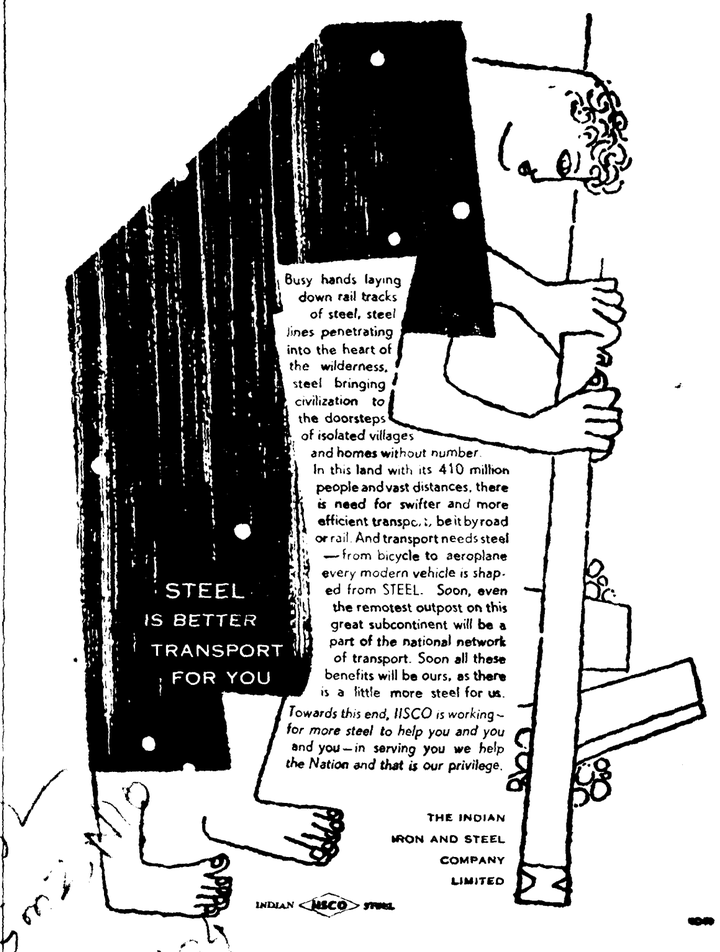
Moti Mahal (6th Floor), Junction of Jamshedji Tata Road, Churchgate Reclamation, BOMBAY 1



Busy hands laying down rail tracks of steel, steel lines penetrating into the heart of the wilderness, steel bringing civilization to the doorsteps of isolated villages and homes without number. In this land with its 410 million people and vast distances, there is need for swifter and more efficient transport, be it by road or rail. And transport needs steel — from bicycle to aeroplane every modern vehicle is shaped from STEEL. Soon, even the remotest outpost on this great subcontinent will be a part of the national network of transport. Soon all these benefits will be ours, as there is a little more steel for us.

Towards this end, IISCO is working — for more steel to help you and you and you — in serving you we help the Nation and that is our privilege.

VOL. CIV. No. 2647 **BOMBAY, 6th JANUARY 1962** **PRICE Rs. 2**

MR. IENGAR ACTS PROMPTLY

THOSE who had calculated that, in view of the impending change in the Governorship of the Reserve Bank of India—Mr. H. V. R. Iengar is due to be succeeded by Mr. P. C. Bhattacharyya, Chairman of the State Bank of India, in less than two months from now—the Reserve Bank's proposal of June last for strengthening the capital base and liquidity position of commercial banks might not reach the stage of implementation for a long time to come must have been taken by surprise last week. For, after patiently waiting for nearly six months, Mr. Iengar suddenly decided to accept the Indian Banks' Association's compromise formula at least in regard to paid-up capital and published reserves. The fact that he hurried to communicate his decision to all Indian scheduled banks through a circular (dated 27th December 1961), even though the Bank had not made up its mind in regard to raising the liquidity ratio, suggests that he wants the banks to give effect to the understanding reached with the spokesmen of the Association in allocating their profits for the year that is just over. This is only as it should be, as 1961 was one of the most profitable years for banks and there should be no difficulty for the vast majority of banks to make an impressive beginning in following the conventions, without having to reduce the level of dividends.

The Reserve Bank's original proposals in regard to capital and reserves were welcomed by this journal, *vide* page one of *Commerce* dated 1st July 1961, subject to two qualifications. The ratio of "own funds" (paid-up capital and reserves) to deposits at 7½ per cent suggested by the Bank was considered as not too high, but it was argued that, instead of enforcing it through legislation, it should be laid down as an ideal to be attained by banks as early as they could. It may be noted here that none of the major countries in the free world has resorted to legislation for this purpose. The second point made by us was that the proposal that banks should earmark 20 per cent of their untaxed profit for reserves until the paid-up capital and reserves were equal to 7.5 per cent of deposits from the public would act rather harshly on banks and leave no room for maintaining their dividends at reasonable levels. It was, therefore, suggested that banks should be placed under a statutory obligation to set aside 20 per cent of their net profit (that is, profit after depreciation and taxation), year after year, without relating the total reserves to any ceiling. The Indian Banks' Association took the stand, after protracted discussions among its members, that a ratio of 5 per cent would do, that, in any case, the ratio should not exceed 6 per cent, that the transfer to reserves from the yearly profits should be restricted to 20 per cent of declared profit, that is, net profit *minus* the transfers to secret reserves, until the total of "own funds" reached the specified ratio, and that all this should be carried out through an informal agreement and not through legislation. If past experience is any guide, there is a snag in these proposals, in that the declared profit can be easily manipulated. Nevertheless, Mr. Iengar has accepted the counter-suggestions of the Indian Banks' Association in a generous spirit. Even the question of transfers to reserves has been left to the good sense of banks. It is to be hoped that none of his successors will find it necessary to secure statutory recognition for this gentlemen's agreement. The following is the pattern of conventions in regard to paid-up capital and transfers to published reserves which Mr. Iengar has recommended to banks for adoption, apparently with immediate effect:

(1) The banks should aim to achieve a ratio of 6 per cent of capital funds (comprising paid-up capital and *published* reserves) to deposits from the public.

(2) Where the published reserves of banks are equivalent to or more than their paid-up capital, irrespective of what is said in Sections 11 and 17 of the Banking Companies Act, they should transfer at least 20 per cent of their declared profits (that is to say, profits after making usual and necessary provisions) to their published reserves till such time as their published reserves and paid-up capital reach a level of at least 6 per cent of their deposits.

(3) Where the reserves of banks have not reached parity with their paid-up capital, they should *continue* to transfer 20 per cent or more of their disclosed profits till (*a*) the reserves are at least equal to the paid-up capital *and* (*b*) the ratio of paid-up capital and published reserves to total deposits is at least 6 per cent.

Reiterating the Reserve Bank's reasons for the aforesaid reform, Mr. Iengar has made the following pertinent points in his circular letter to the banks:

"In the years to come, it will be necessary for the banks to make further intensive efforts to mobilise savings of the community through branch expansion and increasing the range and efficiency of their services. The ability of banks to discharge successfully this increasing responsibility depends vitally upon the success with which banks are able to sustain and increase the confidence of their depositors and protect their interests. In the last ten years, while the deposits of banks have risen substantially, there has not been any material increase in their capital and reserves—with the exception of the compulsory appropriations to the reserve funds required under existing legislation in the case of banks, the reserve funds of which are less than their paid-up capital—with the result that the ratio of paid-up capital and reserves to deposits of scheduled banks has steadily declined from 9 per cent in 1950 to 5 per cent in 1960.

"The existing provisions with regard to minimum capital and reserves as well as transfers to reserves out of annual profits in the Banking Companies Act are of a minimal character which were introduced in the then prevailing context; the chief objective then was to raise the standard of performance of several sub-standard banks which had come into existence during the war years. In the altered circumstances of today, higher operational standards than those stipulated in 1949 have become imperative. Even in advanced industrial countries, with well developed banking systems, there has always been a conscious and concerted effort to get the shareholders' money in business into a proper trading relationship to their deposits; the ratio of capital funds to deposits of banks abroad has generally been on the increase in the last decade."

There are good reasons to feel, as rightly stated by Mr. Iengar, that the aforesaid conventions are not impracticable, especially as no time limit has been set for reaching the 6 per cent ratio of "own funds" to deposits. Mr. Iengar has made it clear that, while he does not minimise the importance of secret reserves, one should not carry this argument to such an extent as to reduce the importance of published reserves. Indeed, the prestige of a bank in the eyes of the public depends, to a large extent, on its published reserves.

Although no time limit has been set to reach the aforesaid goals, it is obvious that banks should start moving in that direction. Already some banks have begun to raise their paid-up capital by issue of new shares at a modest premium. The latest to join the list is the Bank of India which announced, in the last week of last month, an issue of 200,000 shares of Rs. 100 each, with Rs. 50 paid-up, at a premium of Rs. 20 per share. This is a bold step which will bring in a sizable amount of Rs. 1.40 crore. It is possible to think of all sorts of difficulties in the way, but wisdom lies in endeavouring to overcome them. A low capital base in relation to deposits and a high level of dividend are an eyesore to bank employees, trade union leaders, and socialist-minded politicians in whose hands the destinies of this country rest now. It is wrong to think in the present age that high dividends add to the prestige of banks. On the contrary, a big paid-up capital, held by a large number of shareholders, supplemented by substantial reserves and moderate dividend levels steadily maintained year after year, will tend to be a bulwark against nationalisation. In the ultimate analysis, the Reserve Bank's proposals imply that banks will have to be more efficient in their work than they have been hitherto. They can no longer afford to be the provider of soft loans to their favourite sections of trade and industry. Nor can the Government expect to borrow from them at relatively low rates of interest.

AGRICULTURAL PERFORMANCE

INDIAN agriculture attained a record level of production in the crop year ended June 1961—a level which was very nearly 40 per cent higher than that of the crop year ended June 1950. Substantial though this increase was, it was still not relatively much, for India's population over the same period had registered an increase of about 22 per cent. It might, of course, be plausibly argued that the rate of increase in population had not outstripped the rate of increase in agricultural production and that agricultural performance was thus relatively good. Such an argument would not be quite tenable, for it is well known that the increased requirements (caused by rapid industrialisation, increases in incomes and the general urge for better living standards of a larger population as well as the need for stepping up exports) have not been *fully* met, in spite of the increase in agricultural production. It would, therefore, appear that the official elation over the record agricultural output

in 1960-61 was not quite justified. Fortunately the mood of exultation soon wore off, yielding place to a mood of caution and introspection.

The latter mood, which was reflected particularly in Mr. S. K. Patil's convocation address at the Indian Agricultural Research Institute on 26th December last and in Dr. V. K. R. V. Rao's presidential address at the twenty-first annual conference of the Indian Society of Agricultural Economics, has greater justification. The Union Minister for Food and Agriculture was frankly, and rightly, critical in his approach to the basic problems confronting the country's agricultural system. The gaps and deficiencies, which were all too glaring, in this system betrayed, in his view, "undoubted neglect and indifference." Who was primarily responsible for this indifference to agriculture? Was it the Government or the agriculturist himself? Although Mr. Patil did not say it in so many words, he almost seemed to imply that it was the Government that would have to accept the blame. Surely, the glaring deficiencies which he pinpointed could not be primarily attributed to any lethargy and indifference on the part of the agriculturist. While it is undeniable that State-sponsored agricultural research has many laboratory achievements to its credit, the practical application of the results of research has lagged far behind. This function of extension to the field of research results by way of improved seeds, improved cultural practices, and so on, has not been adequately and efficiently discharged by the State. Even after allowance is made for the achievements of the Community Development and National Extension Programme in the last six or seven years, the work of agricultural extension, which has necessarily to be State-sponsored, is yet to make a countrywide impact on the required scale.

Again, the absence of adequate knowledge about the condition and nature of soil by way of separate assessments of the different areas for the purpose of evolving suitable manurial practices is due to the failure of State enterprise. It is true that this deficiency has been sought to be rectified in recent years under an Indo-U.S. Technical Co-operation project for determining soil fertility and application of fertilisers. But even the fringe of the problem has not been touched. While the soil tests conducted so far, under this project, on about two lakhs soil samples are stated to have enabled the demarcation of areas according to their requirements of different types of fertilisers, their adequacy and reliability seem to be in some doubt. Mr. Patil's criticism that the drive for the use of fertilisers has been launched only on the basis of some general experiments lends substance to this point. In any case, as Mr. M. S. Sivaraman, I.C.S., has argued in his article entitled "Some Lessons from American Agriculture" in the latest (1961) *Annual Number of Commerce*, the response of crops to fertiliser use cannot be the deciding factor in the use of fertilisers in the absence of extensive moisture and soil conservation practices. The failure here is again that of the State, for India has yet to establish and operate a soil conservation service of the kind which has functioned in the United States since 1935 and made it possible for that country's agriculture to use, as of 1956, five or six times more fertilisers than in 1934. Mr. Patil's reference to the present 60 per cent loss of water, due to seepage, percolation and evaporation, the waste of a considerable portion of irrigation and loss of already irrigated land through water-logging and salinity, is a further confirmation of the serious deficiency in the matter of irrigation practices.

There are also other glaring State failures in the field of agriculture. The net increase in the irrigated area over the last decade has fallen short of the target by about 20 million acres, with the result that the 1960-61 irrigated acreage is estimated to have been only 68 million acres, as compared with 54 million acres in 1950-51. As irrigation has been largely in the field of State enterprise all along, it is the Governments—both Centre and States, but mostly the latter—that must accept the bulk of the blame for the deficiency. Similarly, the deficiencies in the matter of distribution of improved seeds and improved implements and adoption of better cultural practices and cropping patterns cannot be attributed to any conservatism on the part of the agriculturist. The fact is that the agricultural extension service has not functioned on the scale required to enlighten the farmers on the practicability and profitability of change in traditional techniques. Scientific grain storage, which could minimise the annual loss caused by the inroads of weevils, rats and moisture, has also failed to make the requisite headway as a large-scale State enterprise in the field of agriculture. A State-sponsored plant protection service, which could minimise the loss caused to standing crops by pests and diseases, is yet to function on a countrywide scale.

As these and other deficiencies mentioned earlier, for which the State alone is primarily responsible, have been very much there, it is no wonder that agricultural productivity in India in terms of unit area yield continues to be deplorably low. Dr. V. K. R. V. Rao's exhaustive treatment of this productivity aspect, with supporting statistics, in his address at the conference of the Indian Society of Agricultural Economics serves to drive home the point that it is only through a big increase of 50 to 60 per cent in productivity that a rise of about 55 per cent in agricultural production can be brought about by 1970. His argument, in this connection, is that nearly half the increase in agricultural production in the last decade has been due to an extension in the area under cultivation and that there is no very great scope for the operation of this factor of extensive cultivation over the next decade. This is quite a valid argument which must be heeded. But the big increase in productivity that is required can be achieved only if the glaring defects and deficiencies in State-sponsored activities in the field of agriculture are energetically remedied. It will be, as it has always been, a question of administration and organisation. Mr. S. K. Patil's emphatic view that what the farmer needs by way of capital, know-how and other facilities *must be placed in his hands* is an implicit recognition of the need for better organisation and greater State enterprise.

The approach here must be a broad national one. Dr. V. K. R. V. Rao's thesis that the investment in agriculture contemplated for the different States should do justice to the principle of balanced regional development so as to minimise "the startling differences that now exist in inter-State agricultural productivity" is hardly relevant in this context. Regional disparities in agricultural productivity have always been there because of disparities in climate, topography, water resources, soil fertility, efficiency of State Governments, competence, aptitude and experience of farmers, and so on. Their continued existence does not mean that agricultural development has not been planned on a uniform and equitable basis. A region which has been endowed with better natural facilities is bound to show better results under the impact of agricultural improvement programmes than the one which is basically deficient in such natural advantages. That does not mean that developmental resources should be disproportionately concentrated in the former region and relatively lessened in the case of the latter. If anything, they should be relatively more in the case of the latter region to make up for some of the natural deficiencies.

Be that as it may, what is more patently required is efficient organisation for taking to the farmer capital and improved know-how. After all, the resources in terms of credit, goods and services are being broadly allocated according to the acreages under cultivation with adjustments for the irrigation factor. This basis of allocation is *prima facie* equitable. If any part of these resources cannot be easily had by tenant farmers or small landowners, it will be a case of maldistribution which is due to inefficiency or lack of integrity or both in the field of organisation—whether State, co-operative or private. A problem of this kind does not justify an elaborate and time-consuming inquiry by yet another commission such as the one suggested by Dr. V. K. R. V. Rao. Any number of inquiries by the Planning Commission, the Union Ministries concerned and the State Governments on different aspects of the agricultural system has been made in the last ten years. If one has the patience to study them, one will find therein a more or less complete diagnosis of the malady of Indian agriculture and also the remedies. It only remains to select the best remedy and apply it. In a way this is being done now. Only it has to be rendered more effective and adequate by channelling aids to agriculture without waste or delay on the way. The task is primarily one to be tackled by the State Governments.

ELECTRICITY UNDERTAKINGS

THE Federation of Electricity Undertakings of India, which has served the licensees well by steadfastly presenting their case to the authorities with moderation and restraint, may derive not a little satisfaction from the proceedings of its annual general meeting held at Bombay on 30th December 1961. The electricity industry has every reason to be satisfied that the reasonable pleas made on its behalf from time to time have been quite persuasive too. One has only to recall, in this connection, the brief but pointed address of Mr. S. M. Zubair, Chairman of the Federation, and the considerate and point-by-point reply of Mr. Hafiz Mohammad Ibrahim, Union Minister of Irrigation and Power, at the annual meeting. That there is now a larger measure of agreement than ever before between the Government and the private electricity industry is quite apparent. A certain time-lag between ministerial promise and administrative performance will, of course, be there, but this is understandable, because amendments to the Electricity (Supply) Act may be undertaken only after the General Elections this year.

For the present, the points conceded by the Minister and the promises made by him may be taken to reflect a likely reorientation of the Government's policy relating to the electricity industry. For instance, it has been conceded by the Minister that the present formula of computing the "reasonable return" to the electricity undertakings has not proved flexible enough to permit adjustment of profits with the changing conditions in the money market. And it has been further stated by him that the question of enabling the licensees to find finance for fresh development is being considered by the Government and that the Electricity (Supply) Act would be amended, if necessary, for that purpose. Although the Minister has not straightaway accepted Mr. Zubair's plea for an increase of 1 per cent in the standard rate of "reasonable return," there can be no gainsaying that the industry has been implicitly assured of a fair deal. The Government has no objection, according to the Minister, to the interest on loans (raised by the licensees from certain approved lending agencies) being permitted to be charged as an item of operating expenditure. This willingness is a further confirmation of the welcome change in the Ministry's approach to the problems of the electricity industry. Mr. Hafiz Mohammad Ibrahim's clear statement that generally no private electric supply undertaking, which is functioning satisfactorily and rendering efficient service to the public, would be taken over by the Government should go a long way in allaying the fears of the industry. Taken together, the Minister's statements do point to the likelihood of some changes in the Electricity (Supply) Act—changes which may stimulate the equity investor who has so far been the mainstay of the industry. As many of the licensees are now poised to enter the money market for raising new capital, they rightly look forward to early changes in the law for giving relief to the investor. From all this one must not, however, jump to the conclusion that the Government has made any large concessions to the private sector. Far from it. At best, there have been only some slight relaxations in the rigid policy and that too, long after the need for them had become apparent.

On the subject of power shortage, too, Mr. Zubair and Mr. Hafiz Mohammad Ibrahim have found themselves in broad agreement with each other. The former's criticism of the growing tendency on the part of industrial consumers to set up their own generating units which are generally uneconomic has been accepted by the Minister because such a course would lead to lop-sided development. Mr. Zubair's argument is that installation of generating plant by industrial undertakings would be less enduring than installation of additional capacity by public utility electricity undertakings in the region concerned. But it is a pity that his related plea for permission to the electricity undertakings to expand on the required scale has not been specifically accepted by the Minister. His statement that, as a rule, all consumers, including large industries, should get their requirements of power from the public electricity supply systems sounds vague. It would appear that the Government is still unwilling to learn from experience and from the findings of their own administrators about the working of some of the leading public sector power systems, vide, for instance, the report of the Sachdev Committee on the position of power supply in the Eastern region. In view of the acute shortage of power that is being experienced in many regions of the country, it is very much to be hoped that the promised amendments to the Electricity (Supply) Act will be sufficiently generous to ensure a better return to the private electricity undertakings and to permit their expansion.

MARKET GOSSIP

THE share markets have greeted the New Year in an optimistic frame of mind. The swift and successful conclusion of the Goa affair has removed one political uncertainty. The Chinese aggression and threats by Pakistan are there, but the operators are not worried about them now. For the present, the sentiment is once again bullish on the same old ground that the sky is the only limit for India's economic growth. The rise in equities since the last settlement has been so substantial that some of the scrips in the forward list have attracted the operation of automatic margins. The money market is still comfortable and the seasonal stringency is yet to be felt. The banks, however, realise that this is only a passing phase and that they have a tremendous responsibility to be discharged under the third Plan which will require an enormous increase in their resources. There is, therefore, keen competition among them for attracting the savings and liquid funds of the community. One bank after another is launching new schemes to spread the banking habit in the country.

Competition Among Banks: More The Merrier

The Bank of India Ltd. and the Canara Bank Ltd. have added a new dimension to their service to customers. With effect from the New Year, the Bank of India has decided to permit, free of charge, special mail transfers between any two of its branches for sums upto Rs. 10,000 per day per customer. This facility will be available to all its customers, irrespective of the type of account held. The Canara Bank has announced that, with effect from the 1st inst., it will permit free mail transfer of money upto Rs. 1,000 per day, but this facility is restricted only to its savings account-holders. The Bank of India's scheme is thus more liberal of the two both in respect of the amount that could be transferred in one day and other terms of transfer. It is also not subject to any of the annoying restrictions and conditions under the scheme announced by the State Bank last month. Indeed, the Bank of India's scheme is so attractive that the State Bank's lead pales into insignificance. It is true that the former, too, has placed a limit on the amount that can be transferred free of charge. But it has been fixed at a fairly high level, so that a customer can transfer a total of Rs. 60,000 a week (6 working days) without paying any charge.

It will be recalled that the State Bank's scheme is subject to the following conditions: (1) Credit transfer is possible in respect of only personal (as distinguished from corporate) savings or current accounts. (2) Remittances should be made in person by the account-holder. (3) They should not exceed Rs. 1,000 per account per day. (4) Inter-branch transfers are not possible. These restrictions considerably limit the scheme, which, in effect, benefits only an accounter-holder who goes out of his town and wants to send remittances home. It is thus clear that the Bank of India's scheme is far ahead of the State Bank's scheme and is, therefore, bound to be popular. The primary object of the scheme, it is said, is to provide the Bank's customers with one more tangible facility and thereby popularise the banking habit. Obviously, it is part of the new drive for attracting deposits.

The liberal nature of the Bank of India's new scheme has, however, attracted a measure of criticism from other banks. It is pointed out, for instance, that the scheme will provoke other banks to follow suit with even more attractive facilities as, otherwise, not only will they find its difficult to attract fresh depositors but even their existing customers may be tempted to bank with the Bank of India. Thus, it will mark the beginning of a period of intense competition, which, so the argument goes, will ultimately do harm to banking in general. It is contended by some that not all banks will be in a position to provide the free transfer facilities which the Bank of India has now offered, because banks having a much larger number of branches than the Bank of India, especially in places where neither the Reserve Bank nor the State Bank has any branches, will find it a very uneconomic proposition. They contend that, in initiating this scheme, the Bank of India is taking advantage of the comparatively smaller number of branches it has and that too mostly in big and small cities where facilities for transfer of funds are readily available. In other words, the sum and substance of this line of argument is that it is inimical to the growth of branch banking and that it penalises those banks which went out of their way to provide banking services in small towns as well.

The Bank of India's answer to these criticisms could well be along these lines. Its primary aim is to render the best possible service to its customers and the free transfer facility represents only the latest in a series of facilities it has offered. In respect of the number of cheques permissible, for instance, the Bank of India's terms are more attractive than those of other banks. As to the charge that the scheme is designed to take advantage of the smaller number of branches it has, one has to bear in mind that the Bank of India itself has been steadily increasing the number of its branches. At the beginning of 1958, for instance, the Bank had only 46 branches, whereas today it has 75 branches, an increase of more than 60 per cent. What is more, the Bank expects to open not less than 25 branches this year, so that, by the end of the year, the number of branches will be 100. If the smaller number of branches is an advantage to the Bank in working the scheme, it surely constitutes a disadvantage in many other respects.

While the apprehension of some banks that the new facility offered by the Bank of India will place them at a disadvantage and may revive the old unhealthy competition for deposits, which was brought under control through the inter-bank agreement, is understandable, one cannot find fault with the Bank of India for giving additional facilities for its customers. In fact, if the banking habit, which is still not fully developed in India, is to spread rapidly, banks in the country must make their services as attractive as possible. Since there is little scope for competition in the rates of interest offered on deposits, which are governed by inter-bank agreement, competition should naturally be in the services offered. If banks do not have a free hand at least in this respect, banking will increasingly tend to be monopolistic in character and this will spell the doom of free enterprise in the country. In fact, there is a lot more room for competition among banks in improving their service to customers. For instance, even after the introduction of night airmail service, banks still take as much time as they did before when mails were being sent by surface transport, to collect a cheque on Calcutta or Madras or Delhi or Nagpur. Surely, they ought to be able to give credit to their customers for cheques drawn on these cities and other places, which are easily accessible now, in three or four days, instead of eight to ten days. Some banks take even 12 to 15 days under the stock argument that advice has not been received.

Modella Woollens

The response to the Rs. 30.50-lakh equity issue of the Modella Woollens Limited (Chairman: Mr. C. C. Desai, I.C.S. Retd.), due to open for public subscription on Friday the 12th inst., will doubtless be quite encouraging. For those who subscribe to the capital may not have to wait for long to get a reasonable rate of return. The shoddy spinning plant of the Company at Thana in Bombay has already gone into production and the wool top unit, now being set up at Chandigarh (Punjab), is expected to commence operation in the second half of this year. The products manufactured at the two units are assured of ready demand; the products are shoddy yarn (used for making coarse and cheap varieties of woollen fabrics such as valours, blazers, meltons, flannels and blankets) and wool tops. The quality of the products, according to the management, will be of a high order, as the machinery and equipment installed in both the units are new, incorporating the latest techniques of manufacture. What is more, the Company has secured for the wool top project financial and technical collaboration from the well-known wool combers and top makers of Britain, Messrs. Robt. Jowitt and Sons Ltd., Bradford. The terms offered by the foreign firm are very favourable, there being no technical fees or royalties. It will participate in the equity capital of the Company to the tune of Rs. 13.33 lakhs (£100,000), as well as assist in the erection of plant and machinery, provide the necessary technical know-how, train Indian personnel in its combing mills at Bradford, and supervise the buying and blending of raw wool in world markets on behalf of the Company, all of which will enable the Company to produce high quality finished tops.

The shoddy spinning plant consists of 2,000 spindles, with an aggregate daily productive capacity of 5,000 lbs. of shoddy yarn from wool rags and wool waste. The cost of the plant, together with that of the building, is put at Rs. 18.63 lakhs. The annual productive capacity of the Chandigarh unit is 1.5 million lbs. of wool tops on double-shift basis. The capital outlay is estimated at Rs. 51.25 lakhs, of which the cost of machinery to be imported on deferred payment accounts for Rs. 25 lakhs.

The detail of the Modella Woollens' public issue appear elsewhere (*vide* pages 32 and 33). The offer is for Rs. 30.50 lakhs, divided into 305,000 shares of Rs. 10 each, inclusive of Rs. 5 lakhs representing the value of shares to be allotted to the Life Insurance Corporation against the underwriting agreement. The entire issue has been underwritten by the L.I.C. and prominent firms of sharebrokers. The amount of the public issue is nearly half the Company's total capital of Rs. 65 lakhs. Of the balance of Rs. 34.50 lakhs, the promoters, Directors, their friends and associates have already taken up Rs. 10 lakhs (in fully paid shares) and agreed to subscribe another Rs. 11.17 lakhs. The foreign collaborators will participate in the equity capital to the extent of Rs. 13.33 lakhs, which is an impressive proof of their faith in the success of the project.

Universal Electrics

In keeping with the pace of industrial growth, the third Five-year Plan envisages a significant expansion in the electricity generating capacity, from about 5.7 million kilowatts in 1960-61 to as much as 13.4 million kilowatts in 1965-66. The distribution of such a large powerload among a wide range of consumers, industrial and domestic, naturally involves a heavy requirement of watthour meters, also called house service meters, which will be substantially larger than the actual output of just 470,000 pieces in 1960. The third Plan contains a provision for expanding the capacity from 600,000 meters in 1960-61 to as much as 2.5 million meters by 1965-66. These figures give an idea of the extent to which demand is expected to go up in the coming years. In view of the need for bridging the wide gap thus and considering the severe curtailment of imports owing to foreign exchange shortage, the project of the Universal Electrics Ltd. to put up near Calcutta an up-to-date factory to manufacture 120,000 house service meters per annum is, indeed, well conceived. The total capital outlay on the project is estimated at Rs. 77 lakhs, including working capital of Rs. 22 lakhs. The factory is scheduled to start production sometime during the first half of 1963.

In order to raise the funds required for meeting a large part of the outlay, the Company proposes to enter the market next week with a public issue of Rs. 25 lakhs; the subscription list will open on Wednesday the 10th inst. This amount, as will be seen from the details published elsewhere in the issue (*vide* pages 16 and 17), is more than 50 per cent of the aggregate paid-up capital of Rs. 43.10 lakhs. The balance of Rs. 18.10 lakhs comprises Rs. 10 lakhs already subscribed or agreed to be subscribed by the Directors and their friends, etc., and Rs. 8.10 lakhs allotted (in the form of 8,100 6½ per cent cumulative non-redeemable preference shares of Rs. 100 each) to the Mitsubishi Electric Manufacturing Company Ltd. (MELCO) of Japan, who are the foreign collaborators in the project. This amount represents the consideration in relation to the supply of machinery, equipment and technical assistance. The entire issue to the public has been underwritten.

Under the collaboration agreements entered into with the Japanese firm, the Company has been assured of (a) supply of machinery (under *ad hoc* yen credit on deferred payment terms), as well as up-to-date technical information with regard to the design and manufacture of all types of watthour meters; (b) availability of qualified technical staff; (c) training facilities; (d) right to use any form of trade mark; and (e) a licence from the MELCO to export the watthour meters produced in India to any country in the world excepting Japan, Canada and the U.S. In consideration of licences and all rights granted, the Company has to pay to the MELCO royalties calculated at 2½ per cent on the net selling price of meters sold.

The Company has an influential Board of Directors who include Mr. S. K. Birla and Mr. Hachiroemon Inoue, Director of the MELCO's Overseas Operations Division.

World Sugar

The World Sugar Agreement has now virtually collapsed, thanks to the failure of the U.N. Sugar Conference to reach agreement on the size of the member-countries' export tonnages for the calendar years 1962 and 1963. The Conference held a prolonged session at Geneva, initially from 12th September to 23rd October 1961 and later from 7th to 14th December. The European Office of the U.N. summed up the outcome of the Conference in just one sentence: "The Executive Committee of the United Nations Sugar Conference has today (12th December 1961) concluded that, while it is not at present possible to reach agreement on the matter of quotas for 1962 and 1963, the Conference should consider, and is considering, how international co-operation in sugar matters can best be continued." The Sugar Council was asked to keep the world sugar situation under constant review and to undertake such studies and reviews as would assist in the orderly marketing of sugar, as well as in the preparatory work for the resumption of the Conference or for the convening of another U.N. Sugar Conference in 1963. The Governments of the member-countries were also called upon "to maintain close contact with the International Sugar Council and to co-operate with it with a view to facilitating its tasks."

Excepting for the assurance of further efforts, the mountain of labour at the Geneva Conference has thus not brought out even a mouse. The Conference, it will be recalled, was convened in order to examine the entire working of the Sugar Agreement of 1958, especially in regard to quotas and prices. High hopes were expressed then that the Conference would succeed in making suitable additions and amendments to the Agreement so as to achieve its primary objective of providing both a fair and stable price for sugar producers. But the hopes have been belied. For the main difficulty at the Conference was one of reconciling the conflicting interests in the world's sugar economy, represented by the exporting countries (particularly Cuba, the largest exporter, which is now in the Communist camp), on the one side, and the importing countries (particularly the U.S.), on the other. This difficulty could have been solved had Cuba, Russia and other Communist countries lent their support to the Sugar Council. It is these countries which always disrupt the free market for world sugar by suddenly unloading at times large quantities.

The Geneva Conference was deadlocked over Cuba's insistence on an increased sugar export quota for 1962 to compensate for the loss of its U.S. market. Cuba, supported by the Communist bloc, originally put forward a demand for a quota of 7.3 million tons which was later reduced to 6.8 million tons. The demand was, however, strongly opposed by the Western countries which felt that a quota of 5.8 million tons was more than reasonable. The opposition was quite justified. For the acceptance of the demand would have meant a denial of a sizable part of the free market for the other sugar producing countries the aggregate basic quotas of which add up to only 4.0 million tons, as against the estimated free market requirements of 9.5 million tons in 1962.

With the failure of the U.N. Sugar Conference to reach any understanding, the only alternative

(*Continued on page 52*)

SHARE MARKET CHEERFUL

ALL-ROUND IMPROVEMENT IN VALUES

(From Our Own Correspondent)

BOMBAY, *4th January*

THE stock exchange began the New Year on a cheerful note. Operators were inclined to feel that 1962 would be a year of prosperity. The optimism was strengthened by favourable corporate news and the report that production in the works of Indian Iron and Tata Steel during December 1961 was higher than in the previous month. While support from investors as well as speculators was good, offerings were scarce. As a result values of shares in both cash and forward lists registered a smart rally. The undertone of the market was distinctly bullish. Textiles were well supported, thanks to rumours that price stamping might be abolished. Sugar shares attracted good attention immediately following the promulgation of the Ordinance by the Governor of Maharashtra, exempting certain categories of land from the operation of the land ceiling legislation. Subsequently, it was thought that the cane farms attached to sugar mills did not come under the purview of the Ordinance. Consequently, values fell back. Nevertheless, today's closing rates are well above those prevailing on the last trading day of 1961, namely, 22nd December and substantially higher than the closing quotation as on 14th December, the date of our last weekly report for 1961.

With effect from the new year, six shares have been transferred from the cash to the forward list. They are Dawn Mills, Phœnix Mills, Amar Dye, Indian Dyestuff, Poly-Chem and Maharashtra Sugar. Business in Amar Dye, Dawn Mills, Maharashtra Sugar and Poly-Chem is permitted in lots of five shares. The unit of trading in both Indian Dyestuff and Phœnix Mills is one share.

Steel shares ruled firm. Indian Irons, in particular, were well favoured, thanks to reports that the Company had obtained a World Bank loan for the expansion of its collieries. They improved from Rs. 24.32 on 14th of last month to Rs. 25.48 on the 22nd and to Rs. 25.50 today. The net gain over the period is Re. 1.18. Tata Steels, too, met with good support and rose from the year-end quotation of Rs. 140.75 (as against the closing of Rs. 141 on 14th December) to Rs. 145 today before finishing lower at Rs. 144.50. The net gain during the period was Rs. 3.50. Mukand Irons commenced the New Year at Rs. 28.25, as against Rs. 27.50 on the last trading day of 1961, and advanced to Rs. 29 today, before finishing at Rs. 28.75.

Among textiles, Centurys were in the limelight, advancing from Rs. 615 on the opening day of the New Year to Rs. 637 today. Profit-taking, however, brought down the scrip to Rs. 628 at close. This compares with the rate of Rs. 599 on 22nd December and Rs. 576 on 14th December. Standard Mills, at today's closing of Rs. 1,184 shows a rise of Rs. 129, as compared with the quotation on 14th December. Kohinoors at Rs. 313 shows a rise of Rs. 9 over the same period and Bombay Dyeings at Rs. 67.50 a rise of 90 nP. Finlays hardened by Rs. 14 to Rs. 331. Gokaks firmed up by a like amount to Rs. 210. Khataus were done Rs. 6.25 higher at Rs. 481.25. Morarjees put on Rs. 26 to Rs. 406. Podars advanced by Rs. 7 to Rs. 152. Shree Niwas gained Rs. 2 to Rs. 289. Tata Mills were marked up by Rs. 8 to Rs. 80.20 and Svadeshis by Rs. 4.25 to Rs. 283.

In the sugar section, Belapurs advanced from Rs. 265 on 14th December to Rs. 291 on the 2nd inst. Selling which followed subsequently resulted in a setback and the scrip declined to Rs. 274 today. The net gain over the period was Rs. 9. Maharashtra Sugars, which were put in the forward list with effect from 2nd January 1962, advanced by Rs. 10 to Rs. 200. Phaltans were done 50 nP higher at Rs. 127. Walchandnagars were steady at Rs. 166.

Cement shares elicited buying enquiries. Associated Cements advanced from Rs. 161 on 14th December to Rs. 164.50 today, though the closing was lower at Rs. 163.75. Digvijays were quoted Rs. 3 higher at Rs. 199. Orissa Cements put on 36 nP at Rs. 15.80.

In the shipping group, Scindias improved by 40 nP to Rs. 13.12. Great Easterns gathered 44 nP to Rs. 12.60 *ex-div*. Among automobiles, Hindustan Motors hardened by 52 nP to Rs. 21.12. Premier Automobiles firmed by Rs. 3.50 to Rs. 159.

Rayon shares were in good demand, with an all-round improvement in values. National Rayons, which were quoted at Rs. 551 on 14th December, advanced to Rs. 562 on 22nd December. They firmed up further after the New Year and touched Rs. 576 today before finishing at Rs. 570. The net gain over the period was Rs. 19. South India Viscose advanced by Rs. 9 to Rs. 183. Baroda Rayons scored a gain of Rs. 6 to Rs. 161. Indian Rayons put on Rs. 5 to Rs. 97. Gwalior Rayons were done Rs. 2.60 higher at Rs. 50.60.

Chemicals firmed up. The three shares that were transferred from the cash to the forward list met with good support. Amar Dyes spurted from Rs. 288.75 on 14th December to Rs. 355 today, a rise of Rs. 66.25. Poly-Chems advanced by Rs. 33.75 to Rs. 235. Indian Dyestuffs jumped by Rs. 142.50 to Rs. 570. Colour-Chems advanced by Rs. 40 to Rs. 467.50, and Alembics by Rs. 5 to Rs. 241.25. Dhrangadhras rose by Rs. 10 to Rs. 135.

Among engineering shares, T.E.L.Cos. advanced from Rs. 354.50 on 14th December to Rs. 356.50 on the 22nd and further to Rs. 363.50 today. Alcock Ashdowns firmed up by Rs. 9 to Rs. 319. Larsen and Toubros hardened by Rs. 3.50 to Rs. 41. New Standard Engineerings rose by Rs. 19 to Rs. 211. McKenzies increased by Rs. 8.75 to Rs. 148.75. Texmacos were a shade better at Rs. 21.16.

In the miscellaneous group, Bombay Burmahs firmed up from Rs. 640 on 14th December to Rs. 665 on the 22nd and to Rs. 677 today. The close was Rs. 7 lower at Rs. 670. As compared with the quotations as on 14th December, Hindustan Levers recorded a rise of Re. 1 to Rs. 58. Premier Tyres gained Rs. 12 to Rs. 154. West Coast Papers were quoted at Rs. 186 *ex-div*. W. H. Bradys picked up Rs. 20 to Rs. 500. Chemicoats put on Rs. 6 to Rs. 126. Tata Oils improved by Rs. 2.70 to Rs. 82.5. Wimcos gathered Rs. 7 to Rs. 308.

* * * *

Calcutta Stock Exchange

CALCUTTA, *3rd January*

A firm trend was in evidence on the Stock Exchange in the past fortnight, though the volume of transactions remained poor as a result of tightness of credit. In the previous week, trading was quiet, the alternate bouts of selling and buying and the wide fluctuations both before and after the police action in Goa leading to losses on balance. The encouraging rise in production in the corporate sector should have ordinarily invited greater investment support, but holiday considerations, coupled with the proximity of the budget and the increased interest charges, which result in carry-forward business being costlier, led to a cautious tendency. With the introduction of the automatic margin system and the belief that the recent meeting of Stock Exchange Presidents recommended further reforms has evidently curbed speculation. Indian Irons, however, closed with a substantial gain, following the announcement of the World Bank loan and anticipations of increased steel retention prices. The recent support from the L.I.C. was also a factor cushioning sentiment. The nervousness displayed immediately after the entry of Indian troops into Goa died away when it was announced in Washington that the U.S. aid policy to India remained unchanged, though the more prudent await the Aid-India Club's meeting at the end of this month, before thinking that Goa had not affected the flow of Western aid to India. Jute shares gained on investment support, as the mills are working more satisfactorily than the last accounting period and simultaneous business in goods and fibre is admitting of profits. However, coals were neglected, as the call for greater production is not matched with hopes of an improvement in transport. Sugars were also dull on anxiety that the increasing trend of output might depress prices further. Shares of paper mills improved on good corporate news and/or rumours, while teas were quietly steady, as there was anxiety about marketing the huge surplus of common teas. Several counters in the miscellaneous group benefited from interested support on improved prospects. The improvement in prices of bank shares was also a feature springing from growth prospects and the decision by some banks to increase capital. Textiles lost earlier gains on apprehension about exports.

Several features were recorded in jutes. Gourepores steadily rose from Rs. 394 to Rs. 400. At Rs. 196.00, Anglo-Indias scored Rs. 20.50. Kinnisons were raised from Rs. 154 to Rs. 165 on interested support. Bally hardening from Rs. 223 to Rs. 242. Baranagores picked up Rs. 6 at Rs. 138. Fort Williams had buyers at Rs. 29.44, as against Rs. 28.12 earlier, while Lawrences closed lower at Rs. 170, as against Rs. 175. Aucklands also gave way and met with buyers at Rs. 162, as against Rs. 170. Ganges were fractionally better at Rs. 12.75, as were New Centrals at Rs. 17.12. Agarparas at Rs. 10.56 gained nearly a point, as did Howrahs at Rs. 20.50. Megnas climbed up from Rs. 12.37 to Rs. 13.12. Northbrooks at Rs. 31.25 scoring four points.

A low volume of business was recorded among coals, where Bengals were unchanged at Rs. 350. Burrakurs at Rs. 18.50 closed 50 nP higher on balance. Central Indias gained from Rs. 11.87 to Rs. 12.31, while New Beerbhooms eased from Rs. 22.75 to Rs. 22.19. South Karanpuras closed at Rs. 8.81, after rising from Rs. 8.50 to Rs. 9.50. Raneegunges were quiet at Rs. 15.12.

Among textiles, Dunbars were a strong feature, with an initial rise from Rs. 31.94 to Rs. 32.56, but closed at Rs. 32. On the other hand, Elgin Mills eased from Rs. 22.50 to Rs. 22.15.

Paper mills met with interested support. Seshasayees were bought on investment account at rates varying from Rs. 8.50 to Rs. 8.94 (Rs. 10 paid-up) on expectations of early commencement of production. Orient Papers were steady, with a smart rise to Rs. 40.60, stimulated by the news of the grant of a loan by the U.S. Export-Import Bank. Titaghurs benefited from encouraging corporate rumours and advanced from Rs. 35 to Rs. 35.75.

Sugars were featureless. Balrampurs, for which the taxable ordinary dividend has been maintained at 8 per cent, despite a decline in profits, fell from Rs. 2.56 to Rs. 2.37. The taxable ordinary dividend has been maintained for Tulsipurs, the profits recording an increase. The quotation was steady at Rs. 5.12.

Engineering shares benefited by the rise in the leading counter, Indian Irons, which closed a point higher at Rs. 25.38. Likewise, Texmacos were better at Rs. 21.40. Kumardhubis were raised from Rs. 7.12 to Rs. 7.56. Jessop & Cos., after being higher at Rs. 20.37 receded to Rs. 20.25. Guest Keen Williams were quiet at Rs. 39, Burns declining from Rs. 536 to Rs. 516.

Teas were deserted. Hantaparas gave way from Rs. 118.50 to Rs. 117. Batelis were forced down from Rs. 19.06 to Rs. 18.81. Hattikhiras were unchanged at Rs. 10.37.

Several features were recorded in miscellaneous industrials. Jardine Hendersons were bought by interested quarters to raise the rate from Rs. 78 to Rs. 87. Profit-taking soon followed to lower the gain to Rs. 82. The rise followed reports of diversification of activities. National Pipes and Tubes scored a small gain at Rs. 30.12, on expectations of a good working report for the last accounting period. Following the issue of bonus shares and the declaration of an interim dividend, Britannia Biscuits were keenly sought after and were fully steady at Rs. 61 with very few sellers. B.I. Corporations met with support from interested quarters to improve from Rs. 10.44 to Rs. 10.81. Balmer Lawries, after gaining Rs. 5 at Rs. 250, receded to Rs. 247. At Rs. 38.12, Indian Aluminiums gained Re. 1, following L.I.C. support.

* * * *

Madras Stock Exchange

MADRAS, *3rd January*

Barring a few tea and chemical shares which lacked support, the Stock Exchange ruled steady during the last three weeks. Business put through was, however, modest, particularly because of the intervening one-week Christmas and New Year holidays. Also operators were somewhat hesitant to enter into large commitments, pending the outcome of the Aid-India Club meeting scheduled to be held at Washington towards the end of this month. Textiles elicited good investment inquiries on hopes of better working results of many mills. Coffees and rubbers tended to harden, while teas displayed a mixed trend. Among miscellaneous industrials, cements and engineerings were well favoured.

In the textile section, South India Viscoses forged ahead from Rs. 173 to Rs. 183. Coimbatore Cottons rose by Rs. 6 to Rs. 210. Madurais put on Rs. 3.05 to Rs. 43.25. Travancore Rayons hardened by Rs. 2.55 to Rs. 44.75. Coimbatore Spinnings strengthened by Rs. 2 to Rs. 67. Lakshmis fell initially from Rs. 164 to Rs. 160, but moved up subsequently to Rs. 165, with a net gain of Re. 1. Radhakrishnas picked up 50 nP to Rs. 39.50. Cannanores were maintained at Rs. 173, Coimbatore Pioneers at Rs. 292, Dhanalakshmis at Rs. 255, Metturs at Rs. 388 and Premiers at Rs. 297. Vasantas, however, fell by Rs. 4 to Rs. 297. Bangalore Woollens lost Re. 1.50 to Rs. 238.50. Buckinghams shed a rupee to Rs. 253.

Among coffees, Consolidateds gathered 25 nP to Rs. 19.60. Coffee Lands improved by 10 nP to Rs. 16.60. Ouchterlonys were bid at Rs. 3.44, Cowcoodys Rs. 4.60 and Balanoors at Rs. 14. By Anaparais shed 8 nP to Rs. 3.10.

Among rubbers, Travancores spurted by 25 nP to Rs. 12.50. T.R. and Ts put on 12 nP to Rs. 10.87, following the announcement of an interim dividend of 4 per cent, taxable, for 1961. Midlands gained a like amount to Rs. 10.85. Cochin Malabars increased by 8 nP to Rs. 7.23. Kailas were steady at Rs. 5.30. The Directors of the Company have announced an interim dividend of 12½ per cent, taxable, for the year ending February 1962. Peninsulars were firm at Rs. 22, following the announcement of an interim dividend of 20 per cent, taxable, for the year ending February 1962. Malankaras were firm at Rs. 16.75 and Vaikundams at Rs. 32.50.

Tea shares were generally subdued. Peermades declined by 25 nP to Rs. 22.50. Haileyburias and Highlands eased by 10 nP each, the former to Rs. 14 and the latter to Rs. 14.10. Kil Kotagiris shed 8 nP to Rs. 4.82. But Devasholas were well favoured at Rs. 31 on news of an interim dividend of 10 per cent, taxable, for 1961. Periakaramalais strengthened by 10 nP to Rs. 3.55. Blue Mountains rose by 7 nP to Rs. 2.83.

Among sugars, Cauverys were marked up by Rs. 7.50 to Rs. 117.50 *ex-div*. East India Distilleries rose by 32 nP to Rs. 36.12. Mysores were firm at Rs. 56.50. The Company has maintained the dividend for the year ended June 1961 at the previous year's level of 30 per cent, taxable. Deccans, however, fell by 5 nP to Rs. 11.15.

In the miscellaneous section, Tube Investments rose by Rs. 2 to Rs. 283. Aluminium Industries hardened by 50 nP to Rs. 23.20 and Ashok Leylands by 25 nP to Rs. 9.20. Among cements, Orissas went up by 75 nP to Rs. 16.25 and Dalmias by 8 nP to Rs. 12.20. Chemicals were easy. Travancores fell by 50 nP to Rs. 18.62. F.A.C.Ts lost 35 nP to Rs. 8.30. Metturs and Mysore Chemical Manufacturings declined by 30 nP each to Rs. 14.75 and Rs. 22.15, respectively.

NEWS IN BRIEF

THE State Bank of India opened a branch at Panjim in Goa on the 2nd inst.

The Ganga Corporation Private Ltd., Allahabad, has signed an agreement with the Russian Government, under which it will import Soviet watch components for assembly in India.

The Government of India has extended the export incentive scheme for cotton textiles in its present form so as to cover exports up to 31st December, 1962.

The Railway Board has sanctioned the final location survey of a 142-mile long metre-gauge rail link between Bangalore and Salem, at a cost of Rs. 9 lakhs. The survey will be carried out by the Southern Railway Administration. The line, when completed, will serve the requirements of industrial development in the Salem area.

The Reserve Bank of India has withdrawn the licence granted to the Bank of China for dealing in foreign exchange. The Bank of China has two offices in India, one in Bombay and the other at Calcutta. Its deposits in India at the end of 1960 stood at Rs. 3.52 crores and other liabilities aggregated Rs. 3.25 crores.

A 100,000-ton plant for the manufacture of special steel castings, centrifugal pumps, pipe and rollers is proposed to be set up in Rajasthan by the Kamani Engineering Corporation Ltd., in collaboration with Yugoslavia. The estimated cost of the project is Rs. 7.5 crores, including Rs. 4 crores in foreign exchange which will be covered by a Yugoslav credit.

Facilities for the amicable settlement of disputes between traders in India and Poland have been provided for under an agreement signed by the arbitration tribunal of the Indian Chamber of Commerce and Industry and the Polish Chamber of Foreign Trade, Warsaw. This is the fifth such agreement signed by the Chamber. The earlier agreements were with Japan, the U.S., East Germany and Soviet Russia.

The revised schedule attached to the Indo-East German trade agreement as applicable for the year 1962 provides for export from the country of manganese ore and manganese dioxide, besides traditional items such as cotton textiles, jute goods, coir products, iron ore, vegetable oils, tea and coffee. The main imports from East Germany will be capital goods and machinery items, power-generating equipments, fertilisers and machine tools.

The Railway Board has sanctioned the construction of a 16 KM broad-gauge rail line between Panvel and Apta on the Central Railway. It will be an extension of the Diva-Panvel line which has already been sanctioned for construction. The proposed extension from Panvel will provide rail communication upto Apta, where the basic chemical intermediates plant, an industry of national importance, is being set up in the private sector.

The third stage of the expansion plan of the Fertilisers and Chemicals Travancore Ltd., (F.A.C.T.) has been approved by the Government of India. The plan envisages an increase in the capacity of the factory from 30,000 tons to 70,000 tons in terms of fixed nitrogen per year. The subscribed capital of the company is proposed to be raised from Rs. 3.45 crores to Rs. 7.5 crores and the authorised capital from Rs. 5 crores to Rs. 10 crores.

A draft agreement for the avoidance of double taxation of income between India and France was signed at technical level in New Delhi on 20th December 1961, following negotiations between a visiting four-member French delegation and officials of the Central Board of Revenue. The agreement now requires to be approved by the two Governments and ratified. Similar agreements have been concluded with Sweden, Denmark, Norway, West Germany and Japan. Agreements at technical level have also been signed with the U.S. and Finland.

A technological conference will be organised by the Bombay Textile Research Association at Bombay from 22nd to 24th inst. The conference will be inaugurated by Prof. M. S. Thacker, Secretary, Union Ministry of Scientific Research and Cultural Affairs and Director-General, Council of Scientific and Industrial Research. Ten research institutes all over India will be participating in this conference and, in all, 24 research papers, dealing with textile physics, textile testing, mechanical processing, textile chemistry and chemical processing, will be read at seven technical sessions of the conference.

The two-year Indo-Pakistan trade agreement, signed in March 1960, has been extended by one more year. Under the revised agreement, gypsum, guar seeds and coal have been added in the list of imports from Pakistan. Coffee and coffee beans will be added to the list of items exportable from India. The annual ceiling on imports into India of Pakistan raw cotton in exchange for coal has been raised by Rs. 150 lakhs to Rs. 450 lakhs. The total value of goods to be exchanged under the special agreement is estimated at Rs. 960 lakhs per annum, as against Rs. 810 lakhs previously agreed to.

Details pertaining to the implementation of an Indo-U.S. research scheme for sugarcane breeding were discussed by Dr. Paul Oman, Director of the U.S. Agriculture Department's Far Eastern Regional Research Officer, with the Director of the All-India Sugarcane Breeding Institute at Coimbatore recently. The scheme is estimated to cost Rs. 16 lakhs which will be provided under the P.L. 480 programme. The scheme, expected to commence shortly, envisages development of cane varieties that would resist cold and drought conditions, as well as attack by pests (insects and fungus). Experiments will be carried out in Coimbatore and Pailgaut over a period of five years. This is said to be the first time that a sugarcane research scheme is being undertaken jointly in Asia.

The State Trading Corporation of India will shortly commence the stocking of seedlac from the *kalki* crop at its godowns in four principal lac-producing centres, Gondia, Balrampur, Daltonganj and Ranchi. The stocks assembled at these centres will be moved later to Calcutta after suitable checking. The Corporation has secured facilities for storage there, pending sale to the shippers. The S.T.C. has also decided to open centres at suitable places to handle the Baisakhi crop in a similar manner. The organisation of these purchase centres has been undertaken in pursuance of a four-point programme announced in October 1961 for stabilising the purchase and export prices of lac. The main features of the scheme are the fixation of minimum purchase prices, operation of a buffer stock programme by the S.T.C., levy of an export duty and the reduction of minimum export prices from Rs. 70 to Rs. 64 per maund for B II quality seedlac, with corresponding changes for other grades.

Indian industries, involving a total outlay of over Rs. 30 crores, have sought the assistance of the Indian Investment Centre, New Delhi, in finding technical and financial collaboration with firms in Canada, Japan, West Germany, the U.K. and the U.S. Indian firms are seeking partners for the manufacture of wire ropes, water-meters, seamless tubes, malleable castings, electric house service meters, galvanised iron pipes and steel tubes. Assistance is also being sought for the production of tyres and tubes, cellulose acetate flakes and fibre, insulators and optical instruments. Of the requests forwarded, 19 went to the U.S., ten to the U.K., six to West Germany and one each to Canada and Japan. The Centre has also received inquiries from industrial firms in the Western European countries and the U.S. seeking suitable partners in India for new industries.

The shed accommodation of Indian railways will be increased by one million sq. ft. to provide warehousing facilities for general merchandise, under the Indian Railways' Amendment Act, which came into force on the 1st inst. The Act lays down that, after the period of transit, which includes the period allowed free of demurrage and wharfage, the Railways should extend warehousing facilities for general merchandise for a maximum period of thirty days. During this period, the responsibility of the Railways will be that of a Bailee, under the Indian Contract Act. The Amended Act sets at rest the controversy about the responsibilities of the Railways for the goods after the expiry of free time at destination. There had been a consistent demand from the trade that the Railways' responsibility should not cease with the expiry of the transit period, which included the time allowed free of wharfage and demurrage, as was the case hitherto.

* * * *

From Abroad

The Government of Pakistan has promulgated an ordinance banning exports of goods which do not bear markings of approved standards.

Poland has secured a contract to build a sea port in the island of Cyprus. It will supply machinery and other port equipments and know-how.

Industrial production in West Germany rose by 6.5 per cent during the ten months ended October 1961, as compared with the corresponding period in 1960.

The Gross National Product of West Germany is expected to have exceeded DM 300,000 million (at current prices) in 1961, which is about 10 per cent more than in 1960.

The State-sponsored Life Insurance Corporation in Ceylon, which will have a monopoly of life business in the country, has commenced its operations with effect from the 1st inst.

Licensing of industries over a broad range in Pakistan has been linked with their export performance under the new import policy of the shipping period of January-June 1962 announced last week.

The total world coffee output will rise to 74.6 million bags in 1961-62, as against 64.1 million bags in 1960-61 and the record crop of 78.8 million bags in 1959-60, according to the third U.S. estimate of the U.S. Agriculture Department.

Ceylon will import 1.25 million tons of petrol and oil products from Soviet Russia, under an agreement signed at Colombo. The State-owned Ceylon Petroleum Company will import the oil and distribute it, along with the western oil companies operating there.

It is estimated that the output of crude steel in West Germany declined by 500,000 tons to 33.6 million tons in 1961, as compared with the previous year. On top of this, Ruhr steel makers are reported to be planning a 20 per cent cut-back in production in the first half of 1962.

The U.S. and Britain are considering a "secret formula" for the disposal of their natural rubber stocks. The formula, drawn up by Malaya, with the support of the major producers, is designed to secure a modification in the surplus disposal by the two countries in such a way as to avoid possible market dislocation and depression in international markets.

West German Government aid promised to developing countries in 1961 amounted to almost DM 5,500 million. The assistance has been given (or will be given by the end of 1962) in the form of long-term credits. Furthermore, the Government provided technical aid worth DM 270 million in 1961, as against DM 74.5 million in the previous year. This brings the total technical aid granted from 1956 to 1961 to DM 500 million.

Latest official estimates place West German imports at more than DM 44,000 million in 1961, as against DM 42,700 million in 1960, and exports at about DM 51,000 million, as against DM 47,900 million. Thus the export surplus is expected to amount to DM 5,500 million in 1961, as compared with DM 5,200 million in the previous year. The increase is primarily due to changes in the terms of trade.

The International Monetary Fund has entered into a standby arrangement with the Government of Colombia which authorises drawings up to $10 million for a period of one year from 1st January 1962. The new arrangement follows a previous agreement for $75 million under which Colombia drew the equivalent of $65 million. That arrangement expired on 31st October last and Colombia's net drawings on the Fund are now equal to $65 million. A deterioration in Colombia's financial position during the past year has led the Government to undertake monetary policies designed to improve the balance of payments position and prevent serious increases in the domestic price level. The Colombian authorities have stated that they will avoid intensification of import restrictions.

The International Development Association (I.D.A.) has extended a development credit of $2 million to Jordan to help finance expansion and improvement of the water supply system in the capital city of Amman. The works to be undertaken include the development of several new wells to increase the water supply from a capacity of 620 cubic metres an hour to about 1,500. The total cost of the project is estimated at the equivalent of $3 million, of which $2 million will be covered by the I.D.A. credit and the balance from local sources. The I.D.A. credit is to be repaid over a period of 50 years, including a 10-year period of grace. A service charge of three-fourths of 1 per cent per annum on the amounts withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

The U.S. economic aid aggregated $3,500 million during the fiscal year ended 30th June 1960, which is one-sixth more than that in the previous year. Main beneficiaries were countries in Asia, Africa and Latin America. India's share of economic assistance for the year was $575 million. During the same period, military assistance dropped from $2,000 million to $1,700 million. Thus, the combined U.S. economic and military aid in the form of goods and services and cash payments in the fiscal year 1961 was $5,200 million. However, through repayments on loans and returns of grants by foreign Governments, the net outlay by the U.S. for economic and military aid was only $3,900 million. Economic assistance to Western Europe continued to decline, while that to other areas increased. Repayments by West Germany, the Netherlands and France actually resulted in a net return to the U.S. from Western Europe of more than $900 million. The aid figures do not include payments of $74 million on U.S. subscriptions to the International Development Association in 1961 and of $80 million to the Inter-American Development Bank in 1960.

PERSONAL

MR. F. E. H. Goddard, Manager, The Chartered Bank, Bombay, has been elected President of the Bombay Chamber of Commerce and Industry for the year 1962-63.

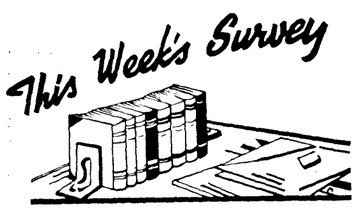
Mr. K. L. Subramanian has been appointed General Manager of the Pandyan Bank *vice* Mr. S. N. K. Sundaram, who has retired.

Mr. D. H. Doshi has been re-elected President of the Indian Chemical Manufacturers' Association. Mr. R. Chakravarthy and Dr. H. R. Nanji have been elected Vice-Presidents.

Mr. D. G. Bell has been appointed Resident Director of Bomas Ltd., Bombay, in the place of Mr. W. Olins, who leaves Bombay in April to rejoin the parent Company in London.

Mr. K. T. Chandy, a Director of Hindustan Lever, has resigned to take over the directorship of the Indian Institute of Management, Calcutta, sponsored by the Government of India.

Mr. M. L. Bexon, Sales Director of the Dunlop Rubber Company (India) Ltd., Calcutta, has been appointed Managing Director of the Company, *vice* Mr. John Luckham, who has just left Calcutta to take up a new assignment at the headquarters of the Dunlop organisation in London.



STANDARDISATION

THE Indian Standards Institution, since its inception in 1947, has done much good work in formulating standards for a wide range of items in the field of industry, agriculture, building construction, etc. The number of national standards already issued by the I.S.I. is approaching the 2,000-mark. This is by no means a small achievement, as compared, for instance, with the activities of the British Standards Institution, which has produced during its existence of over sixty years, no more than 4,000 standards. What is more, the I.S.I. had to start its activities from scratch fourteen years ago, when standardisation worth the name was confined in this country largely to the purchasing sections of railways and certain other Government departments. The industry standards and company standards, too, were not popular in this country. Nor were there reliable international standards for the guidance of the I.S.I. The International Standards Organisation, it may be noted, came into existence almost simultaneously with the inauguration of the I.S.I., but its activities have so far been slow. The I.S.I., however, has received valuable co-operation from national standards institutions of other countries, particularly of the U.K. But it has its own expert bodies, consisting of persons from both the public and private sectors, to draft standard specifications based on special conditions obtaining in this country.

Standardisation is of particular significance to a country like India which is rapidly industrialising itself and making its debut in world markets for the export of several manufactured goods. For standardisation, besides defining the quality of material and products, seeks to ensure dimensional and functional interchangeability, simplification and safety requirements, the ultimate aim always being to secure the largest possibile measure of economy and efficiency. These objectives cannot, however, be attained, unless standard-consciousness is engendered among producers and exporters all over the country. While there has been good response to the I.S.I.'s works from several industries, a large part of the industry still remains outside the purview of the I.S.I.'s activities. It is only appropriate, therefore, that Mr. K. C. Reddy, Union Minister for Commerce and Industry, in his address to the sixth Indian Standards Convention held at Kanpur last week, should have made a fervent appeal to the business community to take up the membership of the I.S.I. and adhere to its standards. It was his firm conviction that standardisation was a prerequisite for giving the consumer his money's worth.

Mr. Padampat Singhania, Chairman of the Reception Committee, was only voicing the public concern when he observed that the benefits of standardisation had not yet been fully realised in this country and that industries had not adequately utilised them. What are the possible measures to improve this situation? It is a moot point whether compulsion will solve the problem. If, by methods of persuasion, the producer can be made to realise the advantages that can be derived from adhering to standards, there is a fair chance that standardisation may become much more popular in due course. There may be a strong case for making standards mandatory in respect of goods for export, provided they can be enforced without red-tapism and the consequent delays. The case for compulsion is much stronger so far as foodstuffs and drugs, are concerned. Only, the machinery for enforcing the law must be efficient and honest. While the co-operation of the industry is essential for implementing standards, a more effective way of popularising them is to make the consuming class realise the value of a third party guarantee like the certification marks of the I.S.I. on various goods. A beginning in this direction has been made by the establishment of certain consumer associations in New Delhi. It will be advisable for the I.S.I. to give more encouragement to such endeavours and promote the growth of similar institutions in other parts of the country on appropriate lines. The various undertakings in the public and private sectors also will do well to insist on I.S.I. specifications in respect of their purchases. Another point to be noted is the need for co-ordinating existing standards issued by various authorities, under the aegis of the I.S.I. Separate specifications are now issued by the All-India Handloom Board, Coffee, Tea and Coir Boards, as also by some of the State Governments in respect of selected goods. In order to avoid duplication of work and ensure uniformity in standards, it is essential to examine the possibility of co-ordinating these activities with those of the I.S.I., as suggested by the Lal Verman Committee (on Quality Control and Preshipment Inspection), which submitted a report to the Government of India last year.

GROWTH OF FOUNDRIES

The foundry industry in the fields of cast iron and steel castings alike is one of the most important engineering industries in the country. There are, according to the estimate of the Indian Foundry Association (Calcutta), as many as 2,000 iron and steel foundries. But their total installed capacity is not precisely known. This industry has so far confined itself to the manufacture of a number of consumer goods like cast iron pans, weights and measures, pipes and specials, municipal and conservancy requirements, component parts for industrial plant and machinery, and sleepers for the railways. But in the third Plan period, it will have a still bigger task, that of producing castings for the machine building industry. Its overall targets of capacity are 1.2 million tons of grey iron castings and 200,000 tons each of steel castings and forgings. Heavy castings for heavy machinery manufacture are to be produced largely in the public sector, and the programme in respect of this sector calls for the creation of an aggregate capacity of 140,000 tons of grey iron castings, 76,000 tons of steel castings and 77,000 tons of steel forgings. How much new capacity will be actually created in the private sector will depend on the demand stemming from the expansion of the automobile industry and the manufacture of machinery for textiles, cement, sugar, paper and similar capital goods industries.

Even as things stand, expansion of capacity in the private sector would be meaningful only if graded pig iron can be made available to the foundry industry in sufficient quantities. It has been estimated by Mr. P. N. Ghosh, President of the Indian Foundry Association, who spoke at the tenth annual general meeting of the Association on 28th December 1961, that the effective availability of this raw material will be no more than 600,000 to 700,000 tons per annum for the next two or three years. This may be compared with the target availability of 1.5 million tons by 1965-66. Apart from the current and prospective shortage of pig iron, there is the question of its enhanced price. The recent increase of Rs. 25 per metric ton has further added to the cost of production in the foundries.

The acute shortage of hard coke has also been responsible for under-utilisation of iron and steel casting capacity and this, too, has added further to the cost of production. Mr. Ghosh's suggestions to deal with the present situation in the foundry industry are calculated to make available ingot moulds and skull scraps in broken form by establishing breaking plants in the iron and steel works and hard coke by equitably distributing its available supply among all the units whether in the public or in the private sector. If effective steps are also taken to establish the low shaft furnaces in the private sector on an urgent basis, there will be an additional supply of about 250,000 tons of pig iron to the foundry industry. Increased supplies of the two raw materials—pig iron and coke—will alone make for fuller utilisation of capacity and thus for lower cost of production in the foundry industry.

AUTOMATIC LOOMS

While the recent decision of the Government of India to license 10,000 automatic looms in units of 500 each as part of the programme of expanding the weaving capacity of the cotton mill industry during the third Plan period is to be welcomed, it is regrettable that the conditions attached to licensing are stringent and onerous. Thus, it is laid down that 75 per cent of the cloth produced on these looms should be compulsorily exported. If any mill fails to carry out this obligation, it will have to pay a penalty which will be related to the shortfall in the export performance. Bonds will have to be executed and bank guarantees given for the fulfilment of the export condition. What is more, the automatic looms will be allotted only to those mills that have the matching spindleage put at 25,000 spindles for a unit having 500 looms. This, it is said, may be either from out of the available surplus spinning capacity of an existing mill or from the regional quotas of new spindles allocated to the States out of the two million spindles proposed to be licensed during the first two years of the third Plan. The Government has made it clear that the allotment of new looms will not be on regional considerations but solely on the basis of the ability of the applicants to discharge their export obligation.

This brief account indicates how stringent are the conditions attached to the licensing of automatic looms, the only saving grace being that the condition regarding guaranteed exports is not related to the past performance of mills. Indeed, the conditions are so onerous that even the mills which have been regularly exporting large quantities will not be able to avail themselves of the Government's offer. The world textile market is governed by so many uncertain factors that it is futile to pin down mills to the condition of exporting as much as three-fourths of the production of automatic looms. It is this restrictive feature of the Government's policy that has been responsible for the poor progress made by the earlier proposals for the installation of automatic looms. It will be recalled that more than five years have passed since the Government first announced its decision to allow the installation of 18,000 automatic looms for the production for export of an additional 350 million yards of cloth every year.

Considering the onerous conditions laid down in the latest announcement, it is not surprising that the mill interests are not at all enthused over the decision. On the contrary, they are disappointed. Replying to a question at the annual general meeting of the Central India Spinning and Weaving Company, Ltd., held at Bombay on Friday last week, Mr. Naval H. Tata, Chairman of the Company, described the restrictions as a "nightmare." How can the mill industry be expected to go in for automatic looms when the conditions attached to this licensing are so stringent, the cost of installation is high, the period of going through formalities is long and there is trouble from labour? If the Government is really earnest about enhancing the competitive ability of Indian mills in world markets, more extensive modernisation of equipment and rationalisation of manufacturing processes are imperative. The industry deserves to be relieved of a part of its fiscal burdens, so that it might be enabled to conserve more financial resources for purposes of reinvestment. It is to be hoped that efforts will be intensified by all the parties concerned for smoothening and speeding up the process of introducing automatic looms in the country.

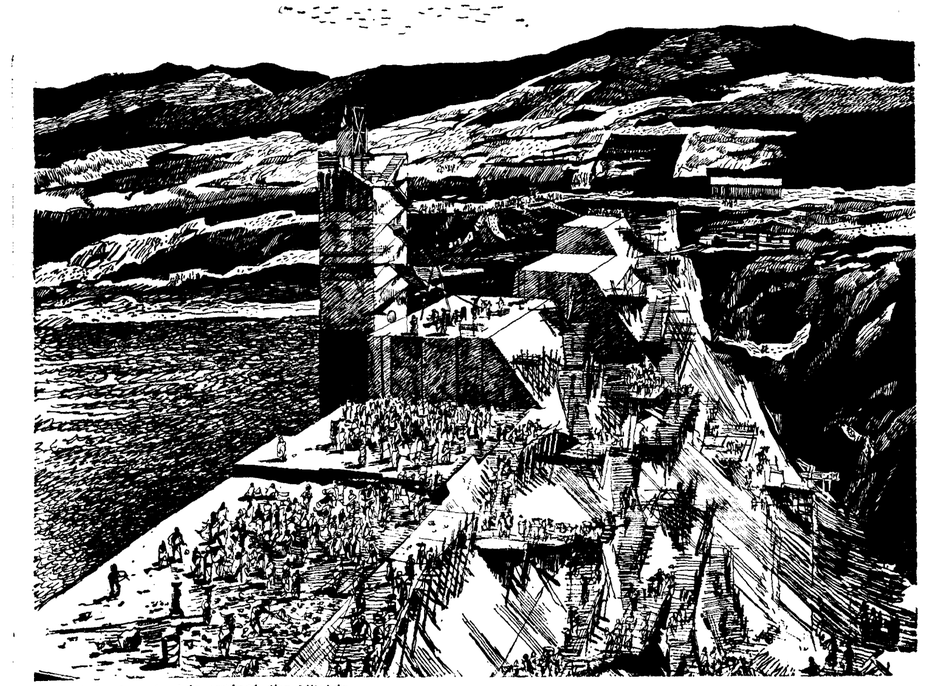
PUMP MANUFACTURING INDUSTRY

The manufacture of centrifugal power-driven pumps has progressed very rapidly in the last ten years. Production in 1960 was 102,200 units, as compared with 33,300 in 1950. There are now 48 registered firms which are on the list of the Development Wing, and these have a rated capacity of 117,600 units per annum. Besides these 48 firms, there are some which are borne on the lists of the State Governments and also a number of small-scale units which are registered with the Small-scale Industries Directorate. Production figures in respect of manufacturing establishments not borne on the list of the Development Wing are, however, not available. Even if their production is not taken into account, it is still found that the pump manufacturing industry has exceeded its second Plan target of 86,000 units.

The industry's target capacity for the third Plan has been fixed at 184,000 units. It is expected that demand for pumps will go up to 160,000 units by 1965. According to Mr. K. K. Jajodia, Chairman of the Indian Pump Manufacturers Association, who spoke at the seventh annual general meeting of the Association at New Delhi on 21st December 1961, the industry is confident of exceeding the third Plan target. It is stated that sufficient additional capacity has by now been licensed to enable the industry to reach the target. Mr. Jajodia's only complaint is that some manufacturers are holding the capacity without actually starting production. His suggestion is that such manufacturers may be requested to surrender their capacity voluntarily and that the capacity so surrendered be redistributed among the existing manufacturers. If this suggestion is accepted, it may solve the problem of idle capacity in some units.

A noteworthy fact about the progress of the industry is the diversification of production. This is brought out by the various types of pumps that are being manufactured in the country. These are: centrifugal pumps—single, double and multi-stage for handling water; reciprocating pumps; horizontal split casing centrifugal pumps; self-priming centrifugal pumps; deep-well vertical turbine pumps; chemical pumps; sewage pumps; pumps for the sugar industry; fire-fighting trailer pumps; bulk pumps for petroleum products; petroleum dispensing and metering pumps; monoblock pumps; rotary pumps for handling viscous fluids; mixed flow and axial flow pumps; gear pumps.

The manufacturers are now in a position to supply pumps suitable for industrial requirements and for handling sewage. It is, however, stated that, at present, manufacture of such specialised pumps is rather limited because of lack of statistics pertaining to demand. The Government has maintained no separate statistics categorising the different types of specialised pumps imported over the last few years, for such pumps have formed part of the overall machinery imports for particular projects. At least in future the manufacturers should be helped to plan their production of specialised pumps by being given advance information of requirements for such pumps in development projects planned by the Government. The industry's grievance is that at present the demand for specialised pumps is not known to the manufacturers until the schemes are at a final stage when the project authorities issue tender notices. Since manufacture of specialised pumps has to be planned ahead, indigenous manufacturers automatically lose their chances in securing orders in the absence of advance indication of requirements. The industry's plea, which is just, is that this state of affairs should be remedied, in view of its capacity to manufacture specialised pumps, too.



Kundah hydro-electric project, the Nilgiris.

Life-giving water, light and power to help transform our wastelands into smiling fields pour out from Bhakra-Nangal, Konar, Gandhisagar, Tungabhadra, Kundah and other projects. These great hydro-electric systems dramatise our progress and stress the fact that concrete is playing a vital part in our nation's growth and well-being.

The Third Plan has provided Rs. 1,712 crores for irrigation and power projects and huge quantities of cement will be required for their construction. In order that more cement may be available for the great projects and for the private consumer the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

DEVELOPING COUNTRIES AND EUROPEAN TRADE POLICIES

NEED FOR CLOSE CO-OPERATION AND PLANNING

By K. Rangachari

EUROPEAN trade policies are now in a state of flux. The final shape of the external tariff of the European Common Market, the conditions upon which Britain will eventually be admitted into that Community and the principles that will govern the widely varying terms required for granting "associated status" to other applicants in Europe, Africa and the Commonwealth will have far-reaching effects on trading relations with the rest of the world. But there is as yet no firm basis for forecasting the probable trends; nor are we in a position to predict the amount of influence that American proposals for liberalisation and similar discussions in G.A.T.T. will have on West European Governments. The development of new policies and techniques by G.A.T.T. and the adoption of those policies by the multilateral mechanism provided by it have, to some extent, become difficult because of the special position which the E.C.M. will have by reason of its shape and size; the primacy of G.A.T.T. and the principle of non-discrimination which is basic to it appear to have been subordinated to West European integration and the economic and political cohesion that it is expected to achieve. On the other hand, a whole set of new techniques have been introduced, like linear cuts and weighted averages, which may help negotiations and prevent serious setbacks to other trading nations affected by the integration.

In this context, it is unsafe to make assumptions about future trends with any feeling of certainty. The present pattern of India's foreign trade and the directions in which it is expected to change as a result of planned industrial development are matters on which certain reasonable assumptions can be made. There are three distinct groups of European countries with whom India's trade relations have developed on different lines for various historical reasons. The first is represented by E.F.T.A. but the predominant factor in this trade is the traditional pattern of commerce with Britain. India's exports to E.F.T.A. have risen from Rs. 109 crores in 1948-49 (of which Rs. 103 crores worth was exported to Britain) to Rs. 179 crores in 1959-60 (Rs. 173 crores to Britain); imports were of the order of Rs. 278 crores in 1957 (Rs. 237 crores from Britain) and Rs. 196 crores in 1958 (Rs. 169 crores from Britain). In spite of improved trade connections with the other E.F.T.A. countries like Sweden, Switzerland and Austria and larger imports of equipment from those countries, there is no trend towards improvement in exports to them. As a trading block, E.F.T.A. has been neutral to the external trade of its member-countries and the steps taken to promote intra-regional trade among its members do not directly affect their relations with individual countries outside; on the whole, they have adhered to free trading principles.

Task Before India

All this has, however, ceased to be of any importance, since E.F.T.A. itself is in the melting pot and the inevitable recognition by its members of the primacy of the Rome Treaty subject to adjustments to safeguard their individual trading and political positions makes India's problem of exports identical with that of expanding her export trade with the European Common Market. India has to concentrate its attention immediately on maintaining its exports to the British market and surmounting difficulties created, first, by the absence of duty-free entry for certain items like tea (if no concession is forthcoming from the Six) and secondly by the "reverse" preferences granted to imports from the Six or their associated areas.

Trade with the second European group, comprising the Common Market countries, has been persistently showing a deficit. While India's exports have increased from Rs. 27 crores in 1948-49 to Rs. 52 crores in 1960-61, imports from this area have gone up to Rs. 195 crores last year. The deficit is thus of the order of Rs. 143 crores; after the decline in the sterling reserves this country has been financing this deficit from untied credits either directly granted by the countries or by multilateral credits granted by international institutions like the World Bank and the I.M.F. and those hitherto given by the U.S.A. through D.L.F. loans.

The third trading group in Europe consists of the Soviet Union and East European countries which form a distinct block with trading policies of its own. Trade with this area has been possible on a pragmatic basis; payments in rupees for imports and use of this money for purchases from this country have enabled the achievement of a balance in trade over a period of time. In contrast to the other areas, trade with this group has expanded, although it is still moderate, not exceeding Rs. 50 crores each way. During the last three financial years, India has had a favourable balance, particularly with the Soviet Union.

All these three groups are supplying essential machinery, raw materials and components and capital goods which India will need in increasing quantities in the future for its industrial development. But it is becoming evident that even so, India will not be able to maintain imports at high levels, unless they are paid for by larger exports to them or are covered by long-term credits. When an Indian delegation, led by Mr. K. B. Lall, visited Western Europe two years ago, it found that there was "neither lack of demand nor lack of competition" in the countries for most of the goods which India has to offer; there was also considerable goodwill for India. But these factors did not prevent the pursuit of some illiberal policies and attempts are being made to seek harmonisation of trading practices within the Common Market on the basis of satisfying local requirements from within the region.

Problems Identified

Many developments have taken place since the Lall delegation's visit. Pressures on the Common Market from the U.S.A., G.A.T.T., and E.F.T.A. have assisted the comparatively liberal outlook of countries like Holland; and Britain's entry may carry this process further. For all practical purposes, there will only be two trading groups in Europe in future, the Western and the Eastern. Their attitude to the problems of trading with the developing countries will be judged by (1) the extent to which they open up their markets to the primary producing countries and help them to improve their terms of trade; and (2) the removal of hindrances to a larger absorption of the manufactured products of developing countries.

Much work has already been done in identifying the problems; under G.A.T.T.'s auspices, a special expert committee produced a report (known as the Haberler report) which was followed up in detail by Committee III of G.A.T.T. There the problem rests at present; as Mr. George Ball observed at the recent Ministerial meeting of G.A.T.T., "there has been wholly inadequate progress in terms of those measures which were principally recommended by G.A.T.T. Committee III, that is, the relaxation of tariffs and of non-tariff measures which tend to impede the access of the less developed countries to the world markets." One of the difficulties of tackling the problem directly under G.A.T.T. is the principle of reciprocity, in which the underdeveloped countries are at a serious disadvantage. The advanced countries have to be very clear, said Mr. Ball, "that the principles of reciprocity which may govern the dealings between economically-advanced countries may not be altogether as faithfully followed as in the dealings between the economically advanced and the less-developed countries." He also emphasised that the former should "provide assistance to the export industries of the less-developed countries, to assist them to improve their production and, quite as important, to assist them in improving their marketing methods."

A conscious attempt to increase international specialisation to the extent of providing scope for exports of manufactures of the developing countries requires some planning and some structural adjustments in the advanced countries which would permit liberalisation of tariffs and other commercial policies. Western countries which have at last recognised the importance of capital aid to the underdeveloped world are still far from realising the implications of larger trade; the prospects of expanding their own exports is dependent on such trade, as there are limits to the loans and grants which they can provide.

Some estimates have been made of the magnitude of this problem. It is calculated that underdeveloped countries should be able to expand their exports, from about $20 billion now to about $50 billion in twenty years. Of this increase, about half may be in the shape of traditional commodities to North America, Western Europe, Eastern Europe and Japan; the rest of the gap must be filled by export of manufactures. In this global increase of $15 billion, India's task is of finding outlets for about $1 billion more of manufactures per year by 1980. Such a programme calls for not only readiness on the part of the advanced countries to absorb more manufactured goods but also for efforts in India to expand manufacturing capacity on a scale which would leave enough for the growing needs of the domestic market and provide a surplus for export of the types that can be sold abroad. Formidable as this may seem, it need not be considered altogether impracticable.

For Western Europe alone, the problem may be one of accommodating about $5 billion in manufactures from these countries but this may amount to no more than about 2 per cent of the additional demand for manufactured goods when their economies expand in the next two decades. For example, it is possible for the industrial countries to take semi-processed metals for their use. Western customs tariffs are an obstacle to the replacement of crude ores by semi-processed ores, especially of non-ferrous metals. Leather and wood are other items in which Western Europe still prefers imports in their raw form rather than in semi-finished state. Tariffs on cocoa products are a deterrent to exports of processed cocoa, butter and powder.

Even with the best will in the world there may be technological and organisational obstacles in the developing countries in the way of manufacturing for export; where there are competitive sources of supply, investment in any one of the countries in processing may become a waste, if the processed product is not taken and raw materials are preferred. Hence there is no incentive in these countries to build up export industries.

Textiles and canned food products are other items in which the scope for exports can be enlarged. The development of synthetic and artificial fibres in the West poses a threat to increased cotton textile imports; processing methods in food may have to advance considerably if the less-developed countries should attempt to satisfy consumer tastes in the advanced countries. Rubber, coffee and tobacco are other examples of commodities in which raw material producers can undertake manufacture to earn more foreign exchange.

No Serious Hardship

Since Western Europe is experiencing manpower shortage in many new industries, no serious hardship is likely to arise if some of the older industries adapt themselves to changing conditions, though the transition may sometimes be painful, as Lancashire's experience has shown. The textile sector is considered a test case, since it is in this field that the less developed countries have been able to offer keen competition; European reactions against "low cost" manufactures shows that the process of adjustment will be a long and strenuous one. Until the advanced countries adopt policies which aim at facilitating such imports, developing countries cannot give preference in their plans for industries mainly devoted to exports and to exploit fully the natural advantages they possess.

European quota restrictions constitute serious deterrents to the development of exports by the less-developed countries; often, these policies are maintained not only for protecting local manufacturers now but kept in reserve for future occasions when they may be needed to counter any recessionary trends in particular industries. Except in France, these quotas are not imposed on primary products; but they cover a wide field, including temperate zone agricultural products, tropical foodstuffs, semi-manufactures and finished goods. West Germany uses import licensing to regulate entry of textiles and clothing, ceramics, sewing machines and toys; there are similar restrictions in France even after the liberalisation measures adopted in 1959. The continued refusal to accord most-favoured-nation treatment to Japan is another example of the narrow outlook still prevailing in this matter. In Italy, textiles, radios, etc., are subjected to quota restriction irrespective of origin. (A contrast is offered by Holland, Belgium and the Scandinavian countries which are liberal in some respects.) Among other restrictions are certain forms of indirect taxation and regulations prescribing that specified proportions of domestically-produced materials be used in industries like margarine and soap. Jute control in Britain is yet another form of restriction on imports from countries which are in a position to specialise in the production of jute goods; the system of marking up the price to protect Dundee is a typical case of protection to an uneconomic local industry.

Fiscal levies are imposed upon coffee, tea, cocoa and tobacco on which many underdeveloped countries depend for their foreign exchange earnings. They amount to 60 per cent. on coffee and tea in France, 72 per cent. on coffee and 97 per cent. on tea in West Germany, 87 per cent. on coffee, 73 per cent. on cocoa and 50 per cent. on tea in Italy. The Rome Treaty does not place any limitations on these levies, so that even when the common external tariff of the Six is reduced to sufficiently low levels, there will be no guarantee that the reduction will not be offset by revenue taxes.

Subject to these considerations, some cautious optimism may be warranted by the E.E.C. offer of a 20 per cent. reduction in its tariff on condition of reciprocal concessions by other G.A.T.T. members, though this will not benefit non-members. Of even greater interest is the future of quantitative restrictions on imports; the Rome Treaty only provides for their elimination in trade among its members and for the adoption of a common policy in respect of third parties. Such harmonisation may not be consistent with the rules of G.A.T.T., because it presupposes a common balance of payments problem for all the Six, which is the only ground on which such restrictions can be justified. Also the question remains whether quota restrictions can be removed on one part of E.E.C.'s trade and not on another when both belong to G.A.T.T.

If the area of "associated" countries expands as a result of Britain's entry followed by some Commonwealth members, preferential treatment for some of the countries might favour their traditional exports. This can help to preserve the *status quo* or facilitate a slight improvement in their trade but their corresponding obligation to avoid discrimination against the Six (or the Seven when Britain joins) will expose their industries to competition from the advanced countries using the raw materials which they export. It remains to be seen whether these associated countries will be given sufficient latitude for raising their protective tariffs or regulating their own import quotas to enable diversification of their economy. From this point of view, the decision of the Indian authorities not to accept associated status (in the doubtful event of its being favourably considered by the Six) is understandable.

Eastern Bloc

These numerous uncertainties are absent in trade with the Eastern bloc which is also engaged in promoting economic growth and paying increasing attention to raising internal consumption standards. Its price structures, exchange rates and the practice of balancing payments have not so far seriously hindered trade with the less-developed countries. Though greater importance may be attached to the internal trade of the Communist bloc, there will be room for supplementing it with imports from outside sources. However, there have been some trends towards self-sufficiency like the proposals for growing more jute and tea inside the Soviet Union which may affect India's exports; considering the strong preference for tea in Russia and the possibilities of increasing the levels of consumption in coming years, total self-sufficiency may not be attainable.

Estimates of the increase in the trade of the Soviet bloc show that its total trade turnover may increase fourfold by 1980 (from the present level of $20 billion) and that imports from the developing countries may increase from less than a billion in 1958 to over $5 billion, of which about one-third may constitute manufactures, in exchange for machinery and equipment. This may call for some adaptations of the present payments mechanism and for extensions of credits to the developing countries to enable them to gear their production to the requirements of these markets. It may well be that some initiative in Eastern Europe in these directions will stimulate thinking on parallel lines in the Western half.

If as part of the aid programme of the Western countries, some minimum percentages are adopted for importing goods from the developing countries, there will be greater incentive not only for planning export-oriented industries in the latter but for the movement of capital from the Western countries for building up export industries in the less-developed areas. There are already some indications that American capital, which has been moving into Western Europe, may find that investment there has reached saturation point and that other countries like India may offer equal advantages. Many of these adjustments can be better planned, if there is co-operation and close co-ordination; it is obvious that advanced countries have to prepare themselves for rationalising their industrial structures to provide scope for the underdeveloped countries just as much as the latter have to plan for the types of manufactures which can earn foreign exchange.

PACE OF ECONOMIC EXPANSION IN CANADA HIGHER

A YEAR OF CHALLENGES AHEAD

By Hon'ble George Hees

CANADA'S MINISTER OF TRADE AND COMMERCE

AS 1961 closes, forces are in motion which could bring a major reshaping of world trade patterns. Britain, Canada's major overseas customer, is now negotiating to enter the European Common Market. The ramifications of such an association would have far-reaching implications for virtually all trading nations. Canada, as a member of the Commonwealth and as a major world trader, is doubly affected. This new formative period in world trade relations comes upon us at a time of expanding economic activity in nearly all parts of the world.

This favourable climate should help to foster outward looking attitudes on the part of countries adapting to these new conditions. For Canada such a prospect poses the likelihood of considerable adjustment, but it also gives promise of new opportunities.

Meanwhile, the pace of the economic expansion in Canada has accelerated in 1961. National output has increased sharply from the beginning to the end of the year. Industrial production has moved into new high ground and, on the basis of the latest figures, is running six per cent higher than a year ago. Higher operating levels in Canadian industries have meant more employment and increased incomes.

The upward trend of total personal income has accelerated, and corporate profits have reversed their previous decline and appear headed to new records. The labour market has strengthened. Over the course of the year, the growth of job opportunities has exceeded new job seekers, and unemployment has declined. By November, there were 18 per cent fewer jobless persons in Canada than in the same month a year ago.

Turnover Picks Up

Economic developments in Canada in 1961 have occurred within the context of renewed cyclical expansion in North America, and continued growth in most overseas countries. More goods have moved across retain counters, and spending on consumer services has increased in line with the strengthening trend of personal incomes. A resurgence in sales of automobiles and other durable goods was evident in the latter part of the year. Following a period of inventory adjustment, businesses are again adding to stocks, though at a moderate rate. Business outlays on plant and equipment turned upward at about mid-year.

In the field of residential house building, the easier terms under the National Housing Act, implemented last year, together with the greater availability of mortgage funds, have contributed to increased housing activity. Meanwhile, institutional and public construction has continued to expand. Special federal measures, which have helped to round out local public investment programmes, include the provision of financial assistance for such purposes as technical education, sewage projects, university residences, and the extended municipal winter works programme.

Exports Exceed Imports

A key feature of the current economic expansion has been the strengthening in Canada's trade position. Exports have been increasing at a faster pace than imports, resulting in a further improvement in the merchandise trade balance. It is now evident that a trade surplus has been realised in 1961, as compared with deficits of $97 million in 1960, $369 million in 1959, and $713 million in 1956. On the other hand, Canada has been running an "invisible" deficit in excess of $1 billion annually. Therefore, the deficit on all current transactions, though less than last year, remains large.

Much of the increase in exports this year reflects higher wheat shipments. At the same time, there has been an encouraging growth in exports of manufactured products. Despite lower sales abroad of farm implements and automotive products, total exports of manufactured goods, on the basis of figures available to date, are up about 10 per cent. In addition to large deliveries on aircraft orders, significant increases have occurred in such categories as industrial machinery, electrical apparatus, cotton products, and manufactured wood products. Industrial material exports were adversely affected early in the year by the economic slow-down in the United States economy. More recently, however, sales of mineral and forest products have been moving ahead in response to the upturn in factory output south of the border.

Imports Higher

Imports are higher this year compared with last, but the increase is moderate in relation to the general expansion in activity. There has, in fact, been increased reliance upon domestic, as opposed to foreign, sources of supply in a number of fields, including automobiles, appliances, textiles, and iron and steel products. All in all, trade figures for 1961 show that Canadian producers are making headway to an encouraging degree in the further penetration of both home and foreign markets.

New federal measures of a far-reaching character have been implemented to help Canadian producers extend their markets and expand production. Of major importance has been the change in the exchange rate policy, resulting in a lower external value of the Canadian dollar. For the last six months, the Canadian dollar has been at a discount with the United States dollar, amounting, on average, to 3.3 per cent as compared with an average premium of 3 per cent during 1960. In the prevailing conditions of intensive international competition, an exchange rate shift of this magnitude provides an important lift to the wide range of Canadian industries competing with foreign goods, both domestically and abroad.

The new credit facilities available to capital goods exporters have brought an energetic response. Projects in eight countries, involving the possible sale of Canadian capital equipment, aggregating $82 million, are under active consideration, while five other proposals are being studied—a total of $214 million.

Throughout the past year, the Department of Trade and Commerce has made an all-out effort to bring to the Canadian businessman a greater awareness of opportunities in foreign markets, and also to help in the search for new avenues of economic production and development. To this end, the trade conference of late 1960 has been followed up by a series of provincial conferences, aimed at fostering, at the local level, the necessary sense of urgency in the drive for new markets.

Other new measures contributing to business growth include the provision of guaranteed bank loans to small business; extension of the operations of the Industrial Development Bank; the provision, under income-tax regulations, of accelerated depreciation for specified categories of capital outlays; and the establishment of new arrangements providing for increased attention to product design.

Prospects for the New Year

Looking to the new year, there are many signs of continued expansion. As the old year ends, key indicators of economic activity are pointing upward. Business confidence is strong, and there is widespread expectation of future growth in production and sales. Information now available on investment plans for 1962 indicates at least a sustained level of business outlays for new plant and equipment, and further growth in institutional and public building. The current surge in consumer buying should clear the way for a strong order position in the new year.

Giving support to this firm business trend in Canada is the improving economic situation in the United States. Exports to the United States have risen since early 1961, but have yet to reflect the full impact of rising factory output in that country.

These are some of the considerations which seem to underlie current expectations of a good year ahead. It is important, however, not to be lulled by good business prospects into letting up in our efforts to strengthen our position in world markets. In the expansion phase of the business cycle, the going is apt to be deceptively easy. In a period of expanding demand, it is possible for an industry to maintain a higher level of sales even though its share of the total market is shrinking. The full

AMERICAN LETTER

MODERATE ECONOMIC GROWTH EXPECTED

HEAVY GOVERNMENT EXPENDITURE FORECAST

From Our Special Correspondent

NEW YORK, *30th December*, 1961

AT the turn of the year, there are two major influences apparent in the United States—the almost certain continuation of moderate economic growth in 1962 and a "crisis of confidence."

The gross national product, which was in the neighbourhood of $537,000 million in the last quarter of 1961, will reach, according to expert forecast, more than $555,000 million in the second quarter of 1962 and may reach $570,000 million by the end of 1962. These prognostications come from a panel of 14 nationally known economists who participated in the latest meeting of the National Industrial Conference Board Forum.

Among the major factors expected to contribute toward the 1962 business expansion were rising personal income, larger profits, although inadequate in comparison with past profit-margins, greater Government demand for goods inherent in the defence programme, a large reservoir of consumer credit, the favourable replacement cycle for durable goods purchased a decade ago, better values in the market place, the steel inventory build-up and rising productivity.

Despite this logically rosy outlook, there are problems which come under the heading of a "crisis of confidence." Both political and economic factors play a role in this situation. In the realm of politics, there is, of course, the precarious situation of the United Nations and within its membership.

The crisis in the Congo has left a deep mark and the rifts of feelings and emotions will be somewhat difficult to heal and eradicate. India's action against the Portuguese territories on its mainland has not helped this situation. Over and above that is the inconsistency of U.S. foreign policy which is difficult to understand by Americans as well as by peoples in other countries.

Invisible Crisis

As Dr. Arthur Schlesinger, Jr., Special Assistant to the President, put it in a conversation the other day, the Kennedy Administration is confronted with an "invisible crisis," as against the "visible crisis" of the Roosevelt regime. Otherwise, he conceded a similarity of economic and social objectives among President Kennedy's "New Frontier," Mr. Truman's "Fair Deal" and Mr. Roosevelt's "New Deal."

The inconsistencies include U.S. support of armed intervention in the Congo by the U.N., the condemnation of India over Goa for armed intervention which already has led to demands from some members of the Congress that aid to New Delhi should be withheld, the dilemma in Cuba, despatch of warships to Dominican waters to which must be added previous U.S. opposition to French and British landings in Suez and the Berlin crisis.

Inconsistency and crises have resulted in consumer hesistancy which is not helped by continuing wage-cost-price pressures. This, in turn, does not make for confidence in business and industry and hard core unemployment persists. Spokesmen for the Government, like Mr. Schlesinger, say there is little inconsistency. The U.S. position in the Congo is explained, for example, with the remark that Katanga is indispensable for the Congo as a whole.

The tacit approval of the ill-fated invasion of Cuba is now held to be a "great error" and the new policy may be boiled down as paralleling the *cordon sanitaire* of European precedence. Another indirect result of the crisis atmosphere is the unfavourable U.S. balance of trade. In the July-September quarter of 1961, it reached a rate of more than $3,000 million.

Foreign competition was and is likely to continue as an important factor and unused industrial capacity is a side-effect. Conversely, this means that, if the occasion should present itself, the U.S. industrial plant will have great ability to enlarge output.

World developments left their marks in the foreign exchange markets as well. It seems an anomaly that both India and the U.S. should have been losing gold reserves simultaneously but for different reasons. Again, it is the crisis of confidence—strictly psychological—based on fears and speculation rather than on facts. Despite Portugal's upheavals in Angola, despite Goa, the escudo has been strong and there was weakness in the rupee and in the dollar.

The magic word, no doubt, is gold and the Portuguese have excelled in gold trade at their various trading points around the world. Macao has figured prominently in this field and, with the precedence of Goa, there are now question marks about Macao. The reasoning, rational or otherwise, is, if China can take territory belonging to India and India can take over Portuguese enclaves, China can do the same and it might do so. The gold question, so far as the average businessman is concerned, also comes under the heading of an invisible rather than a visible crisis.

Gold is Overrated

In the first place, gold is now held to be overrated in importance, at least here. Secondly, the U.S., despite the losses in monetary gold stocks, still has 40 per cent of all such stocks in the Western world. Thus, there is no need for panic even in view of the considerable amounts of gold at the disposal of the Kremlin at Moscow. There is some apprehension here, though, about the losses in India's gold reserves which are now only 40 per cent of what they were five years ago—not counting, of course, the private hoards. But these are some of the economic consequences which present themselves at the New Year as a result of world developments.

In addition, a strictly internal crisis is brewing in the U.S. It involves the transportation industry, not only the railroads which have changed but little in the last half century but also the airlines. This is a serious curtailment of profits in the inter-city trucking industry also and this state of affairs cannot continue without resulting in bankruptcies for some companies or in more mergers.

It is difficult to understand why this should happen since transport and travel have increased greatly. There are two basic answers. One is better and more costly equipment which cannot be acquired, improved or replaced under current profit-margins in the absence of an enlightened tax write-off law. Secondly, there is a combination of factors, increasing operating costs, excessive competition and the stimulation of excess capacity which is partly the fault of the regulatory authorities. The cost-profit squeeze is particularly evident in this field.

Building and construction seem to be heading for a record year. It should be at least 5 per cent higher than in 1961, considering the increase in population, required new dwellings, office space, highways and Government requirements in this field. There is also what might be called an educational building boom, in that it concerns schools, colleges and universities.

Government Spending

Federal expenditures for goods and services which were $57,000 million in 1961 will probably rise to $63,000 million this year. Last year, some $50,000 million was for defence and this share may increase to $55,000 million. The Government spending area covers really the entire economy, wages, maintenance, fuel, spare parts, ships, submarines, aircraft, missiles, household utensils, autos, guns and so forth.

It might also be observed that outlays for space development have doubled recently almost every year. In the fiscal year 1961, there were $744 million and, in fiscal 1962, they will run to $1,335 million. State and Local Governments will boost their spending from about $51,500 million to $55,000 million. All Government expenditures together provide a most powerful stimulus for the economy which, however, is not necessarily productive in the purist economic sense.

There is very little in the offing which would suggest radical changes in the money and credit markets. There has been a slight gain in interest rates for various purposes. Both commercial and mutual savings banks were permitted to pay more interest to their depositors. While much noise has been made about it, only about 3 per cent of the banks in the U.S. have seen fit to announce increased payments. The answer probably is they cannot afford very well to pay more than 3½ to 4 per cent before overhead and profits.

Even though under circumstances of enhanced economic activity, the ratio of savings should diminish and spending by consumers should go up, there should be no shortage of credit nor a material increase in its costs in the near future.

U.S. Agriculture

Farmers had a relatively good year and they are looking forward to similar results in 1962. Farms produced just about as much food and fibre in 1961 as in 1960 which was the last record year. Net income was about 10 per cent larger and exports of farm products soared to a new high. The yields of crops per acre was about 2 per cent higher than in 1960 and 1958, both of which were record years.

A new acreage planting reduction programme was put into operation under which farmers were paid for not growing certain produce and this resulted in the first decline in U.S. feed grain stocks since 1952. Otherwise, wheat production was affected by drought conditions. It was about 10 per cent smaller than in 1960 at 1,200 million bushels, or 422,880,000 hecto-litres.

The smaller crop production was offset by larger output of livestock and livestock products. In 1961, the net income of farm operators was about $12,700 million, or about $1,600 million higher than in the preceding year. Slightly higher market prices were responsible for it in part and Government price support programmes contributed the other part of the gain.

About one half of U.S. cotton, wheat and rice production went overseas. Exports of agricultural products reached a new high of $4,900 million in the fiscal year ended 30th June 1961, up about 10 per cent over 1960. The Kennedy Administration's farm programme has a domestic and a world facet. At home, it aims at raising farm income which had fallen behind the national growth rate. The international objective is more effective use of agricultural abundance in the Food-for-Peace Programme. In other words, it is planned to use food in the interest of world peace and economic development overseas.

New Industrial Developments

The new and sixth decade of the twentieth century saw significant developments which, perhaps, are only the beginning of better things to come. They include an electronic telephone exchange which is being field-tested at the present time. Its switching system handles calls 1,000 times faster than present equipment. It repairs itself or teletypes for human help if its curcuits break down.

Another development relates to what might be called "machine talk." More than 500 American companies are using computers. They talk to one another over regular telephone lines, but they have been developed by different companies. An electronic translator-computer has now been developed which converts automatically the language of one into another. There are now 5,000 computers at work in business, industrial, scientific and governmental organisations.

Construction is being helped by new products for foundations, floor panel systems—in fact, anything but roofing. There are factory-made partition walls, quick-drying plasters which reduce finishing time, new doors which cut costs by one-third and new air-conditioning and refrigerating units.

Discoveries have also been made in the peaceful use of harnessing the atom. It involved co-operation among university scientists, medical doctors, industry and the Government. Thermonuclear forces, such as contained in the hydrogen bomb, are now used for production of useful electricity. This has benefited so far the public utilities and shipping. In addition, the first atomic weather station has been set up. It is un-manned and is located in Canada. It transmits automatically weather conditions every three hours and fills a void which existed heretofore. It is expected to operate for two years before refuelling and it is powered by 1 lb. (.45 kilogram) of strontium 90.

Much comment was caused here by the announcement at the U.N. that the International

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

CENTRAL BANK COMPLETES FIFTY YEARS

MANY IMPRESSIVE ACHIEVEMENTS TO ITS CREDIT

THE Central Bank of India, the largest joint-stock commercial bank in the private sector, celebrated its golden jubilee on 21st December 1961, that is, after the last regular issue of this journal for the past year was published. On that day fifty years ago, the Bank first opened its doors for business. In the broad and swift sweep of time, fifty years is only a brief period. But it is certainly a landmark in the history of an institution, especially when the half century coincides with a most momentous period in the history of India which witnessed the decline and fall of a mighty empire and the rebirth of a nation which is now struggling hard to raise the low living standards of its people. Like all great institutions, the Central Bank had humble beginnings but high ideals and aims. It owed its origin mainly to the vision, enterprise and patriotism of the late Sir (then Mr.) Sorabji Pochkhanawala, who, even as a young man, conceived the idea of establishing a bank which would be entirely Indian in composition, management and outlook and approach. In realising this deserving ambition, he was assisted by an able band of directors and loyal colleagues. The Indian business community and investors, too, had a soft corner for the Bank, for to bank with Central was regarded as a help to the national cause. From Sir Pherozeshah Mehta, the founder-Chairman (1912-15), to Sir Homi Mody, the present Chairman, a succession of illustrious men guided the destinies of the Bank.

As already stated, the Bank had a modest but encouraging start with an authorised capital of Rs. 50 lakhs. The issued capital was Rs. 20 lakhs, of which Rs. 10 lakhs was paid-up. The fifty years since then has, of course, not been a period of placid growth. Stresses and strains there were, as in the life of any other organisation, the more so in the case of a banking organisation, because its business is highly sensitive to any passing wind that blows over the national horizon. In fact, for the Central Bank, the test came early, perhaps too early. For, in 1913, when the Bank was hardly two years old, it found itself in the midst of a country-wide banking crisis, which, starting with a toll of 29 banks in the Punjab, spread over the entire country, involving the crash of as many as 64 banks. In Bombay City alone, eleven banks, including such well-known institutions as the Specie Bank and the Credit Bank, closed their doors. It is a tribute to the inherent soundness of the Bank's policy and an index of the banking public's confidence in it, that the Central Bank weathered the storm without having to avail itself of the selfless offer of Sir Pherozeshah Mehta to give the title deeds of his personal properties to help the Bank to raise additional funds to tide over the crisis. Scarcely had this critical period passed than the First World War broke out. There was general dislocation of trade and industry and the Central Bank, along with other banks, felt the impact and suffered heavy decline in deposits. The difficult conditions continued for some time but, by the end of 1916, the corner was turned and the expansionary phase set in which, barring occasional setbacks, has continued to this day.

Pre-eminent Position

In 1923, the Central Bank took over the management of the Union Bank of India Ltd. The Tata Industrial Bank was also amalgamated with it. These two events were the earliest instances in the banking history of the country of one bank going to the assistance of another bank in trouble—a trend which is much in evidence today and is actively encouraged by the Reserve Bank. After successfully tiding over the Great Depression of the early 'thirties the Central Bank celebrated its silver jubilee in 1936, when its paid-up capital and reserves stood at Rs. 2.5 crores and deposits at Rs. 31 crores. The Bank had 84 branches in different parts of the country and it had already achieved the distinction of being the biggest of all joint-stock banks in India, a position which it still retains. At present, the Bank has 338 branches in all, including eight in Pakistan, one in Rangoon and one in London. There is hardly any place of commercial importance in the country where the Central Bank does not have a branch. As against a small staff of 30 in the beginning, it has now as many as 12,000 employees in its head office and branches.

The post-independence period witnessed rapid changes in the economic landscape of the country. The first and second Five-year Plans, which aimed at accelerating the pace of industrialisation and promoting all-round economic and social development, demanded of the banking industry a more enterprising and purposeful role than in the past. The Central Bank, along with other commercial banks in the country, accepted the challenge and steadily diversified its operations by venturing into fresh and unexplored fields to meet the changing needs of a developing economy. Realising the importance of agriculture to India's economy, the Central Bank gave high priority to financing the production and marketing of agricultural commodities. It has also been making significant contribution to the financing of the organised industrial sector, namely, textiles, sugar, *vanaspati*, cement, iron and steel, engineering, jute, plantations, etc. The past fourteen years since independence has been a period of sustained and systematic development of the Bank's business. Deposits steadily grew and the shift towards time deposits became more pronounced. Advances to industry assumed greater importance than previously and foreign exchange business was handled on a larger scale. The total working funds and gross earnings increased substantially. As at the end of June 1961, the Bank had an authorised capital of Rs. 6.30 crores, subscribed capital of Rs. 5.77 crores, paid-up capital of Rs. 3.15 crores, reserves and other funds of Rs. 4.17 crores, deposits of Rs. 209.62 crores and total working funds of Rs. 233.92 crores. The table at the bottom indicates the quinquennial progress of the Bank since its inception till the end of 1960.

Pioneer in Many Fields

As the biggest joint-stock bank in the private sector, the Central Bank pioneered many activities which have now come to be taken for granted by the banking public in the country and which therefore no bank can do without. As far back as in 1921, the Central Bank introduced, for the first time in the country, home savings safe accounts for encouraging the saving habit among people of modest means. The Bank was also the first to permit the use of cheques for savings-account holders. It also started a special department staffed by qualified ladies to attend to the needs of lady customers. The Bank was again the first in India to provide safe deposit facilities for its customers. Among other pioneering activities may be mentioned the introduction of three-year cash certificates and the issue of rupee travellers cheques.

The aforesaid short account gives a broad idea of the immense progress and impressive achievements of the Central Bank in the past fifty years. These have been possible because the Bank was able to earn and retain the confidence and goodwill of the public which is the most valuable asset of a bank. While the past has been crowded with achievement, the future holds both challenges and opportunities. The Central Bank, in common with other commercial banks, will be called upon to play an increasingly important role in the country's development. We have no doubt that it will address itself to the task of the future with the same earnestness and dedication with which it has successfully striven to translate into reality the noble ideals which its founders had set for it.

It is in the fitness of things that, to commemorate its golden jubilee, the management of the Central Bank has decided to start, in association with the Dena Bank, a bankers college for training young men for worthwhile careers in banking. The college is to be appropriately named after Sir Sorabji Pochkhanawala, the founder of the Central Bank. Surely there is no better way of perpetuating the memory of a man, who dreamed of building up Indian enterprise in banking and worked for it with selfless devotion, than by providing facilities for young men who share his ideals to fulfil their dreams.

DEPOSIT INSURANCE CORPORATION

The Government of India has issued two notifications under the Deposit Insurance Corporation Act, 1961, bringing the Act into force from 1st January 1962, and constituting the Corporation with effect from the same date. The Bill to provide for the establishment of the Corporation, it will be recalled, was passed by the Lok Sabha in August 1961 and by the Rajya Sabha in November 1961.

The Corporation will be an autonomous body with a paid-up capital of Rs. 1 crore wholly allotted to and subscribed by the Reserve Bank of India. The Act provides for a five-member Board of Directors. The Governor of the Reserve Bank will be the Chairman of the Board. Mr. M. V. Rangachari, Deputy Governor of the Reserve Bank, and Mr. A. Baksi, Joint Secretary, Ministry of Finance, Department of Economic Affairs, will be the nominees of the Reserve Bank and the Central Government, respectively. The two non-officials appointed to the Board by the Central Government will be Professor G. S. Dewan, retired Professor of Actuarial Finances at the Sydenham College of Commerce, Bombay, and Mr. S. N. Desai, President of the Institute of Chartered Accountants of India.

The Act requires that all commercial banks functioning normally should be registered by the Corporation as insured institutions within one month of the date on which it is brought into force. It is anticipated that all the 293 banks which are eligible under the Act, including the State Bank of India and its eight subsidiaries, will be registered within the prescribed time limit. The insured banks will pay at quarterly intervals a premium of 5 nP per hundred rupees per annum on their deposits and will be entitled to the benefit of cover to the extent of Rs. 1,500 in the case of each depositor.

The Corporation's liability will arise and be discharged on the liquidation of any insured institution or the enforcement in relation to it of a scheme of reconstruction or amalgamation which does not provide for payments in full to the depositors. In the event of liquidation, payments up to Rs. 1,500 will be made by the Corporation and any expenditure thus incurred will be reimbursed to it subsequently from out of the dividends in liquidation as and when they are declared. In the event of the enforcement of any scheme of reconstruction or amalgamation, the Corporation will be responsible for the payment of the deficiency, if any, in the amounts credited to the depositors up to a limit of Rs. 1,500 and it will recover the expenditure incurred by it from the subsequent payments which are due to be made to the depositors.

The Act provides for the limit of the insurance to be increased at any later stage beyond the sum of Rs. 1,500, in case this is considered necessary or desirable. It also provides for the liabilities to the depositors to be discharged most expeditiously, and it is expected that, in actual practice, the payments due to the depositors will be made within a few weeks of the date on which the Corporation's liability arises.

An investment agreement by the International Finance Corporation (I.F.C.) and the Pakistan Industrial Credit and Investment Corporation Limited (P.I.C.I.C.) for $4 million and $3 million, respectively, with Ismail Cement Industries Limited, has been signed. This is the largest single investment made by either of these institutions. The Bank of America N.T. and S.A. of San Francisco is participating in the I.F.C. investment to the extent of $172,000. The total cost of the project is estimated at over Rs. 5.8 crores. Foreign exchange requirements will be about $7 million to be provided by I.F.C. and P.I.C.I.C. The latter's foreign exchange funds to be used for this project are derived from a loan from the World Bank. The local financing will be provided by the Pakistani sponsors and by an issue of shares to be offered to the public in Pakistan. The I.F.C. investment will be in two parts, one of $2.75 million in dollar debentures bearing 7¼ per cent dollar interest, maturing between 1966 and 1973. The remainder of $1.25 million is in convertible dollar income notes entitled to income, in rupees, equal to dividends on an equivalent amount of common stock; these mature between 1974 and 1976 and are fully convertible into common shares at par any time prior to maturity. The P.I.C.I.C. contribution of $3 million will be in debentures bearing 7½ per cent interest, repayable in rupees with maintenance of value clause, maturing between 1966 and 1973.

For dependable distribution down the line...

VOLTAS IS THERE

The need may be for pharmaceuticals in an outlying village, or construction equipment in a remote town, or textile machinery in a big city...but whatever the demand and wherever it stems from, it is always answered because Voltas is there with its effective distributive system. Take pharmaceuticals—the Voltas Pharmaceutical Division has 7 sales offices with a 50 strong sales force covering nearly a thousand towns and villages all over the country. Stocked in air-conditioned warehouses, the pharmaceuticals reach chemist and consumer promptly, efficiently, regularly. And the same creed of service underlies Voltas' distribution in all 10 Divisions... all down the line!

Briefly, Voltas' activities comprise:

- **Marketing and Distribution of goods:**
  Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.
- **Manufacture and Development:**
  Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!
- **Service**
  Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

INCREASING COTTON PRODUCTION AND YIELD

MR. M. R. RUIA CALLS FOR COLLECTIVE ACTION

THE New Year does not appear to have begun well for raw cotton. With crop prospects still remaining largely uncertain, the delay in the movement of crop has given rise to fears of shortage of this fibre. Such a prospect in the context of the steadily rising mill consumption and the apprehension regarding the ready availability of U.S. cotton this year explains the current firmness in the cotton market. Prices of almost all varieties are ruling at the ceiling rates. Some varieties are said to be changing hands even above the ceilings.

It is not so much the possibility of supplies falling short of demand in a particular season as the persistent tendency for shortfalls in production of cotton to recur that is cause for concern. Attention to this problem was again drawn by Mr. Madanmohan Ruia, President of the Cotton Buyers' Association, in his speech at the twenty-fourth annual meeting of the Association held in Bombay on 26th December last. He said that the recurring shortage of cotton supplies in the country was disturbing to a degree, as the problem had really assumed serious proportions. He apprehended that, sooner or later, it would go out of control, if it were not tackled vigorously and with far-sightedness.

Outlining his solution, Mr. Ruia observed that increased production could be a reality only if the farmers were given an incentive in the form of higher prices. The present prices of Indian cottons, he contended, were below world parity. Prices had been artificially kept down by the imposition of ceilings. The first fundamental requirement for obtaining larger production was realistic prices. This could be brought about by either removing the ceilings or by raising them to a level which would put Indian prices on parity with world prices. He was confident that his suggestion could be implemented without any apprehension about the likely effects of such a step on exports of textiles, for other suitable methods could be devised to maintain them. He did not say as to what these "other methods" were; instead, he only asserted that they could be easily worked out if the trade were given an opportunity to do so.

Low Yield

Mr. Ruia regretted that his suggestion for collective action by all the interests concerned, namely, farmers, traders, mills and Government to tackle the problem of increasing production had not been acted upon. He pointed out that it was hardly a matter of pride to the country that, with the largest acreage under cotton, India should be so woefully behind other countries in the matter of yield. He therefore appealed to all the interests concerned to give urgent consideration to the suggestion. He apprehended that if prompt and vigorous measures were not taken the shortages would persist, necessitating the continuance of irksome controls which make normal marketing virtually impossible. Failure to tackle the problem would, he warned, reduce the country to the status of what he called "permanent addicts to imports of P.L. 480 cotton," a prospect that could hardly be palatable to anybody.

Mr. Ruia has done well to focus attention on the urgency of the problem of increasing cotton production. None can dispute his diagnosis that, apart from the vagaries of weather, low level of yield is the main reason for production lagging behind requirements. But it is difficult to agree with his prescription of lifting of price controls or upward revision of ceiling as the solution to the problem. The argument that higher prices would lead to higher production is an old one which has been disproved by the experience of the past seasons which shows that it is the weather and not so much the price that is the determining factor. It is not contended that production is insensitive to price changes. But the fact that the acreage sown to cotton has shown little change from year to year over the past many years, notwithstanding the wide fluctuation in prices, indicates that production (acreage) is not as sensitive to price changes as is made out to be. The farmers are concerned with not what they realise for each bale of cotton as the net return from an acre of land. If an acre of land under cotton yields a net return which is less than the yield from an acre under competing crops, there might be a shift away from cotton in areas where substitution of crops is possible. But this does not seem to have taken place on any significant scale. Nor has Mr. Ruia given any data to prove his oft-repeated contention that higher prices would surely yield more cotton, without adversely affecting the production of other crops, or that their absence has meant less acreage for cotton.

It is common knowledge that net return per acre is not the result only of price. The yield per acre has a more decisive influence. If, therefore, the yield is raised farmers will earn more per acre of land and production will automatically go up. Accordingly, what is necessary is not abolition of price controls or the raising of ceilings but direct assistance to farmers in the form of better seeds, fertilisers where there is irrigation, more irrigation that will reduce the dependence on rain, removal of waterlogging and salinity in the areas that have been under irrigation for a long time, and soil-testing. This means a lot of hard work for the Departments of Agriculture in all the States where cotton is grown. But it will have none of the disadvantages and dangers which a policy of upward revision of prices will inevitably have on the prices of cloth and the general price level in the country. It is difficult to share the optimism of Mr. Ruia that the higher price of cotton, which accounts for about 50 per cent of the cost of production of cloth, will not affect exports of textiles, however ingenious the "other suitable methods" which he has in mind. Exports apart, nearly 90 per cent of cotton (mill and handloom alike) produced in this country goes into domestic consumption. Accordingly, a higher prices for cotton means a higher price for domestic consumers and, therefore, inflation. On this point, Mr. Ruia was silent. Why? Is inflation at home less inconvenient than a setback in exports? Again, whatever may be the ingenious methods adopted for offsetting the impact of higher cotton prices on cloth exports, it should not be forgotten that their cost, too, will have to be borne by the consumers here and that, as such, they will also tend to aggravate inflationary pressures.

Since official attempts to raise the cotton yield per acre have not been successful to the extent necessary, some unofficial attempts may be made, in addition to making speeches and putting forward paper plans. It would be a good thing if Mr. Ruia were to organise a meeting of millowners and cotton merchants under the joint auspices of the Cotton Mills' Federation and the E.I.C.A. for drawing up practical projects for securing increases in per-acre yields in a short period. They could, for instance, take responsibility for reforming cotton growing in certain tracts in the country and show to the rest of the country that the job could really be done. They will be rendering a signal service to the country and to themselves if they approach this serious problem in a missionary spirit.

COTTON GROWING AND RESEARCH

The Plenary Session of the Tenth Conference on Cotton Growing Problems in India, organised by the Indian Central Cotton Committee, was held on 30th December at Bombay under the Chairmanship of Dr. S. M. Sikka, Additional Agricultural Commissioner, the Government of India. Some 60 delegates from all over India connected with cotton research and development work attended the session. The plenary session of the Conference took up for discussion the resolutions which were recommended by the respective seminars on the different subjects which were held on the previous two days. In all 32 resolutions were considered and 31 were passed at the plenary session. These dealt with interspecific hybridisation in cotton, causes of low yields in the problem areas and the means to effect improvement, and the cotton problems of the Central *arboreum* and Western *herbaceum* regions. The resolutions will now be placed before the meeting of the Indian Central Cotton Committee scheduled to be held in February, 1962, for consideration and further action.

One of the resolutions recommends the implementation of a master project for interspecific hybridisation and co-operative research for the improvement of Indian cottons in a few selected centres in the country, where facilities and personnel were available for undertaking this work with a view to improving the Indian cottons in quality, productivity and other desirable characters like resistance to pests and diseases. The Conference also recommended that one of the centres under the project should be located in a place where facilities for irradiation work were available.

The work for the evaluation of the wild species for resistance to the various pests and diseases under standardised conditions of infestation or infection was recommended to be taken up and the resistant species catalogued. In this connection, the Conference also recommended that a sub-committee might be appointed by the Indian Central Cotton Committee to lay down standard techniques for the evaluation of the material for resistance to specific pests and diseases.

The need for further detailed and critical study of the morphological, histological and biochemical factors, which form the basis of resistance to different pests was recognised and the Conference recommended that work on these aspects should be taken up as a joint programme of the Breeder, the Entomologist and the Biochemist, working as a team.

The Conference took note of the fact that during the third Five-year Plan period, a target of 50,000 acres had been set for cultivation of hybrid cotton, in order to make up for the anticipated shortfall in the production of extra-long staple cotton in the country. It was, therefore, considered essential that a continuous supply of hybrid seed of good quality should be ensured for achieving this target. For this purpose, the Conference recommended the setting up of a permanent agency for hybrid seed production based on the experience gained in the Pilot Project now working in the Gujarat State.

Under the seminar on the causes of low cotton yields in the problem areas and the means to effect improvement, the Conference considered the problems of Mathio, Vidarbha, Nimar, Dharwar-Kumpta and Rayalaseema tracts in the States of Gujarat, Maharashtra, Madhya Pradesh, Mysore and Andhra Pradesh respectively. It noted that the improved variety "Sanjay", recommended for the Mathio tract was not better in yield of *kapas* but possessed higher ginning outturn and better spinning capacity than the local variety. The Conference, therefore, recommended that re-orientation of research with adequate emphasis on higher yield per acre in addition to better quality should be effected, specially in the problem areas where low yields were recorded. The Conference also recommended that the comprehensive agronomic experiments formulated by a Special Sub-Committee and approved by the Indian Central Cotton Committee should be undertaken in a representative centre in the Mathio tract.

For raising a pest and disease free crop in the Vidarbha and Nimar tracts, the Conference recommended the schedule drawn up by the Special Sub-Committee of the Indian Central Cotton Committee for implementation under the Cotton Development Schemes.

The 'chaufuli' method of sowing which was akin to the square pocket method in vogue in Russia and which was followed in about two lakh acres in the Vidarbha region was recommended for wider adoption.

LEVY ON INDIAN COTTON

The Committee of the Indian Cotton Mills' Federation decided, at its meeting held on 21st December 1961, to collect from mills a levy on Indian cotton at the rate of Rs. 2.50 per bale on short-staple cotton, Rs. 5 per bale on medium-staple cotton and Rs. 10 per bale on long-staple cotton in order to increase the funds for the promotion of cotton cloth and yarn exports. The levy will apply to all Indian cotton of the 1961-62 season.

Simultaneously, the levy on imported cotton will be raised from Rs. 130 to Rs. 150 per bale of 1-1/16" and above and from Rs. 170 to Rs. 200 per bale for cotton of 1-3/16" and above. The Committee also decided to make certain recommendations to Government for streamlining the export incentive scheme. Earlier, the Committee had a meeting with Mr. W. R. Natu, the Textile Commissioner, when the problems relating to the industry, with particular reference to its development in the third Plan, rehabilitation, machinery requirements and cotton supply position were discussed.

COATED NYLON

One of the most fascinating aspects of nylon is that it enables textiles to be used for a variety of entirely new purposes. It has particularly interesting possibilities for engineers. Although textiles have long held several attractions for the engineer—one of the biggest is their flexibility—the uses to which they could be put have been severely limited in the past because they lacked sufficient strength and durability.

The introduction of nylon with its tremendously high strength and energy absorption, its ability to resist flex fatgue and abrasion and its complete immunity to rotting has enabled these limits to be raised dramatically. This is particularly true of coated nylon fabrics.

Nylon base cloths coated with various types of plastic or synthetic rubber were originally developed for protective covers. Their lightness in weight, flexibility and ease of handling give important advantages and they have achieved widespread success. But far-seeing engineers quickly realised that their capabilities were so much greater than those of any other industrial fabrics that they could be used also for completely new purposes.

Among these is the nylon airhouse in which British Nylon Spinners have housed their display at the Indian Industries Fair at Delhi. In appearance the airhouse is rather like a huge bubble tethered to the ground by iron stakes. The skin of coated nylon fabric is held up solely by air blown in by powerful electric fans which are kept running constantly. Special advantages are that there are no poles or other supports to get in the way inside and that the structure can be put up or taken down quickly and easily.

PROSPECTS FOR COTTON INDUSTRY

U.K.'S ENTRY INTO E.C.M. WILL DO GOOD RATHER THAN HARM, SAYS LORD ROCHDALE

From Our Special Correspondent

MANCHESTER, 22nd *December*

PROSPECTS for the Lancashire cotton industry in the event of Britain entering the European Common Market were good, Lord Rochdale, Chairman of the Cotton Board, told members of the Manchester Statistical Society. "My own view is that it will do good rather than harm," he said and added: "Admittedly more Continental specialities will enter our markets, but, for the first time in their lives, our own salesmen will encounter a group of major markets, whose standards of living compare with our own, where tariff barriers are being lowered instead of raised."

MANCHESTER LETTER

"We have latterly been very much short at and unable to shoot back," said Lord Rochdale. "One by one our major markets have protected themselves against our salesmanship by tariffs and quotas. At last we shall have a chance to show our mettle. Every reduction in the internal tariff of the European Economic Community if we become a member, should provide an opportunity for someone here if we are smart enough to grasp it." The industry, he said, must attract and hold its fair share of top grade men from the universities and higher technical colleges. Firms must be large enough to offer full scope to these men, providing the possibility of promotion to positions of real influence and responsibility, while they remained relatively young and able to give the aggressive initiative and leadership which a competitive world demanded.

Further help would be needed on the import side to curtail arrivals of foreign goods. Re-equipment of the mills must be regarded as an ever-continuing demand, and the industry must be given a reasonable chance of financing itself from current and future profits for this purpose.

Too Many Small Firms?

The structure of the Lancashire cotton industry was a subject which Lord Rochdale dealt with in detail; particularly its vertical organisation. "The contraction of the industry and its long history have undoubtedly left it with too many small firms for maximum efficiency," he commented.

Although Lord Rochdale went on to agree that there would always be a place for a certain number of small specialised units, he pointed out that half the employees in the trade were engaged in firms with over a thousand operatives. The industry, outside the converters, now consists of 776 companies, of which 36 employ over a thousand workers, and could qualify by market capitalisation of over £1,000,000 as trustee stocks.

Trend to Verticalism

What is perhaps surprising, in view of the much-criticised horizontal structure of the trade, is that 26 out of these 36 firms are predominantly vertical units, engaged in spinning, weaving and converting activities. Lord Rochdale went on to observe that about 110 firms which make returns to the Cotton Board are quoted on official stock exchanges. By employment, he said, they represented 54 per cent of the industry's total.

It terms of equipment, however, these 110 concerns cover about 80 per cent of mule and ring spinning, 50 per cent of waste spinning and doubling respectively, and 35 per cent of the weaving capacity in the industry. They are also responsible for about 30 per cent of the deliveries of converted cloth. "The vertical trend is there, but it needs to be carried further," he added.

Turning to the ever-present question of imports, the Cotton Board Chairman quoted figures which were presumably presented to the President of the Board of Trade, Mr. F. J. Erroll, only a few days previously. These should have left the President in no doubt as to the way in which the industry's leaders were thinking. Imports into Britain from low-wage countries in 1960, Lord Rochdale said, were roughly 27 per cent of home consumption; for Canada they were 15 per cent; for the United States 6 per cent; and for the Common Market group only 2½ per cent. "I think it is generally accepted that we have already reached saturation point," he continued, and said: "Indeed, my own view would be that we have already passed it, and that, while they increase their imports, ours should be gradually reduced, until a more uniform percentage is reached."

Grumblers Justified

As a woollen manufacturer working in Lancashire before the war, Lord Rochdale freely admitted that he had then regarded the cotton industry as "a persistent grumbler." In the past four years since his appointment, he had gained a more informed and objective picture—and a rather different one.

The cotton industry's troubles, he now recognised, sprang from its past greatness. The three largest exporters in the world today—Japan, the United States and India—catering for a more populous and richer world, still exported an aggregate quantity less than half the 7,000 million yards of cloth which Lancashire shipped abroad in 1913. The world's markets since then have gradually closed their doors to the outsider, under the influence of the nationalistic policies being widely pursued.

Despite short-term trading difficulties, however, the Cotton Board Chairman believes that the industry is now much healthier. He contends that Britain's entry into the Common Market would do more good than harm, enabling salesmen of cotton goods to cater for a group of major markets whose standards of living are comparable with our own, and where tariff barriers are being lowered instead of raised.

European and Commonwealth Trade

Details of Britain's trade with the European Common Market countries in relation to business with the Commonwealth are valuable at this time when so much is being said and written about this country's prospective entry into the European Economic Community. The International Cotton Federation has collated the following facts about exports and imports of textile products during 1960, which set out the situation in that years:

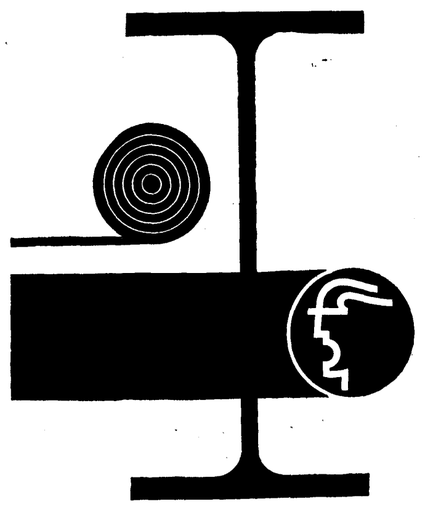
	Cotton goods		Man-made fibre products		Woollen and worsted goods	
	£ '000's	% of total	£ '000's	% of total	£ '000's	% of total
Exports to Commonwealth ...	43,199	68	15,977	54	27,772	32
Imports from Commonwealth ...	28,678	43	453	3	85	1
Exports to E.C.M. ...	1,530	2½	1,150	4	22,500	26
Imports from ,, ...	18,250	27	8,000	53	7,500	77

Note: Commonwealth figures include trade with South Africa.

Mill Stoppages Over Christmas

Extended holidays during Christmas and New Year will be taken by more than 120 Lancashire spinning and doubling mills. This was stated in Manchester by the British Spinners and Doublers Association. Large stocks of cheap imported goods from the Commonwealth and elsewhere were blamed for the decision, as many of these arrivals had been purchased on duty-free terms or had been assisted by subsidies, the Association said.

The Government was being urged to take direct action to stabilise the position, while the reorganisation and re-equipment of local mills was being completed. Even the most efficient and progressive Lancashire firms could not stand up indefinitely to unfair competition, the Association declared.—*All Rights Reserved.*



Iron and Steel

The large Iron and Steel firms, with more than 100 affiliates and subsidiaries will display their finest products during the

1962 HANOVER FAIR

APRIL 29 to MAY 8

Please address requests for information and literature to:

Deutsche Messe- und Ausstellungs-AG., Hannover-Messegelände

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this industrial undertaking at Calcutta of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus, along with documents attached thereto, has been delivered to the Registrar of Companies, West Bengal, as required by Section 60 of the Companies Act, 1956.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

The subscription list will open at the commencement of Banking Hours on Wednesday, the 10th January 1962 and will close at the close of Banking Hours on Tuesday, the 16th January 1962. The Directors may, at their discretion, close the subscription list earlier but not before the close of Banking Hours on *Friday, the 12th January 1962.*

UNIVERSAL ELECTRICS LIMITED

SHARE CAPITAL

AUTHORISED CAPITAL

Rs. 1,00,00,000 divided into :—

9,00,000	Equity Shares of Rs. 10 each	Rs. 90,00,000
10,000	Preference Shares of Rs. 100 each	Rs. 10,00,000
		Rs. 1,00,00,000

SUBSCRIBED AND PAID-UP CAPITAL

20,000 Equity Shares of Rs. 10 each. These shares are fully paid-up, payment having been received in cash from the subscribers to the Memorandum and Articles of Association, Directors, their relatives, friends, nominees and connections	Rs. 2,00,000

PRESENT ISSUE

8,100 6½% (free of Company's tax but subject to deductions of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of Rs. 100 each ...	Rs. 8,10,000
3,30,000 Equity Shares of Rs. 10 each	Rs. 33,00,000
	Rs. 41,10,000

OUT OF THE PRESENT ISSUE :

(a) Mitsubishi Electric Manufacturing Company Limited having their office in Tokyo, Japan, will be allotted 8,100 6½% (free of Company's tax but subject to deduction of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of Rs. 100 each credited as fully paid-up for consideration other than cash as hereinafter mentioned in relation to the supply of machinery equipment and Technical Assistance	Rs. 8,10,000
(b) 80,000 Equity Shares of Rs. 10 each have been agreed to be subscribed by the Directors, their relatives, friends, nominees and connections and will be allotted to them in full	Rs. 8,00,000
(c) OFFERED TO THE PUBLIC AT PAR FOR SUBSCRIPTION IN CASH—2,50,000 Equity Shares of Rs. 10 each	Rs. 25,00,000
	Rs. 41,10,000

The entire issue to the public has been underwritten.

Out of the above shares offered to the public, the Life Insurance Corporation of India have agreed to take up 50,000 Equity Shares of Rs. 10 each and a firm allotment of these shares will be made to that Corporation accordingly.

DIRECTORS

1. SHRI S. K. BIRLA, 8, India Exchange Place, Calcutta-1. Industrialist and Businessman.
2. SHRI HACHIROEMON INOUE, c/o Mitsubishi Elec. Mfg. Co. Ltd., Tokyo, Japan. Director, Overseas Operations Division, Mitsubishi Electric Mfg. Co. Ltd.

Except for Preference Shares to be issued for consideration other than cash,

Equity Shares

On Application	...	Rs. 2.50 per share
On Allotment	...	Rs. 2.50 per share
Balance	...	Rs. 5.00 per share on call or calls to be made not earlier than 4 months after allotment
		Rs. 10.00

INCOME-TAX BENEFITS

The special benefits provided under the Indian Income-tax Act, 1922, with regard to development rebate and exemption from tax for the first five years of operations under Section 15(C) will be available to the Company in respect of the proposed undertaking.

HISTORY AND OBJECTS

The Company was incorporated on 3rd February 1961 with its Registered Office at Calcutta for the purposes mentioned in its Memorandum of Association and in particular to establish an up-to-date factory for the manufacture of 1,20,000 pcs. House Service Meters per annum.

SCOPE AND PROSPECTS

India's dynamic growth during the First and Second Five-year Plans and the progressively increasing tempo during the third Plan is linked with the rapid expansion of electricity in the country in which watthour meters are necessary for measuring the consumption of electricity. The demand for watthour meters is directly associated with the growth of electricity. If power is not available in ample sufficiency to meet the demand, a very serious restriction on the proper growth of all industries will occur and its effect will be even more seriously felt in the processing industries which offer the greatest scope for increasing employment. Equally, if agricultural improvement and rural development take place as they should, there will be a vast and important demand for increasing quantities of power for village and agricultural development. The development of power has, therefore, to keep pace with the industrial growth of the country. There is already a good demand for watthour meters and with the implementation of electrical programme in hand and the expansion contemplated, this should increase in the years that lie ahead. Distribution of this power load to consumers—industrial and domestic—would involve heavy requirement of watthour meters. Indigenous production in 1960 was only about 4,70,000 pieces and it is anticipated that demand for such meters will increase during and after the Third Plan period. Hitherto, the major requirement of these meters was being met by imports which have had to be severely curtailed owing to the shortage of foreign exchange.

Production in the normal course is expected to commence sometime by the first half of 1963.

PROFITABILITY

In view of the above, the Directors hope that barring unforeseen factors, it would be possible to earn a reasonable return on the capital employed in the business.

COLLABORATION AGREEMENTS

Messrs. Mitsubishi Electric Manufacturing Company Limited of Tokyo, Japan (hereinafter

UNIVERSAL ELECTRICS LIMITED *(Continued)*

referred to as MELCO), are the foreign collaborators in this Project with whom the Company has entered into an exclusive technical assistance agreement, which has been concluded with the approval of the Government. Under this agreement, MELCO has undertaken to supply this Company with up-to-date technical information with regard to design and manufacturing of all types of watthour meters. MELCO has also undertaken to furnish a reasonable number of qualified technical staff for the purpose of advising and assisting the Company in the erection of the factory, installation of equipment, and production of the watthour meters. It has also agreed to train the Company's technical staff in its works. The agreement also authorises the Company to use any form of trade mark which is mutually agreed upon with MELCO including the use of the Three Diamonds—the exclusive trade mark of the Mitsubishi Group in a suitable form. The Company has also received a licence from MELCO to export the watthour meters manufactured by it in India to any country in the world excepting Japan, Canada, and the United States of America.

In consideration of the technical assistance, services and information the Company is to allot and issue to MELCO 1,500 6½% (free of Company's tax but subject to deduction of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of the face value of Rs. 100 each credited as fully paid-up.

This agreement shall continue for ten years from the date of its execution during which period, in consideration of licences and all rights granted under the agreement, the Company shall pay to MELCO royalties calculated at two and half per cent (2½%) on the nett selling price of the watthour meters sold by the Company.

Agreements have also been entered into by the Company with MELCO by which the latter undertake to supply to the Company machineries of an aggregate value of Rs. 9,75,000 of which machineries of the value of Rs. 3,15,000 will be supplied under *ad-hoc* Yen Credit on deferred payment terms. Further, in consideration of supply of the machinery of the same value, the Company shall allot to MELCO, fully paid-up 6½% (free of Company's tax but subject to deduction of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of Rs. 100 each of the aggregate value of Rs. 6,60,000.

PLANT SITE

The plant will be located near Calcutta. Land required for this Project has been purchased. The Company has also received the assurance of the West Bengal State Electricity Board for the supply of adequate power.

INTEREST OF DIRECTORS

All the Directors will be interested to the extent of any shares subscribed by and allotted to them in the Company. They will also be interested to the extent of the fees they may receive for attending the Board Meetings.

Mr. Inoue is a Director, Overseas Operation Division, *Messrs. Mitsubishi Electric Manufacturing* Co. Ltd., and is, therefore, interested in the Agreements with Messrs. Mitsubishi Electric Manufacturing Co., Ltd.

Mr. S. B. Bilimoria is a partner of Messrs. Batlivala & Karani, one of the underwriters and brokers named in the Prospectus.

Mr. M. L. Pyne is a partner of Messrs. G. M. Pyne, also one of the underwriters, and brokers named in the Prospectus.

Mr. K. Khaitan is a partner of Messrs. Khaitan & Co., the Solicitors of the Company, who will be paid the professional charges payable to Solicitors.

None of the Directors has any interest in any property acquired by the Company within the two years preceding the date hereof or in the plant and machinery that may be purchased out of the proceeds of this issue, except as stated above.

UNDERWRITING

The issue to the public is being fully underwritten, the names of the Underwriters and the amounts underwritten by them being as stated below :—

Underwriters	*Amount underwritten* Rs.
The Investment Corporation of India Ltd., Ewart House, Bruce Street, Bombay-1	10,00,000
* The Life Insurance Corporation of India, Jeevan Kendra, Jamshedji Tata Road, Bombay	5,00,000
M/s. G. M. Pyne, 14, India Exchange Place, Calcutta-1	4,00,000
M/s. Batlivala & Karani, Union Bank Building, Dalal Street, Fort, Bombay	3,00,000
M/s. A. B. Pandit & Co., 32, Apollo Street. Fort, Bombay	3,00,000
Total ...	25,00,000

In the opinion of the Directors, the resources of the said underwriters are sufficient to discharge their underwriting obligations.

* These shares have been agreed to be allotted on a firm basis to the Life Insurance Corporation of India.

UNDERWRITING COMMISSION

Underwriting commission @ 2½% of the nominal value of 2,50,000 Equity Shares underwritten is payable to the said underwriters.

BROKERAGE

Brokerage will be paid by the Company to the Managing Brokers, Brokers to the issue mentioned in the Prospectus and to members of any recognised Stock Exchange and to the bankers @ 10 nP per Equity Share on 2,50,000 Equity Shares offered to the public and allotted in respect of applications bearing their stamps. No additional brokerage will be payable to the Managing Brokers.

Brokerage on the same basis will be payable to the Underwriters in respect of applications made or procured by them provided that the relative form of application bears their respective stamps and in such case no brokerage will be payable to any other party.

No underwriting commission and brokerage will be payable in respect of shares subscribed by the Directors, their relatives, friends, nominees and connections.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The estimated requirements, as per estimate made in 1961, are as follows:

	Rs.
(a) Land, Building and cost of engineering acquisition and construction of plant ...	48,00,000
(b) Cost of technical services payable to MELCO (in the form of Preference Shares as stated elsewhere)	1,50,000
(c) Brokerage and preliminary expenses including expenses of this issue	1,55,000
(d) Working Capital	22,00,000
(e) Any other expenditure ...	3,95,000
Rs.	77,00,000

SOURCE OF FUNDS

	Rs.
(a) Equity Shares	35,00,000
(b) Preference Shares	8,10,000
(c) Loan from the Refinance Corporation for Industry Ltd. through a Scheduled Bank, against the Mortgage of fixed assets repayable over a period of 7 years	25,00,000
(d) Deferred payment for supply of machinery, payable over a period of 10 years	3,15,000
Rs.	71,25,000

It is intended that the balance of Rs. 5,75,000 and any increase there may be in the actual cost over the estimated cost including provision for working capital will be raised by loans from the Company's Bankers in the normal course of business.

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 25,00,000.

IMPORT LICENCES

The Company has obtained licences from the Government of India for the import of all the plant and machinery at present envisaged. Orders for some of the machinery have already been placed and for the balance, negotiations are being carried on.

INSPECTION

Copies of the Prospectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during business hours.

APPLICATION FOR SHARES

Application for shares must be made for a minimum of 50 shares or multiple of 50 shares. Application forms properly completed must be lodged together with the amount payable on application before closing of the subscription list with any of the branches of the Company's Bankers mentioned in the Prospectus but NOT with the Registered Office of the Company.

PROSPECTUS AND APPLICATION FORMS

Copies can be obtained from the Registered Office of the Company and from its Bankers, Managing Brokers, Brokers or Underwriters as mentioned above.

CHARTERED ACCOUNTANT

AN INTERNATIONAL PHARMACEUTICAL COMPANY REQUIRES A CHARTERED ACCOUNTANT TO ASSUME CONTROL OF ALL ACCOUNTING FUNCTIONS FOR ITS INDIAN ORGANISATION IN BOMBAY.

FIRST-CLASS ACCOUNTS AND ADMINISTRATIVE EXPERIENCE TOGETHER WITH DETAILED KNOWLEDGE OF THE COMPANIES AND INCOME TAX ACTS IS ESSENTIAL; SO IS HIGH GENERAL INTELLIGENCE AND A LIVELY MIND. THE PREFERRED AGE GROUP IS 30-40. SALARY WILL BE APPROPRIATE TO THE RESPONSIBILITY OF THE POST WHICH CARRIES ATTRACTIVE PROSPECTS.

INITIAL SCREENING AND SHORT LISTING HAS BEEN ARRANGED THROUGH THE COMPANY'S AUDITORS, WHO WILL TREAT ALL APPLICATIONS IN THE STRICTEST CONFIDENCE. INTERVIEWS WILL BE HELD IN BOMBAY.

PLEASE REPLY TO BOX 990, C/O "COMMERCE,"
BRADY HOUSE, VEER NARIMAN ROAD, FORT, BOMBAY.

MORE IDLE JUTE LOOMS ENERGISED

MILLS MAKING RENEWED EFFORTS TO RAISE OUTPUT

AS the new calendar year 1962 was ushered in, another 2½ per cent of the jute industry's idle looms went into activity in accordance with the decision taken by the Indian Jute Mills Association at a special meeting held at Calcutta on 22nd December. As a result of this development, the sealed loom complement of the industry is now only 7 per cent of the total loomage, the lowest level for many years. What is more, though the unsealing of another 2½ per cent of looms has been permitted during the current month, it is expected that the period may be extended further and that more looms may be energised in the coming months also. These expectations are based on two grounds. In the first place, shortage of ready goods will persist, owing to the pent-up demand arising from the overseas consumers who are running down their stocks. Secondly, the Calcutta Electric Supply Corporation has assured adequate power supply for operating the additional looms, as well as for working the spinning-preparing departments, albeit on the mills' weekly closed days. Further, arrivals of raw jute are in full swing and prices are being maintained at reasonable levels.

The unsealing of additional 2½ per cent looms is yet another proof of the jute industry's earnest efforts to maintain as high a level of output as possible, thus belying the allegation of some that the industry is deliberately keeping raw jute purchases at a low level in order to depress prices further. It will be recalled that, following the curtailment of production necessitated by the acute shortage of raw jute earlier in 1961, there was inevitably a substantial fall in jute goods stocks held by mills. As soon as more jute became available in August, no time was lost in restoring the production to its former level; the working hours of mills were also restored to 48 per week from mid-October. As this step was found inadequate and shortage of ready goods persisted, it was decided early in November that production should be stepped up still further by unsealing an additional 2½ per cent of looms from the 13th of that month. This reduction in the level of idle looms was also not sufficient and the I.J.M.A. Committee decided, as already stated, to permit the member-mills to unseal another 2½ per cent of their looms during January 1962.

Raw Jute Purchases

The jute industry has also been endeavouring to help maintain raw jute prices at a stable level in the face of the unusually large quantities of the fibre being placed on the market by sellers. The I.J.M.A. has been issuing minimum quotas of jute to be purchased by mills, the quotas being designed to ensure that the full quantities of jute arriving at Calcutta are taken up, though the financial resources of the mills are severely strained as a result of the heavy trading losses suffered early last year. The total quantity of raw jute actually purchased by the I.J.M.A. member-mills in the first fortnight of December was over two million maunds, as against the quotas amounting to 1.38 million maunds. The quotas issued for the weeks ended 23rd and 30th December were 1.0 million maunds and 900,000 maunds, respectively.

The aforesaid measures will soon relieve to a great extent the shortage of ready goods and prices of manufactures will tend to decline. Nevertheless, the overseas customers do not feel happy, as they consider the present prices unduly high. They therefore urge that the present difficulties in the jute goods market can be overcome simply by unsealing more looms. The jute industry has, however, turned down the plea as being "quite impracticable" for two important reasons. One, there is already a shortage of spinners in most of the mills. And two, the chronic shortage of electric power in West Bengal is temporarily aggravated by the need to overhaul the generating plant, a process which is likely to continue for some six months.

Apropos the complaints by foreign buyers about the persistently high prices of Indian jute goods, the I.J.M.A. has issued, through its New York office, a special statement assuring the burlap trade in North America that everything possible will be done to achieve more favourable trading conditions at the earliest possible date. Analysing the background of the current market position, the I.J.M.A. says:

"A plentiful supply of jute goods at economic and stable prices is no less vital to the long-term interests of the Indian jute industry than it is to the North American burlap trade. The harm that can be done to the industry's market by prolonged shortages of goods and the consequent high prices was amply demonstrated in the early 1950s. The Indian mills have no wish to see a repetition of this situation and they are, therefore, most anxious to ensure that the present unsatisfactory market conditions should not continue for a day longer than can be helped. To this end, the Association is now doing everything that in the circumstances it is possible to do."

An Essential Prerequisite

The I.J.M.A., however, points out that to expect by now a complete recovery from a raw jute crisis as acute as that which faced the industry during the past two years is manifestly unrealistic. For, according to it, the building up of adequate jute goods stocks to enable a return to the more stable market conditions prevailing up to the end of 1959 must inevitably take some time to accomplish. In this connection, the I.J.M.A. emphasises that an essential prerequisite for achieving long-term stability is another large jute crop next season (July 1962-June 1963).

It is needless to state here that the size of the jute crop will depend, apart from climatic conditions, on the relative prices of this fibre and rice at the time of sowing in March. It is therefore in the interests of all concerned with

PACKING SUGAR FOR CONSUMERS

NEED FOR ADOPTING HYGIENIC METHODS

By G. Ramchander

IT is well known that packaging of goods is not so well advanced in our country as it is in other countries. Goods must reach safely the warehouse of the buyer and it must be nicely and securely packed, so that, on display at the counter, it must sell itself. In the modern age, it is display that is the main feature of salesmanship. We are just now realising the need for a better packing wherever we have adopted packaging.

What is packaging: It is simply an outer case or container duly shaped and sized to contain the article.

What is its utility: (1) It protects the article packed from contamination and deterioration in quality. (2) The packed article could be conveniently handled and transported. (3) It would have a display or advertising value by appealing to the æsthetic sense of the buyer to possess the package.

Types of packaging: According to the type of raw material use, we have five types or varieties of packaging, namely, wood, glass, tin, paper boards and jute bags. The other types of recent origin are celluloid and bakelite, aluminium foil (sensitised or anodised), plastics and alkathene or polythene. Each one of these has its particular field of application. Thus sugar cannot be packed in wooden cases nor acid in jute gunnies.

Sugar is an essential article of food. India has been the pioneer in sugar manufacture. Long before the Western world knew it, sugar was manufactured in our country. The Sanskrit word *sharkara* means 'gravel-like' that is, having the appearance of gravel. Sugarcane itself is a tropical plant and it grows best in the tropics.

In the modern sugar industry, we are now in the forefront in the matter of production and factory efficiency, though we lag behind in productivity and field efficiency. We have this year produced an all-time record of three million tons of sugar, and the problem is one of excess production, as our own home consumption is very much less. The *per capita* consumption of sugar and *gur* in our country is 30 lbs., whereas it is as high as 96 lbs. in the U.S.

Small Packings

Sugar in India is packed at the factories in bulk quantities of 100 kilos in jute (gunny) bags. These bags are stored in piles in godowns and are sold as bags to the retailers. There is no small package for the retailer to sell or the housewife to buy. The housewife has to keep a supply of empty tins or bottles for storing the purchased sugar for daily use. We usually see in our country people carrying sugar in handbags or conical-shaped old newspaper packets. Besides the danger of contamination of this precious article of food, there is the possibility of loss by spillage and short weighment at the grocer's. For, even though at the factories there is correct weighment and packing in gunnies, there is no such thing at the grocer's in the absence of small consumer packagings. Hence small consumer packaging seems to be very essential to avoid both contamination and short-weighment.

Packaging of refined sugar in the West is a large-scale operation in a refinery. Dozens of accurately packing machines are operated around the clock. There is complete automation in this. The single-piece die-cut cartons are folded, the correct quantity of sugar is put into it, the top lids are closed and glued, and the package is delivered on to a belt conveyor, carried to the storage racks and put into the shelf in predetermined lots. A million packages of sugar are produced in 24 hours at the Californian and Hawaiian Sugar Refinering Corporation at Crockett, California, and it is marvellous sight to see the packaging section of this largest refinery in the world. They refine and package 800,000 tons of raw sugar per annum.

Containers for Sugar

Paper bags or cartons are used for packing sugar in the U.S.A. Paper makes an excellent container. It is sift-proof, moisture-resistant and gives the sugar complete protection *en route* to the final consumer. The cardboard cartons are of one piece die-cut, with an inner polythene-coated paper.

The various types of packaging seen in the U.S. are 25 lbs., 10 lbs., 5 lbs., 2 lbs. and 1-lb. packets. The 25-lb. packages are getting out of use. There is also the single service polythene-coated paper packets. For granulated sugar, especially the 25-lb. packages, the three ply paper bags with handies to carry easily and spouts to empty without spilling are found.

Cost of Packaging

The bulk packaging adopted in India in packing sugar in jute 'A' twill gunnies works out to between 1.7 and 2 per cent of the cost of sugar contained in it. There is no consumer packaging. In the U.S., in 100-lb. bulk packaging the cost of packaging works to 1 per cent of the cost of the sugar contained in it. In consumer packaging, the cost goes upto 25 to 30 per cent of the cost of the sugar contained in it. In single-service packets, the cost is even upto 50 per cent. Rapid urbanisation and the high cost of living pays for this convenience, according to American economists.

It is no doubt true that, in our country, the cost of sugar is already high. But, with rapid urbanisation and the comfort and conveniences needed, consumer packaging of sugar has to be adopted sooner or later. Being an article of food, it has to have a protective packaging during its distribution. One cannot tolerate a bag of sugar lying open with a grocer with flies swarming on it. The cost of sugar has to be reduced at the other end, that is, the agricultural end, by raising the productivity of sugar per acre. The cost could also be reduced slightly in the factory by manufacturing fine grained sugar, instead of the large grained sugar now demanded by the consuming public, as this has an adverse effect on steam economy. For no one is going to bite the sugar. It has to dissolve either on the palate, if at all eaten as such, or in beverages and drinks. I may here say that C. & H. Refinery advertises its sugar, which is only fine grained, corresponding to our 'E' grain size of the I.S.S., as "pure cane granulated fine grained, quick dissolving, all purpose sugar."

U.P. SUGAR MILLS AND BIHAR CANE

At a meeting held in Gorakhpur recently, the east U.P. group of sugar factories passed a resolution urging the State Government to allow them to purchase Bihar sugarcane which they had been purchasing for the last 23 years. The occasion for making this appeal to the Government arose from a directive in the bonding orders that the factories would crush only U.P. cane. Mr. M. Zunnurain, Cane Commissioner of U.P., said at Gorakhpur the other day that the U.P. Government had offered to purchase only 2.5 million maunds of Bihar sugarcane, as against an average of 4.5 million maunds in the previous years, in view of increased production of sugarcane in the State this year, in spite of the fact that the Punjab Government had refused to purchase 2.5 million maunds of sugarcane from some of the west U.P. districts which they used to purchase in past years. The Cane Commissioner also disclosed that, with a view to helping the cane growers to crush their surplus sugarcane, his department had already supplied nearly 1,000 kolhus and power crushers in east U.P. and proposed to supply them another 400 kolhus and cane crushers. The problem of surplus sugarcane, he added, was not so keen in west U.P. where people were already *gur*-minded and converted a considerable portion of their cane crops into *gur* and *khandsari*. The Cane Commissioner is further reported to have impressed on the millowners of east U.P. the desirability of clearing off the arrears of sugarcane prices to cane growers.

SUGAR PRODUCTION AND STOCKS

The total sugar production during the month of November 1961, the first month of the 1961-62 season, was 115,000 tons, as against 235,000 tons in the same month during 1960-61, according to the Indian Sugar Mills Association. The offtake of sugar from factories (including despatches for export) during the month was 199,000 tons, as against 152,000 tons. The total closing stocks of sugar with factories as on 30th November 1961 was 1,100,000 tons, as against 678,000 tons on the same date last season.

FIRE — MARINE — ACCIDENT

OVERPRODUCTION IN TEA FEARED

TAX RELIEF URGENT TO STIMULATE OFFTAKE

THE tea industry seems to be moving into difficult times. This statement may sound strange, because production of tea in the last calendar year, that is, 1961, touched, according to the latest available estimate, an all-time record of 760 million lbs., as against 705 million lbs. in 1960. But the fact is that such a notable increase in output has not been accompanied by a corresponding rise in offtake, domestic as well as export. Consequently, the industry is today faced with the problem of disposing of a sizable surplus. The aggregate sales realisations from North Indian tea for the year 1961 are said to be much lower as compared with the previous year—one estimate puts the actual extent of decline at over Rs. 9 crores—thanks to the recession in prices. The average price fetched by North Indian tea at the export and internal sales in Calcutta during the year (upto 21st November) was well below that prevailing last year: Rs. 4.64 per kg., as against Rs. 5.27. A recent report from Calcutta averred: "With more than half of the tea crop still to be sold, there are frequent reports of distress selling at prices below the cost of production."

This certainly does not constitute a favourable climate for enthusing the producers to put forward their best to reach the production target of 900 million lbs. and the export target of 610 million lbs. set for it under the third Five-year Plan. If their efforts are to meet with complete success and if tea is to provide a sizable part of the country's increasing foreign exchange requirements in the coming years, some measures of support and encouragement are urgent. One such measure pertains to tax relief, the need for which has assumed urgency now because of the necessity to stimulate exports and domestic consumption and to raise resources for financing expansion. This aspect has been most forcefully brought out by the Tea Association of India, Calcutta, in the course of a memorandum to the Union Minister for Finance.

The Association has drawn pointed attention to the heavy incidence of wage bill on the North Indian tea gardens. The wages, it is said, have always been higher in comparison with not only South Indian gardens but also with the other tea producing countries. The North Indian tea gardens would, of course, have borne this higher incidence of wages, had the productivity per worker employed been larger. But it is contended that it is not so. It is pointed out that the gardens in North India employ more persons per hectare than their counterparts elsewhere, since the distribution of rainfall in North India is very uneven, whereas Ceylon and South Indian gardens are fortunate enough to get two rainy seasons. The Association has also drawn attention to two other handicaps. One, the North Indian tea gardens are too far away from the port and hence they have to bear a much higher transportation cost not only for bringing their tea to the port but also for carrying stores from the port to the gardens. Two, the tax burden is unduly heavy, as is shown below.

The North East Indian teas bear very heavy taxes such as Assam road tax and West Bengal entry tax over and above the excise and export duties, tea cess, etc. The total of all these taxes comes to as much as 112.18 nP per kg., as against just 72.40 nP in 1953-54. It may be noted here that there was no road tax before 1953-54 and no entry tax prior to 1956-57. The total revenue from excise and export duties on North Indian tea has gone up from Rs. 13.71 crores in 1953-54 to Rs. 20.03 crores in 1959-60, while the quantity of tea actually exported has declined from 203.19 million kg. to 113.00 million kg.

All these factors, the Association avers, have rendered the North Indian teas uncompetitive in comparison with those produced in other parts of the world. No elaborate arguments need be put forward to substantiate this contention. It will be seen from the table at the bottom of the page that, over the period from 1954 to 1960, exports of tea from India fell by 3.9 per cent, while those from Ceylon rose by 13.4 per cent, Kenya's by 112.5 per cent, Uganda's by 78 per cent, Nyasaland's by 44.8 per cent and Brazil's by 167 per cent. Surely, there is no exaggeration whatever in the warning given by the Association that, if the present policy is continued, Indian teas are bound to be outcompeted in foreign markets and after a few years will dwindle to such an extent that India "shall not be able to earn foreign exchange worth mentioning from tea exports."

The high level of export duty on tea—44 nP per kg.—is not justified. Tea, after all, is mainly an export product. When the Government of India is not levying an export duty on any other exportable articles now, why should tea alone be made an exception? It is argued by some Government spokesmen that an export duty on tea is essential in order to ensure that the maximum amount of foreign exchange possible is earned. The assumption here is that any reduction in export duty on tea will mean that much loss of foreign exchange, as the exporter is supposed to pass on the benefit to the overseas buyer. This argument is fallacious, as it overlooks the long-term interests of the country. It ignores the fact that Indian teas do not enjoy monopoly in foreign markets but have to face stiff competition. The Tea Association of India has done well to cite the case of jute industry with a view to impressing upon the Government the fact that the factors which led to the fall in jute goods exports are playing a significant part in the tea industry also. Here is what the Association says:

"... Before the partition of the country, Indian jute goods used to enjoy monopoly in the world markets, but still a nominal export duty was levied by the Government. During the Second World War when the market for the commodity was expanding, the Government started raising the rate of duty and it was raised to Rs. 1,500 per ton in the year 1950. This affected adversely the competitive character of our jute goods and, consequently, the export of jute goods started declining. After the partition, the Indian jute goods did not enjoy the monopoly and, under the umbrella of high export duty, several jute mills were established in East Pakistan and other parts of the world and they have been competing with the Indian products. Subsequently, the duty was not only reduced but had to be abolished altogether. In spite of this, the export of Indian jute goods declined, although its consumption increased all over the world considerably.

"Now, if we examine the progress of the tea industry in North and South India from 1950, we find that the factors which were responsible for decline in export of our jute goods are playing an important part in the tea industry also and that is the reason why, in spite of our vast efforts, the tea industry has not been able to make any substantial progress, especially in North India, though it has become a slogan that the industry has been making huge profits. While examining the profits in the industry, people only cite profits of the few fortunate companies and do not take the trouble of examining the industry's profit as a whole. If there are huge profits in the industry, especially in North India, then why did we not make satisfactory progress during the last 10 years?"

It is true that the profits of tea companies have registered a rise in recent years, the average actual profit per acre of land under tea for 1960 being estimated at Rs. 562, as against Rs. 387 in 1950. But the whole of the increase in profits has been absorbed by taxation. It is calculated that the incidence of tax per acre is more than Rs. 298, which represents a rise of as much as 142 per cent as compared with the tax load amounting to Rs. 123.28 ten years before. It is not surprising that the tea companies' profit after tax, which had risen from an average of Rs. 263 per acre in 1950 to Rs. 519 in 1954, has since suffered a setback, the estimate for 1960 being no more than Rs. 264. When such is the position, how can one expect the tea companies to strive hard to achieve a further quantitative and qualitative expansion? By virtue of it being one of the staple earners of foreign exchange—Rs. 129 crores out of the aggregate export value of Rs. 640 crores for all commodities in 1960—and a large employer, the tea industry has certainly a right to ask the Government to review its policy in respect of taxes on tea and provide substantial relief.

4½ PER CENT

WEST BENGAL STATE ELECTRICITY BOARD BONDS, 1972

For Rs. 200 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of West Bengal)

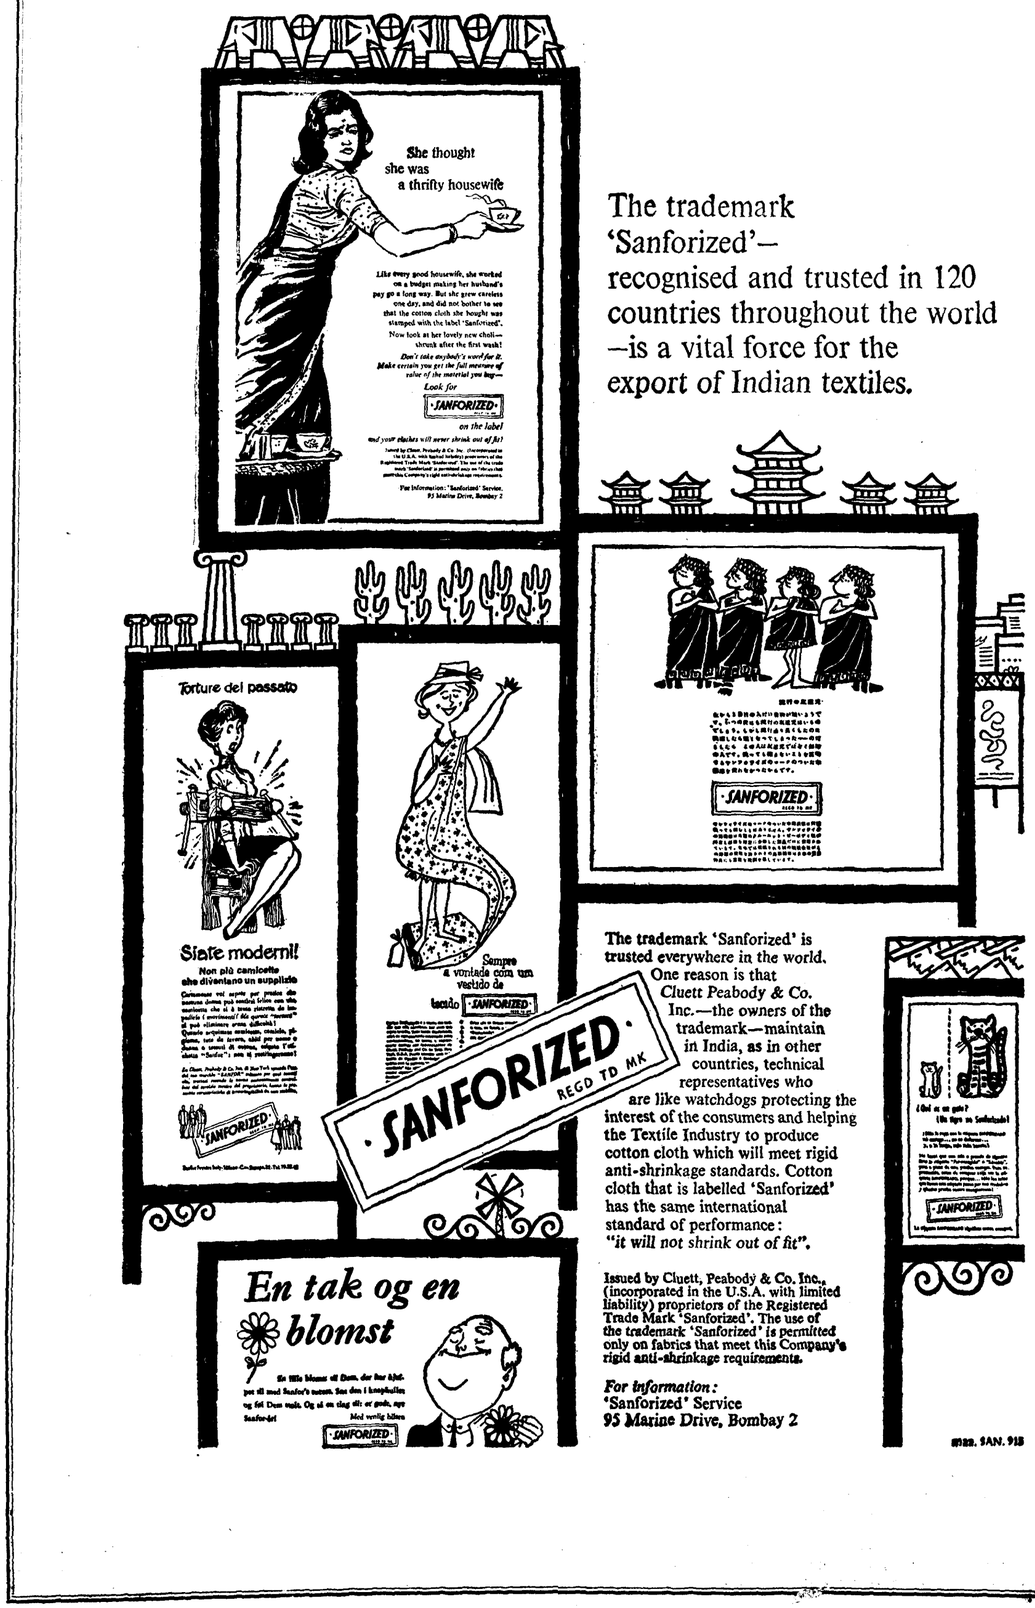
The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.25 PER CENT

REDEEMABLE AT PAR ON THE 21st JANUARY 1972

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the State Bank of India at Calcutta, Bombay, New Delhi and Madras from 15th January, 1962 to 20th January, 1962, both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices mentioned above and at the Head Office of the State Electricity Board, 1, Hastings Street (7th Floor), Calcutta-1.



KOLHAPUR SUGAR MILLS LIMITED

CHAIRMAN, MR. RAMNIWAS R. RUIA'S SPEECH AT ANNUAL MEETING

LONG-TERM SOLUTIONS TO SUGAR SURPLUS PROBLEM URGED

THE ten per cent cut in sugar production during the current season enforced by the Central Government was criticised by Mr. Ramniwas Ramnarain Ruia, Chairman of the Kolhapur Sugar Mills Ltd., in the course of his speech at the Twenty-eighth Annual General Meeting of the Company held at Kolhapur on Friday, 22nd December 1961. Any restriction on the productive capacity of a factory, Mr. Ruia declared, would hit not only the industry but also the cultivator-supplier of cane who was the major partner in the industry. He was aware of the complex nature of the problem arising from the large sugar surplus, but pointed out that the cut in output should only be a temporary feature and that long-term solutions were necessary. He emphasised the importance of building up an export market for about 600,000 tons of sugar, as well as the urgency of stimulating domestic consumption by cheapening sugar through a substantial reduction in the basic excise duty. He also stressed the need for encouraging other outlets for sugar consumption such as fruit canning by supplying cheap sugar, as is being done in the other sugar-producing countries.

The following is the full text of Mr. Ruia's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you at the twenty-eighth annual general meeting of the Kolhapur Sugar Mills.

"Before commencing the proceedings of the meeting, I desire to mention a very happy recent achievement of our country, evidently inspired by the vision, foresight, patience and courage of our beloved Prime Minister—I refer to the liquidation of the colonial rule in Goa, for long a Portuguese pocket. The feudal yoke of colonial rule of the Portuguese for the last four hundred years and more has now ended and, by the liberation of our brethren, India, for the first time in modern history, has become one entity. This is a very great achievement. Thanks to our Army, Navy and Air Forces who have done a wonderful job in clearing this pocket of foreign rule. It is a great national event and we all rejoice about it. I am sure I am expressing your feelings and that you will join me in paying our humble tribute to our beloved Prime Minister and homage to our motherland in honour of this event. Pray God that Panditji is given long years of health to guide our young nation, in its career of progress, assuring him at the same time that we shall do our utmost, in whatever walk of life we are placed, in achieving the same.

Company's Working

"The accounts for the period ended 30th June 1961, along with the report of the Directors, have been in your hands already for the statutory period and, with your permission, I shall take them as read. I shall, however, mention a few salient features of the working of the year.

"Considering the capacity of our new plant, we could have crushed a much larger quantity and achieved a much larger production, since supplies of sugarcane were available in plenty. But due to mechanical trouble, particularly of the centrifugals, we were much handicapped. We crushed 251,850 metric tonnes of cane and produced 316,777 bags of sugar. Although the performance is gratifying and although we top the list of sugar mills in Maharashtra, I have a feeling that we could not take full advantage of the capacity of our plant. The average recovery was 12.57 per cent. The results of our estate have been the highest since the inception of the factory and the average yield was 46.9 metric tonnes per acre.

"The mills have been doing considerable development work on their own estate and for their cultivator-suppliers for all these years. Our cane development department is recently well organised and is manned by a qualified [illegible] The Company has given financial assistance, in cash and kind to the tune of Rs. 20 lakhs, or more to its cultivator-suppliers. The Food Minister very aptly pointed out that the real progress of the sugar industry in India will have to be largely in the fields, and achievement of more tonnage per acre and of quality *cane—more sugar* per acre—is quite necessary for any progress in the industry.

"Gentlemen, as you are aware, the acreage under sugarcane has gone up by leaps and bounds in the last few years, partly due to high prices of *gur* in the Kolhapur district, because *gur* is regarded as the 'gold' of Kolhapur and prized much, and partly due to the availability of irrigation facility. On observing this trend, your Directors decided to launch upon the project of expansion of the mills to a suitable higher tonnage. I am happy to note that the expansion was absolutely well-timed. Not only has it enabled the Company to keep its manufacturing cost within limits but has also helped numerous cultivators when the price of *gur*, during the last couple of years, has gone down. You will be glad to note that, with the cane development policy of the Company and the assured price of cane, more and more cultivators are wanting to contract with the Company for giving their cane.

Sugar Surplus Large

"The overall position of sugar today in India is of a large surplus. In order to meet the situation and to discourage diversion of land under food crops towards sugarcane, Government have recently enacted a cut of 10 per cent in the production of sugar by factories. This measure, I am afraid, will not achieve the desired aim unless there is a planned policy of restricting acreage under sugarcane and at the same time by intensive cultivation, the tonnage and quality of sugarcane per acre are improved. At the same time by giving incentive to higher consumption as *per capita* consumption of sugar in India is comparatively very low.

"Along with the expansion of the factory plant, you are aware, the project of the expansion of the distillery was undertaken simultaneously. I am happy to report that the expansion has been satisfactorily completed and the plant is capable of producing 6,000 gallons per day. You will be pleased to know that the Government of Maharashtra having closed their Nasik Distillery, we are the only distillery in Maharashtra producing absolute alcohol and supplying it to chemical and pharmaceutical industries and educational laboratories. Our distillery is likewise looked upon as the central distillery for the Kolhapur region and the expansion of our distillery has given a much-needed outlet for the waste molasses of neighbouring factories. The distillery will be producing about 2 million gallons per year. The production of such a large quantity of alcohol has necessitated our undertaking of alcohol-based chemical industries.

"You are already aware that the Company has been given a licence for the manufacture of acetic acid, butyl alcohol and butyl acetate. Orders regarding the plant were placed with Messrs. Chematur of Sweden and the plant and machinery will begin arriving early in 1962.

"In this context, I may add that I visualise a network of alcohol-based chemical industries attached to our mills in the future, if the Company maintains its present pace of progress, which I am hopeful, it will.

"Though I have been mentioning to you some of the salient and happy features of the year of the report, I am afraid, the coming year bristles with difficulties.

Unstable Market

"The country has entered the happy position of surplus production of sugar, from that of deficit. Unfortunately higher domestic consumption has not been achieved along with. In fact, it has remained static at 21 lakh tons during the last few years, which may possibly be due to control on sugar distribution by Government. Recently, these controls have been largely relaxed. But the previous carryovers and the surplus production have glutted the market and the fair price for sugar fixed by Government, on the basis of the Tariff Board report, is not being realised. The market in sugar has become unstable regarding prices and the selling pressure is rather acute.

"Along with the falling prices of sugar the industry has been asked to implement the Wage Board recommendations, which we have gladly done in entirety.

"With the increased cost on labour and in stores and spares and also due to the large carryover of stocks, interest and insurance charges on the large quantity, I am afraid the Company will not be able to show the same financial results next year.

"A solution of the surplus position of sugar may lie in the export market. But the export of sugar, under the international agreements, committed long ago when we were not even members, do not hold out this possibility of exporting all our surplus.

"Thanks to the efforts of our Government and its dynamic Food Minister, India could get an export allocation to the States in the free market. An outlet for about six lakh tons of sugar in the export market would enable the industry to function satisfactorily with its present installed capacity. Along with it, ways and means have to be found to increase internal consumption by cheapening sugar by a substantial reduction in the basic excise duty.

"Other outlets for the consumption of sugar have to be encouraged, such as fruit canning, by supplying cheap sugar, as is being done in other sugar-producing countries.

Effect of Output Cut

"Any restriction on the productive capacity of a factory hits not only the industry but also the cultivator-supplier who is the major partner in this industry. Though I am perfectly aware of the complex nature of the problem from the national point of view, the present cut of 10 per cent in the production, under the Sugar Regulation Act, should, if at all, remain only a temporary feature and other long-term solutions appear to be necessary. In this context, the general criticism of the high cost-price of sugar being a barrier to our exports seems to be ill-founded. Many of the sugar-exporting countries are exporting sugar under Government subsidies. All industrial products based upon agriculture need some subsidy from the Government in advanced countries too. With our backward agriculture, particularly so relating to sugarcane and with the disproportionate wages in comparison with efficiency, it will be unwise to expect India to produce sugar at competitive rates. To me it appears that India must needs enter the export market on an extensive scale to sustain agricultural economy and to earn foreign exchange by supporting it with the necessary subsidy, for a long time to come. I am happy to note that our Government has realised this position.

"The present cut of 10 per cent would ultimately result in realising a 4 per cent overall cut only. This amounts to only about a lakh tons of sugar and the cut would be effective on certain units. A cut of one lakh tons on a few units would result in great hardship on them and the cultivator-suppliers of those units would suffer the greatest hardship. Realising this, the Governments of Madras, Bihar and U.P. have already approached the Centre to revoke the Act in their States in the interest of the cultivators, and I take this opportunity to request the Government of Maharashtra to use its good offices to persuade the Central Government likewise.

"In the case of the Kolhapur district, the sugarcane grower has been already hard hit by the unprecedented floods. If his sugarcane is declined by the mills, he would be further hit in the falling *gur* market.

"You will be happy to know that the mills have donated total contribution to the tune of Rs. 68,000 during the year, of which Rs. 50,000 paid to the Maharashtra Congress Election Fund and Rs. 5,000 to the Chief Minister's Konkan Relief Fund deserve prominent mention.

"In the context of the floods, crop insurance will be a very provident and a necessary

High quality, Precision construction and Dependability

HALDA—*the beloved of the secretaries—is the product of closest and effective technical collaboration with the Facit Group of Companies in Sweden, manufacturers of business machines ranging from typewriters, calculators, adding machines, duplicators and office furniture to electronic computors.*

HALDA typewriter embodies the same high quality, technical skill, craftsmanship, precision construction and dependability for which the Facit products are world-renowned.

HALDA typewriters are available with English, Hindi, Tamil, Canarese, Malayalam, Gujerathi and Marathi keyboards, to suit our regional needs.

HALDA typewriters are sold and serviced in 40 important centres throughout India.

GOVERNMENT-OWNED COMPANIES—III

TRENDS IN MANAGEMENT PATTERN

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

IN comparison to the factual information on the structural pattern and finances of Government companies made available by such official sources as the Department of Statistics, Cabinet Secretariat, Department of Company Law Administration, Industries Wing of the Ministry of Commerce and Industry, Lok Sabha Secretariat, etc., statistical data on management pattern of these companies are almost missing. In the absence of adequate factual information on top managerial personnel, discussions on management questions in the various reports and in the papers read at the various seminars on Public Enterprises held during the last two or three years in our country have perforce been of a very general nature, dealing with such broad issues as the nature and functions of the boards of directors, types of people to be appointed as managing directors, chairmen or directors, the qualifications of the directors, propriety of appointing officials as directors, need for drawing managerial talent from non-official circles, etc. Also, in the absence of factual information, very often misleading conclusions have been drawn regarding the nomination of officials on the boards of directors of Government companies. Similarly, sweeping observations have been made that frequent transfers of Governmental officials serving on the boards of directors of Government companies from one Ministry or Department to another, have very often changed the entire composition of the boards of Government companies, with the result that much of the experience gained by the older Government directors in a particular Government enterprise was wasted and the new Government directors, being fresh to the responsibilities of their new charge and with no past experience regarding the working of the enterprise to fall back upon, would not be competent enough to attend to the special problems requiring their attention. Further, it has been contended that, in the final analysis, with an ever-changing board of directors, the executive personnel outgrow their functions and assume policy-making powers. As a sequel to this development, the growth of the enterprise was sometimes circumscribed within the narrower limits set by executive thinking, which, otherwise, should have developed within the broad framework provided by policy decisions arrived at by a board of directors against wider perspectives of industrial development of the country, of the priorities set by the Five-year Plans and of the rising expectations of the public. Likewise, many other untested and unverified propositions regarding the management of public enterprises are in the air which might prove to be completely unsustainable, if certain basic statistical information relating to the management pattern of corporate public enterprises were available. An attempt is made in this article to provide some basic statistical facts which might help in tying up the general propositions relating to the management of Government companies to some solid moorings.

Directorships

Our investigations with regard to the 140 Government companies at work at the end of the year 1960-61 show that the total number of directorships in these companies aggregated 1,007 and the number of persons holding these offices totalled 665. The Central Government companies, including both the exclusively owned ones and the companies which are jointly owned with the State Governments and/or private interests, accounted for as many as 494 directorships. As against this, the total number of directorships in the Government companies exclusively owned and administered by the State Governments totalled 513. That is to say, of the total number of directorships, 49 per cent belonged to Central Government companies and the remaining 51 per cent to State Government companies. As regards the persons holding directorships in the Government companies, 305 were concerned with exclusively State Government-owned companies, whereas 360 persons occupied positions of directors on the boards of Central Government companies.

Further, our investigations reveal that, of the 1,007 directorships, 696 are held by officials of the Central and State Governments, and 311 by non-officials. The number of the officials working on the Government companies comes to 385 whereas that of non-officials is 280.

Over the four-year period, 1957-61, the increase of Government companies from 84 in the latter half of 1957 to 140 in 1960-61, was accompanied by the multiplication of directorships from 580 to 1,007. The growth in the number of directorships has been roughly proportionate to the increase in the number of Government companies. Similarly, the percentage rise in the number of persons holding offices of directors in the Government companies has also more or less been of the same order as that noticed in the number of the Government companies and of the directorships, viz., around 70 per cent. Table 1 gives the overall position of directorships of Government companies in 1957, 1959 and 1961.

TABLE 1

Overall Growth of Directorships in the Government Companies

Year	No. of Government companies	Total directorships	No. of persons holding directorships	Average directorships	
				Per company	Per person
1957	84	580	400	7	1.4
1958-59	103	685	450	7	1.6
1960-61	140	1,007	665	7	1.6

It has been possible for us to collect somewhat detailed factual data for the Government companies for 1958-59. It is revealed that out of 685 directorships, 360 were held by Government officials numbering about 150. This discloses that on an average a Government official held 2.4 directorships whereas a non-official held about 1.1 directorships. In comparison to these averages, in 1960-61, an official held 1.8 directorships and a non-official 1.1 directorships. These proportions thus prove that the choice of persons for directorships of Government companies is now spread over a larger group of persons and there has been an easing of the burden of managerial work on the top officials of the Government who were called upon to shoulder these responsibilities in addition to their normal departmental and executive functions. This dispersal is likely to lead to encouraging results in the efficiency of Government companies which would be getting greater care and attention in the hands of the officials as well as the non-officials.

Size of Boards

Taking all the Government companies together, the average number of directorships per Government company works out to 7; separately for the Central Government and State Government companies, the average figures work out as 9 and 6, respectively. This shows that the average size of the boards of directors of the Central Government companies was bigger than that of the State Government companies. A more detailed study of the sizes of boards of directors discloses that 19 out of the 39 exclusively Central Government-owned companies have boards of 10 and more directors each whereas 7 of them have boards of 9 directors each, 6 companies have boards varying between 6 and 8 directors and 7 companies, 2 to 5 directors each. In the case of the other 15 Central Government companies in which the State Governments and private interests happen to be co-sharers with the Central Government, in capital investments, 5 companies are seen to have boards comprising 10 and more directors each whereas one company has a board of 9 directors, another company a Board of 8 directors and two companies Boards of 7 directors each. Four such companies have Boards of 6 directors each and 2 other companies have Boards of 5 directors each.

In the cases of exclusively Central Government-owned companies, the largest size of the board of directors comprised 18 directors, the company in question being the National Industrial Development Corporation, set up by the Ministry of Commerce and Industry, followed by the Fertilisers Corporation of India which has a board of 15 directors. Among the other Central Government companies in which the Central Government have taken other partners also, the largest size of the board of directors comprised 13 directors, the company being the National Newsprint and Paper Mills. In this case, the board of directors has representatives of the Central Government, State Government and private interests. As for the State Government companies, 11 out of the 86 State Government companies have Boards of directors of 10 or more directors each, the largest one being composed of 15 directors, namely, the Andhra Pradesh Industrial Development Corporation Ltd. Six, five, eight and four State Government companies have been found to have boards comprising 9, 8, 7 and 6 directors each respectively. Thus, 34 State Government companies have boards of directors comprising more than 5 directors each and, out of the remaining 52 companies, 24 companies are found to have Boards of 5 directors each, 18 companies boards of 4 directors each and 10 companies boards comprised of two to three directors each. Table 2 below gives details of the size of the boards in the cases of various categories of Government companies:

S. = Wholly State Government-owned companies.

Table 3 given below presents the distribution pattern of companies in a double frequency frame made up of the size of the boards of directors, on the one hand, and the size of the companies according to their authorised capital, on the other. The distribution pattern of companies in the table, by and large, confirms the general notion about the positive correlation between the size of the board and that of the company, namely, the larger the company, the bigger the size of the board of directors. It is seen that, out of 61 Government companies which have an authorised capital below Rs. 10 lakhs each, as many as 51 companies do not have more than 5 directors each on their boards and of the remaining 10 companies, 9 companies have boards of directors comprising 6 to 9 directors. Only one company falls out of the general pattern of the size of boards of directors of small-sized companies. The largeness of the board of directors in this case—12 directors—is due to the fact that a larger representation had to be given to private interests. In the case of the middle-sized companies, namely, companies having an authorised capital exceeding Rs. 10 lakhs but below Rs. 50 lakhs, it is observed that, out of 17 such companies, 13 have boards of directors comprising 6 to 10 directors and the other four are seen to have smaller boards not exceeding 5 directors. In the case of giant-sized companies which are demarcated from other companies by the authorised capital limit of Rs. 1 crore, our investigations reveal that, out of the 57 giant-sized companies, 31 have boards of directors comprising more than 10 directors and, of the remaining 27 giant-sized companies, 13 have boards comprising 8 or 9 directors each. There are, however, 3 companies which attract attention for having disproportionately small or big boards in relation to their size based on their authorised capital. One such company is the National Industrial Development Corporation Ltd., which has an authorised capital of Rs. 1 crore and, in sharp contrast to the average size of a board of directors of companies belonging to this stratum, this company has a board of 18 directors. On the other hand, the Hindustan Steel and Neyveli Lignite Corporation are the other two examples in which case the size of the board of directors was pegged at 9 directors each, although their authorised capitals were Rs. 300 crores and Rs. 80 crores, respectively.

Range of Directorships

Our investigations further reveal that the range of directorships held by persons in the Government companies is very wide; the largest number of directorships held by a person comes to as many as 43 followed by 41 directorships held by another person. After these two high limits there is a big gap and the third person in order of importance is seen to hold 20 directorships followed by another person holding 13 directorships. All these four persons happen to be Government officials in the States. The two persons who hold more than 20 directorships which is the maximum prescribed under the provisions of Section 275 of the Companies Act, 1956, however are not covered by the restrictions of the aforesaid section as an overwhelming number of companies whose directorships are held by them are unattached private companies which are exempted under section 278 of the Act for purposes of counting of directorships under Section 275.

However, these four cases of heavy concentration of directorships apart, an overwhelming number of persons, namely, 543 in a total of 665, hold only one directorship each in the Government companies. On the basis of these figures, plural directorship is confined only to 20 per cent of the persons. Sixty-six persons have been found to hold 2 directorships, 27 persons 3 directorships and 25 persons between 4 and 10 directorships each. Table 4 below gives detailed distribution pattern of directorships held by the officials and the non-officials.

TABLE 4: *Distribution of directorships among the official and non-official directors* 1960-61

No. of directors	Official directors	Non-official directors	Total directors	Directorships held by

43 ..	1	..	1	43	..	43
	385	280	665	696	311	1,007

Our study also discloses that, of the 385 officials holding directorships in Government companies, both State and Central, 158 persons figure only on the boards of the Central Government companies, 132 persons on the boards of the exclusively State Government-owned companies and the total numbers of directorships held by these officials in the exclusively Central Government and in the exclusively State Government companies come to 199 and 281 respectively. The remaining 95 officials serve on the boards of mixed class of Government companies. As regards the non-officials, whose number comes to 280 persons holding 311 directorships in Government companies, 173 persons serve on the exclusively State Government companies and 72 on the exclusively Central Government companies, leaving 35 persons who serve on the boards of mixed Government companies. The total numbers of directorships held by the non-officials serving on the exclusively Central, State and mixed Government companies aggregated 190, 76 and 45, respectively. Table 5 below furnishes detailed data on the directorships held by the officials and non-officials on the Government companies. It also gives the number of directorships held in the giant-sized Government companies.

TABLE 5: *Directorships held by the official and non-official Directors in the various types of Government companies*

A study of the extent to which the boards of Government companies are weighted with official element shows that, out of 140 Government companies, in 24 companies officials are in a minority, that is, less than 50 per cent of the total strength of the boards, in 6 cases they share the directorships on the boards equally and in the remaining 110 cases they are in a clear majority. The boards of 33 Government companies consist of officials in entirety. In 16 companies, the majority of the officials on the boards varies between 80 and 99 per cent, and in 39 companies between 70 and 80 per cent. Thus, our investigations reveal that there is a fair representation of non-official elements, selected for their specialised knowledge, in 52 Government companies accounting for nearly 40 per cent of the total number of Government companies at work. The representation of non-official elements in these cases is found to come up to 30 per cent, that is, about one-third of the total strength of the boards; this is quite a fair strength for exercising potent influence over the policy decisions of the boards.

Frequency of Changes

The frequency of changes in the boards of directors of Government companies believed to be occasioned by transfers of officials has been the subject of sharp comment in various quarters. By and large, these criticisms have been made from the impressions gained from the changes in the composition of boards noticed in some cases. In this connection, it would be relevant to draw the attention of the readers to the fact that a board of directors of a company need not be a fixed body and changes in the personnel of the Board are expressly contemplated in the provisions of the Companies Act. In extreme cases, the boards of directors, except for the directors representing the managing agents where they exist, could undergo almost a complete shake-up in the course of three years' time, if the retiring directors either did not offer themselves for re-election or were voted down at the annual general meetings of the company. The relevant sections of the Companies Act which provides for the retirement of directors are Sections 255, 256 and 257. So, changes in the make-up of boards of Government companies are in tune with the spirit of the provisions of the Companies Act but this is not to say that changes of a sweeping character at short intervals were the underlying intention of the aforesaid provisions of company law. As a matter of fact, an important implied safeguard for ensuring continuity of policy in a company has been provided by the recognition of the right of the retiring directors to be re-elected and by the exemption provided for one-third directors of a company who need not retire, unless the Articles of Association of the company so direct.

The changes in the boards of directors of Government-owned companies have been studied in regard to three time periods, namely, 1957-59, 1959-61 and 1957-61. For the first time period, statistical data are available for 45 common companies of which 27 are Central Government companies and 18 are State Government companies. Taking the two types of Government companies together, it is seen that 182 directors happened to be common on the boards existing at two points of time, namely, 1957 and 1958-59 and these common directors accounted for 52 per cent and 47 per cent of total number of directors serving on the Boards of these companies at the aforesaid two periods of time, respectively. The corresponding figures for the Central Government companies for the two years are 45 per cent and 36 per cent, whereas those for the State Government companies for the same years are 71 per cent and 66 per cent, respectively.

As between 1959 and 1960-61, it is seen that, in 78 Central and State Government companies, the proportion of common directors to total directors holding offices in those two years work out to 64 per cent and 54 per cent, respectively, the corresponding figures for the Central Government companies being 52 per cent and 50 per cent and for the State Government companies 85 per cent and 64 per cent respectively. A comparison of the results for the two periods shows that, in more recent years, there has been a greater degree of stability in the membership of boards of directors of Government companies, and thus the criticism that transfers of officials very greatly affect the board compoosition is not substantiated by facts.

Over the four-year period 1957-61, our investigations reveal that the common directors in the Central and State Government companies taken together come to 35 per cent of the total directors in 1957 and to 28 per cent of those in 1960-61. The corresponding proportions of the common directors for the two years in the Central and State Governments companies separately work out as 26 per cent and 20 per cent and 48 per cent and 43 per cent respectively. Further, it is seen that, among the common directors of both the types of companies taken together, official directors accounted for nearly 37 per cent, whereas their proportion works out to 53 per cent in the case of Central Government companies and 24 per cent for the State Government companies. Thus we find that the proportion of common directors is not so disastrously low as to warrant the conclusion that the boards of directors of Government companies are in a state of constant ferment and change.

(Concluded)

PETROLEUM PRICES

Prices of petroleum products in India, excluding taxes, compare favourably with those prevailing elsewhere. For example, the company selling price of a product such as regular grade petrol in India is lower than in the majority of European countries. The final pump price charged to the consumer in India, as in the West, is high because of the heavy incidence of taxation. The following table shows that basic company selling prices are lower in India than in most European areas. In addition, it indicates the ratio of tax to basic pump price, placing India among the ranks of those countries which subject petroleum products to stiff taxation. The figures are based on the current rates of conversion.

Petrol Prices: Regular Grade

Country	Basic price per kilolitre	Taxes per kilolitre	Total pump price	Ratio of tax to basic price
	Rs.	Rs.	Rs.	
Austria	250.00	340.00	590.00	1.36
Belgium	210.00	510.00	720.00	2.43
Denmark	240.00	390.00	630.00	1.63
France	230.00	700.00	930.00	3.04
Germany	270.00	670.00	940.00	2.48
Greece	280.00	420.00	700.00	1.50
Holland	230.00	360.00	590.00	1.57
Ireland	270.00	400.00	670.00	1.48
Italy	200.00	540.00	740.00	2.70
Norway	280.00	440.00	700.00	1.69
Portugal	300.00	410.00	710.00	1.37
Sweden	290.00	380.00	670.00	1.31
Switzerland	210.00	270.00	480.00	1.29
United Kingdom ..	240.00	370.00	610.00	1.54
India*	283.00	429.00	662.00	1.84

* Figures quoted are an approximate all-India average.

Distribution from main port terminals to the interior presents two problems in India that are not encountered in the same degree in European countries—first, comparatively longer overland hauls by rail and road and, secondly, the necessity to serve a large number of small consumers, accounting for little offtake individually, but dispersed over a wide area. Despite the higher distribution costs resulting from the above factors, it will be seen that the retail prices in India, exclusive of taxes imposed by Government, compare favourably in the majority of cases.

SPENCER AND COMPANY LIMITED

SPEECH OF CHAIRMAN, MR. Z. R. IRANI

PLANS FOR FURTHER EXPANSION OF TURNOVER

ADDRESSING the shareholders of Spencer and Company, Ltd., at its Sixty-fourth Annual General Meeting which was held on 20th December 1961, at the registered office of the Company at 153, Mount Road, Madras-2, Mr. Z. R. Irani, Chairman of the Company, said:

"GENTLEMEN,

"We foregather once again for the sixty-fourth annual general meeting of the Company, and it gives me pleasure to address you in my fifth year of office as Chairman of your Board.

"Before I proceed, let me welcome Mr. C. C. Desai to our Board. An able administrator in high office as a Civil Servant, on retirement from Service, he has made a reputation for himself in business circles and his vast experience will be of great benefit to our Company.

"The accounts for the year ended 30th June last and the Directors' Report thereon have been in your hands for the prescribed period, and I am sure you will have felt satisfaction with the state of affairs, the trading results, in point of fact, being the best for the last thirteen financial years.

"I think it best on this occasion to give you a retrospect of the last five years by making a particular comparison with items as they stood on 30th June 1956, but, first, let me give you the profit contribution of each of our activities, which is, wholesale and retail trade 28 per cent, drugs and pharmaceuticals 25 per cent, hotels and catering 13 per cent, house furnishing 7 per cent, tea 6 per cent, refrigeration and air-conditioning 12 per cent, ærated waters 3 per cent, cigars 1 per cent and sundries 5 per cent. Added to this is, of course, the comparatively considerable benefit derived from investments judiciously made. The main changes between the year under review and the previous year are, firstly, the rise in wholesale and retail trade which proves that we continue to be predominantly a merchant house and, secondly, the betterment under the head 'sundries,' the reason for which is that our Kanpur factory made a small profit, as against the large loss previously suffered.

"An examination of turnover shows the following increasing trend:

1956-57	Rs. 319	lakhs
1957-58	" 297	"
1958-59	" 371	"
1959-60	" 379	"
1960-61	" 454	"

"In consonance with avowed policy to help keep prices within reasonable limits, for our ever-increasing number of customers, profit margins have had to be readjusted. Expenditure in almost all forms is on the rise, and unavoidably so, and a fair proportion of that had to be absorbed by us. Our future, therefore, rests on assiduous promotion of turnover. We have been successful in this, and I am glad to say this satisfactory trend continues. Your Company's interests lie in the consumer field and, by this, I mean the manufacture of, and acquisition of distributor rights for, consumer goods for sale to the consumer. In any form of economy, the merchandising of commodities plays an essential part and your Board is firm in its resolve to foster and promote these activities to the best of the Company's financial capacity.

Utilisation of Resources

"Your Board, in pursuing this policy, has brought about the greatest utilisation of the Company's resources with the help of bank credit facilities. On 30th June 1956, we had a cash and bank balance of Rs. 60,69,279, whereas on 30th June 1961, there was a net overdrawing of Rs. 21,52,551. The difference of Rs. 82,21,830 arising over the six intervening years is represented by the following in round figures:

	Rs.
Land	1,51,000
Buildings	18,70,000
Plant and machinery	10,32,000
Motor vehicles	98,000
Corporate investments	19,66,000
Fluid assets	31,05,000
	Rs. 82,22,000

"As previously mentioned by me, the reason for acquisition of land and buildings is of a twofold nature, on the one hand, to preserve and assure continuity of our trading interests and, on the other, as a satisfactory investment with increasing capital value. The plant and machinery has been purchased partly for expansion and partly for modernisation of our various manufacturing activities. The corporate investments have proved themselves as dividend earners and, whilst on this point, I would like to state that, whereas it is desirous to limit our investments to within our country, it is impossible to dispose of our holding in Spencer and Company (Pakistan) Ltd. owing to current exchange control regulations. The increase in fluid assets is represented mainly by trading stocks. With expanding turnover and increasing distributorships, it will be realised that investing quantums must also rise, especially off-season commitments. Let me add in passing that ample provision has been made to maintain our assets at the full worth of their book values.

Exports

"Export is one of our country's biggest problems. There are so many factors involved, such as surplus availability of goods without causing undue strain to internal requirements, the quality and price of the goods offered, the express preference by the importer for goods of Indian origin and, above all, the economic benefit to be gained by his country. In all this, killing competition from vastly more industrialised countries will have to be met, competition of the type that can well lead to friction. Economic interdependence is a far safer haven than independence. Far better, were it to build up the country's resources for the benefit and service of its people and to concentrate on exporting what is required by other nations.

"Political conditions all over the world are such that economic pressures are bound to be felt in our country. There has been considerable inflation, for it is apparent that currency is losing its purchasing value. The size of the third Plan, the commitments it engenders and the difficulties it involves make the picture bleak. That the Plan will create stresses goes without saying, but in what exact manner and in what sphere none of us can as yet say, because much depends on world conditions and world aid. The Company's future rests on marketing and continued existence of reasonable purchasing power. So long as there is, therefore, no appreciable change in conditions as exist at present, we can face the future with courage.

Preference Dividend

"I now touch on the matter of preference dividends. The change has been brought about by Government legislation and we adhere to the letter of the Law. The difference between what is now and what was previous to the enactments is comparatively small. Instances have been brought to our notice of companies having recently enhanced their preference dividends, but it must be remembered that such dividends were at very low rates over the many previous years. This cannot be said of the preference dividends on our shares and for this reason our equity shareholders may not agree to any enhancement. Bearing in mind the rates of dividend, current market quotations and consequently the yield per share, it is clear that our preference shares rank as high as any. I take the liberty of quoting *The Economic Times* when it says, 'The hunt for high yielding preferences has not been undertaken so far, but the consistency of Spencer 'A' and 'B' contains a clue to gradually changing opinion about the yield available on preference shares whose merits are thrown into relief only by a market depression.' This is too true; your Board, therefore, feels that there should be no question of enhancing the rates over what have all the years been comparatively attractive.

Labour

"The continued rise in the cost of living, particularly in South India, has necessitated a considerable increase in the dearness allowance to employees. The increase for the half-year ended 30th June 1961 was approximately Rs. 1 lakh. The cost of workmen and staff welfare has also increased to a large extent and must necessarily rise in the future as your Board is anxious that there should be no unnecessary curtailment in this respect. Further, an equitable distribution in respect of bonus to staff will be made in due course. The provident fund of workers in our drug factory, bakery and hotel establishments has been taken over by the State under the Employees' Provident Funds Act.

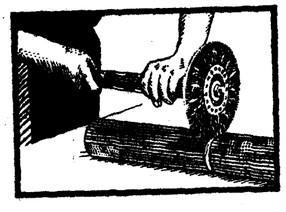
"During the year, two of our most senior executives retired owing to ill-health, creating a serious gap in administrative personnel. I am glad to say that the burden has been admirably shouldered by others with merit and encouragement to these must surely be given. There is a grave shortage of this category of worthy personnel and it behoves us to hold on to our senior employees who have demonstrated initiative and drive by giving them due recognition. Replacement of such would be a problem indeed.

"We shall have to work in the future under increasingly competitive conditions and to achieve any measure of success we shall have to be greatly assisted by the continued loyalty and keenness of all our employees. On behalf of the Board, I should like to record our grateful thanks to them for their untiring efforts during the past year and to say how much we look forward to their support in coming years by their energy, efficiency and productive capacity and, of course, the discipline and the skill with which they keep operating costs steady."

The balance-sheet as at 30th June 1961, was approved and adopted. A further and final dividend of 12 per cent, less tax, on the ordinary shares, as recommended by the Directors, was declared making in all a total dividend of 18 per cent, less tax, for the year.

Note: This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.

"SCCO"



These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adopted for weld cleaning and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

(*Concluded from page 24*)

protection and our Government should take it up, as some of the State Governments have already done.

"I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

"As Chairman of the Company, I desire to express my feelings of thankfulness to the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

"Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

"Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the industry and the progress of our mills before you.

"Thank you. Jai Hind."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Gaiety and Colour

It's the village fair...where business vies with fun. At this seasonal get-together, villagers sell the products of their farms and handlooms. The day's business done, they indulge in a little gaiety and at dusk, return to the farm and the loom.

The colourful handloom products displayed at the fair are an eloquent tribute to their traditional art. The quaint patterns and the essential harmony of colours is utterly captivating. Small wonder, then, that the products of the handlooms find a ready market among the sophisticated in India—and abroad.

These colour-conscious artisans largely rely upon Amar Dyes for their requirements of dyes. They have good reasons too. Amar dyes offer a wide range of colours of astonishing fastness and quality, at extremely competitive prices...prices *they* can afford.

For special tastes, special colours

THE PREMIER AUTOMOBILES LIMITED

MANUFACTURE OF COMPONENTS AND MEADOWS ENGINES PROGRESSING SATISFACTORILY

CHAIRMAN, MR. LALCHAND HIRACHAND'S SPEECH AT ANNUAL MEETING

IN his speech at the Seventeenth Annual General Meeting of the Premier Automobiles Ltd., held at Bombay on 22nd December, 1961, Mr. Lalchand Hirachand, Chairman, reviewed at considerable length the various developments pertaining to the Company's working in the past one year. The progress registered in the manufacture of more components for cars and trucks and of the Meadows engine was recalled by him with satisfaction. The D.L.F. credit of $7.2 million provided to the Company under an agreement signed with the U.S. Government in August 1961 also figured prominently in Mr. Lalchand's review. The Chairman's reference to the Company's expansion programme under the third Plan was another highlight of his speech.

The following is the full text of Mr. Lalchand Hirachand's speech:

"LADIES AND GENTLEMEN,

"I am very happy to extend a warm welcome to you all, on the occasion of the seventeenth annual general meeting of the Company.

"The Directors' report and the statement of accounts for the year ended 30th June 1961 have been in your hands for over a month and I hope you have given due consideration to the same.

Working Results

"During the year under review, the Company's turnover increased to Rs. 22,73,86,000 as compared with the last year's turnover of Rs. 20,94,87,000. 6,913 cars and 6,073 trucks were sold during the year.

"The working of the Company for the year under report resulted in a profit of Rs. 60,59,495 after providing Rs. 56,44,279 for depreciation, Rs. 13,00,000 for development rebate and Rs. 55,00,000 for taxation. Adding to this, the balance of Rs. 3,21,332, being the amount of previous year's 'carry forward' (after adjusting the amount of dividend paid on forfeited shares now annulled) and the net surplus of excess provisions, income and claims received in respect of previous years Rs. 77,292, the amount available for distribution comes to Rs. 64,58,119. Out of this your Directors have made the following appropriations:—

To contingency reserve ...	Rs. 10,00,000
To dividend on equity shares at Rs. 9 per share (subject to tax)	Rs. 49,82,540
Balance to be carried forward	Rs. 4,75,579

"This year's turnover shows an increase of Rs. 1,78,99,000 over the previous year's. In the same way the current year's profit shows an increase of Rs. 18,40,656 over last year's. This has naturally enabled us to maintain the dividend on increased capital.

Components Manufacture

"The progress made in the manufacture of components of motor vehicles by the Company has already been dealt with in the Directors' report. I shall therefore only briefly summarise the position as follows:—

"The Fiat transmission including gears is being manufactured in the factory.

"The manufacture of axles for the Fiat car is also satisfactorily progressing. The machining of the items like brake drums, hubs, ring gears, pinion and axle shaft has been completed and the assembly of the axles has already commenced. In a short time they will be used on the vehicles.

D.L.F. Aid

"The progress on the manufacture of front and rear axles for trucks has been steady.

"As stated in the Directors' report, an agreement in connection with the loan of 7,200,000 dollars from the Development Loan Fund of the U.S.A. has been executed. The aforesaid agreement was signed on the 21st August 1961 in New Delhi by Mr. John Kenneth Galbraith, U.S. Ambassador on behalf of the U.S. Government and by me on behalf of the Company. A small ceremony was held in the U.S. Embassy in New Delhi on that day which was attended by several officials of the Indian Government and senior officers of the Premier Automobiles Ltd.

"While signing the agreement, Mr. John Galbraith said that this was the first agreement he had signed for the private sector, since he became Ambassador, and further observed:

"'There is nothing that is going to be more needed in the course of the third Five-year Plan than improved transportation, including improved road transportation. You (Premier Automobiles) are playing a very important and critical role in the provision of facilities necessary for this purpose. We have very high confidence in Premier Automobiles and it is our conviction that you will continue to do a very good job and that you will produce good automobiles, get them out in time and for a low price. This I am happy to note, is your intention and I wish you good luck.'

"While thanking the D.L.F. for this assistance, I made a reply suited to the occasion as follows:

"'The initial success has been there. We have made considerable progress during the first two Plans, and it is our keen desire that the work should be carried on with greater enthusiasm, so that progress towards the objective, for which the Government of India are working and for which people in commerce and industry are co-operating with the Government, may be accelerated. We greatly appreciate the assistance that we are getting from the American Government in the form of this loan. It is particularly a happy augury that direct help is being given to the private sector. In this country, the private sector is playing a very important role in economic development, and I am sure that this assistance will help us to rebuild our nation for the betterment of all. The D.L.F. loan to Premier Automobiles will finance foreign exchange costs of importing machinery to produce components for Dodge and Fargo trucks and Fiat cars, and to modernise and expand capacity of other portions of the Company's factory. The expansion project made possible by the loan is expected to enable India to save more than 2 million dollars per year in foreign exchange, now spent in importing sheet metal components. Premier's output will be increased from 12,000 trucks and cars per year to 21,000 units.'

"We are awaiting sanction for our application for a further loan of 3,000,000 dollars made to the D.L.F. for the purchase of dies for the sheet metal components for the Fiat cars.

"I place on record our thanks to the Bank of Baroda Ltd. for giving guarantee in favour of the D.L.F. on the 26th September 1961, in respect of the loan of $7,200,000. The Bank of Baroda has also been good enough to agree to give the guarantee for the additional loan of 3,000,000 dollars.

Expansion Proposal

"The subject of expansion has been engaging the attention of the Government of India for some time. Subsequent to the meeting held by the Minister for Industries in January 1961 in Delhi, acute shortage of foreign exchange has developed and the Government have had to reassess the position. The thinking that was indicated in the meeting held in January was that so far as commercial vehicles were concerned each commercial vehicle manufacturer could increase the production to such capacity which he thought the market would accept. Freedom with regard to models and loading capacity was also given to the manufacturer. While the latter factors have not changed, the Government find it necessary to restrict the expansion in production capacity as there is not enough foreign exchange to meet the requirements of the manufacturers. Your Company have been allowed to expand the production of commercial vehicles to 7,500 on the basis of single-shift working. We are also offered foreign exchange for the manufacture of the diesel engine. The total allocation therefore is as follows:—

(1) 7.2 million dollars for the sheet metal equipment, expansion of tool room and removing of certain bottlenecks in the present capacity.

(2) Additional 3 million dollars for obtaining dies for the sheet metal parts particularly of the Fiat car.

"It is estimated that the machinery acquired with this money will enable us to increase our production of Fiat cars to 9,000 per year and of commercial vehicles to 9,000 per year in two shifts.

"In addition to the above, we will be allowed:—

(a) Foreign exchange to the extent of 5 crores of rupees and

(b) Additional 1.95 crores of rupees for purchasing machinery and equipment for forgings and castings.

For these two items negotiations will have to be made with the Agency for International Development, U.S.A., for a loan agreement. This money will be spent entirely in the United States of America.

(c) In addition one crore of rupees will be given in foreign exchange from soft currency area and particularly from U.K.

"It is expected that with the utilisation of this foreign exchange our capacity to produce commercial vehicles will increase to 7,500 units on one-shift basis or 15,000 vehicles on two-shift basis.

"As regards the expansion of car production, the matter is still under Government's consideration and no decision has yet been taken.

"Economy Car" Question

"In my last year's speech I had pointed out that it was not in the interest of the country for the public sector to take up the manufacture of an 'economy car.' Several representations from responsible quarters have since been made, urging the Government not to create new productive capacity either in the private or the public sector unless it was in the general interest of the national economy. The Jha Committee had already made its recommendations on similar lines against the introduction of an economy car at this stage. The Development Council for Automobiles Ancillary Industries and Transport Vehicles did not favour any allocation of foreign exchange being made for the production of a new car unless the priority claims of the existing automobile manufacturers were fully met. The economy car is almost similar to the models currently produced. To profess, therefore, that such a model can be produced at a substantially lower price would be misleading. Our economy is based on high costs due to lower volume, less efficiency of labour, high prices of materials which have to be imported from abroad and the high taxation on local products. Unless, therefore, the whole system is changed it will only be a miracle if costs could be brought down so steeply as expected. It would be useful if the Government paused a while and considered how the foreign automobile concerns declined to undertake the manufacture of automobiles on the ground of uneconomical production and therefore decided to close down their shops which were giving handsome profits. They had the experience, the know-how and all the resources; so their decision to close down becomes significant in the context of the optimistic expectations of such low costs of the economy car. The recommendations of the French manufacturers are full of 'ifs' and 'buts.' I would, therefore, appeal to the Minister of Industry to weigh the pros and cons of the problem more rationally before taking decision in the matter.

Sales of Vehicles

"In the year 1961, the sales of vehicles have been very much similar to the sales in 1960. In the commercial vehicles, however, there has been a little setback in the demand. This is partly due to the proposed legislation on hire-purchase. Under this legislation the present right of the financiers to take possession of the product, if stipulated instalments are not paid, has been subjected to considerable restrictions. This has created a scare and the banks as well as financing organisations have restricted their financing operations. As is well known, the commercial vehicles are primarily sold on hire-purchase basis. If, therefore, hire-purchase operations are restricted, it has its effect on the demand for commercial vehicles. Secondly, the heavy taxation, particularly the heavy excise duties that were levied last year, is showing its effect gradually. The tight money market also has contributed to the fall in demand. The big waiting lists have shrunk and the commercial vehicles are now available practically on demand, even in the case of popular makes. How long this situation will continue, it is difficult to say. Let us hope that with the rising tempo of production in the third Five-year Plan, the need for transport facilities grows rapidly and in consequence the demand for commercial vehicles also goes up.

Third Plan Programme

"The third Five-year Plan envisages an increase in vehicle production to the extent of doubling the present capacity. Under the second Five-year Plan, the automobiles production target was established at 60,000 units. For one reason or another, this could not be reached and the maximum production came to 52,000 vehicles. In the third Five-year Plan the target is fixed at 100,000 vehicles and the Government have already started taking steps to enable the manufacturers to expand their production. Hitherto, the Government have only considered the expansion of commercial vehicles, while the expansion of cars is still under consideration. I hope that expansion of the cars programme also will be given effect to before long. It is expected that more than 45 crores of rupees will be spent for the expansion programmes during the third Five-year Plan.

Agreements With Labour

"For the purpose of improving our relations with labour, we have entered into two agreements with the Premier Automobile Employees' Union. By one agreement, wage structure was revised, which is expected to give the workmen an annual additional income of nine lakhs of rupees. Under this agreement, it can be safely said that we offer the best terms in the automobile industry.

"The second agreement covers the question of bonus for the financial year 1959-60. The total amount, approximating to Rs. 23 lakhs, would be distributed as bonus to all our employees. The share of the workmen, under this agreement, whose earnings are below Rs. 500 per month, comes to nearly Rs. 21 lakhs. All these terms were offered to Engineering Mazdoor Sabha, who have rejected them, if I may say so, very unwisely.

"The subject of wages reclassification, etc. was referred to a Conciliation Board, of which the late Justice Bavdekar was the Chairman. The Court held elaborate deliberations and, I understand, were about to sign the report. Unfortunately, the sudden death of Justice Bavdekar left the work incomplete. The Government have now appointed Shri Jeejibhoy to be the Chairman of this Board and it is hoped that the Board will soon conclude their deliberations and submit their report to the Government.

Meadows Engines

"While we are making progress with regard to the manufacture of parts and components, we are also making experiments and research with regard to design and other engineering problems. It was observed that some of our commercial vehicles have shown certain defects in the special conditions existing in this country. Our staff have redesigned some of the parts which will make the commercial vehicles more popular. A constant effort is being made to improve the methods of production and also improve the design, to make vehicles more popular.

"In last year's speech I had mentioned that as a result of the Government's policy with regard to automobile manufacture, which was announced last year, the Company will have the right to manufacture the Meadows engine. The agreement with Automobile Products of India Ltd. for the taking over of the manufacture of Meadows engine by the Company was executed on 29th April 1961. In pursuance of this agreement, out of the sum of Rs. 24 lakhs, the Company has paid Rs. 15 lakhs to A.P.I. in part consideration of the A.P.I. having negotiated with the Government of India and agreed to cancellation of the licence dated the 9th December 1955 issued to them for the manufacture of Meadows engine and of A.P.I. having negotiated with Meadows for the termination by mutual consent of the licence granted by Meadows to A.P.I. under an agreement dated the 16th March 1956. The balance of Rs. 9 lakhs is payable in two instalments of Rs. 3 lakhs and Rs. 6 lakhs, at the expiration of 12 months and 24 months respectively from the date of the agreement.

"The production of Meadows engines has begun but it will take some time more before we can attain the full production as we have yet to import a number of machine tools required for the purpose.

"In consequence of the transfer of diesel engine licence in favour of Premier we have negotiated a fresh agreement with Henry Medows Ltd. whereby Premier have obtained slightly favourable terms particularly regarding payment of royalty which has been substantially reduced.

Further Capital Issue

"As stated in the Directors' report, the Company had made an application for the issue of further equity capital of the value of Rs. 2 crores in shares of Rs. 100 each, to meet the rupee expenditure that will be needed for the purchase of land, building, etc., in connection with our sheet metal project. In addition, a balance of Rs. 40,40,000 remained to be issued out of capital sanctioned by an earlier order of the Controller of Capital Issues.

"The Controller of Capital Issues has now accorded his sanction for the issue by the Company of further 2,40,400 equity shares of Rs. 100 each for cash at a premium of Rs. 10 per share.

"As stated in the Directors' report, the Company has selected a suitable land admeasuring about 300 acres on the Kalyan-Shill Road, near Kalyan, for the new factory site. An agreement with the Government of Maharashtra was executed on the 12th December 1961 in respect of the acquisition of this land. We expect to obtain actual possession of the land in a short time.

"The construction work of the factory building at Kalyan has been entrusted to Messrs. Hindustan Construction Company Ltd., the well-known and reputed firm of constructional contractors in the country.

Agreement With Chrysler

"The existing agreement of the Company with Chrysler Corporation had to be revised to bring it in conformity with present-day conditions. The modified agreement has received the approval of the Government of India and will be valid upto 31st December 1966.

"Under the provisions of this agreement the Company has to pay to Chrysler Corporation in consideration of the manufacturing assistance and other benefits granted by the Corporation to the Company the following fee:

(1) When the total amount paid to Chrysler for a vehicle or components is more than 50 per cent of the Chrysler ex-factory dealer net price; 1 per cent of the value of that portion of complete vehicle not purchased from Chrysler.

(2) When the total amount paid to Chrysler as aforesaid is less than 50 per cent of the Chrysler ex-factory dealer net price; 1½ per cent of the value of that portion of a complete vehicle not purchased from Chrysler.

"The above scale of fee is applicable upto the production figure of 15,000 vehicles per year and thereafter the fee will be open to further negotiation between the parties.

Agreement With Fiat

"I am glad to inform you that the agreement with Fiat S.P.A. which was valid upto 12th September 1961 has been renewed for a further period of five years from 1st July 1961 and it has also received the approval of the Government of India.

"Under the new agreement we have to pay to Fiat in addition to the payment for technical know-how etc., a fee of 2½ per cent on £300 (being the agreed value of a C.K.D. set ex-factory) on each unit manufactured and sold by the Company upto 7,000 units manufactured per year and this fee will be reduced to 1.5 per cent on each unit manufactured and sold by the Company beyond 7,000 units every year.

"Out of 1,60,000 debentures issued in the year 1958, 1,57,462 debentures have been converted into 'A' ordinary shares as on 8th December 1961, leaving a balance of 2,538 still outstanding. By a special resolution passed in the meeting of the debenture-holders held on 2nd June 1961 the debenture-holders have accepted bank guarantee as security in place of lien which the debentures had on the fixed assets of the Company.

"For your information I may give the production figures for the five months ended 30th November 1961, and they are as follows:

"The Company produced 3,014 cars and 1,920 trucks and sold spare parts of the value of Rs. 67,06,938 during the five months ended 30th November 1961 as against 2,730 cars and 2,525 trucks and spare parts of the value of Rs. 64,01,413 sold in the corresponding period of the previous year.

"A fire broke out in our factory on the night of 21st May 1961, which completely destroyed the trim application department, trim store and the assembly plant office. As this day happened to be a weekly holiday for our workmen, there was no loss or injury to human life; the damage was confined to the materials of the approximate value of seven lakhs of rupees. This damage was fully covered by insurance.

"The business of the Premier Auto Electric Ltd., a subsidiary, was satisfactory. This Company took up the distributorship of more indigenous products, namely, automobile dash-board instruments in Northern and Western India and Dagenite batteries in the State of Maharashtra and West Bengal.

"The other subsidiary Company, the India Steering Gears Ltd., could not start business this year also due to non-availability of a licence.

"The financial statements of both the companies have been published along with the financial statement of your Company.

Taxation

"The position regarding taxation is as follows:

"The Income-tax assessments of the Company are completed upto the end of the financial year 30th June 1955.

"The assessments of the Company as agents of Chrysler Corporation have also been completed upto 30th June 1960. The Company's application to the Tribunal for referring our case to the High Court is still pending.

"The assessments of the Company as agents of Fiat Corporation have been completed upto the financial year 30th June 1960.

"In addition to the donation of Rs. 25,000 to the Poona Flood Relief Fund and Rs. 10,000 for relief work at Poona, mentioned in the Directors' report, the Company has sanctioned a donation of Rs. 90,000 to the Election Fund of the Congress Party and Rs. 60,000 to the Election Fund of the Swatantra Party.

Labour Welfare

"I shall now deal with some of the welfare activities in our works.

"The Company has always been encouraging activities in the realm of sports. Members of our staff participate in the "Times of India" Cricket Shield, Football, Hockey, Hu-tu-tu, and Badminton tournaments in the City.

"Adult education classes in Kannada are held in the colony under the auspices of the Bombay City Social Education Committee for such of the employees who desire to take advantage of the same.

"There is also a Bal-Mandir primary school (run with the aid of management), having over 300 children. The workers' education classes conducted by workers-teachers trained under the Government of India Workers' Education Scheme have been recently started and about 35 worker-students attend this class.

"I extend an invitation to all the shareholders to visit our factory this year also. To facilitate the visit, Saturday 13th January 1962 has been selected and those of you who would wish to visit the factory are requested to register their names at the head office of the Company so that necessary transport can be arranged.

"Before concluding, I take this opportunity to offer thanks to the staff and workers for their co-operation and the good work put in by them during the year under review.

"And now I beg to move:

"'That the Directors' report and audited balance-sheet as on the 30th June 1961 and profit and loss account for the year ended on the 30th June 1961 be and they are hereby approved and adopted.'"

N.B.—This does not purport to be a report of the proceedings of the annual general meeting.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the Prospectus of which are available from the Company's Bankers, Brokers and from the Registered Office of the Company.

The consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licence No. L/23/3/N-27/60 dated 14th July, 1960 and Licence No. L-23(3)/N-6/Tex(P)/61 dated 17th October, 1961 have been obtained from the Central Government for the establishment of this new Industrial Undertaking, copies of which are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus having attached thereto the documents specified therein have been delivered for registration to the Registrar of Companies, Maharashtra, as required by Section 60 of the Companies Act, 1956.

Application will be made to the Stock Exchange, Bombay, for permission to deal in and for an official quotation of the shares of the Company.

The subscription list will open at the commencement of banking hours on 12th January 1962 and will close at close of banking hours on 20th January 1962 or earlier at the discretion of the Directors but not before the close of banking hours on 15th January, 1962.

MODELLA WOOLLENS LIMITED

(INCORPORATED ON 28th JULY 1961 UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED CAPITAL

7,50,000 Equity Shares of Rs. 10 each	Rs.	75,00,000
2,50,000 Unclassified Shares of Rs. 10 each	Rs.	25,00,000
	Rs.	1,00,00,000

ISSUED AND SUBSCRIBED CAPITAL

The Directors, promoters, their friends and associates have already subscribed for 1,00,000 equity shares of Rs. 10 each, on which the sum of Rs. 10 has been fully paid...	Rs.	10,00,000

PRESENT ISSUE

5,50,000 Equity Shares of Rs. 10 each	Rs.	55,00,000

OUT OF THE PRESENT ISSUE

(a) 1,33,300 equity shares of Rs. 10 each have been reserved for allotment at par, to Messrs. Robt. Jowitt and Sons Ltd., Bradford, England, as per their letter dated 1-9-1961, from time to time within two years from the date of the agreement with them, but not before the wool combing unit goes into production ...	Rs.	13,33,000
(b) 1,11,700 equity shares of Rs. 10 each have been agreed to be subscribed by the promoters, directors, their relatives, friends and associates	Rs.	11,17,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION

3,05,000 Equity Shares of Rs. 10 each	Rs.	30,50,000

The entire issue of 3,05,000 equity shares of the face value of Rs. 30,50,000 has been underwritten.

Out of the above, the Company has agreed to the firm allotment to The Life Insurance Corporation of India, Bombay, of 50,000 Equity Shares of Rs. 10 each of the face value of Rs. 5,00,000 against the underwriting arrangement with them of 75,000 Equity Shares.

No shares are issued or agreed to be issued for consideration other than cash.

TERMS OF PAYMENT

The amount payable in respect of the present issue of equity shares is as follows :—

On application	Rs.	2.50
On allotment	Rs.	2.50

The balance of Rs. 5 per share is payable in two calls of Rs. 2.50 each, the first of such calls to be made not earlier than two months after the date of allotment and the second call to be made also not earlier than two months from the date of the first call.

Failure to pay any amount due on the shares allotted when due, will render previous payments and the shares liable to forfeiture.

No other class of shares is being issued at present.

THE INDUSTRIAL INVESTMENT TRUST LTD., 61, Apollo Street, Fort, Bombay.

UNDERWRITING COMMISSION AND BROKERAGE

An underwriting commission of 2½ per cent on the nominal value of the shares underwritten is agreed to be paid to the underwriters on the shares respectively underwritten by them.

Brokerage at the rate of one per cent will be paid to recognised brokers on the nominal value of the shares allotted on applications bearing their stamp.

No brokerage is payable on shares reserved to be allotted to the foreign collaborators, directors, promoters, their friends, relatives and associates.

OBJECTS OF THE COMPANY

The Company was incorporated on 28th July, 1961 with the several purposes mentioned in the Memorandum of Association of the Company. The main object for which the Company is established is to set up a shoddy plant for the manufacture of shoddy yarn at Thana and a wool combing plant for the combing of wool and manufacture of wool tops at Chandigarh in terms of the Industrial Licences granted by the Government of India to the Company.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certificate No. 12080 dated 10th August, 1961 to commence business, from the Registrar of Companies, Maharashtra, after filing a statement in lieu of prospectus.

The Statutory Meeting of the Company was held on 23rd December, 1961.

PROSPECTS

The present import of wool tops in India is restricted to about 15 million lbs., annually against 31 million lbs. being the annual requirements of the worsted spinning industry as envisaged in the third Five-year Plan. The expected annual production of wool tops in India at present by the existing manufacturers is between 8 and 9 million lbs. The Company has been licensed to manufacture 1.5 million lbs., of wool tops per year.

The promoters, **Messrs. Kanshi Ram Kidar Nath**, had made arrangement with Staple Hall Trading & Finance Co., Ltd., England, for the supply of a complete new wool combing and wool top dyeing and printing plant on deferred payments. The manufacturers of the machinery are Prince-Smith & Stells Ltd., Keighley, England, who are one of the world's leading manufacturers of combing and spinning machinery. Shipment of the plant is expected to commence during December 1961 and the entire plant is expected to arrive at site at Chandigarh by April-May 1962. The plant is expected to be erected by and to go into production in the second half of 1962.

The foreign exchange of the equivalent of Rs. 13,33,000 (approximately £1,00,000) which will be available to the Company by the issue of equity capital to the foreign collaborators is proposed to be utilised to meet its future requirements of foreign exchange necessary for expansion or any other purpose which may be beneficial to the Company.

Shoddy yarn is mainly used for the manufacture of woollen fabrics like Velours, Blazers, Meltons, Flannels and Blanket cloth, etc. The Promoters are one of the first in India to start the manufacture of shoddy yarn, for which a big demand exists in the country at present. The Directors are of the opinion that the entire expected production of 1.5 million lbs. will have a ready market at a satisfactory price.

The Promoters, Messrs. Kanshi Ram Kidar Nath have transferred to the Company a complete NEW SHODDY SPINNING UNIT of 2,000 spindles, which has been installed at Om Baug, Thana, near Bombay.

By an agreement dated 5th September 1961 the Promoters have agreed to lend the services of such foreign technicians employed by them and in consideration thereof the Company will pay to the promoters a moiety of the expenses incurred by them.

THE SHODDY SPINNING UNIT OF THE COMPANY COMMENCED PRODUCTION ON 1st NOVEMBER 1961. Import Licences for the necessary raw materials have been received.

TAX BENEFITS

This being a new industrial undertaking the Company will be entitled to the benefits under the Indian Income-tax Act, 1961 as regards development rebate and depreciation. In addition, it will also enjoy exemption from Income-tax for profits upto 6 per cent of the capital employed for the first five years of the Company's operation under Section 84 of the Act.

Shareholders of the Company will also be exempted from Wealth-tax on their holdings for a period of five years under clause xx of subsection (1) of Section 5 of the Wealth-tax Act.

Shareholders will also get exemption from tax on such dividend as is paid from the Company's exempted portion of the profits.

ESTIMATE OF PROFITS

The Directors are of the opinion that the Company should be in a position to pay a dividend on its equity capital FROM THE VERY FIRST FINANCIAL YEAR from the profits of the shoddy plant alone, which is already in production.

FOREIGN COLLABORATION

The Company has entered into a financial and technical collaboration arrangement with Messrs. Robt. Jowitt & Sons Ltd. one of the leading top makers and wool combers in the U.K. Under the said arrangement NO ROYALTY OR TECHNICAL FEES are payable except the remuneration and expenses of the technicians sent out by them. Further the buying and/or blending of raw wool in world market (outside India) will be supervised by them on behalf of the Company on the normal commission prevalent in the trade, and in turn they guarantee the quality to type of the finished tops. A formal agreement is being drawn up.

LOCATION

The shoddy spinning plant has already been installed at Om Baug, Thana, near Bombay.

The wool combing plant will be set up at Chandigarh. The Company has acquired about 23 acres of land from the State Government with the option of buying additional 19 acres within 2 years.

RAW MATERIALS

The Company is confident of obtaining adequate import licences for its requirements of raw materials for the manufacture of wool tops and shoddy yarn. Besides, the Company also proposes to use local and indigenous raw materials.

SPECIAL ADVANTAGES

(1) The shoddy spinning plant is already in production. According to the present conditions of the trade, it is expected that the profits of this unit alone should be sufficient to pay a dividend from the very first year of its working, even before the combing unit goes into production.

(2) The foreign collaborators have offered very favourable terms and no royalty or technical fees are payable.

(3) The promoters have permitted the use by the Company of their trade mark "Modella". The trade mark is already popular and widely known throughout the country and is associated with the best knitting wools and fabrics.

(4) The promoters Messrs. Kanshi Ram Kidar Nath, proprietors of Model Woollen Mills, Thana and Model Woollen & Silk Mills, Verka, Amritsar, have a long experience in all aspects of the woollen trade and industry and are well connected with overseas manufacturers.

(5) The entire plant for both the units (wool top and shoddy yarn) is NEW incorporating therein the latest technique of manufacture.

ESTIMATED CAPITAL OUTLAY

The cost of the project will be about Rs. 1,04,18,000 estimated as under:

SHODDY PLANT :		Rs.	Rs.
Machinery		12,45,000	
Buildings		5,68,000	
Legal charges including stamp duty and registration if any.		50,000	
			18,63,000
WOOL COMBING PLANT:			
Imported machinery which will be on deferred payment ..		25,00,000	
Duty, freight, etc.		4,25,000	
Indigenous and other machinery		7,00,000	
Land		5,00,000	
Buildings		10,00,000	
			51,25,000
Total value of block ..			69,88,000
Working capital		31,30,000	
Preliminary expenses ..		3,00,000	
			34,30,000
Total ..			1,04,18,000

FINANCIAL RESOURCES

The Company's requirements of the capital are proposed to be met from the resources mentioned as under:—

Equity capital (excluding shares reserved to be issued to the foreign collaborators) ..	Rs. 51,67,000
Deferred payments on machinery	22,00,000
Loan from Company's Bankers and other sources	30,51,000
	Rs. 1,04,18,000

Equity shares reserved to be issued to the foreign collaborators at par within 2 years from the date of the agreement (approximately £1,00,000), but not before the wool top unit of the Company goes into production Rs. 13,33,000

The above capital reserved for the Collaborators is proposed to be utilised to meet the future expansion and/or other requirements of the Company as may be beneficial.

The Company's Bankers, viz. The Hongkong & Shanghai Banking Corporation, Bombay have agreed in principle to grant facilities upto Rs. 30 lakhs on usual terms and have guaranteed the deferred payments on the combing machinery. The Bank will be given a charge on the Company's assets including a charge on any uncalled capital.

Messrs. Kanshi Ram Kidar Nath, the promoters, have undertaken to arrange for and procure additional funds to meet any shortfall between the actual cost of the project and the financial resources now taken into consideration so as to complete the scheme.

APPLICATIONS AND ALLOTMENTS

Applications for shares which must be for 100 shares or multiples of 100 shares, must be made on the official form. The application form together with a remittance for the full amount payable on application must be sent to The Hongkong & Shanghai Banking Corporation or the Bank of India Ltd., at any of their branches mentioned in the application form.

THE MYSORE KIRLOSKAR LIMITED

TWENTIETH ANNUAL GENERAL MEETING

CHAIRMAN, MR. M. D. SHIVANANJAPPA, ON HANDICAPS TO PRODUCTION

POINTED attention to some of the difficulties facing the machine tool industry was drawn by Mr. M. D. Shivananjappa, I.A.S., Chairman of the Mysore Kirloskar Limited, in his speech delivered at the Twentieth Annual General Meeting of the Company held at Harihar on Friday, 29th December 1961. Mr. Shivananjappa made special mention of the problem of obtaining quality raw materials such as hard coke and pig iron, as well as of the transport bottleneck. It was a very serious problem, he said, that, when a wagon was made available, coke at the site might not be available and, when the coke was available, there might not be any wagon available. He stated that this problem, apart from increasing costs, had "created several critical situations with lot of anxiety over keeping up a steady flow of production in the foundry." Emphasising that the manufacture of quality machine tools depended on the supply of quality raw materials, he called upon the authorities concerned to give their "very earnest and serious consideration to this major problem."

The following is the full text of Mr. Shivananjappa's speech:

"LADIES AND GENTLEMEN,

"It is my proud privilege and pleasure to extend to you all the most hearty and cordial welcome to this twentieth annual general meeting of your Company today.

"The balance-sheet of the Company as at 30th June 1961 and other statement of accounts for the year ended 30th June 1961, as also the Directors' report and the Auditors' report have been already in your hands for some time past and I presume you may have gone through the same. According to the usual practice and with your permission, I take the same as read.

Capital Issue

"At the time of the last annual general meeting, I had informed you that your Company had proposed to issue a further capital of Rs. 40 lakhs made up of Rs. 15 lakhs equity capital and Rs. 25 lakhs preference capital. The same was actually issued during the year under report and the response from the shareholders and the public has been very satisfactory. In fact, there was an oversubscription to the extent of about Rs. 32 lakhs. Because of the large oversubscription, your Board has adopted a method of scaling down the number of shares applied for in order to ensure an equitable allotment. This was done in consultation with the Bombay Stock Exchange.

"The extent of oversubscription to the recent issue of shares of your Company is an index to show the extent to which the shareholders and the public have confidence in the prospects of your Company in the years to come.

"As you may have seen from the Directors' report, it has been decided to open a branch factory in Hubli and I am glad to inform you today that the factory building for the said branch factory in Hubli is well in progress and will be shortly available for occupation.

"During the year under report, there has been an addition to the plant and machinery valued at about Rs. 18.14 lakhs, as against Rs. 9.45 lakhs in the previous year. The import licences for the plant and machinery required for the several expansion schemes of your Company have been granted by the Government recently and the same are being processed further.

A Difficult Period Ahead

"In view of the large investment in capital goods envisaged during the next 2-3 years and in view of the latest amendments to the Company Law, we will be required to provide for full depreciation on such additions to plant and machinery and other fixed assets and we will have also to avail of the tax concessions in regard to the development rebate, etc. These provisions would be quite sizable and I am afraid, during the next 2-3 years, the Company may have to pass through a difficult period.

"From the profit and loss account of your Company, you may have noticed that the net sales of the manufactured goods during the year amounted to Rs. 1.57 crore, as against Rs. 1.41 crore in the previous year. The sale of stores and sundries during the year amounted to Rs. 6.05 lakhs, as against Rs. 5.85 lakhs in the previous year.

"The percentage allocation of the various factors of production, as also the provision for taxation and the balance of profit during the two years ended 30th June 1960 and 30th June 1961, has been as under:

"Raw materials and stores consumed, including works-in-process and transport charges, accounted for 42 per cent. The figure for the previous year was also the same. Wages were 23 per cent, as against 24 per cent last year. Indirect working expenses came to 11 per cent this year, as against 10 per cent last year. Fuel and power stood at 2 per cent and it was the same in the previous year. Statutory depreciation, excluding the development rebate, worked out at 6 per cent this year, as against 4.5 per cent last year. Taxation liabilities were of the order of 7 per cent and this percentage is the same as that of the previous year. The balance of profits stood at 9 per cent in this year, as against 10 per cent in the previous year. This percentage allocation of the various factors of production would enable you to know the working of the factory.

Machine Tool Industry

"I think it would not be out of place on my part if I say a few words about the machine tool industry, in general. In a machine tool industry, the capital investment required is much larger, whereas the profits are comparatively lower than in other industries and, therefore, the expansion and development of this key industry is likely to be rather slow. Much of the progress of engineering industries depends on the availability of quality machine tools. The manufacture of quality machine tools in its turn depends on the availability of quality raw materials. It is here that we have been experiencing difficulties in recent months both in regard to the availability of quality hard coke and pig iron. Added to this, the transport bottleneck continues to divert a substantial attention of the management. We have been required to transport coke, for instance, by road over a long distance from Bihar to Harihar at a very high cost of transport, because the railways have not been able to supply wagons for the movement of hard coke to the extent required by us. It is a very serious problem in that, when a wagon is made available, coke at site may not be available and, when the coke is available, there may not be any wagon available. Apart from increasing costs, this had created several critical situations with a lot of anxiety over keeping up a steady flow of production in the Foundry.

"We can only appeal to all the authorities concerned to give their very earnest and serious consideration to this major problem.

Agreement With Labour

"In regard to the several labour disputes in your Company which were pending before the Industrial Tribunal, Bangalore, and at other levels, I am now happy to inform you that, after protracted negotiations, we have been able to arrive at an agreement with the Workers' Union on all the issues, and your Board of Directors have approved the same only today. The agreement is proposed to be in force for a period of three years ending 31st December 1964. The agreement will result in a considerable financial burden on the Company. As this is a first long-term agreement to be entered into by your Company, the terms have been rather liberal and I, therefore, take this opportunity of urging on the employees concerned to see to this and take the matter in the right spirit and fulfil their obligations in doing their best in raising the production to the maximum. In the years to come, your Company will have to face competition from several quarters and it is, therefore, very essential that the employees themselves play their part fully in enabling the Company to offer their products to the customers at competitive prices. I trust that the employees concerned will take this matter very seriously.

"Ladies and gentlemen, during the year under report, the management and the members of the organisation, including the workmen and the staff, have exerted in raising the production to some extent and I take this opportunity of sincerely thanking them not only on my behalf but also on behalf of you all.

"Ladies and gentlemen, I also thank you for the very patient hearing that you have given me.

"I now propose that the balance-sheet and the profit and loss account and the Directors' report be adopted."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

AMERICAN LETTER

(Concluded from page 10)

Bank for Reconstruction and Development had made a $19.5 million loan to the Indian Iron and Steel Company Ltd., for a 12-year term at an interest rate of 5¾ per cent per annum. This includes a commission of 1 per cent. The loan will cover primarily foreign exchange requirements and participating in the transaction are Fidelity-Philadelphia Trust Company, and Philadelphia National Bank.

The loan is designed to assist in financing the Company's programme for increasing coal production from 260,000 to 2,200,000 tons annually through the opening of new mines and the expansion of existing ones. Also involved is the transportation of coal by aerial ropeways to the Company's steelworks at Burnpur. This is to relieve congestion of the railways.

The projects underwritten include the opening of two underground mines and of one open cast mine at Chasnalla. Collieries at Jitour and Ramnagore will be modernised and expanded. And except for the purchase of a small part of its iron ore requirements, I.I.S.Co. will become a fully integrated steel operation and one which, according to the World Bank, "may be expected to retain its position as one of the lowest-cost steel producers in the world."

Readers in India probably know that that the works are scheduled for completion by March 1967 at a total estimated cost of $40.2 million. Also, that the major items of imported equipment necessary for the project will be procured on the basis of international competitive bidding.

Including this loan, the World Bank has made 29 loans totalling almost $800 million to India to assist in the improvement of railways, roads, sea transport, air travel, agriculture, electric power and for other purposes.—*All Rights Reserved.*

JUTE

(Concluded from page 18)

the jute goods trade to see that raw jute prices are maintained at reasonable levels. But this is possible only so long as jute goods prices bear a reasonable relationship to current raw material costs. This is an aspect which has to be specially stressed, because, even without taking into account the large sums that still have to be spent on modernisation, the financial resources of mills are already severely strained. For a long time now, they have had to operate in highly adverse trading conditions. It is estimated that the jute industry suffered losses to the extent of more than $12 million during the six months from April to September 1961. In such circumstances, it is, as the I.J.M.A. statement observes, obvious that, should jute goods prices fall below parity with raw jute prices, the Association's price support scheme will inevitably collapse and with it, the prospect of another large jute crop on which depends the long-term stability of the market.

IN THE SPACE OF 10 YEARS...

the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—100 more than existed ten years ago.

STEEL PRODUCTION SOARS BY 425% AT MUKAND

We reckon our production in 1960-61 to be 69,552 tonnes of rolled products and 5,624 tonnes of castings. In other words a rise of 48% over the previous year.

In 1951-52 MUKAND employed 1,064; in April 1961—2,306. Over the past ten years production figures have soared—13,615 tonnes of rolled products and 704 tonnes of castings in 1951-52; and 425% more in 1960-61.

	57/58	58/59	59/60	60/61
		(Rs. in lacs)		
CAPITAL	51	51	71	61

Profits retained in business to date	25	35	45	57
Profit for the year	19	30	31	53
Dividend for the year	5	5	8	10

MUKAND manufactures high grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing flux of big orders—like the one placed by the Railways with MUKAND in October 1961 for 4,862 sets of Centre Buffer Couplers valued at Rs. 1,14,00,000.

MUKAND provides India's new and growing industries with the quality components that they must have.

GENERAL INSURANCE PROBLEMS

SUGGESTIONS TO IMPROVE COMPETITIVE CAPACITY

BESIDES pleading for the creation of a "proper climate" for the development of insurance, Mr. K. P. Mody, President of the Indian Insurance Companies' Association, Calcutta, had not much to offer by way of constructive criticism or suggestion in his speech on the occasion of the silver jubilee celebrations of the Association held at Calcutta last week. The ills of the general insurance industry are too well known to need reiteration. It would have, therefore, been useful had Mr. Mody devoted his speech to some bold and forthright suggestions for curing the ills of general insurance and putting the industry on a sound and stable footing, instead of presenting a catalogue of its difficulties and problems. His plea for the creation of a "proper climate" for the development of insurance by diffusion of insurance consciousness among the people, patronage by Indian industry and trade and the formulation of helpful Government policies is too broad to be of any practical value. If, on the other hand, he had outlined a concrete plan to promote insurance consciousness among the people, the lack of which, according to him, is one of the principal reasons why the expectations about the expansion of general insurance as a result of industrial expansion under the Five-Year Plans has not fully materialised, Mr. Mody cited, as an instance of this lack of insurance-mindedness, insurance of imports. In spite of the fact that the Import Control Enquiry Committee in 1950 and the Export Promotion Committee in 1957 emphasised the need for Indian importers making increasing use of the services offered by Indian insurers to save foreign exchange, the response had not been very encouraging so far. The buyer can ordinarily choose his own terms of shipment and it should not, therefore, be difficult for importers to utilise the insurance facilities available to them. Why they have not done so is a question worth investigation by the Association. There can be only two possible explanations. Either the advantages of insurance have not been driven home or the terms offered by Indian companies are not competitive. In either case, the remedy lies not, as Mr. Mody did, in merely appealing to the patriotic sentiment of the trade and industry but in remedying these defects.

Foreign Markets

Indian insurers can, in Mr. Mody's opinion, earn foreign exchange for the country by developing business in foreign countries. But, in order to be able to compete with powerful foreign companies, Mr. Mody suggested that Indian insurers should enter overseas markets not as individual companies but as combined units. Such a step, in his view, besides avoiding unhealthy competition amongst the companies, would enable them to cover large risks with confidence. The Association itself should, he said, take the initiative in formulating a scheme for bringing Indian insurers together into some sort of a consortium to write overseas business at competitive rates.

Mr. Mody's concern at the growing tendency on the part of the Government to reserve the lion's share of the Government's insurance business to Government-controlled companies is understandable. At present, as much as 75 per cent of the Government business is being allocated to Government-controlled business and the balance of 25 per cent is distributed among the remaining Indian insurers. This, Mr. Mody pointed out, was tantamount to Government withdrawing its support to the Indian insurance market. He pleaded that it was only fair to give to the private insurers, who had developed the Indian insurance market with considerable stress and strain, at least an equal share of Government business, taking into account, if need be, their underwriting capacity.

While the Indian insurance market has not expanded significantly, despite industrial expansion, competition among insurers to get a share of the available business had resulted in a number of malpractices. Prominent among them, as Mr. B. R. Bhagat, Deputy Minister for Finance, pointed out in his inaugural speech, was the evil of rebating. Its effects were unwholesome and often injurious. First, it is normally deleterious. Secondly, as the payment of rebate is illegal, the customer tended to have an improper hold on the officers and agents of the insurance companies. Thirdly, rebates resulted in losses to the exchequer as they had to be paid surreptitiously and hence escaped the liability to tax. Fourthly, rebates adversely affected the expenses of management. Lastly, it involved general insurance business in a vicious circle because rebating led to more and more rebating. The Code of Conduct was evolved to eradicate these evils and to bring about healthy conditions in the trade. Mr. Mody admitted that, despite the revision of the Code in 1956 and the tightening up of its provisions so as to make it more effective, it has not been successful in eliminating wasteful competition, excessive procuration cost and rebating. The object of the Code, in his opinion, is commendable. It might not be possible to remove the shortcomings of the Code entirely, but one should be happy, he felt, if they can be kept down to a minimum so that it will not impair the financial strength of the companies. Inasmuch as the Code has been framed by the representatives of the industry and accepted by most of the companies, it was the duty of all insurers, Mr. Mody exhorted, to make a determined effort to remove whatever shortcomings it had.

Expense Limits

In this connection, he also drew attention to the expense limit for insurers which had been causing much hardship to many companies. He pointed out that insurance was the only industry where expenses were controlled by legislation. Insurers were finding it difficult to keep their expenses within the prescribed limits which were fixed as far back as 1950. Since then the cost of every item constituting the expenses of management had gone up. If the objective behind the limitation was to increase the general reserve, it had failed. An analysis of the position of insurers during the past few years would show, according to Mr. Mody, that not only had the expenses gone up but the outgo by way of claims had also increased. The limits prescribed under Rule 17E were stringent in some cases even by the standard of excesses incurred in some foreign countries. If Rule 17E were amended on a realistic basis, the need to write direct business at any cost would disappear and the companies could concentrate on profitable underwriting. The question called for fresh thinking and Mr. Mody expressed the hope that the Department of Insurance will take steps to revise the limits to make them more realistic.

Nationalisation

On the question of nationalisation of general insurance, Mr. Mody said that the case for nationalisation was very weak. He dismissed the case for nationalisation in the following words:

"If the objective was to utilise by nationalisation the funds lying with the general insurers for long-term investments, it can hardly be realised. For the working results of insurance companies will show that the funds lying with them are meagre. The premium income of general insurers has not expanded to any appreciable extent these years with periodical reduction in fire rates from which 40 per cent of the total gross premium is derived. Further, with the Indian Insurance Companies Association Pool coming in for a major share of the business of the public sector, the prospects of large funds being handled by the industry are not bright. Nor are the views expressed that the drain on foreign exchange, consequent on reinsurance abroad, would be stopped by nationalisation, correct. It will not be possible for general insurers to operate without reinsurance facilities provided in international markets. Even industrially advanced countries as U.S.A., U.K., and U.S.S.R., consider it necessary to work in co-operation with insurers in foreign countries. Nationalisation would only result in losing the goodwill of the country whose nationals are operating as insurers in India. Some foreign countries had tried nationalisation in some form or other without any success. It is indeed a matter for regret that the sponsors (of nationalisation) disregard the problems which general insurance has to face."

Striking a note of optimism about the future, Mr. Mody said that, with the increasing tempo of economic activity, the field of general insurance would be widened and new lines of business were bound to be developed. The demand for engineering insurance, machinery erection insurance and many other miscellaneous types of insurance were fast growing. This called for training personnel for administrative and field work. Even as it is, there was difficulty in getting trained personnel. He, therefore, pleaded that ways and means should be found for training young men for careers in insurance.

Notice

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry at 6, Netaji Subhas Road, Calcutta-1, at 3 p.m. on Friday the 2nd February 1962, to consider and, if thought fit, to pass, with or without modification, the following resolution:—

"IT IS RESOLVED that for the purposes of Explanation 1 to Section 293(1)(d) of the Companies Act, 1956 the total amount up to which moneys may be borrowed by the Board of Directors in exercise of the authority conferred on them by Article 66 of the Company's Articles of Association and as confirmed by resolution passed in General Meeting on the 1st December 1956 shall be such sum as is computed to be equal to twice the amount of the paid-up capital of the Company (without taking into account any sum or sums borrowed after the 28th November 1952, and whether before or after the date of the confirmatory resolution aforesaid, from the International Bank for Reconstruction and Development or from the Central Government) provided that with effect as and from the 28th December 1960 the total amount outstanding at any one time in respect of borrowings by the Board from all sources whatsoever shall not exceed the sum of rupees fifty-five crores."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll to vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Note: An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the members of the Company.

BONUS ON POSTAL LIFE INSURANCE POLICIES

The Government of India has declared bonus in respect of postal life insurance policies which were in force on 31st March 1960 and which are the liability of the Government of India, including the policies of the Baroda State Insurance Fund which was merged with the P.L.I. Fund in 1957. The rates of bonus are as follows:

1. In respect of whole life policies of both civil and military wings, a simple reversionary bonus for the period from 1st April 1957 to 31st March 1960 at the rate of Rs. 20 per thousand sum asured per annum.

2. For endowment assurance policies issued on or before 31st March 1940 a simple reversionary bonus for the period 1st April 1957 to 31st March 1960 at the rate of Rs. 17 per thousand, sum assured per annum.

3. On endowment assurance policies of both civil and military wings issued on or after 1st April 1940 and all Baroda State Insurance policies, a simple reversionary bonus for the period from 1st April 1957 to 31st March 1960 at the rate of Rs. 15 per thousand sum assured per annum.

For policies maturing between 1st April 1960 and the date of next valuation, interim bonus at the rates of Rs. 20 and Rs. 15 per thousand sum assured per annum has been declared for whole life policies and endowment assurance policies, respectively.

One who did not waver...

Jamshedpur's latest blast furnace needed a 'big bell'—a 20-ton component requiring highly skilled casting and machining. A difficult operation even if the right machine tools were available, but in 1958 they were not, and import seemed the only solution to all but one determined and resourceful young engineer, N. P. Naik.

Working on this problem in his leisure hours, Naik gradually crystallised his ideas into mathematical formulae and blue-prints. He developed, at the same time, a new machine tool to do the job by remodelling a small boring machine, stage by stage. Then started the casting and intricate machining, until, in a short time, Naik and his colleagues succeeded in producing a 'big bell', fully meeting the technical specifications to the last detail. As a tribute to Naik's fine endeavour, Tata Steel gave him an award of Rs. 10,000, the highest made under a ten-year old scheme to encourage initiative from the shop floor.

Men like Naik are carrying forward a fine Jamshedpur tradition, recalling Jamsetji Tata's exhortation: "Let the Indian learn to do things for himself."

RAW MATERIAL SHORTAGES IN ENGINEERING INDUSTRIES

WAGON BUILDING DESERVES HIGHER PRIORITY

AS of 1961, India's engineering industries have attained the size of a major organised industry almost on a par with the textile industry. The output of general and electrical engineering industries (both light and heavy) in that year is estimated to have been of the order of about Rs. 500 crores in terms of value. This figure would have been still higher but for the shortages of iron and steel, coal and power. These shortages, incidentally, have also been responsible for accentuating the trend of rising costs in the engineering industries. According to Mr. K. L. Chowdhary, President of the Engineering Association of India (Calcutta), who spoke at the nineteenth annual general meeting of the Association on 22nd December 1961, the trend of rising costs has been in operation since 1956. The figures of *input as per cent of output*, cited by him in this connection, are:

1956	61.6	1959	64.5
1957	64.3	1960	66.0
1958	63.7	1961	67.5

Mr. Chowdhary's inference from these figures is that, as cost of production increases, the profitability of the industry declines, even though it expands and develops. The object of export promotion cannot, therefore, be realised in the face of rising production cost. On the subject of export promotion, Mr. Chowdhary emphasised the need for an additional measure of relief to engineering industries in the form of price preference in Government contracts to exporting industries. At the same time, supplies of graded pig iron and steel, coal and coke, and power would have to be made more adequate and regular. But it would seem that the present unsatisfactory state of affairs relating to raw material supplies would continue in the years immediately ahead unless more energetic steps were taken to remedy the situation.

The account given by Mr. Chowdhary of the present and prospective position pertaining to raw materials and power is revealing in this connection. In West Bengal, for instance, engineering industries had to pass through a very serious situation throughout 1961 as a result of shortage of power. They sustained a loss of about Rs. 5 lakhs per day during March-April that year. The power shortage, though somewhat relieved since then, is still hampering production schedules. The supply position of coke has also been unsatisfactory. As for finished steel, its availability to the engineering industries in 1961-62 would be much less than the 1.7 million tons required by them, for the entire output of steel in the country in the year would be less than 3 million tons.

The supply position of steel, according to Mr. Chowdhary, is not likely to improve in the next two years, for the aggregate production itself might fall short of the 1963-64 target of 4.3 million tons by about 800,000 tons. As against this, the requirements of engineering industries are expected to grow to 1.9 million tons in 1962-63, 2.1 million tons in 1963-64 and 2.3 million tons in 1964-65. Even at a very conservative estimate, the demand for steel from the engineering industries in 1962-63 would be not less than 1.5 million tons. There is no certainty that even this quantity would be made fully available, for there will be a heavy demand for steel from the machine building and other heavy engineering projects under construction.

The supply position of graded pig iron will be equally difficult. The main sources of supply of foundry grade pig iron, for the time being, are only Bhilai and Durgapur whose combined output would not be more than 600,000 tons. While an additional 300,000 tons may be available after a couple of years from low shaft blast furnaces and electric smelting of iron ores, at present the only unit is Kalinga which produces hardly 25,000 tons per year. It would thus appear that not more than 600,000 tons of pig iron would be available to the foundry industry in 1962-63.

In view of the expected difficult supply position relating to steel and pig iron, Mr. Chowdhary has strongly urged upon the Government the necessity of publishing an approximately correct forecast of the availability of these two raw materials to the engineering industries during the next three years, so that they can plan their production programmes with greater confidence. At the same time, in the interests of export promotion, he has advanced a reasonable plea for the timely delivery of about 30,000 tons of steel, 20,000 tons of billets and 30,000 tons of pig iron to the exporting industries in 1962-63. Both these requests are patently modest and reasonable in the current difficult circumstances governing iron and steel supplies. The authorities should somehow seek to satisfy the minimum requirements of engineering industries. At least in one specific field, namely, wagon-building, the Government should not fail to make steel available in adequate quantities. It is, indeed, distressing to hear that, while the railways have been complaining of a shortage of wagons throughout last year, the wagon-building industry has been working at half the rated monthly capacity of 1,860 wagons for no other reason than shortage of steel. As wagon-building is a crucial engineering industry—crucial from the point of view of augmenting railway transport capacity—there can be no excuse for denying adequate quantities of steel to it. Mr. Chowdhary's view is that transport is so important for feeding the industries with raw materials and for movement of finished goods that no argument should be allowed to stand in the way of development of wagon-building industry. This is a sound rationale for according a higher priority to wagon-building.

NUNMATI REFINERY GOES ON STREAM

The first State-owned oil refinery in India "went on stream" on 1st January 1962 at Nunmati, six miles from Gauhati in Assam. The refinery will have three main units—a crude distillation unit, a kerosene refining unit and a coking unit. It will have an annual refining capacity of 750,000 tons of crude. The products of this refinery will include motor-gasoline, high speed diesel oil, light diesel oil, kerosene, furnace oil, aromex and petroleum coke. It is noteworthy that as much as 167,000 tons of kerosene will be manufactured by this refinery.

The Nunmati refinery has been built in collaboration with Rumania under the Indo-Rumanian agreement under which, it may be recalled, Rumania had agreed to provide Rs. 5.5 crores' worth of equipment and know-how for the refinery. According to the Rumanian experts, the capacity of the refinery can be doubled, at a cost of not more than 50 to 60 per cent of the present outlay.

The full functioning of the refinery will be possible only when the 260-mile-long pipeline between Naharkatiya oilfields and the refinery is commissioned by March this year. Till then, the refinery will be working only at half the rated capacity.

The reactor of the *Savannah*, the first nuclear-powered cargo and passenger ship, is reported to be operating at Camden, New Jersey. The reactor went critical—achieved a self-sustained nuclear chain reaction—on 21st December 1961. Testing will now continue at Camden at gradually increasing power up to a maximum of seven megawatts, or 10 per cent of its designed power of 70 megawatts. After that, the vessel will be transferred to Yorktown, Virginia, for higher power testing.

Following testing at Yorktown, the schedule calls for sea trials and operation of the *Savannah* as an experimental vessel for two to three years. Toward the end of this period, the vessel is to enter limited commercial service and will visit major world ports.

Construction of the *Savannah*, it may be recalled, was authorised in 1959 by the U.S. Congress at the request of the then President Eisenhower, to demonstrate the feasibility of using atomic power to propel merchant ships.

The Petroleum Information Service, sponsored by the petroleum undertakings of the Government of India, has just brought out a brochure explaining to the general reader the various aspects of the petroleum industry. Entitled "the Story of Oil," the brochure is well got up and written in a simple and lucid style. It carries a number of charts, diagrams and photographs which, together, add to its value.

INDUSTRIAL **IBCON** CONSULTANTS

in the expansion of

TEXTILE INDUSTRY

IBCON offers to intending promoters of textile industry, comprehensive consultancy services comprising:

- Project study and financial estimates.
- Project design including equipment, buildings, power, steam, water-supply, etc.
- Advice on purchase of equipment from India or abroad by tenders or negotiations.
- Supervision of construction of buildings and erection of equipment and services.
- Commissioning and operation.
- Senior and supervisory staff selection.
- Management organisation, clerical procedures, quality control, scientific cost and wage schemes.
- Technical assistance after commissioning to ensure successful and profitable operation.
- Also production planning, waste control, stores, dyes and fuel consumption.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, have as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation in India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

WANTED

BELGIAN *MANUFACTURER'S* AGENT located in Brussels wishes to meet in Benelux, West Germany or France Indian businessmen to help them making proper contacts and after their departure, follow and check the selling or buying negotiations they may have started. Write to Box No. *988*, C/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

THE BANK OF BEHAR LTD.

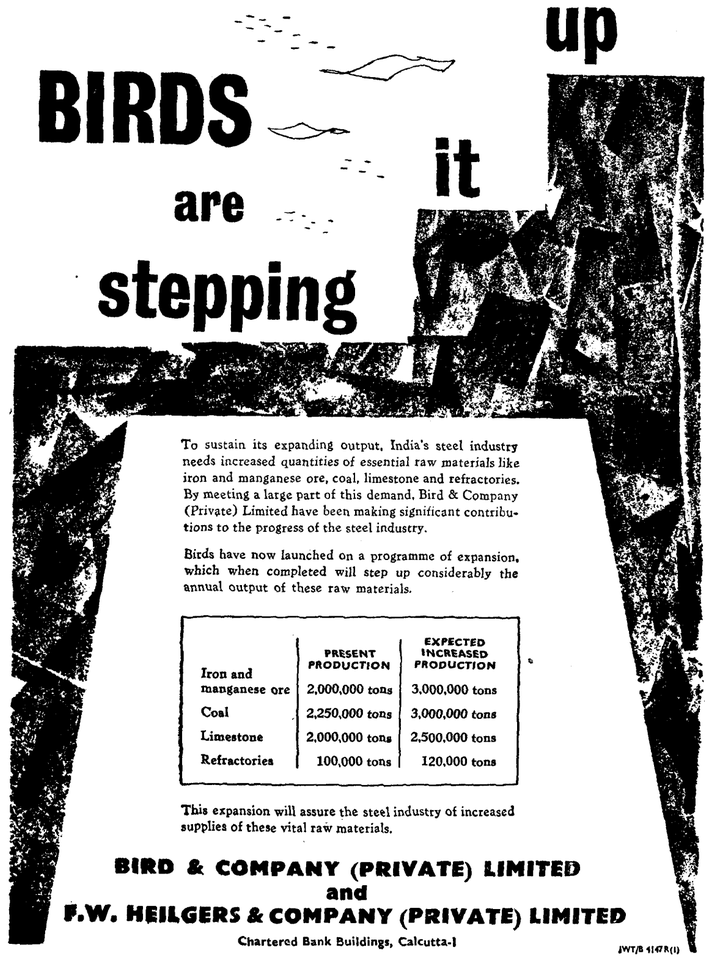
Head Office: PATNA
ESTD. 1911

BRANCHES AT:

Arrah, Beharsharif, Buxar, Chapra, Calcutta, Daltonganj, Gaya, Jaunpur, Jharia, Kanpur, Katrasgarh, Laheriasarai, Motihari, Muzaffarpur, Monghyr, Patna, Patna City, Ranchi, Siwan and Varanasi.

A. C. BHAT,
General Manager.

BIRDS are stepping it up



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

BIRD & COMPANY (PRIVATE) LIMITED
and
F.W. HEILGERS & COMPANY (PRIVATE) LIMITED
Chartered Bank Buildings, Calcutta-1

JWT/B 4147R(1)

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 500, you should

(1) Declare their value in writing at the time of booking, and

(2) Pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the I.R.C.A. Coaching Tariff No. 18.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

EXPANSION OF WORLD TRADE IN PRIMARY PRODUCTS SLOW

NO IMPROVEMENT IN AVERAGE PRICES

ALTHOUGH world trade has been increasing at a rapid pace during the last few years, it is mainly the industrial countries which have reaped its benefits in full. Exports from the non-industrial countries, which are predominantly primary produce, have, however, been lagging behind. It is in this context that non-industrial countries are clamouring for larger trade opportunities for their goods in industrial countries, in addition to direct financial aid. The latest annual report of the G.A.T.T., *International Trade* 1960 (Price $1.50), the full text of which was received just now, only confirms the adverse trends experienced by the underdeveloped countries. Although this report is now out of date by a year, it is a valuable document, containing as it does a wealth of data on world trade in its proper perspective. The value of world exports (including communist countries, but excluding U.S. exports under special terms) in 1960 rose by 11 per cent to $125,000 million, as compared with 1959. Average prices, too, rose. But this was accounted for exclusively by manufactured goods, the average price of which increased by 3 per cent. The average price of primary products, however, failed to increase and remained at the previous year's level. Further, the expansion of total world trade in 1960 was uneven among the various trading areas, with the major part of the increase accounted for by the European Common Market countries and North America. There was a considerable increase in the imports of non-industrial countries (all countries, excluding North America, Western Europe, Japan, Russia, Eastern Europe and Mainland China) from the industrial areas (in contrast to declines in the previous two years). At the same time, the tempo of expansion of exports from these countries to industrial areas (excluding communist bloc) slowed down in 1960.

The relatively poor performance of non-industrial countries in the field of world trade reflects largely the failure of exports of primary products to hold their own. The total value of world trade in primary commodities rose by 8 per cent, which compares unfavourably with an increase of 15 per cent in exports of manufactures. The increase in exports of primary products in 1960 (noted in respect of agricultural raw materials, particularly textile fibres and foodstuffs) was the result mainly of larger exports from the U.S. to other industrial areas. Thus, the non-industrial countries, the exports of which are composed mainly of primary products, have not shared in the increase in exports of these commodities in 1960.

Earnings from Exports

Earnings from exports of primary products continued to be at an unsatisfactory level. The low level of prices of primary commodities since 1958 has had an adverse effect on the economic situation in non-industrial countries. While the volume of exports of primary products rose by 16 per cent between 1957 and 1960, the corresponding value increased by only 6 per cent. It is pertinent to note here that, although the volume of exports of manufactures went up by only 18 per cent between 1957 and 1960 (approximately the same rate as for primary products), their value moved up by as much as 22 per cent. Again, while the average prices of primary products in 1960 remained stable at the previous year's level, those of manufactures were higher by 3 per cent. The following table shows the movement of average prices of exports (in terms of indices) of both primary commodities and manufactures since 1957:

(Base: 1957=100)

	1958	1959	1960
PRIMARY PRODUCTS			
Foodstuffs	96	91	90
Coffee, tea, cocoa	97	82	73
Cereals	99	96	95
Agricultural raw materials	89	93	93
Textile fibres	80	77	82
Oilseeds, fats, oils	99	103	97
Mineral raw materials	95	90	89
Ores	93	93	94
Total (excluding crude petroleum)	93	92	92
Total (including crude petroleum)	94	92	91
Manufactured goods	100	100	103
Non-ferrous metals	90	99	102

As will be seen from the table, between 1957 and 1958 there was a decline in the prices of all commodity groups. In 1959 and 1960, prices of foodstuffs and minerals declined, though the average prices of agricultural raw materials were better. The price level of primary products as a whole declined by 6 per cent between 1957 and 1958 and by 2 per cent in 1959. A more detailed analysis reveals that prices of most foodstuffs dropped sharply between 1957 and 1960, except the prices of meat (which increased), of tea (which remained stable) and of cereals (which showed only moderate declines). As regards agricultural raw materials, price increases were recorded during the period of four years in jute and hard fibres, rubber and certain fats, whereas declines occurred for most of the other products, especially tobacco, wool and cotton. Among minerals, prices for petroleum products and solid fuels, which stand out as major items, weakened in the course of 1959 and 1960.

Foodstuffs

The total exports of the major commodity group among primary products, namely, foodstuffs, which aggregated $18,950 million in 1959, went up further by 3 per cent in 1960. This was mainly the outcome of an increase in food exports from industrial countries. An important point to be noted here is that the share of industrial countries in food exports has been steadily going up, that is, by $2,900 million to $10,400 million between 1953 and 1960. At the same time, food exports by non-industrialised countries rose by only $825 million to $9,450 million. Exports of wheat, rice, sugar, tea, citrous fruit and tobacco from non-industrialised countries rose from 1959 to 1960, but those of coarse grains, butter, meat and cocoa declined. The following table shows the trend in exports of food and beverages (including tobacco) from non-industrial countries since 1953:

(Value in million dollars)

Commodities	1953	1958	1959	1960*
Wheat and flour	504	268	311	360
Maize and barley	232	245	254	216
Rice	476	453	385	415
Butter	194	147	242	200
Sugar	1,122	1,817	1,165	1,350
Meat	517	753	803	695
Total ..	3,045	3,183	3,150	3,236
Coffee	2,378	1,953	1,879	1,866
Cocoa	483	574	586	520
Tea	436	599	555	573
Total ..	3,297	3,076	2,970	2,959
Tobacco	186	236	238	290
Grand total (including others) ..	8,625	9,340	9,280	9,450
Food exports from industrialised countries	7,500	9,330	9,720	10,400

* Including estimates for several countries for which full 1960 data are not available.

Trade in agricultural materials, which, after the sharp fall in 1958, staged a substantial recovery in 1959, continued to rise in value in 1960, although at a slightly lower rate. From a total value of about $13,980 million in 1959, exports reached about $15,400 million last year, mainly under the impact of a strong increase (by about $1,300 million) in these exports from the industrial countries. About one half of this expansion was on account of the U.S. exports of a few commodities, notably raw cotton, rubber (synthetic) and certain oilseeds. Exports in this group from less-developed countries in 1960 seem to have been only very slightly larger in value than in 1959. As noted in the case of foodstuffs, the development in exports of raw materials from these two groups of countries over the past several years has been unequal. In the period 1953-59, exports of raw materials from industrial countries rose over twice as much as exports from the less-developed countries, that is from $4,700 to $7,700 million, and from $6,500 to $7,600 million, respectively. Exports from Eastern Europe, U.S.S.R. and mainland China (excluding intra-regional trade) rose over the same period from $475 to $650 million.

So far as individual raw materials are concerned, there were in 1960 substantial increases in the volume of exports of some items; cotton and coconut products by one quarter, soyabeans by 16 per cent and olive oil by an exceptional rate of 40 per cent. While the volume of sawn timber, and hides and skins rose slightly, fairly large declines occurred in natural rubber, which fell by 11 per cent, groundnuts by 12 per cent, jute by 9 per cent, while minor reductions occurred in wool, sisal and abaca. Important price increases were recorded for extra long-staple cotton, jute and sisal. While a somewhat firmer price tendency was observed in the case of timber, rubber prices were relatively stable until mid-1960, after which they fell sharply, under the impact of increasing stocks held by producers and competition from synthetic rubber. Following an easier supply situation, prices of copra dropped and wool prices, as well as those of hides and skins, were also weaker than in 1959.

A clear picture of the recent trends in exports of agricultural raw materials from non-industrial countries is provided in the following table:

(Value in million dollars)

	1958	1958	1959	1960
Cotton	1,160	1,055	1,075	1,060
Wool	1,831	1,277	1,453	1,484
Jute	174	178	150	169
Sisal, abaca, henequin	118	108	140	160
Coconut products	338	311	335	310
Groundnuts and oil	214	230	200	280
Natural rubber	771	910	1,349	1,300
Hides and skins	271	227	308	310
Total (including others) ..	6,525	6,385	7,550	7,600

Non-Ferrous Metals

There was a notable increase in the exports of non-ferrous metals in 1960. A high level of consumption of non-ferrous metals in Western Europe in 1960 led to a strong rise in imports of some of them and to a reduction in exports from the area. While several of the main producing countries in Latin America and the overseas sterling area participated as suppliers, especially as regards copper (from Chile) and tin (from Malaya), there was a spectacular increase in European imports from North America.

In the case of both foodstuffs and raw materials, it has been noted that the expansion in exports over the past few years was much more rapid in the industrial areas than in the primary producing countries. As regards fuels, the development was exactly opposite: a sharp rise in the primary producing countries contrasted with a virtual stagnation in these exports from the industrial countries. In fact, after the temporary boost given to the latter exports in 1956-57, following the Suez crisis, when oil supplies to Europe from North America temporarily replaced those from other sources, the level fell sharply in 1958 and in 1959, it had become reduced to $3,000 million, that is, only slightly more than the value registered in 1953. The considerable cuts in coal imports from the U.S. into Europe in 1958-59 further accentuated this movement. On the other hand, in 1959, fuel exports from the non-industrial countries were about 60 per cent larger than in 1953, having risen from $4,560 to about $7,340 million. On the basis of estimates for the principal exporting countries, the figure in 1960 is expected to have reached about $7,900 million. In respect of coal, if a distinction is made between coal-producing and non-producing countries in Europe, it is seen that the steps taken by some of the former to limit imports have resulted in a sharp contraction (by over 40 per cent) of imports in the period 1957-60; there was, by contrast, only a slight reduction in non-producing countries. In West Germany, for instance, the introduction of a duty on imports exceeding a certain quota resulted, in combination with cancelled long-term contracts for the import of United States coal, in a fall in imports into the country from suppliers outside the European Coal and Steel Community from 17 million tons in 1957 to 5½ million tons in 1960. In Belgium, imports in 1960 were limited by quotas, not only from outside suppliers but, owing to the particular difficulties in the country's coal industry, also led to a sharp fall in imports over the last few years and the United Kingdom, which is not a traditional importer ceased to authorise imports in 1958 except for coal from sterling countries. Imports virtually ceased in the spring of 1959, and have not since been resumed.

WORLD OUTPUT OF TIMBER

World production of all forest products made further headway in 1960, as compared with the previous year, according to the Yearbook of *Forest Products Statistics 1961*, just brought out by the U.N. Food and Agriculture Organisation and Economic Commission for Europe. The most spectacular increase in output was recorded by manufactured products and pulp products. Production of industrial wood, in terms of volume, rose by more than 2 per cent and that of roundwood remained unchanged. The *Yearbook*, which contains figures relating to over 160 countries and is priced at 12s. 6d., shows that the use of wood as a basic material for the production of capital and consumer goods has been rising all over the world.

Sawnwood continues to be the major wood product. Proportionally, the increase of broad-leaved species was higher than that of coniferous species, which, nevertheless, hold a dominant position in the use of sawn timber. The most important increases of industrial wood removals in 1960, as compared with 1959, took place in Europe (30.3 million cubic metres increase), in Asia (6.6 million cubic metres) and in North America 4.3 million cubic metres). Taken on a world basis, fuel wood remains highly important, with estimated removals amounting to about 710 million cubic metres, of which 24 per cent is cut in Asia, 19 per cent in South America, 16 per cent in Africa, 15 per cent in Russia and 14 per cent in Europe. The relative importance of each category of roundwood does, of course, vary by region and over a period of time, with the percentage of wood cut for industrial purposes being higher in the more industrialised regions. Thus, while there is a world average of 60 per cent, the statistics show that it is 88 per cent in North America, 71 per cent in Russia, 69 per cent in the Pacific area and 68 per cent in Europe.

The European production of railway sleepers from 1958 to 1960 showed very little change and Rumania, France and Poland remained the principal producing countries. The main importing countries in 1960 were the U.K. and West Germany, and France and Rumania were the main exporting countries. A decline rather than an increase is expected in the European production of wooden sleepers as a result of competition from other materials, notably concrete. According to available data, the largest producers of railway sleepers outside Europe are Japan, Australia, Canada and the Argentine.

The output of plywood aggregated 15.5 million cubic metres in 1960, or 4 per cent more than in 1959, an increase of about 56 per cent over the last five years and of 120 per cent over the last decade. North America continues to be the largest plywood producing region, followed by Europe and Russia. Contrary to the trend in production, international trade in plywood decreased, as compared with 1959. Significant decreases in exports were reported from Japan, the U.S. and the Philippines, whereas Canada, Finland, France and Rumania increased their exports. Finland now becomes the largest plywood exporting country in the world, closely followed by Japan, and the U.K. becomes the largest importing country in 1960, with a total import of 640,000 cubic metres, a figure 30 per cent more than in 1959. Particle board production showed a rise of 32 per cent over 1959. European production increased at an even faster rate than world production and now accounts for 65 per cent of the reported world production. The U.S.S.R. reported an increase in production of 89 per cent, while the expansion in the United States seemed to have slowed down. Central and South America, Africa, Asia and the Pacific area altogether account for only 8 per cent of the world production.

Wood-pulp production reached in 1960 almost 69 million cubic metres, which represents an increase of 8.3 per cent, as compared with 1951. The total production of pulp products rose from 48.7 million metric tons in 1951 to 78.2 million metric tons in 1960, or an increase of 60 per cent. In 1960, while world production rose by 7 per cent, as compared with 1959, North America increased its production by only 4 per cent, but is still by far the leading pulp producing region. Mechanical wood-pulp continues to account for 31 per cent of global production. Chemical wood-pulp production increased by about 8 per cent, but this increase was noticeably higher in Europe and in Asia than in North America and in Russia. Pulp from other fibrous materials remains relatively less important, though production of this product also increased by 13 per cent. Exports of wood-pulp increased by 13.6 per cent. North America's shipments rose by 21 per cent, mainly owing to the very large increase in the exports of the U.S., but Sweden, Finland and Norway together account for 55 per cent of the world trade in wood-pulp.

The production of newsprint reached a new record level of more than 14 million metric tons. This increase was largely due to the fast expansion of the European production which was about 11 per cent higher than in 1959 and to the production of Asia which also increased by 11 per cent. Production in North America increased by about 6 per cent, with Canada still the world's largest newsprint producing country followed by the United States, Finland, Japan and the United Kingdom. World trade in newsprint increased by almost 7 per cent in 1960, but the expansion of trade was much higher in Europe (14 per cent). The largest exporting countries are Canada and Finland, whereas the United States and the United Kingdom are the largest importing countries. In the category of printing and writing paper and other paper, world production rose by 8 per cent reaching a total of 13.5 million metric tons of printing and writing paper and 21.7 million metric tons of other paper, while world trade in these products, however, rose at an even faster rate. The principal exporting countries are Sweden, Finland and Norway, and the main importing countries the United Kingdom and the Federal Republic of Germany.

World production of paperboard reached a new high of 24.6 million metric tons in 1960 and exports rose 13 per cent above the 1959 level. The Yearbook shows that European exports accounted for 56 per cent of the world total and those of North America for 41 per cent. World fibreboard production was 4.3 million metric tons, which brings the increase in output over the last decade to 82 per cent. Compressed fibreboard continued to gain ground and now accounts for 62 per cent of total output, whereas the output of non-compressed types decreased in 1960 compared with 1959.

NEW PRODUCTS AND PROCESSES

Stroboscope for Scanning Textile Patterns

IT is common knowledge that in the clothing industry high standards of weft alignment are called for. Although a straight weft is very important in a plain fabric, much heavier costs may be involved in the case of fancy fabrics where the pattern is skew. This feature is a problem in finishing technique. As a result of improvements to finishing apparatus, the average speed of cloths has been substantially increased. Depending on the type of fabric handled, speeds of up to 200 metres a minute are possible on modern tenters. At these speeds it is impossible to check the position of the woven or printed pattern in the weft direction. This means that the speed of the machine has to be decreased to a fraction of the speed of which it is actually capable, resulting in considerable loss of efficiency. In addition to existing, often expensive, apparatus in the textile industry for making textile patterns visible at high speeds, a Dutch firm has developed a simple device (a stroboscope) that makes patterns woven in or printed on the cloth visible at high speeds.

The pattern has to be made visible to enable any distortions or deviations to be corrected. For this purpose use is made of cloth (or weft) straighteners, which can be controlled either by hand or electronically. Without a stroboscope of this type, hand control at high speeds is impossible, since the human eye is too slow to be able to discern the weft-shoots. When electronic control is applied the stroboscope acts as a visual apparatus for checking that the weft straighteners and subsequent aligning equipment are working properly. The stroboscope utilises a standard fluorescent lamp which casts light on the cloth at a certain frequency. The lamp is supplied via a special control box provided with knobs for regulating the frequency, the latter being dependent on the size of the pattern and the speed of the cloth. It is also possible to insert a synchroniser to ensure that the frequency remains automatically adapted to the cloth pattern in the event of fluctuations in cloth speed. The stroboscope may be mounted on tenters, equalisers and possibly on sanforising machines, and works irrespective of the speed of the fabric. Its operation is also unaffected by the type, colour, density or weight of the fabric.

Controls for Oil Burners

The photo-electric cell is the basis of two interesting new products of one of Britain's smaller electronic firms. One is a unit to control the operation of oil burners. The other is a smoke control unit. The oil burner sequence and flame failure control unit is produced with a range of variations suitable for use with small or large oil burners—from the small domestic type to industrial installation. It enables their automatic operation at preset times with thermostatic control. Safety controls guard against failure for a wide variety of reasons, and a system of lights (white, amber or red) indicates whether the installation is operating, whether the burner motor is energised or whether there has been a failure. On heavy oil burners the unit can be augmented to operate solenoid valves, induced draught fans or other operations, and when used with steam raising plants a low-water cut out system can be incorporated. The smoke control unit provides a visual and audible warning when smoke exceeds a pre-set density and apart from its value in achieving fuel economy it is useful for all industries in which limitation of smoke emissions is necessary.

Potato Harvester

Tests have been carried out at a Scottish machinery testing station on a modified commercial potato harvester with an electronic "sensing" device which may solve the costly problem of potato harvesting. The device is claimed to have had 95 per cent efficiency in laboratory trials in differentiating between a potato, stone and clod. In the prototype unit tested a beam of ironising radiation, with a peak intensity of about 0.5A, was divided into nearly parallel horizontal beams each directed on to a scintillator operated in association with a photo-electron multiplier. The radiation was pulsed and the output from each multiplier fed to an amplifier which was also supplied with a coincident pulse of equal magnitude but opposite polarity. Pulses normally cancelled so that no amplifier output was associated with a multiplier. This condition was not upset by the interposition of a potato in a beam but a stone or clod reduced the multiplier pulse. There was, therefore, an amplifier output available to actuate a rejection mechanism associated with each beam interrupted by a stone or clod.

New Life for Old Blankets

A new machine which can give new life to "tired" blankets has been developed by a British company. One of the problems encountered by laundries has been that of restoring blankets which normal use, coupled with washing and subsequent drying, has tended to felt the raised or napped surface of the fabric. The new machine resolves this difficulty. The unit incorporates metal teazles which lightly brush the blanket passing through it, lifting the matted surface and thus giving the blanket more bulk and resilience and greatly increasing its thermal efficiency. The machine is attractively styled with easily removable fibre glass covers and fairings moulded from "Durgglas" chemically bonded glass mat. It has a standard width of 96 ins. (244 cm.) and is driven by a 1½ h.p. motor. Simple to operate and maintain, its running speed of three yards per minute enables 100 standard size double bed blankets to be processed during an eight-hour shift.

Safety Unit for Tractors

A new safety unit for tractors, which is making a contribution towards reducing the toll of accidents caused by their overturning, has been developed by a British engineering firm F Butt and Co., Ltd. When the tractor leans over—forwards, sideways or backwards—at more than an angle of 32 degrees, the unit operates to stall the engine and blow a warning horn. The device automatically cuts off diesel engines by pulling the fuel-injector stop rod; and petrol engines by short-circuiting the ignition. By this device, the driver is warned that his vehicle is dangerously near the angle of overturn, and he can rectify the situation. The horn will continue to blow until the tractor is righted or until the battery has run out. Thus, if a tractor has overturned into a ditch, trapping the driver, the continuous sound of the horn will bring help. The unit comes in the form of a small box that can be quickly and easily fitted to any make of tractor.

Precision Welding

Built for delicate welding operations on the thinnest of wires and sheets, or the tiniest of components—mainly in non-ferrous metals—is a new series of welding machines manufactured in Britain. They embody novel mercury switches developed by the makers which have no moving parts and enable the welding current to be switched electronically. They also give closer control of the welding cycle. Outputs of 20, 60 and 80 kVA are available in the series, which is specially suitable for work on the construction of complex electronic valves, transistors, condensers and other miniature components in the electronic, optical and precision engineering industries.

New American Inventions in 1961

A flood of new products and processes, on which more than 50,000 patents were issued during 1961, is transforming industry and the way of living in the United States. No facet of living, or of manufacturing, seems to have escaped the impact of inventors' efforts to devise easier or better ways of doing things. Spurring the inventors is industry's expenditure of vast sums on research facilities. In 1961, U.S. industry spent at least $5,000 million of its own funds on research and development of commercial products and processes.

Among the newest products and processes are the following:

Solid State Electronic Circuits

The almost magical new art of molecular electronics, which makes materials with the electronic characteristics the designer wants, has produced a general-purpose computer only slightly larger than a sardine can and weighing only 10 ounces. Metals are vapourised and deposited on thin wafers. Each contains a complete electronic circuit, thus eliminating such ordinary semi-conductor devices as resistors, capacitors, and condensors. One manufacturer predicts that the new circuits can shrink a six-transistor radio circuit to the size of a pencil eraser.

Automobiles

The 1962 models of most American automobiles unveiled to the public in October last featured such improvements in maintenance as changing oil and getting minor lubrication only twice a year and major lubrication every 30,000 to 33,000 miles. Some models also had self-adjusting brakes. Three-speed automatic transmission for compact cars and a stick gear shift without a clutch pedal were other new features on some cars.

Machine Talk

More than 500 American companies are using about 45 per cent of the more than 5,000 computers now at work in the nation's business, industrial, scientific and governmental organisations. Many of the business computers need to "talk" to each other, relaying data from a branch sales office, warehouse, factory or laboratory to the main headquarters. For example, these machines "talk" to each other over regular telephone lines, using teletype sending and receiving equipment and data-phone service, a new telephone method of data transmission. An electronic translator computer has been developed which automatically converts the language of one type of computing equipment to other types. Thus dissimilar computers can now "talk" to each other.

Coin-operated Dry Cleaner

Coin-operated dry cleaning machines, resembling in outward appearance automatic washing machines, made their appearance in Laundromat stores, gasoline filling stations, and elsewhere. The number of machines has soared from less than 500 at the start of the year to more than 15,000.

Colour Television

Improvement of colour set quality, reduction of repair costs and improved and increased colour programmes by television stations caused sales of colour television sets to nearly double in 1961.

Housing Construction

Today there is a new or better product, tool, or method to do almost everything in the construction of a house except roofing. Some of the improvements are: foundation and floor panel systems that can provide hardwood floors for the cost of concrete slabs; factory-made partition walls that can save up to $500 a house; new bathroom systems that can give two bathrooms for less than the cost of one in former years; new add-on units that can bring air conditioning to every house; quick-drying plasters that cut finishing time two-thirds; new devices for lower cost wiring; and new doors that cut closet and hallway costs by a third.

New Typewriter

A new electric typewriter, which has no moving paper carriage and no typebar, appeared on the market. Alphabetic characters, punctuation marks and numbers are arranged on a walnut-sized nickel-coated sphere. This is mounted on a carrier inside the typewriter, and whisks along from left to right, tilting and twisting on two axes to get the right letter into position and printed. It is claimed that the new typewriter permits faster operation. Several typing heads—each with a different type style—can be interchanged.

MIXED PERFORMANCE BY BIRLA GROUP OF SUGAR MILLS

PROSPECTS NOT BRIGHT

ALTHOUGH the Directors' reports for the year ended 30th June 1961 of three sugar companies, namely, the Upper Ganges Sugar Mills Ltd., the New India Sugar Mills Ltd., and the Bharat Sugar Mills Ltd., under the management of Cotton Agents' Private Ltd., Bombay, run truly to a pattern, the actual working results achieved by them are, however, as varied as could be. With the exception of Upper Ganges, for example, the other two companies have disclosed sizable declines in sale as well as gross profit, while New India has suffered a setback in its net profit as compared with the improvements reported in this respect by the other two. The only point of similarity is that all the three companies have maintained their previous rates of ordinary dividends.

Upper Ganges

Notwithstanding the country-wide recession in sugar, the Upper Ganges Sugar Mills has been able to push its sale further by as much as Rs. 102.80 lakhs to Rs. 363.69 lakhs and, though it has thereby recovered fully the ground lost during the previous year, its sales are yet Rs. 11.48 lakhs lower than the record figure of Rs. 375.17 lakhs reached during 1957-58. Higher sale has, quite naturally, brought about an increase in the excise duty paid on sugar, by Rs. 8.35 lakhs to Rs. 81.60 lakhs, and in total expenses, by Rs. 48.14 lakhs to Rs. 302.95 lakhs, but, even then, the gross profit shows an improvement of Rs. 14.77 lakhs to Rs. 38.27 lakhs.

The Managing Agents' commission, which had claimed Rs. 1.46 lakh during the previous year has moved up to Rs. 2.40 lakhs for the year under review. Provision for depreciation has changed but a little from Rs. 9.38 lakhs to Rs. 9.62 lakhs but that for taxation has, for obvious reasons, been more than doubled to Rs. 8.92 lakhs in comparison with Rs. 3.50 lakhs previously. Despite the increases in essential provisions, the net profit is still higher by Rs. 8.17 lakhs at Rs. 17.33 lakhs. With a higher net profit thus, transfers to reserves have been raised substantially from Rs. 1.78 lakh to Rs. 10.15 lakhs. Of this, the development rebate reserve gets Rs. 2.27 lakhs, as against Rs. 1.62 lakh, and the general reserve Rs. 7.50 lakhs as against nil, the balance being credited to sundry provisions.

New India Sugar

The New India Sugar has reported a decline of Rs. 31.58 lakhs to Rs. 110.05 lakhs in sale of sugar and, though it has received some relief through a decrease, amounting to Rs. 10.03 lakhs to Rs. 29.48 lakhs, in the excise duty, the gross profit has nearly halved to Rs. 6.94 lakhs as against Rs. 13.54 lakhs for the previous year. In consonance with the lower profit, a reduction has been brought about in overall essential provisions from Rs. 7.96 lakhs in 1959-60 to Rs. 3.38 lakhs for the year under review. Of this, the provision for Managing Agents' commission accounts for a cut of Rs. 0.58 lakh to Rs. 0.43 lakh and that for taxation of Rs. 4.00 lakhs to Rs. 0.45 lakh only. Provision for depreciation, on the other hand, has remained more or less steady at Rs. 2.50 lakhs, as against Rs. 2.42 lakhs. Consequently, the net profit shows a less severe decline of Rs. 2.00 lakhs to Rs. 3.56 lakhs. After taking credit for Rs. 0.35 lakh brought over from the preceding accounting period and writing back Rs. 0.09 lakh as provisions no longer required, the Directors have set aside Rs. 0.61 lakh to meet the liability on account of preferred dividends for the year and from the balance have proposed ordinary dividends at 36.5 per cent, subject to deduction of tax, absorbing Rs. 2.88 lakhs as during the previous two years.

Bharat Sugar

The performance of the Bharat Sugar Mills during the year has not been as disheartening as that of New India, in that, despite a fall of 17.4 per cent (from Rs. 83.39 lakhs to Rs. 68.58 lakhs) in sales, the gross profit has declined only moderately from Rs. 9.24 lakhs to Rs. 7.38 lakhs. Moreover, there has been an all-round curtailment in essential provisions, that for the Managing Agents' commission having been brought down from Rs. 0.82 lakh to Rs. 0.64 lakh, for depreciation from Rs. 1.05 lakh to Rs. 0.85 lakh, and for taxation, quite perceptibly, from Rs. 4.85 lakhs to Rs. 1.25 lakhs. The net profit has, accordingly, risen to Rs. 4.64 lakhs from Rs. 2.52 lakhs for the previous year. As a result, the Directors have found no difficulty in maintaining the dividends at their previous levels; the preference dividend absorbs Rs. 0.25 lakh and ordinary dividend, at 15 per cent, Rs. 2.25 lakhs, in both cases, subject to deduction of tax.

A perusal of their respective balance-sheets, as at 30th June 1961, discloses that the financial positions of these three companies is only moderately strong. In each case, the share capital has a modest backing of reserves and the total of these two very nearly equals the written down value of the fixed assets. All the three companies have resorted to heavy bank borrowings, with a view to finding sufficient working capital, and the current assets in each of the three cases are just sufficient to cover bank loans and current liabilities put together.

During the course of the year, each company had a record crushing, having worked for a larger number of days than during the previous year and having crushed a bigger tonnage of cane. The recovery in all the three cases, however, was lower than during the preceding year. This was due to unfavourable climatic conditions, lower sucrose content of cane and longer duration of the season, conditions which have been common to all other mills in North Bihar.

According to the availability of cane in their area, all the companies anticipate further considerable rise in the crushing of cane during the current year. The Government, on the other hand, has issued an order restricting the production of sugar to a level 10 per cent lower than that during the previous year. Efforts are being made by individual companies with the Government to exclude the sugar factories in Bihar from the restrictive provisions of the ordinance. In view of the said restrictions on output, coupled with the heavy carryover of stocks and the declining prices for sugar following the decontrol, the Directors of these companies feel that the prospects for the ensuing year are anything but cheerful.

The Rs. 10 fully paid ordinary shares of these companies are quoted on the Calcutta Stock Exchange. The following table presents the present market quotation for these shares on an *ex-div.* basis and the net return on investment:

	Ex-div. price Rs.	*Net yield* Per cent
Upper Ganges Sugar ...	72.02	6.9

MYSORE KIRLOSKAR'S PROGRESS STEADY

RESERVES STRENGTHENED

THE record of sales and earnings achieved by Mysore Kirloskar Ltd. (Managing Agents: Messrs. Kirloskar Associates, Yantrapur), during the past five years, stands a living testimony to the impetus received by the machine tool building industry in the country and the progress made by it during the second Plan period. Sale of the Company's highly esteemed product, which amounted to about Rs. 44.59 lakhs at the close of the first Plan, had, it will be recalled, improved each successive year till it stood at Rs. 140.75 lakhs for 1959-60, while the gross profit increased fourfold during the same period, having risen from Rs. 7.77 lakhs to Rs. 35.41 lakhs. During the year ended 30th June 1961, it is heartening to note, the same rate of progress was maintained. Sales increased by a further Rs. 16.40 lakhs to Rs. 157.15 lakhs and the gross profit was higher by nearly Rs. 4.00 lakhs at Rs. 39.40 lakhs.

A higher profit level and improved activity have brought about an increase in essential provisions, that for Managing Agents' remuneration having gone up from Rs. 3.03 lakhs to Rs. 3.22 lakhs, for depreciation from Rs. 6.80 lakhs to Rs. 9.35 lakhs, and for taxation from Rs. 10.50 lakhs to Rs. 11.80 lakhs. In spite of this rise of Rs. 4.04 lakhs in prior calls on gross profit, the net profit has declined only marginally from Rs. 15.08 lakhs to Rs. 15.03 lakhs. To this has been added Rs. 0.07 lakh brought forward from the previous accounting period, and Rs. 2.24 lakhs as a write-back of excess provisions, to get a total disposable profit of Rs. 17.34 lakhs. From this, the Directors have transferred Rs. 11.31 lakhs, as against Rs. 10.98 lakhs last year, to various reserves and, out of the balance, an ordinary dividend of 12 per cent, subject to deduction of tax, has been proposed. It is to be noted that, though the rate of dividend remains unchanged, as compared with the past two years, the amount required to maintain the dividend is larger at Rs. 6.00 lakhs, as against Rs. 4.24 lakhs during 1959-60 and Rs. 3.45 lakhs for 1958-59. This is due to increases in the paid-up capital.

The figures of sale, profits and essential provisions referred to earlier are, it is well to remember, exclusive of the corresponding items appertaining to the unit manufacturing capstan and turret lathes in collaboration with Alfred Herbert of Coventry, England. The turnover of this unit, for which separate accounts are being maintained, for the year to 30th June 1961, more than doubled to Rs. 13.77 lakhs from Rs. 6.82 lakhs previously, while a gross profit of Rs. 1.07 lakh has been earned in place of a loss of Rs. 0.69 lakh incurred a year ago. After providing Rs. 2.27 lakhs, as against Rs. 0.87 lakh, for depreciation and crediting Rs. 1.86 lakh, as compared with Rs. 0.86 lakh, to the development rebate reserve, the net loss carried to the balance-sheet amounts to Rs. 3.07 lakhs as against Rs. 2.42 lakhs.

The progress made by the main unit of the Company during the four-year period 1958-61 is presented synoptically in the comparative table given below:

(Value in lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958

The financial position of the Company, as reflected in its balance-sheet as at 30th June 1961, is strong. Following capitalisation of reserves to the tune of Rs. 10 lakhs through the issue of bonus shares, the share capital of the Company now stands at Rs. 50.00 lakhs, as against Rs. 40 lakhs a year before, with a backing of Rs. 42.35 lakhs in the reserves and surplus account. Secured and unsecured loans,

(Continued on next page)

FINANCIAL RESULTS OF A.C.C. DISHEARTENING

NET WORTH DECLINES DUE TO LOW PROFIT-MARGIN

THE annual report of the Associated Cement Companies Ltd. (Managing Agents: Messrs. Cement Agencies Ltd., Bombay) for the year ended 31st July 1961, reveals that, although sales had increased from Rs. 2,708.68 lakhs to Rs. 3,004.39 lakhs, the gross profit has declined quite perceptibly to Rs. 587.35 lakhs from the previous year's record figure of Rs. 602.59 lakhs. This fall in the profit-margin is attributed by the Directors to a variety of factors essentially beyond the control of the Company. Thus, they state in their report to the shareholders:

"Both the effective installed capacity and the actual production were appreciably higher than in the preceding year, but the ratio of production to capacity could not be maintained at the level of the previous year. This was due to shortage of power resulting from cuts imposed by various Electricity Boards, to paucity of railway wagons for the carriage of coal and despatch of cement. The operating results for the year under report was discouraging. The profits have declined further due to increases in cost beyond the control of your Company. Rise in railway freight and electric power supply rates, higher price of coal and further substantial advance in stowing excise duty on coal, etc., have been the main factors contributing to higher cost of production. Moreover, while the permission granted by the Government of India in December 1960 to employ used bags for packing cement was welcome news, they did not increase the packing charge during the last quarter of 1960 despite rising prices of gunny bags, and they further penalised cement producers by fixing an average packing charge of only Rs. 13 per metric tonne for new and used bags taken together, which remained in force upto 19th February 1961. These measures involved your Company in very substantial losses on packing."

This situation would be appreciated better if it were to be noted that, whereas the percentage of total expenses to sales had remained more or less stationary at about 80 during the previous three years, such as in 1960-61, rose to 83.7 per cent, despite a rise of about 11 per cent in sales.

As a result of the decline in gross profit and reduction in the rate at which remuneration is payable to managing agents, the provision for Managing Agents' commission has recorded a fall of as much as Rs. 21.80 lakhs to Rs. 17.16 lakhs. As against this saving, there has been a heavy increase in the provision for depreciation, from Rs. 239.60 lakhs to Rs. 275.56 lakhs, and in that for taxation, from Rs. 110.93 lakhs to Rs. 137.55 lakhs. The net increase in essential provisions has thus been of the order of Rs. 40.78 lakhs; as a result, the net profit shows a more perceptible decline than the gross profit of Rs. 56.02 lakhs to Rs. 157.08 lakhs. It may be noted that this is the lowest net profit which the Company has reported since 1953-54.

Provisions made in the previous year have been found in excess of actual requirements to the extent of Rs. 4.39 lakhs and accordingly this amount has been credited back to the profit and loss account, in comparison with Rs. 2.60 lakhs similarly written back during the previous year. Even then it has not been found possible to maintain the transfer to reserves at the previous year's level and a cut of Rs. 41.43 lakhs to Rs. 30.38 lakhs has been administered in this case. Of this, Rs. 29.27 lakhs, as against Rs. 70.04 lakhs, have been credited to the statutory development rebate reserve and the balance to the amortisation reserve. Finding the year's profit utterly inadequate, despite a lower transfer to reserve, an appropriation of Rs. 98.00 lakhs, as against Rs. 84.50 lakhs previously, has been proposed out of the general reserves to enable payment of the ordinary dividend recommended by the Directors at Rs. 12 per share, subject to deduction of tax, which requires, as during the previous year, a sum of Rs. 228.90 lakhs. The carry forward is slightly higher at Rs. 0.61 lakh, as against Rs. 0.42 lakh brought in.

A perusal of the Company's balance-sheet as at 31st July 1961 shows that, despite the large-scale transfer, as aforesaid, of Rs. 98.00 lakhs to the profit and loss account, the reserve position has deteriorated only moderately as compared with the previous year. This has been due to the fact the Company was obliged under Section 350 of the Companies (Amendment) Act 1960, to transfer Rs. 77.33 lakhs to the reserves from the depreciation account so as to bring the total written down value of the fixed assets in its books in line with that in the income-tax books. Inclusive of this amount, the reserves now stand at Rs. 1,069.80 lakhs, against a share capital of Rs. 1,907.10 lakhs, all in equity shares. It is no wonder that, in this situation, the market anticipates a bonus issue, despite lower profit figures. Total loans which the Company has availed of from banks and other resources for the financing of its expansion and diversification projects stand at Rs. 754.36 lakhs in addition to current liabilities and provisions amounting to Rs. 1,020.60 lakhs.

On the assets side, the gross block, as on the date of the balance-sheet, is carried in the Companies' books at a cost of Rs. 4,388.38 lakhs, of which Rs. 211.28 lakhs represent the cost of assets acquired during the year. This has been written down to Rs. 2,536.04 lakhs and, together with Rs. 9.59 lakhs, being cost of machinery, etc., in transit, and Rs. 90.39 lakhs as unallocated capital expenditure, gives a net block of Rs. 2,636.02 lakhs. Investments, current assets, loans and advances all together amount to Rs. 2,115.85 lakhs.

It will be noted from the foregoing account that the net block is below the paid-up capital and reserves by Rs. 341 lakhs which means that a part of the reserves has been used as working capital. Accordingly, the total indebtedness to outsiders, amounting to Rs. 1,775 lakhs, is less than the current assets by that amount. The net worth at Rs. 29.77 crores is actually a shade lower than that at the end of 1957-58. The break-up value of the Rs. 100 fully paid ordinary shares is about Rs. 156 per share.

The steady decline in the profit-margin of the Company during the past four years is well brought out by the comparative table given below.

(In lakhs of rupees)

	For the year ended 31st July			
	1961	1960	1959	1958

While the financial results of the Company for 1960-61 have not been encouraging, substantial progress was achieved by it during the year on the various expansion schemes initiated a few years ago. This will be evident from the following extract from the Directors' report:

"The erection of the second unit at Mancherial Works was completed during the year under review; but, due to disturbed labour conditions and inadequate power supply which continued during a good part of the year, the anticipated output at this works could not be attained.

"Work on the blast furnace slag cement project at Chaibasa and on the slag granulation plant at Jamshedpur was completed towards the end of June 1961; and manufacture of blast furnace slag cement was commenced soon thereafter.

"The project for setting up a Dry Process cement factory of 1.65 lakh tonnes capacity at Jamul near Bhilai was taken up in September 1960; and work on the construction of the colony and administrative buildings commenced in the early part of 1961.

"During the year under review, the extension of Dwarka Works to increase its capacity from 2.46 lakh tonnes to 3.50 lakh tonnes per annum was approved by the Board, and work on the project has already commenced.

"Satisfactory progress has been maintained on the installation of the white cement plant at Kymore with a capacity of 25,000 tonnes per annum.

"The extension of the Katni refractory plant, increasing its capacity to 30,000 tonnes per annum, has been completed and the annular kiln went into production in November 1961.

"The progress in the manufacture of cement machinery at Shahabad will be adversely affected as a result of the Hindustan Steel Limited having advised us, long after their accepting allocation from the Iron and Steel Controller, that they would be unable to supply certain steel plates required. It may now be necessary to import these plates.

"The construction of the heavy engineering works of A.C.C.-Vickers Babcock Limited is nearing completion at Durgapur and production will commence shortly."

The Rs. 100 fully paid ordinary share of the Company is currently quoted at Rs. 161.50 *cum-div.* and, on an *ex-div.* basis, fetches a net yield of 5.5 per cent. This relatively high yield, as compared with the low yields available on several other first-class equities, is an indication of the poor esteem in which investors hold shares of cement industry, even though it is undoubtedly an industry with immense growth prospects. The reasons for this low rating are not far to seek. Apart from shortages of vital raw materials, power and transport, to which the Directors have alluded, the biggest handicap of the cement industry is the unremunerative selling prices allowed by the Government.

(Concluded from previous page)

and current liabilities and provisions, all aggregate Rs. 91.48 lakhs, of which Rs. 23.38 lakhs are a loan from the I.F.C. Fixed assets at their book value stand at Rs. 128.08 lakhs, including Rs. 21.85 lakhs worth of additions during the year, and have been written down to Rs. 67.18 lakhs. Adding to this Rs. 5.15 lakhs as cost of buildings in progress and Rs. 1.90 lakh paid as a deposit for the purchase of land, the total net block as at the date of the balance-sheet, works out to Rs. 74.23 lakhs. Current assets, loans and advances, and investments total Rs. 109.60 lakhs and fully cover all liabilities to outsiders.

During the year under review, the Company continued to make good progress in the manufacture of its existing items as well as new lines of capstans and turrets and the building for the unit of capstans and turrets is almost complete and is occupied for the manufacture of the said types of lathes. The Company has decided to open a branch factory at Hubli and has purchased land for the said purpose. The building work is in progress.

The latest market quotation for the Company's Rs. 100 fully paid ordinary share listed on the Bombay Stock Exchange is Rs. 172.50 *cum-div.* On an *ex-div.* basis, the net yield works out to Rs. 5.1 per cent.

KAILAS RUBBER CO., LTD. Taxable interim dividend of 12½ per cent for the year ending 28th February 1962.

TRAVANCORE RUBBER AND TEA CO., LTD. Taxable interim dividend of 4 per cent for the year ended 31st December 1961.

BRITANNIA BISCUITS LTD. Taxable interim dividend of 6 per cent on ordinary shares for the year ending 31st March 1962. Transfer books remain closed from 2nd to 19th January 1962, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Taxable dividend of 15 per cent on the ordinary shares for the year 1960-61. (Dividend for 1959-60 was only 12 per cent).

INDIAN VEGETABLE PRODUCTS LTD. Taxable dividend of Rs. 17.00 per ordinary share, for the year ended 30th September 1961. Transfer books remain closed from 26th December 1961 to 11th January 1962, both days inclusive.

METAL BOX CO., LTD. Taxable interim dividend of Re. 0.90 per ordinary share, for the year ending 31st March 1962. Transfer books will remain closed from 8th to 16th January 1962, both days inclusive.

RALLIS INDIA LTD. Taxable dividend of 8½ per cent or Rs. 8.50 per ordinary share, for the year ended 31st August 1961.

SYNOPSES OF COMPANY REPORTS

Kusum Products Ltd.

(Managing Agents: East India Development Co. Private Ltd., Calcutta.)

Annual General Meeting—Held on 23rd December 1961.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (*vanaspati*, raw materials, soap and oils, etc.) gross	4,03,68	4,45,62
Closing stock	41,99	39,45
Gross profit	9,49	9,59
Transfer to Managing Agents' remuneration	50	81
" " depreciation	2,58	91
" " depreciation (arrears)	Nil	50
" " taxation	3,39	3,17
Net profit	3,02	4,20
Adjustments	43*	1,14
Appropriations:		
Total available balance	3,50	5,34
Transfer to provision for contingencies	5	3
" " development rebate reserve	21	81
" " debenture redemption reserve	1,00	2,00
To additional dividend on preference shares for 1960	5	Nil
Proposed dividends (taxable) 5½% R. C. preference	39	44
" " ordinary	1,44 (18%)	1,68 (21%)
Carried forward	36	38

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 780 transferred from provision for wealth tax account and Rs. 9,768 refund of income-tax on preference dividend for 1960.

Extracts from the Directors' report: During the year under review the production of *vanaspati* was equivalent to that of the previous year in line with the stationery level of production maintained by the industry. However, as anticipated earlier, the Company exported 150 tons of *vanaspati* under the export-incentive-scheme introduced during the year. The Company also exported 50 tons of *Crude Glycerine* repeating the same tonnage during the current year as well.

The improved quality of laundry soap produced from the Company's continuous cooling plant has been appreciated by consumers. A second machine has since been ordered for to enable the manufacture of other varieties of quality soaps in keeping with their growing demands.

An agreement has been concluded with Messrs. United Vegetable Manufacturers Limited, Calcutta, for taking over their *vanaspati* factory at Rishra on long-term lease. This factory will be commissioned soon after requisite repairs are completed. Within a year of its inception, the Chemical Engineering Division has secured major contracts for design and supply of Chemical Plants. A fabrication shop has been organised at the Company's Rishra Works to enable timely supplies of equipments to clients. Provision has been made for its phased development in tune with the anticipated growth of chemical industries in the country.

The debentures of the Company for Rs. 10 lakhs which were due for repayment on 30th September 1961 have been renewed, with the *approval of the debenture-holders*, for a further period of ten years up to 30th September 1971 with the rate of interest increased from 4¼ per cent to 7¼ per cent per annum.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,00,000	Gross block	50,74,188
7½% debentures	10,00,000	—Depreciation	31,37,750
Reserves and surplus	7,35,632		
Other liabilities	55,74,317	Net block	19,36,438
		Current assets	68,20,907
		Investments	20,688
		Cash	1,22,921
	Rs. 89,09,949		Rs. 89,09,949

* Paid-up capital consists of 80,000 equity shares of Rs. 10 each, fully paid up and 8,000—5½ per cent. cumulative redeemable preference shares of Rs. 100 each, fully paid up. The preference shares are redeemable at 5 per cent. premium at any time at the option of the directors by giving 3 months' notice.

Burrakur Coal Co., Ltd.

[*Managing Agents*: Messrs. Bird & Co. (Private) Ltd., Calcutta.]

Annual General Meeting—Held on 29th December 1961.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (coal)	3,22,39	3,24,95
Sales (by-products and other sales)	49,85	52,79
Closing stock (coal, coke, by-products and other stock)	27,29	19,26
Gross profit	47,41	58,79
Transfer to Managing Agents' commission	3,21	4,51
" " depreciation	11,99	12,19
" " provision for taxation	13,64	17,29*
Net profit	18,57	19,80
Adjustments	1,49	1,11
Appropriations:		
Total available balance	20,06	20,91
Transfer to development rebate reserve	3,62	2,28
" " general reserve	Nil	1,00
" " reserve for bad and doubtful debts	1,71	1,50
Proposed dividends (taxable) 7% 1st preference	2,09	2,58†
" " " 6% 2nd preference	24	24
" " " ordinary	11,82 (18%)	11,82 (18%)
Carried forward	58	1,49

N.B.—Adjustments include only the balance brought forward from the previous year.

* Includes wealth tax for previous year Rs. 12,287.

† This includes Rs. 48,296 being additional dividend on 1st preference shares for the year 1959 calculated in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: *Raisings and Despatches.*—13,09,305 tonnes of coal were raised and 12,79,394 tonnes despatched compared with raisings of 13,06,528 tonnes and despatches of 12,85,397 tonnes during the previous year.

Although plans had been made and finance provided for a substantial increase in output during the year under review, this did not in fact materialise owing to a number of factors including shortage of transport, shortage of electricity and shortage of explosives. The suspension of working at Budrocchuck Colliery, was also a factor. The non-availability of transport was so acute at some periods that stocks increased to the point where production had to be restricted instead of expanded. Coal is a perishable commodity which cannot be stacked for indefinite periods without considerable deterioration and serious risk of fire from spontaneous combustion.

Loyabad Ropeway.—The sand transported over the Company's Ropeway system was 8,05,573 tonnes compared with 7,73,655 tonnes during the previous year. During the period under review the Industry attempted, without success to obtain an extra element in the sand subsidy for transportation of sand over long distances from the source of supply.

Loyabad Coke Plant.—The production of metallurgical coke during this year was 99,810 tonnes compared with 1,28,809 tonnes in the previous year. Despatches were 1,05,086 tonnes compared with 1,22,443 tonnes during the previous period. The decrease in production during the period under review was due to as many as six ovens being out of commission for repairs up to April 1961, following the collapse of a single oven. A repair programme has now been planned which is expected to keep the ovens in good condition for another five years before extensive renewals are again required. It is not however expected that the previous rate of production will again be achieved.

Prices and Profits.—During the period under review average colliery costs increased by no less than Rs. 1.293 while the average sale price was increased by 61 nP. The increase in cost has been due to the increase in the price of stores and spares for which the Industry has not been compensated. In addition the increase given to the Industry in respect of certain labour awards have not been sufficient to cover them.

Gassy Mines.—In pursuit of their very laudable policy of greater safety in coal mining, the Mines Department have declared an increasing number of mines as gassy during this period. Some of the Company's mines have been so affected, with the result that plant which was previously acceptable has had to be replaced by flame-proof machinery, and electric cap-lamps and other such items have had to be ordered.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,18,42,280	Gross block	4,53,59,640
4½% debentures	20,50,846	—Depreciation	2,38,26,119
Reserves and surplus	1,44,37,891		
Other liabilities	1,55,92,384	Net block	2,15,33,530
		Block in progress	8,34,171
		Current assets	1,81,76,304
		Investments	30,15,090
		Cash	3,64,305
	Rs. 4,39,23,400		Rs. 4,39,23,400

* Paid-up capital consists of: (*a*) 9,09,248 ordinary shares of Rs. 10 each, fully called up; (*b*) 22,998 seven per cent. cumulative preference shares of Rs. 100 each, fully called up, and (*c*) 45,000 six per cent. second cumulative (taxable) preference shares of Rs. 10 each fully called up.

Barnagore Jute Factory Co., Ltd.

(*Chairman*: Sir John H. Burder) Agents in Calcutta: Jardine Henderson Ltd.

Annual General Meeting—10th January 1962.

Working Results:

	For the year ended 31st March (In £ sterling)	
	1961	1960
Gross income	199,017	311,739

" " " ordinary	16,844 (10%)	50,531 (30%)
Carried forward	95,080	92,399

N.B.—Adjustments include the balance brought forward from the previous year.

* Gross profit after meeting Directors' fees.

† This includes £18,805 being provisions for Indian taxation for past years, no longer required.

Extracts from the Director's report: The sale as scrap of certain obsolete machinery in the South Mill was referred to in the last report, and it was recorded that as far as could then be ascertained the excess of the written-down value of the machinery scrapped over the proceeds of sale was likely to result in a capital loss of approximately £55,000. The ultimate loss is, however, now computed to be £63,047 and this amount has been charged against reserves.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	£	Assets	£
Capital*	475,000	Gross block	1,372,653
Reserves and surplus	937,989	—Depreciation	967,103

* Paid-up capital consists of 55,000 ordinary shares of £5 each fully paid and 40,000 five per cent cumulative preference shares of £5 each, fully paid.

Tulsipur Sugar Co., Ltd.

(*Registered Office*: 9/1, Ramkumar Rakhit Lane, Calcutta.)

Second Annual General Meeting—11th January 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (sugar and molasses)	1,12,37	76,13
Closing stock	77,66	53,71
Sugar excise duty	31,43	22,18
Gross profit	2,75	3,87
Transfer to depreciation	1,92	1,12
" " taxation	Nil	60
Net profit	83	2,15
Adjustments	2,62*	25*
Appropriations:		
Total available balance	3,45	2,40
To development rebate reserve	2,07	1,34
Excise duty rebate recoverable (short recovered)	6	Nil
Proposed dividend (taxable) ordinary	1,12 (8%)†	87 (4.4%)‡
Carried forward	20	19

N.B.—Adjustments include the balance brought forward from the previous year.

* Includes adjustment of obsolete stores; profit on sale of fixed assets: provisions written back and other credit items.

† *On the increased paid-up capital of Rs.* 14,00,070.

‡ On a paid-up capital of Rs. 7,00,035.

Extracts from the Directors' report: The factory commenced crushing on 10th November, 1960 and worked till 13th June 1961. There was a record crush of 44,69,383 mds. cane as against 33,43,913 mds. for the previous season (1959-60). Disproportionate rise in sugar cane price has increased cane cultivation and cane acreage. The price of *gur* having been considerably low, the quantity of cane available for supplies to the mills had considerably increased. The Company's factory was specially requested and pressed by the U.P. Government to crush 7 lakh maunds of Barhni cane to avoid growers agitation. This cane was of very poor quality and affected the recovery adversely. The Government has been approached for giving price concession in respect of supply of this cane. The recovery obtained during the year was 8.97 against 9.53 of last year. The reason for fall in the recovery was very low yields of Barhni cane besides deterioration of cane quality due to hail storms in certain parts of cane fields. The factory worked for 180 days as compared to 143 days of last year, and to avail of concession in cane cess the factory had to start crushing during the first fortnight of November 1960 when the recovery was low. Crushing also continued during the hot part of the year, in the months of May and June, during which the sugar recovery had also a steep fall.

The expenditure on extension was Rs. 6,89,000 in 1959-60 and Rs. 12,69,000 in 1960-61 besides jobs in course of construction for Rs. 1,62,000. Thus a total amount of Rs. 21,20,000 has been spent on extension during last two years.

The factory had taken several replacements and extensions, as shown by the above figures of huge amount spent, which nevertheless, could not be completed and worked during the short period. Working results, therefore had been below expectation.

As in the last year, the export of sugar was handled by the Export Agency Division of Indian Sugar Mills Association and the Company's factory was allocated a quantity of 14,167 bags to be delivered to the said Agency at the direction issued by the Sugar Directorate under Sugar Export Promotion Order. A part quantity from the said allocation was despatched before the 30th June, 1961 and balance has been delivered in subsequent period resulting in a loss of approximately Rs. 2.20 lakhs which has been charged to the profit and loss account for the year under review.

Season 1961-62: In the coming year the position should be different on account of the Government Ordinance in decontrolling the sugar and also levying restrictions on future production for lesser production in current season than in the past and thereby ease the sugar market tension. With the extensive repairs and efforts to increase the crushing capacity in the following years, the directors hope to obtain better results.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	14,00,070	Gross block	41,94,177
Reserves and surplus	12,72,277	—Depreciation	17,91,755
Other liabilities	99,11,887		
		Net block	24,02,422
		Block in progress	1,01,004
		Current assets	99,76,516
		Investments	10,000
		Cash	34,392
	Rs. 1,25,84,234		Rs. 1,25,84,234

* Paid-up capital consists of 2,80,014 ordinary shares of Rs. 5 each.

Neelamalai Tea and Coffee Estates, Ltd.

[*Managing Agents*: Messrs. A. V. Thomas & Co. (India) Ltd., Madras.]

Annual General Meeting—20th December 1961.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960

" " Equity	2,70	2,70
Carried forward	16	5

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report:

Tea—Crop and cost of production: The tea crop harvested during the season, together with the costs, is given below:—

	Estimates 1960-61	*Crop secured* 1960-61	*Crop secured* 1959-60	*Yield per acre* 1960-61
	Kgs.	Kgs.	Kgs.	Kgs.
Sutton	2,13,000	2,51,946	2,09,264	596
	(4,75,000)	(5,55,445)	(4,61,350)	(1,315)
Katary and Bhawani	4,08,000	4,95,826	4,39,463	492
	(9,00,000)	(10,93,109)	(9,68,849)	(1,019)
Total	6,23,000	7,47,772	6,48,727	434
	(13,75,000)	(16,48,554)	(14,30,199)	(1,102)

Note:—Figures within brackets represent equivalent weight in pounds.

The weather conditions have been favourable and the tea crop harvested exceeded the estimate by 2,73,554 lbs. The Estates' cost of production was Re. 1.42 per lb. and Rs. 3.14 per Kg. The total cost of production including duty, labour bonus etc. was Re. 1.62 per lb. and Rs. 3.58 per Kg. The cost of production has been lower this season owing to the higher yield per acre.

Tea Sales: The average price realised was Rs. 2.52 per lb, compared to Rs. 2.54 of last season. The tea market for High Growns, both in and outside India was irregular during the season, and the Company continued to ship part of its teas to the U.K. and U.S.A.

Coffee: Crop and cost of production:

	Estimate 1960-61	*Crop secured* 1960-61	*Crop secured* 1959-60
	Tonnes	Tonnes	Tonnes
Wooligooly	152.400	253.706	84.690
	Cwts.	Cwts.	Cwts.
	3,000.00	5,110.90	1,668.67

Owing to favourable weather conditions and good blossom showers, Wooligooly Estate had been able to harvest a record crop of 5,110.90 cwts. and the entire crop was delivered to the Coffee Pool, as usual. The coffee prices had, unfortunately, not been satisfactory, and for the season 1959-60 against the valuation of Rs. 2.37 per point, Rs. 2.24 per point only had been realised. For the season 1960-61 *the crop has been valued at Rs. 2 per point and* it is hoped this price will be realised. Owing to the heavy crop during the season 1960-61, the crop for 1961-62 will be below average *and it has been estimated* at 102 tonnes.

Estimates for the season 1961-62:

	Tea		Coffee	
	Crop	*Cost per kg.*	*Crop*	*Cost per kg.*
	Kgs.	nP.	Kgs.	nP.
Sutton and Bhawani	3,40,200	301 54	..	..
Katary	3,18,000	340 91	..	..
Wooligooly	..	..	1,02,000	325 70
Total	6,67,200	320 37	1,02,000	325 70

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	54,00,000	Gross block	85,03,830
Reserves and surplus	24,03,704	—Depreciation	15,12,160
Other liabilities	22,90,544		
		Net block	69,91,720
		Current assets	25,39,109
		Investments	1,37,775
		Cash	4,23,674
	Rs. 1,00,94,248		Rs. 1,00,94,248

* Paid-up capital consists of 1,80,000 five per cent. cumulative preference shares of Rs. 10 each, fully paid up in cash and 7,20,000 equity shares of Rs. 5 each, fully paid up in cash.

Standard Batteries Ltd.

(*Managing Agents*: The Industrial Enterprises Ltd., Bombay.)

Sixteenth Annual General Meeting—10th January 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (batteries, spares, etc.)—Net	1,20,84	1,27,95

N.B.—Adjustments include the balance brought forward from the previous year.

* Includes Rs. 1,697 being excess provision for bonus for 1958-59.

Extracts from the Directors' report: The demand for the various applications of lead acid batteries has shown a marked healthy sign in addition to the automotive and other normal types that are being produced in this Company's factory. With the increased industrial activity and the adoption of more modern material handling equipment such as electric platform trucks, fork lift trucks, etc., the factory is building up batteries to the customers' requirements and it is hoped that the import of these batteries will be restricted as the country can easily fulfil the demand.

The factory has sold more automobile batteries than in the previous year. Inspite of this, the total turnover and profits are slightly lower than the previous year partly due to the realisation of lower net selling prices against keen competition, part absorption in our cost of the enhanced excise duty and partly due to the absence of demand for train lighting cells from the Railways.

The factory has standardised an *Automatic Switch Tripping Unit* for substations and power stations with a local rectifier manufacturer of repute and there is every hope that this new line, delivering complete switch tripping stations with the Company's *Pg batteries*, would enhance further the usefulness of the factory to the vast electrical distribution schemes undertaken by the various State Electricity Boards.

With the modern well equipped formation and charging department as also the new sub-station, which were mentioned in the previous report and which are now in full commission, the factory can *face with optimistic confidence for any further* demand in lead acid batteries for the various fields of application during the third Five-year Plan.

The Company's factory is in close touch with the Defence Ministry and have taken up the development of new types of batteries for their requirement. This is a long term programme and it is hoped that in the months to come, the technical personnel and the laboratory facilities available, will build these special batteries to the Defence Ministry's specification.

A latest type of oxide manufacturing plant is under erection during the current year and this will further augment the manufacturing ability of the factory *without depending on outside source* of supply of this material.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	37,50,000	Gross block	78,02,623
Reserves and surplus	22,10,913	—Depreciation	33,07,702
Other liabilities	68,05,721		
		Net block	39,35,321
		Current assets	88,07,944
		Investments	2,314
		Cash	21,055
	Rs. 1,27,66,634		Rs. 1,27,66,634

* Paid-up capital consists of 37,500 ordinary shares of Rs. 100 each fully paid up. Of the above shares 3,500 ordinary shares are allotted as *fully* paid up pursuant to Vendors' Agreement without payment being received in cash.

General Tyres Ltd.

(*Managing Agents*: National Rubber Manufacturers Ltd., Calcutta.)

First Annual General Meeting—11th December 1961.

Extracts from the Directors' report for the period ended 30th June 1961.

Issue of Shares: During the period under review 7,99,125, equity shares of Rs. 10 each (inclusive of 450 shares subscribed by the signatories to the Memorandum and Articles of Association and/or first directors) and 20,000 9 per cent (free of Company's tax but subject to tax deducted at source at the prescribed rate from time to time) cumulative redeemable preference shares of Rs. 100 each were allotted against the issue of shares as per the Prospectus dated 21st October 1960.

Long-term Loan: Against the loan of Rs. 60 lakhs sanctioned by the Industrial Finance Corporation of India a sum of Rs. 25 lakhs was drawn upto the end of the period under review. The said Corporation have also furnished a deferred payment guarantee for Rs. 39.62 lakhs in respect of plant and machinery to be imported from Czechoslovakia.

Land and Buildings: Land measuring about 94 bighas together with three sheds at 127, Kattadanga Road, Kankinara, Dt. 24-Parganas was purchased in January 1961. Satisfactory progress was achieved in respect of construction work at the factory site including remodelling of the three existing buildings and construction of the main factory shed.

Plant and Machinery: During the period under review Plant and Machinery valued approximately Rs. 40 lakhs, shipped from Czechoslovakia, were received at the factory site.

The working of the Company for the above period resulted in a loss of Rs. 1,05,203 after providing for depreciation and the directors recommended that the same be carried forward.

Since 30th June 1961 further progress has been achieved in respect of civil engineering work relating to construction of buildings, roads, drains, etc., further consignments of plant and machinery have been shipped, sanction has been received from the Government of West Bengal for supply of electric power and two senior technical personnel have been deputed for technical training in Czechoslovakia.

Mr. K. N. Mookerjee and Dr. D. Banerjee, Directors visited Czechoslovakia in August 1961 for discussion with Messrs. Technoexport Foreign Trade Corporation and finalisation of various aspects of technical collaboration in course of which they concluded the licence and technical aid agreement with Messrs. Technoexport. The directors recommend approval of this agreement by the shareholders.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,97,875	Gross block	2,41,068
Other liabilities	44,74,914	—Depreciation	1,336
		Net block	2,40,032
		Block in progress	53,30,533
		Expenditure during construction	70,242
		Current assets	15,58,404
		Cash	17,01,888
		Miscellaneous expenditure	3,60,887
		P. L. a/c (deficit)	1,05,203
	Rs. 94,72,789		Rs. 94,72,789

* Paid-up capital consists of: (*a*) 450 equity shares of Rs. 10 each fully paid up; (*b*) 2,96,875 equity shares of Rs. 10 each—Rs. 5 per share called and paid up and (*c*) 20,000 nine per cent (free of Company's tax) redeemable preference shares of Rs. 100 each—Rs. 50 per share called and paid up.

RAMTIRTH (HINDI MONTHLY)

Editor: Yogiraj Shri Umeshchandraji

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

KIRLOSKAR ELECTRIC COMPANY LIMITED

PRODUCTION DIVERSIFIED—RESULTS FOR 1960-61 A RECORD

MR. C. R. SRINIVASAN, CHAIRMAN, VIEWS THE FUTURE WITH OPTIMISM

ADDRESSING the shareholders of the Kirloskar Electric Company Limited at their Fifteenth Annual General Meeting held at Bangalore on 30th December 1961, Mr. C. R. Srinivasan, the retiring Chairman of the Company, took an optimistic view of the future for the Company, after tracing the remarkable progress made by it in recent years. He was not unmindful of the snags ahead, in view of the acute shortage of foreign exchange and imbalances in economic growth under the Five-year Plans. Nevertheless, he expected that, with courage and confidence, the Company would win through. He drew pointed attention to the large beneficial results arising from the diversification of the Company's manufactures and the agreement just concluded with Lincoln Electric Company Ltd. of the U.K. for the production of welding generators in this country. His estimation of the markets in the third Plan period showed that there would be enough demand for both electric motors and transformers, provided conditions otherwise were favourable.

The following is the full text of Mr. Srinivasan's speech:

"LADIES AND GENTLEMEN,

"Before commencing the proceedings of the meeting, I have a melancholy duty to perform. You might have read in the papers of the sudden death of Mr. H. I. Wonfor, the day after his arrival in India, a few hours after a talk with me. He was due to stay for a week to complete his talks on many matters of interest and importance. News of his death shook me as nothing has done in my life. He was a friend whom I valued most for his qualities of head and heart. He made a great contribution to the build-up of the new economy in this country, the land of his adoption, and in that context his services to this Company deserve all praise. In the formative stage of the Company, he played a notable part and my own association with it was entirely on his persuasion. He was himself a Director of your Company for a short term and after his retirement he continued to take lively interest in its progress. May I ask you to stand up and pay your last respects to a great and good man by observing two minutes' silence. May his soul rest in peace.

"And now let us attend to the business that has brought us together today. The report of the Directors and the audited balance-sheet for the year ended 30th June 1961, have been circulated in due course and I am sure you would have read them with interest and profit. This is the fifteenth annual report of the Company and I have been the Chairman of the Company all these fifteen years. Believe me, it is a privilege I value, because it is a signal mark of confidence which my colleagues on the Board and the management have reposed in me. It has been not merely a privilege but a pleasure also to meet you at these annual gatherings and exchange thoughts with you. You have attended these meetings in large numbers, shown intelligent interest in matters that in the last analysis directly concern you, and I am free to confess that I have profited greatly by your comment and criticism. I have referred to this with an upsurge of feeling because this is the last meeting I shall preside over as your Chairman. My health has been failing for some time and my body craves rest. I have carried a heavy burden on my shoulders these fifty years and more; in your interest as well as mine I have decided to retire. I am glad the Company is in fine fettle and I can, therefore, part company with an easy heart.

Remarkable Progress

"I well remember, and so do many of you I expect, the site as it was when we proceeded to put up our factory here—bleak barren waste land. It required courage and confidence, faith and hope to set our hand to what we have attempted and achieved. And, within a period of fifteen years, what a transformation! Today, it can compare with the best in the West for its size and service. We started five years ahead of Government in our planning. With limited resources, we have shown the potentials of auto-expansion as we progressed year after year to a well-defined objective. The first quinquennium represented the proving period when we expected the shareholders to tighten their belts and wait for the harvest to come. Their confidence was not misplaced. An idea of the progress made by the Company during the last ten years could be had from the following tables which give the details for the two succeeding quinquenniums—1952-56 and 1957-61:

'A'

	1956	1961
	Rs.	Rs.
Paid-up capital	29,45,440	43,72,400
Reserves	6,83,000	40,84,000
No. of employees	790	1,300

	1952-56	1957-61
	Rs.	Rs.
'B'		
1. Pay-roll (excluding profit sharing bonus)	34,06,000	93,15,000
2. Bonus to employees ...	1,67,000	8,99,000
3. Quantum of dividend	5 03 700	17,81,800
4. Income-tax paid ...	7,57,000	46,00,400
5. Sales-tax paid ...	1,45,000	13,87,000
6. Sales	2,52,64,000	10,48,90,500

"Starting with the production of electric motors of limited range, the Company has since diversified its manufacture and is now producing, in addition to electric motors of all types, transformers and alternators and presently will proceed to the manufacture of D.C. motors, fractional H.P. motors and welding generators. It is this diversification as well as production in the higher ranges of motors that has helped the Company to show record results in the year under report.

Higher Dividend

"As already stated in the Directors' report, the sales of the Company during the year under report were Rs. 2,81,09,580, as against Rs. 1,83,75,179 for the previous year. During the year, we have added land, buildings, plant and machinery, etc., to the extent of Rs. 16.29 lakhs and the gross block now stands at Rs. 111.74 lakhs against Rs. 95.49 lakhs last year. The total reserves of the Company now stand at Rs. 40.85 lakhs as against Rs. 28.79 lakhs last year. After providing Rs. 7.36 lakhs for depreciation (Rs. 5.98 lakhs last year) and Rs. 12.88 lakhs for taxation (Rs. 7.20 lakhs last year), the available profit stands at Rs. 14,37,026. This amount, along with the balance brought forward from the previous year, makes available a sum of Rs. 14,40,008 which is proposed to be utilised for purposes already mentioned in the Directors' report. I am sure, you will find the above results most encouraging. In the appropriations, the Board has recommended two things, which I am sure, will in particular interest you. One is higher dividend of 11 per cent, subject to tax; the other is the allocation of Rs. 2,10,000 to the dividend equalisation reserve raising it to Rs. 3 lakhs.

Place in the Third Plan

"You are aware that the third Five-year Plan, which marks a vital phase in India's progress towards a self-sufficient economy, has been presented to the nation with a call for an investment of Rs. 10,400 crores. The Plan takes into account the results of the development over the past ten years, the increased expectations of the people, the implications of growth in population, the large-scale industrialisation and the need to mobilise the domestic resources of the country to the greatest extent possible. One of the main objectives of the Plan is to step up industrial production and for this purpose specific targets have been fixed for each industry.

"In this new set-up, the electric motors and the transformer industries have an assigned place. These industries have made considerable progress over the last decade. The electric motor industry has so far enjoyed protection for well over ten years and the period has been extended for another two years. Under protection, it has grown steadily and it is now on the threshold of further large-scale expansion and diversification of output. With much larger increase of power envisaged during the third Five-year Plan, both the electric motors and the transformer industries, also protected to end of 1963, will be called upon to fulfil an important role in quickening the pace of industrialisation.

"The total licensed capacity (including the existing installed capacity) for electric motors at present is 1.65 million horse-power per annum. This is to be raised to 3 million H.P. in the third Five-year Plan. Again, the total licensed capacity (including the existing installed capacity) of the transformer industry is at present 2.84 million kva. and this is expected to be raised to 4 million kva. which is the target capacity fixed in the third Five-year Plan. All this shows that both the electric motors and transformers will have enough demand in the near future, if conditions otherwise are favourable.

Many Snags

"*Prima facie* it looks as though we are on a good wicket. But they are many snags betwixt and between which it would be folly to ignore. The country is passing through a difficult phase in its planned economy. We completed the second Five-year Plan, weary, footsore and limping. The third Five-year Plan, of the dimensions contemplated, is bound to intensify the shortfalls we have already begun to experience. Foreign exchange is the biggest hurdle. We want it to ensure adequate supply of essential raw materials. We want it to service debt charges already incurred; we want it to cover our needs in regard to spares, accessories and replacements; we want it for the purchase of plant and machinery for new installations. And the till is nearly empty! What we earn by exports even at considerable sacrifice, will only cover a fraction of our needs. The Aid India Club, of which we hear so much, basically depends on continued goodwill over a period of years among the members. Not a reassuring picture, but we have elected to go forward in faith and hope. In the dynamic economy we are committed to, there is no room to watch and wait.

"Exchange apart, however, even in matters well within our control there has been want of foresight and lack of co-ordination, affecting production to capacity already installed. In the matter of coal, for example, there has been a penny wise and pound foolish policy; railway transport has not measured up to the needs of an expanding economy; Coastal shipping reserved for Indian bottoms shows no signs of health under the impact of uneconomic freight rates and endless labour troubles. Power shortage, whether based on hydel or thermal sources, is becoming endemic. One may well ask what is the point in putting up new units when old ones are faced with idle capacity.

"It is not my intention to blame the administrative set-up in the country. They are among the best in the world for the work normally assigned to them; but the new responsibilities that have descended on them call for initiative and enterprise and decision, they have never been trained to exercise. Increasingly, a political angle is developing to basically economic problems in the welter of inter-State competition and decisions on merits are oftentimes delayed and occasionally denied. Once the elections now in the offing are over, let us hope that those returned to office will show some grit and determination in sorting out these problems that are clogging the way today. In the great task of regeneration that we are committed to, in keeping with the tradition of service and sacrifice that Gandhiji has reminded and recharged us with, our only chance of success in achieving enduring economic freedom is to hold together and pull together. This is not the place, perhaps, to deliver a political sermon and you will not mistake me if I have allowed zeal to outrun my discretion. But, in my valedictory address, a little more freedom may not be out of place. With courage and confidence, I expect, we shall win through.

Welding Generators

"I have detained you longer than I intended over this address. I shall just refer to one or two points before concluding my remarks. You would have noticed from the Directors' report that our agreement with the Brush Electrical Engineering Company, Ltd., came to an end in July 1961. A further agreement for continuing the collaboration on equitable terms has been negotiated and awaits approval of Government. We have concluded an agreement with the well-known U.K. firm, Messrs. Lincoln Electric Company, Ltd., for the manufacture of welding generators in India. One of our engineers is already undergoing training at the works of

(Continued on page 52)

MONEY MARKET DULL

(From Our Own Correspondent)

BOMBAY, 3rd *January*

The short-term money market is a little more active than three weeks ago when we last wrote about it in this column. The inter-bank call money rate, which was 3½ per cent then, is now standing at 4½ per cent. But this rate had come to prevail even after mid-December. Conditions, however, are still fairly comfortable and the usual seasonal stringency has not made itself acutely felt. At 4½ per cent, the borrowers' needs of day-to-day money are being fully met, without having to make a call on the Reserve Bank to any significant extent. In Calcutta, the rate is a little higher at 4¾ to 5 per cent. But this does not mean that banks are flushed with funds. On the contrary, the competition among banks for deposits is keener than before. Only, it is not visible to outsiders through a rise in the interest rates for short-term deposits, because of the ceilings under the Inter-bank Agreement.

The short-term deposit rates are as under:

	Per cent
Notice money from public:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days (,,)	3½
(iii) 61 to 90 days (,,)	3½
(iv) 91 days and over but less than 12 months	3¾
(v) 12 months	4

The results of 91 days' Treasury Bills sold through tenders are of the stereotyped order to which the market has long been accustomed. Tenders opened on the 2nd inst. showed that the amount offered was only Rs. 2 crores, same as that invited. These were accepted in full at the average rate of 2.520 per cent per annum, as against 2.500 per cent before, that is, in every week after 14th November 1961. No intermediate Treasury Bills were on sale, but they have been resumed with effect from today. Sales through weekly tenders are also being continued.

The Reserve Bank's statement for the week ended 29th December 1961 shows, as compared with that for the previous week, minor variations in the Issue Department. Foreign assets are lower by Rs. 2.50 crores at Rs. 150.32 crores, as a result of a fall in the balances held abroad. Reflecting mainly the year-end window-dressing by banks, deposits of banks with the Reserve Bank reveal a big rise of Rs. 25.75 crores. A part of this increase has been met by borrowings from the Bank. The exact amount of such borrowings is not discernible, but those against usance bills alone have gone up by Rs. 8.43 crores to Rs. 14.74 crores.

The Gilt-edged market is quiet, with restricted turnover.

In the foreign exchange market, the rupee is a little weaker than it was three weeks ago in terms of the U.S. dollar, with the banks' selling rate for spot T.T. on New York being Rs. 476.50 per $100, as against Rs. 476.25 at the time of our last report. Their buying rate has gone up by 50 nP to Rs. 473.25. These variations reflect the decline in the value of the pound sterling from 281.040-281.070 cents per £ to 280.920-280.950 for spot. The rate for three months' forward is, however, a shade better at 279.110-279.140 cents a £, after going down to 278.860-278.890 cents earlier in the period under review.

TANNED SKINS SLUGGISH

(From Our Own Correspondent)

MADRAS, 1st *January*

Arrivals of E.I. tanned hides and calf were of the usual volume during the week under review, and offtake kept pace with the stocks coming from the tanneries. Prices remained steady, despite the fact that export trading was below normal during the last fortnight. U.K. buying interest centered round the lower grades in cow hides for which there was also good inland demand at higher prices. There were fair inquiries for cow-calf in light average weights, but stocks available were small. Demand for buff-calf was good from importers both in the U.K. and the U.S.A.

In the tanned skins section, the market remained sluggish. Demand for tanned goat skins—superior tannages— was mostly for 11/12 lbs. up, while lower averages remained neglected due to lack of demand for light suede leather. It has been reported that importers on the Continent are in difficulties over their unsold purchases, which is a bearish factor for E.I. tanners to take note of. Inquiries for prime sheep were poor and tanners quoting lower price levels did not stimulate buying interest. Poorer tannages suitable for lining trade have declined to the levels at which they can be economically used on the Continent, and trade in this line improved to some extent.

The following are the ruling prices in rupees per lb., for all round parcels in the local market:

Tanned cow hindes 8/8½ lbs., average, per hide 2.20 to 2.25, tanned buff hides, 12/14 lbs., 1.90 to 2, tanned cow calf, 1½/2 lbs., skins, 3.50 to 3.70, tanned buff calf, 3 to 3.10, tanned goat skins, 9½ lbs., per 10 pcs. 5.50 to 5.75, and sheep, 7 lbs., 5.50 to 6.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 4th *January*

The bullion market presented dull conditions practically throughout the three weeks since our last report dated 13th December 1961. In the absence of any new encouraging development, operators did not evince much interest in fresh business. Consequently, the volume of transactions actually put through was limited and values moved narrowly, the general tendency being upward. The daily average offtake of both gold and silver was no more than 5,450 tolas and 7 bars, respectively. Actual arrivals were at an average of 6,700 tolas of gold and 20 bars of silver per day.

The last week of December witnessed a firm trend in bullion. The firmness was engendered by reports suggesting seizure of contraband gold at Calcutta and better advices from Rajasthan regarding offtake of silver. Values, as a result, moved up. There was, of course, profit-taking at every point of rise which erased a part of the gains. Nevertheless, today's closing rate for silver was higher than that prevailing three weeks ago, while gold was a shade lower.

The adjustment rates fixed today were Rs. 119.00 per 10 grams of gold and Rs. 211.65 per kilogram of silver. The corresponding rates for 13th December 1961 were Rs. 119.25 and Rs. 209.60, respectively.

The *Fagun* (22nd March) settlement in gold evoked good support and advanced from Rs. 121.95—that is the rate at which business in this settlement commenced on 13th December 1961—to Rs. 122.10 on 26th December and, after declining to Rs. 120.85 yesterday (Tuesday the 2nd inst.), recovered to Rs. 121.30 yesterday but finished lower at Rs. 120.75 today. The *Margashir* settlement went off the board at Rs. 118.40 on 22nd December, as against Rs. 120.45 nine days before. The rate for transferring commitments from the *Margashir* to *Fagun* settlement which stood on that day was in favour of bears to the extent of Re. 1.70, as compared with Re. 1.20 on 13th December.

Ready gold was quoted at a discount under the forward (*Fagun* settlement) throughout the three-week period under review, though the actual discount declined from Rs. 2.15 on 13th December to Re. 1.50 today. The ready rate improved from Rs. 119.50 three weeks before to Rs. 120.20 on 18th December. Subsequently, it eased to touch Rs. 117.05 on 20th December. After fluctuating narrowly, the rate stood at Rs. 119.25 today.

In silver, the *Fagun* (23rd March) settlement, business in which commenced at Rs. 212.15 on 13th December, was done at as high as Rs. 213.25 at one time on 18th December. After declining to Rs. 211.15 four days later, the settlement moved up again and touched Rs. 213.55 today before closing at Rs. 213.25. The *Margashir* settlement ran out at Rs. 210.90 on 23rd December, as against Rs. 210.20 ten days before. The bulls in this settlement were obliged to pay Re. 1.35 to the bears for getting their commitments transferred to the *Fagun* settlement, the same rate as that prevailing on 13th December.

Ready silver, which stood at Rs. 209.60 on 13th December, gradually moved up to touch Rs. 211.75 five days later and, after easing to Rs. 209.70 on 20th December, improved subsequently to touch Rs. 211.95 today. The closing rate was Rs. 211.65. At this level, the discount under the forward (*Fagun* settlement) was Re. 1.60, as against Re. 1.95 on 13th December.

During the three-week period under review, the world price of gold in the London bullion market fractionally improved from $35.15½ to $35.15½ per fine ounce. The sterling price rose by 2½d. to 250s. 3½d. Ready silver advanced by 1½d. to 88½d. and forward silver by 1½d. to 89d. Silver in New York also rose from 102.75 cents to 104.75 cents.

The following table shows the trend of prices during the week under review:

	3-1-62 (closing)	High	Low	13-12-61 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	119.25	120.50	117.05	119.50
Forward: *Fagun*†	120.75	122.10	119.15	121.65
Sovereign	97.50	99.50	97.25	99.50
SILVER				
Ready (.996 fine)	211.65	211.95	209.55	209.60
Forward: *Fagun*†	213.25	213.55	211.15	211.55
London—				
Silver Ready	88½d.	88½d.	87d.	86½d.
Silver Forward	89d.	89¼d.	87½d.	87½d.
Gold	250s. 3½d.	250s. 5d.	250s. ½d.	250s. 1d.
New York—				
Silver	104.75 cents	104.75 cents	103.25 cents	102.75 cents

* 22nd March settlement. † 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED FIRMER

(Messrs. A Bradley and Co.)

CALCUTTA, 2nd *January*

Generally firmer tendency has prevailed in the linseed market since our last report and there has been an all-round advance in prices. Arrivals are still very small and sellers are reserved.

The oil section is firm. Sellers are hesitant in selling for forward deliveries, only small local business being done for ready delivery.

The oilcake market is dull. Local demand is poor at present.

Ready/January is quoted at Rs. 31.12 per maund.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 3rd *January*

During the three weeks that have elapsed since the last weekly report for 1961 was published, the cotton futures market ruled fully steady. Prices moved in a narrow range either way with the net change over the period being negligible. The steadiness was due to good support by mills and investors. This was prompted by the fear of a possible shortage of cotton as the season progressed, thanks to a decline in crop estimate and the bleak prospects for import of U.S. cotton. The firmness of the spot market following the delayed movements of the crop and keen mill demand also imparted strength to futures. The Jarilla March contract which closed at Rs. 672.50 per three quintals on 13th December after fluctuating between Rs. 675 and Rs. 666 firmed up to Rs. 674 today. The market was closed on 1st January owing to New Year and on 2nd as a mark of respect to the memory of the late Mr. Manilal H. Patel, a Vice-President of the East India Cotton Association. The spot market at Sewri continued to be closed today also.

Conditions in the spot market continued to be firm. Mills were regular buyers of such popular varieties as Cos. L 147, Khandesh and Kalyan. Prices of most varieties are ruling at the ceiling. Reports of requisitioning in certain regions curbed rise in price above the ceilings. The firmness was aided by the delay in the announcement of import quota and fear that U.S. cotton would not be freely available. It was reported that the Government of India was trying to impress upon the U.S. administration that India stood in urgent need of at least 600,000 bales of P.L. 480 cotton for the current year. The trade welcome the prospect of importing Rs. 1.50 crore worth of Pakistan cottons.

The absence of quota restricted export business. Rumours were current that, in view of good Bengal *Deshi* crop, the Government would soon release a sizable fresh quota. Banking on this, shippers were found doing business on a subject-to-licence basis.

Regarding exports, reference may be made in this connection to the plea made by Mr. Madanmohan Ruia in his address at the latest annual meeting of the Cotton Buyers' Association held in Bombay last week. Mr. Ruia said that the Bengal *Deshi* crop this season had turned out to be a bumper one of 450,000 bales. After making provision for mill requirements and other consumers and taking into account the quota of 125,000 bales already issued—and fully absorbed since—there would still be left, according to him, a very large surplus—of more than 150,000 bales—which could be made available for export. He therefore appealed to the authorities to consider this question urgently and issue a further export quota of 100,000 bales of this cotton without any grade restriction, including 25,000 bales left out of the original announcement of 150,000 bales made when the first export quota was issued. This, in his opinion, would bring valuable foreign exchange and also help to arrest, to some extent, the present declining trend in Bengal *Deshi* prices.

It is reported that a new scheme for the distribution of cotton was proposed at a meeting of cotton mill and trade interest called by the Textile Commission last week according to which the season's crop would be distributed on a variety-wise basis. Each mill would get its requirements of cotton according to certain percentages worked out on the basis of an agreed formula. The purpose of the scheme is said to be to ensure a rational distribution of the available supplies among the mills.

Steady conditions prevailed in the Karachi cotton futures market during the week under review. The January contract attracted moderate support and rose from Rs. 78.65 on 12th December to Rs. 78.70 yesterday. The March contract firmed up from Rs. 76.65 to Rs. 77.25. Spot prices ruled firm. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing in Karachi:

Sind *Deshi* 76; Punjab *Deshi* 74; 4F Punjab Roller 89.20; S.G. 96.20; N.T. Roller 87.70; S.G. 93.70; 289F Punjab Roller 96.70; S.G. 106.70.

Easy conditions prevailed in the Liverpool cotton futures markets during the period under review. Slackness of spinner demand and lower New York advices prompted selling by commission houses and local traders which resulted in a decline in values. Both American and American type contracts were marked down. Sudan cottons trade in Liverpool was, however, quietly steady and values remained practically unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool, the figures in brackets being the closing rates on 12th December:

American cotton one inch staple contract: March 24.65 (24.75), May 25.10 (25.65.)

Sudan: January 32.25 (32.25.)

Cotton futures in New York suffered a setback during the period. The intervening holidays and lack of demand resulted in an easiness in prices. Uncertainties about the U.S. cotton policy for the next season and the threat of Japan to cut imports of American cotton if the U.S. placed a

special fee on its imports of cotton textiles, also imparted weakness to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	2-1-62	26-12-61	19-12-61
New York spot	35.55	35.45	34.45
December	—	—	—
March	34.08	34.15	34.12
May	34.62	34.68	34.56

ART SILK YARN EASY

(From Our Own Correspondent)

BOMBAY, *3rd January*

The past four weeks have witnessed an easy trend in the yarn market. The easiness is due to fears that the supply of yarn available will be substantially higher in the coming weeks. The fears have stemmed from the decision of the Central Government to issue to actual users licences for importing Rs. one crore worth of art silk yarn during the October-March licensing period. There are also rumours that the State Trading Corporation will be importing art silk yarn to the value of Rs. 2·5 crores under barter and other deals during the same period. These imports, together with the imports by established importers as well as special users like *zari* manufacturers and the import of about Rs. 5 crores worth of yarn (for six months) under the *export promotion scheme for art silk fabrics*, are expected to result in plentiful supplies. Thanks to such expectations, the premium commanded by import licences is believed to have declined from over 200 per cent a few weeks ago to about 160 per cent. *Consequently, prices of art silk yarns* have suffered a setback. In sympathy with art silk yarns and following low level of offtake at consuming centres, stable fibre yarns have tended to move down. Cotton yarns continue to rule dull.

Among imported art silk yarns, 120 Italy receded in the course of the past four weeks from Rs. 1.848 to Rs. 1.764. 120 Japan declined by Rs. 42 to Rs. 1.832. 150 Japan was quiet at Rs. 1,929. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade dropped 31 nP to Rs. 14.24 and 150 Bt. cones 1st grade 29 nP to Rs. 12.01. Amtan (20 deniers) February contract was done at Rs. 3,345 today, as against Rs. 3,305 four weeks before.

Staple fibre yarn (40 x 1) February delivery encountered selling and receded from Rs. 819 to Rs. 765. Spot Citys fell by 53 nP to Rs. 9.24. Hinds eased by 36 nP to Rs. 9.06. Kohinoors declined by 33 nP to Rs. 9.35.

In the cotton yarn section, ten counts Moderns lost 13 nP to Rs. 18.37. Podars were unchanged at Rs. 17.25. Twenty counts Moderns were done at Rs. 22.75 and Canturys at Rs. 21.50. Business was put through in thirty counts Edwards at Rs. 25.25. Sixty counts Finlays improved from Rs. 63·25 on 6th December to Rs. 64.25 today and eighty counts Moderns from Rs. 69 to Rs. 70.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared *with those prevailing a week ago:*

	3-1-1962	6-12-1961
	Rs.	Rs.
Art silk yarn—		
20/1 Amtan (100 kg.)—		
February	3,345·00	3,305.00
120 Japan (per 100 kg.)	1,832·00	1,874.00
150 Japan (per 100 kg.)	1,929·00	1,929.00
120 Italy (per 100 kg.)	1,764.00	1,848.00
Nat. Ray. 150 Bt. I	12.01	12.30
Staple fibre yarn (40 × 2)—		
February	765·00	819.00
Century (per kg.)	9.24	9.77
Cotton warn (per bundle of 10 lbs.)—		
10s Podar	17·25	17.25
20s Modern	22·75	22.75
30s Edwards	25·25	—
40s Sekaria	50·50	—
60s Finlay	64·00	63·25
80s Modern	70·00	69.00

OILSEEDS BETTER

(From Our Own Correspondent)

BOMBAY, *3rd January*

During the last three weeks, the oilseeds exchange put on a cheerful appearance. The reported decision of the Government of India to grant an export quota for 20,000 tons of H.P.S. groundnuts led to bullish fervour in groundnuts. Reports that the State Trading Corporation had acquired a substantial quantity of groundnuts through co-operative societies in Gujerat at a price much above the F.M.C. ceiling level also imparted strength. Further, there was good offtake from local *vanaspati* manufacturers and crushers, while arrivals, particularly, from Kathiawad, were low. Prices would have gone up still further but for the rather early arrivals of new crop from Andhra and Madras. Castorseeds were virtually buoyant, thanks mainly to the anticipation of U.S. demand for Indian castor oil, following the higher prices and smaller exportable surplus in Brazil. Besides, there were some encouraging enquiries from the U.K., some other West European countries and the communist bloc. Linseeds were also firm, though they turned subdued lately in view of the possible substantial arrivals of new crop from up-country centres within a fortnight or so. Cottonseeds were steady.

Of importance to the trade is the recognition granted by the Forward Markets Commission to the Grains and Oilseeds Merchants Association, Bombay, for conducting trade in non-transferable specific delivery contract in groundnut, linseed castorseed and cottonseed, for three years ending December 1964. The Association has also been permitted to conduct forward trading in oilcakes of groundnut, linseed, cottonseed and nigerseed.

Groundnut Nizam bold rose from Rs. 46 in the middle of December to Rs. 46.25 before closing at Rs. 46.12. Oil Railway receipts hardened from Rs. 18.95 to Rs. 19.10. There was no official trading in hedge contract, with the open market prices ruling much above the ceiling level of Rs. 215. In private trading, January 1962 contract improved from Rs. 216 to Rs. 218.

Castorseed March 1962 contract spurted from Rs. 166·25 to Rs. 173.50 yesterday. But it shed some gains today to close at Rs. 172.62. Madras small finished at Rs. 35.75, as against Rs. 33.75 three weeks ago. Oil B.S.S. was higher by 70 nP at Rs. 15.70 and Commercial by 55 nP to Rs. 15.05.

Among linseeds, March 1962 contract initially rose from Rs. 38.81 to Rs. 39.44, but drifted lower subsequently to Rs. 39. Bold ready closed today at Rs. 43.25, as against Rs. 43.75 three weeks before.

Cottonseeds April 1962 contract, which had gone up from Rs. 104·75 to Rs. 106.50 earlier, gave way subsequently to Rs. 105.

The following table shows the closing prices of oilseeds and oils on Wednesday, 3rd January, as compared with those of the two previous weeks:

	3-1-1962	27-12-1961	13-12-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	215·00	215·00	215·00
Nizam bold	46·12	45.75	46·00
Khandesh quality	46·25	46·50	46·50
Oil ex-mill ready*	19·05	19.00	19·20
Railway receipts*	19·10	18.90	19.10
Oil January 1962	17.65	17.65	17.65
Castorseed			
March 1962	172·62	171·75	166·25
Ready Madras	35.75	35·10	33·75
Ready Kanpur	34.37	33.75	32·50
Oil B.S.S.†	15·70	15·50	15.00
Oil commercial†	15.05	14.70	14.50
Linseed			
March 1962	39.00	39.22	38.81
Bold ready	43.25	43.50	43.75
Oil ready†	18.25	18.30	18.10
Cottonseed			
January 1962	100.50	101.75	103.00
Nagar seed	34.00	38.10	39.00
Kardi seed	24.00	24.10	23.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

POOR DEMAND FOR PEPPER

(Messrs. Parekh and Co.)

BOMBAY, *3rd January*

Our last report was dated 22nd November 1961. The highest and lowest prices touched by garbled Malabar black pepper since then are given below:

Week ended	*Highest*	*Lowest*
	Rs.	Rs.
29-11-61	342	315
6-12-61	330	322½
13-12-61	325	325
20-12-61	325	310
27-12-61	320	315

After the evening up of December delivery on the Cochin Ring, January delivery moved between Rs. 308 and Rs. 347. Despite fair-sized arrivals at the terminal markets which are now averaging more than 600 candies, the market remained more or less maintained, as the exporters who sold about 500 tons to the East European countries remained continuous buyers almost daily. Bulls also lent a helping hand. So far, Russia is reported to be out of the Indian market. The present silence on the part of the U.S.S.R. is interpreted by a knowledgeable source to mean that Russia purchased from Singapore 3,000 tons of Lampong, its six monthly *requirements*. However, Indian exporters are putting in feelers to the Trade Agency of the U.S.S.R. often.

During the period, New York bought about 300 tons at prices ranging from $0.34 to $0.35. After sizable buying, New York withdrew, as the dealers there never wanted to buy without testing the grinders. This they could not do owing to annual stock taking and consequent holiday feeling during the greater part of the month of December. The buying in the middle of December was more or less due to rumour that the U.S.A. *India Conference line is likely to increase its freight* with effect from 1st February 1932 to $90.50 from $40 which was a "free freight" rate after the dissolution of the Conference. This rumour proved unfounded, as one or two steamship companies refused to join hands with the Conference. They are quoting $50. This had had its effect on the local prices for February delivery which was once quoted at a discount of Rs. 5. The present quotations for January and February are almost the same.

Despite the rise in the prices of black and white pepper at Singapore to Str.$137½ and Str.$170, respectively, the future of Malabar appears to be uncertain, because the impact of peak arrivals during the month cannot be absorbed unless there is a continuous buying support from the U.S.A. and Russia resorts to bulk buying as is usual during this time of the year. The present attitude of New York is to buy hand to mouth. As such, no sizable buying by New York is vouchsafed unless prices are sufficiently lower for inducing prospective buyers. During the period under review, Singapore rallied from Str.$127½ to Str.$137½ for black and from Str.$165 to Str.$170 for white. However, turnover was thin, as most of the business was confined only to short covering. The future of the Singapore market along with that of the world market is depending upon the attitude of the Indonesian Agency which are the major stockists of Lampong in both Singapore and Telok Betong.

Spot in New York moved between $0.37 and $0.38½. Grinders showed disposition to buy one or two cents lower than the asked price. The dealers in New York are bidding in the neighbourhood of $0.34. Another reason for their patchy buying is that they are confident of the fact that there is no short supply of pepper in the world market this year and are confining their purchases to the minimum. They expect that Malabar shall have to revise its price lower and, unless it is done, no big quantity can be marketed. Political situation in Indonesia, Kuwait, Berlin, Congo and Vietnam, Goa question having been solved for ever, are sustaining factors. The general feeling in the market is that there is more of war psychosis in India and elsewhere than in the U.S. Unless the U.S. buyers get excited and revise their policy of standing on the fence, prices cannot be maintained, even though on the surface present rates appear lower. The prediction from star gazers for the mal-effect of *Ashtagraha* is acting as a drag on the market, as dealers do not want to take undue risk by heavy purchases.

Ready pepper in Bombay is nominally quoted at Rs. 176 per 50 kilos, with demand poor.

STRONG DEMAND FOR TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *19th December* 1961

Offerings in sale No. 51 held today amounted to 575,000 kgs. Quality in general showed a further improvement. The market was strong with improved demand for all teas. There was keen enquiry for plain and low medium descriptions which advanced irregularly by 10 to 20 nP. Medium teas were also well competed for and sold at around last rates. There was good support for good mediums, particularly those with improved quality which were dearer. Highgrowns continued to be irregular. Whole leaf grades met with strong demand and were considerably dearer. There was good support for unorthodox descriptions which were fully firm whilst black leaf descriptions were steady.

The quotations per kg. were:

	1961	1960
	Rs.	Rs.
Low mediums	3.10/3.40	4.60/4.75
Mediums	3.40/3.85	4.75/4.95
Good mediums	4.10/4.85	4.95/5.20
Nilgiri B.O.P.	5.40	8.10

The average price realised in sale No. 51 was Rs. 4.00 per kilo, as compared with Rs. 3.91 a week ago and Rs. 4.88 in the corresponding sale last year.

300,000 kgs. were offered in dust sale No. 51 held on 21st December 1961. A useful selection of *dusts* was on offer with later invoices showing slight improvement. There was a strong demand and prices were generally dearer for all descriptions. Low mediums and mediums were keenly competed for an advanced irregularly by 25 nP to 50 nP and sometimes more. Resdua's met with keen competition and advanced sometimes up to 75 nP. Highgrowns were strong and dearer with quality. C.T.C. and Legg-cut descriptions also shared in the upward trend of the market.

The average price realised in dust sale No. 51 was Rs. 3.98 per kilo, as against Rs. 3.44 a week ago and Rs. 4.45 in the corresponding sale last year.

Colombo: At the export sale the market met with a good demand. Best westerns were slightly lower whilst others were firm. Poorest descriptions also declined in price. Colourry mediums were well supported at firm rates. Lowgrowns were barely steady. At the off-grade sale both offgrades and dusts came to a good demand and were generally dearer. Best liquoring dusts, however, met less support.

London: North Indian and other growths: In Monday's sale the market was strong to dearer all round with best Assams receiving more support from the buyers and these types generally registered advances of 4d. per lb. The sale on Wednesday followed Monday's trend.

Ceylon and South Indians: In Tuesday's sale 26,026 packages were offered of which 8,585 packages came from South India. There was a good demand from Ceylons which were fully firm to dearer. Buyers showed keen interest for South Indians which were frequently dearer, particularly the teas at the bottom.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 1: 700,000 kgs. offered. Strong general demand. Prices have advanced 20 nP to 30 nP for plain and low medium descriptions. Medium and good medium 30 nP to 40 nP dearer. Highgrowns irregular with quality. Whole leaf very strong, and much dearer. Unorthodox stronger and dearer."

TEAS HARDEN

(From Our Own Correspondent)

CALCUTTA, *2nd January*

Heavy shipments of tea were a feature of activity in the Calcutta *freight* market in the past two weeks. There was evidence that several overseas buyers who had hitherto refrained from buying against stocks in order to take advantage of a possible falling market, in view of the huge surplus in this season in all the producing countries, had now begun to be active. That explained the strong demand in evidence at the centenary tea auctions which took place ceremoniously on 18th December last.

Offerings aggregated 74,765 packages and, to mark the ceremony, the first lot from each of the invoices was auctioned by the Chairman of the Tea Board, Mr. A. S. Bam. As the sale progressed, the earlier rise in prices could not be maintained in full. Keen competition was in evidence for the "tea for price." Another strong feature was whole leaf grades the prices of which, particularly of cheaper varieties, hardened. Tippy teas participated in the general dullness, while Darjeelings were firm at around last rates. Plain brokens sold readily at dearer rates. C.T.C. teas were firm, with secondary grades possessing useful liquors realising higher prices. However, plainer liquorings met with less support. Plain brokens evinced good demand, similar fannings being just steady. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.40 to Rs. 5.80; best Assam C.T.C. B.P. Rs. 5.40 to Rs. 5.70; medium Assam C.T.C. fannings Rs. 4.60 to Rs. 5.00; medium Assam C.T.C. B.P. Rs. 4.80 to Rs. 5.10; clean plain pekoe Rs. 3.90 to Rs. 4.10; plain fannings Rs. 3.50 to Rs. 3.70; and plain B.P. Rs. 3.50 to Rs. 3.65.

At internal sale No. 28 held on 20th December, dusts on offer aggregated 24,651 chests, which met with strong and general demand. Legg-cut teas advanced. Orthodox teas met with better support, the lots possessing bright liquors realising higher prices. The poorer sorts of this category, however, eased. C.T.Cs were irregular. However, fibrous C.T.Cs and the smaller and brighter descriptions sold well. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00; medium Assam C.T.C. dust Rs. 5.50 to to Rs. 6.00; legg-cut dust Rs. 4.30 to Rs. 4.60; medium Assam dust Rs. 3.85 to Rs. 4.20; and plain orthodox dust Rs. 3.65 to Rs. 4.00.

Leaf on offer amounting to 312 chests was in fair demand, while the 32 chests of green tea on offer eased.

Considering the substantial fall in U.K. stocks —those for the week ended 15th December 1961 fell by 3½ million lbs. to 118 million lbs.—British interest at the closing auctions of the current season should be substantial. Exports of North Indian tea to the U.K. this season has been estimated at 142.9 million lbs. which falls short by 6.6 million lbs. as compared with the previous last season's figure. This suggests that the U.K. has been behind its purchases and postponing building up of stocks in a big way.

There is also yet another reason why the forthcoming auctions should attract greater support. The November output in North India fell short of earlier expectations, and at 59 million lbs. showed a rise of only 4.80 million lbs. as compared with November 1960. In December, the output would be insignificant, as the gardens had ceased plucking much earlier than usual. Adding the November figure, North Indian production amounted to 588.4 million lbs., running ahead by 69.6 million lbs. as compared with 1960. Quality of tea is low for this part of the season, and yet the realisation of higher prices at the centenary auctions and expectations of similar conditions in the forthcoming auctions are attributed to the need of overseas buyers to be more active.

The world output for 1961 is estimated at 1,245 million lbs. which is higher by 105.6 million lbs. and 100.4 million lbs., respectively, as compared with 1960 and 1959. On the other hand, world exports amounted to only 219 million lbs., as against 221.8 million lbs. in the previous season. These figures stress the desperate need for strengthening India's promotional campaign abroad. Against this background, industry circles have noted with appreciation the decision of the Tea Board to start a promotional campaign in the U.K., particularly in Scotland. The trade points out that, if the prices of common teas are to be maintained, internal consumption should increase. It has, therefore, appealed to the Tea Board to conduct campaigns in the rural areas.

Now that budget time is near at hand, both tea trade and industry have renewed their appeal to the Union Government to take measures to consolidate the Assam carriage tax, the West Bengal entry tax and also the tea cess into Central excise duty. Since these levies are being collected by different authorities on varying criteria, the gardens have to spend considerable amount on clerical work which can be curtailed if the taxes are merged in the Central excise. The industry has also renewed its appeal to Government to allot it greater quantities of fertilisers. It is pointed out that, unless this is granted, the call of the Planning Commission to increase production to 900 million lbs. within the next five years would prove meaningless and that it is being directed without coordination among the different Union Ministries dealing with the tea industry.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, *2nd January*

Holiday considerations led to easy conditions in the metal market during the week under review, in contrast to the firm tone that prevailed in the previous week. The easiness was due to reports of similar trends in foreign markets. The Government's decision not to allow licensing any more units in several non-ferrous items, including bare copper conductors and brass and copper pipes and tubes, has been considered as a step in the right direction. In view of shortage of non-ferrous metals, the existing units have not been able to work their plants up to capacity. The news of the Indonesian Government's decision to export substantial quantities of tin to the U.S.S.R. and to another communist country provides a clue for the answer to the poser why, unlike in 1960 when the U.S.S.R. loaded 900 tons of tin into the U.K., it did not send any tin in 1961, but imported substantial quantities as to effectively reduce London warehouse stocks. Evidently, Russian consumption of tin has been on the increase.

On 12th December, tin was quoted on the London Metal Exchange at £952½ a ton. Subsequently, the rate declined to £942. Although there was keen buying on behalf of the Continent, the easiness was attributed to liquidation of stocks due to year-end consideration. The rate declined further to £938½ on 28th, but, within the next two days, recovered to £947. In Calcutta, tin opened at Rs. 1,578.75 per 100 kgs. and, after declining to Rs. 1,555.00, recovered to Rs. 1,574.75. The stock position was causing anxiety. Although copper scrap advanced—berry scrap from Rs. 514.50 per 100 kgs. to Rs. 519.50 and utensil scrap from Rs. 471.50 to Rs. 466.25—there was less demand, in view of the availability of virgin metal against permits. In London, for a while, the quotation of electrolytic copper at £231½ a ton was maintained for a while, following disturbed reports from Katanga and inactivity in Union Miniere mine there, and apprehensions of troubled labour situation affecting Chilean output. However, there was less consumer demand and the price fell to £228¾ before recovering to close for 1961 at £229½. Local support for electrolytic zinc was forthcoming and the price improved from Rs. 263.75 to Rs. 273.50 per 100 kgs. The London rate of £71¾ a ton was maintained in moderate dealings. Virgin lead was unchanged here at Rs. 128 per 100 kgs. Demand was slack, though the stock position was not as comfortable as it was a month earlier.

JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, *2nd January*

A notable development of import to the jute markets during the period since 12th December has been that, after a lapse of several months, simultaneous business in goods and fibre has, once again, become profitable for mills. This has been so because of the rise in prices of goods brought *about in the wake of wide fluctuations in prices* both before and after the Goan upheaval and also by increased offtake for internal consumption on both commercial and Government accounts, as well as by heavy year-end shipments for fulfilling *earlier export commitments.* This has enabled, contrary to earlier apprehensions, stabilisation of fibre prices at the minimum levels. Arrivals of fibre have risen appreciably, and the fact that paddy harvest is almost complete has enabled farmers to pay attention for marketing the remainder of their fibre produce. It had been apprehended earlier that fibre prices were likely to fall below the minimum level of Rs. 30 a maund basis Assam bottoms. This, however, has not been so, thanks to the timely steps taken by the Indian Jute Mills' Association. First, the Association decided to continue in operation beyond 1st January the 2½ per cent of looms unsealed from 13th November. This decision was taken in order to alleviate the shortage in goods and to prevent prices of goods from rising to unfair limits. Although production in November at 93,700 tons was higher by 16,000 tons attributed to the unsealing of 2½ per cent of looms from 13th November and lesser number of holidays as compared with October, stocks with mills at the end of the month at 57,400 tons showed the insignificant rise of 1,900 tons.

This was followed by the I.J.M.A.'s decision to unseal another 2½ per cent of looms as from the *current month, thus reducing* the percentage of looms now remaining permanently sealed to 7. Simultaneously, the fibre quota for purchase by mills was also increased. The minimum quotas released for each of the weeks ended 9th and 16th *December 1961 aggregated 690,000* maunds and, for the week ended 23rd December, the quota was increased to one million maunds. It will be remembered that, with increased arrivals of fibre and in an attempt to stabilise fibre prices, the maximum quota to be purchased by mills was changed to minimum quota. As a result of increased purchases, the mills have been put to considerable financial strain, and this, coming so soon after the recent trading losses, has aggravated the situation. However, *it should be pointed out* that sowing time is fast approaching and, if fibre prices are not maintained, there is every danger that the next season's crop might be substantially lower. Although no final idea of the current crop can yet be had, the industry *feels that it is likely* to fall short of earlier estimates. However, according to the Jute Balers' Association, the crop is likely to total seven million bales, and imports from Thailand and Pakistan are placed at 500,000 bales. The total of 7½ million bales compares with 5.6 million bales available in the last season.

Reports of distress sales from interior marketing areas at considerably lower rates than the *minimum* have been received. It is believed that, although there have been such sales, these reports have been grossly exaggerated. Considering that, while prices of goods have risen, prices of fibre have remained at the same level as existed a month ago, there is force in the argument that fibre arrivals are exceeding offtake by mills. The Bengal Jute Dealers' Association has urged the Government to effect a further increase in the purchase quotas of mills and also to announce a minimum export quota of fibre. The Jute Balers' Association, another organisation, has also urged the Government to permit export of fibre. Although the present situation does not warrant resumption of exports, it has to be borne in mind that world prices are below the Calcutta rates, and as such there is little prospect of the inferior Indian fibre even realising the present quoted prices from foreign buyers. At a time when the country is importing fibre from Thailand and Pakistan, it is contradictory to suggest that India should export fibre. Reports from Pakistan make no mistake of the fact that overseas buyers are inactive and refuse to enter into commitments even at the existing level of prices. Overseas interest in even Dundee tossa 4s in the Narayanaganj market, which is *difficult* to be located, is nominal at present. The one effect of India's entry in the export field would probably be further depression in fibre prices.

The Government is committed to inaugurate a buffer-stock scheme immediately the price falls below Rs. 30. Already, the mills have built up their own stocks which will prevent any unfair rise in prices. The question the Government will have to consider pertains to the disposal of their stocks as and when these were built up. Consumption by mills can be increased further by putting to operation the 7 per cent of looms now remaining sealed. However, overseas demand for goods has not risen to such proportion as to justify such a step. If, as a result of increased production, prices of goods fall, mills would again incur trading losses, and this in turn would affect fibre prices. On all counts, the situation is very much complicated, and it would be prudent on the part of the Government to leave the fibre and goods prices to adjust themselves. As a result of increased purchases of fibre by mills, prices have been maintained and apprehensions of a further fall in prices have been allayed. Conditions have become stabilised and it is to be hoped that, with the announcement by mills to increase production further, prices in interior districts where distress sales have been reported would improve.

On 12th December, there was considerable selling pressure on goods and activity in futures *was bearish. As a result, ready hessian* 40″ 10 oz. declined from Rs. 53.50 to Rs. 52.50 and B. twills from Rs. 131.50 to Rs. 129.50. On the following day, selling pressure continued and prices eased further to Rs. 52 and Rs. 128 respectively. On the 14th, a hardening tendency developed, following reports of large orders from Government, but, when the tenders were announced, the quantity belied earlier expectations. B. twills closed below best at Rs. 128.75 and hessian 40″ 10 oz. at Rs. 52.25. *Over the week-end, there was the en*couraging report that burlap consumption in the U.S.A. during November was higher at 70 million yards, as compared with 65 million yards in the previous month. This, coupled with buying of B. twills *on Government account for near delivery*, pushed up B. twills to Rs. 129.75 and hessian 40″ 10 oz. to Rs. 53.50. This was followed by good covering demand on 18th, 19th and 20th, B. twills gradually rising to Rs. 133.50 and hessian 40″ 10 oz. to Rs. 56.75. *Interest in hessian was shown by* the U.S.A. and the Continent and Australia bought woolpacks for delivery from May to July. On 21st December, a further rise in prices was in evidence, but with B. twills at Rs. 134.75 and hessian 40″ 10 oz. at Rs. 57, prices closed below the best levels on account of profit-taking. Prices staged a further rise in the wake of the Goa situation, but there was selling pressure at higher levels, the closing prices for the week ended 23rd December being Rs. 135 for B. twills and Rs. 56.50 for hessian 40″ 10 oz.

The reopening on 26th after Christmas was noted for a quiet tendency, and B. twills were quoted at Rs. 133.75 and hessian *40″ 10 oz.* at Rs. 56.25. Activity in the futures market led to wide fluctuations in prices on the next day, and the rates closed at Rs. 133.25 and Rs. 56.75, respectively. Hessian was bought by the U.S.A., forcing the price of the 10 oz. on 28th to Rs. 57.25. In sympathy, B. twills gained to Rs. 133.75. Due date covering pushed up hessian to Rs. 59.50 on 29th. B. twills at Rs. 135.25 also recorded a substantial gain. The following table compares the opening and closing rates with the lowest and highest touched for the period covered by this review:

	Opening	*Low*	*High*	*Closing*
	Rs.	Rs.	Rs.	Rs.
B. twills ...	129.50	128.00	135.25	135.25
Hessian 40″ 10 oz.	52.50	52.00	59.50	59.50

Increased support was accorded by mills to the fibre market. Arrivals also increased. The announcement by mills that the 2½ per cent of looms unsealed on 13th November would continue to be in operation even before 1st January and their further decision to unseal a further 2½ per cent of looms also led to greater demand of fibre. The cumulative effect was that conditions became firmer. *Daisee* bottoms at Rs. 33 gaining 50 nP. A similar rise was recorded in northern bottoms at Rs. 30, while Assam bottoms remained unchanged at Rs. 30.00.

SUGAR RELEASE DELAYED

(From Our Own Correspondent)

HAPUR, *1st January*

Sugar ruled quietly depressed during the week at Rs. 106.75 per bag in wholesale and 97 nP to Re. 1 per *seer* in retail. Demand for bold crystal was brisk, while stocks of small inferior quality were accumulating with some factories this side. Following the Indian Sugar Mills' Association's request, the monthly quota release is likely to be delayed by the Government so as to ensure clearance of stocks. All the factories getting adequate cane supplies and week-end prices here were: mill delivery per maund E29 Simbhauli Rs. 37.85; Amroha D29 Rs. 36.37; Bijnore D29 Rs. 35.75; Dhampur E29 Rs. 36.44.

With buying enquiry at a low ebb, sugar drift*ed lower in the Muzaffarnagar market* during the last fortnight. The mills were nursing huge stocks, mostly of inferior small crystal, and buyers were hesitant to enter into commitments even at substantial discounts. Spot sugar also recorded losses

KIRLOSKAR ELECTRIC COMPANY LTD.

(*Concluded from page 46*)

Lincolns and we propose to start production as early as possible.

"You will also be glad to hear that we have entered into an agreement with the Employees' Association on various outstanding matters and the agreement will be in force upto June 1964. No doubt this agreement has imposed an additional financial burden on the Company and by the same token reduced the margin of profit on its products in a competitive market. It is to be hoped that the labour now at least will fully co-operate with the management in raising and maintaining a higher standard of production to justify the additional burden.

"It only remains for me to express my heart-felt gratitude for the courtesy and consideration I have uniformly received at the hands of the shareholders, the staff, the management and the Board of the Company."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

PACE OF ECONOMIC EXPANSION IN CANADA HIGHER

(*Concluded from page 9*)

consequences of this situation may not strike home until the overall market deteriorates, at which time the lagging competitor suffers disproportionately. This, therefore, is the time to intensify, not slacken, our endeavours.

Although Canada's merchandise trade balance with the rest of the world has moved from a deficit to a surplus position, we still have a large deficit on total current transactions. This reliance upon foreign resources, must, to the maximum extent practical, be replaced by the fuller and more effective use of our productive potential. In these circumstances, Canadians *simply cannot afford*, even temporarily, to rely on the favourable prevailing currents to carry us along.

For Rupe... Banks, Deposits... Governme... Other Gov... Balanceshe... SCHEDU... BANK... Demand Li... Time Liabi... Borrowin... Res...

So long as we have the means to achieve a better balance with the rest of the world, maintenance of our current position in world markets is simply not good enough. It is imperative that we press ahead to expand our share of rapidly expanding world markets.

There is much to show that Canadian producers have made a good start towards achieving the kind of competitive strength and resiliency necessary to extend their position in the present-day competitive world. Full realisation of this objective is not quickly or easily attained. It requires continued perseverance, through good times and bad, and demands action on many fronts. In this offensive, the plant manager, the worker, and the primary producer, i.e. the people who make the goods for sale in world markets, occupy front-line positions. These groups, however, are not likely to succeed single-handed. Their efforts must be supplemented by positive action on the part of all ancillary services in the community which can help in any way to improve the effectiveness of the nation's productive machine. To succeed fully this must be an offensive in depth.

The year 1961 has been one of good progress toward such a goal. The economy is well launched towards further major strides ahead in the coming year. However, the advance achieved will depend largely upon how we rise to the challenges before us. No number of rosy predictions will move us to our objective.

The outlook for 1962 is favourable. The measure of prosperity to be achieved, however, will depend upon the initiative, the enterprise, the energy, and the enthusiasm of Canadians. During the past year we have made great strides. The economy, lifting from a solidly prepared base, is now well launched on its course to further major achievements in 1962. I call on the businessmen of Canada to exhibit that degree of confidence and energy which I am confident will carry us to new heights of prosperity and progress.

MARKET GOSSIP

(*Concluded from page 3*)

now left is a price war among various producers. It is feared that Cuba will try to undercut most of its rivals, though it will also stand to lose from such a move. Already world sugar prices are depressed. Sugar in London now stands at £21½ per ton, as against £24 just before the Geneva Conference began on 12th September and £27½ a year ago. So far as India is concerned, it is now free to export any quantity of sugar it likes, but the limiting factor will be the heavy financial loss. Even before the prices fell, the loss was quite large. It has increased now and will be much more when the price war starts. Indeed, the prospect of India being able to sell even that modest quantity of 113,000 tons it did in 1960-61 in markets outside the U.S. will be bleak, as its capacity to stand cut-throat competition is next to nothing.

Common Market At Crossroads

The last-minute bid by the Common Market countries to arrive at a common agricultural policy before the year 1961 ran out has failed. This has necessitated the postponement of the second stage of the integration scheme, which was scheduled to commence on the 1st inst., as provided for in the Rome Treaty. There is, of course, nothing surprising in the hitch which has now developed in the formulation of a common agricultural policy, for this had been expected by quite a few observers. It is precisely because of the acute differences of opinion among the Six on this issue that the Rome Treaty itself left out this prickly subject from its purview in 1957. What is, however, important to note is the fact that even a determined beginning in tariff reduction in respect of industrial products has failed to make the members see eye to eye on farm policy. The greatest obstacle in the way of farm products integration is the rigid adherence to protectionist policies by the Six in their respective countries. The price levels, although artificially maintained by subsidies, vary widely from country to country. In West Germany, prices are allowed to persist at much higher levels than in France or Italy, for instance, in wheat, rye, barley and oats. West Germany is, understandably enough, not in a hurry to push forward with schemes that will readily attract surplus products from other members, depress its domestic prices, and, probably, throw some people out of work.

Although the full details of the meeting of the Council of Ministers of the Six held at Brussels have not been made public, it is generally believed that opinions were sharply divided on the farm policy. The most important factor that led to the deadlock in negotiations would appear to be the French objection to speeding up of the tariff reduction of industrial goods, thereby opening out opportunities for manufactures of West Germany in other countries of the Common Market, without, at the same time, throwing open its own (German) market for the agricultural products of other member-countries. Apart from the differences of opinion between France and West Germany, there have been other hurdles too. For instance, Italy wanted unrestricted exports of its fresh fruits and vegetables to West Germany, but the latter was not in a mood to oblige. Similarly, Holland insisted on the opening of the West German market for Dutch poultry. There is, however, nothing to warrant the conclusion that the collapse of the Common Market is imminent, because of these clashing interests, as predicted by some critics. Such an inference would be wishful thinking. The Council of Ministers has only adjourned the meeting for the New Year holidays and is scheduled to meet this week-end to resume negotiations. The possibility of a compromise formula being worked out is still strong; any such understanding may be made applicable with retrospective effect from the 1st inst. to be in conformity with the letter and spirit of the Rome Treaty. If, however, such an agreement is not reached immediately and the whole question is, once again, postponed, the prestige of the Common Market will be at stake. What is more important, this may delay the full consideration of Britain's application for its entry into the Common Market.

MARKET REPORTS

(*Concluded from page 49*)

due to slack demand and week-end prices were: damaged E29 quality Rs. 97 to Rs. 99; dry C29 and D29 of Mansurpur at Rs. 107.25 and Rs. 106.25 per maund.

Khandsari ruled quietly steady, as inclement weather during the major part of the fortnight hampered production. Punjab and Rajasthan buyers lifted dry stocks with prices recording some gains, while wet quality declined fractionally. Prevailing prices were: superior Rs. 34; inferior Rs. 31; crystal Rs. 32 to Rs. 34; *boora* Rs. 36 to Rs. 39 per maund.

Gur was depressed during the week. Arrivals were small due to inclement weather, but demand, too, was slack. Arrivals, however, improved towards the week-end, thanks to sunny weather, but loading was now restricted to consuming areas of Western and Central Railway. Total arrivals here during the current season were small at 2.6 maunds, as against the corresponding figure last year of 3.25 lakh maunds and week-end prices here on Monday were: *pansera* best Rs. 14.62; *dara* Rs. 14.12; *balti* Rs. 14.37; *shakker* Rs. 17 a maund. *Shakker* arrivals were small at an average of 75 maunds daily and prices stayed steady.

FOODGRAIN ARRIVALS SMALL

(*From Our Own Correspondent*)

HAPUR, 1*st January*

Foodgrains ruled steady during the past fortnight, as arrivals continued to be poor and stockists were reluctant sellers expecting better prices in the next three months which would be the fag-end of *rabi* grains. However optimism and confidence are being expressed about the food position in the year just beginning, as the record foodgrains production of nearly 80 million tons in 1961 is likely to be maintained in 1962, if not outstripped. Foodgrain prices, too, are officially described as "stable" and this indication is attributed to the abolition of wheat zones and expansion of rice zones.

Wheat prices here recorded modest gains during the fortnight to be quoted on Monday at Rs. 17 a maund for average quality and upto Rs. 19 for better farm produce. Daily arrivals were poor at an average of 75 to 100 maunds and local stocks here were put at about 18,000 maunds. Wheat and other *rabi* crops were now progressing under healthy conditions, thanks to sunny weather but winter rains were still deficient.

Rice ruled bearish, thanks to continued arrivals of new grains in markets and, despite severe floods in several parts of the country, the rice crop had been fairly good. Stocks of rice in the producing areas were increasing and week-end prices were: *rice mainpuri sela* Rs. 19; *gadda kutchu* new Rs. 18.75; *ramajwayan sela* Rs. 21; *raimunia sela* Rs. 22; *basmati sela* Rs. 26 to Rs. 28; superior Rs. 30 to Rs. 32; paddy Rs. 9 to Rs. 11.75 a maund.

Gram, too, sought higher levels at Rs. 15.62 a maund for Punjab variety due to good demand and steady advices from Punjab and local stock had shrunk to 16,000 maunds. Barley continued to rule quietly steady at Rs. 11, *bejhar* inferior at Rs. 11.50 and *moongia* variety at Rs. 12 a maund, but demand for these grains was slack. Maize continued to reach here from east U.P., Punjab and Rajasthan. Although local stocks swelled to 40,000 maunds, prices were steadier at Rs. 11.50 to Rs. 13.25 a maund on brisk consumer support and stocks purchases. *Bajra* also improved on good seasonal support to Rs. 16 a maund. *Methi* continued to be quoted at Rs. 27, but *juwar* and *guwar* steadier at Rs. 12.25 and Rs. 14.50 a maund, thanks to increased demand.

Among pulses, peas ruled quiet owing to comfortable stocks position at 28,500 maunds and new crop was progressing under good conditions, offtake during the fortnight was four wagonloads to Bombay. *Arhar* sought higher levels, as in the last two weeks extreme cold and foggy conditions had injured the crop over a wide area. *Urd* and *moong* were also quoted higher, in view of good seasonal demand and week-end prices (in rupees per maund) were: Peas *dara* 12.50; *farm* 13.37; peas *dal* 14; gram *dal* 17.50; *arhar* 14.37; *arhar dal* 17.75; *urd* 22 to 24; *urd dal* 24 to 26; *moong* 18 to 20; *moong dal* 20 to 22; *massoor* 15 to 17; *massoor dal* 19; *moth* 17.50; *moth dal* 20.50.

Notices

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Registered Office:

9, Wallace Street, Fort, Bombay-1.

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT IN pursuance of the powers granted to them by a resolution passed at the Extraordinary General Meeting, held on 29th May 1958, the Directors have extended the final date fixed for the receipt of applications for consolidation of fractional certificates into whole shares of Rs. 125 each, from 31st December 1961 to 31st May 1962.

Dated at Bombay this 27th day of December 1961.

By Order of the Board,
WALLACE & CO.,
Secretaries & Treasurers.

THE TRAVANCORE RUBBER & TEA COMPANY LIMITED

(*Incorporated in India*)

THE BOARD OF DIRECTORS HAVE SANCtioned payment of an interim dividend of 4 per cent on the Ordinary Shares for the year ending 31st December, 1961, subject to deduction of income-tax. The dividend will be paid to those members whose names are on the Company's Register as on 16th January, 1962, or their Mandatees.

The Transfer Books of the Company will remain closed from 10th January, 1962, to 16th January, 1962, inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) LTD.,
Managing Agents.

ALLEPPEY, 22*nd December* 1961.

THE GWALIOR SUGAR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will remain closed from the 16th day of January, 1962 till the 31st day of January, 1962, both days inclusive, in connection with the Annual General Meeting of the Company to be held on the 31st January, 1962 at the Registered Office of the Company at Dabra (Madhya Pradesh).

By Order of the Board,
FOR THE GWALIOR SUGAR COMPANY LIMITED,
J. COOMAR,
Secretary.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2648 BOMBAY, 13th JANUARY 1962 PRICE Rs. 1

ECONOMIC AFFAIRS NEGLECTED

FOR a considerable time now, economic affairs have not secured in New Delhi the primacy which they deserve. After the third Plan was finalised last August, the coming General Elections occupied the minds of Ministers and lesser politicians; to this distraction were later added international developments such as Congo, Goa and the rest. If the nation's economy is still growing, it is because of the momentum it had gained in earlier years and the great devotion with which senior officials in charge of the economic departments have been handling the day-to-day tasks. But they have their limitations. They can suggest and advise on policy but cannot take responsibility for changes or innovations needed in a developing economy; if their enthusiasm is often curbed by the tendency on the part of their political heads to play safe, decisions are bound to be delayed or deferred indefinitely. So, whether it is a question of more electric power, larger coal output, better transport or export promotion, we can only look up what the Plan document says on the subject and hope for the best.

The winter session of Parliament hardly found time even for the minor measures of legislation which were due to be brought up before it, such as the establishment of a Credit Information Bureau or powers for Government to require new units to export a part of their products. Proposals for amendment of the law regarding taxes on wealth, gifts and expenditure are kept in abeyance and so much else has been pending before Parliament for longer periods. A major achievement during the last year was the enactment of a cleaner and a more compact Income-tax Act; the actual time taken for its passage in the two Houses did not suggest that such work seriously interfered with the other business of Parliament. There seems to be a general lack of interest on the part of the Ministries concerned in promoting legislation to revise, codify and change old laws; for example, a Bill passed by the Rajya Sabha to amend the Sale of Goods Act on the basis of the eighth report of the Law Commission is still pending before the Lok Sabha.

The third Plan devotes considerable space to a discussion of administrative delays and the means of reducing them. One of the measures needed in this context, perhaps by the Ministry of Agriculture more than others, is reform of the law relating to acquisition and requisitioning of land. A conference of State and Central officials was held some time ago to discuss the suggestions of the Law Commission (made in its Tenth Report). So far only the drafting of a Bill has been finished. Similarly, in respect of other enactments in which modernisation of law is needed to facilitate transactions in the private sector, the machinery has been slow-moving; revision of both the Negotiable Instruments Act and the Contract Act on the basis of the work already done by the Law Commission has not been completed. Judged by this record, it seems unlikely that the latest report on Hire Purchase or the one on Marine Insurance, expected shortly, will receive early consideration.

Typical of this trend towards slowness in implementing essential legislative proposals is the acceptance of common carrier's liability by railways four years after the publication of the Freight Structure Committee's report. The legislation in this case was very simple and no great drafting ingenuity was needed; nor can the railways claim that they have turned the long delay to good account by completing administrative arrangements, so as to be in a better position to take responsibility for damage and loss in transit of goods. Since pilferage on certain routes accounts for a good proportion of the compensation claims even now, the railway authorities cannot hope to reduce their losses by merely changing the packing rules and making them stricter.

Yet another example of a dilatory approach to immediate problems in the economic sphere is in the setting up of a Parliamentary Committee to supervise the working of the public sector undertakings. Though, after a great deal of preparation, a motion was brought before Parliament at the end of the Second Lok Sabha's term, a technical objection to the inclusion of members of the Upper House in the proposed Joint Committee upset the plan and revealed lack of preparation. For a system working largely on the British model, the reasons which led to the exclusion of Peers in the U.K. Committee were quite relevant to Indian conditions and there was hardly any justification for not being ready with reasons for a different practice here if that was considered desirable.

The record of the Second Lok Sabha, whose life will formally end on 31st March 1962 (after it gives a Vote on Account to authorise expenditure until the Budget is passed), is very uneven. It began with a bang, by enacting the Wealth, Expenditure and Gift Tax Acts and showed lively interest in L.I.C. affairs. It modified the reorganisation of States by creating two new States of Gujarat and Maharashtra. Substantial amendments were made to the Companies Act. The law on Merchant Shipping was consolidated; besides facilitating certain aspects of banking reform, the Lok Sabha also passed an Act for the introduction of deposit insurance. The system of company taxation has been changed; special rupee notes were issued for use in the Persian Gulf area. But, on the whole, the impression that one gets is not one of much pressure of legislative work to justify the lapse of several Bills that will be pending before the Lok Sabha when it is dissolved.

Its Committee work, however, is very impressive. The Estimates Committee of the Second Lok Sabha presented 144 reports, of which 24 related to State undertakings. Even when its reports were occasionally out of focus (as on the Planning Commission), the Committee stimulated public interest on many current questions and gathered information which was otherwise not available. When the proposed Committee on public sector projects is also set up after the General Elections, the Estimates Committee will be in a position to concentrate attention on other departments.

A new feature was the extension of the committee method for the consideration of the third Plan at its preparatory stages. In practice, however, this was not quite effective because the membership was too large and the procedure adopted was unsuited for the purpose. A miniature debate was conducted in the Committee more or less on the lines of the proceedings of the full Houses, though the proper course would have been to adopt the Select Committee method of examining point by point and recording the general consensus of opinion subject only to dissent on vital differences. The recent innovation by a Joint Committee of the U.S. Congress, which got together an expert team to examine the problems of growth in the American economy, deserves close study here so that the Planning Commission, which has now lost its character as an expert body (which it could claim at an earlier stage) but has not gained correspondingly by way of greater influence with the Congress Party or State Governments, may be kept in touch with both public and expert opinion.

PAPER INDUSTRY

PRODUCTION of paper and paperboard in India in the end-year of the second Plan was a record. The actual output of 350,200 tons in that year from a total installed capacity of 410,000 tons represented an increase of 90 per cent, as compared with the production of 187,000 tons in the last year of the first Plan. The larger part (accounting for 80 per cent of the additional production, it is claimed on behalf of the industry, came from the older units which had expanded their capacities. Both the industry and the Development Wing of the Ministry of Commerce and Industry deserved credit for this achievement, according to Mr. Umashankar Bajoria, President of the Indian Paper Mills Association, who addressed the nineteenth annual general meeting of the Association at Calcutta early this week. But they could not have possibly forgotten that, in spite of their achievement, *per capita* consumption of paper in the country by the end of the second Plan was only 2.1 lbs., as compared with, for instance, 103.2 lbs. in Japan. The *per capita* demand for paper, thanks to the high rate of industrial development and the extension of education in the second Plan period, should have been considerably more than the actual *per capita* consumption.

The large unsatisfied demand for paper and the additional demand for it expected during the third Plan period would appear to justify a higher target of *additional* capacity than the 410,000 tons proposed by the Planning Commission. The Commerce and Industry Ministry has, therefore, done well to license an additional capacity of 875,000 tons, thereby exceeding the target laid down in the third Plan report. But this does not mean much, for as much as 462,000 tons of the total licensed capacity are not covered by foreign exchange approvals and there is no certainty that the licensed capacity will be actually installed in its entirety and brought into operation. This aspect has, however, escaped the notice of Mr. Bajoria who otherwise dealt exhaustively with the problems of the industry pertaining to expansion [illegible] duction and installation of the licensed capacity covered by foreign exchange approvals.

Currently, these problems are related to ex-factory prices, return on capital, rehabilitation allowance and supply of raw materials. There is reason to believe that [illegible] problems are [illegible]ved betimes to the [illegible]mable satisfaction of industry, actual production may fall [illegible]

short of the target of 820,000 tons (1960-61 capacity of 410,000 tons *plus* third Plan's additional capacity of 410,000 tons). Already the first year of the third Plan is drawing to a close, but the trend of production so far is hardly reassuring. In August 1961, for instance, production of paper and paperboard was only 31,000 tonnes, as compared with 29,000 tonnes in the corresponding month of 1960. The aggregate production in the January-August period of 1961, again, was only 241,000 tonnes, as compared with 228,000 tonnes in the corresponding period of the preceding year. Judging by this trend of production, it looks as if 1961-62 will have to its credit no more than 370,000 tonnes from an installed capacity of less than 450,000 tonnes. Expansion of both capacity and production seems to have been held up because of official delays in getting the fair ex-works prices of paper revised. These prices, fixed on the recommendation of the Tariff Commission, have turned out to be uneconomic in the last one or two years in the wake of a general increase in the cost of raw materials, chemicals, fuel, power and transport.

Such other questions as return on capital, rehabilitation allowance and raw material supply would also need to be dealt with more expeditiously in the interests of further development of the industry. The return of 12 per cent on employed capital, included in the fair selling price, is considered far too inadequate to cover all the requirements (dividends, taxation, interest on working capital, managing agents' and directors' remuneration, bonus to labourers, interest on debentures and loans) and still allow the industrial units to embark upon further expansion with their own resources. As the medium and small units have been assigned a big role in the expansion of both capacity and production in the third Plan period, it is clear that, under the present price structure, they would find it difficult to fulfil their obligations. A more adequate return on capital would also be necessary to attract enough equity capital for financing the planned expansion. At the same time, the industry's plea for a rehabilitation allowance as an element in the fair ex-works price has not lost any of its validity, for the present-day cost of machinery is more than four times the cost in the pre-war years and normal depreciation accumulations are too inadequate to meet the present replacement cost. The policy of the State Governments in auctioning their forest areas annually or leasing them for short periods purely on revenue considerations would also need to be revised in a rational manner, in order to end the present uncertainty regarding the availability of raw materials at reasonable prices. It would also be necessary for the State Governments energetically to implement a well planned scheme of afforestation to take care of the growing raw material needs of paper and other allied industries.

COST ACCOUNTING IN THE WEST

COMPANY managements in India can hardly claim to have the kind of "aggressive cost consciousness" which is one of the outstanding characteristics of company managements in the West, more especially in the United States, where a continuous effort is made to reduce unit costs year in and year out. They have yet to learn, in all seriousness, that, in any continuous process of cost reduction, accounting and costing data have a certain utility which surpasses their informative value. The utility is that such data can be used for the day-to-day control and efficient management of a company's operations with a view to achieving maximum use of available resources. This is the central lesson from Western experience which is driven home to company managements in this country in the brief but pointed report of the Indian productivity team (Leader: Mr. M. K. Rustomji, Controller of Accounts, T.E.L.Co.) on cost accounting and financial control in the U.S., the U.K. and West Germany. The report, just published by the National Productivity Council, is a document which is valuable not only for its general observations and recommendations but also for its specific findings on all the inter-related aspects of cost accounting and financial control.

The team has appropriately dealt with the question of control of materials utilisation at the very outset, for the cost of materials might constitute anything from 50 to 80 per cent of the cost of a product. The trend towards simplification in the record-keeping for materials, according to the team, is now widely prevalent in the West. Many of the factories visited by the team have only group control accounts for materials in the accounts department. These group accounts, such as for spare parts, tools, and so on, are debited with receipts and credited with issues; the balances in these accounts represent the value of stock of stores, which is reconciled with the itemwise inventory valued periodically. It is becoming more and more usual to have only one set of itemwise records of stores, with quantities and values, and that, too, only in the material control department. Apart from this simplification of records for stores, there are two other distinct trends, one being towards greater physical control over every aspect of store-keeping and the other representing better inspection of incoming materials. The most important lesson here for Indian firms is that they could greatly improve their organisation for inspection of incoming materials. They could also develop, as in the West, cost standards for productive material consumption—standards to be laid down by technical staff and to be constantly reviewed by them, in order to reduce production costs by changing manufacturing processes, utilising scrap and waste and using substitutes. The team's brief description of the ways in which control on materials utilisation and inventory control are exercised in the West could be studied with advantage by company managements in India.

Equally valuable is the team's description of the types of cost systems prevalent in the United States. The accounting departments in that country, according to the team, discharge not only the recording function but also, to an increasing extent, the interpretative function. As the recording function is now coming more and more within the scope of mechanised accounting, American accountants are able to concentrate their attention on the interpretative function of examining the accounting information with a view to correcting and controlling the present and planning the future. The accounting data, when suitably interpreted and made available in time, enable the management to measure efficiency, material consumption, labour performance and control of overheads, to locate and control loss and wastage, to measure the efficiency of various departments, processes, products and methods, and to measure the success of such operations as manufacturing, purchasing and selling. As the emphasis in the West is on the control of costs of current operations, importance is given to the speed with which the cost information is assembled. There is, as the team has put it, *aggressiveness* in the accountants' approach to his problems and a greater readiness to adopt new techniques in the collection, summarisation and presentation of cost data, so that it could be of greater assistance to the management.

The current trends in the application of these techniques are quite interesting. Comprehensive budgetary control systems, with the sectional budgets (such as for sales, production, cost of production, general administration expenses, selling and distribution cost, and capital expenditure) linking up with the final profit and loss budget, are most common in the United States. As 'anticipation' of income and expenditure before the commencement of a period in itself introduces a considerable element of planning into an organisation, it facilitates cost control. But this does not mean that, in the formulation of budgets, the accounts department is allowed to impose its views on the other departments. The adoption of standard costing in most companies in the West makes for effective cost control. As standard costs, which are predetermined costs, are recorded in the accounts, *variances* in actual expenditure from standards can be segregated and shown under separate accounts. Companies using this system exercise control of current operations by watching these variances and analysing them carefully to show to the persons responsible for creating them the monetary effects of their inefficiency.

The team has also dealt with the Western trends relating to internal audit. According to it, the *protection* function of internal audit is not emphasised very much now. This function of detecting errors, preventing fraud and checking the arithmetical accuracy of the account books is considered less important than the *constructive* appraisal of operations such as sales, purchasing, production and advertising. It is now seldom the practice to have a large number of men in the internal audit staff to check all vouchers and journals. The internal audit department, on the other hand, consists now of a small body of highly qualified men who are more concerned with the checking of the effectiveness of the internal controls.

Most of the recommendations made by the team in the light of its findings are realistic and capable of application in this country. Its first plea is for shaping the accounts department more and more as a service department so that it can assist managers at all levels in the direction and control of day-to-day operations. There can be no two opinions on the team's view that managers should be trained in the understanding of accounting figures and that all their planning should be directed towards reducing manhours and unit costs. But the recommended budgetary control and standard cost systems are considered by the team itself to be not capable of full-scale application at the present stage in India. There can, however, be no difficulty in adopting these techniques partially by incorporating in the accounting systems the basic principles of setting up plans or targets and of reporting actuals against Plans. Only when top company managements in India adopt, by stages, budgetary control techniques in their organisations, decentralisation of authority and responsibility, even while retaining control, would be rendered increasingly possible. The scope for simplifying costing and accounting techniques in India is also stated to be considerable. Perhaps, measurement and comparison of productivity can be more easily done by the recommended adoption of "managerial ratios," such as sales profit to capital employed, sales to employees, cost of sales to sales and profits before tax to sales. But the team's view that there should be greater interchange of financial and cost information between companies may not be widely accepted for obvious reasons.

RESEARCH IN MANPOWER

AN institute of Applied Manpower Research will soon start functioning in New Delhi. It will be a semi-autonomous body, with a Council of 54 members, including representatives of State and Central Governments, public and private sectors and labour and managements. It is not clear why this particular type was favoured for this branch of research alone when there are other divisions within the Planning Commission for perspective planning, statistics research programmes, labour and technical training. Though some guidance is expected from experts to be imported, the problem of staffing another large unit will not be easy to solve. There is already the National Council of Applied Economic Research which can be utilised for these purposes also, though it does not appear that its services have so far been availed of on any extensive scale. Moreover, for the allied problem of making a comprehensive survey of the country's natural resources and the manner of their utilisation, the Planning Commission has set up only a separate committee to co-ordinate information and surveys which is supplemented by a Standing Committee and expert technical committees for the various fields of study.

The National Council seems to have provided the pattern even in respect of the name of the Manpower Institute. But while applied research in economics is understandable and can be distinguished from theoretical or fundamental research (as in the other physical sciences), a similar distinction in the field of manpower is hardly conceivable and no significance can be attached to the term 'applied'. The ostensible purpose of the new institution is to help improve the quality and utilisation of the labour force. The Third Plan says: "Among the main aims of the Institute will be to provide a broad perspective of requirements of trained manpower for economic development in different fields, arrange for facilities for advanced training and building up the existing work-force, evolve methods for identifying and developing talented persons and, generally, secure the most effective utilisation of the country's human resources." This tall order is expected to be fulfilled by the Institute's two divisions, one dealing with statistics and estimates of requirements and the other with problems of training for employment and better use of the existing workers and managerial personnel.

The scheme has been worked out by the Home Ministry, though why it fell within its province is not clear. The semi-autonomous character of the new unit suggests that all the existing departments in the Planning Commission, Labour Ministry and State Governments may continue to function as before. If that is so, then the recent ideas of bringing statistical departments under one roof or at least of coordinating their work lose significance. The importance of manpower planning and training cannot be denied; but, at the same time, it is difficult to agree that proliferation of institutions of this kind—and that at New Delhi—is adequate recognition of such importance.

MARKET GOSSIP

Ceiling On Urban Incomes

WILL there be more socialism in India after the General Elections are over and the third Government is formed under the Constitution? This old question is the topic of the talk in business circles. Its revival is attributable to certain observations made by the Congress President, Mr. N. Sanjiva Reddy, at the sixty-seventh session of the Indian National Congress held at Patna last week and the virulent attack made by Prime Minister Nehru, as well as some of the prominent Congress leaders, on the Swatantra Party. The share markets slumped last week-end on receipt of this news and, though they have recovered a part of the ground lost, a subdued feeling has come to prevail.

To those who wish to recollect what exactly Mr. Reddy said, the following quotation from his presidential address will be handy:

"We have, during the last decade, introduced many agrarian reforms which form the basis for rural progress. Land reforms have been actively introduced in many States and in many others they are under progress. The question now arises is as to why we should have a ceiling for landed property alone, and not for urban wealth also, where the people have amassed enormous amounts of money.

"Our basic objective is to bring about economic growth, without the growth of monopolist tendencies, and the concentration of economic power in a few hands. It is also our aim to see that there is an economic and social readjustment of our systems, to ensure that the increased wealth of the land is shared by all the sections of the people. In view of this, the question of having a similiar ceiling on urban incomes has to be thought of.

"It is necessary that the problem should be faced, and some solution attempted for it. It is in this context that we have in our election manifesto for 1962 stated that it is necessary to have some limitations on high urban incomes not merely through taxation but also through other means, in order to lessen the great disparities that exist today. It is with a real purpose and meaning that the significant phrase 'through taxation and other means' has been used in this."

There is, of course, nothing new in what Mr. Reddy has stated. He has only reiterated, with a little bit of elucidation, what was stated in the election manifesto of his party, the first comprehensive draft of which was published in September last (*vide* page 579 of *Commerce* dated 23rd September 1961). But his reiteration is not without significance for two reasons. In the first place, it is in contrast to the silence maintained on this issue at the Madura session of the A.I.C.C. which adopted the election manifesto. This, as well as the fact that the elections are only 42 days ahead, may induce some to treat his statement as part of the strategy for getting the Congress Party back into power with a large majority at the Centre as well as in all the States. While this is a perfectly logical inference, it would be a mistake to treat it as an election stunt. Mr. Reddy has clearly stated that the Congress Pary means business this time. He has warned those who may treat such statements lightly by saying, in effect, that the Congress Party has deliberately stressed the need for a ceiling on "high urban incomes." Mark his words. "It is with a real purpose and meaning," he says, "that the significant phrase *through taxation and other means* has been used" in the election manifesto. And, secondly, by making its intention clear, the Congress Party has saved itself from possible criticism later on that it is doing something which was not specifically stated in its election manifesto. It may be recalled that it was accused of this charge when it decided to place a ceiling on agricultural land and introduce joint cooperative farming.

There may be some who are inclined to feel that, as imposition of a real ceiling on urban incomes is more difficult than restricting the holdings of agricultural land, the Congress Party's intention will remain only on paper. There is, of course, a lot to be said in favour of this hunch. One can easily cite a hundred and one reasons in support of it, including the setback which ceilings on urban incomes will have on the climate for foreign aid, in general, and foreign private capital, in particular. But it is quite possible that, flushed with success in the elections, of which the Congress Party seems to be assured now, the Government may well take a big step to socialise the country further. Did anyone, for instance, expect that Mr. Y. B. Chavan and his colleagues in the State Cabinet would nationalise the sugarcane plantations in Maharashtra, despite the plea by the Planning Commission and the Ministers of the Central Government for their exemption from the application of land ceiling? And yet nationalisation of sugarcane farms is a *fait accompli* now. Overnight, Mr. Chavan deflated the savings of those who had invested in the sugar companies in his State. Nothing is impossible in a Government dominated by socialists like Mr. Jawaharlal Nehru, Mr. K. D. Malaviya and Mr. Krishna Menon. In Mr. T. T. Krishnamachari, Mr. Nehru will find an able lieutenant to fulfil his promise to the electorate to introduce a ceiling on urban incomes. We still do not rule out the possibility of T. T. K. emerging from his "lame-duck" politics. It does not require much skill to expropriate wealth, but only a thick skin against the criticisms of those who are the victims of expropriation either directly or indirectly. The task will be extremely easy for those who have no faith in the virtues of private enterprise, who see great scope for expanding the public sector with the help of Communist powers and who suffer from the hallucination of "man-eaters" prowling about in the private sector.

Tens of thousands of words have been written in this journal and elsewhere during the past seven or eight years to show that a ceiling on incomes of individuals in the higher income bracket will not help improve the lot of the have-nots and that, on the contrary, it will only prolong their agony of semi-starvation, half-nakedness and absence of a roof over their heads. The only thing that such a revolution—reform would be a wrong expression here—can do is to quench the feeling of jealousy against the "haves." Apparently, all this preaching through the columns of the Press has been of no avail, so far as the Congress Party is concerned.

The imposition of ceilings on agricultural lands has not made any significant contribution to productivity of agriculture. On the contrary, it has arrested the flow of private investments in agriculture and thereby restrained the spread of scientific farming. It will be no exaggeration to say that this so-called agrarian reform is the biggest hoax played on the rural electorate by the Congress Party. The only people to be benefited by it are a handful who support the Congress Party and the local party bosses to whom additional power of influence has accrued. Similarly, no amount of massive redistribution of wealth in the name of economic equality will make the poor richer. Mr. Nehru himself has admitted this fact hundreds of times and agreed with the view that what the poor needs is an opportunity to make a living and not distribution of doles. What, then, is the purpose of adopting an election manifesto, in which a provision is made for placing a ceiling on urban incomes?

Speaking in Bombay on the last *Divali* day, Mr. Morarji Desai, the Union Finance Minister, stated that "the Government does not want to lessen anybody's wealth, be it individual or institution" and that, on the contrary, it was interested in creating more wealth and its better utilisation. Mr. Reddi's observations at Patna and the Congress Party's election manifesto run counter to the Finance Minister's appreciation of the Government's basic objective. It took Mr. Morarji Desai three years of patient endeavour to undo the mischief caused by T.T.K.'s wrong fiscal and monetary policies and needlessly provocative pronouncements. His nuisance taxes have achieved nothing, beyond giving a socialist halo to the Nehru Government. A certain amount of fiscal stability has been brought about now. The rich have reconciled themselves to high levels of personal taxation. A large measure of confidence has been induced among the foreign investors. The public and private sectors have learned to coexist and respect each other. All this good work would be undone, if the Congress Party were to switch back to its ideological pranks pertaining to equality of wealth, income and economic power.

Ceiling on agricultural land was wrong in principle. It would be a greater folly to repeat it in the urban sector, on the ground that it is necessary to provide solace to those hit by land ceilings. It must be borne in mind that ceiling on landholdings was less dangerous, because its repercussions were of a limited character. It did not upset the climate for foreign aid or for foreign private investments on account of the widespread, but mistaken, impression in foreign countries that rural India was being dominated by a few rich absentee landlords living on the toils of millions of ill paid landless workers. But a ceiling on urban incomes will have very serious, much widespread repercussions on the economic growth of the country and might even open the floodgates for Communism.

The Congress Party's election manifesto has already provided a large measure of comfort to the Communists in this country and their sympathisers in the Congress hierarchy. Mr. K. D. Malaviya, Union Minister for Oil, has already openly condemned his colleagues in the Government and the party whom he described as "conservative elements" and called for the adoption of a "pattern of aggressive socialism," by which he means that there should be only one sector, namely, the public sector. He has made it clear that "a compromise between capitalism and socialism would never bring about the socialist pattern." With such persons holding seats of power, it would be foolish to assert that all this talk of ceiling on urban incomes is only an election stunt.

Khandelwal Udyog

The big expansion in the production of pig iron and steel envisaged in the third Plan will greatly facilitate the growth of engineering industries for which iron and steel are the basic "raw-material." Steel fabrication is one of the ancillary industries that will directly benefit from the increased supply of steel during the third Plan. It is, perhaps, this consideration that the planners had in mind when they set in the third Plan a high target for structural steel fabrication. As against the present capacity, estimated at 500,000 tons, inclusive of wagon builders, the target for achievement by the fabricators by the end of the Plan is fixed at 1.1 million tons, an increase of more than hundred per cent. The Plan also envisages the expansion of capacity for many allied activities such as manufacture of pressure vessels and heat exchangers. Production of cranes is another important allied activity that is sought to be expanded. In achieving the Plan target for the steel fabrication industry, Khandelwal Udyog Limited, which had converted itself from a private to a public limited company with effect from 12th January 1960, will make a substantial contribution.

The Company, which is already engaged in steel fabrication, has finalised plans for the expansion of existing lines of manufacture and to enter new ones in order to meet the demands, which largely remain unsatisfied, at present, for fabricated steel, pressure vessels, cranes, etc. To finance these plans, the Company proposes to enter the capital market next week (for details *vide* pages 82 and 83 of this issue). The Company has an authorised capital of Rs. 1.5o crore.

In addition to fabrication of steel, the Company has already received licence for the manufacture of such construction machinery as concrete mixers, asphalt mixers and roller pan mixers, as also electric overhead travelling cranes of upto 20 tons capacity and electric and combustion industrial furnace, ovens, etc. The services of competent foreign collaborators have been secured for implementing the expansion plans expeditiously and efficiently.

Anti-friction Bearings Corporation

This new undertaking for the manufacture of ball, roller and taper roller bearings, incorporated in May 1961, has just taken over the existing unit of Dhirajlal & Co. (Lonavla), with its annual production of 50,000 pieces of ball thrust bearings and 70 to 80 tons of steel shots—grinding media for the paint industry. The new company is expected to step up its production capacity, under a phased programme, to the level of 600,000 pieces of ball, roller and taper roller bearings and 200/240 tons of grinding media by 1964. It will have the technical collaboration of Messrs. Steyr-Daimler-Puch A.G. (Austria), one of the few leading ball and roller bearings manufacturers in Europe, with 40 years' standing in the field. The products of the Company will have the assurance of a ready market, for the demand potential for ball and roller bearings, which are an indispensable item in any moving part from the bullock cart to the jet aircraft engine, has been estimated at about 20 million pieces by the end of the third Plan.

The authorised capital of the Company is Rs. 1 crore, divided into Rs. 60 lakhs of equity shares of Rs. 10 each and Rs. 40 lakhs of unclassified shares of Rs. 10 each. The issued equity share capital will be Rs. 60 lakhs, made up of Rs. 27.5 lakhs of public issue, Rs. 22.5 lakhs by promoters and friends, Rs. 5 lakhs by the Austrian collaborating firm and Rs. 5 lakhs by the L.I.C. The additional finances required for implementing the project have been secured to the extent of Rs. 32 lakhs as a foreign exchange loan from the Industrial Credit and Investment Corporation of India Ltd., and Rs. 8 lakhs as a deferred payment loan from the Austrian collaborator. The rest of the financial requirements to the extent of Rs. 27.8 lakhs is proposed to be met partly by cash accruals arising from the operation of the existing unit and by short-term borrowings.

The "Lender's Club"

Dr. Per Jacobsson, the energetic Managing Director of the International Monetary Fund, can justifiably congratulate himself on the success of his efforts to strengthen the Fund's resources further, though the scheme he suggested first has been modified in some respects. The final acceptance of the scheme by the ten leading industrial countries (U.S., U.K., France, West Germany, Italy, the Netherlands, Belgium, Sweden, Canada and Japan) and the details of its implementation were announced by the I.M.F. on Monday this week; agreement in principle, it will be recalled, had been reached at the annual meeting of the Fund at Vienna in September 1961. The scheme envisages the formation of what is called the "Lender's Club" (consisting of the aforesaid ten members) which will provide a total of $6.000 million to be used by the Fund to check any "speculative attacks" on "international reserve currencies" more effectively than is the case at present, in particular, and to finance the growing volume of world trade, in general. The largest member of the Club is, as is only to be expected, the U.S., its contribution being one-third of the total, or $2.000 million. Britain and West Germany will each provide $1.000 million. The balance of $2.000 million represents the combined share of the remaining seven countries ($550 million each by France and Italy, $250 million by Japan, $200 million each by the Netherlands and Canada, $150 million by Belgium and $100 million by Sweden). These amounts, to be made available in the members' own currencies, are almost exactly the sums envisaged by Dr. Jacobsson at the Vienna meeting of the Fund. The procedure laid down for their actual utilisation is briefly as follows:

The deficit countries will apply for assistance to the Managing Director of the Fund and other members of the Club. The latter will then be consulted by the Managing Director and, taking into account his recommendations, they will inform him of the amounts they consider appropriate to lend to the Fund for being advanced to the applicants. Wherever possible, agreement should be unanimous, but, if this were to prove impossible, decisions could be taken by a two-thirds majority of Club members voting (the prospective borrower does not vote), provided that this is also a three-fifths majority in terms of votes weighted according to the contributions. Repayment by the Fund to the member must be in his currency where possible, gold or, after consultation, in a currency which is convertible "in fact." Interest is paid by the Fund to the lender at the rate of 1½ per

EQUITIES RETREAT

SELECTIVE BUYING IN TEXTILES

(From Our Own Correspondents)

BOMBAY, 11*th January*

IN contrast to the firmness noted last week, equities on the Stock Exchange suffered a setback during the week under review, though some recovery in a few select counters was in evidence today. For the confident optimism, which had inspired the strident advance in share values last week gave place to a feeling of hesitancy, if not nervousness. The reference in the speech of Mr. Sanjiva Reddy at the Patna session of the Congress to ceiling on urban income induced misgivings among operators who wondered if it could be a straw in the wind. Pakistan's determination to raise the Kashmir issue in the U.N. and China's fresh claim for 1,000 square miles of territory in the Gilgit region, presently occupied by Pakistan, also imparted weakness to the market. The change in sentiment was evident on the opening day of the week itself, that is, Friday the 5th inst., when there was a sharp fall in prices. The fear of higher *budla* charges in Friday's settlement was partly responsible for the decline. Although the fear did not prove correct as the *budla* charges were lower than expected, the market failed to pick up strength. In fact, the downward trend gathered further momentum when the new account opened on Monday. After a feeble attempt at recovery on Tuesday, the market staged a relapse again yesterday. It was feared that, should there be a further fall in prices, some shares might attract margins as in the case of six scrips which were subjected to margins during the upswing last week. These fears, together with institutional support and selective buying in certain scrips, notably textiles, led to a recovery in values. The recovery, however, was not marked enough to make up for the earlier losses, so that today's closing rates for the majority of scrips were below those prevailing at the end of last week.

Steel shares encountered selling. Tata Steels declined from Rs 144.50 to Rs. 142 yesterday and further to Rs. 141.25 today, before finishing a shade higher at Rs. 142. The net loss over the week is Rs. 2.50. Indian Irons receded from Rs. 25.50 to Rs. 24.88. Mukand Irons eased from Rs. 28.75 to Rs. 28.

Barring a few select scrips, textile shares drifted lower. Centurys showed some initial firmness but succumbed to selling, dropping from Rs.#628 to Rs. 602.50 yesterday. After recovering to Rs. 611 today, they closed at Rs. 609.50, a net loss of Rs. 18.50 over the week. Standard Mills shed Rs. 8 to Rs. 1,176. Morarjees declined by Rs. 7 to Rs. 399. Khataus were marked down by Rs. 5.75 to Rs. 475.50. Elphinstones eased by Rs. 4 to Rs. 114 and Dawns by Rs. 3 to Rs. 156. Simplex receded by Rs. 2.50 to Rs. 158 and Tata Mills by 70 nP to Rs. 79.50. But Swan Mills spurted by Rs. 32 to Rs. 662 on special support and Central Indias by Rs. 10 to Rs. 139.50. Kohinoors were better by Rs. 2 at Rs. 315. Finlays gathered Rs. 4 to Rs. 335. B.R. Cottons found buyers Rs. 2 higher at Rs. 72. Bombay Dyeings improved from Rs. 67.50 last week-end to Rs. 69 yesterday before receding to Rs. 68.30 today. Podars were steady at Rs. 152, as also Phoenix at Rs. 232.

Sugar shares were easy. Belapurs declined from Rs. 274 to Rs. 271 yesterday. Although the scrip attracted support today and rose to Rs. 279, it receded to Rs. 271. The net loss over the week is Rs. 4. Maharashtra Sugars fell by Rs. 7.50 to Rs. 192.50. Phaltans and Walchandnagars eased by 50 nP each to Rs. 126.50 and Rs. 165.50, respectively.

Cement shares were subdued. Associated Cements slided down from Rs. 163.75 to Rs. 161.50 on Monday but recovered to Rs. 162.50 today, showing a net loss of Re. 1.25 over the week. Digvijays receded by Rs. 6 to Rs. 193. Orissa Cements softened by 12 nP to Rs. 15.68.

In the shipping group, Scindias suffered a further loss of 12 nP to Rs. 13. Great Easterns shed 8 nP to Rs. 12.52. Among automobiles, Premiers declined by 95 nP to Rs. 151.75 *ex-div.* Hindustan Motors lost 52 nP to Rs. 20.60.

Among rayon shares, National Rayons encountered selling and declined from Rs. 570 to Rs. 548 today, before finishing at Rs. 553. The net loss over the week is Rs. 17. Baroda Rayons eased by Rs. 4 to Rs. 157. South India Viscose decreased by Rs. 2 to Rs. 181. Gwalior Rayons, however, attracted some support and gained Rs. 2.50 to Rs. 53. Indian Rayons were neglected at Rs. 97.

Chemical shares drifted downward. Indian Dyestuffs slumped by Rs. 27.50 to Rs. 542.50. Colour-Chems lost a like amount at Rs. 440.50. Amar Dyes were marked down by Rs. 17.50 to Rs. 337.50. Poly Chems lost Rs. 10 to Rs. 225. Synthetics eased by Rs. 6 to Rs. 228. Dhrangadhras shed Re. 1 to Rs. 134 and Citrics Rs. 2 to Rs. 79. Tata Chemicals were done 36 nP lower at Rs. 19.64.

In the engineering group, Telcos declined from Rs. 363.50 to Rs. 352 on Tuesday but recovered to Rs. 360 today. The net loss over the week is Rs. 3.50. Hindustan Electrics receded by Rs. 22.50 to Rs. 155. Texmacos shed 40 nP to Rs. 20.76. Kamanis eased by 24 nP to Rs. 17.12. Asian Cables were done Re. 1.50 lower at Rs. 106. New Standard Engineerings softened by Re. 1.50 to Rs. 200.50. Selected engineering shares, however, attracted support. Tinus Alcock Ashdowns hardened by Rs. 4 to Rs. 323. Cooper Engineerings picked up Re. 1.25 to Rs. 181.50. Premier Constructions gained a rupee to Rs. 195.

Among miscellaneous industrials, Bombay Burmahs moved down from Rs. 670 to Rs. 648.50 today. The finish was, however, a shade better at Rs. 650.50. The net loss over the week is Rs. 19.50. Voltas shed Rs. 3.50 to Rs. 309. Hindustan Levers were done at Rs. 57.50, as against Rs. 58 last week-end. Ceat Tyres old and new lost Rs. 2.50 each to Rs. 210 and Rs. 195, respectively. Premier Tyres receded by Rs. 3.75 to Rs. 151. Anil Hardboards eased by Rs. 5 to Rs. 267.50. West Coast Papers were marked down by Rs. 8 to Rs. 178. Wimcos, however, provided a bright spot, the quotation jumping up by Rs. 9 to Rs. 317.

* * * *

Madras Stock Exchange

MADRAS, 10*th January*

The Stock Exchange ruled subdued during the week under review, with the exception of textiles and a few other select counters which tended to move up on good buying inquiries. The deliberations of the Patna session of the Congress with renewed emphasis on socialism chilled the enthusiasm of operators. Sugars were depressed. Cements, chemicals and engineerings in the miscellaneous section encountered selling. Among plantations, teas lacked support, despite the recent recovery in prices at the auctions, while coffees and rubbers attracted scattered attention. The textile section ruled firm, thanks to encouraging advices from piecegoods markets.

In the plantation group, Consolidated Coffees lost 40 nP to Rs. 19.20, following the non-too-optimistic assessment of coffee prospects made by the Chairman. Peermades Tea fell by 25 nP to Rs. 22.25. Blue Mountains by 13 nP to Rs. 2.72 and Periakaramalais by 5 nP to Rs. 3.50. Ouchterlonys, however, hardened by 26 nP to Rs. 3.70 and Cochin Malabars by 7 nP to Rs. 7.30. Among sugars, Travancores eased by 30 nP to Rs. 8.50, E.I.Ds by 12 nP to Rs. 36 and Deccans by 10 nP to Rs. 11.05. In the miscellaneous section, Western India Plywoods suffered a loss of Rs. 3 to Rs. 217. Travancore Cements declined by 35 nP to Rs. 7.65, Orissas by 25 nP to Rs. 16 and Indias by 10 nP to Rs. 6.35. Mettur Chemicals sagged by 35 nP to Rs. 14.40 and F.A.C.Ts by 15 nP to Rs. 8.15. Ashok Leylands shed 7 nP to Rs. 9.13, but Aluminium Industries picked up 15 nP to Rs. 23.35. Among textiles, Premiers forged ahead from Rs. 297 to Rs. 320. Coimbatore Cottons were marked up by Rs. 7 to Rs. 217. Bangalore Woollens rose by 50 nP to Rs. 239. Travancore Rayons improved from Rs. 44.75 to Rs. 45, but closing at Rs. 44.80.

* * * *

Calcutta Stock Exchange

CALCUTTA, 10*th January*

In the absence of fresh support and encouraged by weaker advices from Bombay, trading on the Stock Exchange took an unimpressive turn in the last two days, though, earlier in the week, modest gains were recorded on investment support from interested quarters on growth prospects, under the impact of the highly encouraging rise in industrial production during 1961 and hopes that the upward trend would gather momentum in the current year. The publication of satisfactory output figures for TISCO and IISCO in respect of December and the sure expectation of a rise in retention prices buoyed sentiment for some time, but the tightness in bank credit in the wake of the busy season and the number of new issues announced during the week curtailed funds. Further, operators were cautious, thanks to their anxiety about taxation in view of higher Defence expenditure.

Despite the poor supply position of raw cotton and the anxiety on exports deepening from the Government's decision to connect sanctioning automatic looms with exports, there were a few impressive features. Coals for a time enjoyed support, but profit-taking soon intervened to lower the gains. Although the volume of transactions fell in jutes, attributed to the uncertainty now caused as to whether the mills would be in a position to recoup earlier trading losses and at the same time be able to make current production economic, there were a few impressive rises. Earlier in the week, engineerings met with support, but gains could not be maintained in view of the subsequent bearish pull. Teas were firm.

ELECTRO-EQUIPMENTS CORPORATION

The new plant to produce electric house service meters put up at Mulund in Bombay by the Electro-Equipment Corporation (Chairman: H. H. Fatehsinghrao Gaekwad) is expected to go into production in March next. The plant will have an initial annual capacity to produce 60,000 meters on a single-shift basis. The Company has secured the collaboration of the Polish concern Cekop, for the supply of plant and equipment, technical know-how and manufacturing licence.

The Corporation offered for public subscription on Monday this week 171,500 equity shares of Rs. 10 each. This issue, amounting to Rs. 17.15 lakhs, represents nearly 50 per cent of the total issue aggregating Rs. 35 lakhs, the rest having been contributed by existing shareholders and promoters as well as their friends.

NEWS IN BRIEF

ALL military and defence taxes levied in Goa by the former Portuguese regime have been abolished.

The State Trading Corporation is understood to have signed an agreement with Poland for the export of lemongrass oil, worth Rs. 3 lakhs, and it is negotiating with Poland for export of sandalwood oil.

A new variety of cotton known as "raniben," tolerant of heavy rains, has been evolved by the Indian Central Cotton Committee, in co-operation with the U.P. Department of Agriculture.

The newly-built Cruiser Graving Dock at the Naval Dockyard, Bombay, was inaugurated by the Defence Minister, Mr. V. K. Krishna Menon, on Tuesday the 9th inst. The dock will dry-dock the Navy's cruisers and other large ships.

A licence for putting up at Tuticorin in Madras a fertiliser factory with an annual capacity of 33,000 tons has been granted to Messrs. Kothari and Sons, Madras. A U.S. firm is expected to collaborate in the project.

The Tariff Commission has taken up for investigation the question of continuing protection to sheet glass industry after December 1962. It has prepared questionnaires for eliciting the opinions of various producers and consumers.

The Central Warehousing Corporation is expected to build seventeen new warehouses in the second year of the third Plan, that is 1962-63. It has so far built 50 warehouses, in addition to the 300 warehouses constructed by the 14 State Warehousing Corporations.

The Indian Central Jute Committee has decided to undertake a comprehensive study of the economics of jute-growing with particular reference to the cost of production. The Committee has also decided to sponsor a scheme for examining the possibility of utilising jute sticks for industrial uses.

India's exports during the month of November 1961 were higher at Rs. 60.14 crores, as against Rs. 57.01 crores in the previous month. But the extent of the rise in exports was less than that of imports which aggregated Rs. 85.32 crores, as compared with Rs. 79.60 crores in October. Consequently, the adverse balance of trade widened from Rs. 22.59 crores in October to Rs. 25.18 crores in November.

According to the provisional estimates of the Livestock Census held in Gujarat in April 1961, the total livestock population in that State is 13.42 million, as against 13.33 million in 1956. The number of cattle has gone up by 6.3 per cent from 6.13 million to 6.51 million. The number of buffaloes has gone up by 9.1 per cent, that is, from 2.62 million to 2.86 million. The number of sheep has registered a fall of 14.4 per cent to 1.49 million and that of goats 13.7 per cent to 2.58 million.

A process for extracting Epsom salt and potassium chloride from sea bittern has been developed on a semi-pilot plant scale at the Central Salt and Marine Chemicals Research Institute, Bhavnagar. India's present annual requirements of about 50,000 tons fertiliser grade potassium chloride are almost entirely met by imports.

A motor fishing vessel, *Jal-Ruston*, built by the Ruston and Hornsby Ltd., an associate of Greaves Cotton and Co., Ltd., Bombay, was launched at Balmora by Mr. K. Chidambaram, Director of Fisheries, Gujarat State, last week. The vessel costs about Rs. 11,000 and is equipped with the Ruston oil engine, incorporating the most modern developments in small marine oil engine design.

The Government of India has approved the inclusion in the third Plan of a thermal power station, to be located at the site of the Kalakote coalfield in the Jammu region of Jammu and Kashmir State. The thermal station, consisting of two steam turbo-generating sets, with boiler and accessory equipment will have an installed capacity of 10,000 kw. of power. The power station will help in the mechanisation of mining operations in the Kalakote coalfield, and feed heavy industries, including a cement factory, proposed to be established in this region. The power station will also supplement electric power supply to the Jammu and Kashmir grid system. The equipment for the thermal station is proposed to be obtained from Yugoslavia, under the Yugoslav credit. The total cost is estimated at Rs. 1 crore.

The world's biggest aerial ropeway is to be built in India by a British firm at an estimated cost of over £2 million. It will carry up to 450 tons of sand an hour from the bed of the River Damodar to collieries at Jharia in Bihar. The Coal Board has placed the order with Breco-Ropeways, of London. Breco is to construct a composite plant which will include a sand-winning apparatus, feeder ropeways and heavy-capacity trunk ropeways, delivering sand to a number of stockpiles for distribution to the various collieries. The whole plant is expected to be completed by the spring of 1964. The project consists of three mono-cable ropeways, each less than a mile in length and each capable of conveying 200 tons an hour. These are connected with a single bi-cable ropeway split into five sections and 16 miles long, which has a capacity of conveying 450 tons an hour.

The Government of India has appointed a Central Tripartite Wage Board for the iron and steel industry, with Mr. G. K. Shinde as Chairman. The terms of reference include: (a) to determine the categories of employees (manual, clerical, supervisory, etc.) who should be brought within the scope of the proposed wage fixation, and (b) to work out a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages. It is stated that, in evolving a wage structure, the Board should, in addition to the consideration relating to fair wages, also take into account the needs of the industry in a developing economy; the requirements of social justice and the need for adjusting wage differentials in such a manner as to provide incentives to workers for advancing their skills. The Board should bear in mind the desirability of extending the system of payment by results. In this the Board shall keep in view the need for fixing a minimum (fall-back wage) and also to safeguard against overwork and undue speed. The demands in respect of payments other than wages raised by the unions will be taken into consideration by the Board in making its recommendations.

The Merck and Company, Incorporated, an American pharmaceutical firm, has announced its participation in the Hindustan Antibiotic plant to be inaugurated in Bombay late in March next. The plant is being established with the assistance of Merck, Sharp and Dohme International, a division of Merck and Company. Some 40 American technicians of Merck have been training Indian technicians to service the Bombay plant when it opens. The American pharmaceutical firm also plans to establish a similar plant in New Delhi in co-operation with the Tata organisation. It will be known as Merck, Sharp, Dohme and Tata.

From Abroad

The Spring Trade Fair at Leipzig in East Germany will be held from 4th to 13th March next.

Mongolia has been admitted as a member of the U.N. Economic Commission for Asia and the Far East.

Malayan exports of tin during the calendar year 1961 were higher at 77,923 tons, as compared with 76,368 tons in 1960.

The U.S. Government proposes to lend $12 million to Mexico and five Central American countries to help them finance coffee exports.

A Rumanian delegation is now in Djakarta negotiating with the Indonesian Government in connection with the development of the petroleum industry in Indonesia.

The A.E.I.-Hofpoint of Britain, the domestic appliance division of the Associated Electrical Industries, has reduced the prices of all of its consumer products by an average of 11 per cent.

World tobacco production in 1961 was 807 million lbs., or about 50 million lbs. less than in 1960, according to the U.S. Agricultural Department.

PERSONAL

MR. T. A. Pai has assumed charge as the Managing Director of the Canara Industrial and Banking Syndicate Ltd., with effect from the 1st inst.

Mr. H. R. Rakshit, Public Relations Officer at the German Social Centre of Rourkela for the last two years, has been appointed Chief Public Relations Officer for Hindustan Steel Ltd., Ranchi.

Mr. B. N. Banerji, Member, Central Board of Revenue, is expected to take over charge as the Director-General of Export Promotion with the status of Additional Secretary.

Dr. C. F. Hickling, Fisheries Adviser to Britain's Department of Technical Co-operation, will advise the Government of India on its marine fisheries research programme.

Mr. W. A. C. H. Bosschaart has been appointed Chairman and Managing Director of Philips India Ltd. *vice* Mr. P. C. Vink, who will take over as the Managing Director of the Philips organisation in Australia.

Communist China has entered into an agreement with a French firm for the purchase of one million tons of assorted French grain in the next three years. The deal is worth about $60 million, but the prices are subject to revision at six-monthly intervals.

The U.S. foreign aid missions abroad have been instructed not to allocate funds for expanding rubber plantations, without obtaining prior approval from Washington. According to a State Department spokesman, it would be unwise to sell rubber at more than 20 cents per lb. after 1970, in view of increasing competition in the world rubber market.

South Africa will sell pig iron worth £90 million to Japan over a ten-year period, following an agreement reached between the S. African Metal Corporation and the Japanese Yawata Iron and Steel concern. It is not known how Japan will pay for the pig iron. It is reported that S. Africa is likely to import in exchange Datson pick-up truck engines and chassis for assembly in S. Africa.

Short-term prospects for the U.S. economy are bright and output will continue to expand rapidly in 1962, according to the Organisation for Economic Co-operation and Development. All major sectors of domestic demand are expected to contribute to the improvement. The findings of the Organisation's study reveal that the increase in house-building is likely to continue, that the demand for industrial plant and equipment will recover and that Government expenditure, particularly defence spending, will contribute to larger demand.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

GLASS AND CERAMICS

THE recorded history of Indian glass industry dates back to the sixteenth century, or perhaps earlier, when there was a number of established units in North India manufacturing, on a fairly large scale, such products as bangles and flasks for preserving the waters of the Ganges. It is, however, only during the last half-century that the industry has developed on modern lines and diversified its pattern of production to cater to various industrial applications. With the inception of planning, the industry has received great impetus. This has been particularly so, because of the growing demand from various sectors, such as railways and automobiles, building construction, electrical industry, scientific laboratories and packaging especially for chemicals and pharmaceuticals. Thus, the output of glass and glassware, including sheet glass, laboratory glass and glass shells, has increased from no more than 94,000 tons in 1951 to 224,000 tons in 1961. In the field of refractories, production has gone up from 240,000 tons to 1.58 million tons and ceramics from 36,000 tons to 121,000 tons. The expansion of the industry has been sustained by the increasing tempo of mechanisation of the various manufacturing operations. The quantitative progress has been accompanied by a perceptible improvement in quality as well. No wonder, then, that the glass industry has even been able to enter the export market, albeit on a small scale.

The industry has plans for making further headway during the third Plan period. The total capacity of glass and glassware is proposed to be stepped up from about 370,000 tons in 1960-61 to 615,000 tons in 1965-66. The capacity of refractories is expected to go up from 87,000 tons to two million tons. Another sector, which has large development programmes, is electric porcelains, the capacity of which will be raised from 12,500 tons to 30,000 tons. The corresponding production targets are 440,000 tons for glass and glassware, 1.6 million tons for refractories and 24,000 tons for electric porcelains. The manufacture of several new items is also envisaged. Particular mention may be made here of optical glass, which is of basic significance to the instruments industry. The other lines of production proposed to be taken up during the Plan include ophthalmic glass, fibre glass, plate glass, crystal glass, wired and figured glass, glass insulators, special type of refractories and superior quality sanitaryware and laboratory glassware. Mr. Manubhai Shah, Union Minister for Industry, stated, in the course of the address to the first meeting of the newly established Development Council for Glass and Ceramic Industries, held last week at New Delhi, that industrial licences had already been issued to reach the target laid down in the third Plan. This, no doubt, is encouraging. But licensing is only the first step. What is more relevant is to see that plants are put up according to schedule, their capacity is fully utilised and they produce goods which are competitive in terms of both quality and price.

In this context, it is of the utmost importance to step up the rate of utilisation of capacity by the industry, even granting that some surplus capacity is inevitable in the case of an industry like glass. The major impediment in the way of full utilisation of capacity is the inadequacy of raw materials and fuels. The chief raw materials are soda ash, sand, borax, salt cake, dolomite, bone or limestone, saltpetre, sulphur, manganese dioxide, colouring materials and refractories, as also coal as fuel. The supply of soda ash of requisite variety is now insufficient. The light soda ash produced in India is not quite suitable for use in glass manufacture, in that its use will render cost of production prohibitive. Besides, the restrictive policy on imports has circumscribed the scope for buying the requisite variety, the heavy soda ash, from other countries. It is, at any rate, heartening to hear from Mr. Manubhai Shah that a beginning has already been made by certain soda ash plants to produce heavy type product required by the glass industry. It may be noted here that the Tata Chemicals plant at Mithapore, Gujarat, has just commenced production of heavy soda ash. It will produce 1,500 tons per month. The total consumption of soda ash by the industry is estimated at 70,000 tons per year, which is expected to go up to 100,000 tons in the next two or three years. Domestic prices of soda ash, again, are much higher than those in other countries. The high cost of this raw material impairs the competitive capacity of Indian glasses. It is encouraging to note, in this connection, that the Government intends to give glass manufacturers soda ash at concessional price, as an incentive for export.

The glass industry's difficulties are not confined to soda ash alone. In respect of sand, the industry complains of inadequate supply of sand of uniform quality. The producers have also to depend on imports for some of the essential chemicals. The precarious position of the supply of coal is only too well known to need any elaboration. These difficulties may have a crippling effect on the capacity of the industry to export. So it is doubtful whether Mr. Shah's intention to double exports to Rs. 50 lakhs annually by the end of the third Plan will be fulfilled, although it is a reasonable target. The Government will do well, therefore, to consider the possibility of granting sufficient incentives, in the form of import entitlements for raw materials and machinery, against exports of glass and glassware. The industry, on its part, should spare no efforts to improve quality and adhere strictly to the relevant standard specifications designed by the Indian Standards Institution.

FINE CHEMICALS FACTORY

The inauguration of the fine chemicals factory of the Glaxo Laboratories (India) Pvt. Ltd. at Thana, Bombay, on Tuesday this week marks an important landmark in the development of chemical and pharmaceutical industry in India. The new plant, declared open by Mr. Y. B. Chavan, Chief Minister of Maharashtra, will take up, for the first time in India, the manufacture of several fine chemicals, particularly vitamin A and corticosteroids, from indigenously available natural products. It carries the country one more step forward towards its objective of ensuring adequate supply of vitamins and drugs at reasonable prices. Vitamin A will be produced from beta-ionone, which is derived from lemon-grass oil, available in Kerala in abundance. The process of converting lemon-grass oil into beta-ionone has been developed by the scientists of the Glaxo's parent company in the U.K. Vitamin A, which is an essential ingredient for maintaining good health, finds extensive application in India in the production of *vanaspati* and other foodstuffs, including animal feeds, as well as in a large number of pharmaceutical preparations. It may be recalled here that it was Glaxo which started the manufacture of vitamin A in India, for the first time in 1958, but out of imported intermediates.

The manufacturing processes for the production of corticosteroids and senna adopted by the new plant also speak volumes for the pioneering efforts of Glaxo. The first corticosteroids used for medicine, namely, cortisone, was synthesised from sisal plant by the British Glaxo chemists in 1954 by a nineteen-stage chemical process. Glaxo India began the production of corticosteroids as early as in 1958 from imported basic chemicals. Sisal is now grown in India in limited quantities only. But the Company seems to be optimistic about finding adequate quantity of sisal from indigenous sources in course of time. In addition, senna pods, which are available in South India and have been in use for centuries as a crude laxative, will be refined in the senna plant at the Thana factory. The refined product will be devoid of the griping properties and the bitter taste of the natural product.

The manufacture of vitamin A and corticosteroids is expected to save foreign exchange of Rs. 30 lakhs annually. The total capital outlay on the project so far amounts to about Rs. 1.50 crore and will be Rs. 2 crores when it is finally completed. A noteworthy feature of the Company's scheme is the proposal to establish a full-fledged research unit. This will work in partnership with Glaxo's laboratory in Britain and develop itself to fundamental research in discovering new products from indigenous raw material. The Company has also been paying close attention to labour welfare schemes. It has, for instance, devoted a sum of Rs. 23 lakhs for housing its workers in clean, airy, modern flats in the neighbourhood of its new factory at Thana.

The happy and fruitful association of Glaxos with India, where it has now taken firm roots as a progressive manufacturing concern, dates back to 1919, when Messrs. H. J. Foster and Company of Bombay was appointed exclusive agents for the world-famous Glaxo infant food produced by Glaxo Laboratories Ltd., Britain. Fosters subsequently became a wholly-owned subsidiary of Glaxo. The post-independence period saw a steady expansion in the activities of the Glaxo Laboratories (India) Ltd. and the commencement of secondary production of a wide range of pharmaceutical preparations out of imported basic ingredients. Glaxo now manufactures in India all the products formerly imported as finished goods either from local or imported ingredients; these number well over a hundred items. The transition of Glaxos in India from the position of a secondary manufacturer to a basic producer dates back to 1958 when it was decided to put up a milk drying factory at Aligarh (U.P.) and a fine chemicals factory at Thana which has come to fruition. The Aligarh factory has been in operation for some time now, turning out the well-known baby foods, Glaxo and Ostermilk, and saving the country foreign exchange of the order of Rs. 40 lakhs. The fine chemical factory at Thana is one of the most modern units in the world, incorporating all the latest developments in this sphere of science and technology born of years of research and know-how. The proposed research unit will be in keeping with the exhortation of Mr. Manubhai Shah, Union Minister of Industry, to foreign manufacturers to provide suitable opportunities for Indian scientists within this country to benefit by their participation in our economic development. Glaxo's manufacturing units are undoubtedly a shining example of Indo-British economic co-operation.

COTTON PRICES

The question of an economic price for cotton has again been tossed into the arena of controversy. Mr. Madanmohan Ruia, President of the East India Cotton Association and the Cotton Buyers' Association, set the ball rolling by categorically asserting, in his presidential speech at the annual meeting of the Cotton Buyers' Association held at Bombay on 26th December 1961 (*vide* page 14, *Commerce* of 6th January) that the first fundamental prerequisite for obtaining higher production was to allow a realistic price by either removing the present price control or, if that were not possible, by raising the present ceiling prices for cotton to world parity levels. Mr. Ruia reiterated his plea again at the plenary session of the tenth conference on cotton growing held at Bombay on 30th December last, when, speaking as the Vice-President of the Indian Central Cotton Committee, he pointed out that the present ceiling prices of Indian cotton were somewhat artificial and had a real bearing on the country's inability to adjust the cotton production to meet the rising demand. He conceded that, if his suggestion were implemented, it might have repercussions on exports of Indian cotton textiles. But he was confident that "other ways" could be found for promotion of exports.

Mr. Ruia's solution for the cotton problem is, however, not favoured by the spokesmen of millowners who fear that an increase in the ceiling prices of raw material would hit exports of cotton textiles from India. Their misgiving was voiced by Mr. Bharat Ram, President of the Indian Cotton Mills Federation, this week. Commenting on Mr. Ruia's suggestions, he pointed out that one of the main advantages that India had over its competitors in the world textile markets was that Indian cotton was relatively cheaper. If the ceiling prices for cotton were raised, exports of cotton textiles would be adversely affected. As long as prices left "a decent margin" to agriculturists, there was no justification, he averred, for raising the ceiling. If the ceiling on cotton prices were raised, it would, he said, tend to shift more acreage to cotton and affect the production of other crops, thereby disrupting the internal price structure. Citing the example of sugarcane, Mr. Bharat Ram pointed out that higher sugarcane prices had caused a shift of acreage to this crop at the expense of other essential agricultural products.

It is evident from the foregoing account that both Mr. Ruia and Mr. Bharat Ram agree on one point, namely, that the price should be such as to ensure a reasonable return to the cultivator. Mr. Ruia, however, thinks that the present ceiling prices, which happen to be the current market prices, are unrealistic in that they are not only below world parity but also

low in relation to the supply and demand for cotton and the prices of other commodities. By implication Mr. Bharat Ram is of the view that the cultivators are getting "a decent margin." Neither of these industrialists have cited any statistical data in support of their respective contention. We had pointed out, in our last issue, the dangers inherent in an upward revision of the price of cotton and the alternative way of ensuring a higher return to the farmer which is the aim of raising the price. We, however, do not think that the argument that cotton prices should remain lower than elsewhere in the world in order to give an advantage to millowners to compete successfully in the world markets is tenable. This amounts to saying that the poor farmer should make a sacrifice for the benefit of workers, investors, and managements covered by the mill industry who are all well off. No impartial observer can agree to this kind of proposition. The competitive ability of cotton textile mills should be sought to be improved by removing the other handicaps placed on the industry, such as excessive taxation, restrictions on modernisation and elimination of uneconomic units.

The contention that higher cotton prices would hit exports is far more valid, although, that too cannot be taken as a ground for not raising cotton prices, if the prices happen to be uneconomic. For a price policy which ignores the need for maintaining and raising production to meet the continuously rising demand will defeat the very objective which the policy seeks to achieve. The question of questions is, therefore, whether, at the ceiling prices, the return to the farmer is sufficient to cover his cost of production and leave a reasonable margin of profit. Those who plead for raising the ceilings obviously think that it does not, whereas those who oppose it think that it does. Neither Mr. Ruia's Associations nor Mr. Bharat Ram's Federation have, as far as we know, conducted any study of this matter. It is, therefore, imperative that an impartial investigation be conducted with a view to determining the relative increase in the cost of cultivation and prices of cotton. A revision of cotton prices should be made only on the basis of such an investigation and after making sure that the necessary incentive for growing more cotton cannot be provided by the other means discussed in our journal last week. The basic objective in deciding this question should be not to aggravate inflationary forces.

IRAQ'S SEIZURE OF OIL CONCESSIONS

Nationalism and foreign oil companies always seem to be heading for a conflict in the present-day world. The latest instance of such a conflict is to be found in the dispute between the Iraq Government and the Iraq Petroleum group of companies working in Iraq. The dispute has now taken a serious turn, for Law No. 80 of 1961, passed on 12th December to override the companies' legal rights under the concession agreements, redefines and greatly restricts their areas of operation. It is stated that the companies are now left with only about 1,938 sq. kms., out of their original concession areas totalling 435,780 sq. kms. That means they have been stripped of more than 99 per cent of the area of their concessions which, normally, will expire legally only at or after the end of this century. The companies are complaining bitterly that the Iraq Government has thrown overboard its own earlier proposal that 90 per cent of their areas be relinquished in two stages, namely, 75 per cent immediately and a further 15 per cent within seven years. Their bitterness now is all the greater, for the Iraq Government has chosen unilaterally to dispossess them of 99 per cent of their concession lands, although they had agreed last year to the 90 per cent relinquishment formula as part of a general settlement of various other matters under discussion.

Why has the Iraq Government taken this extreme step? One explanation is that the Government was angry because it could not get the companies to accept its demands for a 20 per cent share participation and for more than a 50 per cent share in profits. Whatever be the explanation, there seems to be some point in the contention of the companies that even 90 per cent represents much more territory than Iraq can possibly itself explore or exploit, and more than it could advantageously lease out to others in the present circumstances. Even if new oil were discovered and developed with Russian help, it would have to be exported into markets where the Russians are already pushing their own exports to the utmost and, moreover, would have to be sold in competition with the Iraqi oil of the Iraq Petroleum group of companies. It is also rightly argued that the Government's hasty action might harm Iraq's international standing. Here the companies emphasise the point that, if the 90 per cent surrender had been accepted, as earlier agreed between the two parties, the territory would have been open for offer to others, which is not the case now. No reputable concern, according to them, is likely to make an agreement to spend money in territory only made available by breaking an agreement, for, by thus condoning the breach, it would be eroding the legal and moral basis on which its own agreement would rest. If the large financial and technical resources required for further exploration and exploitation are thus denied to Iraq, the Government's action in forcibly taking more than what it would otherwise have accepted on a friendly and agreed basis will be proved to have been unwise—a case of cutting the nose to spite the face.

RAW JUTE PRICES

The need for avoiding violent fluctuations in raw jute prices and ensuring some sort of stability is imperative as much in the interest of cultivators as in that of jute goods producers. For, while any undue rise in prices will have a serious impact on the cost of manufacturing jute goods, a sharp fall will hit the growers hard and adversely affect the jute industry itself through scarcity of raw material caused by diversion of a large part of jute lands to other crops, particularly rice. Jute growers and millowners alike have, therefore, reason to feel gratified at the categorical declaration made by the Jute Commissioner, Dr. Ajit Mazoomdar, at a meeting of the Central Supervisory Body for Jute held at Calcutta last week, that the Government of India was determined to maintain Calcutta prices of jute at the floor level of Rs. 30 per maund (basis Assam bottoms) and that there could be no question of relaxing official vigilance at any time this season. In this connection, he pointed to the formation of the Jute Buffer Stock Association which, he said, "is now in a position to take up purchase operations whenever necessary." Availing himself of the opportunity, Dr. Mazoomdar highlighted some of the other steps taken to maintain raw jute prices at reasonable levels. These are as follows:

1. The Indian Jute Mills Association has introduced a system of compulsory purchase of jute by member-mills on the basis of minimum weekly quotas.

2. Following representations to the Railway Board, jute movements from North Bihar and North Bengal have shown a progressive increase since early December. More broad-gauge empties are now being made available by the North-Eastern and North-Eastern Frontier Railways, with a corresponding improvement at transhipment points.

3. The National Agricultural Co-operative Marketing Federation has started working a scheme to assist co-operative organisations of jute growers in the States in selling their jute to Calcutta. The scheme provides for grant of brokering facilities and financing of purchases with advances up to 80 per cent of value.

4. In order to enable jute mills and traders to effect larger purchases this season, steps have already been taken, in consultation with the Reserve Bank and the State Bank, to provide additional credit facilities. Further steps for credit liberalisation are under consideration.

5. The jute import policy for the current season is so designed as not to impinge on the undertaking already given that the primary producers' interest would be protected at all costs: the total imports allowed so far come to just under 400,000 bales.

While all these measures have imparted stability to the raw jute market, there still remain a few jute growing pockets, especially Tripura, Saharsa in Bihar and some districts in Assam, where, we are told, a large accumulation of the fibre, due to inadequate rail and river transport at the peak marketing period, is tending to depress local prices. The problem in the Saharsa district is said to have been accentuated further by an abundance of inferior quality jute which leads to an abnormal widening of price gap between what jute circles term bottom and cross-bottom grades of the fibre. In such a situation, the chances of a buyers' market developing locally, as Dr. Mazoomdar pointed out, cannot altogether be ruled out. This aspect has unfortunately been completely overlooked by those who have alleged that the jute mills are trying their best to keep down raw jute prices by making only small purchases of the fibre. That the allegation is baseless is also evident from the statement of no less a person than the Jute Commissioner who said: "Coupled with the inadequacies in transhipment from metre-gauge to broad-gauge at Barauni, Bhagalpur, Sakrigali, Farakka and other points, the fact that jute normally enjoys no priority in booking aggravates the transport difficulty. The railways have failed to fulfil their programme of jute bookings decided at the beginning of the season."

An important point which Dr. Mazoomdar made in the course of his speech was that, though the pressure of jute arrivals into Calcutta usually reached the season's peak in December, there might be a reversal of the norm this season because of the big crop and it was quite possible that the rate of arrivals in January and February would exceed that of the previous month. This is because the growers' holding power in the earlier months was higher as a result of the much better prices received by them during the last two years. Every precaution has, therefore, to be taken, as Dr. Mazoomdar pertinently stressed, to ensure that a larger release of jute by growers in the immediate future did not have an adverse effect on prices and, consequently, on the sowings of the next jute crop.

THE CEMENT PRICE ISSUE

IMPLICATIONS OF GOVERNMENT DECISION

By T. P. Subramonian

ONCE again, the price of cement has been raised. A thorough investigation into all aspects of this controlled industry, undertaken by the premier price-fixing authority in the country, formed the basis for the Government decision to enhance the price of this basic construction material. The rise in the price of cement has unwelcome implications for the economy. At the same time, the Tariff Commission's Report and the Government's major departures from the recommendations of the Commission raise certain vital issues. This paper is at attempt to examine them.

The Industry's Case

The fair ex-works prices of cement for the different producing units were fixed by the Union Government on the recommendations of the Tariff Commission in 1958. Excepting for the slight enhancement of these prices early in 1960, consequent on the Central Wage Board Awards, these held good till June 1961. There were as many retention prices as there were producers. The State Trading Corporation (S.T.C.) has been functioning as the sole distributing agency for cement in the country for the last five years. A uniform f.o.r. destination price was fixed throughout the country by the addition of a pooled freight by the S.T.C. to the individual producers' retention prices. Thus, prior to the latest Tariff Report, while the producers' retention prices ranged from Rs. 55.54 per tonne of naked cement for Dalmia Bharat to Rs. 82.18 for Travancore Cements, the uniform f.o.r. destination price for packed cement was Rs. 117.50 per tonne till February 1961. With effect from 20th February this year, the f.o.r. destination price was fixed on an unpacked basis at Rs. 104.60 per tonne. The packing charges are added separately to this every quarter. These packing charges amounted to Rs. 17.00, Rs. 18.00 and Rs. 19.00 per tonne in the first, second and third quarter, respectively of the calendar year 1961. For the fourth quarter, it has been fixed at Rs. 18.00 per tonne.

The reference of the cement industry by the Government to the Tariff Commission in October 1960 for a fresh examination of its prices was the result of a series of representations by the industry to the effect that its costs had gone up appreciably on account of forces beyond its control. The industry had also based its case for an enhancement of the ex-works prices on the need for funds for rehabilitation and expansion and for a better return on capital comparable to the profits earned by other industries. It had also urged that assessment of production costs should be based not on rated capacity but on actual production.

Tariff Commission's Reaction

In its report submitted in August 1961, the Tariff Commission has appreciated the industry's plea and recommended new ex-works prices to the nineteen different units (the A.C.C. group being treated as one unit, as in the previous inquiry), representing varying gains over the previous prices. The weighted average of the new ex-works prices (Rs. 74.49 per tonne, inclusive of selling agency commission of Re. 1.49 and incidental charges of Re. 1.25) represents a 21 *per cent increase* over the weighted average of the previous ex-works prices (Rs. 59.20 per tonne exclusive of the selling agency commission and incidental charges). According to the Commission, the bulk of the increase is to enable the industry to shoulder the increased cost-burden caused by forces beyond its control such as the increase in railway freight, rise in the price of coal and limestone, increase in electricity rates, rise in wages, etc. A small part of the increase is due to higher rates of profit allowed to most of the units. Let us examine these two—the cost element and the profit element that go into the ex-works prices allowed to the producers.

Both in the 1958 inquiry and in the 1961 inquiry, the Tariff Commission investigated into and estimated the costs of production of each individual unit, added a quantum of profit based on a percentage return on capital employed and, with a rehabilitation allowance where justified, arrived at the fair ex-works price of cement for each unit. It may be noted that, against the weighted average ex-works cost of Rs. 50.06 per tonne in the 1958 report, the weighted average ex-works cost in the present inquiry is Rs. 61.61 per tonne—a rise of Rs. 11.55 per tonne or nearly 23 *per cent in three years*. If this is the extent to which costs have actually gone up in a regulated industry on account of forces beyond its control, it must certainly make our planners sit up and think. As far as the Tariff Commission and the cement industry were concerned, the answer to rising costs of inputs—labour, fuel, transport and raw materials—might lie in an automatic enhancement of the final ex-works prices and in turn an increase in the selling price of cement. But the issue must perforce have a wider significance for the Government and the Planning Commission. And it should be their endeavour to cry halt to the rising spiral of wages and prices in the larger interests of the country and the Plan.

Profit Element

As regards the profit element, the Commission has by now settled down to one uniform method in their price inquiries—a fair return on capital employed in the industry. Capital employed is defined as net fixed assets *plus* current assets *minus* current liabilities. As in the previous inquiry, the Commission has now recommended a differential rate of return for the several units, depending on the cost-efficiency of the unit and special circumstances, if any. The *principle of differential return* is based on the sound idea that the high cost units should not expect the same rate of return as the low-cost ones and the low-cost units must have a reward for their efficiency. To the industry as a whole, the Commission has allowed a higher rate of return in the present inquiry than in the previous one. The rates of return now recommended range from 10 to 14 per cent as compared with the range of 8-12 per cent in the last report. This is the first time that the Commission has allowed a 14 per cent return on employed capital for an important industry. That the Commission has revised its notion of the 'norm' of fair profit from 12 per cent to 14 per cent is of some significance to other industries and to the economy in general. Unless there is a wide disparity in the element of risk, controlled industries which have been allowed a 12 per cent return by the Tariff Commission and other *ad-hoc* committees would now have a legitimate case for enhancement of retention prices. That the Commission has now allowed gratuity as an item of cost, whereas in the previous inquiry it was considered a charge on profits, is also not without significance.

The return on capital referred to above is the gross profit, out of which the industry must meet its commitments under bonus for workers, interest on borrowed capital and debentures, dividend on preference shares, managing agents' commission and income-tax, and finally declare a reasonable dividend to the shareholders. In view of the challenge facing the cement industry in the shape of a large expansion programme—for which a separate allowance has not been given in the prices—one would readily endorse the Commission's enhancement of the norm of fair profit from 12 per cent to 14 per cent. At the same time, it must also be said that a protected industry, with an expanding and assured domestic market and with an assured price for a stipulated period, would not be justified in expecting more than this as an award from a statutory body. The price mechanism, even as recommended by the Tariff Commission, provides room for a larger profit than stipulated, if the unit brings about reduction in its costs of production by improved efficiency—assuming, of course, the unit costs of non-escalator inputs does not rise.

Thus, taking the works cost and profit element together, the Tariff Commission appears fully justified in having recommended an increase in ex-works prices of cement.

The Prices Recommended

The final fair ex-works selling prices of naked cement fixed by the Commission for the nineteen units in the industry range from Rs. 67.50 for Dalmia Dadri to Rs. 103.00 for Travancore Cement. The weighted average works out to Rs. 74.49 per tonne, which is an increase of Rs. 12.55 over the current price. According to the Commission's recommendation, this entire increase is to be passed on to the consumer. Thus, adding to the weighted average ex-works price of Rs. 74.49 per tonne the excise duty, inter-State sales tax, average freight, S.T.C. remuneration, contingencies, etc., the Commission arrives at a new uniform f.o.r. destination price for naked cement of Rs. 118.40. This involves an increase of Rs. 12.55 over the pre-report figure of Rs. 105.85 (i.e., Rs. 104.60 plus incidental charges of Re. 1.25). The Commission has recommended that the new prices should be effective for the three years ending 30th June 1964, subject to the escalation clauses covering fuel and power rates.

Government's Sanction

In their resolution dated 31st October 1961, the Union Government have broadly accepted the approach of the Tariff Commission to the cement question and have agreed to the need for an enhancement of cement prices. In three important respects, however, the Government have differed from the Commission. Let us examine these:

(a) ***Differential Retention Prices:*** While the Tariff Commission has recommended differential retention prices based on individual costs, Government feel that this system would not be conducive to efficiency and greater production. According to Government, there should be a uniform retention price for the industry, so that pressure is exerted on units having higher costs to find economies and there is a measure of reward for those able to achieve economies. Accordingly, Government have fixed a uniform ex-works price of Rs. 69.50 per tonne of naked cement. They have, however, allowed an extra price for those few units having an appreciably higher cost on account of special reasons in order to enable them to continue in production and reach economic levels. Thus, an extra Rs. 3 per tonne has been allowed for Digvijay, India Cements, Kalyanpur, Sone Valley and Satna; Rs. 5.50 for K.P.C., Saurashtra and Madras Cements; and an extra Rs. 25.50 for Travancore Cements.

In the first place, this part of the Government resolution is an internal contradiction. On the one hand, they announce their decision to have a uniform retention price because a differential system is not conducive to efficiency; on the other hand, they give extra price allow-

ance to selected units, on the ground that they are under special handicaps, thereby creating a system of differential prices which they object to in principle. It is precisely because of the disparate conditions within the industry that the Tariff Commission declined to fix a uniform retention price. What could possibly act as a deterrent to efficiency in the mechanism of differential works cost was sought to be countered by the Commission through the mechanism of differential profit element. Perhaps, the most charitable description of the price system introduced by the Government is that, while it continues to be a system of differential ex-works prices, the number of prices is smaller and the margin of difference is narrower than under the Tariff Commission's scheme. Under the Commission's scheme, there were ten levels of prices, the margin between the lowest and the highest being Rs. 35.50; under the Government scheme, there are four levels of prices, the margin being lowered to Rs. 25.50. But then the implications of this are serious.

The scheme of retention prices now announced by the Government would mean not a mere departure from or simplification of the Tariff Commission's recommendations. It would mean an outright violation of the interrelated principles upon which the Tariff Commision had based its scheme. Since the Tariff Commission had computed the ex-works prices by adding a differential profit margin to the estimated actual costs of production (*plus* a rehabilitation allowance where justified) of each of the units, a departure from these ex-works prices would obviously mean an enhancement/reduction of the profit-margin allowed. The new scheme of retention prices announced by the Government would mean not a mere distortion of the profit-margin allowed by the Commission but a distortion that is anything but uniform for the different units. Table I shows the increases in retention prices recommended by the Commission and the increases allowed by the Government for the different units.

The retention prices now fixed by the Government and those recommended by the Commission for the different units are not exactly comparable as the former is exclusive of an amount of Rs. 2.75 representing selling agency commission (Re. 1.50) and incidental charges (Re. 1.25) which the Commission's prices include. Making due allowance for this amount, we have in Table II compared the increases recommended by the Commission and those allowed by the Government in the ex-works prices of the different units.

It will be seen that for all units except one the Government has allowed a quantum of increase that is less than what the Commission had recommended. The exception is Dalmia Bharat for which while the Commission had recommended an increase of Rs. 9.21, Government has allowed an increase of Rs. 13.96. This is, indeed, strange and without justification. The possibility that this might have been accidental and not intentional does not make it any the less innocuous. On the other hand, one unit (Panyam) gets practically no increase, whereas the Commission had recommended an increase of Re. 1.76 per tonne. Barring these two extreme cases, the increases allowed by the Government range from 37 per cent to 94 per cent of the increases recommended by the Commission.

In Table III, we have made a two-way classification of the units in accordance with the price increases allowed by the Government and in accordance with their own efficiency as measured by the profit-margin allowed by the Commission. Looked at this way, the nature and degree of distortion effected by the Government scheme would become clear. Units that were put in the same profit bracket by the Commission get varying shares of the increases recommended by the Commission and will thus be in different profit brackets. It is also likely that some of the high-cost units will now get higher profits per unit of employed capital than the low-cost units, which would mean a negation of the principle of reward for efficiency. While the implications for each unit will have to be worked out separately and in detail, one would not be far wrong in saying that, by and large, the Government's modification of the retention price scheme recommended by the Commission has created a state of confusion.

(d) ***The Period of Price-fixation:*** While the Tariff Commission had recommended the new prices to be in force for a period of three years, Government have decided that the new prices should be in force for a longer period, i.e., till the end of the third Plan. This has advantages as well as disadvantages. The advantage for the country is a measure of stability in the price of a basic construction material throughout the Plan period. But this measure of stability is subject to the escalation clauses relating to fuel and power rates and any changes arising out of governmental action. On the other hand, the industry has reacted unfavourably to this decision of the Government extending the period of price-fixation recommended by the Commission. For they would not be able to pass on to the consumer increases in cost arising from factors other than those covered by the escalation clause. The expression "governmental action" is an interesting innovation open to very wide interpretation. A shorter period would invariably be welcomed by industry in a persisting situation of product-shortage and general inflationary pressure. The presence of escalation clauses by itself is no consolation to the industry, in view of the absence of a quantifying mechanism and the characteristic delays of governmental decisions. The Government's decision on the period of cement price fixation is an interesting contrast to the action it recently took on the Damle Committee's Report on Oil Prices, drastically cutting short the period for which the Committee had fixed the prices.

(e) ***The Increase in Consumer Price:*** To allow an increase of Rs. 12.55 in the weighted average of ex-works prices, the Commission effected an equal measure of increase in the f.o.r. destination price which, according to their recommendation, was to be raised from Rs. 105.85 to Rs. 118.40 per tonne of naked cement. The Government, however, have not allowed the full measure of increase in ex-works prices recommended by the Tariff Commission, as stated earlier. The f.o.r. destination price has now been raised by Government to Rs. 117.60, as against Rs. 118.40 recommended by the Commission. The reason given by the Government for not agreeing to the full quantum of increase in the price recommended by the Commission is that, while they appreciate the need to provide incentives for greater production, they are anxious to avoid an undue rise in the price of a basic construction material like cement and thus safeguard the interest of the consumers. One is left to wonder how, while the increase of Rs. 12.55 in the f.o.r. price would be an undue hardship for the consumer, a rise of Rs. 11.75 would not! The reduction of 0.7 per cent effected by Government on the revised f.o.r. price recommended by the Commission fails to carry conviction in regard to the Government's solicitude for the cement consumer. The net result is that the Government have distorted the ex-works price scheme carefully evolved by the Commission without any significant gain to consumers.

Both the Tariff Commission and the Government have left undisturbed the margin between the ex-works price and the f.o.r. destination price. The margin is as wide as Rs. 45. The two important constituents of this margin are the excise duty of Rs. 23.60 per tonne and the pooled freight of Rs. 18.90 per tonne. The Commission has not thought it fit to comment on the excise duty which was first levied in 1954 at Rs. 5.00 per ton, increased to Rs. 20 in 1957 and, again to Rs. 24 per ton in 1959. In view of the concern that the Government have expressed, in their resolution, for the consumer, one would feel there is a clear case for reducing the quantum of excise duty on cement, so that the full impact of the increase in retention prices is not felt by the consumer. In the first place, the Government itself is a bulk consumer of cement and a reduction of the excise duty will not be an unqualified disadvantage to the exchequer. To the private consumer, on the other hand, it would be a significant relief. A high price for cement will be a great burden on private construction projects and will accentuate the problem of middle class housing. One would wish the Government will not fail to examine this question at least at the time of the next budget.

The other important element, namely, the pooled freight has, however, received the attention of the Tariff Commission. The Commission has expressed concern that the pooled railway freigth which went up from Rs. 15.00 per ton in 1954 to Rs. 15.50 in 1956 has now risen to Rs. 19.00 per ton. The Commission has observed that "the rise is not fully covered by the increase in rail freight only," and has guessed that "probably the average lead has increased because of longer movements." One does not feel assured by the report that this is a full explanation nor does one get the feeling that this element in cost, the freight average, has been thoroughly looked into. The Commission feels that "by proper screening of demand and better planning of movements," by more regular movement and shorter regional leads in one direction as far as possible, the freight average could be brought down. This is now a matter for the Government and the S.T.C. to explore and implement.

The report on this basic industry has served to highlight the dangers inherent in an inflationary situation, and the Planning Commission and the Government must look at the question from the wider angle of overall price policy and control. The Government's decision on the report has served to disturb the rationale of the Commission's approach to price fixation in a controlled industry. Lastly, the naive tendency to effect an automatic transfer of the industry's burden to the consumer's shoulders without re-examining the fiscal element and the mechanism of distribution is anything but satisfactory.

LONDON LETTERS

THE LIFTING CLOUDS

From Our Own Correspondent

LONDON, *30th December 1961*

HOWEVER one may criticise the techniques for restoring international confidence in sterling, there is fortunately no doubt that, in their savage way, the various repressions on the economy have worked. In the third quarter of this year, the improvement in the British balance of payments as compared with a year earlier was striking: from an overall deficit of £109 million in 1960 to one of £25 million in 1961. For the first three quarters of each year, the improvement was from a deficit of £230 million in 1960 to one of £108 million in 1961 and the crude trade figures for the months of October and November show that the improvement is being continued. Thus there is no question that, when the final figures for 1961 appear, they will show a vast improvement on those for the previous year, even though they will not have succeeded in turning a deficit into a surplus.

Small Improvement

The following table compares the third quarters of the two years:

(In million £s.)

	1960	1961
Imports (f.o.b.)	1,005	947
Exports (f.o.b.)	859	912
Visible trade deficit	146	35
Net invisible income	79	98
Less—net Government expenditure..	69	88
Net invisible surplus	10	10
Adverse current account balance ..	136	25

There was thus an improvement of over £110 million in this quarter, even though there was still a deficit of £25 million which compares with deficits of £68 million and £15 million in each of the two preceding quarters, respectively. No significance should be attached to the fact that the deficit appeared to increase between the second and third quarters of this year: successive quarters can never be compared satisfactorily and, in any event, the second quarter showed an exceptionally high net invisible income (after allowing for Government expenditure) of £25 million. On visible trade account—nowadays the most important part of the accounts—the third quarter actually showed a small improvement over the second.

Overseas Investments

As usual, U.K. investment overseas continued gaily in the third quarter to the tune of a net £60 million (private investment exceeded this, but the Government received a net repayment). For the three quarters as a whole, net investment overseas has reached £236 million, though the devastating effect of such a sum added to the deficit on current account has been offset by the famous once-for-all Ford share purchase of £130 million, leaving the final balance of investment at £106 million. *But it must be realised that the higher figure represents what the country is normally trying to achieve.* At the lower figure, the country has incurred indebtedness this year to date of £214 million and all this arithmetic supports the thesis that this country needs to earn a current account surplus of some £300 million in order to pay for the normal level of overseas lending. We obviously a very long way still from doing are this.

come back to the third quarter, this To some very interesting monetary movesshowed, the sterling balances of non-sterling ments, are reduced by £208 million (repaycountries with assistance) and those of nonments of Basle-ations were increased by £538 territorial organis the I.M.F.). * * *

Looking for the Light

LONDON, *6th January*

s begun, as no doubt it should. A.D. 1962 bnomists—official and private—with industry, oking hopefully for a better, and the City, l clearer future and finding some grounds for optimism. In the first place, that most obvious of all indicators, the industrial share index, has maintained itself, after its end-year rise, at about 6 *per cent above the* October low level, though neither the strength of sterling nor the level of production has encouraged this. Even though the boom in sterling has spent itself and there seems to have been some speculative outflow in December (which is, however, normally a month in which heavy overseas payments have to be met), the gold loss of only £18 million—excluding, of course, the annual service of £67 million on the U.S. and Canadian loans—is not at all unsatisfactory.

Bank of England's Reading

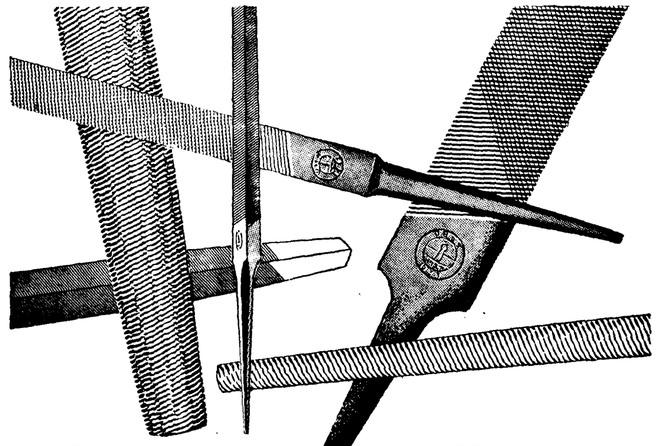
Moreover, the Bank of England has offered quite an optimistic view of the short-term factors bearing on the balance of payments. It has noted that, in the last quarter, expenditure is lagging behind the rise in national income; that Government overseas expenditure may begin to decline—even if this is through *force majeure* as Colonial commitments dwindle; and that *long-term* foreign investment in the U.K. may be maintained and thus finance the U.K. long-term investment overseas. This is not a bad position from which to start 1962, even though the Bank has warned that it is no use becoming complacent, if the "July measures" do produce their *results, the balance* of payments does improve, and then all is squandered, once again, in another inflationary spree. The future must depend on an expansion in exports—there is no substitute.

For all the foregoing reasons, plus the proposal to finance exporters with credit at 5½ per cent, the City is anticipating an early cut in the Bank rate. Though the most cynical reason advanced for this is that, unless the Bank moves fast to cut the Rate, the next crisis will be upon us and the inevitable jump in the Bank rate will bring it up to double figures!

The T.U.C. and the Chancellor

The difficult negotiations between the Chancellor of the Exchequer and the Trades Union Congress centre on the pressure to get rid of the "pay-pause." What the Chancellor is asking for is a national income policy (the word "income" replacing the prejudicial word "wages") and the T.U.C. is not objecting, though it pointed out this week, with great firmness, that profits and dividends were showing no signs of being restricted in the same way as are wages. There are a number of claims—*including* the Civil Service and the railwaymen—pending and the refusal of the Government to meet the pay claim of the Post Office workers has led to a "work-to-rule" in that service, amounting now in practice to a go-slow. If Your Correspondent's Letter is delayed that will be the reason. The industrial dangers of sitting on all wage claims is increasing weekly and even the Chancellor is now conceding the need for an intermediate stage between his pay-pause and the emergence of a national incomes policy. He would like to maintain the pause till the April Budget, but the odds at present are on an intermediate stage, to be known as a period of "wage-restraint," developing within the next few weeks. In that case, the Chancellor would like to be able to talk about his new incomes policy in the Budget.

There is a foolish story going about the City to the effect that the Chancellor threatened the T.U.C. with devaluation to get them to co-operate with his Economic Council. But there is a great deal of difference between a threat and an analysis—in the Chancellor's favourite vein—of the devaluation dangers before the country, if, in the absence of an incomes policy, costs persistently outrun prices and prevent the country achieving its needed exports expansion. There is a reasonably co-operative atmosphere between the Chancellor and Labour at the moment, with the T.U.C. having rather the better of the running. Even here light is emerging.



How to select steel files with built-in efficiency...

LOOK FOR THESE SUPERIOR QUALITIES IN YOUR LIGHTHOUSE STEEL FILES:

Precision: The uniformity in the angle and the level of each cut are precision-perfect for precision-filing.

Efficiency: The special angle of the cuts results in greater efficiency with less exertion by your workers.

Durability: Made from the finest steel and meticulously heat treated, Lighthouse files are ideal for various applications, even under rough handling.

Craftsmanship: Lighthouse Steel Files are tooled by skilled craftsmen working under expert supervision.

Lighthouse Steel Files are available in a wide range.

DEPOSIT INSURANCE IN INDIA

COMPARATIVE STUDY WITH THE U.S. SCHEME REVEALS MANY MAJOR DEFICIENCIES

By P. K. Sen
UNITED BANK OF INDIA LIMITED

THE Government of India and, particularly, the Reserve Bank deserve congratulations on their decision to insure bank deposits. The idea received formal recognition in 1950, when it was commended by the Rural Banking Enquiry Committee, which, however, had advocated that it should be deferred to a more opportune time. In 1954, the Shroff Committee recommended its consideration. Last year, on 31st August, to be precise, a Bill, entitled "The Deposit Insurance Corporation Bill, 1961" was introduced in the Lokh Sabha and was eventually passed. The scheme has come into effect from 1st January 1962. The banks have been asked to pay premium at the rate of 5 nP per centum of their respective total deposits, as defined in the Act.

The idea of insuring deposits with banks developed in the U.S. and the Federal Deposit Insurance Corporation has been successfully functioning in that country for over a quarter century. There is no other example of such insurance in any other country. In discussing the scheme for deposit insurance in this country, a reference to the American scheme cannot, therefore, be avoided.

The basic points at issue are:

(*a*) What are the objectives of deposit insurance?

(*b*) What are the functions to be performed in attaining these objectives?

(*c*) What should be the important aspects of the set-up to be organised for ensuring the smooth functioning of the scheme?

The Objectives

Discussing the need for deposit insurance, *The Staff Study on Assessments and Coverage for Deposit Insurance* of the F.D.I.C. (of the U.S.), observes:

"The economic importance of deposit insurance stems from the fact that liabilities of banks are essentially demand liabilities to the public and that these liabilities constitute the country's principal means of payment, i.e. cheque money. . . . Distress calling of loans and forced liquidation of securities by banks and bank borrowers have led to widespread bank suspensions and to a drastic destruction of the principal part of the money supply, bank deposits.

"Deposit insurance is useful in correcting these unfortunate periodic experiences from two major closely related viewpoints—that of the individual and that of the nation. From the individual's standpoint, deposit insurance provides protection, within limits, against the banking hazards of deposit ownership. But the major virtue of deposit insurance is for the nation as a whole. By assuring the public, individuals and business alike, that cash in the form of bank deposits is insured upto a prescribed maximum, a major cause of instability in the nation's money supply is removed."

Briefly discussing the background of the Federal Deposit Insurance Corporation, the F.D.I.C., in its publication entitled *Its History Through* 1954, describes how, in the late nineteenth century, deposit money gained in importance in relation to the bank notes and observes:

"This development again focussed attention on bank failures, as deposits lacked the guarantee provided for national bank notes, and there was a resurgence of interest in the insurance of all bank obligations."

Of the two considerations, namely, that of the individual depositors and that of the broader aspect of money supply in the economy, the latter is relatively more pronounced, being a national problem as such. The major objective of deposit insurance, therefore, is to ensure stability of an important component of the money supply, namely, bank deposit, *by providing psychological tranquillity among depositors and relegating bank failures to a state of obscurity and insignificance, if not completely preventing them.* It has thus to act not only as a psychological "tranquilliser" for the depositors, but also as an effective "built-in stabiliser" in the economy of the country.

The objective of an effective scheme for deposit insurance then is not just to pay the individual depositors, upto a stipulated maximum, in case of bank failure. It is more than that. The scheme has to ensure, through its working, that extensive bank failures are prevented *even during periods of recession.* In order to achieve this, the aspects discussed in the subsequent paragraphs have to form the essential features of the scheme in our country.

Inclusion of Banks

As many banks as possible should be included in the scheme. When the scheme was first initiated in the U.S. on 1st January 1934, the banking situation there was in an alarming state. Yet, of the 7,800 applicant banks (besides those which were statutorily required to come under the insurance scheme), 6,800 were found, after examination, to be "solvent in the sense that their assets covered their liabilities." In roping in such a large number of banks, "the Corporation was cognisant of the risk inherent in the serious capital impairment which existed in many banks." The scheme in India has also recognised this important requirement and has provided that every existing banking company shall be included as insured bank (Section 10). As for new banking companies, that is, those formed after the date on which the scheme came into effect, the provision in Section 11 corresponds to a similar provision in the Federal Deposit Act.

Limit Per Depositor

Much of the success of the scheme will depend on the recognition by the depositors of the reasonableness of the cover received and this will be conditioned by whether or not the limit affords coverage to the maximum number of depositors. If the maximum limit is kept at a level considered reasonable by the maximum number of depositors, the psychological tranquillity will immediately be achieved and, in a state of managed economy, it may then reasonably be assumed that a serious depression is not likely to take place. But, if the limit is kept lower, the basic purpose of the insurance may not be realised.

It may be noted here that amongst 150 Bills introduced on the subject in the U.S. Congress, between 1886 and 1933, "virtual complete coverage of deposits was provided for in four-fifths of the Bills." The Banking Act of 1933, which created the F.D.I.C., provided two separate plans of deposit insurance: "a temporary plan, which was initiated on 1st January 1934, and a permanent plan which was intended to become effective on 1st July 1934, but which did not become operative on that date and was substantially revised by later legislation." (The permanent plan took effect from 23rd August 1935 under the Banking Act of that year.) The temporary plan initially limited the insurance cover per depositor to $2,500; and on 1st July 1934, when it was extended, the protection was raised to $5,000 per depositor, and the Act of 1950 raised this limit further to $10,000 per depositor, which limit continues to be in force.

In the Indian scheme, the limit has been fixed at Rs. 1,500 per depositor (Section 16(4)(b). It is said that about 75 per cent of the total number of bank accounts would be fully covered by this limit. In the U.S. "the proportion of accounts in insured banks fully protected by deposit insurance (that is, accounts no greater than the maximum insurance) has never been less than 95 per cent and in 1951 was almost 99 per cent." The coverage under the Indian scheme is thus inadequate. The Act, however, empowers the Corporation to raise the maximum limit, subject to the approval of the Central Government. It is to be hoped that the Corporation will, before long, exercise this authority in their good judgment and in the interest of the banking system. It should also be remembered, in this connection, that the educated middle class in the cities are the most sensitive and vocal amongst the depositors and that this class of depositors should be fully covered.

Bank Examination

Examination of covered banks from time to time is an indispensable function which the Insurance Corporation must exercise, because it is only thus that the Corporation can be in a position to watch, assess and improve the standard of banking and bank mangement and *reduce its insurance risk.* The first stage requiring such examination is when a new bank is incorporated. Although there is no such legal provision in the U.S., "the chartering authorities have generally sought the views of the Corporation with respect to eligibility of banks for deposit insurance." It may be hoped that such a convention will also be established in this country.

With regard to the banks already insured, the F.D.I.C. has power to inspect them. Such direct authority has not been given in the Indian scheme; the Corporation may, however, ask the banks for such statements and have free access to all such records as it may think fit. But, so far as examination of a bank is concerned, Section 36(1) provides that the Corporation may only request the Reserve Bank to cause an inspection. The Corporation thus will have to depend entirely on the Reserve Bank for inspection. In order to enable the Corporation to function effectively, it would have been advisable to empower it to inspect any bank at its discretion. Direct inspection by the Corporation need not necessarily overlap the Reserve Bank inspection but would enable the Corporation to make its own assessment and exercise its independent judgment at least in special cases.

The Corporation in India, like the F.D.I.C. in the U.S., could generally depend upon the yearly examination of banks by the Reserve Bank, exercising its authority *only in special cases.* To quote again from the F.D.I.C. publication, "while it is empowered to make special examination of any insured bank, it rarely exercised this authority. Of the 140,000 examinations made by the Corporation since its organisation only about one-fifth of one per cent were of institutions regularly examined by the other Federal agencies." This testifies that, however, few occasions *have* arisen where the F.D.I.C. felt it necessary to inspect a bank already inspected by the central banking authority. The need for such power is obvious. Through examination of banks, the Corporation can be in a position to observe, first hand, the working of a bank, *from the insurance standpoint,* and to exert the necessary influence upon the structure and character of banking.

Bank Management

Of equal importance is the quality and policy of bank management. The publication of the F.D.I.C. correctly observes: "Of obvious concern to the Corporation is the quality of bank assets. Even more important is the quality of bank management. . . . Maintenance of adequate capital and regular provision for losses of assets are among the banking practices constantly recommended by the Corporation." Such recommendations and guidance achieve their purpose in most important and major issues, because the Corporation has adequate powers to back them. The authority to examine banks is one of the effective tools. The other weapon is its authority to terminate, after due warning, the insured status of any bank which persists in unsafe and unsound banking practices. "Practices regarded as unsafe and unsound include such things as operating with inadequate capital, weak management, insufficient and inaccurate records, self-dealing, honouring cheques against uncollected funds, and lax lending policies."

The F.D.I.C. is further empowered to require any insured bank to provide "protection and indemnity against burglary, defalcation and other similar insurable losses" (Section 18(*e*) of the F.D.I. Act). Many banks have been found to be vulnerable to these risks. Section 18(*g*) of the Act empowers the F.D.I.C. from time to time, to limit "by regulation the rates of interest or dividends which may be paid by the insured nonmember banks on time and savings deposits," subject to conditions specified in this section. (The Board of Governors of the Federal Reserve Banks, it may be noted, have powers to establish the maximum rates of interest that may be paid by member-banks on saving and other deposits.

These important provisions are not there in the scheme of insurance of bank deposit in India. Section 13 of the Act enumerates contingencies in which the insured status of a bank shall stand cancelled; but all these relate to situations, arising either from measures taken by the central banking authority or by the Government or through amalgamation, where a particular bank ceases to operate in its own name. The section does not give the Corporation any power to cancel the insured status of any bank found unsuitable. Thus, the Corporation will not be in a position to watch, assess and improve the quality of banks' policy of bank management and, more so, be an underwriter of liability of banks controlled by the supervisory authority of the Reserve Bank.

Weaker Banks

Then there is the important question of rehabilitating the weaker banks.

borders, of high quality banks and low quality uninsurable banks, there would be a number of banks which, though in a difficult financial position, may, if given proper assistance and spread of time, attain a sound position. With a view to nursing these banks, instead of pushing them on to liquidation, the F.D.I.C. is authorised to make loans or to purchase any sub-standard assets or to guarantee any other insured bank against loss by reason of its assuming liabilities and assets of such a bank (Section 13(*e*) of the concerned Act). Thus, the F.D.I.C. is enabled, on its assessment of the situation, to render prompt and useful service in rehabilitating a bank in distress.

Under the "absorption method" a bank in distress is absorbed by a sounder bank, under the agis of the F.D.I.C. the absorbing bank taking over the sound assets and the Corporation providing cash equivalent to the difference between the liabilities and the value of the sound assets acquired. The Corporation acquires the assets rejected by the absorbing bank and disposes them off when favourable opportunities arise. The experience of the F.D.I.C. has been very satisfactory. Not only has its loss been reduced by adopting this method but depositors in such banks have been fully protected regardless of the amounts of their deposits.

The scheme in India does not enable the Corporation to perform this function. Sections 16 to 21 of the Act relate to the liability of the Corporation and prescribe the manner in which the Corporation shall make payment of its liability under the insurance scheme. All these relate to cases of banks under orders of winding-up, or liquidation or where a scheme of compromise, arrangement, reconstruction or amalgamation has been sanctioned. No provision has been made to enable the Corporation to act expeditiously in strengthening or absorbing a bank assessed to be in financial difficulty, with a view to avoiding the process of liquidation.

Trust Funds

The Act in the U.S. further provides that trust funds held by an insured bank "in a fiduciary capacity, whether held in its trust or deposited in any other department or in another bank," shall be insured and that it will form an additional cover, besides the cover on deposit of the owner of such trust fund (Section 7, Sub-section (2)(i)). A similar provision has not been made in the Indian scheme. Although trust business is not yet common with the Indian banks, some banks even now undertake this type of business, and it is expected that, with the growth and development of banking, this will become a more common feature.

Publicity

An important provision in the U.S. Act is with regard to display by every bank of a statement to the effect that its deposits are insured upto the prescribed limit per depositor, by signs at each place of its business and by inclusion in its advertisements. Failure to do so makes an insured bank subject to a fine of not more than $100 (Section 18 *a*). This may not be necessary in India in that form, because *all* the banks will stand insured. Such publicity, however, has another important function, that is with regard to bringing about a climate of confidence in the minds of the depositors. It may, therefore, be advisable for the Corporation itself adequately to advertise, through all important media, as well as through publication of brochures and booklets, that the deposits of banks are insured to the extent of the prescribed limit.

The set-up for an insurance scheme would consist of two things, namely, funds and organisation. Owing to the nature of the objectives of deposit insurance, the Corporation, to be effective, has to be a high-powered independent body. The F.D.I.C. in the U.S. has been designed accordingly and has been functioning efficiently. It has, however, been seen that the scheme in India has been designed to make the Corporation a relatively unimportant body, with practically a few routine functions to be performed. The set-up, accordingly, is quite different from the F.D.I.C.

Capital Funds

The capital of the Corporation in India is Rs. 1 crore fully paid-up and allotted to the Reserve Bank (Section 4). The Corporation may borrow from the Reserve Bank sums not exceeding Rs. 5 crores (Section 26(1)). The premium will be taken to form the Deposit Insurance Fund (Section 23). The idea may be to retire eventually the capital provided by the Reserve Bank by a subsequent legislation and make it a 'mutual' fund, as in the case of the F.D.I.C. This would, of course, be possible only after the insurance fund has grown to a sizable amount. The provision in the relative U.S. Act, however, is that the Corporation shall transfer only 40 per cent of its net assessment income to its funds and the balance shall be credited *pro rata* to the insured banks. The Indian scheme, on the other hand, provides that the entire premium shall be credited to the insurance fund. It is to be hoped that, after working the scheme for some time, this provision will be brought in line with that in the U.S.

With its maximum limit per depositor at $10,000, the F.D.I.C. calculates that a fund equal to 1 per cent of the total deposits of insured banks would be "the smallest figure that can possibly be considered reasonably adequate." In India, with a much lower limit per depositor—Rs. 1,500—it may be held that the minimum requirement of fund would be, say, one-sixth of one per cent. Even by that calculation, the requirement of funds would be nearly Rs. 3 crores. But it would be better to have a larger initial fund, say, Rs. 5 crores. If, as can reasonably be expected, the intention is to raise the limit per depositor after some time and taking a prospective view with regard to the growth of deposits, it would be advisable to have an initial fund of at least Rs. 10 crores (which would still be about half of 1 per cent of bank deposits).

Organisation

With regard to organisation, the Corporation fundamentally differs from the F.D.I.C. The Board of Directors of the F.D.I.C. consists of three members, one of whom is the Comptroller of Currency and the other two are non-officials appointed by the President with the consent of the Senate. One of the latter two is the Chairman. The Corporation in India will have a Board of five directors, of whom three will be ex-officio in their official capacity; Governor and a Deputy Governor of the Reserve Bank and an officer of the Central Government. The Governor of the Reserve Bank will be the Chairman. The Board has already been formed accordingly. Thus, the management of the Corporation is altogether subordinate to the Reserve Bank.

The Act concerned in the U.S. empowers the Board of Directors of the F.D.I.C. to formulate by-laws for regulating the manner in which the general business of the Corporation may be conducted and "the privileges granted to it by law may be exercised and enjoyed" (Section 9). In this country, however, it has been provided that the Board of Directors of the Corporation may make regulations, with the *previous approval of the Reserve Bank* and that such regulations will first be made by the Reserve Bank within the three months of the establishment of the Corporation (Section 50). The powers of the Board of the Corporation, therefore, will continue to be limited even in this respect.

Section 3(2) of the Act provides that the head office of the Corporation shall be at Bombay but it may, with previous sanction of the Reserve Bank, establish branches or agencies at any other places in India. It may be mentioned here that, with a view to having a closer touch with the insured banks in different areas, the F.D.I.C. maintains district offices at 12 major cities, besides its head office at Washington D.C. It is to be hoped that the Corporation in India will similarly maintain district offices at least in the important cites of Delhi, Calcutta and Madras.

Conclusion

It will be seen from the foregoing comparative study that the Corporation in India will be deficient in many essential aspects and is hardly likely to succeed in attaining the same standard of functional utility as the F.D.I.C. of of the U.S. has done. The main objectives in insuring bank deposits, as discussed earlier in this article, may, therefore, remain unachieved. It is to be hoped that the intention of the authorities is not to provide a mechanism only for paying the depositors in case of bank failure and discard the fundamentals of deposit insurance, in its real sense.

If there has to be real deposit insurance, as it is understood in the only country where it has existed for years, the Corporation must perform the functions necessary for the purpose. It must be given the requisite tools to enable it to assess and give expert functional guidance and support to such banks as may need it. This, however, should not be confused with banking control. The functions of the Deposit Insurance Corporation are essentially that of an analyst and hence distinct from the functions of the central banking authority exercising supervision over the banks.

The Act in the U.S. provides that, whenever the Comptroller of Currency shall appoint a receiver, "other than a conservator of any insured national bank or any District bank," he shall appoint the Corporation receiver for such bank (Section 11 (c)). One of the main functions of the F.D.I.C., as provided in the Act, is to act as Receiver (Section 9). In the Indian scheme, even this provision is not there. On the other hand, Section 17 provides that the Corporation shall pay the liquidator in the manner prescribed therein. Thus, the Corporation will practically be a paying body for all practical purposes. Its other functions will be of a consequential routine nature.

One may, therefore, wonder what was the need for sponsoring the insurance scheme in this form, if the only purpose was to extend the limit of preferential payment to depositors already provided for in the Banking Companies Act! If, for some valid reasons, the Corporation has to function as a wing of the Reserve Bank, it can do so, but that is no reason why it should be so designed as to be functionally incomplete. It is, therefore, to be hoped that, having gone thus far, the authorities will review the whole matter and take suitable corrective steps to make the scheme more effective and useful.

INTERNATIONAL LIQUIDITY PROBLEMS

A working group of the Monetary Commission of the European Economic Community, under the chairmanship of Dr. O. Emminger, a member of the Board of the Deutsche Bundesbank, has completed an investigation of international liquidity problems. Criticism was expressed by the group on the method of establishing the adequacy of international liquidity by relating total reserves to the volume of world imports; this failed to take into account, amongst other factors, the liquidity potential available in international institutions, and also failed to reflect the connection between liquidity and the changing balance of payments positions of the leading countries. In stressing the importance of action to correct a disequilibrium, the report warns against the erroneous interpretation, which may be derived from the use of an inadequate measure of liquidity, that, once international liquidity had been enlarged, deficit countries would no longer have to impose on themselves the reforms needed to restore external equilibrium. The group stressed that between the fear of deflation induced by liquidity shortage and of creeping inflation, it was the latter that was still the principal problem of international monetary policy. The problem of a gold shortage was still remote.

Regarding the United States, the view was expressed that it would have to reduce its deficit to a level that could be absorbed by the other countries, i.e., they should not exceed the amounts by which they were willing to increase their U.S. dollar holdings. In the immediate future, the most important problem was that of offsetting the large short-term movements of speculative capital, for which purpose it was desirable to have additional international arrangements for the period needed to restore a sound balance of payments position, and in particular to strengthen central bank cooperation, as at the time of the revaluation in March 1961 of the Deutsche Mark and the Netherlands Guilder. Moreover, since this action was limited in time and scope, it should be reinforced by the provision of credit facilities within the framework of the competent international institutions.

WORLD BANK'S SWISS FRANC BOND ISSUE

A Swiss franc issue of Bonds of the World Bank was publicly offered in Switzerland on the 5th inst. by a syndicate of leading Swiss banks. The banks offered at par Sw.F. 100 million (approximately $23 million) of 4 per cent 11-year bonds. The Swiss Credit Bank, the Union Bank of Switzerland and the Swiss Bank Corporation headed the underwriting group as they had done in previous public offerings of World Bank bonds on the Swiss market. The new issue, known as the Emprunt en Francs Suisses 4 per cent de 1962 (4 per cent Swiss Franc Bonds of 1962), is dated 1st February 1962 and will mature on 1st February 1973. On and after 1st February 1970, the World Bank may redeem all or part of the issue on any interest payment date on 45 days' notice in case of partial redemption and three months' notice for total redemption. Interest will be payable annually on 1st February, with the first payment due on 1st February 1963. The issue will be listed on the stock exchanges at Zurich, Basle, Geneva, Berne and Lausanne.

This is the eleventh public issue of the World Bank in Swiss francs. In addition, there have been five private placements by the Bank in Switzerland, of which three, aggregating Sw.F. 333 million, were transactions with the Government of Switzerland. Including the present issue, the aggregate of World Bank bond and note issues outstanding in Swiss francs comes to about Sw.F. 853 million approximately $198.6 million).

The Government of Maharashtra has sanctioned a scheme under which it will guarantee the advances granted by banks to industrial co-operative societies. The Registrar of Co-operative Societies, Poona, the Divisional Joint Registrars of Co-operative Societies and the Joint Registrar of Industrial Co-operatives will implement the scheme. It is intended to give a degree of protection to co-operative and other banks against possible losses in respect of the advances granted by them to industrial co-operative societies. The bank will be entitled to recover from the State Government 90 per cent of the amount in default in respect of the advances made to such societies. In turn, the State Government is entitled to recover from the Government of India 50 per cent of the amount in default in each individual case subject to certain conditions.

TOURISM IN WESTERN EUROPE

MAJOR FOREIGN EXCHANGE EARNER FOR MANY COUNTRIES

ON the suggestion of the Economic Commission for Asia and the Far East, 1961 was celebrated by the countries in the E.C.A.F.E. region as "Visit the Orient" year. Ind a too fell in line with the other countries by taking steps to make a visit to India more attractive. As part of the drive for more tourist traffic, the E.C.A.F.E. held a seminar on tourism in New Delhi in April 1961 wherein the problems of development of tourism in the region were discussed, for the first time, on an international level. It is too early to assess the effect of these on the tourist traffic in this region. But they are likely to have attracted more tourists than would otherwise have been the case. The total number of tourists, who visited India during 1961, is tentatively estimated at 145,000. Tourism ranked as the sixth largest foreign exchange earner for the country in 1959 when total earnings from this source amounted to Rs. 22 crores, as compared with a mere Rs. 4.5 crores in 1950.

Tourism is an important source of foreign exchange not only to India but to many countries, especially countries of Western Europe. These latter countries have taken steps to promote tourism on an international level. Some interesting facts about the trend of tourism in Western Europe and the importance of tourism to the economies of the countries in the region are given in a study entitled *Tourism in Europe** prepared by the Tourism Committee of the Organisation for European Economic Co-operation. Although tourism, domestic and foreign, as an organised industry is far less developed in India, as compared with Western European countries, the views of the Committee on the different problems confronting the Government and certain sectors of the economy *vis-a-vis* the immense growth in tourist traffic in recent years, are of interest to this country which too hopes to build up its tourist industry as a major foreign exchange earner and source of employment.

The O.E.E.C. Committee has noted that the development of international tourism, which had been noted over a period of several years, continued in 1960. Tourist travels in member-countries of the O.E.E.C. as a whole and in Yugoslavia increased by almost 15 per cent as compared with 1959. This increase was more pronounced than during the previous year but was not uniform. Appreciable variations were recorded from one country to another. The average was exceeded in Spain, where the increase was as much as 46 per cent, the U.K. (20 per cent) and Portugal (19 per cent), while it was almost reached in the Netherlands and Greece. All other countries, except Turkey, showed an increase in tourist traffic.

Weather and Tourism

The number of nationals who went abroad for their holidays during 1960 is estimated at 2.7 million in the U.K., 1.5 million in Italy and the Netherlands, 510,000 in Sweden, excluding holidays spent in other Scandinavian countries, and 367,400 in Portugal. Intra-European tourist travel in 1960 developed at approximately the same rate as in 1959, 12 per cent, to be precise. The Committee considers this satisfactory, in view of the poor weather conditions in the summer of 1960 in Europe. It is said that weather changes may affect travel locally and from one country to the next but not the trend of tourism as a whole.

As for tourist traffic between North America and Europe, there was, according to the Committee, a marked increase in traffic from North America to Europe. The number of U.S. residents travelling to Europe and the Mediterranean in 1960 increased by 18 per cent, from 705,000 to 832,000. Of these, 602,000 tourists crossed the Atlantic by air and 230,000 by sea, indicating that 60 per cent of the tourists take to air travel. The number of Europeans travelling to the U.S. in 1960 was also higher than in 1959, rising by 17 per cent from 233,000 to 274,000. Of these 165,000 came on pleasure trips, 65,000 on business, 39,000 as transit passengers and 5,000 as students.

The increased tourist traffic was naturally reflected in the receipts and expenditure on account of tourism. Total receipts from tourism in the O.E.E.C. member-countries in 1960 amounted to $3.6 billion (1 billion=1,000 million) and expenditure to $2.3 billion. Receipts exceeded expenditure in Austria, Denmark, France, Greece, Italy, Portugal, Spain, Sweden, Switzerland, and Turkey and, with the exception of France and Portugal, the proportion was higher than in 1959. In West Germany, Norway, and the U.K., however, expenditure was higher than receipts and in Germany there was a greater difference between these two items than in 1959. Judged by the expenditure of their nationals abroad, and particularly in other member-countries, West Germany, the U.K. and France supply the majority of European tourists.

Record Increase

In 1960, Germany was outmatched only by the U.S. U.S. tourists spent $704 million in Europe and the Mediterranean area, nearly 17 per cent more than in the previous year, and one of the largest increases recorded in several years. Over $460 million was paid by U.S. residents to foreign shipping companies and airlines for overseas travel. A considerable part of this expenditure must have gone to European carriers, so that, for the first time, payments to foreign carriers were higher than to American carriers. Two-thirds of the increase in U.S. tourist expenditure abroad was in Europe, as against one-third in 1959. Europe's share in such expenditure, therefore, increased from 38 per cent in 1959 to 40 per cent in 1960. Similarly, its share in the expenditure of U.S. residents travelling overseas amounted to 70 per cent of such expenditure in 1960, as against 68 per cent in 1959. However, the average individual expenditure of U.S. tourists in Europe, excluding transport, fell slightly from $851 in 1959 to $841 in 1960. This trend is attributed to an increase in the number of persons of moderate means going to Europe.

The relative importance of dollar receipts in the total tourist earnings of Western Europe can be assessed by working out their percentage to the aggregate receipts. Thus, in France dollar earnings accounted for 48 per cent of total tourist receipts in 1960, in West Germany 42 per cent, in the U.K. and Sweden 37 per cent, in Norway 34 per cent, in Turkey 33 per cent, in Italy 32 per cent, in Denmark 27 per cent, in the Netherlands 20 per cent and in Austria and Switzerland 14 per cent.

Importance of Tourism to European Countries

(In millions of dollars)

Countries	Total receipts from Tourism (1)	Total receipts from all invisibles (2)	Total exports receipts (f.o.b.) (3)	(1) as a % of (2)	(1) as a % of (3)

Tourist Earnings

Income of the magnitude indicated above is bound to reflect itself in the balance of payments position of the individual countries. The part played by tourism in the general economy of the countries can be evaluated by comparing tourist receipts and expenditure with other items in the balance of payments of these countries. In Austria, net tourists receipts in 1960 covered 78 per cent of the country's trade deficit. In Belgium, tourism equals in importance the exports of electrical machinery, arms and ammunition, coal and coke products and metal manufactured goods. In Denmark, tourist receipts accounted for six per cent of total foreign exchange receipts from exports of goods and services. In France, tourism ranks third among export industries, just after iron and steel products and automobile industry, and is of more importance than chemical products, machinery and instruments. In Italy, tourist receipts in 1960 accounted for nearly 10 per cent of income from exports of goods and services and 30 per cent of total income from invisibles. The surplus of tourist receipts over expenditure covered about 86 per cent of the trade deficts. In the Netherlands, foreign tourism is one of the main export industries, receipts from it are higher than sales abroad of such leading export items as milk and other dairy products, eggs, fresh vegetables and cotton cloth. In Switzerland, tourist receipts in 1960 accounted for over 16 per cent of export earnings. Tourism for it is the second most important export industry, next only to exports of machinery and even more important than chemical products and watches. In the case of W. Germany, tourist receipts represent about 16 per cent of receipts from total invisible transactions and 4 per cent of its export earnings. Corresponding percentages for other countries are: 59 and 20 per cent in the case of Austria, 23 and 7 per cent in Denmark, 17 and 21 per cent in Greece, 41 and 29 per cent in Ireland, 8 and 3 per cent in the Netherlands, 5 and 6 per cent in Norway, 16 and 10 per cent in Portugal, 70 and 40 per cent in Spain and 9 and 5 per cent in the U.K. where tourist receipts represented a source of overseas currency large enough to cover over 50 per cent of the deficit on visible trade.

Government's Role

The rapid growth and the present position of tourism as an export industry in Europe are due, to some extent, to the measures taken by the Government to promote international tourism. Since its creation in 1949, the Tourism Committee of the O.E.E.C. has continuously examined what action the Governments could take to remove obstacles to international tourism. Such measures concerned the control of identity papers involving visas, customs regulation both for goods carried by tourists and for motor vehicles and, on the financial side, tourist allocations which were at one time very limited. These activities were supplemented by similar action taken by other international organisations such as the Council of Europe and the Economic Commission for Europe. The joint publicity undertaken in the U.S. in 1960 by the E.T.C. under the auspices of the O.E.E.C., in order to develop American tourism in Europe, was continued in 1961. Yugoslavia and Finland also participated in this with the member-countries of the O.E.E.C. In addition to this common effort, each of the member-countries possesses a National Tourist Office designed to promote both domestic and foreign tourism on their own territory. The sums annually allocated to these Offices vary considerably according to country, ranging between $75,000 and $3.5 million. Most of these funds, though not necessarily all, are supplied by the Government concerned.

Future Prospects

Discussing the prospects for tourism in Western Europe, the Committee points out that, from a mere amusement, reserved for the happy few, tourism is developing into a necessity for the masses. There is thus every reason to think that tourism, whether domestic or international will continue to grow during the next few years. A number of constant factors applicable to the present era such as the increase in population and the almost universal increase in individual income, longer paid holidays or holiday bonus and the desire to improve public health, all these mean that holidays and travel are increasingly becoming a part of modern living.

Market surveys indicate that the urge of the tourist is to travel more often and farther afield. Transport facilities are, therefore, of crucial importance in the development of tourism, which will, in the Committee's opinion, depend on carrier capacity, particularly of the airlines, and on the rates offered. Both these matters are closely interrelated. So far the policy followed in this respect in the O.E.E.C. countries has brought about a certain imbalance between traffic and capacity, the latter having increased much more rapidly than the number of passengers, which needs to be corrected. Tourism by car will also continue to grow to the extent permitted by the road network and road projects thus constitute a problem of primary importance for tourism. Closer co-operation between both methods of transport is, therefore, considered as highly desirable.

But much of the problems created by the unceasing development of tourism would be less acute, according to the Committee, if tourist traffic could be spread still further throughout the year. As it is, tourism is largely a seasonal industry and the Committee feels that fresh investments on transport and accommodation would be worthwhile only if there were an even distribution.

COTTON MILLS EARNED MORE LAST YEAR

SHARP FALL IN GREY CLOTH IMPORTS

From Our Special Correspondent

MANCHESTER, *2nd January*

EARNINGS announced by British cotton companies in 1961 showed another big increase on the previous year, although those published in the final quarter had already begun to reflect the narrower margins and the shortage of orders which led to extended mill stoppages over the Christmas and New Year holidays.

MANCHESTER LETTER

Total net profits, after tax, of 70 companies owning more than 250 mills rose by £2,750,000 as compared with the figures issued in 1960. Compared with 1959, when earnings were at the lowest level for 20 years back, the 1961 returns showed an increase of over £7,500,000. During the year, order lists steadily declined after extensive buying in 1960, leading to an absence of fresh business and substantial imports of low-cost foreign products. The big business done in 1960 was reflected in the published net profits announced last year by the 70 companies of £11,377,922, as against £8,624,025 for the same firms in the previous 12 months.

Dividend Higher

According to an independent analysis of trading results (prepared by Frederick W. Tattersall Ltd. of Manchester), the aggregate net earnings announced by 14 leading spinning and weaving combines and their subsidiaries last year amounted to £6,591,184, as compared with £5,263,725 in 1960. The average profit was £470,799 per group, as against £375,980. The average dividend paid was 14.82 per cent, as against 12.48 per cent and total credit balances were £8,839,391, as against £7,905,823.

Average profits announced by 23 independent spinning mills during 1961 were £46,050 per company, as compared with £34,058 for the same firms in 1960. The average dividend paid last year was 18.62 per cent, as against 17.74 per cent in 1960. Average profits earned by 16 concerns combining spinning and weaving were £171,868 per company last year, as compared with £117,894 in 1960. The average dividend was 17.51 per cent, as against 14.44 per cent. For the whole of these 39 firms, the average profit announced was £97,668, as against £68,452 for the same concerns in 1960, while the dividend last year averaged 18.16 per cent, as against 16.38 per cent. Credit balances held by these companies total £7,377,842, an average of £189,175. A year ago, 41 firms had credit balances amounting to £6,523,557, an average of £159,111.

The average profits of 17 firms engaged mainly in weaving were £57,512 per firm in 1961, as against £40,627 in the previous year. Dividends averaged 13.11 per cent, as against 10.09 per cent and credit balances amounted on average to £171,199 per company, as against £163,555.

In 1961, two spinning concerns and three weaving firms reduced their capital from a total of £4,770,000 to £3,751,194. Ten cases of scrip issues were reported by cotton textile companies, the amount involved being £2,787,446.

Diminishing Imports

Another sharp fall in the quantity of grey cloth imports was the main feature of the November overseas trade returns. Although these arrivals still exceeded the volume of all cotton goods shipped abroad by a substantial margin, the total at 37,714,000 yards compared with 54,334,000 yards in the same month of 1960. As a result of this steady decline in the supplies reaching the United Kingdom in this category, grey cloth arrivals for the first eleven months of 1961 were practically identical with those recorded in the same period of the previous year.

The volume of those goods absorbed, either for re-export or for retention in the home market, to the end of November was 545,057,000 yards, valued at £34,873,423, as against 544,417,000 yards, costing £33,795,508, in 1960. Purchases of finished cotton fabrics from abroad, however, remained at a higher level than in the previous year, being 144,195,000 yards, as against 118,192,000 yards, the respective values being £24,619,703, as against £20,554,531.

The pattern of arrivals of grey cloth was not unduly altered in November, though there was a noticeable drop in the quantity of goods taken from Hong Kong as compared with 1960. In the eleven months, India shipped 169,529,000 yards, as against 210,291.000 yards; Pakistan 21,098,000 yards, as against 35,610,000 yards; and Hong Kong 80,906,000 yards, as against 95,863,000 yards. Other Commonwealth suppliers sent 21,873,000 yards, as against 9,541,000 yards. Grey cloth arrivals from areas outside the Commonwealth showed 145,563,000 yards absorbed from undesignated countries, as against 106,811,000 yards, while shipments from France increased during the eleven months from 7,616,000 yards to 13,814,000 yards.

More from Japan

The release of the overseas trade figures coincided with the announcement of a new Anglo-Japanese agreement, permitting substantially increased imports from Japan under enlarged quota arrangements. Many of these items concern goods and materials outside the textile field, but the largest actual quota remains the supply of cotton and rayon grey cloth for re-export after processing. For a number of years, this has been set a maximum of £3 million with a complementary limit of £1,050,000-worth of apparel. A 50 per cent rise in the ceiling has now been granted, so that grey cloth imports to the tune of £4,500,000 can be permitted, and the apparel quota has been raised to £1.700,000. In the first eleven months of 1961, imports of Japanese cotton greys amounted to 56,630,000 yards, as against 45,996.000 yards in the same period of 1960.

Prospects for the Lancashire cotton industry in the event of Britain entering the European Common Market were good, Lord Rochdale, Chairman of the Cotton Board, told members of the Manchester Statistical Society. "My own view is that it will do good rather than harm," he said. "Admittedly more Continental specialities will enter our markets, but for the first time in their lives our own salesmen will encounter a group of major markets, whose standards of living compare with our own, where tariff barriers are being lowered instead of raised."

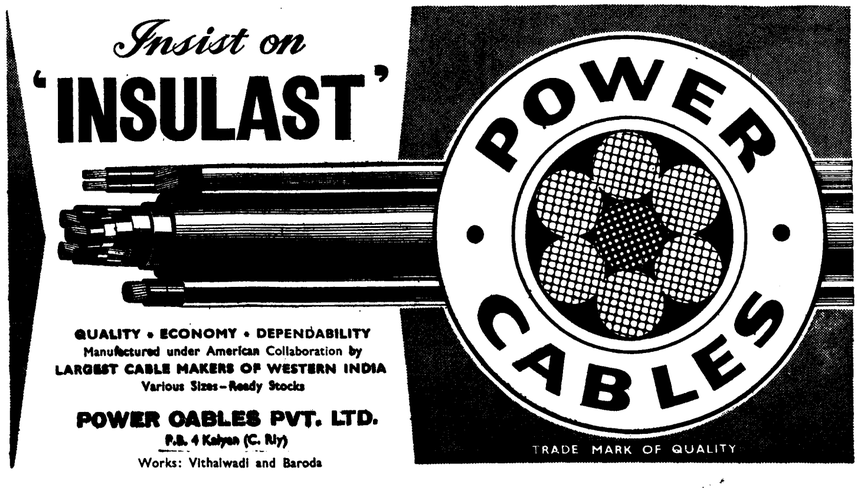
"We have latterly been very much shot at and unable to shoot back," said Lord Rochdale. "One by one our major markets have protected themselves against our salesmanship by tariffs and quotas. At last we shall have a chance to show our mettle. Every reduction in the internal tariff of the European Economic Community if we become a member, should provide an opportunity for someone here if we are smart enough to grasp it." The industry, he said, must attract and hold its fair share of top grade men from the universities and higher technical colleges. Firms must be large enough to offer full scope to these men, providing the possibility of promotion to positions of real influence and responsibility, while they remained relatively young and able to give the aggressive initiative and leadership which a competitive world demanded.

Further help would be needed on the import side to curtail arrivals of foreign goods. Re-equipment of the mills must be regarded as an ever-continuing demand, and the industry must be given a reasonable chance of financing itself from current and future profits for this purpose.

Large stocks of imported cotton textile goods are responsible for short-time working in about 120 Lancashire spinning and doubling mills during the Christmas and New Year holidays, according to the British Spinners and Doublers Association. "The need to curtail production has arisen mainly owing to the large supplies of cheap imported goods from the Commonwealth and elsewhere which have come into this country either duty-free or assisted by subsidies or both," said a statement from the Association. Calls for direct action by the Government had been made, it was stated, while the reorganisation and re-equipment of Lancashire mills was being completed. "Even the most efficient and progressive Lancashire firms cannot stand up indefinitely to unfair competition," the Association asserted.—*All Rights Reserved.*

"TEXTILE MACHINERY INDEX"

The third edition of the *Textile Machinery Index* (Publishers: Messrs. John Worrall Limited of Oldham, Lancashire. Price: (£2 4s. 6d.) has just been published. The first and second editions appeared in 1956 and 1958, respectively, when they created a very favourable impression on textile circles throughout the world. The new edition completely catalogues the activities and textile equipment produced by the members of the Textile Machinery and Accessory Manufacturers' Association, as well as a host of associated textile mill supplies and a comprehensive textile chemicals and auxiliaries section. It has been meticulously revised to keep abreast of the considerable development in the U.K. textile machinery and accessory manufacturing industries since the publication of the second edition.



FINANCES OF COTTON MILL INDUSTRY

CAPACITY TO RAISE FUNDS FOR EXPANSION INADEQUATE

AN important consideration which the Tariff Commission will have to bear in mind while recommending fair ex-mill prices for cotton textiles is that the return the industry gets should be sufficient to attract capital by enabling the average unit to distribute a reasonable dividend, after paying interest on loans taken for modernisation and after making due provision for repayment of the loans. At no time before was the need for assuring the industry such a return so urgent as it is today when the financial position of the purely cotton spinning and weaving mills is none too happy. The rate of capital formation in the industry has slowed down markedly in recent years and, unless the industry is enabled to earn adequate profits which will help it not only to step up availability of funds from internal sources but also to secure external finance, the implementation of even the modest programme of expansion envisaged for it under the third Plan will be retarded. Enough data to support this conclusion are provided in the supplementary memorandum submitted to the Tariff Commission by the Indian Cotton Mills Federation. In this brochure, the Federation has given replies to question Nos. 14, 15, and 16 of the Commission's special questionnaire. Briefly, the questions are:

Has there been a tendency towards a slower rate of capital formation in the cotton mill industry in recent years? If so, what are the reasons?

Can the financial position be adequately reflected by taking into account the current replacement value of fixed assets?

What is the estimate of capital that will be employed by the industry during each of the next three years, keeping in view the needs for expansion?

Low Capital Formation

The replies to the above questions are based on the findings of a special study made by the Federation from the balance-sheets of 294 cotton mills (76 spinning units and 218 composite units), together covering 82 per cent of the industry's aggregate installed capacity, for the years 1955 to 1959. The salient features of the combined balance-sheets of these 294 mill companies as made by the Federation are given below:

(In crores of Rs.)

	1959	1958	1957	1956
Capital formation :				
Gross	25.50	—2.02	48.18	64.01
Net	13.42	—12.36	37.37	52.31
Gross profit	34.52	16.75	15.98	41.52
Increase in gross fixed assets ..	22.57	23.91	31.86	28.95
Increase in plant and machinery only	18.91	18.73	25.62	23.15
Paid-up capital	111.96	110.62	108.16	104.84
Reserves and surpluses ..	73.81	70.46	79.61	91.38
Total ..	185.77	181.08	187.67	196.22
Less net block	165.91	144.30	141.85	120.80
Internal resources for working capital	19.86		45.82	76.11*
Borrowings	146.70	154.84	149.69	114.17
Trade dues	72.73	61.56	58.69	57.35
Gross block	351.07	317.38	304.59	272.73
Depreciation provision ..	185.16	173.08	162.74	151.93

* End of 1955.

It will be seen from the above table that the rate of capital formation declined during the years 1957, 1958 and 1959. Actually, in 1958, there was an erosion of capital to the tune of Rs. 12.36 crores (net). The gross fixed assets of the 294 mill companies increased by just Rs. 107.29 crores, from Rs. 243.78 crores at the end of 1955 to Rs. 351.07 crores as on 31st December 1959.

The results obtained above cover the four years from 1955 to 1959. To cover the five years of the second Plan, an estimate has been made of the investment in gross block of these 294 mill companies for the year 1960. The investment in block in any year seems to have relationship with the profits of the previous year, as may be seen from the fact that the relatively better profits of 1955 and 1956 resulted in higher investment in 1956 and 1957. As the profit of 1959 was comparable to that of 1955, the investment in fixed assets in 1960 is put down at the same level as in 1956, that is, around Rs. 29 crores. Out of that, the investment in plant and machinery is taken as Rs. 23 to 24 crores. On this assumption, the investment in gross block in the second Five-year Plan by the 294 companies under study is estimated at Rs. 136 crores, of which investment in plant and machinery account for Rs. 110 crores. For the entire industry, the increase in gross fixed assets over the second Plan period is believed to be of the order of Rs. 170 crores, the share of plant and machinery alone being Rs. 134 crores.

The period from 1955 to 1959, it may be noted here, included two years (1957-58) of very poor profits. Consequent on the rise of Rs. 107.29 crores in gross block in four years between 1955 and 1959, the internal resources (of the 294 companies) for working capital got depleted by Rs. 56.25 crores, necessitating higher borrowings and trade dues, the former rising by Rs. 65.07 crores and the latter by Rs. 20.41 crores. It is thus clear that the investment in block has put a severe strain on the finances of the industry. It is, however, not clear why the Federation has not included the financial results of the cotton mill industry for the fiscal year 1960-61. Surely, by the time it prepared the memorandum, the balance-sheets and profit and loss accounts of almost all the mills could have been easily procured and the necessary data processed. Its failure to do so is likely to vitiate some of its conclusions, at least psychologically, because the calendar year 1960 or the financial year 1960-61 was better than the preceding year and the cynics may say that the Federation has deliberately refrained from including them in its study.

Resources Not Adequate

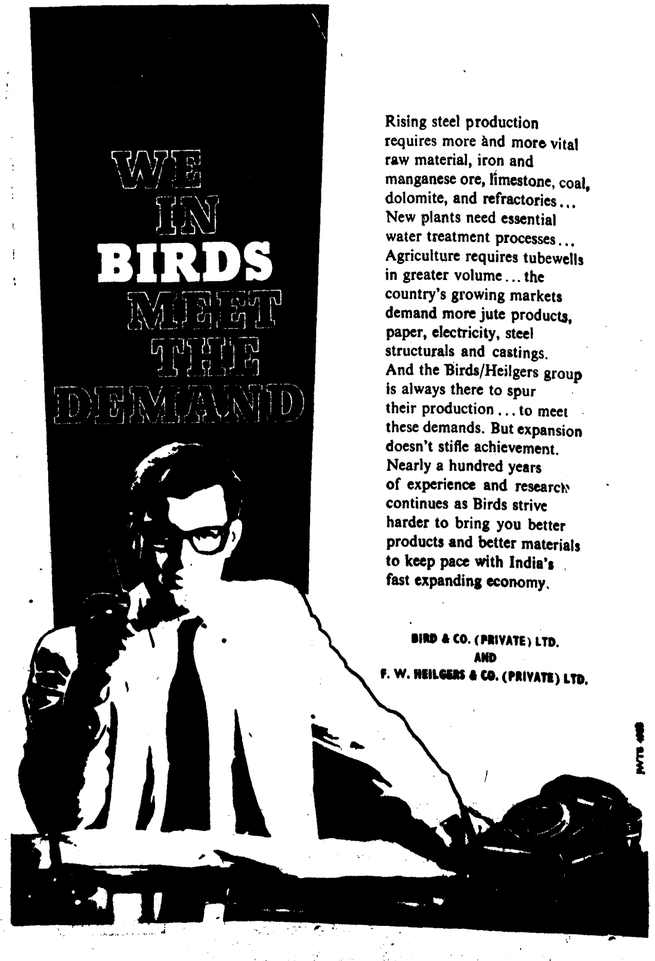
Although the vast majority of the units of cotton textile industry fared better in the past year, it would be true to say that its resources are not adequate to carry through a modernisation and expansion programme which will place it in a position to cater to the rising domestic needs of cloth and to hold its place in the world trade in textiles. As the Federation rightly observes:

"Due to a rise in the prices of machinery, much more will have to be spent in the coming five years to achieve even the same results in terms of physical assets.... The Working Group's estimate of Rs. 180 crores for investment in the third Plan period appears very conservative. In the last five years, the best performance was in 1957, when the investment in fixed assets by the 294 mill companies under study was Rs. 31.86 crores. As they covered 82 per cent of the industry, the estimated investment in fixed assets by the whole industry in 1957 would be Rs. 38.87 crores. Looking to this performance and on the assumption that the industry will be allowed to have a reasonable degree of profitability, our estimate of the industry's investment in fixed assets in the next five years is Rs. 40 crores in 1961, rising upto Rs. 60 crores in 1965, making a total of Rs. 250 crores in the five-year period. While the above estimate will cover replacement and modernisation, it does not take into account the expansion of three million spindles and 25,000 automatic looms, envisaged in the third Five-year Plan. The investment required on this account will depend upon how much of the capacity is given to existing units and how much entirely to new units, as the latter will require finance on a larger scale. It will also depend upon the sources from which the machinery is obtained and the trend in machinery prices."

In this connection, the Federation has drawn attention to the enormous sums of money spent on cotton industry in other countries such as Japan, Britain and the U.S. The estimated expenditure actually incurred in Japan from 1955 to 1959 was Rs. 363.92 crores. The U.S. Administration has lately given tax incentives with a view to boosting the rate of investment in the textile industry which has been officially labelled as "sick." The Federation pertinently comments: "If the U.S. textile industry can be officially labelled as 'sick,' we do not know what word we should use to describe the condition of our industry."

Financial Position

The Federation has made a special study of the financial position of the cotton mill industry in each of the years 1955 to 1959. The relevant



Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

† Total net assets. — Numerative is negative.

In reply to the question whether the financial position of the cotton mill industry can be adequately reflected by taking into account the current replacement value of the fixed assets, the Federation has reiterated that, for the purpose of calculating depreciation as an element of cost, it should be allowed on the replacement cost of assets. It also wants the return to the industry to be calculated on the basis of replacement cost, in view of the urgent need for modernisation. Incidentally, it says that, if the return were calculated on historical value, the adjustments necessary from year to year on account of the progressive investment in block, the servicing of loans and a provision for payment of loans would create many complications.

Capital Requirements

The Federation has made an estimate of the capital that will be employed by the cotton mill industry during each of the next three years, keeping in view the needs for its expansion. The relevant projected figures are as follows:

(In crores of Rs.)

	1960	1961	1962	1963
Investment in gross block	39.0	40.0	45.0	50.0
Total gross block of the industry	467.0	507.0	552.0	602.0
Net fixed assets	226.0	254.0	287.0	325.0
Percentage ratio of net assets to gross fixed assets	48.5	50.0	52.0	54.0

The Federation's study of 294 mill companies reveals that, between 1955 and 1959, the ratio of net fixed assets to total net assets increased from 31 per cent to 39 per cent. The increase indicates that a major portion of the rise in the total capital employed from year to year was absorbed for fixed assets formation. To that extent, therefore, the requirements of working capital have not been adequately met. The cost of working capital in the next few years will also be on the increase because of the rising price trend. To enable the industry to meet adequately the growing working capital requirements in the years to come, it is considered essential that the ratio of net fixed assets to total capital employed should remain stable. In 1959, the ratio was 39 per cent and, making allowance for a marginal rise of 1 per cent in the next few years, the ratio should be stable around 40 per cent. Taking the next fixed assets in 1963 at Rs. 325 crores as 40 per cent of the total net assets, the total capital employed by the industry in 1963 is expected to be Rs. 813 crores.

Relief Needed

The question naturally arises: Will the industry be in a position to raise as much as Rs. 300 crores in the next three years? The experience in the past few years has not been encouraging. The 293 mill companies could raise only Rs. 7.2 crores by resorting to capital market during the period from 1955 to 1959. They could, of course, borrow heavily from banks, but such borrowings were largely due to accumulation of cloth and yarn stocks. It is certainly a matter for consideration how far the industry can continue to rely on this source for obtaining funds, in view of the Government's dear money policy. Nor is the experience of the industry with regard to meeting their requirements through issue of debentures very encouraging; the total sum actually raised during the period 1955 to 1959 was just Rs. 2.34 crores. Similarly, the amount raised on the basis of mortgages and others was only Rs. 16.96 crores. The capital requirements met out of internal resources (depreciation and reserves), too, were not much, being Rs. 46.95 crores.

In view of all these considerations, it is not easy to refute the Federation's plea that the industry must be enabled to earn adequate profits which will help it not only to step up the availability of funds from internal resources but also to secure external finance. Equally tenable is the Federation's plea to the N.I.D.C., I.F.C. and other financial institutions to adopt a liberal policy in granting loans to cotton mills.

DISTRIBUTION OF INDIAN COTTON

In view of the reduced size of the Indian cotton crop during the current season, the Textile Commissioner has decided to introduce a scheme of varietywise distribution of the estimated production, generally on the basis of the consumption of different descriptions of cottons by mills during the last season. The Textile Commissioner has already taken the first step in specifying the maximum aggregate quantity of Vidarbha M.P. 197-3 and Khandesh Virnar 197-3 cottons to be bought by mills as 55 per cent of the aggregate consumption of these cottons during the cotton season 1960-61. This principle has been extended to all other varieties of cottons, with a view to balancing the short production in some varieties with the increased crop in other varieties.

For the purposes of the distribution scheme, Indian cottons have been categorised into the following two broad groups:

(I) *Medium and Long staple cotton:* (1) Digvijay 'A' and 'B', (2) Surti, (3) Punjab/American 320F and 216F RG and SG, (4) Karunganni, (5) Buri American and Cambodia 'C', (6) Gaorani 6 and J2, (7) Jayadhar and Laxmi, (8) Cambodia 'A' and 'B'.

(II) *Short staple cottons:* (1) Moglai Jarilla and Oomra, (2) Vidarbha M.P. 197-3, Khandesh Virnar 197-3, (3) Westerns, (4) Kalyan/Dholleras, (5) Bengal Deshi, (6) Pratap, Mathia and Mungari, (7) others.

The annual aggregate quota of short-staple cottons will be 100 per cent of the aggregate consumption of such cottons during the cotton season 1960-61, while the corresponding quota for medium and long-staple cottons will be 85 per cent of the aggregate consumption of these varieties during the cotton season 1960-61. Since, however, many mills have consumed foreign cotton stapling 1" and below during the last season, 85 per cent of such consumption will be given as additional quota in medium and long-staple cottons.

The formulæ for arriving at the eligible quotas in each category are being communicated to mills in a separate circular.

Eligible mills have already been allowed to buy during the current season a quantity equal to 50 per cent of their total consumption of Indian cottons and foreign cottons stapling 1" and below during the last cotton season 1960-61. The percentage has now been increased to 60 per cent but the purchase can be made only subject to the condition that in respect of each of the varieties for which allotments have been specified, purchases should be made in such a manner that the stocks on any day, including the outstanding purchases from which delivery is to be taken, shall not exceed the five months' average consumption of that variety during the cotton season 1960-61. If on the day of the receipt of the allocation letter the stocks are in excess of the aforesaid five months' limit, the mills shall be precluded from taking further delivery of the variety concerned unless the position is rectified by further consumption.

The mills which have not imported foreign cotton stapling 1" and below allotted to them during the last season or which have not obtained the necessary clearance from the Indian Cotton Mills' Federation are "not eligible" for any Indian cotton quotas.

The quotas of each mill are being calculated and quota letters will be posted shortly. In the meantime, mills are advised to calculate their own quotas on the basis of the formulæ being circularised separately and adhere to the varietal and quantitative limits prescribed. The quantities purchased during the current season in excess of the allotment should be reported by the mills to the Textile Commissioner so that the same may be released to other needy mills.

Exchange of a part or whole of the allocation against any particular variety with another mill will be allowed with the permission in writing of the Textile Commissoner, but applications for such permission will be considered only for the quota itself and not for the physical bales held in stock. Such application shall be received within two months of the date of the allocation letter. Once such permission is granted, no application for subsequent alteration from either of the mills will be entertained.

ASSISTANCE TO KASHMIR TEXTILE INDUSTRY

The regional office of the Textile Commissioner at Amritsar, besides attending to the problems of the textile industry located in the Punjab, Himachal Pradesh and Delhi regions, will render all the necessary assistance to the various development projects relating to the textile industry in the Jammu and Kashmir State also. It may be recalled that this regional office was opened in November last.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 500, you should

(1) Declare their value in writing at the time of booking, and

(2) Pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration of or damage to such articles. The articles named above and many others you will find listed as "Excepted Articles" in the I.R.C.A. Coaching Tariff No. 18.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

INDIA AND WORLD COFFEE SITUATION

FRESH THINKING ON EXPORT POLICY WANTED

COFFEE is one of the tropical crops which have moved from a position of reasonable balance to one of excess supply at current prices. The aggregate world stocks of coffee lying unsold, which normally used to be much less than a million metric tons in previous years, increased to as much as 3.5-3.6 million tons on 30th June 1961. The stocks at the end of the current season (30th June next) are expected to be still higher, in view of the notable rise in the production from 3.87 million tons in 1960-61 to 4.23 million tons in 1961-62. The anticipated output of 4.23 million tons and the opening stocks of 3.55 million tons together give a total available supply of 7.78 million tons, against which the estimate of consumption is placed at no more than 3.75 million tons. In other words, the coming season (1962-63) will begin with a huge stock of over 4.0 million tons hanging on the world market. The carryover stocks of coffee in producing countries will thus be higher than the whole year's world consumption. And naturally, coffee prices are depressed, notwithstanding the world-wide effect of the International Coffee Agreement and its regulated exports. The latest available quotation for Uganda Robusta grade in London is just 137*s.* 6*d.* per cwt. which, though it is higher than 131*s.* 6*d.* prevailing a year ago, is well below the highest rate of 210*s.* for 1960.

It is against the aforesaid background that the outlook for coffee exports from India will have to be assessed. Surely, an export policy which merely looks to an immediate increase in physical volume of export without understanding or accepting its long-term effects on the domestic industry is, as Mr. C. I. Machia, a leading planter of South India, stated, not only shortsighted but dangerous. Addresing the recent annual meeting of the Consolidated Coffee Estates, Mr. Machia clearly warned against the excessive weight of exports in relation to the total crop. He felt that the world coffee situation might not improve for many years and that it would be imprudent to place our future marketing policy on the assumption that world prices would improve. Emphasising the need for proper thinking, Mr. Machia observed:

"The Government policy is markedly in favour of increased export. For the first time in twenty years, we were forced to export a greater proportion of our total crop than is consumed here. If we can export an increasing volume of selected coffees, there is the advantage of familiarising the foreign market with the particular characteristics of our produce. But, if coffee is dumped abroad at whatever price it will fetch in the interest of an export drive, which is unfortunately being forced upon every commodity without due regard to their individual economy, nothing but loss can result. It is very important to us that Government should think over its coffee export policy with great care and that the Coffee Board should advise the Government with clarity and truthfulness, even if it is contrary to the avowed policy of the Government. The Board owes this duty to both the Government and the coffee industry whose welfare is the Board's first responsibility. This year the producers have made attempts to represent a case for a new marketing policy and several reforms in marketing procedures."

In the considered opinion of Mr. Machia, two things are essential to improve the capacity of India to export more coffee. One is that the return to the grower should be such as would induce him to continue in business. The other is that the export drive must be realistically linked to creating a preferential acceptance for Indian coffee in the world market. Otherwise, export promotion, as Mr. Machia rightly declared, becomes a purely mechanical operation of diverting larger quantities of coffee from the Pool over which the Government, through the Coffee Board, exercises statutory control. "It is to be realised," to quote him, "that not all coffee produced in this country is of export quality and it is essential in the interests of the industry that only the very best quality which is capable of earning a premium should be exported."

There is, as already noted, a surfeit of coffee supplies the world over. This is so because the pace of rise in world coffee exports has not kept pace with that of output. A detailed review of the world coffee position has been made by the Commonwealth Economic Committee in the December 1961 issue of its publication, *Tropical Products Quarterly*. According to this study, as against the increase of 7.05 million cwt. to 84.50 million cwt. in the aggregate world production during the season 1961-62, exports in the calendar year 1961 may be estimated at 50.12 million cwt., representing a rise of just 1.07 million cwt., as compared with the 49.05 million cwt. actually shipped in 1960. (*Note*: Each cwt. is equal to 112 lbs. and 20 cwt. make one ton.) Table A below indicates the trend of world production and exports in recent years. It will be seen from this table that the improvement in coffee production during the current season is accounted for mainly by Brazil, the world's biggest producer of coffee, its actual share being more than half the total; the extent of the rise over 1960-61 is as much as 7.26 million cwt. The output is also higher in Uganda, Colombia, Mexico, El Salvador, Guatemala and other Latin American countries. The increases in these countries have more than made good the decline in output in India, Ivory Coast, Angola, Tanganyika, Kenya and some other African countries. Referring to India, the *Tropical Products Quarterly* says that unusually heavy and long rains and floods in Mysore and Kerala have resulted in a crop much smaller than the record one harvested in 1960-61. Its estimate of the Indian crop is one million cwt.

World Coffee Trade

The world trade in coffee during 1961 was at much the same level as in 1960, a decline in exports from Latin America being offset by an increase in shipments from Africa. Consignments from Brazil during the first nine months of 1961 amounted to 14.5 million cwt., 800,000 cwt. less than a year earlier. Shipments from Colombia during the period January-October 1961 at 49,107 cwt. were also less. The main Commonwealth countries, however, were able to raise their coffee exports substantially. East African shipments, for instance, reached 2.6 million cwt. in the first nine months of 1961, as against 2.2 million cwt. in the corresponding period of 1960. Uganda again accounted for some two-thirds of the total, but the shipments from Kenya showed a great increase.

More marked still was the rise in shipments from India, the estimated figure for the whole of 1961 being 31,000 tonnes, as against 16,050 tonnes in 1960. The notable improvement in Indian coffee exports was due mainly to the much heavier offtake by Common Market countries, especially West Germany and Italy, which, during the seven months ended July 1961, received over one-half of the total. But shipments to the Soviet Union and Eastern Europe were appreciably lower. The quantity of coffee exported by India to some of the important markets during the first seven months of 1961 is given below, the figures in brackets relating to shipments, during January-July 1960 and the whole of 1960, respectively:

(In thousand cwt.)

West Germany 104 (36-69); Italy 57 (11-28); Netherlands 36 (10-24); U.S. 36 (*nil*-15); Soviet Union 28 (44-44); U.K. 21 (5-7); Yugoslavia 17 (3-14); France 17 (3-14); Sweden 14 (2-3); East Germtny 9 (19-20); Egypt 7 (*nil-nil*).

The biggest importer of coffee in the world is the U.S., followed by West Germany, France, Italy, Sweden, Belgium, Canada, U.K., Netherlands and others. The actual imports from all sources during the first half of 1961 and 1962, as well as in the whole of 1960 and 1959, are shown in Table B.

World Coffee Agreement

A brief reference to the International Coffee Agreement may be made here. The Agreement, it will be recalled, was first signed in September 1959 by 15 Latin American countries, representing 80 per cent of the world exportable production of coffee. The membership of the Agreement is 27 now. Ethiopia has filed a declaration of intention to join the Agreement eventually. India, which is not a member of the Agreement, is still considering the invitation to join it. Opinion is rather divided. The majority of planters want to join the Agreement, but the Government is rather lukewarm. The Agreement has been extended for a further one year as from 1st October 1961. The aggregate export quotas fixed for the October-December 1961 and January-March 1962 quarters are 9,204,000 bags and 9,046,000 bags, respectively. The members have agreed to export not more than 97 per cent of their total quotas for the two quarters.

The Directors of the Agreement will meet again in March next to fix quotas for the third and fourth quarters, if no long-term agreement is concluded by that time. A Co-ordinating and Drafting Committee was appointed some time ago by the Coffee Study Group to draw up such an agreement. This Committee constituted a smaller Drafting Committee which, in November 1961, submitted a preliminary draft providing for the establishment of a new permanent council, meeting annually to lay down a policy for an Executive Board. It was stated that the Board could, subject to the Council's approval, fix minimum prices and authorise a reduction in export quotas whenever prices fell by 5 per cent below the minimum, or, conversely, raise the quotas if prices rise 10 per cent above the minimum. A significant feature of the draft agreement is the provision made for penalising non-members. Thus, first, the co-operation of consumer countries is sought in the fixing of export quotas. Secondly, these countries are asked to place embargoes on imports from non-members of the Agreement, as also from members who violate their quotas. The preliminary draft is now being examined by the main Committee and the member-Governments. The comments made by these will enable the Coffee Study Group, which is meeting sometime next month, to judge whether a basis exists for calling a conference to negotiate a long-term Agreement.

EXPORT PROMOTION FOR PLANNED DEVELOPMENT

A RESUME OF STEPS TAKEN BY GOVERNMENT

By M. P. Mathur

DURING the past decade, plans of economic development have exerted increasing influence on India's foreign trade. With the development of the economy and consequent rise in industrial production, the level of imports has risen appreciably. During the first Plan period, imports amounted to Rs. 3,620 crores, that is, an annual average of Rs. 720 crores. For the second Plan period as a whole, aggregate imports were about Rs. 5,360 crores, that is, an annual average of Rs. 1,072 crores. The third Plan, with its larger investment programme and continued priority for development of basic and heavy capital goods industries, requires still larger imports than during the second Plan period. It is estimated that, during the third Plan, the annual average level of imports would have to be about Rs. 1,270 crores.

While import requirements have been continuously on the increase, India's exports during the last decade have been rising very slowly. During the first Plan, the annual average was about Rs. 609 crores and, during the second Plan, the average was estimated at about Rs. 614 crores. It is, therefore, imperative that supreme effort has to be made to step up exports to the maximum extent possible. For the third Plan period, the target for exports is Rs. 3,700 crores. It is essential that effort and planning will have to be made to increase exports even to a greater magnitude than the target if we are to avoid serious shortfalls in the implementation of the third Plan. Indeed, this is the period in which exports must be built up, so that much larger requirements anticipated for the fourth Plan have to be fulfilled. Considering the requirements on account of repayment obligations abroad and maintenance and development imports, it is anticipated that, by the end of the fourth Plan, the annual level of exports would have to rise to about Rs. 13,000 to Rs. 14,000 crores. It is against this background that the objective of achieving export earnings of not less than Rs. 3,700 to Rs. 3,800 crores over the third Plan period has to be viewed.

Fully realising this task, the Government has initiated a series of measures to promote a rapid rise in the export trade of the country. A committee has been appointed to study in detail the country's trade policy and to make suitable recommendations in regard to measures to be taken for export promotion. This Committee is expected to submit its report shortly.

Special Directorate

In the Ministry of Commerce and Industry, which is directly concerned with export trade of the country, an integrated structure in the form of Directorate of Export Promotion for servicing exporters has been built up. It gives guidance, assistance and information to Indian exporters. This organisation has branch offices at Bombay, Calcutta and Madras, in order to render help to exporters in each of those zones. These regional offices devise concrete measures for enlarging exports of particular commodities and assisting the export trade in solving their difficulties.

In order to obtain the collective advice of the trading community, so that correct policies could be framed, the Government have set up a number of advisory bodies to advise it in respect of measures to be taken for export promotion and specific policies to be pursued in that direction. There are the Export Promotion Advisory Council and its Standing Committee, the Regional Advisory Committees at the ports and Honorary Export Promotion Advisers. There is a Foreign Trade Board which enunciates policies, taking into consideration the advice given by these various bodies. These policies are implemented by the Export Promotion Directorate mentioned earlier.

Export Promotion Councils

For some of the important commodities or groups of commodities which figure in the export trade of the country, a number of Export Promotion Councils have been set up with the active co-operation of the trade. The role of Government in these Councils is to give stimulation, encouragement, guidance and financial assistance, while the trade is expected to take concrete steps through the agency of these Councils, in respect of devising and taking measures which would increase exports of commodities with which they are concerned. In this manner, 13 councils have been established for cotton textiles, silk and rayon textiles, plastics and linoleum, engineering products, shellac, mica, cashew, leather, tobacco, sports goods, chemicals and allied products and marine products. These Councils in particular undertake studies in foreign markets, send out trade delegations and conduct trade publicity in foreign countries. They also lay down standards of quality and packing of goods for shipment abroad. They act or nominate arbitrators or valuers in settlement of trade disputes or differences arising in export transactions. They also undertake enrolment of exporters under the Enrolment Scheme announced by the Government.

Apart from these Councils, half a dozen autonomous Boards have been constituted for tea, coffee, coir, silk, handloom products and handicrafts. Although the functions of these Boards are wider, export promotion is an important part of their activities. The Indian Jute Mills Association has been entrusted with the task of promotion of exports of jute goods in consultation with the Jute Commissioner.

Besides the above organisations, there are other institutions like the Department of Commercial Intelligence and Statistics, the Director of Exhibitions, Director of Commercial Publicity, State Trading Corporation, Government of India's Trade Representatives in foreign countries, etc., which play their assigned roles in the scheme of export promotion.

Fiscal Incentives

In order to encourage exports, the Government have abolished control on a very large number of commodities. Commodities whose exports are either banned or restricted are only a few now. Export duties have either been abolished or reduced in most cases.

A number of facilities are provided to the exporters in respect of import of raw materials required for manufacture of finished goods for export, in movement of goods by rail to the ports, shipping, etc. A scheme has been devised for grant of import licences for import of raw materials up to a specified percentage of the f.o.b. value of foreign exchange earnings on goods exports. This scheme covers a large number of export items in the manufacture of which imported materials are normally used. Besides this general scheme, there are several special export promotion schemes to facilitate export of commodities such as engineering goods, cotton textiles, woollen goods, art silk manufacture, plastic goods, chemicals, sports goods, etc. Exporters who undertake to export specific quantities of goods are granted import licences for the import of raw materials and spare parts to achieve the targets of exports. Tinplates and box staplings are released for the manufacture of tin containers for packing cashewnuts, coffee, chemicals, confectionery, biscuits, food products, etc., intended for exports. Steel sheets required for containers for exporting varnishes, non-essential oil, chemical and chemical products are also made available.

For a wide range of goods, drawbacks of import and excise duties on raw materials and components used in their manufacture are allowed. Another facility which is available to exporters is the permission to manufacture in bond. Cost of production of some export commodities rise, because raw materials used in the process of manufacture have to bear the incidence of custom and/or excise duties. In order to encourage exports of these commodities, their manufacture is permitted in bonded premises.

Freight Rates

For investigating complaints in regard to ocean freight rates, a Freight Investigation Board has been set up in the Office of the Director General of Shipping, Bombay, with a branch office at Calcutta. Applications made by associations of exporters in accordance with the prescribed procedure for reduction in freight rates are taken up by this Board with the Shipping Conference to secure adjustments in freight rates. As a result of the efforts of this Board, reduction in freight rates in respect of a number of commodities has been secured.

In order to obviate the hazards involved in export trade, the Government has set up an Export Risks Insurance Corporation to cover the various types of risks that an exporter has to undertake. This organisation also helps exporters in securing loans on easy terms from commercial banks on the basis of export risks insurance policies issued by it. Steps have also been taken for provision of credit facilities to exporters through scheduled banks in India under the Bill Market Scheme.

Quality and Standards

To popularise Indian products in foreign countries and to establish the Indian trade connections, it is essential that the quality of Indian goods should be of a high standard. Compulsory quality control schemes which are backed by legal sanction are operated under the Agricultural Produce Act, Fruit Products Control Order, Drugs Act, etc. The Leather Export Promotion Council and Cotton Textiles Fund Committee have formulated voluntary quality control schemes. Certain commodities, such as tobacco, raw wool, lemon grass and sandalwood oils, sunn hemp and bristles are subject to compulsory grading before being exported. Recently, the Government had set up a Committee for Quality Control and Pre-shipment Inspection. Most of the recommendations of this Committee have been accepted. More and more schemes are being evolved to cover a number of export commodities. The Indian Standards Institution plays an important role in the maintenance of standards and quality of Indian manufactures. This Institution has so far published quality standards in respect of more than 1,700 items covering all types of electrical, mechanical and chemical products and products of the building industry. Apart from the formulation of standards, the Institution has been empowered to issue licences to manufacturers to use the ISI mark when the goods conform to the requirements laid down by it. The I.S.I. officers help the producers to improve quality, manufacturing processes and techniques and render facilities for the testing of materials.

Agents Abroad

The Trade Representatives of the Government of India stationed in almost all important trading centres in the world help in furthering trade relations between India and the countries in which they are stationed. They assist the visiting Indian Trade Delegations by securing suitable introductions. They also help in settlement of trade disputes arising out of transactions entered into between India and foreign parties.

Trade Delegations to visit foreign countries from time to time, with a view to establishing direct contacts with foreign importers, are sponsored. Apart from market research conducted by these Delegations in foreign countries, the Government has been taking a direct interest in market research through its Trade Representatives abroad, who are asked to undertake surveys on specific commodities. The foreign officers of the various Export Promotion Councils stationed in foreign countries also conduct market surveys and keep the trade in India fully informed of the developments abroad.

Another direction in which the Government encourages promotion of exports is conclusion of Trade Agreements. Trade Agreements both on multilateral and bilateral pattern have been entered into with a number of countries with a view to strengthening trade. Payments arrangements have been provided for in these Agreements for effecting payments for imports and exports.

To acquaint foreign importers with Indian products, intensive commercial publicity is conducted through various media. Publicity through films, photographs and radio is also done. India also participates in international exhibitions as well as organises wholly Indian exhibitions, so that Indian goods can popularise in foreign

(*Continued on page 79*)

Notice

THE KELVIN JUTE COMPANY LIMITED

ANNUAL GENERAL MEETING OF MEMBERS

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from the 17th January, 1962 to the 31st January, 1962, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

CALCUTTA, *4th January*, 1962.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD.

CHAIRMAN'S SPEECH AT ANNUAL MEETING

DELAYED POOL PAYMENTS FOR COFFEE CAUSING HARDSHIP TO GROWERS

THE Fifteenth Annual General Meeting of the Coffee Lands and Industries (Mysore) Ltd. was held at Pollibetta, Coorg (Mysore State), on Friday, 29th December 1961. Addressing the meeting, the Chairman of the Company, Mr. C. I. Machia, pointed out that the coffee growers had been put to considerable hardship because of lack of finance due to delays in making pool payments. These delays, he added, also increased the cost of production, as the grower had to find other sources for his working expenses at rather high rates of interest. He urged adequate relief to the grower to ensure that he received at least his minimum return. A reasonably fair manner in which this could be done, in his opinion, was to pay out of the Central excise collections a sum equal to the difference between the internal and average export realisation of Robusta coffee.

The following is the full text of the Chairman's speech:

"LADIES AND GENTLEMEN,

"It gives me much pleasure to welcome you to the fifteenth annual general meeting of the Company. The Directors' report and the audited accounts for the year ended 30th June 1961 have been with you for the statutory period and, with your permission, I shall take them as read.

"The total crop harvested at 1,088 tonnes or 930 tonnes of Arabica and 158 tonnes of Robusta is a record for the Company. It is satisfying to note that the average yield on your estates during the year was 391 kgs. per acre, which shows that your properties are maintained in the best of productive condition.

"Your Board has considered it prudent to adopt a valuation of Re 1.90 per point, in view of the present trend in prices, particularly in respect of exports. It is, however, hoped that the final return may exceed this valuation slightly.

Working Results

"The profit after taxation amounted to only Rs. 5,73,427, as against Rs. 2,03,662 in the previous year, in spite of a record crop.

"The increase in earning has not been commensurate with the higher crop. The profit after taxation is just Rs. 35,000 more than that earned on a crop of 608 tonnes harvested in 1954-55.

"The dividend at 12 per cent on the ordinary share capital recommended by your Board is consistent with the need to allocate larger amounts to reserve and to provide for a bigger carry forward than usual, in anticipation of a very much lower crop in the coming year.

"The income over valuation of 1959-60 crop received into this year's account is only Rs. 60,871, as against Rs. 1,24,626 received in 1959-60. The excess over valuation was only 4 nP per point, making up to a total of Rs. 2.24 per point. During the year, we received a small bonus payment of nearly 2 nP per point on account of 1956-57 coffee amounting to Rs. 26,354. It is of interest to compare the valuation and final value per point received for each of the last five years together with the amounts received from the previous seasons' account:

Season	*Valuation per point*	*Final value per point*	*Income from previous season's account*
	Rs.	Rs.	Rs.
1955-56 ..	2.37	2.55	5,99,834
1956-57 ..	2.50	2.81	3,73,877
1957-58 ..	2.23	2.51	3,62,655
1958-59 ..	2.37	2.45	1,48,410
1959-60 ..	2.20	2.24	87,225

"The income from the previous seasons' coffee is the lowest since 1950-51 and the trend is noticeably towards a decline.

"Our share of profit from Hehole estate amounting to Rs. 15,038 is the highest since the Company purchased a share of that estate in April 1958. The estate has produced a record crop of 40,689 tonnes or 649 kgs. or 13 cwts. per acre.

Hunsur Works

"The year's working was satisfactory. The works cured a record of 4,202 tonnes of coffee. Income from trading at Hunsur works was lower than the previous year consequent on the delay in receipt of nitrogenous fertilisers allotted through the Coffee Board by the Government and the reduction in sales of other estate supplies due to increasing competition.

Expenditure

"Our production, trading, selling and administration expenses after eliminating trading is Rs. 32,93,904 which is slightly higher than that of the previous season's figure of Rs. 31,22,654. This is accounted for by an increase of Rs. 1,50,000 in salaries, wages and bonus and about Rs. 15,000 under the heading miscellaneous expenses; incurred on the higher crop harvested.

"The increase in wages was the result of the agreement reached between the labour unions and the Mysore State Planters' Association, whereby the plantation labour wages were revised from 1st August 1960 as under:

Men	from Re. 1.40 to Re. 1.62
Women	from Re. 1.06 to Re. 1.23
Adolescents ...	from Re. 0.88 to Re. 1.00
Children	from Re. 0.75 to Re. 0.80

"The cost of production per acre works out to nearly Rs. 897, out of which cost of labour alone accounts for Rs. 406 per acre or nearly 45 per cent of the total cost.

Prospects

"It is feared that the crop estimated may not be harvested due to poor setting and development. As mentioned in the Directors' report, nearly 600 acres of our properties have been affected due to an unprecedentedly heavy south-west monsoon, and the rehabilitation of these areas will take time and additional expenditure.

Labour

"Our relations with labour have been cordial. Such difficulties as we have experienced in our dealings with labour have been due to a number of small and unrepresentative unions, who make exaggerated claims hoping thereby to attract a larger membership.

"Earlier in this speech, I referred to two items which are significant in the context of effecting economies in the working of our estates. One of these was the regular fall each year in the income received from the previous seasons' crop indicating a steady decline in the return to the grower. The other was the fact that, with this decline and a heavier incidence of taxation, a crop of as much as 1,088 tonnes produced an extra profit of only Rs. 35,000 over a very much smaller crop of only 608 tonnes in 1954-55.

"All reasonable efforts to reduce the cost of production are being made, but it must be impressed that very substantial reductions are not possible without serious detriment to the land and without affecting the yield per acre. With a falling return for coffee, it is more than necessary that the yield per acre should be maintained if not increased.

"One item on which there can be no reduction is the cost of labour. In fact this will steadily go up and, as is well known, the Central Government has constituted a Central Wage Board for coffee to consider the question of a fair wage.

"Labour must do a full day's work and the present heavy absenteeism should cease. It is hoped that any recommendations regarding wages will take into account hours of work and productivity.

"Coffee is a horticultural crop and workers engaged therein are not called upon or expected to do work requiring greater skill or work which is more arduous than in normal agricultural operations. Plantations, however, have been treated on a par with manufacturing industries where labour is concerned and as a subject for Central control.

"Substantial economies in cultural operations such as spraying, manuring and weeding are scarcely possible, without serious detriment to the properties. The Government, however, is in a position to help the industry through these critical times, especially in respect of the following matters:

"*Taxation:* Depreciation allowances under the Mysore Agricultural Income-tax Rules are lower than that allowed under the Central Income-tax Rules, particularly in the case of tractors, motor vehicles, spray hose, etc. Vehicles plying in the Malnad or hill areas have a shorter life than those plying in urban areas. Plantations are a wasting asset and no allowance towards this is also given. State taxation at 40 per cent is, therefore, in effect higher than the Central rate of tax on companies. In spite of various representations, the State Government has not liberalised the rates.

"*Manure:* Manure is essential, and hence forms another major item of expenditure, amounting as it does to nearly Rs. 100 per acre or roughly 11 per cent of the cost of production. Plantations, however, have to pay some Rs. 20 more per tonne than a farmer for nitrogenous fertilisers, which are controlled by the Government of India. The distinction between a farmer and a plantation owner, who is also an agriculturist, is inequitable and arbitrary.

"Another item of avoidable expenditure is the fact that payment for nitrogenous fertilisers to the Central Government have to be made well in advance—in some cases advance payments have been made six to eight months before the fertiliser was received—involving in considerable loss on interest charges. There is also no assurance that the fertilisers will be received in time.

"*Machinery:* Plantations are charged some Rs. 3,000 per tractor extra over the price for an agriculturist on the ground that plantations can 'afford to pay' and imported pulpers and sprayers are also subject to an additional excise and customs duty.

"*Village Panchayats*: We now have a new taxing authority. The village *panchayats* are empowered to and are now levying taxes on all estate dwellings, including labour lines, for which the *panchayats* provides no amenities in the way of lighting, water-supply, sanitation, etc. Estate vehicles which use only estate roads and engines are also subject to a further tax. All this casts a further burden on the cost of production.

Pool Payments

"Large growers receive an advance payment on delivery of crop and the balance in instalments. The payment received by the grower by the end of October normally amounts to between Re. 1.75 to Rs. 2.00 per point, whereas this year the payment received up to the end of November was only Re. 1.19 a point. It must be obvious that growers have been put to considerable hardship because a lack of finance due to such delays. These delayed payments also increase the cost of production, as the grower has to find other sources for his working expenses at rather high rates of interest.

"The return to the grower has been steadily declining as the following will show:

(Rupees per point)

1954-55	2.37
1955-56	2.55
1956-57	2.81
1957-58	2.51
1958-59	2.45
1959-60	2.24
1960-61	1.90 present valuation, but likely to be a little more.

"The reduction in return during 1959-60 and 1960-61 was due to the serious fall in export prices and we are now approaching a situation where the Coffee Board is unable to ensure even the minimum return to the grower. The very serious decline in export prices for Robusta of nearly Rs. 50 per 50 kgs. will certainly prevent a minimum return being made.

Exports

"The Coffee Board is helpless, as it is bound to carry out Central Government directives as to the quantity of coffee to be exported. The coffee exported from India this year amounted to 29,658 tonnes to the end of November, which constitutes a record. While this has no doubt helped to dispose of a larger quantity of coffee, it has not brought in receipts which will ensure a fair or even minimum return to the grower. In ordering these exports, no consideration for the well-being of coffee growers is apparent.

"In the face of this most difficult situation, the Central Government increased the Central excise duty on Arabica coffee and continues to collect the excise duty on Robusta. Adequate relief to the grower to ensure that he receives at least his minimum return is essential and a reasonably fair manner in which this can be done is to pay out of the Central excise collected a sum equal to the difference between the internal and average export realisation of Robusta coffee.

Coffee Marketing

"It is pleasing to note that, as at the end of December 1961, the balance remaining unsold is expected to be only 3,125 tonnes of Arabica equal to 1½ months' requirements and only 9,099 tonnes of Robusta which would be required for the first three months or a total of 12,224 tonnes. About 4,000 tonnes of Robusta earmarked for export has been diverted to the internal market and is included in the carry forward referred to above. It is hoped that this diversion may help to make up somewhat the loss sustained in the export of Robusta.

"There is also the gratifying sign of an increase of nearly 4,000 tonnes in internal consumption and it is to be hoped that this tendency will continue.

"Any marketing policy must give a fair return to the grower and this may be achieved by not dumping coffee for exports at whatever price it may fetch and by building up a stable and expanding internal demand.

"It is a welcome change that the Board and the Government have decided to sell coffee for export in open auctions in place of the old and outmoded tender system. Open auctions should, more than ever, show that quality coffees will fetch their own premium and, in due course, the Board may have to limit its auctions to quality coffees and not sell coffees which can only result in a loss to the pool.

"After some experience of the open auction system, it may be found necessary to add a refinement in the way of selling by making available for sale each year coffees known by their estate names, or distinguishing marks.

"The Chairman and the Chief Coffee Marketing Officer of the Coffee Board have recently completed a tour of England and Europe to study the export market, in particular relation to Indian coffee and I have had the privilege of reading their admirable tour reports. The knowledge gained by them at firsthand should prove useful to the industry.

"It is also pleasing to know that a Cup Taster is to be appointed very soon. It is, however, hoped that there will be no undue delay, as it will give him time and opportunity to get acquainted with Indian coffee from this season itself.

Propaganda

"More propaganda is necessary to increase internal consumption particularly in North India, and this should be so oriented as to deal with a large anticipated increase in Indian production.

"The Coffee Act has now been amended and power has been taken to fill all places in the Coffee Board by nomination by the Central Government. An assurance has been given in the Lok Sabha that the nomination of growers will be made in consultation with recognised Planting Associations. It is to be hoped that this will be an improvement though a more welcome reform would have been to allow for an increased representation to growers, especially as it is their well-being that is at stake.

Land Ceiling Bill

"The Mysore Land Ceiling Bill has been passed and is now awaiting the assent of the President. While plantations as such are exempt the restrictions imposed on the amount of reserve, ancillary and agricultural land that may be held will affect the efficient management of well established and compact units. Only 100 acres of reserve land, such ancillary land the area of which is yet undefined, and one ceiling unit of 18 standard acres of paddy land may be held in addition to the land on which plantation crops are grown. Your Company holds some 800 acres of reserve which is essential, as it serves as firewood reserves, grazing areas, sources of jungle soil for nurseries and serves as wind and rain breaks. The reserve land is spread over a number of estates and most of it is really unfit for cultivation, but is required for the uses enumerated above, which are essential to the well-being of the existing estates.

"Suitable representations are being made to the Central Government by the United Planters' Association of Southern India and the Mysore State Planters' Association in an effort to see that plantations in Mysore State should not suffer in comparison with those in Madras and Kerala.

"I have referred in this speech to the many handicaps that coffee growers are suffering from and it is sincerely hoped that these difficulties will receive the earnest and sympathetic consideration of the Central and State Governments.

"In closing, I wish to thank our managers, members of the staff and labour both on the estates and at the Hunsur works for their work during the year.

"Finally, I must express my gratitude to my fellow-Directors for their wise guidance."

Note: *The above statement is not a report of the proceedings of the annual general meeting referred to.*

STATE BANK OF BIKANER

(Subsidiary of the State Bank of India)

Head Office: BIKANER

Each of our 72 branches is fully equipped to provide

PERSONALISED SERVICE

ALL TYPES OF BANKING BUSINESS

including

FOREIGN EXCHANGE BUSINESS TRANSACTED

Interest on Savings Bank Deposits allowed at

3% per annum

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT—

PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL
STORES ORGANISATION • CONSUMABLE STORES CONTROL
RAW MATERIALS CONTROL • FUEL AND STEAM UTILISATION
TRANSPORTATION METHODS • MECHANICAL HANDLING
PRODUCT QUALITY CONTROL • OPERATIONAL RESEARCH
WORK STUDY • BUDGETARY CONTROLS
VALUATION OF PLANT & BUILDINGS
DESIGN AND ESTIMATES OF EXTENSIONS

ON LABOUR—

METHOD AND WORK STUDY • PRODUCTIVITY INDICES
TIMEKEEPING SYSTEMS • WAGE PAYMENT SYSTEMS
JOB EVALUATION • WAGE STRUCTURES
PERSONNEL RECORDS • LABOUR POLICIES
HUMAN RELATIONS • COMMUNICATION
REORIENTATION LECTURES • FOR LABOUR AND SUPERVISION

IN OFFICES—

MANAGEMENT ORGANISATION • EXECUTIVE LEVEL WORK
CLERICAL PROCEDURE • MANAGEMENT CONTROLS
WORK MEASUREMENT • BUDGET FORECASTS
LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND

THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT

MARKET RESEARCH

PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES

TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

CONSOLIDATED COFFEE ESTATES (1943) LTD.

MR. C. I. MACHIA, CHAIRMAN, ON RISING COSTS AND FALLING PRICES

REASONABLE RETURN TO COFFEE GROWERS IMPERATIVE

THE coffee industry's dilemma of rising costs and falling prices was highlighted by Mr. C. I. Machia, Chairman of the Consolidated Coffee Estates (1943) Limited, in the course of his speech at the Eighteenth Annual General Meeting of the Company held at Pollibetta, Coorg (Mysore State), on Friday, 29th December 1961. With the selling of coffee for export at whatever price it might fetch, the Coffee Board was, Mr. Machia observed, unable to pay to the grower even the so-called minimum return. He commended for immediate acceptance by Governments three specific measures in order to afford reasonable relief to coffee. These were: (*a*) abolition of excise duty on coffee and maintenance of the existing minimum release price, (*b*) grant of a direct subsidy to coffee by making up the difference between cost of production and export price; and (*c*) reduction of agricultural income-tax and liberalisation of rules relating to depreciation, new clearings, etc. He authorised that encouragement given to coffee now was bound to pay the Government handsomely later, as production and sales in internal and export markets expanded.

The following is the full text of Mr. Machia's speech:

"LADIES AND GENTLEMEN,

"It is with great pleasure that I welcome you to the eighteenth annual general meeting of the Company. The Directors' report and the audited accounts for the year under review have been in your hands and, with your permission, I propose to take them as read.

Working Results

"The year's working has resulted in a profit of Rs. 21,93,249 after taxation, as compared with Rs. 13,08,089 in the previous season. The increase in profit is mainly attributable to the record crop harvested. The coffee crop for the season amounted to 2,585 tonnes of Arabica and 1,633 tonnes of Robusta or a total of 4,218 tonnes, as against 1,451 tonnes of Arabica and 998 tonnes of Robusta or a total of 2,449 tonnes in the previous year. The total crop of 4,218 tonnes exceeded the blossom and revised estimates and the possibility of such an increase had been referred to in my speech last year. The Arabica and Robusta crop for the season under review is the highest since the inception of the Company and is nearly 988 tonnes more than the previous record crop of 1956-57. The average yield per acre of Robusta at 626 kilograms or nearly 12½ cwts. per acre is a record. The average yield per acre of Arabica is 553 kgs. or about 11 cwts. and is slightly lower than the previous record of 575 kgs. or 11½ cwts. in 1956-57.

"Your Board has considered it prudent to adopt a valuation of Re. 1.90 per point, in view of the present falling prices of coffee, particularly in respect of exports. This valuation is considered reasonable and it is possible that the final return may exceed this figure slightly.

"The income over valuation for 1959-60 received into this year's accounts is the lowest since 1948. I had indicated in my last year's speech that the surplus over that year's valuation would not be much. We have finally received only 4 naye paise per point or a total of Rs. 2.24 per point and, with the lower crop of that year, the amount received on account of 1959-60 coffee was only Rs. 1,58,579. During the year under review, we also received a small bonus payment of about 2 naye paise per point amounting to Rs. 87,036 on account of 1956-57 coffee crop. Against these receipts from previous season's coffee crop, we have had to set off a loss of Rs. 12,613 incurred on the 1959-60 season's pepper stock over the previous year's valuation, a loss due to the steep fall in pepper prices.

Subsidiary Crops

"I will now refer briefly to our subsidiary crops. The total income from subsidiary crops such as pepper, cardamom and oranges was Rs. 7,40,433 and was a little higher than the income of the previous season.

"*Pepper*: The production for the year was 74 tonnes, as against 58 tonnes in the previous year. The income from pepper this year on a crop higher by 16 tonnes was only Rs. 2,66,731, as against Rs. 2,83,047 for the previous year's crop. This lower realisation was due to a marked fall in prices. Due to constant fluctuations in the pepper market, we have not disposed of our entire yield, but have carried forward much of our current season's crop. Pepper is a very highly speculative commodity and the prices have recently been subject to wide and erratic variations.

"*Cardamoms*: The income from cardamoms at Rs. 97,409 is the highest since the inception of the Company and the total yield of 6 tonnes is a record.

"*Oranges*: The income from oranges was Rs. 70,807 higher than the record income of Rs. 1,23,469 received for the previous year and was due to a larger crop and better prices.

"*Paddy and straw*: Our income from paddy and straw has gone down considerably due to a very low yield of 560 cartloads of paddy, as against 733 cartloads in the previous year.

"*Timber sales*: Our income from timber sales is much lower. In view of the large coffee crop, it was considered unnecessary to effect any sales on a large scale. Such sales as were made were limited to the removal of trees affecting cultivation. It is proposed to sell a fair quantity of timber this year to supplement the income from our very much lower coffee crop.

"In keeping with the policy of increasing our subsidiary crops, we have planted during the year 20 acres of oranges and other citrus fruits, 7 acres of cardamom and 11 acres of arecanut. We have also planted about 10,000 pepper vines and we expect to improve our cultivation of paddy.

"The income from our curing works was lower than that of the previous year, due to their curing a lesser crop than in the previous season and to the increase in the labour wage bill. The income from trading is also lower and is due to the delay in obtaining nitrogenous fertilisers owing to scarcity of wagons and to import restrictions on power sprayers, etc.

Expenses Rise

"Our production, trading, selling and administrative expenses show an increase of Rs. 10,75,201 over that of the previous year and is accounted for as under:

"(1) To an increase of 1,769 tonnes of coffee over that of the previous season, resulting in a corresponding increase in crop charges such as gathering, curing, transport, etc.

"(2) The application of extra manure to heavy bearing areas resulted in an increase in cost under the heading 'consumption of stores and spare parts.'

"(3) The wage agreement entered into with labour with effect from 1st August 1960 which accounted for nearly Rs. 3 lakhs increase in wages, provident funds, etc.

"The dividend at 20 per cent on the ordinary share capital recommended by your Board is consistent with the need to allocate larger amounts to reserve and to provide for a big carry forward in anticipation of a lower income in the coming year.

"During this year the total capital expenditure amounted to Rs. 7,30,904, estate machinery, pulphouses, barbecues, etc., accounting for nearly Rs. 2,11,380.

"Labour housing has been completed on all our estates excepting two which still require about 50 new units and the conversion of 26 substandard houses to prescribed standards. Our main capital works in the future will be the modernising of about four pulphouses, building of barbecues, construction of reservoirs for storage of water for pulping and spraying, etc.

Prospects

"It is feared that the estimated crop for the coming season given in the report may not be harvested, as the setting of the Robusta crop has been poor throughout Mysore State.

"Last year, I referred to the prevalence of a malady in coffee. At the initiative of the Bombay Burmah Trading Corporation Ltd., Dr. F. J. Nutman of Kenya, one of the foremost coffee scientists in the world, was invited to India, and your Company also shared in the expenses of his visit. He visited the properties of the Bombay Burmah Trading Corporation Ltd. and our estates, and his report has proved to be of great interest. His general conclusion was that the die-back did not appear to be caused by a pathogen but was likely to be due to a certain combination of circumstances such as overbearing, shade, debility due to leaf disease, etc.

"As Dr. Nutman is a recognised authority on coffee leaf disease, his advice on this subject was taken and a series of experiments are now being laid out by the Company's Scientific Officer, who is in regular correspondence with him. On your behalf, I should like to record our grateful thanks to Dr. Nutman for his kind and very ready advice and help.

Labour

"Our relations with labour were generally cordial. A disquieting feature is the increase in the number of Labour Unions who are not truly representative of labour. In many cases, the new unions are confined to a single estate and the leaders of such unions also demand the right and are allowed to attend conciliation proceedings instituted in respect of industry-wide demands. Exaggerated claims far beyond those put in by long existing and established unions are made, and most attempts at conciliation and settlement are obstructed. It may be necessary for the Labour Department to investigate the representative character of such unions.

"As you are aware, the Government of India has constituted Wage Boards for tea, coffee and rubber. The Wage Boards are to consider among other matters the question of paying a fair wage and also whether the wage should be based on a single wage earner per family or on family earnings as at present. There is little doubt that the wages will be increased and this will naturally affect the coffee industry vitally, geared as we are to a high per acre.

"It is to be fervently hoped that the examination of the subject of wages will be related to output. We accept as inevitable a certain amount of absenteeism as peculiar to any agricultural enterprise, but, when labour insists on having all the benefits of industrial employment, we have a right to expect less laxity in attendance and a greater exertion to earn the wage. As enlightened employers we cannot be against a rising wage level, but we are fast approaching a stage when we have to make much better use of our labour or we and our labour will suffer together.

Exports

"I reported to you last year that, despite the International Coffee Agreement, the world coffee situation is likely to deteriorate further. This has unfortunately come true and our export sale averages reflect the depression in the world coffee market. The average prices realised at the export sales from July 1960 to June 1961, for the two main varieties of coffee, are noted below:

1960	*Plantation A* (Rs. per 50 kgs.)	*Robusta Flats* (Rs. per 50 kgs.)
July 7	208.34	..
August 4	201.11	95.02
September 8 ..	200.11	91.14
October 14	184.24	88.20
November 9 ..	176.62	84.43
December 15 ..	..	81.09
1961		
January 25	190.56	..
February 23 ..	175.94	..
March 23	166.07	..
April 11	164.71	73.20
May 5	164.50	73.33
June 8	172.09	67.96

"There has been a discernible weakening of coffee prices despite the strong and world-wide effect of the International Coffee Agreement and its regulated exports. Apart from the erratic and substantial fall in our export prices, what has further depressed our return per point has been the excessive weight of our export in relation to our total crop.

"The world coffee situation is not likely to improve for many years and it would be imprudent to plan our future marketing policy on the assumption that world prices would improve. The Government policy is markedly in favour of increased export. For the first time in twenty years, we were forced to export a greater proportion of our total crop than is consumed here. If we can export an increasing volume of selected coffees, there is the advantage of familiarising the foreign market with the particular characteristics of our produce. But if coffee is dumped abroad at whatever price it will fetch, in the interest of an export drive which is unfortunately being forced upon every commodity without due regard to their individual economy, nothing but loss can result. It is very important to us all that Government should think over its coffee export policy with great care and that the Coffee Board should advise the Government with clarity and truthfulness, even if it is contrary to the avowed policy of the Government. The Board owes this duty to both the Government and the coffee industry, whose welfare is the Board's first responsibility.

"This year the producers have made attempts to represent a case for a new marketing policy and several reforms in marketing procedures. As the largest single coffee producer in the country, your Company is naturally interested in helping to devise a sound and helpful coffee policy. It is my view that an export policy which merely looks to an immediate increase in physical volume of export without understanding or accepting its long-term effects on the Indian coffee industry is not only short-sighted but dangerous.

Two Conditions Essential

"There are two conditions which are essential to improve our capacity to export more. One is that the return to the grower should be such that he will continue to be in business. The other is that the export drive should be realistically linked to creating a preferential acceptance for Indian coffee in the world market. Otherwise, export promotion becomes a purely mechanical operation of diverting larger quantities of coffee from the Pool over which the Government, through the Coffee Board, exercise statutory control.

"It is to be realised that not all coffee produced in this country is of export quality and it is essential in the interests of the industry that only the very best quality which is capable of earning a premium should be exported.

"A sound internal market expansion programme is vital to the increasing production of coffee and we trust the Coffee Board will be able to persuade the Government to accept such a policy.

"We constantly make every effort to effect economies in our cost. We have always worked on the basis of a high unit yield and our level of expenditure has been related to that policy. There is no advantage to be gained from lowering our standards for doubtful economy, but there is always the need to exercise vigilance that each rupee we spend is put to the best use. Every care is being taken towards that end. You will doubtless appreciate that, for producing 72 per cent or 1,769 tonnes more crop, the expenditure of the Company increased by 11 per cent or by less than Rs. 11 lakhs. What we are, however, faced with is that a prospective fall in coffee production without any compensating rise in prices would leave us in the position of having to spread the same weight of expenditure over a smaller crop.

Home Market

"This brings me to the problem of increasing costs and declining prices. After my intimate association with the coffee industry over the past fourteen years, I have no doubt that the ultimate solution to the present problem lies here in our home market. We must expand this market to absorb at least two-thirds of our increasing crop, so that the loss on the export of the remainder can be maintained at a tolerable level. I do not envisage a lowering in the quantities for export—in absolute terms—since the size of the one-third reserved for export will increase in proportion to the expanded production. The first and foremost step to be taken is to assure the producer of a fair price at which his interest in improved production can be maintained.

"In simple terms, the position is that, with the selling of coffee for exports at whatever price it may fetch, the Board is unable to pay to the grower even the so-called minimum return.

Four Relief Measures

"There are four specific measures immediately open to the State and Central Governments to afford reasonable relief to coffee. One is to abolish excise duty altogether and to maintain the existing minimum release price so that the benefit accrues to the grower. Another is to offer a direct subsidy to coffee by making up the difference between the cost of production and the export price. The third is to reduce the rate of agricultural income-tax on coffee and to liberalise the rules relating to depreciation, new clearings, etc. The fourth, to revise the excise duty on an *ad-valorem* basis. Perhaps a judicious use of all these four measures should be adopted, so that the fall in revenue from coffee is not unduly heavy on any particular account. Encouragement given to coffee now is bound to pay the State and Central Governments handsomely, as our production and sales in the internal and export markets expand.

"In 1951, on a production of 1,481 tonnes of coffee, this Company recorded a profit of Rs. 22,39,598. The amount available for disposal after tax was Rs. 17,17,598. Taxation absorbed slightly more than 23 per cent of the profit, whereas for the year under review, on a production nearly three times greater, the profit was only Rs. 37,33,249 and, after taxation which absorbed nearly 41 per cent the amount available for disposal was Rs. 21,93,249. In spite of this heavy taxation and the requirement of a higher working capital, your Company added to its fixed assets by incurring Rs. 7,30,904 in capital expenditure.

Tax Burden Heavy

"The burden of direct taxation is heavy enough, but the cost of indirect taxation adds considerably to our costs. For example, a standard farm tractor with all duties and taxes now costs over Rs. 19,000 to a planter, whereas his competitor in Kenya could buy such a tractor off the showroom for a little below Rs. 11,000. Such comparisons are possible in a wide range of estate machinery, affecting materially our ability to compete in exports.

"A matter of great concern to your Company has been the passing of the Mysore Land Reforms Bill in its present form. We are the largest single coffee interest in the country, with a record of intensive development of our properties, a reputation for maintaining a high standard of welfare and steady employment for our workers. The many representations made to the State Government pointing out the consequences of some of the measures of the Bill on organised plantation industry and the relatively liberal provisions made in the neighbouring States in regard to plantations have gone unheeded. We are greatly disappointed at the restrictions placed on the reserve land that can be held and the disruption of the entity of compactly managed units. For instance, it is provided that the land that may be held as reserve for expansion should not exceed 100 acres, irrespective of the present size of a property. A company like ours with about 8,000 acres under cultivation will, therefore, be allowed only 100 acres as reserve, the same extent as is permissible for, say, a 5 acres or 10 acres cultivator. The Bill also contains a proviso that the 100 acres should be planted up within five years, a condition of little advantage to the small grower due to the heavy finances required. The Bill does not also provide for the replacement of unsuitable and spent land by planting on new land—a continuing process essential to maintain the maximum productive efficiency of the planted area. In regard to agricultural land interspersed in plantations, a plantation owner may retain only one ceiling area or 18 standard acres of such land.

"By these provisions, your Company, which under the Act is treated as a person, will be entitled to retain only one unit of 18 standard acres of paddy land out of its present holdings of some 600 acres, and 100 acres for development, out of about 2,000 acres of reserve land. The balance is to be surrendered.

Position More Difficult

"The Act has failed to take account of the difficulties a company such as yours will have to face. All water sources required for labour, pulping and spraying are situated in the low-lying paddy fields and the difficulty that must result in outsiders controlling these sources can well be imagined. Some of our reserve land is not suitable for cultivation, but requires to be maintained, as such land serves as windbreaks, as sources of fuel to labour, as grazing grounds for estate and labourers' cattle, as sources of jungle soil for coffee nurseries and many other uses so essential for running a coffee estate. The position becomes more difficult when it is realised that our reserve and paddy lands are distributed over some 13 estates.

"Your Company is owned by about 3,000 shareholders, mostly of the middle class, and the justification for the imposition of ceiling in this context is difficult to understand.

"The long-term effect of this Bill will be to cause a gradual deterioration of the industry and of its revenue-earning capacity with attendant unemployment. These points are being forcibly brought to the notice of the Union and the State Governments by the United Planters' Association of Southern India and the Mysore State Planters' Association. It is hoped that the Government will at least realise that the imposition of restrictions on plantations in Mysore is unjust especially when compared to the position of plantations in Madras and Kerala.

"The development of tea, coffee and rubber is governed by Central Acts, but the Mysore Land Ceiling Bill will certainly affect the development of plantations, particularly coffee in this State, contrary to the aims of the Central Government.

"The matters I have touched upon are matters which will affect the expansion and production of coffee, and it is to be hoped that these problems will be dealt with expeditiously and that the position of coffee growers will to some extent at least be ameliorated.

"I must now thank all our managers and members of our staff both at head office and on the estates and at the Kushalnagar works for another year of hard and efficient work.

"Finally, I must thank my fellow Directors for their wise guidance and help."

Note: *The above statement is not a report of the proceedings of the annual general meeting referred to.*

AUTOMOBILE PRODUCTION IN U.S. AND WESTERN EUROPE

E.E.C. BIGGEST EXPORTER OF VEHICLES

IN the field of automobile production, the United States remains well ahead of all other countries, with a total output of 7,942,000 vehicles of all kinds (as of 1960) including 6,694,000 passenger cars and vans and 1,200,000 trucks and utility vehicles. The total value of this output exceeded 13 billion dollars. But United States' output has changed relatively little, for even in 1950 output of all motor vehicles had totalled just over 7 million and the 1955 peak of over 9 million has never again been reached. Still the automobile continues to be one of the most widely accepted symbols of the American people's economic well-being and industrial capability.

Today, almost 74 million motor vehicles are registered in the United States, including 61 million passenger cars and 12 million trucks. About three out of every four families have their own automobiles, and some 13.5 per cent of all American families own two or more automobiles. As of 1960, motor vehicle travel has also set a new record of more than 4,000 miles per head.

The automobile's impact on the American economy continues to be greater than that of any other single product. For instance, the industry's yearly consumption rate of raw materials is pretty high. At present it consumes about 17 per cent of all steel produced in the United States, 48 per cent of malleable iron, 63 per cent of rubber, 42 per cent of lead, 60 per cent of leather upholstery and 70 per cent of plate glass. Practically every type of raw material is used in some amount in the production of automobiles. One out of every six business in the country, according to the U.S. Department of Commerce, is in some way related to *automobiles*. Auto manufacturers also purchased such odd products as ground corn cobs to use as a base for a polishing compound; pipe cleaners for cleaning tiny holes in parts; razor blades for cutting insulation; feeding bottle nipples for covering certain components as they move through paint spraying booths; castor oil, an element of brake fluid; and cactus fibres used in air cleaners.

Employment Figures

More than 10 million persons (representing roughly one out of every seven workers in the nation) work for an enterprise related to the auto industry. Employment figures include 790,000 in the production of motor vehicles and parts, 294,000 in the crude and refined petroleum industry, 2,023,000 in automotive sales and service, 493,000 on state, country and local roads, 6,564,000 as truck drivers and others in the trucking industry and 302,000 in motor, bus and taxi employment. According to the estimate of the U.S. Automobile Manufacturers Association, some 700,000 workers are employed in producing batteries, automobile stampings, electrical equipment, and in insurance and finance services related to autos.

Although the effects of motor vehicle production on the economy of the United States are thus far-reaching, they are eclipsed by the impact of cars and trucks as they are put into use. The story of the motor vehicle is merely getting under way when it leaves the final assembly line. In this phase, hundreds of trucking companies transport the new cars and trucks from factory to dealer. Some 90,000 retailers of new and used cars and parts cater to the needs and whims of millions of customers in every state of the nation as well as other countries. There are also 193,000 gasoline service stations which sell about 55 billion gallons of petrol every year. The related road-building industry, too, provides work for half a million people.

While the United States is the first largest producer of automobiles, it does not rank as a substantial net exporter. In 1960, for instance, it was a net importer of vehicles, for its net exports of 192,000 trucks and utility vehicles were outweighed by net imports of 300,000 passenger cars and vans. In 1961, some 5.6 million cars were sold. The demand for cars in 1962 is estimated at 7 million, including 350,000 imported cars.

A comparative picture of automobile production in and exports from Western Europe can also be presented here on the basis of information available in a recent bulletin from the European Community. According to the bulletin, the six-nation European Economic Community produced in 1960 as many as 4,065,000 vehicles, of which 3,603,000 were passenger cars and vans, and 462,000 trucks and commercial vehicles. The Community has caught up so rapidly with the United States, in that it has become the world's second largest producer of automobiles. In 1960, Britain came third with a total output of 1,811,000 vehicles, comprising 1,353,000 cars and vans, and 458,000 trucks and utility vehicles. (It may be incidentally noted that the Soviet Union trailed far behind with a total output of 524,000 vehicles, of which only 139,000 were passenger cars and 385,000 trucks and utility vehicles.)

It is noteworthy that, while United States output of automobiles has changed relatively little, the Community output has been more than doubling itself every five years as follows:

1950	791,000
1955	1,902,000
1960	4,065,000

Thus, in 10 years, the Community's output has risen from not much more than one-tenth of U.S. production to over one-half. British output has expanded sharply, too, but at only about half the Community rate: 784,000 in 1950, 1,237,000 in 1955 and 1,811,000 in 1960.

The upshot of the changed situation in the Community is that the Six countries are becoming more and more highly motorised. In 1959, there was one car for every 15 inhabitants, against one for every 30 inhabitants in 1954. The 1959 figures ranged from one for every 30 inhabitants in Italy to one for every nine in France. In Britain, on the other hand, there was one car for every 10 in that year. In the Community as a whole, the total number of passenger cars and vans in 1960 was just over 13 million, as compared with just over 5 million in Britain and 600,000 in the Soviet Union.

In the field of exports, the Community has become the world's biggest exporter of motor vehicles. In 1960, its net exports (exports *minus* imports) reached 1,379,300 vehicles of all types, as compared with 656,000 shipped by the United Kingdom.

So far a general picture of automobile production in the Community as a whole has been given. It would be useful to refer here to some of the findings of a recent study, undertaken by a group of French economists, of the effects on French industry of the Common Market.

French Experience

Between 1958 and 1959, French production of motor vehicles rose by 14 per cent and in the following year by a further 6 per cent. These figures, however, compare unfavourably with the industry's performance in Germany and Italy. (Production of motor vehicles in 1960 rose by 19 per cent in the Federal Republic and 30 per cent in Italy.) Moreover, total French production last year (1,369,000 vehicles) was considerably lower than German production which rose above 2 million. Investment in the automobile industry in France was also lower. Renault's investment in 1961, for instance, was at the rate of 15 billion old francs, whereas Volkswagen's was over 50 billion.

In 1959 French vehicle exports to the rest of the Community more than doubled, and last year exports again increased substantially. This increase took place at the same time as French models were in great demand on the U.S. market. The advance continued in 1960 when sales on the American market fell away. At the same time, France has also been importing more cars. In 1960, as a result of the lifting of quota restrictions on 1st January last year, total imports into France of motor vehicles more than doubled—30,000 (18,500 German and 8,500 Italian cars) in comparison with 13,700 in 1959. In 1961, the estimated imports were 50,000. The share of other Community countries in the French market is likely to go up, for, with the recent French tariff reductions, cars imported from the rest of the Community pay only 18 per cent duty in comparison with 29 per cent on imports from outside.

As far as the internal organisation of the industry in France is concerned, there are only four large concerns (Renault, Citroen, Pengeot and Simca). Even then, it is admitted that further concentration is desirable. This, however, is stated to be difficult to realise, though certain forms of co-operation have been developed —Citroen and Simca, for instance, agreed last year on the joint use of a factory at Nanterre.

The French automobile industry has also forged new links with other automobile producers in the Community. One agreement exists between Simca and Fiat; another between Renault and Alfa-Romeo. Under the latter, Renault sells the Italian Company's models in France, and Alfa-Romeo has set up a Dauphine assembly plant in Italy and also put its distribution chain in Italy at the disposal of the French firm. Recently, Renault has also signed an agreement with Finmeccanica, under which diesel motors for Renault tractors will be built in the Italian firm's Naples factory.

The main competition feared by French producers, according to the study, is that from American sources—Ford's German company and Opel (a subsidiary of General Motors). These are stated to be planning an offensive in the Common Market which might lead to the production of a new small model in an attempt to capture the huge market for small cars in the Community.

E.C.A.F.E. SEMINAR ON ELECTRIC POWER

Technical and economic aspects of developing electric power in the E.C.A.F.E. countries were reviewed and discussed at a regional seminar held at Bangkok in the latter half of December last. The seminar gave detailed consideration to such problems as how to make a scientific and rational assessment of the power resources available in a country; how to co-ordinate planning of power development with overall economic progress; rural electrification; and how to find adequate financial resources for electric power development.

As the various delegates reported on conditions in their own countries, there was general emphasis on the pressing demand for electric power, not only for household use, but even more urgently for industrial purposes. Most countries had experienced a shortage of private capital for energy development, and had, therefore, resorted to Government financing. Still another common problem was the shortage of trained personnel, and the need for long-term planning in the context of overall national development schemes.

The seminar recommended that countries of the region should take steps as early as possible to adopt national standards for equipment, methods and practices, and that these activities should, wherever feasible, be co-ordinated at the regional level. This would help in the interchange of both power supply and electrical manufactured goods between countries of the region. In this connection, the E.C.A.F.E. was requested to act as a clearing-house for the exchange of information on standardisation activities, and to review progress in this field periodically.

The seminar examined the past trends of load growth, and attempted to correlate it with various interrelated economic factors, e.g., population, gross national product and industrial production. The need for reasonably accurate forecasting of power demand was emphasised, and governments were advised to give priority to long-term surveys in this regard.

It was also recommended that governments should undertake or encourage the establishment of a central agency to direct, co-ordinate and control the electricity supply industry, particularly for the generation and transmission of the supply. It was felt that distribution could be left to local or private agencies.

In dealing with methods of financing, participants examined in detail the relative merits of Government subsidy and partial self-financing from the earnings of the utilities. Although conflicting views were expressed, it was generally felt that self-financing was desirable, the extent to be determined by the individual countries.

A number of measures were recommended to speed up the process of rural electrification. These included Government subsidies, the revision of tariffs, and the inclusion of rural electrification programmes in national economic development schemes. The process could also be encouraged, it was felt, by the introduction and dispersal of industries in rural areas.

WORLD'S FIRST AUTOMATIC WATER PUMPING STATION

Brighton, the famous British holiday resort, is stated to be the world's first town to build a water pumping station which operates remotely according to a programme based on expected daily needs for a week ahead. The station is fully automatic and not manned. The development was made possible by research into water consumption of the 316,000 people living in the 64-square-mile area served by the town's pumps. Average consumption over a year was 14,000,000 to 18,000,000 gallons a day.

The pumping station operates according to seven-day programmes which can be amended or replaced at any time. It receives its pumping instructions by telephone line from a control room six miles away. The control room has an electronic plug or peg board with holes relating to each half-hour of each day of the week. These set the week's programme. The purification plant is also automatically corrected for a wide range of water quality.

Brighton authorities, it is reported, consider it a possibility that, eventually, a computer might be used for the integration and automatic control of all water sources in the district, including 30 reservoirs.

NEW PRODUCTS AND PROCESSES

Precision Boring Machine

AN Austrian mechanical enterprise is specialising in the manufacture of precision boring machines of all usual sizes, from simple hand-operated models to big-sized fully automatic precision boring machines, working as part of big roll trains. A 4-spindle precision drill has been specially designed for the finishing of completely gastight valve seats due to the perfect alignment of valve guide and valve seat. The perfect turning of the valve seat gives it an exact conicalness with a flawless surface not marred by the wear of the knives. The machine is fully automatic and has a transfer installation. It is intended as an element of roll trains. For the precision boring of crankshafts, cam shafts and oil pumps in automotive vehicle motor blocks a 3-spindle precision boring machine has been designed. Its special design guarantees highest precision. The bladeholders are supported by precision bearings placed on either side of the work-piece. The control and the lay-out of all control elements are designed to simplify operation as much as possible and are foolproof. A 2-spindle hydraulic precision boring machine serves, among others, for finishing the boreholes of different diameters in hydraulic casings. Its most characteristic feature is the concentration of all feeding devices. The play of all movements is reduced to a minimum, all canting and getting out of alignment is excluded. This results in a superior finish of the surfaces and in a precision as they are essential for the longevity of the tools. According to the required series, the firm also manufactures precision boring machines for different workpieces turned out in smaller series.

Hydro-pneumatic Boring Attachment

Messrs. Speedy & Eynon Limited of Warstone Lane, Birmingham, England have recently developed equipment for fitting to standard centre lathes which enables boring, drilling and reaming to be carried out quickly and accurately without operator fatigue or wear to the machine itself. The equipment, which takes the place of the normal tailstock, consists of a number of cylinders which are connected to a compressed air supply. These pneumatic cylinders feed the drill, reamer or boring bar at constant speed into the piece to be machined. The entire operation is controlled by the throwing of an electric switch. In order to prevent undue pressure being brought upon the tool, a hydraulic control cylinder is incorporated in the apparatus. The unit is fitted with a quick return system for the tool withdrawal. As the speed is infinitely variable, suitable feed rates are quickly and easily obtained and it is claimed that a marked improvement in tool life is achieved. In a recent application drilling a stainless steel billet it was found that the boring operation shown on the attached photograph, was reduced from 4½ hours by normal manual operation to 1½ hours by the use of the apparatus. The attachment can be manufactured to suit individual requirements and is easily installed by the works engineer. It is unnecessary for the original tailstock to be replaced from time to time as this new attachment is adaptable for all normal operations.

Transistor Drilling Machine

An all-transistor U.S. drilling machine operated from one inch punched tape is now being offered at a price which should, so it is claimed, put it within the scope of the smaller metal-working companies. Designed from the outset as a complete unit that could easily be mass-produced, its components have multiple uses in order to take advantage of production-line techniques. The circuitry of the control system is made up of interchangeable plug-in boards. The drill has a table working surface of 30 inches by 20 inches and a table travel of 20 inches by 15 inches. The punched tape uses a digital code and so the drill is officially of the sort said to be "numerically" controlled. Tape can easily be prepared for most workpieces directly from the blueprint and, according to the makers, every phase of preparation and operation can be handled by a metal-working shop's personnel after very little instruction. On a run of, say, five inches, the position-locating accuracy is to the nearest thousandth of an inch.

Plastic Flooring

A cold-setting solvent-free plastic material has been developed in Germany for application as a permanent flooring in garages, workshops and laboratories. Its two components, in liquid form, are supplied in the correct proportions and mixed before use. Application is by squeegee and coverage ranges from 1 to 1.5 kilos per square metre. Coatings of 1 to 2 mm. are usually adequate. Claimed to be exceptionally tough, the coatings are stated to bond very strongly with concrete, metals, wood and stone and to give protection against corrosive atmospheres, water, solvents and dilute acids. Hardening time is two to four days according to weather conditions. Reductions in cost can be achieved by adding fillers such as fine sand or corundum to the liquid plastic in proportions ranging from equal to seven times its weight. The filler can be added to the resin or the hardener or both but this must be done before mixing.

Protective Plastic Coating

Designed to protect working surfaces in factories and laboratories, a new plastic coating is applied by brushing or spraying. Containing a very small amount of solvent, it dries to the touch in two hours, becomes impervious to marking in five hours and hardens completely in three days. Layers from 0.15 to 2 mm. thick can be applied in one operation and the material—which contains up to 90 per cent solid filler—can be built up into very thick layers without shrinkage or wrinkling. The plastic flows easily, leaving an even surface, filling cracks and depressions and sealing pores and is suitable for application to metal, wood, stone, brickwork and other plastics. It is highly resistant to heat, cold, brine, industrial atmospheres, motor fuels containing aromatics and many corrosive chemicals. Two types are available, one with high elasticity and the other hard.

Acidproof Plastic Ventilators

Ventilators made of plastic material, as they are used in the chemical, galvanising, textile finishing, paper, photographic, foodstuffs and beverages industries, are on the production programme of an Austrian enterprise. They can be used wherever the atmosphere is damp or contaminated by acids or otherwise. The ventilators are acidproof and need no special treatment or servicing. Casings are made of hard PVC, impellers of low-pressure polythylene or polypropylene, in some cases manufactured by injection moulding. The ventilators can oe used at room temperatures up to +60° C. Considering their high performance, prices are very reasonable. The main parts are standardised and interchangeable. Screws and bushings are made of stainless steel. The ventilators are delivered with or without electromotors, the latter being always of the enclosed type.

Rot-proofing Agents

As the result of increased production, two established rot-proofing agents, produced by a British firm, are now available for export. Known as "Rexcopine" and "Rexcote," they are produced from coal. Rexcopine is used widely for the protection of coal and coke sacks and ropes. Recent trials have shown that jute yarn treated with the agent fully retained its strength after exposure to 15 weeks' weathering, while untreated yarn exposed to the same conditions retained only 30 per cent of its strength in the same period. Similarly, Rexcote finds application in the treatment of netting, rope and cordage. The protection given by Rexcopine and Rexcote, it is claimed, compared favourably with the performance of these alternative products under the conditions of test employed.

EXPORT PROMOTION FOR PLANNED DEVELOPMENT

(*Concluded from page 73*)

countries. A chain of showrooms at important international commercial centres is also maintained.

Settlement of Trade Disputes

To facilitate the smooth flow of trade, steps have been taken for settlement of trade disputes arising between Indian exporters and foreign importers. Arbitration is a normally accepted method for settling such disputes. In order to provide necessary arbitration facilities, the Federation of Indian Chambers of Commerce and Industry has set up an arbitration body, the main purpose of which is to provide machinery for settlement of disputes. The Federation has also entered into mutual arrangements with some foreign arbitration associations for settlement of commercial disputes arising in those countries. The Government has also been trying to encourage the incorporation of arbitration clauses in all overseas contracts between the foreign importers and Indian exporters.

The various measures adopted by the Government have begun to yield some results. There has been a steady increase in exports during 1961. Our exports during the ten months January to October 1961 were of the value of Rs. 548.80 crores, while in the corresponding period of 1960, they were of the order of Rs. 503.95 crores, showing an increase of about Rs. 45 crores. This is no doubt only a small increase, but it should spur us to greater activities with confidence. The objective is to carry forward the planned development of the country and to create a self-sustaining and self-generating economy. Towards this end, we must increase our exports to a much larger extent.

DO I REALLY NEED A BANK ACCOUNT ?

Of course you do. If kept in a bank, your savings will earn interest. Besides, they'll be safe from theft and misplacement. And a bank account might induce you to save more.

But what happens when I need money for an emergency?

You can easily withdraw—quickly and without notice. Savings are intended for use on a rainy day.

But you know, we don't have much money?

No matter! You can open a savings bank account with the State Bank of India with as little as Rs. 5/-.

Really?

Yes, the State Bank of India. With over 900 offices throughout the country, the State Bank of India is serving the nation. And what is more by lodging your savings with the State Bank, you will not only benefit personally, but will also play your part in the development of the national economy.

The State Bank of India?

Yes, the State Bank of India.

STATE BANK OF INDIA
INDIA'S LEADING BANK

BSTA'S-SB-50A

WORLD NICKEL CAPACITY AT ALL-TIME HIGH

CONSUMPTION, HOWEVER, UNCHANGED

THE nickel-producing capacity of the non-communist world (excluding Cuba) touched an all-time peak at 625 million lbs. in 1961, an increase of 15 per cent over a year and as much as 100 per cent over the last one decade. This information was given by Mr. Henry S. Wingate, Chairman of the International Nickel Company of Canada Ltd., in a year-end review of the industry at Copper Cliff, Ontario, on the 4th inst. The offtake of the metal has, however, been unsatisfactory. The total nickel capacity exceeded consumption by about 125 million lbs. in 1961. Mr. Wingate estimated that total nickel consumption in the "free world" in 1961 would be approximately the same as in 1960, when it was 503 million lbs., as against 425 million lbs. in 1959. This brought about increased competition for markets among the "free world" producers of nickel. This adverse situation was further aggravated by supplies of Cuban nickel produced from factories seized by the Castro regime for sale in Europe. The supply position was made more comfortable by the disposal of strategic nickel stockpiles by the U.S. amounting to 45 million lbs. in 1961, as against 50 million lbs. in 1960. But, unlike sales by Cuba, this step was taken by the U.S. with the co-operation of Canadian producers to avoid any disruption of the market.

Canada continues to be the largest producer of nickel, accounting for over 75 per cent of the total capacity of non-Communist countries in 1961. Its dominant position is likely to be retained for years to come. In fact, much of the increase in capacity in 1961 is accounted for by Canada itself. The most significant contributory factor in this increase was the completion of International Nickel's new plant at Thompson, Manitoba (Canada), which is easily the largest nickel plant in the world. The fully-integrated Manitoba plant, which commenced commercial production by the middle of 1961, has an annual capacity of 75 million lbs. This has already brought International Nickel's total capacity from its operations in the Sudbury district of Ontario and in Manitoba to more than 385 million lbs. per year. Among the other major Canadian producers, Falconbridge Nickel Mines Ltd. raised its capacity by 5 million lbs. to 70 million lbs. last year. The annual capacity of the Sherritt Gordon Mines Ltd. was 25 million lbs. Next in importance was the French nickel company, the Sociate Le Nickel, with deposits on the island of New Caledonia; its capacity was 50 million lbs. in 1961. The capacity in the U.S., consisting mainly of the operations of the Hanna Mining Company, Riddle, Oregon, continued at about 23 million lbs. per year. Japanese refiners, employing imported ores, are accounting for the greater part of the balance of the free world's nickel capacity; their total annual capacity is estimated at 45 million lbs.

Capacity In Cuba

About the developments in Cuba, Mr. Wingate had this to say: "it is difficult to comment on the nickel operations in that country, but nickel in the form of nickel oxide is currently being produced there in the facilities seized by the Castro regime and is being offered for sale in Europe. In 1959, facilities capable of producing over 50 million lbs. of nickel annually were available in Cuba, and a new operation based on facilities in Cuba and a refinery in Louisiana, with capacity to produce another 50 million lbs. of nickel per year was about complete."

According to another reliable source, Cuba proposes to expand its nickel capacity, with aid from Soviet Russia, to 150 million lbs., an increase of 300 per cent, in the course of the next three or four years. The total capacity for nickel established in the communist countries (excluding Cuba) is estimated at 120 million lbs. per year.

Although Canada is the leading producer of nickel, its consumption is negligible, being only about 2 per cent of free world total. The U.S. is the largest consumer, accounting for about 44 per cent. The Common Market countries use 20 per cent, the U.K. 16 per cent. Japan 9 per cent, and Sweden 4 per cent. In the U.S., consumption of nickel showed an improvement over 1960, but there was a slack in the offtake by Western Europe from the previous year's high rate. During the year-end, according to Mr. Wingate, the overall demand position tended to be better.

Among the nickel-consuming industries, stainless steel is in the forefront, consuming about 34 per cent of the total nickel production. Constructional steel is another major consumer of nickel. The following table shows the percentage share of nickel consumed by various industries:

	Percentage of total	
	1961	1960
Stainless steels	34	34
Constructional steels	14	13
High nickel alloys	15	14
Nickel plating	14	15
Iron and steel castings	11	11
Copper and brass products ...	4	4
All others	8	9

It is not clear whether the stagnation in consumption is at least partly the result of raising Canadian prices of the metal, for the first time in four and a half years, by 7.1/9 cents (U.S.) per lb. in the middle of the year. This was done in order to offset higher and mounting costs. Following the aforesaid increase, the base price of refined nickel went up to £660 per long ton in the U.K. and Europe and 81.25 cents (U.S.) per pound, including the 1.25 cent import duty, in the U.S. It may be noted here that, though nickel is a versatile metal, there are several competing substitutes. Unless, therefore, the industry resists the temptation of passing on the burden of increasing cost to the consumer, nickel consumption cannot be stepped up to keep pace with expansion. This will ultimately depend on the operating efficiency of the industry and the discovery of new industrial applications for the metal.

New Applications

It is gratifying to note that the industry is placing emphasis on the development of new lines of applications for nickel, a brief account of which was given by Mr. Wingate in his review. To quote him:

"The nickel industry continued on a broad scale its research and marketing activities aimed at increasing the uses of nickel and nickel alloys in both the established and the newer fields of applications. Included in these activities were research for new products, special promotions and development work with present and potential customers, advertising, technical services, and the publication of technical literature.

"A major development during the year was the announcement of a series of revolutionary new ultra high-strength steels. These have a combination of properties never before realised in other alloy steels. Containing 18 to 25 per cent nickel, these new steels exhibit unmatched toughness, high strength and advantages in heat treatment and fabrication. They are arousing widespread interest throughout industry. Pilot heats have been produced by alloy steel manufacturers and these new nickel alloys are currently being evaluated by both industry and the military for advanced design requirements for applications involving exceptional resistances to extreme stresses and pressures."

Several advertising campaigns for consumer product promotion have also been undertaken by the industry. The "gleam of stainless steel" project started by the International in 1959, is only an instance in point. This project, held during the past three years in co-operation with leading department stores and producers of stainless steels in the U.S., will be undertaken in 1962 by the Committee of Stainless Steel Producers of the American Iron and Steel Institute. Similar programmes are expected to be continued in the U.K. and Canada also in 1962.

In an effort to further expand the application of nickel stainless steels in architecture, several special competitions were conducted. In Canada, a design contest for a stainless steel branch bank was held by the Stainless Steel Development Committee in conjunction with International Nickel, Atlas Steels Limited, and Union Carbide, Canada, Limited. In France, a competition aimed at promoting the large-scale use of nickel stainless steel window frames by the building industry was sponsored by a committee consisting of architectural, building and metal societies, and nickel producers. These competitions brought many entries and it is expected that they will materially assist in widening interest in the use of nickel stainless steels in such architectural uses. A significant metallurgical advance in the use of nickel powders was the development, by Sherritt Gordon Mines Limited, Canada, of a process for the direct rolling of nickel strip from powder. Commercial production of this strip was started by Sherritt Gordon in 1961. As a result of this process, economies have been achieved which make this nickel strip highly desirable for electronic and coinage applications. A condenser tube research programme designed to evaluate standard and modified alloys was initiated at the International Nickel's corrosion testing laboratory in North Carolina in co-operation with major power companies. The objectives of the programme are to determine the usefulness of the more recently developed copper-nickel alloys under a variety of conditions and to compare the behaviour of these newer alloys with the older condenser tube material as used in the power industry.

During the year, a sharp gain was registered in the use of nickel powders in nickel-cadmium batteries. These batteries, which provide long-life, dependable sources of power for electrical appliances, are now being manufactured in huge quantities for use in such consumer products as electric shavers, portable drills and flashlights, and auxiliary lighting equipment. Additional activities in the fields of research and marketing included work in numerous other important nickel-consuming fields such as the high temperature applications of nickel alloys, foundry products, chemical products and electronic applications.

Outlook

Looking ahead, Mr. Wingate observed:

"The free world's nickel industry, as a result of major expansion in its production facilities, has made available to consumers over the past several years greatly increased supplies of nickel. This has served as an important impetus to the development of expanded markets. Consumption of nickel in 1961 has kept pace with the all-time high reached in 1960. With more than adequate supplies available for all applications, we contemplate that the gradual upward trend in the use of nickel by the free world will continue. Augmented production capacity, coupled with enlarged research and marketing facilities, assure that the metal produced by the nickel industry will be available in ever-increasing quantities to satisfy the ever-greater demands of a growing scientific world."

This conclusion must be reassuring to consumers of nickel in India, where, in view of the expansion of steel industry and the plans for manufacturing stainless steel, the demand for nickel is bound to increase in the coming years.

WORLD OUTPUT OF OILSEEDS

World production of edible oilseeds, particularly soyabean, groundnut and rapeseed, is expected to be higher in 1961-62 than in the previous year, according to the latest estimates of the Commonwealth Economic Committee, London. Indeed, among edible oils, only olive oil is likely to be lower. The prospect of abundant supplies has exerted a downward pressure on edible oil prices in recent months, despite reports of a shortfall in Chinese crops. Prices would have been still lower but for the high support price in the U.S. for soyabean, which has a stabilising effect. Among industrial oilseeds, the output of linseed is placed lower, on account of poor crops in Canada and the U.S. But castorseed crop is fairly good, particularly in Brazil.

The C.E.C. estimates that Indian groundnut crop, based on unofficial reports, is higher at 5 million tons in 1961-62, as compared with 4.4 million tons in the previous season. The output in Nigeria is said to have gone up from 884,000 tons in 1960-61 to 960,000 tons. Similarly, total West African crop is estimated to have risen from 1.1 million tons to 1.2 million tons. In Sengal alone, following favourable rainfall, a record commercial harvest of 850,000-900,000 tons is expected, as against 800,000 tons last season. The figures for all the countries here refer to groundnut in shell.

The increase in the output of soyabeans has been more spectacular, mainly because of a strident improvement in the U.S. and to some extent in Canada. The latest estimate puts the U.S. crop at a record level of 18.8 million tons in 1961, an increase of 25 per cent over 1960. This increase is attributed mainly to larger acreage and record yields, following excellent weather during the growing season. Total supplies of soyabeans in the U.S. during the 1961-62 marketing season, including the small opening stocks, is estimated at 18.94 million tons. In addition, the U.S. stocks of soyabean oil (as in the beginning of October) was unusually large at about 300,000 tons, reflecting a high rate of crushing in 1960-61, and the decline in exports on account of increased prices. This position of abundant supply is in distinct contrast to that a year ago, when supply and demand were in "fairly close balance."

A notable increase in the output of rapeseed also is reported, with a larger crop in Western Europe and Canada. The output in France is placed higher at 105,000 tons (as against 82,000 tons in 1960-61), Sweden 114,000 tons (as against 54,000 tons) and Canada 249,000 tons (as against 248,000 tons).

Among industrial oils, linseed is expected to be in short supply in 1961-62. The latest estimate of the linseed crop in the U.S. puts it at 535,000 tons from a harvested area of 2.7 million acres, as compared with 760,000 tons from 3.3 million acres. Because of the dry weather in the main growing areas, the acreage suffered a sharp decline. So the total supplies of linseed for the 1961-62 season are lower by 20 per cent at 668,000 tons, as compared with the previous year. This amount will be just sufficient to meet domestic consumption. Consequently, U.S. exports are expected to decline sharply. The Canadian linseed crop is estimated at 383,000 tons in 1961. This is 33 per cent lower than that in the previous year, when the crop was 576,000 tons, and 14 per cent below 1951-60 average. Canadian average yields fell by 27 per cent on account of dry weather conditions in growing areas. A redeeming feature of linseed production, however, is the higher output in Argentina, estimated at 650,000-700,000 tons, as against 553,000 tons in the previous year.

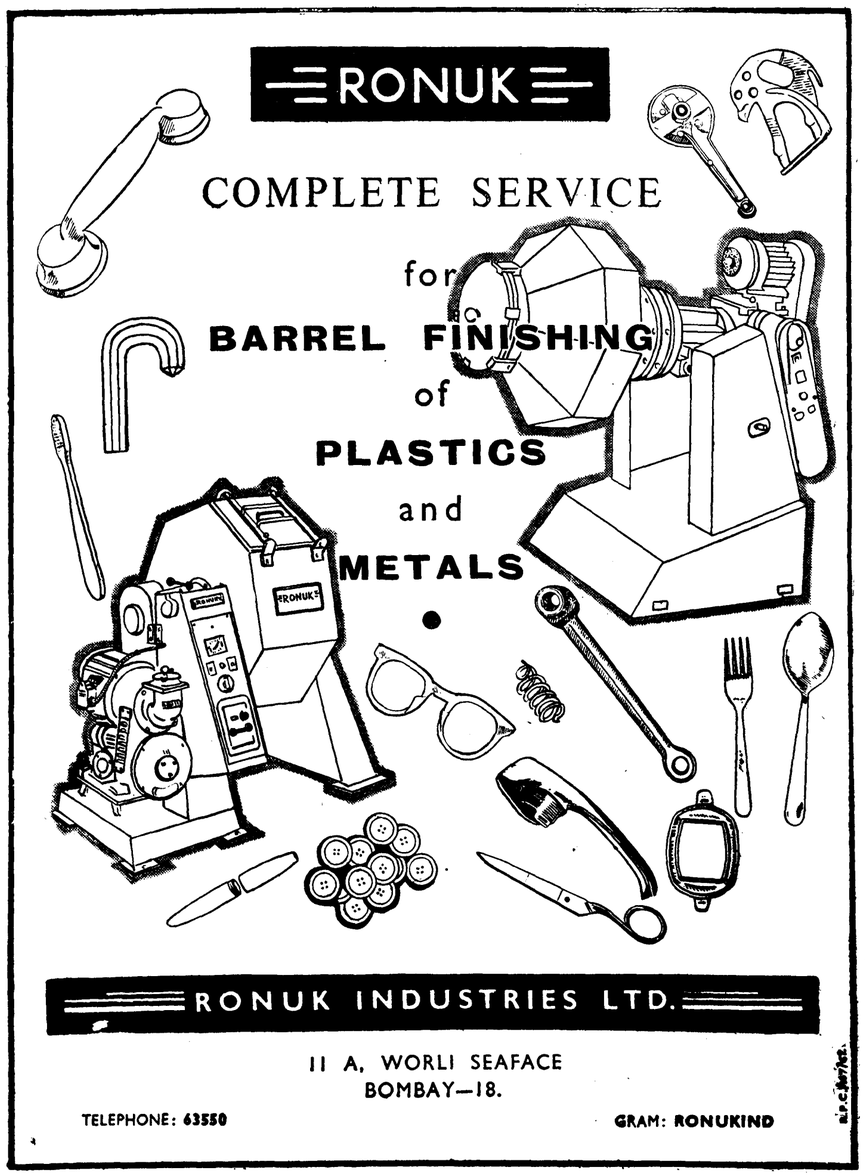
The castorseed production in Brazil is expected to show a slight decline. Drought damaged the crop early during the season in Bahia, the major producing region. The Brazilian output is, therefore, placed lower by 10,000 tons at 190,000 tons. It may be noted here that, in the first half of 1961, Brazil exported as much as 37,600 tons of castor oil (including 1,800 tons to Russia), as compared with only 11,500 tons in the first half of 1960. Exports, however, slackened in the second half. Among others, the output of copra is expected to be lower in the Philippines, the major producer, as a result of lower rainfall last year. Last year, copra output had improved in the Philippines, as also in Ceylon and Indonesia.

On the export front, the major features of 1961 are increased shipments of groundnuts from West Africa and large exports of groundnut oil, a sharp decline in both United States and Chinese soyabean exports, and a marked fall in the level of United States soyabean oil and cottonseed oil shipments. A reduction in copra shipments from the Philippines has been more than offset by larger coconut oil exports, notably from Ceylon and Malaya, but palm kernel and palm oil exports have contracted somewhat. Much heavier shipments from Argentine have accounted for most of the increase in world trade in linseed and linseed oil this year, but Argentine supplies are now at very low levels, and importing countries in the next few months will have to turn to North America (for linseed) or to stocks in the Netherlands (for linseed oil) to meet their immediate requirements. The imports of vegetable oils and oilseeds by the U.K. in the first nine months of 1961 were 2 per cent smaller than in the same period of 1960; in edible oils, the reduction was 15 per cent. Imports into the European Economic Community show a similar trend, with generally low receipts of edible oils, especially soya and cottonseed, but increased entries of copra and linseed.

TEXMACO-WARD COLLABORATION

The Textile Machinery Corporation Ltd. of West Bengal has just entered into a collaboration agreement with a Birmingham firm (Messrs H. W. Ward & Co., Ltd.) belonging to the group of Associated British Machine Tool Makers. The Birmingham firm, one of the leading Capstan and Turret lathe manufacturers in the U.K., has been producing precision machine tools for the last 60 years. The Textile Machinery Corporation Ltd., well known throughout India as Texmaco, has been manufacturing first class machinery for the past 20 years.

The Capstan lathe covered by this collaboration is the Ward 3C a machine of a very high standard. A bar capacity of 1¼" and a centre height of 7½" combine with a range of 12 spindle speeds and automatic longitudinal feed to the Intermediate Saddle and Capstan Rest to make the Ward 3C an extremely versatile machine. At present it can be offered either with chuck work or bar work tooling, although a vast range of extra equipment from special tooling to Air Operated Chuck make the machine suitable for operation in all engineering establishments. Production at the Texmaco factory has already commenced on the Ward 3C and annual output should soon reach 50 machines.



THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

Applications are invited on the basis of the Prospectus issued by the Company.

Consent of the Central Government has been obtained to this issue a complete copy of which is open to the public for inspection at the Registered Office of the Company. It must be distinctly understood that, in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme, or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of this Industrial Undertaking at Kurla, Bombay. Licences have also been obtained for the expansion programme. Copies of all the Licences are open to the public for inspection at the Registered Office of the Company. It must be distinctly understood that in granting these Licences, the Government of India do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of this Prospectus with copies of the documents referred to hereafter has been duly delivered for registration to the Registrar of Companies, Bombay, as required by Section 60(2) of the Companies Act 1956.

Applications will be made to the Bombay and Calcutta Stock Exchanges for permission to deal in and for an official quotation of the Preference and Equity Shares of the Company.

The Subscription List will open at the commencement of Banking Hours on the 19th January 1962 and will close at the close of the Banking Hours on the 25th January 1962. The Directors reserve the right to close the subscription list earlier than the 25th January 1962, but in any case, not earlier than the 22nd January 1962.

KHANDELWAL UDYOG LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956.)

SHARE CAPITAL

AUTHORISED	**Rs.**	**1,50,00,000**
Divided into :		
1,00,000 Equity Shares of Rs. 100 each		**1,00,00,000**
50,000 Ten per cent (free of Company's tax but subject to deduction of tax at source) Redeemable Cumulative Preference Shares of Rs. 100 each		**50,00,000**
	Rs.	**1,50,00,000**

ISSUED		**Rs.**
40,020 Equity Shares of Rs. 100 each		**40,02,000**
20,000 Ten per cent (free of Company's tax but subject to deduction of tax at source) Redeemable Cumulative Preference Shares of Rs. 100 each		**20,00,000**
	Rs.	**60,02,000**

SUBSCRIBED AND PAID-UP			**Rs.**
11,071 Equity Shares subscribed and fully paid by the Promoters, Directors and their friends and associates			**11,07,100**
RESERVED FOR FIRM ALLOTMENT			
Equity Shares :			
9,249 Equity Shares for the Promoters, Directors and their friends and associates .. (no underwriting commission or brokerage is payable in respect of these shares.)			**9,24,900**
NOW OFFERED FOR PUBLIC SUBSCRIPTION		**Rs.**	
19,700 Equity Shares of Rs. 100 each ..		**19,70,000**	
20,000 Ten per cent (free of Company's tax but subject to deduction of tax at source) Redeemable Cumulative Preference Shares.		**20,00,000**	
			39,70,000
			Rs. 60,02,000

No Shares will be issued for consideration other than cash.

The Project has been examined by the Industrial Finance Corporation of India, The Life Insurance Corporation of India, The Refinance Corporation for Industry Private Ltd., and The Chartered Bank and has been supported by them as under :—

(1) The Industrial Finance Corporation of India has underwritten 15,000 Ten per cent (free of Company's tax but subject to deduction of tax at source) Redeemable Cumulative Preference Shares of Rs. 100 each for the face value of Rs. 15,00,000.

(2) The Life Insurance Corporation of India has underwritten 5,000 Ten per cent (free of Company's tax but subject to deduction of tax at source) Redeemable Cumulative Preference Shares of Rs. 100 each for the face value of Rs. 5,00,000 which the Company has agreed to reserve for firm allotment to them.

(3) The Refinance Corporation for Industry Private Ltd., has sanctioned a loan of Rs. 20 lakhs through The Chartered Bank, Bombay.

The issue of Equity Shares is not being underwritten but the Managing Agent have agreed to subscribe or procure subscriptions for the shortfall, if any, between the amount offered for public subscription and the amount of applications received in response to the offer.

ACCOUNTS

Year ending	*Sales*	*Depreciation*	*Net Profit before provision of taxation*	*Net loss before provision of taxation*
	Rs.	Rs.	Rs.	Rs.
16-10-1956 to 22-10-1957 ..	907.00	4,426.00	....	8,725.00
23-10-1957 to 10-11-1958 ..	60,891.00	34,930.00	....	97,910.00
11-11-1958 to 31-10-1959 ..	4,68,846.00	57,747.00	....	4,503.00
1-11-1959 to 19-10-1960 ..	9,19,596.00	69,592.00	....	2,70,517.00
20-10-1960 to 7-11-1961 ..	20,91,665.00	97,113.00	1,04,726.00	....\
	2,63,808.00		1,04,726.00	3,81,655.00
	Total Depreciation provided .. Rs. 2,63,808.00		Total net Loss .. Rs. 2,76,929.00	

It will be observed that during the year ending *Diwali* 1961 the Company has definitely turned the corner. In this year the net Profit has been Rs. 1,04,726.00 after allowing Rs. 97,113.00 for Depreciation. From the commencement of the working of the Company to date the total loss of Rs. 2,76,929 mainly represents allocations from Gross Profit to Depreciation amounting to Rs. 2,63,808.00.

The Chartered Bank has recently had the entire block assets of the Company valued by Messrs. Gregson Batley & King, Chartered Architects, and according to their report the assets are valued at Rs. 35,05,795 as against a Book Value of Rs. 14,86,243. The promoters shall be making available to the investing public the entire benefit of this appreciation by retaining the value of the assets only at their book value. The consent of Messrs. Gregson Batley & King has been obtained for making the aforesaid statement and the same has not been withdrawn.

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their respective underwriting obligations.

The amounts payable in respect of shares comprising the present offer are as follows:—

	Preference Shares	*Equity Shares*
With application	Rs. 10 per share.	Rs. 10 per share.
On allotment	Rs. 15 per share.	Rs. 15 per share.

The balance of Rs. 75 in respect of each Preference Share and Equity Share shall be payable in such calls as may be determined by the Directors, provided that no call shall exceed the sum of Rs. 25 per share and that prior notice of at least 30 days shall be given in respect of each call and there shall be a minimum interval of one month between any two calls.

The calls on preference and equity shares shall be made simultaneously and proportionately.

BOARD OF DIRECTORS

CHAIRMAN

SIR A. RAMASWAMI MUDALIAR, K.C.S.I., D.C.L., (Oxon), India Steamship House 21, Old Court House Street, Calcutta, 1. Industrialist.

DIRECTORS

SHRI RAMPRASAD KHANDELWAL, J.P., Khandelwal Bhavan, 166, Dr. Dadabhai Naoroji Road, Bombay 1. Industrialist.

SHRI MADAN MOHAN RUIA, 96, Nepean Sea Road, Bombay 6. Industrialist.

SHRI DAVID STEWART, Trosley, Wilderness Rd., Chislehurst, KENT (England). General Manager (Retd.), The Chartered Bank, London.

SHRI VALLABHDAS VASANJI MARIWALA, Sudha Kunj, Tardeo Road, Bombay 7. Industrialist.

SHRI BEHARILAL KHANDELWAL, 33, Netaji Subhas Road, Calcutta 1. Industrialist.

SHRI B. D. GARWARE, Chowpatty Chambers, Sandhurst Bridge, Bombay 7. Industrialist.

SHRI K. SADAGOPAN, B.A. (Hons.), I.R.A.S. (Retd.), 19, Curzon Road, New Delhi. Industrialist.

SHRI PREMNATH KHANDELWAL, B.Sc. (Hons.), Bar-at-Law, Khandelwal Bhavan, 166, Dr. Dadabhai Naoroji Rd., Bombay 1. Industrialist.

GENERAL MANAGER

SHRI K. SWARUP, M.B.E., B.Sc., A.M.I. Mech. E., M.I.Loco.E., (London), M.I.E. (India), Chief Administrative Officer—Integral Coach Factory, Perambur, Madras, joining on 19.1.1962.

MESSRS. RAJ PAUL CHADHA & COMPANY, Stock & Share Brokers, Delite Cinema Building, Asaf Ali Road, New Delhi 1.

BANKERS TO THE ISSUE

THE STATE BANK OF INDIA, Bombay and Branches.

THE CHARTERED BANK, Bombay and Branches.

THE CENTRAL BANK OF INDIA LTD., Bombay and Branches.

THE PUNJAB NATIONAL BANK LTD., Bombay and Branches.

THE UNITED COMMERCIAL BANK LTD., Bombay and Branches.

THE ALLAHABAD BANK LTD., Bombay and Branches.

OBJECTS

The main object of this issue is to expand the present activities of the Company in accordance with the various programmes mentioned below.

LAND, WATER AND POWER

The Company is fortunate in having acquired early enough a large plot of land in heavy industrial area measuring over 8 acres in Kurla, an industrial suburb of Bombay. The site is close to the Bombay-Agra Road being connected to it by a pucca road. It is also within a few minutes' walk of the newly opened Vidya Vihar suburban station on the Central Railway. The Central Railway have approved the possibility of making available a Railway Siding to the Company.

Sufficient water supply for the Company's requirements is available from the Bombay Municipal Corporation's mains.

Adequate power is also available and the Bombay Suburban Electric Supply Ltd. have already put up their Sub-Station in the Company's premises for this purpose.

HISTORY AND PROSPECTS

The Company was incorporated on 16th October 1956 for carrying on the business of Steel Fabricators. It functioned as a private limited company upto 12th January 1960, when it was converted into a Public Limited Company.

The third Five-year Plan envisages large-scale developments in the sphere of Heavy and Light Engineering Industries in view of the increased availability of steel in the country. A relevant extract from the third Five-year Plan bearing on the subject of 'steel fabrication' is reproduced below:

"As against the current structural fabrication capacity estimated at 500,000 tons, inclusive of the capacity of the wagon builders, the target for the last year of the third Plan is visualised at 1,100,000 tons. The accent is expected to be much more on developing fabrication facilities for heavy structurals than has been the case in the past. Allied to these structurals shop facilities for the manufacture of items like pressure vessels, heat exchangers and other types of chemical plant and equipment are envisaged to be developed through the establishment of heavy plate and vessels works. The manufacture of cranes is another important line of allied activity."

The Company has already embarked on the above lines of manufacture and has made considerable progress; and plans have been finalised for further expansion and development to meet the vast demand in the country that remains unsatisfied, for fabricated steel structurals, pressure vessels, cranes, etc.

STEEL FABRICATION

The Company received an Industrial Licence, bearing No. L/1-A (4)/N-II/57 dated 28th October 1957, for the fabrication of 3,600 tons of steel structures per annum and after completion of the first phase of the Workshops, production was commenced in March 1958. During the initial years the Company has overcome most of the teething troubles common to new engineering industries and has established itself in the Structural Engineering Field. The capacity shown in the abovementioned Industrial Licence for steel fabrication has also since been doubled to 7,200 tons per annum *vide* Industrial Licence No. L/1-A (7) 3/60 M.E.I. of 30th August, 1960.

The Company has been fortunate in obtaining for its Structural Division the exclusive Technical Collaboration of LES ETABLISSEMENTS EIFFEL, who are one of the world's leading construction companies and who have built, amongst other structures, the famous 'EIFFEL TOWER' in Paris. Under this collaboration while getting the full benefit of the long experience and know-how of 'Eiffel' the Company shall also be undertaking the construction of patented 'EIFFEL STANDARD BRIDGES' which owing to their low erection and maintenance costs, have been very successfully used all over the world, particularly so, in the underdeveloped countries.

CONSTRUCTION MACHINERY

In addition to its steel fabrication activity, the Company obtained an Industrial Licence bearing No. L-11/3/LEI(B)/60 dated 26th November, 1960 for the manufacture of certain items of Construction Machinery, namely, Concrete Mixers, Asphalt Mixers and Roller Pan Mixers. Of these the manufacture of Concrete Mixers has already been taken in hand, production having commenced nearly two years ago. The Company's present production of this item compares favourably with the output of other leading Indian Manufacturers, and it is proposed to increase this production even further in the near future. The Company has come to an arrangement with the Indian Associates of Messrs. MILLARS' MACHINERY CO. LTD., London, under which the Company shall be manufacturing these machines in India under the Designs and Specifications of MILLARS and an agreement has been signed with Messrs. Millars' Timber and Trading Co., Ltd., Bombay, the Inda Associates of the U.K. Company, whereby the Company's entire production of Concrete Mixers shall be taken up by them initially for a period of 3 years. MILLARS' Construction Machinery is already widely known in the country for several decades and enjoys by far the largest share of the Market in India.

E.O.T. CRANES

An Industrial Licence for the manufacture of Electric Over-head Travelling Cranes upto 20 tons capacity, bearing No. L-8B-2/7/MEI/60 dated 6th September, 1960, has been received by the Company.

The Company has been fortunate enough to secure the technical collaboration of the well-known 'MUNCK-HAMJERN' Group NORWAY, who are world-renowned in the manufacture of these Cranes.

INDUSTRIAL FURNACE

The Company has entered into a Collaboration with Messrs. S.p.A. ING. F. FERRE & C., OF MILAN, ITALY, for the manufacture of Electric and Combustion Industrial Furnaces, Ovens, etc. Under this Collaboration the Company would be particularly taking up the manufacture of various types of Heat Treatment Furnaces, which are in great demand by the growing Engineering, Iron and Steel and Non-ferrous Industries. These Furnaces have hitherto been imported.

The Company is thus well set to take the fullest advantage of the increasing opportunities which are open to the Engineering Industry.

When all the schemes under contemplation are completed, a turn-over of about Rs. 1 to 1½ crores per annum is expected. Upon completion of these schemes, the Company expects profits which after providing for depreciation, development rebate and income-tax shall leave an adequate surplus for an appreciable dividend to the Shareholders.

It is not considered necessary to fix any minimum amount of subscription.

The financial requirements of the Company are comprised of:

	Existing	Proposed	Total
	Rs.	Rs.	Rs.
1. Cost of land and building.	7,14,000	6,75,000	13,89,000
2. Plant and machinery ..	6,89,000	16,44,000	23,33,000
3. Brokerage, underwriting commission and preliminary expenses	1,382	1,50,000	1,51,382
4. Contingencies	..	31,000	31,000
5. Working capital ..	..	25,00,000	25,00,000
Rs.	14,04,382	50,00,000	64,04,382

BROKERAGE AND UNDERWRITING COMMISSION

Brokerage of 1% will be paid to recognised Bankers or Brokers on allotments made in respect of applications bearing their stamps. An underwriting commission of 2½% will be paid to the Underwriters. Brokerage at the rate of 1% will also be payable to the Underwriters to the issue of allotments made in respect of applications bearing their stamp. An additional Brokerage of ½% will be paid to the Managing Brokers, on Equity Shares.

MANAGING AGENTS

M/s. Khandelwal Industries Private Ltd., Khandelwal Bhavan, 166 Dr. Dadabhai Naoroji Road, Bombay 1, a Private Limited Company with a subscribed Capital of Rs. 5,00,000, are the Managing Agents of the Company with effect from 1st July, 1960, for a period of ten years.

Shri Ramprasad Khandelwal and Shri Premnath Khandelwal who are the Directors and Members of the Company are also Directors of the Managing Agency Company, and Shri Beharilal Khandelwal who is a Director of the Company is also a Member of the Managing Agency Company.

RIGHTS OF PREFERENCE SHARES

The Preference Shares shall confer on the holders thereof the right to a fixed cumulative preferential dividend at the rate of 10% (free of Company's tax but subject to deduction of tax at source) and shall rank in a winding-up as regards return of Capital and payment of arrears of dividend whether earned, declared or not, down to the commencement of the winding-up in priority to Equity Shares, but shall not confer the right to any further participation in the Profits or Assets of the Company.

Any further preference share issue ranking *pari passu* with the present Preference Share issue will be made only after prior approval of at least three-fourths of the then holders of the present preference issue.

TERMS OF REDEMPTION OF PREFERENCE SHARES

The Company shall have the right after five years from the issue of such Preference Shares, or earlier if so determined by the Company in General Meeting, to redeem at par from time to time the said Preference Shares or such of these by drawing lots as the Directors of the Company may from time to time decide after giving six months' previous notice in writing in that behalf addressed to the Shareholders of Preference shares to be redeemed or, by such shorter notice, if so determined by the Company in General Meeting.

All outstanding Preference Shares, if any, will be redeemed within ten years from the date of issue.

APPLICATIONS AND ALLOTMENT OF SHARES

Applications for Preference and Equity Shares must be made on the respective forms copies of which may be obtained from the Registered Office of the Company and from any office of the Bankers or Brokers.

APPLICATIONS must be made for a minimum of FIVE SHARES OR A MULTIPLE THEREOF.

APPLICATIONS must be completed in accordance with the directions contained therein and delivered before the closing of the subscription list to:

(1) Khandelwal Udyog Ltd., Khandelwal Bhavan, 166, Dr. Dadabhai Naoroji Road, Bombay 1.

(2) The State Bank of India, Bombay and Branches.

(3) The Chartered Bank, Bombay and Branches.

(4) The Central Bank of India Ltd., Bombay and Branches.

(5) The Punjab National Bank Ltd., Bombay and Branches.

(6) The United Commercial Bank Ltd., Bombay and Branches.

(7) The Allahabad Bank Ltd., Bombay and Branches.

Where no allotment is made, the deposit will be returned in full within three months and where the number of shares allotted is less than the number applied for, the balance deposit will be applied towards the amount remaining payable on the shares allotted and any balance thereafter remaining will be returned within three months. The Directors reserve the right to refuse any application wholly or in part without assigning any reasons. Failure to pay any amount on shares allotted when due will render the previous payment liable to forfeiture.

The shares issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

The Share Certificates will be issued within six months of the date of allotment.

SCINDIA STEAM SAILS AGAINST LOW TIDE AGAIN

SHARP FALL IN PROFIT, BUT DIVIDEND SAME

ALTHOUGH the captains of our shipping industry have been expecting, for the past one year or so, "some adjustment to take place before long" to arrest the fast deteriorating outlook for the industry, one cannot help regret that, all said and done, the change has been not for the better but for the worse. This is the indelible impression one gets from a study of the working results of the country's premier steamship company, Scindia Steam Navigation Company Ltd. (Chairman: Mr. Dharamsey M. Khatau, Bombay), for the year ended 30th June 1961. In fact, the low tide the Company has been sailing against has extended itself as a direct result of the previous year's handicaps such as cut-throat international competition, higher operation costs, excessive delays in Indian ports leading to a low turnround of ships, and uneconomic freight rates. For it is for the first time, at least during the last four years, that both the total cargo carried and the total freight earned by the Company have declined, the former from 26,76,600 tons in 1959-60 to 25,95,362 tons in 1960-61 and the latter from Rs. 18,35.79 lakhs to Rs. 17,50.11 lakhs. Consequently, the gross profit has declined again steeply from Rs. 2,66.91 lakhs to Rs. 2,01.97 lakhs. The magnitude of the present depression in the industry can be gauged from the fact that, with less than half the last year's freight earnings, Rs. 8,88.22 lakhs to be precise, the Company had reported a gross profit of Rs. 1,17.69 lakhs during the year 1954-55. Despite this setback in its working, the Directors of the Company have maintained the equity dividend at the previous year's level of 3 per cent, or 60 nP per share, subject to deduction of tax, apparently to stem the rot in the stock market, as the Company's shares were sold down to a new low of Rs. 12 last year.

Commenting on the year's working, the Directors observe:

"The year under review has been one of the most depressing years for the Company and proved to be one of continuous frustration and disappointment. Operators in the Liner trades continued to be affected by the world recession in trade, owing to too much tonnage looking for cargoes wherever possible at depressing freight rates. On the other hand, costs of operations continued to be on the increase. ... The operations connected with the coastal services have continued to be uneconomic; any improvement in the quantum of cargoes available in these trades being considerably offset by consistent fall in draughts in the Hooghly river resulting in lesser carriage of cargo by the same bottoms. Unsatisfactory conditions of discharge resulting in slower turnround of vessels also adversely affected the coastal operations."

The following table gives a clear idea of the sharp setback suffered by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958

* Subject to tax.

Expenses during the year 1960-61 have declined slightly to Rs. 16,34.42 lakhs, from Rs. 16,64.09 lakhs in the previous year. But this decline does not represent any reduction in the operating cost per ton, which, in fact, was higher. For it is due entirely to, and is not in proportion with, the lower cargo lifted by the Company during the year. As a result of this, the gross profit has declined sharply from Rs. 2,66.91 lakhs to Rs. 2,01.97 lakhs. The net profit is incredibly low at Rs. 4.60 lakhs, as against Rs. 81.27 lakhs a year before, after providing depreciation of Rs. 1,96.45 lakhs (Rs. 183.10 lakhs in the previous year) and Directors' remuneration of Rs. 0.92 lakh (Rs. 2.54 lakhs). No provision has again been made for taxation, though the assessable income amounts to Rs. 30.5 lakhs. The statutory development rebate allowance in respect of the new ships acquired during the year amounts to Rs. 128 lakhs and the statutory development rebate reserve at 75 per cent thereof amounts to Rs. 96 lakhs. As the assessable income is less than the rebate, only Rs. 30.5 lakhs will be allowable and the reserve required to be provided at 75 per cent thereof is Rs. 23 lakhs, which has been provided as special depreciation for the year, as against Rs. 1.01 lakhs for the previous year. The Directors have transferred Rs. 16.13 lakhs from the general reserve to wipe off the debit balance brought forward from the previous year. The general reserve account now stands at Rs. 4,76.69 lakhs. To the extent of Rs. 25 lakhs out of a total of Rs. 33.79 lakhs, the dividend has been paid from the dividend equalisation reserve. A sum of Rs. 0.40 lakh has been transferred to meet the shortfall in the investment reserve account, arising from the transfer of a loss of Rs. 23.87 lakhs on the sale of 10,425 ordinary shares of Rs. 1,000 each in the Hindustan Shipyard Ltd. to the Government at Rs. 80.38 lakhs. The account now stands at *nil*. The amount to be carried forward to the next year's account is Rs. 2.83 lakhs.

Despite yet another year of unsatisfactory rewards, the Company has increased its gross tonnage of cargo steamers by 4,986 to 2,60,313. The passenger-*cum*-cargo tonnage stood at the end of the year at 9,138, as against 10,587 a year before. The total capacity thus amounts to 269,451 g.r.t., as against 265,914 g.r.t. previously.

The m.v. *Jalakirti*, a second ship ordered by the Company with Messrs. Mitsubishi Heavy Industries Reorganised Ltd., Kobe, Japan, under the yen loan agreement, was launched in October 1960 and delivered according to the schedule in February 1961. She was placed on the India-U.S.A. service as a sister ship to the m.v. *Jalakrishna*. An order for two additional 17-knot motor vessels of the *Jalakrishna* type has been placed with the Hindustan Shipyard Ltd. The keel of the 17-knot Japanese type ship ordered in the previous year with the Shipyard was laid in October 1961. The s.s. *Jalakrishna* and the s.s. *Jalamohan*, war-built vessels, were sold last year in July and December respectively, and the s.s. *Bhadravati*—coastal passenger-*cum*-cargo vessel built in 1932—was disposed off in June 1961 for scrapping.

During the year, there was an addition of Rs. 3,24.45 lakhs to, and a deduction of Rs. 29.58 lakhs from, the Company's fleet, which, after these adjustments, stands at Rs. 37,51.79 lakhs. The excess of assets over liabilities is Rs. 22,42.85 lakhs and is represented by a paid up capital of Rs. 11,38.57 lakhs and reserves and surplus of Rs. 11,04.28 lakhs.

The sound financial position of the Company and the heavy discount at which its shares are currently quoted in the market should no doubt induce investors to go in for the Company's shares. There is also the possibility that, if the worst were to be over now, the Directors might not hesitate to give the much needed pep to the market by stepping up the dividend. Nevertheless, for the present, one can hardly do better than hope that, if the worst has not been seen, it should be over now. The Directors themselves are not quite optimistic of the near-term outlook for the Company, though they observe that, "in most of the important Conferences covering overseas trades in which the Company operates, efforts have been made to rationalise berthings and pool resources with a view to ultimate economy." These steps, coupled with efforts to bring about an improvement in the rates of freight wherever possible, according to them, lend hope for some improvement in the next year. As for coastal services, they say: "Rates of freight still continue to be low. Efforts are being made by the Indian Coastal Conference in this matter, and the Company keenly awaits the result of the inquiry in the matter of freight increases by Mr. R. G. Abbhi, Government Director on shipping companies."

The Rs. 20 fully paid ordinary shares of the Company are currently quoted at Rs. 12.92 *cum-div*. On *ex-div*. basis, they offer at this rate a yield of 3.5 per cent per annum, free of tax.

KIRLOSKAR ELECTRIC DOES WELL

LONG-TERM OUTLOOK PROMISING

THANKS, first, to the revival of the demand for electric motors and transformers, and, secondly, to the policy of diversification followed by it to cover such additional products as alternators, D.C. and fractional horse-power motors, welding generators, and motors in the higher ranges of power, both the sale and profit of Kirloskar Electric Company Ltd. (Managing Agents: Messrs. Kirloskar Associates, Harihar) for the year ended 30th June 1961 have not only made good the ground lost in the previous year but have also recorded further sizable gains. Sales, excluding selling commission, at Rs. 277.83 lakhs stand higher by more than 50 per cent than the previous years' figure of Rs. 182.06 lakhs, and the gross profit shows a rise of as much as Rs. 15.55 lakhs to Rs. 40.79 lakhs. Despite a heavier incidence of cost, the increased turnover has brought about an improvement in the profit-margins and the ratio of gross profit to sales has improved from 13.9 per cent for the year 1959-60 to 14.7 per cent for the year under review.

Higher gross profit has naturally meant a higher provision for the Managing Agents' remuneration and taxation, while the increased manufacturing activity reflected in a higher depreciable block has brought about an increase in the provision for depreciation. The Managing Agents stand to get, in respect of the year under review, Rs. 3.37 lakhs, as against Rs. 1.92 lakh previously, while taxation claims Rs. 12.88 lakhs as against Rs. 7.20 lakhs a year ago. Provision for depreciation, which was Rs. 5.98 lakhs last year, has now been raised to Rs. 7.36 lakhs. Although the essential provisions between themselves take away Rs. 23.61 lakhs, as against Rs. 15.10 lakhs, the net profit still shows a rise of roughly 70 per cent, from Rs. 10.14 lakhs to Rs. 17.18 lakhs.

The expansion and diversification plans of the Company have necessitated a constant and substantial plough back of earned profits and the Directors have, therefore, done well to retain as much as Rs. 12.38 lakhs, or 72 per cent of the net profit, as compared with Rs. 6.21 lakhs last year. Even then, they have found it possible to raise the rate of ordinary dividend by 2 per cent to 11 per cent, subject to deduction of tax. This absorbs Rs. 4.81 lakhs, as against Rs. 3.93 lakhs, and leaves Rs. 1,709 as a carry forward, as against Rs. 2,982 brought in.

The progress made by the Company during the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958

† Subject to deduction of tax.

A perusal of the Company's balance-sheet as at 30th June 1961 reveals that the cautious dividend payment policy followed by it during the past fifteen years has undoubtedly helped it to build up a strong financial position. The share capital of Rs. 44.38 lakhs, consisting exclusively of equity shares, is supplemented by Rs. 40.86 lakhs in reserves and surplus. Against this, fixed assets, with a book value of Rs. 111.74 lakhs, are worth Rs. 66.00 lakhs including Rs. 4.21 lakhs as cost of capital work-in-progress. Current assets, loans and advances aggregate Rs. 130.08 lakhs or Rs. 19.24 lakhs more than all loans and current liabilities put together.

Although the aforesaid particulars are, no doubt highly satisfactory, prospects for the current year appear to be far from encouraging. While every effort is being made to maintain the improvement in sales, the Company, as the Directors point out, has been obliged to accept orders for transformers at prices which offer little margin, presumably because of the keen competition prevailing in the business. Further, there has been, of late, a noticeable decline

(*Continued on next page*)

SYNOPSES OF COMPANY REPORTS

Bababudin Coffee and Produce Co., Ltd.

(*Managing Agents*: A. V. Thomas & Co. (Mysore) Private Ltd., Bangalore.)

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (proceeds of coffee and other produce) ..	6,00	4,16
Gross profit ..	1,29	(—) 48*
Transfer to Managing Agency remuneration ..	11	8
,, ,, depreciation	20	14
,, ,, taxation	25	Nil

To additional preference dividend for 1958-59 and 1959-60	§	Nil
Proposed dividend (taxable) ordinary ..	32 (8%)	32 (8%)
Carried forward	22	2

N.B.—Adjustments include the balance brought forward from the previous year.

* Loss after providing for depreciation and Managing Agents' remuneration.

† This includes Rs. 92,000 transferred from reserves.

‡ Calculated at 0.035 per cent, in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

§ Represents a sum of Rs. 208 being additional preference dividend for 1958-59 and 1959-60 calculated at 0.035 per cent.

Extracts from the Directors' report:

The Estate harvested a record crop of 245,843 tonnes for the season under review. The entire crop was delivered to the coffee pool. Owing to unfavourable market conditions, the coffee prices both for internal sales and export sales have been rather low recently and it is expected that the payment for the coffee crop for season 1960-61 may not be more than 1.90 nP per point as against 2.24 nP per point for the previous season. This has naturally resulted in financial stringency and economies are being effected wherever possible in working of the property.

The estimates for season 1961-62 are as follows: Estimated crop 120 tonnes and cost of production 119.24 nP per 50 kilos. According to the latest indications, the crop for the ensuing season may be around 100 tonnes only.

Accounts in brief as at 30th June 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital* ..	7,00,000	Gross block ..	7,87,289
Reserves and surplus..	1,84,576	—Depreciation ..	1,30,165
Other liabilities ..	1,74,598	Net block ..	6,57,134
		Current assets ..	2,45,393
		Investments ..	73,967
		Cash	32,680
	Rs. 10,59,174		Rs. 10,59,174

* Paid-up capital consists of 80,000 equity shares of Rs. 5 each and 30,000 six per cent cumulative preference shares of Rs. 10 each. Of the above 40,000 equity shares are allotted as fully paid up by way of bonus shares on capitalisation of reserves.

Balrampur Sugar Co., Ltd.

(*Secretary*: Mr. R. Kanodia, Calcutta.)

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (sugar and molasses)	90,42	69,10
Closing stock	68,11	40,98
Gross profit	3,33	3,01
Transfer to depreciation	1,58	1,12
,, ,, taxation	52	10
Net profit	1,23	1,79
Adjustments	54	56
Appropriations:		
Total available balance	1,77	2,35
To excise duty rebate—short recovered ..	6	Nil
Transfer to development rebate reserve ..	56	1,31
Proposed dividend (taxable) ordinary ..	1,12 (8%)	56 (8%)
Carried forward	3	48

N.B.—Adjustments include the balance brought forward from the previous year; provisions no longer required written back and other credit items.

Extracts from the Directors' report: The duration of season during the year under review was 152 days against 124 days in the previous year. The cane crushed was higher at 1216685.90 quintals (32,59,777 Mds. 22 Srs.) as compared to 959414.46 quintals (25,70,489 Mds.) during the previous season. The recovery was also higher at 10.17 per cent against 9.94 per cent in the preceding season.

As reported in the Directors' last year's report the phased programme of extensions and reconstructions has already been taken in hand. The Company has been granted a license by the Government to increase its crushing capacity to 1,200 tons per day.

The excise rebate of Rs. 4,11,964 allowable under the incentive scheme on extra production of sugar during the season 1960-61 was not provided in the above accounts for the reason that the Company shall be entitled to receive the said sum of Rs. 4,11,964 during the year 1961-62. Therefore, the same shall appear in the accounts for the year 1961-62. Similarly no provision of any amount has been made for any sum under the price linking formula in respect of season 1960-61 as the Government of India has referred the price linking formula to the Tariff Commission for further examination and the amount of deferred cane price payable to the Cane Growers will be determined only after the Commission has examined the formula and its report thereon is accepted by the Government.

Accounts in brief as at 30th June 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital* ..	14,00,000	Gross block ..	34,35,427

Carried forward	1,16	1,11

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: *Iron Ore*.—Raisings decreased from 7,02,299 tons to 6,44,182 tons as compared with the previous year. Despatches also decreased from 6,92,063 tons to 6,47,828 tons.

Manganese Ore.—The total output was 59,656 tons as against 61,285 tons last year. Despatches increased from 50,066 tons to 70,685 tons this year. Normal prospecting was carried out during the year.

Manganese Dioxide.—Production of *Dioxide Ore* was *nil* during the year under review as against the output of 640 tons last year. Production was *nil* as the Company's main deposit yielding *Dioxide Ore* has been exhausted. Sales, however, recorded an increase from 986 tons to 2,140 tons. Sales were effected from previous stocks.

Market.—The demand for *Iron Ore* was satisfactory but this year again the full advantage of the demand could not be taken due to inadequate supply of railway wagons.

Manganese Export Market is still depressed and became more competitive with the result that prices of the various grades of ore have fallen sharply.

Bolani Ores Ltd.—This project has made considerable progress and has now reached the target despatches at the rate of 1 million tons of *iron ore* per annum to Durgapur Steel Plant.

Eastern Shipping Syndicate.—The activities of the Syndicate ceased on 31st August 1957. The realisation of assets and the payment of liabilities are still in progress.

Accounts in brief as at 30th June 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

,, income-tax on preference dividend ..	5	7
,, ordinary dividend (taxable) ..	65 (20%)	65 (20%)
Carried forward	3	10

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The directors feel that the result for the year ended 30th June 1961 have been very stisfactory.

Cost:—Estate delivery per lb. Estimated cost for

	Cents
1960	78-35
1961	80-88
1962	85-65

The average price realised for 1961 rubber is: Sheets Rs. 156.89 per 50 kgs. and Scrap Rs. 132.26 per 100 kgs.

The rubber harvested in 1961 amounted to 2,55,354 lbs. The estimate for 1961-62 are placed at 2,60,000 lbs.

The cost of production during the year has gone up mainly due to increased cost of wages and amenities to labour. In spite of representation by planters, the Government of India have not increased the prices of rubber.

Accounts in brief as at 30th June 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

		Cash	35,647
	Rs. 10,37,282		Rs. 10,37,232

* Paid-up capital consists of 65,000 ordinary shares of Rs. 5 each and 25,000 six per cent cumulative preference shares of Rs. 10 each.

Central Provinces Railways Co., Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

52*nd Annual General Meeting*—Held on 5th January 1962.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1961	1960
Net earnings	9,87	8,15
Government's share	2,45	1,58
Gross profit	7,14	6,25
Transfer to Managing Agents' commission ..	36	31
,, ,, taxation	3,05	2,87
Net profit	3,73	3,27
Adjustments	5	7*
Appropriations:		
Total available balance	3,78	3,34
To Interim dividend (taxable) ordinary ..	Nil	1,41 (1.50%)
Proposed dividend (taxable) ordinary ..	3,76 (4%)	1,88 (2%)†
Carried forward	2	5

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 471 being over provision for final dividend for the year ended 30th September 1959.

† Final dividend.

Extracts from the Directors' report:

The following table shows the statistics of traffic for the past three years:—

	1958-59	1959-60	1960-61*
Number of passengers	21,86,084	22,90,889	25,14,629
Gross earnings (in rupees) ..	9,81,274	10,13,968	11,52,657
Merchandise (in metric tonnes) ..	1,42,393	1,85,684	1,47,195
Gross earnings (in rupees)	5,54,845	5,16,457	5,88,911

* The figures for 1960-61 in respect of the number of passengers carried during June to September, 1961, and tonnes carried during September, 1961, will require adjustment as the audited figures have not been received.

Coaching Traffic:—There has been an increase of about 2,23,000 in the number of passengers carried and of over Rs. 1,38,000 in coaching receipts.

Goods Traffic:—This class of traffic likewise shows an increase of over 11,000 tonnes with augmented earnings of more than Rs. 67,000.

The Board of Directors having given due consideration to a suggestion made by some shareholders at the Company's last annual general meeting that the declaration and payment of an *Ad-interim dividend* should be discontinued and only one dividend be declared in respect of each financial year, decided that the payment of *Ad-interim dividend* should be discontinued.

Accounts in brief as at 30th September 1961 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	94,00,000	Block	95,61,236
Reserves and surplus..	57,206	Current assets ..	4,27,374
Other liabilities ..	6,39,688	Investments	500
		Cash	1,07,784
	Rs. 1,00,96,894		Rs. 1,00,96,894

* Paid-up capital consists of 94,000 equity shares of Rs. 100 each fully paid.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Secretary,
Secretaries and Treasurers.

CALCUTTA, 3rd *January*, 1962.

NO CHANGE IN MONEY

(*From Our Own Correspondent*)

BOMBAY, 10*th January*

There have been no outstanding developments in the short-term money market in this, the second week of the New Year. Most of the banks are in a comfortable position and are able to meet the credit needs of their customers without any difficulty. The intense competition for deposits stems not from immediate requirements but from the expected calls in the future. At the moment, the demand for bank credit is below expectations.

Today, the inter-bank money market was a little more active than in the previous days of the week under review, but the demand was not heavy enough to push up the inter-bank call rate which continued to be steady at 4½ per cent. The same rate prevailed in Calcutta too. If the broadening of demand for funds noted today were to gather momentum in the next few days, as, indeed, it might, the inter bank call money rate could easily move up to 5 per cent.

There have been no changes in the short-term deposit rates which are as follows:

	Per cent
Notice money from public:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days (,,) ...	3½
(iii) 61 to 90 days (,,) ...	3½
(iv) 91 days and over but less than 12 months	3½
(v) 12 months	4

The Central Government was table to raise Rs. 2 crores by way of 91-days' Treasury Bills, under the weekly tender system, at 2.520 per cent, the same as in the previous week. The amounts tendered, however, exceeded the invitation by Rs. 3 lakhs. As against nothing in the previous week, the offtake of 91-days' intermediate Treasury Bills was Rs. 15 lakhs. Sales of both the types of bills are being continued in the coming week.

Notes in circulation, according to the Reserve Bank's statement for the week ended 5th January 1962, have staged a rise of Rs. 26.24 crores, but as notes held in the Banking Department have shrunk by Rs. 3.03 crores, the total notes issued are up by Rs. 23.21 crores. This increase, which is quite normal for the first week of a month, has been balanced on the assets side of the Issue Department by an addition of Rs. 10 crores in foreign securities and of Rs. 15 crores in rupee securities, against which there has been a fall of Rs. 1.79 crore in rupee coin.

The aforesaid increase in the foreign securities held in the Issue Department has been brought about by a transfer from balances held abroad shown in the Banking Department. These are actually done by Rs. 16.87 crores. Consequently, the total foreign exchange reserves are lower by Rs. 6.87 crores at Rs. 143.45 crores.

Deposits of banks with the Reserve Bank, which had gone up by Rs. 25.76 crores in the previous week, have fallen by Rs. 26.31 crores in the week under review. This development only confirms the view that the increase in the previous week was mostly due to the customary year-end window-dressing operations. A part of the decline reflects the repayment of a sizable amount of the borrowings from the Reserve Bank. Such under the usance bills alone is of the order of Rs. 7.81 crores, the amount outstanding being no more than Rs. 6.93 crores.

Indicative of the quarterly tax payments is the increase of Rs. 11.45 crores in the deposits of the Central Government. The funds of other Governments, however, have staged a marked contraction of Rs. 20.78 crores.

The scheduled banks' statement for the week ended 29th December 1961 shows an increase of Rs. 23.14 crores in deposits, the bulk of which has been under demand deposits. Inter-bank borrowings are lower by Rs. 4.90 crores. Bank credit has staged a sharp rise of Rs. 23.07 crores. Investments have gone down by Rs. 20 crores, while cash balances have moved up by Rs. 24.48 crores.

The State Bank's statement for the corresponding week (viz., 29th December 1961) shows an increase of Rs. 6.31 crores in deposits, a rise of Rs. 5.98 crores in advances, a fall of Rs. 20.32 crores in investments and an improvement of Rs. 18.59 crores in cash balances. These figures will enable the reader to appreciate the extent to which the variations in the position of scheduled banks as a whole have been influenced by this State-owned banking giant.

The gilt-edged market has been devoid of any fresh features. Over the week, there is hardly any variation in the prices of Central Government loans. Among State loans, there has been some inquiry for the 4½ per cent 1972 issues, resulting in a rise of 5 to 20 nP in the loans of Madras, Andhra, Uttar Pradesh, Madhya Pradesh, Bihar, Orissa and Mysore.

There has been a slight improvement in the value of the pound sterling in the foreign exchange markets of the world. This key currency of the sterling area has hardened in terms of the U.S. dollar, French and Swiss francs and Deutsche mark. In terms of dollar, for instance, the spot rate New York on London has strengthened over the week by 0.180 cent to 281.100-281.140 cents per £. There has been a corresponding improvement in the three months' forward rate also, the latest rate being 279.130-279.170 cents. Reflecting this strength of pound sterling, the value of rupee in terms of U.S. dollar has also improved. The banks' selling rate for ready T T on New York is Rs. 476.25 per 100 dollars as against Rs. 476.50 a week ago. The banks' buying rate is Rs. 473, as against Rs. 473.25 per 100 dollars last week.

BULLION WEAK

(*From Our Own Correspondent*)

BOMBAY, 10*th January*

There was a sharp decline in bullion prices during the week under review, gold receding by Rs. 3.25 per 10 grams and silver by Re. 1.70 per kilogram. The decline followed tired bull liquidation prompted by continued sizable arrivals, while offtake was small. There were, besides, large offerings on behalf of a Calcutta trader. At lower levels, some support was no doubt in evidence and both metals staged a recovery. But the recovery was negligible, so that the closing rates were well below those prevailing on Wednesday last week. The undertone of the market at the time of writing was weak.

Arrivals of gold and silver during the week, as already stated, were quite large, the daily average being 6,400 tolas and 40 bars, as against 6,700 tolas and 20 bars, respectively, in the previous week. Average offtake was 5,600 tolas of gold (5,450 tolas last week) and 6 bars of silver (7 bars). The floating stocks in the local market are estimated at 50,000 tolas of gold and 1,700 bars of silver.

The adjustment rates fixed today were Rs. 115.75 per 10 grams of gold and Rs. 209.95 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 119.00 and Rs. 211.65, respectively.

In gold, the *Fagun* (22nd March) settlement began the week at Rs. 120.60, as against the previous close of Rs. 120.75, and moved down to touch a low of Rs. 117.40 today. The net loss over the week was Rs. 3.35.

Ready gold continued to be quoted at a discount under the forward throughout the week, though the actual discount declined slightly from Re. 1.50 to Re. 1.40. The ready closing rate was lower at Rs. 116, as against Rs. 119.25 a week ago.

The *Fagun* (23rd March) settlement in silver encountered selling and receded from Rs. 213.25 on Wednesday last to Rs. 211.60 on the 8th inst. After recovering to Rs. 212.40 today, the settlement finished at Rs. 211.45. The net loss over the week was Re. 1.80.

Ready silver declined from Rs. 211.65 to Rs. 210 on Monday. Subsequently, it improved and touched Rs. 210.70 today before closing at Rs. 209.95. At this level, the discount under the forward was Re. 1.50, as against Re. 1.60 a week before.

The world price of gold in the London bullion market improved further, albeit slightly, from $35.15½ to $35.15⅞ per fine ounce. But the sterling price eased from 250s. 3½d. to 250s. 2d. owing to the firmness of the pound sterling *vis-a-vis* the dollar. Ready silver came in for some selling and shed ¼d. to 87⅞d. Forward silver also eased by ¼d. to 88¼d. Silver in New York, however, was unchanged at 104.75 cents.

The following table shows the trend of prices during the week under review:

	10-1-62 (closing)	High	Low	3-1-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	116.00	119.15	116.00	119.25
Forward: *Fagun*†	117.40	120.65	117.40	120.75
Sovereign	98.00	98.00	97.50	97.50
SILVER				
Ready (.996 fine)	209.95	211.85	209.90	211.65
Forward: *Fagun*†	211.45	212.85	211.40	213.25
London—				
Silver Ready	87⅞d.	88d.	87⅞d.	88⅛d.
Silver Forward	88⅛d.	88⅛d.	88⅛d.	88d.
Gold	250s. 2d.	250s. 3½d.	250s. 2d.	250s. 3½d.
New York—				
Silver	104.75 cents	—	—	104.75 cents

† 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS STEADY

(*From Our Own Correspondent*)

MADRAS, 8*th January*

The kip market remained steady and there was no change in the tempo of trading or prices. Demand for inland trade for lower selections in cow hides was good and the prices obtainable locally were 10 nP to 15 nP higher than exporters' ideas. U.K. inquiries were patchy, with emphasis on lower grades which were not available at workable prices for export. Demand for cow calf from the U.K. was selective and small and that for buff calf from the U.S.A. was negligible. Arrivals of buff hides met with ready clearance at firm prices.

In the tanned skins section also, there was no material change in the pattern of demand. There were isolated inquiries for lightweight top marks goat skins in run selections and for heavies lower ends as well as for middle class sheep skins 2 lbs. average run parcels. Other lines seemed to be neglected for the present.

The January tanned skins public auctions in West Germany will take place on the 8th inst. when about 84,000 goat skins and 62,000 sheep skins will be offered for sale.

Shipments during the month of December 1961 were 1,885 bales tanned cow hides, 172 cow calf, 11 buffs, 380 buff calf, 455 goat skins and 265 sheep skins to the U.K. ports; 25 cow hides, 12 cow calf, 28 buff calf, 992 goat skins and 398 sheep skins to Continental ports; 158 buff hides, 155 buff calf and 254 goat skins to the U.S.A. ports; and 7 goat and 91 sheep skins to Japan. It will be noticed that the shipments of tanned skins to the Continental ports last month were very heavy.

COTTON FUTURES IMPROVE

(*From Our Own Correspondent*)

BOMBAY, 10*th January*

Neither the import quota of 200,000 bales announced on Saturday, the 6th inst., nor the new scheme of distribution of Indian cotton published yesterday had any bearish effect on the cotton futures market which firmed during the week under review. Barring occasional setbacks, caused by profit-taking, the trend of futures prices was steadily upward. The import quota fell flat on the market because shipment under the quota was possible only from 1st July to 31st October. There was, therefore, no prospect of foreign cotton immediately becoming available under the quota. The new scheme of distribution of Indian cotton also had no adverse effect because it did not come as a surprise. In fact, the scheme was discussed earlier by the Textile Commissioner with the representatives of mills and trade. Although the fear that the Forward Markets Commission might intervene, should futures prices, which are already only a few rupees below the statutory ceiling, rise unduly, tended to curb speculative enterprise, fresh support was forthcoming from mills and investors. Futures prices consequently firmed up. From Rs. 673 last week-end, the Jarilla March contract steadily rose to Rs. 680 today.

At a meeting held yesterday, the Board of the East India Cotton Association is reported to have decided to set up a sub-committee to work out the details of the next contract, namely, I.C.C. August 1962. The sub-committee, it is said, was advised to devise the contract in such a manner as to obviate the need for any intervention in the market by the F.M.C. The Board would also appear to have resolved the controversy arising out of the F.M.C.'s contention that the ceiling price of the contract was inclusive of the invoicing back rate and the penalty for failure to tender by deciding to advise the members to adjust their outstanding commitments in such a manner as to fall in line with the F.M.C.'s ruling. Demand for ready cotton continued to be good. Spinners showed interest in almost all old and new crop varieties. Interest centred mainly round such varieties as L.147, 197/3, Co2, Vijay and Digvijay. Prices ruled firm.

Export demand for Bengal *Deshi* was good. Sizable business in this variety passed on a subject-to-licence basis. Among foreign cotton, demand was reported for East African. Pakistan and American growths too evoked inquiries. Of the import quota of 200,000 bales announced on Saturday, 70,000 bales of cotton of staple length 1-1/16" will be allocated to mills against their retention quota under the export incentive scheme. The balance of 130,000 bales consists of 30,000 bales of cotton of staple length 1-1/16" and above but below 1-3/16" and 100,000 bales of cotton of staple length 1-3/16". The large import allocation of 100,000 bales in respect of cotton stapling 1-3/16" and above is likely to prove very helpful to the spinners, since it would enable them to book more Sudan cotton which is cheaper. Prices of Egyptian cotton have lately started declining rapidly and, if they come in parity with those of Sudan in the near future, there is every possibility of the latter cotton being picked up by spinners in equal, if not more, quantity.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal 682, Co2 1,150-1,200, Khamgaon 961, B.P.52 1,330, Busoga (UNUG) 1,310, Sudan XG3S 1,665, XG5S 1,450.

Firm conditions prevailed in the Karachi cotton futures market during the week under review. Renewed export inquiries and good domestic mill buying initiated a general buying movement which took prices to higher levels. N.T.R.G. January contract firmed up from Rs. 78.70 to Rs. 79.40. The March contract too was quoted higher at Rs. 78.10, as against Rs. 77.25 last week-end.

Cotton futures in Liverpool drifted further downwards during the week under review. Selling by commission houses and local traders persisted while demand tended to recede. Both the American and American type contracts declined. Even higher advices from New York failed to lift values. Sudan contracts, however, ruled quietly steady with values unchanged from last week. The following are the latest available quotations—in pence per lb. from Liverpool:

American cotton one inch staple contract: March 24.55; May 25.00; July 25.15; October 24.90.

American cotton mixed growth contract: March 24.95; May 25.40; July 25.55; October 25.30.

Sudan: January, March, May 32.25.

In contrast to last week's setback, the New York cotton futures market depicted a firm trend during the week under review. Support based on the expectation of a higher loan rate for the 1962 crop resulted in a rally in the distant positions while the near deliveries firmed up in sympathy. Firm advices from the spot market also imparted strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	9-1-62	2-1-62	26-12-61
New York spot	35.55	35.55	35.45
March	34.49	34.08	34.15
May	35.04	34.62	34.63
July	35.17	—	—

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *10th January*

The easy trend depicted by the yarn market in the past four weeks continued unabated during the week under review. Art silk yarns encountered selling, thanks to poor offtake by weaving mills and prospects of large imports in the near future. Consequently, prices suffered a setback. Stable fibre yarns also drifted downward, due to lack of encouraging advices from consuming centres. Cotton yarns lacked support, excepting finer counts which were somewhat favoured and tended to move up.

Amilan (20 deniers) February delivery was subjected to heavy selling pressure and hammered down from Rs. 3,345 to Rs. 3,205. April position was done today at Rs. 3,267. Among indigenous spot art silk yarns, National Rayons 120 Bt. cones 1st grade dropped Re. 1.03 to Rs. 13.31. 150 Bt. cones receded by 94 nP to Rs. 11.07. Among foreign yarns, 150 Japan was dull at Rs. 1,929, as also 150 Italy at Rs. 1,709. 120 Japan, however, met with scattered support and gathered Rs. 13 to Rs. 1,845. 120 Italy gained Rs. 10 to Rs. 1,874.

Staple fibre yarn (40 x 1) February settlement declined by Rs. 26 to Rs. 739. Spot Hinds fell by 48 nP to Rs. 8.58. Citys shed 31 nP to Rs. 8.93, Kohinoors lost 20 nP to Rs. 9.15.

In the cotton yarn section, ten counts Podars were quiet at Rs. 17.25 and Moderns at Rs. 18.37. Twenty counts Centurys and Moderns were unaltered at Rs. 22.75 and Rs. 21.50, respectively. Thirty counts Edwards changed hands at Rs. 25.25, same as last week. Sixty and eighty counts Finlays evoked good demand, the former rising by Re. 1/- to Rs. 65 and the latter by Re. 1.82 to Rs. 82.82.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *10th January*

The oilseeds market continued to rule firm during the week under review. The firmness of groundnuts was engendered by the export quota for 20,000 tons of H.P.S. groundnuts (referred to last week in these columns) announced on Wednesday last week. Another helpful factor was the Government of India's decision to permit industrial units consuming groundnut oil (for instance, soap producers) to export the oil in replacement of an equal quantity of less costly oils. This move is designed to economise the use of groundnut oil for diverting it to export channels. A clear picture of the possible quantum of exports under the scheme was lacking, but traders felt that any export of oil would lighten the internal supply position. Yet another helpful factor was the Forward Markets Commission's decision to permit the Exchange to effect outward payment in respect of January and April contracts in groundnuts and January contract in groundnut oil. The Commission, it may be recalled, suspended outward payment early in November in a bid to control speculation. The F.M.C.'s decision was bullishly interpreted by the trade.

The extension of the shipment period for the current quota for groundnut expeller cake by a month, that is, up to the end of January, also imparted strength. The news of an extension was received with a sense of relief by shippers who could not utilise the full quota according to original schedule, on account of freight difficulties. Consequent on these factors, groundnuts moved up. The rise in prices would, indeed, have been more marked but for the continued large arrivals of new crop seeds. In sympathy with groundnuts and on hopes of revival of U.S. buying of castor oil, following smaller supplies from Brazil, castorseeds were strong. Linseed and cottonseeds were well maintained.

A new centre for conducting forward trading in cottonseeds was inaugurated at Bhatinda in the Punjab, by Mr. Syed Noor, Member, F.M.C., on the 6th inst. Recognition has been given to the Punjab Company Ltd., Bhatinda, for a period of three years for carrying on forward trading in cottonseeds. The hedge contract will have as its basis 320F variety of cottonseed. In addition to the basic variety, *desi* cottonseed is also tenderable against the hedge contract subject to the payment of appropriate tendering difference to be prescribed by the Board of Directors of the Company from time to time. The months of delivery are *Posh* and *Chetar* of the *Samvat* year. The unit of trading is fixed at 5,000 kgs. Sellers have been given option to deliver cottonseed at 26 other important centres in the States of the Punjab, besides Bhatinda. Bhatinda is the seventh forward market in cottonseed, set up under the Forward Contracts (Regulation) Act, 1952, the other six being Bombay, Ahmedabad, Akola, Ujjain, Surendranagar and Amritsar.

Groundnut Khandesh quality hardened by 50 nP to Rs. 46.75. Nizam bold rose by 38 nP to Rs. 46.50. Oil ex-mill put on 15 nP to Rs. 19.20. In the forward section, the official trading continued to be suspended, with prevailing prices well above ceiling prices. In unofficial trading, groundnut January 1962 contract moved up by a rupee to Rs. 219. April 1962 contract, too, rose by a like amount to Rs. 218.25. Oil January 1962 contract put on 10 nP to Rs. 19.10.

Castorseed March 1962 contract went up from Rs. 172.62 to Rs. 174.50, before closing at Rs. 173.62. Castorseed June contract closed higher at Rs. 172.62 today, as against Rs. 171.62. Kanpur bold picked up 13 nP to Rs. 34.50. Oil B.S.S., however, shed 20 nP to Rs. 15.50.

Linseed March 1962 contract rose initially from Rs. 39 to Rs. 39.22, but eased subsequently to Rs. 39.03. Bold ready was done at Rs. 43.25. But linseed oil shed 10 nP to Rs. 18.15.

In the cottonseed section, January 1962 contract forged ahead from Rs. 100.50 to Rs. 103.25. April 1962 contract gathered 25 nP to Rs. 105.25. Both non-whites and Berars improved by 30 nP to Rs. 20. Whites rose by 25 nP to Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday, 3rd January, as compared with those of the two previous weeks:

	10-12-1961	3-1-1962	27-12-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	215.00	215.00	215.00
Nizam bold	46.50	46.12	45.75
Khandesh quality	46.75	46.25	46.50
Oil ex-mill ready*	19.20	19.05	19.00
Railway receipts*	19.10	19.10	18.90
Oil January 1962 ..	17.65	17.65	17.65
Castorseed			
March 1962	173.62	172.62	171.75
Ready Madras	35.75	35.75	35.10
Ready Kanpur	34.50	34.37	33.75
Oil B.S.S.†	15.50	15.70	15.50
Oil commercial†	14.70	15.05	14.70
Linseed			
March 1962	39.03	39.00	39.22
Bold ready	42.50	43.25	43.50
Oil ready†	18.15	18.25	18.30
Cottonseed			
January 1962	103.25	100.50	101.75
Niger seed	37.50	38.00	38.10
Kardi seed	24.00	24.00	24.10

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, *10th January*

Malabar black pepper moved narrowly during the week without any notable new developments except the deterioration in the political situation in Indonesia on the question of West Irian. Newspaper reports indicating an imminent invasion of West Irian by Indonesia failed to put any pep in the market, as the traders remained more worried when they saw the U.S. sitting on the fence, despite the day-to-day expansion of new arrivals.

Garbled at Cochin moved between Rs. 313 and Rs. 317 and ungarbled between Rs. 307 and Rs. 312. January delivery seesawed between Rs. 318 and Rs. 322, while February changed colours according to the alternate bouts of selling and buying by bulls and bears, the highest and the lowest being Rs. 322 and Rs. 319, respectively.

There are some vague reports regarding the sale of about 1,000 tons of Malabar black to the U.S.S.R., but no confirmation is so far available. Anyway the report has failed to have any salutary effect on the market, as arrivals are outstripping demand. Arrivals in Calicut are also picking up. With such limited export inquiries, it will be difficult to maintain the present level, particularly when there will be competition between Tellicherry and Alleppey areas.

Spot in New York was down to $0.36½ from the highest at $0.38 under pressure of unsold arrivals. It is really paradoxical why New York remained stoic, in spite of the reports of lower inventories. Indian exporters are reported to be sending unsold consignments, as the prices in Singapore are high and, as a consequence, there are more chances for selling afloat at better prices.

Singapore is the only bright spot in the picture, as the major part of the stock of Lampong is in the hands of the Indonesian Agency and owing to short covering as well as war psychosis in Indonesia.

Black pepper in Singapore rallied from Str. $137½ to Str. $142½ and white edged from cut down costs of production in India. It will be Str.$170 to Str.$172½.

The future of pepper is anything but rosy, as the world production is more than enough for the yearly requirements. The upward bulges in the prices will, of course, be there, as the present prices are lower and as such there will be resistance from the sellers. Big holding by the Indonesian Agency at Singapore and Djarkarta is acting as the sword of Damocles on pepper. Nobody knows when and how they will come out to sell.

Ready pepper in Bombay is nominally quoted at Rs. 176 per 50 kilos.

TEAS IMPROVE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *2nd January*

A total of 700,000 kgs. was on offer in export sale No. 1 held today. Quality showed general improvement. There was strong general demand throughout the sale. Best highgrowns came to a dearer market with attractive prices being realised for some of the brighter ones whilst below best were irregular with quality; similar fannings realised dearer rates. Good mediums and mediums were 30 to 40 nP dearer with more support forthcoming for equivalent fannings. Low mediums and plainest sorts sold readily at rates which were 20 to 35 nP above those ruling in the previous sale. Black leaf teas sold extremely well, particularly fannings which advanced considerably. C.T.C. and Legg-cut teas followed the upward trend of the market. Whole leaf grades were strong and dearer, particularly FPs.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.40-3.70	4.55-4.70
Mediums	3.70-4.20	4.70-4.85
Good mediums	4.30-5.40	4.85-5.20
Nilgiri B.O.P.	5.40	8.10

The average price realised in sale No. 1 was Rs. 4.31 per kilo, as compared with Rs. 4.00 a week ago and Rs. 4.89 in the corresponding sale last year.

About 321,000 kgs. were offered in dust sale No. 1 held on Thursday, 4th inst. The sale opened to a strong general demand which eased towards the close. Highgrowns were a strong feature of the sale and generally advanced considerably with improved quality. Mediums and low mediums were fully firm to dearer but at the close there were some withdrawals. The more fibrous types received good support, but at irregular prices, and were sometimes easier. The Wynaad sorts met with less demand than other types and were sometimes easier. C.T.C. and Legg-cut teas were generally dearer.

The average price realised in dust sale No. 1 was Rs. 4.20 per kilo, as against Rs. 3.98 a week ago and Rs. 4.80 in the corresponding sale last year.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No. 2*: 617,000 kgs. offered. Strong demand, particularly for improved quality. Highgrowns advanced considerably, plain low medium and medium brokens 10 to 20 nP. dearer, but similar fannings only firm to dearer. Good mediums dearer with improved quality. Whole leaf very strong. Unorthodox irregularly 10 nP dearer.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *9th January*

The feature of yesterday's export sales was the strong demand for quality teas, while plain teas were about steady. Strong demand was also in evidence in last week's internal sales, indicative of increased offtake for consumption within the country. As on date, about 60,000 packages have been auctioned during internal sales, more than the comparative figure for the last season. Shipments of tea during the week were heavy, and this underlines the need for overseas countries to build up their stocks as a result of their comparatively lower buying earlier in the season on hopes that prices would decline as the full impact of this season's increased production would be reflected in the market.

From the recent address by the Chairman of the Tea Board to the recent meeting of the Assam branch of the Indian Tea Association, it is clear that the increased competition which Indian tea is facing from other producing countries has begun to be taken notice of by officialdom. He referred to the increasing competition from China, Ceylon and East Africa and stressed the need to cut down costs of production in India. It will be remembered that the industry itself is keenly alive to this need, and has been urging the Government times without number to adopt a more realistic taxation policy towards the tea industry. There can be no question of cutting down wages which have been laid down by Government. The only way to reduce costs is to lower taxation, Central as well as States. The need to merge the different States levies into excise duty has been brought to the notice of the authorities several times in the past and this, coupled with the official realisation for cutting down costs, has made industry circles to expect some tax concessions for tea in the forthcoming budget.

Presiding over the recent annual meeting of the Calcutta Tea Traders' Association, Mr. G. A. Whitaker said that the average prices realised at Calcutta auctions so far this season were 66 nP per 1 kg. lower than last season and that many teas were being sold at prices near or below their cost of production. Trade circles think that, while factory Cachars teas are realising prices much below their cost of production.

As at the end of November, Pakistan production recorded an increase of 17.37 million lbs. at 55.11 million lbs. The total output this season was estimated at 59 million lbs. which is 17 million lbs. higher than 1960-61. Pakistan has increased the export quota further from 10 million lbs. to 12.5 million lbs. It has also been announced that about 25 per cent of the export quota or 2 million lbs. or whichever is less can be withdrawn from export auctions in Pakistan for consignment sales to London. The recent auction trend in Chittagong has indicated a falling trend.

Dusts on offer at last week's internal sales held here aggregated 26,854 chests which met with very strong demand. The rise in prices of C.T.C. teas was a feature. Secondary and fibrous C.T.Cs appreciated remarkably and the few good C.T.Cs likewise hardened. The medium teas, particularly those possessing bright liquors, were fully steady. Orthodox descriptions shared in the general trend, medium Assams having bright liquors meeting with keen competition. Legg-cut teas enjoyed good support, the clean and fibrous teas being very prominent. The quotations per 1 kg. inclusive of excise duty were: Good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00; medium Assam C.T.C. dust Rs. 5.80 to Rs. 6.30; legg-cut dust Rs. 4.40 to Rs. 5.00; medium Assam dust Rs. 4.20 to Rs. 5.10; and plain orthodox dust Rs. 3.80 to Rs. 4.40.

Leaf on offer amounting to 347 chests was in good demand, and realised higher prices.

Export offerings during yesterday's sales amounted to 75,151 packages, which met with strong inquiries, leading to a rise in prices. There was ready demand for tippy teas, though these were irregular. Darjeelings realised higher prices depending on quality, the mediums and poorer teas being firm to dearer. There was keen competition for "teas for price" pushing up prices. Plain brokens were firm, similar fannings adding a small gain. The remainder of the fannings on offer were subjected to keen competition and prices gained. Better liquoring and medium orthodox teas were accorded good support, while B.O.Ps of this description recorded an irregular trend. The quotations per 1 kg. inclusive of excise duty were: Best Assam C.T.C. fannings Rs. 5.60 to Rs. 6.00; best Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.80; medium Assam C.T.C. fannings Rs. 4.90 to Rs. 5.30; medium Assam C.T.C. B.P. Rs. 4.90 to Rs. 5.20; clean plain pekoe Rs. 4.00 to Rs. 4.20; plain fannings Rs. 3.60 to Rs. 3.85; and plain B.P. Rs. 3.50 to Rs. 3.65.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *9th January*

Base metal markets remained firm during the week under review. London advices followed an irregular pattern. Earlier in the week, the London Metal Exchange quotation for electrolytic copper dropped from £229½ a ton to £228¼, thanks to the significant rise in warehouse stocks. The price, however, recovered to close higher, on balance at £230½, following the gain in the New York market induced by good buying demand. In Calcutta, copper scrap was in keen demand but supplies were extremely tight. That accounted for the further rise in the price of berry quality scrap from Rs. 522.50 per 100 kgs. to Rs. 527.75 and of utensil scrap from Rs. 471.50 to Rs. 482.25. The fact that supplies to permit-holders have been delayed was responsible for the abnormally heavier demand for scrap during the week. There was the announcement earlier in the week by the major sheet rollers that they have increased the price of copper sheets and brass sheets.

Tin in Singapore maintained a firm trend, and in Bombay the price rose five points to Rs. 1,640.00 per 100 kgs. In London, tin opened at £946 per ton and soon hardened to £950 following keener consumer demand subsequently. However, the quotation closed a shade lower at £947½. In Calcutta, supplies were extremely limited and that, together with the lack of any firm news that the International Tin Agreement would continue to be in existence, imparted firmness. At Rs. 1,578.75 per 100 kgs. the Calcutta quotation was Rs. 2 higher as compared with last week. On the other hand, electrolytic zinc eased from Rs. 265.75 to Rs. 257.75 per 100 kgs. This was due to the difficult stock position in copper in the absence of which purchases of zinc alone by alloy makers would be of no avail. In London, the quotation for zinc was firm at £71½ per ton; however, earlier in the week the rate was lower at £71¼ in line with easiness in copper. Lead in Calcutta was unchanged at Rs. 128.00 per 100 kgs. Demand was subdued. In London, lead declined from £60⅜ a ton to £59¾. An easier trend was recorded in New York also.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, *9th January*

Raw jute was maintained firm at the minimum levels (Rs. 30 a maund basis Assam bottoms), following increased support from mills—the prices obtained in certain marketing centres in the interior were actually above the minimum rates—while jute goods shed a portion of the recent substantial gains, due to continued selling pressure in the futures market and absence of sustained overseas buying in forward positions. Export shipments of goods, however, were considerable during the week. Although demand for hessian had revived and both Argentina and the United States had been active in recent weeks, support was only scattered and, naturally, prices of ready goods fell. It is said that the mills would increase the proportion of hessian manufacture to sacking by unsealing a further 2½ per cent of looms this month. The size of persistent demand for hessian from Argentina is difficult to be assessed now, as that would depend upon the size of agricultural crop there. Lack of adequate demand for sacking is a source of anxiety for mills, because, if demand does not increase, the chances of the mills continuing production profitably so as to not only make current working economic but also make good the earlier losses would be less.

Meanwhile, anxiety has been rightly caused as to the effect of the recent fluctuations in prices on the foreign buyer. Very commendably, the Indian Central Jute Committee, in its latest *Bulletin*, has pointed out that the reasons for the current necessity of importers in the principal consuming foreign markets to operate in a rising market are not far to seek.

It has been in the fitness of things that the mills have purchased fibre in greater quantities, and the request of the I.J.M.A. to purchase more fibre from Bihar has been responded to by mills. In fact, the mills, in their anxiety to prevent fibre prices from falling, have exceeded their weekly minimum quotas issued by the sub-committee, with the result that the mills have built up considerable stocks of fibre and, in order to enable mills to continue in production on a profitable basis, firm conditions in goods should be maintained. Now that indigenous fibre is available in plenty, the trade thinks that the need for further imports would not arise. Of course, cuttings from Pakistan would have to continue to be imported, but the issue of import licences should be regulated further. It is also thought that no more imports from Thailand would be allowed. Since mills have been put to considerable financial strain in their support to the fibre market, the demand for further liberalisation of credit facilities should be more sympathetically looked into by the Reserve Bank.

Assam, Northern and Daissee bottoms were maintained firm at Rs. 30, Rs. 29.50, and Rs. 32.50, respectively, during the week. Arrivals increased, and sellers were anxious for greater business. The better variety was in short supply and continued to command sizable premium. Now that demand for sacking goods is low and mills have to increase the proportion of hessian manufacture, good quality jute would continue to be in good demand. It remains to be seen if mill's' demand for the superior fibre can be fully satisfied. The price in the inferior rose to above Rs. 30 a maund and, according to the Agricultural Department of West Bengal, the price has gone up to even Rs. 35. The impact of this rise is expected in Calcutta.

On Tuesday last, the support accorded to hessian by U.S. buyers was a feature. Ready shipment goods were in keen demand, and covering demand was left unsatisfied. Ready hessian 40" 10 oz. at Rs. 60.50 was fully firm and, though activity in sacking was small, in sympathy with hessian, ready B. twills were firm at Rs. 133.25. Selling pressure soon invaded the futures market. Covering business was done on Wednesday. Nevertheless, ready hessian 40" 10 oz. eased to Rs. 59.00 and B. twills to Rs. 132.75. On the following day, a further fall in prices was effected by the continued selling pressure in futures trading. Hessian 40" 10 oz. fell to Rs. 54 and B. twills to Rs. 128.75. The premium for ready goods continued unabated, reflecting the existence of squeeze. However, reports of firm conditions in the New York burlap market were received, following the need of manufacturers of bags there to replenish their supplies and their apprehension of a further rise in prices. This explained the U.S. purchases on Friday, and hessian 40" 10 oz. recovered to Rs. 54.50. In sympathy, B. twills were better at Rs. 130.00. Over the week-end, hessian 40" 10 oz. hardened to Rs. 55.00, following keen activity in the futures, but B. twills were quietly steady at Rs. 129.75. Bullish note was taken of the fall in goods in stock with mills as at the end of December. The fall in the stocks of hessian was greater than in sacking, while miscellaneous constructions showed a small rise. Ready B. twills gained yesterday to Rs. 55.75, while B. twills eased to Rs. 128.75.

Notice

THE KESAR SUGAR WORKS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the Shareholders of THE KESAR SUGAR WORKS LTD. will be held on Wednesday the 31st day of January 1962 at 4 p.m. (S.T.) at the Registered Office of the Company, 45-47, Apollo Street, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st July, 1961.
2. To sanction payment of dividend to Preference Shareholders.
3. To declare a Dividend to Ordinary (Equity) Shareholders.
4. To elect a Director in place of Shri Kantilal Nahalchand who retires by rotation under Article 143 of the Articles of Association of the Company, but being eligible offers himself for re-election.
5. To elect a Director in place of Shri Ambalal Kilachand who retires by rotation under Article 143 of the Articles of Association of the Company, but being eligible offers himself for re-election.
6. To appoint Auditors for the current year and fix their remuneration and also to fix the amount of travelling and out-of-pocket expenses for going to audit the accounts at the factory.

The Transfer Books of the Company will be closed from 17th day of January 1962 to 31st day of January 1962 (both days inclusive).

By Order of the Board of Directors,

K. D. SHETH,
Acting Secretary.

BOMBAY, *3rd January*, 1962.

A member entitled to attend and vote is entitled to appoint a Proxy, or when that is allowed, one or more Proxies, to attend and vote instead of himself. A Proxy need not be a member.

N.B.—Ordinary and Preference Share Dividends when declared will be made payable at the Bank of Baroda Ltd., Bombay, on and after the 12th day of February 1962. Dividend Warrants will be posted to those Ordinary and Preference Shareholders whose names stand on the Register on 31st day of January 1962.

Shareholders are requested to kindly notify any change of address.

SUGAR SUPPLY COMFORTABLE

(From Our Own Correspondent)

HAPUR, *8th January*

Sugar ruled quietly depressed during the week due to poor demand, while the supply position continued to be comfortable, thanks to the release of monthly quota in the week-end. While bold crystal continued to attract brisk buying support even at Re. 1 to Rs. 2 per maund, higher than the previously controlled rates, inferior small crystal was not at all in demand and was Rs. 2 per maund lower than the controlled rate. All the factories here in west U.P. were crushing with their maximum capacity and week-end prices here were:—Wholesale Rs. 106.50 per bag; retail 97 nP per *seer*; mill delivery per maund. Simbhauli E29 Rs. 37.85; Amroha D29 Rs. 36.37; Bijnore D29 Rs. 35.75; Seohara D29 Rs. 36.75.

Weak conditions were witnessed in the Muzaffarnagar sugar market during the week under review, as the mills holding stocks of inferior quality of previous releases were anxious sellers. Different varieties eased by 6 nP to 37 nP a maund. The release of monthly quota also eased the supply position further. The sugar factories crushing cane with maximum capacity were reported to be getting increased recovery than before. Towards the close of the week, some business was done for Punjab, while demand from the consuming areas of Gujarat and Saurashtra remained dormant. Week-end prices were (in rupees per maund) A29 Iqbalpur 40.47; Lhaksar 39.48; Deoband 39.78; Shamli 39.60; Modinager 37.97; Seohara 36.75.

Khandsari ruled quiet with more arrivals coupled with reduced demand from Punjab and Rajasthan. Prices eased by 37 nP to Re. 1 per maund. Arrivals averaged 1,500 to 2,000 maunds daily in the Muzaffarnagar market and week-end prices were: non-crystal Rs. 31 to Rs. 33.50; crystal Rs. 32 to Rs. 34; *boora* Rs. 36 to Rs. 39 per maund.

Ready *gur* ruled steadier, thanks to brisk buying support and easy loading facilities during the major part of the week. Daily arrivals at an average of 5,000 to 6,000 maunds were readily lifted and there was no stock building here on in mofussil markets. Most of the crushers have taken to *khandsari* manufacture and cane is being diverted in heavy quantities to factories and this accounted for modest arrivals in markets. Week-end prices were: *gur pansera* best Rs. 14.75; *dara* Rs. 13.75 to Rs. 14.37; *balti* Rs. 14.63; *shakker* Rs. 17 a maund.

FOODGRAINS RISE

(From Our Own Correspondent)

HAPUR, *8th January*

Foodgrains ruled firm and gains were recorded in the prices of all grains, including rice. It was reported that the U.P. State Government was anxious to check this rising tendency and had asked the Centre to allow every ration-card holder in the State to purchase Rs. 5 worth of wheat over the usual quota. It was also reported that the Government of India had offered to send more imported wheat to the State. Wheat registered a rise of over Re. 1 per maund during the week to Rs. 17.50 a maund for average quality and upto Rs. 19.25 for better farm produce. Daily arrivals of wheat were poor, but the State Government was selling imported wheat through ration shops at Rs. 15.25 per maund. It was gathered that the stocks for such sales were exhausted and that new allotment would be reaching shortly. Wheat stock with trade here had dwindled to about 16,000 maunds. The standing crop conditions of *rabi* sowings were satisfactory but winter rains were now badly needed.

Rice here recorded fractional gains in sympathy with other grains, though the supply position was reported to be satisfactory as new produce was reaching the markets in larger quantities and stocks with trade were mounting.

Gram registered fractional gains, thanks to good buying support and local stock had run down to 15,000 maunds. Barley and *bejhar* were also steadier. Maize was still reaching here at an average of about 1,000 maunds daily, but, following brisk consumer support, prices recorded a hardening trend. Local stock continued to be put around 35,000 maunds. *Bajra* continued to attract good seasonal support and, with modest arrivals, prices improved fractionally. *Juwar* and *guwar* were steadier, while *methi* and oats were listless in absence of new urges. Week-end prices (in rupees per maund) were:—rice *mainpuri sela* 19.50; *gadda kutcha* new 19; *ramajwayan sela* 22; *raimunia sela* 23; *basmati sela* 27 to 29; superior 31 to 34; gram 15.75 to 16; barley 12; *bejhar* 12 to 12.75; maize 13 to 14.12; *bajra* 16; *juwar* 13.25; *guwar* 14.75; *methi* 27; oats 12.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *8th January*

The linseed market continues to rule firm. Arrivals are meagre and sellers are reserved. Stocks with mills are very small, crushers are buyers daily, but only small business has been done in the past week.

The oil market is steady, due to firmness in other vegetable oils. Local buyers are interested daily, but sellers are very reserved, especially for forward deliveries.

The oilcake market is still dull. Only small local business has been done this week.

Ready/January is quoted at Rs. 31.50 per maund.

§.—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,46,664 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1955.

§§ Investment at cost.

M.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1955 and 37 nP for the year ended 31st March 1956.

(k) Investments.

* Includes bonus.

M.—Managed by the Board of Directors.

N.B.—Dividends paid since 31st March 1956 are shown as taxable.

‡.—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to 16.36 per cent approximate, as the final dividend of 10 per cent was paid on the increased capital of Rs. 118 lakhs, whereas the interim dividend of 15 per cent was on a paid-up capital of Rs. 50 lakhs only. X. B. Ex-Bonus.

MARKET GOSSIP

(*Concluded from page 55*)

cent. The lending member retains the right to recall the loan, if it should find itself in balance of payments trouble and its representations will be given "the overwhelming benefit of any doubt." The lender receives the money on normal I.M.F. terms, to be repaid after a maximum of three to five years. The decisive step in any transaction will be a consultative meeting as soon as it becomes apparent that any Club member may need money.

The exact purpose for which credits will be given is not mentioned in the Press reports relating to the scheme. Mr. M. Baumgartner, Finance Minister of France, has made it abundantly clear that the new facilities will not be granted to cover ordinary balance of payments deficits but are *strictly* intended for neutralising massive short-term capital movements.

It will take another three to four months for the new scheme to come into operation. The scheme will first have to be ratified by the Parliaments of the member-countries concerned. Then a protocol will have to be added to Article 7 of the I.M.F. Charter at a meeting of its Executive Directors scheduled to take place at Washington next month.

From the details given above, it is clear that the new scheme is quite realistic and modest, unlike the ambitious plans—Triffin, Stamp and Bernstein—which envisaged radical changes in the powers and functions of the Fund. Surely, the general borrowing

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2649 BOMBAY, 20th JANUARY 1962 PRICE Rs. 1-2

"EFFICIENCY" MUST BE INDIA'S WATCHWORD

THERE are some serious mistakes in India's industrial policy and, unless they are rectified without further delay and the harm they have already done is undone, the chances of India emerging as a strong and large exporter will be bleaker than they are at present. No amount of special facilities for stimulating exports will be of any use, if the basic factors that determine the competitive capacity of Indian industries are undermined by the adoption of unsound policies based on outmoded ideological grounds. It is worthwhile recalling that India's failure to retain, let alone improve, its status as the world's largest exporter of cotton textiles is primarily due to defects in Government's economic policies. Nature has provided this country with all the advantages necessary for playing the role of the leader in world trade in textiles. Raw material and manpower are readily available. Managerial techniques and auxiliary industries have been developed by persevering industrialists. A fair-sized textile machinery industry has also been established. If its size is not bigger, it is not the fault of entrepreneurs. It is partly due to difficulties in getting technical know-how and collaboration in the early post-war years and partly to checks placed on the growth of textile industry. But lack of machinery was not the stumbling bloc in the way of India's premier manufacturing industry, for, in the early fifties, there was no dearth of foreign exchange. It was the Government's policy of protecting the handlooms and unwarranted fears of displacement of labour that prevented the textile industry's growth on modern lines and the exploitation to the fullest extent possible of the facilities available in the country. The result is that even a tiny colonial city like Hong Kong, built on barren rocks, with a population equal to a little over three-fourths of Bombay City, has blossomed into a leading exporter of piecegoods, ready-made garments and yarn. Even today there is inadequate realisation of the need for giving freedom to enterprising and efficient millowners to modernise their equipment and expand their capacity to levels, and along the pattern, that will enable them to compete effectively in the export markets and to supply cloth to domestic consumers at the cheapest possible price. The latest offer for installing 10,000 automatic looms is hedged in with so many impracticable conditions that none but those who hope to break them later under some pretext or other can afford to accept it.

Obsession with obsolete ideas of the evils of monopoly and concentration of economic power, as well as excessive concern for regional distribution, has led the Government along the wrong path in regard to certain industries such as aluminium, industrial gases, cement, special steels, automobiles and even paper. All these articles are of prime importance for the economic progress of the country and their manufacture must be so planned as to enable the country to get the full benefits of large-scale manufacture and locational advantages. Aluminium is as important as steel; in fact, for India, it is more important, because it is expected to serve as a substitute for copper and other non-ferrous metals in which this country is deficient. It should, therefore, be the aim of this country to manufacture aluminium at the lowest cost by encouraging the establishment of large-sized units of, say, 75,000 to 100,000 tons. Instead, the Government has licensed units of 10,000 to 20,000 tons, with the result that Indian aluminium will cost very much more than world prices and its consumers will be at a disadvantage in competing with their foreign competitors. Similarly, oxygen, among industrial gases, is required for a variety of purposes. A fairly sizable number of small manufacturers has been licensed for making it, for the reason that the Indian Oxygen, which is controlled by the British Oxygen through majority participation in capital, has been having a virtual monopoly in this field. In British Oxygen, the Indian company has a first class partner. In Britain, it has a monopoly, in that it supplies 98 per cent of the country's requirements, but British industries are no worse off. On the contrary, the cost of oxygen in Britain is the lowest in Western Europe and much lower than in the U.S., where the existence of more than one producer has not meant cheaper oxygen. The fact that the Monopolies Commission in the U.K. has allowed the British Oxygen to continue as it has been is highly significant. If a higher degree of Indianisation of the capital of Indian Oxygen had been considered necessary, it could have been arranged to the extent feasible and desirable under the foreign exchange situation. Even if this was considered insufficient to satisfy the hunger of nationalism, would it not have been adequate to permit only one more big producer to come in the field? Was it necessary to allow as many as half a dozen, or perhaps even more?

This line of argument can be easily extended to cover also the other industries mentioned above. For a country of India's size, geographical distribution of units of these industries is undoubtedly an important consideration from the point of view of transport and easy access to consumers. But this does not mean that there should be as many producers as the units needed. Management, technical know-how, marketing and research are prerequisites for the success of modern industry and there would be a waste of resources of men and money, if manufacturing activity were to be spread over a large number of owners. Further, by splitting up the market for these products among a large number of licensees, the anti-monopoly purpose is not served at all, for the aggregate capacity permitted is either below the needs of the country or just sufficient, leaving thereby no room for competition among them. Shortage of foreign exchange, which is going to last for one whole generation, automatically rules out competition from without. It may be that, some day, there will be real scope for internal competition, but that day seems to be quite far off. Meanwhile, a lot of scarce resources will have been wasted. Consumers will have to pay higher prices than necessary. The funds invested will fetch a lower return, which in turn will have an adverse effect on the growth of capital formation. Above all, the country's ability to compete abroad will be weakened. It will thus be seen that nobody but a few industrialists benefit by this misconceived policy of industrial licensing. And all this is happening under the socialist regime of the Congress Party which claims to work for the welfare of the man-in-the-street.

The Congress Party's ideas about monopoly and concentration of economic power are not only as outdated as Karl Marx's criticism of the capitalist society but suffer from double standards, for none of these considerations is borne in mind when industries are established in the public sector. As will be seen from our note on "Monopolistic trends in Britain" on page 103, the community as a whole stands to benefit as a result of bigness in certain types of industries. The evils of these monopolies, if any, are found only in theory, for they are neutralised by State regulation and fiscal policies, not to speak of trade unions, workers' participation and ownership of capital by an ever-widening number of shareholders. Another important point that must be borne in mind is that almost all the countries to which India has to export its manufactures are taking various measures to improve their economic efficiency and defence strength. How can India hope to compete for markets in these countries, unless it, too, keeps step with them? India's watchword in future should be "efficiency" and it is on this touchstone the soundness of economic policies should be tested. It is to be hoped that this idea will sink in the mind of every thinking Indian on the thirteenth Republic Day which he will soon celebrate and that he will do his best to spread this idea among all those who are close to him.

KENNEDY'S FIRST YEAR

THE Kennedy Administration in the United States has just completed the first year of its tenure and fulfilled some at least of the great expectations raised by it in the wide world when it took over from the Republicans. It has met well, if not very decisively, most of the extraordinary challenges of the cold war and ensured, for the time being, world peace by strengthening the Western Alliance, by imparting greater vitality to the United Nations and by building friendship with the uncommitted countries. And it has also improved greatly the chances of arresting the spread of Communism by launching such instruments as the Alliance for Progress, a long-range charter for foreign aid and the Peace Corps for promoting economic reform and higher living standards in the underdeveloped countries of Latin America, Asia and Africa. By refusing to be bullied in Berlin, the Congo and the Far East, by displaying wisdom and patience in the face of Communist provocations and by eloquently reaffirming American faith in the United Nations, the Kennedy Administration has also restored the image of the United States as "the last, best hope of earth."

But, within the U.S., the Kennedy Administration's progress towards the "New Frontiers" has turned out to be slow and halting. Perhaps, one year is too short a period for judging the performance of that Administration in the domestic sphere. Still, *The New York Times*, in keeping with its vigorous liberal tradition, has chosen to pronounce the following judg-

ment on the President's first-year domestic performance:

"On the domestic front, the President's leadership was a good deal less resolute. The brave campaign pledges of movement toward New Frontiers of social inventiveness have had relatively feeble implementation. There was an initial flurry of measures to combat the the recession; the Federal minimum wage was raised and broadened in coverage; housing, farm and highway programmes were enacted and a good water pollution bill also cleared the Congress. President Kennedy acted energetically to safeguard civil rights in employment, education and travel.... (But) he gave inadequate support to his bold programme for aid to public schools; did too little to combat unemployment and speed economic growth and generally showed scant disposition to clash with the powerful coalition of Congressional Conservatives."

That is a broadly valid judgment, and President Kennedy himself, in his State of the Union Message to the U.S. Congress on the 11th instant, was frankly "not satisfied" with the results achieved in the first year. Still, the Administration's perfosmance was sufficiently gratifying in more ways than one. First, the recession, which the Administration inherited last year, was effectively countered by new stimulants to the economy. The resulting recovery brought about a reduction in the major surplus labour areas from 101 to 60 and an increase in non-agricultural employment by more than a million jobs. Secondly, despite rising production and demand, consumer prices held almost steady last year. This, as President Kennedy claimed, "is the best record of overall price stability of any comparable period on recovery since World War II." Thirdly, within a framework of growth and comparative wage-price stability, the Administration was able to keep the U.S. economy competitive by widening the access of small business to credit and Government contracts, and by stepping up the drive against monopoly, price-fixing and racketeering. Fourthly, in the 11 months since 1st February 1961, the United States suffered a net loss of only about half-a-billion dollars in gold in the field of balance of payments, as compared with a loss of nearly $2 billion in the 11 months preceding that date. The country's deficit in basic transactions with the rest of the world—trade, defence, foreign aid, and capital, excluding volatile short-term flows—was reduced from $2 billion in 1960 to about a third of that amount in 1961. Thus, the speculative fever had ended and confidence in the dollar was restored during the year. Fifthly, in the field of health and welfare, more hot lunches and fresh milk were provided to school children, more college dormitories were built and health services and social security for the elderly were expanded last year. Of all these achievements of the Kennedy Administration in its first year, its successes in countering the recession and restoring confidence in the external stability of the dollar were certainly most commendable, though it must be conceded that the dollar is still suspect in the eyes of many Western observers.

The misgivings about the future of the dollar are not without reason. The U.S. balance of payments position continues to be in the red. Further, the U.S. economy cannot be said to have been entirely freed from the possibility of either recession or inflation. President Kennedy has, therefore, outlined a series of measures for the consideration of the U.S. Congress in the current year. As the American economy has suffered three recessions in the last seven years, the President has urged the Congress to give him the stand-by authority, subject to Congressional veto, to adjust personal income-tax rates downward within a specified range and time for slowing down an economic decline before it has dragged the country down. Secondly, he has called for presidential stand-by authority, upon a given rise in unemployment, to accelerate federal and federally-aided capital improvement programmes. And, thirdly, the President has urged the need for a permanent strengthening of the country's unemployment insurance system without constant resort to temporary supplements. To expand growth in the current year itself, the President has asked for Congressional approval to a eight per cent tax credit for investment in machinery and equipment, which, combined with planned revisions of depreciation allowances, is expected to spur the American industry's modernisation and growth and its ability to compete abroad. Two other suggested measures, namely, the Manpower Training and Development Act and the Youth Employment Opportunities Act, are designed to enhance the employability of able-bodied men and women and, thus, reduce unemployment. The President's proposal that health insurance be provided to elderly people is likely to be less controversial than the renewal of his last year's plea for federal aid to public school construction and teachers' salaries.

It is a heartening feature of the U.S. Budget for 1962-63, presented by President Kennedy, on the 18 h instant, that it reflects the basic objectives underlying the aforesaid measures—the objectives of greater economic growth, higher employment and more social welfare. This Budget, which has estimated expenditure at $92.5 billion and receipts at $83.0 billion, reveals a modest surplus of $500 million, in refreshing contrast to a huge deficit of well over six billion dollars (revised estimates) for 1961-62. An increase of $10.3 billion in budget receipts, as compared with the recession-affected level of the fiscal year 1961-62, is based on the expectation that the current brisk recovery will continue, carrying the gross national product during the current calendar year to a record of $570 billion. It is this estimated increase in budget receipts that has rendered possible increases—amounting in all to $3.4 billion—in budget expenditures on account of education and scientific research, retraining for the unemployed, national defence, space programmes and foreign aid. The last item (foreign aid), incidentally, will account for a total of $2.5 billion, an increase of $400 million over 1961-62 by way of economic and financial assistance to the developing nations, in addition to a little more than $1 billion as assistance to Latin America under the Alliance for Progress. The Administration has restrained its enthusiasm for many desirable new projects and activities in the social and economic spheres, presumably because of its anxiety to maintain a semblance of fiscal responsibility. Why it has budgeted for a surplus and, that too, a small surplus and not for a deficit has been clarified by the President in his Budget message:

"The Federal Government is expected to operate in 1962-63 with some surplus. This is the policy which seems appropriate at the present time. The economy is moving strongly forward, with employment and income rising. The prospects are favourable for further rises in the coming year for private expenditures, both consumption and investment. To plan a deficit under such circumstances would increase the risk of inflationary pressures, damaging alike to our domestic economy and to our international balance of payments. On the other hand, we are still far short of full capacity use of plant and manpower. To plan a larger surplus would risk choking off economic recovery and contributing to a premature downturn."

The Kennedy Administration has promised to maintain growth with stability. Its proposed tax reforms and other fiscal stimulants are intended to increase the funds available for use in the business through depreciation allowances and retained earnings, and thereby to bring about a higher rate of industrial growth. But its current attachment to some degree of fiscal stability will not, by itself, ensure wage-price stability, for inflation may still follow in the wake of growth, as the President himself has opined. He has fervently appealed for moderation in the demands of labour. He says in his State of the Union Message that the "first line of defence against inflation is the good sense and public spirit of business and labour—keeping their total increases in wages and profits in step with productivity."

The Administration's new programme for achieving greater balance in agricultural production and its proposal for trade liberalisation add another dimension to the concept of "growth with stability." In particular, the trade liberalisation programme, proposed by the Kennedy Administration, for eliminating gradually, over a five-year period, tariffs in the United States and in the Common Market on those items in which they together supply 80 per cent of the world's trade is a bold attempt. If it succeeds, it will render the slogan "Trade is better than aid" a reality. The proposed farm programme, designed to reduce surplus accumulation but, at the same time, to protect the farmer's income, may have the effect of increasing the prices of food and agricultural raw materials.

So the factors that will make for or undermine price stability will not be confined to wages or profits alone. Budgetary deficits or surpluses, higher or lower productivity, greater or lesser competition from the Common Market goods in the U.S. market, prices of farm produce, higher or lower level of employment, and faster or slower pace of growth in general will all have their impact on stability. There is no reason to believe that the phenomenon of "creeping inflation"—a form of modest but steady monetary depreciation year after year—will be entirely brought to a halt in the United States, as the Kennedy Administration has ruled out, rightly in our opinion, price stability through stagnation and controls. Even though growth may be maintained at a high level, absolute price stability will be an elusive ideal, if *per capita* money incomes rise ahead of production. Much, therefore, depends on the willingness of American workers to restrain their demand for more wages which are unrelated to increases in production and the international obligations of their country.

FUNDAMENTAL RESEARCH

THANKS to the farsightedness of Dr. H. J. Bhabha, the renowned nuclear physicist, and of Mr. J. R. D. Tata, fundamental research, especially in nuclear and high energy physics, was initiated in this country as early as in 1945. It was in that year that the Tata Institute of Fundamental Research, the oldest of India's post-war national laboratories, was founded as a joint enterprise of the Sir Dorabji Tata Trust and the Government of Bombay. Grant-aided by the Government of India since 1946-47 and directed by Dr. Bhabha since its inception, this research institute has also been recognised since 1955 as the National Centre of the Government of India for advanced study and fundamental research in nuclear science and higher mathematics. It has since grown from strength to strength and is now housed in its own massive building which was formally opened by the Prime Minister early this week. What is noteworthy about the Institute is that, in the last 16 years, it has trained scientific personnel for the Atomic Energy Commission and carried out some of the Commission's major projects, of which the Atomic Energy Establishment at Trombay is the most important. Besides thus being the "cradle" of India's atomic energy programme, the Institute has also been active in several other fields, achieving some significant results in the sphere of research.

The Institute's continuous study of the new elementary particles of matter, such as the "meson" and other "strange particles" which have been discovered by scientists elsewhere, has resulted in the discovery of a negatively charged particle called the "K-meson." This discovery was rendered possible by the technique, developed for the first time in the world in this Institute in 1951-52, of using emulsions without glass backing for studying phenomena at high energies. Another outstanding achievement of the Institute is its development of large plastic balloons, which are capable of carrying loads of scientific equipment upto 250 lbs. to altitudes of some 110,000 feet and above for high energy research. The Institute has also designed and constructed a cloud chamber, which weighs 4.5 tons and is the largest of its kind in the world, for studying cosmic ray phenomena. This cloud chamber is being operated by a special device, the only one of its kind in the world, for measuring the energy of particles upto a hundred thousand billion electron volts. The study of extensive air showers, which are produced by extremely high energy cosmic rays, is also under way, and this piece of research, it is stated, may have far-reaching consequences for cosmology. The Institute's work in cosmic rays has led it into the field of geophysics. In this latter field, the Institute has to its credit the discovery for five out of the ten known radioactive isotopes of chemical elements, produced by high energy cosmic rays entering the top of the atmosphere and colliding with the atoms there. The Institute's pioneering venture of building an electronic digital computer in this country is equally creditable. This computer is now available as a national facility, handling computational problems for the Atomic Energy Establishment and the Indian Institute of Science at Bangalore. Above all, in the field of mathematics, which is known as the "father of all sciences," the Institute has by now achieved an international reputation for its contributions.

How much of the Institute's research performance in the pursuit of knowledge of the physical world will be potentially useful for man, it is difficult to figure out presently. Dr. Bhabha has, of course, defined "fundamental research" as basic investigation into the behaviour and structure of the physical world without any consideration as to whether the knowledge so acquired would ever be of any practical value. Still, one may broadly infer from the Institute's achievements to-date that it is quite capable of adding further to basic knowledge which may well be, as it has been in the fields of radar and atomic energy in the forties, developed into technology of immense practical importance one day.

MARKET GOSSIP

Reserve Bank Obeyed

WITH the announcement of the preliminary results of the Central Bank of India for 1961 on Thursday this week, a rough idea of the performance of the five big banks and three medium banks in the private sector are now available. The eight banks are: Central, India, Punjab National, Baroda, United Commercial, United Bank, Dena and Maharashtra. Their statements show that, in appropriating their profits for the past year, they have followed the convention recommended by the Reserve Bank Governor just before the close of the year. For the first time in ten years, the Central Bank has added a sizable amount to its published reserves. The other seven banks, too, have set aside a good part of their profit to reserves. Besides, in the case of every one of them, the amount carried forward is substantially greater than the amount brought in. The Central Bank has effected only a fractional rise in its dividend, from 18.40 per cent taxable (excluding the jubilee bonus of 2 per cent) to 20 per cent taxable, apparently to bring it level with that of the Bank of India and the Punjab National, neither of which has increased the dividend, though the latter's is on an increased paid-up capital. If regard is had for the jubilee bonus paid by the Central last year, there is no increase at all in the total distribution to its shareholders. The Bank of Baroda, too, has not increased its dividend which is at 17 per cent taxable. Similarly, the United Commercial also has only maintained the dividend at 12 per cent taxable. The Dena Bank has, however, rewarded its shareholders a little generously by raising the rate from 8.76 per cent taxable to 11 per cent taxable, but, even after this increase, the rate is well below that of big banks and, what is more, it has earmarked a very handsome amount for reserves. The United Bank of India, which had been paying a very low rate of 4.30 per cent taxable, has raised it to a modest level of 6 per cent taxable. The Bank of Maharashtra is another to maintain the dividend unchanged at 9 per cent, albeit on a higher paid-up capital.

Thus, the eight banks under reference have on the whole been conservative in their dividend policy. It is, however, a moot point whether the big banks would have avoided the temptation to step up the dividend rates but for the Reserve Bank's timely intervention. For there has been a striking increase in their profits, as well as in those of other banks, as will be seen from the following figures:

(In lakhs of rupees)

	1961	1960	1959
Central Bank*	182.76	133.05	99.43
Punjab National* ...	118.54	65.04	66.65
Bank of India†	110.31	103.37	82.69
United Commercial* ...	72.60	67.43	60.42
Bank of Baroda* ...	67.63	40.66	24.89
United Bank*	20.50	14.63	14.29
Dena Bank†	26.15	23.55	13.05
Bank of Maharashtra‡	16.11	9.50	7.72

*After tax for all the three years. †Before tax for 1959 and 1960, but after tax for 1961. ‡Before tax for all the three years.

Readers will do well to take note of the footnotes, for the Bank of India and the Dena Bank have not disclosed the provision made for taxation for 1961. The increase in their profit is, therefore, much more than is seen from the comparative figures for the previous years.

As for conservation of profits, the Bank of India has transferred Rs. 15 lakhs to reserves, as against *nil* last year, and carried forward Rs. 48.16 lakhs (subject to bonus for the staff) which is nearly four times the sum brought in. The Central Bank has set aside Rs. 45 lakhs to the reserve fund (*nil*), its carry forward being about Rs. 5 lakhs more at Rs. 23.37 lakhs. The Punjab National, too, has strengthened its reserves by Rs. 45 lakhs (as against Rs. 11 lakhs), besides carrying forward Rs. 10.52 lakhs, that is, Rs. 6 lakhs more. The Bank of Baroda, which did not credit anything to the reserves last year, has now appropriated Rs. 20 lakhs. And still its carry forward (subject to bonus for staff) is some Rs. 5 lakhs higher at Rs. 23.22 lakhs. The United Commercial, which had stepped up the transfer to reserves last year from Rs. 27 lakhs to Rs. 90 lakhs, has maintained it at Rs. 80 lakhs. Its undistributed surplus also is higher at Rs. 2.07 lakhs. The United Bank of India has raised the transfer to reserves from Rs. 2.93 lakhs to Rs. 4.10 lakhs, without any diminution in the amount carried forward which is Rs. 2.40 lakhs. The Dena Bank has credited to reserve fund a sum of Rs. 15 lakhs, as against Rs. 8 lakhs and Rs. 6 lakhs out of the profits for 1960 and 1959, respectively. And still it is carrying forward Rs. 5.65 lakhs (Rs. 2.17 lakhs). The Bank of Maharashtra has conserved Rs. 4.90 lakhs to reserves, a rise of Rs. 2.40 lakhs over the previous year's figure. This monotonous recital of appropriations to reserves and the sums carried forward has been done, with a view to giving readers an idea of the liberal amounts ploughed back by every one of the eight banks.

Seshasayee Industries

The Seshasayee Industries Ltd., one of the enterprising firms of South India, has certainly done well to undertake a big programme to expand production of high and low tension insulators from the existing level of 1,200 tons to 3,000 tons per annum. For the demand for these insulators is bound to rise greatly in the coming years, what with the considerably large increase in power supply that is expected. Indicative of the size of demand for insulators is the three-fold expansion in production envisaged in the third Plan; the actual target of output fixed to be achieved by 1965-66 is 24,000 tons (capacity target is put as 30,000 tons), as against the estimated production of 8,400 tons (capacity of 12,500 tons) in 1960-61. Taking into account the growing demand for insulators thus and considering that the insulators already being produced in the factory of the Seshasayee Industries are said to be of high quality, it may be stated that the Company is assured of a ready market, the main consumers being electricity undertakings, State Electricity Boards, manufacturers of switchgear and transformers, and railways.

In view of the promising prospects and of the fact that the Company has been assured of technical assistance from the well-known West German consultant, Dr. Ing. K. Draeger of Honef, and that it has a competent Board of Directors, headed by Mr. S. Narayanaswamy of Messrs. Chitra and Co., Share and Stock Brokers, the Company will doubtless be in a position to earn handsome profits within a short period after the completion of expansion.

In order to finance the expansion scheme, the Company is offering a Rs. 40-lakh equity issue, the list for which opens on Saturday the 27th inst. The issue, details of which appear elsewhere (pages 120 and 121) comprises 400,000 equity shares of Rs. 10 each; the entire issue has been underwritten. The Life Insurance Corporation will be given a preferential allotment of shares worth Rs. 10 lakhs (in consideration of its having underwritten a like amount of shares) and the Investment Corporation of India has agreed to subscribe Rs. 2.50 lakhs. These shares will rank for dividend and be *pari passu* in all respects with the existing equity shares (400,000) of the Company. As a result of this issue, the Company's paid-up capital will rise from Rs. 40 lakhs (Rs. 31.60 lakhs ordinary and Rs. 8.40 lakhs preference) to Rs. 80 lakhs. The authorised capital is Rs. 100 lakhs. The new issue of Rs. 40 lakhs is expected to meet two-thirds of the capital outlay of Rs. 60 lakhs; the balance will be met by way of borrowings.

W. Germany: Slackening Boom

Economic signals in West Germany have turned amber, indicating a slackening of the business boom which took the gross national product of the Federal Republic to a peak of DM 300,000 million (at current prices) in 1961, that is, about 10 per cent more than in 1960. No one expects a stagnation in economic activity in 1962, but all are agreed that the Federal economy will expand at a lower rate in the present year than in the past. Business forecasters in that country are currently busy estimating the probable rate of industrial growth in the new year. The consensus of opinion is that it will be between 4 and 5 per cent, as against 6 per cent in 1961. Evidence of slower rate of expansion in the New Year emerged as early as in November last, when new orders booked during the month declined by 2.2 per cent, as compared with the same month of the previous year.

Current thinking on the business prospects in 1962 in W. German industrial circles is reflected in the latest monthly survey of the Federation of German Industries which takes a moderately optimistic view of developments in 1962. The main conclusion of the survey is that a recession is not expected, but the overall growth rate will decline. What are the implications of this trend to policy-makers? The aforesaid survey makes the following comment:

"It is certain that 1962 will be another year of economic growth. Nevertheless, economic and social policy makers should consider it as a common task to act before expansion comes to a general standstill. That means they should set free the many forces which stimulate economic activity and which are still dormant in West Germany and in the rest of the world. Any policy moves of such kind must come in time and must be carefully measured. Braking the growth rate does not help anyone. Here too, stagnation means retrogression."

Looking back upon the developments of the recent past, the survey points out that the slackening of the boom may be due to the fact that some of the major factors responsible for the economic expansion in the last few years—the German desire to catch up with the other leading industrial nations in the world and the stimulus of technical progress generally—are showing signs of fatiguing. Cyclical economic declines are no longer offset by the stabilising force of the general reconstruction boom in W. Germany as was the case until 1957. This development is felt primarily in large sections of the capital goods and investment goods industries and, to some extent, in a few branches of the consumer goods industry, too.

The Federation of German Industries regards it as a significant fact that the investment goods industries too have been affected by the "cooling off" tendencies. The four industries which were not able to maintain production in the period of November 1960-October 1961 at the level witnessed in the corresponding 1959-60 period were shipbuilding, steel, glass and textiles. Other industries, which are about to enter the "cooling off" zone, are the saw mills, the drawing and cold rolling mills, the iron foundries, the non-ferrous metal industry and leather industry. The crude oil industry, in turn, continues to be the main support of the industrial upswing, with an annual growth rate of almost 24 per cent in November last.

Will the slowing down of industrial activity affect the flow of aid to underdeveloped countries? This is unlikely, as the external reserves of W. Germany are still pretty large, though the more recent trends indicate a slowing down of growth in this sphere also. The Federal Government has already announced that Government aid alone to underdeveloped countries during 1961-62 will be of the order of DM 5,000 million. It is to be hoped that internal economic pressures will not force the Government to cut its development assistance to underdeveloped countries in 1962-63. It may be noted here that West German aid to underdeveloped countries during the period 1950 to 1961 amounted to DM 18,300 million (Rs. 2,178 crores), comprising DM 9,700 million raised from public funds and DM 8,600 million derived from private sources.

Monopoly Trends in Britain?

A wave of mergers and take-over bids has been a feature for some time now of the structural changes in British economy. This trend has become more prominent than ever before, following the biggest bid in British business history made by Imperial Chemical Industries Ltd., the fourth largest company (on the basis of 1960 sales turnover) in Britain, to absorb Courtaulds, the leading man-made fibre manufacturers in the U.K. About a month ago, I.C.I. made a share exchange offer worth about £180 million (approximately Rs. 240 crores) to the shareholders of Courtaulds. The Board of Courtaulds, however, has not accepted it so far. It does not seem to favour merger. It has submitted for the consideration of the I.C.I. a counter-plan designed to solve the problems of man-made fibre industry other than by a complete merger of the two companies. If the I.C.I. is not agreeable to this plan, it will have to approach the shareholders of Courtaulds direct, over the heads of their Board of Directors.

Close on the heels of this offer, which itself was preceded by many merges and take-overs in fields as diverse as insurance and real property, has come similar developments in the footwear, glass and motor industries. Early this month, the British Shoe Corporation, the largest shoe manufacturers and retailers in the U.K. and the Saxone Lilley and Skinner (Holdings), the second largest firm in the same field, announced their plan to merge which, if it comes through, would create a footwear group with total assets exceeding £50 million. In the glass industry, the United Glass, the largest manufacturers of glass containers in Britain, and Key Glass Works have agreed to merge. Together these two cover all aspects of the glass container industry and will hold between 35 and 40 per cent of the U.K. market. In the automobile industry, for which competition is the very life-breath, two leading manufacturers, namely, the British Motor Corporation, which makes small cars in large quantity, and Rolls-Royce, famed the world over for its high-cost, high-quality cars, are examining the feasibility of technical collaboration in automobile engineering with a view to finding ways and means of putting to best use the two firms' specialist knowledge in different fields. This move may well be the prelude to the ultimate merger of the two.

What is this trend towards big business getting bigger due to? Is it a sign of the British industry getting ready to meet the challenges and opportunities which the U.K.'s proposed entry into the Common Market might throw up? Of is it the sign of big business taking advantage of the absence in Britain of anti-cartel legislation of the kind existing in the U.S.? This is the question which thinking Britons, who see the prospect, distant though it be at present, of having to buy all their shoes from one manufacturer, all their shirts from another and all their houses from a third, are asking themselves. In the U.S., it may be noted, under the anti-trust laws, any move that is calculated to curtail competition is unlawful and mergers, which lead to concentration of controlling interest, can be prevented if they can be proved to be against the public interest. It is true that, by American standards, the British firms are not that big. Thus, even if I.C.I. and Courtaulds were to join together, the resulting combine will still be smaller than the American giant in the same field of chemicals and synthetic fibres, namely, E.I. Dupont. But the U.S. is also a much bigger country than the U.K. in every respect, physical size, population, gross national product, *per capita* national income and the rate of economic growth. Further, Dupont in the U.S. has no monopoly as such, as it has powerful national rivals.

In Defence of Bigness

A partial explanation of the trend under reference in British industry could be read in the observations made by Mr. S. P. Chambers, Chairman of the I.C.I., in his address to a meeting of the American Chamber of Commerce in London last week. Speaking on the role of big units in industry, Mr. Chambers said that industry must "do something better than presenting a spectacle of blindfolded giants blundering all over the place." Without referring to the I.C.I's bid for Courtaulds, he maintained that some competition could be a gross misuse of resources. Much of modern industry, he felt, was bound to be concentrated into big units, as the requirements of capital, research and development increased the optimum size of the economic units. Legislation against large concentration of economic power, which was necessary fifty years ago, was now out of date and modifications of ideas were needed.

Mr. Chambers readily agreed that planning was necessary, the more so with the increase in

(*Continued on page 140*)

SHARE MARKET IRREGULAR

TEXTILES WELL SUPPORTED

(From Our Own Correspondents)

BOMBAY, 18*th January*

THE share market depicted an irregular trend during the week under review. It ruled easy in the first two sessions (Friday the 12th inst. and Saturday the 13th inst.), thanks to sizable offerings, while buying support was lacking. Consequently, both cash and forward scrips drifted downward. The easiness abated on Monday when, following the Reserve Bank's announcement of the reduction in margin requirement on bank advances against shares from 50 per cent to 40 per cent and investment support, the market picked up strength, with a handsome recovery in values. The recovery, however proved short-lived. For on Tuesday, the market developed a sagging tendency with the exception of a few select textile shares which were firm. Indeed, B.R. Cotton, Finlays and Apollos attracted margin, as the rise in prices, as compared with the last clearing rates, was more than 10 per cent in respect of the first two, while in the case of Apollos, the rate was higher by 5 per cent over the interim rate fixed on Monday. The sagging tendency persisted on Wednesday also, despite scattered support from institutional buyers and encouraging advices from Calcutta. This was because of the nervousness caused by news that Mr. T. T. Krishnamachari, a former Finance Minister, might stage a come-back to the Union Cabinet; he was reported to be seeking election to the Lok Sabha. But today, the sentiment of the market improved again, and scrips in both cash and forward lists tended to rise. Over the week, prices show both gains and losses which are spread over.

Among steel shares, Tata Steels moved narrowly and closed with no change over the week at Rs. 142. Mukand Iron and Indian Irons, however, moved up, the former from Rs. 28 to Rs. 28.25 and the latter from Rs. 24.88 to Rs. 25.

Textiles generally met with good support. Swans spurted by as much as Rs. 38 to Rs. 700 on hopes of a bonus issue which did materialise. The existing shareholders will get bonus shares in the ratio of two for every three held. Central Indias advanced by Rs. 24 to Rs. 164. Finlays firmed up by Rs. 34 to Rs. 369, ignoring the margin. B. R. Cottons, which too attracted margin, rose by Rs. 8 to Rs. 80. Svadeshis hardened by Rs. 7.50 to Rs. 292.50. Ahmedabad Advances put on Rs. 5.50 to Rs. 205. Elphinstones picked up Rs. 3 to Rs. 117. Gokaks strengthened by Rs. 10 to Rs. 224. Phoenix rose by Rs. 4.50 to Rs. 236.50. Podars by Rs. 2 to Rs. 154 and Shreeniwas by Rs. 4 to Rs. 292. Simplex gained Re. 1.50 to Rs. 159.50. Bombay Dyeings rallied from Rs. 68.30 to Rs. 69.90 before finishing at Rs. 69.30. Morarjees gathered a rupee to Rs. 400. Khataus were better at Rs. 476.25, as against Rs. 475.50 last week-end. Kohinoors were steady at Rs. 315, as were Dawns at Rs. 56 and New Greats at Rs. 252.50. Centurys, however, encountered selling and declined from Rs. 609.50 to Rs. 604. Standard Mills fell by Rs. 25 to Rs. 1,151.

Sugar shares suffered further losses. Belapurs receded from Rs. 270 to Rs. 256.50 today, due to selling prompted by the pessimistic note struck by the Chairman at the annual meeting of the Company held on Friday the 12th inst. Phaltans were marked down by Rs. 5 to Rs. 121.50. Maharashtra Sugars eased by Rs. 2.50 to Rs. 190.

Among cements, Associated Cements encountered selling and declined from Rs. 162.50 to Rs. 161.75 before recovering to Rs. 162.25 today. Orissas and Digvijays, however, attracted support, the former rising by Re. 1.08 to Rs. 16.76 and the latter by Re. 1 to Rs. 194. Dalmia Cements were quiet at Rs. 12 while Jaipur Udyogs picked up 80 nP to Rs. 12.24.

Scindias, in the shipping group, receded further to Rs. 12.96, as against last week's closing of Rs. 13. There was nothing in the statement of Mr. D. M. Khatau, Chairman of the Company, to strengthen confidence among investors. Great Easterns, however, managed to put on 12 nP to Rs. 12.64. Among Automobiles, Premiers eased by 25 nP to Rs. 151.50, whereas Hindustan Motors improved by 28 nP to Rs. 20.88.

Rayon shares were quoted higher. Baroda Rayons hardened by Re. 1 to Rs. 158. Gwalior Rayons attracted support based on the expectation that the scrip would be admitted to the cleared list and rose by Rs. 3.50 to Rs. 56.50. Indian Rayons firmed up by Rs. 4 to Rs. 101. South India Viscoses hardened by Rs. 6 to Rs. 187. National Rayons, however, declined from Rs. 553 to Rs. 543.50 on Saturday and after recovering to Rs. 553 on Tuesday, finished at Rs. 547 today. The net loss over the week is Rs. 6.

Chemical shares presented a mixed pattern. Colour-Chems put on Rs. 10 to Rs. 450. Amar-Dyes gathered Rs. 7.50 to Rs. 345. Dhrangadhras (old) received support prompted by hopes that the scrip would be transferred to the forward list and improved by Rs. 2 to Rs. 136. Alembics gathered Re. 1.25 to Rs. 243.75. Indian Dyestuffs, on the other hand, were subjected to selling and receded by Rs. 6.25 to Rs. 536.25. Poly-Chems eased by Rs. 2 to Rs. 22.50. Tata Chemicals shed 40 nP to Rs. 20.04. Synthetics were dull at Rs. 228.

Telcos in the engineering group opened a rupee lower at Rs. 359 and declined to Rs. 356 on Saturday. After recovering to Rs. 368.25 today, they closed at Rs. 364, showing a net gain of Rs. 4 over the week. Alcock Ashdowns firmed up by Rs. 13 to Rs. 336. Cooper Engineerings increased by 50 nP to Rs. 182. Larsen and Toubros gained 25 nP to Rs. 41.25. Jyotis spurted by Rs. 5 to Rs. 196. New Standard Engineerings rose by 50 nP to Rs. 210. T. Maneklals were steady at Rs. 840. But Mysore Kirloskars (new) declined by Rs. 2 to Rs. 131. Asian Cables receded by Re. 1 to Rs. 105. Mahindras softened by 4 nP to Rs. 19.48.

Among miscellaneous industrials, Bombay Burmahs moved down from Rs. 650.50 last week-end to Rs. 647 the next day by improved subsequently to Rs. 659 on Tuesday. They fell back again to Rs. 652.50 today. The net gain over the week is Rs. 2. West Coast Papers attracted support induced by the transfer of the scrip to the forward list with effect from the next settlement, and improved by Rs. 8.50 to Rs. 186.50. Wimcos hardened by Rs. 2 to Rs. 319. Notwithstanding the higher dividend of Rs. 14 per share proposed for the year ended 31st August 1961, as against Rs. 13 distributed in the previous year, and better results, Voltas receded by Rs. 5.50 to Rs. 303.50. Hindustan Levers were neglected at Rs. 57.50, same as last week.

Calcutta Stock Exchange

CALCUTTA, 17*th January*

The Reserve Bank's decision permitting banks to raise their advances on shares and debentures led to steadier conditions on the Stock Exchange on Monday last, but yesterday the gains eroded. The volume of transactions remained low, as it was thought that, with the busy season and the large-scale bank borrowing by trade and industry, any immediate chance of a phenomenal rise in the flow of funds to the market was out of question. Earlier in the week, trading was dull, as talks about the possibility of a ceiling on urban incomes led bears, tempered by caution, to take the upper hand. But a recovery followed the reported decision of the Government of India not to take over well-managed electric supply undertakings. The decision was hailed, as the shift in the official attitude from the declared industrial policy was construed as denoting a major evolutionary change in the policy towards private enterprise under the weight of experience and growing responsibility. The fact that, despite curtailment of bank advances in the past two years in an attempt to check speculation, several new issues had been fully subscribed indicated the growth of private investment. The apprehension that cloth prices would be reduced affected sentiment for some time. The disturbed coal situation and the reappearance of the Kashmir issue in the world's political arena explained why long-term investments were cautious. The shortage of copper, limestone and other raw materials, it was feared, would make the achievement of capacity a difficult task.

With a decline in business, coals were featureless. Raneegunges were unchanged and quiet at Rs. 15.12. Pench Valleys declining from Rs. 17 to Rs. 16.12. Bengals maintained Rs. 360. Burrakurs at Rs. 17.87 recorded a fractional gain. Central Indias at Rs. 12.44 gained 32 nP, Western Bengals being firm at the unchanged rate of Rs. 9.50.

Support for jute shares increased, as larger production would lead to an improvement in working results. However, such thoughts did not lead to a buoyancy as support was cautious, thanks to the fall in overseas demand for sacking goods. At Rs. 187, Kelvins maintained the recent improvement following maintenance of dividend. Birlas met with unsatisfied demand and in the result at Rs. 31.37 bagged in Rs. 2.43. Anglo-Indias recovered from Rs. 190 to Rs. 192, while Alliances, after being better at Rs. 95, closed lower at Rs. 93.50. On sustained interest, Kamarhatties were forced up from Rs. 140 to Rs. 144. New Centrals had buyers at Rs. 17.06, as against Rs. 16.81 previously.

On renewed expectations of a substantial addition to retention prices, Indian Irons were steady at Rs. 25.16, the fluctuations during the week being narrow, between Rs. 24.70 and Rs. 25.24. Texmacos opened at Rs. 20.85 and, after declining to Rs. 20.65, recovered to Rs. 21 before closing at Rs. 20.50. Guest Keen Williams, on interested support, gained from Rs. 39.00 to Rs. 41.75. Indian Standard Wagons, on renewed buying, spurted from Rs. 122.50 to Rs. 129, while Kumardhubis eased from Rs. 7.69 to Rs. 7.56.

Teas were quiet and generally searched lower levels. Thus Brooke Bonds gave way from Rs. 15.75 to Rs. 15.37 and Seajulis from Rs. 23.25 to Rs. 22.87. Huldibaris recovered from Rs. 27.69 to Rs. 28, but Tezpores moved down from Rs. 16.06 to Rs. 15.87.

Miscellaneous industrials were firm. Following the news that the factory would soon go into production, East Anglia Plastics were in good demand and rose to as high as Rs. 26, from Rs. 22.25. Alkali and Chemicals were done at Rs. 45.31, as the the earlier news of higher dividend continued to attract interested buying, but closed at Rs. 44.75. B.I. Corporations were higher at Rs. 11.31 before closing at Rs. 11.19. Aluminium Corporations at Rs. 18.37 were almost one point higher. Dunlop Rubbers were firm at Rs. 39.50, as were Rallis India at Rs. 155. Martin Burns, after rising to Rs. 31.06, closed lower on balance at Rs. 30.25.

* * * *

Madras Stock Exchange

MADRAS, 17*th January*

The Stock Exchange ruled easy during the week under review, barring textiles and a few coffee and rubber shares which continued to elicit good investment support. The reduction in the minimum margin requirement on bank advances against shares from 50 to 40 per cent had no perceptible effect. Nor was the reported purchase by the Life Insurance Corporation in Bombay and Calcutta markets of much avail. Listless conditions prevailed in the sugar section. Teas encountered selling and drifted downward. In the miscellaneous section, chemicals and cements were particularly depressed. It was reported that the Committee of the Madras Stock Exchange was contemplating to include Mettur Chemicals, Dalmia Cements and South India Viscose in the forward list as from the next settlement.

In the sugar section, Cauverys lost Rs. 2.50 to Rs. 115. Mysores suffered a setback of Re. 1 to Rs. 55.50. Deccans declined by 30 nP to Rs. 10.75. East India Distilleries shed 13 nP to Rs. 35.87. United Breweries closed at Rs. 83.59 *cum-div. ex-right*, as against Rs. 101.55 *cum-div. cum-right*. Travancores were steady at Rs. 8.50 and Indias at Rs. 10.90.

Among teas, Nonsuchs fell by a rupee to Rs. 24.50. Parksides dropped 70 nP to Rs. 25.25, United Nilgiris 50 nP to Rs. 23 and Peermades 25 nP to Rs. 22. Periakaramalais moved down by 18 nP to Rs. 3.32. Blue Mountains were quoted 5 nP lower at Rs. 2.46 *ex-div.* Highlands were quiet at Rs. 14.10. Kil Kotagiris at Rs. 5 and Chembras at Rs. 3.32.

Coffees tended to move up. Coffee Lands rose by 36 nP to Rs. 15.78. Consolidated Coffees improved by 30 nP to Rs. 17.30. Ouchterlony Valleys picked up 5 nP to Rs. 3.75. Cowcoodys were steady at Rs. 4.39, Anaparais at Rs. 3.15 and Balanoors at Rs. 14.

Rubbers fared better. Travancore rose by 57 nP to Rs. 13.12. Vaikundams gathered 25 nP to Rs. 32.75. Cochin Malabars were higher by 8 nP at Rs. 7.38. T.R. and Ts, however, declined by 27 nP to Rs. 10.47.

Among textiles, South India Viscose improved by Re. 1.50 to Rs. 183. Bangalore Woollens rose by a rupee to Rs. 240. Buckingham and Coimbatore Spinnings strengthened by 50 nP each to Rs. 253.50 and Rs. 69, respectively. Kotharis gained 12 nP to Rs. 13.62. Lakshmis were fully steady at Rs. 165, Madurais at Rs. 42.85 and Cannanoors at Rs. 173. Coimbatore Cottons, however, lost a rupee to Rs. 216. Travancore Rayons eased by 25 nP to Rs. 44.55. Radhakrishnas lost a like amount to Rs. 39.25.

In the miscellaneous section, Tube Investments were marked down by Rs. 3 to Rs. 280. Standard Motors fell by a rupee to Rs. 15.50. Travancores declined by 30 nP to Rs. 18.25. F.A.C.Ts by 15 nP to Rs. 8 and Mysore Fertilisers by 10 nP to Rs. 10.60. But Mettur Chemicals hardened 35 nP to Rs. 14.75. Indias fell by 10 nP to Rs. 6.25. Orissas dropped a similar amount to Rs. 15.90. Dalmias shed 5 nP to Rs. 11.95. Ashok Leylands shed 5 nP to Rs. 9.08. But Aluminium Industries rose by 10 nP to Rs. 23.45.

THE CENTRAL BANK OF INDIA, LTD:

PROFIT FOR THE YEAR 1961

The net profit of the Bank for the year ended 31st December, 1961, including the sum of Rs. 18,61,490.96 brought forward from the previous year's account and after providing for Taxation, amounts, subject to audit, to Rs. 2,01,36,733.88 which the Directors have disposed of as follows :—

	Rs.
An *ad-interim* dividend paid at the rate of Rs. 2.40 per share, subject to tax (i.e. Rs. 1.68 net) for the half-year ended 30th June 1961.	30,24,000.00
Amount transferred to Reserve Fund	45,00,000.00
Amount transferred to Staff Gratuity Fund	10,00,000.00
Amount provided for Bonus to Staff	60,00,000.00
	1,45,24,000.00
The balance of Rs. 56,12,733.88 the Directors propose to recommend to the Shareholders to dispose of as follows :—	
To pay a Final Dividend for the half-year ended 31st December 1961 at the rate of Rs. 2.60 per share, subject to tax (i.e. Rs. 1.82 net), making in all 14% net for the whole year ..	32,76,000.00
To Carry Forward to next year's account	23,36,733.88
	Rs. 2,01,36,733.88

NEWS IN BRIEF

A YUGOSLAV trade delegation has commenced negotiations with the Government of India officials at New Delhi on trade arrangements for the year 1962.

The Rs. 13-lakh electroplating shop, built as an adjunct to the Heavy Electricals Factory in Bhopal, was declared open by Mr. K. C. Reddy, Union Minister for Commerce and Industry, on Friday the 12th inst.

A Rs. 5-crore terylene plant, with an annual capacity to produce 4.5 million lbs. of I.C.I. polyester fibre is proposed to be put up at Thana, near Bombay, by Chemicals and Fibres of India Ltd. It is expected to go into production in 1964.

The East German Company, the Karl Pouva Factory, has designed and produced a small camera manufacturing plant to be put up at Calcutta. The plant will produce the well-known plastic camera, "Pouva Start," under licence in India. It will have a capacity to produce 300 6 x 6 centimetre roll film cameras in eight hours.

The Ashoka Hotels Ltd., New Delhi, earned a profit of Rs. 25.95 lakhs during the year ended March 1961, as against Rs. 10.03 lakhs in the previous year. The profit for the first eight months of the current financial year is put at Rs. 21.75 lakhs. The profits have enabled the Hotel to wipe off an accumulated loss of Rs. 46.06 lakhs as at the beginning of 1960-61.

The Film Finance Corporation Ltd. has sanctioned a loan of Rs. 3½ lakhs to Bombay Movietone Private Ltd., Bombay, for the production of the picture "Amar Jyoti." The loan will be paid in instalments and bears interest of 9 per cent per annum subject to a rebate of interest for early repayment as provided in the by-laws of the Corporation.

The Central Board of Revenue has decided to extend the procedure for export of goods under claim for rebate of duty on the excisable contents thereof to aluminium utensils. This concession has been granted under Rule 191-A of the Central Excise Rules. It has also decided to permit the manufacture in bond of aluminium utensils for the purpose of export, under Rule 191-B of the same rules.

The Paper Traders Association, Bombay, has sponsored a new company called the Paper Merchants Trading Corporation Ltd. for distributing paper imported by the State Trading Corporation. The capital now issued for subscription by the Company is Rs. 10 lakhs, consisting of 10,000 equity shares of Rs. 100 each. Members of the Association are expected to subscribe to the capital.

An exhibition of the Toray nylon products, manufactured by the Japanese company, the Toyo Rayon Company, will be inaugurated in Bombay by Mr. S. K. Patil, Union Minister for Food and Agriculture, on the 22nd inst. The entire range of goods produced from nylon, polyester fibre and polyethylene fibre will be on display. Toyo Rayon, which has seven manufacturing plants in Japan, produces annually 136,000 tons of different types of man-made fibres.

Purchases by the Government from small-scale industries during 1961-62 are expected to amount to Rs. 8 crores, as against Rs. 2.63 crores in 1957-58, according to Mr. N.E.S. Raghavachari, Director-General, Supplies and Disposals, Government of India. The policy of the Government is to buy stores from small industries even by allowing justifiable price preference and the number of items for purchases from small-scale industries has now been increased from 27 to 46.

Over 630 suggestions for economy in the production cost of railway equipment and for improving efficiency on the railways were received from the railwaymen all over the country during the year 1960-61. Of these, 85 had been accepted by the Screening Committees functioning on the various Railway Administrations to scrutinise these suggestions. The accepted suggestions would result in net annual savings of over Rs. 63,000 in addition to economy in working hours. The suggestions emanate from all classes of railwaymen, including welders, fitters and mechanics. The successful suggestions earned the workers cash prizes, besides advance increments and letters of appreciation.

Austria has agreed to liberalise import restrictions on certain Indian goods upto the end of 1962. The products include cotton fabrics (both mill-made and handloom), silk handloom fabrics, miscellaneous hand-made silk and woollen textiles such as shawls, scarves, *saris* and embroidered shoes, hand-made woollen carpets, linoleum, handicrafts such as ivory goods, fancy jewellery, certain sports goods, toilet cases and travel bags made of leather. Apart from the above products, it is learnt, items like canned and preserved fruits and fruit juice, preserved fish, prawns, frog's legs, cashew-nuts, walnuts, linseed, castor and crude oils, tea and coffee are allowed to be imported into Austria without any quota restrictions. It is expected that goods of all types and handicrafts made of brass or copper will also be liberalised by Austria during 1962.

Letters have been exchanged between a Czechoslovak trade delegation and the Government of India, adding new items to the schedules of goods available for trade between the two countries attached to the current Indo-Czechoslovak trade agreement signed in November 1960. It is anticipated that, during 1962, the Indo-Czechoslovak trade will increase substantially. The commodities to be imported into India will continue to include goods and machinery items, power generating equipment, printing paper, industrial raw materials, cinematographic film (raw), machine tools and precision instruments. The exports from India to Czechoslovakia, on the other hand, will be steel products, tobacco, vegetable oils, woollen textiles, cotton textiles, jute manufactures, coir yarn and coir manufactures, sheep casings, ferro-manganese, chemicals and pharmaceuticals, handicrafts, handlooms, etc.

* * * *

From Abroad

Copper output in Chile during the year 1961 was higher at 481,241 tons, as against 480,100 tons in 1960.

Britain's steel industry achieved a post-war record in exports in 1961—about 21½ per cent of output. A marked fall in imports contributed to the rise in net exports from 2.5 million ingot tons in 1960 to an estimated 3.7 million ingot tons in 1961.

The British Rootes group has secured a Chinese order for 100 three-ton and 30 five-ton Commer petrol-engined trucks. It has also received some orders from Czechoslovakia and Poland. The total value of all these contracts is given as £400,000.

The world cocoa crop in 1961-62 is estimated by the U.S. Department of Agriculture at 2,427 million lbs., which compares unfavourably with 2,628 million lbs. in 1960-61. The output in Ghana (800 million lbs.) and Nigeria (375 million lbs.) is lower than earlier estimates.

Japan's negotiations with the I.M.F. for securing a $300 million standby credit have reached the concluding stage. The country is also negotiating with the U.S. commercial banks for loans aggregating $120 million, in addition to the $200 million granted by three U.S. banks in November last.

The U.K. has just paid the Government of Cyprus £1.5 million under the Cyprus treaty, which guaranteed aid payments of £15 million during the first five years, with effect from August 1960, when the island became independent. This instalment raises total payments so far to £7 million.

The number of persons in civil employment in Britain increased by 12,000 during November 1961 to the highest-ever total of 24,029,000. The increase is attributed to the seasonal expansion of employment in distributive trades, together with a further increase in the number of women and girls at work. There was also an increase of 7,000 (mostly men) in manufacturing industries, reflecting mainly a recovery in the vehicle sector.

The output of plastics materials in the U.K. rose by 7 per cent to 605,000 tons in 1961. Almost the whole of this increase was accounted for by thermoplastics, the production of which increased by 11 per cent. The output of polystyrene rose by 20 per cent, p.v.c. polymers by 15 per cent and polythene by 10 per cent. Exports rose by 13 per cent to 200,000 tons, but the total value declined.

The total new premiums secured by the British life insurance industry during the calendar year 1961 amounted to £187 million, as compared with £167 million for the previous year. The figure represents a growth rate of 12 per cent, which is substantially lower than the 20 per cent reached in the previous year. The new sums assured aggregated £3,089 million, as against £2,716 million in 1960.

The U.S. needs stockpiles of strategic materials worth $4,500 million only to meet the requirements of any emergency, as against the present level of $8,500 million. This view has been expressed by the Combined Defence Production Committee of the U.S. House of Representatives and the Senate in its eleventh annual reports. The report has called for efforts to dispose of excess materials in the national stockpile and Defence Production Act inventory.

Seven Latin American countries (Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay) have reduced tariffs for the first time among themselves on 2,500 items of trade by about 23 per cent with effect from the 1st inst. It may be recalled that, in February 1960, the seven nations signed a treaty in Uruguay to form the Latin American Free Trade Association. Eduador and Columbia are also expected to join the new trade bloc.

The Austrian industry proposes to secure the services of 40,000 workers from foreign countries between April and October next, under an agreement entered into by the Austrian Chamber of Economy and Trades Union Council. This move is a sequel to the need for avoiding an acute shortage of labour such as the one experienced last summer, when five vacancies were notified at the labour exchanges for every man unemployed.

The Japan Air Lines will commence a Convair 880 M jet service from Tokyo to Europe via India in the late autumn this year. The new service, which will be twice a week, will touch Hong Kong, Bangkok, Calcutta, Karachi, Cairo, Rome, Frankfurt, Paris and London. Japan has concluded air agreements with some of the countries concerned and proposes to initiate talks for similar agreements with others.

PERSONAL

MR. P. A. Gopalkrishnan, Chairman of the Life Insurance Corporation of India has gone on a short visit to Ceylon, at the invitation of the newly formed Insurance Corporation of Ceylon.

Mr. M. K. Vellodi, India's High Commissioner-designate to Tanganyika, presented his credentials to the Governor-General, Sir Richard Turnbull, on the 9th inst.

Mr. Akira Isobe, Vice-Chairman of the Fuji Bank of Tokyo, Japan, who is on a tour of Asian countries with a view to studying economic conditions at first hand, has arrived in India.

Mr. Pratap Bhogilal, Director-in-charge of Shree Ram Mills Ltd., has been re-elected Chairman of the Millowners' Association, Bombay, for the year 1962.

Mr. Pravinchandra V. Gandhi, Managing Director of the Dena Bank, has been elected President of the Indian Merchants' Chamber, Bombay, for 1962. Mr. G. D. Somani, a leading industrialist, has been elected Vice-President.

Mr. R. V. Sirur, a prominent businessman of Mysore, has been elected President of the Karnatak Chamber of Commerce for the year 1962. The Vice-Presidents are Mr. B. A. Desai, Mr. Ramji Devji and Mr. Veerabadrappa Chigateri.

Dr. Phiroze B. Medhora, the Industrial Economist of the Industrial Credit and Investment Corporation of India Ltd., has been deputed by the I.C.I.C.I. to advise on the reorganisation of the Agricultural Bank of Mauritius. Dr. Medhora's assignment has been arranged in consultation with the Commonwealth Development Finance Company, Ltd., London.

Mr. P. A. Macrory, Secretary of Unilever Ltd., London, will be in Bombay next week on a short visit. Mr. Macrory, who was a member of the British Bar before the war and the Chief Legal Adviser to the British Military Governments in the Middle East, looks after the Legal, Property and Insurance Departments, besides the Information Division and Share Registry.

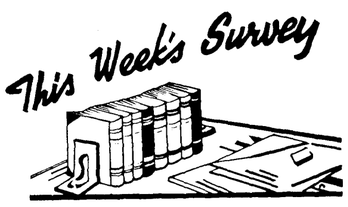
Dr. P. S. Loknathan, Director General of the National Council of Applied Economic Research, New Delhi, is among the five top economists of the world, whose services have been sought by the Organisation for Economic Co-operation and Development (O.E.C.D.) in connection with the establishment of a development centre for helping developing countries. The four other economists are Mr. Raul Prebisch of the U.N. Economic Commission for Latin America, Prof. Edward Mason of the Harvard University, Mr. Roger Gregoire, former head of the European Productivity Agency, and Prof. Jan Tinbergen of the Netherlands.

The Government of Iraq has asked foreign commercial agencies operating in the country to permit at least 51 per cent of the capital to be held by Iraquis, or give up their agencies. This step affects about 26 firms holding 410 agencies, including those belonging to the U.K. (British Petroleum-Iraqui Agencies and Imperial Chemical Industries agency), the U.S., West Germany, Pakistan and Denmark. Penalties for non-compliance are fines upto £5,000 or two years' imprisonment.

Under an agreement signed last week at Karachi, the U.K. Government will give a loan of £7 million to Pakistan to finance some of the projects in the second Plan. The loan will be used for buying British jute machinery, buses, port dredging equipments, postal and telegraph equipments and plant and machinery for an electrical and mechanical workshop. The loan is repayable over a period of 25 years, including a grace period of seven years. It brings the total U.K. aid for Pakistan's second Plan to £15 million.

West Germany's gross national products in 1961 stood at about DM 310,000 million, or about 10 per cent more than in 1960. The growth at constant prices was 5.5 per cent, as compared with an increase by 8 per cent in 1960. Salaries and wages are believed to have risen by more than 10 per cent last year, showing one of the highest growth rates in the world, while business profits rose less than in 1960. Productivity in industry (higher by about 5 per cent) increased much more slowly than in 1960 (by 8 per cent).

Two years of successful operation of its package irradiation plant at Wantage, Berkshire, has led the United Kingdom Atomic Energy Authority to license several British companies to manufacture irradiation equipment. The prototype package irradiation plant at Wantage, which has a design capacity of 500,000 curies of cobalt-60, has at present a source strength of 270,00 curies. It is mainly used for the sterilisation of medical equipment and hospital items such as blankets. The first plants in the world used solely for large-scale and continuous sterilisation of medical and hospital supplies, together costing about £80,000, excluding the cost of radiation sources, will be built at Slough, Buckinghamshire, and Edinburgh, Scotland. They will use intense gamma radiation from sources of cobalt-60 made in the Calder Hall (Cumberland) reactors and fabricated at the Radiochemical Centre, London.



E.E.C.'S FARM POLICY

THE agreement just reached among the Six constituent member-countries of the European Economic Community (Common Market) on the question of a common agricultural policy is of historic significance. For, at one time, it appeared that the lack of unanimity over a common farm policy would have undermined the whole ambitious scheme of Common Market, which, during the last four years, had developed into a dynamic force of unity and integration in Western Europe. The agreement on this thorny issue has given the green signal to the Common Market to enter into the second stage, retroactive from 1st January 1962 onwards in conformity with the provisions of the Rome Treaty. Tariffs among the Six on industrial goods, which have already been reduced by 40 per cent, will now be cut by another 10 per cent, bringing the total cut to 50 per cent of the 1958 level. Having reached the second stage, the Common Market will henceforth need only the approval of the majority of its members, and not unanimity as was the case hitherto, for taking decisions in regard to the future. There is now hardly any other major stumbling block in the way of the Common Market for achieving full economic and customs union during the two stages of four years each (1962-69). The European Common Market has thus crossed the Rubicon and entered a "point of no return."

The negotiations on the farm policy, however, have been quite prolonged and marked by serious clash of interests (*vide* page 52 of *Commerce* dated 6th January 1962). But the Six showed a commendable spirit of accommodation at last, subjugating the narrow consideration of national interests to the wider interests of the Six as a whole. Under the agreement now arrived at, the Six will be opening their frontiers to one another's agricultural products and they will gradually equalise their agricultural support prices. They have also agreed to levy special taxes on food imports from third countries, using this tax to finance exports of the Common Market surpluses to outside markets. Thus, for instance, West Germany, which buys cheap food from non-European sources, will now give preference to French and Dutch products and will eventually use the proceeds of levies on imports from third countries to subsidise French and Dutch exports. This arrangement will adversely affect the third countries' exports of only such products as are raised in the Common Market.

A significant feature of the agreed formula for agricultural policy is the price policy evolved by the Six, with the object of eventually harmonising prices of low-cost and high-cost producers within the Common Market. Basically, for all products except fruit, vegetables and wine, the system of pricing involves the creation of "a common price plateau" throughout the Community which will be maintained above the world market level by means of variable import levies on supplies from third countries. For cereals (and later for dairy produce, too) "target prices" will be fixed and the import levies will measure the difference between these and world prices. In the case of eggs, poultry and pork, there will be no targets, but import levies will be related to the "target prices" of feed grains. The term "target prices," indicates that authorities have an option to buy at a slightly lower price than the harmonised price.

Within the Common Market, "target prices" will be brought to a common level in a period of 7½ years, and possibly less, if the E.C.M. Council gives its unanimous approval. Maximum and minimum points have already been established within which the common level must subsequently be found. The first move towards this level will be made in pricing the 1963 crop, but the magnitude of this and subsequent adjustments have still to be worked out. Equally, it is yet to be decided where the eventual price plateau is to be within the present price range, although the principle has been accepted that, at the end of the agricultural transition period, prices should be such as to discourage inefficient and uneconomic farming. For fruit, vegetables and wine, by contrast, there will be no artificial "target prices." Instead, the aim in respect of these products is to establish free markets within the Community, where prices will be allowed to find their own level behind a common customs tariff against the outside world.

Although full details of the agreement have not yet been released, it is certain that the concessions granted to West Germany are of short-term duration only, involving certain bilateral quotas in respect of third countries for some time to come. This implies dislocation of traditional farm imports of West Germany from third countries such as Canada, the U.S., Argentina and Australia. In the absence of full details, it is not clear whether the new arrangement will mean the violation of the G.A.T.T. provisions which seek to avoid sudden dislocation of trade and imposition of fresh handicaps.

Be that as it may, the solution on the farm policy front, in turn, is likely to speed up the consideration of Britain's application for entry into the Common Market. From the tenor of the agreement on farm policy it seems unlikely that the Six will grant any sizable concessions to the U.K. either in respect of its agriculture or Commonwealth preferences, in the event of its joining the bloc. This is a matter which should cause concern to Commonwealth countries like India.

In the meantime, the U.S., it would appear, has been able to secure tariff reductions of about 20 per cent from the Common Market countries in respect of industrial goods (and not farm products, be it noted) on a reciprocal basis. An indication to this effect has been given by President Kennedy himself. No agreement has, however, been signed so far. The negotiations between the U.S. and the Common Market, which commenced over a year ago, continues at Brussels, tackling the details. The proposed measure, of course, shows that the Six have realised the need for avoiding discrimination in respect of trade with third countries. It is to be hoped that the Six will show the same spirit of accommodation in their negotiations with the developing countries also and grant them liberal facilities for trade, without insisting on reciprocal concessions.

STATE ROAD TRANSPORT

State Road Transport Undertakings operated by the different State Governments in India provide at present largely passenger services. The share of these nationalised undertakings in the total road passenger services provided by an aggregate fleet of about 50,000 buses in 1960-61 was 30 per cent. In spite of the proposed addition of 7,500 vehicles to the fleets of State undertakings during the third Plan period, this share of 30 per cent is expected to remain unchanged. Still, in absolute terms, road passenger transport in the public sector will account for as many as 22,500 stage carriages or buses. An idea of the aggregate investment that will have been made in State Road Transport Undertakings upto the end of the third Plan can be had from the provision of Rs. 26 crores made in that Plan for their expansion. That a large and growing enterprise of the kind should be run on efficient and economic lines is underlined by the relatively better performance of road passenger transport in the private sector. It is good, therefore, to know that the Industrial and Mining Team of the Committee on Plan Projects has suggested a number of measures for improving the operational efficiency of State Road Transport Undertakings and for bringing about greater economies in repair, maintenance and body building.

The present state of affairs in the nationalised sector of road passenger transport leaves much to be desired. The Team's study shows, for instance, that several State undertakings incur losses because of the relatively low percentage of the fleet that is put on the road. At present, the percentages of buses on the road to the total fleets vary from 62 to 85 in different States in the absence of any definite norm for fleet utilisation. The varying rates of fleet utilisation reflect, in turn, the lack of uniformity in vehicle maintenance practices and procedures for stocking spare parts. A multiplicity of makes of vehicles kept by the same undertaking, it is found, results in shortages of spare parts and affects the quality of repair and maintenance work. In the light of these findings, the Team has appropriately recommended that a minimum rate for fleet utilisation should be laid down to serve as a standard for judging the efficiency of workshops and stores organisations. Its related recommendations that a State undertaking as a whole should maintain, where practicable only one make of vehicles and that vehicles of odd makes should be written off on their coming uneconomical in operation are equally sensible. Another important suggestion made by the Team is that protective stocks of such items of spare parts as are in much use should be purchased in economic lots.

There are at least two economy measures which, according to the Team, are quite worthwhile. One measure is to paint only the front of the bus, leaving the entire exterior of the aluminium-panelled body unpainted. This should be easily possible, for nowadays all bus bodies are made out of aluminium sheets which do not corrode under normal conditions like the mild steel sheets which have been used till recently for panels. As an economy measure, it can be profitably adopted, for the estimated saving that can be effected thereby is Rs. 75,000 to Rs. 1,00,000 on a fleet of about 1,000 buses. The other economy measure suggested by the Team is that the tyre should be regrooved before retreading. As such a practice will give about 25 per cent extra mileage at little cost and help utilise the tyre to its full life and as it is widely followed even in countries where there is no shortage of rubber and truck tyres, there is no reason why it should not be adopted in India too.

WORKERS' PARTICIPATION IN MANAGEMENT

A Republic Day feature, which reviews the progress of the scheme of workers' participation in management, distributed to all newspapers by the Press Information Bureau, Government of India, tries to convey the impression that the establishment of Joint Management Councils in 27 industrial units in the country—17 in the private sector and 10 in the public sector—has transformed, as though by magic, labour-management relations in them. The review makes the pompous claim that, as a result of the setting up of Joint Councils, "both managements and workers now have a better appreciation of the difficulties and problems of one another" and goes on to assert that "while managements have become more sympathetic to workers—their problems and their views—the workers are now more willing, even eager, to do better in raising productivity." The review claims many other tangible results for the scheme such as increase in production and productivity, decline in industrial accidents and rise in profits. It is further stated that the Union Labour Ministry is currently in contact with over 100 industrial establishments, both in the public and private sectors, to assist them in launching the scheme of workers' participation in management and setting up Joint Councils.

The review is presumably prepared or approved by the Ministry of Labour. Since it is intended for publication on a special occasion like Republic Day, some exaggeration of the merits of the scheme and its achievements is understandable. But what is the point in painting a picture that has no resemblance to reality, unless it be to deceive the public? Certainly, the Union Labour Ministry cannot pretend to be the sole judge of the scheme. Judging from the actual working of the Joint Councils, the claim made by the aforesaid review is largely unfounded. No less a person than Mr. K. C. Reddy, Union Minister for Commerce and Industry, has stated this week at Bhopal that the scheme has not proved a success in units in which it has been introduced. Since most, if not all, of the units in the public sector, in which Joint Councils have been set up, are under Mr. Reddy's Ministry, his opinion cannot be easily brushed aside. Mr. Reddy went a step further and said that one of the main reasons for the failure of the experiment (in public sector units) was that representatives of workers on the Councils always had the labour point of view uppermost in their minds and at times forget the interests of the industry or of the country as a whole.

It is precisely this attitude of labour that is at the root of not only the failure of the Joint Councils but also many of the problems of industrial relations in the country. It is also responsible for the raising, at meetings of the Joint Councils, of issues which are outside their province and thereby paralysing the functioning of the Councils. Unfortunately, the managements, too, cannot be absolved of all blame for the failure of the scheme. The managements have been lagging behind in implementing the decisions of the Joint Councils, either because they are unable to do so without specific permissions from the Government, which usually takes much time, or because of administrative inertia. The resulting lack of confidence of workers in the usefulness of the Council have made them indifferent to its success.

It is clear from the little experience that has been gained so far that, if workers' participation in management, even in the limited sense in which it is being tried at present, is to succeed, two conditions must be satisfied. First, managements must be given sufficient powers to enforce the decisions of the Joint Councils without having to make a reference in the case of each and every decision to the Government, and, secondly, workers should have the understanding that their interests are identical with those of the industry and the community as a whole. While the former can be done forthwith, the latter can result only from a more intensive effort in workers' education. Unless this is done, the extension of the scheme to more and more units is not advisable. This remark applies with equal force to the units in the private sector too.

SWEDEN'S ECONOMY

With a land area of no more than 449,682 kilometres and a population of just 7.5 million, which is equal to the combined population of both Calcutta and Bombay cities, Sweden ranks as one of the countries having the highest standard of living in the world. The gross national product (at current prices) of Sweden during 1961 was as high as 73,900 million kronors (equivalent to approximately Rs. 6,811 crores), which is expected to be higher still at 76,600 million kronors in the current year; the *per capita* income works out to over Rs. 9,080. The persistently upward trend of national income reflects the growing strength of the country's economy. The national budget report of Sweden, presented last week by the Finance Minister, along with the budget estimates for the fiscal year 1962-63, forecasts an increase of 3½ to 4 per cent in industrial production during the calendar year 1962, expansion of business sector, intensified housing construction, and large investments by the Government and municipalities. The bulk of the increased public investments, it is felt, can be financed through borrowing, thanks to an improvement in savings, both private and under the National Pension Scheme. The report also forecasts a perceptible rise in private net incomes (following rise in wages and salaries plus higher pensions and child allowances, coupled with lower tax rates), reduced inflationary pressure exerted by demand and 3-4 per cent increase in consumption.

While the general picture of Sweden's economy in 1962 thus indicates continued high activity, the country, we are told, may be faced with certain disquieting trends. Particular mention is made of labour shortage, especially in the engineering industry and housing construction in major cities. Mention is made, too, of possible employment problems in steel and forest industries, as well as in forestry and building activities in North Sweden, though hope is expressed that the problems may be overcome by the implementation of normal labour market policy measures. Further, attention is drawn to the adverse price trends in foreign trade, and it is stated that the improvement in foreign exchange reserves which took place last year is not likely to continue this year. In view of these unfavourable trends, the Finance Minister of Sweden, Mr. Gunnar Strang, has warned that the task of maintaining equilibrium in financial policy may be increasingly difficult during 1962-63. And he has made it clear that if the demand for labour and capital expands in a period of full employment, Governmental counter-measures, that is, a strong fiscal policy and a restrictive monetary policy must be strictly maintained and even tightened.

It is against the aforesaid background that Sweden's Finance Minister has formulated the State budget estimates for the ensuing financial year (1962-63). The operating budget discloses a surplus of Kr. 1,678 million, which is smaller than that (Kr. 1,928 million) for the current year (1961-62). The reduction in surplus has occurred because the entire anticipated rise of Kr. 850 million in revenue receipts (from Kr. 18,002 million in 1961-62 to Kr. 18,852 million in 1962-63) has been neutralised by the increase of Kr. 1,100 million in expenditure (from Kr. 16,074 million to Kr. 17,174 million). Following certain adjustments in both incomes and expenditures, but not allowing for higher salaries to civil servants or possible extraordinary appropriations, the surplus for 1962-63 is expected to be Kr. 1,513 million, as against Kr. 1,712 million for 1961-62. The capital budget of Sweden provides for investment appropriations amounting to a total of Kr. 2,610 million, which is more or less the same as for the current year.

A striking feature of the operating budget for 1962-63 is that nearly one-third of the total revenue is earmarked for social welfare, the sum actually provided being Kr. 5,263 million, as against Kr. 4,724 million for 1961-62. The rise is accounted for mainly by old-age pensions and sickness and motherhood insurance benefits. Quite a bit of the revenue is also earmarked for education, the exact allocation being Kr. 2,305 million, a rise of Kr. 168 million as compared with the current year. The higher provision is attributed to the continued improvements in higher education and research, as also support for artistic, literary and musical activities. It is noteworthy that appropriations for foreign aid have been raised, pending a special proposal, by Kr. 80 million to Kr. 130 million. A special body called the Board for International Assistance has already been established for handling the relevant questions.

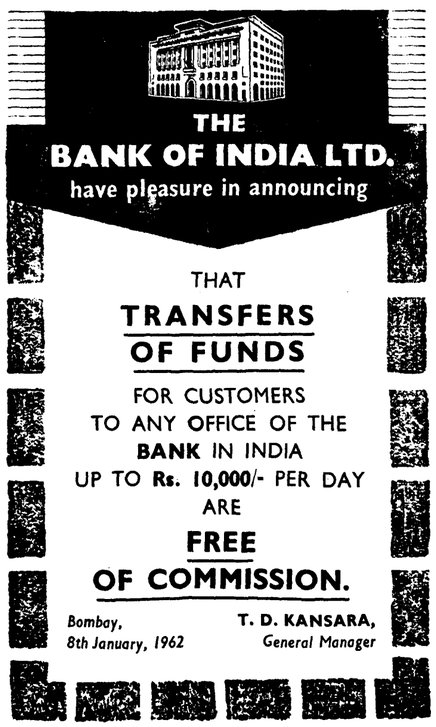
WATCH INDUSTRY

The watch has become so essential a part of modern life and the supremacy of Switzerland in watch-making is so absolute that many countries are trying to build up their watch industries to the level of the Swiss industry. Large-scale smuggling and spurious imitation—both tributes to the excellence of the Swiss watch—are an index of the popularity of Swiss watches and clocks throughout the world. Annual exports of watches and clocks from Switzerland aggregate 40 to 45 million pieces, valued at £100 million or about Rs. 133 crores, representing some 16 per cent of the total value of that country's exports. The Swiss watch industry, which is a fine example of decentralised manufacturing activity, gives employment to 75,000 men and women. Their contribution to the country's exports is more than that of the 68,000 textile workers, though slightly less than the share of the 32,000 chemical workers which is about 20 per cent. Unlike other industries in Switzerland, the watch industry's dependence on imports for raw materials is very little and hence, in the long run, it is considered the chief foreign exchange earner.

Although Switzerland is still the world's most important watch-maker, it is gradually losing its share of the world market, thanks to the steady growth of watch manufacture in many industrial countries in the post-War period. Thus, the Swiss share of the world market for watches has declined from 70 per cent to 50 per cent during the past ten years. For a long time, the main competitors to Switzerland have been West Germany, France, Britain, the U.S. and Japan. Under the protection of tariff walls, watch manufacturers in these countries have enjoyed the lion's share of their respective national markets. But, of late, the Soviet Union has emerged as a major producer of watches, with its annual production currently running at the rate of 15 million watches, as against a mere 700,000 in 1939. But the Swiss seem determined to hold their own against the increasing foreign competition. With a view to improving still further the efficiency of their watch industry, a new legislation has been brought into force, with effect from 1st January 1962, in the place of the old statute, in force since 1951 which laid down strict control over the manufacture and sale of watches and parts. Explaining the main features of the new legislation, the *Economist*, London, says:

"The restrictive system is to be dismantled by stages over four years, beginning on 1st January 1962. The new policy of stimulating the industry by liberalisation is to have a safety device attached to it: a system of official technical control, insisting upon a minimum standard of quality, of all timepieces and parts destined for the foreign market. Thus, through strict supervision of the quality of exports, the industry hopes to maintain the singular advantage of its established reputation for making the finest watches in the world—even when it is turning out many more than before. A second innovation with the same long-term object is the obligation imposed upon manufacturers to make 'solidarity contributions' to a fund for scientific and technical research. There is still much important work to be done here, particularly in the field of electronics. The competition which the new dispensation invites within the Swiss industry itself will spur many manufacturers into reorganising and rationalising their methods, and some of the smaller fry, perhaps, into merging with other strugglers. But although it is anticipated that the co-operative buying of materials will increase, there is no visible trend at present towards financial concentration. The price cartels will continue to operate as before."

With the commencement of watch production at the Hindustan Machine Tools, Bangalore, next year, India too will make its debut as a producer of watches. It has already started producing alarm clocks. In a year's time, it is



proposed to manufacture 55,500 watches (for both ladies and gents) per year at the Hindustan Machine Tools. The estimated cost of the entire project is Rs. 2.5 crores. Production will be stepped up to 360,000 a year in multiple shift, in about six years' time. But, even if production were to reach the target, as laid down at present, a large part of the demand would still remain unfulfilled. India's annual requirement of watches is estimated at two million, of which only a part is being met from regular imports which are strictly limited, the other part being met by smugglers. It is evident, therefore, that there is an assured market for watches produced indigenously, provided they are of good quality and are reasonably priced without being tempted by the high level of prices prevailing at present due to severe restrictions on imports.

Under a recent technical collaboration agreement between the H.M.T. and the Citizen Watch Company of Japan, the Japanese company has agreed to supply technical advice and also to train 100 Indian technicians for a period of about one and a half years. Of these, 52 are already undergoing training in Japan. Five Japanese experts came to India some time back to help in the preparation of layout of the factory building and production of blueprints. Three experts are still in India to train Indian engineers in assembling watch components.

The programme of manufacture at H.M.T. has been so phased that the indigenous content of the watches manufactured would rise progressively from 54 per cent in the first year of manufacture to 60 per cent in the second year, 72 in the third year and 84 in the fourth year. Even after the fourth year, it is presumed that India would have to import about 15 per cent of the components from Japan.

The reasons for choosing a Japanese firm as technical collaborators in the H.M.T. project are two, as we see them. First, the Japanese technique of mass production (The Citizen Watch Company produces, in its eight factories, 8,000 watches a day) is better suited to the requirements and conditions obtaining in India. Watchmaking in Switzerland, on the other hand, is a decentralised activity and the technical skill of the Swiss craftsmen, which is the envy of the world, is largely hereditary. Secondly, the Swiss watch industry has not been co-operative with the Indian Government's project to establish a watch industry of a significant size. Moreover, the Swiss Government has, by statute, prohibited any step, such as export of watchmaking machinery, that might help competitive industry abroad.

Manufacture of watches in the private sector, too, is well under way. It may be noted here that a private limited company, namely, Indo-French Time Industries Limited, has already been granted licence to make watches with French collaboration. The initial capacity of the factory, which is located at Goregoan, near Bombay, will be 90,000 watches of the standard type a year, which will be expanded to 310,000 in the fifth year of production which is expected to commence in a few months' time. One more watch factory in the private sector, with a capacity of 300,000 watches a year to be located at Coonoor (Madras State), is expected to be established in the third Plan period. A West German firm will be the technical collaborators in this project. In addition to these large-scale projects, four schemes for the assembly and manufacture of watches in the small-scale sector in the Punjab, prepared by the Small-scale Industries Service Institute, Ludhiana, have also been approved. The initial approved capacity in the case of each of these schemes is 12,000 watches per annum. Besides watches, there are plans for the production of alarm clocks. The first alarm clock factory in the country at Ghazabad, near Delhi, has already commenced working with Japanese collaboration. A Madras firm is currently negotiating with an American firm, namely, makers of the famous Westclox-Big Ben timepieces, for starting a modern clock factory near Madras, with a capacity of 100,000 timepieces. It will be noted that in none of the projects for the manufacture of watches and timepieces there is Swiss collaboration.

Although India does not stand to benefit by the technical knowledge and skill of Swiss watch-makers, thanks to their desire to keep them to themselves, there is one lesson which this country can still learn from Switzerland, and that is the importance of high precision and quality in watch manufacture. Indeed, it is the technical excellence of Swiss watches that has made the term "Swiss made" the guarantee of quality in watches.

STATES AND PLANNING COMMISSION

SCRUTINY OF ANNUAL PLANS INADEQUATE

From Our Special Correspondent

NEW DELHI, 16*th January*

THE Planning Commission has been engaged for some time in the relatively humdrum task of approving annual State Plans for 1962-63 which the new Ministries will have to implement when they settle down to the business of administration after the elections. It is not clear what standards have been adopted for determining their resources; how much of additional taxation they will have the courage to impose and what their individual budgetary position will be under the Third Finance Commission's award are matters on which no firm assumptions are now possible. Moreover, commencement of work on new projects in the current year has, perhaps, suffered, owing to electoral preoccupations, so that stepping up of outlay in the next financial year may not be quite feasible. On the other hand, there is an element of political certainty, because there will be no elections in two States, Kerala and Orissa, and the Chief Ministers are not expected to change (except in three States, Mysore, Andhra Pradesh and Gujarat), though predictions may be risky at this stage. There is also some certainty about the size and content of the third Plan of all States, with the exception of West Bengal whose total outlay of Rs. 250 crores may continue to be marked "provisional" until the very end, as the most satisfactory way out of the impasse created by disagreement between Dr. B. C. Roy and the Planning Commission.

DELHI LETTER

Annual Plans

Information on the annual plans for 1962-63 has been published for seven of the 15 States. We are told that West Bengal's outlay next year will be Rs. 63.5 crores which is more than one-fourth of the total allotted figure (provisional, be it noted) and helps to maintain the make-believe that the actual Plan will be far in excess of that. On the other hand, for all the other States, the proposed outlay in the second year will be slightly below 20 per cent of their individual total; and this includes Madras also, which, in the past, has shown a capacity to exceed the target if it could only find sound projects. The figures of outlay for the other six States are given below:

(*In crores of rupees*)

State	*1962-63*	*Plan total*
Punjab	43.38	231
Bihar	63.50	337
Kerala	30.30	170
Rajasthan	39.23	236
Madras	56.27	291
Andhra	50.00	305

Considering that, in the first year of the third Plan, State outlays are likely to be much less than 15 per cent of the total, this rate of increase may not be small, though it will not square with the earlier claims of States for larger plans. One of the handicaps in judging the adequacy or otherwise of the provision is the lack of data regarding the actual progress made by each State until the completion of the second Plan and the phasing of the implementation of the third Plan and raising of resources. At several points, the third Plan document complains of the absence of concrete and workable projects—minor irrigation, is one example—and the programme outlined for each State for 1962-63 is equally very vague. Irrigation and power schemes have been highlighted in the handouts issued by the Planning Commission and targets of additional food production are given but this routine pattern is hardly helpful for purposes of evaluation and comparison or pinpointing shortcomings.

Unless there are annual reviews of performance showing where and why there were weaknesses and merits, it will be difficult to narrow the gap between the backward and the advanced States. The Planning Commission should be able to do at least as much as the Colombo Plan Consultative Committee is now attempting in respect of independent countries which are completely free to determine their own policies. State Governments are now left free to determine their plans; the Planning Commission's role is to advise them on how much of these plans can be effective in the context of the foreign exchange resources, the limits of Central assistance by way of loans and grants and the scheme of national priorities. Apparently because of the criticism to which it has been subjected in recent years from the States, the Commission is becoming more reluctant to give clear advice to the States. Nor has there been any indication of willingness on the part of the Centre or the Commission to set up planning bodies in the States which may, to some extent, act as co-ordinating agencies and give each State plan at least the same status which the national Plan enjoys, in spite of the considerable influence exercised by the Union Government in its formulation.

Central Direction

When this question was raised in the Parliamentary Committee on the Third Plan in November 1960, Mr. G. L. Nanda said: "The Planning Commission was now doing nothing but co-ordination. It was not possible to think of a Planning Commission separately for each State. There might be Planning Boards in the States. To a certain extent, there should be central direction of the economy as a whole. For example, in the case of prices, there should be central direction."

In effect, there is now inadequate independent assessment of the choice and formulation of projects and the manner of their implementation over one half of the Plan which falls in the States' sector. This affects problems like reduction of regional disparities, which can be solved only on a national basis, through special provision for the backward areas and people and Central control and supervision. The Planning Commission must, therefore, regain some of the initiative which it possessed earlier but has now lost by its own weakness.

Judged on the basis of immediate national requirements, Kerala's plan looks impressive, because high priority has been given for power development. Installed capacity is expected to increase from 1.64 lakh kw. in 1960-61 to 5.48 lakh kw., in 1965-66; the State appears to be keen on going ahead with the projects on hand —Neriamangalam, Sholayar, Pamba and some new projects. Punjab is equally keen on this aspect, though irrigation is its other major interest which is unflagging. In West Bengal, the Durgapur coke oven power plant and the Jaldhaka hydel project are two major schemes besides the Bandel thermal station. Madras is no less ambitious in the matter of power which it hopes to double by the end of the third Plan. Bihar also has sufficient number of schemes on hand. On the other hand, Andhra Pradesh does not appear to be devoting enough attention to future needs of power, in view of its immediate preoccupation with industry and irrigation.

Planning Commission Weak

The States have, perhaps, a wider audience in their mind when they give a list of the schemes for 1962-63. For example, the annual plan for each State, as put out by the Planning Commission, contains a list of the Central projects in each State (which hardly seems relevant) but offers very little information on the progress of schemes for agriculture and water-supply or health measures. Punjab makes the distinctive claim that primary credit societies have been formed in 95 per cent of the villages; Rajasthan hopes to bring 72 per cent of the State's villages and 44 per cent of the rural population under co-operatives; in contrast, there is complete silence on this vital aspect in the plans of Bihar and West Bengal, for the obvious reason that their record is dismal.

These are examples taken at random to show that the Planning Commission has adopted a routine and mechanical approach to its task of preparing annual plans for States, since it is concerned only with approving the size of the outlay. Contrary to the widely propagated belief, especially by the Swatantra Party, that the Commission is a tyrant ordering the State Governments and Central Ministries and constantly interfering with their discretion, it seems to be functioning very much in a colourless manner, possibly because its composition makes it so.

STEADY EXPANSION IN BUSINESS

LABOUR WANTS MORE LEISURE—COMPETITIVE CAPACITY IN DANGER

From Our Special Correspondent

NEW YORK, 14*th January*

THE expansion of the United States economy has been well sustained. It is based chiefly on increased spending by Government, by consumers and to a lesser extent by business. Expenditures on new plant and equipment appeared to be on the rise, but that is somewhat misleading. Most of this type of money is spent for automation, cutting costs and labour, rather than for real expansion.

However, hopes are high in this area. Surveys on capital spending plans in the first quarter of the year suggest that spending by business will be about 8 per cent higher than last year. If true, it would be quite a gain. There are also indications that, owing to better consumer response for both soft and hard goods, there will be more inventory buying by manufacturers. The holiday season produced near-record sales.

This general improvement has also helped the employment situation. The rate of jobless fell 1 per cent. Unemployment is down to a little more than 4 million which is a manageable rate in prevailing circumstances.

Slow Moves Forward

The outlook is for slow moves forward in the coming weeks and months. It applies to nearly everything—banking, finance, interest rates and politics, national and international. The request for an increase in the national debt limit does not augur too well for the Government's budgetary position. And President Kennedy's suggestions to Congress for powers to cut tariffs and taxes, for more Government subsidised aid for agriculture and the aged will have rather rough going, despite the popularity the President enjoys. The chances are that very little will be accomplished in this session of Congress and that matters will remain more or less unchanged, including foreign aid.

20-hour Week?

A vital issue which is widely debated is the U.S. balance of trade and balance of payments. Mr. Kennedy's request for authority to cut tariffs does not answer the basic question that many American goods are being priced out of world markets by exorbitant costs in relation to other countries. It seems unbelievable, but the Electricians' Trade Union in New York City is on strike at the present time to enforce its demands for a 20-hour work week. That is just one example and many more could be cited. In the long run, how can the American economy compete successfully under such conditions?

One measure, of course, would be lowering the costs of production. This can and has been done by automation. But it requires vast capital outlays these days. Because of antiquated tax laws, lack of depreciation allowances and bookkeeping cash flow, the money has to come out of earnings and hidden reserves. In published balance-sheets among listed stocks, this shows up in an exaggerated price-earnings ratio.

Formerly stocks sold at 10 times earnings. Today, some trade is made at 15 to 20 times earnings and nobody knows what the proper ratio is or should be.

Farm Policy

Another problem which is going to receive much attention here in the next few months is farming. Whether this dilemma will be resolved is another question. Basically, the U.S. farm economy produces more food than the country requires. This creates the surplus problem. Congress is opposed to legislation which makes it mandatory for farmers *not* to produce goods. It is also opposed to giving the President powers to act by decree. This is closely tied in with the foreign aid programme and the chances are that nothing profound, or revolutionary, can be expected to be done in Washington in the near future, except some schemes, in addition to the already existing ones, to sell food and produce against foreign currencies.

President Kennedy's "New Frontier" programme is emerging as a middle-of-the-road course. There are going to be few extremes and many compromises as in the Berlin issue. Labour is not going to be encouraged to hold out for excessive demands and business is not going to be too much encouraged, or discouraged, in its policies. The main tendency will be streamlining of the Government machinery with emphasis on greater efficiency and promotion of good feeling all around.

The main unresolved problem which has to break out into the open is inflation. Up to the present time, outward manifestations such as price increases have been dormant, more or less. But there is another threatened steel strike this year—there are exorbitant demands by trade unions for shorter work weeks, as stated above —all of which adds up to increased costs.

Question of Questions

The question I would like to raise is: How long will U.S. business, industry and finance be able to absorb higher costs without increasing prices, without adding to the cost of living, without dissipating any more of the present position of the dollar and without making any further inroads in America's position in world trade?

Otherwise, the year ahead looks to most observers—with some reservations. In addition to the inflationary aspect, domestically, they centre mainly around foreign questions. These include dissension in the United Nations, the virtual bankruptcy of that organisation as indicated by the proposal to float a bond issue which the U.S. will probably underwrite after much shoutings and protestations, because the U.S. cannot afford to let the U.N. die *vis-a-vis* Russia's desire to that effect. It means the dissipation of more funds for economically unproductive purposes.

Defence spending is also in this category and so is the outerspace programme, although, in all fairness, it must be said that, without the first atom bomb, there would not have been nuclear-powered ships and there would not have been such intense and partly successful research into such diseases as cancer which, on occasions, respond to radiation.

Foreign Exchange Markets

The foreign exchange markets were fairly hectic in the closing weeks and months of the year. Heavy flows of short-term capital among major financial centres dominated the scene. Central banks in the Western world co-operated closely in channelling and controlling this flow of funds. Much of it was speculative, motivated in part by political safety.

The markets were jittery and easily influenced by rumours. Said the Federal Reserve Bank of New York, "one principal reason for this was that the basic payments' balances underlying the two key currencies—the dollar and sterling—continued to be in substantial deficit in spite of noteworthy improvement for 1961 as a whole."

It is taken for granted here that any large-scale international movement of funds is bound to affect the dollar, partly because of its role as a reserve currency and partly because many countries are obligated by agreements to keep the value of their currencies within certain limits with respect to gold, or the dollar.

The foreign exchange market seems to be under much better control now. Ten main industrial countries, including the U.S., the United Kingdom, Common Market members and others have made an agreement with the International Monetary Fund at Washington to provide facilities for mobilising resources to be available for the protection of the convertibility of currencies in the event that developments may threaten to impair the functioning of the international monetary system. This agreement should be of as much interest in India as in the rest of the world.—*All Rights Reserved.*

THE CHANCELLOR WRITES TO LABOUR

(From Our Special Correspondent)

LONDON, 14*th January*

LONDON LETTER

ALTHOUGH the head of the National Planning Board or National Economic Development Council, as it is called, has been appointed—an administrative head of course—the Council does not yet exist and the Treasury and the Chancellor must still do all the work of national planning! The Chancellor is determined to bring both sides of industry together with the Government and his latest effort is an appeal to the Trades Union Congress to consider seriously the national good and to make suggestions on the right course to take in the matter of wages policy. But, though the T.U.C. are once again leaning towards joining the Chancellor's Council, they are quite divided about having anything to do with a wage restraint policy. Thus, the Chancellor's appeal—which has been published to the world—is to sit in cold storage till the T.U.C. design to consider it next week. (*Vide* page 116 for full details.)

As Your Correspondent forecast last week, the Chancellor has now come forward to end the pay pause at the end of March (budget time), *provided* a period of restraint is adopted—a policy which *both* sides of industry would have to accept. Of course, the trouble with this sort of suggestion is that capital never has any difficulty in supporting it, as they can always catch up with dividends at some later date. On the other side, the T.U.C. argue that they cannot oblige individual unions to hold up wage claims, so that their acceptance of a restraint policy would be ineffective—how spacious this sort of argument is, is evident if one considers what reply the T.U.C. would give to any suggestion that they were without influence on the side of labour!

The Choices

The Chancellor estimates that productivity per head would increase 2½ per cent in 1962 and that wage increases should be geared to this figure under three different formulæ: (1) that, except in hard cases, wage increases should be limited to this figure; (2) that an overall increase should be calculated as a sum of money—a share in the national income—available for wage increases and that every increase made should be charged against this sum which should not be exceeded; (3) that industry by industry wage increases granted should be related to the productivity in that industry and that where that could not be measured then some empirical formula should be adopted. In typical Treasury fashion, the disadvantages of each course are considered and the T.U.C. asked which method they would prefer. Not surprisingly, the T.U.C. want to say that none of them is any good—except, perhaps, the last because the argument would be so protracted that it would be tantamount to the traditional negotiation. In fact, this last idea is utterly futile. As for idea number (2), one can just imagine the scramble to get some of the cake before it was all eaten.

Is there anything in idea (1)? The Treasury themselves fear that 2½ per cent would be taken as a minimum, in spite of the fact that the essence is to provide a margin for cases where more should be granted. Besides, there are lots of cases where the facts of competition or the facts of efficiency do not allow any margin for increases. But the Chancellor does not spell out these cases. Some critics say he should be bold —it would be the sort of boldness that would make a veterinary surgeon put his head into the mouth of an irritable lion. Such difficult policies can only be worked out in secret committees where opposing views can be threshed out, without political capital being made of them, and working compromises achieved. And one must always remember that policies are only lines of leadership to put before the rank and file. Even if both sides at the national planning level do work them out in an atmosphere of great goodwill, that is only a beginning to get them accepted by the men and women to whom the policies mean more or less money in the household budgets.

ROLE OF TECHNICIANS IN MODERN TEXTILE INDUSTRY

By Ramnath A. Podar

VICE-CHAIRMAN, INDIAN COTTON MILLS' FEDERATION

A MARKED improvement in the living standards of our people is expected in the third Plan period. Our *per capita* income, which was Rs. 330 in 1960-61, is estimated to rise to Rs. 385 by the end of the Plan period. This rise would have been much more, had not our population been rising at its present alarming rate. Inevitably, a percentage of this increased income will be devoted to the consumption of more and better quality cloth. In this article, I do not propose to sit in judgment on the textile targets under the third Plan, but it should be the utmost concern of the industry to ensure that its products win wider approval both at home and abroad, from twofold point of view, of price and quality.

In this task of promoting greater efficiency and economy in production, the technician has a very important role to play. Indeed, it is his responsibility to see that the men, materials and machines that are placed under his control and guidance are used to the best advantage, in order to realise the goal of economical and efficient production. It is of paramount importance that the worker should be helped to develop a proper outlook about his duties and responsibilities. The technician can promote this end, if his own attitude to work is inspired by what may be called "obsessional thoroughness."

Relationship With Workers

A competent and enthusiastic technician should not, therefore, encounter any serious obstacles in the way of establishing close and cordial relations with the workers and in fostering in them a right frame of mind in regard to their responsibilities and obligations. Success in the establishment of good human relations mean winning half the battle. It makes the task of the technician easier in imparting specialised knowledge to them. The days when the industry could do with unskilled and illiterate labour are long past. It is folly to assume that a mill or a factory can be operated on the basis of the rule of thumb methods, as in the past. Machines of great precision, installed at great cost, cannot be worked efficiently without training and skill.

The worker has, therefore, got to be skilled and intelligent and he can acquire both only as a result of proper training. The need for suitable training facilities for workers in our industry is thus great. It, of course, goes without saying that both the technician and the management should be ready and willing to ascertain labour's floor grievances and redress them promptly. An imperative need in this connection is to make the workers safety-conscious. Complex, power-driven machines are most lethal when handled inexpertly or carelessly.

Use of Materials

The second responsibility of the technician is to regulate the use of the materials required by his department in such a way as to ensure that they do not at any time become either scarce or unnecessary. Since the quality of the materials used has a decisive effect on the quality of the end-product, he should see that sub-standard materials are not allowed in his department. It is, of course, realised that he is not the final arbiter in such matters, but candid and firmly expressed opinions by exports cannot be easily ignored by any management that has a reputation to lose. Such an intelligent regulation of the quality and the quantity of the materials used is vitally necessary for the smooth working of a large factory, where interdependence among the various departments is great.

Maintenance of Machinery

Thirdly, the technician should take deep and personal interest in the proper maintenance of the machinery in his charge. To achieve maximum results, an efficient maintenance of machinery through oiling, overhauling, etc., is as indispensable as good health is to human beings. It is well known that badly kept machines cause frequent breakdowns, adversely affect production, both qualitatively and quantitatively, and put up costs.

Conscientious technicians, therefore, consider it a dereliction of duty if the productive equipment in their charge is not maintained at the highest pitch of efficiency. Such an enlightened attitude is born out of the profound conviction that the shortening of the life-span of a machine through bad and negligent use, is as unpardonable as wanton dissipation of valuable assets.

Technological Developments

Indeed, the need for putting skilled men on maintenance work will increase, as more and more delicate and complicated machines find their place in the mills. Revolutionary changes are taking place in the construction of textile machinery. Japan, we learn, has a pilot mill where the equipment is entirely automatic from bale to yarn. Textile machine builders in the United States are understood to have undertaken a similar enterprise, which is expected to be brought to fruition during the current year.

The fact that carding machines can now double the normal rate of production, that drawing frames can run at 600 ft./minute with 1,000 ft./minute as a near possibility, and that combers can turn out two to three times the usual quantity, no longer surprises us. In fact, in the advanced textile-producing countries, some of the intermediate processes have been dispensed with, with all the attendent advantages in the matter of operation costs. In these circumstances, high speed winding and warping, with most of the operations made completely automatic, will before long become a normal feature of working in every modern mill. Significant changes are also taking place in sizing, which, besides being speeded up, is being increasingly liberated from the errors of subjective human judgment by the adoption of scientific methods.

Again, a veritable revolution is taking place in the weaving shed. Perhaps the day will not be far off when the conventional powerloom will survive merely as a museum piece. It has already been relegated to that position in America. A wide variety of automatic looms are being produced, with improvements being continually added to their mechanism. The shuttleless loom has ceased to be a novelty.

Machine fabrication has to conform to the changing pattern of textile production, which, in its turn, is vitally influenced by the tastes of the awakened and assertive consumer. A day may come when the textile producer will have to consider how best he can meet the demand for non-iron, non-crease and "quick-dry" varieties of cloth. I would like to go a step further. He should even be prepared to produce non-woven fabrics too! The ceaseless search for new and novel fabrics may well lead to further revolutionary inventions both in the mechanism and the structure of the textile plant and machinery.

Advice to Management

The textile technician, like his counterpart in other industries, is thus living in a dynamic world, when he has to be alert and awake at all times. He should be in touch with the latest inventions and tender suitable advice to the management on the type of machinery that should be installed, in pursuance of either modernisation or expansion. It is precisely because technological changes are taking place with such rapidity and in such great magnitude that the need for the technicians to come together and to exchange notes on their experience is so great.

The technicians can also be of great help in promoting research in various aspects of textile production, including investigations into the type of plant and machinery that are best suited to Indian conditions. The climate of the country, the quality of the raw materials and mill stores that are available to the industry and the skill and calibre of the Indian labour force are some of the factors that should influence the fabrication of textile machinery. The considered views of the technicians can be of great help to the textile machinery manufacturers, in planning the pattern of their production.

Similarly, they can be a tower of strength to the research bodies. They are like the proverbial toad under the harrow, which knows where exactly the tooth-point strikes it. They have to face a wide variety of problems involved in the handling of men, machines and materials. Matters like the lay-out of machines, their utilisation and maintenance to the best advantage, an economical and efficient use of materials, and the deployment of labour in a manner conducive to the attainment of higher productivity, confront them daily and at all times. Who can be of real help to the research organisations in going to the root of such problems, if not the experienced technicians?

Value of Research

They know, as all enlightened employers do, the great value of research institutes, and should use their good offices in enlarging the membership of such bodies, so that, with better resources, both in talent and finance, the research organisations can be of real service to the industry. I take this opportunity of appealing to all those cotton textile mills in the country, which have so far stayed away from the research institutes, that they should join forthwith the institute within their region. It is only by endowing the research bodies with all the essential requirements for efficient and purposeful functioning that we can expect them to help the industry in solving its technical and production problems, so that with the aid of newer and more economical processes the industry may succeed in creating a wider demand for its products both at home and abroad.

In conclusion, I plead that managements should wholeheartedly support their forward-looking technicians in introducing salutary changes in their departments. Without such co-operation, any exhortations to the experts are not likely to be taken seriously. The successful running of a modern mill or a factory is thus basically a co-operative enterprise. The position of the technician in the modern industrial economy is, indeed, crucial and it will become increasingly so in the years to come. I have no doubt that he will face the future with his customary prudence and resourcefulness.

Obligations of Industrialists

In passing, I may add that every industrialist has four major obligations imposed on him, namely, that he must strive to continuously give higher and higher dividends to his shareholders who have provided the money for the industry; he should be able to pay higher and higher wages to the employees who work for the industry; he should be able to produce and supply better and better quality products to the consumers at reasonable prices; and he should contribute more and more to the Government by way of revenues. The achievement of these four objects may look rather difficult, if not impossible. Personally, I do not believe that all these four obligations are impossible of achievement. In fact, if proper utilisation and maximum use of the superior machine is made for getting throughout the maximum production and productivity, it can help to solve these problems, because, if the costs of production can be sufficiently reduced by the best utilisation of the machine, there will be room for accommodating all the above fourfold demands on the industrialists. In fact, as a result of proper utilisation of the machine, the industrialists in the industrially advanced countries have been able to declare higher dividends, pay more salaries and wages, contribute more to the revenues of the Government, produce better goods and still reduce the prices of the goods they sell.

Note: *This article is an adaptation of Mr. Podar's speech at the nineteenth All-India Textile Conference held at Sholapur last week.*

CENTRAL REVENUES

The revenue realised from items on which duties are levied and collected by the Government of India in the first eight months of the financial year 1961-62 amounted to Rs. 594.97 crores. Of this, Rs. 79.46 crores were collected during November, 1961. The corresponding figures for the first eight months of the financial year 1960-61 and for the month of November, 1960 were Rs. 509.60 crores and Rs. 66.87 crores, respectively.

The following are details of the revenue realised under various heads:

(In lakhs of Rupees)

	April to November	
	1961-62	1960-61
Customs	1,30,10	1,08,30
Union Excise Duties (excluding coal cess and salt cess) ...	3,11,35	2,63,34
Corporation tax	65,53	53,36
Income-tax	80,08	68,12
Estate Duty	1,96	1,27
Taxes on Wealth	2,23 (p)	2,36
Expenditure Tax	28	35
Gift Tax	35	34
Railway Passenger fare tax ...	—	9,19
Opium	3.09	2.97
Total ...	5,94.97	5,09,60

(p) *Provisional*

ANOTHER RURAL CREDIT FOLLOW-UP SURVEY

DEBTS INCURRED FOR MEETING FAMILY EXPENDITURE QUITE LARGE

THE findings of the Reserve Bank of India's third rural credit follow-up Survey, just published, more or less confirm those disclosed by the first two Surveys, the reports on wh.ch were released in May 1960 and June 1961, respectively. Thus the third Survey highlights, among others, the heavy indebtedness of rural families, large-scale borrowing mainly for the purpose of family expend.ture and not so much for meeting current outlay on agriculture, high rates of interest, low level of capital formation, and uneven development of co-operatives and land mortgage banks. The Survey also reiterates that, in the context of the notable progress recorded by co-operatives, the unevenness in this development emphasises the need for the following measures:

1. Reorientation of the loan procedure in order to vest powers of scrutiny of cred.t limits in the central financing agency.

2. Larger measures of efforts at introducing crop loan system.

3. Relatively greater emphasis on making the primary cred.t society a "viable unit," so that it is in a position to employ a full-time trained secretary.

4. A more determined effort at implementing the policy regarding State participation in co-operatives.

5. Vesting the powers of supervision in the central financing agencies.

6. Promoting a more rapid growth of co-operative marketing through planned efforts at improving the efficiency of marketing co-operatives and at developing processing units in the co-operative sector.

7. Interlinking of credit with marketing.

Scope of Survey

The third Survey had as its period of reference the year ended 30th June 1959 and was conducted in five districts selected from among those covered by the All-India Rural Credit Survey 1951-52. The districts were: Ahmedabad in Gujarat, Cuddapah in Andhra Pradesh, Hissar in the Punjab; Jalpaiguri in West Bengal and Mirzapur in Uttar Pradesh. The scope of the Survey, like the previous two, was confined to a study of the rural credit system in relation to both demand and supply aspects.

The findings of the Survey have to be viewed against the background of the general trends in agricultural economy in the aforesaid five districts. Four prominent trends are discernible. One, the average size of cultivated holdings was large in Ahmedabad and Hissar and relatively small in the other districts. Two, the cultivated area was concentrated in the hands of big and large cultivators, excepting in Jalpaiguri. Three, in all the districts, excepting Mirzapur, the proportion of output sold by cultivators was large, ranging from 44 per cent to 59 per cent. Four, Ahmedabad and Cuddapah showed a fairly high degree of commercialisation and monetisation, followed by Jalpaiguri and Hissar, while Mirzapur revealed a low monetised subsistence type of economy.

Although the period covered by the Survey is more than two and a half years old, the estimates of family borrowings contained in the Survey may be taken to indicate the extent of rural indebtedness that still continues. The actual per family debt outstanding as on 30th June 1959 (end of Survey year) ranged from Rs. 800 to Rs. 640 in Ahmedabad, Cuddapah and Hissar, but was relatively low at Rs. 200 in Mirzapur and Rs. 33 in Jalpaiguri. The Survey year itself, we are told, witnessed a "substantial rise" in the proportion of indebted families and the average debt per family. Out of every five cultivators, three cultivators reported borrowing in that year, thus revealing the large extent of borrowing in all the districts except Jalpaiguri. Family expenditure was generally the major purpose of borrowing in all districts except Ahmedabad, where current expenditure in agriculture accounted for 57 per cent of the total borrowings. In Mirzapur and Hissar, the rates of interest charged were relatively higher as three-fifths or more of the borrowings were obtained at rates exceeding 18 per cent. Borrowings among the lower strata of cultivators were relatively at higher rates of interest.

Of the total borrowing, the major part was contracted from moneylenders and traders in all the districts except Ahmedabad. Co-operatives provided a sizable portion (42 per cent) of the total borrowings of cultivators in Ahmedabad. Co-operative credit formed 14 per cent of total borrowing of cultivators in Hissar and 7 per cent or less in the remaining districts.

Capital Formation

Capital formation (gross), excluding net purchase of land, livestock and houses, exceeded Rs. 250 (per family) in Hissar and amounted to Rs. 148 in Ahmedabad and around Rs. 113 in Cuddapah and Jalpaiguri. Mirzapur recorded a very low figure of Rs. 45 per family. Large cultivators accounted for over three-fifths of total capital formation in most of the districts.

A comparison of data on indebtedness and family expenditure with those of All-India Rural Credit Survey 1951-52 showed that the extent of indebtedness and also the level of debt at the time of the present Survey were generally lower than or the same as that in 1951-52 in all the districts except Hissar where a significant rise was noticed in these respects. The incidence of debt in relation to value of owned land or recorded assets did not show any marked variation except in Mirzapur, where it increased substantially.

The Survey also brings out the increasingly important role played by co-operatives since 1951-52, particularly in Ahmedabad. The percentage share of cultivating families borrowing from co-operatives increased from 4 to 31 in Ahmedabad, from less than 1 to 13 in Hissar and from 4 to 11 in Mirzapur. Average borrowings from co-operatives rose from Rs. 22 to Rs. 188 per family in Ahmedabad, from less than Re. 1 to Rs. 75 in Hissar, from Rs. 4 to Rs. 9 in Mirzapur and from Rs. 7 to Rs. 12 in Cuddapah. Borrowing from co-operatives as a proportion of total borrowing showed a sharp rise from 6 to 42 per cent in Ahmedabad, from less than 1 to 14 per cent in Hissar and from 3 to 7 per cent in Mirzapur.

Although the co-operatives recorded a remarkable progress over the period, their level of development as at the end of the Survey year was very uneven among the selected districts. The co-operatives were better developed in Ahmedabad and, to some extent in Hissar, than in the other three districts. Mirzapur occupied a mid-position, while in Cuddapah and Jalpaiguri they were least developed. The unevenness in the development was due to several factors such as those relating to co-operative planning, structure of the movement and the working of the co-operatives.

Co-operative planning in some districts appeared to have been viewed in a rather restricted sense, namely, fixing of targets—physical and financial—for the different types of co-operatives. Co-operative planning was relatively satisfactory in Ahmedabad.

Out of the five districts, there were two or more central banks in three districts. The financial position of many of these central banks was not very satisfactory. The central bank in Ahmedabad, where efforts at introducing the crop loan system, an important feature of the integrated scheme of rural credit, were made, had relatively better financial resources than those in other districts.

The primary credit structure in two out of the five selected districts was generally satisfactory. The proportion of dormant societies was high in Cuddapah and Jalpaiguri at 37 per cent and 63 per cent, respectively. Wherever large-size societies were organised properly in terms of an adequate area of operation and effective coverage of cultivating families their performance was better than that of small-size societies. A study of the marketing societies shows that the proportion of total value of produce which was sold through co-operatives was less than 4 per cent and that the main objective of ensuring proper recovery of loans by linking credit with marketing was achieved only to a very limited extent in the selected districts.

STERLING IN GOOD SHAPE

CENTRAL RESERVES RISE

By John Kingsley

STERLING has opened the new year in good shape. Some of the money withdrawn from London during December has returned, and this renewed influx makes it clear that the earlier outflow was not attributable to any weakening of underlying confidence. In fact, foreign money always tends to be withdrawn from London in December, and the "real" loss to the reserves (that is, discounting special factors), some £18,000,000, was in fact this time slightly below the comparable figure in 1960 and 1959. Moreover, the actual loss of reserves in December was not as serious as the published fall of £85,000,000 might appear to indicate; for some £67,000,000 of this were accounted for by payment of the usual end-year instalments on the post-war loans from the United States and Canada. Taking the year 1961 as a whole, the Sterling Area's central reserves rose by £31,000,000—though this would not have happened but for the huge credit last summer from the International Monetary Fund.

Figures are not available for the balance of payments for the full year. It seems certain that the recorded deficit on current account will be far below (probably £200,000,000 at least) the exceptional deficit of £339,000,000 recorded for 1960. Moreover, "recorded" is an important word in this context. It is being increasingly suspected that the sources of information available to Britain's balance-of-payments statisticians may have a built-in deficiency on the side of current receipts. This seems the only explanation for the persistently "balancing item" in the balance-of-payments accounts.

In some periods, it is clear that much of the unidentified inflow in these accounts relates to capital items; but in the first nine months of 1961 as a whole, the net flow of capital was certainly outward, and yet there was still a positive "balancing" item of £222,000,000. This was larger than the identified deficit on current and long-term capital account together. Clearly, it is not possible to speak with real certainty about a basic deficit in Britain's balance of payments.

Invisibles

Britain's official statisticians who compile these payments estimates are traditionally very reluctant to make any such guesses about the content of their "errors and omissions." But a survey by the Bank of England in its December *Quarterly Bulletin* did concede that, "although there is no direct evidence, it may be that UK net receipts from invisibles are being underestimated." The survey highlights the importance of the burden of Government expenditure overseas in the decline in Britain's net income from "invisible" transactions, though receipts from shipping and investment income have also fallen away.

In 1960, the British Government's net total expenditure abroad was £284,000,000. In contrast, virtually all other European countries earned more foreign exchange on Government account than they spent; in France, the net yield was £27,000,000 in foreign exchange, and in West Germany no less than £120,000,000. Since Britain's expenditure on the upkeep of its troops in West Germany itself costs about £70,000,000 in foreign exchange, the British Government has successfully entered an application to the N.A.T.O. Council for relief on this score, and talks have been going on with the German Government to find a way of translating this into concrete help.

The German authorities are anxious to avoid a direct contribution, which would entail an unwelcome addition to their domestic budget, and their thoughts have turned to increasing their arms orders from Britain. From the recent talks between Chancellor Adenauer and Mr. Harold Macmillan, it would appear that such increases will be "on a considerable scale," and that they will be supported by other measures which will be considered by a committee set up for this purpose. If this problem can be solved, it will go a good way towards removing a major element in Europe's payments disequilibrium.

COMMERCE
ANNUAL NUMBER 1961

216 pages of our usual size

Copies are now available

A valuable reference book on economic trends in India, carrying comprehensive reviews of coal, cotton, textile, jute, sugar, planting, agriculture, labour, insurance and banking, besides all the major markets. The Annual Number contains also some forty feature articles on a variety of subjects of topical importance, including prospects for investors, contributed by economists, businessmen, administrators and other experts.

WORLD GOLD OUTPUT RISES AGAIN

QUANTITY MOVING INTO PRIVATE USES OR HOLDINGS LESS

ALTHOUGH world trade has been expanding at a rate two or three times as high as the average rate (less than 2 per cent) of increase in the aggregate offical gold stocks, the fears expressed by some regarding a possible setback to international liquidity in the coming years are clearly exaggerated. For the influence of gold on liquidity, which was so enormous some years ago, has declined lately and may be expected to decline further in future. At any rate, it will be wrong to belittle the contribution made by reserves held in the form of foreign exchange and the elasticity provided to the world payments system by the International Monetary Fund. This view has been well brought out in the January issue of the *Monthly Letter* of the First National City Bank of New York, in the course of its customary annual gold review. The review also highlights (*a*) the unique value of the I.M.F.'s resources which can be directed to support the international monetary structure at its weakest point at any particular time; (*b*) arrangements by which a creditworthy country can borrow outside the I.M.F., either from Governmental or private sources; and (*c*) the fact that the Governments and central banks have never been better equipped to economise on gold than they are today.

Despite all this, gold, as the review says, figures prominently in the news. Indeed, interest in the metal has revived lately to an extent not seen for a quarter of a century. The U.S. gold stocks are now at the lowest level since 1939—$16,840 million as on 10th January 1962. Continuing purchases by foreign central banks and Governments, it is stated, "attest to the prestige gold commands in the minds of those responsible for national monetary reserves." And in the world around us, gold "retains its traditional attribute as a highly desirable store of wealth."

Post-war Peak Output

The world gold picture, as presented in the *Monthly Letter*, shows that the aggregate world output of gold in 1961 (excluding Soviet Russia, Mainland China, etc.) reached a new post-war peak for the eighth consecutive year. Worth about $1,215 million, the output was 3 per cent above 1960 and higher by 43 per cent as compared with that in 1953. Taking the officially fixed price as $35 per fine ounce, the production comes to approximately 35 million ounces. As in earlier years, so during 1960, the rise in output was due chiefly to the notable increase in South Africa which now accounts for two-thirds of world production outside Russia. The increase is attributed to rich new discoveries, improved techniques and production in association with uranium. Elsewhere, gold output tended to fall, as is indicated below:

Estimated Gold Production
(In millions of dollars)

	1961	1960	Percentage rise from 1960	Percentage rise from 1953
South Africa	802	750	7	92
Canada	155	160	—4	9
United States	58	58	—0	—23
Australia	38	38	..	..
Ghana	31	32	..	20
Southern Rhodesia	21	20	7	20
Philippines	15	14	4	—10
All others*	100	108	—4	—19
Total*	1,215	1,180	3	48

* Excluding U.S.S.R., Mainland China and countries in their orbit.

Russia's output is variously estimated by Western observers at $350-600 million annually. Russia has been selling gold in Western Europe to balance its international accounts. Import statistics of the United Kingdom show gold imports from Russia of $194 million during the first eleven months of 1961, as compared with $105 million in the entire year 1960; during 1957-59, the figures had been averaging $250 million annually. While London is the principal gold market of the world, larger and more frequent Russian gold shipments were also reported on the Continent. Guesses on Russian gold reserves run from $4 billion to $9 billion. For the first time in many years, Mainland China reportedly sold in Western Europe, covering a balance-of-payments deficit.

A comparison of new gold supplies—from free world output and estimated purchases from Communist countries—with year-to-year increases in the total of official gold stocks makes it possible to get an approximate idea of the varying amounts absorbed by the arts, industry and private holders. In the United States, uses in the arts and industry have been expanding in recent years. Net consumption in 1960 amounted to $105 million, as compared with $50 million as recently as 1957; since 1958, such uses have exceeded current output. As is well known, there is no gold coinage in the U.S. and residents are not allowed to hold gold in monetary form except for coins of recognised numismatic value minted before 5th April 1933.

Less gold moved into private uses or holdings during 1961 than in the year preceding it—$700 million (projected on the basis of the actual figures for the first three quarters), which is almost half of new supplies, as against the all-time peak of $1,000 million in 1960, three-fourths of total new supplies. The reduction coincided with an improvement in the U.S. balance of payments and firm assurances given by the Administration that the U.S. dollar would not be devalued. There were also gold sales by U.S. holders in compliance with the Executive order under which the gold held abroad was to be disposed of by 1st June 1961.

Changes in Gold Stocks

The review recalls that, in the earlier post-war years, attempts were made by the I.M.F. to protect official stocks of gold by asking the member-nations to refrain from selling in free markets, but the attempts proved unenforceable. Private gold trading persisted. France and some other member-nations found it necessary to legitimatise and deal in free markets with a view to stabilising the price of gold and encouraging confidence in paper currencies. New gold production, according to the review, has quite regularly exceeded the absorption of metal into industrial usage and additions to private stocks. The excess of supply is dependent for a market on purchases by Governments and their central banks for monetary reserve purposes. Since the U.S. buys and sells gold at $35 per ounce *minus* or *plus* a ¼ per cent commission, this price sets the general level for the world price. In recent years, the U.S. has been getting little of the new gold production, as the main official buyers have been the Continental European countries using surplus dollars acquired as a consequence of the deficit in the U.S. balance of payments. A part of the surplus dollars has also been used to buy gold from the U.S. Treasury. The table below traces the magnitude and the origin of changes in official gold stocks during the year ended September 1961:

Changes in Official Gold Stocks
Oct. 1960-Sept. 1961
(In million dollars)

	Through transactions with U.S.	Through transactions with I.M.F.	Through transactions with Other*	Gold stock 30th Sep. 1961
Continental Europe	952	800†	1,033	14,870

* Residual figures; including gold from new production, Russian sales, etc.
† Gold purchases made in August 1961 in connection with the British drawing.
‡ Through June 1961. Additional $55 million of gold was purchased from the U.S. in the third quarter of 1961.
§ Excluding Russia, etc.
‖ Total change in I.M.F. stock less sales to the U.S.
N.B.—Table constructed from data in *Federal Reserve Bulletin* and *International Financial Statistics*.

It will be seen from the above figures that the Governments and central banks of Continental Europe converted dollars and other currencies of the value of $2,285 million into gold, the largest additions to gold stocks so made being in West Germany, France and Switzerland. By the end of October 1961, the percentage of reserves in gold held by West Germany, the biggest holder of gold outside the U.S., and Soviet Russia, had risen to as high as 59, as against just 44 at the beginning of the year. The proportion of gold was, nevertheless, below that of the Netherlands and Switzerland (more than 90 per cent) Britain (87 per cent), and Belgium and France (75 per cent). An interesting point to be noted here is that about three-fifths of the $2,285 million worth of gold added to the Continental European stocks during the twelve months ended September 1961 came from sources other than the U.S. Treasury.

Britain had to sell large amounts of gold from out of its official reserves to support sterling during the months March-July 1961. These were in addition to the normal offerings by producers on the London market. Britain's reserves, however, recovered rapidly thereafter, when short-term capital flows were reversed, thanks to the increase in the Bank rate (to 7 per cent) and the massive assistance by the I.M.F. Indeed, Britain repaid a sizable part of the loan obtained from the Fund and converted surplus dollars into gold. International gold flows during 1961 were affected in another way by the mid-year weakness of sterling. In order to acquire additional amounts of currencies to meet Britain's $1.5 billion multi-currency drawing in August 1961, the I.M.F. sold $500 million of gold, of which $300 million went to Europe, $150 million to the U.S., and the balance to Canada and Japan.

U.S. Gold Holdings

The U.S. Treasury gold stocks declined by $877 million during the year 1961 (upto 20th December). The loss will be larger at $1,027 million if the transaction with the I.M.F. is not taken into account. This loss approximates the loss suffered in 1959 ($1,034 million), but is decisively smaller than that in 1960 ($1,989 million) and 1958 ($2,247 million). Since 20th December 1960 there has been a further loss of gold to the tune of $50 million, the actual stocks as on the 8th of this month being $16,840. Although the level of stocks is, as already stated, the lowest since 1939, the stocks still represent 41 per cent of the world's aggregate monetary stock. Commenting on this, the *Monthly Letter* says: "The gold stock remains adequate by any reasonable standard; it is the rate of loss, and rate of accumulation of short-term debts to other nations, that is disturbing. This is just another way of saying that we (the Americans) have a balance of payments problem." In this connection, the *Letter* has quoted President Kennedy who declared sometime ago that the U.S. gold stock still represents a far larger proportion in the world total than the country's share of international trade, that the stock was sufficient to tide the U.S. over a "temporary deficit period" while the country mounted an offensive to reverse these trends, and that the Administration had no intention of devaluing the dollar.

WORLD SILVER

The world silver markets continue to rule bullish, reflecting the failure of the rise in new silver production to keep pace with the persistently expanding demand for the metal. The latest available spot rate for silver in the London bullion market is 87¾d. per fine ounce, which, though lower than the highest rate of 88⅜d prevailing in December 1961, is well above the average price of 79¼d. for the months of May and June 1961. Will the higher prices now ruling lead to any appreciable increase in the supplies of newly-mined silver? On the face of it, the answer to the poser is in the affirmative. But some world bullion dealers feel otherwise. Here is what Messrs. Mocatta and Goldsmid of London, the official silver brokers to the Bank of England since the Bank's formation in 1694, say in their Annual Circular for 1961:

"The higher prices now ruling are not likely to lead to any appreciable increase in the supplies of newly-mined silver, because most silver is a by-product of lead and zinc which are themselves available in excess of current demand at current prices. It seems that additional supplies will, therefore, have to come mainly from the demonetisation of coin which provides only an occasional and intermittent source."

In the opinion of Messrs. Mocatta and Goldsmid, world demand for silver has continued to outstrip new production. "Although the amounts used in the arts have been decreasing slightly, the demands of industry—particularly for the photographic and electrical industries—have increased sharply. And, despite some recoveries from demonetised coin, the demand for minting has, of late years been unusually high. Since the price of silver on European markets has consistently stood higher than the American price, most of the silver mined in the Western Hemisphere has found its way to Europe or Japan. The net result has been that the 'free' stocks at the disposal of the U.S. Treasury fell from 126 million ounces at the beginning of 1961 to 22 million ounces on 28th November. On that day, President Kennedy authorised the Secretary of the Treasury to suspend the sale of these supplies. Long before this, the statistical position of silver had engaged the attention of the many interests directly concerned and of others who thought that they saw an opportunity of making a profitable entry into the market. When supplies of 'free' silver to American industrial users

UNCERTAINTY CROPS UP IN COTTON INDUSTRY AGAIN

FUTURE DEPENDS ON LEVEL OF OFFTAKE

From Our Special Correspondent

MANCHESTER, *9th January*

MANCHESTER LETTER

ONE aspect of the aftermath of the redundancy programme in the producing sections of the cotton trade in Lancashire has been the elimination of a large number of single-unit firms, particularly in the spinning branch. As a result, comparative figures setting out the financial results, announced during any given year, tend to rest more than ever on the experience of the larger groups.

Twelve months ago, tables were published for the first time giving the average profit per company earned by the combines, major spinner-weavers and public companies in the weaving branch, covering the previous decade. These are repeated below, plus the latest returns received during 1961.

	Companies	Average profit per company £	Yearly average dividend Per cent.
Combines—			
1951	11	761,526	19.00
1952	13	534,004	17.42
1953	12	264,180	11.94
1954	12	431,928	13.58
1955	14	333,213	14.99
1956	14	224,904	13.23
1957	14	354,919	12.72
1958	14	235,716	10.79
1959	14	120,254	9.73
1960	14	375,425	12.48
1961	14	470,799	14.82
Spinner-weavers—			
1951	17	194,423	23.03
1952	17	177,045	19.98
1953	21	74,047	17.06
1954	17	83,200	16.32
1955	20	60,761	13.96
1956	18	50,233	12.53
1957	18	69,197	10.89
1958	19	71,504	10.74
1959	20	57,736	10.18
1960	17	112,844	14.17
1961	16	171,868	17.51
Weavers—			
1951	21	120,494	31.79
1952	21	79,837	24.99
1953	28	49,821	21.21
1954	28	38,120	15.98
1955	27	42,285	13.80
1956	24	28,090	9.61
1957	24	24,320	6.27
1958	23	25,015	6.07
1959	22	19,073	6.64
1960	20	47,492	9.66
1961	17	57,512	13.11

Whatever the outlook in the immediate future—which at the moment is speculative, to say the least—the figures released last year reflect very clearly the upsurge in activity which began in the autumn of 1959 and lasted for considerably more than twelve months. The pattern in all three categories follows a remarkably similar course, with a marked improvement in profitability from 1959 onwards.

Earnings Better

Average dividends in most cases regained the level achieved around 1955, but a somewhat significant expansion can be seen in the ground made by the spinner-weaver combinations, which almost attained the high rate of earnings reached after the prosperous 1950-51 era.

The monotony with which the word "uncertainty" crops up in market comment and gossip is no accident. Every trade has its periods of doubt, and the cotton industry is frequently overloaded with them, but, since the flow of foreign imports became a flood, the mood of caution among customers has not been relieved. Nor is it likely to be while the quantity of duty-free arrivals remains on so large a scale.

Arrivals Contained?

During his visit to Lancashire little more than a month ago, the President of the Board of Trade was complacent about the reduction in imports after the phenomenal first quarter of 1961. He evidently assumed that the rate of arrivals had been contained at what he and his advisers apparently regarded as a reasonable figure. It seems clear enough, however, that, as soon as additional demand comes forward from customers, the spate of foreign supplies will leap upwards again, and presumably will fluctuate in the future according to the current level of demand.

Many sources close to the industry are now convinced that no further aid can be anticipated from Government departments, and it is a case of "every man for himself." In all the circumstances, it would be rash, indeed, to suggest what the future holds for Lancashire millowners and their employees. The operatives are anxious about their prospects in a trade so prone to change and decline. Mechanisation is only part of the answer, but, without a marked improvement in the rate of activity among distributors within the next few weeks, employers will have to do some hard thinking about further curtailment of the machines in operation.

Export Survey

An analysis of the national export returns to the end of November shows that a very substantial proportion of the loss of 33 million yards in cotton cloth shipments as compared with 1960 can be attributed to the decline in trade with four major customers. These were Australia, which took 11 million yards less than in 1960; South Africa, whose imports fell by 6,500,000 yards; New Zealand, where takings were 5 million yards down, and the Congo Republic, which also showed a drop of nearly 5 million yards.

Among the numerous countries to which cotton textile fabrics are still despatched, there were various minor changes, including occasional gains such as those shown in shipments to Sierra Leone, Kenya, Aden, France and Jordan, but the quantities concerned were negligible. Only in the case of the undesignated foreign countries was there any appreciable rise, consisting of a 7 million yard increase, to 24,500,000 yards.

The fall in shipments of cotton yarn from the United Kingdom was in ratio more pronounced. Exports in eleven months last year were nearly 6 million lbs. down on the 1960 level. Although Australia remains by far the largest consumer, shipments to that country were responsible for the majority of the decline, failing to reach 5 million lbs., as against over 8 million lbs. in the previous year. Exports to Pakistan were more than halved and sharp falls were recorded in trade with India, Ceylon and Eastern Germany.

More Rayon Yarn Trade

In somewhat striking contrast to the dismal picture presented on the purely cotton side, the disposal of man-made fibre yarns abroad was an encouraging feature. Shipment over the eleven months, at 48,500,000 lbs., were nearly 4 million lbs. higher than in 1960 and were 8 million lbs. up on the 1959 level. Considerable variations took place in this trade last year, there being severe reductions in exports to India, Australia and the Irish Republic. These losses, however, were compensated for by the larger volume of business done with the Soviet Union, Sweden, Norway, Poland, Switzerland and Portugal. A notable increase took place in exports to China, which were nearly doubled, and supplies of man-made fibre yarn sent to "other foreign countries," increased from 6,250,000 lbs. to nearly 9 million lbs.

The downward drift in exports of man-made fibre piecegoods continued in 1961, the total at the end of eleven months being 45 million yards, as against 50 million yards in the same period of 1960 and 58 million yards in the previous year. Destinations followed a similar pattern, with a decline in business with South Africa and Australia, not quite covered by additional sales to Hong Kong, the Irish Republic and Sweden.—*All Rights Reserved.*

BRITAIN IN SEARCH OF A NATIONAL WAGE POLICY

TRADE UNIONS REJECT WAGE RESTRAINT

BRITAIN is currently in search of a national wage policy. With the pay pause scheduled to end in next March, Mr. Selwyn Lloyd, the Chancellor of the Exchequer, is hard put to find an alternative method of wage restraint which will ensure that what has been gained by the pay pause is not completely wiped out by a widespread increase in wages immediately after the pause is over. The Chancellor has suggested an "intermediate phase" to follow the pay pause at the end of March to be replaced ultimately by a national wage policy which will presumably be shaped by the proposed National Economic Development Council. The Chancellor, however, has not yet been successful in his efforts to bring the T.U.C. within the Council. So it is a moot point whether the Chancellor's proposition will be accepted by the T.U.C. which has been an uncompromising opponent of the wage pause policy.

The dangers inherent in a fresh round of wage increases and the various methods for restraining wages are the main theme of a letter sent by the Chancellor to the Chairman of the Economic Committee of the British Trades Union Congress (T.U.C.). Since no wage policy, or for that matter any major economic policy, could be implemented without the active support and co-operation of the trade unions, the Chancellor deemed it fit to set down his thoughts and suggestions in the letter and invite the T.U.C.'s frank views about them. Although there is a lot of differences, fundamental differences at that, between the conditions and problems that exist in Britain and in India, Mr. Lloyd's observations, especially his pointed reference to the dangers of wage increases that are out of proportion to increase in productivity, have more than national relevance.

The Chancellor's Job Defined

Mr. Lloyd starts his letter with a restatement of what, in his opinion, constitutes the job of the Chancellor. It is, to quote him, "to promote economic vitality and strength in this country sufficient to enable us to carry out our international responsibilities for defence and aid to less developed countries but also provide a continuing, broadly spread improvement in the standard of living of all sections of the community."

In order to achieve this result, certain things are necessary, according to the Chancellor. The most important of them, in his opinion, is maintenance of a high level of exports. Export trade depends on the country's goods being competitive, in other words, upon the costs being such that prices are attractive to overseas buyers. Upon the ability to export depend, in turn, the balance of payments. A sound growth of the economy can be based only on a satisfactory level of balance of payments.

The largest single factor having a direct bearing on exports and the balance of payments is wages, discreetly called "personal incomes" by the Chancellor. Since the war, there has been in Britain, according to Mr. Lloyd, a persistent tendency for money incomes to grow faster than the volume of national production. For example, between 1953 and 1960, incomes from employment and from profit both rose more than twice as fast as production. The Chancellor's basic proposition, therefore, is that, unless increases in personal incomes of all kinds are kept broadly in line with increases in production, the objectives of sustained growth and higher standards cannot be obtained. The unsatisfactory prospects for balance of payments caused a major loss of confidence in sterling in last summer. The measures initiated in July 1961 to strengthen the sterling were partly short-term and partly long-term. They did not single out any particular section of the community. Although public attention has been centred on the pay pause, it was only one element in a comprehensive national approach which involved such measures as curtailment of Government diplomatic and military expenditure abroad, tightening of exchange control over private investment of capital outside the sterling area, restrictions on public expenditure at home, increased taxes on consumption, tightening of credit by a 2 per cent increase in the Bank rate and restraint on dividends and profits. In addition, in order to tackle long-term problems and to co-ordinate long-term programmes in the public sector, it was proposed to set up a National Economic Development Council in which both employers and trade unions were invited to participate.

Immediate Problem

But the problem of personal income is an immediate one and must be tackled forthwith. Mr. Lloyd is convinced of the need for Government working out, with both sides of industry, a long-term policy to keep increases in money incomes in line with the increase in national production. A necessary part of any such policy will be the Government's responsibility, by the use of fiscal and monetary measures, to ensure that excessive demand in home market does not drive up prices, prevent the growth of exports and attract a greater quantity of imports than what the country can afford. If arrangements cannot be made for keeping the total growth of incomes in a proper relationship to the total growth of production, the Government, the Chancellor warned, will be forced to act in other ways. The stark truth is that the alternative to an income policy is further restriction of demand with loss of economic growth and with higher levels of unemployment than would otherwise be the case.

Restraint on Profits

In Mr. Lloyd's view, there are four necessary elements in any long-term income policy. First of all, there must be common understanding of the country's economic problems and prospects. Secondly, public understanding must be based on the fact that increases in the total of money wages and salaries above a certain point are self-defeating, because they put up prices. It is often thought that increases in wages and salaries do not matter, because they are offset by reductions in profits. There is no evidence to show, according to the Chancellor, that, in a community enjoying high levels of employment and wages, increases come out of the profits; indeed, since the war, wage costs and profits have gone up broadly in line. Thirdly, all those who influence or decide the course of wages and salaries, whether by negotiation, arbitration or in other ways, or who determine profit-margins, dividends and prices, have a special responsibility. They must recognise that, in the long-run, all will suffer, if sectional interests are allowed to prevail over the interests of the community as a whole. Finally, it must be recognised that wage and salary earners cannot be expected to accept the restraint in wage and salary increases needed to keep rises in income within reasonable limit, if those who benefit from profits are subject to no such restraint. If, therefore, it was established that aggregate profits were increasing disproportionately, as compared with wages and salaries, the Government, Mr. Lloyd adds, would not hesitate to take corrective action in the fiscal or other fields. But no Government, which seeks to increase productivity and growth, can contemplate imposing a uniform limit on the profits or dividends of individual concerns, for such a limit would penalise the growing and enterprising concerns and industries and impair their ability to get the capital they need for expansion, while it would leave inefficient and stagnating concerns unaffected.

The Chancellor emphatically states that, in the existing circumstances, large sums would not be available for increases in personal income during 1962. Until the obstacles to sound economic growth are tackled together and the desired results produced, large increases in wages and salaries are bound to result in inflation. In other words, the increases will not be real in terms of purchasing power.

Against the background of an estimated 2½ per cent increase in productivity during 1962, three possibilities, according to the Chancellor, are possible. They are:

(a) The Government and both sides of industry should accept an understanding that the overall rate of increase in wages and salaries in 1962 should be kept within a stated figure. This must also provide for the exceptional cases where there are sustainable claims for special treatment. It must also be realised that some industries cannot afford any increases at all, if they are to remain competitive.

(b) The Government and both sides of industry should accept the fact that only a limited sum can, without inflationary effects, be distributed by way of wages and salaries during 1962. Out of that sum must come the increases for 1962 already agreed, and any exceptional settlements.

(c) The Government and both sides of industry should examine the feasibility of devising a formula which would do justice to those in employments where productivity cannot be measured, while taking some account of actual increases in productivity where they can be ascertained.

Disadvantages

Each of these courses, the Chancellor concedes, has certain disadvantages. Thus, under the first course, the percentage stated might be regarded as the minimum in each case and not an overall maximum. Under the second, there might be the feeling of first-come-first-served and an acceleration of claims. Under the third course, there might be difficulty and protracted argument about the formula. In the circumstances, the Chancellor would welcome the views of the T.U.C. as to where the balance of advantage lies.

The abovementioned possibilities refer only to wages. The Chancellor, therefore, hastens to add that he does not intend that the restraint in 1962 should be limited to salaries and wages. But he seems to imply, although he does not explicitly say so, that profits and dividends are already lower and that the need for restraint in regard to them is not as great as it is in the case of wages. Gross company profits before taxation in the second and third quarter of 1961, at £1,679 million, was slightly less than in the corresponding period of 1959 and 11 per cent less than in the first half of 1960. Company profits bear a rate of taxation of 53¾ per cent as a result of increases in profits tax in two successive budgets. Ordinary dividends before taxation represent only 7 per cent of wages and salaries and, because investment incomes are more heavily taxed than earned incomes, dividends after taxation represent an even smaller proportion of net wages and salaries. Furthermore, the rate of increase in dividends has recently fallen sharply. Nevertheless, the Chancellor agrees that the position as to profits and dividends should be carefully watched to ensure that, because of wage restraint, they do not improve their relative position.

Long-term Policy

So much about the intermediate phase. As regards the long-term policy, the Chancellor makes the following observations:

"For the long-term, the real answer is to get a rate of sound growth which can carry reasonable increases. By sound growth, I mean growth which is not based on inflation. As I have stated, I believe this to be possible with co-operation, but, if we are to ruin our chances of obtaining that sound growth, increases in 1962 in personal incomes must be kept within the increases in national production. If that is not done, there will be inflation and I shall be driven to further restrictive measures. We must also face the fact that, if the pause is ended and we revert to pre-pause practice, the increases in incomes in 1962 will not be kept within the increase in national production."

Although the T.U.C. has not submitted its reply to the Chancellor's letter at the time of writing this article, its immediate reaction to his suggestions has not been encouraging. At a meeting held soon after the receipt of the Chancellor's letter, the Economic Committee of the T.U.C. rejected wage restraint as unacceptable to it. There was general agreement among the members of the Committee that wage restraint would be impossible to enforce, because the T.U.C. has no power over individual unions to ensure that they observed the restraint. It is pointed out that, even if the T.U.C. were to recommend wage restraint, it needed only one small union to disregard the recommendation and the T.U.C. would be made to look as foolish as it did in 1948, when it answered Sir Stafford Cripps' appeal for restraint, only to jettison the policy in the following year. The last word on the T.U.C. stand, however, has not been said. It is expected to send its reply, embodying its views, this week.

While the prospects of the T.U.C. accepting the new policy of wage restraint are thus bleak, the chances of its participation in the N.E.D.C. have increased, thanks to the patient and persistent efforts of Mr. Selwyn Lloyd. If he finally succeeds in winning the T.U.C.'s co-operation, it will be no mean achievement, considering that, once it participates in the N.E.D.C. and feels that it is contributing to policy-making, the realisation might dawn on it that the interests of labour are identical with those of the rest of the community.

SUGAR INDUSTRY IN DISTRESS

PRICES ARE FALLING, WHILE COSTS ARE RISING

SEVERAL weeks have elapsed since Mr. S. K. Patil, Union Minister for Food and Agriculture, stated that he had suggested to the Finance Minister a reduction in the rate of excise duty on white sugar, with a view to boosting domestic consumption. But there is as yet no sign whatever of the suggestion having been accepted. Here is one more instance of New Delhi's neglect of urgent economic problems to which prominent attention was drawn in the first leading article of the last issue of *Commerce*. The disinclination of the Finance Minister to lower the heavy incidence of excise duty, which is acting as a deterrent to offtake, is regrettable, especially when the case for such a downward revision has been presented by a valued colleague in the Cabinet. In the hope that the expected reduction in excise duty might take place any time, the wholesale dealers have been buying sugar only on a hand-to-mouth basis, with the result that movement of sugar from the factories has been slow and the purpose of decontrol is not being served. Another factor that is restricting the flow of sugar from the producer to the consumer is shortage of transport. A cumulative outcome of this situation is that retail prices of sugar have not reflected even the modest fall that has already taken place in wholesale prices.

The continued high rate of excise duty, namely, Rs. 8.26 per maund, is acting as a great deterrent to increased offtake. Besides the low level of offtake for both domestic consumption and export, sugar prices have tended to decline, at a time when the cost of production and other charges borne by sugar mills have risen markedly. The loss of income on export quota and considerable increase in wages as a result of the Central Wage Board's recommendations, according to Mr. Neville N. Wadia, Chairman of the Belapur Company Ltd., are two of the main factors contributing to higher expenses. Addressing the annual meeting of the Company held at Bombay on Friday last week, Mr. Wadia said: "Add to this the effect of lower selling prices for sugar and the enforced lower production for the current season, as a result of the recent Central Government Ordinance. One can only conclude that the future profits of your Company are not likely to reach again the satisfactory figures of recent years." When such is the position in respect of an efficient sugar mill like the Belapur, one can well imagine the position of other comparatively less efficient mills, let alone marginal units.

Ceiling on Plantations

Mr. Wadia also pointed to the Maharashtra Agricultural Lands (Ceiling on Holdings) Act which, he said, was hanging like a sword on the operations and profits of sugar industry in the Deccan. How ill-advised and unjustified is the inclusion of the cane plantations of sugar mills under the purview of the Act has been highlighted in this journal on more than one occasion in the past, so that it is unnecessary to refer to it in detail again. Suffice it to say that, even now, the Government of Maharashtra can grant exemption to these plantations from imposition of ceiling. Surely, in the present circumstances when export sales are most difficult to negotiate and there is a huge surplus stock in the country, it is not, as Mr. Wadia very pertinently stressed, a wise thing for the economy of the nation as a whole to take any step which may adversely affect the cost of production. "On the contrary," to quote him, "it should be the policy of Government to encourage all growers of sugarcane to increase the yield per acre and the sugar content of cane, and thus bring the cost of producing sugar down to the absolute minimum. Taking away the land from those who are in a position to continue and make further improvements cannot possibly help matters."

Mr. Wadia was also quite right when he described the high price of Indian cane as artificial. Perhaps nowhere in the world is the price of sugarcane so high as in India: Re. 1.62 per maund; the cane cost accounts for as much as half the total cost of making sugar. Such a high price is paid irrespective of the quantity of sugar that can actually be recovered from it. Not only that. The cane growers are also entitled to a share in the profit of sugar mills, but not to a share in the losses incurred by the mills. The cane price should not be maintained so high in the interest of the consumer. It must, Mr. Wadia went on to add, be brought down *to near world levels*, if the Indian sugar industry is to play its part in earning foreign exchange for the country.

It is, however, difficult to agree with this latter part of Mr. Wadia's observation, for there is nothing like a perfect world market price for sugar. The free market for sugar in the world is an extremely limited one and accounts for the minor portion of the world sugar consumption or of the total quantity of world sugar exports. As readers are aware, the bulk of the sugar exported moves under special arrangements and at special prices. The price of sugar in the free market is more or less a cut price and is not, therefore, representative of the true cost of making white sugar, including the cost of sugarcane. Even the most efficiently cultivated sugarcane plantation cannot afford to raise sugarcane for any length of time and sustain a reasonable standard of living for sugarcane growers, or the workers employed in it, if the price of sugarcane is fixed on the basis of the prevailing so-called world price for sugar. What is required, therefore, is the fixation of sugarcane prices at levels that will provide a fair return to growers, taking into account the sucrose content of the cane grown by them. There are undoubtedly growers and growers of sugarcane in this country, ranging from the poorest farmer in South Bihar and Eastern U.P. to the large-scale scientifically run plantations such as those in Maharashtra. A reasonable profit for a small farmer will mean bumper profits for the large-scale plantations. The siphoning of a part of the profits of the latter is a separate problem, for which it is not difficult to find equitable solutions. Suffice it to say that export of sugar without some form of arrangement for sharing the losses will not be a feasible proposition for this country for a long time to come. The aim should be to minimise the losses and there is doubtless plenty of room for improvement in the scheme of price fixation for sugarcane now in vogue. This is an old problem which has been discussed numerous times in this journal.

Fall in Prices

To revert to the sugar industry's current distress. Sugar prices, as already stated, have moved downward since the abolition of controls on 27th September 1961. The latest available ex-godown prices at Bombay, Meerut and Muzaffarnagar as compared with the previously controlled prices are given below:

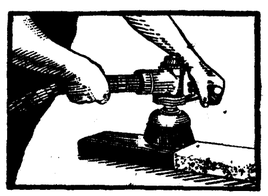
(In rupees per quintal bag)

Centre	Latest available rate	Controlled price
Bombay:		
Laxmiwadi E 29	104.50	112.55
Belapur D 29	108.00	113.00
Belwandi C 29	112.00	114.05
Maharashtra B 29	113.50	114.50
Meerut:		
D 29 grade	103.70	105.37
Muzaffarnagar:		
Dry crystal variety	105.87	108.25

The actual extent of the decline in sugar prices since decontrol, it is pointed out, has been much more than the margin of 84 nP per maund allowed in the controlled price for paying taxes and dividends, as well as for building up reserves. The millowners fear that the financial position of the sugar industry is bound to deteriorate in the current season, especially because of the higher overheads per ton of sugar, in view of the production cut of 10 per cent. Drawing attention to this aspect, the Indian Sugar Mills Association has strongly urged the Central Government so to regulate sugar releases as to ensure a fair price for the industry. In the course of a representation made to Government, the Association observes: "As a result of the liberal releases of sugar since the withdrawal of control, sugar prices have slumped heavily and are ruling Re. 1 per maund below the erstwhile controlled prices. The decline in sugar prices has come at a time when the production cost has gone up by 22-29 nP per maund by way of selling commission which was not included in the ex-factory prices fixed by the Government." Attributing the drop in prices partly to the conservative period of validity of free sale release orders, namely, 45 days, the Association has suggested extension of the period to at least 60 days.

The Government of India is, however, not inclined to take any new measures to check the fall in sugar prices. For it seems to feel that lower prices will promote domestic consumption and thus help narrow the gap between demand and supply. The Government further seems to feel that higher domestic consumption, together with the production cut enforced in the current season and the prospects of exports, will largely alleviate the problem of heavy stocks. This line of argument is not wholly convincing. The chief flaw in it will be obvious from our observations at the outset. How will consumption of sugar go up when the retail prices do not go down? A section of millowners argues that the fall in wholesale prices so far has not been large enough to make itself felt at the retailers' end. The industry is not able to bear even the modest cut in wholesale prices and it would be put to very heavy losses if there were to be a big reduction in wholesale prices. The more effective solution to the problem of promoting domestic consumption of sugar, therefore, lies in a substantial reduction of the high rate of excise duty. After all, the maintenance of sugar prices at a level remunerative to manufacturers is essential for the smooth and uninterrupted working of the industry. The inexorable law of economics has glaringly exposed the weaknesses in the Government's sugar policy. Wisdom lies in recognising this situation and promptly applying the correctives before irreparable damage is done to this major agro-industry of the country.

"SCCO"



For removing heavy scale from large metal surfaces, such as rust, old paint, and incrustations giving the metal renewed surface for painting, etc. These cup brushes are used on high speed flexible shafts electric or pneumatic tools and can be driven at higher speeds being of sturdier construction than the lighter crimped wire types. A good friend for Foundry man.

PALM *GUR* INDUSTRY

The revival of the palm *gur* industry which at one time was a rich source of earning foreign currency would ensure the utilisation of the huge raw material available and provide employment. This view was expressed by Dr. T. R. Naravane, Maharashtra's Minister for Prohibition and Social Welfare, in the course of a talk broadcast from All India Radio, on the occasion of the All India Palm *Gur* Day Celebrations. Not long ago, the country used to export *jaggery* and sugar manufactured from the sweet juice of the palm tree to many European and other countries in large quantities. The palm tree, though looking so insignificant, played a very important role in the country's life, particularly in the village economy. In fact, it used to be the only source of *jaggery* for the villager and its manufacture formed a major village industry.

It has been scientifically established, according to Dr. Naravane, that palm sugar is far superior to cane sugar from the nutritional point of view. *Neera* and palm *gur* contain almost all the vitamins and minerals that man requires in his daily diet. Their protein and sugar contents are much higher than in some fruits. So they can be good substitutes for fish and meat which men cannot afford in their daily diet. Detailing the benefits of the revival of the palm *gur* industry, Dr. Naravane said that, in the first place, the palm tree, is grown in sufficient number, could meet all our requirements of *jaggery* and sugar, thereby releasing the land under sugarcane for growing food crops, which are in short supply. This will also relieve, to some extent, the problem of unemployment by providing occupation to a large number of people.

Dr. Naravane estimated the annual production capacity of the 50 million of palm trees at 1.5 million tons of *gur* worth Rs. 84 crores and the industry, in his opinion, could provide seasonal employment to about 2.5 million workers. It will also help, he added, the prohibition policy of the State as well as encourage the positive aspect of utilising the juice as *neera* for manufacture of *gur* and sugar instead of merely condemning its use as toddy.

ROAD TRANSPORT AND ECONOMIC DEVELOPMENT

AUTOMOBILE INDUSTRY DESERVES GREATER ENCOURAGEMENT

By Virendra Agarwala

TODAY there is one car in the U.S. for every three inhabitants, in France one for nine, in Great Britain one for ten, in Germany one for thirteen and in Italy one for twenty-five. In India the ratio is one for every 8,000. In relation to population, France has as many cars today as the U.S. had in 1930. In India the current production of 30,000 commercial vehicles, 15,000 cars, 5,500 jeeps and 10,000 motor cycles is to be raised to 60,000, 30,000, 10,000 and 40,000 respectively by the end of the third Plan. We also have a target capacity of 8,000 three-wheelers during this period. The number of motor vehicles in India in relation to population is less than 10 per cent of that in Ceylon and less than one per cent of that in the United Kingdom. Road mileage per lakh of population is about 10 in India, as compared with 120 in Ceylon and 384 in the U.K. It may be hard to make a comparative study of the ratios between India and many other countries in the West. The East and West are competing to produce the goods the world needs. The West, particularly the U.S., has reached a stage where overproduction may become a problem to manufacturers whereas India is only on the threshold of the automobile age. It is largely true that a car is a necessity for an American while it is still considered a luxury for an Indian. Economic prosperity is judged in the final analysis by the development of a country's automobile industry.

It is obvious that the indigenous automobile industry cannot make substantial progress unless the increase in the number of cars is accompanied by a wholesale modernisation of the road system and by streamlining the road system in our cities and providing better parking facilities. It is equally true that the Central and State Governments have begun to realise that political and social pressure for better roads proves irresistible once everyone owns a car or any other roadable conveyance or hopes to own one in the not-so-distant future. Rising incomes spur the individual to buy a car and this means that the Government itself will have more money to spend on roads. Such expenditure is essential for the development of the automobile industry. The State Governments in India derived Rs. 116.73 crores from motor vehicle taxes during the second Five-year Plan. The yield from sales tax on motor spirit was Rs. 33.14 crores in the first Plan and Rs. 58.31 crores in the second Plan. The expenditure on road development in the second Plan is estimated to be about Rs. 224 crores.

Roads in Third Plan

The cost of the road development programmes included in the third Plan is about Rs. 324 crores—the programmes in the State sector are estimated to cost about Rs. 244 crores and those in the Central sector Rs. 80 crores. The latter cover both national highways and roads of inter-State and economic importance. Presiding over the 26th session of the Indian Road Congress, Mr. K. Barua disclosed that the Chief Engineers had recommended an allocation of Rs. 590 crores on road development. Warning the planners that no country could think of embarking upon ambitious economic development without simultaneously and adequately expanding transport facilities, Mr. Barua remarked that road transport not only assisted economic progress but also generated economic development. Road development in a vast country like India is essential for the balanced development of the different regions and this calls for more road links and larger production of automobiles, both passenger and commercial. In the context of large-scale agricultural and industrial expansion, the steady population increase and the urgent need for bringing about a balanced development and emotional integration of the country, the need for construction of more roads is as immediate as the production of more vehicles. At present there is hardly half a truck per mile of road in India which compares very unfavourably with the figures of other countries where there are five to ten trucks per mile.

Addressing the Federation of Associations of Small Industries, the Prime Minister asserted that the development of heavy, medium and small-scale and village industries is vital for economic development in rural areas. Such industries need raw material, small-sized machinery and other equipment and, last but not least, a market for their finished goods. It is felt that such industries cannot make any progress, unless we have a network of roads connecting every village throughout the country. Road transport would also be popular with such industries because of the speed with which the goods can be transported. Such entrepreneurs cannot lock up their meagre resources for long periods.

There were 81.27 accidents and 9.2 deaths per 1,000 vehicles in India even though the vehicle density is as low as 1.5 per mile. This has been attributed to the geometrics of roads with allied conditions being stable while the speed of modern vehicles has risen sharply. The total mileage of surfaced roads is now about 144,000 and of unsurfaced roads over 250,000. The Nagpur Plan had envisaged that by 1963 the country would have 123,000 miles of surfaced roads and 208,000 miles of unsurfaced roads. The country has now a mileage of about 15,000 under the national highway system. At present 10 per cent of the long-distance traffic is carried by road but, according to a 20-year projection made by engineers in 1981, nearly 246 million tons out of 800 million tons of the total long-distance traffic would be transported by roads. This would mean a tenfold increase in twenty years. It is true that the number of accidents is much lower in Western countries in spite of much higher speed as compared with that in India. It is obvious that this difference is largely due to proper network and better surfaced roads in these countries. It is not merely a question of economic development, but also from the point of law-and-order situation in the country our roads need to be so developed that the problem of rising road accidents and the loss of human life is at least avoided. It is the primary responsibility of the Government to create such favourable situations that the number of accidents are considerably reduced.

Automobile Industry

Along with the development of better roads throughout the country we also need to make rapid strides in the development of the automobile industry. To move millions of men and tons of materials quickly over leads of 100 to 500 miles, West Germany preferred building a new roadway system to extend their well-established and highly efficient railways. In India, 5-ton lorries, each with two 5-ton trailers, can follow each other at intervals of 10 seconds in almost uninterrupted streams, as they frequently do in many Western countries. This alone means a throughput of the order of 60 tons per minute or over 85,000 tons per day on each lane. The Indian productivity team on road transport has found that its productivity is extremely low in India and has ascribed regulatory measures as the main cause. The permissible gross laden weight of Indian trucks is 8 to 12 tons as compared with 30 to 32 in Germany and the U.S. The bad condition of roads is also responsible for the wastage in road transport. About 60 per cent of the total road mileage consists of earthen roads. Most of the national highways are one-carriage ways. The thickness of these and the State highways is insufficient for the present volume and intensity of traffic.

The development of motor transport is not merely a question of adding more vehicles. It is bound up, on the one hand, with the development of roads and, on the other, with the pursuit of taxation and licensing policies aimed at ensuring maximum economy and efficiency in operation and the best possible service to the users. A simplification of the complex tax system in India with its wide variations in the burden of taxation from State to State and a linking up of the taxation of motor transport with a dynamic programme of road development and maintenance are the most urgent tasks in India. It is significant that in India the production of commercial vehicles went up from 9,187 in 1955 to 26,538 in 1960 while the output of jeeps and cars increased during the same period from 12,865 to 24,598. In the coming years the output of commercial vehicles has to be stepped up to a higher rate than the production of cars so that the many-sided problem of meeting the transport needs of a rapidly growing population, which is also well set on the path of urbanisation and industrialisation, may be met most economically and efficiently. Coal could be carried cheaper in heavier trucks than by rail. What is required is that the trucks should be heavy, that is, 12 to 15 tons, and the roads should be able to bear this weight.

Ambiguity

Ambiguity has overtaken the automobile industry largely due to a move for the baby car project in the public sector. The Ministry of Commerce and Industry which has sponsored the scheme has argued that the initial production target will be 20,000 cars against a minimum optimum capacity of 50,000. The cost of the factory is estimated at Rs. 16 crores, about half of it in foreign exchange. But both the Planning Commission and the Ministry of Finance are not able to secure foreign exchange for the project and they have advised the Ministry concerned not to sponsor it during the third Plan period. It may be pointed out that this project does not figure in the Plan and that even a non-Governmental credit may be reckoned by the Aid-India Club in undertaking commitments to meet the foreign exchange requirements of the third Plan as a whole. In other words, to the extent that such a non-Governmental credit is available for this project, the Aid-India Club may reduce its level of assistance, thus affecting the timely execution of other projects which have been given a higher priority in the Plan. Apart from these practical difficulties in the way, the Government may be required to reconsider the question in principle as such. The nationalisation of air transport should convince us by now that it has not either reduced its fares or provided an efficient service to the people. Passengers are required to remain on the waiting list for weeks together. Let history not be allowed to repeat itself in this case. It is hoped that the authorities themselves would abandon the proposal as arguments against it are so apparent and convincing.

Heavy Taxation

Existing automobile manufacturing units in the country have been set up in collaboration with foreign enterprises and in consultation with and approval of the Government. Inadequate foreign exchange allocations have added to the difficulties of power shortage and labour and have been primarily responsible for curbing the further growth of the industry. But still, it has gradually consolidated its position, the indigenous content of the cars has steadily increased, and the assembly line is already there and should be adopted to meet larger demand. The Planning Commission has allotted only Rs. 43 crores of foreign exchange for the expansion of the automobile industry during the third Plan, as against Rs. 70 crores required by the industry. It is understood that the restricted volume of production is the primary reason for the high cost of automotive products in India. The relation between the quantity of output and cost of production is more pronounced in the case of the automobile industry than in most other industries. None can afford to install modern cost-saving machinery unless their output is substantially higher than at present. Moreover, imported raw materials are available to Indian manufacturers only at higher prices than those at which motor car manufacturers abroad are able to obtain them. The contribution of the automobile manufacturers to the exchequers of the Union and State Governments by way of customs duty, excise duty and sales tax, etc. has increased tenfold over the last seven years and is estimated to be well over Rs. 20 crores per year at present.

The incidence of Government duties is so high that the purchaser of an automobile contributes anything from 25 to 35 per cent of the price paid by him towards the Government exchequer. In 1960, out of a total production of about 19,000 cars in the country, about 9,199 were Hindustan Ambassadors. The ex-factory dealer price of Rs. 11,554, including Rs. 1,000 duty, has a foreign content of only Rs. 2,125 c.i.f. or 18.4 per cent of the total price.

The country owes much to the automobile industry. The success of our Five-year Plans hinges, to a large extent, on road transport. Let us not falter at this vital stage in our development plans. The growth of this basic industry should be encouraged at all costs.

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

A Prospectus together with the documents specified herein has been duly filed with the Registrar of Companies, Madras.

The consent of the Central Government has been obtained to this issue by an order No. R. 388--CCI/61 dated 14-11-1961 of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

An Industrial Licence L. 34 (6) 21/60/L--IND. dated 30-8-1960 issued under the Industries (Development and Regulation) Act 1951 has been obtained from the Central Government for effecting a substantial expansion to this existing industrial undertaking at Serakuppam, P. O. Vadalur, District South Arcot, Madras State, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Company's shares are dealt in and are officially quoted by the Madras Stock Exchange Ltd. Application is being made to the Madras Stock Exchange Ltd., for permission to deal in the present issue of shares.

The Subscription Lists will open at 11 a.m. on Wednesday, the 24th January 1962 and will close at 5 p.m. on Wednesday the 31st January 1962 or earlier as soon as the subscriptions approximating to the amounts issued hereinunder to the public have been received but not earlier than 5 p.m. on Saturday 27th January 1962.

SESHASAYEE INDUSTRIES LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956). DATE OF INCORPORATION 12TH DECEMBER 1957

SHARE CAPITAL

Authorised :

720,000 Equity Shares of Rs. 10 each	Rs.	72,00,000
280,000—6¼% Cumulative tax-free Preference Shares of Rs. 10 each	Rs.	28,00,000
Total ..	Rs.	1,00,00,000

Issued, Subscribed and Paid-up Capital:

316,000 Equity Shares of Rs. 10 each	Rs.	31,60,000
84,000—6¼% tax-free Cumulative Preference Shares of Rs. 10 each	Rs.	8,40,000
Total ..	Rs.	40,00,000

Present Issue and offer :

400,000 Equity Shares of Rs. 10 each	Rs.	40,00,000

The said shares are offered for subscription in cash at par in terms of this Prospectus and the subscriptions for the said shares are payable as follows:—

On application	Rs. 5 per share
On allotment	Nil.

and the balance will be payable in two calls of Rs. 2.50 nP. each, the first call will be made three months after the date of allotment and the second call three months thereafter.

The Preference Shares carry a fixed cumulative preferential dividend at the rate of 6¼ % on the capital paid up thereon from the date of allotment and free of any deduction for Indian Income-tax and to a right on a winding-up to be paid all arrears of preferential dividend whether earned, declared or not down to the commencement of the winding-up and the capital paid up thereon but to no other rights in the profits or assets of the Company. The said dividend will be computed and paid in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

The shares now issued will rank for dividend and be in all respects *pari passu* with the existing equity shares of the Company and will be entitled to participate equally with the existing Equity Shares in any dividend that may be declared after the date of their allotment irrespective of the date on which such allotment has been made.

The entire present issue of 400,000 Equity Shares has been underwritten. No shares are issued for consideration other than cash.

REGISTERED OFFICE

No. 1. ALEXANDRA ROAD, CANTONMENT, TIRUCHIRAPALLI-1.

OBJECTS

The following are the main objects of the Company as contained in the Memorandum of Association:

1. To carry on the business of manufacturers, importers, and exporters of and dealers in ceramic products of all kinds including electrical insulators and other porcelain products and their parts and accessories.

2. To carry on the business of manufacturers, importers, exporters of and dealers in all kinds of transformers, switchgears, meters and their parts and accessories.

HISTORY OF THE COMPANY

Messrs. Seshasayee Brothers (Private) Ltd., Tiruchirapalli, obtained for the benefit of this Company two licences under the Industries (Development and Regulation) Act, dated 29th October 1956 and 7th October 1958 for the establishment of an industrial unit for the manufacture of porcelain High Tension and Low Tension insulators and associated cast iron and non-ferrous castings and malleable castings and mild steel forgings. The Company constructed a factory at Vadalur in South Arcot District and went into trial production early in 1960 and has now standardised the production of conventional transmission-line insulators and their associated metal parts.

Commercial production started early in 1961 and the Company has effected deliveries of high tension and low tension insulators and hardware components to several State Electricity Boards and Private Undertakings against orders received and according to specifications required. The materials delivered have afforded full satisfaction to customers.

High Tension Insulators and porcelain accessories are being overwhelmingly imported into this country, as the small number of factories in India which are engaged in the manufacture of these products are able to meet only a fraction of the present demand. The Directors have carefully considered the demand for high tension insulators and are satisfied that a growing market exists for these goods. They believe, it would be of immense advantage to the Company to enlarge the plant and augment its installed capacity for production of insulators and malleable cast iron parts in order to meet the pressing demand that is in evidence from the various sectors of electrical industries. While the main consumers of high tension insulators are State Electricity Boards, electricity undertakings, manufacturers of switchgear and transformers, the Indian Railways who have recently been enlarging the area of their electrification have started making their demands for high tension insulators. The Directors believe that it is not only desirable but absolutely essential that the present capacity of the factory should be augmented with a view to meet both existing and anticipated demand.

The Company has now obtained a licence from the Government of India for expanding the present capacity from 1,200 tons to 3,000 tons of insulators per annum. The Directors expect that the entire output will be absorbed by current demands. The Company's Technical Consultant, Dr. Ing. habil Kurt Draeger, in consultation with the Company's engineers, has prepared a detailed scheme for the expansion of the factory and has recommended its immediate implementation. The more important items of Plant and machinery required for this expansion will be supplied by Messrs. Franz Kirchfeld, Dusseldorf, West Germany. The Government of India have kindly allotted to this Company the foreign exchange required for the import of plant and machinery. Dr. Draeger has agreed to send technicians from Germany to India who will stay and work in both the Ceramic and Foundry Sections of the factory until such time as rated production capacity has been fully established. He will also be periodically coming over to India to advise on quality control and on the expansion of the range of the Company's products.

PLANT AND MACHINERY

The Company has obtained an Import Licence (No. 991677/TPWG/61/HQ-G-I dated 26-10-1961) for importing the necessary plant and machinery for this project and firm orders have been placed with the Company's suppliers, Messrs. Franz Kirchfeld, G.m.b.H., Dusseldorf, who have been able to negotiate and secure advantageous prices.

TECHNICAL COLLABORATION

The Company has entered into an agreement dated 1-7-1958 with Dr. Ing. K. Draeger of Honef, West Germany, in terms of which he has to render assistance to this Company, in the planning and supervision of the factory erection and in attaining rated capacity of 1,200 tons of porcelain insulators per annum.

In pursuance of the said agreement Dr. Draeger has been responsible for the design and lay-out of the existing 1,200-ton plant. He has assisted in the purchase of plant and machinery for this project in Germany and India, provided personnel for erection of the plant, trained a team of the Company's engineers and technicians in one of his associated factories, namely, Rhein Westfallische Isolatern Werke at Siegburg in West Germany and two of his senior technicians are at present in the factory supervising production and training labour.

Dr. Draeger has agreed to give his assistance for the expansion scheme and the Company has agreed that the Company will seek the approval of the Government of India for payment of additional know-how fee and royalty and to pay him such amount as the Government may approve for the services to be rendered by him and his deputies in connexion with the expansion project.

Dr. Draeger has now completed the Selection of the plant and machinery pertaining to the expansion project and has enabled us to place orders for the same. He is at present busy planning the lay-out of the buildings and taking such further steps as are necessary to speedily implement the expansion programme. He has also agreed to send to India such technical personnel as his deputies and assistants as may be considered suitable for the purpose. He and his deputies will be entitled to such travelling and living allowances in India as may be in vogue from time to time in contracts for engaging foreign technicians.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot is equity shares of the face value of Rs. 15 lakhs.

The capital requirement for the proposed expansion is estimated as follows:—

		Rs.	
(a)	Buildings	11.00	lakhs.
(b)	Imported machinery including import duty, freight and insurance	40.00	,,
(c)	Power Plant, Indigenous machinery and erection, charges and contingencies	6.50	,,
(d)	Expenses of this issue	2.50	,,
	Total Rs.	60.00	,,

It is proposed to provide for the above capital requirement as follows:—

	Rs.	
By issue of fresh capital	40	lakhs.
By borrowings	20	,,
Total Rs.	60	,,

The present issue of Rs. 40 lakhs has been fully underwritten.

ESTIMATED PROFITS

It is estimated that within a short period after the completion of the expansion, the expected profits would be sufficient after payment of dividends on Preference shares to provide a reasonable and attractive return to the Equity shareholders.

MANAGING AGENTS

Seshasayee Brothers (Private) Ltd. were appointed as the Managing Agents of the Company with effect from 6-3-1958 for a period of fifteen years by the Articles and by an agreement dated 6-3-1958 on a remuneration of 10% of the net profits of the Company subject to a minimum of Rs. 12,000 per year in the absence of or inadequacy of profits which minimum shall, however, be increased to Rs. 18,000 per year if and when the paid-up capital of the Company exceeds Rs. 20 lakhs.

PREFERENTIAL ALLOTMENTS

The Company has agreed to make the following preferential allotments, out of the present issue, namely, to the Life Insurance Corporation of India, shares of the face value of Rs. 10 lakhs in consideration of their having underwritten a like amount of shares, and Rs. 2,50,000 face value shares to the Investment Corporation of India, Bombay, in consideration of their having agreed to subscribe for the said shares.

UNDERWRITING COMMISSION

An underwriting commission of 2½% of the face value of the shares will be paid to each of the underwriters in respect of the shares underwritten by them respectively.

BROKERAGE

A brokerage of 1% of the face value of the shares will be paid to the authorised brokers and bankers including the underwriters in respect of share applications bearing their rubber stamp.

All applications must be made on the form accompanying the Prospectus which can be had from the Registered office of the Company, the Company's underwriters, Bankers and Brokers.

RAMTIRTH (HINDI MONTHLY)

Editor: **Yogiraj Shri Umeshchandraji**

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

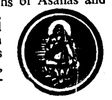
(First Part)

In Four Languages: **English, Hindi, Gujarati and Marathi**

(Author: **Shri Yogiraj Umeshchandraji**)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.



Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL

Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

4½ PER CENT

WEST BENGAL STATE ELECTRICITY BOARD BONDS, 1972

For Rs. 200 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of West Bengal)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.25 PER CENT

REDEEMABLE AT PAR ON THE 21st JANUARY 1972

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the State Bank of India at Calcutta, Bombay, New Delhi and Madras from 15th January, 1962 to 20th January, 1962, both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are a[v]
at all the offices mentioned above and at the Head Office
State Electricity Board, 1, Hastings Street (7th Floor), Calcutt[a]

DELHI

NONSENSE AND FOREIGN AID

By Norman A. Bailey

[The whole problem pertaining to the development of underdeveloped countries is put in its proper, rational perspective by Mr. Norman A. Bailey, an economist and a lecturer in international affairs at Colombia University, U.S.A., in the course of an illuminating article contributed to the Winter 1961 issue of the Colombia University Forum. Mr. Norman Bailey has highlighted what he calls utter nonsense written about the subject of foreign assistance to underdeveloped countries. Analysing the serious limitations to such assistance, as well as to private foreign investment, he emphasises that the only way to develop the economy of an underdeveloped country is through the formation of capital. The prescription he suggests is that development should be achieved, within a framework of political freedom, through work, low wages, honesty, efficiency, free enterprise, high profits regularly reinvested, a Government that confines itself to improving transport, communications, education and health, and through as much private foreign investment as the country can attract. Since the opinions expressed by Mr. Norman Bailey are of particular relevance to India now when those who are in high authority are preaching aggressive socialism, his observations on this subject are of topical importance.—ED.]

AN immense amount of utter nonsense has been written over the last few years about the economic development of underdeveloped areas, compounded of equal parts of stateism, wishful thinking, hopeful prognostications and gloom. The only way to develop the economy of any country is through the formation of capital. There is no other way. It does not matter if the country is nominally communistic, socialistic, statist or entrepreneurial, the process is the same. Only the means differ. This point cannot be emphasised often enough or strongly enough. It is a point most unwelcome to the economic managers, wizards, and soothsayers the proliferate in the underdeveloped countries themselves. A variety of nostrums are advocated and put into practice and, when they fail, others are tried. In the meantime, valuable time is lost, the world's population grows, and the world's poverty with it.

There are three main sources of capital available to any given country: public international investment, private foreign investment, and internal investment. Of the three, the last is by far the most important. This is another fact unpalatable to the purveyors of pipe-dreams, in the industrialised as well as in the underdeveloped nations. The cry now is for international moneys, as if capital from abroad were somehow more useful, more wealth-producing, more valuable than capital generated internally. But considering the magnitude of the task as usually presented—a substantial increase in the standard of living of four-fifths of the world's population—the entire sum donated or lent by all the international agencies and advanced nations put together does not amount to a hill of beans.

Furthermore, it will *not* become very much greater. The inhabitants of the industrialised nations will not stand for having their standard of living lowered. They will not even stand for having the rate of growth in that standard of living substantially lowered. They and their forebears created the wealth which they now enjoy, and to put it crudely, they control the necessary force to prevent any attempt to take it away from them. The United States is, at the present time, trying to reduce its own outflow of gold by inducing Western European countries to share a greater part of the 'burden' of foreign aid so as not to have to lower the already inadequate sum that the U.S. appropriates for such aid now.

Evil Effects

International loans and grants are not in themselves bad, of course. They can be perfectly sound and welcome additions to gross capital formation. In practice, however, they are almost invariably misused. The bureaucracies of the underdeveloped countries are inefficient always and corrupt usually. It cannot be otherwise, and all the best will and good wishes in the world will not alter the fact. A large proportion of the money made available is thus not utilised in any effective way. Another evil effect of these loans and grants is that they are looked upon and treated as a substitute for internal effort and initiative, which they are not, and cannot be. As such, they can be highly dangerous. International financial aid is a wonderful thing when properly used. It is not so used.

Private foreign capital is another matter, and does not offer all the dangers of public aid. In the first place, and most important, private capital, ESTMENted for the purpose of making a
LTD., Ewa generates its own capital, some
Bombay-1. in the country in the form of
4. UNITED and reinvestments, and most of
India Exc lly returns in the form of better
5. CHITRA costs, and greater efficiency, the
6. PATERSON balu Chett proper employment of capital.
7. LEWIS & n capital thus can be of great
Apollo Str erdeveloped country. Two things, however, must be said about this. First, the entire capital investment by the developed countries in the underdeveloped country is very small in relation to their internal investment and investment in each other. Total United States private direct and portfolio investment in all areas overseas is about $40 billion, less than ten per cent of our gross national product for the single year 1959! About 60 per cent of this investment is in areas already at a high stage of economic development. The second thing is that, rather than try to encourage a greater flow of private funds through welcoming foreign investment and treating it well, the Governments and peoples of most underdeveloped countries do their best to drive it out, or prevent it from entering in the first place. That they have not been entirely successful is a tribute to the spirit of enterprise.

No Other Way

This leaves internal capital formation. Every developed country in the world today industrialised largely through its own efforts, whether under *laissez faire* capitalism, as in the United States, England, France, Germany and so forth; under State capitalism, as in Japan; or under communism, as in Russia. Expropriation, liquidation of the kulaks, low consumption, miserable wage rates, slave labour—these are nothing more nor less than capital formation, communist-style. In a capitalist system, capital is formed by the reinvestment of profits, interest and dividends. The part of labour in the formation of capital is minimal, except in the most primitive manufactures. High productivity is the result of mechanisation. Mechanisation is the result of the investment of capital. Nothing more, nothing less. A very simple concept, and usually misunderstood, if not maligned. For the formation of this capital, three things are necessary: the proper atmosphere, a spirit of capitalistic enterprise and low wages. The first two are largely lacking in the underdeveloped areas. The third is present. Real wages are always low in these countries, and there is nothing, absolutely nothing, that Governments, labour unions, or the enterprises themselves can do about it. Wages are a direct result of the investment of capital, not *vice versa*, and they will not rise unless profits, substantial, continuing and secured profits, are made by the suppliers of capital and enterprise. There is no other way.

The great industrial complexes of North America, Europe and Russia were built by two factors: the sweat of underpaid workers and the investment of entrepreneurs or Governments (in the case of Russia). It may be unfortunate that it is so, but it is so nevertheless. It is unfortunate that disease, poverty and illiteracy exist, but they do exist, and neither wishful thinking nor economic panaceas nor mighty speeches will spirit them away. Only work, and profit. But the underdeveloped countries want the best of both worlds. They want to have high wages and costly programmes of social welfare, and at the same time rapid industrial development. It cannot be done now any more than it was ever done in the past. The economic implementation of this attitude results only in severe inflation, and this very inflation has been converted by some countries and some economists into a principle in itself of economic development, a fine example of making a virtue of necessity.

A Way to Expropriate

It is true that inflation is a way to expropriate the populace and confiscate its savings, and thus is a sort of bastard method of forming capital, but inflation also causes available funds to be invested in non-productive enterprises, such as land speculation. And in any case, prolonged inflation inevitably results, sooner or later, in disgust with the Government and collapse of the economic system.

It must also be said that some countries can never be, and will never be, industrial powers. They simply do not have the necessary resources, skills, raw materials or social setting to become highly mechanised and complex societies. This is not a counsel of despair. Neither Denmark nor New Zealand are highly industrialised countries, but they enjoy prosperity and high standard of living by acquiescing in, and using, the international division of labour, rather than fighting it at every turn.

Unfortunately, it must also be said that, given our present level of technology, there are many nations and regions in the world that will never become wealthy, either through industry, specialised agriculture, or in any other way. These are the overpopulated, underdeveloped and raw-material-lacking countries, of which there are more than most people like to think. This may, of course, change. Power may be derived from the sun, food from seaweed, and so forth. But at present they are just as much condemned to poverty in the world as a whole as are certain parts of the United States within the world's richest country.

But all the underdeveloped countries can raise their standard of living somewhat, and some can become wealthy and powerful. They can do it in the communist way, by adopting policies better fitted to beasts than men, by losing every vestige of self-respect, dignity and individual initiative. Or they can do it within a framework of political freedom through work, low wages, honesty, efficiency, free enterprise, high profits regularly reinvested, a Government that confines itself to improving transportation, communications, education and health and through as much foreign private investment as the country can attract. This is not a prescription for social justice. It is a prescription for economic development. It is curious, however, and instructive, that those countries which today have the highest degree of social justice are precisely those which in the past have followed this prescription.

U.N. SPECIAL FUND'S ASSISTANCE TO INDIA

The Governing Council of the United Nations Special Fund has announced an allocation of $2,025,000 (about Rs. 1 crore) for three projects in India. The sum earmarked is out of the total allocation of $42,814,300 for 48 projects in 37 countries, which the Council made at its seventh session held on the 11th inst. The new projects that will receive assistance in India are: the National Institute for Training in Industrial Engineering, Bombay ($669,000); the Central Instructor Training Institute, Hyderabad ($612,000) and the Rajasthan Sheep and Wool Institute ($744,000). The Government of India's counterpart contributions in respect of these projects are $1,620,000, $1,690,000 and $4,272,000, respectively. With this allocation, the total assistance that India has received from the U.N. Special Fund comes to over $15 million, the number of projects being 18.

TRENDS IN U.S. AGRICULTURE

PRODUCTION LOWER—PER ACRE YIELDS HIGHER

By Orville L. Freeman

U.S. SECRETARY OF AGRICULTURE

UNITED States farmers in 1961 had a relatively good year. They produced just about as much total food and fibre as in 1960, which had set an all-time record for output. Their net income was about one-tenth larger than in 1960. They co-operated with the Government in a new programme that began to reduce the surplus in feed grains. Their exports of farm products soared to a new high. Their total financial assets climbed to a new peak.

U.S. output of crops in 1961, principally because of reduced production of feed grains and wheat, was a little less than in 1960. The yield of crops per acre, however, was about 2 per cent higher than the record levels previously established in 1958 and 1960. Except for deliberate efforts on the part of farmers and the Government to hold back output of several commodities, of which the U.S. already had substantial surpluses, the 1961 output of crops would surely have soared to a new all-time record.

The United States, every year from 1952 to 1960, produced more feed grains than it used at home or sold abroad. The result was that unsold stocks of feed grains rose very high. Consequently, an emergency programme was provided in 1961 to decrease the output of corn and grain sorghums.

Under this programme, farmers were given the opportunity to reduce their acreage of corn and grain sorghum by from 20 to 40 per cent. For so doing, they received payments from the Government based on the normal yields of the land they took out of production. It was a voluntary programme; farmers could sign up or not, just as they thought best. More than a million farmers agreed to take out of production one-fourth of the nation's grain sorghum acreage and one-fifth of its corn acreage.

Despite an extremely sharp rise in per acre yields of these two crops, due to almost perfect weather, the 1961 corn crop—3,500 million bushels (1,233,400,000 hectolitres)—was down about 9 per cent; the grain sorghum crop—480 million bushels (169,152,000 hectolitres)—was down 21 per cent, and output of all feed grains declined about 11 per cent. This adjustment in output has made possible the first decline in U.S. feed grain stocks since 1952.

Wheat

Wheat production—1,200 million bushels (422,880,000 hectolitres)—was also about one-tenth smaller than in 1960, mostly because of drought conditions in part of the wheat-growing area.

Partly offsetting these declines in the crop production picture was a 25 per cent increase in the soyabean crop—700 million bushels (246,680,000 hectolitres—a small increase in production of cotton—14.5 million bales (a bale averages 500 pounds or 227 kilograms in weight)—2,000 million pounds (704,800,000 kilograms) and somewhat larger outputs of potatoes and various other commodities.

The smaller production of U.S. crops in 1961 was just about offset by larger output of livestock and livestock products. Production of milk, beef, pork, chickens, and turkeys increased, while output of eggs declined a little. It all added up to another year of abundant production and abundant supplies for U.S. consumers.

U.S. consumers obtain their diets for about 20 cents out of their take-home dollar—in other words, for about one-fifth of their incomes after payment of taxes. A better measure of the cost of food is the hours of labour required to buy it. On this basis, U.S. consumers pay only about half as much for food as do consumers in such economically well-developed countries as England and West Germany, and one-third, one-sixth, or even one-tenth as much as consumers in economically less developed countries.

The average U.S. consumer in 1961 consumed about 87 pounds (39.5 kilograms) of beef, 63 pounds (28.6 kilograms) of pork, and almost 38 pounds (27.25 kilograms) of chicken and turkey. He averaged almost an egg a day. Dairy products, including fluid milk and cream, ice cream, cheese, and butter, also constituted a large part of his diet. He ate about two pounds (.91 kilogram) of fresh fruit per week, plus a liberal quantity of canned and frozen fruit. He consumed about six pounds (2.72 kilograms) per week of fresh, canned, and frozen vegetables, including potatoes; and he filled out his diet with substantial quantities of food grains.

In 1960, the net income derived by farm operators from agriculture was estimated about $11,700 million. In 1961, net income increased by about $1,000 million. This was due in part to the Feed Grain Programme, in part to higher price supports on a number of important commodities, and also to slightly larger marketings at slightly higher average prices than prevailed in 1960.

Exports of agricultural products from the United States reached an all-time high in the fiscal year that ended 30th June 1961. The total was $4,900 million—an increase of about one-tenth over the preceding year and of between 4 and 5 per cent over the earlier record established in fiscal year 1957.

About one-half of U.S. cotton, wheat, and rice production went overseas. So did two-fifths of the tallow and grease output, nearly one-third of the tobacco, and one-fourth of soyabeans and oil.

Financial Position

The credit and financial situation of U.S. farmers also improved during 1961. It is estimated that, as of the end of 1961, farmers' financial assets, including the value of their land, buildings, machinery, livestock, household goods and savings, will total more than $211,000 million. This would be an increase of about $5,000 million during 1961. Subtracting all the debts owed by farmers—about $27,000 million—the net worth of U.S. farmers at the end of 1961 was $184,000 million, or an average of almost $50,000 per farm.

The Government has established a number of objectives for agriculture which it sought in 1961 and will continue to seek in the years ahead. One objective is to raise farm income, which we feel had fallen behind the rate of national growth during the 1950's. A second objective is more effective use of our agricultural abundance and productive ability at home and abroad. We have expanded Government food distribution programmes at home and have sharply stepped up the Food-For-Peace Programme abroad. To enable us to make wise and effective use of agricultural abundance in areas of need throughout the world, we published, in 1961, a World Food Budget. This document pinpoints food supplies and food needs country-by-country throughout the world. We are sure it will be a valuable tool in the effective employment of U.S. abundance and in using food in the interest of world peace and economic development.

India was one of the main beneficiaries in the overseas aid programme of the Ford Foundation during the year ended 30th September 1961, receiving as it did, grants aggregating $5 million during the year. These grants included $800,000 to West Bengal for the establishment of a metropolitan planning organisation to formulate a development plan for Calcutta, $600,000 to the Institute of Public Administration in New York for comparative urban research and training, based primarily on the Calcutta project, $2.34 million to finance agricultural demonstrations in one district in each of seven States, $434,000 for the Institute of Management at Calcutta as a post-graduate training and research centre in business and industrial management, $603,000 for family planning programmes, $600,000 for the small industries extension institute, $200,000 for a national institute for industrial design to improve the quality of manufactured goods, and $181,000 to help train Indian engineers in management production methods in the U.S. steel industry—a programme begun in 1957.

EFFECT OF LEGISLATION ON COLLECTIVE BARGAINING

EXPERIENCE OF LATIN AMERICAN COUNTRIES

THE visit of Prime Minister Nehru to Mexico in 1961 and the visit of Dr. Arturo Frondozi, President of Argentina, to India last month marked the beginning of a new chapter in Indo-Latin American relations. Because of this country's desire (for political and economic reasons) for closer relations with U.S. and Canada, the two powerful countries of the New World, India's relationship with the relatively less developed, but not less important, countries of Latin America, has not been as close as it should have been. Like India and Japan in Asia, Mexico and Argentina in Latin America are now two strong bulwarks of democracy. They are also the two key nations in Latin America. There is another reason why India should cultivate close contact with Latin American countries and that is the identity of interest and problems of these countries and India. Both India and Latin America, therefore, stand to benefit by mutual exchange of experience and ideas. One of the important fields in which there is striking similarity between the conditions in Latin America and India is industrial relations. As in India, so in Latin American countries, legislation and collective bargaining play an important role in labour-management relations.

The question whether legislation strengthens or weakens collective bargaining and trade union movement has been the subject of much debate in this country. While some have argued that labour legislation, by giving the benefit of legal protection to workers, strengthens their power to bargain with employers on equal terms, others have contended that it cuts at the root of collective bargaining by providing workers protection through methods other than collective action by themselves. The official stand has been that, while legislation or Government intervention is unavoidable in the context of planning, real progress could be made only through co-operative arrangements between the parties themselves and that the Government should give all possible encouragement and help to both parties to get together and resolve their differences through mutual negotiation and agreement.

Are legislation and collective bargaining mutually exclusive? Does the one help or obstruct the other? This question is of interest and importance to all countries like India where industrial relations are governed by a combination of these two. The experience of Latin American countries in this respect is therefore of particular interest to India. Much light on this subject is thrown by a study of labour legislation and collective bargaining in the Latin American countries published in a recent (October 1961) issue of the *International Labour Review*. The study is based on the report of the Inter-American Study Conference on labour-management relations held under the auspices of the I.L.O. at Montevideo last year. A comparison of labour legislation and collective bargaining in Latin America with those in the U.S. and Canada is a distinctive feature of the study. The respective roles of labour legislation and collective bargaining in determining working conditions and preventing and settling disputes are of special significance, because of the inter-relationship of legislation and collective bargaining which exists in the American region and the apparent divergence of philosophy and practice between Latin America on the one hand, and Canada and the U.S. on the other, regarding the proper role of one or the other method.

Determining Factors

National attitudes towards the role to be played by legal enactments in fixing working conditions and settling labour disputes, observes the authors of the Study, are not only determined by considerations of social interest and economic power or utility in a given situation; they are also greatly influenced by general legal concepts and traditions, by political ideologies and by the general function of legislation in the organisation of the community. In Canada and the U.S., the greater reliance placed on collective bargaining, as distinguished from statutory regulation of working conditions, is in part a reflection of the pragmatic approach characterising Anglo-American legal concepts which are based on common law principles and on traditional preference for contract and custom rather than statutory provisions. On the other hand, labour law in Latin America follows the Roman tradition, that is, it consists of written law established by non-judicial bodies. This situation has led, in Latin America, to a predominance of legal considerations in the practice and theory of labour relations.

The legal approach of the Latin American countries finds its typical expression in the tendency to codify all conceivable matters relating to labour and social questions into one comprehensive statute book. This concept of codification is largely foreign to the Canadian and U.S. systems. The desire for legal perfection, which is so strong in Latin America, sometimes leads to a situation wherein the law is in advance of the real economic and social situation. But the function of the written law in some of the Latin American countries is sometimes more educational than normative in character. This concept of the role of legislation is somewhat alien to national traditions in Canada and the U.S.

Minimum Wage Fixation

The desire for legislation finds its most immediate expression in minimum wage fixation. Statutory determination of minimum wages and conditions of work has its genesis in the responsibility of the State to protect the worker as the economically weaker party in the employment relationship. Legislative minimum wage-fixing systems exist in all but a very few of the countries of the American region. They assume particular importance in a number of Latin American countries, in view of the low level of wages resulting in part from the relatively low degree of economic development and the concomitant fact that collective bargaining has not yet achieved an effective role in regulating wages and other conditions of work.

The fixing of minimum wages directly by legislation, in which the minimum wage is expressed in the form of a specified amount of money, is to be found in its largest sense in the U.S. where a minimum wage is fixed on a nation-wide basis by the Fair Labour Standards, as amended. However, direct, overall legislative minimum wage-fixing is comparatively rare in the American region. It would seem that only Colombia and Haiti have enacted on overall minimum wage by direct legislation. Other countries such as Uruguay have established minimum wages through direct legislation for specific industries. By far the most prevalent form of legislative wage-fixing in the American region arises out of enactments providing for the determination of minimum wages through the medium of special bipartite or tripartite boards.

Minimum wage-fixing is of crucial importance in the less-developed areas of Latin America, where, in effect, the minimum-wage scales are frequently the wage rates actually paid. On the other hand, in the U.S. and Canada, and in some areas of Latin America, a well-developed economy, including a strong trade union movement and effective collective bargaining, have served to create a relatively high general wage level. Hence, for these countries and areas, minimum wage-fixing is of less importance.

Conditions of Work

In addition to wages, legislation in the region deals, to a greater or smaller extent, with virtually all other conditions of work. While a maximum of normal hours of work is fixed by legislation, in almost all the countries of South and Central America, in the U.S. and in several provinces of Canada, the situation is somewhat different with regard to annual leave with pay. Such leave is recognised in the legislation of all countries in Latin America and in Canada. In the U.S., on the other hand, there is no general legislation in this field, but, in practice, workers, who are not covered by collective agreements, are usually entitled to an annual paid vacation on the basis of established custom.

It is evident from what has been said above that legislation plays a far greater part in the determination of working conditions in South and Central America than in Canada and the U.S. This is due partly to the low degree of development of collective bargaining in many of the Latin American countries, which obliges the State to intervene in the interest of the otherwise unprotected workers, and partly to the adoption of the Roman law traditions under which legislation regulates, in great detail, the individual contract of employment and the mutual rights and obligations of employers and workers arising out of it.

Role of Collective Bargaining

The role played by collective bargaining in fixing wages and working conditions and settling labour disputes varies considerably between different parts of the American region. Whereas it is the normal way of regulating employer-employee relationship in certain countries, it is hardly known in others. The practical significance of collective agreements is undoubtedly greatest in Canada and the U.S. In both countries, they cover undertakings in virtually all branches of industry, transport, services and commerce. To a very limited extent, certain areas of agriculture are also covered. In both the countries, collective bargaining is the basic and characteristic feature of labour-management relations. In some of the Latin American countries also collective bargaining has reached the highest level of development. These are: Argentina, Mexico, Cuba, and Venezuela. In others collective bargaining seems to play a less important part in industrial relations and is, in several cases, restricted to some of the more important undertakings.

The determination of wages and working conditions is the *raison d'etre* of collective bargaining and is the central theme of collective agreements. While, originally, collective agreements in Canada and the U.S. principally dealt with wages, with the evolution of collective bargaining processes, the number and variety of collective bargaining subjects have continually expanded. The typical Canadian or U.S. collective agreements of today contain detailed provisions relating to the various aspects of the employment relationship, such as wages, hours of work, overtime pay, rules governing lay off and recall, etc. In addition, some relatively recent developments in collective bargaining have made for the introduction, into Canadian and U.S. collective agreements, of so-called fringe benefit provisions, such as pensions, profit-sharing, health, accident, etc.

Coverage

It can be assumed that, inasmuch as there is a greater degree of legislative regulation of wages and conditions of work in Latin America than in Canada and the U.S., collective agreements in Latin American countries would not be as ample in their coverage of working conditions as collective agreements found in the former two countries. However, the range of subjects covered in agreements in those countries of Latin America where collective bargaining has developed to a substantial extent, as well as in collective agreements in certain major industries or undertakings in other countries, is quite broad. Some agreements frequently deal with matters seldom treated in similar agreements in Canada or the U.S. Mexican and Argentine collective agreements, for instance, normally contain numerous and extensive provisions often supplementing and improving on statutory norms. Further, quite apart from the machinery for settlement of disputes established by law, there is a growing tendency for collective bargaining agreements in the American region to provide for procedures for the efficient and fair settlement of disputes and sometimes also for joint bodies designed to reduce friction and promote co-operation in the relations between the parties.

Collective bargaining, already highly developed and generally accepted in Canada, the U.S., Mexico, Argentina, Cuba, Venezuela and a few other countries of the American region, is acquiring increasing practical importance in most of the remaining countries also. The existence of comprehensive collective agreements side by side with equally comprehensive labour legislation in a number of Latin American countries indicates that both collective bargaining and legal enactments are by no means mutually exclusive but can be, and in fact often are, complementary. While there are no indications in Latin America of an intention to lessen the volume of legislative prescription in the labour field, efforts are being made in many countries to promote collective bargaining as a result of the growing awareness of its advantages and a number of Governments have made it their declared policy to facilitate and promote the practice.

The evolution of collective agreements, like that of sound labour-management relations, in general, is, of course, dependent upon certain prerequisites of a more general character, many of which are not yet present in a number of Latin American countries. These prerequisites include (1) a certain degree of industrialisation, (2) the organisation of undertakings as production units of a certain size, (3) a certain amount of stability in the work force, (4) a certain level of literacy and basic education, (5) political structure of the community and general economic development which are favourable to collective bargaining, (6) the existence of a basic legislative framework setting out clearly the mutual rights and obligations of labour and management, and (7) a willingness on the part of the parties to accept collective bargaining.

Apart from the absence of these prerequisites in many Latin American countries, there are two other major practical obstacles which have impeded the development of collective bargaining. They are: (1) the weakness of the trade union movement and (2) some obstacles arising out of legislation regulating labour-management relations. The weakness of the trade union movement in Latin American countries is attributed to the following factors: (1) predominantly agrarian character of the economy; (2) presence of various legislative and administrative enactments which have tended to curtail freedom of association; (3) ideological difficulties—that is, rivalries and conflicts between groups of persons holding different political or ideological beliefs and the presence of "outsiders" in the movement, and (4) financial weakness and unstable membership.

As regards legal obstacles, the I.L.O. study referred to at the outset of this article makes the following comment, which, incidentally, applies with equal force to India also:

"While the weakness of the trade unions is certainly the major handicap to the growth of collective bargaining in many Latin American countries, its development may, at least in several countries, also be curbed as a consequence of Government action. The State undoubtedly has the obligation to protect, through legislation, workers who are unable to protect themselves in the absence of strong associations. But legislative action—especially in a cultural environment which is favourable to legalistic perfection—may develop in a way which narrows the area of free collective bargaining to an extent where negotiations between labour and management are not only not stimulated but also lose a large measure of their usefulness and practical significance. This situation constitutes a real problem in some of the Latin American countries. If legislative provisions fixing working conditions are implemented in practice and if they not only contain minimum standards but rather constitute the most favourable conditions which can reasonably be expected under a given economic situation, rendering improvements by negotiations impossible, then a collective agreement can add nothing to the statutory provisions. A combination of legislation and collective bargaining, as it is practised in many, and attempted in other Latin American countries, can work only if the legislative enactments constitute merely a minimum on which improvements are possible, or take the form of general principles and standards which must be adjusted to practical needs or specific situation, or are limited to those questions on which legal action is indispensable. Further, legislation on conditions of work can be a useful means of promoting collective bargaining if it should be filled in by collective agreements or that certain conditions apply only in so far as the parties have not agreed on other solutions."

A Good Example

Mexico, the study points out, is a particularly good example in this regard. It has a very comprehensive Labour Code which has served as a model for other Latin American Labour Codes, supplemented by a tight network of collective agreements, which are particularly lengthy and elaborate as compared with the collective agreements of other countries. This situation is the result, on the one hand, of legislation that is flexible enough to leave a broad area for bargaining and, on the other, of collective agreements which, by references to the relevant statutory provisions and by the avoidance of gaps, repetitions and contradictions with legal norms, constitute a real supplement to the statutory provisions and adjust their objectives and spirit to industrial realities.

In conclusion, the authors of the study observe that the majority of Latin American Governments are endeavouring to promote collective bargaining by various means among which legislation occupies a predominant place. The intention of such statutory provision is certainly, in most cases, to facilitate and encourage collective bargaining, but there are also cases where they have the opposite effect. Nevertheless, it can be stated as a broad conclusion that, despite the difficulties facing it in some countries, collective bargaining has, in recent years, shown a steady development in Latin America and, with the progressive removal of obstacles peculiar to Latin America, its growth will undoubtedly be accelerated.

THE DAY BREAKS BRIGHTER TOMORROW

BEARING TOMORROW'S JOY: the strength
in four hundred million limbs.
Today's work. Today's patience.
Burden borne, feet firmly on the ground.
Tomorrow...a little less of care, a little more of joy.

And for HINDUSTAN LEVER, too,
tomorrow begins today.
In the research laboratory, in the factory and office.
Work, patience, care.
To serve tomorrow's homes and the nation's needs
with products that grow better and better.

TODAY AND TOMORROW...
HINDUSTAN LEVER SERVES THE HOME
WITH SOAPS, FOODS, TOILET PREPARATIONS

PR. 35-X33

PAPER FOR THE PLANS

Paper means progress—to us it also means business.
The throbbing pulse of India's industrialization can be felt as the country races towards the "take-off" stage. The Third Plan is the threshold that offers this exciting view of vital economic activity.
We at West Coast Paper Mills, with new expansion plans in hand, endeavour to keep in pace with the country's progress.
From our plant at Dandeli, during the year 1960–61, we manufactured 17,084 tons of writing and printing and 8,583 tons of Kraft paper resulting in a net saving in exchange of Rupees 4 crores to the National Exchequer.

BRITISH STEEL INDUSTRY'S PERFORMANCE

CONTROVERSY OVER PRICING FORMULA

THE British steel industry has been passing through difficult days. Its production performance in relation to installed capacity has not come up to expectations, for the actual crude steel output in 1961 has turned out to be just 22.3 million ingot tons, as compared with the 24.5 million tons forecast for that year and with the record output of 24.3 million tons achieved in 1960. The 1961 production represents 89 per cent of that year's aggregate steel-making capacity in the industry. This performance is compared with that of the previous years in the following figures:

	Capacity in million tons	*Production as per cent of capacity*
1954	19.9	98
1955	20.5	98
1956	21.6	97
1957	22.9	96
1958	22.9	87
1959	25.9	79
1960	25.9	94
1961	27.5	81

It will be seen from these figures that there has been an overall worsening in the industry's working in relation to capacity in the last few years, apart from the 1960 upsurge. Since last April, the industry has also not got back to 90 per cent working in any single month, nor is it likely to reach the level of 90 per cent working for some time to come. As this 90 per cent working has been assumed by the Iron and Steel Board in its formula governing fixation of steel prices, a controversy has arisen in recent weeks in Britain over the continued applicability of this formula at a time when production is likely to be less than 90 per cent of capacity. The industry's present rough estimate is that ingot production in 1962 is unlikely to exceed 21.5 million tons, though overall capacity will, by the latter part of the year, approximate 29 million ingot tons. This would mean only about 75 per cent capacity working, as against the 90 per cent capacity working which is taken as the yardstick for purposes of price fixation.

The Iron and Steel Board has recently replied to the industry's criticism and sought to justify its method of price fixation. A thorough reassessment of steel prices, according to the Board's statement, is made at intervals of two to three years. In between these major price determinations, interim adjustments, up or down, are made, if substantial changes in cost or other circumstances warrant them. Such variations in price, it is further stated, are intended not only to reflect changes in specific cost items but also to take account of improvements in productivity and fuel efficiency, which it is the Board's duty to ensure. The one per cent increase in steel prices (as against a 3 per cent increase asked for by the industry), announced by the Board in June 1961, is recalled in this connection. If this increase has turned out to be inadequate, it is because, according to the Board, the normal improvements in productivity have not been secured in a period of falling production during the past year. On the question of the average level of working assumed for price fixation, the Board has come close to admitting the need for a change in the basis. It has recognised the possibility that lower running rates may be associated with a long-term change from a phase of tight supplies to one of ample capacity. This recognition has led the Board to concede that some adjustment in the hitherto assumed average running rate of 90 per cent may be called for.

Actually, the Board has been studying this question for some time now. It is, however, faced with the problem of determining how much obsolete capacity should be excluded from the calculations of capacity for purposes of price fixation. The Board is stated to be deliberately aiming at forcing two million tons of older capacity out of production through its pricing policy. While both the industry and the Board have estimated steel demand at about 29 million tons by 1965, the Board's effort to force 2 million tons of obsolete capacity out of production would mean that the total capacity potentially available, on current plans, to meet the estimated 1965 demand would be 32 million tons. If the two million tons of obsolete capacity are in fact withdrawn from production, the industry would be operating only at around 90 per cent of capacity by 1965. But, if this obsolete capacity is not withdrawn, the average level of capacity working will be less than 90 per cent. The question is, therefore, how determined the Iron and Steel Board is to force older capacity out of existence. It looks as if the Board is aiming at more efficient production by forcing out obsolete plant and, on that basis, at a reasonable rate of return in its assessment of prices. In the circumstances, only some marginal adjustment in the average running rate of 90 per cent may be expected. The Board, in this connection, is stated to be keeping in view the prospect of intensified and extended competition.

The steel price sytem may, in any case, be expected to change, if and when Britain actually joins the Common Market of the Six. As British membership of the European Coal-Steel Community will follow automatically from its accession to the Common Market, the question arises whether the Iron and Steel Board in Britain can continue to *exercise its power to fix* steel prices. The Board cannot obviously do that, for it is the High Authority in Luxembourg that will then be in the picture. When most of the functions of the British Iron and Steel Board come to be discharged by the High Authority, the British steel industry feels that steel prices will be controlled much less stringently by the latter (the High Authority). But this does not mean that the British steel industry can look forward to any general increase in prices. On the contrary, it will have to face tough competition from other members of that Community. To face this competition, the British steel industry will have to weed out obsolete plant and improve productivity and fuel efficiency.

Some of the likely changes in the British pricing system, which will come about when the U.K. becomes a part of the Common Market, were recently foreseen by Mr. C. R. Wheeler, President of the British Iron and Steel Federation. According to him, the steel industry in Britain will have to abandon the system of uniform zonal delivered prices and, in its place, to introduce the E.C.S.C. system with its reliance on published basing point prices. One central feature of the E.C.S.C. pricing system is its requirement concerning the charging and the publication of non-discriminatory transport rates. How these rules will be applied in Britain, where the transport rates are determined by the Transport Commission, is not clear. Again, how the structure of British taxation will be modified in the light of the E.C.S.C.'s present pricing rules cannot be foreseen. Mr. Wheeler has the following to say on the tax question:

"The E.C.S.C. pricing rules require each Community producer *selling across the frontier* into another Community country to include in his selling price any turnover or sales taxes charged in the country of sale, but allow him to ignore for pricing purposes those turnover taxes which would have been paid in the country of production and to secure the remission of any tax actually paid in this form. The effect of this, in practice, is that, when a country imposes a relatively high proportion of its tax burden in the form of turnover or sales taxes, its producers gain a competitive advantage when they sell to other Community countries, whereas, when a country imposes a relatively small proportion of its tax burden in this form, its exporters are disadvantaged.... In Britain, however, *none* of the tax burden falling on steel producers arises in the form of turnover or sales taxes; and so our position in the Community would seem likely to be even worse in this respect than that of any other country."

It would appear that a number of interrelated questions relating to steel prices has to be studied in Britain before the Iron and Steel Board and the industry can work out changes in the pricing system in a way that will enable the British steel industry to face "intensified and extended" competition. But some upward revision in steel prices in the immediate future to reflect more fully the cost increases since early 1961 is a different matter which is not likely to present any great difficulty.

OIL PIPELINES AND TANKER TRANSPORT

An analysis of the impact of pipelines on the movement of oil by sea and thus its effect on tanker transport is contained in the report, recently published, of the Maritime Transport Committee of the Organisation for Economic Co-operation and Development which has its headquarters at Paris. The report compares the characteristics of pipelines and tanker transport and gives detailed comparisons with regard to their relative cost. Information is given on existing and planned crude oil pipeline systems in Western Europe, North Africa, the Middle East and North America, and an attempt is made to estimate their impact on the transport of oil by tankers. The report also traces the present pattern of ocean tanker movements and gives statistics showing the figures of oil production and of oil traffic by sea.

The following main conclusions are drawn in the report:

(i) It is necessary to distinguish between two types of pipelines: those which are complementary to ocean-going transport of oil by tankers and without which there would be no transport at all, and those which compete with tanker transport by shortening substantially the transport distance. The first category forms the great majority.

(ii) Pipelines lack the flexibility of tanker transport.

(iii) The existing and projected pipelines in Western Europe will, on the one hand, involve a certain saving in tanker transport by shortening the sea route but, on the other hand, will make oil more competitive with other sources of energy, thereby increasing the demand for oil and creating bigger tanker requirements.

(iv) Of the pipelines outside Western Europe, only two are likely to constitute real competition to tankers by shortening the transport distance—the pipeline system under construction in the Eastern European countries and the Trans-Arabian Pipeline.

(v) Factors which have an important impact on present and future tanker demand are the increase in world oil consumption and the change in the pattern of the oil trade, mainly as a result of the increase of oil production in or close to some of the principal oil importing countries, and the *rising export potential of the U.S.S.R.*

SCOTLAND'S GIANT STEEL STRIP MILL

Scotland's largest industrial project in the 20th century—the Colville group's £100,000,000 steel strip mill plan—is reported to be nearing completion. The first phase of the project, completed at the end of 1957, cost £25,000,000 and provided for new primary producing plant. Now the new cold reduction mill at Gartcosh, Lanarkshire, is in production and fulfilling the first export contract of highly finished sheet steel this week. The semi-continuous hot strip mill at Ravenscraig, near Motherwell—which together with the Gartcosh mill will cost £64,000,000—will be completed in the autumn.

Planned initial production of the Ravenscraig mill is 750,000 tons a year, of which 250,000 tons will be hot rolled sheets and light plates. The balance will be sent to Gartcosh for cold reduction. The output of the hot strip mill could be raised to 2,000,000 tons a year. A new slabbing mill will also be completed at Ravenscraig in April at a cost of £8,600,000.

BRITAIN'S "TRIDENT" JET PLANE

With the successful maiden flight, on the 9th instant, of Britain's new short-haul jet airliner (the Trident, as it has been named), a new phase in jet air travel is stated to have opened. The Trident, manufactured by the well-known firm De Havilland, has been developed to carry 101 economy-class passengers at a speed of 606 m.p.h. over stage-lengths of upto 1,700 miles.

It is powered by three Rolls-Royce Spey by-pass turbo-jets mounted on the rear fuselage well aft of the passenger cabin—a factor which not only makes the Trident the first three-jet airliner in the world, but also ensures quieter travel for passengers. The Spey engine is notable for its economy of operation, and for its quietness.

The Trident is the first *short-haul civil* aircraft to be equipped for automatic landing, to be introduced in stages until the aircraft will be able to land in the worst weather. The aircraft has low operating costs—a vital consideration in short-haul operations.

Exports of electrical and allied engineering products from the U.K. during the first nine months of 1961 amounted to £238 million. The figure is a record and represents an increase of 10 per cent over the corresponding period of 1960. These figures indicate an annual rate of £316 million. Most sectors of the electrical industry have shared in the increase, exports of electronic goods rose from £50 million to £60 million, domestic electrical appliances from £22.8 million to £25.1 million and electrical machinery from £47 million to £51 million (of which switchgear rose from £13.6 million to £14.7 million). The most spectacular increases were made in the exports to the Common Market. A total of £34 million was exported to the Common Market countries, an increase of 45 per cent. The leading customer-countries were Germany, the Netherlands and Italy. Among Commonwealth countries, a large increase was noted in exports to South Africa, New Zealand and Ghana.

Commonwealth ships form the largest merchant fleet in the world, according to Lloyd's Register of Shipping. Their total tonnage is almost 21.5 million. The U.S. continues to hold second place, with 24.2 million tons, and Norway, with 12 million tons, has regained the third place it had lost to Liberia in 1957. During the past year, Britain regained the lead lost to Liberia two years ago in the size of its oil tanker fleet, and now leads the world with 7.3 million tons. The world total of merchant shipping is estimated at 135.9 million tons—an increase of 6 million tons over the previous year.

NEW PRODUCTS AND PROCESSES

New Machine for Cutting Sheet Metal

BLANKS of any shape or size can be cut from ferrous and non-ferrous sheets up to 3 mm. thick with the Trumpf nibbling machine now being marketed by a British firm F. J. Edwards of London. The machine will also cut plastics and aluminium sheets up to 6 mm. thick. An advantage claimed for the machine is that, since it is throatless, the sheet to be worked can be manœuvred through 360 degrees around the cylindrically shaped tool. The sheets can be of any size conveniently handled by the operator. Internal nibbling of any shape can be carried out, it is stated, and requires only a pre-punched or drilled hole of 18 mm. diameter. The smallest radius of cut possible is 9 mm. The machine has two speeds, 800 and 1,200 r.p.m., through a two-step pulley and vee-belt. The drive is from a 2 h.p. motor carried inside the steel fabricated body. Standard electric supply is 400-440 volts. The machine needs little maintenance and the mechanism is easily accessible. The punches and dies can be re-ground and set up again without difficulty.

Pipelines for Transporting Coal and Iron Ore

Huge pipelines for the transportation of solid materials such as coal, iron ore, grain and chemicals, will be used to an increasing extent in the United States according to Mr. Charles C. Whittelsey, President of the well-known engineering concern of Ford, Bacon and Davis, Inc. Pipelines would also be used as miles-long mixing vats in which raw materials would be processed in transit, and would be designed to carry different kinds of materials at the same time, to be separated at various destinations. Solid materials are already being pumped over short distances through pipelines. Coal mixed with water, for example, is now transported more than 100 miles by pipeline in the State of Ohio, for delivery to an electric power generating station. It is reported that experiments are now being conducted in processing wood-pulp while it is in transit through pipelines.

Automobile Bumpers

A British machine has revolutionised the method of manufacturing automobile bars or 'bumpers' and is in use in most British and many Continental motor car factories. The machine, produced by Redman Tools and Products, Ltd., Worcester is hydrauically operated, is capables of forming deep-section bumpers in heavy gauge mild steel or stainless steel in one operation. It offers about 35 to 40 per cent saving in labour and a 15 per cent saving in metal as well as a saving on tooling up of the order of £15,000 to £20,000. It also gives the bumper stylist a greater freedom than ever before since bars can be shaped to his liking without the limitations imposed by presses. Metal is polished in the flat—another advantage over the old method—and fed into the machine automatically. Thereafter the whole process is push button controlled—bumpers being formed in 20 seconds.

Detecting Cable Faults

A device operating on radar principles, which is claimed to locate faults in undersea cables quicker and more accurately than ever before, has been designed by British Post Office engineers and is now being manufactured and marketed under licence by a British electronics company, Furzehill Laboratories Ltd. The equipment—called Pulse Echo Fault Locator—is being installed to maintain the Commonwealth round-the-world cable which is now being laid. It sends a special search signal along the cable at speeds around one hundred thousand miles a second. This reports the position of the fault on a cathode ray tube in the repair vessel using a precise quartz crystal standard to measure the distance. In suitable circumstances it is possible to narrow down the area of the fault as little as 80 yards, saving valuable communication time and cutting costs. The locator can also be used for land cables and for tests in cable manufacture.

New Method of Cutting Steel

A novel system for the cutting of heavy steel sheet used in shipbuilding is under development in Norway. It eliminates the need for drawings, and replaces them with coded numbers to describe the form of the sheet to be cut. The coded numbers are fed on to a punched tape, and when this tape is run through a special apparatus, the movements of the flame-cutter are controlled accordingly to produce the sheet to the desired contour. The system is expected to reduce the time needed for drawing a ship's hull to about a hundredth of that required now and it is expected to be in full practical use in about two or three years.

Motor-car Exhaust Silencer

A motor-car exhaust silencer acting on a new principle has been introduced in America. Instead of using baffle and sound traps, the silencer employs reverberation chambers in a straight-through exhaust pipe. These chambers are pipes, each about the size of a sausage, closed at one end and fastened to the inside of the exhaust duct. They leave room for the corrosive gases and steam in the exhaust to pass through to the open air. When sound waves go through the exhaust system, part of them is trapped in the reverberators, which have their open end towards the engine. Waves are reflected from the closed end of the pipe back into the duct and they cancel out the oncoming ones. The result is to reduce the strength of the unmuffled exhaust.

New Insecticide

A new insecticide with improved properties has been announced by the Shell International Chemical Company. It belongs to the same family of chlorinated hydrocarbons as aldrin and dieldrin and is called Telodrin. This material, a white crystalline solid, insoluble in water, is claimed to be at least four times more active as a soil insecticide than any other in common use. In trials it has given good control of wireworms, white grubs, leatherjackets, cutworms and root flies. As a leaf insecticide it is so far the most effective of the chlorinated hydrocarbons against aphids and bugs. It has also given good results on trials against the berry borer on coffee, the flea beetle on maize, the rhinocerus beetle on palms, and the Colorado beetle on potatoes. Telodrin is thus a very versatile insecticide. More than 400 field trials have been carried out in 65 countries over the past four years. It can be formulated as a dust, a wettable powder or a concentrate to make emulsions. It does not damage plant tissues or affect the flavour of crops. At the very low dosage recommended it is not harmful to human beings.

Activated Earth

The Regional Research Laboratory at Hyderabad has worked out a process for the activation of earths using sulphuric acid. The cost of production for a plant having a capacity of five tons per day works out to about Rs. 410 per ton with this method. An investment of Rs. 6 lakhs is estimated to give an annual return of 35 per cent. Extensive deposits of fuller's earths and bentonites occur in Rajasthan, Gujarat, Mysore and Andhra Pradesh which can be used for bleaching vegetable and mineral oils. The use of activated earths in India, however, is of recent origin. Establishment of the first vanaspati factory in 1930 gave a fillip to the setting up of activated earth industry, the first being the Bombay Sewree Chemicals set up in 1936. As the demand for activated earths increased, more factories were set up at Bombay, Calcutta, Delhi, Madras and Bhavnagar. The total installed capacity of these factories now is about 6,000 tons per annum as compared to the production of 3,500 tons of activated earths in 1958. The number of vanaspati factories all over India has gone up. Thus, for the growing requirements of the vanaspati industry and for the dark vegetable oils now used for hydrogenation, the present production is inadequate and there is considerable scope for the establishment of more activated earth factories in the country.

PRODUCERS OF SODA ASH RESENT NEW CEILING PRICE

INDUSTRY'S PROGRESS SATISFACTORY

THE ex-works ceiling price for light soda ash has been revised by the Government of India and fixed at Rs. 19 per 50 kgs. and that of heavy soda ash at Rs. 20 per 50 kgs. after considering the Tariff Commission's report on the subject. In addition, an allowance for freight charges, at Rs. 15 per tonne for West Coast ports (Bombay and Cochin) and Rs. 25 for East coast ports (Madras, Calcutta and Vizagapatnam), has also been permitted for ex-port town prices. The ceiling price is inclusive of selling commission but exclusive of excise duty, which is Rs. 20 per tonne for both the types of soda ash, local taxes, transportation and handling charges from the works. In fixing the prices thus, the Government has departed considerably from the actual recommendations made by the Tariff Commission. In the first place, the ceiling prices fixed by the Government are lower than those suggested by the Commission, by about one rupee per 50 kgs. in the case of light soda ash and about Re. 1.50 per 50 kgs. in the case of heavy soda ash. Secondly, the Commission wanted the selling price to be fixed only on an ex-works basis. It did not recommend the ex-port town prices. Naturally, the producers of these chemicals are aggrieved over the Government's decision. The representatives of the industry, in a communication to the Government of India, have urged the reconsideration of the revised ceiling prices. Their complaint, in short, is this: "The ceiling prices now fixed ex-works are lower by as much as Rs. 20 per tonne than those recommended by the Tariff Commission, after a detailed inquiry into all aspects of costs and manufacture. Further, the industry is now expected to bear very heavy freight charges for transporting the commodity from the works to the various ports. This, in addition to being contrary to the Commission's recommendation, makes a further serious inroad into the relatively modest return on invested capital allowed by the Commission."

Regrettable Feature

A regrettable feature of the Government's decision is the absence of any explanation for departing from the conclusions of the Tariff Commission. It is, of course, essential to ensure a reasonable price for consumers of a basic chemical like soda ash, who are mostly industries. But, equal attention deserves to be given to the increase in the cost of production of the industry, while determining prices, for any permanent disability in the way of the expansion of the industry will, in the long run, endanger the interests of consumers themselves.

It cannot be denied that the Tariff Commission itself has failed to make out a sufficiently cogent and convincing case for higher prices. In fact, its report is not without certain snags. Out of the four units under production, it has taken into account the affairs of only two units, on the ground that the other two units, which commenced production only in 1959, did not give adequate data for assessing the cost of their manufacture. Even among the two units taken into consideration, one was a low cost unit, which would, in fact, benefit by Rs. 20 per tonne under the price suggested by the Commission. It would be quite appropriate, if the Commission makes another study on the cost structure of the industry now, taking into account all the units. Now that the new units have been under production for more than two years, they should be in a position to furnish the necessary data.

In fairness to the Government, it must be admitted that the price of soda ash produced in India is substantially higher than that of the imported product. But, of course, this applies to all other chemicals also. The fair ex-works price of light soda ash (inclusive of freight disadvantage) is placed at Rs. 19.39 per 50 kgs. by the Commission, as against the landed cost exduty of the imported product of only Rs. 8.89. It is only about a month back that the Government accepted the recommendation of the Tariff Commission to continue protection upto the end of 1964, the rate of duty being Rs. 8.37 per quintal (preferential) and Rs. 11.32 per quintal (standard). Some of the important features of the industry revealed in the report of the Commission, which has been released now along with the Government's decision on prices, may be dealt with here.

The soda ash industry has made good progress during the last few years making the country almost self-sufficient, particularly in respect of light soda ash. Since the last tariff inquiry in 1958, two new units, namely, Saurashtra Chemicals, Porbunder (Gujarat) and Sahu Chemical and Fertilisers, Varanasi (U.P.), have gone into production. The old units are Tata Chemicals Ltd., Mithapur (Gujarat) and Dhrangadhra Chemical Works Ltd., Dhrangadhra. Another unit, Khan Bahadur H. M. D. H. Bhiwandiwalla and Co., Bombay, has also been granted an industrial licence. But it is not expected to go into production before 1964. The total capacity of the industry was 750 tonnes per day in 1961, as against only about 320 tonnes in 1958. The daily capacity is expected to go up to 950 tonnes by the end of 1962 and 1,170 tonnes by 1965. Inclusive of the capacity sanctioned to Bhiwandiwalla and Co., an aggregate daily capacity of 1,370 tonnes is expected to be attained by the end of 1965. Production has gone up from 89,604 tonnes in 1958 to 145,012 tonnes in 1960. It aggregated 90,386 tonnes in the first half of 1961 and, according to the Commission's estimates, must have touched 200,000 tonnes in the whole of 1961. The following table shows the trend in the production of the four units since 1958:

(In tonnes)

	1958	1959	1960	1961 Jan.-June
Tata Chemicals ..	57,617	60,180	69,152	44,246
Dhrangadhra Chemicals ..	31,987	35,136	38,098	19,452
Saurashtra Chemicals ..	..	..	30,151	20,707
Sahu Chemicals	..	972	7,611	5,981
Total ..	89,604	96,288	145,012	90,386

The second Plan had laid down a capacity target of 257,000 tonnes and a production target of 233,000 tonnes. While the industry has fulfilled the target of capacity, production has fallen short. The third Plan provides for an increase in capacity to 530,000 tonnes and in output to 450,000 tonnes. Owing to the delay in the establishment of the fifth unit, and shortfall in production of others, the Commission considers that the third Plan targets cannot be reached in time, unless there is either a further licensing of capacity in existing plants or the establishment of new ones in good time.

Heavy Soda Ash

A feature of the industry's development programmes in the third Plan is the emphasis laid on the production of heavy soda ash. The following table shows the expected pattern of production in the next few years:

(In tonnes)

	1961		1964	
	Light ash	Heavy ash	Light ash	Heavy ash
Tata Chemicals ..	88,000	..	107,000	25,000
Dhrangadhra Chemicals ..	37,000	..	41,000	..
Saurashtra Chemicals ..	64,000	..	80,000	16,000
Sahu Chemicals	10,000	5,000	20,000	40,000
Total ..	199,000	5,000	248,000	81,000

The domestic demand has gone up sizably in recent years. From only 239,000 tonnes in 1958, demand is estimated to have gone up to 260,000 tonnes by 1961. The major consumers of soda ash are glass and bangles, silicate, textiles, chemical caustic soda, etc. The Commission's estimate of their future pattern of demand is given below:

(In tonnes)

	1961	1962	1963	1964
Glass industry	63,000	75,000	90,000	100,000
Bangles	12,000	13,000	14,000	15,000
Silicate	35,000	37,000	39,000	41,000
Textiles	12,500	13,000	13,500	14,000
Paper	7,000	8,000	9,000	10,000
Chemical caustic soda ..	28,500	40,000	50,000	50,000
Bichromate	7,000	8,000	9,000	11,000
Sodium bicarbonate ..	10,000	13,000	14,000	16,000
Dhobis and laundries ..	75,000	100,000	125,000	150,000
Miscellaneous industries ..	10,000	12,000	14,000	18,000
Total ..	260,000	319,000	377,500	425,000

The requirements of heavy soda ash alone is estimated at 57,000 tonnes in 1961, 68,000 tonnes in 1962, 81,000 tonnes in 1963 and 91,000 tonnes in 1964.

Raw Materials

The basic raw materials required for manufacture of light and heavy soda ash are salt, limestone and coke. Ammonium sulphate, sulphur and soda ash are the principal process chemicals, while coke, coal and furnace oil are the main fuels. Of the above materials, sulphur and furnace oil are used in very small quantities for the generation of hydrogen sulphide gas and soda ash for brine purification. The use of sodium sulphide is occasionally resorted to for generating hydrogen sulphide gas. With the exception of sulphur, the requirement of which is met by imports, all other raw materials are indigenously available. Ammonium sulphate, though indigenously produced, is also partly imported through the State Trading Corporation on account of shortage. Coke is used in lime kilns for producing lime and carbon-dioxide required for the Solvey process. It is also used for producing hydrogen, nitrogen and carbon dioxide by way of water gas for the modified Solvey process adopted by Sahu Chemicals. Coal and furnace oil are used as fuel in boilers as well as in calciners.

Although most of the raw materials are available within the country, the industry is still faced with certain difficulties, particularly in respect of freight rates. In order to remove such difficulties, the Commission has recommended the following measures:

"If a consumer undertakes to carry out protective measures for wagons used as required by the railways, the higher freight rate for bulk salt moved should not be enforced.

"The Railway Administration should, in consultation with soda ash manufacturers, evolve a workable arrangement for bulk movement of salt in open wagons and extend the facilities to cover long-distance movement of salt also.

"Hindustan Salt Co. should take speedy steps to implement its schemes for installing necessary equipment for bulk handling of salt.

"The alleged anomaly in freight rates on ammonium chloride, which, though actually a fertiliser, is not charged at the lower rate for fertilisers when supplied to industrial consumers, may be considered by the Railway Administration for suitable action.

"It is not desirable to levy excise duty on that part of soda ash production which is used for self-consumption as a raw material for brine purification.

"For encouraging the use of alternative fuels like furnace oil particularly in areas in Southern and Western India to which coal movements by rail are becoming increasingly difficult, Government may review the impact of excise duty on such oil."

It is said that the Government has taken note of these recommendations. But it has not given any indication of the precise measures proposed to be undertaken. Another important problem of the industry, which has not received the attention of the Government, relates to the rehabilitation allowance. The industry has pleaded for a higher depreciation or a rehabilitation allowance, owing to the highly corrosive nature of the material used in soda ash. The Commission has left the matter of increasing depreciation to the discretion of the Government, saying that it is a general issue determinable only by expert engineering advice. But it has unceremoniously rejected the claim of the industry for rehabilitation allowance.

SILAGE AS FODDER

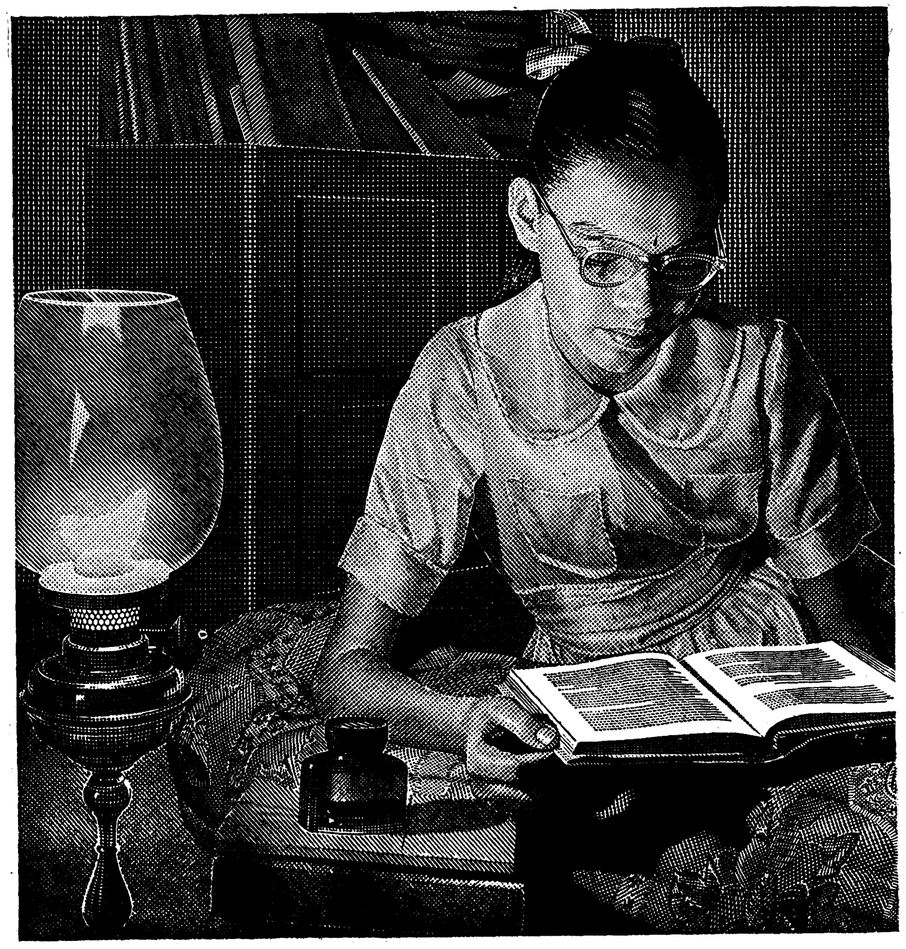
An important exhibit at the dairy section of the National Agricultural Fair, opened at Madras on the 14th inst., are the model silos in the U.S. pavilion. The silage, made out of maize stalks chopped to tiny bits and fermented in storage, is said to be a better feed for cattle than hay, and greatly increases milk yield.

The two silo models seen in the exhibit are simple and inexpensive to build and either type can be easily made by any farmer with little or no assistance. Of the two, the trench type is the easier and cheaper to make because the farmer has only to dig a trench. To make silage, maize stalks should be chopped into half-inch pieces when still green after harvesting and packed air-tight into the silo. These stalks contain a lot of sugar which ferments, and after a month, can be fed as silage. Cows devour silage greedily with the result that their milk output goes up remarkably.

Mr. Robert G. Connelly of the U.S. Technical Co-operation Mission and the Dairy Adviser to the Government of India, prepared the silage exhibit. Emphasising the need for proper fodder to produce milk, Mr. Connelly said that the paddy-hay fed to cows in South India does not contain enough nutrition even to sustain the animals in good health—let alone produce milk. The right fodder for dairy animals is silage. According to Mr. Connelly, groundnut oilcake and cottonseed should be given to the cow or buffalo only to stimulate the milk yield from high to higher, and not as a basic feed.

The other exhibits in the U.S. pavilion are an animated picture panel and an actual size working model of a sanitizer. The first simulates the journey of milk from the cow to the consumer through the different stages of the processing plant. The second, a galvanised iron box, demonstrates how milking utensils can be sterilised by the dairy farmer using this easy-to-operate apparatus.

The comforts of life are spreading



Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will increase by 41.6%. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

SETBACK IN MYSORE SUGAR'S PROFIT

DIVIDEND MAINTAINED—UNSOLD STOCKS HEAVY

THE tale of the Mysore Sugar Company Ltd. (Chairman and Managing Director: Mr. Venugopal Naidu, Bangalore) for the year ended 30th June 1961 is the self-same as that of other leading sugar companies the results of which have already been covered in these columns. More production, lower sales, heavy unsold stocks, smaller profit-margin—this is the outline of the Company's performance in 1960-61. The only outstanding feature is that the Company has maintained the dividend, without cutting it as several others have had to. But, on second thoughts, it seems to us that such is not so outstanding as all that, for two reasons. The Company's capital is small, the management not having increased it by issue of bonus shares (or of new shares), whereas several sugar companies have capitalised their reserves on more than one occasion in the past. Secondly, after 1957, the Company has been paying a steady dividend of 30 per cent, without increasing it, even though the profit was large enough to permit payment of a much higher dividend. Indeed, as the rate of 30 per cent is taxable since for the year 1958-59, the net dividend at 21 per cent is much less than the tax-free return of 30 per cent for 1957-58. Thus, the steadiness in the dividend rate has been at some cost to the shareholders in the past.

The Company's management cannot, of course, be blamed for the setback in the financial results. As the Directors rightly point out, sale of sugar from the factory could not keep pace with the production because of the restricted releases made by the Central Government from individual factories. Consequently, sale proceeds during the year fell sharply by nearly Rs. 119 lakhs to Rs. 323.68 lakhs, leaving a large stock of over 13,700 tons of sugar alone, valued at Rs. 91.48 lakhs, at the end of the year. The Directors add that this has had an adverse effect on the position of the Company's fluid resources.

Apart from these adverse effects on sales, the working of the Company was satisfactory in all other respects. Production of sugar increased from 31,550 tons to 39,049 tons. But the average recovery of sugar from cane was, again, lower at 9.86 per cent, as against 9.98 per cent in the previous year and 10.08 per cent during 1959-60. The number of days for which the mills worked was 267 against 213 in the previous season and the quantity of sugarcane crushed was 395,963 tons, as against 316,100 tons previously. As a result of this, the manufacturing and operating costs increased during the year. The cost of sugarcane purchased and milled went up from Rs. 151.56 lakhs to Rs. 184.04 lakhs and other expenses rose from Rs. 132.64 lakhs to Rs. 134.37 lakhs. The excise bill was lower at Rs. 77.86 lakhs as compared with Rs. 114.74 lakhs in the previous year. This fall reflects partly the lower sales and refund of excise duty on the sugar delivered for export. The gross profit has declined from Rs. 34.50 lakhs to Rs. 28.28 lakhs. After providing the depreciation account with Rs. 8.21 lakhs (Rs. 7.40 lakhs in the previous year) and the taxation reserves with Rs. 11 lakhs (Rs. 13.50 lakhs), the net profit amounts to Rs. 9.07 lakhs, a fall of Rs. 4.53 lakhs as compared with that for the previous year. No provision has been made for the plant rehabilitation reserve. The amount transferred to reserves is Rs. 3.05 lakhs. The dividend absorbs Rs. 6.54 lakhs, leaving Rs. 0.64 lakh to be carried forward against Rs. 1.15 lakh brought in.

The scheme for expansion of the distillery to produce 1.2 million gallons of alcohol per annum was completed and the distillery worked satisfactorily during the year. Production of alcohol was a record, as the entire output of molasses of 857,817 gallons, in terms of absolute alcohol, was consumed. The entire quantity of alcohol produced was sold. No light has been thrown in the Directors' report on the scheme, referred to by the Chairman in his speech last year, for achieving an overall crushing capacity of 4,000 tons of cane per day by stepping up the capacity of the Mandya factory to 3,000 tons partly by rehabilitation and partly by expansion, and transferring the remainder of 1,000 tons to a branch unit to be set up in the Maddur region. Likewise, one will have to await the Chairman's speech for further light on the proposed scheme for the manufacture of cellulose acetate flakes based on the alcohol produced by the Company. As mentioned by the Chairman last year, this scheme will make it necessary for the Company to enter the capital market for raising fresh capital. The scheme also covers production of moulding powder. It is also not known whether the thirty-year agreement between the Company and the Mandya National Paper Mills Ltd. for the supply of bagasse for the manufacture of superior quality paper, which was expected to take effect from the beginning of the current year, has in fact come into operation.

The following table compares the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales—				
Sugar and distillery products	323.68	441.47	392.11	380.07
Farm supplies	14.37	13.82	12.02	10.24
Closing stock	100.61	17.99	55.21	55.54
Other income	8.86	13.20	12.47	15.23
Cost of sugarcane purchased and milled	184.04	151.56	158.42	158.36
Expenses	134.37	132.64	130.00	133.90
Excise duty on sugar	77.86	114.74	104.26	95.84
Gross profit	28.28	34.50	28.60	35.88
Provisions for—				
Depreciation	8.21	7.40	7.78	7.22
Taxation	11.00	13.50	8.00	15.00
Net profit	9.07	13.60	12.82	13.66
Transfer to—				
Rehabilitation reserve	...	5.00	5.00	6.00
Development rebate reserve	1.55	0.36	1.27	0.50
Other reserves and funds	1.50	1.00	1.00	1.29
Dividend	6.54 (30%)	6.54 (30%)	6.54 (30%)	6.54 (30%)
Carry forward	0.64	1.15	0.45	1.44
Sugarcane crushed (tons)	3,95,963	3,16,100	3,54,742	3,83,814
Sugar produced (tons)	39,049	31,550	35,771	39,520
Average recovery (%)	9.86	9.98	10.08	10.29

Note:—Dividend is subject to deduction of tax after 1958.

The financial position of the Company is highly satisfactory. The subscribed capital of Rs. 21.79 lakhs has been supplemented by reserves and surplus of Rs. 114.45 lakhs. Secured loans of Rs. 63.32 lakhs are covered by Government securities and a charge on the floating assets, including stock-in-trade and book debts. Current liabilities and provisions amount to Rs. 153.02 lakhs. The total indebtedness to outsides is thus Rs. 216.34 lakhs. In addition there are contingent liabilities amounting to Rs. 9.12 lakhs. As against this, current assets, loans and advances aggregate Rs. 250.92 lakhs. Investments at cost, after providing Rs. 0.50 lakh for fluctuations in the market, are shown at Rs. 40.91 lakhs. The surplus of current assets over current liabilities works out to Rs. 75.49 lakhs. The gross block increased during the year from Rs. 107.40 lakhs to Rs. 115.55 lakhs and has been writen down to Rs. 59.61 lakhs. Capital works-in-progress is shown at Rs. 1.14 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 56.50 *cum-div.* and, on the *ex-div.* basis, offer a yield of 3.9 per cent per annum, free of tax.

RESULTS OF STRUCTURAL ENGINEERING STEADY

ORDER BOOKS FULL

THE prospects of a rights issue in the near future are strengthened by a small recovery in the working results of the Structural Engineering Works Limited (Managing Agents: Bhagat and Sons (Private) Ltd., Bombay) during the year ended 30th June, 1961. An additional capital issue is warranted by the fact that the Company's dependence on borrowings has increased during the year from Rs. 85.60 lakhs to Rs. 115.52 lakhs, and is twice the issued, subscribed and paid-up capital of Rs. 55 lakhs out of an authorised capital of Rs. one crore. During the fiscal year under review, the Company issued further capital which is not yet reflected in the paid-up capital. Even so, the need for additional capital is obvious, especially as the Company has on hand new schemes of expansion. The Directors observe in their report that, after a careful examination of the available resources, it is estimated that a considerable amount will be needed for the purpose of meeting the existing and future commitments of capital expenditure and working capital. This matter, they add, is engaging their serious attention. In view of the fact that, only in the previous year, the Company had raised additional funds out of bank borrowings, which increased then from Rs. 63.33 lakhs to Rs. 85.60 lakhs, it is quite likely that, in future, the Directors might prefer to raise more funds by increasing the capital further.

The recovery in earnings during the year under review follows a setback suffered in the previous year (1959-60), when the proceeds from sales and work done had declined from Rs. 102.37 lakhs to Rs. 94.46 lakhs and consequently the gross profit from Rs. 21.48 lakhs to Rs. 17.35 lakhs, necessitating the drastic cut in the dividend on equity shares from 17 per cent to 12 per cent, subject to deduction of tax. During the year 1960-61, the realisation from sales and work done has increased appreciably to Rs. 145.16 lakhs. The gross profit has, however, improved only to Rs. 19.33 lakhs, because of a sharp rise in expenses (materials, stores, salaries, etc.) from Rs. 95.14 lakhs to Rs. 134.77 lakhs. Notwithstanding this, the Directors have stepped up the dividend on ordinary shares of Rs. 100 each by one per cent to 13 per cent. Dividends on preference shares have been recommended according to the proposed modifications in the class rights, subject to the approval of the preference and ordinary shareholders. In the previous year, the Company was allowed by the authorities to treat 28.48 per cent of the dividends as free of income-tax, as they were paid out of the profits exempted under Section 15-C of the Indian Income-tax Act. The Company has applied to the authorities to ascertain the exempted portion of its dividends for the year under review on account of the profit earned by the Calcutta factory.

The following comparative table gives an idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales and work done	145.16	94.46	102.37	89.91
Finished stocks at close	67.15	58.80	41.41	38.80
Other income	0.59	0.65	0.68	1.22

Ordinary†	3.90 (18%)	3.36 (12%)	4.25 (17½)	3.10 (22½)
Carry forward	0.09	0.12	0.14	0.24

* Does not include expenses described as, "debitable to capital jobs other than projects-in-progress," which amounted to Rs. 4.11 lakhs in 1961, to Rs. 5.81 lakhs in 1960, to Rs. 8.01 lakhs in 1959, and to Rs. 2.96 lakhs in 1958.

† To facilitate comparison, all equity dividends are adjusted to approximate taxable rates.

The net profit has gone up from Rs. 6.81 lakhs to Rs. 7.73 lakhs, after providing depreciation of Rs. 6 lakhs (Rs. 5.37 lakhs in the previous year), taxation of Rs. 4.10 lakhs (Rs. 4 lakhs) and Managing Agents' remuneration of Rs. 1.50 lakh (Rs. 1.17 lakh). Transfers to reserves aggregate Rs. 4.65 lakhs, as against Rs. 1.45 lakh last year. Excess provision of Rs. 3 lakhs for past liabilities has been written back and it is this amount that is responsible for the larger sum ploughed back.

The Company is to expand its business with foreign collaboration mainly by undertaking the manufacture of prestressed concrete pipes, structural work using Ceno patent method, high pressure penstocks for hydro-electric schemes, etc. Machinery and drawings (costing about Rs. 7 lakhs) for the manufacture of prestressed concrete pipes have been shipped, while machinery worth Rs. 10 lakhs have already been received for manufacturing boilers and high pressure penstocks. Further equipment for the production of boilers would be ordered soon. For its scheme of transmission towers, the Company will receive the galvanising bath by the end of February this year and thereafter will be able to execute big jobs for fabricating the towers. A new factory for manufacturing reinforced concrete pipes for the Duct Line tender project of the Bombay Municipal Corporation is being set up on the Bombay-Agra road. According to the Directors, the Company has sufficient orders to keep its establishments engaged during the current year. They, however, point out that some difficulty is being experienced with regard to the laying of pipes for the Calcutta Corporation for reasons beyond the Company's control. They add that the management is fully seized of the situation and necessary steps are being taken to overcome the difficulty. Implementation of these projects and schemes is expected to give considerable impetus to the Company's business.

The financial position of the Company is quite satisfactory. Against the subscribed and paid-up capital of Rs. 55 lakhs and share application deposit of Rs. 11.02 lakhs, the reserves and surplus total Rs. 42.08 lakhs. Borrowings to the extent of Rs. 111.60 lakhs out of a total of Rs. 115.52 lakhs are secured against plant and machinery, stocks and property. Current liabilities and provisions amount to Rs. 68.25 lakhs. As against this, current assets, loans and advances aggregate Rs. 227.25 lakhs. Trade investments at cost amount to Rs. 1.60 lakh. The gross block increased during the year by Rs. 7.06 lakhs to Rs. 109.39 lakhs, and is written down adequately to Rs. 60.51 lakhs. Projects-in-progress are shown at Rs. 6.60 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 176 *cum-div.*, and at this rate, they offer, on the *ex-div.* basis, a yield of 5.4 per cent per annum, free of tax. A year ago, these shares were standing at Rs. 230.

BIRD & CO. (PRIVATE) LTD.

A British firm of water-treatment engineers, Messrs. William Boby & Co., who specialise in design engineering and treatment process for industrial boiler feed water, has signed an agreement with Bird & Co. (Private) Ltd. of Calcutta to manufacture and sell their electrodialytic equipment in India. The equipment is not suitable for sea water, but is designed primarily to produce drinking water from brackish water supplies.

The manufacture of the water-treatment plant will take place progressively under the supervision of Bird & Co. until ultimately all the conventional equipment, including tanks, pipes and valves, is made in India. The only parts which it will not be possible to make in India, at least for a long time, are the highly specialised membrane stacks which are an integral part of the plant. Arrangements have also been made for Bird & Co. to handle sales in India of an important new instrument recently developed by the British firm for the detection of sucrose (a form of sugar) in sugar refineries.

It has hitherto been very difficult to detect leakage of sucrose deposits into the boilers. Failure to do so can lead to serious corrosion and consequent heavy maintenance costs. This very important development will lead to considerable reduction in maintenance costs in sugar refineries and consequent saving of foreign exchange. It seems likely that, in these circumstances, actual user import licences for these instruments will be forthcoming.

R.R. ENGINEERING CO., LTD.

The R.R. Engineering Company Ltd., in Uttar Pradesh, has streamlined its blueprints for the manufacture of machine tools, sugar mill machinery, steel castings and alloys and steel structures in technical collaboration with foreign manufacturers. The authorised capital of the Company will be Rs. 40 lakhs. The Directors and promoters will subscribe Rs. 9 lakhs. Out of the balance, shares to the value of Rs. 16 lakhs will be offered to the public for subscription before the end of next month. The U.P. Government has already consented to participate in the capital issue by way of underwriting the issue.

GWALIOR SUGAR

PROFIT DOWN—DIVIDEND SAME

HIGHER manufacturing and operating costs have reduced considerably the profitability of the Gwalior Sugar Company Limited [Managing Agents: J. P. Srivastava and Sons (Private) Ltd., Dabra, M.P.] during the year ended 30th June 1961. There is a sizable increase in sales of sugar and molasses from Rs. 70.44 lakhs to Rs. 129.55 lakhs, but the gross profit has declined from Rs. 11.19 lakhs to Rs. 9.87 lakhs, which is the lowest in the past four years. The cost of raw materials and stores consumed has gone up, again, from Rs. 61.19 lakhs to Rs. 67.21 lakhs and so have other expenses from Rs. 14.43 lakhs to Rs. 16.79 lakhs, with the wage bill alone accounting for an increase of nearly Rs. 2 lakhs in the latter following the implementation of the recommendations of the Central Wage Board for sugar industry from 1st November, 1960. A drop in the average recovery of sugar for the season from 9.85 per cent to 9.01 per cent was an additional handicap for the Company and made it necessary for it to crush as much as 3,436,740 tons of sugarcane—a record in its history—against 3,090,858 tons in the previous year. The fall in the recovery is attributed by the Directors to the bad quality of cane and the prolongation of the workers' strike during the best part of the season, as it continued till 17th June, 1961. The Company had also to suffer a loss of about Rs. 2.70 lakhs on account of compulsory export of sugar. All these factors have more than wiped out the advantage gained by the Company in the selling price during the year.

The following table compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale of sugar and molasses	129.55	70.44	111.89	144.57

7% redeemable cumulative preference	0.52*	0.52*	0.47*	0.47*
7% redeemable cumulative preference	0.39*	0.39*	0.35*	0.35*
Ordinary	1.99 (12.5%)*	1.99 (12.5%)*	1.59 (10%)*	1.59 (10%)
Carry forward	0.10	0.13	0.30	0.09
Sugarcane crushed (tons)	34,36,740	30,90,858	29,99,550	31,23,990
Average recovery (%)	9.01	9.85	9.48	9.87

* Subject to deduction of tax.

As is clear from the above table that higher sales have brought in their wake an increased burden of excise duty of Rs. 30.77 lakhs against Rs. 18.18 lakhs in the previous year. The setback in net profit is minor, to be precise, Rs. 0.52 lakh, at Rs. 3.99 lakhs, because of lower essential provisions of Rs. 1.59 lakh for depreciation and Rs. 3.47 lakhs for taxation as compared with Rs. 1.77 lakh and Rs. 3.96 lakhs respectively in the previous year. The Managing Agents' remuneration is also less at Rs. 0.82 lakh, against Rs. 0.95 lakh previously. The Directors have, however, maintained the equity dividend at 12.5 per cent subject to deduction of tax, per share of Rs. 100 each, giving a net return of 8.8 per cent.

The Directors' report that good progress was made during the year in implementing the previous year's proposal to increase the factory's daily capacity from 900 tons to 1,100 tons, which is the licensed capacity. They regret, however, that the Government has turned down their proposal to increase the crushing capacity from 1,100 tons to 1,500 tons. The Company has, however, been assured that its case would be considered, whenever the Government revises its present policy of restricting production of sugar in the country. Till 4th January 1962, when the Directors' report was written, the Company had not been able to obtain any relief from the State Government for remission of cess or any rebate in the price of sugarcane for extending its crushing operations to the hot weather, which has been allowed to sugar factories by the Governments of U.P. and Bihar. On the other hand, the Directors state, pressure was brought on the factory to crush cane from distant places in U.P. and Madhya Pradesh which, apart from the higher transportation charges incurred by the Company, adversely affected the average recovery of sugar. The Directors write that they are giving "anxious consideration" to the problems arising in the working of the factory during the current crushing season on account of the serious crisis created in the industry due to overproduction. They add that it is inevitable that, due to the restrictions imposed by the Central Government and the fall in selling prices of sugar, the working results of the Company would be adversely affected during the current year.

The Gwalior Agriculture Company Ltd., a subsidiary unit, earned during the year ended 30th June 1961, after meeting the usual expenses, a profit of Rs. 87,109, against Rs. 2,02,258 in the previous year. After providing depreciation of Rs. 11,137 (Rs. 13,436 previously) and taxation of Rs. 2.000 (Rs. 1.400), the balance available is Rs. 73,972, and, with the amount of Rs. 18,766 brought forward from the previous year, makes a total of Rs. 92,738. Out of this, Rs. 3,800 have been transferred to capital reserve and Rs. 75,000 to general reserve. The balance of Rs. 13,938 is carried forward. The Directors of the Company state that there had been a marked deterioration in the sugarcane quality in the Harsi area in general. The performance of the Company was further adversely affected by the poor quality and lower yields of its cane crop. The setback is expected to be overcome with further cane development work and propagation of the use of improved seeds.

The paid-up capital of the Gwalior Sugar is Rs. 27.69 lakhs, of which Rs. 15.94 lakhs is equity and the balance preference. This is supplemented by reserves and surplus of Rs. 14.47 lakhs. Borrowings have declined during the year under review from Rs. 25.37 lakhs to Rs. 17.20 lakhs and are secured by a charge on all tangible moveable assets and a guarantee among others by the Managing Agents. Unsecured loans amount to Rs. 1.44 lakh, other current liabilities and provisions Rs. 55.37 lakhs, The liabilities to outsiders thus total Rs. 74 lakhs. These are more than amply covered by current assets amounting to Rs. 88.65 lakhs, of which cash and bank balances alone are Rs. 10.11 lakhs. In addition, there are investments of Rs. 11.40 lakhs, representing almost entirely the Company's holdings (amounting to 7,500 fully paid equity shares of Rs. 100 each) in its subsidiary. The gross block at Rs. 48.71 lakhs, is practically maintained at the previous year's level, and has been well written down to Rs. 15.90 lakhs. The Company has thus a comfortable financial position.

The Rs. 100 full paid ordinary shares of the Company are being quoted at Rs. 90 *cum-div.*, and, on the *ex-div.* basis, offer a yield of 9.8 per cent per annum, free of tax.

Notice

THE BRITANNIA ENGINEERING COMPANY, LIMITED

ISSUE OF EQUITY CAPITAL

THE BOARD OF DIRECTORS HAS DECIDED to issue 5,00,000 new Ordinary Shares of Rs. 10 each at par, ranking in all respects *pari passu* with the existing Ordinary Shares of the Company except that they will not participate in any dividend declared in respect of any period ending on or before 31st December, 1961.

The new Ordinary Shares will be offered for subscription to the holders of the existing Ordinary Shares in the capital of the Company whose names appear in the Company's Register of Members on 12th February, 1962, in the proportion of one new Ordinary Share for every existing Ordinary Share held by them on the condition that the full amount of Rs. 10 per share shall be payable on application and with a right to renounce all or any of the shares offered to them in favour of any other person and to apply for additional shares.

The Share Transfer Books of the Company will be closed from 30th January, 1962 to 12th February, 1962, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

"McLEOD HOUSE",
3, NETAJI SUBHAS ROAD,
CALCUTTA, *9th January*, 1962.

SYNOPSES OF COMPANY REPORTS

Parshuram Pottery Works Co., Ltd.

(*Chairman*: Mr. A. V. Gharpure, Morvi-Gujarat) 30*th Annual General Meeting*—22nd January 1962.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1961	1960

" " rehabilitation reserve	2,00	Nil
" " provision for repayment of fixed deposits	Nil	50
To payment of bonus to staff and workers for the past years	1,23	1,90
To compensation to ex-Managing Agents	1,50	Nil
Proposed dividends (taxable) 6% T.F.C. preference	21	21
" " " 4% T.F.C. preference	40	40
" " " equity	75	75
	(21.44%)†	(21.44%)†
Carried forward	37	8

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 1,28,014.92 transferred from general reserve for the payment of excess bonus for past years.

† The net dividend works out to 15 per cent, or Rs. 3.75 per ordinary share of Rs. 25 each. The current market price of the share is Rs. 67 (at Bombay).

Extracts from the Directors' report: The demand for Company's products continues to increase and looking to the substantial increase in the sales the directors feel that the future for this Company is bright. In order to be able to satisfy the demands, the Company had asked the Government for license to increase its production substantially. The Government has sanctioned the licenses for the expansion of Tiles and Sanitaryware production. When the expansion programme is completed, the Company's tiles production will rise from 50,000 doz. per month to 1,00,000 doz. per month and Sanitaryware from 70 tons to 210 tons per month. There is much to be done to improve the quality of the products and attempt is being made to obtain collaboration with some well known European manufacturers.

The estimated cost of the expansion projects will be Rs. 33,00,000. Applications for the necessary Import Licenses made to the Central Government for these projects are not sanctioned due to foreign exchange shortage and the directors are advised by the Central Government to approach the Industrial Credit and Investment Corporation of India, Bombay, for loan in foreign currency. Accordingly an application for a loan of Rs. 12,00,000 in foreign currency is made to the Industrial Credit and Investment Corporation of India, Bombay. It is also decided to raise a further capital of Rs. 8,75,000 by issuing right equity shares for which necessary resolutions are placed before the Meeting. The rest of the financial requirements will be met from the Company's own resources, short term loan and retained profits.

The Government of India have imposed excise duty on *Porcelain* and *Chinaware*. This duty came in force as on 1st March 1961. The rate of duty being excessively high the Company has made representations to the Government through the All India Pottery Manufacturers' Association Calcutta but it had very little effect. The directors feel that the increase in the ultimate price of the products due to levy of excise duty may have adverse effect on the Company's sales and profits.

Accounts in brief as at 31st July 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	19,00,000	Gross block	92,49,901
Reserves and surplus	17,66,749	—Depreciation	49,43,489
Other liabilities	53,48,836	Net block	43,06,412
		Current assets	21,91,628
		Investments	10,47,321
		Cash	8,70,234
	Rs. 84,15,585		Rs. 84,15,585

* Paid-up capital consists of: (a) 10,000 six per cent. tax-free 1st cumulative preference shares of Rs. 25 each fully paid up; (b) 28,000 four per cent tax-free 2nd cumulative preference shares of Rs. 25 each fully paid up and (c) 14,000 equity shares of Rs. 25 each fully paid up.

Phosphate Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Bangur Brothers Ltd., Calcutta.)

Annual General Meeting—18th December 1961.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960

" " reserve for bad and doubtful debts	Nil	50
Proposed dividend (taxable) ordinary	3,75	4,37
	(25%)*	(35%)†
Carried forward	2,10	2,05

N.B.—Adjustments include only the balance brought forward from the previous year.

* On the increased ordinary capital of Rs. 15 lakhs.

† On a paid-up ordinary capital of Rs. 12.50 lakhs.

Extracts from the Directors' report: During the year under review, the cost of production had gone up due to rise in freight and custom duty on raw materials and increase in cost of packing.

The Government has increased the selling price of *Superphosphate* by Rs. 5 a ton with a view to compensate the rising cost of production which is quite inadequate. However, the full benefit of price increase is not reflected in these accounts, as the same became effective from 11th May, 1961.

During the year the Company also enlarged the area of operation for distribution of mixtures in West Bengal. This Company is also now appointed one of the distributors of fertilisers in Bihar. Though this line is not so profitable yet it ensures the offtake of *Superphosphate*.

Arrangements have been made with Messrs. Industrial Credit & Investment Corporation of India Ltd., for the foreign exchange requirement for the extension scheme. All the indigenous machinery and plant are at site. Imported machinery are expected to be shipped by the end of this year. It is expected, if everything goes well, the expansion scheme should come into operation by April, 1962.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,00,000	Gross block	34,99,083

" " " ordinary	4,20	4,20
	(15%)	(15%)
Carried forward	2,61	1,21

N.B.—Adjustments include the balance brought forward from the previous year; taxation provision no longer required; provision for written back and development rebate reserve in respect of machinery sold—written back.

* Calculated at the increased rate of 9.1 per cent. under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

† Includes additional preference dividend of Rs. 21,000 for the year 1959.

Extracts from the Directors' report: Further modernisation of the machinery in the spinning section of the mills have been carried out to increase efficiency, and other plans in this connection are at present under consideration.

In common with the other mills in the Jute Industry, the Company's mills have passed through an extremely difficult time since the latter part of 1960 owing to the acute shortage of raw jute due to two short crops in succession, that for the year 1960-61 being occasioned by most unfavourable weather at sowing time.

With the promise of a plentiful supply of raw material during the 1961-1962 season at economic prices mills have now resumed working 48 hours per week with 9½ per cent of the looms sealed and according to present indications working during the second half of the current financial year should prove profitable so far as this Company's mills are concerned, and should help to recoup the losses sustained during the early part of the year.

Accounts in brief as at 31st May 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	83,00,000	Gross block	1,59,07,730
Reserves and surplus	60,07,205	—Depreciation	1,08,91,850

		Current assets	86,62,907
		Investments	8,84,540
		Cash	4,78,000
	Rs. 1,51,02,235		Rs. 1,51,02,235

* Paid-up capital consists of 10,000 seven per cent. cumulative preference shares of Rs. 100 each fully called up and 28,000 ordinary shares of Rs. 100 each fully called up. Of the above shares 14,000 ordinary shares are allotted as fully paid up by way of bonus shares of which 7,000 ordinary shares are issued by capitalisation of reserves and 7,000 ordinary shares from share premium account.

Paper Products Ltd.

(*Chairman and Managing Director*: Shri Sardari Lal Talwar, New Delhi.)

Eleventh Annual General Meeting—Held on 14th December 1961.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1961	1960
Sales (including waste paper)	1,18,72	1,05,68
Closing stock	8,34	8,35
Gross profit	15,66	14,40
Transfer to depreciation	3,47	2,01
" " development rebate reserve	85	68
" " provision for taxation	4,08	5,40
Net profit	6,36	6,31
Adjustments	29	20*
Appropriations:		
Total available balance	6,65	6,51
Transfer to reserve fund	2,80	2,25
To dividend (taxable) ordinary	3,84	3,97
	(24%)	(25%)
Carried forward	1	29

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes Rs. 14,051 being old refund of custom duty.

Increase in Capital: The issued capital of the Company was increased from Rs. 9,38,500 to Rs. 16,00,000 on 11th January 1960 which was fully subscribed and paid-up. The fresh capital participated in the working of the Company for about four months in the accounting year 1959-60. Its full effect and full participation in the working of the Company was available for the first time in the year under report. It is gratifying to find that this capital has been usefully employed. In spite of the fresh capital participating during the entire year under report, the directors have recommended a dividend of 24 per cent as against 26 per cent declared in the last year, involving a total dividend payment of Rs. 3,83,965.80 nP for the year under review as against a total payment of Rs. 2,96,917.21 nP in the previous year.

Sales: The annual sales have increased from Rs. 1,05,61,976 to Rs. 1,18,37,546 which gives an increase of about 12 per cent. This improvement in the sales is satisfactory.

Foreign Collaboration: The Technical Collaboration with Messrs. Milprint Overseas Corporation of U.S.A. mentioned since the last two years, has been finalised; and the terms of the agreement, have been approved by the Government of India. The Company has started receiving technical know-how, advice Manual's and other literature and assistance from the said U.S.A. Collaborators with effect from 1st October 1960. The Company shall pay to the Collaborators a sum of U.S. $90,000, subject to tax, spread over a period of five years, commencing from 1st October 1960, payable in equal quarterly instalments.

Factory Inauguration: As was reported in the last year, the Company celebrated the inaugural ceremony of the new Thana factory and the Silver Jubilee on 1st October 1960 when Hon'ble Minister for Industries, Shri Manubhai Shah presided.

New machines of a total cost of Rs. 4,78,403 were installed during the year under report. During the year 1961-62, further machinery and equipment of a total cost of 8 to 9 lakhs of rupees is expected to be added and installed.

Pulp and Paper Mill: The Company was granted an industrial licence by the Government of India for setting up a Pulp and Paper Mill in Maharashtra State. The Company was also granted an import licence for Rs. 12.50 lakhs C.I.F. under Japanese Yen Credit. This import licence has been revalidated upto 31st August 1962 and its value has already been increased from Rs. 12.50 lakhs C.I.F. to Rs. 16 lakhs F.O.B. Firm orders have been placed on the Japanese suppliers; namely, Messrs. Kinsho-Mataichi Co. Ltd., Tokyo, Japan for the supply of one complete unit of Pulp and Paper plant. The terms of payment in respect of this plant are quite attractive as they are on deferred payment basis. The total price is to be paid in 17 bi-annual instalments spread over a period of 10 years starting two years after the date when the contract becomes effective (1st September 1961). A confirmed and irrevocable Letter of Credit has already been established for Japanese Yens 157,852,800 which also includes interest at 6 per cent per annum for the entire period on outstanding balances. The Government of Maharashtra has sanctioned an acquisition scheme for land measuring 45 acres for the present, at Roha, about 90 miles from Bombay for this Paper plant, acquisition proceedings in respect of the total area have been initiated and "Urgency Clause" has also been applied. It is hoped that the possession of the land would be handed over to the Company during the course of next 2/3 months.

It is being proposed to float an independent company to take over the project of said Pulp and Paper Mill. This may materialise sometimes during the next year. In the meanwhile the Company is incurring the necessary expenses. The new Paper Mill when in production is expected to provide the Company with regular supply of paper, its main raw material.

Accounts in brief as at 31st July 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	14,00,000	Gross block	40,94,169

* Loss after providing for depreciation and taxation.

† This includes Rs. 53,904 being compensation from Government for the season 1952-53 on sugar.

22 JAN 1962 PUBLIC DEPT.

Extracts from the Directors' report: During the year the Company's factory worked for 144 days as against 100 days in the previous year and crushed 28.75 lakh maunds of cane (20.50 lakh maunds for 1960) producing 2,62,068 maunds sugar (1,94,827 maunds for 1960) at an average recovery of 9.12 per cent (9.50 per cent for 1960). The fall in recovery is partly due to stale cane supplied from outstations whose percentage has risen from 47 to 56 this year and partly due to early start of the factory when available recovery is generally low.

Government announced the recommendations of sugar wage board in March this year and asked the factories to implement all the recommendations without considering the incidence in the cost structure. Full effect of the implementation of those recommendations will be reflected in the next year's account.

Depreciation has been calculated on the written down value basis as provided in section 350 of the Companies Act 1956 as modified upto May 1961.

The factory will start crushing for the season 1961-62 from 3rd December. Government have announced production control but this will not affect the Company's factory since crushing is expected to be within the limit imposed by the Government. Difficult trading condition in the year just ended is expected to continue for some time or may even continue throughout the next year which is difficult to forecast in the present circumstances.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,02,115	Gross block	36,67,746

	3	19
Carried forward		

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes Rs. 65,000 transferred from dividend equalisation reserve.

† Preference dividend is calculated in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This includes the additional preference dividends for the years 1958-59 and 1959-60.

‡ This includes the interim dividend of 10 per cent. on equity shares.

Extracts from the Directors' report:

Estate	For the year ended 30-6-1961 Estimate	Crop secured	For the same period last year Estimate	Crop secured
	Kg.	Kg.	Kg.	Kg.
Rajagiri	2,94,834	3,59,200	2,72,155	2,93,747
Shallacary	3,85,553	4,40,633	3,53,803	3,79,307
Total	6,80,387	7,99,833	6,25,957	6,72,054

The average Estate cost of production for the year was Rs. 1.78 per kg. against an estimate of Rs. 1.79 per kg., while the corresponding figure for the previous year was Rs. 1.85 per kg. The average sale price realised remained unchanged at Rs. 3.30 per kg.

It is estimated that for 1961-62 season, the Estate cost will be at Rs. 1.71 per kg. and the production will be as under:—Rajagiri 3,62,874 kg. and Shallacary 4,53,592 kg. Total 8,16,466 kg. The capital expenditure is estimated to be Rs. 1,68,664.

The Agricultural Income-tax authorities have disallowed this year also a number of items of legitimate Revenue Expenses as they had done similarly in previous years. The provision for taxation, therefore, fell short of actual demand by Rs. 1,63,000 odd upto the end of the year under report. As this amount had to be paid in spite of appeals against the assessments being still pending, the provision for taxation out of this year's profits includes this also. The appeals however are being pursued.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	86,10,000	Gross block	49,71,527

" " " ordinary	Nil	1,80
	(Nil)	(6%)
Carried forward	(—) 3,86	(+) 1,17

* Loss after providing for Managing Agents' remuneration; Secretaries' and Treasurers' remuneration; provision for doubtful debts and depreciation.

† Loss after taking into account provision for development rebate reserve.

‡ This represents only the amount over-provided in liability in respect of previous period written back.

§ This includes the credit balance brought forward and over-provision for liability of Rs. 1,050 for previous period written back.

‖ Includes additional preference dividend for the years 1956 to 1960 in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: During the year under review the North Mill remained closed and the South Mill worked on a double shift basis with the percentage of looms sealed varying from time to time. On an average 575 looms were worked 96 hours per week on double shift during the year.

Further modernisation of the preparing and spinning sections has been carried out during the year including the installation of 18 *Silver Spinning Frames* on the fine side. The introduction of the new machinery has improved the efficiency.

Accounts in brief as at 31st May 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	45,00,000	Gross block	1,44,87,735
Reserves and surplus	6,06,850	—Depreciation	1,04,88,923
Other liabilities	84,04,063	Net block	39,98,812

		Investments	2,10,000
		Cash	3,97,713
		P.L. a/c deficit	3,85,796
	Rs. 1,35,70,913		Rs. 1,35,70,913

* Paid-up capital consists of 15,000 six per cent cumulative preference shares of Rs. 100 each fully called up and 30,000 ordinary shares of Rs. 100 each fully paid up. Out of the above 15,000 ordinary shares are alloted as fully paid up by way of bonus shares—issued out of capitalisation of profits.

FRESH CAPITAL ISSUES

Eleven Companies, including the Government-owned Film Finance Corporation, have been authorised to issue capital. The issues together amount to Rs. 9 crores, of which one company's share alone is Rs. 4 crores and three others Rs. 1 crore each. The following are the details pertaining to the more important ones:

Associated Bearing Company

Issue of share capital of Rs. 4 crores in equity shares of Rs. 100 each for cash at par. Out of this, 60 per cent will be subscribed by the foreign collaborators AB Svenska Fullagerfabriken Sweden and associates, the balance being offered equally to the Investment Corporation of India or any company of the Tata group and the Indian public. The new company will manufacture SKF single row ball bearings, tapered roller bearings, pendulum weighting arms, etc.

India Cements Ltd.

Issue further capital of Rs. 1,25,55,250, consisting of equity shares of Rs. 5 each for cash at par to the existing shareholders. The money will be utilised for the expansion of capacity of manufacturing cement.

W.S. Insulators of India Ltd.

Issue capital of Rs. 1 crore consisting of equity shares of the value of Rs. 80 lakhs and 9½ per cent preference shares of Rs. 20 lakhs. The proceeds will be utilised for the establishment of a factory in Madras for the manufacture of H.T. and L.T. insulators, Lighting Arrestors etc. in collaboration with Westing-house Electric International Company of New York.

Struthers Wells India

This is a new company which has been granted consent to issue capital of Rs. 1 crore divided into 10 lakh equity shares of Rs. 10 each at par. Out of this, shares of the value of Rs. 28 lakhs will be issued to Struthers Wells International Corporation of New York. The proceeds will be utilised for the manufacture of plants and equipments for fertiliser industries, petroleum refineries, sulphuric acid, caustic soda, soda ash industries, etc.

Antifriction Bearings Corporation

Issue capital of Rs. 60 lakhs in equity shares of Rs. 10 each to be issued for cash at par. Out of this, shares of the value of Rs. 5 lakhs will be issued to the foreign collaborators Steyr-Daimler-Puch AG, Austria. The capital will be used for the manufacture of ball, roller and tape bearings.

Ganesh Flour Mills Company

Issue additional capital of Rs. 55 lakhs, consisting of Rs. 25 lakhs equity shares of Rs. 12.50 nP each at a premium of Re. 1 per share and Rs. 30 lakhs in debenture stock. The money will be used on the two new projects of the Company and also on its existing units. The equity shares will be offered to the existing shareholders of the Company for cash at a premium of Re. 1 per share.

COMPANY MEETINGS AND DIVIDENDS

McKENZIES LTD. Annual General Meeting, Bombay, 27th January 1962. Dividend: 12 per cent or Rs. 12.00 per ordinary share, subject to deduction of tax, payable on and after 5th March 1962. Transfer books remain closed from 17th to 27th January 1962, both days inclusive.

PUNJAB NATIONAL BANK LTD. Taxable final dividend of Re. 1.00 per share (making a total of Rs. 2.00 per share, taxable), for the year ended 31st December 1961.

THE MYSORE KIRLOSKAR LTD.—CORRIGENDUM

The Chairman's speech published in our issue dated 6th January 1962 (*vide* page 84) was delivered by Mr. Channageri Rangappa in the absence of Mr. M. D. Shivananjappa, the Chairman.

Notices

ORIENT PAPER MILLS LIMITED

Registered Office:
BRAJRAJNAGAR (ORISSA)

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the ORIENT PAPER MILLS LIMITED, will be held on Thursday, the 15th February, 1962, at 3 p.m. at Brajrajnagar, the Registered Office of the Company, to consider and if thought fit, to pass, with or without modification the following resolutions as Special resolutions.

1. "RESOLVED that the Company do hereby approve of the contracts entered into or to be entered from time to time with the persons who are or may be deemed to be the Associates of the Managing Agents of the Company including the Companies mentioned below for purchase, sale, or supply of machinery, plant, stores and other goods in such quantities and in such manner as may be agreed upon between the parties upon the terms (i) that the price or amount charged to or received by the Company shall be at rates current in the market at the time of supply, and (ii) that payment for the goods sold and/or supplied by the Company, shall be made within one month from the date of sale or supply of goods.

1. Messrs. Macfarlane and Co. Ltd.
2. The Indian Smelting and Refining Co. Ltd.
3. The Indian Tool Manufacturers Ltd.
4. The Hindusthan Gas and Industries Ltd.
5. The Textile Machinery Corporation Ltd.
6. Messrs. Jiyajeerao Cotton Mills Ltd.
7. Messrs. Birla Jute Manufacturing Co. Ltd."

2. WHEREAS the East Indian Produce Company Ltd., an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said Company carry on business of acting as agents in the United Kingdom and the Continent for purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom, the Continent and other countries and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said East Indian Produce Company Ltd. have been acting as such agents for and on behalf of the Company. Now it is hereby RESOLVED that the East Indian Produce Company Ltd., continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company:

(*a*) For purchase of materials, stores etc., 5% of the invoice price.

(*b*) For purchase of machinery, 2½ per cent of the invoice price.

(*c*) For employing technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by East Indian Produce Co., Ltd., apportionable to such work in each particular case.

(*d*) For rendering any other special service, such remuneration as may be agreed upon between the Directors of the Company and the East Indian Produce Company Limited.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained.

3. WHEREAS the American East India Corporation, an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office at New York in the United States of America and whereas the said Company carry on business of acting as agents in the United States of America for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United States of America and other countries and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to $60,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said American East India Corporation have been acting as such agents for and on behalf of the Company. Now it is hereby RESOLVED that the American East India Corporation continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and that payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company:

(*a*) For purchase of materials, stores etc., 5% of the invoice price.

(*b*) For purchase of machinery, 2½% of the invoice price.

(*c*) For employing technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the American East India Corporation, apportionable to such work in each particular case.

(*d*) For rendering any other special service, such remuneration as may be agreed upon between the Directors of the Company and the American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained.

By Order of the Board,
B. K. VYAS,
Secretary.

16, INDIA EXCHANGE PLACE,
CALCUTTA, *the 11th January*, 1962.

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The Explanatory Statement as required under Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company along with the Notice of the meeting.

ASSOCIATED BATTERY MAKERS (EASTERN) LIMITED

NOTICE TO SHAREHOLDERS

THE ACCOUNTS OF THE COMPANY FOR the year ended 31st August, 1961 exhibit a net profit, allowing for depreciation, of Rs. 46 lakhs. After providing for taxation and reserves, and bringing in the balance from the last account, the amount available is Rs. 26 lakhs.

The Board of Directors has resolved to recommend to the shareholders at the forthcoming Annual General Meeting that a dividend for the full year on the issued capital of Rs. 118 lakhs be declared at the rate of 15 per cent subject to tax.

By Order of the Board,
H. M. COX,
Secretary.

CALCUTTA,
11th January, 1962.

The Institute of Economic Growth, Delhi, which has been operating for some years a programme of training in research methodology for research workers for Ph.D in Economics, has evolved a new scheme to guide research workers in Government and teachers of economics in colleges who may wish to have training in research methodology before undertaking research work. The duration of the programme has been fixed as five months. There will be two courses in a year, the first running through January to May and the second from August to December. Each batch of trainees will consist of about 20 scholars, the minimum qualifications for admission to the course being a high second class master's degree in economics or commerce and satisfactory evidence of aptitude for research. A certificate of proficiency in research methods is proposed to be given at the end of each training programme after due evaluation of candidates. A tuition fee of Rs. 100 per course will be charged per candidate, although a few scholarships along with exemption from fees will be awarded on merit in the case of candidates not sponsored by any Government, University or other organisation. The first course started on the 15th inst.

The 21st Congress of the Federation of Commonwealth and British Chambers of Commerce will be opened by Queen Elizabeth at London on 21st May next. The Congress will be attended by 300 delegates, including those from India. It is expected to take decisions on steps to be taken to expand Commonwealth trade. Particular consideration will be given to the far-reaching problems arising from the Common Market and other economic groupings in Europe. Discussions will also range over a number of important constitutional, educational and social problems affecting the Commonwealth. The Chairman of the Congress will be Lord Lloyd, a Director of Lloyds Bank. The next congress will be held in Southern Rhodesia in 1964.

MONEY MORE USABLE

(From Our Own Correspondent)

BOMBAY, *17th January*

Banks report a perceptible improvement in the demand for funds this week, though it has not yet made itself felt on the inter-bank call money rate which remains unchanged at 4½ per cent per annum. The volume of floating funds in the inter-bank section has shrunk and there are more borrowers than lenders. Excepting one or two big Indian banks, whose deposits have gone up as a result of heavy oversubscription to some of the new capital issues in the private sector, and the exchange banks, almost all the other banks are said to be in need of accommodation to meet the demand on them from trade and industry. The interest rates for short-term deposits have undergone no change and stay put at the ceilings under the Inter-bank Agreement. No move has yet been made by the Committee of the Indian Banks Association on the request made by five of the medium-sized banks for permission to raise the rates payable by them by ¼ per cent as has been done in the case of small banks. Meanwhile, the competition for deposits continues, with banks trying to offer more attractive services to their customers. Close on the heels of the Bank of India and the Canara Bank, the Dena Bank, for instance, has announced a series of special facilities. The most important of them is its readiness to collect at par cheques on any of its offices for any amount. Another concession given by it is a reduction in the rentals for safe deposit vaults. This is an inducement to attract more customers.

A noteworthy development of the week is the decision of the Reserve Bank to permit commercial banks to advance against ordinary shares upto 60 per cent of their value, as against only upto 50 per cent hitherto. This slight relaxation in credit controls came into effect from the 14th inst. In a Press *communique* on this subject, the Reserve Bank said early this week:

"With immediate effect, the Reserve Bank of India has reduced to 40 per cent the minimum margin on bank advances against ordinary shares of joint-stock companies, which it had fixed at 50 per cent according to its directive dated 11th March 1960. This has been done in the light of developments which have taken place since March 1960. Bank credit against ordinary shares, which had risen by 14 per cent in the twelve months prior to the regulation, has since then remained pretty stable around Rs. 80-83 crores, despite a considerable increase in the volume of new capital issues on the market and some rise in share prices. Further, effective December 1961 onwards, a system of regulatory margins, uniform and automatic, has come into force on all the stock exchanges. A measure of self discipline has thus been introduced in the operation of the stock exchanges. The Bank's general credit control has also exercised on the whole a salutary influence on the credit situation."

Market circles are of the view that the aforesaid credit concession to banks will enable them to finance new issues to a greater extent than so far. It remains to be seen whether this step will give a fresh fillip to speculation in the share markets.

The Treasury Bill results for the week under review reveal no new features. Under the tender system, Rs. 2 crores of 91 days' Bills were sold at the average rate of Rs. 2.520 per cent per annum, same as last week. The amount offered was, again, no more than the amount invited. 91 days' Intermediate Treasury Bills fetched a smaller amount than in the previous week, Rs. 10 lakhs, as against Rs. 15 lakhs. Sales of both the types of Bills will be continued next week.

An increase of Rs. 21.52 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 12th January 1962. Since notes held in the Banking Department have been reduced by Rs. 2.28 crores, total notes issued have gone up by Rs. 19.24 crores. This has been balanced on the assets side by putting up the rupee securities by Rs. 19.99 crores and reducing the rupee coin by Rs. 75 lakhs. In the Banking Department, balances held abroad have gone down by Rs. 2.63 crores, with the result that the total of foreign assets are now no more than Rs. 140.81 crores.

Reflecting the demand for funds in the money market, deposits of banks with the Reserve Bank have gone down by Rs. 3.11 crores and their borrowings from the Reserve Bank against usance bills have gone up by Rs. 1.08 crore to Rs. 8.01 crores.

The scheduled banks' statement for the week ended 5th January 1962 discloses a fall of Rs. 4.07 crores in deposits, an increase of Rs. 1.55 crore in inter-bank borrowings and a substantial rise of Rs. 16 crores in bank credit. Investments show a rise of Rs. 13.90 crores, as against which there has been a contraction of Rs. 22.71 crores in the total cash position.

As against these variations in the position of scheduled banks as a whole, the State Bank's statement for the corresponding week discloses a small decline of Rs. 1.20 crore in deposits, a marked rise of Rs. 15.19 crores in investments and a big fall of Rs. 20.12 crores in cash. Its advances have gone up by Rs. 6 crores. Other assets (including inter-office adjustments) have come down by Rs. 8.36 crores, reflecting partly the sizable decline of Rs. 6.02 crores in other liabilities.

The Gilt-edged market continues to be listless, with a quiet undertone. Among the Central loans, 3 per cent 1986 Conversion is a shade lower at Rs. 71 and so also 3 per cent 1970-75 at Rs. 90.10, both loans having lost 5 nP each over the week. Among State loans, 4¼ per cent 1972 Madras, which had registered a rise of 20 nP last week, has lost a part of this gain, 5 nP to be precise. A similar recession is noted in 4¼ per cent 1972 West Bengal. 2½ per cent U.P. Zamindaris Bonds met with a small enquiry and closed 25 nP higher at Rs. 43.75. There was some buying in 4¼ per cent 1972 U.P. and Orissa loans; the former has gone up by 10 nP to Rs. 98.25 and the latter by 5 nP to Rs. 98.15.

In the foreign exchange markets of the world, the pound sterling remained fairly steady, with no appreciable variations in the rate. In the New York market, spot sterling is quoted at 281.050-281.080 cents, which shows a fractional fall of 0.050 cent over the week. Three months' forward, however, has gone up by 0.120 cent to 279.250-279.280 cents per £. In India, there has been no change in the value of rupee against dollars.

GOLD EASY, SILVER STEADY

(From Our Own Correspondent)

BOMBAY, *17th January*

Gold continued to rule easy during the major part of the week under review, while silver staged a slight recovery. The persistent easiness of gold was due to sizable offerings, which followed rumours of large contraband arrivals from Goa, Diu and Daman. Consequently, prices drifted downward. Even at lower levels, support was lacking, thanks to fears of further large arrivals of contraband metal. Silver, however, remained steady to firm on good buying enquiries induced by reports of better offtake in upcountry centres and expectations of early revival of seasonal demand.

Arrivals of gold continued to be quite large during the week, the daily average rate being 6,800 tolas, as against 6,400 tolas last week, while those of silver were lower at 19 bars per day, as against 40 bars. The average daily offtake was 6,000 tolas of gold (5,600 tolas last week) and 6 bars of silver (same).

The adjustment rates fixed today were Rs. 116.25 per 10 grams of gold and Rs. 210.85 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 115.75 and Rs. 209.95, respectively.

The *Fagun* (22nd March) settlement in gold encountered selling and receded from Rs. 117.40 last week to Rs. 116.20 yesterday. After recovering to Rs. 117 today, the settlement finished lower at Rs. 116.70. The net loss over the week was 70 nP.

In silver, the *Fagun* (23rd March) settlement improved from Rs. 211.45 to Rs. 212.15 on Monday the 15th inst. At this level, profit-taking set in and the settlement eased to Rs. 211.20 today, but closed higher at Rs. 211.35, with little or no change over the week.

A feature of trading in the spot section during the week was the marked decline in the rate of discounts under the forward, the actual discounts today being just 20 nP in gold and 50 nP in silver, as against Re. 1.40 and Re. 1.50, respectively, on Wednesday last week. The spot rate for gold, which had advanced from Rs. 116 last week-end to Rs. 117 on Friday and Monday, fell to Rs. 115.85 yesterday, but moved upto Rs. 116.80 today before finishing at Rs. 116.50. Ready silver was done today at Rs. 210.85, as against Rs. 209.95 a week before, the highest touched being Rs. 211.10 today.

The world price of gold in the London bullion market registered a further rise, from $35.15¾ to $35.16¼ per fine ounce, while the sterling price softened by ¼d. to 250s. 1¾d. Ready and forward silver shed ¼d. each to 87¼d. and 88d., respectively. Silver in New York was unaltered at 104.75 cents. It may be noted here that there is at present no forward trading in silver at New York on account of the silver transfer tax. Preparations are, however, being made, according to Messrs. Mocatta and Goldsmid of London, to deal in silver futures on the New York Commodity Exchange, provided the silver transfer tax is repealed.

The following table shows the trend of prices during the week under review:

	17-1-62 (closing)	High	Low	10-1-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	116.50	117.00	115.85	116.00
Forward: *Fagun*†	116.70	117.60	116.20	117.40
Sovereign	97.00	98.00	97.00	98.00
SILVER				
Ready (.996 fine)	210.85	211.10	209.60	209.95

New York—				
Silver	104.75 cents	—	—	104.75 cents

† 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *17th January*

Firm conditions prevailed in the cotton futures market during the week under review. Neither the announcement of an import quota for Rs. 1.50 crore worth of Pakistan cotton nor the rumours about the possibility of even more stringent control measures being introduced, including sealing of cotton zones to prevent free movement of cotton, had any adverse effect on the market. In fact, the market gained further strength from the export quota of 75,000 bales of Bengal *Deshi* announced on the 15th inst. The Jarilla March contract, which was quoted at Rs. 680 last week-end firmed up to Rs. 686.50 on Monday and ruled steady since then at that level till the close today. However, the fear of fresh controls on cotton as also apprehension of Forward Markets Commission's intervention, adversely affected turnover. In fact, business done during the latter half of the week was largely of a jobbing nature.

Mill demand for ready cotton was brisk. In spite of the introduction of the variety-wise distribution of Indian cotton to mills, spinners made large-scale purchases of such popular varieties as CO2, L.147, Khandesh and Moglai. Mill buying was also reported from upcountry centres in Vijay, Digvijay and Surti.

The export quota for 75,000 bales of Bengal *Deshi* was welcomed by the trade although it has fallen short of expectation by 25,000 bales. The absence of any grade stipulation and the first-come-first-served basis of licensing were just what the trade had asked for. The shipment period is between 25th January and 31st August 1962.

Prospects for completing the quota are generally regarded as bright. Japan, the main buyer, is reported to be keenly interested in Bengal *Deshi* at present. Despite the quota, however, export demand was sluggish. This is attributed to the fact that some of the shippers who had sold abroad had already covered a major portion of their sales.

Demand for foreign cotton centred round Sudan and Pakistan cotton. East African varieties also attracted some attention. The following are the latest available quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal 687; Digvijay 1,100; L.147 1,087; Pakistan AC 134: 1,200; B.P. 52 1,370; Sudan G35 1,585.

Cotton futures in Karachi recorded a further rise during the week under review. Good domestic mill buying and keen export demand imparted strength to the market. The announcement by India of an import quota for Rs. 1.50 crore worth of Pakistan cotton was also a bullish factor. Under pressure of persistent buying, the N.T.R.G. January contract firmed up from Rs. 79.40 to Rs. 81.70. The March contract rose from Rs. 78.10 to Rs. 79.

The busy season in Sind is drawing to a close. Most of the N.T. crop has arrived and has been ginned. In Southern Sind, ginning factories have closed down. In the Punjab, arrivals of American-seed *kapas* have been heavy and the crop movement swift. Pickings are drawing to a close. Feature of this year's *Deshi* crop season has been the unusually slow movement of crops indicating the farmers' reluctance to part with their produce at present prices which are considerably below last year's.

Cotton futures in Liverpool suffered a further setback during the week under review. Long liquidation and stop-loss orders resulted in a decline in values. Both the American and American type contracts were marked down. Sudan contracts too met with selling and receded. The following are the latest available quotations—in pence per lb. from liverpool:

American cotton one inch staple contract: March 24.45; May 24.90; July 25.05; October 24.70.

American cotton mixed growth contract: March 24.85; May 25.30; July 25.45; October 25.10.

Sudan: January, March, May 32.00.

Easy conditions prevailed in the New York cotton futures market during the week. Futures prices receded in thin trading with speculative selling and occasional profit-taking providing the main feature.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	16-1-62	9-1-62	2-1-62
New York spot	35.50	35.55	35.55
March	34.24	34.49	34.08
May	34.82	35.04	34.62
July	34.99	35.17	--

ALLOCATION OF ART SILK YARN

(From Our Own Correspondent)

BOMBAY, *17th January*

The Textile Commissioner's notification (dated 11th January 1962) relating to the allocation of indigenous art silk yarn to powerloom weaving units for the current quarter has been welcome by both yarn traders and weaving centres. For the basis of allocation has been broadened to include not merely the mills using only art silk yarn as hitherto but also those using staple fibre yarn and mixed yarn. Some disappointment is however, expressed over the reduction in the size of quota, from 0.64 kg. for the October-December 1961 quarter to 0.48 kg. per loom per shift on the basis of the total number of loom-shifts worked by units on art silk yarn-staple fibre yarn during the July-September 1961 quarter. The yarn traders have also welcomed the extension of the time limit for the submission of essentiality certificate (only) by art silk yarn users up to the end of this month.

It will be recalled that, in accordance with the trade notice dated 1st December 1961, all actual users of art silk yarn during January-March 1962 were finally required to submit their applications, in the prescribed manner, along with essentiality certificates, so as to reach the Office of the Distribution Committee for Art Silk Yarn, Bombay, not later than 31st December 1961. In view, however, of representations made to the Office of the Textile Commissioner pointing to the difficulties experienced in getting the essentiality certificates from the Directors of Industries/State authorities, the time limit for the submission of only the essentiality certificates has been extended upto 31st January 1962, provided the applications have already been submitted in time on or before 31st December 1961. It is made clear that applications in respect of which essentiality certificates are received after 31st January 1962, will not be considered in any circumstance.

The broadening of the basis for allocation of art silk yarn as noted above is expected to result in enlarged offtake. But such an expectation has not led to any rise in prices. On the contrary, art silk yarns have tended to decline. This paradoxical situation is explained by the fact that the increase in offtake will be adequately met from out of the supplies now available. Attention is also drawn to the large arrivals of imported yarn which during the month of December 1961 aggregated as much as 2.34 million kg., highest for any month last year, and to the impending large imports by S.T.C. and actual users, besides imports by established importers as well as special users like the *zari* producers and imports under the export promotion scheme for art silk fabrics.

Amilan (20 deniers) February delivery receded during the week from Rs. 3.205 to Rs. 3.157 and April delivery from Rs. 3.270 to Rs. 3.235. Among imported art silk yarns, 120 Japan dropped Rs. 27 to Rs. 1,818. 120 Italy fell by Rs. 56 to Rs. 1,815. 150 Japan was quiet at Rs. 1,929 and 150 Italy at Rs. 1,709. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade eased by 11 nP to Rs. 13.20, while 150 Bt. cones 1st grade gathered 4 nP to Rs. 11.11 on special support.

Staple fibre yarn (40 x 1) February settlement advanced by Rs. 14 to Rs. 753. April position was done at Rs. 768 today. Spot Kohinoors picked up 7 nP to Rs. 9.22. Citys were firm at Rs. 8.93. Hinds, however, shed 7 nP to Rs. 8.51.

Cotton yarns tended to move up. Ten counts Moderns registered a rise of 38 nP to Rs. 18.75. Twenty counts Centurys were firm at Rs. 21.50 and Moderns at Rs. 22.75. Thirty counts Maduras hardened by 25 nP to Rs. 27.25. Forty counts Maduras were fully maintained at Rs. 33.50. Sixty counts Finlays hardened by a rupee to Rs. 66. Eighty counts Mahendras spurted by Re. 1.12 to Rs. 84.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	17-1-1962	10-1-1962
	Rs.	Rs.
Art silk yarn		
20/1 Amilan (100 kg.)—		
February	3,157.00	3,205.00
April	3,235.00	3,270.00
120 Japan (per 100 kg.)	1,818.00	1,845.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
120 Italy (per 100 kg.)	1,818.00	1,874.00
150 Italy	1,709.00	1,709.00
Nat. Ray. 150 Bt. I	11.11	11.07
Staple fibre yarn (40 x 2)—		
February	753.00	793.00
April	768.00	
Century (per kg.)	8.93	8.93
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	18.37
20s City	21.50	21.50
30s Madura	27.25	27.00
40s Madura	33.50	33.50
60s Finlay	66.00	65.00
80s Mahendra	84.00	82.88

OILSEEDS IMPROVE

(From Our Own Correspondent)

BOMBAY, 17*th January*

The oilseeds market put on a distinctly cheerful appearance during the week under review. Groundnuts continued to rule firm, thanks to lower arrivals, mainly from Kathiawad and South India. It would appear that, in view of the prospects for increase in prices, farmers were reluctant to dispose of stocks, while offtake by local crushers and *vanaspati* manufacturers continued to be heavy. Traders were inclined to believe that ceiling in respect of groundnut hedge contracts might be lifted by the Forward Markets Commission, following a strong plea made by the representatives of producers in Saurashtra. The firmness of castorseeds was engendered mainly by hectic buying by shippers, following reports of good business with Communist countries. Linseeds ruled distinctly steady, particularly because of the pronounced strength of mustardseeds in North Indian markets. Cottonseeds, too, staged a smart rally, on account of encouraging reports from raw cotton market.

The decisions bearing on the expansion of oilseeds production taken at the annual meeting of the Central Oilseeds Committee held at Madras on the 13th inst. were welcomed by the trade. The Committee's decision to meet the entire expenditure on the "package programme" of intensive cultivation from its own funds is expected to stimulate the interests of State Governments in this scheme. Under the original system, envisaging the sharing of expenses between Centre and States, some of the States were not enthusiastic about the scheme. It is reported that, under the new procedure, Gujerat, the Punjab and Rajasthan would implement the scheme, in addition to the five States, originally selected, namely, Madras, Mysore, Maharashtra, Andhra Pradesh and U.P. The package programme is expected to cover 50,000 acres. The Committee has also decided to increase the outlay on the programme by Rs. 5 lakhs to Rs. 15 lakhs.

Groundnut Coromandel rose by 50 nP to Rs. 47.25 and Nizam bold by 25 nP to Rs. 46.75. Oil railway receipts hardened by 25 nP to Rs. 19.35 and oil ex-mill by 20 nP to Rs. 19.40. There was no official trading in hedge contracts, as they were ruling much above ceiling levels. In private trading, groundnut April 1962 contract moved up by Rs. 25 nP to Rs. 218.50.

Castorseed March 1962 contract forged ahead from Rs. 173.62 to Rs. 177.12. Madras small put on a rupee to Rs. 36.75. Oil Commercial picked up 30 nP to Rs. 15 and oil B.S.S. 25 nP to Rs. 15.75.

Among linseeds, March 1962 contract advanced by 44 nP to Rs. 39.47. Bold ready was maintained at Rs. 42.50. Linseed oil gathered 15 nP to Rs. 18.30.

Cottonseed January 1962 contract spurted by Rs. 2.75 to Rs. 106 and April 1962 contract by Rs. 2.50 to Rs. 107.75. Whites improved by 25 nP to Rs. 20.25. Berars and non-whites were both fully steady at Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday, 17th January, as compared with those of the two previous weeks:

	17-1-1962	10-1-1962	3-1-1962
	Rs.	Rs.	Rs.
Groundnut			
January 1962	215.00	215.00	215.00
Nizam bold	46.75	46.50	46.12

January 1962	106.00	103.25	100.50
Niger seed	38.00	37.50	38.00
Kardi seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER MOVES DOWN

(Messrs. Parekh and Co.)

BOMBAY, 17*th January*

Malabar black pepper edged downward during the week for lack of foreign inquiries and under pressure of increasing arrivals. Arrivals averaged 700 candies per day, while daily offtake by exporters and dealers did not go beyond 350 candies. Dealers and commission houses at the terminal centres who have to accommodate growers remained anxious sellers. They in their turn send consignments to consuming markets for raising finance and for relieving a glut in the market. Some of them make sales to New York and to other overseas ports at cut prices for testing the foreign buyers. They even accept on views cheaper bids from new York in anticipation of covering with a margin next day. Acceptance of cheaper bids make foreign buyers to bid still lower the next day. This vicious circle had started spinning and one does not know when such spinning will end. It may not end until foreign buyers feel that the market has reached the bottom. As a result, they come out to buy rather freely, putting aside their present policy of buying hand to mouth.

Spot in New York is seesawing between $0.36½ and $0.38. Holders there sell cheaper to grinders when they can replace from India with a margin. All bids from New York at $0.34½ to $0.33 are reported to have been accepted.

Despite further deterioration in the Indonesian political situation, market at Singapore is reported to be quiet and is down by Str. $2½ both in black and white, the latest price being Str. $140 and and Str. $170 for black and white, respectively. Though other commodities like nutmeg and coffee are booming in Singapore, owing to the present war psychosis in Indonesia, Lampong pepper is said to be immune from any such influence, as stocks in Singapore are reported to be fairly high and are mostly in the hands of the Indonesian Trading Agency. Floating stock of black and white at Singapore in the hands of other dealers being poor, the present quotations received from Singapore are only nominal.

Ungarbled at Cochin climbed down from Rs. 312 to Rs. 295 and garbled from Rs. 317½ to Rs. 300. January delivery on the ring having been squared up at Rs. 312, February is now quoting at Rs. 307 with small interest. Calicut is quoting at Rs. 295. Arrivals there are augmenting and are outstripping the demand.

Ready pepper in Bombay is nominally quoted at Rs. 173 per 50 kilos.

STRONG DEMAND FOR TEA

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 9*th January*

A total quantity of 617,000 kgs. was offered in sale No. 2 held today. Quality in general showed a further seasonal improvement. There were a few attractive teas offered from the Nilgiri district. The market opened with strong general demand which continued throughout the sale. Buyers showed keen interest for highgrowns, particularly those with improved quality which advanced considerably in price. Plain low medium and medium brokens were well competed for and these sold at rates 10 to 20 nP above last. Similar fannings, though sold readily, were only quoted firm to dearer. There was useful inquiry for good mediums also at dearer rates with quality. Black leaf descriptions continued in demand and registered further advances. Whole leaf grades were strong and dearer. Unorthodox descriptions also came in for strong support and were irregularly 10 nP dearer.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.60-3.95	4.55-4.75
Mediums	3.95-4.50	4.75-4.90
Good mediums	4.50-5.60	4.90-5.50
Nilgiri B.O.P.	5.60	9.00

The average price realised in sale No. 2 was Rs. 4.71 per kilo, as compared with Rs. 4.31 a week ago and Rs. 5.01 in the corresponding sale last year.

A larger quantity of 431,000 kgs. was offered in dust sale No. 2 held on Thursday the 11th inst. A useful selection of dusts was on offer. The market met good but irregular demand. There was useful support for plain and low mediums, but prices were lower by 10 to 20 nP. Poorest and milled descriptions were in less demand and often declined by 50 nP. Buyers showed keen interest for clean, black leaf descriptions which sold at prices above last. Highgrowns were in good demand at fully firm to dearer rates. C.T.Cs, particularly the powdery kinds, were generally easier.

The average price realised in dust sale No. 2 was Rs. 4.08 per kilo, as against Rs. 4.20 a week ago and Rs. 4.93 in the corresponding sale last year.

Colombo: In the export sale, there was good general demand. Better liquoring teas from western districts were slightly easier whilst others, with the exception of the poorest kinds, were slightly dearer. Liquoring fannings were well supported at dearer rates. Mediums, particularly the improved quality, were dearer by 5 cents. Persian Gulf descriptions were also well supported and advanced by 5 cents. Small leaf types tended easier. In the offgrade sale, there was strong demand for offgrades and dusts were generally dearer.

London: North Indian and other growths: In Monday's sale there was strong general demand especially for lower descriptions at dearer rates. In Wednesday's sale there was useful demand and the market continued on Monday's trend.

Ceylon and South Indians: 24,663 packages were offered in Tuesday's sale of which 8,520 packages originated from South India. The market met with active demand. The lower kinds from Ceylon were well sought after at firm rates. There was good support for South Indians which were firm and occasionally sold at dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 3: 402,000 kgs. offered. Strong general demand. Plain low medium and medium fully firm to 10 nP. Good mediums dearer, with quality highgrowns irregular, and sometimes below valuation. Fannings strongest feature."

QUALITY TEAS HARDEN

(From Our Own Correspondent)

CALCUTTA, 16*th January*

Quality teas commanded greater attention and met with competition at hardening rates during yesterday's export sales. Although the internal sales held last week commenced with hesitant demand, active conditions set in as the sales progressed.

Heavy shipments of tea, particularly to the United Kingdom, were again a feature of the Calcutta freight market during the week, but it was anticipated that, having regard to the approach of the end of the season, direct shipments for participation in Mincing Lane auctions would decline. Reflecting the increased shipments in recent weeks, stocks in London increased by 3.60 million lbs. to 127.59 million lbs. during the week ended 5th January. The fact that, in the sales held in Mincing Lane last week, strong demand pushed up prices, was taken here as an indication of the need of London stockists to increase supplies before the season comes to an end. The unusually greater interest displayed in Ceylon teas at London auctions should be attributed to the likelihood of a break in supplies should the labour situation in Colombo port worsen. Also, lower production in Ceylon during the months of November and December as a result of adverse weather has gone a long way towards making London bidders more active for Ceylon teas.

The improved demand at Calcutta auctions in the past one month, despite increased production, is attributed by trade circles to the low level of stocks in importing countries. Prices have moved up and, if current labour troubles in Ceylon gather momentum, it is expected that bidders there will have to make up their purchases by taking more Indian tea. Moreover, there are ample indications that, if prices in Calcutta auctions fall, offerings will be restricted. It has been remarkable that, after this indication, conditions have firmed up.

Although tea exports to the U.K. have been below the average so far, increased offtake by the several trade agreements, especially the Communist bloc, has been a feature. Trade circles have learnt with enthusiasm the news that, in an effort to take more Indian tea, a trade delegation from Morocco is expected soon in Calcutta. At present, Morocco buys tea mainly from Japan and China, and it gets very little tea from India. Morocco is a favourite of green tea, but India produces such tea only in the Kulu Valley, the entire quantity being taken up by Afghanistan. That the trade delegation is being sponsored by Morocco is perhaps indicative of that country's desire to change its tea drinking habit in favour of black tea. Trade circles look forward with interest to developments in this regard.

The trade as well as the industry have urged the Tea Board to start more promotional campaigns than hitherto. Ceylon's methods, including the supplying of samples, have brought in good dividends, and there is no reason why India should not consider re-examining propaganda measures and emulate Ceylon. India's target production of 900 million lbs. would be more realistic if only measures were also taken at the same time for aggressive sales campaigns abroad in order to increase effective demand. A glut in supplies is a great danger which should be avoided. In this situation, the Government's decision to grant long-term loans to tea gardens for replanting, extension of acreage and replacement of machinery has not created any excitement.

Dusts on offer during last week's internal sales amounted to 25,500 chests. Demand strengthened as the bidding progressed. Plain orthodox varieties not only wiped away the earlier loss of 10 nP but closed higher on balance. However, medium Assams made their way to an irregular trend. Legg-cut teas were fully steady, the fibrous and clean teas realising higher prices. Among C.T.C.'s, the clean mediums possessing bright liquors recorded higher prices. The good C.T.Cs. registered an irregular pattern. The smaller kinds were fully firm, while the secondary and fibrous grades were sold at hardening rates. The quotations per kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00; medium Assam C.T.C. dust Rs. 5.80 to Rs. 6.30; Legg-cut dust Rs. 4.60 to Rs. 5.20; medium Assam dust Rs. 4.20 to Rs. 5.00, and plain orthodox dust Rs. 3.80 to Rs. 4.40.

Good demand was in evidence in leaf offerings which aggregated 375 chests.

Offerings during yesterday's export sales, amounting to 75,068 packages, met with strong demand and prices were better. The strongest feature of the sales was C.T.Cs, prices of which rose impressively. The general improvement in the market should be attributed to greater demand as well as to better quality. Legg-cut teas were fully steady. Plain brokens met with good support, and keen competition was offered to fannings of this category. Whole leaf grades evoked good demand, as did tippy teas. Darjeelings, however, were irregular, with the lots possessing quality being preferred. Better liquoring and medium Assam orthodox teas were steady, with plainer and medium B.O.Ps receiving more attention. Fannings were fully steady. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.80 to Rs. 6.20; best Assam C.T.C. B.P. Rs. 5.60 to Rs. 5.90; medium Assam C.T.C. fannings Rs. 5.10 to Rs. 5.50; clean black pekoe Rs. 4.00 to Rs. 4.20; medium Assam C.T.C. B.P. Rs. 5.10 to Rs. 5.50; plain fannings Rs. 3.80 to Rs. 4.10; and plain B.P. Rs. 3.55 to Rs. 3.65.

DIVERGENT TREND IN METALS

(From Our Own Correspondent)

CALCUTTA, 16*th January*

While under the impact of acute shortage and keen demand, copper scrap prices rose, the price of zinc eased. Lead also eased, but tin, after moving higher, closed below the best level for the week.

The major news of the week was the International Tin Council's announcement raising the floor price of tin from £730 to £790 a ton and the ceiling from £880 to £965. This means that if the price falls to below £790, the Buffer Stock Manager at London would become a buyer and prevent the price from falling further. Similarly, he would become a seller if the price moves up above £965. These revisions are in accordance with the recent trends in the market. Thanks to acute shortage, the open market rate crossed the ceiling and the London Manager exhausted all stocks, most of which naturally fell into speculative hands. It was becoming clear subsequently that there was no chance for the price to move down to as low as the earlier floor price of £730. Mine-owners had accordingly demanded raising of the floor and ceiling prices in order that, if they increased production by extending mining operations and reopening abandoned mines and if market conditions slumped, they should be assured of compensation for the increased cost of production. Now that this assurance has been made by raising the prices, it is to be hoped that production, especially in Malaya, would increase.

On the London Metal Exchange, tin opened at £943 a ton and declined to close lower at £939½. The downward trend was induced by the expectation of release from U.S. stockpiles at suitable prices. The Council's decision, it was expected, would cause a spurt in world prices, which, however, would not be sustained in view of the possible U.S. releases. In Calcutta, the price opened at Rs. 1,584.50 per 100 kgs. and after having moved higher at Rs. 1,624.00, eased to close at Rs. 1,606.25 in accordance with the weaker trend in London and Singapore.

Shortage in copper has become acute, and it looks as though permit-holders are not likely to get their supplies in the near future. This has resulted in more attention being paid to scrap, and berry scrap hardened from Rs. 527.75 per 100 kgs. to Rs. 546.50 and utensil scrap from Rs. 482.25 to Rs. 486.25. Following lower advices from New York, where spot copper declined from 30.34 cents a lb. to 30.07 cents, the London Metal Exchange quotation was depressed. Opening at £230½ a ton, the rate gradually lost to £229. Consumers there were postponing entering into commitments, and it was reported that world supplies this year were going to be in excess of demand.

In Calcutta, electrolytic zinc opened at Rs. 252 per 100 kgs. and at one time was as low as Rs. 244. Towards the close, the rate recovered to Rs. 248. The decline was due to lack of consumer interest as sufficient quantities of copper could not be found for alloy-making. In London, the rate recovered to £71¼ a ton after being lower at £71-1/8. The recovery followed greater consumer interest.

Virgin lead featured with a fall to Rs. 126 per 100 kgs. from Rs. 128.

JUTES WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 16*th January*

Despite the decision of mills to increase production further in order to relieve the existing shortage for ready goods, jute goods were well maintained during the week under review. Despite increased arrivals, but against the background of the issue of a supplementary quota of about 300,000 maunds, fibre was also maintained. During mid-week, sacking goods reacted, as it had become clear that overseas business in these constructions had gradually declined. Keener competition from Pakistan and the fall in demand for heavy goods had greatly curtailed speculation, and the trade felt that, although with the increased farms output a greater quantity of sacking was being consumed in overseas countries, India was not being benefited from such an increase, as some of these countries had commenced their own manufacture of sacking. This inference is supported in that, at the end of December, sacking in stock with the mills fell by only 500 tons to 29,100 tons. Output of sacking in December was higher by 2,400 tons at 49,600 tons. Against this increase, the fall in stocks, however small, should be considered encouraging normally. Nevertheless, the decline in business with overseas countries dismisses any such elation.

The total output of goods in December was 97,600 tons, an increase of 3,900 tons over November, attributed to the full effect of the 2½ per cent looms unsealed on 13th November. There was no change in the number of hours worked, that is, 208. The total stocks at the end of December were 55,900 tons which, it should be noted, registered a decline of 1,200 tons, despite the increase in production. Adding the stocks of 57,100 tons at the end of November, the total availability in December was 154,700 tons and, considering that stocks at the end of December were 55,900 tons, demand during the month was for 98,800 tons, which exceeded production by 1,200 tons. It is against this background that the Indian Jute Mills Association announced early in the week that the 2½ per cent of looms unsealed on 13th November and the 2½ per cent of looms unsealed on 1st January would continue in production up to the end of March. Earlier, it had been decided that these looms would be in operation up to the end of January only. The Association apprehends that even this increase in production may not be able to satisfy demand in full and, keeping this in view and also the importance of the need to maintain stability in the market, has permitted such of the mills as are in a position to operate more looms to do so to the full extent of their ability from 15th January to the end of February.

Meanwhile, demand for hessian continues very satisfactory and, this against the background of a decline in stock of 1,600 tons to 16,100 tons at the end of December, has resulted in greater speculative attention for hessian. Mills realise that in the present conditions of the market, it is necessary to increase the proportion of hessian output by transferring looms from sacking to hessian. However, fibre fit for hessian is commanding a premium, and it is apparent that the profits of mills would be less in producing a greater quantity of hessian at the cost of sacking and miscellaneous constructions. The stock of the latter at the end of December increased by 900 tons to 10,700 tons.

The decision of mills to raise production further is already reflected in the increase in demand for fibre. Arrivals on an all-India basis have been estimated at 130,000 maunds a day at present, a very highly encouraging figure, which enhances the hope that mills would be able to start the next season with a sizable reserve. A major share of this huge increase is accounted for by increased production in West Bengal and Assam. In West Bengal, the crop, excluding mesta, has been estimated at 16.7 million maunds, an increase of 7.2 million maunds as compared with the last season. Acreage in West Bengal increased from 750,000 to 1,200,000. The minimum quota to be purchased by mills for the week ended 13th January was increased by 300,000 maunds. It is likely that, in view of the decision to raise production further, the higher quota would be maintained in the coming weeks, and that that would push up fibre prices from the minimum levels. Trade circles noted with enthusiasm that the Jute Promotion Council of Britain, India and Pakistan has started a promotional campaign in the United Kingdom.

The fact that buyers continue to show no interest in forward business has made the industry nervous. While fibre stocks with mills are increasing and they have only little goods to offer in the near or immediate positions, order books have yet to go a long way. Since fibre stocks are increasing, there is much uncertainty about the future trend of prices so long as order books remain incomplete. However, current demand for ready goods has indicated that there is ready acceptance, if prices are reasonable. This shows that jute goods can compete successfully with substitutes. In this view, the scheme for a buffer stock in fibre is much to be commented upon. Mills have become wise, and they are building their own stocks so that the new season may not be haunted with the shade of shortage as in the early months of the current season. Pakistan has already asked overseas buyers of fibre to co-operate with it in a scheme to build up buffer stocks. To consider this matter, a conference with overseas buyers is being arranged to take place at Dacca next month. The Pakistan Commerce Minister, disclosing this, hoped that buffer stocks would prevent wide fluctuations in prices. He stated that other support measures envisaged included provision of a network of warehouses in growing areas, where farmers could deposit their produce and obtain advances against its value and a reorganisation of rural markets so that producers could conveniently sell their products at centres near at hand at favourable prices, thus doing away with middlemen. Meanwhile, overseas buyers were still holding out in Pakistan. They were bent upon lowering the E.P.C. rates, and finally succeeded. Accordingly, export firsts have been cut down from £118 and Rs. 250 to £115 and Rs. 240, and lightnings from £92 and Rs. 185 to £87 and Rs. 185. Importers in London, however, are yet to signify their consent to these new rates.

In Calcutta, Assam bottoms were firm at Rs. 30 a maund, as were northern and daissee bottoms at Rs. 29.50 and Rs. 32, respectively. The decision of mills to increase production as well as the issue of a supplementary quota should have normally raised prices from the minimum levels, but there was a report according to which a ready bill of lading from Assam realised only Rs. 28 per maund basis bottoms. Mills were anxious to prevent fibre prices from rising, and that explained their scattered support at a time when sellers were very eager for business. The purchase quota released for the week ending 20th January is in respect of 900,000 maunds. The I.J.M.A. has attributed the fall in fibre prices below minimum levels in certain interior districts to the lack of adequate transport facilities to bring the fibre to Calcutta. It has been suggested that the railways should accept bookings whenever they are tendered and until the wagons are provided railways should store them in their warehouses. At present, forwarding notes are accepted only after providing the wagons, and a shipper has necessarily to wait for long after getting the consignment ready and before loading them in wagons against documents.

Ready hessian 40" 10 oz. were firm at Rs. 55.75 on Tuesday last, while selling pressure in the futures market depressed ready B. twills from Rs. 128.75 to Rs. 127.00. While there was no fresh business done with overseas buyers, hessian met with covering demand. On Wednesday, hessian 40" 10 oz. spurted to Rs. 56.50 for the ready position on renewed covering demand, while hessian for the forward positions were easy as there was no demand for these positions. Heavy goods continued to give way on continued selling pressure in the futures market, and ready B. twills eased to Rs. 126.00. On Thursday, there were reports of business in hessian with U.S. buyers and ready 40" 10 oz. hardened to Rs. 58.00. Ready goods were hardly obtainable, while mills were unable to get sufficient orders for their advanced positions. In sympathy, ready B. twills gained to Rs. 127.25. Profit-taking reduced the gains on Friday, hessian 10 oz. skidding to Rs. 56.75 and B. twills to Rs. 127.50. Over the week-end, good covering business in hessian was done against reports of satisfactory shipment during the week. The 40" 10 oz. kind gained to Rs. 57.25. In sympathy, B. twills hardened to Rs. 128, although no overseas business was done. Conditions, however, eased yesterday when mills turned their attention to forward sales. There was also, selling pressure in the futures market. Ready hessian 40" 10 oz. eased to Rs. 55.25 and B. twills to Rs. 126.25.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 15*th January*

Sugar ruled quietly depressed, as the supply position was very comfortable, thanks to the release of 200,000 tons for sale. The inferior stocks of the last release were still lying with some factories. Inferior small crystal quality was not in request even at Rs. 2 per maund lower than the previously controlled prices, while bold crystal was being readily lifted at higher prices. All factories on this side were attracting good supplies of cane and the sugar percentage in cane was said to have improved, as cane was now fully ripe. Week-end prices here were: wholesale Rs. 106.50 per bag; retail 97 nP per *seer*; mill delivery per maund. *Simbhauli* E29 Rs. 37.85; *Amroha* D29 Rs. 36.37; Bijnore D29 Rs. 35.87; *Dhampur* E29 36.37.

Sugar ruled steadier in the Muzaffarnagar market during the week on brisk demand from Gujarat, Punjab, Saurashtra and Delhi. Bold crystals improved by 35 nP a maund, while inferior quality eased further due to selling pressure by factories. Week-end prices were: A29 *Mansurpur* Rs. 40.35; *Iqbalpur* Rs. 40.10; B29 *Deoband* Rs. 40.03; *Khatauli* Rs. 39.78; *Shamli* Rs. 39.70; D29 *Deoband* Rs. 38.54; *Saharanpur* Rs. 37.44; E29 *Shamli* Rs. 37.75; *Kashipur* Rs. 36.06.

Sugar in Kanpur was, however, depressed, following the quota for sale released towards the week-end. Weekly transactions were about 100,000 bags. While mill delivery was done at Rs. 36 a maund, spot prices touched a new level at Rs. 102.50 per bag. Stringent financial conditions and heavy stocks were said to be responsible for the fall in prices.

Khandsari eased further by about Re. 1 per maund, as demand was slack and quality reaching

MARKET GOSSIP

(*Concluded from page 103*)

the size of operation of business enterprises. As decision became more concentrated and industry became more highly capitalised, the blunders of surplus capacity, according to him, would grow worse without some form of planning and forecasting which were essential for the survival of private competitive enterprise. From this point of view, Mr. Chambers welcomed the British Government's proposal for a National Economic Development Council to co-ordinate information and industrial programmes. This, of course, did not mean that there would be no competition or that resources would be allocated to particular firms or industries. As Mr. Chambers saw it, the chances for efficient business to expand confidently and with better knowledge of potential demand would be greater if more of the limited resources could be made available to the newer and more progressive sections. Competition, he said, would remain, but the worst blunders of putting up excess capacity would be eliminated. Improved information and better knowledge of the growth or decline of demand for particular products could also promote a better answer to problems of international trade.

Mr. Chambers had some sensible things to say about the plea for legislation against import of "cheap" goods into Britain from other countries, particularly underdeveloped countries, which is miscalled dumping. Legislation, in his view, is not the solution. The answer lay in discarding outmoded economic ideas on such matters as monopoly and monopolistic competition. In other words, industrial units must be allowed to expand and take advantage of economies of large-scale production and scientific inventions to compete effectively in domestic and world markets, instead of being shielded by tariff walls and quota restrictions. It is to be hoped that these words of Mr. Chambers would drive home to the diehard millowners in Britain and elsewhere in the Western world who cry hoarse for restrictions on textile imports from underdeveloped countries, ignoring the realities of the changed industrial world in which they and their competitors live.

Tin Prices Raised

The future of the International Tin Agreement has been highly uncertain, ever since the expiry of the first lap of the Agreement in June 1961. The end of the first phase coincided with the total exhaustion of the Tin Council's buffer stock, with the sale of the remaining 10,000 tons at the then prevailing ceiling price of £880 per ton, in a desperate bid to bridge the growing gap between supply and demand. The open market prices have gone up since then by about £70 per ton, thanks to an increase in consumption coupled with a decline in production. According to the Tin Council, world production of tin was only 122,000 tons during the first nine months of 1961, which fell short of consumption by 12,000 tons. The production of tin during the full year 1960 was 171,000 tons, as against an annual average of 177,000 tons during 1951-55. Its consumption amounted to 180,000 tons in 1960, as against an annual average of 141,000 tons during 1951-55. It is in the context of growing shortage of the metal that the producers insisted on raising the floor and ceiling prices from £730 and £880 per ton to £800 and £1,000 per ton. The consuming countries, however, refused to concede this demand. The end of the Agreement appeared to be imminent, when Bolivia, one of the major producers, and five consumers, namely, Belgium, Italy, Mexico, Spain and Turkey, refused to ratify the second Agreement before 31st December 1961, the last date set for it.

The crisis, however, appears to have been averted now, with the decision taken by the Council last week at London to raise the floor by £60 to £790 per ton and the ceiling by £85 to £965 per ton. This move is designed to give a new lease of life to the Agreement, the final date for the ratification of which has now been extended upto 30th June 1962. The Council's new decision indicates that both producers and consumers were prepared to sacrifice something and meet it half-way. The increase in price is expected to bring about an increase in the supply position. The revision of the prices is, however, only of academic significance. For the Buffer Stock Manager has no metal with him to sell and control prices. But there remains a lingering hope. The U.S. has stockpiled about an estimated 350,000 tons, or about double the free world's annual consumption. The U.S. General Services Administration has asked for permission to dispose of 50,000 tons of tin out of this stock. In view of the strong recommendation made by the Combined Defence Production Committee of the House of Representatives and Senate for disposing of part of the stocks, the Congress is not likely to refuse permission for it.

The decision of the U.S. Congress is expected by the end of this month. A major problem, however, remains to be cleared, namely, the price at which the metal should be disposed. Bolivia has already secured an undertaking from the U.S. that it would in no way permit its disposal of tin to disrupt the market. The U.S. will not take a step that will even unwittingly displease Bolivia. It remains to be seen whether the U.S., which is not a member now, will join the Agreement and sell its tin to the Buffer Stock Manager. It is for the Congress to decide the issue.

All those who believe in the need for concerted international action in restricting commodity price fluctuations will welcome the revision of floor and ceiling prices. It may be recalled that tin had been subject to violent fluctuations before the Agreement came into force in 1956. Thus, the price of tin, which was £600 per ton in 1950, skyrocketed to about £1,500 at the time of the Korean boom, but gave way subsequently to touch £600 again.

The upward revision of tin prices under the Agreement has lent firmness in world markets for tin. The price of cash tin in the London market has already risen by about £10 since the Council's decision to raise the price to £950 per ton. This compares with £788 per ton a year ago. The price of tin in the Bombay market, too, has turned firm. India does not produce primary tin and depends on imports for its requirements. The value of such imports aggregated Rs. 3.79 crores in 1960-61, despite the restrictive import policy, as compared with Rs. 5.31 crores in 1959-60 and about Rs. 3.00 crores in 1953-54. The increase in prices by the Tin Council should cause no concern to this country, as it will lead to a greater degree of stability in prices, which is helpful to consumers no less than to producers.

Capital Gains Tax

What is a capital gains tax? Is there any justification for its imposition and, if so, what should be the basis of the levy? These questions may sound elementary to most of our readers, because this tax has been in force in this country for some five years. Nevertheless, observations on this subject by eminent persons elsewhere in the world are always news that will be read with interest. In the annual statement circulated to the shareholders of Barclays Bank last week, Mr. Anthony Tuke, Chairman, has made some interesting points on this tax. As readers are aware, Britain is one of the few important countries in the world where there is no tax on capital gains. But it will not be free from it for long, for the Chancellor has already announced that he intends to introduce, in the forthcoming budget, a proposal to tax certain short-term capital gains. Referring to this proposal, Mr. Anthony Tuke says that gambling might be sinful, though he hastens to add that every investment and business deal is speculative in some degree. He also thinks that, leaving motives aside, there is a case to be argued for a tax on capital profits made by individuals where those profits are made very quickly, assuming that the realised profit represents the difference between cost and sale price and that it is limited to certain classes of assets excluding, for example, houses and furniture. He, however, emphasises that, if there were to be a general tax on capital profits, it should be quite separate from income-tax and should fade out in a very few years. Elaborating this principle, he observes:

"A tax on a so-called profit, which merely registered (perhaps only partially) a fall in the real value of the currency, would be a great injustice. Unhappily this objection has greater validity here (Britain) than it has elsewhere. It, of course, goes without saying that, to be fair, realised losses must be allowed to be set off against realised profits."

Looking at the issue from a practical point of view, Mr. Anthony Tuke doubts whether there would be much money in capital gains tax for the Treasury. Further, as a business proposition, he rejects the tax on the following grounds:

"... Professional investors, or many of them, are already obliged to treat realised capital profits as income and to pay tax accordingly. It is the private investor, the amateur, who enjoys his capital profits free of tax. Up till a few months ago, there had been such a boom in equities during the last two or three years that even the amateurs had made money. Lately, more sober and sensible views have prevailed and many of the paper profits on equities have been blown away. In normal times, when there are ups and downs in the markets, on the whole the professionals win and the amateurs lose. The Government then gets tax out of the professionals and does not have to give any back to the amateurs. Why should it not be content to go on having the best of both worlds?"

Nevertheless, Mr. Anthony Tuke concedes the need for a capital gains tax in Britain in the present context of unhealthy state of affairs—the passion for converting income into capital. His acceptance is, however, subject to two qualifications. One, the tax must always be limited to short-term gains. And, two, the necessary legislation should be simple. The capital gains tax in India satisfies neither of these conditions. Indeed, the levy is so complicated that many investors do not even want to book the profit on their investments in order to save themselves the bother of calculating and paying it to the Government. This is evident from the negligible amounts collected by the Government of India by way of capital gains tax. For 1959-60, for instance, the revenue from this source was no more than Rs. 62 lakhs; for 1958-59, it was much less, being a mere Rs. 39 lakhs.

WORLD GOLD OUTPUT RISES AGAIN

(*Concluded from page 114*)

were cut off, an entirely new situation was suddenly created, to which the London market could only respond by an abrupt rise in prices. The course actually taken by the American authorities was only one of several which had been foreseen as possible and, although it confirmed some forecasts, it still leaves open the question of whether the Presidential recommendations to repeal silver legislation will, in due time, be endorsed by the Congress." Proceeding, Messrs. Mocatta and Goldsmid observe:

"The immediate outcome is certainly testing the capacity of the market to maintain orderly conditions in which all comers get a fair deal. It may still be too soon to say just what part the London silver market may expect to play in a world which has at last renounced the use of silver as a monetary metal, except for the purpose of token coin. But there can now be no doubt that the events of the last few months have established London as the world's market in silver, with nothing to lose from still wider extension of free dealings, without official intervention or support. On the first day under the new conditions, there was a spasm of uncertainty, for want of any clues about which way a number of cats on hot bricks were going to jump. Since then, the market has settled down at a somewhat higher price level which is being mainly supplied from speculative liquidation. The amounts taken by domestic industry during the year fell off a little, but this was due to a reduction of stocks held by certain consumers rather than to any slackening of industrial activity. Very little more silver can be expected, at present, from the proceeds of our (Britain's) own demonetisation programme. Demand for coinage in Europe has come from Switzerland, Italy and Austria, whereas France has bought less, perhaps because it is no longer intended to mint a 2-franc piece. Imports from the usual countries have continued, but the amounts coming from Australia have been much reduced, because considerable quantities of locally-mined silver are being retained. Future sales from China are unpredictable."

MARKET REPORTS

(*Concluded from page 137*)

the market was damp. Due to shortage of cane supplies, crushers manufacturing *khandsari* increased cane purchasing price to Re. 1.25 per maund. To encourage the production of *khandsari*, the U.P. Government reduced licensing fees for *khandsari* manufacture. Week-end prices of *khandsari* were: *desi* Rs. 29 to Rs. 32.50; crystal Rs. 30 to Rs. 33; *boora* Rs. 36 to Rs. 38.50 a maund.

Ready *gur* was quiet during the week, as loading position to consuming areas of Southern, Central and Western Railways was restricted. Daily arrivals were modest at an average of 5,000 maunds which were lifted partly to Assam side and rest to other stations by road for onward despatch. Arrivals declined, as cultivators were reported busy irrigating *rabi* sowings. Total arrivals of *gur* here during the current season were 3.09 lakh maunds, corresponding figure last year being heavy 3.40 lakh maunds. Week-end prices here were:—*pansera* best Rs. 13.62; *dara* Rs. 13 to Rs. 13.25; *balti* Rs. 13.87; *shakker* Rs. 16.50 to Rs. 17 a maund.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 15*th January*

Firm conditions continued to prevail in the foodgrains market during the week under review on reports of damage to the standing *rabi* crops due to frost and absence of winter rains so far. Stockists were reluctant sellers expecting better prices in the coming two months which would be the fag-end of the *rabi* season. Wheat improved by about 75 nP a maund to be quoted at Rs. 17.75 a maund for average quality and upto Rs. 19.75 for better farm produce. Arrivals in the open market were nominal and, thanks to good buying support, local stocks with trade declined to 13,000 maunds. The U.P. Government, in its anxiety to check this bullish trend in prices, allowed increased sales through ration shops in big cities and imported wheat was being sold in ration at Rs. 15.25 a maund.

Despite satisfactory supply position as the new produce continued to reach the markets, rice also recorded a hardening trend in sympathy with other grains and with local stock put at 10,000 maunds. The week-end prices of rice were: *mainpuri sela* Rs. 20; *gadda kutcha* new Rs. 19.50; *ramajwayan sela* Rs. 22; *raimunia sela* Rs. 23; *basmati sela* Rs. 26 to Rs. 28; superior Rs. 29 to Rs. 34 a maund.

Gram improved fractionally to Rs. 15.87 a maund for Punjab variety and, following good consumer demand, local stock dwindled to 15,000 maunds. Barley and *bejhar* also sought higher levels at Rs. 12.50 and Rs. 12.50 to Rs. 13 a maund, respectively, and the standing crops of all these grains were adversely affected in the absence of winter rains so far. Maize was much in request for seasonal consumption and prices sought higher levels with local stocks fast declining, despite continued arrivals from east U.P., and Rajasthan side. *Bajra* also tended to rise due to brisk festival *Sankrayat* demand and arrivals continued small.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 15*th January*

Arrivals of E.I. tanned hides and calf were of moderate volume and clearance was fair-sized. Prices ruled steady. Export trading was small, being mostly for lower selections in cow hides 5-5½ lbs. and 8-8½ lbs. average. Due to good offtake for inland trade at prices higher than what the importers could offer, shipment business was very difficult in this section. Buff hides remained unchanged. Following a few orders for buffs calf from the Continent, the market ruled firm, despite lack of U.S. interest.

In the tanned skins section, importers did not show much interest. Inquiries for tanned goat skins were patchy, especially for 5½-6 lbs. and 8-9 lbs. fifths at low prices. Demand for sheep skins was negligible, despite attractively low prices offered by the tanners. Resistance to prices offered by the tanners was pronounced in the tanned skins section, and the market ruled quiet.

The following are the ruling prices per lb. for all-round lots in the local market:

		Rs.
Tanned cow hides ...	... 8/8½ lbs.	2.20-2.25
" buff hides ...	... 12/14 "	1.90-2.00
" cow calf ...	... 1½/2 "	3.60-3.80
" buff calf ...	... 1½/2 "	3.00-3.25

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2650 BOMBAY, 27th JANUARY 1962 PRICE Rs. 2

URBAN INCOME AND SAVING

IT is a truism to say that development depends upon an adequate level and a right composition of national saving for economic investment. Planned development, in turn, would be greatly facilitated, if it were preceded by the acquisition of some very dependable knowledge about the quanta, sources, forms and purposes of savings for capital formation. But planners in India have thus far been able to adopt, in their plan models, only broad estimates of saving-income ratios for the economy as a whole. These estimates, presumably made in the light of some relevant findings of the earlier National Sample Survey studies pertaining to consumption, of the Rural Credit Survey and of the Reserve Bank's more recent estimates of saving by the aggregate approach, have had a large element of guesswork in them. Even the elaborate study of saving in India in the period 1948-58, published by the National Council of Applied Economic Research last year, has sought to provide, by adopting the aggregate approach, only the "best possible estimates" of saving, within the limitations of inadequately available data, for the three major sectors, namely, individuals (households), corporations and Government. While the estimates of savings in the corporate and Government sectors have been generally made with a large measure of accuracy, it is the household sector's saving that has always defied precise estimation. In view of the overwhelming contribution of the household sector to national saving—according to the Reserve Bank's and the National Council's estimates, this is about 85 per cent—any scientific attempt to estimate that sector's saving in the direct manner of a survey would be most appropriate and timely.

It is, therefore, a heartening development that the National Council of Applied Economic Research has just completed the first stage of its estimate of saving in the household sector by the survey approach. This stage pertaining to urban saving, it may be recalled, was initiated in 1959 when a pilot survey was carried out in Delhi for developing appropriate methods and techniques for a large-scale all-India survey. The findings of this all-India urban saving survey, which was started in April 1960, have just been published by the National Council, along with the findings of a pilot rural saving survey covering 12 villages. Attention is confined here only to the final urban survey, for the final rural survey designed to appraise the magnitude and forms of saving originating in the rural sector is yet to be completed. As any interpretation of the tentative findings of the pilot rural survey, the main purpose of which has been to develop appropriate methods and techniques for a large-scale all-India rural saving inquiry, would not be quite meaningful, the restricted theme of this article needs no further justification.

The National Council's final urban saving study, which has provided an estimate of saving and worked out the saving-income and marginal saving rates for the urban sector, relates to 1960—a most recent year. The universe for this sample survey has been provided by the household population in 1,221 cities and towns with a population of 10,000 or more. The sample of 4,650 urban households (drawn from a sample of 30 towns and cities in all) figuring in this survey does not seem to be small in comparison with the usual sizes of samples drawn by the National Sample Survey in its rounds. In fact, it is a fairly large sample, presumably of the right size to produce reasonably valid results. It may be assumed here that the National Council's statisticians must have arrived at the optimum sample size for this particular investigation in a scientific manner. The weightage given in the sample to high-income households on the ground that savings were likely to be confined mainly to such households is well conceived. The definitions of "income" and "saving" adopted in the survey are quite clear and simple. "Income," according to the definition, includes current receipts (both cash and in kind) but excludes all irregular incomes, such as gifts, windfalls and inheritances. And "saving" means the investment out of the current income (excluding transfers and borrowings) in financial and physical assets. The reader would need to remember these definitions while perusing the specific findings of the study pertaining to the quantum and rate of urban saving.

Some of the general findings of the survey, as distinct from the specific ones, are quite revealing. For instance, there is the finding that 40 per cent of the urban families live in their own houses. Secondly, there are only 1.5 earners in the average urban household. Thirdly, the gross *per capita* urban income, as of 1960, is Rs. 445 per annum, and the net *per capita* urban income (that is, after deducting income-tax) Rs. 428, as compared with the *per capita* income of Rs. 330 for the country as a whole. Fourthly, 85 per cent of the urban households have an annual income of less than Rs. 3,000 apiece, and they account for 52 per cent of the aggregate net income. The remaining 15 per cent of the households have an annual income of Rs. 3,000 and more, and they account for 48 per cent of the aggregate net urban income, as of 1960. Fifthly, almost 50 per cent of the urban income is derived from wages and salaries; about 36 per cent from self-employment in business (including farming), profession, services, etc.; 12 per cent from rents, interest and dividends; and the balance of 2 per cent by way of transfer incomes such as pensions and contributions. Sixthly, among the occupational classes, those engaged in business, either as self-employed persons or in managerial, executive and administrative capacities, and also those engaged in professional and technical work, are the most important from the point of view of savings.

What is most disquieting in the above findings is not the one pertaining to the unequal distribution of income, for it is a feature common to all countries, communist and non-communist alike. The most disquieting finding, on the other hand, is that 85 per cent of the urban households (belonging mostly to the working and lower middle classes) either dissave or do not save at all. This situation is presumably the result of the high cost of living, or of wrong spending habits, in urban areas. It also underlines the fact that savings by way of provident fund and insurance are insignificant in the case of these low-income households. Perhaps, in the wake of further industrialisation and extension of education (both general and technical), and the consequent enlargement of job opportunities, the number of earners in an average household may increase, thereby increasing the possibility of some saving from a larger pool of income. Till that time comes, the effort to effect greater savings out of wages and salaries by means of provident fund, small insurance, low-cost co-operative housing, etc., would have to be intensified. And, if this effort is to succeed, a significant fall in cost of living is imperative.

The specific findings of the survey pertaining to the quantum and rate of saving in relation to income are, however, gratifying to some extent. For instance, the estimated gross saving in the entire urban sector is Rs. 453 crores, as of 1960. This represents 17.2 per cent of the aggregate net income of Rs. 2,640 crores in that sector. (The aggregate gross income of Rs. 2,748 crores *minus* income-tax is the aggregate net income here). The estimated aggregate net saving (after deducting depreciation) of Rs. 362 crores represents 13.7 per cent of the aggregate net income of Rs. 2,640 crores. This is the saving-income ratio or the average propensity to save (of the urban households). Such a saving rate of nearly 14 per cent does not, on the face of it, seem to be wide of the mark. In the current urban context of industrialisation and transport development, the rate seems to be neither too high nor too low. After all, even this saving rate for the urban household sector and the expected much smaller one for the rural household sector may still mean a saving-income ratio of only 9.5 to 10.0 per cent for the economy as a whole, after taking into account the contributions of the corporate and Government sectors. It is to be hoped that the National Council's final rural saving survey will confirm its tentative estimate that national saving, as per cent of national income in 1960, has been well over 10 per cent. This compares favourably with the rate of 8.5 per cent for 1960-61 assumed in the second Plan. If this pace of progress were maintained in the coming four years, the national saving rate might even exceed the target of 11.5 per cent expected to be reached in 1965-66 under the third Plan.

Another reasonably gratifying finding is that productive investments such as in business, farm, life insurance, provident fund, liquid assets, shares and bonds account for nearly two-thirds of the total urban household investment. What part of the unproductive or relatively less productive investments can be diverted to productive channels is a matter of opinion. Compulsion is out of question here, for religion and tradition play a large part in many unproductive forms of expenditure. Persuasion through education is the only way to minimise the proportion of savings going into unproductive investments or hoarding. Perhaps, there is greater scope, as indicated by the National Council, for increasing savings by the extension of life insurance and provident funds. Since the marginal propensity to save—that is, the saving effected out of additions to income—is estimated by the Council at 20 per cent for the entire urban household sector, the future growth of savings seems to be generally promising. However, as wages and salaries account for nearly 50 per cent of the aggregate urban income, a concerted drive for effecting a higher level of automatic saving from the annual addition to an employee's income is still called for. If employers, employees, the L.I.C. and the

Provident Fund. Income-tax and Co-operative authorities heartily co-operate in such a drive, it should not be difficult to devise and work voluntary measures for saving as much as 25 to 33⅓ per cent of such additional income as may accrue to a salaried employee year after year by way of increment, promotion, bonus or allowance. At the same time, the salaried middle class households would do well to restrain their own tendency to imitate some of the spending ways of the rich. Of course, simplicity and contentment are easy to preach but hard to practise. But it is equally true that the urban middle class, which is proverbially and all the time grumbling at the rich, can look forward to some happiness only from a certain contented mode or pattern of living.

INDUSTRIAL GROWTH IN EUROPE

THE pace of industrial growth in the non-communist countries of Europe, taken individually, was relatively slower in the first half of last year than that in the communist countries. A rapid look at the table in this article will easily confirm this main conclusion. The figures, taken from the latest *Economic Bulletin for Europe* which contains an exhaustive review of recent economic developments in Europe, also lead to two other conclusions. One of these is that the rate of increase in industrial production in the first half of 1961 over the first half of 1960 in the communist countries barring Eastern Germany was maintained, more or less, at the level of the percentage increase in the first half of 1960 over the first half of 1959. The other conclusion is that, in the non-communist countries, the rate of increase in the first half of 1961, as compared with the first half of 1960, had substantially fallen from the level of the percentage increase in the first half of 1960, as compared with the first half of 1959. The fall in the rate of increase in the first half of last year was particularly steep in Belgium, the Netherlands and the United Kingdom. But it was a sufficiently gratifying feature of the industrial situation in free Europe that, in spite of the setback caused to its industrial production by the recession in the United States and the decline of motor car exports, the first half of 1961 registered a 7 per cent increase in industrial output, as compared with the first half of 1960, in the countries of the European Economic Community as a whole. It was only in the countries of the European Free Trade Association as a whole that the rate of increase between the comparable periods was much less, being 3 per cent. The more modest rate of industrial growth in the E.F.T.A. group of countries was due mainly to the slow progress in the United Kingdom.

Industrial Production in Europe
(1960 and first half of 1961)

Country	Percentage increase in the first half of 1960 over the first half of 1959	Percentage increase in the first half of 1961 over the first half of 1960
Communist :		
Albania	9.0	8.7
Bulgaria	15.0	11.9
Czechoslovakia ..	11.8	9.7
Eastern Germany ..	10.0	5.4
Hungary	15.9	12.3
Poland	9.9	11.4
Rumania	18.0	17.0
Soviet Union	10.0	8.4
Non-Communist :		
Austria	10.0	7.0
Belgium	10.0	1.0
Finland	17.0	6.0
France	9.0	7.0
Western Germany ..	11.0	8.0
Italy	18.0	8.0
Netherlands	14.0	3.0
Norway	9.0	5.0
Sweden	8.0	5.0
United Kingdom ..	10.0	1.0

The pattern of industrial production in Western Europe broadly confirmed the doubts entertained at the beginning of 1961 about the continuance of the 1960 rate of industrial expansion. All major industrial branches experienced a slower rate of expansion of output in the first half of 1961, following the upsurge of late 1959 and early 1960. Those branches, such as foodstuffs and textiles, whose production increased relatively slowly then, made even less headway since the spring or summer of 1960. The metal-making, metal-using and chemicals branches, in contrast, continued to expand, but less fast. The major exception was the building-materials industry which had the distinction of being the most dynamic branch in 1961 in practically all Western European countries, owing largely to the steep increase in building and construction activities.

A further expansion of production, according to the *Economic Bulletin*, is hampered less by an overall shortage of manpower in the majority of Western European countries than by bottlenecks in some sectors, side by side with under-utilisation of equipment and labour in others. It might be thought, in this context, that the easiest way of increasing total industrial production and (by the same token) labour productivity would be by stimulating demand for the output of industries with spare labour and capacity. But the *Economic Bulletin* is not in favour of such a policy, for it might easily run counter to the long-term aim of sustained economic growth, inasmuch as the artificial revival could hamper desirable long-term structural adjustments of the economy, including the reallocation of resources. A more appropriate policy would, therefore, be to speed up the transfer of manpower from contracting or low-productivity sectors to expanding or high-productivity sectors.

The expansion of industrial output in all the communist countries of Europe except Eastern Germany in the first half of 1961 was not marked by the kind of friction reflected in the pattern of industrial production in Western Europe. On the other hand, industrial output in those countries continued to grow fairly smoothly, with relatively little hindrance from specific material shortages. Of course, the pattern of plan fulfilment in most countries was, as usual, uneven. By and large, 1960 production priorities in the Soviet Union were carried into 1961, with engineering, chemicals and building materials leading the way. In Czechoslovakia, engineering, building materials, chemicals and electric power were again the most rapidly expanding branches. In Hungary, the narrow path of output expansion near to the capacity limit was followed without major difficulty, partly as a consequence of a re-orientation of industrial production policies towards increased international specialisation—implying an expansion of exportable output in finishing industries coupled with increasing foreign exchange allocations for raw material imports. In Poland, expansion in all the major branches in the first half of 1961 was somewhat above the planned rates, and particularly rapid in the engineering and chemicals branches. Most branch output plans were also overfulfilled in Bulgaria, the main exception being ferrous metallurgy, despite the commissioning of considerable new capacities in 1960. The half-yearly plan for industry was surpassed in Rumania and gross industrial output was almost 17 per cent higher than in the corresponding period of 1960; electricity generation kept up with this very rapid rate of expansion.

While Western Europe has been experiencing an overall shortage of manpower, no communist country, except Eastern Germany, has had to curtail industrial expansion on account of any such shortage. The Eastern German situation is, however, unique. From the end of 1949 to 12th August 1961, about 3.5 million people moved from Eastern to Western Germany, whereas only about 500,000 people moved from the West to the East during the same period. The steps taken by the East German Government since 13th August last have virtually stopped the exodus, and the labour situation has thus eased somewhat in the second half of 1961. But, according to the *Economic Bulletin*, the scope for further increases in activity rates is small, and transfers from agriculture cannot be expected significantly to ease the industrial recruitment problem. Hence the current stress in Eastern Germany on the need for raising labour productivity through the introduction of labour-saving machinery and the most advanced techniques, better organisation, improvement of skills and technical education of the work force. Behind the wall that has been put up in recent months to isolate West Berlin from the East, the Government of Eastern Germany seems to be building up its industrial potential on more scientific lines.

Similar efforts to encourage technical advance and increases in labour productivity have been intensified in the other communist countries of Europe. For instance, in Czechoslovakia, the main emphasis is placed on the need for economy in the use of fuel and power. According to the Deputy Premier of that country, more than 100 million kcs. will be saved if a saving of one per cent in the annual consumption of fuels and power is achieved. Since the Czech wage system allows for workers' bonuses upto 80 per cent of the value of the proven savings in high quality coal, the expectation here is that greater economy in fuel consumption will be definitely achieved. In Albania, too, there has recently been a countrywide drive for economy of materials and spare parts for equipment.

It may not be surprising if, in view of the technical improvements that are being effected in the communist countries, the industrial targets for 1961 as a whole are found to have been equalled or even exceeded. In terms purely of rates of industrial growth, rather than of absolute levels of industrial production, the communist countries seem to be maintaining a faster tempo of expansion. This may be due to the fact that their industrial growth has been forced to a great extent. Moreover, the fact that most of the communist countries are in the relatively early stages of industrialisation may also explain their higher rates of industrial growth. These rates are bound to decrease after some years.

SHIPPING INDUSTRY'S EXPECTATIONS

INDIAN shipping, like the shipping industry of other countries, has been generally passing through a lean period in recent years. The Scindia Steam Navigation Company Ltd., for instance, had 81,000 tons of cargo less in 1960-61 than in 1959-60, with the result that its freight earnings dropped by about Rs. 86 lakhs. But the view of the Conference Lines in the India-U.K.-Continent trades that the freight rates would have to be increased to compensate the shipping companies for the increased and increasing costs of operation is yet to find favour with the Union Ministries of Finance and Transport. While the authorities would like to see the companies earn a reasonable return on their employed capital, two considerations, namely, the difficult foreign exchange position and the need to step up exports seem to have complicated the question of increase in freight rates. But the present state of shipping is such that a decision on the question of freight rates can brook no further delay. Mr. Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Company Ltd., has, therefore, made a cogent plea for the adjustment of freight rates. His plea, advanced in his speech at the forty-second annual general meeting of the Company held at Bombay on the 24th instant, merits the same consideration at the hands of the Government as that of any other industry, for it is a question of reviving the confidence of the investing public in the shipping industry. It may be recalled, in this connection, that the gross profit as percentage of sales to gross income of ten Indian shipping companies in 1959 was only 4.2 per cent, working out to hardly 1.7 per cent of capital employed. If, in this circumstance, the investing public displays greater interest in the shore industries than in shipping, it should surprise nobody.

Mr. Khatau's reference to the deteriorating conditions in the coastal and adjacent trades has brought into focus the peculiar problems of these trades. Here it is not only a question of uneconomic freight rates but also one of serious delays and detentions of ships and reduced cargoes, aggravated by the deteriorating Hooghly drafts, so far as Calcutta is concerned. Elucidating the difficulties of coastal shipping, Mr. Khatau describes the actual situation as follows:

"Our experience, in common with that of the other Lines, has shown that, in the absence of a quick turnround of ships, it would not be possible to cater economically and efficiently to the movement of an additional one million tons of coal (to coastal destinations from Calcutta). . . . The deterioration in the Hooghly river draft seems to be steadily increasing. . . . This deterioration is likely to create such serious difficulties to shipping companies that the trade of the country is bound to suffer very considerably in the near future if early appropriate action is not taken."

Appropriate action in the case of the Calcutta Port would involve not only more energetic dredging operations but also expeditious execution of the Farakka barrage scheme to increase the flow of water in the Hooghly. Since the completion of this project will take quite a few years—serious work on it is yet to be begun—there is no prospect of any significant relief for coastal shipping in the foreseeable future. An upward revision of coastal freight rates to compensate for the increased costs is what the shipping companies are now looking forward to, following the special officer's cost inquiry which is due to be completed soon.

MARKET GOSSIP

Share Markets Uneasy

THE share markets are adjourning to celebrate Republic Day in an uneasy mood. Buyers are scarce, while sellers predominate. Two factors are principally responsible for this significant change in sentiment in favour of bears. One is the proximity of *Ashtagraha*—conjunction of eight planets, namely, Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn and Moon's node (*Ketu*)—which is due to take place on 4th and 5th February next. To rational minds, astrology may make no sense, more especially after man's success in space and the placing of a landing craft in the moon. But the fact remains that superstition still has a large sway over human beings. There is a large section of them which believes in astrology. This percentage is, perhaps, higher in India than anywhere else in the world. The prediction that something bad may happen on that day, despite all the *Yagnas* that have been performed to propitiate God in the past one month or so, has frightened many operators and financiers. As a matter of caution, therefore, brokers, too, have generally been advising their clients to wait till the *Ashtagraha* passes off.

The second factor is the return of Mr. T. T. Krishnamachari to active politics. The fact that, after repeatedly saying that he was not interested in contesting the elections for the Lok Sabha, the former Finance Minister, who was affected by the Mundhra eclipse, had filed his nomination papers from two constituencies was itself sufficient to unnerve the markets. The sentiment was further undermined by the news that his opponents in the substitute constituency (Tiruchendur in Tirunelveli District of Madras State) had withdrawn from the contest in his favour. This was a dramatic development, disappointing those who had indulged in wishful thinking that he might lose the election battle. The consensus of opinion in market circles is that, in the new Government that will be formed after the elections, T. T. K. will be actively associated in the task of making and implementing economic policies either as Finance Minister or as Minister for Economic Affairs.

Will the Miracle Happen?

Why does the prospect of T. T. K. occupying such an important position in the Union Government cause misgivings and fears in share markets? It does so for more reasons than one. In the first place, he was the first Finance Minister after independence to impose heavy taxation and introduce certain dubious fiscal policies which seriously upset the confidence of investors without yielding any worthwhile advantages to the Exchequer. Secondly, he created, as Finance Minister, a sense of instability about interest rates and taxation. Thirdly, he gave frequent shocks to markets by indulging in wild talk and making disparaging attacks on private enterprise. Fourthly, he had seriously undermined the morale of civil servants shortly after the Mundhra-L.I.C. muddle. Fifthly, as Finance Minister, he had upset the confidence of foreign private investors. Sixthly, his observations in recent months have not been such as to encourage one to draw the conclusion that the self-inflicted exile during the past four years has brought about any change for the better in him. Those who long to see him again as he was during the years 1952-56, when he was brilliant as Minister for Commerce and Industry, are not hopeful of their desire being fulfilled. Today he seems to be more in favour of controls, nationalisation of certain industries and trade, and a further extension of the public sector than he was before he left the Government four years ago. His antagonism to the private sector only seems to have increased with the passage of time. Seventhly, he still holds the view that the officials are not doing their work properly, that they are no-changers and that the Congress Party has not learned the art of extracting work from them—*vide* his speech at Madurai on the 19th inst. In making this remark, he has already thrown the spanner in the works and there may be demoralisation, again, among top Government officials. And, finally, the Congress election manifesto clearly says that a ceiling on urban incomes must be enforced. Mr. T. T. Krishnamachari is reported to have stated in Madras last week-end that he is in full agreement with this objective and ready to accept the challenge of translating it into practice. His performance in 1957 shows that he will not mind taking up foolhardy ventures, even though the economic climate is less favourable for them than it was then. As at the end of August 1956, when he became Finance Minister, India's external assets stood at Rs. 632 crores; today, they are no more than Rs. 140 crores, despite all the foreign assistance this country has received. As compared with 1957, the gap in the balance of payments position is much bigger. The external debts are much heavier and so is the dependence on the western world for trade and aid. And yet these facts of India's life today may not deter him from trying to practice "aggressive socialism," if given a chance. Nevertheless, there are some optimists in share markets who believe in miracles. It would certainly be a miracle if in the new Government that will be formed in April or May next, T. T. K. turned out to be the hard-boiled realist he was when he presided over the Ministry of Commerce and Industry.

State Bank's Results Excellent

The net profit of the State Bank of India for 1961, according to the preliminary results announced two days after our last issue went to press, shows an impressive rise of Rs. 53 lakhs, or 24 per cent to Rs. 2.71 crores, as compared with 1960 which itself had witnessed an improvement of Rs. 31 lakhs or 16 per cent over the profit for 1959. Thus, the State Bank, too, has shared in the prosperity enjoyed by the banking system as a whole in the past year. A noteworthy feature of appropriations is that, of the increase in profit, no less than Rs. 50 lakhs have been used to boost the transfer to the reserve fund. Thus, this account has received Rs. 75 lakhs, as against Rs. 25 lakhs last year and Rs. 20 lakhs two years ago. The dividend, which stood at the odd rate of 22.75 per cent taxable for 1960, has been raised by a fraction to round it off at 23 per cent taxable, the highest rate to be paid by any commercial bank in this country. Consequently, the amount absorbed by the dividend is a shade higher at Rs. 129.37 lakhs, as against Rs. 127.93 lakhs last year. The increase under this head is, however, much less than that in the provision for bonus to staff which has gone up from Rs. 42 lakhs to Rs. 45 lakhs. In addition, the staff welfare fund and staff co-operative housing fund have received Rs. 10 lakhs each, as against only Rs. 5 lakhs and Rs. 10 lakhs, respectively, a year ago. The pension fund, too, gets a little more at Rs. 7.42 lakhs, leaving Rs. 50.41 lakhs to be carried forward, as against Rs. 56.20 lakhs brought in.

Biggest Take-over Battle in U.K.

With the rejection by the Board of Directors of Courtaulds of the I.C.I.'s share exchange offer worth £180 million, subsequently stepped up to £200 million, the scene of the biggest take-over battle in British industrial history has shifted from the Board room to the market place. The I.C.I. is going over the heads of Courtaulds Board to the shareholders direct. "There is no question in any circumstances of I.C.I. making any alteration in the bid and no question of I.C.I. withdrawing from the matter. We will go ahead on these terms," declared Mr. Paul Chambers, Chairman of I.C.I., last week in London. He also stated that circulars making the formal offer to stockholders of Courtaulds will be posted as soon as possible. It remains to be seen whether the stockholders of Courtaulds will go by the advice of their Board or accept the I.C.I. offer of four £1 ordinary shares of I.C.I. for five £1 ordinary shares of Courtaulds. The original offer, it may be noted, was three I.C.I. shares for four Courtaulds shares. Preference shareholders have been offered, apart from share exchange, which has been repeated, an additional 1s. in cash for £1 unit.

Reacting to the enhanced offer, Courtaulds shares rocketed on the London Stock Exchange by 2s. 4½d. to 42s. 3d. on the 19th inst., adding £14 million to their market value, while the I.C.I. shares declined by 2s. 1½d. to 55s. 9d., wiping out more than £23 million from their market value.

The Board of Courtaulds considers that the offer would "seriously undervalue the earning capacity of Courtaulds" relative to that of I.C.I. And hence its advice to reject the offer. It is not clear whether it is the bid in principle to which Courtaulds Board is opposed or the terms of the offer, or both. But, in a statement issued on the 17th inst., the Board has given the impression that it does not favour merger as the best solution for the problems of the man-made fibre industry. The Board stated that it was convinced that the industry, however organised, can be competitive only if fibre producers are free to buy raw materials in the best market and the textile industry is not limited in its choice of fibres.

The I.C.I. Board, however, thinks differently. According to it, the merger would make the British man-made fibre industry as integrated as the comparable industry is in the U.S. and Europe. It would, in its opinion, avoid duplication of effort, yield economies in manufacture and marketing and provide better utilisation of research and development facilities and capital resources. Economies and improved efficiency are also expected in other fields of common interest, such as packaging film, paint and chemicals.

The I.C.I.-Courtaulds battle is the biggest take-over bid in Britain so far. It has already sparked off sharp reactions in political circles. The British Labour Party has strongly protested against the monopoly threat it sees in the take-over bid and has demanded a public inquiry into the proposed merger. Liberal opinion also seems to be against the merger. In fact, a prominent Liberal M.P. has demanded that the Government should intervene to stop the merger. But has the Government the power to do it under the present Statute? According to Mr. F. J. Erroll, President of the Board of Trade, there is no question of the Board of Trade intervening in the bid, because, under existing legislation, it had no power to do so.

Political opposition has not come as a bolt from the blue to the I.C.I. Board. Said Mr. Chambers, with the courage of his conviction: "What we are proposing to do is to make a business in this country more efficient, more profitable. It would, therefore, extend employment in this country and make us more competitive in America and on the Continent. On that I am prepared to face any politician in any Party."

The British financial press is also not happy about the I.C.I.'s latest move, as the following comment of the *Financial Times*, London, indicates:

"The prospect may be exciting, but it is not altogether pleasant. A Courtaulds victory would not only leave the problem of British Nylon Spinners unresolved but would probably encourage domestic competition in synthetic fibres to an extent which would be harmful to both sets of shareholders and to the country as a whole. An I.C.I. victory, if gained too expensively, might well mean the dilution of earnings for several years to come. Fights of this kind, once begun, can easily cause lasting damage to both sides. The City is aware of this; it is aware of the fact that bids based on relative market prices are often inequitable, and it is concerned about the ease with which any large company can take over any small company. The general public, for its part, already conscious of the fact that bids and mergers involve something more than dramatic movements of share prices, is now likely to feel more uneasy than before."

While conceding the I.C.I.'s point of view regarding the advantages of merger to the British economy as a whole, our London contemporary objects to forced merger through take-over bids. It observes: "The fact that the largest merger question ever to have been raised in British industrial history is to be decided violently in the market place can only focus public attention on the failure of the Government to formulate a policy in respect of a matter of growing public interest." It has, however, no objection to agreed mergers. Writing in a similar vein, The *Economist* concludes:

"In an agreed merger the managers of I.C.I. and Courtaulds could have worked together to sort out the problems: a merger won in battle may have to be built up from bitterness. If, as seems likely, I.C.I. wins, will I.C.I.'s shares be worth as much as they were before Mr. Chambers threw the gauntlet down?"

Cotton Imports

The announcement of three import quotas for a total quantity of 263,000 bales of cotton in quick succession in January is, perhaps, an indication of the official recognition of the tight supply position of cotton during the current season. Additional proof of this is provided by the introduction of the variety-wise distribution of cotton, on top of the quota restriction on mill purchase and compulsory survey already in force. These measures, together with price control and the power vested in the Textile Commissioner to resort to compulsory requisition of cotton, constitutes almost complete control on the marketing and distribution of the commodity. But controls, however strict and comprehensive they may be, are no solution to the problem of shortage of cotton. Import of cotton to make good the fall in domestic production is only a temporary and expensive solution. The higher price of imported cotton and the heavy foreign exchange outlay involved precludes the consideration of imports as anything but an interim expedient. But as long as there is a shortage of cotton imports are unavoidable, if production of textiles is to be maintained.

Once the need for imports is recognised, the next step is to frame the import policy in such a way as to make the best of a bad situation by taking advantage of the world market conditions to get cotton as cheaply as possible. It is in this respect that official policy was found wanting in the past. Improper timing of quota and inadequate quantities released had made imports costlier. It is, however, heartening to note that official policy is becoming more flexible and is being geared to meet the changing market conditions and the requirements of the industry.

The latest quota of 33,330 bales of cotton of staple length 1.3/16" brings the imports allowed so far in the current season to 513,330 bales. This comprises 60,000 bales of Pakistan cotton, 433,330 bales of cotton in the staple length range 1.1/16" to 1.3/16" and above from any source and about 20,000 bales of American cotton under triangular arrangements. It is noteworthy that the share of U.S. cotton in the import allocation is negligible. This is because the U.S. has yet to issue the purchase authorisation to enable India to buy American cotton under P.L. 480. Indications are that the U.S. authorities would issue purchase authorisation for at least 300,000 bales of cotton. The delay is perhaps due to paucity of stocks even in the U.S. The total Government-controlled stocks, as of December last, aggregated 4.89 million bales of 478 lbs. each, comprising 3.42 million bales of 1961 crop cotton and 1.47 million bales of 1960 and earlier crop. This is much less than the stocks held on the corresponding date of the previous year. It is pertinent to refer, in this connection, to the support price for the 1962 crop announced by the U.S. Secretary of Agriculture, Mr. Orville Freeman. The minimum national average support price (average of the crop) for the 1962 crop upland cotton is fixed at 31.88 cents per pound gross weight. This is approximately 82 per cent of the current parity price of 38.96 cents per lb. for upland cotton. The minimum national average support price for 1962 crop extra-long staple cotton will be 53.17 cents per lb., representing 65 per cent of the current parity price of 81.8 cents per lb. It may be noted that the final 1961 crop average support price for upland cotton was 31.88 cents per lb. and for extra-long staple cotton 53.17 cents per lb. Thus the support prices have been kept unchanged.

Far more than the internal support level, it is the export subsidy rate that determines the price of U.S. cotton to overseas buyers. The rate for the 1961-62 season is 8 cents per lb. which will be in force till 31st July next. The subsidy rate for the 1962-63 season has not yet been announced. There is considerable speculation as to what the probable rate would be. Meanwhile, the uncertainty about the subsidy rate is reported to have affected export demand for U.S. cotton.

SHARE MARKET DEPRESSED

LANDSLIDE IN VALUES

(From Our Own Correspondents)

BOMBAY, *24th January*

THIS week's review of the share market covers only four sessions, as the market remained closed on Saturday (succeeding day of the end-of-account period) and as we are going to press a day earlier, in view of Republic Day on the 26th. During this brief period, equities ruled depressed. The market opened steady on Friday. It turned distinctly easy in unofficial dealings on Saturday, following reports that Mr. T. T. Krishnamachari, a former Union Finance Minister, was seeking re-election to the Lok Sabha. Operators apprehended that Mr. Krishnamachari might return to the helm of the country's financial affairs and that there would be a further heavy dose of taxation. His statement at Madurai about the necessity for considerable Government interference in industrial matters, coupled with the misgivings about the evil effects of planetary conjunction predicted next month, caused considerable nervousness among operators. The bulls rushed to liquidate, while bears seized the opportunity to hammer down prices, with the result that share values suffered a sharp setback on Monday. Even the considerably lower *badla* charges for getting the commitments transferred from the 29th January settlement to 10th February settlement were of no avail. A recovery was in evidence on Tuesday, thanks to good institutional support, especially by the L.I.C. and encouraging corporate news. But the recovery could not be sustained for long. For values slumped again today on renewed liquidation and bear pressure following the news that T.T.K. would be declared elected to the Lok Sabha from the Tiruchendur Parliamentary constituency, as all the other candidates had withdrawn their nominations. Even at lower levels, support was lacking. Today's closing rates for almost all counters were well below those prevailing on Thursday last week. The undertone of the market at the time of writing was distinctly bearish.

Steel shares encountered heavy selling. Tata Steels moved down from Rs. 142 to Rs. 138.50 today, the lowest level for the week, before finishing at Rs. 139.75. Indian Irons eased from Rs. 25 to Rs. 24.56. Mukand Irons fell by a rupee to Rs. 27.25.

Textile shares, too, were depressed. Centurys slumped from Rs. 604 to Rs. 578.50, though they recovered to close at Rs. 586 today, showing a net loss of Rs. 18. Finlays were marked down by Rs. 19 to Rs. 350. Standard Mills fell by Rs. 41 to Rs. 1,110. Khataus receded by Rs. 11.25 to Rs. 465. Morarjees by Rs. 10 to Rs. 390 and Svadeshis by Rs. 7.50 to Rs. 285. Central Indias shed Rs. 5 to Rs. 159. Kohinoors declined from Rs. 315 to Rs. 302.50 today. At this level, some support ensued and the scrip recovered to Rs. 309. Bombay Dyeings eased from Rs. 69.30 to Rs. 67.50 before finishing at Rs. 68.50, a net loss of 80 nP over the week. B. R. Cottons softened by Rs. 3 to Rs. 77 and Dawns by Rs. 2.50 to Rs. 153.50.

Sugar shares drifted downward. Belapurs dropped Rs. 4.50 to Rs. 252. Phaltans fell by Rs. 6.50 to Rs. 115, Maharashtra Sugars by Rs. 8 to Rs. 182 and Walchandnagars by Rs. 6 to Rs. 159. Kesar Sugars were marked down by Rs. 17.50 to Rs. 240.

Cement shares also suffered a setback in values. Associated Cements opened lower at Rs. 161.75, as against the previous close of Rs. 162.25, and declined progressively to touch Rs. 159 today before finishing at Rs. 159.50. The net loss over the week was Rs. 2.75. Digvijays eased by Rs. 5 to Rs. 189. But Orissa Cements were done at Rs. 17.24 as against Rs. 16.76.

In the shipping group, Scindias attracted some speculative support and improved by 32 nP to Rs. 13.28 today; they were quoted higher still at Rs. 13.52 yesterday. Great Easterns improved by 16 nP to Rs. 12.80. Among automobile shares, Premier Automobiles were subjected to selling pressure and declined by Rs. 2.50 to Rs. 149. Hindustan Motors shed 36 nP to Rs. 20.52.

Among rayon shares, National Rayons climbed down from Rs. 547 to touch Rs. 531 today, the lowest level of the week, before rising to close at Rs. 539. The net loss over the week was Rs. 8. South India Viscose and Indian Rayons eased by Rs. 3.50 each to Rs. 183.50 and Rs. 97.50, respectively. Gwalior Rayons were quoted Rs. 3 lower at Rs. 53.50. Baroda Rayons shed Rs. 2 to Rs. 156.

Chemical shares suffered a sharp fall in values. Indian Dyestuffs slumped by as much as Rs. 35 to Rs. 501.25. Amar Dyes fell by Rs. 13.75 to Rs. 331.25. Colour-Chems receded by Rs. 10 to Rs. 440. Poly-Chems by Rs. 7.50 to Rs. 215, and Synthetics by Rs. 7 to Rs. 221. Dhrangadhras, old and new shares, eased by Rs. 3 each to Rs. 133 and Rs. 115 respectively. Tata Chemicals shed 36 nP to Rs. 19.68.

Engineering shares were no exception to the general trend. T.E.L.Cos, after opening at Rs. 363.25, fractionally lower than the previous day's close, eased to Rs. 346.50 today, before finishing at Rs. 352.50. The net loss over the week was Rs. 11.50. Alcock Ashdowns were done Rs. 7 lower at Rs. 329. Premier Constructions lost a like amount to Rs. 191.50. Larsen and Toubros decreased by Re. 1 to Rs. 40.25, Asian Cables by Rs. 2.50 to Rs. 102.50, T. Maneklals by 40 nP to Rs. 800 and Mahindras by 24 nP to Rs. 19.24.

Among miscellaneous industrials, Bombay Burmahs retreated from Rs. 652.50 last week-end to Rs. 634.50 today. The close was, however, higher at Rs. 642, showing a net fall of Rs. 10.50. Voltas declined by Rs. 8 to Rs. 295.50. Wimcos dropped Rs. 9 to Rs. 310. West Coast Papers were quoted Rs. 10.50 lower at Rs. 176. Shivrajpur Syndicates lost Rs. 2.50 to Rs. 42. Hindustan Levers shed 50 nP to Rs. 57. Premier Tyres eased by Rs. 6 to Rs. 146. Ceat Tyres by Rs. 10 to Rs. 200 and Rallis by Rs. 2 to Rs. 152.

* * * *

Madras Stock Exchange

MADRAS, *23rd January*

Activity on the Stock Exchange was restricted during the week under review, with values drifting downward. The reports that Mr. T. T. Krishnamachari, a former Union Finance Minister, would be elected unopposed to the Lok Sabha was interpreted bearishly by operators. The reported offer of the Life Insurance Corporation to underwrite or subscribe to shares of new companies in Madras on a much larger scale than at present failed to have any effect. Teas were weak in the absence of any fresh support. Coffees and rubbers were listless. Sugars continued to be depressed on account of uncertain prospects for the industry, particularly in the context of Mr. S. K. Patil's plea to producers to go slow with their production programmes. Textiles, particularly forward scrips, were subdued, with the exception of a few select shares in the cash section which scored handsome gains on investment support. Miscellaneous industrials were quiet.

Among teas, Non-suchs fell by 88 nP to Rs. 23.62. United Nilgiris declined by 50 nP to Rs. 22.50, Highlands 35 nP to Rs. 13.75 and Parksides 25 nP to Rs. 25. Blue Mountains shed 3 nP to Rs. 2.43 and Periakaramalais 2 nP to Rs. 3.30. Chembras, however, picked up 3 nP to Rs. 3.35. In the coffee group, Coffee Lands eased by 63 nP to Rs. 15.15. Cowcoodys dropped by 54 nP to Rs. 3.85. Consolidated Coffees moved down by 40 nP to Rs. 16.90. Ouchterlonys softened by 10 nP to Rs. 3.65. Among rubbers, Midlands lost 5 nP to Rs. 10.50. Cochin Malabars were neglected at Rs. 7.38, as also Malankaras at Rs. 16.90 and Vaikundams at Rs. 32.75.

A feature of trading in the sugar section was the fall of Rs. 5 to Rs. 110 in the quotation of Cauverys. Deccans lost 50 nP to Rs. 10.25. East India Distilleries decreased by 12 nP to Rs. 35.75.

Among textiles, Bangalore Woollens dropped a rupee to Rs. 239. Travancore Rayons eased by 95 nP to Rs. 43.50. Madurais declined by 50 nP to Rs. 42.35. Radhakrishnas lost a like amount to Rs. 38.75. But South India Viscose, however, rallied by Rs. 4 to Rs. 187, following the move of the management to expand the capacity of the plant and to go ahead with the rayon-grade pulp manufacturing project.

In the miscellaneous section, India Cements lost 13 nP to Rs. 6.12, despite the permission granted to the Company by the Controller of Capital Issues to raise additional capital of Rs. 1.26 crore in equity shares of Rs. 5 each at par. For, it was feared that the Company might not be able to maintain the dividend, if the proposed shares were issued immediately. Aluminium Industries shed 5 nP to Rs. 23.40. Ashok Leylands were featureless at Rs. 9.08, as also Andhra Cements at Rs. 9.40 and Travancore Chemicals at Rs. 18.25.

(Concluded from next column)

October 1960, as the agent of the State Bank for the conduct of Government cash transactions and agency business. The Bank continued to transact such business and functions at all its offices which were transacting such business at its new branches set up at Yellandu, Siddipet, Deglur and Partur. It thus transacts Government business at 50 centres and holds currency chests of the Issue Department of the Reserve Bank at 57 centres. The total remittances issued and encashed during the year under the Reserve Bank Remittance Facilities Scheme amounted to Rs. 78.61 crores and Rs. 11.70 crores, respectively. The total amount of remittances issued and encashed on behalf of co-operative institutions during the year aggregated Rs. 18.02 crores and Rs. 11.60 crores, respectively. The Bank continued to act as the Registrar of the Andhra Pradesh State Electricity Board and was also appointed Registrar of the Andhra Pradesh State Financial Corporation as from 6th May 1961 for the 4½ per cent Andhra Pradesh State Financial Corporation Bonds, 1971. Eight new branches were opened at Bhainsa, Jaggayyapet, Yellandu, Siddipet, Deglur, Partur, Bhalki and Shorapur. One sub-office of the Bank was set up at Bolarum and two pay offices were opened in the residential areas of Hyderabad City at Himayatnagar and Chikkadpally. The Bank has 67 branches and 8 pay or sub-offices as at the close of the year. Concessional and simplified terms and conditions for advances against warehouse receipts continued to be extended to encourage a wider use of the warehouses. The needs of small-scale industries continued to receive special attention.

It will be noted from the foregoing account that, as a result of its conversion into an associate of the State Bank of India, the Bank has been able not only to render more useful service in the area of its operations but also to improve its business and profit.

STATE BANK OF HYDERABAD

PROFIT RISES—RESERVES STRENGTHENED

BY publishing this week the Directors' Report and Statement of Accounts for 1961, the State Bank of Hyderabad (General Manager: Mr. Satya Dev, Hyderabad) has re-earned the distinction, after a brief span, of being the first among joint-stock banks to come out with the full details of the results of its working. What is more, the details have been published within such a short period as four weeks after the close of the accounting year. This distinction apart, the year 1961 was quite a favourable one for the Bank in that it witnessed an all-round improvement in the Bank's performance. There has been a notable rise of Rs. 20.75 lakhs in earnings (gross) which amounted to Rs. 122.12 lakhs, as against Rs. 101.37 lakhs for 1960. The rise is in keeping with the general trend of banking last year. Indeed, the improvement would have been more appreciable but for the limitations placed on business by the continued restrictions on advances against the principal agricultural produce of the region in which the Bank operates. A large part of the additional earnings was no doubt neutralised by higher expenditure by way of interest on deposits, borrowings, etc. (+Rs. 11.42 lakhs) and cost of establishment (+5.87 lakhs). Even so, the net profit (after depreciation and taxation, the provision for which has not been disclosed) for the year at Rs. 12.19 lakhs shows an increase of about 33½ per cent as compared with that (Rs. 9.15 lakhs) for 1960.

Despite the improvement in profit, the Directors of the Bank have not raised the dividend, which remains unchanged at the modest level of 6 per cent, as they have followed, just as the other leading banks, the convention recommended by the Governor of the Reserve Bank of India by adding a sizable amount to its published profit to the reserves; the sum actually allocated is Rs. 4.15 lakhs, as against Rs. 1.85 lakh in the previous year. This is equal to a little more than one-third of the published profit. The undistributable surplus (the amount carried forward) is also higher at Rs. 36,069, as against Rs. 9,407 brought in.

The following comparative table shows the progress of the Bank since 1958:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount	92.85	76.80	68.90	55.08
Commission and exchange	27.27	22.97	18.68	16.71

Interest paid	50.08	38.61	35.60	25.48
Expenses	57.11	51.24	47.09	41.08
Depreciation	2.79	2.37	2.46	2.78
Profit	12.19	9.15	5.00	3.50
Provision for taxation*	..	..	..	..
To reserve fund	4.15	1.85	1.00	1.00
,, other funds	1.28	1.25	1.25	1.25
,, bonus to staff	3.50	3.00	2.70	1.25
,, dividend	3.00 (6%)	3.00	Nil	Nil
Carry forward	0.36	0.09	0.05	..

	As on 31st December			
	1961	1960	1959	1958
Capital	50.00	50.00	50.00	50.00
Reserves	33.00	28.85	27.00	26.00
Deposits	24,23.39	19,39.73	18,78.60	15,27.27
Advances	13,09.88	10,71.22	8,01.77	7,73.09
Investments	5,70.02	9,76.97	9,02.94	4,83.01
Cash	3,61.74	1,60.66	3,47.31	4,06.79
Balance-sheet total	28,81.63	24,23.74	21,92.84	18,04.50
Ratio to deposits of—	%	%	%	%
Advances	57.6	55.2	42.7	63.9
Investments	35.5	60.4	48.0	31.8
Cash	14.9	8.3	18.4	29.6

* Not shown separately.

The handsome improvement in the Bank's earnings reflects a sizable improvement in the Bank's turnover during 1961. The balance-sheet, of course, reflects the position only as at the end of the year. But even that is indicative of the perceptible rise of Rs. 327.66 lakhs in advances over the year. The Bank could meet the expanding credit requirements of its clients easily without recourse to borrowings during the major part of the year, as there was further sizable fresh accruals to its deposits (and other accounts) which, as on 31st December 1961, aggregated over Rs. 24.29 crores, as against Rs. 19.40 crores a year before. Consequently, the credit ratio (that is the ratio of advances to deposits) has gone up only modestly from 55.2 per cent to 57.6 per cent. While deposits are higher by nearly Rs. 5 crores, the Bank's investments have declined by Rs. 1.07 crore, so that the investments ratio is substantially lower at 35.8 per cent. The cash ratio, however, has staged a sharp rise from a mere 8.3 per cent to 14.9 per cent. Apparently, the Bank's management must have decided to maintain a larger amount of cash in order to be ready to meet the demand for credit in the current busy season.

With the addition of Rs. 4.15 lakhs from the year's profit, the reserve fund of the Bank stands higher at Rs. 33.00 lakhs, whereas the paid-up capital is unchanged at Rs. 50 lakhs. Consequently, the ratio of reserves to capital has gone up markedly from less than 58 per cent to 66 per cent.

The Bank, which is a subsidiary of the State Bank, has been appointed, with effect from 1st

CENTRAL BANKS AND GOVERNMENTS

MR. H. V. R. IENGAR'S VALEDICTORY ADDRESS

[An address of considerable educative value to politicians and students of money and banking was delivered by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, who is due to retire shortly, under the joint auspices of the Commerce Graduates Association, the Democratic Group and the Progressive Group, on Tuesday the 23rd inst. The subject of his address was the relationship between Governments and central banks. After tracing the evolution of this relationship in some of the important developed countries, Mr. Iengar described the type of relationship that should exist in this country, which is in the process of forced economic march, indicated the possible spheres of conflict in future between the Government and the Reserve Bank of India, and outlined the conditions for avoiding such a possibility. In view of the immense importance of the subject to the majority of our readers, we are publishing on this and two other succeeding pages almost the full text of Mr. Iengar's observations.—ED.]

MY justification for choosing this subject, apart from its intrinsic importance, is that there seems some doubt in the public mind about the location of responsibility as between Government and the Reserve Bank in the field of monetary policy and I believe that it might be helpful if I made an attempt to clarify the situation. I will be as objective as possible but manifestly such views as I express would be coloured by my own experience of office during the last five years.

Incidents in Canada and U.S.

The most recent case which focussed wide public attention on this subject is that of Mr. James Coyne, until recently Governor of the Bank of Canada. Mr. Coyne was appointed Governor in early 1955 and his tenure was due to expire at the end of 1961. In May 1961, the Minister of Finance called upon him to resign, but he refused to do so, and there ensued a very acrimonious debate between the two. The Bank of Canada Act does not leave any supervisory or regulatory power in the hands of Government. The Governor, the Deputy Governor and the other Directors of the Board are appointed by Government, but, once they are appointed, it is for them to discharge their responsibilities as best as they think fit. There have, in recent years, been large-scale changes in the structure of the Canadian economy arising out of the heavy imports of American capital and the increasing ownership of Canadian industry by American interests. Mr. Coyne held certain views about the pressures that he thought were developing in the economy as a consequence of the flow of American capital and the right way of dealing with them and made a series of speeches in public on the subject. These speeches did not deal only with aspects of monetary policy, such as expansion of currency and bank credit and the external value of the Canadian dollar. They ranged, as any general discussion of the Canadian economy was bound to do, over the whole area of economic policy including fiscal policy which is primarily within the domain of Government. The Finance Minister evidently disagreed with the Governor but held his hand till the occasion of the last Canadian budget when he let the conflict between him and the Governor explode before the public. The Minister said that the budget and Mr. Coyne were simply not compatible. There were differences on other matters which it is not necessary to refer to in this context. As there was no residuary authority in the Minister by which the conflict could be resolved and the Governor refused to resign, Government introduced a Bill in the Canadian Parliament the effect of which would have been to dismiss the Governor. In the event, after a very bitter debate in Parliament and an enquiry by a Parliamentary Committee, Mr. Coyne submitted his resignation.

Although Mr. Coyne's case has been most publicised, there have been other cases equally dramatic in nature. In July 1957, the Riksbank, i.e. the Central Bank of Sweden increased the Bank rate from 4 to 5 per cent without consulting Government. Government thought that the step was completely uncalled for and should, in any case, not have been taken without consultations with them. Under the Constitution of the Swedish Central Bank, the Directors, including the Governor, are appointed by Parliament but the Chairman, who, incidentally, is not the Governor, is nominated by Government. The Prime Minister sent for the Chairman and, after a stormy interview lasting five hours, obtained his resignation. But the Governor refused to resign on the ground that he was responsible only to Parliament. The conflict was subsequently resolved by the Riksbank undertaking to consult Government before making changes in the Bank Rate.

I may also refer to the well-known case of Mr. Marriner Eccles who was Chairman and, after four years as Chairman, member of the Federal Reserve in Washington. A controversy arose between President Truman's administration and the Federal Reserve about the policy underlying the Reserve's open market operations. The administration took the view that it was important to maintain the current prices of Government securities and that the Reserve System should so conduct its operations as to maintain the price structure. On the other hand, the Federal Reserve took the line that such a policy would involve heavy pumping of money into circulation and that this would aggravate the inflationary pressures that were already causing them serious concern. President Truman invited the Open Market Committee of the Federal Reserve System to White House and discussed with them the supreme importance of preserving "public confidence in Government's credit and in Government securities." He evidently thought this meant pegging the prices at current levels; and, on the same day as the conference took place, the White House issued a public statement which gave the impression that the Open Market Committee had agreed to the President's suggestion. Mr. Eccles was of the view that they had not so agreed and issued a public statement contradicting the White House. Subsequently he resigned.

In India, also a Governor has previously resigned and there are other cases too. These cases are necessarily somewhat dramatic, but fortunately they are rare. I am mentioning them merely to highlight the fact that the maintenance of appropriate relations between a Central Bank and a Government is not always an easy task. It involves not merely an adjustment of views at the technical level but a mutual recognition of the role that each has to play in the public interest.

Main Function

The main function of a Central Bank, above everything else, is to regulate the issue of currency and to control bank credit; it is charged with specific responsibility for maintaining the stability of the currency. This involves taking a detached view of the economy free from political bias and is predicated on the ability to withstand temptations and pressures to take the easy but slippery line of expanding credit to Government in place of additional taxation and economies in expenditure. This is the basic reason for the setting up of Central Banks outside the direct departmental control of Government. The older Central Banks were given a constitution which left them in a position of real independence. I have already given the example of the Swedish Riksbank, now over 300 years old, of which the Directors are chosen by Parliament; and where the ruling group does not possess overwhelming strength it cannot easily shake the Board or the Governor who is elected by the Board. The position is somewhat similar in Finland. I remember asking the Governor of the Central Bank of Finland, when I met him in Delhi at the time of the Bank-Fund annual meeting in 1958, how often he called on the Finance Minister. He expressed astonishment at the question and said that he never did call on the Finance Minister; it was always the other way round! I mention this merely as an illustration of the extent to which the older Central Banks in certain countries were made virtually completely independent of Government.

The idea of the independence of a Central Bank has been overborne in recent years by newly evolving conceptions of the role of Government in the development of a country's economy and the place of monetary policy in the totality of overall economic policy. It was possible during the days of the gold standard or its variants to give virtual independence to a Central Bank, because its operations were, in a large sense, automatic. The charters of the Central Banks in those days did not enjoin on them the responsibility for so shaping monetary policy as to maintain full employment and generally to promote economic welfare. The responsibility of the Banks was limited in scope and their operations were largely technical. But, as a result of the teachings of Keynes and other economists, and of the experiences of various Governments, particularly the United States of America during the depression in the early thirties, it has now been universally accepted that Government have a direct responsibility in the matter of maintaining full employment and keeping prices at a stable level and that consequently there has to be harmony between the policies for which Government are directly responsible and the policies of the Central Bank. This is also clearly reflected in the charters of Central Banks. To take only two examples: the preamble of the Bank of Canada Act enjoins on the Bank the responsibility "for regulating credit and currency in the best interest of the economic life of the nation, to control and protect the external value of the national monetary unit and to mitigate by its influence fluctuations in the general level of production, trade and prices so far as may be possible within the reach of monetary action and generally to promote the economic and financial welfare of the dominion." Likewise, the Reserve Bank of Australia has been set up so as to "ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank are exercised in such a manner as will best contribute to the stability of the currency of Australia, the maintenance of full employment in Australia and the economic prosperity and welfare of the people of Australia." The Reserve Bank of India Act is not so precise but it also refers in the preamble not merely to monetary stability but also to the need "to operate the currency and credit system of the country to its advantage."

We now see that between Government's overall responsibility for shaping economic policy in such a way as to maintain full employment, stable prices and generally to promote economic welfare and their desire to set up a separate institution to handle monetary policy, a real dilemma arises. If the Bank is truly independent, it might not be possible to avoid crises such as the one that recently happened in Canada. If the Bank is not independent, it is in danger of being merely a creature of the Treasury, and the advantages expected to accrue from the existence of a detached expert body would become illusory. The dilemma has been handled by different countries in a variety of ways.

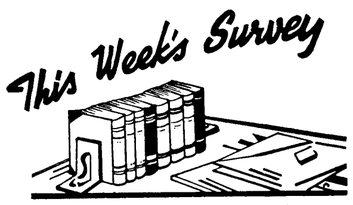
Radcliffe Committee's Views

In the U.K., the Bank of England was nationalised and the Governor, the Deputy Governor and the Board are all nominated by Government. The Governor and the Deputy Governor are appointed for a period of 5 years which may be extended, but the Treasury has reserved the right to issue directives to the Bank after consultation with the Governor. The overall supremacy of Government is thus preserved. The Radcliffe Committee had this to say on the subject:

> "The Central Bank is one of the principal authorities concerned with the framing and operation of monetary policy.... It follows that this policy whatever form it may take from time to time must include the general planning of monetary policy and monetary operations and that the policies to be pursued by the Central Bank must be from first to last in harmony with those avowed and defended by Ministers of the Crown responsible to Parliament.... The problem resolves itself into one of making sure that the exchanges between the two bodies (Government and Bank of England) are organised in such a way that the Bank contributes to the Government's discussions on policy the advice and suggestions which its unique operational experience and contacts qualify it to offer, while the Government on its side is careful to associate the Bank with the formation of those decisions on economic policy in which monetary operations are capable of taking a part.... The true position, as we see it, is that the Bank carries an equal measure of responsibility, to advise to the best of its ability and, having advised, to execute within the limits of the determined policy."

The Committee recommended the setting up of a Standing Committee with the Chancellor of the Exchequer or, in his absence, his immediate political junior, as Chairman, the Governor, the Deputy Governor and two other representatives of the Bank, four of the Treasury and two of the Board of Trade as members. Government did not agree to the setting up of such a policy-making committee but accepted another pro-

(Continued on page 178)



EXPORT RISKS INSURANCE

APART from the record time within which the report and accounts for the year ended 31st December 1961 of the Export Risks Insurance Corporation (Managing Director: Mr. T. C. Kapur) were finalised (they were signed by the Board of Directors on the 22nd inst., that is, three weeks after the close of the accounting year), the working of the Corporation during 1961 has disclosed many encouraging features. The number of policies issued by the Corporation in 1961 rose to 426, with a maximum liability of Rs. 13.02 crores, as against 324, with a maximum liability of Rs. 8.14 crores in the previous year, and 242 policies, with a maximum liability of Rs. 7.8 crores in 1959. The premium income also showed a commensurate increasing, rising from Rs. 2,36,448 in 1960 to Rs. 3,48,338 in the year under review. This works out to an average of about 29 nP per Rs. 100, as against 34 nP per Rs. 100 in the previous year and 36 nP per Rs. 100 in 1959. The sharp reduction in the average rate last year may be attributed to the overall downward revision of the rate effected towards the middle of 1961 which perhaps also partly explains the increase in the number of policies issued during the year. Total claims settled amounted to Rs. 4.32 lakhs in respect of 48 shipments, as against Rs. 3.76 lakhs in respect of 27 shipments in 1960.

An analysis of the policies issued by the Corporation during the year indicates that shipment (comprehensive risks) policies accounted for the bulk of the policies issued by the Corporation. Thus, out of a total of 426 policies, as many as 383 policies were shipments (comprehensive risks) policies, of which 60 covered risks for a period of three years and the remainder for a period of one year. Specific shipments policies were four in number, contracts (comprehensive risks) policies numbered eight, shipments (political risks) policies five and packing credit policies 26. Of the 426 policies issued during the year, 126 policies with a maximum liability of Rs. 46.00 lakhs were for sums of Rs. 50,000 and below, 106 policies, with a maximum liability of Rs. 1.03 crore, were for sums exceeding Rs. 50,000 but below Rs. 1 lakh, and 121 policies, with a maximum liability of Rs. 3.41 crores, were for sums above Rs. 1 lakh but not exceeding Rs. 5 lakhs. Forty-seven policies, with a maximum liability of Rs. 7.65 crores, were for sums exceeding Rs. 5 lakhs. Thus, although the number of large policies is small, they account for more than 50 per cent of the maximum liability of the Corporation. A similar trend was also evident in respect of the packing credit policies, covering pre-shipment advances to exporters to facilitate the purchase or the processing of goods to be exported, issued by the Corporation. Of the 26 packing credit policies issued, 6 were for Rs. 10,000 and below, 1 for above Rs. 10,000 but below Rs. 20,000 and 11 for sums above Rs. 20,000 but not exceeding Rs. 1 lakh. Only eight policies were issued for sums exceeding Rs. 1 lakh but they accounted for a maximum liability of Rs. 37.02 lakhs out of a total liability under the packing credit policies of Rs. 44.52 lakhs.

In respect of each policy, the Corporation fixes the maximum limit of its liability for loss in respect of shipments to be made by the exporter during the currency of the policy which is generally for a period of about one year from the date of its commencement. In fixing the liability, the Corporation takes into consideration the nature of the commodities to be exported, the payment terms and the exporter's estimate of anticipated exports. The maximum liability under the policies issued during the year, as noted above, was Rs. 13.02 crores, as against Rs. 8.14 crores in the previous year, while the maximum liability in respect of the 418 policies in force at the end of December 1961 was Rs. 12.91 crores. This, together with the liability of Rs. 56 lakhs under policies which are no longer current but under which claims might arise, brings the maximum liability of the Corporation, as at the end of 1961, to Rs. 13.47 crores, as against Rs. 8.42 crores at the end of December 1960.

During 1961, the policyholders of the Corporation declared contracts and shipments estimated at Rs. 16.84 crores, as against Rs. 10.16 crores in the previous year. Out of this, those on credit terms were for Rs. 11.47 crores, as compared with Rs. 6.96 crores in the previous year. In addition, pre-shipment advances insured with the Corporation amounted to Rs. 54.42 lakhs.

It is evident from the foregoing account that the business of the Corporation recorded a very substantial improvement last year. But coverage of a respectable percentage of the total insurable exports is still a far-off goal. The pioneering work done by the Corporation in a new and difficult field is, indeed, commendable and the progress made in a brief period of four years (the Corporation started its business only in October 1957) is satisfactory. Apart from the protection which credit insurance affords, insured exporters also derive many additional advantages. For instance, policies issued by the Corporation are generally treated as additional security by the banks. There have been instances where banks have advanced loans to the policyholders of the Corporation even without either the assignment of policies or transfer of the rights under the policies in respect of individual shipments. In addition, banks also give pre-shipment advances against packing credit policies. In fact, 96 policyholders of the Corporation obtained financial facilities in respect of 3,096 shipments of the value of Rs. 2.94 crores on the strength of the policies issued by the Corporation. These facilities and benefits need to be more widely publicised, so that more and more exporters would be induced to take advantage of them and export more and safely. In a country where there is lack of insurance consciousness even in respect of such a basic necessity as life insurance, export risks insurance needs vigorous sales efforts to be accepted by exporters as an essential safeguard.

SUGAR EXPORT

Commenting on the U.S. Administration's decision to cut the import quota allotted for Indian sugar for 1961, we stated in these columns sometime ago (*vide* page 810 of *Commerce* dated 28th October 1961) that serious doubts had arisen as to whether India could count on the U.S. market for long as an outlet for a sizable part of its sugar surplus. Unhappily these doubts have proved correct. For the shelter of a subsidised price provided for Indian sugar in the U.S. market under the present Sugar Act may no longer be there after 30th June next, that is, when the Act is replaced by a new one as proposed by President Kennedy in his Budget Message to the Congress. The President has indicated that the existing arrangement of allocating import quotas to different countries will be done away with and, instead, a global system of buying sugar will be introduced. Under the new system, it is said, the difference between the U.S. domestic and world prices, currently enjoyed by foreign producers, will be retained by the U.S.

If President Kennedy's proposal is accepted by the Congress and if the U.S. buys, as is considered very probable, sugar from the East European countries under the global system, sugar exports from India to the U.S. are bound to receive a distinct setback. Indeed, there may be no exports at all. For India is a high cost sugar producing country and whatever little that was exported last year, and is being exported, has been possible only because of the special price paid by the U.S. which is as much as 50 per cent more than the world price. If this arrangement is eliminated, India will have to compete openly with the other exporting countries for a share in the U.S. sugar market. This is simply not possible, in view of the wide gap that exists between the Indian and world prices. Even after the full remission of excise duty and cane cess together amounting to Rs. 343 per ton and also taking into account the fall in prices that has occurred in the past few weeks, the export price of Indian sugar comes to about Rs. 690 (£52) per ton, as against Rs. 273 (£20½) currently prevailing in London.

This London rate, which is the lowest level touched since the Second World War, is itself very depressed and there is no prospect of any marked recovery in the near future. Indeed, fears are expressed that "very competitive prices could emerge, if buyers appeared," what with 95 per cent of the market consisting of second-hand raw sugar mainly from the Continent and often selling below the official £20½ a ton. It may, of course, be asked as to whether supplying interests will not refuse to sell if prices suffer a further setback. But the point is that the supplying interests may not be able to sit tight over their holdings for long, in view of the huge world stocks, estimated at anywhere between 1.5 million metric tons and 2.0 million tons. Sugar circles in London feel that there are no signs of a cutback in output and that supplies in 1962 will again far exceed demand which is expected to remain weak. Most consumers, according to them, have already committed themselves to price-fixing contracts or barter arrangements with producers, and the sugar which has not been placed in this way will be sold at any price.

It is clear from the foregoing account that the outlook for Indian sugar exports is very bleak. With heavy Government subsidy and high price for domestic consumers, some quantities of sugar may be sold abroad, but how long can the country afford to make such sacrifices? Since devaluation is unthinkable, a cut in the cost of sugar production is the only alternative. This will be possible only if the authorities, Central and State, adopt such steps as would reduce the heavy incidence of cane cost, give tax relief to the industry and encourage growing of sugarcanes that yield more sugar per acre. Equally important it is to withdraw the land ceiling on sugarcane plantations in Maharashtra, so that the sugar companies in the State may continue to make sugar at the lowest cost possible and pass on the benefit to the country as a whole. While all these measures are necessary to improve the efficiency of sugar manufacture in India, they may by themselves be insufficient to help India sell sugar in the world markets. They must be supplemented by a vigorous campaign for an international study of the various special arrangements under which the bulk of sugar consumed in the Western world is being bought. By proposing a switchover to global tenders, the U.S. Administration is causing sudden disruption in the pattern of world sugar trade. It is, of course, quite possible that it might lead to an improvement in the price of sugar in the so-called free market, but it is very unlikely that even then the price would be as high as the one that is being paid to the various suppliers to the U.S. under the present system. If the U.S. finally decides to end its system of preferential and guaranteed purchases, it is just as well that the other countries in the West also should do likewise, thereby making the so-called free market into a real one. In that event, only the efficient producers of sugar will survive and the world trade in this sweetening agent will be as normal as in the case of many other goods.

S. I. VISCOSE

The viscose rayon yarn and staple fibre factory of the South India Viscose Ltd. at Mettupalayam in Madras was inaugurated last week-end by Mr. K. C. Reddy, Union Minister for Commerce and Industry. Although the inaugural function was a formal one, inasmuch as the factory had gone into production earlier, it was nevertheless of much significance, in that it not only marked an important landmark in Indo-Italian economic relations but also constituted the first milestone towards future developments in other fields. The factory, it may be recalled, has been set up as a result of collaboration between a leading industrial group in South India and the world-famous Italian firm, Italiviscosa Eastern Trading, S.P.A., Milan. The collaboration is both financial and technical. Thus, the contribution by the Italian firm to the equity capital of the Company is quite substantial, being as much as Rs. 121.41 lakhs. The firm has also extended all possible technical assistance, trained the necessary Indian personnel and is offering the benefits of its research facilities for the development of the factory.

Built at an estimated outlay of Rs. 10 crores, the S.I. Viscose factory has four units: staple fibre yarn unit with a capacity of 10 tons a day which went into production in May 1961; carbon-sulphide plant (this commenced operation in December 1960); sulphuric acid plant (this started functioning in July 1961); and, finally, the rayon unit, with a capacity of 10 tons a day, that has now been put into commission. The licensed production capacity of the factory is 8 million lbs. of rayon yarn and 8 million lbs. of staple fibre per annum. Further, the Company has secured the licence necessary for manufacturing 60 tons of high grade rayon pulp (or 25,000 tons per annum). Meanwhile, it has requested the Government to permit expansion of capacity. Apropos this request, Mr. K. C. Reddy, in his speech at the inaugural ceremony, assured that "the Government would give immediate consideration" and "do its best to accede to the request."

One may ask whether it would not be better for the Company first to consolidate the position with the present capacity and then take up the expansion project. But the management's proposal has been prompted by more than one consideration. In the first place, it is stated that the project does not entail unduly large fresh expenditure and that the current capital structure is considered quite sufficient for implementing the project in stages. What is more, the Italian law, under which the South Indian Viscose has obtained facilities of loan for a period of over ten years in easy instalments, will facilitate, according to Mr. R. Venkataswamy Naidu, Managing Director of the Company, the Italian collaborators to meet the financial needs for the growth and development of the factory without resorting again to a further issue of capital by the Company. The expansion programme must have also been inspired by the prospects of rising demand for rayon and staple fibre, as witness the sizable third Plan targets of 140 million lbs. and 75 million lbs., respectively, as against the estimated capacity of 52.3 million lbs. (output of 470 million lbs.) of rayon and 48.0 million lbs. (output of 47.8 million lbs.) for 1960-61.

It will be useful to refer here to the note of confidence struck by Dr. Franco Marinotti, President of the collaborating Italian firm, about the future of viscose artificial fibres. In the course of a special article prepared for the Indian Press on the occasion of the inauguration ceremony of South Indian Viscose factory, Dr. Franco Marinotti says that, notwithstanding the growth of new synthetic fibres, the future of viscose artificial fibres "is still rich with possibilities." This view is based on the following grounds:

> "The technological processes, which have become more and more perfected, have undergone such improvements that today it is possible to produce artificial fibres of the best quality that enable the weavers to offer on the market cloth that is particularly durable and attractive, especially as regards colour, since rayon and staple can be dyed very easily. ... The constant progress of fashion, indeed, requires the development of suitable fabrics which can be employed as an alternative to silk fabrics which ... are obviously costlier and, therefore, limited to a small range of buyers. ... The consumption of fabrics designed and dyed in accordance with the changes of fashion, is continuously on the increase in line with the higher standard of living which has been gradually achieved by many nations. ... For the handloom producers, viscose yarns can offer great possibilities as they have done in Italy. Moreover, the importance of artificial fibre production must also be estimated from the point of view of the employment offered not only to those directly employed but to a wide range of connected industrial activities from sulphuric acid to carbon-disulphide. ..."

In view of all these considerations, Dr. Franco Marinotti foresees a continuously increasing use of artificial fibres, as well as an expanding and closer co-operation "with our friends in South India Viscose, with whom, after having realised and eventually expanded the rayon and staple production, we could collaborate also in the polyamidic fibre field in which Snia Viscosa has obtained brilliant results in the international market." It is certainly reassuring to be told by Mr. Reddy that the Union Government would encourage rayon units to undertake manufacture of raw materials and rayon machinery, so that the industry could minimise its dependence on external sources and reduce the drain on the country's slender foreign exchange resources.

DENMARK

The visit of the Prime Minister of Denmark, Mr. Viggo Kampmann, to India this week, serves to highlight the prospects for increasing economic and commercial co-operation between the two countries. India, no doubt, has been making strenuous efforts to expand its exports to Western Europe. But these efforts are largely concentrated in one or two countries, namely, the U.K. and West Germany, whereas smaller countries like Denmark, which offer fresh opportunities for trade, have remained, by and large, outside the realm of India's export promotion. Although Denmark is predominantly an agricultural country and about 60 per cent of its exports comprise agricultural products, its industry, too, is well developed, particularly shipbuilding. It has a population of about five million and a Gross National Product amounting to about £2,000 million.

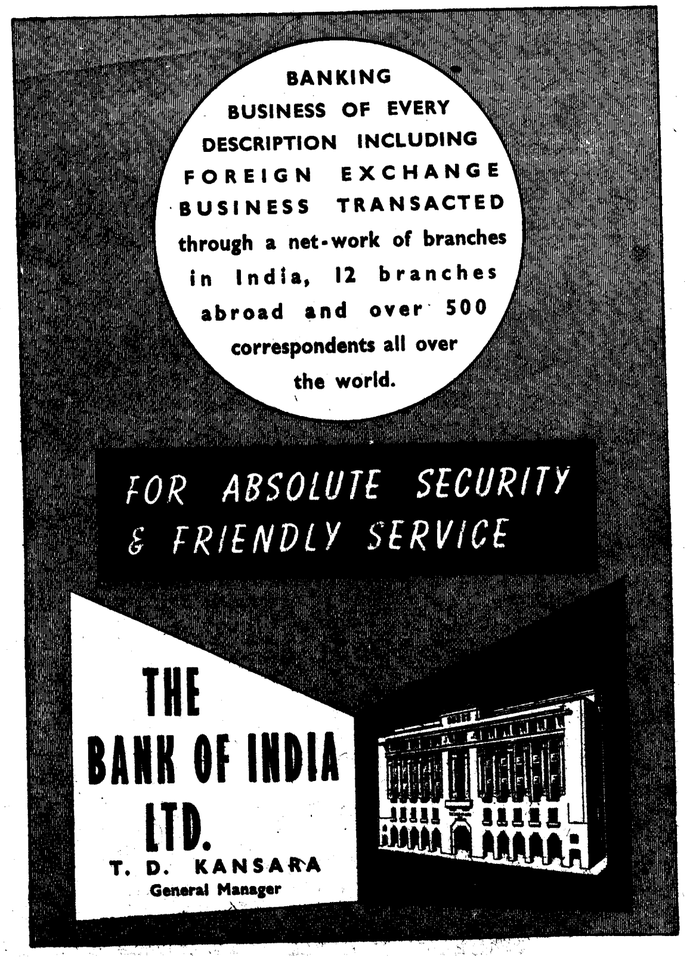
UNDER SECRETARY TO GOVERNMENT OF INDIA
29 JAN 1962
PUBLICATIONS DIVISION

A distinctive feature of Denmark's commercial policy is that it has been pursuing a liberal import policy, unlike some of its neighbouring countries. Imports of a wide range of commodities of interest to India are eligible to enter the country without any quantitative restrictions. These goods include tea, raw tobacco, castor oil, shellac, cotton waste, jute goods and coir yarn. The Government of Denmark has been taking steps to liberalise its import policy further. It was only in the middle of 1961 that imports of a large number of goods were liberalised, including jute sacks (reinforced), sacks of cotton net fabrics and several varieties of footwear. It is precisely because of this enlightened import policy that Denmark's offtake of Indian goods has been on a much larger scale than that by Sweden, Switzerland and other members of the European Free Trade Association, except, of course, the U.K., which is India's largest trading partner. India's exports rose from about Rs. 200 lakhs in 1957 to Rs. 238 lakhs by 1959-60, but declined to Rs. 181 lakhs in 1960-61. Textiles, particularly jute and cotton goods, account for about half of Indian exports. The other important export items are tea, leather, vegetable oils, tobacco, etc. India's imports from Denmark have generally exceeded its exports, except perhaps in 1959-60. Such imports aggregated Rs. 181 lakhs in 1960-61, as against Rs. 159 lakhs in 1959-60 and Rs. 438 lakhs in 1957. The major components of imports were machines and equipments, including electrical items, chemicals and pharmaceuticals and agricultural products. On the whole, the aggregate volume of trade is still at a relatively low level. It will be worth considering whether a bilateral trade agreement will be of help in expanding trade between the two countries.

Of late, Denmark has been making increasing contribution to the industrialisation of India, by way of technical collaboration and/or capital participation in the establishment of new manufacturing units. Quite a few industries, such as dairy equipment, switchgear and motor starters, have benefited from Danish help. Plans are also afoot for the production of cement machinery, evaporator thermostats, milling machines, machine tools, etc., with Danish collaboration. It is to be hoped that Denmark will join the other industrialised countries in granting long-term credit to this country for financing development projects. This will, in turn, help promote mutual trade. Denmark has been channelling aid largely through the U.N. agencies. A part of its funds has been spent for providing training courses for foreign nationals, including Indians, in Denmark, particularly in dairying. Another instance of co-operation between the two countries is the regional dairy training centre at the Aarey Milk Colony sponsored jointly by the Indian and Danish Governments, with the assistance of the F.A.O. The Centre, the fourth training course of which was inaugurated by Mr. Kampmann on Monday this week, seeks to give mass training in the field of dairying to students from countries of Asia and Africa.

INDO-CZECHOSLOVAK CO-OPERATION

The commercial and economic relations between India and Czechoslovakia have been steadily increasing during the last decade. With the agreement finalised at New Delhi last month between the two countries on trade arrangements for 1962, envisaging a total turnover of Rs. 24 crores both ways, as against an estimated Rs. 18 crores in 1961, there are indications that the scope of the Indo-Czech co-operation will expand considerably in the years to come. Under the trade arrangement for 1962, which is based on the overall framework of the trade agreement signed in November 1960, India's trade with Czechoslovakia will continue to take place on a balanced basis, with payments made in non-convertible rupees. Czechoslovakia, it may be noted, has been the



largest customer of India in the Soviet bloc, except Russia. A welcome feature of trade with Czechoslovakia is that it has been buying several raw materials from this country on a fairly large-scale. India's exports of manufactured goods to that country, however, have been lagging behind. The new agreement, of course, provides for stepping up exports of a wide range of manufactured goods, such as steel products, ferro-manganese, cotton and woollen textiles, jute goods, coir manufactures, chemicals and pharmaceuticals, handicrafts and handlooms, besides iron ore, tobacco, vegetable oils and coir yarn, etc.

Czechoslovakia, being a highly industrialised country in Eastern Europe, will supply mainly some of the important engineering items and certain industrial raw materials. The goods that will continue to be imported into this country include various machinery items, power generating equipment, machine tools, precision instruments, as also printing paper, raw cinematographic film, etc. In this connection, it is essential to point out an apparent difficulty the Indian importers face in respect of goods bought from Eastern Europe. While the bilateral trade has its own usefulness to the country in the face of acute shortage of foreign exchange, some of the goods imported from such countries have been found to be more costly and their quality inferior in certain respects. The authorities in both countries will do well to keep a close watch on important transactions and help remedy defects of this sort. Another oft-repeated complaint is that imports by East European countries from India are re-exported to West European countries in a manner that disrupts India's traditional trade with the latter. The Government of Czechoslovakia can, of course, eliminate this anomaly without much difficulty. Unless this is done, the apparent usefulness of bilateral trade in the short-term period will be lost in the long run.

Czechoslovak interest in India goes much beyond the sphere of trade. It is, for instance, collaborating in the establishment of several engineering plants during the third Plan period, both in the public and private sectors. An agreement concluded in 1959 between the Governments of Czechoslovakia and India paved the way for the formers' participation in the establishment of a foundry-forge plant, heavy machine tool plant, heavy power equipment plant and high pressure boiler plant during the third Plan. The foundry-forge plant in Ranchi—the construction of which is now going ahead—ranks among the biggest plants Czechoslovakia has ever supplied abroad and is also the biggest engineering project of the kind in Asia. In size and importance, this plant is said to be comparable to the famous Skoda Works of Czechoslovakia and will be having most up-to-date equipment. Its importance will be gauged from the fact that the output of cast steel in India will increase fourfold as it goes into operation. Its semi-products will be used in the other two plants at Ranchi, namely, the Heavy Machine Building Plant and the Heavy Machine Tool Plant.

For building these projects during the third Plan period, Czechoslovakia has granted to India an eight-year credit of Rs. 23.1 crores on advantageous terms. The loan is to be repaid in deliveries of Indian goods only, beginning after the completion of the projects. The production in the aforesaid projects alone is expected to be sufficient to pay the instalments. To reduce, as far as possible, the drain on India's foreign exchange reserves, the Czechoslovak suppliers have included in the Detailed Project Reports some machines and equipment which are available in India. These projects are so designed as to enable further expansion. Czechoslovakia has also undertaken to share all technical know-how for the erection and production in respect of all projects.

Czechoslovakia is also collaborating with some of the State Governments in the establishment of cement factories, brick and ceramic plants, power plants and also sugar mills. Among the important private sector projects to which it has extended collaboration, special mention may be made of the Walchandnagar Industries Ltd., which is manufacturing machines for sugar mills. Czech assistance has laso been given to other projects, such as a motor cycle factory in Mysore, a tractor factory in Baroda and a tyre plant in Calcutta. Another significant feature of Czech assistance is the emphasis laid on encouraging technical education in the country. Apart from providing technical know-how for collaborating projects and giving training facilities for Indian technicians in Czechoslovakia, the Czechs have built and equipped the Rs. 60-lakh technical college, the Central Machine Tool Institute, Bangalore. It is noteworthy that the college has been given to India as a free gift.

LOANS TO TEA ESTATES

The Government of India has decided to place a sum of Rs. 5 crores at the disposal of the Tea Board to enable it to grant long-term loans to tea estates for replanting, replacement and extension of tea areas. The broad terms and condition of the loan under the Plantation Finance Scheme would be as follows:

The rate of loan to individual estate will be limited to Rs. 7,400 per hectare or Rs. 3,000 per acre to plains garden in four instalments; and Rs. 9,000 per hectare or Rs. 4,000 per acre to hill garden in five instalments.

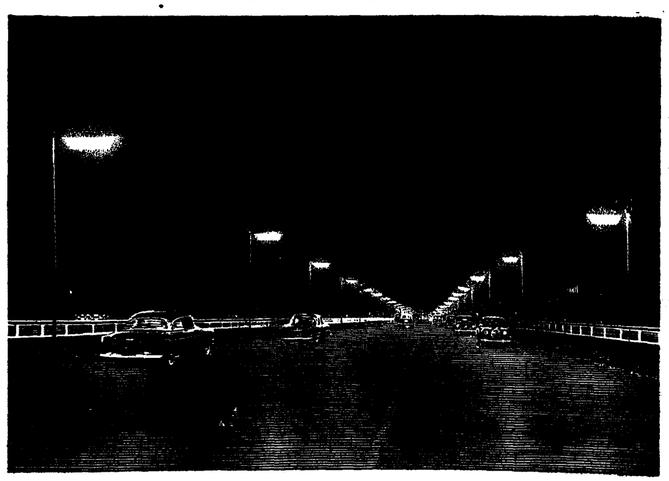
The loan will be repayable to the Board over a period of eight years commencing after the expiry of seven years from the disbursement of the first instalment.

The rate of interest on the loan will be 7 per cent per annum with a rebate of ½ per cent for prompt payments of principal and interest on the due dates.

The security should be primarily in the form of *pari passu* charge obtained through appropriate arrangement with banks now financing short-term loan on the fixed assets of the estate.

The estates willing to avail of the loan assistance may send their applications to the Tea Board in the prescribed form to be obtained from the Board's office in Calcutta, Cochin, Coonoor, Madras and Palampur (Kangra).

THE RED ROAD AT CALCUTTA



LIGHTING BY PHILIPS

Calcutta's Red Road, wide and smooth and straight as an arrow was, nonetheless, long considered rather unsafe for pedestrians or fast-moving traffic at night when the shadows of the maidan seemed to envelope it in darkness. But now this famous road has lighting worthy of its importance and adequate for its traffic.

And Philips have supplied the lighting.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

ECONOMIC TRENDS IN BRITAIN

EXTERNAL POSITION BETTER BALANCED THAN GENERALLY SUPPOSED

By W. T. C. King

EDITOR OF *THE BANKER*, LONDON

BRITAIN is entering 1962 with the economy in a distinctly better shape than at the beginning of 1961, but not in such a good shape as to inspire any large optimism among the New Year forecasters.

The fundamental unsolved problem of the modern economy lies at the heart of virtually every discussion of the wider issues of economic policy—the problem of finding an acceptable way of combining the several seemingly conflicting objectives that the community is constantly trying to pursue simultaneously. It seeks a high rate of economic growth and a rising standard of living and the maintenance of "full" employment, and, in effect, expects these goals to be attainable without endangering either Britain's role as a large contributor to Western defence and to the aid of underdeveloped territories, or its external solvency, or the stability of its money. The relative priorities may shift a little from time to time in response to the actual performance of the economy, so that, for a while, effort may be concentrated on one condition, or one aim, rather than another. But all too often it appears that progress towards one objective is being attained mainly at the expense of the others. Hence each effort to redress a disequilibrium seems to set in motion forces that may cause a new disequilibrium.

Policy Needs Proper Understanding

In the recent past, the emphasis in public policy has perforce been on the conditions rather than the ultimate goals of economic progress. The hard facts of economic life have focussed attention on the overriding need to maintain external solvency, and the resultant concentration of effort has had a substantial measure of success. But the longer this effort has to be sustained, the greater is the risk that influential sectors of opinion may grow impatient at the apparent lack of progress in other directions, leading eventually to a new shift in the emphasis of policy. Hence the ultimate consequences of recent efforts cannot fairly be judged from what has been achieved in the short run.

Twelve months ago, as I remarked in this correspondence at the time, there could be no doubt about what the major aim of Britain's economic policy had to be in 1961. First, priority had, unquestionably, to be given to improvement of the balance of payments, because, for the first time since 1955, even the current account had slipped into deficit, and because there was little likelihood that the deficit could any longer be financed, as it had been in 1960, by a massive net inflow of short-term overseas funds. Nobody then realised, however, how large a deterioration had taken place. At that stage, the current-account deficit for the year 1960 was being guessed at perhaps £150,000,000-£175,000,000, whereas the revised official estimates later put it at no less than £339,000,000, in contrast with surpluses of £320,000,000 in 1958. The picture, it is true, was complicated by fairly radical changes in the basis of compilation of the statistics, which had the effect of producing a significantly larger current account deficit than would have been the case on the old basis of calculation.

True Position Understated

With those violent revisions fresh in mind, I shall not dare to guess what the final estimates for 1961 will prove to be. But there is no doubt at all that they will show a massive improvement upon 1960. The quarterly official estimates show that the deterioration continued into the first quarter of 1961, though at a slackening rate (the current account deficit then being £68,000,000, as compared with £44,000,000 in the corresponding period of 1960), but that in the second and third quarters there was a very sharp recovery. The deficit in the second quarter was down to £15,000,000, while, in the third quarter, there was a less than seasonal deterioration, to a deficit of £25,000,000, in contrast with £136,000,000 in the corresponding—and worst—quarter of the previous year. If seasonal factors are allowed for, the current account was probably not far from the balance during the third quarter, while the actual deficit for the first nine months of the year, at £108,000,000, was well under half that for the first nine months of 1960.

It should be noted, too, that these estimates of what is called the "identified" current balance almost certainly understate the true position. Britain's position as international banker, taking account of changes in the reserves on the one hand and of changes in known short-term liabilities on the other hand, almost always moves more favourably than might be expected from movements in the "identified" current trading and in the ascertained net financing at long-term. The difference is shown in the payments accounts as a "balancing item," which is generally in credit, indicating that Britain has either earned more, or borrowed more, or both, than has been shown in the identified transactions.

In the third quarter of 1961, the unidentified items totalled up to a net credit of no less than £125,000,000, actually £40,000,000 more than the recorded deficit on current account plus the net outgoings of long-term capital. The exceptionally large unidentified receipts in this quarter may be presumed to reflect the strong reverse swing of the "leads and lags" that took place after the buttressing of sterling by the Chancellor's end-July measures and by the resultant big drawing on the International Monetary Fund. In effect, Britain at this period was receiving payments, e.g., for exports that would normally have been settled earlier, whereas in the preceding period it had been making payments, e.g., for imports that would normally have been settled later.

Position Better

A swelling of the unidentified receipts by operations of this kind does not, therefore, indicate any lasting improvement, but simply a reversal of an earlier deterioration. It should be noted, however, that, over the nine months, during which credits of this kind may be presumed to have been roughly offset by the corresponding debits, the balancing item of unidentified earnings or borrowings was still sufficient to offset the whole of the identified outgoings. On this basis, it is possible to claim that Britain's external accounts have lately been much closer to the overall balance, after full provision for net outgoings of long-term capital, than is generally supposed.

But most informed observers, bearing in mind the extent to which the estimates have been revised in recent years, would not care to put over much trust in this sort of statistical argument. There are, in any case, other reservations that have to be made about the improvement that has taken place in 1961. A substantial part of the reduction of deficit on current account has been due to a decline in imports. If the third quarter of 1961 is compared with the third quarter of 1960, the improvement is seen to have been £111,000,000, to which the drop in imports contributed £58,000,000 and the rise in exports £53,000,000 (with an increase on Government "invisible" payments just offset by a rise in other net invisible receipts). This decline in imports has been associated with the drop in primary commodity prices and, even more significant, with a steep reduction in the rate of domestic stock-building from the exceptional level that had been reached in 1960. This is an influence that is likely soon to exhaust itself, if, indeed, it has not done so already. Imports now seem more likely to rise than to fall further, whilst, for some months past, exports have been merely maintained at round the higher level established by the first quarter of last year.

Industrial Production Recedes

The principal instrument for improving the balance of payments in 1961 has, inevitably, been the policy of restraining domestic demand, especially consumer demand. The Government was at pains to avoid putting any corresponding rein upon outlays for productive investment, and such evidence as is yet available about the volume of investment undertaken in the second half of 1961 and in prospect for 1962 suggests that, on the whole, it has been reasonably successful in this aim. But, in the absence of any rapid and strong rise in exports, the check to consumer demand (notably for durables and motor-cars) and the decline in investment in stocks and work-in-progress have together first stopped and then reversed the rise in industrial production as a whole. The seasonally adjusted index, which had been virtually stable for more than a year from the first quarter of 1960, at around 120-121 (1954: 100), started to rise sharply in the second quarter of last year, reaching a peak of 125 in July, but, in the ensuing three months, it dropped back even more sharply, reaching 120 again in October—though it would possibly have been a point higher than this had it not been for the major labour disturbance in the steel and motor-car industries in that month.

This decline in aggregate industrial output has been accompanied by a significant easing of the stringency in the labour market, although, by early December, the unemployment percentage was still no higher than 1.7 in general. The pull of the home market should no longer be preventing Britain's industrialists from seizing such opportunities as present themselves in overseas markets, though in certain capital-goods industries capacity is still very fully engaged. A more serious impediment comes from the threat of rising costs, and here the principal short-run consideration is likely to be the future of the policy of wage restraint. But, in the end, the chances of keeping Britain's goods competitive, like those of keeping sufficient productive capacity available to cater for the export orders, depend on the maintenance of due restraint upon the aggregate of domestic demand.

Toughness Will be Sustained

It is in this sense that the success of the policies of 1961, in improving the balance of payments and in preparing the way for further improvement, may seem to fall foul of other highly prized objectives. A campaign is starting up anew against what is called the policy of "stagnation," demanding a new "expansion." To this the Government replies with precisely the message the Chancellor was giving 12 months ago—that the foundation for renewed expansion must be a strong upward movement of exports. On a long view, this is, indeed, the only possible prescription for sustained growth, but it is hard to convince public opinion that this is so. In the coming months, the public clamour is likely to grow, and not until the Budget shall we know for sure whether the Government will stand its ground. But the omens at present are for sustained toughness.

Notice

THE DURBHANGA SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Ordinary General Meeting, being the Annual General Meeting, of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat, on the 28th day of February, 1962, at 10-30 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Accounts for the year ended the 31st August, 1961, and Balance Sheet and Report of the Auditors thereon.

(2) To elect a Director in place of Shri Padmanabh Prasad, who retires under Article 107 and, being eligible, offers himself for re-election.

(3) To appoint Auditors for the current year and to fix their remuneration.

(4) To transact any other business which may be brought forward at the Meeting with the permission of the Chairman.

As Special Business

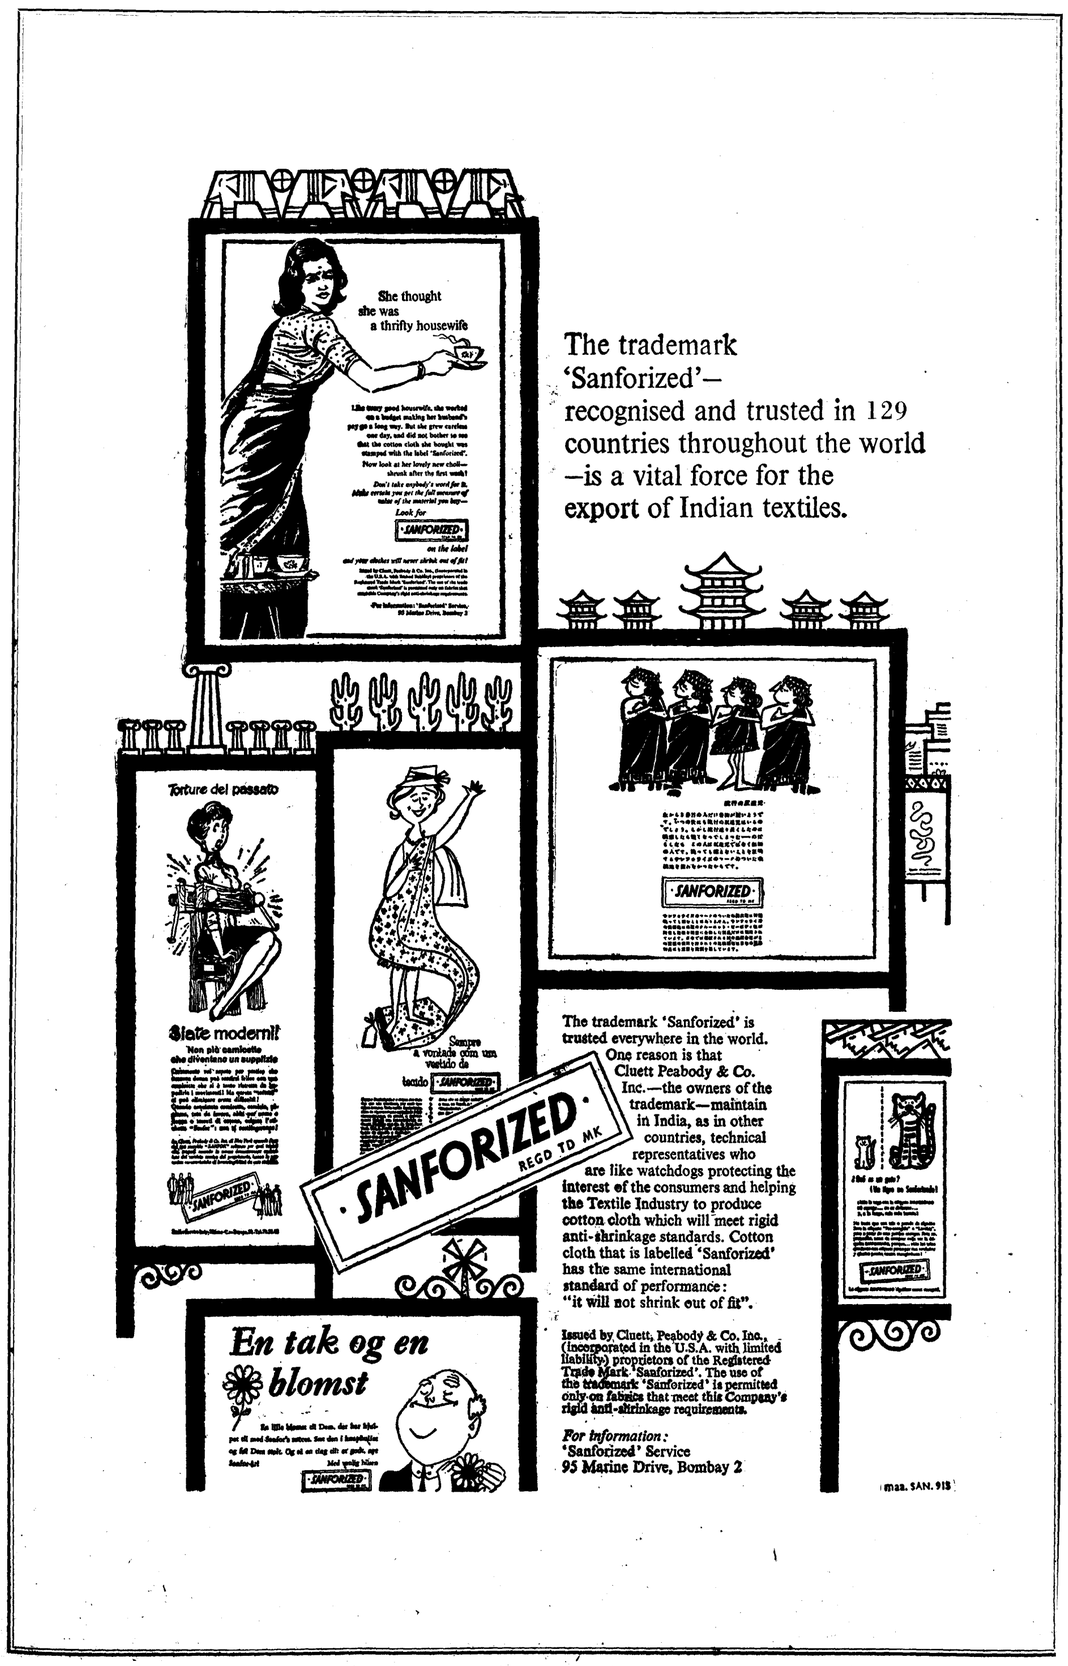
(5) To sanction payment of remuneration to the Manager for the year ended the 31st August, 1961.

By Order of the Directors,
W. F. MALDEN,
Secretary,

LOHAT,
DISTRICT DARBHANGA,
29th December, 1961.

Note.—(1) A member of the Company, who is entitled to attend and vote, is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member.

(2) The Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, has been sent to all the Shareholders along with the Notice convening the Meeting.



INDIAN BANKING NEEDS INTEGRATION

DEPOSIT RATES MUST BE COMPETITIVE

RARELY commercial banking figures in the subjects chosen for talk at the periodical luncheon meetings of the Rotarians in Bombay. Last week, it was one of those rare occasions. And the speaker was a distinguished practical banker, Mr. T. D. Kansara, General Manager of the Bank of India Ltd., the third largest commercial bank in the private sector in this country. In a brief speech to the Bombay Rotarians, Mr. Kansara confined himself only to the current problems confronting the banks. A notable feature of his observations was forthrightness. He stated his views on these problems, without hedging needlessly. It is gratifying to find that the views expressed by this journal from time to time have been endorsed by him. Thus, he is in favour of higher interest rates on deposits, aggressive branch banking by the big, strong institutions, integration of the banking units into a manageable number of big banks, a higher ratio of bank credit to deposits in view of the developmental needs of the country, efficient inspection of banks by the Reserve Bank from time to time and a bigger ratio of owned funds to deposits than the one agreed to by banks under the convention with the Reserve Bank.

We give below the relevant extracts from Mr. Kansara's speech:

"In the past several months, banking has been very much in the limelight. First, two financial dailies, namely, *The Economic Times* and the *Financial Express* have been started and the banking and financial problems, in particular, and economic problems, in general, have been receiving the widest possible publicity as never done before. Secondly, the Reserve Bank of India has outlined certain proposals for strengthening the banking system and the implications of these proposals and the discussions in the Press thereon have brought the problems of banks to the forefront.

"At present, the banking set up includes the Reserve Bank of India at the top, the nationalised sector of banking as one wing and the private sector of commercial banks as another. The private sector of commercial banks covers both Indian and foreign banks. In addition, there are co-operative banks which are operating with the aid of State support.

"Now the total deposits of Scheduled banks are around Rs. 1,750 crores. Of this, Indian Scheduled banks account for 87 per cent and the major Scheduled banks, which are 9 in number, account for 77 per cent. The foreign banks account for another 13 per cent.

"An important problem in the banking system is that of sub-standard banks. . . . The Reserve Bank of India has, in fact, initiated a scheme of amalgamation in the recent past and the programme launched by the Bank requires to be speeded up. Let us hope the Reserve Bank will be able to do so.

Bigger Capital Base Needed

"Apart from dealing with the problem of sub-standard banks, the Reserve Bank of India, as already referred to, has paid attention to the strengthening of the existing banking structure as a whole. In this direction, the Reserve Bank of India has suggested an upward revision of the capital funds of Scheduled banks, so that the ratio might be increased from the present level of about 4 per cent to about 6 per cent. The main justification for the Reserve Bank's proposal is that, though the commercial banks are owned by shareholders, their stake is quite small, as compared with that of the depositors. In other words, the banks are really the trustees of public funds and the Reserve Bank is quite right in insisting that the stake of the shareholders must be increased.

"The argument which has been advanced, in this connection, is that, in foreign countries, especially in Britain, the ratio between owned funds and aggregate public deposits is not more than 3 to 4 per cent and, therefore, there is no need for raising this ratio in India also. It is however, forgotten that the British banks have built up huge secret reserves, which, if brought out, would raise this ratio to a pretty high figure. It is, therefore, imperative that the Indian banks should aim at a ratio of 10 per cent to be achieved in course of time. It is interesting to know that a ratio of 9 to 10 per cent between owned funds to total deposits of commercial banks is considered essential in certain countries.

"One must, however, bear in mind that the strengthening of capital funds of commercial banks alone will not give a sense of security to depositors. What is most important is sound management. In fact, I would like to put more emphasis on sound management, although a strong equity base is a *sine-qua-non* of stable banking progress.

"What are the prospects for banking during the third Plan? According to me, the deposits by the end of the third Plan will be double or increase by 100 per cent, that is, they would amount to some Rs. 3,500 crores. Even so, they may not be enough to meet the demands made upon the banking system. The commercial banks, therefore, have to pay increasing attention to their resources.

Advances

"Now the advances-deposits ratio is around 66 per cent. In the U.K., the ratio is about 45 per cent and in the United States it is about 55 per cent. In Japan, on the other hand, a ratio of more than 100 per cent between deposits and advances has not been considered abnormal. In our country, however, we should go according to the circumstances here and we should be prepared to let the ratio go to even 100 per cent but with adequate safeguards. This is necessary, because the deposits of commercial banks are repayable at short notice. The Reserve Bank of India's assistance in a large way should be available as a lender of last resort. There must be an effective supervision of banks by the Reserve Bank of India to be efficiently able to do so.

"The effective supervision by the Reserve Bank of India is governed by the consideration that the number of existing banks should be small enough to enable the Central banking authority to exercise effective control. Viewed in this context the amalgamation scheme, sponsored by the Reserve Bank, is to be welcomed. In India, we should aim, in course of time, to have 15 or 20 strong banking units. The reduction in the number of banks does not, however, mean the curtailment of services to the public. In fact, these banks, if they are small in number, should be able to provide many more amenities and much more efficient services.

Branch Banking

"An important means of securing deposits by commercial banks is by opening more branches. Our slogan must be "Take the Banks to the People." In some quarters, it has been suggested that banks should go ahead with the experiment of mobile banks, so that even the remotest village in our country could be provided with banking facilities. It should be noted, in this connection, that private banks have certain difficulties in sponsoring the idea of mobile banks. In certain areas like Rajasthan, where the experiment of mobile banks has been conducted, the experience has been none too favourable. In addition to opening more branches, the banks must also be willing to pay higher interest rates on deposits rates which are comparable to those in the region where they are operating, if they are to attract deposits. The banks will be easily able to pass on the cost of such deposits to borrowers who do not mind it, in view of larger profits which they are making on account of our expanding economy.

"Let me deal with one last aspect. The Reserve Bank of India has launched a Deposit Insurance Corporation from the New Year to afford some protection to depositing public. While deposit insurance is no substitute for good management, it serves a psychological purpose. In other words, it offers a sense of security to the depositing public and this enhances their confidence in the banking system and to that extent it is a welcome addition. The major banks do not require a deposit insurance scheme, since they are soundly managed institutions, but they have been willing to make the necessary sacrifice in the interest of larger public good."

INDIA'S LONGEST CONVEYOR BELT AT NEYVELI LIGNITE PROJECT

Over 12,000 ft. in length and 3½ ft. wide, this Dunlop conveyor belt will shortly be delivering thousands of tons of lignite every day with faultless regularity at Neyveli.

In the manufacture of conveyor belting, experience is a vital factor, for only sound design will ensure quick, efficient and economical flow of materials. The Dunlop organisation has the cumulative experience gained from many different countries of the world where conveyor belting is manufactured.

You can depend on Dunlop to deliver the goods!

Dunlop Conveyor Belts are in service at

The coal mines of the National Coal Development Corporation
The Sindri factory of the Fertiliser Corporation of India
The factories of The Associated Cement Companies Ltd.
The thermal power stations of the Damodar Valley Corporation
The Durgapur Steel Project
The Bhilai Steel Project

New avenues of progress

The rapid development of India's road transport has opened up new avenues of progress. Diesel trucks, lorries and buses now link every part of the country...carry goods and people to once-remote areas. With the growth of road transport has grown demand for High Speed Diesel Oil. Today over 1 million tons are consumed.

By the end of the Third Plan the country's needs will increase by 117.2%. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth, and Burmah-Shell believes that

for tomorrow's needs we must act today

TEXTILE MARKETING IN WORLD TRADE

A WESTERN POINT OF VIEW

By Mario Ludwig, LL.M

Director, International Federation of Cotton and Allied Textile Industries.

IN today's world, textile marketing is an international occupation. It cannot be carried out successfully when approached from a purely national, domestic point of view. Indeed, there are few industries which are more international in all their aspects than the textile industries. This applies equally to exports, imports or the home trade.

The international aspects of textile marketing for purposes of exporting or importing are self-evident. But even the manufacturer who produces and sells textile goods exclusively for the domestic market, cannot run his business successfully unless he gives due regard to international developments. He must keep abreast of new production methods and finishes and new end-uses; he must observe changing trends in fashion, colour, style and design: he must anticipate changes in consumer preference and demand, which are often induced by influences from outside his own country. Finally, he must meet the competition on his home ground from imported textile goods, which may have a special appeal to the consumer, either because they are foreign, and thus "different," or because they are cheap.

All these are international aspects of textile marketing over which each individual manufacturer can himself exercise control. He can adjust himself to changing conditions, meet the new requirements and, to a certain extent, even influence the trend itself. If a manufacturer fails to live up to these specifically commercial aspects of competition in international textile marketing, then he has only himself to blame.

Non-commercial Factors

There are, however, a number of non-commercial, not to say "political" factors, which have a bearing on international textile marketing and which are largely outside the sphere of influence of the individual manufacturer. It is with these aspects that I propose to deal with in my paper.

Competition, in the traditional sense of the word, has been the particular condition or climate under which a free market economy has always operated. It has been the result of the interplay of supply and demand; it has rested on the theories of comparative costs and of the international division of labour. This traditional concept of competition is rooted in the world of the 19th century, when the colonial countries supplied the industrialised nations with raw materials, whilst the latter supplied the world with their manufactures. It is amazing that this traditional concept of competition, which so far has formed the basis of world trade policies, could persist so long. Speaking in terms of world trade policies, the 19th century has only ended in 1945.

It required the upheavals of the Second World War to break away from obsolete theories. Since then, the industrialisation of underdeveloped countries has been made one of the primary objectives of world trade policies. Naturally enough, the development programmes in most countries started with the building up of a local textile industry, which could often process locally grown fibres and which, labour intensive as it is, provided plenty of jobs for the abundant and cheap indigenous labour force.

Wages in Developing Countries Low

Today this process of industrialisation has progressed so far that many of the developing countries have reached the so-called "take-off stage" in their economies and have become potential exporters of textile goods. Yet, their standards of living and costs of production, particularly wages, have not kept pace with their industrial progress. Their economic and social structures still differ widely from those of the highly industrialised nations, with which they compete on the world's markets. As a result, there now exists inequality in the conditions of competition; the competitive process has become distorted; the theories of comparative costs and international division of labour are out of date, particularly in the light of the fact that a large share of the development aid has been financed by the industrialised countries themselves.

Clearly, the traditional concept of competition can no longer serve as a basis for world trade policies. But there are also other factors, which distort the competitive process. They are not necessarily caused by the different economic and social structures of developing and highly industrialised countries, but are often found within the latter themselves. They consist of a number of practices in the nature of export aids, which give certain advantages to a textile exporter that would not normally accrue to him. These practices are usually described by the general term of "subsidisation" or "dumping"; they do, however, appear in many forms and disguises. Thirteen such practices can be listed, which, depending on the degree to which they are being applied, are likely to distort competition. They are:

(1) Dumping in the narrow sense of the word i.e. selling abroad at lower prices than at home.
(2) Bonuses on raw materials.
(3) Direct export subsidies.
(4) Export credit facilities.
(5) Tax and duty re-imbursements.
(6) Non-imposition of taxes and duties.
(7) Re-imbursement of social charges.
(8) Re-imbursement of non-levied taxes.
(9) Obstacles to the export of semi-manufactures.
(10) Multiple exchange rates.
(11) Premiums on foreign exchange earnings.
(12) State-controlled export trading.
(13) Barter trading.

Two Factors

To summarise this introduction it can be said that, in the past few years, two factors have been responsible for the disruption of so many of the world's textile markets and the decline of so many mills in so many countries:

(a) Differing economic and social structures of the textile exporting countries competing on the world's markets; and

(b) Certain practices which tend to distort the conditions of competition.

In a city like Manchester, it is unnecessary to recall how many mills had to be closed before the danger of market disruption was recognised at Governmental level. But it now seems that, at last, something is being done about it. In 1960, the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.) officially admitted the existence of the problem of market disruption for cotton textiles. According to the G.A.T.T., market disruption is a combination of the following four elements:

(a) There must be a sharp and substantial increase or potential increase of imports of particular products from particular sources;

(b) These products must be offered at prices which are substantially below those prevailing for similar goods of comparable quality in the market of the importing country;

(c) There must be serious damage to domestic producers or threat thereof;

(d) The price differentials between the competing commodities must not arise from Governmental intervention in the fixing or formation of prices or from dumping practices.

The idea is that, in cases of market disruption, the injured importing country should be granted certain exemptions from the G.A.T.T. rules and have the right to protect itself. This was the very first sign of a basic and overdue change in the philosophy which underlies current world trade policies. It is no surprise that it all started with textiles.

G.A.T.T. Talks

Since then events have moved fast. In May 1961, President John F. Kennedy of the United States of America called for an international conference of the chief textile exporting and importing countries "to seek an international understanding which will provide a basis for trade that will avoid undue disruption of established industries." The G.A.T.T. was asked to initiate negotiations to this effect, and up to now three conferences have been held in Geneva.

The aim of these negotiations is threefold:

(a) significantly to increase access to markets which are at present subject to unilaterally imposed import restrictions;

(b) to maintain orderly access to markets where restrictions are not at present maintained; and

(c) to secure from exporting countries, where necessary, a measure of restraint in their export policy so as to avoid disruptive effects in import markets.

In other words: The developing countries should gradually be given greater and easier access to the world's textile markets, whilst, at the same time, the continued existence and viability of the industries in the traditional manufacturing countries should be preserved and market disruption avoided.

To achieve this, a short-term and a long-term arrangement are to be made within the G.A.T.T. The short-term arrangement is already in force and provides for a stand-still on the present status of imports until 1st October 1962. During that moratorium, no importing country shall be obliged to take a higher volume of cotton textile imports than that taken during a specified period, i.e., the twelve months ended 30th June 1961.

Long-term Arrangement

Meanwhile, a long-term arrangement is to be worked out, which should give the developing countries a gradually increasing share of the international trade, whilst maintaining order on the import markets. Although it is too early to say what form this long-term arrangement will have, it is nevertheless possible to anticipate some of its likely features. The plan is that the traditional importing countries should gradually increase their imports from developing countries. The levels, which these imports should reach from year to year, are to be determined in advance in a multilateral agreement. Each importing country would then know, in advance, up to which level its textile imports may go. No country would have to take more than the recommended level. The burden to absorb the gradually increasing imports from developing countries would then be shared by all the chief importing countries, and world trade in cotton textiles should be able to expand in an orderly manner.

It is appropriate that these negotiations should be conducted within the framework of the G.A.T.T.; the textile problem is, after all, the classic conflict of interests between developing and highly industrialised countries. It may well be that cotton textiles will create the precedent for a re-assessment of the G.A.T.T., in particular, and a revision of current world trade policies, in general.

Reservations

The Geneva talks may, therefore, give us hope that a truly international solution will be found to the problem of textile competition. There are, however, certain reservations which must be made. Assuming that the proposed long-term arrangement will set specific recommended levels of imports, which should not be exceeded, it may then still be possible for domestic markets to be disrupted. Market disruption may take place even under a system of direct import quotas. It is not only a problem of volume, but also one of price. Quite often it was not so much the actual volume of imports that has ruined the market and forced mills to close down but the excessively low level of prices at which these imports were offered or sold. Sometimes it is sufficient merely to make an offer at an excessively low price, to panic the market or to stop business altogether. I cannot help feeling that too much attention has been paid in the past to the question of volume of imports, and too little to the question of price. This is particularly important for an industry like textiles, where profit-margins are notoriously narrow. One must also remember that many mills were closed, not because they did not have enough work as such, but because they did not have enough profitable work. In imports, the question of price should, therefore, be given just as much consideration as the question of volume. The concept of market disruption, as defined by the G.A.T.T., should be given a more precise interpretation. Moreover, the procedures for avoiding market disruption, as originally devised by the G.A.T.T., should be incorporated in the long-term arrangement which is currently being negotiated in Geneva.

In this connection, it might be interesting to see how one country, Switzerland, has tried to solve the problem of textile imports at excessively low prices. Switzerland has, in fact, introduced a system of price supervision and price certification over its textile imports from Japan and other low-cost producing countries. This applies to imports of grey cotton cloth, wool cloth, knitwear and made-up goods, which may only be imported from the countries in question on the basis of an import licence. The import licence is refused by the Swiss Government when the import price shows the following differences below the prices for equivalent goods produced in Switzerland:

10 per cent for cotton cloth;
12 per cent for woollen cloth;
20 per cent for knitwear and made-up goods.

For purposes of comparison, the domestic price is the current market price, including a reasonable profit; the import price is the price at the Swiss border plus duty and transport from the border to the place of destination.

Here is a case of a country, with a traditionally liberal foreign trade policy, that has chosen to deal with the problem of cheap textile imports through a system of price supervision, rather than through quantitative restrictions. Experience so far indicates that the system acts as a deterrent; it has undoubtedly prevented a disruption of prices on the Swiss domestic market, but it is still considered inadequate to solve all the problems of international textile competition. For this, two things will be required: a check on the rising tide of the import volume as well as the avoidance of disruptive prices. I have always felt that the importance of tariffs as an obstacle to trade was somewhat overrated. When someone really meant business, he has usually been able to jump the tariff-walls. On the other hand, tariffs have never been an effective instrument for avoiding market disruption; only quantitative restrictions, can be.

Britain, The Six, and the Commonwealth

Let us now turn our eyes to the European scene, where great things are happening at the moment. The decision of the United Kingdom to apply for membership with the European Economic Community (E.E.C.) is undoubtedly of tremendous importance to the British textile industry. It must be recalled here that the cotton and allied textile industries of Western Europe, represented through the Committee for European Affairs of the International Federation of Cotton and Allied Textile Industries, have always been in favour of comprehensive economic integration in all Western Europe. Indeed, they were the first industry ever to advocate European integration, long before the E.E.C. and E.F.T.A. came into being. They were quick to realise that a fully integrated Western European market is the logical consequence of the great structural changes which the cotton textile industries are undergoing world-wide, and of which I have spoken at the beginning.

Britain's possible affiliation with the E.E.C. does, however, also create problems, especially in connection with the textile trade. These problems originate in the special treatment which the United Kingdom is granting to textile imports from Commonwealth countries, notably India, Pakistan and Hong Kong. It is now argued that this preferential treatment could, under no circumstances, also be granted by the E.E.C.-countries. If Britain, for political and other reasons, has in the past pursued a policy of imperial preference, as a result of which the cotton industry in Lancashire was forced to contract drastically, this is no reason—they say—for the same fate to be inflicted upon the cotton industries of the Continent. They would welcome the British cotton industry with open arms in the Common Market as a competitor on equal terms; they are even prepared to increase their offtake of textile imports from Commonwealth countries and thus to share part of this burden with Britain; but they feel that the Common Market must be protected against disruption through unrestricted cheap imports from Commonwealth or other low-cost producing countries.

This point of view has been officially endorsed by the E.E.C. Authorities at the recent G.A.T.T. negotiations in Geneva. Although the problem, which is raised thereby, is of a fundamental nature, it should be possible to solve it. If the U.K. Government insisted on maintaining the system of imperial preference, a precedent for a solution might be found in the so-called "Noordwijk Agreement." Under this agreement, a number of Western European countries have undertaken not to re-export to other Western European countries any textiles which have been imported, for processing purposes, from certain low-cost producing areas in Asia and elsewhere. Such imports of cheap grey cloth for the improvement trade may only be re-exported to countries outside of Western Europe. It is conceivable that a similar, although extended re-export embargo on textile imports from the Commonwealth might have to be imposed, when the U.K. joins the Common Market.

G.A.T.T. is Out of Date

An easier solution of this problem of Commonwealth textiles could, perhaps, be found through the long-term arrangement on international trade in cotton textiles, which is currently under negotiation in Geneva. If it were possible to conclude a sufficiently broad and far-reaching agreement within the framework of the G.A.T.T., then it is quite conceivable that it could include provisions regarding the re-export or trans-shipment of textile imports from low-cost producing countries. As all the countries involved, i.e. the U.K., all E.E.C.-member countries, India, Pakistan and Hong Kong are taking part in the Geneva-negotiations, the problem would then be solved on a multilateral basis. This would have the additional advantage that an issue could be avoided, on which the U.K. Government, for political reasons, would no doubt find it difficult to reach a decision one way or the other. This brings it home once again how important it is to bring the Geneva-negotiations to a successful conclusion.

Harmonisation

Apart from these more political aspects of European integration, there are, of course, many commercial implications which will have to be reckoned with. One concept that is frequently mentioned in connection with the Common Market is that of "harmonisation". Harmonisation of conditions in E.E.C.-member countries is not only one of the declared aims of the Rome Treaty, but it is the natural result of any regional economic integration. This means that there will have to be adjustments in the size and structure of textile firms in Britain and on the Continent. The process of vertical integration in the cotton and allied textile industries of Lancashire will have to be accelerated and extended. Vertical integration does not stop at spinning, doubling and weaving, with the occasional addition of bleaching and dyeing. It means the full inclusion of all phases of production; in particular, it means a more direct control of and interest in the marketing of textile goods by those who are responsible for their production.

Foreign textile buyers have often been astonished at the gap which separates the production side of the British textile industry from the marketing side. Such remoteness from the market, it is felt, can no longer be justified. Closer co-operation between production of yarn and cloth and marketing of textiles, whether made-up or not, is essential today. This has been achieved for many years on the Continent. It will also have to be achieved in Britain.

Vertical Integration

I do not think that it matters whether the initiative for such fully vertical integration comes from the production side or from the marketing side, as long as it comes. It would enable the producers of yarn and cloth to keep their fingers on the pulse of the market and strengthen their position by engaging the sales talent of the merchanting profession. On the other hand, the merchanting profession would gain strength through the support of the industry. Supply problems would be eased, as the merchanting firms would be backed by a production that can be readily adjusted to changing demand.

Vertical integration, going as far as the merchanting profession, would also reduce costs, since it would eliminate the unnecessary taking of profits at the intermediate stages.

On the Continent, too, adjustments will have to be made. There, the degree of vertical integration is already relatively high; but the units of production and the size of the individual firms or combines tend to be rather small, certainly when compared with Britain. It is, therefore, likely that there will be a move on the Continent towards mergers into larger combines. A larger, common market needs large, efficient units of supply, especially in the case of mass-produced consumer goods.

In the same connection, it is conceivable that there will be various forms of co-operative arrangements between textile firms in different member countries of the E.E.C. These might be loose arrangements regarding the supply or sale of yarn and cloth, or they might go as far as the setting up of subsidiary companies abroad. In a European common market, there is, in fact, no limit to the imaginative use of such inter-firm co-operation. A concrete example may illustrate this point:

Three of the leading vertical textile combines on the Continent, one in Austria, one in Italy and one in Switzerland, have recently formed a joint subsidiary company. This subsidiary is a non-profit-making concern. Its sole task is to carry out technological research for the benefit of its foster parents. It is a kind of brains trust or talent pool for textile technological research. All the achievements, inventions and findings of the group are made available to all the three parent companies. Yet, these three companies are directly competing with each other, not only on the same markets, but in exactly the same range and type of products, namely, high fashion goods and specialities. Here is a truly remarkable example of European inter-firm co-operation.

Some adjustments will also be required on the financial side, in regard to both capital investments and dividends. The textile industry is labour-intensive; its manpower/output ratio is rather high. Labour is, therefore, a relatively large cost factor. For many years yet, the textile industries in the highly industrialised countries will have to compete with industries in the countries where cheap labour is abundant. It is, therefore, vital that they should reduce their labour costs as much as possible. This can only be achieved through automation. Equipment for automation, however, is expensive. Requirements for capital investment will, therefore, be much higher in the future than they have been in the past.

Conclusions

What conclusions can be drawn from this brief review of the international aspects of textile marketing?

I do not wish to indulge in the hazardous occupation of "crystal-gazing"; but I believe that recent developments enable us partly to foresee the future, at least along very broad lines.

We have seen that the textile industries all over the world are at present going through a period of either active or passive structural adjustment. This is only a transition period, during which new foreign trade policies, based on what might be called "qualified liberalism", should be applied.

During this transition period, we are likely to see a great advance in automation and labour saving technological progress in the textile industries of the highly industrialised countries. At the same time, costs of production, including wages, in the developing countries are likely to increase, as their standard of living rises.

We shall then arrive at a point—may be in twenty, thirty or more years—when production costs and conditions of competition will no longer differ so much from one country to the other, and when costs and wages—relatively speaking—will be high everywhere. It may then no longer be economical to ship large volumes of textile goods from afar, half way around the world.

This will mark the beginning of a new phase, to be characterised by the re-establishment of balance in the productive capacity of the textile industries world-wide. The size of each industry will then be in the right proportion to the size of its own national economy. Each industry will, in the main, produce for its domestic market, whilst exports will largely consist of specialities. In large integrated markets such as the E.E.C., however, there is still likely to be some specialisation of production by countries, even for staple goods, and therefore room for exports in such goods.

Thus, we shall continue to have imports and exports, as well as a home trade. But our markets will be nearer to our mills. They will certainly be more sophisticated and will call for the highest standards of production and the best skills of marketing. To succeed on these markets must surely be a challenge to everyone.

[The above article is based on a paper presented at a symposium on marketing, organised by the Textile Institute (Manchester and District Section) in the Lesser Free Trade Hall in Manchester on Tuesday, 23rd January 1962.—Ed.]

RECESSION IN COTTON INDUSTRY

SHRINKING ORDER LISTS, SHORT-TIME WORKING AND WASTAGE OF LABOUR

From Our Special Correspondent.

MANCHESTER, 16*th January*

THOSE Lancashire traders looking to the Cotton Board to provide any optimistic message at the beginning of 1962 have found cold comfort in the latest quarterly review of the situation. If the gloom which still envelops the industry is to be shifted, it will certainly not be dispersed by the reading of such a doleful document. No consolation is to be gained by traders in Lancashire from learning that their opposite numbers on the Continent are also doing badly; the one small gleam of hope can be derived from the fact that conditions in the United States are now apparently a little more favourable than in the early part of 1961.

MANCHESTER LETTER

Figures relating to the recession in Lancashire have already been widely quoted, and no useful purpose is served by repeating the unwelcome facts of shrinking order lists short-time working and wastage of labour. The immediate cause of the decline in output, the Cotton Board contends, has been the reduction in stocks in the pipe-line beyond the converting stage.

Clothing Sales Recovery

"One mildly encouraging feature of the situation," the report adds "is that retail sales of clothing, corrected for price changes and seasonal variations, after falling slightly in the first half of the year, recovered in August, September and October to something like the peak levels reached in the final quarter of 1960." Because so many holidays are taken in the third quarter of the year, comparative figures can be a little misleading, but a check against the same period of 1960 shows that, in the spinning section last year, 90.9 per cent of spindles were running, as against 84.5 per cent twelve months previously. The average number at work in the spinning section was also higher as compared with 1960, there being 61,560 operatives in employment, as against 57,940. The number on the books, however, had fallen by nearly 5,000 to 66,470.

In weaving, the proportion of looms running in the third quarter as compared with those in place, was also 90.9 per cent as against 79.2 per cent, but the average number at work at 70,660 showed a fall of 1,310 on the previous year. A slight increase in the volume of automatic machinery in weaving has been recorded over the twelve months, there now being 43,200 fully automatic looms, as against 40,600 in the third quarter of 1960.

Fewer on Shifts

Figures are now available showing the extent of shift-work in spinning from the beginning of 1961. Out of 6,180,000 ring spindles running during the third quarter, 1,440,000 were engaged on two shifts, but only 180,000 on treble shifts. These returns were almost identical with those in the first half of last year, but there was a drop of 200,000 spindles working single shifts, and a fall of 400,000 spindles engaged on evening shifts.

Since the middle of last year, a distinct change for the worse has occurred in the situation of many Continental cotton industries. According to the report, the reduction in output was mainly confined to the Common Market countries, chiefly Germany, but production in Spain and Portugal still remained above the 1960 level. Forecasting a spread of this decline to countries which had managed to maintain production up to the third quarter, the Cotton Board adds: "There is little doubt that the familiar textile stock cycle is the basic cause of the present recession."

The yarn section's report of Manchester Chamber of Commerce pointed out that the familiar textile trade cycle has been accentuated by gross overbuying during the unsettling period of reorganisation. Orders had been placed not only at home but also in overseas countries many of which had not previously rated as sources of supply. The result has been a period of indigestion from which the trade is still suffering. Commenting on disruptive competition from low-cost Eastern textile imports, the report declared:

"It is surely unreasonable to expect the United Kingdom industry effectively to compete in the export field against foreign producers who enjoy the stability of protected home markets. The favour accorded by the Lancashire cotton industry to Britain's application to join the Common Market is to some extent influenced by the anticipation that membership will provide a partial shelter from the deluge of textiles from the Commonwealth."

Commonwealth Import Policy

More and more machinery is being installed in Commonwealth countries with the object of producing textiles, each project bringing additional demands for increased protection. High tariff barriers, plus liberalisation of Japanese imports into Australia and New Zealand, have greatly reduced Lancashire's actual and potential export trade to these markets. "Conversely, a large, dynamic and prosperous Europe, unfettered by tariffs or restrictions, can be said to offer an attractive and challenging alternative to the fickle and often depressing conditions encountered elsewhere."

Japanese competition, once a regular complaint on the lips of British textile traders, but now often obscured by the rise of Hong Kong, is still a persistent threat. The Commonwealth section of the Chamber refers to the unceasing flow of Japanese textiles to Australia, which, over the past few years, has exceeded 100 million yards of cotton cloth annually. Existing margins of preference, it is pointed out, are totally inadequate to bridge the gap of costs between countries based on Western Living standards and those in the low-cost producing areas. The same obstacle is apparent in any efforts being made to extend business with New Zealand. In 1956, Japanese exports of cotton cloth to New Zealand only accounted for 8 per cent of that country's imports, but, by 1960, Japan's share had risen to 32 per cent, making her the leading supplier in this field.

Outlook in Europe

Britain's prospective entry into the Common Market inevitably colours the tone of the Europe section's report. This contains a summary of the pattern of Continental trading in cotton textiles, confirming that France is the biggest exporter, followed by West Germany and the United Kingdom. The French and British sell most of their exports outside Europe; the main French markets are in her associated territories overseas, while 80 per cent of British exports go to Commonwealth countries and nine per cent to foreign countries outside Europe. West Germany, on the other hand, sells most of her exports within Europe, but only 10 per cent of these go to fellow-E.E.C. countries.

If the two existing trading areas in Europe are united, there will obviously be changes in the export pattern, but the survey underlines the belief that European industries as a whole will eventually face competition from cheaply produced yarn and fabrics made in Asia and elsewhere.

Hong Kong Garment Threat

Nearly 35 per cent more knitted fabrics and clothing was imported into the United Kingdom during the first nine months of last year, says the annual report of the Hosiery and Knitwear section of the Manchester Chamber of Commerce. Of this increase, a "substantial" proprotion of the imports of knitted goods came from Hong Kong. Twice as many jumpers and cardigans were imported from the Colony—85,526 dozens, as compared with 39,519 dozens in 1960.—*All Rights Reserved.*

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

PROBLEMS OF TEA INDUSTRY

TEA BOARD CHAIRMAN DECRIES PLANTERS' PESSIMISTIC VIEWS

THE Chairman of the Tea Board, Mr. A. S. Bam, I.C.S., sang the same old song when he concluded his speech, at the annual meeting of the Dooars Branch of the Indian Tea Association, held at Binnapuri (Dooars, Assam) last week, by saying that the "competitiveness of Indian tea has to be maintained by bringing down the cost of production and improving quality." Evidently, the Chairman was prompted to reiterate this general advice, which is accepted by all, by the growing competition in the world tea markets. Though he did not mention competition as such, he said: "In the ultimate analysis, the solution to the problem of surplus production lies in the expansion of consumption in the consuming countries abroad and eventually promoting the exports of Indian tea. I need hardly emphasise that not only our position in the traditional markets has to be improved, but efforts have to be directed to gain ground in new markets." Mr. Bam also referred to some of the measures already taken or proposed to be taken to improve the conditions of tea industry, such as tea plantation finance scheme, hire purchase scheme, provision of irrigation facilities, improvement of roads and communications in tea growing areas, acquisition of surplus tea garden lands by estates and ensuring sufficient supplies of fertilisers, cement and coal. But all these measures will not be of much avail unless the tea industry's plea for tax relief is conceded. Mr. I. F. Morriss, Chairman of the Indian Tea Association, did well, indeed, to warn that, without adequate "practical incentives" by way of reduction in taxation, there was no possibility of achieving the 900-million-lb. production target and selling the extra tea at remunerative prices.

Tax Relief Urgent

The need for tax relief to the industry is especially urgent in the present context of the persistently rising production cost and continued accumulation of heavy stocks. It is stated that the North Indian tea gardens began the current calendar year with more than half of the 1961 tea crop lying unsold in their godowns. Such heavy stocks mean a lot of strain on the finances of companies. If the upward trend of tea production and exports is to be maintained, it is imperative that the two suggestions put forward by the Consultative Committee of Tea Producers Associations in a memorandum submitted to the Tea Board in December last are implemented immediately. One of the suggestions pertains to the reduction, or even abolition, of export duty. The other is that internal taxes on tea must be simplified by amalgamating the Central excise duty, Assam carriage tax, West Bengal entry tax and tea cess into one tax to be collected as near to the point of sale as possible. Since tea is, as this journal has pointed out on more than one occasion, an export commodity, it should not be subjected to any export duty, as in the case of other exportable articles. If, however, the Government still considers that the export duty is necessary, the rate of duty should be brought down from the present high level of 44 nP per kg. to a more reasonable level and abolish it altogether at a later stage. As for the rationalisation of taxes on the tea industry, it is certainly most disheartening, as Mr. Morriss said, that little or no progress has been made in dealing with the problem, despite well-reasoned representations and numerous memoranda submitted to the Union Government.

Besides tax relief, steps have to be taken for intensive propaganda both in India and abroad for boosting consumption of tea. Mr. Morriss rightly observed that the tea industry could not develop a steadily expanding export market without a broad and secure domestic market. It is scarcely necessary to state that, to the extent the domestic market expands, the capacity of the industry to compete in world markets will increase. Mr. Morriss also rightly stressed the importance of research. Alluding to the proposal that the producers' associations should join together in a Tea Research Association and thus qualify for annual grants from the Government, he said: "It is planned that the Council of Scientific and Industrial Research will give half the aggregate costs of scientific research in North East India and the Association's producer-members will pay the other half. If the negotiations are brought to a successful conclusion, there will be a scientific association covering the whole of North East India and all the estates."

To revert to the Tea Board Chairman's speech. Reviewing the recent trends in India's tea industry, he observed:

"The year 1961 has been significant for the tea industry in many respects. For the first time in the history of the Indian tea industry, a record crop of over 760 million lbs. was registered. It is noteworthy that almost the entire increase in production of about 70 million lbs. during the year was contributed by the tea industry in North East India, the share of Dooars being about 11 million lbs. Total exports of tea from India from January to 16th December 1961 were 425 million lbs. valued at Rs. 116 crores, as compared with 400 million lbs. valued at Rs. 113 crores during the corresponding period of 1960. Shipments to Britain, the principal buyer of Indian tea, upto the end of October 1961 were higher by about 13 million lbs. as compared with the corresponding period of 1960. As a matter of fact, exports to many of the traditional markets, including Britain, West Germany, the Irish Republic, Egypt, Sudan and the U.S.A., showed an increase during 1961. The bumper crop during 1961 and the consequent larger offerings at the auctions showed a downward trend in prices, but the prices realised were not by and large, unfair. As a matter of fact, the prices have improved and shown a tendency to be firm since the 26th sale, that is, the beginning of December 1961, and this trend will, I hope, continue till the end of the current season.

Reduced Profitability

May be, tea prices have lately shown a tendency to improve. Even so, Mr. Bam, sounded a little complacent when he said that there was no cause for undue anxiety evidenced in certain quarters in the industry. For the present level of prices has to be viewed against the background of enhanced production cost and heavy tax burden. It is calculated that the incidence of tax per acre is as high as Rs. 298, as against Rs. 123.28 a few years back. The cost of production too, has gone up substantially. Accordingly, the average profit earned per acre by a tea estate has gone down considerably from Rs. 519 in 1954 to Rs. 264 in 1960. The profit for 1961 is believed to be much less.

Measures of Assistance

Be that as it may, some of the measures of assistance as highlighted by the Chairman of the Tea Board include the following:

Irrigation: The Governments of West Bengal and Assam have been requested to undertake a comprehensive survey and the Tea Board has been accepting applications under the hire-purchase scheme for purchase of sprinkler irrigation equipments. The Board has also been recommending to the import control authorities applications from tea gardens for import of such equipments.

Roads and communications: The question of providing facilities for transport of teas to Calcutta from North East India was discussed with the Chairman of the Railway Board some time ago. The facility provided by the return of the broad-gauge line to Siliguri was proposed to be supplemented by allowing tea associations to take lease of a large plot of land near the transhipment point (where broad and metre-gauge lines run side by side), with a view to enabling them to build godowns for storing tea before being transhipped to Calcutta and elsewhere. The tea associations were accordingly advised to take advantage of the offer of the Railway Board, and it is hoped that this facility would be fully utilised. Some complaints relating to the difficulties of booking teas from North Bengal and Assam stations were taken up with the Railway authorities. It is understood that at present there is no difficulty in the downward movement of teas.

Surplus tea garden lands: As a result of the discussions which the Tea Board held with the Chief Minister of West Bengal, the State Government has kindly agreed to refer back to the Board for re-examination each case of proposed acquisition of surplus tea garden lands and not to enforce the orders for resumption of such lands pending *de novo* examination by the Board. In examining these cases, every opportunity is afforded to the tea garden managements to place their viewpoints, and the essential needs of the gardens for development and expansion are carefully considered, so that no land *prima facie* suitable for tea cultivation is lost to the tea industry.

Income-tax: The Ministry of Finance has decided to postpone, as a special concession, the June

SCINDIA STEAM NAVIGATION COMPANY LIMITED

CHAIRMAN, MR. D. M. KHATAU, PLEADS FOR INCREASE IN FREIGHT RATES

PROSPECTS FOR SHIPPING IMPROVING

THE following is the summary of the address of Mr. Dharamsey Mulraj Khatau, Chairman, The Scindia Steam Navigation Company Ltd., delivered at the Forty-second Annual General Meeting of the Shareholders, on Wednesday the 24th January 1962, at Scindia House, Ballard Estate, Bombay 1.

After welcoming the shareholders, the Chairman referred to the audited accounts and Directors' report for the year ending 30th June 1961, and stated that the results of the year could not be considered to be encouraging and that they reflected the situation faced by shipping companies all over the world and India, in particular. Despite this adverse economic situation, the Company was fortunate in covering its costs, making a nominal profit of Rs. 4.5 lakhs, and declaring a dividend of 60 nP per share, after drawing Rs. 25 lakhs from the dividend equalisation reserve.

The Chairman stated that the level of freight rates in overseas liner trades showed no improvement during the year, whereas costs of operating ships showed signs of continued increase. However, as a result of rationalisation of services by all member lines of the India/U.K.-Continent Conference, the next year should show improved results.

Mr. Dharamsey added:

"One significant event of this year has been the decision of the Shipping Corporation of India to join the Conference, covering the India/Pakistan/U.K.-Continental trades as also in the U.S.S.R. trade. I sincerely hope that their association with India Steamships and ourselves will be a source of strength and will enable the Indian Lines to cater more effectively and efficiently to the requirements of the trade because this co-operation between the Government Corporation and the Indian Lines will lead to the growth of mutual confidence. I say this because I believe that there is considerable scope for expansion of Indian shipping in trades not yet served by Indian ships. It, therefore, is very necessary that this expansion should cover trades and routes not yet catered for and take place along strictly planned and rational lines."

Problem of Freight Rates

He further stated that the Conference members were greatly concerned over increased expenditure to cover which an increase in rates was the only answer. The Conference representatives have placed this position before the Ministers of Transport and Finance, who, whilst appreciating the situation, felt that owing to the difficult foreign exchange position of the country, the problem of freight increase had become a little difficult of solution. It could, however, be expected that this situation would not continue for long and would soon right itself.

In regard to coastal and adjacent trades, the Chairman pointed out that there was further deterioration and hence the coastal results were very disappointing. The basic problems facing coastal shipping are uneconomic rates of freight, serious delays and detentions to ships and reduced cargoes due to the deteriorating Hooghly drafts. Unless these basic problems are tackled expeditiously and the much-needed relief and assistance secured, the future of coastal shipping will continue to remain gloomy. The obvious answer, therefore, lies in permitting upward revision of freight rates as costs increase. In this context the Chairman said that Mr. R. G. Abbhi, the Government Director on the Boards of Indian shipping companies, had been specially asked by the Government to go into the costs of operations on the coast. It was a sincere hope that when Mr. Abbhi had finished his examinations, he would be able to recommend to Government to fix a level of freight rates for the coast which would not only take care of increased costs, but would also give a satisfactory return to the companies on the capital employed in the coastal trade.

The Chairman mentioned that, in addition to the delivery of the m.v. *Jalakirti*, further orders were placed with the Hindustan Shipyard Ltd., and felt that in view of the size of the Company's business and fleet, it was very necessary to work out a steady programme of building new vessels every year. As ships were ready earners of foreign exchange, he hoped that the requisite foreign exchange would be made available for this purpose.

Outlook

As regards future prospects, Mr. Dharamsey stated:

"You naturally expect me to tell you something about our future. I know it will not satisfy you, if I say that it is difficult to forecast the future with any degree of certainty. On the other hand, there are so many 'imponderables' in the shipping business and possibly the uncontrollable items of expenditure far exceed the controllable ones. The adjustment of freight rates can be the only answer to compensate for increased and increasing costs of operation and the maintaining of a modern fleet. I feel that in our developing economy, transportation has still to receive the priority it deserves in terms of planning and quick execution. If this important industry is to survive and if the confidence of the investing public is to be restored, it is very necessary that early steps should be taken to decide upon a suitable machinery that would enable the industry earn reasonable rates of freight having regard to the factors mentioned above. It would also create a feeling amongst the shareholders that theirs too is an industry whose problems receive the same consideration from Government as those pertaining to the other industries ashore. The National Shipping Board could play an important part in this context by advising Government as to how the shipping industry could maintain its proper place in our economy. However, I do not wish to place before you a gloomy and pessimistic outlook as to the future of this Company. As you are no doubt aware, the shipping industry the world over is one where lean periods by far exceed the boom periods; I would, therefore, venture to express the hope that the lean period is more or less over and that we should see signs of an improvement, even though gradual, before long."

The Chairman referred to the Konkan services and the report submitted to Government in 1960 by the Konkan Coastal Shipping Services Committee, and added:

"We conveyed the acceptance of recommendations of the Committee early in Janury 1961. The decisions of the Government of India on the report of the Committee were conveyed to us only in October 1961. These decisions, however, fell far short of the recommendations of the Committee. Due to this disturbing development, the B.S.N. Company (1953) Ltd. had no alternative but to announce the closure of its services from 1st December 1961. I am happy to say that both the Government of India and the Government of Maharashtra have shown due appreciation of the Company's position and negotiations with the two Governments are still continuing. In the meanwhile, in the hope of a satisfactory settlement, the Company has agreed to maintain its services till the end of May 1962. The situation will be reviewed before then."

After placing on record the long and valuable services rendered by Mr. Dinshaw D. Romer, a Director of the Company who retired due to ill health, Mr. Dharamsey thanked the Minister of Transport and his colleagues in the Transport Ministry for the interest shown by them in furthering the cause of Indian shipping. He also appreciated the services rendered by the Company's agents abroad and in India and thanked the shippers and consignees for their continued support.

The audited statement of accounts were placed before the shareholders for their approval and adoption.

CHARTERED ACCOUNTANT

WITH DIRECTORSHIP POTENTIAL

LEADING PUBLIC COMPANY, associate of an International Group, is looking for an accountant capable of becoming CHIEF ACCOUNTANT within two years. There are also clear prospects of a future Board appointment.

The successful candidate will be a Chartered Accountant aged 35 to 40 years, with a good degree, and possibly also a Cost and Works qualification. He should now be Chief Accountant or equivalent of a good-sized industrial public company. He must have a good practical, as well as theoretical knowledge of the preparation and presentation of Company Accounts, of modern costing and budgetary control, and of providing constructive information to operational management. A knowledge of statistical techniques and machine accounting is also desirable.

As Chief Accountant, he will be responsible for all aspects of financial and accounting control, including the preparation and interpretation of budgets and monthly accounts.

Salary will depend on his experience and ability, but will start at not less than Rs. 35,000 per annum. Increments are based entirely on merit. There are excellent pension and other usual benefits.

Applicants should send comprehensive details of qualification, experience, age and present salary to—

WORLD'S CRUDE OIL PRODUCTION

UNINTERRUPTED RISE FOR THE THIRD YEAR IN SUCCESSION

HAVING doubled during the 1950s to reach over 1,000 million metric tons by 1960, the world's crude oil production rose last year by around 70 million tons for the third year in succession, to attain a record of 1,119 million tons. Output in the free world rose by about 48 million tons to over 932 million and that in the Communist world by about 20 million tons to 187 million, the increase being, in each case, broadly similar as in the past three years. Around 550 million tons were produced in January-June and nearly 570 million tons in July-December, and the rate of increase over the year at 6.5 per cent was only fractionally lower than the average rate of increase of about seven per cent annually that obtained during the 1950s when production was at lower levels.

Last year's increase was rather more widely spread than in the preceding two or three years. Production in the U.S.A. showed a relatively small rise of over 100,000 barrels daily or about six million tons being 1.6 per cent, after having been virtually stationary the year before. In the free world outside the U.S.A., the 1961 increase was 42 million tons or 7.8 per cent compared with 52 million tons or 10.7 per cent in 1960; and in the Communist world the rise—most of it in the U.S.S.R.—amounted to 19½ million tons or 11.6 per cent compared with the previous year's 20¼ million tons or 14 per cent. Of the main producing areas in the free world, the Middle East registered the biggest increase, of about 18 million tons, followed by the Sahara with an increase of 8½ million tons, which was equivalent to nearly a doubling in output. The increase in Canada was about five million tons, and in Venezuela and Argentina over three million tons each. With regular commercial production started in Libya, there are 52 crude oil producing countries in the world.

North America

The 1.6 per cent rise in U.S. production was accompanied by a somewhat higher percentage increase in crude oil imports and in the production of natural gas liquids, but the demand for petroleum products went up by only about one per cent, and there was consequently a substantial increase in crude oil stocks. There was only a very small production increase in Texas, where the Railroad Commission's monthly allocations totalled for the year only 101 producing days in 1961 compared with 104 in 1960 and 126 in 1959—a reflection of the continued increase in productive capacity. For the new year, the outlook for the economy as a whole is favourable, but this is not altogether the case for the domestic oil industry. The Independent Petroleum Association of America forecast a 2.6 per cent increase in oil demand including exports, but stresses that this higher demand may well be fully met from existing high stocks, higher crude oil imports, and a higher output of natural gas liquids, with crude oil production remaining broadly at the same level as in 1961.

Canada went sharply ahead last year under the stimulus of the voluntary production targets set by the federal government. After the boom of the early 1950s, the growth was slowed in 1959 and 1960 with about half the production capacity shut-in. The target (including natural gas liquids) of 640,000 b/d (about 31.5 million tons) for 1961 has now been realised, and the figure of 800,000 b/d for 1963 is considered to be within reach, thanks to increased deliveries to the U.S. where Canadian crudes are exempt from import restrictions, and to the displacing of some imported oil in the Ontario area. Canada's own internal demand is expected to rise by an average of five per cent annually during 1960-70.

Latin America

Production in Venezuela went up last year by only about two per cent to reach 151 million tons, and the country—still by far the world's largest oil exporter—has now yielded place to the U.S.S.R. as the world's second largest crude oil producing country. Last year's rate of increase represents only half the target of four per cent annually set in the Government's four-year plan. Venezuela is, of course, strongly affected by the import restrictions in the U.S.A. where about 45 per cent of her output is at present absorbed, and she has lost outlets in Argentina (now self-sufficient) and in Cuba (supplied by Russia) while the geographical advantage previously enjoyed by Venezuelan oil has been lessened by its comparatively high costs and the imposed pricing policy, by the emergence of new competing areas, and by the economies of the use of very large tankers. The rise in Trinidad of about half a million tons is attributable to higher output from the Soldada marine field.

Of the other Latin American countries Argentina has doubled her output in two years, which reached 12½ million tons during 1961 (and a rate of well over 13 million tons now), compared with 9.1 million tons in 1960, and with 4.4 million tons five years ago. This is the direct result of the decision of the Government and the State oil entity, YPF, to seek the help of foreign capital in finding and developing the country's oil resources. Large-scale exploration is being undertaken to enable the country to remain self-sufficient in the face of rising consumption.

In Mexico, oil production is expanding steadily, accompanied by the increased use of natural gas and natural gas liquids, which has arrested the growth of local oil consumption. Lower imports have been more than offset by higher exports of crude. Brazilian production continues upward, all from the Bahia field, where, however, the scope for still further expansion is relatively small. Last year's output of about 4¾ million tons covered about one-third of the country's oil consumption. Chilean production, all from the south of the country, is half-way towards the goal of 2.2 million tons set for 1965, and meets half the country's needs.

Middle East

The expansion of 18 million tons in the Middle East, though still massive, was much less than the 34 million tons in the preceding year. The region's production rose from 97 million tons in 1950 to 265 million tons in 1960, being an average annual increase over the decade of 10½ per cent; the increase in 1960 over the preceding year was 14.7 per cent, and in 1961 6.7 per cent. Last year's smaller advance reflects, in the main, the reduced rate of expansion in some European markets, higher Saharan exports, and the strong competition from Russian oil.

Kuwait, the region's leading producer and the fourth largest in the world, showed little more than one million tons increase in output due to changes in contract-deliveries and to trading fluctuations. There was, however, a particularly heavy advance of 18 per cent in 1960, and if the two years are taken together, the advances were of the same order as in the other main producing countries of the region. There continues to be substantial expansion in Saudi Arabia with its greatly enlarged reserves, also in Iran, where, however, early last year, the disagreement between Iraq and Iran over piloting and berthing in the Shattel-Arab led to the virtual cessation of exports of products from Iran for a short period. Offshore production in Iran was started by SIRIP (ENI and NIOC) which produced last year only about 300,000 tons, but has plans for 800,000 tons this year and 2,000,000 tons in the next. The other offshore concessionaire—Iran Pan American (Indiana Standard and NIOC)—has now discovered oil.

The future of Iraq is now somewhat uncertain although plans are nearing completion for raising the country's export capacity to around 70 million tons annually, by increased capacity of the pipeline system in the north and by the use of a new deep-water terminal in the south. Last year, production in the north was stepped up by some three million tons to reach a record of about 38 million tons, but the output of the southern fields continued to drop from 12½ million in 1959 to 11½ million tons in 1960, and to about ten million tons in 1961, in view of the much higher port charges payable at Fao since mid-1960 which makes this oil less competitive.

Production in the Kuwait-Saudi Arabian Neutral Zone last year was 8.7 million tons (thus for the first time exceeding the output of Qatar) but is now at a rate of some eleven million tons a year. Over 8,000,000 tons annually (nearly twice the volume in 1958 was produced last year from the land concessions of the Getty and Aminoil interests, while the Japanese-owned Arabian Oil Co. started regular shipments from its offshore concession last April, achieving recently a production rate of some 2½ million tons a year. In Qatar, where all production so far comes from the Dukhan field discovered in 1939, Shell found an offshore field early in 1961 which, however, has not yet been taken into regular production, nor has production yet started from the recent discoveries in the Trucial Coast, Syria and Turkey. In Egypt, production has climbed to 3.7 million tons with the development of COPE's Beylayim field and some new discoveries enlarge the country's potential.

Africa

The French Sahara yielded 1.3 million tons in 1959, 8.5 million tons in 1960, and about 16 million tons in 1961 which was, however, nearly 2,000,000 tons lower than had been forecast, owing to the temporary cut, during the French-Tunisian conflict, of the pipeline to the Tunisian port of Skirra. The carrying capacity of the existing crude oil pipelines from the Algerian fields to the coastal termini of Skirra and Bougie (Algeria) is now about 31 million tons, affording substantial scope for future expansion.

Libya joined the ranks of oil producing/exporting countries only at the end of October 1961 with the completion of the pipeline from the Zelten field to Marsa el Brega on the Mediterranean coast, with an initial annual capacity of over eight million tons; production from this field in 1962 will be of the order of 6,000,000 tons. Furthermore, the pipeline from the Bahri-Dahra field to the port of Sidra will have a capacity of 15 million tons when opened towards the middle of this year, and the initial flow through it will be about 5 million tons a year. Libya's production will therefore leap to some nine million tons this year.

In Nigeria, production has been stepped-up from a rate of about 1,000,000 tons annually at the beginning of 1961 to well over 3,000,000 tons towards the end, thanks to the new terminal facilities at the mouth of the Bonny river. In the former French Equatorial Africa (Gabon and Congo), where a slight decline had been anticipated, output was well maintained at somewhat over 850,000 tons.

Western Europe

Western Europe's production rose once again by about 1½ million tons—about the same rise as in 1960—to reach 16½ million tons, nearly half the increase being in Western Germany. It is striking that in this geologically not very promising region, oil output in 1961 was over three times what it was in 1951. Germany has had an uninterrupted growth since 1950 and accounts for nearly two-fifths of Western European production. Austria still takes second place, but her production continues its slow decline—at 3,665,000 tons in 1956 it was 1½ million tons higher than last year—and may soon be overtaken by Metropolitan France, the Netherlands, and Italy (Sicily), all with a current output of over 2,000,000 tons a year. Yugoslavia has leaped ahead in 1960 and 1961 and has attained virtual self-sufficiency in oil, at least for the time being, by developing its new field in northern Croatia.

Far East

Production in the Far East shows, on balance, little change. In Indonesia it expanded steadily during the 1950s, thanks to the belated development of long-established resources in Sumatra, but there was no net increase last year. With the recent completion of the necessary pipeline and other facilities, Shell's Tanjung field in Kalimantan, discovered as far back as 1938, is now, however, starting production at an approximate rate of 2,000,000 tons annually. In the absence of new discoveries production in British Borneo, virtually all coming from the Seria field in Brunei, is continuing its inevitable decline, as is also the very much smaller production of Western New Guinea. In India, small-scale production started last August from the new Ankleswar field, about 180 miles north of Bombay, and total output should rise to a rate of about 1½ million tons yearly by the latter part of 1962, when the first stage of the refining and pipeline facilities needed to handle the potential production from new fields in Assam is completed.

Eastern Europe

The U.S.S.R. continues with its formidable annual increases in oil output which have brought its production from 71 million tons in 1955 to 166 million in 1961. Last year's rise of 18 million tons or about 12 per cent was two million more than was forecast early in the year and, it is said, nearly ten million tons more than the target originally set for the year under the 1959-65 seven-year plan. The goal now announced for 1962 is 185 million tons, implying an increase of the same dimensions as in 1961, which offers little prospect of any diminution in the pressure to export oil under its bilateral trading arrangements. Mr. Khrushchev's recent long-term programme contains oil production targets of 390 million tons for 1970 and around 700 million tons for 1980, which would mean annual compounded increases averaging ten per cent and six per cent over the two decades respectively. Bigger rises are foreseen for natural gas. Most of the current increases in oil production are from the Ural-Volga region but promising new fields have also been discovered in Siberia, Central Asia and elsewhere.

Rumania's production has been almost stationary for the past four years while Hungary has been moving each year towards reaching again (this year) a production of 1.6 million tons, which she had already attained in 1955, before water encroached in the Nagylengyel field. The Albanian plan calls for an output of 947,000 tons in 1965, involving a nearly 50 per cent increase within four years; the country has commitments to export oil to Cuba and Italy. China's oil expansion is believed to have been slowed down recently because of the country's general economic difficulties.—*By Special Arrangement with the Petroleum Press Service.*

THE INDIAN OXYGEN LIMITED

RISING COST OF PRODUCTION CUTS INTO PROFIT MARGIN

CHAIRMAN, SIR JOHN BROWN'S ANNUAL STATEMENT TO SHAREHOLDERS

IN the annual statement to the shareholders of the Indian Oxygen Limited, circulated along with the Directors' report and audited accounts of the Company for the year ended 30th September 1961, Sir John Douglas Keith Brown, Chairman, has set down the reasons for the Directors' decision only to maintain the dividend for 1960-61 at the previous year's level, in spite of the higher profits made during the year. Sir John says that, considering the higher cost of production and the commitments in respect of the various expansion schemes of the Company and the demands which are likely to be made on it to meet the country's requirement of oxygen, it has been decided not to distribute the higher profit through bigger dividend. Referring to the expansion programme, Sir John points out that, apart from industrial oxygen and dissolved acetylene, with the production of which Indian Oxygen is principally associated in the public mind, the Company has entered many new lines of manufacture. Consequently, the range and diversity of production have increased remarkably in recent years. Dealing with exports, Sir John points out that, with the reorganisation and modernisation of the electrode and equipment plants, the Company's exports of nitrous oxides and electrodes to South-East Asia would increase considerably. The Company has already deputed one of its senior executives to assess the markets for its products in the region.

The following is the full text of Sir John's statement:

"Following the precedent established last year, I am again circulating with the Directors' report and accounts for the year ended 30th September last the statement which I would otherwise make at the forthcoming twenty-seventh annual general meeting.

Profits, Taxation and Dividend

"The profit for the year, after providing Rs. 44,95,981 for depreciation and Rs. 36.25,000 for taxation, amounted to Rs. 71,30,284, as compared with a net profit for the previous year of Rs. 62,98,449 after charging depreciation of Rs. 37,10,806 and taxation of Rs. 38,85,900. Although the profit after taxation shows a fair increase over the previous year, as stated in the Directors' report, it was earned at a relatively lower rate. The reason for this lay primarily in an increase in works cost which, I am afraid, is today all too familiar a trend throughout the Indian economy. Persistent shortage of power in several regions where your Company operates contributed significantly towards these increased costs. Calcium carbide which, as stated by me last year, is now procured almost wholly from indigenous sources, continued to give unsatisfactory yields and also remained in short supply, leading to multiple transfers of our stocks between consuming points at heavy additional cost. The result of all this was an appreciable increase in the cost of production of dissolved acetylene, which has not been compensated by any increase in selling prices.

"A refund of tax on profits of an earlier period received during the year and an amount rendered surplus in the tax provision account on the finalisation of the relative assessments have accounted for a total credit in the appropriation account of Rs. 10,50,133. The question of the disposal of the available balance on profit and loss account of Rs. 57,06,872 has received the most careful consideration of your Directors in the light of commitments in respect of our various expansion schemes and the further demands which seem likely to be made on us to meet the country's requirements of our products. Having regard to all these considerations we decided to recommend a dividend at the rate of 15 per cent, which is the same rate as was declared in respect of the previous year. This dividend, however, will be paid early in March on the share capital of the Company as increased during the year through the rights issue to which members subscribed between the middle of April and the middle of May 1961.

"You will see from the accounts that sales during the year reached a level of just over Rs. 7.56 crores, being about Rs. 1.11 crores higher than the previous year. This represents an increase of a little over 17 per cent and I am sure you will agree that it may be considered very satisfactory, particularly bearing in mind the limitation placed on our sales by power cuts suffered by our customers. Sales of all products increased, including, I am glad to say a satisfactory increase this year in the sales of dissolved acetylene, the sales of which in the previous year, you will recall from my statement, were a little disappointing. I told you last year about the argon purification facilities which the Company had installed at its Burnpur factory and which would, for the first time, allow argon to be produced in India. The benefits accruing to those who use argon in their production processes are clearly indicated by the spectacular increase in the sale of this gas, which is particularly essential in fabricating aluminium. Substantial increases were recorded in the sales of gas-user equipment and electrodes, both of which were manufactured in the two works at Beliaghatta and Khardah respectively in larger quantities during the year. Better availability of bought-out items from feeder industries also allowed us to sell increased quantities of electric welding equipment and equipment for the administration of medical gases.

Finance

"The issue of further share capital which was approved at the last annual general meeting was completed during the year and provided additional finance to your Company to the extent of Rs. 1.08 crores, of which Rs. 48 lakhs was accounted for by the share premium. The subscription of The British Oxygen Company Ltd. of Rs. 64,80,000 towards this rights issue was a valuable contribution towards meeting our requirements of foreign exchange for expansion and this sum has since been earmarked for major projects in hand.

"Capital expenditure incurred during the year amounted to Rs. 1,43,09,027 and almost half of it was accounted for by the purchase of oxygen and dissolved acetylene cylinders from the United States of America against accommodation received from the Export-Import Bank. This provides a timely increase in the stock of cylinders carried by the Company, which otherwise would be considerably strained in meeting the increasing demand for industrial gases.

"Arising out of the increasing tempo of the industrialisation of the country based on a growing volume of steel production, as I have already indicated a further large increase in the demand for our products is anticipated during the third Plan period and subsequently. In view of this we are already giving thought to the next phase of our expansion beyond the programme now under way. Ours being a capital-intensive industry, this will necessarily give rise to additional requirements of finance, particularly foreign exchange, and this important matter is at present receiving careful consideration.

Development and Expansion Programmes

"In my statement last year, I referred to the fact that, by including our industry's requirements, the draft outline of the third Five-year Plan had recognised the importance of industrial gases and electrodes in the country's economy. I have been grateful to find that the Plan, as finally published, has also recognised the importance of liquid oxygen explosives and included requirements thereof in the official Plan targets, showing, incidentally, a larger than fourfold increase during the Plan period.

"Oxygen requirements in the Jamshedpur area have continued to grow and the Company has in hand a programme to install three additional 400M3 oxygen plants in the Jamshedpur factory to augment production from the existing plants. The first of the three additional plants has just recently been installed and trial runs are scheduled to begin almost immediately. The second and third additional plants have been shipped from the United Kingdom and should be installed at the Jamshedpur factory shortly.

"The oxygen and dissolved acetylene factory, which has been built at the new site at Bangalore, was completed during the year, together with an administrative block. Production of dissolved acetylene at the new factory commenced in September this year, while the oxygen plant came on stream in November.

"I mentioned last year that, at Gauhati, we had installed an oxygen plant within the premises of Indian Refineries Ltd. You will be glad to learn that during the year the Company acquired its own plot of land and commenced erecting an oxygen and dissolved acetylene factory at the new site. The oxygen plant which had been installed in the premises of Indian Refineries Ltd. was transferred to the new factory and oxygen production commenced last September. A dissolved acetylene producing plant is now being installed in this factory and it is hoped that production will commence in February 1962.

"An industrial licence for installing a second 400M3 oxygen plant in our Bombay factory was obtained during the year and arrangements are now in hand for its installation in order to increase oxygen availability in the Bombay area, which practically throughout the past year has been barely sufficient to meet the rising demand there.

Production of Electrodes

"Plans have been laid to increase the production of electrodes at the factory at Khardah, near Calcutta, within the present licensed capacity and work was commenced during the year on extending the factory buildings to house additional plant and afford further storage capacity. An industrial licence has also been obtained for setting up a wire mill within this factory and the necessary plant and machinery has already been ordered against import licences in hand. The setting up of this wire mill will render our electrode production independent of suppliers of core wire on the basis of arrangements that are envisaged for obtaining suitable rods for wire drawing.

"Steps have also been taken to supplement the machinery installed in the Equipment Factory at Beliaghatta and to extend the factory premises. The expansion and modernisation of facilities at the Electrode and Equipment Factories will allow the production not only of larger quantities but also of a wider range of products.

"The Company continued during the year to pursue actively the development of indigenous manufacture of items of equipment hitherto imported. As explained by me last year, wherever possible and economic, this is being done by encouraging the growth of feeder industries which are helped with technical assistance and designs. Notable among last year's achievements were the production of the 'Cub' machine, a small oxygen profile cutting machine, as well as items of medical equipment, for the production and assembly of which, at the Equipment Factory at Beliaghatta, an industrial licence was received during the year. Another important step was the indigenous development of 'Indarc' welding transformers, which are now marketed by us.

Diversification

"From all that I have said on this subject of development and expansion you will appreciate that our efforts are not confined to increasing our sales of industrial oxygen and dissolved acetylene in cylinders, with which products we are probably principally associated in the public mind, but that we are making substantial progress on the engineering side of our business also. Those of you who have seen our pavilion at the Indian Industries Fair currently in progress at New Delhi, may have been surprised at the range and diversity of our production, which has increased in both respects to a remarkable degree in recent years. Incidentally, we have been gratified by the many favourable comments which have come to our notice on our exhibit at this Fair, with its accent on progress, indigenous manufacture and diversification, and it gives me great pleasure to commend those responsible for its organisation.

Competition: Official Policy

"In my statement last year, I referred to the policy of the Government of India, which envisaged a widening of the base of ownership in the industrial gases field through new entrants into the industry. In pursuance of this policy, sixteen new industrial gas units have been licensed in the last year and a half. A significant increase has taken place in the total licensed capacity of our competitors in this field and, in the year under review, these licensed capacities have about doubled in both oxygen and dissolved acetylene.

"Perhaps the most important outcome of Government's policy in this regard was the development which took place during the year in connection with the tonnage oxygen plant which your Company had agreed to install at Jamshedpur so as to make available to the Tata Iron and Steel Company Ltd, its requirements of oxygen in the process of steel-making. This projected arrangement was referred to by me in my address to members at the twenty-sixth annual general meeting held on the 14th February 1961. Government's reaction to our application for a licence for substantial expansion at Jamshedpur to allow the installation of this plant has best been summed up by Mr. J. R. D. Tata in his statement as Chairman attached to the fifty-fourth annual report of the Tata Iron and Steel Company Ltd., in the following words:

"'In this connection, I regret to have to report that the Government of India have refused to sanction a very satisfactory arrangement we had concluded with Indian Oxygen Company whereby that Company was to put up, at its own cost, a tonnage oxygen plant at Jamshedpur from which the Steel Company was to purchase on favourable terms its greatly enlarged requirements of oxygen. On the ground that the Indian Oxygen Company already has too large a share of the business, Government have decided that the plant should either be put up by another company in collaboration with a different foreign firm or that the Steel Company should put up the plant itself. As the first alternative would have resulted in delay and unnecessary complications through the presence of two oxygen suppliers at Jamshedpur, and in the loss of certain financial benefits which would have accrued from the proposal initiated with the Indian Oxygen Company we had no alternative but to decide to put up a tonnage plant of our own and to shoulder the additional capital expenditure which will amount to over a crore of rupees.'

"Mr. Tata's statement gave rise to some comment at the time when it was published in August last, the burden of which was that this was a case where economic considerations appeared to be overlooked in favour of ideology. This brings me to the point that, while the social objective of planning is not disputed, in my opinion, the attainment of planned industrial development on an economic basis must receive equal consideration; and I feel that a compromise between the two is possible within the framework of the Government's policy. My suggestion is that, on the basis of the estimated demand during the next five or ten years, an allocation of at least a portion of the considerable additional production capacity required may be made among the existing enterprises after taking into account their relative sizes and technical and financial resources. This will enable them to proceed with perspective planning on a fairly firm basis and will ensure that at least a part of the additional capacity is made available in the most economic manner, in step with the increase in demand, without allowing a particular unit to grow too large. I fear that, unless something like this is done, not only the economies but indeed some of the products themselves of large-scale organisation in this field will be denied to Indian industry.

Export Difficulties

"No one connected with industry in this country today can fail to be acutely conscious of the absolute necessity of increasing exports to enable the mounting demand for imports of essential raw materials and components to be met, and we in Indian Oxygen Ltd. are wholly in sympathy with the Government's aspirations in this regard. I must, however, point out the difficulties that are encountered by an industry such as ours since products like oxygen and acetylene are basically unexportable. However, inasmuch as these products constitute the raw materials for industry in general and facilitate indigenous metal fabrication, their contribution to the solution of this problem lies in the saving of foreign exchange which takes place by the progressive elimination of imports of manufactured items and by incorporation in the manufactured products exported by the Indian engineering industry. Nevertheless, mindful of our responsibilities, we arranged during the year for one of our senior executives to visit the South-East Asian countries to assess the market for such of our products as can be exported. Your Company now exports nitrous oxide and electrodes to this region and we are hopeful that this flow will increase and widen in time with the reorganisation and modernisation of our Electrode and Equipment Factories.

"Your Directors are keenly aware that the years that lie immediately ahead contain a challenge that, in the final analysis, must be met mainly by the competence and stature of the management. Following from this awareness, the top management structure of the Company was strengthened and reorganised during the year by the creation of functional divisions each headed by a Chief Executive. Considerable thought has also been given to training schemes within the Company, some of which were satisfactorily started during the year. A search for talent within the organisation was made and I am glad to say that four members of the staff were selected for intensive management training. You may be interested to know that, as at the close of our financial year, we employed in all 3,763 men and women. Of these, 131 were in the officer grades of whom only six were non-Indians. I take this opportunity to extend once again to our Managing Director, Mr. A. K. Sen, and to his colleagues in the management and to all staff and workpeople our thanks for their part in producing the results which are before you.

"In these days it is essential that an organisation should develop its own personality and this can be done no better than through an efficient system of communications within the organisation itself. Towards this end, and also with a view to projecting the personality of your Company to individuals and bodies outside, the publication of a House Journal called *Oxygen News* was commenced during the year. You will be glad to know that this publication has been well commended for its quality and presentation.

Technical Collaboration

"Active technical assistance continued to be received during the year from our parent company, The British Oxygen Company Limited. Specialist personnel from the parent company visited our factories, studied our problems and gave us most valuable advice to enable us to improve our efficiency. A number of our personnel also visited the establishments of The British Oxygen Company Limited in Great Britain and have undoubtedly benefited from the specialised guidance and training so readily offered them.

"We were particularly glad to welcome a few weeks ago, Mr. T. E. Potts, Managing Director of The British Oxygen Company Limited Group. Mr. Potts stayed with us for about three weeks, visiting Calcutta, Jamshedpur, Burnpur, Madras, Bangalore, Bombay and Delhi in a strenuous and crowded programme.

"Your Directors look forward with interest to receiving shortly from The British Oxygen Company Limited their comments and advice on our future expansion plans, of which Mr. Potts made a particular study during his visit. Visits such as this are invaluable for the opportunities which they afford us to discuss our problems with those who are able to draw on a world-wide experience of our industry. I take the opportunity to record here our thanks not only to Mr. Potts but also to the Chairman and the other members of the Board of the parent Company.

"In June last The British Oxygen Company Limited celebrated the seventy-fifth anniversary of its incorporation and on the occasion held a conference of Chairmen and Managing Directors of all its associated companies overseas. Your Managing Director, Mr. A. K. Sen, and I had the pleasure and the privilege to attend this conference, which gave us a welcome opportunity of meeting our counterparts in the other companies and discussing common problems. We also gained an insight into the wide range of interests covered by the parent company and the scale of effort which is being devoted to research and development, in the benefits of which we in Indian Oxygen Limited will continue to share.

Prospects

"It is too early in the new financial year to give you any firm indication of the likely trend of profits this year. Sales so far compare favourably with the corresponding period in the previous year and, having regard to the continuing development of the metal using industries, we would expect this progress to be maintained. At the same time, we found that, in the second half of our last financial year, our activities were affected by power shortages, and I fear that this is a feature which will, unfortunately, recur for some years yet. We have also to bear in mind the increase in the cost of production to which I have referred earlier in this statement. Nevertheless, we have no reason to fear that our profits will not be maintained and indeed, it would be reasonable to expect some modest increase. At the same time, I must again point out that the extent of our existing foreign exchange liabilities and the prospects of our having, within the next few years, to shoulder further loan liabilities, demand from shareholders the exercise of a degree of patience. Our prosperity is, I would repeat, tied up with the growth of important sectors of the country's expanding industry and I am confident that, organised as we are on the basis of technical competence, service to our customers and personnel, who have the welfare of the Company and its growth at heart, our performance in the years ahead will be found not wanting."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

Silicone-aluminium paints which are claimed to be able to withstand working temperatures up to 550 degrees Centigrade for long periods and little affected by exposure to the weather are now being produced by Rayweir Products, of Freshwater Road, Chadwell Heath, Essex. The paints are also said to be resistant to many chemicals at moderate temperatures. It is stated that the principal uses for these paints are for maintenance work, decorative finishes for some domestic appliances and protective coatings for industrial equipment. For maximum protection the paints are used in conjunction with silicone zinc primers.

SISTA'S

THE ASSOCIATED CEMENT COMPANIES, LIMITED

TWENTY-FIFTH ANNUAL MEETING

SPEECH OF CHAIRMAN, MR. DHARAMSEY M. KHATAU

SPEAKING at the Twenty-fifth Annual General Meeting of the Associated Cement Companies Limited, held in Bombay on Friday, 19th January 1962, the Chairman, Mr. Dharamsey M. Khatau, said: "Although the year under review has been one of further progress for the cement industry in the country—in terms of increased production and despatches—rising costs of materials and services have more than offset the benefits accruing from this increase in production. Our financial results for the year are rather disappointing, despite the fact that the effective installed capacity and actual production were higher. Profits have declined due to an abnormal rise in the cost of coal, stowing excise duty, railway freight and electric power-supply rates. The incidence of these increases was higher than the economies effected by continuous technical and other improvements. There was also loss of production at some works, mainly due to coal and power shortages, and loss of despatches due to paucity of railway wagons, which, to some extent, was aggravated by the strike of the Central Government employees in July 1960. The cumulative result of all these factors was that the ratio of production to capacity could not be maintained at the level of the previous year."

Coal Shortage

Referring to the acute coal shortage in the country, the Chairman stated that the timely action by the Ministry of Commerce and Industry, following representations by the Company, had enabled its factories to tide over this coal famine. "I would, however, refer here," Mr. Khatau continued, "to two factors which currently threaten to make matters difficult for the cement industry—the deterioration in the quality of coal supplied and the new B.O.X. type wagon introduced by the railways. While the quality of coal has been lowered as a matter of Government's general policy of conserving high grade coal, the new type wagons, which, owing to their outsize dimensions, cannot be weighed on the existing weighbridges, have been responsible for considerable short-loading of coal resulting in heavy losses to the consumer. Your Company is continuously taking such steps as are possible to meet the situation."

Packing Charges

The Chairman mentioned another setback suffered by the Company as a result of Government's arbitrary decision in fixing the packing charges for cement for the last quarter of 1960, at rates far below the rates recoverable from consumers. This decision caused heavy losses to the Company, though repeated and urgent representations by the industry persuaded Government later to allow the industry to pack a portion of its cement in sound reusable bags as from 1st January 1961. He observed:

"While the decision was in itself most welcome, it was vitiated by the fact that a completely unrealistic low charge of Rs. 13 per metric ton, which bore no relation to the prevailing market prices, was fixed as the average packing charge for new and used bags taken together. This further added to your Company's losses on account of packing charges. Further repeated representations by the industry finally led Government to adopt a realistic basis for fixing the average cost of new and reusable packing materials. However, the heavy initial losses which your Company suffered on this account could not be recouped during the period under review."

Dividend

On the question of dividend, Mr. Khatau said:

"Blocked as we were by a fixed retention price, already too low, it was inevitable that, against the tide of rising costs of materials and services, the profits of the Company should steadily diminish over the past three years. During the year under review, the unexpected happenings to which I have referred above made further inroads into our profits. In the last three years, the Company has had repeatedly to dip into its meagre reserves to be able to pay a modest dividend to shareholders. This year the withdrawal from reserves has been as high as Rs. 98 lakhs.

"Despite the reduction in the net distributable profits as compared to last year, your Directors have decided to maintain the dividend at the same level, namely, Rs. 12 per share, subject to deduction of tax. Your Company has been emboldened to do this in the hope that the relief which has come—although belatedly—by way of a higher retention price, will yield better results in the next few years."

Tariff Commission

Reviewing the circumstances that led to the belated Tariff Commission inquiry into cement prices, after Government's refusal to grant interim relief despite the industry's numerous representations, the Chairman said:

"It was hoped that the inquiry would be completed in time for Government to announce the revised price from 1st July 1961—that is, immediately after the expiry of the previous price-period. The revised price, however, came into effect only on 1st November 1961, thus putting the industry and your Company to a further substantial loss of earnings.

"I think I must dispel the belief held in certain quarters that the price increase granted to the industry by Government is generous. The increase awarded falls considerably short of what was expected to enable your Company even to earn a reasonable net return on capital employed, much less to recoup past loss of earnings or to energise it for a vigorous future.

"I should like to say that the general approach of the Tariff Commission to the question of revision of cement prices was, by and large, fair. It has shown a sympathetic awareness of the difficulties which the industry has had to face. Stating that cement ranks in importance next to iron and steel in the economic development of the country, it recommended certain steps to stimulate the industry's growth on a high priority basis. The fact that its final recommendations, pruned still further by Government fell short of our expectations, does not take away the basic merit of its method of approach.

Recommendations Scaled Down

"After carefully investigating all the factors involved, the Tariff Commission recommended an effective increase of Rs. 12.11 per tonne in the retention price allowed to your Company—which did not cover its full requirements. Unfortunately, Government has scaled down even this increase in price by Re. 1.25 per tonne. It is frustrating to note that the recommendations of an independent statutory body, made after a most detailed and searching scrutiny of costs, should have been scaled down by Government.

"It is to be regretted that, once again, the Tariff Commission declined to consider the payment of bonus to employees and Managing Agents' remuneration as legitimate items of cost. It is also to be regretted that the Tariff Commission has not recommended automatic escalator clauses to cover subsequent increases in the price of fuel and power, railway freight rates, and increased dearness allowance linked to the cost of living index. The Commission has apparently left it to Government to vary the price in relation to these factors as circumstances may warrant. This is unfortunate, because our past experience shows that redress in such matters by Government is, unhappily, too long delayed.

"The Tariff Commission recommended that the new prices should come into operation from 1st July 1961 and remain in force till 30th June 1964, that is, for three years. Government has, however, made the new prices operative only from 1st November 1961 and has extended the duration to 31st March 1966. In an era of steadily rising costs, a fixed price for a period of nearly five years is, in my opinion, bound to affect the industry adversely."

The Chairman added that all these matters will be taken up with Government through the Cement Manufacturers' Association which was formed in February 1961 to protect the interests of the cement industry.

On the question of the current and future demand for cement, the Chairman mentioned that, during the year under review, there was a rise in the tempo of demand in all sectors, which available supplies were unable to keep pace with, due partly to shortages in production and partly to inadequacy of rail transport. To meet this transport gap at least partially, the Company had been developing the transport of cement by road where conditions are favourable and, during the year, the Company was able to transport nearly 25 per cent of its despatches of cement by road. Mentioning the reimposition of control over distribution of cement by State Governments, the Chairman felt that the shortage of cement was likely to continue for some time and added:

"The Planning Commission has estimated the demand for cement at 13.2 million tonnes in 1965-66 and has fixed a target of 15.24 million tonnes of capacity to be achieved by the end of the third Five-year Plan period. This seems to be a realistic target both financially and technically."

Judging from the present trends, however, the Chairman felt that a prodigious effort was necessary to achieve these targets. While welcoming the appointment by Government of the two important Panels for the cement industry—one to look into the problems facing it and to stimulate research and development, and the other to increase its productivity, he hoped that these panels would see that bottlenecks impeding production and productivity are expeditiously removed. Mr. Khatau continued:

"Judging from the performance of the industry under prevailing conditions, production is likely to be about 10 per cent lower than demand over the next few years, unless prompt action is taken to secure for the industry reasonable foreign exchange facilities, adequate supplies of coal, power and wagons for the movement of raw materials as well as the finished product. It is also necessary that the resources and 'know-how' of established manufacturers of cement should be utilised to the fullest extent possible."

Expansion and Rehabilitation

Reviewing the Company's planned programme of expansion, rehabilitation and modernisation, Mr. Khatau reported the completion of the second unit at Mancherial raising its rated capacity to 3.3 lakh tonnes and that of the blast furnace slag cement project at Chaibasa and the slag granulation plant at Jamshedpur. Though the manufacture of blast furnace slag cement had commenced soon after, owing to preliminary teething troubles, the licensed capacity of 1.7 lakh tonnes of slag cement could not be fully achieved. The Chairman, however, said that the Company as well as the T.I.S.Co. were making every effort to increase the slag cement output. The work on the construction of administrative and residential buildings for the Company's new dry process cement plant at Jamul (formerly Durg) was progressing according to schedule and the bulk of the machinery for this plant was being manufactured at A.C.C. Workshops. The construction of factory structures for the extension to Dwarka works, which would raise its annual capacity from 2.46 lakh tonnes to 3.5 lakh tonnes, had already commenced.

Refractories and Silvicrete

The extension to the Company's refractory plant at Katni raising its capacity from 17,640 tonnes to 30,000 tonnes a year, was also completed and the annular kiln was put into operation recently. Efforts in diversification in the manufacture of products like Accoset-50, Acco-cid, ceramic grinding media, etc., were being intensified. The demand for the Company's Silvicrete white cement was steadily growing and that product has been well received. The construction work on the foundations and structures of the new white cement plant at Kymore with an annual capacity of 25,000 tonnes had been completed.

New Products

Mr. Khatau also announced that the Company had commenced at its Shahabad works the manufacture, for the first time in India, of a special cement known as oil well cement for the Oil and Natural Gas Commission, for use in oil wells in Assam and Gujarat. The demand for this product was at present small, but it is likely to increase with the development of the country's oil resources. The Chairman also reported that the Company had successfully manufactured a portland cement with water-repellent properties which would overcome in a large measure the storage and handling difficulties experienced at present by the cement consumer under highly humid and moist conditions. The new product will be marketed in the near future.

New Engineering Works At Shahabad

Continuing, the Chairman reported that the Company's new Engineering Works at Shahabad, which was only in the planning stage last year, had made considerable progress. The factory buildings and housing colony were coming up and most of the plant and machinery required for the project had been ordered from abroad and some had already arrived at site.

A.C.C.-Vickers-Babcock Ltd.

Referring to the completion of the A.V.B. Heavy Engineering Works, the Chairman stated that the factory had commenced partial production and had already secured orders for the manufacture of boilers as well as cement machinery. The Chairman cautioned, however, that a capital-intensive project like the A.V.B. would take a few years before it could materially add to the profits of A.C.C.

Pakistan

The Chairman also announced that negotiations for the sale of the Company's factories in Pakistan had now reached the final stage and the matter would be placed for the consideration of the shareholders at the meeting.

Managing Agency

The Chairman then referred to the Company's proposals for the extension of the duration of the Managing Agency Agreement from five to ten years and raising the Managing Agents' remuneration to 7½ per cent. The matter was under negotiation with Government and the Chairman expressed the hope that, in view of the time-consuming nature of the Company's development projects and the special responsibilities shouldered and services rendered by the Managing Agents, Government will appreciate the Company's views and accede to its request.

Labour-Management Relations

Reviewing labour-management relations, Mr. Khatau stated:

"The labour situation at our Cement Works was fairly peaceful, principally because in co-operation with our unions, we had voluntarily implemented the Wage Board recommendations. A part of the credit for this satisfactory position must also go to the Chairman of the Wage Board whom the Government of India constituted as the central machinery to resolve differences of interpretation arising in the process of implementing these important recommendations.

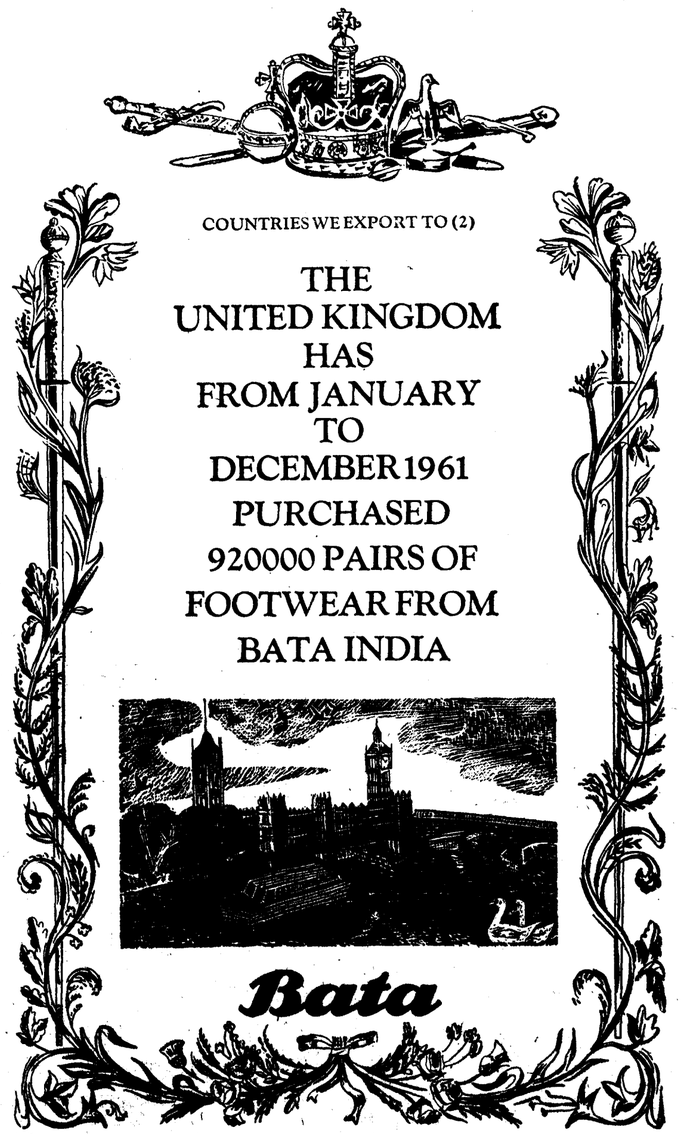
"I am afraid our collieries have a different story to tell, because there were no less than five strikes during the year 1960-61, and similar interruptions in production have continued during the current year also for no valid reasons. The principal cause of this sorry state of affairs is the irresponsible attitude and behaviour of union leaders whose continued indulgence in factional fights has seriously interfered not only with the production of coal but also with the peace of the Kotma colliery and its colony. The Code of Discipline which all the central organisations of labour had accepted is not always being implemented. This is most unfortunate, for, if it is to bring about any appreciable improvement at all, it must be continuously acted upon as an article of faith by all the contracting parties. In this joint endeavour, the role of the Government cannot be overemphasised. There have been frequent complaints against the procedure adopted by the machinery set up by the Central and the State Governments to implement the Code."

Bonus

In spite of lower net profit this year, the Chairman said, the Directors had decided to maintain the rate of bonus to the employees at the same level as the previous year, solely with a view to preserving cordiality of labour-management relations. As a result, the large majority of employees, particularly those in the lower scales of pay, would receive substantially higher amounts of bonus, in view of the increase in their basic wages, as recommended by the Cement Wage Board.

Mr. Khatau concluded with an expression of warm appreciation of the hard work and unstinted co-operation of all the Company's employees.

Note: This does not purport to be a report of the proceedings of the annual general meeting which will be sent separately to shareholders on request.



Balance Sheet of the State Bank of Hyderabad as at 31st December, 1961

FAIR PRICE FOR CALCIUM CARBIDE REVISED

LACK OF SUITABLE RAW MATERIALS IMPEDES GROWTH

AS in the case of soda ash (which was dealt with in these columns last week), the calcium carbide industry, too, has come in for a raw deal at the hands of the Government of India in respect of its fair selling prices. The fair prices recommended by the Tariff Commission has been reduced by the Government. The fair ex-works prices for calcium carbide fixed by the Government is Rs. 44 for 50 kgs. of 4/80 mm size in 50-kg. packing and Rs. 43.25 for 100-kg. packing. The prices recommended by the Commission were Rs. 45.50 and Rs. 44.75 per 50 kgs. for the two varieties, respectively. The reduction made by the Government is thus Re. 1.50 per 50 kgs. in each case, or a little over 3 per cent. These prices, which will be in force till the end of 1962, are exclusive of transportation charges from the factory, local taxes, selling commission, etc. But bulk consumers, using ten tonnes or above per month, on a regular basis, are entitled to get this chemical at the ex-works selling price, without any addition of selling commission. In other cases, the selling commission is restricted to Rs. 4 per 50 kgs.

The downward revision of prices is a sequel to the Government's rejection of the Commission's premise that the rates of consumption of raw materials and the cost of raw materials have gone up since the time of the previous public inquiry in 1958. The Government stresses that there is no justification for a higher rate of raw material consumption than that estimated previously by the Commission in 1958. This argument is rather unconvincing. For the industry has grown considerably since 1958, when there was only one major unit engaged in the manufacture of calcium carbide, namely, the Birla Jute Manufacturing Company Ltd., Calcutta. Since then, a unit in Madras, which had been previously producing calcium carbide on a small scale, has now started large-scale commercial production. Besides, a new unit has been put up near Bombay by the Calico Mills. The expansion of the industry has led to greater demand for raw materials. In view of the general inflationary conditions, the prices of raw materials and fuels must have gone up considerably. Equally important is the fact that those units located in South and Western India have been at a distinct disadvantage in respect of such raw materials as coal, charcoal and petroleum coke. The difficulties of the industry have been aggravated by the Government's indifference to develop the new sources of deposits of good quality limestone, the major raw material, which have already been located. Again, it would appear that the industry will have to depend on imports for petroleum coke, which had been available indigenously so far.

The Commission's original recommendations themselves in certain respects fell short of the industry's demands. The industry had pleaded for a margin for contingencies of Rs. 25 per tonne, or 3 per cent of the cost of production, on the score of high cost of production and loss of output due to occasional breakdowns. The Commission, however, added only Rs. 15 per tonne to the works cost for covering marginal increases in cost. The rate of return on capital employed was also fixed by the Commission at a mere 8 per cent, with the element of working capital estimated as equivalent to five *months'* cost of production. While arriving at the fair ex-works price, the Commission's report stressed the fact that any further reduction in the return on capital would put the Bombay and Calcutta units at a disadvantage. As regards depreciation, the Commission made provision on the written down value at normal rates under the Income-tax rules, including the second-shift allowance.

It is on the above basis that the Commission had worked out the fair ex-works price at Rs. 44.46 per 50 kgs. for Birla Jute Manufacturing Company Ltd. and Rs. 42.34 per 50 kgs. for Industrial Chemicals Ltd., Madras. Although the Commission did not receive the cost of production of Calico Mills' unit, it was of the opinion that as this unit was located at a considerable distance from the sources of raw materials, its cost was not likely to be lower than that of the Calcutta unit. In respect of the Madras unit, though it is nearer to sources of raw materials, it is situated far away from consuming centres, resulting in considerable freight disadvantage. On balance of considerations, the Commission came to the conclusion that Rs. 44.46 (exclusive of 50 nP towards selling expenses) per 50 kgs. was a fair ex-works price for the industry as a whole.

According to the Tariff Commission's report, fair ex-works price (average fair ex-works prices of Birla Jute and Industrial Chemicals), as calculated by it, namely, Rs. 45.90 per 50 kgs., including the provision made for freight disadvantage is 88.13 per cent higher than the landed cost ex-duty of the imported product, which is Rs. 24.75 per 50 kgs. On this basis, the industry has a claim for tariff protection at the rate of 88.13 per cent *ad valorem*. But, in view of the sheltered market on account of import restrictions, the protective duty recommended by the Commission was 50 per cent *ad valorem* only. The Government has accepted this recommendation. Incidentally, protection will be effective upto 31st December 1964.

The industry has been receiving protection since 1956. Under the umbrella of protection, the industry has made good progress. The annual installed capacity has risen from 4,050 tonnes in 1958 to 34,500 tonnes as of 1961. This has been the result partly of expansion of the two old plants, namely Birla Jute (from 3,300 tonnes to 12,300 tonnes) and the Industrial Chemicals (from 750 tonnes to 9,000 tonnes). The new unit of the Calico Mills Chemical Division, which has started production since 1961, accounts for an installed capacity of 13,200 tonnes. It may be noted that the total installed capacity of the industry exceeds the licensed capacity by 10,700 tonnes. The Commission has, therefore, asked the authorities concerned to rectify this anomaly.

The production of calcium carbide has also gone up considerably, that is, from about 3,803 tonnes in 1958 to an estimated 21,000 tonnes in 1961. Two more units are expected to come into operation. One is old, namely, the Travancore Electro-Chemicals Industries Ltd., which was closed down in 1955; this is expected to reopen during the course of this year. It will have an annual capacity of 10,000 tonnes. The other is a new unit, with a capacity of 13,200 tonnes, which is being established at Kotah (Rajasthan) by the D.C.M. Chemical Works. This, however, is not expected to begin operations before 1964. The following table shows the trend of actual production between 1958 and 1960 and estimates for 1961 and 1964:

(Tonnes)

	1958	1960	1961*	1964*
Birla Jute Manufacturing Co., Ltd. ..	3,441	7,755	8,500	8,500
Industrial Chemicals, Ltd. ..	362	2,319	8,500	8,500
Travancore Electro-Chemicals Ltd. ..	..	..	..	9,500
Calico Mills, Chemical Division ..	..	..	4,000	12,500
D.C.M. Chemical Works ..	..	..	..	..
Total ..	3,803	10,074	21,000	39,000

* Estimated.

The present rate of production is almost sufficient to meet the domestic demand. The domestic demand has gone up from 13,000 tonnes in 1958 to 17,000 tonnes in 1960 and is expected to rise to 55,000 tonnes by 1964. The calcium carbide is used mainly in the manufacture of acetylene for welding, in organic chemicals and plastics. It is also used for lighting and mining purposes.

At present, the industry is handicapped by lack of suitable grade of limestone, which is the chief raw material, as also coke and cheap power. The main difficulty in regard to limestone is lack of communication and transport facilities in areas where large deposits of high-grade limestone have been located by the Geological Survey of India. In order to step up the supply of coke, the Commission has recommended the need for manufacturing high-grade coke at the Durgapur coke over plant on a priority basis. As the Commission observes, given adequate supplies of suitable raw materials and electricity, there is every prospect of the industry being able to produce calcium carbide of good quality at prices comparable to those of imported product.

REPORT OF THE AUDITORS

To THE STATE BANK OF INDIA:

We, the undersigned Auditors of the State Bank of Hyderabad, appointed under Section 41 (2) of the State Bank of India (Subsidiary Banks) Act, 1959, report on the Balance Sheet and Accounts of the Bank as at the 31st December, 1961.

We have examined the above Balance Sheet of the State Bank of Hyderabad as at the 31st December 1961, and the Profit and Loss Account for the year ended upon that date with the Accounts and Vouchers relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts, and report:

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iii) that, the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) that, the Profit and Loss Account shows a true balance of profit for the year covered by such Account;

(vi) that, in our opinion the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and;

(vii) that, in our opinion Books of Account have been kept by the Bank as required by law.

PATTERN AND REGULATION OF LIFE INSURANCE INVESTMENTS

POST-WAR TRENDS IN SOME COUNTRIES

A COMPARATIVE study of investment of life insurance funds in selected countries, published in a recent issue (November 1961) of the *Reserve Bank of India Bulletin*, reveals some interesting trends in investment of life funds in the post-war period. Although lack of uniform data makes it difficult to compare the pattern of investments in various countries, on the basis of such information as is available, the study draws certain broad conclusions.

In almost all developed countries, life insurance is a very important form of personal savings. The increase in life insurance in force in India by nearly eight times between 1937 and 1960 compares favourably with the trend in some of the industrially advanced countries. As a percentage of national income also, life insurance in force has shown a steady rise in India from 8.1 in 1950 to 15.9 in 1960. But this does not mean, we must hasten to add, that the growth of life insurance in this country has been satisfactory, or adequate from the national, as well as individual, point of view. For, although the hundred per cent rise in ten years appears striking on the face of it, the ratio of life insurance to national income is still one of the lowest in the world and far below that of other countries. The total life insurance in force, as a ratio to national income, is the highest in Canada, being 178.5 per cent, followed by the U.S. (140.5 per cent), New Zealand (96.9 per cent), Australia (77.8 per cent), Japan (67.0 per cent) and the U.K. (61.2 per cent). The table at the bottom gives life insurance in force, national income and the ratio of life insurance in force to national income in the leading countries of the world and impressively brings out the enormous leeway that life insurance has to make in India.

Financing institutions play a very important part in mobilising the community savings and channelling them for investment. Among them the role of commercial banks and life insurance companies is particularly significant. In almost all countries, the banking system is the largest part of the financial system, while, in some countries, life insurance companies constitute the second largest part. In the U.K. and Canada, the assets of life insurance companies formed over 55 per cent of the assets of the banking and monetary system in 1960, whereas in India the proportion was only 13 per cent. However, the life insurance sector in India was the most important institutional investor, next only to the banking system, influencing the market for private capital issues and Government securities to a considerable extent.

Basic Difference

There is an essential difference between the investments of banks and insurance companies. While the former is primarily concerned with the provision of working capital for industry and trade and, therefore, invests only a relatively small proportion of its funds in short and medium-dated Government securities and in corporate stocks and shares, the latter, whose commitments are of a fairly long-term nature, invests a large proportion of their funds in medium and long-dated Government securities and in corporate stocks and shares. This basic difference determines the general criteria governing investment of life funds which are different from those of other investments. Life insurance, in general, involves long-term contracts which permit the accumulation of funds with life offices. For life insurance companies, a high degree of liquidity is not essential, not only because of the long-term nature of the contract but also because of the periodical accrual of funds by way of premium, investment annuities, etc. Besides, a high degree of accuracy is possible in life insurance business in estimating claims that are likely to arise, unlike in banking business or even in respect of general insurance business, where the contracts are essentially of a short-term nature. In view of this fundamental difference, life insurance offices tend to invest their funds largely in medium and long-dated securities, debentures, mortgages and real estate and stocks and shares which enable them to obtain a higher yield than on shorter-dated securities and more readily marketable assets.

While the aforesaid term criterion broadly influences the pattern of investment, the actual distribution of investments is determined by the economic and financial conditions in the country and the restrictions imposed by the Articles of Association of the companies as well as by the provisions of the insurance legislation. As the funds accruing to life insurance companies in the form of premium income represent the life savings of policyholders, it is of the utmost importance that a large proportion of such funds should be invested in assets which are safe and readily marketable with little or no loss of capital so as to enable companies to fulfil their contractual obligations to policyholders. Even in regard to investment in gilt-edged securities, which are quite safe and readily marketable in normal circumstances, a proper balance has to be maintained, so as to ensure adequate yield and minimum loss of capital. This implies an equitable distribution of investments not only between short, medium and long-term securities but also between Government and semi- as well as non-Government securities. The last mentioned category of investments, namely, non-Government, consists of debentures, mortgages and real estate which are not considered as safe as Government or semi-Government securities or readily marketable but which yield a higher return on capital. The post-war reconstruction boom has increased considerably the scope for life insurance companies' investments in mortgages and real property.

Preference and Equity Capital

The next category of investments is preference and equity shares. Life insurance companies prefer to hold a larger proportion of available preference capital of companies than of equities partly because of the limited amount of preference shares in the total share capital of companies and partly because of the emphasis placed by insurance companies on security of income and on avoiding getting involved in the management of companies. In view, however, of the fact that a large proportion of policies issued by the life offices are "with profit" and the companies compete with one another to attract new business by showing a good record of profit-bonuses, the general trend in several countries, in the post-war period in particular, has been to invest more and more in equities which not only yield good dividends but also serve as a hedge against inflation. Even in general insurance business, where the liquidity and marketability of investments are more important than the yield on investment, rising prices enhance the cost of claims and investment in equities is a hedge against inflation. However, the actuarial principle of matching the average term of assets to that of liabilities serves to limit the willingness of life insurance companies to hold equities which are perpetual securities and the market value and earning power of which are, in principle, highly variable. Thus, common stocks can become handsome investments when purchased with discretion, but they can hardly supplant gilt-edged stocks, municipal or good corporate bonds and mortgages which are the "bread and butter lines" of investments of life insurance companies.

Life insurance companies also underwrite new flotations of companies, as a result of which they sometimes acquire the shares. They also obtain large blocks of industrial securities through "direct placement" by business or industrial firms requiring capital. Other items of investment of life funds are deposits with banks, direct loans to business concerns and loans to policyholders against the security of their insurance policies. These investments form a relatively small proportion of total investments of life insurance companies.

Legislative Control

With a view to ensuring that life insurance funds are invested chiefly in Government or other approved securities and that investments in debentures, mortgages and share capital of companies are diversified over as wide a range as possible, many countries have enacted legislation governing investment of life insurance funds. The legal framework within which life insurance companies operate in Canada, Japan, Norway, Sweden, the U.S., and India vary widely. Both in Australia and the U.K., life insurance companies are free from legal restrictions over the distribution of their assets. In Canada, a Commonwealth country, however, the Federal Insurance Act specifies that an insurance company should not invest more than 15 per cent of its assets in common stock and not more than 5 per cent in income-producing real estate. The Act also defines broad categories of investments in which life insurance funds may be placed. In Japan, the Insurance Companies Act, 1939, does not permit any life insurance company to hold stocks and shares of companies in excess of 30 per cent of the total value of its assets. In Sweden, at least 90 per cent of the insurance funds must be invested in securities such as bonds issued by the State, mortgage banks or industries, promissory notes issued by banks or municipalities, mortgages and loans on insurance policies. The remaining 10 per cent of the insurance funds may be invested in securities other than those mentioned above but not, however, in stocks. Only the life company's free capital may be freely invested. In Norway, life insurance investments is confined to certain categories of assets. Although the law does not fix the proportion of assets to be invested in any of the specified securities, the Supervisory Board exercise strict control over the investment of life insurance companies partly through comprehensive accounting reports and partly through inspection of companies.

In the U.S., statutory control over the investments of life insurance companies is exercised by the State Governments. In every State, there is a law regulating the investments of life insurance companies domiciled in that State. The law in the New York State, for instance, has prescribed that an insurance company should not invest more than 2 per cent of its admitted assets in preferred or guaranteed stocks or invest in common stocks more than 3 per cent of its admitted assets or one-third of the surplus to policyholders, whichever is less. Besides, the triennial examination of life insurance company accounts, through the National Association of Insurance Commissioners, involves a thorough investigation of investments. Apart from individual State legislation, accounting practices in force in the U.S. are also a deterrent against investments in stocks and shares. As equity and debenture investments must be shown at market value in the balance-sheet of an insurance company, a heavy fall in their market value would destroy public confidence in the insurance company. A company with more than 5 per cent of its assets invested in equities is exceptional and for life insurance as a whole 4 per cent is invested in stocks and shares.

N.A.—Not available. * Relates to 1958.
Sources: (i) World Insurance Trends; (ii) International Financial Statistics; (iii) Life Insurance Fact Book, 1961.

In India, under the modified Section 27A(2) of the Insurance Act, made applicable to the Life Insurance Corporation of India in 1958, at least 50 per cent of the funds should be held in Government or other approved securities, another 35 per cent should be invested in approved investments and only the balance of 15 per cent may be held in other investments.

An analysis of the pattern of investments indicates that, in the pre-war period, life insurance companies in India and Australia held a high proportion of their assets in the form of Government and semi-Government securities, while, in other countries, other types of assets such as stocks and shares, mortgages, etc., formed a substantial proportion of the total assets. During war-time, the ratio of investment of life insurance companies in Government and semi-Government securities showed a sharp increase in most of the countries but this trend was reversed in the post-war period. In the post-war period, life insurance companies in foreign countries have again invested a very large proportion of their funds in industrial securities and in mortgages. In Japan, for example, investments in stocks and shares of companies and loans to industries claimed as much as 71 per cent of the total assets of life insurance companies at the end of 1960, while, in Canada, the U.K. and the U.S.A., investment in shares and debentures constituted about 40 per cent of the total assets of life insurance companies. In India, the proportion of investments in Government and semi-Government securities to total assets had declined from 70 per cent at the end of 1945 to 56 per cent at the end of 1955 but it subsequently rose to 61 per cent at the end of 1960.

The table below indicates the pattern of investments in selected countries during the post-war period.

It is evident from the table that the proportion of mortgages to total assets was the lowest in India, 1.5 per cent at the end of 1960, whereas it ranged from 15 per cent in the U.K. to 36 per cent in Canada. The various schemes initiated by the L.I.C. after 1960, for granting housing loans and mortgage loans may, however, be expected to lead to an increase in the proportion of these assets to the total investments in the coming years.

Distribution of Investments

(Percentage to total assets)

DALMIA ENTERPRISES IN THE NATION'S SERVICE

WORLD INSURANCE CAPACITY

A call for a reappraisal of the capacity of the world insurance market in face of the ever-growing size of risks was made by Mr. D. J. R. Evans, Deputy Chairman of the British Insurance Association, in an address to the Non-Life Insurance Institute of Japan recently. Mr. Evans, said that at a time when profit margins were likely to be lower because of intense competition and reduction of rates, insurers were being asked to strain their resources to the utmost to produce the capacity required.

"As a result of post-war inflation, the introduction of automation in industry and the accumulation of risk as exposed to a single loss, we have to meet demands for insurance against exceptionally high values." he said. "Modern factories, such as those now used in the motor car and aircraft industries, are outstanding examples of great concentration of value under one roof. The great tonnage of the larger ships, especially tankers, now built and correspondingly high insurable values are another example. Atomic power stations, dams and the major construction risks are others and one must think today of the civil aircraft of tomorrow. This means that a reappraisal of the capacity, not only of the particular insurance market primarily concerned but of the world insurance market as a whole, must be made in order to provide the cover needed. A reappraisal also of individual capacities in comparison with the insurer's financial resources and the ability to meet and survive a catastrophic loss of this kind, is essential.... The underwriting experience of most companies is less favourable than some years ago as a result of intense competition and the steady reduction of rates. At a time, therefore, when profit margins are likely to be lower, insurers are being asked to strain their resources to the utmost to produce the capacity required.

"Apart from capacity, which is a problem in itself, the problems of providing insurance cover for the entirely new risks presented by the use and transport of nuclear substances have had to be closely studied on an international basis. It is, I feel, a great achievement that insurers in many countries have linked themselves together to ensure that the insurance industry as a whole should not only understand the risks involved but provide the insurance cover required. It will continue to be necessary for them to observe closely scientific developments in this field since the use of nuclear substances will extend to industry generally in the course of time."

KIRLOSKAR BROTHERS REPORT GOOD PROGRESS

GROWTH POTENTIAL HIGH

KIRLOSKAR Brothers Limited (Managing Agents: Kirloskar and Sons, Kirloskarvadi, Sangli District) has made satisfactory progress during the year ended 31st July 1961. But for the insufficient supply of coke, which did not permit, once again, production at full capacity, the year's progress would have been much more significant. In the preceding year, too, the full capacity could not be utilised, owing to a slight setback in the demand for pumps as also because of inadequate supply of the essential raw materials. During the year under report, the demand for the Company's products was satisfactory and, had full production been possible, the results would have been more reassuring.

Net sales during the year totalled Rs. 314.62 lakhs, against Rs. 234.13 lakhs in the previous year. The effects of this sizable improvement in turnover have, however, not been fully felt at the level of gross profit, which, at Rs. 37.05 lakhs, shows only a modest rise of about Rs. 5 lakhs over the sum of Rs. 32.87 lakhs earned in the previous year. This was due to an all-round rise in costs. The cost of raw materials consumed during the year went up from Rs. 107.49 lakhs to Rs. 166.29 lakhs and so did that of stores and spares from Rs. 36.39 lakhs to Rs. 42.09 lakhs. Other expenses also rose quite sharply from Rs. 60.38 lakhs to Rs. 72.60 lakhs, with the wage bill going up from Rs. 33.61 lakhs to Rs. 38.38 lakhs.

The provision for depreciation at Rs. 9.27 lakhs is more than last year (Rs. 7.82 lakhs). Taxation has been provided with almost the same amount, Rs. 11.28 lakhs, as against Rs. 11.06 lakhs a year ago. The Managing Agents' remuneration amounts to Rs. 2.54 lakhs, as against Rs. 2.60 lakhs for the previous year. After these provisions the net profit works out to Rs. 13.96 lakhs, against Rs. 11.39 lakhs for 1959-60. Due to this small rise in the net profit, the Directors had no alternative but to maintain the dividend at 10 per cent, subject to tax, which takes away Rs. 4.31 lakhs, against Rs. 4.03 lakhs previously, because of the distribution on the new shares for the full year, as compared with only for six months in the previous year.

The following table gives an insight into the Company's working in the past three years:

(In lakhs of rupees)

	For the year ended 31st July		
	1961	1960	1959
Sales (net)	314.62	234.13	222.22

Carry forward	0.11	0.12	0.12

The dividend is subject to deduction of tax.

It may be recalled that the Company has a programme to manufacture vertical turret lathes and horizontal boring machines. In the previous year, it had signed a collaboration agreement with the Bullard Company, U.S.A., for the manufacture of these products according to its design. To meet a part of the foreign exchange required for the plant and machinery for the manufacture of these machine tools, the Company obtained in the previous year a foreign currency loan of Rs. 25 lakhs from the Industrial Credit and Investment Corporation of India. Construction of the building for machine tool factory for this expansion programme was taken up during the year under review. All the machines to be imported from the U.S.A. for this project were shipped during the year. The machinery covered under the I.C.I.C.I. loan will be imported during the current year (1961-62) except for one or two machines which will be received before the end of 1962. The first few sets of the components of vertical turrent lathes will be received from the Bullard Company during the course of this year. The Directors expect to place the first indigenously assembled 36" Kirloskar/Bullard vertical turret lathes on the market before the close of the current financial year. In the previous year, the Company was licensed to start a small branch factory at Dewas in Madhya Pradesh. The State Government handed over the possession of land at Dewas to the Company in May 1961. The construction work has been taken up and the factory is expected to go into production during the current year.

Kiroloskar Pneumatic Company Ltd., a subsidiary unit, has shown during the year to March 1961 a profit of Rs. 8.62 lakhs, after providing for depreciation, taxation, development rebate reserve and bonus to employees, against a debit balance of Rs. 2.50 lakhs brought forward from the previous year. The Company has declared a maiden dividend of 12.5 per cent, subject to tax, on equity shares.

In the previous year, the Company had increased its capital by issuing one bonus share for every four equity shares held by the shareholders on 26th October 1959. These shares had qualified for the year's dividend. It had also issued in the same year 20,000 new equity shares, which were offered to the shareholders whose names appeared in the Company's books on 6th February 1960 in the ratio of one share for every eight shares held by them. The Directors had allotted 19,794 shares by the end of the year, which were eligible for the dividend for only six months of that financial year. During the year under review, the Company issued 60,000 equity shares of Rs. 25 each at a premium of Rs. 10 per share. These shares were offered to the existing shareholders in the ratio of one for every three shares held by them on 20th February 1961. The entire issue was fully subscribed. The Company's capital, as at the close of the financial year 1960-61, thus increased to Rs. 53.52 lakhs from Rs. 43.22 lakhs previously. To the extent of Rs. 22.49 lakhs, the subscribed capital represents capitalisation of reserves. The authorised capital is of Rs. 150 lakhs; Rs. 100 lakhs in ordinary shares of Rs. 25 each and the balance in preference shares of a like denomination, which has not been issued. Reserves and surplus have also gone up during the year from Rs. 79.02 lakhs to Rs. 95.04 lakhs and very comfortably supplement the capital. The capital expenditure during the year has pushed up borrowings from Rs. 15.43 lakhs to Rs. 35.68 lakhs. The unsecured loans have also increased from Rs. 14 lakhs to Rs. 19.29 lakhs. Current liabilities and provisions amount to Rs. 72.95 lakhs against Rs. 66.57 lakhs previously. Against these liabilities which aggregate Rs. 126.91 lakhs, there are current assets, loans and advances of Rs. 195.33 lakhs and investments of Rs. 20.33 lakhs, of which those quoted are Rs. 20.26 lakhs, commanding a market value of Rs. 39.20 lakhs. The financial position of the Company is highly satisfactory and is well balanced to cover the requirements of capital expenditure in future. The gross block increased during the year from Rs. 122.24 lakhs to Rs. 136.73 lakhs and has been very conservatively written down to Rs. 60.81 lakhs.

The ordinary shares of the Company (of Rs. 25 each) are currently quoted at Rs. 56.00 *cum-div.* and, at this rate, they give, on the *ex-div.* basis, a yield of 5 per cent per annum, free of tax.

BELGIAN MANUFACTURER'S Agent located in Brussels wishes to meet in Benelux, West Germany or France Indian businessmen to help them making proper contacts and after their departure, follow and check the selling or buying negotiations they may have started. Write to Box No. 988, C/o "COMMERCE," Brady House, Veer Nariman Road, Fort, Bombay.

KESAR SUGAR EARNS LESS

DIVERSIFICATION UNDER WAY

NOTWITHSTANDING an increase of 17.6 per cent, from Rs. 191.28 lakhs to Rs. 224.97 lakhs, in the sale proceeds of sugar, molasses, alcohol and chemicals, and with the production and recovery of sugar showing no material fall as compared with the previous year, the gross profit of the Kesar Sugar Works Ltd. (Chairman: Mr. Tulsidas Kilachand, Bombay), for the year ended 31st July 1961, has slumped to Rs. 14.37 lakhs from Rs. 23.84 lakhs for the year 1959-60. Loss on sugar export quotas, the rise in cost of production, particularly in the wage bill due to statutory enforcement of the recommendations of the Central Wage Board for the sugar industry, and increased interest charges have largely been responsible for this decline. The working of the chemical factory also reported a lower profit on account of the fall in prices of chemicals and some setback in production experienced as a result of the Government's policy to allow imports under the Export Promotion Schemes.

Provision for depreciation has increased slightly from Rs. 3.16 lakhs to Rs. 3.95 lakhs but that for taxation has gone down, for obvious reasons, by Rs. 3.90 lakhs to Rs. 4.00 lakhs. Despite the overall reduction in essential provisions, the net profit at Rs. 6.42 lakhs is only half of that (Rs. 12.78 lakhs) for the previous year. A lower net profit has brought about a cut in the transfer to the reserves from Rs. 6.10 lakhs to Rs. 1.46 lakh only. Of this Rs. 0.96 lakh, as against Rs. 2.10 lakhs, has been credited to the development rebate reserve and Rs. 0.50 lakh, as compared Rs. 4.00 lakhs, has gone to the general reserve. Preference dividends claim Rs. 91,575, as against Rs. 1.00 lakh previously. The rate of ordinary dividend has been lowered moderately by 2.5 per cent to 20 per cent subject to deduction of tax. Even so, the total dividend distribution to ordinary shareholders has increased from Rs. 4.05 lakhs to Rs. 4.50 lakhs. This is because the ordinary shares of Rs. 50.00 each, which were so far paid up to the extent of Rs. 40.00, became fully paid during the course of the year. The carry forward is also lower at Rs. 0.92 lakh as against Rs. 1.04 lakh brought in.

The operating results of the Company for the past four years are presented synoptically in the comparative table that follows:

(In lakhs of rupees)

	For the year ended 31st July			
	1961	1960	1959	1958
Sale proceeds of sugar, molasses, power alcohol, chemicals, etc.	224.97	191.28	197.28	234.58

Carry forward	0.92	1.04	0.09	0.75

* Subject to deduction of tax.

The financial position of the Company as reflected in its balance-sheet as at 31st July 1961 is fairly strong. The share capital of Rs. 37.47 lakhs consists of Rs. 15.00 lakhs in preference shares and the balance in equity shares and is supplemented by Rs. 22.50 lakhs in the reserves. Secured and unsecured loans, which have risen quite substantially by Rs. 37.97 lakhs during the course of the year, amount to Rs. 136.25 lakhs in addition to current liabilities of Rs. 92.90 lakhs. Fixed assets, with a book value of Rs. 101.91 lakhs, have been well written down to Rs. 40.86 lakhs and, together with Rs. 3.32 lakhs as the cost of machinery on hand pending erection, yield a total net block of Rs. 44.38 lakhs. The Company's investment portfolio at cost has also increased from Rs. 3.28 lakhs to over Rs. 66.83 lakhs, first, because of its purchase of 60,000 shares of Synthetics and Chemicals Ltd., and, secondly, because of an increased commitment in a subsidiary company. Current assets, loans and advances altogether aggregate Rs. 177.90 lakhs.

During the year under report, the quantity of cane crushed, as well as of sugar produced, was practically the same as during the preceding year, being 58.80 lakh maunds

COMPANY MEETINGS AND DIVIDENDS

DALMIA IRON AND STEEL CO., LTD. Annual General Meeting, Rajgangpur (District—Sundergarh —Orissa State), 15th February 1962. Dividend: Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 21st January to 15th February 1962, both days inclusive.

RALLIS INDIA LTD. Thirteenth Annual General Meeting, Calcutta, 15th February 1962. Taxable dividend of 3½ per cent or Rs. 8.50 per ordinary share, for the year ended 31st August 1961. Transfer books remain closed from 27th January to 15th February 1962, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR CO., LTD. Net dividend of Re. 0.70 per ordinary share, for the year ended 31st July 1961. Transfer books will remain closed from 6th to 13th February 1962, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Taxable dividend of 15 per cent or Re. 1.50 per share (22½ per cent or Rs. 2.25 for the year 1960), for the year ended 30th September 1961. Transfer books will remain closed from 11th to 24th February 1962, both days inclusive.

PHALTAN SUGAR WORKS LTD. Taxable dividend of Rs. 9.00 per ordinary share (Rs. 12.00 per share, for 1960), for the year ended 30th September 1961.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of £3¼ per cent net (tax applicable at 7s. 9d. in the £), for the year ending 31st March 1962, payable on 15th February 1962.

ASSOCIATED BATTERY MAKERS (EASTERN) LTD. Taxable dividend of 15 per cent or Re. 1.50 per share, for the year ended 31st August 1961.

VOLTAS LTD. Taxable dividend of 14 per cent or Rs. 14.00 per ordinary share (Rs. 13.00 per share, for 1960), for the year ended 31st August 1961, payable on 5th March 1962. Transfer books remain closed from 16th January to 5th February 1962, both days inclusive.

STATE BANK OF MYSORE. Taxable final dividend of 5½ per cent (making a total of 10 per cent for the year), for the ended 31st December 1961. The taxable dividend for ten months from 1st March 1960 to 31st December 1960 was 9 per cent.

STATE BANK OF TRAVANCORE. Taxable dividend of 5 per cent for the year ended 31st December 1961.

INDIAN OVERSEAS BANK LTD. Taxable dividend of Rs. 14.00 per share, for the year ended 31st December 1961. The dividend for 1960 was also Rs. 14.00 per share taxable.

DEVKARAN NANJEE BANKING CO., LTD. Taxable final dividend of Rs. 3.50 per share (making a total of Rs. 5.50 per share taxable, for the year 1961). The dividend for 1960 was only Rs. 4.38 per share, taxable.

UNITED BANK OF INDIA LTD. Taxable dividend of 6 per cent or Re. 0.60 per share (dividend for 1960 was 4.30 per cent or Re. 0.43 per share, taxable), for the year ended 31st December 1961.

PUNJAB NATIONAL BANK LTD. Taxable final dividend of Re. 1.00 per share (making a total of Rs. 2.00 per share, taxable), for the year ended 31st December 1961.

(*Concluded from the previous page*)

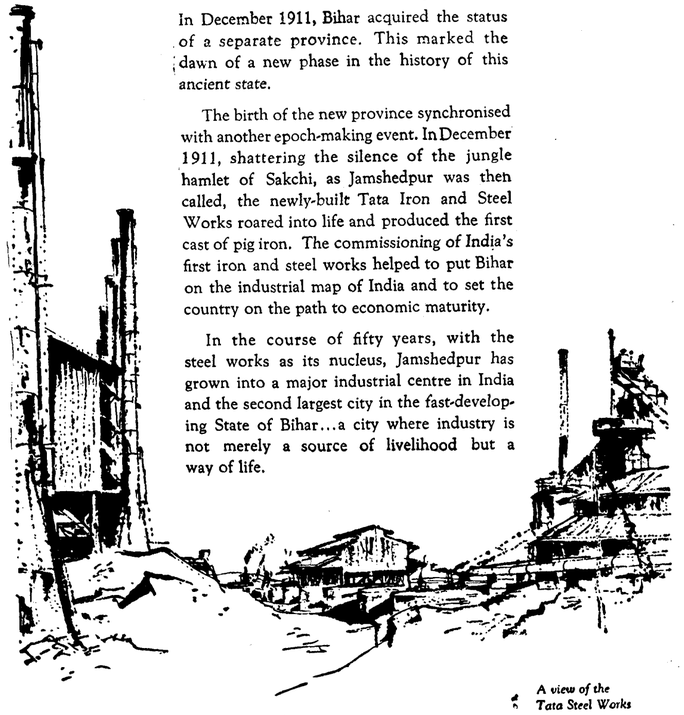
and 5.65 lakh maunds, respectively, as against 58.82 lakh maunds and 5.65 lakh maunds a year ago. The recovery of sugar was unchanged at 9.60 per cent of the cane crushed. As for the distillery, the year under report proved to be a record one both as regards production and offtake. A larger production was possible because of the increase in the manufacturing capacity and the offtake was satisfactory, as it became possible to export 2.29 lakh gallons of alcohol. The Distillers' Trading Corporation, which has now become a subsidiary of the Company, successfully commenced its operations and was instrumental in securing the export business.

So far as the current year is concerned, the crushing has already commenced. Though the cane crop appears satisfactory, the production will have to be curtailed in accordance with the production quota fixed for the factory. The results of current working will also depend to a large extent upon the price that would be realised.

The Company has obtained an industrial license for the manufacture of sodium hydrosulphite, fermosul and other chemicals. Negotiations for technical and financial collaboration have been carried on with A.C.C. (Brothers) Ltd., England, who manufacture these chemicals and whose products enjoy a good reputation in the market. In consultation with the said collaborators, a scheme has been submitted to the Government and its approval is awaited.

The Rs. 50 fully paid ordinary shares of the Company are quoted on the Bombay Stock Exchange at Rs. 257.50 *cum-div.* and fetch, on an *ex-div.* basis, a net return of 2.8 per cent.

important beginnings



In December 1911, Bihar acquired the status of a separate province. This marked the dawn of a new phase in the history of this ancient state.

The birth of the new province synchronised with another epoch-making event. In December 1911, shattering the silence of the jungle hamlet of Sakchi, as Jamshedpur was then called, the newly-built Tata Iron and Steel Works roared into life and produced the first cast of pig iron. The commissioning of India's first iron and steel works helped to put Bihar on the industrial map of India and to set the country on the path to economic maturity.

In the course of fifty years, with the steel works as its nucleus, Jamshedpur has grown into a major industrial centre in India and the second largest city in the fast-developing State of Bihar...a city where industry is not merely a source of livelihood but a way of life.

A view of the Tata Steel Works in 1911

ASSOCIATION OF MAN-MADE FIBRE INDUSTRY

CHAIRMAN, MR. AR. RAMANATHAN ON ROLE OF RAYON AND STAPLE FIBRE

PLAN TARGETS MUST BE RAISED SUBSTANTIALLY

THE growing importance of man-made fibres such as rayon and staple fibre was emphasised by Mr. AR. Ramanathan, Chairman of the Association of Man-made Fibre Industry, in the course of his speech at the Annual General Meeting of the Company held at Bombay on Friday, 19th January 1962. Man-made fibres, Mr. Ramanathan said, ranked high among the nation's industries. Alluding to the targets fixed in the third Five-year Plan, he declared that they fell short of the actual requirements and urged that they should be raised substantially, if production is to be commensurate with the pattern of demand likely to emerge at the end of the Plan.

The following is the full text of the Chairman's speech:

"FRIENDS,

"It gives me great pleasure to preside over this annual general meeting of our Association and associate myself with you in the matters relating to the problems of the man-made fibre industry.

"Before I proceed further, to dwell upon the important trends relating to or affecting the industry, I would like to lay emphasis on the fact that, in the domain of textiles, 'the old order is changing, yielding place to the new.' In many ways, and engineered for different purposes, these new fibres have, indeed, been responsible for revolutionising the textile industry. The brain-children of science, as they are aptly described, they are not disturbed by the vagaries of nature and thus can be manufactured the year round to meet the entire range of consumer preferences, from wearing apparel and furnishing fabric to heavy-duty tyre cord and surgical dressings.

"Today, as we scan through the pages of textile history, we find that the seventeenth century anticipation has been more than realised and man-made fibres, apart from carving out a niche for themselves in the realm of textiles, have taken firm roots in the economy of every country laying some claim or other for material advancement.

World Output

"Though it is true that the course of production does not pursue the pattern and time limits set by man, yet one cannot refrain from remarking that the year 1960 has witnessed not merely an acceleration of technological advancement but an output dimension registering a new high with a total of 7,511 million pounds per annum, an increase of about 7½ per cent above the 1959 level. This may be stated to equal 30 per cent of cotton production of the world and more than double that of wool and silk put together. Quantitative increases apart, it is also a matter of satisfaction to know that big strides have been made all the world over in improving fibre performance and properties.

"In short, the record of achievement in the field of man-made fibres all the world over is one of which the industry and the proponents of these fibres may deservingly be proud and feel genuinely enthused for exploring 'virgin fields and pastures new.'

"On the domestic front, the remarkable advance thus far achieved by rayon industry in India in its relatively short span of life is of no mean significance. With a little under 5 million lbs. in 1951, the national output of viscose rayon has, inside of a decade, increased to very nearly 45 million lbs. Within a short space of time of about ten years, the country has witnessed the setting up of several rayon manufacturing units with expansion projects on the anvil in almost every manufacturing unit.

"So far, the increased production has secured a saving of about Rs. 28 crores of foreign exchange, which means that the initial foreign exchange liability at Rs. 3.75 per lb. for setting up plants of about 80 million lbs. of annual installed capacity has already been paid for by the net saving of foreign exchange during the last ten years.

"As regard staple fibre, from about 7 million lbs. in the year 1954, the production has increased to 48 million lbs. in 1960 and its contribution to foreign exchange resources has been in the vicinity of 12 crores of rupees all these years. At the end of 1961, the actual production of staple fibre has already reached the licensed capacity of 64 million lbs., resulting in a further saving of about 4 crores rupees.

Targets Under Third Plan

"For the man-made fibre industry, the Plan document envisages the widening of the capacity base from about 100 million lbs. at the end of the second Five-year Plan to 215 million lbs. (140 million lbs. of rayon filament and 75 million lbs. of staple fibre). This expansion programme provides, *inter alia*, for an increase in the *per capita* consumption of rayon fabrics from 1.3 yard in 1960-61 to 1.8 yard in 1965-66. The overall target for rayon filament comprises 20 million lbs. of tyre cord yarn required for the automobile industry, 76 million lbs. of viscose filament, 24 million lbs. of acetate yarn, 10 million lbs. of cuprammonium and 10 million lbs. of synthetics.

"These figures, in my view, fall short of the actual requirements of the country and should be substantially revised, if production is to be commensurate with the pattern of demand that is likely to emerge at the end of the third Five-year Plan. Even from the foreign exchange angle, revision of the target is desirable, in view of the immediate saving that can be effected. Moreover, expansion of the rayon and allied industries will accrue benefits in a very short time and the initial foreign exchange for capital equipment, etc., will pay for itself in less than three to four years.

Research—Fundamental and Applied

"You will all agree that research is the backbone of man-made fibre industry and its progress is highly necessary for the advancement that should be made in the production of man-made fibres in the world. The fields of research with which the man-made fibre industry is concerned are very wide, since they embrace not only organic and physical chemistry but textile technology as well. I personally feel that a start should be made to establish a research centre before long.

Importance to the Economy

"It is an incontrovertible fact that, today, in India or any part of the world for that matter, man-made fibres rank high among the nations' industries. The importance of development of rayon industry to the economy, as a producer of raw material required for the medium and small-scale textile industries, as one which contributes to the conservation of our slender foreign exchange resources by reducing the import bill, and as a factor which helps more lands to be brought under the cultivation of food crops, is obviously of no mean significance. These apart, in the overall economy of the country, the industry is of vital importance to the communities dependent upon it for economic stability. More importantly, the man-made fibre producers, here and elsewhere, are among the largest employers, taxpayers and utility users.

"From the labour relations angle, if evaluated, the amenities and employee services provided by the industry compare very favourably with the best prevailing standards of the country. The industry may be said to be virtually free from occupational hazards and time lost, as a percentage of planned hours, on account of accident or sickness is indeed very negligible. Furthermore, if employee-turnover and absenteeism records are the yardsticks which measure the attitude of the employees towards their jobs, this industry, in spite of the fact it is relatively young, has comparatively low turnover and low absenteeism which obviously means high human satisfaction.

"In the half-a-century since rayon and synthetics appeared on the world scene as a dynamic force, science and industry have brought forth significant changes in the living standards of the people. If the world trends, currently prevailing, are any indication, there is every reason to assume that great achievements are in store for the benefit of the industry here and elsewhere. Moving with the times and meeting the diverse needs of man, free from the impact of prevailing customs and unfluenced by tradition, never stale or stagnant, truly man-made fibres are as modern as the nations' youth and as new and promising as the unborn tomorrow.

"Thank you."

CORRIGENDUM

Regarding announcement of Public Issue by

SESHASAYEE INDUSTRIES LIMITED

It is regretted that an error has crept in under the heading "Preferential allotment" in the above mentioned announcement. The Investment Corporation of India Ltd. have not been given any preferential allotment of shares as stated therein.

The Investment Corporation of India Ltd. are the underwriters only to the extent of Rs. 5 lakhs face value of equity shares offered for public subscription.

PLANTING

(*Concluded from page* 158)

instalment of advance income-tax payable by tea companies in North East India up to September in cases of genuine hardship.

Fertilisers: As a result of the sustained efforts made by the Tea Board, the Government of India has agreed to reduce the prices of sulphate of ammonia, urea and ammonium sulphate nitrate for the tea industry by Rs. 14.50, Rs. 14.10 and Rs. 8.50, per tonne, respectively. The Government of India has already released 65,000 tons of neat sulphate of ammonia to the tea industry in North East India during the year 1961-62, in addition to 1,560 tons of urea and 16,185 tons of ammonium sulphate nitrate. The Board is pressing the Government for a further release of about 10,000 tons of neat sulphate of ammonia for the industry in North East India. From 1962-63, the industry's entire requirement of nitrogeneous fertilisers is likely to be met in the form of neat sulphate of ammonia.

Cement: Following the continued efforts made by the Board, the Union Government has released additional quantities of cement to the tea industry.

Coal: Large quantities of coal have been allotted to the North Bengal and Tripura tea gardens.

Mr. Bam also alluded to the Government of India's decision to place Rs. 5 crores at the disposal of the Board to enlarge it to grant long-term loans to tea estates for replanting, replacements and extension of tea areas. While this decision is welcome, it must be pointed out, once again, that the amount of Rs. 5 crores covering a period of five years is too inadequate to meet the industry's actual requirements. It is said that this sum will be sufficient to replant no more than 17,000 acres. If the target of replanting 50,000 acres is to be reached during the third Plan period, the financial assistance would require to be stepped up to Rs. 15 crores, which in fact was the outlay recommended by a Special Committee of the Tea Board.

SYNOPSES OF COMPANY REPORTS

Hindusthan Sugar Mills Ltd.

(*Chairman*: Mr. R. D. Birla, Bombay.)

(*Managing Agents*: Messrs. Bachhraj & Co., Ltd., Bombay.)

Working Results:

" " " ordinary	17,40 (29%)†	17,40 (29%)†
Carried forward	80	62

N.B.—Adjustments include the balance brought forward from the previous year; excess provisions written back and other credit items if any.

* Calculated at 7.143 per cent.

† This consists of dividend at Rs. 9 per share plus a bonus of Rs. 9.00 per share making a total of 29 per cent. or Rs. 29 per share on the ordinary shares.

Extracts from the Directors' report: During the season under report, the Company's factory at Golagokarannath, U.P., crushed 1,93,23,403 maunds cane with sugar recovery of 9.75 per cent. Quantity of sugar produced was 69,232 tons which has been the highest produced by the factory in any season. All-India sugar production reached nearly 29,75,000 tons. Carry over of sugar stocks as on 1st November 1961 is estimated at 11,50,000 tons, as against 5,50,000 on the same date last year. The stock has increased by 6 lakh tons, in spite of export of more than 2,50,000 tons sugar. Though there has been substantial increase in sugar production, unfortunately consumption is lagging behind. In 1960-61, internal consumption is estimated at only 21 lakh tons. As it was felt that the controls were coming in the way of increase in sugar consumption, they have been removed by the Government of India with effect from 27th September 1961. Simultaneously, sugar production quotas at 90 per cent of the production of a factory in 1959-60 or 1960-61, whichever is higher, are being fixed by the Government under an Ordinance which has been issued for this purpose. In the case of smaller factories which have produced less than 11,000 metric tonnes in either of these two seasons, there will be no cut in their production quota.

The condition of the cane crop in the reserved zone of the Company's factory is not as good as it was last year but the area being more, the total available supplies are not less. As on sugar production in excess of the quota fixed by the Government, extra excise duty of Rs. 8.27 has to be paid, at present there appears to be no possibility of the production of the factory exceeding the quota, which is 90 per cent of last season's sugar production.

The old 1000-ton milling plant of the Company's factory, which had become spare as a result of substantial expansion carried out by the factory in 1957-58 has been sold at Rs. 7,65,000.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	65,00,000	Gross block	2,84,66,646
Reserves and surplus	1,08,80,798	—Depreciation	1,81,16,598
Other liabilities	3,10,80,487	Net block	1,03,71,048
		Current assets	3,68,97,017
		Investments	15,000
		Cash	6,77,220
	Rs. 4,79,61,285		Rs. 4,79,61,285

* Paid-up capital consists of 5,000 five per cent tax-free cumulative preference shares of Rs. 100 each fully paid and 60,000 ordinary shares of Rs. 100 each fully paid. Of the above shares 55,000 ordinary shares and 5,000 preference shares are allotted as fully paid bonus shares by way of capitalisation of reserves.

Indian Vegetable Products Ltd.

(*Managing Agents*: Messrs. Forbes Forbes Campbell and Co., Ltd., Bombay.)

		Block-in-progress	17,372
		Current assets	40,95,072
		Investments	82,840
		Cash	10,58,308
	Rs. 58,93,763		Rs. 58,93,763

* Paid-up capital consists of 21,175 ordinary shares of Rs. 100 each fully called up. Of the above shares, 10,175 (of which one share remains to be consolidated) are issued as fully paid up by way of bonus shares by capitalisation of reserves.

Samastipur Central Sugar Co., Ltd.

(*Directors-in-charge*: Mr. Jamunadhar Kayan and Mr. D. P. Agarwalla, Calcutta.)

Registered Office: 10, Bentinck Street, Calcutta.

42nd *Annual General Meeting*—31st January 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales	61,99	71,97
Closing stock	60,56	27,49
Excise duty (*less* amount payable closing stock)	17,40	20,82
Gross loss (after providing for depreciation)	—3,22	—2,53
Provision for depreciation	65	1,03
Adjustments	1*	1,01†
Net loss carried forward	—5,50‡	—1,52§

* Represents Rs. 881 being profit on export of sugar in respect of previous years.

† This includes a credit balance of Rs. 4,898 brought forward from the previous year; Rs. 11,024 being profit on sugar exports relating to previous years and a sum of Rs. 85,000 transferred from general reserve.

‡ After taking into account the profit and loss on sugar exports for previous years.

§ Loss after taking into account the profit on sugar exports for previous years; credit balance brought forward and the amount transferred from general reserve.

Extracts from the Directors' report: During the year, the Company's factory worked for 168 days as against 126 days in the previous year and crushed 12,54,282.67 quintals against 9,05,276.21 quintals in the previous year producing 1,08,522.67 quintals against 82,150.88 quintals at an average recovery of 8.65 per cent against 9.07 per cent in the previous year. The fall in recovery percentage has been in general with all the sugar factories in the Darbhanga District.

According to concessions announced by the Central and State Governments, the Company's factory is eligible to get a rebate on cane-cess and a rebate on excise duty. Both these rebates have been taken into account for the year but the Directors regret to report that increase in the cost of production together with sugar export loss have completely neutralised the benefit thus obtained.

Manufacturing cost during the year has gone up due to increase in transport charges, lower recovery, very high price paid for packing materials and increase in the price of the chemicals and stores consumed. This has further been aggravated by the increase in Insurance premiums and Bank interests on overdraft due to heavy accumulation of sugar stocks.

The factory commenced crushing for the season 1961-62 on 28th November, 1961, and the directors hope to crush about 30 lakh maunds of cane with an average recovery of 9.50 per cent during the current season.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	11,99,750	Gross block	64,26,842
Reserves	13,90,877	—Depreciation	28,58,591
Other liabilities	1,00,70,001	Net block	35,68,251
		Block-in-progress	10,717
		Current assets	84,32,830
		Investments	5,000
		Cash	94,549
		P.L. a/c (deficit)	5,50,181
	Rs. 1,26,61,528		Rs. 1,26,61,528

* Paid-up capital consists of 1,20,000 equity shares of Rs. 10 each fully paid up. This includes Rs. 750 being amount paid up on shares forfeited.

A substantial contract for a fleet of 100 Leyland Comet bus chassis valued at over Rs. 38 lakhs (£280,000) has been placed with Ashok Leyland Ltd. of Madras by the Kerala State Transport. The chassis will join a fleet of over 240 Comet buses operated by the undertaking, and will have 42-45 seater body-work fitted at the central workshop in Trivandrum. The Himachal Pradesh Transport Department has also placed its first order with Ashok Leyland Ltd. for eight Comet bus chassis to meet a growing demand in the State. Another three Ashok Leyland Comet bus chassis have been ordered by Punjab Roadways, bringing their total fleet to 219 Comets.

The European Development Fund, set up by the Common Market to promote social and economic development of overseas territories associated with it, has approved of 233 projects involving an outlay of $277 million during the first four years of its existence (1958-61). In 1962, the outlay is expected to be $200 million. Of the expenditure so far approved, $112 million were spent on infrastructure projects, $48 million on agriculture and stock breeding, and $43 million on educational and vocational training.

HINDUSTAN PRECISION MACHINE TOOLS FOR INCREASED PRODUCTION AND BETTER ACCURACY

HIGH SPEED PRODUCTION LATHES - Type H-22

225 mm (8¾") Centre height, 1000 mm (40") and 1500 mm (60") between Centres ..... Delivery in 4 to 5 months

GENERAL PURPOSE TOOL ROOM LATHES - Type LB

170 mm (7") Centre height × 1000 mm (40") between Centres ..... Delivery in 4 to 5 months

200 mm (8") Centre height × 1000 mm (40") and 1500 mm (60") between Centres ..... Ex-Stock

250 mm (10") Centre height × 1500 mm (60") between Centres ..... Delivery in 2 to 3 months

HIGH POWER MILLING MACHINES - Universal, Horizontal and Vertical - Type M2 & M3

Table Size 1100 mm × 310 mm (40" × 12") ..... Ex-Stock

Table Size 1600 mm × 360 mm (60" × 14") ..... Delivery in 8 to 10 months

HIGH POWER RADIAL DRILLS TYPE RM-50/60

Drilling Capacities 50 mm (2") and 75 mm (3") in steel. Distance: column to spindle 925 mm (38") to 2150 mm (86")

Smaller Sizes ..... Ex-Stock

Larger Sizes ..... Delivery in 5 to 6 months

MONEY IN GREATER DEMAND

(From Our Own Correspondent)

BOMBAY, 23rd *January*

Stringency has come to prevail in the short-term money market. It is, of course, less acute than this time last year, but conditions are not as comfortable as those a fortnight ago. Inter-bank call money rate, however, is still unchanged at 4½ per cent., presumably because the banks' borrowings from the Reserve Bank are still within the quota available at the basic Bank rate of 4 per cent per annum. This week many banks are said to have resorted to the lender of the last resort. Advices from Calcutta point to a perceptible hardening in the inter-bank rate from 4 per cent a week ago to 4½ per cent.

The short-term money rates remained unchanged at the ceilings under the inter-bank agreement. The request of medium-sized banks for permission to raise their deposit rates by ½ per cent above the present ceilings was considered by the Committee of the Indian Banks Association this week. The big banks are reported to have voiced their unwillingness to concede this request. The Committee, however, adjourned without coming to any definite conclusion.

The 91-day Central Treasury Bill results showed no change over those last week. The amount offered was Rs. 2 crores, equal to the amount invited. The whole of it was accepted, at the average rate of 2.520 per cent per annum which is the same as last week.

YARNS DECLINE

(From Our Own Correspondent)

BOMBAY, 23rd *January*

Limited turnover with values drifting downward characterised trading in the yarn market during the week under review. Operators were not inclined to enter into large-scale fresh commitments either way, in the absence of any new development. Art silk yarns encountered selling on fears of reduced offtake by weaving mills, especially, in Ludhiana. The fears stemmed from reports that the mills in Ludhiana were contemplating to curtail production for export, in view of the unsatisfactory working of the import incentive scheme for art silk fabrics exports.

Staple fibre yarns also suffered a setback to values. Demand from consuming centres was at a low ebb, while supplies were quite comfortable. It was stated that the production of staple fibre yarn continued to be pretty high, thanks to the encouraging staple fibre supply position. There would, indeed, have been a more appreciable decline in prices had it not been for short-covering and lack of fresh selling below particular levels.

Cotton yarns continued to be dull. For traders preferred to await the outcome of the talks, now being held in the city, between the representatives of the Indian Cotton Mills Federation and the British textile industry delegation on the question of a ceiling pact with regard to exports of Indian cotton yarn to Britain. The Cotton Board is believed to have suggested a ceiling of 7.49 million lbs. of yarn based on the average quantity exported during the year 1958, 1959 and 1960. The actual exports of cotton yarn from India to Britain in 1961 are estimated at 13.00 million lbs., as against 9.20 million lbs. in 1960, 7.70 million lbs. in 1959 and 5.59 million lbs. in 1958.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	23-1-1962	17-1-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
February	3,123.00	3,157.00
April	3,205.00	3,235.00
120 Japan (per 100 kg.)	1,818.00	1,818.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
120 Italy (per 100 kg.)	1,818.00	1,818.00
150 Italy	1,980.00	1,709.00
Nat. Ray. 150 Bt. I	10.98	11.11
Staple fibre yarn (40×2)—		
February	737.00	758.00
April	747.00	768.00
Kohinoor (per kg.)	9.00	9.23
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	18.75
20s Century	21.50	21.50
30s Madura	26.75	27.25

60s Finlay	66.00	66.00
80s Finlay	84.00	84.00

LINSEED ARRIVALS SMALL

(Messrs. A. Bradley and Co.)

CALCUTTA, 22nd *January*

Firm conditions prevail in the linseed market. But business has been negligible, as arrivals are very small. Crushers are keen buyers daily, while sellers are reserved.

The oil market is steady and prices have firmed up. Local buyers are in the market daily for ready and forward deliveries, due to high prices ruling for other vegetable oils, but business has been on a very small scale. Millers are not keen to do much business, as supplies of seeds are very short.

The oilcake market is steady. Offtake is better, but stocks in the hands of millers are small.

Ready/January is quoted at Rs. 22.50 per maund.

SPURT IN BULLION

(From Our Own Correspondent)

BOMBAY, 23rd *January*

The bullion market depicted a distinctly firm trend during the week under review. The firmness was engendered by encouraging offtake, hopes of a further rise in demand and bullish advices from commodity markets. Reduced pace of contraband gold arrivals from Goa and reports regarding the seizure of large parcels of smuggled metal in the City also imparted strength. Consequently, gold scored handsome gains, spot rate rising by Re. 1.50 and forward by Rs. 2.60. In sympathy with gold and on reports that some Delhi and upcountry interests were interested in buying silver, the price of this metal also registered a notable rise—of Re. 1.80 in ready silver and Rs. 2.80 in forward.

The improvement in bullion prices would have been more marked but for large arrivals, the daily average of which was 8,500 tolas of gold and 22 bars of silver, as against 6,100 tolas and 19 bars, respectively, in the previous week. The average offtake per day was 8,250 tolas of gold (6,000 tolas last week) and 7 bars of silver. The floating stocks in the City are estimated at 80,000 tolas gold and 1,000 bars silver.

The adjustment rates fixed today were Rs. 117.75 per 10 grams of gold and Rs. 212.65 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 116.25 and Rs. 210.85, respectively.

There was an all-round fall in prices in the London bullion market this week. The world price of gold declined from $35.16½ to $35.15½ per fine ounce, the sterling price easing from 250s. 1½d. to 250s. 1½d., after rising to 250s. 3d. earlier. The drop in prices followed large sales by the Bank of England in view of enlarged demand. Spot and forward silver eased by 1⅜d. each to 85½d. and 86½d., respectively. The easiness was due to weak advices from New York where silver fell from 104.75 cents to 103.75 cents.

The following table shows the trend of prices during the week under review:

	23-1-62 (closing)	High	Low	17-1-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	118.00	118.75	116.70	116.50
Forward: *Paysat*† ..	119.30	119.95	116.80	116.70
Sovereign	97.00	97.25	97.00	97.00
SILVER				
Ready (.996 fine)	212.65	212.70	211.25	210.85
Forward: *Paysat*†	214.15	214.30	211.40	211.35
London—				
Silver Ready	85½d.	86½d.	85½d.	87½d.
Silver Forward	86½d.	87¾d.	86½d.	88d.
Gold	250s. 1½d.	250s. 3d.	250s. 1½d.	250s.1½d.
New York—				
Silver	103.75 cents	104.50 cents	103.75 cents	104.75 cents

† 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

PULSES WELL SUPPORTED

(From Our Own Correspondent)

HAPUR, 22nd *January*

Steady to firm conditions were witnessed in the foodgrains market during the week under review. Arrivals were small and crop prospects were none too good, having been adversely affected by frost and absence of winter rains. Wheat was steady at Rs. 17.50 a maund for average quality and upto Rs. 19.50 for farm produce. A further rise in prices was checked by the sales of imported wheat in ration at Rs. 15.25 a maund. Daily arrivals of wheat in open market were poor and stocks with trade receded further to 12,000 maunds. Wheat crop in unirrigated areas was reported to be poor for want of winter rains so far and damage due to heavy frost.

Rice was also steady, despite comfortable supply position. For new produce was still reaching the markets and steadiness in prices was simply in sympathy with prices of other grains. Week-end prices were: rice *mainpuri sela* Rs. 20; *gadda kutcha* Rs. 19; *ramajwayan sela* Rs. 22; *raimunia sela* Rs. 23; *basmati sela* Rs. 26 to Rs. 28; superior Rs. 30 to Rs. 34 a maund.

Gram improved fractionally to Rs. 16.25 a maund, thanks to good demand resulting in local stocks drifting lower to 13,000 maunds. Crop prospects were also uncertain in the absence of winter rains. Barley and *bejhar* continued steady and, although consumer demand for these cereals was poor, stocks with trade were also small. Maize was still reaching in heavy quantity at an average of 1,500 maunds daily from east U.P. and other centres, but prices were held steady on brisk consumer support with local stocks put at 34,000 maunds. *Bajra* demand subsided and prices were lower, while *juwar* and *guwar* stayed steady on poor local stock position. Week-end prices (in rupees per maund) were: barley 12.50; *bejhar* inferior 12.75; *moongia* 13.12; maize 13 to 14; *bajra* 15; *juwar* 13.25; *guwar* 14.37; *methi* 27; oats 12.

Among pulses, peas and *arhar* attracted good demand mostly in the form of *dal* and stocks were fast declining. Standing crops, however, were adversely affected due to extreme cold and frost during the week. Other pulses were steadier with gains recorded in prices of *massoor dal*. Week-end prices were: peas *dara* Rs. 13.25; farm Rs. 14.25; peas *dal* Rs. 14.75; *arhar* Rs. 15.31; *arhar dal* Rs. 18.50; *urd* Rs. 23 to Rs. 24; *urd dal* Rs. 25 to Rs. 27; *moong* Rs. 18 to Rs. 21; *moong dal* Rs. 21 to Rs. 23; *massoor* Rs. 15 to Rs. 17.50; *massoor dal* Rs. 20.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 23rd *January*

Trading in the cotton futures market was featureless during the week. Prices, however, ruled steady. With the Jarilla March contract almost within reach of the ceiling rate, there was little scope for any large-scale buying without forcing the contract upto the ceiling and thereby bringing trading to an automatic standstill. On the other hand, the bullish outlook for cotton did not warrant selling of any magnitude, except perhaps for booking profits. Influenced by this consideration the Jarilla March contract hovered round Rs. 690. The volume of business dwindled to a trickle.

In sharp contrast to this, the spot market was very active. Spinners showed interest in almost all popular varieties. Keen demand was noted for CO2, L 147, Khandesh/Berar, Vijay and Digvijay. Prices ruled Rs. 25 to Rs. 30 above the ceiling, in the case of most of the varieties. The introduction of the variety-wise distribution of cotton has not so far had any perceptible effect on the general demand for cotton, except that it has prevented mills from going in for cotton of their choice. Reports of requisitioning of cotton in some areas, particularly Khandesh and Berar, induced an element of caution in mill buying.

Export demand for Bengal *Deshi* was slack. Japan is yet to show interest in this cotton. The quantity applied for registration against the recent Bengal *Deshi* export quota on the first day of registration, namely the 22nd inst., was estimated at 22,000 bales.

Following the import quota for 33,330 bales of cotton of staple length 1-3/16" and above announced on the 19th inst., spinners showed interest in Sudan cotton for prompt shipment. East African cotton also showed a hardening tendency, thanks to tight supply position of East African A.R. cotton. Private estimates place production of this cotton at 200,000 to 240,000 bales, of which 190,000 bales are said to have been already sold. Stray interest was also noted in Pakistan and American cotton. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal 684; Hubli Laxmi 1,070; Wagad 830; Digvijay 1,108; B.P. 52 1,375; Sudan XG35 1,675; G5S 1,386.

Karachi cotton futures market ruled distinctly firm during the week. Good export demand and local mill buying resulted in a rally in prices. The N.T.R.G. January contract firmed up from Rs. 81.70 last week-end to Rs. 82.05. The March contract rose from Rs. 79 to Rs. 80.05.

In contrast to last week's easiness, cotton futures in Liverpool staged a recovery during the week. Short covering by local traders and Commission House support strengthened both the American and American type contracts. Consequently their quotations improved. Sudan cotton contract were, however, unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool.

American cotton mixed growth contract: March 24.60; May 25.05; July 25.20.

American cotton mixed growth contract: March 25.00; May 25.45; July 25.60.

Sudan: January, March, and May 32.00.

Steady conditions prevailed in the New York cotton futures market during the week. Business centred mainly round the May and July positions which edged higher. Trading in the more distant position was affected by the uncertainty about the export subsidy rate for the 1962-63 season crop, due to be announced shortly.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	22-1-62	16-1-62	9-1-62
New York spot	35.50	35.50	35.55
March	34.24	34.24	34.49
May	34.80	34.82	35.04
July	35.01	34.99	35.17

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, 23rd *January*

Oilseeds and oils moved upward during the week under review on bull support induced by the reported damage to mustardseed, castorseed and linseed crops, as a result of cold wave in Gujarat and North India. Castorseed hedge contracts touched the record levels of the season, though, towards the close, there was profit-taking which erased a part of the earlier gains. Groundnuts put on a cheerful appearance in the face of sustained support from both crushers and *vanaspati* manufacturers. There were, besides, hopes that the Government of India would grant a fresh export quota for H.P.S. groundnuts, in addition to the quota of 20,000 tons, released early in the month, which has been completely exhausted. The Exchange authorities have already sent a communication to New Delhi urging release of a supplementary quota. Linseeds and cottonseeds also scored handsome gains.

Castorseed March 1962 contract advanced from Rs. 177.12 to Rs. 179.62. Madras small put on a rupee to Rs. 37.75; it had touched Rs. 38 earlier. Oil commercial rose from Rs. 15.75 to Rs. 15.90, before closing today at Rs. 15.70.

Groundnut Nizam bold rose by 50 nP to Rs. 47.25. Oil ex-mill picked up 45 nP to Rs. 19.85.

UNDER SECRETARY 29 JAN 1962 PUBLIC DEPARTMENT 177

April 1962 contract was quoted, in private trading, at Rs. 218.50, that is, Rs. 3.50 above the ceiling level.

Linseed March 1962 contract closed today at Rs. 40.25, as against Rs. 39.47. Bold ready gathered Re. 1.50 to Rs. 44. Linseed oil rose by 70 nP to Rs. 19.

In the cottonseed section, February 1962 contract moved up by Rs. 3.25 to Rs. 109.25 and April 1962 contract by Rs. 2.75 to Rs. 110.50.

The following table shows the closing prices of oilseeds and oils on Tuesday, 23rd January, as compared with those of the two previous weeks:

	23-1-1962	17-1-1962	10-1-1962
	Rs.	Rs.	Rs.
Groundnut			
January 1962	215.00	215.00	215.00
Nizam bold	47.25	46.75	46.50
Khandesh quality	47.02	47.25	46.75
Oil ex-mill ready*	19.85	19.40	19.20
Railway receipts*	19.05	19.35	19.10
Oil January 1962	17.65	17.65	17.65
Castorseed			
March 1962	177.62	177.12	173.62
Ready Madras	37.75	36.75	35.75
Ready Kanpur	35.12	35.50	34.50
Oil B.S.S.†	15.70	15.75	15.50
Oil commercial†	15.15	15.00	14.70
Linseed			
March 1962	40.25	39.47	39.03
Bold ready	44.00	42.50	42.50
Oil ready†	19.00	18.30	18.15
Cottonseed			
January 1962	109.25	106.00	103.25
Niger seed	38.50	38.00	37.50
Kardi seed	24.50	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEAS FIRM

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 16th *January*

A total of 402,000 kgs. was on offer in export sale No. 3 held today. Quality showed general improvement but that of teas from the Nilgiris was only about maintained. There was good general demand for mediums and lowgrowns, but highgrowns met with less inquiry and were barely steady. Best and the lesser highgrown broken grades were about steady but fannings met with less competition at lower rates. Good mediums and mediums were firm, and dearer where quality showed an improvement, while fannings grades in these categories were strong and dearer. Low mediums and plainest kinds were up to 4 nP dearer, but, where an improvement was evident, prices sometimes advanced more. Low medium fannings were not as strong as their brokens but were generally slightly higher than last. Black leaf brokens were firm and fannings a strong feature. C.T.C. and legg-cut teas were about firm to dearer. O.Ps and pekoes declined slightly in price, but F.Ps were firm.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low medium	3.70-4.05	4.60-4.90
Medium	4.05-4.80	4.95-5.20
Good medium	4.90-5.70	5.35-6.00
Nilgiri B.O.P.	5.60	9.25

The average price realised in sale No. 3 was Rs. 4.79 per kilo, as compared with Rs. 4.71 a week ago and Rs. 5.11 in the corresponding sale last year.

A total of 337,000 kgs. was offered in dust sale No. 3 held on Thursday the 18th inst. There was good general demand, but rates were slightly easier. Plain and low mediums teas were sold at about last rates, while medium and good medium types were fully firm and occasionally dearer, particularly those with clean leaf appearance. Legg-cut teas met with strong demand and were irregularly dearer, but C.T.Cs inclined easier. Highgrowns were about steady.

The average price realised in dust sale No. 3 was Rs. 4.06 per kilo, as against Rs. 4.08 a week ago and Rs. 5.00 in the corresponding sales last year.

London: North Indian and other growths: In Monday's auction, there was strong demand and most descriptions came to a dearer market, with best Assams the strongest feature. Plain broken pekoe remains at 3/0½d.

Ceylon and South Indians: In Tuesday's sale, a total quantity of 25,757 packages was offered, of which 9,263 packages were from South India. There was good demand. Lowgrowns from Ceylon were dearer by ½d., while others were sold at rates 1d. to 2d. above last. South Indians met with strong demand except thin and plain liquoring sorts.

JUTES RECEDE

(From Our Own Correspondent)

CALCUTTA, 22nd *January*

Against the background of the Indian Jute Mills Association having asked mills to put into operation from 15th January to the end of February the balance of the 7 per cent of looms permanently remaining unsealed, depending upon their capacity to do so, it is unfortunate that there has been a diminution in the demand for goods, including hessian, from overseas countries, thereby leading to a fall in prices. Meanwhile, the daily arrivals of raw jute have increased further and, despite the fact that the I.J.M.A. increased the minimum purchase quota of mills and mills, in their exuberance to ensure that fibre prices were maintained above the minimum levels, exceeded the quota, mills were not able to absorb arrivals in their entirety. Consequently, stockists were keen for business and, though Calcutta quotations did not fall below minimum levels, reports of a break in prices below the minimum were on the increase. The West Bengal Government has been naturally anxious over this situation, and has been exerting all its influence over the Centre in an attempt to get the Buffer Stock Agency on its feet.

All preliminary work in connection with the formal inauguration of the buffer stock scheme has now been completed and, as soon as registration is done, it is likely to go into action. This is expected to be so in the course of the current week. The scheme will operate in those areas where the price has fallen below Rs. 30 a maund basis Assam bottoms. It will be noted that mills have built up considerable stocks of fibre, and as such they need not lift any fibre from the buffer stock until some time. This will naturally lead to problems of accumulation, finance and storage. The coming into being of the buffer stock does not mean that mills will stop buying. They will continue to buy at the same time, so that current buying will be at least equal to their daily consumption and their stocks will remain unaffected. In such a situation, the question as to what would happen to the fibre in the buffer stocks would naturally arise. It should be remembered that fibre fit for hessian manufacture has been nearly sold out to exhaustion, and what remains to be marketed is the inferior quality fibre fit for manufacture of sacking goods, the demand for which has notably fallen.

The possibility of the buffer stock authority being permitted to export a limited quantity of fibre, for which it is claimed that purchasers can be found in overseas countries, has already been hinted. Any such possibility is hindered by the thought of likely losses. For it is well to remember that, even for the superior Pakistan fibre, overseas buying has been very low and, despite the insistence of authorities to maintain the E.P.C. rates, they had to be cut down last week. In these circumstances, it is apparent that the dropping of the hint by officials that the buffer stock authority is in a position to export fibre has been in an attempt to stabilise fibre prices. Trade circles, on the other hand, have genuinely felt that India has surplus fibre this season and that, if exports are not permitted prices would not improve and that there is every danger that sowings in the next season would be comparatively lower. It is necessary that there should be a meeting point between the views of the industry and the trade, and such a common ground can be found, if buffer stocks are retained within the country and released to mills at the beginning of the forthcoming season. This will enable mills to maintain the increased tempo of production, if need be, even beyond March. However, a solution for storage of the fibre thus bought for buffer stocks would have to be found and, granting this is found, it is to be hoped that the buffer stock authority, which includes mills and banks, would be able to block funds for some time.

In an attempt to maintain the minimum prices, the I.J.M.A. has issued a purchase quota of one million maunds for the week ending 27th January. The quota for the week ended 20th January was 900,000 maunds, and actual purchases exceeded this quota. In the course of a handout, the I.J.M.A. has explained that, having regard to increased arrivals, the weekly quota has been progressively increased. The minimum quota has been in force since the past eight weeks and, for the seven weeks up to 13th January, the quota released amounted to 4.7 million maunds, whereas actual purchases by mills aggregated 6 million maunds or 1.3 million maunds more than the total quota. This has naturally put mills into financial strain as well as created storage problem. The fact there is little demand for forward goods and whatever demand is there is centred around ready and near delivery goods has accentuated the financial problems of mills. Further, the several restrictions in force in the futures market prevent mills to hedge beyond a month in goods. Although the restrictions in the futures trading have largely contributed to putting down speculation and to that extent stability in prices of both goods and fibre has been brought about, it is suggested that, considering the huge stocks of fibre with mills, they should be allowed to hedge for a period greater than at present, which will ease their financial problem to an extent. In turn, they will be enabled to increase purchases of fibre. Some criticism has also been heard on the methods by which the Government has decided that Rs. 30 basis Assam bottoms should be the minimum price. Since the mills had incurred heavy losses by paying high prices in the last year—Assam bottoms reached a high of Rs. 56 a maund in March 1961—they should be allowed the benefit of the lower cost of production for fibre in the higher crop. The fact that fibre is often quoted at a discount and that stockists are very keen for business suggests that minimum prices are capable of revision. After all, capital has been invested in mills for profit and, when mills incurred heavy losses in the days of fibre shortage and shareholders took it as part of the game of investment, it is unfortunate that the opportunity to recoup the losses is not allowed to be fully utilised by mills.

In the last few weeks, overseas demand for hessian has no doubt increased and, although it is evident that hessian is beginning to re-capture some of its markets lost to substitutes in the U.S.A., the argument of Mr. L. Kanoria, who recently addressed the Jute Balers Association that past experience has already shown that substitutes, however much favoured, have not been able to reduce the popularity of jute goods permanently anywhere is not unanimously shared by the industry. Substitutes such as paper bags have much benefited by recent researches and, though they cannot be put to the same uses as hessian, it is on the maintenance of fair prices the future expansion of the overseas market for Indian goods depends.

In the fibre market during the week, prices remained unchanged as follows: January-February delivery: Assam bottoms Rs. 30.00 a maund, *daissee* bottoms Rs. 32.00 and Northern bottoms Rs. 29.50. There were reports of offers at a discount of Re. 1 to Rs. 2 a maund and mofussil markets were weak. Despite the reduction in E.P.C. rates in Pakistan by £3 a ton in export firsts, £2 in D.T.C., £5 in export lightnings, £5 in outport tossa 2/3, £3 in Dundee tossa 4, and £5 in Dacca tossa 6, business taking place in the Narayanganj market had been small. Buyers were not satisfied with these cuts, and demanded a further reduction of £2 a ton. However, offers at a discount were not forthcoming, and this demonstrated traders' co-operation with the Pakistan Jute Board in the latter's efforts to stabilise prices. It was expected that, if the present lull continued for a week or two more, overseas buyers by sheer necessity to replenish their stocks would be obliged to come to the market at E.P.C. rates.

In the Calcutta goods market, on Tuesday last, prices declined as purchases were lower. Ready B. twills fell from Rs. 126.25 to Rs. 126.00 and ready hessian 40" 10 oz. from Rs. 55.50 to Rs. 55.25. It was thought that overseas buyers were holding out in anticipation of a fall in prices, now that the I.J.M.A. has removed all restrictions on output and mills are expected to operate to full capacity if only to ease the high fibre stocks. On Wednesday also, overseas buyers preferred to remain idle. However, some covering business in non-standard hessian took place, but this did not prevent prices from moving down. Hessian 40" 10 oz. receded to Rs. 54.00 and in sympathy B. twills to Rs. 125. On the following day, with very little activity, hessian 40" 10 oz. was unchanged at Rs. 54, while B. twills fell to Rs. 124.75. On Friday, apart from some buying of B. twills on Government account, there was very little to note. B. twills moved down Rs. 123 and hessian 40" 10 oz. to Rs. 53.50. Over the week-end, some covering business was done in hessian, as business was reported with Argentina and the United States. As a result, hessian 40" 10 oz. recovered to Rs. 54.25; however, B. twills eased to Rs. 122.75, as apart from buying on Government account, there was no other support.

"KHANDSARI" DECLINES

(From Our Own Correspondent)

HAPUR, 22nd *January*

The sugar market continued to depict a divergent trend this week also. While bold white crystal variety improved further, thanks to brisk buying support from the Southern consuming areas as well as Delhi and Punjab, inferior small crystals sagged. All factories here in west U.P. were attracting heavy cane supplies. Week-end prices here were:—Wholesale Rs. 106.50 per bag; retail 97 nP per *seer*; mill delivery per maund E29 Simbhauli Rs. 37.85; Amroha D29 Rs. 36.25; Bijnore D29 Rs. 35.75; Modinager D29 Rs. 37.65; Dhampur C29 Rs. 37.37.

Total sugar production during December 1961 was 417,000 metric tons, as against 496,000 metric tons in the corresponding month last year and offtake during the month was 203,000 metric tons, which includes 21,000 metric tons despatched for exports, as against 169,000 metric tons (including 12,000 metric tons for exports).

Quietly depressed conditions were witnessed in the Muzaffarnagar market during the week, as demand was quiet and lower prices in South and east U.P. also acted as influencing factors. Inferior crystals of factories in west U.P. were quoted at a heavy discount, while bold crystal was getting premium from 25 nP to Re. 1 per maund. The percentage of recovery by U.P. mills, by 15th December 1961 is put at 8.70, as against 8.50 last year. Week-end prices were—A29 Iqbalpur Rs. 40.10; Lhaksar Rs. 39.54; B29 Deoband Rs. 39.97; Rohana Rs. 39.16; Shamli Rs. 39.70; C29 Deoband Rs. 39.09; Daurala Rs. 39.13; Dhampur Rs. 37.31; D29 Deoband Rs. 38.54; Dhampur Rs. 36.50; Lhaksar Rs. 37.06.

Slackness in demand and pressure of arrivals (put at 5,000 maunds daily) at Muzaffarnagar led to a fall of 50 nP to Re. 1.50 per maund in the prices of *khandsari* during the week. Manufacturers were getting cane at Re. 1.25 to Re. 1.31 per maund, but supplies were not heavy. Week-end prices were: *Desi khandsari* moist Rs. 25 to Rs. 29; dry Rs. 30 to Rs. 32; crystal Rs. 30 to Rs. 32.50; *khandsari boora* Rs. 35 to Rs. 36 a maund.

Gur improved fractionally towards the week-end, thanks to revival of loading facilities to consuming areas of South, offtake in the last two days being 25 wagonloads to Gujarat and Saurashtra. Daily arrivals during the week were small at an average of 4,000 maunds, following inclement frosty weather. Total arrivals during the current season at 3.5 lakh maunds here were less than the corresponding figure last year at 3.80 lakh maunds. There has yet been no stocks and latest prices were *pansera* best Rs. 14.25; *dara* Rs. 13.50 to Rs. 13.87; *balti* Rs. 14.50; *shakker* Rs. 17 a maund.

Brisk demand for *gur chaku* from Punjab and the South accounted for hardening trend in prices in the Muzaffarnagar market. *Gur ladoo* was in demand from east U.P. and Bihar and week-end prices were fractionally higher than corresponding prices last Monday.

Gur futures were perfectly bullish during the week. The latest quotations were at best level of session on continued bull support. Fagun was quoted today at Rs. 14.14, the highest of the session, as against Rs. 13.66 last Monday.

Preparation of land for next cane sowings is now in full swing. Actual sowings will commence after a fortnight.

CENTRAL BANKS AND GOVERNMENTS

(*Concluded from page 145*)

posal of the Radcliffe Committee that changes in the Bank Rate should be expressly announced as having the authority of the Chancellor of the Exchequer. There has never been any occasion to issue written directions to the Bank. No information is available about the discussions between the Treasury and the Bank, because the tradition in the U.K. has been to keep discussions between the two confidential, but it may be assumed that, in the typically British way, there is a good deal of give and take.

British and U.S. Systems

While the British law leaves the Bank of England structurally subordinate to Government, the Australian law gives the Reserve Bank of Australia a somewhat superior position. In the event of a difference of opinion between the Board and Government, which cannot be resolved by discussion, the Board has to submit a written statement containing its views, and the Government may thereupon overrule the Board and declare its own policy expressly taking responsibility for such policy. The papers including the Board's statement have thereafter to be submitted to Parliament. This is an important difference from the British position, in that differences between Government and the Reserve Bank of Australia have formally to be brought before Parliament.

In the U.S.A., the main policy making body in the Reserve System is the Federal Reserve Board at Washington consisting of seven members appointed by the President with the approval of the Senate for a period of 14 years. But, following the pattern, familiar in American costitutional practice, of introducing checks and balances, so that no single authority can assume overriding authority the law gives no power to the President to issue directions to the Board. It appears, however, that the Board is also independent of the Congress in the sense that Congress cannot give it directions. To people accustomed to British and Indian constitutional practice, it is not easy to say in precise terms where exactly is the centre of power in the U.S.A. in regard to monetary policy; it appears to lie in the Federal Reserve Board. A Congressional Committee, which reported to Congress on the subject, usually called the Patman Committee, described the situation as follows:

> "The independence of the Federal Reserve System is desirable, not as an end in itself, but as a means of contributing to the formulation of the best overall economic policy.... The independence of the Federal Reserve System must be an independence *within* and not *from* Government."

But while the law may vary from country to country, the whole tenor of legislation in recent years has been, while setting out the need for monetary stability, to emphasise that monetary policy must be in harmony with the broad social objectives of full employment and economic growth and that consequently, the location of the ultimate responsibility for monetary policy must vest in Government.

Pre-requisites

It is manifest that satisfactory working arrangements between Government and a Central Bank can only be established if the following conditions are fulfilled:

(*a*) Government must have confidence in the Central Bank and its Governor and in turn the Central Bank must be conscious that Government is directly answerable to the people and recognise the Government's ultimate responsibility.

(*b*) The establishment of cordial relationship should not be at the expense of the Governor's ability to be forthright in the expression of his views even to the point of being considered difficult. It would be fatally easy for a Governor to have the pleasantest relationship with the Treasury by just subordinating himself to Treasury views. As Montagu Norman said "I look upon the Bank as having the unique right to offer advice and to press such advice even to the point of nagging; but always, of course, subject to the supreme authority of the Government."

(*c*) The Treasury should not interfere with the operational or administrative responsibilities of the Bank, so long as the general policy pursued by the Bank is in harmony with Government's economic policy. In this connection, may I recall an incident which happened when I was Home Secretary to the Government of India working with Sardar Patel? After two or three months of working with him, I said to him one day that I was very pleasantly surprised that only in two cases out of some 3 or 4 hundred had he disagreed with me. He replied: "That is quite wrong, I did not agree with you in quite a number of other cases." And he mentioned a few. "But," he added, "I did not express any disagreement on the file for two reasons: First of all, the matters at issue did not raise important issues of policy; they were relatively unimportant. Secondly, if I had disagreed with you formally on the papers whenever I felt that I would myself have taken a different view, your prestige in the department would have gone down and your status as Home Secretary would have suffered." This incident taught me one of the most valuable lessons in the art of administration, namely, that quite often what matters is not the exercise of power but restraint in its use. In this context, I should mention that so far no directives have actually been issued by Government to the Reserve Bank.

It is of the essence of sound working relationships between a Treasury and the Board of a Central Bank that the Board should consist of people who are independent and who feel that they can express their views with candour and without fear. That is the case in the U.K. But the extent of Government's control in India in economic matters is vastly more comprehensive than in the U.K. Having regard to the stage of economic development through which we are passing, a planned and controlled economy is inevitable, whatever may be the arguments about particular forms and details of control. It follows, however, as a consequence, that non-official members of statutory Boards taken from industry and commerce, however high their sense of duty, may possibly, on occasions, feel somewhat inhibited in expressing their views with complete frankness. The fact that a Minister represents the power of the State which is pretty all pervasive in matters of industrial development and that the members of the Board have often to make requests for official sanctions under various enactments could possibly affect their relations in a manner which does not happen in countries less subject to control such as the U.K. If I may lift the curtain a bit on the proceedings of the Board of the Reserve Bank, our Directors have always shown notable candour and I believe this is welcomed by Government. I mention this point, however, because the maintenance of the independence of the Board cannot be assumed to arise automatically from its structure; it must continue to be consciously nurtured and welcomed.

In the U.K., the Bank of England is, by tradition, regarded as one of great status and independence. The Governor can be, and, possibly on occasions is, overruled by the political Minister, but the fact that he can be so overruled is merely incidental to the exercise of political power by a Minister responsible to Parliament. That does not come in the way of mutual esteem and camaraderie. This situation has evolved in the U.K. as a result of long years of a highly developed administration. In India, we are passing through the aftermath of a great political revolution culminating in independence. The maintenance of good relations between a post-revolutionary Government and institutions charged with responsibility for monetary stability is often a matter of considerable difficulty, because the former are naturally anxious to achieve changes in the social order with rapidity and the latter, by tradition, are inclined to caution. Fortunately, in the handling of this problem so far as Government and the Reserve Bank are concerned, adjustments have taken place with a great deal of mutual understanding. I mention the point, because, here again, the result is not automatic and has been the result of conscious effort on both sides.

Peep into the Future

Taking a look into the future, there are four areas in which, as far as I can see, the need for accommodation of ideas may arise between the Government and the Reserve Bank:

(1) interest-rate policy,

(2) the volume of accommodation to be given to Government (deficit financing),

(3) the manner of handling sub-standard banks, and

(4) policy in regard to accommodation to co-operative institutions.

Any of these could form the subject-matter of a separate lecture and I do not propose to go into them in great detail. I will only advert to the nature of the problems in the most general terms.

(1) *Interest-rate Policy*

I have discussed in public on several occasions the question of interest rate policy. To recapitulate briefly—the structure of interest-rates in India is not a wholly integrated one; while the rates in the organised sector are relatively low, those in the unorganised sector are indeed high. While the dichotomy between the organised and unorganised sectors of the money market is not today as clear-cut as it used to be 20 or 30 years back, and the links between the two are growing, the unorganised sector finances a substantial part of internal trade and remains largely outside the purview of the Reserve Bank's control. The question, therefore, is not one of raising or lowering the whole complex of rates but of operating on varying levels of the market, with somewhat different purposes in view. Here again, the developmental aspects of the working of the Reserve Bank are as important as the regulatory aspects. In due course, one may expect a more integrated pattern, as the money market gets increasingly sophisticated, but this will take some time.

It is against this setting that the policy of the monetary authority has to be viewed. While active use has not been made of the Bank rate instrument as such, monetary policy has been adapted to the requirements of the economy from time to time in a variety of ways, especially through selective credit controls and more recently through the slab-rate structure. It has now become more stringent, with a view to dealing with the emerging inflationary pressures in the economy largely arising from the accelerated development programme. Accordingly, interest rates in the organised sector of the Indian money and capital markets have been stepped up; this is in part only a reflection of the state of the market. In view of the paucity of savings relative to the growing investment requirements, a rising trend in interest rates is normally to be expected, both for the public sector and for the private sector. On the other hand, not only here but in other countries, governments like to borrow at as low rates as possible, to keep down the interest burden on the exchequer. This becomes an important consideration, especially when the Government has a large borrowing programme over a period of years. Monetary policy has to adjust itself from time to time between these conflicting considerations.

It is difficult to forecast with any precision the developments likely to take place in India in the field of interest rates, though, so far as the private sector is concerned, a shift in direction has already clearly taken place. By the very nature of things, a constant process of adjustment between the Reserve Bank and Government would become necessary, more particularly with increasing demand for Plan resources as well as the growing sophistication of the economy.

(2) *Deficit Financing*

An expansionist bias in the economy and a tendency for prices to rise are to be expected from an investment programme that all the time is pressing on the resources position. It is the task of fiscal and monetary policies to keep this under control and to ensure maintenance of reasonable price stability, without inhibiting the growth process. This postulates that, as national income rises, the increase in money supply needs to be kept to the non-inflationary rates. An increase in money supply can be brought about by increasing bank credit to Government and to the private sector. An increase in bank credit to the Government constitutes deficit financing. The Economic Department of the Reserve Bank estimated, on certain assumptions, that deficit financing during the third Plan period should not exceed Rs. 550 crores; this is now a major policy decision written into the Plan. It is not a rigid position that would hold irrespective of other developments in the economy. Therefore, the Reserve Bank should continue to be alert and watchful of the emerging price situation in regulating bank credit to the private sector, and should also continually advise Government on the level of deficit financing that can be incurred from time to time. . . . Fortunately, in this matter, Government have shown praiseworthy restraint, but the situation will require continuous watching.

(3) *Sub-standard Banks*

As I have repeatedly stated, we have a sound commercial banking structure; in terms of deposits, over 95 per cent is held by well-run institutions, and the problem of weak units and their weeding out or reconstruction is confined to a small proportion of deposits. In regard to this reconstruction work, Government have the final statutory authority. When weak units are being dealt with, Government are faced with various political and other pressures from different quarters. This is understandable, but does not obviate the need for difficult and firm decisions. The approach of the Reserve Bank is necessarily guided in this matter, as also in regard to extension of banking facilities, by considerations related solely to the efficiency of the banking structure as a whole. The point likely to arise from time to time is the pace at which reconstruction or amalgamation should take place, the Reserve Bank having a bias in favour of speed and Government having to pay attention to local public reactions.

(4) *Co-operatives*

Then there is this challenging field of co-operation. For almost a half-century, the co-operative movement stagnated in this country, despite valiant efforts of a few non-official co-operators; such progress as was made was fitful and uneven, and hardly the fringe of the problem of rural credit was touched. It is only in the last decade or so that perceptible advance has been made, and the Reserve Bank has played no small part in this. We in the Reserve Bank believe, without any reservation, that co-operation is the best form of organisation for meeting the credit requirements of the agriculturists. Accordingly, we have been making a decisive and purposive incursion directly in the field of agricultural credit. Even so, credit provided through the co-operative organisation still forms only a small part of the total credit needs of agriculturists, but the problem of rural credit no longer seems intractable and the prospect is definitely encouraging. There are some who think that the Reserve Bank has been taking unusual and excessive hazards in extending credit to co-operatives. On the other hand, there are those who think that we are unduly cautious. When a major institutional change is being effected, the human element is important. In my view it would be highly imprudent to extend credit without taking into account the ability of the co-operative credit structure to absorb the assistance offered by official institutions, or to ignore the organisational deficiencies and operational weaknesses in the co-operative structure. There is possibility here of a real conflict of approach between those who think that even greater risks have to be taken than has been done hitherto and the Reserve Bank who take the view that the attempt should be all the time to help build up the co-operative structure on increasingly sound lines and to provide credit facilities only within the limits of their absorptive capacity.

In conclusion, I would refer to the statement made by the Finance Minister in the Rajya Sabha on 21st December 1957: He said, "The Governor of the Reserve Bank is not an officer of the Government. The Reserve Bank happens to be the supreme autonomous body that is created.... He is a non-official. He is entitled to criticise the Government, to differ from Government . . . we can, in matters where Government's policies are to be carried out, issue directives: but the Reserve Bank can hold a different opinion, though they have to act according to the directives issued by the Government for good reasons.... He is bound to carry out the direction, but, in doing so, he is entitled to tell me and also publish it in his report that the Government of India was advised in the matter...." I think this sets out very fairly the relative responsibilities of Government and the Reserve Bank at present and I have every hope that it will continue to be regarded as the charter for the vital role that the Reserve Bank would have to play in shaping the country's economy.

GOOD ENOUGH IS JUST NOT GOOD ENOUGH!

The work of standardization and certification is precise and exacting. Goods produced to standards qualify for carrying the ISI certification mark of the Indian Standards Institution.

Before, and even after, a licence for affixing the ISI mark on any product is granted, exacting tests and inspections are carried out at various stages of its manufacture. Certified goods are picked up from the manufacturers' works and sent to independent laboratories for testing. ISI inspectors constantly check whether the manufacturer is complying with required standards. Certified goods are also collected at random, from the distributor and the retailer, and tested for quality. Legal sanctions are available against abuse or unauthorised use of the ISI mark.

Nothing, therefore, is left to chance. With ISI "good enough" is just not good enough. For, the interest of the consumer as well as the good name of Indian industry have to be protected.
