"I propose to abolish the five-year old expenditure tax with effect from the current year. When it was introduced in 1957, it was realised that it had no backing of historical experience. It was, however, hoped that the tax would be a potent instrument for restraining ostentatious expenditure and for promoting savings. While these are very desirable objectives, experience has shown that the existence of the expenditure tax has contributed little to them. The revenue from this source has remained conspicuously small. It has been argued that the incorporation of an expenditure tax in the tax structure would make the administration of income-tax a great deal more effective and would enable the rates of income-tax to be lowered suitably. Experience has not shown this to be the case. If the working of this tax had shown some promising results, it would have been worth while to continue and even extend it; but, with the present experience, it is considered best not to continue a measure which, as a source of economic restraint, has been ineffective and as a source of revenue unattractive. The basic objectives of the tax have to be achieved in other ways."

The forthright manner in which Mr. Desai has acknowledged the failure of this fiscal innovation is typical of the Gandhian streak in him. The other ways in which he has tried to achieve the object are the increases in wealth tax, super-tax and surcharge, reduction in the entertainment expenses allowed to companies and heavy excise duty and sales tax on all luxury articles, including cigarettes and other stimulants.

The selection of goods for increasing the excise and customs revenue has been done with an eye to minimise its impact on the cost of living of the common man, to restrain domestic consumption and to stimulate exports. As these lines are being written, industries and trades affected by the tax are wailing that the burden imposed is unbearably heavy. While it is natural for them to do so, they should not overdo this act. They must look at the proposals not from their own point of view but from the needs of the country as a whole. They will do well to realise that their function is essentially that of the tax collector, which means that they must pass on the incidence of the tax to the buyer. In the case of controlled articles, the Government should readily agree to a prompt upward revision of the selling price of manufacturers to reflect the cost of additional or new excises. While the Finance Minister has done well to give a substantial relief in the taxes collected on exports of tea, he is not justified in denying the long overdue relief to sugar industry burdened with large surplus stocks and sizable loss on exports. Indeed, his stoic silence on this subject, despite the convincing case in favour of a sizable reduction in excise duty which has been fully conceded by the Minister for Food and Agriculture, is intriguing.

THE NEW RAILWAY MINISTER BEGINS WELL

SARDAR Swaran Singh has displayed both dynamism and skill in his maiden Railway Budget (for the year 1962-63) presented to the third Lok Sabha on Thursday last week. He has not only ventured to revise upwards freight rates as well as passenger fares but also effected these revisions in a judicious manner. In this respect, he has certainly scored a march over his predecessor, Mr. Jagjivan Ram, who it was that should have made the beginning in the budget for 1961-62 itself, the first year of the third Plan. At the time of the presentation of that budget (in February 1961), it was pretty clear that, on the basis of the then existing level of fares and freights, the Railways would not be able adequately to meet the steeply enhanced working costs and to embark upon the Rs. 1,325-crore third Railway Plan. But Mr. Jagjivan Ram did not have the political courage either to revise passenger fares or to bring about a more remunerative structure of freight rates. Had he been bold enough to make a beginning last year, Sardar Swaran Singh would certainly have been able to complete it in the current year, so that the internal resources of Railways for financing their third Plan would be at least 50 per cent of the total outlay.

It is quite natural that the proposals for raising fares and freights should have evoked severe criticisms, because no one likes to pay more. It is also true that these proposals will have their impact, direct and indirect, on the cost of living in due course. But what is the alternative? Staff expenses have gone up markedly in recent years, more especially since 1st November 1961, following the recent decision of the Central Government to enhance the dearness allowance payable to its low paid employees; the additional expenditure is put at Rs. 12.20 crores. There has also been an increase in the price of coal consumed by Railways. Further, the Railways continue to incur heavy losses on account of the uneconomical haulage of coal; as against the average per ton-mile cost of more than 5.79 nP on metre-gauge and 3.80 nP on broad-gauge, the actual charges levied are no more than 3.33 nP on both the gauges. And, what is worse, there is a persistent tendency towards a progressive growth in the volume of traffic in low-rated goods (like salt, oilseeds, ores and foodgrains) carried at freight rates which are less than the cost to the Railways. Alongside of rising working costs of the Railways thus, there is the imperative need even otherwise to raise additional resources for meeting the heavy capital outlay which the Railways will have to incur at present-day high costs for executing the Plan programmes, not to speak of the continued, steady demand on the Railway Development Fund for financing works such as operational requirements which cannot be assessed as being directly remunerative, amenities for Railway users and expanding welfare needs of an increasing staff strength.

If the Railways were not to recover the increase in costs and find a part of the funds required for their development from the users of their services, the taxpayers as a whole would have to foot the bill. Surely, the former course is a lesser evil. The interim budget (presented on 13th March last), it will be recalled, disclosed a net surpus of just Rs. 13.16 crores, as against the estimated expenditure of Rs. 23.04 crores (to be incurred in 1962-63) on works chargeable to the Development Fund, thereby leaving a gap of Rs. 9.88 crores to be found either from General Revenues by way of a loan or by raising the fares and freights. The loan would have gone up further to over Rs. 22 crores, after taking into account the payment of Rs. 12.20 crores due to higher dearness allowance to lower paid employees. It is obviously neither desirable nor practical, as Sardar Swaran Singh said, to take such loans year after year.

There is also some justification for higher fares and freights in the consideration that the users of railways must pay more today if their expanding requirements of railway facilities in the coming years are to be adequately and appropriately met. It is on this consideration that Railway freights have to be determined and not, as the Union Finance Minister aptly stated in his Budget speech, on the philosophy of "no-profit-and-no-loss." After all, there has not been any enhancement in passenger fares in recent years, while increases in freight rates—4 per cent from 1st October 1958, 5 per cent surcharge from 1st April 1960 and minor adjustments in coal rates, etc., since 1st July 1961—have not kept pace with the spurt in cost of transport. The two increases of 4 per cent and 5 per cent, together with the 4 per cent now levied, brings the total increase to 13 per cent, which, in fact, was the extent recommended by the Railway Freight Structure Enquiry Committee in its report of April 1957. Even with the anticipated additional revenue of Rs. 21.26 crores in 1962-63 as a result of the proposal for adjustments in fares and freights, the net surplus creditable to the Development Fund will be no more than Rs. 23.22 crores which is just sufficient to cover the expenditure on works chargeable to the Fund.

It must, indeed, be said to the credit of the new Railway Minister that he has boldly effected a general upward revision in fares and freights, instead of resorting to complicated and cumbersome selective adjustments. Indeed, he should have brought these increases into force from 1st June, instead of 1st July, so that the Railways could have the benefit, at least in part, of the seasonal increase in traffic. The details of the revisions in rates for freight traffic are given elsewhere in this issue (*vide* page 758), so that it is unnecessary to refer to them at length here. It will be evident from these details that the increase in freight rates in no case exceeds Re. 1.05 per tonne, whatever the commodity or the distance over which it is transported, and the additional yield is expected to represent no more than 4 per cent over the existing goods earnings of a whole year. The extent of the increase, thus, cannot be considered as excessive and, that, too, when it is spread over almost all commodities (except railway materials, postal traffic, military traffic and manganese ore exported) and is so designed as to avoid a large burden on any single commodity. Nor can the importance of the resulting rate structure being more telescopic, albeit slightly, than at present, be underrated. "This, in fact, is justified," to quote the Railway Minister, "since several items of cost which have increased are not affected by the lengths of haul." A flat increase in freight rates as now proposed, instead of a common percentage rise, is to be particularly welcomed for two reasons. In the first place, it will minimise the incidence of increase in the already high-rated commodities and go a long way towards narrowing down the existing difference between the lowest and highest freights as envisaged by the Committee on Transport Policy and Co-ordination. Secondly, the proposal, resulting as it will in a somewhat larger percentage rise in short-distance rail traffic, will tend to encourage its offloading to road which would be a desirable thing to happen.

There is, however, one omission on the part of Sardar Swaran Singh. He has ignored almost completely the Mudaliar Committee's explicit plea for concessional freight rates in respect of goods exported. Considering the great urgency of earning much foreign exchange through exports, the Railway Minister will do well to concede the plea. A general rebate of about 25 per cent as suggested by the Committee can be given. This concession will not weigh heavily on the Railways' finances, inasmuch as the export goods traffic forms only a small proportion of the total traffic carried by Railways.

In the case of passenger fares, too, the revisions made are quite judicious. The incidence of increase is made to fall more heavily on persons travelling First Class—about 15 per cent—while it will be just 8.65 per cent in the case of Second Class, 9.85 per cent in respect of Third Class, and 5 per cent in season tickets. Even here, it is gratifying to be told by the Railway Minister that, in notifying the proposed increases in passenger fares of different classes, opportunity will be taken to remove certain anomalies —such as the one which does not afford any relief, through telescopic charges, for long-distance passengers—which crept into the fare structure when the passenger fare tax (the benefit of this levy is exclusively for the State Governments), chargeable at varying percentages for different distances, was merged in passenger fares on 1st April 1961 without making any other adjustments. The Railway Minister could, perhaps, have avoided the rise of 5 per cent in season tickets, the incidence of which falls on a large number of office and industrial workers in cities like Bombay, Calcutta and Madras. But we are told that the incidence will be very negligible. Generally, a third class suburban season ticket holder travels only about 17 kilometres a day each way on the average. Even for 30 kilometres each way, the proposed enhancement will add to the cost of travel only about 40 nP in a whole month. Thus, the average third class suburban ticket holder will have to spend barely one naya paisa extra per day. It may be noted here that the rates for season tickets have remained unchanged since January 1948, as the passenger fares tax, imposed in 1957, did not apply to them. The suburbanites may not grudge paying this small addition, if their trains run to time and the frequency is increased.

While the Railway Minister's move to balance the expenditure and income by charging higher fares and freights is commendable, the public has a legitimate right to demand that the services rendered by the Railways are efficient and that there is no wastage of funds due to laxity in administration. It is true that the operational efficiency of Railways has registered an improvement in recent years, but there is still much leeway to make up. As compared with the modern techniques of transportation adopted in several countries, the progress achieved in India is very poor. Similarly, though passenger travel conditions have improved, there is still plenty of scope for further improvement, especially in regard to upper class passengers. In most trains, first class coaches are badly neglected and maintained. Overcrowding continues, but this is largely the result of the rapid growth of population, large influx of people to cities and towns to secure a means of living, and increase in the purchasing power in the hands of the people. An increase in fares is undoubtedly one of the methods of discouraging unnecessary travel.

DELHI LETTER

AN ANTI-INFLATIONARY BUDGET

From Our Special Correspondent

NEW DELHI, 25*th April*

MR. Morarji Desai seems to have achieved the unique distinction of being able to tax substantially and yet to enhance his reputation as a relatively safe and reliable Finance Minister from the tax payer's angle. He has not displeased many, probably because much worse was expected; but what is the magic by which the markets, which get panicky at the mere prospect of Mr. T. T. Krishnamachari's return, could take all that Mr. Desai had to offer them and still feel that they have not been hurt too badly? The additional taxation he has now imposed is worth more to the Exchequer than Rs. 72 crores in a full year estimated in the Budget; it may well be that, together with the taxation he imposed last year, this will yield about three-fourths of the Centre's target for fresh taxation (of Rs. 1,100 crores) in the third Plan. There is little doubt that this is a courageous effort. When counselling States against overambitious planning in excess of visible resources, he was challenged in the National Development Council last year to "dare and act"; after his own heroic effort in raising resources, Mr. Desai was entitled to point out that, so far, the States have taxed only to the extent of one-sixth of their Plan target of Rs. 610 crores and have yet to reveal their intentions or strategy for the rest.

A New Principle

The Centre has so far followed both in precept and in practice the fiscal virtue of balancing the revenue budget, a matter in which the States are still lagging far behind; now with the diminished prospects of raising loans from the market, the Union Government is faced with the alternatives of making up the shortfall either through more savings and taxation or by more deficit financing. Mr. Desai has virtually rejected the latter course and has now propounded, in somewhat categorical terms, the principle that sizable surpluses in the revenue budget should sustain at least a good part of the capital budget too. There will be an overall deficit of Rs. 89 crores still left uncovered but the actual position may be different and the deficit may disappear completely, proving this to be a hundred per cent anti-inflationary Budget. If the public can respond better in future to loans and small savings, it will, perhaps, be rewarded by a slightly lower burden of taxation.

Mr. Desai could have adopted a different course, if his object had been merely to take things easy. The deficit in the revenue budget of over Rs. 60 crores was largely an artificial one, created for providing the pretext for taxation. The additional dearness allowance granted to Central employees has been met by the raid on the deficit neutralisation reserve built out of profits of coinage operations to the extent of Rs. 15 crores. Concessions in direct taxation for encouraging exports have been provided by forgoing not existing revenue but the yield from the increase in company taxation. Thus, in all respects, Mr. Desai had a manageable problem of balancing the budget. He had, however, many other obligations which he has not tried to avoid; to set an example to the States in raising tax resources, to tell the Aid-India Club before it meets next month that this country is prepared for heavy sacrifices for the sake of development, to mop up inflationary pressures in the economy and restrain consumption where it affects savings or exports, and, lastly, to show that a supreme effort is being made to encourage exports to strengthen the country's capacity to service the mounting foreign debts, all these are some of the principal objectives underlying Mr. Desai's present fiscal policy. In these circumstances, it needed some bravado to declare that the "one thing that should not be taxed is people's patience."

Shrewd Political Judgment

The Finance Minister showed shrewd political judgment in deciding that the time has come to balance the continuous increases in indirect taxation, affecting prices of many articles of popular consumption, with a substantial measure of direct taxation. The most obvious choice then was the corporation tax; though the private sector had suggested, in the initial years of the recent reform a further reduction of the tax to below 45 per cent, corporate profits have been high. Foreign analogies for a lower average rate had little relevance to a situation in which a large internal market, insulated from foreign competition, provided ample scope for riskless enterprise. At an earlier stage, the Company rate of taxation was 51.5 per cent: the reduction to 45 per cent was merely the sugar-coating needed for general acceptance of the new scheme of corporation tax and the separate deduction of personal income-tax from dividends which ended the system of grossing. This phase is now complete; the States have also been pacified by the Third Finance Commission's award which compensates them partly for the diminution of the income-tax divisible pool. With the added advantages of demonstrating that the private sector was in no better or privileged position under his stewardship, Mr. Desai had no hesitation in accepting this course: at the same time, it has given him an opportunity to show some concessions to foreign investors by reducing (from 63 per cent to 50 per cent) the rate on dividends received from a non-subsidiary Indian company registered before 1st April 1959. Above all, the increase in the corporation tax has provided a method of giving incentive to exports without loss to the Treasury, though the rules to be framed by the C.B.R. will ultimately decide the actual quantum of relief. In effect, there will be a general 10 per cent rebate on incomes from exports which is not small, even if not too generous.

That corporation tax accrues entirely to the Centre was also an important consideration in selecting it for an increase. It is remarkable how little Mr. Desai has managed to give to the States (about Rs. 8 crores in a total taxation of Rs. 69 crores for the rest of this year), in spite of the widening of the divisible range of excise taxation by the Finance Commission. If the Commission had not specifically enumerated the items of excise taxes to be divided, the *new* excises estimated to yield Rs. 15 crores in a full year would also have been shared with the States. The yield from the additional excise duty on loose tea is offset by the rebate on exports; while the consumer subsidises exports, States will gain nothing. In the light of all this, it may be doubted whether there would have been an increase in the rates of income-tax in the middle brackets if the Finance Commission had awarded a higher percentage than 66⅔ as the State's share; Mr. Desai might have lost interest in this source.

Mr. Desai's comparison with foreign countries for income-tax rates in these brackets may not be quite apt, particularly after the heavy erosion in middle class and fixed incomes in the war, post-war and second Plan periods. But there has been a merciful recognition of the plight of the salaried class which has no expense accounts to show or other methods of concealing income; only, that this recognition should be restricted to the niggardly halving of the surcharge of 5 per cent is rather deplorable.

Expenditure Tax

The abolition of the expenditure tax is as symbolic as its original levy and continued retention; this is another break with the old scheme, after the abolition of the excess dividend tax, wealth tax on companies and reduction of the tax on bonus shares. On the other hand, Mr. Desai has been ready to exploit the wealth tax for more revenue (or was it only to pacify the socialist sections in the Party?) by raising the top slab rates up to 2½ per cent, a level not visualised in the Kaldor scheme. The capital gains tax has been further sanctified by the distinction drawn between short- and long-term gains, based on whether an asset is held for a year or more; the set-off for losses appears to be quite liberal. The further curb on entertainment allowances seems to be in keeping with the intentions declared in the third Plan regarding expense accounts.

Except that the separation of the short-term capital gains for a higher rate of taxation as income may discourage the practice of stagging in the markets in new issues, it is difficult to see what the Finance Minister has done to broaden equity participation. The withdrawal of the exemption for wealth tax of shares held in new industrial companies may not be a right move. Encouragement for exports seems to have stopped with the grant of rebate in corporation tax and the reduction of the tea export duty and rebate on tea excise; there is, however, an indication of consolidated refunds of excise duties paid on all materials used in the manufacture of exported goods, on the lines of the Mudaliar Committee's recommendation in respect of sales tax levied by States.

There is no innovation of any kind but much competent budgeting against inflation. Besides his general dissatisfaction with the efforts made by the States in raising resources through taxation, Mr. Desai indicated that there was need for adjusting the gains to the States from the Centre's tax effort, in keeping with the overall requirements of both the Centre and the States; that such a review should be necessitated so soon after the Third Finance Commission's report may indicate dissatisfaction with it. The Planning Commission is to take up this review soon. Some more measures for small savings are in the offing; the withdrawal of the Prize Bond scheme may be a preliminary for introducing a more attractive scheme. Mr. Desai's general observations on the importance of surpluses in public sector undertakings and a pricing policy suited to raising them have not taken concrete shape. Despite such drawbacks, it is a good Budget.

(*Concluded from next column*)

strable shortage of cotton, which makes price changes a one-way traffic, what is the use of a hedge contract? For one thing, it cannot be kept within the ceiling prices, unless it is artificially made bearish, as has been done during the past many years, and this will impair whatever efficiency it might have had as an instrument of price insurance. Past experience is that, whenever the pressure of demand had been high and supplies inadequate, the hedge contract, in spite of its pronounced bearish slant, hit the ceilings long before the delivery period started and many months passed without any trading at all. In the circumstances obtaining at present, a hedge contract could serve no useful purpose. By imparting a speculative push to price movements, its presence can cause much harm both to the grower and consumer of cotton. The only beneficiary of a futures market in cotton at the present juncture would be a handful of speculators who will get a fresh lease of life to play their old game. Of course, it will keep the Forward Markets Commission busy and powerful. In the absence of a hedge market, the Commission will find its existence difficult to justify and Parkinson's Law will become inoperative.

MARKET GOSSIP

A Practical Socialist

THE share markets have well withstood the additional tax burden of over Rs. 70 crores imposed by the Finance Minister in the final budget for 1962-63. Barring textiles, values of other scrips have gone up perceptibly, though turnover has only been of a modest nature. The setback in textiles is chiefly due to the increases in excise duties which are expected to hit particularly the more efficient units that have taken the trouble to modernise their machinery at considerable capital cost and introduced new processes to cater to consumer tastes. It is feared that, as usual, the Finance Minister has underestimated the effect of this tax on the revenue, apparently in order to sugarcoat the pill.

On the whole, the sentiment of the market is bullish. It must be said to the credit of Mr. Morarji Desai that he has succeeded in squeezing out a large sum of money without damaging market sentiment. The secret of his success lies in being pleasant to the taxpayer; he has, indeed, a sweet tongue. He does not run down the private sector. On the contrary, he tickles its vanity first before mulcting a good part of its profit and wealth for the benefit of the Exchequer. He has either removed or substantially modified the nuisance taxes and those that were patently unfair, but has not hesitated to increase the overall rate of taxation. His latest budget speech, outlining his tax proposals, is a masterpiece in persuasion and tact. It is extremely difficult to say "no" to his plea for additional taxation. Mr. Nehru has undoubtedly done well in continuing him as the Finance Minister. Mr. Desai has been quietly, but very effectively, implementing socialism, instead of merely preaching it in offensive language as is the wont of some Congressmen, not excluding the Prime Minister.

Fortunately for Mr. Desai, there have been some fortuitous developments that have enabled the share markets to gulp the doses of heavy taxation without much protest. Five of them are important. (1) There has been news of one or two good bonus issues, as, for instance, that of Indian Oxygen. (2) Mr. K. D. Malaviya's approach to coal industry has been friendly and cordial, not to say pragmatic. (3) Rumours have been rife of an imminent increase in the retention prices for the steel companies. (4) Money market has been comfortable. And (5) Reports about the progress of some of the leading new units are encouraging.

Further Cut in British Bank Rate

For the third time in seven weeks, the British Bank Rate was cut by a further half per cent to 4.5 per cent on the 26th inst. The previous two cuts, by half per cent each time, were in March last, from 6 per cent to 5.5 per cent on 8th March and from 5.5 per cent to 5 per cent on 22nd March. The latest cut was not unexpected. Financial circles in London have been anticipating for some time now a fresh reduction in the Bank Rate to stem the tide of hot money coming to London from the U.S. and Continental money markets. In fact, in spite of the previous two cuts, the flow of hot money into London has continued at an embarrassing rate. It is true that there has been some slowing down in the rate of inflow, but it is still fast enough to make heavy inroads into the reserves of other countries, especially the U.S. During the week ended 18th April, U.S. gold losses amounted to as much as $75 million, bringing total losses so far during the year to $355 million. The U.S. Treasury's stocks of gold on 18th April stood at no more than $16,535 million, the lowest since August 1939. Total gold losses during 1962 are expected to be as high as, or perhaps even more than, last year's loss of $857 million. A good part of this outflow of gold is said to have gone to London. In view of the higher interest prevailing there, it has been drawing in short-term funds from the Continental countries also. They have been using their dollar reserves to meet the flight of funds to Britain.

One more probable reason for the reduction in the Bank Rate, apart from those mentioned above, might be the desire of the British Government to forestall a possible recession in economic activity setting in later in the year. Of late, there have been some signs pointing to such a possibility.

Futures Trading in Cotton

The frantic search for foreign cotton still continues. Although Mr. Manubhai Shah, Union Minister for International Trade, struck an optimistic note regarding the cotton supply position in the country, in his statement made in the Lok Sabha this week, the fact remains that the situation has no shown any significant change for the better. According to Mr. Shah, the supplies available internally, together with imports already arranged, would be sufficient to meet the requirements of mills. The difficulty is only in respect of maintaining an adequate level of stocks at the beginning of the next season. He estimated a decline in stocks of the order of about one million bales. In other words, the cotton gap is one million bales.

Viewed against the background of tight supply position of cotton in the country, the reported move by the cotton interests in Bombay to start futures trading in the 1962-63 season cotton crop early in May is ill-advised. For, even assuming that the crop during the next season would be a bumper one, there is no justification for permitting futures trading so soon, because, in the conditions obtaining at present, there is no need whatever for a hedge market. When there is a large and demon-

(*Continued in previous column*)

TREND OF SHARES

FIRM UNDER BULL GRIP

(From Our Own Correspondent)

BOMBAY, 26th April

STOCK markets were firm under a strong bull grip this week. Mustering some courage in the session preceding the presentation of the tax proposals, the markets gathered considerable strength as the proposals were announced and rose substantially in the following days to round off the week on a distinctly firm note. Values simply rose all-round on short-covering and fresh buying. But Steels were exceptionally firm on hopes of an early announcement of an increase in retention prices and better corporate working during the current year. One must not, however, ignore the fact that these shares rose on heavy buying against options. Textiles, on the other hand, did not know which way to turn following the proposal to revise the general structure of excise duty on cotton cloth and yarn. At first, these shares rose along with others, reacted sharply later, but rallied to some extent near the close of the week. However, their overall performance was discouraging, as it was felt from the observations made by Mr. Arvind Mafatlal and Mr. C. H. Campbell that the additional excise burden on the industry might work out to nearly Rs. 30 crores and not Rs. 12.1 crores as estimated by the Finance Minister.

The share market's bullish reaction to the tax proposals contrasts with the fears of industrialists, as well as trade and industries chambers, that they would retard capital formation in the private sector. There are not a few on stock markets alone, who feel that the burden of Rs. 27.2 crores by way of direct taxation is too heavy. But the markets' behaviour can be explained as follows:

(*a*) They had discounted heavy taxation earlier, (*b*) there is no feeling of hostility towards the private sector in the Finance Minister's speech. (*c*) money market is comfortable, (*d*) inflation would persist and (*e*) reports about rights issue and bonus issues continue to be encouraging.

* * * *

In Bombay, Steel shares staged an impressive rise and sustained the improvement in other sections. The lethargic Tata Ordinary rose during the week from Rs. 139.50 to Rs. 145 and closed with a gain of Rs. 5.50 at Rs. 144.50. Indian Iron appreciated from Rs. 24.80 to Rs. 25.95 and closed at Rs. 25.80 against Rs. 24.76 a week ago. The bulk of the rise in these two shares was registered on Wednesday. After being done at Rs. 28.50, Mukand Iron improved from Rs. 28 to Rs. 28.40 to close 35 nP higher on balance at Rs. 28.25.

Miscellaneous issues came next and recorded sizable gains, with Bombay Burmah rising by Rs. 26.50 to Rs. 677.50, Indian Dyestuff by Rs. 27.50 to Rs. 532.50, Telco by Rs. 17 to Rs. 363 and Voltas by Rs. 10.50 to Rs. 293. Hindustan Motors were up by 44 nP to Rs. 20.04, Premier Automobiles by Rs. 4.50 to Rs. 134, Alcock by Rs. 15 to Rs. 335, Poly Chem by Rs. 16.25 to Rs. 220 and Premier Construction by Rs. 5 to Rs. 177.50. Even Armar Dye gained Re. 1.25 to Rs. 332.50, in the face of a cut of three points to Rs. 9 in the dividend for 1961. Among Cements, Digvijay rose from Rs. 201 to Rs. 209, A.C.C. from Rs. 157.75 to Rs. 160.25 and Orissa from Rs. 18.36 to Rs. 19.12. In Shippings, Scindia improved by 64 nP to Rs. 13.32

The only exception to the general buoyancy in the market were Textiles, which not only failed to repeat the high levels touched as soon as the tax proposals were announced, but closed much lower than those levels, with some of the issues showing losses on balance. Thus, Standard lost 21 points to Rs. 1,017, Khatau 15 points to Rs. 455, Finlay seven points to Rs. 324, Kohinoor Rs. 8.50 to Rs. 298.50, Shree Niwas Rs. 5 to Rs. 276 and Svadeshi Rs. 2.50 to Rs. 284, despite an announcement of a two-point increase in the dividend to 19 per cent for 1961. Bombay Dyeing finished 10 nP higher at Rs. 69.60 and Century Rs. 2.50 better at Rs. 623.50. In the cash section, Mafatlal lost Rs. 61.25 to Rs. 900 and Gold Mohur Rs. 25 to Rs. 250. Cash scrips in the miscellaneous section showed generally small gains. But some of them registered big profits. Thus, Permanent Magnets shot up by Rs. 32.50 to Rs. 265, Chemicoat by Rs. 62 to Rs. 235, Hindustan Wired Glass by Rs. 40 to Rs. 190, Colour Chem by Rs. 25 to Rs. 485, Kirloskar Pneumatic by Rs. 13.75 to Rs. 348.75 and Synthetics by Rs. 10 to Rs. 231. T. Maneklal, however, slumped by Rs. 95 to Rs. 715.

* * * *

The Calcutta Stock Exchange was cheerful. Selected Tea shares, Jutes and Coals were conspicuously firm; the first following the relief in the export duty, the second on expectations of better working and the possible exemption from the enhanced tax on companies on export earnings and the third on talks of an early upward revision in the selling price for coal. Cotton mill shares were neglected. Miscellaneous issues recorded small changes either way. The Forward List showed fair gains. Dunlop rose by one full point to Rs. 44.62 and Texmaco were up by Rs. 1.40 to Rs. 23.30. G.K.W. rose near the close to over Rs. 42. Noticeable gainers among Teas were Betijan from Rs. 28.44 to Rs. 30.50, Grob from Rs. 9.80 to Rs. 10.50, Methoni from Rs. 19.62 to Rs. 20.44 and Hantapara from Rs. 122 to Rs. 134.50. Among Jute shares, Bally rose by Rs. 10 to Rs. 314, Delta by Rs. 15 to Rs. 194 and Kelvin by Rs. 16 to Rs. 211. Bengal, in Coals, spurted from Rs. 341 to Rs. 362, East India appreciated by Rs. 3.25 to Rs. 40.62 and Central India from Rs. 11.47 to Rs. 12.75.

Engineering issues were generally better, with Hindustan Wire rising from Rs. 10.75 to Rs. 12.31, Calcutta Steel from Rs. 16.62 to Rs. 17.25 and Jessop from Rs. 24.37 to Rs. 25.12. A spurt from Rs. 38.12 to Rs. 44.12 in Indian Oxygen on expectations of a bonus scrip issue, which came true in the form of a 2:5 share issue proposal by the Company, featured the trading in the Miscellaneous section, where Goodyear improved further from Rs. 41.75 to Rs. 42.50, but Union Carbide slipped down from Rs. 50.50 to Rs. 49.62. Among Textiles, while Kesoram recovered from Rs. 31.81 to Rs. 32.62 and J.K. Rayon moved up from Rs. 21.37 to Rs. 22. Jayshree showed a loss of 88 nP to Rs. 16.31 and Cawnpore of 32 nP to Rs. 8.62.

* * * *

The Madras stock market showed generally a sprinkling of small gains. Most of the Forward shares were better. Select Plantings turned active. But some of the prominent Mill shares were easy. In the Forward List, S.L. Viscose recovered from Rs. 180 to Rs. 184. Madura from Rs. 38.05 to Rs. 38.25, Mettur Chemical from Rs. 12.30 to Rs. 12.75, Periakaramalai from Rs. 3.33 to Rs. 3.49, Consolidated Coffee from Rs. 18.15 to Rs. 18.25 and Ouchterlony Valley from Rs. 3.95 to Rs. 4.03, but Lakshmi eased from Rs. 166.50 to Rs. 165. Quoted *ex-div.*, Coimbatore Cotton gained by Rs. 6.20 to Rs. 193 and Coimbatore Pioneer rose from Rs. 290 to Rs. 296.50, but Bangalore Woollen fell from Rs. 267 to Rs. 262, Buckingham from Rs. 282 to Rs. 281 and Coimbatore Spinning from Rs. 87 to Rs. 82. E.I.D. eased from Rs. 40.25 to Rs. 40. In Plantings, Chembra showed a gain of 14 nP to Rs. 3.55, Peermade of 10 nP to Rs. 8.90 and Cowcody of 6 nP to Rs. 4.06.

CAPITAL MARKET NEWS

NEW ISSUES

THE East Indian Coal Company Ltd., Calcutta, proposes to issue Rs. 50 lakhs of debenture-stock 1967-1976 at par payable in full on application. It carries interest at the rate of 6.5 per cent per annum, subject to tax. Firm applications from the underwriters and their friends for Rs. 25 lakhs have been received and will be accepted in full. The offer to the public is, therefore, only Rs. 25 lakhs. The list for public subscription will open on 8th May 1962 and close on 10th May 1962, unless the Directors decide to extend the closing date. Applications must be for multiples of Rs. 1,000 of stock, with a minimum of Rs. 1,000. The entire issue has been underwritten by the Life Insurance Corporation of India and Messrs. Place, Siddons and Gough (Private) Ltd., the well-known firm of share brokers in Calcutta, for a commission of 2 per cent of its par value. The Company has no mortgages, debentures or other loan capital outstanding, but has overdraft facilities with the Hongkong and Shanghai Banking Corporation (secured by the hypothecation of its stocks of coal and present and future book debts). As at the close of business on 16th April 1962, the amount owing to the Bank on this account was Rs. 53,68,667. The share capital of the Company is £240,000 in ordinary shares of £1 each. No share capital is under option nor agreed to be put under option. The Company has not issued any redeemable preference shares nor has at present any intention to do so.

The debenture-stock will be constituted and secured by a trust deed in favour of the Mercantile Bank (Agency) (Private) Ltd. as trustees for the stockholders. Application has been made by the Company to execute the trust deed. Interest will be payable at Calcutta on 1st May and 1st November every year in respect of the half-yearly periods ending on the previous day.

The debentures will be redeemed on 30th April 1976, but the Company has the option to redeem them either in whole or in part on 30th April 1967 or any time thereafter on three calendar months' notice.

The Company will establish a sinking fund and contribute to it Rs. 5 lakhs out of the distributable profits from the year ending 30th April 1967, and every succeeding year thereafter. It will be at liberty to issue further debenture-stock, provided that it shall not in point of security rank in priority to the present issue, but may rank *pari passu* therewith on a specific approval of its trustee and sanctioned by a special resolution of its holders.

There has been a considerable improvement in the working results of the Company during the past two years. In the year ended 30th April 1960, raisings amounted to 583,111 tons and there was a net loss on the year's working of £3,196. But in the year ended 30th April 1961, raisings increased to 1,087,040 tons and the profit for the year, after providing for depreciation and taxation, amounted to £122,534. During the current year, production is expected to rise to 1,275,000 tons of coal. Profits for the 10 months ended 28th February 1962 are estimated to have exceeded the profits for the corresponding period of the preceeding year. Three years ago, the Company initiated a programme for reorganisation of the collieries requiring an outlay of Rs. 106.43 lakhs. During the two years ended 30th April 1961, it spent Rs. 53.51 lakhs. Between 1st May 1961 and 31st March 1962, it has incurred further expenditure of Rs. 14.12 lakhs. The balance of Rs. 38.80 lakhs will have been incurred by the end of 1963. The proceeds of the present debenture issue will be utilised to repay the loan taken from the Hongkong Bank. The latter has, however, agreed to provide further finance, which, together with the contemplated issue of additional share capital within the next two years, will enable the Company to complete the expansion programme. Sir John Douglas Keith Brown is the Chairman of the Company.

RIGHTS ISSUES

The Directors of the **Sirpur Paper Mills Ltd.** have decided to increase the share capital of the Company by issuing rights ordinary shares at par in the ratio of one share for every four shares held. The transfer books of the Company will be closed from 2nd to 11th May 1962. The present paid-up equity capital is Rs. 2,18,55,240 in shares of Rs. 10 each.

The **Lakshmi-Vishnu Cotton Mills Ltd.** proposes to raise its ordinary paid-up share capital of Rs. 89.60 lakhs in shares of Rs. 100 each to Rs. 112 lakhs by issuing rights shares in the proportion of one share for every four shares held. An application has been made to the Controller of Capital Issues for the necessary sanction.

4½ PER CENT

ORISSA STATE ELECTRICITY BOARD BONDS, 1972

For Rs. 150 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of Orissa)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99 PER CENT

REDEEMABLE AT PAR ON THE THIRD MAY, 1972.

SUBSCRIPTIONS will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Patna, Lucknow, Hyderabad, Cuttack, Berhampur and Sambalpur from the 30th April, 1962 to 2nd May, 1962, both days inclusive. Subscription may however be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices of the State Bank of India mentioned above and at the office of the State Electricity Board, New Capital, Bhubaneswar.

NEWS IN BRIEF

THE Central Government is considering, in consultation with the Reserve Bank, a proposal to set up an agricultural development corporation, according to Mr. Morarji R. Desai, Union Finance Minister.

An industrial licence for the installation of a cottonseed oil extraction plant at Bhopal has been granted to a Bombay firm, Messrs. B. R. Herman and Mohatta India Private Ltd. The proposed unit will have a capacity to crush 100 tons of cottonseed per day.

A large mica grinding plant has been set up at Jaipur in Rajasthan by the India Mica Grinders Ltd. The plant is claimed to be the largest in India with a capacity to grind 20 tons a day. It will go into production shortly and use all the mica waste available from mines in Rajasthan. The whole of the fine mesh mica powder produced will be exported.

The first consignment of sugar (21,000 tons), covered under the Indo-U.S. barter agreement signed last week, was shipped from Calcutta port on the 17th inst. The agreement is for the export of 50,000 tons, against the purchase of 44,000 bales of U.S. long-staple cotton. Tenders for the first consignment were invited by the Export Agency Division of the India Sugar Mills Association.

Sizable deposits of copper have been discovered in the Khasi Hills, near Cherrapunjee, Assam. The State Directorate of Geology and Mining proposes to undertake extensive prospecting with advanced methods in the area in order to determine the full potentiality and economic value of the deposits. It is reported that deposits of nickel have also been discovered in the Manipur area.

A new public sector aluminium smelter, with an annual capacity of 25,000 tons, is proposed to be set up in Madhya Pradesh with Hungarian collaboration, according to Mr. K. C. Reddy, Union Minister for Commerce and Industry. A project report for the plant is awaited from Hungary. The proposal of a private firm for another smelter in the same State has been rejected, as it is thought that there is no scope for it.

The Union Ministry of Commerce and Industry has announced a revised list of 178 industries in respect of which applications for licences under the Industries (Development and Regulation) Act, 1951, will ordinarily be rejected without reference to the Licensing Committee. Simultaneously, another list of 19 industries, in respect of which licences under the Industries Act will ordinarily be granted without reference to the Licensing Committee, has also been published. Both lists will be in force till 30th September 1962.

The Union Government has under consideration a proposal received from the Mysore Government for manufacturing 15,000 tons per annum of high grade alloy and special steel bars at the Mysore Iron and Steel Works at Bhadravati. Disclosing this in the Lok Sabha this week, the Minister for Steel and Heavy Industries, Mr. C. Subramaniam, stated that this was in addition to the steel expansion scheme already sanctioned for production of 100,000 tons per annum of steel ingots to be converted into 85,000 tons of saleable steel.

Work on the construction of the 300 mega watt thermal power station at Bandel, W. Bengal, the largest thermal power station in India, was formally inaugurated by Prof. J. K. Galbraith, U.S. Ambassador to India, on the 20th inst. The U.S. will give a long-term loan repayable in forty years (no repayment will be required in the first ten years) to cover the entire cost of Rs. 25.8 crores of the project. The loan will carry a rate of interest of ¾ per cent. per annum and will include $30 millions to cover the cost of machinery and equipment to be imported from abroad.

The provisional estimates of the 1961 livestock census, released by the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture, place the total livestock population in India at 336.53 million. This compares with 306.50 million in 1956, representing an increase of 9.8 per cent in five years. The number of cattle has gone up by 10.7 per cent, that is, from 158.65 million to 175.67 million. The number of buffaloes has risen by 13.9 per cent to 51.14 million. Sheep and goats have registered increases of 2.6 per cent (from 39.25 million to 40.26 million) and 9.8 per cent (from 55.41 million to 60.81 million), respectively. The number of horses and ponies has declined from 1.48 to 1.35 million. Poultry has recorded an increase of 23.5 per cent, that is, from 94.68 million to 116.91 million. The number of tractors has gone up from 20,980 to 34,297.

The State Trading Corporation of India has formulated a new scheme to foster exports of the products of small-scale and medium-scale industries. The scheme, which will initially be on a pilot basis, will help to establish direct business relationship between small-scale and medium-scale Indian manufacturers on the one hand and foreign importers on the other. As many as 79 products, under ten groups, namely, stationery items, hardware items, chemists' supplies, toilet products, industrial items, fancy goods, foodstuffs, domestic sundries, clothing sundries and auto spares, will initially be brought under the purview of the scheme. The type of assistance contemplated cover arrangements for designing and printing of top-class presentation material, finding of foreign customers, assistance in the field of price quotation and arrangements in regard to sampling and shipping facilities, marine insurance, export risk insurance cover, etc. In regard to credit facilities, the scheme provides for S.T.C. to take on the role of the recourse party to foreign bills. The effect of this provision will be that, subject to the creditworthiness of the overseas buyers being guaranteed, as may be required, the manufacturer-exporters will be permitted to offer to the foreign buyers credit up to 120 days. The manufacturer himself will receive payment to the extent of 95 per cent of the value of the exports, soon after the goods have been shipped.

From Abroad

The total expenditure on scientific research and development in the U.S. rose from $500 million in 1939 to $14,000 million in the 1960-61 fiscal year.

The U.S. suffered a further loss of gold worth $75 million during the week ended 18th April, bringing the total Treasury gold stock to $16,535 million, the lowest level touched since August 1939. The total outflow since the beginning of this year amounts to $355 million.

The West German export credit bank, Ausfuhrkreditanstalt, A.G. has extended the duration of credits granted by it from three to eight years. The credit bank is formed by funds contributed mainly from 26 leading West German banks and some from the Federal Bank.

The production of wheat in Australia during the 1961-62 crop year is estimated at 246.3 million bushels, or 27 million bushels less than the record level of the previous year. The yield per acre is put at 16.8 bushels, as compared with 20.4 bushels in the previous year.

Ghana and Soviet Union have signed a new trade agreement designed to expand mutual trade in a variety of commodities. Under the agreement, Ghana will export cocoa beans, tropical timber and coconuts in exchange for Soviet cement, iron rods, flour, laundry soaps, petroleum products and also cotton fabrics.

The average annual income of a U.S. family in 1961 was $7,020, representing an increase of $180 over 1960. After allowing for the rise in cost of living, the real increase in income was $90. Since 1947, the average family income has risen by 70 per cent on an absolute basis, and by 30 per cent, after adjustment for cost of living.

The possibility of an upward trend of industrial production in the U.K. was noted in February, when the seasonally adjusted index of production for all industries was 113, as compared with 111 in January (base: 1958=100). This is the first rise in output since last June. Provisional official estimates show that the seasonally adjusted index for manufacturing industries only was also 113, as compared with 110 in January.

World production of natural rubber overtook consumption slightly, after ruling lower for the previous three years. According to the International Rubber Study Group, production reached 2.1 million tons in 1961 (as against 2 million in 1960) and consumption of 2.09 million tons. Included in the consumption figures are the estimated gross imports into the U.S.S.R. which nearly doubled in 1961 to 326,500 tons, as against 171,500 in 1960 and those into China which on the other hand fell by more than a third to 81,000 tons (as against 133.750 tons in 1960).

PERSONAL

MR. Naval H. Tata has been re-elected President of the Employers' Federation of India for the year 1962.

Mr. Mangulal T. Pari has been re-elected President of the Bombay Shroffs' Association for 1962-63. Mr. Hiralal J. Parikh has become the Vice-President.

Mr. Jayachand D. Lohade and Mr. M. A. Karim have been elected President and Senior Vice-President, respectively, of the Federation of Andhra Pradesh Chambers of Commerce for the year 1962-63.

Mr. Vallabhdas V. Mariwala has been elected President of the Pepper and Ginger Merchants Association, Bombay, for 1962-63. Mr. Javerchand P. Shah has been elected Vice-President.

Mr. Sevantilal M. Sheth, Mr. Chandulal Kanji and Mr. Jamnadas T. Talreja have been elected President, Vice-President and Honorary Secretary, respectively, of the Bombay Sugar Merchants Association for the current year.

Dr. C. Nanjundayya, Joint Director of the Bombay Textile Research Association, has been elected Vice-President of the Textile Institute of Manchester. Dr. Nanjundayya is the first Indian textile technologist to receive this honour.

Mr. S. T. Sadasivan, General Manager of the United Commercial Bank Ltd., has been elected President of the Indian Chamber of Commerce, Calcutta, for the year 1962-63. Mr. K. K. Birla and Mr. Sookamal Ghose have been elected Senior Vice-President and Vice-President, respectively.

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

AUTOMATIC LOOMS

ANOTHER official announcement pertaining to automatic looms has just been made. In a Press note dated 16th April, the Textile Commissioner says that the Government of India has decided to permit installation of automatic looms in cotton mills but only in replacement of their existing plain looms, unlike in the case of the previous decision (announced in December 1961) which covered the licensing of 10,000 automatic looms as part of the programme for expanding the cotton mill industry's weaving capacity during the third Plan period. While the total number of looms that will be permitted is not stipulated, the allotment of looms will be subject to the following conditions:

1. Normally the minimum number of automatic looms allotted will be 48 and the maximum 144, in a single unit.

2. All automatic looms will be of indigenous make and no automatic looms will be allowed to be imported, unless against entitlements for machinery under the Export Promotion Scheme.

3. The reed space formula currently applicable for replacement of plain looms by plain looms will also be applicable for replacement by automatic looms.

4. The allotment of these automatic looms will be governed by the principles contained in the recommendations of the 15th Session of the Indian Labour Conference in regard to modernisation and rationalisation.

5. The mills shall export 50 per cent of the production for a period of five years and shall execute a bond supported by a banker's guarantee of the equal amount. The normal rate of production will be taken as 24,000 yards per annum per loom for medium and coarse cloth and 20,000 yards per annum per loom for fine and superfine cloth. The penalty for shortfall will be calculated at 10 nP per yard (0.91 metre).

Those mills which wish to install such automatic looms are requested to write immediately to the Textile Commissioner for the prescribed application forms; applications from mills will be entertained upto 31st May next.

There are three distinct changes in the conditions governing allotment of automatic looms in replacement of existing plain looms, as compared with those pertaining to expansion. One, licences will be granted to parties irrespective of matching spinning capacity which is fixed at 25,000 spindles in respect of "expansion installation." Two, the compulsory export quota in the total cloth produced on automatic looms is fixed lower at 50 per cent, as against 75 per cent. Three, the minimum number of automatic looms that will be allotted to a single unit is fixed lower at 144, as against 500. There is, however, no change (*a*) in the minimum time limit of five years for compulsory exports, (*b*) in the penalty at 10 nP per yard for shortfall in exports, and (*c*) in the execution of a bond supported by bank guarantee for the amount of penalty calculated for five years. The conditions in regard to the indigenous make of the automatic looms, reed space formula and I.L.O. principles are entirely new.

It is thus evident that the conditions which will have to be complied with by mills that desire to replace their existing plain looms by automatic looms are stringent and onerous. The apparent twin-objective of the Government to ensure modernisation of mills and promote exports is no doubt a laudable one. But it will be futile to pin down mills to the condition of exporting one half of the cloth production on automatic looms for as long a period as five years, especially in the context of the growing competition in world textile markets. How many millowners will be prepared to give an undertaking of this nature in these days of imponderables? Not many; so it seems to us. The experience of the past few years speaks for itself. Replacement of plain looms by automatic looms was first recommended by the Kanungo Committee in September 1954. The Committee had advocated replacement at the rate of 5,000 looms a year over a period of 20 years.

It was not, however, until June 1956 that the Government of India announced its decision to permit installation of 14,600 automatic looms. Six months later, that is, in December 1956, the number was raised to a round figure of 18,000. Since the conditions attached to licences issued to mills were so hard to fulfil—one of the conditions was that the whole of the cloth produced on automatic looms should be exported—that even the mills which were regularly exporting large quantities were not able to benefit from the scheme. The Export Promotion Committee (Chairman: Mr. V. L. D'Souza) had urged the Government (in August 1957) to relax the conditions, with a view to making the scheme more attractive to mills. Again, in its report submitted in July 1958, the Joshi (Textile Enquiry) Committee drew pointed attention to the extremely inadequate response to the scheme (installation of 18,000 automatic looms) and said that the scheme might not function effectively thereafter. The Committee recommended installation of 3,000 automatic looms on condition that the entire production of such looms was exported, but added that there should be no stipulation regarding guaranteed exports in relation to past performance of mills. This recommendation was accepted by the Government. The Textile Export Promotion Scheme announced in October 1958 covered 3,000 automatic looms; the number was subsequently (in July 1959) raised to 6,000.

So far as replacement of existing plain looms were concerned, the Government announced, in December 1958, that it would permit the installation of 7,500 automatic looms over the three years 1959, 1960 and 1961—at the rate of 2,500 looms per annum—as a pilot project. The Government did not, of course, impose, as a condition for allotment, any "obligation of export" on the mills interested in its offer. Nevertheless, the progress of installation was none too encouraging. Data relating to the number of automatic looms actually installed during the three years of the pilot project period are not available at the time of writing, but, according to the International Federation of Cotton and Allied Textile Industries, the number installed in the first two years, that is, 1959 and 1960, was no more than 505 (482 in 1959 and 23 in 1960). Earlier, about 2,383 looms had been installed in 1958 and 710 looms in 1957. Including these, the total number of automatic looms installed during the four-year period from 1957 to 1960 was no more than 3,598, as compared with the 13,500 looms allowed (6,000 looms under the Export Promotion Scheme and 7,500 looms under the pilot project). The industry's progress in this sphere will appear insignificant if the comparison is made with the 18,000 automatic looms announced in the first year of the second Plan.

It is not clear whether the latest decision of the Government to permit installation of automatic looms in replacement of plain looms is only a continuation of the pilot project. If it is so, one fails to understand as to why the Government has reintroduced the element of compulsory export (50 per cent of production). It is a pity that the authorities are still not prepared to face facts squarely, facts fully supported by events in the past eight years. Even at the risk of repetition, we must say that enough damage has already been done and, unless the Government retraces its steps and follows a realistically liberal textile policy, the cotton mill industry will not be able to produce at an economic cost adequate quantities of cloth to meet the expanding domestic requirements and also for export purposes. The sensible approach would be, to reiterate our earlier stand, to allot as many automatic looms as possible to those mills which are working efficiently, are situated in ports like Bombay, Madras and Calcutta and in centres nearer to these ports, and which have been taking keen interest in export business.

A SCHEME THAT HAS FAILED

A damning indictment of the Employees' State Insurance Scheme and its working was made by Mr. K. C. Mahindra, Chairman of Mahindra and Mahindra Ltd., in his speech at the sixteenth annual general meeting of the Company held at Bombay this week. He cited the failure of the scheme to drive home the point that compulsion does not achieve anything. There was, according to Mr. Mahindra, hardly any group of industrial workers who felt benefited by, or satisfied with, the "meagre and almost callous service" provided under the scheme. Consequently, every company, in spite of its having paid the contribution due from it, had to maintain its own medical contingent to look after the workers. Mr. Mahindra, therefore, urged a complete re-examination of the various aspects of the scheme. If the criticisms were found to be true, Mr. Mahindra added, the Government should not hesitate to scrap the scheme altogether. But how to fill the vacuum? Mr. Mahindra suggested an alternative scheme, under which every company should be asked to spend compulsorily its present contribution to the scheme or more if need be for developing its own medical service. Mr. Mahindra was certain that, in this way, every company would be able to give its workers services equal to, if not better than, those purported to be rendered at present. The Government, on its part, should use the large unutilised funds of the Employees' State Insurance Scheme to build hospitals and recuperation homes in selected areas near where the workers live.

Mr. Mahindra is not the first to have expressed dissatisfaction at the working of the Employees' State Insurance Scheme. In fact, it was in response to repeated and widespread complaints about its defective working that Dr. A. L. Mudaliar was appointed as a one-man committee to inquire into the working of the scheme. What has happened to the Mudaliar report? This is a mystery which is yet to be solved. What were the conclusions and recommendations of the Committee? Instead of appointing another inquiry committee as suggested by Mr. Mahindra, it would be desirable to see whether the findings and recommendations of Dr. Lakshmanaswami Mudaliar would, if implemented, give satisfaction.

One advantage of the alternative scheme suggested by Mr. Mahindra, however, is that workers will get better service than from the present scheme under which the insured worker is one among a million to be collectively served by the scheme. If it is not considered desirable to scrap the scheme wholesale, it is worth examining if, as in the case of provident fund, a company providing medical services of a specified minimum standard to its workers could be exempted from the scheme. This would give an incentive to employers to spend more on medical services, because they will then be assured that the full benefit of whatever expenditure they incur is derived by the workers, instead of its getting lost in the general pool.

GENERAL INSURANCE

The successive encroachments by the Central and State Governments upon the traditional business of private companies have been a striking feature of general insurance business in recent years. Slowly but steadily, by subtle and ingenious methods, the Governments have been encouraging the public sector in general insurance, comprising three direct-writing companies and one re-insurance company, at the cost of the private sector. Not being satisfied with an absolute monopoly in life insurance and 75 per cent of the general insurance business of Government and semi-Government bodies, channelled through the Indian Insurance Companies' Association Pool, the public sector companies are casting their nets far and wide. In a bid to help public sector companies, the railways are insisting on the insurance of bid-bond guarantees being placed with the Indian Insurance Companies' Pool, 75 per cent of whose business now goes to the three companies in the public sector. The Central Water and Power Commission, too, seems to have followed suit, insisting that, as in the case of railways, bid-bond guarantee should be insured only with the Pool. It may be recalled that the Bombay Municipal Corporation had recently issued a directive requiring that the insurance for fire risks of buildings constructed on plots let out by the Corporation or the Improvement Trust should be placed with the Pool. As a result of representation by insurers to the State Government and the Corporation, this directive was, however, withdrawn a few days ago and the *status quo ante* was restored.

But a very recent directive of the Bombay State Financial Corporation has again caused some concern among the insurers in the State. Acting in pursuance of a resolution passed by the Industries and Labour Department of the Government of Maharashtra, the Corporation, as the agent of the Government, has advised businessmen seeking loans under the Maharashtra State Aid to Industries Rules, 1961, that they should henceforth insure the properties mortgaged against the loan with the Indian Insurance Companies' Association Pool. The directive covers only mortgages in respect of loans sanctioned by the Government and not those by the Corporation. Even so, insurers feel that it is a departure from the practice followed so far and that, quite apart from any loss of business it might entail, the action is wrong in principle. The Indian Insurance Companies' Association has itself directly and through the Indian Merchants Chamber represented to the Government of Maharashtra that the decision should be reviewed. According to it, such business was on the books of individual companies for the past several years and there is no valid reason for changing the practice. This departure, the Association feels, has, perhaps, been taken under a misconception of the scope of the Pool which was meant to cover only the business of Government, Municipalities, Universities and similar bodies. In any case, according to the Association, it was never the intention of the members of the Pool to authorise it to undertake such business.

The objection of insurers to the latest move is understandable. Their fear is that it is the thin end of the wedge and that, gradually, all their business that is even remotely connected with Government and public bodies would be taken away. The Government's freedom to insist that the properties mortgaged against loans sanctioned by it at concessional rates under the State Aid to Industries Rules should be insured with an insurer of its choice cannot be questioned if it is based on the consideration that the cover for the risk is obtained from an insurer of good standing and financial strength. It may be recalled, in this connection, that some banks have been in the habit of telling the borrowers with whom they should insure their assets. But the Government's present practice is of a different order. To insist that those who seek its assistance must insure only with the public sector general insurers is tantamount to practising discrimination against the private sector.

I.A.C. TO BUY "CARAVELLES"

The move of the Indian Airlines Corporation—I.A.C. for short—to rationalise its fleet by adding a few medium-range jet aircraft—"Caravelles," manufactured by Sud Aviation of France, a predominantly State concern, is commendable. The Corporation has already had detailed discussions with the Chairman (Mr. Hereil) and other officials of the French firm. It is reported that negotiations for the purchase of four Caravelles have almost been completed and three more are expected to be bought later. The aggregate cost of the four planes is estimated at about Rs. 6.64 crores, or approximately Rs. 1.66 crore per plane. The terms of payment are not known, though it is presumed that the deal will be partly on cash basis and partly on credit basis. The French Company generally expects 5 per cent of price being paid at the time of signing the agreement, 10 per cent at the time of delivery and the balance in eight instalments spread over a period of upto seven years.

One may argue that the capital outlay on the purchase of Caravelles is very large and that the domestic routes are not long enough to make the time-saving factor of more than slight importance. Even so, it would appear that the main trunk routes are quite suitable for jet operation. The replacement of Viscounts by Caravelles is desirable, particularly because the latter is specially designed for low-cost, high-speed operation on short and medium length routes. The cruising speed of Caravelles is over 500 miles per hour, the running time between Bombay and Calcutta, for instance, being just 2 hours and 8 minutes. From the point of view of fuel utilisation also, Caravelles are claimed to be more economical than other aircrafts with comparable power and capacity. The cost of operation, we are told, will be less by 25 per cent as compared with even the Comet 4. Again, the maintenance man-hours are very low. If all these claims are true, and taking into account the factors that the carrying capacity of Caravelles is pretty high—about 78 to 80 passengers, as against 44 in Viscounts—and that there can be greater frequency of service, the addition of Caravelles will surely enhance the earning potential of the I.A.C. Incidentally, the addition of Caravelles will help promote tourism and earn for the country valuable foreign exchange. It will be interesting to note here that, out of the total passenger revenue

of Rs. 9.03 crores earned by the I.A.C. during the year 1960-61, a sum of Rs. 1.50 crore was earned in foreign exchange through inter-line bookings.

The age of medium-range jet passenger aircraft began in April 1959, with the simultaneous commissioning of Caravelles by Air-France and S.A.S. Since then, the Sud Aviation Company has received orders for the supply of 142 Caravelles, of which 110 have already been delivered.

Among the many factors which crews appreciate are the silence and comfort of the cockpit, the disposition of the controls and instrument panels, visibility both during climb and descent, and manœuvrability, particularly at low altitudes. Pilot training poses no problems whatsoever. The Caravelle's landing and taking off characteristics are such that it may be used on any field suitable to conventional aircraft, and it is readily adaptable to existing traffic patterns for arrivals as well as departure. Its steep rate of climb makes it easy to select the most favourable method of attaining the required altitude, while the efficiency of its air-brakes permits rapid letdowns and reduced flying speeds while waiting and during the last stages of the approach and landing. The Caravelle's auto-pilot system has been found particularly satisfactory, especially during approach manœuvres. The silence within the Caravelle aircraft astonishes passengers accustomed to conventional aircraft. The rear position of the turbojets and exceptionally efficient sound-proofing account for this pleasant feature. Once fuelled, the Caravelles can keep flying non-stop for seven hours, at an altitude of 30,000 feet.

STEARIC AND OLEIC ACIDS

Opening the sixth public inquiry into the question of continuance of protection to the stearic and oleic acids industry in Bombay on 19th April 1962, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, disclosed that, during the fourteen years of protection, the industry had made good progress, despite difficulties connected with the import of raw materials. The facts given by Mr. Aiyangar show that production of stearic acid has increased from 69 tonnes in 1947-48 to 2,838 tonnes in 1961 and that of oleic acid from eight tonnes to 392 tonnes. Practically all the grades of these fatty acids required by the consuming industries are now indigenously manufactured and their quality has improved considerably. Lately, however, selling prices have been showing an upward trend. Mr. Aiyangar stated this trend must be curbed. He believed that, with the use of modern installations and equipment, the processing costs could be reduced.

Protection was first granted to the industry in 1948 by converting the existing revenue duty of 30 per cent *ad valorem* on stearic and oleic acids into a protective duty. The Tariff Board's second inquiry in 1950 led to the continuance of protection for four years. In the third inquiry in 1954, derivatives of stearic and oleic acids were also included in the scheme of protection. The duty was fixed at a uniform rate of 31.5 per cent *ad valorem*, or eight annas, per lb., whichever was higher. After the fourth inquiry in 1957, the protection was extended for two years, the duty remaining unchanged. On the Commission's recommendation in 1959, the Government extended the protection by three years to 31st December 1962, at the existing rate of duty of 35 per cent *ad valorem*, or 50 nP per lb. whichever be higher. Most of the producers want the protection to be continued further.

In 1959, seven units were engaged in the manufacture of either both or one of the two acids. One of them, in Kerala, had no significant production. But another small unit, Gandhi Parekh Investment Corporation (Private) Ltd., Bombay, is now producing oleic acid with a capacity of 91 tonnes per annum. Four of the existing units are producing both the fatty acids, two of them only stearic acid and the other two oleic acid. At the time of the last inquiry, the aggregate capacity of all the units was 6,598 tonnes for the manufacture of stearic acid and 1,161 tonnes of oleic acid. The present capacity, as reported by the Development Wing, amounts to 6,949 tonnes of stearic acid and 1,768 tonnes of oleic acid, as against 7,765 tonnes of the former and 1,269 tonnes of the latter, reported by the producers. According to them, the production of stearic acid went up from 1,931 tonnes in 1959 to 2,289 tonnes in 1960 and 2,838 tonnes in 1961 and that of oleic acid from 300 tonnes to 345 tonnes and 392 tonnes correspondingly. Thus, there has been a considerable under-utilisation of the existing capacity. The total capacity of the five producers of derivatives has now increased to 452 tonnes, as indicated by them, from the estimated 432 tonnes in 1959. The production comprises stearates of aluminium, zinc, magnesium, calcium and lead. It has increased from 113 tonnes in 1959 to 126 tonnes in 1960 and 166 tonnes in 1961. Here, too, the capacity is not fully utilised.

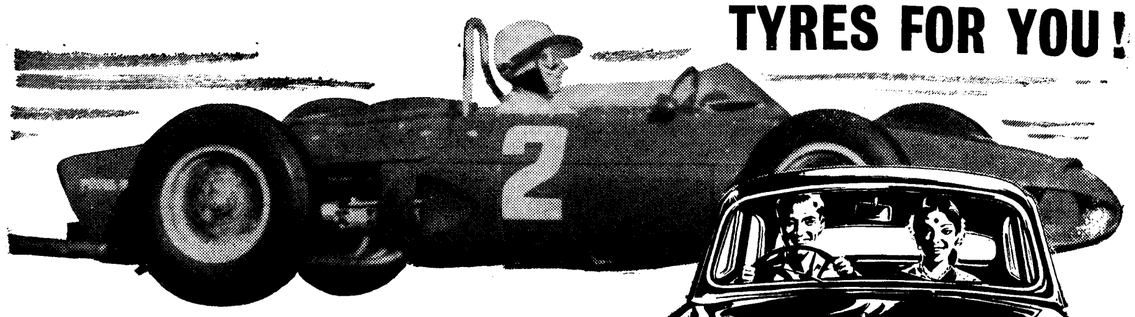
According to the Commission, the internal demand in 1959 was 1,930 tonnes for stearic acid and 254 tonnes for oleic acid. It is expected to rise to 2,743 tonnes and 610 tonnes, respectively, this year. The demand for stearates, estimated at 152 tonnes in 1959, is expected to reach 254 tonnes by the end of the current year. The apparent consumption of stearic acid, based on sales and imports, was 2,410 tonnes in 1960 and 2,716 tonnes in 1961. The corresponding figures for oleic acid are 335 tonnes and 407 tonnes. There has been no import of stearates, and the apparent consumption on the basis of internal production amounts to 126 tonnes in 1960 and 166 tonnes in 1961.

So far as raw materials for the manufacture of stearic and oleic acids are concerned, palm oil and tallow have to be imported. The imports are allowed to the existing manufacturers on the basis of their past consumption. But the producers have found the quotas inadequate and are faced with crippling under-utilisation of capacity. In the absence of tallow and palm oil, groundnut oil is the most important raw material. But its price has been ruling pretty high and it is difficult to find a convenient and cheap substitute. Among the possible substitutes, *mohuva*, *neem* and cottonseed oils are found to be in irregular supply and costly. Further, it is difficult to process them, because of the presence of other materials. Notwithstanding the fact that one manufacturer in Bombay has been given the licences under the Certification Marks Act for both the acids and another in U.P. for stearic acid and that other manufacturers are reportedly taking steps to obtain the licences, the Commission has received complaints relating to the cosmetic grade of stearic acid that the indigenous material is not up to the quality of the imported variety in regard to colour and low iodine value. As regards oleic acid, some consumers have complained about its colour, pour point and cloud point. There have been complaints also about the high selling prices of both the acids and inadequate supplies of indigenous stearic acid. There have, however, been no complaints about the quality of stearates.

1959—1960—1961

Every 'Grand Prix' Motor Race Was Won on Dunlop!

The Result—**SAFER, MORE DURABLE TYRES FOR YOU!**



Phil Hill, the world champion driver, at the 1961 Belgian Grand Prix which he won on a Ferrari equipped with Dunlop tyres.

No other tyre can touch Dunlop's unequalled record of success on the world's greatest racing circuits: Dunlop tyres equipped the cars taking the first, second and third places at every 'Grand Prix' Motor Race during 1959, 1960 and 1961. And it is this unequalled experience that enables Dunlop to build tyres for your car which will meet your demands better than any other—maximum safety under all conditions and long, trouble-free mileage.

DUNLOP Gold Seal CAR TYRES FOR TOP MILEAGE & SAFETY

CENTRAL GOVERNMENT'S FINAL BUDGET

REVENUE DEFICIT OF RS. 60.78 CRORES COVERED BY ADDITIONAL TAXATION

THE Union Finance Minister, Mr. Morarji Desai, presented the final budget of the Government of India for the current financial year (1962-63) to the Lok Sabha on Monday the 23rd inst. The budget discloses a smaller revenue deficit of Rs. 60.78 crores, as against Rs. 63.46 crores revealed in the interim budget. The difference is due to certain minor changes made in the estimates of revenue and expenditure. The total revenue receipts are now placed at Rs. 1,320.87 crores, as against Rs. 1,305.87 crores and expenditure at Rs. 1,381.65 crores, as against Rs. 1,369.33 crores. The increase of Rs. 15 crores in revenue estimate represents the transfer from the profits on coinage operations outstanding under a suspense account, while the rise of Rs. 12.32 crores in expenditure estimate is to be attributed to (*a*) increase in dearness allowance to Central Government employees drawing a basic pay below Rs. 400 per month (Rs. 7.39 crores), revision of pay scales of officers in the Defence Services (Rs. 2.7 crores), export promotion (Rs. 1 crore), purchase of stores and equipment required by the Survey of India (Rs. 99 lakhs) and concession in freight rates on coal (Rs. 25 lakhs).

The overall deficit in the budget is expected to be slightly wider at Rs. 150 crores, the interim estimate being Rs. 147 crores. After taking into account the net accretion of Rs. 60.80 crores resulting from fresh tax proposals, the overall deficit will be reduced to Rs. 89 crores which, it is said, will be met by expansion of Treasury Bills (that is, deficit financing).

The revenue deficit of Rs. 60.78 crores is proposed to be converted into a nominal surplus of Rs. 2 lakhs through various fresh taxation (both direct and indirect) proposals which together are estimated to yield an additional Rs. 68.88 crores in 1962-63 (and Rs. 71.70 crores in a full year). Excluding from this the States' share of Rs. 8.08 crores, the fresh yield that will accrue to the Centre is Rs. 60.80 crores. Of the estimated additional yield of Rs. 71.70 crores in a full year, direct taxes account for Rs. 27.20 crores or 37.50 per cent. and indirect taxes for Rs. 44.50 crores or 62.50 per cent.

DIRECT TAXES

The changes proposed in the sphere of direct taxation as described in the memorandum explaining the provisions in the Finance (No. 2) Bill 1962 issued by the Ministry of Finance are as follows:

Income-tax and Super-tax

Rates of Tax for the Assessment Year 1962-63 on Incomes other than Capital Gains

Assessees other than companies.—Individuals, Hindu undivided families, unregistered firms, etc.: In the rate schedule applicable to individuals, Hindu undivided families, unregistered firms, etc., the existing slab of Rs. 15,001—20,000 has been substituted by two slabs, namely, Rs. 15,001—17,500 and Rs. 17,501—20,000. For all the slabs above Rs. 5,000, the rates have been slightly increased as compared to the existing rates. The basic surcharge for purposes of the Union has been fixed at 2½ per cent for incomes from Salaries. In other respects, the existing surcharges are to continue.

The following table sets forth the total tax (income-tax, super-tax and surcharges) payable by a married individual with two children at certain levels of income at the rates applicable for the assessment year 1961-62 and the rates proposed for the assessment year 1962-63:—

Income	Income from salaries only		Wholly earned income other than salaries		Wholly unearned income	
	1961-62	1962-63	1961-62	1962-63	1961-62	1962-63
Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
5,000	42	42	42	42	42	42
10,000	438	479	438	490	500	560
15,000	1,094	1,171	1,094	1,199	1,250	1,370
20,000	2,039	2,272	2,039	2,328	2,330	2,660
25,000	3,696	4,044	3,696	4,142	4,224	4,734
40,000	10,521	11,065	10,521	11,334	12,024	12,954
70,000	29,421	30,745	29,421	31,495	33,624	35,924
1,00,000	51,471	53,039	51,471	54,328	58,824	62,094
1,50,000	91,721	98,320	91,721	96,020	1,00,824	1,05,594
2,00,000	1,31,971	1,34,601	1,31,971	1,37,707	1,42,824	1,49,094

Registered firms: The existing tax-free slab of Rs. 1—40,000 is replaced by a tax-free slab of Rs. 1—25,000 and the slab of Rs. 25,001—40,000. The revised slabs and the rates applicable, which depend upon the number of partners in the firm, are set forth in the following table:

	Where the firm has 4 or less partners	Where the firm has 5 or more partners
	Per cent.	Per cent.
On the first Rs. 25,000 of total income	nil	nil
On the next Rs. 15,000 of total income	5	7
On the next Rs. 20,000 of total income	6	8
On the next Rs. 40,000 of total income	7	9
On the next Rs. 50,000 of total income	8	10
On the balance of total income	10	12

Companies: (*a*) The rate of income-tax applicable to all companies is proposed to be raised from 20 per cent to 25 per cent.

(*b*) The effective rates of super-tax payable by various types of companies on incomes other than capital gains and royalties of the type mentioned at (*c*) below are set forth in the following table:

Income	Rates applicable to companies which have made the prescribed arrangements for the declaration and payment of dividends within India		Rates applicable to companies which have not made the said prescribed arrangements
	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000	Other companies	
Dividends received from:			
A subsidiary Indian company formed and registered before 1-4-1961 ..	5	5	5
An Indian company not being a subsidiary, formed and registered before 1-4-1959	5	10	25
Any other Indian company formed and registered on or after 1-4-1959..	5	10	10
Other income	20	25	38

(*c*) The effective rate of tax on royalties received by a foreign company (which has not made the prescribed arrangements for the declaration and payment of dividends within India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1-4-1961 and which has been approved by the Central Government, is proposed to be continued at 50 per cent.

(*d*) The effective rate of super-tax payable with reference to bonus shares issued is proposed to be continued at the existing rate of 12½ per cent.

Export incentive: An incentive for export promotion has been provided for all assessees other than foreign companies (which have not made the prescribed arrangements for the declaration and payment of dividends within India). A rebate of one-tenth of the income-tax and super-tax attributable to income from exports out of India will be allowed in such cases. The Central Board of Revenue will make rules for the computation of such income.

Rates for Deduction of Tax (Including Super-tax) at Source from Interest on Securities, etc.

In the case of assessees other than companies, the rates for deduction of tax at source from interest on securities, dividends, etc., remain unchanged. In the case of companies, the rates at which tax is proposed to be deducted at source are set forth in the following table

Income	Rates applicable to companies which have made the prescribed arrangements for the declaration and payment of dividends within India	Rates applicable to companies which have not made the said prescribed arrangements
Interest on any income-tax free security of the Central or a State Government	5	38
Interest on other securities ..	30	68
Dividends received from an Indian company referred to in section 90(1)(iv) of the Income-tax Act	25	25
Dividends received from any other Indian company:		
(*a*) which is a subsidiary company formed and registered before 1-4-1961 ..	30	30
(*b*) which is not a subsidiary company and is formed and registered before 1-4-1959	30	50
(*c*) which is any other company formed and registered on or after 1-4-1959.	30	35
Royalties payable by an Indian concern in pursuance of an agreement which is made on or after 1-4-1961 and which is approved by the Central Government	.....	50
Any other income	.....	68

Amendments to the Income-tax Act, 1961

Taxation of capital gains.—Assessees other than companies: For the purpose of levying tax on capital gains, it is proposed to divide them into two categories, namely, gains arising on transfer of short-term capital assets and gains arising on transfer of other capital assets.

The gains relating to the short-term capital assets are proposed to be taxed at the rate applicable to a total income comprised of the amount of such capital gains and all other income except capital gains. The gains relating to capital assets other the short-term capital assets are to be taxed either at a flat rate of 25 per cent or at a rate applicable to a total income comprised of the amount of such gains and all other incomes except capital gains, whichever is less.

The losses arising in respect of short-term capital assets can be set off against the capital gains relating to short-term capital assets as well as other capital assets and any such loss as is not fully so set off can be carried forward to the succeeding assessment year or years to be set off against the capital gains relating to short-term capital assets for those years. The carry-forward will be restricted to eight assessment years.

The losses arising in respect of capital assets other than short-term capital assets can be set off only against capital gains relating to any other similar capital asset. The net losses, if any, relating to capital assets other than short-term capital assets are not to be carried forward to any subsequent year.

In regard to losses under the head "Capital gains" which had arisen for the assessment year 1961-62 or any earlier assessment year and have not been fully set off and are available for being carried forward within the limit of eight assessment years, only such portion of the losses as relates to short-term capital assets is to be carried forward to the assessment year 1962-63 or any subsequent assessment year.

A short-term capital asset is defined as a capital asset which is held by an assessee for not more than twelve months immediately preceding the date of its transfer.

Companies: In the case of companies also, capital gains are to be considered in two parts—those relating to short-term capital assets and those relating to other capital assets. Capital gains relating to assets other than short-term assets are to be taxed at the rate of 30 per cent (25 per cent being income-tax and 5 per cent being super-tax). Capital gains relating to short-term capital assets are to be aggregated with all other incomes (except capital gains relating to assets other than short-term assets) and taxed accordingly. As regards set off and carry forward of losses, the position is to be the same as in the case of assessees other than companies.

Exemption of donations for charitable purposes: The maximum limit upto which exemption is available in respect of donations for charitable purposes is proposed to be increased to 10 per cent of the total income (as reduced by any portion thereof which is exempt from tax) or Rs. 2,00,000, whichever is less. The enhanced limits will apply to donations made during the previous years relevant to the assessment year 1963-64 or any subsequent assessment year.

Income-tax rebate on Cumulative Time Deposits: An amendment proposed to be made to section 87 of the Income-tax Act provides that deposits made in a 10-year account or a 15-year account under the Post Office Savings Bank (Cumulative Time Deposits) Rules, 1959, as amended from time to time, will be entitled to a rebate of income-tax in the same manner as contributions to recognised provident funds or premia paid for life insurance.

Higher limits for life insurance premia, etc.: Another amendment to section 87 of the Income-tax Act seeks to enhance the maximum limit upto which income-tax rebate is available in respect of life insurance premia, contributions to provident funds, etc., to Rs. 10,000 in the case of individuals and Rs. 20,000 in the case of Hindu undivided families.

Minimum amount of dividend to be distributed by companies in which the public are not substantially interested: At present, a company in which the public are not substantially interested is required to distribute at least 50 per cent of the distributable income, if it is an industrial company, and 65 per cent if it is any other type of company (other than an investment company). The said percentages of 50 and 65 are proposed to be reduced to 45 and 60 respectively as a sequel to the raising of the general rate of tax on Indian companies from 45 per cent to 50 per cent.

Entertainment expenses: At present, entertainment expenses incurred by a company are allowed at a graduated scale, the maximum amount admissible being Rs. 1,00,000. This scale is proposed to be reduced, the maximum amount admissible being fixed at Rs. 60,000.

Wealth Tax

It is proposed to abolish the exemption available in respect of shares held in new industrial companies.

Part I of the Schedule to the Wealth Tax Act is proposed to be revised. The slabs have been recast and the rates of tax on the two highest slabs are proposed to be raised to 1.75 per cent and 2.5 per cent, respectively.

Expenditure Tax

It is proposed to suspend the operation of the Expenditure-tax Act for the financial year 1962-63 and the subsequent financial years.

INDIRECT TAXATION

In the sphere of indirect taxation, the rates of existing excise duties on several items have been raised and ten new items brought under the purview of excise duty. The import duties on a number of items have also been stepped up. Since the changes are too numerous, we are reproducing the Finance Minister's own summary given in Part B of his speech, rather than from explanatory memorandum:

Union Excise Duties

"Turning to indirect taxes, it is only natural that a major share should come from the Union excise duties. I propose to revise the rates of excise duty on unmanufactured tobacco and cigarettes which would yield a revenue of Rs. 5.29 crores in a full year. While the general rates are being increased by only small amounts, it is proposed to re-classify tobacco granule (rawa) in keeping with its more general use and also to re-group cigarette price slabs.

"I also propose to revise the general structure of duty on cotton cloth and yarn. The present rates of duty on yarn are 10 and 15 naye paise per kilogram. The incidence of this duty per metre of cloth is less on superfine cloth as compared to coarse cloth. This is not an equitable position. It is proposed to revise the yarn rates in such a way as to achieve a slight progression in the incidence of tax according to the quality of cloth, maintaining the present duty on coarse yarn at 10 naye paise. The differential of 10 naye paise per kilogram in favour of yarn issued in hanks will continue. It is also proposed to step up the duty on processing of cloth, keeping in view the improvement in quality and price of cloth as a result of processing. Operations like mercerising, shrink proofing and organdie processing substantially enhance the quality as compared to bleaching, dyeing and printing and should attract relatively higher rates of duty. With these two aspects in view and to secure that the common man has not to make anything more than a marginal adjustment in his cloth bill on coarse and medium cloth which he normally uses, it is proposed to reduce the duty on grey

unbleached cotton fabrics. It is also proposed to place units with 50 or more powerlooms on the same footing as composite mills. Rates of compounded levy on power-loom units with looms from 5 to 49 are also proposed to be increased so as to graduate the increase in benefit with the reduction is size and to reduce the incentive for splitting of units. Units employing 4 looms or less will be exempt. As a result of these changes, the annual revenue from cotton cloth and yarn will increase by Rs. 12.1 crores.

"It has been found by experience that match boxes of 50 sticks are being sold at 6 naye paisa a box. As local taxes and conditions vary a little, the actual price to a retail dealer so works out that in several areas he cannot sell at 5 naye paise a box without incurring a loss, whereas at 6 naye paise a box he makes an excessive profit. In view of this, it is proposed to revise the duty fixed by notification so as to wipe out this unintended margin, the statutory rates remaining unchanged. This will yield a revenue of Rs. 1.99 crore per annum.

"It is proposed to convert the duty on unprocessed woollen, rayon and art silk fabrics to a duty on yarn and processing, so as to release the powerlooms from excise control. The loss in revenue will be made good partly by an increase in duty on yarn and partly by a duty on processed fabrics. As a result of these changes, only a small number of units will need excise control in future. As a fair quantity of yarn is imported, these changes will result in a loss of Rs. 50 lakhs in the revenue from excise duty, but there will be a net increase in revenue of Rs. 1.16 crores on account of increased countervailing duty on yarn.

"The present definition of patent and proprietary medicines which followed the Drugs Act has been producing some anomalies. The Drugs Act definition, while suitable for medical purposes, excludes from the scope of patent and proprietary medicines quite a few preparations which are sold under proprietary names and marks and are priced accordingly. I have, therefore, proposed a more suitable definition. With this widening of the definition, I propose to reduce the incidence of tax from 10 to 7.5 per cent by a notification and also to exempt totally certain highly essential drugs.

"It is also proposed to alter the tariff item of asphalt and bitumen so as to include coal-tar, which is used for similar purposes. Coal-tar burnt in furnaces of plants producing it will be exempted by notification. It is also proposed to revise some of the exemptions which have either outlived their utility or have been found to be open to abuse. It is proposed to simplify the procedure for duty on copper and other alloys for convenience of smaller manufacturers. It is also proposed to increase the duty on aluminium foil by Rs. 100 per tonne in order to discourage its internal consumption which creates a demand for the import of ingots. In order to encourage export of tea, it is proposed to increase the duty on loose tea by 5 to 10 naye paise per kilogram and to give a rebate of 15 naye paise per kilogram on its export.

"These changes in the existing excise duties will give a revenue of Rs. 20.74 crores in a full year.

"I also propose to levy excise duty on some new items. It is proposed to levy a duty on jute manufactures in order to restrict their internal consumption and to encourage their exports. This will yield a revenue of Rs. 3.12 crores. It is also proposed to levy an *ad valorem* duty of 5 to 7.5 per cent on certain iron and steel products but to exempt wastages arising in the manufacture of these products from raw iron or steel. Net revenue as a result of this will be Rs. 6 crores. It is proposed to levy a duty of 5 to 15 per cent on electric cables and wires which will yield a revenue of Rs. 2.1 crores. It is proposed to impose a duty on specific acids and gases which will together yield a revenue of Rs. 1.64 crores. Other items on which I propose to levy an excise duty are plywood at the rate of 10 to 15 per cent, asbestos cement products at the rate of 10 per cent, tread rubber and latex foam sponge at the rate of 20 per cent, gramophones, gramophone parts and accessories and gramophone records at rates varying from 15 to 30 per cent. These items will yield a revenue of Rs. 2.30 crores. In the mineral oil section, I propose to add a levy at 5 per cent on mineral oils and mineral oil products not otherwise specified. On the present production this will bring in a revenue of Rs. 26 lakhs. The total revenue from the fresh levies will be Rs. 15.42 crores in a full year.

Customs Duties

"The changes in the rates of excise duties and the imposition of fresh duties I have just described will yield a revenue of Rs. 7.25 crores on the customs side from countervailing duties.

"I propose to increase import duties on certain iron and steel items and on art silk yarn by 5 per cent. This will yield a revenue of Rs. 2.16 crores. The main items affected by the increase under iron and steel are structures, fittings for pipes and tubes, tin plates, steel ingots and manufactures not otherwise specified. In the case of tin plates, the increase will, however, be only 2 per cent. I also propose to impose an import duty of 25 per cent on stainless steel plates and sheets and rods and bars. This will yield a revenue of Rs. 80 lakhs. Copra is subject to an import duty of 40 per cent standard and 30 per cent preferential but by a notification they have been reduced to 15 per cent standard and 5 per cent preferential. It is proposed to increase the notified rates to 25 per cent and 15 per cent which will still be well within the ceilings. It is found that as compared to Indian copra, there is a substantial price advantage in imported copra. It is also proposed to increase the duty on certain types of tools, excluding machine tools and agricultural implements, from 35 per cent to 50 per cent. This is in line with certain increases made last year. These two items will yield a revenue of Rs. 1.89 crore in a full year. It is also proposed to rationalise duties on a few items which will yield a small revenue of Rs. 7 lakhs only.

"It is proposed to raise the rate of import duty on cars from 100 to 150 per cent. The specific duty of Rs. 6,000 is, however, being done away with so as not to discourage import of small or used cars in genuine cases. Though there are no regular imports of cars, some cars continue to come into the country, on Customs clearance permits. As their number is small, their outside value is high and when they are sold, there are very large profits. The proposed increase in duty will reduce these profits and will make import of cars a little less attrative. The revenue from this will be about Rs. 25 lakhs.

"Having spoken so far about increases, I now refer to a substantial reduction. I propose to reduce the export duty on tea from 44 naye paise to 25 naye paise per kilogram. This will mean a loss of revenue of Rs. 4.1 crores. Taken with the proposed refund of excise duty of 15 naye paise per kilogram, this should provide a substantial incentive for export of tea.

"These proposals on indirect taxes side will bring in a revenue of Rs. 44.5 crores in a full year. During 1962-63, their effect will, however, be for 342 days that is to the extent of 93.7 per cent.

The following abstract shows the estimated additional revenue and lack of revenue in loss cases—in lakhs of rupees—as a result of the revisions effected in excise duties :

(Rs. in lakhs)

Apropos the issue as to the respective roles of direct and indirect taxation, the Finance Minister made the following observations :

"There seems to be a feeling in some quarters that, whereas direct taxes are progressive, indirect taxes are regressive in the sense that their incidence falls more heavily on the poor than on the rich. I am afraid this view that indirect taxes are regressive is not correct in our conditions. Whether indirect taxes hit the poor more than the rich or *vice versa* depends upon the kind of commodities that are subjected to indirect taxes and the rates at which they are taxed. No one would contend that excise duties on automobiles, refrigerators and air-conditioners, for example, hit the poor. Quite a number of items in our range of indirect taxes are such that they impinge more heavily on the upper middle and middle classes. We had this whole question analysed last year and our study shows that indirect taxes in India have been progressive in their incidence. That is to say, the higher the total expenditure of a family on an average, the higher the proportion of the total expenditure it pays in indirect taxes. Not only that, but the degree of progression also was shown to have increased, as more and more articles not entering appreciably in the common man's consumption were subjected to excise duty.

"Hon'ble members would also appreciate that, in a country like India, the income-tax cannot be a mass tax. That would be administratively impossible and indeed irksome to the vast majority of the poorer people. At the same time, we have to tax at least to some extent even those who are not covered by income-tax, for it would be equally impossible to meet all our requirements for both Plan and non-Plan expenditures without mobilising a part of the incomes that accrue to the poorer sections of the community. Undoubtedly, the richer sections must carry an increasingly larger share of taxation and the poorer sections must benefit progressively more through development. That is part of our concept of a socialist State.

"I am aware of the widespread desire in this House and outside that the imposition and enhancement of excise duties should not lead to a general increase in consumer prices. In some cases, duties are imposed, as there is a large margin of profit, and it is considered desirable to reduce that margin. In others, for example, as in the case of matches this year, the duty is meant to take away the unintended margins of middle-men. In these cases, there should be no increase in the price to the consumer. On the other hand, in a case like that of patent and proprietary medicines, where it is proposed to reduce the duty, there should be a reduction in prices. In the case of cloth, a part of the increase in the rates of duty on yarn and processed fabrics can as well be absorbed by the industry. The duty on coarse and lower medium fabrics has been particularly so adjusted that there should be no increase in the price of such cloth.

"As regards the impact of these duties on exports, I should like to mention that it is proposed to give a consolidated refund of excise duties paid on the materials and intermediates used in the process of manufacture. There is, therefore, no reason why excise duties should impinge on export costs."

SUMMARY OF FINAL BUDGET ESTIMATES

AMERICAN LETTER

TRAGEDY OF ERRORS

STEEL PRICE EPISODE RAISES FUNDAMENTAL ISSUES

From Our Special Correspondent

NEW YORK, 21*st April*

THE big story in the last week or two has been the tragedy of errors in which the President of the United States and the American steel industry were the principal actors. The matter goes far beyond matters controversial. It involves Constitutional rights, persuasion, coercion—in fact, the vitals of society. Both the steel industry and the President have been playing with dynamite.

It is dawning slowly on the public that they did. What happened was that, after the last contract settlement with the steel workers which granted higher wages and fringe benefits, the industry did not increase steel prices. This time, there was strong pressure for a contract settlement long before the current contract expires. This was brought upon by statements of President Kennedy addressed to both management and the trade unions.

Management did not say anything that they might have to increase prices and won a relatively favourable labour contract settlement which was hailed widely as non-inflationary. U.S. steel management committed the first blunder by announcing just a few days after the settlement it would increase steel prices.

President's Charge

President Kennedy committed the second blunder by charging the industry with avarice and virtual treachery at a time of national danger. There is no occasion for rejoicing at these developments. On Friday the thirteenth of April, the Administration had bent the steel industry to its will. It was inevitable. Price increases were rescinded.

A number of very disturbing questions have arisen in this chain of events. The Administration's excuse for taking an active role in the steel labour negotiations was the unfavourable U.S. balance of international payments. Yet, the executive branch of the Government had no constitutional right in interfering with the price increase which is the responsibility of company management to stockholders and labour, not to Government.

An Unconstitutional Act

Another discouraging factor in this affair is that Washington gave its approval, in one form or another, to higher wages and greater benefits for workers, then discouraged price increases and, thus, actually engaged in the unconstitutional fixing of prices beyond the realm of its powers and existing laws. It was an assumption of powers not legally granted and they can, or could, lead to further abuse of Federal power.

The theory that the trade unions should benefit and the companies should not, creates a double standard. Until the Government obtains legislation to control prices, as it had during the last war, the setting of prices remains a prerogative of management, "the wisdom or folly of which will be decided in the market place," as one commentator put it.

The pot boiled over with ill-considered charges and countercharges, because of insufficient understanding of the President's position, his sense of power, the steel companies' sense of power and their sensitivity and the current state of public opinion. It is a one-sided understanding of the profit system which condones an increase in wages and, thus, costs, and denies compensation to those who have to pay the price. It raises again fears of inflation in many minds.

At any rate, the steel wage contract settlement means that inventory hoarding for fear of a strike, has now come to a definite halt. Output which was at 80 per cent of capacity in the first quarters, is likely to decline to 70 per cent or lower for the second quarter, as a whole.

The economy continues to go along on a relatively even keel. Mixed indices rather than substantial gains have been evident in March. But everything is relative. As the editor of *Arizona Progress* put it, "never in the history of the world have so many people been so well off—yet so gloomy about it."

International Trade

The great debate on American world trade policy continues. The latest comment on this score came from Arthur H. Motley, President and publisher of Parade Publications, speaking before the British-American Chamber of Commerce.

He emphasised the necessity for freer world trade. The real problem facing the U.S., he said, "is the problem of producing what other parts of the world want at a price that is consistent." Owing to its background, the U.S., he suggested, should have no difficulty in easily accepting the facts of modern economic life and entering knowingly and intelligently into the problems which are posed by the division of the world into totalitarian and free and the further division of the free world into regional trading areas.

While not criticising the U.S. preoccupation at this time with the Common Market in Europe, Mr. Motley emphasised that "there is a persistent voice of many American people demanding U.S. participation in the commercial affairs of all of the free world, not merely Europe or the American continents."

U.S. Universities Pledge Aid to India

Nine leading universities in America have joined the U.S. Government in pledging financial and scientific aid towards the further development of an institute of technology in India. The first institution to benefit by it will be the Indian Institute of Technology at Kanpur. The universities are expected to match the U.S. Government's $3.5 million contributions which will be administered by the Educational Services, Incorporated, Watertown, Massachusetts.

The Educational Services will administer the contract, which is under the financial direction of the United States Agency for International Development. The co-operating universities are California Institute of Technology, Carnegie Institute of Technology, Case Institute of Technology, Massachusetts Institute of Technology, Ohio State University, Princeton University, Purdue University and the Universities of California and Michigan.

It is generally conceded to be an appreciable step forward in the recognition India is accorded in this country as a vital force among the peoples of Asia, economically and socially. I might say, it is an unbelievably long step forward which could not have been predicted perhaps ten short years ago.

United Nations News

The picture at the United Nations remains unchanged. As of this writing, no final decisions have been made about the bond issue which is of such urgent importance to the world organisation so far as U.S. participation is concerned and the form it may take. Again, as I said in previous despatches, the matter will, no doubt, be resolved in the current session of Congress, because not even the most violent opponents of U.N. policy want the organisation to die which was conceived under such noble auspices at San Francisco.—*All Rights Reserved.*

(*Concluded from next column*)

mon Market. It is appreciated here that the present Six do intend to form a political union, but opinion here is that this is going to take some years before it can have much significance and, under a federal structure, there would be no interference in the politics of the country; but it will, of course, ultimately be a different matter on foreign affairs where a common policy would need to be evolved. The talks on political union between the Six have, however, broken down, because France is attempting to take too individualistic a policy particularly in the matter of arms co-operation with N.A.T.O. The Dutch and Belgians accordingly do not desire to proceed with talks on political union until Britain has become a member of the Market and this suits the U.K. very well. Their negotiators did ask to be associated with the political discussions of the Six and, although France resented this, it gave the other countries who did not see eye to eye with France the opportunity to ask to have the whole of these discussions shelved until the U.K. could come in naturally.

LONDON LETTER

PROGRESS OF COMMON MARKET TALKS

HIGH TARIFF WALLS FOR AGRICULTURE

(*From Our Own Correspondent*)

LONDON, 21*st April*

THE backroom work which has been steadily going on in Brussels between the six members of the Common Market and the U.K. delegation has once again, attracted attention. The Opposition in this country, for one thing, seems to have realised that their position on these negotiations was altogether too ambiguous and that they would have to come to a clear understanding among themselves on their attitude. This is becoming urgent, since it is now clear that the Government hope before the summer recess to have their plan for entry into the Common Market ready for full Ministerial consideration and that, before the next session of Parliament, this plan should have been discussed in detail with the Commonwealth Prime Ministers. If everything goes smoothly, then it would be possible to bring in legislation for Britain's entry into the Common Market at the beginning of 1963.

The Opposition is, however, in nearly as much difficulty as the general public in coming to further conclusions, since it is not fully aware of the state of negotiations regarding the entry of Commonwealth products. British agriculture is now seen not to present the serious problem which it once did. After all, Europe is a high cost agricultural producer and if it is Government policy that food in this country should go up to the Continental level, then the British farmer will get his prices from the Market instead of through agricultural subsidies; the British farmer is not, on the whole, a higher cost producer than his opposite number on the Continent and it is only in the horticultural section that there are likely to be difficulties.

Two Aspects

The Commonwealth presents problems on two aspects. The first, on tropical products and the degree of competition which is going to arise between those produced within the British Commonwealth and those produced within the former French territories. On the temperate side, the question is competition between Commonwealth temperate products and those of Europe.

On this latter point, the ambition of France is to see Europe as agriculturally self-supporting; in other words, there is to be a definite policy of building up European agriculture to the exclusion of Commonwealth products. If this policy were persisted in to an extreme degree, it could create not only a source of possible disruption to the Commonwealth but also turn the Common Market issue into a serious political struggle in this country. But it is not yet clear what precisely the long-term objective is to be; it is clear that the proceeds of tariffs from what will become one of the world's high tariff walls all round the new Common Market are to go into a central fund for helping out agriculture in marginal areas. In the U.K., remote hill districts may get help but most of the assistance will probably go to the highest cost producers of all, such as Western Germany. If policy did work out this way, there would be a real danger of sacrificing Commonwealth interests to those of Western German farmers. It is this aspect of the problem which concerns the Opposition most and, obviously, the U.K. negotiators in Brussels are trying to get agreement on a middle position.

If this middle position can be achieved it will mean that Australia, for instance, would be shipping temperate zone products to the Common Market at a slight disadvantage with European producers at present prices, but retaining an advantage over products from outside the Commonwealth and the Common Market. The Australians have already indicated that they could agree on a position of this kind—but, even so, in the long run, the trend might well be to make it more difficult for Commonwealth products to be sold into Europe.

The other matter which has come into prominence recently is that of the political relationships between the members of the Com-

(*Continued in previous column*)

I.M.F. AND MONETARY STABILITY

"A YEAR OF EXCITING DEVELOPMENTS," SAYS PER JACOBSSON

A STIMULATING review of the main developments in the international monetary field during the year ended 31st March 1962 was made by Mr. Per Jacobsson, Managing Director of the International Monetary Fund, in his address to the U.N. Economic and Social Council early this month. Mr. Jacobsson described the twelve months covered by his address as more exciting and, at the same time, more constructive than any period in the past forty years. Mr. Jacobsson's review is not just a factual account of the happenings in the monetary field, but a critical evaluation bearing the imprint of his deep insight into world monetary problems, his unique experience and breadth of vision.

The gold rush and the consequent strain on the dollar were taken by Mr. Jacobsson as an appropriate starting point for an analysis of the events of the past year. The excitement began in the winter of 1961-62 when the dollar was suspect in the eyes of many international financiers, and led to considerable pressure on the foreign exchange market. One of the more spectacular signs of nervousness was the increased purchase of gold by the public in those markets where gold could be bought and the price paid in those markets, when converted into dollars, rose well above the official U.S. parity of $35 per fine ounce. This particular phase, if not quite brought to an end, clearly gave way to a period of less strain, following the categorical statements by President Kennedy early in 1961 that the official dollar price of gold could and would be maintained and that the U.S. authorities were determined to take whatever action was deemed necessary to correct the persisting deficit in the U.S. balance of payments. The relative calm, however, proved to be of short duration, for a new situation suddenly arose as a result of the revaluation by five per cent of the German mark and the Dutch gilder in March 1961. Whatever might be the contribution of these changes towards lasting monetary equilibrium in the long run, their immediate consequences, in Mr. Jacobsson's opinion, were highly unsettling. The financial world was plagued by rumours of further changes in the exchange rates of the Deutsche mark and the gilder and changes in those of other European currencies. These rumours were greatly damaging to confidence. Considerable movements of short-term funds took place, affecting particularly the pound sterling, a currency in which large working balances and reserves of many countries are still being held.

Constructive Action

It soon became clear, however, that there was determination in the major financial centres to defend the existing monetary structure and this determination found expression in constructive action on the part of the various monetary authorities. Mr. Jacobsson referred, in particular, to the measures taken by the British Government which, together with massive assistance from the Fund ($1,500 million in seven different currence and a further $500 million under a stand-by arrangement), led immediately to a reversal of the trend of the exchange market, especially as there was a pent-up demand for sterling held back during the period of uncertainty. But confidence is a plant of slow growth and the disquiet affecting the whole exchange situation subsided only very gradually. In fact, in many parts of the world, the balance of payments continued to be exposed to a great deal of strain and financial assistance from the Fund was requested by many countries. Mr. Jacobsson gave the following explanation for this heavy demand for assistance:

"The reasons for the continued strain varied, but there is one major economic development which goes more some way to explaining it and which is perhaps not immediately apparent. This development was what has been called 'the end of the post-war inflation' which, like the greater convertibility among currencies, has, in itself, been a great achievement, but it has also posed problems. In the post-war period, commodity prices had gone on rising, some years more, some years less; but, by 1959-60, when the major currencies were convertible and trade had been greatly liberalised, supplies of goods had generally caught up with demand. Fortunately, booming business in Europe and improving business in the United States kept up the general level of prices. Some goods and services rose, while others declined; and those countries that were largely dependent on the export of commodities, the prices of which had declined, were often adversely affected. Moreover, once the general price level had ceased rising, greater attention had to be paid to moderation both in the field of cost increases and in the field of credit expansion. Since steps were not always taken in this new situation to bring about speedily enough the necessary adjustment in policies and practices that had been maintained over a number of years, unbalanced external positions emerged. A number of countries lost reserves and many of these were obliged to turn to the Fund for financial assistance in order to gain the time needed for the corrective measures to take effect."

I.M.F.'s Assistance

Mr. Jacobsson pointed out that seventy-six countries were at present members of the Fund and that applications were under consideration from a further fifteen countries. During the twelve-month period under review, no fewer than twenty-three countries in all the continents of the world had exchange transactions with the Fund. In addition, seven countries entered into stand-by arrangements with the Fund without actually drawing on the Fund. In all, drawings on the Fund over the last twelve months amounted to a total of $2.4 billion ($2,400 million) in ten different currencies and, at the end of the period, there is, 31st March 1962, undrawn balances of outstanding stand-by arrangements with members amounted to a total $1,900 million.

General Arrangements

Explaining the reasons for the general arrangements made last year by which the Fund might borrow supplementary resources, Mr. Jacobsson said that very heavy drawings on the Fund, severe pressure on the exchange markets, and the limited holdings of gold which the Fund could prudently utilise for drawings were the considerations that prompted the negotiations undertaken last year with a view to strengthening the world's monetary defences. Under the arrangements that followed these negotiations, it may be recalled, ten of the major industrial countries will stand ready to lend upto specified maximum amounts of their currencies to the Fund, aggregating in all the equivalent of $6,000 million, whenever the Fund, together with these countries, considers that supplementary resources are needed to forestall or cope with an impairment of the international monetary system. Mr. Jacobsson claimed the following merits for the arrangements:

"It is the great merit of these borrowing arrangements that they make it possible to mobilise quickly large additional resources for the defence of the international monetary system. The need for such resources arises not from any failure of this system, but, on the contrary, from its success—from the broader convertibility of currencies and the increased freedom of the exchange markets. As so often in life, success creates its own problems. More widespread convertibility, which is so important for the growth of world trade, has, at the same time, made possible sudden and substantial shifts of funds from one country to another. Since large movements of funds are most likely to occur between the main industrial countries, it was not unnatural that it was precisely those countries, in the first place, which should want to provide adequate safeguards against the untoward effects of these movements. The resources to be provided under the borrowing arrangements will make it possible to forestall or cope with the threat of any impairment of the international monetary system created by these movements or by any other circumstances. In this way, the resilience of that system, as well as the liquidity of the Fund, will be enhanced to the benefit of all member-countries."

More Cooperation

The borrowing arrangements, according to Mr. Jacobsson, must be seen as a manifestation of a growing tendency towards international solidarity in the monetary field. These arrangements, in his view, were not the only sign of such a tendency. He cited many recent instances as evidence of increasing international monetary co-operation. Describing some of them, he said.

"I would like to mention again the credits, which I have already referred to, extended by various central banks on the Continent of Europe to the Bank of England in the spring and summer of last year.

"...the United States' representatives are now attending regularly the meetings of the Bank for International Settlements in Basle; and discussion of financial and monetary matters has become an important part of the work of the O.E.C.D. The Federal Reserve System is now in a position to undertake operations in the exchange market, and is, in fact, doing so, which certainly represents a new departure in post-war United States financial policies. The concerted steps being taken to prevent disturbing movements on the London gold market are also of interest in this context. I should add that these methods of co-operation are almost all still in the process of evolution, and none of them will, of course, replace the necessity for the authorities in the individual countries to safeguard their own position and sustain balance by pursuing appropriate policies. But these national policies have to be worked out in relation to world-wide developments. It is a healthy sign that more and more discussions are taking place either in international organisations or directly between interested countries, which contribute both to the adoption of appropriate national policies and to the harmonising of these policies in the international field."

Summing up the results of this co-operation, Mr. Jacobsson remarked:

"I think that this working together has already met with a large measure of success. For some months now, the exchange markets have been much calmer and singularly free from disturbing rumours. Sterling has recovered from the pressures of the past year and is now strong in the markets. Furthermore, the British authorities have already todate repaid almost half the $1.5 billion originally drawn from the Fund in August last year. It has probably helped a little that most of those who last year speculated in gold and currencies burned their fingers, but that, in itself, would not be sufficient to steady the market. The relative calm is, I think, rather due to a growing feeling that, in monetary matters, there is a greater measure of international co-operation and sufficient resources available both to overcome difficulties that may emerge and to ensure that public policies will not have to be determined by the impact of sudden movements of funds due to speculative attacks."

Mr. Jacobsson then referred to the devaluation of the Canadian dollar in June 1961, the introduction of a fluctuating rate for the Philippine pesos in January this year and the fixation of a new par value for the Israel pound in February last and remarked that these changes in monetary policy represented an approach to a more balanced system. The objective of the Israel and Philippine action, he said, was to establish a realistic rate of exchange, in order to provide a sound economic basis for foreign trade and better balance to the economy as a whole.

Dealing with the Fund's relation with the underdeveloped countries, Mr. Jacobsson pointed out that, over the last year, the majority of the Fund's transactions had been with the less developed countries. This was nothing new, for, since its inception, most of the Fund's transactions had been with this group of countries. He had, however, a word of advice to these countries. He asked them to establish and maintain a high degree of creditworthiness. In his view, one of the major considerations, in any judgment of a country's creditworthiness, would always be whether or not the country maintained stable monetary conditions. Monetary stability, he emphasised, was much more important for a country than simply its effect on the thinking of foreign financial centres from where development funds are drawn. Monetary stability, he averred, was one of the most important prerequisites of a healthy domestic economy and was, indeed, the only reliable foundation for sustained economic growth.

Evils of Inflation

The Managing Director of the Fund recognised that, in their anxiety to develop their economies as rapidly as possible, one of the great problems which many countries had to deal with was that of inflation. He did not agree with those who tolerated, if not welcomed, inflation as an inevitable concomitant of economic development. He described the evils of continuous inflation in the following words:

"It is true that for a time inflation can bring forth real resources, by a kind of 'forced savings,' but these savings are derived from those whose consumption is reduced by the rising prices, that is, through what amounts to exploitation, since the benefits accrue to others. This method of producing savings will not last for long, since those who are exploited will not allow their wages to lag behind, and the public will not continue to hold, for longer than they absolutely must, a currency that persistently falls in value. All kinds of distortions in the economy will ensue, quality of products will suffer, and the maintenance of capital assets already produced will be neglected. The resources that inflation has wrung out of a part of the population by 'forced savings' will often tend to be used for unproductive purposes, luxury building, etc. The new capital so obtained may even be more than outweighed by the flight of capital out of the country. So, there is a deterioration—for a time perhaps not fully noticed —which affects the more spectacular gains financed from inflation. Meanwhile, monetary reserves are steadily eroding away, the public becomes increasingly critical, and, eventually, the authorities are obliged to reverse inflationary policies if major disturbances are to be avoided."

Over-valued Currencies

Mr. Jacobsson was equally critical of overvalued currencies which resulted from inflationary financing of budget deficits or excessive private business demand for credit. In his opinion, since such credit expansion will swell the volume of demand beyond the available resources, internal prices will tend to rise and also the volume of imports, while exports will be impeded and there will, in addition, be a flight of capital in a number of ways. For a time the inflation may engender a "boomlet" or even a boom, but, if the exchange rates are kept unaltered, as is usually the case, the economy would soon be caught by the depressing effects arising from an overvalued currency.

Will a correction of overvalued currencies not add to the cost of imports, especially of capital goods, which the underdeveloped countries require? Anticipating this question, Mr. Jacobsson observed:

"But even when an overvaluation is indisputable, there is often strong opposition to any move toward establishing a more realistic exchange rate. It is feared, among other things, that the rise in the price of certain imported goods following the adjustment of the exchange rate will be politically unpalatable, but, in fact, the effect on prices generally is often slight indeed, since the new rate is sometimes little more than an adjustment to an already established price situation.

"If, after a period of inflation, a stabilisation programme is put into force, there will be a period of adjustment when monetary reserves have to be replenished and investments wait for genuine savings to become available. Usually the authorities will have to take certain more major policy decisions which will not, as a rule, be popular. Successful stabilisation requires determined effort and dogged perseverance on the part of the authorities, but, if it is successful, the results are lasting and valuable. During this intervening period of adjustment, when the necessary determination may be so difficult, the hard things, although not altogether avoided, can be mitigated by foreign assistance.

"At this point, the question is generally asked whether one can be sure that the period of adjustment will soon be transformed into a period of growth. The stabilisation programmes undertaken with Fund support have met with criticism from those who describe them as deflationary and leading to stagnation. But countries which have pursued, without wavering, the consistent policies required to make a success of stabilisation programmes have found before long that the expansionary forces inherent in the economy have been strong enough to stage an impressive revival of business once monetary stability was restored."

Stability Alone Not Enough

The I.M.F. chief readily recognised that monetary stabilisation was not enough. Monetary stability was only a firm base on which could be built a sound economy with technical knowledge and genuine financial resources. The object of the Fund was to help promote monetary stability by giving short-term assistance to member-countries to tide over temporary balance of payments difficulties. By its activities over the years, the Fund, Mr. Jacobsson claimed, had been able to contribute greatly to the stability of exchange rates and, with more resources becoming available, in case of need, it should be able, in future, to help effectively strengthen the international monetary structure and ensure sufficient liquidity for the proper working of the international monetary system.

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

DEVELOPMENT OF WOOLLEN INDUSTRY

OVER-LICENSING OF SPINNING CAPACITY

THE way in which the planners and powers-that-be have handled the development of woollen textile industry in India is rather depressing. Indeed, the industry provides an example of unplanned development. How else is one to explain, for instance, the overlicensing of spindles in excessive numbers, though it is a well-established fact that the woollen spinning capacity has not been fully utilised for a number of years and is surplus to requirements? The Estimates Committee of the erstwhile (second) Lok Sabha has certainly done a signal service by pinpointing, in its 164th report, this and several other defects and also by putting forward quite a number of useful suggestions designed to put the woollen textile industry on a stable footing. It is, however, surprising that the report covers only the spinning sector and does not make, except by way of casual references, any observations on the weaving sector. Nevertheless, it must be acknowledged that the report, like the several others submitted by the Estimates Committee under the inspiring chairmanship of Mr. H. C. Dasappa, is notable for the wealth of information furnished and the refreshingly frank remarks on the failures of both the Government and industry.

Before dealing with the Committee's report, it will, perhaps, be useful to distinguish as between woollen, worsted and shoddy yarns. Woollen yarn, which is spun from raw wool, is used for carpet making and for producing medium quality goods such as blankets, tweeds and suitings. Worsted yarn, which is spun out of wool top (combed wool), is used in the manufacture of superior fabrics, hosiery and handknitting wools. Shoddy yarn spun from shoddy wool is used to produce cheaper variety of blankets, melton cloth, etc.

Vast Idle Capacity

Overlicensing of spindles for shoddy yarn in excessive numbers has accentuated, as the Committee rightly points out, the problem of raw material, worsened the already low utilisation of the existing productive capacity and resulted in the locking up of capital resources, including foreign exchange outlay for machinery, etc., all of which are bound to make for higher overheads in production and higher prices for consumers. The data given in the report show that the capacity actually lying idle in the woollen spinning and shoddy spinning sectors even on the basis of two-shift working has never been less than 54.4 per cent and, in the case of worsted spinning, the idle capacity has been progressively going up from 32.4 per cent in 1956-57 to 45.9 per cent in 1960-61. The position would be worse if capacity on three-shift working is taken into account. It will be worthwhile to quote here the severe strictures passed by the Committee:

"The Committee regret that the Textile Commissioner's organisation is not in possession of complete and correct figures in respect of installed capacity of the industry, and varying figures have been given at different places. ... There was no room for issuing additional licences for worsted spindles after 1958 when the foreign exchange position was known to be difficult and supply of wool tops and raw wool could not even be assured for the existing units. ... The Committee see little justification for issuing licences for installation of 12,784 additional spindles for shoddy yarn (during the second Plan), for the same number could well have been found by allowing conversion of woollen spindles to shoddy."

The production of woollen-worsted yarn no doubt registered a rise during the second Plan period, though the actual rise was negligible, from 21.7 million lbs. in 1955-56 (end of first Plan) to 28.5 million lbs. in 1960-61. Details are given in Table A. The pace of rise in output has, of course, accelerated since the third Plan began, the quantity of yarn actually produced in the first year (1961-62) being estimated at about 35 million lbs. But the gap that still remains to be covered for the fulfilment of the third Plan production target of 52 million lbs. is pretty wide, as much as 17 million lbs. The Estimates Committee has done well to urge the Government to help the industry avoid underutilisation of installed capacity by assuring it supply of raw material. In particular, it has asked the Government to pay special attention to the development of adequate combing capacity within the country, so that foreign exchange can be utilised more gainfully through imports of raw wool rather than wool tops. For ensuring such a development, the Committee has emphasised the importance of (*a*) speeding up experiments for wool top manufacture from indigenous wool and the combination with imported wool; (*b*) raising production of the requisite quality wool through large-scale sheep-shearing, grading and marketing programme; and (*c*) allowing imports of foreign wool in adequate quantities for production of wool tops. The estimated requirements of wool tops—in million lbs.—during each year of third Plan are given below; figures in brackets relate to anticipated production:

1961-62: 22.0 (7.2); 1962-63: 24.5 (20.7, including 3.5 million lbs. of synthetic fibre tops); 1963-64: 27.0 (25.77); 1964-65; 29.0 (29.0); 1965-66: 31.5 (31.5).

Mill requirements of shoddy yarn are placed at 11.5 million lbs. per annum during the third Plan. The raw materials for shoddy yarn are old garments, wool waste, tailor cuttings and the like. The Committee considers that, in the face of internal demand which is met largely by imports, exports of these raw materials, even if small, may be banned.

Rehabilitation

While the need for assuring the woollen industry the requisite supply of raw material is urgent, there is no gainsaying that the productivity of the industry cannot be expected to improve unless steps are taken simultaneously to rehabilitate and modernise equipment. This aspect has to be specially stressed because a sizable part of the industry's equipment is so dilapidated that it requires complete replacement. It may be recalled here that the N.I.D.C. Working Group, in its report submitted in 1960, had emphatically stated that the woollen industry must be given a fair opportunity to replace its machinery, so that it would be enabled to reduce costs, improve quality and, at the same time, give better earnings to workers and better conditions of work without unduly disturbing the employment situation. The Estimates Committee fully shares the observations of the Working Group as regards the benefits that would accrue on full implementation of the programme of rehabilitation and modernisation (estimated to cost Rs. 11.25 crores with a foreign exchange component of Rs. 9.25 crores) and makes the following suggestions:

A mill-wise plan for rehabilitation and modernisation may be prepared and implemented.

Government should assist the industry by indicating the sources from which machinery could be procured.

Information regarding the availability of machinery from East European countries given in the report of the delegation which visited these countries in 1960 could be circulated to mills.

Efforts should be made to step up the manufacture of woollen textile machinery within the country.

Government may extend, if considered necessary and feasible, facilities, including loan.

Incidentally, it is gratifying to be told by the Chairman of the International Wool Secretariat, Sir William Gunn, who was in Bombay last week, that the Secretariat would give assistance in the form of expert technicians and knowledge to the Indian woollen industry in the near future.

Yarn Production Pattern

The Estimates Committee has made special mention of the woollen manufacturers' plea for revising the pattern of woollen-worsted yarn production from 47.5 to 60 per cent for weaving, and from 32.5 to 20 per cent for hosiery, the allocation for hand knitting being left unchanged at 20 per cent. It has not examined the issue at length for want of time, but feels that the Government should pay careful attention and make sure that the pattern prescribed is such as to meet equitably the requirements of all sectors. It also wants the Textile Commissioner to draw up a scheme early for the equitable distributon of yarn to hand-knitting processors.

The question of yarn supply was discussed in detail by the reconstituted Development Council for Woollen Industry at its first meeting held at Bombay on Thursday last week. Emerging from the discussions were four recommendations as follows:

(1) A limited number of woollen spindles might be allowed to spin shoddy yarn, provided they had the necessary equipment for doing so and no imports of additional machinery, accessories, etc., were involved. (2) Allocation of import quotas for raw material might be made in future on the basis of number of spindles installed subject to some adjustment in respect of worsted spindles producing a larger percentage of hosiery and knitting yarn or weaving yarn. (3) The pattern of production of different kinds of worsted yarns might be revised so as to ensure an adequate production of different all weaving yarn, hosiery yarn and knitting yarn out of the imported raw material. (4) A committee, consisting of Mr. R. K. Birla, Mr. T. N. Khaitan and Mr. Satish Chandra Mahajan, should be appointed, with powers to co-opt other members, to arrange distribution of worsted, weaving and knitting yarn on the same lines as is being done in the case of artsilk yarn.

A special reference was made by the Committee to the Export Incentive Scheme for woollen goods. Evidently, the Committee must have been provoked by the fact that, although the scheme has been in force for the past four years—it was introduced in April 1958 and revised in July 1961—the progress achieved so far is not quite encouraging as will be seen from Table B. This is due to the inordinate delays in the issue of entitlements and malpractices indulged in by some parties. The Committee has drawn attention to both these aspects. It suggests that the procedure for issue of entitlements may be reviewed and streamlined and delays eliminated. Further, it suggests the early finalising of scheme for compulsory pre-shipment inspection.

The Export Promotion Scheme was also considered by the Development Council at its last week's meeting. The Council pleaded for a suitable revision of the scheme, with at least 10 per cent of the incentives being compulsorily earmarked for machinery import. It pleaded, too, for allowing merchant-exporters the same incentives as are available to manufacture-exporters. Whatever be the justification or otherwise for these pleas, a special responsibility is cast on the industry and the trade. It is somewhat disquieting to hear frequent complaints about quality of woollen goods exported to other countries. The delegation of woollen industry which visited the East European countries in 1960, for instance, has cited in its report a number of cases of unsatisfactory supply. To quote the delegation: One Ludhiana party supplied (to Malta) woollen knit-wears which were found to be shorter in size, with colour fading and extremely poor knitting stitching. Some of the goods had even holes." The industry and trade should endeavour their best not to give room for such complaints. For once prejudice enters the mind of overseas customers, it will be very very difficult to remove it.

TABLE A: *Woollen Industry in Second Plan*

	1960-61	1959-60	1958-59	1957-58	1956-57

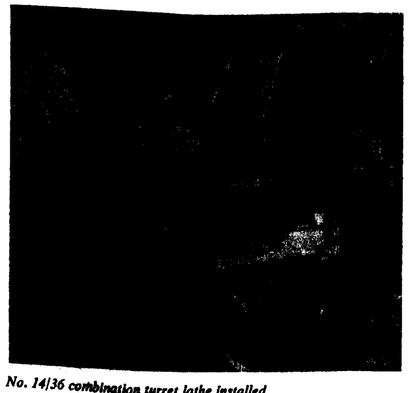
6" spindle ram-type horizontal mill and boring machine

THE REAL POWER OF AVB

Vast Technical Resources... Modern Workshops...



No. 14/36 combination turret lathe installed in the AVB light machine shop

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools...here is the *real power* of AVB. The essential combination to generate *real industrial power.*

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry...by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. **6" ram-type horizontal mill and boring machine.** This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India.
2. **Numerous capstan and turret lathes** upto 36" diameter swing and central lathes upto 42" diameter.
3. **28/60 vertical model hydrotel milling machine** with 360° profile milling equipment.

AVB ...*a Powerful Partnership for Progress*

CENTRAL BANK OF INDIA LIMITED

CAPITAL TO BE RAISED BY ISSUE OF NEW SHARES

MR. HOMI MODY ADVOCATES RECASTING OF THIRD PLAN

THE Fifty-first Annual General Meeting of the Central Bank of India Limited was held at Bombay on Wednesday, 25th April 1962. In his speech at the meeting, Mr. Homi Mody, Chairman of the Bank, said that, by and large, the year was one of general expansion of national output and that, in regard to industrial production, though there was an increase of something like 8 per cent, the rate of growth was lower than in the previous year. Conditions of acute scarcity were allowed to develop in respect of coal, power and transport, in spite of repeated warnings of businessmen and industrialists. The failure in these all-important sectors, together with an inadequacy of maintenance imports of items such as raw materials, spares and components, he added, had been chiefly responsible for the slackening in the pace of industrial production during the year.

"The second Plan had sufficiently indicated," continued Mr. Mody, "that the transport capacity was grossly inadequate for the needs of the country. The situation demanded drastic recasting of ideas with regard to targets of production and priorities.... A position has now been reached in which not only the Plan estimates are likely to be confounded, but even the existing productive capacity in the country may be seriously affected."

Transport Bottleneck

"Continuing, Mr. Mody said that the transport bottleneck had been most seriously felt in the coal industry. There was, as a result, growing shortage of coal in consuming centres, affecting all industries depending upon it for industrial or power production. He added that it was remarkable that, when the country was desperately short of wagons, a large part of the rated capacity of the railway wagon industry should be lying idle. In the face of this situation, the targets of production set for the coal industry during the third Plan period would seem to be completely unrealistic. He was of the opinion that the capital expenditure and foreign exchange involved in the projected expansion and the time required for developing new mines had apparently not been given adequate consideration. He went on to point out that, even if we could raise all the coal estimated in the third Plan, the problem of transport would remain.

Mr. Homi Mody observed that side by side with this imbalance in our economy was the acute power shortage that the country was experiencing. Under-estimation of the country's requirements, the failure of public sector undertakings to reach their targets and the disincentives to the private sector of the industry had resulted in a shortage which was being increasingly felt, particularly in regions which are far away from the coalfields. All this, argued Mr. Mody, provided growing evidence of the imperfections of the Five-year Plans. In this connection, he observed:

"Arguments about the public and the private sector, and even about the size of the Plans, are becoming irrelevant in this context. What the country needs is national planning in every sense of the word, and the policy of keeping the public and private sectors at arm's length, so to speak, from each other needs to be revised."

"There ought to be a much closer relationship between the two than is now the case, and it is a thousand pities that the knowledge, experience and enterprise of those who have built up in the past, as they are building up in the present, an imposing structure of considerable dimensions, in the face of many difficulties, should not be more adequately utilised. There has recently been a welcome awareness on the part of Government of the importance of the private sector, but there is, as yet, an imperfect understanding of the role it can play in national development. While foreign experts are greatly in demand, there is still a barrier between the Government and the Indian industrialist, arising from a certain distrust and suspicion. I have been emphasising for some years that there has been a change in the outlook of the business community, and that there are many in its ranks who are not dominated by self-interest and are anxious to co-operate in the task of national development. I hope it may be found possible for their voice to be heard more effectively in the framing and implementation of our Plans for a rapid advance in the moral and material condition of our people."

Foreign Exchange

The Chairman expressed concern over the persistent erosion in the total foreign exchange reserves which had dropped from Rs. 825 crores at the beginning of the second Plan period to Rs. 302 crores at the end of 1961, in spite of large drawings on the International Monetary Fund. He said: "In the year under review, our adverse balance of trade amounted to Rs. 283 crores. This shows a welcome decline from the figure of the previous year, but this was more due to a decrease in imports than to an increase in exports. The remedy," he continued, "lies in our ability to attract greater foreign investments and to promote larger exports." As regards the first, Mr. Mody advocated that our Government should seriously consider ways and means of doing away with the harassing procedures, delays and stiff-necked attitudes which a number of foreign investors, anxious to participate in Indian undertakings, were experiencing. As regards export promotion, he said:

"Government must realise that the measures so far undertaken have but a limited value, and that the basic fact is that our products have to be competitive in quality and price. In this connection, I would quote from a speech made by Mr. Alfred Hayes, President of the Federal Reserve Bank of New York, to the New York State Bankers' Association a few months ago, on the subject of export promotion. Whilst sounding a note of warning against the habit of looking upon import restrictions, higher tariffs and exchange controls as a panacea for their balance of payments difficulties, he said: 'We must be willing not merely to recognise foreign competition as an economic fact but also to make an aggressive effort to compete more effectively in all markets, both with new and important products and with lower costs.... This is not the job of monetary policy alone, nor even of monetary policy primarily. Wholehearted co-operation from Government, industry and labour is a necessity in this area.' I would add that giving subsidies and inducements, on the one hand, and loading costs of production with all manner of burdens, on the other, is a self-defeating process."

Interest Rates

Mr. Homi Mody then informed the shareholders that, with a view to improving their position, the banks effected, in March 1961, an upward revision in the rates laid down under the Inter-Bank Agreement. The pressure on the banking system, however, for additional credit continued to persist and the advance-deposit ratio rose in consequence from about 62 per cent in December 1960 to over 70 per cent in March 1961. The banks were, therefore, obliged, during the busy season, not only to liquidate a part of their investments in Government securities but to borrow on a larger scale from the Reserve Bank, even at penal rates of interest.

Mr. Mody then went on to recapitulate the various measures taken by the Reserve Bank during the year to strengthen the banking system and revive public confidence which had been somewhat shaken by bank failures in the preceding year. The policy of encouraging a merger of the weaker banks with the stronger ones was vigorously pursued and resulted in the reduction in the total number of scheduled banks from 94 to 83. In conformity with this policy, the Central Bank took over the Jodhpur Commercial Bank. By far the most important event that took place during the year was the passing of an Act for the establishment of a Deposit Insurance Corporation, which would fully cover about 75 per cent of the total number of deposit accounts in the country, and provide protection to all depositors to the extent of Rs. 1,500 per account.

Equity Base

"Towards the close of the year," continued Mr. Mody, "the Reserve Bank also put forward a proposal for strengthening the equity base of the banking system and exhorted all the banks to observe a convention which would lead to their achieving a ratio of 6 per cent between their paid-up capital and reserves and their deposits. This is no doubt a sound move, but, if the present pace in the growth of bank deposits is kept up, the attainment of the prescribed ratio may take a long time, even with the transfer of 20 per cent of declared profits to the published reserves of banks." He then disclosed to the shareholders that, as a step towards implementation of this proposal, the Directors had decided to increase the authorised capital of the Bank to Rs. 10 crores and to raise additional capital by the issue of 6,30,000 new shares in the ratio of one new share for every two existing shares. This would increase the paid-up capital to Rs. 4,72,50,000.

Turning to the affairs of the Central Bank itself, Mr. Mody informed the shareholders that, for the second year in succession, the Bank's deposits registered an impressive increase of Rs. 20 crores, the total moving up from Rs. 200 crores in 1960 to Rs. 220 crores in 1961, and that, in the quinquennium 1957 to 1961, the growth of the Bank's deposits had been of the order of 42 per cent.

Bank's Earnings

Over the past five years, the improvement in gross earnings had been of the order of Rs. 4.43 crores, or 57 per cent. The increase, Mr. Mody affirmed, had taken place under all heads, namely, interest and discount, commission, exchange and brokerage. The net profit during the year showed a substantial rise, and was indeed a happy culmination of the progress made by the Bank during the first half century of its working. He, however, sounded a note of warning that, while it would be their constant endeavour to keep up the rate of growth in profits, it must not be forgotten that the future would throw additional burdens on the industry. As a corollary to the growth of deposits, progressively larger amounts would be needed year after year for payment of premia to the Deposit Insurance Corporation. The implementation of the Tribunal's award was likely to impose a further burden. The Reserve Bank's proposal for strengthening the equity base and increasing the liquidity ratio of Banks would also have their effect on the availability of resources for employment in the Bank's business. It was, therefore, considered prudent and necessary to conserve the Bank's resources and, accordingly, out of this year's profit, Rs. 45 lakhs were transferred to reserves, taking the total of the Bank's owned funds to Rs. 7.28 crores. This, however, was still short of the ratio between capital and deposits as envisaged by the Reserve Bank.

Referring to the dividend, Mr. Mody stated that, this year, in view of the larger profits, it was proposed to pay a final dividend of Rs. 2.60 per share subject to tax, which, together with the interim dividend of Rs. 2.40, would amount to a total dividend of Rs. 5 per share, subject to tax, or Rs. 3.50 net for the whole year, thus restoring the dividend to the level of 14 per cent net at which it had stood prior to the cut effected as a result of the changes in the taxation system.

In conclusion, Mr. Mody made a reference to the golden jubilee of the Bank which was celebrated in a befitting manner all over the country, as well as in Pakistan, Rangoon and London. The great enthusiasm witnessed everywhere served to bring home vividly the abundance of goodwill and public confidence which the Bank enjoyed. Everyone connected with the institution had derived fresh inspiration from those celebrations. In commemoration of the occasion, it was decided, in colla-

PROSPECTS FOR COTTON TEXTILES

MR. WINTERBOTTOM SUMS UP CHANGES AFFECTING INDUSTRY

From Our Special Correspondent

MANCHESTER, 17th April

MANCHESTER LETTER

TAKING a more audacious line than some other trade organisations which have hesitated to discuss the implications of the Common Market in the open, the National Federation of Textile Works Managers' Association, at its conference at Blackpool, dealt with the subject widely and without restraint. It was accepted that many of the viewpoints put forward were individual opinions. Indeed, the whole vital topic is so overlaid with speculation that no hard and fast answer to the many queries involved can be given. Only experience will show, if the project materialises, how Britain, and Lancashire in particular, will be implicated.

Putting the cart before the horse, by taking the end of the last paper first, Mr. Frank S. Winterbottom's apt summing up of the changes likely to affect the British cotton industry provides the best synopsis of the general outlook. Only two of his six points could be described as offering advantages to Lancashire, but these were both fundamental changes which local traders have been advocating for some considerable time. The first was the likely disappearance of duty-free entry of cotton textiles into the United Kingdom from India, Pakistan and Hong Kong, possibly in stages. The other was the belief that increasing exports of Lancashire-made textiles should flow to European countries, not only during the transitional period as duties are reduced but also when they are finally abolished in 1970 or earlier.

Unfavourable Aspects

To the disadvantage of the local trade would be the ultimate adoption of the Common Market external tariff of 13.8 per cent, replacing the present 17½ per cent. Rising imports of textiles from Common Market producers must be expected as the existing rate of duty is reduced towards the ultimate phase of no duty at all. When the common external tariff is finally established, cloths paying the duty could be imported and processed for re-export to European countries without any rebate of duty to the disadvantage of finishers in Britain. Such dutiable cloths, added Mr. Winterbottom, could, however, be imported under customs bond and re-exported after processing to countries outside the Common Market to the continuing disadvantage of Lancashire's weaving industry.

Pin-pointing the future prospects of inter-European trade, he stressed that the Lancashire industry would at any rate know where it ultimately stood, with neither quotas nor duties. "We shall be selling to markets with a like standard of living and with similar costs of production; with tastes, styles and distribution not too far from those existing here; with buyers who operate financially in a similar way to traders in this country—and lastly, but not least, who can be visited almost as easily as customers in this country."

Structural Changes

Competition from vertical units would have to be faced, he added. It might be necessary to meet such pressure by similar developments in our own industrial structure or even by closer working and distribution arrangements. In this connection, Mr. Winterbottom referred to the psychological impact of the establishment of a European market which has already made its mark on those participating in the project. Continental businessmen have tended to adopt a European, instead of a merely national, outlook and to form co-operative links between corporations in different countries.

These, he pointed out, had frequently taken the form of agreements between firms of differing nationalities to share markets and specialise in sectors of production to obtain the advantages of long runs from manufacturing capacity. A spread of such arrangements to include British firms must be anticipated.

Better Styling Needed

Discussions on these lines frequently refer to the horizontal structure of the Lancashire cotton industry. It was, therefore, not surprising that Mr. John J. Butler, of *The Economist* Intelligence Unit, again urged, as so many outsiders do, that a more vertically integrated structure should be encouraged. The British industry, he said, could well enter a new phase of development, if the G.A.T.T. agreement on cotton textiles established regulation of supplies on a wider basis.

The industry, he suggested, should aim at better design and styling, which would not follow Europe's lead at one remove, but which would establish a modern English style in design and fashions. It should aim at more flexibility to meet changes in taste, perhaps coming faster with a rising standard of living throughout Europe and with closer exchange of ideas. Perhaps most of all, the industry must meet the challenge of a vastly enlarged domestic market of possibly 250 million people by learning how to market its products effectively across the whole of Europe.

Situation Worse—Cotton Board

Conditions in the British cotton industry deteriorated steadily during 1961 and the situation has worsened further in the last three months, according to the latest quarterly review issued by the Cotton Board. Returns published indicate that the global figure of yarn output last year was about one per cent higher than in 1960, the major increase being achieved by India. Dealing with the local trade, the Cotton Board reports that yarn output in Lancashire in February was about 14 per cent below the 1961 peak last April. Rate of cloth output per working day in January fell to 12 per cent below last year's highest reached in June.

No improvement so far in the rate of ordering can be recorded and order books have continued to shrink, the report adds. Stocks held by spinners and weavers have been increasing and great pressure on prices has brought quotations down to quite unremunerative levels. "The only immediately hopeful features of the situation are the fact that stocks beyond the weaving stage have certainly been run down substantially and the maintenance of retail sales of clothing at a high level at least up to January," the survey declares. Imports of cotton piecegoods into Britain last year declined quarter by quarter from a level of 225 million square yards in the first three months of 1961 to 143 million yards in the final quarter and 96 million yards in the first two months of 1962. Arrivals of cotton yarn in contrast declined very little since the peak reached in the first quarter of last year. India remains the largest supplier but imports from Hong Kong have expanded rapidly as those from Spain have fallen. World exports of cotton goods suffered a sharp setback last year after a notable expansion in the two previous years. Shipments were about six per cent lower than in 1960 and the only important countries to increase their trade abroad were the United States and Hong Kong.

Record Profits for Cotton Growers

Commonwealth cotton fields produced a record financial year for the British Cotton Growing Association last year. In his address to the annual meeting in Manchester, the president, the Earl of Derby, announced a net profit of £286,058, the highest in the Association's 60-year history. "The outstanding feature of the year for us has been the record crop grown in Nigeria, which totalled 293,406 bales, this being 70 per cent more than the preceding year, and 20 per cent higher than the previous record of 240,861 bales achieved in 1958," he said. Uganda crops produced 10,000 bales more than the previous year, but in Kenya the yield was down.

Total production, announced in the Association's annual report published last month, amounted to 1,581,600 bales, only 500 bales below the record annual output. Looking ahead to the results of the current year's crops, Lord Derby warned that bad weather, resulting in "disastrous conditions" in Uganda, would have a considerable effect on the next financial returns. A dividend of 7 per cent and a bonus of 2½ per cent, both tax-free, were approved.—*All Rights Reserved.*

for all interior construction and decoration the wise choice is JOLLYBOARD

the modern material

JOLLYBOARD—India's leading hardboard—is ideal for use in department stores, factories, offices and modern homes. It's strong, light, durable and highly decorative. It can't crack, split or come apart.

ECONOMICAL TOO—
JOLLYBOARD is very economical. It's not only surprisingly low priced, but also saves up to 50% of your money in labour and painting costs.

Remember the name JOLLYBOARD ...it's your guarantee of quality!

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of the records in London and proper returns adequate for the purposes of our audit have been received from the branches in India, none of which has been visited by us. We have examined the foregoing Balance Sheet and Profit and Loss Account which are in agreement with the said records and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act 1956 (India) as amended by the Indian Companies (Amendment) Act 1960 and the Banking Companies Act 1949 (India) as amended up to 24th March 1961 and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of these branches as at 31st December 1961 and the Profit and Loss Account gives a true and fair view of the profit for the year ended on that date.

SCOPE FOR INDEPENDENT AIR OPERATORS

ATTITUDE OF BOTH PARLIAMENT AND GOVERNMENT SHORT-SIGHTED

By Our Aviation Correspondent

EVER since the nationalisation of scheduled air transport, and the formation of the two air corporations, a handful of small "independent" companies—some seven in number—have grudgingly been permitted to eke out, in the field of charter and non-scheduled operation, a scant and precarious existence. One employs these terms advisedly; in spite of some rather unctuous lip-service on the part of Ministers and other Government spokesmen, the independents have received no visible encouragement. Opposition, on the other hand, both covert and overt, has been much in evidence.

Nor, curiously enough, have these concerns ever enjoyed public support or a "good Press." It has truly been a case of everyman's hand against them. Take, for example, the recent debate on the Air Corporations (Amendment) Bill in Parliament. The hostility displayed was surprising—and almost unanimous. One member went so far as to suggest that, where the "independents" had succeeded in operating services found uneconomical by the Corporation, this was due solely to malpractices and staff exploitation in which the former indulged!

There probably have been malpractices from time to time. If you push any industrial undertaking too hard to the wall, its reactions are apt to be unethical. It is simply a matter of self-preservation. Much of the criticism, however, has its roots in suspicion and hostility. In any event, there is another side to the medal. The independents have also performed, and are performing, a valuable public service. Statistics show, for instance, that their annual carriage of freight is equal to that of the domestic Corporation.

Private Operator Fares Better

In N.E.F.A., one of the independents—the one, incidentally, which came in for most of the opprobium so lavishly broadcast during the debate—has successfully carried out supply dropping operations of considerable national importance. This form of operation is often arduous and always hazardous. One does not want to labour the point, but, when the Indian Airlines Corporation carried out similar operations, there were some very serious accidents.

All this is not to suggest that these private companies are perfect. Indeed, their shortcomings are many and obvious. They are out of tune with the times. This is not the day of the small concern operating on a shoestring budget. Such operation has long ceased to be either practical or desirable. The obvious remedy for many of their ills is to combine their resources—a course which they seem consistently to spurn. Even a measure of unity would add much to their stature and, incidentally, to their bargaining power *vis-a-vis* the Government. It is still, of course, not too late.

Prima facie, the Air Corporations (Amendment) act gives the independents a new status and fresh hope. They have now the right—subject, of course, to permission by the Government—to participate in the scheduled air transport of the country. What more, it might be asked, can the Government do for them? In the opinion of your correspondent, however, the situation thus created is by no means so favourable for the independents as might be imagined. Let us endeavour to marshall and establish the facts.

The Hard Facts

In the first place, other than those which I.A.C. now operate, there is probably no air route in the country which, within the foreseeable future, will repay the kind of development which is all these private companies can afford. In the area to the north and east of Calcutta—Assam, West Bengal, Tripura, and N.E.F.A.—there are possible exceptions to this premise. To that question, one will return later in this article. In the meantime, one repeats that, outside the abovementioned area, the possibility of finding a worthwhile route is remote. There are, of course, some which might repay development using helicopter or VTOL aircaft but that would be an extremely expensive and essentially long-term process.

One has to assume that the only equipment which any of the independent companies are likely to use is the Dakota. That, indeed, is the only cheap equipment available. On any route with sparse traffic—and, again, one has to assume that any route which an independent might obtain will have very scant traffic—the Dakota is both too large and too uneconomical. To substantiate that statement, here are a few leading figures.

Depending on the scale of the operators' overheads, the cost of operating a Dakota lies between Rs. 600 and Rs. 800 per hour. Assuming a route 250 miles in length, and one daily frequency in each direction at a block speed of 135 miles per hour—the most one would expect on a sector of this length—the daily cost of operation would be between Rs. 2,220 and Rs. 2,960 With an average of six to eight passengers each

AUDITORS' REPORT TO THE SHAREHOLDERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion, proper books of account have been kept by the Company as required by Law so far as appears from our examination of those books.

We have examined the Balance Sheet of Mercantile Bank (Agency) Private Limited as at 31st December, 1961, and the above Profit and Loss Account for the year ended on that date which are in agreement with the books of account. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required, and the Balance Sheet gives a true and fair view of the state of the Company's affairs as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the results for the yea ended on that date.

LOVELOCK & LEWES,
Chartered Accountants.

CALCUTTA, 4th *January*, 1962.

REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1961

GENERAL

As shown by the Balance Sheet as at 31st December, 1961, the Company's authorised capital of Rs. 10 lakhs has been fully issued out of which Rs. 5,00,500 has been paid up and is held by Mercantile Bank Ltd., Calcutta.

As in previous years, the year under review shows no profit or loss as the transactions of the Company are incorporated with those of the Parent Company, Mercantile Bank Ltd.

In view of the fact that the name of our Company has been changed and in order to comply with the Companies (Amendment) Act 1960 certain consequential changes were made in our Company's Memorandum and Articles of Association, copies of which has amended, have been reprinted.

DIRECTORATE

It is with profound regret that we record the death of Sir B. P. Singh Roy, K.C.I.E., Kt., which occurred on 24th November, 1961.

The vacancy caused by his death will be filled up as soon as possible.

Sir B. P. Singh Roy, K.C.I.E., Kt., was due to retire from the Board this year by rotation. However on account of his death and in order to comply with the requirements of Article 81, Mr. W. H. Jackson retire this year from the Board, but being eligible offers himself for re-election.

During the year Mr. W. H. Jackson was granted leave of absence for a period of three months with effec from 30th June, 1961. During this period Mr. W. K. Dargie was appointed as an alternate Director fo Mr. W. H. Jackson.

AUDITORS

Messrs. Lovelock & Lewes retire but being eligible offer themselves for re-appointment as Auditors fo the ensuing year.

For the Board of Directors,

W. H. JACKSON,
B. GILL, } *Directors.*

F. I. C. HERRIDGE,
Secretary.

CALCUTTA,
Dated the 4th January, 1962.

LABOUR PROBLEMS AND POLICIES

MR. NAVAL TATA CALLS FOR REALISM

THE thoughtful speech delivered by Mr. Naval H. Tata, President of the Employers' Federation of India, at the twenty-ninth annual general meeting of the Federation, held at Bombay on the 23rd inst., contained, in addition to a review of the main developments in the field of labour-management relations during the past year, some significant observations and comments on the problems confronting employers in the country. The appointment of the Bonus Commission, whose recommendations are likely to have far-reaching effects on employer-employee relations in the country, naturally attracted the pride of place in the catalogue of subjects dealt with by the President of the Federation. Mr. Tata welcomed the Commission. If he did not anticipate its findings, it is quite understandable, for that would not have been in order. But it is rather surprising that he did not make any suggestions or recommendations as to how the Commission should go about its job. Instead, he was content with a mere recital of the circumstances and reasons that prompted the appointment of the Commission. It must, however, be said to his credit that he performed this apparently dull business in a very interesting manner.

Genesis of the Bonus Commission

The decision to appoint a Bonus Commission, Mr. Tata recalled, was taken in pursuance of the recommendations of the Supreme Court, which, in turn, was prompted to do so by the confused thinking and equally conflicting and contradictory awards of the tribunals in dealing with bonus claims. Mr. Tata, however, hastened to add that it would be unfair to accuse the worker or the employer or the tribunals for the state of affairs which led to numerous references of disputes to the Supreme Court. Patently, in his view, the trouble was caused by the dubious meaning of the word 'bonus,' the concept and connotation of which had remained undefined for a long time. A variety of interpretations was consequently put on it to suit the situation of each case, the dice being generally loaded against the employer in the name of social justice. It was almost a case of a doctor prescribing medicine without properly diagnosing the disease. It was not surprising, therefore, according to Mr. Tata, that the Supreme Court suggested a review of the entire problem by a high-power commission.

Alluding to the controversy regarding the chairmanship of the Commission, Mr. Tata candidly reiterated that the Government's choice did not inspire confidence in the ranks of employers and, although they ultimately conceded the right of the Government to choose the Chairman, the psychological damage inflicted on employer-employee relations was not, in Mr. Tata's view, sufficiently set right by the subsequent assurances of the Labour Minister. Nevertheless, Mr. Tata fervently hoped that the deliberations of the Commission would result in a solution that would forever solve the complexities of bonus which had been responsible for a great deal of deterioration in industrial relations in the country.

An Unwise Action

Turning to wages, Mr. Tata expressed satisfaction that, on the wage front, the country was endeavouring to establish an orderly growth of wage boards to deal with the fixation of wages in a number of industries. While the controversy over the need-based wage and the various interpretations of the term "need-based wage" had contaminated the atmosphere for a while, it looked as though, according to Mr. Tata, the major industries of the country would soon settle down to the formulation of wage schedules through the machinery of the wage boards. He, however, felt it necessary to refer to a recent development which had caused a certain measure of misgivings with regard to the functioning of these boards. This was the recommendation made by the Wage Board for Tea Industry in Northern India, based on a *majority* decision of the Board, that interim relief be granted to the clerical and manual workers in the tea plantations in Northern India. "It is unfair," Mr. Tata commented, "for a wage board, whose terms of reference are clearly to survey the question of wages impartially, dispassionately and objectively, to recommend, for the sake of expediency, *ad hoc* payments without a unanimous decision. Such short-circuit methods may soon destroy the confidence of the parties to the inquiry and render the implementation of the decisions of the Wage Boards by the employers and workers extremely difficult."

The President of the Federation did well to emphasise the close connection between wages and productivity. He pointed out that, contrary to what was stated in some quarters, India was not a cheap wage-cost economy. It was true that individual earnings of the worker in this country compared less favourably with those in the more advanced countries of the West. Managerial emoluments, too, for that matter, were correspondingly lower. But, in the sphere of practical economics, it was the cost of wage per unit of production that mattered. Two factors were crucial, pointed out Mr. Tata, in determining competitiveness, namely, quality and cost. As for the former, it was primarily the responsibility of the management to be quality-conscious. As for the latter, the cost of a product depended upon the price of raw materials, which was largely controlled by the Government, and the cost of labour. It was not sufficiently appreciated by all concerned, Mr. Tata contended, that, for all practical purposes, in an era of adjudicated awards, the employer had no control over wages. It would be impossible, he declared, for the country to compete in world markets, unless it followed a rational wage policy. It was only then that costs in this country could be on a par with those prevailing in advanced countries.

Social Justice

Mr. Tata did not spell out in detail what he meant by a rational wage policy. But he seemed to imply that it was one which related wages to productivity and which was less heavily overpainted with the vague and elusive concept of social justice. Indeed, his comments on the way the Government seeks to promote social justice are worth quoting:

"It has often been stated in our country that the concept of wages has a wider significance and that it should not be related to productivity only. We do not dispute that it should include an element of what has come to be popularly known as 'social justice.' I shall not question the justification for its inclusion, provided this yardstick of social justice is applied equally energetically both to the organised as well as the unorganised non-industrial worker of the country and reasonable parity maintained between the aggregate wages of both the categories. Strangely enough, such philosophy is reduced to sheer mockery when the organised labour of the textile industry is expected to conform to such standards of social justice initiated by Government, and yet, in the powerloom sector, this yardstick is completely ignored. What is more, there is a growing tendency to enlarge this sector in preference to organised sector, as if it is the intention of Government to perpetuate such social injustice. In the ultimate analysis, wages cannot outrun industry's capacity to pay, nor can they be out of tune with productivity. I shall not say anything more at this stage, except to point out that a recent survey has shown that, between 1951 and 1957, the wage index in the organised sector rose by 24 points, but the productivity index rose only by 8.6 points."

Wide Disparity

Drawing attention to the existence of wide disparity between the different sections of the working population, particularly factory and agricultural labour, Mr. Tata said that agricultural labour received only a fraction of what industrial labour earned. Thus, the average annual earnings of a factory worker in 1958 was Rs. 1,296, and that of Class IV Central Government employees was Rs. 972 (in 1958-59) while that of agricultural labour was only Rs. 99. Mr. Tata did not suggest that wages of industrial labour should be brought down to the level of other workers. Only, he emphasised that it would be most unwise to accentuate the existing big disparities in the earnings of workers in the different sectors and that any increase in the earnings of industrial labour must be preceded by a rise in productivity.

Dealing with the other aspects of the labour situation, Mr. Tata said that, considering the experience of some of the public sector undertakings in associating labour with management, it was unwise to introduce the scheme in haste, at least not until the workers' representatives had developed a full sense of the new responsibilities they were called upon to shoulder. Experience in other countries had clearly shown that executive powers cannot be shared with the workers and must remain in the hands of the management. Mr. Tata, however, added that, where conditions were favourable and good industrial relations existed, management should take an active interest in joint consultation and should be prepared to discuss certain matters with the workers' representatives. The latter, on their part, must be knowledgeable enough to participate in such consultation and there should be no impatience in this matter. In any case, Mr. Tata was firmly of the opinion that this was one of the schemes which should not be imposed or introduced by means of pressure tactics from any quarter. In other words, the experiment ought to be conducted on a purely voluntary basis and must proceed slowly.

Code of Discipline

The President of the Federation expressed satisfaction that, during the last three years the Code of Discipline was in force, industrial strife, in terms of man-days lost, had gone down appreciably. Whether this was the direct outcome of the Code or not, the consensus of opinion, as expressed at the Seminar on the Code of Discipline held last year, was that the Code had considerable potentialities for bringing about better industrial relations.

Mr. Tata made some significant observations on the vexed question of trade union recognition. He pointed out that there was no central statute on the subject. Some States like Maharashtra had passed laws dealing with the recognition of unions on an industry-wise basis, regardless of the representative character of that union at the unit level. There were basic difficulties, according to Mr. Tata, in encouraging industry-wise union and bargaining without ensuring healthy trade union practices at the unit level. The absence of this also militated against other important matters being dealt with at the unit level. He, therefore, appealed to the State Governments, which had passed legislation covering industry-wise unions, to reconsider their views in the light of past experience and make appropriate changes with a view to building up healthy trade unions from below.

The Emerging Pattern

In conclusion, Mr. Tata dealt at length with labour relations in general. He commended the enviable record of cordial labour relations prevailing in the Scandinavian countries and observed that their experience offered some lessons for India. In this connection, he made a critical evaluation of the effect on labour-management relations in general and trade union movement of the policies followed in the past 15 years and pointed out that the pattern of industrial relations that had been evolved was far different from the one obtaining in Scandinavian countries. We may appropriately end this article by quoting below his assessment of the situation in India:

"It is nearly 15 years since our national Government was established. But the picture of industrial relations emerging from our early efforts is far from the one indicated in the Scandinavian countries. The political pattern of our trade-union movement leading to inter-union rivalries, coupled with the understandable reluctance on the part of some employers to recognise a union in the face of such rivalry, has deprived us of the benefits of collective bargaining which has proved so valuable in other countries. In the absence of collective bargaining, we have relied too much on Government interferences and adjudicated awards. There seems to be more emphasis on labour laws than on moral values of mutual accord and agreement. So long as we persist in the philosophy of the State being primarily responsible for ensuring good and healthy industrial relations, we shall never attain standards of industrial peace achieved by other countries by exposing the interests of both employers and workers to the full blast of an organised and well-established system of collective bargaining. Until both the employers and workers are ready to endure, to some extent, the inevitable suffering through a trial of strength upto a point where it does not hurt the national interest, we shall never be in a position to build up healthy and powerful trade union and employers' organisations which are so vitally needed to usher in industrial peace. It would be unfair on my part to single out any one of the three parties concerned for the lack of progress in this direction. It will need a lot of soul-searching by the worker, the employer and the Government to find out the reasons which have prevented us from attaining such industrial peace. More of bipartite agreements and less of adjudicated awards, more of voluntary codes and less of labour laws, more of self-reliance on the part of the employer and the worker and less eagerness on the part of Government to interfere, may perhaps, in course of time, put us on the path of an enduring industrial peace which we need so badly to make our best contribution to the national economy. Let us hope that, through awareness of such needs, we shall attain our goal in the not too distant future."

IN THE SPACE OF 10 YEARS...

the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—*100 more than existed ten years ago.*

RAILWAY BUDGET FOR 1962-63

BOTH FREIGHT RATES AND PASSENGER FARES RAISED

THE final Railway Budget for the current (1962-63) financial year was presented to the third Lok Sabha on Thursday, 19th April, by Sardar Swaran Singh, the new Union Minister for Railways. The interim budget, it will be recalled, was presented on 13th March by Mr. Jagjiwan Ram. The final budget places the estimate of gross traffic receipts for 1962-63 higher at Rs. 545.36 crores, as against Rs. 523.10 crores shown in the interim budget, but the whole of this increase of Rs. 21.26 crores represents the additional revenue which the Minister expects to get from his proposals for adjustments in passenger fares and freights with effect from 1st July next. The estimate of ordinary working expenses is also put higher at Rs. 356.80 crores, as against Rs. 345.60 crores, or a rise of Rs. 11.20 crores. The expansion is due mainly to the payment of increased dearness allowance to lower paid Central Government employees according to the recent decision of the Government. As a result of these changes in earnings and expenses, the net surplus in the budget (creditable to Development Fund) has turned out to be larger at Rs. 23.22 crores, the earlier tentative estimate being Rs. 13.16 crores. The surplus, according to Sardar Swaran Singh, "will just cover the estimated expenditure (Rs. 23 crores) on works chargeable to the Development Fund in 1962-63 and will, therefore, obviate the need for a loan from the General Revenue to finance the Fund." In the estimates presented in March 1962, a loan of Rs. 9.88 crores had been envisaged. The Fund is now expected to close with a nominal balance of Rs. 36 lakhs at the end of March 1963.

The important financial figures of the Railway Budget as now presented are compared with those presented in March 1962 as well as with the revised estimate for 1961-62 and the actuals for 1960-61 in Table A.

Of the anticipated additional revenue of Rs. 21.26 crores, passenger earnings account for Rs. 11.46 crores and goods earnings for Rs. 9.80 crores. Details of gross traffic receipts and working expenses are given in Table B.

The Railway Minister has proposed to revise upwards both freight traffic rates and passenger fares, with effect from 1st July next. The actual revisions are indicated below:

Freight Rates

The basic rate charged in respect of goods will be raised by 50 nP per ton or 5 naye paise per quintal for traffic (including coal) carried up to 40 kilometres and one rupee per tonne or 10 naye paise per quintal in the case of traffic carried beyond 80 kilometres, marginal adjustments being made over distances 41-80 kilometres. In the case of foodgrains, however, the increase in basic rate will be one rupee per tonne only at distances in excess of 160 kilometres, the increase in stages between 41 kilometres and 160 kilometres being evenly spread out between 50 nP and one rupee per tonne. The supplementary charge of five per cent would be levied in addition, as hitherto. These increases will not apply in the case of railway material, postal traffic, military traffic, and export manganese ore. In the case of livestock and sugarcane charged at lumpsum wagon rates, a flat increase of Rs. 5 per 4-wheeled broad-gauge wagon for traffic carried up to 40 kilometres and Rs. 10 per 4-wheeled broad-gauge wagon for traffic carried beyond 80 kilometres, with suitable adjustments for intervening distances, will be made. For livestock and sugarcane carried over metre and narrow gauges, the rates of increase will be Rs. 3.50 nP per 4-wheeled wagon for traffic up to 40 kilometres, and Rs. 7 per 4-wheeled wagon for traffic beyond 80 kilometres. These increases in rates which are charged on wagon basis represent an incidence of increase somewhat less than the charges on per tonne basis. In these cases also, the supplementary charge of five per cent will be levied, as hitherto. The increase in freight rates will in no case exceed Re. 1.05 per tonne, whatever the commodity or whatever the distance over which it is transported.

As the proposal is not for a common percentage increase but a flat increase, a material increase in the transport cost of already high-rated commodities will be avoided. On the other hand, this flat increase would narrow down the existing difference between the lowest and highest freights, as envisaged by the Committee on Transport Policy and Co-ordination. Further, the proposal, resulting as it will, in a somewhat larger percentage increase in the short distance rail traffic, would tend to encourage its offloading to road as is desirable.

Passenger Fares

The incidence of the increase proposed in the first class fares approximates to 15 per cent, while that for second and third class fares will be slightly under 10 per cent. For air-conditioned third class in de-luxe trains, the present surcharge over third class fares will be correspondingly increased, but keeping the fares for this class of travel still below the proposed second class mail fares. Increases had been made in the air-conditioned class fares on 1st April 1955; these fares will also be increased, while maintaining a reasonable relationship with the fares for corresponding journeys by air. As regards the season tickets including suburban, an increase of five per cent over the existing fares is proposed. The revised bases for passenger fares, which is proposed to be adopted from 1st July 1962, is indicated in Table C.

The aforesaid increases in freight and passenger fares have been justified on two grounds. They are: (1) increase in working costs of railways following the enhancement of dearness allowance to staff, etc., and (2) need (even otherwise) to maintain a satisfactory return on heavy additional capital outlay which the railways will have to incur, at present-day high costs, for executing the Plan programmes. Characterising the need for raising additional resources as imperative, the Railway Ministry's supplement to the Explanatory Memorandum on Budget observes:

"At a time when the railway system is greatly expanding, there is also a continued and steady demand on the Railway Development Fund for financing works such as operational requirements which cannot be assessed as being directly remunerative, amenities for railway users, and expanding welfare needs of an increasing staff strength. The surplus to be earned and credited to the Development Fund, therefore, has to be maintained at an adequate level. It would obviously be not desirable to resort to loans from General Revenues to the Development Fund year after year, as will inevitably be necessary if the railways' resources are not augmented."

In the course of his speech, Sardar Swaran Singh gave an account of the rail transport movements planned during the current year. This review shows that the railways have programmed to meet in full the demands of the steel plants and washeries, and to provide initially for a daily movement of not less than 3,646 wagons for other consumers from the Bengal and Bihar fields, as compared with 3,580 wagons in 1961-62 and 3,398 wagons in 1960-61. In the later part of the year, it will be possible to improve on this figure. No difficulties are anticipated in meeting the requirements of the outlying fields in full. The Government's objective in the third Plan is to step up production from these fields. In the result, consumers of coal in general may expect, and will receive, more supplies than during the last year. The railways' estimate of traffic in 1962-63 is an additional 15 million tons. Of this, half will be of coal and goods traffic for steel plants and the other half for others, over and above the traffic carried in 1961-62. With a view to achieving the large increase that has to be planned for coal movements in the third Plan, an appreciable proportion of the increased traffic will be carried in heavy trainloads of the new type of BOX wagons, which are being put into commission in increasing numbers.

Expansion Scheme

The Railway Minister also gave some details of the construction and expansion scheme under the third Plan. According to the review, during 1961-62 (first year of third Plan), the electrification of 528-route kilometres was completed; a further 350-route kilometres are expected to be electrified in 1962-63. Doubling of track of about 600 kilometres was completed in 1961-62; it is programmed to complete 800 kilometres more of doubling in the current year. The fleet of locomotives was augmented by the addition of 41 metre-gauge diesel locomotives in 1961-62; it is expected that 112 broad-gauge and 19 metre-gauge diesel locomotives will be received in the current year. The Chittaranjan Locomotive Works have begun turning out electric locomotives, of which 21 are expected to be delivered before the end of 1962-63, including three such locomotives already turned out, while at the same time fully maintaining the output of steam locomotives as in the past. The output in the Integral Coach Factory has been steadily increasing, and is also being diversified to cover various types of coaching stock; during the last year the factory turned out 598 coach shells, and 644 coaches are expected to be turned out during the current year. Wagon production has suffered difficulties owing to shortage of materials, but these are being steadily overcome. During 1961-62, as many as 19,100 wagons, in terms of four-wheelers, were manufactured, compared with 11,984 in the previous year. The present rate of production exceeds 2,250 per month; this rate will be improved upon in the coming years. Most of the major line capacity works needed to cope with the anticipated rise in traffic during the third Plan period and which take time for execution, have either been sanctioned already or else are ready to be taken up during the current year. The works, machinery and rolling stock programme for the year 1962-63 has been placed at Rs. 295 crores, which is the highest in recent years.

TABLE A: *Railway Finances at a Glance*

(In crores of Rs.)

	1960-61 (Actuals)	1961-62 (Revised)	1962-63 (Budget) As presented in March	1962-63 (Budget) As now proposed

Net working expenses	313.15	330.39	345.60	356.80

*Includes additional earnings resulting from the merger of passenger fares tax with the passenger fares, with effect from 1st April 1961, in lieu of which, however, an annual payment of Rs. 12.5 crores will be made to the General Revenues for distribution to the States, over and above the 4.25 per cent dividend payable by the railways.

TABLE C: *Proposed Passenger Fares*

Distance (Kilometres)	*Bases (In nP per km.)*
First Class:	
1—250	7.7
+251—500	7.0
+501—800	6.3
+Over 800	5.9
The overall average increase on existing first class fares approximates to 14.9 per cent.	
Second Class:	
Mail/Express	
1—250	4.4
+251—500	4.3
+501—800	4.0
+Over 800	3.5
Ordinary	
1—250	3.85
+251—500	3.70
+501—800	3.50
+Over 800	3.20
The overall average increase on existing second class fares approximates to 8.85 per cent.	
Third Class:	
Mail/Express	
1—50*	2.50*
1—250	2.60
+251—500	2.45
+501—800	2.10
+Over 800	1.85
Ordinary	
1—50*	1.90*
1—250	2.15
+251—500	2.05
+501—800	1.80
+Over 800	1.70
*Applicable in the case of journeys up to 50 kms. only. The overall average increase on existing third class fares approximates to 9.85 per cent.	
Air Conditioned Class:	
1—250	13.0
+251—500	13.0
+501—800	12.0
+Over 800	11.5
Surcharge in respect of III class air-conditioned.	
1—800	1.5
+Over 800	1.4

Season Tickets—Increase of 5 per cent over present fares.

NEW PRODUCTS AND PROCESSES

Flame-proof Rubber

MANY attempts have been made to render natural rubber flame-resistant by compounding with some combustion retarding materials such as chlorinated hydrocarbons, ammonium salts, borates and metallic oxides. The high loadings of these materials which are usually required, however, may have a markedly adverse effect on the elastic properties of the products and may also cause processing difficulties in latex applications. A new approach to this problem, developed at the laboratories of the Natural Rubber Producers' Research Association of Malaya, involves the chemical modification of natural rubber so that flame resistance is "built into" the rubber molecule. This also eliminates the possibility of the loss of combustion-retarding components by leaching or other physical means. The modification required is achieved by reacting rubber in the latex form with the polyhalogenated compound trichlorobromomethane (20 per cent). The loss in tensile strengths by this process may be partly made up by a technique similar to masterbatching, in which a more highly modified latex is blended with sufficient natural latex to reduce the chlorobromomethane content to the required level (e.g 12 per cent). One suggested application for these flame-resistant rubbers is in the bonding of hair pads for upholstery and packaging purposes. Another possible application of the latex is in the production of foam rubber.

Anti-shrink Treatment of Wood

A new process for anti-shrink treatment of wood, which is equally effective on coniferous and hard woods, has been developed at the U.S. Forest Products Laboratory, Wisconsin. The process can be used to stabilise rifle stocks against shrinking and swelling due to humidity variations. Reversing the traditional procedure, the stocks are first shaped and semi-inletted from fresh cut green wood. Then they are heavily treated with the stabilising chemical, polyethylene glycol 1000, and then kiln-dried. Best dimensional stability results from treatments that impart a glycol retention of 20-30 per cent (by weight of dry wood) in the thin, critical areas. Only a small portion of the chemical penetrates the thick part of the butt. The preferred treatment consists of soaking the green precarved stocks for 45-60 days in a 30 per cent solution of glycol maintained at 75°F. The glycol inhibits shrink, swell and warp by bulking the wood fibre cells where the large molecules of the stabilising chemical displace the natural moisture of the wood.

Plastics as Conductors

A convenient way of combining the light weight and corrosion resistance of plastic with the electrical conductivity of metal is to coat one with the other. A French firm claims to have found a simple way of doing this. The plastic base is immersed for a few minutes in each of several different chemical solutions that contain selected metallic compounds. These form an intermediate and partially conductive layer that sticks firmly to the base. The whole is then electroplated with a layer of nickel or other metal. The Company claims that the technique is suitable for both decorative finishes and for such items as the printed circuits of electrical apparatus.

Drilling With Sparks

A machine which will drill holes with a diameter little thicker than a human hair through very hard metals has been developed at the B.S.A. group's research centre. Production of the machine has already begun at the Kitts Green, Birmingham, factory of B.S.A. Tools. Known as the Penatron, the machine uses the spark erosion technique, in which a spark jumping between the drill bit and the workpiece wears away the latter to the shape required. This method is not new, but the Penatron differs from other machines operating on the same principle, it is stated, because of the way in which the distance between the drill (which is in effect an electrode) and the workpiece is controlled. Normally a servo mechanism is employed to advance the drill or die automatically, but in the case of deep-hole drilling with very fine bits there is a danger of breakage if the servo mechanism "overshoots" the depth of the hole. This problem has been solved, it is claimed, by making the worktable of the Penatron vibrate, so that in effect the drill electrode continually bounces against the workpiece. Because it is very light and freely suspended, the drill "bit" suffers no damage.

Electropolishing

Melting metals in stainless steel vacuum furnaces for the nucleonic, electronic and aircraft industries of today has demanded highly polished surfaces for the stainless steel to avoid unwanted gases being generated. This is particularly important where speed of production is vital, since gassing characteristics affect the time taken to pump the vacuum furnace chamber down to the required low pressures. An electropolishing process introduced by a British firm, Electropol Processing Ltd. is now being successfully used in Britain for the steel of vacuum furnaces to ensure that the most minute scratches that could harbour dirt and thereby set up gases are removed. The electropolished surface is smooth, gently undulating and easily cleaned.

Vegetable-Chrome-Vegetable Tannage

Though most village tanneries employ bag tanning, sometimes, when the hides are badly cured it is not possible to stitch them into bags. In such cases a vegetable-chrome-vegetable combination tannage process developed at the Central Leather Research Institute, Madras, is claimed to be advantageous. In this method, bag tanning pits are not necessary and the process can be carried out in a small pit or vat even in the open.

THE TRAVANCORE RAYONS LIMITED

PLEA FOR TAX RELIEF TO RAYON INDUSTRY

CHAIRMAN MR. AR. RAMANATHAN'S SPEECH AT ANNUAL MEETING

A PLEA for some relief in excise duty or, alternatively, an increase in the selling price of rayon yarn was made by Mr. AR. Ramanathan, Chairman of the Travancore Rayons Limited, in his speech at the Sixteenth Annual General Meeting of the Company held at Rayonpuram (Kerala State) on Wednesday, 25th April 1962. He also pointed out that, when final products were subjected to heavy excise duties, the levy of excise duty on basic and intermediate raw materials of rayon yarn and cellulose film such as caustic soda, soda ash, glycerine, zinc, etc., was inequitable. A liberal approach to this question, according to Mr. Ramanathan, would yield better results—both to the Government and the Industry.

The following is the full text of Mr. Ramanathan's speech:

"DEAR SHAREHOLDERS,

"It gives me great pleasure to extend to you all a cordial welcome on the occasion of this sixteenth annual general meeting of your Company. The annual report and accounts for the year ended 31st December 1961, having been circulated to you in advance, I hope I have your kind permission to take them as read.

Working Results

"The working for the year 1961 has resulted in a profit of Rs. 61.93 lakhs after providing Rs. 40.13 lakhs for depreciation, Rs. 2.75 lakhs for development rebate reserve, Rs. 1.50 lakh for gratuity reserve and after paying Rs. 32.80 lakhs towards excise duty.

"You will notice from the balance-sheet that the provision for taxation is higher by Rs. 3.30 lakhs compared to 1960, and, with the profit for the year being more or less the same as that of 1960, your Directors have maintained the dividend recommendation on the equity shares, at the same rate of 20 per cent. They have considered it also prudent to create a new reserve, known as 'dividend equalisation reserve.' As the Directors have explained in their report, the reason for this reserve is this: When the huge expansion programmes of the Company are completed, a large amount of development rebate will be allowed to us by the income-tax authorities. In order to avail of this rebate, a development rebate reserve equivalent to 75 per cent of the rebate will have to be set aside. The setting aside of such a reserve will diminish the distributable profits. The object of the dividend equalisation reserve is to help maintain dividend stability in such circumstances.

Excise Duty—Need for Relief

"The increase in profits would have been greater but for the following reasons:

"As I had mentioned in my last speech, the Central Government's 1961 budget raised the excise duty on rayon yarn steeply, by 66⅔ per cent, and, what is more the manufacturers were called upon to bear 60 per cent of the increase. This has meant a loss in profit of nearly Rs. 10 lakhs. Secondly, an equally high excise duty of 20 per cent *ad valorem*, on our cellulose film, was also levied, and, as anticipated, this proved to be a major cause of a fall in demand for the film in the latter part of 1961. Consequent upon this, the increased capacity of our cellulose film plants had to remain unutilised.

"Even during last year, I had submitted that the Government of India should take a balanced and well considered view of the position and offer the industry the relief it deserves, by way of a reduction in the excise duties on rayon yarn and cellulose film. Alternatively, in the case of rayon yarn, the manufacturing units could be allowed to increase the selling prices to some extent. While on this subject, I wish to refer to another point also. In the case of both rayon yarn and cellulose film, there are a number of basic and intermediate raw materials such as caustic soda, soda ash, glycerine, zinc, etc., which also bear excise duty, in addition to the final products. This is, obviously, inequitable, and, in my opinion, a liberal approach to these aspects is likely to yield better results—both to Government and the industry. I for one do agree that sacrifices are necessary on the part of everyone, in the interest of the Plans and the nation.

"The Indian rayon industry has achieved notable success in the short span of a decade. The annual output has increased from 5 million pounds in 1950 to 45 million pounds now. The saving in foreign exchange has been about Rs. 28 crores so far. The target for filament yarn under the third Five-year Plan has been fixed at 75 million pounds. Considering the substantial pace of progress of the economy, this target is easy of achievement, and may require an upward revision to cope with the enormous expansion in demand, which the size of the Plan is likely to generate.

Production

"The production of rayon yarn suffered some shortfall, due mainly to lower output in the older machines which had been working since 1950. There have been many cases where our applications for imports had to be drastically cut due to acute foreign exchange shortage. While I fully appreciate the uncomfortable situation in which the Government is placed, I would plead for more scientific re-arrangement of priorities in such a way that raw materials and spare parts are allowed, in due measure, to existing industries, so that unutilised capacities may be minimised in the overall national interest. The production of moisture-proof cellulose film registered an increase of about 50 per cent over the 1960 production due to the commissioning of our second MST Plant. When the market for the film improves, the increase in our MST production can also be maintained.

Exports

"With the pressing necessity to increase the country's exports, your Company is also making its contribution and striving to explore the export markets. In the case of rayon yarn, we are helping the fabric exporters by supplying them a quota of rayon yarn at subsidised prices. In the case of cellulose film, I am glad to tell you that a satisfactory beginning is being made. The quality of our film has met with good consumer acceptance. Besides the Far Eastern markets, it is also our desire to explore the Middle Eastern markets. Continuous efforts are being made to improve the factory efficiency, process and technology, and the quality of our products.

"The benefits of statistical-quality-control techniques are being availed of; and also the employees at various levels are being suitably educated and trained under courses conducted by the National Productivity Council. A work and job evaluation study is also being undertaken so that men, materials and machinery could be fully utilised.

"As you are all aware, the Company holds an industrial development licence for expansion of its rayon production capacity by another 5 tons per day, which will raise up the total rayon production to 13.6 tons per day. This expansion is expected to cost the Company about 3.5 crores of rupees, which has to be met partly by issue of right shares and partly from long-term borrowings. At the moment, I am unable to give you any indication as to the issue of capital, etc., since the entire scheme depends upon the licence situation. Immediately the licence is received, your Directors expect to consider this question.

"The erection of the cotton linter plant is going on according to schedule. And, as your Directors have stated in their report, in line with its traditional pioneering efforts, your Company will be the first rayon plant to manufacture rayon grade pulp in India. The capacity will be 10 tons per day, initially. The production is expected to start by October/November this year.

"The relations with labour were satisfactory, on the whole. The three-year agreement with the labour terminated on 4th April 1962. It is the desire of your Company to renew it for a longer term in the interest of industrial peace and stable progress. I hope the employees will give their full co-operation.

"I now propose that the Directors' report, balance-sheet and profit and loss account for 1961 be approved and adopted."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

THE CANARA BANKING CORPORATION LIMITED

Registered Office: **UDIPI, S. India**

BOARD OF DIRECTORS

U. GOPALAKRISHNA NAYAK, ESQ., *Chairman.*

LEGAL ADVISER
N. V. KAMATH, ESQ., B.A., B.L., *Advocate.*

GENERAL MANAGER
V. R. KAMATH, ESQ., B.A., LL.B.

DEPUTY GENERAL MANAGER
K. S. SHENAI, ESQ., CERT. A.I.I.B.

DIRECTORS' FIFTY-SIXTH ANNUAL REPORT

The Directors have the pleasure to submit to the shareholders the Fifty-sixth Annual Report for the year 1961. The net profit of the Bank, after making the necessary provisions, is Rs. 8,22,189.96; and with a sum of Rs. 11,249.63 brought forward from previous year's account, the sum available for distribution is Rs. 8,33,439.59. After placing a sum of Rs. 1,65,000 to the Statutory Reserve Fund, the balance left over is Rs. 6,68,439.59, and the Directors recommend the following appropriations:—

		Rs.	nP
1.	To provision for Income-tax	3,90,000	00
2.	To Preference Dividends	75,490	00
3.	To Dividend on Equity Shares at 15 per cent. (Dividends are subject to deduction of Indian Income-tax)	1,87,500	00
		6,52,990	00
	Leaving balance to be carried forward	15,449	59
	Total .. Rs.	6,68,439	59

Your Directors are glad to report that there has been a satisfactory increase in deposits and that the liquidity position has been more than maintained, and this is in accordance with the general trends during the year.

In order to improve the Capital/Deposit ratio of the Bank, it is the intention of your Directors to approach you later in the current year with a proposal to increase Capital.

Shri B. Vaikunta Baliga, who was the Chairman of the Board of Directors on the date of the last Annual Report, had to relinquish his office as Director of the Bank on 27th February, 1961, consequent upon his joining the Cabinet of Ministers to the Government of Mysore. His invaluable guidance has helped not a little in building up the business of the Bank. In his place, Shri U. Gopalakrishna Nayak, a Director longest in office, having been on the Board since 1935, was unanimously elected as Chairman.

Shri V. R. Kamath, General Manager of the Bank having gone on leave from 3rd September, 1961, Shri K. S. Shenai, Deputy General Manager of the Bank is holding additional charge of the duties of the General Manager since then, for the duration of his leave, and as such is the Chief Executive Officer for the time being.

The Administrative Office of the Bank was shifted from Udipi to Mangalore on 5th April, 1961. Under the Scheme of Amalgamation notified by the Government of India, the Bank of Citizens Limited, Belgaum, was amalgamated with your Bank on 17th October, 1961. Out of the 16 branches of the said Bank taken over by your Bank, two, viz., Dharwar and Karwar were closed and amalgamated with our existing branches at those places. Two new branches were also opened, one at Ankola and the other at Kumta. This brings the total number of branches to 78. For the first time, the business of underwriting of shares of other companies was undertaken and the new issue of the shares of Mysore Paper Mills Limited for Rs. 1 crore was underwritten by your Bank to the extent of Rs. 14 lakhs and your Directors are happy to report that there was no need to fulfil any part of the underwriting obligation.

The Directors thank the shareholders, customers and staff for their unstinted co-operation without which it would not have been possible to achieve the all-round progress of the Bank during the year.

(By authority of the Board),
U. GOPALAKRISHNA NAYAK,
Chairman.

AUDITOR'S REPORT

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited as at 31st December, 1961, and also the Profit and Loss Account of the Bank for the year ended on that date with the books of accounts of the Head Office and Branches and report that:

(a) I have audited the accounts of all branches of the Bank;
(b) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit;
(c) Such information and explanations have been found to be satisfactory;
(d) The returns received from the branches have been found adequate for the purpose of my audit;
(e) The transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank;
(f) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required;
(g) In my opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1961;
(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
(iii) proper books of accounts as required by law have been kept by the Bank so far as it appears from my examination of those books; and
(h) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

THREE GOLDEN HORSES....*consistency!*

Consistency is an important word in the production of yarns. A good rayon yarn offers, first and foremost, *consistency*: uniformity, dependability. The most modern of yarn-producing facilities, themselves marvels of operational consistency, produce THREE GOLDEN HORSES Rayon Yarn. And with great *consistency*, the uses for THREE GOLDEN HORSES are increasing. We think you'll agree when we suggest that *consistency* is really the healthy credo of all success, and is desirable in every department of manufacture.

INDIA'S CORPORATE GIANTS IN WORLD FOCUS—I

By Dr. Raj K. Nigam, Ph.D (Econ.) (London)

THE phenomenal growth of the corporate sector in our country during the last fifteen years in particular has in its stride brought forth a galaxy of giant-sized joint-stock companies which has created a stir and sensation throughout the entire length and breadth of the country and has led the people to believe that the country was firmly set on the path of rapid industrial development. This luminous constellation of corporate enterprises also aroused widespread feeling in the country that, within a conceivably short time, the products of giant-sized industrial firms and mills of our country would be competing with those turned out by the gigantic industrial establishments of the U.S.A., Europe, the U.K., Canada in the West and of Japan in the East. It is, indeed, a very remarkable feature of the development of the corporate sector in our country that the emergence of the corporate giants has taken place in a big way within the short time of 15 years or so after the attainment of independence in 1947. In fact, the protovertebral development of some of the present-day corporate giants took place during the World War II period when our country's material and manpower resources were ostensibly deployed for producing a wide range of industrial and consumer goods for the effective prosecution of war efforts and for use in the actual theatres of war. The search for the sinews of industrial production needed for the war efforts started in such an intense manner that the Indian entrepreneurial spirit freed itself from the allurements of traditional investments such as in gold and land and in a few well-established and tested lines of manufactures and took to the manufacture of a whole range of altogether new industries.

A Moot Question

Following this breakaway of the entrepreneurial spirit from the traditional areas of industrial production, the real flowering of entrepreneurship in pristine form took place in the post-independence period when the niddle-noddle industrial policies of the alien Government were duly supplanted by the nationalistic policies laid down by the national Government which aimed at bringing the country nearer to the high industrial plateau on which the world's industrially advanced and rich countries were perkily seated. The Government's economic policies were also directed towards taking the country's economy to the take-off stage in a well-planned and sustained manner. Judged against this background, the emergence of the corporate giants in our country is a matter of real satisfaction and national pride. It is still a moot question whether these giants have become strong monopolies or are in the process of acquiring this notoriety. The answer to this question would depend upon one's sensitivity and approach to the phenomenon of growthmanship in the industrial sector. In fact, the search for the correct answer would require a deep study of individual corporate giants, their structures, mechanics of operation, distribution systems, etc. Truly speaking, only after conducting such a penetrative study could one form some judgment as to which of the corporate giants have attained monopolistic forms. The purpose of this article, however, is somewhat different. It merely attempts to apprise the readers of the position of the topmost corporate leaders of our country *vis-a-vis* the world's biggest corporate giants, as many of us in this country do not have a clear appreciation and understanding of this fact.

The official statistical sources only provide a long-range overall view of the growth of the corporate sector in the country and not the details regarding the development of joint-stock companies of different sizes. The comparative position of joint-stock companies stratified into various size-strata available for the earliest year is that for 1953. In that year, in the total corporate population of 29,312 companies, the number of big and giant-sized companies with a paid-up capital exceeding Rs. 50 lakhs was 307 and of these 250 were public companies and 57 private companies. According to an unpublished research work quoted in the official publication, *The Corporate Sector in India*, the number of big and giant-sized public companies totalled 54 and 82 for undivided India in 1939 and 1946 respectively. The number of such corporate units in 1928 was 62. Thus, notwithstanding the Partition of the country in 1947, over the time-span of 25 years, viz., 1928-53, the number of summit-corporate bodies with a wide public share-ownership increased more than fourfold and during the comparatively shorter period of 1946-53, the number of such companies increased threefold. Further, between 1953 and 1958, the number of private and public big and giant-sized companies increased by 75, with the total number of such companies standing at 382. The number of public companies in the total was 306 and that of private companies 76.

Riskmanship

A further splitting up of the overall total of big and giant-sized companies into companies having a paid-up capital of Rs. 50 lakhs and under Rs. 1 crore each and companies having a paid-up capital of Rs. 1 crore and more each, which are called big-sized and giant-sized companies, respectively, in this country, reveals that there were 226 big-sized and 156 giant-sized companies in the country in 1958 as against 192 and 115 companies, respectively, in 1953. In the aggregate paid-up capital of Rs. 1,306 crores for the entire corporate sector in 1958, the big and giant-sized companies together accounted for Rs. 753.5 crores, that is, about 57 per cent of the total paid-up capital. Taken separately, the paid-up capital of the big-sized companies totalled Rs. 151 crores and of the giant-sized companies Rs. 603 crores, the proportionate share of the two groups in the total capital being 11 per cent and 46 per cent respectively. In the subsequent years, the number of such companies and their paid-up capital have further increased and their share in the total paid-up capital has markedly gone up.

It is thus clear from the foregoing statistics that powerful factors favouring growth of big and giant-sized industrial and commercial ventures are at work in the country. By and large, the big and giant-sized companies which also epitomise the riskmanship of the steadily enlarging class of investors drawn from the rich to middle-income strata of the society and the entrepreneurial spirit and managerial skills of the people, are the offsprings of the first and second Five-year Plans which charged the general atmosphere in the country so intensely and powerfully that the investment potentials inside the country as well as the investible funds of foreign industrial firms appeared on the scene with an unprecedented and spectacular spontaneity.

More to Come

The deep impact of the Five-year Plans and the confidence of the investing class in the economic progress of the country in the coming years are reflected in the growing numbers of new company registrations in the country which during the last three years have averaged 1,600 companies a year. Further, in the total figures of new company formations, the number of giant flotations is in no way small; it has progressively risen during the last five years. The number of big and giant-sized companies are reported to have risen from 44 in 1956-57 to 142 in 1960-61 and the giant-sized companies incorporated with an authorised capital of Rs. 1 crore and more each taken separately increased from 28 in 1956-57 to 89 in 1960-61. It may also be noted here that some of the giant-sized companies have been formed by the Government also, the number being seven in both the years 1956-57 and 1960-61. Judging from the present tempo with which giant-sized companies are being formed in the country, one could not but hope that the number of giant-sized companies would be quite large in the coming years.

We in this country draw the line between corporate giants and companies of other sizes at the Rs. 1 crore authorised or paid-up capital mark. Outside our country in the U.S.A., the watershed line is drawn at the billion-dollar level, in the U.K. at the million-pound mark and in Japan, at the ten-billion-yen point. Principal criteria for determining the size of corporations or companies usually used is the total assets or turnover, and the paid-up capital serves as a subsidiary guide-mark. Moreover, a popular way of communicating the names of the nation's corporate leaders is to single out the first 100 biggest corporations or companies ranked in terms of either total assets or sales. The well-known *Fortune** magazine of the U.S.A. presents a list of 500 biggest industrial companies of the United States every year and, alongside, it also names the 100 largest foreign industrial corporations outside the United States. In the U.K., the list of 100 industrial toppers which was, a few years ago, for the first time, released by the National Institute of Economic and Social Research, London, is brought out by the British Board of Trade, whereas, in Japan, the top 200 largest industrial corporations are every year named by the Industrial Bank of Japan. In our country, the toppers' list is officially drawn up by the Department of Company Law Administration but it has not yet become an annual exercise, as in the case of foreign countries. The corporate toppers have recently been limelighted by some economic journals also in the country. This article carries the study of the corporate giants a stage further and sizes them up against the tall heights of the foreign corporate giants. For comparative study, information for 1959-60, which is uniformly available for various countries has been used in this article.

*Data from the August, 1961 issue of *Fortune* has been used in this article for making a comparative study of the corporate giants.

Tata Engineering and Locomotive Company	1945	28,25 (8)	31,20 (10)	10,00 (14)	1,58 (74)
Dunlop Rubber Company (India)	1936	25,97 (9)	14,83 (22)	3,70 (35)	9,08 (25)
Associated Cement Company	1936	25,55 (10)	43,89 (5)	19,06 (4)	28,37 (3)

* Paid-up capital plus reserves.

To take up the case of the 100 top corporate giants of our country first, the list of such companies for 1959-60 is spearheaded by the Hindustan Steel Company, a Government company, whose total tangible assets (net of depreciation) aggregated approximately Rs. 557 crores. It is followed by the Tata Iron and Steel Company and the Indian Iron and Steel Company at the second and third places. These two companies are separated from the top-ranker by a very wide margin in the size of their total assets. As against the total assets of Rs. 557.1 crores of the Hindustan Steel Company, those of the other two aforesaid companies amounted to Rs. 170.2 crores and Rs. 92.8 crores, respectively. At the bottom of the list, at the hundredth place, figures the Investment Corporation of India, with total tangible assets to the tune of Rs. 5.2 crores. Total tangible assets of the first 100 top companies add up to Rs. 1,978.6 crores and their paid-up capital to Rs. 774.4 crores. The list includes 19 Government companies, whose total assets and paid-up capital aggregated Rs. 839 crores and Rs. 450 crores, respectively. A majority of the companies in the list are engaged in heavy capital goods and basic industries including chemicals and fertilisers; the number of such companies is 53. The relative position of different industries in the list is shown in Table I.

Age Pattern

A study of the age pattern of the top companies reveals that, of the 100 corporate giants, 29 companies came into existence in the post-independence period and, of these, 20 companies were formed during the first two Five-year Plan periods. Fifteen giant companies were formed during World War II and in the immediately following years. By sheer coincidence, the examination of the list reveals that an equal number of the present giants had come into existence during the First World War and in the years immediately following. Among the remaining 41 giants, 10 companies belong to the previous century, the oldest among them being the Bengal Coal Company formed in 1853. This company occupies the eighty-eighth place in the list. The relative position of the top ten giants based on the financial data for 1959-60 is depicted in Table II, with the rankings shown in brackets.

Note:—Subsequently, Sindri Fertilizers and Chemicals has been merged with another giant-sized company, namely, the Hindustan Chemical and Fertilizer Company, occupying the eleventh rank in the list.

On the basis of the volume of sales or main income, the companies shown in Table III occupy the first ten top positions in the country. Figures in brackets in that table indicate the rankings.

(To be concluded)

CENTRAL BANK OF INDIA LIMITED

(*Concluded from page* 752)

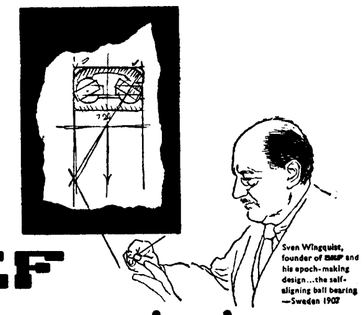
boration with the Devkaran Nanjee Banking Corporation, to set up a Staff Training College, which would be named after the founder of the institution, Sir Sorabji Pochkhanawala. Mr. Mody stated that an announcement to that effect had been made at the time of the golden jubilee and the draft outlines of the Scheme were now being examined.

Budget Proposals

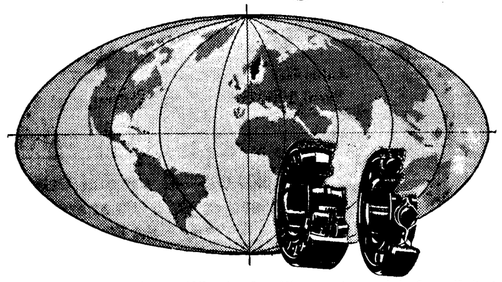
At the conclusion of his speech, Mr. Mody, referring to the Budget proposals of the Finance Minister which were announced after his speech went to press, observed:

"It is idle nowadays to expect from a budget anything but heavy burdens. The reactions of the harassed taxpayer can, therefore, only be in the nature of either a groan or a sigh of relief that it has been no worse, depending on how much has been sought to be extracted from him. He can expect nothing better so long as our Government's planning continues to be what it is. All that can be said, accordingly, about the latest Budget is that the Finance Minister has done his best in the circumstances and is to be commended for his courage in doing away with the vexatious and unproductive expenditure tax. He must not forget, however, that the additional burden he has cast on the corporate sector is unjustified and is bound to affect the pace of industrial development."

from this little sketch



grew the SKF world-wide organization



Sven Wingquist, founder of SKF and his epoch-making design...the self-aligning ball bearing —Sweden 1907

The place was Sweden—the year 1907, when Sven Wingquist invented the first self-aligning ball bearing, which revolutionized the bearing industry.
Manufacturers liked the new type of bearing and demand for it became world-wide.
With the passing of time SKF has grown with the industry it serves.
Today you will find SKF at work on all types of machinery in every industry, filling the intricate precision requirements of the jet aircraft, to the tough needs of huge construction units. Wherever a bearing is required, SKF will meet the requirement—with the finest bearing in the world.

The Debenture Stock now being issued was created by a resolution of the Board of Directors of the Company passed on the eighteenth day of April, 1962 and will be constituted and secured by a Trust Deed in favour of Mercantile Bank (Agency) Private Limited as Trustee for the stockholders. Interest will be payable in Calcutta on 1st May and 1st November in each year in respect of the half-yearly periods ending on the previous day. The initial payment of interest will be made on 1st November, 1962 and will amount to Rs. 30.88 nP per Rs. 1,000 of Stock (subject to deduction of Indian Income-tax at the appropriate prescribed rates); provided that if an application for subscription is received after the 10th May, 1962 and is accepted for allotment of Debenture Stock, the instalment of interest payable on 1st November, 1962 will be proportionately reduced. Application has been made by the Company for permission to execute the Trust Deed pursuant to the provisions of Rule 37 of the Mineral Concession Rules, 1960 while the Trustee has also made application for a Certificate of Approval pursuant to Rule 4(3) of those Rules.

The Trust Deed will contain *inter alia* the following provisions:—

1. SECURITY—(*a*) The Debenture Stock will be secured by a Trust Deed executed in favour of the Trustee for the Debenture Stockholders and comprising a floating charge upon all the moveable and immoveable property of the Company; subject to the condition that the Company shall be at liberty to create charges by way of a floating security in priority to or *pari passu* with the floating charge herein mentioned on its stock of coal and coke wherever situated, consumable stores, book debts, outstanding moneys receivable, claims, bills, contracts, engagements, securities, investments, rights and other moveable assets in favour of banks for securing overdraft facilities in the ordinary course of business.

(b) The Company shall be at liberty from time to time to issue further Debenture Stock provided that such further Debenture Stock shall not in point of security rank in priority to the present issue but may rank *pari passu* therewith only if such further issue so ranking in point of security is approved by the Trustee of the present issue and sanctioned by special resolution at a meeting of the holders of the Debenture Stock constituting the present issue in accordance with the provisions of the Trust Deed securing the same.

The existing hypothecation and any hypothecation supplemental thereto in favour of The Hongkong and Shanghai Banking Corporation in respect of the Company's stock of coal and present and future book debts will take priority pursuant to clause (*a*) above over the floating charge to be created by the Trust Deed.

2. REDEMPTION—(*a*) Such part of the Stock as has not been previously redeemed will mature for payment at par plus accrued interest on the 30th April, 1976. The Company may redeem the whole or any part of the Stock on the 30th April, 1967 or at any time thereafter at par plus accrued interest on giving three calendar months' notice to the Stockholders in that behalf.

(b) The Company will establish a Sinking Fund to which during the year ending 30th April, 1967 and during every succeeding year ending the 30th April, the Company will contribute out of the distributable profits (as defined in the Trust Deed) of the Company's relevant financial year a sum not exceeding Rs. 5 lacs. Commencing from 30th April, 1967, the Sinking Fund may be applied in the redemption of Stock to be selected by drawings plus accrued interest. The Fund may also be utilised in the purchase of Stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a bank until required for redemption.

(c) The Company may at any time purchase Stock in the market at a price not exceeding par plus the accrued interest but exclusive of expenses. The Company may keep any Stock so purchased alive and re-issue the same or may cancel such Stock and in that event an amount equal to the nominal amount so purchased may be treated as having been transferred to the Sinking Fund in any future year.

3. ADDITIONAL PROVISIONS—(*a*) The rights of stockholders may be modified or compromised by a special resolution passed at a meeting of stockholders held in accordance with the Trust Deed, a quorum for this purpose being three stockholders present in person or by proxy. On a show of hands each stockholder present in person will have one vote and on a poll each stockholder present in person or by proxy (who need not be a stockholder) will have one vote for every Rs. 1,000 of stock held.

(b) A register of the Stock will be kept at the Head Office of the Company and a duplicate register at the Registered Office. It may be closed for any periods not exceeding a total of 30 days in any year.

(c) Stockholders will be entitled to their Stock free from equities or cross claims by the Company against the original or any intermediate holder.

(d) The Stock will be registered and transferable in amounts and multiples of Rs. 1,000.

4. TRUSTEES—Included among various provisions designed to indemnify and limit the liability of the Trustee are the following:—

(*a*) The Trustee shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof;

(*b*) The Trustee shall not be responsible for the money subscribed by applicants for the Stock or any part thereof or be bound to see to the application thereof;

(*c*) The Trustee shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed.

Provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show the degree of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

HISTORY AND BUSINESS: The Company was incorporated in England on 20th day of April in the year 1893 as a public company with limited liability. The registered office of the Company is at 149, Leadenhall Street, London, E.C.3. By a special resolution passed on 24th April, 1950 the seat of the management and control of the Company was transferred from the United Kingdom to India from 1st May, 1950. The Head Office and the principal place of business of the Company is at 4, Clive Row, Calcutta.

The Company, which commenced business soon after its incorporation, is one of the oldest coal mining concerns operating in the State of Bihar, producing from its Jharia colleries some of the finest metallurgical coal available in India. The Company owns lands extending to 5,346 bighas or 1,767 acres in the Jharia Coalfield and some 9,093 bighas or 3,006 acres in the Mugma field. The coal reserves of the Company in these areas are estimated to be in the region of 194 million tons, comprising 150.3 million tons in the Jharia field and 43.7 million tons in the Mugma field.

The Government of India in August, 1960 pursuant to the provisions of Section 4 of the Coal Bearing Areas (Acquisition and Development) Act, 1957 notified its intention to prospect the area comprising the Company's Sutikdih Colliery (which was last worked in 1928) and a suit was filed by the Company in the Supreme Court of India to restrain the Government from taking any further action in this regard. The suit was duly heard by the Supreme Court and the decision was in favour of the Government of India. Subsequently, by an order published in the *Gazette of India* on 16th December 1961, Government has purported to acquire this valuable property and a claim for the compensation admissible has been lodged with the appropriate authority. Sutikdih Colliery comprises an area of 723 bighas, containing estimated coal reserves of 29.5 million tons of coal.

A serious outbreak of fire in 1935 in a colliery which adjoins the Company's Bararee Colliery has necessitated expensive protective measures being undertaken by the Company over a period of years, during which the financial assistance received from the Coal Board to meet the cost thereof has been negligible. With the completion during the past year of the Company's ropeway for the transport of sand for stowing at Bararee Colliery, it is hoped that it will now be possible to lay down a solid sand barrier of adequate thickness to ensure that this fire makes no further inroads into the Company's property.

Consequent upon the acquisition by Government of the Sutikdih Colliery, already referred to, a dispute has arisen between the Company and the National Coal Development Corporation Limited in regard to the sand rights in the Damodar River previously allotted to the Company by the Coal Board. The National Coal Development Corporation Limited has meanwhile offered, subject to the concurrence of the Government of India, to enter into an agreement for the collection by the Company of specified quantities of sand for a limited period not exceeding five years, which will permit of the Company making alternative arrangements for supplies of sand required for stowing purposes.

DEVELOPMENT: The Government of India's Third Five-Year Plan has fixed a target of 97 million tons of coal to be reached by 1965-66, representing an increase of 37 million tons over the Second Plan target. Of this increase, some 17 million tons is expected to be raised from the collieries in the private sector of the industry. To achieve this increased level of production with the prospect of a further increase being called for during the following five years a very substantial capital outlay is involved, including large amounts in foreign currencies, and the Government of India has arranged for facilities to be made available through the International Bank for Reconstruction and Development for acquisition of the necessary foreign exchange to cover the requirements of, for the present, the first two years of the Third Plan period. The industry's ability to achieve the Third Plan target set for it will depend to a considerable extent on the progress which is made in development of the necessary transport facilities as well as in overcoming the irregular supplies of electric power and shortage of explosives.

The Company has during the past few years been engaged in carrying out a programme of expansion of output which involves the reorganisation and modernisation of its collieries to meet the increased demand for coal, primarily from the steel industry, during the Third Five-year Plan period. It is anticipated that raisings will be increased from the present level to approximately 1.6 million tons per annum by the end of 1962.

FINANCE: The total capital expenditure incurred by the Company during the two years ended 30th April, 1961 in connection with the reorganisation of the collieries and the planned expansion of output amounted to £401,314 (Rs. 53,50,862). During the current year which commenced on 1st May, 1961, further capital expenditure actually incurred up to 31st March, 1962 amounted to £105,931 (Rs. 14.12,417). The additional expenditure contemplated to complete the present programme is £291,023 (Rs. 38,80,308) and it is anticipated that all of this will have been incurred by the end of 1963. The total capital expenditure in connection with this programme will amount therefore to £798,268 (Rs. 1,06,43,587) and to date has been financed from the Company's own resources, which have been largely supplemented by advances received from The Hongkong and Shanghai Banking Corporation secured on the Company's stocks of coal and book debts. The proceeds of the present issue will be utilised to repay The Hongkong and Shanghai Banking Corporation which has, however, undertaken to provide further finance which, together with a contemplated issue of additional share capital within the next two years, will enable the programme to be completed.

There has been a considerable improvement in the working results of the Company over the last two years. For the year ended 30th April, 1960 raisings amounted to 583,111 tons and there was a net loss on the year's working of £3,196. For the year ended 30th April, 1961 raisings increased to 1,087,040 tons and the profit for the year after providing for depreciation and taxation amounted to £122,534. While in the recent past raisings have from time to time been restricted due to irregular electric power supplies, a shortage of explosives and deficiencies in railway transport facilities, it is nevertheless anticipated that at least 1,275,000 tons of coal will be produced during the current year ending 30th April, 1962. Profits for the ten months ended 28th February, 1962 are estimated to have exceeded the profits of the corresponding period during the previous financial year.

A high proportion of the Company's output consists of high grade coking coal, the production of which was for a number of years restricted pursuant to the provisions of the Coal Mines (Conservation and Safety) Act, 1952. It was only with the emergence of the greatly increased demand for this type of coal for the purposes of the country's

expanding iron and steel industry that these restrictions ceased to operate. In these circumstances, the financial results during recent years, until it became possible to increase output to offset rising costs, do not afford a true index of the likely course of profits within the next few years but, as will be observed from the report of the Company's Auditors incorporated in this prospectus, the profit for the year ended 30th April, 1961 amounted, after providing for depreciation but before providing for taxation, to £161,352 (Rs. 21,51,360). On this basis and after making an adjustment for interest on the indebtedness to be repaid out of the proceeds of this issue, the annual interest on the Debenture Stock is covered more than seven times.

By a Notification published in the *Gazette of India* dated 29th December, 1961 the Government of India in exercise of the powers conferred by Section 30A of the Mines and Minerals (Regulation and Development) Act, 1957 have in effect provided that in respect of its leases the Company will in future be required to pay royalty at the rate of 2½ per cent on the f.o.r. price of coal despatched. Although a simultaneous increase in the controlled price of coal has been granted, this increase will not compensate the Company for the additional royalty payable and it is estimated that the net effect on future profits will be a reduction of approximately Rs. 3,50,000 *per annum*, in respect of which, however, relief from taxation will be admissible.

If the capital expenditure between 1st May, 1961 and 31st March, 1962 is added to the written-down value of the fixed assets as at 30th April, 1961 as shown by the report of the Auditors and if adjustment is made for depreciation incurred between these dates, the written-down value of the fixed assets as at the date of this prospectus is more than twice the amount of the Stock now being issued.

STATUTORY AND GENERAL INFORMATION: The main objects specified in the Company's Memorandum of Association may be summarised as consisting in carrying on the business of coal owners and colliery proprietors and with this object to implement agreements entered into with various parties at the time of the Company's incorporation; to purchase, lease or otherwise acquire concessions, lands, estates and properties for mining and for any other purpose together with any rights and privileges belonging thereto, developing the resources thereof by building, planting, clearing, mining and otherwise dealing with the same; to acquire coal, iron ore or other mines and quarries and explore mining and other rights and generally to explore mines, lands and rivers in search of coal, slates and other mineral substances of all kinds and to carry on any metallurgical operations; to cultivate and improve lands, to construct roads, railways, tramways etc., to acquire manufactories, buildings, etc. and to carry on business as miners, storekeepers, planters or any other business which may be conveniently carried on in conjunction therewith.

No share or loan capital is under option or agreed to be put under option.

The Company has not issued any redeemable preference shares nor is there any present intention to do so. No shares or debentures have within the two years preceding the date of this prospectus been issued or agreed to be issued as fully or partly paid up otherwise than for cash.

No amount or benefit has been paid or given within the two years preceding the date of this prospectus or is intended to be paid or given to any officer of the Company save as remuneration for services as a Director or employee of the Company.

Sir John Brown, a Director of the Company, is a Director, and Mr. Narsing Dass Bangur, Mr. Govind Das Bhatter and Mr. T. C. Hornby, Directors of the Company, are members of Jardine Henderson, Limited, the Company's Managing Agent and Secretaries and as such are interested in the managing agency agreement hereinafter referred to.

No property in which a Director is directly or indirectly interested has been acquired by the Company within two years of the date of this prospectus or is proposed to be acquired except for properties purchased or acquired during the ordinary course of business from bodies corporate in respect of which the interest of the Directors of the Company consists solely in their being members or Directors of such bodies corporate.

On July 11th, 1952 £120,000 of the Company's reserves were capitalised and applied in paying up in full 120,000 Ordinary Shares of £1 each which were issued to members of the Company as bonus shares.

The qualification of a Director is the holding in his own name or jointly of shares of the face value of £250.

The remuneration payable to a Director is Rs. 150 *per mensem*. The Directors are entitled to be paid reasonable travelling and hotel and other expenses incurred in the execution of their duties as Directors.

The Managing Agent is entitled to appoint one Director to the Board of Directors of the Company in terms of Article 81 of the Company's Articles of Association and such Director is not liable to retirement by rotation.

The Managing Agent has been appointed to hold office for a period of ten years from the first day of May, 1950 and thereafter from year to year until its term of office shall be terminated by six months' notice in writing given by the Company to the Managing Agent, on the following terms as to remuneration:

(a) a commission at the rate of five per cent on the net profits of the Company derived from the business of the Company carried on in India, excluding the Purchased Coal account and after deducting London expenditure, United Kingdom and all other taxes on income and depreciation;

(b) a further commission at the rate of two annas per ton on all coal and at the rate of four annas per ton on all coke despatched from the Company's collieries with a minimum commission of Rs. 24,000 per annum;

(c) a monthly allowance of Rs. 3,000 to cover salaries and passage money of supervisory staff in the Company's Calcutta office; and

(d) a monthly allowance of Rs. 500 in respect of rent-free office accommodation to be provided in Calcutta.

The Managing Agent is a public limited company. Its issued and subscribed capital is Rs. 2,50,00,000 consisting of 50,000 5 per cent Preference Shares of Rs. 100 each fully paid and 200,000 Ordinary Shares of Rs. 100 each fully paid.

The share capital of the Company is £240,000 divided into 240,000 Ordinary Shares of £1 each.

Whenever the capital of the Company is divided into different classes of shares the special rights attached to any class may, subject to the provisions of the statutes, be varied or abrogated, either with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of an extraordinary resolution passed at a separate general meeting of such holders.

In a general meeting of the Company, on a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him.

The Directors may decline to register a transfer of shares upon which the Company has a lien or, in the case of shares not fully paid up, to a transferee of whom they do not approve.

The Directors may from time to time at their discretion borrow or secure the payment of any sum or sums of money for the purposes of the Company, provided that the aggregate amount at any one time owing by the Company shall not without the previous sanction of the Company in general meeting exceed twice the aggregate amount of the nominal capital of the Company for the time being issued and the reserves including undistributed profits.

Every director, managing agent, manager or officer of the Company or its auditor shall be indemnified by the Company against all liability incurred by him in such capacity in defending any proceedings in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 448 of the Companies Act, 1948 in which relief is granted to him by the Court.

CONTRACTS: (a) A contract dated 24th April, 1950 was entered into between the Company and Jardine Henderson, Limited appointing Jardine Henderson, Limited to be the Managing Agent of the Company on the terms as to remuneration hereinbefore mentioned for a period of ten years from 1st May, 1950 and thereafter from year to year until its term of office shall be terminated by six months' notice in writing given by the Company to the Managing Agent.

(b) The following contracts not being contracts in the ordinary course of business which are or may be material have been entered into by the Company within two years of the date of this prospectus:

(i) dated 18th April, 1962 between the Company and Place, Siddons & Gough (Private) Ltd. relating to the underwriting of Rs. 40,00,000 of Debenture Stock for a commission of 2 per cent of the par value thereof;

(ii) dated 18th April, 1962 between the Company and the Life Insurance Corporation of India relating to the underwriting of Rs. 10,00,000 of Debenture Stock for a commission of 2 per cent of the par value thereof.

UNDERWRITING: The entire issue in aggregate is being underwritten by Place, Siddons & Gough (Private) Ltd. and the Life Insurance Corporation of India for a commission of 2 per cent of the par value thereof. In the opinion of the Directors the resources of the Underwriters are sufficient to enable them to discharge their obligations.

BROKERS: Brokerage of one-half of one per cent will be paid by the Company on the nominal value of allotments made in respect of applications bearing the stamp of a recognised Broker.

COMMISSION: No commission has been paid by the Company within the two preceding years or is, save and except the commission to underwriters and brokerage aforementioned, payable by the Company for subscribing or agreeing to subscribe, or procuring or agreeing to procure subscriptions, for any shares in or debentures of the Company.

EXPENSES: The expenses of the issue, including underwriting commission and brokerage, are estimated not to exceed Rs. 3,07,800 and are payable by the Company.

CONSENTS: The consents in writing of the Auditors, the Trustee, Solicitors, Brokers and Bankers to the Company to act in the capacities stated have been obtained. Messrs. Lovelock & Lewes have given and have not, up to the date of delivery of this prospectus for registration, withdrawn their written consent to its issue with the inclusion therein of their report set out above in the form and context in which it appears.

The foregoing written consents have been attached to the copy of this prospectus which has been delivered to the Registrar of Companies, New Delhi, for registration together with copies of Contracts (a), (b)(i) and (b)(ii) above and copies of such written consents together with copies of the Contracts referred to have been attached to the copy of the prospectus delivered to the Registrar of Companies, West Bengal. A copy of the consent in writing of Messrs. Lovelock & Lewes to the issue of this prospectus with the inclusion therein of their report set out above and a copy of Contracts (b)(i) and (b)(ii) above have been attached to the copy of the prospectus which has been delivered to the Registrar of Companies in London.

DOCUMENTS: Copies of the Articles of Association of the Company, draft Trust Deed constituting the Stock now being issued (subject to modification), audited accounts for the five years to 30th April, 1961, the Auditors' report contained herein, the Consent Order of the Controller of Capital Issues, the Consent Order of the United Kingdom Treasury and copies of other contracts, agreements and documents herein mentioned can be inspected between 10 a.m. and 12 noon on any business day till the expiration of fourteen days from the date of publication of this prospectus or until the subscription list closes, whichever is the earlier, at the Head Office of the Company, 4, Clive Row, Calcutta.

APPLICATIONS: Applications, which will be accepted from persons resident in India only, must be for amounts of Rs. 1,000 of Stock or multiples of Rs. 1,000 and must be made on the accompanying form. All application forms properly completed must be lodged together with the full amount payable with one of the following branches of the undermentioned Banks:

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CALCUTTA—31, Dalhousie Square, Calcutta-1.

BOMBAY—16, Veer Nariman Road, Fort, Bombay-1.

MERCANTILE BANK LIMITED

CALCUTTA—8, Netaji Subhas Road, Calcutta-1.

MADRAS—16, First Line Beach, Madras-1.

NEW DELHI—"E" Block, Connaught Place, New Delhi.

BOMBAY—52/60, Mahatma Gandhi Road, Bombay-1.

BANK OF INDIA LIMITED

HYDERABAD—B4—329, Sultan Bazar, Hyderabad (Deccan).

INDORE—Pungallia Bhavan, Santha Bazar, P.O. 60, Indore City.

AHMEDABAD—Bhadra, Ahmedabad.

Payment should be made by cheque or draft drawn on a scheduled bank in Calcutta, Bombay, Madras, Delhi, Hyderabad, Indore or Ahmedabad as the case may be in favour of "The Hongkong and Shanghai Banking Corporation," "Mercantile Bank Limited" or "The Bank of India Limited" (as the case may be) "A/c. The East Indian Coal Co., Ltd. Debenture Stock" and crossed "A/c. Payee only." Cheques or bank draft drawn on banks elsewhere WILL NOT BE ACCEPTED.

No receipt will be issued in respect of moneys paid but an acknowledgment will be forwarded by post in due course by Letter of Allotment or Letter of Regret and, where allotment is not made in full, by return of any surplus application money paid, in which latter event bank commission, if any, will be payable by the applicant. Allotment Letters along with Refund Orders, if any, will be despatched within two months of the closing of the subscription list. Due intimation will be given when these Letters of Allotment should be surrendered to the Company in exchange for Debenture Stock Certificates.

Debenture Stock Certificates will be ready for despatch by registered post within four months from the date of allotment. Pending the issue of Certificates the Company will register transfers against Letters of Allotment accompanied by duly completed forms of transfer.

4, CLIVE ROW, CALCUTTA-1.

4, LYONS RANGE,
CALCUTTA-1
16th April, 1962.

Dear Sirs,

We have examined the books and accounts of your Company as kept in Calcutta in which are incorporated the certified returns from the Collieries and which have been audited by us for the five years ended 30th April, 1961, and report that the profits and losses of the Company were as set out below.

These profits and losses have been arrived at after charging all expenses of working and management and after making such regroupings and adjustments as are, in our opinion, appropriate.

	Year ended 30th April, 1957	*Year ended 30th April*, 1958	*Year ended 30th April*, 1959	*Year ended 30th April*, 1960	*Year ended 30th April*, 1961
INCOME	£	£	£	£	£
Profits after deducting Colliery and Calcutta Expenditure.	54,055	35,103	58,016	4,211	219,178
Income from Investments	8,056	9,031	6,887	5,968	6,050
Adjustments relating to previous years	—	6,589	1,635	13,836	—
Profit on Sale of Assets	—	—	550	5,297	1,400
Miscellaneous	23	13	26	20	46
	62,134	50,736	67,114	29,332	226,674
OTHER EXPENDITURE					
London Expenses	332	322	391	343	333
Directors' Remuneration	675	675	675	675	675
Audit Fees	285	285	465	435	412
Commission payable to Staff and Managing Agents	1,081	1,368	2,704	1,575	10,960
Colliery Cesses	9,723	8,830	9,589	9,300	13,388
Adjustment of Stores	—	—	—	—	12,335
	12,096	11,480	13,824	12,328	38,103
Profit before Depreciation, Taxation and Wealth Tax	50,038	39,256	53,290	17,004	188,571
Depreciation as charged in the Accounts	13,283	12,827	17,284	17,949	27,219
Profit after charging Depreciation	36,755	26,429	36,006 (Loss)	945	161,352
Taxation	27,060	15,078	14,775	2,251	38,818
Wealth Tax	3,168	2,963	—	—	—
	30,228	18,041	14,775	2,251	38,818
Net Profit/Loss after Taxation and Wealth Tax	(Profit) 6,527	(Profit) 8,388	(Profit) 21,231 (Loss)	3,196	(Profit) 122,534
Exchange—1s. 6d. per Rupee	=Rs. 87,027	=Rs. 1,11,840	=Rs. 2,83,080	=Rs. 42,613	=Rs. 16,33,787

Notes: (1) For the years 1957 and 1958 Taxation and Wealth Tax have been charged on the basis of completed assessments and for the years 1959 to 1961 provision has been made at the rates laid down in the respective Finance Acts.

(2) The figures of "Profits after deducting Colliery and Calcutta Expenditure" as shown in the above statement are after charging Commission to the Managing Agents at -/2/- per ton of Coal and -/4/- per ton of Coke despatched from the Company's Collieries.

Commission on Profit payable to the Managing Agents has been calculated at 5% on the Net Profit of the Company after deducting Depreciation and Taxation.

We also report that the assets and liabilities of The East Indian Coal Co., Ltd., as at 30th April, 1961, which is the last date to which the Company's accounts were made up prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such regroupings as, in our opinion, are appropriate.

	£	£	Rs.
ASSETS			
Fixed Assets—At net book value	606,223		
Expenditure on Fixed Assets in course of installation	125,792		
Investments—Quoted—At Cost—In Government Securities and in Ordinary Shares, fully paid (Market Value—£ 101,421 = Rs. 13,52,280)	135,373		
Investments—Unquoted—At Cost less amounts written off—In Shares and Debentures, fully paid	18,917	886,305	1,18,17,400
CURRENT ASSETS—			
Stock of Stores	88,167		
Stock of Coal—At Cost	119,535		
Book Debts—Considered Good—Unsecured	288,092		
Advances and Deposits	95,253		
Cash at Bank, in hand and on Deposit	15,810	606,857	80,84,760
		1,492,662	1,99,02,160
Deduct: LIABILITIES			
Bank Loan—Hongkong and Shanghai Banking Corporation—Secured	389,295		
Sundry Creditors (including Provisions)	359,188		
Dividends	37,969		
Provision for Taxation	20,783	807,235	1,07,63,133
NET ASSETS—As at 30th April, 1961		685,427	91,38,027
REPRESENTED BY			
240,000 Ordinary Shares of £1 each fully paid up	240,000		
Premium on Shares	40,000		
Capital Reserve	49,584		
Development Rebate Reserve	66,496		
Other Revenue Reserves	275,125		
Profit and Loss Account (Balance)	16,280	685,427	91,38,027

Notes: (i) Contingent Liability—Claim against the Company, as a Partner of Pandra Syndicate, not acknowledged as a debt — £ 4,500

(ii) No Depreciation has been provided on Land and Colliery Development. = Rs. 60,000

(iii) Contracts made for Capital Expenditure amount to £58,380.

(iv) Bank Loan is secured by a floating charge on the Company's Plant and Machinery, Stock of Coal, Book Debts and deposit of Title Deeds and Investments.

The Dividends paid by the Company in respect of the five years ended 30th April, 1961, were as follows:—

	Rs.
Year ended 30th April, 1957 on 240,000 Shares of £1 each @ Re. 1.50 per share (without deduction of Tax)	3,60,000
Year ended 30th April, 1958 on 240,000 Shares of £1 each @ Re. 1.00 per share (without deduction of Tax)	2,40,000
Year ended 30th April, 1959 on 240,000 Shares of £1 each @ Re. 1.25 per share (Gross—subject to deduction of Tax)	3,00,000
Year ended 30th April, 1960 on 240,000 Shares of £1 each @ Re. 1.00 per share (Gross—subject to deduction of Tax)	2,40,000
Year ended 30th April, 1961 on 240,000 Shares of £1 each @ Rs. 2.00 per share (Gross—subject to deduction of Tax)	4,80,000

Yours faithfully,
LOVELOCK & LEWES.

THE NATIONAL RAYON CORPORATION LTD.

"OUR RAYON YARN PRICES SECOND LOWEST IN WORLD"

CHAIRMAN, MR. KASTURBHAI LALBHAI'S ANNUAL SPEECH

DESCRIBING the criticism that the selling prices of rayon yarn are not comparable with the prices prevailing in other rayon producing countries in the world as incorrect, unwarranted and misleading, Mr. Kasturbhai Lalbhai, Chairman of the National Rayon Corporation Ltd., told the Annual General Meeting of the Corporation, held at Bombay on Thursday, 26th April, 1962, that "our prices are, in fact, substantially lower than the internal prices prevailing in all the other rayon yarn manufacturing countries in the whole world." He added that "these prices are even lower than the landed cost of the corresponding imported varieties."

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to this fifteenth annual general meeting and placing before you for consideration the Directors' report on the working of the Company for the year 1961 together with the statements of accounts for that period. These have been in your hands for some time now and, with your permission, I shall take them as read.

Production

"The production of the rayon yarn during the year under report has increased by Rs. 77 lakhs and that of chemical products by Rs. 17 lakhs as compared to the year 1960. There has been an all-round increase on the expense side due to the increase in excise duty and increase in other items due to higher production, both of the rayon yarn and of chemical products. It is hoped that the turnover for the year 1962 will be higher, as the Tyre Cord Plant has gone into production and the expanded rayon plant will be in production for the whole year as against only six months in the year under report.

"No allocation has been made towards gratuity reserve this year, as your Board has decided to pay the amount of gratuity, if and when it arises, and charge it to the accounts of the year in which it becomes payable.

"There will be no further payment on account of royalty to Skenandoa Rayon Corporation, as our liability to pay it has ceased with the close of the report year.

"We have now heard from the Government of India that they have approved of the Industrial Credit and Investment Corporation of India, granting our Company foreign exchange loan to the tune of Rs. 39 lakhs as applied for by us, for the expansion of the caustic soda plant. The import licence permitting import of requisite machinery is expected any moment, and it is hoped that the expanded capacity would be installed sometime early next year.

"The tyre cord and fabric manufactured by the Company at its newly set up plant has been sent to leading manufacturers of tyres for tests. One of the manufacturers of tyres being satisfied has already placed a trial order for a sizable quantity and negotiations are afoot with a few other tyre manufacturers for the supply of tyre cord.

"The ensuring of adequate and uninterrupted supply of coal and electrical energy continues to be a headache to the Company. In case of industries like ours, who have a continuous manufacturing process, the problem becomes even more acute. I only hope that in due course of time the situation will improve.

Rayon Yarn Prices

"For quite some time now, the rayon manufacturing industry is being criticised with regard to the selling prices of rayon yarn fixed by them under the plea that they are not comparable with the prices prevailing in other rayon producing countries in the world. This criticism is not only incorrect, but the actual facts are entirely different from what they are represented to be. The ex-factory prices exclusive of the excise duty, permitted to be charged by the indigenous rayon manufacturing units are, in fact, substantially lower than the internal prices prevailing in all the other rayon yarn manufacturing countries excepting one; thereby you will appreciate our prices become second lowest in the whole world. I may also state that these prices are even lower than the landed cost of corresponding imported varieties. Such criticism, to say the least, is, therefore, unwarranted.

"In this connection, I may also mention that the manufacturers of rayon yarn as a whole agreed to the absorption of 60 per cent of the additional excise duty imposed last year on the specific understanding that the consuming units in their turn will not pass on the burden of this excise duty to their customers. We regret to find that this understanding has not been honoured. In the circumstances there does not appear to be any cogent reason for asking the manufacturers to continue the absorption of the 60 per cent of the additional excise duty. Suitable representation is being made to the authorities concerned to reconsider this matter.

Licences for Pulp

"While the Company has been receiving licences for raw materials required for operating of our plant at its rated capacity, the position is somewhat different in the case of licences for pulp. The Government appears to have fixed a certain quota of foreign exchange for the import of rayon grade pulp into the country as a whole. This quota is not being increased in proportion to the increased capacity coming in operation. The available exchange is, therefore, being distributed *pro rata* amongst the operating units, resulting in curtailment of the quota of the existing units from time to time. We are thus compelled to purchase the balance of our requirement of pulp, utilising the licences made available against the export promotion scheme. These licences are made available, as you are aware, in consideration of certain quantity of yarn being sold at substantially lower rates, which, in effect, goes to increase the cost of pulp. The landed cost of sulphur has also increased consequent upon the shipping being restricted to the U.S. bottoms. These factors, combined with the overall increase in the wage rate, transport, electricity etc., have contributed to the increase of the production cost.

"I am glad to inform you that the management's relations with the labour continued to be cordial during the report year. The dispute about the quantum of bonus paid for the year 1960 was referred by the Workers' Union to the Labour Commissioner, on whose report the Government initially decided in the Company's favour. However, a letter has been recently received from the Government informing that, on reconsideration, the matter has been referred to the Labour Court for adjudication.

"A suggestion was made at the last annual meeting that a statement from the Chairman should be circulated to the shareholders along with the report and accounts of the Company. I regret this could not be done this year, but I may assure you that the suggestion will be implemented from ensuing year.

"In conclusion, I must say a word about the workers and the staff, who, by their efficient work, have contributed in a large measure to the smooth running of the plant and the satisfactory working of the organisation.

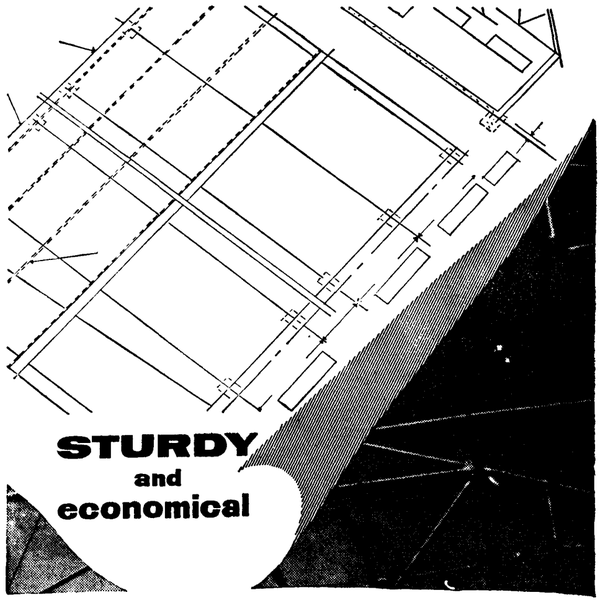
"With these observations, I commend the report and the statements of accounts for adoption and propose the following resolution:—

Resolution

"'The fifteenth annual report and the statements of accounts for the year ended 31st December, 1961, be and they are hereby adopted.'

"Thank you, gentlemen."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in.
SLS/44	44 ft.	10 ft. 1/8 in. and 13 ft. 4 1/8 in.

THE DUNLOP RUBBER COMPANY (INDIA) LTD.

ADEQUATE ROAD TRANSPORT FACILITIES WANTED

MANAGING DIRECTOR, MR. M. L. BEXON'S SPEECH

A STRONG plea for giving all possible encouragement to the development of road transport was put forward by Mr. M. L. Bexon, M.C., Managing Director of the Dunlop Rubber Company (India) Ltd., in his speech at the Thirty-sixth Annual General Meeting of the Company held at Calcutta on Tuesday, 24th April 1962. Mr. Bexon pointed to the persistent shortage of transport which affected the movement of finished products from the factory to the various sales offices and said that increasing use of road transport for long-distance routes had proved very helpful. Emphasis, he declared, should be placed on road building and maintenance as a positive contribution towards solving the existing transport difficulties.

The following is the full text of Mr. Bexon's speech:

"LADIES AND GENTLEMEN,

"I have much pleasure in welcoming you to the 36th annual general meeting of the Company. The Directors' report and accounts have been in your hands for some time and, with your permission, I should like to take them as read. You will have noticed that we have this year for the first time incorporated some information and photographs of the activities of your Company, and I am sure you will agree that this is a worthwhile addition to your general knowledge of the Company's affairs.

"The year under review saw both our factories at Sahaganj and Ambattur working to full capacity, the notable feature being a general increase in productivity which was most encouraging.

"During the early part of the year, the Tyre Dealer Associations continued to play a worthy role in ensuring an equitable distribution of the sizes in short supply at list prices to consumers, but, with the onset of the monsoon, retail selling prices generally began to fall: by the end of the year, the general shortage of tyres, except in a few sizes and types, was no longer felt and trading tended to return to normal.

Demand Position

"Increased supplies of our highway truck and bus tyre were made in the main sizes, but the demand for this extremely popular pattern remained unsatisfied. Similarly, our Gold Seal car tyre continued to maintain its high level of acceptance with users and remained their first preference.

"Throughout the many irrigation and industrial projects, our off-the-road tyres continued to be in keen demand and particular mention may be made of the Dunlop 'Powergrip' and 'Earthmover EM.7' patterns which found ready acceptance for their high quality and durability.

"Sales of cycle tyres and tubes in the domestic market increased, although our deliveries to the bicycle industry were below the level of 1960, as the activities of some of these concerns declined during the period. It is our view that the general trend in this industry will improve before long and the signs today already confirm this view.

"In the industrial rubber products field, our conveyor belting expansion was completed during the period and field reports on the high quality of our product continued to be most encouraging.

"The demand for industrial and other types of hoses was also satisfactory and it is true to say, I think, that, in every large project throughout the country, Dunlop hoses are being used.

"Dunlopillo sales remained at a high level and the demand for our range of products continued to exceed our manufacturing capacity. It is of interest that sales of Dunlopillo for industrial applications increased considerably.

"During the year, we were continually handicapped by the shortage of transport for the conveyance of finished products from our factory at Sahaganj to our various sales offices spread throughout the country, and this problem unfortunately still remains with us today. Increasing use of road transport where possible for long-distance routes has proved very helpful and we would strongly urge that this medium be given every encouragement to develop to the full. Emphasis, we feel, should be placed on road building and maintenance as a positive contribution towards solving the existing transport difficulties.

Exports

"Your Company has responded to Government's call for exports and we are currently exporting all types of tyres, cycle rims and accessories. We are also seeking to widen the range of products we export and negotiations are in progress to this end.

"However, I feel it would not be out of place to mention that export business is not only highly competitive but has its own special difficulties, and by its very nature cannot be built up over a short period of time.

"Nevertheless, I am glad to be able to tell you that our cycle tyre exports in 1961 were 17 per cent higher than in 1960 and, in the first quarter of this year, our overall exports were running at a level over 50 per cent higher than the same period in 1961.

Expansion Plans

"I am sorry to report that there has been a delay in implementing our expansion plans, which were mentioned at this time last year. You will probably have seen Press reports that Government are considering the question of raising the target for the automobile tyre manufacturing capacity to be established during the third Five-year Plan. It is to be hoped that their decision will be announced soon and that we shall then be able to go ahead with our full plans, because Ambattur has been designed so that economical expansion can take place quickly and efficiently.

"Meanwhile, we are implementing some small expansions at both factories for which we have licences. We also have a licence to manufacture P.V.C. belting, for which there is a good demand from the coal mines. Because of its fire-resistant properties, it is advantageous for use in underground gassy mines, and we are finalising plans to implement this project. The Directors have constantly under review the possibilities and necessity for expanding existing capacity and introducing new products.

"During 1961, the supply position of raw materials in general was reasonably satisfactory, although the foreign exchange situation and the consequent uncertainties and delays in the issue of import licences presented a constant problem. For some items, however, we had to abandon our established suppliers and find new sources in the U.S.A., with a consequent increase in our raw material bill. Despite these difficulties, production at both factories was maintained according to schedule.

"On a number of items, import duties were further increased and resulted in a substantial addition to raw material costs, thus offsetting a number of economies which we had introduced.

"Considerable progress has been made towards producing indigenously various raw materials we use, and we are already arranging comprehensive test programmes in order to ensure that these materials will be suitable for the very high quality products we make. It is gratifying to note that over half of our cycle rims are now manufactured from local rim strip and, as indigenous production increases, we are hopeful that, during 1962, our entire output of rims will be made from Indian steel, with a consequent saving in foreign exchange.

"The profit for the year after providing for depreciation, interest and taxation was Rs. 1,64,75,494, as compared with Rs. 1,24,56,228 for 1960. The profit after tax expressed as a percentage to sales was 5 per cent, and, as you will have gathered from the Directors' report, the improvement over last year's figure of 4.1 per cent arises mainly from the increased volume of business and increased efficiency.

"Excise duty now exceeds Rs. 6 crores and absorbs a substantial amount of working capital, a matter which your Directors continue to keep under constant consideration.

"It will be observed that overall salaries, wages and bonus show an increase of approximately Rs. 34 lakhs and welfare expenses are also up due mainly to improved canteen and catering expenditure at factories, depots and head office.

"Advertising expenditure has been increased to meet the ever-growing competition facing us now and in the future, and our participation in the Indian Industries Fair accounted for a substantial portion of the increase.

"The amount of bank overdraft interest has decreased as a direct result of our reduced borrowings.

"As a result of the temporary lull in capital expenditure until our next planned expansion receives approval and gets under way, the amount transferred to development rebate this year is only Rs. 7,50,000.

"The amount transferred to general reserve is Rs. 62,50,000, this being considered prudent in the light of our forward expansion plans.

"Our net profit available for disposal is higher than last year by approximately Rs. 41 lakhs. The compulsory transfer to development rebate reserve has decreased by Rs. 9,50,000 and this gives an overall increase of approximately Rs. 50,50,000 of profits available for disposal. Out of this additional amount, it is proposed that Rs. 25,50,000 are allocated to you, the shareholders, the balance of Rs. 25 lakhs remaining as retained profits within the Company.

"The Directors recommend a dividend for 1961 of 20 per cent subject to tax on the ordinary share capital as increased by the recent bonus issue. In 1960, the dividend paid on the old capital was 21.5 per cent.

"On the assets side, there have been no significant changes since last year. Inventories are higher in line with the higher level of output and sales.

"The share capital as issued and subscribed has increased by Rs. 1.5 crore, which is, of course, the bonus issue, and reserves have already been mentioned in the Directors' report and need no further comment. Our overall borrowings through bank overdrafts, etc., are lower in line with the increased profits and reduced capital expenditure. The provision for taxation is higher arising from the increased profits and the additional liability in respect of the bonus issue.

Future Prospects

"There are now several manufacturers producing tyres in the country and others are expected to come into production during 1962. Competition will, therefore, be keen, but your Company does not fear this and indeed welcomes it. We have the product, the sales organisation and the market acceptance to retain our share of the expanding market, but it is our earnest hope that, if the total manufacturing capacity of the country is in excess of demand, then free competition and consumer preference will be allowed to decide sales levels.

"It is particularly gratifying to record a further improvement in labour relations at the Sahaganj factory during 1961. Increased productivity was obtained from both our factories with correspondingly greater rewards to our workers. I should like to mention that the workers also shared in the improved results of the Company, an annual bonus being paid at the rate of 3½ months' basic salary as opposed to three months last year. The total bonus paid for the year exceeded Rs. 44 lakhs.

"The Company entered into long-term agreements with Employees' Unions at Sahaganj and Ambattur factories, and at several of our depots throughout the country. These contain increasing benefits to the employees and reflect the success that has been achieved over the years in the field of industrial relations. At head office and the depots the service conditions continue to be improved.

"You will, I am sure, wish to join the Directors in thanking the employees for the loyal service they have given and the hard work they have put in towards another year's successful results."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

MAHINDRA AND MAHINDRA LTD.

ANNUAL STATEMENT BY CHAIRMAN, MR. K. C. MAHINDRA

STATUTORY COMMITTEE TO DEAL WITH STEEL BILLS PAYMENTS ADVOCATED

MR. K. C. Mahindra, Chairman of Mahindra and Mahindra Ltd., has proposed that a statutory committee, comprising representatives of the Ministries of Steel and Finance, Iron and Steel Control, and Steel Importers' Association, be constituted to deal with the issue of payments from Government against steel bills and that the Committee be armed with powers to decide each individual dispute on its merits. This notable suggestion is contained in his speech, delivered at the Sixteenth Annual General Meeting of the Company, held at Bombay, on Monday, 23rd April, 1962.

The following is the full text of Mr. Mahindra's speech:

"As usual I extend genuine welcome to shareholders, who have found it convenient to attend this annual general meeting, the sixteenth in the series. That the Company's meetings deserve your personal attention is a tribute, which I willingly acknowledge, to your perspicacity and desire to learn more about this Company, its management and the prospects it holds forth for future development.

"Our efforts to present the accounts earlier than May have been speeded by the compulsory provision made in the Companies Amendment Act last year, that the annual general meeting must be held within six months of the closing of the Company's financial year. The revision of the Articles of Association is not yet completed, but I hope that this will be done at an early date.

Working

"Since the report and the accounts for the year 1960-61 have been before you, the financial press has commented upon the increase in gross profits as compared to the previous year. The issue is well taken and I would like to take this opportunity to place this matter in its proper perspective. The Company's main activity is built round the manufacture and sale of jeeps and allied vehicles. In a smooth running and well-structured organisation engaged in automobile manufacture, there is a certain minimum level of industrial workpoints, manned by skilled operators, of supervisors, inspectors and engineers, of service personnel and regional field workers and not the least important, of development technicians, accounts personnel and senior managers. Maintenance of an effective organisation requires provision of operational resources on a minimal scale. Such provision is possible, if a certain volume of vehicles are regularly produced and sold at prices, which would yield the necessary margins. Alongside are transient incidences like experimental work on complicated parts and shortages in pipelines of production, mostly raw materials, which also have to be paid for. And as I mentioned last year, there is the requirement for annual increase in wage costs of labour averaging 8 per cent to 10 per cent a year. The volume of production and sales along with proper emphasis on productivity is, therefore, the chief determinant of the profit-margin. We may now analyse the 1960-61 factors as applicable to your Company's operations. The accounts, as presented, indicate that while selling prices have remained the same, costs have been held except for increase in wages and salaries, which has perhaps been cancelled by more efficient turn-rounds and more effective utilisation of machines. Development relating to manufacture of complicated functional parts has been completed and production established on more balanced batches.

"*I may add that the surplus, as shown in* the accounts before you, is not extraordinary; while there is no element of casual gain therein, the profit ratio to capital employed or even sales to net profit ratio is still low, and the reason is simple: in conformity with the desires and directions of Government, we have held the price line, despite ample justification in increased wage-costs and raw material prices for increase in sales price. It is also to be remembered that the incidence of taxation is high, and that our allocation to reserves over the six years of the Company's operations as a public company have been very modest. The Company must accordingly depend upon an increasing volume and economy of management to yield a return on shareholders' money which is both fair and attractive for further capital formation.

"We can turn now to change and development in the jeep division in the ensuing years. The capacity is to be increased to produce, entirely indigenously, 10,000 units and more. A programme of centralisation of the Company's manufacturing activities is already under way at Kandivli, where we have purchased and taken possession of about 137 acres of land for this purpose. A complex of factory buildings, administration offices, canteens, transport maintenance shops, medical aid centre and possibly a testing track will arise in this area. A new pattern of costs will begin to emerge as we get into the stride of increased production in the course of the next two to three years. It is my hope that this grouping will lead to more efficient control over quality production and over expenditure, and that, with increasing turnover, the Company will progress from strength to strength.

Steel Division

"Operations of the steel division have been satisfactory and the backlog of unfulfilled contracts helped in maintaining the anticipated margins. As indicated in the Directors' report, the pattern of activity for this section is changing and, although imports of special sections and varieties of steel, not so far produced in the country, will continue on a diminishing scale for the next couple of years, it is to be hoped that the new steel works will have stabilised their respective production schedules and that, with assurance of supplies, the distribution of steel will be rationalised and channelled through experienced and dynamic centres. The Company's steel section has already gained such reputation in Calcutta and Bombay, and we are hoping to spread over to Madras and Delhi shortly.

"Last year, I referred to delays in the receipt of payments from the Government against steel bills. There has been no improvement whatsoever in the matter of payments, although on several occasions during the year promises were made by officials concerned for speedier settlement. The authorities do not seem to realise their contractual obligations; their apathy toward problems created by themselves, because of conflicting instructions and departmental lapses, is astounding. With the decreasing volume of subsidised imports, the burden of interest charges, unless payment is promptly received, is becoming very heavy. It is not fair that the importers, who have discharged their entire contractual obligations, should be made to suffer for reasons which do not concern them at all. An effective solution to this chronic problem has to be found at as early a date as possible, and I would suggest that a statutory committee be constituted consisting of representatives of the Ministries of Steel and Finance, Iron and Steel Control, and Steel Importers' Association with powers to decide each individual dispute on its merits. We may get somewhere.

Tractor Project

"Brief mention has been made in the Directors' report of our development activities. I am confident the shareholders will welcome the collaboration agreement with the world-renowned International Harvester Group of Chicago in respect of manufacture of tractors to their design. As announced, it is proposed to form a separate public company for the purpose, to which the International Harvester will give a substantial long-term loan as well as participate in its equity. Most of the formalities have been completed and we are now discussing with our associates as well as with the Government the pattern of capital structure and the timing of the new company's flotation. The shareholders will be interested to learn that Voltas Limited has agreed to join the International Harvester and ourselves in promoting the new company as a tripartite venture. Besides participation in the equity capital of the new company, Voltas will serve as the Company's sole distributors and thereby give to the new concern the benefit of their vast experience in the agricultural field. Steps are also in hand for installing facilities for the manufacture of agricultural implements needed for attachment to tractors. This will bring to a climax the end of the first phase in our pursuit and endeavour to establish a unit for direct assistance to agriculture.

"Mention was also made in the report of the alloy steel project. While we have concluded satisfactory agreements with the well-known Ugine Group in France, formal approvals of the Government respecting this collaboration as well as proposals for financial arrangements are pending. I should tell the shareholders that this is a major project and finance required is of the order of Rs. 6 to 7 crores, of which the foreign exchange component is approximately 45 per cent. Search for this kind of finance is going to be a laborious process, but is well under way. In the meantime, exhaustive technical studies have been made by our French collaborators; Ugine's engineers are now in India discussing with us detailed operation plans: several prospective sites in the Madras State have been examined and power supplies discussed with the electrical authorities. Tentative search for plant and equipment has begun. I am revealing no secrets when I say that the project report prepared by us in consultation with Ugine's engineers has received warm commendation from the finance institutions, whom we have approached for assistance. This is a tribute to the zeal, enthusiasm and hard work of the personnel in our steel division. I am hopeful that a conclusion will soon be reached and that, before the next annual general meeting comes round the steel alloy project will be launched.

"Certain other ancillary plans are in various stages of development, so also expansion programmes in the various units in our associated group of companies.

"The other day, our Prime Minister exhorted businessmen to consider social justice as the supreme aim of national activity. He went on to say that affluence itself is good, but alongside extreme poverty it presents a painful sight. Social justice, therefore, must become the prime motivating factor of all human activity. This exhortation, though in general terms, is meant for every man and woman in India, no matter in what activity he or she is engaged.

Social Justice

"In so far as business motivation is concerned, I am afraid profit motive will remain the prime criterion for the initial risks. Sound business analysis postulates a positive return on the moneys and skills to be invested. But once the economics of a business venture promises such return, there is no reason why business people should not engage themselves towards harmonising the profit motive with the concept of social justice. What is social justice? To business people it should mean the consideration of more than fair returns to the employees for the work they put in, inasmuch as the pressure of the unemployed and the unemployable, together with the general need to feed many mouths, require a more than the market return for labour involved. There is another impressive argument in favour. Hunger has no morals and, therefore, the minimum needs of employees in the matter of food, clothing and shelter deserve to be met, irrespective of what their toil can fetch in the market. In order, however, to distribute more than the quantum of current wages, there must be a surplus available for the purpose. Granted there may be occasions when no surpluses are available to meet such extra-normal requirements, and one can do nothing about it. Nevertheless, it should remain the endeavour of every profit-making enterprise to keep in view this narrow but practical application of social justice. Mr. G. L. Mehta, the scholar diplomat, who has served India with great distinction in several spheres and commands wide respect for his knowledge and wisdom, in an address before the International Industrial Conference, held in San Francisco in September 1961, posed before his American audience the issue of social justice in the following words:

"'The milieu within which private enterprise functions today is far different from that prevailing in the eighteenth and nineteenth centuries. Private enterprise is no longer taken for granted, and its justification is no longer sought to be measured only by the profit rate it is able to earn. Private enterprise will be judged by —and its survival depend upon—its social utility to the economy.'

"In the present context of our country's poor economic level, there can be no two arguments, for the other way would ultimately lead to chaotic conditions and revolutions of the nature which would wipe away many of the things which we today cherish.

"Motivations of social justice in the planning of an industrial complex must generate amongst the entrepreneur the aspiration of care for the poor and the lowly, but, while 'minimum needs' form the starting gun on the track, the line at the finish will not find all runners abreast at the tape. This factor of difference is a human element and should be respected as such. Richard Tawney, the noted British historian, who was born in India, described it brilliantly in this passage:

"'Equality of opportunity is not the absence of violent contrasts of income and conditions, but equal opportunities of becoming unequal.'

"This is where the responsibility of the Government begins. Spread of educational and social standards, so that every citizen has an equal opportunity to grow, is a prime concern of the State, and any moneys devoted to the development of this infra-structure of our future society are healthy and essential investments. In the limited sector of industrial operations, the State policy should inspire acknowledgment of social motivations amongst the management and the workers alike. Compulsions hardly achieve any targets—in the long run. Both management and workers need to be educated in their respective responsibilities—perhaps, so also the Government of the day. Look at the fiasco of the Compulsory Employees State Insurance Scheme, which has been in operation over the last decade. I am not exaggerating, when I state that there is hardly any group of industrial workers who feel benefited or satisfied with the meagre and almost callous service provided under the Scheme. Every company, despite the wage-percentage contribution that is levied on it, has to maintain its own medical contingent to look after the workers. May I suggest a complete re-study of various aspects of the Scheme, and if the criticism is found valid, the Government should not hesitate to scrap it altogether. I recommend instead that each company should be asked compulsorily to spend its present contribution to the Scheme or more on developing its own medical service, and I am confident that it will be able to provide for its staff equal, if not better, facilities. The Government should on its part build hospitals and recuperation homes in selected areas near where the workers live; the large unutilised funds of the Employees' State Insurance Scheme should be devoted to this purpose.

Labour's Responsibility

"We have also experienced during the past decade an attempt at codification of the rights of labour. I have expressed the conviction that mass poverty commands allegiance from businessmen to the dictates of social justice. In order that doles and charity should play no role in the practical acceptance and application of the concept, industrial workers should also appreciate their responsibility towards production and productivity standards. Even in Communist Russia, where they are aiming to evolve a classless society, emphasis is placed primarily on the produce of labour and not on fictional rights. Only recently, Mr. Nikita Khrushchev went on record as follows:—

"'Labour productivity must be always one jump ahead of the growth of wages. The level of wages depends entirely on the output of produce, on the productivity of labour in a given society.'

"There is also a larger obligation in addition to mitigation of mass poverty—the obligation to remove inertia, to eradicate listless apathy amongst millions—the obligation on the few thousands, who can intelligently plan and operate. There has arisen, however, a new political platform in the country with non-planning and *non sequitur* as its party slogans. Time does not permit the luxury of stop-and-go as a way of life. However valid the charges of a permit-licence-*raj* may be against the present Government, responsible economists generally accept that in an underdeveloped economy planning by the State has become a prerequisite, and an essential one, for economic betterment. Even Britain, the home of traditional *laissez faire*, has reluctantly admitted, after the successful experience of France over the last six years, the need for planned development. Political platforms usually adopt an extreme position, but not even the most profound advocate of non-planning will deny that 'a river is water, but a river is also banks. And without banks there is no river.'

"*It is another matter that planning may be* slipshod and unrelated to facts of a particular situation; that mistakes after mistakes have been and continue to be committed; that results so far belie the claims of the planners and the hopes of the millions. These problems should be taken up specifically and one by one in order to find the lacunæ in methods and performance.

Deficiencies

"For instance, I referred casually last year to the growing lag between planning and achievement. With diminishing resources in foreign exchange, the scarcity of industrial raw materials, which require to be imported, is being increasingly felt. For the automobile manufacturers there is still the absolute dependence on imports in their requirements of special steels and forgings, in addition to the necessity of periodic refurnishing of more progressive and, therefore, more efficient machinery and plant. To these are currently added shortages of coal and coke, of transport and of power. These deficiencies, which will, if continued, increasingly handicap proper utilisation of plant capacities, cannot just be explained away by the fact that the expansion has been too rapid and has taken even the Planning Commission by surprise. Many of these deficiencies are Government-based, in the sense that the decisive voice say, in railway development or coal production or power generation, remains solely with the Government, and it must now be acknowledged that to this extent the planning techniques were deficient and that supervision over performance too slack. In a commentary on this aspect of planning in India, Barbara Ward, the well-known British economist and a sympathetic observer, said recently that 'in army parlance, the *Q-Plans* (in India) are not balanced by *Q-OPs*,' meaning that there is need for 'a tough agency demanding a regular account of work in progress, not simply in terms of money spent, but of physical targets actually achieved and giving no quarter until every backlog is made up.'

"There is great force in this comment. The other day at a seminar organised by the National Council of Applied Economic Research in Delhi, the discussion paper was titled 'Looking Ahead.' Projections were made of the future shape of things 20 years from today and certain heartening conclusions were tentatively advanced for the world of 1981. And yet, the assumptions behind these hopeful projections were, amongst others, the following:—

"1. Existing transport and power deficiencies will be removed in the next two or three years.

"2. Transport and power facilities will be developed ahead of their actual requirements.

"3. Minerals developments policy, particularly with regard to iron ore, coal, limestone and manganese, will be geared to the short- and long-term requirements of industrial development and export trade, without undue insistence on reserving coal and iron ore mining for the public sector or non-economic considerations.

"These assumptions appear to be just wishful thinking: but, if we are to hope for a decent, deserving, justice-oriented life 20 years from today, it is time the Planning Commission and Government thought of '*Q-OPs*' and set about in earnest correcting the lag between plan and performance, particularly in the critical sectors. There are grave problems. I am confident that persons in private business will be only too glad to assist in every way they can to find solutions. These are also challenges posed by an expanding economy, which offer exciting avenues for further progress and advancement.

"Before I conclude, you will be interested to know that for the five months, ended 31st March, 1962, our operations both in the jeep and the steel divisions have been satisfactory. Sale of vehicles averaged 678 per month as against 517 during the corresponding period in 1960-61. Steel orders booked in this period amount to over 74,000 tons, as against 164,000 tons in the whole of last year. The movement of controlled stocks has averaged nearly 2,000 tons a month from Calcutta and Bombay stockyards. Negotiations, for three small units in the field of flexible insulations, gauges and tools and current limiters and regulators are nearing conclusion. We can look forward to promising year.

"On behalf of the Board and the shareholders, I would like to convey greetings to our staff and thank them for their services during the year."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

WIMCO'S RESULTS SATISFACTORY

FINANCIAL POSITION SOUND

A NUMBER of contradictory features are presented by the annual report of the Western India Match Company Ltd. (Managing Agents: The Swedish Match Company, Bombay) for the year ended 31st December 1961. Notwithstanding an increased demand from the rising population, sale of the Company's products has actually gone down albeit moderately, by Rs. 30.48 lakhs to Rs. 18.03.68 lakhs side by side with a fall in the value of closing inventories from Rs. 21.66 lakhs to Rs. 9.72 lakhs. These facts, coupled with the ones that there has been no further cut in the prices of goods produced by the Company and that the payment on account of excise duty has also decreased to Rs. 10,09.47 lakhs from Rs. 10,66.65 lakhs a year ago, suggest a lower total output during the year under review. Against this, however, the cost of raw materials consumed has increased from Rs. 260.91 lakhs to Rs. 272.12 lakhs. In the light of only routine information disclosed in the annual report, it has not been possible to reconcile satisfactorily the aforesaid divergent trends. It would appear that the trading results of the Company's paper mill were less satisfactory than the match section. Unfortunately, the profit and loss account does not give us enough details on this score nor is the Directors' report sufficiently elucidative. The Company would do well to give fuller details of the results of its working for the benefit of its shareholders and investors.

Due chiefly to the saving on excise duty and also in other expenses to a small extent, the gross profit has shown a rise from Rs. 150.56 lakhs to Rs. 163.08 lakhs. But this has been accompanied by a rise in the provision for the Managing Agents' commission, from Rs. 12.64 lakhs to Rs. 14.32 lakhs, and in that for taxation, from Rs. 51.15 lakhs to Rs. 57.10 lakhs. Provision for depreciation is also higher by Rs. 1.50 lakh at Rs. 20.52 lakhs. Out of the increase of Rs. 12.52 lakhs in gross profit, therefore, as much as Rs. 9.13 lakhs or nearly 75 per cent has been absorbed by the essential provisions and only the balance is reflected in the net profit; the latter has grown from Rs. 67.75 lakhs to Rs. 71.14 lakhs. Transfer to reserves is slightly higher at Rs. 11.36 lakhs as against Rs. 10.69 lakhs and that to the provision for contingencies at Rs. 15.00 lakhs, as compared with Rs. 12.73 lakhs during 1960. Ordinary dividend has been maintained, for the second year in succession, at Rs. 16.00 per share, subject to deduction of tax, and absorbs, as during the preceding year, Rs. 44.00 lakhs. A sizable sum of Rs. 5.11 lakhs is being carried forward, as against Rs. 4.54 lakhs brought in.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds (gross)	18,08.68	18,34.16	17,61.21	15,65.09
Other income	13.27	13.40	13.49	12.93
Closing stocks of finished goods	9.72	21.66	26.58	30.46
Raw materials consumed	272.12	260.91	236.59	225.77
Excise duty	10,09.47	10,66.65	10,42.44	988.90
Other expenses	360.34	365.52	344.28	315.02
Gross profit	163.08	150.56	147.51	104.50
Managing Agents' remuneration	14.32	12.64	12.87	8.98
Provision for—				
Depreciation	20.52	19.02	18.06	13.73
Taxation	57.10	51.15	52.35	37.60

Transfer to reserves	11.36	10.69	18.15	13.21
Provision for contingencies	15.00	12.73	...	...
Dividend	44.00 (D. 16%)*	44.00 (D. 16%)*	44.00 (D. 15% + B. 1%)*	30.25 (D. 10% + B. 1%)
Carry forward	5.11	4.54	4.21	1.68
Market value of ordinary share (In rupees):	1962	1961	1960	1959	1958
High	321.00	314.00	280.00	271.00	203.50
Low	297.00	250.00	234.50	185.00	161.25

* Subject to deduction of tax.

It will be observed from the above table that, despite the mild setback suffered in production during the year under report, the upward trend in gross and net profit has continued unabated. Since the rate of dividend has been maintained at 16 per cent during the past three years, the growth in profit has naturally led to a strengthening of the Company's reserve position. During the last four years alone no less than Rs. 81.14 lakhs have been retained in the business, thereby raising the equity per share by nearly Rs. 30.00.

There was no change, during the year under review, in the Company's share capital which, as at 31st December 1961, stands at Rs. 275.00 lakhs in 2.75 lakh ordinary shares of Rs. 100 each. This is backed by Rs. 235.60 lakhs in reserves, including the provision for contingencies. Against this the net block is worth Rs. 276.97 lakhs which figure is obtained by reducing the gross block of Rs. 500.37 lakhs by Rs. 229.01 lakhs representing depreciation up-to-date and adding to it Rs. 5.61 lakhs being the cost of capital work in progress. Current liabilities and provisions aggregate Rs. 200.47 lakhs and are more than adequately covered by current assets, investments and loans and advances which together amount to Rs. 434.10 lakhs.

In order to attain a certain amount of independence in the matter of raw materials, the Company has under consideration a project for the manufacture of salt and certain other chemicals such as potassium chloride.

The Rs. 100.00 fully paid shares of the Company are currently quoted at Rs. 304 *cum-div.* to fetch a net yield of 3.8 per cent per annum on an *ex-div.* basis.

(*Concluded from next column*)

readers are aware, is in the doldrums. Its holding in Walchandnagar Industries is larger still at Rs. 95.94 lakhs and, thanks to the decision of the Maharashtra Government to take away the sugarcane farm, the earning potential of this investment has also suffered a serious setback and the Company will take a long time to recover. Both major subsidiaries, namely, the Hindustan Construction (investment Rs. 35.82 lakhs) and the Indian Hume Pipe (Rs. 35.01 lakhs), as also one of the allied companies, namely, the Copper Engineering Company Ltd. (Rs. 25.13 lakhs), have been faring well and could be expected to report encouraging results in the coming years. But, with two big lame-ducks in its investment portfolio, it will be unrealistic to expect any spectacular improvement in the results of the Company for the near future.

Certain significant changes have taken place in the Company's financial position as revealed by its balance-sheet as at 31st December 1961. The capital structure has been simplified by the conversion of the promoters' shares into equities. This has naturally increased the ordinary share capital, which had been raised earlier through the issue of bonus shares by capitalising a part of the reserves. The share capital now stands at Rs. 120.25 lakhs (as against Rs. 105.06 lakhs a year before), of which Rs. 81.25 lakhs are in three classes of preference shares and the balance in equities. Following the issue of bonus shares, the reserves have naturally declined from Rs. 146.45 lakhs as at 31st December 1960 to Rs. 127.04 lakhs. Loans have nearly trebled and total Rs. 51.33 lakhs in addition to current liabilities and provisions amounting to Rs. 24.56 lakhs. In the issue of new equity shares by the Walchandnagar Industries Ltd., and the Cooper Engineering Ltd., during the year under review, the Company was entitled to 24,831 equity shares and 11,172 equity shares of Rs. 100 each, respectively, which were duly acquired at a premium of Rs. 30 and Rs. 25 respectively. A hundred shares of the Acme Manufacturing, however, were sold off during the year. Consequent on these changes, the Company's investment portfolio has risen to Rs. 273.00 lakhs as compared with Rs. 231.91 lakhs at the close of 1960. Current assets, loans and advances together amount to Rs. 41.94 lakhs, while the written down value of fixed assets is Rs. 8.24 lakhs, as against a book value of Rs. 10.42 lakhs.

Two of the Company's subsidiaries, namely, the All-India Construction Company Ltd., and the Building Construction Company Ltd., went into voluntary liquidation towards the close of 1960. Ninety per cent of the share capital held by the Company in them has been received from the liquidator.

The Rs. 30 fully paid share is currently quoted at Rs. 166.50 *ex-div.*, and fetches a net return of 4.2 per cent per annum.

PREMIER CONSTRUCTION

PROFIT AND DIVIDEND LOWER

A TYPICAL example of a holding company in India is the Premier Construction Company Ltd. (Managing Agents: Messrs. Walchand & Co. Private Ltd., Bombay). It enjoys a majority interest in four Walchand Group companies, namely, the Indian Hume Pipe Company Ltd., the Hindustan Construction Company Ltd., the Acme Manufacturing Company Ltd., and the Hindustan Spun Pipes Ltd. In addition, it also holds a large number of shares in two more companies belonging to the same group, namely, Walchandnagar Industries Ltd. and Cooper Engineering Ltd. Another company in which the Company has a large block of shares is the Scindia Steam Company Ltd. with which the late Seth Walchand was closely associated. As a holding company, the Premier Construction's fortunes are dependent upon the dividends it earns on its investments. Although the Company received bigger dividends from its subsidiaries, there was a sharp fall in the return on other investments. Accordingly, there was a modest setback in the gross earnings for the year ended 31st December 1961 of Rs. 0.37 lakh to Rs. 22.77 lakhs. This fall is on top of the decline of Rs. 10.45 lakhs suffered in 1960. During the past two years alone, therefore, the Company has lost nearly a third of the gross earnings of Rs. 33.59 lakhs obtained in 1959 which, incidentally, are the second highest for the past ten years. Against this falling trend in income, expenses have kept mounting up and amounted, during the year under report, to Rs. 7.16 lakhs as against Rs. 4.18 lakhs in 1960. The gross profit has, therefore, declined more sharply than the earnings, that is, by Rs. 2.82 lakhs to Rs. 15.77 lakhs. The downward trend in profit has thus not only continued but has as well gathered momentum. A slight increase over the previous year in the various essential provisions has also been witnessed, having aggregated Rs. 2.56 lakhs, as against Rs. 2.21 lakhs. These leave a much reduced net profit of Rs. 13.21 lakhs, as compared with Rs. 16.38 lakhs for the previous year. With a lower sum (after meeting preferred dividends) being now available for distribution to equity shareholders, the Directors have been obliged to reduce the rate of ordinary dividend, for the second year in succession, from Rs. 13.50 per share to Rs. 10 per share, both subject to deduction of tax. Though the rate has been reduced, the gross disbursement to shareholders has, on the other hand, increased, because of the increase in the number of shares following the bonus issue effected during the year and the conversion of promoters' shares into equities. The carry forward is larger at Rs. 88,651, as against Rs. 12,839 brought in.

The following comparative table presents the Company's operating statistics for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	22.77	23.14	33.59	33.05
Work-in-progress at close	0.49	0.33	0.72	1.91
Expenses	7.16	4.16	5.94	5.10

† Subject to deduction of tax.

But for the increase in the dividends from the Indian Hume Pipe from Rs. 1.66 lakh to Rs. 3.18 lakhs, there would have been a bigger fall in the dividend receipts of the Company, which in 1961 were only Rs. 16.15 lakhs against Rs. 17.14 lakhs in the preceding year. The fall in the dividend from other investments from Rs. 10.61 lakhs to Rs. 7.70 lakhs is quite marked, and this must be attributed to the unfavourable trading conditions suffered by the Scindia Steam. The Company's trend of profit for the future depends to a considerable extent on the results of the Scindia Steam. Out of its total investment of Rs. 272 lakhs, the shipping company's share is of the value of about Rs. 72.80 lakhs. The shipping industry, as

(*Continued in previous column*)

PROFITS OF FINLAY COTTON GROUP LOWER

DIVIDENDS, HOWEVER, MAINTAINED

VOLUNTARY price control on cloth, which operated throughout 1961, coupled with higher prices of long-staple cotton have had a serious effect on the sales and profits of the three city mills under the management of James Finlay and Company Ltd., Bombay, namely, the Finlay Mills Ltd., the Swan Mills Ltd. and the Gold Mohur Mills Ltd., during the year ended 31st December, 1961. The extent of damage suffered by each has naturally depended upon its operating efficiency, and the popularity of its products in the market. The worst sufferer has been the Gold Mohur, while the one to escape with the least damage has been the Finlay Mills. It is interesting to note, however, that, despite the variations in individual performance, all the three companies have managed to maintain their ordinary dividends, without drawing too heavily from the reserves.

The turnover of Finlay Mills has increased by 18.7 per cent from Rs. 253.44 lakhs to Rs. 300.89 lakhs, but, against this, the rise in the cost of raw materials and stores consumed has been only 7.8 per cent, from Rs. 138.85 lakhs to Rs. 149.70 lakhs and this has resulted in lifting the gross profit marginally by Rs. 2.06 lakhs to Rs. 44.64 lakhs. Unfortunately, this increase has been more than fully absorbed by higher essential provisions which have aggregated Rs. 27.90 lakhs, as against Rs. 24.76 lakhs previously and the net profit is, therefore, slightly lower at Rs. 16.74 lakhs as compared with Rs. 17.82 lakhs for 1960. The net additions to reserves are smaller at Rs. 2.58 lakhs, as compared with Rs. 4.42 lakhs conserved last year. Consequently, it has been possible for the Company to maintain the ordinary dividend at Rs. 23.00 per share, subject to deduction of tax, claiming as before, a sum of Rs. 11.50 lakhs.

Though the sale proceeds of Swan Mills have been well maintained during the year at a little over Rs. 217.00 lakhs, an increase of nearly Rs. 10.00 lakhs in total expenses and a decline of Rs. 2.66 lakhs in the value of closing stocks have cut deeply into the margins available to the Company and have brought about a steep fall in the gross profit from Rs. 51.48 lakhs to Rs. 34.51 lakhs. Total essential provisions have no doubt decreased by Rs. 8.21 lakhs to Rs. 23.51 lakhs, but this has not helped matters much and the Company has, therefore, ended the year with a net profit of only Rs. 11.00 lakhs which is lower by nearly the same amount than the previous year's figure of Rs. 21.31 lakhs. Withdrawal from reserves has been brought down from Rs. 13.46 lakhs to Rs. 3.20 lakhs but credits to reserves even more so from Rs. 22.20 lakhs to Rs. 23.000 only. The Directors have, therefore, found no difficulty in maintaining the rate of ordinary dividend at the attractive level of 36 per cent, subject to deduction of tax. Total dividend disbursement will claim Rs. 12.96 lakhs, leaving Rs. 10,399 as a carry forward as against Rs. 26,062 brought in.

The worst sufferer in the trio has been Gold Mohur which has suffered a setback of Rs. 16.19 lakhs to Rs. 225.43 lakhs in sales. Not only has the turnover declined but there has also been, for some reason or other, an increase out of all proportion in expenses as well, from Rs. 198.30 lakhs to Rs. 207.49 lakhs, with a consequent shrinkage in gross profit of Rs. 20.57 lakhs to Rs. 20.82 lakhs. Lower essential provisions, totalling Rs. 12.69 lakhs as against Rs. 22.11 lakhs last year, have mitigated the situation somewhat and the net profit, therefore, shows a decrease of Rs. 11.15 lakhs to Rs. 8.13 lakhs. In order to maintain the dividend at 21.5 per cent, subject to deduction of tax, claiming Rs. 10.75 lakhs, the Directors have been obliged to withdraw a sum of Rs. 3.50 lakhs from the general reserve.

The relative performance of the three mills during the past four years is presented in the comparative table appearing at the foot of this review.

Despite the setback in fortunes in recent years, the financial position of the companies continues to be strong. In each case, the share capital, all in equity shares, is well supported by sizable reserves and the gross block has been written down to a third of its original cost. None of the companies has availed of any bank or other loans and the total of current assets, loans and advances, and investments afford, in each case, a more than adequate cover to current liabilities and provisions, thereby depicting a highly comfortable working capital position. One wonders in this situation whether the companies cannot diversify their activities and put their surplus resources to a more profitable use. The balance-sheets of the Companies as at 31st December 1961 are presented in summarised form in the following table:

(In lakhs of rupees)

	As at 31st December 1961		
	Finlay	Swan	Gold Mohur
LIABILITIES			
Share capital	50.00	36.00	50.00
Reserves	83.17	88.65	63.09
	133.17	124.65	113.09
Other liabilities and provisions	69.08	55.59	47.75
Total	202.25	180.24	160.84
ASSETS			
Gross block	212.84	216.66	112.19
Less depreciation	129.92	134.21	76.68
Net block	82.92	82.45	35.51
Current assets, investments, and loans and advances	119.33	97.79	125.33
Total	202.25	180.24	160.84

The renovation and modernisation programme of the Mills continued during the year. The Finlay Mills acquired new assets worth Rs. 10.23 lakhs during 1961 and has placed orders for 15 ring spinning frames in addition to 23 spinning frames ordered earlier. The delivery of these is expected to commence early in 1963. Orders for other auxiliary equipment have been placed and deliveries are anticipated to materialise soon. The Swan Mills, in a like manner, expect the delivery of the 35 ring frames ordered by it early in 1963. In the case of Gold Mohur, delivery of the 36 ring spinning frames took place in 1961 and the machines are under erection. Orders have been placed for a further lot of 15 frames, and a winding and warping unit.

The current market quotations for the Rs. 100 fully paid ordinary shares of the companies and the net yield on an *ex-div.* basis are given below:

	Price Rs.	Net yield %
Finlay	380.00 *c.d.*	5.1
Swan	390.00 *c.d.*	8.3
Gold Mohur	275.00 *c.d.*	5.4

BENGAL COAL

PROFIT-MARGIN SHRINKS

A FURTHER rise in production and sales to new peak levels and a small setback in the profit-margin (ratio of gross profit to sales) are the features of the results of the Bengal Coal Company Ltd. (Managing Agents: Messrs. Andrew Yule and Co., Ltd., Calcutta) for the year ended 31st October 1961. The Company, which accounts for about 30 per cent of the country's output of selected 'A' grade coal, had raised during the year under review 3,188,709 tonnes of coal and despatched 3,426,347 tonnes, as against 3,096,576 tonnes and 3,213,514 tonnes, respectively, in the previous year. Sales realisations spurted by Rs. 87 lakhs to Rs. 869.31 lakhs. But the gross profit at Rs. 123.68 lakhs shows hardly any improvement over that for the previous year, when it was Rs. 123.59 lakhs. Consequently, the profit-margin has shrunk from 15.8 per cent to 14.2 per cent. The causes for this phenomenon are a rise in costs and a relatively unremunerative selling price for coal. The freight bill went up from Rs. 93.55 lakhs to Rs. 119.53 lakhs, staff expenses from Rs. 333.23 lakhs to Rs. 370.93 lakhs and colliery and other expenses from Rs. 257.97 lakhs to Rs. 284.25 lakhs. The net profit has actually been lower at Rs. 41.39 lakhs as compared with Rs. 43.85 lakhs for the preceding year due to larger essential provisions, with depreciation claiming Rs. 24.88 lakhs as against Rs. 23 lakhs a year before and taxation Rs. 51.75 lakhs as against Rs. 49.50 lakhs. The Managing Agents have satisfied themselves with a lower remuneration of Rs. 5.66 lakhs as against Rs. 7.24 lakhs in the previous year. The return to ordinary shareholders has been reduced from 25 per cent to 21 per cent, subject to tax, though the payment is on the capital increased by the issue of 20,000 ordinary shares of Rs. 100 each issued as rights shares at a premium of Rs. 100 per share. The Company also issued during the year 6.6 per cent debentures of Rs. 60 lakhs. The new issue expenses amounting Rs. 2.64 lakhs have been adjusted against the year's profit. Besides, Rs. 4 lakhs have been transferred to the newly created debenture sinking fund. A sum of Rs. 7.55 lakhs, nearly the same as in the previous, has been transferred to development rebate reserve, but appropriations to other reserves have aggregated only Rs. 6.23 lakhs, as against Rs. 14 lakhs a year before. The carry forward is still at the substantial level of a little over Rs. 10 lakhs.

The table below brings out the salient features of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1961	1960	1959	1958

Low	314.00	297.00	273.00	201.00

* Subject to deduction of tax.
† Less income-tax paid by the Company.

The Directors state in their report that raisings could have been higher at several of the Company's collieries but for the severe shortage of power experienced in the Raniganj coalfields, the shortage of explosives and the insufficiency of rail transport. During the year, however, it was possible to start raising coal from the Hatnal seam at Sodepore 9 and 10 pits, at which the Dishergarh seam raisings had been exhausted some two years ago. From July last, the Company resumed the working of Sanctoria colliery, which had been leased out for a number of years, and the raisings have since increased to more than 9,000 tonnes a month. The Company project reports for increased output under the third Plan have been approved by the autho-

ATUL PRODUCTS' PROFIT DECLINES

COSTS MOUNT UP—COAL AND RAW MATERIALS IN SHORT SUPPLY

COST inflation hit Atul Products Ltd. (Managing Agents: Messrs. Lalbhai Sons and Co., Ahmedabad) during the year ended 31st December 1961. Sales continued their uptrend during the year and rose from Rs. 418.95 lakhs to Rs. 474.81 lakhs. But the gross profit has come down from Rs. 148.98 lakhs to Rs. 139.11 lakhs. Thus, the healthy trend of a simultaneous rise in turnover and earnings witnessed since 1953, when the Company came into prominence, has been interrupted for the first time. Nevertheless, the taxable return to shareholders has been maintained at 12 per cent per annum, and the revenue reserves strengthened further by a transfer of Rs. 40 lakhs, as against Rs. 34 lakhs in the previous year, out of the distributable surplus of Rs. 68.06 lakhs, made up of a net profit of Rs. 63.91 lakhs and the surplus brought forward from the previous year of Rs. 4.16 lakhs. Still, there is a balance of Rs. 2.38 lakhs.

During the year, the cost of raw materials rose further from Rs. 187.45 lakhs to Rs. 193.15 lakhs, staff expenses from Rs. 19.57 lakhs to Rs. 24.07 lakhs and other expenses from Rs. 118.56 lakhs to Rs. 178.49 lakhs, excluding excise of Rs. 27.61 lakhs. In fact, the cost inflation, that had crept in during the previous year, became quite apparent in the year under review. This will be clear from a comparison of the increases in turnover, gross profit and total costs, excluding excise, in 1961 over the levels in 1959. The turnover shows a rise of Rs. 121 lakhs (from Rs. 353.81 lakhs to Rs. 474.81 lakhs), gross profit of Rs. 28.49 lakhs (from Rs. 110.62 lakhs to Rs. 139.11 lakhs) and costs of Rs. 129.97 lakhs (from Rs. 265.74 lakhs to Rs. 395.71 lakhs). Expressed percentagewise, the increases work out to 34.1 in turnover, 25.7 in gross profit and 48.9 in costs. The strident increase in costs has reduced the Company's profit-margin (the ratio of gross profit to sales) to 29.2 per cent last year from 35.5 per cent in 1960 and 31.2 per cent in 1959. In other words, the benefits of a rising turnover, enjoyed by the Company in the previous year, were completely lost during the year under review.

Notwithstanding the decline in gross profit, the Directors have judiciously stepped up the provision for depreciation from Rs. 19.94 lakhs to Rs. 22.18 lakhs. Taxation claims Rs. 38.50 lakhs, as against Rs. 49 lakhs in the previous year. Managing Agents' remuneration has been curtailed from Rs. 11.17 lakhs to Rs. 7.20 lakhs. These have slightly reduced the setback in earnings at the level of net profit which works out to Rs. 63.91 lakhs, as against Rs. 68.87 lakhs in the previous year. Besides increasing the transfer to general reserve from Rs. 34 lakhs to Rs. 40 lakhs, the Directors have set aside Rs. 6 lakhs as against Rs. 4.50 lakhs a year before, for development rebate reserve. In the circumstances, the carry forward at Rs. 2.38 lakhs can be deemed to be quite satisfactory and indicative of the fact that the dividend has been fully earned.

The table below shows at a glance the Company's performance in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

* Includes Rs. 7.50 lakhs in respect of 1958.
† Wealth tax.
‡ Subject to deduction of tax.

Apart from cost inflation, shortages of coal and raw materials also contributed to the setback, as they prevented the Company from maintaining a satisfactory level of production; it is estimated that they resulted in a loss of output of 300 tons of dyes. The Directors say that the supplies of coal and raw materials would be even more difficult during the current year.

The rise in sale proceeds, despite fall in production, is due partly to the imposition of excise duty and partly to the bigger sale of vat dyes of Atic Industries Ltd., distributed through the Company. Raw materials supplies are expected to be satisfactory only when the schemes adopted by the Company for the manufacture of intermediates are fully implemented. It is satisfying to find that the plant for the manufacture of sodium naphthionate, sulfanilic acid, meta phenylene diamine, etc., is now working and has made the Company self-sufficient in these intermediates. The Company has also started the manufacture of chlorohydroxyquinoline hydrochloride and 4-chloronitrophenol (sodium), intermediates required in the manufacture of quiniodochlor (vioform). The plants for the manufacture of BON acid and caustic soda are under erection. The foreign exchange components of the major schemes for the manufacture of intermediates have been partly covered by a loan from the Industrial Credit and Investment Corporation of India and partly by an agreement with the Commonwealth Development Finance Company Ltd., London. Steel structure for the plant building has been ordered as also a part of the equipment. The Directors expect the plants to be completed by the end of next year.

Among the Company's subsidiaries, CIBA-TUL Ltd. came across some delay in the progress of its schemes due to insufficient foreign exchange for the purchase of equipment. CIBA Ltd., Switzerland, was persuaded to advance a foreign exchange loan of Rs. 56 lakhs (Sw. Frs. 5 million) to the Company, and the Government's approval for this arrangement was obtained. The Company earned a profit of Rs. 1,077 after providing Rs. 2,360 for taxation. Ameer Trading Corporation Ltd., another subsidiary, earned a profit of Rs. 32,670 after providing Rs. 6,000 for income-tax. It distributed Rs. 33,600 by way of a dividend at Rs. 7 per share, of which Atul Products received Rs. 14,400. The Company also received Rs. 20 lakhs from Atic Industries Ltd. by way of dividends. Credit for these dividends has been taken in the year's accounts.

The financial position of the Company, as at the end of the year, reveals its large dependence of external funds. Out of its issued capital of Rs. 300 lakhs, Rs. 249.95 lakhs have been subscribed for and Rs. 241.35 lakhs are paid-up. Reserves amount to Rs. 125.97 lakhs. As against this, the gross block of Rs. 548.53 lakhs, showing a rise of Rs. 142.76 lakhs during the year, stands at a written down value of Rs. 402.89 lakhs. This large-scale expansion is financed by borrowings, mostly from the Government, which, inclusive of the interest accrued (Rs. 4.70 lakhs) are shown at Rs. 172.06 lakhs. By 31st March 1962, the total amount outstanding on this score had increased to Rs. 247.36 lakhs after taking into account the repayment of Rs. 37.64 lakhs made so far. The Company has applied to the Government for the final instalment of Rs. 15 lakhs from the loan. In addition to this long-term loan, the Company borrowed during the year Rs. 71.92 lakhs from its banks. In the previous year, this liability was a mere Rs. 66,416. On top of this, the Company has unsecured loans of Rs. 103.46 lakhs, of which the I.C.I.C.I. loan amounts to Rs. 15.56 lakhs (as against Rs. 80.34 lakhs a year before), the balance of Rs. 87.90 lakhs being fixed deposits. Its other current liabilities and provisions total Rs. 209.79 lakhs. Exclusive of the Government borrowings and the I.C.I.C.I. loan, which aggregate Rs. 187.62 lakhs, its total indebtedness to outsiders amounts to Rs. 369.61 lakhs, and is covered by current assets, loans and advances of Rs. 377.03 lakhs. In addition, there are investments (all unquoted) amounting to Rs. 144.62 lakhs. With further expansion programme in hand, it would be proper for the Company to raise its own funds.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 487.50 *cum-div.*, and offer a net yield of 1.7 per cent per annum, on the *ex-div.* basis. Such a low yield reflects the share market's optimistic view of the prospects for the Company.

BENGAL COAL

(Concluded from previous page)

rities and import licences will be issued shortly. The foreign aid through the World Bank loan will cover the cost of the imported plant and machinery for the Company's existing collieries as also for the new sinkings for coking coal at Murulidih in Jharia, and the reopening of the colliery at Kunustoria in Raniganj.

The financial position of the Company is highly satisfactory. Its issued and paid-up capital of Rs. 140 lakhs, including Rs. 20 lakhs in preference shares, is comfortably covered by reserves and surplus at Rs. 254.73 lakhs. With the issue of Rs. 60 lakh debentures, bank borrowings have come down from Rs. 65.47 lakhs to Rs. 1.39 lakh. Current liabilities and provisions amount to Rs. 285.05 lakhs. As against this, current assets, loans and advances aggregate Rs. 408.31 lakhs. Besides, there are investments standing at Rs. 13.40 lakhs, of which those quoted in the market amount to Rs. 9.07 lakhs, commanding a market value of Rs. 9.03 lakhs. The gross block increased during the year from Rs. 745.30 lakhs to Rs. 789.11 lakhs, and has been adequately written down to Rs. 281.49 lakhs. Capital wroks-in-progress are shown at Rs. 33.98 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 345 *cum-final-dividend*, and offer, at this rate and on *ex-div.* basis, a net yield of 4.3 per cent per annum.

ANNOUNCEMENT

THE STATE BANK OF JAIPUR

have pleasure to announce the introduction,
as from the 1st May 1962,
of
SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE

A deposit relationship with the Bank will entitle the use of the services of any of its 49 offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details

Please contact any office of the State Bank of Jaipur where you will always find a friend.

Proposed dividends (taxable) Ordinary	Nil (Nil)	6,90 (25%)
Carry forward	43	1,18

N.B.—Adjustments represent the credit balance brought forward from the previous year and other credit items like excess provisions, etc.

Extracts from the Directors' report: As the Company has embarked on the Photographic paper project which was estimated to cost about Rs. 85 lakhs and as the bulk of the capital expenditure was financed out of refinance loan of Rs. 50 lakhs, the Directors consider it desirable and in the best interest of the Company to conserve its cash resources. The Directors therefore recommend, instead of paying a cash dividend out of the profits of last year, capitalisation of a sum of Rs. 3,63,500 from general reserve and distributing the same by way of bonus shares in proportion of one new ordinary share for every 10 ordinary shares held subject to the approval of the Controller of Capital Issues. The necessary application for the consent of the Government to the issue of bonus shares is being made.

The fall in profits is accounted for by higher cost on account of cotton, varnish and other raw materials and lower realisation on yarn and cotton healds.

Share Capital: During the year under report the Company had issued and allotted 15,000 redeemable cumulative preference shares of Rs. 100 each at par while 8,750 ordinary shares were allotted to Messrs. Agfa AG, Leverkusen at a premium of Rs. 100 per share.

Camera Factory: The working of the camera factory showed improvement during the year. Last year the company had submitted a scheme to the Government for manufacture of *Isolette Camera* but the Government of India did not approve of the same due to a large expenditure of foreign exchange required for the scheme. The Company has, therefore, submitted in December 1961 a scheme for the manufacture of *Agfa Click III* and *Agfa Clibo Flashgun* after negotiations with its collaborators Messrs. Agfa AG, Leverkusen. Foreign exchange requirement for this scheme being very small, the Company is confident that this scheme will be approved by the Government.

Photographic Paper Factory: About 80 per cent of the construction work is over. A portion of the machinery has arrived at site. The remaining machinery will be shipped very shortly. Pilot working of the factory is expected to commence in July-August, 1962. Regular production may start in another three months and full working may be established by the end of 1962.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	51,35,000	Gross block	90,21,992
Reserves and surplus	56,46,657	—Depreciation	51,00,895
Other liabilities	39,39,371	Net block	39,21,297
		Block in progress	31,15,203
		Goodwill	1,000
		Current assets	47,17,273
		Investments	2,34,985
		Cash	27,31,267
Rs.	1,47,21,028	Rs.	1,47,21,028

* Paid-up capital consists of 36,350 ordinary shares of Rs. 100 each fully paid up and 15,000 —8.57 redeemable cumulative preference shares of Rs. 100 each fully paid-up.

New Beerbhoom Coal Co., Ltd.

(*Managing Agents*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 26th April 1962.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1961	1960
Coal sales (gross)	1,74,34	1,56,22
Closing stock of coal	1,91	2,06
Gross profit	17,88	20,02
Transfer to Managing Agents' commission	1,02	1,33
,, ,, provision for depreciation	5,20	5,05
,, ,, ,, ,, cesses	1,28	1,58
,, ,, ,, ,, royalties	17	8
,, ,, ,, ,, taxation	5,45	5,40
Net profit	4,81	6,58
Adjustments	1,33	88
Appropriations:		
Total available balance	5,64	7,46
Transfer to development rebate reserve	32	1,64
,, ,, general reserve	50	2,00
To dividends (taxable) Preference	18	18
,, ,, Ordinary	3,20 (10%)*	2,84† (16%)
Carry forward	94	80

N.B.—Adjustments include the balance brought forward from the previous year; excess provisions written back and other credit items.

* On the increased ordinary capital of Rs. 31,97,210 and is made up of an interim dividend of 5% per cent. or 35 nP and a final dividend of 5% per cent. or 65 nP.

† The dividend for 1960 was on a paid-up capital of Rs. 17,76,280.

Extracts from the Directors' report: Raisings for the year were 7,90,386 tonnes compared with 7,14,376 tonnes in the previous year and 6,56,767 tonnes in the year ended 31st October, 1959. Despatches amounted to 7,86,324 tonnes compared with 7,16,944 tonnes and 6,46,381 tonnes in the two previous years.

Although the raisings for the year constitute a record in the history of the Company, there was a substantial decrease in the output of Selected "A" coking coal at Victoria Colliery. Owing to disturbances in the underground workings at this colliery, it was decided in conjunction with the Chief Inspector of Mines to suspend all mining operations for a time whilst very considerable quantities of sand were stowed underground in order to stabilise the workings. There were accordingly no raisings from the pits for almost three months as from 10th July, 1961, and during this period about 1,75,000 tonnes of sand were transported by the colliery ropeway and by road for stowing underground. This major operation has imposed a considerable burden on the Company, since a substantial proportion of the total cost is not being compensated by the Coal Board, but it has resulted in the conservation of large areas containing this high grade Ramnagar Seam coking coal. With the resumption of mining operations early in October, 1961, Victoria Colliery is now operating normally.

The output of Victoria West Colliery has shown a slight decline, mainly on account of shortage of sand resulting from one of the pumping pontoons being washed away in the Barakar river, when there was a heavy release of water from the Maithon Dam in September, 1961. The total quantity of sand stowed in this colliery and in Victoria increased to almost 8,20,000 tonnes.

The coal raisings from both Barmondia and New Kendah Collieries have shown satisfactory increases. At the latter colliery, coal is now being raised from the pits deepened to the Dobrana Seam, although it appears unlikely that any substantial raisings can be obtained from these two pits during the next two or three years as it is not possible at present to obtain the increased power required for the colliery.

The Project Reports which were submitted by the Company in respect of the increased output required for the third Plan were duly approved in respect of the foreign exchange assistance being granted to the private sector of the coal industry by the International Bank for Reconstruction and Development. Arrangements are now being finalised to obtain the import licences for plant and machinery.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Liabilities	Rs.
Capital*	33,97,210	Gross block	1,69,65,316
Reserves and surplus	35,40,878	—Depreciation	1,11,11,826

,, development expenditure written off	3,20	6,28
Transfer to general reserve	2,50	Nil
,, ,, reserve for contingencies	1,50	3,00
Proposed dividend (taxable) ordinary	6,00 (20%)	4,50 (15%)
Carry forward	46	8

N.B.—Adjustments include the balance brought forward from the previous year and excess provisions relating to previous years.

Extracts from the Directors' report: While the percentage of taxable profit to turnover for 1961 is more or less maintained as that of the previous year, the percentage of net profit to turnover has somewhat declined partly because of greater provision being necessitated for income-tax as also on account of the fact that the Company was obliged to reduce considerably the production of larger variety of radio receivers (which generally yield greater profit) as a result of the fall in demand for the same experienced with the introduction of Central Excise Duty of 20 per cent in March 1961. Viewed in this context, it is gratifying to note that the total turnover for the year increased by about 16 per cent. It was during the year in question that National-Ekco introduced in the market among other new models, its low-priced *JANATA* receiver—Model U756 costing Rs. 125 to the consumer (exclusive of local sales tax). This set was well received by the market and steps are being taken to increase the production of the same during the current year.

The Directors are hopeful that with the increased purchasing power of the people brought about by successive Five-year Plans, the demand for radio receivers, particularly small and low-priced ones will gradually continue to increase and to meet this anticipated increase in demand, the Directors are cautiously planning to expand production. They are further pleased to report that negotiations for the purchase of vacant lands in north of Bombay have been satisfactorily concluded and it is hoped that the new factory and administrative buildings will be constructed and be ready for occupation early in 1963.

The Plastic Division worked quite satisfactorily during the year under review and with the Company's plans to increase production of those receivers using plastic cabinets, a portion of the Company's requirements of bakelite cabinets and knobs remains unsatisfied and to remedy the situation it has been decided to obtain another moulding press.

Although mention was made in the last report regarding some proposals being considered by the Board to set up a plant to manufacture radio components, as yet, nothing has been finalised; it is hoped that the negotiations in this regard will be satisfactorily concluded shortly.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.

Carry forward	61	14

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* Preference dividend is calculated at 7.8 per cent. subject to deduction of tax.

Extracts from the Directors' report: Milling operations started on the 9th November, 1960, and continued up to the 7th April, 1961. During this period the factory crushed a record quantity of 36,38,095 maunds of sugarcane with an average sugar recovery of 9.62 per cent, as compared with 25,58,490 mds. and 9.08 per cent during the preceding season.

The total crush was made up of 13,41,934 mds. of cane from the Company's own farms and 22,96,161 mds. from cultivators. The corresponding figures for the previous season were 16,08,761 mds. and 9,49,729 mds. respectively. The plantation of this crop was considerably delayed due to heavy floods in October, 1959, and consequently yields were low. There was, however, an overall increase in cane acreage in the area due to increase in cane price from Rs. 1.44 per maund to Rs. 1.62 per maund, effective from season 1959-60, and other development measures taken by the Company.

The scheme of payment of a rebate to the extent of 50 per cent in basic excise duty on all sugar produced by factories in excess of their average production during the previous two seasons was continued. The Company's factory was able to claim a rebate of Rs. 5,62,845 on this account. A quantity of 8,841 bags was despatched to the Export Agency under the Sugar Export Promotion Act, 1958. A further lot of 4,917 bags is yet to be delivered on this account.

The factory's total production of molasses was requisitioned by the West Bengal Government for supply to distilleries in the State at a rate of Re. 1 per maund.

The industry started the season 1961-62 with an unprecedented carry-over of 11.40 lakh tons of sugar from the previous season. With huge opening stocks, stagnant consumption and rather uncertain export prospects, the industry would appear to be facing a crisis of surplus.

The factory is running smoothly and has, up-to-date, crushed 11,64,065 quintals (31,19,694 maunds) of cane with an average sugar recovery of 10.37 per cent.

Account in brief as at 31st August 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,59,320	Gross block	81,62,698
Reserves and surplus	54,67,364	—Depreciation	46,43,344
Other liabilities	66,99,267	Net block	35,19,354
		Block-in-progress	2,87,724
		Current assets	1,06,48,005
		Cash	2,977
		Miscellaneous expenditure	68,391
Rs.	1,42,26,451	Rs.	1,42,26,451

* Paid-up capital consists of 4,000 six per cent. cumulative preference shares of Rs. 100 each fully paid up and 1,65,982 ordinary shares of Rs. 10 each fully paid up.

CANARA BANKING CORPORATION

SPURT IN ADVANCES

A SPURT in advances, in refreshing contrast to a slight setback in the preceding year, features the results of the Canara Banking Corporation Ltd. (Chairman: Mr. U. Gopalakrishna Nayak, Udipi, S. India) for the year ended 31st December 1961. Continuing their uptrend, deposits, too, have gone up sizably, but not as much as have advances. Thus, advances, which came down from Rs. 490.65 lakhs to Rs. 488.72 lakhs in 1960, have jumped up to Rs. 615.86 lakhs in 1961. Deposits have risen from Rs. 872.72 lakhs to Rs. 10,12.23 lakhs. The percentage rise over the year is 26 in advances and 15.9 in deposits. The relatively larger increase in advances is also reflected in the rise of 4.8 points to 60.8 per cent. in the credit ratio during the year under review, as against a fall of 2.1 per cent to 56 per cent in the previous year.

As a result of this healthy growth, the Corporation's working during the year has shown a distinct improvement over the steady progress it reflected in the preceding year. To illustrate, the income from interest and discount has increased from Rs. 48.63 lakhs to Rs. 53.94 lakhs and that from commission and exchange from Rs. 11.09 lakhs to Rs. 13.62 lakhs. And since the income from other sources is insignificant at Rs. 0.23 lakh, the improvement in profit from Rs. 6.75 lakhs to Rs. 8.22 lakhs underlines the favourable business conditions enjoyed by the Corporation during the year. Incidentally, the profit shows an increase of more than 100 per cent over the 1958 level of Rs. 4.02 lakhs.

The rather sharp rise in profit during the year, as can be seen from the comparative table below, has been due to only small increases in outward interest (from Rs. 30.89 lakhs to Rs. 32.71 lakhs) and in other expenses (from Rs. 6.94 lakhs to Rs. 7.69 lakhs). But staff expenses have gone up perceptibly from Rs. 14.87 lakhs to Rs. 18.31 lakhs. Taxation has taken away Rs. 3.90 lakhs, as against Rs. 2.80 lakhs a year before. The transfer to statutory reserves has been stepped up from Rs. 1.35 lakh to Rs. 1.65 lakh. The preference and equity dividends have absorbed Rs. 2.63 lakhs, with the latter maintained at 15 per cent, subject to tax.

The table below brings out the progress of the Corporation since 1958:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount earned	53.94	48.63	41.07	34.91
Commission and exchange	13.62	11.09	9.45	8.36
Other income	0.23	0.23	0.11	0.12
Interest paid	32.71	30.89	25.60	22.53
Staff expenses	18.31	14.87	13.22	5.06
Other expenses	7.69	6.94	5.40	11.41
Depreciation	0.87	0.50	0.34	0.37

Low	74.75	69.75	67.50	75.00

* Subject to deduction of tax. † Unencumbered portion.

It will be noted that the slowing down in the progress of the Corporation experienced in 1960, after a swift improvement in 1959, has turned out to be a passing phase in the history of the Corporation, as it has picked up again in 1961. During the year under review, deposits have risen all round, with fixed deposits going up from Rs. 589.18 lakhs to Rs. 670.12 lakhs, savings bank deposits from Rs. 150.88 lakhs to Rs. 183.98 lakhs and current and contingent deposits from Rs. 132.06 lakhs to Rs. 158.12 lakhs. While advances, as mentioned at the outset, have outstripped this growth in deposits, investments, the next important source of income for a bank, have failed to keep an even pace of growth, though the increase here from Rs. 353.27 lakhs to Rs. 385.31 lakhs is not too small. As a result, the ratio of investments to deposits has come down from 39.4 per cent to 36.8 per cent. Cash balances, too, show a small decline from Rs. 106.77 lakhs to Rs. 105.38 lakhs, and consequently, their ratio to deposits has also slipped down from 12.2 per cent to 10.4 per cent. The ratio of the Corporation's "own funds" to deposits works out to 4.5 per cent. To improve it, the Directors propose to issue fresh capital this year.

The Corporation absorbed the small-sized Bank of Citizens Ltd., Belgaum, on 17th October 1961. Out of the 16 branches of this bank, one at Dharwar and another at Karwar were amalgamated with the Corporation's existing branches. Two new branches were opened, one at Akola and the other at Kumta. The total number of branches is now 78. Taking up the business underwriting of shares for the first time, the Corporation underwrote for Rs. 14 lakhs the Rs. 1 crore share issue of the Mysore Paper Mills Ltd. It is interesting to find that it had not to fulfil any part of this underwriting obligation.

MR. MORARJI DESAI ON BANKING AND SAVINGS

The Finance Minister's speech on the final budget for 1962-63, delivered on 23rd April 1962, contains two references which are of importance to bankers in this country. The following is the relevant extract:

"The banking system has an important role to play in this (raising the level of savings to an adequate level). A couple of years ago, there had been signs of a lack of confidence, particularly in some of the smaller banks. I am happy to say that, as a result of various measures which we have taken, including the scheme of deposit insurance which came into force at the beginning of this year, our banking system stands greatly strengthened. The Governor of the Reserve Bank, with whom I recently discussed the matter, mentioned with special satisfaction the fact that the smaller banks will, in his judgment, continue to play a useful and important role in our economy. The State Bank has been opening branches in semi-urban and rural areas. The Reserve Bank is making special efforts to facilitate the availability of credit at low rates of interest to agriculture.

"Although considerable progress has been made in all these directions and bank deposits are steadily on the increase, the banking system does not find it too easy to meet all the demands for funds which are generated by our growing industries and rising levels of production. It seems to me desirable that industry in the private sector should exercise a greater measure of restraint in relying on bank finance. I say this not because I want to slow down the development of the private sector, which is as much a part of our Plan as the public sector, but because private industry has available to it another source of finance which has, in the recent past, become exceedingly important. I refer to finance in the shape of equity capital. There was a time when it was difficult to get a new issue subscribed and only big commercial houses could afford to set up major enterprises. This situation is fast changing. The public at large, even people with modest incomes, are now investing in shares. This is a healthy sign which we must encourage. Government have, therefore, been encouraging existing companies, which wish to branch into new lines of production, to start new companies. Further, in the flotation of new companies, there should be the maximum opportunity for public participation. It seems also desirable that new companies should aim at raising a larger proportion of the capital they need through equity shares, rather than by loans, as they did in the past. The pursuit of these policies will mean that the ownership of private industry will become more widebased and the concentration of economic power will be reduced.

"The banking system also provides finance to the public sector. Apart from the investments which it makes in Government securities, public sector undertakings draw upon the banks to meet their requirements of working capital. Life insurance, like banking, is yet another source of finance for our development. The Life Insurance Corporation is a major investor in Government securities. It also contributes to the development in the private sector. It is making special efforts to popularise insurance in the rural areas through its *Janata* scheme and is using *panchayats* and co-operative societies in order to spread insurance in the villages.

"In the effort to mobilise savings for the public sector, I attach the greatest importance to the Small Savings movement. During the second Plan period, the net collections from small savings, including Prize Bonds, amounted to nearly Rs. 415 crores, which was roughly 9 per cent. of the total outlay in the public sector in the second Plan. The third Plan target for net collections from small savings is Rs. 600 crores. We had, accordingly, budgeted last year for a net collection of Rs. 105 crores from small savings. But judging from the progress of collections during the year, the revised estimates presented last month came down to Rs. 95 crores and I would not rule out the possibility of actuals being even lower. Clearly, we shall have to redouble our efforts to make the Small Savings Scheme a success, particularly in the rural areas. I would invite the co-operation of every member of this House in this great task.

"The Government must, of course, for its part, do a great deal too. We have to improve our selling arrangements as well as service to the small grower. We must devise new schemes to suit his needs. This is engaging my urgent attention at the moment. I can make one announcement straightaway. At present, contributions to provident fund and to life insurance policies are, within certain limits, eligible for a rebate on income-tax. However, for those who are not salaried workers or wage-earners, there is no scheme of provident fund. The opportunity for life insurance is also subject to medical checks. To make available some kind of an arrangement analogous to a provident fund for people who are self-employed and not salaried workers, I propose to extend and modify the Cumulative Time Deposit Scheme run by the post offices. At present, monthly deposits can be made under the scheme for a period of 5 or 10 years. We shall now introduce, in addition, a 15-year account with a maximum monthly deposit limit of Rs. 300. The existing limit of a maximum monthly deposit in a 10-year account will also be raised from Rs. 100 to Rs. 200 per month. At the same time, the contributions made to the 10 and 15 years accounts will be allowed to earn a rebate of income-tax as in the case of life insurance premia and contributions to recognised provident funds and subject to the same limits."

MERCANTILE BANK LIMITED

The statement of accounts of the Mercantile Bank Limited (Manager: Mr. J. B. Stewart, Bombay) pertaining to the operations of its branches in India during the year 1961 makes highly encouraging reading. The gross income shows a handsome rise of Rs. 37.21 lakhs to Rs. 219.86 lakhs. The rise is accounted for chiefly by interest and discount which have gone up by Rs. 25 lakhs to over Rs. 148.59 lakhs. Other incomes also have increased by Rs. 17.04 lakhs to Rs. 32.76 lakhs. Income from commission, exchange and brokerage, however, is lower by Rs. 4.83 lakhs at Rs. 38.51 lakhs. A large part of the improvement in earnings has no doubt been neutralised by higher expenditure, interest payments on deposits, borrowings, etc., alone rising by Rs. 19.03 lakhs to Rs. 76.22 lakhs and staff expenses by Rs. 8.51 lakhs to Rs. 67.78 lakhs. Even so, the profit for the year 1961 is markedly higher at Rs. 29.81 lakhs, as against Rs. 13.85 lakhs for 1960. The whole of this profit has been remitted, as in the previous year, to the head office in London.

Over the year, the advances made available by the Indian branches of the Mercantile Bank registered a sharp rise of Rs. 1.14 crore to Rs. 23.11 crores. A drop of Rs. 91 lakhs to Rs. 3.79 crores in bill business has been more than made good by the significant expansion of Rs. 2.05 crores to Rs. 19.32 crores in loans, cash credits, overdrafts, etc. As against the net increase of Rs. 1.14 crore in bank credit, the fresh accretion of deposits was just Rs. 54 lakhs—the total as on 31st December 1961 stood at Rs. 19.57 crores—so that the Bank has had to rely, to a considerable extent, on borrowings from other banking companies, agents and the like, the total of these borrowings rising from Rs. 4.23 crores in 1960 to Rs. 8.92 crores in 1961. It is this factor which explains the marked increase of over Rs. 19 lakhs in interest payments. Nevertheless, the profitability of the Bank has recorded, as already stated, a distinct improvement. The balance-sheet total of the Bank's Indian branches as on 31st December 1961 stood at the impressively high level of Rs. 31.46 crores, as against Rs. 29.60 crores a year before.

UNITED COMMERCIAL BANK

In our review of the United Commercial Bank's working results for the year 1961, appearing on page 660 of *Commerce* dated 14th April 1962, the "owned funds" of the Bank, including the proposed new issue which will bring in Rs. 1.50 crore, were inadvertently shown at Rs. 3.85 crores, whereas the correct figure is much higher, that is, Rs. 5.85 crores. The error is regretted.

Save a

out of every Rupee

— to keep prices from going higher!

Don't say that living costs have to keep climbing. **You** can check Inflation.

One of the main causes of rising prices is **over-spending.** If each one of you save only one naya Paisa out of every rupee you earn, you will put a strong brake on inflation.

This will produce Millions of Rupees in savings—money which is badly needed to finance our FIVE YEAR PLANS.

Of course, you get a personal bonus from your extra savings—the feeling of independence and security that a growing bank balance brings . . . .

Sure, all this means a sacrifice. But isn't this worth? If this means continuing prosperity—and keeping it sound!

Thousands of depositors have made a savings account at Canara Banking Corporation Limited as a form of thrift. So, why not **You** also join them?

Industry House, 159, Churchgate Reclamation, Bombay 1.

NOTICE IS HEREBY GIVEN THAT THE Sixty-fifth Annual General Meeting of the Shareholders will be held at the above address on Tuesday the 22nd May 1962, at 4-15 p.m., for transaction of the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.
2. To confirm the dividend paid by the Directors on the Preference Shares for the year ended 31st December 1961.
3. To sanction the declaration of dividend on Equity Shares for the year ended 31st December 1961.
4. To appoint a Director in place of Shri Rasiklal Maneklal who retires from office by rotation but being eligible offers himself for re-election.

As a Special Resolution:

5. To appoint a Director in place of Shri Motilal Tapuriah who is an associate of the Managing Agents, Birla Gwalior Private Limited, and who retires from office by rotation and is eligible and offers himself for re-appointment; and to consider, and if thought fit, to pass the following resolution as a Special Resolution in respect of which special notice as required by Sections 190 and 261 of the Companies Act 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 and other relevant provisions, if any, of the Companies Act 1956, Shri Motilal Tapuriah, who retires from office by rotation and is eligible for re-appointment and who is an associate of the Company's Managing Agents, Birla Gwalior Private Ltd., within the meaning of sub-clause (c) of clause (3) of Section 2 of the Companies Act 1956 (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint upto two ex-officio Directors to the Board) be and is hereby re-appointed a Director of the Company."

The reasons which make the Special Resolution necessary are more fully dealt with in the Explanatory Statement annexed hereto which for the purpose of the said Section 261 shall be deemed to be incorporated in this notice.

As a Special Resolution:

6. To appoint a Director in place of Shri J. J. Ashar, Bar-at-law, who is the Company's legal adviser and who retires by rotation and is eligible and offers himself for re-election, and to consider and if thought fit to pass the following Special Resolution of which special notice as required by Sections 190 and 261 of the Companies Act 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act 1956, Shri J. J. Ashar, Bar-at-law, who, being the Company's legal adviser, may be deemed to be holding an office of profit under the Company, be and is hereby re-appointed a Director of the Company."

The reasons which make the resolution necessary are more fully set out in the Explanatory Statement annexed hereto which for the purpose of the said Section 261 shall be deemed to be incorporated in this notice.

7. To appoint Auditors to hold office from the conclusion of this meeting until conclusion of the next Annual General Meeting, and fix their remuneration.

Special business:

To consider and if thought fit to pass with or without modification the following resolutions as Special Resolutions:—

8. "WHEREAS the East Indian Produce Co. Ltd., an associate of M/s. Birla Gwalior Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and WHEREAS the said Company carry on business of acting as agents in the United Kingdom and the Continent for purchase and sale of goods including stores, spare parts, plant and machinery and rendering of services such as recruitment of technical personnel, etc. and also have dealings and business connections with parties all over the United Kingdom and the Continent of Europe and their operations are on a very large scale and WHEREAS their expenses of maintaining their office amount approximately to £65,000 per annum and WHEREAS expenses which can be attributed to the work expected to be done for and on behalf of the Company would depend on the value of purchases effected through and services rendered by the said company in relation to their total turnover in each year, and WHEREAS the said East Indian Produce Co. Ltd., have been acting as buying agents for and on behalf of the Company in the United Kingdom and the Continent of Europe having been appointed as such buying agents for a term of 3 years from 1st December 1959 pursuant to a special resolution of the Company passed in General Meeting in that respect on 1st December 1959, and their appointment as such buying agents is due to terminate on 30th November 1962, NOW it is hereby Resolved that the appointment of the said East Indian Produce Company Limited as such buying agents be and is hereby renewed for a period of 3 years with effect from 1st December 1962 on the following terms as to commission and expenses:—

(a) For purchasing stores, spare parts, etc. a commission of 5% of the invoice price of the goods purchased.

(b) For purchase of plant and machinery a commission of 2½% of the invoice price.

(c) For recruiting technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the said East Indian Produce Co. Ltd. apportionable to such work in each particular case.

(d) For rendering any other special service, such remuneration as may be agreed upon between the Directors of the Company and the said East Indian Produce Co. Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires permission of the Central Government or of the Reserve Bank of India, as the case may be, the same will not be done unless such permission is obtained."

9. "WHEREAS the American East India Corporation, an associate of M/s. Birla Gwalior Private Ltd., the Managing Agents of the Company, maintain an office at New York in the United States of America and WHEREAS the said Company carry on business of acting as agents in the United States of America for purchase and sale of goods including stores, spare parts, plant and machinery and rendering of services such as recruitment of technical personnel, etc. and also have dealings and business connections with parties all over the United States of America and their operations are on a very large scale and WHEREAS their expenses of maintaining their office amount approximately to $60,000 per annum and WHEREAS expenses which can be attributed to the work expected to be done for and on behalf of the Company would depend on the value of purchases effected through and services rendered by the said Company in relation to their total turnover in each year, and WHEREAS the said American East India Corporation have been acting as buying agents for and on behalf of the Company in the United States of America having been appointed as such buying agents for a term of 3 years from 1st December 1959 pursuant to a special resolution of the Company passed in General Meeting in that respect on 1st December 1959 and their appointment as such buying agents is due to terminate on 30th November, 1962, NOW it is hereby Resolved that the appointment of the said American East India Corporation as such buying agents be and is hereby renewed for a period of 3 years with effect from 1st December 1962 on the following terms as to commission and expenses:—

(a) For purchase of stores, spare parts, etc. a commission of 5% of the invoice price of the goods purchased.

(b) For purchase of plant and machinery a commission of 2½% of the invoice price.

(c) For recruiting technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the said American East India Corporation apportionable to such work in each particular case.

(d) For rendering any other special service, such remuneration as may be agreed upon between the Directors of the Company and the said American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires permission of the Central Government or of the Reserve Bank of India, as the case may be, the same will not be done unless such permission is obtained."

10. "RESOLVED that Article 120 of the Articles of Association of the Company be deleted and the following be inserted in its place as Article 120:

"120. In addition to the remuneration payable to them in pursuance of the preceding Articles 118 and 119, Directors may be paid or reimbursed all travelling, hotel and other expenses properly incurred by them:

(a) in attending and returning from meetings of the Board of Directors or of any Committee thereof or General Meetings of the Company; or

(b) in connection with the business of the Company."

By Order of the Board,
R. S. VENKATESWARAN,
Secretary.

THE TATA MILLS LIMITED

NOTICE

THE FIFTIETH ANNUAL GENERAL MEETING of THE TATA MILLS LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, 1, on Monday, the 21st May 1962, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1961, and the audited Balance Sheet as at 31st December 1961.
2. To declare a dividend.
3. To appoint a Director in place of Mr. N. B. Vakil who retires by rotation and is eligible for reappointment.
4. To appoint a Director in place of Mr. T. V. Baddeley, C.B.E., who retires by rotation but does not offer himself for reappointment and to fill that vacancy a notice has been received by the Company from certain members under Section 257(1) of the Companies Act, 1956 proposing Mr. C. H. Campbell as a Director.
5. To appoint Auditors and to fix their remuneration.
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to Section 163(1) of the Companies Act, 1956, and in supersession of Resolution No. VI passed at the Annual General Meeting of the Company held on the 22nd day of May 1957, the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under Section 163 of the Companies Act, 1956, or any or more of them, may be kept at the Registered Office of the Company and/or at the Company's Record Room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay.

RESOLVED FURTHER that in supersession of the said Resolution No. VI passed at the aforesaid Annual General Meeting of the Company the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under the several provisions of the Companies Act, 1956, and in particular under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362, 370 and 372 and Schedule VIII of the said Act be kept open for such inspection by the persons entitled thereto to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the Registered Office of the Company and subject to the provisions of the Companies Act, 1956, at the Company's Record Room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay and/or at the Record Room in Tata Mills Dadar and/or at such other place in Greater Bombay as may be decided upon by the Board of Directors of the Company, as the case may be, between the hours of 10-30 a.m. and 1-00 p.m. on all working days excluding Saturdays, Sundays and public holidays except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company Provided However that the register required to be maintained under Section 307 of the said Act shall be open for inspection of the members or the holders of the debentures of the Company, if any, as aforesaid between the hours abovementioned during the period prescribed by sub-section (5)(*a*) of Section 307."

Notes:—(*a*) The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. 4 and 6 set out above, is being posted to all members.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will remain closed from Thursday, the 5th April 1962 to Wednesday the 2nd May 1962, both days inclusive.

(*d*) If the dividend on shares, as recommended by the Directors, is passed at the meeting, payment will be made on and after Tuesday, the 22nd May 1962, to those members whose names are on the Register of the Company on the 2nd May 1962.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-SIXTH ANNUAL GENERAL MEETING of THE SVADESHI MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, 1, on Wednesday, the 23rd May 1962, at 4-30 p.m., or so soon thereafter as the proceedings of the separate meeting of the holders of the Preference Shares of the Company convened at 4-20 p.m. at the same place and on the same day shall conclude, to transact the following business:—

1. To consider, and if thought fit, to pass the following resolution, with or without modification, as a Special Resolution:—

"RESOLVED that the Memorandum and Articles of Association of the Company be altered in the manner following:

(*a*) At the end of clause (V) of the Memorandum of Association the following Explanation shall be added:

'*Explanation*.—In respect of the financial year ended 31st December, 1961 and for each subsequent year or other period, the cumulative preferential dividend on Preference Shares shall be payable (or deemed to have been payable) at the rate of 7.14 per cent without any deduction therefrom on account of income-tax payable by the Company, but subject to such deduction of tax at source in respect of tax payable by the shareholder as is provided by Section 194 of the Income-tax Act, 1961, or any statutory modification, replacement or re-enactment thereof or any Finance Act or any other Act or Rule or Regulation for the time being in force and at such rates as may be prescribed thereby or by any competent authority.'

(*b*) In Article 4 of the Articles of Association, the following Explanation shall be added at the end:

'*Explanation*.—In respect of the financial year ended 31st December, 1961 and for each subsequent year or other period, the fixed cumulative preferential dividend on Preference Shares shall be payable (or deemed to have been payable) at the rate of 7.14 per cent without any deduction therefrom on account of income-tax payable by the Company, but subject to such deduction of tax at source in respect of tax payable by the shareholder as is provided by Section 194 of the Income-tax Act, 1961, or any statutory modification, replacement or re-enactment thereof or any Finance Act or any other Act or Rule or Regulation for the time being in force and at such rates as may

be prescribed thereby or by any competent authority.'"

2. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December, 1961, and the audited Balance Sheet as at 31st December, 1961.

3. To declare dividends on Preference and Ordinary shares.

4. To appoint a Director in place of Mr. C. H. Bhabha who retires by rotation and is eligible for reappointment.

5. To appoint a Director in place of Mr. F. H. Kemple who retires by rotation and is eligible for reappointment.

6. To appoint Auditors and to fix their remuneration.

7. To appoint a Director in place of Mr. D. D. Romer who has resigned and to fill which vacancy a special notice as required by Sections 190, 257 and 261 of the Companies Act, 1956, and other applicable provisions (if any) of the Act has been received by the Company proposing Mr. N. A. Palkhivala as a candidate for the office of Director and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. N. A. Palkhivala, who is a Director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board) be and is hereby appointed a Director of the Company."

The reasons which make this Special Resolution necessary are that as the Managing Agents of the Company are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two Directors to the Board and as Mr. N. A. Palkhivala is a Director, member, officer and an associate of the Managing Agents, his appointment as a Director liable to retire by rotation, can only be made by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956.

8. To consider, and if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that pursuant to Section 163(1) of the Companies Act, 1956, and in supersession of Resolution No. VII passed at the Annual General Meeting of the Company held on the 20th day of May 1957, the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under Section 163 of the Companies Act, 1956, or any one or more of them, may be kept at the Registered Office of the Company and/or at the Company's Record Room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay.

"RESOLVED FURTHER that in supersession of the said Resolution No. VII passed at the aforesaid Annual General Meeting of the Company the registers, indexes, returns, books, certificates and documents of the Company required to be maintained and kept open for inspection under the several provisions of the Companies Act, 1956, and in particular under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362, 370 and 372 and Schedule VIII of the said Act be kept open for such inspection by the persons entitled thereto to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the Registered Office of the Company, and subject to the provisions of the Companies Act, 1956, at the Company's Record Room in the Army and Navy Building at Mahatma Gandhi Road, Fort, Bombay and/or at the Record Room in Tata Mills, Dadar and/or at such other place in Greater Bombay as may be decided upon by the Board of Directors of the Company, as the case may be, between the hours of 10-30 a.m. and 1-00 p.m. on all working days excluding Saturdays, Sundays and public holidays except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company Provided However that the register required to be maintained under Section 307 of the said Act shall be open for inspection of the members or the holders of the debentures of the Company, if any, as aforesaid between the times abovementioned during the period prescribed by sub-section (5)(*a*) of Section 307."

Notes:—(*a*) The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. 1, 7 and 8 set out above, is being posted to all members.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will remain closed from Thursday, the 5th April, 1962 to Wednesday, the 2nd May, 1962, both days inclusive.

(*d*) If dividends on shares, as recommended by the Directors, are passed at the meeting payment will be made on and after Thursday, the 24th May, 1962, to those members whose names are on the Register of the Company on the 2nd May, 1962.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
N. H. TATA,
Director.

BOMBAY, 19*th April*, 1962.

Registered Office:
BOMBAY HOUSE,
24, BRUCE STREET, FORT,
BOMBAY, 1.

LARSEN AND TOUBRO LIMITED

NOTICE OF CLOSING OF TRANSFER BOOKS

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Share Transfer Books of the Company will be closed from Monday the 7th May 1962 to Thursday the 24th May 1962, both days inclusive. for the purpose of further issue of Equity Capital of Rs. 55,00,000, at a premium of Rs. 8 on each share.

Letters of Offer of 'right' shares will be posted to the Shareholders on or about the last week of May 1962.

Shareholders are requested to notify the Company any change in their present Registered Address as early as possible.

By Order of the Board of Directors,

LARSEN & TOUBRO LIMITED,

L. & T. (MANAGEMENT) PRIVATE LIMITED,

N. M. DESAI,
Director,
Managing Agents.

Dated: 21*st April* 1962.

STEEL CONTAINERS LIMITED

THE BOARD OF DIRECTORS OF THE above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Dividend of 20 per cent for the year ended 31st December, 1961.

BALMER LAWRIE & Co. LTD.,

D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA.
17*th April*, 1962.

THE INDIA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the India United Mills, Limited will be closed from Monday, the 28th May, 1962 to Friday the 22nd June, 1962, both days inclusive.

By Order of the Board,

C. N. BENGALI,
Secretary.

BOMBAY, 23*rd April*, 1962.

SCOPE FOR INDEPENDENT AIR OPERATORS

(*Concluded from page* 755)

way and a single fare of Rs. 60, the daily revenue would lie between Rs. 720 and Rs. 960. On average, then, the daily loss would be Rs. 1,750, amounting to an annual loss of about Rs. 6,38,000. In practice, of course, an average of six to eight passengers each way is unlikely of attainment but freight might add something to the daily revenue.

The foregoing, needless to say, is only a rough and ready calculation. It is, however, sufficiently near the truth to demonstrate how costly the development of a route—even a single short route of this kind—can be. To be successful, the would-be operator requires three basic factors in his favour—suitable equipment, adequate financial resources, and a total operation big enough to carry his overheads. Small-scale operation, with unsuitable equipment, is inevitably doomed to failure.

As one suggested earlier in this article, there may be some scope for the independents in the Assam/West Bengal/N.E.F.A. area. It is, after all, this area which they did much to develop; it is here that the bulk of their present operations lies. They know all that there is to be known of the actual and potential traffic of this region. It is possible that they may see certain advantages in operating on a scheduled basis. It is possible, certainly. But one would still have doubts as to where the ultimate advantage lies.

Of one thing the independents must be only too well aware—any licence issued under the present Act will be for a very limited period. In the course of the debate, it was made perfectly clear that I.A.C. is to take over all routes in the country "as early as possible." That seems to argue a term of from five to ten years. If that is the case, one need be no prophet to foretell the final result; the licensee does the spadework and the Corporation steps in and reaps the harvest. That cannot be a very inviting prospect for the independents.

The British Example

The Government was at no pains to hide its intentions. There are, it seems, certain routes and areas which the Corporation finds unremunerative to operate. Therefore, says the Government, let the private companies develop these routes and the Corporation can take them over in due course. It does not seem to have occurred to anyone that, if a route, for political, strategic, or any other reason of State, has to be served by air transport, it is clearly the responsibility of the Corporation—financially assisted by the Government, if necessary—to carry out the task. The impression one gets is that nobody cares what happens to the private companies—and that, one suggests, is a very shortsighted viewpoint.

Finally, one wonders why all this reluctance to admit a very small measure of private enterprise into the business of air transport? In Britain, where they seems to be just as much wedded to the principles of State enterprise, there are a large and growing number of independent airlines. Some of these are comparatively large concerns, well organised, powerful, adequately financed, and equipped with the most modern aircraft. Yet these companies are permitted—indeed, encouraged—to seek direct competition on important routes with the two Air Corporations. Why deny to the private air companies in India the few, the very few, crumbs which fall from the rich man's table? From two points of view at least—public convenience and national air power—it might not really come amiss to give them something a bit more substantial by way of encouragement.

BRITAIN'S BIGGEST AIRLINER

Britain's biggest airliner, the four-jet Vickers VC-10, was taken out from its hangar at Weybridge, Surrey, for the first time on the 15th inst. It is to undergo a series of intensive pre-flight checks scheduled to last six weeks. The VC-10 weighs 150 tons fully loaded, and is 158 ft. long. It will carry 150 passengers at 600 miles per hous over distances exceeding 4,000 miles. A Vickers spokesman said that 54 VC-10 airliners have been ordered to date. Deliveries to B.O.A.C. will begin at the end of 1963.

An international Plant and Maintenance Engineering Conference and Exhibition is being organised to take place at the Alexandra Palace in London from 17th to 21st June 1963. A five-day symposium and exhibition on industrial process heating is also being organised to take place concurrently with the above. Both these events will be on an international scale, and speakers, delegates and exhibitors will be invited from overseas countries. Delegates to these two 1963 Conferences will have "free run" of both Exhibitions. An attendance of many more than 2,000 top engineers is confidently anticipated.

MONEY SLIGHTLY EASY

(From Our Own Correspondent)

BOMBAY, 25*th April*

Comfortable conditions continue to prevail in the short-term money market. The demand for bank credit is still sizable, but the supply of funds with the banks has been increasing at a greater pace. Consequently, there are more lenders than borrowers in the inter-bank section. The day-to-day call money rate is 3½ per cent, with business being possible even at 3½ per cent after clearing hours. Reports from Calcutta also point to the existence of similar conditions there.

There has been no change in the rates of interest for short-term deposits. They are all ruling at the ceiling prescribed under the Inter-bank Agreement. The rates are:

	Per cent
Notice money from public:	
3 days and more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days (inclusive) ...	3½
(iii) 61 to 90 days (inclusive) ...	3½
(iv) 91 days and over but less than 12 months	3½
(v) 12 months and over but less than 24 months	4
(vi) Two to four years	4½
(vii) Four to five years	4½
(viii) Five years and over	5

No definite decision has been arrived at till the date of this report on the question of revising the aforesaid rates, following the notice given by the five medium banks. It was reported early in the week that the representatives of the medium banks on the 9-man committee in charge of revising the Agreement had offered to withdraw their demand for a ¼ per cent differential in their favour as compared with the rates payable by the big banks, provided the definition of small banks was so amended as to cover only those with deposits upto and including Rs. 5 crores, instead of Rs. 25 crores at present. It was further reported that the small banks' representatives were, however, unwilling to accept this proposal. Today, it is said that the medium banks have withdrawn their offer of this week and reverted to their earlier demand. The fate of the Agreement is thus still uncertain.

In keeping with the slightly easier money conditions, the 91-days' Treasury Bill rate has declined from 2.620 per cent per annum to 2.580 per cent per annum, although the amount offered at Rs. 2 crores was exactly equal to the amount for which tenders were invited. There was a noticeable improvement in the sales of Intermediate Treasury Bills; during 17th April to 21st April 1962, the market absorbed Rs. 57 lakhs worth of these bills, as against Rs. 10 lakhs in the previous week and a mere Rs. 1 lakh in the week before that.

Foreign Assets Pretty Low

According to the Reserve Bank's statement for the week ended 20th April 1962, there has been a further contraction by Rs. 2.13 crores in foreign assets, on top of a decline of Rs. 5.17 crores in the preceding week. The total of these assets now stand at no more than Rs. 117.89 crores, of which Rs. 108.86 crores are held in the Issue Department and the balance in the Banking Department.

Indicative of the improvement in the supply of funds in the money market, deposits of banks with the Reserve Bank have gone up by Rs. 2.12 crores and borrowings against usance bills have declined by Rs. 1.53 crore to Rs. 12.47 crores. It may be interesting to note that, as recently as of 6th April 1962, they were standing at Rs. 40.73 crores, after touching a high of Rs. 47.84 crores on 16th March 1962. Thus, in a little over a month's time, the banks have been able to reduce their borrowings from the Reserve Bank against usance bills alone by no less than Rs. 35 crores. During this period, they must have also reduced their other borrowings from the Bank. It would appear that, in all, their total borrowings from the Reserve Bank have been slashed by about Rs. 60 crores in the past one month, besides raising their deposits with the Bank by about Rs. 11 crores. These figures will give readers a good idea of the extent to which conditions in the money market have improved in favour of the banks.

The latest available statement of the Scheduled banks is for the week ended 13th April 1962. This shows, as compared with that for the previous week, an increase of Rs. 4.83 crores in deposits, followed by a rise of Rs. 5.55 crores in bank credit. Investments are slightly lower, while total cash has declined by as much as Rs. 13.43 crores, mainly because of a large repayment, amounting to Rs. 14.41 crores, of borrowings from the Reserve Bank.

There has been some improvement in the demand for Government securities, but this has had no effect on Gilt-edged values, because the Reserve Bank has been a ready supplier. It would appear from the resumption of the outright sale of some medium-dated securities by the Reserve Bank that the central banking authorities consider the improvement in the short-term money market as a passing phase and that they do not want to allow this temporary feature to engender a rise in the prices of gilt-edged securities.

In the foreign exchange markets abroad, the £ sterling has been ruling quite steady. The spot rate for sterling in the New York market, after declining from 281.540 to 281.380 cents per £ early in the week, has staged a slight improvement; the latest available rate is 281.410-281.450 cents. There has been a similar improvement in the rate for three months' forward which is currently quoting 280.210-280.250 cents per £. Locally, the banks' selling rate for ready T.T. on New York has gone up by 25 nP to Rs. 475.75 per 100 dollars. There has been a corresponding rise in their buying rate also, which is now quoted at Rs. 472.25 per 100 dollars.

SPOT BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 25*th April*

The bullion market ruled distinctly easy in the first three sessions of the week but picked up strength during the post-Budget session on Monday and the firmness persisted till the close today. The earlier easiness was due to corrective long liquidation, while fresh support was lacking on fears of reduced spot offtake as well as proximity of the Central Budget. Some upcountry operators were persistently unloading their holdings. Consequently, both gold and silver drifted downward. Prices, however, staged a recovery in the post-Budget session on Monday, thanks to fresh inquiry and short-covering induced by the increase of 5 per cent in corporation tax. The recovery was also aided to some extent by Mr. B. R. Bhagat's statement in the Lok Sabha that the Government of India had decided to keep the gold produced in Kolar gold mines (to be taken over by it from the Mysore Government) in official reserves and not sell it in the open market. The recovery was, however, not marked enough to make up for the earlier losses, so that today's closing rates were lower than those prevailing a week ago, excepting ready gold which was a shade better.

Offtake of both gold and silver during the week under review was larger than in the previous week; the daily average offtake was 6,800 tolas and 15 bars, as against 5,800 tolas and 12 bars, respectively, in the previous week. The average rate of arrivals was lower in gold (9,600 tolas, as against 10,000 tolas), but higher in silver (20 bars, as against 18 bars).

The *Jeth* (18th June) settlement in gold began the week at Rs. 121.55, as against the previous close of Rs. 121.30, but gradually receded to touch a low of Rs. 120.05 on Monday. The settlement improved to Rs. 120.85 today before finishing at Rs. 120.60. The net loss during the week was 70 nP.

Ready gold receded from Rs. 121.25 to Rs. 120.05 on Saturday. Thereafter, it moved up and touched Rs. 121.60 today, though it closed lower at Rs. 121.35. At this level, the spot rate commanded a premium of 75 nP over the forward, whereas it was quoted at a discount of 5 nP on Wednesday last week. In silver, the *Jeth* (19th June) settlement encountered selling early in the week, the quotation declining from Rs. 220.20 to Rs. 216.60 on Monday. It moved up subsequently to Rs. 217.95 today before finishing at Rs. 217.70. The net loss over the week was Rs. 2.50.

Ready silver eased from Rs. 221 to Rs. 219.10 on Saturday, but rallied thereafter and touched Rs. 221.20 today. The closing was Rs. 220.95. At this level, the ready rate commanded a handsome premium of Rs. 3.75 over the forward, as against 80 nP last week-end.

The dollar price of gold in the London bullion market eased from $35.07½ to $35.07-5/8 per fine ounce, while ready gold gathered one penny to 249s. 3d. Ready and forward silver were unchanged at 84¾d. and 84½d., respectively, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	25-4-62 (closing)	High	Low	18-4-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.35	121.60	120.05	121.25
*Jeth**	120.60	121.55	120.05	121.80
Sovereign	96.76	97.00	96.50	97.00
SILVER				
Ready (.999 fine)	220.95	221.80	219.10	221.00
Jeth†	217.70	220.80	216.60	220.20
London—				
Gold	249s. 3d.	249s. 3d.	249s. 3d.	249s. 3d.
Silver Ready	84¾d.	—	—	84¾d.
Silver Forward	84½d.	—	—	84½d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, 23*rd April*

Trading in E. I. kips in the local market this week was slow. Small quantities of cow hides in light weight were sold for shipment. Demand was more for fifths selection in cow hides, run in cow calf and buff calf. There was good inland demand for cow hides lower ends of medium and heavy weights. Sellers were reserved in the calf section, as stocks with the tanners were small. Importers in the U.S.A. were interested in buff calf skins. They are likely to buy, if the tanners reduce their prices further, say by 5 per cent.

There was no change in the tanned skins market. Small quantities of goat skins were sold to the U.K. and Continent in 11/12 lbs. average and to the U.S.A. in 11/12 lbs. and upwards. In the tanned sheep skins section, there was very little business in prime and semi-prime classes, while mediums met with good inquiries at unchanged prices. Tanners have been trying to put up the prices, which might retard the volume of sales.

In the German tanned skins auctions, held last week, there was good clearance of tanned goat 11/12 lbs. average while other weights were neglected. Only a third of the stocks on offer were cleared and the prices realised were about 3d. to 6d. less than what Madras sought. The clearance of sheep was negligible.

STEADY DEMAND FOR COTTON

(From Our Own Correspondent)

BOMBAY, 25*th April*

As there is no futures trading in cotton at Bombay, the cotton market had little enthusiasm to greet the Budget. The additional levies on mill cloth proposed by the Finance Minister was not expected to be reflected in any significant change in the trend and pattern of mill demand for raw cotton. In the spot market, mill demand continued to be well maintained. Spinner interest was noted in almost all popular varieties such as Vijay, Digvijay, Kalyan, Laxmi, Wagad and Co2. In view of the tight supply position, prices continued to rule firm. Judging from the registration figures, export demand for Bengal *Deshi* is not as brisk as was earlier anticipated. Out of the quota of 70,000 bales announced recently, sales registered till the 19th inst., are placed at 51,750 bales. This excludes sales to communist countries. Sales to Yugoslavia aggregate about 10,000 or 11,000 bales. Since under the India-Yugoslavia trade agreement payment for this cotton is to be made in rupees it is said that this quantity cannot be included in the latest quota which is linked to import of cotton. Hence a special export quota for Yugoslavia is expected to be issued shortly.

Among foreign cotton, Sudans and East Africans were in the limelight. U.S. cotton also evoked some attention while interest in Pakistan cotton tended to subside.

While every one concerned with cotton is anxiously awaiting the announcement of the cotton policy for the new season, Mr. Manubhai Shah, Union Minister for International Trade, in a statement made in Lok Sabha this week, struck an optimistic note about the cotton supply position. He assured the House that the available cotton supplies, together with imports already arranged, would be sufficient to meet the requirements of mills not only for internal sales but also for exports. The Government, according to him, expected substantial imports under P.L. 480 and import of cotton from U.S.S.R. and East Africa under barter arrangement was also being considered.

Mr. Shah conceded that a shortage of one million bales of cotton in the carry over-stocks at the beginning of the next season, was anticipated. The requirements of cotton for consumption in mills during the current season ending August this year were estimated at 5.5 to 5.6 million bales.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.

Bengal *Deshi* 680; Ganganagar (Superfine) 718; Hubli Laxmi 1,170; Khamgaon 1,115. Pakistan N.T. 985; American 1,272; Mwanza 1,176-1,118.

Generally easy conditions prevailed in the Karachi cotton futures market during the fortnight under review. Mill demand continued to be slow and export interest slack. Reflecting this, the N.T.R.G. May contract receded from Rs. 73.10 on the 10th inst., to Rs. 70.70 at close this week. The July contract eased by Rs. 1.10 to Rs. 71.70 during the same period.

The fourth and final estimate of the 1961-62 Egyptian cotton crop put production, less scarto, at 6.55 million metric cantars, as against 6.53 million metric cantars estimated in February and last season's output of 10.44 (old) cantars. The staple length-wise breakdown of the crop is as follows:

	(In metric cantars)
Cotton over 1⅛"	2,768,000
" " 1⅛"	1,660,000
" " 1⅛"	2,127,000
Scarto	258,000

Cotton futures in Liverpool receded in slow dealings characterised mainly by inter-month switchings and routine dealings. In the absence of any fresh incentives, trading interest was lacking. Both the American and American type contracts recorded small losses. Sudan cotton contracts in Liverpool ruled quietly steady, with values showing practically no change. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.65; July 24.10; October 24.10; December 24.20.

American cotton mixed growth contract: May 24.05; July 24.50; October 24.45; December 24.55.

Sudan: May 30.00; July 29.00; September 29.00.

Quiet conditions prevailed in the New York cotton futures market during the fortnight. Values moved in a narrow range in their trading. Net changes over the week were negligible.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	24-4-62	17-4-62	10-4-62
New York spot	35.70	35.70	35.07
May	34.25	34.21	34.30
July	34.70	34.63	34.70
October	34.40	34.29	34.31

PEPPER RISES

(Messrs. Parekh and Co.)

BOMBAY, 25*th April*

Malabar black pepper moved both ways during the fortnight under review. In the earlier part, garbled sagged down to Rs. 307 in sympathy with Lampong and Sarawak which were offered to New York and Europe very much below the parity of Malabar. In the later part, however, the market improved under pressure of seasonal inland

demand and buying by exporters who sold some parcels to East European countries.

Ungarbled moved between Rs. 299.50 and Rs. 310 and garbled between Rs. 307 and Rs. 318. May delivery, after touching the lowest at Rs. 318, rallied to Rs. 327. Business in July delivery was thin, there being small interest from both buyers and sellers. London was down to 37d. for white and to 29d. for black.

New York Spot was forced down to $0.34 under pressure of selling by dealers who reduced their selling price, as they were to replace Lampong with a margin. At the time of writing, however, it improved to $0.35.

Direct business with Singapore proved poor, as foreign dealers preferred to deal direct with the origins since the quality of pepper shipment from Singapore during the year incurred recurrent claims.

Brazil is likely to emerge as a serious competitor and, in the years to come, it is expected to produce more pepper both white and black than Sarawak, as most of the pepper plantations in the country are being managed by the Japanese emigrants.

Ready pepper in Bombay is nominally quoted at Rs. 166 per 50 kilos.

FRESH TAXES ON YARNS

(From Our Own Correspondent)

BOMBAY, 25*th April*

Both the customs duty on imported art silk yarn and the excise duty on indigenous yarn have been raised in the final Budget of the Central Government presented to the Lok Sabha on Monday this week. The following are the revisions:

Customs duty: The standard rate of duty on artificial silk yarn and thread has been raised to Rs. 7.50 per kg. or 55 per cent *ad valorem* whichever is higher plus excise duty (statutory), from Rs. 6.60 or 50 per cent *ad valorem*. Similarly, the rate has been enhanced from Rs. 4.45 to Rs. 4.85 per kg. on rayon yarn below 75 deniers, from Rs. 3.15 to Rs. 3.45 on yarns of 75 deniers and above and from Rs. 2.75 to Rs. 3.00 on yarns above 100 deniers; in addition to the revised rates, there will be, as hitherto, excise duty by notification. The additional annual revenue expected is Rs. 68 lakhs as a result of change in basic customs duty and Rs. 166 lakhs by way of countervailing duty provision for which already exists.

Excise duty: The effective rates of excise duty have been revised as follows:

(In Rs. per kg.)	*Revised*	*Old*
Below 75 deniers	4.00	3.00
75 deniers and above but not above 100 deniers	3.00	2.25
Above 100 deniers	2.00	1.50
Staple fibre	1.00	0.75

The tariff rate on rayon and synthetic fibre and yarn has been increased from Rs. 3.35 to Rs. 4.50. The estimated additional revenue is put at Rs. 171 lakhs.

Explaining the proposal in respect of excise duty, the Finance Ministry's memorandum says:

"This proposal is part of a wider proposal to simplify and rationalise the existing tariff on rayon or artificial silk fabrics and yarn. Unprocessed artificial silk fabrics are being exempted from the Central excise duty by a notification as a result of which only processed fabrics falling under this item will be required to pay duty and that, too, at half the existing rates. This would remove control from a large number of powerloom units producing only unprocessed fabrics. However, to make up for the loss of revenue arising out of this step, the tariff rate as also the effective rates on rayon and synthetic fibres and yarn are being stepped up by about one-third of the existing rates."

The excise duty on cotton twist, yarn and thread has also been enhanced as is indicated below:

(Effective rates in nP per kg.)		
Count group	*Revised*	*Old*
Less than 17 counts	10	10
17-34 counts	13.5	10
35-47 counts	18	15
48 counts and over	27	15

The relief given to yarn cleared in hanks generally used in handlooms is being continued at 10 nP per kg. for each group. One effect of this is said to be that coarse yarn issued in hanks will be free of duty.

The estimated additional revenue is put at Rs. 290 lakhs.

In the case of woollen yarn, the rate of excise duty (in per cent *ad valorem*) has been increased from 10 to 15 on worsted yarn and from 5 to 7½ on others. The additional yield is expected to be of the order of Rs. 65 lakhs.

It is proposed to convert the duty on unprocessed woollen, rayon and art silk fabrics to a duty on yarn and processing so as to release the powerlooms from excise control. The loss in revenue will be made good partly by an increase in duty on yarn and partly by a duty on processed fabrics. Consequently, only a small number of units will need excise control in future. As a fair quantity of yarn is imported, these changes will result in a loss of Rs. 50 lakhs, but there will be a net increase in revenue of Rs. 1.16 crore on account of the increased countervailing duty on yarn.

Immediately after the above proposals were announced, the yarn market experienced nervous bull liquidation. It was feared that the steep increase in tax burden on art silk yarn would evoke resistance by weaving mills. There was, besides, the report that the supplies of yarn available would increase, following the release of about 20,000 cases of indigenous yarn allocated against the first quarter's quota but not actually released. Consequently, Amilan (20 x 1) April delivery climbed down from Rs. 3,805 to Rs. 3,625. Subsequently, there was a recovery. In sympathy, the prices of other yarns tended to move up.

The Government of India has decided to allocate indigenous art silk yarn during the April-June 1962 quarter to the art silk powerloom weaving units at the rate of 0.53 kg. per loom per shift on the basis of the total number of loom-shifts worked by such units on art silk/staple fibre yarn during the April-June 1962 quarter.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	25-4-1962	18-4-1962
	Rs.	Rs.
***Art silk yarn*—**		
20/1 Amilon (100 kg.)—		
April	3,740.00	3,745.00
June	3,830.00	3,830.00
120 Japan (per 100 kg.)	2,150.00	2,094.00
150 Japan (per 100 kg.)	1,950.00	1,929.00
120 Italy (per 100 kg.)	1,847.00	1,845.00
150 Italy (per 100 kg.)	1,736.00	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.)	12.72	12.85
***Staple fibre yarn* (40 x 2)—**		
April	732.00	727.00
June	753.00	745.00
Kohinoor (per kg.)	8.36	8.18

40s T. T. Corin	33.75	33.50
60s T'Mangal	50.50	50.00

GROUNDNUTS RECOVER

(From Our Own Correspondent)

BOMBAY, 25*th April*

After a sharp decline in the earlier sessions, oilseeds tended to recover later in the week. But today's closing prices in general were still below those prevailing a week ago, barring linseed, which staged a smart rally following reduced arrivals of new crop. The Union Budget did not have any perceptible effect on the market as all the major oilseeds were spared from any new imposts. Copra was an exception, the import duty on which was raised sharply from 5 per cent to 15 per cent. The upward revision was fully reflected in sharp rise in coconut oil prices. Groundnuts came in for heavy selling in the beginning of the week, thanks to pressure of offerings of inferior seeds. At low levels, there was, of course, renewed buying by local crushers and *vanaspati* manufacturers. The relaxation of credit limits in respect of bank advances to expeller mills was welcomed by the trade, as it would help promote exports of deoiled cake. The Reserve Bank has relaxed the bank credit limits available to "integral" expeller mills using the solvent extraction process. Effective from the 19th inst., such expeller units—which export deoiled groundnut cake—will be entitled to additional credit limits from banks to the extent of 25 per cent of the f.o.b. value of the exports made by them in the corresponding 12 months ending February 1962. A circular to banks, announcing the relaxation, states that a sizable quantity of deoiled groundnut cake is exported annually and the relaxation will help the expeller units to increase their exports. Banks are required to maintain a minimum margin of 45 per cent on all advances against groundnut. The oil expeller units will now be able to secure a relaxation in their credit limits to the extent of 25 per cent of the f.o.b. value of their exports.

Castorseeds, which had maintained a firm front last week, turned easy. A better sentiment was, however, in evidence towards the close on reports that the world output of castorseeds were much lower in 1961 than in the previous year. The world castor bean crop in 1961 aggregated 588,000 short tons, according to an estimate by the U.S. Department of Agriculture. This was ten per cent below the previous year's record of 651,740 tons, but 17 per cent above the 1950-54 average. The decline in last year's output was due mainly to a sharp decrease in the Brazilian crop and a less significant drop in India. Brazil's crop last year was 180,000 tons, as compared with 245,000 tons in the year before, while India's crop was 109,760 tons, as against 118,270 tons in 1960. Production in Thailand was 49,600 tons in 1961 and 47,400 tons in the year before. According to the U.S. Department of Agriculture, the prospects for increase in production this year, both in Brazil and India, are good. World exports of castor bean and castor oil in 1961 seemed to have dropped considerably from the 1961 total of 162,000 tons oil equivalent basis (or 360,000 tons bean equivalent). Thailand maintained its position as the leading exporter of beans for the third year in a row. In the export of oil, India suffered a decline whereas Brazil registered a sharp increase. This was reflected in the U.S. imports of oil. The U.S. imported from India 13,787 tons of oil in 1959 and 24,960 tons in 1960, but in 1961 it did not import a single ton. At the same time the U.S. import of oil from Brazil, which had declined to 20,977 tons in 1960, from 40,797 tons in 1959, shot up to 55,407 tons in 1961. The decline in imports from India is attributed to the relatively higher prices of castor oil.

Groundnuts May 1962 contract fell from Rs. 219.12 to Rs. 214, before closing at Rs. 218.12. Nizam bold closed 25 nP higher at Rs. 46.50. Oil May 1962 contract hardened by 5 nP to Rs. 18.50.

Castorseed June 1962 contract wound up the week at Rs. 163.25, as against Rs. 164.37. Madras small, after an initial decline, recovered to Rs. 33.12. Oil commercial, however, shed 10 nP to Rs. 13.40 and B.S.S. 5 nP to Rs. 14.20.

Cottonseed July 1962 contract put on 50 nP to Rs. 102.50. Both non-whites and whites, however, lost 10 nP each to Rs. 20.90.

Linseed September 1962 contract advanced by 71 nP to Rs. 38.12 and June contract by 69 nP to Rs. 38.12. Bold ready was maintained at Rs. 37. Linseed oil, however, eased by 10 nP to Rs. 14.90.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 25th April, as compared with those of the two previous weeks:

	25-4-1962	18-4-1962	11-4-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	218.12	219.12	224.75
Nizam bold	46.50	46.25	47.00
Khandesh quality	46.75	46.50	47.50
Oil ex-mill ready*	19.15	19.00	19.50
Railway receipts*	18.95	18.90	19.20
Oil May 1962	18.50	18.45	18.95
Castorseed			
June 1962	163.25	164.37	164.25
September 1962	166.25	167.37	166.75
Ready Madras	33.12	33.00	33.75
Ready Kanpur	32.00	32.00	32.50
Oil B.S.S.†	14.20	14.25	14.30
Oil commercial†	13.40	13.50	13.60
Linseed			
June 1962	37.50	36.81	37.12
September 1962	38.12	37.41	38.00
Bold ready	37.00	37.00	36.75
Oil ready†	14.90	15.00	15.10
Cottonseed			
April 1962	—	—	—
July 1962	102.00	102.50	103.00
Niger seed	36.25	35.00	36.00
Kardi seed	23.50	25.25	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 280 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR SUPPORT FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 18*th April*

A total of 698,000 kilogrammes was offered in Sale No. 16 held on the 17th inst. Quality in general showed a further slight decline. The market opened with good general demand which slackened as the sale progressed. There was fair support for low mediums and mediums at 20-30 nP below last rates, but this slackened and, at the close, they were up to 50 nP lower. There was strong enquiry for good mediums and these were irregularly dearer with fannings under this category receiving better support. Highgrown B.O.Ps were irregular and their fannings followed a similar trend but were sometimes dearer. Black leaf descriptions sold readily at lower rates and these declined by up to 30 to 40 nP over last. Whole leaf grades met with good demand at slightly easier rates than last. There was good enquiry for unorthodox descriptions which were fully firm to dearer, particularly fannings grades.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.80-4.20	4.40-4.55
Mediums	4.30-5.00	4.55-4.70
Good mediums	5.10-6.00	4.75-5.05
Nilgiri B.O.P.	5.00-9.20	5.00-6.50

About 307,000 kilogrammes were offered in dust sale No. 16 held today. The market met with only a fair demand. There was fair enquiry for low mediums and mediums, but these declined by upto a rupee per kilo. The plainest descriptions, however, were better supported, but these also shared in the downward trend of the market. There was less enquiry for good mediums and these were considerably easier. Highgrowns, however, met better support and these are quoted steady. Grainy black leaf descriptions sold readily, but these were also much easier. Unorthodox descriptions declined by 40 nP to 50 nP. A few invoices under this category which were cleaner sold at around last rates.

Colombo: This week, the market met with less demand following a decline in quality. Best and medium brokens sold at irregularly lower rates. Lowgrowns also met with only fair support and were easier by 5 to 10 cents. Offgrades, however, met with good demand, particularly better liquoring kinds which were dearer. Stalky kinds were easier to buy. Dusts also sold at lower rates.

London: *North Indian and other growths*: In Monday's sale, 30,700 packages were offered, of which 22,008 packages were from North India. At the beginning of the sale, the market was irregular, but, towards the close, the market firmed up and there was more enquiry for plain sorts which were firm to dearer.

Ceylon and South Indians: Tuesday's sale amounted to 26,736 packages, of which 7,590 packages came from South India. Ceylons met with useful support, particularly low and medium descriptions which were strong to dearer. Highgrowns, particularly light liquoring sorts, were irregular. There was strong demand for South Indian teas which were generally rather dearer.

An admirable reference book in Industrial Law!

V. B. Kher's **Supreme Court Digest of Labour Law Cases**

Vol. II (May 1959 to December 1960) **Rs. 15.00**

"I welcome this little publication. It helps one to get a glimpse of the great role played by the Supreme Court of India in enunciating principles of cardinal importance in the field of labour relations."

TEA DUTY RELIEF WELCOMED

(From Our Own Correspondent)

CALCUTTA, 24*th April*

The tea industry and trade have welcomed the sizable reduction in the export duty on tea, from 44 nP to 25 nP per kg. Even the total abolition of the duty was justified and would have been appropriate. However, it is expected that the benefit of the duty reduction would be passed on substantially to the foreign consumer. If the Government is satisfied later that the measure has led to increased exports, it is quite possible that the remnants of the duty would be withdrawn. However, it is disappointing that the Finance Minister has proposed an increase in the excise duty on loose tea ranging from 5 nP to 10 nP per kg. This change is not expected to affect exports, since there is a provision for rebate on exports at the flat rate of 15 nP per kg. In zone I and IIIa, the increase is 5 nP to 15 nP and 30 nP respectively; in all the other zones, the increase is 10 nP, the new duty in zone II being 25 nP, IIIb 45 nP, and IIIa, excepting Darjeeling, 35 nP per kg.

It is realised that the Exchequer would lose as much as Rs. 4.1 crores a year due to the proposed reduction in the export duty, and perhaps Mr. Morarji Desai, therefore, considered that some measure was necessary to make up the revenue loss. Thus, his attention has fallen on loose tea.

There was strong demand during last week's internal sale, when dusts on offer amounted to 28,355 packages. Legg-cut teas registered a small gain, while the fibrous teas eased in an irregular trend. Keen competition was offered to C.T.C. dusts, and, as a result, the brighter teas recorded a satisfactory gain. Fibrous secondary teas were steady. Clean plain orthodox teas were firm, but the fibrous eased. Brighter liquoring Assams met with good inquiry and prices improved. The quotations per one kg., inclusive of the excise duty, were: Good Assam C.T.C. dust Rs. 6.40 to Rs. 6.90, medium Assam C.T.C. dust Rs. 5.50 to Rs. 5.90, legg-cut dust Rs. 3.75 to Rs. 4.40, medium Assam dust Rs. 3.90 to Rs. 4.30, and plain orthodox dust Rs. 3.30 to Rs. 3.60. Leaf offerings, amounting to 2,638 packages, met with fair demand at irregular prices.

Tea shipments were extremely limited in the week, and this was a blessing in disguise, as, with the cuts in the drafts of the river leading to restrictions in the transport from the port, shippers found it extremely difficult to obtain full allotment of space.

The fact that in the last week's sales in London demand was good and that cheaper offerings were much in the forefront received attention here inasmuch as British buyers were making a last-minute effort to cover their requirements in view of the poor stocks. It was significant that the U.K. warehouse and about-to-be-landed stocks declined from 157.4 million lbs. to 152.4 million lbs. in the week ended 13th April and teas afloat to the U.K. from 19.8 million lbs. to 14.3 million lbs. The price for North Indian plain teas rose between 1d. and 2d. per lb. Among South Indian offerings in London, the better mediums and high growns fell slightly, but teas showing an improvement in quality hardened. In view of the Easter holidays, there would be no sales in London during the week.

Now that the new season is to begin shortly, tea circles have been discussing the prospects. The forthcoming season will be significant in that Britain's entry in the European Common Market is expected to materialise. This will, in all probability, be heralded by a reduction in the import duty in order that Britain's trade with the Commonwealth countries might not be adversely affected. As a result, tea will be made considerably cheaper in Europe as a whole than at present. As such the European consumption of tea is expected to receive a fillip, but huge promotional efforts would be necessary in order to lead the average European consumer to take more to tea in relation to other beverages. The Tea Board is certainly alive to the developments in Europe following the expected reduction in the import duty. However, since nothing is known about the Board's intention to conduct campaigns in Europe, the trade would expect the Board to take it into its confidence and evolve suitable plans, so that India is the first to catch the bus at the right time.

The fact that in the 1961-62 season U.K. imports of Indian tea declined is naturally causing much concern. Ceylon was able to attract considerable British attention to its plain teas thanks to the lower prices. Although in the forthcoming season Indian teas of quality would continue to be bought by Britain, unless prices of plain teas are reduced, most of such teas would ultimately be consumed within the country. Internal consumption is increasing rapidly, despite official discouragement. Although the gardens producing a majority of plain teas were helped by good internal demand, prices fell. It is expected, therefore, that more and more gardens would take to C.T.C. manufacture. However, it should be pointed out that, with the rapidly increasing standard of living, the Indian consumer, so much addicted to tea, is unlikely to reduce his consumption even if sufficient plain tea is not offered to him. For nothing prevents him from taking to the superior teas.

All these factors suggest that more attention to exports to the U.K. is necessary to maintain India's position as the largest supplier of tea to that country. India's output in this year is expected to rise, but it is considered that such rise would be inadequate to maintain supplies to the U.K. as also to a rapidly growing internal market. That, despite a remarkable increase in the output in 1961, there is no carry-forward to the next season should deserve pointed attention.

The prominent tea booking firm, Messrs. Carritt Moran, analysing the prospects for the next season, says that a satisfactory market is expected, but that more C.T.C. dusts may find their way to the internal market to the detriment of orthodox types for which the Middle East would be the only markets. The firm's finding that, in spite of an expanding dusts market within the country in 1961-62 season, the average price realised fell by 35 nP per one kg. should enable the inference that one of the factors which led to an increase in the internal offtake was the lower price.

Analysing export prospects, the firm says that with the low level of stocks in the U.K., there would be no difficulty in disposing of quality teas. Therefore, it expects that the prices of good tea would be maintained at the same level as 1961-62. World output in 1962 is expected to rise by some 90 million lbs., which should not be a matter of concern in view of the slowly increasing world consumption. The review paints a less rosy picture for tippy teas, considering that the Iranian buyers would not be inclined to pay as much as hitherto. The demand for Darjeelings is generally expected to be maintained, but the broken grades would continue to restrict sales of the whole leaf grades in view of the confirmed change of interest of the Turks.

EASY TONE IN JUTE

(From Our Own Correspondent)

CALCUTTA, 24*th April*

Against the background of the Mudaliar Committee recommendations, substantial concession by way of income-tax relief on jute export earnings had been generally expected here. There is, however, a great sense of disappointment, as the Finance Minister has maintained the *status quo* in regard to income-tax on export earnings. Perhaps by way of according consolation to those concerned on export promotion, Mr. Morarji Desai has exempted export earnings from the increase on company income-tax, proposed in the budget. The inadequate attention which this subject has received at the hands of the Finance Minister has greatly disappointed the jute industry.

Similarly, the proposal to levy a duty on indigenous consumption of jute goods has come as a complete surprise. The duty has come at a time when the industry has just turned the corner from huge losses it suffered last year. Production is being maintained at a high level in mills. This is so only because there is good internal and overseas demand. The present step to restrict internal consumption, it is apprehended, would affect mills' production. This would indeed be unfortunate, as stocks of fibre for production of jute goods fit for internal consumption only are abundant. Besides, another bumper crop of fibre is expected. Prices of the inferior varieties of fibre fit for production of sacking goods have already declined, and, if production in mills falls as a result of the present controversial measure proposed by the Finance Minister, fibre prices would indeed be affected. It is necessary to ensure maximum production in mills. Exports of jute goods are free from the proposed levy. The levy of a duty on internal consumption coupled with increased freight, as proposed in the Railway budget, would mean a sure increase in the cost of production not only in the jute industry but in other industries also. This would mean that at the present levels of prices for raw jute and jute goods, the profit-margin for mills would be lower.

Although buffer stock purchases in the lower qualities of fibre, viz. *bimli* and *jungli*, took place and fresh arrivals in agencies fell, easier conditions were in evidence in the raw jute market during the week under review. Earlier in the week, the continued dry weather was attributed as the cause for the steadying influence, but as most jute districts experienced fair to moderate rains on Friday and Saturday last week and sowing operations commenced in right earnest, sellers turned anxious. As the week progressed, conditions in jute goods also became easier. Although overseas support was not entirely lacking and buyers of hessian on behalf of the United States were active in small quantities, the main support was in the nature of covering business. Ready goods also gave way. With the clear indication from overseas buyers that the current price levels were very high for buying on a large scale, there was the realisation that prices must decline. The occurrence of rains and prospects of imminent sowing drew attention to chances of a bumper crop once again. If a crop akin to the magnitude of the last one is to be harvested, either fibre exports must be permitted or prices of goods must be lowered in order to provide incentive to foreign buyers to build up a sizable stock of goods, thus paving the way for mills to continue to be in full production and consume all the indigenous fibre.

The report that the U.S. burlap stocks at the end of March were higher by 4 million yards at 258 million yards was in line with the earlier expectations. This only confirmed the view that the U.S. buyers could afford to watch the price trend before entering into fresh commitments in a big way. Burlap consumption in the U.S.A. for March totalled 75 million yards, registering a fall of 2 million yards compared to the previous month. The total for the three months to March was 240 million yards, giving the encouraging monthly average of 80 million yards, which was a new high for this period. Such satisfactory rate of consumption indicates that substitutes and bulk handling methods had met with a check in these three months. This was possible only by a fall in prices as compared to the corresponding previous period. But the fact that the U.S. interest has now gradually declined also shows that the prices of substitutes might have become competitive. Traders realised the need for passing on to the overseas buyers a little more of the benefit arising from the bumper fibre crop. At the same time, it should not be forgotten that mills had suffered considerable losses when they had to keep their plants on during the fibre shortage last year.

The low level of stocks of jute goods with mills has been the cause of the squeeze in ready goods, which whipped up speculation. Despite a decline in the interest from foreign buyers, the stocks of goods have not risen. This has been due to a striking increase in the internal consumption. It had been earlier hoped that the proposed relief in income-tax on exports would enable mills to increase exports even at the cost of internal consumption. In that case, prices are bound to receive a further boost. In the long-term interests of the industry, this should be avoided. Against this background, the Government of India's decision to license over 250 broad looms for mills is welcome. The importation of these looms is dependent upon adequate foreign exchange being available from export earnings. It is time the Government reviews the existing capacity of mills, trend of internal consumption of goods and export demand. If the past six months are any indication in this regard, the need to set up a few mills becomes clear.

During the week, support from members of the Buffer Stock Association was paltry. Due to the time required for working out details over formalities connected with financing, the State Bank of India's advances had been delayed. For this reason, the quota already issued and amounting to 250,000 maunds had not been fully covered. Ear-

DA-62/48

lier, B.S.A. members purchased *jungli* bottoms at Rs. 61.62 per 100 kgs. and *bimli* bottoms at Rs. 64.30. Although the rains during this week gave a fillip to the sowing operations, the crop would mature late. The high prices, which were prevalent at the time of sowing last year, no longer remain, but the good profits which farmers had reaped then would stand them in good stead to sow at least as large an acreage as last year's. A bumper crop is, therefore, anticipated, and, since at present good quality fibre is in short supply and commands a premium, it is expected that the cultivators would pay greater attention to quality. Much depends upon the availability of retting facilities, which were meagre last year to cope up with a large crop. More canals and tanks have since been provided, and it is expected that the proportion of the tossa and middles to *bimli* and mesta varieties would be higher. In 1961-62, the all-India yield was 2.8 bales per acre as against 2.5 bales in the previous season, and in some of the West Bengal districts it was as satisfactory as 3.5 bales per acre. The increased availability of fertiliser enhances the hope that the yield per acre would register a further increase this year, and even assuming that there is going to be no significant increase in the acreage a higher crop can be harvested. Prices were unchanged this week, with mofussil quotations being nominally above Calcutta's parity.

Due to lack of genuine support, the earlier steadiness in jute goods was not maintained. On Tuesday last, details relating to the U.S. consumption for March were available. The small fall did not influence the trend, as there was keen activity in the futures market. There was also good covering demand in ready goods. These factors were responsible for the rise in the price of ready hessian 40" 10 oz. from Rs. 53.10 to Rs. 53.70. Ready B. twills hardened from Rs. 133.25 to Rs. 135. The details in respect of despatches of jute goods from mills in March pleased the market, as they disclosed increased offtake both on account of export and consumption within the country. Thus, total despatches were higher by 8,300 tons at 98,200 tons. The increase of 8,300 tons was shared by the different constructions as follows: hessian 2,200 tons, sacking 1,600 tons, and others 4,500 tons. Of the total of 98,200 tons, exports claimed 66,400 tons or 67 per cent, the balance of 31,800 tons being for local purposes. These figures compared with 62,300 tons or 69 per cent and 27,600 tons respectively for February, 1962 and 55,800 tons or 64 per cent and 31,800 tons respectively for March, 1961. There was only small covering business on Wednesday, and the news of poor shipping business so far caused concern. As a result, B. twills eased to Rs. 133.80 and hessian 40" 10 oz. to Rs. 53.25. This was followed by speculative selling in the futures market on Thursday. As a result, prices declined. The pace was checked in respect of hessian 40" 10 oz. by the news of sales to the United States, the rate recovering to Rs. 53 after being further lower. B. twills eased to Rs. 132.70. After the Easter and week-end holidays, the market re-opened yesterday, when B twills were quoted lower at Rs. 132 and hessian 40" 10 oz. at Rs. 52.85.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 24th April

The Union Finance Minister's proposal to levy an excise duty on electric cables and wires has not altogether surprised the local industry and trade. For, this is designed to restrict the consumption of copper in cable plants, which had developed been asked about a year ago by the Government to switch over to the production of aluminium cables and conductors. Some cable manufacturers are now gradually effecting the change India is not only self-sufficient in aluminium but has a large capacity for export also. Recently, quite a few firm proposals to set up aluminium plants have been approved by the Government.

The simplification of the excise duty on copper and copper alloys has been much welcomed. As represented by the industry, the 10 per cent *ad valorem* duty on copper and brass pipes and tubes in force from March, 1961 had meant a tremendous increase in paper work for both the excise staff and the manufacturers. It had been suggested that, if this duty were to be retained, it should be converted into a duty based on weight, similar to the one in force on copper and grass circles and sheets (i.e. Rs. 300 per metric tonne) which, it has been interpreted, also include brass and copper long-length flats and square rods up to and including ¾" thickness or width. Non-ferrous metals are a protected industry, and having regard to the Government's policy of not burdening an industry while it receives protection, it had been expected that the duty on copper and copper alloys would be withdrawn.

Fully firm conditions were in evidence in the local metal market during the week under review. Demand was good, and overseas advices were firm and encouraging. The London Metal Exchange closed for the Easter holidays, with copper being firm at £234 a ton for spot delivery. Support from industries was modest. Earlier, in London, three months' copper was quiet at £234¼ a ton, as there was some uncertainty about the maintenance of the price. However, the price recovered subsequently to £234½, and it was thought that producer support would continue for some time. In Calcutta, copper scrap supplies were scarce and berry scrap hardened from Rs. 557 per 100 kgs. to Rs. 572. Mofussil consumers have naturally strongly reacted to the proposal of the new Railway Minister to increase freight rates.

The Government of India has now clarified that the requirement of the licenceholders to get their import licences endorsed after using the first half and after the expiry of the first six months would not be applicable to the D.L.F. licences. This is because the D.L.F licences are naturally issued against the firm allocation of foreign exchange. Since a good portion of copper to be imported from the U.S.A. would be against the D.L.F. loan, this clarification means that the licences issued under this scheme would be valid for their full period. It is also stated that annual licensing to established importers of non-ferrous items would apply to the following items: (a) copper wrought in certain forms, viz. rods, sections, pipes, tubes, plates and sheets, including those cut in shape and size, (b) copper scrap, whether ingotted or otherwise; zinc or spelter unwrought, including mazak and alloys of zinc and aluminium containing not less than 94 per cent zinc dross, etc., and, (c) tin block and tin scrap; brass, bronze, and similar alloys, unwrought, etc; brass bronze and similar alloys wrought etc; copper unwrought in the form of ingots, blooms, slabs, cakes, tiles, bricks, blocks, billet cathodes, blister bars, electrolytic wire bars, and ingot bars.

Tin, in Calcutta, opened at Rs. 1,687 per 100 kgs. and eased to Rs. 1,683. The decline was due to the weak advices from Singapore and London. In London, the quotation declined from £952 to £944 per ton Overseas reports indicated that the release of the U.S. stockpile tin was imminent. After its recent meeting, the International Tin Council requested the U.S.A. to release 164,000 tonnes from its strategic stockpile amounting to 349,000 tonnes. The balance of 185,000 tonnes is the quantity required by the U.S.A. for its maximum stockpile. Although nothing is clear about the price at which the U.S.A. would release the stocks, it was expected that it would not be lower than £950 a ton, since the U.S.A. would not like to be blamed for depressing the international tin market. Malayan producers have already represented to the U.S.A. that they should be consulted on the price before the actual releases were ordered. The U.S. Senate Committee, headed by Mr. Symington, is reviewing the position, and is expected to submit its recommendations to the Senate very shortly. This had an adverse effect on the price in London as well as Singapore.

Virgin lead was unchanged here at Rs. 126 per 100 kgs. There was some definite improvement in the trend of demand, but, with a comfortable stock position, the price was unchanged. In London, the price improved from £59½ to £60 a ton, as demand was more, despite larger warehouse stocks. Zinc, in London, also showed improvement, the opening and closing quotations being £59½ and £60 a ton respectively. The gain in the price was due to greater European demand. Locally, the price improved from Rs. 247 to Rs. 250 per 100 kgs.

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, 23rd April

Foodgrains prices registered a marked decline here during the week under review. New rabi grains arrivals were still poor. Trade circles expect further fall in prices in the near future, as arrivals would rise. Arrivals were reported heavy in east U.P., where an easy trend in new *rabi* grains continued. Harvesting of grains has finished and now winnowing and threshing operations have been in full swing.

Wheat indicated an easy trend. While the fall in new wheat prices was of about 67 nP per quintal, old quality prices sagged considerably to be quoted at the week-end at Rs. 37.51 to Rs. 40.19 per quintal for the average quality and Rs. 41.53 to Rs. 42.87 for the better farm produce. Old stocks were poor and traded around Rs. 42.87 to Rs. 49.57 per quintal according to quality. Locally, new wheat arrivals averaged 500 maunds daily. Consumers still preferred to use the old quality wheat, and hence its prices were higher than those of new produce. Rice ruled quietly steady on better consumer demand. Stocks here were estimated around 10,000 maunds. Week-end prices (in rupees per quintal) were:—*mainpuri* 52.56, *ramajwaqan sela* 56.26 to 61.62, *raimunia* *sela* 58.94 to 64.30, *gadda* 52.25, *basmati sela* 66.98 to 75.02 and superior 80.38 to 96.45.

Arrivals of new gram from Punjab increased to an average of 1,000 maunds a day. Arrivals of the new local produce also commenced. Prices, consequently, developed a sagging tendency. Barley and *bejhar* were listless, as arrivals were still poor. Selling pressure in maize continued throughout the week and most of the local stocks were lifted by Ahmedabad. *Bajra* attracted some demand, and was steadier. *Juwar* and *guwar* also ruled steady on good demand in the face of poor stocks. Week-end prices (in rupees per quintal) were:— gram Punjab 36.84 to 37.16, local 36.17, barley 26.80, *bejar* 27 to 28.13, maize 20.07 to 26.79, *bajra* 34.83, *methi* 72.34, *juwar* 37.51 to 41.52 and *guwar* 38.18, oats 27.

In pulses, new peas arrivals have increased to an average of 2,500 maunds daily. Arrivals were also heavy in the *mofussil* markets. While *dara* average quality eased under the pressure of arrivals, farm quality was steadier on support for conversion into dal and for stock purposes. Offtake was fair at eight wagon loads to Madras side. *Arhar* also stayed steady, as the old stocks were meagre and new arrivals had not commenced. New *massor* eased on increased arrivals and poor quality. Prices in other sections on Monday (in rupees per quintal) were:—peas *dara* 28.80 to 29.47, *farm* 30.31 to 32.82, peas *dal* 34.16, *arhar* 41.53, *arhar dal* 51.58, *urd* 58.94 to 64.30, *urd dal* 66.98 to 75.02, *moong* 50.91 to 53.56, *massor* new 37.51 to 42.87, *massor dal* 51.58, gram dal 45.55, moth 42.87 and moth *dal* 50.51.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2664 BOMBAY, 5th MAY 1962 PRICE Rs. 2

VICTORY FOR PROPAGANDA

PROPAGANDA and agitation pay, more so when they are made on behalf of the so-called downtrodden agriculturists. The latest instance of this statement is provided by the announcement of an increase in the ceiling prices of cotton. Those who carried on the campaign are clever people. They followed the well-known practice of pitching one's demand pretty high, so that the outcome could be at least very near one's goal. The self-appointed champions of cotton growers demanded decontrol, even when they knew that it would not be granted. In return, they got the ceiling prices pushed up. In retrospect, it looks as though this was precisely what they had in mind. The Government of India, which had so far successfully resisted the pressure from various quarters to raise the ceiling prices of cotton, has at last succumbed to it and decided to enhance the ceiling price of Jarilla fine 25/32", which is the basic variety, from Rs. 820 to Rs. 945 per candy of 784 lbs. Corresponding changes will be made in the prices of other varieties also. The revised ceiling prices are applicable only to the next season's (1962-63) crop. At the same time, the Government has not raised the floor prices. Why? Was it because the propaganda did not include this issue, or because the Government did not want to face even the remote possibility of having to buy cotton at that price? Whatever be the reason, an increase in the ceilings, unaccompanied by a corresponding rise in the floors, has led to a widening of the gap between the two, which had been reduced, quite rightly, only last year by raising the floor from Rs. 495 to Rs. 600 for the basic variety and correspondingly for the other varieties. In the result, the speculative pendulum has more amplitude to swing. The strangest part of this business is that this facility for unwarranted speculation has been provided by a Government which calls itself socialist.

It will be interesting to know the basis on which the Government decided to raise the ceiling by Rs. 125 per candy. What is the sanctity about this figure of Rs. 125? Why not Rs. 150 or Rs. 200? If an increase of Rs. 125 was considered necessary as an incentive to the grower to raise a bigger cotton crop of, say, 5.4 million bales, an increase of Rs. 200 should, *ipso facto*, result in a still bigger crop which the country can surely and comfortably absorb. The fact of the matter is that the Government has chosen the figure only arbitrarily, for, to the best of our knowledge, it has not carried out any study of the increase in the cost of cultivation of cotton since 1951-52 when the present ceiling prices were fixed. It is significant, in this connection, that, as an alternative to decontrol, some in the trade had asked for an increase of about Rs. 150 to Rs. 200 per candy. In its Press Note, the Government says that, in choosing the figure of Rs. 125, it took into account the difference between the ceiling price and the "prices (actual) paid by the industry for cotton during the past few years." This explanation is ridiculous, for it amounts to taking cognisance of the price that might have been illegally paid by the mills. To revise the statutory prices on this basis is to give the black market a dignity which it does not deserve. In any case, the Government has now openly admitted that transactions in contravention of the Cotton Control Order had been going on and that it could do nothing about them.

The implications of the admission that actual market prices were higher than the statutory ceiling could, indeed, be embarrassing to the Government. If a millowner were to point out that he had been paying only the legal price for cotton and that, since it has been raised, he should be allowed to raise the price of cloth to compensate for the rise in the price of cotton, will the Government concede the demand? This is a perfectly valid argument, valid from both the moral and economic point of view, and, if it is not accepted when the time comes (that is round about October next when the 1962-63 crop starts moving into the market), it will be tantamount to penalising the honest for his honesty. If, on the other hand, it is contended, as is being done by the Government, that the industry can well absorb the rise in the price of cotton without having to pass it on to the consumer of cloth, it means that the industry has all along been allowed to reap an abnormal profit at the cost of the farmer.

Be that as it may, higher prices could be justified in the short period if they lead to larger production which would ultimately enable prices to go down to more normal levels. This can happen only in a situation in which the price received by the farmer has been so uneconomic as to inhibit production. That this is hardly the case is evident from the wide year-to-year variation in the production of cotton irrespective of the level of prices. In any case, when once the prices are allowed to go up, they can hardly be brought down, for there will be a hue and cry by politicians on the ground that the agriculturist is being penalised for having taken the trouble to grow more cotton. This has happened on many an occasion in the past and it will happen

elapsed since the Tariff Commission made their recommendations, these selling prices have been rendered steadily more uneconomic by increases in production costs which, by reason of our fixed prices, we have been unable to pass on to our customers. Our industry has been and is being squeezed between rising production costs and fixed selling prices, and our profitability has correspondingly declined. One of the consequences is that there are indications of lack of progress in the implementation of some of the schemes for the establishment of new mills by licence-holders, a very disturbing development which endorses the industry's opinion that paper manufacturing on longer enjoys the degree of profitability to attract fresh capital to the extent required for achieving the planned increase in our production capacity. The only remedy is for Government to grant immediately a suitable *ad hoc* increase in paper prices . . . "

An upward revision in the paper industry's selling prices to cover cost increases is, thus, imperative. No less imperative is the need for providing in the prices a reasonable return on the capital employed. The need is especially great because it is on the margin between selling prices and production costs that depends, to a large extent, the capacity of the industry to expand adequately, in order to meet the rapidly rising demand for paper stemming from increase in population, improvement in literacy, development of educational facilities and growth of industrialisation. The total domestic requirements of paper by 1965-66 are expected to be of the order of 700,000 tons, as against 350,000 tons in 1960-61, and they will be much higher, according to tentative estimates, at 1.2 million tons by the end of the fourth Plan (1970-71) and 1.8 million tons five years later (1975-76). The attainment of these targets will entail heavy capital outlay. In the third Plan period alone, the investment outlay (on paper and newsprint combined) is put at Rs. 100 crores, with a foreign exchange component of Rs. 35 crores. How can such a heavy outlay be financed so long as the paper industry is not allowed to earn a fair profit that will enable ploughing back of funds for expansion and also offer sufficiently promising prospects to attract fresh capital? This is a highly relevant point, because over 80 per cent of expansion envisaged in the third Plan has to be obtained from the establishment of new units. The new units, whatever their size, inevitably require, as Mr. Egan very pertinently stated, a much heavier capital investment per ton of capacity than the long-established mills from which the bulk of present output comes.

The paper industry is required under the third Plan to step up the rated annual capacity from 410,000 tons to 820,000 tons and actual production from 350,000 tons to 700,000 tons. The quantity of paper actually produced in the first year of the Plan (1961-62) is believed to be just 360,000 tons and the estimated output in the current year (1962-63) is no more than 400,000 tons, so that the gap to be covered during the remaining three years is as wide as 300,000 tons. This gap must be filled, as, otherwise, there will be much waste of precious foreign exchange. It may be noted here that India imported paper (excluding newsprint) worth about Rs. 6 crores during the calendar year 1961.

A brief reference to the progress that is being made in regard to the implementation of the development programme for paper industry may not be out of place here. As against the additional capacity of 410,000 tons required to achieve the third Plan target of 820,000 tons, the capacity actually licensed so far comes to 804,000 tons or an excess of almost 400,000 tons. Is this action in consonance with planned development? Mr. Egan would have done well to examine it critically, instead of merely saying that the Government "has given a margin of 50 per cent as provision against non-implementation of some of the schemes." There would have been no need for this margin, if the Government had carefully examined the ability of the applicants to fulfil their undertaking. Sources of raw material for paper industry are limited. Capital is scarce; foreign collaboration is costly and difficult to be had. And so is foreign exchange. Excessive licensing will result in unhealthy competition among entrepreneurs for these scarce resources which in turn will push up the capital costs. Again, if actual implementation happens to be larger than expected, there may well be a sizable unutilised capacity. Already, the extent of capacity lying idle in the paper industry has increased from just one per cent in 1955 to 11 per cent in 1961.

Another undesirable feature of the expansion plan for paper industry is the prominence given to new units and that too to small-sized units. Of the new capacity licensed for 804,000 tons, 21 new mills account for a total capacity of 478,000 tons and 71 small units for a capacity of 181,000 tons, whereas the expansion schemes of the 13 existing mills envisage an aggregate capacity of no more than 145,000 tons. The establishment of new mills involves, as already stated, heavier capital investment than that needed for raising the capacity of existing mills. The outlay will be higher still in the case of small units. Decentralisation has no doubt certain merits, provided locational advantages have been thoroughly ascertained and carefully verified. Paper mills have to be located where raw materials are easily available and continuity of supplies is assured. But it looks as though too much importance has been attached to decentralisation ignoring the economic aspects of large-scale manufacture, as witness the substantial share allotted to as many as 71 small units.

The rising cost of production apart, the paper industry is faced with two disquieting problems, one pertaining to transport bottleneck and the other to shortage of raw materials both of which have, according to Mr. Egan, acted as serious impediments to the efficient working of the industry. Mr. Egan certainly did not cry 'wolf' when he said that, if the railways failed to bring the supplies of raw materials and fuel required by the industry and move its finished products to the markets, the development of paper industry would be jeopardised. Nor did he indulge in any exaggeration when he warned that, unless vigorous steps were taken to develop the sources of raw materials, there was bound to be a grave scarcity of raw materials. Considering the steadily increasing pressure on the country's bamboo and other forest resources not only because of the expansion of paper industry but also because of the requirements of other industries such as rayon grade pulp, Mr. Egan's plea for long-term tenure at reasonable rates of royalty merits due consideration. The three factors which, according to Mr. Egan, should be borne in mind in the fixation of royalty rates are: (1) paper prices are fixed by the Government; (2) the industry is a substantial contributor to Government revenues through excise duty; (3) unlike forests worked by contractors on an annual basis, the areas leased to the industry will be exploited in a scientific manner resulting in better yield and correspondingly increasing royalties. It may be pertinent to recall here that the Tariff Commission itself had made a specific suggestion favouring long-term leases of forests to paper mills.

Timely solutions to the three main problems of costs and prices, transport, and raw materials on the lines indicated by Mr. Egan, together with the removal of anomalies in excise duty assessment and expansion of paper mill machinery industry, will ensure an orderly and steady development of the paper industry in coming years. The paper mills, on their part, should endeavour to see that their products reach consumers at different centres in adequate quantities and in an evenly spread manner. Although the Tariff Commission had made a special mention of this aspect and urged the appointment of distributors-wholesalers at all important centres on the basis of population and other requirements, no worthwhile progress seems to have been made in giving effect to this suggestion. Similarly, it would appear that steps have not been taken to amalgamate the two associations of paper manufacturers, namely, the Indian Paper Makers Association and the Indian Paper Mills Association. Such an amalgamation is highly desirable for the simple reason that in unity lies strength.

DEVELOPMENT OF KERALA

THE National Council of Applied Economic Research, New Delhi, has just published a draft report of a techno-economic survey of Kerala undertaken by it at the instance of the Kerala Government. The report, incorporating the findings of the survey, which is, perhaps the first overall assessment of the resources of the State in relation to its development needs, has recommended a ten-year investment programme involving a total investment of Rs. 1,000 crores, Rs. 400 crores in the third Plan period and Rs. 600 crores in the fourth Plan period.

The report has suggested that the State should aim at achieving a *per capita* income of Rs. 410 by 1970-71, a level comparable with that anticipated for the country as a whole and which represents a more than hundred per cent increase (101.6 per cent to be precise) over the present *per capita* income of the State. In order to achieve this level, the national income of the State would have to increase at an annual rate of Rs. 10.7 per cent, as compared with the 6 per cent per annum envisaged in the third Plan for the country as a whole. An increase of this magnitude, according to the Council, would call for an investment of the order of Rs. 1,000 crores.

From the brief extracts of the report published in the daily Press, it is not clear whether the Council has suggested the ways and means of raising the money for investment of this magnitude. Clearly, the State Government, however much it might try, cannot, by itself, find the entire amount, nor even a substantial part of it. The Council's remark that there is need for greater awareness by the Centre of the special needs of Kerala is perhaps an indirect hint that the major portion of the burden should be borne by the Centre. Even if the Centre is willing to shoulder this burden, its resources position is such that it will have considerable difficulty in doing so, unless drastic modifications are made in the Statewise allocations under the third Plan already made. Assuming that somehow the money could be found, can the State Government (which is the most unstable of all the State Governments) implement a plan of such a magnitude? Experience of the State in respect of the utilisation of the first and second Plan allocations does not warrant optimism in this regard.

The Council has, however, done well to pinpoint the lines along which the State's development should proceed. In view of the very high man-land ratio in the State, the Council points out that industrialisation is the only way of solving the basic problems of Kerala and the industrial sector will have to be the main spearhead of growth in the future. The mainspring of the strategy of industrial growth should be technological advancement. The Council's report mentions many large-scale and medium-scale industries, agro-based, forest-based and mineral-based, which have plenty of scope for development in Kerala. Among the large-scale industries, the pride of place according to the Council must be given to engineering. The Council has also stressed the need for substantially increasing the capacity for power generation from the present level of 150 mw. to 400 mw. by 1966 and 800 mw. by 1971. This will not be difficult, as Kerala is favourably placed in respect of hydro-power resources.

In the sphere of agriculture, the Council has stressed the need for a proper system of crop priorities and for devoting more attention to the development of cash crops because of the special suitability of the State for such valuable crops as tea, coffee, rubber, coconut, arecanut, pepper, cashewnut and other spices, not to mention banana and jack fruit. It has suggested that no conversion of land from cash crops to foodgrains should be permitted and that, on the contrary, all possible extension of cultivable area should be reserved for cash crops. If, by so doing, production of foodgrains were to decline, the report recommends that the deficit should be made good by imports from other States. The State Government should, suggests the Council, get a firm declaration to this effect from the Centre.

The Council is not very optimistic about the employment position in the State which it describes as "not very promising." This is obviously an understatement, in view of the fact that, even if all the programmes outlined in the report were fully implemented, there would still be a backlog of 650,000 unemployed by 1970-71. The report has, therefore, suggested that, as long-term remedies, the Government should encourage migration of families out of Kerala and intensification of the family planning efforts, so that the impact on population growth of high birth rate and the comparatively low death rate in the State (17 per 1,000 as against the all-India death rate of 25 per 1,000) will be minimised. These are, however, long-term solutions which hold out no promise of any immediate relief to the hardship caused by unemployment. The present problems of the State are the result of years of stagnation and no programme, however large and imaginative, can solve them quickly.

MARKET GOSSIP

Pessimism Not Shared

IT is now more than ten days since Mr. Morarji Desai presented his final budget for 1962-63. During this interval, more views have been expressed by the spokesmen of the business community on his proposals for raising additional revenue for the Exchequer. Almost all of them have been extremely pessimistic of the implications of these proposals to investments in the private sector. The Federation of Indian Chambers of Commerce and Industry has asserted that the enhancement of the burden of direct taxes carried by individuals and corporations will have an adverse effect on capital formation, on corporate dividends and establishment of new companies. Similar views have been expressed by other chambers of commerce as well. There may well be a repetition of them when Mr. G. D. Birla, Mr. A. D. Shroff and Mr. N. A. Palkhiwala address select public gatherings in the next few days. The sum and substance of their song will be that the Budget for 1962-63 will retard the growth of the private sector, as it has reduced what little incentive there was for hard work, larger savings and more investments in productive enterprises.

The share markets, however, have refused to accept this interpretation. If anything, values are a little higher than they were a week ago. One cannot attribute this wholly to bear covering and bull manipulation, for there has been no sign of any selling by genuine investors and there is a scarcity of good scrips. If the Budget is so bad as is made out by the business community, why are the big investors not taking their profit? In spite of the withdrawal of the concession in wealth tax in regard to investments by individuals in new industrial projects, not one of the scrips of new companies which have been quoting at a high premium has gone down in value. Further, the bears are extremely quiet, while the bulls are able to maintain their hold over the market comfortably.

Who is wrong, the share markets or the spokesmen of the business community? Time alone can tell. Theoretically, and even logically to some extent, the businessmen, who have criticised the Budget proposals on the lines already indicated, appear to be correct. There is, of course, nothing in the budget that improves the tax-free profit-margin of industries and the net savings of individuals. But, in actual practice, the net effect on capital formation in its totality may be more favourable than appears on the surface. That apparently is the reading of the share markets. And this inference of the markets is based on recent history. For instance, when the system of grossing up dividends was abolished, it used to be contended that the Finance Minister had taken away more than he had given and that, in the ultimate result, the industries would be worse off and less profit would be available for shareholders. This reading of the position was not borne out by subsequent events. Again, every increase in taxation has been criticised by the business community. And yet it has not hesitated to invest more in shares and to establish more new companies.

The explanation for this feature is simple. The taxes collected and loans raised by the Government come back to the private sector in the form of greater opportunities. While the post-tax profit-margin may decline as a result of the increase in the tax on companies, the scope for expanding the turnover is greater as a result of the large investments' outlays envisaged in the third Plan. In other words, the loss on the swings may be more than made good on the roundabouts. Similarly, while the capacity of individuals to save has been hit by the tax proposals, the chances for an increase in the number of such individuals, as well as for quick promotion, are bright. Consequently, the volume of individual savings collectively may continue to grow in the coming years, in spite of the increase in direct taxation just proposed by the Finance Minister. In fine, one cannot but concede that the argument that a high level of taxation is not incompatible with a rapidly growing economy has been borne out by events in the past four years.

It is not merely the level of taxation that determines the scope for private investment but the attitude of the Government. Surely, a lower level of taxation will not be of much good to the private sector, if the field for its operations is narrowed down. To the credit of the Government it must be said that it now realises the value of the private sector to a greater extent than it did at the commencement of the second Plan and that it has mitigated, to a considerable extent, the hardships caused by multiple taxation.

Undoubtedly, lower levels of taxation, cheap money policy, strong protection against both internal and external competition, and unlimited scope will create a wonderful climate for the industrialisation of the country by the private sector. But, alas, such a state of affairs is not politically feasible today. In the prevailing social and political conditions, the well-to-do minority has to pay a price not only for its progress but even for preserving its very existence. It will be quite unrealistic to ignore this aspect while viewing the budget proposals. There is no doubt that, if the Finance Minister had not stepped up the direct taxes, there would have been a veritable boom in the share markets by now, a development which would be highly undesirable for the Government and the private sector alike.

Planning Boards for States

At last, the Planning Commission has decided that there should be separate planning machinery in States on the same lines as at the Centre, with the Chief Minister as Chairman of a Board and some other Ministers as members and two or three full-time members. That such Boards could be set up was conceded by Mr. Nanda some time ago when he addressed the Parliamentary Committee on the third Plan. He then mentioned that all that the Planning Commission was then doing was coordination and that, in effect, there was no real scrutiny of the States' part of the Five-year Plans (though States had been complaining of the tyranny of the Commission and the Finance Ministry at the Centre). Three Five-year Plans have thus been prepared; the need for special machinery has been felt now when the States have been asked to prepare a 15-year perspective Plan, which obviously cannot be done by the departments or Ministers, even though many States have already undertaken techno-economic surveys. Inclusion of schemes now depends upon many political considerations and it is doubtful whether they can be wholly eliminated. A major difficulty may be the lack of personnel for the secretariat work of the Planning Boards proposed to be set up; perhaps some supernumeraries from the Planning Commission can now be spared for the States to serve as a base for a proliferating bureaucracy which will in time create more work for itself; there may also be zonal organisations in course of time.

However, if these new bodies can find the right men to help them with ideas and data and work as a team, they could do much useful work. In view of the instability of State Cabinets and the consequent uncertainty and delay in work on some of the projects, there should be considerable advantages in having plans and priorities well settled in advance, so that the executive can carry on the work of implementation (as it does at the Centre when Ministers are pre-occupied with the elections). The Planning Commission found that many of the third Plan schemes were only loosely prepared, especially in minor irrigation; their capacity for additional taxation was overestimated in order to inflate their Plans. These drawbacks may be avoided or reduced to some extent in future; but the value of the Planning Boards will depend upon how they are staffed; at the Centre, the full-time members are all party men who could not be accommodated elsewhere in the Government but had to be settled anyhow. The results have been obvious. Both for training up more experts in planning at the junior level and to avoid making State plans too much of a party matter, it seems desirable that full-time members should be retired senior officials or businessmen who have functioned at the national level and can avoid a parochial approach.

NEW ISSUES AND THE BUDGET

By George Carvelho

THE Government's attitude towards the activity of the new issues market and the spread of the investment habit appears strangely ambivalent. To good socialists, the Stock Exchange and all its works are tainted with the sins of capitalism and it is difficult for them, with their ideological make-up, to appreciate the advantages of the trend towards what its supporters call people's capitalism or a shareholders' democracy. Hence the cynicism with which the Prime Minister tended to dismiss the reference to this matter in the presidential address at the last annual session of the Federation of Indian Chambers of Commerce and Industry.

Mr. Morarji Desai, however, labours under no such illusions. Introducing the Budget proposals for 1962-63 in the Lok Sabha on 23rd April, he made it clear that he appreciated the part which an active, vigorous market for new issues and an expanding investor class are playing in mobilising resources and directing them to productive investment. Referring to his desire that the private sector should exercise a greater measure of restraint in relying on bank finance, he said:

"Private industry has available to it another source of finance which has, in the recent past, become exceedingly important. I refer to finance in the shape of equity capital. There was a time when it was difficult to get a new issue subscribed and only big commercial houses could afford to set up major enterprises. This situation is fast changing. The public, at large, even people with modest incomes, are now investing in shares. This is a healthy sign which we must encourage."

What is perplexing is that, immediately after giving expression to these admirable sentiments and apparently without being aware of the contradiction involved, the Finance Minister proceeded to place before the Lok Sabha a set of tax proposals which will certainly make investment in shares less attractive and, in particular, deal a severe blow to the capacity of companies to raise new capital from the investing public.

Had these measures been introduced about two years ago, they would have had some semblance of justification on the ground that they were needed to restrain the hectic scramble for any and every new issue that had created dangerously unhealthy conditions, with heavy oversubscriptions, excessive premiums and widespread stagging. Surely those who devised the Budget proposals must be aware that such conditions no longer prevail. Investors have become increasingly discriminating in the support they extend to new issues, premiums have declined to more reasonable levels, phenomenal oversubscriptions are extremely rare and, in some cases, a large part of the issue has been left in the hands of the underwriters. While an intrinsically sound enterprise, with management that commands the confidence of the investing public can always be sure of raising the funds it requires, much of the exuberance has gone out of new issues. In fact, a position has been reached where competent observers are getting worried about the capacity of the market to sustain the tempo of industrial expansion. At such a time, the Budget measures may well tip the scales to such an extent that the market for new capital may well dry up.

The specific proposals that are particularly objectionable from the point of view of new issues are three: the increase in taxation of company profits from 45 per cent to 50 per cent, the removal of the exemption from wealth tax on shares of new companies and the changes in capital gains tax, especially the denial of the facility to carry forward losses on long-term capital transactions. Indirectly, a number of other proposals will have the same effect. The increases in personal income-tax and wealth tax will reduce savings and consequently the size of the investible resources that would be available for taking up new issues. The widespread increases in indirect taxation will have a double effect. In so far as they raise the cost of living, they too will reduce saving. To the extent to which they are borne by industry, they will reduce profitability and thus make new ventures less attractive to the investing public.

Investors have a right to ask the Finance Minister to explain how he can reconcile his words with his deeds. Does the Government really desire that the new issues market should grow in activity and range? If so, does it think that the tax changes referred to will help or hinder the realisation of that objective? Even a Finance Minister, torn between the need to placate socialist sentiment and encourage private saving and investment, should be expected to pay due respect to the virtue of consistency.

TREND OF SHARES

UPTREND ACCELERATED

(From Our Own Correspondent)

BOMBAY, *3rd May*

THE uptrend in equities was accelerated this week. The tax proposals having been announced and absorbed easily, the operators were inclined to look for the possible concessions in the measures proposed by the Union Finance Minister. And they did not seem to be hoping against hope, as Mr. Morarji Desai did express his willingness to consider "genuine" cases for relief. This and the flow of some good corporate news came in handy for the big operators, who, having got into the market at about the low levels which prevailed a little before the tax proposals were announced, collected enough strength not only to sustain their firm grip but also to extend it to the sections which were neglected in the previous week. Thus almost all of the highly speculative Textiles, particularly in Bombay, were pushed up in a matter of 48 hours. Prices rose on swift bear covering and sustained bull support. In no small way the past fortnight's bull phase on the stock markets is sustained by the belief, which curiously enough is put forward only in a rising market, that, in a fast developing economy like ours, industries have enough scope to survive increasing tax incidence.

For the immediate outlook, sentiment was influenced by the expected increase in steel retention price and selling prices for coal and cement. And one wonders, whether the proposed price increases, justified by the rise in costs, are a pointer to some sort of price inflation that may creep into the economy before long. If this were so, it would be foolhardy to expect the stock markets to act otherwise than bullishly. At the same time, the markets can ill afford to ignore the situation on the country's northern border. And the latest reports emanating from China do suggest that the inevitable might really happen. This apart, the rise in values has to be technically sound. In the past fortnight, it has been caused to a great extent by bear covering, and has been sharp enough to provoke a correction.

* * * *

Spurt in Textiles was an outstanding feature of trading on Dalal Street, where the previous week's all-round hectic buying considerably subsided and yielded place a couple of times to mild realising. But the sudden strength in Textiles sustained the general buoyancy and, at the close, several counters were fully firm, with further small gains. At higher levels, follow-up support was, however, lacking and activity tended to be professional. The market well received the news that the National Rayon Corporation might increase its capital at the appropriate time to finance its project to manufacture staple fibre. Mr. Neville Wadia's emphasis on modernisation of Bombay Dyeing, Century Mills' excellent report, Alcock Ashdown's Chairman, Mr. K. D. Ryall's encouraging statement on the outlook for the Company and the rise in Gokak Mills' sales from Rs. 3.84 crores to Rs. 4.22 crores and gross profit from Rs. 43.19 lakhs to Rs. 75.41 lakhs, enabling the Directors to propose a cash bonus of Rs. 4 per share in addition to maintaining the dividend at Rs. 14, subject to tax, for 1961. It ignored the setback in Shivrajpur Syndicate's working during the year ended 30th November 1961, resulting in a loss of Rs. 5.81 lakhs as against a profit of Rs. 28.78 lakhs in the previous year. The decline in the output of saleable steel by Tisco in April from 128,000 tonnes to 110,000 tonnes as also by I.I.S.Co. from 86,294 tonnes to 47,646 tonnes did not produce any effect on Steel shares.

In Textiles, Century spurted by Rs. 44 to Rs. 667.50, Standard by Rs. 34 to Rs. 1,051, Khatau by Rs. 17.50 to Rs. 472.50, Morarjee by Rs. 11 to Rs. 417, Phœnix by Rs. 8 to Rs. 270, Elphinstone by Rs. 11 to Rs. 136, National Rayon by Rs. 11.50 to Rs. 583.50, Kohinoor by Rs. 7 to Rs. 305.50 and Bombay Dyeing by 70 nP to Rs. 70.30. Mafatlal, in the Cash List, rose by Rs. 31 to Rs. 910 *ex-div.*

Steel shares forged ahead, with Tata Ordinary appreciating by Re. 1.50 to Rs. 146, Indian Iron by 60 nP to Rs. 26.40 and Mukand Iron by 55 nP to Rs. 28.80. In the miscellaneous section, Bombay Burmah recorded a good gain of Rs. 16 to Rs. 693.50, Indian Dyestuff rose by Rs. 15 to Rs. 547.50 and attracting a margin of Rs. 27.50 per share against bulls for it had risen as high as Rs. 560 earlier in the week. In the Engineering section, Alcock gained Rs. 10 to Rs. 345, Voltas Rs. 10.50 to Rs. 303.50 and Telco Rs. 8 to Rs. 371. Shippings were in demand, with Great Eastern advancing by Re. 1.16 to Rs. 14.76 and Scindia by 56 nP to Rs. 13.88. Cements and Electrics were steady, with A.C.C. rising by Rs. 2.50 to Rs. 162.75 and Tata Power by Rs. 7.50 to Rs. 1,107.50. Sugars were dull, but Walchand rose by five points to Rs. 161. Most of the cash scrips were better. Camphor scored a rise of Rs. 12.50 to Rs. 117.50, Selected Satgram of Rs. 20 to Rs. 145, Shah Construction of Rs. 11 to Rs. 146, Issac Holdens of Rs. 3.52 to Rs. 20.76 and Fit Tight of Rs. 22.50 to Rs. 217.50. T. Maneklal rallied from Rs. 715 to Rs. 760. But Permanent Magnets lost Rs. 15 to Rs. 250.

* * * *

Excepting Jute shares, most of which reacted on persistent profit-taking, values forged ahead in Calcutta on considerable short-covering and sizable speculative support. Scattered realising at higher levels was easily absorbed. Coal, Tea and Steel shares and select miscellaneous and Engineering issues were in the limelight. Coal shares were in demand on reports that the rise in the selling price of coal might be announced soon. Tea shares thrived on the export duty relief. Expectations of early announcement of an increase in steel retention price contributed to the rise in Steels. Other counters advanced on speculative support. The absence of export promotional measure in the budget and the belief that the proposed excise duty on manufactures would be difficult to be passed on to consumers made the erstwhile buyers turn sellers in Jute shares.

In the Forward List, GKW rose from Rs. 40.87 to Rs. 42. Indian Aluminium from Rs. 39.37 to Rs. 40.75 and Texmaco from Rs. 23.30 to Rs. 25 and others recorded further moderate gains. But Birla Jute eased from Rs. 37.37 to Rs. 36.75 and Dunlop from Rs. 44.62 to Rs. 44.12. Among Cash scrips, Coals were active, and the spurt from Rs. 362 to Rs. 381 in Bengal was a feature of the week's trading, with Amalgamated gaining Re. 1.18 to Rs. 22.87, North Beerbhoom Re. 1.87 to Rs. 22.87, East India Rs. 2.88 to Rs. 43.50, Pench Valley Rs. 2.31 to Rs. 17.81 and Raneegunj Re. 1.87 to Rs. 16.87. Tea shares were firm, with Soom rising from Rs. 45 to Rs. 48, Sungma from Rs. 13.12 to Rs. 14.69, Tezpore from Rs. 16 to Rs. 17.25 and Bhatkowa from Rs. 19.94 to Rs. 21.25. But Hantapara failed to digest the sharp rise of Rs. 12.50 in the previous week and reacted by Rs. 9.50 to Rs. 125 on heavy realising. Chemical shares evoked sustained support; Alkali advanced from Rs. 43.62 to Rs. 47.81 and Bengal from Rs. 105 to Rs. 112. Braithwaite were a bright spot in the Engineering section and rose from Rs. 54.75 to Rs. 60.25, following news that the bonus issue had been sanctioned by the authorities. Calcutta Steel gained 50 nP to Rs. 17.75, J.K. Steel 60 nP to Rs. 20.22 and Jessop 63 nP to Rs. 25.75. Miscellaneous issues enjoyed selective support. Dr. Paul were particularly in demand and rose sharply from Rs. 20.75 to Rs. 24.56, with Angelo Bros. following close on its heels with a gain of Rs. 2.56 to Rs. 23.12 as did Associated Battery with a gain of Re. 1.87 to Rs. 33.62. Goodyear stole the operators' attention from mid-week on expectations of a right issue following the announcement of the expansion plan and recorded a sharp rise of Rs. 5.75 to Rs. 48.25. Indian Oxygen's bonus issue produced a further rise of Rs. 3 to Rs. 47.12 in the scrip. Hindustan Pilkington Glass staged a smart recovery from Rs. 21.50 to Rs. 22.94. Universal Cable and Usha Martin were also in demand and tacked on some useful gains. Among Jute shares, Kelvin fell from Rs. 211 to Rs. 201 and Bally from Rs. 314 to Rs. 305 as did Union from Rs. 191 to Rs. 182. Budge Budge reacted by four points to Rs. 143 and so did Alexandra to Rs. 301.

* * * *

Values improved all-round in Madras, but some Textiles suffered a small setback. Business was good and activity broad-based, with the previous week's bright spots in Plantings and Miscellaneous issues remaining in the forefront. There was some profit-taking near the close, but the tone was firm. Consolidated Coffee spurted from Rs. 18.25 to Rs. 19.40 and highlighted trading in Cleared securities. The speculators' favourite S.I. Viscose gained as much as Rs. 7.50 to Rs. 191.50 on keen support. Madura moved up by 25 nP to Rs. 38.50, Aluminium Industries by 55 nP to Rs. 24.10 and Ashok Leyland by 17 nP to Rs. 9.12, but the gain of 20 nP to Rs. 6.20 in India Cement was partially offset by a setback of 10 nP to Rs. 13.55 in Dalmia Cement. Mettur Chemical improved further from Rs. 12.75 to Rs. 13.

In the Cash List, among Tea shares, Kil Kotagiri were up by 37 nP to Rs. 5 and Parkside by 25 nP to Rs. 23.25. Coffee Lands gained one full point to Rs. 15.50. Midland, in Rubbers, appreciated from Rs. 11.20 to Rs. 11.50 and Cochin Malabar gained 14 nP at the *ex-div.* quotation of Rs. 7.05. Cauvery Sugar eased from Rs. 103.50 to Rs. 103, but E.I.D. rallied from Rs. 40 to Rs. 40.12. In the Miscellaneous section, Travancore Rayon improved from Rs. 20.25 to Rs. 21.50, W.I. Plywoods from Rs. 210 to Rs. 217, Madras Rubber from Rs. 21.62 to Rs. 22.95 and Indian Steel Rolling from Rs. 11.95 to Rs. 12.25. In Textiles, Travancore Rayon were marked up from Rs. 42 to Rs. 43.50, but Bangalore Woollen lost three points to Rs. 250 *ex-div.*, Buckingham one point to Rs. 271.60 *ex-div.* and Kothari 95 nP to Rs. 12.20.

CAPITAL MARKET NEWS

NEW ISSUES

THE **Paper Products Ltd.**, Delhi, proposes to raise additional capital of Rs. 16 lakhs in equity shares of Rs. 100 each from the public. The subscription lists will open on 14th May 1962 and close on 22nd May 1962, or earlier, but not before 17th May. The Company has already a paid-up capital of Rs. 34 lakhs as against the authorised amount of Rs. 50 lakhs, which will be fully issued with the present issue. Apart from the flexographic and other types of printing facilities at its disposal, the Company is engaged in rotogravure printing, an important printing process for flexible packaging industry, and has recently obtained a licence of the value of Rs. 4.26 lakhs for the import of a complete plant for the manufacture of rotogravure printing cylinders. The setting up of this plant, as an auxiliary service, is expected to give the Company self-sufficiency in one of its important basic requirements, widen its activities and improve its present working. The proceeds of the present share capital issue will go towards the purchase of the equipment, provide additional working capital for the expanding business and better organise the scope for the Company's activities.

It will be recalled that the Company, incorporated on 12th June 1950, took over in August 1952 the running business of a partnership firm, Paper Products Company. Since the take-over, the turnover has progressively increased and was Rs. 118.72 lakhs in 1960-61 and so has the net profit before taxation, which amounted to Rs. 12.72 lakhs last year. It paid a taxable dividend of 24 per cent in 1961. With increasing industrialisation in the country, the market for packaging materials is expected to rise rapidly. The outlook for the Company can, therefore, be regarded as bright. It is noteworthy that the Company has entered into a technical consultation agreement with Messrs. Milprint Overseas Corporation, Milwaukee, Wisconsin, U.S.A., which is providing technical manuals in respect of standard operating procedures, technical news letters and other confidential data on the technical advances in the manufacture and sale of flexible packaging materials made from cellulose films, pilo-film, polyethylene, saran, aluminium foils, glassine and waxed papers for a maximum fee of 90,000 dollars, subject to Indian income-tax, to be paid for five years from 1st October 1960.

The Associated Bearing Company Ltd. is expected to be in the market around the middle of this month to raise from the public Rs. 80 lakhs towards its equity share capital. Its authorised capital is Rs. 7.50 crores and Rs. 10 lakhs of it is paid-up. It is now proposed to issue capital of the order of Rs. 3.90 crores, of which Rs. 2.34 crores will be taken up by the foreign collaborators and Rs. 76 lakhs by the Investment Corporation of India Ltd. and the Company's Directors and friends. The Company proposes to state clearly in its prospectus that it would take it a few years to pay a return to shareholders. It has been licensed to manufacture 900,000 tapered roller bearings, 1.5 million single row deep grooved ball bearings, 300,000 pendulum weighting arms, 360,000 centering sleeve inserts and 120,000 tape tensions pulleys per annum, all on double-shift basis. The total capital outlay on the project is estimated at Rs. 6 crores and will be met by the capital issue of Rs. 4 crores and bank borrowings of Rs. 2 crores.

RIGHT ISSUE

Another company to raise its capital is the **Ahmedabad Advance Mills Ltd.** It proposes to issue at par 10,000 new ordinary shares of Rs. 100 each as rights shares to the existing shareholders in the proportion of one new share for every four shares held by them. The new shares will be entitled to the proportionate dividend that may be declared in respect of the year to 31st December 1962. The present paid-up capital of the Company is Rs. 50 lakhs, of which Rs. 40 lakhs is in equity and Rs. 10 lakhs in preference shares.

FRESH ISSUES SANCTIONED

The Controller of Capital Issues has authorised 11 companies to issue fresh capital aggregating Rs. 4.67 crores within a year. The following are the details of the more important ones:

The General Industrial Society Limited, Calcutta, has been granted consent to the issue of capital of Rs. 44,90,000 divided into (i) 1,08,000 bonus shares of Rs. 10 each to be issued in the ratio of one bonus share for every share held, (ii) a cash issue of 2,16,000 equity shares of Rs. 10 each at a premium of Rs. 3.50 nP per share and (iii) 12,500—9.5 per cent cumulative redeemable preference shares of Rs. 100 each. The proceeds of the issue would be utilised on the establishment of a factory at Mirzapore, Uttar Pradesh, for the manufacture of aluminium foil and for taking over a textile mill near Calcutta.

Braithwaite and Company (India) Ltd., Calcutta, has been granted consent to the issue of 4,34,021 bonus shares of Rs. 10 each on capitalisation out of its reserves. The Company's existing capital is Rs. 56.59 lakhs.

The Gourepore Company Limited, Calcutta, has been given consent to the issue of 24,000 bonus shares of Rs. 100 each on capitalisation of reserves to the extent of Rs. 24 lakhs. The bonus shares will be issued in the ratio of one bonus share for every share held.

Shri Ambika Mills Limited, Ahmedabad, is to issue bonus shares of the value of Rs. 21,25,300 to be made in the ratio of one bonus share for three shares held.

Motor Industries Company Limited, Bangalore, is issuing bonus shares of the value of Rs. 15 lakhs on capitalisation of reserves. The present paid-up capital of Rs. 150 lakhs is in equity shares of Rs. 100 each.

Soom Tea Company Limited, Calcutta, is to issue 15,000 equity shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of reserves to the extent of Rs. 1.50 lakhs. The bonus shares will be issued in the ratio of one bonus share for every two shares held.

Indian Oil Company Limited, Bombay, having a subscribed and paid-up capital of Rs. 226.25 lakhs is raising Rs. 90 lakhs (inclusive of Rs. 19 lakhs already raised) in equity shares of Rs. 1,000 each, for cash at par. The proceeds of the issue would be utilised for marketing and distribution of petroleum products by taking over the entire production of the public sector refineries that may be set up.

NEWS IN BRIEF

THE Madras Land Reforms (Fixation of Ceiling on Land) Act 1961 has received the assent of the President.

The ceiling fixed for export of H.P.S. groundnut-in-shell has already been reached and no further applications will be entertained, according to the Joint Chief Controller of Exports.

A Bill seeking to create a National Co-operative Development Corporation was introduced in the Lok Sabha last week. The proposed corporation will take over certain functions of the National Co-operative Development and Warehousing Board.

The Union Government has released a special quota of 50,000 metric tons of sugar for sale by factories in the open market. The regular release for May is expected to be announced on or about the 15th inst. unless the rate of consumption and other conditions justify an earlier release.

The National Coal Development Corporation has approved of a plan to work a 70-foot thick seam in an underground mine in its Kargali Colliery in Bihar. The seam is estimated to contain reserves aggregating about 26 million tons of good quality coking coal, of which 17 million tons can be extracted.

The Tea Wage Board is being asked to hear the parties again on its recommendations for the grant of an interim wage increase for Assam and West Bengal estate labour. The Government has already accepted the recommendations of the board in respect of South India and requested the employers of tea estates there to implement them.

Production of iron ore during the month of February was 1.21 million metric tons as compared with 933,000 metric tons in the corresponding month of the previous year. During the month despatches for consumption in the iron and steel plants aggregated 665,000 metric tons, while despatches for export amounted to 236,000 metric tons.

The Government of Mysore has sanctioned 13 projects for the utilisation of rural man-power, each involving an expenditure of Rs. 2 lakhs. These projects are intended to provide jobs to the unemployed and the under-employed rural areas, particularly during the non-agricultural season. It is also expected to create remunerative community assets in the areas concerned.

The Film Finance Corporation Ltd., has sanctioned a loan of Rs. 3.5 lakhs to Mr. Shahou Ramkrishna Moadak, Bombay, for the production of the picture *Amar Samadhi* produced and directed by him. The loan will be paid in instalments and bears an interest of 9 per cent per annum subject to a rebate of interest for early repayment as provided in the bye-laws and regulations of the Corporation.

A scheme of compulsory quality control for cardamom, dry chillies and pepper under Agmark grading standards, has almost been finalised by the Spices Export Promotion Council. Consequent on the introduction of the scheme, the incidence of cost in the price structure is estimated at 43 nP for every Rs. 100 worth in the case of pepper, 42 nP in respect of cardamon and Re. 1.40 for dry chillies. Meanwhile, a technical development committee headed by Dr. V. Subramaniam, Director, General Food Technological Research Institute, Mysore, as Chairman, has been constituted to develop new methods of processing research, storage, packing and use of waste spices material.

The sub-committee, appointed by the Government under the chairmanship of Mr. N. E. S. Raghavachari, Director-General of Supplies and Disposals, in July 1961 has recommended that the firms registered as approved suppliers with the Directorate General of Supplies and Disposals of the Union Ministry of Works, Housing and Supply, should be automatically accepted for registration by public undertakings and State Governments. In addition, State Governments may have separate list of firms registered. It has also recommended that, in cases where firms registered with the D.G.S. and D. have defaulted against contracts entered into by the State Governments and public undertakings, they should report such cases to the D.G.S. and D. for prompt and suitable action against them. Further, it has suggested that, as far as possible, specifications for items to be purchased should be definite and up-to-date, but not so rigid as to restrict competition. These purchases should be made on the basis of I.S.I. specification. The recommendations have been forwarded to the State Governments and public undertakings for their consideration.

From Abroad

West Germany produced electrical equipment goods worth DM 22,200 million last year, 13.5 per cent more than in 1960.

The number of self-service stores in West Germany rose by 8,061 to 30,680 in 1961, according to the Institute of Self-Service Shops at Cologne.

Mexico, world's largest silver producer, produced 42 million ounces of silver during 1961, a drop of 2.5 million ounces from the previous year.

Norway is expected to send shortly a formal official request for opening negotiations with the European Common Market on its application for membership.

A traveller's cheque with new design is being introduced by the Westminster Bank. It will carry at the lower edge symbols in magnetic ink which can be interpreted by electronic equipment for accounting purposes.

A total sum of DM 2,668 million was spent for advertising in West Germany during 1961 as against DM 2,195 million in 1960. Newspaper advertisements formed the largest group with DM 1,356 million as compared with DM 1,188 in 1960. TV advertising rose from DM 132 million in 1960 to DM 226 million last year.

Australia's largest Trade Mission, headed by Mr. Donald Mackinnon, a former Australian Minister to Brazil, has left for South America to explore the possibility of expanding exports to this country from their present level of about £A1.5 million a year. The mission will visit Venezuela, Colombia, Ecuador, Peru, Chile, Argentina, Uruguay and Brazil.

Britain has repaid another $70 million to the International Monetary Fund bringing the total direct repayments since October last to $700 million. Britain drew $1,500 million in various currencies from the Fund early in August last. The latest repayment comprised $35 million in West German Marks, 20 million in Canadian dollars and 15 million in Belgian Francs.

It has been announced by the Government of Spain that Spanish export credits for ships and capital goods will be granted for a maximum period of five years upto 80 per cent of the value of orders. Bills covering these credits will be discounted by private banks at 4.5 per cent and the Bank of Spain will rediscount them at 3.6 per cent. The current rates are 5 per cent and 4 per cent, respectively.

The West German automobile production amounted to 590,521 units in the first quarter of this year, 2.6 per cent more than in the same period last year. The increase was, however considerably smaller than from the first quarter of 1960 to the same period of 1961 (10.5 per cent). About 268,754 automobiles were exported in the period under review, 2.8 per cent less than in the first quarter of 1961. The export quota dropped correspondingly from 48 to 45.5 per cent.

The free world's first continuous camera eye on the moon—designed to detect any lunar surface change—will be opened shortly by the Lockheed-California Company. Technique and equipment tests are under way at the Lockheed Solar Observatory in the Hollywood Hills. After the day's sun-seeing time-lapse photography is completed lunar telescope-camera surveillance takes over at night. When fully developed, this will be the first known long range and systematic lunar time-lapse photography programme. The ultimate goal is to advance scientific knowledge, specially in the areas that would affect manned moon landings.

PERSONAL

MR. J. C. Jain, General Manager, Bennett Coleman and Company, has been elected Chairman of the Advertising Council of India for the current year.

Dr. S. N. Sen, Divisional Manager of the State Trading Corporation, has retired from the Corporation. He has been associated with the Corporation since its inception.

Mr. R. L. Tuli, General Manager, The Punjab National Bank Ltd., has been elected President of the Delhi Management Association for the current year.

Mr. N. N. Wanchoo, Secretary, Department of Iron and Steel, Government of India, Mr. K. N. Subbraraman, Director, Hindustan Steel, and Mr. K. M. George, Chief Design Engineer, Hindustan Steel, have left New Delhi for West Germany to discuss details of the Rourkela plant expansion.

WORKERS' PARTICIPATION IN MANAGEMENT

THE Presidents of three employers' organisations, namely, Mr. Naval H. Tata, President of the Employers' Federation of India, Mr. Surottam P. Hutheesing, President of the All-India Organisation of Industrial Employers and Mr. S. Srinivasan, the retiring President of the Delhi Management Association, have expressed misgivings about the scheme of workers' participation in management which is sought to be progressively extended in the third Plan period, so that, in course of time, it would become "a normal feature of the industrial system." Citing the experience of other countries, Mr. Naval Tata pointed out that executive powers could not be shared with workers but must remain with the management. However, where conditions were favourable and good industrial relations existed, management should, in his opinion, be prepared to discuss "certain matters" with representatives of workers. In any case, he was firmly of the view that this was one of the schemes which should not be imposed or introduced by means of pressure tactics or in haste but one that had to be initiated only gradually and conducted on a purely voluntary basis.

Mr. Surottam P. Hutheesing expressed the doubt whether the concept of workers' participation in management was not in conflict with that of collective bargaining. How are the representatives of workers, he pertinently asked, to perform simultaneously the two incompatible roles of sharing responsibility for managerial decisions and leading opposition to management? In his opinion, a more satisfactory arrangement would be to proceed on the assumption that management must be responsible for the economic performance of the enterprise and that the worker should be induced to take a share in the responsibility for the 'community' life of the factory.

Mr. S. Srinivasan probed the question deeper and tried to demarcate clearly the functions of management and trade unions. According to him, the persistent attempt to question and whittle down the manager's authority and circumscribe his freedom to take decisions stem from a basic confusion between the functions of management and trade union. The trade unions, he pointed out, existed to represent its members and to protect their interest. Their job was to seek a continuous improvement in the terms and conditions of employment and to ensure that management behaved in a responsible manner and to call it to account when it did not. Obviously, they could not, therefore, run with the hare and hunt with the hounds. He, however, conceded that workers needed to know what was going on in the organisation in which they were working. They should also be given a distinct sense of participation in the affairs of the organisation. This could and should be done by joint consultation and not through co-management. But too much should not be expected of joint consultation either, for it did not bring in unanimity. It was at best, Mr. Srinivasan said, a machinery through which progress in human relations could be slowly made: it was a way to minimise suspicion and it recognised that workers were adults.

Mr. Srinivasan then proceeded to aver that, unfortunately, no systematic attempt had been made in India to define precisely the scope of joint consultation. "When the Labour Ministry swears by workers' participation in management, what is the kind of participation it is thinking of? Raising this issue, he posed the following further questions, and observed:

"Does our Union Ministry seriously believe that the management should discuss with the workers' representatives subjects such as foreign collaboration arrangements, expansion plans, alternative methods of raising finance or reorganising the capital structure of the enterprise? Is it contemplated that the union officials should be consulted and their advice heeded in matters like issue of bonus shares, proportion of profits that should be ploughed back, managerial promotions, appointments to the Board, diversification of the firm's activities, modernisation of equipment, advertising and marketing policies or formulation of the manpower budget in regard to managerial requirements for the future?

"One would rather expect the captain of the ship to assemble his crew on the quarter-deck to ascertain the best way to ride the storm. The absurdity of labour participating in all areas of industrial management becomes patent the moment the question is asked: why, in the name of industrial democracy, should not the union consult management about the wisdom of the workers going on a strike? Or, why, in the name of political democracy, should not the Union Cabinet consult the representatives of the lower division clerks in the Secretariat about the need for modifying our third Plan?"

If the scheme of labour participation in management envisaged by the Union Ministry of Labour involved only consultation and discussion in an atmosphere of co-operation and mutual trust which would lead to a feeling among workers that their representatives are participating, to some extent, in the decisions of management, it would not be different, according to Mr. Srinivasan, from the joint consultation that obtains in countries like U.K., U.S.A. or Sweden. If that was so, why not make that clear, instead of wrapping the simple, straightforward joint consultation in misleading phraseology which confounded both union and management. The former, he added, was uneasy lest participation in management should weaken collective bargaining which was a union's most precious prerogative, while the latter was equally apprehensive, because the term "participation in management" conjured up visions of the workers' representatives participating in the deliberations of the Board of Directors.

It is clear from what has been said above that there is considerable confusion and misunderstanding about the exact scope of the scheme of workers' participation in management. It is necessary to clear this confusion before the scheme is extended to other units. Full and complete participation by workers in all aspects of management is neither desirable nor practicable. Workers and their unions in the advanced countries of the West are not enamoured of sharing in management. In fact, they often display not merely apathy but barely-concealed hostility towards schemes for associating labour more closely with management. But they have, by extending the field of collective bargaining beyond the traditional questions of wages and hours of work, acquired a remarkable degree of control over those management decisions which directly affect the day-to-day life of the worker and that is all what they are interested in. This approach is due to the early realisation that the control, which they now exercise on management, depends, in the last analysis, on their remaining independent of management. In fact, they are afraid that this independence would be jeopardised if they were forced to accept responsibility for management decisions either through actual participation in management or through too close an involvement in joint consultation.

Workers' participation in management is also not looked upon in the West as a cure for the social stresses and strains which ultimately reflect themselves in industrial morale. It is recognised that enlightened personnel management, involving the "human relations" approach to personnel matters, could do much to promote better labour-management relations.

FOUNDRY INDUSTRY

The growth of the foundry industry in the country has, of late, received considerable momentum, side by side with the development of other capital goods industries in general. There are now 2,000 foundries in the country, with a large number of them located at the two principal industrial areas, namely, Bombay and Calcutta. The production of iron castings has gone up from about 2,84,000 tons in 1953 to about 900,000 tons by 1960, the full year for which data are available. The steel castings sector has also made satisfactory progress, its turnover having gone up from 11,000 tons to 36,000 tons during the same period. In the malleable castings field, however, there is still further scope for development, its total installed capacity at present estimated at only 8,000 tons. Apart from the quantitative expansion of output, the industry has also taken steps towards diversifying production lines. The castings for machine-building industry is one of the notable examples of this trend towards diversification. This is by no means a small achievement, considering the fact that until recently, the industry was only catering to the needs of such simple consumer goods as cast iron pots and pans, weights and measures, and to a certain extent, pipes.

The pace of development of the industry would have been still faster, but for the pronounced scarcity of iron and steel of requisite quality. It is estimated that the industry's demand for foundry-grade pig iron was one million tons as of 1960, but the supply fell short by as much as 400,000 tons, or a gap of 65 per cent. Besides, there have been complaints that the quality of the pig iron supplied by some of the integrated steel plants is not satisfactory. Further, it appears that the integrated steel plants may not be able to cater to the demands of the foundry industry, although such an impression generally prevails. Dr. B. R. Nijhawan, President of the Institute of Foundrymen, and the Director of the National Metallurgical Laboratory (Jamshedpur), for instance, pointed out, in his address at the annual convention of the Institute held at Calcutta last week, that the production of foundry-grade pig iron by the integrated steel plants might not be advisable on economic grounds. The unit cost of production of the foundry-grade pig iron will be higher in large-scale steel plants than in small units. The capital investment in the case of per ton of pig iron produced by the integrated steel plants was of a very high order. These units, therefore, should be permitted to go ahead with all-steel production, instead of being compelled to produce the crude semi-finished product like the foundry-grade pig iron. According to Dr. Nijhawan, in other countries, this grade of pig iron is produced by steel plants having blast furnaces, with a hearth diameter of not more than 14-15 feet. Against this, the blast furnaces of integrated plants in this country have a hearth diameter in excess of 20 feet. A possible solution suggested by Dr. Nijhawan is to utilise the small-scale iron plants for the production of foundry-grade pig iron in the third and fourth Plans. According to him, it is even possible for small-scale units to secure a greater profit per ton of pig iron than that in the case of large plants, as the former units do not come within the purview of any price control and retention price in respect of foundry-grade iron.

Another difficulty facing the industry arises from the fact that there are no adequate facilities in the country for conserving and refining the inferior types of scrap. This problem, as stated by Mr. A. N. Bannerji, the Iron and Steel Controller, is one of inadequate technological development. In this context, Mr. Bannerji emphasised the need for reserving raw materials like scrap for the needs of the domestic industry, instead of permitting their exports. He felt that it would be preferable to utilise as much scrap as possible within the country and export, if possible, the finished product, namely castings, rather than scrap. Presumably, Mr. Bannerji was justifying the present restrictions on the export of scrap. He is surely on strong grounds when he advocates this approach, for, in allocating domestically available raw materials, the claim of the domestic industry should get precedence over exports, for their conversion into finished and semi-finished products add to the value of exports, besides providing employment within the country.

Pipework installations

by S&L

We undertake fabrication and installation of pipework, as well as the design work entailed in the engineering of piping systems.

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers, and draughtsmen, many of them trained abroad, now provides,

* fabrication of all types of pressure pipework,
* fabrication of bent boiler tubes, superheater elements and coils for all purposes,
* the installation of piping systems for all pressure and temperature conditions.

Whatever your project—a Steel Plant, Power Station, Paper Mill, Chemical Plant, a single item or a complete installation—call for S & L.

MR. HUNTER ON TEXTILE POLICY

It is somewhat unfortunate that the planners and the powers-that-be have not cared to give any thought to the question of revising the development programme for cotton textiles under the third Five-year Plan, although attention has repeatedly been drawn to some of the serious defects in the programme. Two such defects may be mentioned once again. In the first place, the aggregate production target of 9,300 million yards fixed for cloth (mill, handloom and powerloom) is too conservative to cover adequately the expanding domestic demand (let alone export) emerging from the rise in population and increase in purchasing power. Secondly, excessive reliance is being placed on the decentralised sector's capacity to fulfil the target of 3,500 million yards assigned to it, as against the estimated actual output of no more than 2,285 million yards in 1960-61, while the mill sector's capacity is frozen at a predetermined level. The production target has been fixed at 5,800 million yards per annum to be reached in 1965-66, as against the effective capacity of about 5,000 million yards in 1960-61. We have pointed out on more than one occasion that, unless the overall target and the mills' target are revised upward and effective steps taken to reach them, the actual available supply of cloth by the end of the third Plan will be much lower than the actual requirements, domestic as well as export, resulting in an acute shortage, if not famine, of cotton piecegoods.

Viewed thus, there is no exaggeration whatever in the statement of Mr. E. F. G. Hunter, Chairman of the Buckingham and Carnatic Company, to the effect that the mill cloth target of 5,800 million yards will barely keep pace with the anticipated population increase and will leave nothing for securing the progressive rise in living standards, one of the aims of the successive Five-year Plans, and certainly no margin for increasing experts so necessary if India is to reach the stage of self-developing growth. Even the limited scheme of expansion announced by the Government last year has attached to it an obligation to export which, if not met, will involve heavy penalties. Such a condition, as Mr. Hunter pertinently remarked, will inhibit growth rather than assist it, but growth and higher productivity are essential, if India is to maintain its position in world textile markets.

This is a vital point especially in the context of the keener competition for the narrower fields open to exporters, thanks to the entry of many countries, which were formerly importing the whole of their requirements, into the field of cotton textile manufacture. Drawing attention to this development, Mr. Hunter pointed out that India was at a disadvantage *vis-a-vis* many other countries, as the latter had introduced superior equipment and secured higher productivity of labour. "Quality," he went on to add, "has now become the key to success in overseas markets, but this alone is not sufficient and, it is essential that quality is backed by higher productivity to ensure a low cost product."

Mr. Hunter also criticised the controls over production of textiles and observed: "The restriction of production effected by the control of looms and spindles installed . . . has created a condition of shortage in the textile market in India. This is neither good for the consumer nor the industry, and provides an unsatisfactory background for promoting sales in overseas markets where profits, due to intense competition, are negligible or non-existent." Few would disagree with these observations.

THE NAYA PAISA COIN

Like the proverbial pea that hurt the pretty *petite* from under a score of mattresses, the naya Paisa coin seems to be a source of some concern for the authorities. Recently, the Government put into circulation new naya Paise coins in nickel-brass alloy in place of pure copper. The reason for this switch-over is shortage of foreign exchange. Copper for coinage purposes is obtained mostly through imports. While this is the official explanation for the change-over to the yellowish coin, one also gathers that the Government was obliged to effect the change by some shrewd, business-minded people, who obtained more than one naya Paisa from every such coin by turning it into copper and selling the metal in the market at the premium it commands because of scarcity. Obviously, the tiny little tot, which has a nasty habit of slipping out of the pocket and which evokes the generosity of its possessor and swiftly finds itself in the beggar's bowl, must have received greater care at the hands of these unscrupulous elements. The authorities had no alternative but to stop the issue of copper coin.

We now read in the *Statesman* that the cost of minting a naya Paisa coin is nearly twice its face value, and even more, if the amount of foreign exchange needed to import copper, of which it is made, is taken into account. The report avers that there is a great demand for the coin, a coin which, in the opinion of the authorities, has hardly any purchasing power. Most of the people, too, have the same view, but apparently not the bad elements. And it is largely because of the ingenious use to which they put it that its total production represents more than a third of the aggregate coinage output of India's three mints. So large is the demand for this tiny coin that the mints find great difficulty in meeting it in spite of working overtime. Accordingly, the Union Government is credited with the idea of even eliminating the use of naya Paisa coins. The most practical way to do it, it is said, would be to express the basic rates of wages, tariffs and duties in even numbers or multiples of five naye Paise. It is argued that such a course would, apart from reducing the demand for one naya Paisa coins, obviate much of the difficulties of shroffs in banks and treasuries. But it would mean a further addition to the cost of living.

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

TAKING A NEW LOOK AT COAL

JUGGLING WITH TARGETS AND TRANSPORT

From Our Special Correspondent

NEW DELHI, 1st *May*

BUT for the Union budget, the last week of April could well have been called a "coal week" in the capital, with both the Railway Minister, Sardar Swaran Singh and the Fuel Minister, Mr. K. D. Malaviya, training their sights towards new horizons in coal. From a critic of the railway transport muddle to the major public defender of the coal carrier, Sardar Swaran Singh's transformation has been rapid and he has been quick to try shift the blame from the railways. Although Mr. Malaviya's commitment to the public sector in the oil field had become chronic, in dealing with the coal production problems he seems to have exhibited some pragmatism, since he is reported to have decided to assign to the private sector the task of increasing coal output above the original target of 97 million tons by 1965-66.

DELHI LETTER

Sardar Swaran Singh has been firm in denying the charges of the coal industry as well as of the Federation of Indian Chambers of Commerce and Industry that coal piled at the pitheads because the railways failed to clear it. According to the Railway Ministry, there is an irreducible minimum of 2.3 million tons at the pitheads even when there was surplus wagon capacity to clear it. The Railway Ministry figures (see table alongside) show that the clearance from the pitheads has been progressively improving, the stocks coming down from 3.8 million tons in January 1961 to 3.3 million tons in January 1962. In 1961-62, the railways' undertaking to move cent per cent of the coal required for steel plants and washeries from the Bengal and Bihar coalfields and of all coal from outside fields was fully met, a Railway Ministry Press note says. Coal movement during the year increased by 7.1 per cent in respect of Bengal and Bihar coalfields and 5.8 per cent for all coalfields in the country, as compared with the previous year.

The Ministry explains that, in the third Plan, there is provision for an increase of about 1,200 wagons per day by the end of 1965-66 in coal movement to consumers other than the steel plants and washeries, from the Bengal and Bihar coalfields. As against this target, the railways have achieved about one sixth of the increase during the first year of the Plan. This increase was despite the dislocation caused by the Goa military action in the peak of the busy season and the wastage of capacity of more than a million tons because collieries continued to load about 800 wagons less than usual on Sundays and holidays.

The railways say that they are confident that, with the progress of capacity, development works and acquisition of rolling stock, the loadings will gather momentum in the current and later years of the Plan and come up to the full target set for the third Plan. They also dispute the contention that "accumulation of stocks at the pitheads blocked finances and impeded production." The Ministry emphasises the fact that pithead stocks steadily came down right through 1961-62. In the Bengal and Bihar fields, stocks at the end of January 1962 were 3.1 million tons, as against 3.3 million tons a year earlier.

The working group of the Planning Commission on coal production and transport has recommended an increase in the coal targets to 101 million tons in the last year of the third Plan and suggested raising the rate of production to a rate of 104 million tons in the last quarter of the last year of the third Plan. Against a target of about 60 million tons for the last year of the second Plan, the actual production in the calendar year 1961 was only around 56 million tons. The target was for producing about seventeen million tons from outlying fields but actually a little more than ten million tons is all that is estimated to have been produced in outlying fields.

From around 56 million tons the coal production now is sought to be raised to 104 million tons or a rate of 26 million tons in January-March 1966 against the actual production of 13.77 million tons in the last quarter of 1961, or an increase of nearly 100 per cent. According to the coal industry, the limiting factors are shortage of transport, fluctuations in the day-to-day wagon supplies, power shortage, scarcity of explosives and, of course, the lack of incentives. The industry has lost no time in pressing its case for a price increase with Mr. Malaviya.

Replying to the railway budget debate, Sardar Swaran Singh gave an assurance which did not anyway offer industries any cause for jumping with joy. The assurance was that supplies of coal to all users will in no way be less than those during 1961-62. He hoped the consumers would get more as a result of rationalisation in wagon allocation.

Sardar Swaran Singh hopes to clear the confusion over proposals to streamline wagon allocations. The gap between paper allocations and actual availability has been wide in the past, the Railway Minister admits; what he aims to achieve is to bring paper allocations to actual levels of physical availability of wagons.

The movement of coal by sea has not come up anywhere near to Delhi expectations, the best rate being 1.5 million tons annual against the hoped for rate of two million tons. The planners' working group suggests that the Government shipping corporation should acquire coastal ships to make the total tonnage adequate for the movement of two million tons. The coastal conference of shipowners calculated that 43 ships would be the minimum needed to move two million tons, but the Transport Ministry estimates the needs at fifty ships. The entire need for new coastal tonnage may have to be met through imports and the working group wants quick allocation of foreign exchange for this purpose. The Hindustan Shipyard cannot accept any fresh orders for some years to come, as its order books are already full.

For handling the increased rate of coal traffic, the Working Group suggests additional investment of Rs. 92 crores (including Rs. 30 crores in foreign exchange) in rolling stock and line capacity works. This capacity is to be developed on the basis of suggested production in the last quarter of 1965-66 at the annual rate of 72 million tons in the Bengal-Bihar region and 32 million tons from the outlying areas.

The strategy in the original target of 97 million tons was to raise 31 million tons, or about a third, from the outlying fields so as to relieve the pressure on railway transport. This sound principle has been abandoned in the new proposals in which six out of the seven million tons additional target is to be raised in the Bengal-Bihar region. The question of moving the additional coal production above Moghulsarai poses another built-in transport problem to the coal plans.

Mr. Malaviya is reported to have agreed to the private sector almost entirely taking up the task of raising the additional production. The new Coal Minister will, however, take some more time to decide on the incentives to the coal producers.

Food Products Exports

The new International Trade Ministry under Mr. Manubhai Shah is planning to initiate measures for the increase of exports of food products. To begin with, the drive will be in fish and other marine products in which there have been recently setbacks in our traditional markets. Ceylon's introduction of a national co-operative marketing body for fish has coincided with reduction in Indian fish exports to Ceylon which has also signed an agreement with far away Belgium for supply of fish. Ceylon is planning another agreement with Canada.

A new opening for frog legs sales to the United States is also not being exploited enough. Although the U.S. imports of Cuban frog legs came down to 400,000 lbs. in 1961 from 865.000 lbs. in 1960, India did not make any headway last year in the American market. Actually Indian frog leg exports to the United States fell from 806,000 lbs. in 1960 to 517,000 lbs. in 1961. The fall was largely due to the U.S. rejection of a large quantity of Indian frog legs in the middle of 1961, because the Food and Drug Administration found the Indian exports had become decomposed.

In the Ceylonese market, new competition is expected to emerge from East Pakistan which had recently sent a delegation to the island.

The Government thinks that it is necessary to ensure greater control on and co-ordination of fish exports. Under study is the promotion of a food products export corporation in the public sector. The constitution of such a corporation is being studied by experts.

The fishing industry will receive a shot in the arm through the agreement with Japan for using Rs. 30 lakhs of the yen credit for the purchase of marine diesel engines. While this credit is planned to be utilised in the current financial year, the Japanese engines will speed the mechanisation of fishing vessels in 1962-64. The engines will be supplied to State fishery departments, mostly for the Malabar coastal fishing industries which are the most developed. Zaffrabad in Saurashtra is also planned to be developed as a mechanised fishing centre. The newly planned food products export corporation, too, will help develop the fish oil industry on the west coast as well as in Bengal.

Planning in Democracy

Singapore's Prime Minister, Mr. Lee Kuan Yew, is convinced that among developing democratic countries the only one to have reached anywhere near the take-off stage is India He also believes that India has managed to keep long-term planning and democracy together.

Among his important calls during a three-day visit to New Delhi was a meeting with members of the Planning Commission. Mr. Lee says that people generally prefer to vote for parties which can provide results in four or five years and do not favour those who believe in economic planning the fruits of which can be had only in the long-term. His question to the Planning Commission was: How has India succeeded in marrying adult franchise to planning? Mr. Gulzarilal Nanda told the Singapore leader that Indian leaders are convinced that democracy and planning do not come in the way of planned economic progress. Briefly stated, Mr. Nanda's explanation was: What is crucial to the success of planning in a democracy is the quality of leadership and ability successfully to communicate to the people a sense of enthusiasm and willingness to sacrifice. This is essentially a task of educating the masses and orienting planning

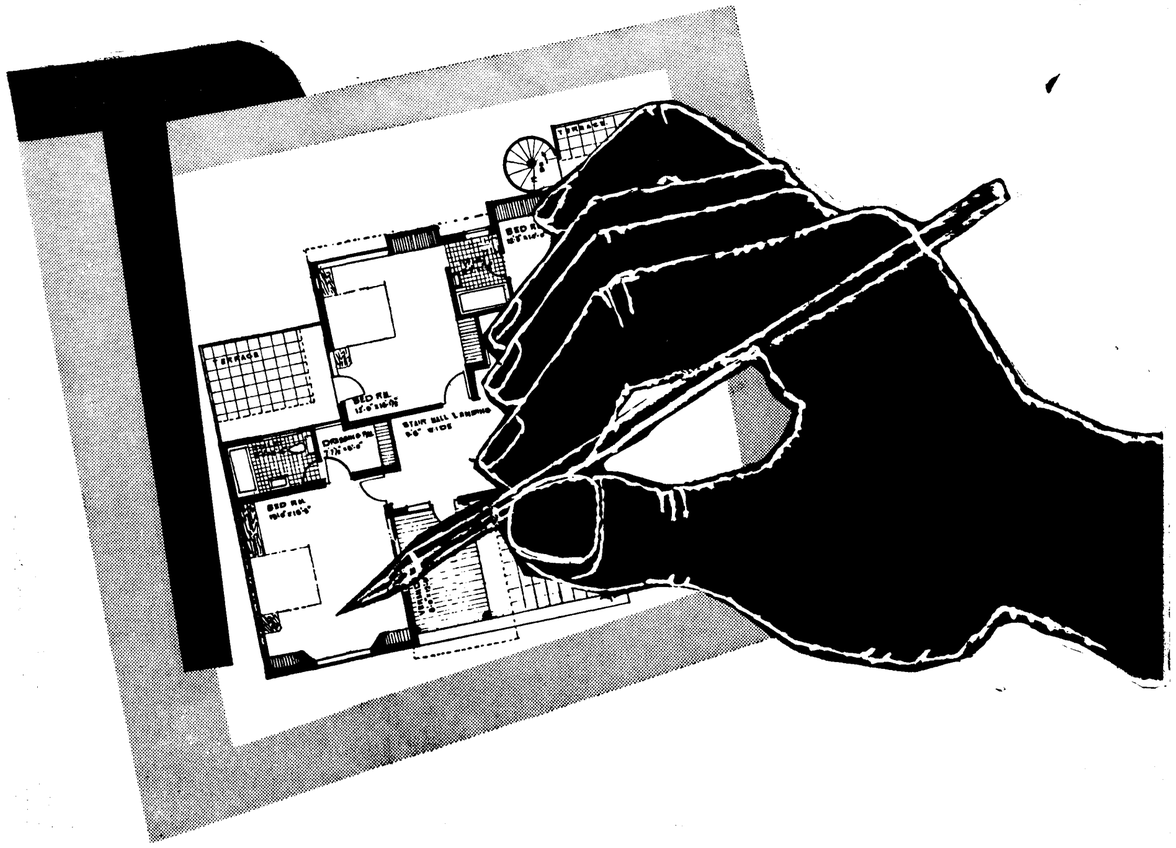
SOURCE:—*Indian Railway Ministry.*

this is the time to think about air conditioning



and this is the time to think about Carrier and Voltas

—now, while a new building is in the blueprint stage. Too early? Not at all. It's a costly afterthought to plan air conditioning once construction has begun. Before designs are finalized, air conditioning engineers and architects work in close collaboration. Provision is made *from the beginning* for the installation of air conditioning plant, air ducts and cooling towers. This saves money on both equipment and installation costs. And air conditioning affords architects more freedom and flexibility to adopt new building concepts and designs for architectural beauty and maximum utilisation of the available space.

Why Carrier and Voltas?

Because they bring the maximum engineering experience and skill to every air conditioning project. Carrier in the field of manufacture of equipment. Voltas in the field of engineering, installation and service.

Air conditioning plant installed by Voltas is meticulously designed to suit a particular job. Every project is carried out by skilled engineers and technicians, and serviced with the expert care that guarantees efficient, economical operation.

Carrier

the people who know air conditioning and refrigeration best

VOLTAS

VTV-24

BANK OF RAJASTHAN FARES WELL

SHARP RISE IN DEPOSITS

A SHARP rise of 16.3 per cent from Rs. 536.26 lakhs to Rs. 623.94 lakhs in deposits features the working results of the Bank of Rajasthan Ltd. (General Manager: Mr. B. L. Sethi, Jaipur) for the year ended 31st December 1961. While the increase is in line with the general banking trends in the country, it is particularly notable, as it far exceeds the improvement of 8.9 per cent recorded by the Bank in 1960. On the assets side, advances have slipped down from Rs. 263.29 lakhs to Rs. 259.91 lakhs and their ratio to deposits has declined from 49 per cent to 41.6 per cent. Investments recovered from the previous year's setback, but the improvement from Rs. 201.77 lakhs to Rs. 216.29 lakhs was relatively small as compared with the growth in deposits, with the result that their ratio to deposits, too, has moved down from 37.6 per cent to 34.6 per cent. Notwithstanding this inadequate progress in the sources of income as at the close of the year, the Bank has fared well during the year, with its income from interest and discount increasing from Rs. 24.50 lakhs to Rs. 28.83 lakhs, an increase that more than adequately covers the rise in outward interest from Rs. 14.81 lakhs to Rs. 17.80 lakhs as a result of higher deposits. Its income from commission and exchange, as also from other sources, has shown some improvement. And, despite an increase in staff expenses from Rs. 8.31 lakhs to Rs. 9.77 lakhs and in depreciation from Rs. 0.79 lakh to Rs. 0.92 lakh, the Bank has earned a slightly higher profit of Rs. 3.50 lakhs as compared with Rs. 3.36 lakhs in the previous year. A sum of Rs. 1.23 lakh has been transferred to reserves and that has brought them on parity with the paid-up capital. The return to shareholders has been maintained at the last year's level of 10 per cent per annum, subject to tax.

The comparative table below brings out in nutshell the progress of the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount earned	28.83	24.50	20.96	17.35

Cash	31.5	21.5	24.4	46.5

* Subject to deduction of tax.

The improvement in deposits has been under all categories, with fixed deposits going up from Rs. 296.83 lakhs to Rs. 368.50 lakhs, savings bank deposits from Rs. 113.53 lakhs to Rs. 121.40 lakhs, and current and contingency deposits from Rs. 124.26 lakhs to Rs. 132.20 lakhs. A welcome feature of this Bank's working (again, on the basis of year-end figures) is that it has not found it necessary to resort to borrowings from other banks. This was so even in 1960, when many banks found it necessary to resort to this source on a very substantial scale to supplement their deposits. The ratio of the "own funds" to deposits works out to 2.96 per cent. In 1952, it was as high as 9.31 per cent. The decline in the ratio reflects the Bank's growth. However, with a view to reaching the accepted goal of 6 per cent, the Directors have decided to made a beginning by raising the paid-up capital. At present the paid-up capital consists of 300 shares of Rs. 100 each fully paid and 17,882 shares of Rs. 100 each, with only Rs. 50 called up. They now propose to call up the balance of Rs. 50 each.

During the year under review, the bank ceased to transact Government Treasury work at six more branches. It was, however, entrusted with the responsibility of collecting water and electricity bills at two more places, making the total of 13, by the State Department and Electricity Board. During the year, one new office of the Bank was opened at Bikaner, raising the total number of branches to 37, of which 34 are in Rajasthan. Between the close of the year and 22nd March 1962, the Bank has opened two more branches and proposes to establish a few more this year.

BAREILLY CORPORATION (BANK) LTD.

The results of the Bareilly Corporation (Bank) Ltd. (Secretary: Mr. Harish Kumar, Bareilly) for the year ended 31st December 1961 make encouraging reading. Its gross income, the bulk of which came from banking business, improved from Rs. 8.97 lakhs to Rs. 9.90 lakhs, reflecting the rise in advances over the year from Rs. 63.01 lakhs to Rs. 70.66 lakhs and in investments from Rs. 45.59 lakhs to Rs. 54.31 lakhs. Deposits, which had been slightly lower in 1960, expanded from Rs. 128.02 lakhs to Rs. 140.23 lakhs. And because of this, borrowings from other banks at Rs. 3.90 lakhs were practically the same as in the previous year. Interest paid on deposits amounted to Rs. 4.15 lakhs as against Rs. 3.92 lakhs in 1960. Other expenses also were higher, albeit slightly. The profit, after depreciation, amounted to Rs. 1.80 lakhs as against Rs. 1.34 lakhs in the previous year. This higher profit has attracted a larger provision for taxation of Rs. 0.74 lakh as compared with Rs. 0.54 lakh a year before. General reserve has been allocated Rs. 0.10 lakh as against Rs. 0.14 lakh in the preceding year, and a sum of Rs. 0.20 lakh has been set aside for deferred shares conversion fund. The dividend on equity shares of Rs. 10 each has been increased by one point to 10 per cent, and that on deferred shares also of Rs. 10 each from 57 per cent to 70 per cent, both subject to tax.

The comparative table below gives an idea of the Corporation's working in the past four years:

(In lakhs of rupees)

Investments	54.31	45.59	45.92	45.67
Cash	30.55	32.59	30.09	26.93
Balance-sheet total	177.85	168.41	159.81	150.89
Ratio to deposits of—	%	%	%	%
Advances	50.4	49.2	51.4	50.7
Investments†	35.9	32.6	32.5	34.6
Cash	21.7	25.5	28.3	22.2

* Subject to deduction of tax.
† Only the unencumbered portion is taken into account.

The improvement in advances is reflected in rise in the credit ratio from 49.2 per cent to 50.4 per cent. The ratio of investments to deposits also increased from 32.6 per cent to 35.9 per cent. But, with the decline in cash balances at the year-end from Rs. 32.59 lakhs to Rs. 30.55 lakhs, their ratio to deposits shrank from 25.5 per cent to 21.7 per cent. All categories of deposits increased during the year: fixed deposits from Rs. 79.36 lakhs to Rs. 84.90 lakhs, savings bank deposits from Rs. 33.22 lakhs to Rs. 36.67 lakhs and current account (and contingency) deposits from Rs. 15.45 lakhs to Rs. 18.66 lakhs. At the end of the year, reserves exceeded the paid-up capital of Rs. 5.84 lakhs by Rs. 1.11 lakh, including the sum set aside during the year under review. Following the Reserve Bank's suggestion, the Directors propose, subject to the concurrence of the deferred shareholders, to convert deferred shares into ordinary shares.

MITSUI BANK LTD.

There was a handsome rise of 3,510 million yen (Y) to Y25,930 million in the gross operating income of the Mitsui Bank Ltd. (Chairman: Mr. Kiichiro Satoh, Tokyo) during the half-year ended 30th September 1961 as compared with the previous half-year. More than one-third of the increase in earnings was accounted for by interest and discount which together show a rise of Y1,278 million to Y16,576 million, thanks to the larger volume of loans. The rise would have been more marked but for the slightly lower loan rate. The income from securities investment also went up by Y446 million to Y2,980 million, due to larger holdings and dividend receipts from corporations. Other income, including commissions on foreign exchange transactions, too, improved by Y1,786 million to Y6,374 million. Quite a good bit of the increase in earnings was, of course, neutralised by higher interest payments on deposits, borrowings, etc. (+Y1,339 million), transfer to reserves (+Y1,190 million), staff expenses (+Y257 million), other operating expenses (+Y525 million), amortisation and depreciation (Y82 million), and taxes (+3 million). Even so, the profit for the half-year under review shows a rise of Y114 million to Y1,987 million. The net profit of the Bank is shown as Y1,491 million which, together with the undistributed surplus of Y496 million of the previous year, brought the total available for distribution to Y1,987 million. This amount was appropriated thus (figures are in million yen): legal reserve 150, special reserve 300, taxation reserve 570, dividend at 9 per cent per annum 405, bonus 6 and carry forward 556.

The balance-sheet total of the Bank as on 30th September 1961 stood at the impressively high level of Y763,935 million, as against Y685,938 million six months before. Of this increase of Y77,997 million, the share of borrowings from the Bank of Japan alone was Y36,153 million. The appreciable increase in borrowings thus is perhaps attributable largely to the failure of fresh accretion to the deposit portfolio (+Y9,623 million) to keep pace with the rise of Y20,648 million to Y286,814 million) in loans granted; the deposits as at the close of September 1961 aggregated Y463,362 million.

Among the several new types of deposits, the "personal check account" made by far the most satisfactory showing, hailed by customers as a timely moneykeeping device which cannot be found at the counters of other monetary institutions. Other deposit services of the Bank like the "shopping deposit account" and the "overseas travel deposit account" also made fair gains. In the place of loan operations, the Bank exercised a very restrictive policy in line with the tight money measures adopted by the Government during the term such as the two successive rises of the Bank of Japan's rediscount rates and the upgrading of the deposit reserve requirements. Efforts were not, however, spared for higher efficiency of loan operations for the eventual increase of yields.

The Bombay branch of the Mitsui Bank (Manager: Mr. K. Yoshikawa, Bombay) earned during the year 1961 a gross income of over Rs. 16.64 lakhs, as against Rs. 15.62 lakhs in the previous year. The whole of this increase was accounted for by interest and discount which rose from Rs. 12.39 lakhs to Rs. 13.86 lakhs, while commission, exchange and brokerage declined from Rs. 3.22 lakhs to Rs. 2.78 lakhs. Despite higher earnings, the profit for the year suffered a fall of Rs. 1.31 lakh to a mere Rs. 21,000. This was due mainly to the increases in the various items of expenditure; interest payments on deposits rose by Rs. 1.74 lakh to Rs. 10.69 lakhs, staff expenses by Rs. 23,000 to Rs. 3.93 lakhs, and other expenses by Rs. 30,000 to Rs. 1.54 lakh.

The interest and discount earned, as already stated, registered an improvement during 1961, despite the drop, over the year, of Rs. 60.66 lakhs to Rs. 254.65 lakhs in advances. Even for meeting this volume of advances, the Bank had to resort to borrowings from banks which went up from Rs. 92 lakhs to Rs. 224 lakhs. This was necessary because of the drop in deposits which, as on 31st December 1961, stood at Rs. 81.33 lakhs, as against Rs. 105.15 lakhs a year before. There was, however, a notable increase of Rs. 25.33 lakhs to Rs. 39.55 lakhs in cash, while investments remained unchanged at Rs. 5.01 lakhs.

A RECORD YEAR FOR I.M.F.

The International Monetary Fund has completed a financial year marked by a record volume of operations which, with the diversity of currencies involved in drawings and repayments, brings the Fund closer than ever before to the multilateral, revolving character envisioned at the time of its establishment.

Drawings of U.S. dollars through 30th April 1958 represented 91.7 per cent of all drawings from the Fund. In the financial year 1960-61, however, only 36.4 per cent of drawings were in U.S. dollars, and in 1961-62 the proportion drawn in U.S. dollars fell to 34.7 per cent, with 10 currencies drawn. Japanese yen and Swedish kronor were used for the first time in Fund exchange transactions during the past twelve months. The Fund's holdings of Italian lire and deutsche mark fell to 10 per cent and 8 per cent, respectively of the members' quotas for a time during this period.

At the end of the Fund's seventeenth financial year (1st May 1961 to 30th April 1962), total drawings since 1947 when the Fund began its operations; were equivalent to approximately $6.3 billion, and total repayments were a little more than $4 billion, while undrawn portions of stand-by arrangements exceeded $2 billion. Members' drawings on the Fund during its past financial year were equivalent to $2.2 billion and repayments to $1.2 billion, both figures being far higher than in any other financial year. Over the past twelve months, the Fund has provided financial assistance in the form of drawings or stand-by arrangements to 30 of its members—16 in Latin America, 4 in Europe, 3 in the Middle East, 6 in the Far East and 1 in Africa. On the last day of this period, the United Kingdom Government made a fourth substantial repayment to the Fund against its $1.5 billion drawing of last August. It was equivalent to $70 million, and was paid $35 million in deutsche mark, $20 million in Canadian dollars and $15 million in Belgian francs.

SEA ISLAND COTTON DEVELOPMENT

A REORIENTED SCHEME BEING IMPLEMENTED

APROPOS our comments on the Sea Island Cotton Development Scheme, in our issue dated 17th February, 1962 (*vide* page 288), Dr. B. L. Sethi, Secretary of the Indian Central Cotton Committee, observes, in a communication addressed to us, as follows:

"While the publicity accorded to the development of hybrid cotton is appreciated, it is regrettable that the Sea Island Cotton Development Scheme should have been construed as a failure. You have yourself, in the course of the article under reference, stated that 'the Sea Island Cotton Development Scheme has not been a success not because of any inherent defects in it, but because of faulty implementation.' You have, further, mentioned that 'delay in the appointment of adequate number of supervisory and advisory staff and lack of proper promotional effort resulted in the cotton being sown in a negligible area although adequate quantity of seed was available to cover a bigger area.' Furthermore, you added that 'thanks to lack of proper publicity and educative effort, the crop came to be regarded as a waste land crop whereas, in fact, it requires the best land and utmost care for the protection of the plants from pests and diseases.' These various statements, I am afraid, do not correctly present the facts of the case.

"In the first place, the Sea Island Cotton Development Scheme had not been initiated with much fanfare and publicity. It was the culmination of experiments on the acclimatisation of the Sea Island cotton, initiated at Pattambi and Mangalore as far back as in 1949-50. After several years of experimentation and research for the most suitable variety, three types of Sea Island cotton were found to thrive on *modan* and *kumeri* lands on the hillslopes. A review of the results of these trials with the three varieties in the succeeding years indicated that Monteserrat was better than St. Vincent, but the Andrews type proved to be the best of all. It was in 1956-57 that, with adequate manuring and plant protection, the variety 'Andrews' gave a phenomenally high yield of 1,614 lbs. of seed cotton per acre under rainfed conditions. In fibre properties also, it proved to be better than the commercial standard of the imported Egyptian variety, 'Karnak.' As in the case of all agricultural crop plants, the process of introduction and acclimatisation in a tract where cultivators were completely ignorant of the methods of growing any cotton, would necessarily be long-drawn and arduous. Though the Committee sponsored the scheme for its development in 1957-58, and vigorous efforts were made to extend its cultivation in the Kerala region and also in parts of Malnad of Mysore, no appreciable progress was made in the Kerala State as would be evident from the table on this page.

"This is due to the fact that this was a new crop raised in a locality where the cultivation of cotton was unknown and where the farmers lacked that close familiarity of measures required to be taken for obtaining optimum yields. Besides, the pattern of crop production in Kerala is unlike as in the neighbouring States and the pressure on land is so great that any new introduction will have to replace a part or whole of the existing crops, which in comparison might prove to be unremunerative to the cultivators. Being a delicate crop and requiring constant attention and vigilance both in regard to the application of fertilisers as well as the adoption of plant protection measures, the crop failures were very much due to either negligence or indifference on the part of the cultivators or adverse seasonal conditions caused by erratic rainfall or periodical drought. With a view to gaining more information on the adaptability of this delicate cotton, research was continued to study the various conditions under which it could be grown and those conducive to obtaining high remunerative yields to make the crop competitive and profitable to the cultivator.

"You will, therefore, appreciate that the introduction of a new crop in a new area is a difficult task. The Committee, however, provided under the scheme a full complement of staff with the idea of concentrating attention in certain definite compact regions which through past experience had been found to have potentialities for the development of the crop. The Committee had also provided incentives by way of seed and fertilisers on loan in kind and plant protection chemicals at 50 per cent subsidy for application to the crop. Despite all these, the process of development and extension in the Kerala State had not made much headway during the past year particularly, i.e. 1961-62, owing to sudden bursting of monsoon and its continued intensity spread over nearly two months since the beginning of June, resulting in unprecedented floods and waterlogged conditions. The cultivators who had purchased the seed could not undertake sowings as the land could not be prepared, and where it was sown, it was either washed out or the growth was so badly affected that the plants could not recover after the restoration of normal conditions. In Mysore, there has been an increase in the extension of areas as the cultivators have extensive holdings, more cattle manure and less difficult terrain, offering scope for the use of implements. Though the rainfall is moderate, it is evenly distributed during the monsoon period. Large areas of jungle-cleared lands were also available for cultivation and the problem, thus, became simpler to a certain extent, though the psychology of the farmers remained one of hesitancy towards this new crop.

"Despite the various handicaps of climate, soil, inadequate attention, etc., the Sea Island Andrews cotton is marching on and the experiments conducted at Mandya during the past two years have clearly brought out that the future scope for the extension of this delicate type lies in areas with moderate rainfall, commanding irrigation facilities. At Mandya, which receives a rainfall of about 30" to 32" and where supplementary irrigation from the Viswesvaraya Canal is available, under optimum conditions of fertilisation and plant protection, the Andrews variety was found to yield about 2,000 to 2,500 lbs. per acre which is easily one of the best records for irrigated cotton in any part of India.

"The Committee during a review of the work in Kerala and Mysore at its last annual meeting held on the 28th February 1962, expressed the view that, though originally it was thought that the possibility of extension of the extra-long staple cotton existed in the high rainfall tracts, its performance during the past few years clearly showed that, in future, emphasis would have to be laid on developing this cotton in areas with moderate rainfall and possessing facilities for giving supplementary irrigation. In view of this, it suggested that it would be necessary to locate areas where such facilities existed for developing this cotton. The President added that this would open up two different aspects, namely, cultivation and extension would have to be restricted to irrigated areas and experiments would have to be taken up on a wide scale in different States where facilities for irrigation were available such as Punjab, Uttar Pradesh, Gujarat, Maharashtra, Andhra Pradesh and Madras as also in Mysore, where irrigation schemes had been developed. It was agreed that necessary seed might be supplied for undertaking these exploratory trials. The scheme was, therefore, reorganised in Kerala with a view to concentrating attention in the three regions, namely, Trichur, Nilambur of Kozhikode district and Alathur of Palghat district. It was considered that a potential area of about 50,000 acres was available in the Palghat district, which could be opened up by tractor ploughing by the State Government. In Mysore, the Committee accepted a target of development of over 10,000 acres under rain-grown as well as irrigated conditions. Besides this, the States of Maharashtra, Gujarat, Rajasthan, Uttar Pradesh, Punjab, Andhra Pradesh and Madras have been addressed for conducting exploratory trials under supplementary irrigation with a view to demarcating suitable localities for its cultivation.

"Thus, it will be seen that, while it had not progressed as expected, under certain adverse seasonal and local conditions, owing to reasons enumerated above, it has gained a larger and a wider field and has now been shown to be profitable under irrigated conditions. That the variety Andrews has been found to be inherently capable of adapting itself to various soil and climatic conditions, is a proven fact. However, high remunerative yield could only be expected if proper care was taken to apply not only the manures and fertilisers but also the necessary plant protection measures against pests and diseases from the early stages of crop growth. The scheme is, therefore, being worked out on a reorientated basis and has not been given up as a failure. It must be stated here that the introduction of any new crop under Indian conditions is not analogous to starting a new industry, where even the scheduled production cannot be expected until after a few years of normal full-scale working. A close association between the plant and the human agency has to be established before any fruitful results can be obtained in agricultural crop production. In this context, it is well to remember the effort, energy and money expended in the introduction of the American cotton into India by the East India Company in the forties of the last century and its accompanying failure when that cotton was needed most by the Lancashire textile industry. But today, after three-quarters of a century of continuous work of development, the improved American cottons constitute 25 per cent of the Indian cotton crop.

"Publicity and educative effort are not wanting under the present set-up of the Sea Island Cotton Development Scheme. In fact, the staff consisting of *maistries*, fieldmen and assistants go from door to door in the villages explaining the various operations to be undertaken, the need for adoption of plant protection measures, besides the frequent visits paid to the cultivators' fields by supervisory staff with a view to impressing upon the farmers the importance of the different measures for raising a good crop and the contribution which they would, thus, be making to the sum total of the country's prosperity by raising a successful crop."

Acreage and Production of Sea Island Cotton

CHAIRMAN, MR. H. S. CHATURVEDI'S ANNUAL SPEECH

CONCERN EXPRESSED OVER UNSATISFACTORY COAL SUPPLY SITUATION

IN the course of his speech at the Forty-second Annual General Meeting of the British India Corporation Ltd., held at Kanpur on Saturday, 28th April 1962, the Chairman, Mr. H. S. Chaturvedi, remarked that the coal situation, which had been very precarious during the past 12 months, still continued to be unsatisfactory. The Corporation's factories, he said, depended upon adequate supplies of coal to function effectively and added that it was a matter of great concern that substantial cuts had been made in the basic allocation of railway wagons for transport of coal. One could only hope, he observed, that the authorities concerned would not allow productivity to suffer through lack of co-ordination between coal suppliers and transport arrangements.

The following is the full text of Mr. Chaturvedi's speech:

"GENTLEMEN,

"I extend a cordial welcome to you on the occasion of the forty-second annual general meeting of the Corporation.

"The Directors' report, the balance-sheet, and the audited accounts for the year ended 31st December, 1961 have been circulated as usual, and with your permission, I shall take them as read.

Good Results

"I am happy to report that 1961 was a good year for the B.I.C. Group as a whole. You will see from the Corporation's profit and loss account that, after deducting all expenses, the profit before taxation amounts to Rs. 1,05,36,221 as compared with Rs. 90,93,242 for the previous year. After providing for depreciation and taxation, the surplus available is over Rs. 61 lakhs as against Rs. 53 lakhs last year.

"The overall results have enabled your Directors to recommend a dividend payment per ordinary share, of 35 nP. less tax, which represents a gross return of 7 per cent per annum on the capital invested by the ordinary shareholders. The need to improve further and to build for the future, however, is obvious, and out of the available trading surplus, about 40 lakh rupees has been ploughed back into the business, as against a corresponding figure of about 31 lakh rupees last year.

"I would like to draw your special attention to the increase in overdraft by over a crore of rupees during the year. This was partly on account of tax payments on the Corporation's income-tax assessments. The main factor, however, which necessitated higher borrowings in 1961, is reflected in our present production policy. The value of stocks to meet the requirements of work in progress has increased considerably, the stock-in-trade at 31st December 1961 being Rs. 4.42 crores, showing an increase of Rs. 1.14 crore over Rs. 3.28 crores as at 31st December of the previous year. The current year has started with a full order book for our woollen branches, and there is every indication that the high level of demand will continue.

Woollen Branches

"Production in our woollen branches has been satisfactory during the year. The market demand for our popular Lal-imli and Dhariwal products continues to be good, and the branches were able to sell their entire production.

Inadequate Raw Materials

"Import licences for raw materials were issued on the basis of 50 per cent of wool consumed during the period 1956-57. This amount is obviously quite inadequate for the current requirements. A notable development in the woollen branches, however, has been the successful introduction, after considerable experimentation, of various blends of Indian and imported wools. I am glad to report that the market demand for these products has been favourable.

"With regard to our programme for the rehabilitation and early modernisation of our plant and machinery, plans sub-divided into various phases and projects had been submitted to the Textile Commissioner, but no licences have yet been issued. We shall, however, continue to press this matter.

"The problem of obtaining adequate spare parts to maintain our old machinery in running condition still remains. In many cases we have been unable to execute urgent orders for the Defence Services, because machines have remained out of commission due to the non-availability of spare parts. This is a situation which deserves special consideration by the Government.

"Our woollen mills have been recently called upon to divert substantial quantities of weaving yarn spun out of imported wool, which is already in short supply, to small-scale weaving units in Amritsar. To do so is bound to affect seriously our pattern of production. It will also result in a number of weavers being thrown out of employment from the Lal-imli and Dhariwal Mills, which have earned their high reputation as specialised manufacturers of cloth, blankets, hosiery goods and knitting wool, and not as wholesalers of spun yarn.

Leather Branches

"The Cooper Allen and North West Tannery branches continued to face serious operating difficulties during the year. Until the plant and machinery of the shoe factory is modernised, it will remain a vexed problem to cater for modern markets in sufficient volume to produce profits. So far, unfortunately, it has not been possible to obtain the necessary import licences to take up any programme of rehabilitation.

"The raw hide position remained substantially unchanged, the quality of hides having continuously deteriorated. Prices, on the other hand, have risen due to the shortage of supplies.

"Although the turnover increased during the year, it was not possible to realise the modest profit shown in 1960.

Cotton Textile Units

"The results of the Elgin Mills Company, Ltd., and Cawnpore Textiles Ltd., for which the Corporation is now working as Secretaries and Treasurers, were very satisfactory. The sales and profits were substantially higher compared with previous years due to better trading conditions, and the sustained efforts of the management to achieve higher productivity. Bearing in mind market trends and consumer preferences, our production patterns were adjusted to ensure maximum results from the installed equipment.

"I am also glad to report that rehabilitation and modernisation programmes to replace old equipment and installation of up-to-date machines over the next five years, have been approved for both the Companies. During the past two years, a sum of Rs. 26,50,000 has already been expended on other rehabilitation programmes at the Elgin Mills, and an approximate sum of Rs. 11 lakhs at Cawnpore Textiles.

Sugar Units

"A record was created in the quantity of cane crushed and sugar produced during the season 1960-61 in all the six sugar units of the Group. While this achievement may be considered satisfactory, it has been largely offset by losses suffered in respect of exports, increased wages imposed by the sugar wage board, and high rates of interest paid on bank overdrafts necessitated by accumulations of sugar stocks. Other adverse factors were higher prices of consumable stores, and lower prices obtained for sugar as a result of price decontrol in the wake of overproduction and lower exports.

"The machinery in most of our sugar factories is old, and requires rehabilitation and replacement. This is not yet possible chiefly for reasons of financial stringency and restrictions on large-scale expansion.

"Another factor, which is causing considerable concern, is the deterioration of cane quality in east U.P. and north Bihar, where our Group factories has recorded a steep decline in recovery. The matter is receiving the attention of the Government authorities concerned, and it would appear that the only way to compensate factories for lower recovery is to link the price of the sugarcane with the recovery.

Labour Welfare

"This year again, I am glad to report that our relations with labour continued to be quite satisfactory. The Board has recommended special payment of three annas in the rupee to all workers, on their basic earnings in 1961.

The Coal Position

"The coal situation, which has been very precarious during the past twelve months, still continues to be unsatisfactory. The Corporation's factories depend upon adequate supplies of coal to function effectively, and it is a matter of great concern that substantial cuts have been made in the basic allocations of railway wagons for the transportation of coal. Production in the Lal-imli Mills was stopped in January 1962, when the factory had to close down for six days due to shortage of coal. We can only hope that

TEXTILE ACTION GROUP PLANS DEMONSTRATION

IMPORTS OF CLOTH RESENTED

From Our Special Correspondent

MANCHESTER, *24th April*

MANCHESTER LETTER

A BIG protest march through London is being organised by the Textile Action Group, the militant organisation which has pledged itself to persuade the British Government to take action to help the Lancashire cotton trade.

A spokesman for the group, which calls itself T.A.G., said it was hoped to get thousands of cotton operatives, executives and trade union leaders to take part. The organisers are trying to arrange for every cotton mill and weaving shed to send a coach party.

After the march, with slogans and banners, it is planned to hand in a protest petition at the House of Commons. Then there will be a ceremonial burning of a pile of imported cloth which the marchers will take with them.

No date has yet been fixed for the march, but it is hoped to hold it on a weekday when the House of Commons is sitting. For this reason T.A.G. officials are appealing to cotton employers to give their operatives time off to take part.

The movement also revealed that it is circulating cotton trade organisations asking them to support a demand for the abolition of the Cotton Board, and its replacement by "a more effective body, representative of the requirements of the industry."

Financial Setback

Illustrating the swing of the pendulum is the fact that conditions in the local industry during the first three months of the current year have been quite the reverse to those experienced 12 months ago. Then it was possible to comment on the financial results coming to hand in that period as reflecting the much more favourable margins being obtained by producers in the various sections of the industry. Now these margins have virtually vanished and uneconomic trading is all too frequent.

At the same time, the early days of 1961 had already cast their shadows before them and a lower level of activity was apparent. Cotton companies which had issued their annual statements, however, were able to bask in the glow of the surge of demand which had led to over-full order books in 1960 and whose repercussions are very much to blame for our current discontents.

A score of companies have issued their returns, covering, for the most part, the whole of 1961, since the beginning of the current year. The record, as was to be expected, indicates the falling away in demand which led to short-time working towards the end of last year, and the steady erosion of margins.

Profits Decline

Although profits in each of the sections have declined, compared with the previous results, average earnings are still in excess of those published in the first quarter of 1960. Within the categories, however, the experience of those firms combining the activities of spinning and weaving appear to show less variation over the years than is encountered in the more horizontally based sectors.

Average earnings covering the twenty firms have declined by about 20 per cent, the current net profit being £82,069 per company, as against £102,852 announced during the early months of 1961. The dividends distributed this year average 12.29 per cent, as against 13.40 per cent.

Taking the eight companies involved in both spinning and weaving operations, average net profit this year amounted to £144,234, with a dividend of 11.90 per cent, as against £159,760 and an average payment of 13.02 per cent. The four weaving companies turned in average profits of £36,475 and paid an average dividend of 11 per cent. This compared with profits of £53,397 and a dividend of 11¼ per cent announced by the same companies early last year.

Confirmation that the spinning branch has suffered to a larger extent than other sections from the inroads made by foreign competitors is contained in the results so far released. The eight firms involved have reported average net profits of £42,700 this year, as against £70,672 in 1961. The average dividend has fallen from 14.73 per cent to 13.32 per cent.

All the indications point to a significant lower level of profits in the months ahead when the current exceedingly dull phase of trading will be displayed in the stark reality of profit and loss accounts and balance-sheets. A recovery in activity is long awaited but even a swift reversal of current trends would probably come too late to make 1962 anything but a disappointing year on the financial side for Lancashire textile firms.

Exports Contract in 1961

Although cotton yarn output in the major producing industries of the world topped its previous best last year, the flow of international trade in cotton goods decreased. Buyers in many countries took a less optimistic view of the outlook and curtailed their requirements, so that the export figures, except in one or two instances, were lower than for several years back.

As the Cotton Board has already indicated, shipments dropped by about six per cent, as compared with 1960. By the fourth quarter of last year the fall had become much steeper, being 12 per cent below the level recorded in the same period of 1960.

On the other hand, exports of man-made fibre piecegoods showed little change on balance, as compared with the two previous years. Slight reductions occurred in the quantities shipped by individual countries, but bigger sales by India and Italy covered any decreases.

The table below, extracted from the Cotton Board's quarterly review, and adjusted, in some instances, on the basis of performances in the earlier months of 1961, shows the comparative figures of shipments during the past two years from the leading exporting countries:

(In million yards)

	1961		1960	
	Cotton	Rayon, etc.	Cotton	Rayon, etc.
U.K.	286.7	48.9	327.4	54.4
U.S.	524.8	141.1 (*A*)	438.6	156.8
Japan	1,410.8	1,052.3	1,434.6	1,066.7
India	593.4	71.9 (*B*)	723.7	39.5
Holland	307.0	80.9	340.0	80.4
France	469.0	125.8 (*B*)	532.9	140.4
Germany	283.5	207.4 (*B*)	284.8	213.7
Italy	113.5	229.5 (*A*)	116.7	101.8
Belgium	266.6	117.1 (*A*)	273.8	102.9
Hong Kong ..	366.2	27.1 (*B*)	312.4	32.6
Portugal	146.0	2.5	180.2	3.0
Switzerland ..	55.4	32.8	63.0	29.1
Spain	140.2	13.1 (*B*)	166.9	22.4
Pakistan	60.1	.. (*B*)	75.6	..
Czechoslovakia ..	136.0	.. (*C*)	150.4	..

Estimated on basis of (*A*) 11 months, (*B*) 9 months, (*C*) 6 months.

Changes in the table of the "Top Ten" find Britain assuming an ever-diminishing place among the world's shippers of cotton and allied products. Long ago ousted from the premier position, Lancashire is now tailed off in tenth place, after which there is a substantial gap before the rapidly expanding Spanish and Portuguese mills enter the table. Perhaps the most notable feature is that, when cotton and man-made fibre goods are combined, the United Kingdom's exports have been overtaken by each one of her prospective partners in the European Economic Community, excluding the tiny State of Luxembourg.

When cotton goods alone are considered, Britain has again slipped back a place, now being seventh in the table, having given way to Hong Kong. In this sector, the shipments from that Colony have been made considerable strides, now being fifth in the world, after Japan, India, the United States and France.

THE BANK OF RAJASTHAN LIMITED

Registered Office:—**Udaipur** *Central Office*:—**Jaipur**

The Directors' Report for the year ended 31st December 1961 submitted at the Nineteenth Annual General Meeting held at the Registered Office of the Company at Clock Tower, Udaipur, on 25th April 1962

The Directors have pleasure in submitting the Nineteenth Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1961, together with the Auditors' Report.

Branches and Services :—During the year under report one new office of the bank was opened at Bikaner raising the total number of branches to 37, of which 34 are in Rajasthan. After 31st December, 1961, and upto the date of this report we have already opened two new branches at Nasirabad and Indergarh and propose to open a few more during the current year. The bank has training classes for the benefit of the junior officers, supervisors and clerical staff.

Government Treasury work at six more branches has ceased to be transacted by the bank. However, the Water Works Department of the Government of Rajasthan and the Rajasthan State Electricity Board have entrusted the water and electricity bills collection work at more places during the year and we are now collecting water bills at thirteen places and electric bills at four places in Rajasthan.

Capital and Reserves :—During the year under report a sum of Rs. 250 being the amount unpaid on ten shares (which were previously forfeited) having been received, the paid-up capital of the bank has increased to Rs. 9,24,100. The directors are glad to report that after the transfer of Rs. 1,23,336.00 nP., this year, the reserves of the bank have now reached parity with the paid-up capital. The ratio of capital and reserves to deposits of the bank which was more than 9.31 per cent in 1952 went down to 2.96 per cent in 1961. The directors have, therefore, decided to make calls on the shareholders for the unpaid amount of the shares.

Working Funds :—The working funds of the bank have increased to Rs. 6,66,80,235. They are more by Rs. 94,16,402 as compared with the figure of last year.

Deposits :—Inspite of the transfer of treasury work, the deposits of the bank have maintained a steady growth and now stand at Rs. 6,23,94,392. The rise has been 16.35 per cent as compared with 5.2 per cent of the Scheduled Banks in India. This reflects the increasing confidence of the public in the bank.

Liquidity :—The ratio of our liquid assets (cash, balance with banks, money at call and short notice and investments) to total liabilities is 62.35 per cent as against the Indian scheduled banks ratio of 41.45 per cent. The bank has thus ample liquid resources to meet its liabilities.

Investments :—Out of the total investments of Rs. 2,15,32,328 (excluding Rs. 96,764 in gold), 97.72 per cent is in Government and Trustee securities and 85.45 per cent of the securities mature within ten years.

Advances :—The total advances of the bank stand at Rs. 2,59,90,919, which are 41.97 per cent of our deposits as compared with 49.09 per cent of the last year. Our secured advances are 92.69 per cent of the total advances. The bank continues to follow the traditional sound policy in making advances.

Profit and its Appropriations :—The net profit of the bank for the year under review is Rs. 3,50,301.62 nP as against Rs. 3,36,202.91 nP, a year ago. After adding a sum of Rs. 3,274.02 nP. brought forward from th previous year a sum of Rs. 3,53,575.64 nP. is available for appropriation.

After making the following appropriations :

	Rs. nP
To Reserve Fund under Section 17 of Banking Companies Act	71,000.0
To General Reserve Fund	52,336.0
To Provision for Income-tax and Super-tax	87,000.0
To Bonus to staff	49,345.0
	2,59,681.0
The Directors now recommend to declare a dividend at 10 per cent per annum subject to tax	92,410.0
Leaving a balance of (to be carried forward)	1,484.6
Total .. Rs.	3,53,575.6

Directors :—During the year under report Shri Ganga Sahaiji Purohit vacated the office due to retiremen from Government service. The Directors place on record their appreciation of the valuable services rendere by him during the tenure of his office as Director. In his place, the Government of Rajasthan have nominate Shri Mohan Mukerji, Finance Secretary, as a Director on the Board.

Election of the Directors :—In accordance with Article No. 119 of the Articles of Association of the bank two Directors viz. Sarvashri Rajadhiraj Harisinghji of Achrol and Seth Damodarlalji Mansinghka retire from the Board of Directors by rotation, but being eligible offer themselves for re-election.

Appointment of the Auditors :—The shareholders are requested to appoint Auditors for the ensuing yea and to fix their remuneration.

The Board of Directors are thankful to the Shareholders, the Government of Rajasthan and the client of the Bank for their continued patronage. They also express their appreciation of the loyal services rendere by the staff of the bank.

By order of the Board,
HARI SINGH,
Chairman.

JAIPUR, 22*nd March*, 1962.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Bank of Rajasthan Limited as at 31st December, 1961, and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 13 branches audited by us and 24 branches audited by other Chartered Accountants. In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the proviso to sub-section (1) and (2) of section 211 and sub-section (5) of section 211 and Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn in accordance with the sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with forms A and B of the Third Schedule to the Banking Companies Act, 1949. We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;

(d) The Bank's Sheet and Profit and Loss Account dealt with by this report are in agreement with books of account and the returns;

(e) The reports on the accounts of the branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;

(f) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts together with notes thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1961, and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

BUCKINGHAM AND CARNATIC COMPANY LTD.

CHAIRMAN, MR. E. F. G. HUNTER'S SPEECH AT ANNUAL MEETING

REVISION OF TEXTILE PRICES IMPERATIVE

A WARNING that the pressure of rising costs in the cotton mill industry would inevitably affect its profit-making capacity, unless a revision of the prices fixed voluntarily by the industry as a whole could be agreed upon, was given by Mr. E. F. G. Hunter, Chairman of the Buckingham and Carnatic Company Limited, when he addressed the Company's shareholders at their Forty-first Annual General Meeting held at Madras on Friday, 27th April 1962. Mr. Hunter hoped that the Tariff Commission would provide a satisfactory solution to the price question. He referred to the adverse effect of the restriction on production through control over looms and spindles installed. This, he said, was good neither for the consumer nor for the industry and provides an unsatisfactory background for promoting sales in overseas markets where profits, due to intense competition, were negligible or non-existent. Alluding to the re-equipment, modernsation and rehabilitation programme of the Company, he pointed out that the implementation of the programme involved further heavy capital expenditure and this would be met from the Company's own resources.

The following is the full text of Mr. Hunter's speech:

"GENTLEMEN,

"It is my pleasure to welcome you to the forty-first annual general meeting of the Buckingham and Carnatic Company, Ltd. You will have had an opportunity to study the Directors' report and the accounts for the year ended 31st December 1961 and, with your permission, I propose to take them as read.

"Trading conditions in India during 1961 were generally good, but the improved results recorded in the accounts now before you are largely due to the maintenance of production at a satisfactory level throughout the year. In the Directors' report, your attention has been drawn to the record sales figure achieved for the fourth year in succession. This fresh record is a credit to your Company's sales organisation and, whilst I am hopeful that sales will continue to grow, other factors, particularly rising costs to which I will refer later, may make it difficult to maintain profits at the 1961 level.

"For the first time since 1953, your Directors have recommended an increase in the dividend on the Company's ordinary shares. The final dividend proposed will bring the total for the year to 18 per cent gross, equivalent to 12.6 per cent net, which compares with the dividend of 10 per cent net declared for each of the eight preceding years. Your Directors feel fully justified in recommending the higher dividend which represents a modest 5 per cent return on the ordinary capital and reserves. Whilst it is, of course, essential in the interests of all concerned that a substantial share of the profits be retained to finance the heavy costs of modernisation, it is but equitable that shareholders should participate in the higher profits particularly as labour by way of wages, dearness allowance, bonus and other benefits, and Government by taxation have annually secured an increasing share of the Company's revenues.

Exports

"Your Company is at all times engaged in a drive to increase exports and 1961 was no exception. This is evidenced by the increase in your Company's export sales by 2½ per cent to approximately Rs. 2.02 crores, which increase was once more against the trend of India's sales of textiles in overseas markets which last year fell by nearly 19 per cent.

"Many more countries have entered the field of cotton textile manufacture and this has resulted in keener competition for the narrowing fields open to exporters. India is at a disadvantage compared with many other producers due to the latter's superior equipment and higher productivity of labour. Quality has now become the key to success in overseas markets, but this alone is not sufficient and it is essential that quality is backed by higher productivity to ensure a low cost product.

"Much has been said and written lately about incentives to export, and there is little I can add except to say that, from your Company's point of view, it is most important that these schemes continue, thereby enabling your Company to obtain modern equipment from overseas, as well as cotton, dyestuffs and chemicals.

Import of Dyestuffs

"The indigenous dyestuff industry now provides your Company with a much larger proportion of its requirements and this trend will continue, but, in my opinion, unless imported dyestuffs are always available in reasonable quantities, the indigenous industry will suffer from lack of competition. Already most indigenous dyestuffs are more expensive than those imported, in spite of a heavy import duty, and, if this duty is increased, as is rumoured, it will be still more difficult for Indian finished cloth to compete overseas. In fact, now that India has increasingly to export finished goods, there is a case for a reduction in the import duty on dyestuffs and chemicals.

"The restriction of production effected by the control of looms and spindles installed, to which I referred in my speech last year, has created a condition of shortage in the textile market in India. This is neither good for the consumer nor the industry and provides an unsatisfactory background for promoting sales in overseas markets where profits, due to intense competition, are negligible or non-existent. The agitation for special incentives to export would lose much of its force, if the industry could be carried on in a climate where the conduct of business was less subject to constant and disturbing alterations of policy, the most recent of which has affected the supply of cotton.

Raw Cotton

"The 1960-61 Indian cotton crop was good and plentiful. Although the quota system introduced during the previous year was continued, mills had no difficulty in securing their normal requirements of cotton. Unlike the cotton season ended August 1960 when the carry-over was dangerously low, at the end of August 1961, the carry-over of Indian cotton was around 18.5 lakh bales, i.e. roughly 87 per cent more than the carry-over of the previous year, and the textile industry had every reason to begin the 1961-62 season with confidence in so far as raw cotton was concerned, with the new crop estimated at around 50 lakh bales. However, during the last four months of 1961, growing conditions deteriorated rapidly and it became clear that once again mills would be faced with a cotton crisis. The 1961-62 crop is currently estimated at 43 lakh bales, which is far below the annual requirements of the textile industry in India, and the Textile Commissioner introduced varietywise rationing with retrospective effect from 1st September 1961. Apart from the fact that there is a serious shortage of most varieties of cotton, prices are now inordinately high and, unless Government takes early action to import suitable short-staple cotton with which to augment indigenous supplies, the industry will later in the year be faced with an acute shortage of its primary raw material. All these factors cannot but have an adverse effect on the textile trade, particularly on exports.

"With a steadily rising mill consumption, intensive efforts must be made not only to increase acreage under cotton but also to increase the yield of cotton per acre in this country, which unfortunately is the lowest in the world. I understand that the Indian Central Cotton Committee has made certain recommendations to Government in this respect and it is to be hoped that effective and prompt action will be taken. Unless this is done and a realistic approach to the problem is made, the country will have to grapple with cotton crises for years to come.

"The increase by almost exactly Rs. 50 lakhs in the Company's overdraft loan from the Bank is mainly due to the increase in stock-in-trade, mostly raw materials, and to the reduction in creditors. Capital expenditure during the year amounted to nearly Rs. 56 lakhs and this was financed by the allocations to depreciation and reserves. The re-equipment, modernisation and rehabilitation of the mills is a continuous process and an essential one if the Company is to maintain its trading position. The programme for the next three years, in pursuance of this policy, will involve further heavy capital expenditure and this, it is intended, will also be met from the Company's own resources.

"As is noted in the Directors' report, by the allocation of Rs. 6,50,281 to the debenture redemption fund, there has now been provided for the redemption of the debenture-stock loan a total of Rs. 50 lakhs being 50 per cent of the original loan which still has half of its term to run to the latest redemption date, namely, 1972.

"I referred earlier to the record sales, but, if you will turn to the other side of the profit and loss account, you will find that costs under almost every head of account are higher than for the previous year, many of the items of cost being unfortunately also record figures, despite every effort by the management to economise and trim expenditure wherever possible. You will observe also from the profit and loss account that charges in respect of management have undergone a change in consequence of the relinquishment of the Managing Agency from the 1st January 1961, and charges in respect of 'Managing Directors' remuneration' and 'Directors' commission' appear for the first time.

Cost Increases

"During 1962, there will certainly be further rises in costs, as, apart from the general upward trend, which in January of this year was reflected in the highest monthly labour dearness allowance figure to date of Rs. 77.66 per head, the Company will be obliged to meet certain specific increases. The first of these is in respect of the increase of Rs. 2 per month in the wages of all workpeople from the 1st January 1962 in accordance with the terms of the Textile Wage Board recommendations made in 1960 and this alone will cost over Rs. 3 lakhs per annum. Secondly, the Company's contribution to the Employees' State Insurance Scheme has been doubled from the 1st April 1962 and this means a further increase of over Rs. 3 lakhs in a full year. Thirdly, in order to finance the Export Incentive Scheme, Government has imposed a special levy on all Indian cotton consumed from the 1st January 1962, and it is estimated that this additional levy will also involve an increase in cost of over Rs. 3 lakhs per annum. Thus these three specific increases alone will cost your Company more than Rs. 10 lakhs a year and, unless labour makes some extra effort in return for the further increase in wages, no compensating benefit will accrue to the Company. It is hoped shortly to initiate with the leaders of the recognised unions, the question of greater productivity.

Voluntary Price Control

"Towards the end of 1960, the industry, at the behest of Government, entered into a voluntary price control agreement under which prices were fixed on the basis of those at which individual mills were selling their cloth in August 1959. No provision was made in the agreement for the adjustment of prices to meet an increase in costs. It is obvious, therefore, that the pressure of rising costs will narrow margins and inevitably affect the industry's profit-making capacity, unless a revision of the prices fixed can be agreed upon. The immediately future prospects of the industry should, therefore, be viewed with the foregoing in mind. It is to be hoped that the report of the Tariff Commission appointed by Government to enquire into fair prices for cotton textiles and yarn will provide a satisfactory solution to the price question.

"The Wage Board recommendations concerning rationalisation in respect of which substantial increases were awarded to labour, including the increase of Rs. 2 per month from 1st January 1962, to which I have already referred, have yet to be implemented although the principles were settled by agreement between management and labour in the previous year.

Designed to suit your special needs!

Designing and engineering are the very core of Voltas organisation and service. Voltas have six independent, self-sufficient Engineering divisions—electrical, mechanical, agricultural and construction equipment, textile and paper machinery, machine tools and air conditioning and refrigeration. Activities include the import, distribution, designing, manufacture, erection and servicing of internationally famous machinery and equipment. Manning the various divisions is a powerful force of trained and experienced personnel—expert engineers. designers, technicians, mechanics, servicemen—mobilised to answer your particular needs in the best tradition of Voltas service.

Briefly, Voltas' activities comprise:

Marketing and Distribution of goods:
Representing leading manufacturers, both foreign and Indian, Voltas supply a wide range of goods—Electrical, and Mechanical, Air conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.

Manufacture and Development:
Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!

Service:
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation

When expert engineering is required VOLTAS IS THERE

HIGH-POWER COMMITTEE FOR U.P. SUGAR

WHERE IS THE NEED FOR IT?

BOTH the sugar millowners and the cane growers in Uttar Pradesh must have felt gratified at the move of the State Government to constitute a high-power committee for inquiring ino the conditions obtaining in sugar economy and suggesting measures for improvement. Disclosing this move, the State's Chief Minister, Mr. C. B. Gupta, said, while inaugurating the seventy-fourth annual meeting of the Upper India Chamber of Commerce held at Lucknow recently, that the proposed committee would be asked to formulate suitable recommendations to the Government, "so that a concerted effort may be made to impose sugarcane cultivation in the State and make sugar industry competitive." The Committee could consider, he added, the suggestion made by Mr. K. N. Wilcox, the retiring President of the Chamber, for utilising a part of the cane cess and purchase tax collected by the State Government specifically to develop cane cultivation, instead of being absorbed wholly, as is at present, in general revenues. Mr. Wilcox, it may be noted, had also suggested that, in order to encourage growers to produce better quality cane, the price of cane should be linked to its sucrose content.

The aforesaid move of the U.P. Government has apparently been prompted by the anxiety not only to check the pace of deterioration in the State's sugar economy but also to put the industry (the white sugar manufacturing sector) on a solid and secure footing. But the question is: Where is the need for a high-power committee when the problems confronting the industry are pretty clear and the solutions to them are well known? Who, for instance, does not know that the cost of sugar production is rigidly high, due to the heavy incidence of cane cost, wages, transport charges and taxation, all of which are outside the influence of mills? And who, again, is not aware of the poor productivity of sugarcane lands in U.P. in terms of both yield per acre and sucrose-content, defective location of many sugar mills—they are situated at places far away from the cane-growing areas—and dilapidated condition of machinery and equipment in several units?

It is not that the authorities, State and Central, are not aware of the solutions to these problems, but only they lack the political courage to implement them. This is especially so in the State of Uttar Pradesh, where the sugarcane growers are highly vocal and continue to enjoy enormous political influence. The high level of prices statutorily assured to cane growers provides, as the U.P. Chief Minister himself frankly admitted, no incentive to the grower to improve the quality and sucrose-content of cane. Only two weeks ago, we reiterated in these columns that, since the agriculturist is assured of a high minimum price for every maund of cane supplied to sugar mills irrespective of the sugar contained in it, he is concerned only with growing as much cane as possible and does not bother either to assess whether a particular area is really suitable for cane growing or to put in any efforts to improve the quality of cane. Mr. Gupta did well, therefore, to plead for the enforcement of the scheme for linking cane price to both quantity and quality. The adoption of such a scheme will not affect the income of growers at all. On the contrary, it will result in higher earnings for them, inasmuch as the total realisation from a larger yield of good quality cane will be much higher than has been the case all these years.

To revert to the proposed high-power committee. If this committee is really to prove worthy of the task entrusted to it, it is necessary that it should consist not of persons who represent the vested interests in the U.P. sugar industry but largely of persons who are not connected with the industry and who have an intimate knowledge of the sugar industry in India as well as abroad. This is an aspect which must be borne in mind while the Government finalises the personnel of the committee. Another important point is that the committee must be asked to complete its work within as short a time as possible. The Government, too, must act promptly on the committee's recommendations.

While one has to await the findings of the proposed committee and the U.P. Government's decisions thereon, something urgent will have to be done straightway to help the sugar industry in its present precarious condition due to serious financial crisis caused by unprecedented burden of stocks resulting from stagnant consumption, increasing production and difficulties in export. Every 100,000 tons of sugar lying in the godowns of the mills involve the locking up of funds amounting to over Rs. 6 crores, not to speak of the problem of storage.

The problem of huge sugar surplus can be tackled only by taking effective measures designed to stimulate domestic consumption. One of such measures pertains to the reduction in the prevailing high prices through a downward revision of the excise duty. This was what Mr. S. K. Patil, Union Food and Agriculture Minister, advocated long back. But it is regrettable that the Finance Minister, Mr. Morarji Desai, has simply brushed aside this suggestion. Indeed, Mr. Desai is reported to have categorically stated (after our last issue had gone to press) that there was no possibility of excise duty on sugar being reduced. This attitude, to say the least, is deplorable. When in 1957 the excise duty was raised by Rs. 4.12 per maund for the specific purpose of reducing internal consumption with a view to making available larger supplies for export, one fails to understand why the Finance Minister is hesitating to lower the duty, now that the need for stimulating domestic consumption is most urgent.

AUDITORS' REPORT

We have audited the foregoing Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at the 31st day of December, 1961, and also the foregoing Profit and Loss Account of that Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the Proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Branch so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bombay Branch of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit of the Branch for the year ended upon that date.

CONSENTS

The consent in writing of the abovementioned Bankers, Managing Brokers, Brokers, Legal Adviser and Auditors to act in their respective capacities have been obtained and delivered to the Registrar of Companies, Delhi, along with this Prospectus as required by Section 60, Companies Act, 1956, and have not been withdrawn.

MAIN OBJECTS OF THE COMPANY

The main objects of the Company, as set out in its Memorandum of Association, are to carry on the business of manufacturers of and dealers in products, articles and packagings made from paper, board, pulp of all kinds, cellulose films, polyethylene, plastic films and metal foils and films of all kinds and other flexible or treated or laminated materials, including cardboard railway and other tickets, mill board, paper and cardboard boxes, wall and ceiling papers, toilet rolls and tapes, containers, drinking straws, bags, pouches, envelopes, sheets, rolls and all kinds of flexible packagings; and manufacturing, fabricating, printing, treating, waxing and laminating all kinds of packaging materials; and business of manufacturers of and dealers in paper and board of all kinds and products made from paper and board of all kinds.

PRESENT BUSINESS

The Company at present is engaged in production of flexible packaging from printed and unprinted paper, cellulose film and boards and is registered under the Industries (Development and Regulation) Act, 1951. The Company also provides amongst numerous other things, cellulose film heatseal strip packaging for various tablets, transparent cellulose film and waxed paper for the twist-wrapping of confectionery and sweets, waxed paper packaging for bread, biscuits and other articles, paper and cellulose bags, pouches and wrappings for all types of goods including textiles, ready-made clothes, hosiery and other articles, food articles, tobacco, soaps, umbrellas, razor blades, plastic goods, toys, engineering products, machine goods, spares, electric bulbs, hurricane lanterns and innumerable other goods. The Company also manufactures drinking straws, paper bags, cartons and various other packagings for commercial and retail trades.

HISTORY AND DEVELOPMENT

This Company was incorporated at Delhi on 12th of June 1950 as a Public Limited Company. The promoters of this Company, viz. Shri Sardari Lal Talwar and Shri Roshan Lal Talwar, had in fact made a start of this business in the year 1935 at Lahore as a partnership firm under the name and style of Paper Products Company. The turnover of the said firm for the year ending March 1947 was Rs. 4,36,682-1-6. After the partition of the country, a fresh and humble start was made by the firm in a rented factory at Shahdara near Delhi. The turnover was Rs. 13,99,314-2-9 for the year when the running business was taken over by this Company in August 1952. After the takeover, this Company started making a real and rapid progress. The said firm was the pioneer in India in the field of organised flexible packaging and even now this Company is the premier flexible packaging manufacturing concern in the country, as is evident from the Company's sales figures quoted below (inclusive of Sales of Waste Paper):

Financial Year	*Sales.*
	Rs. a. p.
1952-53	14,72,320 12 6
1953-54	17,75,631 5 3
1954-55	25,26,136 15 0
1955-56	39,01,432 11 9
	Rs. nP
1956-57	49,90,140.99
1957-58	58,35,244.49
1958-59	84,62,470.96
1959-60	1,05,88,453.34
1960-61	1,18,71,553.46

Sales from 1st August 1961 to 31st March 1962 i.e. for the first eight months of the current financial year are Rs. 1,00,37,223.13 nP (subject to audit) as compared to Rs. 72,34,119.60 nP for the corresponding period last year (peak sales months, however, have been in the last quarter of the financial year). It will thus be observed that sales in the first eight months have registered an increase of 38.74 per cent over the sales for the corresponding period in the previous year. This increase compares very favourably with the percentage of increase of about 12 per cent during the year 1960-61 over the sales for the year 1959-60.

SUMMARY OF PAST FIVE YEARS' WORKING

Year ended 31st July	*Paid-up capital of the company*	*Net profit before taxation§*	*Rate of dividend*	*Amount of dividend distributed*
	Rs.	Rs.	%	Rs.
1957 ..	9,37,677.06	5,09,012.10	12†	1,12,099.42

* Increased to Rs. 16 lakhs subscribed capital from 11th January 1960 onwards.

§ Without taking into account Development Rebate and Extra Shift Depreciation Allowance.

† Free of tax.

‡ Free of Company's tax but subject to tax at source.

The Company has been able to pay dividend of 24 per cent free of Company's tax but subject to deduction of tax at source at the prescribed rates for the year 1960-61 after putting a sum of Rs. 2,80,000 in the General Reserves although its capital had increased from Rs. 9,38,500 to Rs. 16,00,000. Even during the earlier financial years the rate of dividend has been steadily going up. A sum of Rs. 8,00,000 from out of the General Reserves has been capitalised by the issue of Bonus shares allotted to the existing shareholders in the ratio of one share for every two held. The Company still holds a sum of Rs. 4,80,000 in its General Reserves apart from Rs. 2,06,925.43 nP in the Development Rebate Fund.

FOREIGN TECHNICAL COLLABORATION

The Company has entered into a technical consultation agreement with Messrs. Milprint Overseas Corporation, Milwaukee, Wisconsin, U.S.A., one of the leading producers of flexible packaging in U.S.A., having associates in almost all parts of the world. The collaborators are providing technical manuals in respect of standard operating procedures, technical news letters and other confidential data on the technical advances in the manufacture and sale of flexible packaging materials made from cellulose films, plio-film, polyethylene, saran, aluminium foils, glassine and waxed papers and combinations and laminations thereof and other types of papers and films presently known or subsequently to be developed. The Company shall be paying to the foreign collaborators three-fourths per cent of its total net turnover up to a maximum ceiling of U.S. $90,000 subject to Indian income-tax to be paid in equal quarterly instalments spread over a period of five years beginning 1st October 1960, as stipulated in the agreement. The Government of India have accorded their consent to the said payments.

RAW MATERIALS

The main raw materials required by the Company are paper, board, cellulose films, metal foils and plastic films. The actual consumption of paper during the year 1960-61, imported and indigenous qualities, was over 2,000 tons. Requirements of the Company if the present rate of growth continues are expected to rise approximately to 6,000 tons by the end of 1967.

IMPORT OF NEW EQUIPMENT

Apart from the Flexographic and other types of printing facilities at its disposal, the Company is engaged in Rotogravure printing which is considered to be the most important printing process in use for the flexible packaging industry throughout the world for fine and faithful reproductions. It has recently been given an import licence of a value of Rs. 4,25,700 for the import of a complete plant for the manufacture of rotogravure printing cylinders. The setting up of this plant as an auxiliary service will give the Company self-sufficiency in one of its important basic requirements and while ensuring efficiency and speedy service to the Company's clients, is likely to widen the scope of its activities and may provide a stepping stone to improve its present working.

OBJECTS OF THIS ISSUE

Apart from using the proceeds of this issue for the purchase of the aforesaid machinery and equipment from abroad and locally for the manufacture of printing cylinders and erecting necessary buildings for the said purpose, the objects of this issue, *inter alia*, are twofold, firstly, to provide additional working capital which is required as a result of the expanding business, increase in sales and the installation of the new equipment, and secondly to better organise the scope of the Company's activities with the participation of fresh public capital.

FUTURE PROSPECTS AND DIVIDEND

The consumption of packaging in India is comparatively speaking still low and with the successful implementation of the Five-year Plans and the resultant increase in the standards of living of the population and the vast multiplication of the industries in the country, one can expect a rapid increase in the needs for proper and modern flexible and functional packaging. The need for exporting products, suitably and attractively packed, alone, brings into the limelight the importance of modern flexible and functional packaging. It is considered necessary that in order to stand in competition in the export markets, the Indian manufacturers must pack their products properly in attractive and functional packagings. The package must provide not only protection from dust, heat and other atmospheric influences and preservation from deterioration but also a strong sales appeal and visibility. It is, therefore, believed that other things being equal, in the years to come, the demand for flexible packaging of all types is likely to increase to a great extent.

As explained above, the Company's sales had been on the increase and it may reasonably be anticipated that the rate of increase will be maintained because the demand for proper packaging from the rapidly increasing industries in the country is bound to grow. All goods purchased have to be properly packed before they leave the factory. It is therefore not unreasonable to expect bright prospects for the Company's business in the coming years.

On the basis of the past working result of the Company and considering the growth prospects mentioned above, the Directors have every reason to hope that with the additional finance now to be made available by the present issue and provided no unforeseen circumstances arise which have the effect of hampering or curtailing the Company's operations, the profits of the Company will be sufficient to enable it to pay reasonable dividends.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors is required to be provided is Rs. 16,00,000 to be utilised under the following heads:—

	Rs.
(i) Purchase price of property (machinery, equipment both imported and indigenous and buildings, etc.)	10,00,000
(ii) Expenses of the Issue	1,00,000
(iii) Repayment of money borrowed in respect of foregoing matters	—
(iv) Working capital	5,00,000
(v) Any other expenditure	—

ESTIMATED AMOUNT OF THE EXPENSES OF THE ISSUE

It is estimated that the expenses of the issue which will be paid by the Company will not exceed Rs. 1,00,000.

UNDERWRITING

The shares now intended to be issued have not been underwritten.

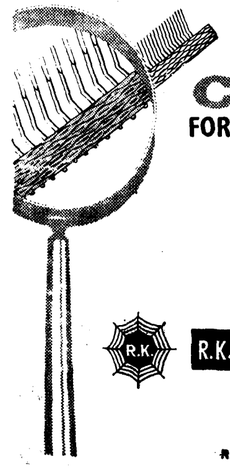
BROKERAGE

Brokerage at the rate of one per cent will be paid to recognised brokers on the nominal value of the shares allotted on applications bearing their stamp.

The Managing Brokers will receive commission at ¼ per cent of the nominal value of all shares allotted under the present issue.

INSPECTION OF CONTRACTS AND OTHER DOCUMENTS

Copies of Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company on any working day during office hours until the subscription list is closed.



Highest Quality

CARD CLOTHING

FOR COTTON & WOOLLEN TEXTILE MILLS

INDIA'S CORPORATE GIANTS IN WORLD FOCUS—II

By Dr. Raj K. Nigam, Ph.D (Econ.) (London)

IN comparison with the world's top industrial giants, the corporate giants of our country are very small indeed. Among the world's first 100 biggest industrial companies, General Motors of the U.S.A. occupies the top position, whereas Badishe Anilin, a chemical company of West Germany, stands at the 100th place. Total sales of these two companies in terms of Indian currency amounted to Rs. 6,064 crores and Rs. 295 crores, respectively, in 1960. This means that the total sales of the world's tallest industrial giant worked to nearly 70 times the size of the total sales of the Indian counterpart, namely, the Tata Iron and Steel Company whose total sales in 1960 aggregated Rs. 87 crores. It is further seen that the total sales of the world's smallest giant among the first 100 corporations were found to be nearly 3½ times those of the Tata Iron and Steel Company.

It is, however, to be noted here with some satisfaction that, while our country is out of the world list of the top 100 corporations ranked on the basis of the total turnover, the Hindustan Steel Company of our country, in terms of total assets, occupies the twenty-ninth place among the world's 100 biggest companies. The position of this company moves up to the eighth place, if the U.S. industrial giants are taken out of the list. The satisfaction derived from finding the Hindustan Steel Company ranked among the world's toppers is heightened by the fact that this company happens to be a public sector undertaking.

The two tables I and II present the world's topmost ten companies ranked according to their total sales in 1960. To facilitate a better understanding of the relative position or size of companies figures are given in terms of U.S. and Indian currencies in these tables and elsewhere in this article. In the first table, the world's industrial giants include the industrial giants from the U.S.A., whereas, in the second, ranking has been given after excluding the U.S. corporate giants, for the rest of the world. This has been done to assess the comparative position of the Indian giants among the rest of the countries of the world which in the combined list of corporations of all the world countries claim only a limited number of places. Apart from this, the sizes of the top industrial giants in the other countries of the world are considerably small as compared with that of the U.S.A.'s super-giant, namely, General Motors, whose total sales in 1960 amounted to twice the total sales of the rest of the world's leader, namely, Royal Dutch-Shell Company, jointly owned by the U.K. and Holland. Total sales of this Company in terms of Indian currency were Rs. 2,608 crores in 1960. In the global list of the 100 toppers, 70 companies belong to the U.S.A. : West Germany contributes 11 companies, Britain nine companies, Japan and France two companies each, and Switzerland, Holland, Italy and Luxemburg one company each. The balance of two companies are jointly owned by Britain and Holland. In the rest of the world's list, 30 companies belong to Britain, 22 companies to West Germany, 11 companies each to Japan and France, eight companies to Canada, four companies to Italy, three companies to Holland, two companies to Britain and Holland jointly, two companies each to Switzerland, Belgium, Sweden and Australia and one company to Luxemburg. Indian companies are completely out of the picture, but, in course of time, when the Hindustan Steel Company attains its full stature, it is very likely to join the group of the world's 100 top industrial giants.

A comparative study of the industrial giants of our country with those of the important world countries separately brings out interesting facts to light. Taking the U.S. corporate giants first, General Motors and the Weyerhaeuser occupy the first and the hundredth places in U.S. corporate heirarchy. In terms of Indian currency, their annual sales in 1960 amounted to Rs. 6,064 crores and Rs. 218 crores, respectively, which work out as 70 times and 2½ times respectively of the sales of the Indian top-ranker, namely, the Tata Iron and Steel Company. A U.S. corporation whose total sales equalled those of the Tata Iron and Steel Company occupies the 254th position in that country; this is the Norton Corporation of Worcester, Mass. Taking the total assets as the basis for ranking the giants, Standard Oil (N.J.) ranks as number one in the U.S.A., while General Motors stands second, the total assets of these companies being $10,090 million and $8,553 million, respectively. The hundreth place in terms of assets is taken by Skelly Oil Corporation whose assets in 1960 amounted to $388 million. On conversion into Indian currency, the total assets of the aforesaid three U.S. corporations work out to Rs. 4,802 crores, Rs. 4,071 crores and Rs. 185 crores, respectively. On comparison of these figures with the total assets of our country's number one company in terms of assets, namely, the Hindustan Steel Company, we find that the latter's total assets come to only one-eighth and one-seventh of those of the Standard Oil and General Motors, respectively, and the total assets of India's number two company, namely, the Tata Iron and Steel Company, come close to those of the U.S.A.'s hundredth corporation, namely, Skelly Oil Corporation. A comparative idea of the size of the U.S.A.'s ten top corporations from the point of view of sales can be had from the table given below:

Ten Top American Corporations Ranked According to Total Sales in 1960

Name of corporation	Sales in		Total assets in	
	U.S. $ million	Rs. crores	U.S. $ million	Rs. crores
General Motors	12,736	6,064	8,553	4,071
Standard Oil (N.J.)	8,035	3,827	10,090	4,803
Ford Motor	5,237	2,494	4,031	1,918
General Electric	4,197	1,999	2,551	1,214
U.S. Steel	3,698	1,761	4,781	2,275
Socony Mobil Oil	3,178	1,514	3,455	1,645
Chrysler	3,007	1,431	1,368	652
Texaco	2,980	1,418	3,647	1,737
Gulf Oil	2,721	1,295	3,643	1,828
Western Electric	2,640	1,257	1,665	793

In the U.K., excluding the two jointly owned companies with Holland, the British Petroleum Company is the biggest unit in the corporate sphere of that country; its total sales amounted to $1,811 million. The second largest unit was the Imperial Chemical Industries which recently made an abortive attempt to grow still bigger by taking within its fold Courtaulds which occupies eleventh place among the British giants; the total sales of the I.C.I. amounted to $1,564 million. In terms of the total assets, the position of the two companies is interchanged; I.C.I. with $2,312 million assets is first in the list and the British Petroleum with $2,019 as second. The relative sizes of the British Petroleum and I.C.I., in terms of sales, work out to ten and nine times, respectively that of the Tata Iron and Steel Company, whereas their total assets individually are twice as large as those of the Hindustan Steel Company. The total sales record of T.I.S.Co. is less than half the sales of the British company occupying 25th place among the toppers of that country. The top ten biggest companies of the U.K. are listed below ranked according to their total sales in 1960:

Ten Top Companies in the U.K.

Name of company	Sales in		Total assets in	
	U.S. $ million	Rs. crores	U.S. $ million	Rs. crores
British Petroleum	1,811	862	2,019	961
I.C.I.	1,564	743	2,312	1,101
British Motors	968	461	423	201
Hawker Siddley	905	431	640	305
British American Tobacco	805	383	1,154	549
Dunlop Rubber	770	367	544	259
Ford Motor	752	358	551	262
Tube Investments	707	337	540	257
Guest, Keen and Nettlefields	707	337	603	287
Associated Electrical Industries	603	287	649	309

In West Germany, Volkswagenwerk, A.G., the world's famed automobile company, Fried Krupp, the reputed iron and steel and machinery company, and Siemens, the electrical equipments manufacturing company, occupy the first three positions with their total sales in 1960 aggregating Rs. 522 crores, Rs. 467 crores and Rs. 460 crores, respectively. As compared with sales of the Tata Iron and Steel Company in our country, the total sales of the above two German companies work out to five to six times. Total assets of Siemens exceed those of the top West German company; they are estimated to be of the order of $812 million, that is, equal to Rs. 387 crores. In comparison to this, the total assets of the Hindustan Steel exceeds by 45 per cent.

In France, Cie Francaise des Petroles—a petroleum products company—and Renault—the world-wide-known automobile company—head the list of corporate giants of that country. The total sales of these two giant companies in terms of Indian currency in 1960 aggregate Rs. 318 crores and Rs. 311 crores, respectively, which come to about four times the sales of the Tata Iron and Steel Company in our country. The total sales of the French company, de Wendel, an iron and steel and machinery company, which occupies the 10th place in terms of sales, totalled more than those of T.I.S.Co., with actual figure of sales being approximately equivalent to Rs. 141 crores. The two tables III and IV set out the position of the ten top giants of West Germany and France for purposes of comparison with those of our country.

Nearer home in the East in Japan, Hitachi, the world-famed electrical equipment manufacturing Japanese company, and the Yawata Iron and Steel Company, respectively, take the first and second positions in terms of total sales in the corporate sphere of that country. Their total sales were reported to be equivalent to Rs. 373 crores and Rs. 325 crores, respectively, in 1960. In comparison with the turnover of the Tata Iron and Steel Company, the sales of the aforesaid two Japanese companies work out around four times. The Japanese company whose total sales approximated that of the T.I.S.Co. occupies the fourteenth place in the list of Japanese corporate giants. This company is the Kawasaki Steel Corporation. In terms of assets, the two electric equipment and cable and electricity companies, namely, the Furukawa Electric Company and Tokyo Electric Power Company of Tokyo occupy the first two places. The next eight places are occupied by Kansai Electric Power, Yawata Iron and Steel, Fuji Iron and Steel, Chubu Electric Power, Tohoku Electric Power, Hitachi, Kyushu Electric Power and Nippon Kokan in that order.

The following table lists the first ten corporate giants of Japan arranged on the basis of their total sales in 1960:

The First Ten Japanese Corporations Ranked According to Total Sales in 1960

Name of company	Business	Sales in		Total assets in	
		U.S. $ million	Rs. crores	U.S. $ million	Rs. crores
Hitachi	Electrical equipment	783	373	921	438
Yawata Iron and Steel	Iron and steel	683	325	879	418
Tokyo Shibura Electric	Electric equipment	612	291	799	380
Fuji Iron and Steel	Iron and steel	490	233	660	314
Japan Steel and Tube	Iron and steel	373	178	487	232
Matsushita Electric	Industrial elec. equipment	367	175	337	160
Mitsubushi Electric	Manufacturing elec. equipment	353	168	395	188
Nippon Oil	Petroleum products	336	160	284	135
Toyo Rayon	Textiles	310	148	262	125
Toyota Motor	Automobiles	285	136	165	79

Besides the foregoing comparative study of the industrial giants in the leading countries of the world and in India, some very interesting facts come to light on a comparison of the sizes of sales of the topmost corporations in certain important industrial fields in the various countries of the world and in India. The following table presents the interesting information in this regard:

Industrial Product Leaders Abroad and in India

(Total sales in crores of rupees)

Iron and Steel Industry :			
U.S. Steel	U.S.A.		1,761
Tube Investments	Britain		337
Mannesmann	West Germany		401
Schneider & Cie	France		214
Broken Hill Propriety	Australia		179
Yawata Iron and Steel	Japan		325
Tata Iron and Steel Co.	India		87
Automobiles :			
General Motors	U.S.A.		6,064
Ford Motor	Britain		358
Volkswagenwerk A.G.	West Germany		522
Renault	France		311
Fiat	Italy		415
Ford Motor	Canada		259
Volvo	Sweden		148
Toyota Motor	Japan		136
Premier Automobiles	India		21
Petroleum Products:			
Standard Oil (N.J.)	U.S.A.		3,822
Royal Dutch/Shell	Britain/Holland		2,608
British Petroleum	Britain		962
Gelsenkirchener Bergwerks A.G.	West Germany		333
Cie Francaise des Petroles	France		318
Petrofina	Belgium		228
Nippon Oil	Japan		160
Burmah-Shell Refineries	India		11
Chemicals :			
DuPont (E.I.) de Nemours	U.S.A.		1,019
Imperial Chemical Industries	Britain		744
Farbenfabriken Bayer	West Germany		374
Phone-Poulenc	France		159
Montecatini	Italy		249
Sumitomo Chemicals	Japan		55
Sindri Fertilisers and Chemicals	India		9

(Concluded)

TABLE I: **World's 10 Top Industrial Giants *including* the U.S. Corporations**

Name of corporation/company	Country of origin	Sales in		Total assets in	
		U.S. $ million	In terms of Indian Rs. crores	U.S. $ million	In terms of Indian Rs. crores
General Motors	U.S.A.	12,736	6,064	8,553	4,071
Standard Oil (N.J.)	U.S.A.	8,035	3,827	10,090	4,803

FRESH ISSUES SANCTIONED

Fresh capital issues, aggregating more than Rs. 68 crores, by five companies, including a public sector undertaking, have been sanctioned by the Controller of Capital Issues. The consent is valid for a year. The following are the details of the more important ones:

Hindustan Steel Limited, Ranchi, a Central Government undertaking, has been given consent to issue further capital of Rs. 67 crores in equity shares of Rs. 1,000 each, for cash at par. The shares will be used for financing construction, expansion and operation of the public section steel and coal washery projects. Hindustan Steel has a paid-up capital of Rs. 300 crores.

The Bank of Baroda Ltd., Bombay, is raising further capital of Rs. 1 crore divided into 100,000 ordinary shares of Rs. 100 each to be issued for cash at a premium of Rs. 15 per share, Rs. 50 paid-up. The proceeds will be utilised for strengthening the Bank's capital base. The present paid-up capital is Rs. 1.50 crore.

Godrej and Boyce Manufacturing Company (Private) Ltd., Bombay, is to issue bonus shares of the value of Rs. 36 lakhs, divided into 3,600 equity shares of Rs. 1,000 each. The Company has a subscribed capital of Rs. 58.50 lakhs, all in equity.

Industry and Trade are fast developing. More people are travelling abroad today than ever before for business.....for technical training.....for higher education. Are you, too, going places ?

We offer complete travel service

Air, Steamer, Rail and Bus tickets for all destinations at tariff rates : Hotel reservations anywhere : Personal accident and Baggage Insurance : Clearing, Forwarding and Storage of unaccompanied baggage : Meeting and Transfer service everywhere : Assistance in securing passports, Visas, Health Certificates and Travellers Cheques.

THE BAREILLY CORPORATION (BANK), LIMITED

(ESTABLISHED 1928)

Thirty-fourth Annual Report of the Board of Directors to the Shareholders.

The Directors beg to submit to the shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1961. The Auditors' report is also annexed thereto.

	Rs. nP
The Net Profit for the year including Rs. 94.77 brought forward from the previous year amounts to	1,79,790.11
The Directors recommend that the following appropriations be made out of the aforesaid profit:	
1. To General Reserve	10,000.00
2. „ Provision for Income-tax	74,000.00
3. „ Bonus to Staff	20,000.00
4. „ Deferred Shares Conversion Fund	20,000.00
5. „ Payment of dividends at	
6 per cent. per annum, subject to income-tax and surcharge at 30 per cent. on cumulative Preference 'A' Shares	6,000.00
6 per cent. per annum, free of income-tax on cumulative Preference 'B' Shares	8,571.00
10 per cent. per annum, subject to income-tax and surcharge at 30 per cent. on Ordinary Shares	37,155.00
70 per cent. per annum, subject to income-tax and surcharge at 30 per cent. on Deferred Shares	3,710.00
6. To be carried forward to next year's account	354.11
Rs.	1,79,790.11

The working and earnings of the Bank during the year continued to be satisfactory. In spite of the increased cost on establishment and deposits it has been possible to show better results. A new branch of the Bank was opened on 5th May, 1961, at Kannauj (District Farrukhabad) which is showing gradual improvement.

RESERVES

With the transfer of Rs. 10,000 from the profits of the current year the Bank's Reserves will stand at Rs. 7.04 lakhs and will be 120 per cent. of the Paid-up Capital of the Bank.

DEPOSITS

The deposits and other accounts as at 31st December, 1961, aggregated Rs. 1.40 crores as against Rs. 1.28 crores as at 31st December, 1960, showing an increase of Rs. 12 lakhs.

ADVANCES

At the end of December, 1961, the Bank's advances stood at Rs. 70.66 lakhs as against Rs. 63 lakhs as at 31st December, 1960.

INVESTMENTS

The investments of the Bank as at 31st December, 1961, aggregated Rs. 54.31 lakhs forming about 39 per cent. of total deposits as on that date.

On the suggestion made by Reserve Bank of India the Directors propose, subject to the concurrence of Deferred shareholders, to convert Deferred Shares into Ordinary Shares and with this view it has been considered necessary to set apart Rs. 20,000 for the purpose although more money will still be required to give effect to the conversion scheme.

In accordance with Article 113 of the Company's Articles of Association one of your Directors Shri D. C. Sharma retires and another director Shri N. P. Asthana has agreed to retire by rotation and both of them being eligible, offer themselves for reappointment.

The Directors are thankful to the shareholders and constituents of the Bank for their continued patronage and confidence and they also place on record their appreciation of the services rendered by the Managing Director and the staff of the Bank during the year.

The shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.

LABOUR AND SOCIAL JUSTICE

RATIONALISATION OF REGULATIONS NEEDED

THE bold and forthright remarks made by Mr. Surottam P. Hutheesing, the retiring President of the All-India Organisation of Industrial Employers, in his speech at the twenty-ninth annual meeting of the Organisation, held at New Delhi on 28th April, should stimulate fresh thinking on some of the more fundamental aspects of labour policy in the country. The official labour policies and programmes are influenced rather too much by ideological considerations and the attitude of the ruling party towards that amorphous concept "social justice and social welfare." Mr. Hutheesing certainly did well to subject this concept to a searching analysis. The employers, he categorically stated, were for broad-basing social welfare, but felt that such welfare hinged on an economic base. Elucidating this point of view, in another context, Mr. Hutheesing observed:

"The problem is essentially one of apportioning priorities between the distribution of a given level of income and better distribution of an increasing income. More developed economies bear evidence to the fact that greater production must precede better disribution of income and itself works like a mechanism operating in that direction. The industrial history of other countries proves that greater production eliminates the more acute tensions associated with inequality, and that increasing aggregate output is an alternative to distribution and even to reduction of inequality. It is then through economic progress that we can hope to make the concept of social justice meaningful, though the concept is variously interpreted. I feel that there will be broad agreement if I say that the essence of social justice is in providing employment to those who are willing and able to work and at improving progressively the earnings of the people. Both these aspects are essentially related to the problem of economic growth. Moreover, if the social aspect gets restricted to a small, organised group, the element of justice, if any, will become inevitably one-sided. Public policy must, therefore, have in mind not only the improvement of the conditions of living of the industrial worker, but also the massive labour force on the farms and the land and other sections of the community.

It was for the aforesaid reason, Mr. Hutheesing pointed out, that employers advocated measures that would really assist economic development and thereby promote the welfare of workers and the community. Speaking for employers as a whole, Mr. Hutheesing declared their firm conviction that faster economic growth could be achieved only a greater element of realism were introduced into the policies and programmes pertaining to social betterment. Drawing attention to the rapid proliferation of labour legislation and the multiplicity of labour awards, he called for the rationalisation of present acts and regulations, instead of enacting fresh laws.

"Plimsoll Line"

He emphasised the need for drawing a line between what is desirable and what is practicable, and said:

"In a rapidly changing economy, there is no doubt a need to adjust to the new values, and decidedly, to the new conditions. It stands to reason that every effort should be made to ensure that the legislation, which is intended as an adjusting factor, does not prove itself to be a cause for disturbance. I say in all responsibility that the mere intention to work in the interests of social welfare will not, in itself, yield the desired results. On the other hand, it may indirectly give rise to other conditions which, on balance, may negative the larger purpose in view. We can draw a valuable lesson from the 'Plimsoll Line,' as the line drawn on the hull of a ship is called, and which is not permitted to sink below the water lest the safety of the ship be endangered. There ought to be some sociological 'Plimsoll line'—gradually coming lower as the economy gets strengthened—so that the industry is not overloaded, at any point of time, and its future, and with it the future of those dependent on it, including workers, is not jeopardised."

Dealing with wage policy, Mr. Hutheesing said that, for one reason or another, the kind of consideration required to put Indian industries on efficient and modern lines and make planned effort more fruitful was not brought to bear on wage policy. In this connection, he made the following significant observation:

"Though the first Five-year Plan laid down that an abrupt increase in wages was detrimental to the economic stability of the country, as it would get reflected in the costs of production and, consequently, in the rise of prices of products, wages have come to be determined by industrial tribunals whose approach is neither uniform, nor realistic. There have been discussions of social principles and standards and only incidentally of the financial capacity of the industry. Even here no firm view of the capacity has been taken, nor, for that matter, of what is meant by industry. In other words, it is not clear whether wage policy should be related to the capacity of a particular unit to pay, or the capacity of all industries in the country to pay. Further, I am constrained to say that little thought is being given to correlate emoluments to productivity of labour. The increase in wages recommended either by Industrial Courts or even by the Wage Boards has been largely based without aid of work measurement or job evaluation. In the circumstances, it is not surprising that we see anomalies between earnings and work performance.

Bonus—Some Guide Lines

Unlike Mr. Naval H. Tata, President of the Employers' Federation of India, who refrained from making any suggestions to the Bonus Commission, Mr. Hutheesing had something to say about bonus. The following are his relevant comments:

"I feel, it will be wrong to have a uniform formula applicable to all industries when the conditions, as much as practices, are varied. I hope that the Bonus Commission will keep this in mind, and also the economic function of profit which is not merely to provide additional emoluments to labour. The gains of the industry are the result of a number of factors, either initiated by management or on account of some extraneous circumstances such as excess demand in relation to supply. Few can deny that, behind the modern machine, which results in increased productivity there is the work of scores of research and scientific workers and other people who come under the category of the 'illustrious obscure.' Similarly, behind the effort of the management and workers, there are facilities provided by the community in the form of improved educational and training facilities, and, above all, the condition of peace for the industrial units to function. Further, there are the basic facilities and other social services provided by the community. It is necessary that workers should be made aware of the wider setting and the relentless economic principle that there can be no appreciable increase in emoluments without a corresponding increase in productivity. Again, the emoluments in a particular undertaking or industry cannot be very far out of alignment with the prevailing standards of the country even if the profitability of an undertaking or industry so permitted."

Besides aforesaid considerations, there are, according to Mr. Hutheesing, other considerations of national importance. The chief of

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of The Bareilly Corporation (Bank), Limited, Bareilly, as at 31st December, 1961, and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of ten branches audited by us and unaudited returns from seven branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961.

We report that:

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1961 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

A SATISFACTORY YEAR BY ALL MEMBERS OF THE GROUP

SIR MICHAEL TURNER'S REVIEW

THE Ordinary Yearly General Meeting of The Hongkong and Shanghai Banking Corporation was held on 16th March 1962, at the City Hall, Victoria, Hong Kong, Sir Michael Turner, C.B.E., Chairman, presided. Addressing the shareholders on the occasion, the Chairman said:

"LADIES AND GENTLEMEN,

"It is thirty-one years since an annual general meeting of the Bank has been held in the City Hall and I am sure that those of you who remember the old City Hall will agree that the new one is a vast improvement.

"As you will see from the accounts before you, the profit for the year amounted to $43,315,459 (£2,700,000), an increase of $1,125,399 (£70,000) over the previous year. This figure includes the dividends paid by Mercantile Bank Limited and The British Bank of the Middle East and, in accordance with normal banking practice, the profit has been arrived at after making transfers to the credit of our inner reserves, out of which full provision has been made for the depreciation in the value of our investments and for all known doubtful debts and contingencies.

"It is proposed that a sum of $5,000,000 (£312,000) should be written off Bank premises. After allowing for this provision and the interim dividend of 5s. per share your Directors recommend the payment of a final dividend of 10s. per share which, on the shares outstanding at 31st December, 1961 amounts to $25,400,596 (£1,581,000) leaving a balance of $2,340,534 (£146,000) to be carried forward.

Consolidated Balance Sheet

"Turning to the Group Consolidated Balance Sheet, which shows the overall position of the Bank and all its subsidiary companies, you will note that the total now exceeds £478,000,000, an increase of £33,000,000 over 1960. A list of the main subsidiary companies is shown in the booklet in your hands. At the annual general meeting of The British Bank of the Middle East held on 13th March, it was decided to increase the issued capital to £2,500,000 by the capitalisation of £500,000 from the share premium account and the reserves and to transfer £400,000 to reserve account from that Bank's inner reserves. This raises the issued capital to a figure more appropriate to the standing of the Bank in the countries in which it operates.

"Hong Kong currency notes in circulation increased by $32,000,000 (£2,000,000) due to a rise in the excess note issue and this increase is reflected on the other side of the balance-sheet by a similar increase in Hong Kong Government certificates of indebtedness. Current, deposit and other accounts have increased by $500,000,000 (£31,250,000).

"When we turn to the assets side of the balance-sheet we find that cash in hand has increased by $24,000,000 (£1,500,000) while money at call and short notice and investments have decreased by $15,000,000 (£937,000) and $4,000,000 (£250,000) respectively. British and other Government Treasury Bills have fallen by $177,000,000 (£11,062,000) but trade bills discounted have increased by $196,000,000 (£12,250,000) and advances are $461,000,000 (£28,812,000) higher, a satisfactory indication that we are playing our part in meeting the ever growing demand for finance by commerce and industry. This has naturally affected the liquidity ratio of the Group which now stands at 33.90 per cent. You will note that the balance-sheet of Wayfoong Finance Limited appears among our accounts for the first time. This company has had a satisfactory year and the profits earned have been retained to build up reserves.

"On the whole, all members of the Group have had a satisfactory year and profits have been maintained. The dividend paid to shareholders in 1953, when I assumed office as Chief Manager, was £5 per share. Since then there have been two free scrip issues and this year's dividend of 15s. per new HK$25 share is equivalent to a dividend of £9.7.6 on the old HK$125 shares. Also to be taken into consideration is the fact that shareholders have been relieved from the reserve liability, while the market value of our shares has increased by approximately 2½ times. I think you will agree that shareholders' interests have not been neglected.

"The changes in the Board of Directors during the year are shown in the report which is in your hands. Mr. S. W. P. Perry-Aldworth, Senior London Manager, retired at the end of last year and has been succeeded by Mr. G. O. W. Stewart, formerly Deputy Chief Manager here in Hong Kong, who was also appointed Deputy Chairman of the London Committee.

"We, in partnership with S. Japhet & Co. Ltd., the well-known London merchant bankers, and National and Grindlays Bank Ltd., have formed a new company in London, Exporters' Refinance Corporation, Ltd., to provide longer term finance for exporters than can usually be obtained from commercial banks. The authorised capital of this company is £1,000,000 and arrangements have been made to obtain additional finance from the joint-stock banks in London.

New Offices

"Last year we opened eight new offices here in the Colony and started a mobile bank, based on our Tsuen Wan Office, which operates in the New Territories. We have also opened new offices at Beaufort in North Borneo and at Petaling Jaya, near Kuala Lumpur, in the Federation of Malaya, where Mercantile Bank Limited have opened new offices in Bentong and Mentakab. The British Bank of the Middle East have opened their fifth office in Kuwait, but their two branches in Syria have been nationalised. Two branches of their subsidiary, The British Bank of the Middle East (Morocco) S.A., were opened in Casablanca.

"Many of you are aware that I am leaving Hong Kong today on retirement and my wife and I are very sad at the prospect of leaving the Colony and all of our many friends, but we look forward to seeing them all again when we return for the centenary of the Bank in 1965. During my tenure of office as Chief Manager I have been most loyally and steadfastly supported by the staff, from the senior managers down to the most junior local employee, to all of whom I am most deeply indebted. I am certain that there are few concerns today in which staff relations are as good as in ours and my thanks, and those of shareholders, are due to the Branch Managers of the Group and to the staff of all nationalities for their continued loyalty and efficient service.

"I have no hesitation in commending to you my successor as Chief Manager, Mr. J. A. H. Saunders, who is well known to many of you. I have no doubt at all that he will serve the Bank well.

"Ladies and Gentlemen,

"The report and statement of accounts having been in your hands for the required period I will now formally propose their adoption as presented."

In his statement circulated to the shareholders earlier along with the accounts, the Chairman reviewed the main developments of the year and the economic conditions in the various countries where the Bank operates. Referring to India, he observed:

India

"At the end of the year there was renewed tension over the border dispute with China, which arose out of Indian complaints of further encroachments into her territory, and Chinese counter-charges that Indian troop movements in the north-east frontier area amounted to aggression against her. The border dispute continues to cause considerable indignation in India and has given opposition parties an opportunity of attacking the Government for lack of firmness in dealing with this issue. Mounting criticism of inaction and the approach of the general elections may, perhaps, have been factors influencing the Government's decision to seize the Portuguese enclaves. The Congress Party won their expected victory in the general elections held last month for State Assemblies and to the National Parliament although a number of seats were lost to opposition parties.

"The foreign exchange reserves fell to a very low level during the year and in July the Government had to draw the equivalent of U.S.$250 millions, in a number of currencies, from the International Monetary Fund to tide them over until the first instalments of foreign aid, promised by the Aid-India Consortium and the World Bank for the first two years of the third Plan, were received later in the year. Stringent import controls have been continued with the intention that the limited foreign exchange resources should only be used to ensure, in so far as possible, the most advantageous balance between maintenance imports, to make the best use of the country's industrial capacity, and imports of capital goods for development where these are not provided under foreign aid schemes. The value of exports, although higher than in the previous year, has not been increasing as rapidly as was hoped, and this is a cause for concern since the third Five-year Plan envisages as essential a greatly increased volume of exports, if the targets set therein are to be achieved. An encouraging feature during the year has been a notable increase in foreign collaboration with Indian concerns in setting up industrial enterprises.

"Looking back on the results of the second Five-year Plan, which ended last year, it is clear that although the achievements fell short of what had been expected, there was a definite advance in industrial production, an improvement in agricultural output and a rise in national income which was, however, diminished by an 11 per cent increase in population during the five-year period. There has also been a small improvement in the standard of living of the vast rural population in the form of improved services and amenities, such as educational and health facilities, and the gradual spread of such things as electric light and piped water supplies. This, it is hoped, will stimulate some enthusiasm, particularly among the younger men and women, to adopt new methods and techniques leading to a further increase in agricultural production and thus help to lift rural India out of the poverty in which it has existed for so long.

"India's population of 438 millions, as revealed in the census held last year, is expected to rise to 490 millions in the next five years and this has caused the Planning Commission to increase targets for foodgrains, industrial production and employment in the third Five-year Plan, which has been finally approved. There are, however, indications that the shortage of power and transport capacity is likely to get worse and measures to mitigate this situation are being considered by the Commission. The revised total expenditure amounts to the equivalent of £8,700 millions, but the estimated foreign exchange deficit to be covered by foreign aid remains at £1,950 millions, a sizable proportion of which has been promised to cover the first two years of the Plan.

"There seems to be considerable doubt as to whether the resources of the banking system are growing fast enough to keep pace with the expanding economy and from the figures which are available, advances are increasing at a proportionately greater rate than deposits, resulting in growing pressure on the liquidity ratios of the banks. To counter this trend the Reserve Bank is considering measures designed to raise minimum requirements in regard to both cash reserves and liquid assets and has issued a directive to the effect that the ratio of capital plus published reserves to deposits should not be less than 6 per cent. A corporation was set up on the 1st January of this year to insure bank deposits up to a maximum of Rs. 1,500 per account which will be financed by a levy paid by the banks on their total deposits. It is hoped that this measure will assist in creating greater confidence, which was shaken to some degree by the failures in 1960, and will encourage a flow of savings into the banking system."

MICHAEL W. TURNER, *Chief Manager.* — N. H. T. BENNETT, *Chief Accountant.* — H. D. M. BARTON, W. C. G. KNOWLES, J. D. CLAGUE } *Directors.*

The annexed Notes form an integral part of these Accounts.

NOTES ON THE ACCOUNTS

1. Confirmed Credits, Guarantees and Endorsements outstanding amount in the case of the Bank to HK $600,718,122 (HK $571,529,167) and in the case of the Group to HK $1,320,758,004 (HK $1,173,517,154). In addition, there are commitments in respect of outstanding Forward Exchange Contracts.

2. Foreign Currency Balances are converted into Hong Kong Dollars at the rates ruling at 31st December, 1961. The Sterling equivalents of the figures shown in the Balance Sheets are converted at the rate of HK $1=1/3d.

3. The Hong Kong Currency Notes in Circulation are secured as to the Authorised Note Issues by the deposit with the Crown Agents of Investments having a market value in the case of the Bank of HK $50,770,500 (HK $31,439,100) and in the case of the Group of HK $55,663,402 (HK $36,218,100) and as to the Excess Note Issue by the deposit of funds in respect of which the Hong Kong Government Certificates of Indebtedness are held.

4. Current, Deposit and Other Accounts include certain accounts amounting to HK $25,550,392 (HK $47,947,714) in the case of the Bank and to HK $72,386,106 (HK $89,909,780) in the case of the Group which are secured by the deposit of assets of the Bank and of the Group respectively.

5. Directors' Fees, London Committee Fees, Chief Manager's Remuneration and Special Administration Expenses of the Bank amounted to HK $1,301,952 (HK $1,105,984).

6. Contracts for outstanding Capital Expenditure amounted in the case of the Bank to HK $3,680,321 (HK $3,622,465) and in the case of the Group to HK $12,282,161 (HK $10,764,161).

7. There are contingent liabilities for uncalled capital in respect of certain of the Investments and Subsidiary Companies of the Bank amounting to HK $6,882,000 (HK $4,150,000).

8. At 31st December, 1961 the Bank held 99.69 per cent of the Issued Share Capital of The British Bank of the Middle East and for the purpose of the Group Accounts that Bank has been dealt with as a wholly owned subsidiary.

9. The Reserves and Undistributed Profits of the Subsidiary Companies applicable to the period since acquisition have been included with the Inner Reserves in the Group Accounts.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

In accordance with the Regulations of The Hongkong and Shanghai Banking Corporation we have examined the annexed Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited accounts of the London Office and with the returns received from the other Offices. We have obtained all the information and explanations we have required. So far as appears from our examination the Bank has received proper and adequate returns from its Branches and has kept proper books of account.

In our opinion the said Balance Sheet with the annexed Notes gives the information required of banking companies by the Companies Act, 1948, and on the basis therein authorised is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1961, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

We have also examined the annexed Consolidated Balance Sheet of the Bank and its Subsidiary Companies with the audited Accounts of those Companies certain of which have been audited by other firms. In our opinion the said Consolidated Balance Sheet with the annexed Notes gives the information required by the Companies Act, 1948, in the manner authorised for a banking company and on that basis gives a true and fair view of the state of affairs of the Group at 31st December, 1961.

INDIAN PAPER MAKERS ASSOCIATION

STRONG PLEA FOR IMMEDIATE INCREASE IN SELLING PRICES

CHAIRMAN, MR. P. J. EGAN'S ANNUAL STATEMENT

MR. P. J. Egan, Chairman of the Indian Paper Makers Association, made a strong plea to the Government at the Annual General Meeting of the Association, held at Calcutta on Thursday, 26th April 1962, to grant immediately a suitable *ad hoc* increase in paper prices to compensate for the increase in costs, which has taken place over the past three years. "Our industry has been and is being squeezed between rising production costs and fixed selling prices, and our profitability has correspondingly declined," Mr. Egan stated. As a result, he added, there were indications of lack of progress in the implementation of some of the schemes for the establishment of new mills by licence-holders.

The following are extracts from Mr. Egan's speech:

"The paper industry enters the second year of the third Plan with a programme of vast expansion ahead of it. Expansion brings its own problems, and I would like to deal with these as well as the more immediate ones with which the paper industry is confronted. First, there is the problem of rising production costs and fixed selling prices coupled with the need for the industry to maintain a level of prosperity, which will enable profits to be ploughed back for expansion and which will offer a sufficiently promising prospect to attract fresh capital. Secondly, there is the transport problem, which during the past year has been one of the serious impediments to the efficient working of the industry. And finally, there is the grave problem of raw material requirements.

Selling Prices

"The margin between the industry's selling prices and production costs is particularly important because on it depends to a large extent our ability to finance the expansion envisaged in the Plan. It is also specially relevant because over 80 per cent of this expansion is to be obtained from the establishment of new units—units which, whatever their size, must inevitably require a much heavier capital investment per ton of capacity than the long-established mills from which the bulk of our present output comes and which, in the case of smaller units, will not enjoy the economic advantages that accrue from large-scale production. The selling prices of paper and board which were adopted in January 1960 by the Government of India on the recommendations of the Tariff Commission are unduly low, and over the three years, which have elapsed since the Tariff Commission made their recommendations, these selling prices have been rendered steadily more uneconomic by increases in production costs which, by reason of our fixed prices, we have been unable to pass on to our customers. Our industry has been and is being squeezed between rising production costs and fixed selling prices, and our profitability has correspondingly declined. One of the consequences is that there are indications of lack of progress in the implementation of some of the schemes for the establishment of new mills by licence-holders, a very disturbing development which endorses the industry's opinion that paper manufacturing no longer enjoys the degree of profitability to attract fresh capital to the extent required for achieving the planned increase in our production capacity. The only remedy is for the Government to grant immediately a suitable *ad hoc* increase in paper prices to compensate for the increase in costs, which has taken place over the past three years.

Cost Increases

"In my speech, last year, I indicated that at the rate contract meeting, held in March, 1961, the Government had agreed to reconsider the question of prices on receipt from the industry of details of cost increases which had taken place since the Tariff Commission's investigations. Negotiations with the Government culminated with visits in February and early March of this year by joint delegations of members of this and the Indian Paper Mills Association to New Delhi for discussions with the Development Wing of the Ministry of Commerce and Industry. The details of the cost increases which were incurred since 1958 by five of the units, whose costs were investigated by the Tariff Commission, have been submitted, and the weighted average increase in the cost of production of these mills, as disclosed in these statements, works out at Rs. 150 per metric tonne for raw materials, chemicals and power and fuel alone, disregarding the increases in labour charges, repairs, establishment and other overheads. The industry's submissions are now being considered by the Government. I trust that the Government will shortly grant a suitable increase in selling prices to compensate for the cost increases which have already taken place, and, in addition, will keep intact the 5 per cent contingency allowance in the price structure to meet further increases in the future. In this context, as an indication of the necessity for preservation of the contingency allowance, I need only refer to the freight increases introduced in the Railway Budget last week and to the excise on chlorine and hessian in the Finance Bill. Besides granting an increase in selling prices, I trust the Government will also abolish the reel rebate which, since its introduction in January, 1960, has acted as a disincentive to expansion of reeling capacity, and will restore the differential for colouring charges to pre-1960 levels. Before I finish this subject, I repeat that the need for an *ad hoc* increase in paper prices is urgent, and express the hope that the Government will reach a favourable decision at a very early date.

Transport Difficulties

"Despite the best efforts of the railway authorities who, with the limited supplies of wagons at their disposal, have done everything possible to help us, the deficiencies of railway transport remain the greatest single difficulty in the day-to-day running of our mills. For the major part of the past year, almost all of our members accumulated large stocks of raw materials at the upcountry despatching stations, but were unable to have them delivered to their mills because of the lack of railway wagons, while stocks at the mills were reduced to critically low levels. Similarly, the railways were unable to provide adequate wagon supplies for our very considerable requirements of coal, and our mills in north-east India had no option but to accept large quantities of coal by road at considerable extra cost. There can be no question but that the transport shortage has impaired the paper industry's efficiency and added to its working costs.

"The Association was very active throughout the year in bringing these transport difficulties to the notice of the authorities concerned, and during the early part of 1961 we were successful in having raw materials for the paper industry upgraded in the Preferential Traffic Schedule. But this upgrading produced little practical improvement, and it was not until the latter part of the monsoon, when the normal seasonal reduction in pressure on the railways took place, that we were able to obtain increased deliveries of our raw materials and to reduce our upcountry stocks. Since then, the situation has again deteriorated and we are once more in a position, where the raw material stocks with some mills have been reduced to no more than a few days' consumption, while at the same time large accumulations are awaiting despatch from upcountry. Grave as these current difficulties are, however, perhaps the most alarming feature of the situation is its threat to the future development of the paper industry. If the railways cannot cope with supplies of raw materials and fuel at our existing level of production, then there is a danger that the lack of transport will frustrate our development plans.

"It is widely recognised that pressure on the country's bamboo and other forest resources is steadily increasing not alone by the expansion of the paper industry but also by the requirements of other industries and by new industrial uses of bamboo such as for rayon grade pulp. It is particularly important, therefore, to plan the development of our forests on healthy and scientific lines so as to maximise their productivity in the years to come. Scientific exploitation and plantation of forests can be undertaken only over a long period of years; it requires substantial capital investment, which will not be forthcoming unless the investor has a reasonable assurance that he will be able to reap the fruits of his labour and expenditure. The paper industry, in its own interests, is anxious to play its part in the proper development of the country's forest resources, but it can undertake the necessary investment on plantation and scientific exploitation only if it is assured of long-term tenure at reasonable rates of royalty. The factors to be borne in mind in the fixation of royalty rates are that paper prices are fixed, that the industry is otherwise a substantial contributor to the Government revenues through the medium of excise duties and that, unlike forests worked by contractors on an annual basis, the areas leased to the industry will be exploited in a scientific manner, resulting in better yield and correspondingly increasing royalties.

"These sentiments, which have been expressed for many years by my predecessors, are fully endorsed by the findings of an F.A.O. expert, who was assigned to India in 1959-60 to advise the Government on the development and integration of forests and forest industries, and whose report, which has recently been made available here, includes recommendations for long-term leases at economic rates. This report indicates that the present output of bamboos must more than double itself, and that this can be done by the development of new areas, by improved silvicultural methods and by the establishment of bamboo plantations. To ensure adequate supplies of bamboos for paper making, our industry is prepared to play its full part in this development work and, unless vigorous steps are taken on these lines, there will undoubtedly be a grave shortage of raw materials for the paper industry in the years to come.

New Raw Materials

"Many mills have been exploring the possibility of making use of new raw materials and the most important items of this kind, which have been introduced during the past few years, are bagasse and jute sticks. Bagasse has hitherto been used as fuel by the sugar industry, and sugar mills can make it available for paper manufacturing, if they are assured of receiving adequate coal supplies to replace it. The use of jute sticks by the paper industry constitutes an exceedingly valuable innovation. As it has hitherto been regarded largely as waste material, it is clear that, if it is developed on a substantial scale, it will constitute a very great boon to the hundreds of thousands of agriculturists engaged in the cultivation of jute.

"For those mills whose pulping capacity falls short of their paper-making capacity, the import of wood-pulp under the Development Loan Fund has been particularly helpful and, indeed, it is only by means of such imports that these units have been able to utilise their paper producing facilities to the fullest extent."

An admirable reference book in Industrial Law!

V. B. Kher's Supreme Court Digest of Labour Law Cases

Vol. II (May 1959 to December 1960) Rs. 15.00

"I welcome this little publication. It helps one to get a glimpse of the great role played by the Supreme Court of India in enunciating principles of cardinal importance in the field of labour relations."

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

SEVENTY-NINTH ANNUAL MEETING

MR. E. F. G. HUNTER PLEADS FOR ADEQUATE COTTON IMPORTS

THE cotton crisis, arising from acute shortage and exceedingly high prices, was highlighted by Mr. E. F. G. Hunter, Chairman of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., in his speech at the Seventy-ninth Annual General Meeting of shareholders held at Bangalore on Thursday, 26th April 1962. Mr. Hunter urged the Government to take immediate measures to augment imports of cotton, including a proportion of suitable short-staple cotton, to supplement indigenous supplies. In his considered opinion, unless this was done, the industry would very soon be faced with a serious shortage of primary raw material. Special mention was made of the frequent new charges and imposts, as well as higher wages, which had enhanced cost of production, and he wanted labour to make "some extra effort" in return for the further increases in wages.

The full text of Mr. Hunter's speech is given below:

"GENTLEMEN,

"I have pleasure in welcoming you to the seventy-ninth annual general meeting of the Bangalore Woollen, Cotton and Silk Mills Company Ltd. The Directors' report and the accounts for the year 1961 have been in your hands for the prescribed period and, with your permission, I propose to take them as read.

"You will have seen from the accounts that the Company had a successful trading year, sales having reached a figure of over Rs. 6 crores for the first time in the history of the Company. The higher profit resulted from the progress made to improve efficiency in the mill and also from the good conditions which prevailed for most of the year in the Indian markets.

Dividend

"The better results have made it possible for your Directors to recommend an increase in the dividend on the Company's ordinary shares. The final dividend recommended will bring the total for the year to 18 per cent gross, equivalent to 12.6 per cent net, which compares with the dividend of 10 per cent net declared for each of the eight preceding years, during which period labour by way of wages, dearness allowance, bonus, gratuity and other benefits has annually taken an increasing share from the Company's revenues.

"The closure of the Company's Hebbal Mill in June of last year saw the final conclusion of a battle which the Woollen Department of your Company has fought over a period of years against the tide of rising costs, which, together with the cess and excise duty, imposed on all but the coarser rugs in 1955, made the working of this Department uneconomic. Fortunately, by careful reorganisation and re-deployment of labour, the closure was effected without retrenchment. Negotiations for the sale of the woollen machinery and the machinery parts at satisfactory prices were concluded during the year, and formal sanction of Government to the transfer of the machinery to the buyer is awaited. It may be some time before the machinery is removed from the mill, but, meantime, consideration is being given to the future use of the Hebbal Mill premises.

"Sales of the Company's popular union fabric 'Cotswol' and the heavier cloth 'Angola' increased during the year and a substantial contract for the supply of both these fabrics to Soviet Russia was completed. Your Directors continue their efforts to improve sales in overseas markets as they are most anxious to secure the valuable incentive benefits by way of licences for the import of cotton, dyestuffs and machinery.

"Increased supplies of indigenous filature silk enabled the Company to increase the number of looms in use in its Silk Department for the manufacture of filature silk shirting and saris, and I am pleased to say that this increased activity contributed to the improved results for the year. Recent developments in the production of spun silk in Mysore State are promising and there are prospects that, during 1962, the Silk Department will once again work to full capacity.

"The supply of Indian cotton during the 1960-61 season was favourable, both in respect of quality and quantity, but controls which had been introduced during the previous cotton season were continued. Although the textile industry had every reason at the beginning of the 1961-62 cotton year to expect a satisfactory Indian cotton crop with the new crop estimated at around 50 lakh bales, during the last four months of 1961, growing conditions deteriorated rapidly and it became clear that, once again, mills were faced with a cotton crisis. The cotton crop is now estimated at around 43 lakh bales, which is far below the annual requirements of the textile industry in India, and this represents a reduction of approximately 21 per cent on the 1960-61 Indian cotton crop. This obliged the Textile Commissioner to introduce variety-wise rationing of cotton several months after the start of the season. Apart from the fact that prices of all varieties of Indian cotton are now exceedingly high, it is clear that, unless Government takes urgent measures to augment imports, including a proportion of suitable short-staple cotton with which to supplement indigenous supplies, the industry will very soon be faced with a serious shortage of its primary raw material. We know that negotiations are in progress with the U.S.A. and, we believe, with certain other countries.

Premium on Cotton

"The industry has not been faced with any serious shortage of long-staple cotton so far, but, with effect from January 1962, Government has increased the rate of premium payable on long-staple imported varieties in order to finance the export incentive Scheme. The increase in the rate of premium varies from Rs. 20 to Rs. 30 per bale, depending on the staple length of the cotton, and this will necessitate increased expenditure by your Company of about Rs. 2,00,000 per annum.

"Your Company has been carrying out experiments with the production of a terylene-wool suiting and this fabric will be introduced to the market shortly.

"The increase in costs recorded in the profit and loss account is, in general, no more than proportionate to the increase in production and sales despite a tendency for all costs to rise, and reflects the energy with which measures of economy have been exercised by your Company.

New Imposts

"Unfortunately your Company, in common with others in the industry, is frequently faced with new charges and imposts over which it has no control and three of such additional increases in cost will have to be met this year. First, the wages of all workpeople were increased by a further Rs. 2 per month from the 1st January 1962 in accordance with the terms of the Textile Wage Board recommendations made in 1960. Secondly, the Company's contribution to the Employees' State Insurance Scheme has been doubled from the 1st April 1962. Still further to finance the Export Incentive Scheme, Government has imposed a special levy on all Indian cotton consumed from the 1st January 1962 and it is estimated that this additional levy will involve an increase in cost of about Rs. 85,000 per annum. It is hoped that labour will make some extra effort in return for the further increase in wages, otherwise the Company will have nothing to show for these specific increases in cost.

"It will be noted that a new item of cost, namely, automatic loom cess, appears in the profit and loss account. This new impost introduced by the Budget of 1961 is levied on 30 per cent of the production of automatic looms less the value of cloth exported. Had, therefore, the Company's export sales not improved, this levy would have been much heavier. While the Company will make every endeavour to increase exports, it is unlikely that it will be able altogether to avoid the payment of this additional levy.

"You will observe from the profit and loss account that charges in respect of management have undergone a change which is in consequence of the relinquishment of the Managing Agency from the 1st January 1961.

"The Company's appeal to the Supreme Court against the imposition of octroi duty by the Corporation of Bangalore on raw materials entering the city was heard during the year and I regret to have to report was decided against the Company. As a result, a sum of over Rs. 8 lakhs, for which provision had been made, being the balance 50 per cent of the octroi duty levied since 1955 when the new duty was first introduced, was paid during the year to the Corporation of Bangalore.

Power and Water

"Industrialisation in Bangalore has made considerable progress during the last ten years and one result is that, during this period, the population has almost doubled. Unfortunately, neither the supply of electric power, nor of water to the same area, has progressed at the same rapid pace. During the year, it became necessary for the State Government to introduce staggered working days to reduce the daily electric power demand and the mills now work on Sunday of each week and have Monday as the weekly holiday. Further, the mills have been asked to reduce their demand during the evening peak load period which occurs between 6-30 and 9-30 p.m., and ways and means of meeting this request, without adversely affecting production, are being explored. No doubt as a further measure to reduce consumption, as well as a means of raising revenue, the Government of Mysore saw fit during 1961 to enhance the tax on electricity consumed. I regret to report that no improvement in the supply of water is in sight and it has been necessary to supplement the Corporation supplies by water from bore wells which your Company has sunk in recent years at considerable cost. The water thus secured is, however, initially unsuitable for production purposes, and to make it usable a water treatment plant has been installed and is now in operation.

"Coal supply difficulties were again experienced in 1961 and recourse had to be made to the purchase of sea-borne coal which costs nearly double that supplied by rail. Apart from a recurring difficulty in obtaining supplies, the use of coal has made it difficult to maintain cleanliness in the mill and the storage of coal has taken up valuable space. Your Directors, therefore, decided to convert the mill boilers from coal to oil firing and it is hoped that the conversion will be completed during 1962.

Additional Area

"In addition to the space which will be gained by the release of the coal yard, the Company has obtained from the Corporation of Bangalore a promise to sell to the Company approximately six acres of the tank bed to the south of the Company's property. The mill has for many years been severely handicapped by lack of space, and the additional area promised will prove invaluable in the Company's plans for reorganising and modernising the mill.

"I am sure you will wish to join with me in expressing thanks to all the Company's officers, staff and employees who have contributed to the satisfactory results.

"Finally, I would like to express my very grateful thanks to my colleagues on the Board for their support and co-operation throughout the year."

Note: *This document does not purport to be a report of the proceedings of the general meeting.*

INDIAN ALUMINIUM COMPANY LIMITED

MR. K. C. MAHINDRA'S LAST SPEECH AT ANNUAL MEETING

COMPANY TO REACH SELF-SUSTAINING STAGE BY 1966-67

ONCE again, Mr. K. C. Mahindra, Chairman of the Indian Aluminium Company, Limited reiterated, while addressing the shareholders of the Company at their Twenty-fourth Annual General Meeting held at Calcutta on Friday, 27th April 1962, the Directors' anxiety to see that the Company continued to play its leading role in the development of the aluminium industry in India. With this in view, proposals consistent with sound business principles, Mr. Mahindra said, were constantly in review for expanding the Company's activities further. He referred, in particular, to the plans for expansion of ingot capacity at Alupuram by 5,730 tonnes and for the establishment of a foil mill with an annual capacity of 2,500 tonnes of aluminium foil in Maharashtra State. Indeed, he declared that the Company would reach the stage of a self-sustaining economy by 1966-67 when it would have achieved sufficient strength to stand on its own and generate enough technique, enough management and enough resources to follow through further expansions. Mr. Mahindra pleaded for exemption of aluminium industry from payment of electricity duty and urged that the Government should exercise care in issuing prospecting licences or giving mining leases for bauxite. In conclusion, he stated that this was his last address to shareholders, as old age and indifferent health had compelled him to seek retirement from active work.

The following is the full text of Mr. K. C. Mahindra's speech:

"I have great pleasure in welcoming you to the twenty-fourth annual general meeting of the Company.

"The salient features of the Company's operations in 1961 are contained in the Directors' report which has already been submitted to you along with the audited accounts for the year. You will no doubt have noticed that, following the termination of the sole selling agency agreement with Venesta Foils Limited, effective 30th June 1961, sales of agency products for the year dropped to Rs. 17 million from Rs. 32 million in 1960. Production and sales of the Company's own products were, however, maintained at a satisfactory level during the year, despite extensive dislocation by the construction work on the expansion programme at each of the plants.

Profit

"The net profit for the year of Rs. 11.10 million shows an apparent decrease from Rs. 11.98 million in 1960. During the year, there were increased interest charges on borrowings, additional wage costs following new labour agreements, and exports, though small in quantum, at prices below total cost. But the major shift is due to the much larger allocation to development rebate reserve (Rs. 4.55 million, as against Rs. 263,000 in 1960).

"During 1961, your Company entered the export sales market for the first time. Sheets and circles were sold to South Vietnam in the face of severe competitive conditions. Your Company's efforts in this direction are in conformity with the declared wishes of the Government of India and we will continue to search for overseas markets. Currently, your Company is looking into the possibilities of exporting aluminium extrusion and paste to South-East Asian countries.

"In recommending a dividend of Re. 1.50 to be paid on each ordinary share, your Directors proposed that, to the extent as it may be possible, the dividend should be paid out of the Company's undistributed profits exempt from tax under Section 15C of the Indian Income-tax Act. It now gives me great pleasure to announce that the Income-tax Officer has certified that 78.1 per cent of the dividend on ordinary shares will be deemed to have come out from the undistributed profits of the Company exempt under Section 15C of the Indian Income-tax Act 1922. 78.1 per cent of the ordinary dividend will thus be exempt in the hands of the respective shareholders for payment of income-tax and super-tax. Dividends will be paid to the ordinary shareholders in accordance with the above instructions of the Income-tax Department.

Expansion Programme

"The most satisfying aspect of your Company's activities during 1961 was the progress made in respect of the expansion programme. At Hirakud, the expansion aimed at doubling the capacity of the plant to 20,000 tonnes per annum was completed five months ahead of schedule. At Alupuram, the additional extrusion press was installed on time and started operating in October 1961. The expansion of alumina-producing facilities at Muri progressed satisfactorily and a portion of the new facilities was brought into operation in December, again ahead of schedule by approximately four months. In a few weeks' time, the Company will have completed the integrated expansion programme undertaken during 1959. You will be glad to know that all the projects have been or will be completed within the capital expenditure figures originally budgeted. This is specially heartening, in view of, what appears to me, a chronic occurrence in inflationary conditions to exceed capital estimates. On behalf of all of you, may I take this opportunity of expressing our sincere appreciation of the efforts of all those within the Company who have made this remarkable achievement possible. I should mention at this stage that, a few years back, the Company commenced developing an engineering and design section, and the closeness between actuals and estimates are largely due to the meticulous preparatory exercise by our engineers. Our thanks are also due in very great measure to our technical consultants, Aluminium Laboratories Limited, under whose guidance and general supervision the expansion programme was conceived and carried out.

"I have said it before, but it merits repetition, that your Directors are anxious that your Company continues to play its leading role in the development of aluminium industry in India. With this in view, proposals consistent with sound business principles are constantly in review for further expansion of the Company's activities. In accordance with this policy, plans were submitted in 1960 to the Government for the expansion of ingot capacity at Alupuram by 5,730 tonnes and for the establishment of a foil mill in Maharashtra State with an annual capacity of 2,500 tonnes of aluminium foil. Late in 1961, we received licences under the Industries (Development and Regulation) Act from the Government of India covering these projects, although financing terms still await Government's approval. While there have been unnecessary delays, we hope we shall soon be able to start construction work which, when completed, will save the country approximately Rs. 8 million per annum in foreign exchange. Other forward-looking plans are also under study for further expansion of the Company's activities as and when market and other conditions justify.

Philosophy of Growth

"Shareholders with a historic sense will have noticed that the Company has followed over the years a consistent and continuous policy of development; the thinking of your Board and the management has no doubt been inspired by the philosophy of growth which Indian planners placed before us, but we have advisedly, and I am proud to say, deliberately planned to be a stage ahead of the targets and aims of the Planning Commission. The third Five-year Plan, which commenced last year, expressed a tentative but half-hearted hope that, by the end of the fourth Plan, that is, 1971, India would reach the stage of a self-sustaining economy. In our own sphere of industrial operations, I make bold to state that the Indian Aluminium Company would reach this stage five years ahead; I mean that expectations are that your Company would by 1966-67 achieve sufficient strength to stand on its own and generate enough technique, enough management and enough resources to follow through further expansions.

"Prof. J. K. Galbraith, the distinguished Harvard economist, and now the U.S. Ambassador to India, commenting on Indian planning in 1959, affirmed that:

"'In both capitalist and communist countries investment is in very large measure from the earnings of industrial enterprises. Something must happen in India like this. Industrial plants must take on their full job which is to be efficient producers and to accumulate surpluses which will provide for future expansion.'

"Your Company has taken on this full job.

"Recently, the National Planning Association, a non-profit research organisation in Washington, D.C., made a case study of the Indian Aluminium Company as an example of Indo-Canadian collaboration. Here is their recorded judgment:

"'... Different aspects of the Company's growth reveal an underlying unity of approach, ... fitting current actions into a telescopic view of future objectives. This view encompasses an industrially developed economy in which aluminium will play an important role. It is enterprising business policy and enlightened self-interest to be in the vanguard of this development, which demands a many-sided responsibility in investment, in technical and managerial efficiency and above all in willingness to share responsibility for the Indian community's development over and above the profit motive. Indispensable to this responsibility is a confidence in one's ability to assess and face the future. It is in this confidence in the future of the country, and in the rewards of doing progressive business there, that the basic motivation of Indian Aluminium Company's management philosophy may be discerned.'

"You will be interested to hear that, after many years of benefiting through borrowing technicians and specialists from associate companies overseas, your Company was able in 1961 to make a small beginning in lending specialist Indian staff for overseas projects. I welcome this beginning and look forward to further opportunities for your Company to assist in the development of new projects overseas through the loan of Indian specialists, as such exchanges benefit not only the overseas projects but also this Company and the men concerned through broadening of experience.

Power Supply

"As we all know, aluminium industry is a major power consuming industry. About 2.5 kw./year of electric power is consumed in the production of every tonne of metal, the power cost forming approximately 20 per cent of the total cost of production. It, therefore, becomes necessary for all producers of aluminium to ensure a long-term supply at rates which are both economical and definite. Before setting up its Hirakud smelter and again, before its further expansion, your Company held protracted negotiations with the Government of Orissa to ensure long-term supply of power at fixed rates. These negotiations resulted in our entering into firm long-term contracts with the Government which formed the basis of our expansion

"In mid-October 1961, the Government of Orissa levied a 15 per cent *ad valorem* duty on the consumption of electricity in the State. This levy of duty has considerably upset our future plans and put the Company to a serious competitive disadvantage through direct increase in the cost of metal produced at Hirakud. The Company does not claim that the imposition is *ultra vires* the rights of the State, but submits that the levy will furnish a handicap to long-term planning, beside increasing the already high prices for aluminium products in the country. It is also a matter for consideration of the authorities that development in a comparatively underdeveloped country can proceed apace only if the contractual fundaments of industrial operations are not disturbed by the Government for the period of the contract. May I, in contrast, cite the case of Ghana where Volta River Authority has been set up for construction and operation of a dam and power generating plant and firm agreements have been signed with a consortium which proposes to set up an aluminium smelter. Guarantees have been given by the Government of Ghana that, while the power contract is in existence, the Government will not impose any tax or other fiscal charge on the use of electric power by the Volta Aluminium Company, Ltd. The tenure of the contract is for 30 years, and rate for power is fixed *firm* at 2.625 U.S. mills per kilowatt-hour or Rs. 110 per kw./year (in contrast to Rs. 190 per kw./year at Hirakud—Stage II). This constitutes the linchpin of the entire project, as the power contract forms the foundation for financing the hydro dam and power plant. I have cited the Ghana example in the hope that the Government of Orissa will reconsider the matter and exempt the aluminium industry in the State from the duty.

"Another interesting feature of the Ghana project may be mentioned: Government of Ghana has agreed that, for the first 30 years, the Volta Aluminium Company's income taxes will be based on the tax laws in effect on 2nd January 1961, including receipt of benefit of Pioneering Company relief. There is also provision for exemption from customs duties of imported construction materials and exemption from minerals duties in connection with the mining or processing of Ghanian bauxite.

Bauxite

"I would like to draw the attention of the Government from this forum to another matter which is of some concern to both the present and the potential producers of aluminium in this country. It has often been said that India has plentiful supply of bauxite, the ore from which aluminium is produced. This is, perhaps, true, but it is equally true that the deposits of bauxite ore throughout India have not yet been thoroughly field-tested for quality or reserves. Aluminium producers in India naturally desire to make geological surveys of areas known to possess bauxite and your Company has applied for prospecting licences for several of such areas. One difficulty which is being experienced in this exploratory effort is that a lot of bauxite-bearing areas are under the mining lease of persons whom I would venture to call 'intermediates', that is, persons who have no direct interest in the utilisation of ore for producing aluminium. Large areas are thus closed for any prospecting or exploratory effort and sometimes there is a scramble for obtaining mining leases by private negotiations for areas which are yet unproven. Whatever has been done over the past years probably cannot be undone; but I venture to suggest that State Governments should from now on exercise care in issuing prospecting licences or giving mining leases for bauxite properties to persons or companies who are not directly engaged in the production of aluminium. This would ensure more effective utilisation of the bauxite reserves in the country and greatly contribute to the establishment of new economic production units.

"Speaking on this occasion last year, I had mentioned to you the transportation difficulties which the Company was experiencing on account of uncertainty of railway wagon availability. This difficulty continues, and representations made to the Railway Board have proved of little avail. The Company has been forced to use road transport in several instances, which has proved costly as well as unsatisfactory in other respects. But it would appear that we have no alternative until such time as the transportation situation in the country improves.

Excise Duty Regulations

"I had also spoken to you last year about the way in which excise duty regulations were being enforced resulting in serious competitive disadvantage to your Company. Our application to the Central Board of Revenue for permission to move aluminium ingot in bond from the smelters at Alupuram and Hirakud to the rolling mill at Belur has as yet produced no relief. This matter was also taken up with the Central Excise Reorganisation Committee. In the meantime, our losses on account of blockage of working capital on metal in pipeline and excise duty on melt loss are multiplying. This is an unfair burden which the rigidity of regulations has imposed on the Company.

"Several years ago, speaking from this forum, I attempted a comparison between two kinds of growth—that in population and in productivity. Since then, we in India have learnt in the bitter context of a population explosion that most of our efforts at 'national growth' have proved inadequate. We have still to comprehend the true meaning of productivity, its nature and content, for, otherwise, our development plans for growth would not so fumble and confound. Despite a plethora of productivity associations, seminars, numerous delegations abroad and published records of these trips, I remain sceptical in that the true measure and content of this co-ordinate of industrial activity is little understood. There is a personal factor which appears to be missing in such reportings—a factor of personal judicious assessment of the extent of application of a particular analysis in a selected industry. Is productivity a mere co-efficient of labour, of work done by the individual artisan? Does automation qualify the conclusions? Does the emergence of a professional managerial class, as distinct from financiers or even technocrats, have any bearing on the classical concept of productivity as output per man-hour? This is a puzzling thesis.

Productivity

"The popular measuring rod for productivity is output per man-hour. But the President of U.S. Steel Corporation—the largest steel complex in the world—has recently raised a few broad queries:

"'What about the capital invested in more efficient equipment? What about the research which produced better production processes and the know-how which made available higher quality materials? What about the input of man-management, when directed and contributed to this effort?'

"These are pertinent questions; practical difficulties emerges as one begins to frame an equitable distribution of gains in productivity over the various sectors—labour, management, machines, research, technology, capital employed, etc. Searching for an appropriate definition of Productivity, I have not come across anything better than.

"'An attempt to anticipate and solve man's major problems on earth by providing through the highest technology more and more of everything, for everybody, from less and less resources.'

"This does not, however, provide either a measure for gauging the actual quantum of increase in productivity, nor provide the base for any rational system of distribution. But no matter what economic and industrial philosophy inspires national efforts, productivity increment is essential for growth and productivity is largely the result of social attitudes of the labour force—their attitudes to technology, to professional management, to work discipline. In our country, under the stress of circumstances, over-burdened by extreme poverty, many of these attitudes have got perverted and frequently one witnesses drop in productivity with inexorable increase in wage costs. This is a spectacle which one should deplore and not applaud—as many of our labour and even political leaders do, without reason and without understanding. Whatsoever the measure of productivity one may adopt, no one will deny that it is the key as well as the handmaiden of prosperity. Witness Japan: her astounding industrial recovery is explained in large part by productivity-wages-prices relationship. Over the six years, 1955-60 productivity increased by 47 per cent, wages by 34.3 per cent and prices only by 2.8 per cent. As a recent survey in the London *Economist* indicated, 'the margin between productivity and wages makes possible a high rate of capital accumulation by companies, and thus a high rate of capital investment. In addition, personal savings are exceedingly high ... these are probably the most important determinants of economic growth in Japan.' There is a deep lesson to be learnt here.

Agriculture and Industry

"An odd feature in the Indian planning firmament has been the comparative playdown of productivity in the agricultural sector—a field which contributes to more than 53 per cent of the gross national income of the country. An understanding of the perspective relationship between agriculture and industry, of the true meaning and content of productivity, of the measures which will quickly fructify and yield tangible results—these are essential virtues which we must cultivate along with discipline of mind and of habit. The latter is most needed in the context of our present development.

"Government quite rightly has concerned itself over the last decade with a fair deal for industrial workers, but, perhaps unwillingly, has created a climate of unenforceable and irrational demands which halt and do serious damage to the productive machine. With a larger and larger portion of the cake, the industrial worker, by and large, recognises no discipline and little responsibility for growth in results.

A Commendable Counsel

"It may interest you, as it intrigued me, to know that a keen foreign observer mentioned to me the other day that perhaps what India needs is compulsory military training—to impart amongst the young a sense of discipline during the formative stages of one's character. A country need not become war-minded, if there is compulsory military training—witness Switzerland; nor need it possess arms—as was successfully done in Germany a few years after the war ended. This is a commendable counsel coming from a friend of our country.

"In the person of Mr. A. J. Zullig, the new Managing Director of the Company, you see a very wise and experienced head. It is fortunate that the Company has been able to secure the services of a man who has lived his life with aluminium and at the same time is conversant with social and industrial conditions in diverse climes and places. It is my hope that he will stay with the Company for many years and continue the tradition of sound business and forward look for which the Company has already made a name.

"To the staff and workers I give our thanks on your behalf for their loyal and steady work throughout the year.

Last Speech

"Perhaps you will allow be to conclude on a personal note. This will be the last occasion I will be addressing the shareholders at their annual general meeting. I am aware of the calendar, but indifferent health also has compelled me to seek retirement from active work. Let me say that I am deeply grateful to the shareholders for their indulgence, to the members of the Board and the staff for their confidence, and to everyone connected with this great Company for the trust and loyalty they gave me throughout my 14 years' association with them. I have relished with them the dignity of shared confidence, for I believe that faith and work alone do not always yield results: work is merely an expression of what man believes and does. To be enduring, other men must feel and believe and work the same way. These years have been personally of great satisfaction to me. I feel happy that the Company is in good shape and that I will be entrusting the charge in the next few months into younger and abler hands."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

THE FERTILISERS AND CHEMICALS, TRAVANCORE LIMITED

Registered Office:

Eloor, Udyogamandal P. O.

FOR SALE

A complete Wood Gasification unit using firewood of any quality as raw material and comprising Producer Gas Plant, Hydrogen Gas Plant, Nitrogen and Girbitol Plant, High Pressure Purification Plant and Wood Handling Conveyor system, for achieving a production of 40 tons of Ammonia per day is available in good operating condition for sale.

Detailed specifications can be had on request from the General Manager, The Fertilisers and Chemicals, Travancore Limited, Udyogamandal P. O., Kerala, on payment of a sum of Rs. 25 per copy by crossed cheque, Postal Order or Money Order.

GENERAL MANAGER.

BRITAIN AND THE COMMON MARKET

TERMS OF ENTRY EXPECTED TO BE FINALISED IN TWO MONTHS

THE negotiations between Britain and the Common Market over the former's application for membership will enter a crucial stage on Tuesday next week, when a two-day session of another Ministerial Conference is due to commence at Brussels. Now that the strictly technical phase of negotiations is over, the Conference is expected to devote its attention towards broadening the area of agreement in such a way as to finalise the general terms of Britain's entry into the Common Market by July next. Although no public announcement of agreement as such is likely, there are indications that the deliberations of the Conference will lead to an eventual agreement on the question. Forming the basis of deliberations is a progress report prepared by the Deputies who have been making detailed studies on the various aspects of the proposal for some time past. The report had already been circulated among the Ministers. At a meeting held at Brussels last week, the Deputies are reported to have worked out an acceptable formula for talks at the forthcoming Ministerial Conference on the basis of comments made by the Ministers on the report.

At last week's meeting, the Deputies of Britain and the six countries of the Common Market gave some serious thought to two vital questions, one pertaining to the establishment, after the U.K.'s entry, of Community annual reviews of farm prices and incomes, and the other concerning introduction of long-term guarantees for the level of such incomes. Far more important was the agreement reached among them on the issue of setting up a working party on tropical products. The proposed working party is expected to examine the best means of safeguarding exports of *all* tropical products from *all* Commonwealth countries, irrespective of their association or otherwise with the Common Market. For the present, however, the working group will prepare factual statements on tea, coffee, cocoa and bananas. It will compile a complete set of economic data, including trade statisics, as well as information on trends in production and consumption and on the effects on demand of changes in import duties and consumer taxes. Britain has already suggested ways for treating these commodities. It wants *no* duties for tea and cocoa under the common external tariff of the Six, a world price stabilisation agreement for coffee and a reasonable measure of tariff preference for Commonwealth bananas.

Commonwealth Preferences

The progress report as prepared by the Deputies reveals the current thinking of Britain and the Six over the problem of Commonwealth preferences. According to the report, Britain has stressed the importance of manufactured goods exports to the economies of India, Pakistan, Ceylon and Hong Kong. A working party has been examining whether arrangements can be made to ensure that this trade does not decline, if, on Britain joining the Common Market, the common external tariff is applied to it. The question of free circulation of goods in an enlarged Common Market is also under review, and the working party has not yet completed its work. Britain has asked for a *nil* tariff for tea, and this plea, too, is under consideration.

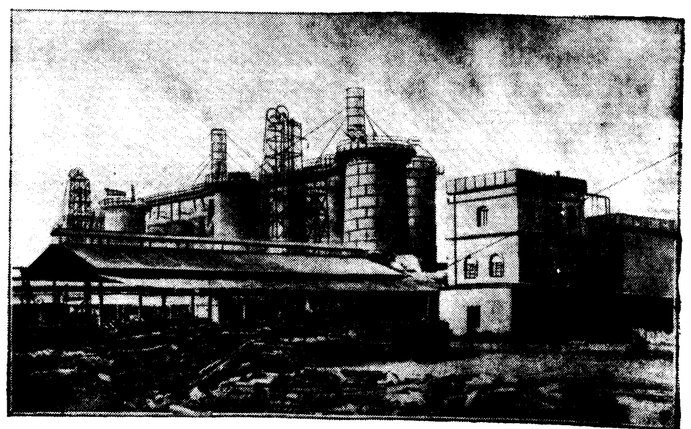
Another feature of negotiations in respect of Commonwealth preferences is that the U.K. seems to favour the establishment of an association of the "underdeveloped" countries of the Commonwealth. The form and content an association agreement should have are discussed in some detail in the report, which examines problems connected with the tropical products of the associated overseas territories of the Six and Commonwealth countries in Africa, the Caribbean, the Pacific and elsewhere. No attempt has been made to decide which countries of the Commonwealth might be associated with the enlarged Community, if it is formed. In the British view, an offer of association should be made to most of the underdeveloped countries and territories of the Commonwealth. On the question of entry into Britain of manufactured goods from Australia, Canada and New Zealand, Britain has suggested that these goods be allowed duty-free. But it has agreed to a hypothetical study of the effects of the progressive application of the common external tariff to this trade.

There is no denying the fact that Britain has expressed its readiness to accept most of the provisions of the Rome Treaty. Britain has made it clear that, with the exception of agricultural and tropical products, its accepts, the general level of the common external tariff as emerging from the Dillon round of talks, but will ask for certain items of the tariff to be reduced to *nil*. In any case, the U.K. will not urge the raising of the levels of any tariff. Britain has, however, pleaded for *nil* tariffs on 25 industrial products—such as aluminium, lead, zinc, newsprint and wood-pulp—and also on a limited number of processed and other miscellaneous foodstuffs.

The report, dealing with another important aspect, namely, agriculture, has given a succinct account of the common agricultural policy of the Six and also the problems which will confront British agriculture and Commonwealth suppliers of agricultural produce to the U.K. market, if the U.K. were to accept the common agricultural policy as it stands. For Commonwealth, the U.K., it is said, is seeking "comparable outlets."

From the foregoing account, it is evident that, so far, the negotiations have been concerned with identifying, analysing and elucidating the problems involved and, consequently, the search for solutions has scarcely begun, though it must be admitted that this process of identification and analysis has shown up several areas of agreement. There is, for instance, the agreement about the importance of the Commonwealth not only to Britain but also to the Six, to Europe and to the free world. There is also agreement about the principles on which a solution should be sought to the problems of India, Pakistan, Ceylon and Hong Kong, and implicit acceptance of the idea that association may well be found to provide the best solution for most of the rest of the underdeveloped countries of the Commonwealth. Further, there is a wide area of agreement on the problems connectd with the tariff and, by common consent, the economic union provisions of the Treaty have thrown up no problems requiring negotiation. If, however, a quick "full" agreement has not been possible, it is because of the complicated nature and the extent of the problems involved. Agreement on the principles which must govern solutions will be necessary before solutions themselves can be sought. The search for compromises cannot, therefore, begin for some time. It is, therefore, natural that the outcome of the ensuing Ministerial meeting is awaited with much interest.

THE FLUX AT KULTI



Old furnaces at Kulti

By general consensus of opinion, Josiah Marshall Heath, a superannuated civil servant of the East India Company, was the first to produce steel in India by modern methods at the Indian Iron, Steel and Chrome Company which he set up in 1830 at Porto Novo in south Arcot.

India's nascent steel industry blundered on through many heart-breaking errors and failures until 1876 when the Bengal Iron Works erected, in the jungles of Kulti, two small open-top furnaces powered by a single blowing engine and charcoal-fired boilers. Welcoming this "economic revolution in the country," *The Statesman*, in its issue dated March 8, 1876, said: "... if these new works are but successful with the flux, India will at no distant date supply herself with her own iron, in place of importing it from Europe" thus speeding "the redemption of the people from poverty".

In 1892, the managing agency of these early works at Kulti passed to Martin & Co. Progressing steadily since then and continually expanding its iron-making and foundry facilities, the Kulti Works were merged in December 1936 with The Indian Iron & Steel Co. Ltd., already in operation at Hirapur under Burn & Co.'s managing agency.

Today, The Indian Iron & Steel Co. Ltd., with fully modernised and integrated works at Burnpur and Kulti and with their own ore-mines and collieries, stand a fitting monument to the perseverance and toil of the early engineers and pioneers and as an abiding testimony of the vital role played by the Company in the development of India's foremost basic industry.

SALES AND PROFITS OF BRAITHWAITE AT RECORD LEVELS

LARGE AMOUNT PLOUGHED BACK INTO BUSINESS

THE year 1961 will undoubtedly go down in the annals of Braithwaite and Company (India) Ltd. (Chairman: Sir John Douglas Keith Brown, Calcutta) as one of record achievement as regards both sales and profits after a period of stagnation extending over four years. Thanks to an overall improvement in production, particularly in the wagon shop, due to increased availability of raw materials and components, and more than a doubling of pressed steel tank material exports, the value of contracts invoiced has risen by about 48 per cent to Rs. 504.34 lakhs, from Rs. 340.97 lakhs a year ago, whereas the gross profit is up by as much as Rs. 33.79 lakhs at Rs. 76.21 lakhs. The profit figure constitutes a record for the Company and has been achieved in the face of continuing difficulties over steel and power supplies. The major portion of the rise in profits has, of course, been absorbed by higher essential provisions, the sum actually provided for depreciation having been raised from Rs. 3.97 lakhs to Rs. 5.73 lakhs and that for taxation nearly doubled from Rs. 17.00 lakhs to Rs. 32.25 lakhs. Even so, the increase in net profit is quite substantial, being Rs. 16.78 lakhs to Rs. 38.23 lakhs. Notwithstanding the large increase in profits, the Directors, after "very careful consideration of all issues involved," have felt it advisable to plough back into business Rs. 26.87 lakhs and to recommend the same dividend as was paid in respect of the previous year, namely, Rs. 2.50 per share subject to deduction of tax, absorbing Rs. 14.15 lakhs. The balance of Rs. 5,914 is being carried forward, as against Rs. 2.84 lakhs brought in.

The progress made by the Company during the last four years is clearly brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Contracts invoiced	504.34	340.97	341.80	334.84

† Subject to deduction of tax

A perusal of the Company's balance-sheet as at 31st December 1961 reveals that its financial position is as strong as ever. The share capital, all in 566,000 equity shares of Rs. 10 each, stands at Rs. 56.60 lakhs and is supported by Rs. 104.60 lakhs in reserves and surplus. Of the total, a sum of Rs. 30.70 lakhs represents merely capital reserves formed on an upward revaluation of fixed assets as on 31st December 1955. Current liabilities aggregate Rs. 133.29 lakhs which are more than adequately covered by current assets, loans and advances and investments altogether amounting to Rs. 191.16 lakhs. With the inclusion of additions worth Rs. 32.34 lakhs during the year, the gross block is carried in the Company's books at a cost of Rs. 120.64 lakhs and has been written down to a net block of Rs. 103.33 lakhs, which also includes Rs. 4.94 lakhs as the cost of capital work in progress.

The progress made in the development of Angus Works that the Company has taken over under a 99-year lease, has so far been most pronounced in the foundry of the works, the output of which is now some 250 tons per month and this will further be raised in the current year. Castings upto four tons weight are being obtained and improved techniques are permitting of a continually higher quality and complexity of work being undertaken.

It will be recalled that, as a step towards further diversification of the product range, the Company had submitted, during 1960, an application for the manufacture of various types of cranes. A licence has now been received in respect of overhead electric travelling cranes, steam loco cranes and dockside load buffling cranes. Government approval has also been obtained for the Company's collaboration agreement with two members of the Thomas W. Ward Engineering group in the U.K. for the manufacture of their products in India.

As regards prospects, it will be interesting to reproduce what the Chairman, Sir John Brown, has stated in his annual statement circulated along with the Directors' report and accounts:

"The Company's order book is now in a most satisfactory state. Structural capacity is fully booked with work which will not be completed until 1964, while the wagon shop should be fully occupied until the middle of 1963. The level of output will, of course, as in the past, be determined, to some extent, by the availability of raw materials, but, as far as can be foreseen at present, we should be able to work the structural shops to near capacity from the month of August 1962 onwards. An important order recently entrusted to the Company is for the fabrication and erection of the steel work for the urgently required extension of the Cossipore Power Station of the Calcutta Electric Supply Corporation Limited. All raw materials for this order are being imported from British mills and much of the steel has already arrived in Calcutta. Fabrication is in hand and despatches will commence from the month of May with completion of erection on site expected by November 1962. The tempo of work in the wagons shops is being maintained at a high level, while orders for the mechanical works are being obtained to match increasing capacity. In this circumstances, it is reasonable to expect a further increase in output in 1962.

"Looking further ahead, we believe that our record of performance to date and the needs of the country's railway system will ensure the receipt of further orders to keep our wagon works fully employed at least until the end of the third Plan period. The rapid industrialisation which is now taking place in India should result in a continually expanding demand for the products of both the structural and mechanical works in the years ahead."

The Rs. 10 fully paid ordinary share of the Company is currently quoted at Rs. 60 *cum-div., cum-right*. The dividend for 1961 is Rs. 2.50 subject to deduction of taxation. On *ex-div., ex-right* basis, the yield works out to 5.3 per cent.

(*Concluded from next column*)

50 per cent over that in 1960, following the commissioning of the second MST plant.

The output of rayon yarn suffered a shortfall, in view of reduced production in the older machines which had been working since 1950. The Directors, however, hope that, with the commissioning of the new machines which are on order, production would again be stepped up.

Sales of all products were steady excepting in the case of plain cellulose film the sales of which declined slightly in the latter part of the year. There are indications that the position will show an improvement in the near future now that the Company has been able to secure, after a severe test, an export market for its cellulose film in the Far East.

As regards expansion, the Directors state that the Company has received permission to install six more spinning machines and relevant import licences are awaited. Formalities in connection with the expansion of rayon production by five tonnes per day are almost complete and orders for the necessary plant and machines will be placed as soon as licences are received from the Government. This new expansion is specially designed for the making of finer deniers of yarn and, perhaps, the Company will, once again, be the pioneers in the country in manufacturing 45 denier special yarn. The scheme, when put through, will raise the total production capacity to 13.6 tons per day.

Meanwhile, installed capacity in respect of cellulose film has been raised by about two tons per day by modifications to machines so as to increase the total capacity to 13 tons per day. The electrical carbon bisulphide plant of five tons per day capacity is scheduled to start production soon. The erection of the cotton linter pulp plant is going on as per schedule and production is expected to commence by August-September this year.

The present market quotation for the Rs. 10.00 fully paid ordinary share is Rs. 42.25 *cum-div.* On *ex-div.* basis, the net yield works out to 3.4 per cent.

MINOR SETBACK FOR TRAYONS

DIVIDEND SAME—PROSPECTS GOOD

OWING to enhancement of excise duty on rayon yarn, about two-thirds of which had to be absorbed in the cost, non-utilisation of capacity in the cellulose film section to the fullest extent on account of slackness in demand in the latter part of the year, and lower output due to ageing of a part of the equipment, the sale and gross profit of the Travancore Rayons Ltd. (Managing Agents: Messrs. Emcete and Sons (Travancore) Private Ltd., Madras) for the year to 31st December 1961 have suffered a setback. The sale proceeds of products have declined by Rs. 10.39 lakhs to Rs. 366.49 lakhs and the gross profit has gone down by a more or less identical amount, from Rs. 122.64 lakhs to Rs. 111.39 lakhs. The decrease in profit has naturally brought about a reduction in the Managing Agents' commission from Rs. 7.34 lakhs to Rs. 5.08 lakhs, but provisions for depreciation and taxation have been increased, the former by Rs. 3.66 lakhs to Rs. 40.13 lakhs and the latter by Rs. 3.30 lakhs to Rs. 30.60 lakhs. As a result of the rise in total essential provisions, the net profit shows a fall of as much as Rs. 15.95 lakhs or over 30 per cent to Rs. 35.58 lakhs. Transfer to the statutory development rebate reserve has been cut sharply from Rs. 15.70 lakhs to Rs. 2.75 lakhs, while a sum of Rs. 8.00 lakhs has been credited, for the first time, to a new reserve known as dividend equalisation reserve. The reason for the creation of this reserve, as explained by the Directors in their report to shareholders, is that, when the Company's expansion programmes are completed, the development rebate, which is allowed by the Income-tax authorities, will be claimed by the Company and, in that case, the available profit may not be adequate for dividend purposes. The Directors have, therefore, thought it prudent to create this reserve, so that the Company can have recourse to it in case of necessity. After making these prior appropriations, the Directors have set aside Rs. 3.25 lakhs for payment of preferred dividends in respect of the year and, out of the balance remaining, they have declared a dividend on ordinary shares at 20 per cent (subject to deduction of tax), same as last year, absorbing, as in the previous year, Rs. 20.00 lakhs.

The Company's record of achievement during each of the past four years is presented synoptically by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales proceeds	366.49	376.88	338.51	328.29

* Wealth tax only.
† Subject to deduction of tax.

The financial position of the Company is highly satisfactory, as will be evident from a perusal of its balance-sheet as at 31st December 1961. The share capital of Rs. 150.08 lakhs, of which Rs. 50.00 lakhs are in preference shares and the balance in equities, has a supplement of Rs. 110.38 lakhs in reserves and surplus. Secured and unsecured loans aggregate Rs. 43.91 lakhs, in addition to current liabilities and provisions together amounting to Rs. 158.72 lakhs. Fixed assets, with a book value of Rs. 567.84 lakhs, have been well written down to Rs. 221.13 lakhs, while the total of current assets, including investments and loans and advances, stands at Rs. 241.96 lakhs.

Production of plain cellulose film during the year showed an increase. The extent of the increase would, indeed, have been more marked if the third cellulose film plant worked to capacity. It had to remain shut down during the latter part of the year, due, as already stated, to slackness in demand. The production of MST cellulose film registered a rise of about

(*Continued in previous column*)

MODERNISATION PAYS SHREENIWAS COTTON WELL

PROFIT BETTER—DIVIDEND RAISED AGAIN

WHAT wonders modernisation and renovation can do for India's cotton textile industry is clearly demonstrated in the performance of the Shreeniwas Cotton Mills Ltd. [Managing Agents: The Marwar Textiles Agency (Private) Ltd., Bombay] during the last three years. The Company, it will be recalled, launched a few years ago an ambitious programme of radically renovating and modernising its equipment. The programme has paid the Company well since 1959, when its effects were felt for the first time. The profitability of the Company (that is the ratio of gross profit to sales) has shown a steady improvement, though the sales realisations have tended to decline. The fabrics, produced by the Company, we are told, command wide popularity and fully satisfy the customers demand for fancy cloth, thanks to modernisation.

During the year 1961, while sales proceeds at Rs. 447.87 lakhs hardly showed any improvement over Rs. 447.30 lakhs in the previous year, the gross profit rose further from Rs. 70.53 lakhs to Rs. 83.48 lakhs, excluding Rs. 2.08 lakhs on sales of fixed assets, transferred to capital reserve. The percentage increase works out to 18.3 on top of 76 in 1960. The profitability, which had gone up from 8.72 per cent to 15.76 per cent in the previous year, rose further to 18.6 per cent during the year under review. The rise is especially significant in that it has occurred despite the increase in cost of raw materials from Rs. 171.16 lakhs to Rs. 180.36 lakhs and in other expenses from Rs. 68.94 lakhs to Rs. 78.76 lakhs, excluding staff expenses which came down a little from Rs. 148.36 lakhs to Rs. 147.23 lakhs. The excise burden amounted to Rs. 64.71 lakhs as against Rs. 63 lakhs in the previous year. Again, notwithstanding higher essential provisions and Managing Agents' remuneration, the net profit is larger at Rs. 40.60 lakhs, as against Rs. 32.13 lakhs a year before. More than half the net profit, Rs. 21 lakhs to be precise (as against Rs. 12 lakhs in the previous year), has been retained in business and, at the same time, the return to shareholders has been stepped up by another 2 per cent to 20 per cent, subject to tax. No provision has been made for bonus to staff. The carry forward is Rs. 1.06 lakh, as against Rs. 56,000 brought in.

The salient features of the Company's working in the past four years are brought out in the comparative table below:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds of cloth, yarn and waste	447.87	447.30	459.15	417.57

† Subject to deduction of tax.

The Company installed during the year new machinery worth Rs. 49 lakhs, of which the equipment imported accounted for Rs. 30 lakhs. With the installation of American combers, the entire production of yarn is now combed. Some more machinery worth Rs. 30 lakhs is expected to be erected in the current year. The Company has a processing capacity of 130,000 yards per day. Besides processing the entire quantity of cloth produced within the mills, the Company also takes daily about 25,000 yards from outside parties for processing. It is proposed to install in the processing department additional machinery for which import licences have already been obtained. This addition will raise the capacity to 200,000 yards and enable the Company to take a larger quantity of outside cloth for processing. Negotiations between Messrs. Cluett Peabody and Company Inc. of the U.S., the owners of the trade mark, "Sanforized," and the Government in respect of the payment of royalty and other matters are still in progress and, as soon as they are finalised, the Company will take steps to import the Sanforizing machine. As against its application for 20,000 extra new spindles out of the 3-million-quota allocated to the industry, the Company has been allowed to install only 4,000 additional spindles; it is pursuing the matter further. It is stated that the installation of the additional 20,000 spindles will not require any big investment in the back process machinery, except cards, as the present capacity is almost sufficient to feed all of them. Automatic looms will be received by the Company by the middle of this year and go into production immediately. The eight-colour Comerio printing machine is under erection and will be used for production shortly. Rationalisation has been the cause of some labour disputes, which, however, have now been amicably settled. The Company has entered into an agreement with the representative Rashtriya Mill Mazdoor Sangh to start four looms a weaver with effect from 2nd April 1962. As for cotton supply, the Company is comparatively in a much better position and is expected to work at the normal level.

The working of the Shree Madhusudan Mills Ltd., a subsidiary of the Company, is improving. It has paid two years' arrears of preference dividend for the first time since it became a subsidiary. Interim dividend for two more years is expected. Its loan application for modernisation and renovation, which has been sanctioned by the N.I.D.C. is awaiting final clearance from Government which is expected shortly. It has placed orders for a new blow room. Another subsidiary, Shree Gopal Industries Ltd., at Kotah, went into production in July 1961 and started normal working in November last. The Company installed 12,000 new spindles at a modest outlay of Rs. 30 lakhs. It is proposed to install 13,000 additional spindles, for which Government's sanction is awaited. The machinery will be able to feed the increased spindleage with some sizable investment only in cards. With the installation of sizing and warping machines, this subsidiary is expected to show still better results.

The financial position of the Company is satisfactory. Its paid-up capital of Rs. 94.80 lakhs is made up of Rs. 90 lakhs in equity including Rs. 56 lakhs by way of capitalisation of reserves and Rs. 4.80 lakhs in preference, redeemable by giving six calendar months' notice. During the year, the equity capital was increased by the issue (at par) of 10,000 shares of Rs. 100 each in the ratio of one new share for every eight existing shares. Since the close of the year, a further rights share issue in the ratio of one for nine shares at par has been made. The capital is supplemented by reserves and surplus of Rs. 89.06 lakhs. Its secured loans have increased from Rs. 129.26 lakhs to Rs. 139.20 lakhs, due to increase in debentures from Rs. 30 lakhs to Rs. 34.22 lakhs and rise in bank borrowings from Rs. 99.26 lakhs to Rs. 104.98 lakhs. Unsecured loans, however, have receded from Rs. 20.97 lakhs to Rs. 8.99 lakhs. Its other liabilities amount to Rs. 127.40 lakhs. Excluding debentures, its liability to outsiders works out to Rs. 241.37 lakhs, which is rather high, but it will be reduced this year by the rights issue. As against this, current assets, loans and advances aggregate Rs. 219.82 lakhs. Investments in Government securities, shares and property aggregate Rs. 94.66 lakhs, inclusive of Rs. 60.98 lakhs deposited with banks. The quoted investments of Rs. 70.80 lakhs command a market value of Rs. 102.67 lakhs. The gross block, which increased during the year from Rs. 190.86 lakhs to Rs. 237.59 lakhs, has been written down to Rs. 144.03 lakhs.

The Rs. 100 fully paid ordinary shares are currently quoted at Rs. 278 *cum-div., ex-rights*, and offer a net yield of 5.3 per cent per annum, on *ex-div.* basis.

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION COMBINES A LOOM BUILDING EXPERIENCE OF 18 YEARS AT CIMMCO WITH OVER 34 YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

INDIAN ALUMINIUM'S STEADY PROGRESS

RESERVES STRENGTHENED—MORE EXPANSION ON HAND

DESPITE a sharp setback of Rs. 114.74 lakhs to Rs. 1,010.03 lakhs in sale proceeds, the Indian Aluminium Company Ltd. (Chairman: Mr. K. C. Mahindra, Calcutta) made steady progress during the year 1961 and nearly maintained the gross profit at the previous year's improved level, the actual profit being Rs. 279.41 lakhs, as against Rs. 280.93 lakhs. The decline in sale proceeds was accounted for entirely by agency products the sales of which fell from Rs. 323.80 lakhs to Rs. 170.62 lakhs, whereas the sales of the Company's "own" products scaled a new peak of Rs. 839.40 lakhs, those in the preceding year being Rs. 800.97 lakhs. The improvement in the sale of "own" products followed the persistent increase in production, as can be seen from the table below:

(In tonnes)

	1961	1960	1959	1958
Aluminium ingot	15,909	15,901	14,892	5,664
Rolled products	11,156	10,952	10,414	8,834
Extruded products	1,589	1,370	1,240	1,084
Aluminium powder and paste	448	432	428	333

Notwithstanding the increase in production, manufacturing and other expenses came down substantially from Rs. 849.22 lakhs to Rs. 741.69 lakhs, with the result that the gross profit showed only a slight fall. Provision for depreciation has been increased from Rs. 55.26 lakhs to Rs. 60.57 lakhs, but that for taxation is reduced from Rs. 99 lakhs to Rs. 53 lakhs. The net profit, therefore, has gone up by Rs. 39.17 lakhs to Rs. 165.84 lakhs. Out of this, a sum of Rs. 95.50 lakhs (as against Rs. 52.63 lakhs a year before) has been transferred to reserves, including development rebate reserve which gets as much as Rs. 45.50 lakhs (as against Rs. 2.63 lakhs). It is thus clear that the Company has been providing funds for further expansion on hand. The dividend has been maintained at the previous year's level of 15 per cent, subject to tax. Gratuity provision has absorbed Rs. 5.64 lakhs more at Rs. 9.80 lakhs. The carry forward is adequate at Rs. 62.32 lakhs, as against Rs. 49.91 lakhs brought in.

The comparative table below gives a fair idea of how the Company has fared in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	1010.03	1124.77	989.68	742.97

† Subject to deduction of tax.

The year 1961 marked the entry of the Company into the export market, with sales of 184 tonnes of aluminium sheets and circles to South Vietnam. The possibility of exporting extruded products and aluminium paste is being investigated. It is interesting to find that, despite limited supplies, the Company is making renewed efforts to develop new uses of aluminium fabricated products. And these efforts would not be fruitless, as we are told that a new consumption pattern with increasing demand for its products for industrial uses is gradually emerging and is expected to become more evident when the supply position improves. The Company's production rose in the face of technical difficulties at the Hirakud smelter, which were overcome subsequently with the help of three specialists from the Canadian associates, and power cut in Kerala which resulted in a loss of 125 tonnes of production in the Alupuram plant. The 15 per cent duty on electricity has pushed up costs at Hirakud. The Belur plant maintained its recovery and efficiency. The rolled products, still short of demand, enjoyed reputation for their quality and finish. The production of aluminium paste at Kalwa kept pace with the requirements of the market. During the year, new facilities were added to the plant to produce pyro-technic powder and production has started from January 1962. Representations against inadequate railway transport proved of little avail, and the Company had to use costlier road transport.

At Hirakud, the expansion programme, aimed at doubling the plant's annual capacity to 20,000 tonnes, was completed five months ahead of schedule. With the availability of partial power supply in November last, 47 out of 84 new pots were started then. By now the plant should have gone into full production with the availability of power for the remaining pots in April-May 1962. An additional extrusion press, installed at Alupuram in October last, was put into regular operation on a two-shift basis on 4th December 1961. This has increased the extrusion press capacity from 1,500 tonnes to 3,700 tonnes per annum. It is designed to produce larger and more complex extruded sections. Under Government orders, however, production is limited to 2,700 tonnes. Some of the new facilities at the aluminium plant at Muri were brought into operation in December last, four months ahead of schedule. The completion of the balance of new facilities was expected by April this year, and, with it, the rated capacity was estimated to rise to 54,000 tonnes per annum, as against 18,000 tonnes before the expansion. The sheet rolling expansion at Belur is to be completed as per schedule in July next. During the year, the Company obtained licences for the expansion of ingot capacity at Alupuram by 5,730 tonnes per annum and for the establishment of a foil mill at Kalwa with an annual capacity of 2,500 tonnes of aluminium foils. Financing terms for this expansion are awaiting Government's approval. With this further expansion on hand, the Company is well set towards attaining "sufficient strength to stand on its own" and generate enough technique, management and resources to follow through further expansions, which it would be possible to do, according to its Chairman, Mr. K. C. Mahindra, by 1966-67.

The financial position of the Company is sound. Its paid-up capital of Rs. 438.81 lakhs, Rs. 398.81 lakhs of which are in equity and the balance in preference shares, is supplemented by reserves and surplus of Rs. 407.41 lakhs. During the year, its bank borrowings rose sharply from Rs. 86.94 lakhs to Rs. 457.63 lakhs, necessitated quite naturally by the implementation of the expansion programme. In addition, the Company has a secured liability of Rs. 3 crores by way of debentures. Current liabilities, provisions and secured loans have gone up from Rs. 14.85 crores to Rs. 19.65 crores. As against these, current assets, loans and advances aggregate Rs. 19.17 crores. The gross block has increased from Rs. 9.80 crores to Rs. 13.73 crores, and this has been written down to Rs. 9.60 crores. Including construction in progress, etc., the net block is shown in the balance-sheet at Rs. 13.63 crores.

The Rs. 10 fully paid ordinary share of the Company is currently quoted at Rs. 40.25 *cum-div.* On *ex-div.* basis, the share gives a net yield of about 3 per cent.

DELHI LETTER

(*Concluded from page* 800)

to an objective of economic democracy as well. Once this is done results like capital formation are bound to improve. Mr. Nanda also explained to Mr. Lee Kuan Yew the importance Delhi attached to the public sector and *panchayat raj* which connoted decentralisation of power.

The Indian Planning Commission will soon be sending a senior small industries expert to serve the Singapore economic development agency in a consultative capacity. Singapore's and India's industrial estate plans have much in common, and Singapore too will help small *entrepreneurs* with capital in addition to providing factory space. But Singapore's wages are high and, despite the wishes of the Government, the investor there wants to have more capital-intensive industries.

According to Mr. Lee's finding, an investment of about Rs. 5,000 could provide employment to a worker at Okhla, but, in Singapore, the ratio is about Rs. 40,000 to one worker. Being a free port dependent on buying and selling, Singapore cannot impose the import restrictions needed to support labour-intensive small industries.

,, ,, equity	5,38	6,72
	(8%)	(10%)
Carry forward	29	44

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

*Includes Rs. 2,50,000 transferred from general reserve.

†This includes Rs. 1,00,000 transferred from general reserve and Rs. 1,25,000 transferred from dividend equalisation reserve.

‡Preference dividend is calculated at 7.8 per cent.

Extracts from the Directors' report: The Company's sales have registered substantial rise from Rs. 1.78 crores in 1960 to Rs. 1.90 crores in 1961. Due to non-availability of power for the third shift, the Company's No. 2 Mill at K. Vadamathurai continued to run for 2 shifts only during this year.

During the year under review, the *Whitins Combing* machinery installed towards the close of the previous year was brought into production. The additional *Cone Winding* machine ordered in the previous year was also received and commissioned. Out of the 30 additional *Cards* ordered earlier, 15 *Cards* were commissioned by the end of the year.

Accounts in brief as at 31st December 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	85,20,000	Gross block	1,96,16,938

To payment of dividend (taxable) equity	Nil	10,00
	(Nil)	(8%)
Carry forward	33	10

N.B.—Adjustments represent the balance brought forward from the previous year.

†This includes Rs. 1,40,000 transferred from equalisation of dividends reserve.

Extracts from the Directors' report: *Share Capital*: Out of the issue of 25,000 new shares, eight shares in respect of which calls remained in arrears, were forfeited by the Directors during the year.

Investments: During the year under review, the Company was allotted 200 shares in A.C.C.-Vickers-Babcock Limited in respect of which a sum of Rs. 20,000 has been paid. The Company was also allotted by way of bonus shares 2,000 fully paid ordinary shares in The Shivrajpur Syndicate Limited and 2 fully paid ordinary shares in The Simplex Mills Co., Ltd. Pursuant to the collaboration agreement with Caribonum Limited, 46 per cent of the Company's holding in the equity and preference share capital of Stamco Industries Limited, i.e., 944 fully paid ordinary shares, 91 partly paid ordinary shares and 230 fully paid preference shares, was transferred to Caribonum Limited in consideration of a payment to the Company of Rs. 9,459. A sum of Rs. 95 was also received from the liquidator in respect of 1 share held by the Company in Steel Files Marketing Co. of India Private Limited (in Liquidation).

Industrial Development: Necessary applications have been made to Government for the formation of Killick Slotted Angles Limited to manufacture *Dexion* products and it is hoped that the Company will be incorporated shortly. The project to manufacture nuts and bolts at the Company's estate at Chandivali has been abandoned as the Directors have considered it inexpedient to go ahead with the same in view of various difficulties in regard to both machinery and raw material. The plant which had been imported is being disposed of with the approval of Government.

John Baker & Sons (Engineers Steel Files): An agreement was reached during the year with labour which has resulted in increased production.

Managed Companies: *The Shivrajpur Syndicate Ltd.* (30-11-1961): The manganese ore market was adversely affected by a cessation of barter transactions involving manganese ore. In recognition of the difficulties facing the industry, the Government decided to reduce Railway freight on manganese ore with effect from 1st January 1962. In view, however, of heavy accumulation of stocks, the Company was at the end of its financial year considering a substantial curtailment of output. This has since been done.

The Central Provinces Railways Co., Ltd. (30-9-1961): Coaching as well as goods traffic during the year showed a welcome increase as a result of measures taken to combat the increased competition from road transport.

Subsidiary Companies: *Killick, Nixon & Co., Ltd.* (31-7-1961): Adverse trading conditions affected the Company's working for this year which unfortunately resulted in a loss. The Engineering Works set up at Chandivali for the manufacture of concrete vibrators, prestressed concrete equipment, etc. went into production from June 1961.

Stamco Industries Limited (30-6-1961): Pursuant to the collaboration agreement with Caribonum Limited, technicians from the U.K. were made available to this subsidiary and certain members of the Company's staff were also sent abroad for training. A new factory has been constructed at Chandivali for the manufacture of this Company's products. With effect from 5th March 1962, the Company's name has been changed to Killick Caribœnum Limited.

A. R. Haseler Limited (30-9-1961): The Company's working for this year, which is its first financial year since it became a subsidiary of Killick Industries Limited, has resulted in a profit due to improved turnover.

Snowcem India Ltd. (31-1-1961): Production and sales continued to show improvement.

With a view to consolidate the Company's position and to conserve its resources the Directors have decided not to recommend any dividend for the year.

Accounts in brief as at 30th November 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	1,24,95,600	Gross block	55,84,569
Reserves and surplus	37,39,447	—Depreciation	21,09,186

,, ,, ordinary	9,95* (D.20% +B.10%)	8,97† (D.20% +B.10%)
Carry forward	62	42

N.B.—Adjustments represent the balance brought forward from the previous year.

*Dividend and bonus on the increased capital of Rs. 39,76,700.

†The dividend and bonus for 1960 was on a paid up capital of Rs. 29,89,400.

Extracts from the Directors' report: Under the Scheme PL-480, the arrangements made by the Government of India for procurement of American maize continued during the year. The Company, therefore, had no difficulty in obtaining necessary raw material of maize and the Starch Plant worked quite satisfactorily. Other essential materials such as *Sulphur, Rockphosphate, Carbon* etc., were also released to the Company in adequate quantities. *Dextrose, Glucose, Sulphuric Acid* and *Fertiliser* plants, therefore, also worked satisfactorily.

Expansion Schemes of the Company have progressed satisfactorily. Most of the new equipments for the extension of the Dextrose Plant have been put into commission. The *Superphosphate* plant is being expanded by a further capacity of 22,000 tons per year. Orders for most of the machinery to be fabricated locally have been given and necessary licence for import of foreign machinery is awaited. Preliminary arrangements for construction of building have been finalised. *Sulphuric Acid* plant is expected to work to its full capacity by May 1962. The building for *Alum* plant is ready; most of the indigenous machinery have been ordered and the erection of the whole plant is expected to be completed during the current year. Machinery for *Sodium* and *Zinc Silicoflouride* plants is expected to be delivered during the current year. Building for *Calcium Gluconate* plant is under construction and on completion of the erection of the machinery, the plant is expected to go into production to its expanded capacity during the current year.

Demand for *Manure Mixtures* is rising in the State. To enter this market, the Company has recently purchased International Trading Agencies, Bhavnagar, who were preparing and selling manure mixtures. Business activities of this concern are being re-organised and operations of the manure mixtures at Bhavnagar are expected to start very soon. In addition to this, the Company has also obtained licence under the Fertilisers (Control) Order, 1957 to prepare manure mixtures at Ahmedabad.

The Government has granted a licence under the Industries (Development & Regulation) Act for manufacture of *Mono-Sodium Glutamate*.

Accounts in brief as at 31st December 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	44,30,150	Gross block	1,77,41,520
Reserves and surplus	40,75,198	—Depreciation	68,66,368

		Net block	1,08,75,152
		Current assets	1,07,80,073
		Investments	5,800
		Cash	3,04,327
	Rs. 2,19,65,352		Rs. 2,19,65,352

*Paid up capital consists of 5,000 seven per cent cumulative preference shares of Rs. 100 each and 39,767 ordinary shares of Rs. 100 each (last year 29,804 ordinary shares of Rs. 100 each). Calls in arrears amount to Rs. 47,825.

Travancore Ogale Glass Manufacturing Co., Ltd.

[*Managing Agents*: Ogale Brothers (Private) Ltd., Alwaye.]

19*th Annual General Meeting*—1st June 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales—glassware	17,74	15,30
Closing stock	53	40
Gross profit	2,57	1,95
Transfer to depreciation	1,03	87
,, ,, development rebate	19	16
,, ,, provision for doubtful debts	Nil	4
,, ,, ,, taxation	65	38
Net profit	70	51
Adjustments	3	12
Appropriations:		
Total available balance	73	63
Proposed dividend (taxable) equity	70	60
	(7%)	(6%)
Carry forward	3	3

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The improvement in the operating profits was largely absorbed by the higher wage bill, depreciation and development rebate and provision for income-tax. After allowing depreciation at usual rates, and initial and extra shift allowances, during previous years the written down value of the assets according to income-tax assessment is lower than that appearing in the books of the Company and therefore higher provision for the tax liability has to be made.

During the year under report, the Central Government introduced excise duty on glass and glassware from 1st March 1961, the levy being 10 per cent on lampware and 15 per cent on other ware like bottles, tumblers, pressedware etc.

The Works Superintendent, Sri M. A. Oke was deputed on a study tour of European countries to study the working of automatic glass making machines so as to introduce mechanisation in the Company's factory as far as practicable. He has submitted a report and it is under study.

Accounts in brief as at 31st December 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	9,98,080	Gross block	18,55,927
Reserves and surplus	51,637	—Depreciation	8,49,209
Other liabilities	7,94,098		
		Net block	10,06,718
		Current assets	7,93,051
		Cash	44,946
	Rs. 18,44,715		Rs. 18,44,715

*Paid up capital consists of 1,00,000 equity shares of Rs. 10 each. Allotment and call money unpaid is Rs. 1,020.

BRITISH INDIA CORPORATION LIMITED

(*Concluded from page 806*)

the authorities concerned will not allow productivity to suffer through lack of co-ordination between coal suppliers and transport arrangements.

General

The total contribution of the B.I.C. Group of Companies to the Union and State Exchequers this year is 4.22 crores of rupees in various forms of taxation as against 3.73 crores last year. This increase by nearly half a crore of rupees is largely due to the excise duty on woollen and cotton textiles to the tune of about 25 lakhs of rupees in excess of last year's figure. Cane cess, this year, has also increased by about Rs. 7 lakhs, the other increases being in respect of income-tax and sales tax.

"Before I close, I would like to thank all my worthy colleagues on the Board for their invaluable support during the year under review. I would also like to express my appreciation of the harmonious working of the staff as a whole. The loyalty and enthusiasm of all categories of staff who have contributed so much to the year's achievements, deserves special mention, and I would like to place on record my thanks for the co-operation extended to me. If teamwork and efficiency are combined with courteous dealings in all contacts and circumstances, I have no doubt that the B.I.C. will continue to go from strength to strength."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

Notice

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

THE THIRTY-SECOND ANNUAL GENERAL Meeting of the Members of Guest Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4 Clive Row, Calcutta, on Thursday, the 31st day of May, 1962, at 12 noon, to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 30th December, 1961.
2. To declare a Dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions:—

5. *As an Ordinary Resolution*:

That approval be and is hereby accorded (approval of the Central Government having been received) to Sir Henry Morton Leech Williams (who was re-appointed Managing Director of the Company for the period 1st January 1961 to 31st March 1962) being remunerated in terms of an Agreement dated 21st December, 1961 between the Company and Sir Henry Morton Leech Williams, a copy of which agreement has been signed by the Chairman for the purpose of identification.

6. *As an Ordinary Resolution*:

That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. William Morrice, a wholetime Director of the Company, being increased with effect on and from 1st April, 1960 in terms of a written communication dated the 25th April, 1962 conveyed to Mr. William Morrice by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.

7. *As an Ordinary Resolution*:

That approval be and is hereby accorded (approval of the Central Government having been received) to Mr. William Morrice (who was appointed Managing Director of the Company for a period of 5 years with effect from 1st April, 1962) being remunerated in terms of an Agreement dated the 25th April, 1962 between the Company and Mr. William Morrice, a copy of which agreement has been signed by the Chairman for the purpose of identification.

8. *As an Ordinary Resolution*:

That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. Thomas Kay Walshaw, a wholetime Director of the Company, being increased with effect on and from 1st April, 1962 in terms of a written communication dated the 25th April, 1962 conveyed to Mr. Thomas Kay Walshaw by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.

9. *As an Ordinary Resolution*:

That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. Bishasher Nath Khosla, a wholetime Director of the Company, being increased with effect on and from 1st April, 1962 in term of a written communication dated the 25th April, 1962 conveyed to Mr. Bishasher Nath Khosla by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.

10. *As a Special Resolution*:

That in view of the proposal contained in the next succeeding resolution that Mr. Mohan Murijmal Malkani be appointed a Director of the Company, consent be and is hereby accorded to Mr. Mohan Murijmal Malkani holding and continuing to hold an office or place of profit under the Company as Sales Manager, Engineering Division, at the Company's Head Office or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms presently applicable to him.

11. *As an Ordinary Resolution*:

That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Mohan Murijmal Malkani be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company.

12. *As a Special Resolution*:

That in view of the proposal contained in the next succeeding resolution that Mr. Robert Allan Binns be appointed a Director of the Company, consent be and is hereby accorded to Mr. Robert Allan Binns holding and continuing to hold an office or place of profit under the Company as Sales Manager, Fastenings Division, at the Company's Head Office or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms presently applicable to him.

13. *As an Ordinary Resolution*:

That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Robert Allan Binns be and is hereby appointed, subject to the approval of the Central Government, under Section 269 of the said Act, as a Director of the Company.

The Register of Members of the Company will be closed from the 12th May, 1962 to 31st May, 1962, both days inclusive.

By Order of the Board,
R. B. RITCHIE,
Secretary.

41, CHOWRINGHEE ROAD,
CALCUTTA-16.
26th April, 1962.

Notes: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

2. No application for warrants will be necessary and payment of any Dividend declared will be made on or after the 18th June, 1962 only to those Members whose names are registered in the books of the Company on the 31st May, 1962, or to their Mandatees. Claims on behalf of holders of shares held on blank transfer will not be entertained.

3. Copies of the written communications and the original agreement referred to in Resolutions 5, 6, 7, 8 and 9 are available for inspection at the Registered Office of the Company from 10 a.m. until midday on working days.

4. The Explanatory Statement as required under Section 173(2) of the Companies Act, 1956 has been issued to all Shareholders.

BUCKINGHAM AND CARNATIC COMPANY LTD.

(*Concluded from page 810*)

"In the course of a speech I made last month as Chairman of the Employers' Federation of Southern India, I referred to the problem of absenteeism in industry in India which has increased in an alarming fashion in recent years and has resulted in expensive machines standing idle, due to workers helping themselves to leave to which they are not entitled. Unfortunately, your mills have not proved immune to this new industrial disease which, experience shows, seems to thrive when higher wages and generous bonuses are paid. Your mills, like many other factories, maintain a leave reserve of men, but this reserve in recent months has frequently proved to be inadequate, as, for example, when on some working days total absence including normal authorised leave, has exceeded 16 per cent. In the case of your mills an absentee figure of 16 per cent means that over 2,300 men are away from work.

"The increase in absenteeism has to some extent been due to the manner in which the State Health Insurance Scheme, the Company's contribution to which, as I have already mentioned, has this year been doubled, is being implemented, and there is evidence that it is possible for fit men to obtain generous medical leave on proportionate wages. It will be apparent to you how this development, if allowed to continue, can result in a serious increase in costs, besides being a most disruptive element to production.

Third Plan Target

"Industrial development during India's first two Five-year Plans was marked by significant achievements, but the target for production of mill-made cloth was set at a low figure by comparison with that fixed for other industries, and was exceeded without difficulty. The target of 5,800 million yards fixed for mill cloth in the third Plan, which was launched during 1961, is also modest being only 13 per cent over the yardage achieved at the end of the second Plan. This target, which I have no doubt will be reached provided adequate supplies of cotton are available, will barely keep pace with the anticipated population increase and will leave nothing for securing the progressive rise in living standards, one of the aims of the successive Five-year Plans, and certainly no margin for increasing exports, so necessary if India is to reach the stage of self-developing growth. Perhaps this is why the limited scheme of expansion announced by Government last year has attached to it an obligation to export which, if not met, will involve heavy penalties. Such a condition is likely to inhibit growth rather than assist it, but growth and higher productivity are essential, if India is to maintain its position in world markets.

"The satisfactory results for 1961 could not have been achieved without the loyalty and sustained efforts of the officers and staff of your Company who continually have to face new problems, invariably accompanied by frustration and anxiety. I am sure you will wish to join with me in expressing sincere thanks to them for the devoted service they have rendered the Company throughout the year.

"In the Directors' report, reference has been made to the resignation of Mr. Molyneaux who, for family reasons, has retired from India. Over the years, Mr. Molyneaux has rendered splendid service to your Company and it is hoped that we shall shortly be in a position to appoint Mr. Molyneaux as one of your Company's Technical Advisers and that he will make periodical visits to India.

"Before concluding, I would like to record my very grateful thanks to my colleagues on the Board for their loyal support and co-operation throughout the year."

Note: *This document does not purport to be a report of the proceedings of the general meeting.*

GOODYEAR PLANS SUBSTANTIAL EXPANSION

Goodyear (India) Ltd. is to expand the annual capacity of its newly-built Rs. 6-crore tyre plant near Delhi from 213,000 tyres at present to 513,000 tyres. The expansion plans are well in hand, and the installation of additional facilities is expected to be completed within a year. Disclosing this at the annual general meeting of the Company held in Calcutta on Friday, 27th April, the Managing Director, Mr. R. E. O. Carey, welcomed the official policy of keeping the licensed capacity in the tyre industry ahead of demand to encourage competition. He was confident that demand would increase rapidly with the additions planned to the country's fleet of trucks, buses, cars and jeeps, as also with the new road mileage to be put up under the third Plan. He said that the new plant, which started production in August last, was still handicapped by an uncertain power supply. The position had, however, improved lately. The number of monthly outages has come down from 110 to about 25, because of the effective measures taken by the Punjab State Electricity Board, and the daily production was approaching the current licensed capacity. The proposed expansion, he hoped, would help the plant achieve economies of large-scale production. He hoped that the shareholders would agree that it was prudent to pass over the dividend in 1961 to meet the requirements of the expansion immediately ahead. It will be recalled that, last year, the Directors retained as much as Rs. 100 lakhs in business out of the distributable surplus.

BANKS ARE STILL DIVIDED

(From Our Own Correspondent)

BOMBAY, *2nd May*

There have been no new developments of any outstanding importance in the money market. The difference of opinion between big banks and medium banks on the Inter-bank Agreement pertaining to interest rates on deposits still remains unresolved. It is not known at the time of writing how this impasse will be brought to an end. The big banks have not been successful in persuading the Reserve Bank of India to intervene in their dispute with medium banks by issuing a directive. An informal meeting of the leading bankers with the Finance Minister is scheduled for Friday, the 4th inst. It remains to be seen whether Mr. Morarji Desai, who regards the Inter-bank Agreement as a good thing for the smooth growth of banking habit in this country, will use his influence and bring about a settlement.

Meanwhile, conditions in the short-term money market are quite comfortable. The volume of surplus funds, however, is not as large as it was a week ago and the demand for bank credit has also increased to some extent. Consequently, there are fewer lenders in the inter-bank section; in fact, advices from Calcutta suggest that the lenders are scarce. Nevertheless, the inter-bank call money rate remains unchanged at the previous week's level of 3½ per cent. The interest rates on short-term deposits are also unchanged at the ceiling prescribed under the Inter-bank Agreement.

The average rate of accepted tenders for 91-days' Government of India's Treasury Bills which had recorded a perceptible fall from 2.620 per cent per annum to 2.580 per cent per annum last week remained unchanged at the latter level this week. The amount offered was Rs. 2 crores, same as last week and equal to the amount invited. There was a fall of Rs. 22 lakhs—from Rs. 57 lakhs to Rs. 35 lakhs—in the sales of 91-days' intermediate Treasury Bills from 25th April to 28th April 1962. Sales of both the type of Bills are being continued.

The only outstanding feature of the Reserve Bank's statement for the week ended 27th April 1962 is a further decline in foreign assets, the exact fall during the week under review being Rs. 5.48 crores, bringing the total down to a low of Rs. 112.41 crores. It may be noted that the fall in the previous week was Rs. 2.13 crores and in the week before that Rs. 5.17 crores. Indeed, the week under reference is the sixth consecutive one to witness a decline in our foreign assets. Between 23rd March and 27th April 1962, the total of foreign assets has come down by Rs. 21.61 crores.

The deposits of banks with the Reserve Bank have gone down by Rs. 3.36 crores and so also their borrowings, those against usance bills alone having come down by Rs. 2.67 crores to Rs. 9.8 crores.

The Gilt-edged market has been ruling quietly steady with a very limited turnover. On comparing the closing rates of today with those a week ago, we find no change at all in any of the State Government loans and in the vast majority of the Central Government loans. 3 per cent 1986 conversion loan and 3 per cent 1970-75, however, show a small decline of 5 and 10 nP, respectively, while 3 per cent 1966-68 has gone up by 5 nP.

In the foreign exchange market, the banks' selling rate for ready T.T. on New York has moved up by 25 nP to Rs. 476 per 100 dollars and so also their buying rate to Rs. 472.50 per 100 dollars. This slight fall in the value of the rupee *vis-a-vis* the U.S. dollar reflects the fractional setback to the £ sterling on the New York exchange market. The latest available rate for spot sterling is 281.250-281.290 cents per £, showing a decline of 0.160 cent over the week. There has, however, been an improvement of 0.140 cent in the 3 months' forward, the latest rate being 280.350-280.390 cent per £.

SUGAR STEADIER

(From Our Own Correspondent)

HAPUR, *30th April*

Sugar was steadier here this week due to brisk consumer demand and the marriage season offtake. Prices recorded all-round further improvement. Forward business for the next monthly release was reported to have been transacted at still higher prices. Some factories in west U.P. closed their crushing season during the week. In order to help mills take all the available cane here as well as in east U.P., where the quantity is still reported to be heavy, the U.P. Government has decided to remit the purchase tax on sugarcane from 1st May upto 12 nP per maund. Traders were of the view that the rising trend in sugar prices would be checked only if additional quotas were released from the heavy stocks with factories. Spot delivery prices improved by Re. 1 per quintal to Rs. 106 for Simbhauli and Rs. 103 for Bulandshar. Mill delivery prices improved to: E29 Simbhauli Rs. 39.25, Bijnore Rs. 39.31, Dhampur Rs. 38.50, D29 Amroha Rs. 38.62, Seohara Rs. 38.87, Merrut Rs. 38.90 and Dhampur Rs. 38.62 per maund.

Brisk demand and the export prospects to the U.S. and Asian countries accounted for the firm trend in the Muzaffarnagar market. Gujarat, Rajasthan, M.P. and Saurashtra showed keen buying interest. Prices improved by 12 nP to 50 nP per maund and the small variety was particularly marked up. In the coming months demand would be at its peak which means that steps to check the rise in prices would be necessary. Week-end prices were: AA29 Rampur at Rs. 41.43, Iqbalpur Rs. 41.54, A29 Lhakasar Rs. 40.85, Mansurpur Rs. 41.54, Khatauli Rs. 41.41, B29, Shamli Rs. 40.47, Deoband Rs. 39.78, D29 Deoband Rs. 39.36, Amroha Rs. 38.69 and Saharanpur Rs. 38.97. Sugar was steady in Kanpur, with the D29 quality rising to Rs. 107 to Rs. 112 a quintal.

Khandsari prices were steadier in sympathy with the crystal section and on good demand from east U.P. and Rajasthan. The production season is nearly complete. Week-end prices (in rupees per quintal) were:—Inferior 75.02 to 83.06, superior 88.41 to 97.79 and crystal 88.41 to 97.79.

Gur ruled steady, as arrivals dropped to an average of about 100 maunds out of the stocks retained by the producers, since the production season has ended. While the superior two-and-a half seer pieces of good quality were being despatched to Punjab, *dara kotha* stocks were being lifted by Gujarat and Saurashtra. The week's offtake was around six wagons loads and local stocks shrinked to 27,000 maunds. Stocks on the corresponding date last year were 68,000 maunds. *Shakker* prices stayed steady on good demand from Rajasthan as well as stockists' support week-end prices (in rupees per quintal) were Superior 53.58, *pansera* 50.91, *dara kotha* 49.57 to 50.91 and *shakker* 57.60.

Gur prices hardened in the Muzaffarnagar market on good demand from Gujarat, Punjab, Rajasthan and M.P. But Chaku quality was quoted at Rs. 17.50 to Rs. 21 per maund. Rusket ladoo attracted good demand from east U.P. and prices ranged between Rs. 10 to Rs. 14 per maund. New cane crop, after good germination, was now suffering with *salai* pest.

After early gains, *gur* futures slipped back on continued bear pressure. *Gur baisakh*, having opened at Rs. 16.01 on last Monday, advanced to Rs. 16.17, and then fell to be quoted at the worst level of today's session of Rs. 15.65.

RECOVERY IN BULLION

(From Our Own Correspondent)

BOMBAY, *2nd May*

The bullion market had only four working sessions during the week, as it remained closed on Friday (when there was election of Directors) and Tuesday (which was Maharashtra Day). The first three sessions witnessed a decline in the prices of both gold and silver, on rumours of large arrivals of contraband gold and fears of further heavy inflow from Goa side. Advices from Calcutta were also not encouraging. Besides, it was reported that offtake in upcountry centres had dwindled. A distinct recovery in prices was, however, in evidence today, thanks to fresh buying by several North Indian operators. Further, some parties who had sold heavily early in the week came forward to book profit. Not only were the previous losses completely made good but today's closing rates were above those prevailing a week ago, excepting in the case of forward silver which was a shade lower.

The daily average offtake and arrivals of gold during the week under review were both less than in the previous week—5,665 tolas and 8,350 tolas, as against 6,800 tolas and 9,600 tolas, respectively. In silver, offtake was higher (15 bars, as against 12 bars), while arrivals were smaller, the daily average being 15 bars, as against 20 bars.

The *Jeth* (18th June) settlement in gold encountered selling and receded from Rs. 120.60 to Rs. 120.05 on Friday, 27th April, and, after recovering to Rs. 120.75 today, finished at Rs. 120.45.

Ready gold continued to command a premium over the forward, the actual premium increasing from 75 nP to Re. 1.05 today when the closing rate stood at Rs. 121.50, a rise of 15 nP as compared with the rate prevailing on Wednesday last week.

In silver, the *Jeth* (19th June) settlement began the week at Rs. 217.55, as against the previous close of Rs. 217.70, and drifted lower to touch Rs. 216.75 on 30th April. The settlement, however, moved up thereafter and touched Rs. 218.40 today; the closing was lower at Rs. 218.

Ready silver continued to be quoted at a high premium over the forward throughout the week. The actual premium today was Rs. 4, that a week ago being Rs. 3.75. The ready rate declined early in the week from Rs. 220.95 to Rs. 220, but strengthened to Rs. 222.40 before finishing at Rs. 222.

The dollar price of gold in the London bullion market softened from $35.07⅞ to $35.07¼ per fine ounce, while ready gold improved by 1½d. to 249s. 4½d. Ready silver gathered ⅜d. to 84⅝d., but forward silver continued unchanged at 84½d., as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	2-5-62 (closing)	High	Low	25-4-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.50	121.80	120.35	121.35
*Jeth**	120.45	120.75	120.05	120.60
Sovereign	96.75	97.25	96.50	96.75
SILVER				
Ready (.996 fine)	222.00	222.40	220.00	220.95
Jeth†	218.00	218.40	216.75	217.70
London—				
Gold	249s.4½d.	249s.5½d.	249s.4d.	249s. 3d.
Silver Ready	84⅝d.	84⅝d.	48⅛d.	84⅛d.
Silver Forward	84⅛d.	—	—	84⅛d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON CEILING PRICES RAISED

(From Our Own Correspondent)

BOMBAY, *2nd May*

The agitation for decontrol of cotton or, in the alternative, an upward revision of ceiling prices, which was going on for quite sometime now, has yielded fruit. The Government has decided to raise the ceiling price of the basic variety of cotton, namely Jarilla Fine 25/35", by Rs. 35 per quintal (Rs. 125 per candy) from the present price of Rs. 231 per quintal (Rs. 945 per candy). The ceiling prices of other varieties will also be correspondingly raised. The floor prices of the varieties will, however, remain unchanged. The revised ceiling prices will apply only to the 1962-63 season crop. Crop of the current and previous seasons will continue to be governed by the ceiling prices in force at present.

The Press note issued by the Textile Commissioner on the 1st inst., announcing the revision of the ceiling prices, contained following significant statement:

"The Government has taken note to the prices paid by the industry for cotton during the last few years and considers that the increase in the ceiling price needs have no effect on the present returns to the industry. The Government, therefore, expects that the prices fixed for different varieties of cloth under the voluntary price regulation scheme by the industry will continue to remain unchanged."

The cotton trade has generally welcomed the revision of ceiling price although a section of the trade is disappointed that the Government did not persuade itself to remove price control on cotton altogether.

The announcement of the price policy for cotton for the 1962-63 season, encouraged the hope that trading in new crop hedge contract would be permitted before long. In fact, the stage is already set for futures trading to begin. A hedge contract has already been framed by a sub-committee appointed by the East India Cotton Association and a meeting of the Association will be shortly called to approve the contract and the amendments to the bye-laws. The salient features of the new hedge contract are the following:

(1) The basis of the contract shall be Fine M.G. Moglia Jarilla, staple 25/32" tenderable upto Good to Fully Good for grade (one and half class "off") and upto 2/32" "on" and 2/32" "off" for staple. (2) All tenderable descriptions shall be tenderable upto 2/32" "off" except Cambodia "A" for which the tolerance will be 1/32". (3) Months of delivery will be March, May and August 1963. (4) The contract shall be subject to the floor and ceiling prices as may be announced by the Government. (5) Tendering differences will be fixed on the basis of differences between the hedge contract rate and the spot rate of the respective descriptions subject to certain reductions depending on the hedge contract rate being below the ceiling rates at prescribed levels.

Prices of ready cotton were largely unaffected by the raising of the ceiling prices because the revised prices are applicable only to the new crop. Steady demand continued to be noted for such popular varieties as Vijay, Digvijay, Kalyan, Surti and Wagad. Bengal *Deshi* cotton attracted enquiries from shippers. Prices were well maintained. Export sales registered against the latest quota aggregate 59,223 bales till last week-end. Among foreign cotton, East African and Sudan cottons were in demand. Importers and mills are eagerly awaiting an announcement regarding import of U.S. cotton under P.L. 480.

The following are the latest available spot quotations—in rupees per candy of 784 lbs. from Sewri:

Bengal *Deshi* 688; Ganganagar 667; Gadag Laxmi 1,160; B.P. 52 1,345; Mwanza 1,150; Sudan GS 1,755; American 115.

The easy trend witnessed in the Karachi cotton futures market last week gathered further momentum during the week under review. The N.T.R.G. May contract declined on persistent selling from Rs. 70.70 last week-end to Rs. 67.90. The July contract eased by Rs. 2.35 to Rs. 69.35 over the week. Ready prices too were easy.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 67.00; Punjab *Deshi* 64.00; 4F Punjab Roller 75.50; S.G. 81.50. L.S.S. Punjab Roller 77.00; S.G. 83.50. N.T. Roller 78.50; S.G. 85.50; L89F Punjab Roller 89; S.G. 99.

A divergent trend was witnessed on the Liverpool cotton exchange during the week. While the May and December deliveries of both the American and American type contracts firmed up, the July and October position receded. This was due to switchings from the latter positions to the former. Good spinner demand for spot cotton also imparted strength to the market. Sudan cotton contracts were, however, neglected and nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.80; July 24.05; October 24.05; December 24.15.

American cotton mixed growth contract: May 24.20; July 24.45; October 24.40; December 24.50.

Sudan: May 30; July 29; September 29.

Quiet conditions prevailed in the New York cotton futures market during the week. Values moved in a narrow range. Net change over the week was negligible. The persistent transfer by Spot and Commission Houses from the nearby May contract to October strengthened the latter but weakened the former. Ready prices ruled steady.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	30-4-62	24-4-62	17-4-62
New York spot	35.70	35.70	35.70
May	34.19	34.25	34.21
July	34.59	34.70	34.63
October	34.43	34.40	34.29

SPURT IN AMILON FUTURES

(From Our Own Correspondent)

BOMBAY, *2nd May*

Under the impetus of bull buying and short-covering, Amilon yarn (20 x 1) June delivery recorded a handsome rise of Rs. 85 to Rs. 3,915 per 100 kg. during the week under review. The bullish fervour was fanned by shortage of floating stocks, good demand from several consuming centres and the decision of the Bombay Yarn Merchants Association Board to commence trading in August contract with effect from today. Ready rates were well maintained, 15 denier Amilon being quoted at Rs. 103.95 per kg. and 20 denier at Rs. 84.15.

Despite the firmness of Amilon yarns, other imported and indigenous art silk yarns as well as staple fibre yarns ruled dull, with rates remaining unchanged from the previous week's levels. Transactions put through were very limited as operators were not inclined to enter into fresh commitments either way pending official clarification in regard to the various modifications in customs and excise duties on yarns and fabrics. Even the reported decision of the Government to grant to exporters full refund of excise duty levied on processed art silk fabrics had no effect.

Cotton yarns ruled easy, barring finer counts which registered an improvement in prices. Traders are awaiting the Union Finance Minister's reaction to the millowners' plea for reducing the proposed rates of excise on yarn which, it is stated, entail an additional burden of Rs. 1.40 crore annually. Meanwhile, the powerloom interests have urged the withdrawal of the newly imposed processing duty and restoration of the confounded levy. The fresh burden resulting from the new imports is put at Rs. 3 lakhs in the case of units having 24 powerlooms producing mercerised cloth and Rs. 91,380 if only bleached and dyed cloth is produced. The burden is said to be higher still at Rs. 5.5 lakhs in respect of a unit with 49 looms. Even a unit with four looms is required to pay annually about Rs. 36,000 if its products are mercerised and Rs. 4,776 if the cloth is only dyed and bleached. The total number of powerlooms in the whole country is estimated at 134,000. It is understood that the Union Government has decided in principle not to issue any more licences for the installation of powerlooms in future.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	2-5-1962	25-4-1962
Art silk yarn.—	Rs.	Rs.
30/1 Amilon (100 kg.)—		
June	3,915.00	3,830.00
120 Japan (per 100 kg.)	2,150.00	2,150.00
150 Japan (per 100 kg.)	1,958.00	1,950.00
120 Italy (per 100 kg.)	1,847.00	1,847.00
150 Italy (per 100 kg.)	1,736.00	1,736.00
Nat. Ray. 150 Bt. 1 (per kg.) ...	12.72	12.72
Staple fibre yarn (40 x 2)—		
June	751.00	753.00
Kohinoor (per kg.)	8.36	8.36
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	18.75	18.75
20s Modern	23.00	23.00
32s Madura	31.00	30.25
40s T. T. Corin	34.25	33.75
60s T'Mangal	50.50	50.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *2nd May*

The distinct trend towards recovery in oilseeds noted last week gained further momentum during the week under review. The hedge contracts ruled particularly firm, thanks to good bull support. The April contracts in groundnuts, groundnut oil and cottonseeds terminated during the week. Groundnuts staged a smart rally, following reduced arrivals from up-country centres on account of hoarding by farmers and merchants in anticipation of further rise in prices. At the same time, *vanaspati* manufacturers and crushers extended large support. Castorseeds put on a cheerful appearance on better advices from Andhra Pradesh. Castor oil, however, tended to sag, despite some U.K. enquiries for castor oil. Better sentiment prevailed in the linseed section as well. Cottonseeds ruled steady in sympathy with raw cotton market. Operators took note of the enhancement of the rate of rebate of Central excise duty from 6 per cent to 7.5 per cent per quintal, in respect of each metric ton of hydrogenated cottonseed oil used by manufacturers of vegetable products. The measure is designed to provide further incentive for producers of vegetable products to increase the share of cottonseed oil in the hydrogenated product. It, however, had no perceptible effect on the market.

Groundnut May 1962 contract advanced by Rs. 2.38 to Rs. 220.50. July 1962 contract rose by Re. 1.75 to Rs. 227.37. The April contract which was knocking at the ceiling rate of Rs. 215 for long went off the board on 30th April at the ceiling rate plus a penalty of Rs. 5 for non-delivery. About 1,100 candies were tendered on account of the recent easy conditions in the groundnuts market. The groundnut oil April 1962 contract ran out at Rs. 17.65, with a penalty of 40 nP for non-delivery. Nizam bold was maintained at Rs. 46.50 and Khandesh quality at Rs. 46.75. Oil railway receipts hardened by 10 nP to Rs. 18.60.

Castorseed June 1962 contract put on Rs. 2.62 to Rs. 165.87. September contract closed higher by Rs. 2.12 at Rs. 168.37. Madras small picked up 13 nP to Rs. 33.25. Oil B.S.S., however, shed 15 nP to Rs. 14.05.

Linseed September 1962 contract improved by 32 nP to Rs. 38.44. June 1962 contract closed firm at Rs. 37.81, as against Rs. 37.50. Bold ready, however, eased by 38 nP to Rs. 36.62 and linseed oil by 20 nP to Rs. 14.70.

Cottonseed July 1962 contract moved up by 75 nP to Rs. 103.25. April 1962 contract was finished at Rs. 98, the penalty for non-delivery being Rs. 2. Berar, white and non-white strengthened by 10 nP each to Rs. 21.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 2nd May, as compared with those of the two previous weeks:

	2-5-1962	25-4-1962	18-4-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	220.50	218.12	219.12
Nizam bold	46.50	46.50	46.25
Khandesh quality	46.75	46.75	46.50
Oil ex-mill ready*	19.20	19.15	19.00

TEA STRONG

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *26th April*

In dust sale No 17 held today 347,000 kgs. were offered. There was strong general demand at prices which were irregular and often firm to dearer. Mediums were firm to dearer, while Travancore and Wynaad types met with keen competition and sold readily at generally enhanced prices. Powdery kinds also came to a strong market. The better mediums and Nilgiris were often irregular, but sometimes dearer. Fibrous kinds and plainest descriptions were well supported at generally higher rates than last. Teas of unorthodox manufacture were in good demand and sold at fully firm to dearer rates.

The forthcoming auctions are:

Export Sale No. 18:	30th April ...	951,000 kgs.
Dust " No. 18:	3rd May ...	354,000 kgs.
Export " No. 19:	8th " ...	630,000 kgs.
Dust " No. 19:	10th " ...	434,000 kgs.

There was no sale at Colombo and London owing to Easter holidays.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 18: 951,000 kgs. offered. Good general demand. Low mediums and mediums irregular and often upto 30 nP easier. Good mediums 20-30 nP easier. Highgrowns irregular, following quality and often but similar fannings generally firm. Unorthodox stronger."

REACTIONS TO CHANGES IN TAXATION ON TEA

(From Our Own Correspondent)

CALCUTTA, *1st May*

The tea industry has had some time now to examine closely those of the Finance Minister's tax proposals which affect it. It is grateful to him for the reduction in the export duty by 19 nP per kg., i.e. from 44 nP to 25 nP, and also for allowing rebate on the excise duty at a flat rate of 15 nP per kg. on all tea exported. It is, however, argued that the latter measure could have been merged in the former and export duty reduced further by 15 nP to 34 nP per kg. It is believed that this would save the industry from much of the botheration and paper work, and avoid the blocking of the excise duty rebate until actual export.

As pointed out by Mr. B. C. Ghose, Senior Vice-Chairman of the Indian Tea Planters' Association, the concession now accorded after a long period of representations and waiting, amounts to acceptance, in principle, the fact that, like other commodities, tea is also entitled to receive a drawback on excise, when exported. Viewed thus, perhaps the Finance Minister would have felt that, if the excise drawback were to be exchanged for a proportionate cut in the export duty, the tea industry would continue to press its demand that the principle of excise duty rebates on exports, allowed elsewhere, should also be extended to it. Although the excise duty rebate may remain so in theory, in view of the benefits the industry would derive, Government authorities administering the excise duty rebate may be empowered to consider the same as merged in the export duty in practice. This would, as stated above, save the industry from blocking the excise duty rebate with Government. The industry's requirements of finance for re-plantation and re-equipment of factory machinery to realise the increased output target of 900 million lbs. by 1966 are perhaps the highest ever.

The rates of excise duty on loose tea, i.e. tea meant for internal consumption, have been increased from 5 nP to 10 nP per kg., depending on zones as shown in the table given below.

Zone	Existing rate of duty per kg.	Zone	Proposed rate of duty per kg.
I	10 nP	I	15 nP
II	15 nP	II	25 nP
IIIa			
Darjeeling ...	25 nP	III	30 nP
Others ...	25 nP	IV	35 nP
IIIb	35 nP	V	45 nP

In other words, teas for internal consumption have been made costlier. Internal consumption is mostly of the commoner types of tea, for which there is only a restricted demand abroad, due to the increasing competition from other producing countries. If because of the increased excise duty internal consumption falls, as is expected now, gardens producing the inferior types of teas would be badly affected. Chances of a significant improvement in quality of output are less for these gardens, having regard to elevation and climatic conditions. If the Finance Minister thinks that, as a result of the increased excise duty, the output of exportable types would rise and that of the inferior types decline correspondingly, he is seriously mistaken. For the greatest incentive for gardens to increase output is an expanding home market. It is true that, as a result of the cut in the export duty and partial rebate in the excise duty, exports should show an increase. However, the industry cannot ignore consumer resistance within the country.

As a measure of export promotion, the tea industry, like the other industries, had been anticipating rebate in income-tax on export earnings. It is, therefore, disappointed that, apart from freeing export earnings from the increase in corporation tax, nothing has been done in this regard to justify the hope which the Mudaliar Committee on export and import policy had generated. Considering the keen competition in export markets, the tea industry would continue to demand total abolition of the export duty and full rebate of the excise duty. It is pointed out that, as in the case of jute goods, excise duty, if at all applicable, should be levied on internal consumption only. World consumption of tea is increasing rapidly, and, although India exported more tea in 1961, the increase in export had been much below what ought to be its proportionate share. These are all writings on the wall and, if read in time and acted upon accordingly by those shaping the country's fiscal policy, the tea industry as well as the national Exchequer would stand to benefit in the long run.

In the dusts sales held here last week for internal consumption, offerings of 28,547 packages met with a strong and general demand. Prices gained as a result. Buyers paid keen attention to medium C.T.Cs, and prices advanced impressively. In particular, the lots of brighter lines and secondary fibrous teas were much favoured. In orthodox teas, an irregular trend was recorded and depending on quality prices moved up. Non-wither legg-cut teas were fully firm. A strong feature was provided by the recently neglected fibrous secondary types, which added modest gains. The quotations per one kg., inclusive of the excise duty, were: Good Assam C.T.C. dust Rs. 6.60 to Rs. 7.00, medium Assam C.T.C. dust Rs. 5.70 to Rs. 6.10, legg-cut dust Rs. 4.10 to Rs. 4.60, medium Assam dust Rs. 3.90 to Rs. 4.30, and plain orthodox dust Rs. 3.30 to Rs. 3.60. Leaf grades on offer, amounting to 11,046 chests, evoked good attention.

The keen demand in the internal consumption sales held in recent months is a happy indication of the growing domestic market. If this had not been so, the tea industry would have been complaining now of a glut in supplies and possibly contemplating measures of production curbs as in the recent past. It is no small consolation that in the 1961-62 season tea prices on the average fell only by about 35 nP per kg., thanks to larger internal offtake. Viewed thus also, it is unfortunate that the Government has discouraged internal offtake not only by discontinuing all propaganda but also by increasing the excise duty. A good internal market is a cushion against excessive world production. The F.A.O. has estimated that, if the existing trend in producing countries to raise output continues, tea would become surplus within a few years.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, *1st May*

Quiet conditions prevailed in the jute goods market during the week under review and, in the fibre section, though prices were maintained at the minimum levels, the quantity that changed hands was insignificant. Anxious sellers of raw jute could only meet with reserved buyers. The levy of excise duty at Rs. 250 a long ton on hessian and Rs. 125 a long ton on other constructions for internal consumption—this works out to Rs. 6.50 per 100 yards of hessian and Rs. 13 per 100 bags of B. twills respectively, the Finance Minister's estimate of revenue from this source being Rs. 3.12 crores—affected trading conditions and prices dropped. Acute nervousness was writ large on the faces of those operating in the futures market, where prices fell noticeably. B. twills May delivery, which was quoting at Rs. 126.70 before the budget, fell by Rs. 2.90 to Rs. 123.80, after Tuesday before recovering subsequently to Rs. 125.40. Although what are mostly consumed within the country are sacking goods, prices of hessian have also been affected. Thus, in the futures market, May hessian 40" 10 oz. fell from Rs. 50.25 to

Rs. 48.80 : the subsequent recovery to Rs. 50 was short-lived, as the rate fell soon to Rs. 49.80 and rose again slowly to Rs. 50.02. These trends were also reflected in ready goods. If this week's fall in prices is any guide, it is evident that the consumer is not prepared to bear the full brunt of the duty, and that the jute mills industry has to pay a good portion of the levy. This is unfortunate especially because mills have been recovering from the crisis which entailed them severe losses last year.

The duty is meant to reduce internal consumption and to encourage exports. It is, however, not clear as to whether these objectives would be realised. It is not disputed, and this week's trend in the market is striking evidence, that the first objective, that is, a drop in internal consumption, would be realised. The trade says that the Finance Minister has not given out anything from his bag to promote exports, unless, of course, he means the increase in company income-tax by 5 per cent which is not applicable to export earnings. Evidence available to the market shows that foreign demand for sacking has visibly declined in recent months. Considering that sacking accounts for the bulk of the internal consumption of jute goods and the duty would encourage the use of second-hand bags leading to reduction in domestic requirements, mills would have no alternative but to reduce the proportion of output in sacking goods. As is well known, a good portion of the domestic crop of fibre is the inferior variety fit for manufacture of sacking. If the mills are compelled to produce lesser sacking, prices of fibre would be affected. At the same time, it should also be pointed out that, since mills will pay less attention to the lower quality fibre, cultivators may pay greater attention to retting and thus attempt to improve the quality of their produce. While such a development is in the interests of all concerned, the lack of adequate retting facilities in several jute growing areas minimises the importance of any such expectation.

While it must no doubt be said to the credit of the State Governments, mills and cultivators that, over the past decade, the quality of fibre has considerably improved, the circumstances facing the jute industry now calls for a supreme effort further to improve the quality of fibre. Until a few years ago, mills used to consume more of the inferior fibre and the higher varieties were difficult to be sold. But, with the growth of substitutes, mills are forced to produce a larger quantity of specialised goods. As a result, the higher varieties of fibre have become difficult to be obtained. At the same time, mills have been changing their machinery and this has led to more economic consumption of the lower-grade jute. At present, what fibre remains yet to be marketed is *jungli* and *bimli* varieties, and, with current stock of fibre with mills being equal to five months consumption and mostly of the inferior varieties, tossa and middles are at a premium. A bumper crop is likely to be repeated this year. Last year, there were several instances of deterioration of quality of fibre on account of retting in muddy water and/or in inadequate level of water in canals and tanks. Also supervision at the time of retting was left much to be desired and, with the high demand of fibre, lots, discoloured and containing loose leaf, on account of retting in unclean water met with ready buyers. Jute circles pointed out that, now that the grow more fibre campaign has been richly rewarded, the Governments of the jute-growing states should take measures to deepen tanks and canals and also dig new tanks, so that, with sufficient water for retting, the proportion of good to poorer quality fibre may increase in the next.

If only the production of fibre suitable for manufacturing goods for export can be increased, the desired result of export duty on jute goods, that is, discouraging internal consumption and encouraging exports, can be realised. However, it is not possible to improve the quality of fibre over-night, and, though, with the prevailing low prices of the poorer jute and the good qualities commanding a premium, a higher proportion of the superior fibre can be expected in the next crop, any significant increase in order to lead to the above end is not possible for reasons already discussed. The Buffer Stock Association has aimed at buying mostly lower-grade fibre as a price support measure. If consumption of such fibre by mills falls, as is apprehended in view of excise duties, the buffer stock would be faced with a difficult situation. Continued storage of fibre will lead to a fall in quality and, with mills buying most of the superior grades, cultivators' organisations may naturally demand for permission to export such of the fibre as is not wanted by mills. Although foreign markets for the poor varieties of fibre India produces is not very wide, in any scheme of export, there is the danger of higher grade jute being mixed up with the poorer varieties and being exported as the latter. Considered from all angles, jute circles declare that this is not the appropriate time to take a measure, which would affect the internal consumption of packaging materials. It is true that the domestic demand for sacking has expanded in recent months, but this has been welcome to mills, since overseas demand for such goods has visibly declined. In the changed circumstances, it remains to be seen if mills would like to continue the unrestricted phase of production and also to what extent the permission given by the Government of India to increase spindlage would be utilised. Current spinning capacity with mills is palpably below the capacity of looms and as such mills could unseal looms only to the extent determined by the supply of yarns.

On Tuesday last, by way of reaction to the levy of excise duty, ready B. twills declined from Rs. 132 to Rs. 130 and 40" 10 oz. hessian from Rs. 52.85 to Rs. 52.80. Interest in new business was very limited, and the futures market was fully bearish. On Wednesday, prices of B. twills in futures trading fell more markedly with the May rate closing at Rs. 124.40 as against Rs. 125.10 on the previous day. As a result, ready B. twills were as low as Rs. 128.20. May hessian 40" 10 oz. in the futures trading closed lower at Rs. 49.84 as against Rs. 50.06 on the previous day. Ready hessian 40" 10 oz. dropped to Rs. 52.65. May B. twills in futures touched a low of Rs. 123.80 on Thursday, but recovered to Rs. 124.45. In the ready goods market, buying interest developed at lower levels, and this enabled B. twills to steady around Rs. 128.50 and hessian 40" 10 oz. at Rs. 52.65. Government interest in B. twills on Friday caused the rate to recover to Rs. 131. Ready hessian 40" 10 oz. also improved to Rs. 53 on revival of foreign inquiries. There was only limited interest shown over the week-end, and quotations declined. However, inter-bazar dealings caused a recovery and B. twills recovered to Rs. 131 and hessian 40" 10 oz. to Rs. 52.75. With no fresh overseas business yesterday, B. twills eased to Rs. 130.50. However, ready hessian 40" 10 oz. recovered to Rs. 53.10.

More rains, coupled with poor interest shown by mills, led to dull conditions in the fibre market. With the apprehension of a possible decline in mills' consumption of the lower-grade fibre as a result of the excise duties sellers exhibited a keen desire for business. It was feared that, since the duty could not be passed on in full to consumers, the profit margin of mills would be reduced. This would naturally lead mills to pay lesser attention to producing goods for internal consumption. Since such a production loss could not be made good by increasing production of goods fit for exports, it was said, turnover of mills would be affected. Further, it was feared that payment of excise duty, reduction in profit margin, etc., would all lead to a decline in finances available with mills for purchasing raw jute. This is indeed a situation which, in the interests of the crop, should be avoided, but Government's measures are gradually leading to such a position. Prices of fibre during this week remained unchanged as follows: May-June delivery: Assam bottoms Rs. 30 a maund, daisee bottoms Rs. 32, and northern bottoms Rs. 29.50.

* * * *

The Jute Buffer Stock Association, which has already made an initial purchase of 50,000 bales of jute for its buffer stock, is now to make another and larger purchase. At their meeting today, the Committee of the Association decided that a further quantity of 75,000 bales should be bought by the end of next week, thus increasing the size of the buffer stock to 125,000 bales, equivalent to 625,000 maunds of jute. Purchase allocations for the additional quantity are being issued to member mills this week and, as on the previous occasion, it is being recommended that purchases should be concentrated as far as possible on low grade jute and mesta. The Association does not think the immediate present an appropriate time for making any purchase of imported cuttings.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *1st May*

Base metals recorded modest gains here during the week under review, due to shortage of supplies and improved demand. The D.L.F. licences for the import of copper from the United States in respect of the expired October-March licensing period have now been issued, and it is expected that supplies against these would be received some time next month. Securing of space from the U.S. is stated to be a problem, but the best efforts are now being made to get these supplies as early as possible. Until they are received, copper-consuming industries would be facing a difficult supply position. Meanwhile, it has been to the advantage of these industries that small-scale consumers have now been able to get releases of supplies through the State Trading Corporation, with the result that their pressure on the scrap market is comparatively less. In other works, scrap ordinarily available in the market can now be fully used by the major industries for some time. Copper scrap prices, however, remained unchanged at the previous rates, with utensil scrap quoting at Rs. 535.75 per 100 kgs. and berry scrap at Rs. 572.75. Thus, last week's rise, following pre-budget rumours of a wider scope for excise duties, was fully maintained. On the London Metal Exchange, electrolytic copper opened firm at £234 a ton for spot after the Easter holidays and, after rising to £234½, returned to the earlier level.

No further particulars on the Finance Minister's statement that the excise duties on copper and copper alloys were being simplified are yet available. The excise authorities have also no knowledge about these. It would, therefore, seem that the simplified procedure has not yet been formulated; possibly, it is taking shape and would be announced within the powers for the Government under the Finance Act of last year. The duty on copper and copper alloys was introduced last year and, during the current year, it has been proposed to levy an excise duty at Rs. 100 per metric ton on copper in crude form, including ingots, etc. The existing duty on sheets and circles of copper and copper alloys is Rs. 300 per metric ton, and the products made from the duty-paid crude would be exempt from the duty to the extent of only Rs. 100 per long ton. Naturally, it is also stipulated that secondary crude form of copper obtained from the remelting of old scrap and/or scrap resulting from the manufacture of sheets and circles from the duty-paid ingots would be exempt from the proposed duty on crude. With this duty, copper is now fully promoted to the level of aluminium in respect of duties, so that aluminium products manufacturers can no longer complain of discrimination which, it was thought, was the primary cause leading to the levy of excise duties on copper and copper alloys in the last year's budget.

The duty on aluminium foils would be increased by 20 per cent. It is not understood why electric wires and cables and copper pipes and tubes, if manufactured from copper, for which the duty at Rs. 100 a tonne had already been paid by virtue of its crude form, should not be exempted to the extent of Rs. 100 a tonne. The duties on these products are on an *ad valorem* basis, the rate on copper pipes and tubes being 10 per cent *ad valorem*, on insulated cables and wires conforming to certain specifications at 15 per cent *ad valorem* and on all other types of wires at 5 per cent *ad valorem*.

Virgin lead firmed up from Rs. 126 per 100 kgs. to Rs. 130. The shortage of supply was the main cause and it was feared that, in view of the higher price in Bombay, some diversion of supplies should have taken place. Advices from the London Metal Exchange were also encouraging. The opening quotation there was £59¼ a ton and closing £60¾. Tin here opened at Rs. 1,702.75 per 100 kgs. and the shortage of supplies was so acute that the price spurted to Rs. 1,732.25. However, the quotation in Bombay was unchanged at Rs. 1,710. In contrast, the London price fell from £944 a ton to £940½ following restricted demand. The Singapore quotation also recorded a significant loss, presumably on reports of imminent releases from the U.S. stockpile. Spot zinc, in London, opened at £69½ a ton and closed fractionally higher at £69⅝. Demand was poor. The Calcutta quotation closed lower at Rs. 246 per 100 kgs., as against Rs. 254 earlier.

FOODGRAINS SUBDUED

(From Our Own Correspondent)

HAPUR, *30th April*

Foodgrains were subdued here this week, though the arrivals of *rabi* grains were still small. Demand, however, was on the increase. As threshing and winnowing operations are being done with vigour, the arrivals would soon mount and lower the prices. Wheat ruled quiet at Rs. 37.51 to Rs. 38.85 per quintal for the average quality and Rs. 41.53 to Rs. 42.87 for the better farm produce. The old stuff, however, was still quoted higher at Rs. 42.87 to Rs. 45.55 per quintal. New wheat arrivals at an average of 600 to 700 maunds daily were still modest, but will soon rise. In east U.P., wheat and other new *rabi* grain arrivals were fairly heavy, thanks to early harvesting. They were readily lifted, and stocks with the trade were almost *nil*.

Rice ruled steady, with modest gains in the *mainpuri* quality, thanks to better consumer support. Stocks here were put around 10,000 maunds. Prices on Monday were: rice *mainpuri sela* Rs. 52.92, *ramajwayan sela* Rs. 58.94 to Rs. 61.62, *raimunia sela* Rs. 61.62 to Rs. 67.30, *gadda kutcha* Rs. 52.25, *basmati sela* Rs. 66.98 to Rs. 75.02 and superior Rs. 80.38 to Rs. 96.45.

Gram hovered around Rs. 36.84 per quintal. New gram was reaching here daily from Punjab at an average of 800 to 1,000 maunds. Local arrivals were still small at about 100 maunds daily. They were all readily lifted by consumers. Therefore, there has been no stock accumulation. Barley continued to be quoted at Rs. 27.62 and *bejhar* at Rs. 27.46 to Rs. 29.47 per quintal. Arrivals of these two *rabi* coarse grains averaged 300 maunds each daily. Maize stock with the trade was poor, as most of it has been lifted by Ahmedabad. The tone was quiet, with the prices quoted at Rs. 26.79 to Rs. 32.15 per quintal. *Bajra* improved fractionally, thanks to good demand for seed purposes in the face of poor stocks. Sowings of *juwar*, *guwar* and *bajra* are being done mostly for fodder purposes. New *methi* arrivals improved to 100 maunds daily. Week-end prices (in rupees per quintal) were: *Bajra* 37.51, *juwar* 38.85 to 41.53, *guwar* 38.18 to 39.52, *methi* 66.98 and oats 28.13.

In pulses, despite better arrivals of a daily average of 3,000 maunds, new peas prices sought higher levels thanks to brisk demand for conversion into *dal* and stockists' support. Madras also evinced keen interest another week's offtake was six wagon loads. Local peas stock mounted to 30,000 maunds, as against 16 *khatties* on the corresponding date last year and 45 *khatties* (about 800 to 900 maunds) in 1959. New *massoor* arrivals have improved to an average of 150 maunds daily. Prices drifted lower under the pressure of arrivals. *Urd* and *moong* continued to attract good demand, as stocks were poor. Week-end prices (in rupees per quintal) were: Peas *dara* 26.79 to 30.46, farm white 30.81 to 33.49, peas *dal* 34.10, *arhar* 42.36, *arhar dal* 52.25, *urd* 58.94 to 64.30, *urd dal* 66.98 to 75.02, *moong* 50.91 to 53.52, *moong dal* 56.26, *massoor* new 37.51, *massor dal* 52.25 and gram *dal* 42.25.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *30th April*

Arrivals of E.I. tanned hides in the local market this week were normal and clearance was good at unchanged prices. Importers in the U.K. were interested in all grades of light weight cow hides and also in medium weights. Export sales have been reported at the last prices, and this has been lending some bullish tendency to the market. Internal and export demand for inferior fifths selection in cow hides was not strong. Arrivals of tanned calf skins were small; demand from exporters was for light weights in cow calf skins and for all weights in buff calf. The U.S. importers were keenly interested in heavier averages in buff calf and several orders have been booked.

In the tanned skins section, the market was firm for goat skins 11/12 lbs. up, but weak for lighter weights. There were buyers for sheep middle class, but not for better classes. The tanners' efforts to get higher prices have not yielded much success so far. Prices of raw goat skins were firm, but easy for sheep.

The next tanned skins public sales will take place in the U.K. on 14th May 1962, and in Germany on 28th May 1962. The quantities available for sale would be known shortly.

BANK RATE CUT AGAIN

LONDON LETTER

(From Our Own Correspondent)

LONDON, *27th April*

THIS has been a holiday week. The spring arrived somewhat belatedly on Sunday last and the Bank of England heralded the occasion by reducing the Bank rate by another ½ per cent. The level at which it now stands at 4½ per cent is the lowest ruling since January 1960 when it stood at 4 per cent. There has been no surprise here over the drop, as, with the pound remaining strong, the Treasury and the Bank have felt that they could afford to pay more attention to the external disadvantages of a high Bank rate than to the internal disadvantages of cheaper money. Even at the new level, the U.K. Bank rate is over 1 per cent higher than those of France, Germany and the U.S.A. The flow of hot money into this country has steadily continued—this is the real strength behind the premium on the pound—and this has meant an increasing liability for interest payments abroad.

On the home industrial front, the upturn in production, which began in February, appears to be continuing, but the atmosphere of deflation and credit restriction is sufficiently strong to allow the Government to rest easy this holiday from their recurring nightmare of too rapid an upswing. It is true that the general cost of borrowing money will be down by another ½ per cent but banks are still maintaining their general tightness.

On the external front, the March trade figures showed exports and re-exports at £537 million f.o.b. and imports at £390 million c.i.f. This leaves a deficit after adjustment for the difference between f.o.b. and c.i.f. of about £12 million to be met out of invisibles. For the first quarter as a whole, the deficit has averaged gross £49 million a month and net £12 million a month. In this first quarter, imports have increased rather faster than exports as compared with the results for the last quarter of 1961, but it is still felt that the spread will no longer widen.

Cost of Imports Steady

One encouraging factor is that the cost to this country of imports has remained steady for the past six months after a 1 per cent rise in the summer of 1961 and the cost of exports has also been held following the 1 per cent rise at the end of last year. The terms of trade are, therefore, still running strongly in favour of the U.K.

Turning to the encouraging features about Britain's overseas trade, the exports to the sterling area, which continued through last year, now seem to have come to an end. Indeed, there has been an increase in each of the last three months. The increase of exports to Western Europe and Northern America has continued and there has been little change in exports to the rest of the world. The exceptionally steady monthly increase through this quarter in exports is the main reason for the general confidence that the improvement is not transient. In terms of figures, monthly exports this year have been about ½ per cent higher than those in the last quarter of last year, but one must reiterate that it is the steadiness of the trend that appears significant.

Imports have been about 1½ per cent higher each month in this quarter as compared with figures in the last quarter. But their pattern is patchy. Imports of raw materials resumed their fall—this is matched by a steady reduction of stocks in this country—but there have been increases in food, fuels and finished manufactures. There is little to suggest an upward trend in imports of consumer goods or capital equipment for industry and many other imports show a substantial percentage fall over their level of a year ago.

The sterling area and North America have sent reduced imports in the first quarter for this year, while Western Europe has sent in rather more, largely from the countries outside the Common Market.

Exhortations to industry to increase exports continue, but something more dramatic than the present steadiness is certainly necessary, if the U.K. is to strengthen her balance of payments with something more substantial than hot money in-flows.

LABOUR

(Concluded from page 819)

them pertains to employment. It is necessary, in his view, to make a clear choice between greater employment and higher wages based not only on immediate considerations but also on its cumulative effect on income and employment in the long run. This choice has also had relevance to the cost structure which would determine the capacity to compete in export markets and earn foreign exchange.

Code of Efficiency

The President of the Organisation suggested that, unlike the Code of Discipline which was introduced from above, albeit through mutual agreement between workers and employers, the proposed Code of Efficiency and Welfare should be taken up first at the State level rather than at the All-India level. In his opinion, such codes receive a greater response at the unit level, if they were discussed by a small number of groups in as many centres as possible. This procedure, he averred, would place greater responsibility on the State Governments which were not always enthusiastic about all that flowed from New Delhi. There is much to commend this approach, for, as Mr. Hutheesing himself pointed out, there is great merit in developing new ideas and new arrangements at the gross root level instead of hoping that centrally evolved ideas and arrangements will filter down to the level where they have to meet the test of practical application.

Mr. Hutheesing expressed misgivings about the scheme of workers' participation in management. Pointing out that the main difficulty with regard to the scheme was the rigid attitude of workers' representatives, who refused to take cognisance of the interest of the industry, the community and the necessity of industrial growth, he observed:

"Moreover, is not the concept of worker participation in management in conflict with the kind of independent bargaining by trade unions that is also being promoted? How are the representatives of workers to perform simultaneously the two incompatible roles—sharing responsibility for managerial decisions and leading opposition to management? A more satisfactory arrangement would be to proceed on the assumption that the management must be responsible for the economic performance of the enterprise, and that the worker should be induced to take a share in responsibility for the 'community life' of the factory. Self-government in this aspect of factory life will help the workers to understand the general functions and difficulties of management."

Mr. Nanda's Defence

It is clear from the aforesaid observation that the exact scope of the scheme has not been made sufficiently clear and that, consequently, it means many thing to many people. The scheme was, however, vigorously defended by Mr. G. L. Nanda, Union Minister for Labour, who inaugurated the session. He rejected the contention that there was any conflict between workers' participation in management and collective bargaining. Mr. Nanda called upon all employers to take a more sympathetic interest in workers' participation in management which, he made it clear, was inescapable. Mr. Nanda did not also accept the view that there had been an undue increase in wage in the country. Wages of industrial workers in India, he emphasised, were too low considering the needs of health and efficiency. Although, according to him, there had been some increase in money earnings between 1951 and 1959, real wages had actually decreased owing to a progressive rise in price level. "So let us not arrive at the conclusion that we have done too well by labour," he declared. While low wages operated against labour efficiency, Mr. Nanda conceded that there was the danger that a higher level of wages might put up production costs and prices. This is true. But the real problem is how these two considerations could be reconciled and where. Mr. Nanda was not any more enlightening on this point than Mr. Hutheesing.

A Swiss firm has launched an entirely new kind of hydraulic pump which is claimed to be remarkable in every way. Its main feature lies in facilitating the natural flow of the liquid inside the body of the pump by avoiding any forced passage through the pipes of the turbine. Thanks to its entirely unencumbered body, this pump can tackle without difficulty and very economically not only thick and viscous liquids but liquids cluttered with solid foreign bodies. Its output and lift exceed those of the traditional equivalent centrifugal pumps. It is simple and sturdy in design, reliable in operation and cheap to run.

WEEK'S STOCK EXCHANGE TREND

VOL. CIV. No. 2665 BOMBAY, 12th MAY 1962 PRICE Rs. 2

BURMAH-SHELL BREAKS NEW GROUND

THE Burmah-Shell, the oldest and largest of the three foreign oil companies operating in India, took the country by pleasant surprise last week-end by announcing a series of three significant proposals in a bid to reach an agreement with the Government of India on issues which have been in dispute for quite some time now. The Burmah-Shell in India consists of two organisations, one in charge of marketing activities and the other engaged in the manufacture of petroleum products. The former, known by the name of the Burmah-Shell Oil Storage and Distributing Company of India Ltd., is a British company with its capital in sterling and jointly owned by the Burmah Oil Company Ltd. and the Royal Dutch-Shell Group. The latter, known as the Burmah-Shell Refineries Ltd., is an Indian company with rupee capital, but is wholly owned by the British company. It has, however, Rs. 8 crores of 5½ per cent debentures 1965-69 practically all of which are held by investors in India. The first proposal of Burmah-Shell management is to convert the marketing company into a rupee company. The second proposal is to offer "substantial and wide-spread" equity participation in both the companies. The third proposal is "immediate termination of the current refinery agreement" and readiness to operate in future under an industrial licence similar to that for other industries, "subject to an understanding on certain basic points." Currently discussions are going on between Mr. H. A. Eccles, Chief Representative of Burmah-Shell in India, and Mr. K. D. Malaviya, the Union Minister of Mines and Fuel, on these broad proposals. It is to be hoped that they will lead to a fruitful conclusion, for they represent an earnest attempt on the part of Burmah-Shell to adjust itself to the changes in India's attitudes and aspirations.

It is common knowledge that Mr. Malaviya has been quite critical of the old refinery agreement concluded in the early fifties and, even though the oil companies have one by one given up most of the substantial privileges permitted under that agreement, he has firmly refused in the past one year and more, to allow any further expansion in their refining capacity even by making some slight adjustments, let alone by adding to the existing plant and machinery. He has been insisting on the conclusion of a new agreement, the terms of which have not been disclosed to the public. The Burmah-Shell has broken new ground by announcing its readiness to surrender the old agreement and negotiate a new one. The basic points referred to by the Company apparently cover such subjects as the basis of price fixation, the source of crude oil for the refineries and the extent to which expansion will be permitted. The crucial question pertains to the refining of foreign crude imported from sources other than those belonging to the Company's principals and its associates, more especially Russian crude which the Company (as also the other two foreign companies) refused to handle when approached by the Government last time.

The offer to accept equity participation by Indian investors is rather belated, but welcome all the same, particularly because it is to be "substantial and wide-spread." Incidentally, it is in keeping with the suggestion made by this journal some years ago, when the conflicts between the Government and the oil companies began. If the words within quotations are followed in their spirit, so far as the actual extent of participation by, and the distribution of shares among, Indian investors are concerned, both the manufacturing and distributing Companies will assume a national complexion. Apart from this sentimental gain, there will be three major advantages: one, a part of the profits earned by the Companies will be retained in the country; two, there will be a substantial and welcome addition to the supply of blue chips which are now scarce; and, three, the offer will make a sizable contribution to the spread of ownership of property among small investors, provided the Government does not insist on a big block of shares being reserved for the Life Insurance Corporation. There will, of course, be a significant addition to the Government's revenue by way of stamp duty and tax on capitalisation of reserves which is very likely to be done in the case of both the Companies before the public is invited to participate in their capital.

As against these advantages, there will be a big disadvantage, if the Companies are permitted to take out of the country the foreign exchange equivalent of the capital offered to domestic investors. At present, there is no restriction on remittance of such capital nor of profit. But, considering the low level of India's foreign exchange reserves and its need for more of them, repatriation of even a small part of the capital invested by the foreign oil companies will mean a big strain. If this drain is to be avoided, Burmah-Shell (and also the other two foreign companies if they decide to follow suit) will have to be permitted to expand its activities in this country. There is no reason why it should not be allowed to grow, for the demand for oil is expanding, and will expand, so fast that there is room enough for all the companies in both the sectors. The country has only made a beginning in the discovery of crude and it is a moot point whether it will be self-sufficient in the foreseeable future. It was only as recently as on Tuesday this week (that is, four days after the Burmah-Shell disclosed its plans) that Mr. Malaviya requested the members of the Informal Consultative Committee of Parliament attached to his Ministry "to disabuse their minds," to quote from an official Press Note, "of the idea that the country has discovered any big oilfield." He said that "India has not proved so far to be lucky enough to have discovered oilfields of the dimensions of those in West Asia," that "even the Ankleshwar oilfield, which is to feed the Koyali refinery in Gujarat, is only a small oilfield and that, "despite the fact that 80 per cent of the wells in Cambay region are producing either gas or oil, the Cambay could be described as only a poor oilfield." Since imports of refined products will take up more foreign exchange than crude, besides denying the country the valuable benefits of refining at home in terms of employment and a vast number of subsidiary industries, it is necessary to expand the refining capacity in the country without any further loss of time. An additional factor that supports this statement is the possibility of considerable delays in implementing the public sector projects for setting up refineries and commissioning them to full capacity. Both the Nunmati and Barauni projects are behind time by about two years and it would not be surprising if the Koyali refinery, scheduled to commence operation by the middle of 1964, were to take one or two years more. Meanwhile, both the civilian and defence requirements of petroleum products look like being greater than those envisaged in the third Plan. In these circumstances, prudence demands an immediate expansion in the refining and marketing facilities of the existing companies.

There are quite a few ticklish issues that will require to be settled once an undertaking is reached with Burmah-Shell on certain basic points. The basis of valuation of the Companies' assets, the extent of capitalisation of reserves, the quantum and terms of the issue to the public, and the composition of the boards of directors are only some that readily occur to one's mind. These, however, should not present any insuperable difficulty, especially as there are certain satisfactory precedents to go by.

MR. NANDA'S INDISCRETION

SOLICITUDE for the welfare of workers is a laudable sentiment for any civilised Government to cherish. But the welfare of a section, however organised, vocal and powerful it may be, cannot be entirely divorced from that of the whole community of which it is only a part. Industrial workers, though they constitute an important and economically productive section of the population, cannot, by virtue of their organised strength, justifiably demand wages and conditions of service which are far out of tune with the general level of wages and living conditions in the country. This is true irrespective of the capacity of the industry to pay. For, even if an industry has the capacity, it cannot go on meeting the progressively rising demands of workers regardless of the claims of other sections of the community on the profits of industry which constitute a social surplus. After giving a reasonable return to the shareholders, a good part of this surplus must be ploughed back into the industry, the balance being used to reduce the selling prices of the products for the benefit of consumers. The distribution of the surplus of a business concern on these lines will be in the interests of the community as a whole, as it will lead to an increase in employment opportunities. A reasonable rate of return to shareholders, coupled with conservation of profit, will facilitate expansion in production, while a reduction in selling prices will help broaden the market for the products. All this in turn will generate more employment and higher production. The tempo of economic progress will thus be kept up.

While the progressive increase in the wages and conditions of service of the working population should be the continuing goal of social policy, it cannot be carried on endlessly. At a certain stage, the actual level of wages above the subsistence level should be fixed in relation to the productivity of workers. For such a wage policy to be acceptable to workers, it is necessary to impress upon them that higher wages can be paid only from higher productivity. Practical application of this principle could be made by passing on to the workers a fair share of the increase in productivity as and when it occurs and by refusing to grant wage increases when it is not preceded by a demonstrable increase in productivity. This is important, because, unless there is a healthy awareness of the mainsprings of industrial pro-

gress, it will be difficult to generate and maintain a tempo of development that will haul the economy out of stagnation and slow growth and put it on the road to self-sustaining development.

A further important point to be borne in mind is that, for a country like India which has no external resources worth speaking about and which has to finance more than 80 per cent of its growing volume of imports through exports, the need for competing in world markets is a paramount consideration. Any wage (nay, labour) policy that ignores this aspect and allows a continuous rise in wages unrelated to productivity will retard economic growth and condemn millions of jobless workers to perpetual unemployment. One may try to overcome the effects of a high-cost economy by providing direct and indirect subsidies. But, ultimately, it will prove to be an expensive expedient of an extremely short-term nature. This is a hard fact from which there is no escape.

Viewed against this perspective, the remarks of Mr. G. L. Nanda, Union Minister of Labour, at the recent annual session of the All-India Organisation of Industrial Employers, on the wages of industrial workers, were ill-conceived and ill-timed. They are likely to be interpreted to justify claims and actions that might embarrass the Minister himself. None can question the validity of Mr. Nanda's thesis that the level of wages has a close bearing on the efficiency of workers. Nor need one quarrel with his contention that wages of industrial workers in India are too low in relation to their needs. But a clear distinction must be drawn between what is desirable and what is practicable. Does the mere fact that Indian workers are not as well paid as their confreres in the developed countries of the world go to prove that justice has not been done to workers or that they have been denied a fair share of the fruits of labour? Mr. Nanda does not want anyone to conclude that "we have done *too* well by labour." Obviously, he feels that enough has not been done for labour. He pointed to the trend of wages of workers to substantiate his statement. According to him, although there had been an increase in wages (money wages) of workers during the period 1951-59, real wages had actually decreased owing to a progressive rise in the price level. Mr. Nanda, however, did not indicate the relative increase in wages and prices during the period. But even if prices can be shown to have increased faster than wages, it is an argument not for raising wages but for bringing down prices. Moreover, it is an indictment of the Government itself for not having succeeded in holding the price line.

Surely, the industry cannot be blamed for the increase in prices which is said to have neutralised the rise in money wages. For it the Government should take the responsibility, because it is the consequence of its initiationary policies. Its labour policy itself has contributed to inflation and so also its policy of protecting low productivity units engaged in the manufacture of essentials of life. It is precisely the fixation of wages in relation to the price level rather than productivity that has discouraged effort and inflated industrial costs in the country. Once the rise in price level is accepted as a justification for higher wages, there is no knowing where the wage-price spiral will lead the country. Mr. Nanda realises the dangers of raising wages to compensate for the rise in price level. He has himself conceded that higher wages, unless accompanied by a corresponding increase in productivity, will put up production costs and prices. But it is in placing the emphasis he invariably errs. Apparently, on such occasions, the instincts of a labour leader and politician and not those of an economist-*cum*-businessman with a practical mind gets the better of him. If, instead of citing the rise in prices *vis-a-vis* the rise in wages, the Minister had analysed the trend of productivity to prove that wages had not risen in proportion to the increase in productivity, he would have established a strong case for higher wages for workers. But he did not do that. Why? Was it because of the fear that a comparison of the trend of wages with that of productivity would not bear out his conclusion? The fact that he did not refer to the trend of productivity at all is all the more significant, because Mr. Hutheesing had pointed out in his presidential address that little thought was being given to correlate emoluments to productivity and that wage increases awarded by the Industrial Courts or even Wage Boards were not based on work measurement or job evaluation. He had also quoted the findings of the survey carried out by Mr. Nanda's own Ministry which showed that, during the first and second Plan periods, there had been wage increases ranging from 33 to 100 per cent in cotton textiles, cement, sugar, jute and plantation industries which together employ 1.7 million workers, out of a total 3.6 million workers employed in the organised industries. He suggested, albeit by implication, that productivity had not shown a commensurate increase. Mr. Naval Tata, President of the Employers' Federation, had argued in a similar vein in his speech at the recent annual meeting of the Federation. In fact, he went a step further and pointed out that, according to a recent survey, wage index in the organised sector of the industry rose by 24 points between 1951 and 1957, whereas the productivity index had risen by 8.6 points only.

Mr. Nanda did not question the validity or accuracy of these statements or of the conclusion that can be drawn from them, namely, that wages have been not one jump but many jumps ahead of productivity. That the reverse should be the case has been conceded by no less a person than the Soviet Premier whose remarks on the relationship between productivity and wages have been approvingly quoted by more than one leading industrialist in the country (*vide* pages 499 and 405 of *Commerce* dated 24th March and 10th March 1962).

Mr. Nanda obviously sidetracked the issue by pointing to the rise in prices which is not so relevant to the fixation of wages on a scientific basis as productivity trends. His remarks are likely to prove a convenient lever in the hands of trade union leaders anxious to advance fresh demands for further increase in wages. And such demands will not be confined to undertakings in the private sector alone. Will Mr. Nanda plead with his own colleagues in the Cabinet to grant wage increases should employees of the public sector units, taking the hint from him, were to put up a demand for higher emoluments? This is not the first time that Mr. Nanda, in his understandable desire to be on the right side of workers and/or to score a debating point, has made such indiscreet, if not unwarranted, remarks. Every time he made a similar statement, workers chose to ask for more in some form or other. With Wage Boards and the Bonus Commission in session to decide important issues, statements of the nature made by Mr. Nanda gain additional significance. It is a well-known fact that industrial workers are not as well paid as they should be to enable them to maintain a decent standard of living, that the vast majority of them still live in slums and that they deserve more congenial working conditions. But this generalisation is true of the vast majority of the people of this country. The poverty of industrial workers simply reflects the poverty of the country as a whole. They aggravate it by not limiting the size of their families. Mr. Nanda would be doing a real service to workers, whose cause he has ceaselessly championed, if he were to preach to them the imperative necessity for family planning. If he succeeds in convincing them of this necessity, he will have ensured for them a significantly real increase in their standard of living which no amount of addition to their monetary income can secure.

SUGAR PROSPECTS

THE outlook for Indian sugar exports has turned bleak again, thanks to the sharp fall in world sugar prices of late. A ton of sugar can now be had in the London market at no more than £23¼ per ton, as against the March-end quotation of £26 to which level it had gone up from a low of £20 in January. The latest recession in prices is attributed to selling pressure from Brazil and "very cheap" sales of white East European sugar. While the downward trend may not gather momentum in the immediate future, there is no likelihood of a notable recovery either. From the long-term point of view, however, the world sugar market will be influenced by two important factors, namely, U.S. purchases and European beet harvest. As for the former, present indications are that the total imports into the U.S. under the Sugar Bill now at Committee stage in the Congress will be limited to just two million tons annually and even these imports will be not at subsidised prices (average premium of 2 cents per lb.) but at world prices. In other words, if the Bill goes through as it is, India will have to compete along with other producing countries for a share in the U.S. market. This means that India must be prepared to suffer a bigger loss on exports to the U.S. than it has done so far under the existing quota arrangement. In 1960-61, it may be noted, the officially estimated loss on sugar exports to the U.S. was Rs. 241 per ton, as against Rs. 430 per ton on those to other markets; the price realised in the former was Rs. 550 per ton and that in the latter Rs. 350 per ton. The second and what is described as "a more nebulous long-term factor" is the European beet crop. The size of the crop will not be known until August, though some feel that production will be less than in the previous season.

Since world sugar prices remain depressed, India is naturally finding it difficult to find customers for its surplus sugar. As against the currently ruling London price of Rs. 310 (£23¼) per ton, the average cost price of Indian sugar comes to a little over Rs. 700 (£53), or a gap of as much as Rs. 390 and that, too, after the full remission of excise duty and cane cess together amounting to Rs. 343 per ton. Exports of sugar, therefore, involve "colossal subsidies," to borrow the phrase which Mr. S. K. Patil, Union Food and Agriculture Minister, used when he was addressing the new Parliament Consultative Committee on Wednesday this week. Mr. Patil stated that, because of "colossal subsidies," the present situation of a glut in sugar "cannot be significantly remedied by exports." This remark clearly implies that something else will have to be done to improve the situation. That "something else" can be nothing more than bringing about a marked increase in domestic consumption. How else can this result be brought about quickly except through a reduction in the tax burden on the consumer which accounts for more than a third of the price paid by him?

The problem of sugar surplus is depressing to a degree. Some had expected a month and a half ago that production in the current season (1961-62) would be 2.5 million tons at worst and 2.7 million tons at best. The latest official estimate for the whole of India puts it at 2,784,000 tons, as against 2,981,000 tons turned out in the previous season, a decline of over 6.6 per cent and not 4.5 per cent as Mr. Patil is reported to have mentioned this week. Including the opening stocks of 1,203,197 tons, the total available supply for the season comes to 3,987,197 tons. Even granting that the optimistic estimates of domestic consumption (2.4 million tons) and export (500,000 tons) would prove correct, the season would end with a carryover stock of over a million tons. The hardship caused to the mills as a result of such stocks can well be imagined. The holding of stocks entail the locking up of substantial funds. What is worse, the mills have to bear heavy interest charges. Is this the reward for the sugar industry which has endeavoured to maintain a high level of output? And is it not unfortunate that the consumer of sugar, who has all along been making sacrifice first in the name of protection from foreign competition and then in the name of development, should continue to be denied the benefit of a lower price? Would it not be better to permit our own people to eat more sugar than allowing it to rot in the godowns? Surely, "yes", if for no other reason than to mop up a part of the surplus purchasing power in the hands of the public and to let the consumer get the impression that the price of at least one important commodity has gone down. It is, indeed, ridiculous that the Government should stand in the way of prices going down not from an uneconomically low level to still lower level but from a pretty high level to a reasonable level, even when the supply position is conducive to such a desirable movement.

With a huge surplus weighing heavily on the sugar industry, it may sound incongruous to say, as was in fact done by Mr. Patil, that "every care would be taken to see that no part of the standing cane crop goes uncrushed." But it is better to crush the sugarcane than to allow it to perish in the fields. Sugar at least can be stored for some time but not sugarcane. It will be a criminal waste to leave the sugarcane in the field to dry up or to encourage its crushing into *gur* the keeping quality of which is poorer than that of white sugar. Somebody, however, has to bear the loss. The sugar mills cannot, as their position is already strained by the losses on exports and prolonged storage of a huge surplus. The U.P. and Bihar Governments have no doubt been authorised to permit a reduction in the minimum price of cane at 1.5 nP per maund for every 0.1 per cent fall in recovery below 9 per cent from the 1st inst., in addition to any rebate of cane purchase tax that may be allowed. But the relief which the sugar mills will actually get under this arrangement is too meagre to compensate them for the increase in production cost as a result of low recovery and addition to the already heavy stocks.

MARKET GOSSIP

The Prodigal's Homecoming

THE return of Canada to a system of fixed exchange rate, after experimenting with floating exchange rate for over a decade, marks a significant departure in that country's monetary policy. Canada, almost alone among the other major members of the I.M.F., had refused to fix a par value for its currency, and left it to be determined in the free market by the free play of supply and demand. For sometime past, however, signs of the Government's dwindling confidence in the floating exchange rate were visible. It may be recalled, in this connection, that, in the first week of October 1950, the Canadian Government unpegged its exchange rate, following widespread speculation that its currency might be revalued by 10 per cent, in view of the large influx of hot money induced by the improvement in the strength of Canadian economy and fears of inflation in the U.S. consequent on the Korean war boom. Originally, the parity of Canadian dollar was at a discount of 10 per cent *vis-a-vis* the U.S. dollar. Later, that is, in 1946, it was fixed at par with the U.S. dollar. Three years later, when the pound sterling was devalued in September 1949 and other Commonwealth countries followed suit, Canada made a gesture by devaluing its currency to the extent of nine per cent. It was only a year after that it fell in love with the idea of floating exchange rate and stuck to its choice for nearly 12 years, even though it was contrary to the spirit of the I.M.F. rules. And the rest of the free world, too, got accustomed to its experiment. There was hardly any protest against it from any of the I.M.F. members, apparently because it did not cause much inconvenience to any of them. For some time past, however, there were signs that the Canadian Government itself was beginning to lose faith in the floating exchange rate. Even so, the fixation of the exchange value of the Canadian dollar on the 3rd inst. has come as a surprise. As early as in June 1961, the Canadian Government had made it known that it considered its currency overvalued in relation to the U.S. dollar and that it wanted it to be below parity with the U.S. dollar by a substantial margin. This gave rise to much speculation in the exchange market about the exact level which the Government considered to be desirable. The resulting uncertainty and the drain on reserves put further strain on Canada's balance of payments position.

The new par value of 92.50 U.S. cents per one Canadian dollar is 2¼ points below the market rate prevailing on the 3rd inst. when the announcement fixing a stable exchange rate for the Canadian dollar was made. It, therefore, constitutes a devaluation of the Canadian dollar by 2.63 per cent. Under the I.M.F. rules, the exchange value should now be maintained with the normal margin of one per cent of the parity rate. It may be noted here that the I.M.F. has warmly welcomed Canada's return to fixed exchange rate and its support, on which the Canadian authorities can now count, may discourage further speculation against Canadian dollar.

The Canadian Government's latest move nails to the counter the fixed *versus* floating exchange rate controversy that has been fiercely raging in Canada for some time past and which used to figure occasionally elsewhere in the free world also. Opinions among bankers and monetary experts were sharply divided as to which of the system was suited to Canada's current economic and financial conditions. Typical of the diametrically opposite points of view held by experts on the subject are the views recently expressed by Mr. W. E. McLaughlin, President of the Royal Bank of Canada, and Mr. A. T. Lambert, President of the Toronto-Dominion Bank, in their respective annual speeches. While Mr. McLaughlin was for a return to a "true floating rate such as we had from September 1950 to December 1960," Mr. Lambert favoured a fixed rate of exchange. Commenting on the experience of Canada under a regime of floating exchange rate, Mr. Lambert said: "For a period of ten years, we had operated under a fluctuating rate and we can only conclude that, for the most part, it failed to reflect Canada's trade and balance of payments position. Canada may have to face up to the need to move towards setting a fixed rate, or perhaps, what would be even better, a narrow range of rates." His arguments for a fixed rate of exchange were based on the ground that "it permits domestic producers to plan ahead, to develop internal sources of supply and to quote firm prices without incurring the risks attached to unforeseen shifts in the exchange market."

Mr. McLaughlin's arguments against fixed exchange rates were on the following lines: No one knows as to what is the appropriate level for a fixed rate, until it is tested in the market and the chosen level remains appropriate only so long as the merchandise trade, foreign investment and other capital flow levels remain constant. As these never remain static, the rate is subjected to abrupt and disconcerting shifts in value. Such a system invites instability, uncertainty and speculative excesses and the movements of the rate may nevertheless fail to have the desired effect.

Mr. McLaughlin then went on to cite Canada's own experience since the Second World War to support his argument. According to him, the range of fluctuation in the exchange rate of Canada in the post-war period was the greatest under the fixed exchange rate system and the least under the floating dollar conditions. If Canada were to return to a fixed rate, it would, in the opinion of Mr. McLaughlin, be faced with swings in its exchange reserves and pressures on its exchange rates similar to those experienced by the U.K., W. Germany, Switzerland and the U.S. "Canada," he asserted, "simply does not have the economic depth to withstand such buffets."

Now that the Canadian Government has finally voted for a fixed exchange rate, it will be interesting to watch whether Mr. McLaughlin's reading of the situation will come true. The next annual statements of the Chairmen of Canadian banks can be expected to throw some light on this issue. It is just possible that Canada's decision to toe the line of the I.M.F. is a prelude to obtaining a line of credit from the Fund. Another likely reason is the prospect of difficult trading conditions in case the U.K.'s move to join the Common Market fructifies.

Following this action of the Canadian Government, the value of the rupee has gone up in terms of the Canadian dollar. The banks' selling rate for T.T. on Canada has come down from Rs. 455.50 to Rs. 442.25 and their buying rate from Rs. 447.25 to Rs. 434.50 per 100 Canadian dollars. This means that imports of Canadian goods into India will be cheaper to some extent, while exports to Canada will meet with some resistance. Further, Canadian goods that compete with Indian in world markets will have a slight advantage.

Dr. Erhard's Dilemma

There is a close resemblance between the car price controversy in W. Germany and the steel price issue in the U.S., in which President Kennedy won a signal victory over the steel corporations. Like the decision of the U.S. steel companies to raise the price of steel, the decision of W. German car manufacturers to enhance the price of their cars up to 5 per cent has caused acute embarrassment to Dr. Erhard, the W. German Minister for Economic Affairs, who has of late been working hard to bring into effect some kind of a "pay pause" which also requires a price pause to succeed. It has, therefore, become a prestige issue and Dr. Erhard has thrown his full weight to bring about a reversal of the price increase. He is using both persuasion and threat to bring the car manufacturers round. What is more embarrassing to the Minister for Economic Affairs is that *Volkswagen*, in which the Government is the largest shareholder (20 per cent), has also raised the price of its car VW1200, the increases ranging from DM 240 to DM 390.

It is a measure of the seriousness with which the Government views this development that the W. German Cabinet, at a special meeting held last week, considered the question and decided that the Government should do everything possible to prevent its economic policy being disturbed by a price increase which it described as "avoidable." The Cabinet maintained that, in view of the good earnings of *Volkswagen*, it could have done without the rise in price. The argument of the management of *Volkswagen* is that increased costs have made it impossible for the Company to do otherwise than to put up the price. Defending the increase in price, Dr. Heinz Nordholff, Managing Director of *Volkswagen*, who is considered to be one of the most popular industrialists of W. Germany, has pointed out that his Company had so far done its utmost to keep down the prices charged for its cars which were now 8.6 per cent below those charged in 1950. At the same time, price of steel ingots had risen, according to him, by 88 per cent during the same period, that of bread by 91 per cent and the wages paid by the Company to its workmen by 143 per cent. In his view, the time had come when rationalisation of production alone could not absorb the rising costs. The increase in the domestic price of the VW 1200, according to Dr. Nordhoff, would not even cover the extra charges of DM 115 million to DM 120 million caused by pay rise granted this year.

Will Dr. Erhard succeed like the U.S. President in his fight with the car manufacturers? Competent observers think that the odds are against the Minister. Hence they rate the chances of his winning as low. But there is no doubt that Dr. Erhard will leave no stone unturned to make the industry acquiesce in the official economic policy. He has threatened that, should the car manufacturers refuse to withdraw the price rise, he would cut the import duty on French and Italian cars to make things difficult for the domestic industry. Whatever may be the outcome of this tussle, this development underlines, as did the U.S. steel price controversy, the fact that close co-operation between the Government and industry is essential even in the so-called free enterprise economies for the success of any economic policy.

Jute Goods and Raw Jute

The meeting of the Parliament Informal Consultative Committee on Commerce and Industry, held at New Delhi on Monday this week, served to focus attention on the problems confronting the jute industry, India's ace foreign exchange earner. Several members who participated in the discussions at the meeting put forward varying suggestions for improving the conditions obtaining in the primary (raw material) as well as secondary (finished products) sectors of the jute economy. But there was consensus of opinion on two vital aspects. One, raw jute prices should be stabilised at reasonable levels. And, two, the industry must be enabled to maintain output of jute goods at as high a level as possible, improve their quality and reduce production costs. These two problems require to be tackled together energetically if the industry is to weather successfully competition in world markets which is becoming keener and keener as each day passes. There is, for instance, the growing competition from Pakistan, where the jute mills enjoy certain cost advantages over India, such as lower raw material prices, newer equipment and lower wage levels, and where the Government has recently been subsidising heavily exports of jute goods. Further, use of substitute materials, development of bulk-handling methods and direct consumer-size retail packing are becoming more and more popular. Mention may also be made of the efforts of countries like Egypt, Thailand and Cambodia to set up jute mills of their own to attain self-sufficiency.

Viewed thus, it was not surprising that much concern was expressed by almost all members over the future of Indian jute manufacture in world markets. Both Mr. K. C. Reddy, Minister of Commerce and Industry, and Mr. Manubhai Shah, Minister of International Trade, also expressed similar concern and urged the supreme importance of raising the competitive capacity of jute goods. It is true that the authorities have already initiated some steps to stimulate exports such as adoption of quality control methods on a large scale, formulation of I.S.I. standards for jute goods, greater facilities for pre-shipment inspection and scheme for registration of exporters. But these would not be of much avail, unless a more vigorous drive were launched to fight obsolescence in jute mills. From this point of view, the assurance of Mr. Manubhai Shah that the Union Government would be prepared to allow establishment of nearly 9,000 broadlooms for modernising the mills and enabling them to compete effectively with other jute goods exporting countries in the foreign market will be widely welcomed. Incidentally, he revealed that the Government had agreed to the complete unsealing of looms and to the stretching of spindle capacity to sustain an eight-hour working of looms.

It may not, however, be desirable, if exports of jute goods are sought to be stepped up, as Mr. Shah suggested, by restraining internal consumption and that too when the demand for jute goods, according to his own admission, is fast expanding, thanks to increased output of cement, fertilisers and other industries needing packaging materials. Where, after all, is the need for such a policy? The scope for expanding jute goods production to the extent required to meet the rising domestic and overseas demand is pretty vast, provided the industry is assured of regular and adequate supplies of quality raw jute at reasonable prices and is given all possible encouragement and assistance to implement modernisation and rationalisation programmes.

Mr. Shah rightly stated that stability of jute prices at remunerative levels would promote a stable pattern of jute production. In this connection, he held out the assurance that, if the operations of the Buffer Stock Agency did not lead to price stabilisation, the Government itself would intervene directly and purchase raw jute from the primary producers. Such an eventuality is unlikely to occur in the light of the categorical statement made on Tuesday the 8th inst. by the Jute Commissioner that the Buffer Stock Agency "would mop up *all* the surplus" and that it would not allow the price of jute to fall again to uneconomic levels. What is more, the surplus of raw jute is not so large as to depress prices, despite the appreciable increase in jute and mesta production, the former rising from 4.03 million bales in 1960-61 to 6.27 million bales in 1961-62 and the latter from 1.15 million bales to 1.71 million bales. The estimated surplus at the end of last month is put at no more than 600,000 bales. By then, 6.33 million bales had already been purchased by the I.J.M.A. member-mills, 500,000 bales by non-member-mills and 125,000 bales by the Buffer Stock Agency, besides the 200,000 bales (notional figure) retained for use in domestic small-scale industries.

TREND OF SHARES

'DISTRIBUTION OF STOCKS'

(From Our Own Correspondent)

BOMBAY, *10th May*

THE past seven days saw 'distribution of stocks' by the principal professional operators in the stock exchanges, which the chartists call at prelude to reaction. This sudden buying in strongly manipulated shares and mild unloading by the operators on a broad front were clearly reflected in the trading pattern which was characterised by sporadic spurts in the former and small but quick dips from high levels in the main body. Having been successful for a full settlement following the announcement of the tax proposals, the operators had no reason to resort to large-scale liquidation. But, during the week under review, they seemed to be preparing the ground for it. The very fact that, in roughly 10 days, several leading counters have recorded about 50 per cent of their annual rise underscored the need for a strong reaction even for extending the uptrend. From the way values receded after touching new high levels on Monday, it appears that the uptrend has cried a halt for the time being. And, significantly enough, closing prices showed small gains coupled, for the first time in the past three weeks, with small losses. But for the spurt in some highly speculative counters today, the losses would have been widespread and quite moderate.

Sentiment was influenced during the week by the high carry forward charges in Bombay, absence of any mention of tax concession at last Friday's meeting between the Finance Minister and the representatives of industry and stock markets and lack of follow-up support at higher levels. The week-end spurt was based on renewed speculation about tax reliefs for textiles and steel products and hopes that, since only Rs. 250 crores remain to be covered by way of taxation during the next three years of the third Plan, fresh taxation in future would be limited. The general expectation is that tax reliefs, if any, would be marginal.

* * * *

Bulls continued to set the tune in Dalal Street. In spite of substantially high carry forward charges at last Friday's settlement, they succeeded in rigging up prices on Monday. This, however, was not surprising, as it was intended by them to scare the bears further of their firm grip on the market. They seem to have succeeded, for there was some heavy short-covering. But, on Tuesday, the bulls came out in their true colours and took the advantage of the rise to lighten their commitments. On Thursday, they lifted up the values again by pushing up Century and Bombay Burmah, possibly to exploit the opportunity subsequently. These bull manœuvres deprived the market of confidence at higher levels. Trading was cautious and the tendency to follow the rise was generally lacking.

Steels lacked the previous week's buoyancy. The rise of Rs. 3.50 to Rs. 149.50 in Tata Ordinary reflected more the book closure contango. Indian Iron receded from Rs. 26.40 to Rs. 26.15 but rallied to close at Rs. 26.50 on Calcutta support after Wednesday's settlement there. But on balance, the gain in these shares was only 10 nP. Mukand Iron lost 60 nP to Rs. 28.20, reflecting a setback from Rs. 62.82 lakhs to Rs. 61.44 lakhs in the Company's gross profit for 1961. Textiles were generally quiet following cautious optimism expressed by the Chairmen of Kohinoor and Shree Niwas about the outlook for the Companies due to the increase in the excise duty on cloth. At close, Bombay Dyeing were 55 nP lower at Rs. 68 *ex-div.*, Shree Niwas Rs. 2 at Rs. 280 and Svadeshi also Rs. 2 at Rs. 280. But, cleverly manipulated by bulls, Century scored a further gain of Rs. 8.50 to Rs. 676. A drop of Re. 1.68 to Rs. 22.04 in Indu Ordinary and a rise of Rs. 23.75 to Rs. 496.25 in Khatau were the other notable features. In the Miscellaneous section, Bombay Burmah were a well manipulated counter and rose further by Rs. 9.50 to Rs. 703. Others lacked their previous week's charm and closed with minor variations. But Poly Chem lost Rs. 5 to Rs. 217.50. Sugars and Shippings were easy. Cements were quiet, but Digvijay gained Rs. 5.50 to Rs. 214. In the Cash section, changes over the week were minor. A spurt of Rs. 23 to Rs. 130 in India Link Chain was contrasted by a drop of Rs. 13.75 to Rs. 180 in Hindustan Wired Glass. Chemicoat were another wide mover and gained Rs. 15 to Rs. 230, but Fit Tight dropped by Rs. 12.50 to Rs. 205. The sanction for New Standard's 1 : 2 rights issue at a premium of Rs. 20 produced a rise of Rs. 4 to Rs. 260 in the scrip. New India 'A', among Insurances, gained Re. 1.50 to Rs. 71.50, and this came in line with the increase of Rs. 1.8 crore to Rs. 12.6 crores in the Company's net premium income in 1961 and the maintenance of the dividend at Rs. 5.70 per share, including a cash bonus of Re. 1.20, subject to tax.

* * * *

Mild profit-taking on settlement considerations produced a subdued tone in Calcutta, where GKW's encouraging report was shadowed by the decline in Indian Copper's gross profit from £13.08 lakhs to £12.22 lakhs, resulting in the maintenance of the dividend of 27 per cent, subject to tax. Speculative shares bore the brunt of profit-taking, while closing prices showed a mixed pattern. Thus, in the Forward List, Birla Jute declined by Re. 1.50 to Rs. 35.25, GKW by one point to Rs. 41, J.K. Rayon by 81 nP to Rs. 21.19 and Orient Paper by 70 nP to Rs. 43.20. Indian Copper were shaded from Rs. 5.18 to Rs. 5.12. Texmaco closed with a gain of 55 nP to Rs. 25.55 and Shree Gopal were up by 63 nP to Rs. 27.25. In Jutes, Fort Gloster and Dalhousie lost Rs. 8 each to Rs. 443 and Rs. 130 respectively, and others showed small changes.

In Coals, Bengal reacted by Rs. 7 to Rs. 374, but East India rose further from Rs. 43.50 to Rs. 47.50. A spurt of Rs. 41 to Rs. 711 in Burn was the feature of trading in the Engineering section, where small losses predominated. In the Miscellaneous section, Phillips India advanced from Rs. 26.37 to Rs. 37.25. Balmer Lawrie gained Rs. 2 to Rs. 279 and so did East Anglia to Rs. 23.25. Hindustan Twyford rose from Rs. 16.75 to Rs. 17.94 and Isaac Holdens from Rs. 17.62 to Rs. 19.56. Goodyear reacted from Rs. 48.25 to Rs. 46.87 on corrective profit-taking.

* * * *

Turnover was small and trading restricted in Madras. Selective support for Chemical shares was a feature. But particularly active were Madras Rubber following the Company Chairman's statement that the factory will go into production within three months; the shares advanced from Rs. 22.95 to Rs. 25.10 on keen demand. Travancore Chemical gained Re. 1.05 to Rs. 22.55 on investment demand. Excepting these two features, trading was unexciting.

SIMCO METERS' SHARE ISSUE

Simco Meters Ltd. will be in the market in the third week of this month to raise subscription for its public issue of 138,833 equity shares of Rs. 10 each and 15,000 9 per cent. taxable, cumulative preference shares of a like denomination for its proposed Rs. 60-lakh project for the manufacture, initially, of 60,000 single-phase meters and 20,000 polyphase meters per year on a single-shift basis in technical collaboration with Messrs. Denis Ferranti Meters Ltd., Bangor, North Wales, U.K., one of the units of the famous Denis Ferranti group of industries. Every meter produced by the Company will be styled, "Under licence—Denis Ferranti Meters." The foreign exchange component of the project is Rs. 25 lakhs, being the cost of the plant and machinery to be imported from the U.K., for the bulk of which firm orders have been placed and will be received at the factory site not later than September 1962. It is to be met from a ten-year loan of Rs. 18,33,330 from the Commonwealth Development Finance Company Ltd., London, which will also subscribe for equity shares worth Rs. 6,66,670. The balance of the outlay of Rs. 35 lakhs is to be raised by issue of share capital and borrowings from banks.

The factory will be located at Tiruchirapalli in Madras State. The necessary land has been acquired and building construction has commenced. The plant is expected to go into trial production by January 1963 and into commercial production two months later. On its installation, the annual turnover will approximate Rs. 63 lakhs on single-shift working, which is expected to yield a gross profit of Rs. 12 lakhs. It is proposed to switch over to multiple-shift working as soon as the first shift attains full capacity production. Messrs. South Madras Industrial Development Company (Private) Ltd. is to function as the Managing Agents of the Company under the "guidance and supervision" of the well-known firm of Messrs. Seshasayee Brothers (Private) Ltd., which has promoted the project and is to act as business consultants of the Company. Mr. S. Narayanaswamy is the Chairman of the Company.

BOROSIL GLASS WORKS' PROJECT

Borosil Glass Works, Bombay, has finalised its project for the manufacture of scientific and industrial glass in financial and technical collaboration with Corning Glass Works, the world-renowned glass manufacturers of the U.S. Borosil is already operating a small hand-processed plant near Andheri with an annual capacity of 1,800 tons. It has been licensed to raise its capacity to 7,200 tons and proposes to manufacture, in addition to the existing lines, glass tubes, rods and chemical glass and set up for this purpose a new highly mechanised factory at Marol, very close to the present factory. Borosil Glass Works Ltd., a new company, will operate the project. It will issue equity share capital of Rs. 1.50 crore, 49 per cent of which will be taken up by the American firm. Of the balance, which will be Indian capital, at least 49 per cent will be issued to investors, as it is proposed to comply with the listing requirements of the Bombay Stock Exchange. The share of the promoters, directors and their associates will, therefore, be very small. The exact distribution between the public and the promoters, etc., will be known after some time, as the public issue is to be made in September. Cornings will subscribe for the shares along with its fully owned subsidiary in Canada and in consideration of the equity participation claim no fees for providing the technical know-how and patents, present as well as those in the next five years for certain products, but obtain equal representation (4:4) on the Board, with an American as the Chairman. Dr. S. R. Lele, Managing Director of Borosil, will be the Managing Director of the Company.

In addition to the share capital issue, the project will call for borrowings of about Rs. 40 lakhs. The take-over of the existing plant will bring in assets worth Rs. 20 lakhs. The foreign exchange component of the project will be roughly Rs. 48 lakhs, being the cost of plant and machinery to be imported from Belgium, France and Argentina. Ninety per cent of the raw materials will be indigenous. The Company will go into production in June 1963 and reach the rated capacity in 1964. It is expected that, by 1965, it will have a turnover of Rs. 2 crores and replace 80 per cent of the present annual imports worth Rs. 90 lakhs.

PUNJAB NATIONAL

RESULTS QUITE IMPRESSIVE

EXCELLENT indeed are the results of the Punjab National Bank Ltd. (General Manager: Mr. Rajendra Lal Tuli, New Delhi) for the year ended 31st December 1961. There has been a big jump of Rs. 50.35 lakhs to Rs. 895.34 lakhs in the income from banking business. This has been outshined by a spectacular rise of Rs. 53.36 lakhs to Rs. 118.40 lakhs in the profit after taxation. The dividend has been maintained at 20 per cent (taxable) on a higher capital. To find an explanation for this phenomenal progress of the Bank one has to take a look at the balance-sheet. It shows a smart rise of Rs. 11.20 crores to Rs. 150.68 crores in deposits, in refreshing contrast to a setback of Rs. 1.67 crore in the previous year. But advances have come down, albeit by a fraction, from Rs. 93.53 crores to Rs. 93.22 crores. Investments, too, have fallen likewise from Rs. 45.80 crores to Rs. 45.54 crores. The rise in income and profit, despite the slight decline in the two basic sources of income, might appear intriguing. But these are only the year-end figures. It is just possible that the average level of advances during the year as a whole may have been higher. Further, the rates of interest charged on advances were better. Again, it is just possible that the bulk of the increase in deposits might have taken place in the latter half of the year. Another point to be noted is the welcome sharp fall in borrowings from other banks which stood at the year-end at Rs. 32.71 lakhs, as against Rs. 473.67 lakhs a year before. An examination of the expenditure side of the profit and loss account shows a rise of only Rs. 20 lakhs to Rs. 371.45 lakhs in the interest paid on deposits and borrowings. The operational expenditure, however, has risen rather sharply, staff expenses from Rs. 305.75 lakhs to Rs. 327.49 lakhs and other expenses from Rs. 81.21 lakhs to Rs. 83.91 lakhs, excluding depreciation which amounted to Rs. 14.71 lakhs, as against Rs. 14.78 lakhs in the previous year. A striking feature of the appropriation account is the substantial addition to reserves. Thus, about one-third of the profit—Rs. 45 lakhs to be precise, as against one-fifth or Rs. 11 lakhs in the preceding year, has been transferred to reserve fund. The provision for bonus to staff, too, has been raised from Rs. 27 lakhs to Rs. 37.50 lakhs. A sum of Rs. one lakh, same as in the previous year, has been set aside for donations and charity, the details of which are not disclosed. As the dividend includes a proportionate share to the 750,000 new shares issue with effect from the last quarter of the year under review, the amount required for it is larger by Rs. 3.75 lakhs. Still the carry forward at Rs. 10.38 lakhs is markedly higher than the sum of Rs. 4.23 lakhs brought in.

The table below gives a synoptical view of the growth of the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	9,15.96	8,71.16	7,97.55	7,86.78
Of which:				
Interest and discount earned	7,32.49	6,97.12	6,29.86	6,08.88
Commission, exchange and brokerage earned	1,62.85	1,47.87	1,07.91	1,02.57
Other income	20.62	26.17	60.28	75.33
Interest paid on deposits, etc.	3,71.45	3,51.38	3,37.31	3,32.56
Staff expenses	3,27.49	3,05.75	2,81.97	2,64.69
Other expenses	83.91	81.21	77.85	73.70
Depreciation and repairs	14.71	14.78	12.72	9.61
Provision for taxation	N.D.	58.00	17.50	33.50
Net profit	1,18.40	65.04	70.20	72.72
Appropriations—				
To reserve fund	45.00	11.00	17.00	17.00
,, development rebate reserve	Nil	Nil	3.50	Nil
,, provision for charity and donations	1.00	1.00	1.00	Nil
,, bonus to staff	37.50	27.00	25.00	30.75
Dividend	28.75	25.00	25.00	25.00
	(20%)*	(20%)*	(20%)*	(20%)
Carry forward	10.38	4.23	3.19	4.49
Capital	1,99.37	1,25.00	1,25.00	1,25.00
Reserves	2,10.94	1,58.50	1,47.50	1,27.00
Deposits	150,68.20	139,48.47	141,15.86	129,19.53
Borrowings from other banks	32.71	4,73.67	3,15.60	6,00.18
Advances	93,21.82	93,53.28	72,51.04	66,76.23
Investments	45,53.50	45,80.33	66,26.94	62,54.05
Cash	23,68.97	12,75.29	13,32.95	13,01.77
	205,11.99	191,52.13	179,55.72	164,15.18
Ratio to deposits of—	%	%	%	%
Advances	61.9	67.0	51.4	52.4
Investments†	30.2	29.4	44.7	43.7
Cash	15.7	9.1	9.4	10.1
Market value of ordinary share (In rupees):	1962	1961	1960	1959	1958
High	23.76	24.88	21.68	24.31	22.50
Low	21.24	18.00xr	18.72	20.12	22.25

* Subject to deduction of tax. † Unencumbered portion only.

It will be noted from the table that the bulk of the increase in deposits has been utilised to strengthen the liquid position of the Bank, as witness the rise of nearly Rs. 11 crores in cash balances; consequently, the cash ratio has jumped up from 9.1 per cent to 15.7 per cent. Because of the sharp rise in deposits, the credit ratio has declined perceptibly from 67 per cent to 61.9 per cent, even though the advances have fallen only slightly. The investments ratio has edged forward from 29.4 per cent to 30.2 per cent, thanks to the fall in borrowings. The growth in deposits during the year was in all categories; in fixed deposits from Rs. 67.29 crores to Rs. 71.59 crores, in savings bank deposits from Rs. 35.70 crores to Rs. 40.89 crores and in current and contingency deposits from Rs. 36.01 crores to Rs. 37.73 crores. Both the paid-up capital and reserves have gone up, and the latter from Rs. 158.50 lakhs to Rs. 210.94 lakhs. Nevertheless, the ratio of "own funds" to deposits works out to a mere 2.7 per cent, as against the accepted goal of 6 per cent.

PROBLEM OF MAKING AIR TRANSPORT PAY

THERE IS STILL MUCH GROPING IN THE DARK

By Our Aviation Correspondent

IT will be generally conceded, one imagines, that the air transport industry is passing through very difficult times. There are, of course, certain notable exceptions—of which, one is glad to be able to relate, Air-India seems to be one—but, these excepted, the year 1961 recorded some fairly staggering losses. The root cause of this rather general tale of woe is, on the face of it, not far to seek—too many seats chasing too little traffic. Or, in other words excess capacity due to the recent transition to jet aircraft.

One says "on the face of it" advisedly. The obvious sometimes obscures the view. It is the old question of the wood and the trees. There could be a number of other causes—less obvious but nonetheless effective. There was, for example, a very marked drop in the customary annual growth of traffic on the domestic routes of the U.S.A. These routes, which carry almost 50 per cent of the world's air traffic—excluding that of the U.S.S.R.—are usually taken as a reliable gauge of traffic trends generally. Why the drop in 1961? Nobody seems to know. The general complaint amongst the airlines is of excess competition. Another suggestion—supported by a certain amount of evidence—is to the effect that the private automobile, particularly on the short-haul, inter-city routes, is taking an ever-growing share of the traffic. The fact remains, however, that just as nobody really knows why 1961 was such a disastrous year, nobody can really foretell what the tourist season of 1962 has in store.

Some Pertinent Remarks

In a recent article which appeared in that well-known aeronautical publication, *The Aeroplane*, Mr. J. W. S. Brancker, for many years the Traffic Director of the International Air Transport Association (I.A.T.A.), has some pertinent things to say on the subject. Mr. Brancker was writing with particular reference to hearings before the British Air Transport Licensing Board. We are not here concerned with these specific issues but, rather, with Mr. Brancker's very revealing views of the industry in general —and who, after eight years with I.A.T.A., should know better than he?

"In spite of statements to the contrary," he writes, "the forecasting of traffic is still an extremely inexact science. Although volume is directly affected by the rate level, it is interesting to note that, during the hearing and appeal dealing with North Atlantic services, virtually no mention was made by either side of any future fare structures or the accelerated expansion which might be caused by changes in the level.... Little collective market research has been done between the airlines and the forecasting of general traffic volume has been left primarily to the manufacturers and other bodies —usually with their own particular axe to grind."

Now that, one suggests, is a very peculiar state of affairs. After all, the forecasting of traffic and the determination of the optimum fare level are the two most important aspects of the business of air transport—or, for that matter, any form of transport. It almost justifies the belief that the whole air transport industry is not only in regard to traffic potentials but equally in regard to fare levels, a gigantic "hit or miss" gamble. Take the I.A.T.A., for example, which represents all the major international airlines. In fixing fares, I.A.T.A., admittedly, has to reconcile the often conflicting interests of all its members—and not seldom their respective Governments into the bargain. The result, of course, is—and must be—a compromise. But is it a compromise based on any reliable research? Or is it a purely empirical percentage deducted from, or added to, an existing fare? In the words of Mr. Brancker, "Do the airlines really know what fares will attract new traffic?" And might not one add, do they really know what level of fare they can economically sustain?

Over the past ten years, several experiments have been tried. On the first occasion, it was called the "Tourist Class" fare and was effected, very simply, by increasing the seating density. It is doubtful, as a matter of hard fact, whether the airlines derived very much benefit from this expedient. Traffic, it is true, multiplied over the next few years, but, had one standard fare been retained, might it not have increased to almost the same extent? One thing is quite certain—the new fare had a marked 'dilutionary' effect. In other words, whilst some new traffic was undoubtedly created, the bulk of the traffic was composed of passengers, who, in any event, would have travelled paying the standard fare. What is still more to the point is whether the airlines, collectively or severally, made any determined effort to discover just what the percentage of dilution was?

Expedients

A few years later, opposed by many but pressured by the American Civil Aeronautics Board, with the introduction of "Economy Class" on the Atlantic routes, yet a further fare reduction was made. If the financial benefits of "Tourist Class" were dubious, those of this later experiment are an even more doubtful quantity. It may have served to mop up some of the surplus capacity, but, by and large, it was probably more dilutionary than productive. That, at least, seems to be the majority opinion but no one, it is fairly safe to assume, really knows.

One of the most fruitful experiments appears to have been the "excursion" type fare. Introduced to foster traffic at off-seasons, the excursion ticket, as its name implies is a cheap 'round-trip' ticket issued on the condition that the return trip is completed within given dates. Since all the older forms of transport have employed the same device for a considerable number of years, the efficacy of this form of cheap fare is a known quantity. Some airlines—Air-India, one believes, amongst them—advocated the extension of excursion fares over the current tourist season. Opposition, however, was too strong and, instead, another device is now being tried—the "Group" fare.

Group Fare

The "Group fare" has been introduced specifically to meet competition from independent carriers—non-scheduled operators, that is to say, outside the I.A.T.A. These operators book up a plane-load of passengers at fares very much lower than those prevailing on scheduled services and then, perfectly legitimately, operate the flight as a charter. So far as the low fare is concerned, their safeguard is that they have a full plane-load; there is no question of flying empty seats. The I.A.T.A. members, to combat this form of competition, will accept bookings from a 'group' of passengers on their scheduled services and such 'groups' qualify for a reduced fare.

One sympathises with the scheduled airlines —but the rules governing the constitution of a 'group' for purposes of a cheaper fare, are extremely involved and complicated. One would go so far, indeed, as to say they are unworkable. In the eighteenth century English, the whole scheme might aptly be termed a "quaint conceit"; in modern parlance, it is just a bit of 'eye-wash' to enable the airlines, with a show of legality, to meet the independents on their own ground. Will it work? Or will it prove to be as dilutionary as its predecessors? We shall not know until the end of the present tourist season —and, judging by the lack of precise knowledge regarding the success or otherwise of previous experiments, probably not even then.

What general conclusions are to be drawn regarding airline fare policies and their present financial situation? Opinions—and remedies, no doubt—will range from one extreme to another, but one aspect seems to have escaped the attention it deserves. In a world of rising prices and inflationary currencies, it is virtually impossible for any form of industry, over a period of years, to keep the price of its product stable. Why should the air transport industry be an exception?

It is a strange but indisputable fact that, whereas the great majority of people, in almost every instance, accept, or shrug off, the ever rising costs of living, when it comes to travel, they are not only shocked at any suggestion of increased fares, they actually expect fares to be reduced. Almost alone amongst the various costs of travel—and these include sea, road, and rail fares, hotel charges, and a whole host of items too numerous to mention—air travel has not only been maintained at little more than pre-war levels, it has, on successive occasions, been offered at reduced prices.

Over the past ten years, of course, the airlines, by various economies, have very materially reduced the seat or ton/mile cost of operation. Larger and more efficient aircraft, more economical engines, greater seating density, overheads spread over a greater volume of operation, pooling agreements and other co-operative measures—all these have contributed towards a lower cost of operation. The hard fact remains, nevertheless, that everything that goes into their end product—wages, salaries, aircraft, engines, ancillary equipment, spares, fuel, stores of all kinds and even landing fees and other Government charges—have all risen very considerably in price. The economies effected can hardly have kept pace with this steadily rising tide of costs.

Like every other form of transport, the airlines have constantly to seek fresh sources of traffic. Reducing fares is an obvious means to that end—but for how much longer can it remain a one-way street? Most of the airlines seem to believe that the only profitable trading they now do is in first class traffic. Unpopular though such a suggestion may be, commonsense points to a firm up-grading of all fares. In the long run, this might provide a better solution than devices and expedients to enlarge the clientele.—*All Rights Reserved.*

NEW TYPES OF AIRCRAFT

Two new types of military aircraft for service through the 1960s and 1970s is being developed, according to Sir George Edwards, Managing Director of the British Aircraft Corporation. One would be an aircraft with long-range for attacking enemy ground communications, radar communications and other targets at considerable distance behind the fighting front. The other would be a shorter-range aircraft in close support of the army, for dealing with tanks, vehicles, troop concentrations and missile defences. These aircrafts would probably be equipped with automatic systems to permit them to follow the terrain closely at the minimum safe height, to avoid enemy missile defences. They would also have vertical take-off and landing or short take off capabilities, self-contained navigation systems which were immune to jamming from the ground, as well as long-range for strategic mobility. Again, they would be self-contained requiring little or no ground equipment.

A REPREHENSIBLE ACT

THE pilots of the Hooghly Pilot Service, who had threatened to go on strike in March last to back up their demand, have at last carried out the threat. Forty out of the forty-six pilots, who do the highly specialised, hazardous and essential job of piloting ships in and out of the Calcutta Port, have absented themselves from work with effect from the 2nd inst., following their resignation which they had submitted as early as in March. This callous action on the part of the pilots has paralysed shipping in Calcutta Port. Twenty-five ships are said to be waiting in the Port ready to sail but there are no pilots to take them out. In addition to the heavy demurrage payable by the shipping companies—a day's idleness costs a ship more than Rs. 10,000—the detention of the incoming and outgoing ships is bound to have far-reaching repercussions on the country's economy in general and exports in particular since Calcutta Port handles about 45 per cent of the country's export trade.

The show-down by the pilots is not a spontaneous development. Trouble has been brewing for some time now. The pilots' main grievance is that their conditions, as compared with those of other marine staff, had deteriorated since 1948. This, they point out, is contrary to the assurances given to them by the Port Authority at the time the pilots agreed to serve under the Port Auhority instead of the Ministry of Transport. They have produced documentary evidence to prove that such an assurance had been given. The authenticity of the document has, however, been questioned by the Commissioners of the Calcutta Port. This has strained the relations between the pilots and the Port Authority. Thus, the alleged "breach of faith" and the failure of the Port Authority to maintain a "differential" between the emoluments of the Pilots and the Assistant Harbour Masters are the provocation for the pilots to go on strike.

In March last itself, the pilots had pressed for favourable consideration of their case and, failing to get a satisfactory reply, the majority of them had submitted their resignation. The resignations were, however, held in abeyance till a final settlement was reached for which negotiations were opened. A sub-committee was appointed by the Port Authority to look into the pilot's grievances. The Committee's recommendations, however, were not accepted by the pilots who insisted that the original assurance should be honoured. On the refusal of the Port Authority to do so, the pilots have pressed their resignation on a mass-scale. Meanwhile, the Government of India has declared the Hooghly Pilot Service as an essential service. This has rendered the resignation and the strike illegal.

It is evident from the background to the strike detailed above that the pilots were ill-advised to take the drastic step they have. It is no doubt that there were delays and dilatoriness on the part of the Port Authority, but that does not justify the action taken by them to vindicate their stand. The pilots are not in the same position as ordinary industrial workers or middle-class workers employed by the L.I.C. or banks and other commercial institutions. They are well-paid and can afford to wait with patience for getting their grievances redressed. As it is, their action is tantamount to holding the country to ransom because they cannot be easily substituted. Indeed, it is reprehensible, because they are not the low-paid half-starved workers who may be excused for resorting to direct action to get a rise in wages or allowances in an era of rising prices. If a band of highly-paid, responsible officers, holding key positions, should behave like ordinary workers, it is a slur on their sense of responsibility. They are setting a bad example for others. Whether their demands are just or not is entirely irrelevant to judging whether the method they have adopted is right or wrong. If the pilots felt genuinely aggrieved even after exhausting all avenues of getting their grievances redressed, they have, as every civilian does, the right to withhold their service, but only after giving the Port Authority "sufficient notice" so that suitable substitutes can be found to pilot the ships. In the case of a specialised job like the one the Hooghly pilots are doing, the period of notice should be reasonably long, say, six months to one year.

The position of the Port Authority is unenviable. To take a decision about the pilots' demands is not as easy as it might appear at first sight. As Mr. Raj Bahadur, Union Minister for Shipping, pointed out in the Lok Sabha, it is caught between the horns or a dilemma. The Assistant Harbour Masters are insisting that their position vis-a-vis the pilots should be safeguarded. If the pilots were to be given some sort of a differential, the Assistant Harbour Masters would object; if the differential were not given, the pilots would threaten a walk out, as, indeed, they have done now. Clearly, it is a delicate balancing act that the Port Authority has to perform and precipitate action by any side, however just its case might be, can only complicate the issue. Moreover, the final decision on the recommendations of the Sub-committee has not been taken. The Union Minister and the Port Authority have assured the pilots that their points of view would be kept in mind when taking a decision. What more could one expect? It is to be hoped that saner counsels would prevail with the pilots and that they would retrace the hasty and unwarranted step they have taken.

N.C.D.C.'S CHIEF ON COAL

The crisis in the coal industry persists and tends to become chronic in character, in spite of the best efforts of planners. The crisis reflects the vicious circle in which the industry has been enveloped for a pretty long time. Transport bottleneck, mounting stocks, lower production, higher costs and unremunerative profit-margin, each is reacting on the other. If the cost of production per ton of coal is to be lower, full production must be kept up. Full exploitation of collieries requires prompt movement of the coal brought to the surface. If production of coal is to be raised to the levels aimed in the Plans, the industry must have a profit-margin which is attractive enough for venturing in the development of wasting assets. If the industry does not grow according to the Plan, the fuel requirements of the country cannot be met in full and this, in turn, will slow down the pace of economic progress. It is thus evident that the coal crisis must be resolved as early and as fully as possible.

It would appear that the urgency of the problem has won the recognition of Mr. K. D. Malaviya, the new Union Minister for Mines and Fuel. The first thing he did after assuming office was to proceed to Calcutta and discuss the issues freely and frankly with the spokesmen of the coal industry. Reports appearing in the daily Press suggest that he is approaching the issues with an open mind and in a realistic manner. Whether this attitude will stay or undergo a change against the private sector is a question for which time alone can provide the answer. What is more important is that, for the present, he seems to be realistic. Thus, he is reported to have expressed his willingness to examine the possibility of raising prices as a major incentive to private miners for stepping up production.

Be that as it may, there is now clear evidence of the possibility of a "new look" at the problem of coal prices, if we take the observations of Mr. Malaviya, both in Parliament and outside, at their face value. But the mess created on this issue by ambiguous statements made by various authorities at various times has not yet been cleared. An instance of muddled thinking on this issue has been provided by Mr. R. C. Dutt, Managing Director of the National Coal Development Corporation. He made a special reference to the question of coal prices at a Press conference held by him at Calcutta a few days ago. Mr. Dutt was of the opinion that current prices were "adequate for the present," although he conceded that there was a strong case for raising prices at a later stage. One can understand Mr. Dutt's logic, if it were confined to the public sector collieries. The Corporation might have earned as much as Rs. one crore in 1960-61. But this cannot be cited as a representative example of profitability of coal mining in general. For the majority of the Corporation's collieries are virgin ones, with coal being found almost at the surface. It will feel the pinch only when it reaches the stage for deep mining. Several large collieries in the private sector which have been undertaking deep mining for years have, on the contrary, found the current prices uneconomic, having regard to rising costs of production. Further, the Managing Director of the N.C.D.C. has no problem of raising finance, whereas the private sector collieries have to win the support of thousands of investors by maintaining a strong and sound financial position and by paying good dividends. The latter's claim for an increase in their selling price of coal for neutralising the rise in cost of production is, therefore, not without justification.

While Mr. Dutt's remarks on the problem of coal prices were ambivalent and interspersed with ifs and buts, he did give some useful information on the progress of coal mining in the public sector. He straightaway admitted that the Corporation's profit for 1961-62 would be much lower than for 1960-61. Why? Because production was lower for reasons already common knowledge. The year 1961-62 started with a rate of production of only four to five million tons, which compares very unfavourably with the rate of 13.7 million tons attained towards the close of 1960-61. Production, of course, has since gone up and is currently placed at an annual rate of eight to nine million tons. Had Mr. Dutt given the actual figures of production, in both 1960-61 and 1961-62, rather than the mere rate of production, it would have been possible to get a clearer picture of the trends in the development of public sector collieries. He could have easily given these figures. In fact he would do well to publish regularly in the first week of each month the production figures of the previous month, as well as the progressive total, with comparable figures for the previous years, as is being done by the T.I.S.Co. and I.I.S.Co. in the private sector and the steel plants in the public sector.

Despite the marked setback suffered in the first year of the third Plan, Mr. Dutt was optimistic about realising the Plan targets by 1965-66. His optimism appears to have been based on two considerations. In the first place, the establishment of coal washeries during the third Plan period, according to him, would make it possible to prevent "non-usable coal taking up wagon space in a difficult zone" and to ensure supplies to high priority consumers, such as steel plants, railways and power stations. Secondly, special efforts were being made to locate new industries, to the extent possible, near coal mines. Mr. Dutt added that ropeways and pipe transport would go a long way in removing transport difficulties. This suggestion sounds very interesting. But it remains to be seen whether ropeways and pipes would be established in the country within the next few years.

Another point elaborated by Mr. Dutt relates to the public sector's programmes for raising coal production in the third Plan period. For implementing the various schemes, the Corporation has secured the assistance of almost all the developed countries. Accordingly, Soviet Russia was helping in the development of a project near Korba in M.P. and in the setting up of a washery at Kathara in Bihar. Poland would also help in the development of one of the deepest mines at Jharia, besides collaborating in the establishment of a washery at Gidi. Negotiations were proceeding with the U.S. for an open-cast mine and a third washery in the Ramgarh area. The National Coal Board of the U.K. might assist the Corporation in working a deep mine in Jarangdih, in the Bokaro region, while French collaboration was being sought in de-pillaring methods applied in thick and highly inclined seams. Two West German technicians were helping the Corporation in coal washery projects, and a third in spare parts production at its Barkakhana workshop. The factory would later produce Rs. 35 lakhs worth of spare parts, which otherwise would have been imported.

TEA INDUSTRY

"Burning the candle at both ends." This was how Mr. A. B. Spence, Chairman of the Central Travancore Planters' Association, described the impact on tea industry of the official tax and labour policies when he addressed the annual meeting of the Association last week-end. What Mr. Spence meant was obviously that the Governments, Central and State, were not merely collecting from the industry huge sums of money in the form of taxes but also compelling it, through various labour welfare enactments, to incur heavy expenditure year after year. The Governments do need funds for economic development and commodity taxation is one of the ways of raising them. Nor does anyone grudge increasing benefits to labour. These considerations should not, however, be stretched too far to ignore the other no less vital consideration of keeping the price of tea at a reasonable level. This aspect is especially important in the context of the growing acute competition in world tea markets. No consumer of tea abroad, as Mr. Spence pointed out, is interested in labour welfare measures and industrial development of the country; he only seeks to obtain his requirements at the most favourable prices whether the tea is produced in India or Ceylon or Indonesia or Africa.

It must, indeed, be said to the credit of Mr. Spence that he openly disagreed with certain planters of North India who have asked for subsidy on tea exports or other forms of assistance. What the industry required, he said, was not subsidy but a reduction of burden. A subsidy can at best be a palliative and cannot be relied upon as a permanent solution to the problem of augmenting tea exports. The solution lies in the creation of conditions congenial to the production of good quality teas at an economic cost. In the first place, there is the need for replanting poor areas with proved high-yielding tea. Emphasising this aspect, Mr. Spence recalled how the tea industry in Ceylon, India's greatest competitor, had already launched upon a liberally subsidised rehabilitation programme which aimed at replacing worn-out and low-yielding tea and at raising the per-acre yields to 3,000 lbs. He also alluded to East Africa which had enormous scope for exports and proved methods for high production.

Further, the tea industry, Mr. Spence averred, had to think of improvement in the manufacture of tea, so that larger quantities of better quality tea could be derived without additional cost. The prevailing method of manufacture, we are told, is still mainly based on principles and machinery designed well over 70 years ago when labour was plentiful and cheap. It is admitted that some progress has been made with new work methods, but it is felt that a lot yet remains to be done. Similarly, while the progress achieved in the designing of new machinery is notable, the availability of the right type of machinery with improved standards of designs and performance is said to be still very difficult. "Not all equipment required by the tea industry," to quote Mr. Spence, "is yet manufactured in India, though it is reported that some six units have been licensed for the manufacture of tea machinery. So far, only two of them are working effectively. Because of the difficult exchange position, imports are becoming almost impossible, although we have a good claim for consideration as the country's leading foreign exchange earner."

Mr. Spence had quite a few interesting observations to make on labour matters. He said:

"Understandably the workers will always seek higher wages, but the sensible limit of such wages must be at the economic worth of their labour. It is always difficult to determine this and a certain amount of conflict is bound to exist. But there must be one thing that both workers and their employers have to agree on, that is, the price at which our produce could be sold without loss to ourselves and without creating resistance from consumers."

The aforesaid observation, though it pertains to tea labour, applies with equal validity to labour in other industries too. The rank and file of labour, as well as the Governments and public bodies, will do well to bear in mind the statement of Mr. Spence that, when a fair wage is asked for, it is only fair that a fair day's work is done.

DEVELOPMENT OF TELEPHONES

With the increase in the tempo of industrialisation, the demand for telephones, particularly in urban areas like Bombay and Calcutta, has been steadily expanding. The number of trunk calls handled by the Telephone Department, for instance, has gone up fivefold, that is, from about 7 million in 1950-51 to about 34 million in 1960-61. The total number of telephones in the country has increased from 168,000 to 460,000 during the same period. The third Plan envisages further expansion of telephone facilities in the country. It provides for the addition of 200,000 new direct telephone connections, apart from converting 50,000 manual lines into auto lines. Further, it is proposed to set up automatic exchanges in 45 centres, in addition to the expansion of existing auto exchanges in 32 towns. The programme for trunk telephones provides for the installation of ten trunk automatic exchanges and a number of additional manual trunk exchanges, besides the setting up of 2,000 public call offices. Among the other major telephone projects in the third Plan, mention may be made of schemes for the laying of coaxial cables between Bombay, Madras and Coimbatore, and between Bombay and Nagpur as well as Delhi and Amritsar. The project for laying coaxial cables between Delhi and Bombay as well as Delhi and Calcutta, which was started during the second Plan period, will also be completed.

The Mandvi Telephone Exchange, inaugurated by Dr. P. Subbaroyan, Governor of Maharashtra, last week-end in Bombay, marks an important step in the development of telephones in the country in general, and the city

DELHI LETTER

EXPORT WORRIES ABOUNDING

MR. LALL COMING FOR CONSULTATIONS

From Our Special Correspondent

NEW DELHI, 8th May

THE drive of Mr. Manubhai Shah, Minister for International Trade, to give a new complexion to efforts on the export front has got under way with the initial conferences in the capital between the Minister and export promotion organisations. There is greater conviction here today of Britain's incapacity to negotiate for any significant long-term measures to protect the Commonwealth countries against the erosion of their exports that will follow Britain's entry into the European Common Market. This conviction is strengthened by official reports Delhi has received on disappointments of the Australian Trade Minister in his mission to Britain and Europe.

Mr. K. B. Lall, India's representative at the European Common Market capital, is soon coming to Delhi for consultations and for briefing before Indian representatives go to Cairo to attend the economic conference called by the Government of the United Arab Republic to discuss the effects of the E.C.M. and measures to counter them. Initially, Yugoslavia and the U.A.R., which are sponsoring the conference, had planned to invite about 20 countries but now the scope of the meeting has been enlarged to cover 40 countries, including India and Japan.

Trade Deficit

There is not much gratification over the improved trade balance at the end of the financial year 1961-62 as shown by the preliminary estimates of the Department of Commercial Intelligence and Statistics. This surplus estimates may also be misleading, because of the tendency to report imports on Government account after considerable delay.

The shrinkage in the trade deficit amounts to Rs. 128 crores, brought about by an increase of Rs. 23 crores in exports and a decrease of Rs. 105 crores in imports. The lower imports continued into the first quarter of 1962. What the figures reveal add up to the conclusion that the country has been unable to make any headway yet in laying a permanent basis for increased exports.

During the calendar year 1961, Britain continued to be the best buyer of Indian goods, but its imports from India at Rs. 162.9 crores are the lowest since 1957 (see Table I). In the last ten years, British purchases were higher than in 1961, except in 1957, 1955, 1953 and 1952. Indian imports from Britain in 1961, valued at Rs. 200.3 crores, were lower than in 1960 but higher than in 1959 and 1958.

The London-end figures for Indo-British trade in the first quarter of 1962 show a setback. The total for the three months ended 1962 was £68.3 million, about £13 million less than in the comparable period of 1961. British imports from India in January-March 1962 were £37.3 million, as against £42.8 million in the first quarter of 1961. British exports to India in January-March 1962 were about £31 million, as against £38.5 million in the comparable period of last year. In the first quarter of this year tea, leather, cotton textile goods and other textiles were all affected. Table II shows a fall of more than £4 million in tea exports to Britain. The value of Indian cotton yarn and fabrics, entering Britain in January-March 1962 at £3.1 million was only about 20 per cent of the total British imports of cotton textiles.

In the calendar year 1961, India sold more tea to Britain than in 1960 but earned less money. Thus, Britain bought 281.8 million lbs. of Indian tea in 1961, against 259.9 million lbs. in the previous year but paid £62.417 million, against £63.993 million in 1960. Ceylon exported 160 million lbs. to Britain in 1961 against 151 million lbs. in the previous year and was also able to maintain the prices to earn a slightly higher total return than in 1960.

In jute goods exports to Britain, India's earnings fell from the level in 1960, from about £6.7 million to a little more than £5.5 million. The chief competitor, Pakistan, was able to improve her sales to Britain in 1961, continuing a trend which has developed since 1959.

The higher earnings from jute goods in the past two years have masked the rotten core which is revealed most clearly in our jute goods exports to Australia. According to Australian returns based on her financial year July to June, Indian exports of jute goods to Australia were valued at more than £A12 million in 1956-57, more than £A10 million in 1957-58, about £A9 million in 1958-59 and less than £A8 million in 1959-60. The increase to £A12.4 million in 1960-61 was directly due to the high prices. In the six months ended December 1961 Australia imported Indian jute goods worth a little more than £A4 million.

In wheat flour sacks, India has almost completely lost her Australian market to Pakistan and, in the Australian market, the purchases from India tend to be to the extent Pakistan cannot meet the demand. India has no answer to the 20 per cent export bonus given by Pakistan to encourage jute goods exports. Pakistan has also revised her jute industry expansion plan to add 6,000 looms in the second Plan period against the original target of putting up 4,000 looms.

British imports of Indian cotton textiles in 1961 were also lower than in 1960, valued at £12.94 million against £14.55 million. In tobacco, India fared better than in 1960, but there were setbacks in other traditional items like leather and oilseeds. The setback in oilseeds may be a temporary feature resulting from Indian shortages. For example, since September 1960, there have been no offers of Indian linseed oil in the British market. In the case of leather and leather goods, the decline in imports from India is perhaps a permanent trend, indicating shoe manufacturers' preference for full chrome leather. A new growing competitor is Italy which is supplying quality finished footwear.

Trade with Australia

From the Australian financial year 1956-57, Australia had been running a continuous deficit in trading with India varying from £A12 million in 1957-58 to £A2 million in 1959-60. The unfavourable Australian balance was £A8.8 million in 1960-61, but there has been a tremendous shift in the second half of 1961. In July-December 1961, Australia earned a favourable balance of about £A6 million. This means a £A12 million shift in trade, since, in July-December 1960, Australia ran a deficit of £A6 million.

In the latter half of 1961, Australian exports to India were valued at £A14 million, more than the exports during the whole financial year ended 30th June 1961. Wheat exports in July-December 1961 were £A9 million, far more than £A3.4 million in the whole of 1960-61 and £A7.7 million in 1959-60. In 1956-57, Australia sold India £A15 million worth of wheat.

One of the results of the British plunge into Europe will be an Australian drive to sell more to Asia. Its dairy industry has already conducted surveys of Asian markets. Australia's Trade Minister, Mr. McEwen, has returned home from extensive talks with the British and Europeans, pessimistic about Britain's ability to fight for Commonwealth interests in the Common Market. Australia has a higher standard of living than Britain and European countries and Europe believes Australia can afford to take a knock. Australia will not be satisfied with transitional arrangements phasing its trade out of Europe. Australians call this the "precipice solution" which will see Australia's preferences and free entry into Britain being gradually abandoned. Australia wants a tariff preference quota which will allow preferential entry into the Common Market of Australian exports based on current trade and with an allowance for growth. Australia is asking for much more than the British and the Europeans are willing to concede. At the same time, it is seeking other directions in trade.

An early development stemming from the Australian difficulty is likely to be the recognition of the Peking regime. This is a measure which Trade Minister McEwen is known to have advocated along with other trade and industry leaders, but Mr. Menzies has so far resisted recognising communist China. Now what may be offered in return by Peking for such recognition is a long-term trade agreement. And Australia knows that China is a natural market for years for its surplus foodstuffs.

TABLE I: *Indo-British Trade*

(In crores of rupees)

Year	Indian imports	Indian exports	Balance in India's favour
1952	152.04	126.54	—25.50

(Concluded from previous page)

of Bombay in particular. Put up at a cost of Rs. 145 lakhs, the Mandvi Exchange has a capacity of 7,200 lines to serve the business centres in that area. It is a forerunner of many more exchanges planned to be set up at various centres in Greater Bombay under the long-term development plan of the Bombay Telephones System. The plan seeks to set up 13 new exchanges, which will increase the capacity of the system by 38,000 lines at a total cost of Rs. 12.5 crores.

The implementation of new projects according to schedule will, however, depend, to a great extent, on the availability of exchange equipments, underground cables, etc. At present, there is only one factory in the country engaged in the production of switching equipments for putting up automatic exchanges, namely, the Indian Telephone Industries, Bangalore, a public sector enterprise. Underground cables are also being manufactured by only one producer at Roopnarayanpur, West Bengal. This, too, is a public sector enterprise. It is, therefore, gratifying to hear from Mr. V. Nanjappa, Chairman, Posts and Telegraphs Board, that another telephone factory and a cable factory would be commissioned by the public sector during the third Plan period. The proposed units are expected to go a long way towards meeting the country's growing demands for telephone equipment and reducing the dependence on imports. A point which deserves to be stressed here is that the installation of telephone facilities is only the first step towards catering to the needs of users, for a lot more remains to be done to improve the quality of service. There is surely no point in providing more telephones, if they do not work satisfactorily. In Bombay, for instance, the services offered by the Telephone system leave much to be desired in many respects. Exasperating wrong cables, inordinate delay in attending to complaints, poor performance by the team of workers sent to rectify defects, egregious time lag in submitting bills for trunk calls, sending debit notes to wrong persons, these are some of the serious deficiencies of the Telephones in Bombay that require urgent attention. The Telephone Administration should, therefore, devote greater attention to tone up the operational machinery and step up the efficiency of their services.

AMERICAN LETTER

AN UPSWING IN BUSINESS UNDER WAY

U.S. STEEL DISREGARDS PUBLIC OPINION

From Our Special Correspondent

NEW YORK, 5th May

THE Easter and Passover holidays, which constitute always one of the biggest shopping seasons of the year, set new highs in retail sales throughout the United States. The total volume this year was somewhere between 6 and 10 per cent above 1961. Easter sales are second only to Christmas in importance for the retail field. Thus, economists have been dispelling some of their previous gloom, and they are now more optimistic than they have been for some time on the assumption that a sustained higher retail volume would prove a considerable stimulus to the U.S. economy. So far this is in the realm of hopes rather than facts. The hopes may be well founded, however, since consumer credit, a fairly reliable barometer of buying psychology, has also been gaining momentum. If the current hire-purchase trend continues throughout 1962, consumers would add about $5,000 million to outstanding credit portfolios. About $4,000 million would be of the instalment variety and $1,000 million in single payment loans. This proportion was about the same at the year-end when total consumer credit outstanding was $57,139 million, of which $43,163 million was in the hire-purchase category. The biggest credit spurt has been in loans made for the purchase of new automobiles. An upswing in business seems, again to be under way.

Optimism here seems to be matched by similar buoyancy abroad. Reports reaching this country from nearly all parts of the non-Communist world, notably those from Western Europe, speak of new increases in business activity. Conversely, trade gains were scored in the export markets.

Steel in the Limelight

Actions of the steel industry were again in the limelight. After rescinding price increases, the U.S. Steel paid its regular dividend. It paid out nearly all its earnings. The obvious implication is that there are plenty of reserves left and that the biggest steel producer will get along. After crying publicly how poor they were and that price boosts, thus, were imperative, this move cannot convince the public, by any means, that the industry is right and the Government is wrong. It was another utter disregard for public opinion for which the U.S. Steel has become known, either deliberately or out of stupidity. And this, despite the fact that the Company spends huge amounts of money every year to maintain its own public relations staff and outside counsellors.

There is much emphasis on exports these days to stem the unfavourable balance of payments. The Federal Reserve authorities have also been quite active, with the same purpose in mind, to keep a tight rein on excess bank reserves, so that the short-term borrowing rate of the U.S. Treasury will not fall below the 3 per cent level which has been competing successfully in recent weeks for the investment of funds of foreign origin, as compared with other markets. The outflow of gold continues. Monetary gold stocks have shrunk to about $16,600 million, off about $800 million in the past 12 months.

Oil Companies

As of possible interest to readers in India, and as mentioned in a previous despatch, the African and Asian oil and chemical business of Standard-Vacuum Oil Company has been taken over by Mobil Petroleum Company Inc. with headquarters in New York. The ownership of the new company, as of the old, rests with Socony Mobil Oil Company Inc. and Standard Oil Company (N.J.). Mobil and its predecessor companies operated in the Orient for half a century before Standard-Vacuum was formed in 1933. Mobil acquired direct interests in more than a score of Standard-Vacuum affiliates and branches as a result of the latest transaction. The underlying purpose of these changes is, as Chairman Albert L. Nickerson of Socony Mobil put it, "to decrease our costs, improve our flexibility, strengthen our ability to compete and increase our profits." Socony Mobil, in terms of gross revenues, ranks third after Standard of New Jersey and Royal Dutch Shell.

Two Notable Books

Two rather interesting books will be published here shortly. One is written by G. Warren Nutter, Chairman of the Department of Economics at the University of Virginia. Princeton University Press is publishing the volume for the National Bureau of Economic Research. While the formal title is *The Growth of Industrial Production in the Soviet Union*, it is actually a comparison of U.S. and Soviet economic growth rates.

Some of the findings are that Soviet industrial output has grown at an annual rate of 6.9 per cent during the 1928 to 1955 period "in bare quantitative terms." Territorial expansion added considerably to this rate, the author suggests. One half of the expansion is attributed to expanded employment, and the other half to improved labour productivity.

Dr. Nutter notes that Soviet industrial growth is not exceptional. The absolute figures show up less favourably for the Soviet Union. The author says that in total "value added" by industry, measured by 1954 prices, the difference between the two countries was $30,000 million in 1913, about $56,000 million by 1928 and the gap widened to $56,000 million by 1955, the latest year covered by the study.

The suggestion is, thus, made that the Soviet Union has been progressively falling behind the total U.S. industrial production in absolute terms. Economic growth rates tend to retard as societies grow older, it is pointed out, and since the earlier years of the Soviet Union some retardation of the growth rate has been discernible.

The second book will be published this autumn. It was written by Prof. Robert C. North of Stanford University, California, about his old friend, M. N. Roy, or Narenda Bhattacherji, the Brahim revolutionary who started as an anti-British rebel in India during the First World War, subsequently became a top-level Communist and in his later years turned away from Communism and headed a "radical humanist" movement.

Prof. North conducted a three-Continent search for documents and papers. Mr. Roy had a Rockefeller foundation fellowship. He died suddenly of a stroke in 1954, survived by his third wife, an American girl, who lived in Dehra Dun, India, until "her mysterious murder last year," according to the book.

Mr. Roy's philosophy, Prof. North maintains, laid the foundation for today's split in Communist ideology between Moscow and Peiping. The first book is a series of volumes to be published by the University of California Press. Among many other sources, Prof. North studied the 26 volumes of *Hindu Conspiracy in the India Office* at London in which hundreds of pages are devoted to Mr. Roy's exploits.—*All Rights Reserved.*

STERLING AREA RESERVES

The central gold and convertible currency reserves of the Sterling Area rose by £7 million during April and stood at £1,240 million as on 30th April 1962. Britain repaid £25 million to the International Monetary Fund on 30th April. Had it not been for this special factor, the rise in the central reserves during April would have been some £32 million. There must clearly have been a strong tide of gold and convertible currencies flowing into the reserves during April, as may be deduced from the consistent strength of sterling in the foreign exchange markets. Further evidence of this is to be found in the reduction of the Bank Rate on 26th April which was made possible by the continued strength of sterling during the first quarter of the year.

One of the three Wellman 280-ton Ladle Cranes teeming at Durgapur. On the right is the battery of seven 200-ton Fixed Open Hearth Furnaces designed and constructed by Wellman for Durgapur Steelworks.

WELLMAN

OFFER COMPLETE SERVICES IN MECHANICAL HANDLING EQUIPMENT

For over 50 years Wellman Smith Owen have been engaged in pioneering and developing Mechanical Handling Equipment for diverse industries and particularly for Steel Plants. During this period they have studied every aspect of the subject and have many outstanding inventions to their credit.

Lately, as a member of the ISCON Group, Wellman Smith Owen designed and supplied 33 cranes including seven 150-ton and three 280-ton Ladle Cranes and two 200-ton Ingot Stripping Cranes, for the Durgapur Steelworks.

Wellman Smith Owen Handling Equipment is specially developed and designed to withstand the most severe working conditions and give continuous reliable service with minimum maintenance.

In additionto this, the Wellman Incandescent Group are also specialists in Industrial Heat Engineering. They design and erect a very wide range of furnaces, ovens etc., for use in diverse industries and are now in a position to manufacture progressively in India many products, which hitherto, have had to be imported.

FERTILISERS—KEY TO INDIA'S FOOD PRODUCTION

NEED TO BRING DOWN PRICES

By V. S. Swaminathan

AGRICULTURE is the Achilles heel of Indian economy. By 1965-66, India's teeming millions would clamour for some 110 million tons of foodgrains a year. And, at the current rate of increase, domestic production would yield only 82 million tons at the end of the third Plan period. Imports simply cannot cover a deficit of this magnitude which is virtually 25 per cent of the minimum total quantity needed. Moreover, they hurt India in two ways. She has to part with precious foreign exchange to pay for food, and this drain leaves little room for flexibility in regard to her transport, power and industrial development programmes. Secondly, Commonwealth exporters of foodgrains are understandably annoyed when developing countries are provided with the United States surplus agricultural products at well below world prices.

In 1959, a group of experts from the Ford Foundation published a report entitled *India's Food Crisis and Steps to Meet It*, wherein they urged that the food problem must be treated as an operation of war by giving top priority to agriculture. For achieving the goal in view, the use of improved seeds, proper irrigation, application of plant nutrients (fertilisers), improved farming practices and enlisting the aid of plant protecting agents, such as weedkillers and pesticides—all have their place.

Since India's available cultivable area is strictly limited, one important method by which increased crop production can be obtained is the adoption of more intensive methods of cultivation. An increased use of fertilisers is the quickest and most economic single means of doing this. India's average yields of staple crops are among the lowest in the world. With rice and wheat, whereas the world averages are 1,512 lb./acre and 1,064 lb./acre, in the case of India they are only 770 lb./acre and 657 lb./acre. Also the country's consumption of fertilisers is very low indeed—one lb./acre against 10 lb./acre in North America and 29 lb./acre in Europe. India's very backwardness in these directions may well prove an asset, since it would take a long time before the law of diminishing returns begins to operate.

Need for Trained Personnel

While the proper conservation and use of indigenous resources of organic and green manures is important, their employment alone will not suffice to provide all the nourishment required by crops. The answer to India's food problem lies in establishing large-scale fertiliser manufacturing facilities locally. The three major nutrients are nitrogen, phosphates and potash. For getting the best results, they have to be supplied in balanced proportions, the quantities of each resting upon the crop and soil conditions. There is crying need, at the same time, for large-scale training of operatives, supervisors and technicians and adequate field education to ensure that the farmers are ready to utilise all the fertiliser capacity as soon as it becomes available.

The active constituents of plant nutrients are generally referred to as nitrogen (N), phosphorus pentoxide (P_2O_5) and potash (K_2O). The most common synthetic nitrogenous fertilisers are calcium nitrate, ammonium nitrate, ammonium sulphate, the double salt of ammonium sulphate-nitrate, calcium cyanamide and urea. The normal phosphatic fertilisers are superphosphate, dicalcium phosphate, triple superphosphate, calcium metaphosphate and magnesium phosphate. The potassic fertilisers comprise potassium chloride and sulphate. Also, ammonium phosphate and nitrophosphates are two compound fertilisers of great and growing importance. There are promising prospects of India becoming self-sufficient in nitrogenous fertilisers. Her resources of phosphatic minerals are meagre, and of potash negligible. In this survey, we are concerned with nitrogenous fertilisers only.

The first Indian plant for the fixation of atmospheric nitrogen was installed at Belagula in Mysore just before the Second World War. It had a daily capacity of 5 tons of ammonia and 20 tons of ammonium sulphate. A second unit was set up in Alwaye in Kerala in 1946, with an installed capacity of 40 tons of ammonia, and 150 tons of ammonium sulphate per day. The Fertilisers and Chemicals, Travancore (FACT) operating this plant used the wood gasification technique of producing synthesis gas for ammonia. Since this process was found by experience to be uneconomical, FACT are now to produce the necessary hydrogen by electrolysis of water and gasification of liquid fuels such as petroleum naphtha. The oil gasification plant, being erected at present, as part of the second stage of expansion, was designed and supplied by Power Gas Corporation.

Among plants that will be installed by FACT during the third stage of expansion, Power Gas Corporation will be supplying the ammonia synthesis plant and ammonium sulphate plant. The end products will be 200,000 tons of ammonium sulphate, 135,000 tons of ammonium phosphate and 5,000 tons of ammonium chloride.

Sindri

In 1944, the Indian Foodgrains Committee recommended the establishment of a large fertiliser factory with a daily output of 1,000 tons of ammonium sulphate. At the invitation of the Government of India, a British Technical Mission visited the country, with G. C. Gowing of I.C.I. Ltd. as chairman, J.G. Rig, also of the I.C.I. Ltd., and T. H. Riley of Power Gas Corporation, representing the British Chemical Plant Manufacturers' Association. Following its investigations and report, the State built a large fertiliser factory at Sindri on the bank of the Damodar River. Commissioned at the end of 1951, this factory had been providing the bulk of nitrogenous fertilisers produced in the country.

With a view to enlarging Sindri's capacity, the Government of India deputed a Fertiliser Mission to visit modern plants in various foreign countries, including Britain, the United States, Canada, Germany, France, Italy and Japan, and suggest the products to be manufactured at this factory. This expansion programme was recently put through for a daily output of 70 tons of urea and 400 tons of double salt. The Sindri factory's production is running well below capacity, because of chronic raw material and power shortages, and lack of adequate preventive maintenance of plant and equipment.

At the commencement of the second Plan, the Union Government set up another expert body to select suitable locations and the pattern of production during the period. As a consequence, three new units at Nangal, Rourkela and Neyveli are going up. The Nangal plant is to produce both fertilisers and heavy water, the latter for the atomic energy programme. The hydrogen required for the ammonia synthesis is obtained by the electrolysis of water.

IWT/IOB-1819

The raw material for ammonia production at Rourkela is coke oven gas. Contract for the construction of plants for extracting hydrogen from coke oven gas and for ammonia synthesis has been awarded to Uhde of West Germany. The rest of the installation for processing ammonia to nitro-chalk and its storage and packing has been entrusted to Sindri Fertilisers and Chemicals. Ansaldo of Italy and Pintsch Bamag Linde of West Germany have won contracts for the construction of the Neyveli urea unit. Sahu Chemicals have started production of ammonium chloride at 120 tons a day. Finally, global tenders for the supply of plant and equipment for producing urea and nitrophosphate at Trombay were under scrutiny early in 1960. At that time India's installed capacity for the production of nitrogenous fertilisers was 133,400 tons in terms of nitrogen. When the new plants at Nangal, Rourkela, Neyveli, Alwaye, Trombay and by Sahu Chemicals are in production, the total will go up to around 400,000 tons of nitrogen a year. Even this figure is deemed inadequate to meet the country's growing needs of this fertiliser.

During the past four years the Development Council for Acids and Fertilisers, and other organisations interested in the use of plant nutrients, had, therefore, been urging the adoption of still higher targets for nitrogen production during the third Plan period. They have favoured the attainment of an annual output of 1,200,000 tons of nitrogen by 1965-66. Its fulfilment will call for an annual capital outlay of the order of Rs. 240 crores. The benefits that will accrue from such investments are brought out in Table A (*vide* page 867) where a comparison is made with alternatives of importing nitrogenous fertilisers or foodgrains.

Fertiliser Technical Committee

The Government of India set up a Fertiliser Technical Committee to examine the economics of manufacture of fertilisers at suitable locations in the different States, and prepare preliminary project reports for organising production at various centres. They also established the Indian Fertiliser Corporation entrusted with activities relating to most new units such as: (a) setting up a design office for drawing up specification of plant and equipment on the basis of which tenders could be invited; (b) organising a construction team for the erection of new fertiliser factories; (c) operating such plants, and (d) establishing a research station for carrying out investigations on the production and application of fertilisers.

The supply of nitrogenous fertilisers, imports and domestic production (present and prospective) is shown below:

Supply Position of N. Fertilisers

(In tons)

Year	Imports	Domestic
1961	29,000	10,541
1958	92,000	76,850
1959	138,000	80,000
1960	150,000	110,000
1966	Nil	1,210,000

As the price per ton of nitrogen fertiliser is around Rs. 1,500 (in terms of nitrogen), the total value of the quantities of this plant nutrient planned for production during the third Plan period represents a substantial addition to national wealth.

The Government of India have licensed a fertiliser capacity of a little over 1,100,000 tons, in terms of nitrogen, as shown below:

Location	Raw material	Output of nitrogen (In tons)
	PUBLIC SECTOR	
Sindri	Coal	
Nangal	Air	117,000
Rourkela	By-product gas	80,000
Trombay	Refinery gas/Naphtha	120,000
Neyveli	Lignite	90,000
Alwaye (FACT)	Naphtha	70,000
Nahorkatiya	Natural gas	80–85,000
Goralchpur	Naphtha	82,500
Durgapur	By-product gas	80,000
Gujarat	Refinery gas	58,000
Bhilai/Durgapur	By-product gas from steel plants	80–90,000
		10,000
	PRIVATE SECTOR	
Visakhapatnam	Refinery gas	
Hanumangarh	Gas/Naphtha/Lignite	80,000
Katni or Hazi	Coal or Naphtha	80,000
Banaras	By-product gas	80,000
Ennore	Naphtha	20,000
Jamshedpur/Buroupur	By-product gas from steel plants	9,000
Kothagudam	Coal	15,000
	Total	80–90,000
		1,100,000–1,150,000

The U.N. Fertiliser Mission, which visited India early in 1961, reported that the implementation of the nitrogenous fertiliser production programme would call for quick decision and action. After analysing the time schedule of Sindri, Nangal, Trombay, Neyveli, Rourkela and other fertiliser projects, this mission pointed out that it takes 52 to 71 months to complete a fertiliser project in India, whereas between

BETWEEN DISINFLATION AND REFLATION

By W. T. C. King

EDITOR OF *THE BANKER*, LONDON

THE budget that Mr. Selwyn Lloyd, Britain's Chancellor of the Exchequer, introduced on 9th April has been generally rated a dull budget, and it has also come under pretty heavy fire from commentators of the expansionist school. This year, however, comments such as these may be regarded by more orthodox observers as tributes rather than serious criticisms—and, conceivably, they may have been so received by the authorities themselves.

Early this year, it had been feared that the Chancellor might feel it necessary to use this budget to reinforce still further the strong disinflationary monetary and fiscal restraints applied last July. But, as data became available for mid-winter production and employment, it appeared, as I noted in my last letter, that the economy had reacted to the disinflationary pressures rather more significantly than had at first been expected. From that moment, fears of a new dose of disinflation through the budget disappeared, and soon were being replaced, in some circles, by hopes of deliberate reflation.

In the event, the Chancellor obviously remained determined to ensure that the economy retained the benefit of the room for manœuvre that had been created by last year's disinflation, and so stuck closely to the precept emphasised earlier in the year—that the pace of re-expansion must be, very largely, governed by the pace at which exports grow. In other words, whilst Mr. Lloyd saw no need to use the budget to curtail the demands on the economy still further, he equally could find no justification for injecting any considerable fiscal stimulus. What was needed was a budget that made hardly any net change, in 1962-63, of less than £10,000,000—on a revenue total of very nearly £6,800 million.

Constructive Changes

The tiny net effect of the Chancellor's proposals on the revenue yield conceals, however, some significant and mostly constructive changes in the pattern of taxation and one major innovation that most city observers are bound to regard as undesirable and destructive. This innovation, foreshadowed during the measures of last July, extends the existing structure of income-tax, surtax and profits tax to cover short-term capital gains from dealings in certain assets—of which the most important are stock exchange securities, commodities, currency, and land and buildings. For land and buildings, a short-period gain will be the one arising where acquisition and resale both occur within three years or less; for other assets the period will be six months or less. Losses arising from similar transactions may be offset against gains and may, if necessary, be carried forward and the tax will not be retrospective.

The new provisions will not apply to capital gains regarded as accruing as profits from a trade or profession (since these are already liable to tax as such); nor will they extend to non-residents.

The detailed rules, so far as their meaning is yet apparent, make the new tax somewhat less onerous than had been rumoured, but they have not sufficed to allay the City's fears that a resultant curtailment and distortion of certain types of stocks exchange transactions may considerably impair the flexibility of the capital market. The points most likely to be affected are the new issue market, especially in risk securities, and the Gilt-edged market, which is dependent for much of its activity upon the short-term switching operations of institutional funds (some of which will now, apparently, for the first time become liable to tax on any resultant short-term capital gains).

The Chancellor is aware that the taxation of capital gains may have undesirable effects: indeed, he introduced his proposals by emphasising that the most important objection to "a capital gains tax is that ... such a tax would vitiate against saving, genuine investment and economic growth." He, therefore, appears to have satisfied himself that the taxing of "what may loosely be called speculative gains" (they are presumed to be "speculative" because they arrive from transactions opened and closed within the prescribed short period) will not be open to such objections; and he regarded it as necessary for the purpose of producing "a feeling of broad equity of treatment between taxpayers." The revenue aspect of the tax was entirely subordinate; in fact, the authorities have not been able to frame any estimate of its possible yield.

Among the constructive proposals in this budget, by far the most important was that relating to the new "between budgets" regulator introduced by Mr. Selwyn Lloyd 12 months previously. In the 1961 budget, it will be recalled, the Chancellor took powers to vary, by Treasury order subject to Parliament, virtually the whole range of indirect taxation, either upwards or downwards, by a uniform percentage surcharge or rebate not exceeding 10 per cent. This highly important power to alter the fiscal load at almost any time during the year was used to the full as part of the measures of last July, when the 10 per cent surcharge was expected to raise an additional £130,000,000 of revenue in the ensuing eight months (and a still larger sum on a full-year basis).

Sensible First Step

Since the Chancellor had decided this year that the economy was not yet ready for any perceptible net lightening of the power (which otherwise would have run out within a few months), he elected to withdraw the surcharge while reimposing a roughly equivalent volume of taxation by normal provisions in the budget—mainly by consolidating the 10 per cent into basic tax rates (so that the prices of the commodities involved were not affected). He then applied for renewal of the regulatory power, which will thus become fully available again, as soon as the Finance Act is passed, for raising or lowering the whole range of indirect taxes—in spite of the retention of the large block of additional revenue originally provided by it last year.

The other notable change was associated with this operation instead of merely consolidating the 10 per cent surcharge into the basic rates of purchase tax, which is Britain's principal general tax on consumer goods. The Chancellor seized the opportunity to broaden the base of this tax while reducing the spread of its several rates. The broadening was achieved by bringing in expenditure on confectionery, soft drinks and ice cream, while the narrowing will reduce the effective top tax rate from 55 to 45 per cent (of wholesale value) and raise the lowest rate from 5½ to 10 per cent. The narrowing of the discriminatory range of this tax, which has been apt to exert distorting effects on industry, is a sensible first step to get Britain's fiscal system into better shape for competition within the European Common Market.

Although the general strategy of this budget has been cautious, I am myself sure that it was not intended to provide any such disinflationary impulse as some observers have professed to find in it. My own belief is that the Chancellor would certainly have given more considerable immediate tax reliefs if he had not already felt reasonably sure that the economy will this year expand in any case—though not necessarily at the substantial rate that the critics are calling for. The main expansive forces that are in sight already are provided by the certainty of some rise in Government expenditure and the probability of a moderate but increasing increment in personal expenditure. In addition, it is expected that increases in fixed investment in the public sector, in the service industries and in housing will more than offset the decline apparently already under way in manufacturing investment, and that later in the year there will be renewed investment in stocks. It seems clear, however, that the increases in demand foreseeable from these sources will leave ample room for the hoped-for expansion of exports; and, if that expansion occurs, the national product will rise more significantly—provided, of course, that the additional exports are not balanced by additional imports.

On the other hand, if the economy were to show signs of flagging later in the year, there is little doubt that the Chancellor would take steps to stimulate it: he pointed out that "these days" he had many weapons to ensure that the economy is kept in "proper balance"—mentioning the Bank Rate, special deposits, control over bank liquidity, and the indirect tax regulator. Within little more than a fortnight of the budget, the authorities had, indeed, resumed the downward adjustment of short money rates.

The Bank Rate, which, as I explained in my last letter, had been twice reduced in March, from six to five per cent, was brought down to 4½ per cent on 26th April. This is its lowest point since the phase of dear money opened at the beginning of 1960 (when the Bank Rate, after being unchanged at 4 per cent throughout 1959, went up to 5 per cent). This latest reduction, made desirable by the continued flow of mobile international funds towards London, was likewise justified by the room for manœuvre now available in the home economy. But it should not be regarded as a portent that domestic monetary policy is now about to swing into deliberate inflation.

ANDHRA BANK'S PROGRESS STEADY

The Andhra Bank Ltd. (General Manager: Mr. T. R. Bhagavat, Masulipatnam) has maintained steady progress during the year ended 31st December 1961. It is featured by a recovery of Rs. 23.50 lakhs to Rs. 909.13 lakhs in advances in welcome contrast to a decline of Rs. 25.75 lakhs to Rs. 885.63 lakhs in the previous year. Besides this improvement in advances, there has been a sizable rise in investments from Rs. 525.73 lakhs to Rs. 660.80 lakhs. Consequently, the income by way of interest and discount has been higher at Rs. 94.24 lakhs, as compared with Rs. 87.89 lakhs in the previous year. Earnings by way of commission and exchange show a minor improvement of some Rs. 60,000 to Rs. 12.70 lakhs, but income from other sources has been higher by Rs. 1.70 lakh at Rs. 3.52 lakhs. The gross income, therefore, shows an improvement of nearly Rs. 9 lakhs to Rs. 110.46 lakhs. It has, however, been completely wiped off by higher expenses following a rise in both deposits and borrowings from other banks and in operational expenses, and the profit has actually been slightly lower at Rs. 11.02 lakhs as compared with Rs. 11.57 lakhs in the previous year.

Deposits show a rise of roughly Rs. one crore to Rs. 15.79 crores; bank borrowings have gone up by more than Rs. 25 lakhs to Rs. 139.34 lakhs. Consequently, outward interest has increased from Rs. 48.50 lakhs to Rs. 50.31 lakhs. There has been a further perceptible rise in staff expenses from Rs. 32.43 lakhs to Rs. 36.70 lakhs as also in other expenses from Rs. 8.50 lakhs to Rs. 11.43 lakhs, excluding depreciation of Rs. one lakh, as against Rs. 0.80 lakh a year before. More than one-third of the profit—Rs. 4.15 lakhs to be precise, as against Rs. 4.90 lakhs in the preceding year—has been claimed by taxation. The return to shareholders has been maintained at 8 per cent, subject to tax. Reserves get Rs. 3.45 lakhs, nearly the same as in the previous year, leaving a surplus of Rs. 0.13 lakh to be carried forward against Rs. 0.04 lakh brought in.

The table below gives a fair idea of the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount earned	94.24	87.89	70.09	59.67
Commission and exchange	12.70	12.10	12.20	9.50
Other income	3.52	1.82	2.05	0.99
Interest paid	50.31	48.50	39.72	32.56
Staff expenses	36.70	32.43	27.14	23.88
Other expenses	11.43	8.50	7.06	7.07
Depreciation	1.00	0.80	0.74	0.77
Profit	4.15	4.90	4.00	6.48
Provision for taxation	..	..	..	4.01

Advances	57.6	59.9	70.6	57.5
Investments†	41.0	37.8	21.8	36.5
Cash	13.0	15.8	13.5	13.1
Market value of ordinary shares‡ (In rupees)—	1961	1960	1959	1958
High	87.00	85.77	88.75	98.75
Low	88.97	88.32	84.00	86.80

* Subject to deduction of tax.
† Unencumbered portion only.
‡ Of Rs. 100, Rs. 50, paid-up.

The bulk of the improvement in deposits has come from fixed deposits, showing a rise of Rs. 0.81 crore to Rs. 9.09 crores. Savings bank deposits have increased from Rs. 3.20 crores to Rs. 3.27 crores and current and contingency deposits from Rs. 3.31 crores to Rs. 3.42 crores. Investments in Government securities total Rs. 6.60 crores. The ratio of "own funds" to deposits stood at 4 per cent at the year-end. During the year, the Bank opened a branch at Bombay, bringing the total to 74. A pay office was opened in the S. R. Medical College campus at Kakinada in February last.

SIEMENS

Approaching 600 Crores Rupees

With its 230,000 employees, the Siemens Organization is the largest private business enterprise in West Germany and West Berlin. Founded 115 years ago, it is active in practically all branches of electrical engineering. Its production spectrum extends from microminiature semiconductor devices to giant power stations. Over 10,000 employees are engaged in research & development work alone. Often passed down from generation to generation, the experience and knowhow of a highly qualified staff of engineers and technicians have established for the products of the Siemens Organization a worldwide reputation for superior reliability.

The turnover of the Siemens Organization has risen from 120 Crores Rs. in 1951 to 480 Crores Rs. in 1960 and 580 Crores Rs. in 1961. Exports rose by about 12% above last year's figure to over 120 Crores Rs.

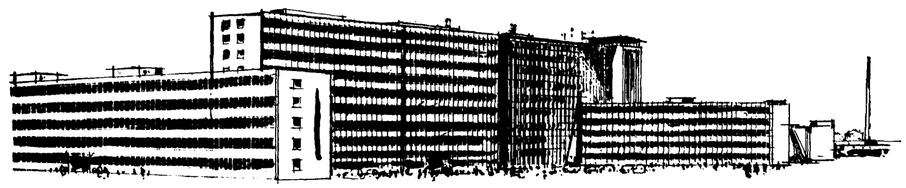
The Siemens Organization has agencies and representatives in 79 countries in all parts of the world. At all branches the services of a staff of technical consultants are always available to customers.

In India, the Siemens Organization is represented by Siemens Engineering & Manufacturing Company of India Ltd.

Summarized Consolidated Balance Sheet of the Siemens Organization as of September 30, 1961 In DM million (DM 1.— = Rs. 1.20)

Assets	30. 9. 61	30. 9. 60
Fixed Assets	874	679
Investments	133	116
Total Fixed Assets and Investments	1,007	795
Inventories (Including Communications Equipment Leased to Customers)	1,393	1,052
Accounts Receivable from Customers	807	720
Other Receivables	406	337
Cash and Other Liquid Funds and Marketable Securities	451	504
Total Current Assets	3,057	2,613
	4,064	3,408

Liabilities	30. 9. 61	30. 9. 60
Capital Stock	520	510
Surplus	653	495
Minority Interests	7	6
Total Stockholders' Equity	1,180	1,011
Reserves for Pensions	498	444
Other Specific Reserves	647	539
Loans and Bank Credits	506	428
Customers' Down-Payments	655	479
Accounts Payable	184	159
Other Liabilities	309	264
Total Liabilities	2,799	2,313
Net Income S & H	85	84
	4,064	3,408



The Communications Research Laboratory of the Siemens & Halske AG in München has a staff of over 3,000, in Erlangen the Siemens-Schuckertwerke AG is at present building a large new research center.

Some of the companies belonging to the Siemens Organization are the following:

Siemens & Halske AG
(All branches of communications technology, including data processing and telemetry, electrical signaling)

Siemens-Schuckertwerke AG
(All branches of power engineering)

Siemens-Elektrogeräte AG
(Electrical household appliances, radio and tv sets)

Siemens-Reiniger-Werke AG
(Medical electronic equipment)

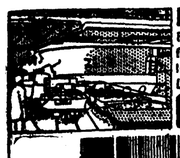
Deutsche Grammophon GmbH
(Phonographs and records)

Siemens-Planiawerke AG
(Graphite electrodes, carbon products for electrothermal and chemical industries)

Vacuumschmelze AG
(Production and processing of special alloys)

Siemens-Bauunion GmbH
(Civil engineering)

Constructa-Werke GmbH
(Full-automatic washing machines)



FERRO-MANGANESE *Vital alloy for steel*

FACOR manufactures high carbon standard grade ferro-manganese, enough to feed every plant and foundry in India . . . and for export that will earn vital foreign exchange

INTERNATIONAL COFFEE SITUATION

F.A.O. FORECASTS HUGE SURPLUS

UNLESS long-term measures designed to restore a balance between supply and demand are adopted, the world coffee market situation by 1965 will have serious implications to the economy of the major coffee producing countries. A clear warning to this effect is given by the U.N. Food and Agriculture Organisation in a special study entitled *The World Coffee Economy*,* published as part of its Commodite Bulletin series. The warning is based on the available evidence which suggests that a substantial coffee surplus is likely to accumulate until 1965 and probably for some years thereafter. No less than 6.6 to 6.8 million metric tons of coffee are expected to remain unsold by the end of 1965 a quantity that represents as much as 145-150 per cent of the anticipated output of 4.4-4.7 million tons during 1965. This estimate is, however, only a tentative one, being subject to annual variations in output in the interim period which, in turn, will be influenced by weather conditions, especially in Brazil, the world's largest producer of coffee. In considering the estimate, one has also to bear in mind the likely impact on consumption of uncertain factors such as tax situation, coffee procurement policies in Eastern Europe, and sales and promotional campaigns.

The huge world coffee surplus of 6.6-6.8 million tons estimated for 1965 is nearly three times the actual 1959-end stocks aggregating 2.84 million tons; the average for the years 1951-53, it may be noted, was no more than 620,000 tons. Such an appreciable increase in the anticipated surplus may appear surprising, because the estimated world coffee output in 1965 is almost the same as the crop actually harvested in 1959. But consumption of coffee in both producing and consuming countries continues to lag much behind production, as is indicated in the following table:

World Coffee Supply at a Glance
(In million metric tons)

	1965*	1959	1957-58	1954-56	1951-53
Opening stocks ..	5.85	1.42	0.84	0.62	0.30†
Production ..	4.55	4.58	3.33	2.61	2.40
Total supply ..	10.40	6.00	4.17	3.23	2.70
Net imports	2.80	2.52	2.34	2.14	1.90
Domestic consumption ..	0.70	0.51	0.41	0.25	0.18
Industrialisation ..	0.20	0.13	..	..	..
Total disappearance..	3.70	3.16	2.75	2.39	2.08
End-stocks	6.70	2.84‡	1.42	0.84	0.62
End-stocks as proportion (%) of production	148	62	45	32	26

* Figures are averages of estimates prepared by the F.A.O.
†Brazil only.
‡ Of this quantity, Brazil alone held 2.66 million tons on 1st July 1960.

Consumption Trend

World coffee consumption over the past half a century, according to the F.A.O. study, shows a rise of about 2 per cent a year compound. The decline in coffee prices after 1958 did strongly stimulate consumption in 1959, but the trend would have been more accentuated if the incidence of import duties and taxes, which is heavy in some countries, had also been lightened. The trend of world coffee consumption in the coming years, we are told, depends essentially on three major variables: rate of growth in real income in the main consuming countries; movements in relative world prices of coffee and changes in Government fiscal policies. The F.A.O. assessment of the prospects for coffee consumption in the importing and producing countries can be summed up as follows:

Importing countries: World imports in 1965 are put within a range of 2.76 to 2.94 million metric tons, an increase of 10-20 per cent above the 1959 level and 25-35 per cent higher than in 1958. This range covers a variety of possibilities, including a reduction in the incidence of coffee taxes in some countries. It is, however, a conservative estimate.

Producing countries: Since price elasticities are likely to be at least as high as 0.6, a fall in relative coffee prices from the 1958 level will, in any event, increase local consumption substantially. Assuming that total real income will rise by some 30 per cent between 1958 and 1965, the total local consumption in 1965 will be about 600,000-700,000 tons, if relative coffee prices are 20 to 40 per cent lower than in 1958. Industrial uses are likely to increase at the rate of 10 per cent annually. The estimate is based on intensified research into industrial uses of coffee in producing countries, especially Brazil. A certain quantity of low-grade coffee is said to have been transformed into fertilisers, oils, feed, etc.

In the considered opinion of the F.A.O., there appears to be good prospects for stepping up "local" consumption of coffee in producing countries by reducing prices, particularly for the inferior grades for which export demand is small and which would otherwise go into stocks. Recalling the Brazilian Coffee Institute's policy (March 1959) of selling old stocks coffee to domestic roasters at prices 30 per cent below the retail price, the F.A.O. feels that similar measures in other producing countries which hold surplus stocks, together with vigorous sales promotion campaigns, may well raise domestic consumption by an appreciable extent.

* *The World Coffee Economy*, published by the U.N. Food and Agriculture Organisation, Geneva. Available in India: Oxford Book and Stationery Co., Scindia House, New Delhi, Pages: 76. Price: $1.00.

The F.A.O. finding reveals that all the coffee trees that will be in substantial production by 1965 have already been planted. The plantings made during the years 1960-62 will also start yielding fruit in 1965, though their effect on total output will be small. Thus, in principle, it should be possible to estimate world crop in 1965 with some accuracy, after making allowance for trees going out of production in the intervening period. There are, however, two major difficulties in estimating the future trend of coffee output to which the F.A.O. study refers. In the first place, inadequate data relating to area under coffee cultivation, number of trees and, most important, age distribution of trees make forecasting hazardous. Even when statistics of area and tree population are available, the figures are known to have a considerable margin of error. Moreover, there are several other important elements affecting yields which are difficult to forecast accurately, such as intensity of cultivation in terms of man-hours worked, fertiliser applied per hectare of plantation, and introduction of new and improved varieties. The second hurdle is absence of any definite historical relationship between price declines and reductions in coffee output; a great deal depends on the phase of business cycle in which the price decline occurs and on the coffee farmers' expectations of world demand. In addition, in some producing countries, Government schemes to restrict output may become of increasing importance in the next five years.

Rise in Output

Subject to the aforesaid uncertainties, the F.A.O. estimates of total world production of coffee in 1965 show a rise of 4.4 to 5.0 million tons. Of this total, the share of Brazil alone is expected to be anywhere between 2.4 and 2.9 million tons, the balance being accounted for by Colombia (460,000-500,000 tons), other Latin American countries (670,000-700,000 tons), Africa (650,000-700,000 tons) and rest of the world 180,000 tons). These levels of output are compared with those in the preceding three seasons, as well as the average for 1950-52, in the following table:

Anticipated Levels of Coffee Output
(In million metric tons)

	Crop year July to June				
	1965-66*	1960-61	1959-60	1958-59	1950-52
Brazil	2.90	1.80	2.65	1.70	1.09
Colombia	0.50	0.48	0.48	0.46	0.36
Other Latin America.	0.70	0.69	0.65	0.59	0.45
Africa	0.70	0.73	0.66	0.60	0.30
Rest of world ..	0.18	0.16	0.14	0.15	0.08
Total ..	4.98	3.86	4.58	3.50	2.28

* The figures are the highest levels of output estimated in the F.A.O. study based on the assumption that producers react in a minimal way to lower prices and that no further restraining measures are taken by Governments.

The estimate of the Brazilian coffee crop is based on the expectations that average yields in Parana will be exceptionally high as a result of the combination of high soil fertility and use of high-yielding varieties. Plans have been drawn up to raise productivity while reducing the number of trees. Provision is made for paying subsidies to farmers who eliminate three low-yielding trees and replant one new tree. It is proposed to eliminate under these plans 100 million trees, one-sixth of the uneconomic trees which together account for 50 per cent of the total existing plants. The capital outlay is put at 3,900 million Cruzeiros. In Colombia also, it is estimated that more than half of coffee plantations in the important Quindio area will require rehabilitation. Costa Rica, El Salvador, Mexico and Peru have reported new plantings since 1955 and improvement in cultivation. In Africa, availability of suitable coffee land at relatively low prices, abundance of labour and, above all, lack of alternative economic crops still make coffee financially attractive.

The Coffee Cycle

Coffee, according to the F.A.O. study, has now entered the downward phase of the cycle, a phase of reduced prices which may persist for a number of years. The problem facing the producing countries is not solely one of adjusting the rate of flow of supplies to the changes in world demand over the next four or five years. It is, additionally, the adoption of long-term policies which will reduce to a minimum the traditional ebb and flow of resources into the coffee sector, as well as allow the progress of economic development to proceed undisturbed by fluctuations in coffee economy. The peculiar position coffee holds in the world economy is described by the F.A.I.O. report as follows:

"It (coffee) is not one of the major agricultural crops, and the value of world coffee production is small in comparison with that of rice, wheat, oils and fats, livestock products or sugar. But the proportion of the world production of coffee which enters international trade is one of the highest of all agricultural commodities, and it is of vital importance to over a dozen countries in Latin America and Africa. Their national economies depend to a varying but substantial extent on this one crop. For these countries, the economic position and prospects of coffee are of profound social and economic importance. The export earnings and prospects of the coffee producing countries are also of major interest to the industrial countries supplying them with manufactured goods."

Coffee is by far the most important single export commodity of Latin America and a number of African countries. It represented over 70 per cent of the total export income (1955-57) for Ethiopia, Colombia, El Salvador and Guatemala, with an aggregate population of 30 million. Even Brazil, with a population of more than 60 million and relatively advanced and complex economy, obtained nearly two-thirds of its total export income from coffee sales.

The income derived from coffee production has generally been higher by a considerable margin on a given area than that arising from most other agricultural activities. Thus, the contribution of coffee to rural incomes has been greater than is indicated by the figures of farm units or land areas engaged in various lines of production. In Colombia, for example, coffee has contributed about 40 per cent of the recorded gross product of agriculture, though under 3 per cent of the total crop and livestock area is devoted to it. Again, in Tanganyika, only a small fraction of the cultivated area is used for coffee, but about 10 per cent of the population depend on the coffee crop for a significant share of their cash income.

Coffee exports contribute substantially to the gross national product of producing countries. The percentage contribution as of 1955-57 is as high as 14 in Uganda and Guatemala, 10 in Costa Rica, 9 in Colombia, 7 in Haiti, 6 in Kenya, 5 in Tanganyika and Dominican Republic, 4 in Brazil and Ecuador and 3 in Honduras. Income from coffee exports has been made to assist other sectors of national economy through taxation. In the majority of producing countries, coffee exports are subject to tax in one farm or another. In general, revenue from coffee taxes has contributed up to 30 per cent of total tax receipts in recent years. In Colombia, the coffee tax in the year ended June 1959 represented about 40 per cent of the total value of exports and more than half of the total Government revenue. Coffee has, thus, been of crucial importance to the economy of several countries in Africa and Latin America.

ANNOUNCEMENT

THE STATE BANK OF JAIPUR

have pleasure to announce the introduction, as from the 1st May 1962, of

SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE.

A deposit relationship with the Bank will entitle the use of the services of any of its 49 offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details

Please contact any office of the State Bank of Jaipur where you will always find a friend.

THE STATE BANK OF JAIPUR

Subsidiary of the State Bank of India

AT THE NATION'S SERVICE

TEXTILE MEN TO MEET PRIME MINISTER

GREY CLOTH ARRIVALS RECEDE

From Our Special Correspondent

MANCHESTER, 1st May

A LANCASHIRE deputation representing all sections of the cotton trade is to meet the Prime Minister on the 15th May. Led by Lord Rochdale, Chairman of the Cotton Board, the deputation is expected to consist of about 12 members, representing employers' associations, trade unions, and the Cotton Board. The deputation will explain to the Prime Minister the serious situation now facing the Lancashire cotton industry, mainly because of imports of foreign cloth. Latest figures show that there are about 5,700 cotton workers unemployed. Nearly 18,000 workers left the industry last year. One point the deputation hopes to stress is the danger of collapse of the Government-sponsored £30-million modernisation scheme, because of a lack of confidence in the cotton industry.

MANCHESTER LETTER

A New Research Finding

A small British research team which set out to investigate the problems of fabric creasing has produced some unexpected results which may have far-reaching effects in the textile industry. The team discovered a simple process by which a completely new range of fabrics made from man-made fibres can be produced. With this process, a wide variety of yarns can be made from any one type of man-made fibre and each yarn is tailor-made to give a fabric with chosen characteristics.

The research which has led to this important development was carried out by a team at the Linen Industry Research Association at Lambeg, Belfast, Ireland, headed by the Director, Mr. D. A. Derrett-Smith, and the Deputy Director, Mr. H. A. C. Todd. After studying the mechanism of creasing, they realised that, to achieve effective and permanent crease resistance, a change in the structure of the yarn itself was needed. As a result, they evolved the new yarns which have an open structure in which each individual fibre is free to move within the yarn. The new yarns are said to be particularly good for machine and hand-knitted garments. They have clarity of stitch and wash without losing shape. They can be made cheaply and quickly on existing machinery, says the Department of Scientific and Industrial Research.

Food for Thought

Any comparisons betweeen the import position at the end of the first quarter of 1962 and the state of affairs ruling in the Lancashire cotton trade 12 months previously must take account of the very substantial change which has occurred in the intervening period. A year ago, it was being suggested that arrivals of cotton cloth from abroad would top the 1,000-million yard mark by the year-end—the first quarter had seen an influx never exceeded before or since; more than 225 million yards had entered British ports.

Subsequent developments showed the folly of taking too much for granted. They also showed the folly of those who had overbought in a period of apparent shortage and created an accumulation which is even now a source of embarrassment to many producers and distributors. By the final quarter of last year, imports had been reduced to 142 million yards and, in the first three months of 1962, they have aggregated 147 million yards.

Grey cloth arrivals so far this year have amounted to 107,497,000 yards, as against the peak of 176,398,000 yards in the same period of 1961. Most of the leading suppliers have taken their share in the cuts imposed by purchasers from this country. India has provided 44,990,000 yards, as against 62,574,000 yards, and Hong Kong 14,776,000 yards, as against 20,158,000 yards. Arrivals from Pakistan, however, have been only 200,000 yards lower than last year at 5,141,000 yards.

The major change in shipments of cotton grey goods from countries outside the Commonwealth has occurred in the large number of undesignated areas, not shown individually in official returns. Purchases from such sources have been severely curtailed, from 54,405,000 yards to 21,893,000 yards. Arrivals from Japan have also been substantially reduced at 6,653,000 yards, as against 16,341,000 yards but France has slightly increased her shipments at 4,077,000 yards.

Apart from the grey cloth section, detailed figures of individual suppliers are not given, but total arrivals of finished cotton fabrics are also lower this year at 39,697,000 yards, as against 48,899,000 yards. In contrast, the quantities of man-made fibre cloth reaching Britain increased by 2 million yards to 20,172,000 yards. Cotton yarn imports show a reduction of 2 million lbs. at 9,748,000 lbs.

The total cost of imports of cotton goods in the first quarter this year was £15,594,081, as against £21,463,879 in 1961. Payments on account of man-made fibre yarns and cloth obtained from abroad amounted to £4,387,213, as against £3,891,027.

Exports Smaller Still

Against this still sombre situation, the failure to regain any ground on the export side cannot be minimised. During the past three years, cotton cloth shipments in each of the first quarters have varied between 82 million yards and 87 million yards, but, in 1962, the total has slipped back to just under 65 million yards. Earnings barely exceeded £9,000,000, as against £11,650,000 in the first three months last year.

Chiefly responsible for this decline in exports are the much lower takings from several West African territories which were at one time British possessions. Business with Nigeria has been more than halved at barely 5 million yards and trade with Ghana and Sierra Leone has also been sharply reduced. Smaller shipments to Australia, South Africa and New Zealand underline the diminishing trade with these markets.

Cotton yarn exports remain in the doldrums and for the first quarter show a fall of 1,000,000 lbs. as compared with last year at 3,536,000 lbs. Australia is now the only country to absorb more than 1,000,000 lbs. during the three-monthly period, but shipments at 1,229,000 lbs. are over 600,000 lbs. lower than last year.

Man-made Yarns Gain

In the man-made fibre branch, cloth exports were only 800,000 yards lower than last year at 12,279,000 yards. Bigger supplies were shipped to Rhodesia and Nigeria, the Irish Republic and Sweden, although Australia, New Zealand and South Africa took smaller quantities.

As a midly encouraging footnote to the doleful tale of diminishing overseas trade, the gains made in supplying man-made fibre yarns to foreign countries deserve due prominence. In the first quarter of 1959, these barely exceeded 10 million lbs.; in the following year, they improved to 12,400,000 lbs.; in 1961, they moved up another 1,000,200 lbs. and this year a further expansion has already taken place to 17,190,000 lbs. Earnings from this source at £6,744,000 are now practically double the 1959 level.—*All Rights Reserved.*

FLEXIBLE PACKAGING that protects your product

Flexible Packaging, because of the protection it offers Physical, Chemical, and Hygienical is a selling asset in today's market. It adds attraction to both Consumer and Industrial Goods to create sales-appeal.

Twenty-seven years of experience in Flexible Packaging and the present collaboration in technical know-how with Milprint, U.S.A., a leading manufacturer of Flexible Packaging in America, equips The Paper Products better today to answer your Packaging Problems.

DIRECTORS' 115th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1961

The Board of Directors of the Bank has pleasure in presenting the audited Balance Sheet as at 31st December, 1961, and the Profit and Loss Account for the year ended that date.

	Rs.	Rs.	*Previous Year* Rs.	Rs.
After providing for taxation and contributing Rs. 12,27,806 to the Employees' Gratuity Fund Trust, the transactions for the year have resulted in a profit (including Rs. 4,23,142 brought forward from the previous year) of		1,22,62,738		68,23,142
Deduct:				
Transfer to Reserve Fund	45,00,000		11,00,000	
Provision for Bonus to Staff	37,50,000		27,00,000	
Provision for Charity and Donations	1,00,000		1,00,000	
Payment of Ad-interim dividend for the year at Re. 1 per share	12,50,000		12,50,000	
		96,00,000		51,50,000
		26,62,738		16,73,142
This leaves the balance for appropriation of				
The Directors recommend payment of final dividend (subject to tax) as under—				
(1) On 12,50,000 shares existing as at the beginning of the year at Re. 1 per share (making a total dividend of 20 per cent. for the year)	12,50,000		12,50,000	
(2) On 7,50,000 shares issued during the year at 50 nP. per share	3,75,000		..	
		16,25,000		12,50,000
Balance to be carried forward to next year's account		10,37,738		4,23,142

The issued Ordinary Capital was increased during the year to Rs. 2 Crores by further issue in September 1961, of 7,50,000 shares of Rs. 10 per share at a premium of Re. 1 per share to the existing shareholders in proportion to their holdings. This capital participates in the dividend of 20 per cent. per annum for one-fourth of the year.

During the year Indo-Commercial Bank Ltd. was amalgamated with the Bank under a scheme sanctioned by the Central Government.

The Directors consider that the working of the Bank continues to be satisfactory.

The Directors place on record their appreciation of the services of Mr. A. M. Walker who has retired as General Manager on 20th December, 1961. Shri Rajendra Lal Tuli has been appointed as General Manager with effect from that date.

The Directors record with deep regret the death on 27th December, 1961, of their colleague, Sardar Bahadur S. Mohan Singh. The Board places on record its appreciation of the very valuable services rendered by him to the Bank

R. B. Dr. Maharaj Krishna Kapur, Shri Chiranji Lal Bajoria and Shri Ashok Kumar Jain will retire at the forthcoming Annual General Meeting.

Shareholders are requested to appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,

7th March, 1962. R. N. GOENKA, *Chairman.*

BALANCE SHEET AS AT 31st DECEMBER, 1961

1960 Rs.	CAPITAL AND LIABILITIES	Amount Rs. nP	Total Rs. nP
	1. Capital—		
2,00,00,000	AUTHORISED CAPITAL— 20,00,000 Shares of Rs. 10 each		2,00,00,000.00

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Limited, as at 31st December, 1961, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in New Delhi, in which are incorporated the unaudited returns of the Bank's branches in Indian Union, Pakistan and Burma none of which were visited by us. Under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, the Central Government by an order dated 15th December, 1961, has exempted all the branch offices of the Bank from the provisions of sub-sections (1) and (3) of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are, therefore, drawn up in conformity with Forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) *in our opinion* and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Monza, Nurburging, Aintree... These Names Spell

SAFER, MORE DURABLE TYRES FOR YOU!

The winning Ferrari, fitted with Dunlop tyres, on the rain-soaked Aintree track during the 1961 British Grand Prix.

Taking a driver and car safely over wet racing circuits at over 170 m.p.h. is just one of the many superlative feats performed by Dunlop Road Racing tyres. Dunlop have equipped the winning cars at Le Mans, Monza, Nurburgring and in every other Grand Prix motor race in the world for the last three years running... Unequalled experience which enables Dunlop to make safer, more durable tyres for your car... Tyres that will render maximum safety at all times, and give you long, trouble-free mileage.

DUNLOP Gold Seal

CAR TYRES FOR TOP MILEAGE & SAFETY

PRODUCTION OF WHITE CEMENT

NEW PROCESS DEVELOPED

WITH the large expansion in constructional activity envisaged in the third Plan, the demand for white cement, which is used for mosaic tiles, decorative fixtures and for the manufacture of coloured cements, is bound to go up. Till very recently, the entire requirement of white cement in the country was met from imports. In 1957, 5,041 tons of white cement, valued at Rs. 10.5 lakhs, were imported. In the following year (1958), white cement was produced for the first time in the country. Production during that year amounted to 2,289 tons, valued at Rs. 2 lakhs, as against a production capacity of 7,000 tons which increased progressively, to 17,000 tons in 1961. Actual production too increased correspondingly and in fact touched as much as 18,220 tons in 1961. Reflecting the rise in indigenous production, imports declined from 5,041 tons in 1957 to 770 tons in 1960.

An additional capacity of 41,500 tons per annum has been licensed by the Government, but, in view of the rising tempo of construction activity, the demand for white cement is expected to increase faster. One of the main difficulties experienced so far in the manufacture of white cement indigenously has been the limited availability of one of the principal raw materials, namely, low iron white clay and the consequent high price. A new process developed at the Regional Research Laboratory, Hyderabad, by using potash felspar, limestone and gypsum for the manufacture of white cement bids fair to be a major breakthrough in white cement production in the country. All the three materials mentioned above are available in plenty in many States. All of them are found in Madras, Andhra Pradesh and Rajasthan, while two are available in Kerala, Madhya Pradesh, Gujarat, Mysore, Bihar, Uttar Pradesh and Orissa. Since the States of Gujarat and Kerala have already white cement factories, Rajasthan, Madras and Andhra Pradesh offer the best promise for starting additional factories. A useful by-product of the process, it may be noted, is potassium sulphate, which is a valuable fertiliser.

The new process consists of sintering the raw mix at 900-1050° C., leaching out potassium sulphate formed and clinkering the sludge at 143° C to yield white cement. The leach liquor is treated for recovering commercial grade potassium sulphate. Run-of quarry limestone and felspar are subjected to primary crushing in jaw crusher, reduced to about 22 mm. in secondary crushers and stored in bins. The sized limestone, felspar and gypsum are fed into separate hoppers by an electric travelling grab crane. Felspar and gypsum are charged to the conical mills, in required proportions by weight feeders. When ground to 60 mesh the materials are passed through dry magnetic separators and fed to the two and feed central discharge silex-lined tube mill from one end. Weighed quantity of limestone is simultaneously fed to the tube mill from other end. The common discharge is passed through a turbo-separator and the material of the desired size, 90 per cent passing 170 mesh B.S.S., is homogenised and stored in raw metal silos; the oversize material being fed back to the tube mill.

The raw meal and water (12-14 per cent by weight of meal) are fed to nodulizer, which is controlled to give nodules of about 12 mm. diameter. These are sintered in an oil-fired rotary kiln at 900 to 1050° C. The material coming out of the kiln is quenched in a continuous, silex-lined pebble mill and wet ground in close circuit with a bowl classifier. The slurry is stored in concrete storage tanks with agitators. The slurry containing potassium salts in solution is leached with open steam in concrete tanks having agitators. The contents are kept boiling for about an hour. The slurry having 30 per cent solids by weight is filtered in wooden plate and frame filter presses. The cake is washed twice with water and the last washing is used in the quenching pebble mill. The leach liquor is stored in copper lined neutralising tanks. The washed cake is clinkered in an oil-fired rotary kiln at 1430° C. The clinker is cooled in a water jacketted screw conveyor type cooler and stored. Alongwith the required quantity of gypsum the clinker is ground in a silex-lined tube mill to obtain cement, 94 per cent passing 170 mesh B.S.S. The cement is stored in silos and packed as and when required.

The leach liquor is neutralised with calculated quantity of sulphuric acid in copper-lined agitated vessels. The neutral solution is concentrated from 1.5 to 20 per cent in a double effect evaporator and fed to a continuous crystalliser. The crystals are separated in a centrifuge and the mother liquor is recycled. The crystals are dried in a rotary drier and packed.

In this process, potash felspar is used in place of china-clay for obtaining good quality of white cement. Normally, china-clay of superior quality, free from iron, has to be used. Moreover, felspar is found more extensively and is cheaper than good quality china-clay. Using potash felspar as the starting material, an important by-product, potassium sulphate, is obtained which is required in large quantities as a fertiliser. A 50-tonnes per day white cement plant will produce nearly 1,000 tonnes of potassium sulphate per year which is quite a significant amount in view of the fact that imports of potassium sulphate during 1960-61 amounted to nearly 11,000 tonnes costing Rs. 35.44 lakhs. There is an advantage derived from the considerable difference in the cost of felspar and china-clay. This, in the final analysis, makes the process more economical. Further economy could be affected by the use of a sinter machine in conjunction with a rotary kiln and the utilisation of waste heat of the kiln for sintering operation. Besides, such an approach would from the standpoint of engineering bring this process on par with the ordinary portland cement process using Lepol Kiln system.

Work on production of white cement from felspar was sponsored by the National Research Development Corporation of India at its Regional Research Laboratory at Hyderabad. The pilot plant consisted of (i) jaw crusher, (ii) porcelain-lined pebble mill, (iii) pilot rotary kiln, (iv) glass-lined steam-jacketted leaching pan and (v) plate and frame type filter press. The pilot cement kiln, 360 cm. long and 30 cm. internal diameter, consists of a burner hood, rotary shell and a dust chamber. The kiln is lined with high-alumina fire-bricks. The drive consists of a P.I.V. infinitely variable reduction gear connected to the kiln shaft by a chain. The discharge spout located in the burner hood is attached to a stainless steel water jacketted twin shell clinker cooler. Raw materials required (limestone, felspar and gypsum) for the work were all obtained from Rajasthan.

A calculation of the cost of production has been made by the Corporation on the assumption that the plant will be located at Jaipur. According to it, the cost of production of white cement in a 50-tons-per-day capacity plant is about Rs. 204.58 per ton. The market price of indigenous and imported white cement ranges from Rs. 300 to 450 per ton. If white cement is manufactured in a bigger capacity plant, the production cost will obviously be less. The cost of production is expected to go down further, if the hot exit gases from the clinkering kiln with some additional heat are used in the sintering operation which can be carried out in a sinter unit. This alternative reduces the total fuel consumption from 18 tons to about 11 tons per day. In this case, there is no waste heat boiler and the cost of steam, therefore, increases.

Taking the above factors into consideration and assuming the cost of plant and machinery to be unaffected (although a sinter machine is cheaper than a rotary kiln), a net saving of Rs. 840 is effected in the daily cost of production. This reduces the cost of production per ton of cement from Rs. 204.58 to about Rs. 190.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

THE ANDHRA BANK, LIMITED

(Established 1923)

Annual Report of The Directors for the year ended 31st December, 1961.

To be presented to the Shareholders at the 38th Annual General Meeting to be held at the Registered Office of the Bank, 11/526 Cantonment Road, Masulipatnam, on Friday the 4th May 1962, at 3.00 p.m.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet of the Bank as at and Profit and Loss Account for the year ended 31st December, 1961. The Auditors' Report is annexed.

The net profit of the Bank for the year 1961 amounted to Rs. 10,97,044.02 nP. after payment of one month's substantive pay as Bonus to staff. Adding to this a sum of Rs 4,822.85 nP. brought forward from the previous year's account and Rs. 74.89 nP. being excess dividends provided for the year, 1960 the total amount available for appropriation came to Rs. 11,01,941.76 nP. Certain appropriations have already been made out of this amount and we propose to make further appropriations as per details given below :—

Appropriations made :	Rs.	nP.
Transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949 ..	3,30,000	00
Provision for Taxes	4,15,000	00
Transfer to Gratuity Fund	10,000	00
Appropriations now proposed :		
To pay a dividend at 8 per cent per annum (Subject to Tax) for the year 1961 ..	3,34,000	00
To carry forward to the next year's account	12,941	76
Total .. .. Rs.	11,01,941	76

The business of the Bank continued to be satisfactory during the year under review.

The Official rate of the Reserve Bank of India remained at 4 per cent per annum during the year.

A Branch of the Bank was opened at Bombay during the above period. A Pay Office was opened in the S. R. Medical College compus at Kakinada in February 1962.

Under Section 197 (A) of the Companies (Amendment) Act, 1960, Sri T. Sriramulu ceased to function as Managing Director with effect from 28th June 1961, and he was co-opted as Director on the same day.

Under Section 256 of the Companies Act, 1956, read with Article 94 of the Bank's Articles of Association, Messrs. K. S. Dutt, M. Ranganath Sai, D. Bhaskararao and Sri T. Sriramulu, Directors retire by rotation and being eligible offer themselves for re-appointment.

You are requested to appoint Auditors to hold office till the conclusion of the next Annual General Meeting and to fix their remuneration.

By Order of the Board,

K. S. DUTT
S. RAMACHAR
V. PARTHASARATHI } *Directors.*

21st March, 1962.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Andhra Bank Limited as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Returns from 55 Branches audited by us and 19 Branches audited by other Auditors.

We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) the reports on the accounts of the branches audited by the other Auditors have been forwarded to us and the same have been considered in preparing our report;

(f) in our opinion and to the best of our information and according to the explanations given to us the said Accounts and the notes thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

A copy of the Prospectus has been filed with the Registrar of Companies, Madras State, for registration together with the documents specified in the Prospectus as required by Section 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order No. R-387-C.C.I./61, dated 14th November 1961, of which a complete copy is open to public inspection at the Registered Office of the Company at Tiruchirapalli. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence was obtained from the Central Government originally for the establishment of this Industrial Undertaking at Vadalur; subsequently the Central Government's sanction was obtained for changing the location of the factory to Tiruchirapalli. Copies of the original and amended licences are open to public inspection at the Head Office of the Company. It must be distinctly understood that *in granting these licences, the Government of India do not take any responsibility* for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Madras Stock Exchange Limited has agreed to grant official quotation for the shares of the Company and permission to deal in them will be granted on the Company complying with the usual and necessary formalities after the closure of the subscription list. An application is also being made to the Bombay Stock Exchange Limited to grant official quotation for the shares of the Company and permission to deal in them will be granted on the Company complying with the usual and necessary formalities.

The subscription list will open at 10·30 a.m. on Thursday the 17th May, 1962, and will close at 4 p.m. on Thursday the 24th May, 1962 or earlier as soon as subscriptions approximating to the amount issued hereunder to the public have been received, but not earlier than 4 p.m. on Monday the 21st May, 1962.

15,000 9% Cumulative Redeemable Preference Shares of Rs. 10 each subject to tax at Rs. 10 per share..	1,50,000	
		5,35,000

Out of the Issue of Preference Shares of the face value of Rs. 3 lakhs, INSURANCE COMPANIES have subscribed for Rs. 1.5 lakhs face value of Preference Shares between them.

Out of the above Issue of Equity Shares, the Signatories to the Memorandum have subscribed for 27,000 Equity Shares. The Directors of the South Madras Industrial Development Company Private Limited, who are the sponsors and Managing Agents, their friends and associates and the Directors of the Company have, together with the firm allotment of Rs. 3,75,000 reserved for the LIFE INSURANCE CORPORATION, subscribed or agreed to subscribe 87,500 Equity Shares of the face value of Rs. 10 each.

The Company has signed Heads of Agreement with the COMMONWEALTH DEVELOPMENT FINANCE COMPANY LIMITED (CDFC) London under which it is provided that CDFC will subscribe for 66,667 Equity Shares of Rs. 10 each amounting to aggregate face value of Rs. 6,66,670. Accordingly, 66,667 Equity Shares are reserved for subscription by CDFC.

OFFER FOR PUBLIC SUBSCRIPTION:

15,000 Preference Shares of Rs. 10 each	Rs. 1,50,000
1,38,833 Equity Shares of Rs. 10 each	Rs. 13,88,330

The Preference Shares now offered to the Public in terms of the Prospectus are payable on application in full at par in cash.

The Equity Shares now offered to the Public in terms of this Prospectus are payable at par in cash as follows:

On application	Rs. 2.50 per share
On allotment	Rs. 2.50 "

The balance of Rs. 5 is payable and will be called up in two equal instalments, the first call being not earlier than three months after the date of allotment and the second call not being earlier than three months after the date of the first call.

THE ENTIRE BALANCE OF THE ISSUE, NAMELY 1,38,833 EQUITY SHARES OF THE FACE VALUE OF Rs. 13,88,330 AND 15,000 PREFERENCE SHARES OF THE FACE VALUE OF Rs. 1,50,000 NOW OFFERED TO THE PUBLIC HAVE BEEN FULLY UNDERWRITTEN.

REGISTERED OFFICE

No. 1, ALEXANDRA ROAD, CANTONMENT, TIRUCHIRAPALLI-1.

OBJECTS

The Company was incorporated on 27th September 1961 for the several purposes set forth in the Memorandum of Association.

The following are the main objects of the Company:

(a) To carry on the business of manufacturers, importers, exporters of and dealers in all kinds, types and sizes of industrial and domestic meters, measuring and recording instruments, gadgets, tools and implements, indicators, pointers and their components and accessories required for electric, electronic, mechanical, automobile and aeronautic machinery and appliances.

(b) To manufacture, sell and deal in all kinds of single-phase and polyphase meters in collaboration with Denis Ferranti Meters Limited and to enter into, secure and obtain licensing arrangements with them for continuous production and sale of

meters manufactured under their Patent and technical collaboration.

PROSPECTS

The present demand for single-phase meters is estimated at the neighbourhood of ten lakhs and polyphase meters at one lakh. It is estimated that during the Third Five-year Plan period, the annual demand will increase considerably, reaching a figure of nearly 16 lakhs of single-phase meters and 4 lakhs of polyphase meters. The present production of single-phase meters is about 4.80 lakhs per year while no polyphase meters are yet manufactured in the country.

It will thus be seen that the entire production of meters in this country, both present and potential will hardly be adequate to meet even a part of the estimated demand and the meters produced will find ready market. The prospects of a factory for the manufacture of meters in India at the present juncture are, therefore, considered very bright indeed.

The initial production capacity of the Company on a single-shift basis is 60,000 single-phase meters and 20,000 polyphase meters per year and the Company will work to installed capacity even from the very inception and this output is expected to be absorbed without any difficulty.

TECHNICAL COLLABORATION

The Company is very fortunate in having secured technical collaboration of **Messrs. Denis Ferranti Meters Limited**, Bangor, North Wales, United Kingdom, one of the units of the **Denis Ferranti** group of industries. This is one of the world-renowned companies manufacturing in United Kingdom integrating electricity meters for over a quarter century under the personal direction of Mr. Denis Z. de Ferranti. Designed to meet the exacting requirements and standards of the British Electricity Boards and overseas markets, the products manufactured by **Messrs. Denis Ferranti Meters Limited** embody unique features, which place the products in the forefront of modern meter designs.

Under the agreement, the Collaborators have agreed to assist this Company to plan the layout of the factory. Further, the Collaborators will procure and supply all the required machinery, equipment, tools and jigs which are to be imported from the United Kingdom and/or from Europe. They will also provide technical supervision during the erection of the machinery in the factory and when the factory is commissioned for production they will render continuous assistance in maintaining quality of the meters produced. They will also provide the technical "Know-how" during the currency of the agreement in relation to manufacturing meters abovementioned. They will also assist this Company in taking up the manufacture of new types of meters which it may decide to produce and in generally maintaining the quality of production up to the standard of their own production in their factories in the United Kingdom. During the currency of this Agreement, every meter that will be produced by this Company will bear the Legend "Under Licence—Denis Ferranti Meters."

BUSINESS MANAGEMENT

The Company will be under the management of **South Madras Industrial Development Company Private Ltd.**, whose Directors have got considerable experience in industrial management. Some of the Directors of the Company are Directors of Companies managed by **Messrs. Seshasayee Brothers (Private) Limited.** The combined experience of these Directors will ensure the speedy completion and successful implementation of the Project.

Messrs. Seshasayee Brothers (Private) Ltd., who are one of the leading and well-known Industrial Houses in India, and who have got experience as Consulting Engineers and Managing Agents to Indian Industries, are responsible for the conception of this scheme and for the collaboration with **Messrs. Denis Ferranti Meters Limited.** They will be associated with this project as **Business Consultants** and as liaison with the Collaborators, by agreement with **South Madras Industrial Development Company Private Limited.** The Agreement is for a period of 10 years in the first instance and will be renewable by mutual consent between the parties thereto.

PLANT AND MACHINERY AND FOREIGN EXCHANGE REQUIREMENTS

The Government of India have been pleased to approve under their communication dated 24th March, 1961 the import of plant and machinery from United Kingdom and securing the required foreign exchange from the **Commonwealth Development Finance Company Limited (CDFC), London.** Accordingly, this Company applied to CDFC for making available foreign exchange for importing plant, machinery and tools to the extent of Rs. 25 lakhs which is equivalent to £1,87,500.

The Company has now succeeded in signing and executing the Heads of Agreement with the CDFC under which it is provided that CDFC will subscribe for 66,667 Equity shares of Rs. 10 each, aggregating to the face value of **Rs. 6,66,670** and lend to the Company in Sterling equivalent to **Rs. 18,33,330** on a long-term loan, repayable after the expiry of 10 years. In this manner, the entire foreign exchange requirements of Rs. 25 lakhs in Sterling are being obtained for importing plant and machinery from United Kingdom.

POWER SUPPLY

The electric power requirement of the factory which will not exceed 350 KW will be obtained from the South Madras Electric Supply Corporation Limited, in whose area of licence the factory is located and they have agreed to afford the necessary power supply.

TRANSPORT

Located near the Tiruchirapalli Railway Junction, the factory is well served by railroad, metre-gauge and broad-gauge and also by National Highways and other trunk roads and thus the factory will have excellent facilities for movement of raw materials and finished goods.

PROGRESS ALREADY MADE

Out of the 10 acres proposed to be acquired by the Company, the Company has already entered up on 4.81 acres of land being Government poramboke land pending assignment in favour of the Company. Steps are being taken for acquiring the balance of 5 acres.

All the Drawings for the factory buildings have been approved by our Collaborators and the Company has already commenced construction of the factory buildings.

Firm orders have been placed for bulk of the machinery and tools which are to be imported from the United Kingdom and they are expected to be shipped and received at site not later than September 1962. Orders for indigenous plant and machinery to integrate with the imports have also been placed with a view to match their delivery with the receipt of imported equipment.

FOREIGN TRAINING

The Chief Engineer of the factory had been working at the factory of our Collaborators at Bangor, North Wales, U.K., to study their methods of production and in particular to assist our Foreign Collaborators in the choice and placing of firm orders with the manufacturers of machinery and equipment. He has just returned to India after completing his assignment.

The Company has also sent abroad Nine Indian technicians for intensive training in the factory of our Foreign Collaborators at Bangor, North Wales. They will take training for nearly Forty weeks and return to India fully equipped to assume their responsibilities in the Company.

Having regard to the progress so far achieved, the Company expects to go into trial production before the end of the current calendar year.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

In respect of the issue under this prospectus the minimum subscription on which the Directors will proceed to allot is shares of the face value of Rs. 13,88,330.

The capital required to reach the stage of production is estimated as follows:

	(In lakhs) Rs.
Land and buildings	10.660
Plant, machinery, tools and dies, including freight, erection and training expenses	39.440
Know-how fee including Engineering and Supervision	2.900
Preliminary expenses excluding Brokerage and Commission ...	1.125
Brokerage and Commission ...	0.875
Working Capital	5.000
Total ...	60.000

Any shortfall that may result from the increase in the capital cost of the Project beyond the aforesaid estimate, will be found by the Managing Agents with the assistance of **Messrs. Seshasayee Brothers (Private) Ltd.**

ESTIMATED PROFITS

The Company intends to install up-to-date machinery and equipment and utilise the special production and assembly methods developed by **Messrs. Denis Ferranti Meters Ltd.**, of United Kingdom. Based on the demand and market conditions, the Directors are satisfied that the working of this project will yield an attractive return on the capital invested.

It is the intention of the Directors to increase production by multiple-shift working as soon as production is stabilised to meet both home demands and exports and when this is achieved the profitability of the project will be substantially augmented.

TAX BENEFITS

The Company will enjoy special benefits under the Indian Income-tax Act 1961 as regards development rebate and depreciation. In addition, as a new industrial undertaking, the Company will enjoy exemption from Income-tax on profits up to 6 per cent on the capital employed for the first five years of the Company's operation, and dividends paid from the Company's profit consequently will be exempt from tax to the extent of relief obtainable under this section of the Income Tax Act.

MANAGING AGENTS

The South Madras Industrial Development Company Private Limited were appointed as Managing Agents of the Company with effect from 27th September 1961 for a period of 10 years. The said appointment has been approved by the Government of India under their order bearing No. 9(284)-C-III/61 dated 31st March 1962.

The Managing Agents will be paid by way of remuneration and commission on the net profits of the Company at the following rates:

10 per cent on the first Rs. 10 lakhs or fraction thereof and thereafter on the usual scale.

PREFERENTIAL ALLOTMENT OF SHARES

As set out above, the Signatories to the Memorandum have subscribed for equity shares to the face value of Rs. 2,70,000 consisting of 27,000 equity shares. The Managing Agents, their friends and associates, and the Directors of the Company together with the firm allotment of Rs. 3,75,000 reserved for the **Life Insurance Corporation of India**, have taken shares to the face value of Rs. 8,75,000 consisting of 87,500 equity shares, and they are entitled to preferential allotment in consideration of their having so agreed to subscribe for the same.

The Company expects the **Commonwealth Development Finance Company Limited** to subscribe for equity shares to the face value of Rs. 6,66,670 consisting of 66,667 equity shares as per the Heads of Terms executed between the Company and the **Commonwealth Development Finance Company Limited** and accordingly they will be allotted the said shares as preferential allotment.

15,000 Preferential shares to the face value of Rs. 1.5 lakh have been taken by the Insurance Companies.

UNDERWRITING COMMISSION AND BROKERAGE

The Company has agreed to pay the underwriters an underwriting commission for equity shares at 2½ per cent of the total value of shares so underwritten by them. Brokerage at the rate of 1 per cent on the face value of shares on the basis of allotment will be paid to authorised bankers brokers and underwriters in respect of applications bearing their rubber stamp.

All applications must be made on the form accompanying the Prospectus which can be had from the Registered Office of the Company, the Company's Underwriters, Bankers and Brokers.

KOHINOOR MILLS COMPANY LIMITED

FULLER UTILISATION OF CAPACITY ON RATIONALISED BASIS

MR. A. N. HAKSAR URGES REDUCTION IN TAXES

THE hope that "something substantial" would come out of the cotton mills' plea for reducing the recently enhanced imposts was expressed by Mr. A. N. Haksar, Chairman of the Kohinoor Mills Company Limited, when he addressed the Sixty-seventh Annual General Meeting of the Company held at Bombay on Friday, 4th May 1962. Mr. Haksar declared that the latest tax burdens, together with the scarcity of cotton and overall rising costs, were bound to make a serious inroad into the profits of the cotton mill industry. Alluding to the increase in corporate tax, he said that his Company's tax liability for the year 1961 would be higher by about Rs. 1.75 lakh. Reviewing the working results for 1961, he attributed the rise in profits to the overall increase in efficiency, fuller utilisation of machine capacity run on a rationalised basis and change in the pattern of production to suit consumer demand. He assured the shareholders that the Company would make every effort to ensure further economies and improvement in efficiency.

The following is the full text of Mr. Haksar's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure in welcoming you to this sixty-seventh annual general meeting of the Company.

"As the working results of the year, which are already with you, show, the year 1961 has been a successful one for the Company. Whereas there has been a modest rise in the gross turnover by about Rs. 46 lakhs as compared with the previous year, the net profit after depreciation, development rebate and taxation has increased by over Rs. 10 lakhs, that is, an increase of about 130 per cent over the previous year. Those of you here, who might have been present at the last annual general meeting, will perhaps recollect the indulgence I had sought from you in permitting the management just two years more to restore the Company to the same position of prosperity it had previously enjoyed, and you will perhaps agree with me that the working results of the year have justified the forecast made last year.

Higher Efficiency

"The principal reasons for the increase in profits are overall increased efficiencies, fuller utilisation of machine capacity run on a rationalised basis, and the change in the pattern of production to suit consumer demand. With regard to the last factor, the Company is earnestly endeavouring to put on the market newer and better varieties of cloth in order to meet with the ever-changing pattern of consumer demand and has recently introduced in the market terylene suitings, terylene shirtings, full voile shirtings and ladies' blouse material known as 'Rubaiyat' all of which has become very popular.

"A comprehensive programme of rehabilitation and modernisation as undertaken in the last year was further implemented during the year. Machinery to the value of Rs. 33,21,647 was erected during the year; machinery worth about Rs. 43 lakhs was on order as at the close of the year. By installing the various machines on order it is anticipated that the Company will be able to effect further rationalisation and also further improvement in the quality of its products.

"Side by side with the programme of rehabilitation and modernisation, your Company has taken further steps towards rationalisation and fuller utilisation of machine capacity by working the spinning section of No. 2 Mill all three shifts on a rationalised basis. Cloth production has also been stepped up by running a section of the weaving shed in No. 2 and No. 3 Mill for the third shift on a four-looms-to-a-weaver basis.

Raw Cotton

"The cotton position was easier during the early part of 1961 and almost all varieties were available at or below the statutory ceiling prices but the position was completely reversed during the latter part of the year. The cotton season 1961-62 started with a carryover of about 22 lakh bales and the position was then considered to be comfortable, in view of the anticipated production of 53 lakh bales. Unfortunately these expectations were not fulfilled because of adverse weather conditions in the cotton growing centres and the estimate has now been reduced to not more than 40 lakh bales. In order to improve upon the cotton supply position, the Government of India has been negotiating with several cotton producing countries and has also requested the U.S.A. Government to render some assistance under PL. 480. Although vigorous efforts are being made in this direction, the prospects of obtaining the industry's full requirements of cotton appear to be bleak, in view of the country's tight foreign exchange position.

"To rectify the imbalance between the supply and demand position of cotton, the Textile Commissioner devised an elaborate system of quality and quantity controls to ensure equitable allotment of available supplies of cotton at ceiling prices. These measures, however, fell short of achieving their desired effect, with the result that cotton prices have shot up, and it is difficult to obtain the requisite cotton within the limits of ceiling prices. It appears that a section of the community has suggested a decontrol of cotton prices. It will be very difficult to foresee the effects of decontrol of cotton on the prices of cloth and yarn, both for the local and for the export market. In order to ensure adequate supplies of cotton to maintain the present level of production and also to meet rising demand, I am of the view that it is imperative to increase the cotton yield per acre substantially and also to raise the statutory ceiling prices, so that the prices of local cotton are more in parity with prices prevailing in other cotton growing countries.

Yarn and Cloth Stocks

"As already mentioned in the Directors' report, cloth stocks during the first half of the year were higher than usual, on account of the confusion created by the price stamping scheme and the increased incidence of excise duty on all fabrics. As the year progressed, the movement of cloth stocks improved and, at the close of the year, stocks were lower than in the previous year.

"The stocks of yarn were also higher during the early part of the year. The budget for the financial year 1961-62 for the first time introduced an excise duty on cotton yarn excepting certain counts in hank form. The levy and its assessment at first created some difficulty and also met with some resistance from the consumers. Matters, however, smoothened out later, and the yarn started moving gradually. At the close of the year, yarn stocks were also lower as compared with the previous year.

Exports

"In its endeavour to earn as much foreign exchange as possible for the country as well as to secure the maximum benefits for the Company by way of import of long-staple cotton, terylene, dyes, chemicals, machinery, etc., your Company has spared no efforts towards trying to push its goods in the world markets. Our own deliveries for export of cloth were higher by 24.93 per cent as compared to 1960. This increase in exports is all the more creditable as far as your Company is concerned, in view of total Indian cloth exports having come down from 692 million yards to about 600 million yards, a drop of 10.5 per cent on last year's performance. The principal reason for this fall in Indian exports has been increased demand for processed cloth, the Indian mills' inability to meet the world demand at competitive prices, the setting up of textile mills in the underdeveloped countries in East and West Africa, Ethiopia, Burma, South Viet Nam and the intensive competition from Hong Kong, China, Japan and Pakistan. Your Company hopes to continue and if possible to increase its exports during the current year also.

"You will have observed from the profit and loss account that the value of stores consumption has increased by about 6.53 per cent over 1960. The principal reasons for this increase have been the non-availability of caustic soda at the prices fixed by the Government of India, in view of the limited indigenous production and the inadequate supply of hydrosulphite of soda, both of which are consumed in large quantities. These chemicals are mainly imported by the State Trading Corporation, and had the imports of these chemicals been regulated by a consistent rather than a haphazard policy, periodic shortages would have been much obviated. There was also an upward revision of import duties on other chemicals, dyes and machinery spare parts.

"Electric power and fuel charges were also higher than last year. This was principally due to more machinery having been worked during the year, as also the inevitable conversion of boilers from coal to oil firing on account of the stringent and uncertain coal supply position.

"As already mentioned in the Directors' report, Nahalchand Laloochand Private Ltd., and V. S. Apte and Sons, the Company's yarn and cloth selling agents, respectively, relinquished their selling agencies on terms mutually agreeable to themselves and the Board of Directors of the Company. They have been of great assistance to the Company especially in tiding over difficult times, and I am sure you will join with me in placing on record our appreciation for their long and faithful services to the Company for over 58 years and 50 years, respectively.

Labour

"In accordance with the Central Wage Board's recommendations, a wage increase of Rs. 8 per worker per month and the merger of 75 per cent D.A. with the basic pay were also implemented during the year. A further increase of Rs. 2 per month per worker is being paid from 1st January 1962 and this will cost your Company about Rs. 2½ lakhs more each year.

"With regard to bonus for the years 1959, 1960 and 1961, negotiations between the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh having failed, the Sang has filed its demand for the year 1959 with the Industrial Court, Maharashtra, before whom the matter is pending.

"In order to achieve peaceful working conditions for the industry, the Government of India have appointed a Bonus Commission to go into this vexed problem of the concept of bonus, the limits of the minimum and maximum amounts payable and the mode of payment and to make suitable recommendations to Government. Whatever their recommendations may be, I feel that bonus should essentially be linked with productivity.

"During the year, 166 employees were retrenched by paying them retrenchment compensation and gratuity amounting to Rs. 5,62,000. While retrenching, advantage was also taken of the natural separation of workers wherever possible.

"In this regard I would like to state that, before effecting retrenchment, your Company made all possible efforts to absorb displaced labour consequent upon introduction of rationalised processes by starting additional shifts and only those workers who were unwilling to accept alternative employment were paid compensation as required by law. I must mention that the introduction of rationalised processes could not have been possible but for the excellent co-operation extended by the R.M.M.S.

"During the year, mill workers gladly responded to the call of the Chief Minister of Maharashtra, Shri Y. B. Chavan, for voluntary donations in order to give relief to the flood-affected people in the city of Poona and other parts of the State of Maharashtra. About 90 per cent of our employees worked on 20th August 1961, although it was a holiday, and the total contribution from their earnings was Rs. 39,914 which was the second highest contribution amongst all the textile mills in Bombay.

"You will observe from the profit and loss account that your Company donated a sum of Rs. 45,470. The principal donations were for the relief of people affected by cyclone in Ratnagiri District and by the floods in Poona and Bihar.

Prospects

"What does the future hold for us? We had every hope that, other things being equal, the current year would prove to be even better than the year 1961, as the results of the first three months have shown a definite improvement over the corresponding period of 1961. However, as you know, only a few days ago, the budget has been announced and, once again, the powers-that-be have thought fit further to increase the imposts levied on your industry. Although, as stated, it is the intention of the Government to recover Rs. 12.1 crores from the textile industry—which in itself is a very high figure—in actual fact on a very conservative estimate it is felt by the industry that the recovery which will be made by Government by these imposts will not be less than Rs. 25 crores and may even be as high as Rs. 30 crores. This latest burden, together with the scarcity of cotton this season and the difficulty of making up this shortfall by imports from other cotton growing areas, not to mention the overall rising costs, are all bound to make a serious inroad into the profits of your industry. Furthermore, as far as the shareholder is concerned, although the Finance Act 1960 had given the corporate sector relief in income-tax and super-tax by a reduction from 51.5 per cent to 45 per cent, this tax levy has again been increased by 5 per cent (making it 50 per cent) and this will mean that your Company's tax liability for the year 1961 will be increased by about Rs. 1,75,000. Strong representations are being made by the industry to try and persuade Government to reduce these imposts, particularly the excise duties. I sincerely hope that something substantial will come out of these representations.

"As far as your Company is concerned, your management will make every effort to try and neutralise the extra expenditure to which I have referred above, by further economies and improvement in efficiency. I started by saying that we had hoped the current year would be much better than the last. I am afraid the original hopes may not, in view of what I have said before, be fulfilled, but I think I can say with reasonable confidence that, comparatively speaking, your mill will do equally well again, if not better, this year."

Note: *This does not purport to be the report of the proceedings of the general meeting.*

BUY in KILOS

Metric weights are compulsory throughout the country.

To ensure quick service and fair dealing, buy only in round units e.g.

1 KILOGRAM
500 GRAMS
200 GRAMS

1 KILOGRAM = 86 TOLAS

If 1 seer (=80 tolas) was sold at Re. 1, 1 Kilo should sell at Re. 1 nP. 7.

THE MODERN MILLS LIMITED

CHAIRMAN, MR. N. D. SIRUR, ON MODERNISATION AND EXPANSION SCHEMES

NEW EXCISE DUTIES ARE INIQUITOUS

SOME details pertaining to the modernisation and expansion schemes of the Modern Mills Limited were given by Mr. N. D. Sirur, Chairman of the Company, in his statement circulated at the Twenty-eighth Annual General Meeting held at Bombay on Monday, 30th April 1962. Mr. Sirur alluded to the proposed installation of 144 automatic looms with matching spindles under the Export Promotion Scheme and automatic screen printing machine, as well as change-over to peroxide bleaching. He dilated at length on the proposed new acetate project and disclosed that a fairly substantial degree of financial participation and technical collaboration from both the U.S. and Europe had been assured by two of the finest companies in the field of chemicals and man-made fibres. Special reference was made by him to the enhancement of the excise duty on sanforising process, as a result of which, he said, the sanforised trade marks might virtually cease to exist on domestic sales of cloth. He also criticised the proposed "unconscionably high" excise duty on mercerising process as being glaringly iniquitous.

The following is the full text of Mr. Sirur's speech:

"GENTLEMEN,

"It is not the usual practice in your Company or its sister Companies for a statement to be issued at the annual general meetings. However, the present meeting is, in many respects, an exceptional one, since matters of moment to your Company have been factually outlined in the Directors' report. In the light of this, a statement supplementing the report is considered desirable, to enable the shareholders to judge for themselves and comment on both the Company's current working as well as future plans.

"You will have observed from the Directors' report that the Company is on the verge of a major expansion into the field of chemicals and man-made fibres at Harihar in Mysore State, but, before I come to that, I would like to emphasise that the constant improvement of your existing textile facilities at Bombay is in no way being lost sight of.

Expansion

"We are in the process of doubling our present capital of Rs. 46,47,350 shortly for the specific purpose of investment in modernisation and carefully considered expansion of your two mills in Bombay. For instance, we are shortly adding, under the Export Promotion Scheme, 144 automatic looms to our present weaving shed of 644 plain looms at Mill No. 2. We have guaranteed to export for a period of four years approximately 4 million yards of cloth per year in order to be licensed this expansion, but we are already exporting on an average more than 5 million yards per year from the production of our existing looms, and earning considerable import entitlement of foreign cotton, dyes and chemicals.

"Thus, the new addition of 144 looms for producing export cloth will in no way be a burden on the Company, but, on the other hand, will permit us to divert some of our present looms to more paying varieties of cloth in the domestic market. Similarly, in regard to the spindles at Mill No. 2, we have at present approximately 22,000 spindles working three shifts, principally on combed superfine counts, while the back process is working only two shifts. Therefore, by working the back process three shifts, we can accommodate, at a very moderate cost, another 10,000 new spindles which can also work three shifts in conjunction with the new Whitin combers that we have recently installed, to enable the Company to work higher medium combed counts from Indian cotton for the weaving shed. We are expecting a licence for these new spindles in the very near future partly for balancing purposes and partly to match the automatic looms which we are ordering.

"On the processing side at Mill No. 2, we are planning to change over to peroxide bleaching, so that our goods receive a more uniform bleach. We are also considering the installation of an automatic screen printing machine for printing our superfine cloth which is already being exported after being printed in other establishments. In regard to the sanforising machine, for which we have an import licence, apart from the difficulties over royalties which are likely to be resolved very shortly, we shall now have to consider the effect that the proposed increase in excise duty has on sanforised cloth.

"The sanforising royalty is barely 1 nP per yard, but the excise duty on the sanforising process is now proposed to be raised to almost 25 nP per yard! Sanforising or pre-shrinking of cloth is a process which does not add anything to the appearance of the cloth. Therefore, the only extra excise duty that could be legitimately charged on this process would be to the extent of shrinkage. It is clear that, if the proposed exorbitant duty is enforced, the sanforised trade mark will virtually cease to exist on domestic sales of cloth. While this may well be the Government's strictly short-term objective from the foreign exchange saving standpoint, the long-range effect of the resultant inevitable withdrawal of 'Sanforised' service from India needs to be carefully re-examined.

"With the prospective entry of Britain into the Common Market, the orientation of India's export trade in textiles has necessarily to be directed towards increasing the present negligible sale of well-processed cloth and made-up garments to our neighbouring countries. In such an effort, the trade mark 'Sanforised' would be a valuable tool and status symbol which the country can ill-afford to lose, especially when Japan and Hongkong are exploiting this trade mark to the fullest extent. The real solution lies in Government negotiating with the sanforised trade mark owners an equitable arrangement by which their royalties do not involve any drain on the country's foreign exchange.

Mercerising Process

"Another glaring inequity is the proposed unconscionably high excise duty on the mercerising process which is age-old and almost a corollary to good bleaching. Moreover, such a levy would hit both the mill and powerloom sectors. It is apparent from the various statements made after the budget proposals that there is considerable room for reducing the proposed burden on the industry equitably and yet collecting the sum of Rs. 12 crores which has been set as the target for increased tax yield from the textile industry.

"I might state here that the flexible yet conservative policy which has been followed over the past few years by your Mills has been principally guided by the trend of Government thinking. We have, therefore, been concentrating on the manufacture of coarse and medium cloth for sale in the export and domestic markets, some superfine cloth for export, and fine yarns for sale to the handlooms and powerlooms in the country who principally manufacture dhotis and saris, on which there is a quantitative restriction in the mill sector. Thus, the additional excise duty burden on the Company should be comparatively light. In the final analysis, it is the results that count, and I am sure that you are pleased with the working of your Company in the last two years averaging Rs. 30 lakhs gross profit per annum, which is comparable to some of the best mills in Western India on the basis of gross profit to gross sales ratio.

Acetate Project

"Now coming to the new acetate project which is being undertaken by your Company, there may be some of you who may wonder why, with the conservative background of your Company, we have decided to embark on this venture. The field of cotton textiles is now sufficiently exploited in the country, while that of chemicals and man-made fibres, particularly cellulosic fibres such as acetate and viscose, is opening up new vistas and perspectives.

"We have chosen acetate, because it hardly exists in the country. The production of viscose rayon yarn in India has already reached a figure of over 50 million lbs. per year, whereas the production of acetate yarn is hardly 5 million lbs., which is a ratio of 1 : 10. On a world-wide basis, the ratio of acetate to viscose yarn is 1 : 3, whereas, in countries such as the United States which cater to a climatic area similar in summer time to India, the production of acetate filament yarn now exceeds that of viscose filament yarn.

"Unlike synthetic yarns such as terylene and nylon, whose prices are more in the range of natural silk, the prices of acetate and viscose filament yarns are competitive with the finer cotton yarns which your Company is already producing. The main consumption is also by the powerlooms and handlooms in the rural areas. Furthermore, unlike viscose yarn, the principal raw materials for acetate yarn, namely, cotton linters and industrial alcohol, are available within the country. More particularly in the case of your Company, the most critical raw material, namely, cotton linters, is available from one of your sister companies, Sundatta Foods and Fibres Ltd. This factor has weighed largely with the foreign collaborators in deciding to combine with your former parent Company, the Mysore Spinning and Manufacturing Company Ltd. (who presently hold 40 per cent of your share capital) in a joint venture for acetate manufacture as a major expansion of your Company.

Foreign Collaboration

"While I am not yet at liberty to disclose to you the names of the companies involved, I can only say at this stage that a fairly substantial degree of financial participation as well as technical collaboration from both the United States and Europe has been assured by two of the finest companies in the field of chemicals and man-made fibres. The American side of the project, namely, the manufacture of cellulose acetate flake, is now virtually final, and our A.I.D. loan application to the U.S. Government is expected to be cleared before the end of June this year. On the European side of our project, which concerns the production of acetate yarn, matters are also progressing satisfactorily.

"The new project for acetate production will be located in Mysore State. We propose to have a daily production of 15 tons of chemical cotton from cotton linters and 10 tons of cellulose acetate flake, of which 5.5 tons will be turned into cellulose acetate yarn. The surplus chemical cotton will be available for sale to manufacturers of cellulose products, while the surplus cellulose acetate flake will be marketed principally in the form of moulding powders for plastics manufacture. If required, the Company would also be in a position ultimately to supply part of the requirements of triacetate flake of Hindustan Photo Films Ltd. which is being established by the Government of India in the public sector at Ootacamund.

"The studies made by us and our foreign collaborators indicate that the above pattern of production would be the most balanced under Indian conditions, since it would not depend on a single outlet for acetate flake as would have been the case had we endeavoured to turn the entire production either into yarn or moulding powders.

"I would like to say at this stage that we have very carefully considered the entire project in all its implications in close co-operation with both our consultants and foreign collaborators. We have convinced ourselves, and more particularly our foreign collaborators, that the project is worthwhile, attractive and deserving of the scale of investment contemplated. I would like you to bear with us a little longer before we can make further details available.

"In conclusion, I would like to express the management's appreciation on your behalf of the very loyal and creditable services rendered by the staff and employees at the mills and at the head office."

Note: *The above statement does not purport to be a report of the proceedings of the general meeting.*

COMPANY MEETING:

COMMERCIAL PRODUCTION OF TYRES TO START IN THREE MONTHS

MADRAS RUBBER FACTORY CHAIRMAN EXPLAINS EXPANSION PLANS

THE Madras Rubber Factory Ltd. hopes to commission its entire plant for the manufacture of Mansfield car and truck tyres within three months, according to Mr. K. M. Cherian, the Chairman.

Addressing the shareholders at the First Annual General Meeting of the Company held in Madras on 4th May, he informed that the erection of the tyre factory was proceeding according to schedule. The entire building of the new factory was complete and the major part of the machinery had arrived, he said.

During the course of his speech, Mr. Cherian said:

"I do hope, you have had an opportunity to study the Balance Sheet and the Directors' Report and, therefore, I do not propose to go into its details except to draw your attention to certain salient features of the Company.

"As you are all aware, the private firm of Madras Rubber Factory was acquired by your company for a total consideration of Rs. 25 lakhs. The public company was floated in 1961 and shares worth Rs. 75 lakhs were allotted on 6th June. The first and second calls were made during August and October 1961 and these shares became fully paid up a few weeks before the close of books on 31st December 1961.

UNIQUE PROFITS

"The profits of the year were Rs. 23,51,764.94 before depreciation and Managing Agents' commission. After adjusting these, we have a net profit of Rs. 18,30,487.37 and this entire amount was earned solely from the existing business of the Madras Rubber Factory Tread Division. The total sales come to Rs. 1,64,47,976.30. The products of the company continue to enjoy the confidence of the public and there is every reason to believe that the sales and profits in the existing lines of business will continue to grow.

"I am sure, you will like to join me in paying tributes to the management for these excellent results and to the previous owners of the concern for their magnificent contribution to the growth of this undertaking.

FINE GESTURE

"It may be pointed out here, that no payments were to be made to the promoters or to the Managing Agents for expenses incurred or for their services in the promotion of the company. The entire expenses thereof had been met by the promoters. Up to 31st March 1961, this was a private company in the sole ownership of the Managing Agents and when the company was converted into a public company on 1st April 1961, the accrued profits of the private company, which came to Rs. 5.31 lakhs, were also given away to the public company.

"I have no doubt you will appreciate this fine gesture from the Managing Agents as an expression of their abundant confidence in the future of this new enterprise.

"I am also happy to report to you today that the erection of the tyre factory is proceeding according to schedule. Orders for the entire machinery required for the tyre factory were placed with our collaborators in October 1961, barely 45 days after the receipt of the necessary import licence and the foreign exchange sanction. The construction of the factory building was also started in October after getting the plans approved by our collaborators.

"The pilot plant machinery was shipped at the same time and, as you all know, it commenced trial production of tyres on 16th November 1961. The entire building for the main factory is now complete. Major part of the machinery has arrived in Madras and the balance is expected shortly.

"The erection work is going on round the clock and our foreign technicians are hopeful of commissioning the entire plant within three months.

EXPANSION PLANS

"The plans of the building and erection of the machinery, etc. have been drawn up in such a way that the factory can be expanded several times its present size without interrupting production. We have also sufficient land for this expansion. We have also applied to the Government of India for their early consideration of our request for the increase of the capacity and we are hopeful that this will be granted as there will be need for increased production of tyres even during the third Five-year Plan.

FOREIGN LINK-UP

"The company is extremely fortunate in having the unstinted co-operation of our collaborators, Messrs. Mansfield Tire and Rubber Company of U.S.A. They are as keen as your management in the early commissioning of the Indian plant and have spared no money or personnal for the realisation of this goal. We are fortunate to have with us Mr. M. L. Bayer, Technical Assistant to Mr. James H. Hoffman, President of the Mansfield Tire Company and he has with him in Madras a team of very senior rubber technicians and engineers. Their devotion to duty, their keenness and eagerness for work and their extremely friendly attitude to people around them, have set a very fine example to our staff and workers.

"We are proud of these eminent friends from abroad and I have no doubt, that you will all agree with me that our company owes a great debt of gratitude and thankfulness to our collaborators, the Mansfield Tire and Rubber Company and to its able and outstanding President, Mr. James H. Hoffman.

"I do not want to say anything more about Mr. Hoffman at present, as I am hopeful that he will be in India very shortly for the formal opening of the tyre factory.

PHENOMENAL GROWTH

"Before I conclude, may I take a few moments of your valuable time, to say a few words about the Indian rubber industry.

"The Indian rubber industry, which took firm root in the country immediately after Independence, has witnessed a phenomenal growth in recent years. The consumption of rubber by all factories in India in 1951 was only 22,786 tons. In a short period of ten years, it has increased to 63,848 tons (1961), and the estimated consumption for the current year is 71,917 tons consisting of 47,448 tons natural, 18,000 tons synthetic and 6,469 tons reclaimed rubber.

"As against this, the internal production is only 30,785 tons and we have to rely on imports to the extent of about 48,000 tons natural and synthetic, and 5,000 tons reclaimed rubber during this year. The position will considerably improve next year when we can expect about 30,000 tons of G.R.S. rubber from the Bareilly plant and 5,000 tons of reclaimed rubber from indigenous production.

PLAN ESTIMATES

"The revised estimates for consumption of rubber for the third Plan period are being compiled and it seems to be fairly certain that the original estimate of 93,500 tons consumption for 1965-66 will have to be radically modified as the figure may be nearer 1,40,000 tons. In spite of the expected indigenous production of 40,000 tons of natural, 30,000 tons of synthetic and 10,000 tons of reclaimed rubber, the country may have to depend on imports to the extent of about 60,000 tons even in 1965-66.

"I dare not predict the possible requirements of rubber for the fourth Plan, but I feel it is high time that the Government and industry studied the situation so that they are at least armed with the knowledge of the future trend.

BOLD POLICY

"I would, in this connection, suggest to the Government and the Planning Commission to enquire fully about the possibilities of the production of additional quantities of natural rubber in India. A bold policy regarding the replanting of the existing low yielding plantations, a directive to State Governments to release for rubber planting all suitable areas and to see that such areas are cultivated according to the latest scientific methods and finally to take immediate steps to open up the Nicobar and parts of the Andaman Islands for rubber cultivation, are some of the suggestions I submit for the consideration of the Government.

"Regarding the other principal raw materials required for the industry such as carbon black, rubber chemicals, rayon cord, tyre valve tubes, etc., though we have to rely on imports for the current year, we will be entirely self-sufficient by 1963 or the latest by 1964, as several new factories have been licensed for manufacturing the above articles.

EXISTING PLANTS

"We have had only two tyre factories in India for nearly 25 years. Though over these years these factories have expanded their production considerably, the consumption of tyres in the country exceeded the production, and for the last two years, we have had to depend on large imports. The Government has, therefore, licensed seven more factories of which so far only three have commenced production. It is hoped that before the end of this Plan, all the remaining four will also have come into production, thereby increasing the output to about 3.8 million tyres and tubes as against the present production of about 2 million.

"The Government now favours an upward revision of the target of production of tyres to about 5.2 million as against the Planning Commission's original estimate of 3.7 million. It is likely that all the existing factories who have the resources and who can arrange the necessary foreign exchange will be given preference in this expansion programme. It also seems to be the Government's policy, to license a capacity of up to a million tyres for all existing units before new applications are considered.

EQUAL SHARE

"In this way, all the tyre factories established in India will be more or less of the same size and they will also be of sufficiently large capacity with a cost of production comparable to their counterparts elsewhere in the world. Moreover, the Government believes that the cost of expansion of the existing units will be far cheaper, as far as foreign exchange is concerned than the licensing of new units at the present time.

"I am glad to inform you that we have submitted our application for a substantial expansion and that we will be in a position to implement the setting up of this additonal capacity without any loss of time, immediately the licence is issued to us.

TREMENDOUS PROGRESS

"The Indian rubber industry has achieved tremendous progress in recent years. Already its production value has exceeded Rs. 80 crores and the total labour employed, over 30,000. It is fairly certain that production may reach nearly Rs. 200 crores by the end of the third Plan period, with a corresponding increase in the labour employed. Your Directors have full confidence in the future of your company and with the untiring efforts of the management, staff and labour, we look forward to better and better results in the years to come."

RULES FOR INDUSTRIAL LICENSING

FEDERATION AND A.-I.M.O. DISSATISFIED WITH PROPOSED AMENDMENTS

THERE are no two opinions in this country as to the need for eliminating procedural delays associated with industrial licensing and registration. Time and again, the business community has brought to light instances of avoidable waste of time and resources resulting from bureaucratic apathy, if not indifference, towards expeditious processing of applications for industrial licences. The spokesmen of the industry have always contended that the licensing procedures are cumbrous and not conducive to speedy implementation of projects. This is particularly true of projects, especially new ones, undertaken with foreign collaboration. The Government of India has no doubt taken certain steps in the matter during the last two or three years. An instance in point is the advance publication of lists comprising a wide range of industries, for which licences under the Industries (Development and Regulation) Act 1951 may ordinarily be subjected or granted without reference to the Licensing Committee. Such measures have, however, touched only the fringe of the problem. One would have naturally thought, therefore, that the Government of India would take more effective steps in the direction of simplification and streamlining procedures in order to eliminate the grievances of prospective entrepreneurs. But this hope has not been realised so far.

It is disconcerting to note that the proposed Bill for the amendment of the Registration and Licensing of Undertakings Rules, should have been so designed as to cause new procedural difficulties and delay. The draft rules, already circulated among the chambers of commerce for eliciting their views, have come in for harsh criticism. In a memorandum submitted to the Government, the Federation of Indian Chambers of Commerce and Industry has categorically stated that the proposed changes in the field of industrial licensing will lead to further delays, instead of expediting the disposal of cases. The Federation has, therefore, suggested that the question of any amendment of the rules should be preceded by a fresh and thorough examination of the existing practices. The objective, according to the Federation, should be to evolve arrangements which will assist quicker disposal of applications and cut out delays at the stage of licensing and thereafter. Viewed from this standpoint, the Federation's apprehension that the rules, as now conceived, will not be helpful seems to be perfectly justifiable.

Major Changes

The proposed major changes in the existing rules relate to the following matters:

(1) Change in the definition of "effective steps" which have to be taken by a licensee to put up the plant within a specified period; (2) time taken for grant of licences and the conditions proposed to be imposed in this regard and (3) new annexures requiring parties to furnish, in certain cases, detailed particulars, *inter alia*, regarding the exact cost of the project, the manner of financing it, particulars of persons holding more than 5 per cent shares, as also the role of the foreign collaborator.

At present, licences are granted subject to the following conditions:

(a) The terms of foreign collaboration will have to be settled to the satisfaction of the Government, and (b) the grant of import licences for capital equipment will have to be screened by the Capital Goods/Heavy Electric Plant Committee.

Under the existing system, provisional licences, or in some cases letters of intent, are issued, which enable the parties to proceed further by way of "taking effective steps" to settle other particulars. But the draft rules lay down that information on these particulars should also be furnished along with the application for industrial licence. The entrepreneurs, according to the Federation, will not be in a position to submit these details at the time of making the applications.

The definition of the term "effective steps" itself has undergone a basic change under the draft rules. Under the present definition, there are three alternative conditions, the fulfilment of any one of which will be tantamount to taking effective steps. These three conditions are: (1) 60 per cent or more of the capital issued for an industrial undertaking, which is a public company within the meaning of the Indian Companies Act, has been paid up, (2) a substantial part of the factory building has been constructed and (3) a firm order has been placed for a substantial part of the plant and machinery required for the undertaking. While the proposed new definition drops the reference to the construction of factory building, it makes it incumbent upon all licence-holders to place a firm order for a substantial part of the plant and machinery for the industrial undertaking. The relevant definition runs as follows: "Effective step means in relation to an industrial undertaking that a firm order has been placed for a substantial part of the plant and machinery for the industrial undertaking, and where the industrial undertaking is a public company within the meaning of the Companies Act 1956, also that not less than 60 per cent of the share capital has been paid up." In the present scheme of things, says the Federation, it is virtually impossible to comply with any of the proposed two conditions. Its reasons for this conclusion are as follows:

"Placing of a firm order for plant and machinery, excepting where the plant is to be procured from indigenous sources, is dependent on the grant of foreign exchange sanction by Government and the obtaining of an import licence. This is an obvious factor the fulfilment of which depends more on Governmental authorities than on the licensees. As Government are aware, the period generally allowed for taking effective steps is six months, although in certain cases it extends upto one year. After obtaining the industrial licence even if the plant is ordered from indigenous sources, it would not be possible to do so within the stipulated period, for a great deal of planning, ascertaining the details of the operation of the machinery, obtaining offers and making the selection has to be done. The position in respect of imported plant and machinery is far more difficult, with all the rigid screening of applications and trying to accommodate such applications under various sources from which credits are available. In certain cases, negotiations have also to be carried on with international financing institutions.

"Similarly, the conditions to have 60 per cent capital paid up within the prescribed period is difficult, almost impossible, to fulfil. In cases where shares are issued on call money system and instalment basis, 60 per cent of the paid up capital is not required to be subscribed. Further, the issuance of such capital is contingent on obtaining sanctions from the Controller of Capital Issues, except where it comes within the exemption limit of Rs. 10 lakhs. Where foreign collaboration is involved, negotiations with the collaborator have also to be finalised and Government's final sanction obtained. These are beyond the control of the entrepreneur."

S. S. Poddar
Managing Director

In view of these difficulties, the Federation has suggested two modifications, namely, (a) the time-limit should run from the date the foreign exchange licence becomes available for the import of machinery, and (b) for raising a minimum proportion of the share capital, the limit of 60 per cent should be substituted by raising 50 per cent of the share capital required for the proposed undertaking or arranging such capital from other sources. Alternatively, it should be deemed to be sufficient if the registration of the Company has been done within the specified period. While suggesting these modifications, the Federation makes it clear that it is not in favour of parties holding licences without any positive intention of implementing their schemes expeditiously. Revocation in such cases may be done, but the time limit for complying, even under the modified conditions suggested by the Federation, would require a period much longer than six months or even one year. It is, therefore, suggested that the time limit which is specified in each application should be sufficiently extended in keeping with such modifications to the rule, as may be finally decided upon by Government.

Further, the draft rule seeks to extend the period for granting or rejection of licence from three months, as at present, to four months. The reasons for this extension are not clear. In fact, even now the period of three months, according to the Federation, is not being strictly observed. But that itself is no sufficient excuse for extending the period to four months. What is necessary, as pointed out by the Federation, is to expedite disposal of cases within the stipulated period of three months. In this connection, the Federation has suggested that additional information required should not be called for in a piecemeal manner. A time limit should be laid down, if not specifically under the Rules, at least by executive instructions to officers in charge of licensing work that additional information, if necessary, may be sought within a period of one month from the date of receipt of applications.

Five Conditions

A still more significant aspect of the draft rule is the provision which seeks to entitle Government to fix several conditions for granting licences. These conditions relate to (1) location of the undertaking, (2) the capacity, (3) the provision of housing and other amenities to workers, (4) minimum standards in respect of quality and (5) the export or sale within the country of such part of the production as the Government may, from time to time, specify. The conferment of these powers on the executive will amount to "enlargement of control on industrial undertakings." Specifically, it is apprehended that unreasonable restrictions about the location of units in particular States or areas may come to be imposed, which may upset the calculations of the entrepreneur completely. As for the provision of housing and other amenities, these matters, it may be noted, are at present left to be decided by State Governments. The Federation, therefore, feels that this provision will only delay the final grant of licences. The condition laid down for stipulating a part of production for exports also seems to be unwarranted. The Federation is of the opinion that, instead of providing for compulsory exports, ways and means may be found to promote exports by giving the desired incentives. The prospects for exports will depend mainly on the competitive capacity of the units concerned in terms of quality and low cost of production. It will take time for new units to stand on its own and enter into competitive world markets. Any compulsion in this regard will, therefore, be futile, and may even defeat the very purpose for which it is intended.

A.-I.M.O.'s Stand

In a separate memorandum submitted to the Government, the All-India Manufacturers Organisation has voiced the concern of the business community more or less in the same vein as that of the Federation. The A.-I.M.O. is particularly exercised over the condition relating to the restriction on "sale within the country," etc. If this condition is approved, according to it, the incentive to promote industries will be killed. It goes a step further and says that "it is something like nationalisation of the entire private sector industries." It has, therefore, suggested the elimination of this clause.

The aforesaid conditions are harmful to speedy execution of projects, for they cannot be easily fulfilled under the existing conditions. The non-fulfilment of conditions, it is to be noted, will attract penalty provisions of the Act. The provision sought to be inserted now is that penalty may be attracted even where any of the conditions of a licence granted is not complied with. The penalty includes punishment with imprisonment upto six months. Considering that the fulfilment of export commitments, for instance, is beyond the control of entrepreneurs, the Federation is right in demanding liberalisation of the proposed penalties as laid down in Section 24 of the Act.

Other Objections

Among the other objections taken by the Federation, one relates to the proposal to append two annexures to forms D and E of the rules, which seek to collect detailed particulars from the entrepreneur, at the time of applying for licences. These particulars, it is said, are either redundant or unnecessary. Elaborating this point, the Federation says as follows:

"The additional information required is either redundant or is of such a nature that the applicants are not in a position to furnish the same at the time of making the applications. By way of illustration, it may be pointed out that the foreign collaborators are not even willing to negotiate for setting up of industrial projects until the Indian party has obtained an industrial licence and the question, therefore, of giving any details in regard thereof at the time of making the application is virtually impossible.

"Also, it is not possible for an applicant, as required under the draft amendments, to specifically mention at the time of the application the nature of his interest in the industrial undertaking such as that of a promoter, managing agent, major shareholder, etc. These details are settled only when the company enters the market for raising capital. Similarly, the disclosure of names and addresses of shareholders holding or agreeing to hold 5 per cent or more of the paid-up share capital of the undertaking is not possible at the time the application is made. Details regarding the participation in management of the company by a foreign collaborator cannot also be furnished at the time of making the application. Similarly, even in respect of schemes where the project cost exceed Rs. 50 lakhs, it is not possible for applicants to indicate details of the cost of land, plant and machinery, building and other fixed capital, promotional expenses, working capital, etc., and it is not understood as to why such details should be required to be furnished at the time of making the application. The applicant can at best give approximate or estimated costs in overall terms. Also the furnishing of details of licences held by the applicant and the extent to which such licences have been implemented, and, if not implemented, the reasons of non-implementation in each case, as required to be furnished under clause 9 of Annexure II, should not be required to be given at the time of making the application. It would result in unnecessary and unproductive labour.

"As for the information required under clause 12 of Annexure II, that is, the manner of financing the project cost, at the time of making the application, the parties can hardly ever furnish the details required to be given. Similarly, in the matter of borrowing from foreign financial institutions or foreign collaborators, financial institutions in India, banks, etc., the details are settled only after obtaining the licence and not before. A provision is also sought to be laid down in clause 13 (d) requiring the party to state whether the necessary application has been made to the Department of Company Law Administration and their approval obtained if provisions of Section 372 of the Companies Act are attracted. Such provision will have to be complied with by the parties, but it hardly stands to reason as to why this should be required to be stated at the time applications are made."

While it is necessary to ensure that licences are properly utilised and in time, the conditions imposed for this purpose should not be such as to sap the initiative of entrepreneurs, and are impossible of fulfilment. It is thus that the proposed amendments have not taken into the account the need for eliminating the major drawback in the scheme of licensing, namely, procedural delays. On the contrary, they will worsen the position. The Federation's suggestion that a small informal group comprising representatives of the concerned Ministries and of the Federation be set up to examine the question of simplifying industrial and import licensing procedures, therefore, deserves to be accepted by the authorities concerned.

The hundred and third anniversary number of the *Indian and Eastern Engineer* (Executive Editor: Mr. Mick P. N. de Bouza, Sohrab House, Dr. D. Naoroji Road, Bombay-1. Pages: 218. Price: Rs. 5), the well-known engineering journal published from Bombay, presents a comprehensive and up-to-date survey of the main developments in the field of engineering and technology in the country. All the contributions, which are by eminent authorities in the respective fields, maintain a uniformly high standard. Scholarly but written in simple, non-technical language, they are bound to appeal both to the layman and the expert. The books section, which carries reviews of recent technical publications, is a useful guide for the latest output of scientific literature.

JAY SHREE TEA REPORTS LOWER PROFIT

PROGRESS OF EXPANSION PLANS

SUBSTANTIALLY lower tea prices realised in the 1961 season (Rs. 4.66 per kg. on sales for export and Rs. 4.84 for the internal market, as against Rs. 5.34 and Rs. 5.11 respectively in the preceding season) account for the setback in the gross profit of the Jay Shree Tea and Industries Ltd. [Managing Agents: Messrs. Birla Brothers (Private) Ltd., Calcutta] from Rs. 58.41 lakhs to Rs. 51.59 lakhs. It is all the more disappointing, as it came in spite of a satisfactory improvement in sales proceeds from Rs. 296.60 lakhs to Rs. 327.90 lakhs. How exactly it is disappointing can be seen from the fact that the profit-margin (ratio of gross profit to sales), which had improved in the previous year by nearly three points from 16.7 per cent to 19.6 per cent, declined by almost four points to 15.7 per cent during the year under review. As a direct consequence of this, the Directors have not been able to maintain the dividend level on the capital increased by the issue of bonus share in the ratio of one for four ordinary shares; the taxable return has been cut from 14 per cent to 12.5 per cent, which gives a net return of 8.75 per cent on the Rs. 10 fully paid ordinary share. The Directors have also been obliged to retain in business only Rs. 12.99 lakhs as against Rs. 16.25 lakhs a year before.

The table below gives the synopsis of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	327.90	296.60	238.77	187.30

†Subject to deduction of tax.

The quality of teas manufactured by the Company continued to be satisfactory, and, in fact, the output from Risheehat Estate, Darjeeling, fetched the highest average price in the entire district. The gardens are being properly looked after, and it is proposed to provide maximum "artificial" irrigation facilities in the different units. Following the introduction by the Tea Board of a scheme to provide finances for new extensions and replanting of teas, the Directors have decided to increase the tempo of the extension and/or replacement programmes of the gardens. The Directors hope that the Wage Board, whose recommended interim increase in wages has been accepted for South India by the Government with retrospective effect from 1st December 1961, will make a scientific inquiry into "all aspects" connected with the industry before giving its final award.

It will be recalled that the Company has already diversified its activities. Its woodcrafts factory in Assam reported further increase in production during 1961. The Directors, however, feel that its working might be affected by the proposed enhancement of timber royalty by the Assam Government, an issue which still remains undecided. Jayshree Plywoods, shifted to a new site at Khardah, has now an enlarged and reorganised factory and commenced trial production. The teething troubles of the superphosphate and sulphuric acid plants, launched by the Company during the last quarter of 1961, are being gradually overcome and efforts are being made to obtain normal production at an early date. However, as the offtake of superphosphate is seasonal, it remains to be seen whether full production will be absorbed by the market. The terms and conditions set out by the Government for the import licence for the proposed hardboard plant at Madhya Pradesh are not acceptable to the Company, and the necessary amendments are being sought but the outcome is uncertain. No further progress has been made in regard to the import licence for the proposed hard board factory in West Bengal. The provisional orders for the import of chip board plant, placed with Messrs. Technoexport, Czechoslovakia, were cancelled due to inordinate delay by suppliers, and other technical difficulties. The immediate prospects for setting up the plant are not bright, as the industry does not enjoy any priority in the present scarcity of foreign exchange.

The Company has sought the sanction of the Controller of Capital Issues to issue (a) rights equity shares at par in the proportion of one share for every three existing shares and (b) preference shares worth Rs. 29.16 lakhs, carrying taxable dividend, of 9.5 per cent per annum. The shares will be issued, as and when the need for additional finance arises. The Company's present paid-up capital is of Rs. 90.92 lakhs, made up of Rs. 87.47 lakhs equity and Rs. 3.45 lakhs preference. It is supplemented by reserves and surplus aggregating Rs. 73.93 lakhs. Bank borrowings have gone up from Rs. 29.19 lakhs to Rs. 70.18 lakhs during the year and so have current liabilities and provisions from Rs. 74.99 lakhs to Rs. 96.62 lakhs. Inclusive of other small loans, the Company's liability to outsiders amounts to Rs. 167.78 lakhs, as against which current assets, loans and advances aggregate Rs. 155.40 lakhs. The gross block appreciated from Rs. 204.25 lakhs to Rs. 249.12 lakhs during the year and has been written down to Rs. 162.75 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20.31 *cum-div.* On the *ex-div.* basis, they offer a net yield of 4.5 per cent. per annum.

I.I. TRUST EARNS LESS, PAYS MORE

Despite a small decline in the gross profit from Rs. 10 lakhs to Rs. 9.54 lakhs for the year ended 31st December 1961, the Industrial Investment Trust Ltd. (Chairman: Mr. Maneklal Premchand, Bombay) has again stepped up modestly the taxable return to its shareholders to 6.50 per cent from 6.20 per cent to which level it was raised in 1960 from 6 per cent paid in 1959. This steady increase in the dividend has been made possible by a further small rise in the net profit to Rs. 6.78 lakhs from Rs. 6.71 lakhs in the previous year and Rs. 5.71 lakhs in 1959. It is arrived at after providing Rs. 2.20 lakhs (Rs. 2.70 lakhs a year before) for taxation and Rs. 0.56 lakh (Rs. 0.59 lakh) for Secretaries and Treasurers' remuneration. In fact, the higher dividend has come in line with improvement in income from dividends on shares and interest on debentures and securities from Rs. 7.42 lakhs to Rs. 8.22 lakhs. But the total income is slightly lower at Rs. 11.39 lakhs as compared with Rs. 11.41 lakhs in the previous year, because the credit taken for tax refund on income from investments is Rs. 3.16 lakhs as against Rs. 3.37 lakhs a year before and income from other sources amounted to just Rs. 2,000 as against Rs. 62,000. The benefits of improved income from investments are reduced further by higher interest charges on bank borrowings at Rs. 1.14 lakh as against Rs. 0.81 lakh a year before and a small rise in expenses from Rs. 0.60 lakh to Rs. 0.71 lakh.

The table below compares in summary form the Trust's investments in the past four years:

(Percentage distribution)

	As on 31st December			
	1961	1960	1959	1958
Banks	6.58	6.17	6.95	7.18
Cements	3.99	3.82	4.38	4.52
Chemicals	2.43	1.34	1.51	1.70
Coal	1.17	1.09	1.23	1.27
Cotton and silk	12.06	12.95	14.07	13.00
Electric and trams	12.69	15.37	8.56	9.15
Insurance	1.96	1.31	1.40	2.17
Iron and steel	5.63	5.41	6.18	5.62
Jutes	7.67	8.02	8.94	8.98
Mining	1.84	1.96	2.22	2.30
Miscellaneous	26.67	23.96	24.02	23.31
Oil	..	..	..	..
Paper	2.26	2.20	2.23	2.09
Railways	..	..	..	..
Rubber	0.44	0.43	0.54	0.56
Salt	1.27	1.22	1.40	1.44
Shipping	0.97	0.93	1.27	1.31
Sugar	8.24	9.20	9.74	9.97
Tea	2.68	2.63	3.00	3.09
Telephones	..	0.02	0.02	0.02
Government securities	2.05	1.97	2.24	2.32
Total	100.00	100.00	100.00	100.00

Market value of ordinary share (In rupees)	1962	1961	1960	1959	1958
High	79.50	81.00	80.00	90.00	82.80
Low	74.20	70.00	69.00	75.00	65.50

It is encouraging to find that the approximate market value of the Trust's investments as at 31st December 1961, or in the case of unquoted investments at book value, was higher than the total book value by 23.70 per cent, as against 14.58 per cent at the end of preceding year. While this in itself speaks of the judicious choice made by the Trust of different classes of shares of different companies, it will be seen from the table above that the portfolio is well diversified in regard to industries. More than a quarter of the total investments, 26.67 per cent as against 23.96 per cent in the previous year, represents holdings in miscellaneous industries. This is welcome, because it underlines the fact that the profitability of such industries is better. The same is true of the increase in investments in chemical industries from 1.34 per cent to 2.43 per cent. The allocation of larger funds for investment in these industries has been made possible by a decline in the relatively less remunerative holdings from 15.37 per cent to 12.06 per cent in electric and trams industries. However, with the solitary exception of one or two, investment in several new miscellaneous companies, the shares of which have reached dizzy heights, is conspicuous by its absence.

The Rs. 100 fully paid shares of the Trust are quoted at Rs. 79.50 *cum-div.* The net yield on *ex-div.* works out to 6 per cent.

RESULTS OF TATA COTTON GROUP

MORE TO RESERVES—STRESS ON MODERNISATION

PURSUING their policy of concentrating, in deference to consumer preference, on the production of better quality fabrics and assisted by improved trading conditions and comfortable supply position of cotton, three of the cotton mills under the management of Tata Industries Private Ltd., namely, the Tata Mills Ltd., the Svadeshi Mills Company Ltd., and the Ahmedabad Advance Mills Ltd., have given an excellent account of themselves during the year ended 31st December 1961. All the three mills have reported sizable increases in their gross sale proceeds, while the gross and net profit figures have touched new high levels. With the exception of Ahmedabad Advance, the other two have proposed higher ordinary dividends but this has been done only after ploughing back into business a large portion of available profits through transfers to reserves.

By maintaining production at a high level with more remunerative prices and by producing increasing quantities of bleached, dyed, mercerised and printed varieties in high, medium and superfine sorts, the Tata Mills have not only been able to raise the sale proceeds of cloth, yarn and waste from Rs. 405.52 lakhs to Rs. 483.37 lakhs but have also been successful in widening the profit-margin from 11.0 per cent to 15.4 per cent, thereby lifting the gross profit by Rs. 29.44 lakhs to Rs. 74.27 lakhs. The higher profit has quite naturally brought about an increase in essential provisions which, during the year under review, have aggregated Rs. 21.55 lakhs as compared with Rs. 12.48 lakhs a year ago. Of this, Rs. 4.18 lakhs (Rs. 2.39 lakhs) have been taken up by provision for the Managing Agents' commission, Rs. 11.37 lakhs (Rs. 10.09 lakhs) by that for depreciation and Rs. 16.00 lakhs (Rs. nil) by that for taxation. Even so, the net profit has risen by Rs. 10.37 lakhs to Rs. 42.72 lakhs which, incidentally, is the highest the Company has ever recorded. Transferring out of this Rs. 4.50 lakhs to development rebate reserve as against Rs. 7.25 lakhs, and Rs. 23.50 lakhs, as against Rs. 21.65 lakhs to general reserve No. 2 and setting aside Rs. 25,000, as against Rs. 60,000 as provision for gratuity, the Directors have proposed a higher ordinary dividend of 22 per cent, subject to deduction of tax. Unlike last year, when the Company had withdrawn Rs. 10.35 lakhs from reserves and provisions, the entire amount transferred to reserves represents net addition.

Benefiting from the ready acceptance in the home market of its production in medium and finer varieties, with highly improved finishes, the Svadeshi Mills Company has been able to complete the year with an increased turnover of Rs. 492.82 lakhs which is about 10.3 per cent higher than the previous year's mark of Rs. 446.75 lakhs. The gross profit has also risen in line with the sales and amounts to Rs. 82.82 lakhs, as compared with Rs. 68.35 lakhs during 1960. A major portion of this improvement, however, has been claimed by higher essential provisions, that for the Managing Agents' commission getting Rs. 4.63 lakhs as against Rs. 4.61 lakhs, for depreciation Rs. 21.37 lakhs as against Rs. 18.49 lakhs and for taxation as much as Rs. 24.00 lakhs as compared with Rs. 17.50 lakhs a year ago. As a result, the net profit has shown an increase of only Rs. 5.07 lakhs to Rs. 32.82 lakhs. Transfers to reserves have been augmented by Rs. 3.21 lakhs to Rs. 12.75 lakhs of which Rs. 6.50 lakhs go to the statutory development rebate reserve as against Rs. 6.00 lakhs and Rs. 5.50 lakhs to general reserves as compared with Rs. 2.84 lakhs previously. Nevertheless, the Directors have found the balance sufficient to raise the ordinary dividend by 2 per cent to 19 per cent subject to deduction of tax claiming Rs. 19.00 lakhs.

The result achieved by the Ahmedabad Advance Mills during 1961 are not directly comparable with those for the previous accounting period, because, it may be recalled, the latter refer only to the second half of 1960 consequent upon the change in the Company's accounting year to 31st December to be in conformity with other textile units in the Tata group. Generally speaking, however, the upward trend in sales and profits is clearly obvious. Sale proceeds of cloth, yarn and waste for the whole year amount to Rs. 300.24 lakhs, as against Rs. 135.94 lakhs for the previous half-year. Likewise the gross profit is higher at Rs. 39.26 lakhs, as compared with Rs. 14.97 lakhs for the preceding six months. Of this, provision for the Managing Agents' commission takes up Rs. 1.81 lakh as against Rs. 0.70 lakh and that for depreciation Rs. 8.44 lakhs as against Rs. 3.82 lakhs. As during the preceding accounting periods, no provision for taxation has been found necessary and hence none made. These leave a net profit of Rs. 29.01 lakhs, as compared with Rs. 10.45 lakhs for the six-month period ended 31st December 1960. Out of this, as much as Rs. 23.65 lakhs have been transferred to various reserves and, out of the balance, the Directors have recommended an ordinary dividend of 12 per cent subject to deduction of tax, which is the same as last year.

The relative performance of the three mills during the past four years is presented in the comparative table given at the foot of this review.

As will be apparent from a perusal of their respective balance-sheets as at 31st December 1961, the financial position of the companies is quite satisfactory. Though in each case the share capital is exceeded by reserves, the rapid pace of renovation and modernisation of the mills has resulted in a paucity of enough working capital and all the three companies have been obliged to borrow heavily from the banks, besides having sizable current liabilities. The total of loans and current liabilities and provision in each case exceeds the current assets, investments and loans and advances put together. This will be apparent from the following table giving the summarised balance-sheet position as at 31st December 1961.

(In lakhs of rupees)

	As at 31st December 1961		
	Tata Mills	Svadeshi Mills	Ahmedabad Advance Mills
LIABILITIES			
Share capital	65.58	115.00	50.00
Reserves	90.06	118.03	70.82
	155.64	233.03	120.82
Loans	151.71	77.85	121.51
Current liabilities and provisions	119.16	139.13	41.85
Total	426.51	450.01	283.68
ASSETS			
Gross block	327.29	386.62	223.05
Less depreciation	136.45	213.26	102.42
Net block	190.84	173.36	125.63
Capital work in progress	9.27	21.62	3.40
Current assets, loans and advances and investments	226.40	255.03	154.65
Total	426.51	450.01	283.68

The modernisation and renovation programmes of the mills made further headway during the year. The Tata Mills installed new machinery worth Rs. 27.00 lakhs which included one blowroom line, eight drawing frames and one duplex felt calender. The installation of these machines has led to an improvement in the regularity in the flow, raised the production per man-hour and improved the finish on fine and superfine qualities of cloth.

In pursuance of its policy of gradual renovation of the mill plant, machinery and buildings, the Svadeshi Mills installed new plant and equipment valued at Rs. 34.00 lakhs while additional machinery worth Rs. 14.00 lakhs was awaiting installation. The Company has received import licences for 144 automatic looms for replacement of 440 plain looms; when these looms are erected the total automatic weaving capacity will be about 35 per cent.

New machinery, valued at Rs. 10.00 lakhs, installed by the Ahmedabad Advance Mills, include carding machines, four drawing frames, one soaper and washer and one drying range. Towards the end of the year, machinery worth Rs. 3.00 lakhs was awaiting installation.

The current market quotations of the ordinary shares of these companies and the net yield are given in the following table:

	Cum-div. price	Yield
	Rs.	%
Tata Mills	78.50	5.2
Svadeshi Mills	291.50	4.8
Ahmedabad Advance	208.75	4.2

PROFIT OF ANGLO FRENCH TEXTILES RISES

MODERNISATION CONTINUES

THE performance of the Anglo French Textiles Ltd. [Managing Agents: Messrs. Best and Company (Pondicherry) Private Ltd.] during the year ended 31st December 1961 is encouraging in that its profit is higher, reserves have been strengthened by a larger amount than in the previous year and the dividend has been enhanced, albeit slightly. All this has been possible despite a fall in production and exports. Its production contracted for the first time in recent years, from 10.99 million lbs. to 10.83 million lbs. in the case of yarn and from 28.96 million yards to 27.20 million yards in the case of cloth. The cost of raw materials consumed was also less at Rs. 151.67 lakhs as against Rs. 158.14 lakhs in the previous year. Export sales of both cloth (this had maintained the uptrend in the previous year) and yarn declined from Rs. 151.88 lakhs to Rs. 102.94 lakhs and Rs. 46,330 to Rs. 10,340, respectively. As a result, its earnings from export incentive premiums were reduced from Rs. 19.64 lakhs to Rs. 11.99 lakhs. The total sale proceeds, however, rose sharply from Rs. 267.22 lakhs to Rs. 307.62 lakhs, following an approximately 100 per cent increase in the internal sale of cloth from Rs. 81.64 lakhs to Rs. 163.95 lakhs and a recovery in that of yarn from Rs. 30.70 lakhs to Rs. 38.50 lakhs. The gross profit has, therefore, improved for the third year in succession from Rs. 36.59 lakhs to Rs. 40.34 lakhs, notwithstanding the continued rise in staff expenses from Rs. 68.30 lakhs to Rs. 70.12 lakhs due to the implementation of the Wage Board recommendations, involving an additional burden of Rs. 3.73 lakhs in 1961, and an increase in other expenses from Rs. 48.45 lakhs to Rs. 50.63 lakhs. The net profit, too, has risen but slightly from Rs. 23.53 lakhs to Rs. 24.20 lakhs due primarily to a much larger provision of Rs. 10.14 lakhs, as against Rs. 7.64 lakhs a year before, for depreciation. The transfers to reserves have been stepped up from Rs. 7.50 lakhs to Rs. 9.42 lakhs. The return to shareholders which had been enhanced from 11 per cent for 1959 to 15 per cent for 1960, has been raised further to 16 per cent per annum.

The comparative table below gives a fair idea of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales (gross)	307.62	267.22	269.81	212.78
Closing stocks	31.04	41.98	21.00	22.75
Other income	17.92	25.37	17.48	22.75
Raw materials consumed	151.67	158.14	132.12	0.62
Staff expenses	70.12	68.30	67.78	113.88
Other expenses	50.63	48.45	52.95	42.04
Gross profit	40.34	36.59	20.68	45.82
Provision for—				9.82
Depreciation	10.14	7.64	6.85

Market value of ordinary share (In rupees):	1961	1960	1959	1958
High	150.00	127.50	90.50	90.65
Low	118.00	90.00	70.00	86.75

† Free of French Indian income-tax.

During the year under review, the modernisation programme of the Company made satisfactory progress. The weaving preparatory department was completed, 34 ring spinning frames were converted to CN high drafting system, nine intermediate frames were converted to double zone drafting arrangement and one more was nearing full conversion by the end of the year. Orders have been placed for the conversion of 47 ring spinning frames to GX-2 system of high drafting and 13 intermediate frames to double zone drafting arrangement. Sixteen Platts MDF-5 high speed draw frames are also on order. The project for modernising the spinning shed is expected to be completed by June 1963. The Directors are now attending to modernising and increasing the capacity of the finishing department. A second kier was commissioned during the year, and plans are under consideration for introducing pigment padding, dyeing and mercerising.

The Rs. 100 fully paid ordinary shares are currently quoted at Rs. 147.50 cum-div., and, on an ex-div. basis, offer a net yield of 12.3 per cent per annum.

FERTILISERS

(Concluded from page 846)

35 and 47 months should normally suffice under local conditions:

Time Schedule for Fertiliser Plant in India

Phasing	Approximate time taken by Government (Months)	Normal time (Months)
Preliminary analysis, project report and initial decision as to proceed with the project	5–7	4–5
Preparation of tenders, preliminary processes, specifications, etc.	3–4	3–4
Contractors' project bid, review of bids, and final decision to erect factory	12–20	4–8
Ordering, construction, erection to completion and start-up	32–40	24–30
Total	52–71	35–47

The Fertiliser Mission, therefore, recommended that the Fertiliser Corporation of India should co-ordinate and be responsible for planning, training, technical examination and research with regard to implementing this programme.

This expert body offers some interesting comments on the raw material base of nitrogen production and the comparative costs of different end-products. The cost per ton of nitrogen is estimated as follows:

Ammonia (82%N) Rs. 454; urea (45%N) Rs. 810; ammonium nitrate/limestone (30.5%N) Rs. 1,030 and ammonium sulphate (20.5%N) Rs. 1,320.

According to this reckoning, production of ammonium sulphate as at Sindri is the least economic and involves the greatest bulk. It costs twice as much to transport a ton of ammonium sulphate as it does a ton of urea. Since the utilisation of ammonia-in-water was found unsuited to Indian conditions, except in a few favoured localities as Tanjore district, the production of urea is favoured.

Comparative Costs

Here are estimates of the comparative costs of producing a ton of ammonia on the basis of the raw materials used: Natural gas, refinery gas, by-product coke oven gas Rs. 300; naphtha Rs. 320 and coal (at Rs. 30 a ton) Rs. 400. The use of gas or naphtha is, therefore, recommended in preference to coal, except in places where coal (or lignite) is available at site (Kothagudam and Neyveli) and the product is consumed locally.

Coming to manufacturing methods, the four steps leading to the production of ammonia are: (1) separation of air into oxygen and nitrogen by liquefaction and distillation; (2) manufacture of hydrogen; (3) purification of hydrogen and (4) reaction of hydrogen and nitrogen.

By burning methane or natural gas in a limited supply of oxygen and in the presence of steam in the required and carefully controlled quantities, mixtures of hydrogen, carbon monoxide and carbon dioxide are obtained. Or one may start refinery gas, coke oven gas or naphtha as raw material.

Carbon dioxide can be removed readily by absorption in an alkaline solution, but the carbon monoxide cannot be separated in the same way. For this reason, this component is converted to carbon dioxide by adding steam to the stream of gases and then passing the mixture over a catalyst, or activating agent, at a high temperature. The resulting gas then consists essentially of hydrogen and carbon dioxide. After absorption of carbon dioxide the hydrogen is of 97 per cent purity, and still contains small amounts of water, carbon dioxide and hydrocarbons all of which must be removed. Hydrogen is purified by treatment in turn with an alkaline solution and a drying agent and finally washing out traces of hydrocarbons by liquid nitrogen.

Several processes have been developed for the synthesis of ammonia, all of them calling for the employment of catalysts, high pressure (2,840 to 14,000 lb./sq. in.) and moderately high temperature. Nitric acid is obtained by high temperature oxidation of ammonia over a platinum catalyst. Finally, urea is made by the reaction of carbon dioxide with ammonia at a pressure of 2,840 lb./sq. in. and a temperature of 345° F.

An early decision on a price policy conducive to the increased use of fertilisers is seen as essential. At present, the Indian cultivator who is, perhaps, the poorest in the world, has to pay almost the highest price in the world for fertilisers. The high price of Indian fertiliser is attributed to the 16 per cent "cushion" included in the fertiliser pool price. This has yielded considerable annual surpluses (Rs. 6.38 crores in each of the years from 1955-56 to 1959-60) which constitute an indirect tax on the cultivator.

Formidable Task

The task of increasing fertiliser consumption on the scale envisaged by India is indeed a formidable one. In the Western countries it took some three years of selling to make a pronounced impression on the fertiliser market. It behoves the manufacturers in the private and public sectors to launch an intensive educational and selling campaign. The Government of India made a gesture recently by announcing reduction in the prices of nitrogenous fertilisers, the idea being that it would enable the farmer to buy more fertilisers and increase the yield (see Table B).

Even at the new reduced prices, the Fertiliser Pool is understood to be making a profit of Rs. 25 to 30 per ton of fertiliser sold. The Pool purchases the indigenous fertilisers at different prices, buying ammonium sulphate produced as by-product by steel plants at Rs. 220 per metric ton, from Sindri at Rs. 300 per metric ton and from FACT at about Rs. 350. And the import price is about Rs. 210 per metric ton. And when the Pool distributes the imported and indigenous ammonium sulphate it is sold at Rs. 330 per metric ton.

The U.N. Fertiliser Mission has recommended the abolition of the Central Fertiliser Pool and direct competitive sales by the individual plants. In fairness, the Government cannot reject the demand for further reduction in prices, the more so as it announced the reduction of excise duty on naphtha used as raw material in fertiliser production last December. This will bring down the production costs of nitrogenous fertilisers manufactured at Trombay, Gorakhpur, Visakhapatnam and Ennore. Lastly, to promote ready acceptance of fertilisers by farmers, the Government should fix a guaranteed minimum price for basic food crops (to start with rice and wheat) that will enable the cultivator to increase yields without fear of a significant fall in prices.

TABLE A: *Fertiliser Imports and Foreign Exchange Savings*

(In million rupees)

Year	Capacity of N. to be achieved (1,000 tons)	Additional food production (1,000 tons)	Foreign Exchange for import of			Savings in Foreign Exchange by	
			Foodgrains	Fertilisers	Fertiliser Plant	Import fertilisers rather than foodgrains	Import fertiliser Plant rather than foodgrains
1	2	3	4	5	6	7 (4—5)	8 (4—6)
1960	250	2,500	1,135	375	42	760	1,093
1961	350	3,500	1,589	525	42	1,064	1,547
1962	400	4,000	1,816	600	188	1,216	1,628
1963	400	4,000	1,816	600	230	1,216	1,586
1964	400	4,000	1,816	600	242	1,216	1,574
1965	700	7,000	3,178	1,050	270	2,128	2,908
1966	1,200	12,000	5,448	1,800	68	3,648	5,380
			16,798	5,550	1,082	11,248	15,716

Note:—Assuming all N. production is used for food production; a ton of N. gives 10 tons of foodgrains and 20 tons of straw; the cost of foodgrains Rs. 400 a ton and straw Rs. 27 per ton. Cost of imported N. taken as Rs. 1,500 a ton.
(Source—*Secretary, Development Council for Fertilisers and Fertiliser Association of India.*)

TABLE B: *Price of Nitrogen Fertilisers to the Cultivator*

(Rs. per metric tons)

	U.P.		Madras		Orissa		In any other State or Union territory	
	Old	New	Old	New	Old	New	Old	New
Ammonium sulphate	330.00	366.00	385.14	371.00	384.50	370.00	374.50	360.00
Urea	733.00	719.00	724.98	711.00	729.10	715.00	729.10	715.00
Ammonium sulphate/nitrate	446.00	438.00	432.06	432.00	443.5	435.00	443.50	435.00
Calcium ammonium/nitrate	359.00	346.00	354.54	342.00	354.50	342.00	354.50	342.00

Note:—Old price prior to 1st December 1961. New price from 1st December 1961.

NEW PRODUCTS AND PROCESSES

Automatic Welding Head

AN argon-arc type fully automatic welding head, capable of joining tubes in confined spaces, has been developed at the Erith, Kent, Works of G.E.C. (Engineering). This equipment has been evolved for use in the installation of the miles of stainless steel gas-sampling tubes forming part of the burst-cartridge detection system at the Hunterston nuclear generating station. The welding head is also suitable for use in other fields where welds may have to be made in places where space is restricted. It consists of two tungsten electrodes 1/16-inch in diameter, mounted diametrically opposite each other, and having a life expectancy between repointings of not less than 20 welds. These electrodes are fitted to the rotating head which is mounted in a frame provided with two split clamps enabling the head to be clamped above and below the joint to be welded. A motor fitted to this frame drives the head forward through 180 degrees, in a plane parallel to the tube, and then reverses through 180 degrees thus returning the head to its starting position. Argon is fed to the head through a length of plastic tubing and arranged to flow around each electrode.

New Fire-fighting Material

A new fire-fighting liquid is now being offered by Imperial Chemical Industries for use against electrical fires and fires of inflammable liquids. The material, known as BCF, for which the chemical name is bromochlorodifluoromethane, acts in part by forming a blanket of dense gas which will not support combustion, and also by the strong inhibiting action which it exerts on the reactions taking place in flames. The liquid is said to be more expensive than well-established materials such as chlorobromomethane and methyl bromide, but it is claimed that the higher cost is offset by its superior properties.

Heat Exchanger

A new type of heat exchanger, claimed to be 25 times more efficient than the conventional air-cooled exchanger, has been developed at a laboratory of Britain's Department of Scientific and Industrial Research. The equipment, which uses an air-water froth as the cooling medium, is described as having a performance comparable with that of a water-cooled exchanger. Air cooling has hitherto had the disadvantage of needing a great deal of space owing to the size of the heat-exchangers required. In the froth-contact heat exchanger developed at the laboratory, tubes containing the material to be cooled are immersed in an air-water froth created by blowing air through a sieve plate in the bottom of a water tank. Cooling occurs in two stages: in the first the tubes to be cooled are covered by a thin, frequently renewed film of water to which heat is transferred at a high rate. In the second stage, the film is carried from the tubes into a constantly-moving froth, where, although the rate of heat-transfer is lower, the area over which heat-transfer occurs is very large. Although the amount of water required is roughly equivalent to that used with cooling towers, the high-powered pumping equipment which forms an important part of the cost of the cooling tower system is not needed.

Treatment for Low-grade Ore

An Australian scientists Dr. T. R. Scott, principal research officer in the mineral chemistry division of the Australian Commonwealth Scientific and Industrial Research Organisation, has made an important discovery on mineral extraction. He has developed a method of producing aluminium oxide from low-grade bauxite. The new process involves a high temperature treatment of the ore with sulphuric acid to form a basic aluminium sulphate as a purified intermediate product. The major advantage of this new process lies in its adaptability to low grade ores, high in silica and iron, which are not suitable for treatment by the conventional alkali method.

Grained Finish for Hardboard

An Australian furniture manufacturer, Ogden Bros. P/L., of St. Peters, Sydney, has developed a new process to provide hardboard with a grained finish comparable with high-class veneering. The process, called Duraplex, gives the hardboard a hard attractively-grained and coloured coating which is heat and scratch resistant and impervious to solvents. It is being used in the construction of Ogden Durabilt bedroom suites. Duraplex involves the printing of timber grain patterns on hardboard in specially developed inks and the application of polyster finish. The first step is the application of a neutral coloured base coat to the hardboard sheet which is then passed through a printing machine in which an etched steel roller applies the grain pattern and colour. A polyster finish is then applied. Eighteen months of research went into the preparation of the nonfading ink used in the printing. Six different grain patterns can be given to the hardboard in an infinite range of colours and shades.

Three-dimensional Radar

A new, three-dimensional radar, believed to be the first of its kind in the world and built by the Royal Radar Establishment of Malvern, is a big step towards automatic air traffic control. The radar, called Blue Yeoman, came into operation recently. It was designed for defence purposes and a chain of about three is to be built along the East Coast. The special feature of Blue Yeoman is that it can measure the altitude of an aircraft at the same time as it determines its direction. Previous radars have measured only direction or only height.

Notices

THE GANESH FLOUR MILLS COMPANY LIMITED, DELHI

Registered Office:
SUBZIMANDI, DELHI

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 70th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Company, Ltd., Delhi, will be held at the Company's premises at 64-65, Najafgarh Road (Industrial Area), New Delhi, on Wednesday the 30th May, 1962, at 10.30 a.m., or soon after the separate meetings of different classes of Shareholders are over, to transact the following business:—

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September, 1961.
2. To declare dividends:—
   (a) On Ordinary/Equity Shares and 7% First Cumulative Preference Shares.
   (b) On 2nd, 3rd, 4th and 5th Cumulative Preference Shares (taking into account the Special Resolution No. 5 in this respect).
3. (a) To appoint a Director in place of L. Bal Raj who retires by rotation under the Articles of Association of the Company and being eligible for re-appointment, offers himself for re-appointment as a Director of the Company.

   (b) To appoint a Director in place of L. Briji Lal who retires by rotation under the Articles of Association of the Company and being eligible for re-appointment, subject to exemption of age limit as prescribed for a Director under Section 280 of the Companies Act, 1956, offers himself for re-appointment and to consider, and if thought fit, to pass the following resolution of which special notice as required under Section 281 of the Companies Act, 1956, has been received by the Company from a Shareholder:—

   "Resolved that L. Brij Lal who has attained the age of 69 years be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for a Director as prescribed under Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors for the financial year 1961-62 and fix their remuneration. Messrs. A. F. Ferguson & Co., Chartered Accountants, the retiring Auditors, being eligible for re-appointment, offer themselves for re-appointment as Auditors of the Company for the year 1961-62.

SPECIAL BUSINESS

5. To consider and if thought fit to pass with or without modification the following as a *Special Resolution*:

   "Resolved that so long as the Company is required to make deductions of tax at source from dividends the rate of dividend on 2nd, 3rd, 4th and 5th Cumulative Preference Shares be increased from 4% to 5.71% per annum."
6. To consider and if thought fit to pass with or without modification the following as a *Special Resolution*:

   "Resolved that in Clause 5(c) and (d) of the Memorandum of Association of the Company the words and figures 4% and 'free of income-tax' wherever they occur in these sub-clauses of clause 5 be deleted."
7. To consider and if thought fit to pass with or without modification the following as a *Special Resolution*:—

   "Resolved that:—

   (i) In Article 3(c) (i) of the Articles of Association of the Company the words and figures "4% per annum" be deleted;

   (ii) In Article 3(d) (i) the words and figures "of 4% per annum" be deleted;

   (iii) In Article 3(e) (i) the words and figures "4% per annum" be deleted;

   In Article 3(e) (ii) the words and figures "4%" be deleted;

   (iv) In Article 3(f) (i), (ii) & (iii) the words and figures "4% per annum" and '4%' wherever they occur be deleted."
8. To consider and if thought fit to pass with or without modifications the following as a *Special Resolution*:

   "Resolved that L. Satya Narain Gupta, Director of the Company be paid 3/4 per cent commission per annum on the amounts guaranteed or securities provided by him in connection with any loans or advances obtained by the Company from time to time from Bankers and other parties for purposes of its business in India and Pakistan. The commission to commence from the date such guarantees or securities are provided."
9. To consider and if thought fit to pass with or without modifications the following as a *Special Resolution*:

   "Resolved that, subject to the approval of the Central Government and to such modifications, if any, as the Government might make, Lala Kirpa Narain, Secretary and General Manager of the Company, be paid 3/4 per cent commission per annum on the amounts guaranteed or securities provided by him in connection with any loans or advances obtained by the Company from time to time from Bankers and other parties for purposes of its business in India and Pakistan. The commission to commence from the date such guarantees or securities are provided."
10. To consider and if thought fit to pass with or without modifications the following as an Ordinary Resolution:

    "Resolved that the Board of Directors of the Company be and are hereby authorised, in consultation with the Company's Auditors, to appoint persons qualified to act as Auditors for audit of the accounts of Branches of the Company, where such audit is not done by the Company's Auditors, as the Board of Directors may decide from time to time and on such terms, conditions and remuneration as they think proper."
11. To consider and if thought fit to pass the following with or without modification as an Ordinary Resolution:

    "Resolved that the Company hereby approves of the appointments and consents to the continuance, as the case may, of the following as Dealers of the Company for a period not exceeding five years commencing from the dates of such appointments and for the products and the Area respectively mentioned subject to any variation that may be made in the terms of their appointments including changes in Area and Products and subject also to the conditions that the arrangements may be terminated earlier by one month's notice on either side."

Note:—(The list of all such dealers is being sent to the Shareholders alongwith the Balance Sheet.)

By Order of the Board of Directors,
FOR THE GANESH FLOUR MILLS CO. LTD.,
(Sd.) KIRPA NARAIN,
Secretary & General Manager.

DELHI,
Dated 30th April 1962.

N.B.—(a) The Share Transfer Book of the Company will remain closed from 17th May 1962 to 30th May 1962 (both days inclusive);

(b) Members unable to attend are requested to send their proxy form, sent alongwith the notice, duly stamped, signed and completed in favour of a person attending the meeting. Forms not properly signed and/or completed or received less than forty-eight hours before the meeting will be treated as invalid;

(c) A member entitled to vote is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company;

(d) A copy of the existing Memorandum and Articles of Association of the Company as well as copies of the proposed amendments to the Memorandum and Articles of Association of the Company duly signed by the Chairman for purposes of identification shall also be available for inspection of members during business hours at the Registered Office of the Company on all working days from 17th May 1962 to 30th May 1962;

(e) The terms of appointment of Dealers as mentioned in item 10 above will be open for inspection of the members at the Registered Office of the Company on any working day between 17th May 1962 to 30th May 1962, during working hours;

(f) Explanatory statements as required under Section 173 of the Companies Act are being sent to the Shareholder alongwith the Balance Sheet by post;

(g) All Shareholders of the Company are also requested to send their present addresses to the Company before the date of the Meeting so that Dividend Warrants for the year ending 30th September 1961 may reach them at their correct address.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 7th June, 1962, at 11 a.m., for the following purposes:

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1961 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 1st to 7th June, 1962, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, *30th March*, 1962.

Note.—A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting (being the one hundred and twenty-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 31st May, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, and to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution, which will be proposed as an Ordinary Resolution, of which Special Notice dated 23rd April, 1962, as required by Section 281 of the Companies Act, 1956, has been received:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Mr. S. C. Law, a Director of the Company, who has attained the age of 69 years, and who retires in rotation and, being eligible, offers himself for re-appointment, and that the said Mr. S. C. Law be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 17th May, 1962 to 31st May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *24th April*, 1962.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

INDUSTRIAL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Fourth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 25th May, 1962, at 12.10 p.m., to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following resolution which will be proposed as a special resolution:

"That the word 'three' appearing in the third line of Article 144 of the Articles of Association of the Company be deleted and the word 'six' be substituted therefor."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 10th May, 1962 to 25th May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *19th April*, 1962.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

HOPE'S METAL WINDOWS (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Fourth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 25th May, 1962, at 12.20 p.m., to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following resolutions which will be proposed as special resolutions:

1. "That pursuant to the provisions of Section 81 of the Companies Act, 1956 and in terms of an Agreement dated 31st May, 1961 between the Company and Henry Hope & Sons Ltd., Birmingham, England, the Board of Directors of the Company be and is hereby authorised to allot to Henry Hope & Sons Ltd. fully paid ordinary shares of Rs. 10 each in the capital of the Company not exceeding the equivalent value of £19,200."
2. "That the word 'three' appearing in the third line of Article 144 of the Articles of Association of the Company be deleted and the word 'six' be substituted therefor."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 18th May, 1962 to 25th May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *19th April*, 1962.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

THE MAHARASHTRA SUGAR MILLS, LIMITED

Registered Office:
Industrial Assurance Building, Churchgate,
BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-EIGHTH ANNUAL GENERAL MEETING of THE MAHARASHTRA SUGAR MILLS, LTD., will be held on THURSDAY, the 31ST day of MAY 1962 at 4-00 p.m., at the Registered Office of the Company, to transact the following business:

1. To consider and adopt the audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1961, and the Auditors' Report thereon and the Directors' Report.
2. To declare Dividends.
3. To transfer a sum of Rs. 5 Lacs from the General Reserve and declare additional Dividend of Rs. 4,72,500 therefrom pursuant to the Notice dated the 3rd March 1962 served on the Company by the Income-tax Officer, Companies Circle I (2), Bombay, under Section 23A of the Income-tax Act 1922 for assessment year 1955-56 (Company's accounting year ended 30th September, 1954).
4. To appoint a Director in place of Shri S. A. Sabnis who retires by rotation and to consider and, if thought fit, to pass the following Resolution of which a Special Notice as required by Section 281 of the Companies Act 1956 has been received by the Company:

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Shri S. A. Sabnis, who has attained the age of 83 years and retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
5. To appoint a Director in place of Shri B. A. Dalal who retires by rotation and is eligible for re-appointment.
6. To appoint a Director in place of Shri Yasho Vardhan, who was appointed an Additional Director of the Company by the Board of Directors on 14th December 1961 under Article 107 of the Articles of Association of the Company and who ceases to be a Director at the Annual General Meeting and in respect of whom the Company has received a Notice in writing proposing his candidature for the office of Director.
7. To appoint Auditors to hold office from the conclusion of the forthcoming Annual General Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

Notes: (a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act 1956 is annexed to the Notice issued to the members of the Company.

(b) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

(c) The Transfer Books of the Company will be closed from the 13th May 1962 to 27th May 1962, both days inclusive.

(d) If dividends as recommended by the Directors are sanctioned at the Meeting, the dividend warrants will be posted to those Members whose names stand on the Company's Register as on 27th day of May 1962. The payments will be made on and after 12th June, 1962.

By Order of the Board of Directors,
FOR THE MAHARASHTRA SUGAR MILLS, LTD.,
M. L. DAHANUKAR & COMPANY PRIVATE LIMITED,
D. M. DAHANUKAR,
Director,
Managing Agents.

BOMBAY, *2nd May*, 1962.

AMAR DYE-CHEM LIMITED

(c) The proposed dividends on Preference and Equity Shares if sanctioned will be made payable at the Chartered Bank, Bombay, on and after 12th day of June, 1962, to those shareholders whose names appear on the Register of Members on 11th day of June, 1962 to whom dividend warrants will be posted at their addresses registered with the Company.

100 kgs., but following weak advices from London as well as Singapore the rate gradually declined to Rs. 1,696.75.

While the firm report of the expected releases of tin from the U.S. stockpile has affected the world price of this metal, it has been claimed on behalf of the U.S. that the releases would be so arranged as not to affect the market trend. The U.S. does not desire that the releases should have any repercussions on producers. It is, therefore, considered possible that the releases would be by auction, the highest bidder obtaining the supplies. In which case, it is very likely that the International Tin Council would bid and thus once again build some buffer stocks. This would thus mean the transference of stocks from the U.S. stockpile to the buffer of the International Tin Council in London. Such a development would, of course, be welcomed by the producers, as it would leave the price unaffected. Having regard to the assurances given by President Kennedy to the producers in Malaya and Bolivia and other countries, it is unlikely that the U.S. would release tin at a price lower than £965 a ton which is the latest ceiling fixed by the International Tin Council. Market circles await the official announcement about the reported sale and the price at which it is to be made. For it would put to end the prevailing uncertainty.

In London, spot copper remained unchanged at £234 a ton; with the existing good warehouse stocks making the report of strike in northern Rhodesia insignificant. In Calcutta, berry scrap hardened from Rs. 572.75 to Rs. 576 per 100 kgs. Demand was keen, but supplies were limited. Until the D.L.F. supplies are received, the situation is unlikely to improve. The absence of adequate copper led to a fall in the demand for zinc which declined from Rs. 244.75 to Rs. 240.25 per 100 kgs. In London, spot zinc opened at £69½ a ton and closed lower on balance at £68½. Virgin lead was steady at Rs. 133.75 per 100 kgs. following the current difficult supply position and troubles in the port.

JUTE GOODS DECLINE FURTHER

(From Our Own Correspondent)

CALCUTTA, *8th May*

The virtual closing of the Calcutta port as a result of stoppage of work by Hooghly pilots is causing considerable anxiety to all sections of jute trade and industry. Already, smaller drafts and, in consequence, loading of less cargo had meant lower exports and now, with the pilots' refusal to work, shippers have been placed in an unenviable position. It has been most unfortunate that this state of affairs prevails at a time when prompt and regular supplies against overseas traders are necessary to maintain the reputation of the trade.

During the week under review, a further decline in prices of heavy goods was recorded, while good demand led to maintenance of hessian prices. On the other hand, widespread rains in several jute-growing areas in both Pakistan and India and renewed expectations of a bumper crop depressed fibre prices in both countries. Thunder showers in the last two weeks have led farmers to start sowing operations in right earnest, although it is feared that, with continued good arrivals, heavy stocks in the bazar awaiting buyers and the farmers still possessing remnants of the old crop, there may be some last minute decisions among farmers to grow paddy instead of jute in certain areas, the overall position is considered to be good. It has been fit and proper that the Buffer Stock Association has started purchases at this time, since these purchases can go a long way towards reassuring farmers that there would be ready buyers of his produce. The Association members have already completed purchases of the first quota of 50,000 bales. It has now been decided to purchase a further quantity of 75,000 bales, which would raise the buffer stocks to 125,000 bales equivalent to 625,000 maunds. As is already known, the B.S.A.'s purchases are mostly low-grade jute and mesta. This is so in order to give support to these grades, supplies of which are abundant as compared with those of the higher grades.

It had been earlier contemplated to import and allocate 100,000 bales of cuttings to mills which were to purchase a proportionate quantity of low grade fibre. This has now been given up, since the trade is much opposed to imports at a time when domestic supplies are more than enough to meet demand. The Buffer Stock Association has rightly pointed out that the present time is not appropriate to make any purchases of imported cuttings. Meanwhile, demand for permission to export raw jute in at least token quantities has again been made, but it is thought unlikely that the Government would permit exports. With the commencement of Buffer Stock purchases, the market is expected to be relieved soon of excess supplies and as such it should not matter to the market trend whether the surplus supplies remain with the Buffer Stock Association and mills or in foreign markets. At present, it is estimated that carryover to the coming season would be in the neighbourhood of 2,400,000 bales, as against 400,000 bales brought in, the respective estimate for Pakistan being 1,100,000 bales, against nil. With the poor interest shown by overseas buyers in Pakistan markets and with continued good arrivals, it was apprehended that cultivators might change over from jute to paddy. The fall in Pakistan prices has been greater as compared with that in India and if the U.K. and Continental buyers do not come forward to relieve the market, prices will fall further. The cancellation of the decision by the authorities to import cuttings is, thus, a step in the right direction.

Storage of jute has indeed been a problem, but, if the State Warehousing Corporation extends its storage facilities to buffer stock purchases pending transportation to consumption centres, it is felt that the price support scheme would make itself further felt in restoring the confidence of farmers. At present, lack of space in growing areas forces the cultivators to dispose of their produce to middlemen at unremunerative prices. A conference between the West Bengal Chief Minister and the Chairman of the Corporation has already been held in this regard.

With the increased crop of the current season and expectations of another bumper crop, it has been apparent that, in order to reduce cost of cultivation and widen the market for raw jute and jute goods, new uses of jute should be discovered. As such, it has been a very happy development that researches undertaken in regard to the possibility of commercial use of jute sticks at present going to waste after peeling the fibre around them have been met with success. These sticks have been found to be very good raw material for hard boards.

With the levy of excise duties on jute goods for internal consumption, prices had an unsettling influence. Wide fluctuations followed and, with the expectation of further fall in prices, overseas buyers stayed out. While hessian prices have returned to the levels existing before the levies, prices of heavy goods have lost on balance. On Tuesday last, ready B. twills eased from Rs. 130.50 to Rs. 129.00 in the absence of demand. However, as a result of interest in local bazar, hessian 40" 10 oz. steadied from Rs. 53.10 to Rs. 53.75. Soon good covering demand in hessian followed, and there were also inquiries from abroad for hessian. As a result, ready hessian 40" 10 oz. hardened further to Rs. 54.25 on Wednesday. However, with little business in heavy goods, ready B. twills dropped to Rs. 127.75. On Thursday, apart from reports of some business in Australian woolpacks, the heavy goods section was inactive. This was reflected in the price of B. twills falling further to Rs. 125.50. However, bear-covering as well as shortage of ready goods saw hessian 40" 10 oz. being lifted to Rs. 54.50. On Friday, there was profit-taking in hessian, as a result of which the price for the 40" 10 oz. construction fell to Rs. 53. Depression marked activities in heavy goods, as demand was absent. This was reflected in the price of B. twills falling to Rs. 124. Over the week-end, there was some covering business done, but this was insufficient to maintain the quotations. Ready B. twills fell to Rs. 122.75 and hessian 40" 10 oz. to Rs. 52.50. However, conditions were fully steady yesterday. Short-covering forced up ready hessian 40" 10 oz. to Rs. 53.75 and in sympathy B. twills moved up to Rs. 124.75.

In the wake of reports of good rains in many jute growing areas, the fibre market was depressed. Sellers were wanting buyers. However, mills were reluctant to buy. As a result, prices fell below the minimum levels.

Notice

STEEL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Fourth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 25th May, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following resolution which will be proposed as a special resolution:

"That the word 'three' appearing in the third line of Article 144 of the Articles of Association of the Company be deleted and the word 'six' be substituted therefor."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 10th May, 1962 to 25th May, 1962, both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO. LTD.,

D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA. *19th April, 1962.*

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

LONDON LETTER

AID FOR OVERSEAS DEVELOPMENT

(From Our Own Correspondent)

LONDON, *4th May*

WHEN, in the July crisis of last year, the Chancellor of the Exchequer began to be brutal with the British economy, he put in a saving word for the underdeveloped countries and declared that disbursements of assistance to them from the U.K. Government funds would have to be continued. In 1960, these disbursements totalled £150 million and, until last July, it was expected that they would rise to £180 million by the end of last year; in the event, they reached £162 million.

The Government cannot be blamed, however, for the greater part of this drop—it has mainly been due to a slower rate of drawing by some countries on the loan funds available to them. Last year's assistance was given a little less than half in the form of grants and a little more than half in the form of loans. A distribution between the various groups of underdeveloped countries for the last two years is shown below:

(In million £s)

	1960	1961
Colonial territories	69	94
Independent Commonwealth	41	50
Other countries	14	12

It is the Colonies which have had the greater part of the benefit and, over the last three years, their share has increased from 53 per cent to 60 per cent. The following table shows more specifically who received grants and who received loans:

(In million £s)

	1961	
	Grants	*Loans*
Africa:		
North Africa	3	—
South Africa	4	4
East Africa	22	20
West Africa	6	11
Central Africa	3	13
America:		
Central America	7	2
South America	1	3
Asia:		
South and South-East Asia ...	6	28
Other Asia	9	1
Australia	1	—
Europe	8	1
Other funds not allocated to individual countries	2	—
Total bilateral assistance	75	83

It will be seen that the lion's share of grants went to East Africa which received nearly half as much again as the countries of Asia. The latter, on other hand, took out more by way of loans.

The O.E.C.D. has for the last two years attempted to assess the total amount of aid going to the underdeveloped countries, but the assessments are made difficult by the uncertainty of the figures for the flow of private capital. Nevertheless, the interesting picture emerges that financial aid from all parts of the world was as high as $8,000 million in 1960. For the years 1950-55, the average was only $3,500 million. The increase in recent years has been very considerable and preliminary data indicates a further strong upward trend in 1961.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, *7th May*

The kip market ruled steady, except for low grade cow hides of light average weights, for which demand was slack. Shipment business was selective, with good demand for lines in short supply, namely, cow calf light weights and top marks in buff calf. A small volume of export sales was reported in cow hides 5/8½ lbs. good standards in better tannages, while F.A.Q. kips were difficult to move. Inquiries from the U.S. for buff hides and calf were not brisk, nor from the Continent for cow calf. Traders felt that prices were not likely to improve further.

Trading in the tanned skins section was limited. Demand was selective, with emphasis on light weight goat un selections and heavy weight lower ends. The U.S. importers were not in the market, as sellers were quoting higher levels. Demand for tanned sheep skins was unchanged, same as last week.

In the next London auctions, 130,000 goat and 140,000 sheep skins will be offered for sale.

The following are the prices quoted in the local market for ready stocks of all-round lots:—

Tanned cowhides 8/8½ lbs. average	Per lb. Rs.
„ cowcalf 1½/2 „ „	3.25 to 3.30
„ buffhides 12/14 „ „	3.70 to 3.90
„ buffcalf 1½/2 „ „	1.90 to 2.00
	3.10 to 3.20

R—Revised. * Estimated.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. i—Interim Dividend.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters "A" and "B" under the columns "Paid-up Ordinary Capital" and "Paid-up per share

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2666 BOMBAY, 19th MAY 1962 PRICE Rs. 2

MR. MALAVIYA REALISTIC ON COAL

THE crucial importance of expeditious and total liquidation of the coal problem which is having a vicious effect on production has been amply realised by Mr. K. D. Malaviya, Union Minister of Mines and Fuel. This is evident not only from his air dash to Calcutta shortly after his new appointment as a Minister with full Cabinet rank but also from his statement in the Lok Sabha on Wednesday this week, when there was a debate on the demand for grants for his Ministry. His remarks reflected imagination and determination. He conceded that it was necessary to raise the prices of coal of at least superior grades in order to ensure an increase in production. Although he was cautious enough to add that low grades were not in need of any price increase, he averred that an increase in the price of coal was not anti-social and that the target of 97 to 100 million tons of coal could not be achieved by leaving the coal industry, whether in the private sector or public sector, in doubt and suspense in regard to the facilities it should get. It must get, he added, finance, power, explosives, technical assistance and transport. Reiterating a statement he had made earlier at Calcutta, he observed that the Government was willing to help the colliery owners as much as possible, including an increase in the target for the private sector, if they stepped up production. It is to be hoped that by this he did not mean that the industry must first raise production to be eligible for an increase in its selling prices and other facilities. That would be like putting the cart before the horse, besides implying that he has no confidence in the colliery-owners. He must be aware by now that, currently, coal production is running below the level attained last year, instead of being well above it, as, indeed, it should be, if the third Plan means anything. The reasons for this unfavourable trend are well known; they are beyond the control of colliery owners. The disabling factors must first be eliminated. It is obvious that no colliery-owner would deliberately keep production down, especially when he knows that, with price control on coal continuing, one of the principal ways in which he can raise his profit-margin is to raise the production in, and the productivity of, his mines.

Indicative of Mr. Malaviya's determination to tackle the coal problem is his assertion that the Government would spare no effort in the coming months and years to reach the target for coal production and that "we shall break the transport bottleneck." These declarations are gratifying to the extent words can be, but they must be promptly translated into action. Many are the ministerial pronouncements and promises which have remained on paper for years without being fulfilled. It is to be hoped that Mr. Malaviya's observations on coal will not share the same fate. He has to act quickly. So far as the public sector is concerned, he is confronted with an additional problem arising from the demand of State Governments for a share in the rights, responsibilities and fruits of coal-mining. The Government of West Bengal, for instance, has been wanting to own and operate coal mines. Nothing is basically wrong with this desire; only it has to be proved by the State Governments that they can do the job better than the monolithic Central corporation, namely, the N.C.D.C. India is too vast a country to permit the successful adoption of the British model in this respect. A variation on the lines suggested by us on page 189 of our issue dated 3rd February 1962 is highly desirable. Mr. Malaviya threw not even a hint as to how he proposed to settle the Centre's differences with the States on this issue. He only said that he had had talks with Dr. B. C. Roy. This only suggests that he is still far from a remedy to quench the States' new thirst for power and resources.

The approach of Mr. Malaviya to the problem of moving coal from the pitheads to the factories as well as to that of small uneconomic collieries is quite imaginative. On the former, the Minister indicated that the Government was thinking of developing inland navigation. It is proposed to utilise river transport in U.P. and Bihar and the D.V.C. canal in West Bengal. The plan seems to be to move coal in big commercial vehicles from coal-fields to river loading points at Monghyr, Bakhtiarpur and Bhagalpur for transport up to Allahabad by the Ganga and to Gorakhpur and beyond by the Ghagra. In the same way, the D.V.C. canal is to be used for moving coal to West Bengal. The idea is excellent, but its practicability has to be tried out. No information is available about the cost of transporting coal in this manner. Loading coal into lorries and unloading it from them—these operations will have to be carried out twice—may increase the percentage of smalls and powdered coal and thereby reduce the caloric value of the fuel. Again, as the supply of boats is very limited owing to the prolonged neglect suffered by inland navigation and the few that are available may not be of the right type to move bulk cargo like coal, not much relief can be expected in the short-term through the adoption of this solution. It is said that country boats will be used to begin with and that these will be replaced *in a few months* by power-driven tugs to be manufactured and supplied by the Defence Ministry. It is, however, a moot point whether the latter will be able to deliver sufficient number of tugs "in a few months." The performance of the Defence Department in the manufacture of civilian goods has been disappointing so far. Despite these "ifs" and "buts", it is worthwhile endeavouring to harness inland navigation for movement of bulk commodities and thereby reduce the pressure on railways.

In an earlier issue of this journal, we had questioned the economic feasibility and desirability of transporting coal by lorries even for such short distances as 75 to 100 miles. This view is shared by a British transport expert, Mr. M. R. Bonavia, whose services had been lent to the Neogy Committee on Transport Policy and Co-ordination. It is necessary to draw attention to his views, for the Neogy Committee itself may not submit its recommendations for a long time to come and the risk of planning for permanent diversion of coal to road transport appears to be real. Mr. Bonavia, we are told, does not favour large-scale diversion of coal from railways to road. According to him, the movement of coal by trucks over long distances, except as a purely short-term and emergency measure, has nothing to recommend itself. The best thing to do, therefore, is to enable the railways to carry more coal and the British expert endorses the suggestion made by us that the railway freight for coal must be raised to make it economical. So

country on the balance of payments front, one can say without any reservation that the very idea of compulsion in cotton textile exports is ludicrous, especially in the present situation when, on the one side, the conditions obtaining in the industry are disquieting to a degree and, on the other, there is fierce competition in world textile markets. How can one talk of compulsory export when, thanks to the official policy of pegging the mill industry's capacity and the growing domestic consumption requirements, *there is no adequate exportable surplus?* The only way to find such surplus is to restrain domestic consumption by both physical and fiscal controls. Are the Government and the leaders of the industry prepared for such a measure?

The circumstances are by no means propitious for the move that has now been decided upon. The cotton mill industry in India is in the throes of a severe crisis. There is, first of all, the acute shortage of raw cotton and the consequent high prices for the raw material. Further, a voluntary price control has been forced on the industry, while its manufacturing cost has become unduly rigid, not only as a result of the high level of cotton prices but also because wages, fuel and electric energy cost more. Then there is the mounting array of taxes. Viewed thus, there is certainly no exaggeration whatever in the remark of Mr. Naval H. Tata, in his annual statements issued as Chairman of the Tata group of mills this week, that the cotton mill industry is being made to stagnate in the name of social justice. And, yet, there are unfriendly critics who accuse the industry of exploitation. Is this, one would ask, the reward for an industry which supplies an essential need like clothing, not to speak of it being the largest national industry employing 800,000 operatives with a total turnover of over Rs. 600 crores and one of the staple earners of precious foreign exchange? Mr. Naval Tata has done well, indeed, by admirably presenting a true picture of what has turned out to be a much maligned industry.

The most disquieting problem confronting the mill industry to which Mr. Tata has naturally drawn attention pertains to the raw cotton supply crisis. He has certainly not cried 'wolf' when he says: "As things stand at present, the industry is bound to face curtailment in production, unless the cotton supply position improves before the middle of September 1962." The estimated shortage of cotton is as much as 700,000 bales, which, if not solved, will result in a production cut of approximately 15 to 20 per cent, with consequent unemployment and shortfall in export performance.

Mr. Tata is very critical of the heavy burden of taxation imposed on the mill industry. He observes:

"The worst and incomprehensible feature of the recent revision is the sharp increase on mercerised cloth. Mercerisation is a very simple process which in India has long ceased to be a discerning finish to cloth. It is a common finish given by all manufacturers to certain types of fabrics used in substantial quantities by the ordinary consumer. To tax this finish out of production is, in my view, a highly retrograde step which will put the quality of Indian fabrics way back into what was produced in the early fifties. In a land where we hear plentiful sermons of equal sacrifice for national interest from all sections of communities and from all industries, this unequal burden on cotton textiles is beyond one's comprehension. When one considers that this industry supplies an elementary need like clothing, it is amazing to find more prosperous industries in the synthetic fibre field dealing with luxury products let off comparatively lightly, not to speak of some other industries. . . ."

The cotton mills would, of course, be willing to bear any load of taxes, provided (*a*) their cost structure is sufficiently elastic and (*b*) there is no consumer resistance. The second factor may not be there now, since cloth is, after all, an article of necessity and the supply is limited by a blanket ceiling on production of mill-made cloth. It is, however, exposed to the odium of profiteering. So far as the first factor is concerned, the mills are certainly in a sorry predicament. The costs of major items such as cotton, wages, fuel and electric energy are all beyond the control of the industry. While assessing the impact of tax burden on the mill industry, one has necessarily to take into account the fact that the industry is equipped with considerable obsolete and inefficient plant and machinery which, working intensively on multi-shift operation, necessitates, as Mr. Tata rightly emphasised, frequent large-scale re-equipment and modernisation. "Such equipment at the present price of machinery," to quote him again, "is frankly beyond the means of the industry, even if no dividend were paid and the entire profit were ploughed back for purposes of rehabilitation and modernisation" An idea of the magnitude of the financial problem of replacement can be had from the following figures given by Mr. Naval Tata in respect of two of his units in Bombay City:

(In lakhs of rupees)

	Plant and machinery		*Other fixed assets*	
	Historical value	*Current replacement value*	*Historical value*	*Current replacement value*
Svadeshi Mills	243	620	89	358
Tata Mills	201	543	72	287

One will doubtless agree with Mr. Naval Tata when he says that, if the authorities want the textile mills to be written off as and when their machinery gets worn out by working intensively as is at present, then, the profits shown by some prosperous units are high. But obviously this is not and cannot be the objective of the Government. It will not be wrong to presume that the planners and the powers-that-be want the industry not only to be kept alive but kept reasonably modernised. If regard is had to this important point, it will be realised that the current level of profits is not as high as is made out to be. The question of profit-level and of finding finance for modernisation and replacement is not the only one on which the powers-that-be have incorrect notions. Their very approach to the problem of modernisation as well as rationalisation is halting and ineffective. So long as such an approach persists, there cannot be any appreciable reduction in production costs. Mr. Naval Tata has impressively highlighted this point. He says:

"Cost reduction and supply of fault-free cloth are the two most essential factors for promoting exports. Installation of automatic looms in replacement of plain looms is very necessary to produce perfect fault-free cloth and reduce costs. Whenever Government have come forward with schemes for installing automatic looms, they have clothed their proposals with such restrictive and penal conditions for compulsory exports that the purchase and installation have ceased to be a pure business venture. It is tragic that Government have not seen their way yet to formulate a well-reasoned policy to liberalise permission for installation of automatic looms. Other countries have rapidly forged ahead, with the result that, today, India has the lowest percentage of automatic looms and looms with automatic attachments to total looms installed. Of about 205,000 looms installed in India, only 17,000 are automatic, that is a negligible 8 per cent. Speaking of countries east of Suez, Japan, our strongest competitor in world markets, has 64,000 automatic looms, roughly 14 per cent of total capacity. Pakistan, another growing competitor, is on a much surer cost footing, with a total of 18,000 automatic looms, roughly 60 per cent of total weaving capacity."

It is against this background that one has to view the prospects for Indian cotton textile exports. The one serious handicap which is thwarting all efforts at export promotion stems from the industry's inability to quote competitive prices, thanks to its low productivity *vis-a-vis the highly rationalised and modern units* in other countries. In view of the relatively labour-intensive character of the industry, the average annual production of cloth per worker in this country is no more than 6,540 yards (1960), as against 13,226 yards in Japan (1960), 9,595 yards in Britain (1960), and 27,927 yards in the U.S. (1956). The productivity of a Japanese worker is thus about double that of India, of the U.K. worker 60 per cent higher and the U.S. about 4½ times. With such poor productivity per worker, how can one expect the Indian industry to withstand competition in foreign markets? There is no short-cut to export promotion. Compulsion of the type now proposed will only mean fostering inflation within the country which in turn will make matters still worse in course of time. Mr. Manubhai Shah must try to look beyond his nose if he is to succeed not only in the short-term but also long-term. He must have the courage to undo all the past mistakes of the Government on the textile front.

A PROJECT FOR PLENTY

THE Koyna project, the first generating unit of which was formally commissioned by Mr. Y. B. Chavan, Chief Minister of Maharashtra, on the 16th inst., bids fair to transform the economic landscape of Maharashtra. Work on the project was started in January 1954. The project is being executed in three stages and will produce, at the end of the third stage, 525,000 kw. of power, a quantity that will go a long way towards meeting the growing power needs of Maharashtra. It has been estimated by the Central Water and Power Commission that, in Western Maharashtra alone, the anticipated demand for power at the end of the third Plan would be of the order of 1,128,000 kw. As the net installed capacity is expected to increase to 881,000 kw. only, there will be a gap of roughly 250,000 kw. This would be more than met by Koyna which will have, at the completion of the second stage, a generating capacity of 465,000 kw.

The first stage of the project consists of the construction of a rubble concrete dam across the Koyna river built to part height and an underground power house, which is the most distinctive feature of the project, fed by a water conduit system taking off from the Koyna lake, to generate 240,000 kw. of power at 60 per cent load factor and produce 1,262 million kw.h. per year. The estimated cost of the first stage of the project is Rs. 38.28 crores. The first generating unit of this first stage, switched on by Mr. Chavan, has a capacity of 6,000 kw. Every six months from now on, an additional 6,000 kw. of generating capacity will be ready. The first and second stage of the project are together estimated to cost Rs. 55 crores. Under the third stage, the tail race waters emerging out of the power house will be harnessed to generate 60,000 kw. of power at 60 per cent load factor. In addition, a power house at the foot of the dam is also contemplated through which the irrigation supplies will be routed to generate 40,000 kw. of seasonal power. Originally, this scheme formed a part of the third stage, but it has now been advanced to the second stage.

It is a reflection of the essential soundness and the great promise of the project that foreign aid has been forthcoming for it in a fairly generous measure. The U.S. Government has already made available for the project Rs. 11.5 crores from P.L. 480 funds. 93 per cent of this amount is in the form of loan and 7 per cent as grant. The World Bank has given a loan of Rs. 12 crores for the first stage of the project and another loan for the second stage is under negotiation.

The Koyna project has had a long period of gestation. The then Bombay Government had, as far back as in the early years of the present century, considered the potentialities of the Koyna basin for irrigation purpose. But, as in many other fields, it was the House of Tatas which first investigated, during the period 1913-24, the possibilities of generating hydro-electric power from Koyna and had prepared a blue-print of a scheme for power generation in three stages. For some reason or other, this scheme did not materialise. The idea was revived after the attainment of Independence and the project that is now under execution has been prepared after extensive fresh surveys and exploration and exhaustive scrutiny of the designs and estimates.

Truly has the Koyna project been called a "project for plenty." For power available from Koyna is bound to give a fillip to industries in Bombay and Poona and the power-starved regions of Western Maharashtra, covering the six districts of Sholapur, Satara, Sangli, Kolhapur, Kolaba and Ratnagiri. Of these, the first four are comparatively better developed than the last two Konkan districts. It is calculated that the potential demand for power in the Ratnagiri district alone would be about 67 per cent of the total estimated demand for power in all the six districts, excluding the Bombay-Poona region. This is because of the possibility of locating there an aluminium plant, which will be a bulk consumer of power, and a calcium carbide and electrolytic caustic soda plant. Power from Koyna would also facilitate the development of electrical and metallurgical industries in Western Maharashtra which is endowed with a variety of mineral deposits. Kolhapur, for instance, has rich deposits of bauxite; iron ore is found in the southern parts of Ratnagiri; manganese ore is present in Ratnagiri, Satara and Sangli districts and good deposits of lime-stone are located in parts of Sangli and Satara districts. Other valuable mineral resources, which should lend themselves to successful exploitation by utilising power from the Koyna project, are asbestos, silica, felspar and mica. Availability of cheap power should also stimulate the development of cottage and small-scale industries using power.

The Koyna project is unique in more than one respect. Technically, the potential drop of water, which is instrumental in producing electricity from the four inclined powershafts, has no parallel in any other project in India or Asia. Another notable feature of the project is that machinery and equipment for it have been supplied by countries of diverse political ideologies such as France, Yugoslavia, Poland, Italy, Switzerland, Japan, the U.S.A., the U.K. and Austria. This has been possible because of India's policy of non-alignment and its keen desire to maintain friendly relations with all countries.

MARKET GOSSIP

Tata-SKF Project

THE much-talked-about and long-awaited ambitious Tata-SKF ball bearings project has now been finalised. The venture will be carried on under the name of the Associated Bearing Company Ltd., Bombay. The Company is offering to the public Rs. 80 lakhs in equity shares of Rs. 100 each, out of a total issued capital of Rs. 400 lakhs. Its capital structure is simple, in that it is made up of only ordinary shares. Of the issued capital, the technical collaborators, Aktiebolaget Svenska Kullagerfabriken, Gothenburg ("SKF Gothenburg"), Sweden, the Skefko Ball Bearing Company Ltd. of Luton, England, and "SKF Schweinfurt," a subsidiary of "SKF Gothenburg," are taking up shares worth Rs. 240 lakhs. The Investment Corporation of India Ltd., the promoter of the project, its Directors, associates, etc., are taking up shares of the value of Rs. 80 lakhs. The Corporation has also agreed to absorb those shares not taken up by the public, without charging any underwriting commission.

The Company has been formed for the manufacture of (*a*) certain types of tapered roller bearings and certain types of row deep grooved ball bearings, (*b*) certain types of pendulum weighting arms complete with bearing units for top rollers and cradles, and (*c*) centring sleeve inserts and tape tension pulleys. The capital outlay on the project is estimated at Rs. 600 lakhs, of which Rs. 285 lakhs will be on plant and machinery (including installation), Rs. 165 lakhs on land and buildings and Rs. 113.50 lakhs will serve as working capital. This outlay is to be met through the issued capital of Rs. 400 lakhs and bank borrowings of Rs. 200 lakhs.

The machinery and equipment, which is expected to cost Rs. 240 lakhs, will be supplied by "SKF Gothenburg"; 50 per cent of it to be designed, constructed and delivered by it and its subsidiaries. Foreign currency to cover the cost of the machinery will come from the Swedish firm's capital participation. As the basic raw materials are not available indigenously, at present, they will be obtained from the steel mills of the Swedish firm. The Company has received import licences of the value of Rs. 162.95 lakhs, of which Rs. 152.52 lakhs will be for the machinery to manufacture bearings and the balance for the components and the machinery necessary to assemble them for pendulum arms.

The collaboration agreement stipulates payment of Rs. 4.15 lakhs for the technical know-how and Rs. 6.85 lakhs for the technical assistance to "SKF Gothenburg" and its subsidiary, "SKF Schweinfurt." In addition, both the Swedish firms will be entitled to a research and development fee of 2.5 per cent of the net annual turnover of the Company. The Company will be entitled to use the patents and trademarks of "SKF Gothenburg," The SKF Ball Bearing Company (Private) Ltd., Bombay, a subsidiary of the Swedish firm, has been appointed sole selling agent in India of the products assembled and manufactured by the Company for five years at a *del credere* commission of 10 per cent of the net realisations. Mr. Per Torsten Grufman and Mr. John Higham, Directors of the Swedish firm's Indian subsidiary in Bombay, have been appointed the Managing Director and Vice-Chairman, respectively, of the Company. Mr. A. D. Shroff is the Chairman. The factory is to be established at Chinchwad, about nine miles from Poona. The factory buildings will be ready during the early part of 1964, when machinery is expected to arrive.

The manufacture of ball bearings in India is a post-war development and the production of tapered ball bearings, a still later development, is quite small. There are two units in the line, the National Bearing Company Ltd., Jaipur, and the New Haven Steel Ball Corporation, Bombay, both of which have not only increased their annual capacity (the former from 6 lakh to 9 lakh pieces of ball bearings and from 684,000 gross to 1,008,000 gross of steel balls, and the latter from 5 lakh gross to 10 lakh gross of steel balls) on a single-shift basis. Both are now working on multiple-shift basis to cope with the ever-increasing demand following the rapid development of automobile, bicycle and fan industries. An idea of the demand growth for this product can be had from the fact that, during the first Five-year Plan periods, the production of ball and roller bearings rose sharply from a mere 80,000 pieces to 9 lakh pieces; in the second Plan period, against an estimated capacity of 1.6 million pieces, the production was about 2.9 million pieces; and, in the third Plan period, the capacity is expected to go up to 10 million pieces and the production to 14 million pieces on three-shift basis. With the rise in indigenous production, imports have gradually come down; nevertheless, they still amount to quite a formidable figure. In these circumstances, the Directors of the Company are right when they say that they do not expect any difficulty in disposing of the planned output. However, a big venture like this would naturally show some losses in the initial years. The Directors have, therefore, made it clear that profits will be first utilised to extinguish accrued losses and to build up sufficient reserves, and only thereafter they are expected to be sufficient to permit a reasonable return to the shareholders. This statement has not in any way adversely affected the investors' enthusiasm for the issue. A heavy oversubscription is a foregone conclusion, if the big premium which the scrip is unofficially commanding is any indication. Apparently, the investors feel that, as a key industry of this nature has assured growth prospects and as the Company is in quite competent hands, it is worth waiting for some years for a fair return.

Another Feather In Its Cap

The other day we heard that the Fertilisers and Chemicals Travancore Ltd. has entered into a 10-year agreement with the Power Gas Corporation of Britain for the sale of its know-how in the manufacture of ammonium sulphate out of by-product gypsum, raised during the production of phosphoric acid, for a fee amounting to 1.25 per cent of the total value of the contracts entered into by the British firm to design and supply the equipment required for such plants anywhere in the world. This country will soon add now another feather, though of a different type, in its cap. It will serve as a further proof of the fact that India's industrial development is not only rapid but also healthy and on right lines. We refer to the move to manufacture and eventually use the Prestolite dynamos and starter motors some two years ahead of even the industrialised European nations.

The name Prestolite goes after the inventor of these products, the Prestolite International Corporation, a wholly-owned subsidiary of the Electric Autolite Company of the U.S., which is rated as the largest manufacturer of auto-electrical equipment in the world. The dynamos, which are AC and replaced the present DC equipment, are an offshoot of the electronic industry and a major revolutionary development in auto-electricals since 1910. They are designed to give a longer life to and easy operation of automobiles, buses, trucks, etc., by reducing the weight (in the case of an equipment of 35 lbs. to 7 lbs.) and by reducing the cost of heavy weight articles. This is made possible by using less of copper and replacing considerably iron by aluminium as the raw materials for dynamos.

The only country to begin the change-over to the new equipment is the U.S., where it would be completed by the middle of next year. Europe would be trailing far behind and have a complete change-over only in 1966. At present, Prestolite is the sole manufacturer of such dynamos in the U.S. and the world, and is making intensive research in minimising their cost and improving further the scope for their use. Two American and one British firms are trying to manufacture them. Prestolite has entered into collaboration for their manufacture with firms in 14 countries and hopes to enter 23 other countries, Japan and Hong Kong being immediately on hand.

The credit for bringing Prestolite to India goes to the recently formed Globe Auto Electricals Ltd., Bombay, which proposes to manufacture 25,000 dynamos and 25,000 starter motors a year to meet 40 per cent of the present demand, with its financial and technical collaboration. The Company was originally formed for the manufacture of windshield wipers, ignition coils, voltage regulators, distributors, spares, etc., for which it has entered into a technical collaboration agreement with Magneti Marelli of Milan, Italy. In order to undertake the proposed diversification, it is increaseng its paid-up capital of Rs. 20 lakhs in equity shares of Rs. 100 each to Rs. 45 lakhs. Out of the additional capital of Rs. 25 lakhs, it is proposed to issue Rs. 10 lakhs to the present shareholders by way of rights shares at par and to offer the balance of Rs. 15 lakhs to the American firm which will additionally get the technical fees and have its President, Mr. J. J. Bohmrich, on the Board of the Company. The consent for the capital issue is awaited and the collaboration agreement is to be approved soon by the authorities. The rights issue will be made in July this year. The Company will go into production of the originally conceived lines in October this year and manufacture dynamos and starter motors in March 1963.

Jute Buffer Stock

What exactly are the objectives of the newly-formed Jute Buffer Stock Association? Although this question may appear somewhat elementary, it has now come to the fore with added significance, thanks to the conflicting viewpoints expressed by the spokesmen of jute industry, jute trade and the Government. Here are the respective viewpoints:

Jute Balers' Association: The Buffer Stock Association has become an instrument for depressing the prices of raw jute and not for stabilising them. The Buffer Stock Association purchases are not, in reality, going to bring about any stability in raw jute prices.

Jute Commissioner: The Buffer Stock Association will have to mop up all the surplus raw jute. Operations would be undertaken in conformity with the firm intention of the Government not to allow the price of jute to fall again to uneconomic levels. Henceforward, adequate quantities of raw jute would be lifted by the Buffer Stock body every seven to ten days. This would restore the confidence in the ability and intention of the Association to mop up the residual surplus.

Mr. C. L. Bajoria, I.J.M.A. President and Chairman of the Buffer Stock Association: The establishment of the Association should not be regarded purely as an expedient to halt a price decline at a particular time or in any circumstances. The promoters of this body have a much broader aim which is to stabilise both supplies and prices on a long-term basis by countering as far as possible not only the uncertainties of the market but all the vagaries of nature.

Mr. Manubhai Shah, Union Minister of International Trade: If the operations of the Buffer Stock body do not lead to price stabilisation, the Government itself would intervene directly and purchase raw jute from the primary producers.

Whatever be the angle from which one looks at the Jute Buffer Stock Association, there is no need to be alarmistic about the growing weakness of raw jute and doubtful about the intentions of the Association. It is true that raw jute prices have fallen lately, despite large-scale buying by the majority of individual mills and the purchase of 125,000 bales (equivalent to 625,000 maunds) already made by the Buffer Stock body. But the fall in prices has been due, as Mr. Bajoria stated at a Press conference at Calcutta a few days ago, to the quick disposal of stocks by growers and sellers in anticipation of a better crop next year, the declining jute prices in Pakistan and Thailand, and the depressing effect of the delay in the shipment of jute manufactures because of the imposition of excise duty and the strike by the Hooghly pilots. Some have criticised that the Buffer Stock body has bought 50,000 bales of jute at Rs. 3 below the floor price of Rs. 30 per maund. Answering this criticism, Mr. Bajoria said that that jute was of low grade and that only such jute was now available in the market. He declared that the floor price of Rs. 30 per maund was unrealistic and that a drop below this level was "unavoidable, because of the conditions existing at present."

In considering the question of raw jute prices, one important factor has to be borne in mind and that is that the prices should be sufficient to ensure a decent return to cultivators, as, otherwise, production would be adversely affected; already there are fears that the acreage under jute and mesta crop in the coming (1962-63) season would be lower by 20 per cent as compared with the present season with a crop yield of just 7.0 million bales. At any rate, it would not be wise to revise the floor price so soon after the solemn assurances given by the Government in Parliament. In any case, the recommendations of the Indian Central Jute Committee's Economic Research Section, which is now working on a scheme for a comprehensive study of the economics of jute growing, with particular reference to the cost of production, are still pending. When received, they may provide an opportunity to revise the floor price with sufficient reason.

Be that as it may, it is too much to expect the Buffer Stock body, a new organisation which is just beginning to find its feet "to be in a position" to step in and achieve something which has never been attempted, far less done, in the past." For the buffer stock operations, as Mr. Bajoria stressed, is highly complex, particularly so when bank credit is involved as in the case of jute. It should also be noted that proper arrangements have to be made for the storage of jute purchased which must be separate from the mills' own stocks. Virtually, all mills, we are told, are already holding five months' stocks on their own account, as a result of which some of them are stocking jute in the open for want of covered storage facilities. In view of the approaching monsoon, the Buffer Stock body cannot, surely, afford to buy more jute without first making arrangements for storing it.

All this clearly suggests that the warning sounded by this journal was perfectly justified. Our contention, as readers will recall, was that, strictly speaking, the business of buffer stock was the responsibility of the Government and that it would be better if the private sector remained out of it. It is a pity that jute millowners allowed themselves to be hustled into the present arrangement. Their troubles have only just started. They will have plenty of them, if the next crop turns out to be a bumper one, as is expected by Mr. Bajoria.

U.K. and Common Market

The meeting of the Six and Britain at Ministerial level, held at Brussels last week-end, marks the beginning of the final phase of negotiations over Britain's desire to be a member of the Common Market. For the statistical background to the negotiations has already been adequately covered, with the preparation of the final report of the Deputies (*vide* page 826, *Commerce* dated 5th May 1962). The Ministerial meeting was, therefore, concerned only with "matters of substance." Although full details of what transpired at the meeting have not been disclosed, the U.K., it is gathered, has made it abundantly clear that its objective is full membership of the European Economic Community (E.E.C.), rather than some form of association. Once this matter was cleared, the meeting plunged into substantive discussion on the problems of, and possible solutions for, such issues as Commonwealth preferences and British agriculture. No decision was taken at the meeting, but there are indications that, as days pass by, the area of agreement between Britain and the Six on essential points is becoming wider.

Some progress seems to have been made in respect of three broad aspects of Commonwealth preferences at the meeting. In the first place, it has been agreed in principle that there is need for making necessary provisions to ensure that exports of "low-cost" manufactures from India, Pakistan and Hong Kong do not suffer in the event of the U.K. joining the E.E.C. Mr. E. Heath, leader of the British delegation, impressed upon the Six, in this connection, that their combined financial stake in India's third Plan and Pakistan's second Plan was twice as large as that of the U.K. Even so, it remains to be seen as to whether the Six will be more accommodating than they have appeared to be so far. Secondly, the British proposal for a delay in the application of the Common external tariff in respect of manufactures from the developed countries of the

TREND OF SHARES

REACTION STARTS

(From Our Own Correspondent)

BOMBAY, *17th May*

AS anticipated in these columns last week, stock markets developed a reactionary trend this week. Bulls left no misgivings about their real intention this week in contrast to their familiar manipulations in the previous week to sustain the bullish fervour to help them serve their ends better. Right from the start, the week saw mild unloading all round, which tended to increase as prices declined. Yet what could be described as bull liquidation was absent during the week; what was seen was essentially profit-taking. High levels usually attract sales of this nature. But a more important factor was the failure of the markets to respond any more to further bull manœuvring without a corrective reaction to the sharp rise witnessed recently. This feature engendered some bold but calculated short-selling. Support was conspicuously lacking, with the result that some mild rallies from the low levels on bear-covering petered out no sooner than they occurred.

Although, over the week, losses predominated, they were small. The setback was minor and could hardly be described as a correction to the preceding spurt in values. In fact, the markets could recoup the losses in no time, if any favourable developments were to arise. If the reaction is to be in the nature of a corrective setback, it has to extend further. The technical position alone, which is still much overbought, would warrant it. That it may do so is indicated in the fact that prices at the close of the week were around the lowest levels.

While the setback came because of the inevitable profit-taking, it was attributed to the sentiment having been adversely affected by (1) the 25 per cent cut, suggested by the Foreign Relations Committee, in the U.S. aid to India this year, (2) continued agitation by Pakistan over Kashmir in the United Nations, and (3) growing fears of some inevitable consequences across the northern borders. The prospect of cotton textile industry having to cut production in the second half of the year because of the scarcity of cotton and reports that the only relief in taxes might be a small reduction in the excise duty on mercerised cloth were additional bearish factors.

* * * *

Dalal Street commenced the week on a mixed note, with some selected counters rising to new high levels. But, with lack of confidence in higher levels, only the firm features attracted the first of the bull selling which spread gradually to other counters. At close, there was a mild all-round recession.

Among Steels, Tata Ordinary advanced from Rs. 149.50 to Rs. 151, but reacted to close 50 nP lower on balance at Rs. 149. Indian Iron came in for some sizable realising and, after looking up from Rs. 26.40 to Rs. 26.60 in sympathy with the strength in Tata Ordinary, declined to close with a loss of 25 nP at Rs. 26.25. Mukand Iron, however, showed a gain of 30 nP to Rs. 28.50. Textiles suffered almost without an exception, with Mr. N. H. Tata's reckoning of the current year's outlook for the industry (as disappointing because of the cotton scarcity and higher excise) providing a damper. While Tata Mills and Svadeshi declined by Rs. 2 each to Rs. 75.50 and Rs. 286 respectively, the much fancied Century showed a loss of Rs. 3.50 at Rs. 672.50 after being done at Rs. 682.50, Standard of Rs. 20 at Rs. 1,022, National Rayon of Rs. 7 at Rs. 561.50, Phœnix of Rs. 7 at Rs. 263, Shree Niwas of Rs. 6 at Rs. 274 and Podar of Rs. 4 at Rs. 147. As an exception, Morarjee gained four points to Rs. 418 and Bombay Dyeing one point to Rs. 69.

In the Miscellaneous section, Bombay Burmah lost Rs. 14 at Rs. 689 following the bare maintenance of the interim dividend at Rs. 12 per share, subject to tax, for the year ending 31st May 1962. Premier Construction moved down by Rs. 3.50 to Rs. 170 and Poly Chem by five points to Rs. 212.50. But Indian Dyestuff were five points up to Rs. 557.50, Amar Dye-Chem gained Rs. 3.75 to Rs. 340 and Shivrajpur Rs. 3.50 to Rs. 40.50. Engineering issues were easy, with Telco receding by two points to Rs. 370.50 and Voltas by four points to Rs. 200. Sugars and Cements were quiet, but Orissa rose by 52 nP to Rs. 19.52. Scindia came down from Rs. 13.80 to Rs. 13.40. Most of the Cash scrips showed small losses. But Sirdar Carbonic Gas spurted by Rs. 55 to Rs. 805 and Bharat Bijlee by Rs. 31.25 to Rs. 235. The encouraging second year's results of Ceat Tyres for 1961, showing a rise in sales from Rs. 137.26 lakhs to Rs. 361.59 lakhs and in gross profit from Rs. 4.26 lakhs to Rs. 49.36 lakhs, however, produced only a fractional rise of Re. 1.25 to Rs. 182.50 in the shares.

* * * *

Trading on the Calcutta Stock Exchange was slow. Movements were narrow and two-sided on alternate spells of bull unloading and bear covering. Closing prices, therefore, showed a mixed pattern. Thus, among speculative shares, G.K.W. recovered from Rs. 41 to Rs. 41.94, Orient Paper from Rs. 43.20 to Rs. 44.10, Burrakur Coal from Rs. 18.62 to Rs. 19.37, Howrah from Rs. 20.75 to Rs. 21.12 and Texmaco from Rs. 25.55 to Rs. 25.95, but Indian Aluminium slipped down from Rs. 41.12 to Rs. 40.81 and Kesoram from Rs. 32.12 to Rs. 32. Among Textiles, Bharat Commerce moved up from Rs. 29.25 to Rs. 29.87 and Dunbar from Rs. 33.25 to Rs. 33.87, but Jay Shree reacted from Rs. 16.87 to Rs. 16.69.

Coals suffered further on persistent realising. Amalgamated declined from Rs. 22.87 to Rs. 22.19 and Raneegunge from Rs. 16.75 to Rs. 16.31. Jute shares tended to rally after the previous week's setback, but the performance was far from convincing, with gains in some issues countered by losses in some others. Thus, Budge Budge improved from Rs. 145 to Rs. 158, Bally from Rs. 303 to Rs. 310, Anglo-India from Rs. 240 to Rs. 248 and Fort Gloster from Rs. 443 to Rs. 455, but Megna moved down further from Rs. 13.25 to Rs. 13.12, Delta from Rs. 193 to Rs. 192 and New Central from Rs. 17.12 to Rs. 17.06. Engineering issues also made a similar show. Burn continued in demand and advanced further from Rs. 711 to Rs. 721. Binani Metals rallied from Rs. 12.25 to Rs. 12.69, but Chase Bright suffered from Rs. 11.87 to Rs. 9.50 on selling pressure. Jessop declined further from Rs. 25 to Rs. 24.62.

Miscellaneous issues were quiet and showed small variations over the week. East Anglia eased from Rs. 23.25 to Rs. 21.87, but Goodyear recovered from Rs. 46.87 to Rs. 47.75, Isaac-Holdens reacted from Rs. 19.56 to Rs. 19.12, but Metal Box looked up from Rs. 61 to Rs. 61.37. Featuring the week's trading, however, were National Rubber, which rose from Rs. 12.31 to Rs. 14.75, Universal Cables, which improved from Rs. 11.44 to Rs. 12.62 and Usha Martin, which gained Re. 1.75 to Rs. 17.87. Phillips India rose further from Rs. 37.25 to Rs. 38.50 and so did N.I. Cable from Rs. 45 to Rs. 46.75. Paper, Sugar and Tea shares were quietly steady.

* * *

Widespread small losses with a few bright patches was the show at close in the Madras stock market. Among Forward shares, Ashok Leyland eased from Rs. 9 to Rs. 8.95, Indian Cement were fractionally lower at Rs. 6.13, Madura showed a loss of 17 nP at Rs. 38.20, Consolidated Coffee reacted from Rs. 19.40 to Rs. 19, Ouchterlony Valley came down from Rs. 4.05 to Rs. 3.88, Periakaramalai slipped down further from Rs. 3.55 to Rs. 3.52, Dalmia Cement reacted from Rs. 13.85 to Rs. 13.60, but Lakshmi gained one point to Rs. 166, Aluminium Industries 10 nP to Rs. 24.10 as did Mettur Chemicals to Rs. 13.20. In Cash List, among Textiles, Buckingham declined by Rs. 6.60 to Rs. 265, Coimbatore Cotton from Rs. 193 to Rs. 189 and Dhanalaxmi from Rs. 245.75 to Rs. 240. In the Miscellaneous section, Andhra Cement showed a loss of 15 nP at Rs. 10.10, but Travancore Cement gained 20 nP to Rs. 8.60 as did Travancore Chemicals to Rs. 22.75. Madras Rubber showed a gain of 18 nP at Rs. 24.86 *ex-div.* Sugars were dull and Plantings depressed.

CAPITAL MARKET NEWS

NEW ISSUES

ORIENTAL Power Cables Ltd., Indore, which will be in the market from 24th May to 31st May 1962 to raise public subscription for 53,000 equity shares of Rs. 100 each and 27,000 9.5 per cent taxable, cumulative redeemable preference shares of a like denomination, is setting up a plant at Kotah in Rajasthan for the manufacture of paper insulated power cables. It has been licensed to manufacture annually 600 miles of such cables. It has entered into a five-year technical collaboration agreement with Messrs. Sumitomo Electric Industries Ltd. of Japan, covering the manufacture of four types of paper insulated power cables, such as (*a*) with or without armouring (including PVC jacket) used at any voltage not exceeding 33 kV, popularly known as belted type power cables, (*b*) H-type power cable, (*c*) SL-type power cables, and (d) HSL-type power cables and PVC insulated power cables used at any voltage not exceeding 3.3 kV, in consideration of the payment of a royalty at ¾ per cent of the net ex-factory invoice value of the products.

In the light of the rapid industrial development and urban and rural electrification in the country for which the installed electricity generating capacity has been raised from 5.7 million kw. in the second Plan to 13.4 million kw. in the third Plan, the paper insulated power cables industry, an offshoot of the second Plan, has tremendous growth prospects. The estimated production of these cables, used for transmitting electricity at high voltages from 1,100 to 33,000 volts and more, which was only 570 miles in 1960, is estimated to have gone up to 750 miles in 1960-61, the last year of the second Plan; the capacity being 1,000 miles. At the end of the third Plan, the capacity is expected to be 4,500 miles and production 4,000 miles per year. Even after taking into account the capacity licensed in the past two years or so, there is still a gap between the present and anticipated production. There will, therefore, be enough scope for the Company's production to be fully absorbed internally at a remunerative price. What is more, it will conserve foreign exchange for the country, since a part of the demand is met at present by imports. Following the recent conversion from the scarce and largely imported copper to the easily available indigenous aluminium as the raw material for power cables, the Company will have such machinery as would be capable of utilising aluminium. The plant is expected to go into production by the end of next year.

The capital outlay on the project is estimated at Rs. 250 lakhs, of which Rs. 146 lakhs will be on plant and machinery, and is to be met by the share capital issue of Rs. 105 lakhs, a medium-term loan of Rs. 85 lakhs from the Industrial Finance Corporation of India and borrowings of Rs. 60 lakhs. The promoters, Directors, Managing Agents, etc... have agreed to subscribe to 21,300 equity shares and 3,000 preference shares. The entire public issue has been underwritten among others by the Life Insurance Corporation of India and the Government of Rajasthan for a commission of 2.5 per cent. Messrs. Somaiya Bharaktiya (Private) Ltd. have been appointed the Managing Agents of the Company.

Gammon India (Private) Ltd., Bombay, which is to convert itself into a public limited company with a capital of Rs. 115 lakhs to finance its expansion programme, will offer the majority of the new shares to the Indian public. After the conversion, the Company will have an authorised capital of Rs. 175 lakhs divided into 17,50,000 equity shares of Rs. 10 each. In addition to its already paid-up capital of Rs. 55 lakhs, it proposes to issue 6 lakh shares at a premium of Rs. 7 per share, of which the Directors, etc., will take up 2 lakhs and the balance of 4 lakhs will be offered to the public. The public issue is expected to be made in the near future.

FRESH ISSUES SANCTIONED

The Controller of Capital Issues has recently sanctioned the following capital issues:

New India Industries Ltd., Baroda, having a paid-up capital of Rs. 51.35 lakhs, has been granted consent to issue 3,635 bonus shares of Rs. 100 each on capitalisation of reserves.

The sanction has been obtained by the *National Rayon Corporation Ltd.*, Bombay, to issue new 6.5 per cent (1972-77) debentures of the value of Rs. 150 lakhs for cash at par. The proceeds will be utilised for financing expansion in the rayon and caustic soda plants. The new debentures rank *pari passu* with the existing debentures of Rs. 150 lakhs, the redemption date of which has been extended by seven years and the rate of interest on them raised from 5.5 per cent to 6.5 per cent. The present paid-up capital of the Company is Rs. 415.37 lakhs, divided into 2,41,121 ordinary shares of Rs. 100 each and 1,74,245 preference shares of Rs. 100 each.

Braithwaite and Company Ltd., Calcutta, has been granted the consent to issue 40,000 cumulative redeemable preference shares of Rs. 100 each for cash at par. The shares are to carry a dividend of 9 per cent, taxable. The proceeds will be utilised for implementing the Company's scheme for the manufacture of cranes and heavy structure.

East India Distilleries and Sugar Factories Limited, Madras, has been granted consent to issue capital of £27,700 (nominal) consisting of 27,700 new ordinary shares of £1 each at a premium of *12s. 6d.* per share. The new shares will be issued on the London Register and will be offered to Messrs. Doulton & Co. Ltd., London. The proceeds will be used for expanding the manufacturing capacity of its ceramic factory. The consent is valid till 31st October 1962. The E.I.D. and S.F. is an Indian company whose capital is borne both on the London register and the Indian register. The present issue is intended for raising sterling capital.

Simulbarie Tea Company (Private) Limited, Calcutta, is issuing 2,000 equity shares of Rs. 100 each as fully paid up bonus shares on capitalisation of reserves. The existing capital of the Company is Rs. 1 lakh.

Century Flour Mills Limited, Madras, is to issue capital of Rs. 23 lakhs for the establishment of a biscuit factory. Of this amount, Rs. 18 lakhs will be in equity shares and Rs. 5 lakhs in preference shares. The new capital will be offered to the public.

Machinery Manufacturers Corporation Limited, Bombay, is to issue 50,496 equity shares of Rs. 10 each to be allotted to the holders of cumulative preference and special cumulative preference shareholders in accordance with a scheme of reorganisation of capital approved by the Bombay High Court.

Sundram Clayton Private Limited, Madras, is issuing equity capital of Rs. 55 lakhs for cash at par. The proceeds will be utilised for the manufacture of exhausters, servos and hydrovacs for automotive and non-automotive units in collaboration with Messrs. Clayton Dewandre Company Limited, U.K.

The Mysore Lamp Works Limited, Bangalore, is issuing 43,750 equity shares of Rs. 10 each for cash at a premium of Rs. 25.87 per share, to the Canadian General Electric Company, Canada. The proceeds will be utilised for financing the Company's expansion scheme.

INDO-U.K. CHEMICALS VENTURE

The negotiations by Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay, with the Distillers Company Ltd. of Britain and the Hercules Powder Company of Wilmington, U.S., for their collaboration in its proposed project for the manufacture of basic raw materials for our organic chemicals and plastics industries have reached an advanced stage. The British firm is to play a leading role in the venture by being the larger foreign investor, with the majority of the equity capital being Indian. In the project will be adapted the well-proved phenol process which is being extensively used in Europe and has been developed by the Distillers in Britain and independently by the American firm. The British firm has been granted licences for the import into India of a number of raw materials such as cumene (14,500 tons a year), phenol (10,000 tons), acetone (6,000 tons), diacetone alcohol (2,000 tons), phthalic anhydride 6,000 tons) and phthalate plasticisers (3,000 tons). Herdillia Chemicals Ltd., a new company, is to be formed to undertake the project. No date is yet available for the finalisation of the plans which, however, are expected to be ready within the next few months.

NEWS IN BRIEF

ESCUDO currency has ceased to be legal tender in Goa, Daman and Diu with effect from the 15th inst. All monetary transactions in these territories are now conducted only in Indian currency.

The total effective arrears of income-tax outstanding as on 1st January 1962 amounted to Rs. 118 crores. Of these, arrears out of the demand created in 1959-60 amounted to Rs. 90 crores, the balance of Rs. 28 crores representing arrears of 1960-61.

Another (second) mechanised State farm on the lines of the Suratgarh farm is proposed to be set up at Jetsar in the Ganganagar district of Rajasthan, according to Mr. S. K. Patil. The area to be covered by the new farm will be over 30,000 acres.

The Hindustan Machine Tool Factory of Bangalore has plans to set up a new machine tools factory, third of its kind in India, at Pinjore, near Chandigarh, in the Punjab. Estimated to cost Rs. 7 crores, the proposed factory is expected to produce 1,000 machine tools annually, to begin with.

In order to assure for exporters continuity of incentive schemes, the Government of India has extended the validity of all the existing incentive schemes until further orders. Moreover, it has been made clear that any change or modification in the incentives will be made only after consulting the interest concerned and giving reasonable notice.

An Evaluation Advisory Board has been set up by the Government to make an independent assessment of the methods and techniques of rural development. The Board will guide the work of the Programme Evaluation Organisation of the Planning Commission. The Chairman of the Board is Dr. V. K. R. V. Rao, Director of the Institute of Economic Growth. The other members include Raja Surendrasingh of Nalagarh and Prof. M. L. Dantwala of the Bombay University.

A Rs. 4-crore plant for the manufacture of marine diesel engines is proposed to be set up by the Government of India. Disclosing this in the Lok Sabha on Monday this week, Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, stated that the Government would enter into negotiations shortly with M.A.N. of West Germany to secure collaboration for the project. No decision has yet been taken about the location of the plant.

The Governments of India and West Germany have signed an agreement under which West Germany will give technical assistance for the promotion of agriculture, animal husbandry and dairy farming in Mandi in Himachal Pradesh on the pattern similar to the "package" development programme under way in select districts. A German team of experts and technicians will be assigned to Mandi for carrying out the programme. An agro-technical development centre will also be set up. In addition, Indian technicians will be trained in West Germany.

The Company Law Administration has announced a change in the head of account in respect of all fees payable under the provisions of the Companies Act. Companies and others concerned have been advised that all such fees, as, for example, those in respect of documents filed with the Registrar of applications submitted to the Central Government, should in future be paid into the treasuries for credit under the head "XXI—Miscellaneous Departments—Miscellaneous—Registration of Joint Stock Companies." Before April 1962, these fees were credited under the head "XXXVI—Miscellaneous Departments—Miscellaneous—Registration of Joint Stock Companies."

The Heavy Electricals (India) Ltd. has concluded an agreement with Prommash-export of Soviet Russia for the preparation of a detailed project report concerning the setting up of India's second Heavy Electrical plant near Hardwar. With a planned production of 1.2 million kw. capacity of heavy generators, alternators and switchgear of sizes ranging from 50,000 kw. to 200,000 kw., the plant will be one of the largest in the world, when in full production. The production programme also includes large and medium size electrical motors required for steel mills and other heavy industries. This is one of the plants included in the Indo-Soviet credit agreement for being utilised during the third Plan period.

The bleaching and calendering factory in the public sector, constructed at a cost of Rs. 7.17 lakhs at Apappanamcode, near Trivandrum, was inaugurated by Kerala's Chief Minister last week. The cost of establishing the factory, namely, Rs. 7.18 lakhs, was met by the Union Government by way of grant and loan to the State Government. The factory will serve about 20,000 handloom weavers of the area to make fine quality cloth. It has a capacity of processing 12,000 yards of cloth per day of eight-hour shift. It will give direct employment to 60 persons. Another 1,000 persons will get employment indirectly in procurement and transportation of raw materials and finished products.

The Government of India has appointed Messrs. M. N. Dastur and Co., consulting engineers, Calcutta, as consultants for the planning and development of the iron and steel industry, including ferro-alloy industry. Under an agreement signed, which will be valid for a period of six years, the consultants will give the benefit of their experience and advice on matters relating to co-ordination of the development of the iron and steel industry, with a view to securing economical installation, costs and high efficiency of production. The consultants will also advise Government on any problems connected with the expansion of the existing iron and steel plants, including ores, mines and quarries, and those which may be established in the public or private sectors.

The Indian Railways have placed an order for 40 locomotive (with 2,600-2,400 horsepower) worth $10 million with the U.S. firm of Alco Products. The 55-foot locomotives (*DL-560's*) will have 16-cylinder diesel engines, each capable of producing 63,000 pounds of continuous tractive efforts. Geared for a maximum speed of 75 miles per hour, the new locomotives will be equipped with multiple-unit control so that four units can be operated together as a single locomotive. These locomotives will become the model which will be manufactured in the new Indian diesel locomotive works in future years. It may be recalled here that Alco and the Government of India recently signed a 10-year agreement under which the U.S. firm will provide technical assistance in establishing facilities at Varnasi for the construction of locomotives and diesel engines. The shipment of the 40 locomotives, which is expected to be completed by the end of this summer, will bring the total number of locomotives supplied by Alco to India to 170.

From Abroad

The Government of Ceylon has decided to increase tea replanting subsidy from Rs. 2,500 to Rs. 3,500 per acre.

The Soviet Union has agreed to join the new International Wheat Agreement scheduled to come into force in July next.

The Soviet Union has undertaken to erect a synthetic rubber plant and several other factories in Cuba, under a two-year technical aid agreement signed between the two countries.

Kuwait proposes to set up a steel plant, which will use locally produced natural gas. A team of technicians from the West German engineering concern, Demag, has arrived in Kuwait in this connection.

The total value of export business insured with the British Export Credit Guarantee Department rose by 12 per cent to £806 million in 1961-62, as compared with the previous year. This represents about 20 per cent of Britain's total exports.

An Australian Co-operative Society, The Victorian Tobacco Growers, is reported to have developed, for the first time in the world, a mould-pest-resistant tobacco seed. European growers have shown great interest in the seed.

The average savings of urban households in Japan, including bank deposits, postal savings and investments, rose by as much as 27 per cent to an equivalent of £618 during 1961, as compared with the previous year. The average savings of rural families also increased by 24 per cent to £233. These findings are revealed in a survey published by the Economic Planning Agency.

Britain's steel production in April was steady at a weekly average of 409,800 tons, being only just short of the March level. On a seasonally adjusted basis, the level of output was virtually unchanged. Although output is still below that of a year earlier by 13 per cent, it has shown an improvement in the first quarter of this year as a whole, as compared with the fourth quarter of 1961.

Ceylon has taken over 193 petrol filling stations (104 from Shell, 46 from Caltex and 43 from Esso). It has also taken control of five bulk depots, 91 kerosene depots and 91 points for distribution to the Government, etc. The process of acquisition started towards the end of last month, when the State-owned Petroleum Corporation started distribution of petroleum products in competition with the Western oil companies.

A new programme, approved by the executive of Ghana's ruling Convention People's Party, seeks to establish a large number of State Corporations in the country to control production and distribution of consumer goods, including forest products, meat and poultry, fisheries, besides constituting a transport corporation to control harbours, railways, air and road services. It also envisages increasing State participation in the wholesale sector of the internal trade as well as foreign trade. Further, it seeks to nationalise life insurance in Ghana.

The Kuwait Oil Company, in which the British Petroleum and the Gulf Oil have equal shares, has agreed to relinquish to the Kuwait Government 9,262 square kilometres, out of the total concession area of 18,512 square kilometres it had secured previously. It has also undertaken to part with a further 1,000 square kilometres at least of its offshore areas in five years' time. With a total of 8,370 million tons of proved reserves of oil, Kuwait contains almost 20 per cent of the world's oil reserves. These proved reserves, however, fall within the area retained by the Company.

Production of tea in Pakistan rose by over 40 per cent to a record level of 59 million lbs. in the year ended March 1962, as compared with 1960-61. The Government of Pakistan has already taken a number of steps to bring more areas under cultivation. A Tea Development Committee has been set up to establish new gardens, rehabilitate derelict gardens and assist the existing ones to improve production through loans and other forms of assistance. The tea acreage under the second Five-year Plan is to be increased from 78,896 acres to 100,000 acres by 1965. The output of tea is proposed to be stepped upto 80 million lbs. by 1970. Meanwhile, extensive survey has been carried out by the Pakistani Tea Board for cultivable land in the districts of Dinajpur, Rangpur-Sylhet, Chittagong and the Chittagong hill tracts.

PERSONAL

DR. S. Radhakrishnan was sworn-in as the President of the Indian Union on the 13th inst. in the place of Dr. Rajendra Prasad, who has retired. Dr. Zakir Hussain has succeeded Dr. Radhakrishnan as the Vice-President.

Mr. A. S. Bam, Chairman, Tea Board, has returned after a two-month tour of the U.S., Canada and Western Europe and Egypt, as the leader of a delegation which assessed the prospects of promoting tea exports.

Dr. A. Ramaswami Mudaliar, Chairman of the Indian National Steamshipowners' Association, Mr. Dharmasey Khatau and Mrs. Sumati Morarjee, Chairman and Director, respectively, of the Scindia Steam Navigation Co., and Mr. C. P. Srivastava, Managing Director of the Shipping Corporation of India, have left for Florence to take part in the two-day summer meeting of the U.K.-Continent-India-Pakistan Conference scheduled to begin there on the 21st inst.

INDUSTRIAL WAGES

APROPOS our comments on Mr. G. L. Nanda's remarks on wages of industrial workers, Dr. N. Das, Director-General of the Employers' Federation, writes, in a communication to us, as follows:

"You appear to have taken as correct Mr. Nanda's statement that, "although there had been an increase in wages (money wages) of workers during the period 1951-59, real wages had actually decreased owing to a progressive rise in the price level." This, however, is not correct. According to the figures quoted in Table 12-11 in *Indian Labour Statistics, 1961*, published by the Indian Labour Bureau, Simla, the index of real earnings of factory workers in 1959 was 106.3 with base 1951=100. In Table 12-10 of the same publication, the index of real earnings of factory workers in 1959 stood at 123.9 with base 1947=100. It would thus be seen that the *situation is quite the contrary* of what has been stated by Mr. Nanda."

Our comments were based on the assumption that, even if Mr. Nanda was factually correct, his contention that enough had not been done to industrial workers could not be sustained either on grounds of equity or economic consideration. The fact that even official statistics do not bear out the conclusion of Mr. Nanda knocks off whatever validity his case for higher wages for industrial workers might have had.

That industrial workers have had a fair (perhaps more than fair) share of the rise in national income since independence is clearly brought out in a monograph on the wages of industrial labour since independence published by the Employers' Federation of India. According to the monograph, the percentage share of organised labour in the national income increased from 2.78 per cent in 1948 to 3.09 per cent in 1958. The percentage was even higher at 3.54 in 1957. The total wage bill of organised labour rose from Rs. 240 crores to Rs. 361 crores in the same period, whereas the share of factory establishments in the national income increased from Rs. 550 crores to Rs. 860 crores. The national income at 1948-49 prices rose from Rs. 8,650 crores in 1948 to Rs. 11,690 crores in 1958.

There has also been a sharp increase in non-wage benefits available to industrial labour during the period. Thus, while the average earnings per worker rose from Rs. 898.1 in 1948 to Rs. 1,295.8 in 1958, the average non-wage benefits rose from Rs. 27 to Rs. 79 in the same period. The ratio of non-wage benefits to average earnings doubled from 3 per cent in 1948 to 6 per cent in 1958.

Industrial workers are far better off than workers in agriculture or comparable employees in Government service. This is evident from a comparison of the average earnings which amounted to Rs. 1,295.80 per annum for factory labour in 1958, Rs. 972 for class IV Central Government employees (for 1958-59) and a mere Rs. 99.4 (in 1956-57) for agricultural labour. Not only in terms of the absolute level of wages but even in respect of the relative movement of wages over a period of time, industrial workers are more favourably placed. This is borne out by a study of the relative movement of wages in agriculture and industry during the decade 1948-57 made by the I.L.O. According to this study, in India, wages of industrial labour rose much faster and higher than those of agricultural labour during the period. Thus, while wages of industrial labour increased by 39 per cent during the period 1948-57, agricultural wages, far from showing any improvement, decreased by about 14 per cent. This trend was in sharp contrast to that obtaining in some of the developed, as well as underdeveloped, countries in America, Asia and Europe, where the rise in industrial wages was accompanied by a proportionate rise in agricultural wages.

BOARD OF TRADE

An innovation of the newly-constituted Ministry for International Trade, under the stewardship of Mr. Manubhai Shah, is the constitution of a fresh institutional agency for export promotion, called the Board of Trade. Although the name of the new body is identical to that of the British Board of Trade, there are fundamental differences between the two so far as their functions go. The British Board of Trade is a full-fledged Ministry of the U.K. Government, presided over by a Minister of Cabinet rank. It is entrusted with the general responsibility in respect of commerce, industry and overseas trade, including commercial relations with other countries, protective tariff, industrial development and consumer production. It is also concerned with export promotion, besides compiling and distributing data on trade and industry and administers certain regulative legislations, for instance, on patents, designs and trade marks and weights and measures. These various functions fall within the purview of more than one Ministry in this country, and no change in this pattern is envisaged now. The scope of the new Board of Trade is, therefore, quite limited. It is only an advisory body, consisting of officials and representatives of trade and industry, with the Minister for International Trade as Chairman. The Board, consisting of not more than fifteen members, is expected to meet once a month and discuss relevant problems and suggest possible solutions. It will have six non-official members, representing trade, industry, economists and others, besides the Presidents of the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers of Commerce. Among the officials, the Special Secretary in the Department of International Trade will be the Vice-Chairman of the Board. The Secretary of the Department of Economic Affairs and Additional Secretary of the Planning Commission will be its members. Besides, two or three senior officers will be full-time members of the Board as directors of production, incentives and quality control and movement and freight.

The Board of Trade, according to Mr. Shah, will be concerned with problems relating to development of both internal trade and overseas trade. In order to be an effective instrument for guiding policy in these matters, the Board will review all aspects of trade and commerce and advise and make recommendations to Government, from time to time, with particular reference to expansion of production, internal trade and exports, including diversification of imports and establishment of suitable import-export relationships. It will also deal with maintenance and improvement of quality and standardisation of production. On export promotion proper, the Board will devote its attention to export incentives and development of fair and efficient trading practices, apart from market research and market surveys. The operations of the State Trading Corporation, promotion of export houses and export agencies, co-operative marketing and co-operative consumer stores and trade fairs are also included in the list of the Board's functions.

The array of subjects falling within the jurisdiction of the Board is, no doubt, impressive. But one feels that, by entrusting the Board with all and sundry matters, the primary objective of export promotion is not likely to receive from it as much attention as it should. There is, of course, no denying the fact export promotion is closely related to several other factors, including production, trading practices and price support. It may also be recalled, in this connection, a significant statement of the Mudaliar Committee on foreign trade: "An important lacuna in the export effort is that, whereas targets of a high order have been theoretically drawn up, adequate steps have not yet been taken to dovetail the import-export targets with the plans and projects of development in the private and public sector and to lay the foundation of a big trade." Will the new body be able to do anything effective in this respect? Time alone can tell.

The constitution of the Board, admittedly, serves an important purpose, in that it serves to highlight the vital need for promoting exports to facilitate the process of development and the large leeway India has to make up in this field. A welcome feature of this new move is the active association of businessmen. If their suggestions are listened to and implemented, something positive may emerge. It is to be hoped that it is not merely an addition to the already existing agencies for export promotion which

have not made any significant impact on the problem. If the Board is at least able to co-ordinate the efforts of the existing Export Promotion Advisory Council, various Export Promotion Councils and Commodity Boards, it will have served a useful purpose.

An institutional agency, however broad-based and high-powered it may be, is not likely to make any perceptible impact on the quantum of trade, in the context of conditions prevailing in India. The basic requisite of export promotion is to enhance the competitive capacity of Indian agriculture and industry by increasing their operative efficiency, reducing cost of production and improving quality. Besides, labour, fiscal and monetary policies will have to be so adjusted as to restrain inflationary pressures in the economy. These are surely matters beyond the scope of a body like the Board of Trade, but it can still help create favourable conditions conducive to the attainment of these objectives, provided it makes a serious attempt at solving the problems and its suggestions are listened to by the Government, businessmen and trade union leaders.

ECONOMIC EFFICIENCY IN COMMUNIST COUNTRIES

One common aim of all economic planning, whether partial or total, democratic or totalitarian, is the most productive use of scarce resources. The degree of efficiency attained in the utilisation of resources determines the relative efficiency of planning under democracy and totalitarianism. It is true that, under democratic planning, the freedom given to entrepreneurs to invest in fields of their choice, without having to conform to a rigid order of priorities centrally determined (and with a large measure of freedom to implement projects and bring them to fruition after they are licensed), tends to detract from the optimum utilisation of resources, but the very existence of private initiative and enterprise is conducive to the growth of productive resources in chosen fields, because the profit-motive impels them to get the best out of their investments.

To communist countries having total planning, promotion of the efficient use of resources continues to occupy an important place in economic policy-making. Last year, according to the *Economic Survey of Europe* for 1961, steps were taken in these countries in three main directions to avoid waste and to ensure efficiency in the utilisation of resources. These were: (1) rationalisation of supply, (2) evaluation of the use of fixed capital, and (3) improvement of the price mechanism.

The emphasis laid on the second and third factors is particularly significant. In the past few years, concern with capital efficiency has begun to match the attention long given to rational utilisation of inputs. Techniques for assessing relative returns to alternative investment possibilities seem to have been developed furthest in Hungary where the practice of estimating the return on projected investments for pushing up exports and catering to domestic markets has been introduced. Current cost calculations are also being made in all export industries.

In line with the general drive to promote efficiency is the attempt made in the operational planning of investments to concentrate resources. In the Soviet Union, the 1960 Plan included a list of priority projects whose finance and supply plans were, for the first time, scheduled for their entire construction period and hence qualified for automatic inclusion in each subsequent annual budget and plan. A codification of investment regulation in Hungary substitutes construction contracts between the supplying and investing agencies extending over the entire building period for the previous annual contracts on the industrial model. An investment concentration programme, with strict control over new projects, is envisaged in Eastern Germany.

The success of attempts to improve the efficiency in the use of economic resources, whether through central planning of the pattern of investment, the level and trend of foreign trade or through the establishment of incentive system tending to induce optimum input and output patterns, is bound to depend heavily on the existence of a price structure reflecting relative costs and/or relative scarcities. Realising this, many Communist countries, including Russia, manipulated the price mechanism to promote more efficient use of resources. In fact, in Russia, there has been a lively debate among economists about the principles of pricing and a general review of prices is now in progress. The price structure established is one in which not only will wholesale prices of consumers goods be much more than those of producers goods in relation to total production cost, direct labour costs or capital intensity, but also the ratio of price to average cost will vary widely within major industrial branches both from product to product and by area. The revision so far made reflects an explicit recognition that price reform is essential for improving the efficacy of planning and that relative prices should, in future, become a factor influencing decisions at the level of the enterprise.

DUTY ON STEEL PRODUCTS

The new *ad-valorem* excise duty on iron and steel products, as proposed in the Central budget for 1962-63, appears to have caused some serious complications due to certain practical difficulties in its collection. Briefly, these difficulties pertain to the items of steel products which attract the duty and the price at which the duty has to be based. It is not easy to determine which items are dutiable because of the large number of the products and their technical similarities and dissimilarities. As for the price, it is not quite clear, whether the duty is to be levied at the statutory base price or at a level after including the permissible extras and sales tax. The worst confounded in the situation seem to be the excise officials, who, in the absence of clear directives, seem to be doing what appeals to them, and the worst hit are the small manufacturers not only because they are subjected to higher than the actual duty but more because their operations have been seriously curtailed because of the delay on the part of the excise authorities in clearing the goods affected.

The aftermath of the imposition of this new excise duty has been clearly brought out by the Steel Re-rolling Mills' Association of India, Calcutta, in a memorandum addressed to the Government. The Association, representing some 180 small and medium-sized re-rolling mills operating in different parts of the country within the purview of the Iron and Steel (Control) Order and recognised by the Government, has appealed to the Government, in the light of its observations, either to rescind the proposals to levy an entirely new excise duty on various items of steel products, or, in the alternative, increase the existing duty on the base metal, namely, steel ingots, from Rs. 40 to Rs. 53.33 a ton, which, on the (assumed) annual production of 4.5 million tons of ingots, would bring in an additional revenue of Rs. 6 crores, that is, the amount which the proposed levy on steel products is expected to fetch.

While the authorities may consider the case on its merits, it is commendable that the Association has not shirked its responsibility to the Exchequer and raised the familiar uproar against taxation, as is evident from its suggestion of a more workable alternative. Only, the Association has exaggerated the yield, as its estimated production of steel ingots is unlikely to be realised in the current fiscal year. Further, the Association's claim that its suggestion, while assuring the same revenue, is designed to reduce the statutory prices for steel products (the already high prices of which have been increased further to cover the new levy) and to help relieve the inflationary pressure is also not fully tenable. Surely, when the levy on steel ingots is raised further, the cost of raw materials to the re-rollers is sure to go up and the latter in turn will want to pass on the incidence to the consumers. It is, however, on stronger ground when it argues that one merit of its proposal is that it would avoid "what appears to be a multi-point levy," and the various complications and delays in administration, besides ensuring speedier movement of stocks from the producers' yards.

It is the Association's contention that considering the way steel products' price structure is determined, it is not possible to arrive at the correct value of the products for appraising an *ad-valorem* duty without much confussion. On the base price certain items of permissible extras on thinner materials and on account of bundling, transport, etc., are chargeable. Then, sales tax and similar other taxes and duties are separately charged. While the instructions received by the Iron and Steel Controller from the Finance Ministry are under-

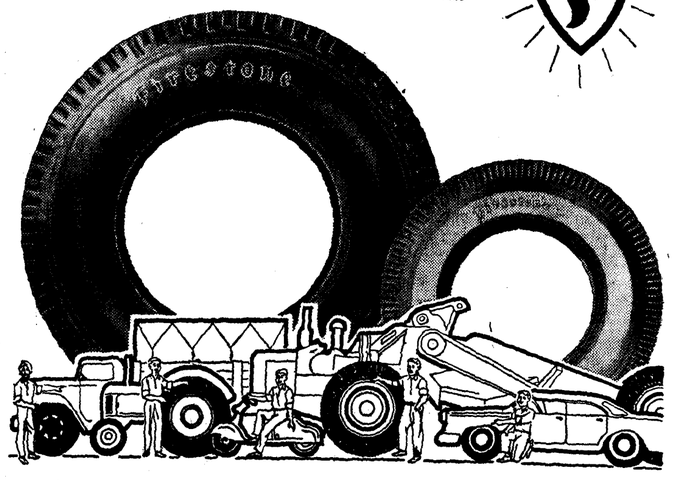
LOOK FOR THIS
'Mark of Quality'



It is your Assurance of Extra Safety and Dependability and only Firestone Tyres have it

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your needs. Every single one bears "The Mark of Quality" —the long-established Firestone symbol of Extra Safety and Dependability.

Specify Firestone and you get—

★ **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.

★ **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions delivers MORE KILOMETRES PER RUPEE from the original tread.

★ **RETREADABILITY** Look after your Firestone tyres — don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

THINK HARD BEFORE TAKING TO OIL GAMBLE

FINDINGS OF U.N. REPORT

IN underdeveloped countries, where the need for economic growth is most pressing, capital, the mainspring of economic progress, is notoriously scarce. Unable to generate a sufficiency of savings within the national economy, such countries are largely dependent on capital from outside sources. Their Governments are, therefore, under an obligation to ensure that optimum use is made of the resources available. They must carefully consider how much of their money to spend on much-needed basic and welfare projects, which foreign capital cannot undertake; they must weigh the pros and cons of competing industrial schemes and do their utmost to attract investors, individual or corporate, from other countries.

These considerations are highly relevant to the case of Governments desirous of fostering the search for oil within their territories. Such Governments may derive much help from a United Nations study entitled *Capital Requirements of Petroleum Exploration and Methods of Financing*. Prepared by the secretariat in New York, with the assistance of expert consultants and published last month, this study provides cost data and explanations of technicalities which must be understood before wise decisions can be made.

In effect it says: Think hard before you embark on an oil gamble. It points to the risks involved in oil exploration, the impossibility of predicting results, and the large financial resources required, and gives various instructive examples of exploration expenditure. In Australia, where Government-subsidised exploration has been going on since the beginning of the century, $90 million has been spent in the past ten years (and much more over a longer period) without any encouraging results until the last few months. In West New Guinea, $112 million was spent in 25 years, resulting in the discovery of only three small deposits. In Nigeria, an investment of $168 million since exploration began just before the last war has only just begun to pay off. And the Fosterton discovery in Saskatchewan, Canada, involved the company concerned in an investment of $70 million before the stage of commercial production was reached.

Nor does the financial drain end when oil has been found. Development drilling programmes can be very expensive, if the pay sands are deep, for costs increase roughly in geometrical progression as one drills deeper. Drilling costs per metre in the U.S. range from $16 for a depth of 650 metres (Illinois) to $620 for a depth of 3,200 metres (Alaska). The range is given as about $50 to $180 per metre in France and $200 to $500 in the French Sahara. So variable are the conditions that a 3,700-metre test well may cost anything between $330,000 and $2,350,000. Offshore drilling costs are generally about double those for comparable onshore wells. Having become involved in big expenditure, the temptation is always to go on and on in the hope of final success.

In view of the expense and the risks involved, the U.N. study states that it is contrary to the principles of sound management to finance highly speculative exploration work from outside sources: borrowed money should be used only for undertakings which can be expected to give a yield sufficient to cover the interest and capital charges entailed. This is the principle always followed by commercial oil companies. Those which may not have accumulated sufficient funds of their own to finance new speculative ventures never resort to borrowing to provide funds for their exploration programmes, but call on their own shareholders.

If the necessary risk capital is to be forthcoming from private sources, local or foreign, certain safeguards must be offered by the State. These commonly include the right to develop any oil or gas discovered, provision for arbitration in the event of disagreements, and satisfactory conditions in regard to field operations, transport and passage of personnel and equipment. The grant of a depletion allowance will give an added incentive. Private capital has been responsible for finding the vast majority of the world's oilfields, and it now accounts for about 94 per cent of free world oil production.

Most State oil entities outside the Communist bloc have had difficulties of various kinds in obtaining the necessary capital for oil exploration or development. For example, in Mexico, 20 years after the expropriation of the oil companies, Pemex could not meet its commitments to the State and owed considerable arrears of taxes. Argentina had to secure the aid of private capital to pursue its policy of oil self-sufficiency. Turkey offers an interesting example of a State enterprise surrendering its monopoly position after 20 years, for the sake of bringing in local and foreign private capital, while retaining an interest in oil exploration. Similarly Bolivia found it expedient to attract foreign companies—which, incidentally, have invested millions of dollars, so far without success.

A variety of methods of financing the search for oil has been evolved. While avoiding any judgment as to their respective merits, the U.N. report stresses the danger that, whatever the method of financing, the money spent may be lost. It, therefore, advises that no exploration programme should be launched without an assurance that the necessary finance will be available. It also recommends that any oil search venture should be examined in its international context. Except in special and essentially temporary conditions, says the study, isolationism makes for insecurity, while autarchy is inconsistent with the optimum use of a country's economic potential; this is particularly true of petroleum development. The future in respect of oil, as of many other things, depends on increasingly close co-operation between the industrialised and the developing countries.—*By Special Arrangement with* ***Petroleum Press Service.***

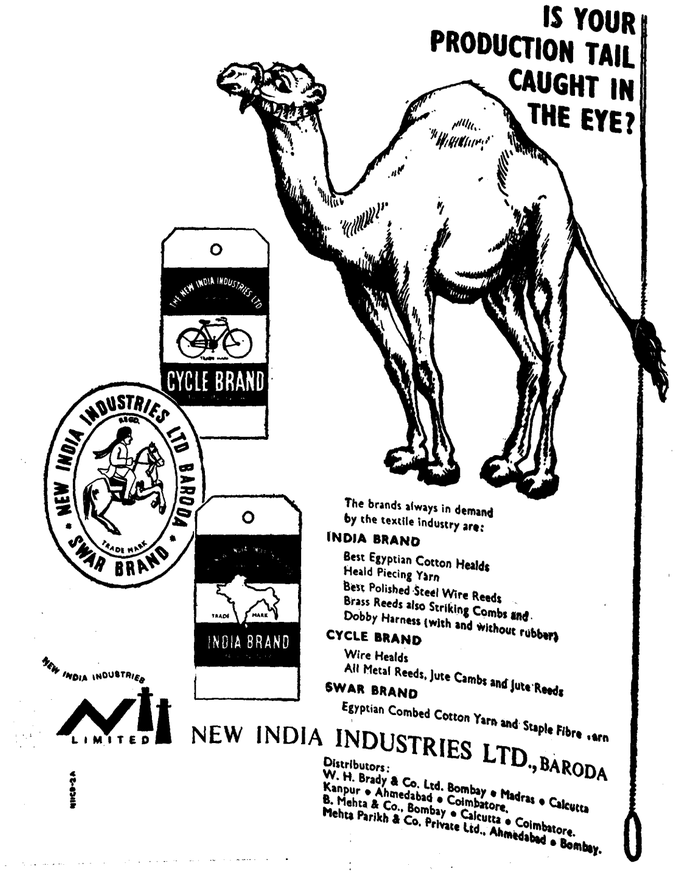
SURVEY

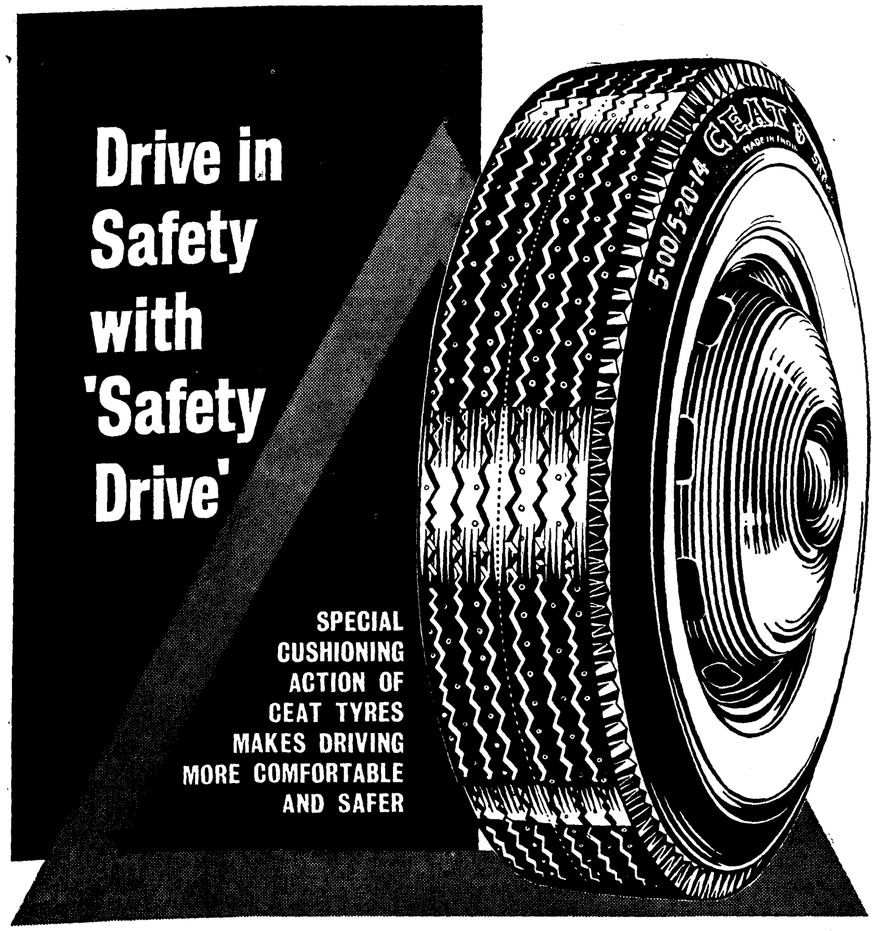
(*Concluded from previous page*)

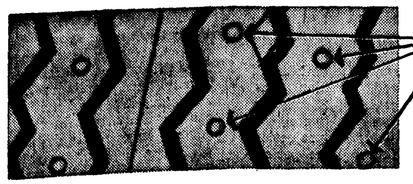
stood to be that the excise duty is to be paid only on the basis of the base price, it is reported that the excise officials at certain places are computing the value of the product by including in the price not only the permissible extras but also the sales tax. Moreover, owing to market fluctuations, a number of mills sell their products at somewhat lower than the statutorily fixed maximum prices. In such cases, the excise officials are said to be taking into account not the actual sales price but the base price. This practice is manifestly unfair.

The Association states that, as the steel products are large in number, they present some technical difficulties to the officials concerned in ascertaining exactly which items attract the duty and at what rate. This state of affairs has confused the excise officials who, in turn, have wrongly added to the list of dutiable products, even the various raw materials such as billets, re-rollable scrap, etc., which are duty-free.

The net result of all these complications, it is said, is the drop in the average delivery of products by a member-mill of the Association from 300 tons during the pre-excise period to a mere 20 tons after the imposition of the levy. The clearance through the Excise Department is painfully slow, as the department is not adequately staffed to cope with its additional responsibilities. The creation of suitable machinery for the work involved now at each point of clearance in different parts of the country would take much time and involve the Administration in considerable expenditure which again, in relation to the yield from the duty, might be high. Meanwhile, the small units of the industry, having limited financial capacity, are hard pressed by their not being able to dispose of their stocks and the business of several of them is said to be at a standstill. Thus, on the face of it, the Association has made out a good case. It remains to be seen whether, and to what extent, the Finance Ministry concurs with this view.







"SIPES"—the little ring knobs found in the tread give extra safety—hold the road better. These "safety rings" combined with CEAT's exclusive deep tread pattern give complete driving confidence.

ANOTHER PERSPECTIVE ON FOOD

NEW LOW PROJECTIONS IN N.C.A.E.R. STUDY

From Our Special Correspondent

NEW DELHI, 15*th May*

DELHI LETTER

AN international agricultural expert once remarked that many of the estimates and projections on the farm front in Asian countries, including India, were comparable to astrological forecasts. Two major projections range from the high rate of growth in demand estimated by a Ford Foundation team and the watered down more conservative estimates made by the Planning Commission in the third Five-year Plan. Foreign experts have tended to give greater emphasis to consumption surveys and envisaged a greater elasticity of food demand in proportion to the increase in employment and increase in income, making allowances for increase in prices. Based on consumption and income surveys alone for more than a decade and a half, there could be a short supply of ten to fifteen per cent in food.

There are some economists who think that continuing shortages are not to be interpreted as a result of the traditional Malthusian factors but as a symptom of some of the healthier aspects of a developing economy, because any major food surpluses would indicate to them that employment and income growth are not at as high a rate as should be. According to these economists, even if population growth is checked (for which there is little hope at least during the next decade), food shortages will continue if there is ample economic development in non-agricultural sectors.

The National Council of Applied Economic Research in its current study, *Long-Term Projections of Demand and Supply of Selected Agricultural Commodities*, 1960-61 to 1975-76, adds some new invalidities to the food picture. If its projections of demand and supply are much lower than even those of the Planning Commission, it is because the N.C.A.E.R. bases its estimates on the assumption that the *per capita* consumption of foodgrains will rise from the current sixteen oz. to only about 18 oz. by 1975-76. The N.C.A.E.R. matches the supply likely to be generated to this rate of demand and arrives at a production figure of 95.7 million tons at the end of the third Plan, against its anticipated demand of 95.4 million tons, yielding a paper surplus of three hundred thousand tons. Its study says:

"Domestic supply and demand will match closely, except for some marginal deficits or surpluses. It seems that, by about the end of the third Plan, the country will reach the stage of transition with regard to the gap between demand and supply. Thus, the deficit in foodgrains of about three million tons in 1960-61 is likely to be wiped off by 1965-66. A stock of foodgrains will have to be built up through imports, unless the supply projections made in this study are exceeded. The target of production fixed for 1965-66 under the third Plan stands at 100 million tons of foodgrains as against an anticipated demand of 95.4 million tons (N.C.A.E.R. projection). The corresponding supply, as worked out in this study, is of the order of 95.7 million tons. Thus, there is just a chance of a balance between supply and demand without taking into account the requirements for stocks. The situation appears to be one of cautious optimism, which warrants the need for imports of about five million tons to provide a cushion for protecting the economy against the dangers arising out of a shortage in the supply of foodgrains."

In working out the target of 100 million tons, the planners made adjustments for about eight per cent for wastage, seeds and cattle feed and placed the actual cumulative human consumption demand at around 92 million tons. But the N.C.A.E.R. has arrived at a lower supply figure with a surplus, although its estimates of the rate of wastage through rodents, etc., are far higher than the Planning Commission's.

A major lacuna with the N.C.A.E.R. study, as with many other investigations in the past, is the almost straight projection of the faulty current assumptions on production of foodgrains. A spokesman of the N.C.A.E.R. explains that the projections are based on a "middle course," rejecting the highest possible and the lowest likely estimates.

In the chapter on Long-term Economic Development, the third Plan fixes the tentative target of 125 million tons of foodgrains at the end of the fourth Plan, but the N.C.A.E.R. projections for 1970-71 are 113.05 million tons of demand and 116 million tons of indigenous foodgrains supply. Against the Plan estimates of sixty million tons in major cereals by 1965-66, the N.C.A.E.R. projects production of a little more than 53 million tons.

The N.C.A.E.R. study does not subscribe to the theory that food demand will rise to meet the increase in supply, although its estimates of growth in production are in a low key. The Council says that, by 1970-71, the country is likely to have a surplus of about three million tons which could provide a nucleus stock from domestic production. By 1975-76, the country would have a surplus of six million tons of foodgrains or 4.3 per cent of the total production. The bulk of the surplus or deficit in foodgrains is accounted for by rice and wheat. While the combined production of rice and wheat now falls short of demand by 2.5 million tons, the entire deficit is expected to be met by the end of the third Plan period through increased production. According to the N.C.A.E.R., the rise in domestic production of the major cereals is likely to exceed demand by about 2.3 million tons and 5.1 million tons by 1970-71 and 1975-76, respectively. In the case of other foodgrains, there will be a low level of self-sufficiency throughout the projected fifteen-year period.

The surpluses in major cereals are estimated to arise from the low production projections of 53.47 million tons in 1965-66, 64.85 million tons in 1970-71 and 77.21 million tons in 1975-76. Comparing the third Plan projections and the N.C.A.E.R. study, one finds that the N.C.A.E.R. and Plan estimates for wheat output in 1965-66 are similar at 15 million tons. The biggest difference is in the estimates of rice output. The planners place it at 45 million tons but the N.C.A.E.R. does not expect it to be more than 38.5 million tons.

In the case of minor cereals, the N.C.A.E.R. estimates a production of 25.5 million tons, against the planners' projection of 23 million tons, and in pulses the planners' estimates are 17 million tons and the N.C.A.E.R. projection 16.5 million tons. For the fourth Plan period, too, the N.C.A.E.R. projects very low increases of less than nine million tons in rice, less than five million tons in wheat and about three million tons in minor cereals.

While the production of foodgrains will increase, according to the N.C.A.E.R., from 76.7 million tons in 1960-61 to 139.4 million tons in fifteen years, rice output will rise from 30.1 million tons to 57.9 million tons, wheat production from 11.2 to 24.8 million tons, and minor cereals production from 22.2 million tons to 31.1 million tons. The N.C.A.E.R. study does not deal with sugarcane and jute production but analyses trends in oilseeds, cotton and tobacco. Naturally, it does not take into account the possible effects of shifts in Government policy, because that is an imponderable factor. The shifts between cotton and oilseeds is also difficult to analyse. The N.C.A.E.R. estimates that the demand for cloth will increase to 23 yards *per capita* in fifteen years and cotton production is estimated to grow to ten million bales. The present pattern of imports and exports will more or less continue. A major portion of the increased supply is expected to be contributed by increased use of fertilisers and irrigation facilities.

*Long-term Supply and Demand Projections for Selected Agricultural Commodities**

Commodity	Unit	1965-66			1975-76		
		Demand	Supply	Deficit (—) or surplus (+)	Demand	Supply	Deficit (—) or surplus (+)
Foodgrains ..	Million tons	95.4	95.7	+ 0.3	133.4	139.4	+ 6.0
Oilseeds ..	,,	7.6	7.7	+ 0.1	12.9	14.2	+ 1.3
Cotton ..	Million bales	6.6	6.1	— 0.5	10.0	10.5	+ 0.5
Tobacco ..	Thousand tons	335	382	+ 47	493	576	+ 83

* Relate to internal demand and supply only. In other words, no estimate was made for export demand. Secondly, demand for stocks is not also included.

ECONOMIC COMMUNITIES

BRITAIN MOVES CLOSER TO W. EUROPE

(*From Our Own Correspondent*)

LONDON, 12*th May*

LONDON LETTER

BRITAIN has applied for membership of the European Coal and Steel Community (E.C.S.C.). What does this mean? The idea of pooling European coal and steel resources was evolved by the French Foreign Minister, Mr. Schuman, twelve years ago; he in turn had based his ideas on the work done in the immediate post-war years whereby Europe was reconstructed through pooled assistance. Within two years of the suggestion of the scheme, the six countries which later became the Common Market had ratified the Treaty setting up the E.C.S.C. Two years later, Britain associated herself with the Community through the exchange of information, consultation and some co-ordination of action. It now intends to become a full member.

The E.C.S.C. was designed to create a single market in coal and steel in the six countries. Trade barriers were to be removed and all measures impeding free competition ended. The French Government were convinced that, if the economies of the West European countries could be sufficiently closely integrated, it would not be practicable for France and Germany ever to go to war again.

External Tariffs

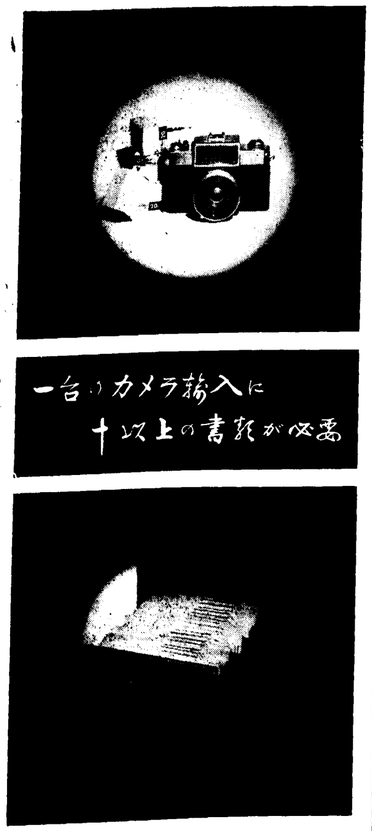
By the beginning of 1958, the external tariffs of the six countries on imports of steel products had been brought within the limits of 2 per cent and 12 per cent. The main barriers to trade in coal and steel between the member-countries had been abolished and rules designed to eliminate unfair competition and discrimination applied. These rules, incidentally, are enforced through a machinery which includes an executive arm called the High Authority situated in Luxembourg and a Council of Ministers.

Over the ten years of the life of the Community, steel production has risen from 43 million tons to 73 million tons. But the coal industries in the Community have been facing difficulties.

The entry of the U.K. would mean that, ultimately, there would be no tariffs on steel between any of the member-countries including the U.K., while Britain would have to have an import tariff in line with those of the other members. The coal and steel industries in this country would be subject to the High Authority's general supervision designed mainly to control pricing and free competition. The U.K., of course, would be the largest coal producer of the Group and second to Germany as a steel producer.

EURATOM

Britain has also sought to join the European Atomic Energy Community which was established between the Common Market countries just five years ago. The aim of this body is to contribute to the raising of the standard of living in member-States through the fostering of nuclear industries. The organisation of EURATOM is comparable to that of the Coal and Steel Community and, three years ago, a Common Market in atomic matter came into existence. This meant that the tariffs on fissile and other materials used in atomic power and certain nuclear equipment were removed between the member-States and a common external tariff set up. Harmony of working between the member-countries has been easy to achieve in this new industry but, also because it is a new industry, the practical achievements remain limited. Joint nuclear research centres are operating and there is a co-ordination of research and of consultation, particularly for the construction of equipment, between the member-countries and Britain, Canada and the U.S.A. Britain's entry into EURATOM will make closer the co-ordination, but the "demands of security" are likely to prohibit the proper integration of the development of atomic power between the member-countries for some time yet.



Or putting the above in English, importing even one camera from Japan takes a good deal of paperwork. Your Mitsubishi Bank man has the knowledge and the modern facilities behind him to help you eliminate much of this or at least speed it up. He and the Mitsubishi Bank have built a reputation over the past 67 years on their ability to give you all the banking services necessary for successful import-export operations. From paper work to market assessment and credit ratings, the Mitsubishi Bank handles all import-export and everyday banking matters quickly, expertly.

AIRCON
Evaporative Climate Conditioners
FOR YOUR INDUSTRY

The initial cost of an AIRCON Evaporative Climate Conditioner is 1/3rd to 1/10th that of an equivalent refrigerant air-conditioner! And comparative running costs? Even less—1/6th the costs of a refrigerant air-conditioner!

And that's not the end of it: hundreds of industries have found that *productivity of workers increases substantially* with AIRCON climate conditioning. So much so that AIRCON installations have paid for themselves within a year!

It's AIRCON for *your* industry! No renovated construction needed, no impractical sealing of rooms needed. Please write to us for more information.

CLIMATE IS OUR BUSINESS

Aircon Industries Private Limited
Lakshmi Woollen Mills Estate
Off Haines Road, Bombay-11

Mark XII 'Air Marshal' is specially designed for industrial sheds, big establishments, canteens and mines. All parts are triply protected against rust. 4-way, 180° directional control. Guaranteed for one year.

for all interior construction and decoration the wise choice is JOLLYBOARD
the modern material

JOLLYBOARD—India's leading hardboard—is ideal for use in department stores, factories, offices and modern homes. It's strong, light, durable and highly decorative. It can't crack, split or come apart.

ECONOMICAL TOO—
JOLLYBOARD is very economical. It's not only surprisingly low priced, but also saves up to 50% of your money in labour and painting costs.

Remember the name JOLLYBOARD ...it's your guarantee of quality!

OWNERSHIP OF GOVERNMENT SECURITIES

SCHEDULED BANKS "DISINVEST"

ALTHOUGH the third survey of ownership of Government securities as at the end of March 1961, published in the April issue of the *Reserve Bank of India Bulletin*—the first and second surveys were carried in February 1960 and March 1961 issues, respectively—suffers from some time lag, it makes quite interesting reading and contains information of considerable utility to all those who are interested in the gilt-edged market. The outstanding feature brought out by the latest study is the marked contraction in the holdings of scheduled banks which were pushed down during the year 1960-61 from the first to the second place, with the Reserve Bank emerging as the largest holder of Government securities (of both Centre and States). The combined holdings of scheduled banks as on 31st March 1961 stood at Rs. 551.96 crores, as against Rs. 688.49 crores on the corresponding date of 1960, or a net drop of Rs. 136.53 crores in one year. The Reserve Bank study attributes this drop to two factors. In the first place, the banks sold securities in order to meet the persistent high demand for bank credit almost throughout the year in the context of the slower rate of expansion of bank deposits and the impounding with the Reserve Bank of additional deposits accruing to banks through the greater part of the year. Secondly, the new procedure relating to the phased transfer (Rs. 12 crores per month) of P.L. 480 deposits from the State Bank to the Reserve Bank led to a depletion in Government securities portfolio of the State Bank and a corresponding increase in that of the Reserve Bank.

Thanks to the substantial "disinvestment" in Government securities on the part of scheduled banks, the banking sector's ownership of the total public debt fell from 28.5 per cent in 1959-60 to 21.6 per cent in 1960-61. The decline would have been steeper still but for the rise of Rs. 4.02 crores to Rs. 38.34 crores in the holdings of co-operative banks and the maintenance of non-scheduled banks' holdings at almost the previous year's level (Rs 10.77 crores, as against Rs. 11.19 crores).

Reserve Bank Holds More

The Reserve Bank, as already stated, was the biggest holder of Government securities (Central and States) in 1960-61, accounting as it did for over one-fourth of the total outstanding of Rs. 2,783.86 crores at the end of March 1961, its actual share (own account) being Rs. 707.08 crores, an increase of as much as Rs. 240 crores over 1959-60. The extent of increase was much more than the actual expansion of Rs. 203.33 crores to Rs. 2,783.86 crores in the total outstanding amount of Government securities. In other words, the Reserve Bank not only made good the entire drop in the holdings of banking sector (—Rs. 132.93 crores) and other sectors (Finance Corporations —Rs. 1.57 crore; Reserve Bank holdings on account of others —Rs. 2.70 crores; non-residents —Rs. 21 lakhs; "others" —Rs. 3.28 crores) but also absorbed quite a large part of the additional Government securities.

Some of the other investors in Government securities such as Insurance and Provident Funds made considerable additions to their holdings during 1960-61, but these additions had no significant effect on the proportion of total debt held by these entities. Details are given in Table I. The insurance group, for instance, augmented its holdings of Government securities by Rs. 51.64 crores to Rs. 386.02 crores, the percentage share in the total rising from 12.9 in March 1960 to 13.9 in March 1961. The increase was wholly on account of the Life Insurance Corporation. Provident Funds, which have emerged as an important category of holder of Government securities in recent years, also made a significant addition during 1960-61, their holdings moving up from Rs. 173.19 crores (6.7 per cent of the total) to Rs. 217.55 crores (7.8 per cent); the outstanding on their account in December 1957 was just Rs. 110 crores. The holdings of Governments (which have various funds of their own) rose by Rs. 4.71 crores to Rs. 267.57 crores, the proportion to the total debt remaining virtually unchanged at 10 per cent. The bulk of the holdings was accounted for by State Governments, the combined share of which as on 31st March 1961 being higher by Rs. 6.49 crores at Rs. 264.06 crores. This rise occurred despite the decline of Rs. 14.20 crores to Rs. 63.37 crores in "Other" accounts such as famine relief, depreciation fund and electricity fund and Rs. 3.37 crores to Rs. 111.38 crores in cash balance investment account. But as against these declines, the sinking fund investment account and *zamindari* abolition fund account increased, the former by Rs. 19.07 crores to Rs. 83.56 crores and the latter by Rs. 4.99 crores to Rs. 5.75 crores. The holdings of Industrial Finance and State Financial Corporations continued to be small, though the aggregate figure rose from Rs. 3.24 crores in 1959-60 to Rs. 4.81 crores in 1960-61.

Excluding the official holdings, that is, those of Governments and the Reserve Bank (own account), the total Government debt as at the end of March 1961 amounted to Rs. 1,809 crores. Of this, the share of commercial and co-operative banks alone was one-third (33.2 per cent). The balance represented the holdings of Insurance (21.3 per cent), Provident funds (12.0 per cent) and "residual" group (29.1 per cent, of which public and private trusts accounted for 10 per cent).

Group-wise Holdings

The decline of nearly Rs. 133 crores in the holdings of the banking sector noted during the year 1960-61 occurred wholly under Central Government securities, with the result that their percentage to the total came down from 40.4 to 33.7. Their holdings in State Government securities showed a small rise, but the proportion declined substantially from 37.0 to 31.8 per cent, owing to the sizable increase in the total of State Government securities. The insurance group raised its proportions in both Central and State Government securities. However, as the additions to State Government securities were relatively larger than those to Central Government securities, the rise in the percentage to the total was larger in the case of the former (from 19.2 to 25.1) than in the case of the latter (from 17.8 to 20.0). The holdings of the "residual" group in Central Government securities recorded a decline from Rs. 367.33 crores to Rs. 336.31 crores, whereas their holdings in State Government securities showed a rise from Rs. 162.89 crores to Rs. 190.63 crores, though the shares in the respective totals remained constant over the year, around 25 per cent and 40 per cent.

Maturity Pattern

A striking feature revealed by the analysis of maturity pattern of Government securities is the predominance of shorter maturities, as Table II shows. Thus, of the combined Central and State Government securities as at the end of March 1961, as much as 34 per cent was in the maturity group within five years and 36 per cent in the group 5-10 years. The two groups together thus accounted for 70 per cent, as against 65 per cent a year before. The share of loans in the maturity group 10-15 years was 10 per cent, that of loans over 15 years and non-terminables being 11 per cent and 9 per cent, respectively. The predominance of shorter maturities generally held good in the case of portfolios of Governments, Reserve Bank (own account) and banks, their respective holdings of securities maturing within 10 years accounting for 76 per cent, 77 per cent and 88 per cent of their total holdings. The holdings of the insurance group were distributed amongst all the five maturity groups; broadly, debt maturing within 10 years formed 57 per cent of the total holdings and that maturing after 10 years about 43 per cent. In the insurance group, the Life Insurance Corporation held 55 per cent of its total holdings of Government debt in securities maturing within 10 years, whereas, in the case of general insurance companies, security holdings in this maturity group formed as much as 82 per cent of their total holdings (Rs. 10 crores). In the case of Provident Funds, over three-fifths (63 per cent) of their holdings had a maturity of over ten years; the remaining 37 per cent of the holdings was in the maturity range 5-10 years (23 per cent) and within 5 years (14 per cent).

A comparison of the holdings of the total debt in the various maturity groups in March 1961 with the position in March 1960 revealed a sizable switchover from medium-longs (10-15 years) to medium-dated loans (5-10 years) during the year. This was a sequel to the shifting of the 3 per cent 1970-75 loan, with an outstanding amount of Rs. 115 crores and the 1970 State loans (with an outstanding amount of Rs. 57.9 crores) from the former maturity group to the latter. This shift was generally reflected in the holdings of a majority of the investor group, but the switchover appeared to be more pronounced in the holdings of insurance companies and provident funds, since, in their case, the holdings in the 1970-75 loan and the 1970 State loans were relativey more prominent among holdings in the 10-15-year range (in March 1960) than in the case of the other investor groups. In the case of commercial and co-operative banks, the effect of the above-mentioned shift was not perceptible mainly because of the fact that the reduction in their securities portfolio during the year was mainly in the medium-dated group (5-10 years).

There was a significant expansion of Rs. 131.80 crores to Rs. 319.67 crores in the Reserve Bank's holdings (own account) of Government securities in the maturity group 5-10 years over the year 1959-60, the percentage share rising from 24 to 32. This expansion was due to the intake of the funding loans in January 1961. The holdings of long-dated securities, that is, in the maturity group over 15 years, also rose markedly from Rs. 15.11 crores (8 per cent of the total) in 1959-60 to Rs. 68.52 crores (23 per cent of the total) in 1960-61, mainly through subscriptions to new flotations. The holdings of securities maturing within five years, too, recorded a rise from Rs. 165.33 crores to Rs. 227.40 crores, while those of 10-15-year securities declined from Rs. 39.92 crores to Rs. 33.31 crores and non-terminables from Rs. 58.68 crores to Rs. 58.14 crores.

The commercial and co-operative banks reduced their share of holdings in *each* maturity group. The reduction was particularly marked in the case of medium-dated (5-10 years) securities, the total of which fell from Rs. 311.18 crores (40 per cent) of the total to Rs. 149.94 crores (25 per cent), concurrently with a sharp *rise* of Rs. 231 crores in the aggregate holdings of all investors in this group. The whole of this decline was accounted for by Central Government securities (from Rs. 275.75 crores to Rs. 169.88 crores), whereas the holdings in State Government securities rose from Rs. 35.46 crores to Rs. 80.06 crores. Among the remaining investor categories, one notable variation was a drop in the share of the "residual" category in the maturity group over 15 years from 44 per cent in March 1960 to 32 per cent in March 1961, notwithstanding an increase in the absolute amount of their holdings in this maturity. Holdings in this maturity group by banks on behalf of their customers declined proportionately from 11.2 per cent to 8.5 per cent, the fall being mainly accounted for by joint-stock companies and individuals. Mention may also be made hereof (i) the increase in the holdings of insurance in mediums (5-10 years) and longs (over 15 years) by 3 per centage points each to 13 per cent and 21 per cent, respectively, and (ii) the increase of 2 per centage points (to 8 per cent) in the holdings of provident funds in longs, in contrast to the decline noticed in the preceding year.

* The figures exclude a special issue of the 4 per cent. Loan 1972 for Rs. 300 crores, created in July 1953, which was wholly taken over by the Reserve Bank of India against cancellation of *ad hoc* treasury bills and held in the Issue Department as cover against note issue.

† Includes (i) Administrator's Rate Custody Deposit Account, (ii) Employees' Security Deposit Account and (iii) Imperial Bank of India Share Capital Compensation Account.

‡ Figures as at the end of December 1959 and 1960.

TABLE II: *Maturity Pattern of Securities*

(In crores of rupees)

Maturity period	Central Government		State Governments	
	1961	1960	1961	1960
Years:				
0—5	881.04	810.58		
5—10	756.41	666.36	89.74	108.07
10—15	196.56	304.76	37.14	119.97
Over 15	196.97	202.79	71.22	196.01
Non-terminables	267.85	257.84	206.99	87.25
Total	2,255.75	2,138.23	528.11	442.30

NOTE:—The figures relate to outstandings as at the end of March. Figures from 1956-57 onwards are inclusive of investment of P.L. 480 funds. Those for 1960-61 and 1961-62 are not strictly comparable to the figures for the earlier years consequent on the change in the arrangements in regard to P.L. 480 funds from 12th May 1960.

* Figures do not take into account transactions on the State Governments' Cash Balance Investment Accounts, the Bank's operations in State Government loans and repayment of State loans held by State Governments.

† On the Reserve Bank's Investment Account and the Central Government's Cash Balance Investment Account.

Loans maturing within ten years predominated in both Central and State Government debt. Out of the total Centre's outstanding of Rs. 2,256 crores at the end of March 1961, securities worth Rs. 851 crores or two-fifths of the total were due to mature within five years and Rs. 756 crores or one-third within 5-10 years, the two together accounting for 71 per cent of the aggregate. In the case of State loans, about 66 per cent (Rs. 528 crores) was due to mature within ten years, the proportion of debt following in the maturity group 5-10 years being as much as half of the total debt.

Among the various investor-categories, Governments, banks and insurance showed a marked preference for loans maturing within ten years in respect of both Central and States debt. Thus, three-fourths of the Central Government debt and four-fifths of the State Government debt held by Governments were due to mature within ten years. In the case of commercial and co-operative banks, over 90 per cent of their holdings in Central Government securities fell due within ten years, the corresponding percentage in respect of State debt being 70. In the case of the insurance category, its holdings of Central loans maturing within ten years were only slightly higher (52 per cent) than those maturing after ten years, whereas its holdings of State loans due to mature within ten years formed as much as 68 per cent of the total. The Reserve Bank and provident funds had hardly any holdings in State Government securities. As regards Central Government securities, while the former held more than three-fourths in loans maturing within ten years, the latter held nearly two-thirds in loans maturing after ten years.

Changes in Maturity Pattern

As regards changes in the maturity pattern during 1960-61, there was a shift from mediumlongs to mediums in the case of both Central and State Government debt. However, the resultant rise in the proportion in mediums was much sharper in the case of State loans (from a little over one-fourth in March 1960 to nearly one-half in March 1961) than in respect of the Central loans (from 31 per cent to 34 per cent).

The banks' holdings of medium-dated State loans rose from 23.9 per cent to 52.6 per cent. of their total holdings, while those of Central Government securities declined from 47.1 per cent to 37.8 per cent. The proportion of total Central Government securities in the maturity group of over 15 years rose from 4.8 per cent in March 1960 to 8.6 per cent in March 1961, as a sequel to the flotation of the 4 per cent 1980 Loan (Rs. 98 crores) in August 1960; this rise was shared by the Reserve Bank, insurance and provident funds in their holdings of Central loans in this maturity group. In the case of State loans, the proportion of debt in this maturity group hardly showed any rise over the year, although, in absolute amount, there was a rise of Rs. 20 crores following the issue of new *Jagir* Resumption Compensation and Rehabilitation Bonds by the Rajasthan Government, the U.P. *Zamindari* Abolition Compensation and Rehabilitation Grant Bonds by the U.P. Government and the Bihar *Zamindari* Abolition Compensation Bonds by the Bihar Government. It is observed that the insurance group increased its holdings of State loans maturing after 15 years by Rs. 14 crores during the year, the percentage share of its holdings in this maturity group rising from 11.3 to 19.2.

Rupee Debt

The total rupee debt of the Central and State Governments, as already stated, rose by over Rs. 203 crores to Rs. 2,783.86 crores in 1960-61. Of this rise, the share of new market loans (net) alone was Rs. 134 crores, the balance of Rs. 69 crores comprising in funding issue of January 1961 (Rs. 50 crores) and bonds (Rs. 19 crores net) issued by some State Governments in connection with payment of compensation in respect of *Zamindari* abolition, land tenures, etc. Between end-March 1960 and 1961, the Central Government debt rose by Rs. 117.52 crores to Rs. 2,255.75 crores—the percentage share in the total, of course, declined from 83 to 81—and States' by Rs. 85.81 crores to Rs. 528.11 crores. Table III shows the net absorption of Government debt by the public (that is, all investors other than Reserve Bank and Governments) during the year 1960-61, as well as in the whole of first and second Plan periods and the first year of third Plan. By net absorption is meant cash subscription *less* cash repayment of maturing loans *plus* net open market sales by the Reserve Bank and by the Government operating through the cash balance investment account.

As against the net market borrowings of Rs. 134 crores during the year 1960-61, the data relating to net absorption of Government securities show that there was, in fact, a net *disinvesment* of Rs. 63.7 crores, which was in contrast to net absorptions in the preceding four years. In the second Plan period, as a whole, the net absorption of Government securities by the public aggregated Rs. 458 crores, the corresponding figure for the first Plan period being Rs. 289.9 crores. It may be noted that the net absorption of Government securities by the public since 1956-57 has been influenced as the case may be by investment or disinvestment of P.L. 480 and P.L. 665 funds by the State Bank. If the effect of this special factor were eliminated, the net absorption of Government securities by the public would amount to Rs. 53 crores in 1960-61 and Rs. 257 crores during the whole of the second Plan period and Rs. 290 crores in the first Plan. These calculations are based on the assumption that all P.L. 480 funds were invested in dated Government securities. In actual practice, however, a part of the P.L. 480 funds was utilised by the State Bank for investment in Treasury Bills and also for extension of credit to private sector in the initial stages of accrual of these funds to the State Bank. To the extent of such utilisation, these figures, as the Reserve Bank study itself admits, are underestimates.

TABLE III: *Net Absorption of Securities*

(In crores of rupees)

	Net market borrowings by the Central and State Governments			Cash receipts (net) from the public	Open market purchase (—) from/ sales (+) to the public†	Net absorption (+) by the public*
	Cash receipts	Cash payments	Net receipts			
First Plan:

1960-61	179.4	45.4	+134.0	+ 92.5	— 61.4	— 63.7
				+ 61.4	—125.1	
Total	872.7	125.8	+746.9	+367.3	+ 90.6	+457.9
Third Plan:						
1961-62	185.7	50.0	+135.7	+ 73.0	— 37.0	+ 36.0

NOTE:—Figures from 1956-57 onwards are inclusive of investment of P.L. 480 funds. Those for 1960-61 and 1961-62 are not strictly comparable to the figures for the earlier years consequent on the change in the arrangements in regard to P.L. 480 funds from 12th May 1960.

* Figures do not take into account transactions on the State Governments' Cash Balance Investment Accounts, the Bank's operations in State Government loans and repayment of State loans held by State Governments.

† On the Reserve Bank's Investment Account and the Central Government's Cash Balance Investment Account.

HINDUSTAN COMMERCIAL BANK LTD.

A more than three-fold rise in the profit (subject to taxation) of the Hindustan Commercial Bank Ltd. (Acting General Manager: Mr. U. S. Mehroutra. Kanpur) from Rs. 4.48 lakhs to Rs. 14.05 lakhs is the outstanding feature of the results for the year ended 31st December 1961. It is due chiefly to an increase in advances from Rs. 480.60 lakhs to Rs. 513.61 lakhs, as investments, the other basic source of income, have contracted from Rs. 308.12 lakhs to Rs. 270.13 lakhs. At the same time, deposits have shrunk again a little from Rs. 694.87 lakhs to Rs. 692.50 lakhs and so also borrowings from other banks from Rs. 76.25 lakhs to Rs. 56.65 lakhs. Consequently, the expenditure has been only marginally higher than in the previous year and the effects of a larger income well realised in terms of profit.

The gross income has increased from Rs. 48.41 lakhs to Rs. 57.78 lakhs, with banking business alone fetching Rs. 49.40 lakhs as against Rs. 41.79

INDUSTRIAL **IBCON** CONSULTANTS

in the expansion of
TEXTILE INDUSTRY

IBCON offers to intending promoters of textile industry, comprehensive consultancy services comprising:

- Project study and financial estimates.
- Project design including equipment, buildings, power, steam, water-supply, etc.
- Advice on purchase of equipment from India or abroad by tenders or negotiations.
- Supervision of construction of buildings and erection of equipment and services.
- Commissioning and operation.
- Senior and supervisory staff selection.
- Management organisation, clerical procedures, quality control, scientific cost and wage schemes.
- Technical assistance after commissioning to ensure successful and profitable operation.
- Also production planning, waste control, stores, dyes and fuel consumption.

IBCON PRIVATE LIMITED

Head Office: Adelphi, 119, Queen's Road, Bombay 1

Branches:
5, RUSSEL STREET, CALCUTTA 16.
BRADY'S BUILDING, MAHATMA GANDHI ROAD, KANPUR.
GEORGE OAKES BUILDING, SRI NARASIMHARAJA SQUARE, BANGALORE 2.
85, WARD PLACE, COLOMBO 7, CEYLON.

Also in: U.K., Pakistan, Burma, Iraq, Chile, Argentina, Brazil, Mexico and Hongkong

WORLD CONGRESS OF MAN-MADE FIBRES

EFFORTS TO STEP UP THEIR USES TO BE INTENSIFIED

THE Second World Congress of Man-made Fibres, held at London early this month (from the 1st to 4th inst.), served admirably to highlight the growing importance of man-made fibres in the international textile economy, with particular reference to their impact on modern living in all its aspects. The Congress, organised by the International Rayon and Synthetic Fibres Committee, which held its first Congress at Paris in 1954, was attended by as many as three thousand delegates from forty countries. Representing both prime producers and users, the delegates exchanged ideas on technical developments and consumer requirements. Discussions and lectures covered research, development, economics and distribution, and the impact of man-made fibres on clothing, textile design and styling in industry and the home alike. Addressing the final plenary session of the Congress, the British Prime Minister, Mr. Harold Macmillan, appropriately described man-made fibres as one of the most progressive groups of industry in the world. A congress such as this, Mr. Macmillan said, provided a vivid example of how closely nations' fortunes are linked. And he added: "The fashion designer, the weaver, the scientist and the salesman have all been making their contribution to the understanding and co-operation between nations. Let us hope the statesmen will succeed in their task."

In the course of a special resolution adopted at the end of its four-day session, the Congress called upon both man-made fibre producers and users to intensify their efforts in the field of industrial and institutional uses. The Congress also urged, in other separate resolutions, the importance of free trade and fair competition; interchange of statistical and technical information; co-operation with retailers; joint promotion to attract a larger share of consumer expenditure; terminology and labelling practice; design; and collaboration with textile machinery manufacturers.

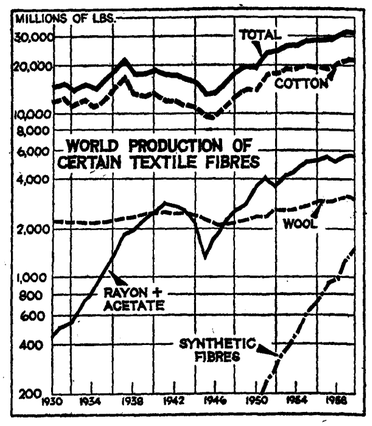
Bewildering Medley of Fibres

A recurrent theme of the various speeches at the Congress was the increasing confusion of trade names, generic terms, and labelling and advertising claims. Mr. Runar Hernberg (President of Uniwool, Helsinki), for instance, observed: "The consumer is often confused by the bewildering medley of fibres with varying properties and qualities which a clever and sometimes even uncritical advertisement offers him. Labelling and advertising should be matter of fact, telling the truth about the goods. The days have gone when consumer interest can be aroused by lyrical rhetoric." The need for ending such confusion was stressed by quite a number of speakers. Dr. H. A. Thomas, Head of Courtaulds' Marketing Division, Director (Technical) and Chairman of the Congress Working Committee, pointed out that "there is a strong case for the International Rayon and Synthetic Fibres Committee setting up a small working group to study and make recommendations on the use of fibre names." Table I on page 895 gives the names of man-made fibres produced in Britain. In light of the discussions at the Congress, a "serious investigation" into the problems of trade marks and labelling of textiles containing man-made fibres is now likely to be carried out on an international basis.

Upsurge in Demand

Those assembled at the London Congress must have felt extremely gratified at the phenomenal increase in demand for man-made fibres in recent years. The aggregate world consumption of these fibres is currently running at an annual rate of almost 8,000 million lbs. as against the actual consumption of 5,000 million lbs. in 1954, when the first Congress was held, representing a rise of as much as 60 per cent. Indeed, the demand for man-made fibres, we are told, is rising at three to four times the rate of demand for natural fibres, namely, cotton, wool and silk. Such a significant expansion of demand is to be attributed to three important factors. In the first place, there is the growth of population. Secondly, with the improvement in the living standards of the masses in a number of countries, the *per capita* clothing requirement is also increasing throughout the world. Thirdly, consumer preference is tending to turn more and more towards better clothes and furnishings, thanks to the remarkable advance in design, science and technology as applied in the production of man-made fibres.

One of the most important contributions made by man-made fibres to the mode of living is, as Colonel F. T. Davies, President of the C.I.R.F.S. (Comite International de la Rayonne et des Fibres Synthetiques), says in the course of an interesting article contributed to the *Financial Times*, London, to save labour and effort in washing and cleaning by the use of so-called easy-care or minimum-care clothes and household goods. In his opinion, this trend will undoubtedly continue and play a vital part in the march of textile progress. According to Colonel Davies, there are wide variations between Western civilisations and those of the less developed countries in the world. For example, during 1957, the quantity of textiles purchased in the U.S. was 34.1 lbs. per person, as compared with 26 lbs. in Britain, 17½ lbs. in Japan and 5 lbs. in other Far Eastern countries. The world average *per capita* consumption of textiles is now 10½ lbs. which is likely to rise considerably during the next few years.



Courtesy: *Textile Organon*

Man-made fibres have increased in popularity to some extent at the cost of natural fibres. Thus, as compared with the position obtaining in 1950, the share of man-made fibres in the total world consumption of all fibres has gone up from 16.7 per cent to nearly 22 per cent (1960), whereas that of cotton has declined from 71.1 to 68.5 per cent and of wool from 12.2 to 9.6 per cent. Even among man-made fibres, the share of synthetic fibres has improved significantly, from 0.7 per cent in 1950 to 4.7 per cent in 1960. The percentage share of staple fibre has also risen quite noticeably from 7.4 to 9.7, while that of rayon has fallen from 8.6 to 7.5. The trend of actual consumption of cotton, wool, rayon, staple fibre and other synthetic fibres is indicated in Table II on page 895.

Rayon

Out of every 100 lbs. on man-made fibres produced in the world, acetate rayon and triacetate rayon in continuous filament or staple fibre form account for more than 76 lbs. Although the percentage share of rayon in the total fibre consumption has gone down, it continues to hold its field as a versatile fibre. Commenting on the continuing wide popularity of rayon staple, Dr. H. A. Thomas of Courtaulds, in the course of an article appearing in the *Financial Times*, says:

"Since its properties can readily be modified by both chemical and physical treatments, such as cross linking or crimping, its field of use continues to expand. In addition to this advantage of ease of modification without chemical damage, its main merits are low price, high water absorption (which, however, can be reduced if required), good dyeing properties to give a wide range of shades and grades of fastness, resistance to attack by perspiration while at the same time being absorbent; it does not develop static electricity, but in fact, by blending with the synthetic fibres, will inhibit the development of static electricity. In addition to a wide range of lengths of staple and fibre thickness, rayon staple is available either bright or matt, in a wide range of fast colours (produced by the incorporation of coloured pigment into the spinning solution), and also in a permanently crimped or wavy form, either in coarse or fine deniers. More recently, some completely new (as distinct from modified) types of cellulosic staples are becoming commercially available in increasing quantities. These have been produced as a result of intensified research on the viscose process, whereby cellulosic fibres are produced with either a thick skin or a thin skin. In fact, conditions can be so controlled that the cross-section of the fibre is uniformly "all skin" throughout or "all core." The degree of regularity of the fine structure known as crystallinity can also be varied."

Nylon

Among the newer man-made fibres of non-cellulosic origin nylon dominates the scene. It is produced, according to Mr. F. C. Bagnall, C.B.E., Managing Director of British Nylon Spinners, in seven European countries, U.S., Canada, Japan and in the Sino-Soviet bloc and on a small scale in South America. Nearly all the nylon produced falls under two main polyamide classifications—nylon 66 derived from cyclohexane and nylon 6 from caprolactam, though small quantities of nylon 11, made from castor oil, are manufactured for specialised end-uses. The aggregate world output of nylon yarns and staple fibres in 1961 was 1,040 million lbs. The three distinct qualities of nylon are light weight, strength and elasticity.

"Lycra"

A new Du Pont fibre with a remarkable range of properties is exciting the textile industry almost as much as nylon did when it first appeared. About to go into full-scale production, "Lycra" spandex fibre is the seventh textile fibre developed by Du Pont. Made in a new plant at Waynesboro, Va., "Lycra" is elastic, light, resistant to perspiration, cosmetic oils and lotions, durable, easily dyed, and easy for manufacturers to work with. Because of these properties, it is finding immediate use in foundation garments and bathing suits. Girdles and brassieres now can be made finer, sheerer and one-third lighter than those made with rubber—and yet provide equal or better figure control. In addition, foundation garments of "Lycra" may be machine-washed and dried. Du Pont, it may be noted, had invested $10 million in research, development and market tests in the evolution of "Lycra".

Polyster Fibres

The production of polyster fibres, which began in the early fifties, is now running at an annual rate of about 350 million lbs. The different names under which these fibres are being manufactured are Dacron (by Du Pont), Terylene (by I.C.I.), "Fortrel (by Fiber Industries Inc, in the U.S.) and "Kodel" (by the Tennessee Eastman Company, U.S.).

Acrylic Fibres

There has been a significant expansion in the production of acrylic fibres (another belonging to the synthetic family) in the past five years. The aggregate world capacity is now estimated at about 630 million lbs. The total sales in 1961 (exclusive of Communist bloc) is put at 248 million lbs. The first acrylic to be marketed commercially was Du Pont's Orlon. The other popular trade names under which this is produced are Acrilan and Courtelle. The acrylic fibre is not subject to vagaries of weather or insect damage, has greater dimensional stability, is readily washable and is stronger and more durable. Assessing the future of this fibre, Mr. Edward A. O'Neal, Jr., President of the Chemstrand Corporation (U.S.A.), observes:

"Prospects are good. Despite the recent expansion of these fibres into textile markets, they have still claimed less than 10 per cent of their potential market. Producers are maintaining extensive research and development programmes to increase the usefulness and applications of acrylic fibres. This effort, with the innovations it will bring and the inherent properties and versatility of the fibre itself, assure the acrylics a strong position in the textile market place."

Polypropylene

The continuous filament yarns produced out of isotactic polypropylene are marketed under the trade name "Ulstron." Its outstanding properties are high strength, allied to an intrinsically low density of 0.91. This high strength is fully retained when the yarn is set. "Ulstron" polypropylene has also exceptional resistance to both acids and alkalis and has unique extension properties of low stretch at working loads, coupled with a higher degree of stretch at greater levels of loading, which enable it to cope with sudden shock loads.

The popularity of man-made fibres is bound to grow considerably in the coming years, what with all the intensive research and development activities undertaken by the different manufacturing firms. Nevertheless, price is, as Mr. J. W. S. Hearle of the Manchester College of Science and Technology, says, the chief key to the future of these fibres. Incidentally, it may be stated as an example that the price of terylene is thrice that of cotton. At the moment, according to Mr. Hearle, synthetic fibres must be recouping the high development and capital costs, but competition is becoming fiercer, as patent production runs out and production expands. In his opinion, the next ten years will see a "fascinating jockeying" for permanent places in the man-made fibre industry. Another key factor, besides price, is the extent to which textile technologists can utilise the various man-made fibres to make the most attractive fabrics.

AUTOMATIC LOOMS

The Central India Machinery Manufacturing Company—the C.I.M.M.Co., for short—has commenced production of Sakamoto automatic looms at its Birlanagar Works in collaboration with the Enshu Weaving Manufacturing Company of Japan. Sakamoto automatic looms are widely in use throughout the world—over 150,000 looms in forty countries; in India, they account for more than 60 per cent of automatic looms in place. The price of the Sakamoto loom produced by the C.I.M.M.Co. is only Rs. 6,000 (c.i.f. Bombay) which is said to be lower than that of automatic looms imported from the U.S., the U.K., Switzerland and other countries. The manufacturers claim that in their loom all the latest advances are incorporated which can be used for weaving both heavier fabrics such as corduroy and velvetin and lighter ones like voiles and lawns. Some of the special features of this loom, according to Mr. A. M. Singhvi, C.I.M.M.Co's Sales Officer in Bombay, are the following:

1. The larger diameter of crank shaft, tappet shaft and swing rail with additional support and heavier side frames and cross rails ensures smooth working of loom at high speed.

2. Wooden swell with leather covering has higher friction force and larger shuttle checking effect.

3. The pirn change is only caused by weft feeler which ensures faultless cloth.

4. The specially developed pirn changing arrangement presses the entire length of bobbin, ensuring minimum failure.

5. The improved design of shuttle eye thread cutter avoids snarls, mispicks and double picks to cloth.

6. The temple cutter is specially improved and operates five times while change takes place and stops, thus ensuring long life of delicate cutting mechanism.

7. The cloth fell micro adjuster device allows back and forth movement by a unit tooth, thus warding off thick and thin places on cloth.

8. Gravity feed lubrication to crank, tappet and swing rail lubricates the loom in two shots.

The C.I.M.M.Co's plant has a capacity to produce annually 2,500 automatic looms on single-shift basis. Excepting for components worth Rs. 1,500 (per loom) which are imported, the production is out of the materials available within the country. The use of imported components is expected to be completely dispensed with in about three years' time. The Japanese firm gets as royalty 5 per cent of the total value of production less the cost of parts imported from them, custom duty and selling expenses.

There are, we are told, two distinct advantages in the installation of Sakamoto automatic looms. One, the cost of production of cloth is low, because average, one worker can operate 30 to 40 looms depending on the type of cloth woven, as against two plain looms operated by a single worker in 60 per cent of the mills. Incidently, automatic loom reduces labour fatigue and ensures higher earnings for labour. Two, the cloth woven on automatic loom is faultless in quality.

With 17 years of loom building experience, together with its up-to-date machine shop and a big foundry, the C.I.M.M.Co. claims to be in a position to meet the country's entire demand for automatic looms.

IMPORT OF TEXTILE EQUIPMENT

The Government of India has decided to make available to the Textile Commissioner during the current licensing period (April 1962 to March 1963) limited foreign exchange credits for import of cotton, wool and art silk textile equipment from Japan, West Germany, Switzerland, Ex-Im Bank and the U.K. Those units which desire to import the same are required to submit their applications before 30th June next to the Joint Chief Controller of Imports and Exports, Bombay, on the prescribed form with a copy of the same to the Textile Commissioner. The credits from the U.K., Japan and Ex-Im Bank may be comparatively higher as compared with credits from other sources. Applications for import from Switzerland or West Germany may, therefore, be restricted to cases where imports of machinery from these specific countries are considered absolutely essential. The proforma invoices are to be submitted for machinery from the country of first choice and approximate c.i.f. value of similar equipment from other countries of choice and order or priority should also be indicated. In the matter of dealing with applications, the following priorities will generally be observed:

Machinery for implementation of new licensed capacity or substantial expansion where effective steps, by way of ordering for indigenous machinery, construction of building, etc., have been completed.

Machinery to be installed for fulfilling export obligations.

Machinery for replacement for which there is no indigenous angle, provided such replacement has been planned in the rehabilitation programme and already submitted to the Textile Commissioner through the Regional Director.

Machinery for other purposes not covered by the above, depending on the adequacy of the credits.

"SANFORIZED" CLOTH

It is an accepted fact in world textile circles that, if certain types of fabrics—poplins, drills and twills, for example—are to be successfully sold in both domestic and export markets, they must carry the world-famous trademark "Sanforized." This trademark is recognised as the universal symbol for dependable shrinkage control. Exporters who cannot supply cloth so labelled frequently lose the sale to exporters from other countries who can supply them. In many countries as, for instance, Japan, a high percentage of the total "Sanforized" output is exported; the trademark is used aggressively as a tool to earn foreign exchange.

"Sanforized" was first introduced to India in 1948 by Cluett, Peabody & Co. Inc., the registered proprietors, which also developed, and is the patent owners of, the compressive shrinkage machinery needed in the production of "Sanforized"-labelled fabrics. Since then, 38 Indian textile firms have been granted licences by the Government of India to import compressive shrinkage ranges and to sign agreements with Cluett, Peabody & Co. Inc., covering the use of the trademark "Sanforized." The

TABLE I: *Man-made Fibres Produced in Britain*

Type	Fibre	Main raw materials	Forms available
Man-made fibres with vegetable or animal base:			
Cellulose	Viscose rayon	Wood pulp	Continuous filament, staple and tow
Cellulose ester	Acetate	Wood pulp or cotton linters—and acetic anhydride	Continuous filament, staple and tow
Cellulose ester	"Tricel"*	Wood pulp or cotton linters—and acetic anhydride	Continuous filament and staple
Alginate	Calcium Alginate	Seaweed	Continuous filament only
Protein	"Fibrolane"	Lactic casein	Staple and tow
Purely synthetic fibres:			
Polyamide	Nylon 66	Benzene (from coal or oil), oxygen, nitrogen and hydrogen	Continuous filament, monofilament, staple and tow
Polyster	Nylon 6 "Terylene"	Caprolactam Petroleum chemicals (ethelene glycol, terephthalic acid)	Continuous filament, staple and tow
Olefin	Polyethylene "Courlene"* "Drylene" Polypropylene "Ulstron" "Courlene PY"	Ethylene from petroleum	Continuous filament, and monofilament Staple Monofilament only
Polyvinylidene chloride	Saran	Ethylene, chlorine caustic soda	Monofilament only
Acrylic	"Courelle"* "Acrilan"*	Acrylonitrile	Monofilament only, staple and tow

* Registered trade mark.

TABLE II: *World Fibre Consumption Pattern*

(In thousand bales of 478 lbs. each)

	1960	1959	1954	1950
Natural fibres—				
Cotton	45,000 (68.5)	46,800 (69.3)	39,400 (71.6)	33,600 (71.1)
Wool	6,750 (9.6)	6,590 (9.7)	5,370 (9.8)	5,926 (12.3)
Total	54,720 (78.1)	53,390 (79.9)	44,770 (81.4)	39,186 (83.3)
Man-made fibres—				
Rayon (filament yarn and filament continuous)	5,250 (7.5)	5,060 (7.5)	4,270 (7.7)	4,020 (8.5)
Staple fibre	4,770 (6.7)	4,580 (6.7)	3,960 (7.2)	3,400 (7.4)
Others	3,270 (4.7)	2,660 (3.9)	900 (1.6)	330 (0.7)
Total	15,290 (21.9)	14,300 (21.1)	10,290 (18.6)	7,740 (16.7)
Grand total	70,010 (100.0)	67,690 (100.0)	55,060 (100.0)	46,870 (100.0)

— figures in brackets relate to percentage shares.

Why CIMMCO Sakamoto
BECAUSE
★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE
ALSO
★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER
AND
TECHNICAL COLLABORATION COMBINES A LOOM BUILDING EXPERIENCE OF 18 YEARS AT CIMMCO WITH OVER 34 YEARS IN JAPAN.
Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.
Manufactured at Birlanagar, Gwalior

IMPROVEMENT IN TEXTILE SITUATION

DOMESTIC OFFTAKE OF FINISHED CLOTH RISING

From Our Special Correspondent

MANCHESTER, *8th May*

MANCHESTER LETTER

THE Lancashire cotton unions have begun their annual conference at Morecambe. Delegates representing 170,000 spinning and weaving workers were told on the first day of the conference that they were meeting under a cloud of depression and short-time working. Alderman Harold Chorlton of Rochdale, in his presidential address to the United Textile Factory Workers' Association, said that there was a universal feeling that the industry could be helped in a more positive way by the Government. It was easy to place the blame on someone else, but the fact was that the textile industries of other countries were being helped by their Governments—one of the latest examples was the action of the United States Government in limiting America's textile imports from Hong Kong.

The United States restricted her imports of cotton textiles to about 5 per cent of domestic production; France had limited hers to 1½ per cent. But the ceiling in the case of the United Kingdom was about 50 per cent of domestic production. Turning to the question of the Common Market, Alderman Chorlton said that, taken at their face value, the objects were very good. But the implications if Britain became a member posed a number of questions. Were we going to be tied to a common policy of wages and conditions? Were we going to lose our independence or were the people of Europe going to follow our lead in the scheme of collective bargaining? Alderman Chorlton added: "There is no doubt that there will be free movement of capital, but, in relation to the movement of labour, what happens? This is a matter which is not so simple—the matter of plucking up people by the roots and transplanting them into another country to work in a similar trade, particularly in our case in which married women are primarily concerned." The question was: Would the price of Britain joining the Common Market be too high to pay for the value we could expect to receive?

Revival in Buying Soon?

A little more optimism seems to have crept into the views being expressed in Lancashire cotton circles, both formally and informally, about the outlook. Certainly a change in the trade's circumstances is long overdue, and a revival in buying power would give all sections a fillip. Those who base their sentiment on graphs are not slow to point out that the trade cycle should be gradually moving upwards before long. At any rate, in reports as far apart in their attitudes as leaders of the trade unions and members of the disturbing branches can be, a mildly encouraging note has been struck.

Sir Alfred Roberts, Secretary of the Card-room Workers' Amalgamation, suggests that all that is needed is a hardening tendency in raw cotton prices to turn the scale. "Even if this does not happen, it seems unlikely that the period of stagnation will persist much longer," he says in his quarterly report. "Buyers will be compelled sooner or later to cover their future requirements."

More directly hopeful about the immediate turn of events is Mr. G. H. K. Rae, Chairman of the Cotton and Rayon Merchants' Association. "Recent reports by converters indicate little increase in their sales of finished cloth," he says in his annual report, "but it would seem that the emptying of the pipeline suggests that a revival in demand may not be long delayed." The cut in the Bank Rate towards the end of March was a favourable factor, he adds. The subsequent reduction within the past fortnight should be further cause for encouragement.

The Merchants' Case

It is doubtful whether any single issue has so divided the sectional interests of the trade in Lancashire as the importation of foreign yarn and cloth. Whereas the industry as a whole remains firmly opposed to any extension of the current rate of arrivals and would joyfully grasp at a curtailment of imports, the attitude of the merchanting community is understandably two-sided. These traders recognise that their basic job is to procure goods for their customers from the most economical source. This need not necessarily be the cheapest market, but quality and price must be assessed in relation to the availability of supplies.

Yet even the most internationally-minded merchant has to admit that to ignore completely the products of local manufacturers is a shortsighted policy. Lancashire as a producing centre may be but a shadow of its former self, but it remains a substantial industry, offering many constructions of cloth on terms which are not always uncompetitive with its rivals.

One of the fundamental points in the industry's case to the Government is that it should not be allowed to drift into complete stagnation so that supplies for the home market would be at the mercy of makers overseas who might eventually reach a position where they could dictate their own terms.

Dependent on Lancashire

All this is suitably recognised in the annual report of the Cotton and Rayon Merchants' Association, which presents a well balanced survey of the position which has arisen during recent years because of the very large increase in arrivals of foreign goods. Most converters, it admits, use some grey cloth from sources outside the United Kingdom, but all are dependent to a large extent on cloth woven in this country. Last year's output of woven cotton and man-made fibre piecegoods was 1,846 million yards, a decline of 68 million yards on the 1960 level and 447 million yards lower than in 1957. In four years, production of cotton cloth has dropped by 24 per cent and man-made fibre goods by 8 per cent.

According to a study undertaken by the Merchants' Association, it is suggested that current home trade requirements of cotton and man-made fibre cloth are around 2,300 million yards a year. The shortfall of home-produced fabric is, therefore, nearly 500 million yards.

Consumer demand in the home market has been steadily rising for some years, as is shown by recent statistics, and there is no reason to assume that this trend will not continue. The Merchants' Association, while not directly involved, is sympathetic towards the attitude of millowners whose re-equipment programme has not proceeded on the scale anticipated under the reorganisation scheme. "The rising tide of imports has created a general lack of confidence within the industry," says the report, "and the restrictions so far made have not afforded a basis sufficiently firm to encourage the expenditure of the substantial amount of capital which large-scale re-equipment requires."

When the redundancy programme three years ago made such sharp inroads on the quantity of plant still remaining in Lancashire, many observers felt that similar pruning of the number of merchants was a necessity which would probably follow in due course. The Merchants' Association now points out that, since 1955, nearly 450 converting firms have ceased to be liable for the Cotton Board levy, having given up business.—*All Rights Reserved.*

TAILOR-MADE YARNS

Britain's Linen Industry Research Association has developed a simple process which has given the textile industry a new range of fabrics made of man-made fibres. The Association has named the product A to Z YARNS—a wide variety of yarns each of which is tailor-made to give chosen characteristics to a fabric. They are particularly promising for machine and hand-knitted garments. Sweaters have been made which are difficult to distinguish from those made of wool. They have remarkable clarity of stitch and wash without losing their shape. Because the process is simple, the new yarns and fabrics can be made cheaply and quickly on existing machinery.

STRENGTHENING GENERAL INSURANCE

WILL GOVERNMENT TAKE THE INITIATIVE?

THERE has of late been much discussion about the need for and ways of promoting some form of amalgamation or group working of general insurance companies in the country with a view to improving the state of affairs in this branch of business. Amalgamation has been prescribed as solution to the problem arising from the existence of too many companies in relation to the size of the market and their consequent uneconomic working. This position of the insurance industry is by no means unique. Banking too was at one time characterised by the existence of unsound units which threatened to undermine the confidence of the public in the entire banking system. But, under the inspiration and guidance of the Reserve Bank of India, a voluntary scheme has been put into effect according to which the uneconomic units will gradually merge with the bigger ones to form strong and economically viable units. Unfortunately, no such trend has been in evidence in the general insurance field where a plethora of units competing among themselves by fair means and foul for a limited market have tended to weaken the insurance business as a whole.

It is, however, one thing to suggest a remedy and quite another to implement it. Though the idea of merger of uneconomic units has been advocated by some insurers themselves, there has been opposition to it from others, as well as from employees. The opposition of employees to merger is based on the fear that it might result in retrenchment. Some insurance managements, especially of smaller companies, do not relish the idea of merger as they are not prepared to surrrender their independence and lose their identity. Moreover, it will give rise to problems of administration and integration.

"Royal" After the Merger

In this context, it will be interesting to know how the problems thrown up by merger of two units are being tackled by the Royal Insurance Group of Britain. It may be recalled here that one of the biggest and most successful mergers in British insurance history was that between the Royal Insurance Company and the London and Lancashire Insurance Company resulting in the establishment of an insurance group with total assets in excess of £400 million (about Rs. 534 crores). The merger took place early last year. It is too early to assess its results but how the Company has gone about the problems of integration of the two companies has been described by Mr. T. H. Naylor, Chairman of the Company, in his annual statement to shareholders a few days ago. Mr. Naylor claims that the merger has been successfully completed in an atmosphere of the utmost goodwill and harmony. According to him, the amalgamation of the Royal Insurance Company and the London and Lancashire Insurance Company was a merger in the true sense of the term, which he defined as a "coming together of organisations for the mutual benefits that can jointly be derived from the combination of their several business interests, effected in unity of purpose and with the sinews of concord." It was not, he asserts, a case of take-over, in which one large financial entity swallows another merely for the sake of increased size or increased power.

As for the future, Mr. Naylor says that a great deal of thought has been given to the problems of co-ordinating and integrating the enlarged group of companies. Future development, he adds, would aim at preserving the traditional identity of each company while securing the benefits that can flow from measures of co-ordination and integration.

Mr. Naylor has outlined the progress made towards co-ordination and integration of the two units. In the U.K., a Joint Finance Committee, consisting of the Directors of the Royal-Globe and London and Lancashire has been set up to secure uniformity of financial policy and practice and, as a consequence, the investment departments of the two groups have been brought together under the chief administration of the Royal Globe. A merger of the two Boards, with a view to establishing a unified control of the wider activities of the two groups of companies has also been proposed. For this purpose, the London and Lancashire is electing to its Board those Directors on the Royal's Board who are continuing in office next year and those who are not already members of the London and Lancashire's Board. Reciprocal elections will be made to the Board of the Royal. Having thus established a common membership, the Board will meet jointly.

Out measures have also been taken with a view to ensuring greater economy of operation and more productive use of staff resources. In New York, the Royal-Globe investment committee has been made responsible for the investments of the London and Lancashire Group and unified top management has been established in the U.S. and in Canada as a prelude to the ultimate integration and co-ordination at all levels. A substantial degree of integration of the organisations of the two groups has already been achieved in India, Pakistan, East Africa, Nigeria, Singapore. Mr. Naylor expresses the hope that, although time and much hard work will be necessary before the integration could bear fruit, ultimately it would yield great advantage for economies of operation, enhanced financial strength and more effective deployment of the combined staff.

Advantages of Amalgamation

These precisely are the advantages which Indian insurance companies also stand to gain from amalgamation. Considering the size of the Indian market, the number of companies operating in this country are too many. As at 31st December 1960, there were as many as 166 insurers registered under the Indian Insurance Act 1938 to transact one or more classes of general insurance business. Of this, 88 were Indian and 78 were non-Indian companies. They write between themselves a gross premium of Rs. 28 crores in India (average of five years 1955-59). The share of Indian companies, numbering 88, is about Rs. 18 crores. The uneconomic size of the Indian companies would be apparent from this. The problem of uneconomic working and unhealthy business practices are ultimately bound up with the size and strength of the companies. The case for amalgamation was forcefully put forward by Mr. A. D. Shroff, Chairman of the New India Assurance Company, in his speech at the annual general meeting of the Company a year ago, in the following words:

"It is imperative that consolidation and integration are achieved in the existing units through amalgamation and group working. It must be clearly realised that, in the present context of tremendous technological changes, severe inflation and rising wages, the units, if they have to be economic units, have to be very much larger than an average unit in this country. With their problems in no sense as acute as ours, the British insurance market ushered in a silent revolution overnight by achieving amalgamations of what may be termed giant units. But we are still leaving it to time and chance to effect a cure by slow and painful extinction of the uneconomic units even though we are aware of the very difficult situation through which the insurance industry in this country is passing, and we realise fully well that there is no other alternative but to integrate the units by group working or amalgamation. I am strongly of the view that Government should take up this problem in right earnest, draw up a plan which will put the industry on a sound and dynamic footing and implement this plan with initiative and determination."

Not Difficult

In Mr. Shroff's opinion, the Indian market, which at present is made up of less than 90 Indian units, should be integrated into fifteen to twenty units, not necessarily by amalgamation but principally by group working leading to amalgamation, with each unit functioning with a minimum of Rs. 50 lakhs portfolio. One of the main difficulties in the way of amalgamation is the desire of each company to retain its identity and independence. This is because, unlike in Britain, where insurance has developed along independent lines, in India it has grown round industries, with each company having large volume of "tied business" which forms the mainstay of their operations. The fear of employees at the lower and higher levels that merger would result in loss of employment for them or

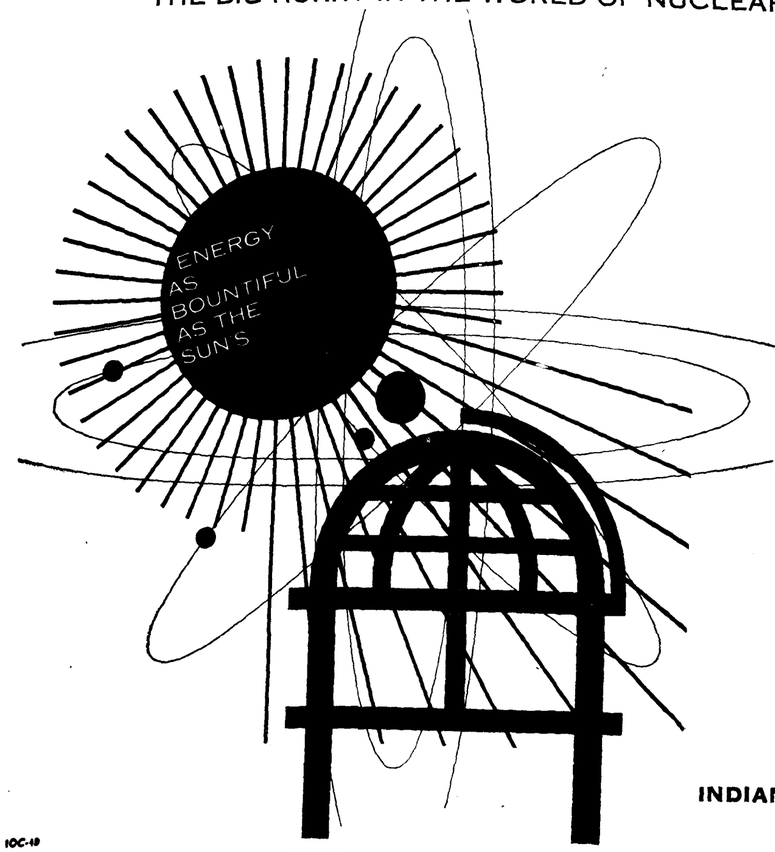
THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS



The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or 'exploded', releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS AND NO OFFER OR INVITATION IS HEREBY MADE FOR SUBSCRIPTION OF ANY SHARES IN THE COMPANY

Consent of the Central Government has been obtained to this issue by two orders, copies of which are open to public inspection at the Registered Office of the Company. It must be clearly understood that in giving these consents the Government of India do not take any responsibility for the financial soundness of any scheme nor for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment of this new industrial undertaking, copies of which are open to public inspection at the Registered Office of the Company. It must be clearly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of this undertaking nor for the correctness of any statements made or opinions expressed in regard to them.

As required by Section 60 of the Companies Act, 1956, a copy of the Prospectus, having attached thereto the documents mentioned therein has been delivered to the Registrar of Companies, Maharashtra, for registration.

Application will be made in due course to the Bombay Stock Exchange for permission to deal in and for official quotations for the shares of the Company.

The Subscription List will open at the commencement of Banking Hours on 28th May, 1962, and will close at the close of Banking Hours on 30th May, 1962.

OBJECTS

The Company was incorporated on 12th April, 1961, in Maharashtra with the objects set out fully in its Memorandum of Association but particularly to carry on the business of manufacturers of and dealers in ball and/or roller bearings, and components in respect thereof, and also the business of manufacturers and/or assemblers of and dealers in pendulum weighting arms, cradles, and bearing units for top rollers, being components of textile machinery, and other components of textile machinery and accessories in respect thereof.

MANUFACTURING AND IMPORT LICENCES

The following three Manufacturing Licences have been granted by the Government:

(1) Licence No. L/8/C-1/1/80 dated 13-5-1960 for the manufacture of certain types of Tapered Roller Bearings and certain types of single Row Deep Grooved Ball Bearings.

(2) Licence No. L/8/A-1/25/61 MEI dated 16-8-1961 for the manufacture of certain types of pendulum weighting arms complete with bearing units for top rollers and cradles.

(3) Licence No. L/8/A-1/31/62 MEI dated 9-3-1962 for the manufacture of centring sleeve inserts and tape tension pulleys.

The following Import Licences have been granted by the Government:—

(A) Licence No. 621750 dated 4-10-1961 for Rs. 9.78 lacs for components for pendulum arms.

(B) Licence No. 991487 dated 22-12-1961 for Rs. 64,786 for machinery to assemble components for pendulum arms.

(C) Licence No. 991268 dated 30-1-1962 for Rs. 1,52,51,720 for machinery to manufacture the bearings.

PROMOTION AND COLLABORATION

The establishment of the Company is the result of collaboration between Aktiebolaget Svenska Kullagerfabriken of Gothenburg, Sweden (hereinafter called "SKF GOTHENBURG") and The Skefko Ball Bearing Company Limited of Luton, England (hereinafter called 'SKEFKO") on the one hand and the Investment Corporation of India, Limited, on the other, upon the terms contained in (a) Heads of Agreement dated 11th April, 1961, and (b) Supplemental Agreement dated 7th April, 1962, between them.

FACTORY SITE AND POWER SUPPLY

The factory is to be established in approximately 100 acres of land near the railway station at Chinchwad, about 9 miles from Poona in the State of Maharashtra. The land is being acquired by the Government for the Company under the Land Acquisition Act, 1894, under two Agreements dated 22nd September, 1961, and 28th December, 1961, entered into with the Governor of Maharashtra. The Company has paid the amount of Rs. 2,40,000 to the Collector of Poona as initial deposits against the said costs. Under a recent judgment of the Supreme Court of India, acquisition of lands for companies under the Act is not valid, but it is expected that the Central Government will be taking early steps to bring in amending Legislation for the purpose of validly acquiring lands for companies.

The factory buildings are expected to be completed during the early part of 1964 but completion by this time depends, among other things, on the satisfactory completion of the land acquisition, and timely supply of structural steel, cement and other materials. It is hoped that electric power for the Company's factory will be available from the Koyna Valley Project by about the middle of 1962.

PLANT AND MACHINERY

SKF Gothenburg will supply or cause to be supplied the machinery and equipment required by the Company to be imported for manufacturing purposes. The cost of this machinery and equipment is at present estimated at approximately Rs. 2,40,00,000 (Rupees two crores and forty lacs). This figure is subject to future fluctuations in market prices. About 50 per cent of this machinery and equipment will be designed, constructed and delivered by SKF Gothenburg and its subsidiaries. SKF Gothenburg has guaranteed that the prices charged for such machinery and equipment will not be less favourable to the Company than the average current market prices charged for similar machinery and equipment supplied by it or any of its subsidiaries to its other manufacturing subsidiaries or any other customer.

SKF Gothenburg intends to supply the necessary machinery by the time the factory has been completed.

Foreign currency to cover the purchase of the plant and machinery will be provided from cash which has been or will be deposited in banks in Europe being the subscription moneys payable by SKF Gothenburg, Skefko, and one of the subsidiaries of SKF Gothenburg for shares which have been or are to be issued to them.

RAW MATERIALS

The basic raw materials are not at present available from indigenous sources and until they are available in India they will have to be imported. It is proposed to obtain these materials as far as possible from the steel mills of SKF Gothenburg.

KNOW-HOW CAPITAL PROPERTY

(A) SKF Gothenburg has executed an Assignment in favour of the Company, whereby it has transferred to the Company valuable secret processes, manufacturing know-how and methods at a price of Rs. 2,40,000 and upon the terms therein contained, to enable the Company to produce bearings per year to the extent licensed by the Government.

(B) SKF Kugellagerfabriken G.m.b.H., Germany (hereinafter called "SKF SCHWEINFURT"), a subsidiary of SKF Gothenburg, has executed two Assignments in favour of the Company, whereby it has transferred to the Company valuable secret processes, manufacturing know-how and methods at a total price of Rs. 1,75,000 and upon the terms therein contained, to enable the Company to produce certain textile parts to the extent licensed by the Government.

TECHNICAL ASSISTANCE AND RESEARCH

(A) SKF Gothenburg has agreed to act as Technical Consultant to the Company in respect of manufacture of bearings upon the terms and conditions contained in an Agreement dated 29th September, 1961, entered into by it with the Company for a consideration of Rs. 5,60,000, without any deduction whatsoever, and in consideration of the technical assistance and collaboration to be given to the Company, it has agreed to pay to SKF Gothenburg a Research and Development Fee of an amount equal to 2½ per cent of the net annual turnover of the Company as therein defined.

(B) SKF Schweinfurt has agreed to act as Technical Consultant to the Company in respect of the assembling and manufacture of textile parts upon the terms and conditions contained in two Agreements dated 29th September, 1961, and 24th April, 1962, entered into by it with the Company for a total consideration of Rs. 1,25,000, without any deduction whatsoever, and in consideration of the technical assistance and collaboration to be given to the Company, it has agreed to pay to SKF Schweinfurt a Research and Development Fee of an amount equal to 2½ per cent of the net annual turnover of the Company as defined in the Agreements.

PATENTS AND TRADE MARKS

SKF Gothenburg has agreed that, during the currency of the said Heads of Agreement, the Company shall be entitled, free of all costs and fees, to the exclusive right to manufacture under and a non-exclusive right otherwise to use (a) Indian Patents belonging to it and SKEFKO in respect of the said bearings or parts thereof and to SKF Schweinfurt in respect of the textile parts, and (b) the Trade Mark "SKF" belonging to SKF Gothenburg.

SELLING AGENCY

The SKF Ball Bearing Company Private Ltd., of Bombay, an Indian Subsidiary of SKF Gothenburg, is appointed sole Selling Agent in India of the products assembled and manufactured by the Company for a period of five years from 9th May, 1962, at a del credere commission of 10 per cent of the net selling prices of the products of the Company and upon the terms and conditions contained in that Agreement.

BUSINESS PROSPECTS

The demand for ball bearings and the licensed textile parts exceeds the existing productive capacity in the country and tapered roller bearings are not at present manufactured in substantial quantities in India.

With the rapid industrial and agricultural development in the country, increasing production and use of motor vehicles and with the growing development of the textile industry, the demand for all these products is likely to increase substantially. The Directors do not expect any difficulty in disposing of the planned output.

The Directors expect that losses will be incurred for some years. After the workers have been trained and a satisfactory level of efficient production reached, then, given also the necessary customs protection, foreign exchange and import licences to acquire sufficient raw materials, the Directors expect profitable working to be achieved.

Profits will first be used to extinguish accrued losses and to build up sufficient reserves. Thereafter they are expected to be sufficient to permit a reasonable distribution to the shareholders.

TAX BENEFITS

According to present law the Directors consider that—

(a) the Company will be entitled to special benefits in respect of Development Rebate under the Income-tax Act, 1961, and may also enjoy the benefit under Section 84 of the Income-tax Act, 1961.

(b) the Shareholders of the Company will be exempt from tax on such dividend paid from the Company's profit exempted from tax under Section 84 of the Income-tax Act, 1961, and

(c) the Shareholders would also have been exempt from Wealth-tax on their holdings under Clause XX of Sub-section (1) of Section 5 of the Wealth-tax Act, but under the Finance Bill No. II, 1962, recently introduced by the Hon'ble Finance Minister in the Lok Sabha, this exemption is proposed to be withdrawn.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 80,00,000 (Rupees eighty lacs) being the whole share capital now offered for subscription by the public.

The capital outlay required for this project will be as follows:

	Rs.
Land and Building	1,65,00,000
Machinery, Installations and Equipment	2,85,00,000
Preliminary Expenses, Brokerage and Expenses of this Issue ...	6,50,000
Price of Know-How Capital Property	4,15,000
Technical Assistance Fees	6,85,000
Working Capital	1,13,50,000
Allowance for Price Increases, Contingencies, etc.	19,00,000
	Rs. 6,00,00,000

SOURCES OF FINANCE

The above amount of Rs. 6,00,00,000 (six crores) will be provided as under:

	Rs.
(a) Out of existing issued capital	10,00,000
(b) Out of present issue	3,90,00,000
	4,00,00,000
(c) Loans from Banks	2,00,00,000
	Rs. 6,00,00,000

EXPENSES OF THE ISSUE

The expenses of the issue other than brokerage are estimated to be Rs. 4,00,000 (Rupees four lacs) and will be payable by the Company.

BROKERAGE

Brokerage at Rupee one per share will be paid to the Brokers to the Issue and Banks.

DIRECTORS

Under the Articles of the Company, each Director shall be paid Rs. 200 for each meeting attended by him and a fair compensation for his expenses and loss of time in connection with attending Board Meetings and also such special remuneration for extra services as may be arranged by the Board.

MANAGING DIRECTOR

Under an Agreement dated 13th April, 1961, sanctioned by the Government, Mr. P. T. Grufman is appointed Managing Director for five years, the Company paying him a monthly salary of Rs. 9,250, rent-free flat and car and entertainment expenses, and upon the terms mentioned therein, and by a Board Resolution dated 7th May, 1962, such appointment has been continued and confirmed.

INTEREST OF DIRECTORS AND PROMOTERS

The Directors are interested to the extent of any Shares subscribed by and allotted to them respectively in the capital of the Company. They are also interested to the extent of the fees which they may receive for attending Board Meetings.

(1) Mr. A. D. Shroff is Managing Director of The Investment Corporation of India Ltd., Bombay, to which consideration is payable for acting as the Company's Registrars and Share Transfer Agents. He is also the Chairman of the Bank of India Ltd., one of the Bankers of the Company.

(2) Mr. J. Higham is Managing Director of SKF Ball Bearing Company Private Ltd., Bombay, the Sole Selling Agent of the Company, to which commission is payable under the Selling Agency Agreements.

(3) Mr. N. M. Wagle is a Director of the Central Bank of India Limited, one of the Bankers of the Company.

(4) Mr. N. A. Palkhivala is a Director of the Central Bank of India Limited, one of the Bankers of the Company.

(5) Mr. P. T. Grufman is Managing Director of the Company and as such is interested in the remuneration and perquisites due to him under the Agreement with him. He is also a Director of SKF Ball Bearing Company Private Ltd., the sole Selling Agent of the Company, to which commission is payable under the Selling Agency Agreements.

(6) Mr. N. K. Suntook is the Partner of Mulla and Mulla and Craigie Blunt and Caroe, the Solicitors of the Company.

INSPECTION

A printed copy of the Memorandum and Articles of Association of the Company, the Consent Orders of the Controller of Capital Issues, Import Licences for plant and machinery, Letters of Consent from Registrars and Share Transfer Agents, Bankers, Solicitors, Auditors and Brokers of the Company, Balance Sheet of the Company, the Industrial Licences issued by the Central Government and copies and/or drafts of the material contracts and documents referred to in the Prospectus, the Report of the Auditors of the Company, the Consent of the Central Government to the appointment of Mr. P. T. Grufman as the Managing Director of the Company, and the Consent of the Ministry of Commerce and Industry (Central Government) to the arrangements with the above foreign collaborators, can be inspected on working days during office hours at the Registered Office of the Company for a period of 14 days from the date of publication of the Prospectus or until the Subscription Lists are closed, whichever is earlier.

TERMS OF PAYMENT OF SHARES

On application ... ... Rs. 100 per share

APPLICATION FOR SHARES

Each application must be for a minimum of 5 shares or multiples of 5 shares. All application forms duly completed must be lodged together with the amount of Rs. 100 per share in respect of Equity Shares, with:

The Bank of India Limited, Bombay, or its branch offices at Calcutta, New Delhi, Madras and Ahmedabad.

The Central Bank of India Limited, Bombay, or its branch offices at Calcutta, New Delhi, Madras and Ahmedabad.

First National City Bank, Bombay, or its branch office at Calcutta.

National and Grindlays Bank Limited, Bombay, or its branch offices at Calcutta, New Delhi and Madras.

The remittance should be made by cash, cheque or draft. All cheques or drafts should be drawn on a Bank in the aforesaid towns only and deposited with the above banks, at their above branches. Cheques or Bank drafts drawn on banks elsewhere will not be accepted.

The Directors reserve full right to reject or accept any application.

PROSPECTUS AND APPLICATION FORMS

Prospectus and application forms can be obtained from the Company's Bankers or Brokers to the issue or from the Company or The Investment Corporation of India Ltd., at their respective Registered Offices.

ELECTRICITY FROM TIDAL WAVES

WORLD'S FIRST PROJECT UNDER WAY IN FRANCE

THE distinction of being the first country in the world to tap energy from tidal waves on a commercial scale will go to France, when its project for tidal power station already under construction at the mouth of the river Rance, which flows into the English Channel, is commissioned, probably sometime next year. This pioneering French enterprise is of revolutionary significance to the development of power resources in the world, opening as it does a new vista for sources of energy supplementing hydraulic, thermal and nuclear devices. Although tidal waves have been known to be a potential source of energy for years, little was done to exploit it, until France took the initiative. French scientists and technicians have been engaged in research, tests and experiments on this problem for the last twenty years. But a definite step towards giving a practical shape to the scientists' findings was taken only in August 1956, when the French Parliament unanimously adopted legislation giving effect to the Government's decision to build the first tidal power station on the Rance estuary, with a capacity of almost 400 megawatts and an annual energy output of 1,000 million kilowatt-hours. On the basis of 1954 prices and wages, it was estimated that the total cost of the project would be about 32 billion (old) francs, with a recurring annual operation cost of 450 million (old) francs.

The site of the tidal plant is situated at a place between the Brebis head (left bank) and Briantais head (right bank). At this spot, which is about 2.5 miles away from its mouth, the Rance is about 0.46 mile wide, and the greatest depths are 39½ feet below the level of the lowest tide. The construction work, which began on 1st January 1961, is currently going on in full swing. The left bank enclosure to enable the lock to be built was finished as early as in September 1961 and excavations for the final structure are now under way. The right bank enclosure has also been completed. The project has now aroused the intense interest of technicians the world over. In view of this great interest, a succinct account of the principles of functioning of the tidal power plant, based on the information contained in the latest issue of the *French Technical Bulletin*, published by the Trade Commissioner for France in Bombay, will be read with interest.

Tidal Range

A tidal power station obtains its energy from the range of tides, that is to say, "the difference between the level at high tide and the level at low tide," from the frequency of the tides (which, incidentally, is not identical throughout the world) and from the volume of water thus displaced. The utility of a tidal development site, according to the aforesaid article, depends mainly on two factors, namely, the extent of the tide and the size of the reservoir which can be created. It is also certain that, from the economic point of view (and the size being equal), a reservoir will be all the more satisfactory as the length of the dam necessary to isolate it from the sea becomes less. As far as the tidal range is concerned (difference in level between consecutive high tide and low tide), the Brittany coasts of the English Channel are the most propitious in the world, thanks partly to the Cotentin peninsula which forms an obstacle to the tidal wave coming from Atlantic. In the Rance estuary, which flows into the Channel between St. Malo and Dinard, the tidal difference in level may reach 44 ft. 4 inches (+13.50 metres above the zero of marine charts). The equinoctial tides, highest of the year, displace the rising tide and ebb tide by as much as 6,356 million cu. ft. (180 million cu. metres) of water, or a flow of about 635,600 cu. ft. (18,000 cu. metres) per second.

From the standpoint of frequency, or the cycle of tides, too, the choice of Rance for location of the project is considered as ideal. For its tides are the semi-diurnal type—two high tides and two low tides in 24 h. 50 m., or the length of a lunar day. This "rhythm," it is said, ensures greater efficiency. The area of the reservoir constituted by the estuary is 8½ square miles. It extends to Le Chattellier lock near Dinan over above 12½ miles and its working volume amounts to 6,500 million cu. ft. (184 million cu. metres).

Several principles have been evolved with a view to filling and emptying basins through turbines. Of these, there are three important principles guiding the operation of the plant, namely, (1) single action on emptying reservoir, (2) single action on filling reservoir and (3) two-way action. A short account of the techniques underlying these three types of working principles given in the French *Bulletin*, is as follows:

"*Single action on emptying reservoir*: On the flow tide, the reservoir is filled by opening the sluice gates. At high tide, these gates are closed and the reservoir is not emptied by the turbines until the outgoing tide has created an adequate head. This is the simplest type of operation formerly used in tidal mills. Time-tables permitting, it can be improved by using the electric power available on the system during slack hours to pump the water from the sea and discharge it behind the dam so as to raise the level in the reservoir and increase the volume of water available for the turbines later.

"*Single action on filling reservoir*: In this case, the energy is generated by passing the water from rising tide from the sea to the reservoir. This process is usually less satisfactory than the previous one, but it can also be improved by pumping to lower the level in the reservoir before the water passes through the turbines.

"*Two-way action*.: This is a combination of the two previous cycles. The energy is generated both on filling and on pumping the reservoir, the turbines developed for the Rance river being able to operate in both directions, thanks to the modification of the orientation of the turbine wheel blades and guides. Here again, two pumpings are possible."

The choice of the cycles is not governed by any hard and fast rules, but varies according, on the one hand, to the strength and times of tidal movements and, on the other hand, to the load demand and the quantities it represents at various times during the day, namely, peak hours, full capacity hours or slack hours. The flexibility of operation is ensured by double action, and pumping ensures the attainment of "operation-cut-to-measure," which is almost completely independent of the rhythm of the tides.

Structural Parts

The Rance project consists of four distinct parts, namely, one lock, the power station proper, a dyke and lock gates. A brief description of these structures of the plant is given below:

(*a*) *The lock*: This lock, which will enable navigation to continue on the Rance estuary, will be 43′ (13 m.) wide and 213′ (65 metres) long. The lock gates will be vertical shaft sector gates.

(*b*) *The power station*: Situated in the deep part of the Rance river, the plant will open up before visitors to the interior like a vast reinforced concrete tunnel about 1,213 ft. (370 metres) long. Each of its two linings, stiffened every 43½ feet (13.30 metres) by buttresses, takes in its turn the water pressure engendered by the tidal rhythm. The roof is vaulted. The plant will comprise twenty-four 10,000 kw. sets. Each set, installed in a bay 43.5 feet (13.30 metres) wide, will be placed in a pit of which the bottom will be situated at about level —33 ft. (—10 m.). For operation, the 24 sets will be coupled in three blocks of eight sets, each block feeding an 80,000 kVA transformer inside the plant. 225 kV oil filled cables will connect the transformers to the outside outgoing substation on the left bank at about 984 ft. (300 metres) from the western end of the plant. Access to the interior of the plant for bringing in large items of equipment will be by a shaft installed on the left bank. 72¼ ft. (22 metres) deep, this shaft will be extended by a gallery which will pass under the lock and open into a reception bay served by the travelling cranes of the machine room.

(*c*) *The dyke*: A dyke about 524 ft. (160 metres) long will separate the end of the plant from Chalibert Island. It will be made of rockfill and will have a watertight concrete diaphragm.

(d) *Lock gates*: Between Chalibert Island and the right bank, there will be a mobile dam (lock gates) comprising six passes enclosed by flat gates about 50 ft. (15 metres) wide and 33 ft. (10 metres) high. These gates will enable the reservoir to be completely filled or emptied.

The sets with which the tidal power plant will be equipped will be of the "bulb" type, enabling water to be passed through the turbines in both directions (tide-reservoir and reservoir-tide); it will also permit of pumping the water. The bulb set is like a small submarine in appearance. It has an ogival steel shell which contains the alternator and Kaplan turbine. Placed in a hydraulic duct, it is entirely surrounded by water, access to the interior being had by a shaft opening into the power plant. Experiments were first made with machines of this type on various rivers, at Cambeyrac on the Truyere river (two 5,000 kw. sets), at Argentat on the Dordogne river (one 14,000 kw. set), at Beaumont-Monteux on the Isere river (one 8,500 kw. set). Nevertheless, to complete the data thus obtained, it appeared to be of interest to experiment with a bulb set under the influence of the tides of the sea. This was done in a disused graving dock in the port of Saint-Malo. The capacity of a Saint-Malo set is 9,000 kw. at a speed of 88 r.p.m. The turbine is a Kaplan with mobile blades and guide vanes. The wheel diameter is 19 ft. (5.80 metres). The turbine is coupled to an alternator with an outside diameter of 16½ ft. (5 metres) which revolves inside its ogival housing in air at atmospheric pressure.

The structures are being erected in dry surroundings inside three cofferdam enclosures. Construction of two enclosures has already been completed, one on the left bank enabling the lock to be built and the other on the right bank for facilitating the building of lock-gate dam. The left bank enclosure consists of concrete walls erected at high tide and designed to be incorporated for the most part in the final lock works. The right bank enclosure is composed of cylindrical steel gabions 62′-6″ in diameter and 49 to 66 ft. in height, connected with each other by arches. These gabions and their arches are made of plate-web piling and filled with sand. During construction of the dam and locks, which will soon be begun, work will be initiated on a third enclosure—central enclosure—comprising two cofferdams, north and south, inside of which will be erected the power station proper. It is northern cofferdam, situated at the side nearest the sea, that will cut out the river, that is to say, isolate its estuary from the sea. Once the river Rance has thus been "cut off," the dam gates will be closed and the estuary will be converted into a lake unaffected by the movements of the sea. The surface of the water will always be maintained at level +28 ft. (marine charts), which is sufficient to permit navigation on the river.

NEW LIGHT STEEL

A Canadian technological achievement of world-wide importance is the new light steel called G40-8. Develop by Algoma Steel Crop. Ltd. of Sault Ste. Marie, Ontario. It has been tested and approved by the entire Canadian steel industry, by the Canadian Standards Association and by the Canadian Institute of Steel Construction. Any steel producer in Canada may use the formula, but Algoma was a first begin production—in the firm's new $15,000,00 universal beam mill. G40-8 is reported to be even stronger than ASTM-A36, a new steel produced in the United States in 1960. It is also easier to use and to weld, more economical and more resistant to the effects of extreme cold than conventional carbon steel. Algoma President G. S. Holbrook says the new steel is 20 per cent stronger for most sections for an average increase in cost per ton of only about three per cent. This, he estimates, means potential savings of 10 to 12 per cent. It can be used not only in such major projects as bridges, buildings, ships, and towers, but also in plate form for tanks and pipes that operate under great pressure.

DEVIDAYAL'S NEW VENTURE

The foundation-stone of a new wire rod mill to be put up at Thana by the Devidayal Rolling and Refineries Private Ltd., Bombay (Chairman: Mr. Harikishandas Aggarwal) was laid by Mr. S. K. Wankhede, Maharashtra's Minister for Industries, Law and Judiciary, on Friday the 11th inst. The plant, which is expected to go into production within a year, will have a capacity to roll 12,000 tons of ¼" copper wire rods per year. The total cost of the project is estimated at Rs. 40 lakhs. The mill, it is claimed, is the first of its kind in the western region.

Mr. Aggarwal, in his speech at the foundation-laying ceremony, observed that the mill would be in a position to cater to the entire requirements of the cable and wire industry in this part of the country. These consuming industries now send their copper wire bars to Calcutta to get them rolled into ¼" rods. Besides, the mill will manufacture copper bus-bars, transformer strips, earthing strips and other special sections and sizes, required by heavy electrical projects and other industries manufacturing transformers, electrical motors, etc. All these products are now being imported. The new project, therefore, is expected to result in a foreign exchange saving of the order of Rs. one crore per annum.

NEW PRODUCTS AND PROCESSES

Dehydrated Portland Cement

PREMATURELY hydrated portland cement, which at present has no commercial value and is usually discarded as waste, can be profitably utilised, according to a process described in a recent issue of the *Journal of Scientific & Industrial Research*. Portland cement, due to improper storage, absorbs moisture from the air and gets hydrated prematurely as a result of which it becomes lumpy and loses its chemical activity. According to the process reported, such cement can be chemically reactivated by crushing (grinding, if necessary) and screening, until it is reduced to approximately its former size, mixing with water and subjecting the resulting paste to high pressure. Mortars and concretes made from the cements thus produced, when moulded under pressure, show high compressive strengths, high impermeability properties and low shrinkage. By increasing the moulding pressure the quantity of reactivated Portland cement required in the preparation of mortar and concrete can be reduced.

Glass-coated Wire

A continuous glass-casting process which can be used to make very thin wire conductors has been devised by Glass Developments, of Sudbourne Road, Brixton, London, S.W.2. In the process, copper wire is melted in a glass tube by induction heating. Heat radiated from the wire melts the glass tube and, from the molten "gob" formed, a filament containing a continuous metal core is picked up and drawn out and attached to a winding drum. Winding rates up to 300 feet per minute and continuous lengths of one kilometre are claimed to be possible. Because of the small amount of power needed and the elimination of expensive diamond dies, it is said to be more economical than conventional die-drawing techniques. Another advantage claimed is that the high surface tension of the glass ensures both a circular wire and a mirror finish.

Cable Clip

A Norwegian firm, A/S Elektrofabrikken, Oslo, is manufacturing a new handy type of cable clip at the rate of many millions a year for home and foreign markets. Called the APK clip, it fixes cables easily, quickly, neatly, efficiently, and cheaply, and is the invention of Norwegian electrical engineer Johannes Andvig. It is now available in a number of versions for various types of cable, but all versions combine nail (or drive-screw) and clip in one unit. One tap of the hammer and the clip is in place. The cable is laid in the clip, which is then tightened and closed with a pair of pliers. One size of clip takes various sizes of cable. The clips are supplied galvanised, or galvanised and lacquered to blend with the cable and background. There is also a plastic-coated clip which is extremely resistant to corrosion, specially made for installations where the cables are exposed to damp, acids, and salts. Apart from the Scandinavian countries, Britain is so far the biggest market for APK clips.

Novel Rubber Containers

Towable containers for transporting oil at sea have been developed by Trelleborgs Gummifabrik, Sweden's leading rubber product manufacturers. In collaboration with Swedish authorities the Company has also developed flat containers for road transport and stationary use for oils or other liquid chemical products. The towable containers usually hold 25 cu.m. (5,500 Imp. gals.), have a width of 2 m. and a length of 22 m. The walls consist of two layers of rubberised nylon fabric with a thickness of 3.6 mm. When filled, the container becomes cylindrical and floats in water with about two-thirds below the surface. The container can be towed by most types of ships, it is quickly filled and requires a minimum of quay space. When emptied, it can be rolled up and carried back to the loading place by sea, road or air. The flat container is also built of two layers of rubberised nylon fabric. The thickness of the fabric varies from 1.8 to 3.0 mm. according to the size of the container. Since it is difficult to equip the containers with proper baffle walls, the large units are built in the shape of several interconnected smaller ones. Containers of this type become pillow-shaped when filled and are manufactured in sizes up to 25 cu.m. Besides being used for vehicle-borne road transport, this type of flat container has also found application for temporary storage of oil at road building sites, for transformer repairs, etc. Certain corrosive liquids which attack other materials may be stored in containers of special rubber.

Net-making Machine

A net-making machine capable of knotting man-made fibres as well as natural fibre twines has been introduced by a British firm, Porlester Ltd., Leicester. Believed to be the only one of its kind in the world, the machine is described as being "a technical break-through of considerable significance." Until comparatively recently, fishing nets were made almost exclusively from hemp and other natural fibres, and manufacturers experienced difficulty in making nets from man-made fibres. The machine was designed specifically to overcome these problems, and by using the latest synthetic fibres nets can be stronger and lighter in weight. They can also be more durable and with a constant mesh size.

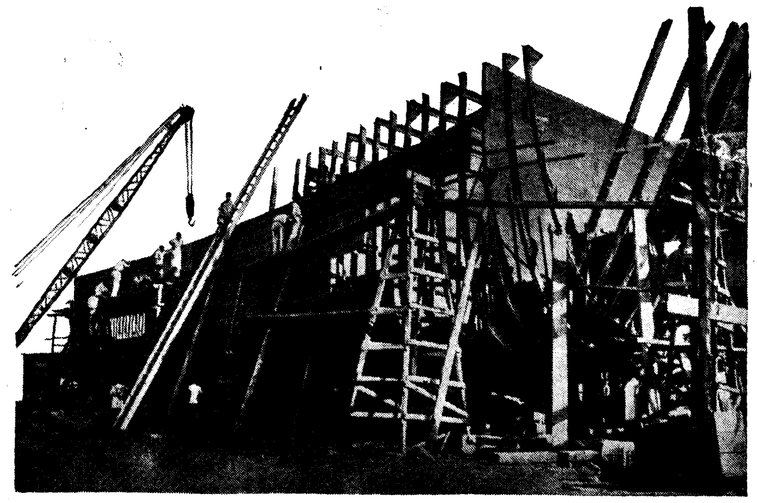
A Revolutionary Method of Food Preservation

A method of food preservation known as accelerated freeze drying extracts all the water from the food which can then be kept almost indefinitely in an airtight bag. The addition of water restores the food to its original condition, as fresh as the day it was preserved. A large proportion of all foodstuffs consists of water. For example, cabbage contains about 90 per cent and meat about 60 per cent. So, with this method of preservation, a 10 lb. joint will weigh 4 lb. and a 2 lb. cabbage only 3 oz. Storage is simple as no refrigeration is needed. The housewife can therefore buy for her future needs, probably choosing a time when prices are low, and can store the goods in an ordinary larder. In the forefront of this revolution in preservation techniques is a British firm Leybold Elliott Ltd., which offers a comprehensive range of freeze drying equipment.

Strengthening Steel

The strength of steel can be increased as much as 50 per cent by adding a very small amount of columbium, according to the U.S. National Steel Company which has patented the new process. One great advantage of the process, the Company believes, is that industrial concerns of many kinds will be able to make lighter weight products, and save on steel, manufacturing costs and shipping charges. Columbium, or niobium, is a metallic element (atomic number 41), which has been known for some 150 years but until the 1903's remained a laboratory curiosity. Now for the first time it is being used in large-scale steel production. Under the National Steel Company's method, columbium is added to steel of low carbon content from which the oxygen has been partly removed. It is said to increase the yield strength without losing what steel men call working properties—weldability, formability and toughness. The new steel has already been used in parts for automobiles, trucks and tractors, construction equipment, pressure vessels, propane cylinders, pipelines and loading devices for railroad cars.

Shipbuilding



The construction of all types of coastal, river, harbour and special craft is undertaken by

"PYRAMID"

THE NATURE OF INFLATION

A COMMONSENSE EXPLANATION AND A PRACTICAL CRITERION

By D. Krishnaswami Rao

IF the decade before the Second World War was one during which the capitalist world was beset by the problem of patent or latent depression, the sixteen years that have followed the close of the war have in most countries been an era of inflation, barely held on the leash by restrictive monetary and other policies. In the free world, the developed as well as the underdeveloped countries have experienced inflationary pressures, while the communist countries have had to use some of the most drastic weapons in their economic armoury to deal with the same eroding evil.

The experience of the world in this respect in the post-war period runs, therefore, contrary to the forecasts and expectations entertained by economists and statesmen of the probable course of economic activity after the end of hostilities. The view commonly held during the closing years of the war was that, after the war ended and its immediate aftermath of a year or two of reconstruction was over, the world would have to face again the problem of a chronic sagging of economic activity as in the pre-war years. It was this view of the post-war prospect that largely inspired the blue-prints of the full employment policies that the democracies got ready for implementation after the war. The much-feared post-war slump has, however, not materialised; on the other hand, notwithstanding three moderate recessions of economic activity since 1945, the problem, by and large, has everywhere been one of restraining the pace of inflation. In fact, one could, without over-simplification, describe the middle decades of the twentieth century as the Age of Inflation. An attempt to give a simple explanation of the nature and genesis of inflation may, therefore, be useful.

Cause of Inflation

Inflation occurs in a country because of an excess of aggregate demand for goods and services in relation to the production available to meet it; it is essentially the result of an imbalance between attempted consumption and the volume of goods and services available for the purpose. It means that the community as a whole is trying to live beyond its means, using the word "means" to refer not to money incomes which are swollen during inflation but to the "real" income of goods and services which does not grow correspondingly.

As the then Prime Minister of England said in August 1955 in a speech to his constituency on his country's economic troubles: "At home, we are trying to do too many things at once. This is better than trying to do too little, but it is straining our resources and raising our costs. . . . At the same time, we are consuming more goods at home than we have ever done before. . . . There is nothing to criticise in these aims, but all of them make demands on our resources, and they cannot all be met at once."

For it is in terms of the excess of demand and the mutual inconsistency of its components as against the available production of a country that the problem of inflation can most directly be explained.

It is common, of course, for Governments which have been unable to control inflation—which perhaps they had themselves let loose on the country by their own spendthrift policies—to blame it on world factors and to point to inflationary trends elsewhere in the world as having raised the cost of the country's imports, thereby generating the upward spiral of costs, prices and wages in the country. But it should be clear, on a little reflection, that a world inflationary trend is approximately a summation of various national trends in the same direction and that inflation as a world phenomenon cannot be long sustained, unless it were being continuously fed by forces operating within each national economy. The world trend could no doubt intensify an internal inflation, but it could not provide the original impulse that lifted incomes and prices upward into their gyration. That impulse comes from excess demand, that is, from excess attempted spending within a nation's economy.

If thus the villain of the piece is a volume of money expenditure that has grown at a faster pace than supplies, it becomes necessary to analyse the circumstances in which such a divergence may arise.

It is a commonplace of economic analysis that production (in the sense of all the economic activities that go into the making of the product and its distribution to the user) generates incomes equal in total to the value of the output; so that the possibility of the development of an imbalance between demand and resources is not inherent in the nature of economic activity. It is only when attempted spending outruns income that demand at current prices exceeds the supplies available at current prices and the inflationary impulse is imparted to the price level.

Let us give a simple illustration to bring out the point made above.

Let us suppose that the total value of the output of goods and services in a year in a country is Rs. 10,000 crores, this being the outlay incurred in producing it, and hence also the total of incomes that this level of productive activity gives rise to. Suppose that the Government of the country raises a sum of Rs. 1,000 crores as taxation, which it utilises for the maintenance of general administration, justice, defence, etc.—that is, of services which give rise to incomes but do not provide goods or services for sale. Let us suppose further that 1,000 crores of rupees are being saved out of private incomes and made available for investment by private industry in the installation of new capital equipment—a process which again generates incomes but does not immediately increase the output of consumers' goods. We further assume that no change is made in the volume of output available for purchase by foreign trade, that is, by an import surplus or an export surplus.

We have in this highly simplified case a position of stability: output worth Rs. 10,000 crores is absorbed by Government expenditure of Rs. 1,000 crores, plus private investment of Rs. 1,000 crores, and ordinary consumption expenditure of Rs. 8,000 crores. The supply of each individual commodity or service may not exactly equal the demand for it but supplies in the aggregate are likely to equal demand in the aggregate at current prices.

Government, the Source

We can now explain the circumstances in which the total of monetary expenditure can outrun the total of available goods and services.

One circumstance in which this can happen is if the Government of the country of our illustration were to increase its expenditure from Rs. 1,000 crores a year to, say, Rs. 1,500 crores a year without inducing a corresponding reduction in private expenditure either through increased taxation of Rs. 500 crores or through governmental borrowing of Rs. 500 crores from increased private savings. Total expenditure, governmental and private, would now be Rs. 10,500 crores as against an output of Rs. 10,000 crores (valued at the prices ruling before the increased Government expenditure was undertaken). The result, if supplies cannot be stepped up from increased production or from a net increase of imports, will be an upward pull on the price level.

As a matter of fact, most inflations, past as well as present, have been the result of increased governmental expenditure that has not been financed either by increased taxation or by increased borrowing from the public. The spendthrift monarchs of old used to finance their extravagance by debasing the currency which at that time used to consist chiefly of full-weight coins of precious metals. Their later-day successors, generally Cabinets of demagogic politicians, used to have increasing recourse to the printing press, paper currency being then the chief form of money, to meet a mounting load of Government expenditure which they dare not impose on the shoulders of the electorate in the form of higher taxation and could not coax out of them in the form of loans.

At the present time, of course, most Governments have a greater sense of responsibility for their actions, but governmental expenditure has in practically every country of the world remained at levels unprecedented in times of peace. The causes of this state of affairs cannot be generalised about, there being circumstances peculiar to each country but one factor of almost universal incidence has been the burden of defence expenditure. In the richer countries of the world, expenditure on defence runs to astronomical figures, because they have to provide not only for the defence of their own territories but also of their allies; while even in some of the underdeveloped countries of the world expenditure on the maintenance and equipment of the armed forces consumes a disproportionately large share of their limited resources.

Another factor, of considerable importance in some of the developed countries, particularly those of Western Europe, is State expenditure on the maintenance of social security and welfare services such as free medical aid and education, old-age pensions, subsidised housing, etc. Expenditure on welfare has been as much a 'must' as expenditure on military defence, because welfare is the social strategy of democracy without which the military strategy of defence would be of little avail. Even the developing countries have had to pay attention to the provision of welfare services to tone down the economic inequalities with which their people are afflicted in greater measure than the people of the richer countries.

A Factor of Importance

Add to all this a factor of special importance in the underdeveloped countries, namely, rapid economic development under Government auspices in order to lift their economies out of the level of poverty and thus forestall what has aptly been called "the revolution of increasing expectations" which is so common in the poorer countries of the world.

Be it defence, attainment of welfare goals or State-sponsored economic development, the net result is the same: Government makes a draft on the real resources of the community which it cannot pay for substantially out of taxation and borrowing from the savings of the people. Considerable resort is, therefore, had to what is called deficit financing, not through the crude old methods of debasing the coinage or speeding the currency printing press, but through the refined modern techniques of Government borrowing from the Central Bank of the country or from the commercial banks by the issue of Treasury Bills or short-term bonds to them. There comes about, therefore, an addition to total demand, which, since it cannot be matched by a sufficient increase in the output of goods and services, can only result in an inflationary rise in the price level.

In the case of *defence* expenditure, it is obvious that its contribution to the production of saleable goods and services is nil. Welfare services, on the other hand, do contribute to some extent to greater labour productivity, but the larger the expenditure on welfare the less, after a point, are the returns in the form of greater productivity. Development expenditure is in another category, because much of it is investment in the building up of the infra-structure of the economy—such as the expansion of electricity generation, irrigation, railway and port development, increase of capacity for steel, heavy chemicals, etc.—which adds to incomes forthwith but can only add to production after a fairly lengthy time-lag.

Consciously, therefore, and possibly in most cases with very little choice in the matter, but with a full sense of responsibility, the modern State, both in the developed and in the underdeveloped latitudes of the globe, does spend in a way that can only result in inflation.

Private Sector Too

A disequilibrium between the flow of monetary expenditure and the supply of goods and services could similarly arise, if, without an increase in saving increased private investment were attempted, financed by credit created by the banks. The increased investment added to an undiminished consumption demand would impose pressures on the country's real resources which cannot adequately meet them and, once again, the price level must rise under the strain.

Inflationary pressure can also build up in an economy if a section of the population, say the wage-earners, demand and obtain an increase in their incomes higher than is justified by their contribution to production. If other sections of the population do not make any reduction in their own standards of living, the increase in working-class incomes and expenditure results in inconsistency between aggregate demand and aggregate supply: the inflation thus induced is called *cost-push inflation*, but it is clear that the basic element in the situation is here again the rise in total monetary expenditure with output more or less constant.

Thus far we have spoken of inflationary pressure as though it always boils up to the surface in the form of rising prices. Inflation can, however, for a time be contained by governmental or voluntary price control. But the pressure of excess demand will then show itself in the form of queues in the case of essential consumer goods and backlogs of unfulfilled orders in the case of other goods. The inflation is, therefore, said to be suppressed or repressed and will become an open inflation (that is, with rising prices) the moment the restraint on prices is lifted.

Communist Economies Too are Not Free

Lest it be thought that the type of disequilibrium which produces inflation is an ailment that afflicts only economies that are largely or entirely free-enterprise systems wherein decisions to produce or consume are taken independently by a number of free agents and incomes and prices are left to determination by the free play of market forces, we should point out that inflation has been equally the problem of the communist economies in which production, incomes and prices are all centrally controlled and the major economic decisions are taken by the central planning authorities. It is so because these authoritarian economies have been no less subject to the conflicting pulls of Defence, Welfare and Development than are the democratic economies. Further, centralisation of economic decision-making cannot avoid the possibility of the emergence of excess demand, firstly because no central authority can decide in detail how much should be produced by each production unit and how every recipient of income should spend it; and secondly because central planning itself involves a compromise, not always comprehensive or consistent, between the output goals and factor input requirements of the various Ministries or Departments of the totalitarian State. Hence we find from time to time in the communist countries complaints of high prices, shortages and queues, phenomena which are symptomatic of inflation, whatever official price indices might aver, and however great the allocating and directing powers of the central planning authority.

Inflation can, therefore, be seen as occurring in any economy, planned or unplanned, developed or undeveloped, if the total volume of expenditure undertaken exceeds the current supply of goods and services. The existence of this imbalance is the commonsense explanation as well as the practical criterion of an inflationary situation. Hence the expressive popular description of inflation as too much money chasing too few goods.

If the imbalance is of the opposite type, with total attempted expenditure inadequate to absorb the supply of goods and services available at current prices, deflation will set in, with falling prices and declining economic activity.

Britain's National Economic Development Council (N.E.D.C.), at its meeting in London on the 9th inst. under the chairmanship of the Chancellor of the Exchequer, authorised the staff of the National Economic Development Office to examine the implications of stepping up the rate of growth of the British economy to an average of 4 per cent a year between 1961 and 1966 (nearly 22 per cent over the whole period). Sixteen industries are to be approached for factual information on the implications for them of a national growth at this rate. The work will fit in with long-range inquiries already proceeding in the public sector and in certain private industries in Britain. The National Economic Development Office will also examine the general economic implications of this rate of growth as a whole and will study obstacles that have restrained growth. The Director-General of the N.E.D.C. will make a first report on this work before the close of the year.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the prospectus copies whereof are available from the Company's Brokers, Bankers and Underwriters.

A copy of the prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, Madhya Pradesh, for registration. Consent of the Central Government has been obtained to this issue. Industrial licence has been obtained from the Central Government for the establishment of this new industrial undertaking. It must be distinctly understood that in giving the consent to this issue and in granting licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or this scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

The Subscription Lists will open at the commencement of the Banking hours on 24th May, 1962 and will close at the close of the banking hours on 31st May, 1962 or earlier at the discretion of the Directors, but not before the close of banking hours on 26th May, 1962.

ORIENTAL POWER CABLES LIMITED

(INCORPORATED ON 25TH SEPTEMBER 1961 UNDER THE COMPANIES ACT, 1956)

AUTHORISED CAPITAL .. .. .. Rs. 2,00,00,000

Divided into—

(1)	1,00,000 Equity shares of Rs. 100 each	Rs.	1,00,00,000
(2)	50,000 9½% (free of Company's tax but subject to deduction of tax at source) Cumulative Redeemable Preference shares of Rs. 100 each	Rs.	50,00,000
(3)	50,000 Unclassified shares of Rs. 100 each ..	Rs.	50,00,000
		Rs.	2,00,00,000

ISSUED CAPITAL:

(1)	75,000 Equity shares of Rs. 100 each	Rs.	75,00,000
(2)	30,000 9½% (free of Company's tax but subject to deduction of tax at source) Cumulative Redeemable Preference shares of Rs. 100 each	Rs.	30,00,000
		Rs.	1,05,00,000

Out of the issued capital the Directors, promoters, their friends and associates have subscribed to 22,000 Equity shares of Rs. 100 each .. .. Rs. 22,00,000

and

3,000 9½% (free of Company's tax but subject to deduction of tax at source) Preference shares of Rs. 100 each .. Rs. 3,00,000

Rs.	25,00,000	

On the above capital subscribed to, the Company has received Rs. 12.50 nP per share as Application money.

NOW OFFERED FOR PUBLIC SUBSCRIPTION:

53,000 Equity shares of Rs. 100 each .. .. .. Rs. 53,00,000

and

27,000 9½% (free of Company's tax but subject to deduction of tax at source) Preference shares of Rs. 100 each .. .. Rs. 27,00,000

Rs.	**80,00,000**

PAYABLE AS FOLLOWS—

	Equity shares	Preference shares
(a) On application ..	..Rs. 12.50 per share	Rs. 12.50 per share
(b) On allotment ..	..Rs. 12.50 „ „	Rs. 12.50 „ „

The balance of Rs. 75 in such calls as the Directors may from time to time determine provided that no call shall exceed Rs. 25 per share and that there shall be an interval of at least three months between any two calls and between allotment and the first call. The calls on both classes of shares will be made equally and simultaneously.

UNDERWRITING

The entire Present Issue offered to the public for subscription is underwritten as follows:

Underwriters' names and addresses	*Equity shares*	*Preference shares*
	(Rs. in lacs)	
1. The Punjab National Bank Ltd.	16.50	..
2. Government of Rajasthan	5.00	10.00
3. The Investment Corporation of India Ltd., Bombay	10.00	4.00
4. Life Insurance Corporation of India, Bombay..	3.50	10.00
5. The Industrial Finance Corporation of India, New Delhi	5.00	3.00
6. M/s. Devkaran Nanjee & Co., Bombay ..	5.00	..
7. M/s. Associated Machine & Tool Co., Bombay.	3.00	..
8. M/s. P. R. Subramanyam, Bombay	2.50	..
9. M/s. Champaklal Jamnadas, Bombay	2.50	..
	53.00	27.00

In the opinion of the Directors, the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

BOARD OF DIRECTORS

1. SHRI KARAMSHI J. SOMAIYA, 74, Marine Drive, Bombay-1. Industrialist and Businessman.

   Director of—1. The Godavari Sugar Mills Limited. (*Chairman*). 2. Godavari Investment and Finance Corporation Limited. 3. Somaiya Organo-Chemicals Limited, etc.

2. SHRI M. HAYATH, 26th Flat, Kaka Court, Dinsha Wacha Road, Bombay-1. Retired Chairman—Central Water and Power Commission.

   Director of—1. Heavy Electricals India Limited, Bhopal. 2. The National Newsprint and Paper Mills Limited, Nepanagar.

3. SHRI N. DANDEKER, "Southlands", 177, Upper Colaba, Bombay-5. Chartered Accountant.

   Director of—1. The Punjab National Bank Limited, Delhi. 2. Uttar Pradesh Pulp and Paper Mills Limited, Delhi, etc.

OBJECTS OF THE COMPANY

The Company was incorporated on the 25th September, 1961, with the objects mentioned in the Memorandum of Association of this Company. The main objects, *inter alia*, are:

To carry on the business of manufacturing, trading and/or dealing in wires, cables, lines of all kinds, conductors, mains, pipes, flexible cords, polyvinyl chloride, paper or any other insulation and/or covering materials and also of importing and/or exporting the same or any one or more of the aforesaid articles, and to do all acts and things pertaining to, incidental to or associated with the same and in particular to manufacture by any convenient, economical or otherwise acceptable manufacturing process, plant and/or technique, paper insulated cables and plastic coated VIR wires in various insulations of all categories and descriptions and various thickness of common use in commerce, trade and industry and to import, export and deal in every article pertaining to the cable industry or any other industry and in particular to put up a plant for the manufacture of Power cables of every type, description and category.

PROSPECTS

The Company has been formed with the object of manufacturing and selling of electric cables, wires and other electrical goods. The technical collaboration agreement entered into with the Company's Japanese Collaborators covers Paper Insulated Power cables used at any voltage up to thirty-three (33) KV and PVC insulated power cables used at any voltage up to three point three (3.3) KV. The licensed capacity of the Company at present is 600 miles of Paper Insulated Power Cables per year.

Consumption of electric power is one of the important economic criteria for determining economic growth and progress of any nation. Our planners and the Government have, therefore, during successive Plan periods laid great stress on increasing the power generation in India.

The Government's plan is to raise the installed generating capacity from 5.7 million K.W. at the end of the Second Plan to 13.4 million K.W. at the end of the Third Plan period. Even then, the estimated *per capita* generation of electricity in India in 1966 of 95 KWH. will be very low in comparison with the *per capita* generation (in 1958) in advanced countries like the U.S.A. with 4,155 KWH, the U.K. with 1,906 KWH, West Germany with 1,807 KWH and Japan with 875 KWH.

It will thus be seen that the scope for expansion in the consumption of electricity is almost unlimited. The demand for cables, the lifelines through which all the power generation must be transmitted, should therefore increase enormously. The Company proposes to manufacture cables for transmission of power at high tensions. These cables are in very short supply at present in the country and consume much needed foreign exchange.

TECHNICAL COLLABORATION

The Company has concluded an agreement for technical assistance with M/s. Sumitomo Electric Industries Limited, Japan. The collaborators are specialists in this line and one of the leading cable producers in the world. They are one of the 29 associate concerns belonging to the Sumitomo group, which has capital investments of Rs. 162 crores, turnover of approximately Rs. 3,000 crores and employs over 1,50,000 people.

The technical collaboration agreement has been approved by the Government of India and will remain in force for a period of five years. The Company has an option to extend the terms of the Agreement for a further period of five years.

Under the Agreement M/s. Sumitomo Electric Industries Limited, Japan, have agreed to render all technical assistance in consideration of the payment of a Royalty, free of taxes, of ¾ per cent of the invoice value of the products payable for a period of five years from the date of agreement.

In the opinion of the Directors the foreign collaborators have offered very favourable terms.

The Collaboration Agreement with M/s. Sumitomo Electric Industries Limited should prove very beneficial to the Company and the united efforts of this Company and the collaborators should make for the setting up of a Power Cable factory that can turn out products of the finest quality.

LOCATION

The plant is proposed to be located at Kota in the State of Rajasthan. The site offers excellent facilities of a broad-gauge railway junction and availability of power and water facilities. Sufficient land is available to provide for present needs and for future expansion.

The Government of Rajasthan has promised all necessary assistance in respect of all aspects of the project.

GENERAL ADVANTAGES

The following series of factors will in the opinion of the Directors contribute to the scope, efficiency and profitability of the scheme outlined in this prospectus:

1. The very wide gap between available resources of paper insulated power cables and the total capacity envisaged in the Third Five-year Plan. This factor alone would give a very reasonable guarantee of immediate utilisation of production.
2. Under the Collaboration Agreement the foreign collaborators will make available to the Company the best techniques of manufacture, on terms that are in the opinion of the Directors very favourable, for the production of cables of the finest quality and efficiency.
3. The promoters of this project are pioneers in various industrial and technical fields including the sugar industry, chemical industry, the textile industry, the automotive industry, the electrical equipment and instrument industry, etc. The industries which they have promoted have so far produced very encouraging results and lucrative return to the public which has invested therein. The Directors hope that the project contemplated in this announcement will also yield favourable results to the shareholders in particular and to the industry and economy of the country in general.

IMPORT OF MACHINERY AND EQUIPMENT AND FOREIGN EXCHANGE

The Government of India have agreed to the import of plant and machinery under the Third Plan Yen Credit from Japan to India and to the financing of the foreign exchange requirements for the import against the Yen credit.

An application for import licence has been made and is expected to be received shortly.

START OF PRODUCTION

Production in the normal course is expected to commence by December, 1963. The Directors hope that barring unforeseen factors they will be in a position to pay a reasonable dividend on the Equity capital.

CAPITAL REQUIREMENTS

The total capital requirements of the project estimated by the Directors and our Technical Collaborators are a sum of Rs. 250 lacs, which will be financed by the capital issue of Rs. 105 lacs and a medium-term loan of Rs. 85 lacs from the Industrial Finance Corporation of India and the balance of Rs. 60 lacs by loans and/or overdrafts from the Bankers and/or Managing Agents.

The Industrial Finance Corporation of India has already sanctioned a medium-term loan of Rs. 85 lacs on terms which are considered by the Directors as favourable.

MINIMUM SUBSCRIPTION

The minimum subscription out of the present issue on which the Directors will proceed to allotment is shares of the value of Rs. 80 lacs.

INSPECTION OF DOCUMENTS

Copies of prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company during office hours.

APPLICATION FOR SHARES

Application forms duly completed should be lodged together with the amount payable on application before the closing date of the subscription list with the Bankers to the issue or with any of their branches in India.

PROSPECTUS AND APPLICATION FORMS

Copies of the prospectus and application forms may be obtained from the Registered Office or Bombay Office of the Company and from the Bankers, Underwriters and Brokers whose names are mentioned above.

THE HINDUSTAN COMMERCIAL BANK LIMITED

18TH ANNUAL REPORT 1961

DIRECTORS' REPORT TO THE SHAREHOLDERS

GENTLEMEN,

The Directors beg to submit the audited Balance Sheet as at, and Profit and Loss Account for the year ended, 31st December, 1961.

The Net Profit for the year, after providing for all working expenses, depreciation, etc., on furniture, motor cars, etc., and making payment of gratuity to the retiring staff, resulted in a profit of			Rs. 14,04,657.95
to which is to be added a sum of being the amount brought forward from the last year			Rs. 2,211.99
making the total amount available			Rs. 14,06,869.94
out of which has been utilised for making provision or writing off bad debts	(i) Rs.	12,77,957.17	
	(ii) Rs.	26,000.00	
has been utilised for writing off the book value of 200 shares of Northern India Oil Industries Ltd., held in the Bank's Investment portfolio, and	(iii) Rs.	89,650.89	Rs. 13,93,608.06
towards payment of taxes and the balance of is proposed to be carried forward to the next year's account.			Rs. 13,261.88

2. The business of your Bank during the year under report showed satisfactory progress. Both gross and net earnings showed considerable increase. The Directors are also glad to report that your bank has since been up-graded from class C-2 to class B under the All India Industrial Tribunal (Bank Disputes) Award and the Directors expect further improvement in the working of the Bank.

3. According to Article 107 of the Articles of Association of the Bank, two directors, viz., (i) Lala Kishan Narain and (ii) Lala Pannalal Beriwal, retire by rotation from the Board and being eligible, offer themselves for re-appointment.

4. You are requested to appoint Auditors for the current year and to fix their remuneration.

5. The Directors express their gratitude to the Bank's constituents and shareholders for their continued confidence and support.

For and on behalf of the Board of Directors,

PADAMPAT,
Chairman.

NOTES :—

(1) No account has been taken of the present liability in respect of future payments of gratuity to staff and various claims made by employees not acknowledged as debts and under dispute.

(2) The figures of Bank's branches in Pakistan have been incorporated in the Balance Sheet and the Profit and Loss Account at par.

(3) The classification of loans and advances does not take into account the Displaced Persons (Debts Adjustment) Act, which may have an effect on the same.

(4) The liability of the Bank in respect of taxes payable for the year 1948 and onwards in Pakistan and in respect of years from 1956 to 1960 in India has not been assessed.

(5) No provision has been made for depreciation on landed property as the estimated present values of such property, according to the management, are higher than their book value.

(6) The Balance Sheet has been prepared in conformity with Form "A" of the Third Schedule to the Banking Companies Act, 1949.

Notes :— (i) The General Manager, the Deputy General Manager and Inspector of Branches are allowed the use of Bank's Motor Cars free of cost.

(ii) The Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

Under reference to our report of even date.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the Balance Sheet of the Hindustan Commercial Bank Limited as at 31st December, 1961, and also the relevant Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from seven branches audited by us and unaudited returns from other thirty-one branches in India and Pakistan (not visited by us for the purpose of this report) certified by the respective branch managers and amended at the Head Office based on the records of various other branches in Pakistan which were evacuated in the year 1947.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the Office and accounts prepared at the Head Office.

proviso to sub-section (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

The Central Government have, by an order No. I(18)-CLVI/61 dated 15th December, 1961, exempted thirty-one branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961.

We report that—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the branches of the Bank;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns duly amended at the Head Office;

(*e*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts read along with the notes appearing therein give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at the 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE PUNJAB NATIONAL BANK LIMITED

CHAIRMAN, MR. R. N. GOENKA'S SPEECH

BANKS MUST GATHER MORE DEPOSITS AND REGULATE COST OF SERVICE

THE various problems confronting banks were reviewed against the general background of India's economy by Mr. R. N. Goenka, Chairman of the Punjab National Bank Limited, in the course of his speech at the One Hundred and Fifteenth Annual General Meeting of the Bank held at New Delhi on Thursday, 17th May 1962. Mr. Goenka called upon the banks to tackle successfully two important problems if only to be able to play their proper role in the next stage of economic development. In the first place, the banks should raise deposits to a level which would be commensurate with the demand for advances from industry and trade. Secondly, they should regulate the cost of banking service with a view to making profits sufficient to build up their own strength and soundness. Mr. Goenka said that, for securing the required growth of deposits, the combined and concerted efforts of all scheduled banks and the Reserve Bank would be needed. The problem was, he added, to increase the deposits not of this bank or that but of the banking system as a whole.

The following is the full text of Mr. Goenka's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to this 115th annual general meeting of the Bank.

"The report of the Directors for the year ended 31st December 1961, along with the audited balance-sheet of the Bank as at that date and profit and loss account for the year, have been with you for some time.

"You will have observed from the report that your Bank made all-round progress during the year 1961. After making a provision for contingencies and taxation and after providing Rs. 12.28 lakhs to the employees gratuity trust fund, your Bank earned a profit of Rs. 122.63 lakhs during the year 1961, including Rs. 4.23 lakhs brought forward. A sum of Rs. 12.50 lakhs has already been utilised for payment of *ad-interim* dividend of Re. 1 per share, subject to tax, leaving a balance of Rs. 110.13 lakhs for appropriation. Your Directors are fully conscious of the need for strengthening the capital base and have, therefore, besides issuing fresh capital worth Rs. 75 lakhs during the year, stepped up the transfer to reserve fund from Rs. 11 lakhs in 1960 to Rs. 45 lakhs in 1961. A sum of Rs. 37.50 lakhs has been provided for bonus to staff, as against Rs. 27 lakhs last year and Rs. 1 lakh has been provided for charity, leaving a balance of Rs. 26.63 lakhs. The Directors have recommended a final dividend of Re. 1 per share, subject to tax, on old shares as well as *pro rata* dividend on new shares issued during the year, making a total of 20 per cent, subject to tax, which is the same as last year. The balance of Rs. 10.39 lakhs has been carried forward to the next year's account.

General Prosperity

"With the increase in industrial and agricultural production and in business activity and the consequent increase in the business handled by banks, the profits of the banking industry during the year 1961 have shown a general improvement. Your Bank has shared in full in this general prosperity of the industry. It is to this general prosperity that your Bank owes its all-round progress in recent years. By the same token, its progress in the years ahead will depend on the continuance of these progressive trends in the national economy and the ability of the Bank to contribute to such progress and to strengthen its position in the process and for that purpose.

"In this view, and not in mere conformity to convention, I should like to make a few remarks on the background of general economic conditions at present and in what remains of the third Plan period. Let me stress the brighter aspects at the start; the increase in agricultural and industrial production and in national income, despite the fall in the rate of growth, the comparative stability of the price level, in spite of the increase in investment and money supply, and the comfortable food position with a reserve stock of about three million tons of foodgrains and bright prospects for the new crop. The lower rate of growth of industrial production during 1961 at 7 to 8 per cent as compared with about 12 per cent during 1960 need cause no great concern, if it held no threats for the future. But in point of fact, the fall in the growth rate is not a passing phase. It is the result of the shortages of certain raw materials caused by the persistent scarcity of foreign exchange and of certain bottlenecks like the shortages of coal, power and transportation, which call for special and strenuous efforts for their removal.

Export Promotion

"The shortage of foreign exchange really springs from the inability to earn foreign exchange by effecting exports on the requisite scale. An improvement in the balance of payments which results merely from a cut in imports, far from solving our problems, will only aggravate our difficulties. Satisfaction with the results of last year must, therefore, be extremely limited. Nothing will avail as a pretext for slackening the effort to increase the exports of some of our important traditional items such as cotton and jute manufactures, tea, raw cotton and vegetable oils or to gain new markets for the products of our engineering industry. A great deal of export promotion effort will be necessary in the coming years, if we are to attain the target of exports of Rs. 850 crores set for the end of the third Plan. Furthermore, in view of the decision of the United Kingdom to negotiate for the membership of the European Common Market and the possibility of our losing the preferences we have enjoyed so long, the preservation of our capacity to compete in the export markets is of paramount importance.

"Trade is even more important to us than aid. We must seriously investigate the cost structure in our industries so as to ensure a larger flow of exports. It would be not a mere handicap but a humiliation, if exports are found insufficient even for maintenance imports at a time when major capital needs are met by foreign aid. The recommendations of the Ramaswami Mudaliar Committee for giving various incentives to industry and creating a climate for more realistic import-export policy must be taken up for careful implementation.

Transport and Power

"As regards the bottlenecks of transport and power, though we can point to a specific few causes of restricted scope by way of accounting for them, it would be useful to admit that they arise from the lopsided nature of our planned development and certain radical defects in our planning. It should not be forgotten that shortages of power and transport are interlinked—the delays in the transport of coal lead to shortages of power. It is obvious that the railways need a more rapid and thorough overhauling. The investment on railways during the second Plan was mainly intended to provide for the increased demand on the railways in the matter of carrying coal and raw materials for the steel industry. Physical targets for the second Plan in respect of railways have not been fulfilled even to two-thirds of the original targets, and now we are in the second year of the third Plan. In a planning regime, shortfalls in one sphere do not stop there, but lead to a chain of shortfalls in others. There is room for a very high power enquiry in regard to the transport bottleneck in a spirit of mutual helpfulness instead of mutual fault-finding.

"The problems that have to be solved to ensure the smooth and successful working of the third Plan are indeed of an intricate kind. All the resources of foresight, patience, practical sense and devotion to the high aims of planning which the nation can command will have to be brought into play. It may be that only some of them would be solved, while others only partially or not at all. Whatever that may be, we may be sure that the economic development of the country and industrial development in particular will make much larger demands on the banking system and the responsibility of the banks will be increased, not reduced, by the imperfections and uncertainties of the developments of the next few years. To be able to play their proper role in the next stage of economic development in the country, the joint-stock banks in India will have to tackle successfully the problems which are their direct concern, though they may affect the country as a whole. They have, in the first place, to raise deposits to a level which will be commensurate with the demand for advances from industry and trade. Secondly, they have to regulate the cost of banking service, with a view to making profits sufficient to build up their own strength and soundness. These are not problems which can be dealt with by the joint-stock banks by themselves, not to speak of any one bank acting on its own. The weaknesses spring from variety of circumstances, all of which must be attended to if the desired improvement is to be achieved.

Deposits

"For the present, it is a matter of some satisfaction that the downward trend in deposits of scheduled banks witnessed in the second half of 1960 was arrested in 1961. Deposits of all scheduled banks, excluding the State Bank, increased by Rs. 135.06 crores during the year 1961 compared to an increase of only Rs. 71.92 crores in 1960. Deposits of your Bank increased by Rs. 11.20 crores and at the end of 1961 stood at Rs. 150.68 crores. Your Bank experienced an increase in all types of deposits; most of the increase, however, was in fixed and savings deposits where the cost of raising funds is high.

"Although the pace of growth of deposits of the banking industry improved appreciably during the year as compared with the previous year, yet the question of expansion of deposits remains one of the major problems facing the banking industry in this country. The experience of the banking industry during the last decade shows that the rate of growth of advances has been much higher than the growth rate of deposits. The upward revision of interest rates in the inter-bank agreement on interest rates on deposits from March 1961 also contributed to raising the cost of attracting deposits. Unfortunately, for some time past, inter-bank agreement on interest rates has not been working satisfactorily. The disparity in the rates of interest asked for by some banks is not conducive to the healthy growth of the banking system.

Advances

"The average weekly advances of your Bank increased from Rs. 86.59 crores in 1960 to Rs. 101.77 crores in 1961. Due to a high level of production in the seasonal industries, the demand for funds during the busy season of 1960-61 pushed up advances of all scheduled banks to an all-time 'high' of Rs. 1,336.32 crores. With the increase in advances of all scheduled banks during the 1960-61 busy season by Rs. 198.6 crores, the resources of scheduled banks were put to considerable strain. In order to meet the genuine demand for funds from trade and industry, banks had, thus, to borrow heavily from the Reserve Bank had also liquidate their holdings of Government securities. The liberalisation of the Bill Market Scheme of the Reserve Bank of India was helpful in borrowing from the Reserve Bank of India and meeting the legitimate demands of trade and industry. As a result, however, the advance-deposit ratio of all scheduled banks (excluding the State Bank) increased considerably and reached 80.32 per cent during the 1960-61 busy season. Liquidity in certain cases was, thus, impaired. By the end of the year, however, the position improved and advance-deposit ratio came down to 71 per cent. Our advance-deposit ratio remained lower than that of all scheduled banks throughout the year, maintaining high liquidity for our Bank. At the end of the year, our advance-deposit ratio stood at 61.86 per cent.

"Unlike the first two Plan periods, the third might well find the deposit resources of the banks lagging far behind the demand for advances. Though the rate of development of the national economy may be the primary cause of the increase in the demand for advances, the failure of deposits to keep pace with advances and investments is also attributable in a great measure to the large amount of money which, for special reasons of their own, refuse to be channelled into the banking institutions. While investment in real property and certain other forms appreciates in value almost automatically, and in some cases even beyond reason, fixed interest yielding investments gradually depreciate, reducing their comparative attractiveness. This feeling has resulted in the appreciable flow of 'unaccounted' money and other funds into channels other than bank deposits and Government securities, offering better attractions despite greater risks of loss.

Interest Rates

"It is not for me to point out what the Government should do to remove these obstacles. But this problem has to be faced and solved. It might cause embarrassment to the Government, because they are themselves borrowers on a very large scale. But nothing is gained, for the national economy or the banking system, or in the long run the Government's finances, by closing one's eyes to this problem. The Government has to devise some method by which an automatic cover will be provided against depreciation in investment in Government securities; and the banks could follow the lead the Government takes. It is obvious that any such method will lead to an increase in the interest rates which will be duly reflected in cost of credit to industry. An increase in both directions which is properly related will do no great harm and, in this faith, it is worthwhile examining the question in all its aspects, if necessary, through an expert committee.

"While I am on this subject, I may, I think, express my disappointment with the manner and method followed by the Government in initiating compulsory deposit insurance. The problem had not been given sufficient thought, and the result is that deposit insurance has become a drag on the big banks, while, in the case of smaller banks, it has actually cut into their earnings. Deposit insurance on this small scale can hardly be an inducement to people to put money in bank deposits. At the same time, by not charging differential rates of insurance premia on the basis of the interest on deposits offered by individual banks, the system will become iniquitous. Now that the Government has some experience of the working of deposit insurance, a further examination of this issue is both necessary and feasible.

Combined Efforts Wanted

"To return to the problem of securing the required growth of deposit resources of banks, it would clearly require the combined and concerted efforts of all scheduled banks and the Reserve Bank. It would be dangerous to assume, as certain commercial banks do, that a higher and competitive rate of interest will be even a partial solution. In view of the increasing operating expenses of scheduled banks, it would be in the interest of the banking industry of the country that all banks agree not only to continue to pay the same rate of interest on similar deposits but also agree upon a minimum lending rate. The problem is to increase the deposits not of this bank or that, but of the banking system as a whole.

"What is required is to break fresh ground by going to areas not hitherto served by banks and by taking a more realistic view of the financial needs of the different sectors of the economy. This can be done only if each bank strengthens itself with a properly trained staff and an intimate understanding of the conditions and needs of the areas it proposes to serve. Branch banking in India received a serious check and even a setback when the terms and conditions accorded to bank employees put up the cost of running new branches in untried areas. But the task has gained a new urgency at the present stage and neither individual banks nor the nation can afford to be deterred from this task by narrow considerations of immediate costs. We must work in the faith that the effort is worthwhile and the rewards will be many-sided.

"On its practical side, it involves the training of the staff, the intensive study of the local conditions and the raising of the tone of administration by modernisation and mechanisation, where the only alternative is dilatory work and poor service to the clients.

Efficiency of Service

"Your Bank for its part is now taking effective steps to increase the efficiency of the services it offers and is introducing new services in order to attract new customers and fulfil their diverse needs. Better service depends a great deal on how well our staff at all levels is trained and re-trained periodically. In this connection, I might mention that your Bank was the first Bank in India to start its own Staff Training College, which started functioning formally in October 1958. It has by now trained 1,057 clerks and officers, equipping them better to provide more efficient service to its clientele in the changing conditions of our country. In our rapidly changing economy, research on methods of efficient service and working has become an essential requirement. The Economics Department of your Bank, apart from studying the prospects of development of different industries in which the Bank is interested or is likely to become interested, and comparing the relative performance of your institution with the rest of the banking system, is now undertaking various cost studies for different services rendered by the Bank besides exploring the market potential.

"A similarly courageous and farseeing policy is called for in regard to modernisation and mechanisation. Banking practices in the West are never allowed to stagnate, because the banks are not obliged to stint in their outlay on progressive ways of rendering service and no undue consideration has to be given to the volume of employment. Both these causes are somewhat weak in operation in this country. Nevertheless, we have reached a stage when the growth of the banking system is imperative for the progress of the national economy and the banking system cannot grow without an improvement in the standard of the services it renders to the public. It is no service to employment to look askance at mechanisation, because employment is better served by accelerating the growth of the national economy than by putting men to work which only machines can do with the required speed. Your Directors are determined to explore to the fullest extent the scope for improving its service through modernisation and mechanisation."

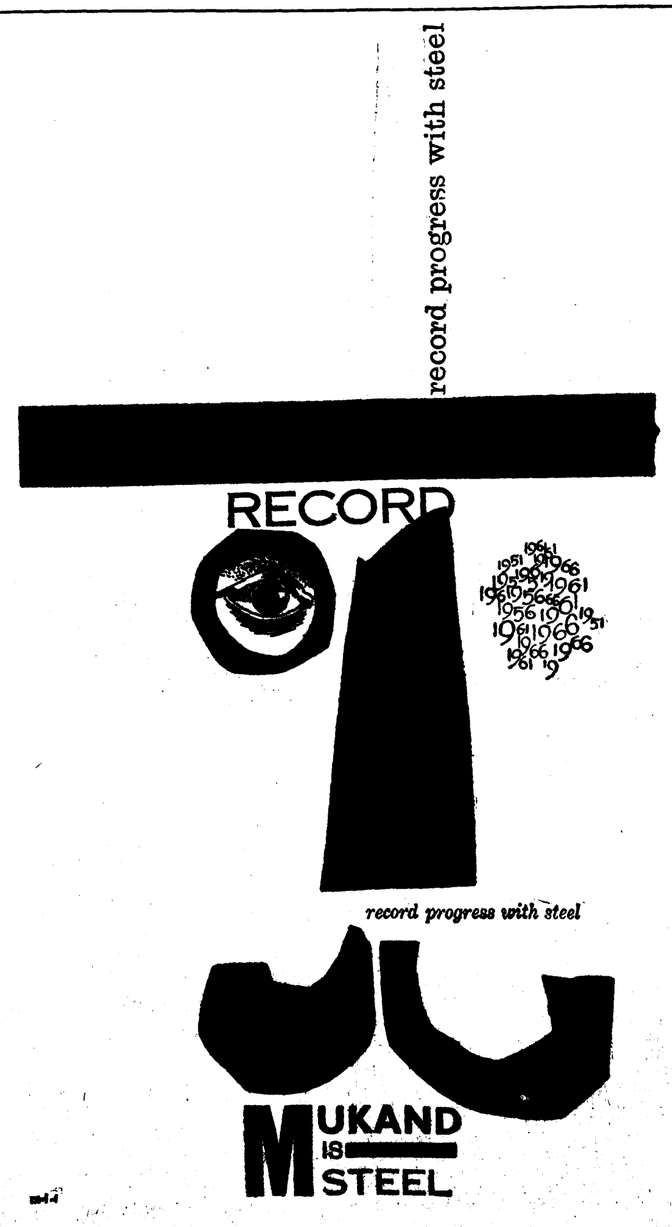
Notice

THE STANDARD COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the members a Dividend on the Ordinary Shares @ 10% per annum for the year ended 31st December 1961, subject to deduction of tax.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, 11th May, 1962.



THE ATUL PRODUCTS LIMITED

USE OF OIL AS INDUSTRIAL FUEL IN GUJARAT

MR. KASTURBHAI LALBHAI WANTS THE ISSUE TO BE FINALISED SOON

STRESSING the need to use oil as an alternative industrial fuel to coal in Gujarat, "if coal were to remain in short supply in the country and particularly so in Gujarat," Mr. Kasturbhai Lalbhai, Chairman of the Atul Products Ltd., urged the State Government, in the course of his speech at the Annual General Meeting of the Company held at Ahmedabad on Saturday, 12th May 1962, to finalise the issue in regard to the availability of oil in sufficient quantity and at equitable price with the Central Government. Mr. Lalbhai's concern over the position of industrial fuels in Gujarat is summed up thus: "... if things are going to take such a turn that a particular area or a particular industry in Gujarat will more or less be forced to use either coal, oil, gas or crude, then that situation will raise a number of problems connected with distribution and prices of those products." He fears that, unless these problems are solved at an early date, the economic future of Gujarat would be jeopardised and the State would lag behind others in economic progress.

The following is the full text of Mr. Lalbhai's speech:

"GENTLEMEN,

"The Directors' report, the statement of accounts and other papers relating to the working of the Company during the year 1961 have been circulated to you for some time. If you will, therefore, kindly agree, we will take them as read for the purpose of this meeting.

"It will be seen from the accounts, that the Company has made the profit of Rs. 1,39,11,000 and this figure includes Rs. 18,06,074 (net) as dividends received from other companies and Rs. 7,31,550 as refund of income-tax. Provision for Rs. 22,18,075 has been made for depreciation; Rs. 7,20,488 for Managing Agents' remuneration and Rs. 38,50,000 for taxation; also other suitable appropriations have been made as shown in the report. This leaves a sum of Rs. 26,99,650 to be utilised for paying dividend, at the rate of 12 per cent per annum, subject to deduction of tax, on the equity shares of the Company. I hope you will be satisfied with the working of the Company and the results for the year.

Handicaps

"The profits for the year 1961 are smaller than those for the previous year. This has been due to the fact that the Company had not been able to make full use of its plants on account of shortages of coal and raw materials. Had we been able to keep to our production programme as planned, the Company would have been able to produce approximately Rs. 50 lakh worth of more goods. It will also be seen from the accounts that the expenditure on various items has gone up during the year 1961. Considering these factors, the Company has done at least as well as in the previous year.

"I am afraid that inadequacy of coal and raw materials will continue to be a problem for us for some time to come. In the past, we suffered both from inadequacy of coal quotas and incomplete deliveries of coal under these quotas. Recently, these quotas have been cut down still further. It is needless to say that production is bound to get affected more adversely. However, when the recent cut in coal quota was introduced, the Government gave an assurance that this reduced quotas will be fulfilled. I hope the Government will so plan the production of coal and supply of wagons that it will be able to keep up to this assurance. Otherwise, the shortfall in our production will be more than that of the year 1961.

"I had referred to this problem last year also and had mentioned that, if coal was to remain in short supply in the country and particularly so in Gujarat, then the Gujarat State Government should see that oil was made available for fuel to the industries in Gujarat in sufficient quantities and at equitable prices. I am sorry to say that this does not seem to have been done. It is true that from time to time various ministers have been advising industrialists to change over to oil from coal. This, however, in my opinion, is likely to create a greater muddle than at present, unless a timely clarification has been made regarding the prices and supplies of oil. It should be realised that excepting Lancashire type of boilers, coal-fired boilers cannot easily be converted into oil-fired boilers and certainly not without great cost. Again, if it were to so happen that some area has to make use of gas or crude oil or does not get supplies of the proper quality of oil and has therefore to reconvert the boilers to the new conditions, the difficulties will be further intensified. I mention this because one hears reports that some oil wells are such that they can give only gas, whereas others can produce only crude oil and that the crude oil has to be used as such; also some wells are completely dry. There are also reports that plans are being made to supply both gas and crude oil to the public for fuel. I do not know to what extent reliance should be placed on these reports. However, if things are going to take such a turn that a particular area or a particular industry in Gujarat will more or less be forced to use either coal, oil, gas or crude, then that situation will raise a number of problems connected with distribution and prices of those products. It is my earnest request to the Gujarat State Government that it take up all these related problems seriously and at an early date. Otherwise, Gujarat will find it difficult to maintain the existing industries and develop new ones. I know that in this, much will depend on the views of the Central Government because the final decision is in their hands. But the Gujarat State Government should impress the Central Government that unless these problems are solved at an early date, the economic future of Gujarat will be jeopardised, and Gujarat will lag behind others in economic progress.

Raw Materials

"Regarding insufficiency of raw material, I may mention that unfortunately a substantial part of the raw materials that we use in our factory are imported materials and are, therefore, affected by the country's precarious position in regard to foreign exchange. There was a cut last year in the import licences granted to us; there is a further cut this year. We have partly met this situation by importing our requirements of raw material from those countries which accept payment in rupees. We are also making use of the export promotion licences. However, this has its own problems. We do not have the choice of quality nor do we get the range in the materials we would like to have. Besides, the prices of these materials have been going up and deliveries scheduled are not always adhered to. Therefore, the net result is that our cost of production goes up, yet we do not have a choice in the goods we would like to produce. I am afraid this situation will continue, until we are able to produce raw materials ourselves in the best manner possible.

Intermediates

"You will be glad to know that we have already started production of four intermediates for use in the manufacture of our Azo dyes and this relieves us of our troubles to a large extent in respect of nine Azo dyes which we manufacture in large quantities. We have not been able to progress fast in respect of the plants which we wish to set up for the manufacture of other 22 intermediates which we still have to import for these dyes. Anyhow, we have now placed orders for the steel structure required for the building of the plant to be set up for this purpose and are also in a position to place orders soon for the equipment thereof. I believe that the plant will be ready by 1964. This will make us more or less self-sufficient in the matter of imported raw materials required for Azo dyes. We have been manufacturing one important raw material needed in the manufacture of napthol dyes. A plant for another more important intermediate required for the manufacture of these dyes is being installed and would be commissioned about the end of this year. This will make us largely self-sufficient in raw materials for the production of napthol dyes also. I have made the use of the word 'largely' for the reason that no factory can afford to manufacture every large and small product, it imports. But I can say that, when the abovementioned schemes are completed, we will be manufacturing nearly 80 per cent of the value of goods we are importing at present.

"We have adopted a similar policy regarding the imported materials required for the production of pharmaceuticals. We are already manufacturing such materials for the manufacture of vioform. Materials required for sulfa drugs will be manufactured in the Cibatul plant. I am sorry the progress of this plant has been rather slow. But now the engineering designs are completed, and we are ready for placing orders for the equipment. All the same, as I mentioned before, these schemes will not be completed before the end of the year 1964, and to that extent we will continue to suffer the difficulties that we have at present. However, I do not think, we will be any worse off than at present, during this period.

Unexpected Gluts

"One can understand and appreciate the difficulties that the Government has in the matter of foreign exchange, but it is difficult to understand and appreciate some aspects of the present policy of our Government regarding the import of dyes. There are nearly half a dozen major manufacturers of dyes in the country and between them they are able to meet nearly 90 per cent of the requirements of the country's demand for vat dyes, napthols, bases, Azo dyes, sulfar black and their derivatives. These major manufacturers are also engaged in investing further large sums for setting up the plants for manufacturing intermediates they need. On a rough estimate, the total investment in the dye industry by the year 1964 would reach a figure of nearly Rs. 25 crores. Yet, consciously or unconsciously, the Government is creating most chaotic conditions in the market for dyes. In theory, there is a belief that this industry requires no immediate direct protection recommended by the Tariff Commission, because it enjoys a sheltered market on account of the stoppage of imports. But in reality, it is not so. Some big users have a privileged position and are able to get import licences for dyes which they could easily buy in the country. A number of small user associations also get similar import licences. The State Trading Corporation imports and sells any dyes it likes, including the items which are banned for import. Worst of all, dyes are imported from the barter deal countries. The consequences are that there are unexpected gluts in the market of different qualities of dyes on several occasions with the resultant adverse effects on the prices for dyes and also on the programmes for manufacture and sales by the indigenous manufacturers. Everyone will agree that it is essential for the Government to adopt a definite policy regarding imports in the larger interest of the country and, however inconvenient such a policy may be to the industry, it must adjust itself to it. However, there should be some definiteness about such a policy, and there should be no unaccountable departure from it. In the absence of such a definiteness, the industry will not be able to get the maximum advantage out of the investments it has made. This is neither good for the country nor for the industry. I, therefore, earnestly hope that the Government will pay serious attention to this matter.

"We have been granted a licence under the D. R. Act for the manufacture of certain chlorinated products to utilise the chlorine we will get from the caustic soda plant. Cibatul will start with the manufacture of urea formaldehyde plastic and will then expand up to the manufacture of related products. The idea is that we should, on the whole, so diversify and co-ordinate the production of our Company and the other associate companies working at Atul that we have a broad-based chemical complex and we will not have too large a dependence on any one group of product. All our expansion have been done with this view, which I hope will have your approval."

SHREENIWAS COTTON MILLS LIMITED

HIGHER DUTY ON MERCERISED GOODS WILL HIT PRODUCTION

CHAIRMAN, MR. G. C. BANGUR'S SPEECH

THE fear that the steep increase in the levy on mercerised cloth proposed in the latest Central Budget might lead to a curtailment of production of this type of cloth was expressed by Mr. G. C. Bangur, Chairman of the Shreeniwas Cotton Mills Ltd., in his speech at the Twenty-seventh Annual Meeting of the shareholders of the Company held at Bombay on Wednesday, 9th May 1962. Mr. Bangur pointed out that mercerised cloth could not be classified as a luxury and hoped that the representation made by the industry for tax relief would bear fruit. Mr. Bangur reviewed the modernisation and renovation programme of the Company and disclosed that the modernisation of spinning section had been completed, while a beginning had just been made in the weaving section. The following is the full text of Mr. Bangur's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the twenty-seventh annual meeting of the Company. The audited balance-sheet and accounts, together with Directors' report have been in your hands for some time and I propose to take the same as read with your consent.

Modernisation and Renovation

"I need hardly stress the vital importance of the programme of modernisation and renovation to enable the textile industry to function smoothly on the basis of the latest technological and scientific developments taking place throughout the world. Your management has been quite alive to the need of keeping a progressive outlook and have spared no efforts in the past few years in this direction. It would be interesting, in this connection, to indicate that the investment of your company on modernisation during the period from 1953 to 1961 has been of the order of Rs. 2 crores.

"I may mention that the spinning department of your mills has been completely modernised and we have at present no ring frames which are older than the year 1955. Similarly, additional modern combing equipment has been installed which now enable the Company to comb the entire yarn production. The spinning and weaving departments are now completely equipped with latest humidification and ventilation plant. Apart from these basic needs in the line of production, the processing department has also been thoroughly reorganised with modern machines and equipment. It will be appreciated that this big programme of modernisation was undertaken against heavy odds and difficulties in obtaining new plant and machinery, both of foreign and Indian origin.

"Your Company will continue to need additional resources for the modernisation of its weaving section for which a beginning has been made by planning the installation of 96 automatic looms for improving the quality of weaving. The programme of substantial renovation carried out by the Company has resulted in diversification of its production by progressively increasing the proportion of finer varieties to suit the changed pattern of demand of the consumers. Your mills have thus been able to eliminate the production of grey cloth and the entire production is now processed in dyed, bleached, mercerised and printed forms.

Heavy Tax Burden

"I would like to draw the attention of the Government to the adverse repercussions of the additional heavy burden that has been imposed during the last Budget. I would specially like to point out that the steep increase in the levy on mercerising from 3 nP to 25 nP per sq. metre is really prohibitive and unless some substantial relief will be forthcoming, I am afraid the present trend of progressive increase of production of mercerised varieties may be reversed. It should be recognised that mercerising is not a specialised process which could be classified as luxury and it is hoped that the representations made by the industry to revise the levy to a more reasonable level will receive favourable response from the Government.

"As regards exports, I may mention that we have been able to push our finer and printed goods in the foreign markets against the traditional varieties of grey and medium cloth. Since January 1962 till date we have been able to export goods worth Rs. 16 lakhs, with further orders on hand amounting to Rs. 9 lakhs and our efforts in this direction are continuing. It would have given the much needed fillip to the export trade had the recommendations of the Mudaliar Committee been fully implemented in the matter of giving exemption in income-tax on export earnings.

"The management has been continuously trying to gradually bring about rationalisation without causing much dislocation to the general employment of workers. I would, however, like to mention that, in spite of the agreement with the representative labour union, it has still not been possible to implement the four-loom-per-weaver system. Our negotiations for implementing this major scheme of rationalisation are still proceeding and I hope the labour will co-operate in implementing the same at an early date which will be beneficial from all points of view.

"The working of your subsidiary company, Shree Madhusudan Mills Ltd., continues to make progress. Efforts are being made to modernise its machinery and equipment as far as possible with our own resources. Orders for additional new machinery will be placed as soon as the loan application is approved by the N.I.D.C. The Company has paid the arrears of dividend on its preference shares for four years ending 31st March 1953 and it is expected that they will be able to pay off the remaining arrears in few years' time.

"The small unit at Kota, which is your another subsidiary company, was completely renovated and modernised with 12,000 new spindles and the normal working of this renovated unit was obtained from November last year. Since then this unit continues to work satisfactorily.

"The Company has received sanction for installation of additional 6,000 spindles from the Central Government and the orders are being placed for the necessary ring frames. After installation of the spindles the working cost will further reduce and still better results can be expected.

Raw Cotton Position

"The cotton supply position this year really continues to be a matter of serious concern to the industry. I am glad that the Government is fully alive to the needs of the industry and active negotiations are going on with U.S.A. and other countries for import of adequate quantities of additional cotton supplies. It is to be seen how far the recent increase announced in the ceiling prices of cotton will lead to substantial increase in the cotton crop. Our yield per acre is really very low and utmost efforts should be made by all possible means to bring about substantial increase in yield which alone could satisfactorily solve our problems of this important raw material for the industry.

"I would, in the end, like to put on record my appreciation of the valuable contribution made by the workers and the members of staff of the Company in showing satisfactory results."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

EXPORTS MOVE UP AT SLOW PACE

COTTON TEXTILES AND MANGANESE ORE, HOWEVER, SUFFER SETBACK

DURING the twelve months ended March 1962, which roughly coincides with the first year of the third Plan, total exports (including re-exports) aggregated Rs. 665 crores, representing an increase of just Rs. 23 crores or 3.6 per cent over 1960-61. Imports, during the same period, fell by Rs. 105 crores to Rs. 1,002 crores, thanks to the persistently restrictive import policy pursued by the Government. As a result of the fall in imports and the rise in exports, the adverse balance of trade narrowed down from Rs. 465 crores to Rs. 336 crores. There is, however, no room for complacency. For the excess of imports over exports even in the neighbourhood of Rs. 350 crores is pretty large, representing well over 50 per cent of exports and more than three times the existing external assets (at Rs. 111 crores) of India. If anything, the foreign exchange situation continues to cause concern. From about Rs. 136 crores in the beginning of April 1961, India's sterling balances have come down to as low a level as Rs. 111 crores at present, despite the loan of about Rs. 120 crores made available by the International Monetary Fund last year. Viewed against this background, the slow growth of exports during the first year of the third Plan is disappointing. The Planning Commission, it will be recalled, has set a target of as much as Rs. 740-760 crores per annum for the third Plan period, as against the annual average of only Rs. 614 crores in the second Plan and Rs. 609 crores in the first Plan. So long as the cost of production in the country continues to be high and non-competitive, the prospect of fulfilling the export target will remain bleak.

Although aggregate trade figures are available upto March 1962, it will take a couple of months more for detailed commodity-wise and country-wise data to be released for the whole period. It is proposed, therefore, to examine here the recent trends in India's foreign trade, on the basis of provisional data relating to the calendar year 1961, made available by the Department of Commercial Intelligence and Statistics, Calcutta. The group-wise and commodity-wise trend in major items of export is shown in Table I. During the calendar year 1961, exports (including re-exports) were higher by Rs. 31 crores at Rs. 665 crores, as compared with 1960. The individual commodities, however, showed a mixed trend. There was an increase in both quantity and value in tea, coffee, tobacco, iron ore, sugar, etc. In the case of such products as oilcakes, spices, hides and skins while the quantity exported was larger, the value realised showed a decline. Again, in respect of certain commodities like cotton textiles, manganese ore, vegetable oils, mica and lac, there was a fall in both quantity and value.

Traditional Items

The modest nature of the increase in the aggregate exports apart, it is disconcerting to find that some of India's traditional export items, particularly cotton textiles, manganese ore and vegetable oils should have suffered marked setbacks. This loss was, however, more than made good by marginal increases over a wide range of items led by jute goods, tea and raw cotton. For the second year in succession, jute goods maintained its position as the largest foreign exchange earner, displacing tea. The total shipments of jute goods touched Rs. 146 crores in 1961, or an increase of about Rs. 4 crores over the previous year. This increase, as is well known, was the result of boom in raw jute prices induced by the extremely small crop in 1959-60 and 1960-61, and not the result of any increase in quantity. It is to be noted here that, owing to larger crop in 1961-62, raw jute prices came down by the end of 1961. The buoyancy in jute goods was only a passing phase.

Although tea could not hold its position in the forefront, the value of its export nevertheless showed a small rise of over Rs. 4 crores to Rs. 124 crores, owing mainly to the recovery in production in 1961, from the previous year's setback. But this was still lower by about Rs. 2 crores, as compared with 1959. In spite of severe competition from Brazil and East Africa, Indian coffee fared better, with its export earnings rising by about 50 per cent to Rs. 9.5 crores. Larger export, it may be noted, was sustained by unusually higher domestic output. Raw cotton was another commodity, the export of which made handsome gains over the previous year. The main reason for the increase in the export of cotton was the larger quota for Bengal *Deshi* allotted by the Government, following a fairly better crop in the 1960-61 season. There was a perceptible increase in the export of iron ore and concentrates, owing mainly to larger shipments under the long-term contracts entered into by the State Trading Corporation with Japan and other countries. Shipments of iron and steel maintained their upward trend, export earnings having gone up by about Rs. 4 crores to about Rs. 12 crores. Several other manufactures that have only recently entered the export trade fared better, although generally the increases were only marginal. The export of chemicals went up by over a crore of rupees to Rs. 8 crores, paper and paperboards by about Rs. 21 lakhs to Rs. 81 lakhs and rubber manufactures by Rs. 2 lakhs to Rs. 40 lakhs. Among light engineering goods, the export of bicycles and spare parts rose by Rs. 9 lakhs to Rs. 17 lakhs and sewing machines by just a lakh of rupees to Rs. 44 lakhs.

In contrast, the performance of a wide range of some of India's traditional exports was discouraging, as already mentioned. The shipments of cotton yarn and fabrics moved down by over Rs. 3 crores to Rs. 55 crores, as a result of growing competition in world markets, particularly from Japan and Hong Kong, and also the high domestic cost of production. The export earnings from manganese ore also declined by Rs. 4 crores, due to high cost of production, increasing competition from Brazil and poor demand. Mica, too, encountered increasing competition from Brazil. There was a sharp decline in shipments of vegetable oils, since the domestic prices were substantially higher than world market prices, thanks to the failure of domestic production of oilseeds to match the sizable increase in demand from indigenous sources for industrial and edible purposes. Among the other items which suffered a setback, mention may be made of petroleum products, coal, machinery and equipments, electric ceiling fans, metal manufactures, hides and skins, oilseeds and oil kernels and footwear.

TABLE I—*Exports (Including Re-exports)*

(Value in rupees lakhs)

	1961	1960	1959
Food Materials	217,03	196,07	193,61
Of which :			
Tea	124,45	119,99	126,39
Coffee	9,50	6,70	6,25
Fruits and vegetables	26,50	24,60	21,01
including cashew kernels	16,54	18,38	15,18
Oilseed cakes, etc.	16,78	16,53	19,46
Pepper and other spices	16,23	17,84	10,19
Tobacco	15,86	15,75	13,85
Of which :			
Tobacco unmanufactured	14,80	14,63	12,85
Tobacco manufactured	1,06	1,11	1,00
Manufactured goods (except chemicals and machinery, etc.)	274,24	255,68	240,10
Of which :			
Textile yarns and fabrics	228,55	213,76	201,45
including, Cotton yarn and fabrics	55,12	58,43	61,56
Jute manufactures	146,00	141,92	110,75
Iron and steel	11,78	8,11	2,05
Glass and glassware	23	27	25
Lime, cement and fabricated building materials, etc.	1,18	93	1,18
Leather	25,99	25,62	28,65
Rubber manufactures	40	38	25
Paper and paperboard	81	60	72
Metal manufactures	2,19	2,26	190
Crude (Raw) materials	118,32	111,13	116,05
Of which :			
Raw cotton	18,69	10,75	16,37
Silk	49	37	28
Hides and skins	8,10	10,14	10,70
Wool and other animal hair	9,25	8,67	12,23
Jute, including cuttings and waste	5	27	3,11
Mica	9,76	9,81	10,31
Wood, lumber and cork	2,68	2,42	2,14
Oilseeds, nuts and oil kernels	4,39	4,37	2,62
Iron ore and concentrates	18,06	16,13	12,93
Iron and steel scrap	6,75	5,82	4,61
Manganese ore and concentrates	11,15	15,39	12,74
Mineral Fuels	5,87	8,73	7,79
Of which :			
Petroleum products	3,42	4,61	3,04
Coal	2,45	4,11	4,76
Animal and Vegetable Oils	6,76	11,07	14,77
Of which :			
Vegetable oils	4,92	9,01	13,85
including, Groundnut oil	25	25	5,74
Castor oil	3,83	8,85	4,92
Linseed oil	7	1,00	2,66
Chemicals	8,01	6,97	4,98
Of which :			
Organic chemicals	93	78	55
Inorganic chemicals	21	15	18
Essential oils	4,76	3,81	2,18
Pigments, paints, varnishes	19	29	26
Medicinal and pharmaceuticals	96	1,03	83
Machinery and Transport	4,58	9,60	4,15
Of which :

Country-wise Exports

Table II on this page shows the pattern of country-wise exports in 1961, as compared with the previous two years. A notable feature of country-wise exports in 1961 is the sharp decline in the shipments to the U.K., which is India's major overseas market. This was, however, made good by marked increases in exports to the other major trading partners, namely, the U.S., West Germany, Canada, Russia and Japan While there was a decline in exports to the E.F.T.A., by as much as Rs. 10 crores, the Common Market countries' offtake rose by Rs. 7 crores to Rs. 56 crores. The increase in Common Market purchases might be due partly to higher prices secured for jute goods. This, however, is no less significant for that matter, considering that the total Common Market imports from developing countries was lower by 2 per cent in 1961.

India's exports to Russia and other Communist countries also showed a perceptible improvement. Except Egypt, most of the important African group of countries bought more from India in 1961 than in 1960. A distressing feature, however, is India's inability to expand its exports to Oceania and several Asian countries. Despite the absence of import restrictions in Australia, India's exports to that market fell considerably. Shipments to many Asian countries also were lower, particularly to Ceylon, Burma, Afghanistan, Saudi Arabia, Philippines, Iraq, Bahrein, South Vietnam and Communist China. This trend was, however, not uniform. For there was a notable increase in exports to some other Asian countries, particularly Japan, Malaya, Singapore, Indonesia, Thailand, Hong Kong and Iran. Still, India's export trade with the E.C.A.F.E. countries, on the whole, continues to be at a modest level. There is thus urgent need for paying greater attention to the neighbouring markets.

SALES AND PROFIT OF AMAR DYE LOWER

DIVERSIFICATION PLANS BEING IMPLEMENTED

CHANGES in Governments' policy for the import of naphthols and fast bases and the abolition of tariff values on these products have adversely affected the sales and profit of Amar Dye-Chem Ltd. (Managing Agents: Messrs. Amritlal and Company Private Ltd., Bombay) for the year ended 31st December, 1961. Although the turnover of the Company's products has declined only moderately by Rs. 5.75 lakhs to Rs. 170.40 lakhs, it was an uphill task for the Company to reach even this figure in view of the stiff competition from the imported varieties. Further, following the heavy reduction in import duties on account of the abolition of the tariff value on goods of foreign manufacture, prices of some of the items had to be reduced to meet competition. All this brought about a shrinkage in the profit-margin (ratio of gross profit to sale) from 38.5 per cent during 1960 to 37.6 per cent during the year under review. Consequently, the gross profit has gone down from Rs. 67.72 lakhs to Rs. 64.08 lakhs. Side by side with this decline, provisions for depreciation and taxation have shown a rise from Rs. 7.87 lakhs to Rs. 8.66 lakhs and Rs. 21.00 lakhs to Rs. 22.40 lakhs, respectively, and even though the provision for Managing Agents' commission has declined by Rs. 1.27 lakh to Rs. 4.34 lakhs, the net profit has shed a few points more than the gross profit in falling from Rs. 33.24 lakhs to Rs. 28.68 lakhs.

Notwithstanding the reduction in profit, the Directors have continued their policy of ploughing a large portion of the available profit back into the business and, accordingly, a sum of Rs. 20.42 lakhs (Rs. 35.68 lakhs) has been credited to various reserves. The balance remaining being inadequate to accommodate an ordinary dividend at the previous year's level, after paying the preferred dividend in respect of the year, the Directors have had to declare a lower dividend of 9 per cent subject to deduction of tax, absorbing Rs. 7.35 lakhs, as against 12 per cent subject to tax for 1960, leaving Rs. 0.35 lakh as a carry forward as against Rs. 0.18 lakh brought in.

The results of operation of the Company during the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December

* Subject to deduction of tax. † Dividend for five years.

It will be observed that the improvement in sale proceeds achieved by the Company during 1960 over the preceding year has not only been completely lost during 1961, but the turnover has actually slipped below the 1959 level. Secondly, the value of closing stock of finished goods and work-in-progress has nearly doubled, thereby providing a testimony to the difficult trading conditions experienced by the Company during 1961. Now that the Government has reversed its policy and put stricter restrictions on the import of naphthols and fast bases even by established importers it would not be too optimistic to presume that the results for the current year would be substantially better. Another factor that stands out is the consistent fall in the net profit from Rs. 37.87 lakhs in 1959 to Rs. 28.68 lakhs in 1961. This was, of course, due to more than doubling of the provision for taxation from Rs. 11.00 lakhs to Rs. 22.40 lakhs. It is of interest to note that despite the year-to-year decline in the net profit the re-tax profit for 1961 is higher by Rs. 2.21 lakhs than the 1959 figure notwithstanding a lower total turnover.

Following the issue, during 1961, of 10,000 equity shares of Rs. 100 each at par, the share capital of the Company as at 31st December, 1961, has increased to Rs. 109.96 lakhs of which Rs. 20.00 lakhs are in 6 per cent tax-free cumulative redeemable preference shares and the balance in equities. This is backed by Rs. 76.50 lakhs in reserves and surplus. Secured and unsecured loans amount to Rs. 19.34 lakhs in addition to current liabilities of Rs. 91.77 lakhs. The total of these two is more than fully covered by current assets, investment, loans and advances altogether aggregating Rs. 199.97 lakhs. Additions and adjustments to fixed assets during the year have amounted to Rs. 31.70 lakhs over and above Rs. 18.95 lakhs during the preceding year and this has raised the value of the gross block to Rs. 134.47 lakhs. On deducting therefrom Rs. 36.87 lakhs as the depreciation earned to-date, the net block works out to Rs. 97.67 lakhs.

The various expansion and diversification schemes undertaken by the Company during the past couple of years made good progress during the year under review. Some of the equipment for the BON acid plant has already arrived while the balance is expected to be delivered by the third quarter of 1962. The plant is likely to go into production by the end of the current year. As regards other projects, the Directors' report says as follows:

"As reported, last year, a two-storeyed building connecting the Naphthol Plant and the Fast Base Plant was completed. The Drying and Blending Units are being shifted to this new building. This would afford facilities for working.

"*Separate plants* for Fast Red B Base and Fast Red GL Base are installed and put into commission. The scheme of putting up separate plants for Fast Scarlet G Base and Fast Red TR Base is on hand. When all these separate units are completed, there would be ample plant facilities in operation and the Company would be in a position to show better results, provided of course raw materials become available in sufficient quantities.

"*T.P.M. Dyes:* The building for manufacture of Basic and Acid Dyes of T.P.M. series is under construction. A considerable time was lost in getting the import licence for equipments, although necessary foreign exchange loan was arranged from I.C.I.C.I. Equipments are now being ordered and it is expected that the plant will be ready by the beginning of the next year.

"The Company is proceeding with its plans for the manufacture of intermediates for dyes for which it has been granted a licence. The agreement for technical know-how for the first phase of the programme has been finalised with Messrs. A.C.N.A. of Montecattini and approved by the Government of India. Arrangements for second phase are under negotiations. Application for import licence for equipments has been made and it is expected that the same would be issued shortly.

"As reported last year, the Directors decided to take the *Beta Naphthol* project on hand. Arrangements for the technical know-how for the manufacture of Beta Naphthol project are finalised with Messrs. A.C.N.A. of Montecattini, Italy, and the Company is busy working on details. The agreement for technical collaboration has been submitted to the Government of India and your Directors hope to receive approval to the same shortly.

"Building for the plant for pigments is under construction and the plant is expected to be ready by the end of the current year. Building for the plant for reactive dyes is under construction. Applications have been made for getting several patents registered under the Patents and Designs Act. The Company is likely to commence production of a few items thereof next year, i.e. in 1963."

The present market quotation for the Rs. 100 fully paid ordinary shares is Rs. 336.25 *cum-div.* The net yield on an *ex-div.* basis works out to about 2 per cent.

MAHENDRA ELECTRICALS LIMITED

The Directors of the Mahendra Electricals Ltd. (Managing Agents: Messrs. Jashbhai C. Patel and Co., Nadiad) state in their first report covering the period ended 31st March 1962, that the Company's plant is expected to be ready for operation during the third quarter of the current year. Its erection has already commenced under the guidance of an expert deputed by the Company's technical collaborators, Messrs. Johnson and Phillips Ltd., London. The construction of buildings is nearing completion. The major portion of plant and machinery is now either at site or under clearance and the balance of the imported machinery will be shipped shortly. The indigenous machinery yet to be received is being despatched. The necessary power for a two-shift working of the plant and continuous operation of some of the machines has been sanctioned by the Gujarat Electricity Board. It will be recalled that the Company had issued 60,000 equity shares of Rs. 100 each, of which 13,333 were reserved for allotment to the foreign collaborators, and, out of these, 11,250 shares have been allotted. The public issue was subscribed in full.

CENTURY EARNS MORE

TAXATION ABSORBS 91 PER CENT OF THE INCREASE IN PROFIT

DURING another successful year, which ended on 31st December 1961, the Century Spinning and Manufacturing Company Ltd. [Managing Agents: Messrs. Birla Gwalior (Private) Ltd., Gwalior] has been able to raise for the fifth year in succession, its gross sale and profit to new high levels. Sale proceeds have registered an increase of Rs. 293.80 lakhs to Rs. 16,39.66 lakhs. Contributions to this improvement in turnover have come proportionately from both the cotton textile and the rayon section; gross sales of the former have increased from Rs. 885.38 lakhs to Rs. 10,56.40 lakhs and of the latter from Rs. 460.48 lakhs to Rs. 583.26 lakhs. It will be noted that the cotton textile section still accounts for the bulk of the turnover, a little over 64 per cent to be more clear. The profit-margin of each section is not shown separately. Taking the total of both, it is seen that, fortunately, the expansion in expenses, including excise duty, has not kept pace with that in the turnover, so that there has been a further widening of the profit-margin, as witness the rise in gross profit from Rs. 285.54 lakhs during 1960 to Rs. 387.57 lakhs during the year under review, or by as much as 32 per cent. The major portion of this improvement has, however, been absorbed by essential provisions which aggregate Rs. 236.19 lakhs, an increase of Rs. 91.97 lakhs over the year. Of this total, Rs. 14.54 lakhs (Rs. 9.89 lakhs) have gone to the provision for Managing Agents' commission, Rs. 86.15 lakhs (Rs. 91.33 lakhs) for depreciation and Rs. 135.50 lakhs (Rs. 43.00 lakhs) for taxation. The increase in the provision for taxation alone is no less than Rs. 92.50 lakhs which is equal to 90.6 per cent of the rise in gross profit. As a result, the net profit has improved only a little, that is, by some Rs. 10 lakhs or a mere seven per cent to Rs. 151.38 lakhs.

Out of this profit, the Directors have already appropriated a sum of Rs. 24.47 lakhs for the payment of an interim dividend of 12 per cent, subject to deduction of tax, on 2,04 lakh old equity shares. From the balance that now remains, including Rs. 6.45 lakhs withdrawn from past provisions and Rs. 2.32 lakhs brought forward from the previous year, Rs. 73.63 lakhs, or nearly half, have been transferred to various reserves. This is a highly commendable action, reflecting as it does the managements' anxiety to ensure progressive growth in the Company's activities. The preferred dividend absorbs Rs. 10.71 lakhs. While the rate of final equity dividend has been lowered to 18 per cent. from 20 per cent previously, both subject to deduction of tax, it has become payable on a larger number of shares, thanks to the issue of bonus shares, in the ratio of one for four. But the total dividend rate is the same as that for 1960, namely, 30 per cent, subject to deduction of tax, as the interim dividend was higher. On the whole, the equity dividend takes up Rs. 9.18 lakhs more than last year.

The rapid progress achieved by the Company during the past four years is clearly brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales (gross)	16,39.66	13,45.86	12,11.33	10,60.99

* Subject to deduction of tax.

In recent years the Company has been adding to its paid-up capital. Thus, in 1960, it offered right shares in the proportion of two for three at a premium of Rs. 20 per share, raising the paid-up capital to Rs. 328.91 lakhs. A year

(*Continued on page 919*)

G.K.W.'S SALES AND PROFIT PICK UP

DIVIDEND NEARLY MAINTAINED

A PEAK turnover and a recovery in gross profit, both coming in refreshing contrast to the *stagnation in 1959 and 1960*, feature the results of Guest, Keen, Williams, Ltd. (Managing Director: Mr. W. Morrice, Calcutta) for the 52 weeks ended 30th December 1961. After *staging a sharp improvement* from Rs. 907.06 lakhs to Rs. 10,24.81 lakhs in 1958, sales proceeds had declined to Rs. 960.96 lakhs in the following year and staged only a small recovery to Rs. 966.63 lakhs in 1960. During the year under review, they jumped up to a new peak of Rs. 10,65.88 lakhs. The gross profit, too, had steadily declined from 1957 to 1960. But, last year, it recovered from Rs. 133.16 lakhs to Rs. 155.69 lakhs and exceeded the sum of Rs. 155.46 lakhs earned in 1958. It is, however, still much below (Rs. 170.81 lakhs) for 1956. The profit-margin (ratio of gross profit to gross sales), which had declined from 15.3 per cent to 13.7 per cent in 1960, has looked up to 14.6 per cent in the year under review, though it is nearly seven points lower than that in 1956.

As in the case of most industrial establishments in the country, the operating costs of G.K.W., too, have recorded a sharp rise of more than Rs. 100 lakhs to Rs. 940.45 lakhs last year as compared with those in the preceding year. The increase is as much as Rs. 311.50 lakhs over the 1956 level, as against the corresponding rise in the turnover of Rs. 271.78 lakhs. What is more, production during the period under review was affected adversely by power cuts and through difficulties in not obtaining adequate supplies for the engineering division. The fact that, despite such serious handicaps, the Company has on the whole fared well, warrants the hope that it will do better in the current as well as coming years.

The appropriation policy adopted by the management is of a nature that befits a growing company. Thus, the provision for depreciation has been increased from Rs. 39.84 lakhs to Rs. 45.21 lakhs and that for taxation from Rs. 18.40 lakhs to Rs. 30.50 lakhs. Consequently, the net profit shows only a small improvement from Rs. 74.92 lakhs to Rs. 79.98 lakhs. Out of this, Rs. 1.10 lakh have gone to meet the adjustment relating to the previous years, Rs. 6.22 lakhs (Rs. 5.59 lakhs a year before) have been provided for additional depreciation, Rs. 10.69 lakhs (Rs. 7.66 lakhs) have been transferred to taxation equalisation reserve, Rs. 12.21 lakhs (Rs. 24.57 lakhs) to development rebate reserve and Rs. 5 lakhs to the newly created debenture sinking fund. A sum of Rs. 11.24 lakhs (Rs. 6.03 lakhs) had been withdrawn from general reserve, "bearing in mind the production difficulties and heavy capitalisation during the period" and the Directors have proposed a taxable dividend of 14 per cent against 16 per cent in the previous year; the rate of dividend has of course gone down but it is on a higher capital following the issue in 1960 of 2,000,000 equity shares of Rs. 10 each at a premium of Rs. 18.50 per share as rights shares in the ratio of 1 : 1.

The recovery made by the Company during the period under review is clearly brought out in the table below:

(In lakhs of rupees)

	For the 52 weeks ended			
	30-12-61	31-12-60	2-1-60	3-1-59

† Subject to deduction of tax.

In December last, the Company subscribed at par to 8,864 shares of Rs. 100 each offered by its subsidiary, Sankey Electrical Stampings Ltd. as rights shares, and its holdings consequently increased to Rs. 187.09 lakhs. Last year, the subsidiary reported an increase in sales from Rs. 402.32 lakhs to Rs. 482.35 lakhs and in profit before tax from Rs. 49.96 lakhs to Rs. 52.60 lakhs and stepped up the dividend from Rs. 15 to Rs. 17.50 per share, subject to tax. It repaid Rs. 10 lakhs to the Company out of the Rs. one crore loan received in 1960.

The financial position of G.K.W. is quite satisfactory. Its paid-up capital of Rs. 4 crores is supplemented by reserves of Rs. 6.76 crores, of which Rs. 4.27 crores belong to the share premium account and Rs. 88.68 lakhs to general reserve. Secured loans amount to Rs. 2.27 crores, made up of debentures Rs. 1.50 crores and bank borrowings Rs. 77.08 lakhs. Current liabilities and provisions amount to Rs. 2.44 crores. Excluding debentures, its liability to outsiders aggregates Rs. 3.21 crores, and is very well covered by current assets, loans and advances of Rs. 7.16 crores. Then, there are investments mostly in subsidiaries of the order of Rs. 1.87 crores. The gross block increased from Rs. 7.38 crores to Rs. 9.28 crores and has been written down to Rs. 6.33 crores. Including projects under completion and capital expenses made, the net block is shown in the balance-sheet at Rs. 6.45 crores.

Between 1957 and 1961, the number of G.K.W. employees rose from 6,300 to 7,374 and the salary bill from Rs. 154.42 lakhs to Rs. 237.16 lakhs. The number of shareholders on 30th December 1961 was 12,693, of whom 5,639 persons held 21 to 50 shares and 3,105 persons 51 to 100 shares.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 42.50, including the final dividend of 80 nP per share. On an ex-div. basis, they offer a net return of 2.4 per cent per annum.

TEXTOOL COMPANY LIMITED

The Textool Company Ltd., Madras, has been granted consent by the Controller of Capital Issues to issue capital of Rs. 20 lakhs in equity shares of Rs. 100 each for cash at a premium of Rs. 10 per share. The proceeds will be utilised for providing additional working capital and liquidating the existing liabilities. The consent is valid up to 30th June 1962.

GENERAL TYRES LIMITED

The Directors of General Tyres Ltd. (Managing Agents: Messrs. National Rubber Manufacturers Ltd., Calcutta) have made the first call of Rs. 2.50 per equity share and of Rs. 25 per preference share, payable on or before 16th June 1962. The issue of the requisite call letters has already commenced.

(Concluded from next column)

The financial position of the Company is strong. During the year under review, the issued capital was raised by the issue of 24,405 shares of Rs. 100 each at a premium of Rs. 15 per share as rights shares in the proportion of one share for every two shares held. As all the shares were taken up by the shareholders, the paid-up capital has increased correspondingly from Rs. 48.81 lakhs to Rs. 73.22 lakhs. Considering that it includes 38,964 shares allotted for consideration other than cash and 9,762 shares issued as fully-paid bonus shares, it is adequately covered by reserves and surplus amounting to Rs. 66.45 lakhs, of which general reserve alone amounts to Rs. 43.45 lakhs. The new capital issued has helped to do away with bank borrowings which had been reduced in the previous year from Rs. 44 lakhs to Rs. 18.37 lakhs. Secured loans at the year-end represent only debentures of Rs. 40 lakhs and unclaimed interest of some Rs. 500 on them. Unsecured loans, however, are higher at Rs. 5.65 lakhs as compared with Rs. 4.99 lakhs a year before. Current liabilities and provisions amount to Rs. 75.88 lakhs as against Rs. 44.86 lakhs in the previous year. But these are more than adequately covered by current assets, including book debts but excluding investments (Rs. 2.12 lakhs) at Rs. 145.28 lakhs as against Rs. 85.67 lakhs in the preceding year. The gross block of Rs. 228.50 lakhs shows an increase of Rs. 7.05 lakhs during the year, and has been written down to Rs. 106.41 lakhs, and including fixed assets under erection and in transit, is shown at Rs. 113.80 lakhs in the balance-sheet.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 223 cum-div. On an ex-div basis, they offer a net return of 6 per cent per annum.

GOKAK MILLS' RESULTS IMPRESSIVE

INVESTORS BENEFIT AGAIN

NOTWITHSTANDING the fact that, in accordance with the recommendations of the Indian Cotton Mills Federation, cotton yarn prices were reduced further right from the beginning of the year, the Gokak Mills Ltd. (Managing Agents: Messrs. Forbes Forbes Campbell and Co. Ltd., Bombay) has fared exceedingly well during 1961. The results assume greater importance, as they are an extension of the previous year's impressive recovery and thereby underline that 1959, which was a particularly lean year, was an exception in the Company's history. Moreover, while they illustrate the "generally good" market conditions for yarn that prevailed last year, they also reflect the benefits of extensive replacement and renovation of machinery carried out by the Company in recent years.

Sales realisations have improved further to a new peak of Rs. 422.36 lakhs, showing a rise of 9.6 per cent over Rs. 385.17 lakhs in 1960, when there was a sharp increase of 32.4 per cent. The gross profit, which had recorded nearly a fourteen-fold increase from a mere Rs. 3.25 lakhs to Rs. 44.19 lakhs in the previous year, has staged a handsome improvement of 70.6 per cent to Rs. 75.41 lakhs. And thanks to only minor increases in costs, the profit-margin (ratio of gross profit to sales) as expanded from 11.4 per cent to 17.8 per cent. Taxation, which had no provision last year, has immediately attracted the Directors' attention following the improvement in profit and a large sum of Rs. 22.25 lakhs has been provided to cover this liability. The provision for depreciation at Rs. 15.14 lakhs is a shade lower than that in the previous year. The Managing Agents' commission has increased by Rs. 3.37 lakhs to Rs. 5.84 lakhs. The net profit, consequently, shows an improvement of only Rs. 6 lakhs to Rs. 32.18 lakhs. The Directors have availed themselves of this opportunity to pay to shareholders a cash bonus of 4 per cent in addition to the dividend of 14 per cent, both subject to tax. The significance of paying the additional reward to shareholders in the form of bonus, instead of straightaway increasing the dividend rate, is that the directors are not confident of repeating the enhanced return this year. They cannot, of course, be blamed if they hold this view, as the prospects for the current year have been marred by the high cost of cotton and increase in excise duties. The net total return has moved up from 9.8 per cent in 1960 to 12.6 per cent; it is close to 13 per cent paid in 1956, though quite below the 15 per cent rate for 1955. It is noteworthy that this policy of satisfying the investor, who had suffered in the past, has not been at the cost of reserves to significant extent. They have received as much as Rs. 18.38 lakhs, a sum which is only a shade lower than that (Rs. 19.05 lakhs) set aside last year. The carry forward at Rs. 0.21 lakh is the same as the amount brought in.

A glance at the table below will give one a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales of yarn and waste (gross)	422.36	385.17	290.76	269.61

,, ,, Ordinary	3,50 (25%)	3,50 (25%)
Carry forward	16	22

N.B.—Adjustments represent the balance brought forward from the previous year.

† This includes Rs. 3,19,070 being excess provision for depreciation made during the years 1957 to 1960 written back.

Extracts from the Directors' report: On account of draught conditions which prevailed for the second successive year in the jute growing areas during the last season, the 1960-61 crop was insufficient to meet the full demand of the industry. The effects of the shortage became steadily more severe, in the result that raw jute prices rose abnormally high in relation to the prices of manufactured goods. These difficult conditions continued upto the middle of September 1961. Because of inadequate supplies of raw jute, production was curtailed by sealing of additional looms, working hours were reduced and there was a block closure of mills for one week in each of the months of June and July 1961.

Trading and working conditions, however, began to show improvement with the arrival of the new jute crop in the market from September 1961. From 25th September 1961, the mill started unsealing a number of looms and increasing the working hours.

In the 1961-62 season, the raw jute crop is expected to be about 80 lakhs of bales which will be sufficient to meet the demand of the industry. The foreign demand for gunnies continues to be steady and stocks are at the lowest level. In view of this, additional looms have since been unsealed leaving only 5½ per cent looms sealed at present. This Company, however, was able to get advantage of the favourable trading conditions for a period of only three months by virtue of the fact that its accounts close annually in December. The prospects for the year 1962 are therefore considered bright.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,00,000	Gross block	75,51,195
Reserves and surplus	16,03,068	—Depreciation	53,53,139

* Only a small sum of Rs. 370.

† Preference dividend is calculated at 9.1 per cent.

†† Preference dividend is calculated at 2.1 per cent. in addition to additional dividend on preference shares of Rs. 6,300 for the year ended 31st October 1959 at 2.1 per cent. in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: A number of the Company's vessels were damaged in a very severe cyclone which passed across East Pakistan on 9th May 1961. The cost of the necessary repairs was considerable and in addition these vessels were off the run at a time when they would have been earning freight. Nevertheless, there was an increase in freight earnings during the year despite the extremely small 1960-61 jute crop and, with the better jute crop in the 1961-62 season, prospects for the current year are satisfactory. Arrangements have recently been made to utilise the fleet for the carriage of general cargo from Calcutta to Dhubri and Gauhati.

Permission has been received from the Government of India to import another light drafted tug for use over the shallow reaches of the Brahmaputra river, and it is expected that this tug will be commissioned in July 1962.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	23,00,000	Gross block	53,71,269
Calls received in advance	1,000	—Depreciation	23,96,464

Carry forward	86	67

N.B.—Adjustments represent the balance brought forward from the previous year and excess provision of income-tax for previous year.

* Preference dividend is calculated at Rs. 6.66 per share.

Extracts from the Directors' report: The sales of the Company's products increased from Rs. 1.38 crore in 1960 to Rs. 1.54 crore during the year under review, a rise of about 12 per cent. The sales during the year show an increase in sale of all the Company's products. The Company's export business suffered a severe setback because of the interpretation of the Indo-Burma Trade Agreement. The decline was to the tune of nearly Rs. 7 lakhs. In spite of this the total coffee sales show an appreciable rise, which is a satisfactory state of affairs. The Indo-Burma Trade Agreement has now expired and the Company started receiving business from Burma, where the Company's coffee enjoys a very good reputation.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	46,99,800	Gross block	69,39,361

N.B.—Adjustments include the balance brought forward from the previous year and other credit items written back.

Extracts from the Directors' report: The working of the mill continued to be quite satisfactory during the year. The mill was running on 3 shifts with an installed capacity of 31,360 spindles besides 1,664 doubling spindles during the year. The average number of spindles worked during the year was 25,521. One set of 4 *High Speed Combers* imported from U.S.A. was installed during the year.

The mill has been enrolled as an "Exporter/Manufacturer" by the Cotton Textiles Export Promotion Council, Bombay under the Enrolment Scheme and it had also export performance during the year for the first time.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	76,35,323

Proposed dividend (taxable) ordinary	78	37
Carry forward	..	..

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: Operations.—As a result of a dispute with the workmen, the Company's Mill was closed for a period of approximately seven weeks. The consequences of the closure are reflected in the reduction in the profit earned for the year.

Supplies of wheat were sufficient to maintain full production during the remainder of the year. As a result of a change in the method of distribution of wheat supplies introduced by Government in April 1962, there are indications that all available finance will be fully employed in the purchase of stocks.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,000	Gross block	37,83,100

PHILIPS INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

THE THIRTY-SECOND ANNUAL GENERAL Meeting of the Members of Philips India Limited will be held on Thursday, June 14, 1962 at 11 a.m. at the premises of the Bengal Chamber of Commerce & Industry, Room No. 2, 6 Netaji Subhas Road, Calcutta-1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1961
2. To declare a Dividend
3. To appoint Directors in place of those retiring
4. To appoint Auditors and fix their remuneration
5. To transact any other ordinary business of an Annual General Meeting

AS SPECIAL BUSINESS

To consider and if thought fit, to pass, with or without modification, the following resolutions:

6. As an Ordinary Resolution

"That with effect from January 1, 1962 Mr. W. A. C. H. Bosschaart, the Managing Director of the Company, shall be entitled to receive from the Company remuneration for his services in accordance with the terms set out in an Agreement dated May 2, 1962, made between the Company of the one part and Mr. W. A. C. H. Bosschaart of the other part."

7. As a Special Resolution

"That, in view of the proposal contained in the next succeeding resolution, consent be and is hereby accorded for increasing the number of the Directors of the Company from five to six."

8. As an Ordinary Resolution

"That due notice in writing signifying the intention of a member to propose Mr. Deba Priya Mukherjee as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Deba Priya Mukherjee be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company."

9. As a Special Resolution

"That this Meeting hereby accords its consent under Section 314 of the Companies Act, 1956 to Mr. Deba Priya Mukherjee holding and continuing to hold an office or place of profit under the Company as its Chief Adviser, Personnel & Industrial Relations, and being entitled to receive from the Company, subject to the approval of the Central Government, the remuneration as set out in the resolution of the Board of Directors passed on May 2, 1962, a copy of which was laid on the table and signed by the Chairman for the purpose of identification."

The Register of Members of the Company will be closed from May 24, 1962 to June 14, 1962, both days inclusive. The Dividend, if approved, will be payable on or after July 2, 1962 to those shareholders whose names are on the Register of Members on June 14, 1962 or to their mandatees.

By Order of the Board

W. A. C. H. BOSSCHAART
Chairman and Managing Director

May 9, 1962

7, JUSTICE CHANDRA MADHAB ROAD,
CALCUTTA 20.

Notes: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself; such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

2. Shareholders are requested to notify the Company immediately of any change in address.

3. An Explanatory Statement as required under Section 173(2) of the Companies Act, 1956, in respect of the aforesaid Special Business is annexed to the Convening Notice sent to members.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

DIVIDEND NO. 36

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-eighth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 8th August, 1962, at 11-30 a.m. the Directors will recommend payment of a Dividend (No. 36) for the year ended 31st December, 1961 of 27 per cent (6.48 pence, i.e. 36 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 31st August, 1962 to all members registered in the books of the Company at the close of business on the 8th June, 1962.

The Registers of Members will be closed from the 9th June, 1962 to the 1st July, 1962, both days inclusive.

The profit for the year ended 31st December, 1961 was £1,222,163 (against £1,307,982 for previous year), out of which have been provided £165,000 for depreciation (£175,000 last year), £4,125 for gratuities last year nil, £68,465 for decretal amount under Kyanite Suit last year nil, £504,512 for Taxation (against £500,477), £56,250 for Development Rebate Reserve (against £50,625) and £100,000 for General Reserve (against £200,000), leaving a nett profit of £323,811 (against £381,880). With £118,750 brought in from 1960, the balance available is £442,561 (against £489,001) and after providing £370,251 for the abovementioned proposed Dividend of 27 per cent subject to deduction of Tax (Dividend No. 35 of 27 per cent subject to deduction of Tax last year—£370,251) the balance carried forward is £72,310 (against £118,750 brought in from previous year).

By Order of the Board,
G. A. CARVER,
Secretary.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1.
Dated the 9th May, 1962.

ESCORTS LIMITED

Registered Office:
26, FAIZ BAZAR, DELHI-6

NOTICE IS HEREBY GIVEN THAT THE 17th Annual General Meeting of the above Company will be held in its premises at 16, Barakhamba Road, New Delhi-1 on Friday, the 15th June, 1962 at 10 a.m. to receive, consider and adopt the Directors' and Auditors' Reports and audited accounts for the year ended 31st December, 1961 and to consider other matters as Ordinary and Special Business of which notice is being given to the Members. Further, separate meetings of the 9 per cent (free of Company's tax) and 10 per cent (less tax) Preference shareholders will also be held on the same date and place at 11-00 a.m. and 11-30 a.m. respectively to consider special business of which too notice is being given.

By Order of the Board,
P. L. JAITLY,
Secretary.

Date: 10-5-1962
DELHI-6.

Note: 1. The Transfer Register and Members Register (both of Equity and Preference share capital) shall remain closed from 26th May to 15th June, 1962, both days inclusive.

2. The Mandates for payment of dividend will be noted only if received before the closing of the Transfer Register and Members Register.

3. The Directors have recommended a dividend of 13 per cent on the Equity shares.

4. Explanatory statements as required under Section 173 at the Companies Act, 1956, in regard to the items under special business will be forwarded to the Members of the Company.

5. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE TWENTY-SEVENTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Wednesday the 6th June 1962, at 3 p.m., for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1961.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring. And, in this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following resolution at the meeting:

"That Sir Badridas Goenka, the Chairman of the Company, who has attained the age of 78 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government this meeting approves the payment of remuneration to Mr. E. K. Srinivasan as the Managing Director of the Company with effect from the 16th July, 1962 on the terms set out in the Agreement dated the 9th May, 1962 and made between the Company of the one part and Mr. E. K. Srinivasan of the other part (a copy of which was produced to the meeting and signed by the Chairman hereof for purpose of identification) or on such other terms as may be agreed between the Central Government and Mr. E. K. Srinivasan and the Board of Directors of the Company."

6. To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government and with effect from the 1st January, 1961, the Chairman and the Deputy Chairman of the Board of Directors of the Company shall each be entitled to receive out of the funds of the Company for their services in attending meetings of the Board or a Committee of the Board a fee of Rs. 300 per meeting of the Board or a Committee of the Board attended by them or such fee not exceeding Rs. 300 as may be agreed between the Central Government and the Board and each of the other Directors of the Company shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board or a Committee of the Board a fee of Rs. 250 per meeting of the Board or a Commitee of the Board attended by him or such fee not exceeding Rs. 250 as may be agreed between the Central Government and the Board."

7. To consider and, if thought fit, to pass with or without modifications the following resolution which will be proposed as a Special Resolution, namely:

"That the Regulations contained in the printed document submitted to this Meeting and for the purpose of identification signed by the Chairman thereof be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Share Transfer Books will be closed from the 30th May 1962 to the 6th June 1962, inclusive.

By Order of the Board,
E. K. SRINIVASAN.
Managing Director.

CALCUTTA, *9th May* 1962

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 6th June 1962.

Explanatory Statement as required by Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

COMPANY AFFAIRS

(Concluded from page 915)

later, that is, in October 1961, a sum of Rs. 50.98 lakhs was capitalised out of reserves and 50,982 bonus equity shares of Rs. 100.00 each were issued in the proportion of 1 : 4. This has brought the paid-up capital to Rs. 379.91 lakhs. This is matched, as at 31st December 1961, by Rs. 396.25 lakhs in reserves and surplus. Secured and unsecured loans amount to a mere Rs. 28.79 lakhs. Current liabilities and provisions aggregate Rs. 257.86 lakhs. With the inclusion of additions worth Rs. 21.02 lakhs during the year, the gross block of the Company is now valued at Rs. 12,62.96 lakhs and, on deducting therefrom Rs. 548.89 lakhs as depreciation provided so far, the net block works out to Rs. 714.07 lakhs. The cost of capital work in progress is estimated at Rs. 27.82 lakhs and this gives a total net block of Rs. 741.90 lakhs. Investments, current assets and loans an advances all total up Rs. 393.46 lakhs and exceed the liabilities to outsiders by a comfortable margin.

The expansion of the rayon plant from 72 to 96 spinning machines has been completed and full increased production will be achieved as soon as the additional power applied for by the Company is released. The construction of factory building for the tyre cord plant is in progress and machinery has started arriving. The plant is expected to go into production early next year. The Company had obtained a licence for a rayon grade caustic soda plant, with a capacity of 30 tons, the cost of which is estimated at Rs. 1.60 crore. Orders for plant and machinery have been placed and production is anticipated to commence by about the end of 1963. As regards the Company's proposal to put up a modern textile unit outside Bombay with automatic looms, the services of a leading Swiss firm of textile engineers, namely, Maurer Textiles S.A., have been engaged and suitable land is being acquired.

The Rs. 100 fully-paid ordinary shares of the Company are a hot favourite with investors and speculators alike and are presently quoted at Rs. 680 *cum*-final dividend. On an *ex-div.* basis, the net yield works out to 3.2 per cent.

INSURANCE

(Concluded from page 898)

reduce the chances of promotion have also prevented merger being seriously considered as a solution to the ills that affect the industry. It is not difficult, as Mr. Shroff himself conceded, to sort out the individual interest of the units concerned and to find solutions to other problems if the insurance industry itself firmly resolves to rebuild the market on sound lines. If the Government takes a firm stand on this issue and prods the insurers to get together, as it has been doing in the case of banking, progress towards consolidation and strengthening of this important branch of service could be speeded up.

NEW INSURANCE SERVICE FOR BRITISH INDUSTRY

An idea which *The Review*, London, predicted could prove to be "one of the most important, stimulating and exciting developments in the insurance world for a long time" was adumbrated a year ago in the annual address of Sir John Benn as Chairman of the United Kingdom Provident Institution. Sir John made the following reference to the "Radcliffe Gap":

"In 1931 the Macmillan Committee pointed to a serious flaw in the British capital market which failed to provide adequately for the long-term needs of small and medium-sized concerns. That gap has been filled by institutions such as the Finance Corporation for Industry, the Industrial and Commercial Finance Corporation and the Charterhouse Group, to whose resources institutions like our own have contributed in considerable measure. Now we have the Radcliffe Committee pointing to another gap: that of providing the genuine risk capital needed to finance new inventions and to bring them to the stage of commercial production. The Radcliffe Report suggests that an Industrial Guarantee Corporation should be set up with Government backing to insure part of the risk. This is surely a case where the life offices could co-operate with the authorities in forming an institution for which there is a definite need. Indeed, as we are so well accustomed to underwriting risks, I should personally prefer to see the life offices setting up some organisation themselves without imposing further liability on the public purse. We helped to fill the Macmillan gap; let us now tackle the Radcliffe Gap."

In January this year the "gap" was filled with the registration of a new company, namely, Technical Development Capital Ltd., to provide that risk capital for selected technical innovations and inventions. The new company is backed by thirty-three insurance companies, banks and City institutions. It has a capital of £2-millions and an impressive Board of Directors. It is said that there is nothing else quite like this company in the United Kingdom (though it has its counterpart in a successful company in the United States of America, whose advice has been consulted). It involves no Government backing. Its ideas are quite flexible: it would appear that when a technical innovation or invention is considered worthy of capital support, the particular form that the support will take will be decided on an individual basis—it may take a variety of forms, including the form of debenture capital, but more likely of an equity interest in the developing company (and probably a majority interest at that) with the rights and interests of the inventor fully provided and cared for. The stage at which the company will be interested in a proposition will be the practical stage after it has been shown to work, and that it has been or could be patented.

SWISS INTERNATIONAL INSURANCE

The international business transacted by Swiss insurance companies has grown a great deal during recent years. At present, about half the private insurance companies are doing some of their business abroad. Stable political and monetary conditions in Switzerland, the long experience of Swiss insurance companies, several of which have been in existence for over or nearly one hundred years, and their readiness to cover even considerable risks explain their growing prestige abroad.

According to an analysis of the Federal Insurance Office statistics published in the Swiss Bank Corporation Bulletin for January 1962, Swiss insurance companies collected during 1959 Sfr. 4,698 million in premiums. Of this sum, about 3 milliard francs concerned either direct or indirect transactions abroad. The proportion of foreign to Swiss premiums is estimated at 9 to 1 for reinsurance, 11 to 7 for insurance against accident and damage to property and 1 to 7 for life insurance. These figures, particularly striking in the sphere of reinsurance, bear impressive witness to the economic importance of the Swiss insurance companies' activities in foreign countries.

This growth of foreign insurance business has had a favourable influence on the Swiss balance of payments on current accounts. For the last four years, receipts under the head of "insurance" have increased steadily. The part the insurance receipts play in the "invisible" transactions is tending to expand as may be gathered from the following table:

Insurance receipts in the Swiss balance of payments on current accounts
(In million Swiss francs)

Year	Receipts	Expenditure	Balance	Insurance receipts expressed as a percentage of all "invisible" receipts
1957 ..	110	25	85	3.12
1958 ..	122	28	94	3.28
1959 ..	137	37	100	3.49
1960 ..	161	36	125	3.57

The above figures refer to all *private and social insurance*. Under "receipts," which in 1960 aggregated 161 million Swiss francs, are included, on the one hand, receipts in connection with true insurance business and on the other *growing income* from foreign investments of the Swiss insurance companies. With regard to social *insurance*, the sum transferred abroad by Switzerland under the provisions of bilateral agreements is markedly larger than that received from foreign countries. With surplus receipts of 125 million francs in 1960, "insurance" is certainly not a negligible asset in the Swiss balance of payments on current accounts although when compared with the net surpluses under other "invisible" heads, such as tourist traffic (940 million francs) or income on capital (680 millions), it is still a relatively modest one.

This year we will be completing the twentieth Anniversary of our prosperous existence. During these years, miles of our Wires and Cables have made many industrial projects of the two Plans and wiring of important Buildings. The production of our renowned NICCO Cables is backed with the technical advice of our collaborators, the British Insulated Callender's Cables Ltd.

Surely, the increasing confidence placed in us, the first national enterprise to make Cables a speciality, is a most cherished asset in our continued progress.

MONEY STILL IN DEMAND

(From Our Own Correspondent)

BOMBAY, 16th *May*

Although there is no stringency in the short-term money market, the demand for funds from trade and industry is good. Banks say that they are still experiencing active conditions and that some of them are borrowers. The inter-bank call money rate, which had gone up to 4 per cent towards the close of last week, continues to stay at that level even today. Reports from Calcutta suggest keener demand for money and some of the floating funds have been diverted to that centre where the inter-bank call rate is a little higher at 4¼ per cent.

The rates of interest for short-term deposits are unchanged at the ceiling levels under the inter-bank agreement. The fate of this agreement will be known early next week. The chief executives of banks are due to meet in Bombay this week-end. A fraction of the increase from 2.580 per cent per annum to 2.590 per cent per annum is the only feature of the Government of India's 91-days' Treasury Bills sold under the tender system. The amount invited, the amount offered and the amount accepted were all the self-same, namely, Rs. 2 crores. Sales of 91-days' Intermediate Treasury Bills fetched a slightly larger amount of Rs. 16.75 lakhs, as against Rs. 15.25 lakhs in the previous week. Sales of both the types of bills are being continued.

The downward trend in foreign assets of the Reserve Bank persists, the exact decline during the week ended 11th May 1962 being Rs. 1.19 crore. The total of these assets now stands at Rs. 109.80 crores.

Reflecting the improvement in the demand for funds, the banks' borrowings from the Reserve Bank against usance bills went up by Rs. 3.35 crores during the week ended 11th May 1962, raising their total to Rs. 11.21 crores. Since other loans and advances also show a bigger rise of Rs. 9.41 crores, it looks as though the banks had taken funds from the Reserve Bank against Government securities also. Deposits of banks with the Reserve Bank, however, improved by Rs. 10.06 crores to stand at Rs. 89.04 crores.

According to the scheduled banks' statement for the week ended 4th May 1962, there was a small rise of Rs. 1.19 crore in deposits. Inter-bank borrowings also were up by Rs. 1.67 crore. Bank credit spurted by Rs. 5.22 crores; actually, the item "advances" had risen by as much as Rs. 11.29 crores, but a part of this rise had been neutralised by a fall of Rs. 6.07 crores in bills purchased and discounted. There was a sizable drop of Rs. 7.79 crores in investments.

It would appear that the bulk of the rise in bank credit noted above was in the books of banks other than the State Bank of India, as the latter's advances (including bills purchased and discounted) had gone up by only Rs. 2.03 crores. Investments of the State Bank were down by Rs. 7.43 crores, but its other assets had expanded by Rs. 6.92 crores. There was hardly any improvement in the deposits of this premier commercial bank.

In the Gilt-edged market, there was some activity in State loans, a few of those maturing in 1970 and 1972 having gone up by 10 to 25 nP. Among Central loans, very little activity was noticeable, but whatever change there was, was in favour of sellers. Thus, an improvement of 15 nP was noted in 3 per cent 1966-68 and of 5 nP in 3 per cent 1970-75. The Conversion loan was, however, a shade lower at Rs. 71.

In the foreign exchange market, £ sterling ruled steady, with the New York on London rate showing hardly any change over the week. Locally, the banks' selling rate for ready T.T. on New York went up by 25 nP to Rs. 476, but their buying rate remained unchanged at Rs. 472.50. The rate for Canadian dollars, which had come down sharply (by Rs. 13.25) last week following a slight devaluation consequent on the fixing of new parity rate at a lower level, went down further by some Rs. 3.25, the latest rates for banks' selling and buying being Rs. 439.00 and Rs. 431.25 (per 100 dollars), respectively.

SUGAR RULES FIRM

(From Our Own Correspondent)

HAPUR, 14th *May*

Sugar continued to rule firm here this week on brisk buying and better export prospects. The inferior quality smaller crystal advanced by about 75 nP per maund on keen demand from Rajasthan and Gujarat possibly due to the marriage season. Spot prices also improved. Week-end spot prices (per bag) were: Simbhauli Rs. 107.37, Bulandshar Rs. 104 per quintal, mill delivery (per maund) E29 Simbhauli Rs. 39.44, Bijnore Rs. 38.87, D29 Amroha Rs. 39, Meerut Rs. 39.44, Dhampur Rs. 38.87, Seohara Rs. 39 and Kashipur Rs. 38.87.

Sugar firmed up in Muzaffarnagar market, and the release of an extra quota went unnoticed. The smaller types evoked inquiries from Rajasthan, while bold crystal was in demand from Madhya Pradesh, Gujarat, Saurashtra and Delhi. Rise in prices was more marked in the inferior quality.

In the spot section seasonal demand was brisk, and prices hardened. Week-end prices (in rupees per maund) were: A29 Rampur 41.53, Iqbalpur 41.60, Daurala 41.81, A29 Lhaksar 41.22, Mansurpur 41.85, Shamli 41.35, B29 Mawana 40.78, Deoband 40.03, D29 Deoband 39.60, Bulandshar 39.25 and Modinagar 39.62.

Khandsari prices improved further owing to fall in arrivals in the face of brisk upcountry demand. The moist quality was quoted at Rs. 30.25 to Rs. 33.25 and the dry superior at Rs. 33.25 to Rs. 36.25 per maund. Khandsari boora and crystal boora were being done at Rs. 36.50 to Rs. 37.50 and Rs. 39 per maund respectively.

Gur ruled quiet, as demand was slack. The week's offtake was three wagonloads. Arrivals were nominal at an average of 75 to 100 maunds, daily and the local stocks at the week-end were 24,000 maunds as against 56,000 maunds at the same time last year. Total arrivals of gur here during the current season approximate 4.26 lakh maunds, as against 4.72 lakh maunds in the last season and 5.87 lakh maunds in 1960. Shakker stayed steady on good Rajasthan and stockists' support. Week-end prices were: Superior 2½ seer pieces Rs. 56.60, pansera Rs. 50.82, kotha dara Rs. 48.23, selected 50.25 and shakker 56.26 to 58.94 per quintal.

Gur firmed up in Muzaffarnagar because of decreased inflow against fresh outside demand. Prices advanced by nearly Re. one to Rs. 18 to Rs. 22 per maund. Rusker laddoo attracted good demand from east U.P. at Rs. 10 to Rs. 14.75 a maund. Shakker dara and masala were much in request from north Gujarat, Punjab and Rajasthan and were done higher at Rs. 21 to Rs. 23 and Rs. 23 to Rs. 25 per maund respectively.

Trading in gur futures remained suspended since 5th May last, when trading in the delivery period for the Baisakh contract started. It is, however, expected that the new contract, phagun, would be opened soon.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 16th *May*

After ruling distinctly easy in the first two sessions of the week, the bullion market picked up strength on Saturday the 12th inst. and the recovery gathered momentum on the 14th and 15th also. The market, however, developed a sagging tendency again today, with both gold and silver drifting downward. Over the week, the rate for white metal was below that prevailing on Wednesday last, while that for gold was a little higher.

Early in the week, the market experienced selling pressure which followed rumours of heavy contraband arrivals and slackness in demand. Some operators were eager to unload their holdings on fears of a marked increase in floating stocks. Consequently, prices suffered a setback. At lower levels, scattered support ensued and a recovery was in evidence. The rise was also helped by better spot enquiries and encouraging advices from up-country centres. Today, the market turned easier on fresh selling pressure.

The average daily offtake and arrivals of silver were both lower during the week under review: 18 bars and 19 bars, respectively, as against 24 bars and 26 bars in the previous week. In gold, the offtake was higher, the daily average being 9,600 tolas, as against 8,250 tolas, while arrivals were considerably less at 8,800 tolas, as against 13,325 tolas.

The feature of trading in the bullion market during the week was the appreciable rise in the premium commanded by ready gold over the forward (18th June settlement). The actual premium today was as high as Rs. 2.45, that a week ago being just 70 nP. In silver, too, ready rate continued to command a premium over the forward (19th June settlement), though the actual premium declined in the course of the week from Rs. 4 to Rs. 3.

The dollar price of gold in the London bullion market eased from $35.08¼ to $35.07¾ per fine ounce. But ready gold improved by ¾d. to 249s. 4¾d. Both ready and forward silver were, however, unaltered, the former at 84¾d. and the latter at 84¾d. Silver in New York, too, was unchanged at 101.50 cents.

The following table shows the trend of prices during the week under review:

	16-5-62 (closing)	High	Low	9-5-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	123.00	124.20	121.20	121.25
Jeth*	120.55	121.20	120.10	120.55
Sovereign	97.25	97.25	97.00	97.00
SILVER				
Ready (.996 fine)	220.05	220.80	218.85	221.80
Jeth†	217.05	217.45	215.85	217.80
London—				
Gold	249s.4¾d.	249s.5¼d.	249s.4¼d.	249s. 4d.

LINSEED LISTLESS

(From Our Own Correspondent)

CALCUTTA, 14th *May*

The local linseed market was lifeless during the week under review and prices showed little change. Fair arrivals have been reported from upcountry, which crushers are absorbing daily against their previous commitments of oil. The oil market was steady. Ready stocks are low, and sellers are not inclined to do much forward business owing to uncertainty of arrivals of seeds. The oilcake market ruled steady. There is a good local demand for ready and forward deliveries. The latest quotation for May/June delivery is Rs. 72.75 per quintal.

COTTON FUTURES SUBDUED

(From Our Own Correspondent)

BOMBAY, 16th *May*

The cotton futures market, after having ruled fully steady during the first half of the week under review, turned easy on Monday. Values declined sharply on persistent bear pressure and selling by upcountry operators. Selling was partly influenced by reports, as yet not confirmed officially, that a substantial quantity of U.S. cotton had been allocated to India and the possibility of a barter deal with Sudan following the visit of a trade delegation which is currently in India. The Jarilla March 1963 contract, which was quoted around Rs. 733 (per three quintals) slumped to Rs. 721.75. Buying attracted by the lower levels induced a recovery and the contract finished the session at Rs. 724. The present setback is, however, expected to be only a temporary phase. The small size of the current seasons crop, which is estimated at no more than 4.3 million bales, and the sharp reduction in carryover stock which is bound to follow as a consequence, make the outlook for cotton extremely bullish. This consideration, together with the difficulty of getting foreign cotton and the current shortage of desirable varieties prompted support which prevented further decline in prices. But when the market opened today, after having remained closed yesterday on account of Id, sentiment continued to remain subdued. The trend of prices was, however, steady. The Jarilla March contract wound up at Rs. 722.25 today, as compared with last week's closing rate of Rs. 733.50, a net loss of Rs. 11.25 over the week.

In the spot section, activity was limited, thanks to the lack of quota with most of the mills. The final instalment of Indian cotton quota has yet to be issued. Mill buying is expected to broaden as soon as the quota is released. Export demand for Bengal Deshi was also slow. Hope of yet another quota for Bengal Deshi has yet to materialise. Export sales registered against the recent quota till the 11th inst. aggregated 61,600 bales, including 11,754 bales sold to communist countries.

Among foreign cotton, Sudan and Egyptian cotton were in the limelight. Mills keenly sought after Sudanese growths on fears that Egyptian cotton would not be available in sufficient quantities, especially in view of the new regulations governing the sale of Egyptian cotton. According to a Presidential decree issued at Alexandria on the 10th inst. the Egyptian Cotton Commission will take charge of all cotton to be ginned and delivered to Alexandria starting with the 1962-63 cotton season. The Minister of Economy will fix prices before each season. The new law, which will come into effect from 1st August next, states that the Minister of Economy will fix terms and dates of delivery of cotton to the Commission. The Commission must sell the cotton abroad or at home at prices and terms determined by the Commission and approved by the Minister. Local mills can only buy cotton through direct purchases from the Commission's stocks.

A trade delegation from Sudan, currently in India, is holding important talks with representatives of the cotton trade, the mill industry and the Government. These talks are regarded as of particular interest in view of the acute shortage of cotton in the country.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal Deshi 685; Wagad 870; Hubli Laxmi 1,227; B.P. 52 1,360; B.P. (UNUG) 1,370; Pakistan AC 134 1,330, American 1-5/32" G.M. 1,272. Sudan G4S 1,430; XG2S 1,710.

In contrast to the easy trend witnessed during the past two weeks, the Karachi cotton futures market staged a smart recovery during the week. Both the May and July contracts attracted support, thanks to better domesic mill demand and good export inquiries. The N.T.R.G. May contract firmed up by Re. 1.70 to Rs. 68.70. The July contract rose by 85 nP to Rs. 67.70.

Cotton futures in Liverpool suffered a setback during the week. Commission House selling and profit-taking resulted in a decline in the price of both the American and American type contracts. Sudan cotton contract were quiet; values remained unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.95; July 23.95; October 23.95; December 24.05.

American cotton mixed growth contract: May 24.10; July 24.35; October 24.30; December 24.40.

Sudan: May 30.0; July 29.00; September 29.00.

Fully steady conditions were witnessed on the New York cotton exchange during the week. Switchover of purchases from the May contract, which went off the Board on the 15th inst. to the July and October position strengthened these. Spot prices also ruled firm.

The Crop Reporting Board of the U.S. Department of Agriculture has published the revised estimates of the 1961 cotton crop. The revised estimates are: planted acreage 16,588,000; area harvested 15,634,000; yield per acre 438 lbs.; production 14,318,000 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	14-5-62	8-5-62	30-4-62
New York spot	35.75	35.70	35.70
May	—	34.40	34.19
July	34.73	34.72	34.59
October	34.53	34.43	34.43

RAYON EXPORT PROMOTION SCHEME

(From Our Own Correspondent)

BOMBAY, 16th *May*

Both art silk mills and traders are eagerly awaiting the official announcement of a revived export promotion scheme for fabrics. Although the revived scheme will be broadly on the lines indicated by the Textile Commissioner, it is expected also to incorporate some of the suggestions made by the interests concerned. The expectation is based on the assurance, which Mr. Manubhai Shah, Union Minister of Industrial Trades, gave when he addressed the Silk and Rayon Export Promotion Council's Committee of Administration at Bombay on Monday this week, that the suggestions would receive due consideration before the scheme was finalised. Among these suggestions, the most important are the following:

Merchant-exporters must also be brought under the purview of the scheme, the incentives granted being in the form of cash.

The manufacturer-exporters must be given incentives in kind, that is, actual yarn and not import licences.

Mills having less than 25 looms should be excluded from the scheme, though they have to be supplied yarn required by them.

Under the new scheme now being considered by the Government, 70 per cent of the export entitlement earned by manufacturer-exporters will be utilised for the import of yarn and the balance for import of pulp. The yarn manufactured from imported pulp will be distributed to weavers at a price to be worked out on the basis of weighted average. Recognised foreign suppliers of yarn will be asked to store their products in India in bonded warehouses. Manufacturer-exporters can secure their requirements of yarn by surrendering to the warehouses their export entitlements. Such a step will facilitate speedy movement of the industry's raw material. For the modernisation of the industry, 20 per cent additional entitlements would be given to mills for import of machinery. With a view to offering quick inspection facilities, centres for inspection of yarn would be opened by the Silk and Art Silk Mills' Research Association and the Textile Commissioner at places like Surat, Calcutta, Bangalore, Madras, Kanpur and Bombay. Manufacturer-exporters with 25 looms and above, associations of manufacturers with 250 looms and above, co-operative societies of handlooms with 50 looms and above, and exporters with minimum export performance would be eligible for participation in the scheme.

The aforesaid reports imparted a bullish fervour to Amlan (20×1) yarn futures which scored handsome gains. The June delivery jumped up from Rs. 3,841 to Rs. 3,905. August position was firm at Rs. 3,980 today. Among imported art silk yarns, 150 Japan spurted by Rs. 26 to Rs. 1,984. 150 Japan was fully maintained at Rs. 2,205, as also 12 Italy at Rs. 1,902 and 150 Italy at Rs. 1,736. Among indigenous yarns, National Rayons 150 Bt. comes 1st grade hardened by 16 nP to Rs. 13.18.

Staple fibre yarns suffered a setback in values, thanks to selling pressure on renewed fears of increased supplies following the Government's recent decision to allow import of viscose staple fibre from East European countries. 40×2 June contract fell by Rs. 12 to Rs. 712. August delivery was neglected at Rs. 732. Spot Citya declined by 33 nP to Rs. 7.92. Kohinoors dropped 9 nP to Rs. 8.05. Hinds receded from Rs. 8.12 to Rs. 7.92.

Cotton yarns depicted a bullish trend on apprehensions of a possible shortage developing in coming weeks as a result of lower ouput in view of raw cotton scarcity. Twenty counts Podars rose by 25 nP to Rs. 21.75. 32 counts Gokaks strengthened by 50 nP to Rs. 33.75. counts T.T. Corins advanced by 50 nP to Rs. 33.75.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	16-5-1962	9-5-1962
	Rs	Rs
Art silk yarns—		
30/1 Amlon (100 kg.)—	3,905.00	3,841.00
June	3,980.00	—
August	2,205.00	2,205.00
150 Japan (per 100 kg.)	1,984.00	1,958.00
150 Japan (per 100 kg.)	1,902.00	1,902.00
150 Italy (per 100 kg.)	1,736.00	1,736.00
150 Italy (per 100 kg.)	13.18	13.02
Nat. Ray. 150 Bt. 1 (per kg.)		
Staple fibre yarn (40×2)—	712.00	724.00
June	732.00	—
August	8.05	8.14
Kohinoor (per kg.) ..		
Cotton yarn (per bundle of 10 lbs.)	18.75	18.75
10s Modern	21.75	21.50
20s Podar	31.00	30.50
32s Madura	33.75	33.50
40s T. T. Corin	50.00	50.50
60s T'Mangal		

PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 16th *May*

Malabar black pepper ruled quiet with tendency downward during the week, in view of the proximity of the due date for May delivery and owing to lack of foreign inquiries. Inland demand was also reported to have turned rather slow. Most of the business under May delivery at Cochin was switched over to July at a premium ranging from Rs. 10 to Rs. 14 per 100 kilos. May delivery was finally squared up at Rs. 310 per quintal.

New York was reported quiet with, Spot hovering around $0.34½. Offers for Lampong black at $0.33¾ from the origins remained untaken. White pepper in London touched a new low of 35d.

Singapore remained quiet, black pepper having touched the low of Str.$117½. Reduced offers for black and white pepper from Singapore remained unaccepted, as the origins were reported quoting lower. Deterioration in Laos political situation is causing anxiety to Singapore and Malayan traders, as any further worsening is likely to cause disruption in shipments to overseas.

Ungarbled is quoted at Rs. 295 and garbled at Rs. 303. July delivery is listed at Rs. 324. Calicut is steady but quiet at Rs. 295. The present high prices of ginger, turmeric, copra and other Malabar produces are reported to be a supporting factor.

Ready pepper in Bombay is nominally quoted at Rs. 168 per 50 kilos.

EXPORT QUOTA FOR H.P. S. G'NUTS

(From Our Own Correspondent)

BOMBAY, 16th *May*

Welcome news to the oilseeds trade this week was the release of a new export quota for H.P.S. groundnut kernels for the current year. The quota amounts to 20,000 tons. Exports will be allowed on a first-come-first-served basis. The relevant Press note issued by the Joint Chief Controller of Exports has clearly stated that registration will be stopped immediately after the overall ceiling is reached. The intending exporters are required to register their contracts soon with the export trade control authorities at the ports concerned. In order to prevent registration of bogus contracts and cornering of quotas, it has been decided that exporters should furnish a 10 per cent bank guarantee on the f.o.b. value of the contracts of H.P.S. groundnut kernels registered by the exporters as an earnest for completing the shipment in this behalf.

The new quota was generally welcomed by operators, though they were not quite optimistic about any sizable overseas demand in the near future. For, apart from the price disadvantage of about £3 to £4 per ton, the fag end of the crop year is usually a slack season for H.P.S. groundnuts. It is, therefore, felt that the immediate prospects of fulfilling the whole quota are not bright. Nevertheless, there was a distinct recovery in values. The recovery was not, however, marked enough to make up for the sharp decline suffered earlier in the week, so that today's closing prices were well below those prevailing a week ago. The initial setback was the result of persistent long liquidation by bulls, on bearish crop reports from the South. Castorseeds, too, moved down, despite rumours of some incentive scheme for castor oil export. Linseed came down initially in sympathy with other seeds, but turned steady towards the close on better advices from sarson markets in the North. Cottonseeds were featureless.

The groundnut July 1962 contract fell from Rs. 218 to Rs. 209.51, before closing at Rs. 210.12. May 1962 contract, which had receded from Rs. 212 to Rs. 202.75, improved to Rs. 203.62. Nizam bold lost Rs. 2 to Rs. 43.25. Khandesh quality eased by Re. 1.25 to Rs. 44. Oil May 1962 contract receded by 75 nP to Rs. 17.15. Oil ex-mill shed 65 nP to Rs. 18.05 and railway receipts 60 nP to Rs. 17.85.

Castorseed June 1962 contract lost Re. 1.38 to Rs. 164.87. September 1962 contract shed 88 nP to Rs. 165.37. Madras small dropped 12 nP to Rs. 33. Oil B.S.S. was lower by 10 nP at Rs. 13.90.

Linseed June 1962 contract declined from Rs. 37.44 to Rs. 37.06 by Monday, but recouped subsequently to Rs. 37.75. Bold ready improved to Rs. 36.50, after falling from Rs. 36.37 to Rs. 35 earlier in the week. Linseed oil, however, shed 5 nP to Rs. 14.45.

Cottonseed July 1962 gave way from Rs. 103 to Rs. 99.50. Berars, whites and non-whites, declined by 10 nP each to Rs. 20.90.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 16th May, as compared with those of the two previous weeks:

	16-5-1962	9-5-1962	2-5-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	203.62	212.00	220.50
July 1962	210.12	218.00	227.37
Nizam bold	43.25	45.25	46.50
Khandesh quality	44.00	45.25	46.75
Oil ex-mill ready*	18.05	18.70	19.20
Railway receipts*	17.85	18.45	18.90
Oil May 1962	17.15	17.90	18.60
Castorseed			
June 1962	164.87	166.25	166.87
September 1962	165.37	166.25	166.87
Ready Madras	33.00	33.12	33.25
Ready Kanpur	32.00	31.75	32.00
Oil B.S.S.†	13.90	14.00	14.05
Oil commercial†	13.30	13.20	13.30
Linseed			
June 1962	37.75	37.44	37.81
September 1962	38.50	38.06	38.44
Bold ready	36.50	36.37	36.62
Oil ready†	14.45	14.50	14.70
Cottonseed July 1962	99.50	103.00	103.25
Niger seed	34.75	35.00	35.00
Kardi seed	25.00	25.25	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR SUPPORT FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 10th *May*

In sale No. 19 held on the 8th inst., 630 kilos were offered. With the exception of a few invoices

—ALL 6,858 OF THEM

From the two full rated captains in every PIA jet cabin to the men that look after the 'planes with such loving attention to detail, they all believe in the job they are doing. The job is getting you there *comfortably—on schedule.*

PIA have marked up an unmatched record for punctuality, and people write nice letters about the service. That's why last year PIA carried more passengers (63% more) and showed a higher profit (41% higher) than ever before. Whether you want to fly to Rome or New York, London or Geneva, there are 6,858 people making sure that you get there *comfortably—on schedule.* They're great people to fly with.

DACCA · KARACHI · TEHRAN · BEIRUT · ROME · GENEVA · FRANKFURT · LONDON · NEW YORK

quality showed a further seasonal decline. The market met with good general demand. Low medium and medium brokens evoked fair support and these were barely steady while corresponding fannings met with good competition and advanced by 10 to 20 nP. There was irregular support for good mediums. A few best invoices were firm, whereas others were easier. Highgrown brokens were in irregular demand and sold at lower rates, whilst fannings under this category met with better support and are quoted steady. There was strong inquiry for unorthodox descriptions which were firm. Whole leaf grades under this category however inclined easier. Whole leaf grades were strong and dearer. There was useful support for black leaf descriptions which sold readily.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	4.00-4.20	4.40-4.50
Mediums	4.25-4.95	4.50-4.60
Good mediums	4.95-5.80	4.70-5.15
Nilgiri B.O.P.	4.50-6.15	4.60-5.80

The average price realised in sale No. 19 was Rs. 4.60 per kg. as against Rs. 4.92 a week ago and Rs. 4.61 in the corresponding sale last year.

A larger quantity of 434,000 kilos was offered in dust sale No. 19 held today. The market met with good general demand. Low mediums met with fair inquiry and were steady and so were the mediums. Poorer fibrey descriptions under this category, however, elicited less inquiry and were easier. Good mediums were generally dearer, whilst black leaf descriptions, although sold readily, realised prices slightly lower than last. There was better support for milled and fibrous kinds which often sold at prices above last. Highgrowns met with useful support, but were irregular. Unorthodox descriptions were irregular, with their fine dusts meeting better inquiry.

The average price realised in dust sale No. 19 was Rs. 3.68 per kg. as compared with Rs. 3.73 a week ago and Rs. 4.40 in the corresponding sale last year.

Colombo: There was fair general demand, but prices were generally easier. Teas from western districts were easier by 20 to 40 cents. Mediums and uvas declined by 10 to 30 cents. Middle East descriptions, however, were firm to dearer.

London: North India and other growths: In Monday's sale there was strong demand particularly for best liquoring kinds which were firm to dearer. Poorer descriptions however were easier and there were a number of withdrawals.

Ceylon and South Indians: 23,205 packages were offered in Tuesday's sale of which 6,160 packages came from South India. There was useful demand for both Ceylons and South Indians which were steady to firm and any change was in sellers' favour.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 20*: 567,000 kgs. offered. Good general demand. Low medium and medium broken irregularly about steady. Similar fannings upto 20 nP dearer. Good mediums easier. Highgrowns brokens lower, with quality fannings strong. Unorthodox easier."

GOOD CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *14th May*

Arrivals of the E.I. tanned cowhides in the local market this week were normal and the clearance was good at firm prices. Secondary marks in light weight cowhides were in good demand, and sizable business was done with the U.K., as tanners were anxious to sell stocks. Importers in the U.K. and the Continent were interested in cowcalf, but sellers were reserved as stocks have been meagre. Prices of buffhides and calf were steady, though inquiries were meagre.

In the tanned skins section, export business was not active. Inquiries for goat skins were irregular, except for extra heavy weight goat skins, for which importers in the U.K., the Continent and the U.S.A. were soliciting offers, with sellers naturally going slow. There was no demand for prime and semi-prime sheep, despite the attractively low prices. Only middle class sheep skins all grades commanded regular inquiries from the U.K. and the Continent, and prices hardened to some extent.

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *14th May*

A steadier trend was witnessed in foodgrains here this week, as arrivals of new *rabi* grains were still small, presumably due to reluctance on the part of cultivators to part with their produce at present. Threshing and winnowing operations, however, were in full swing and nearing completion in some areas. Wheat recorded fractional gains to be quoted on Monday at Rs. 38.85 per quintal for the average quality and up to Rs. 40.19 per quintal for the better farm produce.

Rice also ruled firm on better consumer demand. Arrivals were poor, and stocks with trade around 10,000 maunds. Week-end prices (in rupees per quintal) were: *mainpuri sela* 54.91, *gadda kutcha* 52.92, *ramajudayan sela* 62.30, *raimunia sela* 64.96 and *basmati sela* 81.74.

Gram recorded fractional gains on firm Punjab advices. Daily arrivals were around 1,000 maunds, mostly from Punjab. Local and Rajasthan arrivals were still poor. Barley and *bejhar* ruled steady on good demand in the face of poor arrivals. Some barley was reaching here from Punjab, and local arrivals were modest at an average of 200 to 300 maunds daily. Maize was listless, as consumer demand was lacking and stocks left with trade were poor.

BANKING

(Concluded from page 893)

lakhs a year before. Outward interest has gone up from Rs. 17.16 lakhs to Rs. 17.77 lakhs and so have staff expenses from Rs. 17.73 lakhs to Rs. 18.99 lakhs. But other expenses at Rs. 5.52 lakhs have been nearly the same as in the previous year. In refreshing contrast to 1960 when the Bank had suffered a loss of Rs. 2.28 lakhs on sale of investments, there was a gain of about Rs. 87,000 on sale of investments. This was another important factor responsible for the rise in profit.

The credit ratio, which had moved up from 56.9 per cent to 69.2 per cent in the previous year, has shot up to 74.1 per cent during the year under review. This expansion has been made possible by diverting funds from investments to advances and drawing upon the cash balances which at the year-end stood at Rs. 74.26 lakhs as against Rs. 87.58 lakhs a year before. The cash ratio has, therefore, narrowed down from 12.6 per cent to 10.7 per cent. The investments ratio (unencumbered portion only) has also moved down from 33.3 per cent to 22.1 per cent.

Notwithstanding the rather striking improvement in profit, the Directors have again passed over the dividend to shareholders. It may be recalled that, since its inception in 1943, the Bank has paid only once (in 1946) a dividend of 4 per cent. During the year under review, it has been skipped because a large part of the profit, Rs. 12.78 lakhs to be precise, has been utilised for making provision for or writing off bad debts, and the balance available is just inadequate to pay any return to the investors. Further, a sum of Rs. 26,000 has gone towards writing off the book value of an investment in a joint-stock company. Nearly Rs. 90,000, as against only some Rs. 8,000 in the previous year, have been set aside for taxation. The surplus left to be carried forward is Rs. 13,261 against some Rs. 2,000 brought in. The reserve fund, too, has not received any credit.

It must be mentioned here that, usually, banks deduct their provision for bad and doubtful debts from their gross income and show only the balance as their income. Nowadays, even the provision for taxation is made in this way by the vast majority of banks. If the Hindustan Commercial also had followed this wholesome practice, it would not have been able to show any significant profit. It is also necessary to add here that the bad and doubtful debts still to be provided for are shown at Rs. 20.72 lakhs. The book value of all investments (in Government securities, shares and debentures) also is well above the market value.

FOUR BANKS AUTHORISED TO RAISE CAPITAL

The following four banks have been authorised by the Controller of Capital Issues to increase their capital.

The Sangli Bank Ltd., Sangli, has been granted the consent to issue 4,000 ordinary shares of Rs. 100 each at a premium of Rs. 15 per share. The present paid-up capital of the Bank is Rs. 4.50 lakhs.

Allahabad Bank Limited, Calcutta, has been granted consent to the issue of further capital of Rs. 22,50,000 (nominal) divided into 22,500 ordinary shares of Rs. 100 each, to be fully paid-up for cash at a premium of Rs. 50 per share. The proceeds will be utilised for strengthening the bank's capital base. The present paid-up capital is Rs. 45,50,000.

The Canara Banking Corporation Limited, Udipi, has been granted consent to the issue of further capital of Rs. 12.50 lakhs divided into 25,000 ordinary shares of Rs. 50 each, for cash, at a premium of Rs. 10 per share. The proceeds will be utilised for strengthening the banking company's capital base. The present paid-up capital is Rs. 25 lakhs.

The Bank of Maharashtra Limited, Poona, has been granted consent to the issue of further capital of Rs. 10 lakhs divided into 20,000 ordinary shares of Rs. 50 each, to be fully paid-up, for cash at a premium of Rs. 2.50 per share. The proceeds will be utilised for strengthening the banking company's capital base. The present paid-up capital is Rs. 40 lakhs.

TEXTILES

(Concluded from page 895)

mills concerned have greatly benefited from these arrangements. Besides the right to use the "Sanforized" trademark, there is the vast amount of technical know-how relating to the finishing and shrinkage control of cotton fabrics which the Cluett engineers impart to all "Sanforized" licensees. This technical assistance actually begins before a mill installs a compressive shrinkage range. A Cluett engineer advices on the type of equipment needed after studying the plant's production. He helps the mill engineers in the positioning of the range and assists in its erection. He trains the operators and their supervisors and sets up a quality control programme based on continuous wash-testing which ensures uniform shrinkage performance regardless of the type of fabric or the amount being treated.

Apropos inquiries whether cotton fabrics produced upto 23rd April 1962 on powerlooms working under the special procedure and paying excise duty at compounded rates are liable to any further duty if processed, the Government of India has announced: "such unprocessed cotton fabrics lying with the manufacturers or with the processors on which excise liability has been fully met by payment of compounded fees will not have to pay any further duty if processed provided the processing is completed on or before 31st May 1962."

Notices

THE TRAVANCORE RUBBER AND TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE 18th Annual General Meeting of the Company will be held on Friday, the 15th June, 1962, at the Registered Office of the Company, Chavadi Parambu, North Commercial Canal Road, Alleppey, at 3 p.m., to transact the following business:—

1. To receive and adopt the audited Balance Sheet and Accounts for the year ended 31st December 1961 and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.
4. To appoint Auditors.
5. To transact the following special business, namely to consider and if thought fit, to pass the following resolution with or without modification:—

"RESOLVED that in conformity with the amended provisions of Section 309 of the Companies Act, the remuneration of the Directors be altered with effect from 1st January 1961 from the lump sum of Rs. 1,500 per Director per annum to a sitting fee of Rs. 250 per Director per meeting for meetings of the Board and Committees of the Board attended, subject to a maximum of Rs. 1,500 per year, plus all out-of-pocket expenses incurred for attending such meetings."

The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, in respect of special business under Item 5 set out above, is being posted to all members.

The Transfer Books and Register of Members of the Company will remain closed from 1st June 1962 to 15th June 1962 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,

THE TRAVANCORE RUBBER & TEA CO. LTD.,
Per Pro. ASPINWALL & CO. (TRAVANCORE) LTD.,
C. PRABHAKARAN,
Managing Agents.

ALLEPPEY, *12th May*, 1962.

Note: The dividend, if declared, will be paid on or after 1st July 1962 to those shareholders whose names appear in the Company's books on 15th June 1962 or to their Mandatees.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Registered Office:
9, WALLACE STREET, FORT, BOMBAY 1

INTERIM DIVIDEND

NOTICE IS HEREBY GIVEN THAT THE following Interim Dividends (subject to deduction of Income-tax) have been declared for the year ending 31st May 1962, namely:—

Rs. 240 per share on 100 Original Shares of Rs. 2,500 each.

Rs. 12 per share on 71,400 Shares of Rs. 125 each.

MARKET GOSSIP

(*Concluded from page 883*)

Commonwealth (Australia, New Zealand and Canada) has been accepted by the Six as a basis for discussion. The U.K. has accepted the eventual imposition of the common external tariff on these goods, while making it clear that it expects substantial cuts in tariffs as a result of President Kennedy's proposal for reciprocal tariff reductions. It favours the imposition of the common external tariff in three stages, the first one to take place only in 1965, the second in 1967 and the third in 1970. The Six, however, are said to be reluctant to accept this suggestion, as they fear that it might delay the realisation of the ultimate objective, namely, integration of Western Europe into a single economic and political community. Thirdly, there has been a "meeting of minds" on the British proposition that Commonwealth territories in Africa, West Indies and British-ruled Pacific islands should be offered the status of associate membership, although the Six have not yet definitely acknowledged the principle.

There are, however, still no signs of any agreement on some of the other important British proposals relating to (1) exports of temperate-zone foodstuffs from the Commonwealth, particularly butter, cereals and meat, (2) British agriculture and (3) tariffs on raw materials. For temperate-zone foodstuffs, the U.K. has suggested that provision should be made for their exports to be maintained at least at the level of the current sales to the U.K. and the Six. The U.K. is in favour of a lengthy transitional period, which should be followed by world-wide commodity arrangements designed to safeguard the interests of the producers of these commodities. The Six concede that there should be special transitional arrangements, but want to keep its duration as short as possible. They are, however, unwilling to grant any form of guarantee beyond the transitional stage, because it will, in their opinion, make it more difficult, if not impossible, to negotiate world-wide arrangements. Meanwhile, the British working paper on the subject "comparable outlets" has been referred to the Deputies, who will prepare a report, with special emphasis on cereals, to begin with.

The question of safeguarding the interests of U.K. agriculture still hangs fire. The Six, in particular, are opposed to the British request that producers should be given a "residual guarantee" (in effect an income-guarantee) to farmers on the British model. The Six have, nevertheless, accepted the British plan for annual reviews of guaranteed prices, etc., more or less on the lines of that prevailing in the U.K. at present. The third point, which has not been accepted by the Six, relates to the British proposal for *nil* tariffs on 27 items of raw materials, particularly aluminium, lead, zinc, newsprint and wood-pulp. The British argument that developed countries should not cut themselves off from access to cheap raw materials has fallen on deaf ears. On the contrary, the Six point out that an important reason why tariffs have been imposed on these goods is that the Community has its own producers to protect. Nonetheless, the issue is still open, as the Deputies have been asked to work out suitable solutions for each commodity concerned, be they tariff quotas or reductions in duties.

Thus, irrespective of the immediate success or otherwise of the Ministerial meeting, there are clear indications that it has set the ball of "actual bargaining between the two sides" rolling. The consensus of opinion among Western observers is that further progress will be made in the negotiations, before the scheduled meeting of the British Prime Minister and the French President next month.

saving in other commodity imports. Actually, the demand for other maintenance imports also is increasing and so are the defence needs. The scope for getting more foreign aid than is provided for in the Plan is practically *nil*. On the contrary, in the light of the cut made in the promised U.S. aid by the Senate Foreign Relations Committee, it is doubtful whether even the aid budgeted for will be available in full.

In the light of what has been stated so far, it is no wonder that Mr. C. Subramaniam, the Minister for Steel and Heavy Industries, could not hold out any assurance to the Lok Sabha, when the matter came up for discussion towards the close of last week, that the third Plan target of 10 million tons—9.2 million tons to be precise—of steel ingots would be realised, though he promised that he would "endeavour to achieve it." The Minister would have been more correct had he been as candid as the Planing Commission's Division and said that there would be a substantial spiliover into the fourth Plan period.

A steel shortage of the magnitude indicated in the foregoing paragraphs cannot be lightly treated, especially as it seems to be beyond remedy, in view of the absence of foreign exchange. It would, therefore, be desirable for the authorities and industrialists to get together to face the problem. A frank re-assessment of the extent to which production could be increased within the Plan period by rectifying the defects and breaking the bottlenecks must be made. The earlier this is done the better. As for the balance of the gap, the old common adage, namely, "cut your coat according to the cloth available" appears to be quite relevant. There is surely no point in establishing new industries and expanding the existing ones, if the steel necessary for them cannot be had. Capital will be unnecessarily locked up and return on investments will be delayed. It would be highly imprudent to float new ventures with foreign capital participation and foreign loans to cover, among others, the foreign exchange required for import of raw materials like steel, for such a practice would only add to the already heavy bill of servicing foreign investments, let alone their ultimate repatriation.

The failure of the public sector steel plants to come up to expectations, particularly the mismanagement of Rourkela unit, has lent additional strength to the argument that the Bokaro project be deferred until the existing plants are brought to their full production and the plans to expand them are successfully carried out. The essence of this argument is that the facilities required to keep in full operation the capacity already created and the expansion firmly planned are enormous and that, until they are fully developed and comfortably sustained without detriment to the growth of other industries included in the Plan, there is no point in attempting to establish another million-ton (ingot) plant. On the face of it, this contention is attracive and appealing. But a little reflection will show that it is fallacious. Considering the long time taken for this country even to draw up a project report and to complete all the preliminaries necessary for putting up a million-ton steel plant, it is high time earnest endeavours were made in this direction without any further delay, so that the project may mature at least in another five years, that is, by about the middle of the fourth Plan. The Rourkela project, it may be noted, took a decade to be completed, the Bhilai more than eight years and Durgapur six to seven years. The country cannot afford to defer the Bokaro project any further, if it is not to run the grave risk of an acute steel shortage in the fourth Plan period also. The planners themselves have provided for only a small production from Bokaro in the third Plan. Their object in including it in the current Plan is to pave the way for the smooth progress of the fourth Plan. According to a U.N. estimate quoted by Mr. R. R. Morarka in the Lok Sabha, India's demand for steel at the end of the next 12 years would be at the rate of 28 million tons per annum. Even if this assessment of future demand proves correct only to the extent of 75 per cent, there will be a severe shortage of steel, unless appropriate steps are taken right from now to establish more steel plants. Indeed, it would be better to erect a two-million-ton plant at Bokaro, with facilities for further expansion, instead of a single-million-ton plant as is currently programmed, and also allow T.I.S.Co. and I.I.S.Co. to expand their capacities further.

Viewed thus, Mr. Subramaniam's statement in the Lok Sabha last week, reiterating the Government's determination to go ahead with the Bokaro project, with the help of the U.S. if available or without it if necessary, was quite pertinent. He made it amply clear that the Government of India was keen on having the U.S. help, as witness his appreciation of the Americans desire to have an independent look of all the data behind the project report prepared by the Indian Consultant. A little delay would not matter very much, if, as a result of this expert scrutiny, complete success of the project could be ensured. Surely, none wants the deplorable features of Rourkela's operations to be repeated in Bokaro. It is now for the Americans to reciprocate India's desire to have the benefit of their rich experience in making steel by promptly responding to its offer.

THE NEYVELI PROJECT

THE announcement at Madras this week by Mr. C. Subramaniam, Union Minister for Steel and Heavy Industries, that the integrated Neyveli lignite project was in an advanced stage of execution is, indeed, heartening, assuming that there is no exaggeration of the prevailing position. This is one of the projects that have suffered not a little from defective planning and implementation. Both of these have been responsible for the delay in the execution of the project, with the result that the total cost has gone up quite appreciably. The original estimated cost was no more than Rs. 68.90 crores. This was subsequently revised to Rs. 94.19 crores and we are now told that the cost will go up to as high as Rs. 112.67 crores, owing, *inter alia*, to increase in customs duty and ocean freight in respect of equipment imported for the various schemes and also due to the rise in the cost of civil works following higher prices of construction materials. Leaving apart the two new schemes together costing Rs. 6 crores (clay washing plant and staff quarters) which are later additions and expansion of others, the additional cost as a result of delays runs into several crores of rupees. The Government of India took an unduly long time to sanction the various constituent units of the project, leading to higher costs and additional expenditure on alternative equipment. There was little justification, for instance, for the delay in taking a decision on the briquetting and carbonisation plant. Although tenders for the plant had been received towards the close of 1959, it was not until March 1961 that contracts for the supply of machinery and equipment were actually concluded.

Besides leading to increase in cost, the avoidable delays in the execution of the Neyveli project have also slowed down the pace of industrial development in South India, more precisely the State of Madras. The importance of lignite—or "brown coal" as it is called—to Madras State lies in the absence of high grade coal deposits. The bulk of the coal required for industrial and other purposes has to be hauled over long distances—over 1,000 miles, that is, from West Bengal and Bihar. Such long-distance haulage naturally entails heavy freight charges—Rs. 70 to Rs. 80 per ton if carried by sea and Rs. 45 to Rs. 50 if moved by railways—not to speak of the restricted availability of transport. In view of all these handicaps, the Madras State should, indeed, be considered fortunate to possess large deposits of lignite estimated at 2,000 million tons scattered over an area of 100 square miles. The more easily workable deposits assessed at 200 million tons and with favourable lignite ratio are found round about Neyveli. In terms of thermal value, 2.5 tons of lignite are computed to be equivalent to one ton of good coal. On this basis, the known deposits of lignite and the quantity easily workable are estimated at 800 million tons and 80 million tons, respectively. If these deposits can be worked out economically and utilised for the generation of power and other industrial purposes, "new horizons would be opened up for industrial and economic development of the region." It will be interesting to note here that the average production cost of lignite is a bare Rs. 10-12 per ton, which is well below even the cost of transporting coal from the North to the Madras State.

The project for the integrated development of the lignite deposits at Neyveli included in the second Plan envisaged the mining of 3.5 million tons of raw lignite annually to meet the requirements of (*a*) a thermal power plant with an aggregate capacity of 250,000 kw. (requiring 1.5 million tons of lignite), (*b*) a fertiliser plant for the production of 152,000 tons of urea fertiliser with a nitrogen content of 70,000 tons (500,000 tons), and (*c*) a plant for producing 380,000 tons of carbonised briquettes (1.5 million tons). In addition, it provided for the erection of a plant to produce 6,000 tons of white china and ball clay. No part of this project was completed during the second Plan period. Even the clay washing plant was commissioned nine months after the third Plan began. The third Plan envisages the completion of the programmes included in the second Plan, expansion of thermal power capacity by 150,000 kw. (the cost involved is put at Rs. 10 crores) and stepping up of lignite output from 3.5 million tons to 4.8 million tons at an additional outlay of Rs. 4 crores, in order to meet the fuel requirements of the expanded thermal power plant.

A little over a year ago, the Estimates Committee of the second Lok Sabha had pointed out that the project as a whole was "working at a tempo which seems to assure that the present revised schedules will be kept up and that there will be no further delays." This finding has not, however, proved correct, for, according to the latest annual report (1961-62) of the Union Ministry of Steel, Mines and Fuel, there will be a further delay of six months to one year in the completion of the various schemes. The schedules as laid down in the Ministry's report and the revised schedules as given in the Estimates Committee's report are as follows:

Scheme	*Revised schedule*	*Schedule lately laid down*
Mining*	Early 1964	End of 1964
Power Station†	Middle of 1963	Early 1964
Fertilisers ...	Middle of 1963	End of 1964
Briquetting ...	Middle of 1964	End of 1964

*The second Plan target of 3.5 million tons.

†The first stage covering the erection of five generators with a capacity of 50,000 kw. each; it excludes the second stage covering two generators one with a capacity of 50,000 kw. and another with a capacity of 100,000 kw. included in the third Plan.

In view of the importance of the project and considering that undue delays inflate costs, it is necessary to ensure that the project is completed according to the latest revised schedule at least. But from what Mr. Subramaniam said at Madras it looks as though there would be further delay in completing the power section, as there is some difficulty in getting delivery of a few key parts from the U.S.S.R. in time. Be that as it may, concrete steps should be taken from now alone for expanding lignite production. The Government has done well to take up for consideration an estimate for the expansion of the mine output to six million tons per annum during the third third Plan period, as against the target of 4.8 million tons already fixed. A final decision will, perhaps, be reached after the Government makes up its mind about the location of the iron and steel plant in the South. Preliminary reports on the feasibility of smelting Salem iron ore with Neyveli lignite, according to Mr. Subramaniam, have already been received from Norway, East Germany and the National Metallurgical Laboratory at Jamshedpur. The latter two reports are quite encouraging, and the results of large-scale tests conducted in this connection are expected to be available in June or at the latest in July.

Simultaneously with measures initiated to raise the production of lignite, vigorous efforts will also have to be made to utilise some of the by-products of the project—charfines, tar, middle oil, polyvalent phenols, kerosene, light oil, carbolic acid, cresols and xylenols that will be derived from the briquetting and carbonisation plant. It is a pity that not much advance planning has so far been made in this matter. Surely, the by-products cannot be allowed to go waste. If the resources of the Neyveli Lignite Corporation—the Corporation is said to have so far spent Rs. 76 crores—do not permit it to exploit the by-products, the Corporation can as well allow private parties to undertake the work. There is the need, too, for fully exploring avenues for the setting up of medium and small-scale industries around Neyveli. The desirability of appointing, as suggested by the Estimates Committee, a technical expert committee to undertake a survey and recommend the industrial development of the entire area with regard to by-products and other resources available may be considered by the Government without any further delay.

MARKET GOSSIP

Kourkela Muddle

IT is one thing to indulge in *tall talk* of the public sector commercial undertakings setting standards for the private sector and their being models of efficiency and enlightened management. It is quite another to make them so in practice. Nobody expected the Hindustan Steel *Limited to* work wonders in the field of steel plant management within a short period of a few years or that the T.I.S.Co. or I.I.S.Co. would have to take lessons from it on how to improve efficiency in steel manufacture. But the report of the Solveen Mission on the Rourkela steel plant, detailed extracts of which have been published in a section of the Press, reveals a state of affairs in this giant, modern and up-to-date plant which hardly does credit to the Hindustan Steel, the huge monolithic body that is responsible for managing it. The frequent breakdowns of the plant—there have been as many as 26 so far—and the periodic cessation of its operations had naturally led some to wonder whether the Germans had put up a defective plant. The Solveen Mission's findings should dispel any such impression. They clearly go to show that the blame for the breakdown should be laid entirely at the door of the Hindustan Steel. It has been in running the plant to such an extent that it cannot be excused on grounds of inexperience. It is needless to cite here the series of errors and omissions on the part of the management convincingly catalogued by the Mission in its report. Suffice it to say that it is these and not any inherent defect in the plant that have been responsible for the breakdowns and the failure to reach the full rated capacity of a million tons of ingot. The Germans on their part had done the job of planning and the execution of the contracts well. It is no fault of theirs that they put up an ultra modern steel mill, which, for its successful operation, demanded a degree of managerial competence and technical efficiency that was beyond the capacity of the Hindustan Steel to supply.
