Now that the basic faults have been detected, prompt steps should be taken to prevent a recurrence of past mistakes and to secure from the plant full capacity production, without injuring it. The rider added here is particularly important, especially in the light of what happened to Sindri Fertiliser. As readers are aware, this chemical plant was worked to death by those who wanted to establish production records. It is encouraging to learn that the Solveen Mission's recommendation, to the effect that a sum of DM 85 million (Rs. 10 crores) should be earmarked from the W. German aid commitment of DM 450 million for the second year of the third Plan for financing the cost of repairs and replacements in the blast furnace, maintenance shops and the induction of additional technicians and management experts, has been accepted by both the Governments. But, unless the management is streamlined and geared to meet the exacting standards of running a modern steel plant, there will be no guarantee that the same trouble will not occur again. Frequent changes in top management, excessive bureaucratisation, utter lack of devolution of responsibility and total absence of a labour policy, which are the characteristic features of the Hindustan Steel, are hardly conducive to make it a dynamic organisation which it ought to be, if the three steel plants under its charge, constructed at an enormous cost to the taxpayer, were to prove an asset to the country.

Export Promotion

A new sense of purpose and direction is sought to be given to India's export promotion drive by the Minister for International Trade, Mr. Manubhai Shah. In less than six weeks of its inception, his Ministry has chalked out several measures—some already implemented and some others under active consideration—which together add upto perhaps much more than what had been done for export promotion during the last five years. One who has closely watched Mr. Shah's enviable record as the Minister for Industry in the previous Cabinet will unhesitatingly concede that these new moves are not the result of any momentary enthusiasm. Almost the first important step taken by the New Ministry was to remove the uncertainty in the duration of incentive schemes by putting them on a permanent basis. A still more significant step was the constitution of a high-powered advisory body called the Board of Trade envisaging the active participation of trade and industry. Among the measures being contemplated now, mention may be made of proposals for the establishment of a second State Trading Corporation for dealing exclusively with exports of certain agricultural commodities like oilseeds, pepper and cashewnuts, for the imposition of a cess on industries for financing promotional campaigns and for granting long-term credit facilities to exporters through the Industrial Finance Corporation. Another noteworthy proposal relates to the appointment of an Export Committee, with a full-time Chairman, to study the cost-structure of export products, both industrial and agricultural, and to suggest measures for reducing costs. The question of setting up several export houses, both within the country and abroad, is also being considered by the Government. More of these and other similar measures will be heard when the Board of Trade holds its first meeting at New Delhi on 9th June.

In this context, a stimulating experiment, conducted by a leading British group of industries in evolving group-approach techniques for boosting overseas sales will be noted with interest. In an article entitled *Group Approach to Exporting*, appearing in the latest issue of the *F.B.I. Review*, published by the Federation of British industries, Mr. G. F. Cole, Director of Duport Ltd., tells us the story of how successful have been the results obtained by his company in exploitation of European markets through collective campaigns. The Duport group, it may be noted, has a steel mill, several rolling mills and foundries, apart from its other activities, including production of engineering, electrical and household consumer goods. In order to make an on-the-spot study of market prospects for these products in Europe and establish fruitful connections, a group team was constituted by selecting a specialist director or manager from each of the individual divisions, with Mr. Cole himself as the leader. Reviewing the team's successful tour of Europe, Mr. Cole discounts the general impression that "differing commodities can result in there being nothing in common when it comes to overseas selling." On the contrary, he points out that, although products of individual companies may differ very widely, the contacts and associations that have already been established by some of the companies in the group "could be of tremendous assistance to those other companies seeking completely new outlets."

The tour of the team was preceded by a prior study of all the market intelligence data available through official and other sources. On the basis of the approximate opportunities for each member of the team in each country, appointments for meeting local interests concerned were fixed in advance through the help of British embassy officials. An operational plan was then devised in such a way as to permit a member who had better opportunities in one particular place to stay back for another few days, after the team had left. This member rejoined the team later in the tour. "This worked out very well," says Mr. Cole, "because the people going on in advance kept their ears open for the member left behind and when he eventually arrived, several unforeseen opportunities were inevitably put in his way by his colleagues." In this connection, Mr. Cole stresses the need for fixing prior appointments, without which "it is very difficult to form an intelligent opinion of the weighting of appointments, member to member, and one could easily have a colleague kicking his heels because there were no opportunities for him in that particular city."

The impact of several representatives descending upon one market, asserts Mr. Cole, was profound indeed. Being a group of people with wide interests naturally produced so many contacts that the effect of their presence was "rather like a snowball being rolled to such a size that it became a snowman, whereas one man on his own would have remained the size of the snowball." Although the experiment has been confined to the work of a trade delegation, the group approach seems to be potentially useful for wider application in the export field. As Mr. Cole himself remarks, there is no reason why companies of vastly different interests should not gain considerable advantage from a similar approach to overseas sales promotion. He adds, significantly enough, that a consortium of non-competitive firms selling through the same type of outlet also might well find this approach to be capable of high power exploitation, country by country, "by pooling a common agency or setting up a joint selling organisation." There are quite a few industrial houses in India engaged in the manufacture of several unrelated products. The group approach may have much to commend itself in favour of their export promotion campaigns. Similarly, smaller companies too may find it beneficial to get together for the purpose of pursuing sales opportunities abroad, as suggested by Mr. Cole.

Guardians Turned Orphans

It sounds stranger than fiction that guardians should turn orphans, with the exception of Jules Verne's fantastic science-fictions, which seem to be coming almost true, and the utopias of Aldous Huxley, which, as they have been visualised by him in his recent novel, *The Brave New World*, and his latest, *Island*, obviously appear to be impossible. It is, however, known that some guardians have turned orphans. And, in certain cases, the change is a patent fact.

We are referring here to the shares of investment companies, the founts which have not only given the initial backing to numerous industrial undertakings in the country but have actively supported them subsequently too. It is an irony that, whereas the shares of industrial companies (in which investment companies have regular block holdings) command sizable and even fancy premia and give a net annual yield of no more than 2.5 per cent to 3 per cent in most cases, the shares of investment companies go abegging at a substantial discount (in some cases of even 50 per cent), offering a net annual yield varying generally from 7 per cent to 9 per cent. This is true of several preference shares also.

One has not to go too far for one single and, therefore, the easiest explanation for this state of affairs. It is that people have been buying industrial equities, because it pays them to buy. For sometime past, industrial equities have been going up year after year, whereas shares of investment trusts have been steadily declining, though luckily not in the same proportion. This mania for capital appreciation persists, with utter disregard of the consideration of a decent return on investments. It is true that equities are the best hedge against inflation, but not all of them, and certainly not at any and every price.

Among the exceptions to the general trend of investment trust shares may be mentioned the shares of the Investment Corporation of India Ltd., which have kept their head above water for the past few years and are currently in good demand. But the strength in these shares reflects not any marked appreciation of the outlook for and the working of the Corporation, or the merits of investment trust shares in general, but the opportunity the Corporation has provided to their holders of participating in the investments in some of the promising industrial projects promoted by the House of Tatas; only recently they got the chance of taking up the shares of the Associated Bearing Company Ltd. on a firm allotment basis. This again only emphasises the craze for capital appreciation.

A passing reference to the issue was made by Mr. Maneklal Premchand, Chairman, Industrial Investment Trust Ltd., in his speech at the recent annual general meeting of the Trust, held early this month. Mr. Premchand attributed the failure of investment trust shares to enjoy the same popularity as in the West to two factors: (1) a dearth of sound and well-run investment companies (a few investment companies which exist today, he said, were merely counterparts of managing agencies) due to heavy taxes in the country, and (2) ideas of swift capital appreciation rather than yield considerations in a developing economy like ours with large-scale governmental spending.

It will be recalled that Mr. J. R. D. Tata, Chairman of the Investment Corporation of India, had also observed in his speech at the annual general meeting of the Corporation, held on 18th December 1961, that a disappointing feature of investment companies in India was the relative lack of interest in their shares by the investor. He had said that he had been unable to understand the reason for this lack of interest, as, in the more advanced countries of the West, the shares of sound and well-run investment companies were sought after by investors and, in fact, usually quoted on a yield basis lower than that of high grade industrial stocks. Pleading the case for investment companies' shares, Mr. Tata had observed that, while they might not offer speculative opportunities for quick appreciation as industrial equities do, they offered, particularly to the small investor, a valuable opportunity of participation in a highly diversified portfolio, covering a wide range of industries and combining safety with scope for appreciation, which he could not achieve on his own.

Commenting on Mr. Tata's observations, Messrs. Chitra and Co., the well-known firm of stock-brokers in Madras, frankly stated in its fortnightly market report that "... however unimpeachable the objects with which they (investment companies) were started, they deteriorated into dumping grounds for shares of questionable quality and, what is worse, rather questionable marketability, in addition to their being used also as the refuge of the unsubscribed capital of certain new issues. All these things happened, because these investment trusts were a wing of management groups." Continuing, the Madras firm had rightly advocated a high degree of detachment from—or rather non-attachment to—particular managerial groups and an objective and ruthlessly impersonal capacity to make selections of investment as the basic needs of those who managed investment companies.

As indicated by Chitra and Co. in its review, the fixed dividends of investment companies are based on dividends received by them and would tend to be even and would not even go up with higher dividends on their holdings in particular years, and the prospects of any worthwhile capital appreciation in these shares are almost *nil* (though it is possible, the equity part of these companies may show appreciation), because the companies are not likely to cash in on a capital appreciation of their holdings and, if they did, would be subject to capital gains tax, and would not, in any case, distribute the net retained profits of such gainful selling among their shareholders. In conclusion, Chitra and Co. had suggested that unit trusts of the British type, which are having a flourishing time in the U.K., might be the answer to those who were after an even return on money and that it was time something was done to have them started in this country.

Incidentally, excepting the London stock market where equity values have staged a brisk recovery, the world stock markets have, of late, been uniformly displaying a downtrend, which is attributed to a profit-squeeze faced by major industries. In India, however, shares have been booming and, in the light of the fast developing economy, it would be naturally naive to anticipate a profit-squeeze. But there is the other side of the picture also. Our industries have been facing recently all sorts of shortages, raw materials, power, transport, etc. And then, there is the ever-increasing burden of taxation and wages coupled with the necessity to sell abroad even at a loss. Will it not be prudent for investors to pause for a while and ponder whether yield considerations should prevail at least in regard to investing a part of their savings, instead of allowing themselves to be entirely carried away by the craze for capital appreciation? Surely, at current levels, equities have discounted much of the growth prospects. This is not to suggest that there are no more; only it will be prudent to book at least a part of one's capital profit, even if it means paying some capital gains tax, and lock up the proceeds in first class preference shares standing at a discount and well-known trust company shares which are not in effect managing agency houses. A successful investor in equities is one who knows when to take profit and reinvest and not the one who believes in sticking to his purchases for ever. Equities, it must be remembered, are subject to risks. Even in an economy like that of India, jolts are possible, and one never knows when they will occur, or what will cause them.

TREND OF SHARES

IRREGULAR AT CLOSE

(From Our Own Correspondent)

BOMBAY, 24th May

LAST Friday's bulge in values on the stock markets, brought about by price-rigging by professional bulls and the resultant short-covering because of the settlement in Bombay, did not take long to burst. For throughout the rest of the week, prices steadily declined on light but persistent bull liquidation and absence of support, until Wednesday, when they staged a sudden rally on some sizable influential buying in Steel shares, attributed to expectations of early announcement of the retention prices, which induced bears to cover in other sections also. Today, Steels encountered some fresh bear pressure at higher levels, but some selected issues were steady at improved levels. The week-end rally has been interpreted by some as having brought twilight to the markets after nearly a week's downward drift, while some have argued that it is due to lack of selling pressure at present. It has, however, made the trend irregular and the tone quietly steady at close, as distinct from the continuation of the previous week's reactionary trend and a distinctly easy tone during the major part of the week. It remains to be seen whether the week-end rally marks an end of the reactionary trend, or simply puts it off for some time. A clue to this would be provided by the behaviour of the shares that led the rally.

Meanwhile, it is regretted that the proposed 25 per cent cut in the U.S. aid to India this year has been reduced but not fully restored. However, in the light of the two new British and one Japanese loans announced today, it may be concluded that the outcome at the Aid-India Club's meeting on Monday next will not be as bad as is apprehended following the American cut. At home, the 15 per cent rise in coastal freight rates has left the shipping industry dissatisfied, which had expected it to be at least of 40 per cent for a profitable working. Exports are once again the topic of the day. While the new drive, proposed to be launched by Mr. Manubhai Shah and his Board of Trade is welcomed, it is feared that the reported 1.5 per cent cess on all industries to create an export pool might, in the final analysis, hit some industries badly.

* * * *

The carry forward charges at the last settlement in Bombay were again high, underlining the unhealthy technical position of the market and prevented Friday's rise from being carried further on the following days. Prices declined all-round on liquidation, and Wednesday's low levels showed moderate losses over the previous week-end closing levels in all the sections. But the subsequent rally changed the picture, and values finished with small changes either way. Caution seemed to be the keynote of trading today.

Steels moved widely both ways. Tata Ordinary were in particular, active, and, after recovering from Rs. 149.75 to Rs. 152, fell to Rs. 149.50, rose to Rs. 153.25, and closed three points higher on balance at Rs. 152 on alternate spells of bull liquidation and renewed support. Indian Iron showed a sympathetic gain of 15 nP to Rs. 26.40, but attracted considerable Calcutta selling at higher levels. Mukand Iron were unchanged at Rs. 28.50. Export talks kept Bombay Dyeing in demand and the shares gained Re. 1.40 to Rs. 70.40, and quoted *ex-div.*, Kohinoor rose by Rs. 9.90 to Rs. 310 *ex-div.* on expectations of better working this year. Shree Niwas, too, gained Rs. 4 to Rs. 264 on *ex-div.* basis. New lines such as petrochemicals and the proposed new non-woven fabric plant, the first of its kind in the country, for Tata Mills, and the hint from Mr. Naval Tata at Svadeshi Mills' annual general meeting about a possible merger of Tata group mills, produced a three point rise to Rs. 78.50 in Tata Mills, a gain of Rs. 2.50 to Rs. 288.50 in Svadeshi and an improvement of Rs. 7 to Rs. 163 in Central India. Standard were up by Rs. 13 at Rs. 1,035. But the much fancied Century attracted realising and showed a gain of only 50 nP to Rs. 673, while National Rayon lost five points at Rs. 556.50 and Minerva's Rs. 5, taxable, dividend, after a lapse of four years, actually produced a two point setback in the shares which closed at Rs. 88.

Bombay Burmah fell from Rs. 698.50 to Rs. 680 on tired liquidation, because of the mere maintenance of the interim dividend, but rallied to close Rs. 3.50 higher on balance at Rs. 692.50. Tata Chemicals were the other active Miscellaneous counter and suffered a setback of 72 nP at Rs. 16.64 on selling induced by adverse rumours about the Company's current working and the proposed takeover of Bombay Mineral Supply Co. (Private) Ltd. Other shares were neglected, but Indian Dyestuff showed a gain of Rs. 13.75 to Rs. 571.25. The coastal freight rise did not produce any improvement in Shipping shares; in fact, Great Eastern at Rs. 13.92 showed a loss of 56 nP over the week. Cements were quiet, and the one-rupee increase to Rs. 10 in Digvijay's taxable dividend for 1961 produced a gain of just one rupee to Rs. 212.50 in the shares. Sugars were also quiet. Small losses predominated the Cash List, indicating lack of investment support at the current levels.

* * *

Strength in selected Jute and Coal shares continued to provide a cushion to other sections, which, however, closed easy on liquidation, on the Calcutta Stock Exchange. Paper shares were in demand on hopes of a price rise being in the offing. Speculatives made a mixed show. Burrakur rose from Rs. 19.37 to Rs. 21, but Texmaco, which had been actively supported until recently, lost 55 nP to stand at Rs. 25.40, reflecting disappointment over the bare maintenance of the 10 per cent. taxable, dividend for 1961, despite a rise in the gross profit from Rs. 51.37 lakhs to Rs. 76.39 lakhs. Howrah gained 75 nP to Rs. 22.87, but Birla eased by 12 nP to Rs. 35.25. But GKW and Dunlop recovered, the former by 62 nP to Rs. 42.56 and the latter by 88 nP to Rs. 45. Shree Gopal gained 56 nP to Rs. 28.06 and Orient 35 nP to Rs. 44.45. Indian Aluminium were exceptionally firm and rose from Rs. 40.81 to Rs. 42.81.

Nearly all the Cash Coal scrips showed small to sizable gains: Bengal rose from Rs. 380 to Rs. 398, North Beerbhoom from Rs. 22.87 to Rs. 24.56 and Selected Sctgram from Rs. 129 to Rs. 135. Among Jute, Barnagore were up from Rs. 180 to Rs. 196, Kelvin from Rs. 203 to Rs. 207, Reliance from Rs. 7.75 to Rs. 9.69, Union from Rs. 185 to Rs. 188 and Fort Gloster from Rs. 453 to Rs. 469. But others showed small losses. Bengal Paper moved up from Rs. 35.12 to Rs. 35.19 and Straw Products from Rs. 10.75 to Rs. 11.37, but Sirpur declined from Rs. 16.37 to Rs. 14.87. The miscellaneous section showed small wide-spread losses, and some of the Engineering issues were shaded. Other sections were dull.

* * * *

In very limited turnover, the Madras Stock Exchange displayed generally an easy tone, with Textiles bearing the brunt of liquidation. Some Plantings rallied, as an exception. Thus, among Cleared shares, Madura declined further from Rs. 38.20 to Rs. 37.75 and S.I. Viscose from Rs. 188 to Rs. 183.50, but Lakshmi gained a point to Rs. 167. Among Cash scrips, Travancore Rayon lost one point at Rs. 42.50, Bangalore Woollen two points at Rs. 243 and Cannanore one point at Rs. 132. Coimbatore Spinning eased from Rs. 82.50 to Rs. 81 and Dhanalaxami declined further from Rs. 240 to Rs. 237. But Coimbatore Pioneer rose from Rs. 296.50 to Rs. 300. Among Plantings, Kil Kotagiri improved from Rs. 4.95 to Rs. 5.10, Parkside from Rs. 22.73 to Rs. 23 and Peermades from Rs. 20 to Rs. 20.40, but Chembra eased from Rs. 3.62 to Rs. 3.55 and the Cleared shares Blue Mountain and Periakaramalai lost 10 nP at Rs. 2.47 and 4 nP at Rs. 3.48, respectively. In other sections, Consolidated Coffee and Deccan Sugar were both 10 nP lower at Rs. 18.90 and Rs. 10.15, respectively. In the Miscellaneous section, while the Cleared shares showed small changes, W.I. Products declined from Rs. 215 to Rs. 205, Textools from Rs. 183 to Rs. 179 and Madras Rubber from Rs. 24.86 to Rs. 24.50.

CAPITAL MARKET NEWS

NEW ISSUES

PRABHAT Udyog Ltd., Bombay, which is entering the capital market next week, has a running project to be immediately expanded, which, in all probabilities, would bring in a reasonable return to the public on its investment in the very first year of the Company's working. The Company has taken over as a going concern Prabhat (Stove and Lamp) Products Co. (Private) Ltd., incorporated on 1st May 1957 to take over the business of a partnership firm, Prabhat Products Co., which was started in 1938. The private limited company manufactured at its factory in Jogeshwari, about 12 miles from Bombay City, pressure stoves and lamps, gas mantles and other specialised allied articles. Its production during 1961-62 was 250,000 stoves, 48,000 lamps and 60,000 gross gas mantles. The new Company proposes to expand this capacity immediately, which, during 1964-65, is expected to rise to 500,000 stoves, 100,000 lamps and 100,000 gross gas mantles per annum on two-shift basis. In addition, it is to manufacture 100,000 non-pressure stoves during 1964-65 and is negotiating collaboration with a well-known foreign firm for the manufacture of liquid gas stoves. The collaboration agreement is expected to be signed within a couple of months and the production of the stoves would be taken up next year. Sales realisations during 1961-62 totalled Rs. 84.37 lakhs and are expected to be Rs. 225 lakhs during 1964-65. The profit after taxation was Rs. 4 lakhs in 1961-62. It is expected to rise substantially in future, because, apart from other things, the Company is to convert the present semi-automatic machinery into fully automatic one and install additional plant and machinery, which would reduce costs on a larger production.

The expansion programme will make Prabhat Udyog the largest manufacturer of stoves, lamps and gas mantles in the country. At present, it is enjoying a fully protected market, accounting as it does for 25 per cent of the country's production of these goods. Its products, manufactured according to the I.S.I. specifications, enjoy a great reputation.

The Company has an authorised capital of Rs. 3 crores in equity shares of Rs. 100 each, of which Rs. 60 lakhs are being issued. The promotors, Directors, etc., are taking up 600 shares, whereas 30,000 shares are to be offered partly in consideration of the purchase price (Rs. 7.20 lakhs) of the private limited company and partly in repayment of loans and advances (Rs. 22.80 lakhs) to that company. The balance of 29,400 shares are being offered to the public, the subscription lists for which will open on 30th inst., and close on 9th June 1962, or earlier, but not before 2nd June.

Another company to be in the market next week is the **Asiatic Oxygen Ltd.**, Calcutta, promoted by the Asiatic Oxygen and Acetylene Co. Ltd., also of Calcutta and engaged in the industrial gas business. It is issuing 15,99,993 equity shares of Rs. 10 each at par (in addition to 70 shares already issued) out of an authorised equity capital of Rs. 175 lakhs and preference capital of Rs. 25 lakhs for its Rs. 374.10 lakhs project for the manufacture of industrial and medical gases, welding electrodes, welding and cutting equipment and arc-welding transformers in collaboration with some leading American manufacturers in these lines. In addition to the share capital issue, the Company is taking a loan of Rs. 150 lakhs from the Industrial Finance Corporation of India, and bank borrowings of Rs. 50 lakhs to meet the capital outlay on the project. Out of the present share capital issue, the Directors, their associates and friends are taking up shares worth Rs. 41.40 lakhs, and Air Products and Chemicals Inc., U.S., one of the collaborators, worth Rs. 25 lakhs. The shareholders of the promoting company will be allotted 2,66,000 shares credited at par as fully paid-up in exchange for the ordinary shares in that company. The balance of 670,000 shares are being offered to the public, and the subscription lists for these will open on 31st May 1962 and close either on 9th June or 4th June.

The Company has been attracted to put up its project by a steep rise in the demand for industrial gases since 1956 due to industrial development under the five-year Plans, particularly the increase in production of steel and the rapid growth of engineering industries. Besides, the supplies of the other products it proposes to manufacture are limited due to restricted imports. The promoting company has been manufacturing industrial gases since 1942. It has a factory at Calcutta for the manufacture of oxygen and dissolved acetylene gases, to which has recently been added a new single unit with a capacity of 7,000 c. ft. per hour of oxygen and the corresponding acetylene capacity. It has another factory at Bhilai for the manufacture of dissolved acetylene gas, to which it is proposed to add an oxygen unit. In 1960-61, the company paid a taxable dividend of 40 per cent per annum.

Asiatic Oxygen proposes to establish industrial and medical gas manufacturing units, to begin with, at Bombay, Madras, Rourkela, Durgapur, Patna and Gauhati, and have an initial production of 176.4 million c.ft. of oxygen and 45.6 million c.ft. of dissolved acetylene per annum. The production is to commence within one year. Air Products and Chemicals Inc., U.S., is providing the technical collaboration. The Company has been licensed a capacity of 36 million feet per annum on a single-shift basis of coated and uncoated electrodes and has been permitted to work double shift and has accordingly aimed at an initial production of 65 million feet. A factory will be set up at Calcutta. Metal and Thermit Corporation, U.S., is providing the technical collaboration. The Company also proposes to establish its factory in Calcutta with its electrodes undertaking, for the manufacture of welding and cutting equipment and arc-welding transformers in collaboration with KGM Equipment Co., U.S. (a division of Air Products and Chemicals) and Westinghouse Electric International Co., U.S.

ORIENTAL POWER CABLES

Subscription lists for the public issue of 53,000 equity shares of Rs. 100 each and 27,000 9.5 per cent. taxable, cumulative redeemable preference shares of a like denomination by Oriental Power Cables Ltd. (to which a reference was made by us in these columns last week) have opened this week. The salient features of the Company's project are: (1) The manufacture of high tension paper insulated power cables, with an annual capacity of 600 miles. (2) Even after taking into account the capacity already licensed in this line, demand for power cables in the country would be ahead of supply for a long time to come in the light of the rapid industrial development and urban and rural electrification in the country; in other words, the market for the Company's products is well assured. (3) The factory of the Company is to be located at Kotah, Rajasthan, where, unlike in some other States, electric power is not scarce, there are many more schemes for power generation, there is increasing industrial development, and all this, in turn, means an ever-increasing demand for power cables. Besides, the factory would be quite close to the public sector heavy electricals project at Bhopal. (4) The Company has secured the technical collaboration of Messrs. Sumitomo Electric Industries Ltd., Japan, a leading cable producer in the world and the largest in Japan.

Notice

THE HAILEYBURIA TEA ESTATES LIMITED

KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, Kerala State, on Monday the 18th June, 1962, at 4.30 p.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1961, to declare a Dividend, to elect a Director, to elect Auditors and to fix their remuneration, etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 11th June to 18th June, 1962, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents

KOTTAYAM, 21st *May*, 1962.

NEWS IN BRIEF

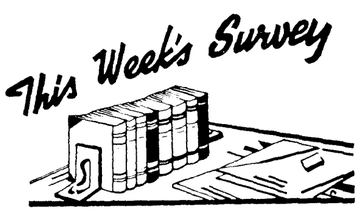
THE third blast furnace of the Durgapur steel plant was commissioned last week-end.

About 3,000 kilolitres of pure benzene produced by the public sector steel plants were shipped to the U.K. from Calcutta last week.

A second State Trading Corporation is proposed to be set up for dealing exclusively with purely agricultural commodities like oilseeds, cashewnuts and pepper.

The Engineering Manufacturers' Association, Ahmedabad, has announced that its member-factories will close down from Friday 1st June until coal supply position improves.

The Government of India proposes to ask the Industrial Finance Corporation, which is now administering funds for industries in the private sector, to start from 1st July 1962 with loan facilities to exporters



A MODEL RETIREMENT SCHEME

IMPERIAL Chemical Industries (India) Private Ltd.—I.C.I., for short—and its two associated companies in India, namely, the Indian Explosives Ltd. and the Alkali and Chemical Corporation of India, have added another attraction to the service conditions offered to their employees. This is a non-contributory pension scheme which will benefit 5,500 employees belonging to the non-management staff. The pension is in addition to the two existing retirement benefits, namely, provident fund and gratuity. Together they make the I.C.I. retirement benefit scheme one of the most liberal arrangements in force in any undertaking in the country.

The scheme, according to the Company, "aims at lessening the employee's psychological and economic fears associated with retirement by ensuring him a regular monthly income, besides giving him in hand the capital sum under the provident fund and gratuity schemes. The I.C.I. scheme will provide a pension, which, together with the annuity value (at the L.I.C. rates of annuity) of sums received under the provident fund and gratuity, will approximate 50 per cent of an employee's earnings, consisting of basic pay and dearness allowance, during the seven years preceding his retirement. The minimum pension guaranteed is Rs. 45 per month for general staff and Rs. 20 for subordinate staff and hourly-rated workers. No maximum has been stipulated and all members of non-management staff, who have 20 years' service to their credit, irrespective of scales of pay, are covered under the scheme. Pension will also be considered even where the employee is prematurely retired for reasons of health or other circumstances, provided he has put in a minimum service of 20 years and the retirement is within five years of the normal age of retirement. The scheme takes retrospective effect from 1st January 1961.

Very few firms in India have a triple benefit scheme of this type. I.C.I's generous gesture goes to show that it is not official proddings and legislative compulsions that ultimately make the employers care for the workers but a sense of responsibility and gratitude to their men.

WORLD TOBACCO OUTPUT

The world output of tobacco (excluding Russian and Chinese) in 1961 was down by about 17,000 tons at a little over three million tons, as compared with the previous year, according to a recent study of the U.N. Food and Agriculture Organisation. The decline in output was the result of a sharp setback in Western Europe, where production had been steadily increasing during the last few years, as also in the Near East and North Africa. Although there was some increase in output in North and South America, it was not sufficient to compensate for the fall elsewhere. The halt in the growth of European tobacco output was the result of widespread attack of blue mould pests in the major producing centres last year. The prospect of a recovery in production in Europe during the current year, however, is quite bright, particularly in view of the fact that several European growers are reported to be switching on to mould-resistant seeds, recently developed in Australia. There is, therefore, nothing to suggest the possibility of any easing of competition in world markets. It is, however, significant to find that consumption of tobacco products has been increasing, not only in Western Europe and North America, but also in the developing countries, despite the grave warnings by medical experts on the deleterious effects of smoking on health.

These advances in consumption in recent years have not been matched by increase in world trade, mainly as a result of increase in domestic output in most of the countries. There are also other equally important reasons for this trend, namely, increasing tariff protection in some countries and also new production techniques designed by cigarette manufacturers to save their consumption of tobacco leaves. World trade in tobacco last year, however, was an exception in that it was at a much higher level than in previous years, thanks mainly to increasing demand from Western Europe necessitated by the decline in domestic production. The Common Market importers were also absorbing more, in order to increase their stocks in anticipation of the introduction of higher imposts on imports in the event of the introduction of a common external tariff. Besides, the U.S. exports of tobacco to developing countries under Government-financed programmes were also higher.

The trend in production and exports of Indian tobacco showed much divergence from the general world trend last year. According to the F.A.O. study, the output in India rose by 6 per cent in 1961. In the 1960-61 crop year, the latest year for which official estimates are available in the country, the output touched 294,000 tons, which compares favourably with 281,000 tons in 1959-60. The increase was mainly on account of extension of area under cultivation. But the increase in production was not accompanied by a rise in exports. Actually, they had suffered a setback. During the eleven months ended February 1962, for instance, exports of raw tobacco amounted to only Rs. 10.13 crores, or an annual average of Rs. 11 crores, which compares unfavourably with about Rs. 16 crores in 1960-61 and Rs. 15 crores in 1959-60. Thus, it is clear that India was not able to share in the larger import demand generated in Western Europe. The long-term prospects for Indian tobacco, however, are by no means bleak, provided efforts are made to cultivate more of superior varieties of tobacco and to raise the yield per acre.

LANCASHIRE AT IT AGAIN

The pressure tactics adopted once again by the British cotton textile industry to get Government intervention in regard to imports from Commonwealth countries are rather disquieting. Nineteen delegates, representing all sections of the industry, including trade union leaders, met the Prime Minister and the Board of Trade President last week and urged with one voice imposition of further restrictions on imports of cotton textiles. The demand made by the delegation, which was led by no other than Lord Rochdale, the energetic Chairman of the Cotton Board, was brief and straight to the point. It said: The Government must assume responsibility and renew the voluntary ceiling agreements with India, Pakistan and Hong Kong —the agreements are due to expire at the end of December next—the renewal being on the basis of actual imports at present. A specific suggestion was put forward to the effect that the agreements should provide for separate categories of grey, finished and made-up goods, to be imported on the basis of present performance. The current level of imports, it may be noted, is virtually on the level of 1959 when the reorganisation scheme was accepted by the industry. The British Prime Minister is reported to have promised to give careful thought to the representation.

If the aforesaid plea were accepted, there would doubtless be a considerable reduction of present ceilings (195 million square yards for India, 42.4 million square yards for Pakistan and 184 million square yards for Hong Kong). For, in contrast to the high level of exports last year, there has been a sharp contraction since the beginning of this year as the following figures will show:

(In million square yards)

	First quarter of	
Exports from—	1962	1960
India	44.99	62.57
Pakistan	0.20	5.14
Hong Kong	14.78	20.16

While it is somewhat doubtful whether the British Government, which has all along favoured only voluntary understanding, will itself be a party to the ceiling agreements, any unilateral action either by the Government or by the industry is bound to injure the trade and the friendly relations existing between the British industry and its Commonwealth counterparts. A clear warning to this effect has been given by Mr. Kasturbhai Lalbhai, who it is that played the leading role in the negotiations that led to the voluntary Indo-U.K. textile ceiling pact. Mr. Kasturbhai is reported to have said in the course of a Press interview:

"It is unfortunate that the Lancashire textile industry should now press the U.K. Government to reduce substantially the imports from India and other countries which are parties to the agreements restricting exports to the U.K. In 1957, the Lancashire textile industry approached the Indian cotton mills to accommodate it by restricting the exports of cotton cloth. Lord Rochdale would readily agree that the attitude of the representatives of Indian cotton mills had been sympathetic, co-operative and accommodative. It is doubtful whether any understanding could have been reached with the representatives of the textile industries of other countries but for the co-operative attitude of the Indian textile industry. The demand of Lancashire textile interests that the present ceiling should be revised on the basis of actuals for the first three months of 1962 is not only unjustifiable but also contrary to the spirit in which the previous negotiations were conducted."

These observations may be said to represent the basic approach of the majority of Indian cotton textile interests, although a minority opinion, which concurs with to put up of this journal, is that there never demand for is any need for a ceiling agreement dustrial devetary or inter-Governmental. Lancas particularly move abundantly justifies the criti rapid taken by this journal on the first pact negoes to by Mr. Kasturbhai Lalbhai and Mr. Nevilleorts, Wadia. It was then hoped by them that the restrictions agreed to would be only for a short period and that they would be abolished thereafter. Instead, their British confreres are now asking them to accept further restrictions. This is a typical instance of British diplomacy. The British textile interests apparently ignore conveninetly the acute foreign exchange difficulty of India which can be solved only if no hindrances are placed in the way of exports of traditional items such as cotton textiles. It is a pity that the British textile interests should have overlooked the point that any curtailment of textile exports from India will automatically reduce its purchases of goods from the U.K. They also do not seem to remember the spirit of the understanding reached at Geneva early this year under the auspices of the G.A.T.T. They have no justification whatever for attempting to invoke the escape clause in this agreement, as there is still overfull employment in Britain, as Lancashire mills themselves are suffering from shortage of labour and as Britain has no balance of payments difficulties now. Both the millowners and the Central Government of this country should take care to see that they do not, once again, play into the hands of wily Lancashire millowners.

GENERAL INSURANCE

In spite of the existence of a voluntary Code of Conduct and the general recognition among insurers that rebating and other malpractices are undesirable, it is no secret that such malpractices are quite common. Attempts to put a stop to them have not met with much success so far, because they have been largely half-hearted and did not go to the root of the evil. The malpractices are the direct result of a state of affairs in the trade which is not conducive to the healthy growth of insurance, namely, the existence of a large number of companies competing for a limited volume of business which has failed to keep pace with the growth of industrialisation. This had led to a scramble for business through adoption of many undesirable practices, of which rebating is only one. For the smaller fry, it is an effective means of competing with the larger companies and the latter too find it a convenient means of attracting new business or keeping the existing business.

The approach of the Controller of Insurance to the problem of rebating is wrong, because it is based on the assumption that rebating springs from the existence of a large profit-margin fo the companies which enables them to bear th burden of unauthorised reduction in premiu The fact that successive reductions in premiu brought about at the instance of the Controll of Insurance, have failed to curb the evil, muc less obliterate it completely, indicates that th fault lies elsewhere. It is true that a reductio in premium rates does make rebating impin more heavily on the finances of companies b as long as the short-term attractions of rebati persist and the state of the insurance market mains what it is, the malpractices are bound continue. They can be wiped out only in situation in which each company has respecta premium base. In the present state of devel ment of the market, there is not enough bu ness to go round for the vast number of co panies operating in India. Only if the sma companies are merged to form economica viable units, having a sizable premium incor will it be possible to eliminate rebating.

It is, however, possible to minimise it, p vided the Code of Conduct among insurers rigidly enforced. It is common knowledge that, barring the provision regarding the advance payment of premium before the assumption of risk, the Code is more honoured in the breach than in the observance. The Administrative Machinery of the Code has not been able to ensure that the Code is strictly adhered to. The latest move of the General Insurance Council to bring about an effective enforcement of the Code is, therefore, a step in the right direction. The Executive Committee of the General Insurance Council, at a meeting held at Simla a few days ago, has decided to take drastic steps to end rebating and other malpractices. One of the measures proposed is the appointment of a cadre of inspector-accountants to examine the receipts and payments of every insurer with a view to detecting elements of rebating in the day-to-day transactions of insurers. All transactions entered into on or after 1st July 1962 will be scrutinised by the said inspectors. This is also the date on which the reduced premium for fire insurance comes into effect. The reduction in premium rates, coupled with more effective inspection of accounts in accordance with the Code of Conduct, are expected to reduce rebating considerably.

The Administrative Machinery of the Code of Conduct will also be the approving authority for the appointment of field staff. This is to prevent companies from luring one another's staff by offering higher remuneration. The inspector-accountants will be appointed by the Administrative Machinery of the Code and their salaries will be paid from a common fund to which all insurers will contribute 0.5 per cent of their direct premium income written in India. To begin with, it is proposed to appoint 25 inspectors. Any loss of business that might result from enforcing these measures will be compensated from a pool of mutual assistance to be created. Each company will be asked to contribute 3 per cent of its gross direct premium written in India to the pool. It will be distributed among the companies losing business on account of the measures according to a sliding scale which will be weighted in favour of small companies. Thus, a company with a gross direct premium written in India of less than Rs. 20 lakhs, will be paid compensation equal to 110 per cent of the shortfall in premium resulting from the reform measures in the first year, 85 per cent in the second year and 55 per cent in the third year. No compensation will be given after the end of the third year from the date these provisions come into effect. The percentage of shortfall to be covered by the subsidy in the case of companies in the Rs. 20-Rs. 50 lakhs premium range will be 100 in the first year, 75 in the second and 50 in the third and in the case of companies having a premium income of more than Rs. 50 lakhs, the percentage will be 75 in the first year, 55 in the second and 33.50 in the third.

This provision is obviously made to cushion the impact on companies of sudden loss of business consequent upon the rigid enforcement of the Code and thereby to make the proposal acceptable to all insurers. In fact, the insurers concerned are reported to be willing to accept the proposal. They would appear to think that some such steps are necessary if the unsatisfactory state of business is not to continue.

The provision for the creation of a pool of mutual assistance for a period of three years is meant to overcome the possible opposition of the smaller companies. During this period, they are expected to adjust themselves to the new regulations, so that, at the end of it, they will have to fend for themselves. The most ticklish problem in this arrangement is this: how to prove that the fall in business is due to the new reform measures and to the slackness of the companies themselves in canvassing business? Since it will be difficult to draw a line between loss of business arising from the reforms and other factors the mutual assistance contains an element of premium on inefficiency. This drawback apart, the whole move reflects the readiness of insurers to get together in order to clean their Augean stable before the Government takes it into its head to get that job done under compulsion.

ALKALI INDUSTRY

The alkali industry, with its twin sectors producing caustic soda and soda ash, provides basic ingredients for the manufacture of a wide range of important chemicals. Caustic soda, for instance, is consumed in substantial quantities by paper, rayon, petroleum and hydrogenated oil industries. Similarly, soda ash is required by glass, bichromates and silicates industries, besides laundries and washermen. The alkali industry as a whole has made steady progress in recent years, although it has not been able to match fully the fast growing requirements of consuming industries. The total annual installed capacity of caustic soda has risen from about 58,000 tonnes in 1958 to 97,000 tonnes in 1961, with a corresponding increase in output from 58,000 tonnes to 97,000 tonnes. The capacity for soda ash has almost doubled, that is, from about 110,000 tonnes to 216,000 tonnes, with a consequent rise in output from 90,000 tonnes to about 200,000 tonnes. The increasing tempo in the growth of the industry has been induced largely by tariff protection, severe import restrictions in the face of growing demand and, above all, by the initiative and enterprise shown by the industrialists concerned. But, in spite of all these, the industry has failed to ensure self-sufficiency by 1961, as originally planned. The only refreshing exception is the light variety of soda ash, the output of which is now sufficient to meet the entire domestic demand.

Mr. Shriyans Prasad Jain, President of the Alkali Manufacturers' Association of India, in his address at the annual meeting of the Association, held at Bombay last week-end, attributed the industry's failure to reach the goal to "a variety of reasons," particularly the rapid expansion of the consuming industries, and to some delay in installing additional capacity. Alluding to the observations of the Tariff Commission on this point, Mr. Jain pointed out that, in respect of caustic soda, in particular, the country would not be able to achieve self-sufficiency even by 1964. Considering the urgency of stepping up production of alkalies as fact as possible, Mr. Jain's plea to release adequate foreign exchange for installing additional capacity in the industry sounds quite pertinent. He was of the opinion that, if the existing units were allowed to expand, the relative needs of foreign exchange would be small. In view of the shortage of foreign exchange, this is indeed a very important consideration which deserves to be recognised by the authorities.

One of the major difficulties facing the manufacturers of caustic soda is the inadequate outlets for the by-product, chlorine, generated under electrolytic process. This problem has been a source of vital concern particularly to the largest units. Chlorine is, admittedly, a valuable industrial raw material, and the demand for it is going up, following the development of such industries as bleaching powder, paper, polyvinyl chloride, polyethelene chloride, certain fertilisers, insecticides and pesticides. Only, the demand for chlorine has been growing less rapidly than that for caustic soda, with the result that there has been a wastage of surplus chlorine. It will take considerable time before outlets can be created for taking up all the available chlorine. Mr. Jain's suggestion was that excess chlorine could be used for the manufacture of ammonium chloride fertiliser, provided liquid ammonia was made available to the industry at "reasonable rates" from the fertiliser plants. This suggestion appears to be a feasible proposition and so deserves the urgent attention of the authorities concerned.

The most serious obstacle in the way of the industry's progress relates to the fixation of ceiling prices at unremunerative levels. In the context of a rigid scheme of ceiling prices, the rising costs of production, following the increase in prices of raw materials, power, fuel, freight and packing charges, etc., has been eating into the margin of profits. The margin of earnings, Mr. Jain averred, has gone down now "even below the very modest so-called 12 per cent return" allowed by the Tariff Commission. Mr. Jain was particularly apprehensive about the prospects for soda ash industry, if the selling prices were maintained at the present level. He called upon the Government to give an *ad hoc* increase in selling prices of soda ash to offset the increase in cost of production. It may be recalled, in this connection, that the Government had actually reduced the price recommended by the Tariff Commission. This was not a fair decision and the position has deteriorated as a result of further increases in production costs since then.

OUTLOOK FOR KILLICK INDUSTRIES

For the past three years or so, when the primary trend on the stock markets has continued to be bullish, the shares of Killick Industries Ltd. are one of the few counters that have suffered a substantial capital depreciation. They lost ground year after year by making a lower top and sinking to a new bottom. In 1959, the highest level made by the Rs. 100 fully paid ordinary shares was Rs. 160.50 and the lowest Rs. 128.50; in 1960, the corresponding levels were Rs. 124 and Rs. 99.20; last year, they were Rs. 111.50 and Rs. 90; and this year, up to 18th May, they have been Rs. 96 and Rs. 83.50. Not only have the investors sustained capital loss but they have suffered also in terms of return on their investments. The dividend was 13 per cent, tax-free, in 1958, but was clipped to 9 per cent, taxable, in the following year, reduced further to 8 per cent, taxable, in 1960 and was completely skipped over last year. This sorry state of affairs finds an explanation in the steady decline in the Company's profit for the past few years. To continue the above comparison, it was Rs. 31.40 lakhs in 1958, Rs. 20.55 lakhs in 1959 and Rs. 19.23 lakhs in the next year. It, however, staged a small recovery to Rs. 24.31 lakhs last year. Taking a "realistic view" of the Company's affairs, the Directors, however, decided to conserve the recovery in profit in business rather than pass on its benefit to the shareholders. In fact, considering that the 1958 results covered a 17-month period following the change effected in that year by the Company in its financial year from July-June to December-November, the year ended 30th June 1954 was the best period enjoyed by it in the past decade, when its gross profit

was Rs. 35.75 lakhs, the return per share was 11 per cent, tax-free, and the shares scaled a peak of Rs. 200 as against the year's lowest level of Rs. 157.25.

Indeed, the position of Killick investors is unenviable, and they apparently need badly some consolation, which has luckily come from the diversification the Company has proposed, and on which some light was thrown by its Chairman, Mr. A. N. Haksar, at its annual general meeting, held on Friday, 18th May. Explaining the need for Killick Industries to branch out into manufacturing at least some of those items considered essential for the expansion programme of industry as a whole, Mr. Haksar traced the past history, when Killick Nixon and Company was originally a purely trading venture, dealing in various types of imported goods and machinery the entry of which into this country systematically curtailed by the Government to save foreign exchange and to create room for the development of indigenous industries. "It was at this stage, a few years ago," Mr. Haksar said, "that your Board of Directors had to take the decision as to whether the trading part of the business should be given up entirely, and this would have meant a drop in the earning capacity of the Company as a whole, or whether steps should be taken to go in for the manufacture of certain of the lines for which we were merely agents selling on a commission basis." Another consideration which led the Company to diversify its activities was that, being essentially a managing company, its fortunes fluctuated widely, depending more upon the operations of the managed companies and the subsidiaries. Again, the managing agency system itself has been subjected to severe restrictions and its commission substantially cut.

Accordingly, Killick Industries has set up an engineering factory for the manufacture of vibrators and pre-stressed concrete equipment and, according to Mr. Haksar, it is doing fine. It has floated Killick Caribonum Ltd., formerly Stamco Industries Ltd., to manufacture typewriter ribbons, carbon papers and other allied lines in collaboration with the world-famous manufacturers, Messrs. Caribonum Ltd., U.K. Mr. Haksar said that the new company was reaching a "break-even" point and expected it to show profit before the end of this year. The Company has recently been licensed to import the machinery for the manufacture of slotted angle and other allied products in collaboration with Dexion Ltd. of England. The product manufactured by Dexion has a flexible use from building a rack or a chair to erecting a house or a factory. The Company's market surveys have shown that there is very large demand for the product in India. The first supplies of the product will be in the market in the first quarter of the next year. Subject to the Government's approval, Killick Industries Ltd. is to be appointed Secretaries and Treasurers of a company to be set up in the country for manufacturing filter-tips for cigarettes in conjunction with Cigarette Components Ltd. of Britain.

The Company will also have a 25 per cent investment in the project. It will be recalled that the Company started last year Snowcem India Ltd., for manufacturing "Snowcem" decorative waterproof cement coatings for buildings and constructions. Mr. Haksar stated that this project was progressing beyond all expectations. With the permission of its English collaborators, this subsidiary company is increasing the range of products and extending its activities to other allied lines. The Company's project for the manufacture of industrial steel files, however, has suffered because of the difficulties in obtaining the adequate technical collaboration for which efforts are, however, being continuously made.

Killicks' smallest subsidiary, namely, A. R. Haseler and Company, has shown much better results since the take-over last year. Its main subsidiary, Killick Nixon and Company, is expected to recover this year from the loss suffered last year, because of accumulation of stocks of cloth following the slump in the U.K. market, while its shipping and clearing and forwarding departments are stated to have done far better and are showing a reasonable margin of profit this year than in the last year. Among the companies managed by Killick Industries, according to Mr Haksar, Kohinoor Mills Ltd. is expected at least to maintain this year's progress; the three electricity companies, Ahmedabad, Bombay Suburban and Surat, have a good future and might even be able to pay higher dividends next year, if the expected amendment to the laws governing the reasonable return allowed to electricity companies materialises this year; the Hingir Rampur Coal Company will benefit greatly in the next 12 months from the expansion scheme on hand; but the prospects for the Shivrajpur Syndicate Ltd. staging any important recovery hinge on the ability of that company to dispose of its accumulated stocks of manganese ore (for which it has proposed to the Government barter deals with the U.S. and Europe and has sold a fairly substantial stock under such deals) and the hope that, in the not-too-distant future, world prices of the ore would improve substantially.

All said and done, one is inclined to conclude as, indeed, Mr. Haksar had done, that the investors in Killick Industries have passed through difficult times and have been disappointed with the working of some of its units, but that, with the additions now having been made to its activities, it would prove in the near future to be a company basically with sound foundations able to pay its shareholders a decent return. What passes one's understanding, however, is that the Directors of the Company should have waited so long for diversifying its activities right when under their very nose several new ventures have reached fruition. Again, they have maintained the stress on management of the new ventures carried on by newly floated companies. Would it not have been better if the Company itself had directly embarked upon some manufacturing programme on a significant scale? The change made at present is only one of degree and not of kind.

AMERICAN LETTER

CORPORATE PROFITS TEND TO SHRINK

IS U.S. LOSING WORLD ECONOMIC LEADERSHIP?

From Our Special Correspondent

NEW YORK, 18*th May*

BUSINESS and industrial trends are mixed, but the broader measures of economic activity are tending upward, as earlier this year. Overshadowing these good points, however, is increased anxiety in the market place of the corporate profit squeeze and over the apparent unwillingness of the Washington Administration to give more than lip service to this situation.

The Gross National Product continued to rise. It reached $549,000 million in the first quarter but it was $4,000 million less than Government estimates. The American consumer, as in the past, has again been playing unexpected tricks and shown unforeseen behaviour. The rise in spending for non-durable goods which was considerable has more than offset a decline in outlays for durables.

One Weak Point

This (consumer spending) area is one of the weakest points in all American economic forecasting. Government and business spending are known factors, but consumer expenditures are not. They depend on how people "feel" at the time. And that is pretty difficult to prognosticate since the public is subject to a barrage of propaganda and opinions through a variety of news media.

As an example may be cited the annual McGraw-Hill survey on contemplated business spending. The figures are based on a poll and an underlying questionnaire. Like any other poll, it cannot cover every concern but only percentages of industries. The rest is projection which, of course, is not infallible.

This year's poll (for 1962) showed a gain for plant and equipment of 11 per cent over 1961 which is higher than Government estimates. Some quarters point with pride to these business plans which may, of course, be changed to fit contingencies. In the face of optimism, there is another school of thought among bankers, even held by the Secretary of the Treasury Dillon, that business investment is inadequate to sustain the pace of recovery.

Thus, the average consumer is faced with two diametrically opposed opinons. In this particular instance, both are honest expressions of opinion. Innumerable other instances could be cited which create confusion in the public mind. Suffice it to say that different opinions based on assumed facts, mixed with prejudices, fear and buoyancy are a healthy by-product of democracy, but the U.S. economy, like those of other countries, does not run by slide rules but is run by human beings with all that that implies.

Government Spending

Government spending on all levels is rising somewhat rapidly. On the national level, spending plans now being debated by Congress will make a balanced Budget well-nigh impossible. State and Local Governments spend 9 per cent more in 1961 than in the preceding year to a total of $51,400 million. These outlays are expected to increase by another $4,000 million this year. This accounts for more than 80 per cent of all Government outlays for goods and services in non-defence areas.

Outlays for schools, education and highways make up over one half of the total, followed by health, sanitation, general administration and civilian safety. About 80 per cent of all moneys spent publicly are raised by Local Governments and two-thirds of the highway programme is borne by the States. The balance comes from Federal contributions.

Corporate Earnings

The facts about earnings of U.S. corporations are that they are up about 30 per cent, as compared with the first quarter of 1961, but that, in the first three months of 1962, they were about 10 per cent behind the fourth quarter of last year. Both percentages are understandable. Early in 1961, the recession still cast its shadow and in the last three months final tax and profits adjustments are being made out of reserves which does not happen in the first three months of a year. In my judgment, the figures are neither too bad nor too good. Wall Street, however, thinks they are quite bad; otherwise, the stock market would not have put up such a somewhat dismal performance. In addition to cold figures available, the financial district is obsessed with a Kennedy-bear-market-psychology which is reminiscent of the days of President Roosevelt.

Outside of earnings, the cash position of corporations to current liabilities has been fairly stable, accompanied by a general rise in working capital as measured by current assets minus current liabilities.

Farm income in 1961 was good. It reached its highest level in eight years and exceeded 1960 by 8 per cent. The total was $12,700 million. It resulted from larger cash receipts from marketing, and increased Government payments and it occurred despite a $500 million rise in farm production costs.

Trade Bill

Official propaganda is now at its peak to stir up sufficient public support, so that Congress will bow to the major demands of President Kennedy's new international trade policy which, among other things, would grant him personal tariff cutting powers. Individual Senators and Congressmen fear that such power would make them less important to their constituents, naturally. Next week, timed to highlight World Trade Week, there will be an hour long television programme "Breaking the Trade Barrier" with President Kennedy and ex-President Eisenhower participating.

Recent official pronouncements have tried to link the necessity for a new trade policy with the loss of U.S. gold stocks, in the sense that the new trade frontier could halt the movement. There are, of course, no guarantees that it will, but it sounds good, since the seepage from U.S. gold stocks is of almost universal concern, because it is constantly kept in the news.

Yet, very few American bankers and businessmen really know what the problem is, because, in the past, it had never reached the present magnitude and, therefore, was never studied. Thus, there is much muddled thinking. To wit, the *American Banker* said editorially the other day that the U.S. might wake up one morning and find the dollar devaluated by our European friends; that the U.S. is slipping into the No. 2 world economic spot and the Common Market may arise as the leader.

In a mild sort of way, leading papers speak vaguely of how nice it would be to get a strong Trade Bill through Congress. Surveys are quoted that 300 key American corporation presidents are in favour of tariff cuts; that import competition has had little effect on domestic employment; that some labour union leaders also favour the Trade Bill.

Under the sponsorship of the newly formed Co-ordinating Council of Organisations on International Trade Policy, a conference was held at Washington attended by about 1,000 supporters of the Bill now before the Congress.

There is much talk about details such as escape clauses, safeguards for domestic industries, trade adjustments, the changing patterns of trade. The opponents point to the potentiality the new powers asked by the President would make him a U.S. foreign trade czar and would go beyond the Constitution. There are fears in these quarters that such powers would be used over and above the law, as he did in the steel price question in which he had no official legal position.—*All Rights Reserved.*

(Concluded from next column)

That such open injustice and such confounding of Government policy should take place is most embarrassing for the Government at present when it is facing a wave of political discontent reflected in substantial losses of votes to its political opponents particularly the nascent Liberal Party, particularly in the recent by-elections. For the first time, the thought has been openly expressed that the Liberal Party could be the means of bringing the Government down at the next General Election.

LONDON LETTER

INVESTMENTS ABROAD

RESTRAINTS RELAXED

(*From Our Own Correspondent*)

LONDON, 19*th May*

THIS week has shown two prime examples of the Government's satisfaction with the external economy of the country and the country's dissatisfaction with the Government on the approach to the internal economy. The strength of sterling has made it possible for the Government to take a major step assisting British industrial investment overseas. Up to now this investment was only allowed if there was a likelihood of a quick benefit to the U.K. balance of payments as a result. The buying of foreign securities was permitted through what was called "switch dollar accounts." These were accounts, one representing the so-called "hard" dollars and another so-called "soft" dollars—the first for American and the second for non-American securities—which provided a fund of currency which could be used for the purchase and sale of foreign securities. These two accounts are now being amalgamated. So, there will henceforth be only one account, fed by the sale abroad of overseas securities and utilised for the purchase of either the American or non-American securities.

This sweeping away of the difference between dollar and non-dollar securities is not only the final step in the simplification of Britain's external currency relationships but it is also the final evidence of the external position of the pound being strong enough not to require the distinction between hard and soft currencies—a distinction abolished a long time ago for ordinary commercial transactions.

As regards British investment overseas, that is, investment of a long-term nature, this is now to be permitted through this same switch dollar account. Obviously, this is one-way traffic: the investment by British companies abroad—and this will in practice mean mainly investment on the Continent—will deplete the switch dollar account and there will not be any corresponding inflow. If the position of sterling remains as strong as at present, there seems no reason why the switch dollar accounts should not finally be abolished and investment abroad allowed to take place on the same basis as the importation of goods: the control on this investment is the last control over the free use of sterling which remains.

Public Unhappy

But, if the Government have felt happy in making this further relaxation on U.K. investment overseas, they have been made distinctly unhappy by the public reaction to the way they have been handling two recent major pay claims. The Government has, of course, laid down a general ruling that pay claims should not exceed the general increase in the level of productivity which they put at 2½ per cent per annum. In the face of a threatened strike of dockers, the Government conceded an 8 per cent increase in dockers' pay. At the same time, they have turned down the nurses' request for an increase in their still somewhat pitifully low rates of pay.

It is true that the Government cannot directly determine the dockers' pay since the dockers are the employees of private organisations or corporations whereas they directly control nurses' pay since the nurses are public employees. But the ordinary man cannot be expected to accept as a good argument that different standards of justice should be applied according to whether the worker is a private or a public employee.

The Government is, of course, very concerned to avoid a dockers' strike which could have a damaging effect on exports and it was the function of the Minister of Labour to try and bring employers and employees together. The Minister has claimed that he has been neutral and has held the ring for a settlement. But the very fact that such a settlement has taken place with the employers conceding a substantial pay rise (which they will not proceed to recoup through higher dock charges) and without the Government making a public protest to the employers is only seen as evidence that the weight of the big Unions can force a policy through even if it is against the Government's avowed intentions.

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial insurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

INDIA'S ECONOMIC DEVELOPMENT

FINDINGS OF ANOTHER WORLD BANK MISSION

NEARLY one year and two months have elapsed since the third Five-year Plan commenced, but the progress actually made in the implementation of the various projects has not been quite encouraging. Indeed, it may not be wrong if it is said that the third Plan as such has still not begun, the current tempo of activity pertaining largely to the spill-overs of the second Plan. How else is one to explain the low level of production particularly in the field of coal, power plants and other industries which are of vital importance to the growth of the country's economy as a whole? Many projects have not been started at all, thanks to shortage of one crucial thing or other. It looks as though the Plan, as at present formulated, will be carried out only in parts if, on the one side, the planners and the powers-that-be do not hesitate to take "difficult decisions" as to priorities and, on the other, the friendly countries abroad do not provide adequate assistance. This assistance, if it is not to be a heavy burden on India, will have to be in the form of long-term loans, repayable after 30 to 40 years, and carry relatively low rates of interest. In a few days from now, the members of the Aid-India Club will be meeting to discuss the question of rendering further aid to the third Plan. It is to be hoped that the meeting will yield tangible results on these lines.

Viewed against the background of the forthcoming meeting of the Aid-India Club, the latest report on Indian economy submitted by the high-powered World Bank Economic Mission headed by Mr. Robert Sadove is a timely and useful document. Although the full text of the report is not available at the time of writing, the excerpts therefrom published in the daily Press indicate that this report also, like the report of the three distinguished leaders of the American, British and West German financial worlds submitted to the World Bank some time in April 1960, is notable not only for the refreshingly candid observations on the various aspects of the Plan but also for the forthright suggestions made to improve the prospects for its successful implementation.

Where the Plan is Still Weak

The World Bank Mission has pinpointed the fact that where the third Plan is still weak is in the detailed phasing of programmes and projects over time. In particular, two serious defects have been highlighted. The first is the lack of technical planning and preparation which, we are told, has sometimes resulted in much less than the optimum benefits being obtained from the capital invested, especially in such industries as iron and steel, petroleum and fertilisers. Two, the present machinery for co-ordinating the investment programmes of the different Ministries is not as effective as it should be, as shown, for example, by the difficulties over coal transport. The Bank Mission certainly minces no words when it avers that the practice of planning in five-year periods carries with it the danger—only too apparent in some sectors of the Indian economy—that "there will be a hiatus in the start of new projects towards the end of one Plan and a bunching of new sectors at the beginning of the next, resulting in the uneven growth in production." It does welcome the planners' awareness of inherent limitations and uncertainties of five-year planning, but makes it clear that these uncertainties afford no excuse for trying to avoid taking difficult decisions as to priorities. In this connection, the Bank Mission points out that, very likely, some of the projects which will actually be started only towards the end of the third Plan, have not even been conceived and that others, now included in the Plan, will have to be deferred or eliminated to make way for the former.

The most serious limitation to the successful implementation of the third Plan relates to foreign exchange. Attention is drawn to the "large build up" of projects waiting for the signal to go, which is reflected in the bunching of new orders in the first two years of the third Plan, particularly in power and industry. The total of new overseas orders for projects to be placed during the Plan period, including projects spilling over into the fourth Plan, is tentatively estimated by the Government at just under Rs. 2,200 crores, of which 40 per cent (Rs. 835 crores) pertains to 1961-62 and over 25 per cent (Rs. 578 crores) to 1962-63. As the Bank Mission says, many of these projects could have been started already if it had not been for foreign exchange restrictions and the delays incurred on this account have had, in some instances, unfortunate repercussions on the growth of the economy as a whole (for example, in the case of certain coal washeries and power plants). Significant, indeed, is the emphasis laid by the Mission that, if development is to proceed smoothly, it is essential that a repetition of this situation should be avoided and that, within the framework of the third Plan, India should receive adequate long-term assurances of external assistance to enable the Government to proceed with the placing of orders in advance of the firm commitment to finance them. The present reserves, as the Mission says, are unquestionably below the level where they can be considered as resources for development. The chances of an improvement in reserves are bleak. On the contrary, there may be a further reduction, for, while imports cannot be substantially reduced without cuts in maintenance imports required for full utilisation of domestic productive capacity, the estimates for project imports have risen, and the demand for non-project imports appears likely to be a good deal higher than the earlier estimates, the scope for earning more by way of exports is rather limited. The Bank Mission has cited three factors as being responsible for the export problem, namely, relatively static demand for India's major traditional exports, continued import restrictions particularly by countries in Western Europe, and lack of an aggressive drive on the part of the Indian Government and business community to find or develop export markets.

The Export Task

It is significant that the Bank Mission, too, has bracketed the business community with the Government for the failure on the export front. It has, of course, taken note of the proposals (under consideration) to increase physical availabilities for export, including fiscal measures to restrain domestic consumption and the move to set aside for export a proportion of production of various industries. The report is quite right when it says that, though supply is important in general, the problem is more on the side of demand and of export sales promotion. And it certainly strikes a note of realism when it declares that, in view of the higher import requirements now foreseen, it is clear that the Plan as at present formulated cannot be carried out in full—even if India received the entire amount of aid requested—unless additional exchange resources are obtained from export earnings. It does not deny the overriding importance of import-saving investment in an economy such as India's. Nor does it underrate the intractability of export problem. Only, it seeks to emphasise, and rightly so, that India cannot reach viability without a very large increase in export earnings.

Agriculture

The Bank Mission's assessment of the progress made in the sphere of agriculture depicts the following trends:

The increase in production appears to reflect an underlying upward trend to which the various agricultural programmes of recent years have contributed. There is no break through on the agricultural front; the production is only marginally better than that of 1958-59. This level has, however, now been established as definitely within the capacity of Indian agriculture even without specially favourable weather. What is even more significant is that the increase has been achieved with appreciably lower quantities of nitrogenous fertilisers than originally envisaged. The marketable surplus of the 1960-61 crop is estimated at 32 per cent in the case of rice and 33 per cent in respect of wheat. Somewhat increased availabilities of consumer goods are believed to account for some of the improvement in marketable surplus, but the pattern of consumption in rural areas is also changing. The money earned by the farmer appears to be going not only in consumer goods but also increasingly in producer items such as fertilisers and farm implements, though evidence on this score is not conclusive.

The Bank Mission is, however, rather sceptical regarding the overall targets for food and other agricultural crops, in view of the continuing delays in the programme for domestic fertiliser production. It, therefore, calls for greater efforts on the part of most State Governments in the field of soil conservation and minor irrigation, as well as a definite programme for stabilisation of agricultural commodity prices.

Industry

The trends in industrial development are summed up as follows:

The index of production definitely understates the progress made. Many new industries are given low weights in the index compared with the traditional industries, or are not included at all, because they came into existence since 1951, and it is precisely these industries which have, over the past year, recorded the most spectacular increases. Production gains have been particularly impressive in machine tools, diesel engines, electric equipment and light engineering industries, as well as heavy chemicals and chemical intermediaries. The level of production in several of these industries has already exceeded the second Plan targets. Only a moderate expansion has occurred in the production of mill-made cotton cloth, but the production of consumer durable goods such as sewing machines, bicycles and electric fans has risen sharply, while refrigerators, automobiles, motor cycles and scooters have shown phenomenal increases. The increase in industrial production has been achieved despite import restrictions, an acute shortage of raw materials, transport and power bottlenecks, and continued licensing and other controls. There are grounds for believing that the import content of domestic production has declined, in view of the fact that maintenance imports have continued to be drastically restricted during the last year, while industrial production was rising more rapidly than at any time since the beginning of the first Plan.

The World Bank Mission is quite optimistic about the fulfilment of the internal resources targets, though the optimism is subject to the qualification that "a sufficiently vigorous and sustained effort is made over the five-year period." It is in this context that the Mission has commended the "vigorous lead" given by the Union Finance Minister in what is called the "obligation of resources for the third Plan." "Throughout, the target for 1961-62," to quote the Mission, "is responsive to the needs of development. The new tax measures not only restrict consumption but also include specific concessions to encourage investment and to stimulate exports." Incidentally, it would appear that the Bank Mission's report was prepared before the tax proposals for 1962-63 were announced. If regard is had for these proposals, it would be seen that the Union Government is making sustained efforts to raise internal resources, according to Plan.

A notable finding of the World Bank Mission is that, though there has not been any avowed change in the policies embodied in the Industrial Policy Resolution, there has been in its application increasingly pragmatic use of the flexibility provisions which allow private enterprise, where national interests dictate, to enter or expand into fields otherwise reserved for the public sector; some of these changes in application which effect programmes in the third Plan have been quite significant. Take, for instance, coal. The Government has removed restrictions limiting establishment of new private coal mines to areas contiguous to existing works. It has also given the explicit assurance that there will be no ceiling on private coal production during the third Plan. Apparently, the Government is pessimistic about the performance of the public sector coal projects. Here is what the World Bank Mission says:

"The likelihood that the public sector will reach its target of three and a half times the 1960-61 level of production is remote. A large part of the new production must come from new mines to be developed in entirely virgin areas, including a much larger proportion of deep mines, and under more difficult mining conditions than in the second Plan. It is certain that substantial foreign technical as well as capital assistance will be needed, and the Government is now considering offers of technical assistance from several countries, particularly for the development of new deep mines and the organisation of central workshops."

Taking note of the developments on the steel front, the Bank Mission draws attention to the absence of any provision for "private" expansion in basic steel, but appreciates the increase in the provision for alloy steel capacity and the inclusion of proposals for additional private pig iron capacity. On fertilisers, the Mission is of the view that production undertaken by the private sector during the third Plan may actually exceed the 200,000-ton figure. This, however, is not the view of the Government of India. According to Mr. C. Subramaniam, Union Minister of Heavy Industries and Steel, the private sector is lagging behind in implementing the projects allotted to it and the target fixed for it may not be reached in time. Since fertilisers are of utmost importance for stepping out the productivity of agriculture, it will be worthwhile to quote below the relevant remarks of the Mission:

"The effectiveness of inducements to the private sector in this area remains to be seen. It appears that, in the past, the Government has, in fact, been inhospitable to private sector proposals in the field of nitrogenous fertiliser industry, apparently feeling that the urgency of increasing agricultural production in the country invests fertiliser with a public interest calling for it to be produced in the public sector. Private investors, on the other hand, have been shy about entering the field, because they would have to operate under various direct controls, including the requirement to sell the product at a fixed price to the central pool. It is understood that the Government is considering relaxation of the pooling requirements after the supply situation has substantially eased. This would presumably take several years. . . . The programme for expansion of nitrogenous fertiliser production is still being developed. As now envisaged, it appears to have certain shortcomings. Specifically, the programme includes some coal-based plants despite expected availability of food stocks such as naphtha and gas in sufficient quantities to enable the third Plan requirements to be met in plants with a lower capital cost. Moreover, the location of some of the proposed plants would appear to be less than optimum from the standpoint of the burden on the transport system. The Government has recently stated that it will pay a differential price which would in fact reflect varying costs of production. This pricing formula, designed to assure private investors of a profit even on a coal-based plant, is resulting in a situation in which positive encouragement is given to such plans, even though there now appears to be sufficient naphtha for all needs."

Oil

Apropos the research for oil, the Bank Mission no doubt admits that public sector efforts have been attended with some encouraging results, but warns that the foreign exchange drain will persist, unless a much larger effort in exploration and development is undertaken. It is not without reason that the Mission states that the public sector can hardly afford such effort from its own resources and the external Government assistance now in sight. And it has done well to highlight the "little attention" given to the problems involved in adjusting the pattern of oil distribution to new sources of supply in Assam and Punjab. Alluding to the State-owned Indian oil company, it says: "This Company has neither the organisation nor the financial resources required for the job. The funds so far allocated to it in the third Plan are Rs. 5 crores, whereas it would possibly require an investment of several times the amount to provide complete facilities for the marketing of one million tons of products."

Another project about which the Bank Mission has misgivings pertains to the Bokaro steel project. It has grave doubts about the wisdom of proceeding at this stage with the Bokaro steel project. In its view, the expansion of the three existing public sector steel plants alone will impose heavy demands on transport facilities, raw material supplies, and available managerial and technical personnel. Notwithstanding official explanations, the Mission feels that the project requires "considerable further technical study." The Mission has aptly described as "misnamed and almost certainly uneconomic" the public sector project for the manufacture of a people's car.

A special reference is made to power development. The Bank Mission is inclined to believe that, even if the target for power were reached—a distinctly optimistic assumption, according to it—the supply of power was likely to fall short of what would be required to support the proposed expansion of industrial production. About nuclear power, the Mission observes: "The Government apparently still intends to proceed with the development of nuclear power, in spite of the doubts expressed in various quarters, both in India and abroad, as to the economics merits of this programme." Whatever be the doubts, India has to press on with the development of nuclear power from the point of view of the future needs of the country, especially for meeting the energy requirements of regions which are denied the sources of coal or hydro-electric power, and are far away from the coal-producing regions. Those who criticise the Government of India's determination to go ahead with the establishment of at least one nuclear power station are extremely short-sighted. In this respect, the country is certainly fortunate to have such a distinguished nuclear scientist and patriot as Dr. H. J. Bhabha.

The Six have taken an important step on the road to a common policy in the provision of export credit guarantees. A committee of experts, drawn from the Six, the E.E.C. Commission and the European Investment Bank, which has been engaged in studying this problem for more than a year, had its first report approved by the Council of Ministers. The Council has approved certain principles for incorporating into national systems of guaranteeing conventional forms of export credit. They are: 1. Guarantees are not to exceed 90 per cent of an original credit. 2. There should be a minimum delay of six months before payment of further types of indemnities wherever the debtor is a public organisation. 3. Institutions guaranteeing credits will enter into reciprocal engagements to cover sub-contractors from other member-States upto 30 per cent of the value of a contract. In June 1961, this percentage had been fixed at 25. 4. A theoretical definition of "political risk" has been adopted. In addition, a uniform system of premiums has already been drawn up as part of the new harmonisation techniques.

MORE U.S. COTTON FOR INDIA

SUPPLY STILL INADEQUATE

COMING as it does at a time when the country is faced with an acute shortage of cotton, which threatens to make curtailment of textile production, if not closure of mills, for some time, almost inevitable, the Indo-U.S. agreement, signed on the 17th inst., for the supply of 180,000 bales (of 500 lbs. or 225,000 Indian bales of 400 lbs. each) of U.S. cotton valued at $28.2 million (Rs. 13.4 crores) under P.L. 480 is more than a commercial deal. It is, indeed, a generous gesture of goodwill on the part of the U.S. towards this country. For some time, it was feared that the U.S., which was a large and dependable source of supply to India during the past two seasons, would not be able to help this country this year, because of a poor domestic crop and dwindling stocks. This apprehension steadily grew as no firm indication was given by the U.S. authorities whether it was in a position to supply cotton to India. The Government of India, it must be said to its credit, did its best to impress upon the U.S. Government the gravity of the cotton supply position in the country and to make it clear to it that this country was counting on U.S. help to avert a crisis in its premier industry occasioned by a shortage of material for reasons beyond human control. To get cotton on easy payment terms from a country, which itself is experiencing a shortage of the fibre, is, indeed, difficult and it is a tribute to the tireless efforts of the representatives of the Government of India, who negotiated the deal and, Prof. J. K. Galbraith, the U.S. Ambassador to India, who used his good offices and all the powers of persuasion at his command for the purpose, that the agreement has been signed in time so that cotton made available under it could be used by mills during the current season itself. Mr. Galbraith's own version of the difficulties of the task is as follows:

"I can safely say that no task of the past year has called for quite the time, energy and particularly the patience as that associated with finding this cotton. Needless to say, I heard at some length from Indian millowners and trade unions, who were anxious to reinforce the eloquent arguments of the Indian Government, as to the need. A major share of my time on a trip to Washington a few months ago was devoted to persuading people there of the need for this fibre and a very large share of our cable traffic has been concerned with the same subject ever since. At times, as the Indian Government officials must also have thought, it seemed we were arranging not for cotton but for the will-o'-the-wisp. Now we saw it; now we did't. It was a most elusive thing.

"But now the cotton is coming. And the lesson lies not in the time that was required but the reason. Cotton, in spite of all of its fashionable substitutes and competitors, is still a much sought after commodity. Despite all temptation, people still want to wear it. It is valuable and relatively scarce. In the years ahead, I venture to think that it will be even harder to find. It is a matter of simple prudence for countries heavily dependent on cotton textiles for employment, export income and domestic consumption to look to their domestic sources of supply of cotton as a cash crop. We have learned in the United States that, when the cash return is good, and when fertiliser and credit are available, farmers will respond. Cotton farmers are probably much the same the world around. I congratulate the Indian Government on the steps taken in the last few weeks to make Indian cotton growing more remunerative. I wish these, and whatever further steps may be taken, all success."

Problem Persists

The quantity that the U.S. has now agreed to give is only a third of what this country had asked for. It would have been better had the U.S. spared at least another 200,000 bales (of 400 lbs.), as the industry will still be faced with the problem of raw material shortage. Nevertheless, there need be no doubt that the deal has to be welcomed in the spirit of something is better than nothing. But for this timely help things would have been pretty difficult for the textile industry. It was feared that, if sufficient quantities of cotton were not available, production of cotton textiles would have to be curtailed. Some millowners had taken even a more alarmist view of the situation and had expressed apprehension that the mills might have even to close down completely for quite a few weeks for want of cotton. This fear is understandable, because, with a crop of hardly 4.2 million bales during the current (1961-62) season, as compared with 5.4 million bales in 1960-61, imports are the only alternative left to make good the shortfall in production. But in view of the acute shortage of foreign exchange and the protracted negotiations with the U.S. Government for cotton under P.L. 480, apart from the negligible quantity of mere 35,000 bales that was to be available to this country against exports of sugar to the U.S., was causing concern not only to the mills but also to the Government. After all, it is the responsibility of the Government to arrange for enough supply of cotton so that production of cloth and employment in the industry could be maintained.

Sources of Imports

Imports of foreign cotton during the period 1st September 1961 to 5th May 1962 aggregated 641,691 bales, as against 712,612 bales during the same period of the previous season, when domestic production was better by about 1.2 million bales. The following table indicates the sources of imports and the quantity imported from each country with comparison for the corresponding period of the previous season:

(In bales of 400 lbs each)

Description	1961-62	1960-61
American	276,727	524,579
Sudan	98,154	31,829
Egyptian	68,680	48,303
East African	127,685	78,175
Pakistan	50,295	2,661
Other sorts	20,150	27,065
Total ..	641,691	712,612

Search Must Continue

Of the imports thus far, the share of U.S. cotton is as much as 276,727 bales, as against 524,579 bales in the corresponding period of the previous season, that is, about half. Almost this entire quantity was licensed during the last season. The 225,000 bales to be made available under the latest agreement will go some way in meeting the shortage of cotton which is expected to be most acute during the period between the middle of September and the beginning of December 1962, that is, the early months of the next (1962-63) season. This is the time when the industry will have to depend solely for its raw materials on its own stocks.

As already said, the latest U.S. help would not solve the problem of cotton shortage. It will only make it less acute. India has, therefore, to persist in the attempt to get more cotton from the U.S., besides trying other sources. Sudan is in a position to supply cotton to India. But the main difficulty is that payment for Sudan cotton must be made in sterling. It is reported that Sudan is willing to supply cotton to India if full cash payment is made for at least 50 per cent of the cotton supplied. India is reported to have offered to buy 200,000 bales of Sudan cotton against export of textiles and sugar. Sudan's reaction to these proposals are not known but it is possible that the negotiations going on between the representatives of the Government of India and the Sudanese trade delegation currently visiting this country will prove fruitful.

India's search for cotton is rendered all the more difficult by the none-too-happy supply position of cotton in the rest of the world. According to the International Cotton Advisory Committee, Washington, world stocks of cotton will decline by one million bales at the end of the current season, as compared with the beginning of the season, to a level which will be the lowest in ten years. The reduction is due mainly to the fall in production during the current season, which will be half a million bales less than in the previous season. In four countries alone, namely, India, Egypt, Mexico and Uganda, the decline in production is estimated at 1.75 million bales (of 478 lbs. each). The worst to be hit by the shortfall is India, the crop of which has gone down by roughly one million bales (of 478 lbs. each). The second point is the rise in consumption of cotton.

The main difficulty in the way of India going in for foreign cotton, from whatever sources it is available, is shortage of foreign exchange. It was, therefore, not unreasonable for India to have approached the U.S. for about 600,000 bales of cotton, a quantity which represents hardly 4 per cent of one season's cotton crop in the U.S. The supply of cotton in the U.S. in the current season is doubtless less than that in the previous season, thanks to the lower carryover stock of 7.2 million bales at the beginning of the season, as compared with 7.6 million bales a year earlier. But it is not so low as to make the release of 600,000 bales of cotton to India a big sacrifice. It is certainly not beyond the capacity of the U.S. and it can easily be made without seriously affecting supplies to domestic mills or normal commercial exports. The textile mills in the U.S. would require no more than 9 million bales (consumption during 1960-61 was only 8.3 million bales) and, assuming that exports of cotton would amount to 5 million bales (this is the figure estimated by the Economic Research Service of the U.S. Department of Agriculture), there will still be left 7.5 million bales to be carried over into the new season beginning on 1st August. This will be actually 300,000 bales more than the quantity brought forward and is equal to 10 months' consumption. Surely, for a country where cotton production is far less uncertain than in India and which can, if it wants to, step up production substantially without difficulty by slight adjustments in the Soil Bank programme, there is no need to carry such large stocks. In India, where agriculture is still a gamble in the monson, stocks equal to three months' consumption are considered normal.

The much-talked-about shortage of cotton in the U.S. is in fact only a relative scarcity, not an absolute shortage. Stocks in the U.S. are low only as compared with the position in years like 1956 when the U.S. had a carryover stock of 14.5 million bales, that is, the equivalent of one whole season's production, and was faced with a most intractable problem of surplus disposal. It is to be hoped that the representatives of the Government of India would stress this point and persuade the U.S. Government to supply India its modest requirements. The U.S. has also a moral obligation to help India, because there is a belief, shared by both laymen and experts, that the nuclear test explosions have something to do with the unusual shifts and changes in weather which largely account for the periodical failure of Indian cotton crop.

FOR SECURITY AND SERVICE

Bank With

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

Head Office: **TRIVANDRUM.**

With 95 Branches mostly spread all over the Industrially fast developing State of Kerala and having Agency and Drawing arrangements with all the 1,175 Branches and Sub-Offices of the State Bank of India and their Subsidiaries, the Bank can handle Banking Business of every description—Foreign as well as Domestic.

Contact your nearest Branch for further details.

WORKING OF COTTON INDUSTRY ACT

CONFIDENCE NEEDS TO BE IMPROVED

From Our Special Correspondent

MANCHESTER, 15th *May*

FINDINGS published by the British Government's Estimates Committee on the working of the 1959 Cotton Industry Act has caused few raised eyebrows in Lancashire. Its main point that, unless something is done to improve confidence in the industry, much of the expenditure incurred in the £30-million reorganisation plan will have been to no purpose, was heartily applauded.

MANCHESTER LETTER

The Cotton Board said that this contention merely underlined opinions long held within the industry. It was obvious the Committee had appreciated cotton's problems, said a spokesman. There was also a feeling that the report was ideal "ammunition" for the industry's delegation, due to meet the Prime Minister this week. The 19 members of the delegation, from both management and labour sides of the industry, led by Lord Rochdale, Chairman of the Cotton Board, are expected to present a "united front" in the contention that the reorganisation plan is in danger of collapse because of evaporated confidence caused by foreign cloth imports.

Manpower Halved

If the rate of wastage now taking place in the labour force of the industry continues at the same level as during the past six months, the current total of those available in the spinning and weaving sections may already have reached a figure exactly half the peak post-war manpower achieved towards the end of 1951. Then employment was being provided for almost 321,000 workers, of which 124,630 were in spinning, 32,240 in doubling and 156,680 in weaving. The latest published returns as at the end of March showed only 164,100 as the number of operatives on the books of employers.

Headache No Longer

In spite of the well-known propensity of the industry for fluctuations in activity, it is, nevertheless, scarcely, credible that, less than 15 months ago, it was possible to comment on the "universal headache" affecting mill managements as being the labour situation. At that time, the shadows, in the shape of non-appearance of follow-on orders, had begun to lengthen, but the gloom which has followed was still only a very distant threat on the horizon. The barometer which so reflects the rate of activity within the trade—the size of the labour force—did not begin to move to the "unsettled" sector for some months, but from the end of June onwards there has been a sharp dwindling of manpower, lately running at a rate of 5,000 per quarter.

No clearer illustration of the disturbing trend in the labour situation can be given than in the following table, which indicates the almost continuous drift from the mills in little more than a decade:

Year-end	Total	Spinning	Waste spinning	Doubling	Weaving
1951	317,750	128,820	7,320	31,050	154,960
1952	272,220	108,070	6,970	24,490	139,700
1953	288,130	118,190	7,250	26,730	140,960
1954	280,460	113,410	7,150	25,210	140,690
1955	256,080	100,130	7,070	22,250	126,630
1956	243,330	97,780	7,300	20,900	117,350
1957	241,150	98,750	7,520	20,560	114,330
1958	207,990	85,920	7,420	16,270	98,380
1959					
June	201,520	83,230	7,060	16,370	94,860
December ..	192,230	75,510	7,280	16,730	92,710
1960					
June	184,460	71,870	7,220	16,760	89,100
December ..	184,790	71,580	7,250	16,080	89,880
1961					
March	182,890	70,980	6,870	15,340	89,700
June	178,940	69,420	6,770	14,700	88,050
September ..	174,540	68,470	6,910	14,170	87,290
December ..	169,520	68,630	6,990	13,340	85,510
1962					
March ..	164,100	61,780	6,920	13,070	82,380

One of the main objectives of modernisation involves the wider use of new machinery which can dispense with labour, while increased mechanisation has been a feature of industrial development for well over a century. "Efficient utilisation of labour" is a phrase continuously employed to support the modern contention of letting the machine do the work and the textile trade is just as keen as others to introduce measures to carry out this aim.

The big fall in manpower which has occurred, and was only temporarily halted after the redundancy programme, means that the average age of workers employed in the cotton and rayon industries is far too high for complacency. The small intake of young people prepared to find a job in the mills is in direct relationship to the apparently doubtful future of the trade and its by no means stable past.

Stock Review

From scattered advices gleaned from numerous traders over the past few months, it seems that clearances of textile goods through the usual distributive channels have been proceeding steadily without any spectacular results. Despite the frequent complaints of producers that merchants have been slow to absorb deliveries, the public at retail level have been making regular purchases and, as a result, stocks have been falling. Distributors within the trade, however, have, as is well known, been slow to replenish their supplies, taking the view that their position is strong and that goods could be secured on quick delivery terms when they were needed.

Some quickening of the pace of this interest among the ultimate consumer has been apparent in the weeks since Easter, but confirmation of the former steady movement is contained in the latest returns issued by the Wholesale Textile Association for the first quarter of the year. It should be emphasised that these figures cover a wide variety of textile and semi-textile goods, ranging from women's coats, furs and raincoats to haberdashery, ribbons and wool.

Output and Sales Down

Total sales of all these different articles fell by 6½ per cent as compared with the first quarter of 1961. Purchases of household textiles, however, were only one per cent down on last year, although men's and boy's shirts and pyjamas showed a drop of over ten per cent. The stock position, on which so much depends, displayed very considerable variation. Total supplies held were 2½ per cent higher than at the end of March 1961, but, within the different categories, several showed decreases, including men's and boy's shirts and pyjamas, where stocks were 10½ per cent down. In household textiles, the figure was 5 per cent lower than last year.

Meanwhile, curtailment of production in spinning and weaving is showing up in a marked fashion now that official returns from the Cotton Board are to hand. Output of both yarn and cloth in March was little altered as compared with the two previous months, but, in relation to the same period in 1961, a big reduction has taken place. Single yarn spun during the month averaged 12,870,000 lbs. weekly, as against 14,280,000 lbs. per week in March last year. In the weaving section, the fall was even more pronounced, as the volume of cloth produced fell from 37,380,000 yards weekly to 34,480,000 yards.—*All Rights Reserved.*

COMPLEXITIES OF WAGE STRUCTURE

AN EMPIRICAL ANALYSIS—NEED FOR DETAILED STUDY

By Dr. A. V. R. Rao

THE Indian wage structure is a complex one. A reading of wage data, published as per the Payment of Wages Act and the Factory Act covering wage earnings upto Rs. 400 per mensem in the wage statistics, never gives a real picture of the real earning of workers in any industry or occupation with any accuracy or nearness to correctness. As anyone familiar with the technicalities of the Indian wage problem knows, the wage consists of a variety of payments like dearness allowance, bonus, contributory provident fund, including the contributions of the employer, payments towards gratuity, casual leave, earned leave and sick leave with full or half pay, paid holidays, maternity leave in the case of women employees, pensions in the case of older employees in certain establishments, holiday and travel benefits in the case of others and a variety of allowances and prerequisites for certain other categories. It is the presence of these numerous items that makes the wage structure complex. An attempt has been made in the following paragraphs to give a brief picture of the various benefits enjoyed by the industrial workers in this country.

Probation

The period of probation in the service of a worker is also a material fact from the wage point of view. The probation period differs from unit to unit, industry to industry, region to region in each State and from State to State in the country. The wages in the probationary period are less than those paid after completing it. It is so in all categories of labour force—both manual and clerical—and the probationary period varies between one month and one year in duration and is also liable to be extended in some cases.

Leave

Opinions are also widely divided about the quantum and quality of each type of leave to be allowed to the employees in industry and this differs over a wide range from industry to industry all over the country. There is always a cry that whatever leave has been provided for under the Factories Act, Shops and Establishments Act or Employees State Insurance Scheme is the minimum and does not mean that it is adequate or fair. To add to this, the leave provisions as per the Statutes themselves, vary widely from State to State.

An interesting, yet important attack on the distinction in leave provisions between white-collared and manual working class, which exists nowhere else except in India, is also of significance. It is often argued with force that both the categories are human and need equal quantum of leave for rest and recuperation and to discriminate between them is incongruous with the concept of human dignity. Considerations of economic implications of such a recognition, rather than want of appreciation of the logical force of the plea for equality of treatment are said to be responsible or the pleas for the maintenance of the *status quo*. It is also argued that, if a person is not able to enjoy his authorised leave, he should be compensated monetarily to the extent of to which he has forgone his leave. This is already being done in some cases, but not always. Demands for a minimum of 10 days' paid sick leave, 10 days' casual leave and 30 days' earned leave are usual in most of the industries all over the country and are often granted. There is also a consistent demand for accumulation and in cases where it is allowed upto two or three years, the leave wages or salaries are paid, on the average of the previous three years. In the compilation of wages data, one will have to take into consideration all these points. Some weaker sections in the industry such as small printing presses and cotton gin and cotton press owners, argue that leave should be combined with paid holidays, as they cannot afford both. In these cases, the compilation of total wage payments would have to be different from what is normally reflected in the published wage statistics.

Holidays

Holidays paid and unpaid, weekly offs, half-paid holidays, and compensatory and sectional holidays have different rates of payments, depending on the requirements of workers to work on these days, if necessary, at double or triple time rates. In calculation of wages, plant-wise and industry-wise, these differences will have to be taken into account. Paid holidays vary from 5 to 7, 10 or 15 to 20 days in certain instances. The wage data of those plants and industries will have to reckon these factors in the compilation of the wage data. While the individual company accounts show the total wage costs, the published wage data do not reflect the different aspects of wage payments. To this extent the annual wage statistics are unreal. It may be interesting to note, in this connection, that annual holidays with pay do not exceed 6 days in Belgium, Mexico, Portugal, Switzerland and the United Kingdom, one week in the United States, Chile, Ireland, Turkey, Venezuela, 7 to 15 days in Egypt, 8 days in Greece and Luxemburg, 10 days in Argentina, Guatemala and Italy, 12 days in Austria, Australia, Czechoslovakia, Federal Republic of Germany, Netherlands, Poland, U.S.S.R., Uruguay, Yugoslavia; 2 weeks in Canada, Costa Rica, Indonesia, Nyasaland, Union of South Africa; 15 days in Brazil, Columbia, Peru; 3 weeks in Denmark, Finland, France, Norway, Sweden and 30 days in Cuba and Nicaragua.

In India annual leave is intended for rest and recuperation, sickness and casual leave for emergency and unforeseen circumstances, maternity or other reasons. Usually, 30 days' leave per year for all white-collared and about three weeks for factory employees has been recognised. But there are various differences in the obligation from time to time and industry to industry, concern to concern, depending on the collective agreements in each concern.

Similarly, the provisions for maternity leave, and leave under the Shops and Establishments Act also vary from State to State, in quantum and qualifying periods. The Factory Act, 1948, which applies to all premises employing ten or more workers where power is used and in establishments employing 20 or more where power is not used, provides that the daily worker who has worked for a period of at least 240 days during the year shall be allowed during the subsequent year leave with wages at the rate of one day per every 20 days of work performed if an adult and one day for every 15 days of work performed if a child. For calculating 240 days as qualifying period any days of lay-off, or maternity leave of 12 weeks and leave enjoyed in the year but earned in the year prior to that in which it is enjoyed are to be days on which the worker has worked in the factory. In calculating wages, these benefits also have to be included.

Benefits Under State Insurance

Similarly, there are the sickness benefits under the Employees' State Insurance Act which applies to all the factories other than seasonal factories run with power and employing 20 or more persons in specified industries, making provision for five benefits. They are: (1) sickness benefit, (2) maternity benefit, (3) disablement benefits, (4) dependent's benefits, and (5) medical benefits.

Sickness Benefit: The sickness benefits cover a period of cash payments to the insured person in respect of such days of his sickness in the benefit period, that is, period of 26 consecutive weeks, as are certified by the duly appointed medical practitioner, provided he satisfies the contributory conditions laid down in the Act and other conditions prescribed in the regulations. No benefit is payable for an initial period of two days, except in the case of sickness following after an interval of not more than 15 days from the period of sickness for which sickness benefit was last paid. The benefit is payable for a maximum period of 56 days in any continuous period of 365 days. The daily rate of benefit payable is equivalent to about one half of the assured average daily wages as given in the Schedule of the Act.

In the calculation of wage data persons covered and benefits received by them under the aforesaid provision shall have to be included. Similarly, from 1956, the benefits extended to T.B. patients after a continuous service of two years in one establishment covered by the Employees' State Insurance Scheme must also be included. This benefit is now extended to another 18 weeks of the completion of the usual benefits under the scheme, subject to the condition that the rate of extended scheme of benefit shall not exceed the full rate of sickness benefit. The rate of cash benefit during this period of extension shall be 75 nP a day or half the sickness benefit rate whichever is higher.

Maternity Benefits: Maternity benefits consist of periodical payments or the sickness benefit rate, with a minimum of 75 nP per day, for all days on which the insured woman does not work for remuneration during the period of 12 weeks, of which not more than six weeks should precede the date of confinement

It is difficult to understand any justification for the distinction in the payment of maternity benefits from State to State instead of having them on a uniform basis for the entire country. The Coal Mines Maternity Benefits Act of 1941 requires payment at the rate of 75 nP per day and Rs. 6 per week per woman for 16 weeks for workers who have worked below the ground for at least 10 days a month during the qualifying period not exceeding six months and for a period of 8 weeks for any other woman worker who has a qualifying service of 6 months preceding the day of delivery. Assam allows for a plantation woman worker Re. 0-11-6 per day in addition to the usual food concession during the period of four weeks preceding the date of delivery, and eight weeks after the period of delivery. The period of benefits is for 8 weeks for those engaged in factories and 12 for those in plantations, and the qualifying period is 150 days' service during the period of 12 months immediately preceding the date of notice. In Bihar, the paid benefit is at the rate of average daily earnings or As. 8 per day, whichever is greater, for 8 days fixed, the qualifying period being 6 months' service preceding the rate of notice. In Bombay, it is As. 8 per day or at the average rate of daily earnings whichever is less and the qualifying period is 9 months' notice preceding the date of 8 days. The Hyderabad Maternity Benefit Act 1942 allows a benefit of As. 12 per day for 12 weeks with the same benefits as provided in Bombay. In Kerala, under the Maternity Benefit Act of 1957, the qualifying period of service is 150 days during the 12 months immediately preceding the date of notice and the allowance is at the rate of Rs. 5.25 per week or at one-twelfth of the average daily wage multiplied by 7 for a week, whichever is higher. Under the Madhya Pradesh Maternity Benefit Act, 1958, the qualifying service preceding the date of a notice is 9 months and the benefit payable for a period of 12 weeks at the rate of 7/12th average daily earnings or 75 nP per day whichever is higher. In Madras, the Maternity Benefit Act of 1954 prescribes the qualifying condition at 240 days' service during the period of one year immediately preceding the date of notice and the payment is for a period of 7 weeks at the rate of As. 8 per day. In Mysore (Maternity Benefits Act, 1937), the qualifying period is 9 months' service preceding the date of notice and the period of payment is for 8 weeks at the average daily earnings or 50 nP per day whichever is less. Under the Orissa Maternity Benefit Act, 1953, the qualifying service period preceding the date of notice is 6 months and the period of payment is 12 weeks at the actual daily wage or salary subject to a minimum of 75 nP per day. Under the Punjab Maternity Benefit Act 1953, the qualifying period is 9 months' service preceding the date of notice and the benefit is for 84 days at average daily earnings or 75 nP per day whichever is greater. In Rajasthan (Maternity Benefits Act, 1953), the qualifying period is 7 months' service preceding the date of notice for a period of 8 weeks and the basis is average daily earnings or 75 nP per day whichever is greater. In U.P. (Maternity Benefits Act, 1938) 7 months' service preceding the date of notice is the qualifying period, the period of benefit is 8 weeks and the daily rate is the average daily earnings or 50 nP per day whichever is greater. In West Bengal (Maternity Benefit Act of 1939), the qualifying service is 9 months preceding the day of delivery, the period of benefit is 12 weeks and the benefit rate is Rs. 5-4-0 per week, wholly in cash or partly in cash and partly in kind.

Under the Shops and Commercial Establishments Act also, the leave provisions vary from State to State. Andhra State allows 12 days' privilege leave, 12 days' sick leave, together with all gazetted holidays with pay. Assam allows 16 days' privilege leave, 10 days' casual leave and a maximum of 4 months' sick leave on half pay after 12 months' continuous employment. Bihar allows one day for every 20 days work as privilege leave. In Mysore, the position is 10 days' privilege leave and 10 days' casual leave, and in Orissa one day for every 20 days of work with accumulation upto 30 days. Punjab allows 14 days' privilege leave for one year's service and 7 days' casual leave after 6 months' continuous service. U.P. provides for 15 days' privilege leave for watchmen and caretakers, 15 days' sick leave after 6 months' continuous service and 3 gazetted holidays with pay and 10 days' casual leave. West Bengal allows 14 days' privilege leave with accumulation upto 28 days, 10 days' casual leave and 15 days' sick leave on half-pay. Delhi permits 15 days' privilege leave with accumulation of 30 days, 12 days' casual leave and 3 national holidays.

The extra payment of leave wages as per the provisions of the various Maternity Benefits Acts and Shops Acts mentioned above constitutes a plethora of changes in the wage payment of the working class. Any proper wage analysis would have to take into consideration the payments made as per these statutes and the various collective agreements or settlements that are in force and binding upon the workmen and managements from time to time.

Bonus

Bonus is another very peculiar feature of the Indian wage structure. It has advanced from the stage of being considered an ex-gratia payment to the stage of being recognised as a legitimate claim of the working class to make good the difference between the living wage and the actual wage. In other words, it is regarded as a deferred wage. Bonus payments now range from a few days' wages to 4 or 5 months' wages; these extra payments to workers should also be included in the wage data.

Retirement Benefits

Gratuity, provident fund, pension, retrenchment compensation and other retirement benefits vary from industry to industry, plant to plant, and region to region. The employer makes this payment when the employee leaves him on retirement or retrenchment, but, as provision for these contingent liabilities has to be made in each year's balance-sheet, one must take into consideration the proportionate contributions to these accounts in arriving at the wage data.

Medical Facilities

Depending on the service conditions, certain managements give free or subsidised medical aid or medical leave or treatment to the employees or medicines at the cost price in the case of pharmaceutical concerns. These are also additions to the actual wage payments and as such should find a place in the total emoluments received and be reflected in the wage data.

Allowances

The Indian wage structure is, to some extent, similar to the Japanese wage structure (which too contains a number of wage components), though it is not as extensively spread over a variety of allowance for skill, age, honesty training, etc. as is the case in Japan. But all the same, the Indian working class and their leadership have not been slow in devising a variety of demands for extra remunerations by way of allowances of all kinds. To those familiar with the industrial disputes and the demands of unions for all these allowances, the theme is a familiar one. A variety of claims for allowances of the following nature under the various awards and settlements can easily be found:

(1) Acting allowance, (2) additional allowance, (3) additional work allowance, (4) attendance allowance, (5) *bhata* allowance, (6) boarding allowance, (7) Bombay allowance, (8) carriage allowance, (9) cash allowance, (10) chemical allowance, (11) climate allowance, (12) clothing allowances, (13) coke allowance, (14) compensatory allowance, (15) compassionate allowance, (16) conveyance allowance, (17) cycling allowance, (18) daily allowance, (19) detention allowance, (20) diet allowance, (21) duty allowance, (22) education allowance, (23) entertainment allowance, (24) extra allowance, (25) extra shift allowance, (26) extra show allowance, (27) factory allowance, (28) food allowance, (29) grain allowance, (30) night allowance, (31) halting allowance, (32) hazard allowance, (33) head office allowance, (34) heat allowance, (35) heavy work allowance, (36) hot allowance, (37) house rent allowance, (38) laundry allowance, (39) leave travelling allowance, (40) line allowance, (41) lodging allowance, (42) lunch allowance, (43) machine allowance, (44) messing allowance, (45) milk allowance, (46) night shift allowance, (47) officiating allowance, (48) outdoor allowance, (49) outstation allowance, (50) overtime allowance, (51) personal allowance, (52) precision work allowance, (53) professing allowance, (54) regularity allowance, (55) retention allowance, (56) Saturday allowance, (57) service termination allowance, (58) shifting allowance, (59) official allowance, (60) subsistence allowance, (61) tea allowance, (62) tiffin allowance, (63) tram allowance, (64) travelling allowance, (65) typing allowance, (66) washing allowance, (67) watchman's allowance, (68) workshop allowance, (69) unclean allowance, (70) unemployment allowance, (71) uniform allowance, (72) war allowance (73) allowances for working during holidays and (74) machine allowances.

Payment of these allowances to certain sections of workmen in certain plants and industries also changes the composition of the wage structure. As mentioned at the outset, the Indian wage structure statistics do not always actually reflect the varieties of additional benefits and payments made to workers under the various heads as discussed above, in the presentation of wage data. There is large need for proper wage studies, industry-wise, and region-wise to understand and appreciate the wage trends and levels in a developing economy. To assess the growing disparity between the wages of skilled and unskilled labour and the changing trends in labour force in the skilled, unskilled and tertiary industries, the need for systematic inquiries into the wage conditions could hardly be overemphasised. The published figures of the monthly and annual averages of wages paid in the several industries conceal more than they reveal in the various components of the wage data.

The wages and extra benefits received by the workers differ from industry to industry even within each State and even within different industries from plant to plant in the same centre. The differences may be due to the provisions of collective bargaining agreements or lack of them; similarly, the supply and demand factors have their own effects in certain regions. The differences in the statutes of States is another cause for disparities.

For a proper and correct understanding of a real rise or fall in the wage levels and rise in the standard of living of workers, detailed attention to the Indian wage data, through an exhaustive chain of periodical studies of the complexities of the Indian wage structure, as well as of the wholesale price index and consumer price index numbers is essential. The consideration of the various components of wage and fringe benefits is another imperative need in this context. It is only then that there can be some possibility of a meaningful talk of a proper wage policy for India.

In conclusion, it must be added, that the prevailing limitations to the existing wage data cannot be helped without appropriate change in the Payment of Wages Act, making the employers liable to submit, in their wage returns, the various elements that make up the total wage, and entrusting the payment of wages authority with sufficient powers to obtain the information, by threats of penalty in cases of failure. This, of course, means more work for the employers submitting the wage returns and for the supervising authority, too, but, in the interest of a more sophisticated wage data, for proper policy approach, the trouble would certainly prove worthwhile.

A Complete Banking Service

★ All the usual banking facilities within convenient reach
★ Foreign exchange business of all types, including remittances
★ Special Thrift Deposit Plan
★ 3-Year and 5-Year Cash Certificates in different denominations at attractive interest rates
★ Safe Deposit lockers in many branches

SBH

STATE BANK OF HYDERABAD

H. O. : Hyderabad Dn. (A.P.)

Serving you through more than 78 branches in Andhra Pradesh, Bombay City and Maharashtra State, Mysore State and Madras City.

First and Foremost... AMERICAN EXPRESS ARE BANKERS

Everybody knows American Express Travelers Cheques, American Express carefree Travel Service—behind both is American Express Banking—a complete Banking Service in over forty cities.

A Complete Banking Service: Current accounts opened • Fixed Deposits Accepted • Commercial credit established • Foreign Remittances Made • Travelers Cheques.

AMERICAN EXPRESS Banking is our first business

AE.B.6.1

TEA IN EUROPEAN COMMON MARKET

COMMONWEALTH PRODUCERS' INTERESTS MUST BE SAFEGUARDED

TEA is one of the commodities the exports of which from India will doubtless be adversely affected as a result of Britain's membership of the European Common Market, unless, of course, it is accorded special treatment. For not only will tea be denied the advantage of free entry into Britain (as against an import duty of 2d. (about 11 nP) per lb. on non-Commonwealth tea) but it might even be subjected to a high duty of 8d. (over 44 nP) per lb. if the Common Market tariff were applied. It must be noted here that, out of every 100 lbs. of Indian tea sold abroad, as much as 61 lbs. go to Britain. And tea is the second largest earner of foreign exchange, the average actual earnings in the past five years being Rs. 129 crores, out of the total of Rs. 607 crores. What holds good in the case of India holds equally good in respect of Ceylon, Pakistan and other Commonwealth tea-producing countries. All these countries have, therefore, to be thankful to Sir Percival Griffiths, C.I.E., Adviser, London Tea Association, for his continued able advocacy of fair treatment for Commonwealth tea in the Common Market. In the course of an interesting article contributed to the April 1962 issue of *The National and Grindlays Review*, Sir Percival, who needs no introduction to readers—he was associated with the Indian tea industry for a long time and is an authority on the subject—has impressively highlighted the importance of tea in the economy of Commonwealth countries, realistically assessed the impact on tea of Britain's participation in the Common Market and forcefully urged special treatment for the commodity. His observations are quite timely, as the negotiations on Britain's application for membership of the Common Market are entering the final phase.

Indian Tea

"Great" is the adjective which Sir Percival has used to describe the role of Commonwealth tea. Tea, according to him, is today much more important in the economy of Commonwealth tea-producing countries than was the case before the war. The percentage share of these countries in the aggregate world supply of tea has gone up from 68 per cent (720 million lbs. out of the total of 1,060 million lbs.) in 1938 to approximately 81 per cent (1,259 million lbs. out of a total of 1,548 million lbs.) in 1960. Commonwealth production has thus increased considerably both in absolute terms and in relation to world supply since the war. Making a special reference to Indian tea, Sir Percival observes:

"...The Government of India does not consider that earnings from the export of tea have yet reached their maximum and in the third Five-year Plan has set a production target of 900 million lbs., of which perhaps 600 million lbs. might be exported, as against average exports of 500 million lbs. in the last three years for which figures are available. Tea producers are sceptical that the production target will be reached and, in any case, it seems improbable to them that India could profitably sell 600 million lbs. of tea abroad. An undue increase in the volume of exports might so depress world prices as to result in a decrease of foreign exchange earnings. If tea is a vital element in supporting India's balance of payments, it is scarcely less important in her internal economy. It is, in fact, with the exception of the railways, the largest employer of labour in India. Nearly one million people work on the tea gardens. In some areas, many gardens are now over-laboured and the stage has been reached when they cannot follow the traditional practice of offering work to the children of labourers when they reach adolescence. For the surplus labour, no alternative employment is available. It is little wonder, therefore, that the Government of India regard with great anxiety any change likely to affect the prosperity of the industry."

Tea is said to dominate the Ceylon economy even more completely than that of India. In the last three years, Ceylon's export earnings from tea have on an average contributed £82 million to its total average export earnings of about £130 million. Over 500,000 labourers are employed in plantations and the revenue from tea industry forms a substantial part of the Government revenues.

Sir Percival has sought to emphasise, albeit indirectly, that Indian and Ceylon teas will have to face keen competition from East Africa for three important reasons. First, tea production in East Africa is growing rapidly and has, indeed, more than doubled in the last ten years. Secondly, production costs are low and teas can be landed in London at a cost of over one shilling a pound less than Indian and Ceylon teas. Thirdly, some of the East African countries may seek to obtain the status of associated territories, in which case they will not be adversely affected by Britain's entry into the Common Market.

U.K. Market

The importance of the U.K. market to the Commonwealth tea industry is indicated in the following figures furnished by Sir Percival:

Commonwealth Tea Exports

(In million lbs.)

	1957	1958	1959	1960	Average of 4 years
From India:					
To United Kingdom	302 (68.1)	331 (65.4)	281 (59.6)	266 (62.4)	292 (63.3)
To E.E.C.	8	9	11	9	9
To other countries	(1.8) 133	(1.8) 166	(2.3) 179	(2.1) 151	(1.9) 160
	(30.1)	(32.8)	(38.1)	(35.5)	(34.8)
Total to all countries	443	506	471	426	461
From Ceylon:					
To United Kingdom	133 (36.3)	165 (40.1)	139 (36.2)	152 (37.1)	147 (37.6)
To E.E.C.	10	13	13	14	13
To other countries	(2.7) 223	(3.2) 233	(3.4) 231	(3.4) 244	(3.3) 233
	(61.0)	(56.7)	(60.4)	(59.5)	(59.1)
Total to all countries	366	411	383	410	398
From East African Commonwealth:					
To United Kingdom	39 (80.0)	39 (73.5)	40 (66.7)	46 (69.6)	41 (71.9)
To E.E.C.	1	1	1	1	1
To other countries	(2.0) 9	(1.8) 13	(1.7) 19	(1.5) 19	(1.8) 15
	(18.0)	(24.7)	(31.6)	(28.9)	(26.3)
Total to all countries	49	53	60	66	57

Note.—Figures in brackets relate to percentage shares in the total.

More than nine-tenths of tea imported into Britain in the last four years have come from the Commonwealth. Figures relating to corresponding imports into the Common Market are not readily available. A rough estimate, however, places the average annual imports at no more than 40 million lbs., that is, less than 10 per cent of imports into Britain. Of this small quantity, the share of Commonwealth countries is not even half.

What will be the combined effect of a duty of 8d. per lb. on Commonwealth teas and the disappearance of the preference in their favour? Posing this question, Sir Percival points out that the issue as to who bears the burden of duty has been a matter of controversy for generations and no general answer can be given. Broadly speaking, however, the position seems to be as follows:

The bulk of tea is sold by auction either in London or in the East (as, for example, Calcutta, Cochin, Colombo and Chittagong). When there is surplus, it is the sellers who bear the burden of new duty or of any increase in production cost, as they dare not withdraw their teas merely because bids are poor, while, in times of short supplies, producers can and do withdraw freely, if bids are insufficient to provide a reasonable profit and any increase in duty may well be passed on to buyers. Between these two extremes, the position varies from time to time, the burden being, perhaps, shared as a rule by them both. The producer will receive less and the buyer will pay more and it is considered probable that, on an average, the incidence of duty will fall equally on producers and buyers.

Impact Will Be Severe

Past experience, according to Sir Percival, shows that, except for occasional short periods, the margins of retail prices over London auction prices remain fairly steady, ranging from 30 to 50 per cent. He therefore avers that it is not unreasonable to assume that a duty of 8d. per lb. will result in an average increase of 6d. per lb. in the retail price. Although it is not possible to say with any degree of certainty as to the extent to which such an increase in price would reduce consumption, it can be stated that the impact would be quite severe. The nature of the impact, as brought out by Sir Percival, is summed up as below:

Foremost among the factors is the psychological consideration, that is, resentment at a sudden and relatively large increase in the price of a popular commodity. The considerable public outcry at the price rise in 1954 left no room for doubt as to how deep and effective such resentment could be, but, fortunately, on that occasion, conditions soon returned to normal.

Tea is now struggling hard to maintain its pre-eminence in Britain against coffee and soft drinks. There are signs that, amongst certain classes, coffee drinking is now regarded as a status symbol—and in an affluent and increasingly class-conscious society, such a situation may well operate to the disadvantage of tea. Coffee consumption is rising, tea consumption is at best stationary. Amongst the younger people, too, fruit juices and soft drinks generally are acquiring a strong hold and, though, in absolute terms, tea consumption has not fallen of recent years, it is not retaining its share in the consumption of all beverages. Resolute efforts are being made by the tea trade to counter this tendency, but the situation is uncertain, and an extra 6d. per lb. might well tip the balance against tea.

An increased duty is likely to produce not only a fall in consumption but a decline in the proportion of good priced teas bought at the auctions. For, if auction prices rise and stay up for any considerable period, the big distributor is inclined to alter the proportion of different grades in his popular blends. As is well known, what the public buy is a blended tea which, in many cases, contains "quality," "medium," and "plain" teas; naturally, there is marked difference among the auction prices of these grades.

Once Commonwealth preference is removed, Indonesia, Japan, and perhaps China, will make vigorous efforts to capture a larger share of the U.K. market. The position would be particularly serious for India and Ceylon, if any of the East African Commonwealth producers were to become associated territories.

Sir Percival has done well, indeed, to warn that an addition of 8d. per lb. to the import duty would have a serious adverse effect on tea trade and industry at a time when costs of production are rising rapidly and when most companies' reserves are low. "There is," to quote him, "complete unanimity (about this) amongst all sections of the trade—producers, buyers and brokers."

Possible Solutions

Two suggestions have been put forward by Sir Percival as possible solutions to the problem, namely, duty-free imports of tea into all countries of the Common Market, including Britain, or continued "free" admission of Commonwealth teas into Britain. Declaring that there is nothing revolutionary about the first proposal, he observes:

"Many commodities are now subjected in the Common Market to import duties well below the arithmetical average which is the theoretical determinant of the duty, and there are already commodities such as hides and skins, manganese and wool which enter free of duty. It is true that there were historical reasons for these exemptions, but, if Britain joins the European Economic Community, she, too, will be entitled to expect consideration to be given to the facts of her history. Moreover, tea is of relatively little interest to the present European Community. Only two of their associates—the Congo and Ruanda Urandi—produce tea and their total production is about 8 million lbs. a year. Half of this tea is already exported to Britain, Ireland and the U.S.A., and it seems fairly clear that the Congo and Ruanda Urandi stand to lose nothing by the arrangement suggested. Exact figures of the customs revenue from tea collected by the Six are not readily available, but rough calculations based on volume and value show that it amounts to less than £3 million out of a total customs revenue of over £500 million. It can hardly be maintained that a concession of this magnitude is too great to expect in view of the importance of tea in the economy of Britain and the Commonwealth."

As for the second possible solution (continued duty-free entry into Britain), Sir Percival is of the opinion that the logical case for it will be stronger than that for free admission of all tea into the Common Market. Alluding to the serious argument against it, that is, administrative difficulty of dealing with re-exports from Britain to the Common Market countries, he rightly says that this difficulty is not regarded as insuperable.

Should, however, both these suggestions be rejected, Sir Percival wants at least the adoption, by the Common Market, of a tariff based on the weighted average of all import duties, including that in the U.K. According to him, such a duty would, on the basis of 1960 figures, amount to about one per cent (as against 23 per cent on tea in small packages and 14.4 per cent on other teas fixed as Common Market tariff). In the case of a commodity like tea, where identification and valuation of particular qualities are extremely difficult, it is felt, a flat rate of duty will be much easier to operate

29 MAY 1962 PUBLIC DEPARTMENT

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

The Central Government have granted necessary licences and/or approvals for the manufacturing programme of the Company. Copies of the relevant licences and/or letters are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of this Prospectus having attached thereto the documents mentioned hereinafter has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Applications have been made to the Calcutta, Bombay and Madras Stock Exchanges for permission to deal in and for an official quotation of the shares of the Company.

The Subscription List will open at the commencement of banking hours on Thursday, the 31st May, 1962, and will remain open until the close of banking hours on Saturday, the 9th June, 1962, unless closed earlier or later at the discretion of the Directors, but not before Monday, the 4th June, 1962.

ASIATIC OXYGEN LIMITED

(INCORPORATED ON THE 12TH APRIL, 1961, UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED:

17,50,000 Equity Shares of Rs. 10/- each	Rs.	1,75,00,000
25,000 Redeemable 9.3% (subject to tax) Cumulative Preference Shares of Rs. 100/- each	Rs.	25,00,000
	Rs.	2,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP:

7 Equity Shares of Rs. 10/- each fully paid, payment having been made in cash by the subscribers to the Memorandum and Articles of Association	Rs.	70

PRESENT ISSUE:

15,99,993 Equity Shares of Rs. 10/- each at par	Rs.	1,59,99,930

OUT OF THE PRESENT ISSUE:

(i) The Directors, their associates and their friends have agreed to take up and will be allotted 4,13,993 Equity Shares of Rs. 10/- each for cash at par	Rs.	41,39,930
(ii) Air Products & Chemicals, Inc. of the United States of America have agreed to take up and will be allotted 2,50,000 Equity Shares of Rs. 10/- each for cash at par	Rs.	25,00,000
(iii) Shareholders of the Asiatic Oxygen & Acetylene Co., Ltd., will be allotted 2,66,000 Equity Shares credited at par as fully paid up in exchange for Ordinary Shares in that company. Should any of these shares not be allotted as fully paid, the same will be available for cash subscription as set forth hereinafter	Rs.	26,60,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

6,70,000 Equity Shares of Rs. 10/- each	Rs.	67,00,000

Applications for Equity Shares by members of the public must be for a minimum of 50 Shares or multiples of 50 Shares.

TERMS OF PAYMENT FOR THE SHARES OF THE ABOVE ISSUE

On application	Rs. 2.50 per share
On allotment	Rs. 2.50 per share

The balance of Rs. 5/- per Equity Share is payable on call or calls but not earlier than three months after the date of allotment of the shares.

The above terms of payment are also applicable to shares to be subscribed for cash by and to be allotted to Directors, associates and friends and to Air Products & Chemicals, Inc. and/or their nominees.

Batlivala & Karani, Bombay	Rs. 3 ,,
Harkisondass Lukhmidass, Bombay	Rs. 2 ,,
Harbans Singh Mehta & Co., New Delhi	Rs. 2 ,,
Raj Paul Chadha & Co. New Delhi	Rs. 2 ,,

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

CONSENTS

Consents in writing of the abovenamed Directors, Bankers, Auditors, Solicitors, Underwriters and Brokers to act in their respective capacities have been obtained and filed with the Registrar of Companies, West Bengal, and have not been withdrawn. Messrs. S. B. Dandekar & Co. and Messrs. Singhi & Co., the Auditors of the Company, have given and not withdrawn their written consents to their Report being included herein in the form and context in which it appears. Messrs. S. B. Dandekar & Co. have also given and not withdrawn their written consent to their Report on Asiatic Oxygen & Acetylene Company Limited being included herein in the form and context in which it appears.

MAIN OBJECTS OF THE COMPANY

The Company was incorporated on the 12th April, 1961, as a public company in the State of West Bengal with objects as stated in its Memorandum of Association and obtained a Certificate of Commencement of Business from the Registrar of Companies, West Bengal, on the 16th November, 1961. The Company has as its main objects the manufacture and sale of industrial and medical gases including oxygen, dissolved acetylene, argon, hydrogen, nitrogen, nitrous oxide, etc., electrodes, welding and cutting equipment, welding transformers and generators and other equipment, apparatus and appliances relating to the foregoing or ancillary thereto.

PROMOTION OF THE COMPANY

This Company has been promoted by the Asiatic Oxygen & Acetylene Company Ltd., of Calcutta, which itself is engaged in the industrial gas business. In view of the industrial development taking place in India, the Government of India is encouraging the setting up of units throughout the country for the manufacture of industrial and medical gases, welding equipment and accessories, etc.

There has been a steep rise in the demand for industrial gases since 1956 due to industrial development under the Five-year Plans, particularly the increase in production of steel and the rapid growth of engineering industries. According to the Third Five-year Plan the indigenous production of steel would reach a target of 6.8 million tons of saleable steel and correspondingly the demand for oxygen is estimated to increase to 1,650 million cubic feet by 1965-66. To take advantage of this opportunity, the Promoters have secured collaboration of Air Products and Chemicals Inc., which is one of the established and progressive manufacturers of industrial and medical gases in the United States of America. Air Products and Chemicals Inc. have also agreed to participate in the Share Capital of the Company to the extent of Rs. 25,00,000. Technical collaboration arrangements have been concluded with K G M Equipment Company and Metal & Thermit Corporation of the U.S.A. Similar arrangements have been negotiated with Westinghouse Electric International Company of the U.S.A.

An arrangement (approved by the Government of India) has been reached with a majority of the shareholders of the Asiatic Oxygen & Acetylene Co., Ltd., whereby their shareholdings in that Company are being transferred to the Company in exchange for Equity Shares in the Company of equivalent nominal value at a rate stated hereinafter.

PRODUCTION PLANS AND BUSINESS PROSPECTS

A. Manufacture of Industrial and Medical Gases

The Company proposes to establish manufacturing units at Bombay, Madras, Rourkela, Durgapur, Patna, Gauhati and/or other important industrial centres. In view of modern plant and equipment being acquired by the Company, not more than 50 persons will need be employed in any of the factories and, accordingly, the Company is not required to obtain licences under the Industries (Development and Regulation) Act, 1951, which position has been confirmed by the Central Government by its letter No. 19 (14)(38) IA (IV)/58 dated the 5th June, 1958.

Initially, the Company aims at reaching a total production of 176.4 million cubic feet of oxygen and 45.6 million cubic feet of dissolved acetylene per annum. The production is expected to commence within one year.

B. Manufacture of Welding Electrodes

The demand for welding electrodes in India is estimated at 500 million feet per annum which is expected to reach 900 million feet by 1965-66. There is sufficient demand for these products to enable the Company to dispose of its entire production satisfactorily. The promoters have obtained Licence No. L/I.A(7)/N-248/61 dated the 5th August, 1961, under the Industries (Development and Regulation) Act in favour of the Company for the manufacture of coated and uncoated electrodes with an installed capacity of 36 million feet per annum on single-shift basis. The Company has further been permitted by the Government of India, *vide* their letter No. LEI(B)-17(258)56, dated the 7th April 1962, to work double-shift. It is intended to reach initially a capacity of 65 million feet per annum. The Company will set up its factory at Calcutta which is a highly developed industrial area with all facilities available for an industrial undertaking of this nature.

C. Manufacture of Welding and Cutting Equipment and Arc-Welding Transformers

The Company proposes to establish its factory for the manufacture of these products in Calcutta along with its industrial undertaking for the manufacture of electrodes.

The Central Government had granted a licence No. L/9/N-38/59 dated the 12th October, 1959, to the promoters for the manufacture of 9,000 units of regulators, 7,500 units of torches and 150 units of oxy-cutting machines per annum. This has been now transferred in favour of the Company. The import of welding and cutting equipment over the last few years has been restricted due to the shortage of foreign exchange and the demand within the country has not been fully met by indigenous manufacture.

The Government has also granted a licence No. L/5(1)/N-86/61 dated the 23rd August, 1961, under the Industries (Development and Regulation) Act in favour of the Company for the manufacture of welding transformer sets and motor generators with an installed capacity of 2,400 and 240 units respectively per annum.

LAND, POWER, WATER, ETC.

The promoters have agreed to acquire for the Company a plot of land measuring 5 acres near Durgapur situated on the Grand Trunk Road in Mouza Gopinathpur in the District of Burdwan on 60 years' lease, with two options to further renew the lease for 30 years each, from the Durgapur Projects Limited, and a payment of Rs. 30,250 has already been made to the Lessors on the 9th November, 1961, which will be reimbursed by the Company. The formal lease documents are being finalised. The agreed terms of the proposed lease are considered to be fair and reasonable. Negotiations have been taken in hand to acquire factory sites at other centres. The Directors are satisfied that suitable sites with adequate power and water supply, transport facilities, etc., can be acquired.

PROFITABILITY

On the basis of the existing prices of the products which the Company proposes to manufacture, the Directors are of the opinion that, in the absence of any unforeseen circumstances, there will be a fair and reasonable return on the capital of the Company.

FOREIGN TECHNICAL COLLABORATION

The promoters have negotiated and concluded agreements with Air Products and Chemicals, Inc. and K G M Equipment Company, a Division of Air Products, of the U.S.A., for technical collaboration in the manufacture of industrial gases and oxy-acetylene welding and cutting equipment and with Metal & Thermit Corporation of the U.S.A. for the manufacture of electrodes. All these agreements have been approved by the Government of India. Technical collaboration arrangements for manufacture of arc welding transformers have also been negotiated with Westinghouse Electric International Company of the U.S.A., and an application for its approval has been made to the Government of India.

The main features of the technical collaboration arrangements, the terms of payment under which are set out in the respective agreements, are summarised below:

A. Collaboration with Air Products and Chemicals Inc. of U.S.A.

The agreement covers industrial and medical gases, oxygen, nitrogen, hydrogen, dissolved acetylene, argon and medical oxygen, including liquid oxygen and liquid nitrogen. Air Products will furnish the Company for a period of ten years with technical know-how acquired or developed by it for the manufacture, distribution and sale of the said gases. They will also make available training facilities for the Company's personnel in their factories and the services in India of a top management executive and technicians.

B. Collaboration with K G M Equipment Company of U.S.A.

The Agreement with K G M Equipment Company, which is for a period of ten years, gives the Company the exclusive right to manufacture, use and sell in India the oxy-acetylene welding and cutting equipment specified in the Agreement in respect of which they will furnish technical know-how and other assistance in the setting up of the factory, the purchase of plant and machinery from abroad, training of the personnel and operation of the factory. Selected technical personnel of the Company will be sent to their factory in the U.S.A. for training. K G M Equipment Company gives the Company a non-exclusive licence to freely export the equipment to be manufactured by the Company to the neighbouring countries such as Burma, Pakistan, Afghanistan, Ceylon, Indonesia, etc.

C. Collaboration with Metal & Thermit Corporation of U.S.A.

The Agreement with Metal & Thermit Corporation, New York, which is also for a period of ten years, provides for the furnishing of know-how and technical services to the Company to manufacture, use and sell electrodes specified in the Agreement. These services include preparation of plant layouts, detailed drawings and engineering assistance and specifications and assistance for procurement of the manufacturing equipment. They will also provide training facilities to the Company's personnel in the U.S.A. and also the services in India of their technical personnel.

D. Collaboration with Westinghouse Electric International Company of U.S.A.

A technical collaboration agreement has been negotiated with Westinghouse Electric International Company of the U.S.A., for a period of ten years, for the manufacture of arc welding transformers. Westinghouse will make available to the Company's personnel training facilities in their plants and provide the services of their personnel in India. The agreement has been submitted to the Government of India for approval.

PLANT AND MACHINERY

Imports of plant and machinery to the value of Rs. 86.69 lakhs have been authorised by the Ministry of Commerce and Industry (*vide* letter No. 1(56)FE/61 dated the 22nd March 1961, of the Deputy Economic Adviser to the Government of India), out of which Rs. 61.69 lakhs is covered by the U.S. Development Loan Fund Loan No. 157 to the Government of India. Agreement had been concluded with Air Products for the purchase of plant and machinery for the manufacture of oxygen and dissolved acetylene valued at Rs. 56.69 lakhs. The Company has obtained the Import Licence No. 990940/DLF 157/61 dated the 29th March 1962, for their import. Formalities concerning the finalisation of the purchase of the plants in accordance with the terms and conditions of the licence are being completed. Arrangements are being made for the purchase from the U.S.A. of plant and machinery for the manufacture of electrodes, oxy-acetylene welding and cutting equipment and arc welding transformers. The remaining machinery and equipment is available in India. The promoters have obtained an import licence for the value of Rs. 48,14,727/- out of which Rs. 2,63,803/- has been utilised by them. Orders had been placed for the gas cylinders covered by the unutilised amount of this licence and necessary Letters of Credit have been established. The promoters have agreed to transfer these cylinders to the Company at cost. An application has been made to the Government of India to allow the transfer. Meanwhile, shipments of the value of Rs. 3,80,822/- have already arrived and further shipments are likely to arrive in the coming weeks.

RAW MATERIALS

The principal raw materials which are required are mostly obtainable from indigenous sources although certain items may be required to be imported for some time. The Directors anticipate that the Company will have no difficulty in obtaining supplies of the raw materials.

TAX BENEFITS

The Company will be entitled to Development Rebate under the Income Tax Act, 1961. As a "new industrial undertaking" the Company will get the benefit of exemption from income-tax under Section 84 of the Act on its profits up to 6 per cent on the capital employed in the "new industrial undertaking" for the first five years of the Company's operations. The shareholders are entitled to exemption from tax on dividends paid to them from the Company's exempted portion of the profits.

ACQUISITION OF THE ORDINARY SHARES OF THE ASIATIC OXYGEN & ACETYLENE CO. LTD.

The Asiatic Oxygen & Acetylene Company Ltd. has been carrying on business of the manufacture of industrial gases since 1942. It has a factory at Calcutta for the manufacture of oxygen and dissolved acetylene gases to which has recently been added a new single unit with a capacity of 7,000 c.ft. per hour of oxygen and corresponding acetylene capacity. It has another factory at Bhilai for the manufacture of dissolved acetylene gas to which it is proposed to add an oxygen unit.

It is now also engaged in certain engineering and construction work. It undertook the subcontract for the Indian portion of the work

relating to the Dugda Coal Washery in Bihar for Hindustan Steel Ltd., the erection of which has since been completed. It has also entered into a similar sub-contract for another coal washery being set up at Patherdih for Hindustan Steel Limited.

The well-known firm of Surveyors, Talbot & Co. of Calcutta, made a valuation of the assets of the Asiatic Oxygen & Acetylene Company Ltd. Based on their Report and on the accounts of that company for the preceding three financial years, Singhi & Co., Chartered Accountants, made a valuation of the shares of that company. A majority of the shareholders agreed to exchange their shares at the rate of 38 shares of this Company for 10 shares of the Asiatic Oxygen & Acetylene Company Ltd., which rate was approved by the Company Law Administration Department, Government of India, *vide* their letter No. 8(29)-CL.VI/61 dated the 16th September 1961. The Asiatic Oxygen & Acetylene Company, Ltd., paid a dividend of 40 per cent subject to tax in the last financial year, that is 1960-61. This did not reflect the results of the working of the new plant which increased the capacity of the company to produce oxygen by more than 100 per cent and the installation of which was completed towards the end of that year. Should some or all of the other shareholders be unwilling to transfer their shares in the Asiatic Oxygen & Acetylene Company, Ltd., the shares of a value representing the difference between Rs. 26,60,000 being the value of the entire 70,000 shares at the above rate of exchange and the value of shares in the Asiatic Oxygen & Acetylene Company, Ltd., acquired by the Company, may be subscribed for cash by all or some of the aforesaid shareholders who have agreed to the exchange or their relatives or their friends or such shares will be allotted to other applicants.

MANAGING AGENTS

It is proposed to appoint Soorajmull Nagarmull as the Managing Agents of the Company for a period of ten years from the date of their appointment. Necessary approval of the Government has been obtained, *vide* their letter No. 9(164)-C.III/61 dated January 10, 1962. The remuneration to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956, and is as follows:—

(i) 10 per cent on the first Rs. 10 lakhs net profits or fraction thereof;
(ii) 9 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
(iii) 8 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
(iv) 7 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
(v) 6 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
(vi) 5½ per cent on the next Rs. 25 lakhs net profits or fraction thereof;
(vii) 5 per cent on the next Rs. 25 lakhs net profits or fraction thereof; and
(viii) 4 per cent on any sum over one crore of rupees net profits.

The Managing Agents are entitled to be reimbursed by the Company the expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. In the event of the Managing Agents being entitled to compensation for loss of office, the limit of such compensation will be governed by Section 366 of the Companies Act, 1956. Other terms and conditions are set out in the proposed Managing Agency Agreement.

Soorajmull Nagarmull have been acting as Managing Agents of the Asiatic Oxygen & Acetylene Company Ltd., since February 19, 1942, and have thereby acquired considerable experience in the business of industrial gases and ancillary equipment. In view of their proposed appointment as Managing Agents of the Company they will resign from the managing agency of the Asiatic Oxygen & Acetylene Company Ltd.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the public issue under this Prospectus on which the Directors will proceed to allot shares is Rs. 67,00,000 being the whole of the Equity Share Capital now offered for subscription by the public.

The capital required for the purpose of implementing the Company's planned production is Rs. 3,74,10,000/- made up as follows:—

1.	Cost of land and buildings ..	Rs.	44,00,000
2.	Cost of plant, machinery and equipment	Rs.	2,07,75,000
3.	Development expenses including training and engineering fees	Rs.	17,75,000
4.	Preliminary expenses including expenses of incorporation and of this issue, including brokerage and underwriting commission	Rs.	5,62,500
5.	Other Promotion Expenses ..	Rs.	2,37,500
6.	Acquisition of shares in the Asiatic Oxygen & Acetylene Company Ltd.	Rs.	26,60,000
7.	Working capital	Rs.	70,00,000
	Total ..	Rs.	3,74,10,000

The above capital requirements will be financed as follows:—

1.	(i) Share Capital from Subscribers to the Memorandum of Association, the Directors, their associates and friends, and the Foreign Collaborators.	Rs.	66,40,000
	(ii) Par value of the shares of this issue to be allotted in exchange for shares in the Asiatic Oxygen & Acetylene Company Ltd. ..	Rs.	26,60,000
2.	Share subscription from the public in terms of this Prospectus	Rs.	67,00,000
3.	Loans from the Industrial Finance Corporation of India and other sources	Rs.	1,64,10,000
4.	Bank borrowings for a part of the working capital as and when required in the usual course of business	Rs.	50,00,000
	Total ..	Rs.	3,74,10,000

LOAN CAPITAL

The Industrial Finance Corporation of India has sanctioned a loan of Rs. 1,50,00,000/-, such loan to be secured by a mortage of the fixed assets of the Company including the plant and machinery which is to be acquired by the Company, and of the assets of the Asiatic Oxygen & Acetylene Company Ltd. The mortgage will be subject to such terms and conditions as may be agreed upon. The balance of Rs. 14,10,000/- will be obtained by means of borrowings from banks or will be arranged by the Promoters, Directors and/or Managing Agents as and when necessary.

PRELIMINARY AND PROMOTION EXPENSES

The preliminary expenses, including expenses of incorporation, payable by the Company, are estimated to be Rs. 1,53,000, which have been incurred by the Asiatic Oxygen & Acetylene Company Ltd., in connection with the promotion of the Company. This amount is to be reimbursed to the Asiatic Oxygen & Acetylene Company Ltd. Save as mentioned hereinbefore, no other consideration has been paid or is payable by the Company to the promoters. Other promotion expenses are estimated to be Rs. 2,37,500 payable by the Company.

EXPENSES OF THE ISSUE

The expenses of this issue, including underwriting commission and brokerage, are estimated at Rs. 4,09,500 and will be paid by the Company.

UNDERWRITING COMMISSION

The underwriters will be paid an underwriting commission not exceeding 2½ per cent of the face value of shares underwritten by them respectively. The total amount of underwriting commission payable by the Company is estimated at Rs. 1,67,500/-.

BROKERAGE

Brokerage will be paid by the Company to members of recognised Stock Exchanges and to banks at the rate of one per cent on the nominal value of the Equity Shares to be allotted to the public in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to the underwriters in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps and in such case no brokerage will be payable to any other party.

APPLICATION AND ALLOTMENT

Applications for shares, which must be for 50 shares or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of the Company's Bankers, namely, State Bank of India, United Bank of India Ltd., First National City Bank or Bank of Tokyo Ltd., at Calcutta, Bombay, Delhi, Madras, Hyderabad, Indore, Kanpur, Bangalore, Ahmedabad, Baroda or Surat.

Payments may be made by cash, bankers draft or cheque. If payment is made by cheque or draft it must be drawn on a Scheduled Bank situated in the town at which the application form is submitted.

Cheques or drafts must be made payable to State Bank of India A/c Asiatic Oxygen Ltd., Equity Issue, or United Bank of India Ltd., A/c Asiatic Oxygen Ltd., Equity Issue, or First National City Bank A/c Asiatic Oxygen Ltd., Equity Issue, or Bank of Tokyo Ltd., A/c Asiatic Oxygen Ltd., Equity Issue, as the case may be, and should, for the applicant's own protection, be crossed "A/c Payee Only." A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an Allotment Letter. The Directors reserve the full right of accepting or rejecting any application in whole or in part. If no allotment is made, the application money in full and where the number of shares allotted is less than the number applied for, the balance of the application money, less the money payable on allotment on the shares allotted, will be refunded to the applicant within two months of the close of the subscription list and in such case the bank's commission, if any, will be payable by the applicant.

No interest will be paid by the Company on application money deposited. Failure to pay any amount due on the shares allotted when due will render the shares and previous payments made thereon liable to forfeiture. No allotment will be made in the names of partnership firms, minors or Trusts. The shares will, when issued, be subject to the provisions of the Memorandum and Articles of Association of the Company as in force and as may be amended from time to time.

The Company shall have a first and paramount lien upon such shares as are not fully paid up for any moneys called or payable at a fixed time in respect of such shares and such lien shall extend to all dividends declared in respect of such shares.

ISSUE OF SHARE CERTIFICATES

The Share Certificates will be issued in exchange for Letters of Allotment within three months of allotment.

PROSPECTUS AND FORMS OF APPLICATION

Copies of this Prospectus and of Forms of Application may be obtained from the brokers named above or from the Company's bankers.

AVB's newest assignment: to supply high pressure boilers for the Delhi 'C' Power Station of the local Electric Supply undertaking.

These modern steam generating units, designed to deliver 960° F-steam at a pressure of 1300 lb. per sq. in., will drive two turbogenerators with a total capacity of 125,000 kw. There will be provision for increase to 187,500 kw. in the near future. Low grade coal, the primary source of energy for the power plant, will be processed in the latest Babcock Type 'E' Pulverisers and burned under the surveillance of automatic combustion control equipment.

The Delhi installation is the latest in a distinguished series of contracts entrusted to AVB in Maharashtra, Madhya Pradesh, Uttar Pradesh and other parts of India.

In providing much-needed thermal power for Delhi, AVB will make yet another contribution to the development of Indian industry...the all-round progress of the nation.

An outstanding example of international collaboration, AVB brings to India the varied and extensive knowledge of three leaders in industry —India's Associated Cement Companies Ltd., Britain's Vickers Ltd. and Babcock & Wilcox Ltd. These famous enterprises have joined together in establishing at Durgapur a large and modern heavy engineering works to 'tailor-make' cement-making machinery, high pressure boiler plants and heavy equipment for mining and other industries.

AVB ...*a powerful partnership for progress*

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open for the Public Inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not undertake responsibility for the financial soundness of any scheme or for the correctness of the statements made or opinions expressed with regard to them. This Consent Order No. R-63-CCI/61 dated 22nd May 1961 has been amended subsequently by the Consent Orders Nos. (i) R-63-CCI/61-2451 of 13th June 1961, (ii) R-63-CCI/61 of 13th July 1961, ii) R-63-CCI/61-967 of 5th April 1962, and (iv) R-63-CCI/61-1684 of 21st April 1962.

Licence under the Industries (Development and Regulation) Act 1951 is not necessary for the manufacture of articles that are being manufactured by Prabhat (Stove and Lamp) Products Co. Private Ltd. which is agreed to be taken over by the Company. The letter Nos. 4(10)/IA/IG/58 of 21st March 1958 and (10)/IA/IG/58 of 12th/13th May 1958 confirming this are open to Public Inspection at the Registered Office of the Company.

A copy of this Prospectus, having attached to it the documents required by Section 60 of the Companies Act 1953, has been delivered to the Registrar of Companies, Bombay, for registration.

An application will be made to the Bombay Stock Exchange for permission to deal in and for an official quotation of the shares of the Company.

The Subscription List will open at the commencement of Banking hours on 30th May 1962 and will close at the close of Banking hours on 9th June 1962 or earlier but not earlier than the close of Banking hours on 2nd June 1962.

The consents in writing of the Auditors, Brokers, Bankers and Solicitors to the Company to act in their respective capacities have been obtained and filed with the Registrar of Companies, Bombay and none of them has withdrawn the consent given.

OBJECTS OF THE COMPANY

The Company was incorporated on 22nd June 1961 with the objects mentioned in its Memorandum of Association and in particular to purchase, take over and acquire the entire business and undertaking carried on by Messrs. Prabhat (Stove & Lamp) Products Co. Private Ltd., as manufacturers of Stoves, Pressure Stoves and other articles together with the goodwill and stock-in-trade, stores, machinery etc. and all or any of the properties, assets and liabilities of the said Private Limited Company upon such terms and conditions as the Directors of the Company may deem proper or agree to and also to carry on the business of manufacture, import and export and to deal in all kinds of articles for lighting, cooking and heating purposes and for expanding its production capacity to 5,00,000 Pressure Stoves, 1,00,000 Pressure Lamps and 1,00,000 gross Gas Mantles per year on two shift basis from its existing capacity and other objects particularly set out in the Memorandum of Association.

The facilities available to Messrs. Prabhat (Stove & Lamp) Products Co. Private Ltd., such as Municipal Licences for Factories, Industrial Power and Actual Users Import Licences will accrue for the benefit of the Company. The Private Company at present is engaged in manufacturing Incandescent Gas Lanterns of 200 and 300 Candle Power with spares and accessories thereof. Incandescent Gas Mantles (Silk & Cotton) of various Candle Powers. Oil Pressure Stoves of various types with spares and accessories thereof and Blow Lamps with spares and accessories thereof.

BRIEF HISTORY OF THE BUSINESS AGREED TO BE TAKEN OVER

The business to be taken over by the Company was started as far back as 1938 in the firm name of Prabhat Products Co., by Shri K. M. Sharma. Shri B. M. Desai and Shri B. R. Misra as partners thereof. On 1st May 1957 Prabhat (Stove & Lamp) Products Co. Private Ltd. was incorporated as a Private Limited Company to

take over the business of Prabhat Products Co. as a going concern. To meet the increasing demand for the products manufactured by the said Private Company as the then existing premises were found inadequate a new factory building was erected in October 1959 at Jogeshwari at a cost of about Rs. 12,00,000 on land owned by the said Private Company since 1947. Shri K. M. Sharma and Shri B. R. Misra who are experienced persons in the lines handled by the said Private Company, had been looking after the production whilst Shri B. M. Desai was in charge of administration and finance. Both Shri Sharma and Shri Misra have extensively toured countries like Japan, Sweden and Germany to acquire technical know-how for the manufacture of the products of the said Private Company.

PROSPECTS

There is a total ban in India on the imports of Stoves, Lamps and Gas Mantles. The consumers' requirements of these articles are entirely met by the indigenous manufacturers. The said Private Company is the largest producers of the above articles in this country.

Kerosene is now increasingly put to domestic use and gradually replacing firewood, charcoal and soft coke. The main reason favouring such a change for economy in cost is due to kerosene being available easily and at prices economical to the consumer. On the other hand the cost of fuel has shown an exorbitant rise during recent years. This change over from fuel to kerosene having been found to be economical and useful, has led to an enormous demand for both pressure and non-pressure stoves for use in households. It is also found by statistics that the demand from rural areas is also on the increase in recent years. Similarly there has been a phenomenal increase in the demand for Oil Pressure Lamps and Blow Lamps. The Central and State Governments and local authorities have been purchasing in increasing quantity these two articles. The Defence Department also is one of the largest consumers of these articles. The demand for these products is growing from Industrial Establishments—large scale, small scale and cottage—all over the country. In areas where electricity is still not made available, Oil Pressure Lamps are being increasingly used. The present indications are that there will be a further improvement in the demand for all the above products.

The said Private Company is one of the largest producers of Gas Mantles and caters to the needs of the above consumers and local bodies who use gas for street lighting.

The various operations of Manufacture at present are carried out partly by automatic and semi-automatic machines and partly by skilled manual labour. The Company proposes to replace the present machines by new ones after the take-over that would make the operations of manufacture more automatic and mechanised and skilled labour will continue to be utilised for attending to additional and efficient production. This change, when carried out, will increase the present production substantially and will also reduce the cost of production.

After implementation of the expansion programme, the Directors estimate that, for the year ending 31st March 1965, the sales figures on a very conservative estimate of the various products will be as follows:—

Pressure Stoves	5,00,000 Units..	Rs.	97,50,000
Pressure Lamps	1,00,000 ,, ..	Rs.	42,00,000
Non-Pressure Stoves	1,00,000 ,, ..	Rs.	25,00,000
Gas Mantles	1,00,000 Gross..	Rs.	42,00,000
Spares	.. ..	Rs.	18,50,000
Total	..	Rs.	2,25,00,000

It is proposed to start manufacture of Non-Pressure Stoves. The Company is negotiating for a foreign collaboration for manufacture of Liquid Gas Stoves.

The said Private Company has also obtained a Licence for the use of I.S.I. Standard Marks on the pressure stoves which will be available to the Company, and the application for the use of I.S.I. Standard Marks in regard to the Oil Pressure Lamps is still pending. Oil Pressure Lamps and Oil Pressure Stoves manufactured by the Private Company have been chosen for use by the Himalayan Expeditions.

The sales during the last three years are as follows:—

Items	1958-59	1959-60	1960-61
	Rs.	Rs.	Rs.
Pressure Stoves ..	26,04,420	31,73,634	41,30,046
Pressure Lamps ..	12,31,400	11,29,800	15,61,480
Gas Mantles ..	12,00,000	13,64,960	17,26,200
Spare Parts ..	5,26,768	6,10,933	5,69,840
Total ..	55,62,588	62,79,327	79,87,566

The Sales for the year 1961-62 are Rs. 84,36,750 (subject to audit) and the estimated profit for the same period is over Rs. 4,00,000.

RAW MATERIALS

Most of the raw materials required for the manufacture of the above articles are easily available in this country. Some of the items have to be imported and these are now obtained under the Actual Users Import Licences. There has been no difficulty so far in obtaining the requirements of imported items. In view of the programme for expansion of production the Company can look forward to a continuity of the present import facility being made available for its additional requirements, particularly as the Import Licences have been granted to the said Private Company after a thorough assessment of its requirements.

POWER AND WATER SUPPLY

At present the Private Company is being supplied 300 kW power which would be adequate for the Company's present requirement. The Private Company has however applied for an additional power of 200 kW which is expected to be sanctioned shortly. When the additional power is sanctioned and made available to the Company, there will be enough power to meet the proposed increase in production.

Water is easily available for the present and future requirements of the factory.

ESTIMATE OF PROFITS

In view of the past working of the business of the Private Company which is to be taken over by the Company and also in view of the

demand for the products of the said Private Company, after giving due consideration to the estimated cost of production, selling, administrative, financial and other expenses, the Board of Directors expect that if the existing conditions continue, the profits will be sufficient to pay a reasonable and satisfactory dividend to the investors.

Subject to unforeseen contingencies, the Company expects to pay a reasonable and satisfactory dividend from the very first financial year .

PRELIMINARY EXPENSES.

The estimated amount of Preliminary Expenses excluding underwriting commission and brokerage is Rs. 40,000 and is to be borne and paid by the Company. Out of this amount Rs. 31,608 is reimbursable to the said Private Company for expenses incurred by it on behalf of the Company. These expenses are payable by the Company.

EXPENSES OF ISSUE

The expenses of this issue including underwriting commission and brokerage are estimated at Rs. 2,00,000 and are to be borne and paid by the Company.

SHARE WITHOUT CASH CONSIDERATION

The Company will issue and allot 30,000 Equity Shares of Rs. 100 each credited as fully paid up, as part of the consideration for purchase of the said business of Messrs. Prabhat (Stove & Lamp) Products Co. Private Ltd. and in repayment of loans advanced to it by its Directors, their friends and relatives, as per details given below:—

7,200 Equity Shares of Rs. 100 each credited as fully paid up in part consideration for purchase of the business of M/s. Prabhat (Stove & Lamp) Products Co. Private Ltd.	Rs.	7,20,000
22,800 Equity Shares of Rs. 100 each credited as fully paid up in repayment of loans advanced by its Directors, their friends and relatives to the said M/s. Prabhat (Stove & Lamp) Products Co. Private Ltd.	Rs.	22,80,000
	Rs.	30,00,000

The consideration of Rs. 7,20,000 has been determined by the Controller of Capital Issues on the basis detailed below, vide their consent order No. R 63-CCI/61/967 dated 5th April 1962.

Paid up capital as on 31-3-1961 (of Prabhat (Stove & Lamp) Products Co. Private Ltd.) ..	Rs.	4,28,100.00
Add: Increase in valuation of land ..	Rs.	4,80,868.49
	Rs.	9,08,968.49
Less: Bad Debts not to be taken over.	Rs.	1,59,041.19
	Rs.	7,49,927.30
Less: Value of Bellasis Road Property not to be taken over	Rs.	1,79,927.31
	Rs.	5,70,000.00
Add: Additional value of goodwill ..	Rs.	1,50,000.00
	Rs.	7,20,000.00

MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is 29,400 Equity Shares of Rs. 100 each, of the nominal value of Rs. 29,40,000. The subscription of this amount is assured by reason of the underwriting referred to hereinabove.

FINANCIAL OUTLAY

The total cost of the project will be about Rs. 70,00,000 estimated as under:—

1.	For payment as consideration to M/s. Prabhat (Stove & Lamp) Products Co. Private Ltd., which is to be by issue of Equity Shares of the equivalent value	Rs.	7,20,000
2.	Cost of Replacement of Machinery, extension/erection of building etc.	Rs.	16,00,000
3.	Repayment of loans borrowed by the said Prabhat (Stove & Lamp) Products Co. Private Ltd. from its Directors, their relatives and friends and others (partly to be discharged by issue of Equity Shares of the value of Rs. 22,80,000 as aforesaid) ..	Rs.	44,40,000
4.	Preliminary expenses	Rs.	40,000
5.	Expenses of issue	Rs.	2,00,000
		Rs.	70,00,000

The above estimated capital requirements are to be met as under:—

1.	From Issue of Share Capital ..	Rs.	60,00,000
2.	From Loan from The Industrial Credit and Investment Corporation of India Ltd.	Rs.	10,00,000
		Rs.	70,00,000

The proposed Managing Agents have given an undertaking to the Company, vide their letter dated 26th April 1962, to secure for the Company at appropriate time and on terms acceptable to the Board of Directors, additional finance to the extent necessary to meet any shortfall between the total capital outlay on the project on the one hand and the amount of the issue and the amount of the loan from The Industrial Credit and Investment Corporation of India Ltd., as indicated above on the other, as also to the extent of the amount required for the working capital.

Since the Company is taking over the business of the said Messrs. Prabhat (Stove & Lamp) Products Co. Private Ltd., which is a going concern, the estimate of the working capital required is not mentioned as the same will be available from time to time from the realisation of the current assets to be transferred to the Company. The additional capital, if required, will be raised by loans from the Bankers.

LOAN CAPITAL

The Private Company has executed a Mortgage dated 12th May 1960 of all the fixed assets, plant and equipment in favour of Mrs. Savitaben Nanjibhai Mehta and others as first Mortgagees for a sum of Rs. 3,00,000 and in favour of Mr. Nanjibhai Kalidas Mehta and others as second Mortgagees for a sum of Rs. 2,00,000 to secure in all a total sum of Rs. 5,00,000. Under the terms of this Mortgage, the mortgage debt is repayable on 12th May 1963. The Company will redeem this mortgage by application of the proceeds of this issue by 31st August 1962.

To enable the Company to create a first legal Mortgage in favour of The Industrial Credit and Investment Corporation of India Ltd., referred in the foregoing paragraph, the Company has obtained an undertaking from the said Mortgagees vide their letter dated 28th April 1962, in which they have agreed to discharge the said Mortgage any time earlier than 12th May 1963 after the expiry of a three months' notice in that behalf.

The Industrial Credit and Investment Corporation of India, Ltd. have agreed in principle as per their letter No. PP/6642 dated 15th September 1961 to lend to the Company a sum of Rs. 10,00,000 to meet a part of the cost of capital equipment to be obtained. The loan will bear interest at 6½% per annum and is repayable in ten half-yearly instalments starting from October 1963. The loan is to be secured by a first legal mortgage of the Company's present and future immovable and movable properties subject to hypothecation of such of the movables in favour of the Company's Bankers as may be required for Cash Credit and Overdraft facilities. So long as the loan or any part thereof is outstanding, The Industrial Credit and Investment Corporation of India Ltd. shall be entitled to appoint a Director on the Board of the Company and such Director shall not be liable to retire by rotation nor shall he be required to hold the qualification shares. The Company has undertaken to The Industrial Credit and Investment Corporation of India Ltd. to make adequate arrangement for the appointment of technical and managerial personnel to look after the project.

UNDERWRITING COMMISSION

A commission at the rate of 2½ per cent on the nominal value of the shares which will be taken up by the Underwriters or for which they will procure Subscription in terms of the Underwriting Agreement with them.

In addition to the said Commission the Underwriters will also be paid brokerage at the rate of 1 per cent of the nominal value of the Shares on allotments made in respect of applications bearing their stamps.

BROKERAGE

Brokerage at the rate of 1 per cent of the nominal value of the Equity Shares will be paid on allotment in respect of applications bearing the stamp of a Bank or of a Member of a recognised Stock Exchange. Brokerage on the said basis will be payable to the Underwriters in addition to the underwriting commission on allotment made in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps.

PURCHASE OF PROPERTY

The Company has entered into an Agreement with Messrs. Prabhat (Stove & Lamp) Products Co. Private Ltd., dated 30th April 1962 in terms of Article 3(1) of the Articles of Association of the Company, to purchase the said Prabhat (Stove & Lamp) Products Co. Private Ltd. as a going concern together with the assets therein mentioned and subject to the liabilities as therein specified and on the other terms and conditions mentioned in the said Agreement. The immovable property referred to in the said Agreement is at present subject to the Mortgage hereinbefore mentioned. The immovable property, machinery, plant and equipment which will also be the subject of acquisition by the Company is situated at Jogeshwari and consists of Freehold land admeasuring 32,781¼ sq. yds. together with the buildings, structures and constructions thereon. The name, address, description and occupation of the Vendors is as follows:—

Name	*Address*	*Description*	*Occupation*
Prabhat (Stove & Lamp) Products Co. Private Ltd.	Noble Chambers, Parsi Bazar Street, Bombay-1	Private Limited Company	Manufacturers of Stoves, Lamps, Mantles and Spares thereof.

Consideration: Under the terms of the said Agreement for the sale of all the said assets including machinery, plant, equipment and this immovable property, part of the consideration for the sale of the entire assets of the Private Company is the allotment of 7,200 Equity Shares of Rs. 100/- each of the Company credited as fully paid up as referred to hereinbefore.

The Company will also as part of the consideration for the said purchase allot 22,800 Equity Shares of the Company of Rs. 100/- each credited as fully paid up in repayment of loans advanced to the said Private Limited Company by its Directors, their friends and relatives.

As to the residue of the consideration for the said purchase the Company will pay and discharge the rest of the liabilities of the Company.

Nature and Title: The immovable property is freehold and will be acquired as a freehold estate.

Particulars of Transaction: As stated hereinbefore, the Vendors, the said Prabhat (Stove & Lamp) Products Co. Private Ltd. had mortgaged the said immovable property, machinery, plant and equipment, to the said First Mortgagees and the said Second Mortgagees for an aggregate sum of Rs. 5,00,000. Shri K. M. Sharma, Shri B. R. Misra and Shri B. M. Desai, the Shareholders and the Directors of the said Private Limited Company who mortgaged the said property as aforesaid are also Shareholders and Directors of this Company. The Company will redeem the said mortgage by repayment of the mortgage dues out of the proceeds of this issue. The said Private Limited Company and the said Messrs. Sharma, Misra and Desai are interested accordingly.

INSPECTION OF DOCUMENTS

Copies of the Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company on any working day during the hours of 10-30 a.m. to 2-30 p.m. during the period the Subscription List remains open.

NEED FOR A LONG-TERM POWER POLICY

FORMATION OF CENTRAL GENERATING BOARD ADVOCATED

By H. M. Patel, I.C.S. (Retd.)

AT the end of the second Five-year Plan, the *per capita* consumption of electricity in India was 38 units per annum. It had risen to this figure from 18 units in 1951, that is to say, within 10 years, the consumption had more than doubled itself. This is by no means a negligible achievement for the country as a whole. And yet, it is only when we compare our *per capita* consumption with the *per capita* consumption of advanced countries, that we realise how very backward we are. The *per capita* consumption of Norway stands at 5,000 units per annum, of Sweden and the United States at 4,500 units, and of the United Kingdom, U.S.S.R. and various other European countries, somewhere between 1,500 and 2,500 units. It is also evident from this comparison how far we have to go before we can really say that we are an industrial nation.

Power is an essential basic requirement for the development of industries, large and small. It is also of great value to agriculture wherever water has to be drawn from wells, ordinary and tube, for irrigation purposes.

The installed capacity of hydro-electric power was 0.56 million kilowatts in 1950. It increased to 1.93 million kilowatts in 1960-61: of thermal power the installed capacity was 1.74 million kilowatts in 1950, and it rose to 3.77 million kilowatts in 1960-61. The total installed capacity thus rose from 2.3 million kilowatts in 1950 to 5.71 million kilowatts in 1960-61. The target set was 6.9 million kilowatts. There was, thus, in spite of the very substantially increased generating capacity, a serious shortfall of 1.2 million kilowatts. The reason for this shortfall was foreign exchange shortage during the second Plan period. Steel and other projects were considered to be of greater priority, and the available foreign exchange was used on them! Was this a right decision? Hardly.

Acute Shortage

One consequence of the failure to achieve the target in respect of power generation has been the acute power shortage which so many States have been experiencing right from the beginning of the third Five-year Plan: and, in most cases, the power shortage is unlikely to be overcome for another couple of years. Such power shortage has had the effect immediately of slowing down industrial development in areas affected. It is not easy to understand what exactly made the Government take the view that completion of industrial projects, however important, was a matter of greater urgency than the completion of power projects. Power targets for each State are fixed on the basis of estimates of load growths, that is, of demand for power during the Plan period. These estimates are themselves worked out on an extremely conservative basis, judging from the fact that almost everywhere they have fallen far short of the actual demand growth. If, then, even these conservatively fixed targets are not reached, the consequences cannot but be serious.

In the third Plan, power has been given a high priority realising that it is the basis for the development of large and small industry. A sum of Rs. 1,089 crores has been allotted for the purposes of power development and the aim is to raise the generating capacity by the end of the third Plan from 5.7 million kilowatts to 12.7 million kilowatts. Transmission lines are to be increased from 84,000 circuit miles in 1960-61 to 1,50,000 miles in 1965-66. Of the 12.7 million kilowatts, 7.4 million kilowatts will be thermal and 5.1 million kilowatts hydro.

Demand Growth Underestimated

This planning for power generation has been based on an estimate of load demand. By and large, not sufficient allowance appears to have been made for the full extent of the growth of demand during the third Plan itself, and of the demand during the early years of the fourth Plan periods. It is essential to take account of the demand for power during the first three years of the fourth Plan, so that there is no risk of shortage of power during that period, that being approximately the time that is required for generating fresh thermal power, which can be generated most expeditiously of the three principal systems of power generation, namely thermal, hydro-electric, and nuclear. Only if, in addition to the demand for power for the period for which power is being generated, provision is made for power required during the time that it takes to generate fresh power, can we be certain of avoiding shortage at the beginning of a new Plan period.

It is failure to plan in this way that has caused, and is causing, quite serious difficulties in practice. Our planning for power should be for a five-year period which is different from the ordinary five-year period, namely, from the middle of one Five-year Plan period up to the middle of another. Only in the first instance when it is decided to change over to the new period would it be necessary to prepare a power plan for a period of roughly eight years. This would put power planning on a realistic basis and no occasion need arise of having to go through a period of hopeless shortages.

It is generally accepted now that, in any normally developing economy, the demand for power doubles itself every five years. The increase in the generating capacity, therefore, takes place in geometric progression from one Plan period to another. Where, therefore, previously we were thinking in terms of 5, 10, 15, and 30 thousand kilowatt stations, we shall now have to think in terms of 60 thousand, 120 thousand, and more. In Gujarat, for instance, the power station which is now under execution, will have four units, each of 60,000 kilowatt units. When the next expansion is sanctioned, there is very little doubt that it will be in terms of a 120,000-kilowatt station. Large thermal power stations employing higher steam temperatures and pressures result in greater thermal efficiency and also reduce capital cost per kilowatt of installed capacity. The capital cost of a 120,000-kilowatt unit is about 20 per cent less than a 30,000-kilowatt unit. The thermal efficiency achieved by the larger unit is 34 per cent as against 26 per cent by the smaller unit. The average thermal efficiency in India today is less than 20 per cent partly, no doubt, because we have not only small units, but many of them are also very old. As, therefore, our power stations become larger, power should become cheaper.

Cost of Generation

As a matter of interest, it may be stated that the cost of generating hydro-electric power per unit is 1.2 naye paise; the corresponding cost for a thermal station using coal is 3 naye paise, diesel power costs 25 nP; the atomic power is estimated to cost 3½ to 4 naye paise. It is expected that, when certain developments take place, the atomic power will cost much less.

As the power stations become larger, the question of fuel supply assumes special importance. Coal in India is to be found in Bihar, West Bengal, with some outlying coalfields in Assam and Madhya Pradesh. As the quantity of higher quality coal is limited, it is being made available only to metallurgical and other industries. Power stations are allotted coal with considerable ash content, or middlings from washeries. It is going to become increasingly difficult to transport the coal required by power stations located far away from the coalfields as must necessarily be the case for power stations in Gujarat, Rajasthan, etc. The ideal arrangement, no doubt, would be, having arranged to generate as much hydro-electric power as possible, to plan the erection of nuclear power stations in States which are far away from coalfields, and to locate thermal stations of very large capacity close to the coalfields, and oil refineries, for power stations can also use oil provided it is available at an economic price. If future development is to take place along these lines, certain consequences must necessarily follow. Power generated at these stations, located in this way, will have to transmit along powerful transmission lines over long distances. The question that would then arise is who would become responsible for the establishment of power stations designed to serve several States? It would become necessary to set up a Central power generating agency which would be responsible for establishing large power stations at most convenient and efficient centres, which will be required to make available to State Electricity Boards the power which they generated, for distribution amongst consumers, large and small.

All the requirements of the States cannot wholly be met from thermal units, however large. Therefore, the hydro-electric potential must be fully exploited. Hydro-electric potential, which is technically and economically feasible, has been estimated at 41 million kilowatts. It must be the responsibility of the proposed Central Generation Board to see that the hydro-electric development is also so phased that it adds progressively more and more power to the total pool available for the use of all the States. The hydro-electric power stations also will not always be able to use up their power in the States in which the water potential is available; therefore, as in the case of thermal power stations, the power generated in one State should be distributed to neighbouring States as may be decided upon by the Central Generation board. The possibility of setting up nuclear power stations at strategic points to serve States situated far away will have to be considered by this Central Board. It may well be that, as the demand for power grows, and as the supply of coal becomes tighter, more nuclear power sations may have to be established. In short, it will be the duty of the new Central Generation Board to tackle the entire problem of generating additional power wherever it can most efficiently be generated for meeting the power requirements of the entire country.

A beginning in a small way has been made in the third Plan, where provision has been made for inter-State transmission lines linking up two States. The entire country will, thus, have progressively to be joined together in this way in a super-grid, so that power is utilised in the most fruitful and efficient manner possible.

Master Plan Required

The Central Generation Board's responsibilities could be limited only to the generation of power; a separate body should be established whose duty it would be to plan the total requirements of power of the country and to allocate the power generated according to the requirements of each State from the most convenient centres of power generation. The State Electricity Boards will, then, be responsible, on receiving power within their territories, for efficient distribution. They will, in effect, be purchasing power in bulk from the Central power allocating body. The Central body for the planning and allocation will have to work not on a five-year period basis but on a basis of much longer term of power development in the country. A master plan should be prepared for the development of the various types of generating stations and of determining their allocation with reference not merely to the most efficient generation, but also to the most efficient distribution.

A beginning should be made immediately for the changeover of the planning period for power to extend beyond the third Plan period into the middle of the fourth Plan and, thereafter, to limit the plan periods to five years as in respect of other projects of development included in a plan, provided, however, that the power plan would be for a five-year period commencing at dates different from those for the rest of the sphere of planning. As early as possible, thereafter, steps should be taken for the establishment of a Central body responsible for the planning of the total generation of power and its allocation to the State Electricity Boards. On this Board there will have to be representatives of every State Electricity Board with a representative either of the Planning Commission, or of the Central Ministry for Power to work as its Chairman.

Once the plan prepared by this body is accepted by the Government, funds will be made available to the Central Power Generation Board which will then be responsible for implementing the various projects. As soon as the additional power is generated centrally in this manner, it will be allocated to different States, again, on a carefully planned basis and with due regard to the demand for power of each State, by the Central planning and allocation body. It will thus be the Central body again which would be responsible for fixing the rate for which power was to be supplied in bulk to the State Electricity Boards. In their turn, finally, on receipt of power, the State Electricity Boards would see to it that the power is competently and economically distributed within the State territories.

NEW PRODUCTS AND PROCESSES

Tyre Retreading

A TYRE retreading machine just introduced in the United States uses electronic punch cards to control distribution of a thin strip of raw rubber over the tyre carcase. Advantages claimed are that the machine will eliminate the splice between tyre body and the new tread, that it is cheaper than hand retreading, and that it will rebuild a greater variety of tyres. The machine extrudes a strip of freshly-masticated rubber an inch wide and ⅛ inch thick directly on to the tyre carcase. Since the rubber is freshly worked, it is naturally adhesive and sticks to the tyre, which is revolving on a mandrel. The punched card, a different one for each type and size of tyre, controls the number of thicknesses applied, and their distribution—more at the centre and fewer at the sides. The retread is then "cured" by heat.

Cylindrical Grinding Machine

Three cylindrical grinding machines, capable of high production rates, yet maintaining a tool-room standard of accuracy, have been developed by a British firm, A. A. Jones and Shipman Ltd. All of them have similarities. Typical of them is a semi-automatic machine with a spark-out timing device and, once loaded, runs through its cycle automatically. The controls are electro-hydraulically operated in order to take advantage of any benefits to be gained from the use of gauge sizing methods. For semi-automatic operation, the retraction movement of the wheelhead, the start-stop of the workhead, and the start-stop of the feed (either continuous or automatic) can be rapidly coupled together by switches so as to give single-button control over the full cycle. Another feature of the machine is a dwell or "tarry," arrange so that it can be brought in at either or both ends of the stroke for periods up to five seconds, individually variable. Controls can be coupled, not only when plunge grinding with a continuous in-feed, but also when traverse grinding with an intermittent in-feed. The wheelhead structure is mounted on anti-friction bearings, which provides a unit highly responsive to small increments of feed. A new arrangement, the disposition of the actual feeding unit directly behind the wheel, enables wide wheels to be used without any tendency to angular distortion of the wheelhead unit.

Meter for Central Oil Distribution

A Dutch firm has produced a meter which accurately measures oil flow. This oil meter makes it possible for the central-heating burners of a number of houses or a block of flats to be connected to a common tank, thus considerably simplifying fuel delivery. Each party connected to a central distribution system of this kind has a meter which records his consumption. The quantities consumed can be read off on the meter periodically and the amounts due settled with the supplier.

The meters can also be used for checking oil consumption in normal, existing units, checking central lubricating systems and finally for accurately dosing very small quantities of oily fluids. They are easily connected to the piping system and come in two models. The smaller model has a capacity of 0.2 to 10 litres an hour, the larger one being capable of handling 3 to 30 l/hr. Both have a maximum working pressure of 3 kg/cm² and can cope with fluids having a viscosity of up to 17 cS and a temperature of from 0 to 40° C. Maximum error is very small, namely, 0.5 per cent over the entire measuring range. It operates on the principle of displacement. The counter dial sumberged in the fluid (which incidentally must be transparent) comprises 6 digit wheels in the small and 7 in the large model, two of them in each case coming after the decimal point, so that meter readings can be taken that are accurate to within 10 cc.

Aluminium-coated Steel

Steel with a diffused coating of aluminium is being offered in America as a low-cost substitute for stainless steel. The maker says it will resist oxidation and corrosion at temperatures up to 1,800 degrees Fahrenheit and costs only half as much as stainless. Substituted for mild steel, the company says, it has a life ten times longer in the 1,000 degree range. The aluminium coating is said to be particularly effective against sulphide corrosion. The steel is coated by packing it in a retort in aluminium powder. Heating gives an aluminium coating from 10 to 40 thousandths of an inch thick. The maker says the coating can only be removed by machining.

Super-speed Cement

A cement formulation which will set in one or two minutes after mixing with water is available in Germany for special jobs in the building industry. It contains no salts which might cause a slowing-down in the setting process or a discoloration of the finished surface. The cement is specially suitable for filling anchoring holes in foundations for heavy machinery and is claimed to permit rapid installation of sanitary equipment, heating apparatus and switchboards. It can also be used to coat damp walls in cellars and, if necessary, can be applied dry, the seepage providing the moisture to set it.

Machine to Make Paper Bags

An Austrian enterprise, Ing. Josef Schachl, Linz/Donau, Obere Donaulaende 7, Austria, has developed a special table machine for the manufacture of small bags made of paper—also plastic coated—or foils, measuring 50 x 80-95 x 150 mm., with a capacity of 150 bags per minute. The special processing system—contrary to the usual types the bags have two longitudinal seams—makes the bags particularly suitable for automatic dosing machines which require very resistant bags. Operation is claimed to be simple and efficient and no skilled labour is required. Piles of about 2,000 paper cuttings (the number varies according to the thickness of the material) are placed on the feeding table of the machine from where the bottom paper is taken away by suction and carried on by a grip. The fact that the bottom paper is taken from the pile has the advantage that the pile may always be completed without stopping operation. The cuttings are folded and glued and finally counted by an electro-magnetic counter before they leave the machine. The clear and simple layout of the machine makes it quite easy to shift from one size to another. The machine requires a floor space on a table top of 700 x 1,200 mm. only. On request a suitable steel profile table is supplied with the machine. Power consumption of the machine which operates on the rotation principle, amounts to 0.3 h.p. for the main drive and 0.4 h.p. for the rotary piston ventilator. In order to make it possible to use the machine for more than one purpose, two models are turned out: one for the manufacture of small paper bags, the other for gluing folding boxes, mainly of the type used for pharmaceutical articles, which are very often still glued by hand. The difference lies only in the feeding device; design, capacity and weight are the same.

Rinsing Machine for Cheese Making

A Dutch firm has developed, in conjunction with the Co-operative Dairy Association of Friesland, a rinsing machine for the continuous cleaning of cheese basins and followers (covers for pressing the curd down). The machine is suitable for incorporation in a conveyor-belt system. The basins are fed in by a conveyor belt and placed upside down on a belt running through the machine. As they pass through the machine, the basins are thoroughly cleaned by a curtain of rising water. On leaving the machine, the basins are up-ended. They then pass onto a cloth belt, where the cloths and curd are put into them. The rinsing water can be brought to and held at the desired temperature by means of a controller, so that the cheese basins also emerge from the rinser at a predetermined temperature. This is very important for the quality of the cheeses to be prepared. Electric switches, thermometer and pressure gauge are housed in a common, sealed cabinet. Removable panels provide easy access to the internals of the machine, which is capable of cleaning out all kinds of cheese containers (plastic, wooden, stainless steel) of all dimensions. The machine does not take long to mount and commission, as it does not require any special foundations or fixtures. Moreover, only one steam line, one water line and one power line are needed. The machine takes up little floor space. It is fully adapted to modern mechanised methods of cheese-making and can also be used in dairies where these methods are not yet applied.

Detachable Tyre Tread

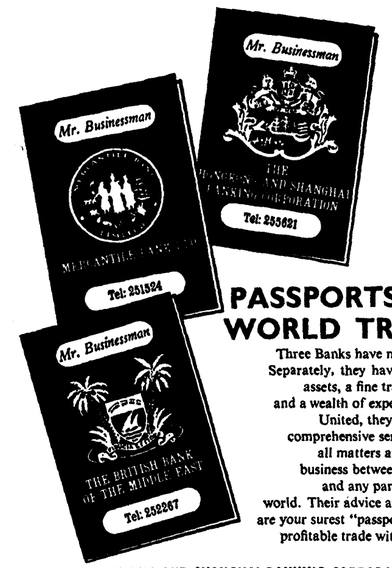
Russian engineers have developed a detachable tyre tread. The Yaroslav tyre factory is now producing such tyres for lorries. The development work it is said took three years. The tread consists of three rubber rings on a metal base. They are mounted on the tyre, which is then inflated. This locks the rings into place. Tests so far made show that with one change of treads the tyres have a running life of up to 200,000 kilometres (about 125,000 miles), against a tyre life of upto about 30,000 miles for standard tyres. The new ones have therefore roughly double the life of the old. They are 50 per cent dearer than standard ones because of the metallic cord involved. Existing factory equipment is usable, so that new capital investment is not needed. How the detachable-tread system would compare with the normal retreading in countries of the west is so far unknown.

Powder Fire Extinguisher

A patent taken out by Dr. Walter Brell of Bad Godesberg in East Germany—Patenschrift 22629—describes a new powder for the extinguishing of fires. Inquiries should be sent to Amt fur Erfindungs-un-Patentweisen, Deutsche Demokratische Republik. The material is a mixture of sodium sulphite and ammonium sulphate. The first, being a reducing agent, takes up oxygen and turns into sulphate. The finely divided ammonium sulphate combines with the sodium sulphate to make sodium hydrogen sulphate and releases ammonia, which has a powerful extinguishing action in itself. Further physical-chemical actions take place. The sodium hydrogen sulphate becomes liquid above 315 degrees C. At higher temperatures gases sulphur dioxide and nitrogen are released. These are also powerful extinguishers. The powder is capable, according to the inventor, of dealing not only with gas and liquid fires, but also with fires of solid substances.

Industrial Noise Protector.

Noise, which is unpleasant at all times, can even be dangerous in certain industries by causing premature fatigue among the workers and thus increasing the possibility of accidents. A Swiss engineer has put an industrial noise protector on the market, in the form of two pads held over the ears by a sheathed metal blade, somewhat similar to a telephonist's earphones. This protector is also available in a hat for the use of workers employed in the open. The "Riwosa" protector can be made to fit any shape of head; furthermore there is no danger of infection or wounds, for no part of it enters the ear; it is comfortable to wear, even over a long period of time, it is washable and therefore hygienic. Reducing noise by about 45 decibels, it is recommended for use in engineering and boiler works, weaving mills, engine testing sheds, on aerodromes, in the construction of tunnels and in all concerns in which the personnel is exposed to intense noise for a long period of time.



PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

INDIA'S FOOD IMPORTS DECLINE

INTAKE OF MACHINERY, HOWEVER, HIGHER

TRENDS in India's export trade in 1961 were examined in these columns last week. It is now proposed to follow up this study by an analysis of the import trade in the last calendar year. In spite of the restrictive import policy, imports have been running much ahead of export earnings, with the adverse balance being met by aid from friendly countries, by drawing down foreign exchange reserves and by loans from the I.M.F. According to provisional figures released by the Department of Commercial Intelligence and Statistics, Calcutta, the total imports aggregated Rs. 1,002 crores in the fiscal year 1961-62, showing a decline of Rs. 105 crores, as compared with 1960-61, when they touched a peak of Rs. 1,107 crores (revised). This level is still higher by Rs. 43 crores, as compared with 1959-60. The performance on the export front in 1961-62 was, however, notable in one important respect. For it was during this year that the consistently upward trend in imports noted since 1958-59, following larger demand for capital goods and raw materials generated by the second Plan, was arrested. It must be borne in mind here that, while figures for 1961-62 are provisional, those for 1960-61 are revised. So when 1961-62 import figures are revised, taking into account certain items under Government account (now excluded from provisional figures), the total imports are likely to be bigger.

Since the commodity-wise and country-wise figures for the import trade are not yet available for the whole of the fiscal year 1961-62, it is proposed to analyse here the trends in imports for the calendar year 1961. Table I on this page shows group-wise and commodity-wise pattern of imports in 1961, as compared with the previous two years. Groupwise, the decline in imports was accounted for mainly by a sharp fall in the intake of foodstuffs. Purchases of crude raw materials and manufactures too were lower. The decline in the case of several items was the result of further curbs imposed, following their larger availability from domestic sources. There was, however, a notable increase in imports of machinery. The following table shows the percentage share of major commodity groups comprising India's imports during the 12 months ended December 1961:

	1961	1960	1959
Foodstuffs	12	19	19
Crude raw materials, including fuels and oils	22	22	19
Chemicals	9	8	9
Manufactures	21	21	20
Machinery and transport ..	35	30	30

It will be seen from the table above that the broad commodity pattern remained more or less the same in 1961, barring foodstuffs and machinery, including transport equipment. The decline in imports of foodstuffs was the result of a marked fall in the purchases of cereals, following the recovery in food production during two successive years 1959-60 and 1960-61, from the setback suffered in 1958-59. The rise in expenditure on foreign machinery and vehicles (despite smaller purchases of certain transport items), reflects broadly the increasing tempo of industrial development in the country. It may also be mentioned here that, although the import of raw materials (including mineral fuels and oils and fats) showed a decline in absolute terms, their proportionate share remained unchanged. Another noteworthy point is that, while developmental imports have claimed a larger share of foreign exchange, the demands of maintenance imports have by no means been neglected. The overall index of industrial production, however, was higher by only about 8 per cent at 181 during the ten months of 1961, which compares unfavourably with 12 per cent in the corresponding period of 1960. The reason for the decline in the rate of growth of industrial output are the shortages of coal, power and transport and only to some extent of foreign exchange.

Wheat and Rice

As already noted, the largest decline in imports, commodity-wise, was registered by wheat and rice. The import of wheat fell by as much as over 50 per cent to Rs. 73 crores in 1961, as compared with the peak levels of the previous year. There was a still sharper decline in the import of rice, namely, by Rs. 15 crores to Rs. 11 crores. The intake of iron and steel was lower by Rs. 16 crores at Rs. 102 crores, thanks to the increase in domestic production of steel from the three public sector plants and others in the private sector. Raw cotton was another commodity, the import of which moved down markedly. During the year under review, thus imports of this commodity amounted to only Rs. 69 crores, as against Rs. 75 crores. This fall is on account of better cotton crop in the country in 1960-61. Still, the 1961 figure is much higher, as compared with the import of cotton worth Rs. 35 crores in 1959. The import of raw jute was also smaller. There was a modest decline in the import of textile yarn and thread as well. Purchases of several items of transport and its equipments were smaller, particularly railway vehicles and aircraft. Imports of some of the non-ferrous metals such as copper, zinc, lead and nickel, too, climbed down; but they were still generally higher than those in 1959. Among the other important items of imports which had staged a fall, mention may be made of petroleum products, wood and lumber, pulp and waste paper, iron and steel scrap, non-ferrous metal scrap, ores of non-ferrous metals, hides and skins, organic and inorganic chemicals and pharmaceuticals.

There was, however, a large number of goods, particularly machinery and components, the imports of which tended to move up. Thus, the import of mining, construction and industrial machinery rose by as much as Rs. 33 crores to Rs. 148 crores. Similarly, marked improvement was noted in the case of metal-working machinery, electric machinery and equipments and other power-generating machinery. India also bought more petroleum (crude and partly refined), coal-tar dyestuffs, manufactured fertilisers, tin, aluminium, paper and paperboard and scientific instruments.

TABLE I—*Imports—Commodity-wise*

(Value in rupees lakhs)

	1961	1960	1959
Food	119,14	210,22	181,54
Of which:

BOWREAH AND DUNBAR MILLS' RESULTS BETTER

IMPROVEMENT IN PROFIT-MARGIN

THE two rather medium-sized Calcutta cotton textile mills, namely, Bowreah Cotton Mills Company Ltd. and Dunbar Mills Ltd., under the Managing Agency of Messrs. Kettlewell Bullen and Company Ltd., are among the several mills in the country that have shown considerable improvement in their working in 1961, which saw a full year's working of the industry's self-imposed voluntary price control scheme. During the year, sales realisations of both the companies rose to new peaks. In the case of Bowreah, they improved from Rs. 197.72 lakhs to Rs. 274.53 lakhs, and in the case of Dunbar, from Rs. 242.39 lakhs to Rs. 306.92 lakhs. Despite a perceptible increase in both manufacturing and operational expenses, there has been a distinct improvement in the gross profit of both the mills, Bowreah's from Rs. 27.18 lakhs to Rs. 45.93 lakhs and Dunbar's from Rs. 37.20 lakhs to Rs. 53.43 lakhs. The third and more vital growth indicator, profit-margin (ratio of gross profit to sales) has also moved up by three points to 16.7 per cent for Bowreah and from 11.2 per cent to 17.4 per cent for Dunbar.

The increase in expenses is basically due to larger production than in the previous year, as is reflected in higher sales and inventory. This is also confirmed by the fact that the increase is more pronounced in manufacturing costs, whereas staff expenses rose because of the full implementations of the wage board recommendations. Thus, as against a rise from Rs. 88.86 lakhs to Rs. 123.44 lakhs in the cost of cotton yarn purchased and from Rs. 31.55 lakhs to Rs. 46.05 lakhs in the expenses incurred on stores, spares, power and fuel by Bowreah, staff expenses increased from Rs. 48 lakhs to Rs. 62.10 lakhs and other expenses from Rs. 12.72 lakhs to Rs. 15.08 lakhs. Similarly, the yarn cost of Dunbar was roughly Rs. 17 lakhs more at Rs. 147.99 lakhs, and of stores, etc., about Rs. 10 lakhs more at Rs. 40.68 lakhs, while its staff expenses rose from Rs. 57.38 lakhs to Rs. 71.63 lakhs and other expenses from Rs. 12.79 lakhs to Rs. 13.05 lakhs. The excise burden borne by Bowreah rose from Rs. 24.42 lakhs to Rs. 31.75 lakhs and of Dunbar from Rs. 13.81 lakhs to Rs. 19.59 lakhs.

Notwithstanding the substantial improvement in the gross profit, the Directors of Bowreah have increased the provision for depreciation only slightly from Rs. 11.99 lakhs to Rs. 12.31 lakhs and those of Dunbar have, in fact, reduced it from Rs. 9.93 lakhs to Rs. 8.86 lakhs. Presumably this is because of the provision to be made for arrears on this account to meet which both the companies have set aside Rs. 6.50 lakhs each. Providing for arrears of depreciation for the first time in the past four years, Bowreah has probably much of unabsorbed depreciation and has, therefore, made no provision for taxation. To make up for the past deficiency in a similar situation, Dunbar has, however, provided as much as Rs. 20.75 lakhs, as against a mere Rs. 1.60 lakh in the previous year, to meet the tax liability.

Out of the distributable surplus, the Directors of Bowreah have transferred Rs. 17.25 lakhs to reserves, as against Rs. 9 lakhs in the previous year, and doubled the equity dividend to 20 per cent, subject to tax. But the Directors of Dunbar have reduced the amount of profit retained in business from Rs. 14.10 lakhs to Rs. 5.61 lakhs and maintained the dividend at 20 per cent, taxable, albeit on the increased equity capital following the issue of 95,000 shares of Rs. 10 each to the shareholders as on 15th June 1961 in the form of one-for-three rights issue at par. Consequently, the amount absorbed by the dividend is higher by Rs. 1.90 lakh. However, both the companies have adequate surplus to carry forward.

The table accompanying this review gives a fair idea of the two companies' progress in the past four years and also provides an interesting comparison of their respective positions during that period.

During the year under review, both the companies continued their modernisation programmes. Bowreah completed installation of Whitin combers, Barber Colman winding and warping machines and mercerising range, which gave satisfactory performance. The hot air stenter has since arrived and is expected to go into operation very soon. Apart from additions to the plant and machinery to the extent of Rs. 25.18 lakhs during the year, orders worth about Rs. 25 lakhs were outstanding for further modernisation of the mills. Dunbar added Rs. 6.79 lakhs to its plant and machinery during the year and had outstanding orders worth about Rs. 18 lakhs.

The year-end balance-sheet of Bowreah reveals increasing reliance by the Company on outside funds to finance its modernisation programme and other operations. In addition to debentures of the order of Rs. 20.65 lakhs, the Company has secured loans from banks amounting to Rs. 79.41 lakhs, as against Rs. 59.75 lakhs in the previous year. At the same time, unsecured loans have shrunk but a little from Rs. 30 lakhs to Rs. 25 lakhs. The current liabilities and provisions have gone up from Rs. 28.02 lakhs to Rs. 36.12 lakhs. Inclusive of secured loans, less debentures, its total liability to outsiders is Rs. 140.55 lakhs and exceeds current assets, loans and advances aggregating Rs. 135.67 lakhs. This apart, as against the written down value of Rs. 93.75 lakhs of the gross block of Rs. 180.34 lakhs, the Company's own funds comprise capital of Rs. 36 lakhs and reserves and surplus of Rs. 33.56 lakhs. To overcome this undercapitalisation, the Directors have rightly decided to issue at par 96,000 ordinary shares of Rs. 10 each in the proportion of two ordinary shares for every five shares held.

The financial position of Dunbar is relatively more satisfactory. Its paid-up capital of Rs. 38 lakhs is adequately covered by reserves and surplus at Rs. 48.39 lakhs. With the additional capital issued during the year, as mentioned before, it has reduced its secured bank borrowings by about Rs. 6 lakhs to Rs. 74.15 lakhs and returned the previous year's loan of Rs. 12.22 lakhs from the Managing Agents. However, its aggregate liability to outsiders, excluding debentures of Rs. 25.76 lakhs but including Rs. 48.93 lakhs being current liabilities and provisions, has increased during the year from Rs. 116.80 lakhs to Rs. 123.09 lakhs. But it is adequately covered by current assets, loans and advances totalling Rs. 178.91 lakhs. The gross block increased from Rs. 157.23 lakhs to Rs. 167.86 lakhs during the year, and has been written down to Rs. 53.99 lakhs.

The Rs. 10 fully paid ordinary shares of Bowreah are currently quoted at Rs. 39.12 *cum-div., ex-right*, and offer, on an *ex-div.* basis, a net yield of 3.7 per cent per annum, presuming that the same rate of dividend will be maintained on the increased capital. The Rs. 10 Dunbar shares are quoted at Rs. 34 *cum-div.*, and the net yield on them, on an *ex-div.* basis, works out to nearly 4 per cent per annum.

SHIVRAJPUR SUFFERS SHARP SETBACK

The Shivrajpur Syndicate Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) suffered a sharp setback during the year to 30th November 1961, as is indicated in a loss of Rs. 5.81 lakhs, before depreciation and taxation, as against a gross profit of Rs. 28.78 lakhs earned in the previous year. The loss has been minimised to the extent of Rs. 1.77 lakh being income from other sources, which was Rs. 0.32 lakh in the previous year. Explaining the setback, the Directors state that, as the Government had stopped barter deals involving export of manganese ore with effect from January 1961, demand for the Company's ores was poor, and, consequently, shipment and deliveries effected during the year aggregated only 41,157 tonnes, as against 92,529 tonnes in 1959-60, and gross sales realisations dropped with a bang from Rs. 124.92 lakhs to Rs. 51.72 lakhs, leaving large stocks at close of Rs. 39.65 lakhs, as against Rs. 28.34 lakhs in the previous year. While sales and inventory put together indicate a decline in production, presumably voluntarily enforced by the management in the circumstances, there has been only a slight drop in the cost of stores and spare parts consumed from Rs. 6.26 lakhs to Rs. 5.49 lakhs, whereas the cost of power and fuel has been higher at Rs. 3.12 lakhs as against Rs. 2.83 lakhs in the previous year. This is true of staff expenses also which at Rs. 35.18 lakhs are higher by Rs. 2.36 lakhs. Other expenses have come down considerably from Rs. 47.52 lakhs to Rs. 26.82 lakhs. The loss has been increased to Rs. 11.30 lakhs with the provision of Rs. 5.49 lakhs (Rs. 5.54 lakhs a year before) for depreciation. The dividend, which was Rs. 8 including Rs. 3 cash bonus on Rs. 10 fully paid share in the previous year, has, therefore, been skipped. The transfer to gratuity reserves has been increased from Rs. 0.50 lakh to Rs. 1 lakh. By withdrawing a sum of Rs. 5.23 lakhs from reserves and provisions, the debit balance carried forward has been minimised to Rs. 7.05 lakhs.

With the introduction of export quota restrictions from January 1961, the Company was granted a quota of 59,130 tons for the calendar year 1961. A similar quota has been granted for this year. The shipments outstanding on 30th November 1961 covered a quantity of 16,695 tonnes for delivery this year. Development on the third level at Shivrajpur 'Underground' was satisfactory and the production of high and low grade ore was similar to that of the previous year. The No. 3 shaft was sunk up to a depth of 540 feet and then discontinued, in view of the depressed state of the manganese market. No mining operations were carried out at the Bamankua mine during the year. Production of high grade ore from underground at the Pani mine was satisfactory, and opencast and waste dump workings continued normally. New building constructions were put off, because of the depressed market conditions. A strike by workers from 15th to 22nd March 1961 over past bonus was settled by agreement. The reduction in the railway freight on manganese ore from January 1962 will benefit the Company by Rs. 7.30 per tonne, the reduced freight rate being Rs. 14.30. It is, however, to be in force only for one year to begin with. Accumulation of stocks and unencouraging market conditions have led the Company to resort to a 50 per cent cut over the previous year in its mining operations and temporarily close the Pani mines from 15th January 1962. Consequently, 1,730 employees were retrenched in January and February this year. As for the immediate outlook for the Company, the Directors pin their hopes on their present efforts to sell sizable quantities of ore and the possibility of re-extending barter facilities to the trade.

With the issue of 1 : 1 bonus share during the year, the issued capital of the Company has increased from Rs. 10.50 lakhs to Rs. 21 lakhs, of which Rs. 20.87 lakhs is paid-up. It is supplemented by reserves and surplus of Rs. 59.89 lakhs. As against nil in the previous year, borrowings have gone up to Rs. 36.57 lakhs during the year under review, excluding unsecured loans of some Rs. 600. Current liabilities and provisions have, however, come down from Rs. 62.85 lakhs to Rs. 18.83 lakhs. The total liability to outsiders works out to Rs. 55.40 lakhs and is adequately covered by current assets, including book debts but excluding investments, of Rs. 71.24 lakhs. Out of investments of Rs. 3.02 lakhs, Rs. 3 lakhs are quoted and command a market value of Rs. 1.38 lakh. The gross block of Rs. 110.96 lakhs, showing an increase of Rs. 4.41 lakhs during the year, has been written down to Rs. 61.48 lakhs. Inclusive of works-in-progress at Rs. 0.42 lakh, the net block is shown in the balance-sheet at Rs. 61.90 lakhs.

NATIONAL MACHINERY MANUFACTURERS

MAIDEN DIVIDEND PROPOSED

A SINGULAR feature of the working of the National Machinery Manufacturers Ltd. (Chairman: Mr. K. M. D. Thackersey, Bombay) during the year ended 31st December 1961 is that it has helped the Company to emerge stronger than it was before. It will be recalled that, since its inception in 1947, the Company saw quite a few ups and downs. Not too far back (in 1958), it suffered a renewed setback. While the improvement witnessed last year was an extension of the recovery since then, it has an added significance, for it marked an end to the legacy of the 1958 setback and still leaves sufficient profit to enable the Directors to propose a maiden dividend of 6 per cent subject to tax.

During the year, sales maintained their uptrend and improved by Rs. 66.91 lakhs to Rs. 365.34 lakhs. But the recovery is more noticeable in gross profit which has staged a rise of Rs. 28.93 lakhs to Rs. 61.17 lakhs. Consequently, there is an increase of nearly six points, from 10.8 per cent to an encouraging level of 16.7 per cent, in the profit-margin (ratio of gross profit to sales). The improvement would have been more marked but for higher prime costs amounting to Rs. 189.04 lakhs, as against Rs. 166.82 lakhs in the previous year and staff expenses of Rs. 90.49 lakhs as against Rs. 86.41 lakhs. After providing Rs. 15.14 lakhs for depreciation, the net profit amounts to Rs. 46.03 lakhs. And before utilising this distributable surplus to pay the dividend, the Directors have provided Rs. 18.82 lakhs for wiping off arrears of depreciation which has now been fully provided on normal and shift basis. No provision has been made for taxation because of this unabsorbed depreciation. They have also retained Rs. 6.86 lakhs (Rs. 1.31 lakh in 1960) in business. The dividend absorbs Rs. 15.14 lakhs, leaving a surplus of Rs. 1.38 lakh to be carried forward as against a debit balance of Rs. 3.97 lakhs brought in.

The table below gives at a glance a fair idea of the Company's working in the past four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

* Includes Rs. 1.94 lakhs for 1958.
† Subject to deduction of tax.

There was an all-round increase in the production of ring frames, spares and conversion materials during the year. Nonetheless, because of insufficient quality raw materials and components, it was inadequate to meet the demand. Although it is proposed to overcome these difficulties by procuring indigenous supplies, imports cannot be entirely done away with and these are difficult to obtain because of foreign exchange shortage. The preliminary work connected with the establishment of the manufacture of NMM-RUTI automatic looms in collaboration with Ruti Machinery Works Ltd., Switzerland, has now been almost completed and production is expected to be established in the near future. The Company proposes to manufacture 1,500 looms a year in the first instance. The imported components required for the first phase of the production programme have started arriving according to schedule.

Because of the unsteady working, the Company has so far had no opportunity to build up any large reserves. Accordingly, they now stand at a total of Rs. 12.53 lakhs, as against the paid up capital of Rs. 252.40 lakhs, of which Rs. 26 lakhs is for consideration other than cash. It reduced its secured bank borrowings from Rs. 111.36 lakhs to Rs. 15 lakhs during the year. But unsecured loans from banks rose from Rs. 82.71 lakhs to Rs. 112.02 lakhs. Its other liabilities and provisions aggregate Rs. 165.08 lakhs. As against this, current assets, loans and advances amount to Rs. 384.51 lakhs. Its gross block increased from Rs. 304.80 lakhs to Rs. 321.14 lakhs and has been written down to Rs. 172.52 lakhs.

TENSILE STEEL LIMITED

Tensile Steel Ltd. (Managing Agents: Messrs. Shah Industries [Private] Ltd., Baroda) has completed about 40 per cent of the construction at the factory site for which it has acquired 118,580 square yards of land from the Government of Gujarat. Messrs. C. Itoh and Company Ltd. of Tokyo, Japan, one of the collaborators of the Company, has made definite arrangements to ship the plant and equipment between September and November this year, which will be erected by the year-end. Giving this information to the shareholders at the Company's first annual general meeting, held at Baroda on Saturday, 19th May, the Chairman, Mr. C. C. Desai, disclosed that, in order to expedite the progress of erection, installation and operation of the plant, Mr. K. K. Omori, President of Shinko Wire Company Ltd., a subsidiary of Messrs. Kobe Steel Works Ltd., Japan (both of which are also collaborating in the Company's project), and a Director of the Company, was expected to arrive in Bombay on the 25th inst. He is to visit the factory site and finalise all technical and other details. Mr. Desai revealed that the Western Railway authorities would lay the railway siding at the factory site before the plant and machinery started arriving so that the Company could receive them straight at site.

Mr. Desai announced at the meeting that the Company, formed for the manufacture of 10,000 tons, per annum of high tensile steel wire, has submitted an application to the Government for expansion of its production capacity to cover a wide range of P.C. wire and other wire products, which negotiations are in progress. He stated that the Company has negotiated a loan of Rs. 20 lakhs and obtained a deferred payment guarantee of Rs. 22.37 lakhs in favour of Messrs. C. Itoh and Company Ltd. from the Industrial Finance Corporation of India. It has also negotiated cash credit facility for Rs. 25 lakhs with the Bank of India Ltd. on very reasonable terms. It has applied for the raw material import licences and the negotiations are in progress.

COMPANY MEETINGS AND DIVIDENDS

DELTA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st May 1962. Dividend: Nil. Transfer books remain closed from 17th to 31st May 1962, both days inclusive.

KUMARDHUBI ENGINEERING WORKS LTD. Annual General Meeting, Calcutta, 31st May 1962. Dividend: Re. 0.35 per ordinary share, subject to deduction of tax. Transfer books remain closed from 17th to 31st May 1962, both days inclusive.

CHEVIOT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st May 1962. Dividend: Re. 0.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 17th to 31st May 1962, both days inclusive.

FERRO ALLOYS CORPORATION LTD. Sixth Annual General Meeting, Tumsar, Maharashtra State, 4th June 1962. Dividend: 11 per cent or Rs. 11.00 per ordinary share, subject to deduction of tax, payable on or after 2nd July 1962. Transfer books remain closed from 21st May to 4th June 1962, both days inclusive.

BASMATIA TEA CO., LTD. Annual General Meeting, Calcutta, 31st May 1962. Dividend: Rs. 2.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 21st to 31st May 1962, both days inclusive.

HERCULES INSURANCE CO., LTD. Twenty-seventh Annual General Meeting, Calcutta, 6th June 1962. Transfer books will remain closed from 30th May to 6th June 1962, both days inclusive.

SEEDPORE COAL CO., LTD. Annual General Meeting, Calcutta, 7th June 1962. Dividend: Rs. 3.00 per ordinary share (includes interim dividend of Re. 1.00 per share). Transfer books remain closed from 26th May to 7th June 1962, both days inclusive.

PODAR MILLS LTD. Annual General Meeting, Bombay, 11th June 1962. Dividend: Rs. 12.00 per equity share (includes a special bonus of Rs. 2.00 per equity share), subject to deduction of tax, payable on and after 10th July 1962. Transfer books will remain closed from 9th to 16th June 1962, both days inclusive.

ANANDAM RUBBER CO., LTD. Nineteenth Annual General Meeting, Kottayam, Kerala State, 12th June 1962. Dividend: 18 per cent or Re. 1.80 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 5th to 12th June 1962, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Eighteenth Annual General Meeting, Alleppey, Kerala State, 15th June 1962. Dividend: 10 per cent or Re. 1.00 per ordinary share (includes the interim dividend of 4 per cent or Re. 0.40 per share), subject to deduction of tax. Transfer books will remain closed from 1st to 15th June 1962, both days inclusive.

PHILIPS INDIA LTD. Thirty-second Annual General Meeting, Calcutta, 14th June 1962. Dividend: Re. 1.20 per ordinary share, subject to deduction of tax. Transfer books remain closed from 24th May to 14th June, 1962, both days inclusive.

ESCORTS LTD. Seventeenth Annual General Meeting, New Delhi, 15th June 1962. Dividend: Re. 1.30 per ordinary share, subject to deduction of tax. Transfer books remain closed from 26th May to 15th June 1962, both days inclusive.

INDIAN COPPER CORPORATION LTD. Thirty-eighth Annual General Meeting, Calcutta, 8th August 1962. Dividend: 6.48 pence or Re. 0.36 per unit of stock, subject to deduction of tax, payable on 31st August 1962. Transfer books will remain closed from 9th June to 1st July 1962, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Taxable interim dividends of Rs. 240 per share on original shares of Rs. 2,500 each; Rs. 12.00 per share on ordinary shares of Rs. 125 each and Rs. 4.80 per share, on ordinary shares of Rs. 125 each (Rs. 50 paid up), for the year ending 31st May 1962, payable on or after 25th June 1962.

OIL'S LIVING ROOM

The hiding places of crude oil are certain types of rock buried deep in the earth. The oil occurs in the tiny spaces between grains of sand in sandstone rocks or little cracks in limestone. Often these spaces account for about one-fifth of the total volume of the solid-looking rock. (You can check this for yourself by filling a glass with dry sand and then seeing how much water can be poured in from another glass before it overflows).

Since the oil is dispersed in these rock-spaces, the "pool" of oil you sometimes hear mentioned is nothing like a lake or river. And however it may have collected in the first place it is not moving at all now.

The explorer looks for places where oil might have collected in an underground trap of rocks. Different methods of exploration are used, and all are based on knowledge of the way oil occurred, migrated and accumulated in the earth millions of years ago.

SYNOPSES OF COMPANY REPORTS

Hope's Metal Windows (India) Ltd.

(*Secretaries*: Messrs. Balmer Lawrie and Co., Ltd., Calcutta.)

4th Annual General Meeting—25th May 1962.

Working Results for the year ended 31st December 1961:

The loss for the year was Rs. 44,842 (loss of Rs. 22,730 for 1960) which it is proposed to be carried forward.

Operations.—The construction of the Company's factory is almost complete and the installation of plant and machinery is presently taking place. Production is expected to commence shortly.

During the year the Company entered into an agreement with Henry Hope & Sons Ltd., Birmingham, England, which provides, *inter alia*, that the latter will supply and install in the Company's factory certain plant and equipment, payment for which will be made by the allotment to Henry Hope & Sons Ltd. of shares in the Company. At the annual general meeting a special resolution for the purpose of approving this allotment will be proposed.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ..	9,45,070	Block ..	74,630
Other liabilities ..	26,483	Current assets	5,17,596
		Investments ..	2,000
		Cash ..	3,09,755
		P.L. account deficit	67,572
	Rs. 9,71,553		Rs. 9,71,553

* Paid up capital consists of 94,507 ordinary shares of Rs. 10 each fully paid up.

Industrial Containers Ltd.

(*Secretaries*: Messrs. Balmer Lawrie & Co., Ltd., Calcutta.)

4th Annual General Meeting—25th May 1962.

Working Results:

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 16,789 being unclaimed dividends.

† Only a small sum of Rs. 200.

‡ Preference dividend is calculated at 6.5 per cent. per annum.

Extracts from the Directors' report: **Raisings** for the year from Lachipore Colliery were 1,10,903 tonnes compared with 92,250 tonnes in the previous year, whilst despatches totalled 1,09,835 tonnes as against 91,255 tonnes.

*In the report of the Directors dated 31st May, 1956 reference was made to the suspension of raising at the Company's Pretoria Colliery, since the available coal had been virtually exhausted. Some time ago it was decided that there was a further small area of Koithi Seam coal in the Pretoria property which could be conveniently worked by an adjoining Colliery and arrangements were accordingly made for this to be done. The mining of this coal has provided a satisfactory additional source of income, but this will cease within the next year or so.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,80,000	Gross block ..	32,20,082

* Loss after providing for doubtful debts and Secretaries and Treasurers' remuneration but before providing for depreciation.

† Loss after taking into account provision for depreciation.

‡ This includes Rs. 35,000 transferred from dividend equalisation reserve for the purpose of paying preference dividend.

§ Preference dividend calculated at 7¼ per cent.

‖ Preference dividend calculated at 6¼ per cent.

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

¶ This represents dividend on the ordinary capital of Rs. 2,8 lakhs. The present ordinary capital is Rs. 56 lakhs and preference capital Rs. 14,06,300 (Rs. 5,00,000 as at the end of 1960).

Extracts from the Directors' report: Members are aware that the amalgamation of Belvedere Jute Mills Co., Ltd., with this Company was sanctioned by the Calcutta High Court and took effect on 30th November, 1961, on which date the assets and liabilities of Belvedere were transferred to the Company. The Company's preference share capital has increased from Rs. 5,00,000 to Rs. 14,06,300 and ordinary capital from Rs. 28,00,000 to Rs. 56,00,000 and that the excess of the book value of the Belvedere assets and liabilities at 30th November 1961, over the face value of the shares issued to the Belvedere shareholders has been shown as capital reserve.

The accounts for the year ended 30th November, 1961, covers the working of Delta Mill only. Belvedere Mill was closed down at the date of amalgamation and the productive capacity transferred to Delta which, since 3rd December, 1961, has been working double shift. The trading of the Belvedere Mill up to 30th November, 1961, resulted in a loss of Rs. 9,03,500.

At present the Company's Mill is working 48 hours a week with a full complement of looms. With the installation of further modern drawing and spinning machinery during and since the close of the year, the modernisation of the drawing and spinning machinery for up to 87½ per cent of the Mill's increased registered loomage has been completed.

Although the transfer to Delta Mill was effected very smoothly, the subsequent working of the Mill for a short time was below the desired level of efficiency, and a period of such unsettlement had been expected in view of the major upheaval involved. However, the Mill is now running smoothly and a good level of production is being attained.

Accounts in brief as at 30th November 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	70,06,300	Gross block ..	1,52,41,028
Reserves and surplus†	51,28,797	—Depreciation ..	53,93,035

Proposed dividends (taxable) 7% C. preference	91§	1,12‖
,, ,, ,, ordinary ..	1,05	Nil
Carry forward	(5%)	(Nil)
	1,21	6

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* Loss for the year after providing for doubtful debts and Managing Agents' remuneration.

† Including Rs. 6,87,429 for depreciation.

‡ This includes Rs. 22,40,010 being profit on sale of the Orient Mill property and assets.

§ Preference dividend is calculated at 9.1 per cent.

‖ This includes the supplementary preference dividend for the year ended 30th November 1959 at 2.1 per cent.

Extracts from the Directors' report: The Indian jute industry experienced very difficult conditions in the second half of 1961. The price of jute rose to abnormally high levels, but prices of manufactured goods failed to keep in parity, making it impossible to work profitably on the simultaneous purchase of raw material and sale of finished goods.

Costs were increased by the lower level of production caused by restrictions in working hours, by the payment of lay-off compensation to labour on account of the block closures of a week each in June and July 1961, and by the increase in workers' dearness allowance which was recommended by the Wage Board for the Jute Industry. In addition, as a result of a strike, this Mill was closed for eight weeks during August and September, 1961.

Scarcity of raw jute and shortage of electric power caused many alterations in the hours worked per week and in the number of looms sealed.

At present the Company's Mill is working 48 hours a week with a full complement of looms. The installation of further modern drawing and spinning machinery during the year to supply 60 per cent of the heavy weft yarns was completed and similar machinery to supply the balance 40 per cent will shortly be installed.

The return to a higher level of production, coupled with the benefit of the modern machinery which has been installed, has reduced costs, and simultaneous business is at present possible at profitable levels.

Accounts in brief as at 30th November 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	46,58,750	Gross block ..	1,27,96,440
Reserves and surplus..	54,41,588	—Depreciation ..	69,58,418
Other liabilities ..	24,98,870	Net block ..	58,18,022
		Current assets ..	60,94,964
		Investments ..	4,82,818
		Cash	14,756
	Rs. 1,27,99,168		Rs. 1,27,99,168

* Paid-up capital consists of 10,000 seven per cent. cumulative preference shares of Rs. 100 each and 3,35,625 ordinary shares of Rs. 10 each fully paid up. This also includes Rs. 2,500 on account of shares forfeited.

Notice

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gillander House, Netaji Subhas Road, CALCUTTA-1

NOTICE IS HEREBY GIVEN THAT THE Fifty-fourth Annual General Meeting of the Members will be held at the Registered Office of the Company on Friday the 22nd June 1962, at 11 a.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.

(2) To sanction the declaration of a dividend.

(3) To appoint a Director in place of Mr. P. W. G. Adair who retires by rotation and, being eligible, offers himself for re-appointment.

(4) To appoint Auditors including Branch Auditors for the year ending 31st December 1962 and to fix their remuneration.

NOTICE is hereby given that the Ordinary Register of Members of the Company will be closed from the 28th May 1962 to 22nd June 1962, both days inclusive.

By Order of the Board,
STEEL BROTHERS & COMPANY LIMITED,
Managing Agents.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA.
7th May, 1962.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member.

INTER-BANK AGREEMENT REVISED

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

The outstanding development of the week in the short-term money market is the agreement among the banks on the lines in which the Inter-bank Agreement on rates of interest on term deposits is to be modified. As readers are aware, there have been protracted negotiations on this issue among the members of the Indian Banks Association for several months. Five medium banks—Dena, Union, Canara, Indian and Indian Overseas—had given six months' notice saying that they would like to withdraw from the Agreement, if it could not be so revised as to permit them to quote ½ per cent more than the big banks, without prejudice to the right already granted to small banks (that is, those with deposits of less than Rs. 25 crores) to offer ½ per cent more than they were doing. In other words, instead of two classifications, big banks and small banks, they wanted to have three classifications, big, medium and small, with the last category having an advantage of ½ per cent over the big banks. The notice given to this effect was due to expire on 31st March, but it was extended by two months, that is, upto the end of May 1962, as no understanding could be reached in time. There were times in the last two months when it looked as though there was no meeting ground among banks and that the whole thing would break, leading to intense competition among them. Even last Saturday, when the final meeting of chief executives of banks took place to endorse a tentative agreement arrived at a few days earlier, it was a matter of touch and go. But, ultimately, the sense of unity among the members of the Agreement got the better of them, the outcome clearly reflecting the spirit of *give and take, as well as of* live and let live. The salient features of the new agreement are as follows:

Scheduled banks with deposits of Rs. 10 crores and less will not be bound by the terms of the Agreement. For purposes of convenience, they are designated as "smaller banks."

Then come "small banks"; these are banks the deposits of which are over Rs. 10 crores but do not exceed Rs. 25 crores.

The third category is "medium banks", defined as banks with deposits over Rs. 25 crores but not more than Rs. 50 crores.

The fourth category is "big banks", that is, banks with deposits exceeding Rs. 50 crores.

The rates of interest which the big banks can pay are subject to ceilings known as "standard rates." The ceilings under the present agreement are to continue unchanged. Accordingly, the schedule of "standard rates" is as follows:

Term Deposits	*Per cent Per annum*
3 to 30 days (inclusive)	3
31 to 60 days („)	3½
61 to 90 days („)	3½
91 days and more but less than 12 months	3½
12 months and more but less than 24 months	4
24 months and more but less than 48 months	4½
48 months and more but less than 60 months	4½
More than 60 months	5

The medium banks, as defined above, are allowed to offer ½ per cent more than the aforesaid standard rates.

The small banks can offer, as they have been doing all along, ½ per cent more than the standard rates.

The *banks* will be reclassified on the aforesaid lines once in six months, on 1st May on the basis of their balance sheets as at the preceding 31st December and on 1st November as at the preceding 30th June.

The revised agreement will come into force from 1st June 1962 and be firm for a period of 21 months, that is, up to 31st March 1964. It is only thereafter that a signatory bank can withdraw from it or ask for a change in the terms and that too only after giving six months' notice.

The Exchange Banks and the subsidiaries of the State Bank of India are to be treated on par with the big banks and can, therefore, offer no more than the "standard rates" to their depositors. By convention, the State Bank of India is expected to follow suit. It may be noted that neither the Exchange Banks nor the State Bank of India are members of the Indian Banks' Association; they are also not a party to the Agreement.

The foregoing changes are yet to be approved by the boards of member-banks, but that is only a question of formal procedure.

As of 31st December 1961, there are five medium banks and three small banks who are members of the Agreement. One of the small banks has since become a medium bank.

The implications of the changes agreed to are: (*a*) Only the medium banks can pay a little more to their depositors. (*b*) The small banks cannot pay anything more than they have been doing. But the advantage they had over the medium banks has been reduced by half. (*c*) The freedom given to smaller banks to quote what they like may induce them to become members of *the Association.*

The trend of the short-term money market during the week under review was easy. Upto Monday, the inter-bank call money rate was 4 per cent per annum but came down to 3½ per cent on Tuesday which level continued today also. The indications are that it will steadily move down in *the coming* days, as the usual busy season is practically over. The term deposit rates are unchanged and so also the rate on 91 days' Treasury Bills at 2.590 per cent per annum.

The foreign assets held by the Reserve Bank declined further by Rs. 2.67 crores to Rs. 107.73 crores during the week ended 18th May 1962.

The Gilt-edged market is colourless, with a modest turnover in 4 per cent 1972 State Loans, most of which have gone up by 10 to 15 nP. The medium-dated loans, maturing in 1967 and 1968, of U.P., Andhra, Madras and Mysore have also had *some* demand resulting in an appreciation of 15 to 25 nP.

GOLD SCALES FRESH PEAK

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

Gold in the bullion market touched a fresh peak of Rs. 127.55 (spot) per 10 grams (or Rs. 150 per tola) on Tuesday the 22nd inst., a rise of as much as Rs. 4.55 in just six days. The spurt followed hectic buying by bulls and frantic covering by bears. The chief impetus was provided by fears of an acute shortage of floating stocks in the next few weeks. These fears stemmed from reports suggesting a persistently high level of offtake, while arrivals continued to be restricted, due to seizure of contraband gold in Bombay (2,460 tolas), Ahmedabad (3,000 tolas), and Madras (75 tolas). The pace of arrivals was expected to slow down considerably in coming months, in view of heavy rains and stricter vigilance by customs authorities in border regions. In sympathy with gold and owing to brisk enquiries from upcountry centres, silver also made a strident advance. It was stated that one prominent operator at Calcutta bought on Saturday large quantities partly to cover his short position. Today, gold tended to look down due to profit-taking at higher levels, while silver continued to rule firm.

The average daily offtake of both gold and silver was larger during the week as compared with the previous two weeks, while arrivals were lower. The relevant figures are given below:

	Week ended		
	23-5-62	16-5-62	9-6-62
Gold (tolas)			
Arrivals	6.000	8,800	13,325
Offtake	13.200	9,600	8,250
Silver (bars)			
Arrivals	12	19	26
Offtake	20	18	24

Reflecting scarcity of actual supply, the premium commanded by ready gold over the forward (18th June settlement), which had risen from 70 nP to Rs. 2.45 last week, increased further to Rs. 4.60 this week, though it declined to Rs. 3.95 today. Ready silver continued to command a high premium of Rs. 3 over the Jeth (19th June) settlement throughout the week.

The dollar price of gold in the London bullion market eased from $35.07⅛ to $35.07⅛ per fine ounce. U.S. Treasury spokesmen reiterated on Monday this week that the U.S. had no intention of changing the price it paid for gold, namely, $35 per ounce. He quoted the statement made on the 17th inst., by Mr. Robert Roosa, Under Secretary of Treasury for Monetary Affairs, who, while addressing the American Bankers' Conference at Rome, had said: "With 8,500 million dollars of liquid dollar holdings in the hands of private foreigners, we must make sure that speculative forces are not fed by uncertainty about either the ability or the determination of the United States to stand firmly behind the inter-convertibility of the dollar with gold at the fixed price of 35 dollars per fine ounce." Ready gold in London continued unaltered at 249s. 4½d. Ready and forward silver were also unchanged at 84½d. and 84½d., respectively, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	23-5-62 (closing)	High	Low	16-5-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready .99 fine)	126.25	127.55	122.50	123.00
Jeth*	122.80	122.95	120.45	120.55
Sovereign	98.50	98.50	97.25	97.25
SILVER				
Ready (.995 fine)	221.80	222.00	219.95	220.05
Jeth†	218.80	219.25	216.95	217.05
London—				
Gold	249s.4½d.	249s.5d.	249s.4½d.	249s.4½d.
Silver Ready	84½d.	—	—	84½d.
Silver Forward	84½d.	—	—	84½d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECOVER AT CLOSE

(*From Our Own Correspondent*)

BOMBAY, *23rd May*

The easy trend witnessed in the cotton futures market towards the close of last week gathered momentum during the week under review. The news of an agreement having been signed between India and U.S., under which the latter would supply 225,000 bales of American cotton under P.L. 480, prompted local and up-country selling which accelerated the downward trend. The expectation that the efforts now being made to get Sudan cotton on deferred payment basis or barter deal would bear fruit also imparted weakness to the market. Operators were inclined to think that, should the Government succeed in this and other efforts for getting cotton, shortage of cotton during the period September to December 1962 would not be as acute as was anticipated. Although it is too early to make even a rough guess of the probable size of the new crop, the general feeling is that the crop would turn out to be a good one. These considerations imparted weakness to cotton futures which declined from Rs. 719.25 last week-end to Rs. 712 on Monday, the 21st inst. There has been a recovery since then induced by short-covering and fresh buying attracted by the low level touched earlier in the week. The Jarilla March 1963 contract improved to close at Rs. 715. The net loss over the week was Rs. 4.25. The trend of price of the contract during the week is indicated below:

	23-5-62	*High*	*Low*	16-5-62
Jarilla March ...	715	723.25	712	719.25

In the spot market at Sewri, mill demand for ready cotton broadened, following the news that an additional quota for Indian cotton would be issued to mills forthwith. Popular varieties such as Vijay, Digvijay, Laxmi, Kalyan, Surti, CO2 and 197/3 were in keen demand. Laxmi attracted particular attention owing to the scarcity of Vijay and Digvijay. In fact, there was a surprise requisition drive yesterday, presumably because *mills experienced difficulty* in getting these varieties.

In the export section, the Government of India has come out with the long-awaited announcement of a special export quota for Bengal *Deshi* to Yugoslavia. The quota is subject to a quantitative ceiling of Rs. 20 lakhs. Trade quarters estimate that this would hardly cover 7,000 bales. But business had already been done to the extent of 18,000 bales of which sales of over 11,000 bales have been registered with the Joint Chief Controller of Exports. According to the terms of the *quota now issued*, all the sales done and applications submitted stand cancelled and exporters will have to make fresh commitments. Some of the salient features of the quota are (i) cable offer and acceptance made after 25th May will only be accepted (ii) applications for registration will be accepted from 29th May, (iii) cotton allotted to shippers will be allowed for shipment from 1st June till 31st August and (iv) as usual, 5 per cent of the quota has been reserved for co-operative societies.

The pace of utilisation of the latest quota for Bengal *Deshi* of 70,000 bales has been slow. This is due mainly to the slackness of demand from Japan, one of the principal buyers of this cotton. Total export sales registered till the 19th inst., were only 50,226 bales. This still leaves a balance of 16,274 bales to reach the ceiling of 66,500 bales (shippers share).

Following the news of the signing of the Indo-U.S. agreement for the supply of 225,000 bales of 400 lbs. each of U.S. cotton under P.L. 480, there was keen mill demand for U.S. cotton. Both Bombay and Ahmedabad mills bought sizeable quantities. Sudan, Pakistan and East African cotton also were in demand. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 685; Ganganagar 618 Hubli Laxmi 1,200; Jayadhar 1,085; Gadag Laxmi 1,160. American 1-5/32"; Good Middling 1,280. Mwanza 1,135; Sudan XG2S 1,720. GS 1,810.

The Karachi cotton futures market ruled firm during the week under review. Good export inquiries and domestic mill demand initiated a general buying movement which led to a smart rally in prices. N.T.R.G. May firmed up from Rs. 68.70 to Rs. 71. The July contract was marked up by Rs. 2.20 to Rs. 69.90.

Fully steady conditions prevailed in the Liverpool cotton futures market during the week. Commission House support and local trade buying imparted strength to the market. Advices from the yarn and piecegoods market were also good. Both the American and American type contracts consequently ruled steady. Sudan contracts were quiet and nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 24.00; July 24.00; October 23.95 December 24.05.

American cotton mixed growth contract: May 24.15; July 24.40; October 24.30; December 24.40.

Sudan: May 30.00; July 29,00; September 29.

Cotton futures values in New York were well maintained during the week under review. Prices moved in a narrow range, showing little net change over the week. Inter-month switchings accounted for a major part of the transactions.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	22-5-62	14-5-62	8-5-62
New York spot	35.75	35.75	35.70
May	—	—	34.40
July	34.76	34.73	34.72
October	34.72	34.53	34.43
December	34.72	—	—

ART SILK YARN FIRM

(From Our Own Correspondent)

BOMBAY, 23rd *May*

The firmness of art silk yarn noted last week continued unabated during the week under review. The renewed firmness was engendered by reports that the revised export promotion scheme for fabrics would be announced shortly. Good offtake of spot also imparted strength. The reported scarcity of imported yarn was another encouraging factor. Consequently, prices registered an improvement. Amilan (20 x 1) August contract spurted by Rs. 40 to Rs. 4.020. June contract advanced by Rs. 35 to Rs. 3.940. Spot National Rayons 120 Bt. cones 1st graded climbed up from Rs. 14.56 to Rs. 15.75. 150 Bt. cones 1st grade strengthened by 77 nP to Rs. 13.95. 120 *denier and 150 denier Japan* and Italy were unchanged at last week's levels. Fresh business put through in these deniers was said to be very much restricted, in view of scarcity of supplies.

In contrast to the *firmness* of art silk yarn, staple fibre yarn ruled distinctly easy, thanks to slack demand from consuming centres. 40 x 2 June and August contracts dropped Rs. 5 each to Rs. 707 and Rs. 727, respectively. Spot Kohinoors declined by 13 nP to Rs. 7.92. Citys eased by 9 nP to Rs. 8.01. Hinds lost 4 nP to Rs. 7.88.

Cotton yarn was dull, operators were not inclined to enter into fresh commitments either way, as they preferred to await the Finance Minister's decision regarding the plea for relief in excise duty. Note was taken of the reported plea of British *textile* interests to peg imports of yarn into the U.K. from Indian and other Commonwealth countries at the 1959 level.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	23-5-1962	16-5-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
June	3,940.00	3,905.00
August	4,020.00	3,980.00
120 Japan (per 100 kg.)	2,205.00	2,205.00
150 Japan (per 100 kg.)	1,984.00	1,984.00
120 Italy (per 100 kg.)	1,902.00	1,902.00
150 Italy (per 100 kg.)	1,736.00	1,736.00
Wat. Ray. 150 Bt. 1 (per kg.)	13.95	13.18
Staple fibre yarn (40 x 2)—		
June	707.00	712.00
August	727.00	732.00
Kohinoor (per kg.)	7.92	8.05
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Madura	31.00	31.00
40s T. T. Corin	33.75	33.75
60s Mahindra	65.50	65.50

GROUNDNUTS RALLY

(From Our Own Correspondent)

BOMBAY, 23rd *May*

Steady conditions prevailed in the oilseeds market, barring castorseeds which encountered persistent selling. *The recovery* in groundnuts noted towards the close of last week gathered momentum during the week under review, mainly on technical considerations, though the reported buying of large quantities of oil and oilseeds in the last few weeks by the State Trading Corporation for purposes of exports, too, induced some strength. The report that the Union Government was contemplating to set up a new State Trading Corporation to deal with exports of oilseeds and other agricultural commodities were noted, but they did *not* have *any significant effect*. Some of the export houses and North Indian operators were leading buyers during the week. But for slack demand from *vanaspati* manufacturers, values would have gone up still further. Linseeds and cottonseeds *moved* up in *sympathy* with groundnuts. Castorseeds, however, ruled easy, thanks to fears of more severe competition from Brazil in the American market for castor oil, following the devaluation of the Brazilian currency.

Groundnut May 1962 contract, after declining initially from Rs. 203.67 to Rs. 201.62, rose to Rs. 208.37. July 1962 contract hardened by Rs. 2.25 to Rs. 212.37. Nizam bold advanced by a like amount to Rs. 45.50. Khandesh quality improved by Re. 1.75 to Rs. 45.75. Oil May 1962 contract put on 40 nP to Rs. 17.55. Oil ex-mill gathered 35 nP to Rs. 18.40 and railway receipts 25 nP to Rs. 18.10.

Linseed June and September 1962 contracts went up by a rupee each to Rs. 38.75 and Rs. 39.50, respectively. Bold ready increased by Re. 1.12 to Rs. 37.62. Linseed oil gathered 10 nP to Rs. 14.55.

Castorseed June 1962 contract, however, fell from Rs. 164.87 to Rs. 164.62, after fluctuating between Rs. 165.37 and Rs. 162.12. September 1962 contract closed 12 nP lower at Rs. 165.25. Ready Kanpurs eased by 28 nP to Rs. 31.62 and Madras *small* by 13 nP to Rs. 32.87. Oil B.S.S. declined by 25 nP to Rs. 13.65 and Oil Commercial by 15 nP to Rs. 13.15.

Cottonseed July 1962 contract was maintained at Rs. 99.50. September 1962 contract improved by 50 nP to Rs. 102. Berar, white and non-white strengthened by 10 nP each to Rs. 21.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 23rd May, as compared with those of the two previous weeks:

	23-5-1962	16-5-1962	9-5-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	208.37	203.62	212.00
July 1962	212.37	210.12	218.00
Nizam bold	45.50	43.25	45.25
Khandesh quality	45.75	44.00	45.25
Oil ex-mill ready*	18.40	18.05	18.70
Railway receipts*	18.10	17.85	18.45
Oil May 1962	17.55	17.15	17.90
Castorseed			
June 1962	164.62	164.87	166.25
September 1962	165.25	165.37	166.25
Ready Madras	32.87	33.00	33.12
Ready Kanpur	31.62	32.00	31.75
Oil B.S.S.†	13.65	13.90	14.00
Oil commercial†	13.15	13 30	13.20
Linseed			
June 1962	38.75	37.75	37.44
September 1962	39.50	38.50	38.06
Bold ready	37.62	36 50	36.37
Oil ready†	14.55	14 45	14.50
Cottonseed **July 1962**	99.50	99.50	*103.00*
Niger seed	35.00	34 75	35.00
Kardi seed	25.50	25.00	25.25

* Rates include excise duty but exclude sales tax
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

NILGIRI TEA EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 17*th May*

A total of 567,000 kgs. was on offer in sale No. 20 held on Tuesday the 15th inst. Quality of medium teas was *often well maintained*, but that of Nilgiris showed a further slight decline. There was good general demand. Nilgiri B.O.Ps were easier on average by up to 20 nP, whilst their fannings sold readily at around last rates. Good mediums were irregular and easier. Mediums and low medium brokens were about steady, but sometimes declined by upto 10 nP. Fannings in this category were strong and irregularly dearer, some meeting keen competition and often appreciating considerably in price. Black leaf brokens were firm and often dearer and similar fannings also advanced. Whole leaf grades sold readily at around last rates. Plainest kinds were about steady. Teas of unorthodox manufacture were generally easier, with fannings in this category meeting less support.

The quotation per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.90-4.20	4.40-4.55
Mediums	4.20-4.80	4.55-4.65
Good mediums	4.85-5.65	4.70-5.20
Nilgiri B.O.P.	4.50-7.40	4.60-5.80

The average price realised in sale No. 20 was Rs. 4.59 per kg. as against Rs. 4.60 a week ago and *Rs. 4.60 in the* corresponding sale last year.

A smaller quantity comprising 334,000 kgs. was offered in dust sale No. 20 held today. *Good* general demand prevailed throughout the sale. Highgrowns and *clean leaf* mediums were well supported at around last rates. The better mediums sorts eased upto 25 nP per kilo, whilst medium and low medium kinds were 10-15 nP lower, with *fibrous* descriptions registering a greater drop. Milled dusts sold quite readily, but residuals registered a decline in price. Unorthodox dusts, although irregular, were generally firm and occasionally dearer except for the browner *fibrous types*.

The average price realised in dust sale No. 20 was Rs. 3.67 per kg. as compared with Rs. 3.68 a week ago and Rs. 4.41 in the corresponding sale last year.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 21: 793,000 kgs. offered. Useful demand. Low medium, medium brokens 10 to 15 nP easier. Similar fannings fully firm. Others easier. Good mediums generally 25 nP easier. Highgrown brokens easier. Fannings firm. Orthodox types easier."

BLACK PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 23rd *May*

Malabar black pepper ruled firm during the week in sympathy with Singapore and owing to sizable purchases by New York dealers at progressively higher prices. They are said to have paid for *May* shipment at $0.35¼ and $0.36. Ungarbled improved to Rs. 315 and garbled was done at Rs. 325. The lowest and the highest for July delivery were Rs. 336 and Rs. 343, respectively.

Singapore, after going down to Str.$115, improved to Str.$120, owing to short covering and deterioration in the political situation in Laos and Indonesia.

Spot in New York improved to $0.36½, the lowest being $0.34½ in the wake of inquiries from grinders whose pipelines were reported almost *empty, as they* were waiting for lower prices in expectation of early selling by the prominent Indonesian holders. The Indonesian holders however, remained reserved sellers, as they preferred to sell to Communist countries rather than to the U.S.A. where they feared big quantities could not be sold without sacrifice.

About 22,500 tons of Malabar are estimated to have gone into *consumption either* as export or as inland offtake from November 1961 to May 1962. As such, the balance available until the arrival of new crop will not be more than 6,500 tons, quantity which is considered to be not so heavy, in view of potential demand from Communist countries which are expected to buy more than during the past years.

The future depends upon the size of foreign and the inland demand from now onwards.

Ready pepper in Bombay is nominally quoted at Rs. 170 per 50 kilos.

DEMAND FOR TEA RESTRICTED

(From Our Own Correspondent)

CALCUTTA, 22*nd May*

Easier conditions were in evidence at the internal sales held last week. Demand was restricted, as buyers were in no mood to cover their requirements. No export sale was held this week; the next sale is scheduled for the forthcoming week. Regular weekly sales will commence in June. Internal buyers desired to wait until regular sales commenced. Since they have a reasonable level of stocks, they can afford to wait for some time for replenishment. Export space was difficult to obtain, but, with the resumption of work by Hooghly pilots from Saturday last, normal conditions are expected in the port within a week or two.

The general impression that the first export auctions held last week did not get to a good start would appear to be erroneous. The offerings consisted of Darjeelings and, though quality was poor, the good grades commanded fair attention and realised reasonable prices. It was significant that the U.S.S.R. was an active buyer. A firm trend for export sales cannot be constructed until a few auctions have been completed; however, it can be said with firmness that quality teas would be readily absorbed. North Indian tea *production* up to the end of April aggregated 17.31 million lbs., representing a decline of 1.86 million lbs. as compared with the corresponding previous figure. The fall was attributed to bad weather, but, since then, climatic conditions have been good and outturn for May is expected to be satisfactory.

The fact that bidders in auctions in London have been active is noted with satisfaction. This indicates that overseas buyers in Calcutta would show similar enthusiasm in bids. The low level of stocks in London is an index of the British need for early replenishment. U.K. stocks recorded a decline of 6 million lbs. to 136 million lbs. in the week ended 11th May. With poor shipments from Calcutta the last one month, U.K. stocks would continue to fall in the coming three weeks. It was significant that, in the London sales of North Indian tea held last week, good invoices sold well, while plains and Dooars fell by 1d. to 2d. a lb. In last week's Colombo auctions, demand was so strong that prices appreciated by 10 to 20 cents a lb.

Tea circles are worried about the marketing outlook for common grades. Production of these in India and other producing areas, especially in Pakistan, Africa and Ceylon, would increase. Thus the export demand for these grades would be marked by stiff competition. With the result, most of what India produces as common grades should be consumed within the country. However, with the growing *quality-consciousness* among consumers in India, under the impetus of a steadily improving standard of living, it is apprehended that the estates producing common teas alone would be facing a difficult problem. The Government should consider the granting of excise duty relief to common teas. The efforts of the Tata-Finlay packaging firm in pushing up sales in India are timely. It is expected that this firm would make a bid to find a market in South India in the first instance. South India is a favourite more of coffee than of tea, and hence tea blending firms in India have not been as active there as in other parts of the country.

Mr. A. S. Bam, Chairman of the Tea Board, has just returned after visiting the United States, Canada, Germany, the United Kingdom, Ireland, the Continent, and the U.A.R. as head of an Indian tea delegation to these countries. The report of the delegation is looked forward with interest, but Mr. Bam has stated that the tour has been useful and instructive. The tour should be judged by the results that would follow. In 1961-62, India failed to obtain a reasonable share of the world's increased requirements of tea. It remains to be seen if this is corrected this year. The export duty reduction has been a timely measure, but it is felt that progress towards making instant tea should be accelerated, if Indian tea is to capture a good market in the United States and Canada. Mr. Bam thought that more exports to the U.S.A. and Canada were likely, but stated that traders there considered prices of Indian common teas as not being competitive.

Dusts on offer in last week's internal sales aggregated 29,853 packages. Demand was restricted and prices declined. Plain orthodox teas eased in an irregular trend. Assams lost 30 nP, while among legg-cut teas, cleaner teas were well supported. Medium C.T.C. dusts eased, the fibrous C.T.Cs joined the general trend, but a few selected invoices were firm. The quotations per 1 kg. inclusive of excise duty were: Good Assam C.T.C. dust Rs. 6.30 to Rs. 6.60; medium Assam C.T.C. dust Rs. 5.70 to Rs. 6.90; legg-cut dust Rs. 4.00 to Rs. 4.30; medium Assam dust Rs. 3.70 to Rs. 4.06, and plain orthodox dust Rs. 3.20 to Rs. 3.30.

Fair demand was in evidence in leaf on offer amounting to 515 packages.

JUTE GOODS STOCKS LOWER

(From Our Own Correspondent)

CALCUTTA, 22*nd May*

The announcement of a fall in jute goods stocks with mills at the end of April coupled with a notable improvement in sailings from the Calcutta port following resumption of services by Hooghly pilots, led to steady conditions in jute *goods* during the week under review, while the publication of the Buffer Stock Association's decision to take up another 250,000 maunds of fibre and of doubling of the export quota encouraged stockists of raw jute. The Indian Jute Mills Association announced earlier that the unrestricted phase of working for mills was being extended up to the end of June. In other words, this decision meant that demand for goods was being maintained at a high level and that *mills* could afford to keep in operation as many looms as possible commensurate with spinning capacity. Because of restricted yarn output, mills generally have to keep 5 per cent of the looms sealed, but, now that demand for jute goods has risen and also an outlet for the surplus fibre has to be found, the mills have reviewed their spinning capacity and are insisting on the Government of India to permit *import of spinning machinery to match with* what is made within the country. It is now likely that imports would be allowed and the mills would soon be enabled to raise yarn output, so that they could unseal the balance of looms now remaining idle. With the acceleration of industrial activity, there is evidence that internal consumption of jute goods has been rising, though the levy of excise duty may result in greater use of second-hand bags. Thus, for a time, overall consumption may decline. But once time is allowed for the cycle to take shape, the normal increase is likely to take effect. Exports in recent months have on an average risen by 5,600 tons to 38,000 tons a month as compared with last year.

The Hooghly pilots resumed duty on the 19th inst., but it would take about two weeks before normal conditions return. Consequently shipments for the month as a whole would not reveal a satisfactory picture. The levy of excise duties on jute goods for internal consumption as from 24th April caused delay in clearances as time was needed for mills to get fully acquainted with the various excise formalities, such as declaration of stocks as on 24th April which should be cleared from time to time as being duty-free, handing over day-to-day production as from 24th April at the excise godown after entering the particulars in the daily register numbered R.G.1, opening a deposit account with the Excise Collectorate for advance payment of duty, clearance of goods through form numbered A.R.1 after deducting duty from the deposit account, submission of monthly returns to the Excise Collectorate (1) showing the pre-excise stock position as at the end of the month, and (2) showing details of post-excise production and despatch in the month together with month-end stocks, etc. The mills have now become fairly acquainted with these procedures, but, since actual stocks at the end of April reveal a false position in view of the delay in despatches following excise duty, the mills have in an attempt to give as correct a position as possible, deducted from April-end stocks despatches for the first five days of May, taking, of course, no account of production in these five days. Adjusted thus, April-end stocks of goods with mills at 60,300 tonnes recorded an overall decline of 1,100 tonnes. Sacking fell by 3,300 tonnes to 25,800 tonnes and miscellaneous constructions by 200 tonnes to 15,900 tonnes, while hessian rose by 2,400 tonnes to 18,600 tonnes.

While in heavy goods only fewer inquiries were received during the week as a whole, and not much Continental buying was anticipated in the near future, there was a notable improvement in sentiment for hessian constructions. The report that U.S. burlap consumption at the end of April fell by 5 million yards to 249 million yards was noted with satisfaction, as the fall was interpreted as denoting a change in U.S. belief to the effect that increased demand for hessian stands in the way of cheaper prices. U.S. consumption in April aggregated 70 million yards. Ready hessian 40" 10 oz. was firm at Rs. 54 on Wednesday last. The news of the increase in *hessian stocks* failed to have any effect, since support from both Argentina and the U.S. was anticipated. Indeed, Argentina's purchases have hitherto been slow, and it has yet to cover 5,000 bales out of its quota of 7,000 bales. However, with the possible delay of May steamer by one month, Argentina may not appear in the market immediately. The continued firmness in forward quotations—Oct.-Dec. hessian 40" 10 oz. at Rs. 47.75 and same delivery basis B. twills at Rs. 120.75 as compared to Rs. 54 and Rs. 125 for ready delivery respectively—is an index of expectations regarding continued strong demand.

Shipping space to several destinations, more particularly to the U.K. and the Continent, was very difficult to obtain. Earlier in the week, several steamers scheduled to load in Calcutta were withdrawn. However, with the resolution of the port difficulties, the situation has changed, though, with a backlog of commitments to fulfil, shippers are placed in a difficult position. Overseas buyers who had so far withheld support are now expected to be active and a squeeze in ready goods is considered inevitable. On Thursday last, with poor interest shown by overseas buyers, prices fluctuated within narrow limits. Ready B. twills eased to Rs. 124 and ready hessian 40" 10 oz. to Rs. 53.60. At lower levels, covering business was done. This led B. twills to move forward to Rs. 125.80 and hessian 40" 10 oz. to Rs. 54.35 on Friday. Covering business was again a feature over the week-end, though overseas were silent. B. twills were about firm at Rs. 125.75 and hessian 40" 10 oz. at Rs. 54.00. During yesterday's trading, overseas buyers were more interested to cover for forward requirements than ready goods. As a result, prices of the former rose. Subsequently, ready goods also rose. There was some amount of foreign buying in hessian, as a result of which the 40" 10 oz. was better at Rs. 55.10. B. twills were firm at Rs. 125.75.

The steady support accorded to the fibre market by the Buffer Stock Association and the announcement of the Association's intention to purchase an additional quantity of 250,000 maunds led to an improvement in raw jute prices. The *jungli* variety improved by Re. 1.50 a maund. It has been indicated that the Buffer Stock Association would remain a permanent body, and its business is to stabilise the fibre market for all time. It will purchase fibre so long as there are offers and sell if prices tend to rise unreasonably. The Jute Commissioner, Mr. Ajit Mozoomdar, said during the week that the Government was attempting to increase purchases for buffer stock and to export fibre to a few East European countries. The weather was dry last week. Earlier rains had led to *significant* progress with regard to sowing, but, if the present dry weather continues, it would cause anxiety. Sowing in the jute-growing States and areas (West Bengal, Assam, Bihar, Orissa, Uttar Pradesh, and Tripura) till early this month were 15 to 25 per cent behind last year's. In West Bengal, the area under mesta and jute is expected to decline from 1.5 million acres to 1 million acres, but, since the yield per acre is expected to increase to 3.5 bales through intensive cultivation, the overall output is likely to be satisfactory.

The Government representatives of jute-growing States told the Central Supervisory Body for Jute, which met here last week, that jute prices received by growers were so low as to jeopardise any planned attempt at stabilising fibre production. It may also be noted that, in its report to the Union Ministry of Co-operation, the study team *on co-operative* marketing of jute in West Bengal has stated: "It is not uncommon for balers' prices in upcountry markets to be lower than parity rates in Calcutta by Rs. 8 to Rs. 12 per maund." The Team recommends the co-operative marketing of jute on the lines of the co-operative marketing of cotton in Gujarat, ensuring of adequate credit for farmers, the starting of a few pilot projects in the main jute-growing areas, and an organisational framework for co-operatives to function at various levels. The Team is satisfied that co-operatives would alone be able to stabilise fibre prices. It deplores the present system of buying in growing areas.

The Government of India has now increased the export quota of jute from 100,000 bales to 200,000 bales. The earlier announcement of resumption of exports to East European countries has been followed by the receipt of inquiries from other areas such as the United States, Japan and Western Europe. *It is proposed to complete shipments* by 31st July, so that there would be no chances of any mix-up of the old with the new crop.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 21*st May*

The kip market remained quiet due to *Bakr-id* holidays. Arrivals from tanneries were restricted. Demand for inland trade was poor. Though inquiries from the U.K. were persistent, importers there were not willing to pay the prices established earlier, but were liquidating their stocks at lower prices forgoing most of their commission. This has been a bad feature in the trade, now and then. Cowcalf light weights and top marks in buffcalf were in demand, but sellers were few, due to paucity of stocks in tanneries available for further sale.

Quiet conditions prevailed in the tanned skins section, except for *middle class* sheep skins, in which demand from the Continent persisted at last prices. Importers in the U.K. did not evince interest in other lines, as they were apparently waiting for the market to decline. Export orders from the Continent and the U.S. were negligible for tanned goat skins.

In the London public auctions held last week, clearance of stocks were small and prices were irregular for goat skins and 6 to 12 pence lower for sheep skins all classes except for middle class tannages.

The following are the nominal prices—in Rs. per lb.—for all-round lots in the local market:

Tanned cow hides 8/8½ lbs. average	2-20 to 2.25
Tanned cow calf 1½/2 lbs. average	3.70 to 3.80
Tanned buff hides 12/14 lbs. average	1.85 to 1.95
Tanned buff calf 1½/2 lbs. average	3.10 to 3.20

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 22*nd May*

Easier advices from foreign markets coupled with buyers' resistance at higher levels led to a fall in prices in the metal market here during the the week under review. The 25 per cent cut in the U.S. aid to India this year (now reduced) caused great concern to the market men, because, at present, the U.S.A. is the only source of copper supplies for India, the imports of which have been planned on the basis of the expected aid. The resumption of work by Hooghly pilots has meant unloading of imports which were hitherto awaiting entry into the river at Sandheads. As a result, *the stock* position of the principal *metals* has improved.

Copper scrap, despite modest releases of permit copper, was in short supply, but, as buyers refused to follow the rise, prices eased. Thus, berry scrap moved down from Rs. 572.75 to Rs. 570.50 per 100 kgs. On the London Metal Exchange, the price for spot copper was maintained at £234 a ton, as cash metal was in good demand, though interest from the Continent was absent.

Tin, in London, opened at £921 a ton and, after rising to £925, closed lower on balance at £914. It would be remembered that, a week ago, it touched the low of £903. The recovery was attributed to steady demand from the Continent and also to higher advices from Penang. Uncertainties were believed to exist with regard to the proposed U.S. releases from the strategic stockpile. Meanwhile, according to reports from Malaya, it was apprehended that the U.S releases might retard Malayan production which reached, in the first quarter of this year a new high of 316,144 piculs as compared to the corresponding figures for the last five years, and showed an increase of 14,000 piculs over the first quarter of 1961. Even if Malayan production maintained this rate of production, it is felt that the world output this year would fall short of demand by 12,000 to 20,000 tons. In Calcutta, the price eased from Rs. 1,692.75 to Rs. 1,669.25 per 100 kgs. following fresh arrivals.

Lead, in Calcutta, eased from Rs. 136 per 100 kgs. to Rs. 134. Demand was subdued. In London, the price declined from £60½ to £59¼ a ton. Electrolytic zinc closed here lower on balance at Rs. 224.50 per 100 kgs., after opening at Rs. 241.25. The week's opening and closing quotations in London for the spot metal were unchanged at £68. The price was better at £68¾ during mid-week.

SUGAR REACTS

(From Our Own Correspondent)

HAPUR, 21*st May*

After ruling firm in the earlier part of this week on continued brisk buying, sugar eased here later following the release of 2.5 lakh metric tons quota for open sale, with the validity period for sale and despatch reduced from 45 to 30 days. Mills were anxious sellers, and prices drifted lower consequently. Most of the factories in west U.P. have already closed their production season and the rest would do so by the week-end. Factories in east U.P., however, are still getting enough cane, and would continue crushing for another fortnight. Sugar production by 30th April 1962 in the country was 353,000 metric tons as against 419,000 metric tons during the corresponding period last season, and stocks with factories on that date totalled 23,92,000 metric tons as against 22,17,000 metric tons on the same date last season. Week-end prices here were: Spot delivery wholesale Simbhauli Rs. 107.37, Bulandshar Rs. 103.50 per quintal, retail Rs. 1.02 per seer, mill delivery (per maund) D29 Amroha Rs. 38.75, Dhampur Rs. 38.62, Seohara Rs. 39, Meerut Rs. 39.37, E29 Simbhauli Rs. 39.25 and Bijnore Rs. 38.50.

Khandsari prices improved fractionally following revival of demand from Punjab, Rajasthan and adjoining areas. The inferior quality was quoted at Rs. 30.50 to Rs. 32.50 per maund, while the dry superior was around Rs. 33.25 to Rs. 36.25 and crystal at Rs. 34.25 to Rs. 36.50 a maund.

Gur was steadier here during the week on brisk buying mostly from Gujarat. The week's offtake was around seven wagonloads and the local stock ran down to 16,000 maunds. *Shakker* was in request from Rajasthan and was steadier. Week-end prices were: *Gur* superior Rs. 53.58, *pansera* Rs. 52.25, dara Rs. 49.57, kotha selected Rs. 52.25 to Rs. 53.58 and *shakker* Rs. 58.94 per quintal.

Sugar production during the month of April 1962 amounted to 353,000 metric tons, as against 419,000 tons in the same month last season. The total production for the season 1961-62 upto 30th April was 2,510,000 tons (including 56,000 tons produced prior to November 1961), as against 2,746,000 tons during the corresponding period last season (including 55,000 tons produced prior to November 1960). The offtake of sugar from factories during the month of April (including despatches for exports) was 267,000 metric tons, as against 175,000 tons, the total despatches during the first six months of 1961-62 season being 1,264,000 tons (including 105,000 tons for exports), as against 1,077,000 tons (including 87,000 tons for exports) in the same period last season. The total closing stocks of sugar with factories as on 30th April 1962 were 2,392,000 metric tons, as against 2,217,000 tons on the same date last season.

PLANTING

(Concluded from page 942)

than an *ad-valorem* duty and, having regard to average prices, it would reasonably be fixed at ½*d.* per lb. Sir Percival goes to the extent of even suggesting that, from the commonsense point of view, it would be better to dispense with this duty altogether, for the revenue to the six European Common Market countries from such a duty would be negligible, since imports into them only amount to about 40 million lbs. a year. Nevertheless, he concedes that, except for the trouble involved, it would make little difference to the tea industry or to the Governments concerned, if sentimental reasons made it necessary to impose the aforesaid weighted average duty instead of permitting free entry. In his considered opinion, the case for relief in one of the three forms described above is unanswerable; as long as that relief is given, it matters little to the tea trade which system is chosen. Sir Percival has rightly urged that Britain need not be—and must not be—a suppliant and that it, too, must state its terms and, among them, should be "fair treatment for the great Commonwealth tea industry."

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share"

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year

DELHI LETTER

TOUGHENING UP IN STEEL

MR. SUBRAMANIAM SEEKS SOME NEW SINEWS

From Our Special Correspondent

NEW DELHI, *22nd May*

THE late Dr. M. Visvesvaraya, in the annals of Indian administration, symbolised the exception of a technician turned statesman and administrator. His methodic approach to problems reflected the operation of a scientific mind. By and large, Ministers in the Union Cabinet as well as in the States have been, unwittingly or wittingly, in collusion with the civil servants who have a non-technical background to suppress the full flowering of the influence of the engineer and the scientist.

The traditional multi-purpose approach and the domination by the civil servant whose seniority in the administrative cadre permits him to overrule a technician have led to odd situations. One such instance was in handling the product of the Nangal Fertiliser Factory which the administrator decided was explosive (on the basis of school chemistry), despite advice to the contrary by the chemical engineers. The result has been that the fertiliser is mixed with chalk before being transported, adding to costs. A similar mixing will be done in a fertiliser factory coming up in one of the steel works in the public sector.

Soviet leaders visiting India, particularly Anastas Mikoyan, are known to have advised Indian Ministers on the need to give more responsibility to the technocrat as the public sector industries grow. They have also suggested that greater decentralisation of authority will help in the efficient operation of the public sector plants. Even Communist China, one of the big proponents of centralisation, has realised that "administrative power vested in leading management personnel of enterprises has been too limited, while industrial departments exercise too much control over the business of enterprises."

During the conference of Asian economic planners organised at New Delhi last year under the auspices of the E.C.A.F.E., it was noted that, "in the actual operation of enterprises of modern scale and complexity, innumerable decisions have to be taken by the man on the spot and it is impossible for a central agency to provide guidance on all such matters without serious loss of time and resources... Where human affairs are to be dealt with in great detail, there are limits to the exercise of compulsion or guidance, and the encouragement of voluntary decisions is likely to achieve better results than the habit of depending upon instructions from the superior. When some decentralisation takes place, various inconsistencies are bound to arise; and one of the functions of a planning administration is to keep such inconsistencies to a minimum, by taking due note of those which are inevitable and by carrying out adjustments in the future programmes accordingly."

American criticism also emanated from Professor Galbraith who came down upon the post office socialism of the civil service.

Failures Frankly Admitted

Over the past few years, such criticism had been falling on deaf ears in Delhi where the inheritors of the British service tried to transplant the civil servants on to jobs not visualised for them by the imperial rulers. Mr. C. Subramaniam, having no firm commitments to the Delhi pattern, has made a frank admission of the failures of the civil service octopus. The admission on the 'misfits' came when he replied to critics in Parliament of the working of the steel plants and heavy industries. Among the points Mr. Subramaniam made were: Hindustan Steel has created a minor 'Delhi' at Ranchi and become more like a secretariat with little autonomy at the plant level. There appears to be a continuous evasion of responsibility. The plants passed the buck on to Hindustan Steel and Hindustan Steel to the Ministry and the Ministry back to Hindustan Steel!

While Mr. Subramaniam would not concede one member's demand that Hindustan Steel be split into different firms, he agreed on the need for a thorough reorganisation of the administrative structure of the steel complex, providing more autonomy at the plant level. He would entrust responsibility to individuals and dismiss them, if they failed to perform satisfactorily. Mr. Subramaniam certainly wants to toughen up the steel structure by building up new sinews in administration by "placing more responsibility on our young men who should think, dare and act." But for such young men, the new Minister will have to look at the flying trapezee—they are certainly not to be found in Government service.

The Steel Minister was irritated by the communist efforts to make a distinction between the performance at Bhilai and that at Durgapur and Rourkela and condemned the attempts to inject a cold war approach in "our public sector projects," but he himself could not avoid adopting a cold war stance. If United States help was not forthcoming, Mr. Subramaniam said, the Bokaro project would not be abandoned, adding: "Fortunately, we are not without friends in the world with the ability, capacity and willingness to extend help." As though to dilute the bitterness of these remarks, Mr. Subramaniam also told Parliament that he found nothing unreasonable in the Americans wanting to make another inquiry into the feasibility of Bokaro. He wanted Parliament to appreciate that, "despite their structure of society and Governmental procedure," they agreed to assist in establishing a public sector project. But the decision to go ahead with Bokaro whatever the American finding makes it clear that Delhi does not consider the American stand reasonable.

The "sick child" among the public sector steel plants (Mr. Subramaniam's description of Rourkela) is soon to receive doses of treatment from teams of Germans. Up to Rs. 30 crores of the West German credit expected this year may be spent on the repair programme to rectify the defects which caused more than twenty-five breakdowns. An Indian delegation which visited Bonn has come to arrangements with the West Germans on the curative measures.

Mr. Swaran Singh, Mr. Malaviya and Mr. Subramaniam may bring a fresh approach to bear upon transport, industry and fuel problems. At the same time, one of the ways to slow the pitch of criticism will be to give Parliament "more intimate association with State enterprises" by appointing a joint committee to supervise the working of public sector enterprises.

Demand Position

Against the total demand of about six million tons of steel in 1961, only about 3.84 million tons were available last year, one million tons imports and 2.84 million tons internal production. Bhilai is the only plant to have reached the full rated capacity and, by April, each of Durgapur's two furnaces gave an average of 1,210 metric tons a day, close to their rated capacity of 1,250 metric tons per day. The third furnace at Durgapur was commissioned on 18th May. The production of ingots at Bhilai in January was even slightly over the installed capacity and Durgapur made rapid advances to make 72,512 metric tons in April, as compared with 52,000 tons last January.

In the third Plan target for pig iron, a gap of half a million tons remains to be bridged, the total target capacity being 1.5 million tons. One million tons are planned to be obtained from the integrated steelworks and, of the schemes for 250,000 tons licensed, only the Kalinga plant is in production. The development of electric furnaces is also slower than envisaged.

The plans for 350,000 tons of special steels by the end of the third Plan have also gone awry. The cost estimates for the Durgapur alloy plant have gone up and planning for the Rourkela sheet mill and the Defence Ministry's plant is lagging behind schedule.

Experts at Yojana Bhavan are also making new projections on the total demand for steel during the remaining period of the Plan and these reveal a dismal prospect. The revised estimates show that steel exports during the third Plan may fetch around Rs. 15 crores, instead of Rs. 90-100 crores envisaged by a panel sometime ago. If the industries are not to be starved, the steel imports may have to go up to more than Rs. 600 crores worth. The additional drain of foreign exchange on the steel account may be a staggering Rs. 600 crores! Over the third Plan period, the shortfall in indigenous steel production as compared with the Plan estimates may be more than 3.0 million tons. The minimum demand to be satisfied will be over 6.0 million tons more than the internal production.

Notices

TEXTILE MACHINERY CORPORATION LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Annual General Meeting of TEXTILE MACHINERY CORPORATION LIMITED will be held at the Registered Office of the Company at Belgharia, 24-Parganas, West Bengal, on Friday, the 29th June, 1962, at 4-15 p.m., for the following purposes:

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 31st December, 1961.
2. To declare dividend on Preference and Equity Shares.
3. (*a*) To appoint a Director in place of Shri D. N. Kapur who retires by rotation and is eligible for re-election.

   (*b*) To appoint a Director in place of Dr. S. C. Law who retires by rotation and is eligible for re-election.

   Dr. S. C. Law can be re-elected as a Director provided a resolution, as required by Section 281 of the Companies Act 1956, is passed. Dr. S. C. Law is a man of wide experience and has been associated with the Company for a long time and has rendered valuable guidance to the Company. It is, therefore, in the interest of the Company to re-elect him on the Board to continue to avail of his valuable advice. The Company has received a special notice pursuant to Section 281 of the Companies Act 1956 from a shareholder of the Company and Special Notice is hereby given that the following resolution will be moved at the meeting.

   "Resolved that Dr. S. C. Law, who retires by rotation and who has attained the age of 70 years be and is hereby re-elected as a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Registers of Members of the Company will remain closed from the 11th June, 1962 to 29th June, 1962, both days inclusive.

By Order of the Board,
O. P. JHUNJHUNWALA,
Secretary.

BELGHARIA,
18th May, 1962.

N.B.—(1) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The dividends when declared will be paid to the registered shareholders or to their order or to their bankers on or after 1st August, 1962.

THE TWYFORD TEA COMPANY LIMITED

KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Forty-seventh Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, Kerala State, on Monday the 18th June, 1962 at 3.30 p.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1961, to declare a Dividend, to elect a Director, to elect Auditors and to fix their remuneration etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 11th June to 18th June, 1962, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents.

KOTTAYAM,
19th May, 1962.

ASSOCIATED BEARING COMPANY LIMITED

CORRIGENDUM

In the Announcement published in this paper on the 19th instant, it was by oversight omitted to mention that brokerage will also be paid to members of any Recognised Stock Exchange at Rupee one per share allotted in respect of applications bearing their stamp.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

PROGRESS IN AGRICULTURE

LOOK at this picture and that—the picture of a slowly but steadily expanding individualist agriculture in India and that of Chinese collectivist agriculture which has now all but collapsed so soon after it was supposed to have leaped forward. There was a time during the last decade when it looked as though Indian agriculture was trailing far behind the Chinese. But the contrast between the two countries today is vastly more favourable to India. Several are the factors which have contributed to this happy result, especially in the last one or two years. There is, firstly, the satisfactory performance on the production front. In 1960-61, for instance, the output of foodgrains in India was of the order of 79.3 million tons. Commercial crops like sugarcane and cotton had also registered further increases in production as compared with the previous year. According to all indications, agricultural production in the 1961-62 (June to July) season is expected, by and large, to be as much as, or even more than, in 1960-61. A little more or a little less than 80 million tons of foodgrains is the estimate for the current year, that is, 1961-62. In particular, rice production now is estimated to be anything between 34 and 35 million tons; wheat is expected to exceed last year's achievement of 10 million tons. As for commercial crops, jute is stated to have touched the level of 8 million bales, while groundnut production has increased by 300,000 tons. It would thus appear that the record level of production attained in the last year of the second Plan has been well maintained in the first year of the third Plan in spite of natural calamities like floods in several parts of the country. That itself is a happy augury for stable progress on the agricultural front.

The second favourable factor that has been in operation over the last one year and more is the comparative stability of foodgrain prices. Thanks to P.L. 480 food imports which have not only relieved the annual marginal food shortage to the tune of about 3 million tons but also restrained the prices in the country as a whole, the wholesale prices of cereals were at the level of 102 points in the all-India index (base: 1952-53=100) in 1961, as compared with 105 in 1960 and 104 in 1959. In particular, prices of both rice and wheat throughout 1961-62 have remained lower than in the previous year. The wholesale prices of raw cotton have remained virtually stable over the months in 1961-62, while those of raw jute have come down from their high level in the previous year. Another favourable factor in the situation is the steady build-up of buffer stocks of foodgrains with the Government. These stocks have recently touched the level of 2.5 million tons, of which rice accounts for 900,000 tons. Since P.L. 480 imports are still coming in, the Government is surely in a position to implement its decision to build up a reserve stock of 5 million tons of foodgrains over the current Plan period.

The outlook for foodgrains production over the rest of the Plan period is no less optimistic. If the recent projection estimates made by the National Council of Applied Economic Research are to be believed, the overall situation with respect to domestic supply and demand may well match closely except for some marginal deficits or surpluses. The Council's finding is that, by about the end of the third Plan, India will reach the stage of transition with regard to the gap between supply and demand. Specifically, the Council has estimated that the 1960-61 deficit of about 3 million tons in foodgrains is likely to be wiped off by 1965-66 and that the third Plan target of 100 million tons may be nearly reached. With an estimated supply of 95.7 million tons in 1965-66 and an anticipated demand of 95.4 million tons in that year, there is, according to the Council, a just chance of a balance between supply and demand without taking into account the requirements for stocks. The situation, thus, in the words of the Council's study itself, is one of cautious optimism which still warrants the need for a full build-up of a reserve stock of 5 million tons to provide a cushion for protecting the economy against price fluctuations and other dangers arising out of any shortage in the supply of foodgrains. This, precisely, is what the Government is determined to do. The hope that Mr. S. K. Patil, Union Food and Agriculture Minister, has expressed, in the course of last week's debate in the Lok Sabha on his Ministry's demands for grants, is certainly reasonable, for the prospect of self-sufficiency being achieved is quite encouraging on current indications.

It must, however, be realised that, in spite of this expected progress towards food self-sufficiency, large sections of the country's population will continue to be in a state of semi-starvation in the sense of inadequate intake of calories. The Food Minister's prescription for this malady is that consumers of cereals should diversify their food habits and eat more non-cereal foods as in the Western countries where one ton of wheat is stated to be sufficient for a family of ten for a year. Mr. Patil's calculation, on the basis of cereal consumption in the West, is that the 80 million tons of foodgrains produced in India could cater to a population of 800 million. The Food Minister has, of course, added in the same breath that it would be difficult for people to change their food habits from cereal consumption to non-cereal foods and other protective foodstuffs. What he seems to have ignored, in this connection, is that non-cereal foods are not produced in adequate quantities today and that protective foodstuffs are far too costly for the low-income groups of the population. It is, therefore, not so much a question of changing food habits as it is one of planning agricultural production in such a way as to make available more non-cereal foods and cheaper protective foodstuffs. Surely, this will involve a higher level of investment in agriculture than the Rs. 1,281 crores provided for in the third Plan for agriculture and irrigation together. Since the resources position will not permit any such step-up in agricultural investment, the Minister's appeal for diversification of food habits is only of academic significance at the present stage of agricultural development. It must be remembered, in this connection, that the pressure of human and animal population together on cultivable land is far greater in India than even in China and that, unless more green fodder can be produced for the consumption of cows and buffaloes from the same land, such protective foodstuffs as milk and milk products cannot be produced in large enough quantities.

The clamant need in this country is for getting a much greater yield than now from the severely limited quantity of cultivable land *per capita*. Already the level of land utilisation in India is so uneconomically high that even marginal lands of very low yielding capacity have been brought under cultivation. The possibility of utilising, to a greater extent, fallows and cultivable wastes is also slender. According to a sample survey conducted in the Kolaba district, nearly 75 per cent of the fallow area is unsuitable for cultivation. The position in respect of cultivable wastes and fallows over the country as a whole may be deemed to be more or less the same as in that district, for the pressure of population on land could not have possibly permitted the non-utilisation of any reasonably cultivable lands. However, the gross

area sown can still increase substantially from the present level of 380 million acres, if irrigation facilities, from both major and minor projects, are created more rapidly so as to facilitate extensive double cropping.

Such double cropping, in its turn, will involve better and more adequate manuring with the help of both organic and inorganic manures. It is here that the situation is far from satisfactory. It has been officially stated that the demand for nitrogenous fertilisers during 1961-62 amounted to about 2.7 million tons in terms of ammonium sulphate, while their availability, including internal production and imports, was only about 1.5 million tons. As the deficit of this order in fertiliser supply cannot be met entirely by imports in view of foreign exchange difficulties, the programme for the establishment of more fertiliser factories in both the public and private sectors would have to be assigned the highest possible priority. But that will involve expenditure of foreign exchange on the imports of plant and machinery for the fertiliser factories. To what extent indigenous fabrication of plant and machinery can reduce the need for imports of foreign machinery is a matter calling for serious examination. At the same time, the widest possible propagation of nitrogenous green manures, as catch crops on irrigated lands, is called for. If a simultaneous drive can be launched for the diversion of as much cowdung as possible from its present use as domestic fuel to utilisation on the fields, it would be possible to fill, by way of organic nitrogen, at least a part of the current and prospective gap in the supply of inorganic nitrogen.

All this, of course, is more easily said than done. The inadequacies of organisation and administration in the matter of agricultural programmes are only too well known. The only hope here is held out by the intensive agricultural districts programme, otherwise known as the "package programme." This programme, which is now in operation in only seven districts of the country, is being extended rather slowly to such other districts as have large extents of land well watered by rain or by irrigation. As irrigation and fertilisation go together and as these twin factors are by far the most important ones for raising agricultural productivity, quicker expansion of the package programme to other eligible districts is absolutely necessary. But it is rather unfortunate that, in *Kharif* 1962-63, the programme has been extended to only six districts. Ways and means must, therefore, be devised for implementing this programme over a much wider area during the third Plan period. Concentration of resources in areas where they can be of optimum benefit from the point of view of maximisation of agricultural production will certainly go a long way towards fulfilling the hope of self-sufficiency entertained in official circles.

BOOSTING TEA EXPORTS

"VERY bright": this was how Mr. Manubhai Shah, Union Minister for International Trade, described the outlook for export of Indian tea in the coming years during question-hour in the Lok Sabha on Thursday last week. The Government, Mr. Shah revealed, was taking a number of steps to promote the sale of Indian tea in both traditional and new markets. And he claimed that the campaign being carried on abroad by the Tea Board has proved fruitful. Evidently, Mr. Shah must have based his views on the findings of the Indian tea delegation which returned recently after an eight-week tour of the U.S., Canada, the U.K., Ireland, the Continent and the United Arab Republic. The delegation, which was led by Mr. A. S. Bam, Chairman of the Tea Board, has already submitted to the Government a "secret" report incorporating "concrete suggestions" for boosting exports. Mr. Bam said at a Press conference in Calcutta (just three days prior to Mr. Shah's statement in the Lok Sabha) that the visit of the delegation, especially to the U.S. and Canada, had created a tremendous impression, since it was after six years that a delegation like this had visited these traditional markets for Indian tea.

It is good that the tea delegation paid particular attention to the U.S. and Canadian markets. It is in these markets that Indian tea has suffered a distinct setback in recent years. The quantity of tea actually shipped from India to the U.S., for instance, during the year 1961 was no more than 22.2 million lbs. (it was actually lower at 18.9 million lbs. in 1960), as against 32.0 million lbs. in 1954. Similarly, shipments to Canada were lower at 15.9 million lbs., as against 19.2 million lbs. (they were higher still at 22.4 million lbs. in 1953). The setback is to be attributed to three factors. In the first place, there is the keen competition from Ceylon and Indonesia. Thus, between 1954 and 1960, U.S. purchases of Ceylon and Indonesian teas have risen from 29.7 million lbs. and 8.4 million lbs. to 40.8 million lbs. and 9.0 million lbs., respectively. The corresponding increase in respect of Canadian purchases is from 16.5 million lbs. and 2.4 million lbs. to 17.6 million lbs. and 30.2 million lbs. Secondly, coffee is said to be a strong rival of tea. Thirdly, instant tea is becoming more and more popular especially in the U.S., but there is as yet no concrete result of research made to prepare instant tea in India. Nevertheless, the prospects for tea exports to the U.S. and Canada cannot be considered bleak. Nor is it correct to say that tea consumption in the U.S. has reached saturation point. Indeed, consumption, according to Mr. Bam, has been increasing at the rate of 2 per cent every year; on the contrary, coffee has almost reached saturation point in America. That there is good scope for pushing up sales of Indian tea in the U.S. market has also been expressed by Mr. Edward C. Parker, Chairman of the Tea Council of the U.S. In the course of a Press interview recently, Mr. Parker observed:

"It seems that, at the present time, we have the most efficient agency for the promotion of tea in the United States. The Tea Council of the U.S.A. has been through a long period of experience and has determined from this experience what their course should be for the future. . . . We think there is a feeling by the members of the tea industry in the United States that instant tea represents an opportunity which has been lacking up to the present time. . . . Now that the very popular iced tea can be produced easily with a product which does not have to be first made hot before it can be iced, we believe that the young people of the country will take to the drink of which their mothers and fathers approve. . . . Now that good instant tea can be used in such an easy manner by the turn of the faucet and the addition of ice, there should be nothing to stop its rapid growth, because the end product compares very well with that made with tea bags or package tea. If we can get the young people of the country to start drinking iced tea at an early age, there is a good chance that some of them will continue in the colder weather to use hot tea at an earlier age than has been done up to the present time."

In this connection, Mr. Parker has drawn attention to the following special aspects of exporting tea which are peculiar to the U.S. and which are different from those involved in shipments to Britain and other countries:

1. In a big part of the U.S., more than 80 per cent of the tea used in the preparation of hot tea is sold in the form of tea bags. India does not use the very fine, light, expensive, flavourful tea that will make a good cup of hot tea, as made with loose tea, if it is realised that it has to punch its way through tea bag paper to become a good cup of tea.

2. At least a third of the tea sold is consumed in the form of iced tea and one of the characteristics the packer looks for in the tea he uses for this purpose is a tea that will not cloud. This is true because, next to taste, the appearance of a glass of iced tea is most important.

3. There is the ever-increasing amount of tea used in the production of instant tea. Unlike tea used for tea bags or package tea, this product must first be subjected to heat to produce an extract and then to more heat for producing a powder and, ultimately, it is the powder that is used to produce a cup of tea in the home. It is generally recognised by packers in the U.S. that Indian tea does not stay with the same blend to produce instant tea as that which is used to produce tea bags and package tea. In fact, the teas used for package tea and tea bags are not exactly similar.

4. Tea generally must stay on the grocer's shelf for a longer period in this country, unlike areas such as England, Australia and other heavy consuming countries. The tea used is that which will stand up well over a period of time.

The tea industry and trade in India will do well to take note of these aspects. If earnest efforts are made to export such types of tea as are required in the U.S., the country can certainly earn more dollars from this beverage. Of special significance is Mr. Parker's plea for continued support to the Tea Council, sending of experienced representatives to serve on the Board of the Council, and arrangement for an Indian tea expert to reside in the U.S. and report his findings to the Government.

To revert to Mr. Bam's Press conference. Apropos the grim forecast (revised) made by the F.A.O. to the effect that the world tea situation might become more serious than was feared earlier and that there might be serious repercussions on prices in future, especially those of low quality tea, Mr. Bam said: "India does not think that there would be a state of overproduction. Therefore, the third Plan target has been set at 900 million lbs."

The question whether the F.A.O.'s forecast is too pessimistic or not, apart, it is somewhat difficult to understand as to why the Indian tea industry and the Government asked the F.A.O., to examine its report (of 1960) in all its details and to confirm or deny its conclusions. One would ask: Could not the Government itself have undertaken a detailed study of the developments in all the tea producing and consuming countries? Such a task is certainly not very difficult, considering that the Government can easily make arrangements to get first-hand reports from the various Embassies, Consulates and Trade Commissioners' offices in different countries. Think, for instance, how the U.S. Department of Agriculture publishes periodical world estimates of some of the more important agricultural commodities. At any rate, so far as the tea industry in India is concerned, there seems to be no point in depending on the Government. The industry itself should take the initiative in the matter. It may be suggested that the Indian Tea Association representing North Indian tea producers and the United Planters' Association of Southern India representing Southern producers should join hands and set up a permanent high-powered research body to make regular studies on the trends in world tea economy. This effort will no doubt entail expenditure, but the expenditure is worth incurring, inasmuch as the findings of the study will enable the tea industry to plan its production and sales in an orderly way.

AUTOMOBILE TRANSPORT

THE country has been passing through a severe transport crisis, but the Neogy Committee on Transport Policy and Co-ordination has yet to complete its enquiry and evolve a firm transport policy which could mobilise all available means of transport in a sort of co-operative endeavour. During the third Plan period itself, such a policy could conceivably assign a bigger role to road transport, so that the estimated gap of 25 million tons of freight traffic could be covered largely by that mode of transport. The potentiality of road transport to solve the transport problem has been well recognised and it is, therefore, appropriate that another organisation of the road transport industry has advanced a strong plea for further incentives to the industry. That representative body is the Federation of Indian Automobile Associations, which is the central organisation of the five regional automobile associations functioning in the country with a total membership of 50,000 car owners. At the third annual general meeting of the Federation held at Bombay last week, Mr. H. N. Ghosh, President, had, in this connection, some useful suggestions to offer. One of these was that road transport should be enabled in the third Plan period to carry 15 million tons *more* of goods traffic. Another suggestion was that a uniform policy should be evolved in the matter of taxation on motor transport. A distressing feature of the present structure of motor vehicles taxation, it may be noted here, is that not only the quantum but also the basis of taxation varies from State to State.

Another concrete suggestion advanced by Mr. Ghosh for the development of motoring in the country is also worthy of note. For instance, there is the need for proper signposting on the roads from the point of view of traffic safety as well as of suitable guidance to travellers. Road signs, such as mandatory signs, cautionary signs and direction signs, would need to be erected on all good roads without any exception. But the authorities have not done full justice to this important work. If this cannot be done for lack of funds, the State Governments should seek the co-operation of the oil and tyre companies which may be in a position to donate the signs for erection.

Tourism, too, will receive a further impetus if road signs and signals come to be internationalised, for tourists by road from other countries to India will, then, not find motoring within this country a heart-breaking proposition. It is rather unfortunate that, while the Government of India has already signed the United Nations' Protocol on Road Signs and Signals, it has not so far chosen to ratify it. The Government's contention seems to be that the change-over to international signs and signals would result in unnecessary expense. But the latest indications are that the Government is slowly veering round to the view that the change-over is inevitable in view of the stand taken by the E.C.A.F.E. authorities. It is to be hoped that the change-over to the international system of road signs and signals will be completed over a period of ten years in terms of the Protocol. More immediately, it should be possible for the Government to introduce the new signs as and when the old ones are due for replacement or renewal.

MARKET GOSSIP

"Black Monday"

THE dramatic collapse of values on the New York, London and Continental stock exchanges and their equally dramatic recovery, both in a brief span of three days, caught the headlines in the world Press this week. Wall Street led the decline on Monday (28th May) when stock values crashed to an extent which is matched perhaps by the slump of 1929. The avalanche of selling, which hit the market, wiped out, within twenty-four hours, some $20,000 million in share values. The Dow Jones index of industrial securities dropped 35 points, the biggest fall in one day. The root cause of the crash was no other than "the realisation that inflation is not here to stay and that business conditions, though good, are not so good as had been expected." The London Exchange swiftly followed suit, and heavy speculative unloading slashed millions of pounds off the overall values of shares. On Tuesday, the *Financial Times* index of ordinary shares climbed down by 18 points. Continental bourses and stock exchanges in other parts of the world, not excluding India, naturally reacted in sympathy.

The sudden unexpected debacle at Wall Street and its chain reactions elsewhere prompted President Kennedy to call an emergency meeting of his top economic and financial advisers who certified that the health of the American economy was perfectly sound and that the sudden slump in the stock market was unwarranted. The Presidents of both New York and London Stock Exchanges also told investors that no calamity had happened and that there was no reason to get panicky. Assured, perhaps, by these words, Wall Street picked up considerable strength on Tuesday and a striking recovery was in evidence. London and other markets again followed suit. Quite a bit of the earlier losses was made good; almost $13,000 million were believed to have been recovered from stocks listed on the New York Exchange on "black Monday."

Whatever be the immediate cause of the precipitous fall in share values the world over, one thing has become clear and that is the delicate nature of the confidence of investors in equities. It looks as though the doubts about the American economy's capacity to maintain the tempo of development, which persist in spite of reassurances by the President's economic advisers and the growing attraction from the point of view of yield of long-term U.S. bonds, have made equities less popular among investors now than ever before.

Aid-India Consortium Meeting

The outcome of the Aid-India Consortium meeting held at Washington on Monday this week is, to say the least, disappointing, although it must be said that there is no cause for despondency. For the Consortium has once again postponed a decision on the quantum of additional aid that might be committed for the first two years of the third Plan. And, what is worse, the postponement is indefinite. It was decided, says the *communique* issued by the World Bank, that the meeting should be adjourned *for several weeks* "to allow the Consortium more time to reach final decisions." It may, of course, be wrong to attribute, as is done by some, the outcome of the latest Washington meeting, too, to political pressures and prejudices against India, as witness the statement in the *communique* that "indications were given at the meeting that a number of members would be able to offer additional aid in 1962-63." Even so, it is rather strange that members other than the U.S. "were not yet ready to make definite announcements." After all, the total additional contribution which Britain, West Germany, France, Canada and Japan had to make for purposes of the U.S. matching requirements was just $220 million, being the gap between the U.S. pledge of $500 million and the combined commitment of $280 million announced *twelve months ago. Surely, this amount* is not beyond the means of the aforesaid countries.

When the previous meeting of the Consortium (held on 30th January) adjourned without taking any decision, we presumed that the postponement had been prompted partly by the need to give sufficient time to rope in countries other than the existing members. For the official statement issued after the meeting had stated that, "at the suggestion of other members of the Consortium, the World Bank agreed to continue to seek to interest other nations in participating in the *financing* of India's development." Two more countries, Austria and the Netherlands, did attend this week's meeting as full members of the Consortium and Belgium also attended the meeting, albeit as an observer. Even with the entry of these new members and even after an interval of full one year, could not the Consortium have announced at least the additional "matching" commitments of $220 million for 1962-63, if not the filling of the estimated deficit of $3,275 million for the entire Plan period or the deficit of $375 million in the first two years?

It is a pity that the urgency of rendering further external assistance required in 1962-63 beyond that already committed has not been adequately recognised. Quite a number of the projects included in the third Plan are in an advanced stage of execution and, unless they are assured of sufficient foreign exchange, the momentum will be slowed down, leading to higher costs. The impact of delay in the grant of assistance will be all the severe because the external assets which India possesses at present are too insufficient to cushion this impact; the total of these assets now stands at *no* more than Rs. 103 crores, a drop of as much as Rs. 47 crores since the beginning of this year. India is no longer in a position to draw down its sterling balances to finance its development, and the country will be hard put to it, particularly in respect of the import of raw materials and components to keep its existing industries going. Nor is there scope for earning large additional foreign exchange by way of exports in the immediate future. The need for the friendly countries of the West to make available aid commensurate with the developmental effort and, what is equally important, aid in a form which will finance not merely individually identifiable projects but the programme of development as a whole, cannot, therefore, be stressed too strongly.

Viewed thus, the continued wide gap between the estimated third Plan foreign exchange requirements ($5,500 million) and the aid offers ($2,225 million) is certainly disquieting. No less disquieting is the long delay between the date of aid authorisations and the date of actual release, which has been due partly to the procedural delays in the release of funds by the aid-giving countries, and partly to the red-tapism and lack of high level efficiency in administration at both Central and State levels in India.

Considering the present tight foreign exchange position of India, the two new loans aggregating £32 million given by the British Government—agreements covering these loans were signed at New Delhi just a week before the Washington meeting of the Aid-India Consortium—is particularly timely. One of the loans, for £22 million, is for the proposed expansion of the plant of the Durgapur steel plant, which has been financed partly through British loans, from one million tons (steel ingots) to 1.6 million tons. The other loan, for £10 million, will be utilised to pay for a wide range of imports from Britain. These two loans, together with the three loans aggregating £45 million signed last year, bring the total of British assistance actually released so far for the third Plan to £77 million. Negotiations on a further loan of £13 million for capital equipment required by a number of projects in fulfilment of the balance of the promised aid of £90 million, we are told, are now progressing. There are two welcome features of all the five British loans. One, they are of a long-term nature, repayable over 25 years, with a grace period of seven years before any capital repayments. Two, the rate of interest charged is reasonable. May be, Britain has, as the U.K. High Commissioner Sir Paul Gore-Booth stated at the loan signing ceremony, its own concerns over its balance of payments and, in 1961, "the Government had to take strong steps to relieve the immediate situation." Nevertheless, Britain must take the lead in filling the shortfall of $220 million in the share of the non-American members of the Consortium to match the proposed American aid of $500 million for the second year of the third Plan.

U.K.-E.C.M. Agreement

The acrimonious debates that characterised the protracted negotiations between Britain and the Common Market over the question of the former's entry into *the latter seem to be coming* to an end. Appreciable progress has been made, for the first time, towards patching up their differences of opinion on substantial issues; and a final settlement of outstanding issues is in prospect. At the Ministerial meeting of the Six and the U.K. held at Brussels on Tuesday and Wednesday this week, agreement was reached on the question of imports of manufactured goods into the expanded Common Market from the developed countries of the Commonwealth, namely, Canada, Australia and New Zealand. Under the agreement, the U.K. will abolish the *existing system of duty-free* imports of manufactures from these countries over a transitional period, at the end of which it will have imposed the common external tariff of the Common Market. The U.K. will apply 30 per cent of common external tariff from the day it joins the bloc, and the remaining 70 per cent in two stages by 1970. *This arrangement will be applicable in the case* of 397 products, as suggested by the U.K. The Six has, of course, made an apparently sizable concession, considering the fact that previously they were not prepared to make such arrangements for more than 57 products. In addition, agreement is also reported to have been reached on the relatively less important issues such as common rules for cartels, free right of establishment, rules regarding quantitative restrictions, movement of labour and capital, wage policy, social security and the question of Northern Ireland.

No final decision, however, has been taken in regard to tariffs on manufactured goods (including cotton textiles) from the Asian members of the Commonwealth. This subject came up for discussion at the meeting, but it was referred back to the Deputies for further study. The specific proposal which Britain has put forward in this connection pertains to the introduction of common external tariffs on imports of these manufactures from countries like India, Pakistan and Ceylon, over a transitional period more or less on the same lines as in the case of Canada, New Zealand and Australia. The proposal is, of course, qualified by the condition that the Six should meet the obligations under the G.A.T.T. arrangement on cotton textiles. This arrangement, however, is not fool-proof and the escape clauses provided therein whittle down its efficacy. So the qualifying condition is mainly of academic significance. According to the British proposal, Indian grey cloth will be subjected to an eventual common tariff of 18 per cent, of which 30 per cent will become applicable probably next year, if the U.K. joins the Common Market by that time. Once the eventual common tariff is imposed, Indian textiles will have to face severe competition from low-priced products, particularly from Japan, in the U.K. market. Obviously, the U.K.'s offer falls far short of the pleas of countries like India. It is disappointing to note that the U.K. has made no provision for any compensation for the loss of preferences in the event of its joining the Common Market, although it had promised originally that it would do everything to safeguard the Commonwealth interests in an expanded Common Market.

The Lame Ducks

One does not always have to turn to the public sector for the lame ducks of industry. For, in fact, there are quite a few of them in the private sector, too, which, though in existence for quite a long time, have failed to stand on their legs, notwithstanding the usual efficiency and talents of private management. But there is a vital difference in the attitudes of the two managements towards the lame ducks. Whereas private managements have boldly admitted their flops—and, if some of them have not done so, the shareholders have brought them to their senses—the Government has persistently denied that some of the ducks it has so carefully nurtured for long have been limping. Consequently, while it could reasonably be expected that the less efficient private sector units would gain strength after some time as a result of the conscious efforts of the managements, it could only be hoped that the public sector units would pick up as a result of chance and luck.

Further proof of such an attitude on the part of the Government to the public sector projects was provided the other day by Mr. Manubhai Shah, Minister for International Trade, when he intervened in the Lok Sabha debate on a non-official resolution tabled by Mr. Balkrishna Wasnik (Congress), asking for a *commission to look into* the lower efficiency and higher cost of public sector undertakings in comparison with their counterparts in the private sector. Opposing the resolution, Mr. Shah said that "unit to unit, size to size, category to category, public sector undertakings have achieved a proud record."

How *proud* is the record can be seen from the facts and figures published by the *Hindustan Times* in an article, "Profit and Loss in the Public Sector," in the issue of 22nd May 1962. The figures relate to 15 public sector industrial companies (National Coal Development Corporation, Air India International, Hindustan Machine Tools, Indian Telephone Industries, Hindustan Antibiotics, Hindustan Cables, National Newsprint and Paper Mills, Shipping Corporation of India, Hindustan Shipyard, Indian Refineries, Oil India, Neyveli Lignite Corporation, Hindustan Steel, Bharat Electronics and Heavy Engineering Corporation) for the year ended 31st March 1961. Among them, Air India International, Hindustan Machine Tools, Indian Telephone Industries, Hindustan Antibiotics, Hindustan Cables and National Newsprint and Paper Mills showed net profits of varying amounts. Dividends were returned only by Hindustan Machine Tools (10 per cent), Indian Telephone (2.5 per cent) and Hindustan Cables (6 per cent). The loss carried forward by the 15 undertakings *taken together* amounted to Rs. 16.55 crores. The total paid-up capital as on 31st March 1962 was Rs. 469.52 crores and was supplemented by reserves, including development rebate reserve, of Rs. 13.08 crores. Fixed loans, predominantly from the Government, amounted to Rs. 370.35 crores. Arrears of depreciation worked out to Rs. 40.95 crores and other liabilities to Rs. 99.89 crores. As against these, current assets totalled Rs. 150.79 crores and cash and bank balances *Rs. 17.88 crores, while expenditure and loss* carried forward stood at Rs. 16.55 crores. The gross block, valued at original cost, was shown at Rs. 605.77 crores and work-in-progress at Rs. 202.80 crores. The interest forgone by the Government on its loans to Hindustan Steel up to 31st March 1961 is about Rs. 25 crores and the arrears of depreciation to be provided on the steel plants alone would be about Rs. 17.57 crores. On the other hand, the Government received dividends of Rs. 4.7 crores in all during the three years ending 1960-61, which, however, were less than the subsidy of Rs. 5.09 crores it paid to Hindustan Shipyard during the same period.

The above figures clearly belie the tall claims of Mr. Manubhai Shah, whose words, unlike *before, smack* of excessive exaggeration. Surely, Mr. Shah is aware that a private sector undertaking starts providing for depreciation and, if possible, development rebate reserve from the very first year's working and pays a reasonable return on capital in its working for the second year. If it does not pay a return on capital after two years of *its inception, it runs the risk of inviting* the wrath of its investors, which is expressed in so many ways, one of them being disinvestment. While it is true that some of the public sector undertakings have still to get over their "gestation period," there are others (listed in the above 15) which came into being several years ago and are still simply crawling. Something would obviously have to be done to ensure the efficient working and management of public sector undertakings. If, as announced by Mr. Shah, a Joint Committee of Parliament is to be set up shortly to supervise their working, no useful purpose would be served by any commission of inquiry, even if set up. On the contrary, it would only expose unduly the State undertakings to embarrassing public scrutiny which, in its turn, might have the effect of interfering with the day-to-day managements decisions. Luckily the mover has withdrawn the non-official resolution. It will, therefore, be for the proposed Joint Committee of Parliament "to watch, superintend and improve the working of these undertakings."

TREND OF SHARES

WALL STREET ECHO

(From Our Own Correspondent)

BOMBAY, 31*st May*

THE Wall Street crash was echoed also by the Indian stock exchanges. Values suffered a sharp shake-out in one single day, on Wednesday, when they opened with sizable losses on bull liquidation, stop-loss selling and virtual lack of support during kerb trading a couple of hours before the start of the official session. During the session, however, selling abated, as reports of a "fantastic" recovery on Wall Street and the London Stock Exchange flowed in. The sudden fall in values in Indian markets induced bears to cover their sales. A mild rally followed the setback on Wednesday itself and was carried a little further today. The week-end closing prices were, therefore, well above the week's lowest levels, though they still disclosed moderate losses on balance.

The setback was more pronounced because of the technically vulnerable position of the markets. It was also as a result of the sentiment having been adversely affected by the adjournment of the Aid-India Consortium's meeting for "several weeks" without any definite commitment on the quantum of additional aid for the second year of third Plan.

This week's setback in the markets has corrected slightly their technical position. But whether it has turned healthy or not would be seen only from tomorrow's carry-over charges in Bombay. The technical position apart, in addition to our political problems, external economic influences have come into prominence now. The behaviour of Wall Street, and still more important, the quantum of foreign aid to us are two overriding considerations now. In a sense, they are also inter-related. Apparently, the waters have been troubled, and fishing in them would be difficult for some time.

* * * *

As in the past, so during the week under review, on the occurrence of some unfavourable happenings, it was given again to Dalal Street to absorb largely the shocks of the Wall Street crash, as the country's operators' attention seemed to have been centred on Wednesday only on the Bombay Stock Exchange. This can be attributed to a very large number of shares in Bombay and the great reputation the market has enjoyed for its liquidity.

The worst to suffer were Textiles, Standard closed with a loss of Rs. 17 at Rs. 1,018, Century were Rs. 9.50 down at Rs. 663.50, Khatau lost Rs. 11.25 at Rs. 480, National Rayon showed a loss of Rs. 11.50 at Rs. 545, Bombay Dyeing declined by 80 nP to Rs. 69.60. Kohinoor were seven points lower Rs. 303, and, among Cash scrips, Gold Mohur lost ten points at Rs. 240, Mafatlal showed a loss of Rs. 12.50 at Rs. 572.50 and Indian Rayon were Rs. 6.50 lower at Rs. 118. Reports of threatened closure of the factory due to non-supply of coal brought down Baroda Rayon from Rs. 147 to Rs. 140. Svadeshi, however, were five points better at Rs. 293.50 and Indu Ordinary showed a gain of 32 nP at Rs. 22.04. Tata Ordinary, among Steels, suffered a sharp setback from Rs. 152.50 to Rs. 146, but rallied to close at Rs. 148.25 against Rs. 152 a week ago. Indian Iron were sold down from Rs. 26.65 to Rs. 25.55 and were 40 nP lower at close at Rs. 26. Mukand Iron also showed a loss of 40 nP at Rs. 28.10.

Miscellaneous section followed the general trend. Bombay Burmah declined by Rs. 9.50 to Rs. 683, Indian Dyestuff by Rs. 15 to Rs. 556.25, Amar Dye-Chem by Rs. 8.75 to Rs. 333.75 and Polychem by Rs. 7.50 to Rs. 207.50. Shivrajpur suffered a setback from Rs. 39.50 to Rs. 36.25 following the discouraging speech of the Chairman, and attracted additional margin of Re. 1.12 per share on sellers for having declined by more than 5 per cent from the last clearing rate. Engineering issues showed small losses; Telco of Rs. 4.25 at Rs. 368.75 and Voltas of Rs. 2.50 at Rs. 298.50. Shippings were hard hit on selling pressure; Great Eastern showed a loss of Re. 1.04 at Rs. 12.88 and attracted an interim margin of 90 nP per share on sellers due to a fall of more than 10 per cent from the last clearing rate and Scindia moved down by 68 nP to Rs. 12.76. Sugars and Cements were easy. In the Cash List, the rise in Colour Chem's profit from Rs. 46.54 lakhs to Rs. 95.90 lakhs and a four-point higher taxable dividend of *Rs. 12 per share* on the increased capital for the year ended 31st March 1962 could not arrest the decline in the shares from Rs. 507.50 to Rs. 500. Other cash scrips showed generally moderate losses. Hindustan Wire Glass, however, declined by eight points to Rs. 173 and both Premier Tyres and Permanent Magnets lost Rs. 2.50 each at Rs. 144 and Rs. 235 respectively. Synthetics and Chemicals lost nine points at Rs. 235. The public issue of Paper Products Ltd. for Rs. 16 lakhs was over-subscribed by 15 times.

* * * *

Losses were widespread on the Calcutta Stock Exchange. Slected Cash coal and jute shares, however, showed small gains. In the Forward List, Indian Aluminium receded from Rs. 42.81 to Rs. 41.75, Dunlop from Rs. 45 to Rs. 44.25, GKW from Rs. 42.56 to Rs. 41.69 and Burrakur from Rs. 21 to Rs. 20.12. While Birla Jute moved up from Rs. 35.25 to Rs. 35.62, Howrah eased from Rs. 22.87 to Rs. 22.62. Indian Cable closed 56 nP higher at Rs. 37.12. Among Textiles, Dunbar and Jayshree were marked down from Rs. 34.62 to Rs. 33 and from Rs. 16.62 to Rs. 15.37 respectively. In Coals, selected Satgram jumped up from Rs. 135 to Rs. 151, East India improved from Rs. 51.75 to Rs. 55.50 as did K. Jherriah from Rs. 48.75 to Rs. 51. Among Jute shares, Alexandra recovered from Rs. 127 to Rs. 130, Dalhousie from Rs. 130 to Rs. 135 and New Central from Rs. 16.25 to Rs. 16.50, but Reliance declined from Rs. 9.69 to Rs. 8.25 and Champdany from Rs. 146 to Rs. 142.

Burn continued to be fancied among Engineering issues and rose from Rs. 721 to Rs. 735 closely followed by B. I. Electric which improved from Rs. 42.62 to Rs. 50. But other issues showed small losses. Losses predominated in the Miscellaneous section. British Paints declined from Rs. 22.62 to Rs. 21.50, Goodycar from Rs. 48 to Rs. 47, Philips India from Rs. 37.50 to Rs. 35.75 and Rallis India from Rs. 147 to Rs. 145. Bengal Paper showed a loss of 94 nP at Rs. 35.25, despite the increase in the gross profit of the Company from Rs. 50.83 lakhs to Rs. 55.05 lakhs and the dividend per share from Rs. 2.60 to Rs. 2.75 for 1961. Straw Products closed one point lower at Rs. 10.37. The rise from Rs. 52.50 to Rs. 60 in Dyer Meakin featured a quiet Sugar section. Tea shares were easier.

* * * *

Sellers outnumbered buyers in Madras and values, wherever changed, showed small losses over the last week. Thus, in the Forward List, Lakshmi fell from Rs. 167 to Rs. 157, Madura declined from Rs. 37.75 to Rs. 36.75, S. I. Viscose came down from Rs. 183.50 to Rs. 175, Aluminium Industries closed 25 nP lower at Rs. 24, Ashok Leyland 10 nP lower at Rs. 8.75, India Cement 12 nP lower at Rs. 6.10, Dalmia Cement 35 nP lower at Rs. 13.20, Mettur Chemical 10 nP lower at Rs. 13.10, Periakaramalai 11 nP lower at Rs. 3.37 and Consolidated Coffee 55 nP lower at Rs. 18.35. Deccan, Blue Mountain and Ouchterlony Valley showed small losses. In the Cash section, among major losers were Coimbatore Cotton which declined from Rs. 189 to Rs. 186, Travancore Rayon which moved down from Rs. 42.50 to Rs. 40, Coimbatore Spinning which receded from Rs. 81 to Rs. 79, Vasanta which showed a loss of Re. 1.50 at Rs. 290, Textools which came down from Rs. 179 Rs. 178, Madras Rubber which lost one point at Rs. 23.50, Travancore Rubber which receded from Rs. 12.45 to Rs. 12.25 and E.I.D. which suffered a setback from Rs. 40 to Rs. 39.19. Orissa Cement, however, closed 18 nP higher at Rs. 19.75.

CAPITAL MARKET NEWS

NEW ISSUE

SUBSCRIPTION lists for the public issue of Rs. 12 lakhs in equity shares of Rs. 10 each by the **Hind Rectifiers Ltd.**, Bombay, will open on the 7th inst. and close either on the 13th or 9th inst. The Company was incorporated on 25th April 1958 and has converted itself into a public limited company from 11th May 1961. It was formed to take over from the Kaycee Industries Ltd. the business of manufacture of rectifier apparatus carried on by it in technical collaboration with the Westinghouse Brake and Signal Company Ltd. of Britain. The Company has now installed a plant for the production of selenium rectifier plates which are the basic components of the rectifier equipment. It proposes to manufacture also silicon diodes and controlled rectifiers for which the plant has been ordered and is expected to be commissioned this year. This will be the first plant in the country for the manufacture of silicon diodes for power. Progressively, the Company would increase activities and manufacture transistors for power and signalling.

Out of its authorised capital of Rs. 30 lakhs, the Company has already issued Rs. 5 lakhs. It is now issuing shares worth Rs. 20 lakhs. The existing shareholders are taking up shares worth Rs. 5 lakhs and the British firm those of the value of Rs. 3 lakhs. The present issue is proposed to be utilised as additions to fixed assets Rs. 6 lakhs, additional working capital Rs. 5.50 lakhs and repayment of borrowings Rs. 8.50 lakhs. Messrs. R. P. Nevatia and Company is the Managing Agents of the Company.

FRESH ISSUES SANCTIONED

The Controller of Capital Issues has sanctioned the following capital issues to be made within one year:

Hindusthan Sugar Mills Ltd., Bombay, has been granted consent to the issue of Rs. 60 lakhs bonus capital divided into equity shares of Rs. 100 each. This is to be allotted in the ratio of one *bonus share for every equity share held.*

Dyer Meakin Breweries Ltd., Solan (Simla Hills), is to issue bonus shares of the value of Rs. 28,36,160 in the ratio of 1 : 1 on capitalisation of the Company's reserves to a like extent.

Indian Vegetable Products Ltd., Bombay, is to issue bonus shares of the value of Rs. 3,02,500 divided into 3,025 equity shares of Rs. 100 each to be made in the ratio of one bonus share for every seven shares held.

Multimetals Ltd., a new company proposed to be incorporated in Calcutta, has been granted consent to the issue of 7,50,000 shares of Rs. 10 each for cash at par. Out of the capital of Rs. 75 lakhs consented, shares of the value of Rs. 25 lakhs may be issued to Revere Copper and Brass Inc. of New York who are the collaborators. The Company will establish a plant at Kotah for the manufacture of copper/brass rods, tubes, etc. for which a licence has been obtained. The total cost of the scheme is Rs. 150 lakhs.

Structural Engineering Works Ltd., Bombay, is to issue capital of Rs. 45 lakhs divided into 45,000 equity shares of Rs. 100 each for cash at a premium of Rs. 5 per share, to be made to the existing shareholders in the ratio of one new share for one old share held.

Trichy Steel Rolling Mills Ltd., Madurai, will issue equity capital of Rs. 40 lakhs for cash at par. The proceeds of the issue will be utilised for the establishment of a re-rolling mill.

Hindusthan Gum and Chemicals Ltd., a new company, has been granted consent to the issue of capital of Rs. 30 lakhs in 3 lakhs equity shares of Rs. 10 each. The Company is establishing a factory in Hissar District for the manufacture of guar gum. Collaboration with an American firm has been arranged who will invest 50 per cent of the capital, the remaining 50 per cent capital will be subscribed privately.

Special Steels Ltd., Bombay, is to issue capital of Rs. 20 lakhs in equity shares of Rs. 100 each for cash at par. The proceeds of the issue would be utilised for repayment of loans.

Digvijay Cement Company Ltd., Jamnagar, is raising further share capital of Rs. 13.50 lakhs in equity shares of Rs. 100 each at a premium of Rs. 50 per share for cash. The shares will be offered to Messrs. Johns Manville International Corporation U.S., who will collaborate with the Company in the manufacture of asbestos cement.

Mastic Products of India Ltd., a new company proposed to be incorporated in Maharashtra, has been granted consent to issue capital of Rs. 80 lakhs (equity Rs. 65 lakhs and preference Rs. 15 lakhs). Out of the equity issue of Rs. 65 lakhs, the Company will issue shares worth Rs. 23.80 lakhs to Ruberoid Company of New York, U.S.A., for consideration other than cash being the value of plant and machinery to be supplied by them. The Company has obtained a licence for the manufacture of various types of tiles, for which a factory will be established in the Maharashtra State.

The Industrial Development Corporation of Orissa Ltd. is to issue capital of Rs. 50 lakhs in equity shares of Rs. 100 each for cash at par to the State Government of Orissa. The proceeds will be utilised for establishment of a cement and a cable factory.

Bimetal Bearings Ltd., Madras, is raising equity capital of Rs. 40 lakhs (in addition to Rs. 10 lakhs already issued) for cash at par. The proceeds of the issue will be utilised for the manufacture of shell-back bearings, bushings for automobiles etc., in collaboration with Clevite Corporation, Cleveland, Ohio, U.S.A. and Repco Limited, Melbourne, Australia.

The Union Bank of India Ltd., Bombay, will issue further capital of Rs. 40 lakhs (nominal) divided into 8,00,000 equity shares of Rs. 5 each, fully paid-up, for cash at a premium of Re. 0.50 nP per share. The proceeds will be utilised for strengthening the bank's capital base. The pre-sent paid-up capital is Rs. 60 lakhs.

Industrial Tools (Private) Ltd., Calcutta, is to issue 25,000 equity shares of Rs. 100 each for the manufacture of house service meters. The Company will convert itself into a public limited company and offer shares for public subscription.

DIVIDENDS WITHOUT DEPRECIATION PROVISIONS

The Government has drawn the attention of all concerned to the fact that provisions of Section 205 of the Companies Act, 1956, under which no dividend shall be declared or paid without providing for depreciation in the manner specified therein, are mandatory in nature and must be strictly complied with by every company before declaring any dividend.

The Department of Company Law Administration has brought out the actual position obtaining in this regard in a Press note issued on 27th May 1962. The Press note states that, for the purpose of complying with the requirement for depreciation under the Companies Act, it is immaterial as to whether depreciation in respect of any assets is actually admissible under the *Income-tax Law.* It adds that the only provision of the Income-tax Law relevant to this purpose is the one specifying the rates of percentage as contained in the Income-tax Rules for the purpose of determining depreciation on various assets. The note points out that the provisions of the Income-tax Law relating to the admissibility of depreciation allowance for calculating total income of the assessee company are not relevant to the purpose of Section 205, read with Section 350, of the Companies Act.

ANNOUNCEMENTS OF CAPITAL ISSUES

A strict warning against the continuation of the practice, by companies offering shares or debentures to the public, of publishing in newspapers and other publications announcements of the public issue under a note, "this is only an announcement and not a prospectus," which are "usually found to contain copious extracts" from the relevant prospectuses filed by the companies concerned with the Registrar of Companies has been given by the Department of Company Law Administration. In a Press note issued on 26th May 1962, the Department states that announcements of this nature would be tantamount to publication of prospectuses in an abridged form which is not in conformity with the provisions of Section 56 of the Companies Act, 1956. This section provides that every prospectus issued by a company shall state the matters and reports set out and specified in Schedule II of the Act. The Department has made it clear that failure by company promoters and managements to comply strictly with the provisions of the law relating to the issue of prospectuses would not hereafter be condoned by the Government and that any default in this respect would render them liable to the penalties under the law and also to pay compensation to every person who subscribes for any shares or debentures on "the faith of the abridged prospectuses." If a company should find it impossible to publish its prospectus in full in newspapers, the Department has advised it to publish only a mere announcement of its intention to issue capital through a *pro forma* devised by the Government for this purpose.

NEWS IN BRIEF

R-INDIA International will be known as Air-India with effect from the 8th inst.

The State Trading Corporation has finalised deals for the export of 230,000 pairs of shoes valued at Rs. 66 lakhs and handicraft articles valued at Rs. 13 lakhs to the Soviet Union.

Production of coal in India during 1961-62 aggregated 55.32 million tons, as against 55.14 million tons in 1960-61. Of this, the private sector alone accounted for 46.43 million tons, the share of the public sector being 8.89 million tons.

The amount spent so far on the various housing schemes formulated by the Union Ministry of Works, Housing and Supply is Rs. 139 crores. Over 222,000 houses have been completed, while 142,443 are at various stages on construction.

A Director of Incentives and a Director of Transport and Freights have been appointed in the Export Promotion Directorate in the Department of International Trade. The former will look into all cases of incentives and the latter into complaints about delays in the movement of goods meant for export by the railways or other transport.

The Rs. 8-crore precision instruments factory proposed to be set up in the public sector with Russian collaboration will be located at Puthusary near Palghat in Kerala, according to Mr. Pattom Thanu Pillai, the State's Chief Minister. The factory will manufacture pneumatic hydraulic and electric precision instruments.

The Textile Commissioner has constituted a panel for advising him on matters relating to export promotion of non-fabric textile items as well as embroidered textile articles. The Commissioner himself will be the Chairman of the Panel. The Panel will meet periodically to review trends in the export of the above items and recommend suitable promotional measures.

The Central Government has sanctioned licences for the setting up of 11 textile mills in Kerala. Ten mills will have 12,000 spindles each. The remaining mill will be a model spinning (25,000 spindles) and weaving mill producing yarn and cloth of exportable quantity. The Government has also sanctioned another 6,000 spindles for expansion of the public sector spinning mill at Balaramapuram, near Trivandrum.

An agreement covering the joint installation of five generating units with a capacity varying from 50 mw. to 62.5 mw. as adjuncts to the Satpura Thermal Station has been entered into between the Governments of Madhya Pradesh and Rajasthan. The scheme is expected to cost Rs. 30.38 crores and will be borne by the two Governments in the ratio of 60 : 40. The project report is under consideration.

The Government of India has extended upto to 15th inst. the time limit for processing the unprocessed cotton, woollen and rayon or art silk fabrics which were produced before 24th April 1962 without attracting liability to any further excise duty. Such unprocessed fabrics can now be cleared without payment of Central excise duty on processing if they are processed on or before this date.

The Union Government is considering the constitution of an agricultural commission to go into all aspects of agriculture in the country, according to Mr. R. S. Singa, Minister in the Ministry of Food and Agriculture. The opinion of all State Governments on this proposal has been sought and already two State Governments have submitted their views. A final decision is expected to be taken by the Government after obtaining the views of these two States also.

The foreign exchange component of the Railways' third Plan has been raised to Rs. 249 crores with a view to having some additional line capacity works to facilitate coal movement. When the third Plan was finalised, it may be recalled, a foreign exchange component of Rs. 138 crores was estimated. This was raised to Rs. 194.33 crores in December last in the Blue Book presented to the World Bank. But the "actual estimate" requirements against the programme of Rs. 1,325 crores was Rs. 230 crores.

Production of iron ore during the month of March 1962 was 1.72 million metric tons, as compared with 1.02 million tons in the corresponding month last year. Orissa was the principal producing State (507,700 tons), followed by Bihar (287,700 tons), Mysore (141,000 tons), Madhya Pradesh (135,000 tons), Andhra Pradesh (51,000 tons) and Maharashtra (44,000 tons). During the month despatches for consumption in the iron and steel plants aggregated 841,000 tons and those for export amounted to 260,000 tons.

A team of engineers, led by Dr. A. Nagaraja Rao, Chairman, Heavy Engineering Corporation, Ranchi, has left for Soviet Russia and Czechoslovakia to discuss with foreign collaborators matters relating to the establishment of the Heavy Machine-building and Coal-mining Projects at Ranchi and Durgapur, respectively. The scope of a Central Design Institute for heavy machine building and engineering, too, will be discussed. Dr. Nagaraja Rao will also visit West Germany, France and Britain with a view to interviewing Indian engineers working or under training in these countries, and recruiting them for the work of the Corporation. The team will be in Europe for about three weeks.

A new 15-year account under the cumulative time deposit scheme run by the post office has been introduced with effect from the 1st inst. Deposits in this account will be allowed to be made up to a maximum limit of Rs. 300. The existing limit of Rs. 100 in the ten-year account has also been raised to Rs. 200 per month from the 1st inst. The contribution made to the ten and 15-year accounts under this scheme will be entitled to earn a rebate on income-tax, as in the case of life insurance premia and contributions to recognised provident funds, subject to the overall limit of Rs. 10,000 or one-fourth of the total taxable income, whichever is less. The deposits in the ten and 15-year accounts would, on maturity, earn a return of 3.8 and 4.3 per cent, respectively, free of income-tax.

* * * *

From Abroad

Hourly wage rates in the West German industry and in the public administration increased by 11 per cent over the year ended February 1962. Monthly rates for office employees also rose by 8.7 per cent.

The Japanese Government has instructed the exchange banks to hold 20 per cent of Euro-dollars and free yen deposits and certain types of short-term foreign exchange loans as reserves for repayment. It has also asked them to assume a cautious attitude to guaranteeing repayment of debts incurred by the Japanese trading companies abroad.

Portugal has decided to accept foreign loans for financing development, after refusing them for the last thiry years. It has now negotiated foreign credits worth 4,500 million escudos (about £56 million) towards the cost of the second four-year Development Plan. The suppliers of credit include the World Bank, the U.S. Import and Export Bank and several American private banks.

The Government of Ghana has signed an agreement with the Czechoslovak foreign trade corporation *Kovo* for the supply of a £300,000 tanning factory on long-term credit. Besides supplying the plant, the Czechs will supervise the construction and train Ghananian personnel. Ghana has also signed an agreement with Yugoslavia for another long-term credit for the supply of a plant for processing pineapples, tomatoes and mangoes.

An official Bill tabled in the Ceylonese Parliament provides for compulsory employment of Ceylonese nationals in estates in preference to foreigners. The Bill will also bestow powers on the Labour Minister to decide what class of estates should employ nationals and their quota for each estate. In April last, it was decided that half the new recruits to estates should be Ceylonese citizens. At present, the number of Indian labourers in tea estates is 396,000 (as against 104,000 Ceylonese) and in rubber estates 39,000 (as against 80,000).

PERSONAL

MR. M. C. Chagla, India's High Commissioner-designate in the U.K., presented his credentials to Queen Elizabeth II this week.

Mr. M. Sunder Ram Shetty has been elected Chairman of the Vijaya Bank Ltd., Mangalore.

Mr. B. K. Sanyal, senior official of the Ministry of External Affairs, has taken over charge as the Chief Secretary to the Government of Goa.

Mr. H. D. Dennis, Vice-President of Caltex (India) Ltd., and Managing Director of the Visakhapatnam Refinery, has been appointed the Chief Executive Officer in India for Caltex with effect from the 1st inst. In this capacity, he will serve as the Resident Vice-President of Caltex (India) Ltd. with headquarters at Bombay. Concurrently Mr. Dennis also becomes Managing Director of Caltex Oil Refining (India) Ltd. Mr. Dennis takes over these positions from Mr. J. R. Price who has been transferred to Sydney (Australia) where he will function as the Chief Representative for Caltex in Australia and New Zealand.

MONSOON PRECAUTION—
check your tyres !

Even 20 miles per hour can be a dangerous speed on a wet and slippery road—if your tyres are worn, there is every chance of skidding.

Protect yourself today against skidding by fitting Dunlop Gold Seal tyres to your car. Behind the designing of these tyres lies Dunlop's unique experience on the world's greatest racing circuits where cars with Dunlop racing tyres touch speeds of 180 miles per hour in the rain!

LONG-TERM POWER PLANNING

THE shortfall, to the tune of 1.3 million kw., in the achievement of the second Plan's target of power generating capacity, would appear to have been at least partly made good in the first year of the third Plan, if the estimate contained in the report of the Union Ministry of Irrigation and Power for 1961-62 is to be believed. According to this estimate, as much as 678,000 kw. of additional generating capacity should have been commissioned during 1961-62, as against the third Plan's target of 600,000 kw. for that year. In spite of this achievement, there is currently a serious power shortage in several parts of the country. The latest instance of such a shortage is provided by the 20 per cent power cut which has been enforced since 1st April in the nine Telengana districts of Andhra. The report has it that this cut may have to be extended to the remaining eleven districts of that State. In the Bombay-Poona region, the power supply position continues to be one of anxiety; it is expected to improve only after the commissioning by the Tatas of their fourth 125,000-kw. thermal unit at Trombay. In the Bihar-Bengal region, the power situation is no better and a controversy is going on there about the estimated load demand. Practically throughout the country the growth in power demand continues to be more rapid than installation of generating capacity. Efforts to go ahead with the construction of power projects in the earlier years of the third Plan are fortunately not being hindered by foreign exchange difficulties, for most of the projects have been tied up with the assistance and credits available from friendly foreign countries. It is authoritatively stated that out of the total estimated foreign exchange requirements of Rs. 330 crores for the power schemes in the third Plan, the amount released during 1961-62 has been of the order of Rs. 110 crores. In 1962-63, the amount of foreign exchange that will be released for the projects will be Rs. 170 crores, thereby leaving only about Rs. 50 crores for commitments during the last three years of the Plan. There will, thus, be no undue delay in the execution of power projects on account of foreign exchange.

But the easier availability of foreign exchange may still not mean expeditious execution of power projects unless more active administrative measures are launched here and now. Two concrete steps suggested by Mr. H. M. Patel, I.C.S. (Retd.), in an article in last week's issue of this journal, are worthy of note in this connection. The first suggestion is that a Central Generation Board should be set up for establishing large power stations at the most convenient and efficient centres and for making available to State Electricity Boards the power generated by such stations. The advantage claimed by Mr. Patel for this arrangement is that hydro-electric development can be so phased as to add progressively more and more power to the total pool available for the use of all the States. In other words, the power generated by a station established by the proposed Board in one State could be distributed to neighbouring States as may be decided upon by the Board. The other suggestion advanced by Mr. Patel is that a separate body should be established for planning the total requirements of power of the country and for allocating the power generated according to the requirements of each State from the most convenient centres of power generation. Under this arrangement, the State Electricity Boards will, in effect, be purchasing power in bulk from the Central power allocating body. Mr. Patel's idea is that the central body for the planning and allocation of power will have to work not on a five-year basis, but on a basis of much longer term. A similar suggestion has also been made by Mr. K. L. Rao, a former member of the Central Water and Power Commission. His proposal is that power projects should be planned ten or fifteen years ahead. The Sachdev Committee, which recently examined the question of power shortage in the eastern region, has made some such suggestion as far as the fourth Plan is concerned.

These suggestions, which are manifestly constructive, can be usefully examined by the authorities if the power shortage is not to continue into the fourth Plan period. But the authorities seem to be almost fatalistically resigned to the prospect of a continuing power shortage. In fact, Mr. O. V. Alagesan, Union Minister of State in the Ministry of Irrigation and Power, has himself admitted that even if all the power projects of the third Plan were successfully completed, there would still be a shortage of half a million kw. in the country as a whole by 1965-66. To say, as the Minister has stated, that this shortage is inevitable since the demand for power is running ahead of supply is to admit the failure of planning in two crucial sectors. After all, industrial development is supposed to be planned in the light of possible power development. If industrial projects are completed as a matter of greater urgency than power projects, industrial capacities are bound to remain partially idle if adequate supplies of power are not available. To put it in another way, unless the power projects which are to cater to the needs of particular new industries are completed in time, there is no particular virtue in going ahead with the industrial projects themselves. How better co-ordination can be effected in the matter of power planning and industrial planning is a matter for more careful study. An instance of lack of co-ordination in this respect is to be found in Andhra Pradesh where, besides the Rs. 25-crore fertiliser factory at Kothagudem and the Rs. 20-crore heavy electrical factory at Hyderabad, as many as 66 industrial units, requiring in all 182 MW of power, have been licensed already without strict regard to the prospective availability of power in adequate quantities and in good time. Obviously, the progress of industrial production will be hindered by the slower pace of power development. Given a more reliable estimate of future load demand, better co-ordination between industrial planning and power planning and greater co-operation between the States in the matter of power generation, it may be possible to avoid the recurrence of a serious power crisis in the beginning of the fourth Plan.

A.-I.M.O. ON KERALA DEVELOPMENT

Two reports on the industrial development of Kerala have been published this month—one covering the techno-economic survey of Kerala undertaken by the National Council of Applied Economic Research (N.C.A.E.R.) and the other drawn up by the Industrial Delegation of the All-India Manufacturers' Organisation (A.-I.M.O.). Unlike the N.C.A.E.R. survey, which is an exhaustive study of the prospects for development of Kerala based on a comprehensive assessment of the resources of the State, the A-I.M.O.'s report is an impressionist account of the industrial potentialities of the State by a group of industrialists who visited the State early this year at the invitation of the Government of Kerala. The object of the delegation's visit was to study and observe on the spot the climate for rapid industrialisation with a view to (1) creating industry-mindedness among the local population, (2) focussing attention of industrialists and businessmen on development possibilities in Kerala, (3) assisting local entrepreneurs to take advantage of the industrial opportunities available in the State, (4) suggesting industries that can be profitably started in the State, (5) finding investment prospects for entrepreneurs from outside the State, and (6) for promoting goodwill among industrialists and businessmen of Kerala and their confreres outside the State.

The A-I.M.O. Delegation's report confirms the conclusion of the N.C.A.E.R. survey that Kerala offers plenty of scope for a wide variety of industries—large-scale, medium and small-scale. Abundant natural resources, cheap electricity and good transport and communications make Kerala suitable for the establishment of heavy large-scale industries.

By far the most significant observations of the Delegation from the point of attracting the State entrepreneurs and capital from outside are those relating to the climate for industrialisation, the labour situation and the attitude of the Government. In fact there is still considerable misapprehension and misunderstanding among industrialists and businessmen outside the State about these aspects of industrialisation of the State. The A.-I.M.O. Delegation's findings should enable a more objective appreciation of the actual conditions prevailing in the State. The Delegation has found that wage levels in the State are fair and individual labour productivity higher than in other parts of India. The labour force is educated and conscious of its rights. The irresponsible labour leadership, which has played no mean part in scaring away from the State potential investors, is dying out in Kerala and the management is becoming more imaginative than before. It has also noted that good industrial relations are prevailing all over the State and almost all organised industries have concluded long-term agreements with their unions prohibiting strikes and lock-outs and recognising negotiations as the ideal means for settling labour disputes. The State Government, according to the Delegation, is anxious to develop the State industrially as quickly as possible.

As additional measures, the Delegation has suggested the appointment of a technical officer in the Directorate of Industries for developing ancillary industries. Arrangements should also be made to supply to prospective entrepreneurs the required designs, specifications, samples and project reports of such items which could be easily manufactured in the State. The Delegation has advised the Kerala Government to lay more emphasis on district industrialisation on the basis of Dr. M. Visveswaraya's scheme for "District Industrialisation." Other suggestions of the Delegation include creation of a free trade zone near about Cochin, further development of road and water transport and wider publicity to the facilities and scope offered by Kerala to industrialists.

A notable suggestion of the Delegation is that the Government should offer equity participation to the local investors in some of the prosperous Government-controlled undertakings and that the money realised from selling its holdings should be utilised for starting new industries. This is a suggestion worth considering, for it will, to some extent, supplement the meagre volume of venture capital forthcoming for investment in the State.

OUTLOOK FOR EXPORTS

With the third Plan gaining momentum, the foreign exchange situation is becoming more and more precarious. India's foreign exchange reserves have now fallen to a disturbingly low level. From about Rs. 150 crores in the beginning of 1962, they have declined by over 30 per cent to Rs. 103 crores in a matter of less than five months. The dilly-dallying of the Aid-India Club to make a firm aid commitment for the second year of the third Plan has aggravated the difficulties, with the result that the prospect of resuming maintenance and development imports on an adequate level remains uncertain. This trend would not have been a source of vital concern but for the fact that conditions for the promotion of exports are none too encouraging both within the country and in overseas markets. Within the country, industrial production has been lagging behind, as a cumulative result of shortages of power, coal and raw materials, besides transport bottlenecks. No less disquieting is the fact that agricultural output has also failed to improve commensurate with the increase in demand for food and raw materials. Reports of slowing down of industrial activity from the latter half of 1961 in some of the major West European countries have created a new element of uncertainty in the short-term outlook for exports. Besides, as is well known, India's exports, both traditional and new items, are encountering persistently increasing competition in world markets. On top of this, there is the fear of some dislocation of established patterns of trade when the U.K. joins the Common Market, which, according to competent observers, is a foregone conclusion.

It is, however, a matter of gratification that these adverse circumstances have not led to any defeatist attitude on the part of the Government of India. On the contrary, the Government seems to be making a determined bid to regain lost markets abroad, expand existing ones and explore new avenues. It would appear that, at a top level meeting of the Planning Commission and Union Ministers for Commerce and Industry, International Trade and Industry, held early this week, an export target of Rs. 725 crores has been fixed for the fiscal year 1962-63. This represents an increase of as much as Rs. 60 crores, or 9 per cent, as compared with the previous year, when actual exports increased by less than 4 per cent to Rs. 665 crores. The rate of growth of exports is thus proposed to be more than doubled in 1962-63 from the previous year's level. The aggregate target is still quite modest, considered against the background of the overall third Plan target of Rs. 3,700-3,800 crores, or an annual average of Rs. 740-760 crores. Considering the several imponderables in the way of exports, some of which were mentioned at the outset, this target is only of academic significance.

Be that as it may, the increase in exports is expected to be attained mainly by raising those of tea, coffee and other plantation products (by about Rs. 15 crores), minerals (by about Rs. 8 crores) and other miscellaneous items (by Rs. 10 crores), while the shipment of textiles is expected to be maintained. In respect of textiles, in particular, one is doubtful whether the exports can be maintained. For there is no sign of any abatement of the severe competition in world markets for India's cotton textiles, particularly from Japan, Hong Kong, etc. What is more, it is quite possible that earnings from the export of jute goods will decline from the high level attained in the previous two years resulting from an inflation in raw jute prices. The jute situation has now eased, with a better crop in 1961-62. This is bound to make much difference in the total textile exports. With regard to other items like manganese ore, much will depend on granting adequate incentives to manufacturers and exporters. The newly-created Ministry of International Trade is, of course, seized of the matter. These incentives are, no doubt, only palliatives. But, in the short-run, there is apparently no other alternative.

Apart from incentives, there is urgent need for granting freight concessions and expediting the transport of goods for exports. It is to be hoped, in this connection, that the Railway Ministry will endorse a plan, suggested by the Ministry of International Trade, designed to give top priority to the haulage of ores and other goods meant for exports, besides reserving a number of wagons exclusively for export purposes. Another disturbing factor is the inadequacy of coal supply to industries. It is gratifying to note here that certain steps are being taken by the Union Ministry of Mines and Fuel to improve the situation.

It would appear that the Government is also examining the possibility of exporting some foodgrains like rice and pulses. The output of foodgrains, no doubt, has tended to recover in 1960-61 and 1961-62, from the setback suffered in 1959-60. But it is still doubtful how much of the staple foodgrains can be released for exports without disturbing their domestic price structure, even if a ready market can be found for them. Further, the scope of their exports will depend much on the pattern of output in the next crop year beginning June 1962 and the nature of the coming monsoon and other factors, which cannot be predicted with any degree of certainty. These exports in any case are not likely to make any large contribution to exports. So also is the case with proposals for shipments of onion, potatoes and chillies. There is, however, no room for undue pessimism, on the export front. Several measures are being devised by the Ministry of International Trade to enhance the competitive capacity of domestic goods in world markets and create a new sense of urgency in the matter. This, indeed, is a redeeming feature of the situation.

DISTRIBUTION OF CHEMICALS

The development of the chemical industry during the last decade has been quite impressive. The manufacture of a wide range of chemicals has been taken up and a strong foundation laid for the development of several basic chemicals. The index of manufactures of chemicals and chemical products (base 1951=100) has gone up by almost three times in ten years to about 280 by 1961. The production of sulphuric acid has gone up from about 99,000 tons in 1950-51 to about 360,000 tons by 1960-61, soda ash from 45,000 to 145,000 tons, caustic soda from 11,000 to 100,000 tons and nitrogenous fertilisers from 9,000 (in terms of nitrogen) to 110,000 tons. Similarly, there has been a rapid progress in respect of hydrochloric acid, sodium bicarbonate, calcium bicarbonate and bleaching powder and other chemicals. Mr. D. P. Kajaria, President of the Indian Chemical Merchants Association, observed at the annual meeting of the Association held at Calcutta on Wednesday this week that even these increases in output had fallen short of requirements within the country. Attributing the high level of prices for chemicals to inadequate production, he called upon the Government to permit larger imports to fill the gap between indigenous production and estimated requirements.

Mr. Kajaria's request for permitting larger imports is apparently sound. But so long as the scarcity of foreign exchange remains acute, the prospect of any sizable increase in imports is to be ruled out. Mr. Kajaria's complaint is not, however, confined to inadequacy of imports. For he was more concerned about the growing share of Government and actual users in the import trade, and the declining role of established traders. He, therefore, pleaded for what he called "a more purposive" policy for imports which would not result in "established importers being squeezed out of their avocations in life." It would have been enlightening had Mr. Kajaria precisely indicated whether and, if so, how many, traders had become unemployed as a result of the present import policy. Unless specific instances are cited, it would be difficult for the trade to convince the Government of its stand. Otherwise, the claim of actual users will naturally continue to receive sympathetic consideration at the hands of the Government. It is time, however, that the established trade was prepared for some perceptible changes in the pattern of imports of chemicals. For India has commenced manufacture of several chemicals which had been previously imported. Obviously, the trade cannot insist on larger imports in such chemicals.

The role of the State Trading Corporation in imports of chemicals also came up for critical comments in Mr. Kajaria's address. His main contention was that, instead of stabilising prices, the Corporation's intervention in imports and distribution of chemicals had only resulted in prices "soaring up to new high levels." Prices of some chemicals imported by the Corporation might have gone up in some cases; but it would have been better if these charges were substantiated by specific data. Mr. Kajaria's complaint that the Corporation has supplanted and ousted normal trade channels is also not supported by any data. In any case, his plea for entrusting the trade with the internal distribution of the chemicals imported by the Corporation deserves to be examined by the authorities. This scheme will work successfully, only if a body like the Chemical Merchants Association undertakes to impose a voluntary code of conduct and checks its members from indulging in unfair trading practices, particularly in those goods which are in short supply.

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

The East India Distilleries and Sugar Factories Limited have pleasure in announcing that with effect from 14th May, 1962, Mr. H. V. R. Iengar, lately Governor of the Reserve Bank of India, has assumed office as Chairman and Managing Director of the Company *vice* Mr. G. N. Noel-Tod.

Mr. G. N. Noel-Tod will continue in office as Vice-Chairman and Managing Director.

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION **COMBINES** A **LOOM BUILDING EXPERIENCE** OF **18** YEARS AT CIMMCO WITH OVER **34** YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

MORE ON SCOPE FOR INDEPENDENT AIR OPERATORS

EFFORTS TO FORM AN ASSOCIATION

By Our Aviation Correspondent

A FEW weeks ago, one wrote of the defects—or, what one conceives to be the defects—of the recent amendment of the *Air Corporations* Act. At the risk of being tedious, one returns to this subject. Although the Act, as it now stands, is hesitant and half-hearted, it does provide a toe-hold, however precarious, in the hitherto impregnable stronghold of State monopoly. It is an opportunity—perhaps a very fleeting opportunity—which, effectively exploited, might lead to important results.

On the other hand, if no attempt is made to storm the breach—if the metaphor is not too fanciful—the rigid monopoly, which the State corporations have to date enjoyed by law, they will continue to enjoy by default. The ball, then, is in the 'independent's' court. What—if anything—are they going to do with it? Lacking modern equipment, with negligible financial resources, their most serious weakness is their apparent unwillingness, or inability, to unite. And yet—or so one can only assume—the amendment to the Air Corporations Act must have been due to some pressure from the independents; where there is smoke, there must be some flame. Moreover, there are signs—no more than that—of a move towards closer association. The situation is not entirely lacking in possibilities.

As it so happens, legislation of a similar nature was enacted, some months ago, in Britain. This is now beginning to bear fruit. It may be of inferest, then, to examine what private enterprise, in a country where the State corporations have, hitherto, also monopolised scheduled operation, is making of its new opportunities. One must make it clear, however, that the two pieces of legislation, though similar, are by no means identical. The main difference lies in the far wider scope of the British Air Transport Licensing Act which permits direct competition with the two State corporations. This demonstrates the extent to which ten years of conservative rule has softened up the former fervour for State enterprise. The Indian legislation, on the other hand, reflects the Government's reluctance, as one Member of Parliament put it, "to do violence to the principles of the Industrial Resolution." It demarcates, presumably, the limit to which, at this stage, the Government feels it can go.

Double Thinking

Be that as it may, the British Act is still very much of a compromise. Whilst the stated aim is to give private enterprise "a fair and reasonable opportunity to compete with the two corporations on equal terms," it is also implicit that "the position of the Corporations is not to be undermined." That one suggests is a characteristically British piece of "double thinking." The two aims, in fact, are incompatible. Equal, after all, is an absolute, not a comparative, term. The British genius for compromise may surmount the apparent obstacle but, in the meantime, it must be the cause of considerable embarrassment to the Air Transport Licensing Board—set up under the Act—who have the task of making it work.

The British-independent operators—which, incidentally, sprang from beginnings quite as small as those of their Indian counterparts—are a very mixed bag. At one end of the scale is the "one-man-band" type of operator living, literally, from hand to mouth; at the other end, however, are a few powerful and well financed concerns which have read the signs of the times. These latter are the outcome of mergers and "marriages of convenience"—as, for example, Cunard-Eagle, which is associated with the world-famous Cunard shipping lines. The activities of these larger companies are numerous; they include car-ferry operations to the Continent, world-wide charter services, "inclusive tours" for holiday makers, and the movement of troops under contract to the Government.

In these circumstances, as can be well imagined, there was no dearth of applicants for licences to operate scheduled services. Indeed, to date, the A.T.L.B. has heard more than seventy such applications. The interesting feature, however, is the quick and angry reaction of the corporations. In almost every instance where an independent has been successful in securing an important licence, the corporations have lodged an appeal. Cunard-Eagle, for instance, obtained a licence to operate a limited frequency service across the Atlantic using Boeing 707 jet liners. On appeal by B.O.A.C.—and, one understands, on intervention by the Minister—that licence was rescinded. It is interesting to record, incidentally, that Cunard-Eagle has contrived, nevertheless, to operate a trans-Atlantic service. Using its permanent bases in the Bahamas, it is now able to operate a schedule service on the route Miami-Bahamas-Bermuda-London. This is raiding some of B.O.A.C's richest territory and, be it observed, without having recourse to the A.T.L.B. This, one suggests, is a timely and appropriate demonstration of the resilience and tenacity of private enterprise!

Question of Appeals

To return, however, to the question of appeals. As was inevitable, B.E.A.'s interests were affected to a greater extent than those of B.O.A.C. Twenty-three licences to operate on domestic and European routes were granted to independents. All these licences have been the subject of appeal by B.E.A. The main grounds of those appeals concern, firstly, capacity and, secondly, pooling agreements. B.E.A. complain that they have already purchased all the capacity which will be required for the next five years; as for pooling agreements into which the Corporation has entered with Continental carriers, the incursion of independent operators, B.E.A. complain, will upset, if not invalidate the arrangements made. Are these just the first agonised squawks of the hen whose nest is threatened—or are they a fair and reasonable presentation of the facts? That, no doubt, is the 64-dollar question which the Appeals Commissioner will have to decide.

If the relevant British legislation has blown up quite a storm, the Indian legislation has caused hardly a ripple on the waters of monopoly. There is, however, perhaps one hopeful sign—a move by the independents to form an association of which, one understands, Mr. K. K. Roy, has been invited to be the first President. Mr. Roy, in the affairs of air transport, is an able, experienced, and resourceful leader. In the pre-Corporation era, when private enterprise ran India's scheduled air transport services, Mr. Roy's company, Airways India, became one of the most successful of the then organisations. He will need all his powers of drive—and persuasion—if he is to achieve the same measure of success with his future charge.

This is the day of the big combine; mergers are everywhere in the air and the results can be seen in every form of industry and commerce. If the independent companies aspire to work on lines more rewarding than the kind of "hole-in-a-corner" operation they now individually pursue, something more effective than an association will be required; they must unite. If Mr. Roy can bring this about, it will be quite a "shot in the arm" for the independent cause. An active injection of private enterprise into India's air transport would benefit both the public and the country. It would do Indian Airlines no harm either; they could do with a "shot in the arm" too—a dose of competition.—*All Rights Reserved.*

The Indian Airlines Corporation has planned to revise the pattern of its night air mail services with effect from 1st October next, according to Mr. Ahmed Mohiuddin, Deputy Minister of Civil Aviation. The Corporation has proposed that Delhi, Bombay, Madras and Calcutta will have direct Viscount services at night. A Skymaster service will continue to operate on the Bombay-Nagpur-Calcutta route. Nagpur will have a day connection with Delhi by a Dakota service operation on the Delhi-Gwalior-Bhopal-Nagpur route. No final decision has, however, been taken in this regard.

Vital supplies for growing industry!

Wherever in India new projects, new industries, new enterprises are being launched, you will find the quality goods and services supplied by Voltas. Industrialists have learnt from experience that quality machinery and equipment are indispensable for efficient operation in industry. They have learnt too that the merchandise distributed by Voltas—whether it be a mighty hydraulic press or a minute spindle—is absolutely dependable in quality and performance.

Briefly, Voltas' activities comprise:

- **Marketing and Distribution of goods:** Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods —Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.
- **Manufacture and Development:** Air-Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!
- **Service:** Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Where quality equipment is demanded VOLTAS IS THERE

ECHOES OF THE BRUSSELS BATTLE

OPENING UP AVENUES IN EUROPE

From Our Special Correspondent

NEW DELHI, *29th May*

DELHI LETTER

BRITISH Minister Edward Heath or one of his senior colleagues was initially expected to come to Delhi in June to take in what one Indian official explained as "a breath of Commonwealth fresh air" before continuing the "Battle of Brussels," but it is now known that Mr. Heath will not be able to come down to the Indian capital in the immediate future for talks. As an alternative, it was suggested by Whitehall that a senior Indian Minister, possibly Mr. Morarji Desai, could go to London for discussions. But Mr. Morarji Desai is busy with the Finance Bill in Parliament, and for the present the matter has been left in the hands of Mr. K. B. Lall who is India's watchdog at Brussels where he is accredited as Ambassador. Mr. Lall has submitted to the European Common Market authorities a memorandum on behalf of the Indian Government on what relations India would envisage having with the European Common Market after Britain takes the European plunge.

India's Commissioner-General for Economic Affairs in Europe used to be posted in London, but when Mr. Lall was appointed to the post last year, the office was shifted to Brussels. The European Six welcomed this shift and the Indian representative has been keeping Delhi well tuned to the political strains of the Euromart negotiations. Mr. Lall met Professor Hallstein, Chairman of the European Economic Commission, on 25th May and gave him the Indian memorandum; copies of it were also sent to the Six. He is due to come to Delhi in June for consultations and to brief the Indian representatives who are attending the conference called in Cairo on the initiative of the United Arab Republic and Yugoslavia to discuss measures to try counter the Euromart influences. India will take part in the conference with ministerial level representation.

India's Stand

India's stand briefly is that not only is it necessary for Britain to obtain makeshift temporary safeguards to maintain the present level of Commonwealth trading with Britain but it would be appropriate ultimately to extend liberal entry for Indian and other Commonwealth goods to the entire European Common Market area. In the long-term it is not only necessary for India to build up on her trade with Britain but expand her trade with Europe as a whole. Among Asian Commonwealth countries India stands to lose the most by Britain's Euromart entry but her shouting over the issue has been at a lower key than, for instance, Australia's and New Zealand's. India has adopted the calm approach because, to quote Mr. Morarji Desai's explanation in Parliament, "prosperous countries are also nervous about maintaining their prosperity. India has no right to tell them that they have no business to safeguard their interests. India can only say that in such arrangements India should not be hurt."

India recognises that it does not lie in Britain's hands to apply her own solution; it will not help anyone if India goes for Britain in anger. India, pursuing patient negotiations, is not to be satisfied with temporary sops permitting present privileged levels of export trade with Britain for a transitional period. What India wants is a permanent solution which will open the doors of Europe and permit liberal trading policies. In Delhi's assessment, Britain, the United States and the Soviet Union (particularly Mr. Khrushchev) have a greater world perspective in trading than the European Six.

When Mr. Peter Thorneycroft was in Delhi last July for discussions immediately after Britain announced her intentions of a European plunge, it was put to him that, with Britain inside a European tariff wall, the Soviet Union would open her doors wide for trading with Asia. In Mr. Thorneycroft's view, Britain would welcome Soviet economic expansion because, if Mr. Khrushchev fulfilled his threats, Russia would have to buy more from abroad. "It would be wonderful," Mr. Thorneycroft said, "if Indians could make the Russians drink as much tea as Britons do!" As a matter of fact, the Indian authorities are hopeful of Indo-Soviet trade quadrupling in the coming decade. India has also at international conferences like that of E.C.A.F.E. at Tokyo complimented the Soviet pattern of balancing trade with India.

Tea, which Mr. Thorneycroft mentioned, comprises the biggest Indo-British trade commodity and is traditionally discriminated against by Germany where the taxes and duties add one hundred and fifty per cent to the price. It is in commodities like tea, coffee and textiles that India wants the European Common Market nations to adopt liberal policies.

While the problems emanating from Britain entering the E.C.M. were casually discussed in Parliament during the budget debate in May, there have been only two detailed published declarations giving the Indian Government's views on the problem. One was a statement by the Finance Minister during a Parliament debate last September and the other a joint declaration after Mr. Thorneycroft's visit. The Indian stand is as follows: There will be serious damage to India's export trade if the United Kingdom were to join the European Community without securing agreement on special measures to safeguard it adequately. The principal exports of India as well as many other developing countries are subjected to high tariffs, internal taxes, and quantitative restrictions of a discriminatory character in some of the countries of the E.E.C. while these products are being admitted duty-free and without restrictions into Britain. If the United Kingdom joins the Common market without suitable provisions for future trade of the Commonwealth from the developing countries, India and other developing countries will find it extremely difficult to maintain and expand their export trade. This is a matter of vital concern to developing countries like India since the earnings of their export trade provide the external resources for their economic development. The credit which India is receiving from Britain and other countries can be repaid only through an expansion of trade.

While diversification of export trade is the aim of Indian policy, it does not mean that India will walk into the Soviet parlour. Mr. Morarji Desai once pointed out that Communist countries too have their economic bloc or, in other words, their discriminatory policies. Delhi is firmly set against any hasty Asian or Afro-Asian common market moves as a counter to the European Common Market. If at all there is any Asian common market in the future, in Delhi's view, it has to emerge as a result of positive reasons within the region rather than as a negative counterblast to external developments.

Traditional Exports to Britain

A big threat from lack of safeguards in Britain's E.C.M. entry would be in cotton fabrics. Britain's purchases of Indian cotton piecegoods have been in some years more than a quarter of India's total cotton textile exports. To protect Lancashire interests there is a voluntary quota on Indian textiles entering Britain but this is an intimate Commonwealth arrangement among India, Pakistan, Hong Kong and Britain. Indian textiles enter Britain free but non-Commonwealth countries' textile exports are subject to a 17½ per cent levy. In addition there is a quota system in Europe which denies India an opportunity to exploit the textile markets.

Tea sales brought more than £62 million sterling from Britain in 1961 out of the total British imports from India valued at £145 million sterling. The Common Market tariff on tea may work out to 18 per cent on loose tea and more than 23 per cent on packaged tea. India is pressing for duty-free entry of tea into the entire European Common Market area.

In the case of jute it is not so much an import duty which worries India because there is already a mark-up system in Britain, but the imposition of quotas. Inter-Asian co-operation, particularly between Indian and Pakistan, can help dictate terms to Europe to some extent in jute but prospects for such Indo-Pakistani co-operation are illusory.

The larger perspective which Delhi takes is that it is by strengthening India's foreign

A SECOND BUDGET IN OFFING?

THREAT OF MORE ECONOMIC CURBS

(*From Our Own Correspondent*)

LONDON, *25th May*

LONDON LETTER

THE Chancellor of the Exchequer is fully aware that he is implicated as much as the Prime Minister and the Minister of Labour for the breaks in his incomes policy. He does not know what to do next and worried that he cannot bring direct action to bear on employers, is threatening to put curbs on the whole economy. In short, he threatens a second budget on the lines of last year's "July measures."

Nothing could be more disastrous to this country. Employment is almost static; if anything, unemployment is rising slightly allowing for seasonal factors showing that there has been no increased pressure on resources. The trade returns for April, now analysed in full, confirm that exports particularly to Western Europe are rising in a healthy fashion and that to other sterling markets they have now stopped falling.

Bank advances which rose sharply during the first three months of the year have since then actually fallen; yet there has been no increase of pressure by the Government on the banks and the explanation appears to be a lack of desire on the part of borrowers. The banks' ratio of cash to deposits is about 1 per cent higher than it was a year ago. In this climate repressive financial action by the Government could only invoke recession.

The Prime Minister has emphasised that incomes must be matched with production but he has not spelled this out in precise terms by saying that in the Government's view such and such industries have no right to give increases and that others have. He has lacked the courage to castigate where increases were justified and to give increases where the failure of recruitment has shown that the industry is underpaid. In the latter category come the nurses who are not prepared to accept a 2½ per cent pay increase—the Government's norm—and the probation officers who have for years been awaiting a radical upward adjustment of their salary scales.

The Wages Question

Recruitment is surely the essence of a wages policy. If an industry or profession cannot recruit the number of workers it needs surely that is evidence that the rate of pay is inadequate to attract enough employees. Similarly, if an industry has more labour than it needs and if the trade union of that industry is correspondingly bellicose, that is the evidence that the rates of pay are unduly high.

The trade unions tend to think in terms of equality in the sense of giving everyone the same pay increases. This is nonsense and yet the same nonsense is broadly repeated by the Government when it makes a fetish of a 2½ per cent figure regardless of the circumstances of the industry.

And yet to go against this simple formula is to invite criticism and, more than that, possible industrial disputes with those industries or sections which, whatever their recruitment position, want to get more money for their workers.

Latest of the unions to protest against this levelling process have been the musicians who were offered, in fact, a 3¾ per cent pay rise but who, because for a long time they have been trying to get recognition that they deserved to be put on a higher level altogether, are now going to come out at the end of the first week in June. Music in London will then be stilled unless some compromise is found! It will be only too easy for the Government to regard musicians as non-essential contributors to the economy but it is a live and active Government that is able to see where general principles must be modified whether the modification is up or down.—*All Rights Reserved.*

Prinex, one of the British subsidiaries of Courtaulds, has secured a £6-million contract from Soviet Russia for the supply of plant and machinery to produce triacetate fibres in Lithuania. This contract raises the total value of contracts for plants secured by Courtaulds group from the Communist bloc to £29 million. The first was for a £4-million acetate plant for Russia in 1959, followed by another £15-million order for other plants. Besides, Yugoslavia and Poland have also bought an acrylic fibre plant, each costing £2 million.

OUR PLANNING: POINTS TO PONDER

IMPROVEMENT IN ADMINISTRATION IMPERATIVE

By Prof. S. S. Jhanwar

GOVERNMENT ARTS AND COMMERCE COLLEGE, INDORE

AFTER more than a decade of planning, it is worthwhile our pausing seriously to think about our goals, direction, methods and the pace at which we are moving. In fact, such evaluations are a part of proper management and planning. During the first two Plans, we spent about Rs. 10,000 crores in the public and private sectors and, during the first year of the third Plan we have incurred an expenditure of about Rs. 2.000 crores on "development." No industrialist or manager will be satisfied with anything less than 10 per cent return on his investments. The return to our national economy from all these huge investments has, however, been rather meagre. In the first Plan period, the national income in real terms rose by an average annual rate of 1.8 per cent, as compared with population growth of 1.6 per cent per annum. In 1948-49, our national product was of the value of Rs. 8.650 crores, in 1950-51. it was Rs. 9,530 crores(Rs. 8,850 crores at constant (1948-49) prices) and, in 1955-56, it rose to Rs. 9,980 crores (Rs. 10,480 crores at constant prices). The net addition to the incomes in the economy was, thus, only marginal. In the second Plan, the trend was erratic and gave an annual average of about 2 per cent for the first two years. In the third year, that is, 1957-58, there was a significant fall of 2.7 per cent over the previous year. And, unfortunately, the 25 per cent anticipated increase in national income during the second Plan period has not at all been achieved. And if, as reported, during this period the income-disparities have increased, the plight of the masses may well be imagined. To add, the population has been increasing at a rate of about 2 per cent per annum. The result is that the *per capita* income in real terms during the two Plan periods has not increased even by 2 per cent per annum. These facts and figures should call for a good deal of thinking and heart-searching. Taking an example, if through loaned or gifted wheat, or due to special favours of nature in a particular year, we are temporarily able to "solve" the food problem, that is hardly a matter for jubilation, as it does not give any evidence of our own efforts and achievements.

Let us admit that our Planning has not yet been essentially and effectively very successful and that we have, by and large, failed our plans. This is not to say anything about planning as such, but about our planning and about the methods of its implementation. Mary Parker Follett stated a few years ago—these words have yet a special significance for our planners and authorities—that "those who are giving their time and thought to national planning are performing one of the most needed services in the world at the present, but I think that, in their preoccupation with *what* needs to be done, they are not always giving enough attention to *how* it shall be done."

The "How of Planning" Ignored

Unfortunately, we depend too much on financial budgeting and financial planning. What, however, are more necessary and important are target and performance budgeting, evaluation of programmes and proper control. *The How of Planning* has been very much ignored by us. The result is that we cannot say with certitude and exactitude where all the Rs. 12,000 crores spent by us since 1951 have gone. With such a colossal sum, each one of our countrymen should have got a good facelift, if the whole amount had been properly utilised. However, various scandals and deals that have come to light (together with those which have not come to light) and the reports of Audit, and of the Public Accounts and Estimates Committees tell a good deal about the wrong side of the balance-sheet of our national household management. A large part of our funds appears to have gone down the drain or improperly and inefficiently spent. Mere expansion of public spendings does not bring about socialism or welfare. Expenditure has to be judicious, economical and productive: the costs and benefits in terms of targets and factual achievements should be compared, and proper control and reporting should be constantly and consistently enforced and followed. But do we not lack many of these in our working?

Many of those entrusted with our finances and funds are not able to appreciate their role or to perform their duties properly. The administration should do its work with promptness, efficiency, economy and integrity. These are the qualities required in each civil servant. Mr. Appleby and others have emphasised these facts and requirements over and over again. Many other suggestions for improving our services and methods of work and administration have also been given. On our administration depends the implementation of our plans and the proper utilisation of the allotted money. Then, the administrative personnel should not become too much authoritative, nor should concentration of power and Statism be permitted to grow. The administrative personnel should feel that they are servants of the people, not masters; and, of course, they should be secure from unjustified and uninformed public criticism and from political pressure. As Barbara Wootton aptly puts it, "a happy and fruitful marriage between freedom and planning can be arranged, but, here, success or failure turns on the behaviour of the actual men and women who have the responsibility of planning: on the measures in which positions of power (*including the Minister's office*—this addition in italics is the author's) are filled by men and women who care for the freedom of others and in whom this love of liberty is not subsequently stifled by the habit of authority." It is really very high time we improved our administration and management, for it is these executive officers and other persons who ultimately spend the money, use the resources, and come into contact with the masses. They can deliver the goods, if they can be injected a little more with values and sense of duty, and if the more efficient, effective and honest among them are duly rewarded and the inefficient or dishonest adequately punished. As it is, administrative deficiencies are, in my view, one of the most disturbing stumbling blocks to our economic (and non-economic) progress today. That is primarily why, as revealed in a recent United Nations Survey, India ranks twenty-fourth among 30 developing nations from the point of view of development and its rate of development is 3 per cent every year, as compared with tiny Japan's rate of 10 per cent per annum.

Family Limitation

Then, most of our efforts for economic betterment are being negatived by the phenomenal growth in our numbers. Unless our population expansion is checked, our plans will not be successful. We are multiplying ourselves much too fast and, unless we multiply less, we shall not be able to divide more. The yearly *net addition* to our population at present is of the order of more than 8 million persons; and with its cumulative effect, this population expansion assumes more serious dimensions. As it is, every year we now add to our teeming millions the whole population of Switzerland (52 lakhs), New Zealand (23 lakhs) and Bhutan (6.6 lakhs) put together. This is quite alarming —more so for the most densely populated and rather backward country like ours. Population expansion also aggravates our already serious unemployment problem. It is, therefore, extremely necessary to have a sound population policy and programme. In the third Plan, we do propose to do something in this direction, but there is need compulsorily to "operate" the husband (*Vasectomy*) or the wife (*Salpingectomy*) after four live children are born and are alive. Other *methods* of family planning should also be utilised. The concept of Planned Parenthood must reach every village and, here, there is ample scope for proper publicity and education.

Savings, capital formation and investible surplus in our country should also be properly assessed and studied by our planners. There is need greatly to improve our capital formation. Of course, the returns on the works in which this capital will be utilised should also be attractive. Productivity should be improved. Then, consumption has to be within limits and control in a planned economy.

Public Debt

Another disturbing factor is our mounting public debt. By the end of 1962-63, the total interest-bearing obligations (including unfunded debt) of the Government of India are likely to go up to about Rs. 8,000 crores. Of these, about Rs. 6,400 crores will be debt raised in India and the rest, about Rs. 1,600 crores, will be external loans. Besides these external loans, we expect foreign aid also. These huge figures of our indebtedness should make us think more seriously about this matter. We shall be required to pay about Rs. 200 crores as interest on these obligations. Despite the position that we have certain interest-yielding assets also, the problem remains whether we can go on borrowing in the manner in which we have done so during the last few years. Our projects in the public sector are not yet providing us the promised and much-publicised returns and the stage of self-generating economy appears to be farther away than what the authorities would have us believe. Yet, all these loans will have to be repaid in time, unless *Charvak* comes to exercise our minds. In this connection, therefore, Prof. Galbraith's following warning should be heeded by all of us:

"Borrowing from abroad should not become a substitute for earning from abroad. The adoption of inappropriate technology, such as elaborate labour-saving devices, might only waste scarce resources and might also aggravate problems of unemployment. The organisation and services appropriate to advanced nations might be costly hindrances to less developed lands. Earning depends on efficient and low cost production that takes advantage of the tendencies of nations in more advanced stages. I venture to think that any friend of India will view with some concern the rather uninteresting behaviour of Indian exports in the last five years. It is doubtful if aid, however generous, can ever be a substitute for such investment earning and for the independence and self-confidence they accord."

Hence, let us not go on borrowing, as if repayment is the creditor's worry!

"MANAGEMENT IN THE THIRD PLAN"

Very little effort has been made so far by the management of public enterprises and Government departments to ensure effective control of the activities in their charge. This view has been expressed by Professor A. S. Deshpande of the Department of Business Management, University of Bombay, in a brochure entitled, *Management In the Third Plan*, just published by the Society for the Propagation of Democratic Thought, Calcutta. He points out that this inadequate control has led to heavy losses not only of material resources but also of human energy, lower efficiency, higher costs and a bad reputation for the whole policy of State ownership and management.

Stressing the need for efficient management, Prof. Deshpande says that industrial enterprises in the public sector account for Rs. 1,500 crores out of the total outlay of Rs. 7,250 crores in the public sector in the third Five-year Plan. A substantial part of this investment will have to come ultimately from the general public through direct and indirect taxes. Besides, inefficient management will impose an additional sacrifice on the general public in the form of higher prices and/or lower quality of their products and services.

The author suggests that the top management must have a sound organisation structure. Its basic requirements are: (1) grouping of different activities, (2) selecting proper persons to head each of these groups, and (3) defining clearly the authority and responsibility of each of these heads. Such organisation structure will ensure that each individual in the organisation knows from whom he has to take instructions and to whom he is to give instructions, that is to say, to whom he is responsible and who are responsible to him.

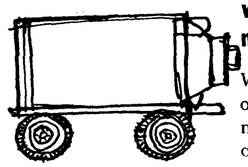
what happened to the rest of the milk?

It just isn't there! About 5 oz. of milk is what *you* get per day—if all the milk India produces is equally shared by her people! That includes milk products, too! And in the next 5 years per capita consumption is expected to go up by just ·2 oz! Not enough? Precisely. More milk has to be produced. Distribution has to be widened. That means more dairies and equipment: milk cans, can-washers, pasteurising plants, storage tanks, bottle-washers and fillers.. even foil caps for bottles! And that is the range of Larsen & Toubro products for the dairy industry alone—from a foil cap costing a few naye Paise to complete dairies worth several lakhs of rupees!

When you next open a milk bottle, consider—



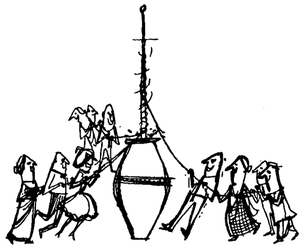
who puts the wheels on milk cans?

We do—but not exactly on cans! Large dairies need large quantities of milk. And it has to be collected in time.
A special job for road tankers—virtually tanks on wheels like the ones made by L & T.

here, food preservation is no problem!

...but in the tropics it's a different story. Foodstuffs deteriorate fast. Take milk, for instance. *Tons* of it! That is what a large dairy handles—*every* day! Milk is collected from distant centres, weighed, tested, clarified, pasteurised and chilled. It's then stored in insulated tanks or cold stores that keep the milk cool, safe from bacteria. Next comes filling and capping of lakhs of bottles—bottles that have already been washed, sterilised and dried. A complicated process? Certainly. Something that cannot be done well enough – fast enough—without special plant and the know-how—exactly what L & T provides.

how many hours to churn 11,500 litres of cream?



If by hand—well, it is *impossible*! But with automatic butter-making plants, in just a day!—and fully packed, too! This is only one of the plants that L & T supplies to milk-products factories. Other special equipment include those for making cheese, condensed milk, milk powder, ice-cream—even ghee!

L & T contributes also to the development of these vital industries:

- oil
- food & agriculture
- steel
- chemicals & pharmaceuticals
- paper
- minerals
- electricity
- transport
- construction

HARSH SHORT-STAPLE COTTON

KEEN COMPETITION FROM RAYON AND SYNTHETICS

HARSH short-staple cotton occupies a unique position in the world's cotton economy. This cotton, though it accounts for less than two per cent of total production, is greatly preferred to other cottons and competing materials for numerous specialised uses. Among these are manufacture of absorbent cotton, mattress filling, mixing with wool in blanket manufacture and production of coarse yarns up to 10 counts. The main types of harsh short-staple cotton are Bengal *Deshi* variety of India, all *Deshi* varieties of Pakistan and Assam and Comilla types grown in both India and Pakistan and, to a lesser extent, the B.C.F. variety of Burma. The world production of harsh short-staple cotton in recent years has been of the order of 500,000-600,000 bales (of 478 lbs. each), more than half of which is grown in India. The following table indicates the trend of production of harsh short-staple cotton in India and Pakistan during the last five years:

(In 1,000 bales of 478 lbs.)

Season	India	Pakistan	Total
1957-58	391	191	582
1958-59	335	145	480
1959-60	364	138	502
1960-61	381	157	853
1961-62 (preliminary)	450	163	613

A substantial portion of India's production is consumed domestically, for both mill and non-mill uses, while practically the entire output of Pakistan and Burma is exported. Although production of harsh short-staples in Pakistan is only about one-third that of India, as an exporter of this cotton, Pakistan ranks roughly on a par with India. Burma, though it exports less than either India or Pakistan, has also become increasingly important.

Owing to the specialised nature of demand, even a relatively small imbalance between supply and demand can often have sharp repercussions on prices. This was true in the 1959-60 season when exportable supplies were barely adequate to meet import requirements and prices rose sharply. The same was true during the major part of the 1960-61 season until it was realised that supplies were in excess of demand. During the early months of the present season, prices declined sharply, due to increased availability and temporarily slack demand, but a recovery took place in November which has been sustained to the present time.

Exports of harsh short-staple cotton in 1960-61 declined by about 25 per cent, as compared with 1959-60. At approximately 275,000 bales, shipments during the season were the smallest since the early 1950s. For the present season, the outlook for exports is relatively favourable, according to the International Cotton Advisory Committee, Washington. In a review of the harsh short-staple cotton situation, the Committee estimates that the total exports of this type of cotton from all countries during 1961-62 should exceed the unusually low level reached in 1960-61 by a fair margin. Demand was lethargic during the opening months of the season, but improved considerably late in October and November attributable partly to seasonal factors. Supplies are ample, thanks to a record crop of Bengal *Deshi* in India, and prices are much lower than a year ago. The Committee's broad assessment of the harsh short-staple cotton in each of the three principal producing countries is as follows:

India

Production of harsh short-staples in India has been rising over the past several years, and preliminary indications are that the 1961-62 crop may reach a post-war record of around 450,000 bales (of 478 lbs. each). Even in 1959-60, when the overall Indian crop was a near-failure, production of harsh short-staples actually increased. In direct contrast to the other countries producing these cottons, there is, in India, a considerable domestic demand for its Bengal *Deshi* variety, both for mill and non-mill uses. After first ensuring that supplies would be sufficient to meet local requirements, any surplus has been allowed for export through a system of periodic allocations. A relatively tight supply situation developed in the 1959-60 season, and only 123,000 bales of new crop Bengal *Deshi* were allowed for export during that season. For the 1961-62 season, the Government of India authorised on 23rd September 1961 the release of 103,000 bales of Bengal *Deshi* for shipment up to 31st March 1962. At the same time, it was stated that a minimum of 123,000 bales would be released during the season and more, if conditions warranted. The granting of such a large interim quota so early in the season was in direct contrast to the piecemeal allocations of prior years, and reflected the expectation of larger supplies this season. Following a disappointing start, the interim quota was filled by the end of November, as demand increased sharply in late October and November. On 22nd January 1962, a further export quota of 62,000 bales of Bengal *Deshi* was authorised and this was filled within three days of the first date of acceptance of applications. It was further reported that substantial business had already been booked with Japan in anticipation of release of this quota. One factor, which could account for the recent revival of interest in Bengals, is the poor crop prospects for other varieties in India, and to this end, there could be some substitution of Bengal *Deshi* for certain other short-staple varieties, which have so far not been allowed for export this season.

Price Trend

Prices of Bengal *Deshi* have been at or near ceiling levels during the past two seasons. A sharp drop of up to 2 cents a pound occurred during August and September 1961, at a time when overseas demand was very subdued. However, prices rose again to the ceilings early in November in line with renewed interest from Japan, and have remained there ever since. Despite the prospect of a record crop, the statistical position of Bengal *Deshi* cotton continues to be strong.

Exports of harsh staple from India (including Assam/Comillas) have averaged around 150,000 bales per year during the last four seasons. For the present season, it is a virtual certainty that total harsh short-staple exports from India will be the largest for many years. Japan continues to be the principal customer, accounting for nearly 90 per cent of the total quantity exported.

The following table gives the destination-wise breakdown of exports of Bengal *Deshi* from India during the four years ended 1960-61:

(In '000 bales of 478 lbs. each)

Destination	Year beginning 1st August			
	1957-58	1958-59	1959-60	1960-61
Australia	1.5	0.5	0.9	0.1
Belgium	0.3	0.1	0.1	0.1
France	10.2	12.5	3.7	6.9
W. Germany	0.1	4.3	0.5	0.9
Hong Kong	0.6	0.3	*	0.1
Italy	0.9	0.5	0.2	0.6
Japan	138.1	106.9	135.1	123.5
Netherlands	0.6	1.4	0.2	0.2
United Kingdom ..	1.1	3.6	1.5	2.3
United States ..	6.5	8.9	6.3	5.0
Others	0.6	0.6	4.7	0.6
Total ..	160.5	139.6	153.2	140.3
Percentage of Japan to the total	86.0	77.0	88.0	88.0

* Less than 50 bales.

Pakistan

Production of harsh short-staples (*Deshi* types) in Pakistan has increased slightly during the past two years, but has not regained the levels prevailing earlier. The situation in this country is quite different from that in India in that there are no restrictions on the volume of exports and only negligible quantities are consumed within the country. Pakistan is, therefore, vitally concerned that the level of production be commensurate with the potential foreign demand to avoid accumulation of stocks and wide swings in price. Unfortunately, this has not always been the case, and the Government has been compelled to intervene. In July 1958, for example, the *Deshi* Cotton Export Incentive Scheme was promulgated in an effort to move the huge surpluses accumulated from the 1957-58 crop. In addition, the Government, over the past three years, has more than halved the export duty on *Deshi* cottons, and in August 1961, even abolished the tax on East Pakistan Comilla types. Despite these efforts, exports of Pakistan *Deshi* cottons have declined considerably, with total 1960-61 shipments having been lower by about a third, as compared with a year earlier, and unsold stocks at the end of the season were several times greater than normal. For the 1961-62 season, supplies are much larger, due in part to a slight increase in production but mainly to the increased carryover. The overwhelming dependence on export demand for Pakistan *Deshis* has resulted in an extremely sensitive local market, and price gyrations have been frequent. Pakistan, like India, is largely dependent on the Japanese market for its harsh short-staple cotton, but to a somewhat lesser degree. Whereas 85-90 per cent of India's exports of these cottons are normally to Japan, the share of Pakistan's exports held by Japan is around 70 per cent or less. In the past few years, the United Kingdom, United States, and several communist areas have been important markets for Pakistani *Deshi* cottons.

Burmese harsh short-staple cotton is becoming more and more a factor in this limited market. Annual production is in the neighbourhood of 60,000 bales per year, most of which is exported. About one-third to one-half the total quantity exported goes to Japan, with the remainder principally to the United Kingdom, Mainland China, the Federal Republic of Germany, and Netherlands. The United States has recently assumed greater importance also. Although Burmese cotton is less harsh than the competing Indian and Pakistani styles, it is generally conceded to be a reasonable substitute and prices for BCF 4, the principal export type, have been fully competitive. Harsh short-staples are exported both by the private trade and the Government-sponsored Union of Burma Co-operative Wholesale Society.

Under a new Four-year Plan beginning in 1960-61, top priority was given to agriculture, in order to increase exports and foreign exchange earnings, and to work toward eventual self-sufficiency. It is hoped that cotton production will be expanded considerably, but only in longer-staple varieties, where yields are reported to be several times greater than those for the native short-staples. On the other hand, the BCF variety is said to be very resistant to diseases and pests, and, as exports of this type are now well established, it would seem that there is little likelihood of any major decline in short-staple production.

Consumption

The distribution of consumption of harsh short-staples can be divided basically into three groups: Japan, India, and the rest of the world. Japan is the most important consumer, and overwhelmingly, the number one export market. Most of the consumption here is in non-mill use, for manufacturing absorbent cotton and for padding in mattresses. When the I.C.A.C. made its last survey of the harsh short-staple situation two years ago, the Japanese Government summed up the probable future consumption trend as follows. "For padding and medical use, the consumption of these cottons will decrease appreciably due to the competition from synthetic and rayon fibres." This has apparently proved to be the case, for consumption of Indian, Pakistan, and Burmese cotton in non-mill uses actually declined by 30 per cent between 1958-59 and 1960-61. This sharp reversal is of special significance because, during the same period, cotton consumption of all growths by the Japanese cotton industry increased by about 40 per cent. In India, mill consumption of all cottons has steadily increased over the past three years, but harsh short-staples have not shared in this increase. Consumption of Bengal *Deshi* by Indian mills has remained constant at approximately 85,000 bales per year since the 1958-59 season but this is some 30 per cent below the level prevailing in the mid-1950s. In addition, substantial quantities have historically been used in hand spinning and other household uses, but it is not known whether any expansion or contraction has taken place recently. Elsewhere, principally Western Europe and the United States, consumption has continued to decline. Based primarily on export data, consumption of harsh short-staples in Western Europe in 1960-61 was off by about a third compared to a year earlier, and as compared with the mid-1950s, the decline has been close to 60 per cent. Similar large reductions have taken place in the United States.

Outlook

As regards the long-term outlook for harsh short-staple cotton, the International Cotton Advisory Committee strikes a somewhat pessimistic note. According to it, for a number of years, there has been increasing substitution, involving rayon and various synthetics, in the traditional harsh short-staple market. In addition, important developments of comparatively recent origin have been the greater use of plastic materials in medicinal uses and the growing

(*Continued on page 1006*)

COTTON TEXTILE DELEGATION MEETS PRIME MINISTER

IMPORTS MUST BE LIMITED TO ONE-FIFTH OF HOME CONSUMPTION

From Our Special Correspondent

MANCHESTER, 22*nd May*

MANCHESTER LETTER

THERE was no immediate reaction from the British Government following last week's talks at London between a delegation of Lancashire cotton employers and union leaders and the Prime Minister when the current problems of the industry were discussed. The Government have, however, promised to issue a statement on the result of the talks shortly.

The delegation—and the Government too, for that matter—was perhaps hamstrung by extraneous factors, dependent on how other countries interpret and support the rules of the international arrangement which has yet to be formally ratified. This pact, in turn, is subject to variation, according to the attitudes adopted by the European nations involved in the Common Market discussions with the British Government.

One-fifth the Maximum

The official view of Lancashire trade leaders is that imports into Britain and the European countries should be stabilised at around 20 per cent of home consumption. This would mean a sharp increase in arrivals into the Continent and much smaller shipments into Britain. On the basis of grey cloth imports alone, some significance can be read into the fact that arrivals from India, Pakistan and Hong Kong in the first quarter of the current year were running at a rate very similar to the annual total of 350 million yards recorded in 1959. The deputation urged the Government to undertake future negotiations with the three countries concerned on such a basis, instead of the current ceiling, which is at a much higher level. More specific identification of individual ceilings should be included in the forthcoming talks, it was suggested, as an overall limitation can lead to a perceptible switching of production to certain goods, with obvious detriment to sectional interests at home.

Extending the Breathing Space

Government support for the Geneva arrangements is, of course, an integral part of Lancashire's case and, unless this is given and disruption swiftly claimed even before it occurs, the attempt to secure an orderly regulation of trade in cotton goods will have failed so far as the Lancashire industry is concerned. Britain's special position, by virtue of the substantial imports already accepted, should certainly qualify for exceptional treatment, avoiding the necessity of gradually opening the door still further to supplies from the developing areas.

The 1959 reorganisation scheme was constantly described as offering a breathing space for Lancashire. Within a few months of its launching, the pace of this breathing became fast and furious, but, subsequently, it has been far more laboured. Now it is being proposed that the closing date for applications to re-equip with the aid of the 25 per cent subsidy should be extended.

Expenditure of public money on such ventures is always the subject of close scrutiny and the Government would have to answer searching questions if the financial assistance was open-ended. The claim, however, can be justified on the basis of the paradoxical situation which has arisen through the giving of cash for re-equipment with one hand and the failure to bar the way against undermining imports on the other.

How Much Modernisation?

Details about the extent and progress of the Government-sponsored reorganisation scheme, together with the views and outlook of several of the most influential people in the trade today, are included in the latest report of the Government's Estimates Committee dealing with the assistance given to the cotton industry. Final figures relating to re-equipment must obviously await the completion of the schemes, but it is now possible to make reliable estimates of the extent of the modernisation which is already in progress or is planned for the future.

According to a memorandum submitted to the committee by the Cotton Board, an analysis of applications approved in principle up to the end of January shows that, if these proposals were fully carried out, they would represent the installation of about 500,000 new ring spindles, some 16,000 new doubling spindles and about 8,000 new looms, nearly all automatic. These figures, however, do not take into account the substantial modernisation of existing machinery, nor do they cover subsequent applications for the re-equipment grant which have been proceeding at a rather higher level during the subsequent three months. By the end of April, in fact, applications for the subsidy had reached a figure of almost £43 million, involving the Government in the payment of £10,741,000.

Actual claims paid at that point were valued at almost £8 million, of which the Government's share was £2 million. Within the individual sections, the total value of applications for the modernisation grant amounted to £21,440,570 in spinning; £888,148 in doubling; £17,622,788 in weaving and £3,012,110 in finishing. The rate of applications, which in the first four months of the scheme totalled £13 million for spinning, doubling and weaving, later showed a very substantial drop, running at about £270,000 weekly in the second half of 1961. Lord Rochdale, in his evidence to the committee, expressed surprise that this fall had been so severe and had persisted for so long, although he recognised that it reflected the crisis of confidence which was still affecting the industry. No doubt stimulated by the approach of the closing date for applications, the rate has now risen again, reaching a value of just under £500,000 per week by last month.

Paid for Scrapping

So far as actual scrapping of machinery in the producing sections is concerned, the redundancy programme was completed officially at the end of March 1960. As a result, 48 per cent of the spinning plant in place before the scheme was launched was eliminated, 34 per cent of doubling machinery and 38 per cent of weaving capacity. The Government's share of compensation for this scrapping is estimated at £10,638,000, of which £6,142,000 were for spinning and £4,265,000 for weaving.

The final date for scrapping of finishing machinery was the end of 1961 and the percentage of total capacity scrapped by this date in the woven cloth section was 16.7 in bleaching, 23.5 in dyeing, 17.6 in printing and 26.3 in yarn processing. After all formalities have been completed, the Government payments are estimated at £1,206,000, the major recipients being the dyeing branch with £700,000 and printing with £300,000.

Under cross-examination, Board of Trade officials and individual members of the industry gave their views on the administration of the scheme, its progress and its value in practice. At the outset, the "magic" figure of £30 million, so widely quoted as a gift to "starving millowners," was put in its proper context. "It was always a rough estimate; it was never a commitment, it is not written into the Act at all," was the comment made by an Under-Secretary at the Board of Trade. In actual fact, from the figures given above, the ultimate likely to be provided from public funds will be below £25 million.

Throughout the hearings, the trade leaders without exception emphasised that shift working was essential, if Lancashire was to compete with her European rivals, particularly in view of the Common Market project. Much discussion took place on the provision of machinery. Several witnesses attested to the great technical progress made in the last five years, particularly in spinning plant. It was suggested that the main reason for this improvement after a long period in which relatively little advance had occurred was due to the higher wage rates being paid all over the world and the consequent call for labour-saving machinery.

Automation Round the Corner

Both Mr. C. E. Harrison and Mr. Eric Cartwright anticipated that a very high degree of automation could be expected within the next decade. Mr. Cartwright said that, in a year or two, we should be getting towards the end of the development of conventional machinery in spinning.

An indication of the heavy investment needed to modernise the industry was given by Mr. Harrison, who declared that a spinning mill could not be re-equipped for under £1 million. Asked why the pace of re-equipment had been so slow, he replied; "I do not see how you could justify an investment of that order just to remain as a sub-contractor to some weaver who is the sub-contractor of the merchant who is himself at the mercy of the chain stores."

Shift Work Analysis

Recent returns issued by the Cotton Board have disclosed the amount of machinery in the spinning section engaged on shift work. In the final quarter of last year, 1,140,000 ring spindles were on two shifts, as were 250,000 mule spindles, 44,000 waste spindles and 233,000 doubling spindles. Three-shift working was confined to 180,000 ring spindles, 10,000 waste spinning spindles and 52,000 doubling spindles. On evening shifts, the respective numbers were 1,180,000 ring, 14,000 waste and 56,000 doubling spindles.

Comparable statistics in the weaving branch have not formerly been given, but, in an appendix to the report, the Cotton Board indicates that, in the fourth quarter of 1961, 31,000 looms were working two shifts, 16,000 three shifts, 7,000 an evening shift and 94,000 a single shift.—*All Rights Reserved.*

DEMAND FOR RUBBER RISING FAST

ENERGETIC ACTION TO STEP UP OUTPUT WANTED

"RUBBER occupies a key position in industrial development and for defence. In view of the uncertainties of the international situation, dependence on imports may be inadvisable.... Their (plantations) rehabilitation demands immediate attention." It was in these words that the Planning Commission underlined the importance of developing the rubber industry in the first Five-year Plan. Several measures were, in fact, initiated to augment production of natural rubber partly through replanting a part of the existing area and partly by bringing new land under cultivation. And the measures did lead to a rise in output, from less than 15,600 tons in 1950 to 23,444 tons in 1956. The progress of development, however, slackened considerably during the second Plan period, the actual output in 1961 being only 27,000 tons, or an addition of just 3,556 tons in five years, though it is somewhat significant that the average per-acre yield of rubber improved from 284.4 lbs. in the first Plan (1951-55) to 306.9 lbs. in the second Plan (1956-60). Judging from this experience, it is clear that, unless more effective steps are taken both by way of promoting expansion and intensive cultivation, the third Plan production target of 45,000 tons—that is, an additional output of 18,000 tons or an increase of 70 per cent—will simply not be fulfilled. Commenting on the progress of development in rubber industry, the Estimates Committee of the second Lok Sabha (in its report dated December 1961) said:

"It was a very timely step that the Government took soon after freedom to constitute the Rubber Board. The Committee, however, regret that the measures that the Government and the Board have taken all these many years have proved totally inadequate for the purpose of making the country self-sufficient in rubber. ... While the Committee have their doubt about the achievement of the production target of 45,000 tons by 1965, which the Board have placed before themselves, they hope that the board would do everything to realise it. If a concerted drive is made to improve the methods of cultivation, it may not be impossible to attain the target."

Dependence on Imports

The need for energetic action to grow more rubber is urgent in all conscience, what with the rapid pace at which the demand for this material is expanding. Even if the third Plan target of 45,000 tons were achieved, there would still be a shortfall of 9,300 tons, the estimated consumption in 1965-66 being put at 54,300 tons, which is expected to increase further to 107,000 tons by 1970 and 171,000 tons in 1975. To the extent indigenous production fails to keep pace with such a rise in consumption, there will be waste of foreign exchange on imports. At current prices, every 100 tons of rubber involve a foreign exchange expenditure of Rs. 3.70 lakhs. Although over sixty years have elapsed since rubber production was taken up in India on a commercial scale, the country continues to depend heavily on imports, since production has lagged far behind production, as Table I shows.

It is somewhat disquieting that no serious attempts have yet been made to undertake a general survey for determining the suitability and availability of land for rubber cultivation in the country as a whole. Such a survey, as the Estimates Committee rightly pointed out, is an essential prerequisite for planned development, and the Rubber Board will do well to make a beginning, at least now. Possible steps will have to be taken simultaneously to extend the area of rubber cultivation—the total new planted area at the end of 1960 was about 290,828 acres (out of the total area of 321,002 acres)—and to replant the areas already existing. The replanting scheme of 1957, it will be recalled, aimed at replanting 70,000 acres of land in ten years at the rate of 7,000 acres per annum. By the end of 1959, the total replanted area was of the order of 10,646 acres, as against the target of 21,000 acres, or a shortfall of 50 per cent. After the increase in subsidy to Rs. 1,000 per acre, the targets for replanting were revised to a total of 52,500 acres in 1965 (7,500 acres in 1960, 8,000 acres in 1961, 8,500 acres in 1962, 9,000 acres in 1963, 9,500 acres in 1964 and 10,000 acres in 1965). Whether it is new planting or replanting, special care will have to be taken to ensure that only high-yielding varieties of seedlings are made available and used. This is important because the present all-India average yield is very poor, being about 320 lbs. (1960), as against 417 lbs. in Ceylon and Malaya. The latter country, we are told, has produced a strain of rubber plant which can come into bearing within about four years, instead of the normal eight-year period, and will yield 800 lbs. in the very first year of tapping.

Viewed thus, it is, indeed, gratifying that, in India, too, several methods have lately been contemplated to increase production. One of them pertains to demonstration trials in certain regions of the country to demonstrate to rubber growers the possibilities of increasing the yield of rubber from existing plantations and thus induce them to take to improved and scientific methods of cultivation. In these trials, all the three methods for boosting production, namely, spraying fungicides against diseases, manuring and application of yield stimulants are to be adopted on selected holdings in each region. It has been decided to lay down demonstration trials at five centres at present. They are Kulasekharam in Kanyakumari district, Punalur in Quilon district, Puthuppally in Kottayam district, Thodupuzha in Ernakulam district and Taliparamba in Cannanore district. The trials at these places are expected to provide the Rubber Board with adequate information to formulate long-term plans for increasing production. It may also serve as models for small growers to adopt better methods of cultivation.

Synthetic Rubber

In view of the wide gap between the production of and demand for natural rubber, it is not surprising that the consumption of synthetic rubber has gone up quite markedly, especially in the past six years, from a bare 106 tons in 1955 to 9,600 tons in 1961. The share of synthetic rubber in the total used in 1961 was almost 17 per cent, as against just 0.3 per cent six years before. This, however, is much below that in the U.S. (55 per cent), France (24 per cent), the U.K. (23 per cent) and W. Germany (22 per cent). The share will, of course, increase in the coming years after the synthetic rubber plant now being put up at Bareilly by Synthetics and Chemicals Ltd. starts working on a full scale; production is expected to commence sometime next year. The target for production fixed in the third Plan is 50,000 tons by 1965-66. Inasmuch as the manufacture and consumption of synthetic rubber will doubtless have a large impact on natural rubber, the need for a co-ordinated approach between the Rubber Board and the Development Wing, as suggested by the Estimates Committee, cannot be stressed too strongly.

In assessing the outlook for natural and synthetic rubber in India, one has to bear in mind the recent trends in the world rubber economy. A review of these trends reveals a remarkable expansion of synthetic rubber output and consumption in the past decade. Thus, in this decade, the aggregate world production has gone up by as much as 291 per cent (from 534,624 tons in 1950 to 1.93 million tons in 1961), while the natural rubber output has risen by just 13 per cent from 1.86 million tons to 2.10 million tons. The production of reclaimed rubber continues to be low. The details are given in Tables II, III and IV. In view of these trends, the producers of natural rubber are naturally worried about the future of their product. They have, therefore, reason to feel gratified at the confidence in the ability of natural rubber to maintain its position in the years ahead expressed by the Chairman of the Rubber Growers' Association, Mr. Charles Jackson, at the annual meeting held at London last week. Declaring that he was not unmindful of the problems to be faced, Mr. Jackson said: "The full impact of the new stereo-regular synthetic rubbers has not been felt, and we must be prepared to see these improve in quality and decline in price. Nevertheless, given the co-operation of Governments and of organised labour, our industry should continue to play its full part in supporting the economy and forwarding the welfare of the developing countries with which it is concerned."

Outlook for Natural Rubber

A special reference to the emergence of new synthetic rubbers was made by Sir G. Edward Beharrell, Chairman of the Dunlop Rubber Company Ltd. when he addressed the annual meeting of the Company at London on 21st May 1962. Sir Edward admitted that there would be extreme competition between natural and synthetic rubber (like cis-polyisoprene), but said: "It may be that recently the real advantages and potentiality of natural rubber have been underplayed, if not absolutely, certainly relative to the prominence given to synthetic rubbers.... A succession of new synthetics, many of them specially tailored for particular jobs, have certainly attracted attention to themselves, but, in a multitude of applications, natural rubber goes quietly on and it remains an adaptable raw material, often incorporating the best compromise of a number of desirable qualities.... It should not be assumed too readily that victory in a price war would go to the synthetic rubber. Natural rubber has shown in the last energetic resilience when it comes to looking after itself. More accurately, it is a tree that repays looking after." As he has pertinently remarked, constant research in the laboratory and careful organisation have brought doubled yields per acre, and, additionally, by paying more attention to grading and blending, the rubber growers can now market a more uniform product in a condition which is more acceptable to manufacturers.

IMMEDIATE RISK COVER IN LIFE INSURANCE

A PRACTICAL SUGGESTION

THE Life Insurance Corporation of India is now insisting upon the payment in full of the first premium along with the proposal. Many reasons are advanced for imposing this condition. It is said that advance payment of premium will (1) discourage rebating by agents, (2) bring forth proposals only from parties genuinely interested in insuring their lives, (3) discourage agents from artificially boosting business figures, (4) narrow the gap between the introduced and completed business which is now very large, and (5) reduce the strain on administration during the year-end when agents introduce bulk business in their anxiety to complete their quota, a practice which the Corporation, too, welcomes as it helps in reaching its Five-year Plan targets. This certainly is an impressive catalogue. But there is one good reason for the proposer not to pay the premium in advance and that is that the money does not earn interest while it also does not cover the risk until the proposal is accepted. In other words, during the period between the date of payment of premium and the date of assumption of risk by the Corporation, the money remains practically idle. A prudent, calculating person may find this adequate reason for not paying the full first premium along with the proposal. This difficulty, however, could be overcome if a satisfactory arrangement, which will reconcile the interests of both the proposer and the Corporation, is made. A method of doing so has been suggested by Mr. J. A. Mansoor, Divisional Manager (North Bombay), of the Life Insurance Corporation, in the March issue of *Yogakshema*, the House Magazine of the Life Insurance Corporation. He has suggested that, in order to encourage the proposer to pay the full first instalment of the proposal, the Corporation must give him something in return. This could be the immediate assumption of risks, for a temporary period of two weeks from the date of payment of premium or till the date of acceptance of the proposal, whichever is later, subject to two conditions. First, the proposer had not consulted a doctor for six months prior to the date of the proposal and, second, the temporary sum assured would be proportionate to the actual mode of payment of premium, that is, full sum assured, if premium is paid yearly and half sum assured if paid half-yearly.

This proposition, according to its author, is also actuarially sound. The crude death rate for the Corporation in the two inter-valuation periods ended 31st December 1959 was 3.84 per thousand insured population. The death rate in the first year after medical examination (or, in non-medical cases, after risk date) would be not higher than 3.84 per cent per 1,000 or 0.16 per 1,000 in the first fortnight. Calculated on this basis, against a possible payment of 16 nP per insured person, by way of early claim, the Corporation would get 15 nP by way of interest on the premium deposited on the assumption of an average yearly premium of Rs. 45 per thousand sum assured.

In order, however, to be on the safe side it is suggested that, until such time as the Corporation gains experience of the working of the scheme, the risk assumed could be limited to half the sum assured in the event of an early claim arising in respect of yearly premium, with proportionate reduction for others according to the mode of payment. A limit can also be put on the sum assured under the scheme of immediate risk cover of, say, Rs. 50,000 and the age at entry, say 40. Another safeguard could be the stipulation that no claim arising from the death of persons engaged in hazardous occupations, mountaineering, etc. nor claim by death due to air accident, would be entertained.

The suggestion is well worth consideration by the Corporation. Its chief merit is that it takes into account the common sense, business principle and is, at the same time, actuarially sound. In fact, at least one company before nationalisation used to grant immediate risk cover and issued temporary cover notes. Care should, however, be taken to see that, in the anxiety to be on the safe side, the scheme should not be hedged in by too many conditions and safeguards as to make it unattractive to prospective, clients.

NEW LIFE INSURANCE BUSINESS IN FIRST QUARTER OF 1962

New business done by the Life Insurance Corporation of India during the first quarter of 1962 aggregated Rs. 38.24 crores, as against Rs. 29.81 crores in the corresponding quarter of last year. The bulk of this, amounting to Rs. 37.58 crores, is accounted for by business in India, the share of foreign business being just Rs. 66 lakhs, as against Rs. 29.17 crores and Rs. 64 lakhs, respectively, a year before. The gap between introduced business and completed business continued to be wide, though the percentage of completion was higher at 49.4 per cent, as against 42.1 per cent. This is perhaps due to the greater insistence on the part of field force on the collection of full first premium along with the proposal. The number of policies issued during the first quarter increased by 16,855; as on 31st March 1962, it stood at 100,286, as compared with 83,431 on the same date last year. The table below gives comparative figures of new business introduced and completed during the period:

(Rs. in crores)

	1962 (January-March)		1961 (January-March)	
	Introduced	Completed	Introduced	Completed
In India	75.77	37.58	68.97	29.17
Outside India ..	1.71	0.66	1.74	0.64
Total ..	77.48	38.24	70.71	29.81

Division-wise, new business introduced rose by 22.4 per cent in the Northern Division and completed business by 57.5 per cent, as compared with the first quarter of 1961. As far as the Central Zone is concerned, only the Kanpur Division has been able to show an increase of over 25 per cent in the introduced business. The Eastern Zone, which occupied the second place as at the end of 1961, is, at the end of the first quarter of 1962, at the bottom of the list. The Southern Zone continues as the undisputed leader from the point of view of total production. In the Western Zone, Ahmedabad and Surat Divisions, which had shown good increases for the first quarter of 1961, as compared with the corresponding period of 1960, have once again, shown further good increases of 25.1 per cent and 38.1 per cent respectively, in their introduced business for 1962.

HERCULES INSURANCE COMPANY

A notable rise of Rs. 5.54 lakhs to Rs. 78.88 lakhs in the net premium income is disclosed by the audited accounts of the Hercules Insurance Company (Managing Director: Mr. E. K. Srinivasan, Calcutta) for the year ended 31st December 1961. The increase is mainly accounted for by the accident and marine departments which together yielded a net premium of Rs. 35.80 lakhs, as against Rs. 30.31 lakhs in the previous year. Fire premium was also higher, albeit fractionally, at Rs. 43.08 lakhs, as against Rs. 43.03 lakhs in 1960. Claims experience, too, was more favourable, having been just over 50 per cent in the three departments taken together, as compared with 55 per cent in the previous year. Commission and expenses of management were lower at Rs. 24.80 lakhs, as against Rs. 25.35 lakhs in the previous year. Consequently, the underwriting profit increased from Rs. 5.95 lakhs to Rs. 9.82 lakhs, and net profit from Rs. 6.81 lakhs to Rs. 10.20 lakhs. The bulk of this came from the fire department which contributed Rs. 6.07 lakhs, as against Rs. 2.15 lakhs. The accident and marine departments showed a surplus of Rs. 1.84 lakh and Rs. 1.91 lakh, as against Rs. 1.32 lakh and Rs. 2.48 lakhs, respectively.

As in 1960 so during the year under review, the fire and accident funds are maintained at 50 per cent of the premium and marine fund at 100 per cent. The table below gives the salient features of the Company's working during the three years ended 31st December 1961:

(In lakhs of rupees)

	Year ended 31st December		
	1961	1960	1959
Fire:			
Premium	43.08	43.03	41.48
Claims	20.85	21.58	20.00
Commission and expenses ..	16.59	18.58	16.58
Fire fund	21.57	21.51	20.74
Accident:			
Premium	14.37	11.51	9.96
Claims	6.99	6.19	5.07
Commission and expenses ..	4.19	3.20	2.90
Accident fund	7.18	5.57	4.98
Marine:			
Premium	21.43	18.80	17.98
Claims	12.77	11.87	11.41
Commission and expenses ..	4.11	3.62	3.43
Marine fund	21.42	18.80	17.98
Net profit	10.20	6.81	6.56
Provision for taxation ..	6.51	4.54	4.38
Dividend	5.80	5.40	5.80
Carry forward	(26.25%) 3.94	(22.50%) 3.78	(22.5%) 3.51

The departmental contribution to the profit and loss account amounted to Rs. 9.82 lakhs, as against Rs. 5.95 lakhs in the previous year. Interest and dividends, less income-tax thereon, aggregated Rs. 5.68 lakhs and other miscellaneous incomes (including profits on sale of investments) Rs. 2.58 lakhs. After providing Rs. 6.51 lakhs for taxation, as against Rs. 4.54 lakhs in the previous year, the disposable balance, including the amount brought forward from last year's account, is Rs. 13.98 lakhs. From this, a sum of Rs. 2.25 lakhs has been transferred to the general reserve and Rs. 1.50 lakh to the staff retirement benefit reserve. The proposed dividend of Rs. 2.625, taxable, as against Rs. 2.25 distributed in the previous year, will absorb Rs. 6.30 lakhs leaving the balance of Rs. 3.94 lakhs to be carried forward. It may be noted here that this is the eighth consecutive year for which the Company has paid a dividend. As a result of the year's working, the total funds of the Company increased by Rs. 7.98 lakhs to Rs. 1.10 crore, comprising a capital of Rs. 24 lakhs and reserves and funds of Rs. 86.40 lakhs.

CHAIRMAN'S SPEECH

GUEST, KEEN, WILLIAMS, LIMITED

Statement by the Chairman, Sir Raghavan Pillai on the occasion of the 32nd Annual General Meeting held in Calcutta on 31st May 1962

"IT is with especial pleasure that I welcome you to this, the 32nd Annual General Meeting of your Company and, for me, the first at which I have the privilege of meeting and addressing you.

The Directors' report and accounts have been in your hands for some time, and, with your permission, I shall take them as read.

Board of Directors

You will all today miss a familiar figure —that of Sir Henry Williams, who, to our great regret, resigned from his post as Managing Director at the end of March this year. As Managing Director, and throughout his association with your Company, he served the interests of the Company with singular devotion and ability, and brought distinction both to himself and to the Company by his achievements in other fields of activity. The Company owes much to his foresight and initiative during a period of rapid development and modernisation, and I am sure it will be your wish that I should, on behalf of us all, express to him our appreciation and thanks as well as our cordial good wishes for the future.

I have also regretfully to report to you the retirement from the Board of Mr. R. Catlow who was Chairman from 1953 to 1961. It is a matter of personal disappointment to me that his retirement should have come so soon, and I would like to place on record our indebtedness to him for the valuable assistance he has throughout given us and for his wise guidance of the affairs of the Company.

Sir Henry Williams is succeeded by Mr. W. Morrice, and application has been made to the Government of India for approval of Mr. Morrice's appointment as Managing Director from 1st April.

It is the intention that Mr. M. M. Malkani and Mr. R. A. Binns, who are at present managers of major sales departments, should join the Board, and this is the subject of resolutions later at today's meeting.

Production and Current Developments

1961 has, for your Company, been a year of technical progress and consolidation. The major plant expansions that have been executed in recent years are now approaching maturity, and this is reflected in a rise in sales and trading profit. But it will be understood from the accounts that the maximum benefit of recent developments has not yet been enjoyed to its fullest extent and some of the newer items of production plant are still being worked up to the desired level of productive efficiency.

Calcutta Works

The new rolling mills at Calcutta were fully in operation at the beginning of 1961. Output has since been rising steadily, and is continuing to improve. A noteworthy advance occurred early in the year when the responsibility for supplying mild steel rods to Bhandup Works was successfully undertaken by the new mills. Before this the wire rods, which are the main item of raw material for Bhandup Works, had to be imported. There was, however, no improvement in the supply of special steel billets, and in rolling bars for outside sale the mills had to rely for raw material on the output of the Company's own steelmaking furnaces—which fortunately operated at a very high level of efficiency—supplemented by the meagre tonnage that could be spared by the major steel producers in India. This deficiency of raw material severely limited sales in the Steel Division which showed little improvement over the previous year's figure in spite of the rise in the total tonnage of bars and rods rolled.

The supply of raw material in the category of mild steel billets, however, has greatly improved, and the position during the latter months of the year was generally satisfactory.

A new production shop came into being during 1961 for the manufacture of bright steel bars, and the plant was in production before the end of the year. Despatches of finished bars did not start early enough for the year's trading results to be affected appreciably, but this department will contribute to the Company's earnings during the current year.

In the Engineering Division, which mainly embraces railway track, signalling and wagon materials as well as automobile components, output of forged items showed some improvement and emphasis is being given to the development of new lines which demand a higher standard of quality and precision. This evolution is proceeding successfully, assisted by current additions to toolmaking facilities, and our country's new and growing engineering industries can rely on the continuance of this technical advancement.

The output of certain products destined for the railways was limited by a temporary lack of demand, and in the case of the crossing sleeper department it was not possible to operate the plant with any degree of efficiency owing to raw material shortage. This special material is however planned for production in India in due course by Hindustan Steel Ltd.

In spite of increased competition both production and sales of bolts, nuts and rivets in the Fastenings Division were stepped up in 1961, and the efforts of the works management are now aligned on the further improvement of plant maintenance and productive performance.

Operations in Calcutta Works were disrupted by the power crisis, which, as many shareholders will recall, occurred early in 1961, and earnings were adversely affected to an appreciable extent.

Bhandup Works

The level of production of the light fastenings made at the screw works at Bhandup and the sales of those products were the highest achieved since output in that unit first started in 1953. During the year a substantial expansion of capacity for making machine screws was established and consolidated and the manufacture of self-tapping screws was started. Whilst the output of this works constitutes only a small element of your Company's turnover it is an up-to-date unit of which we can be justifiably proud.

Exports

I am pleased to report an increase in the Company's contribution to India's export earnings. Disregarding the export of a large quantity of fasteners in 1960 in abnormal conditions of world demand, which could be regarded only as a windfall, the Company's export sales rose almost threefold in 1961, and the sales organisation is being adjusted by the establishment of a centralised export section to handle the increased volume of business.

Operating Results and Dividends

You will have noted in the Accounts that total sales amounted to Rs. 10,65,88,480 compared with Rs. 9,66,62,652 in the previous year. It will be understood from my earlier remarks that the increase would have been considerably larger had it not been for the shortage of certain categories of raw materials.

The Company's trading profit before tax, Rs. 83,83,644, shows an increase of Rs. 11,70,884 over the previous year's figure, and the total net surplus on the year's trading before tax, including enhanced dividends from subsidiary companies, amounts to Rs. 1,04,26,264 compared with Rs. 87,72,760 for 1960.

Provision for taxation however is considerably higher than for 1960 when a larger value of new plant was capitalised and greater tax benefit was derived from development rebate. The surplus after taxation is therefore Rs. 63,07,072 for the year under review, an increase of only Rs. 1,40,357 over the previous year's figure.

It would be appropriate to mention at this point that additions to fixed assets, whilst less than the previous year's figure of Rs. 1,55,24,647 remained at a high level and amounted to Rs. 1,05,48,241 in 1961.

The amount of Rs. 12,21,405 is statutorily transferred to Development Rebate Reserve, and featuring in appropriations for the first time is the transfer of Rs. 5,00,000 to a Sinking Fund which has been created under the terms of the Trust Deed covering Debentures issued in 1958.

Bearing in mind the continuing improvements to production facilities which have been made in the past two years, which can be expected to contribute to earnings in the future, and having regard to profits retained in past years, it has been considered appropriate to transfer Rs. 11,23,813 from General Reserve. An interim dividend of Re. 0.60 per share has already been paid and your Directors now recommend a final dividend for the 52 weeks ended 30th December 1961 of Re. 0.80 per share.

Before concluding my remarks on the accounts I feel that I should draw your attention to the current Budget proposals for increased corporate taxation. If these proposals are enacted an additional tax liability of Rs. 2.7 lakhs will accrue on the Company's profits in 1961.

Subsidiary Companies

Sankey Electrical Stampings Ltd., your Company's major subsidiary, achieved a considerable increase in turnover during the year and has in hand plans for further substantial expansion of capacity and diversification of the industries served.

Nettlefolds of India Ltd., the wholly owned subsidiary which was formed in 1953 to market the products of the Bhandup Works, is being wound up, it being considered that the need for a separate selling company no longer exists. The sales organisation now becomes a part of your Company's selling structure.

The Future

Turning now to the future, I am glad to tell you that the Government of India have approved the Company's plans for the substantial expansion of the steelmaking plant from 12,000 tonnes to 45,000 tonnes per year and an associated small increase in rolling capacity. This assured supply of special steels, which can be made under the Company's direct control will undoubtedly be of great benefit particularly in view of the current trend towards precision and high specification products. The project is still in the stage of detailed planning, but the present indication is that initial production will start in 1964.

A number of new lines are in the process of development, including various categories of special steel bars and rods, and an agreement has been concluded with Sandvikens Jernverks Aktiebolag of Sweden covering the manufacture of hollow alloy steel bars for rock drills, subject to Government approval. Plans are also being drawn up for making several types of fastenings hitherto not produced in India to a satisfactory standard of quality.

In the context of development, I should like to pay tribute to the unfailing and invaluable assistance that is rendered by the Company's technical consultants and associates, Guest, Keen and Nettlefolds Ltd. Apart from making available their immense fund of technical knowledge they have recently agreed to assist your Company and its subsidiary in their needs for foreign exchange by placing at their disposal a sterling loan of some £1¼ million to be utilised for the import of essential plant and equipment. This facility is at present being considered by the Government of India.

The growth and improvement of the Company's production units, which has reached a peak over the past two years, is a constant and continuing process, and, whilst the energies of the Company's management are at present mainly directed to bringing recent development projects to a full revenue-earning state, attention is being given to the refocussing of existing manufacturing facilities in sympathy with the changing needs of India's industries and simultaneously to promoting the birth of new ventures.

In India today industry must be bold in meeting the challenge of technological change and progress, inspired by the promise of future rewards to be shared with the community

THE SAVAMALAI ESTATES LIMITED

MR. M. S. P. RAJES' SPEECH AT ANNUAL MEETING

INCREASE IN SELLING PRICES OF COFFEE INEVITABLE

SATISFACTION at the new system of open auctions for export coffee introduced by the Coffee Board was expressed by Mr. M. S. P. Rajes, Director, the Savamalai Estates Ltd., in the course of his speech at the Thirty-second Annual General Meeting of the Company held at Coimbatore on Tuesday, 22nd May 1962. Drawing attention to the marked reduction in the 1961-62 season's coffee crop, Mr. Rajes stated that the original allocations between export and internal markets might have to be revised. The lesser quantities available, he added, might well result in the higher export prices being maintained and possibly improved. He declared that, with a markedly reduced crop, an increase in selling prices of coffee regardless of quality was inevitable.

The following is the full text of Mr. Rajes' speech:

"GENTLEMEN,

"I have much pleasure in welcoming you to the thirty-second annual general meeting of your Company. The audited accounts and report of the Directors for the year ended 30th November 1961 have been in your hands for the statutory period and, with your permission, I propose to take them as read. You will note that we have made some alterations in the layout of the accounts this year, and I hope you will find these give a clearer presentation. If you have any queries on the accounts, I shall be glad to answer them later.

"Along with the accounts the Chairman's statement has been incorporated which comments on the accounts and reviews the Company's working during the year just passed. Under the circumstances, my address can be made much shorter than usual and, although I will deal with future prospects, I will concentrate more on some of the problems facing the coffee industry today which are of vital concern to the future working of our Company.

"The record crop of 291 tonnes harvested last season did not produce a record profit. Nevertheless, the modest increase in the net profit after tax leaving the available balance in the appropriation account of Rs. 1,45,601, as compared with Rs. 1,23,628 last year when a dividend of 14 per cent was declared, enabled your Directors to recommend an increased dividend of 16 per cent this year, thus compensating for the small cut made last year. This dividend will absorb a sum of Rs. 88,027.

Meagre Return

"After the record Indian coffee crop of 67,794 tonnes in 1960-61, of which no less than 32,271 tonnes have been sold for export, we have witnessed a steady decline throughout the year in the prices at which our coffee has been sold for export. When the Chairman of the last General Meeting addressed you, he expressed concern at this trend and held out no hope of a points value for the 1960-61 crop greater than Rs. 2.00. So far we have been paid Re. 1.90 per point and the present indications are that the most we can expect is about Rs. 2.06. It is in the light of this meagre return that the grower may perhaps be excused for expressing his great concern in the marketing arrangements made for his coffee over which he has no control.

"At a time when the emphasis is on the grower to produce better quality coffee and thereby enable Indian coffee to earn a high reputation in world markets, coffee which is obviously unfit for export is being exposed for sale in export auctions. By this I mean coffee which at its original assessment after curing when it may be said to be at its best was only rated F.A.Q.-4. And yet arabica cherry and gleanings of an original assessment no higher than this are being exposed in current export auctions alongside the best plantation of the new 1961-62 crop. While one can appreciate the desire for maximum exports so as to earn foreign exchange, one can only wonder what the repercussions of such a policy will be on the efforts being made to re-establish a reputation for quality.

"It is gratifying that the new system of open auctions for export coffee introduced by the Coffee Board at its first sale in January 1962 has got off to a good start, and that plantation A, which sold in January 1961 at prices ranging from Rs. 186 to Rs. 198, was sold in January 1962 from between Rs. 191 to Rs. 220. There has been keen demand for all growths and grades and the trend in prices has been maintained at the subsequent open auctions, indeed the price of plantation A has now reached Rs. 264. The total coffee crop for 1961-62 was originally estimated at about 57,000 tonnes. Later estimates caused these to be reduced to about 49,000 tonnes and there are now indications that the eventual crop will be very much lower—possibly somewhere in the region of 43,000 tonnes. Thus, the original allocations between the export and internal markets may have to be revised, and the lesser quantities available may well result in the higher export prices being maintained and possibly improved. If so, 1961-62 payments might well be nearer Rs. 2.30 per point.

"With such a very much reduced crop, an increase in selling prices regardless of quality is inevitable and we are already seeing the measures taken to prevent any undue rise in prices in the local market. With effect from the Pool Sale today, the quantity of plantation coffee that may be purchased by any one dealer is being limited to 5 tonnes. This may have an effect the opposite of what was intended.

Road and Power

"Many of you are perhaps not aware that our Manamboli Estate is in rather an isolated position being almost 12 miles from Valparai. The last two miles of the road which leads off to our estate is of poor surface and not easily motorable. It is, therefore, with considerable interest that we learn that the Power House No. 1 of the Sholayar hydro-electric scheme is going to be constructed in the reserve forest situated on the western side of our estate at a distance of about three miles from our boundary. A first-class motorable road with concrete bridges is now being constructed by the Public Works Department starting from a point beside our Robusta fields and, although we have not yet been officially notified, there can be no other object in Government starting a road from that point to the power house than to eventually use our road as an outlet road. If this should indeed be the case, we can look forward to easier communications and perhaps to electricity being brought to our estate.

Labour

"Our relations with labour continue to be good, although there are signs that we may be running into a rather difficult period. A short strike took place in January 1962 on the issue of the 1960 labour bonus for which a settlement had already been signed by the concerned labour union and the Association of Planters of the State of Madras representing all employers. Under the terms of this agreement, a bonus of 5 per cent of the total cash earnings for coffee estates was duly paid to labour. Subsequently a splinter group of the unions served notice on us and other coffee estates within the Anamallais repudiating the agreement and demanding that we should pay a higher rate of bonus than that which was fixed under the agreement. Although conciliation proceedings before the Labour Commissioner were held, labour adopted go-slow tactics followed by a four-day strike. Unfortunately when the strike ceased, the Government took no further action in the matter on the grounds that the workers were now working peacefully. Negotiations for bonus to labour for 1961 have now been started and it is already apparent that coffee estates within the Anamallais are being singled out by the unions with demands for a bonus to labour higher than that payable in other districts.

Wage Award

"As will doubtless have been seen from newspapers, tea and rubber workers have been given an interim wage increase by the respective Wage Boards. So far no decisions have been reached as far as coffee workers are concerned. The employers feel that the state of the industry generally is hardly able to bear any substantial increase in wages. It, therefore, remains to be seen what the outcome will be and what effect the Wage Board's study of the industry's problems will have on costs. I can assure you, however, that the utmost possible economy will be exercised on all estate and other expenditure.

"Turning to the current year, you may recall that blossom estimates last year indicated a crop of 220 tonnes. We have held to this estimate throughout the year, but, at the end of April, the crop harvested was 207 tonnes with gleaning in progress, it seems likely that there may be a slight shortfall on the original estimate.

"I am glad to report, however, that prospects for next year are excellent. With unusually favourable rains this year, the blossom estimates have been put at 90 tonnes Arabica and 250 tonnes Robusta, making a total of 340 tonnes.

"While your Directors have deferred any further expansion in the planted acreage of the estates, they have considered it advisable to prepare for the day when further planting might be expedient. Accordingly we have recently advertised the sale of trees within an area of 80 acres which it is proposed to clear fell, always provided a satisfactory price can be obtained and the necessary Government permission is forthcoming.

"It only remains for me to express the thanks of the Board and shareholders to the Manager, Mr. E. J. Bosen, his staff and labour for their continued good work during the year. Our thanks are also due to Peirce, Leslie and Co., Ltd., for their services as Secretaries and Treasurers."

A collaboration arrangement between Messrs. Tata Industries (Private) Ltd., Bombay, and Messrs. James Finlay and Co., Calcutta, a company incorporated in the U.K., for establishing a tea packaging company to market "packet teas" in India and abroad has been approved by the Union Government, according to Mr. Nityanand Kanungo, Minister for Industry. The foreign Company has been allowed 49 per cent financial participation. The new company is expected to boost tea sales abroad with a view to earning more foreign exchange.

EXPORT OF OIL FROM COMMUNIST COUNTRIES

THREEFOLD INCREASE IN THREE YEARS

[About one-tenth of Western Europe's gross oil imports now comes from the Soviet bloc. But the proportion varies greatly from practically nothing for the U.K. and 3 per cent for France, to 10 per cent for West Germany, 13 per cent for Italy and 77 per cent for Finland. Western Europe accounts for about two-thirds of total communist oil exports to the free world, which rose by a further 7 million tons to over 30 million tons last year. Outside Europe the main buyers are Cuba, Japan and Egypt, in that order. Continued growth of this East-West trade must be expected, though probably not at the rapid rate witnessed in recent years.]

SHIPMENTS of oil from the Communist bloc —very largely the U.S.S.R.—to the free world continue to grow apace. This East-West trade, though giving rise to heart-searching in the oil industry of the West, flourishes because it is advantageous to those who engage in it. For the Russians, oil is a highly convenient means of paying for essential imports; and it accounts for about one-sixth of the value of all Russian exports to the free world. For industrialised nations of the West, the Soviet bloc offers an expanding market for manufactured goods of all kinds. Assuming that peace is preserved, this trade will doubtless continue to grow. The only question is what rate of advance can be expected.

Total deliveries of crude and products from the Soviet bloc to the rest of the world trebled in three years, from 7.7 million tons in 1957 to 23.5 million in 1960. Last year they rose by seven million tons or 29 per cent to reach an estimated total of 30.4 million metric tons. Rather more than 27½ million tons came from the Soviet Union and most of the remainder from Rumania. Of the total, about half now consists of crude oil and half of products. These exports have grown proportionately more rapidly than production: last year's sales to the free world were equivalent to 17 per cent of crude oil production in the Soviet zone (excluding China), which compares with a percentage of 14½ in the preceding year and of only 7 per cent four years earlier.

Of the extra 7 million tons of Communist oil absorbed by the Western world in 1961, about 6½ million tons was accounted for by five major buyers—Italy, W. Germany, Sweden, Cuba and Japan. An analysis of the trade (crude plus products) by country of destination is given in the table, which reveals that nearly two-thirds of the total was consigned to Western Europe.

Principal Buyers

The largest purchaser of all is Italy. And there are many in that country as well as elsewhere who are disturbed by the growth of this trade. Out of total oil imports into Italy of 35.4 million tons in 1961, about 6.5 million, or nearly one-fifth, came from behind the iron curtain; this was 1.7 million tons more than in 1960. The State-owned E.N.I. is the biggest single Italian buyer. It has an agreement with the Russians for the exchange of oil against steel pipes, synthetic rubber, etc., and imported 2.4 million tons of crude from Russia alone in 1961, out of its total imports of 6.5 million tons. What disturbs Italy's partners in the Common Market—not to mention oil marketers—is the regional dependence on Communist supplies which is being created by exports of products from Italian refineries treating Russian crude: for the country's refinery capacity is far more than sufficient to cover its home requirements. Italy has, however, rejected proposals, agreed to by its partners but now invalidated, for the voluntary limitation by E.E.C. members of oil imports from the Soviet bloc; and all the indications are that the trade will continue to grow.

The open conflict over East Germany notwithstanding, West German imports from the bloc rose last year by a million tons to 3.9 million tons. However, they remained a long way behind those of Italy, both in tonnage and as a percentage of total oil purchases abroad. Coming to a very small extent from East Germany, but mainly from the Black Sea, they accounted for one-tenth of total W. German oil imports in 1961. Increases in crude oil purchases from Russia must be expected when E.N.I.'s refinery in Bavaria starts working in 1963.

France—whose Government, like most others in Western Europe, only unwillingly includes oil in its bilateral trading agreements with U.S.S.R.—took 150,000 tons less from the Soviet bloc last year, in face of rapidly growing supplies from the Sahara. France took about a million tons, out of total oil imports of 37 million, and her agreement with the U.S.S.R. provides for unchanged quotas for this year—which may not, in practice, be fulfilled. Shipments from the Soviet zone to Belgium in 1961 rose by 90,000 tons to 380,000 tons, but those to the Netherlands remained at 50,000 tons, by far the smallest of any Common Market country. The E.E.C. countries together took 12.3 million tons, or almost 10 per cent of their oil imports from all sources—the proportion suggested by M. Marjolin as the safe upper limit. They thus accounted for two-fifths of the Communist bloc's total oil exports to the free world.

Third on the list of European buyers after Italy and Germany, and even more dependent than they on Communist sources, is Sweden. Her purchases jumped by half a million tons to 2.5 million last year, and thus represented almost a fifth of her total oil imports. However, the trade agreement provides for only a modest increase to 2.8-3.1 million tons by 1964. As regards other Scandinavian countries, Finland's purchases from the bloc were already covering 85 per cent of the country's needs and were virtually unchanged last year at just over 2.3 million tons. But they are expected to reach 2.6 o 2.9 million tons this year. Norway, which took 80,000 tons less last year than in 1960, envisages a slight increase. Denmark, which is estimated to have imported 250,000 tons from Russia in 1961, has undertaken to buy a total of 800,000 tons (mostly fuel oil) over the two-year period 1962-63, in return for higher Russian imports of dairy produce.

Russia's deliveries to Austria in exchange for reparations oil were halved to 250,000 tons last year, the agreement having expired on 30th June 1961. Commercial deliveries from Soviet bloc sources amounted to another 750,000 tons, so that the total was much the same as in 1960. With the advantage of propinquity, a gradual expansion of the trade is envisaged up to 1965. Greece took only a slightly larger quantity (1.09 million tons) than in 1960, but this represented 45 per cent of her total oil imports. Iceland is taking rather less Russian oil—which, however, covers most of her civilian needs. Yugoslavia has almost reached the goal of oil self-sufficiency and now imports only nominal quantities. Among the lesser European buyers of Soviet oil is the United Kingdom, though this is the world's second oil importer after the U.S.A. Low sulphur fuel oil is imported by U.K. cement manufacturers, while some lubricants stock is also purchased. Being keen to break into the general oil market, the Russians have hinted at their willingness to place substantial orders for U.K. manufactures. But the British Government has lately reiterated its unwillingness to permit additional imports of Soviet oil.

As will be seen from the table, every country in Western Europe except Eire and Spain is now a regular importer of Soviet oil in greater or lesser degree.

Outside Europe, the biggest buyer is Cuba. However, the quantity shipped last year fell 800,000 tons short of the 3,500,000 tons of crude and 950,000 tons of products specified in the trade agreement with the U.S.S.R., though unspecified quantities of Rumanian oil were also to be supplied. The big increase shown in the table does not mean that shipments are expanding rapidly: it reflects the fact that the trade agreement between the two countries was not signed until June 1960. (Shipments from Western sources did not cease until the autumn of that year). The combined capacity of the three refineries expropriated by the Cubans is about 4 million tons a year, and there are reports that, for technical reasons, they cannot work to capacity. There would therefore seem to be limited scope for further increases in imports of Soviet crude until the new 30-40,000 b/d refinery which the Russians have promised to provide is built. Shipments to Egypt, at 2.3 million tons of crude and products, are now likely to level off, for the current agreement provides for a similar quantity of crude and a rather smaller quantity of products.

But the same is certainly not true of Japan. Pressed to find markets for her manufactures, that country purchased some 3 million tons of oil from the Russians last year, or almost twice the quantity specified in the trade agreement. And the Russians, having only recently secured a foothold in this large and rapidly expanding market, are keen to take full advantage of it. This year's shipments may considerably exceed the 3.4 million tons of crude and black oils provided for in the agreement; and one may wonder what still higher quantities will figure in the new trade treaty for 1963 and later years. Idemitsu, the largest Japanese-owned refiner and marketer, is the biggest buyer and has already signed a six-year agreement with the Soviet Union.

Inadequate Transport

The Communists' oil trade with the rest of the world is generally conducted on a c.i.f. basis, the sellers being responsible for shipment. With a tanker fleet of no more than 1.4 million tons deadweight, the bloc now has nothing like enough tonnage of its own to provide the requisite transport. However, the Russians have been purchasing second-hand tankers, building vessels in their own yards, and placing orders for tankers in other countries—e.g., Italy and Japan. They are believed to have about a million d.w. tons on order at present. They are also deepening and improving their Black Sea and Baltic ports to accommodate the larger vessels now in prospect.

Meanwhile, the Russians remain largely dependent on free world tanker owners, their general practice being, not to take ships on charter, but to make contracts with owners for the delivery of specified quantities of oil. U.S. owners, who, by edict of their government, cannot take part in this trade—and, in any case, could not compete against other Western owners—tried last month to persuade their government to black-list shipping companies which carried Soviet oil. European owners, desperately seeking employment for their vessels, have, however, protested that while their countries are in friendly relations with the Soviet bloc they must be free to carry Russian oil without threat of reprisals. An earlier effort by Jersey Standard to discourage owners from carrying Russian oil failed completely.

That the trade is on a c.i.f. basis is one of the factors complicating any comparison of Russian and Western basic oil prices. Even if Russian f.o.b. prices were equivalent to Persian Gulf postings for comparable crudes, the Russians would have a competitive advantage in Western Europe of the order of 22s. a ton or, say, 44 cents a barrel at current A.F.R.A. freight rates, simply because their Black Sea ports are nearly 3,000 miles nearer the consumer. Another complication is the bilateral character of the transactions, particularly so far as the trade with non-European countries is concerned. While the actual buyer of Russian oil will be concerned with the price he has to pay, a truly

NEW PRODUCTS AND PROCESSES

Simple Viscosity Meter

THIS meter is manufactured by a Rotterdam instrument works and is designed for a variety of industrial applications. Its operating principle is as follows: an electrically driven gear pump continuously draws off a small but constant volume of fluid from the main flow and pumps it through a capillary tube. Since the flow is laminar, the differential pressure between the beginning and end of this capillary tube is almost directly proportional to the viscosity of the fluid. Depending on the purpose for which the instrument is to be used; it can be supplied for continuous and direct indication or with a pneumatic pressure differential transmitter for automatic controlling and registration purposes. In the former version, a pressure differential transmitter indicates the viscosity on a scale that can be calibrated in such units as seconds, Redwood No. 1. If the fluid is liquid fuel, use can be made at the same time of a temperature scale which indicates the degree of temperature correction to be applied to bring the oil to the desired viscosity. In the recording and/or automatic control models, a pressure differential transmitter is used which produces a pneumatic impulse. This signal operates a recorder or control unit, which records the viscosity or controls a correction factor such as temperature.

Economic Metal Pressing

Appreciable economies in the manufacture of a wide variety of steel components at present produced by hot-forging and machining methods can be achieved, it is claimed, by using a new cold-forming press developed by Fielding and Platt, of Gloucester, England. The press, available in two *basic size ranges* (150-500 and 700-1,000 tons), is of unusual appearance as the dies, pressing rams and all other components, except the pushbotton control desk and hydraulic power unit are contained inside a seamless steel tube less than 3 feet in diameter. It is designed primarily for use with one or more similar presses, each of which would perform a single stage in a series of shaping operations. No pre-heating of the metal is necessary. The operator merely places a cold steel billet in the machines and presses a botton. The ram then, within a few seconds, squeezes the metal into shape. The most powerful *model in the range*—the 1,000 ton version—is stated to cost about as much as a conventional press of half the power. Savings in metal can also be obtained, it is claimed.

Disinfectant Soap

Public health does not depend entirely on medicines but also on hygiene and, in particular, the disinfection of the body and the hands, especially when the danger of infection is high: manual work, unavoidable repeated contacts with persons who may be infected, periods spent in areas where endemic or epidemic diseases are rife, etc. Frequently ordinary soap is not sufficient to disinfect the hands, but people are sometimes rather loath to use disinfectant soaps partly because of their smell. An independent Swiss soap factory recently produced a disinfectant soap which has given extremely good results. Made with antiseptics of Swiss origin, "Sano-Septic" possesses a high bactericidal effect, as scientific tests have conclusively proved, and also acts as a deodorant; its detergent power is in no way decreased and it is not at all harsh. This new Swiss product, which has a pleasant and subtle odour, will be useful wherever disinfection has to be carried out on a large scale.

Car Without Gear or Clutch

A car without gearbox or clutch made its first public appearance recently at the British National Engineering Laboratory, East Kilbride, Scotland. The car, a Triumph Herald family saloon, instead of the normal transmission has a hydrostatic system designed and developed by the laboratory's engineers. The clutch pedal is replaced by a foot-control which, when rocked forward with the toe, varies the gear ratio from the lowest to overdrive, and when rocked backwards with the heel engages reverse. The lowest gear enables the car to be driven steadily up a steep incline or to be inched forward at very low speed. The car can be driven backwards and forwards by using one pedal only, leaving the hands free for steering and signalling. The engine can be used for braking in the usual way.

The only connection between the engine and the motors driving the rear wheels is a metal pipe containing hydraulic fluid. The engine can thus be put wherever the designer wishes. It drives an oil pump in which the stroke of the pistons can be varied to control the amount of oil delivered. The high-pressure oil is fed to two motors, one for each rear wheel. These motors also have a control for altering the stroke of the pistons in order to give overdrive ratios. Each motor drives its wheel through a reduction gear but there is no differential mechanism—this is provided by the oil circuit.

Storage Tank for Corrosive Liquids

A range of storage tanks is being produced by Turner and Brown, of Bolton, Lancs., England, for acids, alkalis and other corrosive liquids. They are sold under the trade mark, Turbro-Cyclone. The tanks are constructed from rigid p.v.c. sheet which is bonded and wrapped with resin-impregnated glass fibre. They are light in weight and the company claims that they will give a long maintenance-free working life. Tanks of additional strength and rigidity are also being offered in wire-reinforced p.v.c. the same glass fibre bonded technique being used. The tanks will be designed to specification up to a maximum size of 20 by 6 by 6 feet. A gauge fitted externally enables checks to be made on the contents.

DUNLOP RUBBER COMPANY LIMITED

FURTHER STEADY PROGRESS

CHAIRMAN, SIR G. EDWARD BEHARRELL'S SPEECH AT ANNUAL MEETING

THE Sixty-third Annual General Meeting of the Dunlop Rubber Company Limited was held on 21st May at London. Sir G. Edward Beharrell, the Chairman, who presided, in the course of his speech, said:

"The year 1961 was not without its difficulties with a much lower level of activity in the vehicle and some other industries, particularly in the United Kingdom, resulting in overcapacity. There were also problems in some overseas countries where we operate. In consequence, intensely competitive conditions prevailed throughout the year and, in these circumstances, we were fortunate to be able to increase our sales volume.

"We were also fortunate that, during the year, there was much greater stability, and a generally lower level of natural rubber prices than in 1960. We were able still further to increase the proportion of synthetic rubber used from 44 per cent to 47 per cent, and, together, these two factors gave us a considerable cost benefit. Inevitably much of the benefit was absorbed by lower selling prices and increased labour costs again amounted to a considerable figure. Nevertheless, we were able to improve our margin of profit from 5.1 per cent to 5.6 per cent and the whole organisation is exerting every effort to maintain this. It must, however, be recognised that, as tariffs fall, pressure from customers for lower prices as well as the pressure from labour for higher wages together constitute a major problem facing industry. As a Group we are doing everything possible to achieve economies in other directions, particularly by the modernisation of plant and equipment and by a continual review of our activities and organisational structure.

Exports Scale New Peak

"We did well overseas, with profits about 12 per cent higher than in 1960. These results were helped by record exports from the United Kingdom which were 13 per cent higher than in the previous year.

"It is interesting to note that, at this time last year, the Directors reported that for 1960 United Kingdom profits were 15 per cent higher than in the previous year and that overseas profits were 10 per cent down. For 1961 the position was reversed although for the United Kingdom the reduction was quite small. But the *significance of these movements* lies in the fact that, territorially, the Group's activities are well spread so that the effect of temporarily difficult trading conditions in some countries is cushioned, as it was in the United Kingdom last year.

Diversification

"We are endeavouring to achieve a similar position as regards our range of activities because we recognise that the proportion of our business in tyres—about 70 per cent—is high, and this business is becoming more and more competitive. I want stockholders to know that the Board is giving much attention to the expansion of our other interests and the development of new activities.

"The establishment of a rubber reclaiming plant, in association with the U.S. Rubber Reclaim Company, and the manufacture of synthetic gutta-percha for golf balls by a new Dunlop process, are examples of what we are doing. Yet another can be seen in the announcement, at the end of last month, that Dunlop disc brakes are to be adopted by the Studebaker Corporation in the United States for their new 'Avanti' model. The work involved in developing a product of this kind takes time to mature; but the news is particularly encouraging for us because it is the first instance of this type of disc brake, pioneered by Dunlop, being fitted on a production car by a manufacturer in that country.

Natural and Synthetic

"The emergence of new synthetic rubbers is a regular occurrence. Perhaps one of the more remarkable at present in the chemist's mortar is cis-polyisoprene. In its chemical composition it is the equivalent of natural rubber, but, in the way that theory and practice have of not coinciding, it is not the technical equivalent. There is a technological gap to be filled. However, we do know that, in certain important respects, especially in tensile strength, resistance to wear and stickness or 'tack,' it behaves in a similar, if somewhat inferior, manner to natural rubber. On the other hand, it probably has some advantages over natural rubber.

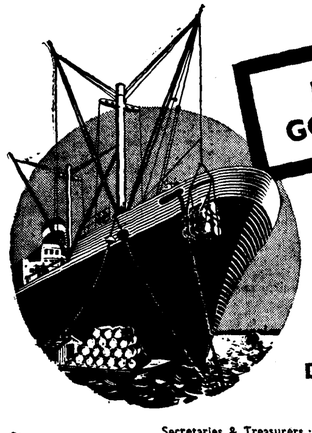
"Another polyisoprene, trans-polyisoprene, is synthetic gutta-percha. Gutta-percha, which is mainly used in golf ball covers, has been in short supply; indeed, it has tended to disappear from the market. In a pilot plant we have solved the manufacturing problems associated with the synthetic product, and we are now building a plant to make it.

"Your Company's attitude towards natural rubber is best summed up in the decision to establish another plantation in Nigeria, and to re-plant steadily in Malaya. At the same time we are planting oil palm in Malaya, in a number of small trial plots where the soil appears suitable before deciding whether to follow the example of the Malayan Government by having a tropical agricultural unit, not necessarily confined to rubber.

Outlook for Current Year

"At this stage it is too early to know what our results are likely to be for the year as a whole; I hope that we can maintain our 1961 figures although, with the influences to which I have referred earlier, this will not be easy; but I can say that all possible efforts are being made by the managements of our Divisions and Companies to improve the efficiency and competitive attack of all parts of the Group."

The report was adopted.



RED LEAD GOES ABROAD

Red Lead, manufactured by D. Waldie & Co. (Lead Oxides) Ltd. in India, is now being exported to Cambodia and the Far Eastern countries. This makes yet another item for India's export drive to earn valuable foreign exchange.

A proved anticorrosive primer Red Lead has been extensively used by engineers for over 100 years all over the world for protection of metal structures, bridges, ships and buildings from rust and corrosion damage.

BRITAIN AND COMMON MARKET

BUSINESSMEN CALL FOR STEPS TO SAFEGUARD COMMONWEALTH TRADE

THE timing of the twenty-first Congress of the Federation of Commonwealth and British Chambers of Commerce, held last week at London, could not have been more appropriate. For the Commonwealth trading system is facing currently one of the most crucial challenges in its history, with the U.K. poised for possible entry into the Common Market. Negotiations between the Six and Britain are now reaching the final phase, and, naturally, the actual bargaining in respect of the role of Commonwealth preferences in an expanded Common Market is gaining momentum at Brussels. The Congress, inaugurated by the Queen, was concerned primarily with the impact of U.K.'s entry into the Common Market on the Commonwealth trade. Significantly enough, the three-hundred Commonwealth businessmen who attended the conference appeared to be much apprehensive about the dislocation of established trade in the event of Britain joining the Six. In the final report, released by the Congress at the conclusion of discussions, which were held *in camera*, it has been stressed that "the Congress views with concern the possibility of irrevocable commitments and a rigid time-table with regard to any transitional arrangements that may result in those arrangements being inadequate in actual practice to safeguard vulnerable economies." The Congress has gone a step further and has warned that it will be even more concerned if the outcome of the negotiations were to lead to a split among the Commonwealth countries and "the impairment of the strength of the Commonwealth."

Continuous Consultations

The Congress has called upon the Governments concerned to make sufficient provision to offset "important changes in established trade that would take place" when Britain joins the Common Market. It has clearly stated that this must take the form of adequate compensation through increased trading opportunities in line with the doctrine of comparable outlets, "together with a natural growth factor for both existing and new products, particularly vital to the less-developed countries." In this context, the Congress has urged that there was a vital need for previous and continuous consultations among Britain and Commonwealth countries individually and collectively, where similar interests were involved. It has also reiterated its desire that expansion of world trade must have as its aim the increasing prosperity and raising of living standards of all peoples and "should not be directed to the local advantage of any region at the expense of others."

It is only natural that the Commonwealth businessmen should have expressed their concern over the possible eventual dismantling of Commonwealth preferences in the event of the U.K.'s economic integration with other Western European countries. For the British connection is the sole unifying factor of the Commonwealth system. "Overseas Commonwealth countries do accord each other certain special privileges, but once the keystone was removed, the whole structure would fall crumbling into ruins." At present, the Commonwealth is the world's largest preferential trading organisation, with most of the countries, including India, having a large share of their foreign trade with the U.K. The total Commonwealth exports, including those of the U.K., are now of the order of £9,000 million annually, representing over 25 per cent of total world exports (excluding trade between members of the Soviet bloc). Its aggregate imports, at over £10,000 million, work out at about 30 per cent of world imports.

India's foreign trade is largely oriented towards the Commonwealth, particularly the U.K. About 45 per cent (just less than half) of its exports are taken up by Commonwealth countries, including U.K.'s overseas territories. Besides, the share of the Commonwealth in its imports is about 30 per cent. Recent trends in India's trade with Commonwealth countries (including territories) are shown in the accompanying table.

To revert to the London conference of the Commonwealth businessmen. The spokesmen of the British Government, who addressed the Congress, affirmed the U.K.'s desire to do as best as it can to safeguard the Commonwealth interests. Mr. F. Erroll, President of the Board of Trade, assured the Congress of Britain's determination to safeguard Commonwealth trade, if the U.K. enters the Common Market. Defending the decision of the Government to negotiate with the Six, Mr. Erroll observed that the U.K.'s entry into the Common Market would "promote a more rapid expansion of the British economy and of European markets as a whole," from which the Commonwealth could benefit. Although he emphasised the British desire to secure necessary safeguards for Commonwealth interests, he was certain that there would be "some diversion and change as well as a general growth of trade." In this connection, he urged the exporters in the Commonwealth to plan on the basis that "in the long run their goods must stand or fall by their quality and competitiveness."

U.K.'s Approach

Meanwhile, a booklet called *Britain and European Communities*, published by the U.K. Government, seeks to elaborate the British approach towards the Common Market. It says that, if Britain joined the Common Market, its opportunities would increase and there would be a strong impulse to greater efficiency. It adds that, although the U.K. is prepared to accept treaty obligations and methods of integration, some of the decisions on matters of details may require "adaptation to meet the needs of a larger grouping and the special circumstances of new members."

On the question of Commonwealth trade in particular, the booklet points out that it is flexible and changing already. There has been a tendency in the other Commonwealth countries to broaden their sources of supply and their outlets for exports. There has also been an increase in British trade with the markets of Western Europe and the U.S. It is said that, if Britain joined the Common Market, this process might be accelerated. The present arrangements for Commonwealth trade, of which preferences are a part, will undergo some change, but changes are taking place in any event, and the importance of Commonwealth preference has diminished over a period of years. But trade between Britain and the rest of the Commonwealth must in any circumstance continue to be of great importance. Trade with the Commonwealth has been a major part of Britain's total trade. In 1961, no less than 36 per cent of Britain's exports and imports went to or came from the Commonwealth, slightly more than Britain's trade with Western Europe. According to the booklet, if British membership of the Common Market brought greater prosperity to Britain, Commonwealth exporters should find Britain to be a better market for them. Stressing that aid and investment in the Commonwealth would continue, the booklet adds that this would be possible only if Britain is economically strong. One of the reasons why the U.K. wants to join the Common Market, according to it, is that Britain would become stronger, if she responded to its challenge. It will then be easier for Britain, says the booklet, to increase the flow of aid and investment to the Commonwealth.

U.K.-E.E.C. RECIPROCAL TARIFF CUT

A substantial reduction in tariff barriers on a reciprocal basis is expected to result from a bilateral tariff agreement which the British Government has concluded with the European Economic Community, following a similar agreement signed between the latter and the U.S. in March last. Under the agreement, the Community has undertaken to reduce duties in their common tariff on products in which British trade in 1959 was worth about £36 million. In addition, British exports will benefit from reductions in the common tariff as a result of agreements between the Community and third countries. Besides, Britain has concluded with the Community an agreement for new tariff concessions, generally by one-fifth, on a wide range of products. British trade with the Community in these products was worth about £173 million in 1959. In the other direction, imports into Britain from the Community, valued in 1959 at £115 million, will benefit from a similar tariff cut by Britain. The new bilateral agreement will expand U.K.-E.E.C. trade. Since it forms part of the so-called "Dillon round" of the General Agreement on Tariffs and Trade (G.A.T.T.), which began in Geneva in September 1960, it will mean that concessions will also be made to other members of the G.A.T.T. under the operation of the "most-favoured-nation" clause.

Commonwealth trade with Britain, it is said, will not be adversely affected by this agreement. Most Commonwealth exports enter Britain free of duty. There is, however, a range of products in which Commonwealth countries enjoy a margin of preference over foreign countries. Where, as a result of the new agreement with the European Economic Community, these Commonwealth preferences are affected by concessions made by Britain to the Common Market countries—and the items concerned are mainly textiles containing man-made fibres—the British Government had decidedto reduce these preferential rates proportionately, so that Commonwealth countries will continue to enjoy the same relative amount of preference on these items as before.

India's exports (including re-exports) were lower in the month of April 1962 at Rs. 51.42 crores, as compared with Rs. 59.89 crores in the previous month and Rs. 52.40 crores (revised) in the corresponding month of the previous month. Imports too fell to Rs. 83.33 crores, from Rs. 98.33 crores and Rs. 92.11 crores, respectively. Thus the adverse balance of trade in April at Rs. 32.43 crores was smaller by about Rs. 6 crores and about Rs. 7 crores, respectively, as compared with March 1962 and April 1961. During the first four months ended April 1962, exports aggregated to Rs. 216 crores, which shows an increase of just Rs. 4 crores, as compared with January-April 1961. There was, however, a sharp fall in imports, that is, by Rs. 28 crores to Rs. 322 crores. Consequently, adverse balance of trade narrowed down during the period by Rs. 31 crores to Rs. 106 crores.

ORISSA CEMENT JUSTIFIES INVESTORS' CONFIDENCE

FURTHER IMPROVEMENT—RESERVES STRENGTHENED

FOR sometime past the ordinary shares of Orissa Cement Ltd. [Managing Agents: Dalmia Agencies (Private) Ltd., New Delhi] have been strongly fancied on the Bombay Stock Exchange. As compared with the low level of Rs. 15.64 early this year, they are now standing at Rs. 20.28 *cum-div.*, a cent per cent appreciation in the fully paid-up value of Rs. 10 per share since they were listed on the Exchange. Apart from the reappearance of tight supply position in cement and the expected reconsideration of the revised ex-works retention prices, announced by the Government in November last following the adoption of a part of the Tariff Commission's recommendations, the strength in these shares has been due also to growing confidence of investors in the Company's working, which is justified by the results for the year ended 31st December 1961. The highlights of working are (*a*) an increase of Rs. 100 lakhs to Rs. 534.30 lakhs in sales realisations; (*b*) a rise of Rs. 44.12 lakhs to Rs. 160.59 lakhs in gross profit; (*c*) an improvement in the profit-margin (ratio of gross profit to sales) from 26.8 per cent to 30 per cent; and (*d*) a plough-back of nearly 48 per cent of the distributable profit (Rs. 34.29 lakhs out of Rs. 71.66 lakhs), while maintaining the equity dividend at the previous year's level of 15 per cent, subject to tax.

Production of cement crossed the 1960 high level of 357,000 tonnes and reached a new record of 373,000 tonnes during the year and the clinker output was at a new peak of 335,000 tonnes. Cement despatches improved from 355,000 tonnes to 363,000 tonnes. Among refractories, the output (in thousand tonnes) of basic bricks rose from 9.41 to 18.05, of silica bricks from 19.18 to 24.39 and of fireclay bricks from 10.61 to 19.79; the despatches (in thousand tonnes) showing a corresponding improvement from 9.30 to 16.24, from 19.93 to 21.60 and from 11.32 to 17.07, respectively. As a result of higher production, the cost of raw materials and stores increased from Rs. 148.91 lakhs to Rs. 203.04 lakhs and so did other expenses from Rs. 98.95 lakhs to Rs. 116.58 lakhs. Staff expenses also rose further from Rs. 64.79 lakhs to Rs. 77.10 lakhs, reflecting presumably a four-year bonus agreement entered with the labour union during the year.

While the provision for depreciation has been reduced from Rs. 38.65 lakhs to Rs. 36.82 lakhs, that for taxation has been raised substantially again from Rs. 28.50 lakhs to Rs. 44 lakhs perhaps to cover the 1959 deficiency. Out of Rs. 34.29 lakhs transferred to reserves, Rs. 30 lakhs have gone to general reserve. After providing Rs. 33.75 lakhs for equity dividend and Rs. 2.34 lakhs for preference dividend, the surplus of Rs. 1.11 lakh that has been carried forward is adequate as compared with Rs. 0.52 lakh brought in.

The table below gives a synopsis of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds (including internal consumption	534.30	434.23	274.09	281.50

† Subject to deduction of tax.

The increase in the profit for the year under review is attributed by the Directors largely to the all-round improvement in the refractories division. The improvement in the despatches of cement and clinker was less than expected because of the continued difficulties in securing sufficient supply of watertight wagons. Thanks to the amendments (with effect from April this year) to the Income-tax Rules which did not permit the shareholders to enjoy full benefit of the tax exemptions available to the Company under Section 15C, the shareholders will enjoy in the 1961 dividend the benefit of the past undistributed profit of Rs. 22.63 lakhs, which has been determined as tax-exempt plus the amount that may be determined as 'tax-exempt out of the profit for the year under review. While the Cement Manufacturers Association has pleaded for reconsideration of the retention prices, the Company has made a separate representation in this regard in the light of the various increases in costs consequent on Governmental action, including the 15 per cent duty on electricity levied by the Government of Orissa with effect from 16th October 1961. It is stated by the Directors that, since the increases in costs have occurred after the completion of the Tariff Commission inquiry, their incidence was not included in the cost computations. However, a decision on the arbitration in the dispute with the Orissa Government regarding the electricity charges is expected before the end of this year. As the import licences for the requisite equipment for the expansion of the basic refractory section were issued at the end of November last, sufficient progress could not be made in regard to the expansion plans. It is hoped that the new basic refractory unit and the first stage of the chemically bonded bricks project would now be completed in the beginning of 1963.

The financial position of the Company is sound. Its paid-up capital of Rs. 265 lakhs, of which Rs. 225 lakhs are equity and the balance preference, is supplemented by reserves and surplus aggregating Rs. 115.27 lakhs. The Company has reduced its secured liability from Rs. 131.30 lakhs to Rs. 75.86 lakhs (bank borrowings from Rs. 46.80 lakhs to Rs. 5.18 lakhs, Industrial Finance Corporation loan from Rs. 83.25 lakhs to Rs. 69.50 lakhs and Central Government loan from Rs. 1.26 lakh to Rs. 1.20 lakh). Current liabilities and provisions amount to Rs. 137.08 lakhs. As against these, current assets, including book debts, aggregate Rs. 228.21 lakhs, and investments amount to Rs. 23.82 lakhs, as against Rs. 10.96 lakhs in the previous year. The gross block increased during the year from Rs. 563.66 lakhs to Rs. 592.02 lakhs, and has been written down to Rs. 331.57 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20.28 *cum-div.*, and offer, on an *ex-div.* basis, a net yield of 5.4 per cent per annum.

(Concluded from next column)

all current liabilities, provisions and borrowings put together.

Throughout the year under review, all the three furnaces of the Company were in operation, except during the month of January 1961 when the factory had to be closed down due to labour trouble. Further, one of the furnaces was shut down during October 1961 for repairs and relining.

With the completion of shipments of the allotted quota under the Indo-U.S. barter deal, experiments were conducted for the production of other alloys. The Directors report that the Company has been successful in producing good quality silico-manganese and ferro-silicon and that it is now in a position to divert a part of its capacity to production of other alloys as and when circumstances require.

As for the current year and thereafter, the Directors state that, apart from effecting deliveries under the barter deal and to Hindustan Steel, a private barter agreement for supply of ferro-manganese has also been signed. Further satisfactory progress towards the installation of electrolytic manganese and manganese sulphate plants has also been reported. Negotiations with a reputed foreign firm for technical assistance in the production of low carbon alloys are also proceeding well.

The Rs. 100 fully paid ordinary shares of the Company are at present quoted at Rs. 154.00 *cum-div.* On *ex-div.* basis, the price fetches a net yield of about 5.3 per cent per annum.

SALES OF FERRO-ALLOYS RECEDE

DIVIDEND, HOWEVER, STEPPED UP

THERE was a decline in the turnover of the Ferro-Alloys Corporation Ltd. (Managing Agents: Messrs. Saraf Mor and Company Private Ltd., Tumsar) during the year ended 31st December 1961, the actual aggregate sales realisation being Rs. 291.03 lakhs, as against Rs. 326.40 lakhs in 1960, or a fall of 11 per cent. This fall has been ascribed by the Directors to two factors: one, the delay in placing orders by the Hindustan Steel Limited on account of the differences over the basis of allocation of order for supply among the various producers of ferro-manganese and the price to be paid for such supplies, and two, the non-inclusion in the sales proceeds of the last consignment of ferro-manganese shipped under the barter deal due to the non-finalisation of accounts pertaining thereto till the closure of the books of accounts. The gross profit has also dropped in consonance with the turnover from Rs. 40.15 lakhs to Rs. 36.09 lakhs. Conditions, however, would have been much different had it not been for the sharp increase in certain items of expenditure, notably freight and repairs and renewals, and the fact that stocks with a higher valuation of earlier years had to be sold off during the year under review. It is interesting to note that, despite these adverse factors, there has been a slight improvement in the profit-margin (ratio of gross profit to sales) from 12.2 per cent to 12.4 per cent. Provision for Managing Agents' commission has been trebled from Rs. 0.62 lakh to Rs. 1.87 lakh, while that for depreciation has been stepped down a little by Rs. 65,000 to Rs. 8.47 lakhs. With the lossess of prior years fully recouped, the profit of the Company has now become liable for taxation and, accordingly, a provision for taxation has been made to the extent of Rs. 5.50 lakhs, as against nil a year ago. The net profit is, therefore, lower by Rs. 10.16 lakhs at Rs. 20.25 lakhs. After transferring from this Rs. 4.05 lakhs to various reserves and setting aside Rs. 1.56 lakh for payment of preferred dividends, the Directors have found enough funds to warrant a higher ordinary dividend on increased capital (Rs. 100 lakhs); the dividend proposed is 11 per cent (subject to deduction of tax) claiming Rs. 8.80 lakhs. The dividend distributed in 1960 was 8 per cent (taxable) on a capital of Rs. 59.87 lakhs. A small surplus of Rs. 29,968 is being carried forward, as against a loss of Rs. 5.54 lakhs brought in.

The operating results of the Company for the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	291.03	326.40	42.43	3.63

With the issue, during the year, of Rs. 40 lakhs worth of rights equity shares, the share capital of the Company as at 31st December 1961 has risen to Rs. 1 crore, of which Rs. 20 lakhs are in 6 per cent cumulative preference shares of Rs. 100 each and the balance in 80,000 ordinary shares of Rs. 100 each. This is supplemented by Rs. 19.14 lakhs standing to the credit of reserves and surplus. Against total capital funds of Rs. 119.14 lakhs, the net block amounts to Rs. 95.36 lakhs and has been arrived at by deducting Rs. 35.98 lakhs, as the accumulated depreciation, from a gross block worth Rs. 131.10 lakhs. Investments, current assets, and loans and advances aggregate Rs. 172.20 lakhs or Rs. 23.78 lakhs more than

(Continued in previous column)

PHILIPS INDIA'S SALES RISE MARKEDLY

EXPANSION SCHEMES WELL UNDER WAY

A SUBSTANTIAL progress in terms of both production and sales has been reported by the Philips India Ltd. (Chairman and Managing Director: Mr. W. A. C. H. Bosschaart, Calcutta) for the year ended 31st December 1961. Sales have shot up from Rs. 555.12 lakhs to Rs. 682.06 lakhs recording an increase of Rs. 126.94 lakhs, or 23 per cent. Excluding the excise duty on radio sets, which came into effect from March 1961, the increase works out to about 18 per cent. In view of higher sales and larger closing stocks of Rs. 293.80 lakhs, as against Rs. 195.56 lakhs in the previous year, it is clear that there must have been a considerable expansion of production. But the gross profit has risen only slightly from Rs. 91.52 lakhs to Rs. 93.63 lakhs, with the result that the profit-margin (ratio of gross profit to sales) which appreciated in the previous year from 14.8 per cent to 16.4 per cent has fallen to 13.7 per cent. This setback, we are told, would have been less pronounced but for the influence of excise duty. The lower profit-margin is attributed by the Directors mainly to the expenses incurred in order to accelerate the process of integration and commence manufacture in the light factory (acquired at Bombay in December 1960), as also to the heavy interest charges paid to cover large borrowings required to sustain increased activities. The Directors add that, because of the usual time-lag, the benefits of such expansion are not realised in the short run.

During the year, expenses soared; prime costs from Rs. 283.57 lakhs to Rs. 313.43 lakhs, staff expenses from Rs. 101.15 lakhs to Rs. 118.42 lakhs and other expenses from Rs. 82.77 lakhs to Rs. 117.55 lakhs. Overdraft interest, included in other expenses, was Rs. 7.75 lakhs, as against Rs. 2.42 lakhs in the previous year. The excise burden amounted to Rs. 41.39 lakhs. Provision for taxation has been raised from Rs. 33.50 lakhs to Rs. 36 lakhs, but that for depreciation at Rs. 19.44 lakhs is nearly the same as in the previous year. The net profit has, in fact, moved down a little, from Rs. 38.98 lakhs to Rs. 38.19 lakhs. A sum of Rs. 2 lakhs (*nil* in the preceding year) has been transferred to the reserve for stock risk, Rs. 3 lakhs (Rs. 2.90 lakhs) appropriated to development rebate reserve and Rs. 5.99 lakhs (Rs. 9.52 lakhs) set aside for miscellaneous provisions. The return to shareholders has been maintained at 12 per cent, taxable, per annum. The carry forward is Rs. 1.43 lakh, as against Rs. 64,000 brought in.

A fair idea of the Company's working in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

Low	26.00	23.50	16.25	13.69

* Subject to deduction of tax.

The Company's Bombay factory involved more extensive repairs to old plant and machinery than what appeared necessary at the time of its take-over. However, after several trial runs, effective production of lamps of standard quality commenced from the end of the year, and steps are being taken to increase progressively the rate of production commensurate with the factory's sanctioned capacity. Following the Government's approval, efforts are being made to start production also of allied products like burners for gas discharge lamps and glow-switches for fluorescent starters. The proposed expansion of the factory at Loni is being implemented, while there was a significant increase during the year in the production of existing items, such as loudspeakers, "multi-function" switches, potentiometers, ceramic and variable condensers, and trimmers of different types. The indigenous content of a radio set in terms of local and foreign currencies spent on materials was 70 per cent in 1961, recording an increase of 16 per cent over the preceding two years and of 20 per cent over 1958. With the acceleration of the process of integration and the availability of materials like valves, the indigenous content is expected to show an appreciable increase in future. The factory at Calcutta, in addition to fulfilling the manufacturing programme for radio sets, turned out during the year a larger number of fluorescent light fittings and various electrical accessories and made an important contribution to the year's turnover.

Production in collaboration with third parties running small-scale industries in various sectors, such as electronic measuring instruments, industrial D.C. units, public address equipment, amplifier and cinema projectors, showed a notable progress during the year. The object of the Company is to manufacture progressively a larger percentage of products locally as well as to increase substantially the production of finished goods to meet the ever-growing demands. It has concluded arrangements for foreign loans to cover imports of capital equipment needed for implementing the initial stages of the expansion schemes. While the indigenous production would save foreign exchange for the country, the Company is exploring the possibilities of exporting the products, the immediate prospects for which are somewhat limited. Thanks to expansion schemes, particularly in the Bombay factory, the number of Philips employees has risen from 2,137 to 2,469 during the year. The training of supervisory and managerial staff by fully utilising the facilities available in the country and abroad has continued to receive the attention of management.

The financial position of the Company is fairly good. Its paid-up capital of Rs. 220 lakhs is backed by reserves and surplus of Rs. 65.27 lakhs. Bank borrowings increased during the year from Rs. 101.02 lakhs to Rs. 186.19 lakhs, and other liabilities and provisions aggregated Rs. 216.22 lakhs. As against these, current assets, loans and advances total Rs. 519.38 lakhs. Investments of Rs. 2.65 lakhs comprise Rs. 56,000 in Government securities and Rs. 2.09 lakhs in partnership firms. The gross block increased during the year from Rs. 216.95 lakhs to Rs. 244.48 lakhs and has been written down to Rs. 159.70 lakhs. Inclusive of the capital expenditure in progress, it is shown in the balance-sheet at Rs. 165.65 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 37.50 *cum-div.* On *ex-div.* basis, they offer a net yield of 2.3 per cent per annum.

PODAR MILLS EARN MORE

Thanks to the modernisation programme initiated a few years ago and now nearing completion, the gross sales proceeds of the Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Private Ltd., Bombay) for the year ended 31st December 1961 have reached an all-time high of Rs. 228.36 lakhs, as compared with the previous year's level of Rs. 173.60 lakhs, notwithstanding the continuance of the scheme of voluntary price regulation enforced by the Indian Cotton Mills' Federation since January 1961. Consequent on this improvement in turnover and a high total output, as evidenced by the increased closing inventory of cloth, yarn and waste, the gross profit has risen to Rs. 30.80 lakhs from Rs. 24.95 lakhs a year ago. Unfortunately, by far the largest portion of the gross profit has been claimed by essential provisions, Rs. 2.44 lakhs (Rs. 1.80 lakh) for Managing Agents' commission, Rs. 6.73 lakhs (Rs. 6.68 lakhs) for depreciation, and as much as Rs. 13.50 lakhs (or more than twice that during the preceding year) for taxation. The result is that the net profit is slightly lower at Rs. 8.13 lakhs, as against Rs. 9.97 lakhs during 1960. Despite this fall in the net profit, the Directors have proposed to maintain the ordinary dividend at 12 per cent (including a bonus of 2 per cent), subject to deduction of tax, even after crediting a higher sum of Rs. 3.20 lakhs, as against Rs. 1.75 lakh to various reserves and setting aside Rs. 57,000, as previously, to meet the preferred dividend liability in respect of the year. The equity dividend claims Rs. 5.40 lakhs, leaving Rs. 1.36 lakh to be carried forward, as compared with Rs. 2.41 lakhs brought in.

With the implementation of the modernisation and renovation programme of the mills practically over, expenditure on account of the acquisition of new assets during the year amounted to only Rs. 5.50 lakhs and this has raised the gross block to Rs. 93.13 lakhs. On deducting from this Rs. 44.99 lakhs as the depreciation earned to date, the net block, as at 31st December 1961, works out to Rs. 48.14 lakhs. Out of the total investments of Rs. 41.59 lakhs, investments worth Rs. 39.94 lakhs are in shares of subsidiary companies alone, while quoted investments have nearly doubled in value from Rs. 13.62 lakhs to Rs. 27.96 lakhs. Current assets and loans and advances aggregate Rs. 105.03 lakhs which adequately cover current liabilities and provisions amounting to Rs. 48.07 lakhs plus secured and unsecured loans totalling Rs. 32.00 lakhs. The share capital of Rs. 65 lakhs, consisting of Rs. 10 lakhs in preference shares and the balance in equities, is backed by Rs. 49.69 lakhs in reserves and surplus. The financial position of the Company is, therefore, sound, inasmuch as the share capital is well supported by reserves, current liabilities are adequately covered by current assets, and the gross block has been written down to half its original cost.

The progress made by the Company during the past four years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds (gross)	2,28.36	1,73.60	1,78.25	1,56.50

* Subject to deduction of tax. † *cr.* ‡ *xr.*

The Rs. 100 fully paid ordinary share of the Company is listed on the Bombay Stock Exchange and is currently quoted at Rs. 150.00 *cum-div.* The net yield on an *ex-div.* basis works out to nearly 6 per cent per annum.

INDIAN RUBBER REGENERATING CO., LTD.

The Directors of the Indian Rubber Regenerating Company Ltd. (Chairman: Mr. K. M. Philip, Bombay) state, in their first annual report for the period 20th December 1960 to 31st March 1962, that the Company's factory would go into production in January next. Orders for the entire machinery required to be imported are placed with the suppliers in West Germany. A part of the machinery is scheduled to arrive by June and the balance by the middle of October this year, when the factory buildings would be ready. Orders for indigenous machinery have also been finalised. The layout of both foundations and erection of machinery has been completed, and the erection work is expected to be over by the end of December this year. The Company has arranged to purchase a plot of land admeasuring about 30,000 sq. yards at Kolset near Thana. The layout of the factory buildings is ready, orders for structural work have been placed and cement required for construction is secured. Power will be secured from the Koyna project.

It will be recalled that the Company was incorporated on 20th December 1960. It issued 35,000 equity shares of Rs. 100 each out of its authorised capital of Rs. 1 crore and offered 17,150 shares to the public and the issue was oversubscribed. It has been licensed to manufacture 2,400 tons of reclaim rubber a year on single-shift basis and raise production to 4,800 tons. As the immediate demand for reclaim rubber is more than 4,800 tons a year and all the raw materials are indigenously available, it proposes to work the factory on three shifts as early as possible. With indigenous machinery, it has started at Kurla a rubber compound mixing mill to cater to the requirements of small-scale rubber manufacturers. The trial production has been successful and a good number of orders have been secured from consumers in and around Bombay. During the period under report, it incurred expenditure of Rs. 1.21 lakh on construction, which is brought under expenditure during construction account and will be capitalised on completion of the erection work. It earned Rs. 33,824 by way of interest, sundry receipts and trading. After providing taxation and other expenses amounting to Rs. 36,522, a debit balance of Rs. 2,698 has been transferred to the balance-sheet.

HINDUSTAN ALUMINIUM CORPORATION

Just two years after the "earth-breaking" ceremony of the aluminium factory of The Hindustan Aluminium Corporation Ltd., at the Rihand dam site at Renukoot in Uttar Pradesh, the first batch of aluminium was produced on 23rd May 1962 from the imported alumina. The credit for this achievement goes to the joint untiring efforts of the Kaiser and Hindalco technicians and administrative staff, who in spite of heavy odds of weather, transportation problems, etc., worked day and night to achieve this. The alumina plant is expected to go into operation within the next three months. Aluminium ingots will start going into the market within the next few days, making this much needed metal available to the industrial and commercial needs of the country and saving precious foreign exchange.

ALL-INDIA GENERAL INSURANCE

PREMIUM INCOME RISES

CONSIDERING the keen competition in the business and the reduction in fire premium rate, the perceptible improvement in gross and net premium income earned by the All-India General Insurance Company Ltd. (Secretary: Mr. P. S. Parameswaran, Bombay) during the year ended 31st December 1961 is, indeed, very notable. The gross premium aggregated Rs. 30.21 lakhs, as against Rs. 25.71 lakhs in the previous year. Reflecting this rise, the net premium increased from Rs. 20.44 lakhs in 1960 to Rs. 22.03 lakhs in 1961. Equally notable is the fact that, in spite of the all-round increase in costs, the Company was able to keep its expenses under control and also to strengthen its reserves by more than a lakh of rupees. The increase in net premium was, of course, accounted for entirely by the miscellaneous department where the net premium rose from Rs. 7.17 lakhs to Rs. 9.27 lakhs. Net premium in the fire and marine department, on the other hand, declined slightly. The decrease in fire premium was due partly to the statutory cession of 20 per cent of its fire premium which the Company had to give to the two reinsurance companies in return for only 50 per cent reciprocity.

Claims experience in the fire department, especially in respect of foreign treaty business, was adverse. Total claims paid and outstanding amounted to Rs. 4.15 lakhs, as against Rs. 3.76 lakhs in the previous year. Commission and expenses aggregated Rs. 5.32 lakhs, as against Rs. 5.56 lakhs in 1960. After transferring Rs. 5.64 lakhs or 48 per cent of net premium to the reserve for unexpired risks and providing Rs. 23,486 as additional reserve, the accounts show a surplus of Rs. 2.17 lakhs. In the marine department, claims increased sharply from Rs. 88,000 to Rs. 1.91 lakh, due mainly to the fact that the Company received during the year from the Indian Insurance Companies' Association Pool marine insurance business covering the three public sector steel plants during the years 1957 to 1960, which proved to be disastrous. Thus, as against a premium income of Rs. 32,826 from this business, total claims paid and outstanding amounted to Rs. 1.19 lakh. This was naturally reflected in the accounts which, after meeting commission and expenses and maintaining reserves for unexpired risks at 100 per cent of premium income, shows a deficit of Rs. 96,741, as against Rs. 34,914 in the previous year.

In the miscellaneous department, net premium, as noted above, rose by Rs. 2.10 lakhs to Rs. 9.27 lakhs. The largest contributor to this account was the motor business which, as usual, proved to be unprofitable. The cost per claim continued to creep upwards. Claims paid and outstanding during the year amounted to Rs. 4.99 lakhs, as against Rs. 3.11 lakhs in 1960. Commission and expenses, too, were higher at Rs. 4.56 lakhs, as against Rs. 3.57 lakhs in the previous year. After earmarking Rs. 4.63 lakhs, or 50 per cent of premium, to the reserves for unexpired risk, there is a loss of Rs. 1.41 lakh which has been transferred to the profit and loss account. The following table summarises the salient features of the working of the company during the three years ended 31st December 1961:

(In lakhs of rupees)

	For the year ended 31st December		
	1961	1960	1959
Fire:			
Net premium	11.74	11.85	8.69
Claims paid and outstanding	4.15	3.76	2.70
Commission, expenses, etc.	5.32	5.56	4.85
Fire fund	5.87	5.69	4.00
Miscellaneous:			
Net premium	9.27	7.17	4.83
Claims paid and outstanding	4.99	3.11	2.36
Commission, expenses, etc.	4.56	3.57	2.77
Miscellaneous fund	4.63	3.44	2.22
Marine:			
Net premium	1.02	1.42	1.12
Claims paid and outstanding	1.91	0.88	0.55
Commission, expenses, etc.	0.48	0.56	0.50
Marine fund	1.02	1.95	1.01
Net profit	0.13	0.11	0.09
Dividend	Nil	Nil	Nil
Carry forward	0.57	0.44	0.21

After setting off the profit in the fire department against loss in marine and accident departments, there is a net underwriting loss of Rs. 20,600. This has been made good by income from interest and dividends, less tax thereon, and other miscellaneous receipts amounting to Rs. 53,615.18, leaving a net profit of Rs. 13,007. This amount and the sum of Rs. 43,813 brought forward from last year's account have been carried forward. The Company had, as on 31st December 1961, funds and reserves aggregating Rs. 25.08 lakhs.

Reviewing the main developments in general insurance during the year under review, Mr. Ramnath A. Podar, the Chairman, stated, in the course of his speech at the annual meeting of the Company held at Bombay on Friday, 25th May, that, under pressure from the Government, the Tariff Committee had agreed to a further reduction of 15 per cent in the fire premium rates which would come into effect from 1st July next. This move, he said, was intended to eliminate the malpractices which continued to plague the industry. In this connection, he observed: "In view of the fact that the two previous reductions in the rates have had no effect on the market condition, it is doubtful whether the suggested remedy will prove effective. So far as your Company is concerned, we welcome any move which will put an end to the evil of rebating and thus put the industry on a sound footing."

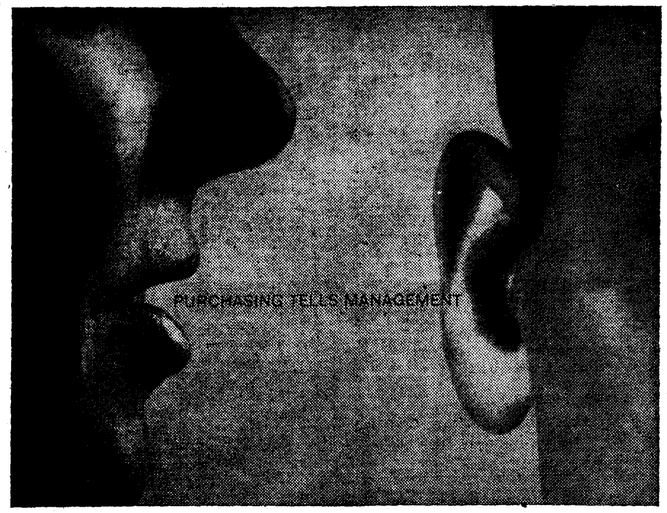
"INDIA'S CORPORATE GIANTS IN WORLD FOCUS"

Apropos the article on the above subject by Dr. Raj K. Nigam, appearing in our issues dated 28th April (*vide* pages 762-63) and 5th May (*vide* pages 816-17), Mr. P. K. Talapatra of Calcutta, writes, in a communication to us, as follows:

"I have read the article with great interest. In the first instance, may I present my compliments to the writer for having brought this important subject to the fore and having pointed out the extremely small stature of our industry as compared to other developed nations?

"At the same time, however, I do feel that the article has several inaccuracies. The author has, in the column of automobile manufacture, taken Premier Automobiles from amongst Indian companies, presumably on the assumption that it is the biggest automobile manufacturer in the country. I find from the balance-sheet of Hindustan Motors dated 8th June 1961 that the sales for the year 1960-61 amounted to Rs. 30,45,39,886, i.e., almost 50 per cent higher than the production of Premier Automobiles. I also find that the tabulations have been prepared rather shabbily and many differences exist between the various tabulations. For instance, in Table II, rupee sales of Volkswagenwerk have been shown as Rs. 524 crores and, in Table III, the same figure has been shown as Rs. 522 crores only. A similar difference also exists in the figure of total assets of this Company in the two tables. There are few more such parallel cases which you will note after proper scrutiny of the tables.

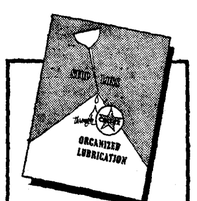
"Lastly, I would comment on the second paragraph of this article. I must frankly express my complete disagreement with the contents of this paragraph. While I am not quite sure what the writer means in feeling a greater sense of satisfaction from the fact that Hindustan Steel is a public sector undertaking, I must point out that it is patently wrong to compare the size of such an undertaking with the other corporations listed. The author must realise that most of the foreign corporations listed by him are joint-stock companies, non-Government-owned, which started with comparatively modest beginnings and by dint of sound working and management have carved out a place for themselves which they now hold in world commerce. On the other hand, Hindusthan Steel is a monolithic body created in one stroke with the taxpayers' money and, therefore, there is no special credit in its achieving this size. I may add that, although its assets are so large, its production is absolutely negligible in proportion and for such purposes of comparison, production forms a truer guide for the ranking of a corporation. Mere creation of assets in this manner is no criterion of efficiency unless matched with productivity. I will not go into the sordid details of cost, efficiency and management of this public sector concern, because that would form another story by itself."



The CALTEX "Stop-loss" Programme helps cut plant-wide maintenance costs as much as 15%

"Stop-loss" organises lubrication throughout the plant—from purchasing on through aetual application. By specifying multi-purpose lubricants and by eliminating duplication, a "Stop-loss" Programme can reduce the number of lubricants needed by as much as 50%. By streamlining purchasing procedures the programme can cut the number of purchase orders.

Best of all—by assuring proper lubrication to every piece of equipment in the plant, a "Stop-loss" Programme helps extend equipment life. Result—plant-wide maintenance savings upto 15%. *Ask your Caltex Sales Engineer for information*



Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

N.B.—Adjustments represent the balance brought forward from the previous year.

† This includes a sum of Rs. 12,07,888 transferred from general reserve.

* Ordinary dividend is on a paid-up capital of *Rs. 60,00,000.*

Extracts from the Directors' report: During the year under review, the trading conditions remained favourable. The manufacturing cost increased further because of higher prices of cotton and rise in the prices of store materials, spare parts, chemicals, dyes and also miscellaneous items. The dearness allowance payable to the employees also remained on a high level.

A start was made in May 1961 in the operation of the additional plant of 15,200 spindles and 192 looms, and it has started running fully from February 1962.

During the year, a sum of Rs. 89,81,422 has been spent on extension of buildings and installation of machinery and equipment on mills' reorganisation and renovation programme.

The installed capacity of the mills is 77,648 ring spindles, 5,388 doubling spindles, 1,216 ordinary looms and 192 automatic looms, with complete dyeing, bleaching and printing plants.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,26,25,000	Gross block	4,39,00,397
Reserves and surplus	2,89,19,331	—Depreciation	1,81,08,201
Other liabilities	1,62,01,946		
		Net block	2,57,92,786
		Current assets	2,45,41,116
		Investments	68,19,599
		Cash	5,93,326
	Rs. 5,77,46,777		Rs. 5,77,46,777

* Paid-up capital consists of:—(*a*) 5,250 five per cent. cumulative preference shares of Rs. 100 each; (*b*) 10,500—4½ per cent. cumulative preference shares of Rs. 100 each; (*c*) 4½ per cent. 'B' class redeemable cumulative preference shares of Rs. 100 each; (*d*) 4½ per cent. 'C' class redeemable cumulative preference shares of Rs. 100 each and (*e*) 1,00,000 ordinary shares of Rs. 100 each of the above 26,250 preference shares and 94,750 ordinary shares have been allotted as fully paid Bonus shares by way of capitalisation of resources.

Binani Metal Works Ltd.

(*Managing Director:* Mr. G. D. Binani, Calcutta.)

21*st Annual General Meeting*—18th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales (gross)	1,76,72	1,41,90
Income from conversion, fabrication, machinery and repairing	2,30	3,19
Closing stocks	26,85	42,18
Gross profit	13,92	3,93
Transfer to depreciation	1,26	96
,, ,, provision for taxation	6,00	1,30
Net profit	6,66	1,67
Adjustments*	10	49

Total available balance	6,46	2,16
To adjustments relating to previous years	3	4
Transfer to development rebate reserve	90	19
,, ,, general reserve	1,00	25
Proposed dividend (taxable) equity	4,00† (10%)	1,62‡ (25%)
Carry forward	58	5

* Adjustments represent the balance brought forward from the previous year and other credit items.

† On a paid-up capital of Rs. 40 lakhs.

‡ Dividend on a paid-up capital of Rs. 6.50 lakhs.

Extracts from the Directors' report: The result of the year under review has been one of further progress in terms of increased production and sales. Total sales amounted to Rs. 1.76 crores as against Rs. 1.41 crore last year.

Improved production methods have been adopted and as envisaged in the previous year's report, the streamlining of the operations has reflected in better yields.

Of the new schemes, sanctioned by the Government, the installation of plant and equipment for the tool room project is proceeding satisfactorily. The German expert, whose appointment was approved by the Government, has joined the company and the strength of the local technical staff has also been augmented. With the existing machines supplemented by local purchases, production of simple Dies and Moulds is expected to commence shortly. Efforts are being made to put in more machines so that the project can get into full swing before end of the year 1962.

The Government's approval of the proposed collaboration arrangement for the Milling machine project has been received. Request for the grant of foreign exchange for the import of capital goods required for implementing the project is under Government consideration.

In view of large indigenous capacity available for the production of *Cast Iron Castings*, the Directors feel that it will not be in the best interests of the Company to pursue this line of production for the time being.

The preliminary expenses of the Public Issue have amounted to Rs. 1,57,048.15 as against the estimate of Rs. 1,10,000.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	27,62,178
Reserves and surplus	5,53,500	—Depreciation	12,27,063
Other liabilities	26,64,304		
		Net block	15,35,115
		Current assets	55,06,520
		Investments	5,836
		Cash	65,635
		Miscellaneous expenditure and losses	1,04,698
	Rs. 72,17,804		Rs. 72,17,804

* Paid-up capital consists of 4,00,000 equity shares of Rs. 10 each, fully paid up in cash. The subscribed capital was increased during the year from Rs. 6,50,000 to Rs. 40,00,000 by the issue of 3,35,000 shares of Rs. 10 each.

Ceat Tyres of India Ltd.

(*Chairman:* Mr. A. D. Shroff, Bombay. Managing Director and General Manager: Mr. F. Acutis, Bombay.)

4*th Annual General Meeting*—11th June 1962.

Transfer to development reserve	22,87	Nil
Dividend	Nil	Nil
Carry forward credit (+) or debit (—)	+1,66	— 8,04

* Represents loss for 1960 after making provision for depreciation.

Extracts from the Directors' report: *Operations*: Except for few items of machinery required to attain the licensed capacity of 1,000 Metric Tons per month, the licences for plant and capital equipment have been granted, and the Directors have pleasure in reporting satisfactory progress in the expansion programme. Provided raw material licences are received as per schedule, the Directors anticipate to reach the target by early 1963. The increase in the rates of customs tariff, cess duty on indigenous natural rubber and the enhanced price of rayon cord have resulted in higher costs of production.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,75,00,000	Gross block	1,65,65,017

Adjustments	4	9*
Appropriations:		
Total available balance	1,54	1,17
Transfer to general reserve	30	20
To filing fee on increase in share capital	3	Nil
Proposed dividend (taxable) equity	1,20 (12%)	93 (10%)
Carry forward	1	4

N.B.—Adjustments include the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 7,000 being reserve for doubtful debts written back.

Extracts from the Directors' report: The net sales of Rs. 39,79,322 are higher by Rs. 7,09,328 than the previous year. It is gratifying to find that the sales are showing an increasingly upward trend. The new areas that were opened up in the last year are showing some progress and the sales are accordingly expected to be considerably higher in the year 1962.

The sales of *Bismuth Salts* have shown an increase over the previous year and *Niacin* and *Niacinamide* have also started moving and about 75 per cent of the production of the installed capacity is expected to be reached during the year 1962.

Collaboration arrangements for the manufacture of specialised products of the Lakeside Laboratories, Inc., Milwaukee 1, Wisconsin, U.S.A. and the Endo Drug Corporation, New York, U.S.A. have been finalised and the products have since been put on the market.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,99,937	Gross block	15,65,822

‡ Preference dividend is calculated at 6.129 per cent.

Extracts from the Directors' report: Rubber: The crop harvested during the year was 6,26,992 kgs. (5,50,862 kgs. for 1960) as against an estimate of 5,30,703 kgs., or an increase over estimate of 96,289 kgs. and 76,130 kgs. more than the crop harvested during 1960. 1961 has established a fresh record for rubber crop in spite of the abnormal South-West Monsoon resulting in a heavy toll of tapping days. The main reason for the improved crop return is the intensification of the tapping system, more particularly in those areas scheduled for rehabilitation in the years ahead. The average sale price obtained per kgm. was 316.61 nP against 330.62 obtained in 1960. As in past years, a portion of the rubber crop was sold with advantage on the estate as liquid latex.

It is estimated that a crop of 7,25,000 kgs. rubber will be collected during 1962 at an estimated estate expenditure of 162.47 nP per kgm.

Tea: The crop harvested was 5,78,898 kgs. (5,68,260 kgs. for 1960) which is 26,647 kgs. below estimate and 10,638 kgs. over the crop for the year 1960. This is most satisfactory when taking into account the adverse weather conditions experience during the year under review. The average sale price per kgm. was 438.40 nP (436.39 for 1960).

In 1962 it is estimated that the tea crop will be 5,86,000 kgs. to be secured at an estimated estate expenditure of 310.15 nP per kgm.

Development: Since the inception of the Company the total acreage planted with High Yielding Rubber has increased from 946.88 acres as at the end of 1960 to 1,231.29 acres as at the end of 1961. The position as at the end of 1962 is assessed at 1,499.55 acres.

The year records the heaviest South-West Monsoon rains from mid-May to mid-August since the 1924 floods. In consequence the incidence of Phytopthora disease in rubber was as severe as has been experienced throughout the history of South Indian rubber. A development trial of protecting rubber by aerial spraying with oil-based formulations was conducted during the year when 1,112 acres of the Company's high yielding rubber was aerial sprayed by both a helicopter and a fixed wing aircraft. In spite of the severity of Phytopthora, leaf retention was entirely encouraging. In consequence in the 1962 season it is proposed to aerial spray 2,525 acres in the control of Phytopthora.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	57,00,000	Gross block	94,29,715
Reserves and surplus	15,19,661	—Depreciation	23,78,761
Other liabilities	15,39,445		
		Net block	70,55,954
		Current assets	9,36,739
		Investments	4,00,000
		Cash	3,66,413
	Rs. 87,59,106		Rs. 87,59,106

* Paid-up capital consists of 1,60,000 six per cent. tax-free cumulative preference shares of Rs. 10 each fully paid up and 4,10,000 ordinary shares of Rs. 10 each fully paid up. Of this 10,000 ordinary shares are allotted as fully paid pursuant to a contract without payments being received in cash.

Notices

NEW INDIA INVESTMENT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, on Friday the 29th June, 1962, at 4.30 p.m. to transact the following business:—

(1) To receive and adopt the Directors' report and audited Profit and Loss Accounts and Balance Sheet for the year ended 31st December 1961.

(2) To declare dividends as recommended by the Directors.

(3) (*a*) To appoint a Director in place of Mr. D. C. B. Pilkington, as an alternate Director to Sir Walter Michelmore, who retires by rotation and being eligible offers himself for re-election.

(*b*) To appoint a Director in place of Sir Badridas Goenka, who has attained the age of 78 years and who retires by rotation and is an associate of Messrs. Ramdutt Ramkissendass, Secretaries and Treasurers of the Company, his appointment needs a special resolution under Section 261 read with Section 379 of Companies Act, 1956 and for which special notice has been received from a shareholder also declaring that age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Sir Badridas Goenka.

In this connection to consider and if thought fit to pass the following special resolution of which special notice as required under Section 190 and Section 261 read with Section 379 of the Companies Act, 1956, as well as under Section 280 (2) of the said Act has been received from a shareholder intimating his intention to propose the name of Sir Badridas Goenka by special resolution to be re-elected as a Director of the Company. The said notice also contains explanatory statement required under Section 173 of the said Act.

(4) To appoint Auditors and fix their remuneration.

(5) To transact any other ordinary business.

The share transfer register of the Company will be closed from 22nd to 29th June, 1962, both days inclusive.

By Order of the Board,

(Sd.) RAMDUTT RAMKISSENDASS,

Secretaries & Treasurers.

CALCUTTA, 18*th May*, 1962.

Notes: (a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The dividends will be paid on or after 15th July 1962 to those shareholders whose names appear on Company's books on 29th June 1962 or to their mandatees. No application for warrants will be necessary.

Explanatory Statement Under Section 173

In the special notice given to the Company of the resolution under item 3(b) of the above it has been stated that Sir Badridas Goenka has been associated since the inception of the Company and has most intimate knowledge of the Company affairs, and it is very desirable that the Company should continue to avail of his valuable advices and experienced guidance as a member of the Board.

4. To appoint a Director in place of Shri Piarelal Sheoparshad Seksaria who retires from office by rotation, and being eligible, offers himself for re-appointment.
5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions:

As Ordinary Resolutions:

6. "RESOLVED that the Company gives its approval to the extension of the term of the office of Messrs. Madhya Bharat Textile Agents, Indore, as the sole selling agents of the Company for the sale of piece goods and yarn manufactured by the Company under the sole selling agency agreement dated 25th June, 1955 made between the Company and the partners of the said Messrs. Madhya Bharat Textile Agents, Indore, upto 31st December, 1961 on the same terms and conditions contained in the said sole selling agency agreement dated 25th June, 1955.

"FURTHER RESOLVED that the Company gives its approval to the extension of the term of office of Messrs. Madhya Bharat Textile Agents, Indore, as the sole selling agents of the Company under the sole selling agency agreement dated 25th June, 1955 made between the Company and the partners of the said Messrs. Madhya Bharat Textile Agents, Indore, for a further period of three years from 1st January, 1962 to 31st December, 1964 on the terms and conditions contained in the supplemental agreement dated the 1st day of January, 1962."

7. "RESOLVED that the Company gives its approval to the appointment of Messrs. Satyanarayan Kabra & Co., Bombay, as the guarantee brokers of the Company for the sale of yarn manufactured by the Company under the agreement dated 14th February, 1962 made between the Company and the partners of the said firm of Messrs. Satyanarayan Kabra & Co., Bombay.

As Special Resolutions:

8. "RESOLVED that the Company hereby accords its consent under Section 314 of the Companies Act, 1956, and other applicable sections, if any, of the said Act to Shri Sajjan Singh Mehta, who is a relative of Shri Chandansinha Sagatmal Bharaktiya, a Director of the Company, holding and continuing to hold office of profit under the Company as an employee on a basic salary of Rs. 710 per month in the scale of Rs. 500-50-750, together with conveyance allowance of Rs. 75 per month and usual allowances and the benefits, amenities and facilities applicable to other employees occupying similar posts with authority to the Board of Directors to sanction at their discretion and in due course promotion to the next higher grade of Rs. 750-80-1,150 and to sanction double or higher increments or to withhold such increments within such higher grade as they may deem fit and proper."

9. "RESOLVED that the Articles of Association of the Company be altered in the manner following:—

(a) In Article 2 substitute the following for the definition of "Branch Office":—

"Branch Office" means any establishment described as a branch by the Company and any establishment carrying on either the same or substantially the same activity as that carried on by the Head Office of the Company or any establishment engaged in production, processing or manufacture, but does not include any establishment specified in any order made by the Central Government under Section 8 of the Act."

(b) For Article 12 substitute the following Article:—

"12. Whenever the capital, by reason of the issue of preference shares or otherwise, is divided into different classes of shares, all or any of the rights and privileges attached to each class may subject to the provisions of Sections 106 and 107 of the Act be varied, modified or dealt with, with the consent in writing of the holders of not less than three-fourths of the issued shares of that class or with the sanction of a Special Resolution at a separate meeting of the holders of the issued shares of that class and all the provisions contained in these Articles, as to General Meetings (including the provisions relating to quorum at such meetings) shall *mutatis mutandis* apply to every such meeting."

(c) Delete sub-clause (3) of Article 85.

(d) In sub-clause (k) of sub-clause (1) of Article 130 add the words "involving moral turpitude" after the word "offence."

(e) After sub-clause (4) of Article 131 add the following sub-clause as (4A):—

"(4A) Nothing in sub-clauses (2), (3) and (4) shall apply to any contract or arrangement entered into or to be entered into between the Company and any other company where any one of the Directors of the Company or two or more of them together holds or hold not more than 2 per cent of the paid-up share capital in the other company.

(f) In sub-clause (ii) of Proviso to sub-clause (5) of Article 131 omit ';' at the end and add the words "or on his being a member holding not more than 2 per cent of the paid-up capital of the Company"; at the end after the words "by the Company."

(g) For Article 144 substitute the following Article:—

"144 (1) Subject to the provisions of the Act and these Articles any person who is not a retiring Director shall be eligible for appointment to the office of Director at any General Meeting if he or some member intending to propose him has at least fourteen clear days before the meeting left at the office of the Company a notice in writing under his hand signifying his candidature for the office of Director or the intention of such member to propose him as a candidate for that office as the case may be.

(2) Every person (other than a person who has left at the office of the Company a notice under Section 257 signifying his candidature for the office of a Director) proposed as a candidate for the office of a Director shall sign and file with the Company, his consent in writing to act as a Director, if appointed.

(3) A person other than a Director re-appointed after retirement by rotation shall not act as a Director of the Company unless he has within 30 days of his appointment signed and filed with the Registrar his consent in writing to act as such Director.

(4) Whenever notice referred to in sub-clause (1) of this Article is received, the Company shall inform its members of the candidature of the person for the office of Director or the intention of a member to propose such person as a candidate for that office either by serving individual notices on the members not less than seven days before the meeting or by advertisement in the manner provided by sub-section 1 (A) of Section 257 of the Act."

(h) Delete Article 134.

(i) For Article 185 substitute the following Article:—

"185. (a) Subject to the provisions of Sections 78, 80 and 205 of the Act any General Meeting may resolve that any amounts standing to the credit of the Share Premium Account or the Capital Redemption Account or any monies, investments or other assets forming part of the undivided profits standing to the credit of the General Reserve, Reserve or any Reserve Fund or other fund of the Company or in the hands of the Company and available for dividends be capitalised:

(i) by the issue and distribution as fully paid bonus shares, or

(ii) by crediting shares of the Company which may have been issued to and are not fully paid up with the whole or any part of the sum remaining unpaid thereon.

Provided that any amounts standing to the credit of the Share Premium Account or the Capital Redemption Reserve Account shall be applied only in paying up unissued shares of the Company to be issued to members as fully paid bonus shares.

(b) Such issue and distribution under (a) (i) above and such payment to the credit of unpaid share capital under (a) (ii) above shall be made to, among and in favour of members or any class of them or any of them entitled thereto in accordance with their respective rights and interests and in proportion to the amount of capital paid-up on the shares held by them respectively in respect of which such distribution under (a) (i) or payment under (a) (ii) shall be made on the footing that such members become entitled thereto as capital.

(c) The Directors shall give effect to any such resolution and apply such portion of the profits, General Reserve, Reserve or Reserve Fund or any other Fund or account as aforesaid as may be required for the purpose of making payment in full for the shares so distributed under (a) (i) above or, (as the case may be) for the purpose of paying, in whole or in part, the amount remaining unpaid on the shares which may have been issued and are not fully paid-up under (a) (ii) above;

Provided that no such distribution or payment shall be made unless recommended by the Directors and if so recommended such distribution and payment shall be accepted by such members as aforesaid in full satisfaction of their interest in the capitalised sum.

(d) For the purpose of giving effect to any resolution under the foregoing Articles, the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates and may fix the value for distribution of any specific assets and may determine that cash payments shall be made to any members upon the footing of the value so fixed or that fractions of less value than Rupee 1 may be disregarded in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend or capitalised fund as may seem expedient to the Directors. Where deemed requisite a proper contract shall be delivered to the Registrar for registration in accordance with Section 75 of the Act and the Directors may appoint any person to sign such contract on behalf of the persons entitled to the dividend or capitalised fund and such appointment shall be effective."

(j) "The printing errors appearing in the Articles mentioned hereunder be corrected as specified against such articles:—

ENGINEERING

(Concluded from page 994)

valid comparison from a country's point of view has also to take into account what the Russians pay for their countervailing imports.

Nevertheless, the prices of Western oil companies have been undercut by the Russians in certain markets, though Soviet leaders have been at pains to convince the Arabs, as they tried to convince Dr. Perez Alfonzo when he visited Moscow last year, that they have no interest in forcing down the level of oil prices. However, price may sometimes be a secondary consideration, outweighed by the offer of a barter deal for surplus products, or the possibility of making payment in local currency.

Be that as it may, Soviet export prices for products are likely to be generally higher this year. There is evidence that certain shortfalls in the supply of products have delayed deliveries (e.g. to Greece) and have led the export organisation to quote higher prices to buyers in Germany, the Benelux countries and perhaps Sweden. Another straw in the wind is the decision of the Soviet authorities to make significant increases in crude oil prices within the U.S.S.R. at the end of this year, to take full account of prospecting costs. (This is part of a general revision of industrial prices, upwards and downwards.) The effect on the inland market is apparently to be minimised by adjustments in transport charges, but it looks as though the central export organisation will have to pay higher prices to the producing entity. If so, it will certainly seek to pass on the increase to overseas buyers.

Without knowing the size of any such increase it is not possible to say what its impact will be on the demand for Soviet oil. But we may bear in mind that the oil producing countries and companies in the free world too would welcome somewhat higher prices for their oil. So long as the U.S.S.R. remains a large importer of manufactured goods and raw commodities she will have to find markets for commensurate exports. The export potential of the bloc mainly depends: (a) on the progress of Russian crude oil production, which is due to rise by 10 per cent a year, from 166 million tons in 1961 to possibly 260 million tons in 1965 and to 390 million in 1970; (b) on the growth of home consumption—itself influenced by the ample availability of alternative fuels, particularly coal and natural gas; and (c) on new or improved transport facilities to the export terminals. It can therefore be estimated only with a wide margin of error.

As shown in the accompanying table, Soviet bloc exports to the free world have grown faster than crude oil production, the proportion of production absorbed by exports having risen in four years from seven to 17 per cent. And it is an avowed aim of the Russian Government to establish—or, to be historical, re-establish—itself as a major oil supplier to the world at large. If last year's export proportion of 17 per cent were maintained, this would imply total Russian oil exports of about 44 million tons in 1965. This is in line with the estimate arrived at, by more elaborate analysis, by Mr. Robert E. Ebel. Allowing a small additional tonnage for the rest of the bloc, this would represent an annual increase of little more than 10 per cent compound in Soviet bloc exports, which in the light of recent experience seems a modest projection.

Export potential is, however, only one aspect of the problem: there is also the question of markets. The Russians cannot hope for further important new outlets such as Cuba, and there is resistance in many quarters to imports of Soviet oil. The possible willing buyers of Russian oil in the larger markets of Western Europe have already been tapped. Their future offtake is likely to be limited by the growth of these buyers' own trade—and expansion will not be easy in view of the new entrants into European markets. Additional outlets may, however, still come when Governments feel constrained to impose the importation of Russian oil as a counterpart to larger Russian purchases. This is particularly applicable to raw commodity exporting countries with surplus crops that cannot otherwise be disposed of. But these countries are all relatively small consumers of oil, and there are usually obstacles to any big rise in imports from Communist sources. All in all, unless any major change occurs, one must expect a continued growth in Russian oil exports, though not perhaps the rapid advance witnessed in recent years.—*By Special Arrangement with Petroleum Press Service.*

CALL MONEY RATE RECEDES

(From Our Own Correspondent)

BOMBAY, *30th May*

Even before these lines appear in print—on *Friday, 1st June—the revised Inter-Bank Agreement* on rates of interest on term deposits will have come into force. The salient features of the *new Agreement* were given in this *column* last week and it will be seen therefrom that the short-term money market will henceforth have four rates of interest, one standard rate payable by big banks and three other rates payable by medium, small and smaller banks. The eight subsidiaries of the State Bank of India are proposed to be accorded the status of medium banks, paying ½ per cent more than the standard rate and an additional ½ per cent. if their deposits decline over a period, say, six months. The Chairman of the State Bank has suggested that the subsidiaries be permitted to use their discretionary right to pay more in regions where they face competition from other small banks as well as for deposit accounts on which they are already paying ½ per cent more than the standard rate under the old Agreement. This suggestion is expected to be considered by the Indian Banks Association tomorrow (that is, Thursday, 31st May).

The easy trend noted in the short-term money market last week gathered momentum during the week under review. Funds available were plentiful, while demand continued to be slack, signifying the end of the busy season. Consequently, the inter-bank call money rate receded further from 3¾ per cent to 3 per cent. The rates of interest for short-term deposits were unchanged. But the rate on Government of India's 91 days' Treasury Bills declined slightly from 2.590 per cent to 2.540 per cent per annum. The amount invited, the amount offered and the amount accepted were all same as in the previous weeks, that is, Rs. 2 crores. The sales of 91 days' Intermediate Treasury Bills fetched a smaller amount of Rs. 11 lakhs, as against Rs. 15 lakhs in the previous week and Rs. 16.75 lakhs in the week preceding it. Sales of both types of Bills are being continued.

There was a further drop of Rs. 5.08 crores in the foreign assets held by the Reserve Bank during the week ended 25th May 1962. The total of these assets now stand at Rs. 109.80 crores, a fall of nearly Rs. 48 crores since the beginning of this year.

Notes in circulation registered a fall of over Rs. 24.81 crores in the aforesaid week. Notes held in the Banking Department, however, were higher by Rs. 25.29 crores, so that the total notes issued show a rise of Rs. 48 lakhs. In view of easy money conditions, the banks' borrowings from the Reserve Bank against usance bills declined by Rs. 3.19 crores to Rs. 3.73 crores. Other loans and advances also showed a sizable fall of Rs. 7.40 crores. Deposits of banks with the Reserve Bank rose by Rs. 1.82 crore to stand at Rs. 89.12 crores. Deposits of Central Government receded by Rs. 3.74 crores, while those of other Governments improved by Rs. 3.54 crores.

The scheduled banks' statement for the week ended 18th May 1962 discloses a rise of Rs. 7.48 crores in deposits, whereas inter-bank borrowings declined by Rs. 57 lakhs. Bank credit fell by Rs. 3.66 lakhs. Of this decline, bills purchased and discounted alone accounted for Rs. 3.59 crores, the share of "advances" being Rs. 7.44 lakhs. Investments, too, receded by Rs. 4.33 crores.

The advances of the State Bank receded by Rs. 1.82 crore during the week ended 18th May 1962. Investments also receded by Rs. 4 crores. There was, however, a rise of Rs. 2.89 crores in cash, Rs. 2.60 crores in other assets, Rs. 99 lakhs in bills payable, Rs. 67 lakhs in deposits and Rs. 53 lakhs in other liabilities.

All Central Government loans in the Gilt-edged market continued unchanged at last week's levels. Among State loans, there were inquiries for 1972 U.P., Madhya Pradesh, Bihar, Orissa, Mysore and Rajasthan, the quotations showing a rise of 5 to 10 nP. In the group of loans maturing in 1970, U.P. rose by 20 nP, Madhya Pradesh, Bihar, Orissa and Rajasthan by 10 nP each, and Mysore by 5 nP. 1969 Rajasthan gathered 15 nP. Other State loans were all unchanged.

In the foreign exchange market, £ sterling ruled slightly easy, with the New York on London rate showing a small decline. Locally, the banks' selling rate for ready T.T. on New York rose by 50 nP to Rs. 476.50. Their buying rate also went up by 25 nP to Rs. 473.00. The banks' selling and buying rates for Canadian dollars receded by 25 nP each to Rs. 439.25 and Rs. 431.50 (per 100 dollars), respectively.

KIPS DULL

(From Our Own Correspondent)

MADRAS, *26th May*

Arrivals of E.I. tanned cowhides from the tanneries were larger than last week, and that of calf restricted. Demand for shipment was moderately good for good marks of better class tannages, but poor for F.A.Q. types. Inland offtake of low grade kips was slow and prices were easy. There were several inquiries for cowcalf in 2/2½ lbs. average, but stocks were small. There was no change in the buffhides and calf section.

There was dull trading in the tanned skins market. Export orders were patchy, and were mostly confined to lightweight goat skins from importers on the Continent, which hitherto, had been somewhat neglected. U.S. buyers were interested in heavyweight goat skins and sellers were reserved as stocks available were small. Inquiries for sheep skins were negligible; and small quantities of lower ends in lightweight sheep middle class tannages were sold at low prices for financial reasons.

PREMIA ON SPOT BULLION FALL

(From Our Own Correspondent)

BOMBAY, *30th May*

Trading in the bullion market this week was highlighted by a decline in the fancy premia (which were exceptionally high last week) commanded recently by both ready gold and silver over the current Jeth futures contract. The premia fell because of a rise in arrivals and relatively small offtake. The futures section moved irregularly both ways, after a slightly lower start, on alternate spells of realising and bear covering. Confidence to follow the rise was, however, lacking. The upcountry operators, having gone short in the recent past, were the main buyers. Higher levels attracted spot house selling. Closing prices showed a mixed trend; gold was steadier, but silver was easy.

The premium on spot gold over futures, which had shot up last week from Re. 1.90 to Rs. 4.60, declined to Rs. 3 at the start of this week, moved up to Rs. 3.50, but fell later to Rs. 2.60. Similarly, the premium on ready silver over futures, having appreciated by 50 nP to Rs. 3 last week, was 25 nP lower at Rs. 2.75 as the week opened and came down subsequently to Re. 1.

The average daily arrivals in gold improved by 1,000 tolas to 7,000 tolas and the offtake shrank by as much as 4,000 tolas to 5,000 tolas. In silver, the average daily arrivals were more than double at 25 bars and the offtake declined from 16 bars to 11 bars.

The dollar price of gold in the London bullion market moved up from $35.07½ to $35.08½ per fine ounce. Ready gold in London also picked up from 249s. 4¾d. to 249s. 8d. per fine ounce. However, ready and forward silver were unchanged at 84⅜d. and 84½d., respectively, as was silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	30-5-62 (closing)	High	Low	23-5-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready .99 fine)	126.15	127.10	125.10	126.25
Jeth*	123.40	123.60	122.10	122.30
Sovereign	99.25	99.25	98.50	98.50
SILVER				
Ready (.996 fine)	218.85	221.75	217.80	221.80
Jeth†	217.35	219.25	216.80	216.80
London—				
Gold	249s.8d.	249s.8d.	249s.6½d.	249s.4½d.
Silver Ready	84⅜d.	—	—	84⅛d.
Silver Forward	84⅛d.	—	—	84⅛d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, *30th May*

The yarn market ruled distinctly easy during the week under review. Art silk yarns were subjected to renewed selling pressure which followed reports that the Government of India would shortly announce the revised scheme for export promotion of rayon fabrics, under which yarn would be supplied to manufacturer-exporter from a pool of imported yarn that is proposed to be established. It is said that foreign manufacturers are agreeable to the formation of a pool in Bombay. Under the existing scheme, which expires tomorrow, import licences are issued directly to manufacturer-exporters. There was, besides, a lull in the spot market. Amilan (20×1) June 1962 contract climbed down by Rs. 90 to Rs. 3,850. August contract slumped by Rs. 80 to Rs. 3,940. Spot National Rayons 120 Bt. cones 1st grade declined by 32 nP to Rs. 15.43. 150 Bt. cones 1st grade fell by 27 nP to Rs. 13.68. 120 denier and 150 denier Japan and Italy were dull at last week's levels.

The staple fibre section was weak, in view of larger selling by manufacturers in upcountry centres. 40×2 June and August contracts went down by Rs. 17 each to Rs. 690 and Rs. 710, respectively. Spot Kohinoors shed 22 nP to Rs. 7.70. Citys eased by 18 nP to Rs. 7.83 and Hinds by 11 nP to Rs. 7.77.

Cotton yarns were featureless. Operators took note of the Finance Minister's rejection of the plea for exempting cotton powerlooms from excise duty. 32 counts Maduras lost 50 nP to Rs. 30.50. 10 counts Podars were quiet at Rs. 17.50, as also 20 counts Podars at Rs. 21.75 and 40 counts T.T. Corins at Rs. 33.75.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	30-5-1962	23-5-1962
Art silk yarn—	Rs.	Rs.
20/1 Amilon (100 kg.)—		
June	3,850.00	3,940.00
August	3,940.00	4,020.00
(120 Japan (per 100 kg.) ..	2,205.00	2,205.00
150 Japan (per 100 kg.) ..	1,984.00	1,984.00
120 Italy (per 100 kg.) ..	1,902.00	1,902.00
150 Italy (per 100 kg.) ..	1,736.00	1,736.00
½ Nat. Ray. 150 Bt. 1 (per kg.) ..	13.68	13.95
Staple fibre yarn (40 × 2)—		
June	690.00	707.00
August	710.00	727.00
Kohinoor (per kg.)	7.70	7.92
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Madura	30.50	31.00
40s T. T. Corin	33.75	33.75
60s Mahindra	—	55.50

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, *30th May*

Easy conditions prevailed in the cotton futures market during the week. There was persistent selling by both local and upcountry operators prompted presumably by hopes of an early start of the monsoon. The negotiations now going on between India and Pakistan for the supply to this country of 100,000 bales of Pakistan cotton against shipment of coal were bearishly interpreted because it was thought that, should they bear fruit, the shortage of medium-staple cotton would be considerably relieved. Under pressure of large-scale buying orders the Jarilla March 1963 contract sharply receded from Rs. 715 to Rs. 705.50 at the close yesterday. The market ruled fairly steady today and the contract finished at Rs. 709.25, showing a net loss of Rs. 5.75 over the week.

The trend of prices (in rupees) of the contract during the week is indicated below:

30-5-62	High	Low	23-5-62
709.25	714.50	705	715

The spot market at Sewri reported good mill demand for popular varieties such as 197/3, Vijay, Digvijay, Surti, Laxmi L.147 and Co2. However, as most of the mills had not received their last instalment of the quota for indigenous cotton, turnover was limited. Meanwhile, the Textile Commissioner has issued a warning to mills against purchasing cotton without a valid quota which, it has been pointed out, is an offence under the Cotton Control Order.

In the export section, some stray business was done in superfine Bengal Deshi. There is still a balance of over 10,000 bales to complete the last quota of 70,000 bales.

Demand for foreign cotton centred mainly round U.S. and Sudan, East African and Pakistan cotton.

The detailed procedure for allottment and licensing of the American cotton under the P.L. 480 agreement, signed on 17th May, has been announced by the Textile Commissioner. The quantity will be divided equally between the two staple categories, that is, 1.1/16" and above but below 1.3/16" and 1" and below but not less than 13/16". Thus the quantity available for allotment will be 1,10,000 bales (of 400 lbs. each) in each category. Cotton stapling 1.1/16" and above but below 1.3/16" will be allotted to mills on the basis of their consumption of cotton of similar stapling during the calendar year 1960. Cotton stapling 1" and below but not less than 13/16" will be allocated to mills to meet their shortage of medium and long-staple varieties. During the current year, the supply of indigenous cotton of these varieties was only to the extent of 85 per cent of their consumption in the season 1960-61. The supplies were, therefore, short of their requirements to the extent of 15 per cent. The purchase authorisation, under this P.L. 480 programme is subject to the condition that the entire quantity is shipped from the United States by 31st July 1962. The entire quantity of 2,20,000 bales has to be bought by India by end-July 1962.

The following are the latest available Spot quotations—in rupees per candy of 784 lbs.— from Sewri:

Bengal Deshi 689; Ganganagar 630; Hubli Laxmi 1,171; American 1" cotton (on sample) 1,200; Mwanza 1,115; Sudan XG2L 1,417.

Karachi cotton futures ruled firm during the week. N.T.R.G. May and July contracts rallied on keen mill and trade support, prompted by reports that India might purchase 100,000 bales of Pakistan cotton if present negotiations were to succeed. The former rose from Rs. 71.00 to Rs. 72.90 and the latter from Rs. 69.90 to Rs. 73.50. Towards the close, however, switchover of purchases from the May to the July contract resulted in a decline of the latter which finished at Rs. 70.80.

Cotton futures in Liverpool suffered a setback during the week. Values receded on selling by Commission Houses and local traders prompted by lower New York advices and the slow offtake in the yarn and piecegoods market. Both the American and American type contracts receded. Sudan contracts, however, ruled quietly steady. Prices remained unchanged.

The collapse of stock values on Wall Street and the general nervousness caused by it among investors adversely affected sentiment in the New York cotton futures market also. Futures values receded on selling prompted by the weakness of the stock market. The easiness of other commodity markets further accelerated the downward trend. Over the week, prices showed appreciable net changes. Spot prices however, ruled steady.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	29-5-62	22-5-62	14-5-62
New York spot	35.75	35.75	35.75
July	34.73	34.76	34.73
October	34.49	34.72	34.53
December	34.36	34.72	—

BLACK PEPPER QUIET

(From Our Own Correspondent)

BOMBAY, *30th May*

Malabar black pepper ruled quiet during the week, as New York withdrew as buyers, the majority of the dealers having gone out of the city for attending the yearly Convention. Spot in New York was marked down to $0.36½. Singapore, after last week's rapid rise, reacted, black pepper having gone down to Str.$117½ and white to Str.$145.

Ungarbled at the assembling centres in India was down to Rs. 309 and garbled to Rs. 315 and July delivery to Rs. 328. At the time of writing, however, the market improved, ungarbled having been done at Rs. 312½ and garbled at Rs. 322½. July delivery improved to Rs. 332-34.

The debacle on Wall Street on "Black Monday" failed to have any effect on pepper in New York, as the stocks are reported to be comparatively poor and consequently the dealers there are anxious to cover their requirements for the coming autumn, as, otherwise, they might miss the bus, in view of the scarcity of offers both from Singapore and India. As is usual in pepper, the growers at the origins become reserved once they see that the market is rising following anxious inquiries from New York and Europe. Prominent holder of Lampong at Singapore is not showing any anxiety to sell unless at his price, as the stock in the hands of second-hands are getting poorer and India is not pressing. The stock in consuming countries is considered insufficient and as such the dealers shall have to come to the market, if not now after a month or so. The deterioration in the political situation in Laos, Indonesia, India, Pakistan and China is a supporting factor.

Ready pepper in Bombay is nominally quoted at Rs. 170 per 50 kilos.

TEA EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *24th May*

A total of 793,000 kgs. were offered in Sale No. 21 held on the 22nd inst. Quality in general showed a further seasonal decline. There were, however, a few Nilgiri invoices which were well maintained. The market opened to a useful demand, but eased off towards the close. Brighter low medium and medium brokens were easier by 10 to 15 nP. A few inferior varieties under this category, however, registered further declines. Corresponding fannings met with better support and were fully firm and sometimes dearer. There was fair support for good mediums, but these were generally easier by 25 nP and in some cases more. Highgrown brokens were irregularly easier except a few invoices where quality was maintained. Similar fannings met with strong inquiry and sold at around last rates. Clean black leaf descriptions were fully firm, with their fannings sometimes dearer. Although unorthodox descriptions sold readily, these inclined easier. A few legg-cut lines, however, sold well. There was good enquiry for whole leaf grades which were steady. Tippy teas on offer met with good support.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.90-4.20	4.40-4.55
Mediums	4.20-4.80	4.55-4.65
Good mediums	4.75-5.50	4.70-5.15
Nilgiri B.O.P.	4.50-6.20	4.55-5.80

The average price realised in sale No. 21 was Rs. 4.42 per kg. as against Rs. 4.59 a week ago and Rs. 4.58 in the corresponding sale last year.

Offering in dust sale No. 21 held today aggregated 463,000 kgs. The market met with good general demand. Low mediums and mediums evoked fair support, but these were easier by up to 30 nP. A few cleaner types under this category however were about steady. There was useful support for good mediums, but these also shared in the downward trend of the market. At the beginning of the sale, there was strong demand for highgrowns which were often dearer, but towards the close, there was a slightly easier tendency for these types. There was keen competition for C.T.Cs which were generally dearer, whilst C.T.C. types and legg-cut types met with less support and were a little easier. Milled and fibrous kinds sold readily at a discount. Clean black grainy descriptions sold at around last rates.

The average price realised in dust sale No. 21 was Rs. 3.35 per kg. as compared with Rs. 3.67 a week ago and Rs. 3.91 in the corresponding sale last year.

Colombo: This week's sale met with good demand. Best western and useful medium brokens were steady on last week's rates, whilst below best were dearer by 10 to 15 cents. Uvas were also slightly dearer with the exception of the plainest kinds which were lower.

London: North Indian and other growths: In Monday's auction there was good general demand. All descriptions were strong to dearer with the exception of the thin liquoring and stalky Africans and Argentines.

Ceylon and South Indians: 28,893 packages were offered in Tuesday's sale, of which 7,625 packages came from South India. There was useful demand with both Ceylons and South Indians selling at firm to dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"Sale No. 22: 778,000 kgs. offered. Market opened with fair demand, but eased considerably towards close. Low medium and medium brokens upto 30 nP easier. Similar fannings 10 to 20 nP easier. Good mediums barely steady. Highgrowns easier. Unorthodox neglected."

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *30th May*

In distinct contrast to the firm tone that prevailed last week, oilseeds drifted lower during the week under review on persistent selling. Groundnuts were particularly depressed, thanks to easing monsoon and the prospects of larger arrivals from the South. There was, however, some recovery in the late sessions of the week on hopes of export promotion schemes for groundnut oil and linseed oil. Today, again the market experienced a sharp setback, following reports of the crash in the New York Stock Exchange, though in the evening, the sentiment improved on news that the New York stocks were staging a rally. A notable development of the week was the commencement of September 1962 contracts in groundnuts and groundnut oil on the 24th inst. Castorseeds were listless, with no encouraging inquiries for exports of castor oil. Linseed, too, ruled easy. Cottonseeds suffered a sharp fall in sympathy with raw cotton.

The Government of India has decided to allow drawback of customs and Central excise duties paid on materials used in the manufacture of copra cake (expeller or rotary) and deoiled cake. The rate of drawback is placed at Rs. 210 per metric tonne. This move did not have any perceptible effect on the market.

Groundnut July 1962 contract was hammered down from Rs. 212.37 to Rs. 203.87 by Monday and, after rising to Rs. 205.37, it slumped to Rs. 201.50 today before closing at Rs. 204.62. The net loss over the week was Rs. 7.75. September 1962 contract closed lower at Rs. 207.75, as compared with Rs. 214.37 on the opening day (Thursday). Nizam bold fell from Rs. 45.50 to Rs. 42.51 before winding finally at Rs. 43. Oil ex-mill lost 75 nP to Rs. 17.65 and railway receipts 65 nP to Rs. 17.45. Oil July contract eased by 35 nP to Rs. 17.65. May contract shed 25 nP to Rs. 17.30.

Castorseed September 1962 contract fell by Rs. 4 to Rs. 161.25. June 1962 contract declined by Rs. 2.87 to Rs. 161.75. Madras small and Kanpurs softened by 62 nP each to Rs. 32.25 and Rs. 31, respectively. Oil B.S.S. dropped 55 nP to Rs. 13.10. Oil Commercial lost a like amount to Rs. 12.60.

Linseed September 1962 contract gave way from Rs. 39.50 to Rs. 38.56. June 1962 contract receded by 44 nP to Rs. 38.31. Bold ready reacted by 62 nP to Rs. 37. Linseed oil was dull at Rs. 14.55.

Cottonseed September 1962 contract was marked down by Rs. 4.75 to Rs. 97.25. July contract fell by Rs. 3.50 to Rs. 96. White declined by Re. 1.25 to Rs. 19.75. Both non-white and Berar shed 50 nP each to Rs. 20.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 30th May as compared with those of the two previous weeks:

	30-5-1962	23-5-1962	16-5-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	208.37	208.37	203.62
July 1962	204.62	212.37	210.12
Nizam bold	43.00	45.50	43.25
Khandesh quality	43.50	45.75	44.00
Oil ex-mill ready*	17.65	18.40	18.05
Railway receipts*	17.45	18.10	17.85
Oil May 1962	17.30	17.55	17.15
Castorseed			
June 1962	161.75	164.62	164.87

EXPORT TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, *29th May*

The new season's second tea export sale was held here yesterday. The tone was almost firm, but as representative lots were not adequate, no quotations were issued. Bidding was hesitant, as buyers were waiting for more quality teas to come forward. Tea bookings were about normal during the week, but forward space for the Continent and the United Kingdom was difficult to obtain.

Tea stocks in the U.K. fell by one million lbs. to 128¾ million lbs. in the week ended 18th May, and this together with the continued high demand in London underlined the need of stockists there to replenish their stocks. During last week's sales

in Mincing Lane, North Indian teas were fully firm. Although North India's last crop rose by 66 million lbs., exports from this area to the United Kingdom recorded a sharp decline by 8.25 million lbs. Speaking in the Lok Sabha, Mr. Manubhai Shah, Minister for International Trade, was optimistic about India's ability to reverse the declining trend in tea exports. The Minister was obviously referring to the recent reduction in export duty. While the duty reduction would certainly help the industry, it is unfortunate that the Government should not realise that the days of levying a duty on exports have ended since long. The abolition of the duty alone would bring in the desired result, which is to capture the lost markets.

The industry is looking forward to Britain's projected entry into the European Common Market. For, with the proposed reduction in duties, India hopes to widen her market for tea. A recent survey had revealed that consumption of tea in West Germany was not rising in view of high taxes there, which amount to 20 deutsche marks a pound.

With the new excise levies on aluminium foils and plywood, the tea industry is in for a period of rising packaging costs. Despite increased production, the finances of the industry are in a deplorable state. Although in the 1961-62 season teas sold in both export as well as internal sales were higher, average prices realised were lower than in the previous season. Thus, while dusts sold for internal consumption rose from 759,129 to 964,427 packages, the average price realised was only Rs. 4.82 a kg. as against Rs. 5.19 a kg. Similarly, in the export auctions, packages sold numbered 2,272,870, recording a rise of 217,402 packages, but the price realised fell from Rs. 5.34 to Rs. 4.66 a kg. It is to be hoped that increase costs this year would be made good by increased output and a spread over a larger crop.

The majority of the gardens continue to suspect the outlook for plain teas. While the quality teas for export are assured of good demand (the export duty reduction is expected to stimulate foreign demand) the plain orthodox teas, representing a fourth of north India's production, have been faced with a declining market, as their prices abroad are much below the cost of production and at home consumers are going more for stronger liquoring C.T.C. teas. In the event of another bumper crop, it can easily be seen that prices of plain teas would slump.

With the growing tea habit in many Asian and African countries and the possibility of Britain's entry into the E.C.M. being followed by an increase in European consumption, it is unlikely that there would be any surplus problem in 1962. While such problem has been anticipated by the F.A.O. by 1966, tea trade circles dismiss the gloomy forecast. This year, both India and Pakistan anticipate a higher crop. In 1961-62, Pakistan's output increased by 40.5 per cent, or 17 million lbs., to 59 million lbs. Pakistan plans to increase the output to 80 million lbs. by 1970.

All is not well with the gardens in Indonesia, and the output is not expected to rise. The industry in Ceylon is also facing numerous problems, and, while generally the output has increased from year to year, it is apprehended that it may not do so this year. The overall rise in production is expected to be more or less equal to the rise in demand, and the poor carry-forward from the last season enhances the general expectation of good outlook. In 1961-62, India's offtake was estimated at 320 million lbs. which was higher by 54 million lbs. as compared to the previous season. However, considering that no stocks were carried over at the beginning of the 1961-62 season because of the drought of 1961, the trade upheld the earlier estimate of internal consumption of 300 million lbs. Despite the increase in excise duty, internal consumption is expected to rise further.

There was fair demand for dusts on offer during last week's sale for internal consumption, which amounted to 28,316 packages. Clean legg-cut teas were well supported, while the plainer fibrous ones were irregular and easier. An irregularly easier trend was also recorded in the plain orthodox varieties. Assams accounted for a decline of as much as 50 nP per kg. Good support was accorded to the clean leaf C.T.Cs. while fibrous teas eased. The quotations per one kg. (in rupees), inclusive of excise duty, were: Good Assam C.T.C. dust 6.10 to 6.40, medium Assam C.T.C. dust 5.60 to 5.80, legg-cut dust 3.90 to 4.10, medium Assam dust 3.50 to 3.80 and plain orthodox dust 3.00 to 3.20. Leaf on offer, amounting to 159 chests, gained in prices.

Offerings at yesterday's export sales were mainly Darjeelings and totalled 28,468 packages. Good support was accorded to C.T.C. teas and the lots possessing brighter liquors, and clean leaf appearances eclipsed fannings. Among Darjeelings, withdrawals were heavy, and the few flavoury teas realised prices well below valuations. Orthodox teas accounted for a decline of 10 nP to 20 nP a kg., best bright liquoring teas received greater attention, and B.O.Ps and fannings being most favoured.

JUTE GOODS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *29th May*

As anticipated, the U.S. is now more active, and the support from this source during the week under review was reflected in prices for hessian being marked higher. U.S. buyers showed keen interest in forward positions. Covering demand developed as a result and speculators contributed their own share to push up prices. In comparison, demand for sacking was lower, with the result that the premium for ready goods disappeared completely. The report that Pakistan was quoting attractively low prices for cornsacks and so it was

Notice

THE SENDRA COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Members the following dividend for the year ended 31st December, 1961, subject to deduction of tax.

On the 128,400 issued Ordinary Shares at 3½ per cent per annum.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *24th May*, 1962.

able to get substantial business from Australia during the week was noted with concern. Firm advices from the burlap market of New York were an inspiration to stockists of hessian, and the sharp rise in prices there was attributed to the hold-up of shipments from the Calcutta port due to the recent pilots' strike. Importers at New York were unable to meet buying orders in full for lack of adequate stocks. It was stated that, had it not been for resistance offered by buyers, prices at New York would have gone up further. The publication of details relating to April production was also a bullish factor, since the overall output at 97,000 tonnes was lower by 800 tonnes as compared with March. Output in hessian was only 37,000 tonnes, showing a fall of 1,400 tonnes; sacking at 45,000 tonnes accounted for a decline of only 200 tonnes, while miscellaneous constructions improved by 800 tonnes at 15,000 tonnes. The fact that, despite good demand, hessian production showed a much greater decline than heavy goods had been due to the poor availability of fibre fit for hessian. On the other hand, inferior types of fibre, which can be only utilised in the manufacture of heavy goods, are in abundant stock with mills.

Steadier conditions were in evidence in the fibre market during the week, thanks to a fall in arrivals. This was indicative of the fact that old fibre still awaiting marketing was not much. Sellers were reserved and demanded higher prices. Mills were active buyers. The greater support now being accorded by the Buffer Stock Association was also a factor leading to prices in upcountry rising to above Calcutta's parity. After a meeting of the Committee of the Buffer Stock Association held here late last week, it was announced that a fresh quota of 250,000 maunds was being released for purchase by the Association. The value of this quantity would be approximately Rs. 60 lakhs. Purchases by the Association had already aggregated 750,000 maunds valued at about Rs. 2 crores. Now that formalities with the State Bank of India with regard to the financing of buffer stock purchases have been completed, payment for the earlier purchases are being made. With the possibility of a decline in acreage under jute now being sown, it may be said that the worst phase of the declining fibre prices has practically ended. Contrary to earlier expectations that there would be no demand for India's inferior fibre in overseas countries, inquiries have been received for these varieties from several countries. This is also a reason for the steady trend in fibre prices during the week. The Government has already increased the export quota by another 100,000 bales. Since all these desiring to export would be permitted to do so within the overall quota of 200,000 bales, the mesta varieties, which can be exported, drew good attention of buyers. Since prices are much lower in Pakistan, it cannot be that the West European countries would buy fibre from India at the existing Calcutta rates. However, the same cannot be said with regard to Communist countries which have rupee funds blocked in India.

After the recent sowings, there had been no rains, and this is now becoming a matter of anxiety. If rains are delayed, there is the apprehension that the crop would be late, and recourse to re-sowing may have to be taken in areas where young plants may have dried up. Note was taken of the hope expressed by Mr. S. K. Patil, the Union Minister for Food and Agriculture, that fibre prices would rule at a point somewhat higher than the agreed minimum of Rs. 30 a maund. In fact, this week's trend also strengthens that hope. While all concerned would readily agree that farmers must be ensured of fair prices, it should be kept in mind that prices should not move up to such a level as to encourage substitutes and producers in other competing countries. It is to be hoped that the committee of Congress M.Ps from the Jute-growing States, which has been formed to advise the Agriculture Minister at the party level in the matter of minimum prices, would examine all aspects before determining the quantum of a fair price.

While the mills are as earnest as the Government to ensure fair prices to farmers, they do not agree that prices at any time this season have been lower than cost of production. Actually, increased production should lower costs and raise profits. It is to be doubted if the Government's decision to export fibre has been made on examining all factors. First, a fall in acreage is anticipated, and the crop would surely be lower than the last one. Secondly, in view of the decision by mills to increase spinning capacity and the greater demand for jute goods for both internal consumption and export, the mills would require to consume more fibre. Thirdly, fibre that India is exporting would lead to loss of business in goods with overseas countries to that extent. Thus, it would be better if this year's surplus could be retained within the country. However, the decision to export fibre is now irrecoverable, since commitments have already been made with foreign buyers. May/June fibre was quoted as follows:

Assam bottoms Rs. 30 per maund, Northern Bottoms Rs. 29.50, and daissee bottoms Rs. 32.00.

On Tuesday last, forward rates for hessian 40" 10 oz. advanced following keen inquiries from the U.S. for delivery up to February next. At Rs. 49.50 Oct.-Dec. hessian 40" 10 oz. gained 50 nP. Reports of active conditions in the U.S. burlap market also led to steadiness. However, there were no inquiries for ready B. twills, which, therefore, eased from Rs. 125.75 to Rs. 125.25. Inquiries for hessian from the U.S. realeased a fresh wave of speculative support and, on Wednesday, this was reflected in ready hessian 40" 10 oz. scoring by Re. 1.25 to Rs. 56.25. B. twills were unchanged and quiet at Rs. 125.25, with no squeeze for ready goods and consequent elimination of premium. On Thursday, business passing was limited, but since speculators were "active hessian 40" 10 oz. added a further gain at Rs. 56.75. In sympathy, B. twills closed firmer at Rs. 125.75. Business with the U.S. soon followed and, though it was of a scattered nature, the volume was adequate to push up the price to Rs. 57. With no demand, the firmness in B. twills could not be maintained, and the quotation eased to Rs. 125.50. Over the week-end, excepting for some covering business, there was little activity. B. twills eased to Rs. 125, but ready hessian 40" 10 oz. was unchanged at Rs. 57.00. Prices yesterday were maintained at these levels, and the overseas inquiries for non-standard constructions were a feature. Overseas inquiries for hessian were subdued, but local buying of both ready as well as forward goods maintained the quotations at unchanged levels.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *29th May*

Trading was quiet in the local metal market during the week under review. Excepting copper, *other metals on the London Metal Exchange recorded an easier tone.* Confusion exists as to the procedure which manufacturers of excisable copper and brass semis should follow for applying for rebate of excise duty of Rs. 100 per metric ton which has been levied on copper ingots, if production of the former is from the latter. No mention has been made with regard to production of semis from copper scrap, but it is to be presumed that production from scrap is also eligible for the rebate, since scrap can result only from duty-paid ingots. Another presumption is that the rebate on brass semis would not be at the rate of Rs. 100 per metric ton, but only in proportion to the copper content. The claim for refund is applicable from 23rd April. Manufacturers are desirous of knowing whether this claim for the rebate could be made on production from import-duty-paid copper ingots imported before 23rd April.

During the week, spot copper opened at £234 a ton on the London Metal Exchange, but soon firmed up to £234½. On the other hand, the forward metal received little attention and this was reflected in the price declining from £232½ to £231½ a ton. In Calcutta, copper scrap supplies continued tight and the metal was fully firm. Tin, in London, closed at £919 a ton, after being done at £916 against £920 earlier in the week. Locally, tin was quiet at Rs. 1,669.25 per 100 kgs. Zinc softened further due to lack of buying support against the background of shortage of copper. In London, the metal eased from £68¾ a ton to £67¾.

DELHI LETTER

(Concluded from page 982)

trading policies that the menacing effects of the European Common Market can be overcome. India's declared effort to boost her export earnings in the decade of the sixties is recognised to be an uphill task, unless Indian industries can be persuaded or coerced into exporting despite the huge attractions of the home market.

It is also pointed out in Delhi that, for example, France is gaining a bigger stake in trade with India. India has been a market for French fighter planes and now France hopes to sell passenger airliners and helicopters to India which is also a potential market for other sophisticated French capital goods. Britain as a suppliant before Europe is not in a strong position today. India hopes to use the vested interests in trade which France will develop in the coming years to make dents in the European wall. Germany is considered a harder nut.

Even if some of the British proposals fall to the ground in Brussels, India's strategy will be to go on patiently with efforts to open up Europe. In these endeavours the impression in Delhi is that Soviet and American policies will play as much part as the efforts of the Commonwealth countries distressed over Britain's coming entry into Europe.

Shortfall in Synthetic Rubber

The Planning Commission and the Commerce and Industry Ministry have come to the conclusion that synthetic rubber is one of the various industrial products in which there will be a shortfall. The target of 50,000 tons is unlikely to be achieved during the current Plan. Work has begun only on the Bareilly factory with 30,000 tons annual capacity; foreign exchange and collaborators have yet to be found for the balance of 20,000 tons.

The estimates of demand for raw rubber in the country are also under revision. From less than 23,000 tons in 1951, rubber consumption rose to nearly 64,000 tons in 1961 and, this year, the demand will be at least 72,000 tons. The breakup of the current year's rubber demand is 48,000 tons natural, 18,000 tons synthetic and the balance reclaimed. The import of natural and synthetic rubber this year is expected to total about 48,000 tons. But next year, with the Bareilly factory going into production there will be a quick drop in the rubber imports. But this reduction will be temporary, because, by the end of the third Plan, the demand for rubber will total more than 140,000 tons, as against the original third Plan estimate of less than 100,000 tons. With indigenous production of 40,000 tons of natural rubber, 30,000 tons of synthetic and 10,000 tons of reclaimed, by 1965-66, the imports will go up to 60,000 tons.

The spurt in demand stems from the expansion of the tyre industry far beyond the levels first envisaged in the third Plan. The initial target was to raise automobile tyre capacity from 1.67 million to 3.7 million and actual production from 1.35 million tyres to three million a year. But even before the end of the first year of the third Plan, the capacity licensed for tyre units aggregates 3.94 million tyres a year. The present plans are to increase the capacity to 5.2 million tyres a year.

COTTON

(Concluded from page 986)

trend towards foam rubber in automobile upholstery and mattresses. This has been particularly evident in the United States and Western Europe, where the largest proportionate displacement has taken place over the past decade. More recently, the same trend has appeared in Japan. The marked switch away from harsh short-staples has its origin in the early post-Korean years when export availabilities were barely adequate and, at times, inadequate, to meet demand. Prices rose to exceptional levels, and traditional users began to look for suitable substitutes, such as rayon, synthetics, and cotton waste. Once the changeover had been accomplished and public acceptance of a slightly different product had been assured, there was less incentive to return to the use of harsh short-staples and, to this extent, therefore, the loss may be a permanent one. This aspect has been typical of the United States, and Western Europe. During this period of transition and in complete contrast to the situation in other countries, consumption in non-mill uses in Japan rose spectacularly up to 1958-59. As noted earlier, however, the pendulum has now swung the other way and non-mill consumption has turned down sharply.

Producing countries, for their part, have been striving to improve these short-staple varieties without loss of the desirable, harsh, characteristics of the fibre, and to attain better yields in order to compete for land with the higher-yielding longer staples. A large majority of the traditional users, basically prefer these cottons to competing materials, but in most cases, uncertainty of supplies and price considerations have been the prime motivations in switching to other fibres or materials. The continuing encroachment of rayon and synthetics in fields once the exclusive domain of harsh Asiatic cottons accentuates the need for promotional efforts but, so far, little actual promotion work has been done. While there will probably always be a certain minimum demand, the long-term outlook can hardly be described as promising. Experience of the past indicates that when long-established markets for harsh short-staples have been lost, they generally have not been regained. With the exception of sporadic shipments to Mainland China and Eastern Europe—usually through barter arrangements—no really new markets have been created. A vigorous promotion campaign, coupled with assurances of adequate supplies and stable prices, could do much to revive interest in these cottons and possibly reverse the growing trend towards rayon and synthetic substitution.

GUEST, KEEN, WILLIAMS, LIMITED

(Concluded from page 992)

rather than by the hope of immediate monetary gain. This obligation your Company is constantly striving to fulfil, and it will be the endeavour of your Directors to ensure that the Company is progressively more able to contribute to, and share in, the expanding prosperity of our country.

The successful working of an organisation such as ours depends on the loyal and co-operative effort of its personnel. I am happy to say that the staff and all employees of your Company have maintained their tradition of loyal service, and I should like to thank them, on behalf of us all, for their continued good work."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Synthetic fibre, according to the Federation, can be used as a substitute for raw cotton. This suggestion ignores two relevant points, namely, the foreign exchange requirement of pulp imports for making synthetic fibre and the unsuitability of mixed cotton and synthetic fibre fabrics for export purposes. The answer to the problem of raw cotton imports (Rs. 80 crores in 1960-61) should be sought in two ways: one, by producing more wheat indigenously and requesting the U.S. Government to divert a part of the allocation for wheat under the P.L. 480 agreement to raw cotton supplies; and, secondly, by providing more irrigation and other facilities for cotton-growing so as to increase the yield per acre greatly.

The Federation's suggestion regarding mineral oils is eminently realistic in the light of its finding that "the programmes for exploration of oil and for setting up of refineries have suffered a serious setback on account of the Government's restrictive approach." The plea is for "a liberal policy which may enable the private industry also to participate." But the Federation's plea for permitting the existing refineries to import more crude oil for utilising their "spare" capacity does not refer to the question of their expansion as such. It would be pertinent to add here that, if the private refineries are allowed to expand their present capacities on practical considerations, there will be a lot of foreign exchange saving, as crude imports cost less than product imports, besides yielding a lot of valuable by-products as raw materials for other industries. In this way, a substantial reduction in the import bill of Rs. 70 crores per annum is possible in the near future if Mr. K. D. Malaviya displays greater realism and flexibility than he has so far shown in his dealings with the oil companies. Perhaps, the easiest way to effect import saving on oil in the next five or ten years would be to permit the oil companies to participate in the exploration and development of petroleum on mutually beneficial terms.

What is required for this as well as for other import-saving measures is a pragmatic perspective. The Federation's particular emphasis on the triple need for a higher priority to the establishment of import-saving industries, for liberal imports of machine tools to manufacture components and industrial machinery and for an appropriate change in the industrial licensing policy is unexceptionable. Only care must be taken to ensure that the quality of indigenous production is of a higher order, so that the goods manufactured on the Indian-made machines and components can compare favourably with those in the world markets in terms of both quality and price. In short, steps taken to effect import saving should not turn out to be handicaps to export promotion. The Federation's further view that ideological considerations should not stand in the way of granting industrial licences to entrepreneurs who can implement the schemes expeditiously is one with which this journal is in full agreement.

COAL PRICES AND COAL TRANSPORT

THANKS to the responsive attitude displayed by the Union Minister for Mines and Fuel, Mr. K. D. Malaviya, in recent weeks, the country's coal policy is agreeably in the process of revision in some crucial respects. There is, for instance, under the current consideration of the Ministry, the coal industry's request for a flat price increase of Rs. 5.43 a ton. The expected increase is intended to cover the increases (Rs. 3.19 a ton) in the cost of production, the cost (Re. 1.09) of servicing the Rs. 60-crore capital investment in the third Plan, a provision of 65 nP for repayment of borrowing and a depletion allowance of 50 nP. As the present prices of coal are recognised even in official circles to be unremunerative, a decision to allow some price increase is stated to have already been taken, though it is yet to be announced. But the Government would like this increase, so say the reports from New Delhi, to be nothing more than modest. Some say that it would range from 38 nP to Re. 1.50 a ton of grade II coal and that it would be confined only to certain categories of high grade coal. As this proposal falls very much short of the industry's expectation, the authorities are credited with the idea of supplementing it by a production bonus which, presumably, could be financed only from the difference between a higher selling price and the industry's retention price. The industry, however, has reiterated its original stand in its latest representations. It is not unlikely that, in the forthcoming meeting between the industry's representatives and the officials of the Ministry this week, a more liberal price increase will be conceded.

Whether or not the long overdue price increase is supplemented by a production bonus to which, in any case, serious objection has been taken on the ground that it might encourage short-sighted slaughter mining, the industry would do well to accept cheerfully now whatever increase is conceded and to ask for more a year or so later when its third Plan investment programme gets fully under way. Already much valuable time has been lost and the industry's expansion programme, with its concomitant in the utilisation of the World Bank loan to private collieries, cannot be delayed any longer. Now that some price increase is going to be sanctioned, the industry must welcome it as a promising first step in the direction of providing an adequate price incentive for greater coal production. For the rest, the industry may have to reconcile itself to a process of patient persuasion, now that Mr. K. D. Malaviya, a hard bargainer, is at the helm.

Even if the price hurdle and other impediments to expansion in production are removed, there will still remain the acute problem of coal transport, especially in the Bengal-Bihar industrial area. Several proposals have been under the Government's consideration in this connection. One of them is to launch a Rs. 8-crore crash road programme for enabling more coal to be moved by heavy trucks to Calcutta. This programme envisages improvements to the Grand Trunk Road, over a stretch of 250 miles between Calcutta and Topchanchi, for facilitating coal haulage by heavy trucks of the type expected to be made available by the Defence Ministry's establishments. It assumes that the Defence establishments will be in a position to supply the trucks, but the assumption appears to be of doubtful validity. Even granting that the trucks will be available in time and in sufficient numbers, the problem of higher cost of haulage by road will still be there. So Mr. Malaviya's reported offer to offset it through a subsidy, like the one now being given for supplies moving by the rail-*cum*-sea route, is quite encouraging. Industrial consumers of coal in the Calcutta area have been asking all along precisely for this, and they will only be too glad to move more coal by road if the subsidy is given and the vehicles are available. If at least 6 million tons a year, as against the actual 3 million tons in 1961-62 and Mr. Malaviya's own target of 10 million tons, can be moved by road during the rest of the third Plan period, it will come as a great relief to the consuming industries as well as to the hard-pressed railways. Only, the cost to the economy as a whole will be pretty high. Be that as it may, what is immediately needed is the assignment of the highest priority to this road haulage plan.

Another official proposal is to improve feeder roads now looked after by State Governments or district boards in the Bengal-Bihar region. This proposal also envisages improvements to roads linking coal areas with riverside jetties from which more coal could be carried by boats and barges up to Allahabad. The idea here is to break the bottleneck caused by congestion in the Moghulsarai railway yard. Some relief could conceivably come to the railways from this plan. But its potentialities seem to have been exaggerated, for haulage of some three to five million tons of coal by river and through the D.V.C. Canal, as now proposed, will be a formidable task in the present undeveloped state of inland navigation. The practical difficulties, in this connection, are several. For one thing, power tugs for operating countrycraft are not readily available and steel sheets required for their manufacture, being already in short supply, cannot be easily diverted from the wagon-building units which themselves are now working below capacity. For another, the ordnance factories, which are expected to manufacture the power tugs, may or may not be in a position to turn out an adequate number of them in the next two months. There is also the question of higher cost involved in the movement of coal by river. Above all, more funds would have to be allocated to any programme covering the creation of new facilities for river transport; here the Planning Commission's objections are foreseen. For all these reasons, the short-term plan for coal movement by river and canal is a difficult proposition. As it will take a longer time to develop river transport for moving several million tons of coal, the only programme, which is immediately feasible, is the one covering the Grand Trunk Road to Calcutta and its feeder roads. Further relief could, however, be had from greater efficiency in the operations of railways in terms of improved wagon turn-round, increased speed of goods trains, quicker loading and unloading, and further rationalisation of block rakes and half-rakes. In fine, the Railway Ministry has the major responsibility for coal movement and, as such, it must be more active in improving the railways' performance all the time than in answering criticism which, not unoften, is well merited.

DEFENCE INDUSTRIES

THERE is doubtless some justification for the establishment, by the Union Defence Ministry, of industrial capacity in several lines other than purely armament manufacture. In an emergency like war, the army's requirements of industrial goods are bound to go up many times. But the country's industrial sector may not be able to meet all these requirements without further ignoring consumer needs which are already not being met fully. If there is some stand-by industrial capacity with the defence forces in terms not only of factory establishments and machines but also of trained personnel, it can be utilised for meeting at least a part of the additional requirements of the army. The United Kingdom, for instance, has some shadow factories which do not produce currently but which will go into production in an emergency. But in a country like India whose resources of development capital, both domestic and foreign, are far too scarce in relation to the competing demands on them, industrial capacity cannot be created only to be kept idle. It can also be readily recognised that the creation of industrial capacity, which can be established only over a period of time, cannot be postponed till an emergency actually sets in. The Defence Ministry in India, it must be said to its credit, has resolved this dilemma by creating some industrial capacity and by utilising it, as fully as possible, for current production.

Such production is of the aggregate value of about Rs. 50 crores per annum now, as compared with Rs. 15 crores four or five years ago. A good part of this current production is accounted for by the Hindustan Aircraft (Rs. 8.3 crores) and the Bharat Electronics (Rs. 2.5 crores), while the balance is contributed by ordnance factories and corporations like Mazagon Docks and Garden Reach. This is, no doubt, a good performance. But it is of questionable wisdom on the part of the Defence Production Organisation to take up lines of manufacture which can be left to private industries where they have the requisite installed capacities or can create or expand them more easily at a lower capital cost. For instance, the manufacture of trucks, it is said, could have been left to the private automobile industry. The Defence Minister, Mr. V. K. Krishna Menon, has, of course, sought to justify their manufacture in the ordnance factories by a reference to the advice of the Directorate-General of Supplies and Disposals. This question, however, has now passed beyond the stage of controversy for the trucks are already being produced by the defence establishments. The only point of interest to the public now is whether an adequate number of these heavy trucks, which are claimed to have an indigenous content of 62 per cent and to be relatively cheap, will be available for moving coal and other materials by road to the areas required.

Leaving aside the question of trucks, one still finds that certain items like coffee machines, milk evaporating machines, sound projectors, radio valves, and so on are being manufactured in the defence establishments. These are lines of manufacture which could conceivably be taken up by engineering and other industries in the private sector. Whether the Defence Ministry had fully explored the possibilities for their manufacture in the private sector is not known, and Mr. Krishna Menon, too, has not been quite enlightening on this aspect. The question of ideology does not arise here, because the Defence Ministry has had no hesitation in taking the help of the private sector in such foreign countries as the U.K., West Germany and the Netherlands. It is quite common practice in almost all the democratic countries in the West to share the task of manufacturing defence requirements with the private sector. If the Defence Production Organisation in India is not to over-extend itself and bite more than it can chew, it should evolve and operate a well-planned programme instead of taking up, in a haphazard and unco-ordinated manner, different lines of manufacture on the spur of the moment.

MARKET GOSSIP

Speculation Dead, Long Live Speculation!

PRIME Minister Nehru has ended one type of speculation, but has revived another. By appointing Mr. T. T. Krishnamachari as a Minister Without Portfolio in his Cabinet, he has put an end to all speculation about T.T.K.'s political career. In doing so, he has generated fresh speculation as to what T.T.K. will do and how his actions will affect business sentiment. There is also the additional speculation that, after a few months, he will be given an important portfolio. The result of all this speculation is a feeling of uncertainty in business circles and uneasiness in share markets. It would be no exaggeration to say that the business community has received T.T.K.'s reappointment as a Minister with a certain amount of trepidation. The blame for it rests with T.T.K. himself, because, quite apart from his quixotic actions in 1956, 1957 and 1958 in the name of socialism, even some of his recent observations, brief though they were, revealed that he would like to make some fundamental changes in the present economic policies of the Government, changes which would be unfavourable to the private sector and individual investors. These observations make many wonder whether he will, once again, prove to be a bull in a china shop. The key to the puzzle is in T.T.K.'s own hands.

It is common knowledge that Mr. Nehru offered a full-fledged Minister's post to T.T.K. even when he first formed the Cabinet after the General Elections and that the offer was declined. The reason, according to a well-informed political correspondent in New Delhi, was T.T.K.'s exaggerated sense of self-esteem. Since then, there have been reports that both the Prime Minister and T.T.K. have had prolonged correspondence. It is not known what assurances were sought by the latter and to what extent they have been met by the former. Events will show in course of time.

Although a Minister Without Portfolio, he is not a Minister without any specific tasks. His chief task, according to reports in the daily Press on Thursday, will be to co-ordinate the activities of the various economic Ministries. In other words, he will be a Co-ordination Minister with a finger in each of the Ministries. The aim in this task of co-ordination will be to break the bottlenecks and to solve the shortages that are hampering production. This will be a thankless task. Each one of the Ministries concerned will be inclined to regard him as an intruder. Again, the bottlenecks and scarcities are the outcome of many years of economic bunglings, including some by T.T.K. in the past when he was a Minister, and they cannot be easily overcome within a short period. On the contrary, he may aggravate them by importing his prejudices and predilections in his attempts to solve them.

It must, however, be said to the credit of T.T.K. that some businessmen, who have become tired of the exasperating lethargy and red-tape of the bureaucracy in New Delhi, characteristics which have converted even the born optimists into voluble pessimists, are happy over his appointment as a Cabinet Minister. They are not unaware of his post-Mundhra bias against the business community as a whole and his fanatical devotion to the so-called socialism of the Congress Party. But they respect his dynamism and are hopeful that he will do something effective to get the economic wheels run faster. They say in effect: "Never mind what he says about, or does to, the private sector. If he succeeds in overcoming the crucial shortages and improving the efficiency of Administration, he will be rendering yeoman service to the country." One has to wait and see to what extent this hope will be fulfilled by events in the coming months.

For some days past, the share markets have been expecting the reinclusion of T.T.K. in the Cabinet. The possibility of this event aggravated the downward trend generated by the slump on overseas stock exchanges led by Wall Street. On Wednesday this week, when T.T.K.'s appointment was a certainty, many speculative counters touched the lowest level in the current downward trend. On the next day, they improved to some extent, but that was due to short-covering and not to any revival of confidence in T.T.K. Since there is a lot of speculation and misgiving about his economic philosophy, it would be a good thing if T.T.K. were to take the earliest available opportunity to clarify his stand on the basic economic policies and issues.

Whither Shares?

The slump in Wall Street and the European Stock Exchanges is only of psychological importance to stock exchanges in this country. It is clear beyond doubt, whatever the Western pundits may say, that equities in Wall Street and to some extent in European countries had gone up too high in relation to the rate of economic growth and yields. "The most commonly accepted view," to quote the latest (June) *Monthly Letter* of the First National City Bank of New York, "is that the stock market and price-earnings ratios had gotten far out of touch with the harsh competitive realities of business life and were overdue for correction." Other reasons that are not so well known are political, as, for instance, the fear of "another Korea" in South-East Asia. There is also a wider realisation that the growth of U.S. economy is running at a lower rate than was expected earlier, that there is a limit beyond which equities cannot go even on considerations of their being a hedge against inflation and that that limit had nearly been reached. Some say that the shake-out in Wall Street and elsewhere is a clear warning of the "new, and formidable, special problems" which the advanced industrial economies will have to face in the 'sixties. Thus, the London *Economist* says: "The United States naturally meets them (the special problems) first; it also, habitually, recognises them earlier than other economies might. To confuse them with the problems of 1929 merely fogs the new challenge with the old fear. One should not underrate the stock market's nose for detecting uncertainties in the economic climate; but the uncertainties of 1962—and beyond—will not go away with a Wall Street rally. This week we have got perhaps, in these intimations of instability, a whiff of the future—and just a glimpse of the test in competitive progress that the free countries have to face."

This, however, is a long-range view. What it means, in effect, is that the scope for any further marked general advance in equities is very limited and remote. The stock market psychology is such that, when values have reached the top or near-top, they must fall, because profit-taking and selling by disgruntled and disappointed investors who entered the market at high levels will ensue.

So far as the stock exchanges in India are concerned, the position is somewhat different. Undoubtedly many equities are overvalued, in the sense that they have discounted the fruits of expansion four to five years ahead. There is many a scrip which has been manipulated. After the budget, there has been a strong bull position in some of the speculative counters, as is evident from the high *budla* rates in the last settlement. These unhealthy features will have to be corrected. The crash in Wall Street first and then T.T.K.'s return to the Union Cabinet have already triggered this corrective movement, which may have some more ground to be covered. But, once this technical correction is over, the markets may present a steadier appearance again, provided the Government's economic policies are not altered to the detriment of investors, and political stability is not disturbed.

The serious foreign exchange situation is both a bearish and bullish factor. Imports of raw materials, components and capital goods may have to bear a further cut. This, in turn, will adversely affect some industries. But, at the same time, it may widen the scope for domestic industries and compel the Government to provide liberal concessions for promoting exports. Further, the number of new company flotations may fall; the Government has already begun to follow a restrictive policy in this direction. Consequently, the quantum of savings seeking investment in the shares of existing companies will tend to increase. It will be more so, if investment in housing becomes even more difficult than is the case now on account of shortage of cement, steel and timber.

Bullion for Jari Goods

A report appearing in a section of the Press on the 5th inst. that the Reserve Bank of India has decided to sell bullion at international rates to the *jari* industry in the country in a bid to boost the export of *jari* goods created considerable easiness in the local bullion market on that day, with ready silver, below .999, sold down to Rs. 214.85 per kg. (85.7 tolas), as against the previous day's highest of Rs. 216.80, and the current *Jeth* futures contract declining to Rs. 215.35 from the previous day's best level of Rs. 217.30. Apparently, the operators are worried over the report and are much confused about the exact implications of sale of bullion by the Reserve Bank to the *jari* industry, if at all it has agreed to do so. It will be interesting for them to know, therefore, that authoritative circles are unaware of any proposal by the Bank to sell bullion to the *jari* industry and confirm that the Bank has neither sold nor proposes to sell, at least in the near future, any bullion to the industry in question. It seems from what Mr. Ranchoddas Popawala, President of the All-India *Jari* Federation, is reported to have said at Surat on the 4th inst., that the proposal is only an idea mooted by the Union Minister for International Trade, and placed before the Finance Ministry for its consideration. In other words, it is still premature to say whether or not it will fructify.

Considering that bullion prices in India are the highest in the world and considerably above the international parity, Mr. Popawala is right in saying that supply of bullion at international rates would give a great impetus to the *jari* industry. He has estimated that the annual output of *jari* goods in Surat, the largest producing centre in the country, would rise from Rs. 9 crores at present to Rs. 12 crores. At the same time, as production costs would be reduced from the present high levels, the industry would be able to succeed in exporting more goods and in competing more efficiently with France, India's main rival in the export markets.

As a part of his all-out export drive, Mr. Manubhai Shah is reported to have asked Mr. Popawala, who is going to Nice to attend the Lions International Convention, to visit the *jari* producing centres in France and report to him of his impressions. Mr. Jayantilal Jariwala, President of the Surat Chamber of Commerce, has already proceeded on an extensive tour of West Asian and European countries to explore the possibilities of expanding the export of *jari* goods and art silk cloth to these countries. The Government is also said to be considering a proposal to send abroad an official delegation of *jari* experts to ascertain the market for *jari* goods, the final decision on which is expected to be taken after Mr. Popawala submits his report on his forthcoming visit to France.

Granting that the Finance Ministry would like to authorise the Reserve Bank to sell bullion at international rates to the *jari* industry, it would obviously wait for all these developments to materialise before directing the Bank to do so. It may be mentioned here that the proposal to sell bullion for industrial use is not novel, as the central banks in some of the Western countries do sell the precious metals for such use. Only, such sales are confined to essential and key industries. Even in India, there has been a practice since the last war to allow, as an exception, manufacturers of jewellery to import bullion and sell abroad jewellery made out of it. But because of the several regulations and formalities associated with it and the limited margin on competitive exports, the practice is said to have found no great favour with jewellery manufacturers. Perhaps sale of bullion for *jari* goods by the Reserve Bank might be an extension of this practice. But before authorising the Reserve Bank to sell bullion, the Government will have to devise a suitable scheme to ensure the use of such bullion only in the manufacture of *jari* goods meant for export, to determine the price at which these goods are to be exported and the margin available to the industry, and, above all, to keep off the possible malpractices by the industry after purchasing such bullion. All this will take time. Clearly, the Reserve Bank is not going to sell bullion tomorrow or even after a few months. And even when it sells, the quantity involved will be small and that, too, will be passed on directly to the *jari* manufacturers.

Deposit Rates Agreement

It is too early to write about the effects of the revised inter-bank agreement on the rates of interest for term deposits under which medium banks and small banks are allowed to pay ¼ per cent more and ¼ per cent more than the standard maximum rates. It is only a week now since the new agreement came into force. Some of the banks in the private sector are sore over the concession given to the State Bank of India subsidiaries. In Bombay, all of them, except one, are said to be using their descretion to pay ¼ per cent more than the standard rates. They are perfectly within the terms of the agreement in doing so, as other small banks are operating in this city. The first party to take full advantage of the differential rates of interest offered by the medium and State Bank's subsidiaries is the Municipal Corporation. Hitherto, the practice of this party was to place its funds in deposits with big banks first to the maximum limits allotted to them and then with medium banks and State Bank associates. But now it is reported to be doing the other way. It first exhausts the limits with banks offering higher rates of interest and then goes to the big banks. Only a beginning has been made on these lines and the trend may be quite perceptible next week, when sizable amounts of deposits mature for renewal. Similarly, the L.I.C. is expected to follow suit and so also other institutional depositors. For all of them, which maintain a sizable amount of funds as term deposits, even ¼ per cent makes a substantial difference. Since the subsidiaries of the State Bank are as good as the State Bank of India and they can pay ¼ per cent more than the big banks, they may be the first favourites with large institutional depositors.

Meanwhile, there has been some pull in the short-term money market since Tuesday this week. Before that, money was pretty easy, with a few lenders in the inter-bank section ready to be content with even 2½ per cent for call money. Several of them even preferred to invest large sums in Treasury Bills on which the yield was only a little over 2½ per cent. But, on Tuesday, the inter-bank call rate spurted to 3¾ per cent and further to 3½ per cent on Wednesday at which level borrowers were over on Thursday. This sudden development in the midst of the slack season has been a puzzle to many banks. Some, however, say that a lot of money has been held up by a large accumulation of cotton textile stocks. The offtake of cloth and yarn from mills has greatly slowed down since the Central Budget in the hope that the Finance Minister will give some significant relief in the heavy additions he made in the excise duties. The position is expected to become a little easier when this accumulation is substantially reduced.

Tata Robins-Fraser Ltd.

Tata Robins-Fraser Ltd., which has been authorised recently to issue equity capital of Rs. 60 lakhs in shares of Rs. 100 each, is a new company formed in Bihar for the manufacture, designing and erection of some of the principal equipments used by heavy engineering units, mines and collieries. The Company will have two divisions—manufacturing and engineering. Among the items to be produced by the manufacturing division will be the materials handling equipment, belt conveyors, wagon tipplers, speed reducers, crushers, feeders and screens, which are used for transporting and crushing stone, coal, coke, iron ore, etc. The engineering division will undertake "turn key" jobs for the use of these equipments and enter into package contracts for installing conveyor systems for mineral processing, coal preparation projects and similar other plants. It will design the projects, prepare a report on them, install the machinery manufactured by the Company and render engineering services.

The Company has secured technical collaboration of Hewitt-Robins Inc., U.S., and Fraser and Chalmers Engineering Works of the G.E.C., U.K., which have been engaged for long in the manufacture of engineering equipment and, though situated in different countries, are said to be working in close association. These two firms would provide the Company, on a certain agreed fee, the know-how and advice it on the purchase of plant and machinery, which would be made not necessarily from Britain or the U.S. They will also sub-

TREND OF SHARES

REACTION CRIES A HALT

(From Our Own Correspondent)

BOMBAY, *7th June*

WITH a further sharp all-round decline followed by a mild rally that gathered some foothold near the week-end, the first major reaction in equities since the tax proposals were announced, which wiped off, in some cases, about 50 per cent of the post-budget gains, seemed to have cried a halt. The position of the markets suggests that the rally should gain in strength in the following days. One main reason why it should do so is that the reaction has been quite heavy and it has brought down equities to strong support levels. Besides, once values rise, one would hear repeatedly of such arguments as the impending announcement of steel retention prices, rise in the selling prices for coal and paper and some relief in the excise duty on cloth. Whether the rally would mark the continuation of the primary uptrend or not time alone can say. However, it may be mentioned here that, in the light of the patchy clouds of economic and political uncertainties that have gathered recently over the country, some among the market analysts are inclined to believe that the stock markets are making a major shift in their main trend. But that remains to be seen.

During the week, values on the stock markets declined further on persistent bull liquidation and some bear pressure due to disquieting reports about aid for the second year of the third Plan and the consequent hitch in the economic development of the country, the extremely low level of the country's foreign balances, shortages of industrial raw materials and difficulties in the infra-structural facilities like fuel, power and transport and a renewed setback in Wall Street. For the major part of the week, support was virtually absent, and setbacks met only with some bear covering. Near the week-end, some cautious support was in evidence, and, notwithstanding the re-entry of the much feared Mr. T. T. Krishnamachari into the Cabinet, some leading counters tended to rally as the prominent bear operators covered their sales. Nonetheless, losses predominated.

* * * *

In Dalal Street, Tata Steel Ordinary were particularly active and rallied swiftly at the week-end on fresh support and bear covering and imparted a steadying effect to the entire market at lower levels. The shares had dipped from Rs. 149.75 to Rs. 147 initially during the week, but rallied to close one point higher on balance at Rs. 149.25. Apart from the rise in the Company's output of salable steel from 110,000 tonnes to 115,600 tonnes in May, support for these shares was also due to their relative "cheapness" and the proximity of the Company's dividend and the steel retention price announcements. Indian Iron, on the other hand, faltered on sizable Calcutta unloading, despite a rise in the Company's output of salable steel from 47,747 tonnes to 68,574 tonnes in May and, after declining from Rs. 26.25 to Rs. 25.65 rallied to close 15 nP lower on balance at Rs. 25.85.

Leading Textiles showed considerable weakness. The much fancied Century were out of favour, although quoted *ex-div.*, and closed Rs. 3.90 lower at Rs. 647. National Rayon showed a loss of Rs. 12.50 at Rs. 532.50. Standard finished nine points lower at Rs. 1,009, and Mafatlal, in the Cash List, showed a loss of Rs. 21.50 at Rs. 845. Bombay Dyeing finished at Rs. 69, as against Rs. 69.60 a week before. Apollo were 6 nP lower at Rs. 2.18, and the rise in the Company's gross profit in 1961 from Rs. 25.77 lakhs to Rs. 28.88 lakhs was ignored, as the dividend has been skipped for the fifth time in succession. Indu Mills shares were also easier in the face of an encouraging report of the Company for 1961, showing a rise in the gross profit from Rs. 112.07 lakhs to Rs. 181.60 lakhs. But Khatau close Rs. 7.50 higher at Rs. 487.50 and Kohinoor were a share better at Rs. 303.50.

Bombay Burmah came into prominence in the Miscellaneous section, and, after declining from Rs. 683 to Rs. 669, staged a strong recovery to close at Rs. 684 as against Rs. 683 a week ago. Rising by 30 nP on balance to Rs. 1.88, B.B. Petrol attracted a margin of 8 nP per share against bulls, as the rise was more than 10 per cent from the last clearing rates. But other issues were easier, with Amar Dye-Chem Rs. 8.75 down at Rs. 325 and Poly Chem and Indian Dyestuff both losing Rs. 7.50 at Rs. 200 and Rs. 548.75 respectively. Engineering shares were also easy, with Telco falling from Rs. 367 to Rs. 354, largely because of the huge bull position of one single operator, though, at close, the shares looked up a little to Rs. 362.50. Shippings, Sugars and Cements were dull and generally easy. Losses were widespread in the Cash section, where Associated Rubber declined by Rs. 26.25 to Rs. 108.75, Colour Chems by Rs. 15 to Rs. 485, Dharamsi by Rs. 20 to Rs. 172.50, Jyoti (old) by Rs. 8.75 to Rs. 198.75, Alembic by Rs. 7.50 to Rs. 222.50, Permanent Magnets by Rs. 7.50 to Rs. 227.50, Ceat Tyres also by Rs. 7.50 to Rs. 172.50, and Hindustan Wired Glass and Synthetics both by Rs. 7 to Rs. 166 and Rs. 228, respectively.

* * * *

In Calcutta, Forward shares suffered sharp reserves. Orient Paper fell from Rs. 44 to Rs. 42.10 and Shree Gopal from Rs. 27.75 to Rs. 26.50, although the latter Company showed a rise in its sales from Rs. 4.69 crores to Rs. 6.45 crores and of Rs. 30.01 lakhs to Rs. 120.84 lakhs in its gross profit for 1961. A setback of Rs. 1.50 was noted in G.K.W. at Rs. 40.19 and in Dunlop at Rs. 42.75. Birla Jute receded from Rs. 35.62 to Rs. 34 and Howrah from Rs. 22.62 to Rs. 21.50. J.K. Cotton were sold down from Rs. 20.69 to Rs. 19.25 in line with a setback in the Company's gross profit in 1961 from Rs. 91.91 lakhs to Rs. 73.39 lakhs. Indian Aluminium moved down from Rs. 41.75 to Rs. 40.50 and Texmaco from Rs. 25.70 to Rs. 25.05. In the Cash List, among Coals, Bengal reacted sharply from Rs. 399 to Rs. 384.50, after the successive sharp gains in the past few weeks. East Indian receded from Rs. 55.50 to Rs. 53. But North Beerbhoom looked up from Rs. 23.25 to Rs. 23.69 as did Raneegunge from Rs. 16.25 to Rs. 16.75. Jutes gave way to bull liquidation, with Union declining from Rs. 188 to Rs. 166, Nuddea from Rs. 72 to Rs. 62 and Anglo-India from Rs. 252 to Rs. 236. But Gouripore edged up from Rs. 495 to Rs. 504. In the Engineering section, Burn reacted from Rs. 735 to Rs. 720 on corrective profit-taking. Others were shaded, but Binani moved up from Rs. 12 to Rs. 12.69. The Miscellaneous section showed small variations, but Shaw Wallace slipped down from Rs. 24.06 to Rs. 22 and Usha Martin from Rs 18 to Rs. 16.31, while Anglo Bros. improved from Rs. 22.56 to Rs. 23.94. Sugars and Tea shares were quiet.

* * * *

Small movements and a quiet tone were the features of trading in Madras. At close, a few shares showed minor variations either way. Thus, in the Forward List, S.I. Viscose showed a loss of Rs. 2.50 at Rs. 172.50, but Madura were 25 nP better at Rs. 37, Aluminium Industries closed 5 nP higher on balance at Rs. 24.05, but Ashok Leyland were 20 nP easier at Rs. 8.55, India Cement were 8 nP better at Rs. 6.18, but Dalmia Cement showed a loss of 10 nP at Rs. 13.10 (reflecting the disappointment over a small increase in the Company's gross profit in 1961 from Rs. 83.86 lakhs to Rs. 84.03 lakhs, despite a substantial improvement in the production of clinker and cement, which increased sales from Rs. 31.01 lakhs to Rs. 410.77 lakhs), Blue Mountains eased from Rs. 2.45 to Rs. 2.42, but Periakaramalai looked up from Rs. 3.37 to Rs. 3.40, Consolidated Coffee were 5 nP better at Rs. 18.40, but Ouchterlony Valley moved down from Rs. 3.75. Cochin Malabar were a shade easy at Rs. 7.03, and Deccan Sugar were 10 nP lower at Rs. 10. The 15 nP improvement to Rs. 20.55 in Peermade tea was due to the declaration of a final dividend of 17.5 per cent, making a total of 25 per cent, for 1961, and provided a feature of trading in Plantings. Haileyburia, however, eased from Rs. 13.60 to Rs. 13.12. Coffee Lands also declined from Rs. 15.50 to Rs. 15.25 and so did Malankara Rubber from Rs. 16.90 to Rs. 16.50. In Textiles, Cannanore eased further from Rs. 132 to Rs. 130. Coimbatore Pioneer from Rs. 300 to Rs. 296 and Coimbatore Spinning from Rs. 79 to Rs. 76. Miscellaneous issues were easy, with Textools moving down from Rs. 178 to Rs. 175.50 and Madras Rubber from Rs. 23.50 to Rs. 23.

CAPITAL MARKET NEWS

NEW ISSUE

NEIVELI Ceramics and Refractories Ltd., a new company incorporated in Madras in May 1960, has taken over the licence allotted to the famous South Indian firm of industrialists, Seshasayee Brothers (Private) Ltd., for the manufacture of 1,200 tons (now raised to 1,800 tons) of sanitarywares, 1,800 tons of glazed wall tiles and 3,000 tons of glazed stoneware pipes. It is to enter the capital market soon with a public issue (its size is yet to be determined) out of the Rs. 45 lakhs of share capital it proposes to issue. Its authorised capital is Rs. 1 crore, made up of 7 lakh equity shares of Rs. 10 each and 3 lakh 9 per cent taxable, cumulative preference shares of Rs. 10 each. Out of this, it proposes to issue equity capital of Rs. 42 lakhs and preference of Rs. 3 lakhs.

The Company is setting up its plant at Vadalur (Madras State) near the Neyveli Lignite Mines, from where the raw materials will be easily available. It has secured the technical collaboration of Elemental Bankeramik Vertriebs GmbH, a subsidiary of a leading West German firm in the line, Keramag AG. The foreign collaborator will also take up shares worth Rs. 1.77 lakh. Tranz Kirchfeld GmbH, West Germany, which has agreed to supply the plant and machinery for the project, will also subscribe for shares of the value of Rs. 2 lakhs. The total capital outlay on the project is estimated at Rs. 75 lakhs and will be met by the share capital issue of Rs. 45 lakhs, a loan of Rs. 20 lakhs from the Industrial Credit and Investment Corporation of India and bank borrowings of Rs. 10 lakhs. The Company is said to be operating a pilot plant, producing 15 tons of sanitarywares per month, which will be integrated with the main plant.

RIGHTS ISSUES

The Directors of the **Apollo Mills Ltd.** propose to raise, subject to the consent of the Controller of Capital Issues, the authorised and issued capital of the Company from Rs. 50 lakhs to Rs. 1 crore by the issue of 25 lakh ordinary shares of Rs. 2 each. The new shares will be offered to the existing shareholders as rights shares in the proportion of one new share for every two shares held on such date as might be fixed by the Directors. The new shares will rank *pari passu* with the existing shares in all respects and will be eligible for dividend from the current year on a *pro rata* basis.

Another company to issue rights shares is the **General Industrial Society Ltd.** (formerly known as the Gondalpara Jute Mills Ltd.). The Company is issuing new 2.16 lakh ordinary shares of Rs. 10 each at a premium of Rs. 3.50 per share to the shareholders as on the 29th inst. as rights shares in the proportion of two shares for every share held by them.

BONUS ISSUES

The General Industrial Society Ltd. is also issuing 1.08 lakh ordinary shares of Rs. 10 each as fully paid bonus shares to the shareholders as on the 29th inst. in the proportion of one share for every share held by them.

The Directors of the **Hindusthan Sugar Mills** propose to act on the sanction received by them from the Controller of Capital Issues to issue 60,000 ordinary shares of Rs. 100 each as fully paid bonus shares to the existing shareholders in the proportion of one bonus share for every share held by them.

SARDESAI BROTHERS LTD.

The Directors of Sardesai Brothers Ltd. have, with the approval of the Bombay Stock Exchange, finalised the allotment scheme for the Company's recent public issue of 17,500 equity shares of Rs. 100 each, for which 5,875 applications for 102,080 shares were received. Five shares will be allotted to one out of three applicants in the category of five shares, to one out of two in the category of 10 shares, to three out of four in the category of 15 to 20 shares and to every applicant in the category of 25 to 55 shares. Those who had asked for 60 to 90 shares will get 10 shares, for 100 to 110 shares 15 to 200 shares 25 shares. The applicants for 1,000 shares will get 50 shares, those for 3,000 shares 130 shares and those for 5,000 shares 190 shares.

HINDUSTAN LEVER'S BONUS ISSUE

Hindustan Lever Ltd. has completed the issue of share certificates in pursuance of a resolution passed at the Company's annual general meeting held on 18th April last to issue 12 bonus shares for every 25 ordinary shares held by the shareholders as on 10th May 1962. The Directors passed a resolution authorising the allotment of the shares on 25th May, and the Company's office posted the entire lot of about 17,350 certificates to approximately 14,000 shareholders all over the country within five days thereafter, although it could have taken its own time within the legally permissible limit of three months or even more under certain circumstances from the date of the resolution authorising the issue.

STOCK EXCHANGES QUOTATIONS

J. R. Motishaw and Company, a well-known firm of stock and share brokers in Bombay, has brought out *Stock Exchanges Quotations*, an 84-page booklet, giving the quotations of all the shares, securities and debentures officially listed on the seven recognised stock exchanges (Bombay, Calcutta, Madras, Delhi, Ahmedabad, Hyderabad and Indore) as at the end of the Samvat years 2016 and 2017 and as at 23rd December 1960 and 22nd December 1961 and as on 29th March 1961 and 30th March 1962, covering the three important dates for the yearly accounting and tax purposes, with a facility to compare the quotations as on these respective dates with those as on 4th January 1954. The booklet is essentially for private circulation and will be handy for the taxpayers among the firm's clients who have to pay wealth tax and/or capital gains tax.

(Concluded from previous page)

scribe to 49 per cent or Rs. 29.40 lakhs, of the issued capital of the Company, and this subscription will cover the foreign exchange component of the project, representing mainly the cost of plant and machinery. The balance of the issued capital, which is 51 per cent or Rs. 30.60 lakhs, will be subscribed to by the Tata Iron and Steel Company Ltd., in which case the Company will be a subsidiary of T.I.S.Co. The management of T.I.S.Co. is, however, considering a proposal to offer some 3 per cent of its share in the issued capital of the Company to either one or more of some of the Tata companies. As the issued capital of the Company will be subscribed by the existing companies, the question of a public issue does not arise. At the same time, it will not be possible to offer the shares of the new Company to the T.I.S.Co. shareholders, as their number is too large in relation to the share of T.I.S.Co. in the capital of the Company.

The Company's plant will be located at Jamshedpur. It will take at least two years to go into production. The collaboration agreement with the two foreign firms will bring the Company the benefits of the orders entered into by them at present and in future with Indian firms. The present orders are estimated at Rs. 4 crores. There will be an equal Indian and foreign representation on the Board of the Company, with one of the Tata luminaries as Chairman.

Notice

THE ALEXANDRA JUTE MILLS LIMITED

ANNUAL GENERAL MEETING

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 15th June, 1962 to 29th June, 1962, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA,
2nd June, 1962.

NEWS IN BRIEF

THE Government of India is contemplating to constitute a study team for reviewing the progress of various irrigation projects and examining the question of timely utilisation of the irrigation potential generated.

A national institute for textile hand printing is proposed to be set up by the Government of India at Ahmedabad shortly. Another national institute for advanced training in the manufacture of dolls and toys will be established in Bombay.

The Life Insurance Corporation has agreed to advance loans to co-operative societies and joint stock companies which propose to set up industrial estates to the extent of 60 per cent of their total cost against a cent per cent guarantee of repayment of the principal and interest thereon by the concerned State Government.

The Film Finance Corporation Ltd. has sanctioned a loan of Rs. 1.2 lakhs to Messrs. Chitra Sharda of Poona for the production of a Marathi Picture. The loan will be paid in instalments and bear an interest of 9 per cent per annum, subject to a rebate of interest for early repayment as provided in the by-laws and regulations of the Corporation.

The Congress Working Committee has appointed a seven-man sub-committee to report on the present economic trends in the country. The sub-committee, which will go into a critical reappraisal of the economic situation, consists of: Mr. Gulzarilal Nanda (Convenor), Mr. U. N. Dhebar, Mr. Morarji Desai, Mr. V. K. Krishna Menon, Mr. C. Subramaniam, Mr. Harekrishna Mehtab and Mr. Sadiq Ali.

Crude oil from the Digboi oilfields in Assam will start flowing into Barauni Oil Refinery by the end of this year when the nine pumping and 17 repeater stations needed for the smooth flow of oil are expected to be completed. The laying of the pipeline from Naharkatiya (Assam) to Barauni, a length of 720 miles, is being done by a German-Italian firm at a cost of about Rs. 5 crores to carry crude oil from Digboi and is expected to be completed shortly.

An Industrial Training Institute for displaced persons and *adivasis* is being set up at Jeypore in the Dandakaranya area. It will train 204 persons annually. The Institute, which is being set up at a cost of Rs. 19.42 lakhs, will give training in fifteen trades, including blacksmithy, carpentry and draughtsmanship. Meanwhile, a total of 4,882 displaced families have arrived in Dandakaranya area from West Bengal upto 15th May 1962.

The Government of India has sent a circular to all the State Governments, Universities and technical institutions, urging them to implement the recommendations of the Thacker Committee on the introduction of the metric system in technical institutions. It is emphasised that all graduates and diploma holders in engineering and technology should be in a position to adopt the new system in their professional work as quickly as possible.

The revised estimate of surpluses from public sector enterprises during the third Plan period is Rs. 450 crores, as against the original estimate of Rs. 440 crores. This was disclosed in the Lok Sabha recently by Mr. Gulzarilal Nanda, Minister for Planning, Labour and Employment. The break-up of this total is as follows: Central: steel plants Rs. 111 crores, fertiliser factories Rs. 33 crores, Posts and Telegraps Rs. 28 crores and other enterprises Rs. 128 crores. The States: Electricity Boards Rs. 110 crores, road transport undertakings Rs. 20 crores and industrial enterprises and other departmental schemes Rs. 20 crores.

A scheme for the manufacture of "baby" tractors to meet the increasing demand for such tractors in the country is being considered by the Central Government. In 1961, the number of tractors in the country was 34,000, as against 21,000 in 1956. While no deliberate effort is being made by the Government to make the farmers switch over to tractors, incentives are being given to them. These incentives include exemption of agricultural tractors from customs and excise duties, grant of *taccavi* loans to farmers to purchase tractors and other agricultural machinery and exemption from local taxes like sales tax in most of the States.

Licences have been granted for establishing 21 new cement factories during the third Plan period, according to Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries. Of them, four units will be in Gujarat, three each in Madras and Madhya Pradesh, two each in Andhra Pradesh and Mysore and one each in Assam, Orissa, the Punjab, Rajasthan, Maharashtra, Jammu and Kashmir and Himachal Pradesh. When all these factories go into production, the installed capacity of the industry will aggregate 15.24 million tons, the rate of output being about 13 million tons per annum.

The Government of India has decided to enforce quality control and pre-shipment inspection of exports without any legislative compulsion. Each Export Promotion Council will be asked to prescribe minimum standards and export incentives, and entitlement benefits will be available only to those exporters whose goods conform to these norms. In the case of all commodities, except engineering goods, pre-shipment inspection will be carried out by nominees of the Export Promotion Council. In the case of engineering goods, it is proposed to ask the Inspection Directorate of the Directorate-General of Supplies to carry out pre-shipment inspection of all exports according to I.S.I. standards and such other specifications as may be prescribed by the Export Promotion Council.

A delegation from the Department of Atomic Energy, consisting of Mr. M. N. Chakravarti (Tarapur Project Administrator), Dr. M. R. Srinivasan and Mr. M. Dayal, has left on a tour of France, the U.S. and the U.K. in connection with the Tarapur Atomic Power Project. Seven tenders were received for the construction of the atomic power station and they have been evaluated in detail from the technical and financial angles. The delegation will hold a final round of discussion with some of the tenderers and with the public authorities concerned in the countries from which the tenders have been received. They will be visiting atomic power stations which are either in operation or in an advanced stage of construction in these countries and in Italy. It is expected that a final decision on the tenders will be taken soon after these discussions are over.

From Abroad

Negotiations on Norway's application to join the European Common Market will begin at Brussels in the first week of next month.

The World Bank has decided to grant a loan of $2.9 million to Ethiopia in order to finance the development and expansion of telephone and telegraphic services.

China has requested Rhodesia to supply large quantities of maize. Reports from China indicate large-scale damage to food crops on account of floods, hailstorms and drought during the current season.

Japan proposes to set up an Association for Overseas Technical Co-operation in order to intensify its assistance to the less developed countries. The Association will be under the jurisdiction of the Foreign Ministry.

The West German Government proposes to denationalise Viag, an industrial holding company with interests in electric power, aluminium and nitrogenous fertilisers. The Government will issue people's shares, as in the case of Volkswagen.

PERSONAL

MR. P. A. Gopalkrishnan, I.C.S., until recently Chairman of the Life Insurance Corporation, has taken over charge as the Managing Director of the Government-owned Indian Oil Company from Mr. B. Arora.

Mr. Ramdas Kilachand has been elected President of the Bombay Oilseeds and Oils Exchange Ltd. for 1962-63. Mr. Chandulal Kasturchand and Mr. Gokalchand J. Agrawal have been elected Senior and Junior Vice-Presidents, respectively.

Mr. R. Muttusamy, Superintendent of Training, Bhilai Steel Plant, has left for Colombo to assist the Ceylon Steel Corporation to formulate a training programme for its technical personnel who will be subsequently trained further in India's steel works. The personnel will be employed by the Corporation in a rolling mill to be set up in Ceylon shortly.

Mr. H. V. R. Iengar, the erstwhile Governor of the Reserve Bank of India who had recently joined the Board of Directors of the Indian Aluminium Co. Ltd., Calcutta, has been appointed Financial and Economic Adviser of the Company with effect from 1st May 1962, in the place of Mr. K. C. Mahindra, a well-known businessman and the chief of the house of Mahindra and Mahindra. Mr. Iengar will hold this position in addition to his capacity as the Chairman and Managing Director of the E.I.D., Madras.

East Germany has approached the West German Government for long-term purchases of certain goods on credits. One proposal relates to the buying of three million tons of West German coal (costing £20 million) annually over a period of ten years and another covers supply of industrial equipment worth DM 45 million.

What is claimed to be world's smallest seven-transistor superhet radio is now being produced by the Standard Radio Corporation of Tokyo. It is just under 2 inches long, 1¾ inches wide and ¾ inch deep and weighs 3 ounces. The set has a special circuit and new miniature resistor and condenser. A dynamic speaker does away with the need for an output transformer. Power comes from two mercury cells. About 5,000 of these sets will be made a month to retail in Japan at a price of about £8 each.

SOVIET AGRICULTURAL POLICY

THE sharp increase in the retail prices of meat and dairy products in the Soviet Union with effect from 1st June 1962, as decreed by the Government, is regarded by Western observers of Soviet affairs as a major departure in Soviet economic policy. For one thing, it indicates the failure of other measures such as higher investment in agriculture and tax reliefs which were introduced in the past with a view to securing higher production and constitutes a recognition of the importance of price incentives in agricultural production. For another, it means that the policy of pampering factory workers, to the relative neglect of farmers, is yielding place to one of encouraging the latter to produce more by ensuring a higher return for their produce. It is clear beyond doubt that, even in a country under dictatorship and central control, increases in production cannot be secured through mere fiats or threats and that profit-motive plays a no less significant part than in the free countries.

The rise in prices is as much as 25 per cent for butter and 30 per cent for meat. As if to compensate the consumer for the increase, the price of sugar has been cut simultaneously by 5 per cent and that of rayon fabrics by 20 per cent.

Explaining the reasons for the increase in food prices, Prime Minister Khrushchev said this week at Moscow that, in the absence of an alternative course of action, it was necessary to raise more money for agriculture. The international political situation being what it was, expenditure on defence and heavy industries, he pointed out, could not be cut. Mr. Khrushchev also frankly admitted the existence of acute inflation in Russia. He said that there had been a disproportionate rise in money incomes (wages and salaries) in the Soviet Union which resulted in a situation in which too much money was chasing too few goods. The rise in price was, therefore, meant to curb the excessive demand. This line of reasoning may sound strange to those who are accustomed to think that rise in prices of essential goods will aggravate inflation, instead of checking it. But a little reflection will show that what has happened is only a recognition of suppressed inflation which invariably takes place in all controlled economies, including India. The Soviet Government must have tried to hold down the prices of food only to find that this policy was having an adverse effect on production. Further, it must have found that lower prices of food, in the context of rising money incomes, left more money in the hands of people for being spent on other goods, including luxuries. One way of meeting this situation in a country like Russia is to increase the prices of necessities, so that less money will be available with the people for buying other goods.

The price increase is only a part of a major drive for increasing agricultural production and productivity. Mr. Khrushchev confidently predicted that, in a year or two, Soviet agriculture "will rise up, as on yeast" because the price incentive is being supplemented by direct assistance to farmers such as provision of more tractors, fertilisers, and agricultural machines and implements. It remains to be seen whether these incentives alone will be sufficient to make Soviet agriculture as efficient as, say, agriculture in the U.S. After all, the benefits of price and facility incentives on production will not be so impressive under collectivist farming as under peasant proprietorship. Will Mr. Khrushchev, who is considered as a realist, make any fundamental departure in the basic tenets of collectivism and State-ownership? Some are optimistic enough to feel that he may, because, for him, Russia and its newly won empire are more important than Communism.

The economic background to the present policy changes in U.S.S.R. deserves special mention. Between 1953 and 1961, Soviet population increased by 29 million. The major portion of this increase was accounted for by the urban population which alone rose by 28 million. Personal incomes increased by 87 per cent during this period, while agricultural production and productivity lagged far behind. Measures taken so far to increase agricultural production proved to be of not much avail. The Soviet authorities are now counting on the price increase to secure more production. It is expected to have a twofold effect. It will, on the one hand, reduce the demand for meat and dairy products, which are major items of expenditure in the budget of the average Soviet family, and, on the other, induce farmers to produce more, thereby bringing parity between supply and demand. It is a tribute to the efficiency of the price mechanism, so typical of capitalist economies, that even the centrally planned economies of communist countries are forced to have recourse to it for correcting imbalances between supply and demand.

INDO-PAK TRADE

It is encouraging to note that the controversies between India and Pakistan on political issues have not hindered the plans for mutual trade. In fact, trade between the two countries is expected to go up considerably during 1962-63, following negotiations held last week at New Delhi between the representatives of this country and a Pak delegation. The trade between the two countries, it may be noted, is guided by the three-year bilateral trade agreement signed in 1960. Under the arrangement now concluded, for the next one year ending March 1963, India will import 100,000 bales of raw cotton, valued at Rs. 5 crores, and supply, in turn, 130,000 tons of coal per month, or 1.56 million tons per annum. While Pakistan will pay in sterling for the entire coal, India will pay for raw cotton in rupees to the extent of Rs. 2.1 crores and only the balance in sterling. Under the special payments arrangements, there will be exchange of goods worth Rs. 4.05 crores each way in 1962-63, which is Rs. 5,00,000 less than last year. It is agreed that the unutilised amounts of the ceilings of the last two years will be carried over into the third year. In addition, the ceilings fixed under this arrangement for the third year are Rs. 40 lakhs for fruits and Rs. 115 lakhs for import of miscellaneous commodities by each country. Further, India is entitled to import jute cuttings worth Rs. 40 lakhs, apart from raw cotton (Rs. 2.1 crores). The ceiling for the import of Indian coal by Pakistan is fixed at Rs. 180 lakhs and for iron and steel items, bidi leaves, railway material and cement, etc., at Rs. 70 lakhs.

It is gratifying to find that India will be able to import more raw cotton this year from Pakistan than last year under the special payments arrangements. It may be recalled that, last year, the ceiling for raw cotton was only Rs. 1.5 crore. In view of India's acute foreign exchange difficulties and great shortage of raw cotton, this measure is particularly welcome. Besides, Pak cotton is an identical substitute for Indian cotton, unlike that bought from countries like the U.S. Another feature of the agreement is the reduction of ceiling on jute cuttings from Rs. 1 crore last year to Rs. 40 lakhs. This has been necessitated by the bumper jute crop in India in 1961-62. On the other hand, Pakistan will also be benefited considerably, particularly in regard to the supply of coal. It is to be noted that India has agreed to release coal for exports, despite the general shortage of this fuel.

The following table shows the trend of India's exports to, and imports from, Pakistan during the last ten years:

(Value in lakhs of rupees)

	Exports	Imports	Balance of trade
1952	46,34	29,14	+ 17,20
1953	7,62	19,41	— 11,79
1954	10,09	17,82	— 7,73
1955	8,71	25,08	— 16,37
1956	8,08	20,91	— 12,83
1957	6,77	13,40	— 6,63
1958	6,27	7,16	+ 89
1959	6,33	5,51	+ 82
1960	10,15	11,53	— 1,38
1961	9,94	15,18	— 5,24

It will be seen from the above table that the total trade between the two countries fell sizably since 1952 to touch a low of about Rs. 12 crores in 1959. But, since the signing of the trade agreement in 1960, the trend has been generally upward. It is, however, to be noted that India's exports to Pakistan are not quite satisfactory, with the result that there has been a substantial adverse balance in its trade with Pakistan. It has been stressed by those who have studied the market conditions in Pakistan that India's publicity campaigns there are quite negligible. Given better and more organised export promotion campaigns in that country, exports can yet be stepped up considerably.

WORLD AGRICULTURE PROSPECTS

Two interesting reports on the prospects for world agricultural commodities during the sixties—that is, 1969-70—have been published, one by the U.N. Food and Agriculture Organisation and the other by the National Institute of Economic and Social Research in the U.K. The actual reports are not yet available; only brief summaries of the reports have appeared in the Press. It is seen therefrom that both the F.A.O. and the Institute have painted a rather "unpleasant picture" in regard to the future of agricultural commodities. And both have urged the need for a reorientation in the policies of the developed economies in favour of primary producers.

The Institute, basing itself on its own study of 14 commodities which together account for about three-quarters of world trade in food, beverages and tobacco, has clearly warned that, unless such a modification is effected, the exports of foodstuffs from the primary producing countries will rise "much more slowly" than in the years 1948-60. It is stated that the aggregate value of primary producers' exports of select commodities in the last decade (the fifties), which was only $5,700 million, would have been higher by another $2,800 million, if only they had kept pace with the rise in money incomes in industrial countries. The Institute has advised the primary producers to process more of their goods to obtain higher export earnings. In this connection, it points out that the tropical and semi-tropical products may hold out "the most promising prospects" for primary producers, because the industrial countries cannot normally produce them for themselves.

The F.A.O.'s warning is more explicit than the Institute's. Unless the policies of the industrial countries are modified, it declares, there may be further additions to the already excessive stocks of agricultural products which are depressing prices, though no worsening of the chronic overproduction of agricultural products is foreseen. The F.A.O. has ruled out the possibility of any improvement in the terms of trade of producers of temperate agricultural products in the sixties. Even on the most favourable assumptions, the rise in the value of exports of tropical and semi-tropical products is not expected to be greater than the growth of population in the low-income countries. A specific suggestion made by the F.A.O. is to the effect that production must be restricted and that more aid should be given to the underdeveloped countries, so that they will be in a position to absorb larger quantities of foodstuffs which they cannot otherwise pay for. While the F.A.O.'s plea for more aid is quite gratifying, the leaning towards restrictions (on production), as our London contemporary, *The Economist*, has observed, might be questionable, unless used as a temporary stopgap.

The F.A.O.'s projections relating to foodgrains, in particular, reveal that, between now and 1970, the Asian and other underdeveloped countries will be faced with a serious imbalance or deficits. Thus, they are confronted with the prospects of a surplus in commercial crops, on the one hand, and an acute shortage of food, on the other. This is undoubtedly a very unpleasant outlook. The cereal deficit in the low-income countries of Asia, Africa and Latin America is likely to be, so we are told by the F.A.O., more than double the present level—that is, 31 million tons, as against 12 million tons, with wheat alone accounting for 20 million tons—if their development programmes go slow or are not fully implemented. The widening deficit is in contrast to the anticipated exportable surpluses in Australia, Canada and the U.S., and the "complete self-sufficiency" in the European Common Market countries. It is calculated that, mainly because of the estimated production increases in North America, especially in the U.S., the world surplus of wheat and coarse grains in 1970 would be at least three times as large as they were in 1957-59. Pointing out that the current production trends in the advanced countries provide considerable scope for enlarging food aid programmes, the F.A.O. is reported to have observed as follows:

"The projected world wheat surplus would be large enough to fill the gap which might occur in these poorer regions, even if, for one reason or another, their wheat production in 1970 were no larger than in 1958 and, if their wheat consumption were to rise by 70 per cent (i.e. corresponding to a 33 per cent increase in total and 27 per cent increase in *per caput* consumption), as implied by the high-income assumption of 5 per cent increase in G.N.P. per year. Rice would be most useful in food-aid programmes, but the surplus in high-income countries is likely to be small. Some quantities of grains other than wheat and rice, especially sorghum, could also be used in such programmes, but the disposal of the huge projected surplus of coarse grains, maize in particular, would raise very difficult problems."

The F.A.O. has referred to what it calls a real conflict between the self-sufficiency policies of several rice importing countries and the plans of the rice exporting countries. It therefore emphasises that the market would have to be kept under careful review, particularly in view of the possible changes in the position of China and the tendency of surpluses in competing grains. An important point to which the F.A.O. has done well to draw attention is the likely continuance, in the underdeveloped countries, of such handicaps as a relatively low level of education, scarcity of capital, inadequate marketing, credit and expansion facilities, as well as the general lack of incentives to increase output. It is needless to add that it is on the removal of all these handicaps and on the basic technological improvements that would largely depend the tempo of economic growth in the underdeveloped countries.

FOOD SITUATION

The food situation has shown signs of improvement during the last two years, mainly on account of larger production and imports. But it is still too early to say that India has turned the corner on the food front. For domestic production is yet to attain a rate of growth that will be substantially higher than the rate of growth of population, providing, at the same time, a margin for the income elasticity of demand. Moreover, while production has increased to some extent, there has not been any perceptible decline in prices, which is long overdue and necessary to give relief to consumers. The foodgrains output rose from 65.8 million tons in 1955-56, the base year of the second Plan, to 79.3 million tons by 1960-61, and is estimated to have touched 80 million tons in the 1961-62 crop year. Nevertheless, the wholesale price index (1952-53=100) for cereals, for instance, was higher at 102 during the financial year 1961-62, as against 100 in the previous year and 88 in 1955-56. What is the reason for this lack of correlation between prices and production? Mr. M. H. Hasham Premji, President of the All-India Foodgrains Association, in his address at the annual conference of the Association held last week-end at New Delhi, observed that the lack of correlation between prices and output was due mainly to such internal factors as controls and zonal curbs which disturbed the smooth functioning of the distributive channel. Further, several external factors, such as the rapid growth of population and the rising levels of *per capita* consumption, affected the price situation.

Mr. Hasham Premji was particularly concerned about the existing zonal restrictions on the movement of rice within the country. He felt that the price stability could be ensured not by irksome controls on distribution, but by increasing output and permitting unrestricted movement of foodgrains throughout the country. Referring to the removal of restrictions on the movement of wheat in May 1961, he pointed out that this had a salutary effect on equalising the price level all over the country. This measure, according to him, had brought down the high prices of wheat in deficit States, with prices in the surplus States remaining steady. In regard to certain States, Mr. Hasham Premji's conclusion may be correct. But the wholesale price index for wheat on an all-India basis has gone up, albeit slightly, that is, from 90 in

PLAN UNDER DARK CLOUDS

LENGTHENING SHADOWS OF AID DELAYS

From Our Special Correspondent

NEW DELHI, *5th June*

DELHI LETTER

IT has never been so good: that's what Food Minister Patil told the grain dealers' convention in Delhi. These remarks apply only to the food front which has been strengthened by P.L. 480, stability in prices and production. For the rest of the economy, it has, perhaps, been never so bad.

The external and internal factors have conspired to add up to create a situation which, it is feared, may be the worst since planned development was launched. Against the immediate effects of the reluctance of the Aid-India Consortium to dig deeper into its pockets and the long-term prospects of European discrimination against Asian countries, the reaction in Delhi was one of despondent helplessness.

The good chit from the latest World Bank Mission and the efforts of Mr. Black have failed to deliver the goods. From the level of aid originally expected from the United States, there is a ninety-million-dollar cut, resulting from the decision of the U.S. Congress to limit the assistance this Plan year to last year's quota. Even these doses may be rationed, if the aiders other than the United States do not provide matching assistance.

The British surrender of several privileges of the Commonwealth under pressure at Brussels is also disquieting to Delhi. Along with the suggestion of reducing Commonwealth preferences in commodities like cotton textiles to the extent of 30 per cent as soon as Britain joins the European Common Market, Britain tried to soften the shock by promising a review of the position at the end of one year's operation of the first stage reduction in preferences. But Delhi is certain that India will suffer severely even in the first stage of tariff changes by Britain.

German Chancellor Adenauer has come out openly against Europe taking on any Commonwealth burdens and, when the Commonwealth Prime Ministers meet in London in September, all the decisions may have been cut and dried, making it impossible to make adjustments. Some quarters in Delhi advocate a direct appeal by Prime Minister Nehru to General de Gaulle and Dr. Adenauer. Some would have India, Pakistan and Ceylon join hands in trying to win some European concessions.

Even in the aid already promised by West Germany there may be further delays. Reports received here last week-end showed that the development aid committee of the West German Parliament had decided that assistance for the expansion of the Rourkela steelworks to 1.8 million tons be provided only after the plant reaches the full capacity of one million tons in the first stage. With so many repairs needed at Rourkela to remove the causes of more than two dozen breakdowns, the German-aided plant will take a year or a year and a half to recoup its health and reach a steady rate of production. *Full one million ton production may take* longer.

Most of the assistance so far offered by West Germany to this country is for Rourkela plant expansion and the latest trend of thinking *in Germany means that German aid flow* will be delayed, further upsetting the already dislocated steel expansion programme.

The West Germans were first believed to have been satisfied with the arrangements made recently by an Indian delegation in talks in Bonn for the rectification of the plant's affairs. But the present decision would indicate some West German reservations. After initial delays, the Bhilai and Durgapur expansion plans are getting smoothly under way, and Hindustan Steel, which already has received world-wide tenders for Rourkela expansion, was expecting to place the orders for machinery by September. Unless the latest West German decision can be reversed, Rourkela expansion will be further delayed.

In this clouded aid atmosphere, one bright spot is the reported willingness of Britain to provide about Rs. 46 crores (£35 million) more assistance in addition to £90 million already committed. This assistance will not be tied to specific projects, it is understood. This will help meet some of the day-to-day import requirements for industries. Consultations have already begun in London and Delhi on the new British offer which the British representative is believed to have mentioned at the Aid-India Consortium meeting in Washington. This will take the British contributions to the third Plan further to £125 *million*.

Another prospect is more Soviet assistance which will be discussed with Mr. Anastas Mikoyan or another senior Soviet Minister expected to arrive in Delhi in the next few months.

Mr. Nehru used the opportunity provided by the presence of State Chief Ministers for the National Integration Conference to discuss the aid blight afflicting immediate prospects of various Plan programmes. The meeting yesterday was also attended by Mr. Nanda and other Planning Commission members. The conference touched upon the problem of pruning such projects as were included in the third Plan but had not yet received external aid support. The Planning Commission was firm in telling the States that they should not for the present add any project which may need foreign exchange

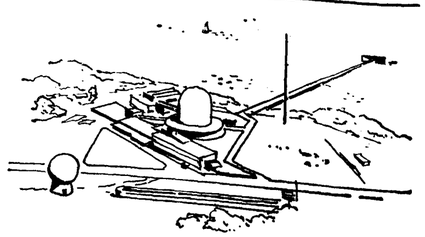
ZERLINA



The Atomic Energy Establishment Trombay

LIGHTING BY PHILIPS

A vitally important industrial research complex, the Atomic Energy Establishment at Trombay is another outstanding example where Philips have solved an entirely new and complicated lighting problem.

From APSARA, the first Indian designed and built Reactor, to ZERLINA, India's third Nuclear Reactor, Philips have been actively associated with the Project Authorities. Their expert advice and pre-planned, scientific lighting techniques have contributed to the success of this gigantic installation.

Philips' scientifically designed equipment is the result of experience, research and development aimed to meet the evergrowing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

AMERICAN LETTER

UTTER CONFUSION DOMINATES ECONOMIC SCENE

LACK OF RIGHT LEADERSHIP

From Our Special Correspondent

NEW YORK, 1st *June*

THE contemporary American scene is one of utter confusion. It varies in degree according to the geographical location. The East coast of the United States is experiencing the worst shock. In cities like Minneapolis and St. Louis, the stock market crash of May did not have the same psychological impact.

But the paper loss of some $20.000 million in stock values in one trading day on the New York Stock Exchange is causing some real soul-searching as did the first Russian Sputnik for which the American public was not prepared at all. The stock market crash, the worst since 1929, came as a stinging blow to morale.

As mentioned in previous despatches, the recent halting and receding performance in the stock markets this year had been referred to as "the Kennedy bear market." The crash was a resounding note of lack of confidence in the Kennedy Administration, its policies towards business and industry and the economic future of the United States itself. The severity of the movement is illustrated by the fact that, of the 1,375 issues traded, 1,221 declined and 9,350,000 shares changed hands between 10 a.m. and 3.30 p.m.

An Irony

Prices have come back somewhat since, backed by institutional investors who recognised bargains. But the underlying lack of confidence among investors remains. That the event occurred on the eve of President Kennedy's 45th birthday was an irony. He inherited several million dollars that day. The response from Washington was disappointing.

Administration spokesmen, including the Secretary of the Treasury, suggested that everything was fine and there was no reason for the crash. This was reminiscent of the *pronunciamenti* of the Hoover Administration during the great depression that everything would turn out to be all right in the end. Some courageous legislators have been suggesting tax cuts and other bold measures to restore confidence.

But it is not that easy. President Kennedy has yet to live down his unconstitutional interference with business in the matter of raising steel prices and the impetuous actions of his brother Robert who is Attorney General are not helping matters. The pity is that, among the "loyal opposition," there is not one outstanding leader who has voiced constructive remedial action of a specific nature.

Kennedy Government in Tough Spot

Perhaps, most disturbing of all has been the overseas reaction. The major West European stock exchanges sold off in sympathy with New York and the outflow of gold continues. So far this year, the U.S. has lost more than $410 million of its monetary gold stocks on top of the $1,000 million loss last year, the first year of the Kennedy Administration. Owing to the volatility of the American temperament, the stock market crash has all but eradicated the psychological buoyancy created by the successful space flight of Commander Scott Carpenter. The blunt truth of the matter is that investors have been selling the U.S. short and they have put the Kennedy Administration on the spot.

And it is a rather touch spot. Reassuring words are no longer the answer. Neither are promises of a new golden era, nor the prospects of remedial legislation which may or may not be enacted in the next session of Congress. In the meantime, punitive tax laws boomerang against the U.S. Treasury in terms of lower tax revenues.

Indeed, there is apprehension that another recession may be in the offing. Steel production at only 60 per cent of capacity at this time of the year is a pretty sad commentary, even though some of the reduction is due to previous hoarding for fear of a steel strike. One school of analysts, as could be expected, suggests that the stock market crash was nothing but a technical correction. They say that prices of stocks were unrealistically high, as much as 30-times earnings in most cases.

Bankers are calling for caution, since the expected boom of the "fabulous sixties" does not seem to be developing, although business conditions as a whole are really not bad at all with only 5½ million people registered as unemployed out of a population of 185 million. What I mean to convey is that, at this writing, there is a masochistic psychosis in business and financial circles bordering on schizophrenia. This goes so far that it is suggested in some quarters that, "if the classical pattern is followed, only a real national emergency, meaning a war, can reverse the present trend." The thought here is that the depression of the 1930s was eradicated only by the Second World War.

Indeed, this seems a bit farfetched, but it is, nevertheless, the topic of conversation in Wall Street and in luncheon clubs. In the same circles, there is also some disappointment that not even a little bit of inflation has been developing in the past period of expanding business. Everybody is, of course, against inflation in theory, but just a little bit, these people feel, would help to bolster the stock market and bolster confidence, generally.

This is what I meant at the outset when I said that confusion abounded here. Perhaps, this is caused by a lack of leadership either at Washington or among businessmen. There simply is no outstanding personality. The picture is also blurred by the uncovering of scandals in all strata of society in both Government and business.

Aside from all this and generalising the present U.S. business situation, it may be said that the economy is working its way through a tough, competitive, inflationless and transitional period. Nobody can be quite certain when that period will end and whence the path will lead.

Four Main Elements

For the past several years, the U.S. economy has seen a relatively slow long-term growth rate which is one of the causes for concern. There have been relatively mild short-term expansions and contractions, mild but persistent unemployment, difficulty in finding new investment opportunities, a struggle to maintain profits and continuing Federal budget deficits even at war-time tax rates.

Big Government has become bigger. Ferociously competitive conditions in domestic and foreign markets have become the order of the day. The easy ways of post-war inflation are past and, as I said before, to the regret of some of those who remember the days.

The short-term outlook for business seems moderately favourable, on the whole. Inventories are conservative. Capital spending bears a conservative relationship to the corporate cash flow and the rate of debt formation has not been excessive. Business trends at the present time may suggest little growth, but there are certainly no indications that another recession is imminent as the emotionalists suggest.

There are four main elements in the uncertain business picture at this time. They include intensified world competition for industrial markets, the disappearance of inflationary influences which were present in the 1950s, high and rising Government spending with an unprecedented tax burden. At this point, the Government sector shares, to the degree of 20 per cent, in the American flow of output and income.—*All Rights Reserved.*

The U.S. balance of payments continued to improve during the months of April and May and, barring some sudden deterioration during June, the deficit for the first half of the year is expected to hit an annual rate of about $1,500 million. This represents a marked improvement over the $2,400 million deficit for the whole of 1961. The deficit so far in the second quarter is running at an annual rate of $1,300 million, as compared with $1,800 million in the first. While the large U.S. trade surplus has been holding fairly steady despite some expected increase in imports, short-term capital movements have not yet posed any major problem. In addition, there appears to be some falling off in the long-term capital outflow. It appears that investment in Europe is losing some of its appeal, as industrial activity there slackens, and many small companies, which hastened to jump on the Common Market bandwagon, are beginning to have second thoughts. The Tax Bill now before Congress would also tend to limit overseas investment, though its chances of passage are considered doubtful.

LONDON LETTER

THE MERRY-GO-ROUND

FURTHER REPAYMENT TO I.M.F.

(*From Our Own Correspondent*)

LONDON, 1st *June*

NO one in the City this week thinks that the rally on Wall Street which almost wiped out the losses of the previous day is the last that will be heard of a Stock Market slump. On the first day of the week, the City noted with apprehension that Wall Street fell more sharply than at any time since October 1929. Inevitably, the fear that history might repeat itself was born, but the fact that the fear still exists in the City, as in the Continental Bourses and in Wall Street, does not mean that it is generally supposed that the markets will take another nose-dive. What it does mean is that uncertainty exists. Maybe the markets will recover; maybe they will go down; more likely they will go up and down. The industrial and commercial pointers all refute the suggestion of a basic weakness, while the excessively high prices that have ruled for some time indicate the need for readjustment. Thus speaks logic, but markets do not move in logical terms.

As if to show that the British Constitution in all its aspects is impervious to the quakings on Wall Street, the Bank of England and the Treasury have hoisted a signal that the pound is strong within and without. The external strength of the pound is proven by the repayment to the International Monetary Fund of a further £25 million of the drawings made nine months ago of £538 million. That international overdraft has now been reduced by this fifth successive payment to £229 million; the difference is one index of the inflow of hot money into this country. At the same time, £18 million of sterling has been sold to the Federal Reserve System against dollars—thus giving practical evidence of the willingness of the U.K. and of the ability of the pound sterling to help the dollar. It is no mean thing in one month to have found £43 million of foreign exchange surplus to this country's requirements.

Internally, the Treasury has agreed that the Bank should refund the extra 1 per cent of special deposits which the clearing banks were required to pay in as part of the crisis measures of last year. The Bank still holds the 2 per cent of special deposits which they had required prior to the "second Budget" of July. Repayment amounts to £77 million and provides that much extra basis for an increase in advances by the clearing banks. Although these banks, together with other finance institutions in the country, have been urged by the Governor of the Bank of England to put export finance first in any credit liberalisation, the very fact that this latest measure is not accompanied by the usual disclaimer of any intention to liberalise credit means that, provided the borrowers can be found, credit will, indeed, be easier.

No Incompatibility

The Government, in short, have been impressed by the relative sluggishness of the economy and are taking the risk that they might encourage inflation. There is no incompatibility between this measure of relaxation and the Chancellor's warning that, if signs of inflation appear, he will reimpose the "July measures." It has been rubbed in that the reins on credit are too tight, but the Chancellor is still justified in saying that, if the economy does get out of hand, he will step in and stop it!

What is incongruous is that events should so far have overtaken the Chancellor in the shape of jittery markets as to make it obvious that what the "little expansionists" have been saying for some time is right—that the real danger facing this country is not inflation but stagnation.

As ever, the dangers of stagnation are much greater in the more volatile American economy than they are in the U.K., but since neither this country nor the Common Market countries can hope to remain immune from any major movements in the American economy, what goes on the other side of the Atlantic dominates sentiment here. It is a fairly safe bet, therefore, to say that, in the weeks ahead, emphasis here is going to be on relaxation rather than restriction.

how much energy from 750,000 tons of oil?

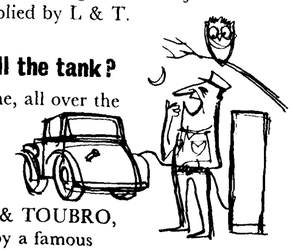
Enough to keep all the cars in India going for weeks—or to make one of them run non-stop for centuries! Seems a lot of energy? It is. 750,000 tons of oil is the annual capacity of the Noonmati refinery. But it is only a part of India's requirements! One reason why crores are spent to find new wells, set up new refineries, enlarge the distribution network. It is a gigantic enterprise—one in which Larsen & Toubro today plays an important role. Drilling rigs and bits, valves, petrol pumps, and geophysical, process and telemetering instruments—these are some of the items L & T supplies for the growing oil industry. Even the complete mechanical construction and erection, including instrumentation, of the Noonmati refinery was a job done by L & T!

When you next stop at a petrol pump, consider—

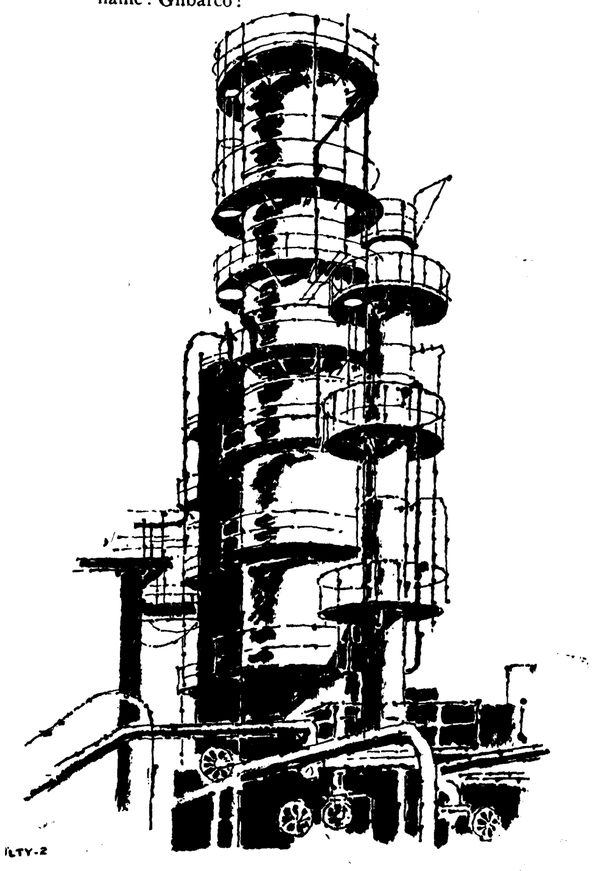
how long does it take to drill a hole—minutes? hours? days?

Depends. If it's drilling for oil, it could be anything! Minutes through soft soil, hours through hard rock. And the drill can go several thousand feet into the earth! Not any drill! Only those specially designed for the job—drills and bits like the ones supplied by L & T.

how much petrol to fill the tank?



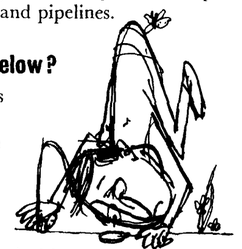
Say, 40 litres. And, imagine, all over the country thousands of such tanks are being filled. A round-the-clock job for petrol pumps—an important product of LARSEN & TOUBRO, made to a design backed by a famous name: Gilbarco!



It's no child's play to stop the flow...

Not when it is inflammable petrol! And that too, in an emergency—say, a fire at an oil refinery! When lives are in danger, seconds count—and seconds are what it takes to close an *Audco* valve. One reason why it is an important component at oil wells, refineries and pipelines.

Is there oil down below?



Perhaps. But how does one find out? Experts drill a hole, fill it with charge and explode it. They record the shock-waves—but not with a stethoscope! Highly sensitive geophysical instruments are used to discover oil-bearing strata far, far below the earth's surface—instruments like the ones made by the world-renowned Texas Instrument Corporation.

L & T contributes also to the development of these vital industries:

TREND OF DEPOSIT RATES IN U.S.

HIGHER LEVELS ATTRACT MORE TIME FUNDS

THE growth of savings and time deposits in commercial banks in the U.S. appears to have slowed down in recent weeks. This, however, follows an extraordinary advance in the first quarter running to over $6 billion. This is two-thirds of the total record increase of last year and, indeed, exceeds the annual total for any other post-war year with the exception of 1958, according to an analysis by the Economic Research Department of the Chase Manhattan Bank, New York, in its latest monthly feature *Business in Brief*.

A major factor explaining the stepped-up flow of time money into commercial banks this year has, of course, been the higher rates on time and savings deposits by thousands of U.S. banks in response to the changes in Regulation Q of the Federal Reserve. As of the first of this year, member-banks—and non-member insured banks under an identical ruling of the Federal Deposit Insurance Corporation—were permitted to move to the following new schedule of rates:

Maximum Interest Rates Payable on Time and Savings Deposits under Regulation Q

Type of Deposit	*Jan. 1, 1957–Dec. 31, 1961*	*Effective Jan. 1, 1962*
	Per cent.	Per cent.
Savings deposits in Bank:		
For one year or more ..	3	4
For less than one year ..	3	3½
Other Time Deposits payable:		
In one year or more ..	3	4
In 6 months to one year ..	3	3½
In 90 days to six months ..	2½	2½
In 30 days to 90 days ..	1	1

A sample poll of member banks taken by the Federal Reserve in mid-January showed that, even by that time, about one-half of all member-banks had raised their rates on savings deposits, with 21 per cent going to 4 per cent. The increases, moreover, were heavily concentrated among the larger banks, so that 83 per cent of all banks with deposits of over $500 million increased their rates, 49 per cent moving to the new maximum of 4 per cent.

A similar, but even more pronounced pattern, was observed in respect of rates on time deposits, that is, funds deposited under a firm contract for a specified maturity. The survey indicated that 68 per cent of all member-banks had raised their maximum rates on such deposits—with 98 per cent of banks with more than $500 million in deposits increasing their maximum rates. As rates on time deposits are normally set according to the prevailing levels of open market rates, however, not all banks have been paying the stated maximum for funds of six months or longer.

In the period since the January poll, a number of additional banks have announced increases in rates on time and savings deposits. This includes institutions in such major cities as Detroit, Minneapolis, San Francisco, and Chicago. Thus by the end of April, the large majority of time and savings deposits in the U.S. banks had been affected to some degree by increased rates.

At the same time, other factors have also been partially responsible for the flood of time money into the banks. A major cause of the record growth in savings deposits in 1961 was the fact that short-term open market rates were below those paid by the banks on savings deposits. This situation has continued during 1962. Moreover, the hesitation in the rate of advance of the economy which took place in the first part of this year has led to an at least temporary building up of time and savings balances.

Sources of Funds

The increased rates on commercial bank time money have not slowed down the deposit growth of other competing savings institutions. Deposits with mutual savings banks and shares of savings and loan associations—many of which have also increased their rates since the first of the year—rose by only $49 million less in the first four months of 1962 than in the equivalent period of last year.

One other competing savings medium, however, has been adversely affected. U.S. savings bonds outstanding decreased by $101 million in the first four months of this year. In the equivalent period in 1961, there was an increase of $50 million.

A portion of the increased time funds seems to have been obtained from the banks themselves—through a reduction of demand deposits. Some of this reduction represents a direct conversion of demand deposits into time and savings accounts to take advantage of the higher rates. At the same time, a part of the inflow of time funds appears to be a by-product of transactions in other financial markets—for example, a sale of stock and the deposit of the proceeds in a time account.

Portfolio Policy

These increased rates have placed a heavy burden of additional costs on the commercial banks, for they involve not only the payment of a higher rate on new deposits, but also an extra ½ per cent or 1 per cent on the savings deposits which the bank already holds. While this is partially offset by lower reserve requirements, and by the fact that, in the long run, the higher rates should enable commercial banks to compete more effectively for savings, the short-term impact on costs may be heavy indeed.

In order to offset these increased costs in the absence of a particularly strong loan demand, the commercial banks have invested in longer-term, higher-yielding assets. A major shift has been to increased investment in State and Local securities to take advantage of their tax-exempt status. In the first four months of 1962, those banks which report weekly to the Federal Reserve added $1,662 million to their holdings of securities other than Government—which consist almost entirely of State and Local obligations. In addition, these banks increased their mortgage holdings by $441 million, and, while liquidating $3,293 million of Government securities maturing in less than five years, built up their holdings of longer-term Government loans by $1,143 million, or 33.6 per cent.

The increased investment of the banks in longer-term securities has had two results. The first has been to reduce yields. In the falling level of intermediate and long-term interest rates which has prevailed since the start of the year, bank purchasing has been a major factor in depressing the returns on State and Local securities, and has had perceptible effects in the mortgage and Government markets, as well as indirect effects on other long-term rates.

A second effect of a lengthening of portfolios is, of course, a reduction in bank liquidity. Nevertheless, liquidity—as measured by the ratio of cash and short-term Governments to total assets, or by the ratio of loans to deposits—still remains fairly high by the standards of the past several years. Therefore, banks remain in a position to accommodate a considerable increase in loans if demands in the latter part of the year should call for it.

Looking Ahead

The major portion of the adjustments to the new higher rates on time money now seems to have taken place. Moreover, in previous periods of business recovery, the rate of increase in bank time deposits was slower as the recovery gained momentum. It would, therefore, be expected that the growth of time and savings deposits would continue to be slower in the coming months than in the first quarter of this year. Yet, at the same time, the new levels of rates should allow the commercial banks to compete more effectively for time and savings funds. This, in turn, implies a continued greater bank interest in the municipal and mortgage markets—and perhaps in consumer credit as well.

KRISHNARAM BALDEO BANK (PRIVATE) LTD.

The Krishnaram Baldeo Bank (Private) Ltd. (Manager: Mr. M. S. Banker, Lashkar, Gwalior), which is a recognised scheduled bank, has suffered a setback in its profit before taxation from Rs. 3.96 lakhs to Rs. 1.73 lakh for the year ended 31st December 1961. However, as far as banking business is concerned, the Bank has fared well. What adversely affected its profit was a decline in its income from non-banking sources. Thus, despite a sizable drop in advances from Rs. 110.79 lakhs to Rs. 80.93 lakhs over the year and slightly lower investments at Rs. 89.44 lakhs as compared with Rs. 89.91 lakhs in the previous year, its income from banking business has gone up from Rs. 8.06 lakhs to Rs. 10.71 lakhs due obviously largely to more favourable terms of lending. But the income from other sources has come down from Rs. 3.59 lakhs to some Rs. 44,000. It was rather high in the previous year because it included a profit of Rs. 3.34 lakhs out of sale of investments.

Taking the year-end figures, deposits of the Bank show a rise of Rs. 16.25 lakhs to Rs. 205.08 lakhs. This has resulted in higher outward interest of Rs. 5.34 lakhs as compared with Rs. 4.66 lakhs a year before. Borrowings from other banks are again shown as *nil*. Staff expenses have increased from Rs. 1.74 lakh to Rs. 2.78 lakhs during the year, but other expenses at Rs. 0.97 lakh are more or less the same as in the previous year. Depreciation has claimed some Rs. 2,000 more at Rs. 32,621. But the provision for taxation has been reduced from Rs. 2.23 lakhs to Rs. 0.30 lakh. The amount transferred to the staff gratuity fund is lower by Rs. 2,000 at Rs. 10,500, but the reserve fund has received Rs. 50,000 and the contingency reserve Rs. 22,301, as against nothing in either case in the previous year. The taxable dividend has been slashed from Rs. 3.90 to Re. one per share of Rs. 50 each.

The credit ratio has slumped from 58.6 per cent to 39.4 per cent due to the divergent trends in deposits and advances referred to earlier. The ratio of investments to deposits has also receded by four points to 43.6 per cent. But at the year-end, cash balances were more than double at Rs. 90.71 lakhs. Consequently, their ratio to deposits has jumped up from 23.6 per cent to 44.2 per cent. The liquidity ratio is as high as 87.8 per cent against 71.2 per cent in the previous year. However, nearly 44 per cent of the investments are in shares and debentures. The ratio of the Bank's "own funds" to deposits works out to 32.5 per cent, as against 35 per cent a year ago.

BANKING ONLY ON SUNDAYS

A 'bank' operating on Sundays only was started in 1799 by the Rev. Joseph Smith of Wendover. The object was to help the poorer sections of his congregation who were often in distress during the winter. The Rev. Smith encouraged them to bring pennies to church on Sundays during the summer, on the understanding that they'd be returned at Christmas increased by one-third "to enable them to purchase a warm garment, half a load of wool or any other domestic comfort they may want at the most inclement season."

Banking has of course become more complex and better organised since the Sunday Bank. But the concepts of social benefit, service and friendliness continue to inspire modern institutions like the Union Bank of India. The Union Bank prides itself on its unique *personalised service*, under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit Vaults; TELEX contact with countries all over the world.

WORLD COTTON SITUATION

I.C.A.C.'S ASSESSMENT OF FUTURE PROSPECTS

A COMPREHENSIVE assessment of the world cotton situation was made by the International Cotton Advisory Committee at its ten-day annual conference held at Washington from 14th to 24th May. The statement issued at the conclusion of the meeting has brought out certain interesting trends in the world cotton economy. It will be seen therefrom that the overall statistical position of cotton remains strong, with acreage and consumption at record levels, that there is a reasonable degree of stability of cotton prices in world markets, that most of the countries may dispose of the bulk of their exportable surplus and that as demand will exceed production by a substantial margin during the current season, stocks at the end of the season will decline by one million bales to a level which will be the lowest since 1953. Apparently, this decline is due to the fall of half a million bales in production during the season at a time when consumption is maintained at a high level. Although the overall supply and demand relationship has thus moved nearer to parity, the Committee has warned that cotton's problems, some transitory, others more fundamental, remain.

The Washington conference was marked by criticisms levelled against the U.S. cotton policies by some member-countries. The Committee itself thought it fit to adopt a special resolution on this subject, which is only to be expected, considering that, since the U.S. is the largest producer and consumer of cotton, its policies continue to exert a profound influence on the world cotton economy. It was generally felt by the member countries that the present U.S. policies had not been successful in finding solutions to some of the fibre's basic problems. The Committee, however, did take note, with considerable interest, of the statement by the U.S. delegation that consideration was currently being given to a number of plans to introduce a greater element of freedom in the matter of cotton production and to reduce or eliminate the differential between domestic and export prices. Such a move, it was felt, would provide a sounder basis for determining the true relationship between supply and demand.

Recent Trends

The discussions at the Washington Conference were held against the background of the world cotton economy as presented by the Committee's Secretariat in the course of a review specially prepared for the conference. The review not only indicated the statistical position of cotton in the current (1961-62) season but also assessed the future prospects of cotton *vis-a-vis* rayon and other competing fibres. Included in the review are the following figures relating to the supply and disappearance of cotton in the current season:

(In million bales of 478 lbs.)

	1958-59	1959-60	1960-61	1961-62 (estimated)
Stocks (1st August) ..	20.7	19.7	19.1	19.1
Production—				
United States ..	11.5	14.5	14.4	14.3
U.S.S.R. and E. Europe ..	7.0	7.5	7.0	7.1
Other Countries ..	17.6	16.8	19.0	18.5
Total ..	36.1	38.8	40.4	39.9
Total supply ..	56.8	58.5	59.5	59.0
Consumption—				
United States ..	8.7	9.0	8.3	9.0
U.S.S.R. and E. Europe ..	8.0	8.4	8.7	8.8
Other Countries ..	20.4	22.1	23.1	23.0
Total ..	37.1	39.5	40.1	40.8
Destroyed ..	0.2	0.2	0.1	0.1
Net exports to Mainland China ..	—0.2	0.1	0.2	0.2
Total disappearance ..	37.1	39.8	40.4	41.1

It will be seen from the above table that, with production and disappearance in fine balance last season, the opening carryover on 1st August 1901 was virtually unchanged. Production in 1961-62, however, is estimated lower by about half a million bales, as compared with 1960-61, despite a marked increase in area from 66.7 million acres to 70 million acres. The reduction was due to lower yields in Egypt, India and Uganda and smaller acreage in Mexico.

Notwithstanding the frequent ups and downs in the textile cycle, cotton consumption continues, with almost monotonous regularity, to set new records. The explanation for this lies partly in the uninterrupted expansion in consumption outside the more traditional textile manufacturing centres and partly in the differences in the timing of the textile cycle. A further boost to world consumption has been given by the marked upswing in India where, although there are continuing difficulties in the supply of raw cotton, consumption is running at a record level. Total world consumption during 1961-62 is placed higher at 40.8 million bales, that is, 700,000 bales more than in 1960-61. Commenting on the prospect for the future, the Committee makes the following interesting observations:

"With much of the world's population still ill-clad, and as a counterpart to the increased production potential, the fact that cotton consumption will set a new record is indeed encouraging. Undue optimism on this score, however, must be tempered by the intense competition from the man-made fibres where the rate of increase far surpasses that for cotton and which has inevitably resulted in a decline in cotton's share of the total fibre market. There are other problems, too—problems concerned with changes in the geographical location of the textile industry and the resultant developments in textile trade. Though the continued upswing in cotton consumption can be attributed primarily to an increase in domestic demand, increased reliance on textile exports to sustain a higher level of consumption is typical of some countries. This has led to radical changes in the pattern of textile trade which in turn has had a decided impact on the cotton industries of certain countries. The United Kingdom is the classic example, where the reversion to a major net importer of cotton textiles has brought mill consumption to less than half what it was ten years ago. For their part, however, textile exporters still have to contend with a formidable array of tariffs, quotas, etc. and latterly the possible imposition of an equalisation fee on cotton textile imports into the United States."

Exports

Increased consumption and purchases for stock by net importing countries carried exports to record new levels in the two previous seasons. The reverse seems to be the case now and, consequently, total exports during 1961-62 are expected to be lower at 15.0 million bales (as compared with 16.6 million bales in 1960-61), comprising 5 million bales from the U.S. and 10 million bales from other countries. In the present circumstances, any reduction in total trade automatically means an almost corresponding reduction in exports from the U.S. Thus, U.S. exports are estimated at no more than 5 million bales, as against 6.6 million bales in 1960-61.

As regards the outlook for world cotton exports, the Committee analyses, the probable future trends in stocks, production, consumption, trade and prices. Its assessment of each of these aspects may be summarised as follows:

Stocks: With disappearance likely to exceed production by a wide margin, end-season stocks will fall to their lowest level in almost ten years. Opening stocks next season would be down by as much as a million bales. Of equal significance, however, are the changes which are likely to occur in the pattern of stocks, particularly in the division of stocks between exporting and importing countries.

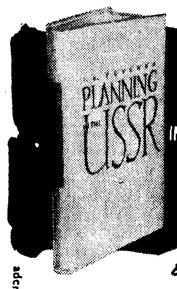
Production: A tentative estimate at present is that total acreage should be at least on a par with the present level, but the paramount factor in the crop outlook for next season would be the assumption of a return to more normal production in Egypt, India and Uganda which, other things being equal, would result in an increase in total production.

Consumption: Although it would be impossible to attempt to give any precise estimate of how much cotton will be consumed next season, it is an undisputed fact that consumption continues to set new records with each successive season. However, there are signs that the curve may be flattening out. In other words, the rate of increase is slowing down, which is not altogether unexpected because, as consumption moves to higher levels, a greater absolute increase becomes necessary to maintain the same rate of increase. Cotton continues to face stiff competition from man-made fibres from outside—cotton consumption is rising but its share of the total market for textile fibres has fallen. Rayon's share, too, has declined in recent years, but the non-cellulosic fibres continue to forge ahead. Inter-fibre competition is always volatile with new developments turning the scale first one way and then another. Cotton still faces intense competition from rayon and here two developments, of comparatively recent origin, have occurred which could have a decided impact on the outlook for cotton consumption—a widening in the price advantage enjoyed by rayon and the introduction of high modulus rayons. At the same time, the production and variety of non-cellulosic fibres continue to increase and there have been many price reductions in the past year. Another really vital factor in cotton's future is what happens to the overall economy.

International trade: If trade in 1962-63 follows roughly the same pattern as in the last two seasons, any fluctuations in the total volume of trade will be reflected mainly in the level of exports from the U.S. Elsewhere, with a return to normal production in Egypt and Uganda, a prospective increase in acreage in some countries, and an increased carryover in Brazil and Sudan, there could be some increase in export availabilities. The reduction in stocks in most importing countries this season has served to depress the level of cotton exports but, with stocks now near the minimum in most instances, the impact of stock policy on the volume of trade, at least on the downside, should be much less important. The vital consideration will be the level of consumption in net improting countries about which it is possible to be guardedly optimistic.

Price: With the price supports in the U.S. virtually at the same level as in 1961-62 and the same initial rate of export payment, there is little reason to expect that there will be any major deviation in the general price level of Upland type cottons next season, though the market for extra-long staples may still remain precarious, particularly if there is an increase in production. Finally, there is the possibility of a change in cotton policy in the United States at some future date.

OF GREAT INTEREST TO INDIAN ECONOMISTS AND STUDENTS



PLANNING IN THE USSR

BY I.A. YEVENKO

This publication is the product of the rich experience of successful planning in the USSR, planning that has ensured the economic and cultural advance at a pace unprecedented in history.

The author deals with the main questions of organisation of planning in the Soviet Union, the tasks and functions of planning agencies, the general principles of drafting plans and the system of their target.

The book also describes the methods of drafting plans and analysing and controlling their fulfilment, using as an illustration chiefly the central section of the national economic plan and industry.

Valuable handbook on the principles of planning !

STRONG OPPOSITION TO CEILING PACTS

NEW JOINT COMMITTEE PLANNED TO PROBE COTTON WAGES

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 29*th May*

STRONG opposition to the British Government's apparent acceptance of the terms proposed by Hong Kong for an extension of the current agreement on cotton imports has been voiced by the Lancashire cotton industry. Millowners protested that a new three-year pact with the Colony, India and Pakistan had been fixed up without consultation with the industry, and that a continuation of the present rate of import ceilings would mean the complete disruption of the trade. "The announcement," said Lord Rochdale, Chairman of the Cotton Board, "although it recognises the need to secure greater stability of trade in cotton textiles, will cause the most bitter disappointment in Lancashire, because it involves no reduction in the ceiling figures." Welcoming the inclusion of yarns in the pact, although, not the basic year chosen, Lord Rochdale said: "Further comment should be left until the comprehensive statement on the subject has been made by the President of the Board of Trade."

Telegrams to Prime Minister

Not content with mere statements, the leaders of the two major organisations in the spinning and weaving sections of the trade sent telegrams direct to the Prime Minister. Mr. Michael Grey, Chairman of the U.K. Textile Manufacturers Association, said that the industry was gravely perturbed and disappointed at the proposed terms. "The perpetuation of the excessively high 1961 ceiling limits, which have already contributed to disruption in the industry is highly unsatisfactory and unreasonable," he declared, and added: "New cloth ceilings should be fixed at the level of current imports."

Mr. Fred Dunkerley, President of the British Spinners and Doublers Association, said that the levels of quotas suggested were much too high. "Imports of cloth and garments at the ceilings permitted by present agreements and yarn imports at 1961 levels will result in loss of public money," he warned. "They will result in failure to achieve the aims of the reorganisation scheme which was based on 1959 imports." Confidence should be restored by a downward revision of ceiling figures of cloth and made-up goods and the stabilisation of yarn imports at 1959 levels.

Under current arrangements, which it is now suggested should be maintained until the end of 1965, a quota limit of 185 million yards annually of cotton cloth can be supplied by Hong Kong for retention in the British home market. India can supply a maximum of 195 million yards a year and Pakistan 42,400,000 yards.

In cotton circles, the attitude of British politicians is regarded as quite incomprehensible and lacking in reality. The sharp curtailment of arrivals of foreign goods over the past six months or more seemingly satisfies the Government that the danger is past. The gap between the current rate of actual arrivals and the 1962 ceiling figures is, however, wide enough to give producers abroad big opportunities as soon as demand quickens.

Local traders know very well that, when business begins to broaden, the tendency will be for foreign supplies to be sought and, as the pipelines are emptied, the flood of imports will begin again. So the trade cycle, now complicated by the intrusion of overseas industries with export surpluses, will continue with increasing intensity; each time it turns, the share available for Lancashire under present conditions must become smaller.

The Lancashire cotton Industry's case has been presented time and again in varying forms, all of which make it fundamentally clear that the overall ceilings on imports from the three Eastern Commonwealth areas exceed reasonable bounds. A deaf ear is turned to these entreaties, but Kong Kong in particular can play upon the sympathies of politicians to a phenomenal extent.

Wages for Workers

Long-term plans to streamline the wage structure of the Lancashire cotton industry and standardise conditions of employment may follow the establishment of a new joint committee representing both employers and trade unions in the spinning and weaving brandhes, if the scheme is approved by the major organisations in the trade. This is the result of a recommendation by the negotiating committees of the millowners and unions, following their meeting in Manchester to consider the nine-month-old wage claim for a 10 per cent advance submitted on behalf of about 165,000 operatives. The demand was rejected last year, but has subsequently been renewed.

The joint meeting decided to recommend to their respective organisations that a very small joint committee should be set up to examine further the present wage claim. It was suggested that this committee might also consider the long-term questions of wage structures and conditions of employment.

Sir Alfred Roberts, Secretary of the Card-room Workers Amalgamation, stated that it was obvious that the state of trade had played a big part in colouring the employers' views on the wage claim, so that they had been reluctant to make any gesture at the moment. It is over two years since workers in the cotton trade received a wage increase.

Well Below the Ceilings

The downward trend of both imports and exports continued during April, and returns now issued by the Board of Trade can be summarised as follows:

Total imports of cotton cloth last month were the lowest since August 1959, being 41,029,000 yards, of which 30,773,000 yards were grey cloth. Combined arrivals of unbleached and finished fabrics for the four months amounted to 188,185,000 yards, as against 281,320,000 yards for the same period last year.

Grey cloth arrivals from India in the four months aggregated nearly 57,000,000 yards, a drop of almost 20,000,000 yards on last year, as against the current ceiling of all types of cotton cloth of 195,000,000 yards. Shipments from Hong Kong barely exceeded 19,000,000 yards of grey cloth over the four months, as against 27,000,000 yards and the annual ceiling of 185,000,000 yards. Pakistan sent nearly 9,000,000 yards, as against 6,400,000 yards, and the ceiling of 42,400,000 yards.

Cotton yarn arrivals to the end of April amounted to 12,343,000 lbs., as against 15,654,000 lbs. last year, while the only section in which more goods were supplied from abroad was man-made fibre cloth, where imports were 25,029,000 yards, as against 23,679,000 yards.

Never before during the past century have exports of cotton cloth fallen below 20,000,000 yards in a month, but this happened in April when only 18,749,000 yards were shipped overseas. The four-month total of 83,725,000 yards compared with 108,449,000 yards exported in 1961.

April shipments of cotton yarn, oddly enough, were higher than in any month since last May, the total of 1,323,459 lbs. exceeding the 1961 monthly average. Exports of man-made fibre yarns, however, are now about five times bigger than those of cotton yarns both by volume and by value.—*All Rights Reserved.*

DISTRIBUTION OF WORSTED YARN

At a meeting of the Distribution Committee of the Development Council for the Woollen Industry held at Bombay on 31st May under the chairmanship of Mr. R. K. Birla, it was decided that the mechanism of distribution of worsted weaving yarn to the small-scale weaving sector should be worked out by a regional committee in Amritsar. The Committee will consist of Mr. Constantinices, Mr. Mahajan and Mr. Jagadish Behl and the scheme will be implemented from 1st July next. It was also decided that the surplus grey hand-knitting yarn should be distributed to hand-knitting processors on the basis of their past performance. This scheme will also be implemented from 1st July.

INSURANCE IN WESTERN EUROPE

A MAJOR SOURCE OF INVISIBLE EARNINGS

By R. Ewart Williams

[Momentous changes are in prospect in both the structure and scope of insurance in Western Europe. At present, despite its being a truly international business, insurance is subject to national laws and each country has its own method of regulating insurance. But the vanishing contours of economic isolation and the altered nature and size of the risk to be covered are forcing European insurers to adapt themselves to the new conditions of economic co-operation. A background to this unfolding drama is provided by the author of the article which is reproduced below from the May 1962 issue of E.F.T.A. Bulletin, *published by the European Free Trade Association.—*ED.*]*

THE operations of insurance companies today are increasingly spilling over national boundaries. The big insurance markets of Britain, Switzerland, West Germany and France—and to a lesser extent Italy, Belgium, the Netherlands and Scandinavia—now have a substantial volume of direct business outside their own countries. But it is the vast system of indirect business obtained through reinsurance which accounts for the bulk of these international transactions.

Reinsurance provides a means by which a local company can undertake a risk far beyond its own capacity by off-loading a substantial proportion of it with other companies. In an address to a London insurance audience Dr. E. Froelich, a leading Swiss reinsurer, gave a fascinating picture of its complexity. He said: "There are many layers of insurance, reinsurance of reinsurance, one on top of the other. They pass from the direct underwriter straight to the first layer, on to the second and then to the third layer, but in many cases they may be channelled back from the third layer for example to the second and so on. The risk is spread criss-cross over the insurance community of the whole world, and this entirely automatically.

"The total loss of the Andrea Doria in 1956 throws a light on how such a commitment exceeding £6 million was distributed. Emanating from one Italian company, this risk came to be placed chiefly in the London market, and from there it went back to companies on the Continent and in the United States. From the latter it found its way back again to European carriers. The reinsurance department of one Swiss company received the risk from 14 companies, situated in five different countries and part of that risk was distributed over 25 companies in seven different countries."

Pioneers in Reinsurance

Reinsurance was first developed on a large scale in the insurance markets of Germany and Switzerland, which were helped in developing it internationally by the fact that from 1746 until 1864 reinsurance was forbidden by law in Britain. In both countries the business was sufficiently attractive to justify the setting up of specialist companies which handled only reinsurance and did no direct insurance, although in the course of time many of the big reinsurance companies also established subsidiaries to deal in direct insurance. Today the share of the specialist reinsurers in these two countries is about 70 per cent. Elsewhere on the European continent the ratio is about 50 : 50.

When the ban on reinsurance was lifted in the United Kingdom, the main British companies writing direct insurance had already established a network of branches and agents throughout the world which underwrote business directly in the various countries, and as local insurance industries developed they were well placed to maintain their position by taking a share of the growing reinsurance business. Thus they felt no need to establish specialist reinsurance companies since they had the resources and technical knowledge to handle the business themselves. Moreover the existence of Lloyd's as a unique type of insurance organisation brought a great deal of reinsurance, particularly marine, to the London market.

Important Force

However, the two World Wars brought considerable changes in the reinsurance market. The economic blockade of the First World War affected Germany's capacity to operate on an international scale, and the German insurance market lost a great deal of reinsurance business to Switzerland and the growing London market.

This situation was repeated in the Second World War, and the German economic collapse which followed it. The West German companies had to await the post-war currency reform and economic recovery before they could again operate internationally, but there has been a remarkable recovery of recent years and today West Germany again is an important force in the reinsurance market.

The international business transacted by their insurance companies provided an important source of "invisible" income for Western European countries. Recent figures published by the Swiss Federal Insurance Office showed that about 64 per cent of the premiums collected by the Swiss insurance companies concerned either direct or indirect transactions abroad.

Excluding life assurance, some 70 per cent of the premium income of the British insurance companies is earned overseas while the proportion of Lloyd's has been put at 60 per cent. This suggests that the combined premium income earned abroad is not less than £850 million a year.

Investment Income

Of course, these are gross figures and do not represent profits. From the income has to be deducted the sums paid in claims and the costs of administration, and both of these have been so heavy in recent years that underwriting profits have been small or even non-existent. The fact that companies have been able to show overall profits in foreign business is because they have earned more on their investments. Just how important this last item can be is reflected in 1960 figures, which show that the ten leading British companies operating in the United States (which is the biggest single source of income for the British market) had assets there of over £650 millions and their investment earnings are about £20 million a year. In addition Lloyd's maintains large trust funds in the United States as security for the business transacted there.

Exactly how much Western European insurance companies contribute from all their operations to their countries' foreign earnings is difficult to determine. Of the two main beneficiaries, Britain and Switzerland, the British do not disclose net insurance income (that is the balance of underwriting profits and losses plus income from foreign investments) separately. However, reliable estimates suggests that it is considerable. In 1960 the Swiss balance of payments figures on current account showed that insurance earnings contributed a surplus of 125 million Swiss Francs.

Restrictions Under Review

Figures of this kind may soon be completely outdated however. For recent trends suggest that the European insurance industry is on the threshold of some radical changes in its structure. There is an increasing pressure towards liberalisation of insurance in Western Europe. At present each country has its own laws governing insurance and its own method of regulating insurance business. As the O.E.E.C. pointed out in its 1961 annual review, a number of European countries control the practice of insurance partly to protect the insured and to safeguard certain standards which are considered essential for an industry which has in its keeping a large portion of a nation's savings, but also to protect domestic insurers from foreign competition.

Foreign direct insurers may, as a rule, establish themselves in member countries' territories provided they comply with the deposit and guarantee requirements which the national insurers have to meet. Such restrictions as exist on direct insurance are concerned only with a limited range of risks.

For several years the O.E.E.C. had a committee working on a plan whereby there would be greater freedom for insurance business to be placed in the best market, notwithstanding that this might mean insuring abroad. There has been also a committee, composed of representatives of the insurance industry in the various countries, which has been working to achieve coordination of ideas on some of these important problems.

Within the last few months the members of the European Economic Community have planned to achieve complete freedom of direct insurance other than life insurance throughout their territories by 1967 and life insurance by 1969. This will mean that, for example, a company registered in France will be free to offer any kind of insurance anywhere within the E.E.C. territories. Such a timetable will involve a vast amount of work, particularly in reconciling the legal aspects of insurance.

Larger Units

It is possible, however, that liberalisation will be hastened by the trend towards the organisation of industry into larger units. This is confronting insurers with what is today their major problem—the provision of adequate underwriting capacity to meet these growing industrial needs. The concentration of millions of pounds' worth of machinery under one roof, all capable of being destroyed in one major fire, necessarily creates a technical underwriting situation in which full use has to be made of all available insurance and reinsurance facilities. One factor contributing to this is that many insurance companies are under-capitalised for the scale of operations likely to be required of them in the future.

To meet this situation the insurance market is itself tending to organise into larger units more capable of providing the cover and service needed by modern economic conditions. Already it is a commonplace for the big insurance companies to have branches in neighbouring territories but, as the Western countries get closer together, there is a likelihood that there will be amalgamations and take-overs on an international basis. This is leading to a greater desire for uniformity in insurance between the different European countries. The trend is being reinforced by the growing extent of American investment in Western Europe which is leading to a growing demand for insurance cover which can be underwritten on a global basis (and is in line with American practice).

Such changes may have an important influence upon insurance's role as an earner of foreign exchange. There will be gains and losses, and it is impossible at this stage to predict whether any particular countries will benefit more than others. The general expectation is that the world growth in demand for insurance will favour those **Western European** countries which are organised already on an international scale but that there will be plenty of business for everybody.

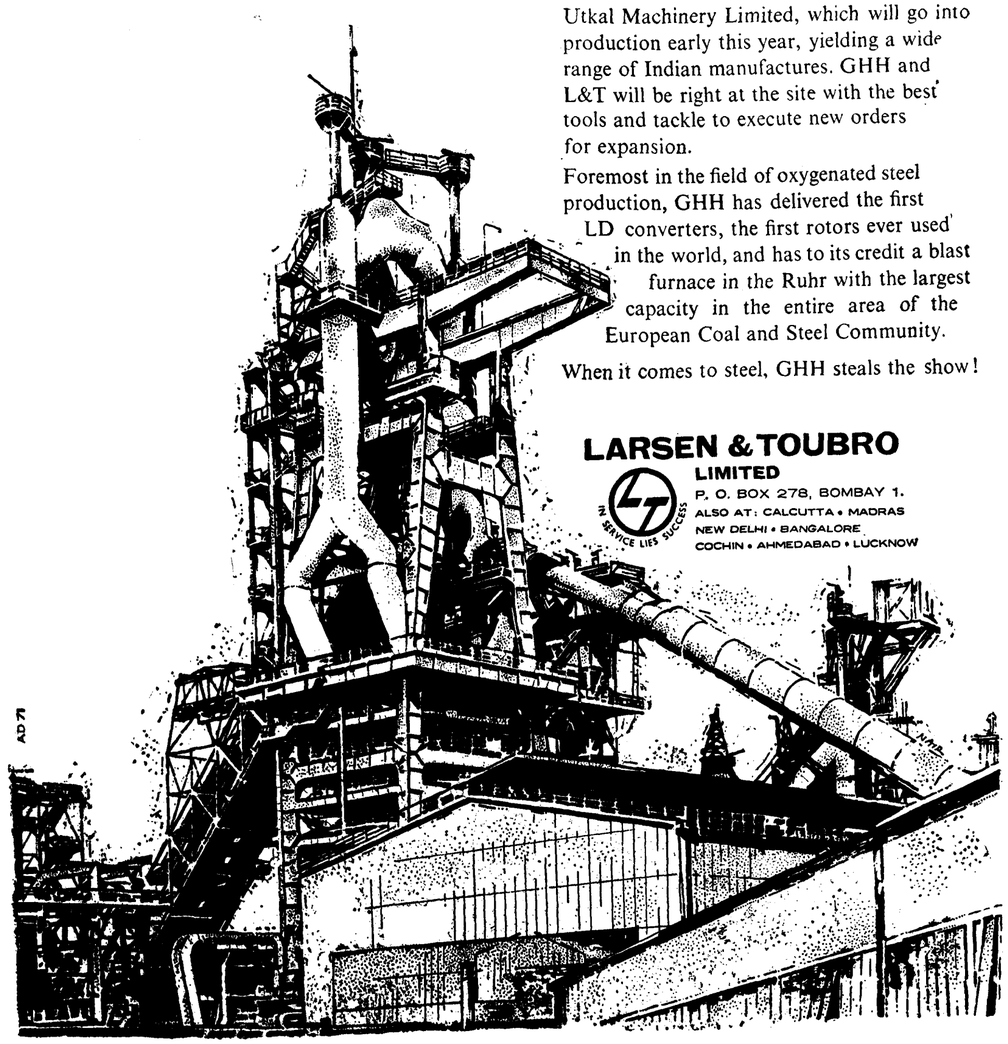
MORTGAGE LOANS ON IMMOVABLE PROPERTY

The scheme for the grant of loans on mortgage of property by the Life Insurance Corporation has now been extended to 13 centres in addition to the 8 cities where the scheme has been in operation for the past two years. Initially the scheme was introduced in the cities of Bombay, Calcutta, Delhi, Madras, Hyderabad, Ahmedabad, Kanpur and Bangalore. As launching of such scheme needs certain experience, trained personnel and other administrative machinery, extension is being considered by stages. The new decision to this effect has now been taken in light of the working of the previous scheme and the needs of the areas selected. The scheme will come into effect immediately in the cities of Chandigarh, Jammu, Jaipur, Indore, Lucknow, Gauhati, Cattack, Patna, Coimbatore, Trivandrum, Ernakulam, Poona and Baroda. Each of these centres, it is said has been selected either on account of its population or its importance or both, since it is the policy of the Corporation to see that an increasingly large section of the public is offered the benefit of the scheme. Loans will be granted only on the security of approved properties based on factors such as location, type of property, marketability, etc.

The 19th annual general meeting of the Export Credit Insurance Organisations—the Berne Union—was held in Aix-en-Province from 23rd to the 27th May 1962, under the chairmanship of Mr. A. Thomas of the Office National du Ducroire. Meeting and observers from the World Bank and the Inter-American Development Bank were present. The attention of the Meeting was centred mainly on the usual review of the economic outlook of various importing countries and trend of payment terms for goods. The Meeting recognised that a clear distinction had to be made between normal export business and economic assistance to countries in course of development. In this connection the Meeting recalled that the Berne Union had repeatedly expressed the hope that progress would be made in establishing a system of international co-ordination on a Governmental level. It was noted with satisfaction that progress had already been made in this direction within the E.E.C. and that the understandings existing within the Union had provided the basis for these developments. Recent initiatives in the O.E.C.D. are an encouraging sign that the collaboration established within the E.E.C. may be extended more widely amongst other exporting countries.

the sinew of industry

STEEL



To the Rourkela works, in the heart of India's Ruhr, Gutehoffnungshutte has supplied the heart of the steel plant—three 1000-ton blast furnaces, a 2400-ton pig casting machine and four scale cars.

Soon, the heart of India's Ruhr will throb with new activity, when plant and epuipment for the iron and steel industry will be manufactured in the vicinity of Rourkela itself. GHH's collaboration with Larsen & Toubro has borne fruit in a new venture, Utkal Machinery Limited, which will go into production early this year, yielding a wide range of Indian manufactures. GHH and L&T will be right at the site with the best tools and tackle to execute new orders for expansion.

Foremost in the field of oxygenated steel production, GHH has delivered the first LD converters, the first rotors ever used in the world, and has to its credit a blast furnace in the Ruhr with the largest capacity in the entire area of the European Coal and Steel Community.

When it comes to steel, GHH steals the show!

SUGAR PURCHASES BY UNITED STATES

NEW BILL SEEKS TO REVISE PRESENT SYSTEM

THE eyes of India and all other sugar exporting countries in the free world are now turned to Washington whereat the U.S. Congress is debating the Administration's Sugar Bill which seeks to fix a basic annual quota of consumption and divide it between the domestic producers and overseas suppliers. Latest indications are that the Bill will be finally passed before the end of this month. India has been pleading with the U.S. Government for *permanent quota for sugar*. Mr. D. O. Puri, President of the Indian Sugar Mills Association, has been in Washington for the last three weeks in this connection. The plea *is based chiefly on two grounds*. In the first place, a permanent quota for Indian sugar in the U.S. market will enable the country to earn the foreign exchange so urgently needed to put through the various development projects included in the third Plan. Secondly, to the extent sugar is exported, the heavy burden, especially financial, on the sugar industry as a result of large accumulations of stocks will be reduced. The total stocks with mills towards the close of April 1962 amounted to almost 2.4 million tons and the current season is expected to end (on 31st October 1962) with a closing stock of anywhere between 1.1 and 1.5 million tons.

A quota for India will have to be fixed out of the combined total of 2.58 million tons allocated to "friendly" foreign producers under the Bill. This aggregate allocation, which is also called the "Cuban quota," represents no more than one-fourth of the basic annual U.S. quota fixed at 9.70 million tons. Of the balance of 7.12 million tons, a quota of 2.65 million tons is allotted to the domestic beet sugar producers. 895.000 tons to cane sugar producers, 1.11 million tons to Hawaii, 1.14 million tons to Puerto Rico, 980 000 tons to Philippines, 15,000 tons to U.S. Virgin Islands, and 325.723 tons to all other foreign suppliers. The allocation of 2.58 million tons to the friendly foreign countries will be distributed on a first-come-first-served basis, the sugar so procured being paid for at world market prices.

Opposing Views

The Bill includes a specific provision under which the premium paid on sugar bought from these countries—the premium is about 50 to 60 per cent more than the currently ruling world prices—will gradually be eliminated over a period of five years, with a 20 per cent cut each year, except in the case of the Philippines, Puerto Rico and the Virgin Islands. Sometime ago, it was widely feared that the practice of paying premium would be dispensed with straightaway. Referring to this provision, Mr. Oriville Freeman, U.S. Secretary of Agriculture, stated, in his testimony before the House Agriculture Committee, that, by dropping the payment of premium to foreign suppliers, the U.S. Treasury would save about $155 million a year by 1966. In a similar testimony, Mr. Griffith Johnson, Assistant Secretary of State, said: "Over-riding foreign policy reasons dictate that quota premiums for foreign suppliers are abandoned." Such an abandonment and a switch-over to a system of global procurement on a first-come-first-served basis would, according to him, diminish the build-up of foreign vested interests in the U.S. sugar market and also help improve the U.S. balance of payments. The Chairman of the Committee, Mr. Harold Cooley, however, disagreed with these views. He is reported to have stated:

"The proposal to drop the premium is fallacious.... The global system of procurement would be fatal, forcing the U.S. to scramble for sugar in an open world market and return to the chaotic situation experienced before the sugar programme was first enacted.... The Soviet Union would manipulate sugar prices and thus increase the cost of sugar to the U.S. by as much as 20 cents a pound.... I would move for a revision of the Administration proposals, so that the reallocation of the Cuban quota is specified in the legislation itself and not left to the operation of the principle of first-come-first-served.... The likely priority of reallocation of Cuban quota would first be the smaller exporting nations of Latin America, followed by the Philippines and the larger full duty countries, and then the world market."

It remains to be seen as to which of the two views will ultimately prevail. If the Administration were to succeed in obtaining the consent of the Congress to its proposal, India will have to compete along with other producing countries for a share in the U.S. market, since no definite quota will be allotted to it. And, what is worse, thanks to the proposed gradual elimination of premium, the loss on sugar exports to the U.S. will be bigger than it has been under the existing quota arrangement. It may be noted here that, even with the premium of about 50 per cent, the loss on exports to the U.S. is quite considerable. The officially estimated loss in 1960-61 is Rs. 241 per ton (the price realised was Rs. 550 per ton), as against Rs. 430 per ton on sugar exported to other markets (the price realised was Rs. 380 per ton).

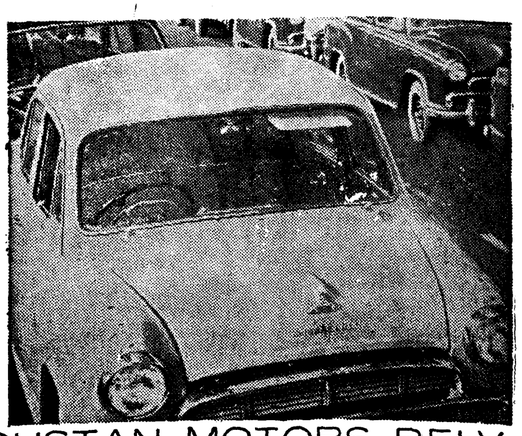
World Sugar Market

Be that as it may, in view of the uncertainty over the terms of the Sugar Bill, particularly in regard to the way in which the "Cuban quota" will be settled, the world sugar markets are ruling quiet "without showing any potential for sudden movement in either direction. Sugar in London, for instance, has been quoted at £24-£24½ per ton since early last month. There are said to be offers of second-hand Brazilian and European sugar, but dealers are not pressing the market. To quote a recent report in the London *Financial Times*: "Generally, they (sugar dealers) have succeeded... in restraining the market from taking an upward path and, in the absence of important events, they are likely to continue to do so."

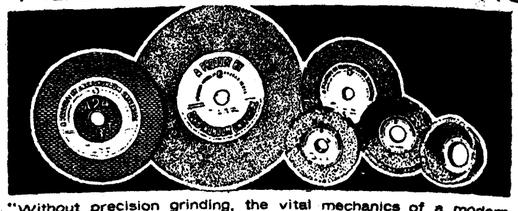
As for long-term prospects, the same report says:

"Long-term factors are at the moment unresolved, and this accounts for the determination of the market to wait on events. Though the technical position would justify higher world prices, the long-term uncertainties will probably act as a restraint for some weeks ahead. Most outstanding among the unknowns is the sugar Bill now before the U.S. Congress. The uncertainty does not centre round the terms of the new Act which will probably go forward on the general lines already determined. For the most important question is the allocation of the Cuban share of the quota and this will not be written into the Act.... Most interest revolves round the size of the Brazilian share of the Cuban quota, which will be in the form of a 'non-quota.' Brazil would not, in fact, gain a position from which it would be able to claim a right to an extension of an annual quota granted on an *ad hoc* basis this summer. But, although the disposal of the Cuban quota would not be regarded as a firm precedent for subsequent years, it is of importance, because the Brazilians are already holding at least 100,000 tons of sugar in reserve in the expectation that they will get a substantial share of the Cuban quota. The disposal of this reserve to the U.S. would have some effect on world prices, since the weight of Brazilian supplies on the world market would clearly be reduced."

Meanwhile, there are rumours that there will be an *ad hoc* arrangement outside the framework of the Sugar Bill for the allocation of the "Cuban quota." The arrangement is expected to be announced when the Bill is passed.



HINDUSTAN MOTORS RELY ON
CARBORUNDUM UNIVERSAL ABRASIVES
FOR ALL GRINDING OPERATIONS



"Without precision grinding, the vital mechanics of a modern motor car will not function. We are using Carborundum Universal Grinding Wheels for this purpose and are able to achieve the very close limits essential for moving parts and for fine surface finishes. Carborundum Universal Abrasives are of consistent good quality without which we cannot maintain our precision grinding."
— HINDUSTAN MOTORS LTD., Uttar Para, Hooghly District.

IN ANY INDUSTRY... FOR ANY GRINDING OPERATION ... YOU CAN RELY ON GRINDING WHEELS BY CARBORUNDUM UNIVERSAL

Besides Grinding Wheels our other items of manufacture include Carboflex Reinforced Depressed Centre Wheels, FERROCARBO Briquettes, Mounted Wheels and Points and Bonded Abrasives Specialities.

CUZ-1968A

The Third Five Year Plan;
Bird-Heilgers' part in it...

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs.1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy: stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and *tops the list of Bird-Heilgers exporting* activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

(2/62)

STEEL EXPANSION LAGGING BEHIND

BRITISH-TYPE STEEL BOARD UNSUITABLE

THE third Plan's target for the steel industry is 10.2 million ingot tons by way of installed capacity. The share of the private sector in this target is 3.2 million tons, and this includes the existing capacity of 3.0 million tons with the T.I.S.Co. and I.I.S.Co. together. The expansion of capacity to the tune of 0.2 million tons in the private sector is expected to come from the installation of scrap-based electric furnaces. The share of the public sector in the overall target of 10.2 million tons is 7.0 million tons, and this includes the existing aggregate capacity of 3.0 million tons with the four State-owned steel plants, namely, Bhilai, Rourkela, Durgapur and Mysore Iron and Steel Works. The balance of 4.0 million tons will be accounted for by the expansion of the four plants and by the construction of another steel plant at Bokaro with an initial capacity of one million tons of ingot. It will thus be seen that almost the entire expansion in the steel industry is the responsibility of the public sector.

But, already, the first year of the third Plan has ended and the expansion programme is yet to get under way. The programme is now about a year behind schedule. As Mr. N. N. Wanchoo, Secretary to the Department of Iron and Steel in the Union Ministry of Steel and Heavy Industries, admitted at a Press conference held by him at New Delhi on 31st May soon after his return from a visit to Bonn, Washington and London, orders for the expansion of the three public sector steel plants should have been placed by the end of the first year of the third Plan. These orders are now expected to be placed only by the end of the second year. On present indications, it is only the Bhilai plant that will embark upon its expansion sooner than either Rourkela or Durgapur, for the agreement with the Russians for its expansion has already been completed. The tenders for additional equipment for the expansion of the Rourkela plant have been received, but it will take two to three years, according to Mr. Wanchoo, to complete the work after firm orders have been placed. In the case of the Durgapur plant, even quotations have not yet been received.

As for the proposed new plant at Bokaro which the United States has offered to construct, some further delay is foreseen, for the team of American experts, expected to arrive in India in the third week of the current month, will take six or seven months to complete a general techno-economic study of the Bokaro project on behalf of the U.S. Government. If the study team's report satisfies the U.S. Government of the viability of the project, actual negotiations for American financial assistance are likely to commence only early next year. Mr. Wanchoo's statement that, even if the U.S. aid plan were not to materialise, the Government of India would go ahead with the project is an instance of bravado. Such an attitude may only complicate and delay the negotiations with the United States which may not have *wholly* reconciled itself to the idea of non-participation by the American steel companies in the capital structure of the project. It would appear from this review of progress, to date, of the steel expansion programme, that all the 4.0 million tons of additional capacity may not come to be actually installed by the end of the third Plan. A large part of the programme may, therefore, spill over into the fourth Plan.

The record of the public sector in the matter of construction and management of the steel plants has so far been anything but good. The Hindustan Steel Corporation, which is a Government company, has not been noticeably efficient in organising production, especially at Rourkela and Durgapur. The slow progress towards the attainment of capacity production, more particularly in the Rourkela plant, cannot be wholly explained by the administrative control of the Department of Steel, for there have been some delays caused otherwise too. Still, it would not be far wrong to infer that the Hindustan Steel Corporation, controlled as it has been by the Ministry, might have sought to avoid responsibility for some vital management decisions. If this tendency to avoid responsibility is to be rectified, there can be no real alternative to giving more and more autonomy to the Corporation in its day-to-day activities. That this is going to be done has already been indicated by Mr. C. Subramaniam, Minister for Heavy Industries and Steel, in the course of his reply to the recent Lok Sabha debate on the demands for grants for his Ministry. As far as the Department of Steel, which is administratively responsible for the public sector steel plants and is also responsible for the further development of capacity for the production of steel, is concerned, greater expeditiousness in the matter of decision-taking is certainly expected of it. In so far as delays are caused by the Department of Steel, it will be for the new Minister to reduce them as much as possible.

Since the Hindustan Steel Corporation has been in charge not only of the operation of the public sector plants but also of their construction, it has presumably had some physical difficulty in discharging the twin responsibilities equally efficiently. Perhaps to avoid a similar difficulty in future when the existing plants have to be operated efficiently and the expansion projects, as well as the proposed new plant at Bokaro, have to be constructed according to schedule, the Government has been considering a proposal to establish an Iron and Steel Board like the one functioning in Britain. In pursuance of this proposal, Mr. Wanchoo has also studied, during his recent visit to Britain, the working of the Iron and Steel Board there. It is not known what the results of his study are. But, whatever be his impressions, there seems to be no care for replacing the Hindustan Steel Corporation by an Iron and Steel Board of the kind functioning in Britain. This statutory Board in Britain, it may be noted here, has been set up under the Iron and Steel Act, 1953, which repealed the steel nationalisation legislation of 1949. It only exercises a general supervision over the iron and steel industry; its members are appointed by the Government and it is financed by levies on the units of the industry. The Board is empowered to make this levy. It also discharges the function of sanctioning price increases for steel—a function which, in India, is being discharged by the Government on the recommendation of the Tariff Commission.

There can be no question of replacing the Hindustan Steel Corporation by a Board of that type, for the former is in charge of construction, expansion and operation of the public sector plants in this country whereas the latter has only the limited function of supervising the iron and steel industry which, in Britain, is almost entirely in the private sector. In India, the function of supervision over the entire iron and steel industry is already being exercised by the Department of Steel in the Ministry of Heavy Industries. What is needed in India is not one more statutory body but the impartation of greater vigour and efficiency to the two existing agencies which, by now, should also be in a position to learn from their own experiences in the recent past.

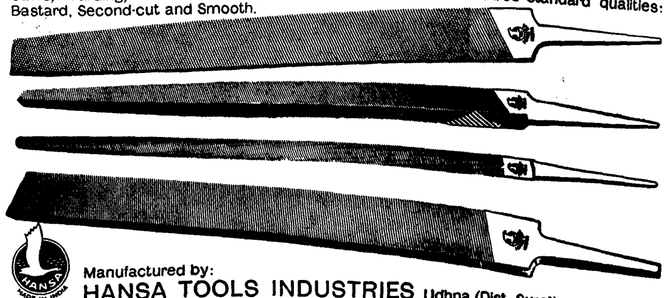
BOILER TECHNOLOGY

Measures to bring boiler technology in India in line with the standards reached in industrially more advanced countries were discussed at the thirty-second meeting of the Central Boiler Board held at Shillong from 21st to 26th May. The meeting was attended by the Chief Inspectors of Boilers of State Governments and the representatives of coal industry, railways and manufacturers of boilers. It was announced at the meeting that the Board's manufacturing programme included the building of boilers of latest design. The Board's aim, it was further stated, was to see that the demand for higher capacity boilers, using increased steam pressures and temperatures, could be met in full from indigenous sources. In pursuance of this aim, it was proposed to import foreign experts to form the core of an inspection organisation at the Centre for providing competent inspection facilities to the industries in the initial stages of development as well as for training the existing inspectorates in the advanced techniques of inspection during construction. The constitution of the proposed body would be the responsibility of the Central Government, while its effective utilisation would be a co-operative effort of the Central and State Governments. It was also made clear at the meeting that the services of foreign experts would be dispensed with when the country's own inspectors had developed the necessary expertise.

A PRECISION JOB DEMANDS PRECISION TOOLS! THAT'S WHY BETTER WORKSHOPS INSIST ON

HANSA ENGINEER'S STEEL FILES

HANSA files are unsurpassed for hardness, accuracy and durability. They are made of choice steel, specially treated to retain a sharp cutting edge even after long use. Up-to-date machinery and rigorous tests at every stage of manufacture ensure optimum quality. HANSA files are available in Flat, Round, Half-round, Square, Triangular, Taper Saws, Mill Saws, Warding, Knife and Pillar types in various sizes and in three standard qualities: Bastard, Second-cut and Smooth.



Manufactured by:
HANSA TOOLS INDUSTRIES Udhna (Dist. Surat).

NEW PRODUCTS AND PROCESSES

Heavy Duty Welder

A NEW, heavy duty welding machine for use on pipelines, refineries and all heavy field construction work is being manufactured by the Lincoln Electric Company (Australia) Pty. Ltd., of Sydney. It combines up-to-date design, robust construction, long economical life, compactness, light weight and mobility. It weighs only 15 cwt. Known as the "Shield Arc 350 D," the new machine is the result of many years' experience by Lincoln Electric in the design and construction of engine-driven welders. The diesel-powered machine is offered at a price much lower than previous large petrol-driven models designed and manufactured by Lincoln. Output current range of 40-400 amps permits the use of large electrodes for economical welding. Independent selection of welding voltage and amperage enables maximum speed and ease of welding under all conditions of joint and position. The engine and welding generator are carefully matched to provide unchanging arc conditions and the units are close coupled for compactness and weight saving.

Specially formed steel channels provide extreme rigidity for chassis and steel canopy.

The all-steel canopy has hinged side panels permitting easy access to engine and welding generator. Rubber mountings for generator and engine absorb vibration.

Smooth economical diesel power for the welder is provided by a water-cooled 32 b.h.p. Australian manufactured Perkins P3 engine.

This rugged unit will operate for longer periods between overhauls than petrol engines, and give long, trouble-free on-the-job operation.

The trailer type under-carriage for road use is provided as an optional extra. Other optionals are: lock-up kit for the canopy and an auxiliary power outlet providing 1 kw. of 110 volt power.

Portable Power Unit

Plumbers and engineers can now eliminate many laborious and time-wasting manual operations by installing a portable power drive unit manufactured by Torque Leader Tools Pty. Ltd., of Melbourne, Australia.

It is adaptable wherever power is needed for pulling, lifting, cranking or turning.

Basically a powered lever, the Torque Leader "168" consists of a worm and ring gear assembly powered by a reversible ½ h.p. electric motor.

The ring gear accepts a wide variety of adaptors to suit almost any plumber's die or square shaft drive which is normally used by hand. The entire unit is housed in a high tensile aluminium case which makes it a light compact tool for on-the-spot operations. The firm claims that with the Torque Leader "168" a 2 in. BSP thread can be cut with a conventional die head in a little over 2 minutes and a 4 in. thread in only 8 minutes.

The tool, with adaptors and dies, weighs only 33 lb.

Features of the "168" include hardened gears running on ball bearings, forward/reverse switch, and insulated handle which can be clamped anywhere through 180 degrees for safe control in tight corners. The tool is packed in a fitted carrying case with a half gallon can of special cutting oil, a cutting oil applicator, two adaptors and a handle locking key. Replacement cans of cutting oil adaptors for the most commonly-used hand dies are also available and the company provides advice and will design special adaptors to suit customer requirements.

Rapid Analysis of Coal

A new process for the rapid analysis of coal to determine its ash and moisture content has been evolved at the Central Fuel Research Institute, Jealgora. Through this process, coal samples can now be analysed in ten minutes, as against eight hours taken by the earlier known processes.

Another advantage of the new method is that it is also applicable to wet coal which emerges from coal washing plants. It does away with the need for drying, crushing and ignition, thereby enabling both continuous operation of the washing plants and proper control over the quality of washed coal.

Coal is one of the basic raw materials for almost all the major industries and the quality of coal has a vital bearing not only on the efficiency of production but also, in several cases, on the life of heating systems. The percentage of ash present and the physical and chemical nature of ash are the primary factors which determine the quality of coal with respect to its calorific value and other characteristics.

Iron and steel works, cement and fertilisers industries and the railways are some of the major consumers of coal and the consignments received from day to day vary considerably in their ash content. Before use every bulk consignment is to be analysed. The methods of analysis currently in use are time-consuming—one analysis taking about eight hours.

New Oat Variety for Breakfast Food

A new oat variety for breakfast food industry has been introduced by the Indian Agricultural Research Institute, New Delhi. The Plant Introduction Organisation of the Institute, which procures from all over the world plant material which could be directly or indirectly utilised to meet the requirements of this country, has introduced the Australian oat variety 'Kent' which yields grains of the desired milling quality for the breakfast food industry. This newly started industry in the country has been facing considerable difficulties because of the non-availability of local material of desired quality and shortage of foreign exchange for purposes of import. Trials conducted with a set of Australian, American and European varieties showed that the variety 'Kent' is highly satisfactory. Efforts are now being made to multiply its seeds.

Manufacture of Puppet Leather

The Central Leather Research Institute, Madras, has developed a new process for making puppet leather using sulpho-chlorinated oil. The leather produced by this process is readily wettable and washable, and also preserves the natural shine and colour of the original skin. The process is suitable for tanning on a cottage scale.

New Process for Fish Preservation

An adjunct to preservation of fish by traditional methods such as sun-drying and salting has been found out as a result of investigations carried out at the Fisheries Technological Research Station, Ernakulam. This new process makes use of the chemical, propionic acid, and is very effective in suppressing red halophile growth and mould attack in wet-salted and pickled fish and considerably increases the storage life of fish. Propionic acid can be safely used for fish preservation. It has already been listed under permissible food additives in Germany and the U.S.A. It is a natural constituent of cheese and dairy products. Propionic acid can be incorporated easily since its sodium and calcium salts are soluble white powders which can be pre-mixed with the salt employed for curing.

Shrink-proofing Woollens

Progress in perfecting a process, which imparts shrink resistance to woollen garments and improves their washability, was recently reported in Albany, California, by research scientists of the United States Department of Agriculture (U.S.D.A.). The process, called interfacial polymerisation (I.F.P.) is particularly adaptable to garments that once had to be handled with care in cleaning to prevent consequent misshapen appearance.

I.F.P. is a unique way of anchoring minute quantities of resin on tiny wool fibres. Only a fraction of an ounce of resin is needed to treat a pair of slacks or a skirt. The resin reduces the tendency of wool fibres to tangle and mesh or "felt" and thus to shrink during washing. Largest test of the process is now taking place in the U.S. armed forces with initial reports of satisfactory results. Several thousand yards of wool were I.F.P.-treated and made into uniforms. The results of the treatment hold high promise for easy-care slacks, sweaters, socks and uniforms. Textile manufacturers generally, have rated I.F.P. as the best treatment yet developed in the long search for processes that would control wool shrinkage and help woollens to maintain their appearance and finish. The problem remaining is turning the laboratory method into a universal low-cost, rapid and efficient commercial process. Wool and mohair laboratory scientists in the U.S. Department of Agriculture are continuing to refine I.F.P. Studies indicate that moth-proofing treatments can be combined with I.F.P. to insure garments against insect damage as well. Some ground has been gained in determining that woollen yarns can be I.F.P.-treated before initial weaving.

Machine for Drying Rice

A new machine for drying parboiled rice which is quick and efficient has been introduced in rice-growing countries by a British firm (Alvan Blanch Development Company, Ltd., Chelworth, Malmesbury, Wiltshire). It is announced that 15 of the firm's grain driers have gone to Ceylon—an order worth over £12,000. Another 10 are to follow soon. Only small modifications have been necessary to the standard British type of grain drier. The main one has been the removal of the cold-air unit and an enlargement of the hot-air factor. The parboiled rice starts off with a moisture content of about 50 per cent and this has to be reduced to 10 per cent—a removal requirement of 40 per cent, about eight times the normal need for grain in Britain. The traditional method of drying rice paddy by spreading it out and turning it in the sun has hazards in wet weather. The new drier, it is claimed, provides the answer to the problem.

Automatic Venting Filter

A new automatic venting filter for use in conjunction with pneumatic conveying systems has been developed by a British firm of dust extraction specialists. The unit, compact in size, can be used for catching dust from a variety of powdered or granular materials, and is fixed at the air discharge point on the receptacle into which the material is being blown. While embodying the fundamental dynamic air flow characteristics generally associated with some blow ring type filters, the unit employs limited quantities of compressed air as a cleaning medium and has the advantage of having no mechanical moving parts. This assures low maintenance costs and reliability of operation, and virtually 100 per sent filtration efficiency is claimed.

IBCON

INDUSTRIAL CONSULTANTS

in the expansion of TEXTILE INDUSTRY

IBCON offers to intending promoters of textile industry, comprehensive consultancy services comprising:

- Project study and financial estimates.
- Project design including equipment, buildings, power, steam, water-supply, etc.
- Advice on purchase of equipment from India or abroad by tenders or negotiations.
- Supervision of construction of buildings and erection of equipment and services.
- Commissioning and operation.
- Senior and supervisory staff selection.
- Management organisation, clerical procedures, quality control, scientific cost and wage schemes.
- Technical assistance after commissioning to ensure successful and profitable operation.
- Also production planning, waste control, stores, dyes and fuel consumption.

KRISHNARAM BALDEO BANK PRIVATE LIMITED

(A SCHEDULED BANK)

Registered Office: **JAYAJEE CHOWK, LASHKAR, GWALIOR**

FOURTH ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1961, together with the Auditors' Report.

	Rs. nP
During the year the working of the Bank has been satisfactory and after making the necessary and usual provisions the Bank has made a profit of	1,72,891.34
The following appropriations have been made :	
Amount provided for Taxes	30,000.00
Amount provided for Gratuity	10,500.00
Amount transferred to Reserve Fund	50,000.00
Amount transferred to Contingency Reserve	22,301.51
The Directors now propose :—	
To pay dividend for the year ended 31st December, 1961, at the rate of Re. 1 per share subject to deduction of tax at the prescribed rates which will absorb	50,000.00
To carry forward to the next year's account	10,089.83
Total .. Rs.	1,72,891.34

Under Article 149 of the Articles of Association of the Company Directors Col. Brijraj Narain and Shri D. P. Mandella retire by rotation but are eligible and offer themselves for re-election.

The Directors wish to record their deep sorrow at the sad and premature demise of His Highness Maharaja Jiwajirao Scindia. It was due to his experience, untiring efforts and keen interest that this Bank achieved its present stature and in His Highness's untimely and sudden demise the Bank has lost its greatest benefactor.

The Directors convey their thanks to all the constituents of the Bank for their support to the Institution.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration

By Order of the Board,

(Sd.) BRIJRAJ NARAIN,
L. B. SETHI,
R. B. VAISHYA, } *Directors.*

GWALIOR, *26th March*, 1962.

KRISHNARAM BALDEO BANK PRIVATE LIMITED—*(Continued)*

STATEMENT OF PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER 1961.

AUDITORS' REPORT TO THE MEMBERS

1. We have audited the attached Balance Sheet of the Krishnaram Baldeo Bank Private Ltd. as at 31st December, 1961, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date (annexed thereto).

2. We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet together with the notes thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

RESULTS OF INDIA REINSURANCE CORPORATION ENCOURAGING

DIVIDEND STEPPED UP

THE working results of the India Reinsurance Corporation (General Manager: Mr. R. M. Desai, Bombay) during the year ended 31st December 1961 reflect the generally favourable conditions under which the general insurance business was carried on in the country last year. Total gross premium written by the Corporation jumped up from Rs. 3.80 crores to Rs. 5.06 crores. The net premium too advanced from Rs. 1.90 crore to Rs. 2.59 crores. This rise in premium income, coupled with a more favourable claims experience, of 40.91 per cent, as against 50.51 per cent in the previous year, lower commission cost and management expenses, resulted in a larger underwriting profit of Rs. 5.25 lakhs (2.03 per cent of net premium income), as against a mere Rs. 50,949, 0.27 per cent of net premium, in the previous year. The net profit, too, increased from Rs. 6.54 lakhs to Rs. 9.79 lakhs and the dividend has been stepped up from six per cent per annum to eight per cent per annum, both subject to deduction of tax. The following table summarises the salient features of the working of the Corporation during the three years ended 31st December 1961:

(In lakhs of rupees)

	For the year ended 31st December		
	1961	1960	1959
Fire :			
Net premium	114.00	83.21	91.00
Net claims	46.90	37.68	41.54
	(42.9)	(45.3)	(45.6)
Commission and other charges.	44.91	32.62	33.49
	(39.4)	(39.2)	(36.8)
Expenses of management	2.84	2.31	2.10
	(2.5)	(2.8)	(2.3)
Fire fund	57.00	41.60	41.90
Marine :			
Net premium	59.68	41.57	39.43
Net claims	38.90	30.77	29.77
	(65.2)	(74.0)	(75.5)
Commission and other charges.	14.53	9.43	9.60
	(24.3)	(22.7)	(24.3)
Expenses of management	0.74	0.58	0.45
	(1.3)	(1.4)	(1.2)
Marine fund	59.68	41.57	20.77
Miscellaneous :			
Net premium	85.17	65.59	51.99
Net claims	33.61	27.72	27.09
	(39.5)	(42.2)	(52.1)
Commission and other charges.	28.13	20.98	17.12
	(33.0)	(32.0)	(32.9)
Expenses of management	1.59	1.36	0.9
	(1.9)	(2.1)	(1.7)
Miscellaneous fund	42.58	32.79	24.05

Dividend	8.00	6.00	5.00
	(8%)	(6%)	(5%)
Carry forward	2.58	0.78	0.24

Departmentwise, the experience of Indian business in the fire section was excellent. Net premium in the fire department amounted to Rs. 1.14 crore, as against Rs. 83 lakhs in the previous year. This rise, though substantial in absolute terms, is, however, not very significant when compared with the rise in aggregate gross premium income (in all the departments taken together) from Rs. 3.80 crores to Rs. 5.06 crores. There are two reasons for this less than proportionate rise in the net premium of the fire section. One, the retrocession of business by the Corporation to member-companies against their compulsory cession was increased from 45 per cent in 1960 to 50 per cent in 1961. Two, in order to give further advantage to Indian companies, who make additional voluntary cessions in its favour, the Corporation gave them a much larger proportion of its reciprocity out of Indian business. Although the increase in net premium income in India is small, there has been a very substantial increase in the premium income under the foreign treaty acceptances, because of the higher reciprocity secured in the year under review. Explaining this point further, Mr. A. D. Shroff, Chairman of the Corporation, says in his statement to shareholders thus:

"The experience in respect of fire treaties accepted from companies in the United Kingdom has fortunately improved to some extent as compared with the past few years, and we have been able to realise a small profit on this portfolio. The results of our incoming treaties from other territories have been very satisfactory with the exception of a couple of serious losses due to fire conflagrations. The growth in the volume and the excellent profitability of the fire facultative business written by the Corporation has been maintained during the year 1961. The Reinsurance Exchange at Bombay continues to work smoothly and is fulfilling its role of increasing the absorption capacity of the Indian market for fire business."

Claims in the fire department declined from 45.3 per cent of net premium to 42.9 per cent. Commission and other charges were, however, fractionally higher at 39.4 per cent, as against 39.2 per cent in the previous year, while expenses of management were lower at 2.5 per cent, as against 2.8 per cent in 1960. After transferring Rs. 15.41 lakhs to the reserve for unexpired risks, which now stands at Rs. 5.7 lakhs, being 50 per cent of premium, there is an underwriting profit of Rs. 3.33 lakhs.

In the marine department, there has been a substantial increase in net premium income both in India and abroad. Claims at the same time declined from 74 per cent to 65.2 per cent. Commissions and other charges aggregated Rs. 14.53 lakhs (24.3 per cent), as against Rs. 9.43 lakhs (22.7 per cent) in the previous year. Expenses of management were lower at 1.3 per cent of premium, as against 1.4 per cent in 1960. After earmarking Rs. 18.10 lakhs to the reserve for unexpired risks, which now stands at Rs. 59.68 lakhs (100 per cent of premium), the accounts show a deficit of Rs. 11.18 lakhs. This is, however, much lower than the debit of Rs. 19.13 lakhs in the previous year. It will be interesting to quote here the observations of Mr. Shroff on the working of this department:

"Cargo premium income in India, which was relatively steady up to 1959, increased substantially in 1960, and there has been an even larger increase during the year 1961; the underwriting result of this business, however, has continued to be marginal. Substantial stepping up of our retained premium on Indian hull business has enabled us in the year under review to take full advantage of the excellent profit yielded by the business. As regards the foreign treaties, it is somewhat too early to have a precise idea about the ultimate experience, as most of these treaties have been on our books only for the last few years, but from whatever results are available, it appears that the portfolio is running satisfactorily."

In the miscellaneous department, there was a further substantial growth in premium income and the overall experience of this business was satisfactory. A part of this increase was, perhaps, due to the higher hire-purchase guarantee business done by the Corporation. Aviation business also showed a very high profit, there having been no loss of any significance during the whole year. The introduction of Boeing jet aircraft, with its high insured values and large amount of cover for liabilities, has, however, necessitated reinsuring abroad a very large portion of this business. Net premium income from miscellaneous business rose from Rs. 65.59 lakhs to Rs. 85.17 lakhs. Net claims aggregated Rs. 33.61 lakhs (39.5 per cent), as against Rs. 27.72 lakhs (42.2 per cent) in the previous year. Commission and other charges were, however, higher at Rs. 28.13 lakhs (33.0 per cent), as against Rs. 20.98 lakhs (32.0 per cent) in the previous year. Expenses of management were lower at Rs. 1.59 lakh (1.9 per cent), as against Rs. 1.36 lakh (2.1 per cent) in the previous year. After transferring Rs. 9.79 lakhs to the reserve for unexpired risks, which stands at Rs. 42.58 lakhs (50 per cent of premium), there is an underwriting profit in the department of Rs. 13.10 lakhs, an increase of Rs. 5.52 lakhs over that for 1960.

After crediting interest, dividend from investments and other miscellaneous receipts, amounting to Rs. 8.07 lakhs, and the net underwriting profit of Rs. 5.25 lakhs to the profit and loss account and debiting the expenses of management not applicable to any particular fund and after making a provision of Rs. 3.50 lakhs for taxation, there is a net profit of Rs. 9.79 lakhs to which has been added Rs. 78,370 brought in from the previous year, making available Rs. 10.58 lakhs for distribution. The proposed dividend of 8 per cent, subject to tax, will absorb Rs. 8 lakhs, leaving a balance of Rs. 2.58 lakhs to be carried forward. The Corporation had, as on 31st December 1961, capital and reserves aggregating Rs. 2.59 crores, comprising a paid-up capital of Rs. 1 crore and departmental reserves amounting to Rs. 1.59 crore.

A noteworthy feature of the Corporation's efforts to increase its business in 1961 was the establishment of two branch offices in Australia and development of connections in South-East Asia and the Far East. This step was taken only after careful exploration of the possibilities of expanding its business in these territories.

ASP/LIC-121

Your average executive spends more than half his waking hours away from home. He is away working for his employer, helping you make a success of your enterprise.

You value the diligence of these men and you endeavour to reward them accordingly.

The LIC can show you a new tax-light way to do so. It is through the Group & Superannuation Schemes. These Schemes possess three unique advantages:

1 Your executives can receive a part of their emoluments tax-free to build up retirement benefits and maximum family security
2 This may not involve any extra cost to the employer
3 The employer gets tax-relief on what he pays towards the Scheme

For further information, please contact the nearest LIC Divisional Office and have a word with the Manager. He will be delighted to give you full particlars.

Durgapur Steel Project: Over 1,50,000 tonnes of ACC Cement have been used on this project

FOR INDIA'S INDUSTRIAL PROGRESS... The most significant development in India since Independence has been the rapid industrialisation of the country. Whole communities have moved in and new townships have sprung up around new industrial undertakings. New homes, schools, hospitals, roads, bridges, dams...huge quantities of cement have been used in the surge of construction all over India. And we are only at the beginning of this era of development and growth. In order that more cement may be available for India's industrial expansion and for the private consumer the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this. **ACC and Sankar brand Cements**

U.K.'S PLAN TO IMPOSE COMMON TARIFF ON TEXTILES

MR. LALL VOICES INDIA'S CONCERN

BRITAIN has submitted a new set of proposals to the Common Market on the question of imposing common tariffs on imports from Asian members of the Commonwealth, in the event of its joining the Six. A reference to the proposals was made on page 975 of *Commerce* of last week. Although full details of the British proposals have not been released, their broad pattern is no more in doubt. The proposals, which are in the nature of a package deal, seek to apply the common external tariff of the Six on imports of cotton textiles (at the rate of 18 per cent) from India, Pakistan and Ceylon over a transitional period. In effect, this would mean abolition of the present system of duty-free entry. The U.K., of course, will apply the Common Market external tariff only by stages. Thus, 30 per cent of the Common Market tariff will be enforced soon after the U.K. joins the Six; and the remaining 70 per cent will be brought into force in two stages before 1970. Provision is also made for a review of the situation at the end of the first stage of the transitional period, in case the trade in cotton textiles were to be adversely affected by that time. All the same, the proposed change will mean a considerable hardship to Indian textiles which are already handicapped by the relatively higher cost of production as compared with its competitors. Besides the above proposal, the British plan envisages the application of *nil* tariffs on some other manufactures and tropical products like tea. Further, duty-free quotas have also been advocated for another group of manufactures and agricultural products like tobacco.

Asian Commonwealth Countries

It will be some time before the reaction of the Six to the new proposals are known. Meanwhile, India and other Asian members of the Commonwealth have made no secret of their deep concern over the U.K.'s latest move, particularly in respect of cotton textiles, as they would mean a distinct reduction in the preferential tariffs which their products now enjoy in the British market and their total elimination at a later date. India, in particular, has reacted sharply to the new proposals, unlike in the past when it chose to remain silent on its stand towards the U.K.'s entry into the Common Market. Mr. K. B. Lall, head of India's mission to the European Economic Community, candidly observed at a Press conference at Brussels that the U.K.'s package offer had come as a disappointment to India and other countries. He held the view, very rightly in our opinion, that the application of 18 per cent duty on import of cotton textile was not a sensible way of helping a developing country. He gave two very good reasons to justify his statement. In the first place, the move, if implemented, would lead to a perceptible reduction in India's exports to the U.K., its major overseas market. Exports of cotton textiles to the U.K. have been yielding foreign exchange of the order of Rs. 18 crores per annum on an average. Secondly, it would impair India's capacity to import essential machinery and equipments and to service and repay the loans she has been taking from the U.K. and other foreign countries. Referring to the provision made for consultations at the end of the first stage, Mr. Lall commented that, by that time, India would have already suffered considerable damage and that its payments position was so critical that it could not afford to take any such risks. Instead, the wise thing to do would be to let India continue to have the freedom of access to Britain and to lower the tariff barriers in continental Europe and then to review the position if it were found that the interests of Britain and Europe had actually suffered.

Mr. Lall's concern will be widely shared not only in India but also by other Asian Commonwealth countries. It now looks as though the U.K., in its anxiety to join the Common Market, is prepared to grant large concessions to the Six in Commonwealth preferences. This in itself would not have been a source of concern, had the U.K. made adequate arrangements for safeguarding the Commonwealth interests in an expanded Common Market and thereby avoid any appreciable dislocation in established patterns of trade. At the moment, there is no reason to think that it is prepared to go the whole hog on this issue; on the contrary, it seems to be taking a position which is not in full consonance with its earlier assurances to Commonwealth countries.

The Commonwealth trading system, which accounts for as much as 25 per cent of total world trade, is sustained largely by a wide range of preferential tariffs mutually granted by the members. The U.K.'s entry into the Common Market and its adherence to the common external tariff as under the Treaty of Rome will seriously disturb a pattern of trade evolved over a period of decades, unless the Common Market is prepared to display a more accommodating attitude towards the members of the Commonwealth than it has done to date. In this context, a comprehensive review of the recent pattern of trade of Commonwealth countries, prepared by the Commonwealth Economic Committee, London, is of topical interest. Entitled *Commonwealth Trade in 1960-61*, the publication seeks to examine the role of the Commonwealth in world trade. In 1960, Commonwealth exports accounted for 24 per cent of world exports (excluding those of the Sino-Soviet bloc) a slightly lower proportion than that during the three preceding years. The Commonwealth imports at about 27 per cent in that years shared fully in the world import boom. By the first half of 1961, there was very little further change in either Commonwealth exports or imports, as compared with the same period in 1960. There was, however, a setback in exports from a number of less developed countries, which was, however, made good by the growth of exports from developed countries of the Commonwealth. Table I shows the trends in world trade by major areas and the share of the Commonwealth since 1955.

World Trade

It will be seen from Table I that the share of the Commonwealth in 1961 (annual rate based on the figure for the first six months) in world exports was 9.9 per cent, which compares well with 9.8 per cent in 1960 and 8 per cent in 1955. Similarly, the percentage of imports by the Commonwealth was higher at 11.7, as against 11.7 and 10.3, respectively. An important trend to be noted here is that the U.S., Common Market and Japan continue to supply an increasing share of world markets for manufactured goods at the expense of two leading Commonwealth suppliers of these goods, namely, the U.K. and Canada. Accordingly, while world exports of manufactured goods rose by 15 per cent in 1960, with high rates for exports from the U.S., Common Market and Japan, the U.K. and Canada were able to expand their exports of these goods at only half this rate.

Considering the generally high level of world industrial activity, the performance of primary commodities exported by the less-developed countries is admitted as "disappointing." There was a 5 per cent gain in the volume of world exports of agricultural commodities in 1960. But the increase was accounted for mainly by the exceptionally high shipments of cotton from the U.S., partly under aid and partly under commercial exchanges with European countries. On the contrary, for the main Commonwealth countries, there were few commodities for which the quantity exported expanded substantially in 1960 over the previous year "without weakening in prices." Prices of world primary products as a whole, says the review, were slightly lower in 1960 than in 1959, and were still falling at the beginning of 1961.

In the sphere of manufactured goods, although the Commonwealth has encountered increasing competition from other developed countries, its aggregate exports were still higher. Shipments of machinery and electrical goods from the Commonwealth, for instance, rose by 8 per cent in 1960, but total world exports in these commodities rose by as much as 16 per cent. But the review points out certain encouraging results in exports from some of the developing countries. Mention is made here of the increasing shipments of light engineering goods from India, cotton textiles from Pakistan and general manufactures from Hong Kong. A feature of exports in the first half of 1961 was the decline in the share of Malaya, Ceylon, Rhodesia and Nyasaland, Ghana and Nigeria, as a result of lower prices for such commodities as rubber, copper and cocoa.

ELPHINSTONE MILLS FARE WELL

DIVIDEND STEPPED UP AGAIN

THE Elphinstone Spinning and Weaving Mills Company Ltd. (Chairman: Mr. B. L. Jalan, Bombay) has staged an all-round improvement during the year ended 31st December 1961. Sales have recorded a handsome rise of Rs. 62.86 lakhs to Rs. 289.57 lakhs, in contrast to the drop of Rs. 13.69 lakhs to Rs. 226.71 lakhs in the previous year. The gross profit, which had shot up in 1960 from Rs. 18.54 lakhs to Rs. 35.83 lakhs, that is, by 93.2 per cent, has increased further by 19.1 per cent to Rs. 42.78 lakhs. The profit-margin (ratio of gross profit to sales) for the year under review is, of course, lower at 14.7 per cent, that for 1960 being 16 per cent. But it must be noted that the previous year's high figure of 16 per cent was due more to the spurt in profit and partly the setback in sales. Production, reflected in higher sales and larger inventory, also increased during the year. Once again, the Directors have passed on to investors the benefits of recovery from the 1957 and 1958 setbacks by stepping up the return on the Rs. 50 fully paid ordinary share from 18 per cent to 22 per cent per annum, subject to tax. The net return per share works out to 15.4 per cent and is the maximum at least since 1948.

One is inclined to agree with the Directors that the investors would find the working results for the year satisfactory, particularly when, on the one hand, trading conditions were rather dull and manufacturing costs continued to rise due to higher prices of cotton and enhanced labour charges and, on the other, voluntary control and stepping of prices on cloth continued all throughout, and what is worse, natural calamities and persistent stringency in the money market affected the normal offtake of the Company's products by local merchants. As compared with the previous year, expenses on raw materials, stores and spares were higher by some Rs. 20 lakhs at Rs. 149.19 lakhs, staff expenses by more than Rs. 11 lakhs at Rs. 82.82 lakhs (to the extent of Rs. 6 lakhs because of an *ad hoc* provision for bonus pending the fixation of the formula by the Bonus Commission), and other expenses by nearly Rs. 14 lakhs at Rs. 38.17 lakhs. After providing Rs. 8.08 lakhs (Rs. 6.30 lakhs in 1960) for depreciation and Rs. 16 lakhs (Rs. 7 lakhs) for taxation, the net profit works out to Rs. 18.70 lakhs, as against Rs. 22.53 lakhs a year before. While the proposed higher dividend absorbs Rs. 6.60 lakhs, as against Rs. 5.40 lakhs in the previous year, the amount transferred to reserves has been Rs. 9.01 lakhs, as against Rs. 14.54 lakhs. The carry forward is Rs. 1.37 lakh, as against Rs. 1.06 lakh brought in.

The table below gives a fair idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December

Low	111.00	55.00	35.00	30.00	32.00

* Subject to deduction of tax.
† Dividend for three years.

The Rs. 50 fully paid ordinary shares are going quite strong. On the 2nd inst. they were quoted on the Bombay Stock Exchange at Rs. 146, a rise of Rs. 35 since the beginning of the year under review, that higher ceiling prices ed last year were Rs. 126 and Rs. 55, respectively. Even at their current quotation of Rs. 132 *cum-div.*, the shares fetch an attractive net yield of 12.3 per cent per annum.

Modernising and renovating its plant and equipment, the Company installed, during the year, machinery valued at Rs. 14.83 lakhs, which included one back filling machine, a Barber Colman Winding and warping machine, three cloth inspection machines, one R.K.I. make O.M.S. ring frame and an embossing calender for the leather cloth division. Machinery and equipment valued at Rs. 9.63 lakhs, including 48 Textime automatic looms and a mercerising range, were received during the year. These have since been erected and put into operation. The looms, however, are having teething troubles. Three high-speed drawing frames are in the course of being received, against an order for five frames placed by the Company. Orders have also been placed for five ring frames of N.M.M. make and one Cocker's H.S. slasher sizing machine from the U.S. The purchase of the block of the Moon Mills Ltd. for Rs. 35 lakhs was completed in August last.

The financial position of the Company is satisfactory. Its paid-up capital of Rs. 55 lakhs, of which equity is Rs. 30 lakhs, is supplemented by reserves and surplus amounting to Rs. 52.34 lakhs. Its secured loans of Rs. 75.58 lakhs include bank borrowings of Rs. 49.35 lakhs (Rs. 28.46 lakhs a year before) and a loan from the National Industrial Development Corporation Ltd. of Rs. 26.23 lakhs (Rs. 22.97 lakhs). Unsecured loans amount to Rs. 1.75 lakh and other liabilities and provisions to Rs. 90.77 lakhs. Excluding the N.I.D.C loan, the Company's indebtedness to outsiders aggregates Rs. 141.87 lakhs, to cover which are available current assets, including book debts but excluding investments, of Rs. 144.70 lakhs. Investments of Rs. 56,000 comprise Rs. 14,000 quoted and Rs. 43,000 unquoted. The quoted investments command a market value of Rs. 11,000 and are lodged as deposits with the Central Excise Collectorate. The gross block increased during the year from Rs. 164.81 lakhs to Rs. 225.40 lakhs and has been written down to Rs. 130.17 lakhs. Depreciation for 1958 and 1959, amounting to Rs. 9.35 lakhs, has not been provided for. No depreciation has been provided on the assets of the Moon Mills Ltd., as they had not been put to use during the year.

(*Concluded from next column*)

appropriation to reserves has been restricted to a transfer of Rs. 4.58 lakhs, as against Rs. 7.16 lakhs a year before, to development rebate reserve.

Production from the various departments was satisfactory during the year under review, and the working results for the first three months of the current year are said to be "very encouraging." It will be recalled that, in their report for 1960, the Directors had stated that the extension of the expansion programme in 1961 envisaged a further expansion of the penicillin, yeast and superphosphate plants and that orders for the necessary capital goods would be placed after the Government's sanction for foreign exchange was received. In this connection, we are told, the Company negotiated and was granted a foreign exchange loan of Rs. 16.30 lakhs by the Industrial Credit and Investment Corporation of India. Until the middle of last month, the import licences for the equipment were still awaited.

The Company's financial position has been strained a little more during the year, which can, however, be understood in the light of a continuous expansion programme. Its loan liability has increased from Rs. 93.15 lakhs to Rs. 118.81 lakhs and its current liabilities and provisions also show a rise from Rs. 79.74 lakhs to Rs. 91.29 lakhs. The total indebtedness as at the year-end works out to Rs. 273.10 lakhs as against Rs. 172.89 lakhs in the previous year, and the current assets, including book debts but excluding investments, aggregating Rs. 172.89 lakhs (Rs. 148.56 lakhs a year before) are again inadequate to cover this liability. Investments, amounting to Rs. 36.13 lakhs, comprise Rs. 16.76 lakhs quoted and Rs. 19.37 lakhs unquoted. The quoted investments, having a market value of Rs. 30.49 lakhs, are, however, pledged against bank borrowings. However, the Company has tried to maintain a healthy ratio of its own funds to borrowings by raising the capital three times in the past four years. Thus, as against borrowings of Rs. 118.81 lakhs, the capital of Rs. 110.00 lakhs and reserves of Rs. 59.74 lakhs make a total of Rs. 169.74 lakhs. The gross block met with a net addition of Rs. 29.15 lakhs to Rs. 267.03 lakhs during the year. It has been written down adequately to Rs. 170.82 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 231.25 *ex-right, cum-div.* On the *ex-div.* basis, they offer a net annual yield of 4.4 per cent.

ALEMBIC CHEMICAL HIT BY AN ACCIDENT

DIVIDEND, HOWEVER, MAINTAINED

THERE was some disturbance in the working of the antibiotics division of the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs. Rayuma Services, Baroda) in the last quarter of 1961 because of the defects noticed in the vials filling process. Although this was "in no way connected" with the penicillin plant, it affected the filling of all antibiotics including penicillin, and called for an immediate thorough check of the filling process, necessitating stoppage of further filling and freezing of all stocks of filled vials. Ultimately, all sales of the antibiotic products were brought to a standstill. All this told rather heavily on the performance of the Company during the year which ended on 31st December. The progressive growth in sales and profit noted in previous years suffered a setback. Sales realisation which had gone up by some Rs. 38 lakhs in 1960, has recorded only a small improvement from Rs. 261.43 lakhs to Rs. 283.90 lakhs in 1961 and the gross profit has actually moved down from Rs. 46.75 lakhs to Rs. 41.68 lakhs. Measured in terms of profit-margin (ratio of gross profit to sales), the effects of the disturbed working of the antibiotics division are quite marked, for it has dropped from 17.8 per cent to 14.6 per cent, wiping out all the improvement recorded from 1957 to 1960. Moreover, last year's results are in contrast to those witnessed in the preceding four years, when sales, gross profit and profit-margin progressively improved year after year. However, the Directors have deemed the setback as "temporary," and quite rightly so because (*a*) it was due to some unforeseen circumstances, and (*b*) the Company's position is quite satisfactory as a result of a continuous expansion programme for the past few years. Therefore, in spite of insufficient profit, they have maintained the equity dividend at 14 per cent per annum, taxable, and that too on the capital increased by the issue of 10,000 new shares. This has been made possible by withdrawing Rs. 3.85 lakhs from the dividend equalisation fund. Perhaps the 2 per cent cut in the previous year might also have deterred the Directors from proposing any further reduction in the dividend.

An insight into the Company's working in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	283.90	261.43	223.95	192.78

Market value of ordinary share (In rupees):	1962	1961	1960	1959	1958
High	285.00cr	282.50	300.00	213.00cr	169.00cr
Low	228.00xr	230.00	208.00	153.00xr	114.00xr

* Subject to deduction of tax.
† Including on 10,000 new shares for 10 months.
‡ Including on 20,000 new shares.
§ Including on 23,000 new shares.

The decline in the profit-margin has also been due to rising costs and higher excise following the imposition of a Central levy of 10 per cent *ad valorem*, with effect from 1st March 1961, on all proprietary medicines not containing alcohol. The excise bill rose sharply from Rs. 6.86 lakhs to Rs. 21.87 lakhs. The cost of raw materials and stores increased from Rs. 136.08 lakhs to Rs. 148.74 lakhs and so did staff expenses from Rs. 44.03 lakhs to Rs. 50.72 lakhs as also other expenses from Rs. 38.27 lakhs to Rs. 43.50 lakhs. Because of expansion, the provision for depreciation has been raised from Rs. 12.52 lakhs to Rs. 18.05 lakhs. But the decline in gross profit has warranted a reduction in the provision for taxation from Rs. 10.20 lakhs to Rs. 8.25 lakhs and has brought down the Managing Agents' remuneration from Rs. 3.12 lakhs to Rs. 1.69 lakh. After making these provisions, the net profit has suffered a bigger fall than the gross profit, that is, from Rs. 20.91 lakhs to Rs. 13.69 lakhs. Once again,

(*Continued in previous column*)

TWO JARDINE HENDERSON GROUP JUTE MILLS SUFFER LOSSES

OUTLOOK FOR 1962, HOWEVER, ENCOURAGING

IT can be stated with certainty that the year 1961 will long be remembered as one of particular difficulty in the history of the Indian jute industry which over many years has experienced extremes of prosperity and adversity. During the major part of the year, the one single factor which governed profitable operations of individual mills was the shortage of jute, occasioned partly by a lower indigenous crop and partly by lack of imports of jute cuttings from Pakistan. And if 1960 was in this respect bad enough, 1961 proved worse. Whereas, on previous similar occasions, the industry could resort to heavy sealing of looms, along with curtailment in working hours, it had to contend during 1961 with shorter working weeks despite unfavourable impact on costs, in order to soften to some extent the impact on workers' earnings. As if this was not enough, the industry had to resort to block closure of mills for a period of one week at a time twice during the year. These adverse trading conditions brought in their wake serious disparities between manufacturing costs and selling prices obtainable for goods which were basically responsible for the heavy losses incurred by many a mill. The annual reports of the two jute mills belonging to the Jardine Henderson Group, namely, Kamarhatty Company Ltd. and Kanknarrah Company Ltd., for the year ended 31st December 1961, reveal that these mills have proved no exception to this general state of affairs.

Kamarhatty Company

Notwithstanding a rise of Rs. 21.98 lakhs to Rs. 431.71 lakhs in sales, due no doubt to the high ruling prices of jute goods, a modest increase of Rs. 3.40 lakhs to Rs. 4.76 lakhs in other income and an appreciation of Rs. 12.06 lakhs to Rs. 84.59 lakhs in closing stocks of jute, work-in-progress, and finished goods, the Kamarhatty Company has reported a loss of Rs. 6.36 lakhs (in contrast to a profit of Rs. 9.58 lakhs earned in 1960), before providing for Managing Agents' commission, depreciation and taxation. In view of the loss sustained during the year, provision for Managing Agents' commission has been made to the minimum agreed extent, that is, Rs. 50,000, while that for taxation has quite naturally been completely suspended. Provision for depreciation is also lower at Rs. 6.90 lakhs, as against Rs. 7.88 lakhs. The year's operations, thus, show a net loss of Rs. 13.76 lakhs, whereas the working results for 1960 showed a net profit of Rs. 48,000. This position has been worsened further by the credit of Rs. 3.85 lakhs to provision for doubtful debts, so that the debit balance transferred to the appropriation account comes to Rs. 17.61 lakhs. In view of the loss suffered during the year and not being inclined towards a further deterioration of the reserve position, the Directors have passed over both preferred and equity dividends and have, after adjusting the surplus of Rs. 39,774 brought in from the previous accounting period, carried forward a loss of Rs. 17.21 lakhs to the balance-sheet.

After adjusting the aforesaid loss, the reserves of the Company show a decline from Rs. 27.60 lakhs to Rs. 10.00 lakhs, against an unchanged share capital of Rs. 59.20 lakhs. Secured and unsecured loans have also fortunately shown a decrease from Rs. 91.59 lakhs to Rs. 82.64 lakhs and so have current liabilities and provisions, albeit moderately, from Rs. 34.50 lakhs to Rs. 31.19 lakhs.

On the assets side, the net block is valued at Rs. 56.25 lakhs and has been obtained by reducing a gross block of Rs. 200.18 lakhs by Rs. 147.20 lakhs, being the amount of accumulated depreciation and adding to the balance of Rs. 3.27 lakhs as cost of capital work in progress. Investments, including share of Jardines Mills Agencies Ltd., amount to Rs. 3.26 lakhs, while current assets, loans and advances aggregate Rs. 123.51 lakhs. On the whole, the financial position of the Company as revealed by its balance as at 31st December 1961 appears fairly strong.

Since the installation of the modern preparing and spinning machinery in the Company's 'B' Mill in 1957, it has been found that the complement of spindles has been inadequate to produce at all times the quantity of yarn required to serve the loomage being worked. More recently, with the progressive unsealing of looms, shortage of spinning capacity has been more keenly felt. In the circumstances, the Directors decided to install seven additional spinning frames, in addition to two sacking weft drawing frames. Certain units of this new machinery has been installed since the beginning of this year and the balance is expected to be in production by the end of June 1962. There is no doubt that these additions will lead to an increase in the working efficiency of the mills. The Company's application for licences to import additional machinery for the beaming department was rejected on the grounds, it is understood, that machinery of the type required is to be manufactured under licence in this country.

Kanknarrah Company

Owing to cut-back in production referred to earlier and power shortage, the gross profit of the Kanknarrah Company Ltd. continued, during 1961, its downward journey with more vigour and the Company has completed the year with a loss of Rs. 6.72 lakhs (in place of a profit of Rs. 6.57 lakhs) prior to charging Managing Agents' commission, depreciation and taxation. The loss sustained during the year has restricted, as previously, the provision for Managing Agents' commission to Rs. 50.000, while no provision for taxation has been found necessary. Provision for depreciation, however, has been lowered slightly from Rs. 6.88 lakhs to Rs. 6.13 lakhs. The net loss has, therefore, risen quite sharply from 81,000 to Rs. 13.35 lakhs. After transferring Rs. 2.67 lakhs to provision for doubtful debts and adjusting the debit balance of Rs. 14.78 lakhs brought in, the adverse balance carried forward to the profit and loss account has again increased to Rs. 30.80 lakhs, or very nearly equal to that for the year 1957. It will thus be noted that whatever progress the Company had managed to achieve during the past two years is now nearly completely lost to it.

As regards the prospects for current year, the Directors of both the Mills report that, with adequate supplies of raw jute and a satisfactory margin between cost of raw material and finished goods price, profitable working has been possible since the last quarter of 1961 and the results achieved during the first quarter of 1962 are encouraging.

PROFIT OF DIGVIJAY CEMENT RISES

PIPES AND ROOFING SHEETS PROJECT

THE gross sales realisation of the Shree Digvijay Cement Company Ltd. (Managing Agents: Messrs. Shree Laxmi Agents Ltd., Sikka, Gujarat) for the year ended 31st December 1961 has undergone a slight recession as a result of the interaction between a lower overall output of cement during the year and a higher retention price effective from 1st November 1961. The actual sale proceeds in 1961 aggregated Rs. 318.02 lakhs, a drop of Rs. 8.21 lakhs as compared with the previous year. But the gross profit has improved by over 50 per cent, from Rs. 43.93 lakhs to Rs. 65.28 lakhs, even though the cost of raw materials and stores consumed as well as other expenses have both gone up, the former by Rs. 3.74 lakhs to Rs. 121.09 lakhs and the latter by as much as Rs. 11.83 lakhs to Rs. 168.22 lakhs. The only reasons which can perhaps explain away this apparent anomaly are, first, the rise of more than Rs. 20.00 lakhs to Rs. 26.10 lakhs in the value of the closing stocks of slurry, clinker and cement and, second, the sharp increase in other income consequent on the receipt, for the first time, of a gross dividend of Rs. 10.77 lakhs from the Companys' subsidiary, the West Coast Paper Mills Ltd.

This betterment in the gross profit has naturally attracted a higher provision for Managing Agents' commission (Rs. 3.71 lakhs, as against Rs. 1.64 lakh), as well as for taxation (Rs. 14.50 lakhs, as against Rs. 10.25 lakhs). Provision for depreciation, however, has been stepped up only nominally from Rs. 18.08 lakhs to Rs. 18.86 lakhs. Notwithstanding this increase in essential provisions, the net profit has more than doubled and now stands at Rs. 28.21 lakhs, as compared with Rs. 13.96 lakhs a year before. Out of this, a sum of Rs. 7.01 lakhs has been credited to the various reserves, the major recipient being the development rebate reserve which gets Rs. 6.23 lakhs, as against Rs. 1.21 lakh during 1960. From the balance that remains, the Directors have, after setting aside Rs. 5.20 lakhs for payment of preferred dividends for the year, proposed a slightly higher equity dividend of 10 per cent subject to deduction of tax, absorbing Rs. 13.44 lakhs. The carry forward is substantially higher at Rs. 2.58 lakhs, as against Rs. 1,550 brought in.

The results of operation of the Company for the four-year period 1958-61, inclusive, are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

The financial position of the Company as revealed by its balance-sheet as at 31st December 1961 can be said to be only moderately good. The share capital stands unchanged at Rs. 214.48 lakhs, of which Rs. 79.94 lakhs are in 5 per cent preference shares of Rs. 100 each and the balance in equities. The capital is backed by Rs. 62.84 lakhs in reserves and surplus. Against this secured and unsecured loans aggregate Rs. 189.48 lakhs, in addition to current liabilities and provisions amounting to Rs. 70.60 lakhs. The net block is worth Rs. 273.02 lakhs and has been obtained by reducing a gross block of Rs. 475.30 lakhs by Rs. 202.28 lakhs being the depreciation earned to date. Building under construction and plant and machinery under erection are valued at Rs. 21.00 lakhs. Investments at cost are placed at Rs. 79.09 lakhs, out of which Rs. 75.59 lakhs are in the shares of the West Coast Paper Mills

Ltd., a subsidiary. Current assets, loans and advances amount to Rs. 164·29 lakhs.

The output of clinker during the year under review was 423,000 tonnes, as against 412,000 tonnes attained in the previous year. One of the clinker grinding mills had to be stopped for about four months for major overhaul and, though the loss in output of cement on this account was partly compensated by the clinker grinding mill at Bombay which was commissioned in the middle of October 1961, the overhaul output of cement at 404,000 tonnes indicated a decline as compared with the output achieved in the previous year.

As for the asbestos cement pipes and sheet making plant which is being erected near Ahmedabad, the Directors state as under:

"The plant will have, in the initial stages, an output of 32,000 tons per year of asbestos cement pipes and roofing sheets. Almost the entire plant and machinery has already arrived at the site and the construction of the factory and other buildings is making good progress. The machinery suppliers have deputed their senior erector for the installation of the machinery and the entire plant is expected to be ready to commence operations within the next few months. There is a good demand for both sheets and pipes, and it is hoped that the products of this new project will command excellent market. The Company had finalised negotiations with the world-reputed firm of Messrs. Johns Manville International Corporation, New York, for both technical and financial collaboration and the agreement containing the terms and conditions for the same has been pending for Government of India's approval for some considerable period. The technical agreement has been finally approved by the Government and the Directors have sent the same duly signed to the collaborators. The financial participation by Messrs. Johns Manville International Corporation was first rejected by the Government, but, on a further representation, the same has been approved in principle. The price for shares for investment of 10 per cent equity capital by Messrs. Johns Manville International Corporation is now under the consideration of the Government and a final decision is expected shortly. Thus the collaboration is likely to take final shape shortly and the Directors are confident that the new project would benefit substantially under this arrangement."

The Rs. 100·00 fully paid ordinary share is being currently quoted at Rs. 209·00 cum-div. and fetches, on ex-div. basis, a net return of about 3·5 per cent on investment.

PRESTOLITE OF INDIA LTD.

A public company called Prestolite of India Ltd. has been registered at New Delhi with Mr. Indar Singh as the Managing Director. The Company proposes to manufacture, in collaboration with the Electric Autolite Company of the U.S., one of the world's largest independent manufacturers of automotive electrical equipments, automotive electrical components of latest design for original equipment and for replacement under the trade mark "Prestolite." The products include ignition coils, voltage regulators, lamps, horns, horn relays, distributors and miscellaneous electricals replacement parts. Most of the above items are at present being imported. Mr. Indar Singh visited the U.S. recently and signed an agreement for both technical and financial collaboration with the Electric Autolite Company. The foreign company will subscribe to equity shares in Prestolite of India Ltd. to the extent of 44 per cent of the issued capital; the investment will cover the entire requirements of foreign exchange for the imported plant and machinery for the project.

Prestolite of India Ltd. will have an authorised capital of Rs. 1 crore, divided into 750,000 equity shares of Rs. 10 each and 25,000 preference shares of Rs. 100 each. The present issue will be for 400,000 equity shares of a total value of Rs. 40 lakhs. Out of this, the Electric Autolite Company will subscribe for shares of the value of Rs. 17·5 lakhs. The factory will be located at Faridabad; the necessary land has been already purchased and the construction of the factory will start shortly.

The Electric Autolite Company will also be represented on the Board. At a Press conference in New Delhi recently, Mr. J. J. Bohmrich, Vice-President of the American company, said that the company designed and produced automobile electrical equipment for original equipment usage by vehicle manufacturers in the U.S., Canada, France, Mexico, Venezuela, Brazil, Argentina and Belgium at the present time. According to him, for the growing replacement parts needs of the passenger and commercial vehicles on the highways in India and throughout the world, the Electric Autolite Company, through its new subsidiary, Prestolite International Corporation, is now engineering and making available "Universal" replacement parts for all popular makes of cars and trucks.

HINDUSTAN ALUMINIUM CORPORATION

The Hindustan Aluminium Corporation Ltd. (*Managing Agents: Messrs. Birla Gwalior* (Private) Ltd., Bombay) produced the first batch of aluminium from the imported alumina on 23rd May last, just two years after the "earth-breaking" ceremony of its factory at the Rihand dam site at Renukoot in Uttar Pradesh. Such progress has been made possible by the construction of all the factory and residential buildings and the erection of the major portion of the plant in a short time of less than 18 months. The Rihand dam power station was commissioned in February last and the transmission lines from the power house to the Company have already been energised. The alumina section of the plant is expected to be ready sometime during the third quarter of this year, when the entire plant is expected to be turned for regular production. In view of the growing demand for aluminium in the country, especially in the making of A.C.S.R. conductors that would replace copper conductors, the Company has applied for expansion of its present capacity from 20,000 metric tons to 50,000 metric tons of aluminium ingots per year. For this purpose, it would be necessary for the Company to set up its own thermal power station, for which also it has sought the Government's permission. The import licence for fabrication facilities, which were delayed further, are expected to be received soon, and an order for the equipment would be placed immediately.

The profit and loss account of the Company for the year ended 31st December 1961 shows a deficit of Rs. 1·88 lakh after transferring Rs. 39·80 lakhs to the "expenditure during construction account," but before making any provision for depreciation and taxation. The deficit has been set off against last year's surplus of Rs. 2·12 lakhs brought forward, and thus a net surplus of Rs. 0·23 lakh has been carried forward. The total expenditure up to 31st December 1961 under the head "expenditure during construction period," as shown in the balance-sheet, amounts to Rs. 49·73 lakhs and, on the costruction of the plant this year, would be adjusted under appropriate headings in the block account. It will be recalled that, out of its authorised capital of Rs. 20 crores, comprising Rs. 10 crores in equity shares of Rs. 10 each, Rs. 2·50 crores in 9 per cent, taxable, redeemable cumulative preference shares of Rs. 100 each, and Rs. 7·50 crores in unclassified shares of Rs. 10 each, the Company has issued equity shares of Rs. 6 crores, of which those worth Rs. 60 lakhs have been allotted for consideration other than cash, and preference shares of Rs. 2·50 crores. The issued capital has been fully called and paid but for calls in arrears of Rs. 4·46 lakhs. The construction work-in-progress stood at the year-end at Rs. 10·45 crores, as against Rs. 2·46 crores a year before. The Minerals and Minerals Ltd., the Company's wholly-owned subsidiary, realised Rs. 4·51 lakhs, as against Rs. 3·56 lakhs in the previous year, from bauxite sales during the year ended 31st December 1961. Its earnings by way of coal raising is shown as nil, as against Rs. 5·12 lakhs a year ago. During the year, it earned a gross profit of Rs. 11,627.

COMMERCE AND INDUSTRY

(Concluded from page 1036)

The review provides a detailed picture of intra-Commonwealth trade. Trade between Commonwealth countries themselves expanded appreciably in 1960; it represented a slightly higher proportion of their total exports (38·5 per cent) than in 1959 but a further slight decline in the proportion of their total imports (34 per cent). In recent years the United Kingdom has gradually sent an increasing proportion of total exports to non-Commonwealth countries and has taken a higher percentage of imports from them. Nevertheless, on average the relative importance of the United Kingdom to other Commonwealth countries in trade both ways, over a fifth, diminished very little between 1957 and 1960. Table III shows exports and imports by each of the Commonwealth countries from other members of the Commonwealth during the period 1956 to 1960.

Table II shows the extent of Commonwealth trade with other major trading areas and leading industrialised countries during 1956-60. The general trend towards diversification of Commonwealth markets and suppliers continued in the period reviewed. The trade of the Commonwealth as a whole with all main non-Commonwealth trading partners expanded except for exports to the U.S. The Commonwealth share in the U.S. imports and exports remained at about 35 per cent, but the U.S. imports in general contracted from the very high 1959 figure, and this affected a number of Commonwealth countries, including Canada and Britain. U.S. exports to the Commonwealth expanded by almost a fifth between 1959 and 1960 and much exceeded the high 1957 level. Important four-year agreements, it may be noted, were signed with India in May 1960 and with Pakistan in October 1961, to supply them with grain and other agricultural material against grants or credit repayable in rupees. The review also describes trade developments between the Commonwealth and other major markets, the Common Market, the European Free Trade Association, Japan, Eastern Europe and Mainland China. In 1960, trade with the Common Market accounted for 14 per cent of Commonwealth exports and 12 per cent of Commonwealth imports. These trade flows each represented nearly a fifth of the Common Market's trade outside the Customs Union. Exports from the United Kingdom to the Six expanded quite rapidly between 1958 and 1960, but recent trends for other Commonwealth countries varied. Commonwealth imports from the Common Market have been growing fast, and Britain now imports manufactured goods from this market to the same value as those exported to it.

Notices

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Bengal Potteries Limited will be held at the registered office of the Company at 45, Tangra Road, Calcutta, on Friday the 29th June 1962, at 4 p.m., to transact the following items of business:—

(1) To receive and adopt the Directors' Report, the audited Balance Sheet and the Profit and Loss Account for the year ended 31st December 1961.

(2) To declare a Dividend.

(3) To elect Directors in place of those retiring.

(4) To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:—

"RESOLVED that the Members of the Company approve of the appointment and continuation as a Director of Bengal Potteries Ltd., of Dr. H. L. Dey who has attained the age of over 65 years, and declare that the age limit of 65 years as specified in Section 280 of the Companies Act 1956 shall not apply to him."

Explanatory Statement under Section 173(2) of the Companies Act 1956, regarding Ordinary Resolution under Section 281

Special notice has been received by the Company on 30th May, 1962, of this Resolution from three of its Members under the provision of Section 281 of the Companies Act 1956.

Dr. H. L. Dey is a retiring Director of the Company and has attained the age of over 65 years. If appointed Shri Dey will get remuneration from the Company as provided in its Articles of Association, and he is interested to that extent. Save as aforesaid no other Director or the Managing Agents have any concern or interest in the above resolution.

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 15th June to 10th July 1962, both days inclusive.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,

BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, TANGRA ROAD, CALCUTTA.
Dated, 2nd June, 1962.

INDIAN ALUMINIUM COMPANY LIMITED

31 Chowringhee Road
CALCUTTA-16

NOTICE IS HEREBY GIVEN THAT THE Company's Transfer Register respecting 6¼ per cent Debenture Stock 1970-75 will remain closed from 15th June 1962 to 1st July 1962, both days inclusive, in connection with the payment of interest on 1st July 1962.

SYNOPSES OF COMPANY REPORTS

Twyford Tea Co., Ltd.

[*Managing Agents:* Messrs. Parkins (Private) Ltd., Kottayam, Kerala State.]

47th Annual General Meeting.—18th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Tea sales	20,62	21,85
Closing stock of tea	5,58	4,52
Gross profit	3,12	4,27
Transfer to Managing Agents' remuneration	21	38
,, ,, depreciation	86	44
,, ,, provision for taxation	55	1,80
,, ,, development rebate reserve	77	Nil
Net profit	73	1,65
Adjustments	33*	†
Appropriations:		
Total available balance	1,06	1,65
Proposed dividend (taxable) equity	95 (6%)	1,57 (10%)
Carried forward	11	8

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 25,000 transferred from dividend equalisation reserve.

† Only a small sum of Rs. 565.

Extracts from the Directors' report: Crop and Price: 4,72,419 (4,89,333 kgs. for 1960) kilograms tea was produced during the year under report against an estimate of 5,09,625 kilograms. The cost of production was 360 cents per kilogram against 350 cents per kilogram in 1960. The average price was 447 cents against 454 cents per kilogram in 1960. The stock of tea remaining unsold as at 31st December 1961 was 1,30,960·70 kilograms, all of which has been since sold.

The estimates for the year ending 31st December 1962 is 5,10,000 kilograms to be produced at a cost of 391·81 cents per kilogram. The crop on 30th April 1962 is 1,56,486 kilograms against 1,41,877 kilograms in 1961.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,75,000	Gross block	33,73,717
Reserves and surplus	16,64,306	—Depreciation	4,33,348
Other liabilities	6,01,856		
		Net block	29,40,369
		Current assets	8,93,865
		Investments	1,101
		Cash	5,827
Rs.	38,41,162	Rs.	38,41,162

* Paid-up capital consists of 1,57,500 equity shares of Rs. 10 each fully paid up. Out of this 24,615 equity shares are allotted as fully paid up by way of bonus shares on capitalisation of general reserve and 15,000 equity shares are allotted in lieu of dividends.

South India Viscose Ltd.

(*Chairman and Managing Director:* Mr. R. Venkataswamy, Coimbatore.)

4th Annual General Meeting—22nd June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sale of finished goods	69,99	Nil
Sale of waste	16	Nil
Closing stock of finished goods, raw materials, etc.	36,28	5,35
Gross profit	19,07	2,08
Transfer to depreciation	17,96	Nil
Net profit	1,11	2,08
Appropriations:		
Transfer to development rebate reserve	Nil	2,08
Dividend	Nil	Nil
Carry forward	1,11	Nil

Extracts from the Directors' report: The erection work of the plant commenced only in July 1960 after the first shipment of machinery arrived. The production of *carbon di-sulphide* was started late in December 1960, *Sulphuric Acid* late in July 1961 and the first production of *staple fibre* in the last week of May 1961. Staple fibre reached the full production target of 10 tons per day in July 1961. The *rayon yarn* plant was commissioned late in October 1961 and it has reached *production of 5.5 tons against* the target of 10 tons per day. At present, only 22 frames out of 41 frames are working. Though 13 spinning frames are kept ready they could not be put into operation due to Government's restriction in the matter of supply of electric power. The Company expects to get full power supply by June 1962. It may be possible to reach full production of 10 tons of rayon yarn per day by July 1962.

The *staple fibre* and *rayon yarn* produced by the South India Viscose Ltd., with the guidance of the Company's Italian Collaborators, have been tested in the laboratories of Snia Viscosa in Italy and found to be of the same international standard and specification as the Italian Rayon Products of Snia Viscosa. The Company's *Rayon yarn* enjoys the same popularity in the Indian market as the foreign Rayon yarn.

The year's working has resulted in a net profit of Rs. 1,11,024. The directors could not provide the full amount of depreciation computed according to income-tax rules, i.e., Rs. 71,05,075. The depreciation provided namely Rs. 17,95,915 is about 25·3 per cent of the same.

Production: 1,894 tons of staple fibre was produced upto the end of the year. Though the machinery proved its capacity for an extra 10 per cent production, yet the production could not be maintained for want of adequate quantities of wood pulp. 148 tons of *Rayon Yarn* were produced during the year. The Company experienced difficulty in securing high grade wood pulp. 2,939 tons of *Sulphuric Acid* and 612 tons of *Carbon-di-Sulphide* were produced during the year.

Sales: 1,880 tons of *Staple-fibre* were sold during the year against allotment made by the Textile Commissioner. There were no sales of *Rayon Yarn* during the year as the orders of distribution were received late in the year. *Sulphuric Acid* and *Carbon di-Sulphide* were mainly consumed in the manufacture of *Staple fibre* and Rayon Yarn.

The Italian Collaborators have been allotted shares in accordance with the directions of the Central Government. 9,056 shares mentioned as reserve for allotment to Italian Collaborators refers to the position as at 31st December 1961. Subsequently 3,722 shares have been allotted and 5,334 shares are yet to be allotted as the terms of the collaboration agreement are not consistent with the directions of Government of India.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,80,83,715	Gross block	8,49,66,349
Reserves and surplus	8,10,271	—Depreciation	18,80,002
Other liabilities	4,27,63,980		
		Net block	8,30,82,347
		Current assets	73,82,997
		Investments	47,000
		Cash	11,34,962
		Miscellaneous expenditure	10,660
Rs.	9,16,57,966	Rs.	9,16,57,966

* Paid-up capital consists of 4,80,944 equity shares of Rs. 100 each. Of this calls in arrears amount to Rs. 10,685.

Basmatia Tea Co., Ltd.

(*Secretaries & Treasurers:* Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—31st May 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales of tea	18,59	20,81
Closing stock of tea	8,51	8,21
Gross profit	5,74	5,38
Transfer to Managing Agents' remuneration	Nil	29
,, ,, Secretaries' and Treasurers' commission	36	13
,, ,, depreciation	89	75
,, ,, provision for taxation	1,90	1,63
Net profit	2,59	2,58
Adjustments	55*	44
Appropriations:		
Total available balance	3,14	3,02
Transfer to general reserve	70	70
,, ,, development rebate reserve	5	9
Proposed dividend (taxable) ordinary	1,91† (22½%)	1,79‡ (35%)
Carry forward	43	44

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* Includes Rs. 10,000 being excess tax provision in respect of previous years written back.

† Dividend for 1961 is on a paid-up capital of Rs. 7,65,000.

‡ The dividend for 1960 was on a paid-up capital of Rs. 5,10,000.

Extracts from the Directors' report: Weather conditions were favourable for growth and a record crop of 3,136 quintals was secured, an increase of 489 quintals on the previous season's crop. The tea market was less satisfactory, however, and the crop sold at an average price of Rs. 6.01 per kg. compared with an average of Rs. 7.21 per kg. for the 1960 crop. Capital expenditure incurred during the *1961 season amounted to* Rs. 3,16,590 and represents the cost of constructing labour and staff quarters, machinery for the factory, the purchase of an area of land and an extension of the tea area.

Estimates for the current season have been framed for a crop of 2,900 quintals.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,65,000	Gross block	23,69,094
Reserves and surplus	11,04,227	—Depreciation	8,49,351
Other liabilities	11,98,109		
		Net block	15,19,743
		Current assets	14,28,231
		Investments	77,725
		Cash	41,637
Rs.	30,67,336	Rs.	30,67,336

* Paid-up capital consists of 76,500 ordinary shares of Rs. 10 each, fully paid up. Out of this 42,500 ordinary shares of Rs. 10 each are issued as fully paid up by way of bonus shares on capitalisation of general reserve.

Kumardhubhi Engineering Works Ltd.

[*Managing Agents:* Messrs. Bird and Co. (Private) Ltd., Calcutta.]

Annual General Meeting—31st May 1962.

Working Results:

	For the year ended 30th November (In thousand rupees)	
	1961	1960
Sales	2,01,63	1,58,80

,, ,, general reserve	Nil	50
Proposed dividends (taxable) 5% C. preference	78†	78†
,, ,, ordinary	3,23 (11·66%)	2,76 (10%)
Amount per ordinary share	[Re. 0·35]	[Re. 0·30]
Carry forward	14	38

N.B.—Adjustments represent only the balance brought forward from the previous year.

* A small sum of Rs. 162.

† Preference dividend is calculated at 6·5 per cent.

Extracts from the Directors' report: Market conditions improved considerably during the year under review. The acceptance of the third Plan and the consequent increase of activity produced a marked change in the demand pattern and orders began to flow in at an ever increasing pace from the middle of 1961. Firm orders on the books now will carry the Company through the middle of the next year.

The Foundry was fully loaded throughout the year and the output showed an increase of 12.58 per cent over the previous year. The Structural Steel Work production however shows an increase of 4.05 per cent only as the availability of matching steel continued to be difficult throughout the year.

Accounts in brief as at 30th November 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	39,64,800	Gross block	98,41,548
4% debentures	10,00,000	—Depreciation	44,29,696

,, ,, capital reserve	23	1
,, ,, general reserve	1,00	1,00
To payment of interim dividend (taxable) ordinary	1,28 (7½%)	1,28 (7½%)
,, ,, dividend (taxable) 6% C. preference	10*	10*
Proposed final dividend (taxable) ordinary	2,98 (17½%)	2,55 (15%)
Total ordinary dividend	[25%]	[22½%]
Carry forward	72	97

N.B.—Adjustments represent the credit balance brought forward from the previous year; excess tax provision written back and other credit items.

* Preference dividend is calculated at 6·765 per cent.

Extracts from the Directors' report: Crop: The 1961 crop of 10,83,565 kgs. represents an all time record and exceeded the previous record of 1959 by 43,327 kgs.

Comparative crop results:

Year	Crop kgs.	Yield per acre kgs.	Average sale price nP. per kg.	Net profit nP. per kg.
1957	10,22,823	657	363.35	20.09
1958	9,49,363	610	358.80	14.06
1959	10,40,238	668	409.88	48.25
1960	10,05,181	646	428.93	47.33
1961	10,83,565	696	420.00	51.54

For 1962 the Manager has estimated a crop of 10,00,000 kgs. at an Estate expenditure of 290.09 nP per kg.

The area under tea is 1,560.15 acres. During the year 76.43 acres of the reserve land not suitable for tea planting were sold. A trial is being made with Arecanut palms and during the year 1.32 acres were planted up.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	18,50,000	Gross block	44,88,202
Reserves and surplus	13,54,597	—Depreciation	17,51,626
Other liabilities	11,56,571		
		Net block	27,36,576
		Current assets, etc.	10,55,215
		Investments	1,07,002
		Cash	3,72,376
Rs.	43,61,168	Rs.	43,61,168

* Paid-up capital consists of 1,500 six per cent. cumulative preference shares of Rs. 100 each fully paid up and 1,70,000 ordinary shares of Rs. 10 each fully paid up. Out of this 85,000 ordinary shares are issued as fully paid-up bonus shares by capitalisation of reserves.

Standard Coal Co., Ltd.

[*Secretaries:* Messrs. F. W. Heilgers and Co., (Private) Ltd., Calcutta.]

Annual General Meeting—22nd June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)

THE ASSOCIATED RUBBER INDUSTRIES LIMITED

REMINDER

MEMBERS ARE HEREBY REMINDED THAT the Nineteenth Annual General Meeting of the Company will be held at the Registered Office of the Company, Union Bank Building, 4th Floor, Apollo Street, Fort, Bombay, on Monday, the 25th day of June 1962, at 4 p.m., for the purpose of transacting the following business:

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.
2. To declare a dividend on Preference Shares.
3. To appoint a Director in place of Shri Kishore M. Premchand who retires from office by rotation but being eligible offers himself for re-election.
4. To appoint a Director in place of Shri Suman C. Sheth who retires from office by rotation but being eligible offers himself for re-election.
5. To appoint a Director in place of Shri Shashikant B. Pattani who retires from office by rotation but being eligible offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider, and if thought fit, to pass the following resolution:

"RESOLVED that the consent of the Company be and is hereby accorded under the provisions of Section 293(1) (*d*) of the Companies Act, 1956 (as amended by the Companies (Amendment) Act, 1960) to the Board of Directors of the Company borrowing from time to time all such sums of money as they may deem requisite or proper for the purpose of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from Temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose; provided that the total amount upto which moneys may be borrowed by the Board of Directors shall not exceed the sum of Rs. 50 lacs at any one time."

8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:

"RESOLVED that pursuant to Section 163(1) of the Companies Act, 1956, the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under Section 163 of the Companies Act, 1956, or any other applicable provisions, be kept open for such inspection, by the persons entitled thereto to the extent, in the manner and on payment of the fees specified in the relevant provisions, at the Registered Office of the Company between the hours of 11-30 a.m. and 2 p.m. on all working days excluding Saturdays, Sundays and Public Holidays."

To consider and if thought fit, to pass the following resolutions as Ordinary Resolutions:

(*a*) "RESOLVED that subject to the consent of the Central Government under the provisions of the Capital Issues (Control) Act, 1947, being obtained by the Company, out of the unissued 15,000 Equity Shares of the Company of Rs. 100 each, 1,000 shares of Rs. 100 each be issued as New Equity Shares ranking in all respects *pari passu* with the existing Equity Shares of the Company."

(*b*) "RESOLVED that subject to the consent of the Central Government under the provisions of the Capital Issues (Control) Act, 1947, being obtained by the Company, it is desirable to capitalise a sum of Rs. 1,00,000 being part of the amount standing to the credit of the General Reserve Account, and accordingly a special capital bonus of Rs. 1,00,000 be declared and that such bonus be applied on behalf of the persons who on such date as may be fixed by the Directors of the Company after obtaining the consent of the Central Government as aforesaid were holders of 10,000 Equity Shares of the Company in payment in full for 1,000 New Equity Shares of the Company of Rs. 100 each and that such 1,000 New Equity Shares credited as fully paid up be accordingly allotted to such persons respectively in the proportion of one such New Equity Share for every ten of the said 10,000 Shares then held by such persons respectively and that such New Equity Shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Shareholder and not as income."

Notes:—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Transfer Books of the Company will be closed from Monday, 4th June 1962 to Monday, 25th June 1962 (both days inclusive).

(*c*) The dividend when sanctioned will be made payable on and after 27th July 1962 to those Preference Shareholders whose names stand on the Register of Members on 25th June 1962.

By Order of the Board,
For and on behalf of,
ASSOCIATED RUBBER INDUSTRIES LTD.,
K. M. PREMCHAND,
Chairman.

UNION BANK BUILDING,
APOLLO STREET,
FORT, BOMBAY.
17th May, 1962.

Explanatory Statement as required by Section 173 of the Companies Act, 1956, has been forwarded to members of the Company.

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Wednesday, the 27th June, 1962, at 4.00 p.m., for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st December, 1961, the Balance Sheet as at that date and the Directors' and Auditors' *Reports thereon.*
2. To declare the Dividend recommended by the Directors.
3. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

4. To appoint a Director in the place of a retiring Director and in this connection to consider and if thought fit, to pass the following resolution of which a special notice as prescribed by Section 281 of the Companies Act, 1956 has been given to this Company.

"That Mr. S. B. Bose who has attained the age of 74 years and who retires from the Board by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act 1956, shall not apply to him."

5. To consider and if thought fit, to pass the following resolution which will be proposed as a special resolution.

"That in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a commission (to be divided between them in such a manner as they shall from time to time determine) of 1 per cent of the net profits of the Company in each financial year over the period of five years extending up to and including the financial year of the Company ending on 31st December, 1966."

The Share Transfer Register of the Company will be closed from the 20th June 1962 to the 27th June 1962, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *25th May*, 1962.

Notes:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividend, if declared, will be paid on or after 16th July, 1962 to those shareholders so entitled whose names appear in the Company's books on the 27th June, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

Explanatory Statement for the Special Resolutions Above

Item No. 4 above. In the Special Notice given to the Company of the intention of a member to move this resolution, it has been stated that as the services of Mr. S. B. Bose aged 74 years, have proved most useful to the Company, he having considerable experience and personal knowledge of the affairs of the Company, should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956 shall not apply to him.

Item No. 5 above. The remuneration of your Directors is regulated by Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act 1956. The Directors of the Company are entitled to be remunerated for their services by a fee of Rs. 200 per meeting to be divided amongst those present at such meeting of the Board and a commission of 1 per cent of the net profits of the Company in each financial year, the latter having been permitted for five years expiring with the Company's financial year which ended on 31st December, 1961.

It is proposed that the Directors should continue to be remunerated in the manner prescribed in Article 97 of the Articles of Association of the Company that is by way of fees for meetings attended and a commission of 1 per cent of the net profit of the Company up to and including the financial year of the Company ending on 31st December, 1966.

Each Director of the Company is interested in the Special Resolution to the extent of the remuneration proposed to be paid to him. The Directors of your Company hold shares in the Capital of your Company as hereunder—

Mr. P. Prashad holds 101 Ordinary Shares.
Mr. S. B. Bose holds 100 Ordinary Shares.
Mr. P. K. Mukerji holds 100 Ordinary Shares.
Dr. D. N. Kapur (Alternate Director to Mr. R. G. Edwards) holds 100 Ordinary Shares.

(5) The relative Explanatory Statements pursuant to Section 173 of The Companies Act, 1956 in respect of the special business under items No. 3 and 4 set out above are being posted to the Shareholders individually along with the Notice of the Annual General Meeting.

NEW INTER-BANK AGREEMENT COMES INTO FORCE

(From Our Own Correspondent)

BOMBAY, *6th June*

The All-India Inter-bank Agreement on maximum rates of interest on deposits has at last been saved. The objection raised by the subsidiaries of the State Bank of India to their being clubbed with the big banks (having deposits of over Rs. 50 crores) which at one time appeared as a serious hurdle was wisely met by the Indian Banks' Association. After some initial hesitation, the Association accepted the proposal made by Mr. B. Venkatappiah, Chairman of the State Bank of India, referred to in these columns last week. Consequently, the State Bank's subsidiaries will enjoy the differential benefit accorded to the medium banks *plus* the freedom to quote ½ per cent more than the latter in certain circumstances. This freedom, though qualified, places them on a par with the small banks, that is, those with deposits of more than Rs. 10 crores, but upto and including Rs. 25 crores. Thus, normally, the State Bank's subsidiaries are entitled to quote the standard rates plus ½ per cent, but may, in the discretion of their General Managers, quote a further ½ per cent more, if (1) there is another small bank operating in the area or to prevent or counteract a decline in deposits.

Another rider made to the amended agreement in the last minute seeks to safeguard the interests of big banks. According to it, the higher rates which the medium banks and small banks, including the State Bank's associates, are permitted to quote are "subject to immediate revision, if it is found that they affect the interests of big banks adversely to an appreciable extent." In effect, this rider means that the amended Agreement, which cannot be revoked before 31st March 1964, can be subjected to further modifications if any of the big banks feels the need for it.

The maximum standard rates of interest are as follows:

(*a*) For notice money at a withdrawal notice of 3 days or more .. .. 3% p.a.

(*b*) For term deposits—

	Period of deposit		
	of.....and over	upto and including....	
(i) ..	3 days	30 days	3% p.a.
(ii) ..	31 days	60 days	3½% p.a.
(iii) ..	61 days	90 days	3¾% p.a.
	of.....and over	but less than	
(iv) ..	91 days	12 months	3¾% p.a.
(v) ..	12 months	24 months	4% p.a.
(vi) ..	24 months	48 months	4½% p.a.
(vii) ..	48 months	60 months	4¾% p.a.
(viii) ..	60 months	....	5% p.a.

The aforesaid rates are payable by the undermentioned banks:

(i) *Banks Incorporated Outside India*: American Express Co., Inc., Bank of China, Bank of Tokyo Ltd., British Bank of the Middle East, Chartered Bank, Comptoir National d'Escompte de Paris, Eastern Bank Ltd., First National City Bank, Habib Bank Ltd., Hongkong and Shanghai Banking Corporation, Mercantile Bank Ltd., Mitsui Bank Ltd., National and Grindlays Bank Ltd., and the Netherlands Trading Society.

(ii) *Banks Incorporated in India with Deposits of over Rs. 50 crores*: Allahabad Bank Ltd., Bank of Baroda Ltd., Bank of India Ltd., Central Bank of India Ltd., Punjab National Bank Ltd., United Bank of India Ltd., and United Commercial Bank Ltd.

It will be noted that all the foreign banks operating in India have been grouped with big Indian banks, irrespective of the size of the deposits they have gathered in India. It would appear that the Exchange Banks have agreed to this arrangement.

The following medium banks, which are all incorporated in India, with deposits of more than Rs. 25 crores but upto and including Rs. 50 crores are allowed to quote ½ per cent more than the standard rates:

Canara Bank Ltd., Devkaran Nanjee Banking Co., Ltd., Indian Bank Ltd., Indian Overseas Bank Ltd., and Union Bank of India Ltd.

The following banks, classified as small with deposits of more than Rs. 10 crores but upto and including Rs. 25 crores, are allowed to quote ½ per cent more than the standard rates, with special provisos for the State Bank's associates as already mentioned:

Bank of Maharashtra Ltd., Canara Industrial and Banking Syndicate Ltd., State Bank of Bikaner, State Bank of Hyderabad, State Bank of Indore, State Bank of Jaipur, State Bank of Mysore, State Bank of Patiala, State Bank of Saurashtra and State Bank of Travancore.

Among the smaller banks with deposits of Rs. 10 crores and less, the Bank of Behar Ltd. and Krishnaram Baldeo Bank (P) Ltd., have agreed to abide by the Agreement.

The revised inter-bank Agreement came into force with effect from 1st June 1962. Since then, the rates for term deposits have been standing at the maximum rates prescribed for the different categories of banks. There has been a slight improvement in the demand for funds and the inter-bank call money rate is presently at 3½ per cent, after remaining at 3 per cent during the major part of the week. But the basic trend of the short-term money market must be said to be easy. **The 91 days Treasury Bill rate has gone down further to 2.5 per cent from 2.540 per cent a week ago and 2.590 per cent a fortnight ago. Although tenders invited were only for Rs. 2 crores, the amount offered was as large as Rs. 4 crores, out of which only Rs. 2 crores were accepted. Besides,** sales of Intermediate Treasury Bills fetched another sum of Rs. 4 crores, as against a mere Rs. 11 lakhs in the previous week. Despite this sudden revival of demand for Treasury Bills on such a large scale, the authorities have not cared to step up the tender limit for the coming week.

There has been a further fall in the foreign assets held by the Reserve Bank as of 1st June, 1962; the exact decline was Rs. 1.15 crore, bringing the total down to Rs. 101.50 crores.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *6th June*

The bullion market depicted a distinctly easy trend during the week under review. Arrivals of both gold and silver were quite heavy, while offtake continued to be restricted. Rumours that the Reserve Bank of India would shortly sell silver to the *jari* industry at world prices with a view to promoting exports of *jari* and *jari* goods also imparted weakness. Several bull operators were anxious to unload their stocks as much as possible. Consequently, values suffered a setback. At lower levels today, there was some support, but the recovery was halting, so that today's closing rates were well below those prevailing a week before.

The high premium commanded by ready silver over the forward (*Jeth* settlement) in the past few weeks disappeared completely. In fact, the ready metal was quoted at a discount, the actual discount today being 50 nP. In gold, the premium on spot over futures declined further from Rs. 2.75 on Wednesday last week to Re. 1 today. Over the week, ready silver receded by Rs. 2.80 to Rs. 215.55 and ready gold by Re. 1.40 to Rs. 124.75.

The rumours regarding sale of silver by the Reserve Bank stemmed from the statement made at Surat this week by the President of the All-India *Jari* Federation. According to the President, Surat produces *jari* goods worth Rs. 9 crores annually. The actual silver consumption is estimated at about 750 to 800 bars worth Rs. 45 to 50 lakhs. For every Rs. 1.5 lakh worth of additional *jari* produced, it is said, there will be a demand for one bar of silver.

The daily average arrivals during the week under review were 7,600 tolas or gold and 55 bars of silver, as against 7,000 tolas and 25 bars, respectively, in the previous week. The average offtake was 4,800 tolas of gold (5,000 tolas last week) and 9 bars of silver (11 bars).

A notable event of the week was the commencement of business in the *Bhadrapad* (September) settlement in both gold and silver on Monday the 4th inst. The starting rates were Rs. 122.60 and Rs. 216.90, respectively. The two settlements encountered selling and drifted downward. The declining tendency persisted yesterday and today too. The rate for transferring commitments from the *Jeth* (June) to the *Bhadrapad* settlement was against bears throughout, the actual rate today being Re. 1.40 in gold (as against Re. 1.80 on the opening day) and 40 nP (same) in silver.

The dollar price of gold in the London bullion market receded from $35.08¾ to $35.07½ per fine ounce. Ready gold, however, firmed up by 3¾d. to 249s. 11¾d. Ready and forward silver were unchanged, the former at 84¾d. and the latter at 84½d., as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	6-6-62 (closing)	High	Low	30-5-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	124.75	126.90	124.50	126.15
*Jeth**	123.75	124.40	123.25	123.40
Bhadrapad ..	215.65	217.15	215.35	216.90§
Sovereign	99.00	99.25	99.00	99.25
SILVER				
Ready (.999 fine)	215.55	217.05	214.85	216.35
*Jeth**	216.05	217.30	215.35	217.35
Bhadrapad ..	122.35	122.60	122.20	122.60§
London—				
Gold	249s.11¾d.	249s.11¾d.	249s.8¼d.	249s.8d.

Silver Forward	84½d.	—	—	84½d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

§ Opening rates

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS EASIER

(From Our Own Correspondent)

MADRAS, *4th June*

The Madras kips market for F.A.Q. types was a shade easier this week in all sections except cowcalf. Buyers from the U.K. have, however, seeking lower levels for the better class tannages while tanners are holding on to the last established prices. Local demand has continued to be poor There were patchy inquiries for the tanned goat skins in 11/12 lbs. and 22/24 lbs. average at unchanged prices, but the lower selections and other average weights were neglected. Export trading in the tanned sheep skins middle class was small and in prime classes *nil*.

In the German Auctions held last week, clearance of stocks was very small in sheep skins, and selective in goat skins. Poor parcels were neglected. Total shipments during May were 2,056 bales tanned cowhides, 247 cowcalf, 30 buffhides, 672 buffcalf, 405 goat skins and 172 sheep to the U.K.; 38 cowcalf 1 buffhide, 42 buffcalf 605 goat and 247 sheepskins to the Continent; 53 buffs 130 buffcalf and 398 goat skins to the U.S.A.; and 14 goat and 297 sheep skins to Japan.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, *6th June*

The cotton futures market; which ruled firm during the early part of the week, turned easy on Monday, following the news that Pakistan had agreed to supply 100,000 bales of cotton to India. Under an agreement to this effect signed on the 2nd inst. at New Delhi, payment for the cotton will be made partly in rupees (Rs. 2.1 crores) and the balance Rs. 2.9 crores) in sterling. The easiness, however, was a passing phase. The market picked up strength the next day, thanks to short-covering and fresh support induced by the realisation that, the supply position of cotton being what it is, the 100,000 bales of Pakistan cotton to be imported are unlikely to relieve the shortage of cotton to any appreciable extent. This, coupled with reports of unsatisfactory progress of the monsoon and the continued firmness of the spot market, imparted strength to futures. The Jarilla March 1962 contract rallied from Rs. 709 on Monday, the lowest level touched during the week, to Rs. 716 yesterday. This level, however, attracted profit-taking and the contract finished lower at Rs. 712. The trend of the market was steady today. The range of fluctuation in the price of the contract is indicated below:

	6-6-62	*High*	*Low*	30-5-62
I.C.C. Jarilla March 1963 ..	712	716	709	709.25

In the spot market, the usual mill interest was noted in such varieties as Laxmi, Vijay, Digvijay, L.147 and 197/3. Prices ruled steady, despite the signing of an Indo-Pak agreement covering 100,000 bales of Pakistan cotton. Among foreign growths, American cotton, both short and long staple, was in the limelight. Mills booked sizable quantities of Middling 1-5/32" cotton in which there was a scarcity of offerings. Moderate business was also put through in higher grade Sudans and East African cotton.

There was little improvement in the demand for Bengal *Deshi*. Sales registered against the recent quota of 70,000 bales till the 1st inst. aggregated only 52,309 bales. Shippers are apprehensive that, in view of the slow demand for Bengal *Deshi* and the need to conserve supplies of cotton no further quota may be released in the remaining period of the current season. It was officially notified on Tuesday, 29th May, that the ceiling fixed for the export of Bengal *Deshi* to Yugoslavia (Rs. 20 lakhs) had been reached.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the (Select) 875. Hubli Jaydhar 1,105; Laxmi 1,180; American G.M. 1-5/32" 1,328; 1-1/16" Staple 1,265; B.P. 52 1.360.

Karachi cotton futures market ruled firm during the week. The firmness was induced by the news of the signing of an Indo-Pak trade agreement providing for the import by India of 100,000 bales of Pakistan cotton. A general buying movement was initiated and futures prices consequently rallied. Good export inquiries helped sentiment. N.T.R.G. July rose from Rs. 70.30 last week-end to Rs. 72. The new crop contract (January 1963) firmed up from Rs. 73.10 to Rs. 74.50.

Quiet conditions prevailed in the Liverpool cotton futures market during the week. Barring the July delivery of both the American and American type contracts, which ruled steady, the trend of futures prices was generally downward. Lower advices from the spot market and lack of demand from spinners discouraged support with the result that futures values drifted downwards. Sudan cotton contracts too were subdued. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.90; October 23.75; December 23.85; March 24.00.

American cotton mixed growth contract: July 24.30; October 24.10; December 24.20.

Sudan: July, September, November 29.00.

New York cotton futures market ruled firm during the week. The recovery on Wall Street coupled with better export and domestic spinner inquiries imparted strength to the market. Activity mainly centred round new crop.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	5-6-62	29-5-62	22-5-62
New York Spot	35.90	35.75	35.75
July	34.80	34.73	34.76
October	34.68	34.49	34.72
December	34.57	34.36	34.72

ART SILK FABRICS EXPORT SCHEME

(From Our Own Correspondent)

BOMBAY, *6th June*

It looks as though there will be some delay in the revision of the Export Promotion Scheme for Art Silk Fabrics. Otherwise, it is somewhat difficult to explain the issue of a special Press note (dated the 1st inst.), by the Textile Commissioner, which says that the present Scheme "will continue to remain in force until it is revived," although the Scheme is due to expire only on the 30th inst. Apparently, the Government of India must not have finally made up its mind regarding the various suggestions put forward by the Textile Commissioner, as well by the weaving interests and trade circles. Meanwhile, the yarn traders are awaiting with great interest the deliberations of the first meeting of the Board of Trade scheduled to be held at New Delhi on Saturday the 9th inst.

In view of the continued uncertainty regarding the revised Export Promotion Scheme, business put through in imported art silk yarns during the week under review was restricted, with values remaining unchanged except in the case of 150 Japan which picked up Rs. 5 to Rs. 1,989. Amilon (20×1) yarn futures met with good support. The August contract spurted by Rs. 45 to Rs. 3,985 and the June position scored a gain of Rs. 40 to Rs. 3,890. Spot indigenous yarns were well favoured, National Rayons 150 Bt. cones 1st grade advancing by 55 nP to Rs. 14.23 and 120 Bt. cones 1st grade by 10 nP to Rs. 15.53.

Staple fibre yarns were firm on encouraging reports from consuming centres. 40×2 August contract hardened by Rs. 6 to Rs. 716. June delivery gathered Rs. 5 to Rs. 695. Spot Kohinoors jumped up by 26 nP to Rs. 7.96. Citys were fully steady at Rs. 7.83 and Hinds at Rs. 7.77.

Cotton yarns ruled easy, following the decision of the Maharashtra Government to raise the rate of sales tax on yarn from the present level of 1 per cent to 2 per cent. Ten counts Prahalads declined by 12 nP to Rs. 17.75. 40 counts TT Corins dropped 38 nP to Rs. 34.37. Maduras shed 12 nP to Rs. 35.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	6-6-1962	30-5-1962
	Rs.	Rs.
Art silk yarn—		
80/1 Amilon (100 kg.)—		
June	3,890.00	3,850.00
August	3,985.00	3,940.00
150 Japan (per 100 kg.)	2,205.00	2,205.00
150 Japan (per 100 kg.)	1,984.00	1,984.00
120 Italy (per 100 kg.)	1,902.00	1,902.00
150 Italy (per 100 kg.)	1,739.00	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.) ..	14.23	13.68
Staple fibre yarn (40×2)—		
June	695.00	690.00
August	716.00	710.00‡
Kohinoor (per kg.)	7.96	7.70
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Maduras	30.50	30.50
40s T. T. Corin	34.37	33.75
50s Indra	40.50	40.50

SUGAR PRICES DECLINE

(From Our Own Correspondent)

HAPUR, *4th June*

Slack demand from outstations and selling pressure by mills accounted for an easy trend in sugar here this week, and the mill delivery prices of D29 and E29 quality—mostly inferior—eased by about 50 nP per maund, though they were still higher by about Rs. 2 a maund than the former controlled levels. Inquiries for forward deals were also poor due to an uncertain pricetrend. Spot delivery prices eased by about 75 nP per quintal.

Buyers' resistance and mill selling produced an easy trend in the Muzaffarnagar market also. Several mills were still holding quotas of even last month's release. Practically all the factories were reported to have closed their production season in this part of the country, while in east U.P. production was expected to continue till the end of this month thanks to good cane supplies, notwithstanding lower percentage recovery.

Khandsari, however, ruled steady, thanks to demand from Punjab and Rajasthan. Besides the local seasonal demand was also on the increase. But prices did not show any appreciable changes.

Gur ruled quiet. Following the revival of loading facilities, offtake in the week-end was six wagonloads to Gujarat side. Local stock was poor around 10,000 maunds, as against last year's corresponding level of 40,000 maunds. *Shakker* stocks with trade were also poor and prices were unchanged, thanks to good demand. Week-end prices were:—*Gur* superior Rs. 50.91, *dara* Rs. 48.23 and *shakker* Rs. 61.62 per quintal.

Gur prices were depressed in the Muzaffarnagar market, as demand was slack. Total *gur* and *shakker* arrivals there during the current season were around 14.40 lakh maunds as against 13.67 lakh maunds during the full season last year, and stocks were now put at 1.15 lakh maunds.

Gur futures declined sharply and the *Fagun* contract was quoted at the worst level of the week of Rs. 19.13 as against the opening level of Rs. 19.44 and the highest in the mid-session of at Rs. 19.56. Cane crop prospects were still uncertain due to the adverse effect of pests.

EXPORT QUOTA FOR GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, *6th June*

A quota of 5,000 tons of H.P.S. groundnuts (in shell) has been released for exports. All shippers, including established exporters and co-operative societies, are eligible for making exports under the quota. Exports will be licensed freely on shipping bills supported by evidence of sale contract. The Government's decision to allow exports of groundnuts-in-shell has apparently been prompted by the feeling that the quota for 20,000 tons of H.P.S. in kernels released last month may not, in fact, be utilised, especially in the light of fear expressed by shippers that kernels will get damaged during the rainy season. The new quota was widely welcomed by traders.

The release of new quota and the reports that the State Trading Corporation had entered into large export commitments in groundnut oil with overseas buyers imparted a bullish fervour to the market. There were also reports suggesting direct purchases of seeds by the S.T.C., particularly at certain producing centres. Linseeds moved up on rumours that the S.T.C. was export some linseed oil to Australia.

In sympathy, cottonseeds ruled firm. Castorseeds, however, were easy, owing to lack of any overseas enquiries for castor oil, besides difficulties in securing freight for shipment of castor oil to the U.K. as the S.T.C. appeared to have booked freight for the export of considerable groundnut oil.

Groundnut September 1962 contract rose by Rs. 3.50 to Rs. 211.25 and July 1962 contract by Rs. 3.38 to Rs. 208. Nizam bold advanced by Rs. 1.50 to Rs. 44.50. Khandesh quality improved by a like amount to Rs. 45. Oil July 1962 contract hardened by 50 nP to Rs. 17.80 and September 1962 contract by 45 nP to Rs. 18.10. Oil ex-mill was higher by 85 nP to Rs. 18.50.

Linseed June 1962 increased by a rupee to Rs. 39.31. September 1962 contract put on 94 nP to Rs. 39.50. Bold ready closed higher at Rs. 38.37, as against Rs. 37. Linseed oil rose by 70 nP to Rs. 15.25.

Castorseed June 1962 contract dropped Rs. 3.75 to Rs. 158. Madras Small eased by 50 nP to Rs. 31.75. Oil B.S.S. lost 25 nP to Rs. 12.85 and Commercial 40 nP to Rs. 12.20.

Among cotton seeds, July 1962 contract was marked up by Rs. 2 to Rs. 98. September 1962 contract rose by Re. 1.75 to Rs. 99.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 6th June, as compared with those of the two previous weeks:

	6-6-1962	30-5-1962	23-5-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	208.00	—	208.37
July 1962	211.25	204.62	212.37
Nizam bold	44.50	43.00	45.50
Khandesh quality	45.00	43.50	45.75
Oil ex-mill ready*	18.50	17.65	18.40
Railway receipts*	18.15	17.45	18.10
Oil May 1962	17.80	17.80	17.55
Castorseed			
June 1962	158.00	161.75	164.62
September 1962	161.75	161.25	165.25
Ready Madras	31.75	32.25	32.87
Ready Kanpur	30.50	31.00	31.62
Oil B.S.S.†	12.85	13.10	13.65
Oil commercial†	12.20	12.60	13.15
Linseed			
June 1962	39.31	38.31	38.75
September 1962	39.50	38.56	39.50
Bold ready	38.37	37.00	37.62
Oil ready†	15.25	14.55	14.55
Cottonseed July 1962	98.00	96.00	99.50
Niger seed	99.00	95.00	95.00
Kardi seed	25.50	25.50	25.50

* Rates include excise duty but exclude sales tax.

† Rates exclude both excise duty and sales tax.

N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

DUST TEAS EASY

(From Our Own Correspondent)

CALCUTTA, *5th June*

In the internal tea sale held here last week, demand for dusts was poor, and prices eased as a result. If the trend in London auctions is any guide, demand for quality teas during the forthcoming export sales would be very keen. For, all quality teas during the last week's sales in Mincing Lane commanded good attention at rising prices. Better liquoring Assams were in particular favour.

Inquiries received from the United States have confirmed the earlier belief among trade circles that the tea drinking habit is gradually changing there and that Americans show a marked preference for instant tea. In this space age, a thing done with terrific acceleration has got its own value. India's desire to export more tea to the U.S.A. can succeed, if instant tea can be manufactured. Such an impression is gaining ground in the trade. Meanwhile, it has been indicated that, as one of the numerous measures to promote sales in the traditional and new foreign markets as envisaged by the Union Minister for International Trade, the Tea Board is arranging to publicise more about tea in West Asian and other countries, and particularly in the U.S.A., the U.K. and Canada through display of photographs which would depict picturesque scenes of tea-growing areas of Assam and West Bengal and narrate, in brief, the story of tea. Several pictures have already been taken and are being processed in the U.K. It is planned to exhibit these pictures also in India. It is not known why south Indian growing areas have been omitted in this picture publicity. A few pictures of the growing areas on the picturesque Nilgiri hills would only enrich the value of the exhibits.

It is to be hoped that the exhibition of these pictures in the U.K. should lead to greater interest in tea among the people. Note should be taken in this connection that the tea drinking habit in the U.K. is also changing fast. The British are now changing to alcoholic and milk drinks and coffee. About three decades ago, imports of coffee into the U.K. were only 16,000 tons, but are now about 40,000 tons, an increase of 250 per cent.

The existence of bilateral trade agreements with the several Soviet bloc countries has made it possible for India to increase exports of tea as a whole, while efforts to increase exports to the traditional markets have not met with the desired measure of success. Tea circles would much desire more intensive campaigns in the traditional markets, such as the U.S.A., U.K., New Zealand, Canada and Australia. The standards of living in these countries are much higher than in African nations and south America with whom also India has concluded bilateral trade pacts. The living standards in Communist countries are also known to be lower than in the Western countries. It is fact that the very existence of these agreements has directly contributed to lowering exports of orthodox teas to the traditional markets.

Although increased world production of tea in 1961 was entirely absorbed and there was no glut in the markets, note should be taken of consistent attempts by several producing countries to increase their acreage. Both India and Pakistan are aiming at a gradual increase in the next five years. Ceylon is trying to reduce the cost of production by increasing output. Japan is growing more tea than in the recent past. Formosa has now established export markets for its tea which is a favourite in London auctions. Some other countries such as Iran, the U.S.S.R. and Turkey, encouraged by their successful attempts to grow tea, have plans to raise their outputs. Among other growing countries, which have in recent years increased acreage in a mentionable way, are Argentina, Peru and East Africa.

From the foregoing it is evident that all producing areas would make a strong bid to capture more markets. Although a glut is not feared this year, the trade emphasises the importance of maintaining a satisfactory home market. The recent increase in excise duties, if passed on to consumers, might retard the growth of the internal market. However, there is also an opinion in the trade that the changes in the excise duty would not affect internal consumption in view of the improving standard of living and increased emphasis on prohibition throughout the country. The boredom of the industrial worker would naturally increase his natural desire for diversion, leading to a welcome cup of tea during intervals.

Another subject, which is causing anxiety in the trade, is the growing tendency among gardens to produce more C.T.C. teas even at the cost of orthodox teas. If this trend continues any longer, prices of the latter might increase and affect efforts being made to encourage greater exports to traditional markets. In the export auctions in 1961-62, prices realised were generally lower in comparison with the previous season, and yet exports failed to improve to the degree required by the increased crop. Export duty reduction would have certainly led to decreased production costs if only other charges had not increased. In this year's railway budget, freight rates have been increased. The excise duty on aluminium foils and plywood would also contribute to increased packing costs. Further, the general rise in prices in the country would eventually mean increased wage bills.

At last week's internal sale, dusts totalled 29,755 packages. As demand petered out with the progress of the sale, conditions became weak. Plain orthodox teas met with more inquiry, but an irregular trend was recorded in prices. Assams eased liberally, but bright liquorings were about firm. Legg-cut teas realised lower prices. On the other hand, clean teas were firm. C.T.C. eased as the sale progressed and fibrous were difficult to sell. The quotations per one kg. in rupees (inclusive of excise duty) were: Good Assam C.T.C. dust 6.10 to 6.30, medium Assam C.T.C. dust 5.40 to 5.70, legg-cut dust 3.70 to 4.00 (*nominal*), medium Assam dust 3.30 to 3.60 and plain orthodox dust 2.90 to 3.10. Leaf, on offer, amounted to 51 chests only, which met with good demand.

JUTES FIRM

(From Our Own Correspondent)

CALCUTTA, *5th June*

Following keen buying interest in hessian by the U.S., fully steady conditions prevailed in the jute goods market during the week under review, while the reported decision of the Government of India to assure a minimum price of Rs. 30 a maund to farmers in respect of the forthcoming crop led to greater firmness in fibre prices. Purchases of hessian were indeed substantial and, as a result, ready hessian 40" 10 oz. shot up at one time to as high as Rs. 60.50, as against Rs. 57 earlier in the week. Support from other overseas interests was also not lacking. There was reason to indicate that overseas buyers believed that prices, which had touched rockbottom levels, had started rising. This accounted for the good volume of business put through in the week. U.S. stockists are now purchasing for replenishment. The belief that the mills would not be able to increase hessian output beyond the present level lent a bullish hand. The news that a steamer had been declared for June for Argentine and that this country would lift about 40,000 bales of hessian for shipment between now and September was noted with much enthusiasm. It was also a factor for this week's upward trend in hessian.

The statistical position in hessian was considered very sound against the background of overseas buyers showing interest in forward positions. Hitherto, they had been refraining from showing much interest in forward deliveries on the assumption that the difference between prices for ready and forward goods should be wider. Business was done up to December positions, and this indicated that the backwardation was entirely satisfactory. In comparison with hessian, interest in sacking goods was of a lukewarm nature, but a late rally leading to fractional rise in prices was recorded in sympathy with continued keen demand for hessian. Present prices for the different constructions of heavy goods should be considered attractive. However, a rise was not overruled in the event of early Cuban interest. Cuba is now keeping away from the market, but it is thought that it would shortly begin covering requirements for this year. Australia is reported to be edging for a greater farm output, thanks to excellent weather conditions. As such, Australian requirements for heavy goods may be greater than usual. If, therefore, Australia and Cuba were to show greater interest, sacking prices should move up. Further, purchases by Communist countries, which have rupee accounts in India, are expected to continue.

Now that overseas demand for goods has increased, vigilance is necessary to ensure that prices do not rise unreasonably so as to lessen the competitive power. Fibre prices in Pakistan are much lower than in India, but the Pakistan mills are unable to meet overseas demand in full. However, these mills are endeavouring to increase production, and a planned increase in loomage is already being executed. Viewed thus, the reported decision of the Government of India at the recent meetings of the Planning Commission and the Union Ministries of Food and Agriculture and Community Development to assure a minimum price of Rs. 30 a maund without prior consultations with the representatives of the Indian mills industry is considered unfortunate. It is to be hoped that the decision at the meetings referred to is only a recommendation for further consideration at a still higher level. For, as pointed out in a statement by the Indian Jute Mills Association, the Association had previously arranged to discuss the question of fibre prices with the Government in June, and as such it had no doubt that no such decision had been taken without prior consultation with the industry. The statement added that, from its experience of the sugar industry, the Government was obviously aware of the danger of fixing raw material prices at a level which adversely affected the export trade in the finished product.

Prices of fibre in Pakistan and Thailand are much lower than in India. As pointed out by the I.J.M.A., the cost of production in India per ton of finished goods is Rs. 300 higher than in Pakistan. That this gap would only increase is a logical conclusion if steps are taken in India to assure farmers of a minimum price of Rs. 30 a maund. Hitherto, mill circles were under the belief that the minimum price of Rs. 30 a maund was applicable for the outstanding quantity of the old crop and that a minimum price, if at all one should be fixed for the next crop, can only be after taking all circumstances into consideration. The I.J.M.A. is one with the Government in the desire to ensure an economic price to cultivators; however, the export potential of the industry should also be safeguarded at the same time. The industry is the best foreign exchange earner of the country, and contributes to Government coffers foreign exchange to the tune of Rs. 145 crores a year. It is to be hoped that the Government discusses the question of prices for the next crop with the I.J.M.A. representatives. It is felt that, now that foreign demand for goods has developed satisfactorily, nothing should be done to increase prices of goods. Although fibre prices were firm during the week, the Government's decision did not lead to any rise in prices. That is a measure of the current level of high stocks. The Government was also reported to have decided that the Buffer Stock Association should make increased purchases. It was further decided that a representative of growers should be taken on the Association which now consists of representatives of Government and mills only. The Government was in favour of marketing jute through co-operative societies. Although this aim should be desirable, it cannot be achieved without better organisation of farmers and a helping hand of Government officials in this regard. If only mills are enabled to purchase from such societies, both farmers and mills stand to benefit.

During the week, middles were shown much attention by mills in the fibre market. Offerings were extremely limited. The break in the dry weather conditions and the occurrence of widespread rains in several jute areas was noted with satisfaction, and this led to limited interest generally in the lower varieties. The report that no export trade in fibre had as yet taken place was noted. Sellers of bottoms desired to dispose of remnants of their stocks at cheaper rates, but demand was subdued.

On Tuesday last, there was selling pressure in the futures market and, as a result, ready B. twills eased from Rs. 125 to Rs. 123. However, hessian was much in the forefront on account of short-covering in near and ready deliveries and, although overseas interest was subdued, ready hessian 40" 10 oz. was maintained firm at Rs. 57. Not much significant note was taken of the fall in April despatches of jute goods, figures in respect of which were released during the week. Export despatches fell from 66,400 tonnes in March to 54,300 tonnes in the following month, with hessian showing a fall of nearly 9,000 tonnes to 25,300 tonnes. The fall in despatches against local purposes was only lower by 3,800 tonnes at 28,000 tonnes. On Wednesday, ready hessian 40" 10 oz. added a fractional gain at Rs. 57.25, following more overseas inquiries. On the other hand, absence of interest forced down ready B. twills to Rs. 122.75. Activity in the futures market became keener, and demand on account of covering business continued undiminished. As a result, ready hessian 40" 10 oz. spurted to Rs. 58 on Thursday, although B. twills remained unchanged at Rs. 122.75. Heavy bear-covering was a feature on Friday, and ready hessian 40" 10 oz. reached a high of Rs. 60.50. Profit-taking soon intervened to reduce the gain to Rs. 58.50. In sympathy, ready B. twills firmed up to Rs. 123. There was selling pressure in the futures market during the week-end and, as a result, easier conditions were in evidence in ready goods. However, covering demand prevented a larger decline. Ready hessian 40" 10 oz. quoted at Rs. 58.25 and B. twills at Rs. 123.00. In the earlier part of yesterday conditions became easier but as covering business for ready goods at lower prices was released prices recovered and closed above the lowest levels of the day, although hessian was lower on balance. Thus ready hessian 40" 10 oz. finished at Rs. 56.75, but ready B. twills rose to Rs. 124.20.

MIXED TREND IN METALS

(From Our Own Correspondent)

CALCUTTA, *5th June*

While, following the London trend, tin eased here this week under bearish influence of renewed expectations of imminent releases from the U.S. strategic stockpile, zinc and copper were fully firm due to the prevailing shortages. The postponed decision of the Aid-India Consortium on further aid to India was viewed by the trade with concern.

In London, tin eased from £917 a ton to £910. In the Far East markets, too, an easier trend was recorded. In Calcutta, the price eased from Rs. 1,641.50 to Rs. 1,622.00 per 100 kgs. Upcountry demand in Calcutta could not be responded to in full in view of the railway booking restrictions to certain areas. Stocks increased as a result of larger arrivals. Although the U.S. Administration is expected to be finally authorised by the Congress to release tin from stocks, there is much uncertainty about the price at which the releases would be effected. Producing countries, viz., Nigeria, Indonesia, Malaya, the Congo and Thailand have demanded an assurance from the U.S. that the price would not be lower than £965 a ton. However, consuming countries have naturally regarded the price as too high. In deference to the wishes of the International Tin Council, the U.S. has agreed to consult the Council and the principally concerned countries before releasing the stocks. Such consultations could only be held after the Administration is empowered by the Congress to effect the releases. Until the U.S. releases are absorbed by actual consumption, world production is not likely to increase in any marked way. It is taken for granted that the gap between production and consumption this year could only be filled in by the U.S. stocks on which depends the future price trend. It is more than likely that the U.S. releases would be in stages.

In London, spot copper advanced by £1 a ton to £235. The rise followed good demand for the cash metal. In Calcutta, utensil copper received attention at Rs. 522.50 per 100 kgs., as against Rs. 519.25 before. Berry scrap was unchanged but fully firm, at Rs. 570.50.

While manufacturers of copper and brass sheets and plates are permitted to claim rebate of Rs. 100 per tonne in the excise duty on these products produce from the duty-paid copper ingots, nothing is known about the question of a similar rebate on copper and brass strips, tubes and pipes produced from the duty-paid virgin metals. It is to be presumed that the omission of the full details in this regard in the Finance Bill is an error, but, until clarification comes from New Delhi, the excise authorities will naturally stick to the letter of the law, thus forcing manufacturers to block further sums in excise duties. In other words, this would mean that the excise duty on certain brass and copper semis would stand increased from Rs. 300 per tonne to Rs. 400 in practice for some time to come.

Already considerable sums have been blocked with the Government in view of the arbitrary interpretation by the excise authorities as to the sizes of sheets and circles on which the duty of Rs. 300 per tonne has been enforced from last year. When this duty was levied, the excise authorities ruled that squares and flats of all sizes came within its scope. The industry did not agree with this interpretation, but was left with the only alternative to pay the duty under protest, while appealing to higher authorities for a clarification. At the beginning of April, in accordance with the interpretation of the Indian Standards Institution, the excise authorities clarified that squares and flats above ¾" in thickness and/or size do not come within the meaning of strips and plates and thus do not attract the duty. The industry has now claimed refund of duty paid on these products under protest since March 1961. It is regrettable that claims for refunds move very slowly in Government offices. It is also a one-sided rule that while the Government can claim short-payment of duty at any time after the original payment of duty by a manufacturer, the industry is debarred claims of refund of duty paid in excess after three months of the original payment of duty. The industry's representations to convert the *ad valorem* duty of 10 per cent on copper and brass tubes and pipes to a specific duty has so far fallen on deaf ears. If only this reasonable demand is accepted the tablework could be avoided considerably, without reducing revenue.

There was good support for zinc during the week in view of the recent decline. The price was firm at Rs. 228.50 per 100 kgs. Virgin lead was also firm at Rs. 132 per 100 kgs. In London, spot zinc opened at £68 a ton, but eased to £67¾.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *4th June*

After ruling steady for the past several weeks, foodgrains turned quiet here this week, thanks to better arrivals of *rabi* grains in the market. But, as against a bumper crop arrivals were still poor. The Union Food Minister, Mr. S. K. Patil, has regarded the food situation in the country as satisfactory. Wheat production, estimated at 115 lakh tons, has exceeded the previous season's outturn by about 9 lakh tons and rice is also plentiful and the granaries are full.

Wheat was sluggish during the week and on Monday, was quoted at Rs. 38.50 per quintal for the average quality and up to Rs. 45.56 for the better farm produce. Daily arrivals improved to an average of 1,500 to 2,000 maunds and, as consumer demand was a little poor, the major part of arrivals went into stock formation, with the result that the local stocks increased to 45,000 maunds. Rice ruled steady on good demand in the face of poor arrivals. Stocks here were also low, estimated around 10,000 maunds. Week-end prices of rice (in rupees per quintal) were:—*Basmati* superior 80.38 to 96.45, *sela* 75.02 to 80.38, *mainpuri sela* 56.26, *ramajwayan sela* 66.98 *raimunia sela* 69.66 and *gadda kutcha* 52.92.

Gram was slightly depressed, to be quoted near the week-end at Rs. 39.52 to Rs. 40.87 per quintal according to quality. Gram arrivals were mostly from Punjab and averaged 1,000 maunds daily. Local stock was around 20,000 maunds. Barley, too, was depressed at Rs. 27.46 and so was *bejhar* at Rs. 26.79 to Rs. 29.47 per quintal according to quality. Stocks of these grains—barley were still poor. *Methi* was quoted at Rs. 61.62 to Rs. 64.30 per quintal. Demand from Bengal was slack, with daily arrivals around 150 to 200 maunds. *Juwar* and *guwar* were still in request for seed purposes and so was *bajra*. The prices were:—*Juwar* Rs. 38.85 to Rs. 41.53, *guwar* Rs. 38.85 to Rs. 40.19 and *bajra* Rs. 37.95 per quintal.

Among pulses, peas and *arhar* were steady for the major part of the week on stockist support, but eased near the week-end because of increased stocks and in sympathy with the general trend in cereals. Daily arrivals of peas were around 1,500 maunds, and part of them were from east U.P. Loading facilities were comfortable in the week-end, which accounted for despatches of 14 wagonloads to Madras and M.P. But local stock of peas was around 71,000 maunds. *Arhar* arrivals from Gujarat were good, but were poor locally due to the virtual failure of crop in this area. Total arrivals during the week were five wagonloads and were readily lifted for conversion into *dal*. *Urd* continued steady on good consumer demand, but other sections were quiet, with prices (in rupees per quintal) at:— *Peas dara* 30.81 to 31.38, farm white 33.49 to 36.17, peas *dal* 36.17, *arhar* 46.79 to 53.58, *arhar dal* 64.30 to 72.34, *urd* 68.66, *moong* 53.58, *moong dal* 61.62, *masoor* 41.43 to 49.57, *massor dal* 53.58 and gram dal 48.23.

LINSEED FIRM

(From Our Own Correspondent)

CALCUTTA, *4th June*

Linseed continued to be firmly held here this week, and sellers were reserved. The local stock-position is very poor. Arrivals have been scarce. The oil market was firm in sympathy with seeds and other oils. Local demand was good, but sellers were reluctant to do much business owing to poor arrivals of seeds. The oilcake market was stagnant. Local demand for forward deliveries was falling off a bit and prices were a little easier. The latest quotation for the June delivery was Rs. 77.70 per quintal.

Notice

THE BOMBAY FIRE AND GENERAL INSURANCE COMPANY, LIMITED

Registered Office:

Moti Mahal, Jamshedji Tata Road, Bombay 1

NOTICE

TO THE MEMBERS,

NOTICE IS HEREBY GIVEN THAT THE Twenty-Seventh ORDINARY GENERAL MEETING of the Members of THE BOMBAY FIRE & GENERAL INSURANCE COMPANY LIMITED, will be held at Henley House, Graham Road, Ballard Estate, Bombay, on TUESDAY, the 3rd July 1962, at 3 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Revenue Accounts, Profit and Loss Account, Profit and Loss Appropriation Account and Balance Sheet for the year ended 31st December 1961.
2. To elect Directors in place of Mr. Manoobhai Doongursee and Mr. F. H. Kemple, who retire under Article 145 of the Articles of Association of the Company and offer themselves for re-election.
3. To appoint Auditors for the current year and to fix their remuneration.
4. To consider and if thought fit, to pass with or without modification the following Resolution for audit of the Accounts of the Company's Branch Offices by persons qualified to act as Auditors.

"RESOLVED that the Board of Directors be and is hereby authorised to appoint such persons qualified to act as Auditors in consultation with the Company's Auditors on such terms and conditions, for audit of the accounts for the year ending 31st December 1962 of the Branch Offices of the Company, whether existing or new Branches to be opened hereafter as the Board of Directors may decide upon from time to time."

The Transfer Books of the Company will remain closed from 26th June 1962 to 3rd July 1962 (both days inclusive).

A Member entitled to attend and vote at the General Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself. The proxy need not be a Member of the Company.

By Order of the Board,
K. K. DASTUR,
Manager.

BOMBAY, *2nd June 1962.*

DELHI LETTER

(Concluded from page 1016)

(Dr. B. C. Roy and Mr. B. P. Chaliha, the champions of a policy of defiance of Central direction, by a strange coincidence were not present at the meeting.)

The State Chief Ministers, in general, are understood to have agreed that, whatever the prospects of external aid, the plans for raising internal resources should remain unchanged. In case of shortfall in foreign exchange resources, projects requiring only rupees will be taken up. Of the total third Plan outlay of Rs. 3,847 crores for the States, the expenditure in the first year was scheduled to be Rs. 550 crores, or 14.3 per cent. The planned expenditure in the second year is Rs. 716 crores, or 18.6 per cent. The States had by and large held over their taxation plans for the current year until after the elections. The Planning Commission will hold a series of talks with State Ministers after the taxation budgets are presented by all States and the full picture of the resources for the current year emerges.

Planning and Integration

Orientation of economic development as a means of national integration was the subject of an exhaustive note from the Planning Commission to the Integration Conference. The Commission said that, in the short-term, the needs of the economy as a whole may call for a greater concentration of resources in some directions than in others, but economics of scale and location acquire greater importance as planned development proceeds. In preparing the long-term development plan for fifteen years, the Planning Commission will make every effort to take into account the needs as well as the possibilities of development in different regions. The Planning Commission has appointed a committee on natural resources and a special division to study the resources potential of various regions.

The techno-economic surveys of various States done by the National Council of Applied Economic Research have already focussed attention on the physical potentialities of regions, although the economic feasibility is an entirely different question. The regional approach has been emphasised by the Centre in the choice of some major public sector projects in the third Plan and in spreading the new licensing for textile mills Delhi has been able to carry over some of this emphasis into the private sector. However, in the private sector the regional emphasis cannot be proceeded with far, because of the tendency of industrialists to precipitate towards areas where natural conditions—in facilities or labour—exist. Further, there is a varying degree of competence among State administrations to provide certain minimum infrastructural facilities and, in this respect, Maharashtra, Bengal, Punjab and Madras will be able to score over the others for a long time to come.

The N.C.A.E.R's recent survey of the Punjab says: "The ingenuity of the Punjabi worker is a great asset to the economy. It is said that he can produce anything if he has a model. His methods may be rough, but he is eager to learn new techhniques to perfect them. In the absence of metallic ores, the importance of perfection of skills in attracting new investments can hardly be exaggerated." The qualities of the people in the Punjab more than perhaps offset the meagreness of the natural endowments of the State.

The N.C.A.E.R. survey on Orissa, which was released along with that on Punjab, shows Orissa as an outstanding example of a State remaining backward, despite rich endowment of natural resources. While the *per capita* income in the Punjab is far above the national average, in Orissa it is far below the national average.

A successful experiment in planned efforts to develop the depressed areas has been undertaken in Yugoslavia and this has many fans at Yojana Bhavan. An adaptation of the Yugoslav model to Indian conditions could mean that the more backward States should be able to obtain loans from a central fund at lower rates of interest than those who have a more developed economy. Private industrialists who would invest in the less developed regions would also have to be assisted through favourable terms which may mean low interest loans or tax concessions.

According to the planners' note to the Integration conference, the following are the main directions in which action to secure more rapid development of backward areas is being intensified:

1. State Governments have identified the markedly backward areas in each State which call for special measures for accelerated development. The Planning Commission will help implement development programmes in these areas.

2. The rural works programme, in order to ensure employment to all persons in the slack agricultural season, is being concentrated in areas suffering from considerable unemployment and underemployment. The ultimate aim is to provide work in this way for 25 lakh people.

3. Many of the large projects are being located in comparatively less developed areas.

4. Greater facilities for education and technical training.

5. It is proposed to undertake this year forty rural industries projects each covering three to five lakh people. The emphasis will be on co-ordinated development of agriculture, small industries, communications and social services. This will ultimately help in the establishment of a balanced and diversified rural economy.

With effect from the current assessment year, all persons who have taxable incomes are required to furnish voluntarily return of their income in a prescribed form. The return has to be furnished before the 30th inst., or, in the case of persons having income from business, before the expiry of six months from the end of the relevant accounting year, whichever is later. In special cases, these time limits will be extended upto a prescribed maximum by the Income-tax Officer on an application being made to him in this regard. However, as this is the first year during which the new procedure is being introduced, it has been decided by the Government to extend the time limit by one month in all cases without any application being made in that regard. Thus, assessees may file their returns of income before 31st July 1962, or, where they have business income, the expiry of seven months from the end of the relevant accounting year, whichever is later.

The Government of India is considering proposals for laying pipelines for the transport of oil and gas in order to give relief to the railways. The proposals include the construction of a product pipeline between Calcutta, Barauni and Delhi for carrying initially 1·5 million metric tons of white products and another between Gauhati and Sillguri for carrying about 500,000 metric tons of such products. Another pipeline from the proposed Gujarat refinery to Ahmedabad for carrying initially about 600,000 metric tons of products annually is also being considered. It is also proposed to lay two crude oil pipelines from Ankleshwar and Kalol oilfields to the Gujarat refinery site for carrying initially about one million metric tons each annually. Three gas pipelines, namely, Ankleshwar-Uttran Cambay-Dhuvaran and Kalol-Ahmedabad for carrying initially about one million c.m. of gas daily are also included in the scheme. The technical, economic and other aspects of these schemes which have a bearing on rail transport and also the quantum of relief to be provided to the railways in consequence are also being studied by the Government.

SURVEY

(Concluded from page 1015)

1960-61 to 91 in 1961-62, but this is still much lower, as compared with 96 in 1959-60 and 105 prices would have gone up still further, had the zonal restrictions on wheat been maintained.

But this does not mean that the case for the abolition of zonal curbs on rice is not sound. With considerable improvement in the supply position, this step is bound to remove some impediments in the way of free flow of marketable surplus. From this point of view, Mr. S. K. Patil's broad hint that the Government was considering the question of removing zonal restrictions on rice is to be welcomed. He, however, mentioned that some States were still against the removal of zonal barriers. Since the Government has adequate stocks of foodgrains for restraining any sudden revival of upward trend in prices, there seems to be no reason why some States should object to the removal of zonal restrictions. The permanent solution for the problem of foodgrain prices will still be elusive, unless output is stepped up steadily commensurate with the increasing requirements of the country. This well-known point needs to be stressed, particularly because the scope for imports, too, is becoming limited in the context of the precarious balance of payments position and the growing foreign exchange requirements for other purposes under the third Plan. Mr. Hasham Premji's plea for intensifying the programmes for irrigation, fertilisers, improved seeds and better implements is quite pertinent in this connection. For it is only with the aid of such measures that agricultural productivity in the country can be improved.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2670 BOMBAY, 16th JUNE 1962 PRICE Rs. 2

PROBLEM OF EXTERNAL RESOURCES

THE foreign exchange crisis confronting this country is not an overnight development. It has been brewing for quite some time and the dire warning "export or perish" has been sounded many a time. Only, it failed to stir the country to an extent necessary to make the export promotion campaign a success. In December 1959, when the external reserves (excluding gold) was Rs. 205 crores, that is, twice as much as the present figure of Rs. 102 crores, we remarked that the level of these reserves was "miserably low" and served "as a sharp reminder of this country's absolute dependence on friendly foreign nations" for its economic growth. Yet, a year later, the third Five-year Plan, involving an outlay of over Rs. 10,000 crores with a foreign exchange component of Rs. 3,000 crores, was drafted. At the time the third Plan was finalised, the foreign exchange reserves were even less, roughly at Rs. 136 crores. And still India decided to go ahead with the implementation of the Plan. One may think that it was foolhardy on the part of India to have undertaken such a plan at a time when not only its foreign exchange reserves were so low but its own competitive capacity in world markets was known to be poor. Indeed, there were many who said so and had argued for a relatively smaller plan. But the Government of India and the vast majority of knowledgeable sections of the community felt that a plan of the magnitude of the third Plan was necessary, in order to meet even the bare requirements of a population of over 400 million with a sharp rate of annual growth. Unlike in the case of the second Plan, the Government took special care to consult the foreign Governments about the extent to which they would be willing to assist the country in the implementation of the third Plan. More than one foreign delegation visited the country and held discussions with the Government and the Planning Commission, the most important of them being the Oliver Frank's mission under the auspices of the World Bank. There were reasonably clear indications that India would get sufficient help to implement the third Plan. This calculation, however, has not fully materialised. The Western nations that had promised help are now reluctant to render all the aid that India needs. It is this development that has converted a chronic malady into a crisis, calling for the introduction of emergency measures to cut imports and push up exports.

There are many reasons for the decline in the enthusiasm of Western countries to aid India in its battle for economic progress. If reports appearing in the Press are any indication, they are mostly political. Circumstances beyond its control have forced this country to step up the defence expenditure and to explore the possibility of securing military equipment even from Russia. Pakistan, too, is taking advantage of India's economic weakness and political preoccupations to antagonise the common friends against this country. Some politicians in the U.S., which has so far liberally helped India, are trying to secure a cut in the assistance because of their political prejudices against the Union Government. Britain and the Continental countries have their own preoccupations with the Commonwealth. Further, the uncertainty clouding the size of U.S. assistance has encouraged them to delay their final decision. The adjournment of the Aid-India Club meeting towards the close of last month without fixing a definite date for the next meeting has made matters worse. There have been delays on the part of some members of the Club even in making available the credit they had already promised. The import of politics into the question of foreign aid is unfortunate and irrelevant. Prime Minister Nehru had made it clear right from the beginning that foreign aid with political strings would be unacceptable to India. But the U.S. is a democratic country and so are the other Western nations. None can prevent their political leaders and the Press from saying what they like, a freedom which their *confreres* in India fully enjoy and any encroachment into which is strongly resented by them. We must, therefore, be patient and not lose our temper. The Government of India, on its part, must not slacken its efforts to get the foreign aid required to implement the Plan. Mr. Morarji Desai's statement in Parliament last week (8th June) is reassuring on this point. He said that negotiations with countries which had given promises of assistance last year were continuing and that further efforts would be made to ensure that as much of the foreign assistance as possible was disbursed during the current year. It is reasonable to hope that the Governments of the members of the Aid-India Club have a better understanding of India's political and economic situation than some of their politicians and newspapers and that, therefore, they will appreciate the urgency of the need for replenishing its foreign exchange till.

The answer to the question as to what India should do in case the Aid-India Club fails to meet its full requirements of foreign exchange is apparent enough. In that unfortunate event, the Plan will have to be pruned to suit the size of resources available, care being taken to ensure that capacity and employment already created are not starved of the resources necessary to keep them going. Such a development will clearly mean that India's friends in the West do not want it to grow fast and that their professions in recent years had a larger element of tall talk than one had discounted. After all, the economy of every member of the Aid-India Club is strong enough to afford the assistance which this country requires. One is aware of the balance of payments difficulties of the U.S., but there is not even the remotest chance of finding a solution to that problem by cutting down economic aid to India.

While every effort must be made to obtain the maximum amount of foreign aid in the form of long-term loans at low

minimum. As its import surplus is largely due to developmental imports, the balance of payments problem is a long-term one. Consequently, the second line of defence provided by the I.M.F. is not of much use. To borrow from the Fund is only to secure a respite. There are only two ways in which India's foreign exchange needs can be met, exports and import of long-term capital in the form of both Government-to-Government loans and private capital. Since foreign Governments are beginning to show signs of getting tired of India, it is advisable not to depend too much on them. This is not to say that they are right and that India should give up its attempt at persuading them to spare a part of their savings for its development. But prudence demands that this country should try to reduce its dependence on others. Further, a higher level of exports is necessary to give confidence to foreign private investors that the projects they help establish in India will not be starved of raw materials, stores, spare parts and machinery for replacement, and that they can freely remit the dividends to their country. Businessmen in this country must consider it their patriotic duty to earn and save foreign exchange, as well as to surrender whatever wealth they have hidden abroad. The Government will do well to give them general amnesty for a specified period, provided they pay the taxes due, if any. It is obvious that, in the present circumstances, if businessmen do not co-operate with the Government wholeheartedly, the alternative will be too many irksome controls and a reduction in the scope for expanding their operations. The Government, on its part, will have to amend those economic policies which stand in the way of reducing cost of production and improving efficiency. Export incentives can only be palliatives and not a cure to the malady of high cost. Ultimately, it is only by making the goods competitive in world markets that India can hope to attain economic viability. Since sustained success on the export front requires many years of hard work, the sooner this country starts with the real measures (that is, those that will yield enduring results) for improving its efficiency and strength the better.

INDIA'S STAND AT BRUSSELS

THE Brussels negotiations relating to Britain's application for membership of the European Economic Community have just entered their crucial phase. The nub of the problem now is whether and what arrangements can be devised to safeguard the vital trading interests of the Commonwealth countries which, not being direct parties to the negotiations, depend almost entirely on the British Government to wring out concessions from the Common Market of the Six. The Commonwealth countries may feel gratified that the British Government is alive to its responsibility and that it is standing by its promise not to join the E.E.C. unless arrangements can be made to maintain the Commonwealth's present opportunities to trade with Britain and with Europe. This promise, so forcefully reiterated by the Commonwealth Secretary, Mr. Duncan Sandys, in the House of Commons on the 7th instant, should help allay some at least of the doubts and fears widely prevalent in the Commonwealth. But a few of the misgivings will continue to remain till the negotiations are completed and a satisfactory overall package emerges. As of today, the Commonwealth countries are in no position to feel fully satisfied with the course of negotiations at Brussels, the following concluding passage in Mr. Duncan Sandys' speech in the latest Commons debate notwithstanding:

"If our admission to Europe should involve the disruption of the Commonwealth, that is an entrance fee which we are not prepared to pay. On the other hand, if the terms are fair, I am unshakably convinced that Britain's entry into the European Community will be good for Britain, good for Europe, good for the Commonwealth, and good for the stability and progress of the world."

If Mr. Duncan Sandys has made this reassuring statement, he has also made several other observations which are rather disquieting. There are, for instance, the points he has made in regard to the rights of entry and preference enjoyed by Commonwealth countries in their traditional British market. The first point is that the Ottawa agreements, which apply only to the signatories in 1932 and provide certain general rights of entry and preference, are subject to revocation at six months' notice on either side. The second point is that it is not any good looking, purely from the legal standpoint, at the question of rights conferred by specific agreements—that is, agreements governing particular commodities for a specified number of years—between Britain and certain Commonwealth countries. There is, thirdly, the point that even Commonwealth producers whose products are not covered by specific agreements "have known that they could not necessarily count on free entry for unlimited quantities for all products for all time." Mr. Sandys has, of course, admitted that these Commonwealth producers "have quite naturally taken it for granted that they could continue to have easy access to the British market." And he has also admitted that "even those which have legally binding pacts have never contemplated the possibility that the British market could be closed to them at the end of the period specified in the agreement." This admission, however, makes no difference to the forthright way in which the legal basis of the rights and preferences enjoyed by Commonwealth countries in the British market has been sought to be undermined. One wonders if any Commonwealth country can now continue to take its stand on "rights" and hope to be supported by Britain.

That brings the subject straight to India's own stand. Relevant in this context is the following passage in Mr. Manubhai Shah's Lok Sabha statement of 12th instant on the course of the Brussels negotiations:

"U.K.'s entry into the Common Market would create a fresh set of problems for us, because of the fact that our trade with the U.K. has been built over a long period of years on the basis of freedom from tariffs as well as quotas and certain guaranteed margins of preferences. It is clear that, if our *long-established rights* (italics ours) under the Indo-U.K. Trade Agreement are replaced by a restricted regime, our trade will suffer great damage."

The reference in the above passage to India's *long-established rights* in the British market may not be of avail any longer, for Mr. Duncan Sandys himself has stated, without mincing words, that "the Six are, not unnaturally, reluctant to give precise and perpetual guarantees for the entry of Commonwealth produce such as we ourselves have never felt able to give" and that "any trading arrangements which we have made with the Commonwealth have always been the subject of periodic review." What India and other Commonwealth countries are virtually asked to hope for is contained in the following two significant paragraphs of Mr. Sandys' speech:

"Broadly speaking, we are endeavouring to negotiate for an initial period arrangements which will, as far as possible, assure to Commonwealth producers trading opportunities in Britain and in Europe equivalent to those which they at present enjoy. That is what we mean in this connection by the term 'comparable outlets.'

"But that, of course, is not enough. The Commonwealth producers must have some assurance of continuity after the initial period. Commonwealth producers must have confidence that, over the years, the enlarged Community will continue to treat them fairly in the same way as they are confident of fair treatment at present from Britain."

It would appear from this statement that India, for instance, cannot depend entirely on the British Government to plead for adequate safeguards for its (India's) trade. In fact, a British paper, submitted to the ministerial meeting in Brussels on 30th May, has already conceded the first round to the Six by taking into account the latter's "reluctance to accept a solution based on complete duty-free entry" for the exports of India, Pakistan and Ceylon. Its concrete proposals, on which decisions are expected to be taken at the next ministerial meeting scheduled for 27th instant, cover cotton textiles, jute goods, other manufactures and tropical products. Regarding cotton textiles, the British proposal is that the common external tariff (15 per cent on coarse grey cloth) of the enlarged Community should be applied in three steps—the first one of 30 per cent to be taken on Britain's entry, the second one of 30 per cent to be taken if statistics covering a period of 12 months following the first move showed that the trade had not been damaged and the final step of application of the full tariff to be taken when the full tariff was applied by member-countries generally. It is a part of this proposal that member-countries be persuaded to relax quota restrictions if periodical reviews of cotton textile imports showed that their volume has fallen below an agreed level. As for jute goods, no clear-cut proposals seem to have been made. In the group of "other manufactures," a *nil* tariff has been proposed for East India hips and for certain articles of special interest to India and Pakistan but not produced on any scale in the Six, such as certain types of sports goods. For other manufactured goods in this category, duty-free quotas, with reasonable opportunities for growth, have been proposed in the British paper. The proposals covering tropical products are: (i) a *nil* tariff for tea and for a number of other items of which these countries—India, Pakistan and Ceylon—are the major producers and of which there is no major production in the existing associates of the Common Market or in Commonwealth countries and territories to which Britain would wish an offer of association to be made; and (ii) duty-free quotas in the enlarged Community for the remaining tropical products and for certain processed and miscellaneous agricultural products, including tobacco.

Even a cursory glance at these proposals made by Britain for dealing with imports from India, Pakistan and Ceylon would show that there are several conditions and reservations attached to them. That these proposals do not concede much and will not, therefore, be found wholly acceptable to these countries should be apparent. Even if that is not quite apparent, the Government of India's recent memorandum to the E.E.C., a copy of which was placed on the table of the Lok Sabha on the 12th instant, should make it so. This memorandum has suggested some practical solutions within the framework of the Treaty of Rome. These are:

(1) *Nil* tariffs to be established as the common external tariff for primary products, semi-processed and some processed products which now enjoy the right of quota-free and duty-free entry into Britain. The products suitable for free entry would include tea, spices, vegetable oils, coarse grey cloth, jute manufactures, coir products, hand-knitted carpets, East India kips, finished leather and leather manufactures.

(2) Since it will clearly be impracticable to accord duty-free treatment over the enlarged Community (as a whole) to all the Indian products eligible by convention and contractual obligations to such treatment in the U.K., the Indian products for which a zero tariff does not prove to be acceptable by the Community may be protected by means of a Protocol to the Treaty of Rome which relates "to goods originating in and coming from certain countries and enjoying special treatment on import restriction into one of the member States." In other words, goods originating from India may be accorded in the U.K. the same treatment as is accorded to the goods imported into France from Morocco, Tunisia, etc.

(3) Deep cuts in the common external tariff on items of special interest to India may be considered. In this connection, attention is invited to Article XXIV of G.A.T.T., according to which a customs union is not expected to adopt a common tariff which is more restrictive in its effect than the tariff previously enforced in member States.

There is clearly a big gulf between these Indian proposals and the British proposals covering the three similarly situated Commonwealth countries, namely, India, Pakistan and Ceylon. Whether the gulf can be bridged or at least narrowed will be known only after Mr. Duncan Sandys has concluded his discussions at New Delhi next week and the attitude of the member-countries of the E.E.C. is fully revealed at the forthcoming ministerial meeting of the Community on 27th June. This country can still hope for a reasonable compromise. This hope may not be wholly unwarranted, for we have it on the authority of the Lord Privy Seal, Mr. Edward Heath, who is Britain's principal negotiator at Brussels, that, while the E.E.C. attached immense importance to the common tariff, it was not so rigid as to say that exceptions were impossible.

While there is at present practically no tariff wall in Britain against Indian goods, the position following the former's entry into the Common Market will be a tariff barrier of 5 to 15 per cent on semi-processed products, 8 to 32 per cent on industrial products like cotton textiles and jute goods, and 50 per cent or more on items like unmanufactured tobacco, unless, of course, a compromise is reached. Otherwise, the common external tariff of the enlarged Community, coupled with the reverse preference now granted to the E.E.C.'s overseas colonies and associated territories, would inflict on Indian exporters a price disadvantage ranging upto 30 or 40 per cent in some cases. There is, therefore, no point in describing the *general* level of the common tariff as being relatively low, for its incidence on different groups of Indian exports will be much heavier. Unless India's case is conceded in a large measure, it is difficult to see how this country can maintain, in the years to come, exports to Britain at their present level of a quarter of all its overseas exports (Rs. 660-670 crores) and also hope to reduce the current annual deficit of about Rs. 130 crores in its trade with the six member-countries of the E.E.C.

MARKET GOSSIP

Why Compel Banks?

REPORTS from New Delhi suggest that the Government of India proposes to resort to legislation which will compel banks to invest a larger proportion of their resources in Government securities than they do at present. We had heard of this possibility a fortnight ago, but thought there was still room enough to negotiate a convention with the Reserve Bank on this much discussed question as was done in regard to the ratio of "own funds" to deposits. It is now said that the Government intends to give legal sanction to this convention also. It is not even six months since the convention came into force and almost all banks of any consequence, as well as a number of small banks, have initiated measures to carry out the spirit of the convention. One, therefore, fails to understand why the Government is thinking in terms of giving statutory recognition to the convention. If it does, it will rob the convention of the charm of a gentlemen's agreement and suggest that the Government has no confidence in the undertaking given by Indian banks. It will also constitute a reflection on the Reserve Bank. Further, both the Government and the banking system will go down in the esteem of other countries.

The chief reason why a convention was preferred to legislation was that, for a reform of this complicated nature, the former was more suitable than the latter, for it provided for a certain amount of flexibility. As the base to which the ratio is related is liable to fluctuation and is expansionary in character in times of inflation such as the present, the need for flexibility is indispensable. A feature of the convention, it will be recalled in this connection, is that it contains no time limit for attaining the ratio of six per cent. The implication here is that banks should ceaselessly strive to reach that goal as and when capital market conditions and their own profits position were favourable for doing so. If there is to be legislation on this issue, can this feature be retained as it is? Incidentally, there is no major country in the free world where banks are subjected to such a statutory control. If the Government of India is anxious to establish world records, there are surely more worthy fields in which it can try to do so.

The fundamental object of the aforesaid reform was to make sure that the banks would regularly set aside a specified portion of their profits even after their published reserves had attained a level equal to their paid-up capital. In recent years, most of the big banks were not making any addition at all to their published reserves, because they had satisfied the legal requirement long ago. Hence, the need for some such step was there. But the convention is so drawn up that, for a long time to come, almost every bank, big or small, will have to earmark a part of its profit in order to enhance its reserve fund. At first, there appeared to be some room for escape in the definition of "declared profit." 20 per cent of which is transferable to the reserve fund. But even this was plugged later on by the Reserve Bank by defining the formula for arriving at the declared profit. In view of all this, it is unnecessary to amend the Banking Companies Act for giving statutory backing to the convention.

If a convention could be negotiated with banks on a complicated issue like the ratio of capital funds to deposits, there is no reason why a similar arrangement cannot be made in regard to the relatively simpler issue of liquidity ratio. The banks have always been maintaining a liquidity ratio higher than that proposed by the Reserve Bank last year. If at times some of them found it necessary to go below the customary level, it was because of the pressure of demand for funds from trade and industry. In any case, the Reserve Bank has already enough powers to call upon the banks to maintain higher cash reserves (what is commonly known as variable reserve ratio), in case it found them to be indulging in "overtrading." If the object of the proposed move is to make sure that the banks bought and held more Government loans than they have been doing in the past two years, all that it has to do is to make such investments more attractive. That solution will be a good thing for the Government itself in more than one respect.

Tax Concessions

There is no cause for disappointment over the changes made by Mr. Morarji Desai in his original taxation proposals. It is true that the concessions (announced in the Lok Sabha on Tuesday this week, while moving for consideration the Finance Bill 1962-63) are only minor and marginal in character. The effect of reliefs announced by him will mean a loss of only Rs. 1.16 crore in a full financial year. But the Finance Minister had clearly ruled out any possibility of major adjustments in tax proposals even when he replied to the debate on the budget in both Houses of Parliament last month. Nor would it be correct to say that the Finance Minister has not respected the public reaction to his original proposals as expressed in the Press and on platform, as well as in the course of speeches made by Members of Parliament during the debate on the budget. For the original tax proposals certainly displayed not only realism but also boldness on the part of Mr. Desai who has sought to raise the resources required in a manner that is politically feasible and least inflationary. No one will deny that additional taxation imposes a burden of sacrifice on the people. But it has to be recognised that such a sacrifice is necessary, unless, of course, one suggests, as some cynics do, that it is better to curtail the Plan to a considerable extent or even to scrap it. There are, as Mr. Desai has reiterated, only two alternatives to higher levels of taxation, namely, inflation or stagnation. The country cannot certainly afford either. It is from this point of view that the overall size of the tax effort has to be looked at.

In the sphere of direct taxation, the Finance Minister has not proposed any modifications except on three points of drafting and one in regard to long-term capital losses. To take the latter first, The Finance Minister's proposal to allow future losses in respect of long-term capital assets to be carried forward for a period of four years is quite equitable, though the period could be extended for eight years as in the case of losses assessed upto the assessment year 1961-62. The reliefs given as a result of the proposed three amendments of drafting or clarificatory nature in respect of direct taxes are: (*a*) the share of a partner in the tax paid by a registered firm need not necessarily be regarded as unearned income; (*b*) the whole of a business loss will be carried forward for being set off against business profits of subsequent years where the assessee has no income under any other head in the year in which the loss is incurred; (*c*) the definition of subsidiary company will apply not only for the purpose of regular assessment but also for that of deduction of tax at source from dividends paid by a subsidiary company to the holding company. In the case of Wealth Tax Act, only one amendment is proposed: to raise the figure of 2 per cent mentioned in Rule 2 of the Schedule to 2.5 per cent; this has been done in order to bring it in conformity with the change in the maximum slab rate from 2 to 2.5 per cent. Rule 2 pertains to the net wealth of assessee not being a company which includes the value of any shares in a company.

The most notable concession announced by the Finance Minister in the sphere of indirect taxation covers, as is only to be expected, both the organised (mills) and the decentralised (handlooms and powerlooms) sectors of the cotton textile industry. It was these sectors which led a strong attack on the upward revision in rates of excise duties. Mr. Desai has done well to reduce the excise duty on mercerised and water-proofed (including rubberisation) mill fabrics by 15 nP to 10 nP per square metre on coarse and medium B cloth (average count of below 26s) and by 10 nP to 15 nP on medium A, fine and superfine fabrics (higher average counts). The incidence of the original uniform rate of 25 nP per square metre was rather heavy and this was especially so in the case of persons using coarser categories of cloth. The textile interests had impressively contended that the high rate of duty proposed might seriously affect the demand for such cloth and thus affect overall offtake. Candidly enough, the Finance Minister has admitted that this argument is not wholly without substance. Moreover, by reducing the tax burden, the Minister has encouraged the process of mercerising which is an important one in that it increases the durability of cloth.

The handloom sector has received a special consideration at the hands of Mr. Desai. All single cotton yarns (whether bleached or gray) as well as unprocessed (grey) folded yarns upto 40 counts issued in hanks are now totally exempted from payment of excise duty. The exemption certainly affords substantial relief to the handlooms that use predominantly yarns below 40 counts. Some relief is also afforded to the handlooms—this concession is extended to the powerloom sector too—which get their fabrics processed by independent operators, as a result of the reduction in the effective rates of excise duty to four-fifths of the standard rates. Incidentally, the independent processing units, which were in existence on 24th April 1962 but which were not required to take out a central excise licence, are now given the benefit of exemption for the first 20,000 square metres of cloth bleached, dyed or printed by them in any month.

Besides the concession in respect of processed cloth, the powerlooms are now allowed to pay excise duty at half the standard rates for the period upto 28th February 1963 and at three-fourth of standard rates during the year ending 29th February 1964. This relief is considered necessary to enable the powerloom sector to readjust its economy and also to work out schemes to ensure that they get yarn at a reasonable price. Corresponding marginal reliefs in the rates of compounded levy for units having 5 to 49 looms, we are told, is being simultaneously proposed.

Being a Gandhian, Mr. Desai could not possibly overlook the interest of the *khadi* industry. He has proposed to exempt cloth certified to be genuine *khadi* from the processing duty, even if such processing is done by power. He has also not overlooked the interest of small-scale producers of woollen fabrics who do not possess their own processing facilities. Thus, woollen fabrics produced on handlooms or powerlooms not having their own spinning plants will be charged only two-thirds of the standard rates, if such fabrics are processed in units which are not in any way connected with a spinning or weaving mill.

The other tax concessions announced by Mr. Desai are listed below for purposes of record:

Newsprint: Excise duty on indigenous newsprint is to be reduced from 22 nP to 5 nP per kg., with a corresponding downward revision in the countervailing duty on imported newsprint.

Medicines (pencillin, streptomycin, quinine, insulin and a few other remedies commonly used as basic remedies): Excise duty is to be lowered from 7½ to 2½ per cent *ad valorem*.

Fertilisers: Ammonia and carbondioxide used for the manufacture of fertilisers in the same factory will be subjected to a nominal duty of Rs. 25 per tonne, as against the standard rates of Rs. 125 and Rs. 500, respectively. Nitric acid (for fertiliser production) is completely exempted from duty.

Coal tar: This is completely exempted.

Tele-communication cables and winding wires: *Ad valorem* duty is to be reduced from 15 to 5 per cent.

The three small-scale industries which have secured similar tax reliefs are hydrochloric and nitric acids, coarse plywoods and re-rollers. Full tax exemption is granted to all units producing without the use of power not more than 50 tons per annum of hydrochloric and nitric acids, provided duty-paid sulphuric acid is used in their manufacture (the quantity of nitric acid which is a high value item, included in this total of 50 tons is proposed to be confined to 15 tons per annum only); to coarse plywoods used mostly in the manufacture of packing cases when produced in units whose total output in a year does not exceed 4,000 square metres and which do not use power in such manufacture except for the purpose of making veneers; and to all re-rollers who use mainly re-rollable scrap and who do not ordinarily get a quota of billets exceeding 10 tons a year, provided the re-rollable scrap or billets used by them for re-rolling have themselves paid duty at appropriate rates.

The aforesaid concessions, it is gratifying, have been given retrospective effect (except in the case of countervailing duty on imported newsprint), a welcome departure from the normal practice of giving "prospective effect." This decision gives relief not to consumers but to the industries concerned, inasmuch as the incidence of the originally proposed duties has already been passed on to consumers. Equally gratifying is Mr. Desai's assurance that steps are being taken in several directions to simplify procedures particularly those relating to *ad valorem* assessments.

"Investive Wages"—A German Innovation?

Conscious effort to encourage wider share-ownership has been a feature of post-war economic policies in most of the free countries of the West. The philosophy behind this policy is that the right to own property is fundamental and that ownership of property, in addition to creating for its possessor a stake in the society, also gives the individual a sense of personal freedom and independence and greater chance for seizing the opportunities in the industrial world. There is also the consideration that property ownership on a large-scale is necessary to maintain the vitality and stability of a social and economic system based on private enterprise. In other words, it is realised that the best method of protecting capitalism, that is, a social order based on private ownership of property, is to make every one a capitalist.

The U.S., Germany and Britain are in the forefront of nations which seek to achieve a wider diffusion of ownership of property. As a result of efforts made by official and voluntary bodies, and the natural instinct of every individual to acquire and own property, coupled with the high levels of income and security of employment (an ordinary industrial worker in any of these countries today enjoys the income and standard of higher middle class people in this country), the number of shareowners has increased in the past decade from one million to 3.5 million in Britain and from 6.5 million to 15 million in the U.S. A new campaign for promoting wider shareownership is planned in Britain to which support has been assured by some prominent members of Parliament, industrialists and the Government. W. Germany seems to have gone further ahead in this sphere than any other country. The Federal Government, in its Declaration of October 1957, gave wide dispersal of property a foremost place in its social policy programmes. Many novel steps have been taken in that country to facilitate and encourage formation of private assets primarily by those having small or moderate means. These include provision of fiscal and other incentives to save, direct subsidising of the savings capacity of the individual savers and creation of facilities for profitable investment. People's share is one of the many new innovations introduced with a view to providing profitable avenues of investment. The people's share has not been juristically defined. It only signifies that shares, divided into small values, of economically sound enterprises are issued to large sections of the population at a favourable rate and that a wide distribution of the shares must be maintained. This is sought to be achieved by "privatising" of publicly-owned enterprises. As a first step towards the introduction of people's shares, in the spring of 1959, a partial privatising of "Preussag," a leading industrial concern, was accomplished by offering shares worth DM 30 million for public subscription. These were subscribed within a few days by some 216,000 investors and the Government had to release a further DM 53 million worth of Federally-owned shares. The next notable step was the partial "privatisation" of Volkswagen Works which too proved a tremendous success.

One more innovation for enlarging the ownership of shares has been proposed in Germany. This is "investive wage" which bids fair to be the number one topic of social and political discussion in that country. The term "investive wage" denotes a share of wages or salaries that is not paid to the employee or worker in cash. This share may be invested either in the shares of the company where the employee works or put in an investment fund for purposes of investment in shares of other companies. In this manner, participation of the working population in the ownership of the means of

TREND OF SHARES

NEW LOWS ON BEAR PRESSURE

(From Our Own Correspondent)

BOMBAY, 14th June

SELLING pressure on stock exchanges continued unabated this week—in fact, it increased as the week progressed—prices fell to new low levels and the previous week-end mild rally proved but a mirage. Almost every day, prices dipped further and, at close, were around the lowest levels of the week, showing all-round moderate losses on balance. Unnerved by the non-stop fall in values, tired bulls liquidated. Support was conspicuously absent; only the erstwhile sellers were buyers at lower levels. Sentiment was demoralised and the tone distinctly weak. Bears were dominant.

The extension of the setback this week, which brought down values on the Bombay Stock Exchange, in particular, either to around or even lower than the pre-budget low levels, only reflected the deep concern of the markets over uncertain prospects for foreign aid for the current year of the third Plan, the 15 per cent cut in the import licences for actual users to conserve foreign exchange and the resultant shortage of imported raw materials and difficulties in importing plant and equipment, the official admission of the difficulties in the infra-structural facilities like fuel, power and transport, fears of an adverse turn in the situation across the country's borders, the continuance of a bearish trend on Wall Street, and, last but not least, reports of unsteady health of Prime Minister Nehru. The trend of the market this week strikingly confirms a common feature of stock exchanges, namely, that almost all are sellers around the low levels and buyers at the top levels. For some of these factors have not cropped up all of a sudden. But, whereas nobody wanted to sell equities some five weeks ago, few want to buy them today.

True, there was hardly anything in the news to provoke one to buy. Even the tax reliefs announced on Tuesday, turned out to be marginal, though subsequently the Finance Minister confirmed that the net gain to the textile industry alone would be roughly Rs. 8 crores. But, at the same time, the authorities have deemed the economic uncertainties and difficulties to be a worthy of challenge, and have assured the people that, notwithstanding these problems, the implementation of the Plan would not be slowed down. Then, the announcement of higher steel retention prices is much more proximate now than what it was a month ago. The selling prices of coal have been raised, albeit on a small scale and it is expected that those for cement and paper would be increased soon. It is believed that the import cuts would boost prices of manufactured goods. At the current low levels, business in shares has shrunk considerably. Finally, the same Mr. Morarji Desai, having a keen sense of awareness to a healthy industrial and investment climate in the country, is very much there in the Central Cabinet and, according to Mr. Nehru himself, he holds a high rank in the Cabinet. All this is too well known to the stock market operators but seems to have been conveniently forgotten by them for the moment.

* * * *

Dalal Street reeled under fresh blows from bears and some nervous bull liquidation. Sentiment deteriorated considerably near the close. As the much expected reliefs in taxes were only marginal, a fresh selling wave enveloped the market, with its barometer, Tata Steel Ordinary, breaking the hard-tested resistance level of Rs. 147.50 and declining to Rs. 146.75. Buyers were hard to find, and the proposed *hartal* by jobbers and brokers on Monday and Tuesday next against the proposed increase in stamp duty in the State budget acted as a restraining influence. Cash scrips also showed small price-cracks. Reflecting the market's anxiety over the import cuts, the unofficial quotations for new shares broke rather sharply on a selling wave. Thus, the quotation for Tak Machinery came down from Rs. 60 to Rs. 40, for SKF from Rs. 120 to Rs. 95, for Kirloskar Cummins from Rs. 108 to Rs. 90, for Paper Products from Rs. 38 to Rs. 32, for Hindustan Kokuku from Rs. 55 to Rs. 45, for United Carbon from Rs. 90 to Rs. 75 and for Steel and Allied Products from Rs. 135 to Rs. 120.

Although the selling pressure was over a broad front, it was concentrated on Century and National Rayon; the former slumped from Rs. 648 to Rs. 620.50, to close 22 points lower on balance at Rs. 625, and the latter fell from Rs. 531.50 to Rs. 509, showing a loss of Rs. 20 at close over the previous week-end level of Rs. 532.50. Standard also showed a big loss of Rs. 39 at Rs. 970. Khatau declined by Rs. 15 to Rs. 472.50. Bombay Dyeing were one point lower at Rs. 68. Kohinoor and Gokak were down by Rs. 6.50 each at Rs. 287 and Rs. 209.50, respectively, while Finlay declined from Rs. 310 to Rs. 303. Svadeshi from Rs 276 to Rs. 274, Tata Mills from Rs. 71.20 to Rs. 68.50 and Phoenix from Rs. 248 to Rs. 240. Mafatlal, in the Cash section, came down from Rs. 845 to Rs. 820 and Gwalior Rayon were 80 nP lower at Rs. 56, despite the increase in the dividend from Rs. 2.25 to Rs. 2.50 per share for the year to 31st March 1962, following a substantial improvement in the sales from Rs. 10.60 crores to Rs. 12.07 crores and in the gross profit from Rs. 3.8 crores to Rs. 4.4 crores.

Among Steels, while Tata Ordinary finished Re. 1.75 lower at Rs. 147.50 and Mukand Iron were down by 80 nP at Rs. 25.50, Indian Iron showed a loss of only 15 nP at Rs. 25.70.

A slump from Rs. 548.75 to Rs. 500 in Indian Dyestuff, calling for the first automatic interim margin of Rs. 31.25 per share on bears, was a feature in the Miscellaneous section. The previous week's promising recovery in Bombay Burmah proved short-lived, as the shares receded again from Rs. 684 to Rs. 668. Amar Dye-Chem suffered a setback from Rs. 325 to Rs. 308.75 and Poly Chem were 10 points lower at Rs. 190. Hindustan Motors closed unchanged at Rs. 19.52, but Premier Auto were easy at Rs. 131. In the Engineering section, Telco came down from Rs. 362.50 to Rs. 354, Voltas were down by 11 points at Rs. 284 and Alcock showed a loss of four points at Rs. 227. Scindia declined by 36 nP to Rs. 12.32 and Great Eastern by 40 nP to Rs. 12.60. A.C.C. came down from Rs. 158.75 to Rs. 156 and Digvijay from Rs. 206 to Rs. 204, and Belapur, among Sugars, from Rs. 231 to Rs. 225. In the Cash List, plus signs were few. The big losers were Hindustan Electric from Rs. 256.25 to Rs. 240, Colour Chem from Rs. 485 to Rs. 466.25, Synthetics from Rs. 228 to Rs. 216, T. Maneklal from Rs. 700 to Rs. 680 and Chemicoat from Rs. 210 to Rs. 202. United Motors, however, rose from Rs. 20 to Rs. 30.

* * * *

In Calcutta, while the majority of the counters showed losses on balance, select speculatives rallied after early decline, but had recovered only a part of the ground lost in the previous week. Thus, Birla Juts showed a gain of 81 nP at Rs. 34.81, Dunlop of 44 nP at Rs. 43.19, Howrah Jute of Re. 1.25 at Rs. 22.75, Indian Cable of 63 nP at Rs. 37, Orient Paper of Re. 1.05 at Rs. 43.25, Shree Gopal of 50 nP at Rs. 27, Texmaco of 45 nP at Rs. 25.50 and J.K. Cotton of 37 nP at Rs. 19.62. However, Burrakur Coal showed a further loss of 50 nP at Rs. 18.94, Kesoram of 69 nP at Rs. 30.06 and G.K.W. of 38 nP at Rs. 39.81.

In the Cash List, among Textiles, Bowreah receded from Rs. 32.50 to Rs. 29.62 and Jagtjit from Rs. 27.50 to Rs. 23.50. East Indian Coal declined further from Rs. 53 to Rs. 49.50. Jutes generally rallied; Delta showed a gain of Rs. 14 at Rs. 205, Dalhousie of Rs. 6 at Rs. 133, and Anglo-India of Rs. 5 at Rs. 241, but Alliance declined from Rs. 130 to Rs. 121. Engineering issues continued easy, with Burn declining further from Rs. 720 to Rs. 699. Assam Sillimanite moved up from Rs. 13.25 to Rs. 14.69 and Bengal Chemical gained one point at Rs. 105. Miscellaneous issues showed further moderate losses. Dr. Paul were one point lower at Rs. 23, Hind. Twyford moved down from Rs. 17.81 to Rs. 17.06. National Rubber receded from Rs. 13.25 to Rs. 12.12, Rallis were traded two points lower at Rs. 142 and Union Carbide came down from Rs. 52.12 to Rs. 50.50, but N.I. Cable recovered from Rs. 46.37 to Rs. 49. Sugars and Teas were quietly steady.

* * * *

The Madras Stock Exchange was easier in restricted dealings. However, some Miscellaneous and Rubber issues showed small gains in the Forward List. Lakshmi declined from Rs. 157 to Rs. 151 and Madura from Rs. 37 to Rs. 36.15 as did S.I. Viscose from Rs. 172.50 to Rs. 166. Ashok Leyland slipped down from Rs. 8.55 to Rs. 8.45 and Mettur Chemicals from Rs. 13.10 to Rs. 13.05. Blue Mountains receded from Rs. 2.42 to Rs. 2.38, Periakaramalai from Rs. 3.40 to Rs. 3.38 and Ouchterlony Valley from Rs. 3.75 to Rs. 3.73. But India Cement looked up from Rs. 6.18 to Rs. 6.20, Consolidated Coffee from Rs. 18.40 to Rs. 18.44 and Cochin Malabar from Rs. 7.03 to Rs. 7.10. In the Cash List, while Bangalore Woollen moved up from Rs. 243 to Rs. 245, Kothari eased further from Rs. 11 to Rs. 10.87; Textools edged forward from Rs. 175.50 to Rs. 176, Andhra Cement from Rs. 10.37 to Rs. 10.50, Orissa Cement from Rs. 19.90 to Rs. 20 and F.A.C.Ts from Rs. 7.80 to Rs. 7.85, but Tube Investments declined from Rs. 290 to Rs. 286, Western India Products from Rs. 205 to Rs. 195 and Madras Rubber from Rs. 23 to Rs. 22.30; E.I.D. looked up from Rs. 39.25 to Rs. 39.50, but Cauvery suffered a setback from Rs. 101.50 to Rs. 99.50; Manankara Rubber gained 40 nP at Rs. 16.90, but Midland slipped down from Rs. 11.40 to Rs. 11.20. Kil Kotagiri moved down from Rs. 3.40 to Rs. 3.38.

CAPITAL MARKET NEWS

NEW ISSUES

ASSAM Sillimanite Ltd. of Gauhati, Assam, incorporated on 6th August 1951 and engaged mainly in the business of mining of natural Khasi sillimanite in the Khasi and Jaintia Hills of Assam, is launching an ambitious refractory project and raising for the purpose its present paid-up equity capital of Rs. 30 lakhs to Rs. 1 crore by the issue of 7 lakh new shares of Rs. 10 each. A part of the additional capital, Rs. 24 lakhs, is to be offered to the public. The subscription lists will open on the 18th inst. and close after a week from that date, or earlier at the discretion of the Directors, but not before the 20th inst. The entire public issue has been underwritten, among others, by the Industrial Finance Corporation of India and the Life Insurance Corporation of India. The Company has entered into a technical collaboration agreement with Messrs. Vereinigte Grossalmeroder, Thonwerke, West Germany, to whom it is issuing 60,000 shares. A total of 2.90 lakh shares has been reserved for allotment to the International Finance Corporation of Washington in consideration for its agreeing to provide big long-term loans for the project. Sixty thousand shares are offered as rights shares to the existing shareholders. The L.I.C. will be allotted 50,000 shares against the underwriting arrangements.

The project, for which a new plant will be set up at Ramgarh, Bihar, is to be implemented in two stages. The annual production in the first stage, for which the plant and machinery will be installed before the end of this year and commissioned into production before the latter half of 1963, will comprise 19,000 tons of fireclay special bricks and shapes, 4,000 tons of sillimanite bricks and shapes, 2,900 tons of insulating bricks, 3,600 tons of fireclay mortars and mixes and 400 tons of sillimanite mortars and mixes and make a total of 29,000 tons. In the second stage, to be taken up after the first stage has gone into production, the annual capacity envisaged is of 17,000 tons, made up of 6,000 tons of chrome-mag bricks and shapes, 3,000 tons of mag-chrome bricks and shapes, 3,000 tons of magnesite bricks and shapes and 5,000 tons of magnesite ramming mixes. The aggregate capacity will thus be 46,000 tons. The Company has been granted a licence worth Rs. 65 lakhs for the import of plant and machinery for the two stages of production. Meanwhile, a preliminary project in the form of an initial plant with all indigenous machinery and equipment and an installed capacity of 3,000 tons per year has been installed at the plant site and was started in February/March 1961. After completing trial runs, production has been built up to a present monthly average of 200 tons. Extensive deposits of fireclays, which will constitute 85 per cent of the raw materials requirements for the first stage of production, are located within 15 miles of the factory site. In addition, the Company owns vast deposits of sillimanite ore and is expected to obtain mining concessions for other essential raw materials such as kyanite, chromite, pyrophyllite and magnesite in Bihar, Orissa and U.P.

All metallurgical industries, steel plants, glass, pottery, enamel, cement and power industries are dependent on a regular supply of refractories not only for their original construction but also for their continued operation. It is reckoned that each ton of steel uses between 150 and 200 lbs. of refractory material and rotary kilns used for manufacturing cement require relining with refractory material every 12 months. With the envisaged steel capacity in the country of 10 million tons per annum at the end of the third Plan, demand for refractories would be about 1.60 million tons a year, of which steel plants alone would account for 1.15 million tons. It is proposed to raise the installed capacity of the refractory industry to 2 million tons at the end of the third Plan. Even after all the schemes licensed so far are implemented, it is estimated that there would be an uncovered gap in demand of 0.50 million tons per annum. At present, refractories production in the country is placed at 0.52 million tons a year. Annual imports approximate Rs. 3 crores. The development of the indigenous industry would, therefore, mean considerable saving in foreign exchange.

The I.F.C., Washington, is advancing the Company a dollar loan of Rs. 44 lakhs ($924,000) for the completion of the first stage of the project and a further loan of Rs. 21 lakhs ($441,000) for the second stage. Under the investment agreement, the I.F.C. has been granted the option, to be exercised at any time up to and including 1st April 1974, to subscribe at par up to 290,000 ordinary shares and to pay the purchase price in promissory notes. The agreement also provides that, in addition to the interest and commitment charges and the benefit of stock option, the I.F.C. will be entitled to participate in the available net profits of the Company (after providing for a dividend of 10 per cent on the nominal amount of the issued shares) up to 30 per cent each for 1963, 1964 and 1965, and thereafter on a reducing scale up to 3 per cent in 1974 and no more thereafter. Sales of the Company have steadily increased from Rs. 17.04 lakhs in 1959 to Rs. 25.26 lakhs in 1961 and the gross profit has similarly gone up from Rs. 3.11 lakhs to Rs. 7.25 lakhs. Last year, the Company paid a taxable dividend of 6 per cent per annum on the equity shares.

* * * *

Subscription lists for the public issue of Rs. 15 lakhs—Rs. 10 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 50,000 9.286 per cent taxable cumulative redeemable preference shares, also of Rs. 10 each—by Zenith Lamps and Electricals Ltd., Madras, will open on the 14th inst. and close either on the 18th or the 21st inst. The Company, incorporated on 12th May 1961 at Madras, is setting up a factory for manufacturing fluorescent tubes, with an annual capacity of 1.2 million pieces. It has secured technical collaboration of Messrs. United Incandescent Lamp and Electrical Company Ltd., of Budapest, Hungary, well known as the manufacturers of the world-famous *Tungsram* lamps. As the plant and machinery to be installed are fully automatic, it is stated, no royalty is to be paid to the foreign collaborator. The Company has obtained licences for the import of plant and machinery of Rs. 16.84 lakhs, comprising Rs. 13.52 lakhs for the fluorescent tubes plant and Rs. 3.32 lakhs for its adjunct glass tube drawing plant. The total outlay on the tube plant is estimated at Rs. 41.70 lakhs and on the glass factory at Rs. 38.30 lakhs, making an aggregate total of Rs. 75 lakhs. The factory will be located at Madhavaram, about six miles from the Madras Central Station. The Company will be the second manufacturer, after the Elmi group of manufacturers, of fluorescent tubes in the country, but its plant, designed to turn out 600 to 650 tubes an hour, will be the biggest of the existing plants. The actual installed capacity for fluorescent tubes in the country is nearly 2 million pieces per annum, as against the estimated demand of 6 million tubes. The restricted supplies, it is said, fetched an unofficial premium of 100 per cent on a single tube.

RIGHTS ISSUES

The East Indian Coal Company Ltd., Calcutta, proposes to issue to the existing shareholders three new shares for every five shares held at 33s. or Rs. 22, per £1 share, that is, at a premium of 18s. or Rs. 8.67 per share. The Company is making the necessary applications to the Controller of Capital Issues and British Treasury.

* * * *

The shareholders of **Kalpetta Estates Ltd.**, Madras, are to be issued by the Company 40,000 rights equity shares of Rs. 10 each at par in the proportion of one share for every two shares held.

NEWS IN BRIEF

THE question of fixing floor or minimum prices for all agricultural commodities is being considered by the Government of India, according to Mr. S. K. Patil, Union Minister for Food and Agriculture.

A team of the Central Geological Survey has discovered traces of silver, uranium, copper and cobalt at the Parbati Valley (Kangara district) in the Punjab. Heavy drilling operations are expected to commence at the site shortly.

A four-member delegation of dry prawn exporters sponsored by the Marine Products Export Promotion Council has left on a week's tour of Burma for exploring the possibilities of increasing prawn exports to that country.

The National Building Construction Corporation proposes to install two mechanised brick plants, one in Madras State and the other at New Delhi. The Madras plant is expected to cost Rs. 20 lakhs. It will use furnace oil as fuel, instead of coal.

The two blast furnaces of the Rourkela Steel Plant in the public sector produced 2,134 tonnes of hot metal in 24 hours last week. This was a record production which exceeded even the aggregate rated capacity (2,000 tonnes) of the two furnaces. The third blast furnace of the Rourkela Plant is getting ready for lighting.

The Indian Oil Company Ltd. has been negotiating with several parties in Eastern and Western Europe and the U.S. for import of lubricants. Disclosing this in the Lok Sabha the other day, Mr. R. Hajarnavis, Deputy Minister for Mines and Fuel, pointed out that no deal had been settled so far, except for the import of 2,000 tons of transformer oil and 6,000 tons of axle oil from Rumania.

A delegation led by Mr. M. R. Sachdev, Secretary in the Union Ministry of Irrigation and Power, has left for Washington to negotiate a loan agreement with the World Bank and International Development Association for the Sone Barrage project in Bihar. The delegation will also negotiate with these organisations loans for the Koyna and Purna projects in Maharashtra State.

The Indian Merchants' Chamber, Bombay, has submitted to the Government of India a memorandum urging an independent inquiry into the working of communication services. The Chamber has stated that, while progress in the direction of providing additional facilities is slow, services of telephones and telegraphs departments continue to reveal serious shortcomings.

The Government-owned Indian Oil Company made its first sale of petrol last week. The I.O.C., up to now selling 'Jyoti' kerosene and high speed diesel oil only in Bombay, will from now on market petrol also. The I.O.C.'s first sale of petrol is for the Poona Municipal Corporation's large fleet of goods carriers, conservancy vehicles and motor cars.

A Japanese firm, the O.M. Ltd., Osaka, Japan, has agreed to provide technical collaboration for the manufacture of super-high draft ring frames, proposed to be taken up by a Coimbatore firm, Messrs. Ramakrishna Industrials, manufacturers of textile machinery. The Japanese firm will receive royalty for supplying technical know-how for the ring frames which are claimed to be the latest techniques in cotton spinning industry.

An industrial licence has been granted for the establishment of the first jute mill in the co-operative sector in Assam. The proposed mill will have 150 looms and is expected to cost Rs. 120 lakhs. This is one of the major co-operative ventures in the State, second only to the co-operative sugar mill at Dergaon in the Sibsagar district. The Industrial Finance Corporation has agreed to give a loan of Rs. 40 lakhs to the jute mill, if a share capital of an equal amount is raised from the members of the society.

The Orissa Government has set up a nine-member Planning Board with the Chief Minister as Chairman to prepare a long-term development plan for the State. The decision is in pursuance of the Planning Commission's call to all States to take measures for strengthening the machinery for planning at State level. The Board will gather economic and technical data essential for planning and modify the third Plan schemes, if necessary, to dovetail them to the proposed long-term plan.

An official team, led by the Secretary for Transport, Mr. G. Venkateswara Ayyar, has left for Washington to finalise the terms of a loan from the International Development Association (I.D.A.) for the expansion of the Bombay port. The loan is expected to cover the foreign exchange cost of the expansion programme, namely, Rs. 9 crores. The total expenditure for the programme is estimated at over Rs. 26 crores. The I.D.A. loan will be interest-free, barring a small service charge.

The Steel Foundry Works at Chittaranjan is expected to go into production by the end of 1963. It is expected to attain full production by 1966. The civil engineering works have already been taken in hand. The foundry, which has been set up in collaboration with a leading British firm, has a capacity of about 10,000 tons of steel castings. It will also produce alloy steel plants and castings, bogie casting for diesel electrical locomotives, electric locomotive castings, bogie castings and roller bearing axle boxes for carriages and wagons.

The construction of the Bhakra Dam is likely to be completed by the end of October 1962. About 99.44 per cent of the concreting work of the dam had been completed by the end of April 1962. The highest level attained was 1,699.5 feet, that is, 739.5 feet above the deepest foundation, against the total height of 740 feet. The power house on the left side of the Dam has been completed and the one on the right side is in the preliminary stage of construction. The expenditure incurred on the Dam up to the end of February 1962 was Rs. 60.48 crores.

The Government of India has raised the prices of the various grades of coal with effect from the 13th inst. The actual increase is Re. 1.50 per ton for non-coking coal of grade selected A and coking grades of A, B and C, Re. 1 for selected B of non-coking and D and E coking varieties, 75 nP for grade I (non-coking) and grades F, G and H (coking) and 38 nP for grades HH, J, K and L (coking) and grade II (non-coking). It is proposed to fix a ceiling at Rs. 2.50 per ton on the prices of coking coal of HH to L grades and non-coking coal of grade II. The grades HH to L of coking coal will also be converted into one grade HH.

The Government of India has decided to reduce by one-third the existing rates of compounded excise levy on *khandsari* for the period from 1st July to 31st October 1962. This decision is a sequel to the representation made by the industry that, during the gawalat period, the recovery of sugar being low, the previous rates operated to their disadvantage. The alternative procedure of compounded levy, it will be recalled, was introduced in 1960 and suitable rates of compounded levy were fixed for the convenience of the manufacturers of *khandsari* sugar in the matter of maintaining accounts and discharging other obligations under the Central Excise Law.

Air-India has decided to build a workshop for the overhaul of Rolls Royce engines and a test house, together costing Rs. 50 lakhs, according to Mr. K. K. Unni, Assistant General Manager of the Company. With a fleet of six Boeing 707-International jets, Air-India has a scheduled daily Boeing service to London and New York, two services a week each to Tokyo and Nairobi, and one service a week to Sydney and Moscow each. It has also introduced a weekly Comet jet service to Jakarta and Kuwait, and a weekly Comet service between Madras and Singapore. In 1961-62, 1,43,930 passengers were carried on all the routes of Air-India, as against 1,18,452 in 1960-61.

A French team of experts has signed two contracts with the Government of India for the supply and eventual collaboration in the progressive manufacture of Alouette III helicopter in Bangalore and Kanpur. To begin with, the French company will supply five helicopters for immediate use in the border roads programme. These five machines are likely to be delivered by the end of this year. The manufacturing programme aims at turning out 100 helicopters per annum. In the beginning, only the superstructures and the parts will be manufactured here. The engines will be imported from France. In course of time, the "Durboprop" engine will also be manufactured in Bangalore.

Madras will soon have a modern factory for manufacturing fluorescent tubes. The Zenith Lamps and Electricals Limited has already secured the licence. The Company will secure technical know-how from the United Incandescent Lamp and Electrical Company Ltd. of Budapest (Hungary) which is well known for the manufacture of lamps, television tubes and electronic valves under the name of "Tungsram." The initial capacity (single-shift basis) of the plant, which is fully automatic, is of the order of 650-700 tubes per hour and forms the biggest single unit in India. The Company's technical personnel will be trained in the *Tungsram's* factories and laboratories in Hungary. Hungarian technicians will supervise the installation of the plant and production in India in the initial stages. The Company has been able to get all this assistance in consideration of their purchasing the plant and equipment from the collaborators, payment being made in deferred instalments. The Company has a phased programme of manufacturing all the components which have at present to be imported. A glass factory for manufacturing all varieties of glass tubes and rods will be established in the immediate future, preliminary arrangements for which have already been completed.

From Abroad

Drought has led to widespread damage of cotton crop in China, particularly in Honan, Shantung and Szechuan provinces.

The Pakistan Government proposes to fix statutory internal minimum price for the lower variety of jute in order to check the present downward trend.

The Japanese Honda Motor-cycle Company proposes to put up a plant in Belgium with a capacity to produce 10,000 motor cycles per month.

The twentieth session of the contracting parties to the General Agreement on Tariffs and Trade (G.A.T.T) will be held from 24th October to 16th November next.

The British Board of Trade is considering a proposal to exempt from any import duty rare earth minerals and their concentrates containing rare earth compounds of not less than 40 per cent and not more than 95 per cent by weight calculated as rare earth oxides.

PERSONAL

MR. T. T. Krishnamachari, Union Minister without portfolio, has been appointed a member of the Planning Commission.

Mr. K. B. Lall, India's Ambassador to the European Economic Community, Brussels, has arrived in New Delhi in connection with the visit of Mr. D. Sandys, British Secretary for Commonwealth Affairs.

Dr. (Mrs.) Maitreyee Bose, M.L.A., a prominent labour leader of West Bengal, has been elected President of the Indian National Trade Union Congress for the year 1962-63 in the place of Mr. Michael John.

Dr. Z. I. Kertesz of the U.S. has been appointed Chief of the Food Science and Technology Branch of the Nutrition Division of the U.N. Food and Agriculture Organisation *vice* Dr. A. G. van Veen of the Netherlands, who has joined the Cornell University of Ithaca, New York, as the head of the Department of International Nutrition.

Mr. Duncan Sandys, Britain's Commonwealth Secretary, is scheduled to arrive in New Delhi on Friday the 15th inst. During his five-day stay in the capital, he will meet the Prime Minister, the Finance Minister and other Government representatives and apprise them of the latest developments in regard to Britain's proposed entry into the European Common Market.

The price of tin on the London Metal Exchange fell below £900 per ton, for the first time since last June, when the buffer stock held by the International Tin Council was exhausted. The decline is attributed to lack of buying on account of uncertainty in regard to the release of U.S. strategic stockpiles.

The U.S. Agency for International Development has granted a loan of $5.3 million for the construction of a new tyre factory in Turkey. The plant, which will be put up by the U.S. Royal Lastik, a Turkish subsidiary of the U.S. Rubber Company, is expected to meet one-third of the total requirements of tyres in that country.

An agreement seeking to ensure complete economic unity between Arab States within ten years has just been signed at a meeting of the Arab League Economic Council at Cairo. The signatories include Egypt, Syria, Jordan, Morocco and Kuwait. Iraq and Saudi Arabia, however, have not yet signed the agreement.

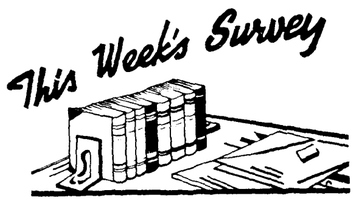
The International Monetary Fund has entered into a stand-by arrangement with Ecuador authorising the latter to draw up $5 million during the next one year in currencies held by the Fund. Ecuador had drawn $10 million from the Fund from an earlier stand-by arrangement, which expired last week. The new arrangement is designed to provide continuing support for Ecuador's stabilisation programme started about a year ago.

The total world consumption of rubber in 1962 is expected to be of the order of 4.28 million tons, comprising 2.13 million tons of natural rubber and 2.15 million tons of synthetic, according to the International Rubber Study Group. World output is estimated at 4.36 million tons—2.15 million tons of natural and 2.21 million tons of synthetic rubber. It is considered likely that 70,000 tons of natural rubber will be delivered from Government stockpiles in the current year.

World wheat production (excluding that of China) in 1961-62 is placed at 208.5 million tons, a decline of 10 million tons over the previous year, according to the latest edition of *World Wheat Statistics*, the statistical annual of the International Wheat Council. The biggest decline was in North America (from 51.5 million tons to 42.1 million tons), as also in Africa. In Soviet Russia and South America, however, there was some increase in output.

The British Government's programme of research into the development of nuclear propulsion for shipping, according to a reply given by the Minister of Transport, Mr. Ernest Marples, in the House of Commons on the 1st inst., would cost about £3 million over the next three years. The research, which is being carried out by the Atomic Energy Authority in collaboration with the nuclear industry, is aimed at a reactor system that will be economically attractive to a wide range of shipping. An agreement, it may be recalled, has also been signed between the Atomic Energy Authority and a consortium of Belgian companies to develop an advanced version of the pressurised water reactor which has shown promise for marine propulsion.

The British Overseas Airways Corporation and the Cunard Steamship Company, the two leading U.K. overseas transport companies, have jointly formed a new company, called the B.O.A.C.—Cunard, in order "to mount a concentrated attack" on foreign air competition over the North and Mid-Atlantic air-routes. The new Company will take over all the existing scheduled air services run by the BOAC and Cunard Eagle, Cunard Steamship's subsidiary, to a large part of the Western hemisphere (mainly the U.S. and the Caribbean, but excluding Canada). The B.O.A.C. and the Cunard are also expected to work in close collaboration throughout the world in providing air and sea services, especially to encourage the scheme for "one way sea and one way air" across the Atlantic. The two airlines, however, will retain their independence in respect of other services.



EXPORT PROMOTION OR COMMITTEE PROMOTION?

THE first meeting of the newly-constituted Board of Trade held at New Delhi last week-end turned out to be a rather tame affair. Instead of coming to grips with export problems and taking decisions on various measures for export promotion, the Board was largely involved in the mere elaboration of well-known generalities. Mr. Manubhai Shah, Union Minister for International Trade and Chairman of the Board, set the tone of the proceedings with the observation that "the most important task before the country is to create an export climate." There is, of course, nothing new in the stress laid on the export climate. All the committees which have studied the question of export promotion since independence have emphasised this point, but to no very great effect. There are, of course, various ways in which the factors hindering the promotion of export climate can be eliminated. In the first place, there is need for ensuring a steady growth of production, industrial and agricultural. As is well known, the transport bottlenecks, and shortage of coal and power have already hit hard industry, in particular. Secondly, the apathy, if not indifference, of the State Governments on the export front, should be overcome. The Mudaliar Committee on foreign trade, in its recent report has made special mention of this drawback. In the Committee's own words, "several instances have come to our notice where the State Governments have resisted remission of fiscal levies and prevented inter-State movement of raw materials entering into products destined for export markets, purely from their provincial standpoint, unmindful—or at least unconscious—of the effect of their policies on the export drive." Thirdly, exporters should be compensated, in the present circumstances, for the loss suffered by them in world markets, through selective concessions, fiscal reliefs and other incentives, in order to make the export business worthwhile in the short run.

It is, of course, impossible for anybody to prescribe cut-and-dried solutions for all the ills on the export front. But the Board, however, could have given a firm direction to export promotion efforts, had the meeting confined its attention to some of the aforesaid major problems and considered the feasibility of the solutions already suggested for them by various expert bodies. It is disappointing to note, in this connection, that the Board, consisting as it does of several leading businessmen, has not been able to make decisions on various measures of assistance to exporters suggested by the Mudaliar Committee. The Board, has only evaded the issue by postponing its consideration on the ground that the question needs to be further studied in consultation with each industry concerned, as the nature of assistance would vary in different cases. It is not clear whether the Board has in view the formation of another committee for this purpose.

That the Board is enamoured of new committees is no longer in doubt. For it has already decided in favour of the establishment of two new bodies, one on export finance and the other on fair trade practices. We are told that a study group, headed by the Chairman of the Industrial Finance Corporation, has been constituted to examine the question of granting liberalised and widespread credit and guarantee facilities to the export trade. It was only last year that a detailed report on export finance was submitted to the Government by the Kapur Committee. The Government does not seem to have taken any decisions on its recommendations. One is at a loss to know what precisely is the miracle expected from the new study group. Another apparent innovation is the formation of a sub-committee, under the chairmanship of the President of the Federation of Indian Chambers of Commerce and Industry, for evolving a code of fair trade practices. The sub-committee is expected to draw up a draft code of fair commercial practices and prepare a phased programme for implementation. Generally speaking, any student of marketing and distribution will be able to suggest a series of fair trade practices. No doubt, the sub-committee may be able to incorporate the views of industry and trade in the matter. It would appear, however, that this move is largely a reflection of the Board's incapacity to arrive at a quick decision. The Board has also approved of the proposal to establish a Quality Control and Inspection Council. The Council, it is said, will place before the Board the operational programme of quality control and pre-shipment inspection. There is nothing new in this move either. Several measures of quality control and pre-shipment inspection are already administered either officially or by industry in respect of select items. It remains to be seen what the new Council is going to do.

The Board of Trade will serve its purpose well only if it resists the temptation of shirking decisions by appointing new committees. There is no dearth of expert studies on most of the aspects of export trade in this country. The Board will do well to examine the feasibility of implementing the suggestions contained therein and make necessary modifications, if needed. Otherwise, the Board will only duplicate the work already carried out, without itself making any positive contribution to the promotion of export trade.

LABOUR POLICY

For sheer foresight, realism and candour, Mr. Nanda's speech in the Lok Sabha in reply to the debate on the Labour Ministry's demand for grants and his address to the Subjects Committee of the I.N.T.U.C. at Calcutta this week were outstanding. The criticism of the Government's labour policy voiced in the Lok Sabha and at the I.N.T.U.C. session was identical, with the well-worn demand for a better deal for workers and the usual complaint that enough had not been done for labour. But the change in his audience did not influence Mr. Nanda to alter the tone or content of his remarks at Calcutta which concerned the Government's approach to labour questions in the larger context of the development needs of the country. Mr. Nanda emphasised, both in the Lok Sabha and at the I.N.T.U.C. session, that improvement in wages could only be based on improvements in productivity, as, otherwise, an inflationary situation would arise and the process would be self-defeating. According to him, two main obstacles in the way of giving workers higher wages were the disappointingly slow rate of growth in production and strikes which "harmed labourers more than employers." He conceded that, while there was some room even now for improving the conditions of workers, it was only to a very limited extent and that, unless production increased progressively, the scope for improvement would narrow down further.

Stressing the need for increasing production, Mr. Nanda pointed out that, last year, inspite of it being one of the most peaceful years in recent industrial history, the mandays lost through work stoppages amounted to 4.2 million, loss of production was estimated at Rs. 16 crores and of wages at Rs. 2 crores. The actual damage done must have been more than what these figures suggest, for the repercussion of work stoppages spread to the entire economy. Mr. Nanda disclosed that, in view of this loss of production, the Government intended to probe into every case of stoppage in production for determining responsibility and taking suitable action. He advised workers not to resort to strike. Should they find that injustice was being done to them, he wanted them to get in touch with the Labour Minister of the State concerned and request him that "they should be considered on strike" before stopping work. It would, he said, mean an S.O.S. to the Government to take all steps to prevent the strike by setting things right. The implication of this advice is simple. It is that workers should not go on lightning strikes and that they should give a chance to the State Governments concerned to avert the strike. As a piece of rhetoric, Mr. Nanda's remark sounds impressive, but its practicability remains to be tested, especially as there are nowadays more major strikes in the public sector than in the private sector.

Mr. Nanda did well to emphasise the importance of productivity because Mr. Michael John, President of the I.N.T.U.C., in his presidential address, sought to give a dangerous interpretation to the relationship between wages and productivity. According to him, higher productivity, which the employers clamoured for, could be possible only when workers had been given a fair wage and on condition that the additional gains of productivity would be shared by workers. The insistence that higher wages should be conditional on higher productivity was, he said, tantamount to putting the cart before the horse. There is a basic fallacy in this argument, as it ignores that wages and the remuneration for other factors of production have to come from production and that the latter must precede the former. Where is the money for higher wages for workers or, for that matter, higher dividend and taxes to come from except from the fruits of their own effort? The stipulation on sharing the gains of productivity is also questionable. For workers are not the only claimants for the gains of higher productivity, for the simple reason that they alone are not responsible for the improvement in productivity. Mr. John's argument proceeds from the wrong premise that workers are at present being denied a fair share of the fruits of their labour—a premise which, perhaps, explains the militancy of his speech this year. In contrast to this irrational attitude, Mr. Nanda's address reflected restraint and respect for reasons. He admitted that, although the working class had derived considerable benefits and raised their standards of life since independence, a large leeway had still to be made up as a living wage had not been achieved by the majority of workers. He emphasised, at the same time, that one should not forget that millions are unemployed or underemployed in the country. In the circumstances, any pressure for higher wages would, he went on to add, be at the expense of other sections which were no better off and, if a large number pressed their claims, prices would rise and most people would fare worse consequently. He was of the opinion that it was possible to increase production in the present circumstances without much additional investment, if people worked harder, reduced wastage to the minimum and if skills of workers of all grades were raised by suitable training. Increase in production achieved this way, he felt, would be anything like 25 per cent in the next five years.

Mr. Nanda candidly admitted that all was not well in the country or even on the labour front. But he indulged in some vague and airy talk when he sought to elucidate what he had in mind. Thus, he observed that a sense of frustration had set in among the people, because of the Government's failure to establish greater equality among the people and in implementing the Socialist policies. The want and hardship which millions of unemployed and underemployed were going through contrasted with the waste and luxury indulged in by a small group. This, he averred, militated against the generation of enthusiasm among the masses. The *status quo* could not be maintained. There would have to be large-scale social change. The first need was, therefore, to remove all impediments in the way of production which arose because of the system as it is functioning now. Now what exactly does he want to do to change the system and how does he propose to do it within the four corners of the Indian Constitution? It would be better if Mr. Nanda were to spell out the manner in which enthusiasm among the masses could be generated.

FURNACE OIL AND COAL

Since early last year, when the coal shortage set in, the use of furnace oil as a substitute industrial fuel has been advocated and sought to be fostered by the authorities. Faced with a continuing shortage in the supplies of coal, industries, particularly in the Western and Southern regions, are themselves keen on switching over to furnace oil. But there are some practical difficulties in the way. One is the relatively high cost of furnace oil, as compared with that of coal. According to inquiries made recently by the Federation of Indian Chambers of Commerce and Industry from its constituents, the cost of furnace oil works out to Rs. 170 per tonne (Rs. 140 being the present price, ex-port and inclusive of the total excise duty of Rs. 60 *plus* the present railway freight of about Rs. 27 from Bombay port to an inland centre like Baroda plus Rs. 3 by way of sales tax, octroi, etc.). The landed cost of an equivalent quantity of coal, assuming that nearly two tonnes of coal are required to generate as much energy as one tonne of furnace oil, will not exceed Rs. 120 in Baroda, for instance. No doubt, the difference of Rs. 50 (Rs. 170 *minus* Rs. 120) will be reduced by Rs. 13½ representing the proposed 50 per cent rebate in railway freight on the transport of furnace oil from ports to consuming centres. But there will still be a gap of about Rs. 36½ which cannot be covered otherwise than by a corresponding reduction in excise duty. This course, suggested by the Federation in its communication of 6th June 1962 to the Union Finance Ministry, should commend itself to the authorities if they are serious about the use of furnace oil as a substitute fuel.

Another practical difficulty faced by industries, which would very much like to use furnace oil, is the non-availability of foreign exchange for the import of equipment required in the conversion of existing boilers from coal to oil firing. There is also the problem of allocating sufficient foreign exchange to additional imports of furnace oil. The Federation's suggestion, in this connection, is that the existing refineries should be enabled to utilise their capacities fully and produce more petroleum products, including furnace oil, from additional imports of crude oil. As crude imports will involve a smaller expenditure of foreign exchange than imports of products like furnace oil, the Federation's suggestion is certainly worthy of consideration. If, however, the foreign exchange difficulties are not expected to be overcome in the immediate future, the Federation's pleas are not likely to be heard. Greater production of coal and its quicker movement to consuming centres will be more immediately possible and that too, without any additional expenditure of foreign exchange other than that provided by the World Bank loan to private collieries. More immediate efforts to resolve the fuel crisis in the industrial sector would, therefore, have to be made in this direction rather than in that of costlier substitution.

RETURNS FROM IRRIGATION PROJECTS

The basic test of a reasonable financial return to the exchequer from the investment on an irrigation project used to be the sole or main test in the days of British rule. But this criterion of productivity has not been uniformly applied to new irrigation projects taken up for construction in the 'fifties. More especially in the second Plan period, out of the 122 new major and medium projects approved by the Planning Commission, as many as 92 have not satisfied the test of productivity. Substantial secondary gains to the community by way of greater agricultural production and employment and special considerations like regional development or development of backward areas and power generation, have relegated the conventional test to the background. It has thus come about that the 'period' within which an irrigation project must be expected to become paying and the concept of 'benefit' have both been considerably enlarged in recent years. The high cost of new irrigation projects and the time lag between the creation of irrigation potential and its actual utilisation in the fields have necessarily meant that no definite 'period' can be laid down. As 'benefit' can be both tangible and intangible (from the point of view of social welfare) no fixed formula can also be uniformly adopted for measuring it in money terms.

In these circumstances the research session of the Central Board of Irrigation and Power held at Ootacamund early this month has wisely pleaded for the adoption of more comprehensive criteria than the test of financial productivity. This support by the Board only confirms the trend that has already been in operation, and carries the implication that the remaining exploitable water resources cannot be harnessed except at still higher costs. Does all this mean that the vast amounts of public money (mostly secured from public loans on which interest has to be paid) invested in new irrigation projects should not be expected to yield some reasonably adequate return? If so, that would be going too far. Surely the broad aim must be to derive some *direct* and some *indirect* returns to the exchequer. More economic construction, speedier and fuller utilisation of irrigation potential created at the headworks, integration, wherever possible, of irrigation projects with the more remunerative power projects, judicious distribution of water according to the requirements of different crops, evolution of an equitable and generally acceptable structure of water rates and betterment levies, propagation of cultural practices most suitable for irrigated lands, and timely and adequate distribution of fertilisers—these will go a long way towards increasing the returns to both the exchequer and the farmer. The returns to the exchequer, though small in a direct sense, can be substantial in indirect terms, that is, by way of additional land revenue or sales tax on larger marketed surpluses, higher returns from the power part of multi-purpose projects, and so on. The additional returns to the farmer flowing from irrigation will, of course, be all too evident to him.

SMALL-SCALE INDUSTRIES

The Indian Merchants' Chamber deserves to be complimented on arranging a conference of small-scale industrialists in Bombay last week. The Conference, inaugurated by Mr. Nityanand Kanungo, Union Minister for Industry, sought to highlight the problems faced by small industrialists of the western region, covering the States of Maharashtra, Gujarat and Madhya Pradesh. The findings of the conference are, of course, applicable to the generality of small entrepreneurs in other parts of the country as well. The deliberations at the conference have revealed that the problems of the small-scale sector of industries fall within three broad groups, namely, inadequate credit facilities, shortage of raw materials and procedural difficulties in respect of land acquisition and of import licences for machinery and components, etc. It is, however, disappointing to note that the conference has not given adequate attention to the problems of, and prospects, for, dovetailing the programmes of the small-scale sector with those of large-scale industries. There is a growing awareness in the country that small-scale industries can have an integrated role in industrialisation only if they are designed to be ancillary units within the framework of common production programmes, as in Japan or the U.S. The Indian Merchants' Chamber, being a body consisting of many large-scale units, could have profitably utilised the conference for assessing the scope for establishing small units ancillary to large units in this region. Its research wing could have made a thorough study of the problem and, in the light of its findings,

MAHARASHTRA'S FINANCES BUOYANT

NEW LEVIES ON ROAD TRANSPORT LACK JUSTIFICATION

THAT Maharashtra is one of the most progressive States in the Indian Union is easily proved by some economic indicators. The State income at constant (1955-56) prices, for instance, is estimated to have *increased* by 31 per cent between 1955-56 and 1960-61, while *per capita* income has gone up by 15 per cent over the same period. It is noteworthy that both these rates of growth are somewhat higher than in the national economy as a whole. In 1961-62, however, the State income seems to have declined marginally on account of some setback to agricultural production. Even the volume of industrial production, as indicated by consumption of electricity and growth in factory employment, appears to have only maintained the usual rate of increase of around 6 per cent during the year. Although industrial consumption of electricity has increased by 15 per cent —from 1,853 million kw.h. in 1960-61 to 2,130 million kw.h. in 1961-62—growth in industrial production has still been retarded by the shortages of key materials like cement, steel, equipment, coal and wagon space. But the State's industrial progress, as indicated by the number of licences issued under the Industries (Development and Regulation) Act for new units as well as for substantial expansion of existing ones, has been well maintained in spite of the crucial shortages. It may be recalled, in this connection, that as many as 385 licences (with an aggregate investment potential of Rs. 100 crores) were issued under the aforesaid Act in 1961. Measured in another way, too, that is, in terms of the value added in the manufacturing sector, Maharashtra continues to occupy a leading position in India's industrial sector, contributing as it does, more than 20 per cent of such value in the country as a whole.

If Maharashtra has thus acquired the reputation of being a progressive State, it is due as much to public investment as to private investment. The Plan outlays in the public sector, for instance, increased from Rs. 21 crores in 1956-57 to Rs. 79 crores in 1960-61. The aggregate public outlays in the second Plan period were to the tune of Rs. 225 crores, which were substantially in excess of the original Plan provision of Rs. 204 crores. The State also attracted its customary large share in the nation's private investment outlays. The proposed third Plan outlays in the public sector are of the order of Rs. 390 crores (Rs. 100 crores on revenue account and Rs. 290 crores on capital account), representing an annual average of Rs. 78 crores. In the first year (1961-62) of the current Plan, the public outlays have been of the order of Rs. 68 crores, while in 1962-63 they are expected to be nearly Rs. 80 crores. If public outlays are maintained at this level of Rs. 80 crores or so in the remaining three years of the third Plan, further economic progress in the State may correspond, more or less, to schedule. But this progress can be achieved only if the resources required for public investment come up to expectations.

Here, happily, the State's finances are seen to be in good shape, revealing a certain buoyancy even at the existing levels of taxation. The relevant figures are given below:

(Rs. crores)

		1961-62 (*Revised*)	1962-63 (*Budget*)
I.	*Tax Revenue :*		
	1. Taxes on income (share of income-tax)	6.7	12.0
	2. Taxes on commodities and services :		
	(a) Union excise	7.1	11.4
	(b) State excise	1.2	1.2
	(c) Sales tax	34.5	36.0
	(d) Entertainment tax	2.6	2.6
	(e) Taxes on vehicles	5.5	5.5
	(f) Tax on railway fares	1.4	1.4
	(g) Other taxes and duties	8.7	7.5
	Total (2)	61.2	65.6
	3. Taxes on property and capital transactions :		
	(a) Estate duty	0.4	0.4
	(b) Land revenue	6.9	7.0
	(c) Stamps and registration	5.9	5.9
	Total (3)	13.2	13.3
II.	*Non-tax revenue :*		
	(1) Interest on loans and advances	2.0	6.9
	(2) Receipts from commercial enterprises	10.6	11.3
	(3) Other receipts	22.3	23.4
	Total (II)	34.9	41.6
III.	*Other receipts* (which include share of additional taxes recently levied by the Union Government in the field of divisible taxes and additional revenue arising out of procedural changes in the administration of Sales Tax Law)		4.4

It will be seen from the above figures that the State's tax revenue, *even at the existing levels of taxation*, will have increased by about Rs. 14 crores in 1962-63, as compared with 1961-62. One would have, therefore, thought that, in a situation like this, there was not much need for heavy additional taxation. But that is not the view Mr. S. G. Barve, Maharashtra Finance Minister, has taken in his tax proposals accompanying the budget estimates for 1962-63 submitted to the State's Legislative Assembly on the 7th inst. These regular budget estimates, as distinct from the Financial Statement which had been submitted on 27th March for the purpose of taking a Vote on Account for the first four months of 1962-63, have revealed, as compared with 1961-62, practically no increase in non-development expenditure on revenue account (Rs. 56.2 crores in either year). But the Government's latest proposals to rationalise the pay scales of its employees will involve an additional expenditure of about Rs. 4 crores in the budget year. Further, in the field of development expenditure on revenue account, there has been an increase, the position for 1962-63, as compared with 1961-62, being as follows:

(Rs. crores)

		1961-62 (*Revised*)	1962-63 (*Budget*)
1.	Social services :		
	(a) Plan	4.0	9.5
	(b) Non-Plan	40.2	45.3
2.	Economic services :		
	(a) Plan	9.4	9.0
	(b) Non-Plan	16.1	18.3

It would appear from the above figures that non-Plan development expenditure on revenue account is expected to rise by Rs. 7.3 crores and development expenditure on account of some Plan schemes only by Rs. 4.5 crores. Even so, the buoyancy in revenues, even at the existing levels of taxation, should have taken care of the major portion of the estimated increases aggregating Rs. 17 crores in non-development, non-Plan development and Plan development expenditures. Any additional taxation could, therefore, have been limited to about Rs. 3 crores (being the difference between Rs. 17 crores of additional expenditure and Rs. 14 crores of additional revenue, as compared with 1961-62). Actually, however, the State's Finance Minister has now brought forward new tax proposals (like the increases in sales tax on a variety of goods other than the daily necessaries of life and on coal gas, the levy of sales tax on hand-made *bidis* and *gur*, the increases in stamp duty and entertainment duty, the readjustments in electricity tariff, the education cess on the annual rateable value of urban immovable property and on irrigated land growing cash crops, the increases in sales tax on motor spirits and in motor vehicles tax, and the new tax on freight carried by lorries) which are expected to yield Rs. 5.7 crores over the remaining part of the budget year and Rs. 8.6 crores in a full year. This much additional tax effort in one sweep seems to be too much even for a big and progressive State like Maharashtra. Some at least of the new tax proposals can as well be re-examined either for reducing their incidence or for withdrawing or postponing them.

The most onerous and, thus, the most controversial of the present tax proposals pertain to increases in sales tax on motor spirits and in motor vehicles tax and to an entirely new tax on carriage of goods by road. Motor vehicles and road transport in India are already heavily taxed, carrying as they do the heaviest taxation in the free world. To burden them further with additional imposts is not fair. The increases (from 4 nP to 5 nP per litre of aviation

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

COTTON TEXTILE IMPORTS INTO U.K.

MR. ERROLL'S STATEMENT GOOD IN PARTS

IT is gratifying to find that the British Government has not yielded to the renewed pressure tactics adopted by the domestic cotton textile industry to get official intervention in regard to imports from India and other Commonwealth countries. The Government has decided to accept the Hong Kong textile industry's offer to continue upto the end of 1965 the present ceilings on its exports of cotton piecegoods and made-ups for retention in Britain, subject, however, to the acceptance of similar arrangements on the part of India and Pakistan. This was disclosed in the House of Commons on Wednesday the 6th inst. by the President of the Board of Trade, Mr. Frederick Erroll, while making a statement on Government policy concerning imports of cotton textiles and other matters affecting the industry. It may be recalled that strong—rather very strong—representations seeking Government intervention had been made by the spokesmen of millowners. A month ago, a Cotton Board delegation met the Prime Minister and vigorously urged that the Government must assume responsibility and renew the voluntary ceiling agreements on the basis of actual imports at present. The plea for import curbs on cotton textiles received powerful support from trade unions also. Indeed, the unofficial Textile Action Group staged a public demonstration last week against imports of cotton textiles from the Asian members of the Commonwealth. It led a procession of both millowners and workers through the streets of London, with banners proclaiming the plight of the industry, and a petition was presented to Parliament.

In his statement, Mr. Erroll did admit that a large volume of imports caused serious difficulties to the domestic cotton textile industry. But he made it clear that the Government was bound to take account of the importance of textile exports to the economies of the Commonwealth countries concerned. The Government, he said, believed that the present ceilings were reasonable in all the circumstances and it had been decided to accept them.

The stand thus taken by the British Government reflects a higher sense of responsibility. Apparently, it must have realised that any unilateral action either by the Government or by the industry may injure the trade and the friendly relations existing between Britain and the Commonwealth countries concerned. By rejecting the plea for reducing the present ceilings, the Government has avoided the possibility of adding to the balance of payments difficulties of countries like India which are faced with a critical foreign exchange situation. The ceilings, it may be recalled, are 195 million square yards for India, 184 million square yards for Hong Kong and 42.4 million square yards for Pakistan, whereas the Lancashire millowners want to take the level of actual imports so far this year as the basis for limiting imports. This level is considerably lower than the ceilings.

Despite the refusal of the British Government to concede Lancashire's demand, we feel that the winner of the campaign is Lancashire and not India or Pakistan. For, by continuously keeping up the agitation against imports, Lancashire has stalled the possibility of India asking for either an increase in the ceiling when the present so-called voluntary pact expires or the pre-pact freedom to ship cotton textiles without quotas. After all, the pact was only meant to give the Lancashire industry a respite and not permanent protection. India would be perfectly justified in asking for the restoration of the freedom it had enjoyed in the past for reasons which this journal has mentioned on several occasions previously. It is, however, a moot question now whether the Government of India and/or the millowners would ever make such a demand. Even if they do, the British Government can conveniently point to Lancashire's wild cries and plead its inability to swim against this powerful current. Once again, the British cotton industry has proved that, in any contest, it pays to be on the offensive and that, in diplomacy and strategy, its leaders can beat their Indian counterparts hollow.

The British Government's decision has naturally been welcomed by our London contemporary, *The Financial Times*. The paper says:

"The Government has refused the cotton industry's plea for more protection, and it has been right in doing so.... In fact, there was really no alternative to this tough line.... To cut the possible ceiling on a major section of Commonwealth exports at the present delicate stage of Common Market negotiations would have been almost impossible, while such action would not have squared either with the undertakings which have been entered into under the international textile agreement at Geneva. The Government has, therefore, accepted the Hong Kong plan and, as long as India and Pakistan do the same, the current ceilings will remain in force until the end of 1965."

In effect, by pitching its demand higher than its actual requirements, Lancashire has safely and firmly achieved its goal. It has placed India on the defensive by raising the issue at a time when India has been trying to make sure that it will not be seriously hit, if Britain joins the Common Market. If, for instance, India were to demand, as a counter to Lancashire's proposals, that the ceiling pact be scrapped, it would have alarmed the Continental textile millowners.

The statement of the President of the British Board of Trade that the present system of duty-free imports into Britain of cotton textiles from the Commonwealth countries will continue is welcome, despite his qualification that the Governments and industries concerned would naturally reserve their right to reconsider the matter if, as a result of the Common Market negotiations at Brussels, there were to be any change in this system. It may be noted here that India now possesses a tariff advantage of 17½ per cent for cloth and 7½ per cent for yarn *vis-a-vis* non-Commonwealth countries. How serious the impact will be if this advantage is done away with is well brought out in the following extract from a statement issued sometime ago by the Indian Cotton Mills' Federation:

"Even as it is, the volume of exports from the non-Commonwealth countries to the U.K. has been greatly increasing, that from the E.E.C. countries alone having expanded from 30 million square yards in 1958 to 77 million square yards in 1960. If the exports from the E.E.C. countries could expand so rapidly even when they suffered from a tariff disability of 17½ per cent *vis-a-vis* the Commonwealth countries, it is easy to imagine how much more formidable their competition will be when the position will be reversed and the tariff advantage of the Commonwealth countries of 17½ per cent will be converted into a tariff advantage for E.E.C. countries of something like 15 per cent. The potential of the E.E.C. countries to export textiles is enormous. They are net exporters to outside world, their exports in 1960 (excluding inter-E.E.C. trade) amounting to 49 million lbs. of yarn and 844 million yards of cloth. India's textile exports to U.K. are a vital source for the earning of foreign exchange by this country. In 1960, the foreign exchange earned on this account was Rs. 17.2 crores from cloth and Rs. 90 lakhs from yarn. India will rapidly lose these earnings, if Britain joins the E.E.C. without arranging for the continuance of duty-free imports."

In the course of his statement, Mr. Erroll alluded to the long-term Geneva agreement which is due to come into operation in October next. He revealed that the Government intended to accept it for the U.K., subject to a reservation exempting Britain from obligations to admit increased imports. This is a major qualification which does not appear to be in consonance with the spirit of the Geneva Agreement. If Britain makes such a departure, every other developed country will tend to follow suit, with the result that the whole Geneva undertaking will go to the wall.

The observations of Mr. Erroll on imports of cotton textiles from countries outside the Commonwealth which have taken advantage of the ceilings agreement with India, Pakistan and Hong Kong are, however, agreeable. Thus, he observed that "it would be unfair to those countries which are voluntarily restricting their supplies to this market, if other countries took advantage of such restraint to increase their own sales." And he minced no words when he declared that the countries with no traditional trade in cotton textiles should not count on being able to build up a new market in Britain. It is precisely for this reason that the British Government has decided to introduce a system of open individual licences in place of the present open general licence under which cotton piecegoods can be imported freely from most sources. It is to be hoped that the new system, while it will "quiet the fear of increasing imports from new sources," will not entail fresh restrictions on imports from existing sources.

A WEEK OF TURMOIL

NEW WAGE POLICY MAY HAVE TO BE EVOLVED

(From Our Own Correspondent)

LONDON, *8th June*

LONDON LETTER

ON almost every imaginable economic and political front this has been one of those weeks in which the whole economy seems to writhe and settle down into a different form. First, in the stock markets the account which has just finished has been one of the most tumultuous in the history of the Stock Exchange. Last week began with the market collapse, following Wall Street, of 8 per cent (in the *Financial Times* index, from 283 of industrial shares to 261). The following day came a 5½ per cent recovery, getting three-quarters of the way back to the opening figure; then the decline set in again in fits and starts to end the week at 267 which is 5½ per cent down on the opening. There is nothing very dramatic about the overall fall, big though it is in terms of points, but there is clearly unease that, in spite of no sound economic reason, why the markets should go on deteriorating, as they yet may.

The Chancellor of the Exchequer has also this week seen his wages policy blown sky-high. In spite of his tremendous endeavours to institute a wages policy with the co-operation of business and the Trade Unions and to establish the overall increase in national productivity as the standard for wage increases, negotiation after negotiation has gone against him. Wage negotiations have traditionally been conducted in an atmosphere of what the particular industry can stand or, for public employees, what has been happening elsewhere. In practice the negotiators have been unable to accept the concept of a guiding light in the shape of the index of national productivity. That was the case which the Treasury put up to the Civil Service Arbitration Tribunal in claiming that nearly half a million civil servants should have their pay raised by 2 per cent. The civil servants countered by pointing to the manner in which their pay has dropped behind general levels of remuneration to the tune of about 5 per cent. The Arbitration Tribunal in fact rejected the Treasury argument, they rejected the Chancellor's policy and they awarded the civil servants a 4 per cent rise. Now that the Government's own employees have won this, no respect is likely to remain for the Chancellor's policy. When the new round of industrial wage increases comes up in the autumn, 4 or 5 per cent rather than 2 or 2½ per cent is likely to be the criterion whether national productivity justifies it or not. So the Government will have to look again for a wages policy.

Labour's Win in By-election

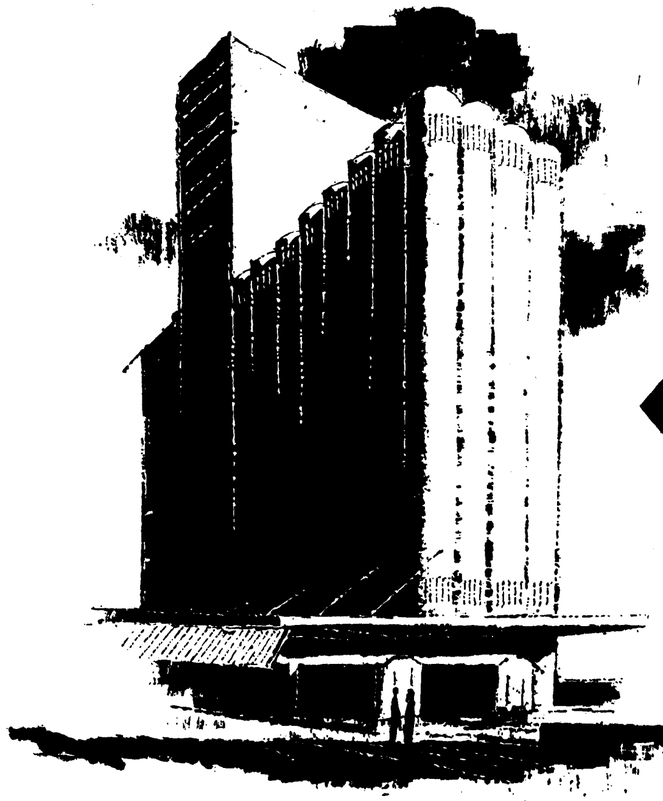
On the political front, the Labour Party won their first seat from the Government in a by-election, increasing their percentage of the poll by 4 per cent and halving, with the help of the Liberals, the Government's vote; although the Liberals were placed third, the fact that they doubled their previous vote is in line with all other indications of their growing attraction to the voter who decides that, if he does not want to see Labour in, he does not necessarily have to vote Conservative. At another by-election the Conservative candidate (an ex-Labour Party man!) held the seat for the Government by a very narrow majority. With 3½ per cent less votes than the Conservative came the Liberal candidate and 5 per cent lower down, the Labour. In both these by-elections the seat was won on a minority vote—in one case the minority Labour and in the other the Conservative. The Government has, of course, plenty of time to manœuvre; they do not have to go to the country for at least two years and much may alter in that time. One can only observe that if the present pattern of opinion develops, the Liberal Party will be in a position, if not to form a Government, then to hold in power whichever of the other parties it chooses.

Negotiations with E.C.M.

Finally, on the international front, the Government is continuing to face criticism about the lack of positive information on the hazards of joining the Common Market. There seems no doubt now that the Prime Minister has pledged Britain's entry more or less on the terms that the Common Market wants. Although

(Continued on page 1093)

A silo—built to accommodate 100,000 tons of foodgrains! If the set-up looks too luxurious, consider *this:* every year in India more than a million tons of foodgrains are destroyed by pests—due to old methods of storage! Colossal wastage? It is. One reason why scientific storage is important—almost next in line to raising food production in India. Today Larsen & Toubro supplies a wide range of plant and equipment in the field of food and agriculture: tractors and implements, earth moving equipment, fertiliser plants, grain silos and food processing plants.



it has a lift.
it has a railway siding.
what is it?

stronger than a pair of bullocks!

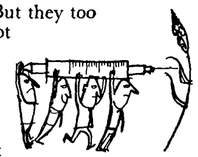
Certainly! And faster. Not the caterpillar—but the tractor that bears the famous name. It ploughs, for instance, about an acre an hour! (A pair of bullocks takes 16 hours!) Impressive? Then think also of the bigger machines: bull-dozers, scrapers, dumpers, traxcavators... all essential equipment for building irrigation dams and canals, clearing forest lands, harrowing and soil conservation.

bread does not grow on trees!

Nor do biscuits, for that matter! Bakeries need flour—large quantities of it every day! Now think of the time it takes to produce one ton of flour *by hand*. And think of the modern Buhler mill that grinds 1,000 tons a day—just one of the plants that L&T now progressively manufactures.

plants do have feelings!

So science has proved. But they too occasionally need a "shot in the arm". Fertilisers, in other words. Essential for healthy growth and increased yield. Every year the demand is growing—and with it the need for fertiliser plants and equipment like the Chemiebau superphosphate plants and other process equipment manufactured by L & T.



which one is eating rice?

Hard to tell the difference—and that exactly is the point. Synthetic rice *looks* similar; it tastes equally good. Then why choose it in place of rice? Because it is three times more nutritious. It is comparatively cheap... two aspects that are important to a country with a food problem. And this is where Buhler come in—with their long experience and know-how.

L & T contributes also to the development of these vital industries:

MEDIUM-TERM FINANCE FOR INDUSTRY

REPORT OF RESERVE BANK'S WORKING GROUP

THE planned acceleration of industrial growth in India has brought to the fore the importance of the provision of long and medium-term finance to industry. In the years since independence, several special financial institutions such as the Industrial Finance Corporation of India, State Financial Corporations and the Industrial Credit and Investment Corporation have been set up and they have extended a growing volume of medium and long-term credit to industry. In the context of the future requirements of industrial growth, the scale of operations of the various special institutions will continue to expand and grow in importance. Some of the commercial banks have also, of late, been taking interest in extending formal medium-term loans to industry, assisted partly through facilities available from the Refinance Corporation for Industry. Considering the demand for and supply of term credit to industry, banks will be called upon to supplement to an increasing extent the facilities provided by other financial institutions. The increasing importance of term loans emphasises the need for improving, as well as disseminating more widely, techniques of appraisal of term loan applications. It was considered useful, therefore, to pool existing experience in this field and accordingly the Reserve Bank of India set up a Working Group under the chairmanship of Mr. K. N. R. Ramanujam, Director of Banking Division, Economic Department, Reserve Bank of India, to prepare a report outlining some of the general principles followed by financial institutions extending term loans. The Working Group which consisted of representatives, among others, of the Reserve Bank of India, scheduled banks, financial institutions such as the Industrial Finance Corporation of India, State Financial Corporations and the Industrial Credit and Investment Corporation of India recently submitted its report to the Bank. The Bank has published the report as the approach to term loan applications and the methods of appraisal discussed in the report will be of interest to all financial institutions engaged in term lending. The salient features of the Working Group's study are brought out in the following summary of the report:

Banks and Term Loans

In its report, the Working Group points out that, while several special financial institutions have been established in recent years for the provision of medium and long-term credit for industry, there is still need for a further broadening of the institutional set-up. Banks hitherto have shown caution in extending their term loan commitments, as they consider such loans non-liquid and hence risky. The traditional concepts of liquidity are, however, not applicable to term loans. The liquidity of such loans depends on the "anticipated income" of the borrowers as they are intended to be repaid over a period of years out of the enhanced profits arising from the utilisation of the loans.

It is well known that Indian banks "roll over" a substantial portion of their short-term credit. This amounts, in effect, to medium-term lending and it has not adversely affected the liquidity position of the banks. Actually, the absence of a continuing obligation for full repayment during the tenure of the loan, the liquidity that comes from regular amortisation and the discipline that this imposes on both the banker and the borrower are points in favour of formal term loans as against rolled-over credit. The adoption of formal term lending by at least the larger banks would introduce a certain flexibility in the operations of the Indian banking system.

The present conditions in India are especially favourable to the adoption, to a limited extent, of the practice of formal term lending by banks. Several measures such as the setting up of the Deposit Insurance Corporation have been introduced to add to the strength and stability of the banking system. At the same time, certain limitations concerning the ability of the Indian banking system to extend the scope of banks' activities in this field should also be noted. Already, the credit-deposit ratio of banks is high, resulting in pressure on their liquidity ratio. There is also the fact that term lending is a specialised business which only banks with a certain minimum of resources, personnel and organisation can undertake. Even in the case of an individual bank equipped for the purpose, the amount of term lending that can be undertaken is limited by its overall financial position which is determined, among other things, by the structure of the bank's deposits (i.e. the size of its term deposits), its capital funds and the general level of its advances-deposits ratio.

Aspects of Appraisal

In the assessment of risks involved in loans of longer duration, the criteria used for judging the "soundness" of short-term loans are often unreliable and inadequate. While a static analysis of the balance-sheet position would suffice for a short-term loan, appraisal of term loans requires a dynamic approach, involving, as it does, among others, a projection of future trends of output and sales and estimates of costs, returns and flow of funds. In fact, the standards to be adopted and the methods of analysis required for the appraisal of term loans are more appropriate to investment decisions than short-term lending. However, there can be no standardised approach to appraisal. Even the criterion of profitability that would be normally adopted by financial institutions cannot be applicable in all cases. In the context of capital scarcity in an underdeveloped economy, it may have to be partly tempered by the wider objectives of development.

There are four broad aspects of an appraisal: technical feasibility, economic feasibility, financial or commercial feasibility and managerial competence. It would be neither possible nor necessary to attach equal importance to all these aspects, even when a comprehensive inquiry seems necessary. Each situation should be viewed separately and as a whole. The strong points revealed by one aspect of appraisal may more than offset weaknesses in others. The scope of appraisal and the emphasis placed on each aspect would hence depend on the circumstances of each case.

The examination of technical feasibility consists of an assessment of the various requirements of the actual production process, with a careful inquiry into the availability, accessibility and quality of the goods and services needed.

The economic feasibility aspect has reference to the earning capacity of the project. The immediate sale prospects of an increase in output should be assessed, but it is necessary to go beyond this. On the supply side, the competitive position of the unit concerned should be examined and, on the side of demand, the projection of future trends worked out. This is a complicated matter, since the influence on demand of the different factors varies depending on the nature of the goods produced—consumer, intermediate or capital. Moreover, as they are estimates, they have to be used with due caution. Nonetheless, it should be possible to determine approximately the range over which the demand for any product will move over a given period.

The appraisal of managerial competence is of importance because, in a dynamic economic environment, the ability of an enterprise to forge ahead of others depends upon the quality of its management. The repayment prospects of a loan thus vitally depend upon the competence and integrity of the management.

Financial Appraisal

The most important aspect of term loan appraisal is the financial aspect. No term-lending institution can afford to ignore a comprehensive financial appraisal, except at its own risk. Any temptation to appraise term loans adopting criteria suitable for short-term accommodation must be scrupulously avoided. The term-lending institutions have to ensure that the projects to be handled by them meet the following minimum financial criteria: (i) The estimated cost of the project is reasonable and complete and has a fair chance of materialising; (ii) the financial arrangement is comprehensive, without leaving any gaps and ensures availability of cash as and when needed; (iii) the estimates of earnings and operating costs are as realistic as circumstances permit; and (iv) the borrower's repaying ability, as judged from the project operations, is demonstrable with a reasonable margin of safety.

The basic data required for financial analysis can be grouped under four broad heads.

(1) *Cost of the project*: The capital cost estimates of the project should be comprehensive and require to be reviewed critically. Comparisons of such estimates may be made with those of similar projects entertained earlier by the lending institution. In the estimation of costs, besides the principal items such as land, buildings, machinery, etc., allowance should also be made for working capital requirements which would vary from industry to industry. It is also necessary to ascertain the means of financing the project that is the extent of reliance on share capital, internal resources such as reserves and surplus, long-term borrowings, deferred payments for import requirements, etc. The cost of the project and the means of financing it have to be related to the phasing of the project and arrangements made to secure funds as the need arises. The schedule of disbursement of the loan will have to be drawn up so as to synchronise with the different payments to be effected by the borrowing unit.

(2) *Cost of production and profitability*: In order to avoid an underestimation of the cost of production, care should be taken to see that no element of cost is overlooked. It will be necessary to work out the stage at which the project will break even and start yielding profit. Estimates of earnings will also have to be made up to the time the unit is expected to establish itself in the market and reach a satisfactory level of production at normal costs, i.e., till the special tax benefits expire in order to assess the normal profitability. Further, it is necessary to work out the extent of price fall that can be sustained by the project without incurring loss.

(3) *Cash flow estimates*: To ensure sound financial planning and reasonable assurance of cash availability, the lending institution has to ascertain the schedule of financial requirements of the project. The cash flow estimates of a project would show the various sources of funds including those arising out of profits and depreciation and the application of the funds for different purposes. A study of the figures would indicate the adequacy or otherwise of financial arrangements made by the borrowing unit. The data would also enable the computation of debt-service coverage which, in its turn, serves as an invaluable guide to the lender for determining the repayment terms of the loan, and the restrictive covenants where so warranted. The figures of cash flow estimates provide the link between the balance-sheet of one year with the next.

(4) *Proforma balance-sheets*: There is a difference in the financial appraisal of projects of new concerns and expansions of existing concerns. In the case of the latter, the first step should be the study of their balance-sheets and profit and loss accounts for the past five years or so. The second step should be the preparation of estimates of cash flows for the next four or five years followed by estimates of balance-sheets for the same period. For a new project, all the necessary figures must come from the cash flow estimates, on the basis of which the proforma balance-sheets are compiled.

Guidance for Borrowers

The preparation of various statements would, no doubt, involve both time and effort and the borrower may require a step by step guidance in furnishing all the relevant data. Although the information called for from the borrower may be rather detailed and the job of furnishing it somewhat exasperating, the borrower would sooner or later realise that the object of the inquiry is to establish the financial feasibility of the scheme and to see whether there is scope for its modification for the mutual benefit of the parties concerned.

The report has also dealt with the significance of "Ratio studies" as broad indicators of the financial trends of a company. A scrutiny of the financial statements (balance-sheet and profit and loss accounts) over a period of years reveals the trends or patterns in financial structure and inter-relationships between financial facts. The relevance of various ratios for an appraisal is briefly discussed. In this connection, the Working Group has emphasised the role of the debt-equity ratio and observes that, from a lender's point of view, the financial structure of a project should reveal a satisfactory balance of "owned funds," i.e. equity and "borrowed funds," i.e. debt.

It would be prudent for the lending institution to depute an officer to inspect the borrowing concern to varify and supplement the information supplied by them. The pre-sanction inspection and a follow-up of loan pro-

SINCE 1899 Men are building roads in impossible places—through steaming jungles and over freezing mountains. Breakdowns here can mean days, not just hours, of delay. But Timken tapered roller bearings keep machines rolling day after day, year after year. They practically eliminate friction. And they're precision-made of case-hardened nickel-rich steel to make them extremely tough and wear-resistant—to assure highest quality. ■ You'll find Timken bearings in almost every kind of machine in the world, making them run better with less maintenance and at lower cost. It's a result of the partnership between Timken Company engineers and the men who design road-building machinery, cars, trucks, railroad rolling stock, farm equipment—a partnership that goes back to 1899. ■ We invite you to use our experience and knowledge to make your product even higher in quality—more competitive. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

PROSPECTIVE TRENDS IN WORLD TEXTILE FIBRE CONSUMPTION

WIDE REGIONAL AND NATIONAL DISPARITIES

A STUDY of consumption prospects for textile fibres was sponsored by the International Cotton Advisory Committee, Washington, three years ago in furtherance of its policy of disseminating the maximum amount of information about the present position and future prospects of cotton. Although cotton is still the world's premier textile fibre, its future is intimately bound up with developments in other fibres, natural as well as man-made and hence a study of cotton's future must necessarily involve a simultaneous assessment of the trends in other fibres too. The Committee, therefore, sought the co-operation of other international organisations such as F.A.O., O.E.E.C. and the U.S. Department of Agriculture to make a joint study of all textile fibres. Accordingly, it appointed in 1959 a working group of economists and statisticians concerned with textile fibres in the various international organisations to develop a two-year study programme. The first phase of the study, which involved investigation of the factors affecting consumption of textile fibres, was completed in 1960 and its findings were published in a report entitled *Studies of Factors Affecting Consumption of Textile Fibres*. The second phase concerned with making actual projections of fibre consumption for the different regions of the world. The projections made by the working group, which have now been published in a report entitled *Prospective Trends in Consumption of Textile Fibres*, gives a glimpse of the probable trend and pattern of fibre consumption in the world in 1965 and 1970.

Consumption Defined

Consumption of fibre is defined by the authors of the study as the quantity of cotton, wool and man-made fibres made available for use by final consumers calculated as the mill consumption of fibres plus or minus the fibre content of net trade in textiles. In making projections of future fibre consumption account was taken of trends in population and incomes and their relationship to fibre consumption. Attention was also given to the prospects for supply of additional cotton or other fibres, textile mills capacity, etc., in areas where it was felt these had an important bearing on fibre consumption. In addition, notice was taken, where feasible, of such factors as the vigour and success of promotion programmes, changes in patterns of consumer expenditure, shifts in urban-rural location characteristics of the population etc. No attempt was, however, made to project the proportion of future textile markets which might be taken by a specific fibre, except where indicated by official plans.

The projections were made on the basis of the assumption that (1) there will be no large-scale warfare, (2) continuous efforts will be made to expand trade and increase living standards throughout the world and (3) that there will be no drastic change in the price of textile fibres. World population is expanding at an annual rate of 1.7 per cent and during the period 1955-60 world population rose by 270 million. A comparable increase is expected during the 1960-65 period.

Availability

On a world basis, according to the study, *per capita* fibre availabilities have been rising in the past. By 1949, world *per capita* availability of cotton, wool and man-made fibres had regained the pre-war level of 3.7 kilograms. By 1955, this had reached 4.7 kilograms and continued to expand, touching 5.1 kilograms in 1960. In aggregate terms, availability of all fibres rose from 8.7 million metric tons in 1949 to 12.5 million tons in 1955 and 15 million tons in 1960. It is expected to be 17.6 million tons by 1965. This estimate is based on the assumption that the rate of increase in production will be of the same order as in the 1955-60 period. This would result in a *per capita* availability for the world of 5.4 kilograms in 1965. In other words, the rate of increase in *per capita* availability will be somewhat less than in the 1955-60 period. The table on this page gives the region-wise aggregate and *per capita* availability of textile fibres during the six-year period 1955-60, with projections for 1965 and 1970.

It is evident from this table that the situation in respect of consumption of textile fibres differs widely between regions and even between individual countries within a region. This is probably due to the differences in the rate of population growth and *per capita* income. Thus, the annual rate of population growth ranges from 0.7 per cent in Northern America and Western Europe to 2.7 per cent in Central America. *Per capita* income is as high as over 2,000 dollars in the U.S. whereas it is only 63 dollars in India. In the highest income areas, namely, North America and Oceania, *per capita* fibre consumption at best seems to be only holding its own. In the Continental Western Europe and Japan, on the other hand, *per capita* consumption has been expanding rapidly under the impact of rising incomes but the rate of increase, according to the authors of the study, may "ease off in the years ahead." With the expansion of the textile industry, *per capita* fibre consumption is also rising rapidly in the Near East and in Eastern Europe and the U.S.S.R. and further increases are anticipated. In India, the authors of the study note, although aggregate textile consumption is rising, there seems to be little, if any, sustained increase in *per capita* availability of fibres and, unless the difficult supply problem is satisfactorily solved, the future level of consumption will be related almost entirely to the growth in population.

Aggregate and Per Capita *Availability of Textile Fibres (Cotton, Wool, Rayon and Synthetics) for use by Ultimate Consumers*

Notices

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Karanpura Development Company Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Friday, the 29th June, 1962, at 11-00 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1961, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 17th June, 1962 to the 29th June, 1962, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA, *31st May*, 1962.

Notes: (*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 23rd July, 1962, to those members so entitled, whose names appear in the Company's books on 29th June, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 31st May, 1962, the following dividends were recommended to be paid for the year ended 31st December, 1961, subject to deduction of tax.

On Ordinary shares at the rate of 5 per cent per annum.

On Founders' shares at the rate of 15 per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *31st May*, 1962.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

(Incorporated in England)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer Books will be closed from the 17th to 30th June, 1962 (both days inclusive) for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent, less Income-tax, payable on the 30th June, 1962, on account of the profits for the year ending 31st December, 1962.

By Order of the Board,
E. H. GASKELL,
Acting Agent.

P4, MISSION ROW EXTENSION,
CALCUTTA-1.
5th June, 1962.

HANDLOOM FABRICS FOR EXPORT

With a view to overcoming certain handicaps experienced in regard to exports of handloom fabrics, the Textile Commissioner has announced that, apart from the stamping of individual pieces with the required trade mark which is already in force, the bales packed with goods will also be sealed outside with the seal of the inspecting organisation at the time of packing. This procedure, it is said, will entail supervision of packing to ensure that only inspected and stamped goods are kept in bales at the time of packing and that such packing is done in the presence of the inspecting staff of the Cotton Textiles Fund Committee. The scheme of inspection and quality marking is purely a voluntary one, though it is compulsory for exports to the European and American markets in order to claim export incentives. The scheme is made applicable to "bleeding Madras" irrespective of the destination of export.

PROTEST AGAINST TEXTILE IMPORTS

PROCESSION OF WORKERS AND MILLOWNERS

From Our Special Correspondent

MANCHESTER, *5th June*

MANCHESTER LETTER

A PROCESSION of 3,700 cotton workers, men and women, including millowners, marched through central London this week to protest against the high level of cotton imports and to petition members of Parliament to stop the decline of the industry. The march was organised by the Textile Action Group, the militant body of Lancashire cotton men formed two months ago to press for a cut in the level of imports.

More than 80 coaches took the demonstrators to the capital, and the numbers participating must have impressed the onlookers. Also impressive, even to those who sympathise with the aims of the campaign, was the degree of financial support for the Group disclosed in the list posted on the Manchester Royal Exchange. The amount donated was practically £1,400: the numbers contributing 183.

Significant among the names of the firms and individuals providing monetary backing for the "ginger group" are the companies whose chairmen are also the "top men" of the two main employers' organisations in spinning and weaving. Many other well-established firms in the trade have lent their support. But, while the Textile Action Group was conducting its protest campaign in London, there was some criticism of the movement from a powerful trade union organisation in Lancashire.

The legislative council of United Textile Factory Workers' Association, which represents more than 120,000 cotton workers, said in a resolution while appreciating the circumstances giving rise to the formation of the organisation, that it deplored some of the statements made by T.A.G. leaders about union leaders failing to support the movement. The cotton unions, it pointed out, have not been asked to support T.A.G. officially, although many of their members were associated with it. The unions had been pressing cotton's case in many ways, and criticism should be reserved for the Government instead of being directed against those who were fighting every inch of the way, said the resolution.

Plans for Emergency Conference

The unions announced plans for an emergency conference, being called in the near future, to discuss the cotton crisis. It's not yet known what action will be proposed, but a union spokesman said that the whole situation had now to be assessed, in view of the Government's failure to help Lancashire. With the Whitsun holiday approaching, the official statement promised by the British Government on its intentions regarding the topics raised by the delegation from Lancashire three weeks back can scarcely be delayed much longer.

In view of the uncompromising tone of the earlier note issued when the Hong Kong proposal was first put forward, however, it seems unrealistic to expect any sudden or substantial change of heart among the politicians. Rather, traders feel, the mood may be hardening against Lancashire, despite the validity of her appeal. Sight of the full text of the offer made by Hong Kong adds yet another touch of fear to the anxiety already so widely evident throughout the local industry. Two new avenues of infiltration appear, which were not disclosed in the first abbreviated reports.

Additional Clause

The proposed agreement covers a three-year period from the beginning of 1963 and, in respect of piecegoods and garments, is on the same terms as the current undertaking. Omitted from the earlier message, however, was the subsequent sentence: "With an additional clause covering more fully the situation which might arise if United Kingdom imports from other countries increase."

Lancashire traders feel that Hong Kong has always been particularly sensitive to the idea of other producers "getting in on the act." Clearly there is an underlying threat of unilateral action in the event of competitors gaining ground on the Colony. Many believe that more damaging still is the secrecy surrounding the clause.

The peremptory tone of the statement, with its "take-it-or-leave-it" attitude, is borne out in another sentence, which appears to brook no argument: "The whole offer in respect of yarn, cloth and garments is subject to similar restriction being agreed by India and Pakistan and to any proportionately more advantageous terms accorded to them being extended to Hong Kong."

More Mills to Close

Two more Lancashire spinning units owned by Manchester firms are completing their orders before ceasing production. The Lancashire Cotton Corporation has decided to close its Trent Mill, at Shaw. As part of a general reorganisation, in pursuance with a policy of diversifying into lines which offer the best chance of an adequate return on capital employed, Armitage and Rigby is disposing of its Warrington spinning mill, although weaving is to be concentrated and re-developed and the carpet yarn spinning plant expanded.

Lancashire millowners have expressed "the most profound disappointment" at the Prime Minister's reply to the industry's recent delegation. A resolution passed by the British Spinners' and Doublers Association, one of the biggest trade associations in the Lancashire cotton industry, stressed that the import levels proposed by Hong Kong and apparently accepted by the Government for imports from Commonwealth countries would not allow a firm basis for the continuation of the Government-sponsored reorganisation and re-equipment plans, based on the import ceiling agreed in 1959. The Association pledges full support for the Cotton Board, which, it claims, is pressing the Government "most strongly" for reconsideration of the position and the need for action to restore confidence in Lancashire cotton.

A Lancashire cotton union leader has accused the Government of regarding the industry as "expendable." Mr. James Whitworth, General Secretary of the Operative Spinners Amalgamation, said that the collapse of the Government-sponsored Reorganisation Scheme was typical of the muddle-headed thinking in Government circles.

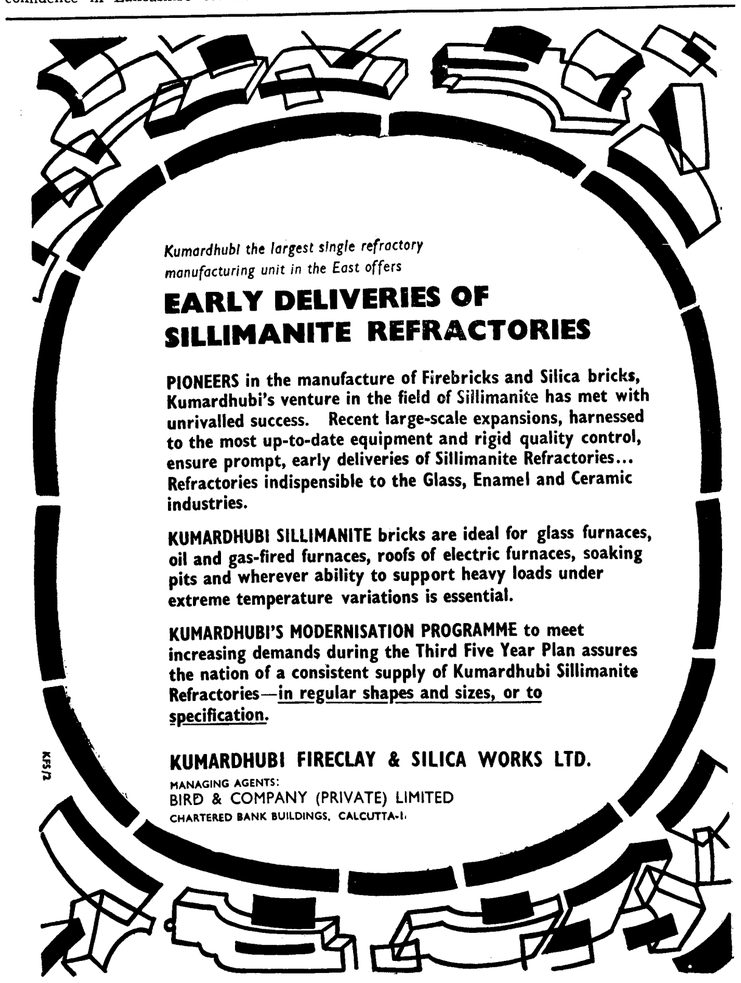
In the crucial period of the reorganisation plan when Lancashire was preparing to scrap 13 million spindles, the Government allowed the country to be swamped with more cheap textiles than ever before. This made the operation practically useless, "putting the industry back to a position even worse than it was in 1959."

The industry was again faced with further contraction and most of the money offered for the reorganisation and re-equipment of the industry was still with the Exchequer. Signs of any improvement in the general state of trade were non-existent and great uncertainty remained for the future.—*All Rights Reserved.*

COMPULSORY EXPORT OF TEXTILES

The Committee of the Indian Cotton Mills' Federation has decided to implement the recommendation of the Cotton Textile Consultative Board fixing the annual export obligation of every mill at 12½ per cent of the turnover of cloth and 3 per cent of the turnover of yarn, with reference to the balance-sheet of any year which ended on a date between 30th June 1961 and 29th June 1962. The export obligation for the six months ending 31st December 1962 will be half of this. The obligation can be fulfilled by a mill by exporting its own product in full or by exporting its own goods in part and by arranging with another mill to export the balance on its behalf. The Committee has also decided that those mills which fail to fulfil their full obligation should contribute to the export effort by paying to the export promotion fund of the Federation, a sum equal to one-eighth of the value by which their export performance falls short of their obligation.

It is estimated that the total export obligation of mills in a full year under the scheme now accepted by the Federation will be around Rs. 65 crores. The export earning of the textile industry during the calendar year 1961 through exports of cloth and yarn was Rs. 49.6 crores.



PROGRESS OF SMALL INDUSTRIES HALTING

COMMITTEE SUGGESTS UNIFORM PATTERN OF AID

THERE would be a uniform pattern of Central and State Government financial assistance for the development of *khadi*, village and small-scale industries, if the Government of India were to accept the recommendations made by the Small Industries Co-ordination Committee's Sub-Committee. The report of the Sub-Committee was presented to the Lok Sabha on the 1st inst. by Mr. Nityanand Kanungo, Union Minister for Industries. The pattern recommended for loans and grants made available by State Governments to industrial co-operatives is as follows:

Loans: 75 per cent of (*a*) working capital or (*b*) value of share capital (the contribution may be higher at 90 per cent in special cases) or (*c*) cost of machinery and equipment, the balance of 25 per cent being raised by the societies themselves. The rate of interest is to be 2½ per cent for a period of ten years except in respect of (*b*) where no time limit is fixed. Repayment of loans may commence two years after the disbursement of the last instalment of loan. The number of instalments mentioned pertain only to (*b*) and that is two instalments.

Grants: Provision of grants for meeting the cost of supervisory and management staff is to be on a tapering scale: 100 per cent during the first year which will be reduced to 75 per cent in second year, 50 per cent in third year, 25 per cent in fourth year and *nil* thereafter. The term "management staff" covers manager, accountant, secretary and other clerical staff, but not the technical staff such as designer, moulder, engineer and salesman.

Utilisation of funds: About 75 per cent of funds (either as loans or as grants) allotted to small-scale industries must be utilised in rural and semi-urban areas, out of which two-thirds are to be earmarked for villages with less than 5,000 population.

Power concession: The benefit of the existing concessional rate for power supply should be made applicable to *all* village and small industries.

Pilot projects: Pattern of assistance should be determined on an *ad hoc* basis. For new schemes, it should be identical with or at least very close to the existing pattern of similar schemes.

The above pattern, it has been suggested, must also apply to the schemes of the Central Social Welfare Board, since it is felt that the existing pattern applicable to these schemes are "very liberal, and, while there may have been justification for it in the initial stages, the continuation of two patterns for similar schemes is no longer necessary. It is also suggested that the schemes for the coir industry must be brought within the purview of the scheme. The Committee has urged the Central Government to drop the policy of giving assistance to States for individual schemes.

A Direct Stake Needed

It will be desirable to have uniformity in the pattern of assistance to village and small industries as recommended to the Committee. The Committee has certainly done well to insist that the institutions or units which are assisted should themselves raise and invest a part of the funds required by them. For, otherwise, they cannot normally be expected to take a keen interest in the success of a venture; they must have a direct stake in it in the form of their own capital. A clear evidence of this need is provided in the second Estimates Committee's report on *Khadi* and Village Industries Commission. It is seen therefrom that the majority of the institutions receiving aid have not started operations and the amount advanced to them has had to be recovered from them. Take the instance of the cottage match industry. Out of the 467 units allotted during the second Plan, only 24 were working at the end of the Plan period, with an aggregate investment of Rs. 2.16 lakhs, as against the disbursement of Rs. 42.03 lakhs. A sum of Rs. 27.64 lakhs was, in fact, recovered and the balance of Rs. 12.23 lakhs was expected to be recovered later. In this connection, the Estimates Committee observes:

"The Committee are not able to appreciate how, when not more than 24 out of 467 units allotted for the cottage match industry are working, the Commission has planned to set up another 200 units during the third Plan. It looks as though the past experience has been no guide to the Commission. They hope that the Commission would review its programme periodically with reference to the actual performance and, before allotting further units, would ensure that the units allotted earlier have actually been set up."

The programme of development drawn up for the village and small industries under the third Plan is considerably larger than in the first and second plans. The programme entails a total outlay of Rs. 164 crores, as against the actual estimated expenditure of Rs. 180 crores incurred in the second Plan period and about Rs. 34 crores in the first Plan period. Such a heavy outlay has been justified on the ground that the development of village and small-scale industries is very vital to the growth of the country's economy in general. Here is what the Planning Commission says in its third Plan report.

"Village and small industries have made a significant contribution in the first and second Plans in realising the objectives of expanded employment, larger production and more equitable distribution. With the larger dimensions of the tasks to be accomplished in the third Plan, their role will be even more important. The objectives of the programmes for these industries as set out in the Industrial Policy Resolution, 1956, and in the second Plan are to create immediate and permanent employment on a large scale at relatively small capital cost, meet a substantial part of the increased demand for consumer goods and simple producers' goods, facilitate mobilisation of resources of capital and skill which might otherwise remain inadequately utilised, and bring about integration of the development of these industries with the rural economy, on the one hand, and large-scale industry, on the other. They also offer a method of ensuring more equitable distribution of the national income and avoiding some of the problems that unplanned urbanisation tends to create. With improvement in techniques and organisation, these industries offer possibilities of growing into an efficient and progressive decentralised sector of the economy providing opportunities of work and income all over the country. One of the principal aims of planning in this field, therefore, is to assist in the adoption of improved techniques and more efficient forms of organisation, so that full advantage is taken of the basic facilities and services available as a result of general economic development and, over a period, the entire sector becomes self-reliant and self-supporting. At the same time, the pace of technical change will have to be so regulated that large-scale technological unemployment with consequent hardship and misery to millions of people is avoided."

Before referring to the progress actually achieved by the village and small industries, it is necessary to remove the confusion that seems to prevail over the concept of small industries. For the purpose of Government assistance, small industries are defined to include all industrial units with fixed capital assets not exceeding Rs. 5 lakhs irrespective of the number of persons employed. The term "small industries" is a broad one which has appropriately been divided in the second Plan report into the following six broad categories:

1. Handloom and powerloom industry (cotton, silk and wool weaving).
2. *Khadi* (traditional and ambar) covering decentralised cotton spinning and *khadi*, as well as wool spinning and weaving.
3. Village industries—handpounding of rice, vegetable oil (*ghani*), leather footwear and tanning (village), *gur* and *khandsari*, cottage match and others.
4. Handicrafts.
5. Small-scale industries.
6. "Other" industries—sericulture and coir spinning-weaving.

Expenditure Incurred

The accompanying table shows the actual expenditure on the development of these industries during the first and second Plan periods, as well as the third Plan provision. This table indicates that the third Plan outlay of Rs. 264 crores is very much more than the combined expenditure of Rs. 214 crores actually incurred in the first two Plan periods. As against the actual expenditure, thus, of Rs. 214 crores during the ten years ended 1960-61, the rise in the value of goods produced by the small industries has been negligible. The aggregate value of production in the year 1959-60 is put at no more than Rs. 1,040 crores, as compared with Rs. 910 crores in 1950-51, representing a rise of just Rs. 130 crores, or an average annual rise of Rs. 14 crores or 14.3 per cent over the nine-year period. Even here, the "real" increase in production (as distinguished from "money" increase) will be much less, if account is taken of the general advance in the price levels.

Expenditure on Small Industries

(In crores of rupees)

	First Plan	Second Plan	Third Plan
Handloom industry*	11.1	31.7	38.0
Khadi	8.4	64.7	72.4
Of which:			
Traditional	..	24.8	37.0
Ambar	..	39.9	35.4
Village industries	4.1	18.0	20.0
Sericulture	1.3	3.1	7.0
Coir industry	0.1	2.0	3.2
Handicrafts	1.0	4.8	8.0
Small-scale industries	5.2	44.4	84.6
Industrial estates	2.5	11.6	30.2
Total	33.7	180.0	264.0

* Including power-looms in the handloom sector.

Handlooms and Powerlooms

The progress made by each of the aforesaid six types of industries in the decentralised sector may now be made. To take the handloom and powerloom industry, "other" industries and handicrafts first. Thanks to the various official props in the form of financial assistance (Rs. 11.1 crores in the first Plan period and Rs. 31.7 crores in the second Plan), tax reliefs and other measures of active encouragement, there has been a quite a notable rise in the production of handloom and powerloom cloth. Between 1951 and 1960, the actual output has gone up from 1,008 million yards to 2,196 million yards. The estimated output in 1961 is 2,592 million yards. This aggregate level of production includes that of powerlooms. The contention of millowners is that the major portion of the total is accounted for by the powerlooms which are not entitled to the assistance given to the handlooms. This contention has not been disproved by the Government and seems to be largely correct. If regard be had to this fact, then the return for the assistance given to the handloom sector has been very poor indeed.

Sericulture

Among "other" industries, the sericulture has achieved some progress. Production of raw silk has risen from 2.5 million lbs. in 1951 to 3.6 million lbs. in 1960. At the end of the second Plan, the industry provided full-time employment to about 35,000 persons and part-time employment to 2.7 million persons. But the high cost of production continued to be the main problem of the industry due largely to the low yield of mulberry per acre, poor yield of cocoons, etc. The third Plan production target for silk is 5.0 million lbs., with an outlay of Rs. 7 crores.

Coir

The progress in coir industry during the first and second Plan periods was generally slow, owing to organisational deficiencies of coir co-operatives, inferior quality of coir yarn on account of inefficient equipment used for spinning, and competition from substitutes in foreign countries. The industry is estimated to provide employment to 800,000 persons.

Handicrafts

In regard to handicrafts, over 100 emporia and sales depots were set up during the second Plan. The annual sales increased from Rs. one crore in 1958-56 to Rs. 2.5 crores in 1960-61. It is estimated that handicrafts, including carpets

Notice

THE ONDAL COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 31st May, 1962, the following dividends were recommended to be paid for the year ended 31st December, 1961, subject to deduction of tax.

On 6½ per cent Cumulative Preference Shares at the rate of 8.45 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary Shares at the rate of 7½ per cent per annum.

By Order of the Board,

P. PRASHAD,
Chairman.

KLM mechanic scrutinizes intake duct of jet engine—one of 166 points KLM inspect in detail every 75 hours.

What you should know about the remarkable reliability of KLM, before your next flight to any of the 104 cities served on KLM's world-wide network

KLM is pre-eminent in jet maintenance. KLM crews were servicing jets years before the first commercial jetliners went into transatlantic service. Read 18 other remarkable facts about KLM and how they earned their enviable reputation for reliability.

1. KLM has had more years of experience than any other airline. Founded in 1919, KLM is literally the World's First Airline.

2. 'Golden Circle Service' is offered on KLM flights from the Far East to Europe via the South Asian routes and over the Pole.

3. The initials KLM stand for Koninklijke Luchtvaart Maatschappij. This is Dutch for Royal Aviation Company. Just KLM will do—it's known all over the world.

Jet maintenance at its best

4. KLM has its own Rs. 28 million jet workshop in Amsterdam.

5. When KLM maintenance crews overhaul a jet engine, they strip it down to two thousand parts.

6. Every KLM DC-8 Jet has weather radar. Your captain can see what the weather is like 150 miles ahead. If it looks turbulent, he finds a calmer route.

7. It takes 12 years for a pilot to become captain of a KLM DC-8 Jet—longer than it takes a doctor to become a surgeon.

Personalised Service

8. KLM economy class passengers enjoy exactly the same friendly personal attention as first class passengers do. The cuisine is simpler, of course, but comes from the same chefs and the same kitchens, and wines and other drinks are available at nominal charge.*

9. Every KLM DC-8 Jet has a luxuriously appointed lounge, simply named the 'Sky Cocktail Bar'. Located in first class. It is a perfect place to meet your fellow travellers over free drinks.*

10. KLM will prepare special baby food on request. Name the brand when you book your ticket. On longer routes American and Dutch baby foods are carried as regular supplies in airplane pantries.

** outside prohibitton areas*

Special facilities

11. KLM offers special lowfares for registered students between 12—26 years, for travel between their homes and place of study. Discounts to and from Europe are usually 25% of the normal round trip fare. For particulars, ask KLM.

12. KLM has its own resthouses in Karachi, Bangkok and Biak. All have spacious rooms with private baths and showers, and recreational facilities. KLM flies in fresh food and delicacies regularly from Holland and Australia. The service in these resthouses matches the standards of a good European Hotel.

13. If you are flying via Amsterdam and can spare a few hours between flights, KLM can book you on a quick tour of Holland. A Holland Minitour lasts about 3 hours. A multi-lingual hostess takes you for a boat ride through Amsterdam's canals. Or a visit to a diamond cutting plant. Or the flower auction at Aalsmeer, or the Keukenhof Gardens. The cost : Rs. 17 approximately.

14. The tax-free shopping centre at Amsterdam airport is probably the best in Europe. You can buy German cameras, Swiss watches, French perfumes and wines and spirits at low, tax-free prices.

15. You can buy a car at Amsterdam airport—tax-free. You will find at least sixteen makes of car in the showroom. Buy there. Or order in advance. (What you save can pay for your entire European trip.)

Flights from Calcutta, Delhi and Karachi

16. KLM's Westbound DC-8 Jet services leave Calcutta on Tuesdays, Delhi on Saturdays and Karachi on Mondays, Wednesdays, Thursdays, Saturdays and Sundays. All these services provide excellent KLM connections at Amsterdam to USA, UK and many European cities.

17. KLM operates twice-weekly DC-8 Jet Services to Japan on Mondays from Calcutta, on Fridays from Delhi.

18. Your travel agent will help you with all your travel arrangements. He is an expert and his experience will tell you where and how you can make the very most of your time and money. Your travel agent's advice is valuable, he'll tell you about the advantages of flying KLM.

KLM ROYAL DUTCH AIRLINES

worth over Rs. 6 crores, were exported during the last three years of the second Plan. It is claimed that favourable conditions for stable and fuller employment were created for skilled craftsmen which, in turn, resulted in considerable improvement in their earnings. Progress was somewhat retarded by shortage of technical personnel and certain basic raw materials and the difficulty in channelling credit to artisans. The All-India Handicrafts Board is concerned with the development of about 40 different crafts. Specific measures of development are being adopted for 12 of these, namely, carpets, art metalware, hand-printing, ivory, *jari*, wood work, papier mache, lacquerware, cane and bamboo and allied crafts, dolls and toys, pottery and jewellery. The number of handicraft co-operatives at the end of second Plan was 1,600.

Khadi

Excluding handlooms-powerlooms, "other" industries and handicrafts, there remain the *khadi*, village industries and small-scale industries proper. In the *khadi* industry, the results obtained in respect of both production and employment have not been commensurate with the expenditure incurred. The total amount of money actually disbursed as loans and grants during the second Plan period was Rs. 64.7 crores (Rs. 24.8 crores for traditional *khadi* and Rs. 39.9 crores for ambar *khadi*. As against this huge amount, the aggregate production in terms of value during the five years was no more than Rs. 60.79 crores (Rs. 8.22 crores in 1956-57, Rs. 11.48 crores in 1957-58, Rs. 13.76 crores in 1958-59, Rs. 14.14 crores in 1959-60 and Rs. 13.19 crores in 1960-61). The output of *khadi* per rupee worth of outlay has declined from 70 nP in 1957-58 to 44 nP in 1960-61. Expressed in quantitative terms, the production of traditional *khadi*, which had gone up from 41.72 million square yards in 1956-57 to 50.05 million yards in 1957-58, declined thereafter and touched 40.60 million yards, or a shortfall of nearly 21 million yards, as compared with the target of 60.00 million yards. Similarly, there was a sizable shortfall in respect of ambar *khadi*, the actual output in 1960-61 being 23.13 million yards, as against the target of 40.00 million yards, though it was markedly higher than the 1.88 million yards produced in 1956-57, when the implementation of the ambar charkha scheme was in its initial stages. The shortfall in both the cases is attributed to organisational difficulties and problem of accumulated stocks of unsold *khadi*. Alluding to these, the report of the second Estimates Committee (March 1962) observes:

"The ambar project had not been properly planned. It appears that, in the enthusiasm for pushing forward the programme, the basic requisites for its successful functioning were not ensured. Charkhas were allowed to be manufactured and distributed, although they were defective. Adequate repair and servicing arrangements had also not been made. Charkhas had been distributed to artisans who were not fully trained for the job. The Committee hope that more energetic steps would now be taken to overcome the shortcomings in the ambar programme and also to activate the idle charkhas already distributed.... *Khadi* worth Rs. 789.25 lakhs, i.e., about 60 per cent of annual production remained unsold on 31st March 1961."

The average price of *khadi* (including traditional and ambar) continues to be very high, more than Rs. 4 per yard. The price differential between *khadi* and mill cloth varieties between 52 nP to Rs. 2 per yard, which "is large enough to create a consumer preference in favour of non-*khadi* cloth." The Estimates Committee has, therefore, urged the Commission to aim constantly at reducing the price of *khadi*.

Village Industries

The progress achieved by the other village industries also has not been quite encouraging. Despite the expenditure of Rs. 22.1 crores in the first and second Plan periods, the total value of production in 1960-61 was just Rs. 33.26 crores. The breakdown of expenditure in the second Plan and the actual production in 1960-61 is given in the table below:

	Total expenditure during the second Plan (Rs. lakhs)	*Production* 1960-61 (Value—Rs. lakhs)
Processing of cereals and pulses	282.57	363.84
Village oil	582.49	1,669.12
Village leather	304.45	85.50
Cottage match	37.62	1.23
Gur and *khandsari*	146.02	716.55
Palm *gur*	186.62	422.80
Non-edible oil and soap	168.12	34.92
Hand-made paper	101.78	24.23
Bee-keeping	55.36	17.38
Village pottery	97.88	31.92
Fibre	24.75	6.56
Carpentry and blacksmithy	10.33	1.62
Total	1,797.94	3,325.67

It is claimed that, as a result of the activities of the *Khadi* Commission during the second Plan period, the *khadi* industry provided (in 1960-61) full-time employment for 81,000 persons and part-time employment for 1,643,000 persons. The corresponding figures for all the village industries (other than *khadi*) together are 72,000 and 606,000, respectively.

"Small-scale" Industries

The small-scale industries proper cover, according to the working definition adopted by the Small-scale Industries Board, all units or establishments having a capital investment of less than Rs. 5 lakhs and employing less than 50 persons when using power. The second Plan provided for an outlay of as much as Rs. 55 crores, as against the actual expenditure of Rs. 5.2 crores in the first Plan. But the amount spent was Rs. 44.4 crores. A few industries have registered a notable expansion, as witness the following figures:

	No. of units		*Actual production*	
	1960	1956	1960	1956
Bicycles	150	44	228,000	25,500
Sewing machines	75	35	52,000	23,000
Machine tools	500	344	Rs. 4.0 crores	Rs. 1.3 crore
Electric motors	74	6	..	..
Electric fans	47	22	..	..

A large number of units came into existence for the manufacture of dyestuffs and plastic goods.

Barring the aforesaid industries and a few others, no information is readily available as to the quantitative progress achieved by all the small-scale industries. The Small-scale Industries Board ought to give periodically statistical data relating to the production performance of the different industries, so that the public will be in a position to assess whether the performance is commensurate with the huge expenditure that is being incurred. A lacuna in the programme for the development of small industries has all along been the lack of co-ordinated approach. Viewed thus, the latest decision of the Central Government to constitute advisory committees (attached to the Small Industries Service Institutes) to ensure effective co-ordination among Central and State agencies concerned with the development of small-scale industries, though belated, is to be widely welcomed. The decision is a sequel to the recommendation of a committee appointed in September 1961 to review the functions of the different organisation for the development of small industries. Each Advisory Committee will consist of the State Director of Industries, the Director of Small Industries Service Institute, the Regional Manager of the National Small Industries Corporation, and two non-official representatives of small industries. The Government of India has accepted the Committee's view that it would be inadvisable for the Small Industries Corporations, being set up in different States, to take up the work of supplying machinery, especially those imported to the small units on hire-purchase, as this work is already being done by the National Small Industries Corporation; there need be no objection, however, if any State Corporation is keen on taking up the supply of indigenous machinery on this basis. In the field of training and economic surveys, the Government agrees with the Committee's recommendation that the State Governments should keep in view local conditions and requirements. There is scope for Central and State agencies undertaking programmes of training for small industrialists. The mobile demonstration-cum-training vans now managed by the Central Small Industries Organisation, it is felt, can be utilised more profitably by the State Governments.

The Centre have also accepted the Committee's recommendation that the Indian Standards Institute should constitute a committee to recommend measures for ensuring uniformity in quality marks and standards. For giving marketing assistance to small industries, closer liaison between the National and State Small Industries Corporations has been suggested. Finally, the Government has accepted the Committee's finding that the programme for providing technical advice and guidance for small industrialists should be mainly the responsibility of the Central Small Industries Organisation. But the Small Industries Service Institutes should also be strengthened further, so that they can be organised more effectively as All-India Institutes of Technological Development.

PROSPECTS FOR TEA ENCOURAGING

"SATISFACTORY OFFTAKE" EXPECTED

TAKING together the world's eight major tea-producing countries (India, Pakistan, Ceylon, Indonesia, British East Africa, Nyasaland, Southern Rhodesia and Mozambique), the share of India alone in the aggregate output and exports comes to more than half. The quantity of tea actually plucked in the calendar year 1961 was over 352 million kg. (1 kg.=2.2 lbs.), out of which 200 million kg. were sold for consumption outside India, representing almost 60 per cent of output *vide* Table A). In spite of this predominant position India has in world tea industry, it does not have the decisive influence on the world tea trade. It is the size of crop in the other producing countries, coupled with the level of offtake by consuming countries, especially Britain, the biggest consumer of tea in the world, that determines the world market trends. No information is yet available as to either of the two latter factors, so that it is difficult to make any definite forecast about the trend of tea prices in the current (1962-63) season. Indeed, the vagaries of the tea market itself are such that one cannot, as Messrs. J. Thomas and Co. (Private) Ltd., a leading firm of tea brokers, Calcutta, point out, in their latest Annual Report (May 1962), be dogmatic about the future trend it may take. It would, however, appear reasonable to suppose, according to this firm, that the opening sales of the 1962 season will be well supported and that, thereafter, the market will inevitably depend, to a great extent, on the crop and supply position not only from North India but also from the other major producing countries.

The Calcutta tea firm considers it "most unlikely" that world production, in general, and North Indian production, in particular, will show the same extent of increase as in the past year, while, from the stand point of demand, the fact that the world consumption has not so far shown signs of lagging too far behind supplies, is also encouraging. The various existing factors, it adds, would appear to ensure a satisfactory offtake of teas at price levels which may not show any substantial change from last season. This view is, of course, qualified by the proviso that "there are no major fluctuations in world supplies." It is recalled, in this connection, that, despite an unprecedented increase in world supplies in the last season (1961-62), there was no indication of a glut of teas in the various consuming countries. Nevertheless, a buyers' market prevailed during the major part of the season, with the result that the average prices of tea were below those in 1960-61, as will be seen from Table B.

Capacity to Export

Speaking from the Indian tea producers point of view, the Annual Report of Messrs. J. Thomas and Co. opines that the steadily expanding internal market should serve to provide an outlet for a substantial proportion of the crop and it is also beyond doubt that quality teas of both orthodox and C.T.C. manufacture will be in good demand. At the same time, the Report emphasises that, since the world tea output is also increasing at a rapid rate and since consumption in India, although a potent factor, has not yet assumed sufficient magnitude to transform a buyers' market into a sellers' market, the marketing conditions will depend ultimately on India's ability to expand its exports.

Alluding to the changes in taxation on tea (*vide* Table C) announced by the Union Finance Minister in the final budget for 1962-63, the Report observes:

"These changes are expected to make Indian teas more competitive on the world markets and should provide a welcome fillip to our exports. However, it should be noted here that the substantially reduced price levels, which prevailed during the last season, did not stimulate exports. It is, therefore, purely a matter for conjecture whether the benefits received by the exporter in the new proposals will make any material difference to exports or whether this relief is not too belated to be of any positive help in regaining some of our markets. For the producer, however, any advantage that he stood to gain by these changes will be offset, to a great extent, by the various increases in excise duty on tea and aluminium foil, as well as increases in freight rates along with new excise duties on plywood, etc., which will entail a greater financial outlay. Moreover, the increase in tax on companies will necessarily mean less profits and therefore less finance to plough back into the industry for expansion and development. It is, however, gratifying to note that earnings from exports have been exempted from this increase."

The move of the Tea Board to intensify its campaign to popularise tea in the U.K., which accounts for more than 60 per cent of India's total tea exports, has been widely welcomed by the trade. Hope is expressed that similar campaigns will be conducted in the other consuming countries the imports into which have shown a "discouraging decline" in the past few years. Apropos the impact on Indian tea of (*a*) the Britain's proposed membership of the European Common Market, and (*b*) the various trade agreements, Messrs. Thomas and Co. state as follows:

"Imports of Indian teas into the U.K. account for about 37 per cent of the combined North and South Indian production, while approximately 1 per cent is imported into the present six members of the European Economic Community, namely, France, Germany, Italy and the Benelux countries. It is, therefore, with more than a passing interest that trade circles in India are viewing the likely entry of Britain into the Common Market. There is considerable speculation as to the effect this would have on the imports of Indian teas to these countries, especially if some of the African countries were to be treated as associate members and their produce is allowed free entry into Britain. This can only put India at a great disadvantage in her trade with the U.K. By and large, however, the formation of the European Common Market has not only stimulated the overall economic growth and trade within the member countries but has also increased their trade with the outside nations. The entry of Britain into the Common Market could, therefore, have only beneficial effects on her own economy and, in turn, also on the economies of her traditional suppliers of goods and produce.

"The various bilateral trade agreements which the Government has effected in the last few years have undoubtedly opened up new markets for Indian teas, but this has also adversely affected India's exports to some of her traditional markets for orthodox teas. In the face of rising manufacturing costs, it is understandable that more and more estates should change over to the more lucrative C.T.C. process not only in Assam but also in the Doars and even in Cachar where a beginning has already been made in the last two or three years. This trend can only be at the expense of orthodox teas, less and less of which will be available from North India in the coming years. These, therefore, are likely to develop inflated values which in turn can only divert demand from the traditional outmarkets to less expensive teas from other producing countries. In popularising Indian teas abroad, therefore, the emphasis will have to be on C.T.C. teas, of which India is, and will continue to be, the premier purveyor."

The Past Season

The prospects for the current tea season have naturally been assessed against the background of the market conditions in the previous (1961-62) season. The Annual Report of Messrs. Thomas and Co. contains a comprehensive review of these conditions. The review reveals that the season in so far as tea leaf is concerned opened on 15th May 1961 when teas from all districts were put up for auction. This was a departure from the practice of two previous years when two auctions confined to Darjeeling teas were held prior to the start of the sales proper. Keen competition from both exporters and internal buyers ensured a higher level of prices than in 1960. The upward trend persisted till the end of July when prices began to decline. The export sales closed on 26th March 1962 "on a note of animation which one would not have normally associated with a year of substantially increased supplies." Nevertheless, the final average prices realised were very low, being Rs. 4.66 per kg., as against Rs. 5.34 a year before and Rs. 5.05 two years before.

In the dust sales, C.T.C. teas played a more dominant role during the season than in the previous season. There was a considerable increase in the quantity on offer which came about, apart from the increased North Indian crop also as a result of many gardens having changed over to the C.T.C. method of manufacture. In addition to this, the high prices paid during the 1960-61 season for dust teas, induced many gardens to increase the percentage of their dust grades. It is estimated that the dust crop for 1961 was approximately 50 million kg., showing an increase of 12 million kg. over 1960 and 13 million kg. over 1959. In other words, despite the crop declining by 5 per cent in 1960, the dust production showed an increase of 2.5 per cent over 1959, while, in 1961, against a crop increase of 12.5 per cent over the previous year, the dust production rose by as much as 31.5 per cent. In spite of the much greater quantity of dusts sold through auctions in Calcutta during 1961-62—an estimated 1.25 million chests as compared to 970,000 chests in 1960-61—there was a good demand throughout the season and, although price levels were not as high as in 1960, they were, nevertheless, considerably in excess of 1959.

Quality Satisfactory

The quality of tea sold during the year under review was generally satisfactory. This is attributed to two factors. In the first place, the growing conditions were conducive to heavy flushes. Secondly, there was the increasing awareness among producers of the importance of maintaining quality on a discriminating buyers market.

London Market

During the major part of the 1961-62 season, the trend of tea prices in London followed that of Calcutta, with values of all descriptions declining steadily until the prospects of a surplus in Indian production receded, when there was a marked turn-round in buying policy and prices rose sharply for quality teas. "The moral," to quote the Report, "would seem to be, therefore, that buyers cannot count on a surplus of good quality teas whatever may be the overall supply position." During 1961, 70.5 million kg. of North Indian teas were shipped direct to the U.K. for sale through the London auctions, as against 60 million kg. in 1960 and 73 million kg. in 1959. Shipments of private sales and forward contracts teas showed an increase from 4.8 million kg. in 1959 to 5.2 million kg. in 1960 to 6.6 million kg. in 1961. Shipping space was readily available throughout the year and the London market was unaffected by strikes and labour disputes. Nevertheless, the practice of offering teas for sale ex-Liverpool and Avonmouth was extended this season and such consignments would not appear to have suffered thereby. This is an innovation encouraged by the buyers, as they have often been severely disrupted by strikes in the London docks in the past.

Exports

Although the quantity of tea shipped from India during the year 1961 was higher than in the previous year, the percentage of exports to the total production continued to decline, the figure for 1961 being 56.9, as against 59.1 in 1960, 64.4 in 1959 and 69.8 in 1958; it was as high as 84.3 in 1953.

Purchases of Indian tea by the U.K., according to the review of Messrs. Thomas & Co., were fairly consistent throughout the year, but less North Indian tea was bought this season than had been expected. While buyers fulfilled their immediate requirements of quality teas, the rapidly increasing crop and the prospect of a large surplus resulted in their preferring to postpone their purchases, as far as possible, to a later date through the London auctions. Imports of North Indian teas into the U.K. amounted to 101.5 million kg. during 1961, as compared with 99.6 million kg. and 104.5 million kg. in 1960 and 1959, respectively. The U.S.S.R., once again, strongly supported the Darjeeling offerings and better quality orthodox leaf and broken grades, but, in addition, a quantity of the more ordinary broken orange pekoes and broken pekoes were also purchased for this country. The current North Indian exports to the U.S.S.R. show an increase on the last two seasons.

While exports to the U.S. also recorded a slight improvement, many of our other established markets showed a depressing falling-away in their imports of North Indian teas. For many years now, Turkey has provided a consistent and valuable outmarket for whole leaf grades, but, from August 1961, purchases by this country were concentrated on broken grades and no interest was shown for whole leaf teas except for those from Darjeeling.

The U.A.R., once again, actively supported this market and, in fulfilling its requirements for black fannings and dusts, it had only limited competition until the later months of the season. This year, for the first time, purchases for this country included a small quantity of legg-cut and C.T.C. dusts. Other Middle East countries have also provided welcome support and contributed largely to the overall increase in exports; of the total increase in exports of 6.6 million kg. over 1960-67, 4.7 million kg. were absorbed by the Middle East countries.

Internal Consumption

As for offtake for internal consumption, better quality offerings, particularly good liquoring C.T.C. descriptions, attracted more marked attention than ever and, if, nevertheless, the minimum policy levels were considerably lower than in 1960, it was only due to lack of competition from exports which enabled the internal buyers to procure their requirements without having to pay high prices. Indeed, Messrs. Thomas and Company say that it was both the wider and greater demand for home consumption that averted what might otherwise have been a major recession in the industry. The quantity of tea consumed internally in 1961 is estimated at about 135 million kg. which is more than one-third of the total crop and represents an increase of 67 per cent over the past decade, whereas the rise in production in the same decade is only 27 per cent. "The existence of such a vast market," to quote the Report, "has already proved

(Continued on page 1100)

TABLE A: *Tea Output and Exports*

(In million kg.)

Year	Production	Exports	Percentage of exports
1952	283.6	186.4	65.7
1953	267.1	225.1	84.3
1954	295.5	199.8	67.6
1955	307.7	163.0	53.0
1956	308.7	232.4	75.3
1957	310.8	198.5	63.9
1958	325.2	227.1	69.8
1959	326.0	209.9	64.4
1960	320.5	189.5	59.1

Tea cess ..	Rs. 4.40 per quintal.			
W. Bengal octroi ..	6.25 nP. per lb.			
Assam carriage tax* ..	15 nP. per kg.			

Note :—Excise duty is now refundable at the point of export to the extent of 15 nP. per kg. previously, no such refund was allowed.
* The Carriage Tax (Revalidation) Act expired on 31st March 1962.

ASSAM SILLIMANITE LIMITED

having its Registered Office at A. T. Road, Gauhati, Assam

ANNOUNCE THAT THEY HAVE FILED WITH THE REGISTRAR OF COMPANIES, ASSAM, TRIPURA AND MANIPUR, SHILLONG

A PROSPECTUS offering for public subscription a new issue of 2,40,000 equity shares in the Company of Rs. 10 each at par.

APPLICATION FORMS along with copies of the Prospectus can be had from the Registered Office of the Company, from the Managing Agents, or from the Underwriters, Bankers and Brokers whose names and addresses are given below:

UNDERWRITERS

	Amount Rs.
1. INDUSTRIAL FINANCE CORPORATION OF INDIA, Reserve Bank Building, Parliament Street, New Delhi	10,00,000
2. LIFE INSURANCE CORPORATION OF INDIA, Jeevan Kendra, Jamshedji Tata Road, Bombay-1	5,00,000
3. MESSRS. MATADIN KHAITAN & CO., 9, India Exchange Place, Calcutta-1	5,00,000
4. MESSRS. MURARKA BROTHERS, 7, Lyons Range, Calcutta-1 (Jointly)	9,00,000
5. MESSRS. RAMNARAIN KAYAN & CO., 7, Lyons Range, Calcutta-1 (Jointly)	

BANKERS

STATE BANK OF INDIA—at any of its Branches in India.

EASTERN BANK LTD.—Calcutta, Bombay, Madras.

THE PUNJAB NATIONAL BANK LTD.—at any of its Branches in India.

THE HONGKONG & SHANGHAI BANKING CORPORATION—Calcutta, Bombay.

NATIONAL & GRINDLAYS BANK LTD.—Bombay, Calcutta, Delhi, Kanpur, New Delhi, Madras, Bangalore, Cochin, Gauhati.

FIRST NATIONAL CITY BANK—Calcutta, Bombay.

UNITED BANK OF INDIA LTD.—Gauhati.

BROKERS

Calcutta

M/s Place Siddons & Gough Pvt. Ltd., 6, Lyons Range, Calcutta-1.

M/s Murarka Brothers, 7, Lyons Range, Calcutta-1.

M/s Damodar Chowbay & Co., 7, Lyons Range, Calcutta-1.

M/s Matadin Khaitan & Co., 9, India Exchange Place, Calcutta-1.

M/s Ramnarain Kayan & Co., 7, Lyons Range, Calcutta-1.

M/s N. L. Roy & Co., 7, Lyons Range, Calcutta-1.

Bombay

M/s J. R. Motishaw & Co., 32, Apollo Street, Bombay-1.

M/s Chimanlal J. Dalal & Co., 107, Stock Exchange New Building, Dalal Street, Bombay.

New Delhi

M/s Harbans Singh Mehta & Co., 33, Regal Building, Parliament Street, New Delhi-1.

M/s Raj Paul Chadha & Co., Delite Cinema Building, Asaf Ali Road, New Delhi.

M/s Raja Ram Bhasin & Co., 'Ashiana,' Faiz Bazar, Delhi-6.

Ahmedabad

M/s Chinubhai Chimanlal Dalal, Manek Chowk, Ahmedabad.

Madras

M/s Dalal & Co., National Insurance Building, Madras.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON JUNE 18TH 1962 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON JUNE 25TH 1962, UNLESS CLOSED EARLIER AT THE DISCRETION OF THE DIRECTORS PROVIDED THAT THE SUBSCRIPTION LIST WILL NOT IN ANY EVENT BE CLOSED EARLIER THAN THE CLOSE OF BANKING HOURS ON JUNE 20TH 1962 AND THAT IT WILL BE CLOSED AT THAT DATE IF A FULL SUBSCRIPTION HAS BEEN RECEIVED BY THAT DATE. SHARE CERTIFICATES WILL BE ISSUED WITHIN 4 MONTHS FROM THE DATE OF ALLOTMENT.

The Company commenced business on 25th day of October 1951 and had been principally engaged in the mining and prospecting of Sillimanite and other refractory materials from the Khasi Hills in Assam. It has recently also undertaken extensive prospecting for refractory clays and minerals.

SCOPE AND PROSPECTS

The main aim of the Refractory Project, which the new issue is to help finance, is the establishment of a plant at Ramgarh, in Bihar, for the manufacture, on a large scale, of a special type of Sillimanite and other refractory bricks and shapes to meet the demand of India's growing needs. The Prospectus contains, *inter alia*, details of the land acquired by the Company and details of the pilot plant already in operation.

FOREIGN TECHNICAL COLLABORATION

The Company have entered into a Technical Collaboration agreement with the Vereinigte Grossalmeroder Thonwerke, Grossalmerode, West Germany, and full details are given in the Prospectus.

INTERNATIONAL FINANCE CORPORATION (WASHINGTON) PARTICIPATION

The Company have entered into an agreement with the International Finance Corporation, Washington, whereby the International Finance Corporation, Washington, will lend the total foreign exchange requirements of the project amounting to Rs. 44 lakhs, for the first stage, and Rs. 21 lakhs for the second stage. Full details of the agreement are given in the Prospectus.

The names, addresses and descriptions of the Directors of the Company are:

Name	*Address*	*Occupation and Description*
SRI SHRI MOHAN WAHI ..	18, Kautilya Marg, Diplomatic Enclave, New Delhi.	Senior Partner, United Provinces Commercial Corporation. *Director :* Agrind Fabrications Ltd., Land Reclamation Corpn. Ltd., Indo-Burma Petroleum Co., Ltd., Lewis & Taylor Pvt. Ltd., United Provinces Commercial Corporation Private Ltd.
SRI AMOLAKH CHAND	Jacob Parade, Lashkar, Gwalior.	*Director :* Indian Oil Co., Ltd. (A Government of India Undertaking). *Member :* Life Insurance Corporation of India (Board and Investment Committee). *Director :* U.P. Financial Corporation (A Statutory Corporation), Upper India Couper Paper Mills Ltd., Luoknow.
SRI H. T. BEATTIE	Khargoli Road, Gauhati, Assam.	*Controlling Agent :* R.S.N. Co., Ltd., and I.G.N. & Rly. Co., Ltd., Gauhati.
SRI NIGEL WHITEHEAD ..	49, Hill Park, Malabar Hill, Bombay.	*Director :* Indo-Burma Petroleum Co., Ltd., Balmer Lawrie & Co., Ltd.
SRI KRISHNA MOHAN WAHI ..	103 A,/Block F, New Alipore, Calcutta-33.	*Director :* Agrind Fabrications Ltd., Land Reclamation Corp. Ltd., Lewis & Taylor Pvt. Ltd., Parts Service India Ltd., United Provinces Commercial Corporation Private Ltd.
SRI KRISHNA CHANDRA PANT, M.P.	C. 1/35, Pandara Road, New Delhi.	Consultant in the Chemical Industry. *Technical Director :* Aloo-Chem Limited.

The name and address of the Managing Agents are:
UNITED PROVINCES COMMERCIAL CORPORATION,
6, Ganesh Chandra Avenue,
Calcutta-13.

THE CAPITAL STRUCTURE OF THE COMPANY IS:

AUTHORISED: Rs. 1,00,00,000
Divided into
10,00,000 Equity Shares of Rs. 10 each .. .. Rs. 1,00,00,000

ISSUED, SUBSCRIBED AND FULLY PAID UP:
3,00,000 Equity Shares of Rs. 10 each .. Rs. 30,00,000

RESERVED FOR OPTION:
2,90,000 Equity Shares of Rs. 10 each at par, to International Finance Corporation, Washington .. .. .. Rs. 29,00,000
60,000 Equity Shares of Rs. 10 each at par to Messrs. Vereinigte Grossalmeroder Thonwerke, Grossalmerode, West Germany, for Technical Collaboration .. Rs. 6,00,000

RESERVED FOR EXISTING SHAREHOLDERS:
60,000 Equity Shares of Rs. 10 each at par being A RIGHTS issue of shares to existing shareholders allotted for cash (without underwriting commission or brokerage) .. Rs. 6,00,000

RESERVED FOR LIFE INSURANCE CORPORATION OF INDIA (in satisfaction of underwriting agreement as mentioned in detail in the prospectus):
50,000 Equity Shares of Rs. 10 each at par Rs. 5,00,000
Rs. 76,00,000

NOW OFFERED FOR PUBLIC SUBSCRIPTION
2,40,000 Equity Shares of Rs. 10 each at par .. .. Rs. 24,00,000
Rs. 1,00,00,000

This announcement is not a Prospectus, and persons interested in the matter are urged to apply at once for a copy of the Prospectus for full details.

DEVELOPING UNDERDEVELOPED COUNTRIES

RIVAL SYSTEMS AND COMPARATIVE ADVANTAGE

By Prof. John Kenneth Galbraith
U.S. AMBASSADOR TO INDIA

[The superiority of democratic system for promoting sustained economic development on sound lines in the underdeveloped regions of the world, given certain prerequisites, such as foreign aid and know-how to supplement shortage of domestic resources, was highlighted with conviction by the U.S. Ambassador to India, Prof. John Kenneth Galbraith, while addressing the Commonwealth Club in San Francisco, on 4th June 1962. The text of this interesting address is published on these pages.—Ed.]

ONE of the well-observed features of economic development in the twentieth century is the need to choose between two broad political and economic designs. This choice, one from which developing nations of the eighteenth and nineteenth centuries were conveniently exempt, is between Western constitutional organisation, on the one hand, and Marxian and neo-Marxian policy and economic organisation, on the other.

These are not, as everyone knows, homogeneous alternatives. Wide differences separate a State such as Poland, where the agriculture, and hence close to half the economy, remains in private hands and subject to market influences from the far more completely socialised economy of the Chinese mainland. There are similar distinctions between the non-Marxian economies, which, in this case, are enlarged by terminological preference and political semantics. In Scandinavia, the United Kingdom and modern India, the word socialism is politically evocative. As a result, politicians try to find as much of it as possible. In the United States, steps that would elsewhere be identified with socialist enlightenment—social security, agricultural price guarantees, even the public development of public power sites—are firmly for the purpose of making private enterprise function better.

Also one must be cautious in speaking of a choice between the two designs. Geography and the proximity of military power have had much to do with the decision. Had Poland, to select a country not unaccustomed to movement, been radically relocated after World War II to approximately the position of Paraguay, her subsequent economic and political history would have been rather different. Individuals do commit themselves as a matter of free choice to a Marxian political and economic design. But nations have rarely done so in the normal course of unmanaged elections, a reluctance, incidentally, which was foreseen by both Marx and Lenin. Nevertheless, these broad alternatives exist. My purpose is to weigh their advantages and disadvantages from the standpoint of the developing country. I am aware that an American Ambassador will not be considered by everyone a wholly impartial judge. And, even in this liberal and sophisticated gathering, there would, doubtless, be eyebrow-lifting if my evidence were to lead me to the wrong conclusion.

But the choice merits serious assessment. Much of the present literature consists of declarations of superiority by one side or the other. We share with the Communists a strong faith in the value of robust assertion. Were the advantage all on our side, we would have little reason to worry. But we do worry, and it might be well, accordingly, for us to have a moderately unemotional appraisal of what we have to offer the developing nations as compared with the Communists.

II

The goal of the developing country can be quickly stated: it is to bring itself as rapidly as possible into the twentieth century and with the apparatus of individual and group well-being—food, clothing, education, health services, housing, entertainment and automobiles—which are associated in every mind, urban and rural, bourgeois and Bolshevist, with twentieth century existence. Here and there are some that demur. But, in my observation, the most monastic Christian, the most contemplative Buddhist and the most devout Gandhian cannot be considered completely secure against the charms of the bicycle, motor scooter or transistor radio.

The things associated with modern civilisation are now denied by backwardness and poverty. The task of the two systems is to overcome this poverty. The causes of poverty, in turn, are not simple—although the problem has suffered prodigiously from over-simplification. One cause, clearly, is an oppressive social structure which channels return from the many to the few and which denies the individual the natural reward of his efforts at self-improvement. Another is a feeble, non-existent or corrupt apparatus of public administration which denies to the country the things—law and order, education, investment in roads, power, manufacturing—which are possible only where there is effective public authority. Or poverty may be itself a cause of poverty—it denies the country capital for investment, revenues for education or purchasing power for consumer products which, in turn, are an incentive to effort. This poverty perpetuates itself. Such are the fundamentals that both systems must attack. It is unlikely that the same causes operate in the same form and with the same intensity in any two cases. An effective attack, therefore, requires not only efficient remedies but effective diagnosis of the condition to be cured.

Both systems agree on a number of important points. It is common ground that a shortage of capital is a likely cause of stagnation. Both agree on the need for a massive volume of investment to initiate and stimulate not only economic but social advance. There is agreement also that this investment should be in accordance with a carefully conceived plan. (Here we have paid the Soviets the compliment of appropriating an important idea). There is increasing agreement that a principal object of this investment must be in the educational and cultural improvement of people themselves. The visitor to the more remote parts of Soviet Asia is immediately impressed by the volume of resources going into schools, colleges, adult education programmes and other traditional backwardness of these areas. If, in the years following World War II, we thought too much of investment in terms of physical capital, and too little of the importance of a literate and educated populace, this is an error we are now correcting.

There are, however—and this will doubtless come as a relief—important differences between the two approaches and these are vital. The first lies in the diagnosis of the causes of poverty and the related remedy. The second difference is in the way development is organised. The third is in the political and constitutional environment of development. Let me take up each of these differences in turn.

III

In the Marxian view, poverty is principally caused by institutions which chain the country to its past—which hold it in colonial subjection, which exploit and subjugate the masses and deny them the reward of their labour, which make Government not the efficient servant of the many but the corrupt hand-maiden of the few.

In the predominant Western view, the poor are the victims of their poverty. All societies have capacity for growth; the poor society lacks the resources to invest in growth. Having less than enough for its current needs for food, clothing and shelter, it has nothing for investment in education, improved agriculture, transportation, public utilities or industrial enterprise.

Each of these views leads naturally to a prescription. If institutions hold a country to its past, the answer is the elimination of these institutions. If the problem is the self-perpetuating character of privation, the answer is to provide the catalyzing resources—specifically, economic aid and assistance in its use—which the country cannot supply to itself.

This is the first difference. The Marxian emphasis is on the institutions that inhibit progress and the need to eliminate them. Our emphasis is on the self-perpetuating character of poverty and the catalysing role of aid. It will be noted that each system has a cause and remedy that is not without convenience to itself. The Soviets, at least until recently, were short of capital. They had a revolution which could be exported at moderate expense. Accordingly, it was convenient to associate backwardness with colonialism, feudalism and repressive capitalism, all of which could be eliminated by revolution. By contrast, we had capital. This we could export with greater ease than comprehensive social change.

IV

The second difference is in the way development is organised. Although there is room for some national preference, and heresy cannot be entirely eliminated, the Marxian commitment is still to State ownership of the means of production—of land, capital plant and natural resources. Private ownership of productive resources and their use for private gain is one of the retarding institutions. Its elimination leaves the State in possession and this continues. Incentives to individual and group effort are strongly supported. But incentives which use the device of property-ownership to combine reward for individual effort with regard for management of property are excluded in principle and in large measure in practice.

The non-Marxian design for organising development is not so easily characterised. In the past, many countries—Japan, Germany, Canada and, to a remarkable degree, also the United States—have made State ownership of canals, turnpikes, railroads, electric power and other utilities, and even steel mills, the fulcrum of development policy. India, Egypt and some South American countries are taking the same course today. However, the main and indeed overwhelming reliance in non-Marxian development, both in agriculture and industry, is on private ownership of productive plant. This is true of countries, such as India, which choose to describe themselves as socialist.

V

The foregoing differences are sufficiently sharp, so that we can relate them to results. And, in Eastern Europe and China, not to mention the much older case of the Soviet Union, there is now an ample experience of Marxian development on which to draw.

Two major advantages lie with the Western or non-Marxian alternatives. There is, we have anciently been advised, a certain physical difficulty in extracting blood from a stone. This, however, is comparatively easy as compared with getting savings out of a poor society. When people do not have enough to eat, they are loath to forgo any part of their meal in order to eat better in the future. Pleas on behalf of children and grandchildren leave the man of simple, uncomplicated intelligence unmoved; he reflects that starvation will prevent his having children and, *pro tanto*, grandchildren as well. But Marxian no less than non-Marxian societies must have savings—without them, there can be no growth. Accordingly, the Western pattern of development, with its prospect of assistance from outside the country, eases one of the most painful problems of development. This is why economic aid has become such an important feature of Western foreign policy. It is the process by which savings are transferred from countries where saving is comparatively unpainful to those where it is very painful. It exploits one of the major advantages of our system.

The Communist countries are not without resources in this respect. The Soviet Union, though its capacity has been far less than ours, has spared some savings for other countries. Communist economies and political organisation deal more effectively—or ruthlessly—with unproductive and excessively luxurious consumption, of which there is always some and may be much, in the poor country. And Communist organisation can, within limit, squeeze blood from its turnip. The penalty is the pain and this cannot be avoided. The rioting in Poland in 1956 which brought Mr. Gomulka to power was occasioned in large measure by the enforcement of a rate of saving that was too grim for the people to bear. These last years on the Chinese mainland have evidently been ones of serious trouble and tension. Part of the problem is inherent in socialist organisation of agriculture to which I will advert in a moment. But some has certainly been the consequence of squeezing a large volume of savings out of a very poor population.

The larger consequence is that Marxian development risks the alienation of the people as non-Marxian development does not. It seems doubtful if a majority of the Chinese people are very pleased with their Government and would vote for it in an uninhibited poll. By contrast, in India, after a decade of development, there has been overwhelming vote for the Government that led the task. If the Indian Government has had to subtract the $7.3 billions it has received from the West in overseas loans and grants since independence from the meagre incomes—an average of about $70 per year—of its own people, its popularity might well have suffered. We see in India, in remarkably clear relief, the advantages of the Western design in providing capital.

VI

The second and equally substantial advantage of Western development is in the matter of agriculture. Industry, on the record at least, is fairly tolerant as to forms of organisation. American industry works well under private ownership. Even the most reluctant among us must agree that the Soviets have made considerable progress with socialism. So no decisive contrast can be registered here. But the undeveloped country is, by definition, a pastoral or agrarian community. The agricultural policy is, accordingly, vital. And it is far from clear, as a practical matter, whether it is possible to socialise a small-scale, densely-populated peasant agriculture. Even in the Soviet Union, the agricultural problem has not been wholly solved. And here, at least, there is no serious talk of catching up. Each year we extend our advantage in man-hour productivity without effort and somewhat to our regret. Outside the Soviet Union, agriculture has been even more of a problem. Poland and Yugoslavia have had to revert to private ownership. In China, by all external evidence, the effort to socialise agriculture has brought a serious crisis. Certainly, it has forced her to turn to the West for the largest food imports in history.

There are good reasons for this failure. Farmers, when they are small and numerous, cannot be brought unwillingly into a State-run system of agriculture, for they can defeat any system that is available for their control. The employees of a factory, like the men of an army, are subject to external discipline. Failure in performance can be detected, judged and penalised. (The same rule holds for certain types of plantation agriculture.) A scattered peasantry, carrying on the diverse tasks of crop, especially of livestock husbandry, cannot be so regimented. As a consequence, productivity falls off. Working for others, the farmer works at the minimum rather than the maximum, and the difference between the two is enormous. He can be made to work at the maximum by giving him land to work and rewarding him with the fruits of his labour or some substantial share to consume or exchange as he wishes. But this is to restore individual proprietorship—private capitalism—which its doctrine excludes.

One day the Marxian economies may succeed in socialising agriculture—no effort is being spared. And the ability of the small man in agriculture to sabotage a system he dislikes or which treats him badly is not confined to communism. It is the reason for the low-productivity and backwardness of the *latifundia* of Latin America and the feudal domains of the Middle East. But the fact that it accepts independent agricultural proprietorship is the second clear advantage of Western development.

VII

I come now to a disadvantage of Western development. The Marxian alternative, I have noted, emphasises the destruction of the bonds that tie the economy to the past. Our emphasis is on capital, education, technical assistance and the other instruments that allow of change. Until recently at least, we have been tempted to suppose that any society is a platform on which, given these missing elements, development can be built.

In fact, institutions do chain economies to the past and the breaking of these chains is essential for progress. The promise that this will be done is a valid and an appealing part of the Marxian case. There is no chance of agricultural development in the underdeveloped and hence agricultural country under systems of absentee landlordism, with the workers or sharecroppers confined by law and tradition to a minor share of a meagre product. And feudal systems of farming extend their corrupting influence to Government, to the provision of public sinecures to those who lack a claim on the land, to the milking of middle class and industrial enterprise and to the destruction of incentives and the morale of the society itself. "In our country," a South American guide once told me, "those who do the least get the most. I hear that, in the United States, it is the other way around. "It's a better system." Progress does require the radical elimination of retarding institutions. If elimination can be had from no other source, the Marxian alternative will sooner or later be tried. The revolution they offer here, we should remind ourselves, is less the Russian Revolution than the French Revolution.

VIII

I come now to the final point of comparison—one, unfortunately, which has been much damaged by bad rhetoric. From the earliest days of their development, personal liberty, equal justice under law and constitutional government have been important to Englishmen and to Americans. They have not been the exclusive concern of everyone, but we have never supposed they were the monopoly of the esoteric and privileged minority.

And so it is in the undeveloped country today. The Andean Indian and the landless worker in the Indian village do have a preoccupying concern with keeping themselves fed. But the general yearning for the dignity of democratic and constitutional government is very great. No people who live under a dictatorship ever feel themselves to be first-class citizens.

There can be little question that most people believe that liberty and constitutional process are safer with the Western than with the Marxian alternative. We have not, in my view, made as much of this advantage as we might. But the Communists are under the considerable handicap that their alternative involves a step into the dark. And while the details are obscure, most people know that it does not involve free selection of rulers by the governed, *habeas corpus*, equal justice under law and a voluntary return to other economic arrangements should the experiment prove unpalatable.

IX

On first assessment, then, the advantage of the non-Marxian alternative for the developing country is considerable. It promises at least a partial avoidance of the pain that for the poor country is inherent in finding savings for investment and growth. It promises an acceptable and viable system of agriculture than a certain unpalatable and possibly unworkable one. And it offers personal liberty and constitutional process. Against this the Marxian alternative promises a more rigorous attack on the institutions—the unproductive claims on revenue and especially the feudal control of land—which exclude change.

But this is not a game where one can count the cards and decide the winner. Some cards count far more than others and there is the unfortunate possibility that some good cards will not get played.

The Marxian promise can be decisive. That is because the things we offer are only effective and attractive after the retarding institutions are eliminated. In a country where land and other resources are held by and operated for the benefit of a slight minority, and where the apparatus of Government serves principally to reinforce such privilege, aid is not in much use. It will also benefit not the many, but the few. Our promise of independent proprietorship is obviously nullified so long as land remains in the hands of the few. And personal liberty and constitutional Government have little meaning in countries where Government is of the privileged, for the rich.

We must, in short, meet the Marxian promise of reform of retarding institutions. We cannot organise revolutions. We can place our influence solidly on the side of reform. Having done this, our cards give us a clear advantage. To be sure, we must play them. We must make good with aid on our promise of a less painful savings and investment process. We must give firm support to the small farmer. We must be clear in our commitment to constitutional process and personal liberty. We cannot suppose that these are wanted only by people of Anglo-Saxon origin of good income. And we must not excuse dictatorship on grounds of anti-communism or convenience in the absence of visible alternatives. The price of doing so, as we have so painfully learned, is disaster magnified by postponement.

These are highly practical matters. If there are no advantages in our alternative, it won't be chosen. The first resort to the Marxian alternative in this hemisphere was in a country where the concentration of wealth and land ownership was extreme, where these had extended a corrupting influence to other economic life and to Government, and where dictatorship had been endemic. This being the experience with the Western alternative, it was not remarkable that so many were so little perturbed by the alternative. India, in face of formidable difficulties, is firmly committed to development on the Western model. That is because, already in British India, and over the whole country at the time of independence, there was a strong attack on retarding institutions—especially on the feudal claims of princes, *zamindars* and great landlords and Government, which was an extension of this landed power; because a substantial measure of peasant ownership had replaced the old system; because aid from outside eased the problem of supply capital; and because people felt secure in the protection of constitutional guarantees and representative Government.

The lesson is clear. The advantages are with us. We must, however, have confidence in them and exploit them to the full.

THE INVESTOR'S INDIA YEAR-BOOK (1962)

Compiled by the well-known Calcutta firm of stock-brokers, Place, Siddons and Gough (Private) Ltd., *The Investor's India Year-Book* (Publishers: Orient Longmans Ltd. Price: Rs. 20) has for long served as a ready reckoner and reliable reference volume on public limited joint-stock companies in the private sector. Exhaustive and complete, but at the same time brief and to the point, covering the vital information on the fast increasing number of companies in our ever-expanding industrial sphere, the *Year-Book* has been an unfailing guide to investors, investment consultants, share and stock brokers, company analysts, specialists and secretaries, accountants and auditors and last but not the least, financial journalists. Indeed, the publishers could be justifiably proud and deserve to be complimented by all these quarters for having promptly brought out the latest 1962 *Year-Book*, which is its forty-eighth edition. Including the six-page index, the latest edition carries 417 pages, 17 pages more than in 1961, which speaks for the publishers' awareness to make the *Year-Book* all-embracing by including within its fold a maximum possible number of new companies. It is equipped with the latest available financial positions of the companies. It carries its usual features like a brief review of the country's major industries, stock and money markets, outlook for investment, representative price movements of the securities, debentures and shares quoted on the Calcutta Stock Exchange and a list of some important new capital issues offered to the public between January 1961 and February 1962.

WALL STREET AND THE WORLD ECONOMY

RECENT FALL WAS AN IRRATIONAL ABERRATION

By W. T. C. King
EDITOR OF THE BANKER

LONDON, 3rd *June* 1962

THE international financial markets have witnessed in this past month one of the most spectacular happenings in modern times—the extraordinary nosedive taken by the New York Stock Exchange on "Black Monday," the almost equally dramatic recovery on the following day, and the violent repercussions of these spasms upon other international security markets. Wall Street had been tending downwards from the beginning of this year: by the last week of May, the Dow Jones index of 30 common stocks was fully 100 points below the 1962 high point of 726 set on 3rd January and 113 points below its all-time high of 735 reached last year. Then, without warning, the weakness was violently intensified. On Friday (25th May), the slithering market lopped another 11 points from the Dow Jones index, and on the crucial Monday (28th May) it plummetted by nearly 35 points to 5¾ per cent in a single day—by far the worst crack since the panic days of the great 1929 crash. At this worst point, the decline from the peak was equivalent to rather over 21 per cent.

The frightening aspect of this violent movement, and the consideration that most disturbed observers overseas, is that at the time nobody could explain precisely why it happened. And since a major weakness that is unexplained is the most disquieting of all threats to sensitive market mechanisms that depend on confidence, the repercussions on overseas exchanges were immediate and no less violent. In London on the following day, sales from New York and from some other overseas centres—probably quite modest sales—precautionary marking down by jobbers, and a fairly widespread offering from private domestic holders drove prices down even faster than they had fallen in New York. The industrial share index compiled by the *Financial Times* slumped by 18 points to 261.3—a fall equivalent to no less than 6¾ per cent. To find a single day's fall even remotely approaching that it was necessary to go back to the Munich crisis of 1938 (when there was a fall of 5.4 per cent). At that worst point, London's decline from its January peak was rather less than Wall Street's (at June under 16 per cent) but its decline from the all-time peak of May 1961) was considerably greater—at over 28 per cent. In Western Germany, where the market dipped by about 5 per cent on 29th May, the decline from the end-1961 point was a shade more than that; and from the all-time peak (August 1960) it reached 40 per cent.

Recovery

A hardly less astonishing aspect of these convulsions is that most of the losses were made good on the following day. The pundits having all asserted that there was neither justification nor reason for Wall Street's Black Monday, and the Secretary to the U.S. Treasury having confidently proclaimed the pessimism of New York bankers and brokers to be flatly at variance with the trend of the American economy, on 29th May, first the professional and institutional investors and then some private buyers returned in force to the market. After a further severe fall in the opening dealings and a huge turnover, the market rebounded even more violently than it had fallen on the Monday. In the final hours of trading on the Tuesday, the Dow Jones average rose by some 40 points, to close at a shade under 604. News of this spectacular rebound naturally did not reach European centres until long after markets had closed after their own day of fright and collapse. But on the Wednesday their rebound was no less violent. In London, in spite of some tailing off towards the close, the day's gain in the *Financial Times* index was over 15 points—the largest day's leap ever recorded, with the one exception of that which followed the Tory victory at the general election of 1959—carrying it back to 276.6, or less than 3 points lower than when the tornado struck.

In some Continental markets, there were even bigger rallies; in Frankfurt one of some 9 per cent. Wall Street, meanwhile, had used a day's holiday to catch up on some of its mountainous arrears of paperwork (and to track down a disconcertingly large number of mistakes); and when it resumed business on 31st May, climbed a little further, so that, by the end of this extraordinary week, the Dow Jones average, at 611.05, was at virtually the point at which it had opened.

The Irrational

These happenings may be less portentous than they were spectacular; but it is absurd to suppose as some comments have seemed to imply, that they can now be dismissed as of little account, merely because the price falls were in many instances substantially made good. The parallel with 1929, which many people in New York thought they were seeing on 29th May 1962 was never in fact a rational one. But the first lesson to be drawn from this experience is that, in spite of all the improvements in investment habits and technique and all the safeguards against speculative excesses that have grown up in these past 30 years, the markets can still be at the mercy of the irrational. When a decline as violent and as sudden as that of Black Monday occurs without a sudden and violent new case, it must be in some measure irrational. And though many rational elements may be discerned, the attempt to explain afterwards why it happened is, indeed, an exercise in rationalisation.

The U.S. stock market, quite apart from this culminating aberration had been falling for six months, during a period in which the U.S. economy had been expanding, and in which the U.S. Government was and is confident that it will expand further—at least through the remainder of 1962 and possibly well into 1963. For this contradiction, if such it was, two principal explanations are put forward by most commentators. In the first place, in the United States, even more obviously than in some other advanced investing communities, the cult of the equity stock and the pursuit of the rewards of "growth" had been pushed to lengths at which hopes of capital gains had long overshadowed considerations of current dividend and earnings yields—and at which, given the highly organised mechanisms for the sale of stocks to an ever widening circle of investors, market prices were pushed to levels that discounted the possibilities of growth for long periods ahead. An analysis published here some weeks ago by Mr. Harold Wincott showed that prices began to lose their normal contact with dividends and earnings about seven years ago. Up to the middle 1950s, the 500 common stocks in standard and poors index were selling on the average at prices equivalent to 12½ years purchase of their earnings, whereas, by last year, prices had risen to the equivalent of 20 years purchase—even though the earnings themselves had scarcely risen on balance, over these of six or seven years ago.

Squeeze on Profits

For much of this period the pundits had been saying that this process could not go on indefinitely; but since it had gone on much longer than most of them ever expected, few could predict with any assurance when and how it would end. But this year the braking forces began to pile up. Most influential among them was the growing conviction in Wall Street and among other professional investors that even though growth of the economy continued, it was unlikely to bring commensurate gains to profits. In many spheres of American business, as in business in Britain, growing sensitiveness to international competition at a time of rising domestic costs has put a squeeze on profit margins. And the fear of an intensified squeeze has been fostered by the traditional conviction on Wall Street that a democratic President must be hostile to business—conviction that burst into new life after President Kennedy's tough and successful intervention to enforce a retraction of the increase in steel prices a few weeks ago. On top of this came further evidence that the second phase of the U.S. economy's climb after its recession was proving less vigorous than the first phase, and distinctly less so than the Administration had been predicting—yet the Government was showing no haste to apply new stimuli.

In all these forces, there was reason enough for the stock market's down trend over the months. And, since Wall Street's pessimism, whether justified or not, accentuated the movement, the culmination can be regarded as the product of the momentum itself: for, as the decline progressively uncovered investors' positions carried on credit (and these were certainly larger and more widespread than had been supposed), increasing pressure from the banks and other lenders for the making up of margins had to be satisfied by sales. In this sense, the collapse followed the classical pattern of all *crisis de confidence;* but there was never any risk of a spiralling on the scale of 1929. The slightly vulnerable credit position of the market could not be compared to the shaky and unrealistic superstructure of 30 years ago, and this time there is a sure basis of a fundamentally sound economy.

Effects to Come

There were, then, some rational grounds for the collapse—and, equally clearly rational grounds for the rebound. But after this evidence of the way in which the irrational can take charge, few dare predict the immediate course of the market and of business confidence. It will be surprising if the shocks of end-day do not leave some marks on the U.S. economy itself—through the added caution that is likely to be induced in the minds of America's entrepreneurs as they decide their programmes for capital investment and for stockbuilding, and probably, too, in the minds of buyers of consumer durables and motor cars. If this influence is perceptible, and if it is not quickly neutralised by some other injection of demand, the "real" effects of the paroxysm in the U.S. stock market will percolate through to the world economy in a few months time—and perhaps will be felt in Britain in some loss of momentum in the hoped for surge in exports. For the present, however, Britain's exports are doing well: they have risen steadily, though not sharply, for four successive months, and the prospect for the balance of payments this year looks reassuring.

Notice

THE ONDAL COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE ONDAL COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 29th June, 1962, at 10-30 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1961, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 17th to the 29th June, 1962, both days inclusive.

By Order of the Board,

P. PRASHAD,
Chairman.

CHARTERED BANK BUILDINGS,
CALCUTTA, *31st May,* 1962.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 23rd July, 1962, to those shareholders so entitled whose names appear in the Company's books on the 29th June, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

AMAR DYE-CHEM LIMITED

GOVERNMENT'S VACILLATING POLICY AFFECTS PROFITS

CHAIRMAN, MR. A. K. DOSHI, ON NEW CAPITAL ISSUE

THE following is the speech of the Chairman, Mr. A. K. Doshi, delivered at the Eighth Annual General Meeting of the Share-holders of Amar Dye-Chem Limited on Monday, June 11, 1962:

"GENTLEMEN,

"On behalf of the Board of Directors, the Management of the Company and myself, I have great pleasure in extending to you a cordial welcome to this Eighth Annual General Meeting of the Company and placing before you for consideration the Directors' Report on the working of the Company for the year ended 31st December 1961, together with the Statement of Accounts for that period. These have been in your hands for some time now and with your permission, I shall take them as read.

"You will have noticed that we have, this year for the first time, incorporated in the Report various charts on production and sales performance, and I am sure this will give you an insight into the affairs of the Company.

Working Results

"The net profit of Rs. 51,07,832 for the year shows a decrease of Rs. 3,16,652 from the last net gain of Rs. 54,24,484. These profits have enabled your Directors to add this year also to the General Reserve Fund a substantial sum of Rs. 12,50,000. This amount will be adjusted after making allowance for higher depreciation and change in Tax Structure as will be discussed hereafter.

"From the Accounts you will observe that the Company has also been able, this year, to set aside a sum of Rs. 5 lakhs towards Redemption of 20,000 Redeemable Cumulative 6 per cent (tax-free) Preference Shares of Rs. 100 each, and thus transfer the amount to the 'Redemption Reserve Fund.'

"The Shareholders will appreciate that, in order to plough back a part of the profits of the Company, your Directors have thought wise to prune the dividend this year. One of the primary considerations is to finance—partly of course—the large expansion programme involving an additional outlay of about Rs. 2 crores within the next two or three years. This is mainly for the different Intermediate Plants and although it will not add to the profits of the Company, it will save a considerable amount of foreign exchange and make your Company's production almost independent of imports.

Sales and Trading Conditions

"This is the sixth year of our commercial production. You will find that the net realisation—on total sales of Company's products—falls short by Rs. 6 lakhs as compared to 1960. This was mainly due to the vacillating policy of the Government and the abolition from 1st September 1961, of the Tariff Value on imports of Amarthols and Fast Bases.

"Import duty of 20 per cent was up to now levied on a tariff value which was on an average of the domestic price of various products and a countervailing duty of 15 per cent was levied to offset the effects of an equal amount of Excise Duty, about which I have already referred to in my last year's speech. However, with this change, the import duty and the countervailing duty were assessed from 1st September 1961 on the invoice price of imported products and this being much lower than the domestic price, in some cases, the total duty of 35 per cent on invoice value was even less than 15 per cent excise duty on the domestic selling price. It is difficult to understand the reasons that prompted the Government to make this change, but after several representations to the Ministry of Commerce and Industry, the only solution that they could find out was to ban the imports of most of the items manufactured by the Company. However, in the meantime, large imports took place at much lower rates than the Company's selling prices and this has affected the sales of the Company during the latter part of last year.

"This adverse effect is still continuing and the sales of the Company's products during the first five months of this year have been much smaller than in the corresponding period during the last year. Unfortunately, the production of T.P.M. Dyes has also been delayed due to the Government of India taking over one year to grant the import licence for some equipments and we are afraid that we shall be able to start production only next year. It will therefore not supplement the Company's production and sales during the current year.

Production

"Due to large-scale imports as mentioned earlier and the imports from Rupee Payment Countries, through S.T.C. as well as against Export Promotion Schemes, the production of the Fast Base Plant had to be curtailed and it almost worked at two-thirds of its capacity during most of the year. We have added two more products to the production programme, namely, Scarlet G and Red GL Base, but we are unable to produce and sell these items at the present moment as our production cost is much higher and the stocks of the cheap imported material are still plenty in the market. We shall be able to produce and sell these items only after the imported stocks have depleted.

"It is generally believed that imports of dyestuffs are considerably restricted and there is on the whole shortage of dyestuffs and the industry is fully protected. However, you will see from the particulars given below that it is not exactly so and at present the dyestuff industry is passing rather through a difficult period, due to overstock of imported products and slackness in consumption of dyes.

(Value in crores of rupees)

	1958	1959	1960	1961
Import of coal tar dyes ...	8.13	8.14	10.31	12.40

"I do hope that the Government will take notice of it and correct the situation by stopping the wastage of foreign exchange on imported products and encouraging local production for which large sums of money have already been invested. Although the prices of indigenous production may look higher to the consumer, the manufacturers are not responsible for it as all the raw materials are two to three times more expensive in our country than in international markets and the industry is subjected to excise duty at various stages. In spite of this situation, it is a fact that the Dyestuff Industry is saving a considerable amount of foreign exchange and your Company alone has saved slightly over Rs. 53 lakhs of foreign exchange during the year 1961.

Coal and Fuel

"You will notice that the expenses of the Company have gone up during the year 1961 and a part of it consists of increase in expense on fuel. This is mainly due to the fact that the Company was forced to use oil during a considerable part of the year as coal supply was very irregular and far lower than the requirement. In fact, the Company has been requesting the Coal Controller since the last one year to increase its quota of coal in view of the enhanced requirements, but instead of doing so, we have recently been advised of a cut in the quota which has been sanctioned to the Company five or six years ago. However, this bottleneck in the coal supply is well-known to all of you and the energies of the authorities as well as various chambers have been directed to solve this problem in the best possible manner. It is the good fortune of the Company that it had purchased a second-hand Oil-fired Marine Boiler in 1955 for use during emergency. This has avoided complete closure of the Plant.

Exports

"I am glad to inform you that the Company has opened a special Export Department with a view to earn foreign exchange and have been able to obtain orders within the last five months to the tune of approximately Rs. 1 lakh. The exports are being done at comparatively much lower prices and do not contribute much to the profits of the Company, but it is being done to fulfil our obligation towards the economy of the country.

"You will be glad to note that, with the opening of the new Ministry of International Trade, the Government is reviewing the whole picture of exports in a realistic manner and we have been assured of a subsidy—partly in cash and partly in kind—towards the losses that we may incur on exports.

Finance Bill, 1962

"As you are aware, the Finance Bill of 1962 has increased the Corporation Tax from 45 per cent to 50 per cent. Whilst this will adversely affect the retained profits of the Company, I am glad to inform you that the Government has accepted the contention of the chemical industry that the percentage of depreciation allowed up till now was not adequate in view of quicker deterioration of Chemical Plants due to corrosion and they have now increased it from 10 per cent to 15 per cent for a single shift. This will mean that your Company's tax liabilities for the year 1961 will be increased by about Rs. 0.98 lakh. This has happened after the accounts were published and therefore will change the picture slightly and reduce the amount carried to the General Reserve.

"You are also aware of the fact that this year's Finance Bill also brings in excise duty on all Acids and Gases and this will further increase the cost of production of the Company's goods. In spite of that, the Company at the present moment does not think it advisable to increase their prices, but on the other hand has reduced the prices of a few products in order to meet competition and increase its turnover.

Issue of Capital

"I had referred in my last speech to the proposal for issue of a fresh capital of Rs. 80 lakhs to cope with the additional requirements of capital for expansion programme. As the Government insisted on a high premium, the Company did not proceed with the said application but tried to carry on with its internal resources and borrowings. The Finance Minister, in the last budget speech, advised that the industry should rely more on equity capital rather than on borrowings. Thus, the industry is faced with an intricate situation. On the one hand, the Government advised the industry to broadbase its equity capital structure and, on the other hand, compels the Company to issue it at a high premium. Even then, it is necessary that the Company will have to increase its Capital to fulfil the programme already undertaken and are renewing the application to the Controller of Capital Issues for increasing the Capital by Rs. 90 lakhs.

Labour

"I am glad to report that relations with labour continued to be satisfactory. The construction of Residential Buildings, the Recreation Centre and our programme for various welfare measures have all contributed considerably to the achievement of this end.

"Negotiations are going on with the Union for grant of Bonus for the working of the year 1961 and we are hopeful of arriving at a satisfactory solution. I hope that this will be the last time that these protracted negotiations have to be carried on, as the Government of India has appointed a Bonus Commission with a hope that they will arrive at some formula which would simplify this intricate system of calculating Bonus. In this connection, I would like to comment that it is desirable to discontinue the system of Bonus and give a fair wage to the workers, but at the same time this wage should be linked up with productivity. Although in the Chemical Industry, the Labour's contribution to the actual production is very little, it has been found that the stress on improving efficiency and productivity is not being given whilst putting up demands for higher wages and higher bonus.

Conclusion

"Before I conclude, I wish to take this opportunity to thank all my colleagues on the Board for their invaluable support during the year under review. I am sure you will join me in expressing our warm appreciation of the cordial relations maintained between the Management and the Labour and the loyalty and devotion of the Officers and Staff of the Company who have contributed in large measure to the smooth running of the plants and in achieving a satisfactory working of the Organisation throughout the year under review.

"Thank you, gentlemen."

Note: This is not a report of the proceedings at the above annual general meeting.

NEW INDIA SCALES YET ANOTHER PEAK

RESERVES STRENGTHENED—DIVIDEND SAME

THE results of the New India Assurance Company Ltd. (Managing Director: Mr. B. K. Shah, Bombay) for the year ended 31st December 1961 present a refreshing contrast to the generally poor record of general insurers in the country. For it has not only maintained the progress made in the previous years, which itself had been striking, but improved upon it to an extent that it has left other insurers far behind. The gross profit, subject to tax, almost doubled from Rs. 69.7 lakhs for 1960 to Rs. 128.2 lakhs for 1961. The net profit at Rs. 74.57 lakhs, though considerably less than the gross profit, is still higher than the previous year's figure by Rs. 15.55 lakhs. The underwriting profit, including interest earned on departmental funds, has jumped up to Rs. 102.7 lakhs from Rs. 45.4 lakhs in the previous year and works out to 8.1 per cent of net premium, as against a mere 4.2 per cent in 1960. This remarkable improvement is the result of a substantial rise in the combined net premium (fire, marine and miscellaneous) from Rs. 10.87 crores in 1960 to Rs. 12.65 crores in 1961 and a significant improvement in the disbursements position. Thus, the claims cost, at 50.3 per cent, was lower than that in the previous year when it was 52.6 per cent. Similarly, the commission and expenses paid were also lower at 35.7 per cent, as against 36.2 per cent in 1960. In spite of the higher profit, the Directors have decided only to maintain the dividend at last year's level of Rs. 4.50 per share, subject to tax. The bulk of the profit has been utilised to strengthen the reserves and provision for taxation. Thus, a sum of Rs. 20.60 lakhs has been transferred to the general reserve and Rs. 5 lakhs to the exchange reserve, as against a mere Rs. 15 lakhs added to the dividend equalisation reserve last year. The provision for taxation has been stepped up from a modest amount of Rs. 10.72 lakhs to as much as Rs. 58.95 lakhs, of which a sum of Rs. 5.30 lakhs represents the provision for taxation in respect of past receipts of compensation for compulsory acquisition of life business.

In addition to the dividend, the Company proposes to pay, as in the previous year, a special bonus of Re. 1.20 per share, subject to deduction of tax; this is to be paid out of the capital reserve built up from the compensation received from the Life Insurance Corporation of India in respect of the life insurance taken over by it. The net distribution to shareholders works out to Rs. 3.99 per share which is the same as in the previous year.

The following table summarises the salient features of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 31st December		
	1961	1960	1959
Fire:			
Net premium	442.40	406.95	346.75
Claims paid and outstanding	165.05	176.74	119.94
	(37.3)	(43.4)	(34.6)
Commission, expenses, etc.	196.89	178.63	148.15
	(44.5)	(43.9)	(42.7)
Underwriting profit (+) or loss (—)	+72.33	+28.28	+66.16
Fire fund	221.20	245.00	214.00
Marine:			
Net premium	244.00	210.37	196.78
Claims paid and outstanding	180.88	134.11	150.87
	(74.1)	(63.7)	(76.7)
Commission, expenses, etc.	60.50	54.67	54.40
	(24.8)	(26.0)	(27.6)
Underwriting profit (+) or loss (—)	—20.74	+15.17	—1.15
Marine fund	244.00	211.00	211.00
Miscellaneous:			
Net premium	573.02	469.51	342.79
Claims paid and outstanding	290.47	200.65	173.92
	(50.2)	(55.5)	(50.7)

	(8%)	(8%)	(8%)
Carry forward	3.78	2.85	1.56

Note:—Figures in bracket represent percentage to net premium income.

It is evident from the above table that the fire department contributed the bulk of the profits, with the underwriting surplus rising from Rs. 28.98 lakhs to Rs. 72.33 lakhs. With a profit of Rs. 51.06 lakhs, the miscellaneous department was a close runner-up. In fact, the profit in the miscellaneous department showed a spectacular rise from a nominal sum of Rs. 1.22 lakh in 1960 to as much as Rs. 51.06 lakhs in the year under review. This was the combined outcome of a sharp spurt in premium income from Rs. 4.69 crores to Rs. 5.78 crores and lower claims cost (50.2 per cent, as against 55.5 per cent in 1960) and commission and expenses (33.6 per cent as against 34.2 per cent in the previous year). Reflecting the adverse wind of higher claims, the marine account, however, has shown a deficit of Rs. 20.74 lakhs, in striking contrast to a surplus of Rs. 15.17 lakhs in the previous year. This adverse result has occurred, in spite of a rise in the premium income from Rs. 2.10 crores to Rs. 2.44 crores and a decline in commission and expenses from 26.0 per cent to 24.8 per cent.

The net departmental contribution to the profit and loss account (the underwriting profit) is Rs. 102.7 lakhs, as against Rs. 45.4 lakhs in the previous year. After taking into account other income and outgo, the gross profit (subject to tax) is Rs. 128.22 lakhs. Out of this, a sum of Rs. 53.65 lakhs has been earmarked as provision for taxation, leaving a balance of Rs. 74.57 lakhs. This, together with Rs. 2.85 lakhs brought from the previous year's account makes available for distribution Rs. 77.41 lakhs. Of this amount, Rs. 20.60 lakhs have been transferred to the general reserve and Rs. 5 lakhs to the exchange reserve. As noted above, a sum of Rs. 5.30 lakhs has been earmarked as provision for taxation in respect of past receipts of compensation from the L.I.C. According to the Chairman of the Company, Mr. A. D. Shroff, this provision has been necessitated, as the Company has now been assessed to capital gains tax in respect of the compensation received. The Company has, however, not accepted this decision and has preferred an appeal therefrom.

The investments of the Company, as on 31st December 1961, amounted to Rs. 10.62 crores (market value), as against the book value of Rs. 9.50 crores, showing a capital appreciation of Rs. 1.12 crore. There is in addition a free investment reserve of Rs. 25 lakhs.

In his statement to shareholders circulated along with the audited accounts, the Chairman, Mr. A. D. Shroff, makes the following significant observation about the progress of the Company and the prospects for it:

"As you are aware, the Company's organisation was severely disrupted by the nationalisation of life insurance business. We had, therefore, to create a new organisation. I am glad to say that the Company has succeeded in building up an effective and active organisation during the period of last five years.

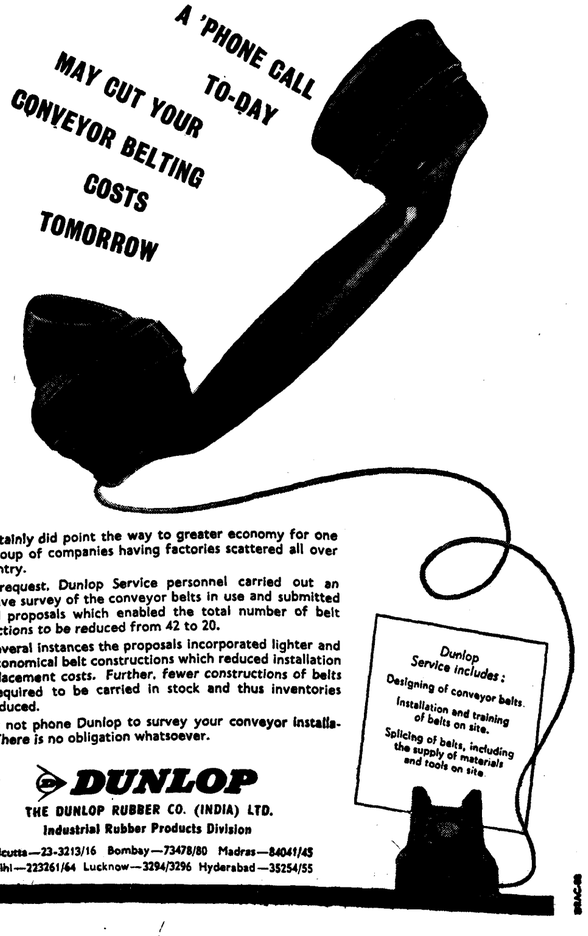
"The Company's policy is to be selective in its underwriting. This selection has to be made by the field staff through rejection of undesirable risks. The field staff have also to take active measures to minimise claims through a planned programme of precautions to be taken at the inception of the assumption of risks to prevent loss occurrence. This called for a well trained and effectively controlled field staff.

"I am happy to inform you that during the last five years our field staff has been gaining underwriting experience and the management are able to exercise a more effective control in the acceptance of risks and in claims minimisation. The effect of this process must result in a continuous improvement in the Company's working.

"I, therefore, look forward to the future of the Company with confidence."

Commenting briefly on the main developments in the field of general insurance in the country, Mr. Shroff says:

"It gives me great satisfaction to inform you that the efforts of the Executive Committee of the General Insurance Council to devise effective measures to place general insurance business in India on a sound footing are bearing fruit. The Administrative Machinery is being reorganised and enlarged to ensure compliance with the Code of Conduct by all insurers. It has also been decided that no insurer will deflect the field workers of another insurer by offering to pay a remuneration higher than his existing remuneration or higher than what is permissible under the Code of Conduct. Also, that no insurer shall deflect the business of another insurer by unfair means. A Mutual Assistance Pool for a period of three years is being established to enable every insurer operating in India to readjust his working to the requirements of the Insurance Act and the Code of Conduct within the shortest possible time. These measures have our fullest support. As I have often stated in the past, Indian insurance has a big part to play in the developing economy of our country. No efforts should, therefore, be spared to integrate and strengthen the working of companies in the country."



This certainly did point the way to greater economy for one large group of companies having factories scattered all over the country.

On request, Dunlop Service personnel carried out an exhaustive survey of the conveyor belts in use and submitted detailed proposals which enabled the total number of belt constructions to be reduced from 42 to 20.

In several instances the proposals incorporated lighter and more economical belt constructions which reduced installation and replacement costs. Further, fewer constructions of belts were required to be carried in stock and thus inventories were reduced.

Why not phone Dunlop to survey your conveyor installation? There is no obligation whatsoever.

RAMTIRTH (HINDI MONTHLY)

Editor: Yogiraj Shri Umeshchandraji

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

INTEGRATED INVESTMENT BY OIL COMPANIES

CURRENT PROFIT LEVELS TOO LOW TO ENSURE EXPANSION

IN a free economy, demand is the ultimate determinant of business expansion, but it is capital investment which makes expansion possible. And willingness to inject fresh supplies of capital into a business will depend in large measure on prospective profits. These truths are more relevant to the oil industry than to many others, for oil is such a capital-intensive business: at every stage it has to employ large-scale plant and equipment—rigs, refineries, tankers, pipelines, service stations. Investment in the various sectors must, moreover, proceed more or less simultaneously to ensure the orderly expansion of the whole. To pour money into the development of an oilfield, for example, without providing the refining capacity and transport facilities needed to bring the products to market, would be futile and foolish.

Simple and self-evident as the foregoing statements may be, lack of appreciation of the realities that underlie them is often at the root of questionings about oil companies' seemingly large profits, and about the justification for integrated operations from the well to the consumer. It will be recalled that towards the end of last year the Organisation of Petroleum Exporting Countries (O.P.E.C.) commissioned three economic consultants—from the U.S., U.K. and Italy—to make separate studies to see how the earnings of the major international oil companies compared with those of other industries and international concerns. The consultants have now reported, and their findings will, it is believed, show that earnings from integrated oil activities are no higher than in other comparable industries—and in some instances, less.

Return on Capital

Their findings can hardly be otherwise. Even the hard-hitting Venezuelan Minister of Mines and Hydrocarbons, Dr. Perez Alfonzo, by no means generously disposed towards the oil industry, publicly acknowledged at the recent Oil Congress in Caracas that the return on the oil companies' investments in Venezuela (in the exploration/producing/refining sectors) was not at present sufficient to attract new investment. It might be thought that an integrated company with oil production in the Middle East alone would fare differently. This is not evident from British Petroleum's 1961 accounts. Obtaining virtually the whole of its oil in the Middle East, B.P. earned in 1961, from the whole of its integrated operations, only 9.2 per cent on the average capital employed (compared, it might be added, with 14.4 per cent in 1957). Royal Dutch-Shell and Jersey Standard, the two largest and most ramified groups, earned last year 8.5 and 10.7 per cent, respectively, on the capital they employed. Very few, if any, ordinary local businesses in Venezuela, the Middle East, or elsewhere, work with such a small return on investment. And they carry none of the heavy risks which the oil industry has to bear in the exploration/production phase of the business.

This "profit," even at the modest rate earned by the oil companies, is by no means what shareholders receive in the form of dividends, as the reviews of the major companies' accounts clearly show. In the case of B.P. and Royal Dutch/Shell, only about two-fifths of their net income went to pay dividends, while the proportion for Jersey Standard was two-thirds; the rest was used to help finance capital expenditure. Last year B.P. made investments of £124 million, of which £84 million was in tankers, refineries and marketing, etc. The Royal Dutch/Shell group invested a total of £374 million; of the £329 million shown in its consolidated accounts and analysed by sector, less than half was for exploration and production. For Jersey Standard the corresponding proportion was 37½ per cent.

Earnings Per Ton

The idea that earnings per ton are higher on oil production than on the other operations is a familiar one. It is, however, misleading. In a highly integrated concern it is quite unrealistic to isolate one phase of the business from the rest. Profits on oil production can be earned only because of the continuous investment in the related operations of transport, refining and distribution. To sustain, or raise, the revenues of the crude oil exporting countries a number of factors in the long process from searching for oil to delivering the finished product to the consumer must be in the right relationship with one another. The level of prices must be such as to enable oil to compete against other sources of energy and to encourage higher consumption. This should ensure a rising volume of trade which, in turn, helps to keep unit costs low. Price and volume, coupled with the pursuit of lowest operating costs, determine the level of profits. And the way in which profits are shared between the oil exporting countries and the operating companies influences the level of company investment—which provides the whole range of facilities needed to cater for future expansion.

In his report to shareholders this year's B.P.'s chairman draws a simple but telling analogy between an integrated oil company's activities and those of a village baker. "To say that an oil company makes a profit at the producing stage is like saying that the profit of the village baker is derived from mixing his dough. The baker cannot make a profit until he has bought an oven, and probably a van as well, and has baked and delivered his bread and been paid for it. The only figure that really matters in the case of an integrated oil company is the net income after tax remaining with the group when the results of all its constituent elements have been set one against the other."

The fact that, for 50-50 profit-sharing purposes, oil production is treated in isolation tends to encourage its artificial separation from the rest of the industry's activities. This separate treatment has proved to be of great financial advantage to the Governments of some of the oil exporting countries. This advantage is enhanced today by the fact that posted prices for Middle East crudes, upon which the shared profits are calculated, are higher than realised prices—and certainly out of line with the prices obtained for the products made from the crude oil. The companies' profits suffer a corresponding disadvantage. Thus, last year B.P. paid to Middle East oil producing countries under 50-50 profit-sharing arrangements over £126 million, while its own net income, after providing £47 million for depreciation, was only £60 million.

There are various reasons for this disproportion which, for some years now, has been growing wider. If it were to persist, it could have adverse effects upon the level of investment for future expansion. At the present time oil production is, in effect, drawing tribute from the rest of the associated activities—evidence, if any were needed, of the unity of oil operations as a whole.—*(By Special Arrangement with the Petroleum Press Service.)*

B.O.A.C. AND CUNARD FORM NEW COMPANY

The British Overseas Airways Corporation and the Cunard Steamship Company have joined in the formation of a new company, to be called B.O.A.C.-Gunard Ltd., to mount the biggest British effort ever on Atlantic air routes. An agreement was signed in London on 6th June 1962 under which B.O.A.C. contributes 70 per cent and Cunard 30 per cent of the capital of the new company. The authorised capital will be £30,000,000. B.O.A.C. will put in eight of its Rolls-Royce Boeing 707 aircraft, Cunard its two Boeing 707s, and both will put in their subsidiary companies in the Bahamas and Bermuda.

The Board of the new company will consist of Sir Matthew Slattery (Chairman of B.O.A.C.) as Chairman, Sir John Brocklebank (Chairman of Cunard) as Deputy Chairman, together with Sir Basil Smallpeice.

As from 24th June all British scheduled air services in an area defined as the United Kingdom, on the one hand, and the United States of America, east of longitude 100° west, plus Mexico, Central America, and the Caribbean with extensions to Peru, Ecuador, Colombia, Venezuela and British Guiana on the other, will be operatel on behalf of the new company. Co-ordination of these services with B.O.A.C.'s other worldwide services will result in a single integrated route network serving most principal cities of the world. These services will be marketed as soon as practicable in the name BOAC-Cunard. All other B.O.A.C. services, including those to Canada and those transitting the new company's area to points beyod, for example across the Pacific, will remain in B.O.A.C.'s name.

BOAC-Cunard will continue to operate all existing B.O.A.C. 707, Britannia and Freighter Atlantic services within the area together with the "Gulfstream" 707 services from London to Bermuda, Nassau, Miami and Jamaica recently begun by Cunard-Eagle Ltd. Until any necessary amendments have been obtained to current route licences, these services will continue to operate in the present names of the actual operators. B.O.A.'s existing commercial pooling arrangements are not affected by the creation of BOAC-Cunard. B.O.A.C. is taking steps to see that its obligations to Air-India and Qantas, to British West Indian Airways, and to Trans-Canada Air Lines are fully honoured by the new company.

A.E.I. POWER CABLING FOR NEW STEELWORKS IN BRITAIN

Main power cabling for the largest and most advanced steelworks in Europe has now been virtually completed by Associated Electrical Industries Limited. At the Richard Thomas and Baldwins fully integrated continuous strip mill under construction at Llanwern, near Newport (Mon.), A.E.I. Construction (Cables and Lines) Division has installed over 40 miles of 33 kilovolt and 11 kilovolt power cables. The cable was manufactured by A.E.I. Cable Division. The contract included the design and installation of about 500 tons of galvanised supporting steelwork for the cables.

The steelworks, built on piles on 2,800 acres of marshland, is three miles long. Most of the cabling in this impressive installation lies hidden underground in nearly three miles of concrete lined tunnels.

All the 33 kV cables are 0.4 sq. in. three-core solid types, screened, paper-insulated lead alloy sheathed and steel wire armoured, with a black P.V.C. oversheath for additional protection and identification (all the cabling at the Spencer Works is colour-coded according to voltage). A total of 23,300 yards of this type of cable was installed. The 11 kV. cabling is of non-draining FIND type, of single-core or three-core construction, with a grey P.V.C. oversheath; 37,186 yards of three-core and 13,611 yards of single-core were installed. Altogether, nearly 42 miles of A.E.I. high voltage power cable was supplied and installed.

RAILWAYS IN THE E.C.A.F.E. REGION

The bulk of inland transport in the E.C.A.F.E. region continues to be carried by railways. But these, by and large, are inadequate to meet the growing demands for additional traffic resulting from the developing economy of the countries of the region. The E.C.A.F.E., therefore, continues to take an active interest in promoting railway development. This interest has been sustained by the studies and discussions of the Railway Sub-Committee of the E.C.A.F.E.'s Inland Transport and Communications Committee. The latest session of the Sub-Committee discussed, on the basis of reports prepared by the E.C.A.F.E. Secretariat, such topics as a comparative study of railway administration, the increased use of containers for freight traffic and a progress report on diesel locomotion.

The report on railway administration notes that public ownership with governmental control is a common feature of most railways of the region. This has resulted in problems of harmonising commercial railway policy with the public interest since the railways have to provide the cheapest possible services for the public and yet, at the same time, be as self-supporting as possible. The report recommends that the operational and commercial functions of the railways should be separate. The use of containers for transporting freight has also been recommended on the ground that they have proved both more economic and more efficient in the advanced countries of the world. As containers offer the advantages of combined transportation by rail and/or road and sea, they enable railways to improve their operation and protect their traffic by introducing door-to-door services. As for diesel locomotion, it is noted that most of the railways of the region have already introduced it and are extending its use.

MEETING BRITAIN'S ELECTRICITY DEMAND IN 1970s

Sir Roger Makins, Chairman of the British Atomic Energy Authority, has predicted that, in the early 1970s, the installation of nuclear power stations at a rate faster than one every year will be necessary if Britain's electricity needs are to be met. By the end of the 1970s, Sir Roger said, in an address to the Nuclear Energy Society in London, electricity production would need energy equivalent to 180,000,000 tons of coal a year, or nearly all of what the coal industry was planning to produce. This, he said, could only be done by importing oil on a larger scale, or by installing nuclear power stations. The second course would be favoured because nuclear power for base load would be as cheap as that from conventional power stations "by the early 1970s."

Sir Roger said that the advanced gas-cooled reactor, a prototype of which was now being completed at Windscale, Cumberland, would immediately produce power at the same cost as conventional power stations, and that eventually the cost of power might fall to 0.45d. a unit (compared with 0.5 to 0.55d. from good conventional stations at present). On the fast reactor system being built at Dounreay, Scotland, which is reckoned to be the most hopeful way of producing atomic power in the 1970s, Sir Roger said that a decision had now been taken to start building a commercial prototype in 1963 or 1964.

NEW PRODUCTS AND PROCESSES

New Range of Synthetic Fibres

A COMPLETELY new range of fabrics from man-made fibres such as Acrilan, Courteile, Terylene, nylon, etc., is foreseen as a result of scientific work done at the Linen Industry Research Association laboratory at Lambeg, near Belfast, reports the Scientific Editor of the *Financial Times*, London. This has led to a double process applied to such fibres. When gathered together in a "tow," before spinning into yarn, they are given a physical treatment that builds in a desired property, such as, for example, crease-resistance for clothes or resilience for carpet pile. A second part of the process, a heat treatment, at the yarn stage or in the weaving of fabric, brings out the latent property. The result is that man-made fibres can be made to produce fabrics with qualities more like the best ones of, say, wool, or with qualities of drape, or with many qualities not yet fully achieved with the synthetic fibres. The yarns have an openness of structure that gives warmth with lightness. The yarns so processed are given the name AtoZ. The processes are completely patented and commercial exploitation is arranged by Shirley Developments, of Manchester. So far Chemstrand and Courtaulds in the U.K. have signed licences for the use of the process, which is a cheap and quick one, on acrylic fibres—that is, Acrilan and Courtelle respectively.

New Safety System for Oil Pipline

A new pipeline safety system which automatically shuts down valves if a leak or break develops is to be installed in a section of the new Assam oil pipeline where it crosses the Brahmaputra river. The safety apparatus was demonstrated in Britain recently to representatives of Government agencies and oil and construction companies by the Oil Well Engineering Company, of Stockport, England. The installation in India will be one of the first. Growth of pipelines throughout the world has caused misgivings among public authorities about the hazards from leaks and breaks, especially where pipelines cross bridges or run through rivers and occupied areas. In India, where Oil India Ltd. (in which the Government of India and the Burmah Oil Company are equal partners) has a 720-mile-long line running over some 30 railway bridges, many more rivers and a number of roads, the Government has insisted on manned valves at either end of vital sections. With this in mind, engineers set to work to develop the Casomatic system now demonstrated. Under this system, sections of line which might be subject to outside hazards, or cross over or through vital safety points, are given an airtight sleeve of large piping, which is filled with compressed air at, for instance, 50 lbs. per square inch. A break in the sleeved pipe will raise the pressure and at 80 lbs. per square inch valves at either end will automatically begin to close and the oil or gas escaping through the leak will be contained within the outer casing. Should the outer casing fracture through, for example, a river flooding and moving the entire pipeline, the pressure will go down and at 20 lbs. per square inch again the valves will automatically close, so that if the actual pipeline breaks before maintenance can be undertaken the amount of oil released will be limited. The system can be installed over any length of pipe.

Automated Power Stations

An automatically controlled turbine run-up system described as an important step towards the automation of power stations has been set up by a British firm, Associated Electrical Industries Ltd. The equipment, mainly of electrical content, provides for the running-up to speed under automatic control of a large turbine generator set prior to the generator being synchronised to a power system. Since August last the system has been under test operation at power stations in Britain. It is suggested that the rate of starting a turbine must be programmed according to the length of time that the turbine has been shut down, to ensure that the incoming steam flow is so regulated that thermal stresses remain within safe limits. Sensing devices monitor abnormal conditions such as excessive pedestal vibration, high shaft eccentricity or low condenser vacuum. Should any parameter exceed a predetermined limit, the turbine speed is held constant; if the signal rises to a second limit it is decelerated; and in greater emergency the set is shut down. All these facilities are provided automatically by the equipment.

Cable Sealing Tool

A new hand tool for the final stage in waterproofing the ends of mineral insulated cables has been developed by a British firm, British Insulated Callender's Cables Ltd. To fit a seal a rotary stripping tool removes the sheath in one continuous strip. Next a brass sealing pot which cuts its own thread in the sheath is screwed on to a cable end with a pot wrench. Then a sealing disc, pierced with as many holes as there are conductors, is passed over the conductors and brought close to the metal pot which is then filled with moisture resisting compound. Finally, the disc is entered into the mouth of the pot and crimped. The new tool has been designed to crimp the mouth of the pot and retain the sealing disc in position. It will perform innumerable crimps with ease and simplicity, and is virtually indestructible. Both the screw and the die plate are quickly removable, if necessary, for cleaning. The body of the tool sits comfortably in the hand and can be held rigid when screwing down during the crimping operation.

Gas Chromotograph

A machine which is so sensitive that it can measure a draft of as little as 5 cubic centimetres in a fortnight and yet is robust enough to withstand considerable rough handling in transit and still retain its sensitivity, has been perfected by a British firm, namely, Griffin and George Ltd. The apparatus is a gas chromotograph for analysing accurately the components of gases, liquids and solids. The method basically is that the substance to be analysed into its component parts is injected into an analytical column after vapourisation. The column contains a very thin film of liquid or a solid known as a stationary phase. Through this the substance is carried by a carrier gas and as a result breaks up into its component parts which arrive at the other end of the column at different intervals where their densities are measured and recorded on graphs. The instrument is of particular value to the chemical and oil industries and in forensic medicine.

New Fleece Fabrics

An Austrian enterprise, Bunzl and Biach, A.G., Vienna, has added to its production programme, mainly including processing of re-used wool and cotton, the regeneration of synthetic fibres, a field that has been neglected upto now. Development work in the field of non-woven fabrics has made it possible for the enterprise to turn out fleece fabrics, the use of which is no longer confined to the textile sector. Such fabrics can be used for manifold technical purposes. Impregnated with bitumen, they serve, among others, as insulating material in civil engineering, for water pipes, etc., instead of glass fibres. By glueing the fabrics on to building or insulating boards, they are protected against condensating water. Moreover, the fabrics may be used for carpets with glued on pile, for filtering purposes of all kinds and even for bookbinding.

New Building Material

A new building material has been evolved for Mirny, the centre of the Soviet diamond industry, lying in cold Yakutia (Siberia). The new material is extremely light blocks of aluminium and foam plastics. Oblong blocks are made of aluminium sheets and their interior is filled with porous synthetic material. They are so light that they can be carried by aircraft or helicopter. Besides, the pressure of the finished buildings on the soil is 95 per cent less and this is of great importance in conditions of permafrost. A three-storey house can be built in two days by means of one belt conveyor without any hoisting equipment. The blocks are connected by a special synthetic glue. Houses made of aluminium blocks are handsome and warm and have splendid insulating properties.

Liquid Nitrogen from Natural Gas

Construction has begun in Lithuania (U.S.S.R.) of a plant to produce liquid nitrogen out of natural gas. It is being built on decision of the Republic's Government to increase the production of mineral fertilizer. The plant, whose annual capacity is to be more than double the annual consumption of nitrogen fertilizer by Lithuanian agriculture, will be completed in two years. The gas coming to the Republic from the Dashava deposit, the Ukraine, will serve as raw material. The new enterprise will also supply agriculture with combined fertiliser.

Anti-bleach Process

Cellulose fibres and cotton fabrics, used for making tents, shop blinds, and sunshades, and for covering deckchairs, frequently bleach in strong sunlight. Because of this they have to be treated, during manufacture, with special protective chemicals. A Swiss firm claims that it has found a better way of doing this than that used hitherto. Dry heat is not used to persuade the chemicals to react with the cloth—high pressure steam is used instead. The company says that this makes it possible to use much lower temperatures and, as a consequence, the treated fabric tends to be much stronger. Protection against bleaching and rotting is claimed to be excellent.

POSTS AND TELEGRAPHS

NEED FOR IMPROVING OPERATIONAL EFFICIENCY

THERE has been growing pressure of demand for better and quicker communication facilities in India, with the expansion of industrial and commercial activities. Appropriately enough, the growth of communications has received a good deal of attention in the Five-year Plans. The development of posts, telegraphs and telephones accounted for an expenditure of Rs. 40 crores in the first Plan, which was raised to Rs. 51 crores in the second. In the third Plan, a sum of Rs. 78 crores has been set apart for this purpose. Of this amount, the expansion of local telephones alone is expected to absorb Rs. 35 crores, excluding Rs. 6 crores for trunk telephones. Thus, the development programmes of communication facilities, which have gained momentum during the two Plans, have been assigned a distinctly bigger role in the third Plan.

It may be recalled here that, between 1950-51 and 1960-61, the total number of postal articles handled by the Posts and Telegraphs Department rose by 80 per cent, that is, from 2,270 million to 4,054 million. The number of telegrams handled increased during the same period by 43 per cent (from 27.9 million to 40 million). There was a fivefold increase in the number of trunk calls, that is, from 7.1 million to 34 million. These data go to show the increasing demand made on postal, telegraphs and telephone services in the country. It must, however, be stressed that, while the communication facilities have been expanded considerably, a lot more still remains to be done to improve the quality of services offered.

Third Plan Targets

The third Plan envisages an expansion of communication facilities in urban centres and there extension to rural areas. It is proposed to examine in some detail the programme for the development of posts, telegraphs and telephones in the current Plan, against the perspective of development already achieved in the first and second Plans. To take the postal services first. The total number of post offices, which had risen from 36,000 in 1950-51 to 55,000 in 1955-56 and still further to 77,000 in 1960-61, is proposed to be increased to 94,000 by the end of the third Plan. The objective in this respect is, as was laid down in the first Plan, to serve, besides all administrative headquarters such as *tehsils, talukas* and *thanas,* every group of villages located within a radius of two miles and having a total population of 2,000, provided the annual loss involved was not more than Rs. 750 and that there was no post office within a distance of three miles. The conditions for opening new post offices were liberalised subsequently, particularly for the headquarters of community development and national extension service blocks and places having authorised schools. During the third Plan, it is proposed to lay greater stress on the postal development of underdeveloped and backward areas and, with this objective, it has been decided to open 200 past offices in very backward areas during the Plan period at a specially enhanced permissible limit of loss of Rs. 2,500 per annum per post office and regardless of the considerations of distance from the nearest post office and population served. This number will be in addition to the number of offices that will be opened under the already relaxed permissible limit of loss of Rs. 1,000 per annum per post office applicable for such areas.

The programme for the development of telegraph services is quite impressive. The number of telegraph offices increased from 3,600 in 1950-51 to 5,100 in 1955-56 and further to 6,450 in 1960-61. It is proposed to install 2,000 new telegraph offices during the third Plan period. In order to minimise the delay in delivery of telegrams, the P. and T. Department has plans to install on an extensive scale devices like teleprinters and tape-relay systems. Meanwhile, complaints of delays in transmission and delivery of telegrams in cities like Bombay, Calcutta, Madras and New Delhi are mounting. It is even alleged that telegrams are being sent by post. The system of phonogram is also not working satisfactorily, apparently in view of the deficiencies in the functioning of telephones. If, on receipt of telegram with a telephone number, the telegraph office finds that the number concerned is either engaged for sometime or cannot be had due to some fault or other, the message is simply sent by post, which takes two days to reach the addressee, instead of being sent through the usual telegraph messenger.

In respect of telephones, the third Plan envisages the installation of as many as 200,000 new direct telephone connections, in addition to the conversion of 50,000 manual lines into auto-lines. At the end of the second Plan, the total number of telephones stood at 460,000, as against 280,000 in 1955-56 and 168,000 in 1950-51. The third Plan also seeks to set up automatic exchanges in 45 towns, apart from expanding the 32 auto exchanges in the country. The programme for trunk telephones provides for the installation of ten trunk automatic exchanges, a number of additional manual exchanges and about 2,000 public call offices. It is also proposed to meet the heavy demand for trunk telephones between important stations by inroducing subscriber-to-subscriber dialling service. Provision is also made for the completion of the project for laying coaxial cables between Delhi and Calcutta, and Delhi and Bombay, which was taken up in the second Plan. Besides, the third Plan provides for laying coaxial cables between Bombay, Madras and Coimbatore, and between Bombay and Nagpur, and Delhi and Amritsar.

Recent Trends

The various schemes outlined above are now under execution. An idea of the progress made by the Posts and Telegraphs during the first year of the third Plan is provided in the Annual Report of the Ministry of Transport and Communications (Posts and Telegraph Board) for 1961-62 as well as in a booklet entitled *Activities—1961-62,* published by the P. and T. Board. According to these publications, during 1961-62 (upto the end of February), 5,740 post offices were opened, of which as many as 5,466 were in rural areas. The number of post offices established in 1961-62 has thus apparently exceeded the target (annual average of 3,400). Besides, 410 branch offices and E.D. sub-offices were upgraded into departmental sub-offices. This upgrading, it may be noted, has also helped in the extension of savings banks facilities and in the improvement of mail arrangement in rural areas. Incidentally, for the convenience of savings bank depositors, a new scheme, called "teller system," has been introduced at the New Delhi post office, for the first time. The special features of this system are (1) deposits and withdrawals can be made without presentation of pass books, (2) the time taken for paying-in funds will be reduced by more than half and (3) withdrawals of amounts upto Rs. 250 will be allowed by the counter clerk on his own authority, thus reducing the time required for a transaction to about one-fourth. The authorities will do well to consider the extension of this system to other urban centres as well.

The progress of the programmes for the development of telegraphs, however, has been slow. As against the third Plan target of 400 (annual average), the number of telegraph offices opened during 1961-62 was only 290. The total number of telegraph offices in the country, as at the end of March 1962, was 6,740. The total number of telephones at the end of 1961 was 498,000, showing an increase of 35,000 during the period April-December 1961. During the whole year 1961-62, 215 new exchanges were opened and 245 existing exchanges were either expanded or rehabilitated. The equipped capacity of telephone system has gone up from 412,620 to 450,000.

The total number of persons employed by the Posts and Telegraphs Department is estimated at 400,000 as at the end of March 1962, which compares well with 382,000 a year back. The increase is attributed to larger traffic. The annual report also places the number of total postal articles handled at 4,252 million, telegrams at 39.2 million and effective trunk calls put through at 32.5 million. While the volume of work handled by the Department is quite sizable, it is disappointing to find that the number of complaints about delays and mistakes in transmission is increasing fast. During the calendar year 1961, the Complaints Organisation received 532,122 complaints (of which 531,522 are said to have been "disposed off"), an increase of about 6,600, as compared with 1960. This works out to 0.0125 per cent of the total traffic, as against 0.0129 in 1960 and 1959 and 0.0135 in 1958. These figures, it may be noted, relate only to those complaints registered with the Department. The complaints not brought to the notice of the Department must be much more. The poor response to complaints and the laconic reply that one gets months after the complaints are lodged have served as effective deterrents to registering complaints with the postal, telegraphic and telephone authorities and induced a sort of fatalistic attitude among the users of these services.

Federation's Complaint

Since individual complaints have not been of much avail, it is gratifying to find that the Federation of Indian Chambers of Commerce and Industry, New Delhi, has taken up the matter. Calling attention to the fact that the telephone system is virtually "in a state of dolperienced by the general public and business community all over the country in the following words:

"So far as local service is concerned, the subscribers have to put up with wrong connections, disturbance—atmospheric, mechanical and human—during conversation, lack of proper audibility and bad reception. And, as for trunk calls, the grievances, add up to a formidable list: delay in booking of trunk calls, delay in answering trunk enquiry positions, giving wrong information about the probable delay in maturing a trunk call, overhearing the subscriber's conversation intentionally or unintentionally, operators speaking to each other on the same circuit while the call is in progress and a host of other impediments and annoyances. In the so-called direct trunk system, the calls are just cut off, and there is no means by which the telephone operators can be contacted except by dialling 'Complaints' which more often than not are unheeded. In point of fact, the subscribers have to face these annoyances after getting, with considerable difficulty, a call through, whether ordinary or urgent. Incidentally, this artificial distinction between ordinary and urgent calls at separate rates seems to be a peculiar feature obtaining in our country. Elsewhere, all trunk calls are rightly treated as urgent; the connection is secured within a minute, the average time being only twelve seconds; and a subscriber can dial a trunk call directly too.

"Conditioned and reconciled as Indian subscribers are to the delay in obtaining trunk calls, they find that during the past few months the position has further deteriorated. A trunk call between principal cities which perhaps used to take anything like two to three hours to fructify takes now as long as six to eight hours—on the first inquiry, advice of four-hour delay seems to be the norm rather than the exception, and from then on the standard answer is two-hour delay. And it is not quite uncommon that on a few days in a week it is reported that the lines are out of order."

The public has had to put up with the aforesaid grievances for so long that it is high time effective steps were taken to ensure a better deal to the users of telephone. The Federation is, therefore, quite justified in asking for an immediate inquiry into the situation.

Defalcations

Quite a few disquieting instances of actual defalcations and losses of public money in the Department have been brought to light in the audit report for 1961-62. The number of such cases was as many as 1,308 involving a total loss of Rs. 7.43 lakhs. While the number of cases showed a decline of just 104 over 1959-60, the amount involved actually increased by as much as Rs. 60,000. As in the past, the employees of the Department were responsible for the bulk of these losses, 65 per cent to be precise. In 308 cases, involving an amount of Rs. 2.18 lakhs (29 per cent), responsibility for the loss had not been fixed so far.

The audit report has also revealed instances of short recoveries and failure to issue bills to the extent of Rs. 12.97 lakhs in the telephone revenue accounts. The short collection is attributed to incorrect valuation of trunk call tickets. The other types of irregularities in this connection, were: (*a*) delay in the issue of advice notes intimating installation, etc., of telephones, (*b*) arrears in pairing work of inward and outward trunk call tickets, and (*c*) delay in verification of late fee bills. A large number of other defaults and infructuous expenditure have been pointed out by the Audit. These include unco-ordinated execution of development works, defects in stores purchase and control and non-utilisation of vacant departmental buildings. These defects only show that there is still considerable room for improvement not only in the quality of services offered to the public, but also in the general administration and execution of projects. If the recently constituted P. and T. Board succeeds in ensuring a greater measure of efficiency in the operation of the posts, telegraphs and telephone systems, it will have justified its existence. One, however, should not be surprised if this turns out to be a forlorn hope, for the Board is such an unwieldy body that it is highly doubtful whether it will be in a position to render any useful work. Only a Union Minister with drive, vision and readiness to compel the lazy workers either to leave the service or work hard can set matters right. When will such a Minister come into being?

TROMBAY FERTILISER PROJECT

The Trombay Fertiliser factory in the public sector, now being put up by the Fertiliser Corporation of India Ltd., near Bombay City, is expected to go into production—according to schedule—in April 1964. This was disclosed by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, in the Lok Sabha the other day. The factory will have an installed capacity of 254,000 tonnes of nitrophosphate, a complex fertiliser containing two soil nutrients (nitrogen and phosphate), and 97,500 tonnes of urea per year. Of the 825 acres of land proposed to be acquired for the construction of the factory and a residential colony, an area of 534 acres has already been secured by the Corporation. Steps are being taken to acquire the rest of the land. Since the factory area is low-lying, 38.6 million c.ft. of earth-filling is involved. Of this, 16.6 million c.ft. of earth-filling has already been completed.

Contracts for design, engineering and supply of plant and machinery for ammonia, urea, nitric acid and nitrophosphate have been placed with two U.S. firms. The contracts for the design, engineering and supply of equipment for the sulphuric acid plant, steam generating plant, yard piping system, bagging and material handling plant and water treatment plant are currently under consideration and will be placed shortly. The equipments offered by one of the U.S. firms has already started arriving in Bombay. It is expected that all the equipments to be supplied by this firm will have been imported by the end of this year.

In respect of the supply of raw materials, the Corporation has already signed contracts with the Trombay oil refineries for petroleum naphtha and refinery gas. Besides, the Corporation is negotiating with some foreign parties to secure rock phosphate for the factory. The Municipal Corporation has agreed to supply the required quantity of water for factory use. An agreement is also expected to be signed shortly with the Tata Power Company for the provision of electric power.

Construction of the various structures of the factory has been taken up. Two warehouses and an administrative building have already been constructed. Work on the factory boundary wall, service building, roads and sewers is in progress. The piling work in the nitric acid plant and the compressor foundation work are now in progress at the site. Earthwork is also going on for the construction of two silos for finished products.

Construction work on staff quarters is also in progress. Two hundred and forty units of type I quarters are ready for occupation and another 240 units will be ready by the end of June 1962. All the 1,750 units of quarters, which have been planned, are expected to be available for occupation by January 1963.

Sixty-five graduate engineers in chemical, mechanical, electrical and instrument engineering are currently under training in the existing factories of the Corporation. These engineers will hold supervisory positions in the new factory. Two hundred trade apprentices and 60 apprentice supervisors are being recruited currently for intensive training in the existing units of the Corporation for operation and maintenance positions.

SHEET GLASS INDUSTRY

A public enquiry into the question of continuance of tariff protection to the sheet glass industry beyond the current year ending December, was held in Bombay last week, with Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, presiding. The industry, it may be recalled, has been enjoying protection since 1950; the existing rate of protective duty is 70 per cent *ad valorem.* It, however, has not been able to stand on its own feet, presumably on account of several handicaps, such as increasing prices of all the basic raw materials, enhanced railway freight rates, expensive road transport and transport bottlenecks. There are now four units engaged in the production of sheet glass, namely, the Hindustan Pilkington Glass Works Ltd., Calcutta, the Indo-Asahi Glass Company, the Seraikella Glass Works and the U.P. Glass Works. No new units have gone into production since 1960 when the last tariff enquiry was held. Two units had actually been licensed at the time of the last enquiry; they were Madras Sheet Glass Works Private Ltd., and the Indo-Belgium Glass Works Private Ltd., Madras. Explaining the reasons for their inability to commence production, Mr. Aiyangar observed that, while the former unit still awaited the grant of import licence for oil-burning equipment for its furnace, the latter had to cancel Belgian collaboration and was now on the look out for West German or American collaborators.

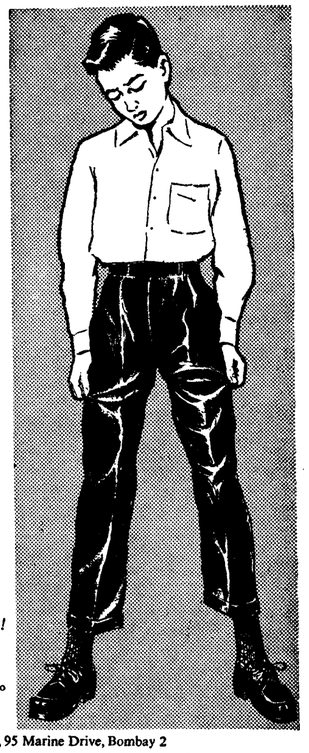
The aggregate capacity of the four units under operation, however, has gone up from 10,573 million sq. metres (113.80 million sq. ft.) per year in 1960 to 13,101 sq. metres (141 million sq. ft.) in 1961, according to figures made available by the producers. But the Development Wing puts the current capacity at only 11,234 million sq. metres (120.92 million sq. ft.). There is a similar divergence in the estimates of production as well. According to the industry, output increased, albeit slightly, from 8,246 million sq. metres to 8,282 million sq. metres. But the Development Wing holds the view that output actually declined from 7,542 million sq. metres to 6,961 million sq. metres. It is rather surprising that there should be such divergence in the data pertaining to capacity and production, considering that only four units are in existence. Surely, it should be possible to verify the industry's claims and resolve the difference of opinion. It is, however, significant to note that the output of thicker varieties of sheet glass required for mirror-making, safety glass, table-tops and others for industrial applications has increased markedly. It may be noted here that licences have been given to three new units, two to be set up in Gujarat and the third at Calcutta. When all the five units licensed so far (including the two Madras units licensed earlier) are commissioned, the capacity of the sheet glass industry will go up to 20.48 million sq. metres (220.50 million sq. ft.). There is, however, no certainty as to when and how many of these units will commence production.

There has been a perceptible improvement in domestic demand as well. The total apparent consumption of sheet glass (including imports) has gone up from 8.265 million sq. metres in 1960 to 8.689 million sq. metres in 1961. Owing to stringent restriction, imports were on a small scale, being of the value of Rs. 5 lakhs in 1961, as against Rs. 6 lakhs in 1960. Imports consisted mainly of thick varieties of glass and certain coloured types.

The principal raw materials required for the manufacture of sheet glass are sand, heavy soda ash, limestone, sodium sulphate, dolomite and arsenic. Barring heavy soda ash and to some extent sodium sulphate, other chemicals are available indigenously. Apart from the increase in prices of several chemicals, the quality of raw materials is also said to be not consistent. The quality of the sheet glass, too, is not uniformly good, although there has been some improvement of late. It is stated that if quality is stepped up further and costs reduced by expanding output and increasing fuel efficiency, sheet glass will be able to find fairly large export markets.

The Birthday Gift

Mother stitched a pair of trousers for his birthday and sent them to the laundry so that they would look fresh, crisp, new. But they shrunk—she had forgotten to look for the label 'Sanforized'!



If only she'd taken a little more care in the selection of the fabric, these trousers would have retained their immaculate fit even after many, many washings.

Make certain you get the full measure of value of the material you buy—

Look for SANFORIZED REGD TO MK *on the label*

and your clothes will never shrink out of fit!

TEXMACO STAGES A COME-BACK

DIVIDEND, HOWEVER, UNCHANGED

THE Textile Machinery Corporation Ltd. [Managing Agents: Messrs. Birla Brothers (Private) Ltd., Belgharia, West Bengal] has staged, during the year ended 31st December 1961, a promising come-back from the distinct setback suffered in the previous year. Indeed, the results for the year warrant the conclusion that 1960 was an exceptionally bad year in the Company's history. To illustrate, the realisations from sales and internal consumption have shot up by Rs. 189.58 lakhs to Rs. 777.46 lakhs—the highest on record—as against a fall of Rs. 26.18 lakhs to Rs. 587.88 lakhs in the previous year, with sales alone improving from Rs. 552.76 lakhs to Rs. 744.01 lakhs and being well above Rs. 576.86 lakhs in 1959. The gross profit, which had declined from Rs. 92.95 lakhs to Rs. 61.30 lakhs in the previous year, has recovered to Rs. 80.67 lakhs. It can be seen that the rise in profit is not proportionate to that in sales. Consequently, the profit-margin (ratio of gross profit to sales) has remained unchanged over the year at 10.3 per cent. Again, while welcoming the recovery in the Company's working results, the investors will doubtless be disappointed to find that the return on their investments will only be maintained at 10 per cent per annum, subject to tax, to which level it was brought down in the previous year from 20 per cent paid for 1959.

Go-slow tactics and sporadic strikes by labour, shortage of certain types of raw materials and rising costs of production—the disturbing features of 1960—continued during the year under review also, but were largely brought under control near its end, while efforts made and being continued to overcome the year's new obstacle, namely, cut in power, are expected to meet with a fair measure of success. The Directors state that the efforts of the management to get over these problems reflected in higher production and better efficiency during the year, but their impact on profit, being gradual, would be felt adequately only in the current year.

The essential provisions are higher: depreciation Rs. 24.37 lakhs, as against Rs. 21.84 lakhs in the previous year, and taxation Rs. 19.81 lakhs, as against Rs. 9.35 lakhs. Managing Agents' remuneration has also increased from Rs. 2.59 lakhs to Rs. 3.63 lakhs. The net profit, as a result, has shown only a small rise of about Rs. 5 lakhs to Rs. 32.86 lakhs, but is sufficient to cover the preference and equity dividends, besides allowing for a transfer of Rs. 6.45 lakhs (Rs. 4.25 lakhs in the previous year) to reserves and provisions, without drawing, unlike in the previous year when Rs. 2.50 lakhs were transferred, any amount from the reserves.

A synopsis of the Company's working in the past four years is provided in the table below:

(In lakh of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales and internal consumption	777.46	587.88	614.06	583.84
Other income	18.31	6.30	8.69	6.65
Closing stocks	158.25	197.30	138.01	115.99
Raw materials, stores and spares consumed	440.13	396.11	374.80	371.18
Staff expenses	139.15	126.83	112.25	90.54
Royalty and excise duty	3.00	2.47	3.40	3.09
Other expenses	83.77	66.76	61.37	50.11
Gross profit	80.67	61.30	92.95	109.34
Provision for—				
Depreciation	24.37	21.84	25.05	24.50
Taxation	19.81	9.35	25.44	41.00
Managing Agents' remuneration	3.63	2.59	6.08	8.43
Net profit	32.86	27.52	36.41	35.41
Transfer from reserves	..	2.50	..	..
To reserves and provisions	6.45	4.25	3.50	11.40
Dividends—				
Preference	11.36*	10.56*	2.90*	1.68
Ordinary	15.00	15.00	30.00	22.50
	(10%)*	(10%)*	(20%)*	(15%)
Carry forward	0.63	0.59	0.37	0.37

Market value of ordinary share (In rupees):	1962	1961	1960	1959	1958
High	25.75	24.76	29.40	26.95	23.35
Low	19.76	16.24	21.50	20.60	15.42

* Subject to deduction of tax.

In the light of what has been said earlier, production in all branches of the textile division increased during the year. Ring frames and carding engines showed a substantial improvement. The assembly of drawing frames was begun. Simplex frames development proceeded speedily; the first frame would be ready this year. Production in the textile division is expected to rise further this year, and orders for all types of machinery are quite adequate. The working of the heavy engineering division, where water tube, Lancashire and vertical boilers, complete sugar manufacturing plant, railway wagons of different varieties and heavy structural items are produced, showed a commendable improvement, and is expected to improve further this year. The first water tube boiler, produced by the Company, was installed and is working satisfactorily. The first sugar milling plant is under production and expected to be delivered by this year-end. The whole of the plant, except the engines, is being manufactured in the Company's works. The steel foundry showed a substantial improvement and would work better this year.

The Company is launching an ambitious programme for the manufacture of textile machinery to meet the country's needs. It will require installation of a number of new machines and renovation of the existing plant. Its implementation will be at the rate of the availability of the necessary import licences. Manufacturing the Texmaco Ward Capstan lathes in collaboration with the well-known firm of Messrs. H.W. Ward and Co., Ltd., of Britain, the Company produced during the year lathe number 3 Ward and delivered the initial products to the satisfaction of the buyer. A phased programme to increase production of lathes is to be implemented this year. It is also proposed to manufacture the more complicated 7-combination Turret lathe under a modern plant now being set up. Efforts are being made to arrange the necessary foreign exchange for the import of plant and equipment for the Company's proposed project for the manufacture of cast iron spun pipes in Maharashtra. With more efficient working and the satisfactory progress of the expansion schemes in hand, one can agree with the Directors that the working results of the Company in the current year would be appreciably better.

The financial position of the Company is sound. Its paid-up capital of Rs. 289.96 lakhs, of which Rs. 150 lakhs is in equity shares and the rest in three different classes of preference shares, is supplemented by reserves and surplus aggregating Rs. 62 lakhs. Its secured loans from banks have increased during the year by some Rs. 3 lakhs to Rs. 304.46 lakhs. The bulk of these are secured against current assets, etc., and to the extent of Rs. 71.34 lakhs against usance bills. Unsecured loans have gone up from Rs. 1.52 lakh to Rs. 22.23 lakhs mainly following the issue of a loan of Rs. 20.55 lakhs by the Managing Agents. Current liabilities and provisions amount to Rs. 583.62 lakhs. The Company's total indebtedness to outsiders amounts to Rs. 910.32 lakhs. This is quite a large sum, though adequately covered by current assets and book debts of Rs. 980.40 lakhs. Investments are shown at Rs. 4.92 lakhs, almost all of which are unquoted. The gross block increased during the year from Rs. 486.97 lakhs to Rs. 514.92 lakhs, and has been written down to Rs. 272.89 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted, on the Calcutta Stock Exchange at Rs. 26.10 *cum-div.* and, on the *ex-div.* basis, offer a net yield of 2.7 per cent.

PREMIER TYRES LTD.

The factory of the Premier Tyres Ltd. [Managing Agents: Messrs. Indo-Orient Agencies (Private) Ltd., Bombay] has gone into production from 27th May last, about five months after the end of the Company's second year of working. All the necessary plant and equipment, ordered by the Company from abroad, arrived by the beginning of this year, and the major portion was received at site before 1961 was out. The trial runs of machinery were completed well in advance of the start of production. Last year, the Company also entered into a fresh technical agreement with its collaborator, the United States Rubber Company of New York, which is one of the foremost rubber tyre manufacturers in the world. Early this year, the Company was granted a loan of Rs. 30 lakhs by the Agency for International Development, Washington, U.S.A., and has utilised half of it against bank cash credit facilities.

It will be recalled that the Company has issued capital of Rs. 150 lakhs in equity shares of Rs. 100 each and of Rs. 50 lakhs in 6.5 per cent, tax-free, cumulative redeemable preference shares of a like denomination. It made the second and final call of Rs. 25 per share on both equity and preference shares on 15th May 1961, payable within two months since then. As on 31st December 1961, there was a balance of Rs. 2.38 lakhs, representing allotment and calls in arrears, which, however, had declined to Rs. 1.56 lakh by 8th May last. The block of the Company is shown in the balance-sheet at Rs. 186.49 lakhs, comprising plant and machinery at Rs. 136.79 lakhs, buildings at Rs. 32.46 lakhs, land at Rs. 5.38 lakhs and other assets of Rs. 11.86 lakhs.

BRITISH PAINTS' SALES UP, BUT PROFIT DOWN

A RISE of 12.5 per cent, or Rs. 23.58 lakhs, to Rs. 211.32 lakhs in sales during the year ended 31st December 1961 has, however, fetched British Paints [India] Ltd. (Chairman: Mr. D. P. Dunderdale, Calcutta) a lower gross profit of Rs. 15.93 lakhs, as compared with Rs. 16.67 lakhs in the preceding year. The profit-margin (ratio of gross profit to sales) of the Company has shrunk further from 8.8 per cent to 7.5 per cent. This lower margin of profit, we are told, was due to increases in costs of raw materials, packages and operating expenses, to meet which the Company increased the prices of paint products in spite of severe competition. While the exact price-rise is not revealed, it appears from the results that, due to competition the full increase in costs could not be passed on to consumers. After being stagnant in 1958 at the 1957 level of Rs. 134.04 lakhs, sales of the Company steadily rose in the past three years. However, from 1958 onwards, the profit-margin rose but once in 1959, from 8.2 per cent to 9.5 per cent to be precise, because the cost inflation, having crept in 1959, had increased further since then.

The lower gross profit has necessitated a reduction in the provision for depreciation from Rs. 3.09 lakhs to Rs. 2.88 lakhs as also in that for taxation from Rs. 6.82 lakhs to Rs. 6.40 lakhs. The net profit, therefore, shows a marginal setback from Rs. 6.76 lakhs to Rs. 6.65 lakhs. The taxable return to the shareholders has, however, been maintained at the previous year's level of 12.5 per cent (to which it was raised from 10 per cent paid for 1959) on the capital increased by the issue of 2.16 lakh ordinary shares of Rs. 10 each at a premium of Rs. 5 per share towards the close of 1960. But this has been made possible by cutting down the transfers to reserves from Rs. 3.63 lakhs to only Rs. 1.75 lakh.

The following comparative table clearly brings out the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	211.32	187.74	166.91	134.04
Other income	0.55	1.13	0.45	0.54
Closing stocks of finished goods	19.68	20.48	15.32	16.03
Raw materials, stores and spares consumed	109.72	101.78	85.43	69.86
Finished goods purchased	0.07	0.41	0.60	0.41
Staff expenses	39.47	35.32	31.07	26.77

* Subject to deduction of tax.

The Rs. 23-lakh increase in sales during the year came to the extent of Rs. 16 lakhs (Rs. 5 lakhs in 1960) from paints products and to the extent of Rs. 7 lakhs (Rs. 14 lakhs) from synthetic resin products. As profitability of synthetic resin products is better, added efforts are being made to increase their sale and exploit the existing good demand for them in the country. The position in regard to the proposal of the Company to manufacture, in collaboration with a foreign company, a special type of protective coating, which is said to be not manufactured in the country, is being reviewed afresh by the Directors due to some difficulties in implementing the scheme as originally envisaged.

Between 1957 and 1961, the Company's balance-sheet has assumed a sounder position. The gross block has grown by Rs. 20 lakhs to Rs. 45 lakhs and reserves by Rs. 21 lakhs to Rs. 41 lakhs, out of which general reserve amounts to Rs. 29 lakhs. During the year, the addition to the gross block worked out to Rs. 2.35 lakhs. The net block at the year-end is shown at Rs. 21.15 lakhs. The paid-up capital of Rs. 50 lakhs, all in equity shares of Rs. 10 each, is supplemented by reserves and surplus aggregating Rs. 41.04 lakhs. The total indebtedness to outsiders amounts to Rs. 52.40 lakhs and is comfortably covered by current assets, loans and advances of the order of Rs. 122.26 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are being quoted at Rs. 24.62 *cum-div.* On an *ex-div.* basis, they offer a net yield of 3.6 per cent per annum.

PHYSICAL PERFORMANCE OF DALMIA CEMENT EXCELLENT

BUT FINANCIAL RESULTS DISAPPOINTING

RECORD production, despatches and sales, but disappointing financial results—this, in brief, sums up the performance of Dalmia Cement (Bharat) Ltd. [Managing Agents: Messrs. Hari Brothers (Private) Ltd., Dalmiapuram, Madras] during the year ending 31st December 1961. Cement production improved by 4.4 per cent, from 3.89 lakh tonnes to 4.06 lakh tonnes. Clinker production staged a sharp rise of 18.9 per cent, from 3.49 lakh tonnes to 4.15 lakh tonnes. Cement despatches increased by 5.2 per cent, from 3.87 lakh tonnes to 4.07 lakh tonnes. On top of a spurt of 49 per cent in the previous year, sales rose by a further 5 per cent from Rs. 391.02 lakhs to Rs. 410.77 lakhs. But the gross profit shows only a marginal improvement from Rs. 83.86 lakhs to Rs. 84.03 lakhs. Consequently, the profit-margin (ratio of gross profit to sales) has slipped down further by one full point to 20.4 per cent.

In retrospect, the year's financial results are much disappointing. In the previous year, an overall increase of 42.6 per cent (14.9 per cent in 1959) in production had resulted in a rise of 38.4 per cent (57.3 per cent in 1959) in gross profit, which again was not quite satisfactory, as the profit-margin had, in fact, receded from 23 per cent to 21.4 per cent. The Directors had attributed this setback in profit-margin to clinker production having lagged behind capacity as also to increase in costs. What is disheartening to hear from the Directors now is that, whereas there is scope for the cement division of the Company to improve further following the increase from Rs. 55.54 to Rs. 69.50 in the ex-works retention price per tonne of naked cement payable to the Company with effect from 1st November 1961, the much desired increase in clinker production, which came about during the year, failed to leave any mark on profit presumably because there was a decline in profit from the ceramics division on account of higher production costs, due, in particular, to increase in wages and cost of coal and other materials.

Although the provision for depreciation has been reduced from Rs. 26.07 lakhs to Rs. 23.85 lakhs and Managing Agents' remuneration is lower at Rs. 4.90 lakhs as compared with Rs. 5.26 lakhs in the previous year, the increased provision of Rs. 24 lakhs for taxation, as against Rs. 19.50 lakhs a year ago, has brought down the net profit from Rs. 33.02 lakhs to Rs. 31.28 lakhs. After transferring Rs. 6.73 lakhs (Rs. 9.33 lakhs in 1960) to reserves, the preference, equity and deferred dividends have been maintained at the previous year's levels and the surplus of Rs. 0.19 lakh is carried forward as against Rs. 0.97 lakh brought in.

A synoptical view of the Company's working in the past four years can be had from the table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales and self consumption	410.77	391.02	262.29	190.32

As the high grade iron ore contract for 1961-62 was finalised between the State Trading Corporation of India and the Japanese buyers only in October last, shipments from the Company's mines showed a decline from 1.88 lakh tons to 1.17 lakh tons. There is an element of uncertainty regarding future exports of high grade iron ore to Japan from the Company's mines and the Bellary-Hospet area generally, and it is proposed to watch further developments before expanding the mining activities. The magnesite business carried on by Messrs. Dalmia Magnesite Corporation (a partnership of the Magnesite Corporation of India and the Company) was satisfactory, as is evident from the increase in the Company's share of profit from Rs. 10.46 lakhs to Rs. 19.30 lakhs. The necessary import licences for the expansion programme of the Salem works are awaited. The doubling of the output of raw magnesite required for the expansion programme presents various difficulties including the disposal of the large quantities of overburden and waste material. We are told that, of the total mined material, only about 10 per cent is usable good quality raw magnesite and the rest is intermixed with spoils, waste or overburden which have to be separated and dumped away from the mines. These problems are being studied along with the possibility of beneficiation of the raw magnesite ore. A scheme to convert the Magnesite Corporation of India into a wholly-owned subsidiary of the Company has been submitted before the Madras High Court and will be considered by the general body at the Company's ensuing annual meeting. Under the scheme, the shareholders of the Corporation would be entitled to receive one ordinary or preference share of the Company in lieu of each ordinary or preference shares held by them in the Corporation.

Dalmia Cement Ltd., a subsidiary of the Company, earned, after providing for depreciation, taxation and Managing Agents' commission, a net profit of Rs. 8.87 lakhs during the year ended 30th September 1961, as against Rs. 6.82 lakhs a year before. It was permitted to export 20,000 tonnes of cement from the Dandot works in West Pakistan to India without any letter of credit and the amount realised from the sale was adjusted against the remittable profit.

The Company has a paid-up capital of Rs. 232.58 lakhs—Rs. 166 lakhs in equity shares, Rs. 61.58 lakhs in preference shares and Rs. 5 lakhs in deferred shares—and is supplemented by reserves and surplus aggregating Rs. 78.97 lakhs. Its liability to outsiders totals Rs. 404.52 lakhs, comprising secured loans (mostly bank borrowings) of Rs. 57.65 lakhs, unsecured loans (including Rs. 120.66 lakhs from the subsidiary) of Rs. 175.76 lakhs and current liabilities and provisions of Rs. 171.11 lakhs. To cover this liability are available current assets and book debts of Rs. 312.07 lakhs and investments of Rs. 204.34 lakhs, of which those quoted amount to Rs. 21.41 lakhs and command a market value of Rs. 22.04 lakhs. A great bulk of the investments—Rs. 164.10 lakhs, to be precise—are in Dalmia Cement Ltd., the assets of which are all in Pakistan. For the present, the return on this investment is practically nil and the realisability of the investment and the transfer of the amount to India depends on the sweet will of the Pakistan Government. The gross block increased during the year from Rs. 285.75 lakhs to Rs. 301.69 lakhs, and depreciation provided on it up to the year-end amounts to Rs. 109.90 lakhs. Inclusive of expenses on construction in progress of Rs. 7.88 lakhs, the net block is shown at Rs. 199.67 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are being quoted at Rs. 13.36 *cum-div.* and offer, on the *ex-div.* basis, a net annual yield of 6.7 per cent.

ELECTRO-EQUIPMENTS CORPORATION

The new plant for the manufacture of electric meters, set up by the Electro-Equipment Corporation at Mulund, has now gone into full-scale commercial production. This was disclosed by Mr. Shyam Lal Khemka, a Director of the Company, at a Press conference held in Bombay last week-end. It is expected that, by the end of 1962, the factory will achieve an annual average rate of output of 50,000 single-phase house-service metres, as against 30,000 originally envisaged. The E.E.C. metres, being manufactured in collaboration with the well-known Polish firm, Cekop, are designed to achieve a high standard of performance, conforming to I.S.S.-722.

In the meantime, the Corporation is contemplating to step up the annual installed capacity to 120,000 metres. It has also plans to diversify production in such a way as to take up the manufacture of three-phase meters as well, probably next year. Negotiations for this purpose have already been initiated with foreign collaborators.

RAYMOND WOOLLEN

RESERVES STRENGTHENED FURTHER

NOTWITHSTANDING rising manufacturing and labour costs, higher overheads and an enhanced excise duty, the operating results of the Raymond Woollen Mills Ltd. [Managing Agents: Messrs. J.K. (Bombay) Private Ltd., Bombay] for the year ended 31st December 1961, have shown a further moderate improvement. Thus, receipts from sale of cloth, yarn and engineers' files have gone up by 4.8 per cent from Rs. 305.69 lakhs to Rs. 320.22 lakhs, thanks mainly to increased sales by the Company's own retail establishments. This expansion in turnover has, as a matter of course, brought about an improvement of Rs. 3.17 lakhs to Rs. 54.12 lakhs in the gross profit. This besides, the ratio of gross profit to sales has maintained an upward trend such being 16.90 per cent, for the year under review, as against 16.67 per cent for 1960, and 16.09 per cent for 1959. The net profit has also gone up by Rs. 5.33 lakhs to Rs. 23.81 lakhs, but this has been due to a lower provision of Rs. 3.64 lakhs, as against Rs. 3.91 lakhs previously, for Managing Agents' commission, and a more than 50 per cent reduction in the provision for depreciation from Rs. 11.56 lakhs to Rs. 5.67 lakhs consequent on the change in the method of computation, even though the provision for taxation is higher by Rs. 4.00 lakhs at Rs. 21.00 lakhs as a result of the enhancement in the rate of corporate taxation.

Nevertheless, if the dividend on ordinary shares has only been maintained at 12 per cent, subject to deduction of tax, it is because of a heavier transfer of Rs. 11.40 lakhs, as against Rs. 7.25 lakhs a year ago, to reserves. Even then, the carry forward is higher at Rs. 2.95 lakhs as compared with Rs. 1.17 lakh brought in. The Directors have thus followed a conservative policy in regard to the appropriation of profits.

It will be observed from the following comparative table, depicting the progress made by the Company during the past four years, that sales have increased consistently from Rs. 216.72 lakhs in 1958 to Rs. 320.22 lakhs during the year under review. The gross profit has also improved in consonance with the turnover and has not only more than doubled during the four-year period, but has actually been earned at an increasing percentage of the gross sales proceeds:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale of cloth, yarn and fibres	320.22	305.69	262.26	216.72

The working of the Engineers' Files Division was not very satisfactory for the greater part of the year. In order to improve the working of this division, the Directors have entered into an agreement with labour under which an increase in wages is to be linked with an undertaking to increase the output by 50 per cent. It is heartening to note that effects of this reform are already being felt and the results shown during the current year so far have been satisfactory.

The issued share capital of the Company, as at 31st December 1961, comprises Rs. 25 lakhs in preference shares of Rs. 100 each and Rs. 75 lakhs in ordinary shares of Rs. 100 each. This is supported by reserves and surplus amounting to Rs. 41.30 lakhs. Against these owned funds of Rs. 141.30 lakhs, secured and unsecured loans aggregate Rs. 57.86 lakhs and current liabilities Rs. 94.07 lakhs. With the inclusion of Rs. 14.55 lakhs worth of new assets acquired during the year, the gross block at cost stands at Rs. 198.23 lakhs and has been well depreciated to Rs. 99.51 lakhs. Investments, current assets and loans and advances total Rs. 193.73 lakhs, that is, well in excess of indebtedness to outsiders.

SYNOPSES OF COMPANY REPORTS

Clive Row Investment Holding Co., Ltd.

(*Secretaries*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—20th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Income from investments	16,60	17,83
Gross profit	15,53	16,87
Transfer to Secretaries' remuneration	90	90
,, ,, provision for taxation	4,25	5,51
Net profit	10,38	10,46
Adjustments	2,52	3,16•
Appropriations:		
Total available balance	12,90	13,62
To interim dividend (taxable) ordinary	3,47 (2½%)	3,47 (2½%)
Proposed final dividend (taxable) ordinary	6,94 (5%)	7,63 (5½%)
Total dividend for the year	10,41 [7½%]	11,10 [8%]
Carry forward	2,49	2,52

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

• This includes Rs. 1,00,000 being excess provision for taxation provided in previous years.

Extracts from the Directors' report: Investment income for the year 1961 showed a decrease compared with 1960 and reflected the difficult conditions in the Jute Industry and slightly less satisfactory results from Coal and Tea investments.

The Company's portfolio during the year under review was substantially unchanged from 1960. Since the close of the year there have been some changes and this has resulted in a reduction of approximately Rs. 10,00,000 in the Company's unsecured loans.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.*
Capital*	1,38,83,000	Investments	1,01,89,139
Reserves and surplus	17,28,670	Current assets	11,56,790

Proposed dividends (taxable) preference	Nil	75
,, ,, equity	(Nil)	(10%)
Carry forward	11	5

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

Extracts from the Directors' report: In view of insufficiency of profits the Directors regret that no dividend can be paid on the equity shares. However, subject to the consent of the Controller of Capital Issues being received, it is proposed to capitalise Rs. 1 lakh out of the reserves and give one bonus share of Rs. 100 each for every 10 shares held to those equity shareholders whose names stand on the Register of Members on such date as may be fixed by the Directors.

The results of the operations for this year have been disappointing. The gross earnings have fallen from Rs. 8.34 lakhs in 1960 to Rs. 4.92 lakhs showing a reduction of Rs. 3.42 lakhs. The fall in profits of the year under report is due to the adjustment in the production pattern necessitated by the transfer of Synthetic Rubber Cots and Aprons manufacture to Inarco Ltd. Inarco Limited is a Company in which Armstrong Cork Co. Ltd., holds 50 per cent equity capital and this Company holds the other 50 per cent. The production of Synthetic Rubber Cots and Aprons at the Thana Factory of Inarco Limited is steadily increasing and it is hoped that the Company will receive the first dividend from its investment in Inarco's shares in 1963.

Increasing costs of raw materials due to imposition of excise duties and increases in import duties, higher packing and freight charges and most of all the imposition of a cess of 30 nP per kg. on raw rubber have increased the manufacturing costs by about 10 per cent.

The installation of the new Footwear Machinery for production of moulded shoes also affected the normal production programmes. The profit margin per unit of production is small in footwear but it is one of the few items capable of mass production in the Company's plant and the Directors hope that once this line is properly established it will contribute its reasonable share to the Company's earnings.

The Directors are also taking steps to increase the range of industrial rubber goods the market for which must expand as the industrial tempo rises in the country. Difficulties in getting import licences for new equipment and shortage of capital resources, however, limit the rate of expansion in this line.

In order to meet the increasing need of funds for the working capital of the Company and in order to take up 500 right shares offered by Inarco Limited, the paid up capital of the Company was increased by issue of 2,500 Equity Shares in May 1961. These shares become *pari passu* with the previous issues from the beginning of 1962 accounts.

On account of non-availability of latex rubber during a considerable part of 1961, the latex plant could not be worked to its installed capacity.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	17,50,000	Gross block	32,93,100
6% debentures	8,00,000	—Depreciation	12,95,812
Reserves and surplus	5,03,328		
Other liabilities	19,31,819	Net block	19,97,288
		Current assets	24,83,297
		Investments	4,55,000
		Cash	49,562
	Rs. 49,85,147		Rs. 49,85,147

* Paid-up capital consists of 7,500 seven per cent. cumulative preference shares of Rs. 100 each redeemable after 1968 and 10,000 equity shares of Rs. 100 each.

Mothola Co., Ltd.

(*Managing Agents*: Messrs. Kettlewell Bullen and Co., Ltd., Calcutta.)

88*th Annual General Meeting*—27th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sale of tea and green leaves	58	86
Sale of shares	80	5,80
Stock of shares	27	94
Other income	1,06	1,23
Gross profit	97	1,31
Transfer to Managing Agents' remuneration	25	25
,, ,, provision for taxation	40	45
Net profit	32	61
Adjustments	53	31
Appropriations:		
Total available balance	85	92
Proposed dividend (taxable) ordinary	(30%)	(30%)
Carry forward	40	47

N.B.—Adjustments represent the balance brought forward from the previous year and credit items if any.

Extracts from the Directors' report: *Season 1961*: The Company's Estate this year produced 83,921 kgs. of green leaves in excess of about 20 per cent as compared to 68,951 kgs. of the year before which was sold to Joonktollee Tea Estate. This excess production was mainly attributable to increased tea bearing area and also for the forced growth of leaves due to abundant and heavy rainfall of 93" as against 68" of the year before.

An area of about 10 acres was put under plantation and the total acreage under tea now stands at approximately 135 acres. Infilling was also carried out to make the plantation even. Tea as well as share nurseries were also put up.

It is hoped that the balance of approximately 36 acres of plantation on virgin soil against total permissible area of 171.29 acres will be put under plantation during the ensuing season.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,000	Gross block	2,82,204
Reserves and surplus	14,06,017	—Depreciation	10,605

,, ,, depreciation for previous years	Nil	4,54
Proposed dividend (taxable) ordinary	12,00 (20%)	7,50 (12½%)
Carry forward	9,85	37

N.B.—Adjustments represent the balance brought forward from the previous year; profit on sale of investments and other credit items.

Extracts from the Directors' report: *Loan From N.I.D.C.*: During the year under report a sum of Rs. 54,100 was repaid to the said Corporation being the sale proceeds of the old and obsolete machinery and towards the release of land intended for the new Bimal Mills unit. The first instalment amounting to Rs. 1,33,338 towards repayment of loan has also been paid during the year 1962.

The results of the year 1961 are quite satisfactory. During the year under report the demand in the home market remained steady during the first half of the year. But in the later half there has been a considerable slackness with unfavourable effect on the profits, sales and inventories. The Company is making changes in its production pattern to be in gear with the changing consumer tastes.

In the export markets, in spite of best efforts, the sales could not be maintained at the level of 1960. This has mainly been due to severe competition from Pakistan, Hongkong and China. Besides, the middle Eastern markets for Indian goods have also shrunk considerably, as textile mills are coming up in many of those countries. Prospects for export sales in the current year also do not seem to be very bright.

The current year, 1962, is facing acute shortage of cotton, and prices are continuously rising. This has affected the profits considerably. Besides, the second part of Cotton Textile Wage Board Award has been implemented from 1st January 1962, giving a rise of Rs. 2 in basic wages per month to the employees. This would result in increasing the annual wage bill by about Rs. 1,20,000. From 1st April 1962 employers' contribution to Employees State Insurance has to be doubled. Added to all this lower prices of cloth and slack demand, the results of 1962 cannot be expected to be as good as those of 1961.

New Mills: As reported last year, Government has granted permission for installing 17,506 spindles and 380 looms. The Directors have decided to put these in a new unit to be called Bimal Mills. Messrs. Gherzi Eastern Ltd., Bombay, a well known Swiss firm, have been appointed as consultants for the project. The plans are ready and building contracts have been given to Messrs. Gammon India Pvt. Ltd., Bombay. Orders for spinning, winding and warping machinery have already been placed, and the balance are being finalised. Looking to the progress, it is hoped that the Mill will go into production by 1963, and that it will be one of the most modern textile units of the country. The total capital outlay for the project would be around Rs. 2.25 crores. A sum of Rs. 59,00,000 is being raised by fresh capital issue. An application has been made to the Industrial Finance Corporation for a loan of Rs. 1,05,00,000.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	60,00,000	Gross block	2,06,67,775
Reserves and surplus	48,02,259	—Depreciation	1,23,70,015
Other liabilities	1,92,10,915		
		Net block	82,97,760
		Block-in-progress	9,18,866
		Current assets	1,97,68,590

To compensation for loss of wages due to short working in 1951-52	‡	1,82
Carry forward credit (+) or debit (—)	+ 1,55 —	8,27

N.B.—Adjustments represent the debit balances brought forward from the previous year.

• This includes Rs. 47,016 being excess provision for development rebate reserve for 1958, written back and Rs. 47,708 being provision for old employees' pension, gratuity and welfare fund written back.

† Preference dividend for 1959 and 1960.

‡ Only a small sum of Rs. 308.14.

Extracts from the Directors' report: The improvement in the working of this Company reflects the increased attention being paid by the Directors to streamline the working for achieving the maximum productivity in the mills. The Directors are happy to note that the renovation programme initiated by them soon after they undertook the management, is bearing results. They visualise a further improvement in the working of this mills when the major portion of the renovation programme is completed by the end of the current year.

Processing Charges: The Directors particularly draw the shareholders' attention to the processors during the year. They wish to mention that erection of the modern process house machinery will be completed by the end of June, 1962, and thereafter the outside processing work will practically stop. The mills will then be in a position not only to standardise the quality of the goods but also to effect considerable savings in the processing charges.

A fire broke out in the carding department of the mills on 2nd January 1962. The services of the Fire Brigade were immediately summoned. Owing to damage suffered by plant, building and machinery as a result of this fire, the mills had to remain closed for some time. The Directors made every possible effort to re-start the mills as early as possible and this was done in a record time of 18 days when the mills were re-started on a partial basis. The mills gradually came to full production shortly thereafter.

Future Outlook: The future outlook of the mills appears to be bright. With the completion of the renovation programme and the installation of machinery which has already arrived, chances of augmenting the profit earning capacity of the mills appear to be encouraging. The Directors are glad to report that the mills have received a printing quota and the printing plant is expected to be installed by the end of this year. This will further help to increase the profits of the mills.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	38,00,000	Gross block	1,40,92 236
Reserves and surplus	6,79,240	—Depreciation	76,50,088
Other liabilities	1,50,36,575

Proposed dividend (taxable) equity	7,88 (12½%)	7,57 (12%)
Carry forward	3	2

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: The trading conditions were favourable during the year enabling the mills to earn decent profits. As in the previous year supplies of cotton could be bought only within the quota limits fixed by the Textile Commissioner. Yarn prices were encouraging and cloth prices were also not unfavourable during the year. The depots opened by the Company were maintained during the year also and as in the previous years a certain amount of export business was also done. A sum of Rs. 3,72,738 has been paid by way of bonus to staff and operatives for the year 1960 in addition to a sum of Rs. 85,027 paid on this account in that year itself. Combing machinery costing approximately Rs. 3,40,000 arrived by the end of the year and were in the process of erection. These have been commissioned in 1962 and are now working.

The income-tax assessments of the Company upto and inclusive of the year ending 31st December 1959 have been completed and the liability on this account has been met out of the contingency reserve.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	63,13,120	Gross block	1,21,09,280

,, ,, ordinary	11,11 (28.5%)	11,11 (28.5%)
Carry forward	79	53

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The provision for taxation is at the increased rate of Company tax announced recently in Parliament by the Finance Minister and there is included the tax of 12½ per cent to be levied on the issue of bonus shares. Shareholders will have received the circular letter issued by the Board of Directors detailing recommendations regarding the issue of bonus shares.

The additions to reserves this year are Rs. 7,07,000 to general reserve and Rs. 5,28,516 to general development reserve. These further reserves are necessary to ensure progress towards the complete modernisation of the plant.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	59,34,575	Gross block	1,20,24,468

‡‡ Preference dividend is calculated at 8.45 per cent.

Extracts from the Directors' report: The Directors are happy to report that the working of the Company during the year was very satisfactory.

The Company has to modernise the machines of 1932 make in stages which may cost about Rs. 70 lakhs. Steps are being taken to finance the project.

The proposal to erect a Mill at Dindugal as contemplated originally was given up. It has been decided to erect the Mill at Karamadai, near Mettoppalayam on the main road. The place selected for the construction of staple fibre unit is near to South India Viscose Ltd., who will be supplying the necessary raw materials. The necessary building plans have been approved and the Company is taking efforts to construct the building as quickly as possible. Further necessary machinery have been ordered and the Company expects the delivery in the middle of 1963. The Directors hope to run the factory in the last quarter of 1963 or early in 1964.

Accounts in brief as at 31st December 1961 are as under:—

N.B.—Adjustments represent the balance brought forward from the previous year.

• The dividend for 1961 is on the increased ordinary capital of Rs. 50 lakhs.

†Dividend for 1960 is on a paid-up capital of Rs. 40 lakhs.

Extracts from the Directors' report: *Sales and manufacture*: Sales for the year have gone up to Rs. 1,72,54,808 from Rs. 1,34,29,753 of last year. This increase is a little over 28 per cent and can be considered satisfactory.

Demand of various types of pumps—small and large—and also demand for medium and large electric motors is continuously increasing. In the case of *Hydro-Electric Generating Sets*, most of the development work is over and we are now on the way to produce regularly such equipment. These sets are required in large number to augment electric supply from small streams and irrigation canals. The order books of the Company are very satisfactorily filled.

Expansion: During the year under review, the Company entered into collaboration with Messrs. Gilbert Gilkes & Gordon Limited of Kendal U.K., for the manufacture of (a) *High Head Turbines*, and (b) *Low Head Turbines* in large sizes. The Company have also entered into collaboration with Messrs. Messwander-Bau for the manufacture of *Instrument Transformers* required for *Switchboard* production.

Accounts in brief as at 31st December 1961 are as under:—

(b) The Dividends, if declared, will be paid on or after 23rd July, 1962, to those shareholders so entitled whose names appear in the Company's books on the 29th June, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

Notices

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 29th June, 1962, at 12.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1961, and to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution, which will be proposed as an Ordinary Resolution, of which Special Notice dated 28th May, 1962, as required by Section 281 of the Companies Act, 1956, has been received:

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Sir Dhirendra Nath Mitra, a Director of the Company, who has attained the age of 71 years, and who retires in rotation and, being eligible, offers himself for re-appointment, and that the said Sir Dhirendra Nath Mitra be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th June, 1962 to 29th June, 1962, both days inclusive.

By Order of the Board,
C. G. MONTGOMERY,
Managing Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *29th May*, 1962.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

PREMIER TYRES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE SECOND ANNUAL GENERAL MEETING of the above-named Company will be held at the Registered Office of the Company at Maneckjee Wadia Building, 127, Mahatma Gandhi Road, Fort, Bombay, on Friday, the 29th June 1962, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1961, and the audited Balance Sheet as at 31st December 1961.
2. To appoint a Director in place of Shri D. N. Khandke, a first Director of the Company, who retires by rotation and is eligible for re-appointment; and to consider and, if thought fit, to pass the following Resolution as a Special Resolution in respect of which a special notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company:

   RESOLVED:—"That pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Shri D. N. Khandke, a first Director of the Company, who retires by rotation and who is a Director of Indo-Orient Agencies Private Limited, the Managing Agents of the Company, and hence an associate of the Managing Agents be and is hereby re-appointed as Director of the Company."
3. To appoint a Director in place of Shri Chandrakant S. Desai, a first Director of the Company, who retires by rotation and is eligible for re-appointment; and to consider and, if thought fit, to pass the following Resolution as a Special Resolution in respect of which a special notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company:

   RESOLVED:—"That pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Shri Chandrakant S. Desai, a first Director of the Company, who retires by rotation and who is a Director of Indo-Orient Agencies Private Limited, the Managing Agents of the Company, and hence an associate of the Managing Agents, be and is hereby re-appointed as Director of the Company."
4. To consider and, if thought fit, to pass with or without modifications, the following Resolution as a Special Resolution:

   RESOLVED:—"That pursuant to Section 360 and any other applicable provisions of the Companies Act, 1956, as amended by Companies (Amendment) Act, 1960, the Company hereby approves, confirms and consents to the contracts or arrangements, if any, to be entered into between the Company and:—

   The United Salt Works and Industries Limited,—Sir H. C. Dinshaw's Dairy and Live Stock Farm,—Urmi Cheese and Chemicals Limited,—Messrs. Shivlal Desai and Sons,—Interocean Services Corporation Private Limited,—Electrical Instruments Manufacturing Company Limited, —Premier Export House Limited,—Arya Varat Lokhan Udyog Private Limited,—Messrs. Bhawoo Kashinath and Company, —Shree Changdeo Sugar Mills Limited,—being the Associates of Indo-Orient Agencies Private Limited, Bombay, Managing Agents of the Company, for the purchases and/or sales of the Company's products; raw materials, machineries, equipments and stores, and/or any other materials, provided that the prices at which the aforesaid goods and articles will be supplied to or by the Company, will be at the rates ruling at the time of delivery or at rates which are not less favourable to the Company."
5. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
J. B. JIJIBHOY,
Secretary.

MANECKJEE WADIA BUILDING,

FORT, BOMBAY.
Dated, 8th May, 1962.

Notes:—(*a*) The relevant Explanatory Statement pursuant to Section 173(2) of the Companies Act, 1956, in respect of the special business under the Item Nos. 2, 3 and 4 set out above has been forwarded to the members of the Company.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

(*c*) The Register of Members and the Share Transfer Books of the Company will remain closed from Friday, the 1st June 1962, to Tuesday, the 26th June 1962 (both days inclusive).

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the seventy-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 29th June, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 15th June, 1962 to 29th June, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
C. G. MONTGOMERY,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *30th May*, 1962.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE GENERAL INDUSTRIAL SOCIETY LIMITED

Registered Office:
15, India Exchange Place
CALCUTTA-1

NOTICE

THE BOARD OF DIRECTORS OF THE Company have, at their Meeting held on the 4th June, 1962, decided to issue 2,16,000 new Ordinary Shares of Rs. 10 each in the capital of the Company for cash at a premium of Rs. 3.50 nP per share to be offered in the first instance to the holders of existing 1,08,000 Ordinary Shares as appearing in the books of the Company as on 29th June, 1962, in the proportion of two new Ordinary Shares for each existing Ordinary Share held.

The Directors have further decided to capitalise part of the General Reserve Fund of the Company and to issue 1,08,000 Ordinary Shares as fully paid Bonus Shares to the holders of existing Ordinary Shares as aforesaid as on the said date, i.e. the 29th June, 1962, in the ratio of one such Bonus Share for each existing Ordinary Share held.

The Directors have also recommended a payment of Dividend at Re. 1 per share subject to deduction of tax at source.

The consent of the Central Government for the issue of new Ordinary Shares as aforesaid has already been obtained by the Company.

For the purpose of such issue, the share Transfer Book and the Register of Members of the Company will remain closed from 22nd June, 1962 to 29th June, 1962, both days inclusive.

By Order of the Board,
For THE GENERAL INDUSTRIAL SOCIETY LIMITED,
K. C. BAGRI,
Secretary.

15, INDIA EXCHANGE PLACE,
CALCUTTA-1.
Dated, the 4th June, 1962.

THE ELLORE ELECTRIC SUPPLY CORPORATION LIMITED

(*Registered Office*: MADRAS-1)

INTERIM DIVIDEND ANNOUNCEMENT

THE SHAREHOLDERS AT THEIR EXTRA-Ordinary General Meeting held on 19th May, 1962 have resolved to pay an Interim Dividend of Rs. 5 per share subject to deduction of tax from the compensation amount received from the Government of Andhra Pradesh on the acquisition of the Ellore Electrical Undertaking.

It is hereby notified that the said Interim Dividend will be paid on 25th June, 1962.

The Share Transfer Books will remain closed from 17th June 1962 to 25th June, 1962 (both days inclusive).

(By Order of the Board),
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS 1.
31st May 1962.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

THE TENTH ANNUAL GENERAL MEETING of the Shareholders of the Company will be held at Dalmiapuram, the Registered Office of the Company, on 29th June, 1962, at 11.00 a.m. Notices of the meeting setting out the agenda and explanatory Statement on the special business to be transacted thereat have been sent by post.

By Order of the Board,
S. C. AGGARWAL,
Secretary.

Dated: *5th June*, 1962.

BANKING

(*Concluded from page* 1068)

posals in order to keep a watch on the progress of the project are of considerable importance. These are, in essence, an extension of financial appraisal and form automatically a part of the work of lending institutions.

On the basis of a thorough financial appraisal, the terms and conditions of the loan are settled. In drawing up the terms of the loan, the principal consideration should be that they should not impose any strain on the concern and provide a reasonable measure of certainty for financial viability, while, at the same time, allowing a margin of safety to the lending institution.

An important matter for determination is the rate of interest and the periodicity of its application. Some of our term-lending institutions charge a uniform basic rate of interest on all loans; the Working Group has expressed the hope that, in course of time, the rates of interest will be varied according to the degree of risk involved.

The Working Group points out the lack of financial data in respect of specific industries and suggests the publication of data relating to companies grouped by size for each industry. The Group also stresses the importance of adequate training in industrial financing to staff employed in financial institutions specialising in term-lending.

Security considerations which are of prime importance in short-term lending are significant for term lending also, especially in India, where information on creditworthiness of borrowers is not readily available and much groundwork has yet to be done in the establishment of credit information bureaux. However, security cover of the loan should not be regarded as a substitute for a scientific financial assessment. Loan proposals should be examined from the point of view of both commercial profitability and the nature of security offered.

The security generally accepted by Indian term-lending institutions comprise existing industrial assets, assets to be acquired from the loans and non-industrial assets as supplemental security. Agricultural land, however, is generally not accepted. Personal guarantees of the directors/managing agents are also obtained as a measure of abundant caution. The nature of charge for industrial loans is usually a mortgage on the fixed assets. The creation of a legal mortgage involves heavy expenses by way of stamp duty and registration charges and, if the loan is required for a relatively short period of five years or so, taking of equitable mortgages would be economical from the borrower's point of view and not so risky from the point of view of the lending institution. However, equitable mortgages are not suitable for long-term loans and it will be safer and desirable to insist on legal mortgages so that in case it becomes necessary, the mortgage could be enforced without intervention of the Court.

For the purpose of assessing the value of security, the assets may be valued on the basis of their book value, current market value or replacement value. In valuing them, it would be expedient to combine one or more of the above methods depending on the type of the asset so that the valuation finally adopted might safeguard the interests of the lending institution and also be equitable to the borrower. A proper valuation of security requires the assistance of technical and legal experts.

Where the total accommodation required by a concern is too large for a single institution to provide, assistance from another institution is difficult to obtain, mainly because fixed assets are already charged and a second charge is generally not favoured. Some form of participation arrangement on the part of different financial institutions would be necessary. Such arrangements can also serve other purposes such as underwriting of shares, issuing guarantees, etc.

The Working Group feels that periodical exchange of views and experiences of the various term-lending institutions would be useful. It is suggested that the annual conferences of State Financial Corporations should be enlarged so as to cover commercial banks which are prominent in extending medium-term loans.

Term Loans to Small-scale Industries

The Working Group has emphasised the special place of a preferred sector like small-scale industries and has discussed the somewhat different approach which banks and other lending institutions should adopt in catering to their requirements and in appraising their creditworthiness. The comprehensive criteria applied to term loan applications from medium and large-scale industries cannot be always used in respect of small-scale industries. These industries, because of certain features inherent in their structure, experience difficulty even in obtaining working capital; they deserve special treatment, because of their relatively high employment potential. The small-scale industrial sector has grown rapidly under the impetus of the promotional measures undertaken by Government. The provision of adequate finance to the sector is hence of great importance.

Although there are different categories of small industries, this sector as a whole faces certain peculiar problems which will have to be borne in mind in evolving measures to cater to its financial requirements. For instance, most small-scale units are unable to offer adequate security against loans. It is also difficult for them to specialise and produce goods of standard quality and they are frequently unable to import the requisite raw materials on the specialised type of machinery or secure deferred payment facilities. These industries are also unable to supply the complicated information required by lending institutions or offer security acceptable to them. The institutions which normally respond to a certain extent to the needs of small industries are smaller banks. However, the resources of these banks are limited and, if the bigger banks with large resources and branch organisation do not adopt a promotional view and extend assistance to small industries, they would be forced to borrow from non-institutional lenders. Both lending institutions and borrowing units have to adjust their attitudes in various ways if institutional credit to this sector is to play a vital role.

The attitude of lending institutions should be practical and flexible rather than strictly legal. They may liberalise their security requirements and adjust the interest rate and period of repayment with reference to the earning capacity of the unit. To enable financial institutions to liberalise their lending criteria, the Government of India has introduced the Credit Guarantee Scheme which is operated by the Reserve Bank and the institutions can avail themselves of the facilities in order to cover a part of their risk. The small-scale industries, on their part, should improve their methods of operations and make their proposals acceptable to the lending institutions. Lack of finance is often not the cause but the result of difficulties in other spheres and it is common knowledge that small-scale industries need non-financial assistance in the form of marketing, technical guidance, and training in management, etc. Several measures have been taken by Government in this regard but still more has to be done. Above all, there is a need for greater co-ordination at all levels between the financial institutions and non-financial institutions and agencies engaged in promoting small industries.

BANK OF MADURA LTD.

Bank of Madura Limited (Secretary: Mr. T. K. Ramasubramaniam, Madurai) has fared better during the year ended 31st December 1961. Profit before depreciation during the year shows a substantial improvement to Rs. 5.95 lakhs from Rs. 2.54 lakhs in the preceding year. Income from interest and discount has increased from Rs. 15.77 lakhs to Rs. 21.67 lakhs, and that from other sources from Rs. 3.83 lakhs to Rs. 6.38 lakhs, including by way of commission, exchange and brokerage of Rs. 3.43 lakhs as against Rs. 2.30 lakhs in the previous year. Interest paid on deposits and borrowings amounts to Rs. 14.86 lakhs as against Rs. 11.28 lakhs a year before. Expenses, including salary bill of Rs. 4.79 lakhs as against Rs. 3.78 lakhs in the previous year, have gone up from Rs. 5.57 lakhs to Rs. 7.00 lakhs. The provision for depreciation is Rs. 0.24 lakh as against Rs. 0.22 lakh a year before. Taxation claims Rs. 2.48 lakhs (Rs. 0.75 lakh in the previous year), statutory reserve fund gets Rs. 1.93 lakh (Rs. 0.47 lakh) and contingent fund Rs. 0.13 lakh (Rs. 0.10 lakh). The provision for bonus to staff has been doubled to Rs. 0.34 lakh. The dividend has been maintained at the previous year's level of 6 per cent, subject to tax, which absorbs Rs. 0.83 lakh, leaving Rs. 0.02 lakh to be carried forward against Rs. 0.02 lakh brought in.

The year's improved results owe largely to a sizable increase in deposits from Rs. 379.87 lakhs to Rs. 526.53 lakhs. Advances have gone up but modestly from Rs. 219.24 lakhs to Rs. 261.37 lakhs. The investment portfolio has increased from Rs. 76.28 lakhs to Rs. 104.68 lakhs. The paid-up capital of the Bank at the end of the year stood at Rs. 13.92 lakhs, practically the same as in the previous year. Reserves and surplus have increased from Rs. 5.60 lakhs to Rs. 6.07 lakhs. Borrowings from other banks were again *nil*. Cash balances at Rs. 191.26 lakhs show an improvement of Rs. 81.33 lakhs over the previous year's position.

An initial par value for the Portuguese escudo, at 28.75 escudos per U.S. dollar, has been established by agreement between the Government of Portugal and the International Monetary Fund.

The parities for the Portuguese escudo in terms of gold and in terms of the United States dollar of the weight and fineness in effect on 1st July 1944 are as follows:

0.030 910 3 gram of fine gold per Portuguese escudo; 1,006.25 Portuguese escudos per troy ounce of fine gold; 28.750 0 Portuguese escudos per U.S. dollar; 3.478 26 U.S. cents per Portuguese escudo.

SURVEY

(*Concluded from page* 1063)

the co-operation of small entrepreneurs could have been sought for the purpose. This can yet be done.

The discussion of the general problems of small industry followed the familiar pattern. On the question of credit supply, Mr. P. V. Gandhi, President of the Chamber, urged the Government for a more co-ordinated arrangement. He suggested the extension of the existing scheme of guaranteed credit to the small-scale sector, in order to enable the commercial banks to play an increasing role in this field. He also pleaded for the integration of the private credit agencies, on which a large section of the small-scale sector relied, with the modern banking structure. Mr. Gandhi, however, did not elaborate the theme or show how the integration could be brought about. Mr. Kanungo, while dealing with the question of credit, observed that the Government would welcome the growing participation of commercial banks in financing small industries. Apart from this broad hint, he too did not outline any new specific scheme for the purpose. The commercial banks, at any rate, cannot be expected to meet the full requirements of small entrepreneurs. In this context, the proposal made by Mr. Gandhi for establishing specialised agencies for the supply of credit to this sector, as in Japan, deserves to be seriously considered by the authorities. Mr. Gandhi's plea that systematic surveys on the scope for developing small industries in all regions should be conducted by non-official agencies is also quite pertinent, considering the need for avoiding their haphazard growth. No doubt, several such surveys have so far been carried out at the official and non-official levels. Presumably much remains to be done in this direction, in view of the increasing need for indigenous manufacture of spare parts and components which are now being imported.

LONDON LETTER

(*Concluded from page* 1066)

there is no question whatsoever about the extreme competence with which the British delegation is handling the negotiations, the Opposition is still able to insist that on the vital fronts of Commonwealth trade and agriculture the price which the Common Market will expect Britain to pay for entry is still unknown; their concern is that Britain does not sign a blank cheque to enter at any price and that, before final decisions are taken, the terms and their implications shall be clearly known and the final discussions take place with exact information. That this information is not yet forthcoming is no fault of the Government or the negotiators—the latter are trying to see what are the best terms they can get. When those are known they will be made public.

Notice

THE BORREA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 31st May, 1962, the following dividends were recommended to be paid for the year ended 31st December, 1961, subject to deduction of tax.

On 6¼ per cent Cumulative Preference Shares at the rate of 8.45 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary Shares at the rate of 15 per cent per annum.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA.

FERRO ALLOYS CORPORATION LTD.

PROBLEMS OF FERRO-MANGANESE INDUSTRY

MR. DURGAPRASAD SARAF URGES GOVERNMENT TO SOLVE THEM

THE main problems facing the ferro-manganese industry were highlighted by Mr. Durgaprasad Saraf, Chairman of Ferro Alloys Corporation Ltd., in his speech at the Sixth Annual General Meeting of the Company held at Tumsar (Maharashtra State) on Monday, 4th June 1962. Mr. Saraf drew particular attention to the increasing competition faced by the Indian ferro-manganese in foreign markets. According to him, although ferro-manganese manufacture in the country enjoyed a basic advantage in that manganese ore was locally available, instead of having to import it as some countries are forced to do, there are other disadvantages such as high electricity charges, railway freight, poor quality of coke and heavy taxation. Consequently, Indian ferro-manganese is unable to compete in world markets. This problem, the Chairman averred, could be solved only by the Government.

The following is the full text of Mr. Saraf's speech.

"GENTLEMEN,

"I deem it great privilege and pleasure to have this opportunity to accord you all a very hearty welcome to this sixth annual general meeting of the Company.

"The statement of annual accounts for the year 1961 and the Directors' report thereon have been with you for some time now, and therefore, with your permission, I shall take them as read.

"Since the Directors' report has dealt at length on the operational and accounts aspects, I do not propose to dilate at any length on these points except to submit to you that a glance at the balance-sheet and the profit and loss account would indicate an all-round improvement made by your Company during the year.

"The unsecured loans stand reduced to a mere Rs. 2.11 lakhs from Rs. 103.91 lakhs and out of the secured loans of Rs. 84.74 lakhs a sum of Rs. 42.67 lakhs have already been paid in the current year. In addition, the balance of the previous year's losses, amounting to Rs. 5.54 lakhs, have been wiped out and further, a general reserve of Rs. 3.50 lakhs has been created. The total reserves and surplus now amount to Rs. 19.14 lakhs as against Rs. 14.50 lakhs in 1960.

"Your Directors have decided that the shareholders should receive their due share of profits in the gains made by the Company and have, therefore, recommended payment of dividends at the increased rate of Rs. 11 per share on the total equity capital which, you are aware, was doubled during the year 1961.

Satisfactory Progress

"Indeed the progress made by your Company is satisfactory, but the situation of the ferro-manganese industry as such is far from being one over which we could be complacent.

"The recently completed Indo-U.S. barter deal helped the Indian ferro-manganese industry to export approximately 1,00,000 tons of its surplus production which assisted the ferro-manganese industry to some extent to stabilise itself. But, after the conclusion of the barter, the problem of disposal of about 1,00,000 tons of ferro-manganese every year, which was planned to be produced for purposes of export, crops up again, since, under the existing circumstances, the Indian ferro-manganese is unable to compete in the world market. Unless either the surplus production capacity of 1,00,000 tons of ferro-manganese is utilised for production of other alloys or suitable conditions created for export of the surplus produce, the industry shall be facing serious difficulties.

"I may mention that ferro-manganese manufactured in many other countries meets the world competition very successfully, though all the countries manufacturing ferro-manganese do not enjoy the basic advantage of availability of their own manganese ore, the main raw material for the industry. They depend on imported manganese ore. We have all the raw materials that we need for our ferro-manganese, yet we are unable to meet the competition in the world market. The main reason for this is that our initial gain on account of availability of all the raw materials in our country is rendered nugatory by adverse factors such as high electricity tariffs, unbearably high rate of railway freight for transport of manganese ore, ferro-manganese and other raw materials, inferior quality of coke and the heavy incidence of sales tax. These are some of the problems of the industry which only the Government can solve.

High Freight Charges

"The ferro-manganese industry is paying over Rs. 100 per ton to the Indian railways for carrying their raw materials and finished products. This is quite exorbitant and unbearable for the industry. Recently the Government announced a reduction of 50 per cent of railway freight on movement of manganese ore for export purposes but so far no such reduction has been granted for movement of manganese ore for consumption in the ferro-manganese industry which is supposed to export a major portion of its finished produce to foreign countries. In virtue, this is a concession on export of raw materials in preference to the export of semi-finished produce.

"Another important problem of the industry is the acute short supply of wagons for movement of manganese ore and other raw materials to the factories. On several occasions, furnaces had to be shut down for want of raw materials which could not be transported to the factory on account of short supply of wagons. Regular supply of raw-materials to the factories is most vital for the proper and efficient running of any industry and it is, therefore, for the Government to provide the necessary transport facilities to our industry.

Wanchoo Committee

"Recently the Government have appointed a committee under the chairmanship of Mr. N. N. Wanchoo, Secretary to the Ministry of Steel and Heavy Industries, to study various problems of the ferro-manganese industry. I am sure that, in view of the export target fixed by the Government for ferro-manganese during the third Five-year Plan and in view of the difficulties experienced by this industry, which is mainly dependent on the export market, the Committee would make suitable recommendations for granting relief to the industry so that it may be able to face the world competition successfully. It must be mentioned here that the ferro-manganese industry does not require any foreign exchange for import of raw materials but on the other hand it is one which is capable of earning substantial foreign exchange which we now need most.

"In this respect the creation by the Government of a separate Ministry for international trade is a very happy and welcome feature. We hope that the Ministry will work vigorously for boosting up the country's exports and find out ways for expeditious disposal of the surplus products of the country.

"Before I conclude I wish to express my gratitude to you all and to all my colleagues on the Board for the support and co-operation. I also thank the workers and the staff of the Company for their hard work and hope they will continue to work with the same zeal and enthusiasm for the smooth and efficient working of the Company."

Note: This does not purport to be a report of the proceedings of the meeting.

REGIONAL TRAINING CENTRE

The Government of India, in collaboration with U.N.E.S.C.O., has established in New Delhi, a Regional Centre for the training of educational planners, administrators and supervisors in Asia. The Centre has started functioning in the premises of the Indian Institute of Public Administration, Indraprastha Estate, New Delhi. The Centre will provide short in-service training courses for officers of the various ministries or departments of education of participating Asian Member countries and Associate Members of U.N.E.S.C.O., undertake and promote research in the technique of educational planning, administration and supervision and place the results at the disposal of such Member States and Associate Members, and assist such States, upon request, in organising educational planning services and in holding national training courses. Mr. A. V. Pai, I.C.S. (retd.), and Mr. R. S. Chitkara, Assistant Educational Adviser in the Ministry of Education, have been appointed Director and Deputy Director, respectively.

TRAVANCORE OGALE GLASS MFG. CO., LTD.

MR. CHATTANATHA KARAYALAR'S SPEECH

THE Annual General Meeting of the Travancore Ogale Glass Manufacturing Company Ltd. was held at Alwaye on Friday, 1st June 1962. Addressing the meeting, Mr. S. Chattanatha Karayalar, M.P., Chairman of the Company, emphasised that, in the interests of the prosperity of the Industry and, consequently, that of workers, it was necessary not only to maintain peace in industry but also to see that productivity was stepped up far above the wages. The Chairman thought that the future for the Company in the years to come was bright in the context of developments taking place and envisaged by the Company.

The following is the text of Mr. Chattanatha Karayalar's speech:

"You will have observed from the profit and loss account that the year's sales, profit, and the proposed dividend at 7 per cent show improvement over last year's results. The working for the current year so far has been satisfactory and I have reason to hope that this year would prove to be a prosperous year for the Company.

Great Potentialities

"In a climate of uninterrupted peace and harmonious relationship, this industry has great potentialities. Our record for the last few years bears eloquent testimony to this aspect of the industry. When I spoke to you two years ago, I assured the employees that, with continuous production and improved earnings of the Company, they would continue to share in the prosperity of the Company. This aim of ours has been progressively achieved. Over the past ten years, the monthly average earnings of the workers have gradually risen and have almost doubled. In the interest of the prosperity of the industry and consequently that of the workers, it is necessary not only to maintain peace in the industry but also to see that the productivity is stepped up far above the wages.

"As from 1st April 1962, the Government of Kerala have introduced on sale of glassware single-point sales tax at 7 per cent, in the place of 2 per cent multipoint sales tax. Similarly, the Central Government have increased the employers' contribution to the Employees' State Insurance Scheme from 1¼ per cent to 2½ per cent of the total wage bill. The railway freight is increased from 1st July 1962. All these go to add to the burden on the consumer. The Central Government have announced increase in the tax on corporate profits from 45 per cent to 50 per cent. This increase works out to more than 11 per cent. This will reduce the balance available for distribution of dividends to shareholders and the resources available to the Company for ploughing back into the business.

Bottles

"Before I conclude, I like to mention that the Government of India are establishing a big chemical plant for manufacturing various kinds of drugs with Russian collaboration at Neriamangalam which is about 30 miles away from Alwaye. This concern would be requiring large quantities of bottles. We shall endeavour to secure this business. This line of activity will increase the total turnover considerably which will in turn improve the earnings of the Company.

"During the past few years we have been able to maintain steady progress, each year being better than the previous one. We have now reached a stage when we can look forward with hope and confidence. I foresee a bright future for the Company in the years to come in the context of the developments taking place and envisaged by us."

Note: This does not purport to be a report of the proceedings of the general meeting.

MONEY USABLE

(From Our Own Correspondent)

BOMBAY, 13th June

For this time of year, when the traditional slack season is well under way, the demand for funds must be said to be pretty good. Banks find that money is still usable, but they have no difficulty in getting their requirements whenever they are short of floating funds. Only, they have to pay a little more. Thus, inter-bank call money rate which had gone up last week from 3 per cent to 3½ per cent, has risen further since Monday this week to 3¾ per cent. In Calcutta, it is higher still at 4 to 4¼ per cent. There is no change in the short-term deposit rates and no bank is willing to quote anything below the maximum levels under the Inter-bank Agreement, lest it should lose its deposits to competitors.

The 91-day Treasury Bills of the Government of India were well fancied for the second week in succession. For the Bills sold under the tender system, the amount offered was Rs. 3.25 crores, as against an invitation of Rs. 2 crores. Only Rs. 2 crores were accepted, at the average rate of 2.510 per cent per annum which is 0.010 per cent more than that paid in the previous week. Sales of Intermediate Treasury Bills fetched a large sum of Rs. 130.25 lakhs. It is true that, in the previous week, the amount offered against the Rs. 2 crores of tenders was larger at Rs. 4 crores and so also the sale of Intermediates at Rs. 2 crores. But the response this week was still far greater than it in any of the preceding weeks this year.

After following a downward trend for eleven successive weeks, foreign assets held by the Reserve Bank have improved fractionally—by Rs. 1.13 crore, to be precise—to stand at Rs. 102.63 crores. This is one of the noteworthy features disclosed by the Bank's statement for the week ended 8th June 1962. Another is a rise of Rs. 2.95 crores in the Bank's advances to scheduled banks against usance bills, bringing the amount outstanding to Rs. 5.50 crores. Since other loans and advances (of which those against usance bills are only a part) have gone up by Rs. 7.48 crores, it looks as though banks' borrowings from the Reserve Bank against other securities also must have gone up. Nonetheless, their deposits with the Bank have gone down by Rs. 4.31 crores. These variations reflect the continued demand for funds in the short-term money market.

The Gilt-edged market witnessed some activity in the State loan section at hardening rates. The 4 per cent medium-term loans of Orissa (1967 and 1968) and Uttar Pradesh (4 per cent 1969), in particular, gained 10 to 15 nP. There was, however, a slight fall of 10 nP in 4 per cent 1972 U.P. and of 55 nP in 4 per cent Andhra 1971. Among Central loans, 3 per cent 1986 Conversion improved by 5 nP to Rs. 71.05 and so also 3 per cent 1984 to Rs. 99.90. 4 per cent 1973, however, were lower by 5 nP at Rs. 100.05.

In the foreign exchange market, the pound sterling ruled steady. The spot rate for New York on London was a shade higher at 280.780-280.820 cents per £ and three months' forward at 280.260-280.300 cents. Locally, the banks' selling rate for T.T. U.S. dollars was Rs. 476.75, that is, 25 nP lower than last week. Their buying rate was 50 nP lower at Rs. 473.25 per 100 dollars.

FAIR DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 7th June

A total of 723,000 kgs. were offered in sale No. 23 held on the 5th inst. Quality of teas from all districts showed a further seasonal decline. The market met fair demand but at lower rates. High-grown brokens met limited enquiry and were irregular but sometimes firm. Similar fannings however met less support and were much easier. The best good mediums on offer were barely steady while others in this category were lower. Low mediums and mediums were up to 25 nP below last week's prices and sometimes more. Brighter sorts, however, were 10 to 20 nP easier. Clean black leaf descriptions sold well at slightly lower rates. Whole leaf grades met less support and showed a lowering in prices. Unorthodox types met poor demand and were lower. Plainest and more stalky descriptions were much easier, particularly fannings.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.50-4.00	4.25-4.40
Mediums	3.80-4.30	4.40-4.55
Good mediums	4.30-5.50	4.55-4.85
Nilgiri B.O.P.	4.00-5.75	4.50-5.65

The average price realised in sale No. 23 was Rs. 3.96 per kg. as against Rs. 4.26 a week ago and Rs. 4.43 in the corresponding sale last year.

Offering in dust sale No. 23 held today amounted to 497,000 kgs. The market met with good demand but prices were somewhat irregular and inclined easier towards the close. Plain and low mediums met good support but were irregularly up to 10 nP and sometimes more. Coloury mediums were in good demand at rates barely steady on last. Highgrowns were in less inquiry and were much easier. Unorthodox types met fair demand but were a little easier. There was more interest shown in residuals but these also followed an easier tendency.

The average price realised in dust sale No. 23 was Rs. 3.24 per kg. as compared with Rs. 3.25 a week ago and Rs. 4.06 in the corresponding sale last year.

London: North Indian and other growths: In Monday's sale there was good demand for the 25,858 packages on offer. Best liquoring Assams were quoted fully firm. The best Africans on offer were sometimes a little easier but there was keen competition for medium and lowgrown varieties which advanced by 1d. to 3d. per lb. In Wednesday's sale best liquoring Africans came to a lower market while other descriptions were irregular and often easier.

Ceylon and South Indians: 23,976 packages of Ceylon teas were on offer. Low mediums were in good demand at fully firm prices but others were irregular and often lower. The 5,742 packages of South Indian teas came to a good market and prices were generally firm except for those invoices of inferior quality which were a little easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 24:* A total of 854,000 kgs. offered. Good demand. Plain and low mediums brokens irregular, but generally firm. Similar fannings about 10 nP easier. Good medium brokens sometimes lower. Fannings firm. Highgrowns easier."

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 13th June

The bullion market ruled firm in the first three sessions of the week under review, but developed a sagging tendency on Monday which persisted till today, when the market picked up strength again. Early in the week, both gold and silver met with good buying support induced by better offtake of spot and encouraging reports from upcountry centres. The floating stocks in the market were said to be low—about 27,000 tolas of gold and 700 bars of silver—and operators feared that the stocks would dwindle further as a result of poor arrivals, especially of contraband gold in view of stricter vigilance by the Customs. Consequently, prices registered an improvement. The upward trend was halted on Monday the 11th inst. when larger arrivals, coupled with reduced offtake, led to a decline in prices. The decline gathered momentum yesterday, as fresh buying inquiries were absent. Today, there was a recovery in prices which followed short-covering induced by firm spot advices. The recovery was so marked that today's closing rates for both gold and silver were well above those prevailing a week ago. The undertone of the market at the time of writing was distinctly firm.

The daily average offtake of gold during the week was higher than in the previous week (6,400 tolas, as against 4,800 tolas), whereas that of silver was lower (8 bars, as against 9 bars). Arrivals of both the metals were smaller, the daily average being 6,800 tolas of gold and 41 bars of silver, as against 7,600 tolas and 55 bars, respectively.

The *Jeth* settlement in gold, which is due to expire on Monday the 18th inst., advanced from Rs. 123.75 to Rs. 125.45 on Saturday (9th) but declined thereafter and touched a low of Rs. 124.80 on Monday. The settlement, however, recovered to Rs. 125.90 today. The *Bhadrapad* (September) settlement began the week at Rs. 122.60 as against the previous close of Rs. 122.35, and, after rising to Rs. 123.30, on Saturday, receded to Rs. 122.85 before finishing at Rs. 123.70 today. The rate for transferring commitments from the *Jeth* to the *Bhadrapad* settlement continued to be against bears throughout the week, the actual rate rising from Re. 1.40 last week-end to Rs. 2.20 today. Margin at the rate of Rs. 20 per 10 grams on outstanding purchase was in force during the whole of the week.

There was a fall in the premium commanded by ready gold over the forward (*Jeth* settlement), from Re. 1 on Wednesday last week to 50 nP today when the spot rate stood at as high as Rs. 126.40, as against Rs. 124.75.

In silver, the *Jeth* (19th June) settlement improved from Rs. 216.05 to Rs. 216.45 on Saturday, eased to Rs. 215.40 on Monday, but recovered thereafter and touched Rs. 216.20 today. The *Bhadrapad* (17th September) settlement fluctuated between Rs. 216.10 and Rs. 215.30 before closing at Rs. 216. The backwardation rate (*badli* payable by bears) declined from 40 nP last week to 20 nP today.

Ready silver improved from Rs. 215.55 to Rs. 215.95 on the 9th inst. After receding to Rs. 214.80 yesterday, the metal recovered to Rs. 215.50. At this rate, the discount under the forward (*Jeth* settlement) was 70 nP, as against 50 nP on Wednesday last week.

The dollar price of gold in the London bullion market firmed up from $35.07½ to $35.10½ per fine ounce. Ready gold, too, advanced from 249s. 11¼d. to 250s. 0½d. Ready and forward silver, however, continued unchanged at 84½d. and 84¼d. respectively, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	13-6-62 (closing)	High	Low	6-6-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	126.40	126.40	125.10	124.75
*Jeth**	125.90	125.90	124.05	123.75

* 18th June settlement. † 19th June settlement.
** 15th September settlement. †† 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES ADVANCE

(From Our Own Correspondent)

BOMBAY, 13th June

Barring occasional bouts of selling by upcountry operators, which resulted in temporary setbacks, the cotton futures market depicted a firm trend during the major part of the week under review. The main factors that imparted strength to the market were reports of slow progress of the monsoon and cloudy weather in some cotton-growing areas and the sustained firmness of spot prices which, in spite of the quota announcement for American and Pakistan cotton, continued to rule as firm as ever. The crisis in the foreign exchange position, apart from the limited availability of cotton abroad, indicated that the prospects for importing foreign cotton to relieve the shortage in domestic supplies were none too encouraging. These considerations were enough to give a bullish twist to the market. Under pressure of sustained buying, the Jarilla March contract rose from Rs. 715.50 last week-end to Rs. 721.25 yesterday before finishing at Rs. 717.50. The contract ruled steady today, with the undertone remaining firm. The range of fluctuation of the contract during the week is indicated below:

	13-6-62	High	Low	6-6-62
Jarilla March				
1963 ...	717.50	721.25	713.25	715.50

Cotton traders are perturbed over the rise in sales tax on cotton by one per cent to two per cent proposed by the Maharashtra Finance Minister. They fear that this would encourage buyers to purchase cotton from other States and get it consigned in their own name to avoid payment of the increased rate of tax.

In the spot market at Sewri, activity was limited. It would appear that several mills had not received the balance quota of indigenous cotton for the current season and hence could not buy cotton. Prices, however, ruled firm. The import quotas for Pakistan cotton and U.S. short staples have not produced any appreciable effect on the price trend.

Export demand for Bengal *Deshi* continued to be sluggish. Barring stray covering by shippers no sizable fresh business was reported. A move is reported to be afoot to get Bengal *Deshi* cotton put on Open General Licence (OGL) for purposes of export. At present, export of Bengal *Deshi* is subject to many restrictions. A section of the trade feels that if Bengal *Deshi* cotton is brought under OGL its export could be speeded up. Among foreign cotton, American and Pakistan cotton attracted the attention of spinners. But owing to the high price of U.S. cotton and the small quota, mills were seen going in for local substitute cottons, which are relatively cheaper, in preference to imported ones. Business in Pakistan cotton was only moderate. Most mills preferred to wait for the actual allotments to be made in their favour before entering into commitments. A limited volume of business was, however, put through on a subject-to-licence basis.

A notification issued by the Textile Commissioner, explains that a total quantity of 100,000 bales of Pakistan cotton will be allowed for import under the latest Indo-Pakistan Trade Agreement. Of this, a quantity of 42,000 bales should be shipped before 31st July 1962 and the balance not later than 30th November 1962. The total quantity of 100,000 bales will be allocated to mills to make good the balance of 25 per cent of the shortage in domestic supply of medium and long-staple varieties. While working out the quotas for individual mills, an *ad hoc* reduction will be made so as to allow for the unadjusted foreign "B" bottom received by them after 1st September 1961. With the allocation of this quantity, it is claimed, the supply of medium and long-staple varieties during the current season is made to equal the consumption of these varieties during the 1960-61 season.

Sudan and East African cotton were relatively neglected. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market in Sewri:

Bengal *Deshi* 680; Wagad 880; Hubli Jaydhar 1,110; Gadag Laxmi 1,170. B.P.52 1,335; American one inch Good Middling 1,190; Elpaso 1,590.

Cotton futures in Karachi picked up further strength during the week under review. Good export inquiries from India and moderate domestic mill demand led to an appreciable improvement in values. N.T.R.G. July contract firmed up from Rs. 72 to Rs. 72.65, but receded to close at Rs. 71.80. The January contract improved from Rs. 74.50 to Rs. 75.45. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan prevailing at Karachi: Sind *Deshi* 69; Punjab *Deshi* 64; 4F Punjab Roller 77.50; S.G. 83.50; L.S.S. Punjab Roller 80.00; S.G. 85.; N.T. Roller 83; S.G. 87.

Fully steady conditions prevailed in the Liverpool cotton futures market during the week. Good spinner demand in both spot and futures sections and quicker movement of stocks in the yarn and piecegoods market imparted strength to the market. Both the American and American type contracts improved on good support. The rise in prices would have been more marked but for lower advices from New York. Sudan cotton contracts were quiet and unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 24.00; October 23.80; December 23.90.

American cotton mixed growth contract: July 24.40; October 24.15; December 24.25.

Sudan: July, September, November 29.

New York cotton futures market ruled easy during the week. Futures values receded on sell-

ing prompted by the expectation of larger crop and lower price support during the new season beginning on 1st August. Lower levels attracted support induced by the continued firmness of the spot market. Net change in values was, therefore, negligible.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	12-6-62	5-6-62	29-5-62
New York Spot	35.90	35.90	35.75
July	34.73	34.80	34.73
October	34.54	34 68	34.49
December	34.46	34.57	34.36

GROUNDNUTS MOVE UP

(From Our Own Correspondent)

BOMBAY, 13th *June*

Firm conditions prevailed in the oilseeds market during the week under review, barring castorseeds which lacked support in the absence of overseas enquiries for castor oil. Groundnuts made a strident advance, thanks to larger offtake by *vanaspati* manufacturers and crushers in the wake of reduced offerings, with the coastal trade from Saurashtra remaining suspended owing to rains. Certain parties who were reported to have entered into commitments with the State Trading Corporation were also making purchases. It was stated that the S.T.C., in turn, had entered into deals with parties in the U.K. and Burma for the export of about 10,000 tons of groundnut oil. Linseed ruled fully steady on encouraging advices from sarson markets in North India. The local stocks of ready linseed were also low. There was good support for cottonseeds.

The groundnut September 1962 contract spurted from Rs. 211.25 to Rs. 215, before finishing at Rs. 214.75, with a net gain of Rs. 3.50. July 1962 contract advanced by Rs. 3.37 to Rs. 211.37. Nizam bold put on a rupee to Rs. 45.50. Khandesh quality improved by 75 nP to Rs. 45.75. Oil ex-mill and Railway receipts hardened by 50 nP each to Rs. 19 and Rs. 18.65, respectively. Oil July 1962 contract picked up 35 nP to Rs. 18.15. September contract gained a like amount to Rs. 18.45.

Linseed July 1962 contract hardened by 56 nP to Rs. 39.87; it had touched Rs. 40.06 earlier in the week. September contract closed higher by 37 nP at Rs. 39.87. Bold ready gathered 88 nP to Rs. 39.25. Linseed oil was done at Rs. 14.40, as against Rs. 15.25.

Cottonseeds elicited good support. September 1962 contract spurted by Rs. 3.50 to Rs. 102.50. July contract increased by Rs. 2.50 to Rs. 100.50. Whites were higher by 10 nP at Rs. 19.30. Both non-white and Berar also gained a like amount of Rs. 20.60.

Castorseeds, however, ruled easy. September 1962 contract, which had risen from Rs. 161.75 to Rs. 163.75 in the earlier sessions, gave way subsequently to Rs. 161.25. June 1962 contract declined by 50 nP to Rs. 157.50. Ready Madras dropped by 12 nP to Rs. 31.62. Kanpur was neglected at Rs. 30.50. Oil B.S.S. shed 10 nP to Rs. 12.75 and commercial 5 nP to Rs. 12.15.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 13th June, as compared with those of the two previous weeks:

	13-6-1962	6-6-1962	30-5-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	211.37	208.00	—
July 1962	214.75	211.25	204.62

Niger seed	35.00	99 00	35.00
Kardi seed	25.00	25.50	25.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 280 kilograms, except linseeds for which rates are per 56 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

STAPLE FIBRE YARN PRICES RAISED

(From Our Own Correspondent)

BOMBAY, 13th *June*

This week was notable for some developments of import to the yarn market. The Textile Commissioner was reported to have informed the Surat art silk weaving mills that the revised Export Promotion Scheme for fabrics would be notified early next month and that the Scheme would be enforced from 1st August 1962. Meanwhile, there are rumours that the Continental art silk suppliers have agreed to the Government of India's proposal envisaging the creation of a pool of imported yarn in Bombay for being distributed to manufacturer-exporters under the revised Scheme. A final decision is expected to be taken by these suppliers at their meeting scheduled to be held in Italy on Friday the 15th inst. The prices of yarn made available from out of the proposed pool will be the average of international prices prevailing during the preceding three months or so. Two other notable developments pertain to the upward revision in the prices of staple fibre yarn effected by the Indian Cotton Mills Federation and the tax concessions for cotton yarn and handloom-powerloom sector announced by the Union Finance Minister in Parliament yesterday (Tuesday).

In view of the increase in excise duty on staple fibre from 75 nP to Re. 1 per kg. under the Budget proposals of 1962-63, the Committee of the Indian Cotton Mills Federation, in consultation with the Textile Commissioner, has revised the schedule of ceiling prices for staple fibre yarn as follows:

(In Rs. per bundle of 10 lbs. hank yarn)

Counts	*Ex-mill prices* Revised	Old	*Differentials* Doubled yarn	Yarns on cones
20s ...	29.75	28.55	3.10	2.85
30s ...	32.25	31.05	3.90	3.20
40s ...	35.25	34.05	4.50	3.50
44s ...	36.45	—	—	—

Note: The differentials for intermediate goods, doubled yarns and yarn on cones are the same as those hitherto in force.

The tax concessions announced by the Finance Minister are given below:

Cotton yarns: All single cotton yarns whether bleached or grey as well as unprocessed (grey) folded yarns upto 40 counts, if issued in hanks, are totally exempted from excise duty.

Powerlooms: The units having between 50 and 300 looms will be allowed to pay excise duty at half the standard rates for the period up to 28th February 1963 and at three-fourths of standard rate during the year ending 29th February 1964. Corresponding marginal relief in the rates of compounding levy for units having 5 to 49 looms is also being simultaneously proposed.

Processed cloth: The effective rates of excise duty on cloth produced by handlooms and/or powerlooms—the major portion of the cloth is taken to independent operators for processing—is to be reduced to four-fifths of the standard rate which itself has been reduced from 25 nP to 10 nP per square metre in respect of coarse and medium B categories (average count of below 26s) and from 25 nP to 15 nP in the case of medium A, fine and superfine categories.

Processing units: Independent processing units which were in existence on 24th April 1962 but were not required to take out a Central excise licence, because they were confining their activities solely to the processing of handloom or exempted powerloom fabrics, will be given the benefit of exemption for the first 20,000 square metres of cloth bleached, dyed or printed by them in any month. This is in partial relaxation of the condition which at present procluded them from availing of this concession on the ground that they had not been licensed before 23rd April 1962.

The trend of the yarn market during the week was distinctly bullish. Art silk yarns registered handsome gains, owing to persistent buying support and scarcity of supplies. Staple fibre yarns were quoted higher, reflecting the rise in ex-mill prices. Cotton yarns tended to move up on hopes of enlarged demand from consuming centres, in view of the latest concessions in excise duty.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	13-6-1962	6-6-1962
	Rs	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
June	4,005.00	3,890.00

PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, 13th *June*

Malabar black pepper moved within a narrow range during the fortnight, the highest and the lowest for garbled being Rs. 320 and Rs. 315, respectively.

In view of the proximity of the autumn season in the U.S., New York dealers whose pipelines are barely filled are anxious buyers, but, as long as the going is good, they prefer buying without exciting the origins. Spot in New York is moving between $0.37 and $0.38½. Singapore remained fairly steady at Str.$120 for black and Str.$152½ for white, with little business. The present attitude of withholding sales by the semi-State Trading Organisation, which is holding the majority of the stock of Lampong, has become an enigma to most Chinese dealers in Singapore. As such, they

WELLMAN INCANDESCENT

WELLMAN INCANDESCENT FORM AN INDIAN COMPANY

The Wellman Smith Owen Engineering Corporation Ltd. and The Incandescent Heat Company Ltd. have formed a company in India. The new organisation will be known as

WELLMAN INCANDESCENT INDIA LTD.

This new step has been taken by the Wellman Incandescent combine for the purpose of manufacturing in India heavy industrial equipment including Steelworks Plant, Furnaces and Ovens, Cranes and other Mechanical Handling Equipment which have hitherto been imported into India. Thus the formation of the new company implies not only a saving in valuable foreign exchange but also the birth of a new heavy industry in the country.

MR. DESAI'S SALVAGE OPERATIONS

From Our Special Correspondent

NEW DELHI, 12th *June*

DELHI LETTER

WHEN Mr. Morarji Desai, Finance Minister, made the statement in Parliament last week that "the Plan is not slowing down," it was only natural that several M.Ps should sneer at it and point out that the appointment of Mr. T. T. Krishnamachari as Minister without portfolio was specifically for overloading measures to rectify the lack of coordinated direction which blocked progress in several important sectors of the economy. Even as Mr. Desai announced the import restrictions to dilute the effects of temporary foreign exchange insolvency, he added a warning that the hungry days would be with us for a long time to come. He declared: "The social discipline and the solidarity that we need today to put our foreign exchange position in order will be needed in an increasing measure in the years to come, if we have to carry forward our plans of development in a steadfast and confident manner." Platitudinously, he added: "And there comes a point in the history of every nation when it must demonstrate that it is prepared to take whatever action that may be necessary to pursue the paramount objectives so vital to its ends of dignity and purpose."

Coming down from the plane of platitudes closer to the realities of the Plan implementation, the Finance Minister said: "The economy will gain in strength, if the projects for which foreign exchange has already been assured are completed as soon as possible.... In respect of the remaining projects also, we should go ahead with all the preparatory work, so that they could be speedily executed as soon as foreign exchange has been arranged." Mr. Desai did not hide the disappointment over the failure of the Aid-India Consortium to deliver more assistance in India's time of need. To quote him: "We have been less successful in obtaining and utilising external assistance required for financing imports necessary for our developing economy." The doses of foreign aid needed now are far larger than the friendly foreign nations' injections which salvaged the second Plan and present internal endeavours are only like scrounging for the crumbs.

Plugging Loopholes

There are doubts on the extent of the import restrictions the economy can take without endangering further its emaciated condition. The private sector's growth at rates faster than originally envisaged offset the stunting of the public sector in the last Plan, but drastic import inhibitions may retard such resilience in the current Plan. Mr. Morarji Desai promised to try to plug the many loopholes through which there is a drain of foreign exchange. This means regulations restricting travel by Indians abroad and intensification of measures against smuggling. One estimate of the drain of foreign exchange through illegal channels is Rs. 50 crores a year and 40 per cent of it is said to be through the Pan-Malayan region.

Singapore may not be the centre of gold smuggling into India, but it obviously has become a major clearing house for illegal payments. It is said that the legal remittances from the Pan-Malayan region into India fell to a trickle of Rs. 3 crores last year from about Rs. 20 crores some years ago. The agents of the smugglers and others have succeeded in persuading Indians in Singapore to switch to black market channels for sending money home by offering the attraction of a 50 per cent gain in the exchange rate. To allay the fear of the remitter over risks in illegal despatch, the agent often first makes the payment to the relative in India and collects the Straits dollars from the remitter later. In the corridors of Connaught Place or in the shops in Janpath and even in the tourist taxi stands, the foreign tourist visiting Delhi can also without much ado get six rupees to the U.S. dollar.

An interesting side effect of the new fiat on foreign travel was the rush last week-end for air bookings. The sale of air tickets in Delhi last Saturday is estimated in one report at Rs. 14 lakhs, about ten times the normal sales. It seems that travel agents made bookings with pre-dating, to circumvent temporarily the Finance Ministry ban on sale of tickets without a Reserve Bank clearance on grant of foreign exchange for travel.

After cutting the frills of foreign exchange wastage, the Finance Minister prepared himself for more strenuous salvage operations. After Mr. Desai told the British Government that he would be unable to visit London in June, the plans for the visit of Mr. Duncan Sandys to India and Pakistan were announced. During his stay in New Delhi from 15th to 19th June, Mr. Sandys will meet the Prime Minister and the Finance Minister and give them a personal explanation of the British surrender at Brussels. He is also reputed to come briefed for a discussion of a variety of other subjects covering a whole range of Indo-British relations and the Indian plans for the purchase of Soviet MIG 21 fighter planes. It is already clear that Delhi does not consider the British memo to the European Six as a correct basis for Britain's negotiations to bargain away the Commonwealth preferences. India suggests that the Indian memorandum, outlining ways for greater entry of Indian goods into Europe, should form the basis for discussions to decide on India's future trade relations with Europe plus Britain.

Mr. Desai has decided to go to Geneva on 9th July to attend a meeting of the U.N. Economic and Social Council and then visit Paris, Bonn and London to meet General de Gaulle, Dr. Erhard and Mr. Macmillan. The trends of thinking in Germany on assistance to India have at no time been generous, and there has been a further stiffening recently. Mr. Morarji Desai's efforts next month may largely be confined to persuading Western friends to pump in immediately some interim aid to help overcome India's exchange crisis while the larger perspectives of assistance remain to be discussed anew by the Aid-India Consortium.

Export Efforts

Mr. Desai's statement contained an almost casual reference to the need to increase exports, and Mr. Manubhai Shah, Minister for International Trade, intervening in the Lok Sabha debate on budget demands for the Commerce and Industry Ministry, outlined three of the various measures being considered by the Government. A study group is working out proposals for the provision of working capital on a larger scale to exporters; the Government is planning to introduce a scheme of short-term deferred payments to expand Indian exports to developing countries in Africa; and talks are taking place with some foreign banks to start a revolving fund of Rs. 10 crores for short-term credit to exporters. Separate wings in the Ministries of Agriculture, Railway, Mines and Fuel and Steel and Heavy Industries will help export promotion.

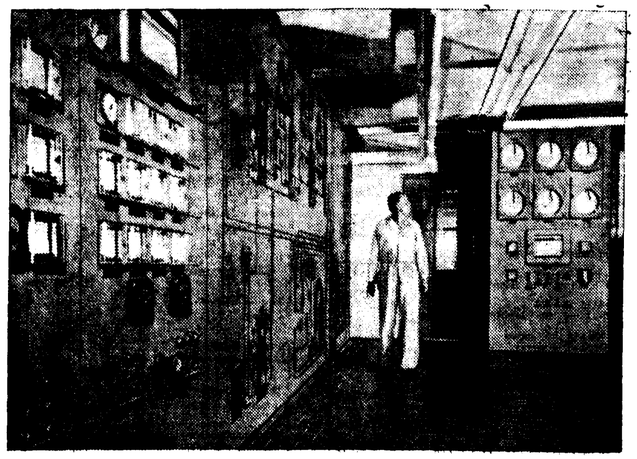
One of the new-fangled decorations is a Director of Incentives. The idea for the award of *Vanijya Nipuna* titles has been laughed out, but details of incentives to be granted to exporters have yet to be formulated. For the present, the Director of Incentives will operate more as a central complaints officer, to whom exporters can go to seek help in solving their difficulties. More State trading wings are on the anvil and one M.P. commented that these will perhaps end up by having a central co-ordinator for all State trading!

(Concluded from previous page)

are offering sparingly to New York. As a consequence, sooner than later, New York dealers shall have to look to India for their autumn requirements which average 1,500 tons per month.

Ungarbled moved between Rs. 309.50 and Rs. 305.50 and garbled between Rs. 320 and Rs. 315. July delivery shuttled between Rs. 328 and Rs. 334. Calicut is quoting Rs. 300.

The attitude of Indian growers in releasing stocks whenever there is demand is reponsible for the present steady to quiet tendency of the market. Inland demand is likely to pick up, in view of the higher prices now demanded by importers for the imported spices because of the present drastic cut in imports.



Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

MAHARASHTRA'S FINANCES BUOYANT

(*Concluded from page 1064*)

spirit, from 1 nP to 3 nP per litre of vaporising oil, from 2 nP to 5 nP per litre of high speed diesel oil and from 9 nP to 11 nP of ordinary petrol) in the motor spirit taxation rates alone are expected to yield Rs. 89 lakhs in the rest of the budget year while the increase (by Rs. 12 per seat in excess of four seats in the motor vehicles (stage carriages) tax will bring in Rs. 16 lakhs. But a saving feature of these additional tax proposals is that as much as Rs. 61 lakhs out of their aggregate yield of Rs. 105 lakhs (Rs. 89 lakhs *plus* Rs. 16 lakhs) will get transferred to the State Road Fund. No such saving merit, however, is found in the new proposal for a tax on carriage of goods by road. This tax, which will be based on the freight actually charged by public carriers (lorries), can be levied at a rate upto 5 per cent, although the rate proposed for the present is only 3 per cent. Even at the rate of 3 per cent the tax is expected to yield Rs. 60 lakhs in the rest of the budget year. This is bound to operate as an onerous levy, on top of the usual taxes on motor spirit and motor vehicles, on lorry transport which has the potentiality to ease the transport situation. The Maharashtra Finance Minister has sought to justify it on the ground that the Railways have recently increased their goods tariffs by 10 per cent on the average and that the erstwhile balance between the Railway tariff and the road transport rates can thereby be restored. The State Government's concern with the balance between the freight rates charged by railways and lorries is difficult to understand. It is the State Government's responsibility to encourage and develop road transport. Such encouragement is doubly more necessary at the present time when road transport is being called upon to supplement, on a bigger scale, the effort of the railways. Second thoughts should, therefore, be brought to bear on the new tax proposals which have the effect of increasing the already heavy incidence of taxes on road transport.

The other tax proposals are far less controversial, and no serious objection can, therefore, be taken to them. For instance, the increases in sales tax on items like foam rubber articles, vacuum flasks, certain classes of confectionery, tinned provisions, toilet articles, ladies' handbags, suit cases, domestic electrical appliances, perfumes and cosmetics, articles of ivory, sandalwood and marble are certainly equitable, for these are articles which could be regarded as near-luxuries. The slight increases proposed in the rates of tax applicable to raw cotton, cotton yarn, paints and varnishes, lacquers, floor tiles and Mangalore tiles are also not likely to have any appreciable impact on the sale prices of the final products. As most of the daily necessaries of life like cereals and pulses, salt, bread, chillies, fresh vegetables and fruit, firewood and charcoal continue to be exempted from sales tax, the pattern of this tax is agreeably becoming one of adjustment to the capacity of the individual to pay. Being the mainstay of the taxation structure in the State, the sales tax has also necessarily to meet a part of the requirement for additional resources. It is, therefore, good to see that the proposed measures in this field will bring in Rs. 127 lakhs during the current year.

The proposed flat surcharge of 10 per cent on the amount of stamp duty payable at the present rates on certain important classes of documents does not seem to be excessive, for it is expected to yield only Rs. 30 lakhs in the current year. The increases proposed in the entertainment duty rates pertaining to racecourse and cinema tickets will bring in Rs. 57 lakhs. The readjustments proposed in the electricity tariff so as to increase the present concessional rates charged for the use of power other than for lights and fans in residential and commercial premises will make for a more rational structure of electricity duties. As the existing concessional rates applicable to essential uses of power in industry and agriculture will continue substantially unchanged, the proposed readjustments, which will bring in Rs. 42 lakhs, may be accepted without difficulty.

As for the proposed education cess which is expected to get Rs. 1 crore from the rural areas and an equal amount from the urban areas, it has every justification in the context of the general upsurge of interest in education and the rather slow increase in educational facilities. If anything, it can be made to yield doubly more in the rural areas where the incidence of land revenue is relatively low in the present state of agricultural prices. As irrigated lands constitute a relatively smaller proportion of cultivated area in Maharashtra than in several other States and as even foodgrains fetch better money returns now, the education cess can be usefully applied to all lands instead of being limited, as now proposed, principally to irrigated lands growing cash crops. Only the rate of cess may then have to be less than in the case of irrigated lands growing cash crops. It would be eminently reasonable to raise at least Rs. 2 crores from agricultural lands through the education cess, thereby making up, partly at least, for the present low, and virtually static, yield of land revenue. That, incidentally, would also enable the withdrawal of the additional tax proposals pertaining to road transport.

MARKET GOSSIP

(*Concluded from page 1059*)

production will be achieved. In terms of economic effect, this means that wage increases, as they are now effected by collective bargaining, would indirectly benefit the individual company and the economy as a whole, as they do not involve any price increases. The investive wage has been suggested by the ruling party, namely, the Christian Democratic Party, and the workers led by this organisation are reported to be in favour of this social innovation. The proposal is as yet in a nebulous stage. The Federal Economics Minister, Dr. Ludwig Erhard, and the Minister for Labour, Prof. Theodor Blank, are said to be studying the scheme. They are expected to submit suitable proposals to Parliament for legislation.

Critics of investive wage, among whom there are both employers and trade union leaders, however, point out that investive wage scheme has many disadvantages. They are: (1) it is a statutory form of compulsory savings which curtails the freedom of the individuals; (2) it involves compulsory grant by employers year after year of ever greater powers to workers in the affairs of the Company, if the objective of co-ownership or participation is to be achieved; (3) employees will lose their freedom to dispose of their wages as they want; and (4) there is also the risk of the employees losing their savings in case of the failure of the Company against which they cannot protect themselves as effectively as the entrepreneur, for the decision on the form of investment of savings would not be left to the workers.

It cannot be said at present whether the proposal will find its way to the statute book. But it is certain that public discussion and debates about its merits and demerits will continue for some time. Independent observers, who have been watching the trends in W. German social and economic thinking, feel that the proposal fits into the pattern of the new economic and political concept of the Bonn Government, which has, of late, endeavoured hard to fight both the emergence of an excessive boom and the exaggerated demands of employers and workers alike. Its object in doing so was to follow a neutral course that would be beneficial to the entire nation.

PLANTING

(*Concluded from page 1076*)

to be of vital importance to the industry, and it is clear that its economy will, in years to come, depend more and more on this market's development."

The conveyance of the 1961 crop to Calcutta was effected without any major hitch. Nearly 575,000 more chests were brought to Calcutta. The public warehouse accommodation in the Port was increased from 550,000 chests to 620,000 chests and private warehouse capacity from 450,000 chests to 500,000 chests. Owing to this additional space and also due to the fact that there was no delay in deliveries, there was no congestion at the Port at any time. Movement of teas through the Port was smooth. If the third Plan production target of 408 million kg. were to be hit successfully, nearly 900,000 chests would need to be brought to Calcutta from the tea districts of North India in 1965 over and above the 5.0 million chests transported in 1961. Pointing to this aspect, Messrs. Thomas and Company say:

"It is hoped that the authorities will not allow this important aspect to be overlooked and that steps will be taken to ensure that the existing transport facilities are extended to keep pace with the expanding needs of the industry. It may be mentioned, in this context, that the new bridge at Pandu over the Brahmaputra river will prove to be a great boon to the industry when it is completed by speeding up the carriage of tea to Calcutta."

Notice

SELECTED SATGRAM COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventeenth Annual General Meeting of the Shareholders of the Selected Satgram Collieries Limited will be held on Friday, the 29th June, 1962, at 4 p.m., at its registered office, F-2 Gillander House, 8, Netaji Subhas Road, Calcutta-1, to transact the following business:—

1. To receive, consider and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December, 1961.
2. To declare dividends.
3. To elect a Director in place of Shri D. N. Mehta, who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Shri C. M. Dave, who retires by rotation and is eligible for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

To consider, and if thought fit, to pass the following resolutions, with or without modification, as Ordinary and Special Resolutions—

ORDINARY RESOLUTION

6. "RESOLVED that Shri Mathuradas M. Parekh whose term of office expires in pursuance of Section 260 of the Companies Act, 1956, be and he is hereby appointed a Director of the Company."
7. "RESOLVED that Shri Baidyanath Banerjee whose term of office expires in pursuance of Section 260 of the Companies Act, 1956 be and he is hereby appointed a Director of the Company."
8. "RESOLVED that the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307, 356-360, 362, 370, 372 and Schedule VIII to the Act be kept open for such inspection by the persons entitled thereto to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company between the hours of 10 a.m. to 1 p.m. on any working day except when the said Registers and Books are closed or the said documents are not available for inspection under the provisions of the Companies Act, 1956 or of the Articles of Association of the Company, provided however that the register required to be maintained under Section 307 of the Act shall be open for inspection of the persons entitled thereto on the days and at the times mentioned above during the period prescribed by sub-section 5(*a*) of Section 307."

SPECIAL RESOLUTION

9. "RESOLVED that the Company be and is hereby authorised to increase the monthly office rent of Rs. 200 to Rs. 1,500 and that the said sum of Rs. 1,500 per month be paid from the 1st January 1962 to the Managing Agents of the Company by way of reimbursement for the office accommodation provided by them to the Company at Calcutta."
10. "RESOLVED that the Company hereby approves and confirms the arrangement being made by the Company with its Managing Agents for the purpose of its business to use and occupy the office premises rented by the Managing Agents at Nagpur and in consideration of such use and occupation pay half of the unapportioned expenses to the Managing Agents, Messrs. S. D. Shethia & Co., Private Ltd. from the 1st January 1962."

The Transfer Books of the Company will be closed from Thursday, the 14th June, 1962 to Friday, the 29th June, 1962, both days inclusive.

By Order of the Board,
For and on behalf of
SELECTED SATGRAM COLLIERIES LIMITED,
For S. D. SHETHIA & Co. PRIVATE LTD.,
M. D. SHETHIA,
Managing Director,
Managing Agents.

CALCUTTA:
25th May, 1962.

Notes:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(*b*) The Dividend, when declared, will be made payable at the Bank of Baroda Ltd. or said after 16th July, 1962 to those shareholders whose names stand on the Register on the 13th June, 1962.

(*c*) Explanatory statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the shareholders of the Company together with this notice.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2671 BOMBAY, 23rd JUNE 1962 PRICE Rs. 2

INDIA AND EUROPEAN COMMON MARKET

THERE seems to be an impression in some quarters that the Government of India has been complacent about the need for safeguarding India's interests against the adverse effects of Britain's entry into the European Common Market. Another impression is that there is complete agreement of minds between India and Britain on what the latter should and could do to protect the trade of the former once it becomes a member of the Common Market. Neither of these impressions is substantially correct. It is true that the Government of India did not bother very much to study the implications of the Common Market when it was first formed. But that was understandable, for (*a*) India's exports to the six Common Market countries were not appreciable, (*b*) no new handicaps were involved, and (*c*) the promoters of the customs union had reiterated on more than one occasion that they would not do anything that was contrary to their obligations under the G.A.T.T. Once Britain decided to throw in its lot with the Common Market, the Government began to make serious attempts to study the implications to India's export trade and very soon appointed a special officer of high calibre, with the status of an ambassador, to keep a close watch over the developments, to advise the Government and to represent India in the countries concerned. The Government's only fault was that it did not take appropriate steps to educate public opinion in this country about the significance of what was happening in Europe.

Some say that the Government of India should have represented its case directly to the six members of the Common Market, both collectively and individually, instead of solely depending upon the U.K. Government for protecting this country's interest. This argument, evidently based on hindsight, is also not wholly tenable. Apart from the fact that India's Ambassador to the European Economic Community has been functioning at Brussels for six months, as against the seven months during which Britain has been actively negotiating with the Common Market countries, the British Government has repeatedly stated in no unmistakable terms that it would do everything possible to safeguard the interests of Commonwealth members and that, if a choice had to be made between Commonwealth and Common Market, it would certainly stick to the former. Further, till very recently, none knew the extent to which Britain was prepared to go in order to be a member of the Common Market. It is only in the course of the last three weeks or so that this country got an idea in this respect. The British proposals to the Common Market, outlining the handicaps it will impose on the exports of this sub-continent (including Ceylon) to the British market as part of the price for Common Market membership, came to light only early this month. And they were promptly and lucidly opposed by Mr. K. B. Lall, the Indian representative in Europe. It was highly improper for the British Government to have made those proposals to the Common Market without prior consultation with the Government of India.

The actions and observations of British Ministers during the past one month or so clearly suggest that there is considerable difference between the British proposals and India's minimum needs and that it is no use depending on Britain alone for safeguarding India's interests. Britain is no longer keen on preserving the advantages gained by India, Pakistan and Ceylon under the system of Commonwealth preferences. It would surely not mind effecting some compromises on them, if that would please the Common Market countries. Apparently, Britain is more anxious to join the Common Market than its earlier statements led one to believe. It is not suggested that there are no redeeming features at all in the British Government's suggestions for protecting India's interests. Only, they do not go far enough. While exports of tea and certain other agricultural commodities may not suffer under the British Plan, such simple manufactured goods as cotton textiles, jute goods, and light engineering products will be faced with sizable tariffs in the British market the moment that country becomes a member of the E.C.M. What is more, these tariffs will grow with the passage of time, as Britain will have to adopt the uniform external tariffs prescribed by the E.C.M. It would appear from the statement of Mr. Morarji Desai in the Lok Sabha on Thursday this week that his talks with Mr. Duncan Sandys, the British Minister for Commonwealth Relations, have not been quite fruitful and that India will have to strive hard through direct talks with all the members of the E.C.M., as well as Britain, to get the proposed handicaps out of its way or substantially reduced. It is a good thing, therefore, that Mr. Morarji Desai himself is proceeding to Western Europe on 1st July to discuss the question with all the Governments concerned.

The comprehensive memorandum, which the Government of India has already submitted to every one of the six members of the E.C.M. and a copy of which was presented to the Lok Sabha last week, is a well-reasoned document, setting out India's case. It is a plea for fair play and justice and not a protest. The Government has persuasively argued the need for India earning more foreign exchange through exports, brought out the crucial importance of British and Continental markets to Indian goods, and emphasised the point that its suggestions are quite in keeping with the spirit and letter of G.A.T.T. It has tried to disabuse the misgiving sedulously sought to be created by the British textile interests that imports of Indian industrial products would lead to a disruption of domestic markets and cause unemployment in the European countries. In any case, it has given the assurance that, "if any difficulties of a serious nature were to arise," it "would be prepared to co-operate with the countries concerned in evolving suitable arrangements to deal with them." In fine, anyone who studies that memorandum dispassionately will find that the Government is fully aware of the implications of the momentous move for integration in Western Europe, and can be depended upon to protect the country's interests to the extent humanly possible. The Government of India has made it clear beyond doubt that it is not opposed to Britain joining the Common Market even though it involves the risk of weakening the Commonwealth ties. It has not raised any political issues or looked at the development from the political angle as is done by the U.S. and certain others. It is concerned with only the economic damages which this country will suffer, or, in other words, with bread and butter.

As a result of Britain's move to join the Common Market, "India is confronted," to quote from the Government's memorandum to the E.C.M. countries, "with the prospect of a high tariff wall against almost the whole range of its products in the market of its major trading partner." Such a situation did not arise when the E.C.M. was first brought into existence, because the trading problems of a considerable number of countries in varying constitutional relationships with the member-States of the Community were solved without damage to the interests of the countries concerned and without a tariff being imposed on trade which had not been subject to tariff before. It would not have cropped up now, if similar treatment had been extended to the Commonwealth countries as a whole. But the "Six" are not prepared to do so, under the specious argument that their ultimate aim is a political union of European countries that would stand as a bulwark against Communism. India has no objection to their desire to remain as an exclusive European club and does not in any case wish to get involved in the cold-war politics. It only wants to make sure that its efforts to achieve viability on the external account are not undermined by Britain's entry into the Common Market. The safeguards that India seeks are not extravagant; they are nothing more than those that are provided for in paragraphs 4, 5 and 9 of Article XXIV of G.A.T.T. If the European countries are far-sighted enough to realise that India, too, is aiming at preserving democracy as is understood and practised by them, it will not be difficult for them to appreciate, as well as concede, this country's quite reasonable stand.

DISARMAMENT AND DEVELOPING COUNTRIES

LET us assume, for the nonce, that the Great Powers who are members of the 18-nation Disarmament Committee will ultimately summon the wisdom to agree, in terms of the U.N. General Assembly Resolution of 1959, on "measures leading towards the goal of general and complete disarmament under effective international control." What a tremendous psychological change will then come over the world scene! The change will be no other than a sense of relief to mankind which has been subjected to a threat of mass destruction. And the new consciousness that the resources which have made this threat possible will be switched over to the tasks of social and economic progress will add further to that sense of relief. One has only to recall here the generally accepted estimate that the world is spending roughly 120 billion U.S. dollars annually on military account at the present time and maintaining 20 million persons in its armed forces. The figure of $120 billion, incidentally, is equivalent to about 8-9 per cent of the world's annual output of all goods and services and to about one-half of the total resources set aside

each year for gross capital formation throughout the world. And it is close to the value of world exports of all goods and commodities in a year and is nearly of the same order of magnitude as the entire national income of all the underdeveloped countries. Since expenditure on alternate security arrangements under the auspices of the United Nations is bound to be small in relation to current expenditure, the above figure provides an approximate measure of the volume of resources that would be liberated by disarmament for peaceful purposes, such as for raising standards of personal consumption, expanding or modernising productive capacity through investment in new plant and equipment, promoting housing construction, urban renewal and rural development, and improving and expanding facilities for education, health, welfare, social security, cultural development and scientific research.

Such a picture of freed resources in global terms conceals, however, the fact of wide disparity between advanced countries and underdeveloped countries. As nearly 85 per cent of the world's aggregate annual military outlay ($120 billion) is accounted for by Canada, West Germany, France, Communist China, Russia, Britain and the United States, the great bulk of the resources released by disarmament would be concentrated in these seven countries. The total military expenditure in all the underdeveloped countries, on the other hand, amounts to hardly a tenth of that of the industrial countries in the free world. The resources that would be released by disarmament in the underdeveloped countries would thus be relatively small. But a substantial part of these freed resources would be represented by scarce foreign exchange, for these underdeveloped countries now rely mostly upon imports for their supplies of military goods and equipment. If, besides this saving in foreign exchange, larger aid in the form of both capital equipment and technical assistance were also available to the underdeveloped countries from the industrially advanced ones, the resources freed by disarmament would accelerate economic development in the poorer parts of the world.

It is in this context that the chapter devoted to "the effects of disarmament on the volume and framework of aid for economic development" in the U.N. Consultative Group's *Report on the Economic and Social Consequences of Disarmament* acquires particular significance. That an acceleration of the rate of growth of underdeveloped countries can be brought about by the resources released by disarmament is, of course, clear. But the question is whether these countries would be able to absorb a considerably larger flow of productive investment. In the considered opinion of the Group, they can, provided the necessary national development programmes and social and institutional reforms are effectively realised. The consequent effect upon the rate of growth is illustrated by the Group through a hypothetical example. It is assumed here that the underdeveloped countries would be devoting half of their own resources liberated by disarmament to investment in productive capacity and that, at the same time, the rate of total capital flow from the more advanced countries (both private enterprise and centrally planned) would rise to around $15 billion annually, or somewhat more than one per cent of their aggregate national product. This, according to the Group, is a modest increase, in view of the 8 or 9 per cent they (the advanced countries) now devote to military purposes. Under these conditions, the less advanced countries might be expected to increase their annual rate of growth of national product from, say, 3 per cent to 5 per cent. This could mean a trebling of the rate of increase in *per capita* income from one per cent to 3 per cent on the assumption of an annual rate of population growth of around 2 per cent.

Even if aid on the scale visualised in the *example given above is possible, there is still* the question whether *disarmament would* release in the advanced countries adequate quantities of the particular resources required by the underdeveloped countries. The U.N. Group has answered the question as follows:

"In the longer run, productive capacities (in the advanced countries) can be adapted to any changed patterns of demand and, provided that the needs of underdeveloped countries are known in sufficient detail, no serious problems should arise in matching resources to uses. Even in the short run, however, it seems probable that a significantly large proportion of the resources absorbed for military use would indeed prove to be of a type useful for investment in underdeveloped countries. An important proportion of military expenditure absorbs the output of heavy industry and of the engineering and construction industries. The output of these industrial sectors could undoubtedly make a valuable contribution to the industrialisation of the less developed areas and to their accumulation of social capital. Transportation and communication equipment, for example, is an important component of military expenditure and is urgently required by underdeveloped countries... Disarmament would also release personnel, such as scientific research workers and engineers, who could be utilised for other purposes. In the event of disarmament, it should prove possible for the industrialised countries to provide greater technical assistance (to underdeveloped countries).... Furthermore, disarmament would free from military service in both the more advanced and the less developed countries large groups of young people. Past experience in utilising their goodwill and enthusiasm in a number of countries indicates that, when completely freed from military preoccupations, many of them could make an important contribution to economic and social development in underdeveloped areas."

The developing countries cannot, of course, take it for granted that a large part of the resources freed by disarmament in the more advanced countries would be automatically available for aid purposes. There are, it must be remembered, urgently competing claims on such freed resources in the advanced countries themselves. The United States, for instance, can absorb much or most of any resources released by disarmament in increased domestic personal consumption, in expansion of industrial capacities as a firm basis for further increases in consumption and in social investment, that is, investment in education, highways, urban renewal, water-supply and conservation, health and hospitals, and research and development. This, incidentally, gives the lie to the communist propaganda theme that "capitalist countries cannot afford to disarm, as their economies are propped up by armament industries." Such difficulties as the advanced countries are likely to have in the wake of disarmament will be inevitable in the brief period of transition, for "it takes time to turn swords into ploughshares or to make an office clerk or factory worker out of a soldier." Even so, it is claimed that the productive capacities released from military use would be immediately adaptable to the increased output of consumer durables and industrial equipment. Their adaptation to the production of houses, food, clothing or educational facilities alone may take a little more time. Be that as it may, there can be no gainsaying the serious possibility that the financial resources saved through disarmament in the advanced countries might be more or less rapidly absorbed by purely national aims. But the rich countries in the northern part of the globe cannot, in fairness, go on adding to their wealth and raising their living standards, while the poor countries in the southern part of the globe continue to suffer from abysmal ignorance and poverty. Surely, the haves among the nations have to think of the have-nots also and take appropriate measures to bridge the ever-widening gap between them. The U.N. Group has, therefore, done well to emphasise that "an appropriate proportion of these resources released by disarmament should be allocated to international aid in its various forms simultaneously with their use for domestic purposes." That the resources so channelled to the developing countries should largely take the form of grants or "soft" loans is the U.N. Group's view. This approach needs no elaborate justification in the context of the balance of payments difficulties which make matters worse for the underdeveloped countries with their heavy accumulated indebtedness. If only disarmament comes ... but, then, why count the chickens before they are hatched?

Military Expenditure in Selected Countries

Country	Military Budget Expenditure (Average 1957-59)	Military Budget Expenditure as percentage of Gross Domestic Product (Average 1957-59)	Military Budget Expenditure as percentage of Gross Domestic Fixed Capital Formation (Average 1957-59)
I. *Industrial Private Enterprise Countries:*			
Canada (million dollars)	1,533	4.6	18.4

RAILWAY ACCIDENTS

THE two-hour debate in the Lok Sabha this week on railway accidents was a sequel to the four recent accidents, including the rather serious one near Hubli to the Poona-Bangalore Express. It has served to highlight the major causes for the recurrence of such accidents. The first and foremost cause is, of course, the negligence of railwaymen, for the Railway Ministry's own analysis of the causes of accidents in recent years has established that disregard of rudimentary precautions by staff has been responsible for a majority of accidents. That this human factor of carelessness and inefficiency is probably in operation to a greater extent than ever before could be inferred from Mr. Frank Anthony's speech in the Lok Sabha debate. If his allegations are to be believed, the recent policy of the railway authorities to promote men according to a quota reserved for the Scheduled Castes, even though some of them "are hopelessly inexperienced and unqualified," is impairing morale and efficiency. There is also the increasing lack of a sense of responsibility among the Class IV staff. Human lapses apart, operational efficiency is impaired because loco drivers have to take out defective engines in several cases. Presumably these allegations will also be examined by the Kunzru Committee which is now inquiring into the causes of railway accidents, with a view to recommending measures for reducing their number and frequency.

This Committee, which has been invested with wide powers to go into every question relating to accidents, may also be expected to examine how far mechanical failures and track failures are responsible for them. An allegation made by Mr. Nath Pai, another member of the Lok Sabha, in this connection is that loco drivers have to run "worn-out engines on weakened tracks supported by rotting sleepers." The Railway Minister, Mr. Swaran Singh, has himself admitted that there is a heavy backlog of track renewals and sleeper replacements and that the situation pertaining to track maintenance is not what he would like it to be. It may be relevant to recall here that, in the second Plan period, only 9,959 kilometres of rails and 11,364 kilometres of sleepers were actually renewed at an aggregate cost of about Rs. 189 crores, as against the planned target of 12,875 kilometres of rail renewals and of the same distance of sleeper renewals. As on 31st March 1961, the arrears of track and rail renewals amounted to 8,470 kilometres and those of sleeper renewals to 2,165 kilometres. The exact position in respect of bridge maintenance is not quite clear. This question, which is related to track maintenance and renewals, calls for serious study, as also the condition of railway workshops which repair the locomotives. Since the Railway Minister has ruled out the need for two separate expert committees covering tracks and bridges, and workshops and locomotives, the responsibility of the Kunzru Committee to examine these aspects is all the more heavy.

MARKET GOSSIP

India Gets U.S. Sugar Quota

SOMETHING is better than nothing. India has secured, along with fourteen other countries, a permanent quota for sugar in the U.S. market for the first time under the Sugar Bill as approved by the U.S. House of Representatives on Tuesday this week. The quota fixed is no doubt very small, a bare 30,000 tons annually. But India will also get, in addition, an *ad hoc* allocation of 100,000 tons from out of the "Cuban quota" of 2.58 million tons reserved for reassignment, if there were to be a change of Government in that country. In effect, this allocation, too, may be regarded as a permanent quota, because the prospects of Cuba throwing off its Communist yoke and returning to the family of free American nations in the foreseeable future are slender. In other words, the total quantity of sugar that India can export to the U.S. every year will be 130,000 tons, which represents about 5.0 per cent of the current rate of output (white sugar only).

India has reason to feel gratified not merely at the grant of a U.S. sugar quota but also at the rejection, by the House of Representatives, of the Administration's request to eliminate the premium of about two cents per lb. (over the prevailing world prices) that the U.S. pays to overseas sugar producers. Thus, for every ton of sugar shipped to the U.S., the price realised will be approximately Rs. 543, as against Rs. 330 per ton on sugar exported to other markets. Even after obtaining such a higher price, the loss on exports to the U.S. will, of course, be quite considerable, say, about Rs. 250 per ton. It must, however, be admitted that, as against this loss, there is the vital consideration of earning the foreign exchange so urgently needed, not to speak of relief, however slight, from the pressure of heavy stocks of sugar. Taking the average price of Rs. 543 per ton, the total foreign exchange that the country will earn by selling 130,000 tons of sugar annually to the U.S. comes to more than Rs. 7.05 crores, a tidy sum, indeed, whereas the loss incurred works out to Rs. 3.25 crores. While welcoming this U.S. help to India, it is necessary to add that the present allocation is smaller than the quantity bought by it last year, when it took some 175,000 tons of sugar. Considerations of consistency alone demand that the U.S. should have allotted a total quota that would have compared favourably with that of last year.

The fourteen other countries which will also receive permanent U.S. quota are Brazil (190,000 tons), British West Indies (100,000 tons), Australia (50,000 tons), French West Indies (40,000 tons), Colombia (35,000 tons), Ecuador (30,000 tons), Guatemala, Argentina and South Africa (20,000 tons each), El Salvador, Paraguay, British Honduras, Fiji and Mauritius (10,000 tons each). Receiving a temporary share of Cuba's quota under the legislation will be, besides India, the Philippines, Peru, Dominican Republic, Mexico, Brazil and British West Indies (150,000 tons each), Australia, Taiwan, South Africa and Mauritius (100,000 tons each). The permanent and *ad hoc* quotas allotted to "friendly" foreign producers together amount to 1,985,000 tons, a quantity which represents over one-fifth of the aggregate U.S. demand for sugar put at 9.7 million tons a year. The balance of 7,715,000 tons is distributed among the domestic sugar producers, Hawaii, Puerto Rico, Virgin Islands, the Philippines, and other foreign suppliers.

Punjab Financial Corporation

A rather piquant situation had developed at the ninth annual meeting of the Punjab Financial Corporation held at Chandigarh on Thursday the 14th inst. The meeting was marked by a scathing attack on the working results of the Corporation by the 152 private shareholders together owning more than three per cent of the total issued capital of Rs. 100 lakhs. The Corporation's standing in the capital market, it was alleged, was very low, as was evidenced by the "little" market value of shares and the inability of shareholders to sell their holdings, for want of buyers. Protesting against the management's "inaction" in dealing with their requests for help in disposing of the shares, the shareholders were reported to have demanded that the State Government should immediately buy the shares from them.

The reaction of the Government to this demand is not known. It is true that the Punjab Financial Corporation Act 1951 contains a clear provision (sub-section 1 of Section 6) under which both the repayment of principal and the payment of an annual minimum dividend at 3 per cent are guaranteed by the State Government. But the guarantee of repayment of capital arises, we presume, only when the Corporation goes into liquidation and not whenever any shareholder or shareholders want to sell off their holdings. Whatever be the provocation for the "private" shareholders to demand repayment, the affairs of the Corporation are not so bad as has been alleged. On the contrary, there has of late been a distinct improvement in working results. The net profit of the Corporation for the year ended 31st March 1962 is higher at Rs. 6.60 lakhs, as against Rs. 5.30 lakhs in 1960-61 and Rs. 4.12 lakhs in 1959-60. The level of profit is much higher than what is needed to pay the minimum dividend of 3 per cent, namely, Rs. 3 lakhs. In view of the improvement in profits, the subvention from the State Government has been reduced further; the actual subvention received in respect of 1960-61 was just Rs. 53,876. Profits may be expected to increase further in the current and ensuing years, now that the Corporation has been given additional borrowing powers and its jurisdiction will soon be extended to Himachal Pradesh. The loans disbursed by the Corporation have gone up in recent years, from Rs. 22 lakhs in 1956-57 to Rs. 57 lakhs in 1960-61 and the figure for 1961-62 must have been higher still. The aggregate assets of the Corporation as on 31st March 1961 stood at Rs. 247 lakhs, as against Rs. 171 lakhs a year before and Rs. 39 lakhs at the end of March 1956.

Born in 1812, Still Going Strong!

Born in 1812, and still going strong! This is the story of one of the world's biggest banks, the First National City Bank, which has played, in its 150 years completed on the 16th of this month, the role of a dynamic leading banker the world over. Believing as it does in the maxim that time without change produces only age, the Bank has grown young with the years.

Founded as the City Bank of New York by a group of public-spirited businessmen in a modest, colonial building at 52, Wall Street, on 16th June 1812, that is, just two days before the war broke out with England, the Bank helped fill the void created by the closure of Alexander Hamilton's First Bank of the United States. From financing the war of 1812 to branching itself out into 30 countries overseas, the Bank has lived through 13 major depressions and six more wars, including the Great Depression and the two World Wars. The first entry painstakingly entered by hand in the Bank's bulky ledger was a deposit of $100. From a mere $500,000 in the early days, the deposits have now climbed to more than eight billion dollars. The Capital funds of the Bank have grown a thousand times from $800,000 in 1812. And this marks an 80-fold increase in New York City's population which was just 96,000 a century and a half ago. The small staff that manned the Bank's original two-storey structure has evolved into a world-wide organisation of 20,000, including 7,000 employees at 87 branches in 30 countries overseas and 13,000 domestically engaged, including those at 91 branches in Greater New York.

Twice renamed, first in 1865 as the National City Bank of New York under the newly passed National Banking Act and then in 1955 as the First National City Bank of New York following a merger with the First National Bank of the City of New York, the Bank is now called, for reasons of brevity, First National City Bank. In 1908, the Bank moved from 52 to 55, Wall Street, the site of the famous Merchants' Exchange which had been destroyed by the Great Fire of 1835. Besides its home in Wall Street, the Bank opened in the spring of 1961, its 41-storey uptown headquarters at 399, Park Avenue, New York. Here are consolidated the operations and service divisions employing the most modern equipment and facilities. Thus, the Bank serves the nation's financial centre downtown from its Wall Street Office and the corporate management centre of the nation uptown from its Park Avenue office.

The Bank began its operations in India in 1903, when it opened two branches, one at Bombay and another at Calcutta. It proposes to open next month a third office in Madras. Fully equipped to handle all types of exchange and commercial banking transactions, the Bank's branches enjoy a reputation for efficiently dealing with all the functions of a bank. What is more, with the launching of a programme of planned development of the country, the Bank has been keeping in close touch with fresh developments in the economy. Foreign investors are provided with all the help and information that they need in the successful completion of their preliminary surveys of the investment climate and the opportunities for investment in particular industries in India. The bringing together of suitable collaborators is also one of the specialised functions of the Bank.

Forged Cheque—Whose Liability?

The Calcutta High Court has decided a case involving an interesting point of law regarding the liability of the receiving bank to refund the amount of a forged "a/c payee only" crossed cheque to the paying bank which honours the forged cheque by a *bona fide* mistake. This development is of interest to every banker, as the judgment is the first of its kind in India. Briefly, the facts of the case are as follows:

The Pearl Assurance Company Ltd., Calcutta, had a current account with a Calcutta branch of the Imperial Bank of India (now the State Bank of India). In May 1954, three cheque leaves bearing serial numbers much ahead of the numbers then being used were found torn off and missing from the cheque book supplied by the Bank to the Company. Somebody unknown to the parties to the suit forged on one of the three cheque forms the signature of the drawer who was one of the few officers of the Company authorised to sign cheques on its behalf. The forged cheque was for Rs. 5,775 and was dated 11th May 1954. It bore the rubber stamp "a/c payee only" and another of the Company below the drawer's signature and carried the name of the payee as "Srish Chandra Dey and Benoyendra Nath Sil," a firm of bullion merchants of Barabazar. The payee was a constituent of the United Bank of India Ltd. and had deposited the forged cheque in its account with the Bank. The cheque was honoured by the Imperial Bank through the clearing house and the United Bank credited it to the account of the payee. Later, the forgery was detected and thereupon the United Bank debited the amount of that cheque in the account of the payee and has been keeping the amount in the "suspense account" ever since.

In September 1955, the State Bank of India, as successor to the Imperial Bank, filed a suit, in the Calcutta High Court against the United Bank and the payee as the defendants for, among other reliefs, recovery of Rs. 5,775 which had been paid by the Imperial Bank by mistake. The State Bank called witnesses to prove the forgery and the payment made by it under *bona fide* mistake thinking that the signature was genuine. The United Bank in its evidence submitted that there was no negligence on its part in doing what it had done, that is, presenting the cheque for encashment through the clearing house.

His Lordship Mr. Justice Datta, who heard the case, declared in his judgment that the plaintiff was entitled to recover the amount of the cheque (Rs. 5,775) with interest at 6 per cent per annum from the United Bank and that the plaintiff (the State Bank) alone was entitled to that sum. His Lordship further held that, when the alleged signature of the drawer of the cheque was a forged one, the cheque was no cheque at all and therefore the banker was not protected under Section 131 of the Negotiable Instruments Act. He added that, under Section 72 of the Indian Contract Act, it was the plaintiff alone who could sue the defendants for the recovery of the sum and not the Pearl Assurance Company Ltd. The relationship of a banker and its constituent, His Lordship observed, was that of a debtor and a creditor and the property in the amount of the cheque at the time of payment was with the plaintiff bank.

The aforesaid brief report of the case published in the daily Press does not convey a full picture of the case nor does it give details of the points decided by His Lordship. Nevertheless, it is clear that the receiving bank was held liable to refund the amount of the forged cheque to the paying bank. The receiving bank is, therefore, supposed to satisfy itself that the cheque on other banks presented through it for collection are genuine, for, if they prove to be forged, the liability will not be that of the paying banks.

New Indo-U.S. Camphor Project

More details are now available of the proposed camphor project to be undertaken by Indian Camphor Ltd., a new company formed in Maharashtra State, in technical collaboration with the famous American manufacturers in the field, Glidden International, C.A. The plant will be set up at Kalyan or Goregaon, the growing industrial suburb of Bombay. The Company has been licensed to produce 1,020 tons of camphor in a year. Dipentine will be the principal by-product and aromatic chemicals the main derivatives. The capital outlay on the project is estimated at Rs. 125 lakhs, of which Rs. 93 lakhs will be on block investments. It is to be met out of equity capital issue of Rs. 57 lakhs, institutional loans of Rs. 46.50 lakhs and borrowings of Rs. 21.50 lakhs. The institutional loans are expected to be finalised soon. The foreign exchange component of the project is Rs. 25 lakhs, being the cost of imported plant and machinery, and has been covered under the normal quota of funds set aside by the authorities for new ventures. Turpentine, the raw material for camphor, is available indigenously. The Company is to offer to the public, in September or October this year, shares worth Rs. 29 lakhs. The Directors, promoters, etc., will subscribe for shares of the value of Rs. 28 lakhs. The collaborating American firm is to be offered no share in the equity capital, but will be offered a royalty and technical fees. The plant will be commissioned into production within a year from the time of the public issue. The Company has been promoted by Mr. Popatlal N. Shah of Messrs. Biddle Sawyer and Company (India) (Private) Ltd., Bombay.

British Banks and the E.C.M.

British bankers, like other thinking sections of the commercial community in that country, are currently exercised over the probable effects on their business of U.K.'s possible entry into the European Common Market. Reticence being one of their professional virtues, bankers are less vocal, even about matters which have nothing to do with their customers' problems which they are supposed to keep secret. Mr. R. D. Fairbairn, General Manager of the Clydesdale and North of Scotland Bank, did not, therefore, violate any professional code of ethics when he chose to think aloud on this subject, last week. He did this in his presidential address to the annual meeting of the Institute of Bankers of Scotland. Mr. Fairbairn felt that, if Britain entered the Common Market, British banks would face the possibility of increased competition from Government and Government-assisted institutions in the banking sphere. His explanation for coming to this conclusion was that there were important differences between British and Continental banking practices. First, there existed throughout the Continent of Europe, the "giro systems," which the Government controlled through the post office and which were not always run on a commercial basis. Secondly, in some European countries at least, savings banks were permitted to issue cheque books and to compete with commercial banks in lending business. Mr. Fairbairn conceded that British banks could not object to competition, but they were entitled, he asserted, to expect that, if the State competed with them directly or indirectly, it should be on equal terms. A giro system, he pointed out, ran at a loss and the remission of taxes on savings bank interest allowed in European countries were always represented as concessions to the small man. But experience was that advantage was taken of such concessions by people who were anything but small and that, when a service had fully developed to fulfil its intended role, it began to compete for commercial as well as private business and for overseas transmission as well as for internal transfers. Mr. Fairbairn's advice to British bankers in this matter was to direct all their efforts to make their own methods

TREND OF SHARES

RECOVERY SETS IN

(From Our Own Correspondent)

BOMBAY, 21st *June*

THE seemingly non-stop fall on the stock exchanges witnessed during the past few weeks did stop at last this week, and a recovery phase set in as lower levels attracted bear covering as also some cautious renewed bull support. Coming as it did after a considerable decline in values, the recovery was naturally slow and painful. It was clearly discernible in Bombay, restricted in Calcutta because of the settlement on Wednesday and hardly noticeable in Madras due to lack of any speculative force. All the same, all the three principal markets displayed, in contrast to marked weakness in the previous week, a quietly steady tone at close. At the time of writing, there are expectations that the recovery might continue in the coming week also.

Sentiment was favourably influenced during the week under review by the realisation that it would be hazardous for the bears to sell further. The technical position of the markets was clearly oversold, though the carry-forward rates in both Bombay and Calcutta did not bear it out presumably because partly they were influenced by the slightly dear money conditions and partly due to some bear manoevres. Cautious optimism about foreign aid prospects taking a promising turn in the near future with the possible postponement of the proposed MIG deal, a better appreciation of India's standpoint on Kashmir at the U.N., the statement from Prime Minister Nehru that our position across the northern border had improved over that of the Chinese and the flow of some encouraging corporate news, all these were the contributory factors to the recovery. Professional bulls slowly renewed their buying. The small fry was also back in the markets in its inimitable way. The volume of business was, however, below normal, as caution was the keynote of trading.

* * * *

Dalal Street was in jitters on Friday, as bears pressed more sales to knock off the most favourable settlement rates. Values dipped even further after the settlement. But a small backwardation in Telco cautioned sellers. As the new account opened on Monday, there was, as it were, a sudden general awareness of the low levels to which values had fallen. Fresh selling was absent. On the contrary, bears themselves were buyers and, in turn, attracted support from the professional bulls. Sentiment took a turn for the better and improved as it was reported that, apart from some teething troubles, there was nothing seriously wrong with the tyre cord plant of National Rayon and that the Company would not be affected by the proposed cut in the rayon pulp imports, as it would be made good by imports under the export promotion scheme. The improvement of 4.5 lakh lbs. to 80 lakh lbs. in Bombay Burmah's tea crop for the financial year ended 31st May 1962 provided another stimulant.

Almost all the sections closed the week higher than the previous week's levels. If any scrip were to be singled out for a brilliant performance, it was National Rayon which staged a smart recovery from Rs. 503 to Rs. 526 and closed 13 points higher on balance at Rs. 525.50. Hindustan Motors were another bright feature and gained 44 nP at Rs. 19.96 following the increase in the dividend from 12 per cent to 12.50 per cent, subject to tax, for the year ended 31st March 1962 in line with a higher profit (after providing for depreciation, taxation and development rebate) of Rs. 149.69 lakhs as compared with Rs. 136.21 lakhs for the previous year.

Among other Textiles, Century and Kohinoor recovered by Rs. 7.50 each to Rs. 632.50 and Rs. 304.50, respectively, on renewed support. Standard were up by 18 points at Rs. 988 and Khatau by 10 points at Rs. 482.50. Gwalior Rayon, in the Cash List, rose sharply from Rs. 56 to Rs. 63 following the permission given by the stock exchange to trade in small lots of 25, instead of 100 as hitherto. There were also rumours that the scrip might be listed on the forward account. Mafatlal moved up from Rs. 820 to Rs. 837.50. But the cleared share, Simplex, showed a loss of two points at Rs. 168.50, despite the improvement in the results which are given elsewhere in this issue. In the Miscellaneous section, Bombay Burmah improved from Rs. 668 to Rs. 678. West Coast showed a gain of Rs. 9 at Rs. 181. Sugars and Cements were actively supported, with Belapur recording a rise of Rs. 6.50 to Rs. 231.50 and Digvijay of Rs. 4.50 to Rs. 208.50. Shippings were quiet.

The barometer of the market, Tata Steel Ordinary, were exceptionally subdued on speculation over the dividend and due to selling caused by rumours of a rights issue on a premium of Rs. 30 per share. The scrip was sold down to Rs. 145, but subsequently rallied to finish at Rs. 147.25. Indian Iron met with active support from Calcutta and improved to close with a gain of 35 nP at Rs. 25.85. Mukand Iron were 40 nP better at Rs. 26.10. Activity in the Cash Section was limited and changes on balance were small. However, Synthetics improved by Rs. 15 to Rs. 231, New Standard Engineering by Rs. 10 to Rs. 230 and Colour Chem by Rs. 8.75 to Rs. 475.

* * * *

Stray selling at higher levels and restricted support due to the settlement produced a mixed price pattern at close in Calcutta. The much-fancied jute shares were, however, particularly subdued. Cleared shares showed small variations either way. But Dunlop, as an exception, reacted from Rs. 43.19 to Rs. 41.75. Howrah Jute finished 75 nP lower at Rs. 22. GKW looked up from Rs. 39.81 to Rs. 40.25. J.K. Rayon also moved up further from Rs. 19.62 to Rs. 20. Orissa Cement closed 19 nP higher on balance at Rs. 20.19. Among Cash counters in Jutes, Delta suffered a setback of 19 points to Rs. 451 and Bally of 13 points to Rs. 296. Anglo-India were nine points lower at Rs. 232 and Dalhousie showed a loss of Rs. 9.50 at Rs. 195.50. Alliance, as an exception, looked up from Rs. 121 to Rs. 124.50.

Among Coals, Bengal receded further from Rs. 384 to Rs. 370 as did Amalgamated from Rs. 24 to Rs. 21.94, but Selected Satgram were two points better at Rs. 153. In the Engineering section, Burn slipped down from Rs. 699 to Rs. 695 and Braithwaite from Rs. 37.12 to Rs. 35.75 as also William Powell from Rs. 3.56 to Rs. 3.19. Cements and Chemicals were steadier, with Alkali rising from Rs. 45.19 to Rs. 46. Miscellaneous issues lacked speculative force. Britannia Biscuits moved down from Rs. 46.25 to Rs. 44.12 and Associated Battery from Rs. 31 to Rs. 30.12, but Indian Oxygen looked up from Rs. 46.12 to Rs. 46.37. Isaac Holdens were weak around Rs. 16.25 against Rs. 16.81 a week ago, but Shaw Wallace improved from Rs. 22 to Rs. 24.50. Tide Water Oil were in demand and looked up from Rs. 24.06 to Rs. 25.50. Paper shares were easy, with Indian Paper Pulp declining from Rs. 22.06 to Rs. 21.25 and Titaghur from Rs. 42.06 to Rs. 41.50. Sugars were steady, but Dyer Meakin reacted from Rs. 58 to Rs. 56.75. Tea shares were generally well held around the previous week's levels. But East India eased from Rs. 20.06 to Rs. 18.87, Tezpore from Rs. 16.50 to Rs. 15.12 and Marga Hope from Rs. 12.75 to Rs. 12.19.

* * * *

Enthusiasm was lacking in the Madras share market, with operators inclined to await developments in Bombay and Calcutta. Activity was restricted to isolated selected counters. The popular South India Viscose, for instance improved from Rs. 166 to Rs. 174. Lakshmi Mills, in the Forward List, edged forward from Rs. 151 to Rs. 152 and Madura from Rs. 36.15 to Rs. 36.25. But Travancore Rayon closed 50 nP lower at Rs. 38.50. Aluminium Industries eased from Rs. 24.05 to Rs. 23.75 and Ashok Leyland from Rs. 8.45 to Rs. 8.40. But F.A.C.Ts were in demand and improved from Rs. 7.85 to Rs. 8.10. W.I. Products also recovered from Rs. 195 to Rs. 196.50, after having suffered a 10-point setback in the previous week. Sugar shares were steady and Cauvery looked up from Rs. 99.50 to Rs. 100. Plantings were quietly steady, with the exception of Highland which slipped down from Rs. 13.75 to Rs. 13.37 and United Nilgiri which turned lower from Rs. 21.12 to Rs. 20.75.

CAPITAL MARKET NEWS

NEW ISSUES

NEIVELI **Ceramics and Refractories Ltd.**, a new venture promoted by the South's well-known industrial house of Messrs. Seshasayee Brothers (Private) Ltd., for the manufacture of sanitaryware, is entering the market on 2nd July and proposes to stay till 9th July 1962 to raise subscription to its public issue of Rs. 25 lakhs in equity shares of Rs. 10 each. The entire public issue has been underwritten collectively by the Madras Industrial Investment Corporation Ltd., the Bank of India Ltd. and some share brokers. The Company is setting up a Rs. 75-lakh project at Vandalur (Madras State) for the manufacture of 1,800 tons per annum of high quality sanitaryware. In addition, it proposes to manufacture at a subsequent stage, 1,800 tons of glazed wall tiles and 3,000 tons of glazed stoneware pipes per annum. The Rs. 75 lakhs of outlay represents Rs. 65 lakhs of block investment and Rs. 10 lakhs as working capital. It will be met by way of a share capital issue of Rs. 45 lakhs, a loan of Rs. 20 lakhs from the Industrial Credit and Investment Corporation of India and bank borrowings of Rs. 10 lakhs. The Company has secured financial and technical collaboration from the world-famous West German sanitaryware manufacturing group, Keramag AG of Ratingen.

The issued capital of Rs. 45 lakhs is made up of Rs. 3 lakhs in 9 per cent, taxable, cumulative preference shares of Rs. 10 each and Rs. 42 lakhs in equity shares of a like denomination. The entire preference capital has already been taken up by various insurance companies. Out of the equity issue, the Directors, Managing Agents and their associates will take up shares worth Rs. 8.23 lakhs, the West German firm will subscribe to shares of the value of Rs. 3.77 lakhs and the Life Insurance Corporation of India has agreed to underwrite and take up shares worth Rs. 5 lakhs.

The Company has already purchased land for the project. The factory site is ideal, as supplies of raw materials like fine quality clay will be available from the nearby Neyveli lignite mines. Other materials such as quartz and feldspar are also said to be available from the adjoining places. The Company has already erected a pilot plant which is in production and will be integrated with the main plant when it is commissioned. Prototypes have been manufactured on the basis of the pilot plant's capacity of 15 tons a month. The miniature plant will help the operatives gain initial experience. A licence to import plant and machinery of the value of Rs. 15 lakhs has been secured. This foreign exchange component of the project has been covered under the I.C.I.C.I. loan. Orders for the plant and machinery have been placed with foreign suppliers and shipments are expected to arrive in time to establish commercial production in 1963. Mr. S. Narayanswamy is the Chairman of the Company.

* * * *

Subscription lists for the public issue of 10,385 9.3 per cent, taxable, cumulative redeemable preference shares of Rs. 100 each and 25,000 equity shares also of a like denomination by **Panyam Cements and Mineral Industries Ltd.** will open on 25th June and close on 2nd July, or earlier, but not before 27th June 1962. The entire public issue has been underwritten. The proceeds of the issue will be utilised towards financing the expansion programme of the Company. The Company has obtained a licence to increase the capacity of its factory to 500 tonnes per day by installing an additional plant with a daily capacity of 300 to 330 tonnes.

The Company was incorporated in June 1955 in Andhra. Its factory at Bugganipalli commenced production on 1st January 1959 and has been producing cement at the sanctioned capacity of 200 tons per day. The Company earned a profit of Rs. 11.78 lakhs for the year ended 31st August 1961 as against Rs. 8.08 lakhs for the previous year, after raising the provision for depreciation from Rs. 9.32 lakhs to Rs. 10.18 lakhs. Sales rose from Rs. 62.72 lakhs to Rs. 65.07 lakhs. Arrears of preference dividend up to 31st August 1960 have been declared. After wiping out a debit balance of Rs. 7.50 lakhs brought in and making necessary adjustments, the Company carried forward last year a surplus of Rs. 9,694.

ANNOUNCEMENT

STATE BANK OF PATIALA

have pleasure to announce that, in pursuance of their "objective to promote Savings," THE INTEREST **RATE** on Savings Bank Accounts will be raised as from the 1st July, 1962, from 2½ per cent to 3 per cent per annum.

FRESH ISSUES SANCTIONED

Given below are the details of the fresh capital issues which have been sanctioned recently by the Controller of Capital Issues:

Heavy Engineering Corporation Ltd., a Central Government undertaking, having a paid-up capital of Rs. 2,564.49 lakhs, has been accorded consent to issue further capital of Rs. 1,600 lakhs in equity shares of Rs. 1,000 each to be subscribed by the Government of India for cash at par.

Lakshmi-Rieter Machine Works Ltd., Madras, has been granted consent to issue equity capital of Rs. 250 lakhs of which shares of the value not exceeding Rs. 18 lakhs will be issued to the foreign collaborators, Messrs. Rieter Machine Works Limited, Switzerland, and the balance (except 10 per cent of the issue to be subscribed by the promoters) will be offered to the public by prospectus. The proceeds of the issue will be utilised for the manufacture of complete textile spinning machinery.

Tata Oil Mills Ltd., Bombay, has been granted consent to the issue of Rs. 35,03,750 (nominal) divided into 1,40,150 equity shares of Rs. 25 each, to be issued for cash at a premium of Rs. 15 per share. The shares will be offered to the existing shareholders of the Company in the ratio of one new share for every two shares held. The proceeds of the issue will be utilised on the expansion programme of the Company.

Phillips Carbon Black Ltd., Calcutta, has been granted consent to issue 3,12,500 equity shares of Rs. 10 each for cash at a premium of Rs. 3 per share. The Company's existing capital is Rs. 125 lakhs. The issue will be made to the existing shareholders. The capital is required for expansion.

Biermans Paper Coating Mills Ltd., Delhi, has been granted consent to the issue of share capital of Rs. 30 lakhs in equity shares of Rs. 100 each for cash at par. Out of this, shares not exceeding 40 per cent would be offered to Messrs. Leonard and Bierman S.A., Belgium. The proceeds will be used for the manufacture of coated art paper and board of all kinds.

Kirloskar Brothers Ltd., Bombay, has been granted consent to the issue of capital of Rs. 25 lakhs in 40,000 equity shares of Rs. 25 each to be issued for cash at a premium of Rs. 12 per share and 60,000 9 per cent (subject to tax) preference shares of Rs. 25 each for cash at par. The proceeds will be utilised for augmenting the Company's liquid resources. The present paid-up capital of Rs. 55,00,710 is in equity shares.

Hoisting Equipment Company Ltd., Hyderabad, has been granted consent to the issue of capital of Rs. 15 lakhs in 1,25,000 equity and 25,000 preference shares of Rs. 10 each carrying a dividend of 9.3 per cent free of Company's tax but subject to deduction of all taxes at the prescribed rates for cash at par. Out of this 15,000 equity shares will be issued to the foreign collaborators, Messrs. Ateliers D'orleans, France, for other than cash in lieu of technical know-how. The proceeds will be utilised for the manufacture of electric hoists.

The Karur Vysya Bank Ltd., Karur, has been granted consent to the issue of further capital of Rs. 2.50 lakhs (nominal) divided into 10,000 equity shares of Rs. 25 each to be fully paid-up, for cash at a premium of Rs. 2.50 per share. The proceeds will be utilised for strengthening the bank's capital base. The present paid-up capital is Rs. 10 lakhs.

The question of high prices of drugs manufactured in India is being studied by a technical sub-committee of the Development Council for Drugs and Pharmaceuticals.

Manufacture of cameras in collaboration with a Japanese firm will start at Durgapur from the third quarter of 1963, according to Mr. Nityanand Kanungo, Union Minister for Industry.

The public sector watch plant at the Hindustan Machine Tools in Bangalore has assembled 15,000 watches since July 1961, when it commenced operations. Over 13,000 watches have already been sold.

The State Trading Corporation is currently negotiating with private firms in the U.S. and Britain a barter deal for export of 100,000 tons of manganese ore in exchange for terylene fibre. Similar deals with other countries, covering shipments of 1.5-2 million tons of manganese ore, are also being contemplated.

A team of U.S. experts has arrived in India to undertake a techno-economic survey of the proposed Bokaro steel plant. The team will confine itself to the appraisal of the suitability of Bokaro as a site for the plant. The actual decision on the financial aid for the project will be taken only after the study team has submitted its report.

Preliminary reports on the tests conducted in East Germany and Norway, as also in Jamshedpur, to determine the suitability of lignite for the production of iron have confirmed the earlier indications that it is technically feasible to produce iron with iron ore, available at Salem, Madras, and lignite coke from Neyveli. Further tests are in progress, which will throw more light on the technical aspects and the economic feasibility of the iron project in the South.

The Gujarat Government proposes to take over a private firm, the Walsura Private Ltd., Kandla, in order to promote the export of "jhinga" fish available abundantly in the Gulf of Cambay and the banks of Lakhiyasur in the Saurashtra region. The State Fisheries Co-operative Association has appointed an eight-man committee to go into the details of the take-over. The firm is engaged in canning "jhinga" fish for export to Australia, England, Burma, Ceylon and other countries.

Under an agreement finalised at a tripartite conference held at Madras this week, workers of tea estates will get 11 per cent of their earnings in 1961 as bonus for the year (same as in 1960) and those in coffee estates 5 per cent (as against 6¼ per cent in 1960). The workers of Yercaud coffee estates will, however, get only 3 per cent. In the rubber estates in the Kanyakumari district, the 6¼ per cent bonus now in operation under an interim award has been raised to 9 per cent.

A second ferro-silicon plant, set up by the Mysore Iron and Steel Works, Bhadravati, was commissioned by Mr. Subramaniam, Union Minister for Steel and Heavy Industries, last week. The new plant, which raises the production capacity of ferro-silicon in the factory from 5,000 tons to 20,000 tons annually, cost Rs. 1.3 crore. It has been put up in collaboration with a Norwegian firm. The Bhadravati Steel Works is the only unit in India manufacturing ferro-silicon at present.

The fifth annual conference of the European Market Association of Advertising Agencies will be held at London on 13th and 14th September next. The Conference will review developments in trade between member countries and formulate policy to expand inter-country marketing and advertising liaison. A feature of the meeting will be the presentation of an annual award to the agency submitting the advertisement that has visually communicated its message most successfully. The trophy is a golden globe, the symbol used by E.M.A. members to indicate their association with the group.

From Abroad

The Government of Argentina has banned all imports other than those not manufactured within the country.

The Ghana Government has undertaken the construction of a factory for the manufacture of plastic footwear. The factory is expected to go into production by the end of this year.

The U.K. Leyland Motors has secured a £1.5 million contract for the supply of 202 buses from Uruguay against keen competition from Italy, Germany and Japan. The order comes from a leading co-operative transport company.

Japan will buy about 45 million tons of iron ore annually from Australia, according to a Japanese steel industry delegation which is now in Melbourne assessing the prospects of entering into farther long-term contracts with Australian mine-owners.

Sierra Leone has formulated a five-year development Plan involving a total outlay of £138 million, of which £82 million are expected to be obtained as foreign aid. Under the Plan, it is proposed to cultivate bananas, rubber and sugar on a plantation basis in co-operation with the repatriate companies. A World Bank mission is expected to visit the country shortly in connection with the development.

The U.S. Congress has passed a Bill, giving President authority to restrict imports of cotton textiles from countries abstaining from the International Cotton Textile Agreement. The new agreement goes into effect from 1st October for a period of five years. The President will take such action, however, only if necessary to carry out the aims of the agreement. He already can enforce the agreement with regard to participating countries.

The U.S. Administration has drafted a plan for releasing stockpiles worth $600-800 million annually. The rate of release represents about ten times the present disposal rate. The value of strategic materials held in stockpile is estimated at $7,700 million, of which the surplus portion accounts for $3,400 million. The major commodities are tin, rubber, aluminium, chromite, cobalt, copper, lead, manganese, molybdenum, nickel, tungsten and zinc.

The world's first commercial atomic power station at Berkeley, in the U.K. started supplying electricity for household purposes last week. To begin with, the station will only supplement local supplies. But in a few months, it will produce enough power to supply a town with a population of about 140,000. The station has been built at a cost of £44 million—more than three times the cost of a coal-fired station of the same capacity. The cost of the power it produces is put at one penny—a third more than that produced from coal.

The U.S. firm, the Firestone Tyre and Rubber Company, is planning to put up a tyre-manufacturing plant at Thailand, the first of its kind there. The company has received from the Thailand Government investment privileges for the construction of the plant which will produce automobile and truck tyres in Bangkok under the Firestone brand. Firestone will be principal stockholder and will operate the Thai Company. Firestone's investment will be insured under the investment guarantee programme of the Agency for International Development of the U.S. State Department. A portion of the financing is being arranged through the Export-Import Bank. Thailand is the world's third largest exporter of natural rubber.

PERSONAL

PROF. J. K. Galbraith, U.S. Ambassador in India, returned to New Delhi on Monday this week, after consultations with the U.S. Government.

Mr. Deba Priya Mukherjee, Chief Adviser, Personnel and Industrial Relations, Philips India Ltd., Calcutta, has been appointed a full-time Director of the Company.

Mr. Milan Simanek has been appointed District Manager of Czechoslovak Airlines (C.S.A.) in India *vice* Mr. Ludwik Homulka who has been transferred to Prague.

Mr. G. S. Gaitonde, formerly Joint Secretary and Legal Adviser to the Government of India, has been appointed President of the Income-tax Appellae Tribunal. He took over charge of his new assignment on Friday last week.

Mr. T. T. Krishnamachari, Union Minister without portfolio, will co-ordinate the Ministries concerned on any economic subject that may be referred to him by the Prime Minister, according to an order issued by the President.

Export duty on tea has been reduced in Pakistan from 25 paisa to 15 paisa, under the Budget proposals for 1962-63 presented to the National Assembly last week. The customs duty on ghee, poultry and dried eggs is abolished. The excise duty on art silk yarn has been reduced from 60 paisa to 31 paisa while that on *khandsari*, sitta salt and betelnuts has been abolished. Sales tax has been removed from a number of items. In the direct tax field, the refugee tax on income has been abolished; earned income limit has been raised from Rs. 4,000 to Rs. 6,000; income from creative writings has been exempted from income-tax; the exemption limit for dividend income raised from Rs. 1,000 to Rs. 1,000 plus 20 per cent of the balance; and for power occupants of houses, the property tax exemption limit has been raised from the gross annual letting value of Rs. 2,400 to Rs. 4,800. Concessions to industry include a depletion allowance of 15 per cent of income to mining concerns which are not eligible for tax holiday and a development allowance of 20 per cent of the original cost of plant and machinery installed after 30th June 1962, in substitution of initial and additional depreciation allowances.

GENERAL INSURANCE

THE clarification of the Government's stand on nationalisation of general insurance made by Mr. Morarji Desai, Union Minister for Finance, in the course of his reply to the debate on the Finance Bill in the Lok Sabha this week, should serve to remove the apprehension in the minds of insurers about their immediate future. We say immediate future advisedly, because Mr. Desai's statement does not contain any indication that nationalisation of general insurance is ruled out once and for all. According to him, there is not much money in general insurance and the risks attendant on nationalisation are grave and great and he would not, therefore, advise the Government to undertake nationalisation. He also added that nationalisation was an instrument of convenience and not a religion for him. While the spirit of the statement is such as not to warrant any fear that general insurance will be nationalised in the foreseeable future, the words italicised indicate that nationalisation cannot be regarded as entirely unlikely. For, on the Minister's own admission, it is convenience not principle which influences a decision on nationalisation. The implication is that, if the industry builds up sufficient reserves and becomes more profitable than it is today, in other words, if there is scope for raising money for the Plan, the Government would not be averse to nationalising general insurance as it did life insurance.

Mr. Desai did not make it clear whether the risks attendant on nationalisation were peculiar to general insurance or that they are the same as that present in the case of life insurance. But the latter did not deter the Government from nationalising life insurance, obviously because it found that there was enough money in life insurance for the Plans to make the risk worthwhile. It is, therefore, clear that it is the absence of money in general insurance, rather than any conscientious objection to nationalisation that has made the Government reluctant to take over general insurance. This attitude is not flattering to the Government, nor is it conducive to building up general insurance into an efficient and financially strong industry. For if, by improving its finances, the industry were liable to attract nationalisation, it would prefer not to pull itself together financially. The managements of insurance companies will be more interested in distributing as much dividend as possible to their shareholders than in building up reserves. Further, the current efforts at weeding out corruption and malpractices and putting general insurance on a sound footing would be futile. If, therefore, the Government is serious about strengthening general insurance, it should give a categorical assurance that, if the industry were run efficiently, soundly and with integrity, it would not be nationalised. It is the proper functioning of the industry and not its ability to fatten the exchequer that should be the criterion to decide whether or not an industry deserves to be nationalised.

COAL PRICES INCREASE

The Government of India announced last week the long-awaited increases in the prices of various grades of coal. The sanctioned increases, as will be seen from the details given below, range from Re. 0.38 per ton to Re. 1.50 per ton:

	Rs. per ton
Non-Coking Coal :	
Grade II	0.38
Grade I	0.75
Selected B	1.00
Selected A	1.50
Coking Coal :	
Grades HH, J, K, and L	0.38
Grades F, G and H	0.75
Grades D and E	1.00
Grades A, B and C	1.50

These price increases have patently fallen very much short of the coal industry's expectation of a flat increase of Rs. 5.43 a ton to compensate it for the higher cost of production, the cost of servicing its capital investment programme in the third Plan period, etc. But that is not all, for the Government has now fixed a ceiling on the prices of coking coal of HH to L grades (converted into one grade HH) and non-coking coal of Grade II at Rs. 20.50 per ton. The marginal price increases, coupled with the ceiling price for certain grades, are disappointing, and the following comments by Mr. G. D. Somani, Vice-President of the Indian Merchants' Chamber, in his speech at the first quarterly general meeting of the Chamber on the 19th instant, might convince the authorities that there would be no serious objection from the side of consuming industries to a possible bigger increase in coal price:

"The coal industry has been agitating the need for fixing an economic price for coal. After protracted consultations and considerations in regard to the matter, the Government has now announced some marginal increases in the price of coal. While the step taken by Government is no doubt to be welcomed, it must be emphasised that the increase is not adequate to enable the industry to fulfil its expansion programme. It is conceded that the price of such a basic material as coal has to be kept under control. But this consideration should not be allowed to come in the way of the prime requirement of enabling the industry to adequately increase its production to meet the growing requirements of coal for industries in the country. It is to be hoped that the Government of India will keep this matter under constant review, for an incentive in the form of adequate revision in the price of coal is so essential for encouraging increased coal production."

As for the Government's decision to limit the price of certain grades to Rs. 20.50 per ton, the reactions from the coal industry's side have been most unfavourable. According to the Indian Mining Federation and the Indian Colliery Owners' Association, the ceiling price will discourage the raising of particular grades of coal from deeper seams in the Jharia-Raniganj fields. The demand for grade II coal alone is expected to exceed 10 million tons per annum during the current Plan period, and there is bound to be increased reliance on the particular coal grades which have just been subjected to a price ceiling. This retrograde step, it is feared, will retard the industry's efforts to increase the production of these grades of coal. If the authorities think that the railways, which use the grade II coal in large quantities, stand to benefit from this price limitation, they should not forget that, if production falls or does not increase adequately, the brick, cement and textile industries which depend on this grade of coal will be subjected to hardship. Again, if production of soft coke, which is in great demand for domestic purposes, does not also rise because of the price limitation, the housewife in North India will have a harder time of it. While this journal welcomes the price increase as a promising first step in the direction of providing an adequate price incentive for greater coal production, it is unable to support the ceiling step in respect of some grades of coal which will have to be produced on a larger scale in the years to come. The authorities should reconsider the latter question in the interests of greater production.

INVESTMENT CENTRE

The Indian Investment Centre, which began functioning on 16th February 1961, has been making slow but steady progress, thanks to the dynamic leadership of Mr. G. L. Mehta, who is the Chairman of the Centre, and the hard work put in by a team of efficient personnel, both Indian and American, under the leadership of Mr. R. S. Bhatt, the Executive Director. That the Centre has already become popular among businessmen in both India and abroad is clearly evident from the growing number of inquiries and project proposals received by the Centre: nearly 1,500, including 64 proposals from Indian companies which provided complete information on projects. Of special significance is the Centre's role in promoting the setting up of joint ventures. As a result of the assistance given by the Centre, according to Mr. Mehta, who addressed the first annual general meeting of the Centre at Bombay on Thursday this week, three proposals from Indian businessmen for collaboration with foreign firms and one proposal from a foreign enterprise for a joint venture with an Indian partner have actually matured. The three "Indian" proposals cover grinders, insulators and lightning arresters, and steel forgings, the foreign collaboration being British in the case of the first and American in respect of the remaining two. The "foreign" proposal, emanating from American firms, covers wood-working machinery.

Besides the aforesaid proposals, which have already fructified, negotiations are said to be in an advanced stage in regard to eight "Indian" proposals and an equal number of "foreign" proposals. Of the latter, five U.S. corporations have chosen their Indian partners and agreements embodying terms of collaboration are now awaiting Government approval. Five other proposals are under negotiation. In addition, six foreign companies have indicated their interest in coming to India; they are making detailed inquiries about the location and size of projects and suitable Indian partners for joint ventures. The inquiries pertain to a wide range of industries—electronic small tools, piston pumps, plastic injection moulding machines, industrial control equipment, precision castings, earth-moving equipment, hydraulic equipment, rubber contraceptives, generators, heavy chemicals and insecticides, machine tools, malt and malt preparations, wood-working machinery, aluminium foil and glass-lined equipment.

Mr. Mehta revealed in his speech that, during the year, 57 foreign companies requested the Centre to help them find suitable Indian parties for joint ventures. The bulk of these, as is only to be expected, was accounted for by the U.S., the number of companies being 43. Of the balance of 14 companies, eight were from the U.K., three from West Germany, two from Switzerland and one from the Netherlands. Mr. Mehta also revealed that inquiries had been received from consulting firms in India as well as in the capital-exporting countries for establishing joint ventures. Incidentally, Mr. Mehta indicated the Centre's method of dealing with inquiries from Indian and foreign entrepreneurs. The method is as follows:

After complete information has been received in a check-list sent by the Centre to Indian businessmen, the project is examined by technical advisers and foreign experts attached to the Centre in order to assess its technical soundness and financial viability. Special emphasis is laid on the economic size of the proposed unit, estimated capital outlay, particularly the estimated cost of fixed assets, sources of finance, and the estimates of cost of production and the margin of profit. After the proposal has been processed by the Centre, it is sent abroad. As a rule, inquiries are sent abroad from entrepreneurs who hold either an industrial licence or a letter of intent from the Government. The Centre does not circulate a proposal simultaneously to a number of firms in the same country. It now forwards proposals to three or four countries at the same time, but retains the confidential approach to one firm at a time in each country. This method has proved effective and response from foreign firms is obtained in a much shorter time.

When the New York office forwards it to the head office at Delhi, all relevant information on the industry is collected and its scope and prospects in India are indicated. Supported by this information, the foreign firm sends its representative to India. After discussions with the officers of the Centre on various aspects of the proposal, Government policies and possible terms of collaboration, the company's representative investigates the availability of raw materials and market prospects of the products his firm proposes to manufacture. Sometimes the representative, if he is so authorised, selects the partner and formulates the terms of technical collaboration and financial participation. In many cases, however, this has to be done at the headquarters of the foreign firm. After the Indian partner is selected and the terms of collaboration are agreed upon, the agreement is submitted for Government's approval.

It is, indeed, encouraging to hear from Mr. Mehta that some of the largest corporations abroad are evincing interest in investment in India. Three factors, he felt, appeared to impress foreign investors about India, namely, political stability, financial integrity and vast potential market. The Centre has done well to draw up a programme of industrial surveys and feasibility studies of specific industries which have a high priority. If the pace of the country's economic development is to be accelerated, larger and larger inflow of private foreign capital is imperative. It is precisely with the objective of ensuring such an inflow that the Indian Investment Centre has been started. There is no doubt that the Centre will fully achieve this objective, provided, of course, the planners and powers-that-be in India take care to see that a congenial investment climate is maintained.

JUTE INDUSTRY

Conditions in jute industry and trade continue to be quite encouraging. Production of jute goods is being maintained at the maximum level, thanks to the easy availability of raw jute at a reasonable price. The total quantity of sackings, hessians and other goods actually produced in the first five months of the current calendar year was as high as 475,600 tons, as compared with 406,600 tons in the corresponding period of 1961. The figure of 475,600 tons is said to be the highest level of production for the first five months of any year since 1956 and this was achieved despite a prolonged strike in one of the larger mills. The marked increase in output has been accompanied by an equally marked expansion of offtake for exports which

in the five months ended May 1962 aggregated 350,000 tons, as against 269,700 tons a year before, so that the closing stocks with mills as on 31st May 1961 was lower at 82,500 tons, as against 92,000 tons on the same date last year. The figure would, indeed, have been much lower but for two factors. One, earlier in the month of May 1962, there were delays in the despatch of jute goods from the mills due partly to the acute shortage of boats resulting from the strike by Hooghly pilots and partly to complications over excise regulations as envisaged in the Central Government Budget for 1962-63. Two, offtake for internal consumption was somewhat lower: 102,200 tons, as against 127,100 tons. The following table shows the statistical position of jute goods in the first five months of 1962 as compared with the same period last year:

(In tons)

	January-May	
	1962	1961
Opening stock	59,100	80,200
Production	475,600	408,600
Total supply	534,700	488,800
Total despatches	452,200	396,800
Of which :		
Internal consumption	102,200	127,100
Exports	350,000	269,700
Closing stocks as at the end of May	82,500	92,000

The present maximum level of production in jute mills is expected to continue up to the end of next month and probably even thereafter, subject, of course, to the decision of the I.J.M.A. Committee. At a meeting held at Calcutta on the 11th inst., the Committee decided to continue the maximum level from the end of this month to the end of next month. The decision was based on the ground that, although the end-May stocks of jute goods were higher (for reasons already mentioned), the offtake had been well maintained. In order to facilitate the maximum level of production, the I.J.M.A. Committee has decided to reduce, with effect from 1st July 1962, the percentage of sealed looms in the total registered complement from 9 to 5. Such a reduction will obviate the difficulties of many mills which currently have to purchase their requirements of loom hours from out of the accumulated balances of other mills.

The rise in exports of jute goods in the past few months must be attributed principally to the notable improvement in burlap consumption in the U.S., India's biggest customer for jute manufactures. The actual consumption during January-May 1962 amounted to 384 million yards, as against 332 million yards a year before. The high level of demand for Indian jute goods from the U.S. as well as from other countries may be expected to persist in the coming months also, provided prices do not rise unduly. B. twills are now quoted at Rs. 126.15 per 100 bags, as against Rs. 152 a year before, while hessians (40" x 10 oz.) are quoted higher at Rs. 59.25 per 100 yards, as against Rs. 48. The relatively higher quotation for hessian is due not to any manipulation by the industry or trade but to the imposition of excise duty at the rate of Rs. 250 per metric ton (Rs. 125 per ton on all other jute manufactures). This duty is payable by only domestic consumers and exports are free from it.

The upward trend of both production and exports of jute goods is expected to continue in the remaining months of the year also, a justifiable expectation, indeed, considering the plentiful supplies of raw jute and buoyant overseas demand for jute manufactures till the time of writing. Since the mills are buying raw jute on their own account, the jute market is ruling strong. The Buffer Stock Association has, therefore, decided to suspend further purchase allocations for the present. It may be noted here that the Association has so far issued purchase quotas aggregating 1,125,000 maunds of jute worth over Rs. 2.8 crores.

It is certainly creditable that the building up of this buffer stock has been accomplished in the face of many difficulties. The Association, for instance, was required to begin its operations not only before it was itself properly organised to do so but even before the necessary arrangements for financing the purchases had been made. Again, the procedure for financing the buffer stock through advances from the State Bank of India is said to be extremely complicated, involving a great deal of documentation. Thus, as against the purchases already made to the value of more than Rs. 2.8 crores, the Bank has advanced to date only Rs. 16 lakhs. Even in respect of the first instalment of buffer stock purchases made in the middle of April, payments are still outstanding. Another difficulty with which the Association has had to contend is that of storage accommodation. Besides the 1,125,000 maunds of buffer stock jute, the mills are also holding, it must be noted, the equivalent of more than five months' consumption on their own account. For lack of godown space, some of this jute has been stored out-of-doors in mills' compounds. And, with the arrival of the monsoon, the storage problem has been greatly accentuated. In spite of all these handicaps, the Buffer Stock Association has been operating successfully and jute prices have been maintained at levels far above those prevailing in Pakistan where new crop jute (basis bottoms) is quoted at Rs. 19 per maund, as against Rs. 28.50 for Assam bottoms at Calcutta. The floor price fixed is Rs. 30 per maund. It is not known whether the same price will be made applicable for the ensuing season due to begin on the 1st of next month.

DIVERSIFICATION OF EXPORTS

The old adage that it is unwise to put all one's eggs in one basket applies with particular force to exports. It is indeed unwise, if not risky, to depend for exports on a limited range of products. Equally inadvisable is the reliance of a country on a limited range of markets. From this standpoint, the structure, pattern and direction of India's exports leave much to be desired. There is, of course, a general recognition at present of the importance of diversifying the composition of exports, although much confusion still prevails on the question of the relative importance of traditional exports vis-a-vis new products, particularly industrial goods. This sort of confusion was in evidence even at the recent deliberations of the high-power body for export promotion, namely, the Board of Trade. According to the official version of the proceedings of the meeting, the three staple exporting industries, plantation crops, cotton textiles and jute goods, which account for 50 per cent of total exports, will be given "greater attention." But, as if to satisfy the protagonists of diversification, the next sentence says that facilities to be extended to engineering goods and chemicals and allied products will also be given "special priority." Thus, while the Board seeks to give "greater attention" to traditional exports, new items, it appears, will also have "special priority." This, of course, may mean anything or nothing. Irrespective of these ambiguities, it is gratifying to find that the Board does not underrate the importance of diversification of the structure of exports.

But neither the Board nor the newly-constituted Ministry of International Trade seems to have devoted adequate attention to, and taken necessary steps for, diversifying the direction of India's trade. Over 40 per cent of India's exports go to the U.K. and the U.S. alone, and another 25 per cent is shared by five countries, namely, Japan, Russia, West Germany, Canada and Australia. The balance is accounted for by a wide range of other countries. Thus, India's exports are at a low level, not only to developing countries in Asia and Africa, but also to several developed countries of Western Europe. In this context, it is only appropriate that Mr. Chinoobhai C. Javeri, President of the All-India Exporters' Chamber, should have stressed, in his speech at the annual meeting of the Chamber on Wednesday this week, the need for seeking new outlets for India's exports. He laid particular emphasis on developing Asian and African markets. The new economic trends in the countries of Asia and Africa, he said, would have a tremendous impact on India's trade with them "because they are our natural markets with immense potentialities." He observed that, on account of similarities in economic conditions, cordial political relations and the progress already achieved in this country, Afro-Asian countries were looking to India for help both by way of collaboration and supply of technical know-how. According to him, if this was done "even in a small way," it would foster goodwill and create demand for Indian machinery and equipment.

Mr. Javeri's suggestion for collaboration is, no doubt, commendable; this measure has also been emphasised by some trade delegations which toured some of the Afro-Asian countries. But one should not minimise the difficulties involved. In view of the acute shortage of capital and technical know-how for developing even the domestic resources, the prospect for channelising them to overseas countries should not be exaggerated. Still, it may be that some of the leading industrial houses in this country do have the wherewithal to venture on a limited scale. India, for instance, can help the Afro-Asian countries in the establishment of textiles, sugar, cement and vegetable oil industries. Some plans, in fact, are already in the air to put up some manufacturing plants in countries like Nepal, Ceylon and Ethiopia. And this trend needs to be strengthened and developed. It would be better if some of the trade bodies themselves were to assess the scope for collaboration and specify the prospective fields in select countries, for such ventures. Meanwhile, the Board of Trade would do well to set up some special regional export cells, as has been done by the U.K. in respect of the dollar area, Western Europe, etc. Such export cells can concentrate attention on export promotion with respect to specific regions and collect and disseminate necessary information among exporters.

One controversial question relating to export promotion is the actual agency for effecting shipments and the relative role of manufacturers, exporters and State trading bodies. On this issue, Mr. Javeri regretted that the role of exporters was not sufficiently appreciated either by Government or by industry. He complained, in this connection, that, in respect of a number of items, incentives were given to the manufacturer only, "though it is the exporter who books the business, assumes risk and carries out all the export formalities." While it is essential not to minimise the importance of actual exporters, it should not be forgotten that manufacturers have also a strong claim for incentives by way of import entitlements and other means of help, in order to sustain the tempo of production and to improve the competitive capacity by reducing costs. Exporters' complaints on specific commodities, however, deserve to be looked into by the authorities, in case any avoidable discrimination against them is involved. As Mr. Manubhai Shah, Union Minister for International Trade, observed in a message to the Chamber, both merchant-exporters and manufacturer-exporters have a vital role to play and both are indispensable. Mr. Shah did well to remind exporters, in this connection, that, while it might be possible for the community to stand by the exporters in meeting to some extent the losses incurred in international trade, "nothing can compensate for quality and after-sales service."

BUDGETARY POLICY

In his speech at the first quarterly general meeting of the members of the Indian Merchants' Chamber held at Bombay on 19th June, Mr. Pravinchandra V. Gandhi, President of the Chamber, did well to underline the importance to planning of proper budgetary policies and procedures. In a planned economy, budget and budgetary policies are not mere conventional fiscal weapons. They have a deeper significance, because they are the instrument for stimulating savings and channelising them to productive investments according to Plan priority. It is, therefore, essential, as Mr. Gandhi pointed out, that the budget reflects a true picture of the state of affairs in the economy and indicates, as accurately as possible, the probable effect of budgetary changes on the economy. This is not the case at present. In Mr. Gandhi's opinion, there are several deficiencies and defects in the presentation of the financial data in the budget. He has, therefore, suggested that, in respect of Plan expenditure, the conflicting data that are currently presented should be reconciled with a view to showing clearly the interrelation of the various correlated magnitudes. A separate statement reviewing the Plan expenditure and estimates both for developmental and non-developmental purposes classified under revenue and capital heads should, according to him, be presented along with the budget. At present, the manner of presenting the budgetary accounts is far from satisfactory, as they do not indicate how much of the Plan targets are being fulfilled in physical as well as financial terms.

Mr. Gandhi also criticised the chronic tendency of the Government to underestimate the revenue receipts and agreed with the Public Accounts Committee that this was not desirable. Mr. Gandhi did not dilate further on this point, but it is obvious that, while there might be something to be said for this method of psychologically preparing the public to bear the burden of additional taxation, a deliberate and gross

(Continued on page 1132)

GETTING THE BEST FROM EUROPE

MR. DESAI ADVANCES TRIP BY A WEEK

From Our Special Correspondent

NEW DELHI, 19*th June*

DELHI LETTER

IN talks with Finance Minister Morarji Desai, International Trade Minister Manubhai Shah and Prime Minister Nehru, the British Commonwealth Secretary, Mr. Duncan Sandys, showed all the cards that Britain has dealt out at Brussels—and the impression in Delhi was that Britain had not much of a game to play; all the aces were in the hands of the European Six. When Mr. Sandys left for Pakistan this afternoon, he had had a full briefing of India's fears, hopes and suspicions—fears about the damage to foreign trade, hopes about preserving some Commonwealth privileges, and suspicions of the political developments in Europe. After four days of threadbare discussions on the impact of the Brussels negotiations on the Indian economy and the concessions which India wants, it was officially stated by both Indian and British spokesmen that the talks led to a broader understanding of each other's difficulties.

Mr. Sandys came to Delhi with limited objectives and, therefore, coming to understand one another more was not difficult. The aim of his trip, as officially explained, was to acquaint himself fully with the Indian stand. As a matter of fact, Mr. Sandys is said to have explained to Indian Ministers the virtual inability of Britain to do much to protect India's interests. Having refused the red carpet invitation to enter the Common Market in Europe some years ago, Britain was today knocking hard at the doors of the Inner Six in a submissive mood. As one Indian spokesman explained to me: "When Mr. Peter Thorneycroft visited Delhi last summer soon after Britain announced her intention to take the plunge into Europe, the British leaders were deluding themselves into believing that their entry would make the European club more outward looking. As of today such hopes appear to be totally invalid."

Towards the end of next week, there will be a series of Ministerial meetings in Brussels to take the crucial decisions on Britain's entry and Commonwealth trade and Mr. Sandys tried to persuade Mr. Morarji Desai to make an immediate dash to Europe for a last minute bid before these meetings. But such dramatic moves ill fit the temper of Mr. Morarji Desai's well-considered and cool behaviour, and the most the Finance Minister would do was to advance his projected European trip by a week or so. Mr. Desai now plans to reach London on 2nd July for talks with British leaders, including perhaps Prime Minister Macmillan. Then he will go to Paris and Bonn to have discussions with General de Gaulle and Dr. Erhard, and later attend the session of the U.N. Economic and Social Council. When the representatives of the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers met Mr. Sandys yesterday, they emphasised the stable Indo-British commercial links. The F.I.C.C.I. stand was: Indian businessmen are prepared to adjust to the changing international trade conditions, but, if these changes are sought to be imposed by Governments without relation to consumer preferences, adjustments become difficult; India's ability to continue large-scale machinery imports from Britain will be related to India's capacity to export to Britain after she joins the Common Market.

The series of meetings between Mr. Sandys and Indian Ministers and working groups of senior Indian and British officials led to the drafting of a note to the British Cabinet on the Indian position. The British negotiators at Brussels will be briefed further on the basis of the detailed document. Mr. Sandys put forward a weak excuse to explain Britain's failure to advocate India's case fully in its proposals submitted to the Inner Six in May. When the British negotiators prepared their proposals, Mr. Sandys argued, they did not have with them the Indian proposals. This argument did not cut much ice with Indian officials, because Britain all along had been aware of the Indian thinking on the need for a liberal trade policy in Europe.

The Indian request is that the European Six do not take the final decisions at the meetings next week on matters concerning India's trade with regard to such demands by Delhi as are not immediately acceptable to them. India wants the decisions to be deferred until after Mr. Morarji Desai meets European leaders.

A major difference between the Indian and British attitudes, as they crystallised during the Delhi talks, is that India wants the nil-tariff rule to apply to a larger number of items than Britain envisages. On such items in which there may be a gradual reduction of Commonwealth preferences India wants the concessions to continue far beyond 1970. The Government agrees by and large with Indian businessmen's views that these gradual reductions in preferences take effect through a transitional period extending to five years beyond the deadline of 1970 at present fixed by the Europeans for common tariffs.

On the eve of the Sandys' visit, Prime Minister Nehru said that there was some hope of India succeeding in its efforts to preserve the level of exports. In his view, the political coming together of European nations was a matter of concern. He said: "If the policies united Europe pursues are liberal, it is good; otherwise, it will help reactionary forces." According to Mr. Nehru, economic relations are the strongest bonds among the Commonwealth nations today. No member of the Commonwealth, to Mr. Nehru's knowledge, wants these ties to weaken. But Britain's joining the European Common Market will injure and weaken these Commonwealth links.

The Prime Minister tended to minimise the possible danger to trade, but indicated his political reservations about the emerging powerful European bloc. Mr. Manubhai Shah, on the other hand, has expressed more alarm over the possible damage to India's foreign trade. In Mr. Manubhai Shah's view, if the Commonwealth trade privileges are taken away and India's prospects for increased trade whittled down by European tariff walls, India may find herself in a difficult position in regard to foreign debt repayments. Mr. Shah told Parliament, in answer to questions: "We hope that negotiations between Britain and the E.C.M. countries regarding the U.K.'s entry into the E.C.M. will result not only in avoiding damage to our existing trade but would facilitate Indian exports getting an increasing share in the imports of the enlarged European community." Will this hope materialise or merely turn out to be wishful thinking?

The Prime Minister's optimism about preserving exports was soon followed by reports from Brussels that the Inner Six have tended to agree to a British proposal that, at some stage, the enlarged European Community should have comprehensive trade agreements with India, Pakistan and Ceylon. As far as tea and jute are concerned, it is now believed that they will have more or less full protection until 1970 for entry into Britain. The understanding on tea will relieve Ceylon's worries to a large extent.

In the nuances of emphasis by the Prime Minister and the International Trade Minister —with the Finance Minister making no public comments on the subject over a long period— some observers try to see differences in approach by various members of the Cabinet concerned with the European Common Market problem. In the Rajya Sabha yesterday, Mr. Bhupesh Gupta, a Communist M.P., characterised the Indian memorandum to the European Six as "reflecting a cringing attitude." Mr. Gupta thought that the Prime Minister tried to view the European developments from a critical angle, but the memorandum did not. Mr. Morarji Desai strongly repudiated the implications in Mr. Gupta's criticism.

The aggregate value of minerals (other than petroleum and minerals declared as prescribed substances under the Atomic Energy Act, 1948) produced in India during the year 1961 was Rs. 174.3 crores, as compared with Rs. 163.2 crores in the previous year, rspresenting an increase of 7 per cent. The increase was due mainly to the higher output of coal, iron ore, bauxite, dolomite and limestone and higher prices of gold bullion and salt. Coal, with an output of 56.1 million metric tons, was the leading commodity and was valued at Rs. 117.2 crores, which was about 67 per cent of the total value of mineral production. Production of metallic minerals was valued at Rs. 28.2 crores, which was 16 per cent of the total value of mineral production. The ferrous group of minerals accounted for Rs. 17.9 crores, which was almost the same as in 1960 and the non-ferrous group of minerals for Rs. 10.3 crores, as compared with Rs. 10.6 crores in 1960.

AMERICAN LETTER

BUSINESS LEADERS SULLEN

HIGH LEVEL OF CONSUMER EXPENDITURE REFLECTS PUBLIC CONFIDENCE

From Our Special Correspondent

NEW YORK, 16*th June*

THE American obsession with the stock market continues. In recent days, prices reached a four-year low in between buying sprees. Everyone is more than concerned. Treasury Secretary Dillon, a former Wall Street man himself, made the statement that, since, on the average, stock prices have fallen to 15 times earnings, everything should be straightened out.

The subject came up also at one of President Kennedy's recent Press conferences. In many business quarters, the stock market break is attributed in a large measure to what is regarded as a hostile attitude of the present Administration towards business and industry. A reporter asked the President whether he had read a column in the influential *St. Louis Post-Dispatch* to that effect. Mr. Kennedy laughed it off. The incident was amusing to insiders, because the White House had just cancelled its numerous subscriptions to the *New York Herald Tribune*, presumably because the paper was a bit too critical, and had replaced the *Tribune* with the *St. Louis Post-Dispatch*.

One technical aspect which contributed to the hectic market movements during periods of heavy volume has been the inadequacy of the reporting system. Several years ago, the Exchange installed new high speed tickers which worked all right under normal trading conditions. But, during the worst days recently, the ticker was more than two hours late in reporting quotations, so that buyers and sellers were in the dark about the fate of their investments during that time. As this is being written, the market is going up and the ticker is 35 minutes late.

Gold Loss

Aside from these emotional and technical considerations, the analysts are wondering whether or not traders and investors actually foresee another recession. Of course, the continued gold outflow is a matter of grave anxiety. Monetary gold stocks have now reached about $16,000 million, as compared with $24.600 million in 1949. The Federal Reserve Ratio, late in May, dropped to 34.4 per cent. Some Senators in Washington call it the most serious issue facing the U.S. Senator Harry F. Byrd of Virginia is the spokesman for this group.

The reasoning of Mr. Byrd is this. Of the $16.000 million gold which are left, some $12,000 million are required to back the dollar. In theory, foreign claims against the U.S. may run as high as $18.000 to $20,000 million. About $10,000 million are earmarked for foreign account. Regardless of the bookkeeping, the margin of safety is getting thinner.

If the margin gets too thin, the argument goes, there would be only two unthinkable alternatives. Raising the gold price and devalue the U.S. dollar, or refuse to honour claims against the dollar in gold. Beyond the borders of the U.S., it would affect all other currencies which are tied to the dollar, besides creating a very bad psychological reaction. Hence, there are some faint bugle calls for austerity, instead of more spending by the Government which has been the heretofore accepted formula. The Federal Budget is certainly going to show a deficit and it would seem a miracle if the same would not be true for the fiscal year beginning 1st July. The pressure on profit-margins of industrial corporations continues. The promised reduction of taxes as from 1st January might help in the long run, but not immediately, since tax revenues would probably shrink in the initial stages. Besides, lower taxes are still in the talking stage and have yet to materialise.

Current Economic Indices

While the future is shrouded in mystery, current statistics certainly do not foreshadow disaster. The June *Monthly Review* of the Federal Reserve Bank of New York summed up the situation thus: "Economic activity scored widespread gains in April and further advances appear to be indicated for May. Consumer demands showed particular strength as retail sales and the number of housing units started rose further following sharp previous upsurges. In May, automobile and department store sales pointed toward new highs and recent information on consumer spending suggests further gains in the months ahead."

But the pace of the advance is still moderate. There is still much unused human and material capacity. There was an increase in employment in May to 68.2 million, a new high, but the labour force expanded, too, so that unemployment remained at 5.4 per cent. Steel capacity operations are also fairly low. At the same time, the auto industry alone is using more steel than in any year since 1955.

Savings of all forms have been expanding largely because of higher interest rates paid by banks. The latest published figures on personal income gave an annual rate of $548,300 million, against $500.800 million last year. Consumer expenditures were $352,000 million, against $330,700 in 1961. Unfilled orders on the books of manufacturers have been gaining and farm income has been higher.

The Gross National Product for the first quarter of the year was running at an annual rate of $548,000 million, as compared with $500.800 million 12 months previously. Hire-purchase credit in April registered the largest month-to-month rise in two years by $517 million to $43,300 million. It speaks well for popular confidence and bodes well for retail trade.

United Nations' Bond Issue

The gap has been closed, temporarily at least, in what seemed like an urgent financial emergency for the United Nations. So far, 36 countries have purchased, or announced their intention to buy, U.N. bonds, totalling about $66 million. Purchases or pledges of more than $1 million were made by Denmark, Finland, Italy, Norway, Sweden, Australia, Canada, West Germany, India ($2,000,000), Holland, New Zealand, Nigeria, Switzerland and the United Kingdom,

So far as the U.S. is concerned, the matter is still pending in Congress, but it seems to me as though Washington will wait until the whole tally is tabulated and then make up whatever difference and gap there may be. Up to this point, there have been no purchases or pledges by any of the Communist countries, but that is now a standard operating procedure. They pay only when pressed. For example, the U.N. Soviet Delegation has a mansion with spacious grounds on Long Island. This is the second time Russia has not paid local taxes on the property. They wait until the tax lien is being sold to be auctioned off and then come along with a settlement.

Australian Firm in Wall Street

Roland Walton & Co., members of the Sydney Stock Exchange, have opened an office in New York headed by one of the partners of the firm, David McLeod. He told me that his company is the only one maintaining offices abroad. In addition to a branch at Melbourne, and New York, they have a branch at Hong Kong.

Asked about the general aim of the New York operation, he replied that they wanted to interest more American investment people to have a look at Australia. He is preaching that Australia is the size of the U.S. with only about 12 million population, has a temperate climate, a very modest tax structure and that its future growth would be considerably greater than those of the industrial countries of the world, since the Continent contains the chief natural resources necessary for development.—*All Rights Reserved.*

COST OF GOVERNMENT

The cost of Government in the United States, Federal, State and local, has risen from $10,200 million in 1929 to $162,000 million today. This means that, in 1929, Government spending cost every American $84, as compared with $399 in 1949 and $848 today. The main reasons are the increased cost of defence, spending on social security and other welfare measures, and foreign aid. Since 1958, prices of consumer goods have gone up by 2.1 per cent and factory workers' wages by 12.8 per cent, but the cost of Government has climbed down by 19 per cent.

LONDON LETTER

WALL STREET IGNORED

SUBDUED OPTIMISM ABOUT BUSINESS OUTLOOK

From Our Own Correspondent

LONDON, 16*th June*

WALL Street has not yet settled down, it seems. This week the market has, once again, reached a sudden "low" and yesterday the index dropped 11.04 points to 563.0, with the result that the market is now 23 per cent below the all-time peak reached last December. The Kennedy Administration probably very sensibly, refuses to be panicked into action, doubtless being persuaded that most of the alarm has been confined to investors and not to the general public or to the business world. Dangling the bait of jam tomorrow but not today, the Administration is obviously anxious to withhold any tax relief until next year's promised cut.

The London Stock Market has, once again, proved a bulwark of solidarity and the fresh overnight slump on Wall Street was completely ignored. Obviously, though, there is no reason for complacency: U.K. prices are not yet at a level to insulate the economy against a further and more settled slump across the Atlantic.

The Federation of British Industries has just published the results of their latest four-monthly survey of industrial trends and this confirms that, while optimism pervades, genuine expansion in the economy still needs the final push to reach achievement. According to the Survey, there has been a continued increase in capacity, but no growth in activity: a shortage of orders is becoming more and more the most important factor limiting the level of output, and, inevitably, industry is planning to spend less on investment. Figures published by the Board of Trade show a small fall in capital expenditure in the first quarter of 1962. (Shortage of skilled labour which up to a year ago was regarded as the main obstacle to growth, now presents a major problem to only a very small section of industry.) Another underlying and allied reason for the stagnation is the pressure of costs on profit-margins. Firms are obviously waging a losing battle against rising costs, one of their weapons being to cut stock-piling to the minimum, particularly of raw materials, and figures show that stocks fell farther in the first quarter of 1962 than in any quarter over the past five years.

The really encouraging aspect of the Survey is the reported improvement in export business and anticipation of a further rise in sales to foreign markets. Here, too, the industry shows increasing awareness of the prospects the Common Market has to offer.

Six hundred and sixty-six firms responded to the questionnaire prepared by the Federation of British Industries and the table below shows the balance of ups and downs over four-month periods during the last two years:

	Past 4 months to			
	Oct. 1960	*Oct.* 1961	*Feb.* 1962	*June* 1962
Level of output ..	+29	+ 7	— 4	Nil
Level of export deliveries ..	+ 8	+ 7	+10	+17
Length of order books total ..	+10	—18	—27	—19
Rate of new orders:				
Total	+14	— 9	—14	— 6
Exports	+ 2	— 5	+ 2	+10
Stocks of finished goods ..	+ 1	+ 6	+16	+ 6

(The excess (+) or shortfall (—) on the percentage of those answering "Up" over those answering "Down.")

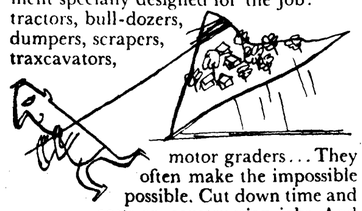
The sobering conclusion to be drawn from the Survey is that, although there are stronger hopes that production and orders are going to increase, the latest evidence of actual performance does little to substantiate them. On the whole, it is hard to reconcile the recent expressions of optimism emanating from the Government with the results of this F.B.I. Report. One factor on the side of the optimists, however, is that preparation of the Survey preceded the Government's latest relaxations—the return of some of the banks' special deposits and an easing of hire-purchase controls. These measures may well prove the stimulus necessary to give the economy that extra boost—and, providing there are no fresh disasters on Wall Street, to give London equities firm ground for a rally in the coming months.—*All Rights Reserved.*

What happens when lightning strikes a transmission tower?

Imagine a city with its power supply cut off! No lights, no air conditioning, no electric trains or trams! No factories and mills. No theatres... *That* is what happens, unless electrical systems are adequately protected—by switchgear, control and relay panels, like the ones manufactured by Larsen & Toubro. But that is not all! L & T today supplies a wide range of equipment vital to many aspects of the electrical networks—from the generation of power to its control and distribution!

man can move mountains...

But not by faith alone! He needs equipment specially designed for the job: tractors, bull-dozers, dumpers, scrapers, traxcavators,



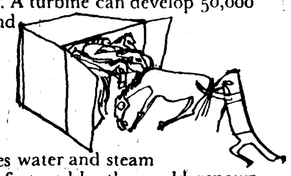
motor graders... They often make the impossible possible. Cut down time and costs on construction jobs. And that is what Caterpillar equipment is doing—helping to build giant dams for hydro-electric projects all over India.

next time when the power fails...

Be thankful the fuse has done its job! Prevented an accident in your house, perhaps—or saved costly equipment from damage. And in large factories, switchgear performs the same function. Cuts off power when it must—and protects equipment worth millions of rupees! Ensures at other times an unbroken flow of current—and prevents loss of vital production time!

50,000 horses on the job?

That is right. Not the horses—but the power they represent. A turbine can develop 50,000 horsepower and much more! Convert the force of water or steam to drive huge generators. L & T supplies water and steam turbines manufactured by the world-renowned German firms of VOITH and GHH.



guardian angel?

Yes! That's what control and relay panels are. They prevent burning out of giant generators and transformers—avoid damage that might run into crores! L & T designs and manufactures equipment of this type—veritably watchdogs of electrical networks!

L & T contributes also to the development of these vital industries:

- dairy
- oil
- steel
- food & agriculture
- chemicals & pharmaceuticals
- paper
- minerals
- transport
- construction

LARSEN & TOUBRO LIMITED

I.M.F. ON EXCHANGE RESTRICTIONS

PROGRESS OF RELAXATION CONTINUES

"COMMERCE is the life blood of a free society. We must see to it that the arteries which carry the blood-stream are not clogged again, as they have been in the past, by artificial barriers created through senseless economic rivalries." This was the message which the late Mr. Roosevelt, the then President of the U.S., had sent to the historic International Monetary and Financial Conference which began at Bretton Woods, New Hampshire, on 1st July 1944. More specific was the statement by Mr. Henry Morgenthau (Jr.), the then U.S. Secretary of Treasury and President of the Conference, that "the first problem is to stabilise currencies and keep them so through frequent consultations between nations...." It was to ensure such stability and with the objective of establishing a multilateral system of trade and payments that the International Monetary Fund—I.M.F., for short—was set up. Although the Fund cannot be said to have achieved this objective even after over sixteen years of working, it has to be admitted that, but for the Fund, the majority of countries would have continued to use the machinery of exchange control to prevent the dissipation of their exchange resources and the weakening of their international economic position through flight of capital. Indeed, thanks largely to the fund, the free world is today having a pattern of exchange rates which are consistent with the maintenance of international equilibrium and stability of international currency values.

A clear indication of the sustained progress that has been made towards the achievement of the purposes of the Fund is provided in the latest (thirteenth) Annual Report on exchange restrictions just published by the Fund; the Report covers the calendar year 1961 and the first three months of 1962. During this period, the changes in exchange systems and restrictions continued the trend of preceding years. Additional steps were taken to liberalise trade and exchanges, as part of the trend to free international payments from restrictions which have been reinformed by the resumption of convertibility of the leading currencies. What was more, major exchange reforms were undertaken in a number of countries—Costa Rica, Ecuador, Israel, the Philippines, the United Arab Republic and Yugoslavia. Further, reliance on bilateral agreements was reduced, and several multiple exchange rate systems were simplified. The progress in all these directions is particularly significant, because it reflects, to quote the Report, "a determination on the part of a number of countries to reduce their reliance on exchange restrictions," even though some of them experienced balance of payments difficulties.

Convertibility

The two major currencies used in international payments which have been subject to various stresses and strains in world exchange markets in the past twelve months are the U.S. dollar and sterling. These stresses and strains brought under pressure the whole international payments system by reason of the rather sharp movements of short-term capital which were made possible largely by the freedom that has been in existence in most countries for non-residents (but not necessarily residents) to exchange one currency for another. The countries concerned have, however, avoided the introduction of exchange restrictions on such capital movements, and there has been "considerable international co-operation" among the central banks of the leading industrial countries to counteract the effect of these movements and to discourage them by giving official support to one another's currencies. It may be recalled here that large-scale assistance was obtained from the Fund by Britain, the great bulk of which has been returned by now.

The year 1961 was notable for two other welcome developments. One, the U.S. and West Germany entered into arrangements to reduce the wide spread between spot and forward rates—this followed the revaluation of the Deutsche mark (as well as Netherlands guilder) in March 1961—and hence to lessen the flow of short-term funds. The arrangements were subsequently broadened to include Swiss franc, Italian lira and the Netherlands guilder. Two, Canada returned to a fixed par value system, in the place of fluctuating rates.

It is indeed gratifying to learn from the Report that, taking the world as a whole, restrictions on trade and payments are today less than they have been for some decades. To quote the Report:

"The number of countries which maintain such restrictions for balance of payments reasons has been appreciably lessened, and this is particularly true of the countries of Western Europe, although they retain restrictions for protective purposes, predominantly on agricultural items. Discrimination against particular Fund members or groups of Fund members has also materially diminished in the past few years, but continues to be significant, especially with regard to certain countries in Asia. Now that the currencies of the major trading countries are convertible, the need and justification for discrimination for balance of payments reasons has virtually disappeared. The decline in recourse to discrimination has been most marked in imports from and payments to the dollar area, and also to an appreciable extent in imports from Japan, and, some countries have abandoned this particular discrimination entirely."

As for the less developed countries, it is true that many of them continue to have recourse to restrictions on imports. But such restrictions are necessitated by balance of payments considerations arising from their development programmes of long-term nature or with certain excessive import demand arising from domestic inflation.

It is equally gratifying to hear that, on balance, the reliance on multiple currency practices continued to decline. The last vestiges of such practices disappeared from the exchange systems of Denmark, Jordan and Yugoslavia. Israel unified its exchange system, except for certain transactions in securities, and Costa Rica took similar action, except for a tax on sales of exchange by foreign-owned banana companies. The United Arab Republic is replacing its multiple rate structure with a single rate. The multiple exchange rate systems of Brazil, Ecuador, the Philippines, and Viet Nam were simplified. However, Chile introduced a dual market system and Korea reintroduced multiple rates on exports. Venezuela's multiple rate system became more complex, but recent measures have made it more realistic. Eleven countries still operate multiple exchange rate systems of some significance: Chile, Ecuador, Nicaragua, the Philippines, and Viet Nam have only two effective exchange rates, but Afghanistan, Brazil, Colombia, Indonesia, Korea and Venezuela have more complicated systems.

Another noteworthy feature has been the persistent marked decline in bilateral payments arrangements between the Fund and member-countries. The number of such agreements entered into between members as on 31st March 1962 was 62, as against 75 a year before, while the number of agreements with non-member-countries was higher at 171, as against 150. Bilateral trade agreements continue in force between countries which do not maintain bilateral payments agreements, but the scope of their application tends to become smaller with the increasing liberalisation of import policies.

Advance Deposits

Among other developments, the I.M.F. Report points to the use of what is called the advance deposit requirements, usually as a prerequisite for obtaining import licences or for clearing goods through customs, though sometimes as part of the exchange system. No clear trend is discernible in this respect. In general, reliance on this device has not materially changed, but there have been many changes in its application. Only fourteen countries now operate this device. Even here, the requirements are not applied in a number of cases against imports from certain countries and, in a few countries, the advance deposit is refunded at the time payment is made for import, while, in several others, the deposits are retained for a fixed period regardless of the time of import or payment. In most of the countries, the advance deposit requirements are considered to be important in restricting the demand for imports.

The Report also refers to capital payments. According to its review, in most countries, capital owned by persons not resident in those countries can be repatriated, although this repatriation is not always possible for all capital transfers through the official market and may be feasible only at some less advantageous rate, depending on the exchange control system and the exchange rate conditions in the country concerned. On the other hand, in countries which operate systems of exchange control, the freedom of residents to export their capital at the official market rate is limited to approved direct investments abroad, and portfolio investment is usually possible only to the extent that other residents of the same country are disinvesting their foreign security holdings. Certain Western European countries permit capital transactions related to dealings in foreign securities, and to dealings in domestic securities by non-residents, to be carried out in markets separated from those for current transactions. In these markets, the exchange rates may at times exceed the exchange rate margins permitted by the Fund. During the past twelve months, these exchange quotations remained, with minor exceptions, within these margins.

In regard to regional economic agreements, the I.M.F. Report claims further progress in the integration of the economic policies of the six European Common Market countries (Belgium, France, Italy, Luxembourg, Netherlands and West Germany), as well as in the gradual elimination of trade barriers within the Market, as envisaged by the Treaty of Rome. An agreement for association between Greece and the Market was signed in July 1961. Eight more countries have applied for membership—Austria, Denmark, Ireland, Norway, Spain, Sweden, Switzerland and the U.K. The U.S. has concluded tariff negotiations with the E.E.C., the U.K. and 24 other countries; the concessions are expected to involve a 20 per cent cut in tariffs on the imports of many industrial products. The European Free Trade Association member-countries (Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the U.K.) have made further progress in reducing intra-regional tariffs as well as in increasing their remaining internal import quotas. The Organisation for Economic Co-operation and Development came into being on 30th September 1961. The five Nordic countries (Denmark, Finland, Iceland, Norway and Sweden) have brought into effect, with effect from March 1962, an agreement among their central banks on short-term credits. The Latin American Free Trade Association came into force on 1st June 1961 after ratification by all the seven original signatory countries (Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay). The contracting parties to the General Treaty of Central American Economic Integration (El Salvador, Guatemala, Honduras and Nicaragua) commenced work on the implementation of the Treaty's provision for the establishment of a Common Market among themselves. On 2nd August 1961, a preferential trade agreement was signed by Costa Rica, Panama and Nicaragua, providing, among other things, for free or preferential treatment of trade among the contracting parties, as well as for exemption from quantitative restrictions other than those agreed upon by the parties concerned.

Opinions are sharply divided on the issue as to whether the formation of regional economic blocs is conducive to the promotion of world trade and prosperity. Many independent economic thinkers and dispassionate observers are of the view that it would be better to approach the problems of integrating economic policies and elimination of trade barriers on a world-wide basis, instead of through regional blocs. Some even ask: Why should there be regional blocs, when the same objectives can as well, and ought to, be fulfilled successfully through the mechanism of the G.A.T.T. and the I.M.F.? Some others have gone to the extent of warning that regional economic blocs will undo whatever progress the G.A.T.T. and the I.M.F. have achieved and that the whole world trade will in course of time be converted into hostile compartments. As it is, the European Common Market has become a powerful force in world trade. The aggregate official gold and foreign exchange holdings of the C.M. countries have gone up quite considerably in recent years. They stood at as high as $16,272 million towards the close of 1961, as compared with a bare $8,384 million at the end of 1955 as the table at the bottom of the page shows. Conversely, there has been a decline in the holdings of a number of other countries. In the case of India, for instance, while gold holdings continue unchanged at $247 million, foreign exchange holdings have dwindled by $1,201 million to $418 million between 1955 and 1961. As for Pakistan, the holdings of gold have risen from $48 million to $52 million, whereas those of foreign exchange have receded from $349 million to $324 million; they were lower still at $216 million towards the close of March 1962. The fears regarding the possible impact of regional economic blocs on world trade are not altogether unwarranted. The growth of world trade has already tended to slow down considerably. The total free world exports during the year 1961, for instance, increased by only 4.4 per cent, as against 10.4 per cent in 1960 and 6.0 per cent in 1959. To give the actual figures, the f.o.b. value of these exports in 1961 was $118,500 million, as against $113,530 million in 1960, $101,890 million in 1959 and $96,110 million in 1958.

In particular, the share of primary producing countries in world trade continues to decline. It is rather disquieting that, while there was "rapid progress" in the exchange of goods between industrial countries during the year 1961, these countries' imports of raw materials did not, according to the I.M.F. Report, keep pace with the growth of their industrial production. It would be a good thing if the I.M.F. were to make, with the help of its expert staff, an impartial appraisal of the possible effects of such regional trade groupings as the Common Market on world trade and to say candidly whether or not they are in keeping with the ideals of its founders. We look forward to such a frank assessment in the near future.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

A SIMPLE PHRASE...
...VITALLY IMPORTANT!

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

U.N. DEVELOPMENT DECADE

TARGETS AND PROPOSALS FOR ACTION

THE sixties through which the world is passing have been designated by the United Nations as the Development Decade. This is stated to be a crucial decade for the less developed countries which have inherited from the last decade a host of unsolved problems. There is, firstly, the problem of developing and organising more effective planning. The general picture is still one in which the majority of countries have either no development plans, or at best have elements of development plans in the form of general projections, or public investment programmes, or plans lacking in implementation. If a true development plan is one that represents an action programme for the public and private sectors of the economy alike, takes full account of the necessary sacrifices and mobilises the necessary resources, and offers opportunities for the development of the latent resources of the country, then this kind of plan is still the exception rather than the rule.

The second problem is posed by the failure of the proceeds derived by underdeveloped countries from export sales of primary commodities or of manufactured goods to develop the dynamic growth which would be necessary to finance their economic development at acceptable growth rates. The well-maintained stable growth in the main industrial countries has by itself proved to be insufficient to give greater stability to commodity prices. One of the reasons for this is the failure on the part of advanced countries to treat the exports of developing countries in a manner which is in keeping with the recognised primary importance of the development of these exports for the balanced growth of the world economy.

There is, thirdly, the problem of inadequate long-term capital flows and assistance from the wealthier countries to the developing countries. True, in the later part of the last decade, the total net flow of capital and assistance to low-income countries increased considerably. Such flow, however, remained considerably less than one per cent of the combined national income of the wealthier countries. Worse still, much of it was made available on a basis that offered no real assurance of its continuity to individual countries; it remained split up amongst a multiplicity of sources, forms and purposes; and the share of multilateral aid through the United Nations system remained small. Furthermore, the fall in commodity prices in the later years of the last decade nullified much of the net increase in the assistance given to the developing countries. There was, again, no clear evidence that a satisfactory basis had been found for a sustained, assured and more widely distributed flow of private capital to developing countries. The present need, in the context of the mounting pressure of commitments for repayment of principal and interest or profits on previous investments and the uncertainty and lack of dynamism of export earnings in many underdeveloped countries, is for increasing the proportion of assistance in forms that would bear less heavily on the balance of payments than conventional loans.

The failure of agricultural output in the developing countries to increase substantially faster than their populations represents the fourth problem. It is stated that the disparity in standards of nutrition is now greater than ever and that the number of human beings living in conditions of hunger and malnutrition is now larger than ever before in the history of the world. The rise in agricultural productivity is not sufficient at the present rate to provide the surpluses which are essential if the industrialisation of the underdeveloped countries and accelerated growth of national income are to be achieved.

Another problem facing the underdeveloped countries pertains to industrialisation. While it is true that industrialisation is gradually developing, manufacturing industry still accounts for less than one-fifth of the low output of these countries and the volume of employment thus far provided by industries has been insufficient to prevent growing unemployment and underemployment.

The effort to bring science and technology to bear upon the special problems of the underdeveloped countries is still not adequate. This is yet another problem, and it is largely due to the continuing and increasing burden of armaments. Heavy financial resources and skilled personnel, part of which might otherwise be devoted to the problems of the developing countries, are pre-empted by the armaments race. Further, there is, in the developing countries themselves, the crucial lack of trained people capable of using advances in technology; and the heavy capital requirements of new processes are also beyond the capacity of the underdeveloped countries. The large scale on which new processes operate and their orientation towards advanced sectors make advanced technology less and less directly applicable to the specific needs of the developing countries.

While highlighting these six major problems confronting the less developed countries, the Acting Secretary-General of the U.N., in his report just submitted to the U.N. Economic and Social Council, has also referred to the problem of how best to deal with the social aspects of economic development. While there has been increasing recognition that social reform is a necessary condition of economic improvement, such recognition, according to the Acting Secretary-General, U Thant, has not yet come to guide practical policies everywhere. The slow pace of progress (more of the order of 1 per cent per annum than 2 per cent in the growth of *per capita* income) in the underdeveloped countries, taken as a group, during the last decade and the continuance of their familiar problems at the opening of the "development decade" have been considered by the Acting Secretary-General in the context of the rapid growth of population. This is how he has summed up the situation:

"Progress toward a higher average level of living in the world as a whole is held back also by the shifting balance of population distribution which results from higher rates of population growth in developing countries than in wealthier countries. As the developing countries account for a larger and larger proportion of world population increases, they tend to offset the improvement of conditions in the world as a whole which would otherwise be brought about by the gains in individual countries. At any rate, the actual number of human beings living in distress and unacceptable poverty has almost certainly increased rather than diminished. This is the combined result of the rapid growth of population in the poorer countries and their failure to join fully in the general march of progress. Even in education, a field in which many underdeveloped countries have made important achievements during the last decade, the progress has not been enough to justify any complacency. In spite of the efforts to stamp out illiteracy, the number of illiterate people may increase, rather than diminish, as a result of the relentless growth of population. In India, for example, although the census figures for 1951 and 1961 show an increase of more than 40 million during the decade in the number of persons able to read and write, even this accomplishment was not enough to prevent the number of illiterates from increasing by more than 11 million in the age group five years and over."

The U.N. General Assembly has already laid down a quantitative objective which must be achieved if the situation described above is to be remedied. This objective is a minimum annual rate of growth of aggregate national income of 5 per cent in all or in the great majority of underdeveloped countries by 1970. As the third year of the current decade is already on, the question arises as to what should be the rate of growth during the rest of the decade. According to the Acting Secretary-General, the average rate of increase of the aggregate incomes of all underdeveloped countries during the remainder of the decade should be not less than 5 per cent, and it would be desirable if, towards the end of the decade, it could be as high as 6 per cent or more. As the growth rate of national incomes of all underdeveloped countries, together, is about 3½ per cent per year, the immediate task will be to raise this growth rate during the coming few years by 1½ per cent to at least 5 per cent and to increase it by a further 1½ per cent to over 6 per cent per annum at the end of the decade. Elaborating this, the Acting Secretary-General says in his report:

"A growth rate of aggregate real incomes of 5 per cent per annum—assuming a continuation of the present rate of population increase—would permit a doubling of the personal standard of living (even given the necessary rates of savings and reinvestment of incremental income) within a period of twenty-five to thirty years; this would mean a real improvement within the working lifetime of individual citizens. It should be emphasised, however, that a 5 per cent annual increase in aggregate incomes of the underdeveloped countries is to be met. Besides a strengthening of the U.N. Industrial Development Centre at Headquarters, the Acting Secretary-General proposes greater support of industrial planning and project programming; extension of industrial advisory services; promotion of small industries, with emphasis on the establishment of industrial estates; and industrial training.

(6) In the field of housing, the Acting Secretary-General estimates that, in Africa, Asia and Latin America, from 19-24 million dwellings should be constructed annually throughout the decade 1960-70 to eliminate existing shortages in 30 years, to house the increase in population and to meet current obsolescence.

(7) If the proposed health targets for the underdeveloped countries are met, each will have, by 1970, one physician per 10,000 persons; one nurse per 5,000; one technician (laboratory, X-ray, etc.) per 5,000; one health auxiliary per 1,000, one sanitarian per 15,000; and one sanitary engineer per 250,000 persons. A realistic appraisal of the health situation in individual countries is urged, together with the development of minimum basic health services.

For achieving the objectives of the Development Decade, not only bilateral aid and capital flow are visualised, but also an expansion in multilateral assistance through the United Nations and its specialised agencies. The Acting Secretary-General has specifically proposed in the latter connection a substantial increase in the resources of the International Development Association and an addition of $25 million yearly, over the decade, to the immediate target figure of $150 million annually for the U.N. Expanded Programme of Technical Assistance and the U.N. Special Fund. All in all, an additional net flow of $4-5 billion a year of capital and assistance to the developing countries over the current decade is considered absolutely necessary. Its break-up into private and public capital or into bilateral and multilateral categories is, however, not foreseen in detail in the Acting Secretary-General's report.

"It is useful to realise that a special premium or bonus is attached to any intensification of progress in underdeveloped countries. If the rate of growth of aggregate incomes is 3 per cent, while population increases by 2 per cent, the improvement of the average standard of living would only be 1 per cent and two-thirds of the increase is required to provide for the increase in population. But, if the increase in aggregate income is doubled to 6 per cent, the improvement is raised from 1 per cent to 4 per cent, i.e., it is not doubled but quadrupled. This consideration should act as a special spur to intensify efforts, both within and outside the underdeveloped countries, to gain an early momentum and save in the long run on the resources needed for a task which all agree will have to be achieved sooner or later.

A related consideration is that, if the acceleration of the rate of growth of income goes hand in hand with improvements in internal income distribution, and if the social benefits of the improvements are widespread, the number of people living below an acceptable minimum standard can be reduced at an even faster rate than the mere increase in aggregate income would suggest."

The magnitude of the global efforts required has also been envisaged by the Acting Secretary-General on the basis of the above assumptions. His calculation is that, since the national incomes of the wealthier countries are now a high multiple of the aggregate incomes of the developing countries (being 10 : 1), a flow of capital representing one per cent of the incomes of the developed countries would add about 10 per cent to the national incomes of the underdeveloped countries and about 100 per cent to their present net capital formation. If the net flow of capital on suitable terms could be raised now to one per cent of the combined national incomes of the wealthier countries, and effectively used, this alone could raise the growth rate of aggregate incomes of developing countries at least half way from the present 3½ per cent to the initial target of 5 per cent each year. A part of the external foreign exchange resources required for increasing the growth rate of aggregate incomes to 5 per cent initially and later to 6 per cent and more could come from an improvement in the trade position of the developing countries. If their terms of trade could be improved by 10 per cent over the present level and kept at this level during the development decade and if, in addition, underdeveloped countries were also enabled to improve their present share in world trade from 26 per cent to 28 per cent and maintain this share throughout the decade, the gap in the foreign exchange requirements for the accelerated rate of growth would be covered. Aid and trade, together, are thus required on the scales suggested. All this, of course, presupposes that the developing countries would be able to mobilise adequate internal resources.

The specific proposals made by the Acting Secretary-General for realising the objectives of the "Development Decade" are as follows:

(1) High priority should be given by the United Nations system to the working out of development plans, and assistance in carrying them out by the mobilisation of an underdeveloped country's own resources and by securing external assistance and co-operation.

(2) Emphasis on the mobilisation of human resources must include better utilisation of the labour force by creating higher levels of productive employment; improving the quality of the labour force by vocational education and training; and enlisting popular support for the tasks of national development, and the participation of broad social groups in them. Particular attention must also be given to the problems and needs of children and young people.

(3) A major task will be to meet the food requirements of an increasing population and, at the same time, provide for moderately improved nutrition. The adoption of modern agricultural practices will be necessary in order to meet the requisite annual increase in food supplies of between 3.8 and 4.3 per cent annually.

(4) To meet the expected large increase in requests for projects to develop natural resources, it will be necessary to expand cartographic services; intensify surveys of water needs and resources; prepare the groundwork for integrated development of international river basins; intensify work on rapid mineral exploration and promote co-operation between neighbouring countries in this field; survey energy needs and resources; and develop small power units in rural areas.

(5) Manufacturing output in the developing countries will have to increase by no less than 130 per cent if the goal of an increase of 5 per cent per year in aggregate incomes of the underdeveloped countries is to be met. Besides a strengthening of the U.N. Industrial Development Centre at Headquarters, the Acting Secretary-General proposes greater support of industrial planning and project programming; extension of industrial advisory services; promotion of small industries, with emphasis on the establishment of industrial estates; and industrial training.

(6) In the field of housing, the Acting Secretary-General estimates that, in Africa, Asia and Latin America, from 19-24 million dwellings should be constructed annually throughout the decade 1960-70 to eliminate existing shortages in 30 years, to house the increase in population and to meet current obsolescence.

(7) If the proposed health targets for the underdeveloped countries are met, each will have, by 1970, one physician per 10,000 persons; one nurse per 5,000; one technician (laboratory, X-ray, etc.) per 5,000; one health auxiliary per 1,000, one sanitarian per 15,000; and one sanitary engineer per 250,000 persons. A realistic appraisal of the health situation in individual countries is urged, together with the development of minimum basic health services.

For achieving the objectives of the Development Decade, not only bilateral aid and capital flow are visualised, but also an expansion in multilateral assistance through the United Nations and its specialised agencies. The Acting Secretary-General has specifically proposed in the latter connection a substantial increase in the resources of the International Development Association and an addition of $25 million yearly, over the decade, to the immediate target figure of $150 million annually for the U.N. Expanded Programme of Technical Assistance and the U.N. Special Fund. All in all, an additional net flow of $4-5 billion a year of capital and assistance to the developing countries over the current decade is considered absolutely necessary. Its break-up into private and public capital or into bilateral and multilateral categories is, however, not foreseen in detail in the Acting Secretary-General's report.

GOVERNMENT REJECTS COTTON INDUSTRY'S PLEAS

ACTION GROUP SEEKS ROYAL INTERVENTION

From Our Special Correspondent

MANCHESTER, 12*th June*

MANCHESTER LETTER

THE British Government has accepted the offer of the Hong Kong Government to continue until the end of 1965 the current ceilings on their exports of cotton piecegoods and made-up goods for retention in this country, subject to the acceptance of similar arrangements by India and Pakistan. Cotton textiles from Commonwealth countries will continue to enter duty-free. Hong Kong will, in addition, limit yarn exports to the 1961 rate.

The Government has also decided not to extend the period for applications for re-equipment grants under the Cotton Industry Act, 1959 beyond 8th July, but the industry is reminded that applicants would still have another year to place their orders with machinery makers, and up to July 1964, to complete installation. The Government has accepted the long-term G.A.T.T. agreement, which is to come into operation in October, subject to a reservation exempting Britain from the obligation to admit increased imports.

These decisions were announced in the House of Commons by the President of the Board of Trade, Mr. Frederick Erroll, who was severely criticised by Labour and Conservative members from the cotton textile constituencies. In general, their complaints were that a lower ceiling for imports from Hong Kong should have been fixed and that the period for re-equipment grant applications extended. They claim that a lower ceiling would have restored some confidence to the industry and that, when that had happened, more applications would be made for re-equipment grants.

A Cotton Board spokesman said in Manchester that there would be "intense disappointment" throughout the trade that there was to be no reduction in the imports ceilings. "That has been the main basis of repeated representations made to the Government," he added. The Board is to study the full text of the Board of Trade statement before making a detailed statement.

Mr. John McCann, leader of the Textile Action Group, which last week organised a mass protest march of cotton workers through London, predicted further mill closures following the statement. "I would not like to hazard a guess at the number of mills which will now decide to put up the shutters," he declared.

Textile Imports "Unsatisfactory"

Mr. Fred Dunkerley, President of the British Spinners' and Doublers' Association, said that the position regarding textile imports was "totally unsatisfactory," and he called the statements made by the President of the Board of Trade "intensely disappointing." But he welcomed the fact that yarn was included in the Commonwealth agreements for the first time and that a new system of individual licences was being introduced which would enable the Government to take speedy action where increased imports from any source threatened or caused disruption. It was also satisfactory that the Government had given a firm assurance that they accepted the long-term Geneva agreement subject to the reservation exempting the industry from obligations to admit increased imports.

But much depended on the firmness and speed with which the Government made use of the possibilities open to it under the agreement, particularly when dumping or subsidies were suspected or proved. Mr. Dunkerley warned that, if imports rose to the levels now agreed to by the Government, public and private money which was invested in the reorganisation of the industry would be wasted. There was a potential surplus of at least 140 million square yards in the case of cloth and 50 million lbs. in the case of yarn and, if this entered the market, it would lead to the closure of more mills.

Saying that the Government decision on imports was unfairly weighted against the people of this country, Mr. Dunkerley said that it would not be long before other industries were similarly affected, and the Government would have to take firm action. It was wrong that the Lancashire cotton industry should be not only the first, but the biggest sufferer. The Association for which he was speaking represents about 300 spinning firms.

Plan To Freeze-out Foreign Goods

Cotton industry leaders who are bitterly disappointed at the Government's refusal to help their industry fight imports may be asked to try a plan to freeze-out foreign goods which are hitting their trade. The plan is to persuade British merchants not to handle imported goods or cloth.

Some industry leaders feel an independent "trade barrier" is the only hope for the Lancashire cotton industry.

Alderman J. W. Whitworth, General Secretary of the Association of Operative Spinners, said that he intended putting the idea forward at next Tuesday's meeting of the Cotton Board. "Even though the ceilings have been fixed we are not bound to take imports of that amount. I think arrangements could be made within the trade not to accept imports," he said. Unless positive moves of this kind were made the industry faced a further contraction of up to 16 per cent, he warned.

Cotton Unions To Meet

Lancashire's most powerful cotton union organisation—the United Textile Factory Workers' Association—is making plans for an emergency conference to discuss the crisis in the cotton industry. The Association—which represents over 120,000 employees in various textile unions—is calling cotton workers to Manchester for a mass meeting on 20th June.

Association Secretary Mr. James Milhench said that more than 800 millworkers were expected to attend the meeting. "The main item will be the question of foreign textile imports, and the effect on our livelihood," he declared. Cotton workers are being urged to take half a day off work to attend the meeting. "We are confident that people will take the time to attend."

The Textile Action Group, which on Monday organised a protest march of 3,700 cotton workers through London, stated that it had not been informed of the meeting. But the Chairman, Mr. John McCann, said: "If the meeting is open to the public we would be glad to attend, and give whatever support we could."

Fewer Workers

Lancashire cotton mills are losing more workers, weaving less cloth, and spinning smaller quantities of yarn every month. Latest figures issued by the Cotton Board in Manchester confirm that protestations by the trade that imports must be curbed to give the home industry a chance to compete with rivals are backed with solid facts. Another 2,100 workers left the industry in April, bringing the total manpower strength down to 161,990. Over 7,600 cotton workers have now left the cotton trade since the beginning of the year, and the labour force is the lowest in living memory.

Average weekly yarn output for the four weeks ended 28th April aggregated 11,210,000 lbs., as compared with 12,870,000 lbs. for the previous month. In the same period last year, the figure was 14,330,000 lbs. Cloth output per week fell from 34,480,000 yards to 31,030,000 yards, as compared with 37,760,000 yards in the same period last year.

T.A.G. Writes to Queen

The unofficial Textile Action Group, which numbers among its supporters leaders of the main employers' organisations in the cotton spinning and weaving industries, has appealed for Royal intervention in the dispute between the cotton trade and the Government. It is seeking an audience with the Queen or Prince Philip to ask for assistance.

A letter sent by the Chairman of the Group, Mr. McCann, to the Queen said that approaches from the industry to the Government had met with no response, and the anxiety felt by these loyal subjects was such that 3,727 of them went to London to protest earlier in the week. The letter to the Queen asked her to intercede on behalf of the industry, and said that the group would be honoured to visit London or elsewhere to talk about the serious situation.

The Prime Minister, in reply to a letter from the T.A.G. asking him to take action to save the industry from the threat of foreign imports, suggested that the Group should send a memorandum to the Board of Trade. In a letter to Mr. Macmillan, the T.A.G. said they felt this would be a waste of time. It pointed out that their objective now was not negotiation, but action, and would be based on the assumption that they would beat the Government in this battle. It was criminal for the people of the North West to be sacrificed, added the letter to Mr. Macmillan.—*All Rights Reserved.*

Notices

STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF the 2nd May 1962 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Director of the Central Board in pursuance of Section 19 (1)(c) of the State Bank of India Act, 1955, to fill the vacancy which will arise on the 1st July 1962 through the retirement of Shri J. D. Choksi, NOTICE IS HEREBY GIVEN that I have accepted as valid the nomination proposing the name of Shri J. D. Choksi of Bombay House, Bruce Street, Bombay, as a candidate for election as a Director of the Central Board of the State Bank of India. The said nomination being the only valid nomination received, Shri J. D. Choksi shall be deemed to be elected a Director of the Central Board of the Bank at the said Local Meeting of the shareholders proposed to be held on the 27th June 1962 which Meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

R. N. CHETTUR,
Secretary & Treasurer,
State Bank of India,
Bombay.

13*th June*, 1962.

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED A First Interim Dividend of Rs. 2.4975 per share (i.e. Rs. 3.00 per share increased in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 less Income Tax at the Company's rate of 25 per cent in accordance with the proposals contained in The Finance (No. 2) Bill, 1962, subject to deduction of tax under Section 194 of the Income Tax Act 1961 on the Company's Preference Shares in respect of the year ending on the 31st December, 1962, payable to Members whose names appear in the Preference Shares Register of the Company on the 16th July, 1962. Warrants will be posted on or after the aforementioned date to the addresses or in accordance with the instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th July, 1962 both days inclusive.

In the event of a reduction in the proposed Company's rate of tax for the current financial year on enactment of the Finance Bill, the excess tax deducted will be refunded.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director & Secretary.

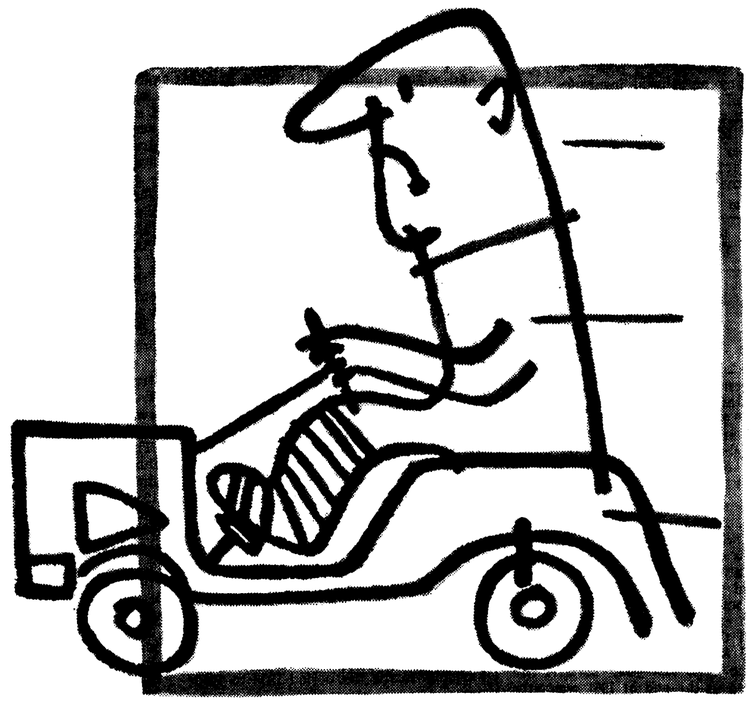
The wise motorist says

"Don't use the clutch as a foot-rest"



After changing gear remove your foot completely from the clutch. The lazy driver is a wasteful driver. Constant pressure on the clutch means more strain on the engine, more petrol consumed. It wears out the clutch plate and shoots up motoring costs.

GENERAL INSURANCE SINCE 1955

INDUSTRIAL PRODUCTION MAINTAINS THE LEAD

FROM the point of view of growth of business, 1960 was one of the best years for general insurance in India, next only perhaps to 1955, a peak year. According to the *Indian Insurance Yearbook*, 1961, incorporating the figures for 1960, which has just been published, the index of general insurance business (base 1951=100) rose during 1960, by 11.8 points to 169.7, as compared with the rise by 13.1 points to 135.3 in 1955. Again, unlike in 1955, when the rise in the index for general insurance exceeded that in the index of industrial production which stood at 122.4, as against 112.4 in the previous year, in 1960, the index of general insurance rose less than in proportion to the rise in the index of industrial production which went up by as much as 18.4 points to 170.3. Thus, the tendency of general insurance business to lag behind industrial production, which was noted during the past few years, persisted during the year under review also. The following table gives the trend of industrial production and general insurance business in the country during the period 1953-60:

Index Number of General Insurance in India

	Index number of general insurance business in India	General index number of industrial production
1953	104.7	105.6
1954	112.2	112.0
1955	135.3	122.4
1956	139.9	132.6
1957	140.4	137.3
1958	146.8	139.7
1959	157.9	151.9
1960	169.7	170.3

It will be seen from the table that the index number of industrial production went up by as many as 18.4 points in 1960, as compared with 12.2 in 1959 and a mere 2.4 in 1958, whereas the index number of general insurance business recorded a rise of only 11.8 in 1960, as against 11.1 in 1959 and 6.4 in 1958.

In terms of absolute figures of premium income, however, 1960 was the highest year on record so far, disclosing a perceptible increase over the business done both in 1959 and 1955. A noteworthy feature was that the larger business, as compared with 1959, was transacted by a smaller number of companies, 166 (comprising 88 Indian and 78 non-Indian), as against 177 companies at the end of 1959, of which 90 were Indian and 87 non-Indian. Eleven more insurers ceased to exist last year, so that the number of insured at the end of 1961 was only 155, of which 82 were Indian and 73 non-Indian. The contraction in the number of companies has been going on for some years, as witness the fact that there were as many as 198 companies (98 Indian and 100 foreign) registered on 31st August 1956, the day preceding the establishment of the Life Insurance Corporation of India, transacting one or more classes of business. Thus, the casualty rate of general insurers since nationalisation of life insurance has been heavy but quite welcome. Even now there are too many insurers, having regard both to the present and prospective size of business. It will be seen that, since the advent of nationalisation of life insurance, the Indian companies have fallen by 16 and the foreign by 27. Again, the foreign companies, which were in absolute majority in terms of numbers, became a minority by the close of last year.

State-wise Distribution

The geographical distribution of the 185 insurers (94 Indian and 91 foreign) who transacted general insurance business during the year ended 31st December 1960 indicates that Maharashtra had the largest number of insurers registered in the State, namely, 40 insurers, having a total net premium income in and outside India of Rs. 22.53 crores out of a total net premium income (for all Indian insurers) of Rs. 32.94 crores. West Bengal had 17 insurers which accounted for a total net premium income of Rs. 6.55 crores, Madras had 14 insurers having a premium income of 1.63 crore, Gujarat 7 with a premium of Rs. 1.04 crore and Delhi an equal number with a premium of Rs. 85.84 lakhs. Other States accounted for 9 companies and had, in all, a total net premium income of Rs. 32.97 lakhs.

Out of the 91 foreign insurers operating in the country, the majority, namely 56, including one insurer holding a standing contract with Lloyd's of London, were incorporated in Britain. They accounted for a total net premium income of Rs. 5.65 crores out of a total of Rs. 7.99 crores collected by the foreign insurers. New Zealand had only 3 companies doing business in India but these constituted, in terms of premium income, the second largest national group, accounting for a net premium of Rs. 76.75 lakhs. American companies were nine in number, and French, Swiss, Australian and Hong Kong four each. Two companies were incorporated in Canada, while Sweden, Kenya, Italy, Indonesia and Ceylon accounted for one each.

Trend of Premium

An analysis of gross and net premium written in India reveals some interesting trends. The gross premium written direct in India during 1960 in all classes (fire, marine and miscellaneous) of insurance business aggregated Rs. 9.19 crores, Rs. 5.79 crores and Rs. 12.11 crores, respectively, amounting in all to Rs. 27.08 crores for Indian insurers, was double that in 1955 when gross premium amounted to Rs. 14.77 crores. As compared with this, gross premium written direct in India by non-Indian insurers during 1960 amounted to Rs. 11.04 crores, comprising Rs. 5.17 crores in the fire department, Rs. 2.76 crores in the marine department and Rs. 3.11 crores in the miscellaneous department, as against a total of Rs. 9.33 crores in all the three departments in 1955, representing only an increase of 18.3 per cent. It will thus be seen that Indian companies accounted for the major share of the increase in gross premium written direct in India. Thus the share of Indian insurers in the gross premium written direct in India increased from 59.6 per cent of the total in 1955 to 71 per cent in 1960 whereas the share of non-Indian insurers declined from 40.4 per cent in 1955 to 29 per cent in 1960. The same is the position in regard to net premium also. Net premium income in India of Indian insurers amounted to Rs. 18.51 crores in 1960, as against Rs. 7.59 crores in 1955. Net premium in India of non-Indian insurers amounted to Rs. 7.99 crores in 1960, as against Rs. 6.82 crores in 1955. Percentage-wise, the share of Indian insurers in the total net premium income rose from 52.7 per cent in 1955 to 69.8 per cent in 1960, whereas that of non-Indian insurers declined from 47.3 per cent to 30.2 per cent during the same period. The following table indicates the trend of gross and net premium income during the period 1955 to 1960:

Trend of General Insurance at a Glance
(In lakhs of rupees)

Year	Fire		Marine		Miscellaneous		Total	
	Indian insurers	Non-Indian insurers	Indian insurers	Non-Indian insurers	Indian insurers	Non-Indian insurers	Indian insurers	Non-Indian insurers
Gross premium written direct in India:								
1955	601.35	442.73	331.83	267.15	443.92	222.95	1,377.10	932.83
1956	737.54	468.98	394.09	266.36	517.59	223.91	1,649.22	958.25
1957	719.33	470.34	438.76	266.23	638.61	251.60	1,796.70	987.17
1958	794.56	471.41	444.86	232.26	765.77	262.89	2,005.18	966.56
1959	871.77	501.28	510.49	240.64	919.08	278.79	2,301.34	1,020.71
1960 (provisional)	918.65	516.57	579.15	276.55	1,210.83	310.57	2,708.63	1,103.69
Net premium income in India:								
1955	277.47	284.68	147.17	193.26	334.41	208.70	759.05	686.64
1956	336.66	300.23	167.56	197.73	401.87	199.66	906.08	697.62
1957	377.96	313.48	209.33	190.96	508.04	213.93	1,096.22	718.39
1958	436.57	323.23	258.85	171.55	602.09	225.08	1,297.51	719.84
1959	513.85	318.62	261.89	180.83	725.98	245.27	1,501.72	744.71
1960 (provisional)	593.42	317.64	309.04	205.04	948.95	276.51	1,851.41	799.19

The gross premium written direct outside India by Indian insurers amounted to Rs. 8.65 crores made up of Rs. 2.35 crores in the fire, Rs. 1.97 crore in the marine and Rs. 4.33 crores in the miscellaneous departments, respectively, as compared with a combined net premium of Rs. 5.81 crores in 1955. While the table indicates the broad trend of net and gross premium in the fire, marine and miscellaneous insurance, it is noteworthy that, during the period 1955-60, the share of Indian and non-Indian insurers in the total has shown a considerable change in favour of India.

The proportion of fire insurance business in the total gross premium written direct in India by Indian insurers has fallen from 44 per cent in the year 1955 to 34 per cent in the year 1960 and the proportion of miscellaneous insurance business has gone up from 32 per cent in the year 1955 to 45 per cent in the year 1960 while the proportion of marine insurance business has slightly fallen from 24 per cent in the year 1955 to 21 per cent in the year 1960. The trend is the result of a faster increase in the gross premium written direct in India in miscellaneous insurance business, as compared to the increase in fire and marine insurance business.

In the gross premium written direct outside India by Indian insurers, the proportion of fire insurance business has decreased from 35 per cent in the year 1955 to 27 per cent in the year 1960 and the proportion of marine insurance business has decreased from 33 per cent in the year 1955 to 23 per cent in the year 1960 while the proportion of miscellaneous insurance business has gone up from 32 per cent in the year 1955 to 50 per cent in the year 1960. This is because the gross premium written direct in miscellaneous insurance business during the year 1960 is more than twice that written in the year 1955 while the gross premium written direct in the other two classes during the year 1960 is only slightly more than that written during the year 1955.

For the non-Indian insurers, 47 per cent of the total gross premium written direct in India during the year 1960 came from fire insurance business, 25 per cent from marine insurance business and 28 per cent from the miscellaneous insurance business. The composition during the year 1955 was 47 per cent for fire, 29 per cent for marine and 24 per cent for miscellaneous insurance business. The change in the proportions of marine and miscellaneous insurance business is accounted for by the fact that the increase in premium income in fire and miscellaneous insurance business in the year 1960 over that in the year 1955 is much greater than that in marine insurance business.

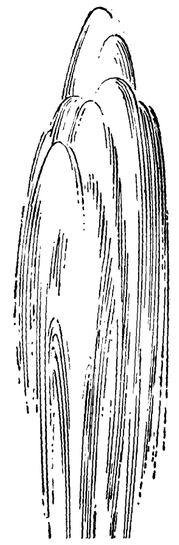
Income and Outgo

While gross and net premiums broadly indicate the trend of business, it is the income and outgo position that shows how far the year's working had led to the strengthening of the financial position of companies. The total income of all Indian insurers amounted to Rs. 33.48 crores, of which Rs. 18.51 crores were from premium income in India and Rs. 14.43 crores from premium outside India. Of the balance, Rs. 50 lakhs were accounted for by interest, dividends and rents and Rs. 4 lakhs by other income. Total outgo amounted to Rs. 29.68 crores, of which Rs. 16.84 crores related to claims, Rs. 4.40 crores were commission, Rs. 8.24 crores expenses and Rs. 0.20 crore miscellaneous outgo. The excess of income over outgo amounted to Rs. 3.8 crores. Of this, Rs. 2.75 crores were absorbed in strengthening the reserve for unexpired risks, leaving an underwriting profit of Rs. 1.05 crore. This profit of Rs. 1.05 crore *minus* a deficit of Rs. 12 lakhs brought forward from the previous year *plus* Rs. 1.06 crore being interest earned (not relating to any particular account) and Rs. 56 lakhs being miscellaneous income made available Rs. 2.55 crores which were appropriated as follows (Rs. in lakhs): Expenses of management 22, taxation 72, transfers to particular funds or accounts 34, dividend 28, miscellaneous outgo 23 and carry forward 77. It will thus be seen that what the Government got by way of taxes (Rs. 72 lakhs) was 2½ times the amount the shareholders got by way of dividend (Rs. 28 lakhs).

Underwriting Experience

A comparison of the underwriting experience of Indian and non-Indian insurers over the years 1955-60 shows that, during the period, the claims experience of non-Indian insurers was better than that of Indian insurers in all classes of general insurance business. Non-Indian insurers, however, paid a higher percentage as commission in all classes of general insurance business during the period except for the years 1958 and 1959 in respect of fire business. Expenses of management, including taxes and miscellaneous outgo, of non-Indian

(*Continued on page 1131*)



MODERN DIVINING ROD

Operated by skilled men, seismic surveys can probe the earth to track underground rock structures that may contain petroleum. Shock waves created by small charges of dynamite travel down, hit the rock formation and bounce back again, to be recorded on the surface by sensitive instruments which produce an X-ray picture, as it were, of the earth's crust. If the picture looks favourable, the next step is to drill a test well.

Geological and geophysical techniques have made oil exploration less of a leap in the dark than it used to be, yet even with scientific aids like the seismic survey it is the drill alone that gives certain knowledge of the presence-or absence-of oil.

THE INDIAN OVERSEAS BANK LIMITED

FIRST FIVE YEARS OF COMPANIES ACT, 1956—I

PLEA FOR FURTHER AMENDMENT INOPPORTUNE

By A Special Correspondent

OUR country's biggest legislative measure, namely, the Companies Act, 1956, completed the first five years of its operation on 31st March 1961 and a full account of its working during the quinquennial period ended 1960-61 became available to the public in the Fifth Statutory Report presented by the Department of Company Law Administration to the Rajya Sabha and the old Lok Sabha on the 29th and 30th March 1962. Provisions of Section 638 of the Companies Act, 1956, impose a compulsory obligation on the Government to present an annual Report on the working and administration of the Act to Parliament. Thanks to the wisdom of our Parliament which incorporated this innovation in the gargantuan Companies Act that a detailed account of the functioning of the corporate sector, the administrative policies of the Government and their repercussions on the corporate sector, the effectiveness of the various restrictive provisions of the Act specially provided for to check various types of bad company practices, the emergence of new objectionable and pernicious company practices and the development of ingenious ways of circumventing the provisions of law, is available to the public every year.

So far, this Report has been made available somewhat belatedly every year as the Government took full advantage of the latitude of time allowed by the aforesaid provisions of the Act which require that "the Central Government shall cause a general annual report on the working and administration of the Act to be prepared and laid before both Houses of Parliament within one year of the close of the year to which the report relates." Notwithstanding this delay, which ought not to be allowed to continue if informed public opinion on the current problems of the corporate sector is to be developed in the country, the Report is an extremely useful document, insofar as it is quite distinct from the general complexion of other administrative reports brought out by the various Government departments and agencies in which cases the paramount aim of the reporting authority appears to be to merely make a formal compliance of an obligation forced upon or self-invited by them and to fill it up with trivialities and factual information of lesser importance and thus avoid the material details about the Government policies and the exercise of discretionary powers by them which in fact should be the real core and heart of any Government report.

Mass of Facts

It is, however, heartening to see that the Statutory Report on the working of the Companies Act is packed with a mass of facts and figures from which a good many broad conclusions and trends are also boldly drawn and developed by the Department of Company Law Administration according to their own light and interpretation of the provisions of the Companies Act with which one may not always partially or wholly agree. This Report is also remarkable in another respect too in that it sets out in great detail the important Government policies and decisions, though it does not always give the reasons and background which led to the solidification of official thinking in the form of those vital decisions. For the detailed presentation of information in the Report, it must be conceded, our thanks are in no small measure due to the Administrative Department in charge of the working of the Companies Act, namely, the Department of Company Law Administration which has chosen the Annual Report prepared by the U.S. Securities and Exchange Commission as the model, instead of the thin statistical statutory report prepared by the U.K. Board of Trade under the provisions of Section 451 of the English Companies Act, 1948, from which the idea of preparing such a report had been borrowed by the framers of the Companies Act in our country.

The preparation and publication of the Statutory Report on the working of the Companies Act and its examination in Parliament and by the public at large serves more than one purpose. First, insofar as the Report exposes the Government policies and the Government's ways of working a particular piece of law to the open public view, better public relations are fostered and an atmosphere of trust and confidence in Government is created. Secondly, with the removal of the veil of secrecy and mystery surrounding the Government policies, the area of public criticism of Government policies, which is, indeed, very wide and vague when people are ignorant and ill-informed, is considerably narrowed down and the resultant healthy and informed criticism leads to a reduction of arbitrariness in Government decisions and checks the possibilities of collusion between the Government and the anti-social or interested elements of the society. Thirdly, the publication of a well-documented statutory report helps Parliament and the public in assessing as to how far the provisions of law and the administrative machinery have been able effectively to check the evil practices, protect the public interests and promote the socio-economic objectives set before the country by the Government. Fourthly, the Report leads to the dispelling of the belief, if any is currently held, that the Government had no settled policies or they took *ad hoc* decisions influenced by corrosive factors or influences.

These in brief are some of the important benefits that accrue from the report of the type required to be prepared under the Companies Act. One would, therefore, in the larger interests of the society, like that other Government Departments are also called upon to make compulsory annual reports on important economic laws such as the Industries (Development and Regulation) Act, Securities Contracts (Regulation) Act, Control of Capital Issues Act so that the democratic pressures and forces have their full impact on the Government policies. As it is, even the small coterie of the best informed people in the country on economic matters know precious little about the working of many laws in the land, and it is no wonder that many provisions of those laws may be dead letters, remaining unused for years or may be irksome burdens on the concerned sections of the society helping only the bureaucracy to proliferate and prosper by turning out piles of unproductive paper work.

Criticisms Against the Act

So much about the importance of the statutory reports on the working of the Companies Act which provide the sinews for the present series of articles. But here, before coming to outline the main highlights of the working of the Companies Act during the last five years and to set out the long string of achievements claimed by the Department of Company Law Administration for itself, it would but be pertinent to allude to various criticisms levelled against the Companies Act and the Department administering it at the time the present Company Law was passed in 1955 and thereafter during the last five years, as a proper assessment of the working of the Act cannot be made without keeping them in the background. The Government, however, is chary of making an assessment of the working of the Act, as it seems to feel that "the assessment of the full impact of a major piece of comprehensive legislation like the Companies Act, which is designed not only to regulate the day-to-day working of the joint-stock companies but also aims at influencing the behaviour pattern of company management in a more fundamental sense than mere routine enforcement of the provisions of the Companies Act could expect to do, requires a much longer experience of the working of the Act than has been available during the last five years."

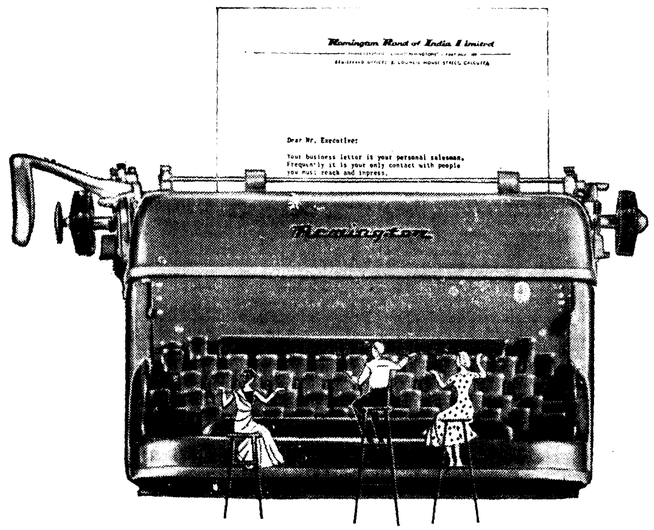
Viewed against this perspective that the Company Law is to attempt "to bring about some far-reaching structural changes in the organisation and working of the corporate sector," the five-year period is, of course, very short, but, on a lower plane of judgment as to how far the grossest types of abuses in company management and corporate finance (which in the past had undermined the confidence of the general public and the investors and thus hindered the growth of the country's industrial potentials) have been controlled and curbed, an assessment can be attempted at this stage. In fact, so far as the change in the behaviour pattern of the companies is concerned, its harmonisation with the larger interests of the society and the long-term objectives of a welfare State as are enshrined in our Constitution would, in a very large measure, be brought about only by an effective play of the democratic pressures in the country and not by the penal provisions of any law or by sending round strongly worded warnings or bigstick actions by the Administrative machinery; the latter types of attempts, in effect, are likely to make the honest management shy and timid and the bad one more insolent and ingenious in devising newer and newer types of bad company practices. Thus, it is a somewhat misplaced belief that the conversion of company 'soul' and 'image' from bad to good could be brought about by a strong law having penal pendants attached to its various provisions. In fact, this big task will have to be left, to a very large extent, to social pressures and voluntary non-governmental organisations in the field of trade and industry which will generate a sense of self-introspection and self-realisation among the people in relation to their duty towards the society and the country.

Federation's Move

Among the economic laws in force in the country, the Companies Act is the most criticised law. Unlike the Finance Acts which give rise to a spurt of sharp criticisms at the time the taxation measures are announced which later on more or less fade out of the focus of public attention, the present Companies Act continues to be perennially under fire since the very early days of its codification and enforcement and, as yet, there are no signs on the horizon that the business class in the country has in any way relented from its original position of hostility and opposition to this measure and decided to live with the existing Companies Act and abide by its provisions in the spirit they have been designed and not under any sort of protest. The impression that the business community in the country still continues to be strongly opposed to this measure is clear from a recent decision of the country's premier business organisation, the Federation of Indian Chambers of Commerce and Industry, to elicit the views of the business community as to which provisions of the Companies Act are in their opinion redundant, irksome and non-essential and entail undue burdens on the company without any compensating advantages or without serving any useful purpose. The Federation has asked them also to point out instances where the clarifications and interpretations of the Act by the Department of Company Law Administration which throw more onerous responsibilities and obligations on the managements and companies, are not warranted by the provisions of the Act. It has also asked for suggestions for deletion or amendment of the provisions of the Act as also of the rules and forms prescribed under the Act. The present move on the part of the Federation to issue a strongly worded circular to its constituent members is symptomatic of the strong current of discontent running under the apparent surface of smooth relations between the Government and industry.

The strong tone of disapproval which underlines the Federation circular issued after five years of administration of the Companies Act can be compared with the vehemence of criticism demonstrated by many a critic of the present Companies Act at the time of its passing in December 1955. This comparison would show that, even after five years, the criticism of the Act continues to run as high is in 1955 when one commentator criticised the Companies Act in the following words:

"The restrictions, prohibitions and inhibitions attributable to the various influences that shaped this law have made it so cumbrous and restrictive that it is sure to make the working of the corporate sector sluggish and retard its growth. The law has become complex and rigid in content, confusing and unworkable in practice. The unending applications for Government approval will introduce red-tape, and make its working dilatory. The Government has allowed its obsession with eliminating abuses and its ideological bias to undermine the efficiency of the working of companies with unnecessary restrictions. Bureaucratic delays and involved procedure will make it difficult for the honest and the scrupulous to function. The difficulty will be particularly great for new comers and smaller companies who will neither have the adequate organisation nor the resources to cope with legal formalities. The complexity of the law will keep the cost of administration high, and require the diversion of energy from productive work to administrative work, thus increasing the overheads and sapping the energy



How BIG is Remington ?

The largest typewriter manufacturer in India. The largest in the world. Our Howrah Factory is the largest in Asia . . . we could give you an awful lot of statistics, but statistics leave out some very important things.

Our Howrah Factory is laid out over 1,80,000 square feet : that's a statistic, but it says nothing of the fantastic difficulty of pioneering in large scale typewriter manufacture.

We have 26 branches and a network of service stations, so that you can buy a Remington typewriter anywhere and get a Remington service man in any part of the country. A fully *trained* man. Many years of organisation went into *that*.

More statistics : a Remington typewriter has 1,845 parts and more than 3,700 different press tools, jigs, fixtures and special toolings are needed to make them. The parts are made from 24 varieties of materials in 251 sizes and thicknesses, including special alloy steel in 53 sizes. More than three-quarters of these materials undergo heat-treatment.

Just these few statistics meant setting up our own Tool Room and Heat-Treatment Section in the Howrah Factory, training Tool Room labour and initiating research among local industries for the production of alloy steel. It meant training a full Assembly Department for highly specialised skills from rivet-spinning and type soldering to electroplating and stove-enamelling and many more. It even meant training type-aligners to be always accurate to within .003 of an inch.

We are rather proud that the finished typewriter from the Howrah Factory truly saves Foreign Exchange *without sacrificing an iota of quality.*

Pyramid

of the management. It will also accentuate the tendency of companies to agglomerate in places like Bombay and Calcuttta, where legal services and other facilities are available, to the neglect of the countryside, the industrialisation of which ought to be encouraged. The grant of powers to the Government will make the administration of the law a major problem and will make the efficient functioning of companies difficult."

It was further mentioned by the same commentator that the Government would have to grant sanctions, approvals, and consents under about a hundred sections of the Act and it will have to do so in the case of 30,000 companies. It will also have to examine whether it should relax the provisions in particular cases. This will be so even in small matters like the grant of petty increments in the salaries and managers. Being burdened with this task of approving routine applications the Administration might tend to neglect or fail to give sufficient attention to important matters under the Act.

Major Strands

Thus, the criticisms of the Act and the Administrative machinery have been strong and superabundant and have also been voiced in varying modes of expressions and at various occasions by the critics. From the tangled web of criticisms one could sort out about a dozen major strands which deserve to be considered in assessing the working of the Companies Act. First, it has been pointed out that the Companies Act is inordinately lengthy, complex and rigid. It is a vast jungle of 658 sections with thick undergrowth of sub-sections, provisos, schedules and attended to by a complex jumble of rules, regulations and forms prescribed thereunder. The complexities of structure, involved language, drafting vagueness and obscurities in the material provisions have made the law a favourite hunting ground for the unscrupulous management and a paradise for lawyers. Secondly, it is said that the provisions are so complicated and technical that most shareholders who are the immediate interested party whose interests are sought to be protected by the Act cannot at all understand them. Thirdly, it is alleged that the Act has been conceived in a punitive spirit and is virtually a penal code which must necessarily have an adverse effect on the honest and straightforward business and managerial class. Fourthly, it is advanced that the Act leaves too much to the subjective judgment of the officials. The powers given to the Government are of omnibus nature and are ill-defined at places and, therefore, they leave too much room for exercise of administrative discretions and issue of administrative fiats. Fifthly, there is too much of over-regulation by Government who are interpolated in even apparently minor matters. This undue assession of authority to the Government in our country who are keen to abridge on slender grounds the area of freedom of initiative and enterprise in the private sector, is likely to be misused by inadequately trained administrative staff and abused by the unscrupulous politicians at the helm of affairs in the Government at any time. Sixthly, there is every possibility of bureaucratic delays and harassment. Also because of the wide spread of the area of interference by the Government, there is every chance of frittering away of time and energies of the Government on relatively small matters and consequently neglect of the big offences under law and the instances of gross abuses would go unpunished and undetected.

Seventhly, the arbitrary nature of the many provisions of law, particularly those relating to managerial personnel, put a high premium on mediocrity and unnecessarily curb the enthusiasm of capable and talented people from entering into the corporate field as they would find the scope of their activity and reward for their work considerably reduced. In the result, this dilution of managerial talents will be reflected in the general deterioration in the performance of the companies in productive spheres. Eighthly, a plethora of returns and forms required to be furnished by company managements without any corresponding utility is likely to increase the administrative cost of companies and would also be a constant source of irritation and botheration to them. Ninthly, the Act has created an atmosphere of uncertainty which cannot but adversely affect the smooth working of companies which is so vital at the present juncture of rapid industrial development of the country. Tenthly, the administrative set-up is and will for a pretty long time be too poorly equipped to satisfactorily shoulder the overcentralised powers and control under the law. Also, the overcentralisation of powers in the hands of the officials is the negation of advice given to the private sector that the powers of the managerial class should be clipped and sized down, so that a concentration of authority does not take place. Eleventhly, the various inherent complexities of law and administrative procedures set out by the Government would hinder the participation of foreign capital in the corporate enterprises in this country. And, lastly, it has been also urged that, for the administration of an Act of this type, it would have been better to create an autonomous authority of the type of the U.S. Securities and Exchange Commission which should have been given the administration of the other laws relating to stock exchanges, capital issues, etc., besides that of the Companies Act. Thus, with such an authority, the bad features of Government administration would have been removed.

Radicals' Objections

All the foregoing criticisms have been advanced from the side of the business and commercial community. Apart from these, the more radical quarters in the country have criticised the Act as a hotchpotch thing which leaves the basic question of checking and breaking up the concentration of economic power and wealth in the corporate sphere by and large unsolved and unassaulted. These quarters also complain that a partisan spirit has been shown to the managing agency system which has been given a fresh lease of life with good many loopholes in the law to make their existence profitable and worth their while.

In answer to the foregoing criticisms the Government made their views widely known both at the time when the present Companies Act was debated in Parliament in 1955 and in the subsequent years. Taking up first the drafting anomalies, the Government took the wind out of the sails of their critics in 1957, when they appointed an expert committee under the chairmanship of Mr. A. V. Vishwanatha Sastri, a retired judge of the Madras High Court, *inter alia*, to suggest amendments in the Act to remove such drafting defects and obscurities as may have interfered with the smooth working of the Act and suggest changes in the form or structure of the Act necessary or desirable to simplify it. The Committee was also asked to suggest amendments to overcome such practical difficulties in its working as may have been encountered since it came into force and to ensure the better fulfilment of the purposes underlying the Act. The appointment of this Committee on which the officials were in a minority of one as against four non-officials, of whom two, including the Chairman, were legal experts and the other two, eminent chartered accountants, of whom one represented a leading English managing agency house of Calcutta, enormously pleased the business circles but the recommendations of this Committee and the resulting Companies Amendment Act of 1960 which later came to incorporate a further series of stringent sections such as those relating to the private companies which under certain circumstances were to be deemed to be public companies, the imposition of a compulsory obligation on private companies to submit profit and loss accounts to the Government, the confirment of powers on Government to direct special audit in certain cases, the enlargement of powers of Registrars of Companies and Inspectors conducting investigations, the declaration of certain persons connected with managing agents to be deemed as managing agents, the incorporation of new provisions requiring Government approval in the case of appointment of sole selling agents, the extension of the scope of the provisions governing inter-corporate loans and investments, the provision of levy of "penal" or "additional" fees in case of default in filing statutory documents with the Registrar of Companies, etc., utterly disappointed and confounded the business community.

The Committee expressed itself against any major change in the form or structure of the Act. It also refrained from recommending any changes of matters of major policy, as in its opinion it was too premature to alter such provisions so soon after their enactment after prolonged deliberation both inside and outside the legislature. The Committee focussed its attention mainly on practical difficulties experienced in the course of the working of the Act and the interpretation of its provisions and also made recommendations with a view to plugging loopholes, supplying omissions, clarifying amendments involving modification of over 150 sections, the majority of which were of a technical nature designed to remove obscurities or to clarify the intentions of the legislature; it was only in respect of about a score of sections that the Committee suggested substantial changes. With this experience at hand, one could say, with a fair degree of certainty, that the latest demand for the review of the scheme and working of the Companies Act with the ultimate aim of getting the irksome provisions of the Act suitably changed in favour of the private sector, is fraught with serious risks. While some provisions of the Act may be straightened in the drafting sense and some cumbrous requirements of law may be streamlined or even dropped, in the present atmosphere prevailing in the country, which favours extension of concept of social control over individual or private activities, there is every likelihood of the clamping of some additional restrictions over private business enterprise and management class on the basis of the study of instances of unsound company practices observed in the course of the administration of the Companies Act in recent years. These instances are prominently listed in a separate chapter in the Annual Statutory Reports of the Department of Company Law Administration. Prudence demands that they be given due heed to by the private sector.

Thus, while the Government have admitted the existence of legal ambiguities and lacunæ in the provisions of the Companies Act, they have also justified the complexity of the present law. According to official spokesmen, the complexity of Company Law is the inevitable result of industrial and business organisations and their activities which are day-by-day becoming more and more complicated and, in the result, require a close watch, as these have wide and serious repercussions on the society. Moreover, the law was bound to get more complicated in future with the economic development of the country and the growth and diversification of business. Simplification of the Companies Act is, therefore, not to be expected at all. The plethora of provisions in the Companies Act in particular, and of laws and regulations hamstringing the development of industry in general has been justified by the officials of the Department of Company Law by the plea that "the laws were the products of circumstances and needs of a particular time." However, as regards the present formidable size of the Companies Act, the Government's view is that it is of the same size as the English Companies Act, with this difference, that the number of sections in the Indian Companies Act has increased by the splitting and hiving off of many sections of the English Companies Act. Further, it has also been explained that the Indian Companies Act has become big, as the Government wanted it to be a "self-contained, complete and exhaustive exposition of the law governing joint-stock companies" in the country.

As to the criticism that too many restrictive provisions have been incorporated in the Act, the Government has adduced historical, as well as ideological, reasons. Taking up the historical justification first, it has pointed out that several important factors contributed to the introduction of stringent provisions in the Company Law some of which are detailed and complicated only on account of the need to prescribe conditions that will ensure a minimum code of good behaviour on the part of company managements

ANNUAL MEETING OF ORISSA CEMENT
INSTALLED CAPACITY OF REFRACTORY INDUSTRY ADEQUATE
CHAIRMAN, MR. J. DALMIA CALLS FOR CAREFUL PLANNING

IN his speech at the Twelfth Annual General Meeting of Orissa Cement Ltd., held at Rajgangpur (Orissa State) on Monday the 18th June 1962, Mr. Jaidayal Dalmia, the Chairman of the Company, dwelt at length on an important aspect of the refractory industry. Mr. Dalmia pointed out that, owing to growth of steel production at a rate lower than anticipated and the rapid improvement in the furnace operating technique, which cut down the consumption of basic refractories and the growing preference for L.D. process of making steel, which requires very little quantity of basic refractories, the installed capacity of the refractory industry at the end of the third Plan, which would be in the neighbourhood of 150,000 tonnes, would be sufficient to meet the estimated requirement of about 100,000 tonnes. There should, therefore, according to Mr. Dalmia, be no apprehension about any shortfall in capacity. On the other hand, careful planning was called for in the creation of additional capacity.

The following is the full text of Mr. Dalmia's speech:

"FRIENDS,

"I extend to you all a very cordial welcome to Rajgangpur on the occasion of the twelfth annual general meeting of your Company. The accounts for the year 1961 and the report of your Directors have been circulated. Though your Directors have decided to maintain the dividend on equity shares at 15 per cent, the net value of the dividend to the shareholders will be better, compared to the previous year as 81.60 per cent of the dividend is being paid out of tax-exempt profit.

"The current ex-works prices of cement fixed by Government effective 1st November 1961, are subject to adjustments from time to time for variations in cost arising from any governmental action or increase in the charges for power or fuel. The representation made by your Company for grant of increase in its retention price on the basis of the escalator clause, has been pending with the Government, since over four months. If price increases are not given retrospective effect, as Government is generally reluctant to do, the industry is left to suffer during the intervening period. It is, therefore, necessary to make the escalator clause meaningful and of real benefit to the industry, that an efficient method is evolved so that requests for price increase based on the escalator clause get prompt consideration and expeditious disposal.

Refractory Industry

"I would now like to deal with some aspects of the refractory industry. Last year, I had referred to the uncertainty regarding the pattern and quantum of the future demand of refractories due to the uncertainty of the consumption rate of refractories per ton of steel produced. Recently, the consumption rate of refractories for steel production is being placed at a much lower level than before. The forecast of the demand for refractories by the end of the third Five-year Plan was based on the steel production capacity reaching a target of 10 million tons per annum by that time. This expansion is, however, well behind schedule and it is expected that the 10 million tons capacity may not be achieved until 1966-67. As a result of this, the operational requirements of refractories by the steel industry must be correlated to an annual steel production of only about six million tons until such time as this expansion is effected. As a result of the foregoing two factors, the forecast of the total annual demand of refractories has had to be altered radically. The estimates made by the refractories panel place the annual requirement of all kinds of refractories upto the period 1963-64 at 6.35 lakh tonnes and the anticipated annual production by then, at 10.51 lakh tonnes. In the case both of fireclay and silica refractories, the anticipated production far exceeds the estimated consumption by 1963-64.

Future Requirements

"With regard to basic refractories, it would be found that, on the basis of 6 million tons annual production of steel, the production of basic refractories will work out to approximately 27 lbs. per ton of steel, which is much on the high side. In this connection, mention might be made that, due to the rapid changes and improvement in the furnace operating techniques, the consumption of basic refractories is going down at a very fast rate. Reports have been received from the U.S.A. about a consumption figure as low as 3 lbs. per ton of steel. However, this low figure is resulting from a considerable advance in operating conditions and technique of the running of the furnaces, and the same yard-stick cannot be applied immediately to Indian conditions. The approximate figures for Indian conditions with the modern plants, which we are having, would lie between 10 and 17 lbs. per ton of ingot steel. Further, it is to be noted that the demand for basic refractories might not go up proportionate to the expansion schemes for production of steel which we are likely to have in future because of the growing preference for the L.D. process for the manufacture of steel which requires very little quantity of basic refractories. This point has also to be borne in mind while assessing the future requirement of the fourth Five-year Plan, due to further expansion of the steel industry. Under the above circumstances, it is felt that, by the end of the third Five-year Plan, with the completion of all the expansions of the basic refractories capacity which are in hand, the likely annual capacity would be in the neighbourhood of 1,50,000 tons, against an estimated requirement of maximum 1,00,000 tons. There should, therefore, be no apprehension about any shortfall in the capacity for the manufacture of basic refractories.

Careful Planning Needed

"The present situation emphasises the need of very careful planning in the creation of fresh capacity for refractories. As mentioned above, even in 1966-67, when the steel production would reach a level of 10 million tons per annum, the demand for refractories would be met fully by the indigenous capacity—rather, in the case of firebricks as well as basic bricks, there could still be substantial surplus capacity which could be utilised for the constructional requirements of the steel plants in the fourth Five-year Plan. Further, due to gradual conversion of all open hearth furnaces into all basic furnaces there is likely to be sufficient surplus capacity in the silica bricks due to which a part of the capacity of silica bricks can very conveniently be switched on to the manufacture of basic bricks, thus increasing further the capacity for production of basic refractories.

"I wish to refer to the tendency of certain States to refuse the mining of their deposits of minerals required by the refractory industry for use outside their boundaries. While the underlying principle of developing industries in their own territories is doubtless laudable, such parochial restrictions should not be imposed on an industry which is of national importance and which caters to the needs of such an all-India industry, as steel. While a composite refractory plant can be set up at only one site, chosen for various considerations, the raw materials for such a plant have to be obtained from all parts of India. It is hoped that the Government of India and the State Governments will take due regard of this and make it easier for this important industry to obain its requirements of essential raw materials.

Workload Study

"I am glad to report that industrial peace continues to be maintained at your Rajgangpur works and the relations between the management and the workers have been and remain cordial. I am, however, disappointed at the delay in the study of workloads which was decided upon by the Government of India while accepting the recommendations of the Central Wage Board for the Cement Industry. Out of 34 cement factories in the country, so far workload studies have been undertaken at only three plants. The study of workloads would provide valuable data for increasing productivity in the industry. Since the wage increases recommended by the Cement Wage Board were not linked to an increase in labour productivity, the burden of the rise in wage bill had fallen on the consumers by way of higher cement price. This was done despite the policy of the Government of India that increase in wages should flow mainly from increased productivity. The study of workloads will help at least in future, to consider demands for wage revisions alongside possible increases in productivity. I would, therefore, urge that due importance should be given to the workload study programme and it should be activated and extended to all the plants without further delay.

"Before I conclude, I wish to express our sincere appreciation of the hard work and co-operation of all the employees of your Company which have contributed in no small measure to the progress which your Company has made. *Jai Hind.*"

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

NEW PRODUCTS AND PROCESSES

Superconducting Wire

SUPERCONDUCTION, not so long ago of purely academic interest, is now becoming a normal technique for some branches of electronics. It is the phenomenon, met with near the absolute zero of temperature, of complete loss of resistance so that immense currents can be created by small voltages. Some metals and alloys exhibit the phenomenon more than others. One is a niobium-zirconium alloy. Associated Electrical Industries, Crown House, Aldwych, London, W.C.2, has now announced that it has developed techniques for producing wire of this alloy down to five-thousandths of an inch. Previously the wire was obtainable only from the U.S. Magnets of superconducting wire can be made very small and yet create enormous magnetic fields. These are of interest in certain future-looking aspects of computers and in plasma physics, the fundamental study of which is a necessary part of thermonuclear research.

Rotary Bag-filling Unit

A Dutch firm bas produced a rotary bag-filling unit capable of handling granular or powdered products, such as flour and feeding flour, cereals, seed, sugar, synthetic fertiliser, etc. The bags, which have to be open at the top, may be made of either paper or jute. The unit consists of two or more funnel-shaped hoppers positioned above a turntable with four or eight cylindrical filling outlets (bagging mouths). At the top of the unit two weighing devices must be installed to weigh off the products. The turntable rotates discotinuously and everytime it stops there are two bagging mouths immediately under the hoppers. The first step in the operating cycle is the clamping of empty bags round the bagging mouths that rotate past the operator. The bagging mouths and bags move round until they are under one of the hoppers. A signal is then automatically given which causes one of the weighing devices to discharge its contents through the appropriate hopper. The unit works intermittently, so that the bags are filled by the two hoppers alternately. The air escapes from the bags via the double walls of the bagging mouths. A safeguard has been incorporated to prevent discharge taking place without their being a bag suspended from the filling outlet. During this cycle, the contents of the bag can be made as compact as possible with the aid of a shaker. At the end of the cycle the bags are automatically transferred to a conveyor belt. Only one person is required to operate the unit, his job being to clamp on the empty bags. The capacity of the unit is 600 bags an hour. If the bags are filled with 100 kg. (2 cwt.) of product, this is equivalent to 60 metric tons of product an hour. The unit is powered by a 1½ h.p. electric motor. If desired, the unit can be supplied complete with a dust jacket. The space inside the jacket, in which the operator also stands, can then be kept dust-free by an exhaustor. This rotary unit does not require a great deal of space nor much maintenance. It can be adapted to meet the particular requirements of any company.

Colouring Trees

A British firm of wood veneer producers, Aaronson Brothers Ltd., Hertfordshire, have patented a process by which colours are introduced into living trees, blending naturally with the grain and figuring of the wood. The process is secret. It is claimed that it takes only a few days for the colour to premeate the entire system of the tree. When the leaves turn colour the process is completed, the tree can be felled and the veneers obtained. The colours are fast to light. Any colours can be introduced, singly or in variety, and the resulting veneers capture the contemporary mood for colour while retaining the traditional beauty and utility of wood. The timber chosen for this new decorative development is beech. Already demand for many parts of the world is tremendous and before long the new veneers will be seen as surface decoration in ships and shops, exhibitions and theatres, in the boardroom, the showroom—in fact, anywhere that wood is used as a decorative material.

PAKISTAN'S NEW CONSTITUTION

ECONOMIC AND FINANCIAL PROVISIONS

By Dr. Anwar Iqbal Qureshi

(With the termination of Martial Law and the promulgation of a new Constitution for the Republic of Pakistan on the 8th instant, a new chapter has opened in the annals of that country. This Constitution, which envisages a federal, presidential form of Government, has several novel features. One of these is that the National Assembly (elected by an electoral college consisting of the members of basic democracies which, in turn, are elected by adult franchise) can override, by a two-thirds majority vote, a Presidential veto of its legislation, unless the President refers the matter to a referendum. Another feature is that the Constitution may be amended, if two-thirds of the Assembly and the President agree. However, a three-fourths majority of the House can override the President's veto of an amendment unless he refers the matter to a referendum or dissolves the Assembly and also seeks re-election himself. A system of indirect elections and a provision for referendum are thus the distinguishing characteristics of the Pakistan Constitution. Apart from the detailed provisions pertaining to the system of government at the national and provincial levels, there are several provisions dealing with financial and economic matters. The following article by Dr. Anwar Iqbal Qureshi, Economic Adviser to the Government of Pakistan, Ministry of Finance, provides a factual account of the provisions.—ED.)

A GREAT deal of thought has gone into the financial and economic provisions of Pakistan's new Constitution. They must be considered in the context of the whole document which sets up a delicate but harmonious system of checks and balances. They also derive from the recommendations of the numerous Commissions and expert Committees—on land reform, agriculture, education, finance, credit and prices, and so on—which were named by the present regime to advise on the deep-seated economic problems which faced it upon its accession to power and to recommend policies and measures for far-reaching economic reform.

At the time of independence the Centre had very meagre financial resources but had to assume broad responsibilities. Perforce it took over important Provincial activities and revenues, which reduced their autonomy and left them only limited and inelastic resources.

The new Constitution radically alters the financial relations between the Provinces and the Centre, greatly enlarging the economic scope of the former. The list of subjects exclusively reserved for the Centre is now restricted to Finance, Foreign Relations, Banking and Currency, Economic Planning and a few other limited spheres. This constitutes a significant accession to the strength and autonomy of the Provinces. For example, the Railways, which throughout their history in the Indo-Pakistan sub-continent, have been controlled by the Centre, will be entrusted to the Provinces from the 1st of July 1962. The Pakistan Industrial Development Corporation is being bifurcated into two Provincial Corporations with the special object of accelerating the tempo of industrialisation in East Pakistan.

In order to provide more funds to the Provinces, the sources of Provincial finances have been increased by the President, on recommendations made by the Finance Commission set up in December 1961, which are reflected in the new Constitution.

Financial Procedure

Of particular significance is Chapter 4 of the Constitution, which deals with financial procedures of the Centre. The basic principle of "no taxation without representation" is confirmed by the provision that no tax can be levied without the express approval and authority of the Legislature. That new taxes will be needed to meet the needs of our developing economy cannot be denied, but their amount and incidence must be determined by the Legislature.

The Legislature will not be able, however, to stop existing expenditure; they will have the right to discuss it but not to vote. This may seem a severe limitation on legislative rights, but the experience of the past counsels the need for some safeguard against a deadlock. It is essential that normal administrative and other commitments be honoured, otherwise the whole machinery of Government is put in jeopardy.

The financial provisions in the Constitution provide for decentralisation and aim at introducing financial stability. In short, economic and financial provisions in the Constitution have introduced measures which will exert a powerful influence on the pattern of production, consumption, distribution, investment, savings and inter-provincial and international trade. The spirit of the Constitution is to move away from an extensive use of direct controls, which has tended to retard the pace of development and rely mainly on fiscal and monetary measures to regulate the economy.

Decentralisation of Central Institutions

The new Constitution has given far-reaching powers to the Provincial Governments in several sections of the economy. It was also felt that the position of Central Institutions which provide funds or assist in development should also be reviewed with a view to find out the possibilities of decentralising these.

A committee, headed by the Cabinet Secretary, was appointed on the orders of the President to investigate immediately the decentralisation of powers of all institutions which provide funds or assist in development such as the State Bank, the Pakistan Industrial Credit and Investment Corporation, the Agricultural Development Bank, the Pakistan Industrial Development Corporation, etc. The President desired that the Dacca and Lahore branches of these institutions should have full powers to sanction funds locally, so that the medium and small customers did not have to travel to Karachi. He also directed examination of the question if the headquarters of these institutions could be located in East Pakistan.

The report of the Committee on Decentralisation of Institutions and the Government's decisions thereon were announced on 21st March 1962. The Committee came to the conclusion that "only such functions should be retained at the head office as cannot be pushed down to the Provincial or regional branches without serious detriment to the working of the organisation. All other functions should be decentralised. Even in respect of functions retained at the head office, the Committee recommended maximum delegation of powers to the regional offices for meeting the day-to-day needs and requirements of the people in such matters as the processing of their loan applications, administrative control over staff, appraisal of schemes and projects and so on." The Committee also made proposals regarding the organisational readjustments that would be required to equip regional offices for their enlarged responsibilities. The question of shifting the headquarters of the institutions or of their bifurcation in provincial bodies has also been considered for each institution.

The Committee was able to reach a substantial measure of agreement in respect of most of the institutions. The only exceptions were the Pakistan Industrial Development Corporation and the Industrial Development Bank, in respect of which the members held divergent views. The opinion in the Committee being divided between irreconcilable points of view, the Committee observed: "It has not been possible for us to make a unanimous recommendation in regard to either of these two institutions. We have, however, discussed the different points of view in some details so that a decision could be taken by the Government in the light of relevant factors."

State Bank of Pakistan

In the case of the State Bank, the Committee recommended that the headquarters of the Bank should remain at Karachi which is the most suitable place, being the most important centre of business and commerce in the country and the hub of the market. The Committee suggested that as soon as a set-up for the co-ordination of the economic research had been created by the Government, preparation and publication of economic fiscal data on a regional basis should be entrusted to this organisation.

As regards the further delegation of powers in the different departments of the State Bank of Pakistan to its regional offices in East and West Pakistan, the report says that in some matters "pertaining to the banking control department, the State Bank has at our request made suggestions for further delegation of powers to the regional offices in respect of such items as approval of the parties for sanction of limits under the bills rediscounting scheme, issue of licences for opening of offices by (scheduled and non-scheduled) banks and grant of permission to them to open an account with the State Bank, disposal of movable and immovable property, and so on."

The report further says: "They have also recommended the strengthening of the inspection units in the Provinces by appointing a Deputy Chief Officer at Lahore, an additional Deputy Chief Officer at Dacca and the grant of larger discretion to them in the consideration of inspection reports. The Deputy Governor, Dacca, will have full powers to take decisions on reports in respect of banks having their principal office in East Pakistan."

P.I.C.I.C.

In regard to the Pakistan Industrial Credit and Investment Corporation, the Committee found themselves generally in agreement with the reasons advanced by P.I.C.I.C. for retaining its headquarters at Karachi, and, therefore, did not suggest any change. Briefly, the reasons were that Karachi is the country's commercial business and financial centre.

As regards the strengthening of its regional offices in Dacca and Lahore, the Committee recommended that these offices should be strengthened by increase of staff as proposed by P.I.C.I.C. and that further additions to the staff could be made later if increase in the workload justified it.

It further recommended that the expert appraisal staff at the head office should pay regular visits to the Dacca and Lahore offices for advice and guidance and the frequency of these visits should be laid down for the benefit of the prospective investors.

Agricultural Development Bank

As regards the Agricultural Development Bank, the Committee emphasised that the proposal to appoint a general manager of the Bank at Dacca, having wide administrative powers and the powers of sanctioning loans upto Rs. 1 lakh to individuals and Rs. 2.5 lakhs to corporate bodies should be implemented quickly to meet the requirements of East Pakistan.

The Committee also considered it necessary that the headquarters of the Bank should remain in Karachi because it is the country's main money market; and also because of the administrative difficulties of effecting a move elsewhere.

Investment Promotion Bureau

On the question of shifting the headquarters of the Investment Promotion Bureau demand was made by the Provincial representatives. The Committee remarked that apart from the suitability of Karachi from the point of foreign investment, the Director General had to be in constant touch with the P.I.C.I.C., the Central Government and other agencies located in Karachi. It, therefore, recommended that the headquarters of the Bureau should be retained in Karachi.

The Committee emphasised in its report that the promotional activity of the Bureau should be stepped up in East Pakistan and felt that this could be realised only by interesting the foreign investor in specific projects. The Committee considered that investment promotion could not be done in a vacuum; it had to be related to projects and clear guide-lines must, therefore, be made available to the foreign investor in the form of a portfolio of schemes to serve as a kind of ready reference for him. The Committee noted that the Central Government had appointed a committee to go into the matter and this committee had been asked to suggest the organisation that should be created to prepare a portfolio of projects for prospective foreign investor. The report suggested that the concrete lines on which the promotional activity of the Bureau might be stepped up in East Pakistan should be considered in the light of the recommendations made by that Committee.

The Committee felt that there should be greater co-ordination in the working of the agencies operating on the Industrial Investment Schedule, i.e. the Central Permission Committee, the Provincial Permission Committee, P.I.C.I.C. and Industrial Development Bank, apart from operations through bonus vouchers. The Committee considered that the most practical way of ensuring this co-ordination would be through the Director-General, Investment Promotion Bureau, who is associated with the working of all the agencies. The Committee, therefore, recommended that the Investment Promotion Bureau should undertake the responsibility of furnishing information on a regular basis to all concerned, including the Provincial Governments, in respect of sanctioned schemes for this purpose.

Council of Scientific and Industrial Research

In the case of the Council of Scientific and Industrial Research, the Committee suggested that its headquarters should be retained in Karachi and the functions of policy, planning and co-ordination in the field of scientific research should continue to be performed by its head office to avoid duplication and overlapping. It further recommended that new draft constitution of the Council should be sent to the Provincial Governments for their comments before it is finalised.

Central Technical Assistance Centre

In the case of the Central Technical Assistance Centre the report says that the reorganisation proposal which had been submitted to the Ministry of Industries should be quickly implemented in order to meet more fully the requirements of the Provinces. Under this proposal, the Project Director will be the Chief Administrative Head concerned with the laying down of national policies, watching of progress and issue of general directions. The field Directors will be given the powers currently enjoyed by the Project Director and their present powers will be delegated to the deputy directors at Karachi and Dacca.

The Committee also urged that greater publicity should be arranged for the services provided by this centre by bringing out suitable pamphlets and brochures and by other means.

Pakistan Insurance Corporation

As regards the Pakistan Insurance Corporation, the Committee was of the view that its functions did not admit of much decentralisation because of the fact that it did not deal direct with the members of the public as its business was primarily with insurance companies. In the opinion of the Committee, however, some steps could be taken to secure for the Provinces greater benefit from the business handled by the Corporations. For this purpose the functions of the Corporation were considered under five heads, namely, treaty and compulsory re-insurance; administration of national co-insurance scheme; promotion of new insurance companies; faculative re-insurance and training facilities for insurance personnel.

In respect of treaty and compulsory reinsurance, the Committee recommended that the insurance companies should submit their periodical returns to the head office through the local office of P.I.C. In regard to the national co-insurance scheme, weightage should be given to smaller companies subject to their financial soundness. In order to spread the benefits of business handled by P.I.C. to the Provinces, it was recommended that the Corporation should invest more funds from its available surplus in institutions providing credit for medium and small-scale industries; subject to an adequate return not below the bank rate. The Committee remarked that for this purpose the Corporation's investment portfolio should be re-examined and the present rules and instructions modified, where necessary.

As regards the headquarters of the Corporation, the Committee recommended that this should remain at Karachi because "the most important function of the Corporation being reinsurance; its location in Karachi would ensure the best facilities for this purpose at reasonable rates and maintain for it a position of strength in concluding reinsurance treaties in the international market."

Planning Commission

Finally, the Committee dealt with the Planning Commission. In the opinion of the Committee the functions of the Central Planning Authority of the country cannot be the subject of much decentralisation. The preparation of periodical plans and of the annual development programmes within their framework will have to be done by a central organisation fully equipped to handle this high responsibility. The Committee, therefore, expressed the opinion that it would not serve any useful purpose to create a cell of the commission in Dacca and that, instead, it would be more useful to develop two-way traffic between the Commission and the Planning and Development Departments in the Provinces.

According to the Committee, twofold action will be required for this purpose, namely; (a) to strengthen the existing machinery for planning in the Provincial Governments; and (b) to establish a more purposeful relationship between this machinery and the Commission.

As regards the first requirement, the report says that the set-up in East Pakistan is already organised on the lines of the Central set-up. The Planning and Development Department is divided into a Planning Division (with one Chief Economist, and Deputy and four Assistant Chief Economists and four Research Officers) and a Projects Division (with one Project Director, assisted by a Joint Director and six progress officers).

In West Pakistan, the report observes, the Planning and Development Department has a much smaller set-up. The Committee stated: "We understand that the Provincial Reorganisation Committee has already recommended that the West Pakistan set-up should be reorganised on the lines of the East Pakistan set-up." In the opinion of the Committee, this was necessary if the Provincial Governments were to do an effective job in the Planning field.

The Committee remarked that this job will now have to be far more than the mere collection and packaging of un-co-ordinated schemes. It should increasingly be the conversion of these schemes into integrated and internally consistent programmes, their effective processing and progress evaluation—which, taken together, constitute effective planning on a continuing basis.

As regards the second requirement, namely, the establishment of a more purposeful relationship between the existing machinery in the Provinces and the Commission, the Committee suggested the following steps:

(a) The Planning Commission should hold a quarterly meeting with the Provincial additional Chief Secretaries (Development) to consider problems of planning and implementation of development schemes;

(b) The Commission should move as a body to Dacca once a quarter for an extended stay of two to three weeks at a time;

(c) The Chiefs of Economic and other sections should pay regular visits to Dacca according to a prescribed frequency; and

(d) The proposal to attach suitable officers of the Provincial Governments to the Commission for training in the concepts and techniques of planning should be quickly implemented.

Government's Decisions

The report of the Committee was considered by the Governors' Conference. The Governors' Conference accepted the recommendations of the Committee, subject to the following remarks:—

Industrial Development Bank: The headquarters of the Industrial Development Bank should remain at Karachi for the time being. *House Building Finance Corporation*: There should not be two corporations as recommended by the Committee but the headquarters of the House Building Finance Corporation should be transferred to Dacca. *Pakistan Industrial Development Corporation*: The P.I.D.C. should be bifurcated into two Provincial Corporations, each with a separate charter and Board of Directors.

"It was further decided that in order to economise in technical manpower and resources the amalgamation of the Mineral Development Corporation, the Oil and Gas Corporation (proposed), the Small Scale Industries Corporation and the Forest Industries Development Corporation with the Provincial P.I.D.C. should be examined urgently by a Committee consisting of the Secretary, Ministry of Industries, the Secretary, Ministry of Finance, and the Additional Chief Secretaries of the two Provinces.

"The Planning Departments in the Provinces should be further reinforced to enable more effective planning in the Provinces. If the services of foreign experts are required by the Provincial Governments the necessary foreign exchange will be provided by the Central Government."

Now, planes of PIA's intercontinental Boeing fleet are showing the world's best *new* films on their Karachi–New York–Karachi routes. Only PIA offer this new kind of jet-flight relaxation to *all* passengers, first and economy class.

And films don't interfere with PIA's cabin service, still as good as any in the world. Whatever you pay for your ticket, you get jet speed and comfort, record-breaking punctuality—and now the world's best new films to help you relax.

No wonder more and more experienced jet travellers are saying PIA are great people to fly with...

STRUCTURE OF ASIA'S FOREIGN TRADE

SHARE OF INTRA-REGIONAL EXPORTS DECLINES

THE formation of trade blocs, particularly the European Common Market, has opened a new vista of regional co-operation which has attracted the attention of those in other parts of the world. It is only appropriate, therefore, that the question of promoting regional co-operation should have received more than casual interest among economists and politicians alike in Asia and the Far East. One of the factors that stands in the way of establishment of a trade bloc in Asia is, as is well known, the relatively small proportion of intra-regional trade among the countries of Asia and the Far East. It is rather disheartening to note that, of late, the share of intra-regional trade has actually tended to decline. According to the *Economic Survey of Asia and the Far East* 1961 (price U.S. $3.00), brought out by the U.N. Economic Commission for Asia and the Far East, the share of trade which the countries of this region conduct with one another has fallen from 36 per cent in 1953 to 33 per cent in 1960. Much of this relative decline is explained by the stagnation of Japan's exports to other E.C.A.F.E. countries—between 1956 and 1959, they declined from 36 to 28 per cent. India's exports to E.C.A.F.E. countries have been similarly stagnant, "although the relative share has not declined because India's total exports have also been stationary." Increasing industrialisation in the smaller E.C.A.F.E. countries, especially in regard to textiles, accounts for some of this change, but the general drive towards self-sufficiency in food as well as in manufactures has also helped to weaken intra-regional trade, as has a shift of consumption in Japan from rice to wheat and from cereals to dairy products and meat.

The percentage of E.C.A.F.E. trade with the U.K. and Continental Western Europe has also declined from 26 per cent to 23 per cent between 1953 and 1960. These declines were mainly the result of expansion in the region's trade with North America (from 22 per cent to 26 per cent), reflecting on the side of imports, larger aid from the U.S. for defence and economic development.

The E.C.A.F.E. region, it may be noted, accounts for about one-tenth of the world trade, excluding the trade of the centrally planned economies with one another. As of 1959, E.C.A.F.E. countries conducted one-third of their trade with one another, one-quarter with North America, one-seventh with continental Western Europe, one-eighth with the U.K. The remaining one-seventh was spread over a wide range of countries. The region is the leading supplier of tropical agricultural products, especially rubber, as well as such minerals as tin and petroleum. Besides, Japan and, to some extent, India supply a wide range of manufactured goods both for other countries of the region and elsewhere.

Communist Countries

Exports from the centrally planned economies of Asia aggregated $2.2 billion (of which China accounted for $2 billion), as against those from other E.C.A.F.E. countries estimated at $11.5 billion. Only 16 per cent. of the exports of Communist countries in Asia went to the other E.C.A.F.E. countries, as by far the greater part, 72 per cent, was taken up by Eastern Europe. They supplied 9 per cent of exports to Western Europe and only 3 per cent to the rest of the world. Of their imports, Eastern Europe accounted for 69 per cent, roughly matching the corresponding exports. But they had a trade surplus with other E.C.A.F.E. countries, from which they drew only 8 per cent of their imports. With Western Europe, from where they imported 19 per cent of their requirements, they have had a trade deficit.

No data have been released by mainland China for its external trade since 1958, but from such information as is available it appears from this that, after reaching a peak in 1959, mainland China's trade fell somewhat in 1960 and declined more rapidly in the first half of 1961. The explanation, of course, is the succession of crop failure which greatly reduced capacity to export agricultural and light industry products. Exports to the Soviet Union, mainland China's principal market had declined by almost one-third in 1960 and probably fell further in 1961. Both exports to, and imports from, Western Europe appear to have fallen by more than 40 per cent in 1961; exports to the United Kingdom over the first ten months fell by 37 per cent and imports by 58 per cent. Over the first nine months of the year, exports to West Germany fell by one-half, and imports by one-third. Hong Kong is mainland China's largest trading partner in the E.C.A.F.E. region, and during the first eight months of 1961, its imports from mainland China fell by 26 per cent and the corresponding exports by 11 per cent. Trade with all E.C.A.F.E. countries appears to have declined by one-fifth for exports and by two-fifths for imports. Other notable developments were the cessation of food exports, the sacrifice of imports of capital goods for imports of food and, after October 1960, a big export of gold and silver bullion. In 1961, mainland China made trade agreements with some twenty countries; in the E.C.A.F.E. region with Afghanistan, Burma, Ceylon, North Korea, and North Viet-Nam. It also contracted to give loans to Burma and North Viet-Nam, as well as to some countries outside the region. But these were nothing like so significant as the aid mainland China itself received from the Soviet Union (mainly in the form of a postponement of payments for previous deficits) and the short-term credits for wheat imports from both Australia and Canada.

Population and Exports

The E.C.A.F.E. Survey has analysed the intra-regional trade of this region (other than Communist countries) on the basis of a grouping, taking into account certain geographical and economic factors like climate, vegetation, major crops, levels of development and foreign trade. The following table shows the percentage distribution of the region's population and its aggregate exports as they were in 1959:

	Population		Exports	
	In millions	Per cent. of total	Billion $	Per cent of total
Japan	92.4	10.4	3.46	30.1
Oceanic Asia (a)	143.6	16.2	2.95	25.7
Free Ports (b)	4.4	0.5	1.70	14.8
Continental South-East Asia (c)	63.8	7.2	0.72	6.2
Indo-Pakistan Sub-Continent	515.8	58.1	1.63	14.2
Northern Continental Countries (d)	67.8	7.6	1.04	9.0
Total	887.7	100.0	11.49	100.0

(a) British Borneo, Ceylon, China: Taiwan, Federation of Malaya, Indonesia and the Philippines.
(b) Hong Kong and Singapore.
(c) *Burma, Cambodia, Thailand and South Vietnam.*
(d) Afghanistan, Iran, Laos, Nepal and South Korea.
N.B.—Centrally-planned economies are excluded from the table.

It will be seen from the table that Japan, with just over 10 per cent of population of the region, accounts for as much as 30 per cent of the region's exports. Oceanic Asia constituted the largest exporting group, after Japan; this group represents leading exporters of rubber, copra, palm kernels, vegetable oils, tin, sugar and hemp. The Continental South East Asian countries are the biggest rice exporters of the region, supplying every country in Oceanic Asia (except China: Taiwan.) All the petroleum exports of the region are provided by two countries of Oceanic Asia—Indonesia and Brunei—and by Iran, which is grouped among the Northern Continental countries. The major exporters of tea are India, Pakistan and Ceylon.

The table at the bottom of the page shows the pattern of the region's exports, both within the region and with other countries, as of 1959. It will be seen from the table that Japan stands head and shoulders above other groups of countries on the export front. But most of its trade is with countries outside the region, being only second to Oceanic Asia as an intra-regional exporter. Oceanic Asia, in turn, ranks second to Japan as an exporter to regions outside the E.C.A.F.E. area; but, unlike Japan, this group exports primary products (instead of manufactures) and sells more to Western Europe than to North America. It is significant to note that the free ports in the region—Hong Kong and Singapore—which share rather equally their exports with this region and others, appear to have larger exports than the whole of Indo-Pakistan sub-continent. Much of their exports, however, comprise re-exports of goods imported both from countries of this region and elsewhere. India and Pakistan together sell much more outside the region than within it, and much more to Western Europe than to North America.

Among E.C.A.F.E. countries, Japan was the most important supplier to Continental South East Asia and the Northern Continental countries, and the second most important supplier to all other country groups. Oceanic Asia was its most important market within the region, followed by Continental South East Asia and the Free Ports. Oceanic Asia exported more within the region than Japan, but only because Japan, next to the Free Ports, provided its most important market. But Oceanic Asia, and the Free Ports, in turn, gave Continental South East Asia its largest market within the region, although sales to the Indo-Pakistan sub-continent and Japan were not unimportant. Most of the Free Ports' exports, within the region, went to Oceanic Asia, but they also had a considerable trade with Japan. The Northern continental countries did not bulk large in E.C.A.F.E. trade either as sellers or buyers, apart from Iran's sales of petroleum to India and Pakistan. Most of mainland China's comparatively small trade within the region is conducted with the Free Ports, to which it sent more than one-half of the E.C.A.F.E. exports and from which it took more than one-third of its E.C.A.F.E. imports. Oceanic Asia came next in importance for mainland China's E.C.A.F.E. trade, and here Ceylon and Indonesia were in the fore.

Balance of Trade

A study of trade balances (difference between exports f.o.b. and imports c.i.f.) among the countries of the region reveals that Japan is the only country which has a large trade surplus in its trade with the E.C.A.F.E. region. It applies this surplus to meet, in part, an even larger deficit with the rest of the world. An indication of the trend in balance of trade of the countries of the region is provided in the following table:

	Total E.C.A.F.E.	Mainland China	Rest of the world
Japan	+ 209	— 15	— 337
Oceanic Asia	+ 92	— 46	+ 520
Free Ports	— 491	— 166	+ 212
Continental South-East Asia	— 26	— 19	— 174
Indo-Pak sub-continent	— 49	+ 3	— 542
Northern continental countries	+ 34	..	+ 105

After Japan, Oceanic Asia is the other group which has some surplus in trade with the E.C.A.F.E. region. Oceanic Asia, of course, has a large surplus in its trade with other regions. The Indo-Pakistan sub-continent and Continental South East Asia have large deficits outside the E.C.A.F.E. region, but have small deficits with other countries of the region. Foreign aid has largely financed such deficits.

A major feature of the E.C.A.F.E. trade is that all country-groups find their major markets outside the E.C.A.F.E. region, except Continental South East Asia which sells more within the E.C.A.F.E. region than outside it, and, in effect, uses surpluses from rice sales to Oceanic Asia and the Free Ports to help finance imports of manufactures from Japan.

Trade Trends in 1961

The E.C.A.F.E. *Survey* has also dealt with the trends in E.C.A.F.E. trade in 1961. A disappointing feature of 1961, according to the *Survey*, was the failure of exports to increase. Following upon a mild increase in the sale of rubber, but a reduction in that of copra, came heavy falls in prices which reduced export receipts in most countries of Oceanic Asia—more particularly in British Borneo, the Federation of Malaya, Indonesia and the Philippines. Pakistan's exports would also have fallen sharply if a big decrease in jute production, due to bad weather

(*Continued on page* 1131)

SALES OF SHAW WALLACE RISE MARKEDLY

BUT RISING COSTS AND OTHER FACTORS CUT INTO PROFITS

EVEN though the sales realisation of Shaw Wallace and Company Ltd. (Chairman: Mr. Stanley Mackay Smith, Calcutta) during the year ended 31st December 1961 has maintained an upward trend, rising by 19.5 per cent or Rs. 148.34 lakhs over the previous year's level of Rs. 759.18 lakhs, there has been a perceptible decline, as had been clearly hinted at by the Chairman of the Company at the last annual general meeting, in the gross profit from Rs. 68.49 lakhs to Rs. 59.80 lakhs. Reasons for this setback have been several, the more important amongst them being rising costs, including excise duties, higher transportation charges which the Company had to bear owing to shortage of wagons, plant break-down at one of the factories, prolonged labour trouble experienced by the flour mills in the agency, and initial losses on the new yeast venture. The situation was further worsened due to a lower income of Rs. 51.39 lakhs (Rs. 55.08 lakhs) on account of agency commission and allowances and of Rs. 14.75 lakhs (Rs. 16.93 lakhs) from other sources.

The decline in the gross profit has attracted a lower provision for taxation of Rs. 22.50 lakhs, as against Rs. 25.76 lakhs previously. Provision for depreciation has also been reduced, albeit slightly, by Rs. 34,000 to Rs. 12.02 lakhs. The net profit, as a result, has declined by Rs. 5.09 lakhs to Rs. 25.28 lakhs. And this decline has necessitated a drastic cut in the transfer to reserves from Rs. 11.58 lakhs to just Rs. 1.20 lakh, the entire amount being credited to the development rebate reserve. The dividend on ordinary shares has, nevertheless, been maintained at Re. 1.50 per share or 15 per cent, subject to deduction of tax, after declaring a preference dividend of 5.33 per cent, subject to deduction of tax. The carryforward, however, is substantially higher at Rs. 8.97 lakhs, as against Rs. 5.14 lakhs brought in.

The operating results of the Company for each of the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	907.52	759.18	637.77	546.71
Agency and other commission and allowances	51.39	55.08	51.69	44.61
Other income	14.75	16.93	19.74	17.83
Closing stocks	201.74	173.90	98.89	114.69
Excise duty	55.25	30.92	..	..
Other expenses	859.65	786.55	648.98	557.66
Gross profit	59.80	68.49	65.22	51.49

To reserves	1.20	11.58	15.82	9.12
Dividends—Preference	4.00*	4.00*	4.50*	3.98
Ordinary	11.25 (15%)*	11.25 (15%)*	11.25 (15%)*	7.50 (10%)
Carry forward	8.97	5.14	5.15	4.87
Market price of ordinary share (In rupees):	1962	1961	1960	1959	1958
High	24.62	26.62	26.62	20.25	15.22
Low	21.56	21.87	19.25	15.00	9.87

* Subject to deduction of tax.

The paid-up share capital of the Company is Rs. 150 lakhs, divided equally between 6 per cent taxable cumulative preference shares of Rs. 100 each, and ordinary shares with a face value of Rs. 10 each. Against this, reserves and surplus amount to Rs. 50.85 lakhs. Secured and unsecured loans aggregate Rs. 346.22 lakhs, besides current liabilities of Rs. 200.38 lakhs. The net block is worth Rs. 105.27 lakhs, including capital work in progress, and has been obtained by reducing a gross block of Rs. 153.92 lakhs by the amount of accumulated depreciation of Rs. 48.65 lakhs. Investments are carried in the Company's books at a cost of Rs. 171.94 lakhs and these have a market value of Rs. 95.37 lakhs, of which Rs. 94.01 lakhs are in quoted scrips and the balance is taken up by unquoted scrips. Current assets stand at Rs. 470.24 lakhs.

The Chairman's review pertaining to the working of the major departments of the Company during the year 1961 shows that the intensified drive to sell more fertilisers continued and a very satisfactory increase in tonnage handled was achieved. The quantity of fertilisers available increased as the year progressed and, in some parts of the country, profit margins contracted in keeping with the law of supply and demand. Consequently, notwithstanding the increase in tonnage sold, our profits were barely maintained.

The superphosphate and sulphuric acid factory worked to capacity throughout the year and sales were satisfactory, despite increased competition from other producers which had the effect of reducing margins. The shortage of railway wagons adversely affected profits for the year, as a large proportion of the production had to be moved to the consuming areas by lorry. This type of transport is much more expensive than movement by rail and the additional cost could not be passed on to customers because of price restrictions imposed by Government. The trend of production in the past four years is indicated below.

	Acid (Tons)	Superphosphates 16% basis (Tons)
1961	25,519	68,441
1960	24,150	71,545
1959	9,429	26,849
1958	7,396	23,839
1957	5,770	15,454

As regards agricultural spraying and dusting equipment, a high level of production was maintained throughout the year, but sales, though higher than in 1960, were somewhat disappointing. The Chairman says: "The sale of spraying equipment, however, has a distinctly seasonal character and I am pleased to report that sales during the first quarter of 1962 have surpassed all expectations and the accounts for 1962 will receive the benefit of these efforts....".

The glue factory in Madras achieved a high level of production. At the Calcutta factory, however, a succession of plant break-downs, coupled with prolonged coal supply difficulties and shortage of water, had a most unfortunate impact on profits. It is stated that, while every effort is being made to resume maximum production, it is too early as yet to forecast whether all difficulties will be resolved in sufficient time for the Calcutta plant to make an adequate contribution to the profits for the current year.

The tea and coal companies under the Company's management experienced somewhat unfavourable conditions, the former due to excess world production with consequent low prices and the later due to local difficulties. The packed production of tinplate during the year at 77,045 tons exceed the previous year's record by 3,517 tons. This outstanding performance was made possible by the hard work of the staff and, with adequate supplies of timber throughout the year, the works were able to plan production on econmic and efficient lines. The working of the flour mills under the Company's management suffered due to the go-slow and subversive activities of workers and the two mills were forced to declare a lockout which resulted in a loss of two months' production.

The production problems at the new yeast factory have all been successfully overcome, but selling difficulties are still being experienced due to the large stocks of imported yeast and hops still available in the country. With the ban on the import of this commodity under the new import policy, offtake of the Company's production is expected to increase.

The Rs. 10 paid-up ordinary shares of the Company are quoted at Rs. 22 *cum-div.* On the basis of a net dividend of Rs. 1.05 per share, the yield is about 5 per cent on *ex-div.* basis.

(*Concluded from next column*)

Rs. 1.37 lakh, secured loans, representing bank borrowings, amount to Rs. 56.41 lakhs, as against Rs. 42.68 lakhs in the previous year. Unsecured loans are of Rs. 0.83 lakh. Other liabilities amount to Rs. 48.52 lakhs. The total indebtedness to outsiders thus works out to Rs. 105.76 lakhs and is comfortably covered by current assets and book debts of Rs. 140.95 lakhs. Investments, in unquoted shares and debentures, are shown at Rs. 1.32 lakh. The gross block increased during the year from Rs. 256.25 lakhs to Rs. 290.26 lakhs and is written down very conservatively to Rs. 98.86 lakhs. Along with capital expenditure on fixed assets under construction, the net block is shown at Rs. 100.04 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 35.12 *cum-div.*, and fetch, on *ex-div.* basis, an attractive net yield of about 6 per cent per annum.

BENGAL PAPER DOES WELL

DIVIDEND LOWER, BUT ON HIGHER CAPITAL

VIEWED against the background of uneconomic selling prices for paper, as contended by the industry in its representation to the Government, and yet further increase in production costs, the results of the Bengal Paper Company Ltd. (Chairman: Mr. N. D. Bangur, Calcutta) for the year ended 31st December 1961 are quite satisfactory. Their particularly encouraging feature is that, after having receded slightly from Rs. 52.61 lakhs to Rs. 51.91 lakhs in the previous year, the gross profit has moved up to Rs. 55.05 lakhs during the year in consonance with a further rise in production from 18,105 tonnes to 19,627 tonnes and in sales from Rs. 316.78 lakhs to Rs. 342.60 lakhs. However, this should not refute the industry's plea for higher selling prices. If anything, the results of the Company only support the plea, as the profit-margin (ratio of gross profit to sales)—the measure of prosperity of an industry—has, in fact, moved down further from 16.4 per cent to 16 per cent and shows, at that level, a drop of one full point from the 1959 level.

A glance at the following table will reveal that the production costs as also the excise bill continued to be higher during the year, the former to a certain extent due to inadequate supplies of raw materials and chemicals and transport difficulties. The costs have increased further this year because of higher prices of raw materials and chemicals due to enhancement of the railway freight and levy of an excise duty on various chemicals. The Directors hope that, in revising the selling prices, the Government would give due consideration to these further increases in costs. As the Company's Secretaries and Treasurers, Messrs. Balmer Lawrie and Company Ltd., resigned on 28th April 1960, there is no remuneration due to them since then. However, due to a larger provision of Rs. 13.62 lakhs (Rs. 10.05 lakhs a year ago) for depreciation and Rs. 19.30 lakhs (Rs. 18.17 lakhs) for taxation, the net profit has moved down a little from Rs. 22.62 lakhs to Rs. 22.13 lakhs. The Directors have, therefore, been obliged to propose a cut in the taxable equity dividend from 32 per cent to 27.5 per cent per annum on the Rs. 10 fully paid share, but this is on a higher capital following the issue of 180,000 bonus shares of Rs. 5 each, since converted into 90,000 shares of Rs. 10 each, in the ratio of one for five. At the same time, the profit retained in business is also lower at Rs. 5.69 lakhs, as compared with Rs. 6.79 lakhs in the preceding year.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

* Subject to deduction of tax.

† Inclusive of 180,000 bonus shares of Rs. 5 each fully paid, issued in the proportion of one bonus share for five shares held by the shareholders as on 26th February 1962.

Note.—In February 1962, prior to the bonus share issue, the Company sub-divided the Rs. 25 fully paid ordinary shares into shares of Rs. 5 each. After the bonus issue, the shares were consolidated into shares of Rs. 10 each.

The expansion and modernisation scheme, which would increase production to 100 tonnes a day, is making satisfactory progress. Orders for the purchase of equipment from the U.S. and the U.K. have been placed and shipment is expected to commence from August this year. The scheme, we are told, would be completed in the second half of 1963.

The financial position of the Company is sound. Its paid-up capital of Rs. 71 lakhs is backed by reserves and surplus of Rs. 64.17 lakhs. Excluding the debenture liability of

(*Continued in previous column*),

SINGARENI COLLIERIES' PROFIT-MARGIN UP

DIVIDEND CUT RESTORED

RIGHTLY have the Directors of the Singareni Collieries Company Ltd. (Managing Director: Mr. N. K. Guruswamy, I.A.S., Hyderabad) stated in their report to the shareholders that the year ended 31st December 1961 was highly successful for the Company. For the year's working has shown an all-round improvement which is highlighted by a three-point rise to 19 per cent in the profit-margin (ratio of gross profit to sales). In the previous year, the profit-margin had looked up from 15.2 per cent to only about 16 per cent. Sales have maintained their uptrend and improved by Rs. 102.39 lakhs, or 15.5 per cent, to Rs. 760.11 lakhs. But the gross profit has risen relatively more, to be precise, by Rs. 39.63 lakhs, or nearly 38 per cent, to Rs. 144.60 lakhs. As a corollary to the higher profit, the previous year's cut in the taxable dividend from 7.5 per cent to 7 per cent per annum on the Rs. 10 fully paid equity shares following a substantial increase in capital has been fully restored. As the dividend is for the whole year on the increased capital, it has absorbed Rs. 22.50 lakhs, as against Rs. 15.25 lakhs a year before.

It will be clear from the table below that prime costs, staff expenses and all other expenses continued to be higher during the year and royalties and dead rents showed a sharp rise of nearly Rs. 10 lakhs to Rs. 31.72 lakhs. The provision for depreciation has been raised considerably from Rs. 38.73 lakhs to Rs. 58.05 lakhs, but that for taxation has been reduced slightly from Rs. 33.90 lakhs to Rs. 32.50 lakhs, notwithstanding the improvement in the profit. The net profit which had, in fact, moved down from Rs. 31.73 lakhs to Rs. 28.55 lakhs has improved to Rs. 53.63 lakhs. Half of it, Rs. 27.26 lakhs to be precise has been retained in business. While the provisions for bonus to workers has been raised slightly from Rs. 2.80 lakhs to Rs. 3.01 lakhs, the provision for gratuity has been *nil* as against Rs. 8.58 lakhs in the previous year.

The table below gives a fair idea of the Company's working in the past four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

† On increased capital.

Note :—Output and despatches figures for 1959 and 1958 are in tons.

Production during the year increased from 2,491,088 tonnes to 2,795,401 tonnes, reflecting the benefits of the expansion and mechanisation schemes. However, it was much below the target of three million tons, partly because of power shortage. On an average, 21,612 workers were totally employed during the year in the collieries as against 20,917 a year before and the average man-shift increased from 0.39 to 0.42 tonnes. Despatches increased from 2,399,410 tonnes to 2,758,267 tonnes. But wagon shortage led to the accumulation of 27,281 tonnes of coal at the pit-heads as at the year-end. This was despite loading on all days of the week under the scheme of staggering of holidays. It is already known that the expansion scheme under the third Plan to achieve the target of 5.65 million tons per annum by 1965-66 is estimated to cost Rs. 20.33 crores. For the first year of the Plan, that is, last year, the Company received from the Central Government a loan of Rs. 2.50 crores. The production target for the current year has been fixed at 3.2 million tons. The development of new mines in Mandamari, Jangaon and Ramakrishnapur areas is progressing rapidly and coal has been touched in five mines. Some of the mines have been mechanised with the latest equipment such as coal cutting machines, belt conveyors, shuttle cars, loaders, etc.

It is proposed to sink shafts at No. 5 incline and No. 7 incline for the purpose of deep mining and it is planned to equip the new mines with mechanical equipment to produce coal without manual operations from the stage of cutting to that of screening for despatch to consumers. The Company has put into operation at Mandamari a newly constructed screening plant provided with bunkers. An aerial ropeway was constructed for sandstowing operations in the Rudrampur division. Ventilation of the mines is given top priority and huge fans have been installed in each mine. Water spraying to prevent coal dust is carried on where possible. The management-workers relations were cordial, but some strikes and lock-outs resulted in a loss of 3.245 man-days and 2.505 tonnes of production. Normal amenities and medical facilities to the employees are being continued. It is noteworthy that over 80 per cent of the staff and workers have been provided with quarters.

The financial position of the Company is satisfactory. The paid-up capital is unchanged at Rs. 3 crores, after it was raised to that level from Rs. 63.21 lakhs in the previous year. It is backed by reserves and surplus of Rs. 1.04 crore. Secured loans amount to Rs. 339.21 lakhs and comprise Rs. 54.21 lakhs from the Andhra Pradesh Government and Rs. 285 lakhs from the Union Government. Unsecured loans of Rs. 100 lakhs are from the Union Government. Current liabilities and provisions total Rs. 302.57 lakhs. Taking the unsecured loans and current liabilities, etc., the total indebtedness to outsiders amounts to Rs. 402.57 lakhs to cover which are available current assets and book debts of about Rs. 533.20 lakhs. Investments have increased from Rs. 8.43 lakhs to Rs. 8.57 lakhs, out of which Rs. 7.37 lakhs are quoted and command a market value of Rs. 7.22 lakhs. The gross block increased from Rs. 8.26 crores to Rs. 10.14 crores and has been written down to Rs. 6.04 crores.

The Rs. 10 fully paid ordinary shares are currently quoted at par *cum-div.* On the *ex-div.* basis, they offer a yield of 5.5 per cent, free of tax, per annum.

SIMPLEX MILLS' PROFIT JUMPS UP

The preliminary figures relating to the working of the Simplex Mills Company Ltd. (Chairman: Mr. S. R. Damani, Bombay) for the year ended 31st March 1962 are encouraging. Although sales have increased only slightly from Rs. 3.23 crores to Rs. 3.32 crores, the gross profit has jumped up from Rs. 34.42 lakhs to Rs. 55.82 lakhs (including Rs. 39,000 brought forward) and the ratio of profit to sales has risen sharply from 10.4 per cent to 17.2 per cent. The gross profit per Rs. 50 fully paid ordinary share works out to Rs. 46.2. Allocations include Rs. 16.14 lakhs (Rs. 16.20 lakhs in the previous year) for depreciation, Rs. 11.50 lakhs *(nil)* for taxation and Rs. 13.90 lakhs (Rs. 2.80 lakhs) for development rebate reserve. After writing off a part of debenture issue expenses of Rs. 70,000 (Rs. 61,000), the surplus available is Rs. 13.58 lakhs. After a lapse in the previous year, the Company has resumed payment of dividend which has been proposed by the Directors at Rs. 11 taxable, per share of Rs. 50 on the capital as increased by the issue of one bonus share for every five shares held. Additions to plant and machinery, buildings, etc., during the year aggregated Rs. 18.38 lakhs. Outstanding orders for machinery at the end of the year amounted to Rs. 61.73 lakhs.

(Concluded from next column)

lakhs by way of debentures. The unsecured loans represent liability to the subsidiary, the Apcar Collieries Ltd. (in liquidation) in respect of the net assets taken over. Other liabilities and provisions amount to Rs. 99.80 lakhs. Excluding the debenture liability, the total indebtedness works out to Rs. 191.04 lakhs to cover which are available current assets and book debts of Rs. 230.10 lakhs and investments of Rs. 16.07 lakhs, of which Rs. 6.23 lakhs are quoted and command a market value of Rs. 6.25 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 28.50 *cum-div.* and offer, on the *ex-div.* basis, a net annual yield of 2.5 per cent.

WAGON, POWER SHORTAGE HIT EQUITABLE COAL

DIVIDEND CUT BY A THIRD

INSUFFICIENCY of rail transport for coal movement in the first half of last year, severe shortage of electric power in the Raniganj coalfields and periodic shortages of explosives have produced a setback in the gross profit of Equitable Coal Company Ltd. (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) for the year ended 31st December 1961. The assistance received by the Company from the scheme to subsidise mines working under adverse conditions has not been of much avail in preventing the downward trend in the profit. As a direct consequence of the failure of infra-structural facilities to come up to expectations, production declined from 1.9 million tonnes to 1.8 million tonnes. Although this meant a slight reduction in the "very considerable increases in colliery working costs which remain unneutralised due to the Government's restrictive price policy," their per unit incidence was heavier than in the previous year. Besides, there was an increase in the percentage of lower grade coal in the Company's raisings. Consequently, the profit-margin (ratio of gross profit to sales) of the Company, which had improved smartly from 4.4 per cent to 8.3 per cent a year before, has slipped down to 6.3 per cent during the year under review. Sales realisations have shown a small rise from Rs. 392.57 lakhs to Rs. 398.57 lakhs, reflecting an increase of some 26,000 tonnes to 1.864 million tonnes in despatches. But this improvement in physical performance has been inadequate to have a favourable effect on the profit.

The investor has been hit badly, as the taxable equity dividend has been cut to 10 per cent per annum (on the Rs. 10 fully paid share) from 15 per cent, to which level it was raised in the previous year from 7.5 per cent paid for 1959. In spite of the lower profit, the provision for taxation has been raised from Rs. 0.85 lakh to Rs. 5.33 lakhs and that for depreciation has been well maintained at Rs. 16.24 lakhs. The Managing Agents' remuneration has been a shade lower at Rs. 1.10 lakh as compared with Rs. 1.33 lakh in the previous year. The amount transferred to reserves is only Rs. 2.77 lakhs as against Rs. 6.60 lakhs a year before.

The table below gives in a nutshell the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

Some idea of the working of the Company's collieries during the year can be had from the following synopsis of the Directors' report:

The seam at the Bhutgoria colliery was exhausted in January and the same position obtained in respect of the Koithee seam at the Charanpur colliery in September. The loss in production, which resulted from the cessation of working in these seams was, however, offset entirely by the output obtained from the Selected Baraboni colliery which was acquired in April in exchange for the Company's Haripur property. Production and despatches in the first four months of the current year are said to be satisfactory. The acquisition of the Selected Baraboni colliery is expected to enable a phased programme of extraction of its overlying Rana seam as also of the Poniati and Koithee seams. The Company's expansion programme included in the third Plan centres round the opening of a new colliery in Mouza Khottadih. While both the technical and financial feasibilities of this venture have been accepted by the screening committees set up in connection with the foreign exchange assistance granted to the private sector by the International Bank for Reconstruction and Development, legal complications have delayed the granting of a licence to the Company for opening the colliery. The financial position of the Company is commendable. Its paid-up capital of Rs. 33.64 lakhs is made up of Rs. 29.64 lakhs equity and Rs. 4 lakhs preference. The equity capital is covered nearly four times by reserves and surplus aggregating Rs. 119.10 lakhs. Borrowings of Rs. 139.11 lakhs comprise secured loans of Rs. 116.41 lakhs and unsecured loans of Rs. 22.70 lakhs. The secured loans include Rs. 47.27

SYNOPSES OF COMPANY REPORTS

Ambika Silk Mills Co., Ltd.

(*Managing Agents*: Messrs. Manganlal Bhagwandas & Co., Bombay.)

23*rd Annual General Meeting*—Held on 11th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	1,30,22	1,15,77
Closing stock	10,18	11,52
Gross profit	21,07	10,27
Transfer to Managing Agents' remuneration	1,84	74
,, ,, depreciation	2,72	2,83
,, ,, provision for taxation	8,40	3,20
Net profit	8,11	3,50
Adjustments	23†	3
Appropriations:		
Total available balance	8,34	3,53
To goodwill, trade name, etc., written off	15	15
Transfer to development rebate reserve	38	32
To short provision for income-tax for 1960	22	Nil
To short provision for general reserve	3,55	44
Proposed dividend (taxable) equity	4,00	2,60
	(20%)*	(15%)‡
Carry forward	4	2

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* Dividend for 1961 is on the increased ordinary capital of Rs. 19,97,800.

† This includes Rs. 20,356 being excess provision in respect of income-tax for the accounting year 1959 (assessment year 1960-61).

‡ The dividend for 1960 was on a paid-up capital of Rs. 17,32,500.

Extracts from the Directors' report: Reference was made in the last year's report to the policy of the Directors to replace, renovate and modernise the existing machineries. As a part of this programme 28 new looms in replacement of old ones have been installed; other looms are being renovated. The increased activities of the Company exerted considerable pressure on the available space and the Directors, therefore, thought it necessary to construct buildings. One building has been completed during the year under report and further constructions have also been taken in hand. It is expected that these facilities will enable the Company to intensify its activity in the printing, processing and allied sections.

In order to partially meet with the needs of a larger working capital, the Company during the year under review increased its subscribed and paid-up capital from Rs. 17,32,500 to Rs. 20,00,000 by issue of 2,675 ordinary (equity) shares of the face value of Rs. 100 each for cash at par. 2,653 shares out of this issue have been taken up by the shareholders as per the scheme leaving a balance of 22 shares.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	19,98,543	Gross block	44,39,632
Reserves and surplus	13,86,114	—Depreciation	27,66,142
Other liabilities	49,64,586		
		Net block	16,73,490
		Goodwill, etc.	15,000
		Block in progress	61,706
		Current assets	65,13,772
		Investments	60,823
		Cash	24,453
	Rs. 83,49,243		Rs. 83,49,243

* Paid-up capital consists of 19,978 equity shares of Rs. 100 each fully paid up. Out of this 1,700 shares are allotted as fully paid up by way of bonus shares by capitalisation of reserves. The capital also includes Rs. 700 on account of forfeited shares (amount originally paid up) and Rs. 43 being excess amount received together with share application money.

Rajkumar Mills Ltd.

[*Managing Agents*: Messrs. Jall Brothers (Private) Ltd., Indore.]

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: Profits have been satisfactory and the directors have been able to recommend payment of dividend after the year 1948.

The Company's income-tax assessments have been made upto the year 1956. The income-tax appeals are pending for 1946, 1947 and 1952 to 1956 and the wealth tax appeals for the years 1956 to 1958. Reference applications before the Income tax Appellate Tribunal are pending for the years 1942 to 1945 and also for the years 1950 and 1951. Besides, in the matter of Industrial tax and excess profits duty, the Company has obtained a certificate of fitness for leave to appeal in the Supreme Court of India.

The Mills power plant being in precarious condition and on account of non availability of electric power from the Madhya Pradesh Electricity Board, expansion or modernisation could not be undertaken. Additional supply of electric power to the extent of 775 kw. has now been made available by the Madhya Pradesh Electricity Board and arrangements are almost complete for converting the whole Mill to Electric Drive and discontinue working of the old main engine. A plan for renovating some of the machines is also under active consideration of the management.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,68,250	Gross block	57,01,901
Reserves and surplus	19,08,299	—Depreciation	37,44,375
Other liabilities	88,50,923		
		Net block	39,57,527
		Current assets	66,76,301
		Investments	1,19,074
		Cash	12,74,570
	Rs. 1,20,27,472		Rs. 1,20,27,472

* Paid-up capital consists of 25,365 ordinary shares of Rs. 50 each, fully called up. Of the above 5,073 shares are allotted as fully paid-up bonus shares by way of capitalisation of reserves. 91 shares remain to be converted against fractional certificates issued but not yet submitted for conversion.

Indore Malwa United Mills Ltd.

(*Chairman*: Mr. Kudilal G. Seksaria, Bombay.)

55*th Annual General Meeting*—26th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales—Cloth, yarn and waste	3,47,52	3,20,50
Closing stock	70,27	55,34
Gross profit	80,52	27,69
Transfer to depreciation	4,55	10,36
,, ,, development rebate reserve	1,10	39
,, ,, provision for taxation	12,75	Nil
Net profit	12,12	16,94
Adjustments—credit (+) or debit (—)	+16	—12,53
Appropriations: Total available balance	12,28	4,41*
Transferred to general reserve	2,01	Nil
,, ,, dividend equalisation reserve	5,00	Nil
Proposed dividend (taxable) ordinary	5,00	4,25
	(10%)	(8½%)
Carry forward	27	16

N.B.—Adjustments represent the balance brought forward from the previous year.

* This represents amount available for appropriation after adjusting the loss of Rs. 12,53,125 brought forward from 1959 accounts.

Extracts from the Directors' report: The total sales of cloth, yarn and waste increased during the year under review by about Rs. 27 lakhs, due mostly to the increased realisation of yarn. As anticipated in the last year's report, the Company has been able to reach the target of Rs. 50 lakhs for yarn sales. It is hoped that realisation on this account will increase during the current year to Rs. 80 lakhs.

Prospects for the current year will be adversely affected by the short supply of cotton due to the expectation of the coton crop during 1961-62 season being not more than 4.3 million bales and reduced imports, enhanced cost of stores, dyes, chemicals and coal.

Renovation and Modernisation: During the year an expenditure of Rs. 78,638 has been incurred in additions and extensions to the existing buildings. New machineries valued at about Rs. 10 lakhs were received during the year. Out of the same, textile machineries valued at Rs. 5¼ lakhs were added, the main items being 2 Texmaco *Ring Frames*, 4 *High Efficiency Plain Looms*, and one set of *Whitin's Combers*. Out of electrical machinery valued at Rs. 4¾ lakhs received during the year machinery worth Rs. 46,000 only was installed. Installation of the remaining electrical machinery is in progress.

In furtherance of the plan of renovation and modernisation of the Mill's machinery orders to the tune of Rs. 60 lakhs were placed during the year under review, comprising of orders for spinning machinry (Rs. 27.87 lakhs), weaving machinery (Rs. 1.64 lakh), processing machinery (Rs. 14.16 lakhs) and electrical machinery (Rs. 18 lakhs), etc. Machinery worth Rs. 5 lakhs only was received during the year 1961, the remaining one are to be received later.

During the current year further orders for machinery amounting to Rs. 20 lakhs have been placed, comprising of spinning machinery (Rs. 13 lakhs) and processing machinery (Rs. 6 lakhs).

The borrowings from the Company's bankers decreased during the year under review by Rs. 11.76 lakhs. However, since the close of the year and up to the date of the report, the Company's overdraft facilities with the banks have increased by Rs. 25 lakhs to meet purchases of cotton. As regards the financing of capital programme, the same will be met partly from accumulated profits and partly from a loan, negotiations for which are in progress with the Company's Bankers.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	50,00,000	Gross block	1,77,31,573
Reserves and surplus	23,26,590	—Depreciation	1,34,04,615
Other liabilities	1,55,78,172		
		Net block	43,26,958
		Current assets	1,58,42,658
		Investments	26,27,412
		Cash	1,07,734
	Rs. 2,29,04,762		Rs. 2,29,04,762

* Paid-up capital consists of 50,000 ordinary shares of Rs. 100 each, fully paid up. Out of this 30,000 ordinary shares are allotted as fully paid-up bonus shares by way of capitalisation of reserves.

Indo-Burma Petroleum Co., Ltd.

(*Managing Agents*: Messrs. Steel Brothers and Co., Ltd., Calcutta.)

54*th Annual General Meeting*—22nd June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sale of products	1,89,35	1,77,34
Commission earned from sales on consignment account	28,61	24,55
Income from investments (gross)	17,36	24,90
Gross profit	75,90	1,13,12
Transfer to Managing Agents' remuneration	7,04	7,38
,, ,, depreciation	5,25	4,51
,, ,, provision for taxation	31,32	43,26
,, ,, provision for extra Port Trust charges	2	29
,, ,, provision for doubtful debts	23	28
Net profit	32,04	57,45
Adjustments	4,55	82,91*
Appropriations: Total available balance	36,59	1,40,36
Transfer to provision for terminal gratuities	1,00	2,00
,, ,, development rebate reserve	58	85
,, ,, general reserve	2,00	22,50
,, ,, dividend equalisation reserve	Nil	5,00
,, ,, capital reserve	Nil	71,86
To dividend (taxable) 7% T.C. preference	3,11	3,50
To interim dividend (taxable) ordinary	10,00	10,00
	(10%)	(10%)
Proposed final dividend (taxable) ordinary	15,00	20,00
	(15%)	(20%)
Total ordinary dividend	[25%]	[30%]
Carry forward	5,00	4,65

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* This includes Rs. 71,85,760 being surplus arising on revaluation of investments transferred to capital reserve and Rs. 6,54,806 being investment depreciation reserve written back.

Extracts from the Directors' report: The trend of increased sales in all branch territories has continued but the generally lower margins have persisted. Lower margins are likely to continue.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,00,000	Gross block	1,15,72,934
Reserves and surplus	2,61,15,573	—Depreciation	59,62,008
Other liabilities	2,07,10,380		
		Net block	56,10,926
		Current assets	1,65,09,437
		Investments	2,61,80,795
		Cash	1,33,44,794
	Rs. 6,18,25,953		Rs. 6,18,25,953

* Paid-up capital consists of 10,00,000 ordinary shares of Rs. 10 each and 50,000 seven per cent taxable cumulative preference shares of Rs. 100 each all paid in cash. Of the ordinary shares 93,570 shares have been allotted as fully paid up by way of bonus shares.

Colour-Chem Ltd.

(*Chairman*: Mr. Ramniwas R. Ruia, Bombay.)

5*th Annual General Meeting*—5th July 1962.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1962	1961
Sales	2,36,04	1,12,05
Closing stock: Finished goods	14,16	7,10
Work-in-progress	6,76	3,24
Gross profit	1,04,05	46,54
Transfer to provision for gratuity fund	1,00	Nil
,, ,, ,, contingencies	7,15	Nil
,, ,, ,, taxation	41,50	9,50
,, ,, depreciation	8,49	10,53
,, ,, development rebate reserve	4	7,82
Net profit	45,87	18,59
Adjustments	11,82*	1,22†
Appropriations: Total available balance	57,69	19,81
Transfer to special reserve	11,78	11
To adjustment of loss brought forward from 1960	Nil	40
Transfer to general reserve	25,00	9,00
,, ,, dividend equalisation reserve	4,00	2,00
Proposed equity dividend	15,00	8,00
	(12%)‡	(8%)‡
Carry forward	91	90

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* This includes Rs. 11,50,000 transferred from special reserve—being profits exempt under Section 84 of the Indian Income-tax Act, 1961; for payment of dividends.

† This represents only Rs. 1.22 lakh being excess provision of development reserve during 1959-60.

‡ The dividend for 1961 is free of tax as it was paid out of special reserve.

‡ Out of the dividend of 12 per cent. for 1962, only 2.8 per cent is taxable; the balance of 9.2 per cent is free of tax since it is being paid out of special reserve.

Extracts from the Directors' report: *Production*: The factory of the Company has worked efficiently throughout the year. Production was maintained in line with the availability of raw materials and sales. Production and sales have been satisfactory since the closing of the financial year to the date of this report.

The shortage of raw materials which at one stage threatened to curtail production has been warded off for the present. This has been possible by the Company covering some export promotion licences and the receipt of a rupee payment licence. It is hoped that further relief in this direction may be forthcoming. However, foreign exchange shortage in the country will continue to overshadow the Company's efforts to attain its installed capacity production, until some of the important raw materials become available indigenously.

Phthalocyanine Blue Project, etc.: Additional capital of Rs. 25 lakhs was issued to the Members last year to finance the *Phthalocyanine Blue Project*. The licence to import machinery for the project was received in January last and orders for the same have since been placed with the foreign suppliers. The first consignment has already been received and the balance is expected in the course of the year. Buildings for installing this machinery are under construction and the Company hopes to start manufacture of this item some time in the first half of 1963. The production of some other items is also being planned but the limitations of foreign exchange tend to circumscribe the Company's activities.

Accounts in brief as at 31st March 1962 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,25,00,000	Gross block	1,14,02,816
Reserves and surplus	55,03,040	—Depreciation	23,90,321
Other liabilities	96,40,024		
		Net block	90,12,495
		Block-in-progress	4,85,126
		Current assets	95,72,081
		Cash	86,23,362
	Rs. 2,76,43,064		Rs. 2,76,43,046

* Paid-up capital consists of 1,25,000 equity shares of Rs. 100 each fully paid up in cash.

ELPHINSTONE SPINNING AND WEAVING MILLS COMPANY LTD.

SPEECH OF CHAIRMAN, MR. N. K. JALAN

ADDRESSING the shareholders of the Elphinstone Spinning and Weaving Mills Company Ltd., at their Annual General Meeting held at Bombay on Wednesday, 20th June 1962, Mr. N. K. Jalan, Chairman of the Company, referred to the problem of raw cotton and stressed that the solution for it lay in raising the yield per acre for which there was much scope. Citing yield figures of some comparable cotton-producing countries, Mr. Jalan brought out that, with the largest acreage (of 19 million) in the world under cotton, India's average yield per acre of lint cotton in the last five years was the lowest *at 93 lbs. in relation to Pakistan's 185 lbs., America's 460 lbs. and Egypt's 550 lbs.* To raise the productivity, he called upon the Government to arrange for better seeds and fertilisers and to introduce scientific methods of cultivation. He proposed cultivation of long-staple cotton in the country to conserve foreign exchange. Mr. Jalan welcomed the idea of buffer stock, advocated by the Union Minister for Food and Agriculture, Mr. S. K. Patil, as an obvious necessity. He dubbed the increase in cotton ceiling prices *for the ensuing season as a "serious error"* that would disturb the price stability of both cotton and the end-products, cloth and yarn.

The following is the full text of Mr. Jalan's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to this forty-third annual general meeting of the Company, and with your permission I shall take the report and accounts for the year 1961 which have been in your hands for some time now, as read.

"In the year under review, the gross trading profit was Rs. 48,78,086 as against a profit of Rs. 36,92,770 for the year ended 31st December 1960. I hope you will consider the working results of the year to be very satisfactory especially in the face of a number of unfavourable circumstances in the working caused by the very difficult availability of cotton and the consequent high prices that had to be paid towards the end of the year, increased labour charges, and the increased cost of stores, etc.

"Taxable dividend on ordinary shares has been raised to 22 per cent from 18 per cent paid for 1960 and 14 per cent for 1959, commensurate with the profits made in the respective years.

Modernisation

"The management has continued its programme of modernisation of the mills during the year under review. The spinning section is being modernised with the installation of high drafting equipments of the latest type, conversion of existing ring frames to longer lift of spindles, application of Pneumafil and installation of overhead travelling cleaners. For balancing purposes, we had applied for 5,200 spindles, but I am sorry that we have been allotted only 3,200 spindles though spindles are being given to new-comers. Orders have been placed for 10 new warp ring frames, comprising 4,480 spindles incorporating such of the latest improvements as the indigenous manufacturers could offer. Three new high speed draw frames are under installation at present and further two are due to be delivered shortly.

"It may be mentioned in this connection that in other parts of the world modernisation is taking place with bigger lift frames of 10" to 12" and one process working. In Japan, the cotton mills have perfected the continuous process in which cotton is put in the blow room and yarn is automatically obtained at the delivery point. If we are to compete in the world markets, it is imperative that we should operate on the basis of the latest technological and scientific developments taking place throughout the world.

"Since it seems difficult for the Indian textile industry to have complete modernisation and automation with the machinery presently available from indigenous sources, the Government should allow importation of latest machinery introduced in the world markets today at least until such time as our Indian manufacturers are in a position to produce machineries of the latest designs, so that the cotton textile industry, which is one of the largest earners of foreign exchange for the country, may prevail in the overseas markets. As mentioned by me in last year's report, the Government should take more effective steps to arrange for manufacture within the country machineries of the latest type, design and modifications.

"One set of Barber Colman spooler and warper has now been installed. Forty-eight automatic crankless looms of latest type in replacement of plain ones and one mercerising plant have been put in commission. The erection of a screen printing plant is also nearing completion.

"Order has been placed for one high speed sizing machine and an automatic warp tyeing machine is due to be received. Application for import licence for a singeing machine has been made and putting up of a continuous bleaching plant is under consideration.

Expansion

"The purchase of the block of Moon Mills was completed during the year under review. The scheme of rehabilitation of this unit with the latest types of spinning and other required machinery has been submitted to the National Industrial Development Corporation for the purpose of a loan from them. The application is now being processed.

"The working of the leather cloth division remained satisfactory during the year under review and production and sales registered a 50 per cent rise over the preceding year.

"During the current year, however, there has been a setback in the production and sales of this division. On account of the further restrictive policy of the Government for issuing import licences for the required chemicals used in the production of leather cloth, the locally manufactured chemicals have to be purchased at prohibitive prices. Besides, the recent raising of excise levy on leather cloth has tremendously affected the offtake of this product and this levy, it is feared, will make the working of this division even more difficult.

Exports

"In spite of the best efforts your mills could export cloth only to the extent of about 14 per cent of the production of the year against 27 per cent in the preceding year.

"India could export only about 575 million yards worth Rs. 46 crores of cloth in 1961 as compared to 692 million yards worth Rs. 54 crores in 1960 and 810 million yards valued at Rs. 55 crores in 1959.

"The Cotton Textiles Consultative Board, at its meeting held on 15th May 1962, recommended that the export obligation of every mill should be 12½ per cent of its turnover of cloth and 3 per cent of the turnover of yarn with reference to the balance-sheet of any year which ends on a date between 30th June 1961 and 29th June 1962. In view of our increased cost of production and the emergence of the European Common Market, the feasibility of realising this export target seems difficult.

"In order to encourage more exports of cloth it is necessary that the export incentive scheme be liberalised further. Besides, the export drive should be backed up by a planned programme of intensive research which is hitherto being done only in a very general way.

"Fortunately, the special problems of export organisation are now being specially studied with a definite eye to the special needs of the country. The Minister of International Trade, Mr. Manubhai Shah, has worked on some very useful ideas in this direction. The substitution of the present Foreign Trade Board, a purely official body, by a Board of Trade similar to the one in the United Kingdom is an orientation in the export promotion organisation capable of producing significant results. Similarly, the proposal of the Government to convert the State Trading Corporation into the principal instrument of export promotion is a move in the right direction. It is hoped that these innovations will help the question of export promotion to be put on a sound and really competitive basis.

Cotton

"As you already know, a serious crisis developed in the availability and prices of cotton beginning from the end of the year under review on account of adverse climatic conditions and the consequent very low cotton crop of the season 1961-62.

"Raw cotton, the principal raw material of the cotton mill industry and forming a large element in the cost of production of cloth, has unfortunately remained a constant problem with the industry. Any shortfall in the availability and any increase in the cost of this item will be a highly embarrassing prospect for the industry. It is high time, therefore, that decisive steps are taken to ensure adequate increase in the total output of indigenous cotton.

"Although the area under cotton cultivation in this country at present is one crore and ninety lakhs of acres which is the highest in the world, the average yield of last five years of lint cotton per acre is only 93 lbs., which is the lowest as compared with Pakistan's 185 lbs., America's 460 lbs. and Egypt's 550 lbs. And although production of cotton did increase during the first and second Plan periods, the increase has not kept pace with the demand. The increase has been only about 50 per cent while the demand has gone up by approximately double. To ensure intensive cultivation with improved seeds and fertilisers is, therefore, the most essential step towards increased crop. What is needed most at this stage is to make vigorous efforts to increase the yield per acre. It goes without saying that there is much scope for increase in the yield per acre and we have got to achieve it. Unless the yield per acre improves appreciably, the cultivator will not get reasonable price for his crop and naturally will lose all incentives for growing more cotton, a position which should not be allowed to develop. The Government should, therefore, arrange for distribution of improved seeds and fertilisers and also introduce scientific methods of cultivation.

"In order to avert the continuous drain on the country's valuable foreign exchange resources used up in the import of long-staple cotton, it is also necessary that steps be taken to increase the cultivation of this type of cotton in the country.

"Besides, the creation of a buffer stock of cotton as wisely advocated by the Union Minister Mr. S. K. Patil is an obvious necessity. The operation of a buffer stock agency can go a long way in preventing prices from falling to levels which are unremunerative to the growers and at the same time provide a reserve stock to cushion the industry against any future shortage of cotton.

"It is also necessary to think of possible substitutes for cotton as one more step towards easing the too frequent difficult cotton supply position. Import of staple fibre in larger quantities would be cheaper and more beneficial. Lately, consumer preference in India and other countries has turned in the direction of mixed blends in cloth to render the process of substitution even easier.

"By way of an incentive to cultivators and as a partial acceptance of the plea of the trade, ceiling prices of cotton have been decided by the Government to be raised for the crop of the next season. It is doubtful whether this is a step in the right direction. It appears to be a serious error to disturb the stability of cotton prices by pushing them up. The increase in the prices will only accentuate the inflationary pressures in the country which are otherwise being brought under control after a long period of time and it will defeat the very purpose which the higher prices aim to achieve through its inevitable effect on cloth and yarn prices. Even the export of cloth and yarn may be affected further on account of the likely rise in prices of the finished products.

Tariff Commission

"The question of cloth and yarn prices has been referred by the Government of India to the Tariff Commission. It is to be hoped that the Tariff Commission will make a pragmatic approach to the needs of the industry to make larger profits to enable it to plough back substantial portions thereof into its scheme of rehabilitation, modernisation and expansion.

"Again the depreciation allowances granted to the industry are inadequate taking into account the fact that these rates of the depreciation allowance were fixed a long time ago. The Tariff Commission, therefore, while examining the cost structure of the industry, should take into consideration this factor seriously and fix the rates of depreciation allowances in such a manner as may enable the industry to finance the scheme of rehabilitation and modernisation speedily.

"The real solution for the problem, however, is for the Government to create suitable conditions for increasing production, which unfortunately is on the decline during the past few months, and promoting healthy competition.

Bonus

"An *ad hoc* provision has been made in the accounts of the year for Rs. 6 lakhs towards bonus payable to workers and staff.

"Bonus has been paid so far for the year up to 1958 and all negotiations for a settlement by the Association with the representative union of workers having failed, the cases for bonus for the years 1959 and 1960 are pending before the Industrial Court.

"The Government of India has appointed a Bonus Commission to study and make recommendation on the question of bonus as applicable to all industries. It is strongly urged, however, that bonus should be directly related to productivity.

Current and Future Prospects

"In the past, from this very platform I have referred to the highly rigid cost structure of the cotton textile industry and the greatest disability of the inflated cost which this industry has been suffering from for long. Although the prices of yarn and cloth have not been permitted to be revised upwards, prices payable for cotton have gone up considerably. Apart from the increase of Rs. 2 in the basic wages of workers effected from January 1962 in addition to the increase of Rs. 8 given in the basic wages from January 1960 in implementation of the recommendation of the Central Wage Board, the dearness allowance payable to the workers and staff has been continuously on the upward march. Merging of dearness allowance in wage, and consequential increase in provident fund contribution has also increased the cost of production. The employers' contribution to the Employees' State Insurance Scheme has been doubled from 1¼ per cent of the total wages to 2½ per cent with effect from April 1962. The power supply company has proposed to levy a surcharge of 10.5 per cent on their existing tariffs with effect from July 1962. Prices of mill stores have also gone up.

"The capacity to plough back profits has been further affected by the reduction in the rate of development rebate from 25 per cent to 20 per cent with effect from 1st April 1961 and the proposal in the budget for increase in the corporation tax by 5 per cent from 45 per cent to 50 per cent.

"The enhanced rates of excise levies on cloth and yarn in the budget are calculated to act very much adversely on the industry.

"It will, however, be appreciated that, in spite of all these heavy odds confronting us, your Company has been continuously modernising and rehabilitating its machinery in the mills as well as in the leather cloth division and I hope that these improvements will help the Company to partly set off the incidence of higher cost of production.

"In conclusion, I have to sincerely thank my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended by them during the year.

"Thank you."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

COMMERCE AND INDUSTRY

(Concluded from page 1126)

conditions, had not been counteracted by much higher prices.

Export receipts fell for one important mineral, petroleum, and for at least one important manufacture, textiles. The decline in petroleum, according to the *Survey*, was probably only temportary and was largely associated with difficulties of supply in both Indonesia and Iran. Although receipts from tin rose a little, the future for both rubber and tin, it is said, is clouded by uncertainty about releases from large stockpiles in the United States. Exports of textiles will also become stagnant as a result of the quotas recently imposed on exports to the advanced countries. It would be of great benefit to the E.C.A.F.E. region, the *Survey* emphasises, if the advanced countries could achieve "greater consistency between their own trade policies and their increasingly generous programmes of aid to underdeveloped countries." Foreign aid is of crucial importance to the E.C.A.F.E region, but stability in export markets —or, better still, opportunity for increasing exports—is of even greater economic importance and of more lasting significance.

Had it not been for larger foreign aid in 1961, imports, like export receipts, would have fallen because there was little change in import prices. As it was, imports rose for the whole region, by as much as one-tenth, although part of this increase was financed by a depletion of foreign exchange reserves, more especially in Indonesia, Japan and the Philippines. Problems of balance between aggregate demand and aggregate supply, and between imports and exports, became less acute, and a few countries even achieved a high degree of stability. According to the *Survey* such stability was helped by greater success of Governments in raising the level of public and private saving and in avoiding recourse to the banking system for financing their rising expenditure.

INSURANCE

(Concluded from page 1118)

insurers also accounted for a higher percentage of the gross premium than those for Indian insurers during the period except for the year 1957 in respect of miscellaneous insurance business. The following table gives underwriting experience of Indian and non-Indian insurers during the year 1960:

Underwriting Experience in 1960

(In percentages)

(Ratio to gross premium written direct in India)

	India	Countries other than India	All countries including India
Fire:			
Claims	26.8	25.9	26.5
Commission	14.0	14.2	14.1
Expenses	31.5	33.6	32.2
Balance	27.7	26.3	27.2
Marine:			
Claims	79.3	46.5	68.6
Commission	7.2	8.0	7.7
Expenses	17.3	25.0	19.8
Balance	−3.8	19.7	3.9
Miscellaneous:			
Claims	53.1	49.9	52.4
Commission	12.5	13.5	12.7
Expenses	21.8	31.9	23.9
Balance	12.6	4.7	11.0

The total assets of the Indian insurers as on 31st December 1960 amounted to Rs. 64.04 crores, as compared with Rs. 57.04 crores and Rs. 51.93 crores at the end of the years 1959 and 1958, respectively. The table below indicates the trend of investments during the three years ended 1960:

(In lakhs of rupees)

	As at 31st December		
	1958	1959	1960
Government securities:			
Central	6,33 (12.2)	5,90 (10.3)	5,75 (9.0)
State	1,32 (2.5)	1,66 (2.9)	1,72 (2.7)
Foreign	1,99 (3.8)	1,76 (3.1)	1,88 (2.9)

(Figures in brackets are percentages.)

The total assets in India of the non-Indian insurers as on 31st December 1960 amounted to Rs. 11.64 crores of which 21.9 per cent were invested in securities of Government and public authorities, 21.2 per cent in shares and debentures of Indian companies, 2.5 per cent in land and house property and 30.9 per cent in deposits, cash and stamps.

Pipework installations

by S&L

We undertake fabrication and installation of pipework, as well as the design work entailed in the engineering of piping systems.

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers, and draughtsmen, many of them trained abroad, now provides,

* fabrication of all types of pressure pipework,
* fabrication of bent boiler tubes, superheater elements and coils for all purposes,
* the installation of piping systems for all pressure and temperature conditions.

Whatever your project—a Steel Plant, Power Station, Paper Mill, Chemical Plant, a single item or a complete installation—call for S & L.

SURVEY

(Concluded from page 1107)

underestimate of revenue gives a misleading picture of the budgetary position. He, however, emphasised the need for a careful scrutiny of the items of non-development expenditure and for ensuring that the revenues from additional taxation are not diverted for non-development expenditure. Mr. Gandhi felt that a detailed scrutiny would help considerably to reduce the revenue gap. He wanted it to be accepted in principle that the revenue raised through taxation imposed specifically for the purposes of financing planned development should not be diverted for non-Plan purposes. He contended that the present practice of debiting expenditure of a capital nature to the revenue account, thereby raising the quantum of revenue deficit, was not a sound one.

All these suggestions sound very well on paper, but how far they will be practicable in the present times when the Central budget is of the magnitude of over Rs. 1,000 crores and when defence expenditure is unpredictable is open to doubt. In a period of rising costs, it is, indeed, wiser to err on the side of some underestimation of revenue. Moreover, the gap between the actuals and the estimates is not so wide as is made out by critics like Mr. Gandhi. The absolute amount by which actual revenue exceeds the budget estimate may seem large, but, if the percentage of such increase is taken into account, the excess is only modest. For instance, in 1960-61, the latest year for which actuals are available, the revenue collected was Rs. 971 crores, as compared with the budget estimate of Rs. 896 crores. The difference is thus Rs. 75 crores but it is only 8.4 per cent. Again, for 1961-62, the revised estimates of revenue is Rs. 1,079 crores, as against the budget estimate of Rs. 1,018 crores, the difference being Rs. 61 crores or a little less than six per cent. Can anyone be so precise in estimating a revenue of over Rs. 1,000 crores as to avoid a fluctuation of a magnitude of ten per cent. Anyway, a gap of such a magnitude is not something unheard of in other countries. In fact, in countries like the U.S.A., the gap between the actuals and the budget estimates has happened to be wider. In some years, an estimated surplus had turned out to be a huge deficit. In a developing country like India, the economy of which is subject to many uncertainties, it is difficult to make precise forecasts of either revenue or expenditures. We wonder whether even private business houses, having much smaller budgets than that of the Government of India, would regard an eight per cent margin between their estimates and actuals as something extraordinary. In short, such a criticism of the budget, which has often been indulged by the I.M.C. and the apex commercial body, the Federation, is out of tune with the times and is outmoded by at least a quarter century, if not more.

NEW GREAT INSURANCE CO., LTD.

1961 was a favourable year for the New Great Insurance Company of India Ltd. (General Manager: Mr. M. G. Mody, Baroda). This is borne out by the statement of accounts of the Company for the year ended 31st December 1961. The combined net premium income in all the three departments registered a notable rise from Rs. 94 lakhs in 1960 to Rs. 1.06 crore in 1961. This increase in premium was accounted for by the fire and miscellaneous departments where net premium rose from Rs. 42.24 lakhs and Rs. 32 lakhs in 1960 to Rs. 50.61 lakhs and Rs. 40.40 lakhs respectively in 1961, while net premium in the marine department declined from Rs. 19.50 lakhs to Rs. 14.86 lakhs. Although the marine department thus made a poor showing from the point of view of premium, it wound up the year with a handsome profit of Rs. 2.92 lakhs but for which the net profit of the Company, aggregating Rs. 6.30 lakhs, would have been lower than that for the previous year when it amounted to Rs. 2.76 lakhs, considering that profits in the fire department suffered a sharp setback, receding from Rs. 6.69 lakhs to Rs. 4.16 lakhs, and the accident department continued to show a deficit, though a smaller one, as compared with the previous year. The higher net profit has enabled the Company to step up the dividend by 50 nP to Rs. 3 per share and to strengthen the general reserve by Rs. 3 lakhs.

Department-wise, net premium in the fire department amounted to Rs. 50.61 lakhs and claims to Rs. 22.41 lakhs, as against Rs. 42.24 lakhs and Rs. 14.89 lakhs, respectively, in the previous year. After meeting commission charges and expenses of management and maintaining the reserve for unexpired risks at Rs. 25.31 lakhs, as against Rs. 21.12 lakhs in the previous year, being 50 per cent of premium, the account shows a surplus of Rs. 4.16 lakhs, a decline of Rs. 2.53 lakhs as compared with the experience in 1960.

Net premium and claims in the marine department aggregated Rs. 14.86 lakhs and Rs. 14.31 lakhs, as against Rs. 19.50 lakhs and Rs. 17.02 lakhs, respectively, in the previous year. After meeting commission charges and expenses of management and making the requisite transfers to the reserve for unexpired risks which stand at Rs. 14.86 lakhs, being 100 per cent of premium, there is an underwriting profit of Rs. 2.92 lakhs, as against a loss of Rs. 2.58 lakhs in the previous year.

The miscellaneous account continued to be in the red. Net premium rose from Rs. 31.99 lakhs to Rs. 40.40 lakhs. Net claims amounted to Rs. 22.05 lakhs, as against Rs. 18.04 lakhs. After meeting commission and expenses and maintaining the reserves for unexpired risks at Rs. 20.20 lakhs, being 50 per cent of premium, there is an underwriting loss of Rs. 2.62 lakhs, as against Rs. 3.69 lakhs in the previous year.

The net profit, after taking into account the departmental profits and miscellaneous income and outgo, is Rs. 6,30,342 to which has been added Rs. 30,736 brought in from the previous year to make available Rs. 6,61,078 for appropriation. Out of this amount, a sum of Rs. 40,000 has been transferred to the staff gratuity account and Rs. 3,00,000 to the general reserve. The proposed dividend, which, incidentally, is the thirteenth to be paid by the Company, will absorb Rs. 3 lakhs, leaving a balance of Rs. 21,078 to be carried forward. The Company had, as at 31st December 1961, funds and reserves aggregating Rs. 1.01 crore, including a paid-up capital of Rs. 20 lakhs and departmental funds of Rs. 60.37 lakhs.

Notice

THE TRAVANCORE RUBBER AND TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 30th June 1962 to the registered holders as at that date half-yearly interest due on the Preference Shares at the rate of 3.0645 per cent (calculated in accordance with the Preference Shares (Regulation of Dividends) Act 1960), subject to deduction of tax.

Preference Share Transfer Books will be closed from 26th June to 30th June 1962, both days inclusive.

By Order of the Board,
THE TRAVANCORE RUBBER & TEA CO., LTD.,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Managing Agents.

MONEY EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 20th June

Short-term money market has become distinctly easier again. Till today, the state of affairs was slightly unfavourable to borrowers as in the past week, but it turned suddenly favourable to them today. Thus, the call money rate in the inter-bank section which was quite steady at 3½ per cent all along the week declined to 3¼ per cent today. Even at this rate, there were more lenders than borrowers.

The rate of interest for short-term deposits are unchanged at the ceiling levels under the Inter-bank Agreement.

The response to 91-days Government of India Treasury Bills was poor, in striking contrast to the good demand for them in the previous two weeks. Thus, the total amount offered was only Rs. 2 crores, same as the amount invited, as against Rs. 3.25 crores last week and Rs. 4 crores a fortnight back. The entire offerings were accepted and the average rate remained unchanged at 2.510 per cent per annum. Sales of intermediate Treasury Bills fetched only Rs. 48 lakhs, as compared with Rs. 130.25 lakhs in the previous week and Rs. 400 lakhs in the week preceding it.

There has been a slight fall of Rs. 93 lakhs in balances held abroad, bringing down the Reserve Bank's holdings of foreign assets, as of 15th June 1962, to Rs. 101.70 crores. There has been a decline of Rs. 5.16 crores in the loans and advances of the Reserve Bank, of which Rs. 1.87 crore is against usance bills of banks.

The Gilt-edged market has been dull and colourless. There has been no change whatever in the rates of Central Government loans. This is true of State loans, too, the only exception being 4¼ per cent 1972 loan of Uttar Pradesh which has gone up by 5 nP at Rs. 98.62. With the time for long-term borrowings by the Central Government close at hand, there is considerable speculation in the market about the forthcoming loans. The Reserve Bank has already suspended sale of Government securities and the Life Insurance Corporation is assiduously building up its cash balance. Market circles expect the new loans to be announced at the end of this month and the list to open by about the middle of next month.

There has been a slight improvement in the value of £ sterling, as a result of which the rupee has looked up a little. Thus, the banks' selling rate for ready T.T. on New York is Rs. 476.50 per 100 dollars, a decline of 25 nP over the week. Their buying rate, however, is unchanged at Rs. 473.25. Abroad, £ sterling has improved by 0.150 cent in terms of U.S. dollar. The latest available rate is 280.930-280.960 cents per £ for ready sterling and 280.330-280.360 for three months' forward. The £ has been fractionally better on most of the Continental exchanges also.

METALS GAIN ON IMPORT CUTS

(From Our Own Correspondent)

CALCUTTA, 19th June

Following the drastic cut in imports, prices of lead, tin and zinc recorded liberal appreciation here during the week under review. International markets did not show much improvements and, in fact, tin touched a new low of £860 in London, after opening at £877. This week's fall has brought the price £5 below the floor level fixed by the International Tin Council. The decline was attributed to lack of adequate buying and poor support from the Continent in view of the uncertainty created by the proposed U.S. releases. Prices in New York as well as Singapore registered modest falls. In Calcutta, the price shot up to Rs. 1,929.00 per 100 kgs., the week's gain being as much as Rs. 207. The price in Bombay gained Rs. 250 at Rs. 1,950. Although buying interest at higher levels was subdued, the rise was due to the prospects of reduced supplies in the face of the deepening foreign exchange crisis and the hardening attitude of the U.S. Congress towards, aid to India.

Copper, tin and zinc being essential metals, it is necessary their imports should be maintained at the existing levels; otherwise there is the apprehension that maintenance of the economic progress would be difficult. Imports of these metals are highly essential, if India's programme for building more machines, which is the only way to reduce imports of capital goods, is to be accelerated. It is to be hoped, therefore, that the Government reviews its decision to cut import of each item.

The steep fall in tin, in London, has been rightly attributed to the uncertainty of the price-trend, caused by the proposed releases from the U.S. strategic stockpile. Bolivia, it was reported, might ask the U.S. to postpone the proposed releases with a view to provide adequate time to consider the pricing-problem for the releases. Meanwhile, it has been explained on behalf of the U.S. that, in the interests of producers as well as consumers, it is essential that early releases from the stockpile are made, as the very fact that America possesses large surpluses affects often the market trend. The releases would bring the price to a more stable equilibrium than at present, after the possible initial fluctuations. Reports from Malaya indicated that releases from the U.S. stockpile were not at all called for, if they were contemplated on the belief that the world was facing an acute shortage in tin. In fact, as the U.S. releases might bring down the price, small producers would have to close down their mines.

In London, electrolytic copper was unchanged at £234 per ton for spot. In Calcutta, scrap prices were fully firm, as the shortage was all the more prominent in view of the delay in the receipt of imports. Electrolytic zinc opened here at Rs. 258 per 100 kgs. and, despite the needs for alloy making in view of lack of matching stocks of copper, hardened to Rs. 273.50. In London, spot zinc fell from £67½ a ton to £66½, and virgin lead from £58¼ a ton to £57⅞. In Calcutta, the price gained from Rs. 135 per 100 kgs. to Rs. 145.75.

BULLION INDECISIVE

(From Our Own Correspondent)

BOMBAY, 20th June

The bullion market moved rather indecisively during the week under review. In the absence of any fresh development, business actually put through was limited, with fluctuations in values confined to a narrow range. Over the week, both gold and silver were a shade lower. The seizure of 2,750 tolas of contraband gold in Bombay this week had apparently no effect.

A feature of trading during the week was the bull operators' tight hold of the maturing *Jeth* (June) settlement in gold despite the margin of Rs. 20 per 10 grams on outstanding purchases. Reflecting this position, the bears were obliged to pay a high *badla* of Rs. 2.25 in gold on Monday the 18th inst. when the settlement ran out at Rs 125.40. In silver, the rate for transferring commitments from the *Jeth* (June) to the *Bhadrapad* (September) settlement continued to be against bears throughout the week, though the actual rate declined from 20 nP on Wednesday last week to 15 nP yesterday, when the *Jeth* settlement went off the board.

Another feature of trading was that the premium commanded by ready gold over the forward (*Jeth* settlement), which stood at 50 nP last week-end, disappeared completely and both rates were at a par on Monday, while, in silver, the premium declined from 70 nP to 40 nP yesterday (Tuesday). This was so, because arrivals of both the metals continued to be well above the offtake of actuals as the following figures pertaining to daily averages show:

	Current week	Previous week
Gold (tolas)		
Arrivals	6,200	6,800
Offtake	5,000	6,400
Silver (bars)		
Arrivals	42	41
Offtake	7	8

The dollar price of gold in the London bullion market improved slightly from $35.10¼ to $35.10⅜ per fine ounce. Ready gold, however, eased by ¼d. to 249s. 11¼d. Ready silver firmed up by ⅛d. to 85d. and forward by ⅜d. to 85⅛d. Silver in New York, however, continued unaltered at 101.50 cents.

The following table shows the trend of prices during the week under review:

	20-6-62 (closing)	High	Low	13-6-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	125.50	126.80	125 20	126.40
*Jeth** ..	125.40	126.60	124.90	125.90
*Bhadrapad*** ..	123.60	124.10	122.95	123.70
Sovereign	98.00	—	—	98.50
SILVER				
Ready (.996 fine)	215.40	216.50	214.80	215.50
*Jeth**	215.80	216.55	215.00	216.20
Bhadrapad †† ..	216.90	216.30	215.05	216.00
London—				
Gold	249s.11¼d.	250s.0¼d.	249s.10¼d.	250s.0¼d.
Silver Ready	85d.	85d.	84⅞d.	84⅛d.
Silver Forward	85⅛d.	85⅛d.	84⅛d.	84⅜d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.
** 15th September settlement. †† 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, 18th June

Arrivals of E. I. tanned hides and calf here this week were normal and clearance was halting, as export inquiries were spasmodic. Fair average quality kips were not in demand, except for fifths selection in medium weights cow hides for shipment to the U.K. and extra heavy kips for shipment to East European countries. Inquiries for buffcalf were slack. Prices for buff hides and cowcalf ruled unchanged. Inland demand was dormant.

Export trading in tanned goat and sheep skins was meagre, and importers seemed to be holding off in anticipation of a decline in prices. There were a few inquiries for tanned goat skins, lower selections in light and medium weights for shipment to the Continent and for 22/24 lbs. goat to the U.S.A. There was steady call for middle-class sheep skins for shipment to the Continent at prices last established. Prime and semi-prime sheep skins continued to be neglected, and stocks accumulated with the E.I. tanners.

In sympathy with the weak tone in the skins market, price levels in the raw centres have been declining and this is welcomed by the industry, no doubt. Export demand for skins in the raw state has been negligible.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 18th June

Linseed continued firm here this week. But turnover was rather limited. Millers expect prices to come down as soon as the wagon position improves and arrivals from upcountry increase. The oil market was steady in limited business. Stocks with millers was small. The oilcake market was quiet, as local demand eased off a bit and prices declined. The latest quotation for the June delivery was Rs. 79.04 per quintal.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 20th June

In the absence of any other major developments to influence the market either way, weather was the dominating factor in the cotton futures market during the week. Report of unsatisfactory rains in some cotton growing areas induced fresh support to the Jarilla March 1963 contract which ruled fully steady. Although there was profit-taking at bulges and selling by upcountry operators which acted as a curb, the sentiment continued to be cheerful. The Jarilla March 1963 contract fluctuated in a narrow range and closed steady at Rs. 719.50 today, as against the last week-end closing of Rs. 718.25. The trend of prices of the contract is indicated below:

	20-6-62 Rs.	*High* Rs.	*Low* Rs.	13-6-62 Rs.
I.C.C. Jarilla March 1963	719.50	719.50	715.50	718.25

Dull trading was reported in the spot market at Sewri. Most of the mills would appear to have exhausted their quota for indigenous cotton. However, needy mills having unutilised quota made moderate purchases of such popular varieties as Laxmi, Surti, 197/3, Vijay, Digvijay, Co2 and L 147. Mills are apprehensive that no further allocation of quota for indigenous cotton might be made. This has induced some of them to go in for foreign cotton which could be good substitutes for indigenous growths. The circular issued by the Union Ministry of Commerce and Industry, amending Clause 6 of the Cotton Control Order, has caused concern among mills. According to the amended clause, the Textile Commissioner may direct mills to sell such quantity of cotton as may be in excess of the quantity which would reasonably be required by the mills for manufacturing yarn in the following three months at such prices or on such conditions as may be specified. This means that the mills may not hold cotton stocks in excess of those required for no more than three months' consumption only. Previously, it may be noted, mills were permitted to hold cotton stocks required for six months' consumption. The new restriction, it is feared, may upset the mill production schedule since spinners would be prevented from entering into long-term commitments in cloth and yarn as they were doing now.

In the absence of domestic mill buying and export demand prices of Bengal *Deshi* tended to become easy. Early in the week, some shippers bought stray lots fine and superfine of Bengal *Deshi* to honour commitments already entered into. Details regarding the import of 100,000 bales of Pakistan cotton were announced on the 13th inst. According to the announcement, the following varieties of Pakistan cotton having a staple length of one inch and below will be allowed for import under the recent agreement: (1) Punjab American 289F (124F, 199F, 289/43, AC 134), (2) Punjab American Sind NT., (3) Punjab American L.S.S., and (4) Punjab American 4F. In the case of all the varieties excepting AC 134, a certificate from the Pakistan Cotton Association Ltd., indicating that the cotton proposed to be imported is one of those varieties, will be necessary. In the case of AC 134, it is necessary to produce a survey certificate of the Pakistan Cotton Association Ltd., certifying that the staple length of that particular lot is one inch or below one inch as the case may be. Allotment letters will be issued by the Textile Commissioner on the strength of which licence to import will be issued. Out of the total quantity of 100,000 bales, 42,000 bales should be shipped before 31st July 1962 while the balance of 58,000 bales may be shipped later, but the shipment period will be up to 30th November 1962.

Demand for other foreign cotton was slack. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 680; Wagad 885; Kalyan 955; Co2 1,150; Gadag Laxmi 1,190; American (on sample) 1,330; Sudan XG3S 1,600; B.P. (W.N.W.G.) 1,305.

Firm conditions prevailed in the Karachi cotton futures market during the week. Keen demand from India and export inquiries from other countries initiated a buying movement which led to a rally in prices. N.T.R.G. July 1962 firmed up from Rs. 71.80 last week-end to Rs. 72.50. The new crop contract, namely, N.T.R.G. January 1963, attracted good support and advanced from Rs. 75.45 last week to Rs. 76.10 before finishing a shade lower at Rs. 75.83. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 69.00; Punjab *Deshi* 65.00; 4F Punjab Roller 77.50; S.G. 83.50; L.S.S. Punjab Roller 79.50; S.G. 85; N.T. Roller 83; S.G. 87; 289F Punjab Roller 89.50; S.G. 98.

Cotton futures on the Liverpool Cotton Exchange ruled steady during the week. Ready and shipment inquiries were quite. Spinner interest was moderate and centred around South American cotton in view of their cheapness as compared with U.S. and other growths. Both the American and American type contracts were quiet and unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 24.00; October 23.80; December 23.80.

American cotton mixed growth contracts: July 24.40; October 24.15; December 24.15.

Sudan: July 29.00; September 29.00; November 29.00.

New York cotton futures market ruled quietly steady during the week. Values moved narrowly in

thin trading. Net changes over the week were negligible. Spot prices however ruled firm.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	19-6-62	12-6-62	5-6-62
New York Spot	36.10	35.90	35.90
July	34.85	34.73	34.80
October	34.58	34.54	34.68
December	34.40	34.46	34.57

ART SILK YARN—CONTROLS TO GO?

(From Our Own Correspondent)

BOMBAY, *20th June*

The yarn market is thick with rumours that the Government of India will soon abolish controls over the prices and distribution of indigenous art silk yarn. The proposed abolition is considered necessary to put an end to the malpractice, indulged in by some parties, of securing yarn quotas for a large number "ghost" looms and then selling them at fantastically high prices to genuine consumers. It is such malpractices that are responsible for the wide disparity between the controlled prices and the actual ruling prices, the difference in several cases being as much as 50 to 60 per cent. It is pointed out that, if controls on price and distribution are removed and if licences for import of yarn under the Export Promotion Scheme are issued without much delay, prices of art silk yarn will go down, thereby facilitating exports of fabrics.

The Government of India has, however, announced that the applications for import licences under the Export Promotion Scheme will be entertained only once a month, instead of twice. This decision has caused much disappointment among weaving interests and traders who fear that exports of art silk fabrics will suffer a setback. Fears are also expressed over the severe impact of the recently enforced cut of 50 per cent in quotas of established importers and 15 per cent in those of actual users. The cuts in import quotas had led to a sharp rise in prices of both indigenous and imported art silk yarns in the local market last week. Since the rise in prices of Amilon (20 x 1) futures was more than Rs. 200 from the last clearing rates, the Bombay Yarn Merchants Association and Exchange had to arrange for a special clearing. Prices continued to increase during the week under review also, while indigenous yarns were subjected to tired bull liquidation and staged a retreat.

Traders in cotton yarn have noted the report that the Textile Commissioner has drawn up a scheme under which the yarn requirements of weavers will be met to the extent possible by direct linking of the demand with the supplying mills through the Indian Cotton Mills' Federation. The scheme requires bulking of the demand under each count and linking the same with the supplying mills, so that a regular flow of yarn from the producer to the consumer is ensured. This arrangement will cover demands received from apex weavers' co-operative societies in each of the States. To start with, about 18,500 bales of yarn of different counts will be distributed under the scheme to 19 apex weavers' co-operative societies in different States. The distribution will be made with the advice of a committee consisting of the representatives of the apex societies and the industry, and it is expected to cover about 16 per cent of the total free yarn made available by mills for use by the decentralised sectors. It is understood that there would also be firm commitments by co-operative societies to pay for and remove yarn from the mills within the stipulated period of 15 days' time. The whole scheme has been accepted by the mills and it will come into force from early August next.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	20-6-1962	13-6-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
June	4,115.00	4,065.00
August	4,230.00	4,180.00
120 Japan (per 100 kg.)	2,205.00	2,205.00
150 Japan (per 100 kg.)	1,984.00	1,984.00
120 Italy (per 100 kg.)	1,902.00	1,902.00
150 Italy (per 100 kg.)	1,786.00	1,786.00
Nat. Ray. 150 Bs. 1 (per kg.)	14.87	15.40
Staple fibre yarn (40 x 2)—		
June	737.00	744.00
August	762.00	770.00
Kohinoor (per kg.)	8.47	8.38
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Madura	30.00	30.75
40s Madura	35.50	36.00
60s Finlay	72.50	72.50

MIXED TRENDS IN SEEDS

(From Our Own Correspondent)

BOMBAY, *20th June*

Mixed trends prevailed in the oilseeds market during the week under review. Groundnuts tended to drift lower, while linseeds and cottonseeds moved up on fresh support. The subdued sentiment in groundnuts was due to larger arrivals of summer crop from Saurashtra and Madras. Reports of favourable rains in some producing centres and beginning of sowing in certain places and also had a bearish effect. Spot castor, too, ruled weak on account of better offerings and lack of good overseas buying enquiries for oil. Castor futures suffered some setback in the early sessions, but, later in the week, there was renewed support at lower levels. The firmness of linseeds was engendered by encouraging reports from sarson markets in North India. In sympathy, cottonseeds put on a cheerful appearance.

Groundnut July 1962 contract eased by 75 nP to Rs. 210.62. September 1962 contract fell initially from Rs. 214.75. to Rs. 212.75, but picked up strength later to close at Rs. 214.50. Nizam bold declined by 25 nP to Rs. 45.25. Khandesh quality was quiet at Rs. 45.75. Oil railway receipts softened by 15 nP to Rs. 18.50. But oil-ex-mill, which had fallen from Rs. 19 to Rs. 18.90, recovered towards the close to Rs. 19.10. September 1962 contract was lower by 5 nP at Rs. 18.40.

Among castorseeds, ready Madras suffered a loss of 50 nP to Rs. 31.12. Kanpur bold fell by 25 nP to Rs. 30.25. Oil commercial wound up the week 25 nP lower at Rs. 11.90. Oil B.S.S. lost 20 nP to Rs. 12.55. September 1962 contract fell from Rs. 161.25 to Rs. 160.75, before closing at Rs. 161.75.

In the linseed section, the September 1962 contract hardened by 50 nP to Rs. 40.37. June 1962 contract rose from Rs. 39.87 to Rs. 40.25, after fluctuating between Rs. 39.81 and Rs. 40.37. Bold ready, which had fallen from Rs. 39.25 to Rs. 39, recovered to the last week's closing level. Linseed oil picked up 10 nP to Rs. 15.50.

Among cottonseeds, July 1962 contract advanced by a rupee to Rs. 101.50. September 1962 contract gained a like amount to Rs. 103.50. Both non-white and Berar strengthened by 40 nP to Rs. 21. White improved by 20 nP to Rs. 19.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 20th June, as compared with those of the two previous weeks:

	20-6-1962	13-6-1962	6-6-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	210.62	211.37	208.00
July 1962	214.50	214.75	211.25
Nizam bold	45.25	45.50	44.50
Khandesh quality	45.75	45.75	45.00
Oil ex-mill ready*	19.10	19.00	18.80
Railway receipts*	18.50	18.65	18.15
Oil July 1962	18.15	18.15	17.80
Castorseed			
June 1962	160.75	157.50	158.00
September 1962	161.75	161.25	161.75
Ready Madras	31.12	31.62	31.75
Ready Kanpur	30.25	30.50	30.50
Oil B.S.S.†	12.55	12.75	12.85
Oil commercial†	11.90	12.15	12.20
Linseed			
June 1962	40.25	39.87	39.31
September 1962	40.37	39.87	39.50
Bold ready	39.25	39.25	38.37
Oil ready†	15.50	15.40	15.25
Cottonseed July 1962	101.50	100.50	98.00
Niger seed	35.00	35.00	99.00
Kardi seed	25.50	25.00	25.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEA EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *14th June*

A total of 854,000 kgs. was offered in sale No. 24 held on Tuesday, the 12th inst. Quality of most offerings was plain, but from the Nilgiris a few invoices were quite useful. There was fairly good general demand at lower rates. Nilgiri B.O.Ps met with limited support and declined by 10 to 20 nP following quality, whilst their fannings were irregular and often 30 to 40 nP lower. Good medium brokens eased by 10 to 20 nP following quality, while their fannings were irregular and also sometimes easier. The brighter medium and low medium brokens were barely steady, whereas others were irregular but generally 10 to 20 nP lower. The brighter medium and low medium fannings were irregular. Others, however, were 30 to 40 nP easier. Black leaf brokens were about steady, but there was less enquiry for their fannings. Whole leaf grades came to a lower market. Plainest brokens ruled steady, while their fannings followed the downward trend. Among teas of unorthodox manufacture, the brokens were well supported but fannings came to an easier market. Tippy teas met good support.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.30-4.00	4.15-4.30
Mediums	3.70-4.30	4.30-4.45
Good mediums	4.00-5.25	4.45 4.70
Nilgiri B.O.P.	4.00-5.90	4.50-5.15

The average price realised in sale No. 24 was Rs. 3.95 as against Rs. 3.96 a week ago and Rs. 4.37 in the corresponding sale last year.

Offerings amounted to 438,000 kgs. in dust sale No. 24 held on Thursday, the 14th inst. The market met with better demand, but prices were lower for most descriptions. Low mediums and mediums were well supported at a decline of up to 10 to 15 nP and good medium sorts generally followed this trend. Highgrown dusts sold at irregular rates and were generally easier; a few of the better kinds on offer, however, sold at around past prices. Black leaf descriptions were well supported but sold at a slight discount. Milled and fibrous types shared in the downward trend of the market. There was less demand for unorthodox types which were generally much easier.

The average price realised in dust sale No. 24 was Rs. 3.19 per kg. as compared with Rs. 3.25 a week ago and Rs. 4.01 in the corresponding sale last year.

Colombo: Just over 7 million lbs. were offered and the market opened to a good demand with the better highgrown brokens 10 to 20 cents easier but the plainer sorts, mediums and lowgrowns were steady, but towards the close weakened, with best mediums 10 cents lower and the plainer sorts and uvas 3 to 8 cents easier. More interest was shown in liquoring fannings.

London: There were no sales this week owing to the Whitsun holidays.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 25: 863,000 kgs. offered. Good demand. Low medium and medium brokens irregularly about steady. Fannings easier. Good mediums firm. Poorer highgrowns fully firm, sometimes dearer. Others steady. Unorthodox dearer."

TEA ADVANCES

(From Our Own Correspondent)

CALCUTTA, *19th June*

With the enlargement of representative lots, better conditions are anticipated in the forthcoming export sales here, and quality teas should register a modest increase in prices. If buying support so far has not been as large as earlier expected, it is because overseas buyers have waited to allow prices to stabilise. During last week's internal sale, demand was active and strong and prices registered satisfactory advances.

Following this week's talks between Mr. Duncan Sandys, Britain's Secretary for Commonwealth Relations, and the Government of India, on the problems arising from the proposed entry by the U.K. into the E.C.M., trade circles here believe that the E.C.M. and the U.K. should categorically declare that tea would be allowed a duty-free entry into the Community. If, as has been reported, Britain's proposals to safeguard the Commonwealth trade are meant for a transitional period upto the end of 1966, nothing would prevent the Inner Six to impose their current rates of tariffs after that period. The Finance Minister, Mr. Morarji Desai's objection to such an approach on the part of the U.K. has been hailed by the trade circles. India has rightly insisted on a declaration by the E.C.M. and the U.K. that they would not only ensure but also expand the current level of exports from the underdeveloped countries. The trade circles anticipate an increase in the exports of tea to Europe after 1st January 1963, which is the date provisionally fixed for Britain's entry into the E.C.M. It should be noted that, while duty-free tea would encourage consumption even if a small duty is levied, the current level of consumption in Europe is not going to be affected, as in some of the countries, the present duty is as high as 150 per cent *ad valorem*.

It is important, therefore, for India to increase acreage under tea. For, unless India increases production, it would not be able to get a proper share in the markets awaiting exploration in the E.C.M. countries. The appeal made by the Tea Association of India, Calcutta, to the Government to take prompt measures to remove the export handicaps with which the industry is faced has been timely. The Association's plea is that the present heavy taxation on the tea industry should be reduced. It says that the high transport charges and taxes both by the Centre as well as the States form not an insignificant portion of cost of production.

It has been reported that measures to increase tea exports would include encouragement to expand acreage and replantation. What these measures would exactly be it is not indicated. If only production is increased at diminishing cost of marginal output, selling prices could be so reduced as to invite more interest. With keen competition from other producing countries, where taxes on the industry are much lower than in India, it is difficult to foresee reduction in costs, without lowering the level of taxation. East Africa is now reported to have made considerable improvement in quality. It has just been announced that Pakistan has reduced its export duty on tea by 10 paise to 25 paise per lb.

The common grievance of tea gardens, namely, inadequate supply of fertilisers, appears to have at long last been driven home to New Delhi. For, it has been reported that, despite measures to lessen the gravity of the foreign exchange crisis, the Government has agreed to ensure regular supply of fertilisers to the tea gardens. The distribution arrangements are to be made by the Tea Board. It is also good news that the Kashmir Government is exploring the possibility of growing tea in certain areas of the State. The Government has approached a planters' organisation in South India to make an initial survey.

Keen competition was a feature of last week's internal sales for domestic consumption. Offerings of dusts totalled 32,635 packages. The sales opened with strong and active demand which strengthened further subsequently. Keen competition was offered to C.T.C. dusts which realised high prices. The fibrous teas, which had been a weak spot in the recent sales met with better support at satisfactory prices. Legg-cut teas, although irregular, were generally bid at dearer rates. Orthodox teas and fibrous lots were also dearer. The quotations (in rupees) per one kg., inclusive of excise duty, were: Medium Assam C.T.C. dust 5.50 to 5.80, medium Assam dust 3.30 to 3.80 and plain orthodox dust 3.00 to 3.20. Good Assam C.T.C. dust and legg-cut dusts were unquoted.

RAW JUTE RISES

(From Our Own Correspondent)

CALCUTTA, *19th June*

The striking feature in the jute markets during the week under review was that fibre prices pierced the floor levels and added gains of 50 nP per maund. New crop was quoted at a premium of Rs. 2 a maund. Such a trend pre-supposes that, as and when the new crop becomes available, prices would be higher. By quoting premium even now, the foundation for an upward trend is being laid. Only recently, the Indian Jute Mills Association pointed to the need for fixing minimum prices for the new crop after consultation with the industry and consideration of all circumstances. If new crop prices were to rise, the prices of goods would move up in turn. These developments should be avoided if exports are to be maintained at present levels. The premium for forward jute is attributed to over-anxiety in New Delhi to ensure a fair return to cultivators and fixing minimum prices well in advance.

Demand for ready goods continued to be satisfactory during the week and, as a result, prices were fully firm. A point of note was that, while the quotations for forward sacking goods were nearer to those of ready goods, in respect of hessian constructions this gap was wider. Thus, while January-March B. twills were quoted at Rs. 124.25, as against Rs. 126.25 for spot, 40" 10 oz. hessian for January-March was lower by Rs. 10 at Rs. 49.75. Owing to such a huge difference demand for hessian was better vis-a-vis heavy goods. A factor that imparted strength was that, despite increased production in May, the squeeze in ready goods continues. The total of all goods produced was 99,700 tonnes, a rise of 2,700 tonnes as compared with April 1962. The largest increase was shown in sacking, which aggregated 47,000 tonnes, as against 45,000 tonnes. Hessian increased by 300 tonnes to 37,300 tonnes and miscellaneous goods by 400 tonnes to 15,400 tonnes. The increase in sacking goods, despite considerably lower demand as compared with hessian, was accounted for by the fact that mills possess considerable quantities of inferior grades of fibre fit for the production of heavy goods only. The scarcity in good quality fibre for hessian was duly reflected in the proportion of sacking production to hessian having increased. The continued squeeze in ready goods recognised that the rise in stocks as at the end of May gave an incorrect picture of the statistical position of goods as against the background of good demand accumulated in the period when movements from Calcutta port were at a standstill, in view of the strike by Hooghly pilots.

Meanwhile, the Indian Jute Mills Association has decided that the unrestricted period of production should continue for the month of July also. This decision has been taken in view of the continued good demand for goods and also of poor stocks. Further, mills possess good stocks of fibre which should be made use of as early as possible in order that quality of output would not be affected by the continued storage of old fibre.

During the week, the East India Jute and Hessian Exchange Ltd. obtained the permission of the Forward Markets Commission for trading in raw jute in transferable specific delivery contracts for delivery beyond June 1962 up to September and also to commence trading in these contracts for raw jute for September delivery. The minimum price for these contracts will be Rs. 30 per maund basis Assam bottoms. This, in other words, means that futures contracts in the new crop would be permitted in the new crop only at the current minimum levels. This gives a clue to the reported decision by the Government of India that the minimum prices for the new crop would be the same as now. Closely following the footsteps of the system of minimum prices in India, the East Pakistan Government is now reported to be favouring the idea of fixing statutory minimum prices, at least for the inferior varieties of jute, the current prices of which, it was apprehended, had moved down much below cost of production. These prices, it should be noted, are much below those existing for similar varieties at Calcutta. Such a decision was reported as having taken place at a conference of the Government with jute interests. Although the prospects for the crop were considered to be good, the conference apprehended that the low levels of prices had led to a reduction in acreage and accordingly the crop was estimated to be 15 to 20 per cent lower than last year. The carryover stocks to the next season would be slightly higher than usual. At the conference, the Government was urged to declare its policy for the forthcoming season as early as possible. Pakistan has announced the export prices (in £ per ton) effective from 1st July: Export hearts 73, Outport tossa (4) 80, Export lightnings 85, Outport tossa (2/3) 90, Dundee tossa (4) 95, Dacca tossa (6) 95, Export firsts 95, Dundee tossa (2/3) 100, Crack tossa (4) 102, Mill firsts 103, Dacca tossa (5) 102, Dundee hearts 118, Dacca tossa (4) 118, Mill red 110, Dundee lightnings 125, Dacca tossa 2/3 131, Dundee firsts 135, and Crack tossa (2/3) 115.

That mills in India are fully utilising the present opportunities of increased demand, both internal and external, is evident in that, in the five months to May 1962, exports at 350,000 tons were a record high since 1955, and production at 475,800 tons in the same period was the highest since 1956. Mills now hold fibre approximately sufficient for five months. In addition, the buffer stocks amount to 1,125,000 maunds. In view of the steady conditions in the fibre market, the Committee of the Buffer Stock Association has decided not to purchase any more fibre for the time being. It was also evident that now not much remained of the old crop awaiting marketing. The growing interest in the new crop is also a sign for the same. However, the Committee has stated that buffer stock purchases would be resumed as soon as conditions warrant the same.

During the week, new crop sellers were reserved, and this led the premium for the new crop to increase to Rs. 2 a maund. Old crop was being offered in small quantities. Prices advanced. Thus, June-July Daisee bottoms hardened from Rs. 33.50 to Rs. 34, northern bottoms from Rs. 29.50 to Rs. 30 and Assam bottoms from Rs. 30 to Rs. 30.50.

The goods market opened on Tuesday last against the background of firm conditions. However, overseas buyers declined offers at higher prices. There was also selling pressure from holders. This led to ready hessian 40" 10 oz. declining from Rs. 60 to Rs. 61, and ready B. twills from Rs. 128.25 to Rs. 127.25. The market was closed on Wednesday on account of the public holiday. By Thursday, there was a significant increase in the number of overseas inquiries for hessians as well as heavy goods, but no business took place, in view of lack of stability to prices. There was selling pressure from holders. This was followed by some mills turning as sellers of near as well as ready goods. Ready B. twills moved down to Rs. 59 and B. twills to Rs. 127. Although actual business passing was little, prices were firmly maintained at the previous levels. Conditions over the week-end were steadier and ready hessian 40" 10 oz. hardened to Rs. 59.25, as not only there was good covering demand but reports from the U.S. in regard to May consumption stock figures were encouraging. However, in the absence of real interest, ready B. twills eased to Rs. 126.15. Lack of buying interest forced down B. twills to Rs. 125.40 and selling pressure in the futures market was also large. However, this did not affect prices of hessian constructions, since overseas buyers showed lively interest for varying deliveries in respect of several constructions. Hessian 40" 10 oz. was firm at Rs. 59.25.

WHEAT DEPRESSED

(From Our Own Correspondent)

HAPUR, *18th June*

Quietly steady tone was witnessed in foodgrains here this week as demand was slack in the face of comfortable stocks of rabi grains which increased further. Wheat here eased fractionally to be quoted on Monday at Rs. 36.82 to Rs. 37.51 per quintal for the average quality. The red quality was quoted even lower at Rs. 36.17 per quintal. The farm superior produce was, however, lifted at higher rates, ranging between Rs. 41.53 and Rs. 45.55 per quintal. Daily arrivals declined to an average of 1,000 maunds. Part of the arrivals were from east U.P. Most of the arrivals were lifted by stockists and the local stock swelled to 61,000 maunds. It was further gathered that wheat stocks in the adjoining markets were also quite good. Due to this improved supply position, offtake from the fair-price shops was negligible. Besides, the open market prices were lower than fair-price shop prices. Trade circles were of the opinion that if kharif crop (maize and bajra sowings of which was being done these days) turned out to be good, wheat prices would decline further. The Government has, however, made the announcement to purchase wheat, if prices fall below Rs. 13 to Rs. 14 a maund according to quality in the open market.

Coarse quality rice prices also sought lower levels in sympathy with the trend in wheat. However, the supply position of rice was not quite comfortable, and stocks were only around 10,000 maunds. Arrivals, too, were small. Preparation of land for paddy sowings was being done these days, and actual sowings would commence with the start of monsoon. Gram eased by about Rs. 1.34 per quintal. Daily arrivals, mostly from Punjab, were around 500 to 600 maunds, and the stock with the trade was estimated at 20,000 maunds. Barley and bejhar, too, were quoted slightly lower, and stocks of these grains were small, around 10,000 maunds each. Methi declined due to slack buying support from Bengal. Juwar and guwar continued to attract brisk demand for seed purposes as sowings of kharif crops were in full swing. Prices in other sections were quiet. Week-end prices (in rupees per quintal) were: Rice mainpuri 34.94, gadda kutcha 53.60, raimunia 67, ramajwayan 64.32, basmati 75.02 to 96.45, gram 38.85, Punjab quality 40.19, barley 27.46 to 28.13, bejhar 26.79 to 29.47, maize 32.15, bajra 37.51, guwar 40.19 to 44.21, juwar 38.85 to 42.87 and methi 56.26 to 58.94.

In pulses, peas tended to fall, as loading was restricted during the week. Stocks of peas were heavy around 73,000 maunds and daily arrivals ran down to an average of 500 to 700 maunds. Arhar arrival from Gujarat were small and stocks as yet poor, around 10,000 maunds. Prices, however, were lower in sympathy with the downward trend of peas. Urd prices also drifted lower on easier outside advices. Other pulses ruled steady. Week-end prices (in rupees per quintal) were: Peas dara 30.81 to 31.48, farm white 32.82 to 34.33, peas dal 35.50, arhar 44.21 to 48.23, arhar dal 60.28 to 66.98, urd 66.98, urd dal 80.38, moong 53.58, moong dal 61.62, massor 42.87 to 49.57, massor dal 53.58, gram dal 48.23, moth 45.55 and moth dal 53.58.

SUGAR WEAK

(From Our Own Correspondent)

HAPUR, *18th June*

Sugar continued to be weak here during the week under review, as demand was slack. The mill delivery prices suffered a setback of 6 nP to 19 nP per maund. Traders expect that the monthly quota release to be announced shortly would again be of 2 lakh tonnes. Spot delivery prices were stationary around Rs. 106 per quintal for the Simbhauli produce and at Rs. 103 for the Bulandshar. The latest mill delivery prices were:—D29 Amroha Rs. 38.47, Dhampur Rs. 38.25, Seohara Rs. 38.50, Meerut Rs. 39.19, E29 Simbhauli Rs. 38.87, Bijnore Rs. 38.31 and Dhampur Rs. 38.12 a maund.

Sugar was depressed in the Muzaffarnagar market, as demand again slackened. Stocks with factories were still heavy, of which they were anxious sellers of fresh quota is likely to depress the market further. Rainy conditions also accounted for depressed conditions in the spot market. With the exception of east U.P. and Bihar, cane crushing season has ended. The units still running would terminate operation by the end of the month. Production of sugar has amounted to 26.04 lakh metric tons by the end of May as against 28.75 lakh metric tons during the same period last year, and stocks todate are 23.56 lakh tonnes as against 22.43 lakh tonnes on the corresponding date last year.

Khandsari ruled steady, as demand from Punjab and Rajasthan was brisk and local inquiries were also fair. Prices improved by about 25 nP per maund, and stocks at the producer's end were declining.

Revival of loading facilities in the week-end accounted for a steady trend in gur. Offtake was five wagonloads, mostly to Gujarat, and local stock ran down to 9,000 maunds; the corresponding figure last year being much higher at 35,000 maunds. The prevailing gur price at Rs. 52.26 per quintal for pansera No. 1 (Rs. 19.50 per maund) were higher than the corresponding price last year at Rs. 15.75 per maund and at Rs. 14.81 in 1960. Cane crop had been adversely affected in some areas due to pests but losses were likely to be made good on good rains. Shakker was much in request from Rajasthan and Punjab and ruled steady. Gur futures tended to rise on continued bull support and gur jagun was quoted near the best level of the session at Rs. 19.40 as against the week's opening level of at Rs. 18.98.

Notices

MINERVA MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 42nd Annual General Meeting of the above Company will be held at its Registered Office, 70, Forbes Street, Bombay 1, on Friday, the 29th June, 1962, at 4-30 p.m., for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December, 1961.
2. To declare a dividend.
3. To appoint Directors in place of those who retire, but are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To appoint Auditors for the current year for doing the local audit of the account books of the Company's Mills at Bangalore, and to fix their remuneration.

The Transfer Books of the Company will remain closed from 28th May 1962 to 16th June 1962, both days inclusive.

By Order of the Board,
N. SIRUR & Co. PRIVATE LTD.,
Managing Agents,
N. D. SIRUR,
Managing Director.

BOMBAY.
dated 18th May 1962.

Note: (1) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a Member.

(2) Dividend when declared will be made payable at State Bank of India, Bombay, on and after Thursday, the 12th July 1962 to those Shareholders whose names stand on the Register of Members on the 16th June 1962. Dividend Warrants will be made collectable at par at State Bank of India, Bangalore and Bangalore City Branches. Shareholders are requested to intimate change of address, if any.

(3) Detailed Notice is going to the Shareholders individually.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. D.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i.—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

MARKET GOSSIP

(Concluded from page 1103)

of transmitting money so efficient, so inexpensive and so widely available that there was no need for a Government-sponsored service to supplement them.

Mr. Fairbairn made it clear that he was stressing these problems, which might be made more acute by the U.K. joining the Common Market, "not as dangers to be feared but as challenges to be accepted by all of us." He felt that the purely economic effects of Britain joining the E.C.M. would, on balance, prove favourable. Banks would be affected both directly and indirectly; directly by European banks' competition in interest rates and charges and indirectly by the experience of customers who would have to be assisted in every way and whatever vicissitudes they might encounter. In Mr Fairbairn's opinion, three aims of the Rome Treaty would affect the banking system directly. They are (1) the harmonisation of national monetary policies, (2) the grant of complete freedom of movement for capital transactions through the progressive elimination of exchange controls, and (3), the liberalisation of banking and insurance services. It was too early to say what widening of interest might become necessary as a result of the liberalisation of banking services. But Mr. Fairbairn felt that, eventually, it could mean the establishment of branch networks covering the whole area or the forging of closer links with banks in other countries. Already several groups of banks mainly concerned with investments had been formed in the countries of the Six. The formation of similar groups of commercial banks could not, he felt, be ruled out.

Insecticides Industry

Agricultural crops in India suffer considerable damage owing to the attack of insects and pests every year. No precise estimate of this damage, however, has been made so far, except for certain States. For instance, the agricultural production team of the Ford Foundation, which studied agricultural problems in this country in 1959, estimated that the Punjab alone suffered a loss of as much as Rs. 18 crores annually on account of damage to crops by insects (of which there are 250 species) and a few species of mammals and anthrapods. This should give one an idea of the colossal extent of damage caused in the whole of India by insects and pests. It is against this background that increasing emphasis is being laid on plant protection programmes as part of the drive for expanding agricultural production. The third Plan stresses the need for popularising the application of insecticides among farmers. It is only natural, therefore, that the insecticides industry should have acquired considerable momentum in recent years. The output of several insecticides, pesticides and fungicides has been going up steadily. The total production of D.D.T., for instance, aggregated 2,820 tonnes in 1961. (as against only 800 tonnes in 1957). B.H.C. (tech) 4,630 tonnes (1,880 tonnes in 1957) and pesticidal formulations (solid) 23,000 tonnes (as against about 18,000 tonnes in 1957). It is estimated that the demand for D.D.T. will go up to 6,000 tonnes by the end of the third Plan and for B.H.C. to 15,000 tonnes. So the prospects for the industry appear to be bright.

A new phase in the Indian farmers' fight against insects and pests will open with the completion of the experiments now being conducted by C.I.B.A., the well-known Swiss firm, on the applicability of some of its insecticides for Indian crops. This firm has developed some new types of agro-chemicals, claimed to be very effective against the attack of various kinds of insects on crops. Dr. G. Heim, Ciba's specialist in agro-chemicals, who left India this week after an extensive tour of the country, claimed, at a Press conference held in Bombay, that the application of Ciba's agro-chemicals would raise production of agricultural crops by 30 to 60 per cent. In countries with similar conditions and problems. Dr. Heim observed, the yield from cotton has been increased by 60 per cent by the use of Ciba's insecticides. It is said that the quality of the crops would also be improved by the use of these agro-chemicals. Ciba, it may be noted, specialises in the manufacture of systematic insectirides which penetrate into the internal plant system and offer resistance against pests and insects. One of the most effective Ciba products is said to be *dimecron*, a formulation based on phosphamidon. According to Dr. Heim, this is the only water-soluable systemic insecticide in the world. The water solubility of this product presents a special advantage for crops grown for edible oils, such as groundnuts, because it eliminates the possible danger of toxic residue in the final products. *Dimecron*, we are told, is already being used in the U.S. and the Middle East and other countries. This product is being tested at the various agricultural research centres in India.

Also being tested in India is a volatile insecticide produced by Ciba, called *nuvan*, a highly potent fumigant and contact insecticide for agricultural pests. *Nuvan* is said to be effective against flies, mosquitoes, gnats, wasps, hornets, mites, lice, fleas, ticks, bedbugs, cockroaches, carpet beetles, ants and silverfish. Other fields of Ciba research and testing in agro-chemicals, which Dr. Heim claims will make a major contribution to pest control, are mineral oil insecticides, against the dormant stages of insects (eggs) and against scales. Ciba's wide range of agro-chemicals also includes effective fungicides for protection of rubber plants, palm trees and hill fruits. Mr. P. Oberer, who is in charge of the world-wide sales of Ciba agro-chemicals, has also arrived in India to explore the consumer potential for these products in this country. But Ciba does not seem to have any immediate plan to put up a plant for the manufacture of these chemicals in India. It is to be hoped, however, that the Company will not hesitate to commence their production in India, if their products find a good market here.

Conference of Telephone Officials

There have been numerous complaints against the telephone system in this country. The business community, in particular, has been hit hard on account of defective telephone services in all the major cities. A reference to the exasperation of telephone users was made in an article in this journal only last week. It is, therefore, gratifying to note that there is some response from the Government to these grievences. Mr. Jagjivan Ram, Union Minister for Transport and Communications, convened a conference of general managers of telephones and other senior officials this week at New Delhi. What transpired at the meeting is still not clear. Obviously, the officials, piqued by persistent complaints, have at last opened their eyes to the plight of telephone users. It will, however, be wishful thinking to expect any immediate remedies for the ills afflicting the telephone system.

It would appear that the officials who participated in the meeting mentioned above attributed the present defects in the telephone system to slow implementation of certain schemes for improvement. The departmental control of telephones system, it appears, makes it difficult for the authorities to take quick decisions for implementing new programmes.

Although the local and trunk telephone systems comprise a wide network throughout the country, four major cities, Bombay, Delhi, Calcutta and Madras alone account for 50 per cent of the load on the systems. If, therefore, the expansion programme now undertaken to provide a large number of telephone circuits linking some of the major cities is put through expeditiously, the pressure of demand on telephone services will be largely eased. The World Bank, it is said, has extended a large loan for the purpose. If this is true, it should be possible to expedite these development projects. The consideration of the question of setting up a corporation should not come in the way of swiftly executing the development schemes.

WEEK'S STOCK EXCHANGE TREND

William Blake.

VOL. CIV. No. 2672 BOMBAY, 30th JUNE 1962 PRICE Rs. 2

BANKS AND DEPOSIT MOBILISATION

IT is obvious that banks will have to mobilise deposits at a greater pace than they have been able to do in the first and second Plan periods, if they are to fulfil their role as provider of credit needed by the private and public sectors alike to fulfil the third Plan targets. Experience in the past two years clearly indicates that it will not pay them to supplement their deposit resources through borrowings from the Central banking institution. With uncertainties shrouding the third Plan production targets for agriculture, industry and trade and with no specific plan to ensure price stability, one cannot be categorical in estimating the credit that will be required in the remaining four years of the Plan. Indeed, some banks are already concerned over the failure of industrial and agricultural production to come up to expectations and are wondering whether the demand for bank credit will be sufficiently large in the next busy season to keep pace with the growth in deposits now taking place. It may be noted here that, in the first half of 1962 (upto 15th June to be precise), aggregate net deposits of scheduled banks rose by as much as Rs. 178 crores, as against about Rs. 72 crores in the corresponding half-year of 1961, after making adjustments for the transfer of P.L. 480 funds from the State Bank of India to the Reserve Bank, and Rs. 180 crores in the whole of 1961. The slowdown in economic growth, however, may be a passing phase and the situation may improve in course of time. That at any rate seems to be the opinion of banks in general, for it is significant that none of them is prepared to reduce the rates of interest on term deposits. On the contrary, all of them are paying 3 per cent even for three-day deposits when the call money rate is 1¼ to 1½ per cent. It will, therefore, be prudent on the part of banks to proceed on the assumption that the third Plan targets will be realised and strive hard to get more deposits. The prospect of burdensome surpluses of deposits is dim, if not *nil*, and the problem of surplus funds can always be more easily handled than that posed by scarcity of funds.

A rough idea of the amount of credit that banks will be called upon to provide in the remaining years of the third Plan was given by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, in his address to the trainees of the Staff Training College of the State Bank of India at Hyderabad on 26th June 1962. According to him, the credit requirements of trade and industry during the four years 1962-63 to 1965-66 may be anywhere between Rs. 600 and Rs. 700 crores. In addition, banks, as the single largest holders of Government securities, will have to find funds for taking up the major portion of Government loans. The third Plan target of public borrowings is Rs. 800 crores, of which some Rs. 155 crores were raised in the first year, leaving a balance of Rs. 645 crores. Since small savings are unlikely to yield the total of Rs. 600 crores assumed in the Plan, public borrowings will have to be more than the targeted figure. At least, a third, if not more, of such borrowings may have to be supported by banks. On this basis, we reckon that, in the remaining years of the third Plan, banks will have to provide anything between Rs. 900 and Rs. 1,000 crores of credit to both the sectors. As Rs. 10 have to be kept on hand as cash reserve for every Rs. 100 taken as deposit, they will have to raise deposits of the order of Rs. 1,000 to Rs. 1,100 crores in the next four years in order to take care of the needs of both the sectors with comfort and ease. In other words, the deposit accretion will have to be at the rate of Rs. 250 to Rs. 280 crores per annum on an average. The rate of growth achieved in the first half of this year is encouraging enough to warrant the conclusion that an increase of this order is not beyond the limits of practicability. But one can never be so sure, for there will always be ups and downs. In the past ten years, for instance, the year-by-year increase in deposits has not been uniform and there have been periods of acute stringency calling for special measures by the Reserve Bank. If regard be had to these points, one will readily concede that there is no exaggeration in Mr. Bhattacharyya's remark at Hyderabad this week: ".... it would be a mistake to rest on our laurels and let matters continue as they are at present. No effort whatever should be spared to speed up further the rate of deposit growth." The past six months have witnessed some vigorous efforts on the part of banks to accelerate the growth of deposits. In the light of figures quoted earlier, it can be said that they have doubtless yielded significant results. And, considering the future requirements of the country, there is no doubt that they must continue them vigorously and judiciously.

The task of deposit mobilisation that lies ahead of banks may also be viewed against the background of the actual growth of deposits during the fifties that closely correspond to the first and second Plan periods. During the five years ended December 1955 (roughly first Plan period) deposits increased, according to the Reserve Bank's latest publication on *Trend and Progress of Banking in India* during 1961 made available this week, by Rs. 129 crores, that is, at an average rate of 3 per cent per year. In the subsequent five years (roughly second Plan period), the accretion amounted to Rs. 602 crores, or an annual average of 12 per cent. In 1961 alone, the growth was Rs. 180 crores, or 11 per cent. All these figures, it may be noted, are exclusive of P.L. 480 deposits. The impressive rise in deposits last year was assisted by the steps taken by the Government and the Reserve Bank to restore confidence among the public in Indian banking which had suffered a marked setback in the autumn of 1960 following the failure of the Palai Central Bank. Introduction of deposit insurance, merger of some sub-standard banks with better banks, an increase in the rates of interest on deposits, attempts made by quite a few big and medium banks to improve their efficiency and vigorous drive for collecting deposits in various ways, all these steps helped banks in securing larger resources in the past year. Since then, in keeping with an understanding with the Reserve Bank, several banks have taken the initiative to strengthen their capital base through issue of additional capital and transfer of a substantial part of their enhanced profits to reserves. But there are two basic factors responsible for the growth of deposits in the past ten years. They are, as the Reserve Bank's report under reference rightly points out, "an expanded stream of savings flowing from the progressively increasing incomes generated in the two Plan periods and the spread of banking habit geographically over a wider area and more strata of the population assisted by the branch expansion programmes, notably that of the State Bank of India." The continuity of the first factor is assured, thanks to the third Plan, with a heavier outlay than under the second Plan. As for the second factor, there is enough evidence of the banks' keenness to spread the banking habit and steps are being taken by some of the banks to overcome the bottleneck of personnel by opening colleges for training staff in both theory and practice. In fine, the climate and the circumstances for mobilising deposits are favourable and success is assured, if banks are enterprising, a condition to which they seem to be quite alive. The prospects of success will doubtless be brighter still, provided there is better realisation among banks of the incentive value of interest rates on deposits in times such as the present when the demand for savings exceeds the supply.

PAKISTAN'S ECONOMIC HEALTH

BOTH India and Pakistan inherited in 1947 almost identical economic problems, although the former started with a bigger industrial base and the latter with a better agricultural base. Both the countries have since been developing their economies in ways that have not been wholly identical. How successful they have been in dealing with the basic problems pertaining to population, agriculture, industry and trade could usefully be the subject of a comparative study. But the temptation to institute an economic comparison between the two countries may have to be resisted in the present delicate state of their political relationship. Even non-official opinion, such as that of this journal, may have to be expressed with a sense of responsibility, for otherwise it may

not be appreciated in Pakistan that this country has an abiding interest in its (Pakistan's) economic progress. It is this spirit which informs the approach of this article to the state of Pakistan's economy, as delineated on the pages of its *Economic Survey*: 1961-62—a bulky and comprehensive document received this week in Bombay.

The facts and figures gleaned from this *Survey* tell their own story, when suitably presented and interpreted. This story appropriately starts with the most basic of all basic questions—the question of population growth. Pakistan's population, as revealed by the 1961 census, is 93.8 million which represents an increase of about 24 per cent over the 1951 figure. As much as 54 per cent of the population is concentrated in East Pakistan which comprises only 15.1 per cent of the total area of Pakistan. With only 1.2 million non-Muslims, West Pakistan has virtually no minority problem. It is only East Pakistan, with its 11.2 million non-Muslims, that continues to have a minority problem of some significance. The percentage of literates to total population, as of 1961, is 15.3 in all-Pakistan—17.6 in the Eastern wing and 12.7 in the Western. The corresponding literacy figures for 1951 are, however, not available. The trend of increasing urbanisation is revealed by the percentage of urban population to total population in all-Pakistan; the relevant figures are 10.4 and 13.1, respectively, for 1951 and 1961.

Although foodgrains production has increased from 13.3 million tons in 1950-51 to 15.4 million tons in 1960-61, that is, by 16 per cent, the population increase over the period has been still greater, with the result that Pakistan has now become a net importer of foodgrains. As the *Survey* records, exports of grain, which were over 3 lakh tons in 1950-51, have been replaced by the net imports of over 16 lakh tons ten years later; but the *per capita* availability of grain for domestic consumption has increased hardly at all. The growth of *per capita* income at constant (average of 1949-50 to 1952-53) prices from Rs. 248 in 1950-51 to just Rs. 251 in 1961-62 is a further confirmation of the fact that, at present, the production and population curves are running far too close to each other. If real national income has risen absolutely from Rs. 1,858 crores in 1950-51 to Rs. 2,380 crores in 1961-62, that is, by 28 per cent, so has the population by an almost equal percentage. Thus the conclusion is reached in the *Survey* that the margin for increasing consumption is very narrow and that accumulation of capital, a vital requisite for further production increases in future, is even more severely restricted. Restraint on population growth, it is therefore suggested, should go hand in hand with expansion of production to realise Pakistan's national development goals. But there is no indication in the *Survey* as to whether any family planning movement has been or is being seriously thought of in Pakistan.

The "population-food-national income" situation in Pakistan may seem to suggest that there is something seriously wrong with that country's economic health. That, of course, is true to some extent. For instance, in the agricultural sector, the twin evils of salinity and water-logging have taken and continue to take a heavy toll of canal-irrigated land. In the Punjab part of West Pakistan, out of 13 million acres of canal-irrigated land, 1.3 million acres have completely gone out of cultivation due to salinity, 1.7 million acres are in an advanced stage of deterioration and a further 5.0 million acres are affected in varying degrees. Water-logging in this region is also widespread over an area of 1.4 million acres. A comprehensive ten-year reclamation plan to combat the twin menace at an aggregate cost of about Rs. 600 crores has recently been drawn up by an American Scientific Mission. The only hope for Pakistan's agriculture is held out by this plan. But this cannot be implemented without massive foreign assistance, especially from the United States. There is, secondly, the problem of low yields in agriculture—a problem which, in the opinion of the Pakistan Government, can be solved by "giving encouragement to co-operative farming over individual farming by small landowners." The following drastic remedies decided upon by the Pakistan Government provide, incidentally, a clue to the present situation of stagnation in agriculture:

(1) Small landholders should be encouraged to form co-operative farming societies with the help of incentives in the form of subsidised services and subsidised machinery.

(2) If small landholders do not agree to group themselves into co-operatives even through incentives, disincentives in the form of fiscal measures should be adopted.

(3) One of the conditions of allotment of State land will be that the allottees should, as far as possible, join a co-operative farming society.

(4) In the matter of distribution of available resources, namely, tractors, implements, fertilisers, etc., preference will be given to co-operatives over individual landowners.

Whether co-operative farming, if organised through such indirect coercion, will do the trick and introduce a dynamic element into Pakistan's agriculture remains to be seen. This programme of co-operativisation, like the one for combating the menace of salinity and water-logging, is only of a long-term significance. But, in the short-term, the two agricultural corporations (one for West Pakistan and the other for East Pakistan), set up last year and grant-aided to the tune of R. 90 crores since, may well channel aids to agriculture more efficiently and thereby bring about some increase in productivity. That the short-term outlook for agricultural production is not quite bad could be inferred from the steady rise in the index of all crops (Base: average of 1949-50 to 1952-53=100) from 117 points in 1959-60 to 124 in 1960-61 and 128 in 1961-62.

If the Pakistan Government is thinking more in terms of co-operation than of private enterprise in agriculture, it has fortunately been thinking in terms more of private than of State enterprise in industry. Its realistic approach to industrialisation is summed up by the following paragraphs in the *Survey*:

"Government efforts toward industrial development include a wide variety of incentives, concessions and facilities to the private sector which is expected to play the major role in this field. . . .

"A key feature of Government's industrial policy is to give maximum scope to private enterprise. Only the manufacture of arms and ammunition of war, the production of atomic energy and the field of railways, air transport and telecommunication are reserved for exploitation by the Government. There is also no intention or policy to nationalise industries."

Thanks to this approach, as well as to the generous terms offered to foreign investors, Pakistan's industrial sector has registered some very striking advance in recent years. The index of industrial production (base 1954=100) has risen from 180 in 1959 to 192 in 1960 and 213 in 1961. This growth has, of course, been greatly facilitated by that country's tax policy which is oriented to increasing the availability of goods by encouraging industrial and commercial activity, to creating a fiscal climate attractive to local and foreign invesors, and to rationalising and simplifying the tax structure. Without levying fresh taxes, this tax policy has effectively broadened the tax base, reduced tax evasion, generally improved yields and enabled the Government to offer some tax concessions in the budgets for 1961-62 and 1962-63. The improvement in the all-shares index from 191 on 30th June 1961, to 226 on 30th March 1962, is further evidence of the success of the financial policy during 1961-62 and of the confidence it has engendered in the investing community. The amendment effected in August 1961 in the Insurance Act has permitted insurance companies to invest 60 per cent of their life funds in "approved investments," as against the old limit of 40 per cent. This, along with the abolition in August 1961 of credit restrictions by the State Bank of Pakistan against shares of existing companies and the declaration of favourable results by a number of companies, has presumably led to greater activity on investment account in the stock market.

All this, of course, is indicative of better industrial health. But it would be an exaggeration to say that Pakistan's industrialisation is being financed almost entirely by private investment. It may be noted here that, since the beginning of Pakistan's second Plan, that is, 1st July 1960, loans for the establishment and expansion of a large number of industrial units have been obtained from foreign sources to the tune of $678 million (Rs. 322 crores). There is as yet no very great diversification in industrial production, for the existing industries (such as tea, sugar, vegetable oil, sea salt, cigarettes, cotton textiles, art silk, jute goods, leather, tyres and tubes, superphosphates, ammonium sulphate, sulphuric acid, safety matches, paper and paperboard, paints and varnishes, cement and steel re-rolling) are much fewer than in India. As of 1961, there is a big deficit on foreign trade account (imports Rs. 306 crores and exports Rs. 191 crores) due largely to heavy imports of industrial raw materials. Export promotion measures appear to be slow in their effects. While exports of raw jute brought in Rs. 89.5 crores in 1961, as compared with Rs. 80.6 crores in 1960, and exports of jute manufactures yielded Rs. 34.8 crores in 1961, as against Rs. 24.6 crores in the previous year, exports of hides and skins, raw cotton, cotton yarn and cotton piecegoods declined perceptibly, the loss in earnings on their account aggregating Rs. 23.6 crores. With foreign exchange earnings projected at Rs. 1,125 crores for the second Plan period (1960-65) and foreign exchange expenditures estimated at Rs. 2,220 crores for that period, only foreign aid on the scale required can ensure the success of Pakistan's second Plan and thus strengthen and broaden its industrial base. With Rs. 449 crores of aid already assured by the World Bank Consortium for the second and third years of the Plan and with no serious political conflicts with the aid-giving countries, it is more than likely that Pakistan will get all that it wants on the foreign exchange front. That augurs well for its economic, particularly industrial, development.

ARBITRATION

THE current fancy of trade unions for arbitration would appear to be more the result of disenchantment with the present practice of adjudication than of a careful appraisal of its merits as an alternative method of settling industrial disputes. The Indian National Trade Union Congress (I.N.T.U.C.) has of late turned out to be a passionate advocate of arbitration in both public and private sectors and successive presidents of that foremost trade union organisation have contended that it is the only way of preventing strikes. The Second Pay Commission's endorsement has given a new force to the case for arbitration and the I.N.T.U.C. leaders never miss an opportunity to press for its adoption. The plea was reiterated this week by Mr. S. R. Vasavada, I.N.T.U.C. leader, in his presidential address to the sixth annual convention of the National Federation of Indian Railwaymen, held at Jaipur. Mr. Vasavada said that Mahatma Gandhi had commended arbitration for settling disputes and that those employers and workers who had followed the Mahatma's advice had greatly benefited from it. He contended that all disputes, which are not settled by negotiation, should be settled by arbitration and the arbitration award should be held binding on both parties. In his opinion, this was the only way of saving industry from the chaos of labour unrest.

The Federation passed a resolution which pointed out that the Government was already committed to provide for arbitration in the public sector and that amicable industrial relations could not be maintained and peace secured, unless arbitration was provided for to settle the disputes that might arise from time to time in both the sectors. Neither Mr. Vasavada nor other I.N.T.U.C. leaders who made the same plea in the past would appear to have examined the suitability of arbitration for general adoption in the country. Arbitration is no doubt a refined way of settling disputes and is both popular and effective in the advanced countries of the West. But its scope is limited. Its success depends upon the fulfilment of certain conditions which hardly exist in India. Arbitration as a method of dispute settlement can succeed only in a situation where collective bargaining is fully developed and where wages and conditions of work are already laid down by collective agreements. Arbitration is found to be more effective and successful in the interpretation of existing rights than in the creation of new ones. It is this limited role that arbitration has performed successfully in countries like the U.S.

The success of arbitration also presupposes the existence of unity among the ranks of workers. For the union must take the responsibility for the administration of the award and should also command the confidence of workers, so that it can, if need be, persuade them to accept an award not favourable to them. The multiplicity of unions obtaining in industrial units in this country makes recourse to arbitration extremely difficult, if not totally impossible. It is for these reasons that employers are reluctant to switch over to arbitration from the present arrangement which was forced on them. It is noteworthy that those who now decry adjudication are the very people who were romantic about it some time ago. Actual experience has disillusioned them and now they are entertaining another illusion. But it need not necessarily be an illusion however, provided the trade union leaders take appropriate steps to create the climate necessary for the successful working of arbitration.

MARKET GOSSIP

A Deplorable Move

THE reported move of the Government of India to levy a cess of 25 nP per lb. on indigenous rayon yarn and 10 nP per lb. on staple fibre with the object of providing cash incentives to exporters of rayon fabrics is, to say the least, deplorable. May be, the need for stepping up exports of rayon fabrics is urgent to a degree. Even so, it would be irrational to compel the raw material producers—that is the rayon yarn and staple fibre manufacturing units—to subsidise exports of fabrics. No one would have objected to such a policy if the spinning units had been so prosperous as to be in a position to bear the incidence of any fresh tax impost itself. But the position actually obtaining is distinctly different, whatever may be the conception of the share markets. The cost structure of the rayon spinning industry has tended to be rigid, owing to the all-round increases in the prices of raw materials, stores and accessories and heavier wage bill. On top of this, the industry has been forced to absorb 60 per cent of the additional excise duty imposed in the Central budget for 1961-62. While cost of production has gone up thus, the ex-mill selling prices of yarn continue to remain unchanged, as the industry is compelled to sell yarn at a fixed price and that too in accordance with the system of controlled distribution as enforced by the Textile Commissioner. What is worse, the industry is finding it difficult fully to utilise its production capacity, in view of coal and power shortage, so that the average cost of output is higher than it would otherwise be.

Considering all this, the call for further sacrifice made on the rayon spinners in the name of export promotion is not convincing. Nor can they be asked to agree, as an alternative to the cess proposal, to a scheme under which they will be required to obtain their entire needs of pulp under licences issued to exporters of rayon cloth, as against three-tenths at present. This scheme is considered unfair, as the spinners will be obliged to pay a premium of 50 per cent on the purchase of their entire needs of pulp from exporters of fabrics.

Apropos the official suggestion for augmenting production of finer yarns, the spinners point out that the production pattern cannot be changed all of a sudden. It is further stated that, if a unit were to go finer, its production would be lower and a part of the viscose-making machinery would remain idle. There would also be some surplus labour. Moreover, not all the existing units are equipped for manufacturing finer deniers. Incidentally, it is rather odd that, when the domestic spinners are exhorted to produce more of finer deniers, the S.T.C. should be allowed to import coarser deniers.

If the authorities are really anxious to step up exports of rayon fabrics, they must make an all-out bid to put an end to the malpractices prevalent in this industry and the huge sums of black market profits that are being made by some of the weavers. One of the malpractices pertains to the sales of import licences for yarn at fantastically high premia—200 to 225 per cent of the face value of licences. There is black market in indigenous yarns also. Some parties secure yarn quotas for a large number of ghost looms and then sell them at very high prices to genuine consumers. It is generally believed in market circles that the black market profit usually works out to Rs. 8,000 per loom per year, in addition to the normal profit. It is such malpractices that are responsible for the wide disparity between the controlled prices and the actual ruling prices of rayon yarn, the difference in several cases being as much as 100 per cent. Appropriate measures should be taken for harnessing this black market profit to subsidise exports of rayon fabrics.

Shortsighted Policy

There is a basic contradiction in the Government's policy towards the metal container industry and this is pinpointed by Mr. K. C. Mahindra, Chairman of Metal Box Company of India Ltd., in his annual statement to shareholders published in full elsewhere in this issue (vide page 1174). Mr. Mahindra points out that the efforts of the Company to improve its efficiency and reduce costs are hamstrung by the Government's refusal to grant permission to increase its productive capacity. The Government's policy pertaining to licensing of expansion of existing units or the formation of new ones is to favour those who produce both the goods and the packages for them. This is not conducive to the growth of an efficient metal and other containers industry, because, as Mr. Mahindra rightly emphasises, technological progress demands the application of the latest processes and methods to an increasing volume of production so as to bring down the cost per unit. The long-term consequences of such a policy are obvious: uneconomic fragmentation of the industry, stagnation in technical development and, above all, high-cost product. Mr. Mahindra—and this journal, too—wonders how the Government could continue to turn a blind eye to these implications of its policy and encourage inefficiency.

The Chairman does not for a moment suggest that new units should not be encouraged or that big units should be allowed to grow bigger at the expense of the small. His point is that, if higher production and productivity are the objectives, as indeed they should be, then the Government's policy should be so adjusted as to make its realisation possible. This is not done at present. Mr. Mahindra is at a loss to understand wherefrom the containers, in sufficient numbers and of the requisite quality required to meet the demands of the consumer industry would come, if the Government persisted in its policy of penalising efficiency. Bigness, after all, is not an evil in itself; nor do big units invariably swallow up small ones. In fact, big units can and do encourage small units. Metal Box, according to Mr. Mahindra, is doing everything possible to foster the growth of small-scale industry. It buys raw materials from the small-scale units, provides them with know-how and sells them machinery.

This shortsighted policy of the Government is bound to affect exports also. For it is common knowledge that attractive packaging is a very effective sales aid. A well-packed product is more easily sold than one which is not, even though it is equal or superior in quality to that offered by the competitor. Last year, according to Mr. Mahindra, goods packed in Metal Box containers valued at Rs. 4 crores were exported to over fifty countries. Many of these packages were designed to meet the specific needs and tastes of the highly competitive overseas markets. The high quality of packaging has assisted greatly the sale abroad of prawns, cashewnuts, *vanaspati*, vegetable oils, fruits, toiletries, confectionery and biscuits. As Mr. Mahindra pertinently remarks, quality packaging to meet the requirements of the customers in a particular market is not an expensive frill but a business necessity. Encouragement to the package and container industry to produce more and better quality product must, therefore, form an integral part of the export promotion drive.

Paper Prices

In response to the insistent demand of the paper industry for an upward revision of ceiling prices to offset the rise in production cost, the Government of India has raised the fair ex-works prices of all varieties of paper by 6 nP per kg. (that is, Rs. 60 per metric ton) on an *ad hoc* basis. In addition, the system of rebate of 4 nP per kg. (that is Rs. 40 per metric ton) which the producers were required to give on wholesale purchases in reels has been discontinued. These two benefits, however, have fallen very much short of the expectations of the industry. Nevertheless, the move is a sufficient indication that the Government is convinced about the industry's difficulties arising from the unremunerative price structure recommended by the Tariff Commission on the basis of an inquiry held as early as in the middle of 1959. Since the adoption of the Commission's price formula (with effect from January 1960), the various elements of cost of production have gone up perceptibly. It is estimated that the average production cost of five of the eight paper mills selected for cost investigation by the Commission has gone up by approximately Rs. 150 per tonne since 1958, as a result of the rise in the prices of raw materials, power and fuels alone. The increases in excise duty and freight rates have also reduced the profitability of the industry.

The Government's gesture, although belated and half-hearted, is bound to help revive the confidence of investors in paper ventures at least to some extent. The industry, it may be noted, is expected to invest a sum of as much as Rs. 100 crores during the third Plan period for development and expansion. The annual rated capacity for paper is proposed to be doubled during the Plan period, that is, from 410,000 tons to 820,000 tons, with a corresponding increase in output from 350,000 to 700,000 tons. The present marginal increase in ceiling prices, however, is not sufficient to encourage the development of the paper industry on such a large scale as is now envisaged. The Government will, therefore, do well to raise the prices further and help the industry by other means also, as, for instance, by granting long-term tenure of bamboo-growing areas at concessional rates of royalty and by giving priority to the industry in the matter of transport of both raw materials and finished products.

Indo-U.S. Trade Pact

India has signed an agreement with the U.S. seeking to provide reciprocal concession on several items of trade between the two countries. Under the agreement, which has been finalised under the auspices of the General Agreement on Tariffs and Trade, the U.S. will reduce tariffs on imports from India on 28 items. These items include some of India's major exports to the U.S., namely, cashewnuts, jute manufactures (webbing, bagging and carpets), coir matting, sandalwood oil and bells of brass. India has agreed to grant, in exchange, concessions in import duty on 25 U.S. goods. In the case of 17 of these goods, the concession is in the form of a guarantee not to raise duties above the present levels. The products covered include metal working machinery, specialised textile machinery, earth shifting machinery, machine components, chemical raw materials, milo and sorghum and rrled skimmed powder. Small reductions in the standard rate of duty will also be given for such U.S. products as Stockholm tar, polythylene moulding powder, wood rosin and electric typewriter. It is said that, while agreeing to these concessions, the revenue and development needs of the country have been kept in mind. It may be noted here that the agreement was negotiated at the G.A.T.T. Tariff Conference, which began in September 1960.

It is rather strange that the official Press release has not given any indication of the precise extent of concessions agreed to. Be that as it may, it is to be hoped that the concessions granted now will promote better trade between the two countries. The U.S. is the second largest market for Indian goods, next only to the U.K. India's exports to the U.S. (f.o.b.) amounted to Rs. 115 crores in 1961, or about 17 per cent of the total (as against Rs. 101 crores in 1960 and Rs. 95 crores in 1959). As a source of India's imports, the U.S. ranks first, accounting as it did for Rs. 240 crores (c.i.f.) in 1961 (about 25 per cent of India's total imports), as against Rs. 292 crores and Rs. 218 crores in 1960 and 1959, respectively. Now that commercial ties with the U.K. are being loosened consequent on its determination to be a member of the European Common Market, India will have to strengthen its trade relations with other countries by making special efforts. Accordingly, this latest understanding with the U.S. is doubly welcome.

Canada: New Defences for the Dollar

The drastic programme for strengthening the Canadian dollar announced by the Prime Minister, Mr. John Diefenbaker, on the 24th inst., has not come as a surprise. For, with a fall of over $400 million in the first three weeks of June, making a total of about $1,000 million or 50 per cent from the peak reached in October last, the Canadian dollar and foreign exchange reserves stood in need of massive assistance. The Prime Minister has proposed a drastic remedy for an extraordinary situation.

The specific measures proposed by the Prime Minister are the following:

(1) Temporary duties ranging from 5 per cent to 15 per cent will be imposed on imports of a wide range of goods. This will net in $200 million in a full fiscal year. Simultaneously, duty-free allowance for Canadian tourist purchases abroad will be sharply cut. The combined effect of these two measures is expected to improve the payments position by $300 million a year.

(2) To reinforce Canada's current gold and foreign exchange holdings, estimated at $1,100 million, arrangements have already been made for financial assistance of the order of $1.050 million, comprising $300 million from the I.M.F., $400 million by way of credit from the U.S. Export-Import Bank and $250 million by reciprocal currency arrangements with the U.S. Federal Reserve System, and $100 million, on the same basis, from the U.K.

(3) The Government will launch a programme involving reductions in expenditure amounting to $250 million in a full fiscal year. These reductions, combined with the increased revenues resulting from the import surcharges, would reduce the budgetary deficit by $450 million in a full year.

Along with these measures, it has been decided to abandon the system of variable or floating Bank Rate, which Canada had adopted in mid 1950s, when it was declared that the Bank rate would be maintained not at a fixed level, as is the usual practice in many countries, including India, but at a level exactly ¼ per cent above the Treasury Bill rate. The Bank of Canada's lending rate has now been fixed at 6 per cent, as compared with the floating rate of 5.17 per cent on the 21st inst. It may be recalled here that, after a decade of trial, Canada had abandoned the floating exchange rate some two months ago, on 3rd May 1962, to be precise. Thus, the return of Canada, after having experimented unsuccessfully with two novel arrangements in the monetary sphere, to the conventional practice of fixed exchange rate and Bank rate is complete.

I.C.I's New Drug for Heart Diseases

Imperial Chemical Industries (I.C.I.) has added another feather to its cap, with the discovery of a new drug to combat heart diseases, the number one killer of the old and middle-aged people in the U.S., the U.K. and many other countries. I.C.I. has had many "firsts" to its credit before. Many well-known and widely used drugs, diagnostic agents, and chemicals, such as the Savlon range of disinfectants, Paludrine for malaria, and Flouthane, the newest of anæsthetics, to cite a few examples, have had their origin in the I.C.I.'s laboratories. But the latest drug is said to be unique, in that there is no other such drug in the world. It is, therefore, regarded as a major research achievement for I.C.I.

The new drug is called Atromid and consists of two components, one a male sex hormone and the other a solvent that helps to potentiate the action of the first. The drug is in capsules and is to be administered orally. It reduces the level of fatty substances such as cholesterol and prevents blood-clotting. At present, a considerable section of medical opinion believes that the serum-cholesterol level is related to hardening and narrowing of the arteries which result in heart-muscular cramp (angina) and blocking of narrowed artery by a clot (thrombosis) and various other fatal conditions. Any drug that reduces the serum-cholesterol level is, therefore, considered a useful treatment for cardiovascular diseases. And Atromid does just that, according to the I.C.I. scientists.

Clinical trials of Atromid are going on in the U.K., U.S.A. and many countries of Europe and the Commonwealth and supplies are expected to be available in a couple of months. It is said that a big team of scientists has been doing the work on the discovery of Atromid for over five years. If Atromid proves to be effective in combating heart diseases, their efforts would not have been in vain.

TREND OF SHARES

IRREGULARLY UPWARD

(From Our Own Correspondent)

BOMBAY, *28th June*

AN irregularly upward trend, marking continuation of the previous week's recovery, was in evidence on the stock exchanges this week. Movements were narrow and highly irregular. Absence of fresh bear pressure, short-covering and some cautious bull support at lower levels produced quick-in-succession rallies from setbacks caused by weak bull unloading and lack of support at higher levels. In relation to the quick two-sided movements seen practically on every day of the week, the volume of business was far from encouraging, as the operators were in no mood to go headlong on the current recovery phase.

Like the rainbow, the markets wore all the colours during the week—they turned from steady to easy, to week, to quietly steady, to a little firm and to slightly subdued—and made it difficult to foresee the trend in the near future. But it appeared to be irregularly upward, as the markets seemed to be struggling to stabilise around the low levels.

As for the political uncertainties, it seems, from what has been observed by both Prime Minister Nehru and Defence Minister Krishna Menon, that any serious armed conflict with the country's two aggressive neighbours was unlikely, unless it is unilateraly provoked by them. Mr. Menon said the other day that not only have we sought a peaceful solution of the problems with them but we have also ruled out war with China, as it would lead to a world war. The foreign aid picture should emerge much clearer, possibly quite reassuringly with the visit of the Union Finance Minister to West Europe.

Another factor of serious concern to the market is the shortages in the infra-structural facilities. All that can be said at present about it is that the authorities have moved in seriously in the matter and can reasonably be expected to succeed at least in minimising the mishaps. In the light of this, it is possible that the markets, having recently suffered a sharp fall due to an adverse reckoning of these three factors, might now readjust themselves to the basic factor of industrial health and corporate working.

• • • •

Dalal Street blew both hot and cold, but closed on a steady note. Sentiment was influenced by the proximity of the T.I.S.Co. and I.I.S.Co. dividends, renewed speculation about a higher dividend and a rights issue from I.I.S.Co., reports that T.I.S.Co. had no intention to raise its capital in the near future, the expected announcement of an increase in steel retention prices and rumours that the tyre cord plant of National Rayon had entered its second phase of production, which belied earlier fears of some serious trouble with the plant. Sizable bear-covering by a prominent operator in Tata Steel Ordinary on Tuesday and in National Rayon on Thursday also helped the market to emerge steady from alternate bouts of weak bull liquidation and short-covering. However, fresh support was selective, cautious and even halting. Closing prices showed more plus than minus signs.

Sectionwise, Steels were the most active and closed a little higher than in the previous week. Tata Ordinary evoked consistent support at the important level of Rs. 146.50, but failed to break through another significant level of Rs. 148.50 and closed 75 nP higher at Rs. 148. Likewise, Indian Iron found ready buyers at Rs. 25.65, but attracted resistance at Rs. 26.15, and closed 15 nP higher at Rs. 26. Mukand Iron were dull and finished 10 nP lower at Rs. 26. In Textiles, National Rayon reacted sharply from Rs. 524 to Rs. 508.50, as the previous week's smart recovery provoked a certain big operator to unload at the improved levels. However, the shares rallied subsequently to close five points lower on balance at Rs. 520.50. Century were well supported around Rs. 626, but could not make much headway after rising to around Rs. 635, and showed a gain of only one point at Rs. 633.50. Other leading counters closed lower: Bombay Dyeing 60 nP at Rs. 67.70. Kohinoor Rs. 4 at Rs. 300.50. Standard Rs. 14 at Rs. 974 and Svadeshi Rs. 5.75 at Rs. 270. Ruia Group shares were exceptionally firm; Phoenix were 26 points up at Rs. 259 and Dawn nine points higher at Rs. 161. Swan, on the other hand, were particularly weak and showed a loss of 15 points at Rs. 295. Mafatlal closed Rs. 11.25 higher at Rs. 848.75, but other Cash scrips were a shade easy.

Miscellaneous issues fluctuated both ways and closed easy. Bombay Burmah rallied to close Rs. 8.50 lower at Rs. 669.50, after having reacted from Rs. 676.50 to Rs. 662. Likewise, Indian Dyestuff finished Rs. 17.50 lower at Rs. 487.50, after having plunged from Rs. 505 to Rs. 480. Amar Dye-Chem were Rs. 8.75 lower at Rs. 296.25. Telco were subdued and closed six points lower at Rs. 352 on selling induced by the delay in the announcement of the dividend. Voltas were sympathetically marked down from Rs. 286 to Rs. 280.50. Hindustan Motors showed a setback of 20 nP at Rs. 19.76. Cements, Sugars and Shippings were quiet. The Cash section was devoid of much activity. Variations either way were small. Ceat Tyres showed a gain of Rs. 7.50 at Rs. 183.75, but Synthetics closed 10 points lower at Rs. 221.

• • • •

Speculative support for the pivotal issues and bear covering contributed to a steady tone in Calcutta. Among speculatives, Howrah Jute showed a gain of 62 nP at Rs. 22.62 and Rohtas and Shree Gopal of 12 nP each at Rs. 16.06 and Rs. 27.37, respectively, but Texmaco closed 55 nP lower at Rs. 24.80 and Kesoram 62 nP lower at Rs. 29.25. Others showed small changes either way. In the Cash section, among Textiles, Birla moved up from Rs. 27.50 to Rs. 30. Bharat Commerce from Rs. 24.50 to Rs. 25.25 and Dunbar from Rs. 30.12 to Rs. 30.50. A recovery from Rs. 49.62 to Rs. 51.37 in East Indian featured trading in Coal shares. North Beerbhoom rallied from Rs. 22.50 to Rs. 23.12. But Selected Satgram closed three points lower at Rs. 150. Among Jute shares, Bally staged a smart come-back from Rs. 296 to Rs. 317, with Budge Budge moving up from Rs. 157 to Rs. 166, Delta from Rs. 195.50 to Rs. 204 and Barnagore from Rs. 184 to Rs. 187. Engineering issues were quiet, excepting Burn which fell from Rs. 695 to Rs. 678.

Miscellaneous section showed an even distribution of gains and losses. Among the prominent issues, Goodyear showed a gain of Re. 1.75 at Rs. 46.25, Issac Holdens of Re. 1.31 at Rs. 17.56, Balmer Lawrie of Rs. 4 at Rs. 264 and Metal Box of Rs. 4.88 at Rs. 64.75, while East Anglia showed a loss of Re. 1.38 at Rs. 18.62, Hindustan Pilkington Glass of Re. 1.25 at Rs. 21.75 and National Tobacco of Re. 1.94 at Rs. 14. Paper shares were better following the announcement of an increase in the selling prices for paper. Ballarpore improved from Rs. 17.94 to Rs. 18.81, Bengal from Rs. 35.19 to Rs. 35.75 and Titaghur from Rs. 41.50 to Rs. 42. Sugars were quiet. Selected Tea shares evoked support, Tezpore looked up from Rs. 15.12 to Rs. 16.31 and Teloijan from Rs. 27.50 to Rs. 27.75, but Soom eased from Rs. 50.25 to Rs. 49.87.

• • • •

Trading was restricted to a few selected issues in Madras. Plantings were easy, but elsewhere gains predominated. Periakaramalai closed 4 nP lower at Rs. 3.26, Peermades 15 nP lower at Rs. 20.30, United Nilgiri 38 nP lower at Rs. 20.37 and Ouchterlony Valley 8 nP lower at Rs. 3.65. But Blue Mountain moved up from Rs. 2.40 to Rs. 2.41, Highland from Rs. 13.37 to Rs. 13.40 and Consolidated Coffee from Rs. 18.40 to Rs. 18.45. Sugars were better, with Cauvery improving from Rs. 100 to Rs. 102, Travancore from Rs. 7.20 to Rs. 7.35 and E.I.D. from Rs. 39.50 to Rs. 29.60. But Deccan closed 5 nP lower at Rs. 9.95. Among Textiles, Lakshmi showed a gain of five points at Rs. 157 and Travancore Rayon of 15 nP at Rs. 38.65, but S.I. Viscose eased from Rs. 174 to Rs. 170.50 and Madura from Rs. 36.25 to Rs. 36. In the Miscellaneous section, among Cleared issues, Aluminium Industries looked up from Rs. 23.75 to Rs. 24, Ashok Leyland from Rs. 8.40 to Rs. 8.43 and Dalmia Cement from Rs. 13.10 to Rs. 13.40, and, among non-cleared shares, Travancore Cement gained from Rs. 8.50 to Rs. 8.56. F.A.C.Ts from Rs. 8.10 to Rs. 8.20 and W.I. Products from Rs 196.50 to Rs. 197. But Andhra Cement showed a loss of 10 nP at Rs. 9.70 and Indian Steel Rolling eased from Rs. 12.40 to Rs. 12.20.

CAPITAL MARKET NEWS

NEW ISSUES

THE management of Hind Mills Ltd., Bombay, which has been taken over by Messrs. C. Parikh and Company, is to offer shortly to the public 175,000 equity shares of Rs. 10 each at Rs. 23.25 per share and 10,000 5 per cent, tax-free, cumulative preference shares of Rs. 100 each at par, subject to the permission of the Bombay Stock Exchange authorities. The present paid-up capital of the Company is Rs. 70 lakhs, made up of 500,000 equity shares and 20,000 preference shares. It is proposed that 51 per cent of the equity shares will be taken up by the Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Ltd. The Directors of the Company and their friends will retain 14 per cent of the total equity shares. The balance of 35 per cent of the shares is offered to the public. Out of the 20,000 preference shares, half will be taken up by institutional investors, and the balance will go to the public. The Company's reserves and surplus aggregated Rs. 12 lakhs as at 30th June 1961.

During 1960-61, the Company earned a net profit of Rs. 18.46 lakhs, as against Rs. 4.08 lakhs

There is much to be said in favour of integrated cost reduction plans suggested by Mr. Puranik. For the co-ordination of technical and administrative aspects of manufacturing operations will go a long way towards ensuring judicious use of available productive resources within a unit and eliminate waste. A resolution passed at the meeting also emphasised the need for improving productivity. It called upon both management and labour to take upon themselves the task of improving productivity by adopting latest techniques. This plea is good so far as it goes. But there remains the question whether trade unions will adopt a more helpful attitude in introducing new techniques. Besides, the Government's policy has also been ambivalent on this issue.

RIGHTS ISSUE

The Directors of **Synthetics and Chemicals Ltd.**, Bombay, propose to issue 125,000 equity shares of Rs. 100 each at a premium of Rs. 20 per share and offer them as rights shares to the existing shareholders in the proportion of five new shares for every 18 shares held by them. The proposed issue has been sanctioned by the Controller of Capital Issues. It will bring in Rs. 1.50 crore, including the premium amount, and help finance the expansion of the Company's capacity from 20,000 tons to 30,000 tons of synthetic rubber per annum, which has been approved by the Government.

FRESH ISSUES SANCTIONED

Given below are the details of the fresh capital issues sanctioned recently by the Controller of Capital Issues.

Indian Oxygen Ltd., Calcutta, has been granted consent to the issue of 1,040,000 equity shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of the Company's free reserves including share premium account. The bonus shares will be issued in the ratio of two bonus shares for every five shares held.

Century Flour Mills Ltd., Madras, has been granted consent to issue bonus shares worth Rs. 4 lakhs in the proportion of one bonus share for every three equity shares held by the existing shareholders.

Seshasayee Wire Ropes Ltd., Ernakulam, has been granted consent to the issue of capital of Rs. 50 lakhs in equity shares of Rs. 10 each for cash at par. Out of this, shares worth Rs. 6.7 lakhs will be issued equally to the two foreign collaborator firms of Japan, namely, Messrs. Ataka and Company Ltd., and Kokoku Iron and Steel Wire Manufacturing Company Ltd. Of the remaining shares to be subscribed by the public, such number of shares as would enable the shares to be listed on the recognised stock exchanges, would be offered to the public by prospectus. The proceeds will be utilised for the manufacture of steel wire rope.

Unichem Laboratories Ltd., which is proposed to be incorporated in Maharashtra, has been granted consent to the issue of capital of Rs. 45 lakhs in equity shares of Rs. 100 each at par. Out of this, 22,500 shares shall be issued for consideration other than cash to the proprietor in consideration of transfer of the net assets of the proprietory concern "Unichem Laboratories" as a going concern, and the balance shares will be issued to the public by a prospectus for cash.

Associated Pulp and Paper Mills Ltd., Ahmedabad, has been granted consent to the issue of capital of Rs. 35 lakhs, in equity shares of Rs. 100 each, for cash at par. Out of this, shares to the extent of about Rs. 8 lakhs will be issued to four Indians, at present resident in Aden. The proceeds will be utilised for the manufacture of paper and pulp.

Harnarain Gopinath General Foods Ltd., Delhi, has been accorded consent to issue Rs. 50 lakhs capital—Rs. 40 lakhs equity and Rs. 10 lakhs preference—for cash at par, out of which Rs. 10 lakhs in preference and Rs. 20 lakhs in equity will be offered to the public by prospectus. The proceeds of the issue will be utilised in setting up a food preservation plant at Shahibabad, U.P.

The Jehlum Spinning and Weaving Mills Ltd., a public company incorporated in the State of Jammu and Kashmir, has been given a fresh consent (in supersession of the earlier one dated 27th February 1962) to the issue of Rs. 40 lakhs divided into 300,000 equity shares of Rs. 10 each, and 10,000 cumulative redeemable preference shares of Rs. 100 each, carrying dividend at 9.3 per cent (gross), for cash at par. The consent order will lapse on 27th February 1963.

The Directors of the Paper Products Ltd., New Delhi, have finalised, in consultation with the authorities of the Delhi Stock Exchange, the basis for allotment of shares in respect of the Company's recent public issue of 16,000 equity shares of Rs. 100 each. There were 8,988 applicants for a total of 255,590 shares. Under the basis for allotment adopted by the Company, the number of proposed allottees will be 2,586. Letters of allotment will be issued shortly.

Notice

THE BANK OF INDIA LIMITED

INCREASE OF CAPITAL AND ISSUE OF NEW SHARES

Issue of 200,000 ordinary shares of Rs. 100 each, Rs. 50 per share paid-up, for cash, at a premium of Rs. 20 per share

SHAREHOLDERS ARE REMINDED THAT the last date for submission of applications with payment for new ordinary shares of the above-mentioned issue is the 5th July, 1962.

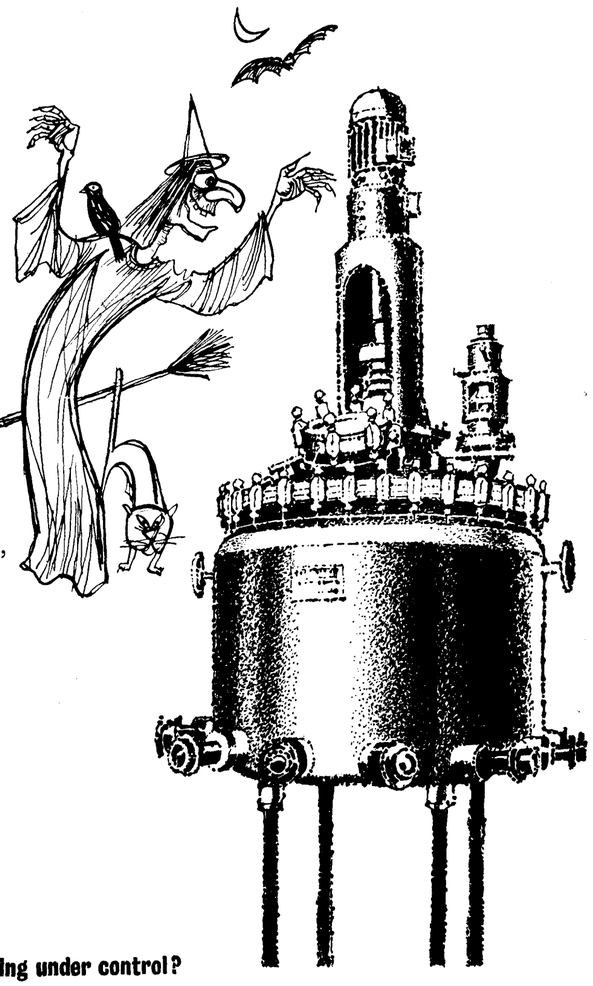
No further extension of time whatever will be given after the said date, namely, 5th July, 1962.

Dated at Bombay this 25th day of June, 1962.

By Order of the Board of Directors,

S. J. RUSTOMJI,

Acting General Manager.



double, double toil and trouble!

The toil is out of it now—so also the magic! Chemistry is no longer a "black art". In some measure, it today enters everything we see and touch—and eat! Its applications are limitless—in the manufacture of chemicals, pharmaceuticals, fertilisers, dyes, plastics, fibres. Millions of tons of these are produced annually—and the demand is growing every day. Which means the industry needs more plant and equipment—and that is what Larsen & Toubro manufactures and supplies: complete chemical plants, process equipment, cooling towers, process control instrumentation and Audco valves.

we don't supply swans!

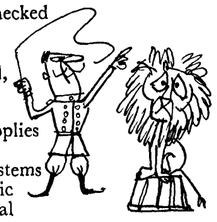
Frankly, we don't even believe in the legend that a swan can separate milk and water! But we know of equipment that can do it—L & T manufactures them! Distillation columns that separate one liquid from another. L & T also specialises in the manufacture of heat exchangers, condensers, reaction vessels, driers and storage tanks, from stainless steel, monel, nickel, copper and aluminium.

it takes more than a pair of hands!

In fact, it's more than a question of manpower—erecting a plant, we mean. There's a lot of thinking and planning—*constructive* thinking that leaves little to chance, saves time, money *and* trouble. And that's the difference between a job done—and a job done well!

everything under control?

It has to be. Control is a vital matter in the chemical industry. Temperature and pressure and flow have to be precisely checked and controlled... When dangerous chemicals are involved, the situation can be really explosive! L & T designs and supplies up-to-date on-line and off-line control systems incorporating electronic computers for industrial and chemical processes.



L & T contributes also to the development of these vital industries:

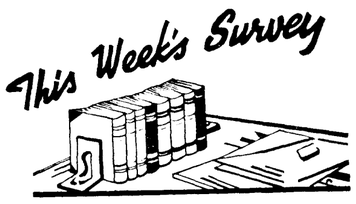
- dairy
- oil
- steel
- food & agriculture
- paper
- minerals
- electricity
- transport
- construction

not enough water?

It can be a problem—when the demand is, say, for a million gallons an hour! That is why cooling towers are particularly important to the chemical industry. They make it possible to use the same water over and over again—exactly like a car radiator, only on a much larger scale! L & T designs and constructs cooling towers to meet specific industrial needs.

IN SERVICE L&T LIES SUCCESS

LARSEN & TOUBRO
LIMITED



NATIONAL INCOME

ECONOMIC growth in the first year of the third Plan seems to have been somewhat satisfactory, though it has not been up to the expectations of the planners. Even this performance is due largely to the increase, albeit relatively modest, in industrial production. An idea of the growth is conveyed by the national income data for 1961-62, as now provisionally estimated by the Planning Commission. The estimate for the year *at current prices* is Rs. 14,690 crores, as compared with the preliminary estimate of Rs. 14,200 crores for 1960-61, the last year of the second Plan. The percentage increase in the 1961-62 national income is, of course, no more than 3.5, as compared with the previous year. But it must be remembered here that the wholesale price index (1952-53=100) for all commodities had registered a decline from 127.5 points in 1960-61 to 122.9 in 1961-62, that is, by about 3.5 per cent. If this factor of decline in the general level of prices is taken into account, it will be seen that the *real* increase in national income in 1961-62, as compared with 1960-61, should have been higher, probably at between 4.5 and 5 per cent.

This means that the growth of real national income in the first year of the third Plan has perceptibly fallen short of the targeted average annual rise of 6 per cent laid down for the period 1961-66, though it is somewhat better than the average annual rise of 4 per cent in real national income during the second Plan period. The relevant figures of national income at constant (1948-49) prices in 1955-56 (the pre-second Plan year) and in 1960-61 (the last year of the second Plan), it may be recalled, are Rs. 10,480 crores and Rs. 12,690 crores, respectively. Economic growth, measured by the increase in real national product, is thus at a higher level now than in the second Plan period. It cannot be otherwise, for the Plan outlay in the public sector alone in 1961-62 has been as much as Rs. 1,150 crores and the additional employment resulting from that year's development programmes has been reckoned at about 2 million. The increase in *per capita* real income, however, must have been much less in view of the 2.3-2.5 per cent increase in population during the year. But this rather slow improvement in the average Indian's standard of living cannot detract from the fact of national economic growth on a broader front with its increasing employment opportunities and rising levels of production in industry and agriculture. If the 1962-63 foodgrains target of 84 million tons (as compared with the actual output of 80 million tons in 1961-62) comes to be achieved and if industrial production, too, registers in 1962-63 a higher increase than the actual 8 per cent of the previous year, the current rate of growth will at least be maintained. Even for this achievement, more energetic implementation of the annual programmes for coal, steel, cement, fertilisers, power and transport will be required.

PRODUCTIVITY OF INDUSTRIES

At no time did India feel the need for improving the competitive capacity of its industries so much as at present, although opinions still differ as to the precise ways and means of achieving this goal. It is, therefore, in the fitness of things that the All-India Manufacturers' Organisation, at its annual meeting inaugurated by Dr. P. Subbaroyan, the Governor of Maharashtra, in Bombay last week, should have devoted considerable thought to this question. Mr. G. V. Puranik, Chairman of A-I.M.O., in his speech at the meeting, expressed the view that the industry itself could do a great deal in improving productivity. He was candid enough to concede that Indian industries lagged far behind in cost-consciousness, in product design and in the application of industrial research. As instances of such lacunæ, he pointed out that, "practically in every industry," there was still vast scope for better utilisation of plant capacity, avoidance of waste and systematic financial control, particularly over capital expenditure. Mr. Puranik, therefore, did well to stress the need for promoting cost-consciousness at all levels of management. In order to achieve this objective, he suggested that every manufacturing unit should chalk out "a continuous and integrated cost reduction plan" as in Western countries. Such a plan, according to him, should be implemented with the help of cost reduction committees to be set up out of personnel selected from the main prducing departments.

There is much to be said in favour of integrated cost reduction plans suggested by Mr. Puranik. For the co-ordination of technical and administrative aspects of manufacturing operations will go a long way towards ensuring judicious use of available productive resources within a unit and eliminate waste. A resolution passed at the meeting also emphasised the need for improving productivity. It called upon both management and labour to take upon themselves the task of improving productivity by adopting latest techniques. This plea is good so far as it goes. But there remains the question whether trade unions will adopt a more helpful attitude in introducing new techniques. Besides, the Government's policy has also been ambivalent on this issue.

There are several factors inhibiting the improvement in productivity, which are beyond the control of an individual entrepreneur. These include the general shortage and inadequacy of basic raw materials and fuels as well as transport bottlenecks. These questions form the subject matter of another resolution, entitled "prerequisites for the successful implementation of the third Plan," adopted at the meeting. The resolution suggests, among others, expansion of capacity for such industries as machine tools, machine building and synthetic fibres (to compensate for the shortage of cotton), better utilisation of installed capacity for steel, upward revision of the third Plan targets for steel and cement, and encouragement to the private sector for developing the coal industry. There is, of course, nothing new in these suggestions. To say this, however, is not to detract from their continuing importance.

OIL INDIA LIMITED

The proved and indicated oil reserves of Oil India Limited, a joint enterprise of the Government of India and the Burmah Oil Company, are 47 million tons. Its proved and indicated reserves of natural gas are 740,428 million cu. ft. With the existing number of wells drilled so far and those to be completed by the end of 1963, Oil India, it is claimed, would be in a position to supply nearly 3 million tons of crude oil per annum, representing a foreign exchange saving of more than Rs. 20 crores on imports, to the two public sector refineries at Gauhati and Barauni and the Assam Oil Company Refinery at Digboi. If further reserves of oil are discovered, as they are most likely to be, in the new concession area in respect of which an exploration licence is pending with the Assam Government, it would not only mean further saving on imports of crude but would also lead to the expansion of the Gauhati and Barauni refineries. The dispute between the Government of India and the Assam Government over the question of oil royalty to the latter has, however, held up prospecting for the last one year in the new concession area of 1,886 sq. miles east of the existing concession (*vide* page 686 of *Commerce* of 14th April 1962). Unless the dispute is settled and the exploration licence granted promptly, it is feared that the progress of Oil India in the vital field of exploration and development would be impeded. Mr. Khandubhai K. Desai, Chairman of Oil India Limited, has, therefore, strongly pleaded, in his speech at the third annual general meeting of the Company held on the 22nd inst., for an immediate settlement of the matter. Considering that the foreign exchange expenditure on account of Oil India's prospecting programme has already been underwritten by the Burmah Oil Company, it would be most unwise to delay things further.

The Chairman's speech is also notable for its review of the progress of work pertaining to pipelines for transporting crude oil. It is, indeed, remarkable that the Burmah Oil Company (Pipelines) Limited, to which the responsibility for designing and constructing a 720-mile-long pipeline from Nahorkatiya to Gauhati in Assam and then to Barauni in Bihar has been delegated by Oil India, has already completed the first stage of the pipeline to Gauhati in spite of several adverse natural circumstances. Progress on the second stage of the pipeline, that is, from Gauhati to Barauni, is stated to be satisfactory, and the management of Oil India, is hopeful that the second stage will be completed before the Barauni refinery goes on stream early next year. Oil India can be justly proud of the fact that, when this modern and automatic pipeline system traversing a difficult terrain from Nahorkatiya to Barauni is completed, it will rank as the second largest in the East (including the Middle East).

It will be seen from the above review that Oil India is still in the stage of construction and development. That the Company's sales of crude in 1961 were limited to about 300,000 tons should not, therefore, cause any surprise. If, in spite of its unsolved problems, the Company was able to have a net surplus of Rs. 1.15 crore, after providing for depreciation, taxation and development rebate, in the brief period since its incorporation in 1959, it should be deemed a reasonably satisfactory performance. When the entire Oil India project, covering oilfield development and pipeline construction and involving an aggregate cost of Rs. 73 crores, is completed, the Company is bound to show much better financial results. The prospects in this connection seem to be good in the context of the spirit of co-operation and mutual understanding obtaining between the two equal shareholders—the Government of India and the Burmah Oil Company.

TEA EXPORTS

Both Mr. Morarji Desai and Mr. Manubhai Shah have urged almost simultaneously the need for stepping up tea exports. Inaugurating the Silver Jubilee celebrations of the Assam Tea Planters' Association at Jorhat on Sunday this week, Mr. Desai emphasised that the tea industry depended for its continued existence not merely on local consumption but also on its hold on world markets. And he assured the tea growers that the Government was always prepared to come to its aid, because tea production had to be increased and exports augmented to earn more foreign exchange. Just a day prior to this statement—on Saturday the 23rd inst.—Mr. Shah declared, when he addressed the members of the Indian Chamber of Commerce at Calcutta, that the tea industry should earn an extra Rs. 25 crores in foreign exchange in addition to the sum of Rs. 124 crores to Rs. 132 crores per annum that the country earned by exporting tea in the past few years.

The call for greater efforts to promote exports of tea is understandable especially in the context of the acute shortage of foreign exchange which is bound to persist for quite some years to come. But a mere call will be of no avail unless appropriate conditions are created for enabling the Indian tea industry to compete more effectively in world markets. One such condition pertains to the large and stable internal market. In other words, a rigorous export drive, as Mr. P. R. Subramanyam, Chairman of the Twyford Tea Company and Haileyburia Tea Estates, aptly remarked in the course of his speeches at the recent annual meetings of the respective companies, should be made alongside the drive for increasing internal consumption too. Mr. Subramanyam was critical of the emphasis on restricting internal consumption placed by the Union Finance Minister in his winding-up speech to the general debate on the budget. He described this attitude as one which revealed "a lack of understanding of the problems facing the industry." Drawing attention to the common tea, he minced no words when he declared: "For the common tea, our internal market should be the mainstay and, in this case, to talk of restricting consumption is suicidal." There is no exaggeration in this remark, for, by restraining the consumption of common tea, not much surplus is created for export. On the contrary, such a policy inhibits the competitive capacity of a tea producer to export the better tea he grows, inasmuch as he cannot hope to survive for long by getting unremunerative prices on teas sold for both internal and external markets.

Whether it is for augmenting exports or stimulating domestic consumption of tea, three things are absolutely necessary, apart from higher output, namely, reduction in production cost, lower incidence of taxation and improvement in quality. An idea of how the tea industry had been caught last year between enhanced cost of production, on the one side, and decline in prices, on the other, can be had from the following data as furnished by Mr. Subramanyam:

(In cents per kg.)

	Production cost		*Sale price realised*	
	1961	1960	1961	1960
Haileyburia Tea	323	304	441	460
Twyford Tea ...	360	330	447	454

The upward trend of expenditure is attributed to increases in labour welfare expenses, prices of stores, fuel charges, land revenue and cultivation expenses. Not only the excise on tea has been raised but also that on aluminium foils used by the industry in packing tea. Freight rates, too, have been enhanced, along with new excise duties on plywood, etc., all of which will entail a greater financial outlay. Then, there are the taxes levied by State Governments under a number of heads. Viewed against this background, the relief given in the form of a reduction in export duty from 44 nP to 25 nP per kg. is not as appreciable as has been made out by the Union Finance Minister. Mr. Subramanyam no doubt welcome the export duty cut, but felt that, in the context of

GROWTH *VERSUS* YIELD

TIME FOR RETHINKING

By George Carvelho

[Now that the boom in the share markets has definitely yielded place to a downward trend, many investors are worried as to what they should do. Consequently, the article on this page is timely and useful. It was specially prepared by the author, who has been associated with the stock exchanges for more than two decades, for the Share Market Review *of Messrs. G. M. Pyne, a leading firm of share and stock brokers in Calcutta. It is reproduced in this journal with their kind permission. While pointing out the need for rethinking on the question of growth prospects versus yield considerations, Mr. Carvelho has stressed that investors should not be stampeded into making wholesale liquidation of each and every equity, but only those which have outlived their growth for the time being.—ED.]*

THE Wall Street collapse and recovery and the generally bleak view of investment prospects in India reflected in persistent weakness of share prices raise certain important questions. Has the time come for a critical re-examination of the facile assumption that growth prospects and capital appreciation are the dominant considerations in investment operations and that return or yield is a relatively insignificant matter? Can equities be relied on to serve as a hedge against inflation in the future? Are even blue chips overpriced at present levels, so that growth prospects are discounted and no significant capital appreciation is to be expected? Is this the time for the prudent investor to consider switching from equities to fixed income yielding debentures and preference shares?

Since the beginning of 1958, share prices have been moving more or less continuously upwards at a cumulative rate, as reflected by the Reserve Bank's All India index number of variable dividend industrial securities, of between 10 per cent and 15 per cent a year. This is only an average covering all sections. Those who have concentrated on the more popular investment counters and sought growth in preference to yield, have done very much better. As a result, share prices have risen on the whole, at about double the rate at which the general level of prices moved up and equity holders have thus been protected against the ravages of inflation.

Judging from the trend of the market in the first five months of 1962, it is extremely unlikely that this experience will be repeated. In previous years, share prices generally moved steeply up in the first half of the year and shed some of the gains in the second half. This year, up to the end of May, the overall rise in the index was comparatively meagre, from 187 at the beginning of January to 195 at end May. What is more, there appears little chance of any further rise. On the contrary, the usual post-Budget rise appears to have spent itself and the prevailing mood is one of caution and misgiving.

The upsurge in prices with which the market greeted the sharp increase in direct taxation in the Budget proposals for 1962-63 could be explained only on the naive reasoning that economic development would swell profits so greatly that even after the larger tax bite there would be more left for distribution to shareholders. A number of factors have combined to prick this bubble of self-delusive complacency and to spread awareness of the profit-squeeze that is going on.

Profitability

The Reserve Bank's study of 118 public limited companies, the accounting periods of which ended during the quarter April-June 1961, shows that the trend had begun about a year ago. The important industries covered in this analysis are engineering, shipping, sugar, cotton, paper and chemicals. The 7.6 per cent increase in income from sales was largely offset by higher costs of raw materials and other manufacturing expenses, salaries and wages and provision for depreciation. Nevertheless profits before tax showed an increase of Rs. 2.4 crores. Tax provision absorbed Rs. 1.8 crores out of this, leaving profits after tax nominally higher by Rs. 67 lakhs. As a result the ratio of profits after tax to net worth, which is the measure of profitability that is important for shareholders, was 0.3 per cent lower than for the previous year.

Since then, the squeeze on profits has certainly tightened. In part this is the result of the stresses and strains of development, in which both the availability of resources and their effective mobilisation are subject to limitations. These difficulties have been aggravated by faulty planning and the emergence of the now familiar bottlenecks of coal, power, transport and foreign exchange. Industries struggling with these difficulties and compelled, because of them, to leave substantial productive capacity unutilised, have found themselves burdened with a greatly increased tax load. Their protests have been brushed aside with the bland generalisation that because they operated in a market sheltered from foreign competition and in a developing economy, they could carry the higher taxation without seriously impairing their profit-earning capacity.

The desperate foreign exchange situation and the drastic imports cuts will increase the already grave difficulties of industries. It now appears likely that the third Five-year Plan will be almost impossible to carry out in full. The Aid India Club is dragging its feet in the matter of providing the external resources for the second year of the Plan. On the export front the performance so far has been far short of the Plan requirements. Some improvement may be expected through the efforts of the Minister for International Trade, Mr. Manubhai Shah, and his newly constituted Board of Trade. But if the cotton textile industry is an example of the method of export promotion visualised, more industries may find themselves compelled to export a specified proportion of their output. This cannot but reduce profitability further. The virtual certainty that Britain will join the European Common Market will not make his task easier.

Politically, there is evidence of a strengthening of the leftist elements in the Government and the entry of Mr. Krishnamachari into the Union Cabinet is not likely to arouse enthusiasm among investors. Even Morarji Desai, as his Budget proposals show, appears to find it impossible to resist or expedient to play up to the socialist clamour for giving reduction of inequality precedence over incentives for increasing production, income and employment. Further, the mounting border tension with China and Pakistan and the signs of strain in relations with the U.S.A. could have serious repercussions on the economic outlook through diversion of resources from development to defence and adverse effects on the flow of foreign aid.

Hedge Against Inflation

Against this somewhat sombre background, it is worth while for investors to examine critically the grounds on which their enthusiasm for equity investment have been based. The argument is familiar and is summed up in the claim that equities serve as a hedge against inflation. At a time when the price level is moving up, any sort of fixed-income yielding security, whether Government bonds, debentures of preference shares, suffers from the obvious disadvantage that they are claims to fixed sums of money and fixed money incomes. As the value of money declines with rising prices, the real value, both of the capital and the income from such assets correspondingly falls. If a person buys a bond for Rs. 100, on which he receives 4 per cent interest a year and if the price level rises by 5 per cent a year, he suffers a loss in the sense that the depreciation in the real value of his capital is not even compensated by his interest income. Equities, on the other hand, offer the prospect of rising dividend income as well as capital appreciation and if, as has happened since 1958 in India, the capital appreciates more than the rise in the price level, the investor in equities is obviously better off than his counterpart who holds fixed income yielding assets. Moreover, in a developing economy such as this, so runs the argument, economic growth is sure to be reflected in a rising level of equity prices. The wise investor would therefore concentrate on growth prospects and pay little or no attention to yields.

This is the mentality that is responsible for the spread of the investment habit among the middle income groups, the enthusiasm for new issues with growth prospects and the general preoccupation with growth stocks so noticeable in the last few years. The logic is unexceptionable in the sense that given the premises, no other conclusion is possible. What tends to be ignored is the important matter of whether the premises or assumptions are valid. For the reasons set out above, it would seem that there is at least grave doubt as to whether, under present conditions, we might expect capital appreciation to continue at anything like the rate witnessed since 1958. It is, of course, true that ours is still an underdeveloped economy, but it is necessary to remind ourselves that economic growth is neither automatic nor continuous and so neither is capital appreciation in equities. The business cycle, with its regular, rhythmical succession of booms and slumps that was once so dear to academic economists, may no longer correspond to the course of events in the real world but there is plenty of evidence to show that belief in continuous economic growth may turn out as great a delusion as the nineteenth century faith in continuous progress. In our case, it is possible that even normal economic growth is being inhibited by unimaginative, ideologically inspired interferences with the growth process.

It looks as if share prices, after their four-year rise are now entering a phase of levelling out or even of moderate decline, before the upward trend is resumed. If this reading of the situation is correct, there is clearly urgent need for investors to change their ideas and their methods. A rearrangement of portfolios in the light of the new circumstances seems necessary.

The one field in which this warning does not appear to be necessary is in new issues. Here, if investors are sufficiently discriminating in their choice, there is scope for almost immediate and very substantial capital appreciation. But it must be emphasised that discrimination is of vital importance. Some new issues recently have been flops and the unwary investors have suffered capital loss.

Importance of Yield

So far as shares of existing enterprises are concerned, the prudent investor would be well advised to think less of growth prospects and more of yields. If, as seems likely, we are entering a period of stable instead of expanding industrial activity and profitability, equities lose their charm as a hedge against inflation. For the economy as a whole, aggregate demand may exceed aggregate supply and inflation may persist but this may not be reflected in industrial profits. For a number of commodities, including steel, cement, paper and sugar, manufacturers' selling prices are fixed on Tariff Commission awards at levels that leave only such meagre return on capital as a socialist Government deems necessary. In others, the inflationary pressure originates from the push of cost rather than the pull of demand and in so far as prices rise, this is merely a defensive reaction by producers, which does not improve their position, but merely prevents a deterioration therein. Many producers find themselves squeezed between rising costs and rigid prices.

In such a situation, investors should ask themselves whether a 7 per cent return on preference shares with no prospect of capital appreciation may not be better than a 3 per cent return on an equity investor with extremely nebulous growth prospects. The fact is that unreasoning infatuation with growth and neglect of yield have pushed prices of even the best blue chip equities to levels at which all likely growth prospects appear to be fully discounted. The following table compares the net yield on a representative list of ordinary and preference shares. There are cases where the yield on equities is even below that on Government securities:

	Approx. current price (16-6-1962)	*Net yield % p.a. on last dividend at current price*
Ordinary Shares :	Rs.	
Burn & Company	700.00	2.80
Guest, Keen, Williams ..	40.00	2.40
Indian Standard Wagon ..	195.00	2.56
Alkali & Chemical	44.00	2.40
Associated Battery	30.00	3.50
Dunlop Rubber	41.50	3.30
Indian Aluminium	39.50	2.60
Metal Box	60.00	2.90
Union Carbide	50.00	2.50
Titaghur Paper	41.00	3.40
	Approx. current price	*Net yield % p.a.*
Preference Shares :	Rs.	
Alkali & Chemical	85.00	5.35
Burn & Company 1st ..	108.00	5.90
Burrakar Coal 1st	94.00	6.78
Howrah Mills	92.00	6.93
Kumardhubi Engineering ..	72.25	6.30
McLeod & Company 2nd ..	62.00	7.34
Ramnugger Cane & Sugar ..	78.00	7.00
Textile Machinery 1st ..	88.00	6.25

Price Earnings Ratio

It would be a great help to investors if some simple formula could be devised by which one could tell whether a particular share, at its current market value, is overpriced or not. Yield calculations are not much help because investors with confidence in the growth prospects of their holdings may cheerfully accept very low returns and even, in the case of new issues, no returns at all for quite considerable periods. There is an inevitable element of personal judgment and therefore possibility of differences of opinion in such assessments. For while the current earnings of the concern are a verifiable fact, the magnitude of future earnings is hypothetical. In other words, that is anybody's guess.

Nevertheless, investors have been so incessant in their demand for guidance on this matter that various attempts have been made to devise some sort of formula. One that has been in use in the U.S.A. for some decades is the price-earnings ratio. This is simply the ratio of the market price per share to the annual earnings per share. As a measure of the worth of a share this is superior to the yield rate because while yield is calculated on the basis of the last dividend, the price-earnings ratio relates the price of the share to the profits after tax. Thus a price-earnings ratio of 20 : 1 does not imply a yield rate of 5 per cent. It means that for every Rs. 20 paid by the shareholders as market price of the share, the company earned a net profit of one rupee. When provision is made for reserves, preference dividends and, in India, managing agency remuneration, the distributed profits and therefore the yield would be considerably less. But even so, the earnings per share are certainly relevant to the financial soundness of the company and therefore to its value to investors. A company that follows a conservative dividend policy and ploughed back much of its profits into expansion and modernisation is a better investment than one that paid the same rate of dividend but, for that reason, could not make the same provision for reserves. If these two shares were quoted at the same price, the greater financial strength of the first would be revealed in a lower price-earnings ratio.

A relatively low price-earnings ratio, other things remaining the same, is an attraction to investors. But it should never be blindly followed. It does not absolve the investor from the necessity of studying the financial position of the concern and assessing its growth prospects. Its usefulness lies in the fact that if two companies are regarded as having equally good growth prospects, the investor would be wise to choose the one with the lower price-earnings ratio.

Raskob Formula

How high may the price-earnings ratio be without the share in question being considered overvalued? The 15:1 ratio laid down as a rule by John J. Raskob in the U.S.A. in the 'twenties was regarded at the time as excessively bullish but it enabled him to foretell the 1929 crash on Wall Street. Since then, ideas of growth have undergone a radical transformation, though as recently as 1950, before the Korean war, the 30 stocks in the Dow Jones index showed an average price of six times earnings. In the bull market that dominated the 'fifties, prices were bid up to fantastic heights and at their highest point in 1961 a number of market favourites such as Xerox, Polaroid and IBM recorded prices from 80 to 120 times earnings. In December 1961 when the Dow Jones index touched its highest point, the prices of stocks in the group averaged 23 times earnings. There is general agreement among American investment experts that the rise in prices had been overdone and that the collapse on 29th May, Blue Monday, was the natural consequence of such a situation. The recovery on the following day was powered by the knowledge that the fall had likewise gone too far and that, at the lowest levels, many first class blue chips were available at absurdly low prices in relation to earnings.

Price-earning Ratios for Shares

Name of share	*Approx. current price (16-6-62)*	*Earnings per share*	*Price earnings ratio*
	Rs.	Rs.	
Bengal Coal	378.00	39.0	9.6
Alkali & Chemical ..	44.50	2.4	18.5
Guest Keen Williams ..	40.00	1.4	28.5
Indian Iron	26.00	2.5	10.0
Britannia Biscuits ..	45.00	6.6	6.8
Dunlop Rubber ..	41.50	3.5	11.8
Hindustan Motors ..	19.25	3.1	6.2
Indian Aluminium ..	39.50	2.8	14.1
Indian Cables	37.00	3.5	10.4
Indian Oxygen	46.00	2.2	21.0
Kesoram Cotton ..	29.50	2.6	11.3
Martin Burn	29.00	3.0	9.6
Metal Box	60.00	4.2	14.3
Philips India	33.50	1.7	19.7
Union Carbide	50.00	1.6	31.2
Titaghur Paper	41.00	2.2	18.6
Orient Paper	42.50	2.7	15.7
Birla Jute	34.00	2.3	14.7
Braithwaite	36.00	6.6	5.4

Since investors in India face a similar problem of assessing the worth of shares and judging whether or not they are overvalued, an attempt is made to estimate the price-earnings ratio for 19 blue chips of the Calcutta market. The results are indicated in the table at the foot of column one. For these 19 shares, the current prices range from 31.2 to 5.4 times earnings, with an average of 15 times. For these shares therefore the average is the same as the Raskob figures. But even conservative opinion in the U.S.A. holds that under present conditions, the Raskob formula of 15:1 is too low. Prices equal to 20 times earnings are considered reasonable and as justifying purchases for growth.

India and U.S.A.

It would, of course, be folly to apply a price-earnings ratio considered appropriate in American conditions to the very different situation prevailing in India. On the face of it, growth prospects in an underdeveloped country such as this should be considered to be greater than in an already mature economy such as the U.S.A. This would seem to justify a very much higher ratio for India than for the U.S.A. But this is a one-sided view that takes no account of the immeasurably greater resources of capital, skill and technology available to American industries and the enormous purchasing power of the markets they serve. Even our biggest companies are the most insignificant of pygmies compared to American giant corporations such as G.E.C. or General Motors. With this vastly greater scale of operations and turnover, there comes a corresponding increase in profitability. The price-earnings ratios that appear fantastic to us in India are not entirely the product of exuberant, over-optimistic investor imagination And American industries have the advantage of operating in a country where free enterprise is almost a dogma and anything even faintly savouring of socialism is branded as alien and incompatible with the American way of life. Even the action of President Kennedy in rejecting the steel industry's demand for a price increase has caused charges of socialism to be hurled at him. Indian industries on the contrary have to adjust themselves to the goal of a socialist society and to a degree of regimentation that would be intolerable in America. It is evident therefore that in such countries the much talked of growth prospects in India are not greater but a good deal less than in the U.S.A. We have therefore to adopt a lower price-earnings ratio than would be considered right for the U.S.A.

Even so, a scrutiny of the Indian figures does not appear to support the view that they are too high and that a corrective reaction is called for. While each case has to be judged on its merits and generalisations are dangerous, at least one such broad assessment may be ventured. By and large, share prices at current levels are not excessive but, again subject to exception in special cases, these prices probably discount all reasonable growth prospects. The scope for capital appreciation without overpricing of shares appears restricted.

What then should investors do? I would suggest that the time is ripe for booking of profits on selected equities notwithstanding liability to capital gains tax and switching to good high-yielding preference shares. There is not much danger of heavy capital loss on good equities but equally, there is not much prospect of substantial capital gain. If that is the case, a 7 per cent return on preference shares (net of the 30 per cent deduction at source which the investor has the right to claim) is a better buy than a 3 per cent or 4 per cent net yield on equities. But selectivity is vital, both in deciding what to sell and what to buy. And don't forget to keep some funds available for attractive new issues some of which are in the offing.

SURVEY

(Concluded from page 1151)

Britain's entry into the European Common Market and the need for a sustained and vigorous export drive, the complete removal of export duty would give "the desired shot in the arm which the present reduction cannot accomplish." If, however, the Government is not inclined to accept the plea for the complete abolition of export duty on tea, it must at least reduce the rate of duty further, especially in view of the latest cut in export duty on Pakistan tea from 25 paisa to 15 paisa per lb.

Unless the tea exported from India is accorded special treatment along with the other Commonwealth teas, not only will the advantage of free entry into Britain (as against an import duty of about 11 nP per lb. on non-Commonwealth tea) be denied but the tea might even be subjected to a high duty of over 44 nP (8d.) per lb., if the Common Market tariff were applied. Britain, as is well known, is India's largest customer for tea, accounting as it does for more than 63 per cent of the total exports from this country. The E.E.C. will do well to dispense with this duty altogether, for, after all, the revenue to the E.E.C. countries from such a duty would be negligible, since imports into them amount to only about 40 million lbs. a year.

Notice

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Company will be held at the Registered Office, 59C Chowringhee Road, Calcutta, on Wednesday, the 18th day of July 1962, at 12.30 p.m., for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1962 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

SPECIAL BUSINESS

The consideration of the following Resolution which will be proposed as a Special Resolution:

"That the consent of the Company be accorded by this Special Resolution with effect from 1st November 1961 to the holding by Mr. T. M. Rama Aiyangar, an Alternate Director, of an office or place of profit under the Company as General Manager, Delhi."

Explanatory Statement and Note

The consent of the Company by Special Resolution is requisite to the holding of his office or place of profit by an Alternate Director of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 2nd July to 18th July 1962, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

59C CHOWRINGHEE ROAD, CALCUTTA.
23rd *June* 1962.

PROSPECTS FOR FOREIGN AID FOULED

MR. NANDA'S BRAVADO ON PLAN

From Our Special Correspondent

NEW DELHI, *25th June*

DELHI LETTER

DELHI appears to have reached a point of no return with regard to proposals for the purchase of Soviet-made M.I.G. 21 fighter aircraft. Unless a miracle happens, India will go through with the deal to buy a few M.I.G. craft first and then to set about manufacturing M.I.Gs within the country. First the Western nations called the Indian Government's attention to their concern over the projected M.I.G. deal by making not too 'discreet 'inquiries'; then there was a persuasive approach by U.S. Ambassador Galbraith and the British Commonwealth Relations Secretary, Mr. Duncan Sandys. To this persuasion was coupled offers of British planes supposedly comparable in performance with the M.I.Gs. And, lastly, have come the threats about economic assistance, if the M.I.G. deal is put through. Of course, the threats have not been direct and official; they have been couched in the diplomatic language of how impossible it would be for the democratic aiders to assuage public opinion at home if India were to buy arms from the Soviet Union.

But these have had little effect apparently on Mr. Nehru's basic thinking on the arms purchase issue on which he and the Defence Minister, Mr. Krishna Menon, have received an almost cheering and certainly unanimous mandate from members of Parliament. All parties support the Government since the armaments purchase is directly hinged to the technical superiority of the Pakistani Air Force stemming from the American gift of fighter planes of modern design to Pakistan.

The Western persuaders have found no arguments to puncture the basic logic in Mr. Nehru's and Mr. Menon's arguments which in essence is as follows: according to Indian Air Force experts, the M.I.G. planes are simpler to make than Western planes of comparable performance. Therefore, the time gap between the decision to take M.I.Gs and the building in India of the first prototype would be less than that if India went in for a Western designed plane. Secondly, in the case of the M.I.G., India will have to deal with just one central Soviet authority. If a Western plane is chosen for manufacture, Delhi will have to make a number of deals with numerous firms making aircraft components.

Plain Speaking

In addition, Mr. Nehru appears to be incensed with the lectures by Western leaders on how India should behave in affairs like Kashmir, Goa and the Congo. This led to his plain speaking in Parliament that India will not barter her freedom of action for economic assistance. In other words, it is an admission that the policy of aid without strings, enunciated by Mr. Nehru and successfully implemented by him in the past decade is now coming up against new difficulties. In these circumstances, the Finance Minister, Mr. Morarji Desai, will not have an enviable task when he visits Europe in the first week of July to convince leaders there of India's need for trade concessions and aid injections. While Mr. Nehru may not brand the European Common Market development as a "neocolonialist plot" as some African leaders have, he is nonetheless convinced of the political repercussions.

While Britain's application to the European Economic Community is largely based on economic considerations, the Inner Six introduce a greater political bias in their decisions. And the Western collaborators in India's development are becoming less tolerant of what diplomats in Delhi call India's aggressive non-alignment. In relation to underdeveloped countries' need for aid without strings, officials in Delhi do not pin much hope on efforts at the United Nations Secretariat. According to one official, the "decade of development" may ultimately prove to be the sixties of sorrows for needy countries who have for long been pleading for more aid and more trade. The prospects may be less aid and less trade.

The end of the first post-election Lok Sabha session was on a touch of bravado on the part of a Minister usually not prone to such talking as he did. Planning Minister Nanda's chant during the closing minutes of the session was that the third Five-year Plan will not be pruned, despite various difficulties; neither would it suffer on account of uncertainties of foreign exchange availability. According to Mr. Nanda, 70 per cent of the industrial projects in the Plan were covered with regard to exchange needs and assistance had been secured for 90 per cent of the mining projects. In exchange coverage Mr. Nanda included the promises of aid made by various countries but an assessment of actual aid deliveries would show a big gap.

Strategy in Targets

Mr. Nanda also explained the strategy in the targets which he indirectly admitted were not based on feasibility of resources. He said: "The choice before the planners was to have smaller targets and thus avoid shortfalls or provide cushions against possible imbalances. If the proper cushions are provided, the plans become a struggle between the cushions and strains and the progress may be slow. On the other hand, smaller targets could not be fixed, because no plan will be too ambitious for the country in view of the enormous problems of poverty, growing population and unemployment."

Mr. Nanda listed the factors affecting the tempo of progress of Indian development. Among these was the lack of a regimented economy. There was pressure of decentralisation and the State's regulatory powers were limited, and the country had a mixed economy in which both the private sector and the public sector were functioning.

Mr. Nanda did not elaborate on what he meant by "some measures of ruthlessness" which may be needed to bring about economic discipline. He was "confident" that the leeway in the first two years of the third Plan would be made up during the remaining years of the third Plan and he "assured" Parliament that the targets in national income would be reached, forgetting perhaps that only a day or two earlier the Planning Commission had released estimates of the national income for 1961-62 which showed a disappointing rate of growth. According to these estimates, the national income rose from Rs. 14,236 crores at the end of the second Plan to Rs. 14,690 crores at the end of the first year of the third Plan. This represents a growth rate of 3.5 per cent, or a shortfall of one and a half per cent over the annual target in the third Plan.

The leeway to be made in achieving the third Plan target may be partly reduced by the coming into full capacity operation of several big projects which have been delayed, but it is doubtful whether the progress can be fast enough to meet the revised target of doubling the national income by 1967-68 and of doubling the *per capita* income by 1973-74. In the six years left for the achievement of the national income target, the growth rate will have to accelerate to more than eight per cent, or double the rates achieved during the years under planned development in the country. There is no magic wand with Mr. Nanda or anybody else to make the economy leap forward at this rate.

The rupee coin in the decimal series will be issued from all offices of the Reserve Bank of India with effect from 2nd July 1962 and thereafter from the district treasuries and other important centres in the country. The new coin is minted in pure nickel and is circular in shape and has a serrated edge. It weighs 10 grams and is slightly lighter than the rupee coins which are in circulation. On the reverse, it bears the year of mintage, viz. 1962 and the value of the coin in international numerals, with the word "Rupaya" in Hindi above and the word "Rupee" in English below the numeral. The issue of the new rupee coins does not involve the withdrawal of the present rupee coins in nickel or quaternary alloy which will continue to circulate along with the new coins.

A Public Relations Officer has been appointed in the office of the Chief Control of Imports and Exports, New Delhi, to assist traders in securing information on trade control policy and procedure. The officer will also assist the traders in getting proper indication about the disposal of their cases.

The appointment of the Public Relations Officer follows the recommendation by the Import and Export Policy Committee, under the chairmanship of Mr. Ramaswamy Mudaliar, that such officers should be posted at the headquarters and regional offices of the Import and Export Trade Control Organisation. Steps have been taken to appoint Public Relations Officers at the regional offices also.

THE JENKINS REPORT

SUGGESTIONS FOR IMPROVING COMPANY LAW

(*From Our Own Correspondent*)

LONDON, *22nd June*

LONDON LETTER

A GREAT deal of publicity is being given to the findings of the Jenkins Report, just published. This is the work of a Committee appointed 2½ years ago under the leadership of Lord Jenkins, a Lord of Appeal, and having among its members representatives of financial, industrial, banking and trade union circles, to study the legal structure of British industry, commerce and finance. This structure is based on the Companies Acts of 1947 and 1948 which then followed the recommendations of a similar committee. The instigation for the current enquiry was a spate of somewhat dubious transactions which gave rise to the feeling that the legal framework left the way too easily open to abuse. The Committee's findings, however, solidly back the existing Code whose provisions "have on the whole worked well in practice" and called only for amplification and consolidation to cover legally practices now generally current and acceptable.

Take-over bids, which have earned a place in the forefront of the news over the past year, are supported in the Report as an integral part of accepted business and an essential feature of economic growth and development, but accompanying this acceptance is a recommendation for a comprehensive set of statutory rules for all such operations. The broader social and economic questions did not come within the scope of the study—concentration of economic power and effects on employees.

A New Code

A new code of conduct for company directors has been laid down and, on the question of duties of directors *vis-a-vis* rights of shareholders, the Committee takes a firm line. British company law is based on the assumption that ultimate control over the directors of a company should be exercised by shareholders and, to achieve this end, it is suggested that there is a legal obligation on a company to provide a fuller account of its activities and affairs and that any decision affecting disposal of the company's assets should be subject to shareholders' approval.

Investors would be given added protection in other ways, too. The Committee suggests means of protecting minorities in companies as well as investors holding special classes of shares. On nominee shareholdings, the Committee recommends that beneficial owners of 10 per cent or more of the equity capital of a company be required to notify their interest, and that this should be registered by the company.

Tackling limited liability, it is suggested that private companies should no longer be exempt from filing accounts. Shipping companies would wholly, and insurance companies partially, lose their exemption in the matter of disclosing hidden reserves. Not so the banks, for, traditionally, banks are regarded in a separate light because their stability is a matter of national importance. This, and also the suggestion that there would be no statutory restrictions on voteless shares, are the two major and most controversial issues and are not likely to be lightly dropped if omitted from any ensuing legislation.

The Report has been received in the City with cautious approval. But the implications are also political and obviously a new Companies Act should be high on the list for Government action.

The rise in industrial output in Britain since the beginning of the year is confirmed by the figures given in the index of industrial production for April. The index for April, seasonally adjusted, is provisionally estimated at 114, as compared with 115 for March and 114 for February (1958 taken as 100).

It is pointed out that, in the three months, February-April, the level of British industrial production, on a seasonally adjusted basis, was 2 per cent above the previous three months, thus confirming the rise in output since the beginning of the year. The March figure was influenced exceptionally by the high output of gas and electricity due to the abnormally cold weather.

1961–A YEAR OF RECORD GROWTH IN BANKS' DEPOSITS

SIGNIFICANT OMISSION IN RESERVE BANK'S SURVEY

THE season for the Reserve Bank's annual publications has begun, with the release this week of its statutory report on the *Trend and Progress of Banking in India* during the year ended 31st December 1961. It has been the practice of the Bank to publish this report first and that has been faithfully followed this year. A gratifying feature of the Bank's report is their promptness and punctuality. It is no mean achievement to bring out a comprehensive report of 225 pages, containing all the monetary and banking data and a detailed analysis of the trends disclosed by them, within six months of the close of the year to which they pertain.

The report on banking for 1961 has retained all the features of its predecessors, except one which is conspicuous by its absence and that is the brief chapter entitled "Perspective." Last year, this chapter made quite a hit, as it contained some important suggestions for toning up the banking system. Why has the Bank dropped this chapter in which it used to lecture to banks? Has it exhausted its repertoire of sermons? Or has the banking system improved to such an extent and attained that much perfection as not to need any more paternal advice from the central banking institution? Or has this piece been reserved for another occasion? Or is the omission due to the change of Governor? Whatever be the reason, the omission has made the report a dull, monotonous piece.

As usual, the authors of the report have begun it with a swift account of the economic background to the monetary and banking trends and developments. They say that "the year 1961, which largely covers the first year of the third Plan, was a comfortable one for Indian banking." They have given sufficient reasoning and data to support this conclusion. Giving the highlights of the year at the outset, the report says:

"The pressure on the resources of banks prevalent in 1960 eased during the year and their liquidity position improved a good deal. This was the result, on the one hand, of a large accretion to their deposits and a moderate expansion in volume of bank credit on the other. These trends enabled banks to reduce their indebtedness both to the Reserve Bank and to the banking system abroad. The general economic background was one of a higher tempo of activity in the economy, in an environment of relative price stability. The year also witnessed a new phase in the consolidation of the Indian banking system. Measures designed to improve generally the operational efficiency of banks and especially to strengthen the sector of medium and small banks were taken. Legislation was enacted to set up the Deposit Insurance Corporation for providing some cover against loss to depositors.... By and large, a measure of normalcy governed the operations of banks in contrast to sustained pressure during the previous year. The change was largely in consonance with the improved supply factors."

The following table, extracted from the report, gives a synoptic view of the yearly operations of scheduled banks on the basis of the changes in the sources and uses of their funds:

(In crores of rupees)

		1961	1960
I. Sources			
(a)	Increase in paid-up capital and reserves ..	1.2	1.2
(b)	Increase in deposits (excluding P.L. 480)..	179.9	101.9
(c)	Increase in borrowings from R.B.I. ..	—	49.7
(d)	Inflow of funds from abroad	—	9.0
(e)	Reduction in cash and balances with R.B.I.		
	(i) Impounded	13.6	—
	(ii) Others	—	—
(f)	Reduction in investments (excluding P.L. 480)	—	99.9
	Total ..	194.7	261.7
II. Uses			
(a)	Reduction of borrowings from R.B.I. ..	42.8	..
(b)	Outflow of funds abroad	8.2	—
(c)	Increase in bank credit	113.5	208.1
(d)	Increase in cash and balances with R.B.I.		
	(i) Impounded	—	13.6
	(ii) Others	7.4	34.5
(e)	Increase in investments (excluding P.L. 480)	50.0	—
	Total ..	221.9	256.2
III. Errors and Omissions		+27.2	—5.5

The increase in the aggregate deposits of scheduled banks amounting to Rs. 180 crores or 11 per cent, as against Rs. 102 crores or 7 per cent in 1960, raising their level in December 1961 to a peak of Rs. 1,757 crores, was the largest recorded in a year so far. The number of deposit accounts of scheduled banks increased by 13 per cent (as compared with 7 per cent in 1960), from 5.8 million in 1960 to 6.5 million in 1961. The bulk of the rise in number took place in savings deposits which went up from 3.6 million to 4.1 million. Ownershipwise, the rise in the number of accounts almost wholly took place under personal deposits (710,000 out of an increase of 750,000) and the relative share of personal deposits in the total number of deposit accounts increased by one percentage point to 88 per cent.

The Bank's survey of ownership of deposits in the year ended October 1961 has brought out the following features:

"Of the increase in aggregate deposits of Rs. 170 crores in the year ended October 1961, time deposits accounted for Rs. 107 crores, savings for Rs. 45 crores and demand for Rs. 18 crores. The relative shares of the three types of deposits in the total outstanding changed thus: Time deposits went up from 47 per cent to 48.6 per cent and savings deposits from 16.6 per cent to 17.6 per cent. The share of demand deposits declined from 36.4 per cent to 33.9 per cent. The largest absolute increase in deposits by type of ownership was witnessed in personal deposits, namely, Rs. 102 crores. A further breakdown shows that the best part of the increase in personal deposits occurred under time and savings deposits, Rs. 52 crores and Rs. 44 crores, respectively. Personal deposits constituted 50 per cent of total deposits in October 1961 as compared with 49 per cent in 1960. Business and Government (including quasi-Government) deposits rose by Rs. 30 crores and Rs. 22 crores, respectively, in 1961, in contrast to a decline in each category in 1960. The share of business deposits in total deposits declined from 33 per cent to 32 per cent, while that of Government deposits increased marginally to 7 per cent."

Credit Expansion

The main features of banking trends in the past year as brought out by the Reserve Bank in the annual report under review may now be briefly summarised. In contrast to the record growth of deposits, expansion of scheduled banks' credit to trade and industry during 1961 was at a slower pace. It was only half of what it had been in the previous year, namely, Rs. 114 crores or 10 per cent as against Rs. 208 crores or 23 per cent. As a result, the advances-deposit ratio was marginally lower at 70.8 per cent in December 1961 to 71.6 per cent a year before. The slower rate of growth of industrial output caused by shortages of power, fuel, transport and raw materials, decline in stocks of commodities and goods in certain lines of industry and trade and stable price levels in regard to foodgrains and manufactures are said to be the main cause for the relatively limited demand for bank credit. The comparative figures given below show at a glance the trend of bank credit:

(In crores of rupees)

	1961	1960	1959
January-April	+133	+164	+154
May-October	— 74	— 26	— 80
November-December ..	+ 55	+ 70	+ 18

Of the two measures of general credit restraint introduced in 1960, namely, the additional reserve requirements (March) and the system of quotas and slab rates on lending to scheduled banks by the Reserve Bank (September), the former measure was completely withdrawn in January 1961 for facilitating credit expansion by banks for seasonal purposes as well as for relieving the acute monetary stringency. The system of three-tier rates was continued throughout the year for exercising an overall restraint. For providing an incentive to scheduled banks to increase their lending to small-scale industries and co-operative institutions, the Bank sanctioned additional specified quotas to individual banks to enable them to borrow at Bank rate.

Liquidity

In view of the relatively lighter pressure of demand for credit and the higher rate of deposits growth, the banks first preferred to use their surplus resources to reduce their borrowings from the Reserve Bank which had gone up to a high level of Rs. 94.5 crores by the end of March 1961, when the busy season was at its peak. They had repaid Rs. 56 crores in April alone and brought down their borrowings during the slack season (May-October) by Rs. 32 crores, as compared with Rs. 27 crores in the 1960 slack season. During the first two months of the 1961-62 busy season (that is, November and December 1961), their borrowings from the Reserve Bank rose considerably less (Rs. 12 crores) than in the corresponding period of 1960 (Rs. 45 crores). An analysis of the borrowings at the peak of the busy season in March 1961 disclosed that two-thirds of the amount was borrowed at the maximum rate of 6 per cent, around one-sixth at 5 per cent and the balance of about one-sixth at Bank rate, namely, 4 per cent. The weighted average rate of borrowing worked out to 5.5 per cent in March 1961. At the end of September 1961, the major part (77 per cent) was borrowed at the Bank rate, nearly one-fifth at the rate of 5 per cent and a negligible portion, namely, 3 per cent, carried the maximum rate of 6 per cent. This compared with the position at the end of October 1960 when 45 per cent of total amount was borrowed at the Bank rate, 35 per cent carried the maximum rate and 20 per cent at 5 per cent. It will thus be seen that the effective Bank rate was considerably higher than the nominal Bank rate of 4 per cent.

After giving priority to reducing their borrowings from the Reserve Bank, the banks next paid attention to strengthening their liquidity position in the most remunerative manner possible. Thus, they used a part of their surplus funds to invest in Government securities. Consequently, the Gilt-edged portfolio (other than that due to P.L. 480 deposits) rose during 1961 by Rs. 38.6 crores to Rs. 439 crores, in contrast to a sharp fall of Rs. 95.7 crores in 1960. Nevertheless, because of the relatively high level of deposits, the investment-deposit ratio at the end of 1961 was slightly lower at 29.2 per cent than 29.4 per cent a year before. There was a rise of about Rs. 39 crores in the banks' cash balances also, albeit between the end of March and that of December 1961. The cash ratio as at the end of 1961 was, however, only 8.9 per cent as compared with 10.3 per cent at the close of 1960.

Profits

An analysis of the profit and loss accounts of 27 large Indian scheduled banks each with deposits of Rs. 5 crores and above showed a significant rise in their net profits (after providing for taxation) over the preceding year. During the year, the net profits rose by Rs. 2.8 crores or by nearly 34 per cent to Rs. 11 crores; in 1960, the rise was Rs. 1.1 crore or 15 per cent. Gross earnings (comprising largely interest and discount) increased by Rs. 9.2 crores or by nearly 12 per cent to Rs. 87.3 crores as against a rise of Rs. 5.8 crores or by nearly 8 per cent in 1960. The rise under gross earnings would have been still higher, but for the change in the accounting procedure adopted by most of the banks, viz., deducting from income the provision for taxation. Total expenses during the year rose by Rs. 6.4 crores (9.1 per cent) to Rs. 76.3 crores as compared to a rise of Rs. 4.7 crores (7.2 per cent) in 1960. In 1961, interest paid on deposits and borrowings, which formed the largest component of total expenses, rose by Rs. 2 crores (nearly 6 per cent) to Rs. 36 crores as compared to a rise of Rs. 1.4 crore (4.3 per cent) in 1960. During the year, establishment expenses rose by Rs. 3 crores (11.2 per cent) as against a rise of Rs. 2.2 crores (9 per cent) in 1960. Other expenses accounted for Rs. 10.6 crores of the total expenses in 1961 and rose higher by Rs. 1.4 crore as against Rs. 1.1 crore in 1960.

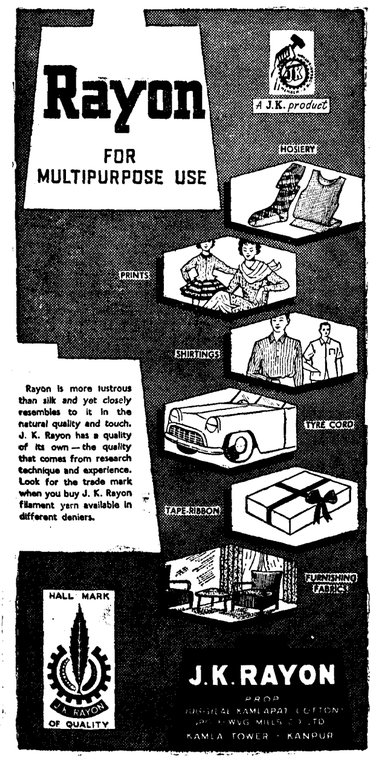
Capital and Reserves

During 1961, paid-up capital and reserves of scheduled banks recorded a rise of Rs. 1.2 crore, i.e. the same as in 1960; the ratio of paid-up capital and reserves to deposits, however, remained unchanged at 4.1 per cent. The rise was entirely due to the increase in reserves of Rs. 1.8 crore partly offset by a fall in paid-up capital of Rs. 0.6 crore; in 1960, paid-up capital and reserves recorded a rise of Rs. 0.6 crore each. The ratio of paid-up capital and reserves to deposits of non-scheduled banks went up to 16.7 per cent from 15.7 per cent at the end of 1960.

Branch Banking

The pace of branch expansion slackened since 1960, after a continuously rising tempo witnessed in the preceding six years. In general, the number of new offices opened is, according to the Report, a more appropriate index of the drive for branch expansion than the overall increase which would have been affected by mergers of non-scheduled banks with scheduled banks or their elevation to the status of scheduled banks, etc. The brisk progress in branch expansion witnessed since 1954 could not be maintained indefinitely, as new branches take time to become viable financially and banks require some breathing space. The State Bank, in particular, after it had completed in June 1960 its branch expansion programme enjoined upon it by statute, planned a lower target for the succeeding quinquennium and opened 46 new offices in 1961, as compared with 91 in 1960 and 115 in 1959. Other banks too felt it necessary to go slow. Besides, the Reserve Bank pursued a more selective policy in branch licensing, with the aim of discouraging opening of branches in over-banked areas, while sanctioning freely applications for opening of offices in areas with little or no banking facilities or where there was scope for expansion.

The total number of offices of commercial banks rose by 84 to 5,111 in 1961, as compared with 180 in 1960. The slower rate of branch expansion was partly due to the sharp fall in the number of offices opened by the State Bank of India. There was a net increase of 246 offices of scheduled banks as against 220 offices in 1960; during the year, 317 offices were closed by them. The number of new offices opened by scheduled banks was only 199, as compared with 268 in the last year; the balance of 118 offices as against 13 offices last year represented those taken over by the scheduled banks from the non-scheduled banks as a sequel to amalgamations, mergers and transfer of assets and liabilities. Although banking companies were granted permission in 1961 to open new offices at 69 centres (as compared with 118 in 1960) which were not served by any bank at all, only fifty-eight offices (as against 97 in 1960) were opened in such places; of these, the State Bank of India accounted for 39 offices or 50 per cent.



FORWARD MARKETS BULLETIN
(Monthly)
Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

COTTON AND COMPETING FIBRES

PRICE AND QUALITY WILL DETERMINE THEIR FUTURE

AN important point stressed by Dr. Kurt Dietrich, President of the International Cotton Federation, in his speech at the annual congress of the Federation, held at Deuville last week, was the increasing competition which cotton faced from man-made fibres. The growth of man-made fibres has been so rapid in the post-war period that any assessment of the prospects for cotton, wool or silk, the premier natural apparel fibres of the world, must necessarily include a study of the position of man-made fibres. It is for this reason that the annual review of the world cotton situation published by the International Cotton Advisory Committee, Washington, invariably contains a survey of the man-made fibres. This year's review, in addition to giving a picture of the existing position of man-made fibres, also broadly indicates the trend of production and consumption of man-made fibres during the decade 1951-61 and compares it with that of cotton to show cotton's declining share in world fibre consumption. The table I on this page shows the trend of production of man-made fibres during the period 1951-61.

It is evident from the above table that total production of man-made fibres has almost doubled during the period 1951-61. The rate of increase has been about four times that of cotton, although, in absolute terms, the gain in cotton has been greater. For the period as a whole, the greatest absolute gain has been in rayon, but, relatively, the expansion in non-cellulosic fibres has far surpassed that of rayon. Furthermore, the situation has changed recently, with the gain in production, both relatively and in absolute terms, in non-cellulosics. On a world basis, the expansion in the output of non-cellulosic fibres has been continuous, while rayon production has experienced periodic ups and downs. A comparison of the trend of consumption of cotton and man-made fibres shows that, though cotton continues to be the leading textile fibre of the world, its percentage in the total world fibre consumption has been steadily declining. Table II on this page illustrates this position.

Relative Shares

It is noteworthy that, with the exception of one year, namely 1956-57, the trend in cotton consumption has been continuously upward, but its share of the total market for textiles continues to decline. The share of rayons is about the same as it was ten years ago but it too has shown a tendency to decline. Rayon consumption is estimated to have increased in 1961 by about 4 per cent, as compared with 1960. A country-wise analysis of rayon consumption shows a marked reduction in the U.K. and, to a lesser extent, in the U.S. and France, whereas in W. Germany, Italy and some of the smaller producing countries, it has increased. But the greater part of the increase in world consumption occurred in the U.S.S.R. and Eastern Europe.

The increase in production and consumption of the non-cellulosic fibres occurred primarily in Japan and the U.S., though notable gains were also made in many West European countries. On a world basis, the percentage increase in production of non-cellulosics during the period is about the same for filament yarn and staple fibre.

After drawing attention to the aforesaid trend, the review of the International Cotton Advisory Committee adds that though statistics constitute an indispensable tool for analysing how cotton is faring *vis-a-vis* the other fibres, they are not of much avail, unless some attention is also given to the fundamentals behind the changes which are taking place in fibre consumption. There are many changes, but the Committee specifically mentions two, namely, price and technological development which, according to it, may be of particular significance to the future. Its comments on these are as follows:

"Pricewise, the advantage recently has turned in favour of rayon. This can best be demonstrated in the experiences of the United States, but, to some extent, it is also typical of other countries. In the last two years, the increase in cotton and the reduction in rayon prices has had a marked effect on the relative prices of these two fibres. In terms of net cost to the mills, rayon's price advantage in the United States two years ago was from 4 to 7 cents per pound. Now it is generally from 12-15 cents. Never has rayon sold at prices anywhere near this low in comparison with cotton.

Quality

"But price is not all and perhaps not even the most important factor. Developments in the field of quality have been equally startling. In the United States alone, three new names have appeared on the cellulosic horizon—Avril, Avron and Zantrel, which are vastly superior to the early forms of rayon. Basically, these new, high modulus rayons have imparted a new property to rayon that was previously one of cotton's key advantages—a high wet strength. These new rayons are now being promoted as a suitable and profitable blend with cotton in end-uses which were previously all cotton. Although priced considerably higher than regular rayon staples, their potential impact should not be overlooked. All this emphasises, with renewed urgency, the need for a greatly expanded programme of research and promotion for cotton to remain competitive.

"In the non-cellulosics, the range of fibres continues to expand and several reductions in prices were announced in 1961. Courtaulds recently announced a fibre manufactured from chemicals that are both cheap and readily available and one which, it is claimed, will offer strong competition to the existing non-cellulosic fibres.

"Even the non-cellulosic fibres, however, have their problems. According to a recent report on the Common Market, competition has forced down prices and, although this has apparently been offset to some extent by more efficient production, profit margins have shrunk. To meet the situation, the report continues, 'there has been a very definite trend towards vertical integration in the field of synthetic fibres.' By this means producers hope to ensure, among other things, an uninterrupted supply of raw materials at lower prices."

"COTTON IS GOLD"

The 1961-62 Annual Number of the *Cotton Trade Journal* of Memphis (U.S.A.) is, as usual, packed with authoritative and informative articles on every aspect of cotton production, marketing and manufacture in the principal producing and consuming countries of the free world. In an introductory article, Mr. Seton Ross, the Editor and Publisher, observes: "The U.S. Government has discovered that cotton is gold. One of the Administration's impelling motives for stimulating U.S. cotton production and exports is the urgent need to earn more dollars in an effort to reduce the gap in the unfavourable balance of payments and to halt the drain on U.S. gold reserves." Indian readers of the number will be specially interested in the section on this country which carries four articles. Two of them, one by Mr. Pratap Bhogilal, Chairman, Millowners' Association, Bombay, entitled "India Increases Textile Output" and the other by Mr. T. S. Subramanian, Director, A.T.I.R.A., on cotton research are of topical interest. The number is priced at Rs. 14.37 and can be had from Messrs. W. R. Stoessel & Co., 63, New Marine Lines, Bombay 1.

SURVEY OF INDIAN HOSIERY INDUSTRY

Mr. J. C. H. Hurd, head of the School of Textiles at Leicester College of Technology, has arrived in India for an 11-week visit to make a survey of the hosiery industry. The survey, which is being made at the invitation of the Government of India, will take him to Calcutta, Bombay, Madras, and Ludhiana. His conclusions and suggestions for the future development of the industry will be the subject of a report on his return to Britain. Mr. Hurd's tour will include visits to research centres and knitting institutes, one of which is run by a former student of the Leicester School of Textiles. Mr. Hurd, who has held his present post for 15 years, is honorary secretary of Britain's Textile Institute and is president of the International Federation of Knitting Specialists.

REVISED STANDARDS FOR U.S. COTTON

Revised cotton standards developed and approved by a working group representating the U.S. cotton industry and the U.S. Department of Agriculture were recommended for adoption by delegates from the 14 signatories to the Universal Cotton Standards Agreement and by representatives of the cotton industry in U.S.A. at their recent meeting in Washington. The revised standards were recommended after all groups at the conference—U.S. cotton producers, ginners, shippers, exchanges and manufacturers as well as representatives of the overseas signatory associations—had an opportunity to see the physical standards proposed for white, spotted and tinged cotton. The revised standards would more nearly represent the qualities of cotton that are now being marketed.

The Textile Commissioner has provisionally placed the cotton textile mills' production during the month of May 1962 at 71 million kilograms of cotton yarn and 387 million metres of cotton cloth. At the end of May 1962, the composite mills of the cotton textile industry held an estimated stock of 146,000 metric bales as unsold and 149,000 metric bales as sold (unlifted).

"CLEAR WAY" FOR COMMONWEALTH CLOTH

GOVERNMENT'S STAND ON IMPORTS CRITICISED

From Our Special Correspondent

MANCHESTER, 19*th June*

FRAYED tempers, tried to their utmost at the time when the British Government bluntly rejected the Lancashire cotton industry's entire case for some relief from the burden of imports, have had an interval in which to simmer down, and the industry, however disappointed, is now engaged in deciding what to do in the light of the situation as it stands. One thing, indeed, is certain; any uncertainty about the future can be dismissed, as the way ahead is clear enough. The three main Commonwealth areas involved have now been given the go-ahead to send large quantities of cotton goods to this country, and it will be surprising if they do not grasp every advantage offered to fulfil their quotas whenever the market is busy.

MANCHESTER LETTER

At times like the present when everyone is scrambling for orders, even at uneconomic prices, the foreign suppliers can still undercut Lancashire's producers, so that the mills abroad get "the best bite of the cake" in all circumstances. Small wonder that forecasts have already been made that many more local firms will fail to stay the pace and give up the unequal struggle before long.

No Sympathy

Perhaps the unkindest cut of all—and one much felt in Lancashire, if not elsewhere—is the complete lack of sympathy displayed by the Government at all stages of the negotiations. Never in any of the official statements or Parliamentary replies has there been the slightest word of regret about the undermining of a once proud industry, which, for all its faults, has been a wonderful money-spinner for Britain in days gone by.

In contrast, the Government's concern for Eastern industries whose British content has now diminished to vanishing point, passes all understanding. Tolerance for developing areas is an admirable principle, but, when it means casting aside the livelihood of many thousands of workers near at home, to say nothing of the waste of capital, and recently public money, such a theory becomes ludicrous.

Modernisation Outlook

Little more than a fortnight now remains in which schemes for re-equipment can be submitted for participation in the Government subsidy. Some last-minute proposals can certainly be expected, as many firms have been waiting to see whether some relief would be obtained from the overhanging threat of more imports. On the other hand, a number of schemes already put forward may never now see fruition. Mill managements can hardly be blamed for tightening their purse-strings when the future presents such a gloomy appearance.

No Further Aid

Two positive facts emerge from the Government's statement, disappointing as that may be. One is that no further help can really be anticipated from this source and that the industry is left to work out its own salvation as best it can. This has been in the minds of most traders for a long time back, but, while the recent representations have been continuing, the vague possibility of some relief has kept a glimmer of hope alive that "something might be done."

The other feature of the announcement was that the Government is ready to accept the terms of the international G.A.T.T. agreement and to implement the special clause which would preclude the United Kingdom from absorbing larger quantities of goods from the developing areas. Negotiations on the Common Market cannot be divorced from this pact, particularly as the European cotton industries are decidedly wary about the British policy of permitting duty-free entry of such goods from the Commonwealth.

Could It Be Worse?

At the start of the holiday season in the mill towns, when output must of necessity be curtailed by extensive local stoppages, traders have often paused momentarily to assess their position. Any such thoughts on this occasion can scarcely be pleasant or prolonged, as the past in retrospect has been a distinctly frustrating experience.

Turning instead to the future, the outlook is by no means favourable, yet it has the negative aspect of being unlikely to be worse than during the past 12 months or so. De-stocking has continued for most of this period and the absence of fresh business leading to a shortage of contracts has been the dominating influence. In such circumstances, it must be argued that a revival in activity will eventually show itself—what is needed is some stimulating factor to provide the initial impetus.

Wanted—A Stimulus

Weather conditions have this power to change the situation but seasonal trends are not suddenly altered and it is easy to miss the market when replenishment buying comes too late. This may well be the case in 1962, although the prospects opened up by a sunny beginning to June could cause a switch from dullness to a broadening demand.

Production in Europe

In view of the keen attention obviously being directed towards European trade affairs during the critical negotiations about Britain's entry into the Common Market, the publication of statistics covering the area, however belated, cannot be overlooked. Figures for the first half of 1961, collected by the International Cotton Federation some months after the end of the big scrapping scheme in the British cotton trade, provide a more realistic measure of capacity in Western Europe as a whole than those available in earlier years. In the 15 countries concerned more than 5 million spindles were eliminated in 1960, a reduction of 12.6 per cent., following the disposal of 6,500,000 spindles, or 13.9 per cent., during the previous year. Over the two-year period, spindleage in the United Kingdom alone fell by 10,179,000 and in the rest of the area by 1,461,000—approximately 2.7 per cent per annum.

One intentional outcome of the scrapping programme was that the remaining machinery was more fully used: 92 per cent of the spindles in place at the beginning of 1961 were in use for all or part of the first six months of last year, whereas the comparable figure in the first half of 1960 was 84 per cent. The number of spindle-hours worked during the first half of last year was higher than in the comparable period of either of the two previous years.

More Automatic Looms

The reduction of looms in place during this transitional two-year period was smaller in proportion. In 1960, there was a fall of 74,000 looms, or 9 per cent of the total, after the elimination of 51,000 looms, representing six per cent during 1959.

Also noted in the returns is the steady increase in the number of automatic looms installed at the expense of ordinary looms. In the European Economic Community during 1960, the number of ordinary looms declined by 18,000, but an increase of 2,000 automatic looms was reported. Cloth production in Western Europe in the first half of 1961, however, was distinctly higher than in the equivalent period of the previous year.

Plant Sales Pick Up

Earnings from textile machinery exported last year set up a new record, but, in the first quarter of 1962, they showed a decline of nearly £1,100,000. An improvement in the offtake during April, however, brought the volume of plant sent abroad to a higher level than in 1961. The current position, after the first four months, is that shipments amounted to 530,625 cwt., as against 525,214 cwt., the respective values being £21,007,299 and £21,748,174.—*All Rights Reserved.*

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

SHARP FALL IN COFFEE PRODUCTION

BUT GROWERS GET SLIGHTLY HIGHER PRICE

THE date of this week's issue of *Commerce*, that is, 30th June 1962, marks the end of the current coffee season which began on 1st July 1961. The season (1961-62) was one of the poorest in the recent history of the Indian coffee industry, at least from the point of view of production. The quantity of seeds actually harvested was no more than 43,000 tonnes, representing a fall of as much as 60 per cent as compared with the 67,794 tonnes produced in the previous season (1960-61). Weather conditions might have had its impact on the size of the coffee crop, but there is no denying that the poor return obtained by coffee growers in the previous season also had its effect. The average "point" value paid by the Coffee Board to growers, which was Rs. 2.45 for the 1958-59 crop, declined to Rs. 2.20 for 1959-60 crop and Rs. 2.06 for 1960-61 crop. This meagre return and the fact that the coffee growers had no control over the marketing arrangements for their coffee must have killed their enthusiasm to produce more.

The position in regard to prices has, however, since improved, especially after the introduction of the new system of open auctions for export coffee by the Board with effect from the beginning of 1962. Thanks to the new system and the keen demand for all growths and grades of coffee, prices have registered a notable rise. Plantation A grade coffee for export is currently ruling in the Virudhunagar market at as high as Rs. 290 per 50 kg., as against Rs. 191-220 early this year and Rs. 186-198 in January 1961. In view of the high export prices, the 1961-62 payments (to coffee growers) are expected to be nearer Rs. 2.30 per point. Even this payment is much less than Rs. 2.81 per point obtained in 1956-57, since when there has been a sharp rise in production costs. The table below gives the pool stocks and sales of coffee out of the current and previous seasons' crop:

Pool Stocks and Sales

(In metric tons)

(Upto 15th May)

	1961-62 crop	1960-61 crop
Receipts into the pool	43,634	67,794
Of which :		
Plantation	21,876	28,984
Arabica cherry	6,320	10,304
Robusta	15,438	28,506
Sold against pool sales, local sales and allotments	3,263	32,755
Of which :		
Plantation	3,066	11,035
Arabica cherry	197	5,058
Robusta	...	16,662
Sold for export	5,656	32,271
Of which :		
Plantation	5,315	17,921
Arabica cherry	36	5,141
Robusta	305	9,209
Balance of stock	34,715	2,768
Of which :		
Plantation	13,495	28
Arabica cherry	6,037	195
Robusta	15,133	2,635

The improvement in prices of coffee, however, is only some consolation. For it has not been of such magnitude to offset the effects of the sharp fall in aggregate production of coffee. Further, despite lower production, the undisposed stocks of coffee at the end of the 1961-62 season are very much higher than those a year ago, in view of the record crop in the previous season.

The need for ensuring a reasonable return to coffee producers is important, for, otherwise, production cannot be expected to be maintained at a high level. It may be noted here that the gap that has to be covered between the actual output of 43,000 tonnes in 1961-62 and the third Plan target of 80,000 tonnes is pretty wide—37,000 tonnes. Unless production is stepped up and simultaneous efforts are made to improve the quality and reduce the cost of production, the prospects for exports will be none too encouraging, what with the huge stocks already hanging on the world market (about 3.9 million tonnes as on 30th September 1961) and the fears of a further substantial increase.

It is against the aforesaid background that the United Nations Acting Secretary General has invited 110 countries to meet at New York on 9th July next "to do something about the world surplus of coffee." The 110 countries include all the 104 U.N. member-States and 6 non-members (West Germany, South Korea, Kuwait, Rhodesian Federation, Switzerland and South Vietnam). The confe-ed to last five or six weeks. It is understood that the Government of India has decided to participate in the conference; the delegation is likely to be led by Mr. H. Sitarama Reddi, Chairman of the Coffee Board. Mr. J. O. Santos, Secretary-General of the International Coffee Study Group, visited New Delhi last week to persuade the Government to join the proposed long-term international coffee agreement which will come into force on 1st October next, if everything goes well.

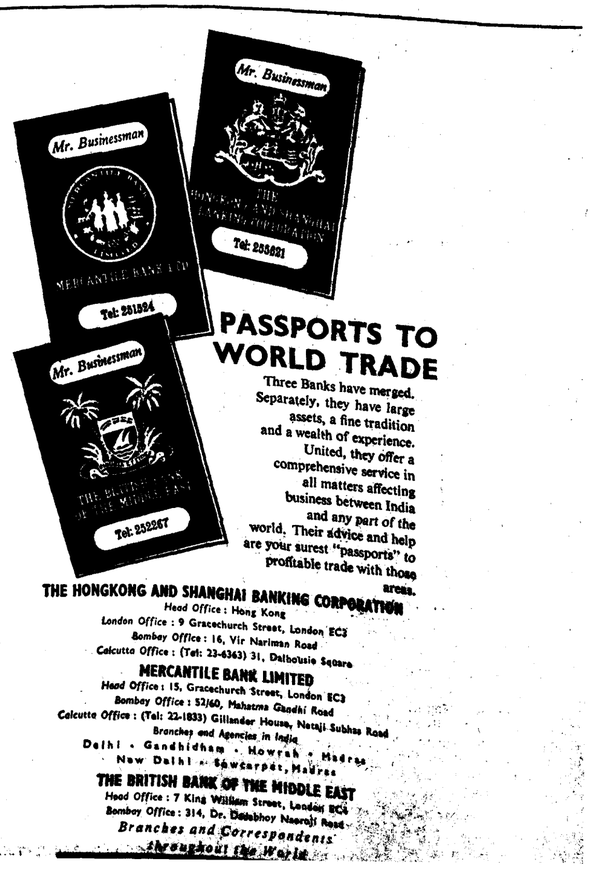
With the decision of the Union Government to participate in the U.N. coffee conference, the question as to whether this country should join the agreement has come up again. The Coffee Board and several planters would appear to have renewed their pressure on the Government to join the agreement. Apparently, they must have been prompted by a fear and a hope. The fear is that, if India stays outside the agreement, its coffee may be denied entry in several consuming countries which may be given the right under the agreement to control imports from non-agreement countries. The hope is that the tariff on coffee imported from the producing countries may be reduced as a measure to boost consumption. As against the plea for seeking the membership of the world coffee agreement, there is the consideration that India may have to subject itself to all the restrictive provisions of such an agreement. The draft agreement, it will be recalled, provides for fixation of export quotas, penalties for excess shipments, minimum selling prices and output targets for producing countries. This consideration is a very important one, especially because India's coffee exports are relatively small and there is the urgent need for augmenting these exports with a view to earning foreign exchange so badly required to push through the various Plan schemes.

India certainly cannot afford to be a party to any move that tends to encroach upon its right to regulate its coffee production, which, by world standards, is still small. The country's final decision about the membership of the long-term coffee agreement will, of course, depend on how far and to what extent the agreement will reconcile the conflicting viewpoints of the producing countries *per se* and between producing and consuming countries. It will be worthwhile to quote here what the London *Financial Times* stated recently in the course of an editorial:

"The difficulty is that the interests of the two sides are still very far apart. Bedevilled as they are by massive stocks and the political influence of their own farmers, the producer-governments are primarily concerned with disposing of as much coffee as possible at the best available price. They are, therefore, working for an agreement which will help them to achieve these objects, while, at the same time, remaining sufficiently flexible to be able to steal a march on their competitors whenever possible. The consumers, however, are more anxious to bring consumption and production into line by the destruction of surplus stocks and capacity, and are in many cases reluctant to carry out a wholesale reduction in their tariffs and other taxes."

It is in this context that the two recommendations made by the U.S. National Coffee Association are significant and indications are that they will be stoutly opposed by the producing countries. First, the quotas that will be fixed under the agreement must include all types of coffee and cover all markets, so that it would be extremely difficult for producers to contravene the new agreement in the way the old has been. Secondly, the coffee producers should commit themselves to a plan for the reduction of surplus stocks and production within a reasonable period of time.

Meanwhile, the coffee interests in India must have noted with concern the latest Press reports suggesting that the Ministers of the six European Common Market countries have decided to reduce the common external tariff for coffee imported from the "associated" countries in Africa and Latin America by 25 per cent with effect from 1st January 1962 and by another 15 per cent in 1963. This decision will doubtless adversely affect India's exports to the Common Market countries which had registered some improvement last year. The E.E.C. duty on coffee is pretty high, being 16 per cent. As the Government of India has clearly stated in its memorandum to the E.E.C., the restrictive effect of such a high tariff on exports would be considerably aggravated by the fact that supplies of coffee from countries and territories associated with the E.E.C. will have duty-free entry into the member-States in later years.



PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

An Industry Nurtured by Research

'More than any other industry,' someone has said rightly, 'the Dyestuffs Industry has been nurtured by Research'. Dyestuffs is a complicated industry, comprising hundreds of intermediates and complex processes. An important feature of this industry is that it is DYNAMIC and PROGRESSIVE...it keeps on changing with the tastes and preferences of people. Its prosperity, therefore, depends primarily on the extent to which research in Organic Chemistry—with particular accent on the Chemistry of Dyes—advances in the country. ■ A sound foundation for Research has been laid at AMAR DYE to enable it to keep its standards abreast of the latest trends in the world of dyes. AMAR DYE's ambitious research plans are based on a bid to secure rapidly for the country a firm place among the important dyestuff manufacturers of the world.

LINKING CANE PRICE TO SUGAR RECOVERY

GOVERNMENT'S DECISION TO TAKE EFFECT FROM NEXT SEASON

AT long last, the Government of India is reported to have taken the bold decision to link the price of sugarcane to both recovery per cent and quantity with effect from the ensuing crushing season due to commence on 1st November next. The credit for this decision must certainly go, in large measure, to Mr. S. K. Patil, Union Minister for Food and Agriculture. For it is he who has sought to enforce a scheme, although it has been talked about for nearly a decade, and two of his predecessors failed to implement it. But, apparently in his anxiety to avoid political unpopularity, Mr. Patil has perpetuated the defects in the existing system. Full details of the new scheme, which will replace the present defective system of paying for cane on the basis of weight alone irrespective of quality considerations, are not yet available. The broad features of the scheme, however, are said to be as follows:

The minimum (standard) price will, as in the past two seasons continue to be Re. 1.62 per maund on the basis of a recovery of 9.8 per cent. But a scheme of discount or premium will be applied alongside. According to this, a small sum of 1.2 nP per maund will be added or deducted, as the case may be, for every rise or fall of 0.1 per cent in the average certified recovery during the current (1961-62) season.

Two Disquieting Features

The principle behind the above decision is, indeed, a commendable one, but its application in actual practice suffers from two disquieting features. First, the existing minimum price of Re. 1.62 per maund of cane, which is high in all conscience, is being continued and, second, the recovery per cent of 9.8 per cent taken as the average basis is very low. It will be recalled that, when the Government first raised the minimum price from Re. 1.44 per maund (applicable for the seasons from 1953-54 to 1958-59) to Rs. 1.62 just before the commencement of the 1959-60 season, it was clearly stated that the enhanced price was for the 1959-60 season only. Even the old price of Re. 1.44 was regarded as too high in relation to prices of other agricultural commodities. But the higher price of Re. 1.62 was continued during the 1960-61 and 1961-62 season also. It is this policy that has been responsible for the glut of sugarcane supplies and the problem of sugar surplus, so that the Government has had to enforce a compulsory cut in the output of white sugar. Despite this cut in output, there has been a substantial expansion in the area sown to the cane crop. The second official estimate of the cane crop for the season 1961-62 puts the total area at almost 6.00 million acres, as against 5.73 million acres in 1960-61 and 5.22 million acres in 1959-60 to which level it had risen from 4.80 million acres in 1958-59. The area of 4.80 million acres in 1958-59, when the minimum price of cane was Re. 1.44 per maund, was itself pretty large as compared with the area sown in previous years, say, 3.50 million acres in 1953-54. Surely, the agriculturists would not have devoted such a large area to the cultivation of sugarcane if the price had not been very profitable. In addition to this so-called minimum price, which itself was fixed at a very high level, the cane growers has also been getting a share in the profits of sugar mills. Both the efficient and inefficient farmers have been getting the same reward all these years.

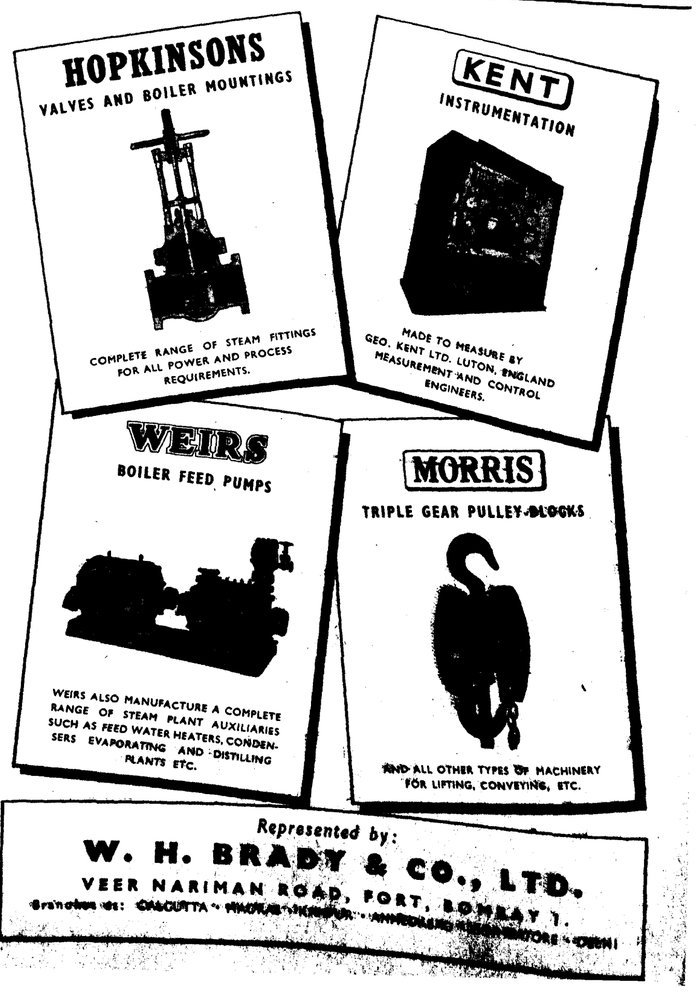
Incidence of High Cost

What is worse, the enhanced price of Re. 1.62 per maund is to be paid under the new scheme for cane with a recovery of just 9.8 per cent, and not the usual basis of 10 per cent that has been regarded as the norm all these years. In effect, therefore, the minimum price per cane with 10 per cent recovery will be higher still—Re. 1.64 2/5 per maund, a rise of another 2.4 nP. With this rise, the incidence of cane cost in the total cost of sugar production will work out to as much as 68-69 per cent. Nowhere in the world, we think, is the incidence of raw material cost in sugar industry so high as it is in India. The Government should have at least linked the present price of Re. 1.62 per maund with the recovery of 10 per cent as had been suggested by the Indian Sugar Mills Association. There is, however, one consolation, and that is that, as a result of the new scheme, the sugar mills will no longer be liable to pay to cane growers a share in the prices of sugar realised by them in excess of what is regarded by the Government as the fair ex-mill prices.

The schedule of adding or deducting at the rate of 1.2 nP for every rise or fall of 0.1 per cent in recovery of sugar in cane seems to be quite reasonable. Wider slabs, as the Sugar Mills Association has pointed out in a memorandum submitted to the Food and Agriculture Ministry, would not be equitable and also not in the interest of growers. The schedule, the Association has further suggested, should operate between the recovery limits of 8.5 per cent and 11 per cent, subject to a minimum of Re. 1.44 per maund. The Association also wants the factor of duration, which has a close bearing on the recovery of sugar, to be taken into account. The limits for duration suggested are 90 days and 180 days. It may be noted here that the cost schedule prepared by the Tariff Commission for the Northern region operates between these limits. An important point made by the Association is that, for determining the cane price, the recovery for the season concerned should be taken into account. This suggestion naturally presupposes payment of an initial price to cane growers, the final price being worked out at the close of the season when the overall recovery duration are known.

The one reason why the system of linking the price of sugarcane to sucrose content has been strongly advocated is that it will lead to an improvement in the quality of cane raised. Hitherto, the agriculturists have not bothered to put in more efforts to grow cane yielding a larger quantity of sugar per acre, as they have been assured of a fixed minimum price on whatever cane they were supplying to the suga mills. Indeed, the continued adoption of thi defective system had all along nullified th otherwise useful cane development work. It is not surprising, therefore, that, barring a few development zones, both the average yield of cane per acre and the recovery per cent continue to be poor, the all-India averages (1960-61) being 14.41 tons and 9.74 per cent, respectively, as against 14.25 tons and 9.92 per cent in 1954-55.

In theory, the new system should encourage the farmer to grow better quality of cane which in turn will result in the release of a part of the area under sugarcane to other agricultural crops, especially foodgrains. It, however, remains to be seen to what extent this will happen, for there is nothing in the new scheme that discourages inefficient sugarcane farming. On the contrary, there is every possibility of still more land being brought under this crop, as the present minimum price of Re. 1.62 per maund is being continued for all practical purposes. We have already pointed out that that price has led to a progressive increase in the area sown to sugarcane crop in recent years. It would be no consolation even if the upward trend were arrested, with the present area being repeated in the coming seasons, for that would only be a negative gain. What is required is a substantial reduction in the present sugarcane acreage, followed by a rise in the yield of cane per acre. For that to happen, the Government ought to have fixed the minimum price at a much lower level, retaining the present minimum as the maximum to be paid for cane with the highest sucrose content, say, 11 per cent, if not 12 per cent. In fine, the Government is making only a half-hearted attempt at implementing a good suggestion. It would not, therefore, be surprising, if the results flowing from its efforts were to be unsatisfactory. It is regrettable to find that Mr. Patil, too, has failed to summon enough political courage to go the whole hog after deciding to pursue the right path.



CONTROLLING EXPENSES OF GENERAL INSURERS

VIOLATIONS GALORE CALL FOR REVISION OF BASIC LIMITS

THE annual report of the Controller of Insurance gives every year detailed information regarding the compliance or non-compliance by general insurers with the regulation relating to limitation of expenses. Considering that the formula limiting expenses under Section 40C of the Indian Insurance Act is of doubtful value, too much significance should not be attributed to these data. Nevertheless, as a broad indication of the trend of expenses of general insurers, they have some value.

Section 40C of the Indian Insurance Act seeks to limit the expenses of management that can be lawfully incurred by an insurer in respect of his general insurance business in India. The basic limits for expenses are prescribed in Rule 17E of the Insurance Rules. The Controller of Insurance is, however, empowered to fix, in consultation with the Executive Committee of the General Insurance Council, the extent of relaxation from these basic limits in respect of any year. Apparently, in fixing the extent of relaxation in a particular year, the Controller takes into account the trading conditions during that year, so as to enable insurers to keep the expenses within reasonable variations from the prescribed limits. In exercise of this power, the Controller of Insurance fixed the extent of relaxation for the year 1951 at 2½ per cent of the gross premium written direct in India during that year. For each of the years 1952 to 1954, the relaxation was fixed at 20 per cent of the fall in the gross premium written direct in India during the year concerned, as compared with the gross premium written direct in India during 1951, subject to a minimum relaxation of 1½ per cent and maximum relaxation of 5 per cent of the gross premium written direct in India during the year concerned. The extent of relaxation was reduced for each of the years 1955 to 1957. Further, fire and miscellaneous insurance business were treated differently from marine insurance. For the years 1958, 1959 and 1960, the extent of relaxation for fire, miscellaneous and marine insurance business alike was fixed at 15 per cent of the fall in the gross premium income written direct in India during the year concerned as compared with 105 per cent of such premium income in the preceding year, subject to a minimum of one per cent and a maximum of 4 per cent of the gross premium.

Trend Since 1955

According to the *Indian Insurance Year-book*, 1961, the number of groups of Indian as well as non-Indian insurers who contravened the provisions of Section 40C of the Act was less during 1960 than in 1959. About half of the groups of insurers who contravened the provisions of Section 40C of the Act during the year 1959 were administered a warning. Out of a total number of 123 groups of insurers, who transacted business during 1960, only 44 groups complied with the provisions of Section 40C of the Act throughout the period from 1955 to 1960, while as many as 33 groups of insurers contravened the provisions four or more times. Of these 33 groups, as many as 30 groups were administered warning once or more. The registration of one insurer, who disregard two warnings, was cancelled last year. The following table gives a classification of the groups of insurers who transacted insurance business during the year according to the number of times they contravened Section 40C of the Act during the six-year period 1955-60:

	Number of groups of insurers		
	Indian	Non-Indian	Total
Groups of insurers who:			
Complied with S. 40C of the Act in all the years	29	15	44
Contravened S. 40C in:			
One out of the six years ..	12	3	15
Two out of the six years ..	8	10	18
Three out of the six years ..	10	5	15
Four or more out of the six years	18	15	33
Total ..	77	46	123

As regards the overall experience, the Controller of Insurance makes the following comment:

"Considering all classes of general insurance business together, groups of insurers who spent less than the basic limits in terms of Rule 17E, wrote almost the same proportion of the total gross premium written direct in India in the year 1960 as in the year 1959. The percentage of the gross direct premium income by which the expenses actually incurred exceeded the basic limits in respect of the groups spending more has decreased from 4.0 per cent in 1958 to 3.3 per cent in 1960. The aggregate experience of all groups over the period from 1958 to 1960 shows that, whereas the actual expenses have exceeded the basic limits both in 1958 and 1959, there is a marginal saving in 1960.

"In respect of fire and miscellaneous insurance business, a higher proportion of the total gross premium written direct in India went to groups of insurers spending less than the basic limits during 1960. The percentage of the expenses incurred in excess of the basic limits by groups, which spent in excess, to the gross premium income written direct in India, which increased from 3.7 per cent in 1958 to 4.2 per cent in 1959, has decreased to 3.9 per cent in 1960. The experience of all groups, except those with a premium income between Rs. 15-20 lakhs and Rs. 27½-35 lakhs, was better during 1960 as compared with 1959.

"In marine insurance business, about two-thirds of the total gross premium written direct in India went to groups of insurers spending less than the basic limits during 1960. The percentage of expenses incurred in excess of the basic limits by groups, which spent in excess, to the gross premium income written direct in India, which had increased from 4.4 per cent in 1958 to 5.1 per cent in 1959 has decreased to 4.1 per cent in 1960. The experience of all groups, except those with a premium income between Rs. 5-10 lakhs and over Rs. 22½ lakhs, was better during 1960 as compared with 1959."

Revision Needed

It is evident from the above that, contrary to the general impression, those insurers who spend more are not necessarily those that write more business. The large number of cases of violation of the law relating to expenses indicates that the basic limits for expenses under Rule 17E, which were fixed in 1950, are out of parity with the increased cost of every item of management expenses. It is so even after making allowance for the relaxation given by the Controller year after year. It is estimated that expenses of management incurred by general insurers have gone up by a minimum of 20 per cent and a maximum of 30 per cent during the period 1950-59. There is therefore, a strong case for a revision of the basic limit of expenses as also a re-examination of the practice of linking expenses with the gross direct premium which has been held to be responsible, partly at least, for the scramble for business and the many malpractices resulting therefrom.

INDIAN MERCANTILE INSURANCE CO., LTD.

The favourable conditions experienced by general insurance business during 1961 are reflected in the results of the Indian Mercantile Insurance Company Ltd. (Manager and Secretary: Mr. C. M. Telivala, Bombay) for the year ended 31st December 1961. The combined net premium income in all the three departments taken together rose to Rs. 43.76 lakhs from Rs. 37.98 lakhs in the previous year. The increase was accounted by the fire and miscellaneous departments, wherein the net premium were higher at Rs. 22.29 lakhs and Rs. 13.61 lakhs, as against Rs. 19.07 lakhs and Rs. 10.75 lakhs respectively, in the previous year. Marine premium, on the other hand, showed a slight decline from Rs. 8.16 lakhs to Rs. 7.86 lakhs.

Claims experience, especially in the fire department, was better. Net claims paid and outstanding amounted to 29.9 per cent in the fire department, 40.6 per cent in the miscellaneous department and 77.4 per cent in the marine department, as against 36.6 per cent, 42 per cent and 69.3 per cent, respectively, in the previous year. Commission and expenses were lower in the fire and marine departments, having been only 44.2 per cent and 28.5 per cent, as against 45.6 per cent and 31.8 per cent in 1960, while, in the miscellaneous department, they were fractionally higher at 44.6 per cent, as against 44.2 per cent in the previous year. The net underwriting profit, that is, profit in the fire and miscellaneous departments minus the loss in the marine department, increased from Rs. 3.41 lakhs in 1960 to Rs. 4.94 lakhs in 1961. This was not so much the result of a substantial increase in the underwriting profit in the fire and miscellaneous departments as an outcome of a reduction in the loss on the marine account from Rs. 1.47 lakh to a mere Rs. 5.260. The net profit is higher at Rs. 6.65 lakhs, as against Rs. 5.69 lakhs in the previous year. The dividend has been maintained at Rs. 6 per share, subject to tax, the same as in the previous year.

The following table summarises the salient features of the working of the Company during the three years 1959, 1960 and 1961:

(In lakhs of rupees)

	Year ended 31st December		
	1961	1960	1959
Fire:			
Net premium	22.29	19.07	20.77
Net claims	6.67	6.98	6.22
Commission and expenses	9.84	8.69	7.78
Underwriting profit (+) or loss (—)	+4.34	+4.41	4.48
Fire fund	11.15	9.54	12.38
Marine:			
Net premium	7.86	8.15	6.69
Net claims	6.08	5.65	5.30
Commission and expenses	2.24	2.69	2.34
Underwriting profit (+) or loss (—)	—0.05	—1.47	—1.76
Marine fund	7.86	8.16	6.69
Miscellaneous:			
Net premium	13.61	10.75	8.61
Net claims	5.52	4.52	5.59
Commission and expenses	6.08	4.75	3.91
Underwriting profit (+) or loss (—)	+0.66	+0.47	—0.61
Miscellaneous fund	6.61	5.37	4.31
Net profit	6.65	5.69	4.05
Dividend	2.54 (15%)	2.54 (15%)	2.26 (13.4%)
Carry forward	3.09	4.21	4.17

As already noted, the departmental contribution to the profit and loss account amounts to Rs. 4.94 lakhs. This, together with Rs. 1.71 lakh being income from the interest, rents and miscellaneous receipts, including profit on sale of investment, aggregating Rs. 3.13 lakhs, less outgo amounting to Rs. 1.41 lakh, yields a total of Rs. 6.65 lakhs to which has been added Rs. 47,000 being the net balance brought in from the previous year, giving a sum of Rs. 7.12 lakhs available for appropriation. Out of this a sum of Rs. 1.50 lakh has been transferred to the general reserve. The proposed dividend absorbs Rs. 2.54 lakhs. The balance of Rs. 3.08 lakhs, subject to taxation for the year 1961, is being carried forward.

The funds and reserves of the Company, as on 31st December 1961, aggregate Rs. 68.74 lakhs, made up of a paid-up capital of Rs. 16.92 lakhs and reserves and surplus of Rs. 51.82 lakhs.

CAR INSURANCE IN SWEDEN

Car insurance premiums in Sweden are to be raised by 20 per cent from the beginning of next October. In the case of some of the smaller companies, the increase may be greater. Higher premiums have been expected for some time since there has been no general change in rates for as long as seven years. In the interval there have been some alterations designed to bring the rates into a more equitable relationship with each other, but this is the first overall rise since 1955.

What has prevented this so far is that there has been considerable competition between the insurance companies, which has in particular taken the form of the offer of higher bonuses for special categories of drivers. One way out of this type of conflict has been the merger. Most of the leading companies reported this year that they were making a loss on their car insurance business. One of the biggest groups reported that last year the total damages paid out exceeded premium income by 10 per cent. The companies have agreed, with the approval of the State insurance authority, to raise the premiums as a consequence, and it would not be surprising to find that bonuses are soon reduced in some cases.

The industry reckons that since 1955 damages paid out have risen by 25 per cent simply as a result of the higher cost of living.

HERCULES INSURANCE CO., LTD.

An error had inadvertently crept into our review of the Hercules Insurance Company, Ltd. published in *Commerce* dated 2nd June 1962, page 990, wherein it was stated that 1961 was the eighth consecutive year for which the Company had paid a dividend. This is not correct. The Company had been paying dividend every year for the last eighteen years and hence the dividend for 1961 is the eighteenth.

An old, well-established trading Company with strategically situated Show Rooms, Service Stations, and Offices in New Delhi, Calcutta, Madras and Bombay and with Associates in the U.K. and Ceylon is looking for Representatives, Sole Selling and Export Agencies from Indigenous Manufacturers of Engineering Products, Scientific and Industrial Instruments, and Consumer Products. Proposals for Sole Selling and Export Agencies and Representatives in other lines will also be considered. Excellent Bank references. Write in confidence to Box No. 994, c/o "Commerce," Brady House, 12/14, Veer Nariman Road, Bombay-1.

FIRST FIVE YEARS OF COMPANIES ACT, 1956—II

BALANCE SHEET OF GENERAL GAINS AND LOSSES

By A Special Correspondent

ON the fundamental plane, it has been urged by the Government spokesmen that the whole concept of company legislation had undergone an almost radical change and the old principle of *laissez faire* has come to be abandoned in modern times in favour of increased Governmental intervention in the conduct of affairs of companies, as the Government is expected to play an active role "in the integration of the activities of a company with the public interest in a welfare State." The concept that company's sole responsibility is to its shareholders has now come to be destroyed with the rise of big and giant-sized companies whose activities have direct effects on the various sections of the society separately and taken together, let alone the shareholders who constitute a tiny fringe in comparison to the rest of the community. As George Goyder, in his latest book *The Responsible Company*, puts it, "the social role of the big company is becoming so important for the community that the way in which big companies discharge their social responsibilities is of immediate concern to all of us." In this connection, on the management's role, he stresses the point that "the balancing of the company's responsibility to the workers, as members of the company, to the consumers of the goods and services it provides and to the community of which it is a citizen, with its primary one of operating at maximum efficiency and lowest cost so as to make profit and discharge its obligations to its shareholders, represents the full scope of management." Viewed from this angle, "increasingly the view has gained ground in recent years that directors of a company are trustees not merely for the owners or shareholders of the company but also for workers, suppliers, consumers, the immediate community and the general public." The apparent failure of the Company managements in India to attune their thinking apparatus to the newly emerging concepts of social responsibility of the company and the prevailing social compulsions of a growing industrial economy has led to the curtailment of the powers and privileges of management under the present Companies Act.

Enlightened Opinion

Thus, the absence of appreciation and assimilation of trusteeship concept is the basic source of complaint against the administrative policies and decisions of the Government who now seem to demand a spontaneous acknowledgement and acceptance of "social responsibility" by those in authority in a company as a moral imperative. Once the harmonisation of views takes place between the business and Government on this fundamental plane, much of the present discord and difficulties in the working of the provisions of the Companies Act are likely to vanish. The enlightened opinion in our country seems to be slowly veering round the Government's view, as is clear from Mr. K. P. Khaitan's observation at a Seminar on Company Law held under the auspices of the Indian Law Society where he said that "a company is no longer to be regarded merely as a legal entity which carries on trade, business or social activities but a company is a special being which affects the life and economy of the nation in such a manner and to such an extent that it must be subjected to a special code of public conduct and responsibilities."

The Government have also made it clear that their aim is to see that a high code of honesty and conduct is developed and followed by company managements. The restrictions imposed under the new Act regarding the number of directorships that can be held by an individual, the limits on managerial remuneration, the restrictions on certain financial powers of the management requiring reference to the general body of shareholders, the interdicting of fiduciary transactions in which managerial personnel are interested, the prescription of a procedure for proper disclosure and the securing of approval to fiduciary transactions by the general body, all these, again, stem from the above desire on the part of the Government.

On the question of detailed regulation the Government's case seems to be based on the fact that company management cannot be left to the judgment and discretion of top personnel as in the U.K. or the U.S.A. for a few very cogent reasons. First, the principles of social responsibility or social obligations of business have not, even in a limited sense, been realised in our country. Secondly, there has been a tardy growth of the sense of fiduciary responsibility in the average company management in the country. Thirdly, there is absence of strong and well organised financial institutions with long traditions of public service to their credit and that a strong unbiassed financial and economic press has yet to emerge in the country which would exercise a restraining influence on the bad elements in the corporate sector through exposure of concealed facts and through guidance given to the public in the country. Fourthly, there is also the absence of a strong and well-developed public opinion with regard to company matters which is prepared to frown severely upon unwarranted deviations from accepted norms of company behaviour and practice. Fifthly, comparatively slow progress has so far been made in the country towards professionalisation of the management of joint-stock enterprise which is already an established fact in the leading countries of the West and which has accounted for far-reaching changes in the character and quality of company management in those countries. It is advanced from official quarters that "the truth is that the particular form and manner in which company practice is best regulated in a country depends not so much on ideological or *a priori* considerations, as on the state of a country's economic and social development, the current manners and moves of the business community particularly of the higher echelons in that community and on a host of other objective factors, not the least important of which are the competence and capacity of its voluntary economic institutions to regulate as a matter of internal discipline the behaviour pattern of the corporate sector."

Administrative Efficiency

As regards the other points of criticism that there would be delays and harassments, penalisations and persecutions and arbitrary handling of cases by inexperienced and untrained staff, the Government have from time to time given fulsome assurances that these would be avoided. For the matters relating to appointment of managerial personnel, their remuneration, etc., a safeguard has been provided in the Act itself in the form of the Advisory Commission. Further, the Government have given the assurance that the decisions of the Commission, which would be a non-official body, would be accepted as far as possible unreservedly. Consequently, the area for arbitrary decisions taken in any brash and brazen manner in such matters has considerably been narrowed down. Further, as the Annual Statutory Reports say, the Government have progressively been trying to build up the necessary expertise inside the Department to look at the problems of the corporate sector with an understanding indulgence and from the technical angle, instead of in any whimsical or quizzical manner against which an alarm had been raised during the debates on the Companies Bill in Parliament in 1955. The Government, as is given out by official quarters, are continuing their efforts to "improve the instruments of execution of policy" by imparting training to the staff even at the lower echelons.

As regards delays and unnecessary harassment of companies, it is learned that there has been a continuous flow of instructions and circulars from the headquarters to the field and regional offices of the Department of Company Law Administration to avoid delays to the fullest possible extent. On these points, there is also the assurance given by the then Minister of Finance, Mr. C. D. Deshmukh, who piloted the Companies Bill in Parliament in 1955. He said that "I am very happy to give the assurances that have been demanded in regard to the administration; first, that it should be adequately staffed, that it should be competent, that red-tape should be reduced to a minimum and that, finally, we should have a new concept of positive helpfulness; that is to say, our aim should be not to trip up the unwary but to assist actively those who seem anxious to observe the law but find themselves somewhat helpless in this welter of legislation."

But, with all these assurances and best of efforts on the part of Government, it would be too presumptuous to say and believe that the instances of delays, harassments and unnecessary irritations to companies have not occurred at all or are not likely to arise in the future. Instances of delays in scrutiny of prospectus and memorandum of association, etc., approval of managerial remuneration, harassment caused in connection with small lapses in filing returns or in giving timely intimations about various matters, etc., have very often been complained of by the business community. One has, however, to be realistic in this regard and look at these lapses with pardonable indulgence so long as something very serious does not occur.

A Criticism Belied

With regard to the criticism that the Companies Act and the Administration would affect the general investment climate for foreign investments and for expansion of corporate activities, it has been stated by the Government that the Companies Act by itself acted as a marginal deterrent factor as compared to the fiscal and labour laws. In fact, the investment climate is the product of interactions of many factors and it would be wrong to ascribe it to any single law or authority. However, notwithstanding the much mistaken view that the Companies Act by itself alone determined the investment climate and affected corporate activities and capital formation, one could say, on the basis of the available evidence furnished by the growth of corporate funds, maintenance of new company registrations on a high plateau except in one year, 1956-57, and the increase in the number of foreign collaborations and the like developments, that the much feared deleterious effects of the Companies Act and of the administrative policies followed by the Department of Company Law Administration were very much exaggerated and have not been realised.

Investors' Confidence

While the business community has found faults with the Act and the Administration, the Government have recorded a number of gains or achievements during the last five-year period in the Annual Statutory Reports. These gains have to be read against the major objectives for which company law was passed in 1955. The more important basic objectives kept in view while framing the new Act were (a) the improvement in the efficiency of corporate businesses as measured by accepted standards of management, (b) the reconciliation of managerial efficiency with the legitimate rights of investors, (c) the safeguarding of creditors and other partners in production and distribution, (d) the attainment of the ultimate ends of the current social and economic policy of the State to be helped and furthered by the working of the corporate business organisations in the country, (e) the reduction of the cost of management in the corporate sector, and (f) the putting an end to unsound and improper practices relating to inter-corporate loans and investments, control of management of companies which developed into alarming proportions during and post World War II years. Really speaking, it was these evils that provoked the Government to pass the present comprehensive company law. The latest Statutory Report has stressed this point in the following words.

"One of the basic objects of the Companies Act was to restore, through its regulatory provisions, the confidence of the general public in business investment which had been rudely shaken during World War II and in the years immediately after it, when, apart from speculative frenzy, large-scale malpractices by company managements had caused considerable damage not only to several public companies but also to the image of joint-stock enterprise as such in the public mind. As investors' confidence was essential to the long-term healthy growth of the country's industrial economy, it was felt that it should be revived without delay through effective administrative and legislative measure of diverse types. One of these measures was the new Companies Act."

The working of the Companies Act and the record of the Department of Company Law Administration will have to be adjudged against these objectives also. In broad terms, the Department of Company Law Administration has claimed the following achievements for itself; a more detailed discussion of some of these gains would be taken up in subsequent paragraphs:

(i) In sharp contrast to the old loose-type of Administrative set-up, the Department has neatly tidied up its offices at the State, Regional and Central levels manned by expert accounting, legal and administrative staff. With this expertise at its disposal, the Department has become "a central clearing house of information and advice to the other Ministries and Departments of Government, whether at the Centre or in the States as also for other Governmental and quasi-governmental authorities in respect of matters connected with the organisation and working of joint-stock enterprise in this country. In this role, the Department has helped the smooth functioning of the corporate bodies in the public sector according to law."

(ii) For the proper management of corporate bodies, the Department has strengthened several new professional disciplines, besides the chartered accountancy, viz., cost and works accounting, management accounting and company secretaryship "on which, in the long run, the standards of company management in the country must largely depend."

(iii) The scrutiny of documents and prompt action in regard to defaults have succeeded in inducing increasingly regular habits on the part of company management and have led to the submission of properly drawn up accounts within the stipulated time limits.

Management Problems

(iv) The scrutiny exercised by the Department over management problems like the appointment of managerial personnel, the terms and tenures of managing agents or managing directors or managers, etc., has reduced the opportunities for large-scale malpractices and, at the same time, instilled a growing sense of social responsibility in the management.

(v) It has succeeded in some measure to cleanse the corporate management in the country of incompetent and burdensome management. "The procedure followed in regard to the cases of the managerial personnel with the help of an independent Company Law Commission ensures that unfit persons are not appointed to top management positions," and that they are appointed on reasonable terms and conditions "such as do not impose a needlessly onerous burden on the companies."

(vi) Through effective vigilance and scrutiny of the special resolutions passed under Section 314 in cases where relatives and associates of the managing agents are appointed to offices or places of profit in a company a wholesome check is exercised on the evils of nepotism and other forms of improper appointment to important executive offices in a company.

(vii) The vigilance exercised over the conversion of public companies into private companies has had some effect in preventing evasion and avoidance of the provisions of law applicable to public companies.

(viii) The administrative scrutiny exercised over company promotions has helped to hold in leash the speculative elements in the corporate sector and to prevent the imposition of excessive unproductive financial burden on public companies.

(ix) The surveillance exercised over inter-company loans and investments has strengthened the financial bases of companies and has prevented unscrupulous elements in trade and industry from making use of public funds largely for their private ends.

(x) The law and the Administration has succeeded in exercising a healthy check on undesirable cornering activities which are detrimental to the public interests.

(xi) The administration of the provisions of law relating to oppression of minorities or mismanagement of company affairs by the majority has played its part in increasing the confidence of investors in joint-stock enterprises.

(xii) The powers conferred on the Administration about investigation into the affairs of companies and the manner in which these powers have been exercised in selecting cases have exercised a wholesome deterrent influence over unscrupulous company managements.

(xiii) The initiative taken by the Administration in respect of several matters connected with the management of companies which in the past were left almost wholly to the judgment of courts of law has already had some effect in changing the attitude of the general public towards the role of the courts of law in mercantile matters and at the same time introduced into the system of judicial administration a sense of perspective and wider horizons in relation to company affairs.

(xiv) The greater disclosure of financial information contained in the annual reports of companies had brought about an increasingly wider and more intensive awareness of the mechanics of company management among the shareholders, the creditors and the general public.

(xv) Such administrative vigilance as is exercised over company accounts and company audits by the Department has helped to develop a sense of responsibility among company auditors and, it is hoped, has strengthened their position *vis-a-vis* the management of companies as guardians of the shareholders and the general public.

(To be continued)

ANNOUNCEMENT

STATE BANK OF PATIALA

have pleasure to announce that, in pursuance of their "objective to promote Savings," THE INTEREST RATE on Savings Bank Accounts will be raised as from the 1st July, 1962, from 2½ per cent to 3 per cent per annum.

SPEECH OF THE CHAIRMAN SHRI R. B. AMIN

At the Fifty-fifth Annual General Meeting of the Shareholders held on 21st June 1962

THE ALEMBIC CHEMICAL WORKS CO., LTD., BARODA 3

LADIES AND GENTLEMEN,

I have great pleasure in welcoming you to the fifty-fifth Annual General Meeting of the Company. The Accounts for the year ended 31st December 1961 and the Directors' Report have been with you, and with your permission, I shall take them as read.

The end of the year under review coincided with the completion of the expansion envisaged and planned in 1957. The Yeast Plant was installed, and started production in 1958. Bottling of insulin and insulin production was started and the filling capacity for CO_2 was increased. The expansion of the Sulphuric Acid Plant will be completed in about four months' time, raising the capacity to 50 tons per day. Insecticides were put on the market. And, then, of course, the Penicillin Plant was planned, designed and was commissioned to production during the same period.

The fixed capital expenditure rose from Rs. 0.93 crore in January 1957 to Rs. 2.67 crores at the end of 1961. During the period of these five years, Rs. 31.60 lakhs were added to the reserve. Even after the amounts utilised (Rs. 7.00 lakhs for issuing bonus shares in 1957 and Rs. 3.85 lakhs for dividend equalisation for 1961), the net increment to reserve is about Rs. 21.00 lakhs. The turnover increased correspondingly, and for the year 1961 was double of that of 1956. This was in spite of the unfortunate setback received in the last quarter of 1961, to which a reference was made by your Directors in their report circulated to you.

Superphosphate Project Dropped

We are in the Third Plan period now, and are also in the midst of a foreign exchange crisis. Any further expansion of industries is hereafter going to be determined, for some time at least, by the foreign exchange available to it, and not necessarily by the opportunities available for expansion. An added factor is the development of the public sector, which seems always to get a priority. Our plans for future expansion, therefore, must take into account these factors and circumstances which seem to be changing fast. In my last year's address to you, I referred to the proposed expansion of the Superphosphate Plant. In view, however, of the setting up of the Gujarat State Fertilisers Company Ltd. which will manufacture nitrogen and phosphoric acid based fertilisers, there is little scope for the manufacture of only superphosphates. We are, therefore, giving up the idea of expansion of this project.

For the expansion of the Penicillin and the yeast Plants (also referred to by me in my last year's address), we ourselves negotiated a loan to cover the foreign exchange cost of the plant with the Industrial Credit and Investment Corporation of India Limited. We thought that by raising a foreign currency loan, repayable over a period of nine years, the Government would be persuaded to allow the imports. During the seven or eight months which have elapsed since our application for import licences, the Government has not yet taken decision for granting import licences for the expansion of Penicillin; but I am glad to say that only this week we have been intimated by the Government of its decision to allow imports of the machinery needed for the Yeast expansion under the D.L.F. programme. With the heavy restrictions on imports of consumer goods and with the steadily increasing demand both for medicinal and bakers yeast, there is need for an increased production of this product.

Ethyl Alcohol Plant

We expect that licence for the Penicillin expansion would also be granted to us by the Government soon. The expansion of the Ethyl Alcohol Plant is under way, and barring unforeseen difficulties, would be completed early next year.

Animal feed is put on the market during the current year.

Under the Finance Bill recently passed by the Lok Sabha, the Union excise duty is levied even on non-patent medicines, if they bear a trade name or bear a monogram, symbol or label of the manufacturer. It may be argued that a trade or brand name on even a non-patent medicine has a sales value; the monogram or a label, however, merely helps to safeguard purity of the drug and makes large-scale manufacture and sale of spurious drugs more difficult. If pilferproof caps would not bear the monogram of the manufacturer, they would not serve the purpose for which they are meant. I do, therefore, hope that the Government will still reconsider its decision and would not insist on the abolition of the monogram, etc. as a condition for exempting a non-patent drug from the excise duty. The reduction of the excise duty to 2½ per cent. on six very important life-saving drugs like penicillin, streptomycin, etc. is welcome.

Before I close, I would like to thank my colleagues on the Board, Managing Agents, staff and workers of the Company for their support and co-operation.

I now commend the Balance Sheet and Profit and Loss Account of the Company and the Directors' Report for your consideration.

Note:—*This does not purport to be the report of the proceedings of the Annual General Meeting.*

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus has been duly filed with the Registrar of Companies, Madras State, for registration together with the documents specified in this Prospectus, as required by Section 60 of the Companies Act, 1956.

The consent of the Central Government has been obtained to this issue by an order No. R. 33-CCI/62 dated 25th January 1962 of which a complete copy is open to public inspection at the Registered Office of the Company at Tiruchirapalli.

An Industrial Licence No. L/34 (5) N-8/59 dated 8th October 1959 has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving consent to the capital issue and in granting this licence, the Government of India do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Madras Stock Exchange Limited has agreed to grant official quotation for the equity shares of the Company and permission to deal in them will be granted on the Company complying with the usual and necessary formalities after the closure of the subscription list. An application is also being made to the Bombay Stock Exchange to grant official quotation for the equity shares of the Company.

THE SUBSCRIPTION LIST WILL OPEN AT 10 A.M. ON MONDAY THE 2ND JULY, 1962 AND WILL CLOSE AT 5 P.M. ON MONDAY, THE 9TH JULY, 1962 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING TO THE AMOUNT ISSUED HEREUNDER TO THE PUBLIC HAVE BEEN RECEIVED, BUT NOT EARLIER THAN 5 P.M. ON WEDNESDAY, THE 4TH JULY, 1962.

NEIVELI CERAMICS AND REFRACTORIES LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956.)

	Rs.	Rs.
AUTHORISED CAPITAL:		
7,00,000 Equity Shares of Rs. 10 each	70,00,000	
3,00,000 9% Cumulative Preference Shares (subject to deduction of tax) of Rs. 10 each.	30,00,000	
		1,00,00,000
ISSUED CAPITAL:		
4,20,000 Equity Shares of Rs. 10 each	42,00,000	
15,000 9% Cumulative Preference Shares (subject to deduction of tax) of Rs. 10 each.	1,50,000	
15,000 9% Cumulative Redeemable Preference Shares (subject to deduction of tax) of Rs. 10 each	1,50,000	
		45,00,000
SUBSCRIBED AND PAID-UP CAPITAL:		
68,250 Equity Shares of Rs. 10 each (Rs. 5 per Share paid-up)	3,41,250	
15,000 9% Cumulative Preference Shares (subject to deduction of tax) of Rs. 10 each fully paid	1,50,000	
15,000 9% Cumulative Redeemable Preference Shares (subject to deduction of tax) of Rs. 10 each fully paid	1,50,000	
		6,41,250

Out of the above issue, some GENERAL INSURANCE COMPANIES have subscribed for the entire Preference Shares of Rs. 3 lakhs, and therefore, no Preference Shares are now offered to the public.

Out of the issue of Rs. 42 lakhs of Equity Shares, the signatories to the Memorandum have subscribed for 18,000 Equity Shares of the aggregate face value of Rs. 1,80,000. The Directors of The South Madras Industrial Development Company Private Limited, who are the Managing Agents of the Company, their friends, associates and Directors of the Company have subscribed for 50,250 shares of the aggregate face value of Rs. 5,02,500. The friends of the Managing Agents have further agreed to subscribe for 4,050 shares of the aggregate face value of Rs. 40,500. The Madras Motor & General Insurance Company Limited, have agreed to subscribe for 10,000 Equity Shares of the face value of Rs. 1,00,000.

Out of the balance of 3,37,700 Equity Shares of the face value of Rs. 33,77,000, the foreign collaborators, Messrs. ELEMENTAL BAUKERAMIK VERTRIEBS, GmbH., have agreed to take 17,700 Equity Shares of the face value of Rs. 1,77,000 in lieu of one-third instalment of know-how fee payable to them. Messrs. FRANZ KIRCHFELD, GmbH., West Germany, have agreed to subscribe for 20,000 Equity Shares of the face value of Rs. 2,00,000.

The Life Insurance Corporation of India have agreed to underwrite 50,000 EQUITY SHARES of Rs. 10 each and accordingly 50,000 Equity Shares of Rs. 10 each will be allotted as firm allotment to the Life Insurance Corporation of India, who have agreed to subscribe for the same against underwriting arrangements with them.

THIS LEAVES 2,50,000 EQUITY SHARES OF THE FACE VALUE OF Rs. 25,00,000 WHICH IS NOW OFFERED FOR PUBLIC SUBSCRIPTION AT PAR FOR CASH IN TERMS OF THE PROSPECTUS AND IS PAYABLE AS FOLLOWS:

On application	Rs. 2.50 per share.
On allotment	Rs. 2.50 per share.

The balance of Rs. 5 per share is payable and will be called up in two equal instalments at an interval of not less than 3 months between the calls, the first of such calls being made not earlier than three months from the date of allotment. No premium is payable on these shares.

THE EQUITY SHARES HEREIN OFFERED FOR PUBLIC SUBSCRIPTION ARE FULLY UNDERWRITTEN.

BOARD OF DIRECTORS

1. SRI S. NARAYANASWAMY (*Chairman*), Stock Broker, 6, Chittaranjan Road, Madras-18.
2. SRI RUSSI JAL TARAPOREVALA (Businessman), 210, Dr. D. Naoroji Road, Bombay-1.
3. SRI H. M. CHAWALLA (Businessman). Resident Manager of: The Concord of India Insurance Co. Ltd., Bombay. 'Baktavar', Wodehouse Road, Bombay-5.
4. SRI R. CHAKRAVARTHY, M.A., B.L. (Business Executive), 3/1, Rani Jhansi Road, New Delhi-1.
5. SRI C. MUTHIAH MUDALIAR (Landlord), 4, West Car Street, Sirkali, Tanjore Dt.
6. SRI A. KRISHNAMURTHI, (Agriculturist), Alavandipuram, Thyagasamudram Post, Tanjore District.
7. SRI R. SUBBARAYAN (Businessman), 16, West Boulevard Road, Tiruchirapalli.
8. SRI RAJANIKANT MANILAL MEHTA (Businessman), No. 1, First Main Road, Madras-20.
9. SRI P. MARUTHAI PILLAI (Businessman), No. 26, Sterling Road, Madras-34.

MANAGING AGENTS

THE SOUTH MADRAS INDUSTRIAL DEVELOPMENT COMPANY PRIVATE LIMITED. 1, Alexandra Road, Tiruchirapalli-1.

UNDERWRITERS

	Amount underwritten (Equity Shares) In lakhs
Madras:	
Madras Industrial Investment Corporation Ltd., Whites Road, Madras-14 ..	Rs. 10.00
Bank of India Ltd., 10, Armenian Street, Madras-1	Rs. 3.00
Chitra & Co., 322-23, Linghi Chetty Street, Madras-1.	Rs. 2.75
Maconochie & Co., P. B. No. 291, Mercantile Bank Building, Madras-1	Rs. 1.00
Paterson & Co., 22, Rrrabalu Chetty Street, Madras-1	Rs. 1.00
Bombay:	
Life Insurance Corporation of India, Jamshedji Tata Road, Bombay-1	Rs. 5.00
T. H. Vakil, 112, Stock Exchange New Building, Apollo Street, Bombay-1	Rs. 1.50
Jashwantlal V. Bhagat, 5, Hamam Street, Bombay-1	Rs. 1.00
Champaklal Devidas, Agakhan Buildings, Dalal Street, Bombay-1	Rs. 1.00
New Delhi:	
R. K. Relan & Co., United India Life Building, New Delhi-1 ..	Rs. 2.00
P. Roy Company, 3/8, M. M. Road, New Delhi ..	Rs. 1.75
Total:	Rs. 30.00

The Directors are of opinion that the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

REGISTERED OFFICE

NO. 1, ALEXANDRA ROAD, CANTONMENT, TIRUCHIRAPALLI-1

OBJECTS

The Company was incorporated on 12th May 1960 for the several purposes set forth in the Memorandum of Association. The following are the main objects of the Company as contained in the Memorandum of Association.

(1) To carry on the business of manufacturers, importers and exporters of and dealers in sanitarywares, ceramic wares, stoneware pipes, glazed wall tiles.

(2) To carry on the business of manufacturers of and dealers in all kinds of bricks, tiles, pipes, pottery, earthenware, china and terracotta and ceramic wares, crockery and to manufacture refractories.

(3) To carry on the business of manufacturers, importers and exporters of and dealers in lining material and furniture.

PROSPECTS

The recent demand for wash basins, closets, sinks and other articles of bathroom and kitchen equipment, has far outstripped supplies in the country. The demand is much in excess of supply.

The current production of Indian sanitaryware is estimated at about 6,000 tons per annum. The estimated demand by the end of 1966 is about 30,000 tons. It looks as if even this estimate has been made on the conservative side. There is therefore considerable scope for expansion of this industry, particularly in South India, where the industry is not developed even to the extent it has developed in Bengal and Bombay States. Sanitaryware being by its nature both heavy in weight and brittle in character, cannot be transported over long distances without incurring heavy railway freight and expenditure involved in careful packing and therefore, the prospects, for sanitaryware industry in South India are distinctly bright.

The Government of India issued an Industrial Licence dated 8th October, 1959 and bearing No. L/34 (5) N-8/59 under the Industries (Development & Regulation) Act of 1951 to Messrs. SESHASAYEE BROS. (PRIVATE) LTD. in the first instance for the manufacture of 1,200 tons of Sanitaryware, 1,800 tons of glazed wall tiles and 3,000 tons of glazed stoneware pipes. This licence was subsequently assigned with the consent of the Government of India in favour of NEIVELI CERAMICS AND REFRACTORIES LIMITED. As regards sanitaryware, the initial licensed capacity of 1,200 tons has since been increased to 1,800 tons per annum. The Company proposes to take up the production of vitreous sanitaryware as the first phase of its programme of production.

SITE, POWER AND RAW MATERIAL

The Directors have chosen Vadalur, near Neivell as convenient location for the factory as this place offers numerous advantages in the matter of raw material supplies, fuel and water. The Company will take advantage of large supply of china-clay that will be made available from Neivell Lignite Mines. High quality quartz, and feldspar, the only other two main ingredients for making sanitaryware, are readily available in the neighbouring districts of Tiruchirapalli and Salem in adequate quantities and can be economically transported to Vadalur. These materials from neighbouring districts are already being used by Messrs. Seshasayee Industries Limited, Vadalur for the manufacture of High Tension and Low Tension insulators and other electrical porcelains.

THE COMPANY HAS PURCHASED ABOUT 16 ACRES OF LAND AT VADALUR to meet not only the immediate requirements of the factory but also to take care of future expansion.

The site of the mill is very near the Railway Station of Vadalur and it is also well connected by National Highways. Thus, road and railway transport facilities are readily available.

Power supply requirements are adequately ensured as the Madras State Electricity Board's H. T. Lines already supply power to the Insulator factory of Messrs. Seshasayee Industries Limited, Vadalur. The State Electricity Board have kindly agreed to meet and fulfil our needs in this behalf.

Good artesian water is available in plenty as this area is well known for artesian wells. Water supply will, therefore, offer no problem.

FOREIGN COLLABORATION

The Company considers itself lucky in having secured the technical and financial collaboration of a leading firm of sanitaryware manufacturers in West Germany, namely, Messrs. ELEMENTAL BAUKERAMIK VERTRIEBS GmbH., a subsidiary of KERAMAG AG, Ratingen (near Dusseldorf) in West Germany. The Keramag group have been in sanitaryware manufacturing business for over 40 years in Europe and have considerable experience in the manufacture of sanitaryware both out of fire-clay and Vitreous china. They own and operate three large-sized factories in Germany, each of which is producing between 18,000 to 20,000 tons of sanitaryware annually. KERAMAG are the first to introduce the process of twin glazing in respect of numerous varieties of ceramic wares they produce. The KERAMAG Group enjoys a very strong domestic market in Germany and Europe and also export part of their output to the South American market, where KERAMAG products are very popular. KERAMAG have examined the technical and financial aspects of this Project and have satisfied themselves as to the gainful character of its operation in this country. They have agreed to subscribe DM 145,000 or the equivalent of Rs. 177,000 in the equity capital of the Company as already mentioned. Messrs. ELEMENTAL BAUKERAMIK VERTRIEBS, GmbH., have agreed for one of their Directors serving on the Board of this Company, at the request of this Company.

The Company is beholden to DR. FRANZ KIRCHFELD (Sr.), Chairman of the well-known firm of Messrs. FRANZ KIRCHFELD, GmbH., one of the leading export houses in Dusseldorf, for helping this Company to get the collaboration of KERAMAG. They have agreed to subscribe for 20,000 equity shares and to be represented in the Board of this Company at the request of this Company.

The technical collaboration agreement and the allotment of equity shares in the manner aforesaid have been approved by the Government of India under their order No. 34(76)/Chem. IV/61 dated 17th October, 1961.

TRAINING OF INDIAN PERSONNEL

In terms of the Collaboration Agreement, M/s. ELEMENTAL BAUKERAMIK VERTRIEBS, GmbH., have agreed to train 15 Indian technicians chosen by this Company in their well equipped and modern factories in Germany. They have further agreed to depute 2 or 3 of their senior technicians to India to help this Company with the erection and commencement of working of the Company. These technicians will stay in India until optimum production is attained by this Company.

BUSINESS MANAGEMENT

The Company will be under the management of the South Madras Industrial Development Company Private Ltd., whose Directors have got considerable experience in industrial management. Some of the Directors of the Company are Directors of companies managed by Messrs. SESHASAYEE BROTHERS (PRIVATE) LIMITED. The combined experience of these Directors will ensure speedy completion and successful implementation of the Project.

Messrs. SESHASAYEE BROTHERS (PRIVATE) LIMITED, who are one of the leading and well-known industrial houses of India are responsible for the conception of this scheme and for negotiations on collaboration with Messrs. ELEMENTAL BAUKERAMIK VERTRIEBS. GmbH. They will be associated with this Project as Business Consultants to the South Madras Industrial Development Company Private Ltd. The remuneration payable to the Business consultants will be met by the Managing Agents and this is not to be reimbursed by the Company.

IMPORT OF PLANT AND MACHINERY AND FOREIGN EXCHANGE REQUIREMENTS

The Government of India have been pleased to issue under their communication dated 25-4-1962 and bearing No. 990669/ICICI/61 HQ-CG. Import Licence to the Company for importing plant and machinery from West Germany for C.I.F. Rs. 15,40,000. This amount of foreign exchange will be found by the Company by borrowing from THE INDUSTRIAL CREDIT & INVESTMENT CORPORATION OF INDIA LIMITED (I.C.I.C.I.), BOMBAY.

The Industrial Credit and Investment Corporation of India Limited have agreed in principle to lend to the Company a sum of Rs. 5 lakhs and also a sum in foreign currencies equivalent to U.S. $315,000 (about Rs. 15 lakhs) as determined by the International Bank for Reconstruction and Development towards a part of the capital expenditure. The Rupee Loan will bear interest at 6¼% per annum and will be repayable in 10 half-yearly instalments commencing from April 1, 1965 and ending on October 1, 1969. The Foreign Exchange Loan will bear interest at 7½% per annum and is repayable in 20 half-yearly instalments commencing from April 1, 1965 and ending on October 1, 1974.

The Loan from the Industrial Credit and Investment Corporation of India Ltd., will be secured by a first legal mortgage of the Company's immovable and movable properties, present and future, subject to the hypothecation of the tangible movable assets in favour of the Company's Bankers for cash credit/overdraft facilities. So long as the loan from the Industrial Credit and Investment Corporation of India Ltd., or any part thereof is outstanding the Industrial Credit and Investment Corporation of India Ltd., shall be entitled to appoint a Director on the Board of the Company, who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

The indigenous component comprises mostly of certain conventional items, electrical equipment, service equipment, etc. These are readily available and are being arranged to be procured from indigenous sources.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot is 1,00,000 shares of face value of Rs. 10,00,000.

The capital required to reach the stage of production is estimated as follows:

	Rs.
Land and buildings, etc.	16,76,600
Plant, machinery and tools, etc.	28,23,000
Electric plant power supply, know-how fee, etc. ..	15,09,000
Preliminary expenses, interest on borrowings, etc..	3,81,400
Brokerage and underwriting commission	1,10,000
Working capital	10,00,000
	75,00,000

It is proposed to provide the said sum of Rs. 75 lakhs as follows:

By Share Capital	Rs. 45 lakhs
By loan from I.C.I.C.I.	Rs. 20 lakhs
By Bank borrowings	Rs. 10 lakhs
Total ..	Rs. 75 lakhs

Messrs. SESHASAYEE BROTHERS (PRIVATE) LIMITED and Messrs. SOUTH MADRAS INDUSTRIAL DEVELOPMENT COMPANY PRIVATE LIMITED, who are the Managing Agents of the Company have given an undertaking to this Company that they will procure for this Company at the appropriate time and on terms acceptable to the Directors of the Company loan capital to the extent necessary to meet the shortfall, if any, that may result by reason of the capital cost of the Project exceeding the amount of present issue of Capital and the loan of Rs. 20 lakhs arranged with I.C.I.C.I. and further to the extent of the requirement of the working capital.

PROGRESS ALREADY ACHIEVED

The Company has purchased nearly 16 acres of land at Vadalur. The Company has erected a Pilot Plant for manufacture of 15 tons per month of high quality sanitaryware by the use of Down Draught Kiln. It has already erected buildings and structures worth nearly Rs. 2.5 lakhs representing moulding and kiln furniture section, casting shop, slip house, office building, water supply installations and staff quarters. Machinery worth nearly Rs. 2.5 lakhs in the nature of Ball and Pan Mills, Down Draught Kiln, power equipment etc., have already been purchased and installed. **The Company has succeeded** in establishing trial production. This pilot plant will help the operatives to gain initial experience before they are sent abroad for being trained in the factories of our Technical Collaborators in West Germany.

This pilot plant will be integrated with the main plant when the latter is erected.

In November 1961, two Directors of **Messrs. Elemental Baukeramik Vertriebs, GmbH.,** viz., **Mr. Oehlen** and **Mr. Jung Poppe** arrived in India and visited the factory site and expressed considerable satisfaction with the location of the factory, particularly in terms of the facilities available in the matter of raw material and transportation. After their visit, it was decided to locate the main plant adjacent to the existing pilot plant site.

In January 1962 **Dr. FRANZ KIRCHFELD (Sr.)**, Chairman of **Messrs. FRANZ KIRCHFELD, GmbH.**, visited India and the factory site and he was similarly impressed with the location. M/s. Franz Kirchfeld, GmbH., and our technical collaborators between them help us to place firm orders for plant and machinery and equipment to be imported. Orders are being placed with reputed manufacturers in West Germany and they are expected to be received at site before the end of the current calendar year. In accordance with the time-table drawn up by the Company, the foreign technicians will arrive in India to erect the Tunnel Kiln and commence trial production in the middle of 1963 so that by the end of 1963 the Company expects to reach commercial production.

MANAGING AGENTS

The South Madras Industrial Development Company Private Ltd., No. 1, Alexandra Road, Cantonment, Tiruchirapalli, a Private Limited Company, will be the Managing Agents of this Company for a period of ten years, from the date of incorporation of the Company, viz., 12th May 1960. The said appointment has been approved by the Government under their Order No. 9 (789)—C-III-60 dated 7th February 1961.

The Managing Agents will be paid by way of remuneration and commission on the net profits of the Company at the following rates. 10% on the first Rs. 10 lakhs or fraction thereof and thereafter on the usual scale.

UNDERWRITING COMMISSION

An underwriting commission of 2½% of the face value of the shares will be paid to each of the underwriters in respect of the shares underwritten by them respectively.

BROKERAGE

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of bankers, and recognised Brokers. Brokerage at the aforesaid rate will also be paid to the underwriters, in addition to the underwriting commission in respect of allotments made on applications bearing their stamp.

APPLICATION AND ALLOTMENT

APPLICATIONS FOR EQUITY SHARES WHICH MUST BE FOR A MINIMUM OF 25 SHARES SHOULD ONLY BE ON THE BASIS OF FULL PROSPECTUS. THE PROSPECTUS AND APPLICATION FORMS CAN BE HAD FROM THE REGISTERED OFFICE OF THE COMPANY, THE UNDERWRITERS, BROKERS AND BANKERS TO THIS ISSUE.

(Sd.) H. M. CHAWALLA, R. CHAKRAVARTHY, S. NARAYANASWAMY, RAJANIKANT MANILAL MEHTA, RUSSI JAL TARAPOREVALA, C. MUTHIAH MUDALIAR, A. KRISHNAMURTHI, R. SUBBARAYAN, P. MARUTHAI PILLAI.

WEATHER FORECASTING CAPABILITIES OF EARTH SATELLITES

W.M.O.'S REPORT RECOMMENDS TEN-YEAR PLAN

SOME of the satellites launched by the United States and the Soviet Union for space research in the last five years have yielded a large volume of data which could be used for better weather forecasting, more accurate navigation and faster and vaster communications. The American satellites in the Tiros series merit special mention in the context of weather forecasting, for they have sent back television pictures of huge weather disturbances developing in remote areas. As nature uses clouds to draw its own weather map and as satellites of the Tiros type enable meteorologists to both see and use this map, the "weather satellite" is emerging as a powerful tool, complementing existing systems by filling observational voids which exist even within dense data areas. In this connection, the following account by Dr. Harry Wexler, Director, Meteorological Research, U.S. Weather Bureau, on the utility of weather satellites will be read with interest.

"Over the immense oceanic expanses and over sparsely settled land areas, where present meteorological observations are meagre and economic considerations make any significant improvement by conventional techniques prohibitive, the satellite will be especially useful but it will make valuable contributions over other areas too. Less graphic than the clouds, but more important for a basic understanding of atmospheric behaviour are measurements of solar and heat radiation absorbed and emitted by Planet Earth and its atmosphere. The ceaseless attempt by the atmosphere to equalise the radition-caused temperature differences between equator and pole creates wind and weather with phenomena ranging in size from 5,000-mile-long storm families, fronts and jet streams to smaller individual storms like the 300-mile-wide hurricanes and the 200-yard-wide tornadoes. None of these widely different sizes of atmospheric whirls and eddies can be neglected in studying the atmosphere and in predicting its future behaviour."

World Weather Map

Dr. Wexler, who has constructed a hypothetical world weather map based on actual cloud pictures from the Tiros satellites, has also indicated the outlines of a future world meteorological satellite observing system. The observations obtained from such an operational meteorological system, according to him, can also be used by research meteorologists in improving their understanding of world weather, climatic changes and possible paths leading to beneficial weather modification. It is noteworthy that the United States has already made a beginning in limited international release of meteorological satellite information. Thus, weather satellites represent the first important practical application of man's thrust into space and should pave the way for increased co-operation among the nations of the world. It is, therefore, a heartening development that both the United States and the Soviet Union have recently indicated that they intend to set up world centres in Washington and Moscow, within the next three years, for the purpose of developing satellite weather forecasting techniques and that they expect the World Meteorological Organisation (W.M.O.) of the United Nations to co-ordinate the international activities of these centres.

Thanks to the co-operation that has developed between the scientists of both countries (U.S. and U.S.S.R.), a report has also been just drawn up by W.M.O. and submitted to the Economic and Social Council of the U.N. The central finding of this report is that satellites now make it possible to observe clouds and other atmospheric features over the whole world and that these observations, combined with those obtained from weather observing stations on land, on boardship and aircraft and with rocket and balloon observations, should enable detection and tracking of every major storm. And its chief recommendation is that a "World Weather Watch," based on meteorological satellites and a system of world and regional centres, be established to improve and develop existing weather forecasting capabilities.

The various steps recommended in the W.M.O.'s report are to form part of a ten-year plan of action. The first step is to harness the co-operative efforts of member-countries for the rational utilisation of earth satellites for meteorological purposes. Co-ordination of types and scope of observations as well as orbits has been recommended in this connection. Secondly, a "World Weather Watch," which will serve as a co-operative global meteorological observing and prediction system for the orderly preparation and dissemination of processed meteorological information, is to be established. Under this system are to be set up world centres and regional centres which would avoid duplication but would still make available to each meteorological service the data and background information it requires. The world centres (like the ones which the U.S.A. and the U.S.S.R. have offered to set up in Washington and Moscow), which would have access to world-wide data coming from the usual meteorological observations as well as from meteorological satellites, would also have available the elaborate and costly equipment required for processing and piecing together the information obtained from satellites and other sources. The proposed regional centres would make available to all countries in the region of each centre the vast amount of additional data which meteorological satellites provide. These regional centres will not replace but rather assist existing national meteorological services.

Global System

Thirdly, global observations will be needed to work the system of "World Weather Watch." In order to derive the utmost benefits from meteorological satellites, the W.M.O.'s report has prepared a plan for a minimum network of meteorological observations. This plan provides for the establishment of some automatic surface weather observatories and 53 new upper air observatories, of which 20 should be on ships on the high seas. The estimated cost of implementing this plan is $35.7 million for purchase and installation and $16.5 million for annual operation. While the national programmes of some countries are expected to enable this plan to be implemented in part, in other cases (especially in the less-developed areas) financial assistance from international sources such as the U.N. Expanded Programme of Technical Assistance and the U.N. Special Fund, will be necessary. The establishment of a "World Weather Fund" to support the implementation of the W.M.O. plan of action has also been recommended in the report. If and when the ten-year plan is approved by the W.M.O. Executive Committee and endorsed by the U.N. General Assembly, it will be the first major effort in international co-operation in pursuance of the U.N. resolution (December 1961) on "peaceful uses of outer space."

L.D. STEEL FROM BHADRAVATI

The Mysore Iron and Steel Works in Bhadravati will be the second, after Rourkela, to manufacture steel by the extremely economical L.D. process. The already existing plants are at present being extended by Demag by an L.D. and electric steel works, one 800-ton mixer, one three-high blooming mill, one three-high finishing train and the necessary crane and subsidiary equipment. After completion of the extensions 130,000 tons of crude steel will be produced annually in Bhadravati.

In the L.D. process, it may be noted in this connection, pure oxygen is blown on to the hot metal. In this manner heat economy in the converter is considerably improved. It is possible in this process to melt down considerable quantities of scrap. Further, an extremely low nitrogen content is attained, which, to a certain extent, is less than that of open hearth steel simply because air does not come into contact with the hot metal. Because of the high temperature at the point where the oxygen meets the hot metal, the lime which has been added liquefies right at the beginning of the process and forms a reactive slag. Therefore, the dephosphorisation begins much earlier than in orthodox processes. Steel from an L.D. steel works is of roughly the same quality as open hearth steel. Besides the metallurgical advantages, the capital costs of L.D. steel works are lower than those of open hearth steel works.

RAPID ELECTRIFICATION OF WEST GERMAN RAILWAYS

By the beginning of the seventies all steam engines operating on the 31,000-kilometre-long rail network of the Federal Railways of West Germany are to be replaced by electric engines. Almost 4,100 kilometres have up to now been electrified. In a few year's time the change-over to electric engines is to be completed for a track length of 9,000 kilometres. From then on, on one-third of all West German railway lines electric engines will be in operation. They are to be employed in 75 per cent of all transport services of the Federal Railways. While in 1950 almost 90 per cent of all rail kilometres were operated by steam engines, today the percentage has dropped below 50 per cent. During the last five years the Federal Railways expended for the purchase of diesel engines no less than DM 1,400 million (350 million dollars).

These endeavours to rationalise railway service, it is claimed, will also bring about further amenities for the traveller. While security will be increased, the travelling speed is to be accelerated even further. Until a year ago the travelling speed for fast trains reached, on an average, approximately 70 kilometres per hour. In 1958 some lines were already used by trains travelling at a speed of 140 kilometres per hour, and recently a new line on the right side of the river Rhine was commissioned, which can be used by trains going by a maximum speed of 160 kilometres per hour. Experts hold that in a few years' time long-distance trains will be able to travel at a speed of 200 kilometres per hour.

TEST GALLERY FOR MINE SAFETY RESEARCH IN BRITAIN

A reinforced-concrete gallery, nearly a quarter of a mile long, is to be built in Britain for research into the causes and control of explosions in coal mines. The tunnel-shaped gallery—a full-size replica of an underground road in a coal mine—will be constructed above ground for the Ministry of Power's Safety-in-Mines Research Establishment at Buxton, Derbyshire. With its ancillary equipment, it will cost nearly £300,000.

The primary purpose of the gallery is to study, under carefully controlled conditions in which research data can be accurately assessed, the coal-dust explosions. Full-scale explosions—of the kind which can cause a major disaster—will be set off to test various control methods. The whole gallery is designed to stand up to the big explosion pressures which may be encountered during an experiment. To prevent condensation which would affect basic conditions, the gallery walls will be heated by cables cast into the concrete. Also cast in concrete will be instrument boxes to accomodate pressure gauges and other instruments which are being designed by the Safety-in-Mines Research Establishment with a view to giving the maximum information concerning the movement of shock waves and general pressure build-up in the gallery.

NEW PRODUCTS AND PROCESSES

Weaving Without Shuttle

A METHOD of weaving has been developed at the College of Science and Technology, Manchester, in which the yarn forming the cross thread, or weft, is thrown through the triangular opening made during the weaving process in the longways threads, or warp, of the cloth. An approach has thus been made to the weaver's ideal of not passing anything through the cloth other than the thread. The shuttle has been eliminated and no air or water jets are needed to carry the thread. Weaving speeds can be more than doubled and machine designs made simpler and cheaper. The inventor is Prof. J. J. Vincent, head of the textile technology department of the College. The basic principle is to grip the thread between two rapidly revolving plastic rollers which throw it forward at speeds up to 400 ft. (121.9 m.) a second and project it from distances over 6 ft. (1.82 m.) to keep the thread straight, the rolled speed is progressively reduced mechanically during projection, and to avoid waste the thread is retracted slightly before it is cut off. The loose ends are then tucked in mechanically to form a selvedge before the next thread is thrown. To further simplify the mechanism, Prof. Vincent is now experimenting with conical rollers driven at constant speed to project the thread. At the beginning of projection the thread is first gripped at the widest part of the rollers, which is moving at the highest linear speed. To produce the retardation for straightening, the thread is moved steadily towards the narrow part of the rollers where the linear speed is lower. A prototype loom is now being made by an experimental organisation near Manchester and it is hoped to demonstrate it soon.

Expansion Joint for Road Bridges

A new type of expansion joint for road bridges has been developed by a British firm which specialises in designing and manufacturing rubber anti-vibration devices. The joint has been made to provide a smooth road surface under extreme conditions of expansion and contraction, including those to be found in the tropics and sub-tropics. Under the heaviest loadings, says the firm, the joint maintains a tight seal against water, dirt and grit. It needs no lubrication or maintenance and is free from corrosion and it is also silent in operation. The joint is made up from sections 18 in. (45.7 cm.) long, each consisting of a pad rubber bonded to metal and supported by two intermeshing cantilever units or combs. In assembly, the combs are bolted to metal plates embedded in concrete. The rubber units are then screwed down and bolted together lengthwise to form a continuous strip. Sections of the joint can be replaced without disturbing the concrete deck of the bridge. To reduce alternating stresses to a minimum, the cross-section of the bonded rubber unit has been carefully designed, and the rubber is carried over the lip of the metal side members to prevent exposure of the bonded edge, and achieve the most efficient sealing. For the same reasons, the rubber also projects over the ends of the side members. Steel bars are bonded into the rubber to support it lengthwise on the combs. The inner faces of the steel combs are tapered to facilitate the insertion of rubber pads, which are drawn down into position by bolts screwed into the combs. During this process the rubber is pre-compressed, the amount depending on the ambient temperature. Maximum contraction of the bridge permits the joint to expand 1¼ in. (28.575 mm.) but since this is the same as the pre-compression, the rubber is never in tension.

Fuel Oil Computing Register

A new fuel oil computing register with an easily operated external price control will soon be available in Europe. The manufacturers, the Lockheed Electronics Company, are investigating the possibility of setting up a distributing network. An extended price range will make the machine adaptable to any European currency. The computing register is one of a series of products and systems being developed by Lockheed for use in the production, processing and distribution of petroleum. With the new Lockheed Computing Register, drivers can issue on-the-spot printed invoices for a variety of petroleum products. Adjustment of two control tabs at the top of the register allows drivers to select in the price. After delivery is completed, a single turn of a crank produces a printed invoice which itemises gallons delivered, price per gallon, tax and discount (if any), and the total amount of the transaction. This invoice serves as the customer's bill.

Lockheed Computing Registers, it is claimed by the makers, can replace any registers now in use and can be adapted to all existing fuel oil meters used for consumer deliveries. The register is entirely mechanical in operation, has extremely high impact strength and corrosion resistance. It is 10 inches high, 9 inches square and weighs under 15 lbs.

Boards from Wood Chips

Vermiculite-surfaced chip board with a non-combustible surface has been introduced by Air-screw-Weyroc of Weybridge, Surrey, England. It is to be provided initially in 12 and 18 mm. 8 by 4 feet boards with Vermiculite on one side and sanded on the reverse. The board will sell at 1s. 10½d. and 2s. 3d. per square foot and is suitable for linings, ducting and partitioning. Another company, Tyne Board Company of Willington Quay, Wallsend-on-Tyne, has introduced a new wood particle board for the building industry and also a marine grade chipboard. The wood particle board can be sawn, drilled, planed, jointed, screwed and nailed as with ordinary timber and is available in 12, 15 and 18 mm. thicknesses. The chipboard is available in thicknesses ranging from 9 to 22 mm.

HAILEYBURIA TEA ESTATES LIMITED

RESTRAINT ON DOMESTIC TEA CONSUMPTION UNWISE

CHAIRMAN, MR. P. R. SUBRAMANYAM, CALLS FOR MORE EXPORT AID

ADDRESSING the Annual General Meeting of the shareholders of Haileyburia Tea Estates Ltd., held at Kottayam (Kerala State) on Monday, 18th June 1962, Mr. P. R. Subramanyam, Chairman of the Company, pointed out that the Union Finance Minister's emphasis on restricting internal consumption of tea, in the course of his reply to the debate on the Central budget in the Lok Sabha, revealed a lack of understanding of the problems of the industry. India's common tea, Mr. Subramanyam averred, could not expect to meet a profitable export market and there was, therefore, no use restricting its consumption within the country to spare more for export. Only quality tea at competitive price could compete effectively abroad and it was, accordingly, necessary to take all possible measures to strengthen the competitive capacity of quality tea.

The following is the full text of Mr. Subramanyam's speech:

"GENTLEMEN,

"The Directors' report and statement of accounts for the year ended 1961 having been in your hands for the requisite period, I will, with your permission, take them as read.

"The result of the working for 1961, as stated in the Directors' report, after providing Rs. 1,60,904 for depreciation and Rs. 51,000 for development rebate reserve, is a net profit of Rs. 2,97,539.86 to which must be added the sum of Rs. 32,987.29 brought forward from the previous year's account, making a total of Rs. 3,30,527.15.

"Your Directors have recommended for the payment subject to deduction of income-tax of a dividend of 12½ per cent on the equity share capital absorbing Rs. 3,12,500 and 5 per cent on the preference share capital absorbing Rs. 14,000 inclusive of Rs. 1,500 on grossing to the extent of 30 per cent of 40 per cent of the dividend and the balance of Rs. 4,027.15 to be carried forward to next year's account.

Cost of Production Mounts

"You will observe from the balance-sheet already circulated that the cost of production has gone up from 304 cents in 1960 to 323 cents in 1961 per kilogram while the net average sale price realised was 441 cents per kilogram against 460 cents in 1960. The increase in estate expenditure is due to increased welfare expenses, consumption of stores, higher fuel charges, increased land revenue and increase in the cultivation expenses. The donation of Rs. 20,000 to the Mundakayam Medical Trust is the first instalment out of a total contribution of Rs. 37,375 which your Company proposes to make to the Trust on the basis of planted acreage. By this donation, which is exempted from income-tax and agricultural income-tax, your Company's obligations under the Plantation Labour Act 49 of 1951 in respect of group hospitals will be fully covered.

"The fall in sale price is the result of the sharp fall in prices from November 1961. The initial steep fall in November/December was followed by resumption of trading at a much lower level. The prices ruling in the early part of 1962 have been very much below that of the corresponding period in 1961.

Restriction on Consumption Undesirable

"The figures for world production in 1961 indicate an increase of about 112 million pounds over the previous year. Exports from India have not shown any corresponding increase and it is presumed that a good portion has been absorbed in the internal market. The F.A.O. report of the possibility of a world surplus of tea in 1965 has been discounted to a certain extent in official circles in India. While this is understandable in view of the avowedly expansionist thinking of our Government, I consider that any move to restrict internal consumption would not be in the long-term interests of the country.

"I am glad to report that greater awareness of the industry's problems are to be seen in Delhi and Calcutta. While the reduction in export duty is no doubt welcome, I feel that, in the context of Britain's entry in the European Common Market and the need for a sustained and vigorous export drive, the complete removal of export duty would have given the desired shot in the arm which the present reduction cannot accomplish. The recent tour of an Indian Tea Delegation to America and Europe would, I hope, open the eyes of the Tea Board Chairman to the problems of promotion and propaganda in those countries and enable him to devise ways and means for meeting Ceylon competition in all those markets with more success than hitherto.

Unwise Emphasis

"In this connection I consider the emphasis on restricting internal consumption shown in the Finance Minister's winding-up speech replying to the general discussion on the Budget as revealing a lack of understanding of the problems facing the industry. India's common tea cannot expect to meet a profitable export market. Only quality tea at competitive prices will increase our exports. For this purpose of reduction of cost, Government should give full encouragement in whatever manner possible by removal of export duty, by freezing wages if necessary and by giving subsidies in appropriate cases. For the common tea our internal market should be the mainstay and in this case to talk of restricting consumption is suicidal.

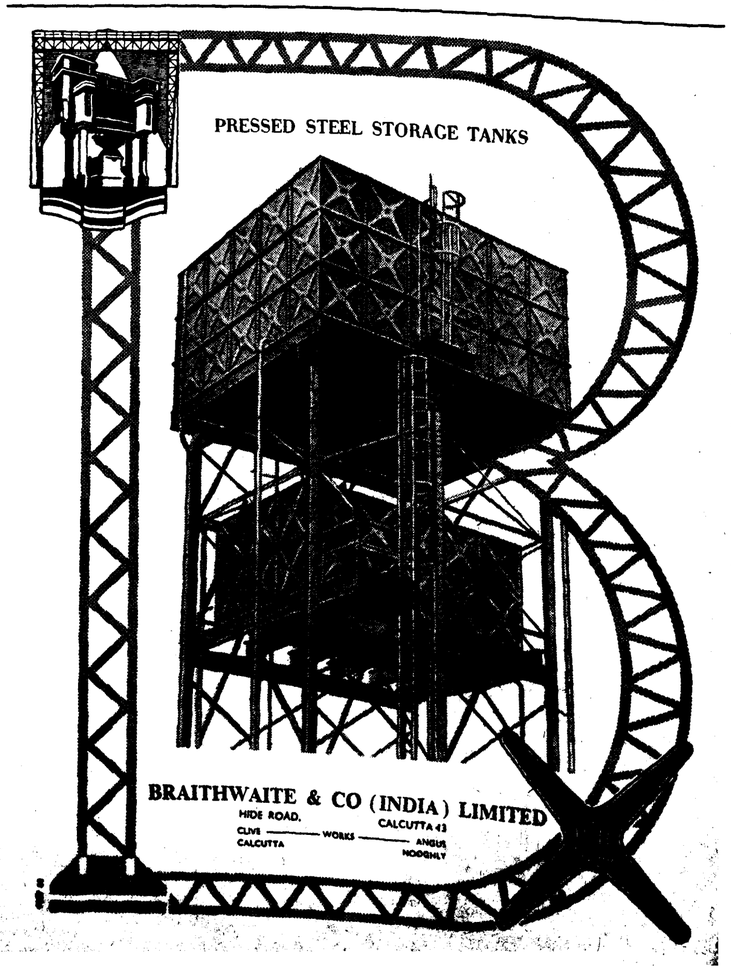
"The improvement to our factories are almost complete and, with the exception of the humidification plant and the winnowing tunnel, all the other machines will be in commission during the year. Our factories will now be able to deal adequately with the increased crops. The premium which teas manufactured by unorthodox methods, i.e., by C.T.C. etc., are getting has set your Board thinking and they are considering ways and means of at least trying this manufacture in one of our factories as a trial measure.

Crop Position

"I am glad to be able to say that the crop as on 31st May 1962 is 1,11,047 kilograms ahead over the previous year and with average weather conditions this increase is likely to be maintained at the end of the year.

"It is customary to give some indication of current year's results. While present price levels are no doubt discouraging, I am inclined to think that there is an undercurrent of strength in the market which should be reflected in steadier prices. If a further wage increase is not imposed on us, with the increased crop now coming in and the better standard of manufacture, the prospects for your Company appear to be reasonably good.

"Our thanks are due to the Managing Agents, the Estate Manager and staff for the way in which they have carried out their duties during the past season. Our thanks are also due to Mr. A. M. Spence, our Visiting Agent, for his valuable advice and assistance."



ANNUAL MEETING OF OIL INDIA LIMITED

SPEECH OF CHAIRMAN, MR. KHANDUBHAI K. DESAI

PROMPT GRANT OF EXPLORATION LICENCE URGED

A STRONG plea for the immediate grant of licence to Oil India Limited to undertake oil exploration work was put forward by Mr. Khandubhai K. Desai, Chairman of the Company, when he addressed the Third Annual General Meeting of the Company held at Duliajan (Assam) on Friday, 22nd June 1962. Any further delay in the matter, Mr. Khandubhai Desai warned, would seriously impede progress in the vital field of exploration and development. He pointed out that, if oil were discovered in the new concession areas in respect of which an exploration licence was pending with the Assam Government, not only would there be saving on further imports of crude but the refineries at Gauhati and Barauni could be expanded further. This, he said, was a matter that should be given priority, especially because Oil India's prospecting programme did not involve any foreign exchange expense, inasmuch as it had already been underwritten by the Burmah Oil Company, the Government's partner in Oil India. He revealed that, with the existing number of wells drilled so far and those to be completed by the end of 1963, Oil India would be in a position to meet its commitments of supplying nearly three million tons of crude a year to the Gauhati, Barauni and Digboi refineries, the foreign exchange saved being more than Rs. 20 crores annually.

The following is the full text of Mr. Khandubhai Desai's speech:

"GENTLEMEN,

"The report of the Board of Directors gives you an idea of the financial position of your Company and explains in some detail the extent of its operations during the year 1961. I shall refer briefly to some of the salient features in this report later, but I think it is important in the first place for us to realise their context against a more general background.

Consumption of Petroleum Products

"The consumption of petroleum products in a developing economy like India is bound to grow at a rate faster than what has been generally estimated in the past. We are at the present moment still dependent to a very considerable degree on imports both of crude and of products, and this is again dependent on the availability of foreign exchange for such imports. This is of particular relevance at a time like this, when all else is overshadowed by the continuing foreign exchange crisis with which this country is faced. At present, we are spending about Rs. 80 crores every year in foreign exchange on imports of crude oil and petroleum products. It is well to remember this fact when considering or discussing the large-scale programme of oil exploration that has been launched during the last few years by the Government of India. In the public sector, the Oil and Natural Gas Commission propose to spend about Rs. 200 crores on exploration and production operations, and they aim to achieve a production target of about 3½ million tons per year during the final year of the third Five-year Plan. I would like to take this opportunity to congratulate the Oil and Natural Gas Commission on the signal successes they have already achieved in the Gujarat region, and to pay our tribute to the dedicated and unremitting efforts they are making to increase India's oil potential.

Three Million Tons By 1963

"As far as the programmes of your own Company are concerned, Oil India's reserves stand at about 45 million tons of oil and 720,000 million cu. ft. of gas at present and, with the existing number of wells drilled by Oil India so far and those to be completed by the end of 1963, Oil India would be in a position to meet its commitments of supplying nearly 3 million tons a year to the refineries at Gauhati and Barauni and the Assam Oil Company refinery at Digboi. This total production of 3 million tons would mean a foreign exchange saving of more than Rs. 20 crores a year. If we are fortunate to discover oil in the new concession areas in respect of which an exploration licence is pending with the Assam Government, this in turn would greatly assist not only in saving on further imports of crude, but in further expansion of the refineries at Gauhati and Barauni. This is a matter, therefore, which should have priority especially as Oil India's prospecting programme does not involve any foreign exchange expense, as the latter has already been underwritten by the Burmah Oil Company, Government's partner in Oil India. We had originally planned to start work in the new area in October 1961. Unless the exploration licence is granted promptly, it would not be possible to start the work even in the coming cold weather and any further delay would seriously impede progress in the vital field of oil exploration and development.

"Our annual report gives you some idea of the facts and figures of oil drilling and operations during the year 1961.

Transport Through Pipeline

"While the achievement of our production target is all important, special mention should also be made of the transport problem, namely, the construction of the 720-mile long Oil India pipeline from Nahorkatiya to Barauni. The completion of the first stage of this pipeline to Gauhati was delayed due to abnormally heavy rains in the middle of 1961, which led to the suspension of work. However, as soon as this was foreseen, arrangements were made to build up stocks of crude at Gauhati refinery by means of railway tankwagons to enable the refinery to commence operations as scheduled on 1st January 1962. The first stage of the pipeline was actually completed by the beginning of March and pumping of crude oil to the refinery had commenced. We taken this opportunity to congratulate the Burmah Oil Company (Pipe Lines) Limited and the contractors for having done a good job under difficult circumstances. Progress on the second stage from Barauni to Gauhati is satisfactory and we are hopeful that the whole line will be ready when the Barauni Refinery goes on stream early in 1963. This pipeline system traversing a difficult terrain, cutting across three State boundaries is the second largest in the East (including the Middle East) and will be one of the most modern and automatic.

Organisation Takes Shape

"The year 1961, as you would see, has been a momentous one in the history of this young organisation. The Second Supplemental Agreement brought Government's shareholding on a par with that of the Burmah Oil Company, thus giving it parity on the Board of Directors. The first task to which the newly reconstituted Board addressed itself was the setting up of a separate organisation for Oil India.

"As from 1st January 1962, we took over on Oil India's payroll all the staff required—executive, clerical and labour—engaged on Oil India's work who had hitherto been employees of the Assam Oil Company. The organisational set-up, provision for future recruitment, the devolution of powers, and duties to the Managing Director and to the officers in the field and other allied matters have been charted out and are now in actual operative effect. This transition, I am glad to say, has been effected without any friction, and I would like to take this opportunity to convey our grateful thanks for managing Oil India's affairs to Assam Oil Company and for their co-operation since then.

Problems We Had to Face

"Like any other industrial undertaking, however, Oil India has had its own share of difficulties during the year. The new Board was faced almost immediately with a strike by the contractors' labour—but this was fortunately settled in a brief time.

"*Land Acquisition*: Another serious problem that arose was the question of land acquisition for further drilling in our existing concession areas. It is not always possible to acquire land under the Land Acquisition Act 1894 or Rule 119 of the Assam Land and Revenue Regulations. Therefore, we had to resort to private negotiations in certain cases. We were, however, caught on the horns of a dilemma, as we found that adherence to existing procedure for acquisition of land entailed much time and uneconomical use of drilling outfits. Although land could be obtained more quickly by private negotiation, prices spiralled and our continuing to pay high prices became impossible not only because of the excessive cost to the Company but also because of the overall effect on land prices for other industrial ventures within the State. We have sought the co-operation of both the Government of India and the Government of Assam in this regard and we trust that, with their assistance, some solution can be found to this problem.

"*Utilisation of Natural Gas*: The utilisation of natural gas produced along with oil and by itself has presented problems of planning. The Assam Government have now set up a Committee on which Oil India is represented, which would go into these questions regarding market availability of gas, the demands from various consumers, the capital costs involved in storage equipment, the price at which the gas is to be sold, etc. It is gratifying to note that the Assam Government is very keen on fostering and developing gas-based industries in the State.

"*Royalty*: Another important matter to which I would like to refer is the royalty question. I earnestly trust that there would be an early settlement of this question, as this would enable us to proceed more expeditiously with our development programmes.

Financial Position

"As far as our financial position is concerned, I do not think it is necessary for me to go into this in any detail, as this is fully set out in the report before you. As you would see, the financial picture shows that the net surplus after providing for depreciation, taxation and development rebate amounts to Rs. 1.15 crore which is being transferred to the general reserve. Taking into account that we are still in the development stage and our sales in 1961 were limited to about 300,000 tons, I think this can be considered reasonably satisfactory.

"In conclusion, I would like particularly to thank my colleagues from the Board for their co-operation and assistance. From the very beginning, it was realised by both partners in Oil India (the Government of India and the Burmah Oil Company) that the successful working of Oil India with two equal shareholders would depend primarily on a basic understanding and agreement on matters concerning the formulation of policy at the Board level, combined with a certain amount of give and take on both sides. I am glad to say that this system has worked smoothly and successfully. The Board has functioned as a homogeneous team and I trust it would continue to function on the same lines in future. This has been due to the spirit of co-operation shown by both the partners and to their understanding of the common objective, namely, to make this new venture a success.

"Finally, I would like on behalf of your Company to express my appreciation to the staff and workers of Oil India who have given their full loyalty to this new organisation and who have spared no pains to contribute to its successful working. In this connection, I must pay here a tribute to Mr. M. J. Condon, the previous Managing Director of Oil India, who was instrumental in evolving a basis for the Government and the Burmah Oil Company to work together and in making the transition smooth. I would also like to place on record my appreciation of the excellent team work done by our present Managing Director, Mr. J. C. Finlay, and the Financial Director, Mr. Govindan Nair, which has rendered possible the setting up of Oil India on its feet."

OIL ROYALTY FOR ASSAM

Mr. K. D. Malaviya, Minister of Mines and Fuel, confirmed in the Lok Sabha last week that, on the suggestion of the Assam Government, it had been agreed to refer the issue of oil royalty to a third party. Answering questions, Mr. Malaviya said that the Government of India was convinced that the rate of royalty had to be fixed by it, but the Assam Government did not agree with this interpretation and had raised certain constitutional issues. There was no alternative left except to refer the matter to a third party. He stated that recently the Assam Government had asked for a higher royalty. The difference between the royalty now paid and the latest demand of the State Government was Rs. 96 per ton. Asked whether the 15 per cent financial participation in the Indian Oil Company had been offered by the Government of India to the Assam Government *in lieu* of additional royalty, he said that a separate proposal was under consideration for offering the Assam Government some participation in the oil refinery. This proposal had nothing to do with the royalty question.

TWYFORD TEA COMPANY LIMITED

CHAIRMAN, MR. P. R. SUBRAMANYAM'S SPEECH AT ANNUAL MEETING

SUGGESTIONS FOR PROMOTING TEA EXPORTS

A PLEA for giving full encouragement, in whatever manner possible, to export of tea was made by Mr. P.R. Subramanyam, Chairman of the Twyford Tea Company Ltd., in his address to the shareholders of the Company at their Annual General Meeting held on Monday the 18th June at Kottayam (Kerala State). He suggested the removal of export duty, freezing of wages, if necessary, and grant of subsidies in appropriate cases as possible measures the Government could take to stimulate exports.

The following is the full text of Mr. Subramanyam's speech:

"GENTLEMEN,

"The Directors' report and statement of accounts for the year ended 1961 have been in your hands for the requisite period. I will, with your permission, take them as read.

"The result of the working for 1961 as stated in the Directors' report after providing Rs. 86,301 for depreciation and Rs. 77,500 for development rebate reserve is a net profit of Rs. 72,932.08 to which must be added the sum of Rs. 7,873.88 brought forward from the previous year's account and a sum of Rs. 25,000 transferred from the dividend equalisation reserve making a total of Rs. 1,05,805.96 now available for distribution.

"Your Directors have recommended for the payment, subject to deduction of income-tax, of a dividend of 6 per cent absorbing Rs. 94,500, leaving a balance of Rs. 11,305.96 to be carried forward to next year's account.

"You will observe from the balance-sheet that the cost of production has gone up from 350 cents in 1960 to 360 cents per kilogram in 1961 while the average sale price realised was only 447 cents, against 454 cents per kilogram in 1960. The increase in Estate expenditure is due to increased welfare expenses, consumption of stores, higher fuel charges, increased land revenue and increase in the cultivation expenses. The donation of Rs. 15,000 to the Mundakayam Medical Trust is the first payment out of a total contribution of Rs. 30,200 which your Company proposes to make to the Trust on the basis of planted acreage. By this donation, which is exempted from income-tax and agricultural income-tax, your Company's obligations under the Plantation Labour Act 49 of 1951 in respect of group hospitals will be fully covered.

"The fall in sale price is the result of the fall in prices from November 1961. The initial steep fall in November/December was followed by resumption of trading at a much lower level. The prices ruling in the early part of 1962 have been very much below that of the corresponding period in 1961.

"The results are disappointing. Unfortunately, the unusually heavy rainfall had a depressing effect on crop and the shortfall, together with the provision for the development rebate reserve, has badly affected the net profit.

"The figures for world production in 1961 indicate an increase of about 112 million pounds over the previous year. Exports from India have not shown any corresponding increase and it is presumed that a good portion has been absorbed in the internal market. The F.A.O. report of the possibility of a world surplus of tea in 1965 has been discounted to a certain extent in official circles in India. The controversy has not yet been settled but the following conclusions are inescapable. Increase in crop should not be at the expense of quality or at high cost. A vigorous export drive should be made simultaneously with a drive for increasing internal consumption too. While foreign exchange needs are responsible for the present export-mindedness, the necessity of a large and stable internal market in the long-term interest of the industry should not be lost sight of. In this connection I consider the emphasis on restricting internal consumption shown in the Finance Minister's winding-up speech replying to the general discussion on the Budget as revealing a lack of understanding of the problems facing the industry. India's common tea cannot expect to meet a profitable export market. Only quality tea at competitive prices will increase our export. For this purpose of reduction of cost, Government should give full encouragement in whatever manner possible by removal of export duty, by freezing wages, if necessary, and by giving subsidies in appropriate cases. For the common tea, our internal market should be the mainstay and, in this case, to talk of restricting consumption is suicidal.

"I am glad to report that greater awareness of the industry's problems are to be seen in Delhi and Calcutta. While the reduction in export duty is, no doubt, welcome, I feel that, in the context of Britain's entry in the European Common Market and the need for a sustained and vigorous export drive, the complete removal of export duty would have given the desired shot in the arm which the present reduction cannot accomplish. The recent tour of an Indian Tea Delegation to America and Europe would, I hope, open the eyes of the Tea Board Chairman to the problems of promotion and propaganda in those countries and enable him to devise ways and means for meeting Ceylon competition in all these markets with more success than hitherto.

"I am glad to be able to say that the crop as on 10th June 1962 is 10,574 kilograms ahead over the previous year and with average weather conditions this increase is likely to be maintained at the end of the year.

"It is customary to give some indication of current year's results. While present price levels are no doubt discouraging, I am inclined to think that there is an undercurrent of strength in the market which should be reflected in steadier prices. If a further wage increase is not imposed on us, with the better standard of manufacture and with no need to meet the same depreciation and development rebate commitments as in the previous year, the prospects need not be very gloomy.

"Our thanks are due to the Managing Agents, the Estate Manager and Staff for the way in which they have carried out their duties during the past season. Our thanks are also due to Mr. D. S. McIntyre, our Visiting Agent, for his valuable advice and assistance."

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA'S VIEWS ON CEMENT SHORTAGE

FULLEST UTILISATION OF EXISTING INSTALLED CAPACITY URGED

THE fullest utilisation of the existing capacity in cement industry was urged by Mr. V. H. Dalmia, Chairman of Dalmia Cement (Bharat) Ltd., in the course of his speech at the Company's Tenth Annual General Meeting, held at Dalmiapuram on Friday, the 29th inst., to meet the problem of cement shortage. The persistent shortage of cement, he said, had induced a review of the expansion plans for the industry. Demand for cement by the end of the third Plan had been revised to 15 million tonnes, he observed, and added that the Government was, therefore, considering revision of the capacity target for the industry from 15.2 million tonnes to 18 million tonnes, an increase of 20 per cent. In 1961, he said, against an installed capacity of 9.4 million tonnes, the actual production was only 8.2 million tonnes. Mr. Dalmia emphasised that it should be possible to obtain appreciably higher production through better utilisation of the existing capacity itself at relatively much less expenditure of valuable foreign exchange, if the required spare parts and equipment were allowed to be imported and the other difficulties, such as coal and wagon supplies, were resolved.

The following is the full text of Mr. Dalmia's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the tenth annual general meeting of your Company. As usual, I take this opportunity to give a brief review of the working of your Company during the year under report.

"In 1961, the production in all the manufacturing departments has been better compared to the previous year, except for a slight decline in the refractory section. Despite improved production, there is no mentionable increase in the profit earned by your Company on account of all-round increase in costs and growing competition in the products of the ceramics division and also due to the adjustment of bonus to employees for the year 1960, in respect of which no provision was made in that year. The impact of the increase granted to your Company in the ex-works retention price of cement will be felt from the current year onwards.

"I am glad to inform you that 57.75 per cent of the dividend recommended by your Directors will be paid out of the tax-exempt profit. In the computation of the tax-exempt profit available for distribution as dividend, besides the undistributed balances of the earlier years, the Company's share of tax-exempt profits of Messrs. Dalmia Magnesite Corporation has also been included.

Retention Price for Cement

"I would now refer to the decision of the Government of India on the question of cement prices. Taking the view that the system of differential prices, recommended by the Tariff Commission based on individual costs, is not conducive to efficiency and greater production and that there should be a uniform price for the industry so that there is a measure of reward for those units which are able to achieve economies, the Government fixed the uniform ex-works price of naked cement at Rs. 69.50 per tonne for the industry, with provision for extra price in the case of certain high-cost units. The retention price, payable to your Company, stands increased from Rs. 55.54 to Rs. 69.50 per tonne, effective from 1st November 1961. I regret, however, that the revised price was not brought into effect from 1st July 1961, as recommended by the Tariff Commission, considering that the previous price period expired on 30th June 1961.

"The persistent shortage of cement has induced a review of the expansion plans for the industry. The revised estimates now place the demand for cement by the end of the third Plan at 15 million tonnes, and the Government is, therefore, considering revision of the capacity target for the cement industry from 15.2 million tonnes to 18 million tonnes, an increase of 20 per cent. In this context, I would like to say that the fullest utilisation of the existing installed capacity should be accorded paramount importance by the Government as providing a ready means of increasing speedily the production of cement at a time when the country is faced with an increasing shortage of this commodity. In 1961, against an installed capacity of 9.4 million tonnes, the actual production was only 8.2 million tonnes. It should be possible to obtain appreciably higher production through better utilisation of the existing capacity itself at relatively much less expenditure of valuable foreign exchange, if the required spare parts and equipment are allowed to be imported and the other difficulties, such as inadequate or irregular supply of coal, wagons for inward and outward movement to and from cement factories, are resolved. Besides, a scheme of incentives should also be introduced to encourage the maximisation of production. I understand that some such scheme is already under consideration of the Government of India.

Coal Supplies

"During the past few years, there has been a growing realisation that the supplies of coal were not keeping pace with the growing demand of the country's expanding economy. The shortfall was attributed mainly to insufficient rail movement capacity, and, last year, it was sought to augment this by moving coal by the sea-*cum*-rail route. While this has brought a measure of relief, it has not proved sufficient. More recently, however, it has been admitted that the production of coal itself is inadequate and recourse to alternative fuels, is, therefore, considered doubly necessary. The Government of India has, therefore, suggested the conversion to complete, or partial, oil-firing of certain industrial units, including the cement factories, which are situated at long distances from the Bengal/Bihar coalfields and has agreed to grant *ad hoc* increases in the retention prices to cement producers to offset the incidence of the higher cost of oil. The movement of Bengal/Bihar coal by the all-rail route to certain consumers, including several cement factories, was stopped and was replaced by shipments of coal from the Calcutta port following announcement of the scheme to subsidise the movement of coal by sea. In view of this element of compulsion, the Government of India has been requested to modify the subsidy formula in such a manner as would ensure that the cost to the consumer of seaborne coal is exactly the same as the cost by the all-rail route. It is hoped that they will agree to this. There is urgent need for a settlement of the subsidy claims without delay as also for a simplification of the procedure which would eliminate such delays in future. As matters stand at present, the payment of subsidy has not been made till now even against claims submitted more than five months back.

Iron Ore Exports

"Last year, I had referred to the tremendous expansions in the steel industry, which were being planned on a global basis. Since then, however, there have been indications of a partial recession in Japan, which has led to some hesitancy on the part of the Japanese steel industry to increase their commitments abroad in purchasing iron ores. It is hoped that this is only a temporary phase. With the development of new sintering and pelletising processes, low grade ores of various origins are being used more and more extensively by the steel industry in many countries. As a result of this, the importance, hitherto attached to very high-grade ores such as is supplied from your Company's mines, is lessening. The need, therefore, of long-term agreements with various countries for the supplies of such ores from India is greater, particularly when we find that fresh sources of such ore are being exploited in other countries to a larger extent. In view of the urgent need of boosting the country's export trade, particularly where through such exports, free foreign exchange can be earned, the State Trading Corporation of India Ltd. will, doubtless, endeavour to conclude such long-term agreements with various countries as rapidly as possible.

"The Government of India and the Government of Madras have had before them for some time a project for developing the capacity of the Cuddalore port to cope with the increased exports of iron ore and to handle the larger quantities of fertilisers and coal, which are being unloaded at that port. I understand that the plans for this development project have been finally passed, and, it is to be hoped, that the actual work will be taken in hand very soon with the ultimate target, perhaps, of making the Cuddalore port capable of exporting up to one million tons of iron ore per year. To take advantage of the increasing port capacity at Cuddalore and other major and minor ports which are being developed further, however, it is important that the railway capacity for movement of ores should be increased more rapidly. In this connection, it is heartening to note from a recent statement made by Mr. Manubhai Shah, the Minister for International Trade, that the Railway Ministry would be persuaded not only to give top priority to the haulage of ores and other goods for export but also to reserve a number of wagons specifically for export purposes. While your Company's ore business has shown a decline since I spoke to you last, it is hoped that, as a result of possible long-term arrangements for high grade ore exports from India and as a result of the growing port and railway capacities, your Company may also look forward to increased exports of their iron ore.

"The results achieved for their last financial year by Messrs. Dalmia Magnesite Corporation, in which your Company is a partner, continue to show satisfactory progress. The demand for deadburnt magnesite from the steel industry and the refractory industry in the country continues to show an increase. There are indications that this demand may rise steeply by the beginning of the fourth Five-year Plan, by which time the steel industry may reach its target of 10 million tons of steel production per annum. There are also indications of a possible export market, as I had mentioned last year, and recently some small export of deadburnt magnesite has been made by Messrs. Dalmia Magnesite Corporation. In the circumstances, the outlook for the industry is bright even after the contemplated expansions, including the doubling of the capacity at the Salem Works, have been completed.

Factories in Pakistan

"The two cement factories in Pakistan, belonging to your subsidiary, continue to face a variety of problems. Implementation of our programme for rehabilitation and modernisation of these factories is held up on account of the difficulty in getting import facilities for the required spares and equipment. Demand for cement in West Pakistan has been slack, and, as a result, competition has developed. Every effort is being made to revitalise the sales organisation and improve the despatches. I am glad to add that relations between the management and workers at both the factories of your subsidiary in Pakistan have taken a welcome turn. A long-term agreement has been reached at the Shantinagar (Karachi) Works covering wages and other demands. A similar agreement is likely to be concluded with the workers at the Dandot Works also. Both the factories are working well except for the problems created by the lack of rehabilitation of the plant and equipment for reasons which I have just mentioned.

"I wish to refer now to the long-term agreement signed at Dalmiapuram in November 1961 in regard to the payment of bonus to the employees. As a result of the formula by which the quantum of bonus has been linked to the clinker production attained in the relevant year at your Dalmiapuram Works, I am confident that industrial peace would prevail at Dalmiapuram and workers would lend their full co-operation in augmenting production. I wish to express my satisfaction at the growth of sound and cordial relations between your Company and the workers' unions evidenced by increasing willingness to resort to mutual discussions and negotiations for the settlement of outstanding issues. The agreement in regard to bonus is an outstanding example of this growing co-operation.

"Finally, I would like to express, on your behalf and on my own, our appreciation of the services rendered to the Company by all executives, staff and workers.

"Jai Hind."

N.B.—*This does not purport to be a report of the proceedings of the general meeting.*

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

THE Twenty-ninth Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday the 18th July 1962 at 59C Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members:

Sales

"Your Company's sales have grown steadily over the past year; from Rs. 970 lakhs in 1960-61 to Rs. 1,050 lakhs in the year under review. This increase of 8¼ per cent as compared with 11 per cent last year was not quite as high as expected. However, I see no reason for discouragement or alarm. I would rather interpret the relative shortfall as a useful reminder of how closely our fortunes are linked with those of our customers. Our sales figures are a remarkably accurate barometer of the affairs of the consumer-goods industries. In 1961-62, the high prices of groundnut oil made vanaspati too expensive for some people who had become accustomed to buying it; less toilet powder was bought after an excise duty was imposed in March 1961; in many instances our customers' output was limited by shortages of raw materials, and, as a result, some of those who buy industrial components from us took less than we had expected. Besides, there were rises in costs, particularly affecting raw material. I shall refer to them later. Our customers' problems which adversely affected our sales volume, our greater efforts in export fields and rising costs have caused profit margins to narrow. The solution, insofar as it is within our own control, rests in increased efficiency and increased productivity. I believe that Metal Box, measured by any standards, is an efficient manufacturing organisation and that our pursuit of greater efficiency is relentless. There is, however, a limiting factor, the *volume* of production. Technological progress demands the application of the latest processes and methods to an increasing volume if we are to remain a low-cost producer. But in the case of tin containers our productive capacity is not being increased. Government's policy over the licensing of any expansion of existing units or the formation of new ones continues to favour the man who produces both the goods and the packages for them. I cannot believe that Government can continue to turn a blind eye to the obvious long-term consequences: uneconomic fragmentation of the industry, stagnation in technical development and, above all, a high-cost container for the masses of the people. All around us, industrialists are appealing to be allowed to produce more in order to meet their ever increasing costs. How can the price-line be held so long as Government deliberately fosters the emergence and growth of uneconomic methods?

"I do not wish to be misunderstood: there is no plea whatsoever that large units be allowed to expand at the expense of the small. In Metal Box we have done and are doing everything we can to foster the growth of small-scale industry. We buy materials from it, we provide it with know-how and we sell machinery to it. My point is that if the targets in the Third Plan for the production of consumer goods—milk products, to take only one example—are to be achieved, I just do not see where the containers in the numbers, at the price and in the quality which all these new manufacturers are demanding from the start, are going to come from. We shall have to wait and watch the prices rise, whereas we ought to be getting on with the basic job.

Exports

"In other fields, I am glad to be able to say that we are, indeed, getting on with the job. To conserve foreign exchange, for example, we have extended the manufacture in Calcutta of industrial components and machinery required for can-making and closing, which had to be imported hitherto, and we have made a successful effort to step up our direct exports of packages, machinery, hardware and publicity media. Since we first entered the markets of South East Asia, competition, notably from Japan, has intensified. Despite this, our exports were 36 per cent higher than last year and their value during the year was over Rs. 25 lakhs. We are now one of the first five exporters of engineering goods. The growth in our direct exports, made possible only by constant touring and by offering very low prices, has had its effect on our profits. Nevertheless, we are resolved to maintain a steady growth and hope to achieve a substantial increase in our exports in the current year.

"Our largest contribution in the export field is an indirect one: supplying packaging materials, to international standards of quality, for goods packaged and exported by Indian manufacturers. It is our conviction that every well-packaged Indian product is a potential earner of foreign exchange. This belief is substantiated by the export from India last year in Metal Box packages of goods worth over Rs. 4 crores to more than fifty countries spread all over the globe. Many of these packages were designed to meet the specific needs and tastes of highly competitive overseas markets. My report last year highlighted the part your Company was playing in India's prawn exports. Amongst the other exports, the success of which has been assisted by the high quality standard of our containers, are cashew nuts, vanaspati, vegetable oils, fruit, toiletries, confectionery and biscuits. Here is an important area of achievement at a time when the diversification of India's export pattern is a matter of great urgency.

"To those who participate in the closed economy of India, marketing consumer goods abroad may well be an unfamiliar and novel experience. It has not taken long for the fact to be brought home that, when exporting, quality packaging designed to meet the customers' requirements in a particular market is not an expensive frill but a business necessity.

"An important feature in the year's trading was the increased cost of tinplate. Supplies from the Tinplate Company and Rourkela have often had to be despatched by road rather than by rail at greater expense. Most imported supplies now arrive under D. L. F. from America. In earlier years, tinplate came more cheaply from Japan and the U.K. We have also had to resort to Russian supplies in non-standard sizes at prices even higher than the American. Supplies, albeit at a price, have been reasonably available throughout 1961-62.

"Stocks at the commencement of the new financial year, though slightly less than the previous year, can be considered satisfactory. But the outlook for the current year is clouded by the uncertainty of production at Rourkela which is struggling with the problems involved in starting up a major steel enterprise. In areas where we can make a contribution we are co-operating closely with this new source of supply and it is gratifying to note that the quality of our first consignment of Rourkela tinplate was promising. Quantitative difficulties, however, may take long to overcome and, having regard to the length of time taken to plan imports, it is important that D. L. F. or other imports should continue to be made available on the same scale as last year.

"Deep-drawing mild steel sheet was in satisfactory supply throughout the year. The production of our industrial components is assured for the present orders on hand; but beyond that, production will depend on the availability of imported sheet steel of the special quality required for this type of work.

"The Company's consumption of aluminium sheet and slugs, whilst showing a small increase over the previous year, continued to be limited by the availability of Indian-made supplies and by their high price. With the completion of the Indian Aluminium Company's expansion programme, and the commencement of production by Hindustan Aluminium during this year, it is hoped that consumers of this valuable packaging material will benefit from additional supplies at a lower price.

"The increased excise on foil, now Rs. 600 per tonne, is a discouraging levy on a material which we use exclusively for the tamperproof sealing of tinplate containers and for the development of new laminates for heat-sealed consumer-packages intended for the mass markets.

Research, Design and Development

"The year under review has seen continued success in the efforts by our Research Division to develop high-quality ancillary materials of indigenous manufacture. Recent successes in collaboration with our suppliers include a range of process resistant decorative materials for collapsible tubes and, on an experimental basis, for processed food cans; an enlarged range of high-gloss flexographic inks which enables us to produce Diothene bags to a quality comparable with any polyethylene printing anywhere in the world; and improved light-resistant inks for use on packages and advertising media liable to continuous exposure to daylight. The Canning Advisory Service offered by Research Division to food canners has continued to expand. Considerable development work has been carried out on complex aspects of plastics production and technology.

"Normal product design work continued successfully throughout the year and a number of new products within the scope of our existing machinery were added. The Technical Development Section has made further contributions over the year in the design of new packages, industrial components and machinery. Package development work is primarily directed towards improved pilferproof containers capable of being manufactured and, as far as possible, closed at high speeds. An outstanding development introduced during the year under review was the aluminium 'No-pilfer Diaphragm' designed primarily to seal confectionery containers and make them tamperproof. The use of this development eliminates the need for imported tagger tinplate. We have also developed prototype machinery for addition to our range of sealing equipment for customers re-designed some of our existing plant, and designed new machinery to accelerate production speeds.

"As an important development aimed at providing greater facilities to prawn exporters, we opened in December 1961 our Kerala Service Installation in Cochin which includes a reforming unit. At Calcutta No. 1 a high speed Open Top can-making line of the latest design has been installed to replace obsolete equipment. In the Plastics Works at Calcutta No. 2, machinery for the manufacture of heat-sealing laminates, extrusion-coated products and moulded bottles is being installed. Manufacturing trials, are currently in progress and we expect to go into regular production shortly.

"Also at Calcutta No. 2 steady progress has been maintained in machinery building; currently we are making a range of twenty-five different machines. The fact that some 10 per cent of our output of these machines was exported is an indication of the high standards achieved.

Laminated Papers

"Your Company has recently received permission from the Government of India to manufacture treated and laminated papers and boards and containers made therefrom. Our entry into this field will enable us, using Indian raw materials, to offer precision-made cartons finished to that high standard of quality which is essential for export markets. It will also enable us to develop packaging systems involving the use of tamperproof functional cartons capable of holding semi-solids and possibly liquids, and providing an air-tight seal. This product diversification is a result of the Company's sustained efforts to provide its customers with a complete packaging service. In this, as with all our endeavours, both old and new, we owe much to our associates in the United Kingdom. The new line of laminated papers and boards and containers made therefrom will be substantially assisted by the valuable contribution which our associates can make, and your Company will materially benefit from their long experience in what to us will be a new field of activity.

"In Bombay, with the completion of an additional floor on the administrative block, our present site in Worli is now fully developed. We have, therefore, purchased some twelve acres of land at Deonar 9 miles from Worli. Here, Bombay No. 2 Factory will be built in order to relieve congestion, make room for carton manufacture and improve working conditions at Worli. Preliminary planning has been completed and construction should commence shortly.

Employee Relations

"Good relations between management and employees have continued except for occasional signs of restlessness in Calcutta and Faridabad. The past year was marked by the establishment of representative committees of employees to strengthen bipartite negotiations in all units. To facilitate understanding at all levels management has widely circulated an unequivocal statement of the Company's personnel policy.

"I am glad to report that after three years of unsatisfactory relations in Madras, this last year has seen a marked improvement. The terms and conditions of union recognition have been settled and a five-year agreement resolving differences has been signed. The second three-year agreement on Prosperity Bonus with employees ended with the payment of last year's bonus. Fresh negotiations were started late in 1961 and they have now been concluded in a new three-year agreement.

"We have continued to put emphasis on the training of staff and progress has been made in integrating outside courses available both in India and abroad with facilities within the Company. Two of our Indian officers were given special technical training by our associates in the U.S.A., the Continental Can Company Inc. Sixteen Indian officers were sent for training with Metal Box in the U.K. Seventy-four managers have already undergone the Company's residential course in management and one hundred and fifty-four foremen and supervisors have attended non-residential full-time courses organised by the Company. In time, every member of the Company's management cadre will have participated in a programme of formal training. Our in-company courses have benefited from a visit of the head of Metal Box's Education and Training Division in the U.K., Mr. D. G. Sanders. You will be interested to learn that following his visit, our associated companies in neighbouring lands have decided to send their managers to India to participate in our courses.

"Aside from formal schemes of training, we have charged management in all our units with the important responsibility of on-the-job training and we have generally improved the planning of the career development of our more promising employees. There is, as a result of this training activity, a perceptibly increasing awareness of sound management practice at all levels.

"I thank the employees of the Company for their co-operation and for the fine sense of responsibility which they have contributed over the past year to our progress in the face of some formidable difficulties.

Retirement

"Sir Robert Barlow, who has been a Director of the Company since its formation in 1933, has retired from the Board. I am sure you would wish me to place on record our deep appreciation of the invaluable services rendered by Sir Robert Barlow in the last thirty years. It was his genius that spear-headed the development of the packaging industry in India and if it had not been for his inspiration and foresight this Company could never have aspired to its present position in the Indian economy."

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

ELECTRO-EQUIPMENTS CORPORATION LTD.

CHAIRMAN, MR. S. R. DAMANI'S SPEECH

BRIGHT PROSPECTS ENVISAGED

MR. S. R. Damani, Chairman of the Electro-Equipments Corporation Ltd., told the First Annual General Meeting of the Company, held at Bombay on 16th June 1962, that, considering the wide gap between the present installed capacity in the country of 500,000 pieces per year of electric meters and the third Plan requirements of 21 lakh pieces, the prospects for the Company were bright. Recalling that the Company went into production within six months of its formation as a public limited company, Mr. Damani disclosed that it would achieve production of 50,000 meters this year, and added that it was proposed to raise the installed capacity from 60,000 meters per annum to 120,000 meters in the near future. He said that the manufacturing programme would be extended to include production of polyphase meters, for which negotiations with the Government were in progress. He stated that the recent import cuts would not affect the Company, as its imports of meter components from Poland were on rupee payment.

The following is the full text of Mr. Damani's speech:

"GENTLEMEN,

"I take this opportunity of extending to you all a hearty welcome at this very first meeting of the Company. Your presence here today shows the keen interest you have in the Company, and I attribute the success of our venture to this keen interest evinced by you. I believe it is an edifying reflection of the quantum of interest for the welfare and the success of the Company. It is, as well, a tribute to your desire of knowing everything about the Company's working, its management, its progress and its prospects.

"Your Directors have pleasure in presenting for your consideration and acceptance their first annual report and the audited statements of accounts for the year ended 31st December 1961. They have been with you for the last three weeks and I may, with your permission, take it as read and approved.

Production Started in Six Months

"The measure of confidence of the public in the future prospects of the Company can very well be gauged from the fact that, soon after the offer of the equity shares of the Company was made to the public, the issue was oversubscribed. We are happy to report that this confidence was not misplaced, when I draw your attention to the fact that our factory has gone into production within six months of the formation of the Company as a public limited company. The standard of perfection in the manufacturing of the meters is well maintained so as to command good demand in the market. The credit for this supreme effort of commencement of the working of the factory and maintaining the standard of perfection is due, in no small measure, to the technicians of the foreign collaborators as well as ours, without whose efforts and zeal, the achievements would have been well-nigh impossible.

Future Programme

"Initially, we have started manufacturing the single-phase house-service meters and the production thereof is being systematically stepped up, and, during the current year, we hope to achieve the production of 50,000 meters. We are hopeful of raising our installed capacity from 60,000 meters per annum to 120,000 meters per annum in the near future. Also your Directors propose to extend the manufacturing programme so as to include the manufacture of polyphase meters; negotiations with the Government are continuing. The meters manufactured by us, with the collaboration of Messrs. Cekop, will meet with good initial success in the market and the product will, I am confident, make its name by virtue of its quality and performance. I may add here that the recent announcement of the measures to be taken for the conservation of foreign exchange by the Central Government will not affect us, as our import of meter components are from Poland and in which no foreign exchange is involved as the payments are to be in non-convertible Indian rupees according to the agreement between the two countries.

"The requirements of electrical energy meters, both single-phase and polyphase, directly linked to the electricity supply, rural electrification scheme and industrial developments in various sections, all of which have been accorded high priority in the third Five-year Plan, are estimated at 21 lakh pieces per year, whereas the installed capacity of the existing meter manufacturing units in India is only 500,000 pieces per year, which will leave a big gap between demand and supply. I am sanguine that our products will be well received in the market. On these statistics, I am confident in saying that the future of the Company is quite bright.

"The Company has been able to secure a loan of Rs. 10 lakhs from the Bombay State Financial Corporation, and we are thankful to the Bombay State Financial Corporation for the expeditious sanction.

Accounts

"The accounts for the period under review shows a loss which, being of the capital nature, is being carried forward to the next year. These expenses will be adjusted under their respective heads on completion of the factory installation work.

"Three of your Directors, Mr. S. L. Khemka, Mr. C. P. Khemka and Mr. N. L. Khemka retire by rotation under the Articles of Association of the Company, but being eligible they offer themselves for re-election.

"Messrs. M. L. Bhuwania and Company, the auditors of the Company, also retire at this meeting, but being eligible offer for re-appointment. You are requested to confirm their appointment for a further period of one year, till the conclusion of the next annual general meeting, and also fix their remuneration.

"Before I conclude, I, on behalf of the Board of Directors and the shareholders, would like to convey our deep sense of appreciation for the co-operation of the members of the staff and workers, both at the office and at the factory."

Note: *This does not purport to be a report of the proceedings of the meeting.*

Notice

THE DURGAPUR PROJECTS LIMITED

(A West Bengal Government Undertaking)

10, Middleton Row, 1st Floor,
CALCUTTA-16

THE DURGAPUR PROJECTS LTD. INVITE sealed Tenders superscribed on the cover "Tender for Tar Distillation Products" from *bona fide* consumers/dealers for purchase of the following products on a guaranteed monthly offtake basis for a period of one year. Name of products and their monthly production are respectively as follows:—1. Carbolic Oil (Phenol Content 20-25% and 30-35%. 95% distilling between 170°C-208°C,—30 tons; 2. Crude Naphthalene, Hot pressed Quality (Crystalising point: 78°C)—75 tons; 3. Timber Pickling Oil (Creosote Oil) (Blended Wash Oil and Anthracene Oil ISI. Specification No. 218 of 1962)—150 tons. Tenderers will quote prices F.O.R. Durgapur Works, exclusive of all taxes and duties, if any, mentioning guaranteed monthly offtake for one or more items. Successful tenderers shall execute an agreement for the monthly guaranteed offtake of product or products valid for twelve months depositing as security 2½ per cent of the monthly offtake value of each product. Supplies shall be made strictly against advance payment of total value of each consignment or against irrevocable letter of credit to adequate amount. Tenders as indicated above will be received by the Sales Promotion Officer in the office of the Director, Commence and Transportation, The Durgapur Projects Ltd., 10, *Middleton Row* (1st floor), Calcutta-16, upto July 14, 1962. Further Technical details as required will be had from the Sales Promotion Officer at the above address. The Project is not bound to assign any reason for not accepting the lowest or any other offer.

TRAVANCORE CEMENTS LIMITED

SPEECH OF MR. C. S. LOGANATHAN

THE hope that the Government of India would give sympathetic consideration to the cement industry's plea for higher retention price was expressed by Mr. C. S. Loganathan, Chairman of the Travancore Cements Limited, in his speech at the Fifteenth Annual General Meeting of the Company held at Kottayam on Friday, 22nd June 1962. Mr. Loganathan did admit that the increase in cement price allowed from 1st November 1961 gave some relief in meeting the enhanced cost of production, but pointed out that there had since then been again some increase in working cost due to higher railway freight, coal cost, etc. as well as to a rise in raw material prices. The following is the full text of his speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the fifteenth annual general meeting of the Company. The audited balance-sheet as at 31st December 1961 and the profit and loss account for the year ended that date and your Directors' report have been in your hands for some time and, with your permission I shall take them as read.

Profit

"The year's working has resulted in a net profit of Rs. 4,99,058, as against Rs. 5,21,843 for the previous year. In the later part of 1961, we were on white cement production and the bulk of it is being sold in 1962. This has resulted, to some extent, in lesser turnover and profit compared to the previous year. The revised price for cement came into effect only from 1st November 1961, even though the term of the previous price fixed in 1958 was to expire by July 1961. The increase in price allowed to us from 1st November 1961, no doubt, gives us some relief in meeting the increased cost of production, but there has been again some increase in working cost, due to increase in railway freight, coal cost, etc. The raw material cost has also gone up, as we have now shifted our dredging operations to 'Vaikom' area which is nearly 10 miles further away from the place where we were collecting our shells in previous years.

"The Cement Manufacturers' Association is taking up the matter with the Ministry of Steel and Heavy Industries to revise the retention price of cement wherever necessary due to increase in coal price, railway freight, electricity charges, royalty on raw materials, etc., since the revision of price in November 1961 and we can reasonably hope that the Government of India will give sympathetic consideration in this matter.

Dividend and Taxation

"The Directors of your Company have recommended payment of 6 per cent dividend subject to tax for 1961 after providing for taxation. As you are aware, the present Company taxation stands at 50 per cent of net profit, as against 45 per cent in the previous year and the divisible profit after taxation is reduced accordingly.

"Relation with staff and labour have been cordial. The period of the long-term truce agreement entered into with the labour unions in 1958 expired on 31st May 1962 and it is hoped that another long-term agreement would be arrived at shortly to maintain industrial peace.

"I wish to bring to your notice with deep regret the death of Sri Parayath E. Raman Menon on 15th February 1962 who was a Director of the Company from the inception. I have no doubt that you will join me to place on record our appreciation of the valuable services rendered by the late Sri Parayath E. Raman Menon to the affairs of the Company.

"I wish to express my gratitude to my fellow Directors for their valuable guidance and service and the Works Manager and all employees of the factory for their work during the year.

"Gentlemen, I thank you all for your presence at this meeting.

"I now request that the Directors' report and the audited accounts for the year 1961 be taken for consideration and adoption."

Note: *This does not purport to be the report of the proceedings of the annual general meeting.*

INDORE MALWA UNITED MILLS LIMITED

CHAIRMAN, MR. K. G. SEKSARIA'S SPEECH

"COMPANY WILL DO EVERYTHING IN ITS POWER TO FULFIL ITS QUOTA OF EXPORTS"

THE *Fifty-fifth Annual General Meeting* of the Indore Malwa United Mills Ltd. was held at Bombay on Tuesday, 26th June 1962. Addressing the meeting, Mr. Kudilal Govindram Seksaria, Chairman of the Company, regretted the steadily declining exports when the country needed foreign exchange badly. He referred to the compulsory obligation cast on mills to export during the second half of this year 12½ per cent of their production of cloth and 3 per cent of yarn in the year ending on any day between 30th June 1961 and 29th June 1962 and declared that his Company "will do everything in its power to fulfil its quota of exports." He also referred to the modernisation and renovation which, he said, was going on as per schedule. As for the prospects for the current year, he hoped that, despite adverse factors, the working results would not be less favourable than in 1961.

The following is the full text of Mr. Seksaria's speech:

"GENTLEMEN,

"I welcome you to the fifty-fifth annual general meeting of the Company. The Directors' report and the annual accounts of the Company for the year ended 31st December 1961 have been in your hands for sometime and, with your permission, I take them as read.

"You will no doubt be gratified to observe from the Directors' report and the audited accounts that, in spite of high expenses, the Company has been able to show a higher profit of Rs. 30.51 lakhs before providing for depreciation, development rebate and taxation, as compared to Rs. 27.69 lakhs made last year.

Cotton Supply

"During the early part of 1961, the supply position in respect of cotton was quite easy and practically all varieties were available at or below the ceiling prices. This happy position, however, was completely reversed during the latter part of the year. Due to adverse weather conditions in the cotton growing areas, the 1961-62 crop is estimated to be only about 40 lakh bales. As a result, the industry has been experiencing a serious crisis in the supply of cotton and the prices have shot up. The serious position can be seen from the remarks of Shri Manubhai Shah at the meeting of the Cotton Textiles Consultative Board that, in spite of the Government's attempts to arrange for the import of cotton from all fronts, he could not hold out any definite promise in this regard. As far as your Company is concerned, despite a pretty large stock of cotton in hand and the expected allotments of Indian and foreign cotton, the management will be experiencing great difficulty in running the mills fully till new crop arrives in the market.

"Due to plentiful supplies of raw cotton at comparatively low prices during the major part of the year 1961, cloth and yarn output registered a notable rise, the total output being about 5,148 million yards and 1,868 million lbs., as compared with 5,052 million yards and 1,737 million lbs., respectively, in 1960. The production by the textile mills during the year 1961 would have been much more encouraging but for a series of impediments, especially heavy tax imposts and the hurdles lying in the way of modernisation and renovation. This rise in output and the sizable opening stocks with mills resulted in a larger supply being available for consumption and export during the year 1961, the excess over the previous year's figures being about 300 million yards. In terms of *per capita* availability, however, the mill cloth supply was no more than 13.17 yards. Due to decline in exports, the quantity available for domestic consumption was larger. In the natural course this should have resulted in a decline in prices, but due to the stepping up of excise duties on cloth and yarn together with duties on chemicals and dyes, the prices of cloth rose by 3 to 4 per cent, thus neutralising a part of reduction in the prices of cloth and yarn secured from the mill industry by the Government. The year 1961 was a favourable one for the working of the industry, though the cost base was persistently higher due to higher wage bill and enhanced prices for stores, chemicals, dyeing materials and coal.

"At a time when the country needs foreign exchange badly, it is distressing that our exports of cotton textiles, one of the main foreign exchange earners, should be steadily declining. The exports for the year 1961 were 575 million yards, as against 810 million yards in 1959 and 690 million yards in 1960. This trend is still continuing, the export figures for the first five months of this year being only 200 million yards. This problem in the context of foreign exchange crisis has been receiving serious consideration of all concerned and, with the concurrence of the industry, a compulsory obligation has been cast on all mills to export in the second half of the current year 12½ per cent of their production of cloth and 3 per cent of their production of yarn during the year ending on any day between 30th June 1961 and 29th June 1962.

"This Company will do everything in its power to fulfil its quota of exports of cloth and yarn.

"Turning to the affairs of the Company, the profits shown, as stated above, are Rs. 30.51 lakhs, as compared to Rs. 27.69 lakhs last year. The total sales of cloth, yarn and waste increased by about Rs. 27 lakhs, due mostly to the increased realisation of yarn. The cotton consumption has gone up by about Rs. 3 lakhs, stores, dyes and chemicals by Rs. 5 lakhs and wages by Rs. 6 lakhs, largely due to the rise in the D.A. Further, bonus for the year 1959 amounting to Rs. 1.65 lakh and gratuity and retrenchment compensation amounting to Rs. 67,862 have been adjusted against the profits.

Modernisation

"Modernisation and renovation of the mills is going on as per schedule. As on today, out of 51,128 spindles at our mills, 13,600 spindles were replaced by 1961 and, out of the orders placed for the supply of 17,680 new spindles of longer lift, the first ring frame of 680 spindles has been received and is running most satisfactorily since the last two months. The delivery of the remaining spindles is expected to be completed by the middle of next year. In view of the extremely late deliveries offered by the manufacturers, 15,000 spindles are being renovated with high draft system and pneumatic clearer attachments and overhead cleaners. Orders for the renovating materials in this connection have already been placed and deliveries thereof are expected shortly. Further, the Company has applied to the Textile Commissioner for additional 20,000 spindles for balancing purposes. This application is still under consideration.

"Six high speed roving frames ordered last year are expected to be received shortly. Further orders for 10 canfed inters and conversion materials to renovate existing 15 inter frames with UTL 4-F drafting system have been placed.

Machinery Purchase

"Negotiations are going on for the purchase of Barber Colman winding and warping machine and order for the same will be shortly placed. Further, an application for 144 automatic looms for replacement has been made to the Textile Commissioner. In order to modernise our processing department with latest machinery, orders for cloth mercerising range, hot air stenter, pneumatic padding mangles, vertical drying ranges, black-rope type washing machineries, Obermaier German make package dyeing plant, cloth singeing machine, semi-automatic tensionless jiggers, kiers and a mineral *khaki* dyeing plant, costing in the aggregate Rs. 20 lakhs, have been placed. Out of the same, the mineral *khaki* dyeing plant is under erection and the cloth mercerising range and package plants are in transit. In order to use the power to be obtained from the Chambal Hydel Project, the electrification of the mills is in full swing. This is expected to result in some saving and to free the mills to a considerable extent of its dependence upon irregular coal supplies.

"I hasten to add, however, that, during the year under consideration, your mills have not been forced to resort to involuntary closure on account of coal shortage and that, in view of the new measures adopted by the Government of India to accelerate the supply of coal, this contingency is expected not to arise.

"As anticipated last year, the sale of additional yarn to the decentralised sector of the industry during the year 1961 reached the target of Rs. 50 lakhs. The management is continuing its efforts to increase the production of such yarn and I hope that realisation on this account during the current year will reach Rs. 80 lakhs.

"Benefiting by the experience gained from the running of the third shift of the spinning section of the mill to produce additional yarn for catering to the needs of the decentralised sector of the industry, your Directors are considering the running of the waste department of the mills, known as the 'New Mills,' in the third shift as from the first week of July 1962. This will increase the realisation by at least Rs. 5 to Rs. 7 lakhs this year.

Prospects

"As regards the prospects for the current year, the same would have been better than last year, had it not been for the rise in cotton prices, enhanced cost of stores, chemicals and coal, and increase in the wage bill of the Company due to increased D.A. coupled with a further increase of Rs. 2 in the basic wages of the workers as from 1st January 1962, and the enhanced contribution to the E.S.I. scheme. However, I hope that, despite the above adverse factors, the results of the year's working will not be less favourable than in 1961. The recent budget proposals, which have now been passed by Parliament, have enhanced the excise burden on cloth and yarn. But the Hon'ble Finance Minister, while enhancing these duties, has in fact kept in mind to reduce the burden upon the public in general and, with this end in view, he has reduced the excise duty on grey cloth which has given some relief to the poorer section of the community. As your mills are at present producing coarse and medium varieties of cloth, mostly grey, the incidence of excise duties on your mills on the production of such varieties of cloth will be lighter.

"As intimated to you in the notice, we would be transacting some special business in the meeting. In the explanatory note annexed to the notice, the nature of the business has been fully explained to you. I hope you will accord your approval thereto.

"On behalf of the Board and my own, I thank all the officers and other employees of the Company for the good work they have put in during the year.

"Thank you."

WORLD TRADE IN SPICES

DECLINE IN PEPPER CONSUMPTION IN THE WEST FEARED

SPICES occupied the pride of place in international trade as early as in the fifteenth and sixteenth centuries. In fact, they were then the main components of commercial intercourse between Asia and Europe; this, incidentally, changed the course of history. Spices were ideal for overseas trade even at a time when transportation facilities were very limited and primitive, owing to their high value per unit of weight and non-perishable qualities. Their relative importance in world trade, however, has declined considerably with the passage of time, reflecting the phenomenal growth of trade in other products. At present, spices account for just less than 0.1 per cent of world trade. Trade in spices, nevertheless, remains important for a number of exporting countries and is the dominant feature in the economy of a few colonial islands. It is also important in the domestic economy of producer countries where domestic consumption is high, and is a significant item of import trade of other countries in the Near East and Far East. But the statistical information on most items of spices is scrappy and far from authentic.

It is, therefore, gratifying to note that the U.N. Food and Agriculture Organisation—F.A.O., for short—has taken the initiative to publish a study on the trends in world production, consumption and marketing of major spices. The study, entitled "*Spices—Trends in World Markets*" (1962), has been prepared by Mrs. M. F. W. Hemming and Mr. George F. Ray of the National Institute of Economic and Social Research, London, in co-operation with the Sugar, Beverages and Horticultural branch of the F.A.O. Commodities Division, at the request of the F.A.O. Committee on Commodity Problems. The study (priced at 2*s.* 6*d.*), includes nine of the major spices, accounting altogether for four-fifths of the world spice trade. These are: pepper, cloves, nutmeg, mace, cardamom, cinnamon, cassia, ginger and pimento.

Instability of Prices

A striking feature common to all spices, according to the F.A.O. study, is the instability of their prices. The main cause of price fluctuations lies in the conditions of production. Spices are generally produced only in a few areas in the tropics and the influence of weather, pests and disease on the level of output is very marked. The following table shows the average world output of major spices between 1958-60 (the latest period for which the data are compiled in the aforesaid study), as compared with 1951-53 and the immediate pre-war period, 1937-39:

TABLE I

(In thousand metric tons)

	1937-39 annual average	1951-53 annual average	1958-60 annual average
Pepper	83.6*	43.6	67.2
Cloves	20.7	17.8	17.2
Nutmeg and mace	8.2	6.6	5.3
Cardamom	3.4	3.0	2.4
Cinnamon and cassia	10.6	8.5	11.1
Ginger	17.5	19.4	20.7
Pimento	4.2	2.8	2.5

* 1935-39 average.

It will be seen from the table that, except for ginger, the output has not yet regained the pre-war levels. The devastating effects of war on spice production in Indonesia account for a *major* part of the decline in total output. The instability in prices has also had a dampening effect on producers.

The influence of production on prices is quite marked in the case of spices, though the impact of price on output is difficult to assess. On this important question of relation between the price and output of spices, the F.A.O. study says as follows:

"It is generally accepted that spice production is responsive to price changes, but, in many cases, this effect is not easy to trace in the overall statistics, let alone to express in quantitative terms. In the first place, the influence of price has, in some cases, been heavily overlaid by other factors (such as war-time destruction and subsequent recovery, or climatic influences). Secondly, price can influence production in several different ways operating with varying time lags: where it affects new planting, this may not show up in output for some years, increased expenditure on manure or insecticides produces results relatively quickly, while an increase in labour devoted to the harvesting of the crop may increase output with no delay at all. Finally, in very poor localities, production may even respond to price negatively, if producers are heavily dependent on cash obtained from spice production for buying the necessities of life, or where alternative production possibilities are very limited or non-existent. Quite apart from such extreme cases, the extent of positive reaction of production to prices varies greatly with the degree of dependence on spice production in the particular producing areas. While the influence of prices on production is not easy to establish, the influence of production on prices is often very striking. Thus, the hurricane which destroyed three-quarters of the nutmeg trees in Granada was followed by a sixfold rise in the wholesale prices of nutmeg."

Demand

Apart from the question of supply, the prospects for increasing the demand for spices, according to the F.A.O. study, are apparently not bright, except in the East. The reason for expecting consumption of spices in the East to expand is the rising standard of living following the efforts that are being made to develop the economies in this region. In the West, which now offers a good market, spices form "a minute item in the family budget" and their consumption is influenced much more by cooking and eating habits than by prices or real income. Technological progress in the food processing industries and the extensive use of refrigeration have exerted an adverse effect on demand for spices employed for preservation purposes. Increased use of processed foods which are acceptable to a wide range of tastes may also have contributed to reduce the need for spices in the higher-income countries where such foods are more common. It may be noted here that the advanced industrial areas of North America and Western Europe still account for over half of the total import market for all the spices taken together, but the share of these countries has nevertheless been falling, as compared with the pre-war levels, in favour of Arab countries and to a lesser extent South America. There has been some declines in the imports of Soviet Union and Eastern Europe (where imports are undertaken by the State) and also of India, which has imposed severe controls on imports of certain spices.

Exports of spices are of outstanding importance to a few insular economies, the extreme cases being Zanzibar and Granada. In the former, cloves alone account for over four-fifths of the total exports and, in the latter, nutmeg and mace for more than one-half. The following table shows the percentage of the export of spices of the major producing countries to their total exports:

TABLE II

	Percentage of export of spices to total exports*	Main spices exported
Zanzibar	81.5	Cloves and clove oil.
Granada	54.0	Nutmeg, mace.
Seychelle Islands	18.8	Cinnamon and its oil.
French Oceania	14.9	Vanilla.
Madagascar	10.3	Cloves and vanilla.
Sarawak	4.7	Pepper.
Jamaica	3.4	Pimento and ginger.
Reunion (Bourbon)	2.3	Vanilla.
Sierra Leone	2.1	Ginger.
Indonesia	1.6	Pepper, nutmeg, cassia, mace.
India	1.5	Pepper, cardamom, ginger.
Malaya and Singapore	1.6	(Re-exports of spices).
Ceylon	1.3	Cinnamon, cardamom.
Spain	0.6	Capsicum.

* Including essential oils distilled.

N.B.—Percentages relate to the year 1955-57 (annual average), except for Sarawak, Ceylon and Spain, for which the average is for the period 1955-58.

Pepper

Pepper is by far the most important of the spices, with the value of exports amounting to about $36 million annually (1958-60), representing about 30 per cent of total world spice exports. The main producers of pepper are India, Indonesia, Sarawak and Ceylon. It will be a disturbing thought for these countries to hear that, owing to relatively low price and negligible income elasticity of pepper in high-income countries and to the technical changes in the food processing industry, "prospects for an increase in consumption do not appear to be bright" in Europe and North America. Despite the increase in world population and *per capita* income since the pre-war period, world pepper consumption has decreased by 20 per cent, the decline being shared mainly by developed countries. The annual *per capita* consumption of pepper in the U.S., the main consumer, fell from 121 in 1935-39 to 100 grams in 1954-58. Similarly, it declined during the same period from 59 to 58 grams in the U.K., from 137 to 83 grams in Sweden and from 80 to 64 grams in West Germany. The table below shows the data of *per capita* consumption for all the important countries:

TABLE III

(Grams per head per year)

	1937-39 (average)	1950-53	1954-58	1954-58 as percentage of 1937-39 level
U.S.	120.65†	78.47	99 79	— 83

Canada	81.65	63.50	81.65	100
Mainland China	4.08	..	0.91	..
Denmark	66.68	34.93	67.58	+102
France	60.33	33.57	49.90	— 83
Germany	79.83	32.66	63.50	— 80
Greece	49.90	17.69	40.82	— 82
India	57.15	21.77	34.02	— 59
Indonesia	70.31	14.06	72.57	+103
Iran	20.87	8.17	13.15	— 63
Italy	41.73	17.69	31.75	— 76
Japan	..	0.91	3.18	..
Netherlands	63.95	14.97	35.38	— 55
Peru	..	5.90	27.22	..
U.A.R.*	49.90	28.12	19.50	— 39
Russia	..	..	22.68	..
Yugoslavia	19.96	8.18	10.43	— 52

* Including Syria. † 1935-39.

Nevertheless, the authors of the study are of the view that the outlook is not uniformly discouraging for they feel that the scope for expanding consumption in low-income countries, particularly in producer countries themselves, is fairly good. In these countries, price and income effects are still important. Besides, the relatively monotonous diets and the insignificant role of food processing industries also "favour" a strong demand for pepper.

Exports and Imports

As regards the foreign trade in pepper, the following table shows the trend in exports, re-exports and imports of major trading countries in 1960, as compared with the previous two years and also 1951 and 1937-39:

TABLE IV

(In thousand metric tons)

	1937-39 average	1950	1958	1959	1960
Exports					
Indonesia	51.70	7.11	12.45	28.78	8.18

* Post-war figures relate to West Germany.
† Estimated. ‡ China only.

A striking feature of exports is the emergence of India as a major supplier of pepper during the post-war period. India has always been a large producer of pepper, but before the war, it consumed most of its production at home. The entrepot trade of the Federation of Malaya and of Singapore largely reflects the exports of Sarawak and Indonesia. While Sarawak succeeded in reducing the proportion of its exports handled through Singapore from 85 to 70 per cent, the disappearance of Dutch traders from Indonesia enabled Singapore merchants to increase their share of Indonesia's exports from 16 per cent in 1938 to 80 per cent in 1958. Apart from Singapore, trade in the traditional re-exporting centres has declined heavily. The role of Hong Kong, which used to act as middleman for Chinese exports, has dwindled almost to nothing. The same is true of the U.S. re-exports. The London market regained its importance after the war, but has lost some of it since 1954.

The main importer of pepper is the U.S. Before the war, it took up some 30 to 40 per cent of total exports. After the war, mainly owing to the pepper shortage, but partly also

(Continued on page 1188)

RESULTS OF F.A.C.TS GRATIFYING

EXPANSION TO BE FINANCED BY CENTRAL GOVERNMENT

THANKS to the completion of the first stage of its expansion plan, the benefits of which began to be felt during the year under review, the Fertilisers and Chemicals Travancore Ltd. known familiarly as F.A.C.Ts (Chairman: Mr. T. A. Joseph) was able to record, during the year ended 31st December 1961, an improvement of Rs. 102.63 lakhs to Rs. 411.49 lakhs in the turnover over and above the rise of Rs. 69.25 lakhs realised during 1960. This increase in sales, however, does not fully reflect the improvement in production which the Company was able to achieve, since the retention price of ammonium sulphate was lowered by the Government of India and prices of superphosphate and ammonium chloride had to be drastically cut to meet market conditions. The actual output of major products, in metric tonnes, was substantially higher as will be evident from the following figures, those in brackets relating to the previous year:

Ammonia 20,426 (13,537), sulphuric acid 65,879 (52,827), ammonium sulphate 51,109 (39,813), ammonium phosphate 12,897 (*nil*) and superphosphate 29,185 (39,584).

Although the gross profit has risen from Rs. 80.37 lakhs to Rs. 99.20 lakhs in consonance with the sale proceeds, the rate of increase has been lower due partly to the aforesaid cut in prices and partly to the underutilisation of capacity of the ammonium phosphate plant on account of shortage of ammonia. Provision for Managing Agents' commission has been lowered from Rs. 2.42 lakhs to Rs. 0.95 lakh and represents only the balance of amount payable to the former managing agents. Provision for depreciation, on the other hand has gone up substantially by Rs. 13.66 lakhs to Rs. 38.76 lakhs while a small provision of Rs. 1.50 lakh has also been found necessary, for the first time, for taxation. After making these essential provisions there has accrued a somewhat higher net profit of Rs. 57.98 lakhs as compared with Rs. 52.85 lakhs for the previous year. Ordinary dividend has once again been maintained at 6 per cent, subject to deduction of tax, and absorbs, as before, Rs. 20.76 lakhs. Transfer to reserves, excluding Rs. 2.00 lakhs credited to the provision for staff gratuity, has been raised to Rs. 25.75 lakhs from Rs. 23.55 lakhs previously while the carry forward is higher at Rs. 33.01 lakhs as compared with Rs. 26.13 lakhs brought in.

The working of the Company during the past four years is presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale of products	411.49	308.83	239.58	247.11
Other income	12.89	11.07	15.24	14.08

* Subject to deduction of tax.

The farsighted policy of ploughing a large portion of available profits back into the business has helped the Company to supplement its share capital of Rs. 346.06 lakhs (all in equity shares of Rs. 10 each) by reserves amounting to no less than Rs. 98.93 lakhs. Considering that it was only as late as 1958 that the Company was able to recoup fully the deficit brought forward from earlier years, the accumulation of the aforesaid reserves does appear creditable. Since the owned funds were found grossly inadequate to meet the capital expenditure required for the execution of expansion plan, the Company was obliged to lean heavily on borrowings which, as at 31st December 1961, aggregated Rs. 300.62 lakhs. Of this Rs. 227.03 lakhs represented loans from the Industrial Finance Corporation and the balance from banks. In addition to these, current liabilities and provisions totalled Rs. 205.72 lakhs.

On the assets side, the net block is worth Rs. 458.15 lakhs and has been obtained by reducing a gross block of Rs. 801.87 lakhs by Rs. 343.72 lakhs which represents the depreciation earned to date. Besides, development projects under completion are valued at Rs. 137.28 lakhs. Investments, current assets and loans and advances altogether amount to Rs. 355.91 lakhs.

The Company's expansion programme, undertaken a few years ago, continued to make good progress. The first stage was completed by the end of 1960 and the Company came into the market with Factamfos (ammonium phosphate) early in 1961. The electrolytic hydrogen plant, however, could be worked only upto two-thirds of its capacity for want of power. The second stage of the programme, involving the replacement of the existing firewood gasification plant by an oil gasification plant based on naphtha, is expected to be completed by the middle of this year. Arrangements for commencing trial runs in June are complete and commercial production is expected to start by the last quarter of the year. Side by side with this, the Company has taken on hand the third stage of expansion, envisaging the raising of the factory's capacity to 70,000 tons of nitrogen per annum. The programme, scheduled to be completed by 1963-64, involves a capital outlay of nearly Rs. 10.00 crores. The Government of India has agreed to contribute Rs. 8.00 crores for this purpose, Rs. 4.00 crores as equity capital and Rs. 4.00 crores as a loan. The balance Rs. 2.00 crores required will be found from the Company's own reserves and surplus.

An interesting event during the year under review was the signing of an agreement by the Company with Messrs. Power Gas Corporation of the U.K. for the exchange of technical know-how developed by the Company for the manufacture of ammonium sulphate from by-product gypsum obtained from the phosphoric acid plant. According to this agreement Power Gas Corporation Ltd. will be paying to the Company a royalty on a percentage basis on all contracts secured by them for the manufacture of ammonium sulphate out of by-product gypsum. This is, indeed, a great step forward not only for the Company but for Indian industry as a whole.

The Rs. 10.00 fully paid ordinary shares of the Company are currently quoted at Rs. 8.10 *cum-div.* to fetch on *ex-div.* basis a net yield of 5.5 per cent per annum.

MINERVA MILLS RETURN TO DIVIDEND LIST

Thanks to a spurt in sale proceeds from Rs. 128.10 lakhs to Rs. 200.77 lakhs and further improvement in gross profit from Rs. 8.41 lakhs to Rs. 10.13 lakhs during the year ended 31st December 1961, the Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur and Company (Private) Ltd., Bombay) has returned to the dividend list after a lapse of four years. The Directors have proposed for the year a modest taxable return of 5 per cent per annum on the Rs. 100 fully paid equity shares, which works out to 3.5 per cent net, as against 6 per cent paid in 1956, on the same amount of equity capital of Rs. 29.60 lakhs. Out of the 9,865 8.5 per cent per annum, taxable, redeemable cumulative preference shares of Rs. 100 each, resolved to be issued in October 1960, for which applications were received from 17th February to 31st August 1961, only 3,266 shares are shown as subscribed for till the year-end and the total amount absorbed by way of dividend on these shares amounts to Rs. 0.24 lakh.

It will be recalled that from 1957 to 1959 the Company was in the red. The year's results are a continuation of the recovery noticed in 1960. Costs rose quite sharply during the year largely because of higher production as is reflected in both increased sales and a larger inventory of Rs. 68.63 lakhs as against Rs. 32.53 lakhs in the previous year. The cost of cotton consumed rose by some Rs. 10 lakhs to Rs. 92.25 lakhs. Staff expenses increased from Rs. 45.51 lakhs to Rs. 47 97 lakhs. Other expenses went up by some Rs. 4 lakhs to Rs. 33.34 lakhs. The provision for depreciation has been reduced from Rs. 6.37 lakhs to Rs. 6.16 lakhs. The Managing Agents' remuneration has again been the minimum of Rs. 0.40 lakh. The provision for gratuity has been raised slightly from Rs. 1.15 lakh to Rs. 1.17 lakh. For want of assessable profit, no reserve for development rebate was created in respect of 1959 and 1960. But, as the 1961 profit is assessable, it is necessary to create a statutory reserve amounting to Rs. 3.08 lakhs for which a like amount has been transferred from general reserve. In addition, out of the year's distributable surplus, Rs. 0.45 lakh has been transferred to the reserve for development rebate. After providing for the dividends, there is left a surplus of Rs. 0.24 lakh which is carried forward as against *nothing brought in from* the previous year's profit.

The profit for the year does not take into account a capital gain of Rs. 78,790 from sale of a portion of the Company's land to the Mysore Spinning and Manufacturing Company Ltd. From the capital profit, provision has been made for the capital gains tax amounting to Rs. 23,637 payable thereon and the balance of Rs. 55,153 has been carried to capital reserve. The Directors state in their report to the shareholders that the profit for the year did not come up to their earlier expectations mainly because the implementation of the second phase of the Company's programme for renovation and modernisation had to be temporarily suspended, as the loan sanctioned by the National Industrial Development Council for the purpose could not be availed of pending the execution of the mortgage deed. It is expected that the formalities would be completed soon and the loan would be available by the latest in July this year, when part of the imported machinery, which has already arrived, would be taken delivery of and erected. The 13 double driven ring spinning frames (9,048 spindles), ordered for replacement purposes from the National Machinery Manufacturers Ltd., Bombay, are also said to be getting ready and would be erected in the course of this year. The working efficiency of the plant and equipment would considerably improve and increase the Company's earning capacity once all the new machinery goes into production.

The recent three-year setback on the one hand and the modernisation programme on the other have produced some imbalances in the Company's financial position. Its paid-up capital of Rs. 33.07 lakhs, of which Rs. 29.60 lakhs are in ordinary shares and Rs. 3.27 lakhs in preference shares, is backed by reserves and surplus aggregating only Rs. 9 lakhs. During the year, there was a welcome drop in secured bank borrowings from

(Continued on page 1181)

ESSO STANDARD'S RESULTS IMPRESSIVE

ENTIRE PROFIT PLOUGHED BACK

AN improvement of nearly Rs. 2 crores to Rs. 36.01 crores in sales realisations, a rise of about Rs. 90 lakhs to Rs. 418.72 lakhs in gross profit and a two-point increase to 11.6 per cent in the profit-margin (ratio of gross profit to sales) are the highlights of the impressive results of Esso Standard Refining Company of India Ltd., known until March this year, as Standard-Vacuum Refining Company of India Ltd. (Chairman: Mr. J. W. Sinclair, Bombay), for the year ended 31st December 1961. At the same time, however, the return on equity capital of Rs. 225 lakhs in fully paid shares of Rs. 20 each, held entirely by the Esso Standard Eastern, Inc. and its nominees, has been skipped; the entire profit, minus the dividend on preference shares, has been ploughed back. It may be mentioned that, in the past four years, it was only for 1960 that the Company had paid a return of 12 per cent, taxable, on the equity shares.

The year 1961, we are told, was yet another record year for the Company. An average of 40,945 barrels per day of crude oil was processed, as compared with 38,876 barrels a day in 1960, resulting in a total production for the year of about 2,264.80 million litres. The Company sold 2,238.8 million litres as against 2,177.80 million litres in the previous year. Of the total sales, 2,052.20 million litres were in India and the balance of 186.60 million litres, consisting of motor gasoline and asphalt and representing surplus over the requirements of the country, were exported to New Zealand, Australia and Indonesia. Since the refinery went into operation in 1954, the total foreign exchange savings, including export earnings, for the country are estimated at Rs. 26.01 crores.

The table below gives an insight into the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	36,00.66	34,06.52	29,07.72	27,80.90
Other income	21.93	34.53	39.31	35.93
Cost of products	15,41.49	16,46.43	14,12.41	15,57.95
Excise duty	13,62.43	11,16.92	915.45	624.32
Stores, power and fuel	40.93	61.82	51.07	56.49
Staff expenses	68.11	67.68	78.01	83.15
Other expenses	195.90	219.43	203.22	202.06
Gross profit	418.72	328.77	346.84	292.65
Provision for—				
Depreciation	92.31	01.86	87.13	76.39
Taxation*	144.52	105.69	100.84	81.15
Net profit	181.89	131.22	158.88	135.10
To reserves	181.35	130.70	158.35	134.57
Debenture issue expenses	0.53	0.53	0.53	0.53
Dividends—				
Preference	4.50†	4.50†	4.38†	3.20
Ordinary	..	27.00 (12%)†	..	..

* After taking into account the amount transferred from the reserve for deferred taxation, which was Rs. 13.29 lakhs in 1961, Rs. 10.31 lakhs in 1960, Rs. 8.91 lakhs in 1959 and Rs. 11.95 lakhs in 1958.

† Subject to deduction of tax.

It can be seen from the table above that what has largely contributed to the improvement in the profit-margin is the exercise of thorough cost control which is so vital to as big an oil refinery as that of Esso. Further, the prices of crude also were lower, due to keen competition in world markets. Thus, although the year's operations reached a new peak, the principal item of costs, namely, expenses on the products, has gone down from the previous year's high level of Rs. 16.46 crores to Rs. 15.41 crores, which again is lower than the 1958 level of Rs. 15.58 crores. Other items of costs also show a considerable drop from the previous year's levels. The provision for depreciation has been raised from Rs. 91.86 lakhs to Rs. 92.31 lakhs. Excise duty paid to the Government has more than doubled, from Rs. 6.24 crores to Rs. 13.62 crores, in the past four years. In addition, direct taxation, too, has claimed about Rs. 39 lakhs more at Rs. 144.52 lakhs, and, if the increase in taxes proposed under the Central budget for 1962-63 is taken into account the liability is estimated to rise further by some Rs. 17 lakhs. After making these provisions, the net profit works out to Rs. 181.89 lakhs as against Rs. 131.22 lakhs for 1960. After providing Rs. 0.53 lakh towards writing off debenture expenses, the balance of Rs. 181.35 lakhs has been transferred, as is usual with this Company, to general reserves, from which the dividend on preference shares is provided for.

Preparations for receiving the Ankleshwar crude oil, which were initiated in 1961, bore fruit in February last, when the first shipment was received. During the year under review, facilities for bulk asphalt loading were also completed. A licence for the manufacture of hexane has been received from the Government, and the work in connection with the construction of the necessary plant is in progress.

Financially, the Company is very sound, as can be seen from the position obtaining as at the end of 1961. Its paid-up capital of Rs. 300 lakhs, made up of Rs. 225 lakhs in ordinary shares and Rs. 75 lakhs in 6 per cent cumulative preference shares the whole of which is held by Indian investors, is supplemented by reserves and surplus aggregating as much as Rs. 10.79 crores. Such a high reserve position reflects the policy of the management to reinvestment the profit in expansion and development of the Company's activities rather than declare high dividends and take them home. This policy is an index of this foreign company's continuing confidence in India. It is also of considerable benefit to this country.

VICTORIA MILLS MAKE FURTHER HEADWAY

OUTLOOK PROMISING

FURTHER headway has been made by the Victoria Mills Ltd. [Managing Agents: Messrs: Mangaldas Mehta and Company (Private) Ltd., Bombay] during the year ended 31st December 1961, which is in continuation of the improvement noticed in its performance since 1958. Having moved up from Rs. 210.97 lakhs to Rs. 227.67 lakhs between 1958 and 1960, sales picked up fast to reach Rs. 285.68 lakhs in 1961. Likewise, gross profit for 1961 has risen further to Rs. 36.84 lakhs after having improved from Rs. 14.17 lakhs to Rs. 29.90 lakhs in the preceding three years. With a higher profit, the taxable dividend on the Rs. 100 fully paid equity shares has been maintained at 25 per cent per annum, to which level it was raised in the previous year from 20 per cent paid for 1959, on the capital increased during the year by the issue of fully paid 4,400 bonus shares in the proportion of one share for four shares held. In effect, this means a 25 per cent increase in the return to shareholders.

Mr. Mathuradas Mangaldas Parekh, Chairman of the Company, told the annual general meeting held at Bombay on the 21st of this month that the continuous improvement in the Company's performance for the past four years had been achieved in a period of favourable market conditions, though at the same time costs of production also rose considerably. With the full year's working of the scheme for voluntary price control on cotton textiles, on the one hand, and rising costs, on the other, the Company had to obtain increased profits, according to Mr. Parekh, through optimum utilisation of the machinery, high efficiency at every stage of production and a larger volume of output. During the year under review, the cost of cotton consumed was higher by some Rs. 12 lakhs at Rs. 102.57 lakhs and of stores (included in other expenses as shown in the following table) by some Rs. 10 lakhs at Rs. 51.91 lakhs. Staff expenses increased further from Rs. 68.35 lakhs to Rs. 73.19 lakhs. Consequently, the profit-margin (ratio of gross profit to sales), which had shot up from 8 per cent to 13.1 per cent in the previous year, has receded to 12.8 per cent.

The improvement in absolute profit has warranted a higher provision for taxation at Rs. 9.35 lakhs as compared with Rs. 6 lakhs a year before. The provision for depreciation has also been stepped up from Rs. 5.97 lakhs to Rs. 6.63 lakhs. The Managing Agents' commission has increased from Rs. 1.42 lakh to Rs. 2.13 lakhs. Pending the settlement of the issue in regard to bonus for workers for 1959 and onwards, a provision of Rs. 6.75 lakhs (Rs. 6.25 lakhs in 1960) has been made towards this liability. The amount retained in business under reserves is some Rs. 50,000, as against Rs. 1.91 lakh a year ago, but the carry forward is sizable at Rs. 4.85 lakhs as against Rs. 0.79 lakh brought in.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

* Subject to deduction of tax.

Considerable attention has been paid by the Company to modernisation. Thus, the capital investment, since 1954, adds up to about Rs. 1 crore. It is said to have been judiciously spread over the various departments to achieve diversification in production, improvement in the quality of products and reduction in operating costs.

Periscoping the outlook for the current year, the Chairman told the shareholders that it was patchy because of higher cotton prices, further increase in wages following a monthly rise of Rs. 2 per operative since January 1962, double contribution by the employers to the Employees' State Insurance Scheme from April 1962, the latest increases in the excise duties on cloth and finally the 12.5 per cent obligatory export for every cotton textile mill; the bright spots are: the Company's position in regard to cotton is quite good, the raw material shortage would not dislocate or hamper production, the mill is well equipped to adjust its manufactures to the market demand, the operational efficiency of the plant is satisfactory, the Company has been known as a "good" exporter for the past few years, and, finally, the general prospects for cotton textiles are encouraging.

The financial position of the Company is sound. Its paid-up capital of Rs. 30 lakhs of which Rs. 22 lakhs is equity and the rest preference, is supplemented by reserves and surplus aggregating Rs. 68.47 lakhs. Its secured liability has increased from Rs. 28.13 lakhs to Rs. 41.88 lakhs, but unsecured loans have come down slightly from Rs. 23.36 lakhs to Rs. 19.54 lakhs. Other liabilities and provisions amount to Rs. 51.57 lakhs. The total indebtedness to outsiders works out to Rs. 112.99 lakhs, but is adequately covered by current assets and book debts amounting to Rs. 147.73 lakhs. The book value of the gross block as at the year-end is Rs. 140.88 lakhs. It has been written down to Rs 63.03 lakhs.

The Rs. 100 fully paid ordinary shares of the Company offer, at their current market value of Rs. 435.50 *cum-div.*, a net yield of 4 per cent per annum.

STANDARD MOTORS

DIVIDEND REDUCED

THERE was a perceptible decline in the turnover of the Standard Motor Products of India Ltd. (Deputy Chairman: Mr. K. Gopalakrishna, Madras) during the year ended 31st December 1961, with the sales realisation having dropped by Rs. 40.80 lakhs to Rs. 348.95 lakhs despite a higher production of 3,409 vehicles as compared with 3,364 vehicles in 1960. In the absence of any explanatory statement in the Directors' report, it is difficult to understand this anomalous situation, particularly so because the closing stocks of finished goods have also been well depleted. Contrary to this trend in sales, the gross profit has increased, albeit slightly, from Rs. 28.52 lakhs to Rs. 29.08 lakhs, as a result of which the ratio of gross profit to sales has improved to 8.3 per cent from 7.3 per cent during 1960.

In view of the large additions made to the block account during the preceding year, the provision for depreciation has quite naturally increased from Rs. 9.50 lakhs to Rs. 11.08 lakhs while that for taxation is also higher at Rs. 8.25 lakhs as against Rs. 6.60 lakhs previously. These between them have absorbed a major portion of the available gross profit and consequently the net profit has gone down by Rs. 2.67 lakhs to Rs. 9.75 lakhs. Out of this a sum of Rs. 2.00 lakhs (Rs. 3.75 lakhs) has been credited to the development rebate reserve and Rs. 4.46 lakhs have been set aside to meet the liability on account of the preferred dividend for the year under review. Since the balance is not enough to maintain the ordinary dividend at the previous year's level of 9 per cent, subject to deduction of tax, a lower dividend of 7 per cent, subject to deduction of tax, has been proposed. This claims Rs. 3.29 lakhs, leaving Rs. 1,937 to be carried forward as against Rs. 2,974 brought in.

The operating results of the Company for each of the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	348.95	389.75	214.26	231.02
Other income	1.03	2.91	1.59	2.87

Deferred	..	..	..	0.17
Carry forward	0.02	0.03	0.04	0.51

* Subject to deduction of tax.

The financial position of the Company as reflected in its balance-sheet as at 31st December 1961 is moderately strong. The slow rate of earnings has naturally restricted the growth of the reserve position and the share capital of Rs. 100.00 lakhs, consisting of Rs. 50.00 lakhs in preference shares, Rs. 47.00 lakhs in ordinary shares and Rs. 3.00 lakhs in deferred shares, has a backing of only Rs. 26.42 lakhs in the reserves. Secured and unsecured loans aggregate Rs. 92.78 lakhs in addition to current liabilities and provisions amounting to Rs. 46.12 lakhs. A gross block of Rs. 162.37 lakhs, including new assets worth Rs. 26.86 lakhs acquired during the year, has been depreciated to Rs. 111.61 lakhs. Investments, current assets, loans and advances amount to Rs. 153.37 lakhs. Miscellaneous expenditure yet to be recouped is placed at Rs. 33,398.

During the year under review, a new 2-door model, Standard Herald, was introduced and was well received. The necessity of a 4-door model is indicated and till such time as a 4-door model of the Herald is developed and introduced in the market by 1964, the Company intends to fill the gap, with the permission of the Government, by the manufacture of a limited number of Standard Companion Estate cars. As regards the manufacture of 1-ton truck, the Directors state the Company is still in the development stage and by the time the relevant licences are received the manufacture of truck chassis might be extended to 1963-64.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 16.62 *cum-div.* In reducing the price to an *ex-div.* basis, the net return on investments works out to about three per cent per annum.

RESULTS OF SELECTED SATGRAM BETTER

DIVIDEND, HOWEVER, PRUNED

SATISFACTORY are the results of the Selected Satgram Collieries Ltd. (Managing Agents: Messrs. S. D. Shethia and Company [Private] Ltd., Calcutta) for the year ended 31st December 1961. For, despite a small setback in sales realisations from Rs. 52.71 lakhs to Rs. 51.07 lakhs, the gross profit has improved further from Rs. 7.36 lakhs to Rs. 9.56 lakhs. That this improvement is due to better market conditions for coal during the year is confirmed by the fact that it would have been more pronounced but for the sizable revenue and capital expenditure incurred on repairs, renewals and replacements in the new Satgram Colliery following the declaration in February 1961 of its Bogra seam as gassy by the Department of Mines, Government of India. Another reason for the improvement in gross profit is that, in spite of increase in operations, costs have been nearly maintained at the previous year's level, with mining and raising charges showing only a small rise from Rs. 25.02 lakhs to Rs. 26.84 lakhs. However, transport difficulties prevented the Company from exploiting fully the market for coal, and hence the setback in sales realisations.

With a higher profit, the provision for depreciation has been raised from Rs. 1.84 lakh to Rs. 2.63 lakhs and so also that for taxation from Rs. 1.89 lakh to Rs. 2.38 lakhs. Managing Agents' remuneration has increased from Rs. 0.65 lakh to Rs. 0.76 lakh. Still the net profit is higher at Rs. 3.79 lakhs as compared with Rs. 2.98 lakhs a year before. The Directors have, therefore, been able to recommend, after transferring Rs. 1.10 lakh (Rs. 1.02 lakh in the previous year) to reserves, a taxable equity dividend of Rs. 14 on a higher capital, following the issue of 20,500 shares of Rs. 100 each on 14th August 1961, as against Rs. 16 paid a year before. Actually, the amount required to pay this lower rate of dividend is higher, as will be seen from the table below, giving a fair idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	51.07	52.71	44.14	29.81

Low	112.00	110.00	160.00	..

* Subject to deduction of tax. † In tonnes.

The New Satgram Colliery caused some unexpected troubles for the Company. Besides extensive repairs, etc., carried out in its Bogra seam, the Satgram seam, raising three-fourths of its production, was completely closed for about two weeks and its 36 dip section for about two months. The output of this colliery suffered also in the latter half of the year because of the extreme shortage of explosives. The Company was granted assistance at 60 nP per ton by the authorities for working gassy mines. However, the other collieries of the Company worked well.

The total raisings by the Company increased from 283,851 to 369,427 tonnes during the year. Despatches also improved from 263,931 to 349,043 tonnes, but the stock at close was higher at 16,105 tonnes as compared with 9,911 tons a year ago. In the current year, we are told, all the collieries have been working satisfactorily, and the last December raising target of 40,000 tonnes has been surpassed. The Company has received the licence for substantial expansion and, in view of the present good market, has decided to expand the existing workshop on a large scale and register it in the name of New Satgram Engineering Works under the Factories Act. The Company has entered into agreement with Messrs. Cekpo, Poland, and Sofremines of Paris for the preparation of a preliminary report for the exploitation of its Dishergarh seam.

The financial position of the Company leaves room for consolidation. Its paid-up capital of Rs. 33.59 lakhs is backed by reserves totalling only Rs. 5.04 lakhs. Its liability to outsiders of Rs. 45.62 lakhs is exceeded by current assets and book debts only by Rs. 2 lakhs at Rs. 47.81 lakhs. The gross block increased from Rs. 34.65 lakhs to Rs. 48.83 lakhs and has been written down to Rs. 36.14 lakhs. But there are still arrears of depreciation of Rs. 12.69 lakhs.

The equity earning in 1961 was Rs. 18.83 and works out to 12.15 per cent on the market value of the shares at Rs. 155. If the dividends received and the rise in share price is taken into account, investment of Rs. 100 in the shares two years ago is now equivalent of Rs. 173, after providing for a normal return of 6 per cent per annum. Currently, the shares are quoted at Rs. 142 *cum-div.* and, on the *ex-div.* basis, at a net yield of 8.8 per cent per annum.

NEW GREAT INSURANCE COMPANY OF INDIA LIMITED

CHAIRMAN, MR. TULSIDAS KILACHAND, CALLS FOR AMENDMENT OF INSURANCE ACT

ADDRESSING the Nineteenth Annual General Meeting of the New Great Insurance Company of India Ltd., held at Baroda on Saturday, 23rd June 1962, Mr. Tulsidas Kilachand, Chairman of the Company, dealt with some of the problems facing the insurance industry. Most of the difficulties of the industry, Mr. Kilachand contended, were due to the plethora of restrictive regulations contained in the Indian Insurance Act and the Code of Conduct for general insurers. Pointing out that the provisions of the Act had become out of date, the Chairman called for a new statute, in a more simplified form, based perhaps on the model of the U.K. Insurance Act. The following are extracts from Mr. Kilachand's speech:

"Recently, all insurers carrying on general insurance business in India have received a circular from the Secretary of the Executive Committee of the General Insurance Council, conveying certain decisions taken by the Executive Committee introducing far-reaching changes in the Code of Conduct and the Administrative Machinery. If it is possible to improve the tone of the market by introducing these changes, nobody will be more happy than I. I am, however, personally of the opinion that these changes, far from assisting in the development of general insurance business, will hamper its growth. In fact, a dispassionate examination of the situation will show that all the difficulties encountered by the industry at present are primarily due to the very nature of the provisions included in the Insurance Act, which are unrelated to facts, and because they are unreal, artificial supports, such as the Code regulations, have become necessary to sustain them.

"The Insurance Act governs the carrying on of general insurance business in India, and was passed as early as in 1938, when both life and general business was in the non-Governmental sector. Life insurance was nationalised over six years ago, with the result, so far as we are concerned, many of the provisions of the Act originally applicable to life business, have become obsolete. It is, therefore, high time that the Insurance Act as a whole was reviewed and, as I had occasion to refer to in my speeches in the past, an Act in a more simplified form, based perhaps on the model of the U.K. Insurance Act, be placed on the Statute Book.

"As mentioned earlier, I am personally convinced that most of our difficulties are due to the plethora of restrictive regulations that are included in the Act and the Code. A smooth and progressive development of the industry on the right lines can only be possible by the removal of all such restrictive provisions that impede its natural growth.

"My views on this subject are shared by the other Directors of your Company. However, since all the insurers in India, both Indian and non-Indian, are, I understand, giving their full support to the recent changes in the Code of Conduct, your Board have also decided to fall in line with other insurers.

Reduction in Fire Premium Rates

"Another point to which I would like to refer is the decision recently arrived at, at the instance of the authorities, to reduce the fire premium rates. This is the third reduction during the last eight years. The first reduction took place in 1955, when the average worked out at about 10 per cent. A similar reduction was effected in 1960, and hardly two years have passed before a further reduction of about 15 per cent is being brought into force from 1st July 1962. I am afraid that this important subject has not received the consideration it deserves on the part of the authorities. We are told that the fire rates have substantial margin of profits, which enables companies to indulge in the so-called unhealthy practices. It should not, however, be overlooked that the previous two reductions, aggregating in all to about 20 per cent in the fire rates, have not succeeded in eliminating such practices to any material extent. There is, therefore, very little justification to presume that yet another reduction will achieve this objective. It is also well known that, comparatively, both marine and miscellaneous accident business have not all proved profitable; yet such practices exist in these two classes of insurance also. It is thus apparent that rates have nothing to do with the so-called malpractices.

Distorted Picture

"Apart from this, insurers have to cater to their clients' requirements for all classes of business, and if they make a profit in the fire department, such profits help them in meeting, to some extent, the losses in the marine and miscellaneous insurance departments. This explains our dependence on the profits of fire business, but if an accusing finger is pointed to such profits alone, and a Nelson eye is kept in regard to the losses in the other departments, the picture becomes distorted. It is, therefore, essential that the problems is tackled as a whole and, viewed from this angle, there is no justification for reducing fire premiums rates and that too in such quick succession.

"We are told that marine and miscellaneous insurance departments should stand on their own merits. Whilst on the subject, it may not be out of place to stress that the unfavourable experience of marine and miscellaneous insurance business is not peculiar to Indian insurers only; it is the same problem with companies the world over. If, therefore, Indian companies unilaterally disturb the marine rate structure, there is every chance of their losing this business to the powerful foreign market.

"However, since a decision has already been taken to reduce the fire rates for the third time from 1st July 1962, I can only hope that this will be the final reduction and that the authorities will refrain from contemplating further reductions, as such a step will only weaken Indian insurers and impair their healthy growth.

"To sum up, I wish to emphasise that, instead of reducing the fire rates on the one hand, and introducing more and more restrictive regulations in the Code on the other, to support the unreal provisions of the existing Insurance Act, it would be far better to amend the Act itself, on the lines suggested by me earlier, with a view to improving the market conditions."

Company's Building

Referring to the Company's building, Mr. Tulsidas Kilachand mentioned that the foundation work had been completed and that the construction of the superstructure had been taken up, but we were still experiencing difficulties in obtaining the required supply of building materials such as cement. If we succeeded in surmounting these handicaps, it was expected that, in the normal course, the building would be completed by the end of 1963.

Expansion Abroad

Mr. Tulsidas Kilachand took the opportunity to mention that the question of starting operations in some of the South East Asian countries where conditions were favourable was under the Company's active consideration, on the basis of a study tour undertaken by an officer of the Company. In this connection, Mr. Kilachand referred to the difficulty in getting permission to do business in foreign countries and observed: "I would like to mention that, before we extend our activities to a foreign country, we are required to obtain the permission of the Reserve Bank of India as well as of the Controller of Insurance. Considerable delay is usually experienced in getting such permission, and I would, therefore, appeal to the authorities concerned to cut red-tapism to the minimum and assist the companies in their expansion projects."

Company's Accounts

Dealing last with the departmental accounts, the Chairman stated that the gross direct premium for the year 1961 was Rs. 60,69,262 in fire, Rs. 48,97,961 in miscellaneous insurance, and Rs. 42,48,244 in marine, whilst the net premiums were Rs. 50,61,495, Rs. 40,40,335 and Rs. 14,85,797 respectively. After providing for losses and expenses, and reserves at 50 per cent in respect of fire and miscellaneous insurance, and 100 per cent for marine, and after adding the balance brought forward from the previous year, the net amount to the credit of the profit and loss appropriation account in all was Rs. 6,61,078. The Directors had transferred Rs. 40,000 to the staff gratuity account and Rs. 3,00,000 to general reserve and had proposed to pay thirteenth dividend on ordinary shares at Rs. 3.00 per share less tax, amounting to Rs. 3,00,000.

N.B.—This does not purport to be a record of the proceedings of the annual general meeting of the Company.

COMPANY AFFAIRS

(*Concluded from page* 1179)

Rs. 57.25 lakhs to Rs. 49.72 lakhs, and total secured loans, including debentures of Rs. 18.61 lakhs (Rs. 18.59 lakhs in 1960), have come down from Rs. 75.85 lakhs to Rs. 68.32 lakhs. Unsecured loans have also receded slightly from Rs. 21.04 lakhs to Rs. 20.28 lakhs. Current liabilities and provisions amount to Rs. 34.40 lakhs. Excluding debentures, which are a long-term liability, the total indebtedness to outsiders works out to Rs. 104.39 lakhs, as against which are available current assets and book debts of Rs. 111.45 lakhs and investments of Rs. 0.95 lakh. The total borrowings by the Company, excluding debentures, aggregate Rs. 71 lakhs and are more than twice the paid-up capital. The gross block of the Company, which increased from Rs. 106.75 lakhs to Rs. 112.95 lakhs during the year, has been written down to Rs. 52.06 lakhs.

The Rs. 100 fully paid ordinary shares are currently quoted at Rs. 88 *cum-div.* On the *ex-div.* basis, they offer a yield of 4.1 per cent per annum, free of tax.

NATIONAL AND GRINDLAYS BANK LIMITED

SYNOPSES OF COMPANY REPORTS

Borrea Coal Co., Ltd.

(*Secretaries & Treasurers*: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta.)

Annual General Meeting—29th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	47,05	46,71
Closing stock	14	69
Gross profit	6,72	6,51
Transfer to Managing Agents' commission	Nil	35
" " Secretaries' and Treasurers' commission	41	16
" " depreciation	1,00	89
" " statutory development rebate reserve	4	44
" " provision for taxation	2,53	2,01
Net profit	2,74	2,66
Adjustments	31	20
Appropriations:		
Total available balance	3,05	2,86
Transfer to general reserve	1,00	1,00
" " bad and doubtful debts reserve	25	Nil
Proposed dividends (taxable) preference	34	34
" " ordinary	1,12	1,12
	(15%)	(15%)
To additional preference dividend for 1959	Nil	8
Carry forward	34	32

N.B.—Adjustments represent only the balance brought forward from the previous year.

Extracts from the Directors' report: *Raisings and Despatches.*—2,01,993 tonnes of coal were raised and 2,05,128 tonnes despatched during the year compared with 2,01,253 tonnes raised and 2,00,239 tonnes despatched during 1960.

It has still not been possible to drive the new surface inclines to 18 Seam in Aralgoria due to continued trouble experienced over land acquisition.

Transport.—During the period under review the siding at the Company's colliery was strengthened to take BOX wagons. This improved the transport position to some extent and stocks were reduced by 3,135 tonnes during this period.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	11,50,000	Gross block	45,77,689
Reserves and surplus	28,10,650	—Depreciation	29,53,344
Other liabilities	12,59,954		
		Net block	16,24,345
		Block in progress	2,89,447
		Property acquired by Central Government.	2,12,911
		Current assets	13,61,402
		Investments	7,91,046
		Cash	4,41,393
	Rs. 47,20,604		Rs. 47,20,604

* Paid-up capital consists of 75,000 ordinary shares of Rs. 10 each fully called up and 4,000—6.5 per cent. cumulative preference shares of Rs. 100 each fully called up. Of the ordinary shares, 25,000 shares have been allotted as fully paid-up bonus shares by capitalisation of reserve.

Straw Products Ltd.

(*Managing Agents*: J. K. Agents Private Ltd., Bhopal.)

23rd Annual General Meeting—29th June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	1,09,50	96,90
Closing stocks of finished products, raw materials, etc.	29,81	24,53
Excise duty paid	18,21	13,60

Appropriations:		
Total available balance	8,62	21,48
Transfer to general reserve	8,00	20,50
To dividends	Nil	Nil
Carry forward	62	98

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

* This includes Rs. 13,69,956 being excess depreciation provided during previous years written back.

Extracts from the Directors' report: Keeping in view the heavy financial commitment for installation of the Paper Mills, the Directors do not recommend any dividend this year and propose that surplus available after provision for taxation be conserved for future.

Working of the Board Factory at Bhopal: During the year, the working of Bhopal Factory has been satisfactory. The Company continued to manufacture various varieties of *Boards* and introduced some new qualities. The Company's new products were very well received and appreciated in the market.

The Paper Mill Project in Orissa popularly known as J. K. Paper Mills has made excellent progress. The construction of factory buildings and residential township has almost been completed. Major portion of the plant and machinery has already been erected in a record time of about five months. The erection is in full swing with the aid of a good number of foreign erectors and it is expected that the erection shall be completed shortly and the plant will be ready for commissioning earlier than schedule. By this time, total fixed assets to the tune of over Rs. 5,00,00,000 have been created for Paper Mills including the expenses incurred after the close of year ending December 1961. The Directors feel that, in spite of numerous hurdles like difficulties in the supply of cement, steel and other materials and transport, the project has made very satisfactory progress and is being executed in most economical manner. Power at 33 kV from Machkund Hydro Electric Scheme has already been received. The Company's one and half miles long Railway Siding which has to handle a train-load a day when the plant starts, is already working and has served a very useful purpose in handling the entire imported machinery. A large quantity of bamboos has already been collected at Mill site.

The Company shall get all its requirements of bamboos from its own forest leases in Orissa which are being developed on scientific basis.

The Company has been able to secure loans of Rs. 25 lakhs from the State Bank of India and Rs. 50 lakhs from the Government of Orissa for meeting the financial requirements of the Paper Mills through the vigorous efforts of and on personal guarantees given by the Managing Agents and their Directors. The total amount of the loan of Rs. 75 lakhs has since been received by the Company.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,14,78,530	Gross block	5,96,31,915
Reserves and surplus	1,24,38,711	—Depreciation	18,34,316
Other liabilities	4,16,53,889		
		Net block	5,77,97,599
		Current assets, etc.	67,90,283

	(4%)	(5%)
Carry forward	2	4

N.B.—Adjustments represent the balance brought forward from the previous year.

* The dividend for 1961 is on a higher capital.

Extracts from the Directors' report: *Operation*: The working of the Company during the year under review had been generally satisfactory. There was increase in production, sales and profits. The profits would have been still higher if the Company had been in a position to increase its selling prices earlier than September 1961 to make good the continuous increase in the cost of various raw materials since the prices were fixed three years earlier. Prior approval from the Government is required for effecting revision in prices and this took considerable time. Company taxation has been raised in the recent budget. Further, larger amount had to be provided for depreciation as per the latest rules. In spite of these, it had been possible to recommend a dividend on the increased equity capital including the equity shares issued during the year in terms of that issue. This issue, as a result of which the Company's equity capital was almost doubled, was made towards financing the Company's expansion programme for *Scooters* the production of which has commenced only during the year 1962.

As in the previous years, a substantial portion of the increase in the establishment and other expenditure has been for manufacturing new components by the company thereby increasing the indigenous content of the motor cycles. The value of components manufactured by the Company increased during the year by over Rs. 20 lakhs.

The most important feature of the working during 1961 was the completion of the main phased programme for the substitution of imported motor cycle components by those made in the country. Therefore, the process of continuous development and expansion of the establishment in the motor cycle production has been completed. As already indicated by the Chairman in his speech at the last annual general meeting, further increase in the production of motor cycles from 1962 onwards can be expected to take place with only marginal increase in the establishment, resulting in higher productivity and profitability in this line.

Scooters: Towards the finance required for the scheme, in addition to the fresh capital of Rs. 23.33 lakhs issued during the year under review, the Company applied to the Industrial Finance Corporation for an additional loan of Rs. 14 lakhs which has been sanctioned. With the completion of the construction of the buildings and receipt of most of the plant required for the initial phase, pilot production has already commenced and it is expected that the scooters will be in the market from June-July this year.

Engines for Industrial, Agricultural and other purposes: The Government have issued the necessary licence to the Company under the Industries (Development and Regulation) Act for undertaking this project and have also approved the technical collaboration agreement with The Villiers Engineering Co. Ltd., U.K.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	54,99,000	Gross block	78,68,819
Reserves and surplus	5,59,510	—Depreciation	19,17,275

† Only Rs. 344.

‡ This includes Rs. 15,000 transferred from general reserve.

§ Dividend for 1962 is on 1,28,400 ordinary shares of Rs. 10 each. The dividend for 1960 is on 80,000 ordinary shares of Rs. 10 each.

The Karanpur Mining Syndicate: During the year ended 31st December, 1961, 158,818 Metric Tonne of Coal were raised and 153,168 Metric Tonne were despatched. The arrangements for raising and selling coal from Religara Colliery continue to work satisfactorily.

The scheme of amalgamation with The Churulia Coal Co. Ltd. The Scheme of Arrangement has been sanctioned by the Calcutta High Court since closing and in pursuance of the said Order, all the assets, properties, rights, powers, liabilities and duties of The Churulia Coal Co. Ltd. now stand transferred and are vested in this Company with effect from 1st January 1962.

The Churulia Coal Co. Ltd. now stands dissolved without winding up as from the aforesaid date and in terms of the Scheme of Arrangement one Ordinary (Equity) Share of Rs. 10 each in this Company has been issued for every 3 Ordinary (Equity) Shares of Rs. 4 each of The Churulia Coal Co. Ltd.

N.B.—Adjustments represent the balance brought forward from the previous year.

* The dividend for 1961 is on the increased ordinary capital of Rs. 15,00,000.

† The dividend for 1960 is on a paid-up capital of Rs. 5,00,000.

Extracts from the Directors' report: *Operations.*—The production and sales of Switchgear and Electric Motors again showed an improvement over the previous year.

The development of the Company has now reached the stage when in the opinion of the Board, a further issue of share capital is desirable. Resolutions will therefore be proposed at the annual general meeting for the purpose of authorising an increase of Rs. 10 lakhs in the issued share capital.

The Government of India has given its approval to the entering into by the Company of technical collaboration agreements with Johnson & Phillips Ltd., Charlton, England, and with the Electric Construction Co. Ltd., Wolverhampton, England, which provide inter alia, that shares in the Company shall be allotted to Johnson & Phillips Ltd. and The Electric Construction Co. Ltd. in payment of certain items of plant and machinery to be acquired by the Company.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,00,000	Gross block	35,74,0
Reserves and surplus	15,86,787	—Depreciation	17,36,1

CALL MONEY RATE SLUMPS

(*From Our Own Correspondent*)

BOMBAY, 27*th June*

The trends in the short-term money market this week are quite characteristic of the traditional slack season. In the inter-bank section, everyone is a lender and borrowers are hard to find, which suggests that there is a surfeit of surplus funds. There has been a swift fall in the call money rate, from 3½ per cent a week ago to as low as 1½ per cent today. Indeed, after the clearing hours today, money went abegging even at 1½ per cent.

An anomaly of the money market is the failure of interest rates on short-term deposits to reflect the easy money conditions. Deposits of all types under this category, from three days to twenty-four months, fetch the maximum rates of interest allowed under the inter-bank agreement. Is it not funny that banks should be ready to pay 3 per cent per annum for three-day deposits even when the call money rate is near one per cent and the yield on 91-days' Treasury Bills is less than 2½ per cent? The only explanation for this state of affairs is that no bank, however big, has the courage to quote a rate lower than the maximum, lest it should lose an account to one of its rivals. Such is the keen competition for deposits, be they current, three-day, one week, or one-year usance.

Another indication of the extremely easy money conditions is provided by the results of the Central Government's 91-days' Treasury Bills. As against the invitation for Rs. 2 crores (same as last week), the total amount offered was as high as Rs. 4.25 crores as against just Rs. 2 crores last week. Tenders at Rs. 99.400 were accepted in full and lower tenders rejected. The total amount accepted was Rs. 2 crores. The average rate of accepted tenders has fallen from 2.510 per cent to 2.400 per cent per annum. Sales of 91-days' Intermediate Treasury Bills fetched a spectacular amount of Rs. 6.36 crores, as against a mere Rs. 48 lakhs in the previous week. Despite such keen demand for Treasury Bills, the monetary authorities have not increased the tender limit for the coming week; it remains unchanged at Rs. 2 crores. This is understandable, in view of the forthcoming long-term borrowings of the Central Government. Sales of Intermediate Treasury Bills also are being continued.

Yet another indication of the slack season is provided by the continuing contraction of notes in circulation. In the week ended 22nd June 1962, according to the Reserve Bank's statement for that week, they declined by Rs. 34 crores. This fall was on top of a drop of Rs. 10.26 crores in the previous week.

There has been a slight improvement of Rs. 64 lakhs in the foreign assets held by the Reserve Bank, bringing the total up to Rs. 102.34 crores as of 22nd June. It will be recalled that, in the previous week also, there was an improvement of Rs. 1.13 crore in this portfolio.

The Gilt-edged market is lifeless. Every one is keenly awaiting the terms of the Central Government's borrowing programme, due to be announced any time now. In fact, the heavy volume of floating funds with banks and the consequent shortfall in the inter-bank rate are the result of the big institutional investors conserving their resources for investment in the forthcoming loans of the Central Government. In the whole list of the Central and State loans, we find only two changes over the week, a rise of 5 nP in 4 per cent 1981 Central loan and of a similar rise in 4½ per cent 1972 Andhra loan, both being quoted at Rs. 98.80.

In the foreign exchange markets of the world, the £ sterling has been a shade quiet. Thus, on the New York Exchange, spot sterling has come down by 0.200 cent to stand at 280.730-280.760 cents per £. Three months' forward has also come down by 0.120 cent to 280.210-280.240 cents per £. In keeping with this trend, the banks' selling rate for ready T.T. U.S. dollars in India has risen by 25 nP to Rs. 476.75 per 100 dollars. Their buying rate for ready T.T. is, however, unchanged at Rs. 473.25.

KIPS FEATURELESS

(*From Our Own Correspondent*)

MADRAS, 25*th June*

The local market for hides and skins remained more or less unchanged this week. Demand for F.A.Q. kips was dormant. But the medium-weight fifths selection and the light and heavy average inferior fifths attracted overseas demand. Inland demand for lower grade kips was poor. A small volume of business was put through to the U.K. in better marks of light-weight cow-hides. Demand for cow calf, 2/2½ lbs. average, exceeded supply. Buff hides and calf ruled steady.

Export trading in tanned goat and sheep skins was selective and small. Importers seemed to be rather feeling the pulse of the market than to be keen on booking orders. All sections were quiet, except for stray genuine inquiries for tanned goat-skins, 13/14 lbs. up, from the U.S.A. and middle class sheep from the Continent, which remained firm.

The next London tanned skins public sales will commence on the 2nd July, when 120,000 goat skins and 110,000 sheep skins will be offered for sale. The German public auctions will take place on 5th July, when 74,000 goat and 49,000 sheep skins have been catalogued for sale.

The following were the ruling prices (in rupees) per lb. for unassorted all-round lots in the local market: Tanned cow hides, 8/8½ lbs. average 3.15 to 3.15, tanned cow calf, 1½/2 lbs. average 3.60 to 3.70, tanned buff hides 12/14 lbs. average 1.70 to 1.75, tanned buff calf 1½/2 lbs. average 2.60 to 3.15.

BULLION INDECISIVE AGAIN

(*From Our Own Correspondent*)

BOMBAY, 27*th June*

The bullion market continued to move indecisively during the major part of the week under review. Fresh buying orders were scarce, due to the end of marriage season and delay in the arrival of monsoon. The daily average offtake was no more than 4,800 tolas of gold and eight bars of silver, as against 5,000 tolas and seven bars, respectively, in the previous week. Arrivals of both the metals were heavy, though traders did not try to press sales. The daily average of arrivals was 7,000 tolas of gold (6,200 tolas last week) and 41 bars of silver (42 bars). The arrivals of gold might have been larger but for the seizure of 1,120 tolas of contraband metal in Bombay this week. Over the week, both gold and silver showed some gains. The marked rise in silver prices at London and New York did not have much effect on the local market.

The *Bhadrapad* (15th September) settlement in gold began the week at Rs. 123.50, as against the previous close of Rs. 123.60, and, after moving up to Rs. 124 today, finished at Rs. 123.90. The ready rate commanded a handsome premium over the forward throughout the week, though the actual premium declined slightly from Re. 1.95 last week-end to Re. 1.75 today when the closing rate stood at Rs. 125.65, as against Rs. 125.55 on Wednesday last week.

In silver, the *Bhadrapad* (17th September) settlement encountered selling and receded from Rs. 215.90 to Rs. 214.60 on Monday the 25th inst. At lower levels, there was some support and the settlement recovered to Rs. 216.25 today. Ready silver continued to be quoted at a discount under the forward, the discount actually increasing from 50 nP to Re. 1. Over the week, the spot rate registered a gain of 85 nP, today's closing rate being Rs. 215.25.

Silver in the London bullion market rose to near-record levels during the week, thanks to speculative buying. The spot quotation for today was 89d., a rise of 4d. as compared with the rate prevailing a week ago. This level is just ¼d. below the all-time peak of 89¼d. reached in February 1921 and the highest level since the U.S. Government suspended sales of official silver in November 1961. Forward silver jumped up from 85¼d. to 89¼d. The swift rise in silver prices followed bullish advices from New York where the price spurted from 101.50 cents to 104.50 cents. Ready gold in London also advanced from 249s. 11½d. to 250s. 2d. The dollar price was almost unchanged at $35.10½, as against $35.10⅜.

The following table shows the trend of prices during the week under review:

	27-6-62 (closing)	High	Low	20-6-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	125.65	126.00	124.90	125.50
Bhadrapad *	123.90	124.00	123.30	123.60
Sovereign	97.50	98.00	97.50	98.00
SILVER				
Ready (.996 fine)	215.25	215.65	214.60	215.40
Bhadrapad †	216.25	216.25	215.45	215.90
London—				
Gold	250s.2d.	250s.2d.	249s.10½d	249s.11½d.
Silver Ready	89d.	89d.	85¾d.	85d.
Silver Forward	89½d.	89½d.	86d.	85½d.
New York—				
Silver	104.50 cents	104.50 cents	101.50 cents	101.50 cents

* 15th Septembere settlement. † 17th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

BLACK PEPPER EASY

(*Messrs. Parekh and Co.*)

BOMBAY, 27*th June*

During the earlier part of the fortnight, Malabar black pepper ruled steadier, in view of sizable purchases by New York dealers who paid progressively higher price at $0.36 for ready shipment, there being scarcity of spot and afloat in the U.S. Ungarbled was done at Rs. 309.50 and garbled was sought after at Rs. 325. Later in the week, however, New York having withdrawn, Malabar ruled easy particularly under pressure of selling by bears on the Cochin Exchange in July delivery, which failed to move up, despite strength in garbled for want of new incentive. Ungarbled went down to Rs. 300 and garbled to Rs. 310. July delivery climbed down from Rs. 332 to Rs. 313, with few buyers.

Singapore remained fairly steady in black, but white showed appreciation in value from Str.$152½ to Str.$157½, as arrivals from Sarawak were poor and delayed owing to late crop.

Spot in New York, after touching the high of $0.38, came down to $0.37, as India accepted few parcels at lower price from $0.35½ to $0.35, as drop in July delivery brought forth selling of ungarbled from growers at reduced price. Some business with the East European countries was reported.

Shortage of rain is reported in the pepper-growing areas. After the initial showers at the break of the monsoon season, there has been no rain since a month. If such conditions persist, the crop is likely to be late as well as poor, though it is too early to state anything definitely in this direction.

At the time of writing, there are reports of few showers. It remains to be seen whether it will be continuous and heavy downpour to relieve the present drought condition or passing showers.

The future of the Malabar crop depends upon the behaviour of rain from now onward.

Ready pepper in Bombay is nominally quoted at Rs. 168 per 50 kilos.

COTTON FUTURES IMPROVE

(*From Our Own Correspondent*)

BOMBAY, 27*th June*

The cotton futures market picked up further strength during the week under review. Lack of rain in certain cotton-growing tracts, particularly Berar and Khandesh, and reports of higher production of cloth and yarn in the month of May, as compared with the previous two months, initiated a general buying movement. Sellers, on the other hand, were reserved and were inclined to watch the progress of the monsoon. Futures prices consequently tended to rally. Higher levels, however, attracted profit-taking. Nevertheless, the Jarilla March 1962 contract wound up the week higher at Rs. 722.75, as against the last week-end quotation of Rs. 720.50. The range of fluctuation of the contract is indicated below:

	27-6-62	*High*	*Low*	20-6-62
I.C.C. Jarilla				
March (1963) ...	722.75	724	717	720.50

All eyes are now turned to the trend of the monsoon and progress of sowing operations. In the Punjab, U.P. and Rajasthan, new crop sowing has already been completed. A tendency towards increased sowing of Punjab American at the expense of Bengal *Deshi* has been noted. This is due perhaps to the comparatively lower price of Bengal *Deshi* during the current season and the record prices fetched by Punjab American H.14 and 320 F. As regards other regions, apart from a few showers here and there, the whole rain-fed cotton tracts of Omras, Gujarat and Saurashtra have remained practically dry and rains are anxiously awaited for sowing operations to start.

There was moderate demand for ready cotton in the spot market at Sewri. Reports of dwindling stocks prompted mills who had unutilised quota to make purchases of such qualities as Vijay, Digvijay, Surti, L.147, Co2, 197/3 and Kalyan. Prices were more or less unchanged. There were good inquiries for Bengal *Deshi* following a revival of demand from Japan. Prices consequently tended to harden. Export sales registered against the last quota till the 22nd inst. aggregated 55,405 bales, leaving a balance of 11,035 bales to reach the ceiling of the shippers' share.

Among foreign cottons, Pakistan cotton was much sought after. A sizable volume of business was put through. Stray business was in evidence for Sudan and East African cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri: Bengal *Deshi* 680; Ganganagar 750-800; Hubli Laxmi 1,190; Khamgaon 975; Pakistan AC 1,160; Pakistan N.T. 1,075; 4F on sample 1,000; B.P. 5D (F.A.Q.) July shipment 1,325; Sudan XG3L 1,375; American on sample 1,290.

Cotton futures in Karachi scored further gains during the week. Buying support influenced by brisk overseas demand and keen domestic mill inquiries led to a rally in prices. N.T.R.G. July advanced from Rs. 72.50 to Rs. 72.70. The new crop contract firmed up from Rs. 75.83 to Rs. 76.15.

New crop developments have so far been normal. Sowing is well under way in Sind and the Punjab while it is over in *Deshi* tracts. Germination is so far reported to be good.

Dull conditions prevailed in the Liverpool cotton futures market during the week. Values, however, ruled steady in thin trading. Transactions consisted mainly of inter-month switching and small trade covering. Both the American and American type contracts fluctuated in a narrow range with small net changes over the week. The following are the latest available quotations—in pence per lb. from Liverpool:

American cotton one inch staple contract: July 24.05; October 23.80; December 23.75.

American cotton mixed growth contract: July 24.45; October 24.15; December 24.10.

Sudan: July, September, November 29.50.

New York cotton futures market suffered a setback during the week. Values decline on selling prompted by the issuance of a large number of July delivery notices and lower than expected consumption of cotton during the current month. Spot prices were, however, steady.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	26-6-62	19-6-62	12-6-62
New York Spot ...	36.10	36.10	35.90
July ...	34.23	34.85	34.73
October ...	34.43	34.58	34.54
December ...	34.38	34.40	34.46

LOWERING ART SILK YARN PRICES

(*From Our Own Correspondent*)

BOMBAY, 27*th June*

There was a sharp drop in the prices of indigenous art silk yarns during the week under review. The drop followed nervous liquidation by stockists on fears of a distinct improvement in floating stocks in the market. The fears stemmed from the reported move of the authorities to bring down prices of art silk yarn. The spinners, it is said, have been asked to expedite deliveries of yarn to cardholders and they have agreed to do so. There is also the move to expedite within a fortnight the issue of import licences for yarn worth Rs. 1.5 crore under the Export Promotion Scheme for fabrics. The Export Promotion Council for Silk and Art Silk Fabrics will forward applications for licences to the Joint Chief Controller of Imports after the applicants furnish an

affidavit to produce bank certificates within six months after the date of export and the licences will be issued immediately thereafter. The Textile Commissioner's Office is also expected to issue entitlement certificates without any delay. If, despite the prospects of larger arrivals of imported yarn, the prices of such yarn have gone up, it is, perhaps, due to the fact that, even with such large imports, there will still be a big deficit in supplies and that the premium on art silk yarn licences will continue to be pretty high.

Meanwhile, it is learned that the Government of India is contemplating to levy a cess on rayon yarn and staple fibre produced within the country at 25 nP per lb. on the former and 10 nP per lb. on the latter with a view to subsidising exports of rayon fabrics through grant of cash incentives to exporters. As an alternative to this proposal, the Government would appear to have suggested a scheme under which the spinning units will be required to obtain their requirements of pulp under licences issued to exporters of rayon cloth. They will be given actual user licences for this purpose, if they are not able to get their full requirements under the Export Promotion Scheme.

Among indigenous yarns, National Rayons 150 Bt. cones 1st grade fell by 78 nP to Rs. 13.55. 120 Bt. cones 1st grade receded by 42 nP to Rs. 15.95. Among imported yarns, 120 Italy moved down from Rs. 1.902 to Rs. 1.819. 150 Italy was dull at Rs. 1.736. 150 Japan, however, climbed up from Rs. 1.984 to Rs. 2.205. 120 Japan advanced by Rs. 55 to Rs. 2.260. 20 x 1 Amilon June delivery forged ahead from Rs. 4.115 to Rs. 4.235. August contract spurted by Rs. 110 to Rs. 4.340.

Staple fibre yarn drifted lower, as enquiries from consuming centres were poor. 40 x 2 June settlement declined by Rs. 9 to Rs. 726. August position suffered a loss of Rs. 11 to Rs. 751. Spot Citys fell by 42 nP to Rs. 7.96. Kohinoors dropped 9 nP to Rs. 8.38. Hinds shed 16 nP to Rs. 8.51.

Cotton yarns ruled dull, notwithstanding the possibility of reduced arrivals from Madras and Coimbatore sides, in view of power shortage affecting production there. In the meantime, operators are awaiting the reaction of the Maharashtra Finance Minister to the plea of traders for revision in sales tax on cotton yarn which has been raised from 1 per cent to 2 per cent. A deputation of the Bombay Yarn Merchants Association and Exchange Ltd. waited on the Minister this week. The Association spokesmen brought to the notice of the Minister the fact that the turnover of cotton yarn business in Bombay was about Rs. 25 crores per year. A large part of this trade, it was pointed out, would be diverted to other States such as West Bengal and Madhya Pradesh where there is no sales tax on cotton yarn. It is further stated that the cost of the handloom cloth in Maharashtra would move up and it would be difficult to market handloom cloth and powerloom cloth owing to competition from other States.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	27-6-1962	20-6-1962
	Rs	Rs.
Art silk yarn —		
20/1 Amilon (100 kg.)—		
June	4,235.00	4,115.00
August	4,340.00	4,230.00
120 Japan (per 100 kg.)	2,260.00	2,205.00
150 Japan (per 100 kg.)	2,205.00	1,984.00
120 Italy (per 100 kg.)	1,819.00	1,902.80
150 Italy (per 100 kg.)	1,736.00	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.)	13.55	14.37
Staple fibre yarn (40 x 2)—		
June	726.00	737.00
August	751.00	762.00
Kohinoor (per kg.)	8.38	8.47
Cotton yarn (per bundle of 10 lbs.)		
10s Podar	17.50	17.50
20s Podar	21.75	21.75
32s Madura	29.50	30.00
40s Madura	35.00	35.50
60s Finlay	72.50	73.50

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, *27th June*

Barring castorseeds which drifted downwards on persistent selling pressure, the oilseeds market ruled distinctly steady during the week under review. Groundnuts put on a cheerful appearance on reports suggesting delay in sowing operations due to inadequate rains in most of the groundnut-growing areas, particularly Kathiawar and Maharashtra. Linseed was firm, following encouraging advices from sarson markets in North India. In sympathy, cottonseeds elicited good support. But castorseeds encountered selling induced mainly by the report that the U.S. Senate had passed a Bill, authorising the Government to dispose of castor oil from strategic stockpiles. But for this report, castorseed would have registered a rise in values consequent on the reduction of $14 to $30 per tonnes in freight rates for castor oil exports from India announced by the West Coast of India-Pakistan and the U.S. Conference; the reduction is with effect from the 19th inst.

Among groundnuts, July 1962 contract advanced by Rs. 3.15 to Rs. 213.75. September 1962 contract rose by a rupee to Rs. 215.50. Nizam bold was fully maintained at Rs. 42.25, as also oil railway receipts at Rs. 18.50. Oil July and September 1962 contracts hardened by 15 nP each to Rs. 18.30 and Rs. 18.55, respectively.

Linseed June 1962 contract rose by 50 nP to Rs. 40.75. September 1962 contract strengthened by 13 nP to Rs. 40.50. Bold ready was higher by 20 nP at 39.75. Linseed oil, however, shed 15 nP to Rs. 15.35.

Cottonseed September 1962 contract closed higher at Rs. 105, as compared with Rs. 103.50. July 1962 contract improved by a rupee to Rs. 102.50. White picked up 37 nP to Rs. 19.87. Both non-white and Berar were fully steady at Rs. 21.

In the castorseed section, September 1962 contract fell by Re. 1.13 to Rs. 160.62. Madras small eased by 12 nP to Rs. 31. Oil Commercial shed 15 nP to Rs. 11.75 and Oil B.S.S. 10 nP to Rs. 12.45.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 27th June, as compared with those of the two previous weeks:

	27-6-1962	20-6-1962	13-6-1962
Groundnut	Rs.	Rs.	Rs.
July 1962	213.75	210.62	211.37
September	215.50	214.50	214.75
Nizam bold	42.25	42.25	42.50
Khandesh quality	45.50	45.75	45.75
Oil ex-mill ready*	19.00	19.10	19.00
Railway receipts*	18.50	18.50	18.65
Oil July 1962	18.30	18.15	18.15
Castorseed			
June 1962	159.00	160.75	157.50
September 1962	160.62	161.75	161.25
Ready Madras	31.00	31.12	31.62
Ready Kanpur	30.00	30.25	30.50
Oil B.S.S.†	12.45	12.55	12.75
Oil commercial†	11.75	11.90	12.15
Linseed			
June 1962	40.75	40.25	39.87
September 1962	40.50	40.37	39.87
Bold ready	39.75	39.25	39.25
Oil ready†	15.35	15.50	15.40
Cottonseed July 1962	102.50	101.50	100.50

Kardi seed	26.50	25.50	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *21st June*

A total of 863,000 kgs. was offered in sale No. 25 held on Tuesday the 19th inst. Quality in general showed little change. The market met with good general demand. Brighter liquoring low medium and medium brokens were well supported at generally dearer rates, while others were irregular. Brighter fannings under this category were firm, but others, particularly plainer kinds, evoked less support and were sometimes difficult of sale. Good mediums elicited keen demand and were fully firm. There was better support for highgrowns. The poorer descriptions were fully firm and occasionally dearer whereas others sold at around last rates. Teas of unorthodox manufacture were well competed for, the majority of them being sold at rates above last. Black leaf brokens and fannings also sometimes registered advances. Whole leaf grades and a small selection of tippy teas were well supported.

The quotations per kg. were:

	1962 Rs.	1961 Rs.
Low mediums	3.10-4.00	4.20-4.35
Mediums	3.90-4.30	4.35-4.50
Good mediums	4.30-5.25	4.50-4.70
Nilgiri B.O.P.	4.00-5.95	4.50-5.45

The average price realised in sale No. 25 was Rs. 3.89, as against Rs. 3.95 a week ago and Rs. 4.4 in the corresponding sale last year.

Offerings amounted to 433,000 kgs. in dust sale No. 25 held on Thursday, the 21st inst. The market met with good demand. Low medium and mediums were well supported at fully firm to dearer rates. A few of the more fibrous kinds under this category did not receive the same support. There was good inquiry for good mediums which sold at around last rates. Highgrowns were also well supported and these were quoted barely steady. Milled and residual descriptions met with keen competition and were stronger, sometimes selling up to 30 nP above last prices. Unorthodox dusts were irregular. C.T.Cs were dearer while C.T.C. types and legg-cut types, although selling readily, inclined a little easier. There was useful support for clean black grainy descriptions.

The average price realised in dust sale No. 24 was Rs. 3.24 per kg. as compared with Rs. 3.19 a week ago and Rs. 4.14 in the corresponding sale last year.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 26: 801,000 kgs. offered. Strong demand. Low medium and medium brokens firm. Similar fannings easier. Brighter good mediums about steady. Others easier. Highgrowns fully firm. Unorthodox irregular and easier."

METALS TURN EASY

(From Our Own Correspondent)

CALCUTTA, *26th June*

In the absence of support at higher levels, last week's rise in metal prices here was short-lived, as tin eased measurably and zinc looked back this week. However, lead remained unchanged and copper scrap continued fully firm. The reaction followed the belief that the Government of India would be disinclined to cut the imports of non-ferrous metals in the light of a speedy progress in machine building industries. Moreover, the signing in New Delhi of the Indo-U.S. agreement for the non-project loan of $200 million to finance imports of raw materials, including non-ferrous metals, components and machinery, also contributed to the reaction. As India imports copper only from the U.S.A. and these are covered by loans, it is believed that there would be no cut in imports of copper. In order that the copper imports should be fully utilised, these should be matched by adequate imports of zinc and tin for alloy making. Hence it is to be hoped that the import quota of zinc and tin would also be maintained at the present levels.

On the London Metal Exchange, spot copper was unchanged at £234 a ton, while the three months gained from £230 to £230½. However, the New York market displayed softness. Copper scrap was in acute shortage in Calcutta, but an easing of the supply position was expected to set in soon now that the D.L.F. supplies had started arriving. At Rs. 541.25 per 100 kgs., utensil scrap recorded a ten-point rise, while berry scrap was unchanged at Rs. 589.50 per 100 kgs. The easiness in New York was attributed to the earlier reports indicating the possibility of release of copper by the U.S. from its surplus stocks. It was reported that the U.S. was keen to release about 142,000 tons. Mr. Simon D. Strauss, Vice-President of the American Smelting and Refining Company, observed that the awareness among consumers of the abundant nature of supplies of copper and the increased production capacity in several mines were factors which were causing price stability in the U.S. market and hoped that the proposed releases would be orderly and in stages so that their impact on the market would be the minimum.

Following selling pressure, tin here eased from Rs. 1,881.75 per 100 kgs. to Rs. 1,840. There was less demand, and the stock position also improved as a result of recent arrivals. On the London Metal Exchange, tin improved once from £850 a ton to £865, but closed at £857. The recovery in London followed the latest U.S. report that the Administration would release from the stockpiles only about 1,000 tons a month and that it would take a few years to complete the proposed total release of 50,000 tons. The releases would be so arranged, the report said, that the U.S. and other world markets would not feel the impact. It appeared from the report that the releases would not be at stipulated prices, but at market prices at the time of the releases. The U.S. Administration has since assured that the releases would not be made before the tin producing countries, viz., Nigeria, Congo, Bolivia, Indonesia, Thailand and Malaya were consulted.

Electrolytic zinc opened here at Rs. 256.00 per 100 kgs. and improved to Rs. 269.75. However, as support at higher levels was lacking and the stock position was modest, a gradual decline to Rs. 267.75 was recorded. In London, the metal closed at £65-7/8 a ton, after opening at £65¼, and lead at £56¾ a ton, after opening at £56¼. Lead here was unchanged at Rs. 147.75 per 100 kgs.

Note was taken of the uncertain nature of the deliberations at the recent meeting of the International Lead and Zinc Study Group. World supplies of zinc were now much in excess of demand, and the group recorded that the world producers' stocks had declined by 40,000 tons in the first quarter of this year. Nothing was indicated about any plan for international control of production. The U.S., Japan, Spain and the Six European countries agreed to make a voluntary cut in production of both zinc and lead, while Australia, Peru and Sweden agreed to limit their production of lead. The U.S.S.R. has agreed not to increase exports of lead and zinc to the Western countries. The Study Group is scheduled to meet again in October next, when it would consider developments in the light of the above undertakings by the producing countries.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *25th June*

A steady tone was witnessed in the local foodgrains market during the past week due to decline in arrivals of *rabi* grains. *Kharif* sowings were being done, but extensive sowings would be possible only with the onset of monsoon in the next few days. Wheat prices improved by 67 nP a quintal during the week to be quoted on Monday at Rs. 38.18 for the average quality and at Rs. 41.53 to Rs. 46.22 for the superior farm produce. However, the red quality wheat was easy at Rs. 36.17 to Rs. 36.81 a quintal. Daily arrivals of wheat declined to an average of 1,000 maunds. Part of them were from east U.P. and, as the bulk of them went to stockists, the local stock with trade here rose to 70,000 maunds. The average quality was quoted at Rs. 14.25 a maund, almost the same level as in the corresponding period last year, but, in 1960, it was done higher at Rs. 15.50.

Prices of the coarse quality rice sought higher levels on good demand in the face of poor arrivals and small stocks around 10,000 maunds. New paddy sowings would commence with the beginning of rains. Week-end prices (in rupees per quintal) were: Rice *basmati* superior 80.38 to 96.45, *sela raimunia* 66.98 and *gadda* 53.58. Gram also recorded modest gains during the week to Rs. 38.85 to Rs. 41.19 per quintal on firm Punjab advices. Arrivals declined to 500 to 600 maunds a day, and stocks were around 22,000 maunds. Barley was steady at Rs. 28.13, and so was *bejhar* at Rs. 28.13 to Rs. 30.81 per quintal. Daily arrivals and local stocks of these coarse grains were poor around 10,000 maunds each.

Methi eased, as demand from Bengal was reported slack. *Juwar* and *guwar* continued to attract good buying support for sowing purposes. Sowings of maize and *bajra* as foodgrains and *juwar* and *guwar* as fodder crops were being done. Week-end prices (in rupees per quintal) were: *Methi* 56.26, *juwar* 40.19 to 44.21, *guwar* 40.19, maize 31.15 and *bajra* 37.51.

In pulses, peas continued steady, thanks to brisk buying support mainly from Madras. The week's offtake by that centre was six wagonloads. Daily arrivals dropped to an average of 300 to 400 maunds but total stocks were still heavy around 74,000 maunds. Stocks on the same date last year were also heavy at 90,000 maunds. *Arhar* ruled steady in sympathy with peas. *Moong* was depressed.

JUTE GOODS STEADIER

(From Our Own Correspondent)

CALCUTTA, *26th June*

Although the jute goods market began the week on a distinctly subdued note against the background of the earlier suspension of purchases by Argentina, steadier conditions set in as the week progressed and prices not only gained earlier losses but closed higher on balance. This was so because of reports of gain in prices in the New York burlap market, where, on sustained buying, the 40" 10 oz. hessian spot rose from 14.65 cents per yard to 14.95 cents and the 7½ oz. from 10.45 cents to 10.60 cents. This was highly pleasing to the market, since earlier it had been reported that, in view of the unsteady trends in stock market, activities in the U.S. and the heavy purchases by that country in recent weeks, buyers for the U.S. were likely to show interest only on a hand-to-mouth basis for some time to come. Much satisfaction was also caused by the news suggesting that the U.S. burlap consumption in the U.S. aggregated 73 million yards in May, showing a rise of 3 million yards over April 1962 and 16 million yards over May 1961. The monthly average for the past five months was higher at 77 million yards, as against 57 million yards for the corresponding previous period and 65 million yards for the whole of 1961.

Despite these encouraging features, there was the apprehension that, if the present unsteadiness in the U.S. stock markets were to continue, burlap consumption might be affected. Such an apprehension explained the earlier bearishness in the futures trading where August 40" 10 oz., opening at Rs. 53.10, eased to Rs. 52.84. However, recovery soon set in, and the quotation reached a high of Rs. 54.84. These trends were also visible in August B. twills, which, opening at Rs. 125, fell to Rs. 122.90, but soon made good to Rs. 126.70. The uncertainty about the future could easily be detected, in that forward business coming up was very shy. Continental buyers of hessian would appear to have put off buying, as they considered that the present level of prices was high. Argentina has now put off further purchases, as it considers that its support was a factor for the steady uptrend. The quota which Argentina was to complete this month was 9,000 bales, but it was very unlikely that this would be completed. Argentina would make further purchases if the price of 40" 10 oz. now quoting at Rs. 61.25 came down to Rs. 58. That buyers for Argentina expected a decline has been indicated in that the steamer which was expected to leave with 9,000 bales and balance from last month, has been postponed for next month. However, current conditions in the market as well as the knowledge that Argentina has to make up a good deal to cover its requirements for the year do not indicate that the price would decline to Rs. 58, in the short-run at any rate.

During the week, fibre prices were firm. Since the reports of damages to plant on account of recent excessive rains have been discounted and the present sunny weather has done much good to plants, the premium for the new crop, which was Rs. 2 a maund a week ago, fell to Re. 1 a maund. However, sellers were reserved and demanded a premium of Re. 1.50 a maund. Meanwhile, mills continued to show interest in Assam and Northern bottoms of the old crop which were quoted at Rs. 30 and Rs. 29.50, respectively. June-July daissee bottoms were unchanged at Rs. 33.50. It has been stated on behalf of the West Bengal Government that, in view of the unsatisfactory prices received by growers this year, the current area under mesta was expected to be lower than 15 per cent as compared with 1961-62. It is further stated that this year's early monsoon is likely to induce the farmers to go in for more paddy than jute. In 1961-62 West Bengal's total jute acreage was 1.14 million which yielded 3.35 million bales. The acreage under mesta was 340,000 and yield 715,000 bales.

The fall in prices in Pakistan—the current price there is about Rs. 10 to Rs. 15 basis bottoms —has rightly caused much alarm to authorities there. In order to arrest the decline, the minimum prices for export have already been increased, and an inquiry commission has been proposed to examine all details of the jute trade and recommend measures for betterment. The Pakistan Government is also reported to be favouring the financment of small shippers in order to minimise monopoly by big shippers. The constitution of a futures market is also likely. However, the Government is reported to be not favouring the idea of fixing minimum prices.

While it is not known if the 20 per cent cut in imports recently announced would affect the imports of spare parts and machinery required to enable mills to increase their spinning capacity, which has already been sanctioned by the Government, trade circles referred to the export promotion measures now being taken by the Union Minister for International Trade and said that, if only adequate attention was paid to this industry, exports of jute goods could be increased. Referring to the need to increase the produce of cotton and oilseeds, the Union Finance Minister, in his recent statement to Parliament, took pardonable pride for the achievement of self-sufficiency in raw jute. In this connection, it should be pointed out that raw jute cultivators and others realised enormous profits in 1960-61 season; this led to the following bumper crop, which, when its full impact on the market was being felt, affected prices. Government measures in co-ordination with the mills industry prevented prices from falling to levels which were considered as being below cost of production.

Encouraged by the success of the price support scheme and out of a desire to ensure a fair return to cultivators, the Government was recently reported to have fixed minimum prices for the next crop on the same level as this year. This has been done without consultation with the mills. Even in the worst stage of the crisis which faced the fibre market in the last year, the Government acted in complete unison with the mills. The crisis having passed and stable conditions having returned to bring prices to a new equilibrium, the Government's action in fixing minimum prices for the next crop without consulting the manufacturing industry and ascertaining its views should be considered unfortunate, if reportedly true. In this connection, the Planning Commission's decision to ask the Indian Central Jute Committee to examine the jute development measures initiated in the first and second Plan periods and determine the measure of achievement as well as causes of failure of some of the steps is in the right direction. For the findings would enable constructive lessons to be drawn for the future especially because the investigation would be in relation to fertilisers, seeds, cultural practices, plant protection measures, retting facilities, etc.

Bearishness in the future activity imparted a quiet trend in the ready goods market, where B. twills were weak at Rs. 125, as against the overnight quotation of Rs. 125.40. However, ready hessian 40" 10 oz. was about steady at Rs. 59.60, as against Rs. 59.50. At this stage, good covering business developed, and this was reflected in ready hessian 40" 10 oz. gaining to Rs. 60 on Wednesday. However, fresh overseas business was lacking. Heavy goods also met with covering demand, but this was inadequate to maintain the quotation which, therefore, fell to Rs. 124.75. At this stage, that is, on Thursday, reports of substantial interest by Ghana in B. twills against July-August shipments pushed up B. twills to Rs. 127.25. Also, activity in futures trading became keener. In sympathy, ready hessian 40" 10 oz. hardened to Rs. 60.75. Encouraging reports were received from the U.S. burlap market. Buying interest soon developed in both heavy goods and hessian for ready as well as near deliveries. Prices were accordingly pushed up on Friday, but gains were invaded by profit-taking. All the same, quotations were higher on balance, with ready hessian 40" 10 oz. at Rs. 61.25 and B. twills at Rs. 129.25. Although there was little business done over the week-end, prices were steady at Rs. 61.50 and Rs. 129.00 respectively. During yesterday's trading, ready B. twills spurted to Rs. 131.50 following keen speculative activity in the futures market. No

THREE GOLDEN HORSES.... *consistency!*

Consistency is an important word in the production of yarns. A good rayon yarn offers, first and foremost, *consistency*: uniformity, dependability. The most modern of yarn-producing facilities, themselves marvels of operational consistency, produce THREE GOLDEN HORSES Rayon Yarn. And with great *consistency*, the uses for THREE GOLDEN HORSES are increasing. We think you'll agree when we suggest that *consistency* is really the healthy credo of all success, and is desirable in every department of manufacture.

KURASHIKI RAYON CO., LTD.

Head Office: Shin-Hankyu Building, 8, Umeda, Kitaku, Osaka, Japan,
Cable Address: KURARAY OSAKA

genuine business was transacted; only Cuban inquiries revealed interest for a substantial quantity. A Burmese tender for about 5,000 bales was thought to be on the way.

SUGAR DRIFTS LOWER

(From Our Own Correspondent)

HAPUR, *25th June*

Sugar prices here drifted lower this week owing to easy supply position in the wake of the monthly release for open sale. Mill delivery prices eased by 6 nP to 19 nP per maund, and spot delivery prices by 25 nP a quintal. Demand from Gujarat and Saurashtra was slack. Week-end prices were: Spot delivery *Simbhauli* Rs. 105.75, mill delivery (per maund) D29 *Amroha* Rs. 36.69, *Dhampur* Rs. 39.56, *Seohara* Rs. 38.69, Meerut Rs. 39.25, E29 *Simbhauli* Rs. 39.12, Bijnore Rs. 38.62 and *Dhampur* Rs. 38.44.

A steady trend was witnessed in the Muzaffarnagar market during the past week on brisk demand from Gujarat, Punjab, Rajasthan and Saurashtra. Prices improved by 7 nP to 38 nP a maund. No forward deals were reported. Spot prices also improved by 50 nP a bag due to higher offtake. Despatches improved considerably, as sugar was lifted by both rail and road transport. The Kanpur market was buoyant during the week in the wake of heavy purchases by Maharashtra and Saurashtra, coupled with revival of demand from West Bengal.

Khandsari continued to evoke good inquiry and ruled firm. Demand from Punjab, Rajasthan and local areas caused prices to move up by 50 nP to Re. 1 per maund.

Gur registered sharp gains due to brisk buying support mainly from Gujarat. The week's offtake by that destination was eight wagonloads. The local *gur* stock shrunk considerably to 4,000 maunds. *Shakker*, too, was much in request, and the prices continued to rise. Standing cane crop was affected by the absence of rains. Week-end prices were: *Gur* superior Rs. 57.60 to Rs. 60.28, *dara* Rs. 50.51 to Rs. 53.58 and *shakker* Rs. 64.20.

Continued demand from Gujarat accounted for a sharp rise in *gur* prices in the Muzaffarnagar market also. The *chaku* quality improved to Rs. 22 to Rs. 22.75 a maund and the *kotha* wet was being lifted at Rs. 18.50 per maund. *Rusket khurpa* evinced interest from Rajasthan at Rs. 8 to Rs. 11.50 a maund.

Gur futures moved both ways during the week. The *Fagun* contract, having opened at Rs. 19.40 last Monday, touched the highest and the lowest levels of Rs. 19.45 and Rs. 19.23, respectively, in the mid-session and was done today at Rs. 19.38.

RESTRICTED DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *26th June*

The prevalence of exceptionally good weather explains why tea production in the country has so far been ahead of last year's level for the corresponding period. Higher production is seen not only in the North, but also in the South. And it is because of the expected increase in production this year that buyers in the export auctions, held so far in Calcutta, have shown small interest in our tea. Considering that the U.K. tea stocks for the week ended 15th June 1962 fell by 2 million lbs. to 123 million lbs., it was expected that British demand in the auctions should rise. However, the idle conditions in the export sales held so far intrigued the trade which attributed the lull to the need for more competitive prices. As pointed out by the Tea Planters' Association of India, excessive taxation by the Central and State Governments and the high cost of transport have raised the cost of production. The increased wages and amenities for labour have not reflected themselves in the labour productivity.

A candid and outspoken analysis of the present ills of the industry came from Mr. N. K. Dutta in his presidential speech at the silver jubilee session of the Assam Tea Planters' Association, held at Jorhat earlier in the week. Mr. Dutta declared that despite the recent tax concessions, the industry's production costs were extremely high in relation to other tea producing countries. Contributory causes to this unsatisfactory state of affairs, Mr. Dutta said, were the high cost of labour, coal and fertilisers which was accentuated by the new excise duty on aluminium foils and plywood and the increased railway and steamer freights. The Union Finance Minister, who also spoke on the occasion, said that he could not contemplate any further immediate concession to the industry, for, if the concessions went beyond certain limits, other countries might react differently and cause unfair competition to prevail.

Against the background of a rapid fall in sterling balances and the foreign aid uncertainties, the need to step up exports of tea has become all the greater, which is now too well realised by New Delhi. As 85 per cent of India's exports comprise traditional items such as tea, jute goods, cotton textiles, oilseeds, mineral ores, etc., it is but proper that export efforts should be directed to these commodities in the first instance.

The tea trade has generally agreed that, as a result of the reduction in the export duty, tea exports should increase. According to Mr. Manubhai Shah, Union Minister for International Trade, an increase of Rs. 5 crores was not difficult to realise, if the proposed entry of the U.K. in the European Common Market would not disturb the existing pattern of Commonwealth trade. Mr. Shah recently desired to get a larger share for tea in the expanding economy of the Continent. If only the existing duty on tea in several European countries is reduced, the tea drinking habit would receive the much-needed impetus. If this were to happen, a striking increase in world production would be necessary to cope with demand.

However, such hope might not be realised now. The E.E.C. is now reported disinclined to abolish *in toto* the existing common external tariff of 18 per cent on tea. A 40 per cent cut was reported to have been agreed. A greater reduction depended on the British negotiations at Brussels. Consumption in the U.K., where a duty was in force before the Commonwealth concessions, increased from year to year. This underscores the need to introduce tea in areas where it is little known. If only the E.C.M. area is fully tapped, results would be very encouraging. Against this background, the formation of a European Tea Committee in Brussels, to which the Indian Tea Board has offered all co-operation, was noted by the trade here with considerable satisfaction.

An Indian firm has urged New Delhi to grant it subsidy to sell blended tea in the U.S. It was officially stated that this suggestion was under consideration. The trade would welcome other measures to promote sales in Canada and the U.S. The fact that tea sales in the U.S. grocery stores increased by 3 per cent to 89 million lbs. in 1961 goes to show that more encouraging results could be achieved out of greater efforts at sales promotion. The popularity of instant tea in the U.S. could be imagined from the fact that it formed about 7.9 per cent of total sales in 1961. A decade ago, instant tea was unheard of. Another trend in evidence was the preference for bagged tea over loose tea.

The proposal of the Assam Government to start an auction centre in Gauhati was not supported by the Union Finance Minister on the ground that Gauhati offers little facilities for an auction centre.

Offerings at yesterday's export sales here totalled 29,743 packages which met with good general demand. The better C.T.Cs attracted keen competition, while the plained liquoring teas were sold at prices below the brokers' valuations. Among medium teas, fannings were firm and broken grades were subjected to greater competition. The brighter liquoring orthodox Assams and Dooars were fully firm as were tippy B.O.Ps and O.Fs Whole leaf grades were steady, but plain teas met with support at prices below valuations. Darjeelings were weak. The quotations per one kg. (in rupees), inclusive of the excise duty, were: Best Assam C.T.C. fannings 6.60 to 7.20, best Assam C.T.C. B.P. 6.40 to 6.80, medium Assam C.T.C. fannings 5.40 to 5.70, medium Assam C.T.C. B.P. 5.60 to 5.90, clean plain pekoe 4.30 to 4.60, plain fannings 4.00 to 4.30 and plain B.P. 4.00 to 4.30.

Notice

SYNTHETICS AND CHEMICALS LIMITED

NOTICE

THE SECOND ANNUAL GENERAL MEETING of SYNTHETICS AND CHEMICALS LIMITED will be held at Walchand Hirachand Hall, Indian Merchants' Chamber Building, 76, Vir Nariman Road, Bombay-1, on Thursday, 26th July, 1962, at 4-30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st March, 1962 and the Balance Sheet as at 31st March, 1962.
2. To appoint Directors in place of Mr. Tulsidas Kilachand, Mr. W. D. Waugh and Mr. Kishore M. Premchand, who retire by rotation and being eligible offer themselves for re-appointment.
3. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

4. To consider and if thought fit to pass the following resolution as an Ordinary Resolution:

"RESOLVED that approval be and is hereby given to the issue of 1,25,000 Equity Shares of Rs. 100 each at a premium of Rs. 20 per share to be offered to the holders of the existing Equity Shares in the Capital of the Company, the same to be offered to the members whose names appear in the Register of Members on such date as the Directors may hereafter resolve in the proportion of 5 such new Equity Shares for every 18 existing Equity Shares of Rs. 100 each held by such members on such date and if the offer of new Equity Shares results in any member becoming entitled to a fractional interest in a share, then and in that event no fractional certificates shall be issued to members but that the fractional interests shall be consolidated and allotted as the Board of Directors deem fit to any person or persons, including themselves or to any one or more of the employees of the Company, for the purpose of being sold and the proceeds, less the proportionate payment of the amount due and payable to the Company for such shares including premium of Rs. 20 per share and also less the expenses of sale and any other expenses, be divided *pro rata* amongst the members who would otherwise have been entitled to a fraction or fractions of such new Equity Shares, and the Directors be authorised to make such arrangements regarding the issue and offer such new Equity Shares subject to the provisions of this resolution as they may consider advisable."

5. To consider and if thought fit to pass the following resolution as a Special Resolution:

"RESOLVED that subject to the consent of Controller of Capital Issues and subject to the consent of Messrs. Elton Henry Schulenberg and Walter Dale Waugh, each of whom is a holder of 50 Equity Shares in the capital of the Company being obtained for the purpose, the Directors be and they are hereby authorised to offer to Firestone Tire & Rubber Company of Akron, Ohio, U.S.A., 31,250 Equity Shares out of such new issue at a premium of Rs. 20 per share and that no offer of new Equity Shares be made to the said Messrs. Elton Henry Schulenberg and Walter Dale Waugh in respect of the 50 Equity Shares standing in their respective names."

6. To consider and if thought fit to pass the following resolution as an Ordinary Resolution:

"RESOLVED that approval is hereby given to the Directors to vary the terms of the following contracts referred to in the Prospectus issued by the Company and dated 13th day of May, 1960 as may be required for the purpose of making arrangements for expanding the capacity of the Plant to 30,000 tons per year.

(1) Technical Collaboration Agreement dated 30th January, 1960 made between Kilachand Devchand & Company Pvt. Ltd., and the Firestone Tire & Rubber Company as adopted by this Company by an Agreement dated 25th March, 1960 made between this Company and Kilachand Devchand & Co. Pvt. Limited.

(2) Agreement dated the 12th December, 1960 consequential upon the letter dated 20th April, 1960 from the Firestone Tire & Rubber Company regarding the loan of the difference between U.S. $5,625,000 and the costs of obtaining at par 1,12,500 Equity Shares of the Company."

7. To consent, pursuant to Section 314 of the Companies Act, 1956 to Mr. M. B. Daphtary who is a relative (within the meaning of Section 6 of the Act) of Mr. B. K. Daphtary, a Director of the Company being and continuing to hold an office or place of profit under the Company as an employee, and if thought fit, to pass the following resolution as a Special Resolution:

"RESOLVED that the Company hereby accords its consent under Section 314 of the Companies Act, 1956 and other applicable provisions (if any) of the said Act to Mr. M. B. Daphtary who is a relative of Mr. B. K. Daphtary, a Director of the Company, holding and continuing to hold office or place of profit under the Company as an employee on a basic salary of Rs. 880 per month in the time scale of Rs. 700-60-1,000-70-1,350 together with the usual allowances and the benefits, amenities and facilities applicable to the employees occupying similar posts, with authority to the Board of Directors to sanction special increments within the grade or to withhold increments as they may deem fit and proper."

Notes:—(a) A Member entitled to attend and vote at the Meeting is entitled to appoint one or more proxies to attend and to vote instead of himself and the proxy need not be a Member.

(b) The Register of Members and the Share Transfer Books of the Company will remain closed from Monday, 16th July, 1962 to Thursday, 26th July, 1962 (both days inclusive).

(c) Copies of the above agreements and documents mentioned in items 4, 5 and 6 are open for inspection during business hours on any working day till 12-00 noon of 26th July, 1962.

(d) An explanatory statement as required under Section 173(2) of the Companies Act, 1956, in respect of the aforesaid Special Business is annexed to the convening Notice sent to members.

By Order of the Board of Directors,
K. B. DABKE,
Secretary.

* National income at factor cost—the aggregate of all income earned in the production of goods and services in the course of a year including net income from abroad.
Source: *International Financial Statistics*, May 1962.
† Based on the eighth issue of the Annual Paper on National Income (at current prices prepared by the Central Statistical Organisation. Figures are based on the 1941, 1951 and 1961 population census.

COMMERCE AND INDUSTRY

(*Concluded from page 1178*)

to other factors, arrivals in the U.S. fell substantially and did not rise significantly again until 1954; they remain below the pre-war level both in quantity and as a proportion of world pepper exports. Soviet Russia has become the second largest importer in recent years. The U.K. is the next largest importer, its imports now being at or above their pre-war level (excluding re-exports). Germany was a large buyer of pepper before the war and its imports, like those of other European countries (France, Italy, Sweden, the Netherlands, Greece) have been picking up recently, though they are still lower than before the war. Among the industrial countries, only Canada, Austria, Denmark and Belgium now import more than before the war.

Pepper trade follows a well-established pattern. France takes all the pepper of Cambodia and other former French territories, including Madagascar. Brazil supplies the American continent, Argentina being the principal market in recent years. The main source of the U.S. supplies before the war was Indonesia; later the U.S. took the bulk of its needs from India, but since 1956 imports of Indonesian pepper have been resumed—partly directly, partly via Singapore. A major part of the Sarawak crop goes to the London market. The U.K. imports mainly from Commonwealth countries. A high proportion of Ceylonese pepper is resold to the U.S. The Soviet bloc countries have hitherto bought only from India. But Singapore is the most important buyer of both Indonesian and Sarawak pepper, and from there the products of these two major sources reach practically all importers of pepper.

The share of major producers in world pepper output is shown in the following table:

TABLE V

(In thousand metric tons)

	1935-39 average	1950	1958	1959	1960
Asia:					
India	15.01	30.93	25.91	26.72	26.62
Indonesia	58.33	7.89	17.33	19.10	..
Sarawak	2.40	0.32	9.89	8.60	6.76
Ceylon	2.27	4.31	5.74	7.84	..
Cambodia	4.99	1.50	1.54	1.60	..
Thailand	0.18	0.05	0.18	0.20	..
Americas:					
Brazil	..	..	2.86	3.37	..
Africa:					
Madagascar ..	0.27	0.36	0.59	0.60	..
Nigeria	..	0.77	0.27	0.30	..
World Total (including others).	83.63	46.62	66.88	68.00	..

Drawing particular attention to the wide fluctuations in prices of pepper, the F.A.O. study observes that uncertainty about prices and the lack of satisfactory data on output have seriously hampered rational planning of pepper production at the national level. The absence of adequate co-ordination of production policies at the international level, according to it, has also adversely affected pepper producing countries. The study, therefore, emphasises the need for "more extensive use of existing facilities" for international consultation and discussion on production and trade policies.

Cloves

The second place in world spice trade goes to cloves. By far the biggest clove-producing country is Zanzibar, followed by the Malagasy Republic and Indonesia. Zanzibar's output was 6,600 metric tons in 1960, as against 18,400 tonnes in 1959, 7,160 tonnes in 1958 and 9,000 tonnes between 1935 and 1939 (average). The consumption of cloves in the late fifties has been 15 per cent above the pre-war level, but the increase was accounted for mainly by Indonesia. Indonesia is the largest importer (8,100 tonnes in 1960). The U.S. imports of cloves in 1960 was lower at 1,200 tonnes, as against 1,300 tonnes in 1959 and the pre-war annual average of 2,000 tonnes. Cloves are imported by India too, but, owing to import restrictions, they have fallen to an annual average of 1,000 tonnes, from about 4,000 tonnes before the war. The major factor that is likely to prevent any wide fluctuation in clove prices is the stockholding policy pursued in Zanzibar.

Nutmeg shares with cloves the second rank in world's spice trade, with its total export earnings amounting to $15 million. Another spice, mace, is the covering of the fruit of the same plant which gives the nutmeg seeds and accounts for world trade worth $3 million. The major producer of nutmeg is Indonesia, followed by Granada. Both these countries together produced about 6,000 tonnes of nutmeg and mace in 1954-55. But a hurricane in Granada destroyed nutmeg trees, resulting in a severe setback in production, with a boom in prices, which continues even today. The F.A.O. study rightly warns that, since demand in some of the major markets (the U.K. and the U.S.) is declining, the present boom should not be allowed to induce over-planting, "which would lead to a collapse of prices, when trees reach their full yield."

Ginger and Cardamom

Ginger is another spice cultivated mainly in India, which is estimated to produce about 17,000 tonnes (as in 1960), or about 60 per cent of world total. The other major producers are Ceylon, Jamaica and Sierra Leone. Mainland China, according to the study, is probably still a major producer, but since the end of the war, most of its output has been used for domestic consumption. Consumption of ginger has followed divergent patterns in the major consumer countries in the post-war period: while it has risen in the United States and in Arab countries, on the whole it has fallen in the United Kingdom. The extreme price fluctuations do not stimulate efforts to increase output. Moreover, storage difficulties present an obstacle to stockholding in producer countries. However, there may be possibilities of countercyclical stockholding at the consumer end. Some mitigation of the impact of price fluctuations in producers' incomes, according to the study, might also be possible through Government marketing schemes similar to those of Jamaica. An arrangement for a regular exchange of information on marketing programmes and other activities among the major producers, it is said, will greatly enhance the benefits of national marketing schemes in stabilising world prices.

In respect of cardamom, produced mainly in India and to some extent in Ceylon, Indo-China and Central America, the study points out that the market for it has been expanding, unlike other spices. Cinnamon is cultivated mainly in Ceylon and Seychelles Islands and cassia in Indonesia. Pimento, popularly known as allspice because it resembles in taste and aroma a mixture of cinnamon, cloves and nutmeg, is produced mainly in Jamaica and other Caribbean countries. The existing statutory agency for marketing the product in Jamaica has been able to ensure some measure of stability in prices, in spite of a general fall in demand since the pre-war period and wide fluctuations in output.

Notice

BURN AND COMPANY LIMITED

Registered Office

12, Mission Row, Calcutta-1

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Company will be held at its Registered Office, 12, Mission Row, Calcutta, on Friday, the 20th July, 1962, at 11 a.m., for the purpose of considering and, if thought fit, passing the following resolution:—

"That subject to such approval of the Central Government as is required by Section 372 of the Companies Act, 1956 being duly obtained, this general meeting having taken under consideration the scheme of collaboration between the Company and A. Reyrolle and Company Limited do sanction the investment by the Company which is thereby contemplated in the purchase or acquisition of shares in the proposed Company to be known as Reyrolle Burn Limited notwithstanding that such investment will exceed ten per cent of the subscribed capital of that Company."

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote in his stead.

By Order of the Board,

MARTIN BURN LIMITED,

ROMEN MOOKERJEE,

Director,

Managing Agents.

20th June, 1962.

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, have as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation In India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquires; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: { Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

Kumardhubi the largest single refractory manufacturing unit in the East supplies

REFRACTORIES FOR INDIA'S VITAL INDUSTRIES

Half a century of experience, intensive research, expert advisory services, modern equipment and quality control at every stage of production... these factors contribute to the unsurpassed excellence of KUMARDHUBI REFRACTORIES... Refractories indispensible to the Steel, Ceramic, Chemical, Sugar, Cement and other major industries.

KUMARDHUBI firebricks, Silica bricks, Sillimanite bricks, Insulating bricks and bonding materials are economical too...they last longer and stand up better to variations in temperature—saving replacements costs and time.

KUMARDHUBI'S modernisation and expansion programme ensures the nation a consistent supply of the finest refractories—in regular shapes and sizes or to specification—to meet India's industrial advancement during the Third Five Year Plan.
