir, Baronet, G. B. E., K. C. I. E., at the Fifty-fifth Annual General Meeting of the Shareholders of the Bank of India Limited, held at Bombay on Monday, 27th March, 1961.

Ladies and Gentlemen,

I have great pleasure in welcoming you to this our Fifty-fifth Annual General Meeting.

In 1960, as in other years, the Reserve Bank of India have been vigilant in their efforts towards the proper development of banking in the country. We very much appreciate the consideration which the Reserve Bank of India have extended to banks. It is no small task to endeavour to watch and guide the large number of banking units—big and small—throughout the country. I would express the gratitude of my colleagues on the Board and myself for prompt information, advice and guidance given to our Bank from time to time by the Reserve Bank of India.

TAXATION

I am personally of opinion that the recent Budget is framed on a fair basis. I am sure the Finance Minister expects to be criticised whatever he does by one school of thought or the other. A pertinent question has been asked as to how the Finance Minister was to raise funds for the Government if he did not do so by indirect taxation. My answer is that the Government should reduce their capital expenditure on rash projects which have no prospects of yielding good value for money spent. It is believed by many that this is due to the increase of corruption in the last few years and lack of efficiency and competent technical personnel in Government service. At the root of all the trouble is the policy of the Planning Commission who have allowed their imagination to run wild without calculating the disastrous financial consequences of their rash projects. Really good and efficient planning will enable the Government to spend less and to borrow less money from all parts of the world and thus reduce the demand for maintaining the high levels of taxation already imposed and for levying other taxes on all classes of the people.

The Government were spending crores of rupees and claiming that they had raised the annual income of the common man. I do not vouch for the accuracy of this claim but if this is well-founded it forms a very reasonable argument for indirect taxation. The Finance Minister must not forget that India is the heaviest taxed country in the world and that a certain class of people are made to

pay almost the whole of their hard-earned income in taxation leaving little or nothing to live upon. Most of them are at present living on their capital. Highly placed officers both in public and private enterprises are made to pay a large portion of their hard-earned salaries in taxation leaving little for the maintenance of themselves, their families and their dependents. The only class of people that appears to be comparatively well off under present conditions is factory labour.

The main necessities of life are food, housing and clothes. Food and housing are the responsibility of the Government. Clothing is supplied by the private sector and, although the textile industry supplies cloth to the public at a cheaper price than supplied by many countries of the world to their people, the Government insist upon lowering the prices because it only affects the private sector but they do very little effectively to reduce the price of food or housing.

ALL-INDIA INTER-BANK AGREEMENT

In my last two annual speeches I have mentioned the All-India Inter-bank agreement for maximum rates of interest on deposits which the larger commercial banks, about 40 in number, other than the State Bank of India, entered into from October, 1958. Changes in the maximum rates of interest were made during the year from the 22nd August, 1960, and from the 1st October, 1960. I would like to see the State Bank of India, as the largest commercial bank in the country, also joining in the agreement. I understand that the Indian Banks' Association have been making endeavours in that direction. In this connection, I have to inform you that our General Manager, Mr T. D. Kansara, has recently been elected Vice-Chairman of the Indian Banks' Association.

THE BANK IN 1960

The Bank's profit of over Rs 103 lakhs for the year 1960 is about Rs 20½ lakhs more than the 1959 profit of about Rs 82½ lakhs. These figures of profit for the two years cannot be exactly compared. Part of the difference between them is because during the bulk of 1960 tax at an appreciably lower rate than in 1959 has been deducted at source from the Bank's investment income.

Before arriving at the profit figure we have, as usual, made

appropriate prudent provisions. Sound banking calls for the setting aside of provisions relative to our commitments. Our business is appreciably growing. Our liabilities are increasing. Prudence dictates that, in such circumstances, adequate provisions should be made at all stages.

A final dividend of 12½ per cent., subject to deduction of tax at the prescribed rates, is proposed. This will absorb Rs 37½ lakhs. An interim dividend of 7½ per cent. subject to deduction of tax was paid in August last. The amount of that interim dividend was Rs 22½ lakhs. The total dividend for the year is 20 per cent. or Rs 60 lakhs, subject to deduction of tax. This compares with 16 per cent., subject to deduction of tax, for 1959 and with 16 per cent., free of incometax, for 1958. I think shareholders will be pleased at the dividend we are recommending.

The increase in the dividend proposed for 1960 goes to off-set only to some extent the reduction in the net payment caused by the changes made by the Finance Act of 1959.

AUDIT

The Companies (Amendment) Act, 1960, materially amended the Companies Act, 1956. Section 228 of the main act, as amended, makes audit of all branches of the Bank obligatory. The Central Government have power to exempt branches from being audited as required by the amended Section 228. For 1960, we applied to the Central Government for such exemption and it was granted. For 1961, we do not intend to seek any exemption. My colleagues on the Board and I are, on this point, at one with the legislature. We have a high regard for the safety provided by frequent audit.

BRANCHES

The Bank has a programme of considerable branch expansion.

STAFF RELATIONS

During 1960, staff relations in the Bank have been on a reasonably tranquil basis, but difficulties have not been absent.

GENERAL MANAGER

It is with great regret that I refer to the death during the year of Mr T. R. Lalwani, General Manager of the Bank. He served the Bank for nearly 43 years, the last three years as General Manager. He enjoyed the confidence of the Board to a marked degree.

In Mr. Lalwani's place, the Board have appointed Mr T. D. Kansara as General Manager.

LOCAL COMMITTEES AND STAFF

I would express our appreciation of the aid given to us by our Local Committees at branches.

I express our thanks to our General Manager, Mr T. D. Kansara, for his able management of our affairs and for his unremitting application to the Bank's business. Our thanks are tendered to the staff who have assisted in the Bank's working during the year.

Note:—This does not purport to be a report of the proceedings of the Annual General Meeting.

MARTIN BURN LIMITED

Notice is hereby given that the Board of Directors has declared an additional dividend on the Preference shares in the Company in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 in respect of the year ended 30th September, 1960, and also sanctioned payment of dividend on the same for the half-year ending 31st March, 1961.

The dividends will be paid on or after the 20th April, 1961 to those shareholders whose names appear on the Register of Preference Shareholders on the 18th April, 1961.

The Register of Members and Share Transfer Books for Preference Shares will be closed from the 10th April, 1961 to the 18th April, 1961, both days inclusive.

By Order of the Board,
A. G. GIDLEY
Secretary.

12, Mission Row,
Calcutta-1,
1st April, 1961.

The Proprietors of Indian Patent No. 56558 "Process for the Pre-treatment of oxidic iron catalysts" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered patent. Anyone interested should apply Box No. 1/61 Care Indian Finance, Calcutta-14.

This is only an announcement and not a Prospectus.

The Government of India have granted a Licence, for the establishment of this New Industrial Undertaking, of which a copy is available for inspection at the Registered Office of the Company. It must be distinctly understood that in granting the Licence the Government do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to Public Inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of this scheme or for the correctness of any of the statements made or opinions expressed with regard to them. A copy of the Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956, specified herein, has been delivered for Registration to the Registrar of Companies, Kerala, Ernakulam.

An application shall be made to the Calcutta Stock Exchange Association for the listing of the shares of this company for Official Quotation.

The subscription list will open at the commencement of the Banking hours on the 5th April, 1961, and will close at the close of the Banking hours on the 12th April, 1961, or later as the Directors may decide.

MALABAR IRON & STEEL WORKS LIMITED

AUTHORISED CAPITAL Rs. 1,00,00,000
Divided into - 10,00,000 shares of Rs. 10/- each.
ISSUED CAPITAL - Rs. 40,00,000
Divided into - 4,00,000 shares of Rs. 10/- each.

This Company has been formed for starting a series of industrial units in the State of Kerala in pursuance of the Government's declared policy of industrialisation and in the first instance, the Company is putting up a combined unit (group of Industries) comprising of the most essential industrial units which cater to the needs and form the basis, fundamental nuclei of many industrial undertakings particularly Small Scale Industries that are or may come into existence in Kerala sooner or later. The first group of Industries when commissioned will manufacture:—

- Industrial Basic Raw Materials (Steel Section & Castings).
- Industrial Machinery/Machine Tools (Specialised).
- Industrial Components, Gears and Drives.
- Industrial auxiliaries including hardware and implements.

Necessary consent has been obtained from the Controller of Capital Issues for the issue.

Of the shares now offered for subscription the Directors and their friends have agreed to take 2,04,000 shares amounting to Rs. 20,40,000/-.

The balance of 1,96,000 Equity shares of Rs. 10/- each are now offered for Public subscription in terms of the Prospectus payable.

On application Rs. 5/- per share.

On allotment Rs. 5/- per share.

Failure to pay the allotment money will render the share liable to forfeiture.

Application for shares should be made on the printed form accompanying Prospectus; further copies may be obtained from the Registered Office of the Company and from the Bankers and the Brokers. Applications must be completed in accordance with the direction contained therein and delivered before the closing of the subscription list to the Registered Office of the Company. The application money must be paid in cash or Bank Draft. Money Orders will not be accepted. Outstanding Cheques must include Bank charges at 0.25 nP. per % (minimum 0.62 nP). Where no allotment is made, deposit amount will be returned by cheque on the Company's Bankers at Palghat and where a partial allotment is made the unutilised balance after adjusting the allotment money will be returned by cheque on the Company's Bankers at Palghat within 2 months. Bank commission, if any, will be payable by the applicant. No interest whatsoever will accrue or be paid by the Company on application money or other sums. The shares when issued will be governed by the Regulation viz: Memorandum & Articles of Association of the Company.

The instruction contained in the application form should be followed carefully.

The Directors do not bind themselves to allot the full number of shares applied for and reserve the right to reject any application wholly or in part without assigning any reasons therefor. Applications which are not complete or which are not accompanied by proper payment including bank charges may not be considered.

The Shares Certificates will be issued within four months from the date of allotment.

The Company has no debentures or debenture stock outstanding.

CONSENT:

The consent of Auditor, Bankers, Legal Adviser and Brokers to act in their respective capacities have been filed with the Registrar of Companies, Kerala, along with Prospectus required under Section 60 of the Companies Act, 1956.

The Company was incorporated on 28-11-60 with the objects mentioned in the Memorandum of Association.

OBJECTS:

Inter alia the main objects are:

- To undertake and to manufacture, roll and re-roll steel-sections, cast iron steel and non-ferrous castings, machine tools, machine parts, instruments, jigs, attachments, industrial fasteners, house building accessories, industrial and agricultural implements, wire products, domestic and industrial chains, wire nails, pins, malleable iron castings, and parts, conveyors, material handling equipments, instruments tools textile accessories, industrial components, engineering requisites, fabricated parts, vessels, railway requisites, cylinders, structural work and coaches.

- To undertake and execute contracts, orders and sub-contracts for any or all of these from any person, body or associations and to erect these or any of these.

- To carry on the business of Mechanical Engineers, Electrical Engineers, Aeronautical Engineers, Automation Engineers, Civil Engineers, Navigation Engineers, Automobile Engineers, Machinists, Fitters, Founders, Smiths, Wire

Drawers, Tube Makers, Metallurgists, Galvanizers, Annealers, Enamellers, Painters, Electro-platers, Packers, Makers, Ship-builders, and manufacture, Export and Import and deal in all kinds of plants, Conveyors Plants. Mechanical Handling Equipments, Machinery, Appliances, Machine Tools, Apparatus, Accessories, Machine Parts, Electroplated goods and things necessary or convenient for carrying on any of the above business or usually dealt in by persons in the like business.

The Company will in due course apply for a Certificate to commence business as required by Companies Act.

DEVELOPMENT LICENCES:

The Government of India have granted a development licence No. L/IA/3/82/MEI/60, dated 30-12-60, licence for setting up a Rolling Mill is under consideration.

BUSINESS PROSPECTS MARKET:

There is no organised Factory in Palghat, Kerala to make the machine tools, as visualised in these schemes and appliances to meet local needs. Most of the items envisaged to be manufactured will be consumed within the State though it is reasonably hoped that 5% to 10% of the production will be sold outside Kerala (In the adjoining districts of Madras and Mysore).

The Scheme will only meet a fractional % of the States' consumption in the beginning and the demand for the products is not seasonal but is perpetual.

MATERIALS:

Steel, Pig Iron and Coke are available in plenty as a result of the new projects. Import of raw material will amount approximately to Rs. 2.5 lakhs a year.

SERVICE:

Water is available from our own wells while power will be generated by the Company's own Generators in adequate quantity.

MAN-POWER:

Kerala labour force is quite intelligent and is easily adaptable. Men and women being hard workers, given fair training. Palghat workers can take up any type of intelligent work and exert maximum efforts. No trouble is apprehended in recruitment, training, placement or collective bargaining.

METHOD:

The Promoter possesses a veritable acumen and the 'know how' besides facilities and influence in the market. The Promoter and his associates are quite capable of assuring technical perfection of all machine tools and parts.

Iron and Steel Sections	Rs. 45 lakhs a year	
Machinery and fabricated items	Rs. 35 -do-	Rs. 92 lakhs a year
Other items including Agency Sale	Rs. 12 -do-	

PROFIT AND DIVIDEND:

Indication as the market being lucrative the Directors are of the opinion that in the absence of any unforeseen circumstances the Company should be in a position of paying fairly dividends on the issued equity shares right from the first year itself.

PRELIMINARY EXPENSES:

The preliminary expenses which are payable by the Company are estimated to be Rs. 70,000/- including Broker's commission and the other expenses of the issue.

MINIMUM SUBSCRIPTION:

The minimum amount which in the opinion of the Directors must be raised by the issue of share in order to provide the sum required to be provided as per paragraph 5 of Schedule to allot shares offered by the prospectus is the subscription of the nominal value of Rs 25,00,000/- payable in cash. The total amount of Issue will be utilised as follows:—

	(Rs. lakhs)
Land & Building	15.00
Plant & Machinery	15.50
Preliminary expenses	0.70
Working capital	8.80
Total	40.00

QUALIFICATION OF DIRECTORS:

Under the Articles of the Company the qualification of the Director is the holding of 500 Equity shares solely or jointly with another or others of the nominal value of Rs. 5,000/- (Rupees five thousand only).

MEETING FEES:

Article of the Company provides that the remuneration of every

COLLABORATION:

Polytechna, the Czechoslovakian State Agency for Technical collaboration has given its consent to collaborate with this company in the manufacture of many of the machine tools. The details of this agreement when reached will be announced in the press.

MACHINERY:

Many of the machinery required for the project can be purchased in India. Some of the machines can be designed by the Promoter to save valuable foreign exchange. Some machines can be had against non-transferable rupee payment as well.

The foundation stone of the project was laid by His Excellency Shri V. V. Giri, Governor of Kerala on 3rd December, 1960 and the function was presided over by the Hon. Industries Minister of Kerala.

TURNOVER:

The conservative estimate of the anticipated annual sale when fully commissioned is as follows:—

Rs. 45 lakhs a year	
Rs. 35 -do-	Rs. 92 lakhs a year
Rs. 12 -do-	

Director of the Company shall be Rs. 100/- for every meeting of the Board which he attends in addition to the actual travelling expenses, if any, if he is not a resident of the place where the meeting is held.

BROKERAGE:

In respect of the shares now offered to the public, the company will pay brokerage at the rate of 20 p to Banks, recognised Brokers and Agents on an allotment made in respect of applications bearing the stamps of such Banks, Brokers, etc.

The Directors have appointed Shri Nurani Sessa Parameswaran Iyer, as Managing Director for a period of 5 years and fixed his remuneration by way of salary and allowances Rs. 2,000/- (Rupees two thousand only) per month plus all out of pocket expenses under the draft agreement and as provided in the Articles of Association.

DIRECTORS INTEREST:

Shri Nurani Sessa Parameswaran Iyer is interested as Director and shareholder of the company and Shri Iyer is the Promoter. Shri Iyer is further interested as Managing Director of the company a place of profit as per agreement between himself and the Company a copy of which is available for inspection at the Registered Office of the Company.

All Directors are interested in the usual remuneration to be paid by way of fees for meetings attended and will be paid their travelling expenses etc., if any.

CONTRACTS:

The following contracts, not being contracts in the ordinary course of the business will be entered into by the Company with the parties mentioned.

The draft agreement between Shri Nurani Sessa Parameswaran Iyer, Promoter of the Company and the Company.

AUDITORS REPORT:

The auditors have given and not withdrawn the consent for inclusion of reports under item 24 of Part II of the Schedule-II of the Act.

The Original Report is open for inspection at the Registered Office of the Company.

Inspection of Contracts and Other Documents:—

- A print of the Memorandum and Articles of Association of the Company.
- A letter from the Controller of the Capital Issues, Government of India in connection with the present issues.
- The Draft Agreements between Shri N. S. P. Iyer and the Co.
- A Licence granted to the Company under the Industries Development and Regulation Act, 1952 and Rules made thereunder.
- Report of the Auditors.

FICCI

Accord on Basic Objective

IN asking for broad agreement on the basic aim of planning, at the annual session of the Federation of Indian Chambers of Commerce and Industry, the Prime Minister was apparently preaching to the converted. The basic aim, he defined as the establishment of a technologically mature society which results in far greater production and equitable distribution to even out the great difference in the social set-up. The Presidential address of Mr A.M.M. Murugappa Chettiar, like those of his predecessors in recent years, leaves hardly any room for misconceptions over this crucial issue. At the very outset of his address, Mr Murugappa Chettiar affirmed that their views on many general issues, particularly those pertaining to planning, reflected similar thinking. And, in conclusion, he exhorted businessmen to recognise the full significance of the movement which, having at length completed the political emancipation of the nation, has in our own day already begun unprecedented social emancipation. "Our duty," he said, "is clear. It is to help that organic process of development which will make possible and real the sanguine expectations of the masses."

This affirmation of shared objectives provides the basis for the reconciliation of divergent approaches to particular aspects of planning or economic policies of Government. Though Mr Nehru did not deal with any of the specific points raised in the President's address, he clearly indicated that, if there was agreement on basic objectives of planning, differences over details could be ironed out.

The significance of this statement, as a pointer to the Government's approach to detailed programmes, could not have been lost on his audience of seasoned business leaders. In placing the Federation's views on specific issues before the public and more particularly of the Government, the President's address departed from the familiar pattern of critical review of Government policies couched in very general terms that is usually followed by spokesmen of trade and industry in their formal utterances. The address, on the other hand, has spotlighted the specific obstacles that hinder the attainment of the common objective. The points touched upon in the President's address have been defined and elaborated in the resolutions for the open session. These add up to a forceful plea for a pragmatic approach to the tasks of planning and more particularly for a reconsideration of the pattern of investment envisaged in the Third Plan—in the fields of industry, power and transport—so as to ensure a matching of the flows of commodities with the pattern of demand emerging as a direct consequence of the developmental effort. While acknowledging with satisfaction the increased availability of steel, Mr Chettiar has also underlined the defects of the system of distribution which was evolved twenty years ago and is now overdue for revision.

The substantial shortfall in the utilisation of foreign exchange during the Second Plan is another important point to which Mr Chettiar has drawn timely attention in his presidential address. Against a total of Rs 1,264 crores, exclusive of PL 480 assistance, which was available for the Second Plan, the amount actually utilised was under Rs 800 crores up to the end of last year and the major part of the balance is likely to be

carried over to the Third Plan. That part of the aid is tied to specific projects is well understood; but this does not provide a complete explanation of the shortfall. Delay in utilisation of foreign assistance leads to delays in development all along the line. To the extent that the Public Sector is not in a position to programme for full utilisation of foreign assistance within a specific period, it is desirable that the Private Sector should be enabled to fill the breach. As the Prime Minister has himself indicated, rigid demarcation of Private Sector and Public Sector betrays an intellectually limited approach to a dynamic problem.

If it is agreed that the full potential of the Private Sector should be harnessed to the tasks of economic development, the arbitrary restrictions that have been imposed by the recent amendment of the Company Law have no place in a rational scheme for control of investment. The economic development of the country is handicapped not only by shortage of capital, but to an even greater extent by shortage of managerial ability and entrepreneurial talent. In the context of the basic objectives of planning, the policy regarding Capital Issues, which prevents an existing company from branching out into a different line of production, imposes a totally misconceived embargo on entrepreneurial ability. Broadening of the basis of investment in joint-stock companies was advanced as the main consideration justifying the restriction, when the question was raised in the Consultative Committee of Parliament for the Finance Ministry early last month. A society wedded to Free Enterprise of the sort advocated by the Swatantra Party may have reason and justification for adopting such a restriction, but it is difficult to see its relevance in the context of planning for a socialistic pattern of society in this country. The question boils down to this: Do we want a larger number of shareholders, or do we want more industries, employment and incomes. Shareholders form only a microscopic minority of the population of 436 million, whose interest, as the Prime Minister repeatedly emphasised, should be the paramount consideration determining Government's economic policies. The restriction can effectively prevent an existing company from starting a new line of production which will add to the volume of employment and the national product. But is there any guarantee that it will encourage the formation of new companies with extensive public participation? Even from the tax angle, there is little to be said for discouraging a variegated pattern of corporate enterprise. Taxes can be gathered only after new companies are formed and begin to earn profits. But can restrictions be relied upon to release

enterprise?

In urging a revision of the investment pattern, the President's address as well as the resolution on the subject adopted by the Federation last Sunday and the speeches thereon, have urged larger allocations for consumer goods industries. The former has argued that, where there is surplus labour available for employment, a higher output of consumer goods is not only compatible with higher investment but is also necessary to preserve the stability of the economy and ensure the necessary investible funds. The validity of this line of reasoning depends on what particular categories of goods are meant by the term consumer goods which includes a multitude of commodities. The desirability of increased allocations can be usefully considered only in terms of particular goods and not of "consumer goods" as a class. There may be a good case for increasing the targets for individual items of mass consumption. But these will have to be identified as such and the cost involved

in stepping up their output included in the reckoning. Another very relevant consideration is the extent of the demand that the establishment or expansion of particular lines of consumer goods will make on limited foreign exchange resources, both for capital equipment as well as for maintenance imports in the future. The Planning Commission and the Federation may be able to agree on an order of priorities if all the members of the latter are able to agree with Mr M. P. Birla on the urgent necessity of placing a curb on import of industrial raw materials and draw up their plans for manufacture on the basis of his sensible suggestion that a time limit should be set for most of these raw materials to be produced in the country. What he has said about raw materials also applies equally to imports of components and half processed materials. But the murmurs of dissent which greeted his suggestion make it clear that Mr Birla was thinking far ahead of his colleagues.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE is hereby given that the 35th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57-B, Free School Street, Calcutta, on Thursday the 27th day of April 1961, at 10.30 a.m. for the following purposes:

- To consider the Profit and Loss Account for the year ended 31st December, 1960, the Balance Sheet as at that date the Reports of the Directors and Auditors of the Company.
- To declare dividends.
- To appoint Directors in the place of those who retire by rotation.
- To appoint auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as an ordinary resolution and the remainder as special resolutions:

- (As an ordinary resolution): "That Mr. Sachindra Chaudhuri be and is hereby appointed a Director of the Company."
- (As a special resolution): "That subject to the approval of the Central Government under Section 269 of the Companies Act, 1956, Mr. Michael Laurence Bexon, an executive officer in the whole-time employment of the Company, be and is hereby appointed a Director and Deputy Managing Director (Sales) of the Company upon the terms and conditions presently governing his employment, as evidenced in a letter dated 1st March, 1961 issued by the Company and addressed to him, and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him".
- (As a special resolution): "That consent be and is hereby accorded to Mr. Prakash Narain Haksar, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Purchasing) with remuneration in that capacity as approved by the Company in General Meeting on 29th April, 1957".
- (As a special resolution): "That consent be and is hereby accorded to Mr. James Alexander Moore, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Finance) with remuneration in that capacity as approved by the Company in General Meeting on 23rd April, 1959".
- (As a special resolution): "That consent be and is hereby accorded to Mr. Kenneth Claud Ferguson, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit

tions presently governing his employment, as evidenced in a letter dated 1st March, 1961 issued by the Company and addressed to him, and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him".

(As a special resolution): "That consent be and is hereby accorded to Mr. Prakash Narain Haksar, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Purchasing) with remuneration in that capacity as approved by the Company in General Meeting on 29th April, 1957".

(As a special resolution): "That consent be and is hereby accorded to Mr. James Alexander Moore, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit under the Company as a Deputy Managing Director (Finance) with remuneration in that capacity as approved by the Company in General Meeting on 23rd April, 1959".

(As a special resolution): "That consent be and is hereby accorded to Mr. Kenneth Claud Ferguson, a Director of the Company, holding and continuing to hold, with effect from the 28th December, 1960 an office or place of profit

30th March, 1961.

NOTE:

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference shares of the Company will be closed from 17th April, 1961 to 8th May, 1961, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 17th April, 1961.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is annexed to the Notice issued to the members of the Company.

Markets

JUTE Steep Fall in Prices

THERE has been a steep fall in the jute and gunny markets during the past few days and indications are that the lowest levels in the present bout of recession are yet to be reached. It is evident that the reactionary trend has been touched off by the uniformly good reports from the jute growing areas. Thanks to the showers last month and further rainfall since then, sowings already have made good progress. The indications about Pakistan's new crop prospects, too, are very encouraging. That country, which has planned for a crop of 7.4 million bales, seems to be sparing no effort to attain the targeted production. These developments have not been missed by foreign consumers of jute goods. Presumably, they argue that, with a bumper crop in the offing, even though that is still some five or six months away, it will be in order if they keep their buying to the minimum. And in this view they will not be losers if they draw heavily from their stocks to meet their needs in the next few months. This explains the almost complete lack of overseas interest in the Calcutta market even after prices have dropped substantially in the course of the past few days.

It is true that raw jute, basis Assam Bottoms, is now quoting some 5 points below the maximum price fixed by the IJMA; but the fall does not seem to be due to heavy arrivals. As a matter of fact, arrivals in the upcountry market continue to be of meagre proportions. It would therefore seem that holders are the people who are anxious to get rid of their stock when the going is still good. It is to be inferred that they are now convinced that, what with mills' reluctance to pay the maximum prices on the one hand and the consumers' disinclination to buy even at the substantially reduced levels obtained at present on the other, the boom period for raw jute has at long last come to an end.

Raw jute sellers' ideas also seem to be influenced to a considerable extent by what looks like an all-out effort to harvest a bumper jute crop next season. Effort appears to be particularly directed toward increasing the yield per acre and in this programme it is essential to ensure that cultivators get fertilizers in adequate quantities. According to the Indian Central Jute Committee, "there is plenty of fertilizer going round this year." It may be recalled that the ICJC has pointed out in one of its recent Press releases that cultivators will be able to raise a jute crop in their fields before taking

up the aman crop. In a Press release early this week, it has indicated that mesta can be grown in sugarcane fields. It is pointed out that this has been established after years of intensive field work by an agriculturist scientist in Madhya Pradesh. Mesta can be grown on the periphery and along the water channels of a sugarcane field. The cost of mesta production is generally low because it is a hardy crop and its cost of production as a border crop on a sugarcane plantation will be lower still as no separate land preparation will be necessary. All this goes to show that unless something extraordinary happens to upset the programme of jute development, the 1961-62 jute season will witness jute production reaching a very high level.

Although there has been a substantial fall and, as pointed out earlier, further recession in prices looks possible, it is idle to expect the present reactionary trend to continue

PRICE TRENDS.

	As on 23 Mar.	Low- est	As on 28 Mar.
	Rs.	Rs.	Rs.
Hessian:			
45" x 11 ozs.	70.00	67.00	67.00

Northern	61.00	55.00	57.00
Daisee	63.00	59.50	59.50

for any length of time. Perhaps it may be correct to say that high prices, even the maximum prices stipulated by the IJMA, will not again be reached. But prices may stabilise at around current levels or may regain part of their lost ground for the simple reason supplies are and will continue to be meagre, for the next five or six months, that is, till the new jute crop begins to move into the markets in their bulk.

★

The jute goods market ruled easier during the past week and prices steadily declined under selling pressure. Mills were sellers but buyers continued to keep to the sidelines presumably on the expectation that further decline in levels was in the offing. The weakness of the goods

section stemmed primarily from a weak raw jute section but the easier trend was further accelerated in the absence of buying interest and selling pressure from mills. Hessian 40" x 10 ozs. Ready reacted to close on Tuesday at Rs. 67. B Twills was at one time down to Rs 172 but closed better at Rs 176.50 on Tuesday. Raw Jute prices were easier and Assam Bottoms was sold down to Rs 55 from Rs 62 but closed better at Rs 58.

★

TEA Clearing-up Sale for 1960-61

IN the final clearing-up Export Sale, held this week in Calcutta, offerings were 14,331 packages. There was a strong and general demand, all descriptions selling at generally dearer rates. No rates were given as there were insufficient quotable teas on offer.

Meanwhile, tea exports from North-East India have shown a decline to 23.2 million pounds in the corresponding month of last year. Total exports in the first two months of the current year are, however, higher at 59.7 million pounds as compared to 54.9 million pounds in the corresponding period of last year.

The improvement in exports is largely due to increased off-take by the UK from 29.21 million pounds in January-February 1960 to 36.73 million pounds in the first two months of the current year. The Irish Republic has also increased its off-take to 2.07 million from 1.31 million pounds. Shipments to Sudan have risen from 378,520 pounds to 1.55 million pounds. Exports to other countries have shown a decline.

Exports from Ceylon showed a marked increase to 409.78 million pounds in 1960 from 383.49 million pounds in the previous year. This improvement was considered significant in view of the fact that Egypt reduced its off-take of Ceylonese teas to 800,200 pounds last year from 10.49 million pounds in 1959. The UK, the largest buyer of teas from Ceylon, increased its off-take from 138.7 million to 152.37 million pounds. Off-take by the Continental countries also improved.

The marked rise in the export of teas from Ceylon was attributed to the increased world demand created by the shortfall in supplies from Northern India. The increase in out-turn of Ceylonese tea from 413.1 million pounds in 1959 to 434.7 million pounds last year also contributed to the increase in shipments.

In the Mincing Lane, prices, after ruling initially firm, developed an easier tendency towards the close of the sale. The weakness was attributed to the increased availability of African teas, which provided competition for Plain teas from North India and Ceylon.

Tea stocks in London, as on 17 March, were 152.36 million pounds as against 151.03 million pounds in the previous week. Total float was 21.83 million pounds including from Calcutta 10.10 million pounds; from

Chittagong nil; from Cochin 2.62 million pounds; from Ceylon 6.24 million pounds and from other Ports 2.05 million pounds.

According to the figures released this week, production of tea in Indonesia was lower at 9.0 million pounds in November 1960 as against 9.8 million pounds in the corresponding month of the previous year. Production in Portuguese East Africa was higher at 3.4 million pounds during the last quarter of 1960 as against 2.5 million pounds in the corresponding period of 1959. Total output for the whole of 1960 was also higher at 19.9 million pounds as against 18.0 million pounds in 1959.

★

COTTON Switch to Distant Contract

Lively and active conditions characterised the Bombay cotton market during the past week with both ready and forward sections moving up on fresh investment enquiries. The Jarilla April contract touched a new peak of Rs 599.25 but later reacted to Rs 587 and the August contract was quoted at a premium of Rs 8 over the April contract. The anxiety of many of the operators in switching over from the maturing contract to the distant contract was clearly noticeable.

The spot market at Sewri also exhibited better conditions. Mills' interest hovered around Laxmi, CO 2, Vijay, Burti, Kandesh and Kalyan. The possibility of issuing the balance of export quota for Bengal Deshi having been ruled out, the demand for that growth subsided, but the prices were left unaltered.

The tendering differences fixed in respect of the Jarilla April contract were gratefully greeted by both the trade and industry. Tenders against the maturing contract are expected to be heavy. The only difficulty that will crop up due to the present arrangement is the high ready rates which will be about Rs 75 per candy higher than the forward quotations.

The consumption of indigenous cotton in January showed an increase by 12,000 bales from the previous month to 0.36 million bales. The Indian spinners' preference for indigenous cotton was undoubtedly responsible for this trend. This has been made possible by the fairly comfortable supplies of domestic cotton during the current season consequent on the rise of nearly 1.5 million bales in this season's crop over the previous season's output. As against the enhanced consumption of Indian cotton, foreign cotton consumption by the spinners is declining. Consumption of imported growths in January fell to 88,000 bales from 107,000 bales in the preceding month.

Cloth stocks, both unsold and sold, with mills slipped down by 65,000 bales at the end of February. This was attributable to the comparatively small production of cloth in January.

Import of foreign cotton into India from 1 September to 11 March aggregated 611,818 bales as against

1 April 1961

278,419 bales in the corresponding period in 1959-60.

Description	1959-60	1960-61
American	39,648	427,631
Sudan	54,657	37,592
Egyptian	126,877	39,062
East African	47,114	80,754
Pakistan	6,245	2,624
Other Sorts	24,155	3,878

Total 278,419 611,818

Exports of Indian cotton to foreign countries during the same period amounted only to 101,549 bales as against 122,202 bales in 1959-60.

Countries	1959-60	1960-61
UK	1,706	773
Continent	8,153	5,446
Hongkong	4,022	8,239
Japan	99,907	85,845
USA	7,156	1,073
Other countries	1,258	168

Total 122,202 101,549

PIECEGOODS

The Bombay piecegoods market displayed divergent conditions. The domestic sector exhibited moderate activity while the export front remained inactive.

The turnover in the home market was far below expectations. Up-country centres remained dormant. The shortage of funds created a delay in payments. The demand was generally confined to seasonal goods like dorias, mulmul and voiles. Quality goods, however, slipped down to some extent. Dhories, sarees and shirtings also met with good enquiries. UP, Delhi, Kanpur and the Punjab turned out to be the chief consuming centres.

The cloth stock at the end of February with the composite mills imparted strength to the market. Another redeeming feature of the period under review was the change in cloth duties. The Government of India's decision to compound the duty on cotton yarn produced and consumed by mills into a levy on cloth and exempt the first seventy per cent of production of cloth on automatic looms from the extra charge of 25 per cent was widely welcomed by the industry.

The export front failed to pick up during the week under review. The widening disparity in prices and the increasing consumer preference for processed goods were responsible for the listless conditions in the export section. Fresh enquiries were few and far between.

★

According to the February review of the Secretariat of the International Cotton Advisory Committee, "the overall cotton situation continues to be encouraging." Total production is estimated at 32.5 million bales. With the exception of the US, crop production in all the other countries increased. With the record crop and increased carryover, supply outside the United States is estimated to go up by 2 million bales. Consumption during the opening months of the season was higher than in the previous year, and it is expected that consumption outside the United States will exceed last year's total.

For the Investor

INVESTMENT GOSSIP Cooling of Post-Budget Ardour

The stock market may now be said to have reached a very interesting stage. The month-long bullish ardour since the Budget, seems to have considerably cooled off yielding place to a more sober assessment of prospects. Even so, the undertone continues to be steady although lately an irregular pattern has come to characterise trading. The ready support at the lower levels and the profit-taking at the bulges would appear to indicate that the generality of operators is inclined to pause at the present juncture.

The uniformly encouraging spate of corporate news has played an important part in keeping up the bullish enthusiasm at a high level; and this is exactly the factor that continues to exert a powerful influence in moulding the present trend in the stock market. With most established companies on the threshold of completing their expansion programme and consequently of recording a notable increase in their profits, investors are reluctant to part with their holdings in a hurry. Bonus issue prospects are responsible for the continued interest in certain shares which have been in the forefront since Budget Day. The mere news that a particular company listed in a certain stock exchange has decided to apply for permission to issue bonus shares is found to be enough to enliven drooping spirits in other stock exchange in the country.

The present tendency to consolidate the gains rather than continue the uptrend may have stemmed from a number of factors. The first of these is perhaps the lurking fear that Government may not long countenance a continuous rise in share prices. It is also possible that the Laos situation is engendering some anxiety. A third deterrent is the acute stringency in the money market. It is quite likely that investors' attention is once again turning to new issues which have been placed on the market during the past week or so. Indications are that the coming weeks will witness more new issues being placed on the market as reports go to show that Government is keen on cutting down administrative delays in sanctioning new issues.

★

INVESTMENT SPECIAL Malabar Iron and Steel

The Malabar Iron & Steel Works Limited has received sanction from the Controller of Capital Issues for

an issue of Rs 40 lakhs in equity shares of Rs 10 each. Of this, the directors and their friends have agreed to take 204,000 shares and the balance of 196,000 shares are now offered for public subscription. A sum of Rs 5 per share is payable on application and the balance on allotment.

This company has been formed for starting a series of industrial units in the State of Kerala in pursuance of the Government's declared policy of industrialisation. The company is putting up a combined unit, comprising the most essential industrial units which cater to the needs especially of small-scale industries that are or may come into existence in Kerala sooner or later. Most of the items, envisaged to be manufactured, will be consumed within the State though it is reasonably hoped that 5 to 10 per cent of the production will be sold outside Kerala.

Polytechna, the Czechoslovakian State Agency for Technical Collaboration, has given its consent to collaborate with this company in the manufacture of many of the machine tools. Again, most of the machinery required for the project can be purchased in India.

The subscription list will open on 5 April and close on 12 April or later at the discretion of the directors.

NEW ISSUE NOTES

Jaipur Udyog

The Jaipur Udyog Limited has decided to issue 500,000 Ordinary shares of Rs 10 each, at par, in the ratio of one for every four existing shares to those shareholders registered as on 13 April 1961. Transfer Books will be closed from 11 to 13 April 1961.

Joonktole Tea

The Joonktole Tea Company Limited of Kettlewell Bullen group has made an application to the Controller of Capital Issues for permission to issue 60,000 bonus shares of Rs 10 each to the ordinary shareholders in the proportion of one for one.

Sahayak Finance

The Sahayak Finance & Investment Corporation Limited, Hyderabad, will shortly be in the market with a public issue of Rs 10,00,000 in equity shares of Rs 10 each. The signatories to the memorandum have taken 2,300 equity shares, while the promoters and their friends have taken up 20,000 equity shares. The balance of 77,700 equity shares will be offered for public subscription. A sum of Rs 5 per share is payable on application and the balance on allotment.

Enfield India

Enfield India Limited has proposed to issue 233,300 equity shares of Rs 10 each. Of this, 33,300 shares are reserved for allotment to foreign collaborators. The balance of 200,000 equity shares will be issued to holders as on 12 April at four shares for

every five shares held. The last date for the receipt of applications and letters of renunciation is fixed at 2 a.m. 1961.

Emerald Valley

The Emerald Valley Estates Limited has decided to issue 50,000 equity shares of Rs 5 each at par in the ratio of one for to shares held. The last date for the receipt of applications and renunciation letters is fixed at 31 May 1961.

INVESTMENT NOTES

B. B. Petrol

Following the reduction of capital of the company, and passed by a special resolution on 6 January, the repayment of 1sh 6d (Rs 1) per Ordinary share of 3sh will be made to the members registered as on 31 March. Warrants will be issued on or after 15 April 1961.

BIC

After a lapse of three years, the return of British India Corporation to the dividend list is a significant event. The company has now proposed to pay a taxable dividend of 4 per cent for 1960, the last dividend being 2 per cent paid for 1956.

Chase Bright Steel

In the first report released by Chase Bright Steel Limited, the directors have stated that the construction of the main factory building has almost been completed. The entire installation is expected to be completed, soon.

Seshasayee Paper

It is learnt that Seshasayee Paper & Boards Limited has been successful in securing deliveries of plant and machinery eight months earlier than the original schedule. It is now expected that the machinery will start arriving from July next and shipments will be completed by the end of the year. The first call of Rs 2.50 per share is payable on or before 25 April 1961. Meanwhile, dealings in the scrip have started on the Calcutta Stock Exchange and the rate is quoted at Rs 4.87 to Rs 5.00.

INVESTMENT BRIEFS

Kohinoor Mills Company Limited has recommended a final dividend of Rs 10, making a total of Rs 15 per share, taxable, for 1960. This gives a net dividend of Rs 10.50 against Rs 6.65 per share previously.

Buckingham & Carnatic Company Limited has proposed a final dividend of 6 per cent, making a total of 10 per cent for 1960, taxable, the same as in the previous year.

Bangalore Woollen & Silk Mills Company Limited has recommended a final dividend of 6 per cent, making a total of 10 per cent, taxable, for 1960, the same as in the previous year.

Lucky Valley Estates Limited has maintained the dividend at 10 per cent, taxable, for 1960.

BALANCE-SHEET BRIEFS

The Calcutta Chemical Company Limited has reported a net profit of Rs 13.08 lakhs for the year ended 30 June 1960 as against Rs 12.61 lakhs for the previous year. The Ordinary dividend is maintained at 18 per cent, taxable.

The Budge-Budge Jute Mills Company Limited has shown a slightly lower net profit of Rs 8.68 lakhs for the year ended 31 October 1960, as against Rs 10.33 lakhs. The dividend is reduced from Rs 15 to Rs 10 per share, subject to deduction of tax.

Burma Mines Limited has reported a drop in the profit, before providing for taxation, to £79,256 from £88,461 for 1960. The dividend is reduced from 1½d to 1-1/8d per share, free of income-tax.

The working of Sen-Raleigh Industries of India Limited has resulted in a net profit of Rs 24.49 lakhs for the year ended 30 September 1960 as against Rs 23.90 lakhs. The dividend is maintained at 8 per cent, subject to deduction of tax.

Braithwaite & Company (India), Limited has raised the dividend from Rs 2.25 to Rs 2.50 per share for 1960, thanks to the rise in the net profit Rs 17.15 lakhs to Rs 20.72 lakhs.

Jessop & Company Limited has maintained the ordinary dividend at 8.58 per cent on the increased capital, thanks to a substantial rise in the net profit from Rs 29.5 lakhs to Rs 37.30 lakhs for the year ended 31 October 1960.

STOCK EXCHANGES

Technical Correction: Partial Recovery

Watch-Dog Writes:

ALTHOUGH stock markets showed signs of looking back, most market observers were inclined to interpret this development purely as a technical correction. A further setback in equity prices had no damaging effect on the technical position of the market. In fact, it looked as if the market was preparing for taking a further leap forward. This was evident when prices displayed a smart recovery from the low levels touched early in the week.

Equities on the Calcutta Stock Exchange, after suffering a further setback from last levels, staged a mild recovery towards the close.

Thanks to appreciable bear-covering and support at lower levels, prices on the Bombay Stock Exchange showed a smart rally at the close.

On the Madras Stock Exchange, activity was mostly confined to the Planting and Miscellaneous sections.

CALCUTTA

Calcutta, Friday. This week's trading on the local stock exchange was curtailed by interrupt-

ing holidays. During the period the market remained open, losses were extended further due to renewed profit-taking in most share groups. The over-bought position was mainly responsible for a further setback in prices, which was considered to be technical in nature. If there was any other factor that could be interpreted to have any effect on sentiment, it was the continued tightness in the money market.

Giltedged securities ruled very steady, particularly the short-dated issues, as there was some shortage of scrip in respect of the loans repayable in the coming few years. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 73.95.

A broadening of enquiry for Tea shares at enhanced levels was the main feature of the week's trading. The news of the Jay Shree Tea having applied to the Controller of Capital Issues for permission to issue bonus shares in the proportion of one for four and of Joonktolle Tea for bonus in the ratio of one for one set the ball rolling in the direction of buying of shares of other companies holding bonus possibilities. An idea of the extent of the rise in the prices of a few selected shares will be clear from the following table:

	As on High-	As on
	24 Mar.	28 Mar.
	Rs	Rs
Baghmari	25.50	28.00
Betjan	29.62	31.25
Hasimara	28.12	29.00
Huldibari	29.25	30.75
Teloijan	31.62	33.37
Methoni	19.50	20.50

Jute shares continued to enjoy good support. The main inspiration for the renewed buying was derived from the reports of rainfall in the jute-growing areas and the bright prospects for the new crop. It was thought that, with the steady fall in raw jute prices, the working of the various mills might improve considerably.

The anxiety with regard to wagon shortage and a general disposition to await further news concerning the flow of foreign assistance for expansion were reflected in the Coal section, where prices were slightly easier.

Textile shares continued to rule firm on reports of bigger supplies of raw cotton and encouraging advices from the piecegoods market.

Engineering shares, which came in for good attention and recorded fresh higher levels last week on prospects of exports of engineering goods, suffered a setback due to lack of fresh support. Price movements in the speculative shares were, however, influenced by settlement considerations on Wednesday. Against the previous week-end closing of Rs 26.83, Indian Irons opened steady at Rs 26.82 and, after improving at one time to Rs 26.84, receded gradually to Rs 26.62 before recovering again at the close to Rs 28.86. The settlement rate was fixed at Rs 26.75 as against last settlement of Rs 26.55. TEXMACO recorded a fresh low of Rs 22.25, to improve towards the close to Rs 22.60 on technical considerations. Braithwaite remained firm at Rs 36.95 following the release of excellent working results and the increased dividend for last year. Jay Engineering met with business at Rs 30.06 to Rs 30.50. J K Steel at Rs 26.87 to Rs 27.50; Escorts at Rs 21.50 to Rs 21.75 and Jessop at Rs 22.00 to Rs 22.37. Guest, Keen, Williams were rather sticky at Rs 44.50 in the absence of any bonus issue announcement.

Miscellaneous issues moved with the general trend of the market. The following table shows the price trends of a few selected shares:

APR 1961

INVESTOR'S SUPPLEMENT

Buoyant Tone in March

March had been a very active month for the stock market; and the activity was of a variety which brought satisfaction allround. Most of the time during the month prices steadily looked upward giving the impression that the uptrend would continue for quite a long time. Toward the close, however, there were indications that most operators (and investors too) were rather reluctant to follow the rise any further at least for the time being. Even so, the undertone continued to quite steady upto the end of the month.

The marked enthusiasm in the stock market during the month stemmed directly from the manner in which Mr Morarji Desai, the Union Finance Minister, had chosen to frame the Central Budget for the first year of the momentous Third Plan. Mr Desai's Budget fulfilled expectations as far as the manner of the new taxation to be imposed. Barring minor alterations, direct taxation was left alone. Almost the entire revenue deficit gap has been sought to be covered by indirect levies. This Mr Desai has done by spreading his net wide. The rates of duty in respect of 14 commodities already subject to excise has been enhanced while the duty has been imposed on 18 new commodities. The additional revenue that will accrue to the Central Government is estimated at Rs 28.60 crores. Customs duty has been enhanced on 41 items and the contribution from this source is estimated at Rs 29.27 crores. Thus the major portion of the deficit of Rs 60.60 crores is to be covered by indirect taxation.

The Budget has been welcomed by most businessmen presumably because it is the best possible under the circumstances. The main factor influencing the Budget was the Third Plan with large requirements of resources both external and internal. The additional taxation during the Third Plan period that will become necessary has been placed at Rs 1150 crores and it was but natural to anticipate that the Central Budgets from year to year would bear the impress of such a big need. It was therefore, with a considerable amount of concern that the Budget Day was awaited by the stock market although there were strong arguments to leave direct taxation alone. The Budget brought no jolts, and on the contrary some valuable concessions like the reduction in the tax on Bonus shares and operators' enthusiasm knew no bounds. The tax on new bonus issues has been reduced from 30 per cent to 12½ per cent. Mr Desai's Budget speech has revealed that the constructive criticisms in this regard have been noted by him, even though the revenue aspect

of the measure gets emphasis in his speech. The measure had the immediate effect of pushing up the quotations of those shares with bonus issue prospects. Since quite a few companies have built up considerable reserves but are chary of issuing bonus shares mainly because of the fact that they have

caution. They argued that the reduction in the development rebate and the raising of the special surcharge of 5 per cent on earned incomes over Rs 1 lakh to 10 per cent of basic tax and the increase on customs duty on certain industrial raw material were adverse elements in the invest-

PRICE TRENDS DURING MARCH, 1961.

to pay a large part of the reserves to the Government in the shape of the tax on new bonus issues, the reduction in the tax is expected to pave the way for the issue of bonus shares.

There were however a few whose enthusiasm was tempered with

caution. Production cost would increase resulting in a wage spiral as well as increasing difficulties on the export front.

But a cautious approach to equities did not become apparent till the month was some distance past its midway mark. The first warn-

ing that a runaway boom in equities would not be to the liking of the authorities came from the Committee of the Bombay Stock Exchange which imposed making up prices almost at the appearance of the first flush of enthusiasm. Operators in Calcutta however did not have to conform to any new regulation but all the same the Bombay measure had a sobering effect on sentiment in Lyons Range. The continued stringency in the money market and indications of a rise in banks' lending rates were probably responsible for the cooling of the month-long post-Budget ardour toward the close of the month. The slight slowing down of activity in regard to the existing list in later dealings can also be attributed to the spate of new issues on the market.

Sectionwise, jute shares became quite prominent in later dealings following indications of bright prospects for the next jute crop. No one believed that jute companies would be able to improve their working results for the next four or five months in view of the continued shortage of the raw material. Raw jute prices were no doubt showing signs of weakness but the fact remained that the raw jute supply position would continue to be difficult till the new crop moved into the markets in bulk. However, with the satisfactory progress of sowing and the continued favourable weather in the growing areas coupled with the concerted efforts that were put forth by Government and others, a bumper crop was expected. The reasoning seemed to be that with raw jute available at reasonable prices, the jute goods industry would be able to record good working results during the next jute year.

Although tea shares were subdued in the first half of the month, sentiment improved considerably in the second half. The change stemmed mainly from hopes of bonus shares revived by the news that Jay Shree Tea had applied for permission to issue bonus shares. Shares of companies with large reserves were eagerly sought after throughout the rest of the month.

Coal shares participated in the upsurge somewhat moderately with attention centred on selected shares. Although prospects for coal shares were considered good in view of the big task awaiting the private collieries in the Third Plan, investors seemed to think that a cautious approach had been called for because of the slow movement of coal to consuming centres.

(a) After transferring Rs 6,26,601 from Depreciation, Renewal and Extension Fund and Rs 80,000 from Reserve Fund.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) After transferring Rs 250,000 from Machinery Reserve and Rs 300,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 70,000 from Development and Rehabilitation Reserve.

(f) After transferring Rs 234,895 from General Reserve.

(g) After transferring Rs 2,656,522 from General Reserve.

(h) After writing back Rs 360,718 being excess depreciation provided in 1958.

(i) After transferring Rs 1,098,546 from General Reserve No. 1.

(j) After transferring Rs 1,002,174 from General Reserve.

(k) After transferring Rs 1,230,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 297,425 from excess depreciation.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 2,978,000 from General Reserve.

(p) After transferring Rs 1,000,000 from Dividend Equalisation Reserve.

(q) After transferring Rs 5,27,512 from General Reserve.

(r) After transferring Rs 400,000 from General Reserve.

(s) Includes Rs 100,230 being provisions made in previous years written back.

(t) After transferring Rs 8,22,569 from General Reserve and Rs 75,000 from Depreciation Reserve.

(u) After transferring Rs 9,80,000 from General Reserve.

(v) After transferring Rs 200,000 from General Reserve.

(w) After transferring Rs 50,000 from Dividend Equalisation Reserve.

(x) After writing back Rs 66,747 being excess sales tax and Rs 14,000 being excess Development Rebate.

(y) After transferring Rs 380,580 from General Reserve.

(z) After transferring Rs 255,000 from General Reserve.

(aa) After transferring Rs 525,000 from General Reserve.

(ab) After transferring Rs 1,075,000 from General Reserve No. 1.

(ac) After transferring Rs 9,00,000 from Reserve for taxation.

(ad) After transferring Rs 351,429 from General Reserve.

(ae) After transferring Rs 350,000 from General Reserve and Rs 165,000 from Machinery Rehabilitation Reserve.

(af) After transferring Rs 4 lakhs from Reserve for fall in price.

(ag) After transferring Rs 109,648 from General Reserve.

(ah) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(ai) After transferring Rs 271,942 from General Reserve.

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited).

Affiliated Institution:—
THE ALLAHABAD BANK LTD.

Head Office:
38, BISHOPSGATE LONDON,
E.C.2

West End Branch, London:
2, Regent Street, London S.W.1.
and at

MANCHESTER, LIVERPOOL, NEW
YORK and HAMBURG.

Branches of the Bank are established
at most centres of commercial
importance throughout Southern
and South-Eastern Asia and the
Far East.

Branches of The Eastern Bank
Limited, a wholly-owned subsidiary
of The Chartered Bank, are estab-
lished in Iraq, Bahrain, in the
Persian Gulf at Qatar and Sharjah,
Lebanon and Hadramaut and in
India, Pakistan, Ceylon, Aden,
Singapore and Malaya.

Calcutta Office:
4, Netaji Subhas Road.
Sub Branch: I. G. THOMSON
31, Chowringhee Road. Manager.

THE INDIAN BANK LIMITED

Have pleasure in Announcing
Enhancement in their Rates
of Interest on Deposits

Certain items of enhancement are:

- Savings Bank Accounts
—From 2½% to 3% p.a.
(From 1-4-61)

- Deposits fixed for 12 months
and over but less than
24 months
—From 3½% to 4% p.a.
(From 15-3-61)

- Deposits fixed for 60 months
and over
—From 4½% to 5% p.a.
(From 15-3-61)

For further particulars please
apply to the nearest branch
of the Bank.

Facts and Figures	

The Nightmare of Numbers

THAT politician's cliché, the "teeming millions", is assuming an oppressive reality. The provisional figures of India's population as gleaned from the 1961 census will come as a rude shock even to the wildest of Neo-Malthusians. Even if we are to ignore sundry complaints in the daily press about omissions in enumeration, the accepted figure of 438 millions is far higher than what anyone had dared specify before. The Planning Commission for example, has apparently been padding itself with comfortable illusions about the rate of growth. As the accompanying Table A will show, the Second Plan had estimated at the end of the Third Plan a population of 434 million, an estimate that has been outstripped by the actuality at the beginning of the Third Plan itself. The Central Statistical Organisation, slightly more daring, had put it at 431 millions at the beginning of the Third Plan, which again is an underestimate. The projections for the future of both these bodies have thus been vitiated by the percentages of increases visualised. The CSO estimated a mean decennial increase of 17.45 per cent as against the actual 21.5 per cent, which was roughly the decennial percentage of increase it had projected for the period 1961-66. It estimated a progressive reduction of the rate of growth after 1966: a decennial percentage of increase of 19 per cent for the period 1966-71 and of 14.7 per cent for the period 1971-76. As Table A will show, the Planning Commission itself was easy-going in its expectations when it drew up the Second Plan, though the Third Plan draft adopts the CSO estimates.

What are the implications of these revelations of the actual extent and rate of growth of our population? In the first place, the principal assumption behind the Third Plan having been found incorrect, the detailed formulation of its tasks have to be reviewed. The mouths to feed and the bodies to clothe have increased by about 7 millions even before the Plan has started and this means that the expected 100 million tons of food grains and 5,800 millions yards of mill textiles and 3,500 millions yards of hand-loom textiles will leave our people even less adequately fed and clothed than we had hoped. And as for food grains, it may be that Mr Patil was a little premature in assuming that he had no further business to transact. It is now evident that the mystery of the record production of 58-59 not being able to bring down prices of agricultural commodities is capable of a simple arithmetical solution in that the number of mouths to feed had been under-estimated. The impact of this situation on the whole range of planning, especially in regard to prices, is too obvious to need special mention. The quantum of import of food grains and its foreign exchange repercussions will also need further study.

Another crucial reappraisal will have to be of that Cinderella of planning—employment. According to the Draft Outline of the Third Plan, the Second Plan's hopes of 8 million additional jobs outside agriculture have been realised only to the extent of 6.5 million jobs. Thus the backlog of unemployment is to the

extent of 7 million jobs and new recruits to the labour force (on the basis of 38 per cent of the total population) are put at 15 millions. One third of this is expected to be urban aspirants for jobs some of whom will be "educated" seekers of jobs. Now that the total population itself is higher by about 7 millions, the increase in the number of new entrants in the labour force will be about 2.6 millions. Thus total job opportunities will have to be found for a staggering number of 24.6 million persons. Third Plan's present expectations of absorption of this labour force are modest enough at a total of 14 million jobs distributed between rural and urban opportunities of 3.5 and 10.5 millions respectively. The additional one million new entrants as originally envisaged were expected somehow to be accommodated with jobs, with the result that the Fourth Plan was to begin with only the backlog.

The new and crushing burden of unemployment now revealed by the census will have to be combated by a more specific strategy than the one envisaged in the Third Plan draft described thus: "The remedy would be a continuing expansion of national economy at a high enough rate to create adequate employment opportunities in the urban areas and to provide conditions for the continuing growth of agricultural production which would reduce under-employment.... Sustained programmes over a period of years for the rapid development of agriculture and expansion of modern industries will be the only solution to the problems of unemployment. In the transitional stage, it is necessary to maintain and indeed to promote labour-intensive methods of production to the fullest extent so long as this does not lead to a smaller aggregate production in the economy." This is the second arm of the Mahalanobis Pincer which cannot be said to have had spectacular success during the Second Plan. Other strategies which ideological preconceptions have so far kept out of the planners' range of vision have therefore to be brought into focus. The logic of numbers may yet convince where abstract arguments failed. Similarly, other priorities would also need reappraisal. The secondary and tertiary sectors in the economy would deserve greater attention from the point of view of employment-potential, if nothing else. The fact that the so-called private sector has this region principally allocated to it as its responsibility should not be allowed to blur the cruel compulsions of numbers.

We have not considered the implications of the growth of population in terms of per capita income particularly, since the per capita income is merely a measure of well-being and not a particularly meaningful one in the context of fluctuating prices. We have preferred the starker terms of food, clothes and jobs. On all these counts, the census has bad news to give. In this context, the urgency of an effective programme of family planning can no longer be evaded by half-hearted and (sometimes) ham-handed propaganda.

STOCK MARKET

Bulls in Command
in First Quarter

THE saying about the appetite coming with the eating is being proved over again. While 1960 was a memorable and unparalleled year, for the buying spree and the resultant boom conditions it witnessed, the quarter just ended witnessed a fresh rise in equity values, suggesting that the bulls had taken again full command of the situation. While the speculators were largely responsible for a sharp

upt in selected shares, investors, too, were inclined to pick up growth stocks with a favourable statistical and fundamental position. Thus, almost all popular shares tried to establish new peak levels, as will be clear from the price trends of a few selected shares in each counter. (Table I).

The improvement in the investment climate was indicated by the considerable premia at which some new issues were quoted. This was mainly due to the fact that the shares of the existing good companies were in short supply. In the result, their prices had generally been much higher than were supported by dividend yields. Moreover, most of the scrip were held either by the LIC, which appeared never to sell shares it had once bought, or by individual holders who were reluctant to sell and attract the tax on capital gains. In the circumstances, investors found it comparatively cheaper to invest their funds in good new shares, especially when companies making new issues often had an assured demand due, among other things, to the incidence of import restrictions. (Table II)

The confidence amongst the professional operators as well as investors sprang from various factors. First, the flow of company reports showed how the profitability of vari-

ous industries had been helped by the expansion of activities. Secondly, it was thought that the severe restriction on imports might enable the domestic industries to flourish under the advantages of a protected market. Lastly, there was a general hope that companies, having large reserves, might issue bonus shares in order to raise their capital.

But the steady rise in values in a number of shares had taken them to such dizzy heights that any further advance would have been considered unreal. Moreover, most operators were posing the question whether any further progress would be helpful and healthy for the market. It was thus the natural process of reaction that spontaneously set itself in motion from the middle of March. If there was any other factor, that could be interpreted to have an effect on sentiment of the operators to induce them to book profits, it was the continued tightness in the money market. However, this reaction had no damaging effect on the technical position of the market. In fact, it looked as if the market was preparing for taking a further leap forward.

Although the turn of the year failed to provide any inspiration for marketmen, sentiment showed a distinct improvement from the middle of January, being influenced by a num-

TABLE II

Company.	Type of Issue	Issue Price	Details of Issue
1. Madras Aluminium.	Offered to public	Ord. Rs 100 Pref. Rs 100	Authorised capital is Rs 10 crores. Issued capital is Rs 6 crores comprising 4,50,000 equity shares and 1,50,000 preference shares. The entire public issue of Rs 1,86,50,000 is underwritten.
2. Usha Martin.	Offered to public	Ord. Rs 100 Pref. Rs 100	Issued capital is Rs 28 lakhs in 1,80,000 equity shares and 10,000=9.5 per cent Cumulative Redeemable Preference shares. The ICICI has subscribed for 30,000 equity shares. The balance of the issue amounting to Rs 25 lakhs in equity shares and 10,000 preference shares was offered to the public. The applicants for the ordinary shares got partial allotment and those for the preference shares in full.
3. Travancore Electro Chemical.	Offered to public	Rs 100	The authorised capital is Rs 1 crore, while the paid-up capital is Rs 13,76,600 in shares of Rs 100 each. Offered to the public 10,000 shares.
4. Indian Oxygen Limited.	Rights Ordinary	Rs 10 at a premium of Rs 8	Issued 6,00,000 new ordinary shares of Rs 10 each.
5. Bombay Oxygen Corporation.	Offered to public	Rs 100	Out of the authorised capital of Rs 3 crores, the issued capital is Rs 1.50 crores, consisting of 1,50,000 equity shares of Rs 100 each. Out of this 73,500 shares was offered to the public.
6. Belsund Sugar.	Offered to public	Rs 7.50	Issued 1,29,935 new shares, at par, in the proportion of one new share for every two existing shares.
7. K.C.P. Ltd.	Rights Ordinary	Rs 10	Issued 1,00,000 equity shares at par in the proportion of 17 shares for every 100 shares held.
8. Mysore Kirloskar Ltd.	Rights	Ord. Rs 100 Pref. Rs 100	Capital is raised by the issue of 15,000 ordinary shares and 25,000 preference shares.
9. Thakur Paper Mills.	Offered to public	—	The authorised capital is Rs 1 crore out of which equity shares of the value of Rs 40 lakhs were issued. The amount offered to the public was Rs 25 lakhs. The entire public issue was underwritten.
10. British Paints (India), Ltd.	Offered to public	Rs 10 at a premium of Rs 5	Raised additional capital. Out of the new issue of Rs 21,63,000, a sum of Rs 2 lakhs was reserved for subscription by the directors and their friends and the employees of the company. The issue was over-subscribed by eight times.
11. Mahendra Electrics.	Offered to public	Rs 100 each	Issued 23,000 equity shares.
12. Swastik Rubber.	Offered to public	Rs 100 each	Raised additional capital. Issued 15,500 equity shares to the existing shareholders. Out of the shares not taken by them, the managing agents and their friends agreed to take up shares worth about Rs 10 lakhs. The balance of the shares was offered to the public.
13. Madras Cements Limited.	Offered to public	Ord. Rs 100 Pref. Rs 100 both at par	Raised additional capital by Rs 70 lakhs. The entire issue was underwritten. The capital offered to the public was 17,211 equity shares and 7,050 preference shares.

TABLE II—(Contd.)

Company.	Type of Issue	Issue Price	Details of Issue
14. Rajaramka Pulp and Paper.	Rights Ordinary	Ord. Rs 100 Pref. Rs 25	The authorised capital is Rs 50 lakhs of which Rs 40 lakhs were in equity shares and Rs 10 lakhs in preference shares. The issued capital was Rs 25 lakhs in equity shares. The public was offered only 12,250 equity shares, the balance being taken by the promoters and their friends.
15. Travancore Chemical.	Rights Ordinary	Rs 10 at par	Issued 20,000 equity shares in the ratio of two shares for every thirteen shares held.
16. Ballapur Paper.	Rights Ordinary	At par	Issued right shares for Rs 85.82 lakhs in the proportion of three new shares for every two existing shares.
17. Blue Mountain Estates Ltd.	Rights Ordinary	Rs 2 at a premium of 45 p	Issued 10,50,000 equity shares in the proportion of one share for every three shares held.
18. Jay Engineering Company	Rights Ordinary	Rs 10 at a premium of Rs 7.50	Issued 6,07,500 equity shares to the existing shareholders in the proportion of 2: 3.
19. South India Viscose Ltd.	Offered to public	Rs 100 at a premium of Rs 5	Issued right shares for Rs 1.40 crores in the ratio of 2:5.
20. New Central Jute	Offered to public	Rs 10 at a premium of Rs 3.25	Issued new ordinary shares in the ratio of one for two shares held.
21. Southern India Industrial Corp.	Offered to public	Rs 10	Issued 90,000 equity shares out of which 16,500 shares were allotted on a firm basis. The balance of the issue of 73,500 shares was offered to the public. The issue was over-subscribed by nearly three times.
22. Bhagwan Devi Paper	Offered to public	Rs 10	Issued 1,50,000 equity shares.
23. Fit Tight Nuts	Offered to public	Rs 100	Raised fresh capital for Rs 25 lakhs in 25,000 ordinary shares. The amount offered to the public was Rs 14,70,000.
24. Amalgamated Electricity	Rights Ordinary	Rs 10 at par	Issued 84,375 equity shares in the proportion of one for every ten shares held.
25. Pesticides Ltd.	Offered to public	Rs 100	Issued 5,00,000 equity shares. The amount offered to the public was Rs 24,50,000.
26. Tube Suppliers Ltd.	Offered to public	Rs 10	Issued Rs 8,70,000 in equity shares. The actual offer to the public was Rs 6 lakhs.
27. Kirloskar Oil Engines Ltd.	Offered to public	Pref. Rs 10 at par	Issued 2,50,000 Redeemable Cumulative Preference shares. The whole issue was underwritten.
28. Ceat Tyres Ltd.	Rights Ordinary	Rs 100 at a premium of Rs 25	Raised additional capital by issuing 1,61,000 new equity shares in the proportion of 7 shares for every 5 shares held.
29. Aruna Sugars	Offered to public	Rs 10	Issued 8,50,000 ordinary shares. The amount offered to the public was Rs 35 lakhs.
30. Jaipur Udyog Ltd.	Rights Ordinary	Rs 10 at par	Proposed to issue 5,00,000 Ordinary shares in the ratio of one for every four existing shares.
31. Enfield India Ltd.	Rights Ordinary	Rs 10 At par	Issued 2,33,300 equity shares. Of this, 33,300 shares are reserved for foreign collaborators. The balance 2,00,000 shares was issued to holders at four shares for every five shares held.
32. Emerald Valley Estates	Rights Ordinary	Rs 5 at par	Issued 50,000 equity shares in the ratio of one share for two shares held.

Judging from the behaviour of the market and the gossip before the presentation of the Central Budget, it appeared as if marketmen in general entertained hopeful anticipations in respect of the Budget proposals. Simultaneously, they felt that it would be safer not to pitch hopes too high; and this was reflected in sustained profit-taking at the higher levels.

As a matter of fact, the tempo of activity was accelerated when the Budget proposals were actually announced. It should rather be said that never before in recent history was any Budget of the Central Government received with so much cordiality. It gave a fresh reinforcement to the confident feeling with which the operators were trading in the market, at least for some weeks before the Budget. Although there were one or two unwelcome features in the Budget, the proposals were, on the whole, considered to be favourable from the stock market angle.

The most cheerful feature was the proposal to reduce the tax on bonus issues from 30 to 12½ per cent. It was felt that those companies, who had so long been withholding the issue of bonus shares on account of the high level of taxation, might now proceed unhesitatingly to capitalise their reserves. In respect of the many indirect taxes, it was believed that a

substantial portion of those might be passed on to the consumer in the form of high prices. The reduction in the export duty on tea was welcomed, as it was thought that it would increase the capacity for competition in foreign markets. The removal of tax discrimination against minority holdings, the cut in taxes on royalties and the extension of concessions to foreign technicians gave rise to a feeling that there would be a larger flow of foreign capital and collaboration.

Thus, the upward trend in prices, noticed in the post-Budget week, gathered further momentum due to renewed activity of the bulls. It looked as if most of them had even shed their cautions and were extending their commitments, so that the trend was more or less a one-sided movement. The bullish fervour was accentuated by the release of excellent corporate results. Although fears of a sharp increase in lending rates by the scheduled banks and of the impositions of marginal curbs on speculative trading induced a slightly reactionary tendency in prices in the middle of March, the tone of the market tended to harden on lack of fresh offerings due to non-occurrence of any of the above events.

The real fillip to recovery was the continued flow of encouraging corporate news, which enabled the market to accelerate the pace of movement, indicating the brilliant performance being made by the corporate undertakings under the impact of expansion taking place in different units. Again, the decision made by two tea companies—Jay Shree and Joonktolle—to issue bonus shares gave rise to a feeling that other companies having large reserves might follow suit. Another news, that heartened the market, was a favourable allocation of foreign exchange to the export industries in the next licensing period. Finally, in the absence of any measure to check their progress further as was done in Bombay, the bulls continued to remain active in their dealings.

But a feeling amongst certain operators that the market was overbrought induced profit-taking, which did not allow the market to advance by leaps and bounds as was noticed in the previous weeks. Although the market showed thus the signs of looking back towards the end of the quarter, most market operators were inclined to interpret this development as a technical correction flowing from the earlier sharp advance in prices. Offerings at higher levels, therefore, found ready absorption by short-covering.

In the dealings during the quarterly period under review, Engineering shares came in for a good deal of attention in the belief that the scope for the engineering industry, during the next few years, was good as a large portion of the development in the Third Plan would take place in this sector of the economy. It was thought that the expansion was likely to be facilitated by the prospect of increased supplies of steel from the expanded existing steel companies and the new steel plants of the public sector and, as a result of bigger supplies of steel, it was possible that the fabricating industries would also be given a new boost. Hopes were also entertained that, in order to promote the exports of engineering goods, the Government might have to give relief to the industry by reducing duties and other levies which, at present, hamper the competitive power of Indian goods. In the case of Indian Irons, the steel retention price "scoop" was utilised by the speculators to keep the price movement in the scrip fairly steady during the early part of the period under review. TEXMACO, after ruling initially firm, turned into a weak spot of the section on adverse rumours with regard to last year's profit and dividend.

Jute shares were practically neglected during the major portion of the period when there were more sellers than buyers in evidence due to the absence of any fall in fibre prices. It was feared that the high prices paid for raw jute and the increased labour emoluments might squeeze the mills' profitability. Thanks to the reports of rainfall in the jute-growing areas and the bright prospects for the new crop, there was a revival of buying interest from the middle of March in the anticipation that the problem of shortage of the raw material might be solved in the course of the next few months.

It appeared as if the Coal section was making a fresh bid for rallying from the year-end levels. Almost all the shares enjoyed good support at rising levels on prospects of obtaining foreign loans for expansion. Operators were also encouraged by the statement made by Sardar Swaran Singh at the Indian Mining Association meeting, held towards the end of March, to the effect that there would be no difficulty in getting the foreign exchange needed for the expansion of the industry. Top levels were, however, not maintained till the close of the quarter due to an anxiety with regard to wagon shortage and the consequent fear of accumulation of stocks at various pit-heads.

Till the end of February, dealings in the Tea section were few and far between. Professional operators as well as investors could not but be shy until they could properly assess the result of working of the tea companies in 1960. But the Budget proposal to reduce the export duty induced a broadening of enquiry from the beginning of March. Although it was gradually realised that the net effect of the changes in the export and excise duties would be very little, the news of the proposals made by the Jay Shree and Joonkotte tea companies to issue bonus shares set the ball rolling in the direction of buying of shares of other companies having bonus possibilities. Shares of good dividend-payers and those of companies with disposable reserves attracted the best attention.

After ruling initially firm on expectation of bright prospects for the industry during the year, Sugar shares displayed a slightly reactionary tendency towards the close of the period. This was mainly due to fears of excessive supplies and the consequent accumulation of stocks with the factories.

Textile shares remained subdued at the beginning of the year on the apprehension that a further cut in cloth and yarn prices would hamper the profitability of the industry. Sentiment, however, turned bright from the third week of January on ideas that the profits for 1960 would be satisfactory and the dividends would be maintained, if not increased, in view of the offtake of cloth having shown a continuous improvement. Although support was halting at the beginning of March on account of the fresh burden imposed on the industry following the announcement of an increase in excise duty on yarn, all shares forged steadily ahead on subsequent reports of bigger supplies of raw cotton, the decision to modify the excise duty on yarn and the proposal made by some mills to diversify their activities.

Generally speaking, Miscellaneous issues received constant attention throughout the period in the belief that the companies, which were engaged in the newer lines of production, were doing very well. As the existing blue chips had attained such dizzy heights as to be out of reach of the average investors, the new shares, even with the considerable premia they were commanding, attracted attention on the long-term view.

Power Famine Ahead

THE shortage of electric power continues to be a source of anxiety to industry. The annual meetings of the Associated Chambers of Commerce of India in last December and of the Federation of Indian Chambers of Commerce and Industry last month have forcefully drawn attention to the impending power famine in the country and stressed the need for prompt and effective measures to ensure regular and adequate supply of power. India is now on the threshold of an industrial revolution and scarcity of power at this stage will cause a severe set-back to the expansion of our economy.

Power shortage is not confined to any particular region but seems prevalent in all parts of the country though it is acute in certain areas like Madras and West Bengal. In Madras for instance, the present installed capacity is estimated at 571 megawatts of which only 344 megawatts is "firm" power, that is, not subject to seasonal fluctuations. But the demand is placed at 727 megawatts which means that there is a deficit of 383 megawatts. It is also pointed out that by 1965-66 the total installed capacity will reach only 1441 megawatts of which 909.5 megawatts will be firm power against a total demand of 1448 megawatts. Some idea of the alarming state of affairs in this regard can be had from the conclusion recently reached from some All-India surveys that in 1965-66 the availability of power for the country as a whole will be almost five years behind actual requirements!

It is clear then that the speed with which power is being developed in India has been quite inadequate to meet the growing requirements of the various sections of the economy. In 1950 the consumption of electricity among the different classes of consumers was 4157 million KWH which rose sharply to 7111 million KWH in 1955 and further to 7959 million KWH in 1956. The trend is shown below:

Total Electricity Sold:	(Million KWH)		
	1950	1955	1956
Domestic light and Small power ..	525	850	934
Commercial light and Small power ..	309	514	546
Industrial Power ..	2604	4698	5323
Irrigation ..	162	255	316
Other Purposes ..	557	794	840
Total ..	4157	7111	7959

It will be noticed that even in the course of the first Five Year Plan which laid relatively less emphasis on industrialisation, the total consumption jumped from 4157 million KWH in 1950 to 7959 million KWH. For the year 1959-60 the total consumption is estimated at 12,131 million KWH of which the breakdown was as follows: domestic light and small power 1312 million KWH; commercial light and power 725 million KWH; industrial power 8324 million KWH; irrigation 720 million KWH and other purposes 1051 million KWH.

At the commencement of the Second Five Year Plan, the total generating capacity stood at 3.4 million KWH of which the public and private factors accounted for 2.7 million KWH and 0.7 million KWH was in industrial establishments generating their own power. Under the Second Plan, provision was made for raising the installed capacity to 6.9 million KW. But the actual achievement is expected to be only of the order of 6 million KW against demand which is estimated at about 10 million.

Acute shortage of foreign exchange which occurred in the early stages of the Second Five Year Plan and delay in completing some of the major projects like Bhakra-Nangal, Koyra, Rihand and Hirakud are stated to be the main causes for the set-back to the programme of power development.

The Draft Outline of the Third Plan envisaged an allotment of Rs 975 crores for power—Rs 925 crores in the public sector and Rs 50 crores in the private sector. Of the outlay in the public sector, Rs 580 crores were earmarked for hydro and thermal generating schemes, Rs 51 crores for atomic power, Rs 24 crores for uranium mining, fabrication and plutonium extraction plant and Rs 270 crores for transmission, distribution and rural electrification. Subsequently, the outlay on power was reported to have been increased but full details are not yet available. But increased provision is not by itself a guarantee that the problem is being tackled in right earnest. It is equally important to ensure that the different departments dealing with the production and distribution of power work together in greater co-ordination and that adequate foreign exchange is allotted for the import of the necessary generating and other plant and equipment. The various restrictions imposed on the private sector by the Electricity (Supply) Act need to be reviewed and reasonable incentives provided to enable the companies to attract sufficient funds for expansion purposes. Further, the active co-operation of industrialists should also be secured by associating them with the work of the State Electricity Boards. In Madras and several other States, the Electricity Boards are reported to consist exclusively of officials. But in view of the fact that the bulk of the power is consumed by industry, there is no reason why the latter's spokesman should not be intimately associated with the working as the Electricity Board.

Exports and Marketing Techniques

THE Indian Society of Advertisers has shown a shrewd sense of the topic of the hour in its choice of theme. That has enabled it to draw into its parlour the Prime Minister, the Finance Minister as well as the Minister for Industry and Commerce—perhaps the greatest single feat of advertisement that it has pulled off so far. As a result, ISA has built up its image in the public mind as an organisation in the vanguard of the national effort for economic emancipation. For, as Mr Nehru pointed out, modern advertisement spreads its message, not so much by direct appeal, as by association which penetrates into the sub-conscious. His own presence at the rostrum, where he remained for forty-five minutes, entertaining an audience composed of hard-boiled advertisement executives with reflections on the philosophy and practice of their profession, was a superb example of successful subliminal projection.

Mr Nehru speeded the conference on its way by administering what can only be described as a friendly kick. His own reaction to advertisements, he said, was negative. But he recognised the tremendous force of advertisement in the modern world and was anxious that it should be used only for good purposes. And his speech showed very clearly that he had devoted more thought to the ethical and practical problems of advertisement than most of those who are directly involved in it. The advertisers in our country, he said, are up

8 April 1961

against a difficult problem. The aim of advertisement by and large is to increase levels of consumption. But the Government, for the present, is under a necessity to restrict consumption in order to release resources for investment. That perhaps is one of the reasons for his rejection of commercial broadcasting, for which the Chairman of the Conference, Mr Chinubhai Kilachand, made out a very persuasive case.

In his welcome address, the Chairman of the ISA made the following points: As the yield from traditional items of export was declining and as competition and restrictions were growing, India must adopt an aggressive and sustained advertising and market research programme to diversify markets and goods.

2. One effective method of implementing such a programme would be through a Commercial Broadcasting will not only carry our sales message to neighbouring countries but also help sell our products in the domestic market, earn foreign exchange and avoid expenditure in our advertising on foreign radio stations. It could provide interesting programmes and earn enough to pay for itself.

3. Trade marks and brands play a vital role in export promotion. Greater efforts should be made to protect them in foreign markets.

4. Market research must be continuous in order that we will have up-to-date information about changes in preference on the part of consumers abroad. It will be advantageous to associate experienced businessmen and members of the ISA with delegations going abroad.

5. Tourism plays a vital role in export promotion. Invisible exports have last year earned three times more than what they used to a decade ago; a sustained and purposeful to a decade ago; a sustained and purposeful to publicity programme should be launched to attract more tourists.

Mr Chinubhai Kilachand also made a suggestion for the establishment of a Central Export Institute to co-ordinate the activities of the various Export Promotion Councils and, in this connection, referred to the role of a similar Institute in Australia where a Cabinet Minister supervised the whole range of export promotion.

Advertising and Sales Promotion

By S. RANGANADHA

Although the techniques of sales promotion are well known to all competitive producers of consumer goods, their success depends upon how best they make use of them. Common sense tells us that vigorous and emotional persuasion of a product in question will yield better results than the passive type of motivation. But other motives too may be present in a hypothetical consumer. Two examples are impulse buyer and subliminal suggestibility. The former can be defined as, "a purchase result from a decision made on the spot in the outlet where the consumer sees the product displayed", while the latter conveys, "the presentation of messages at an intensity low enough so that the individual at whom they are directed is not aware of their presence".

The impact of the sales volume implies both the consumers response and the techniques of selling efforts. The major part of the sales turn-over results from the manipulation of the selling strategy in the face of consumer's reaction.

There are two ways of looking at this

problem. The research executives treat the entire mass of customers as a constant factor and push their sales through motivation research. In other words, they make "the customers want what the firm has to sell". The other approach is the market research where they assume the buyers as a variable factor. In short, they, "produce products desired by buyers". Here they have got to fall back upon the resources of psychology.

In a well advanced industrialised society, the consumers tend to fit into a general and standardised groove of habits which the society approves of. They are susceptible to the general use of persuasion. By switching over to different techniques of inducement, the producers may change the tastes of the consumers en masse. The question that arises here is not how good the product is, but how best the dealers could serve the consumers.
