REGISTERED OFFICE

186, GOLF LINKS, NEW DELHI-3.

CONSENT:

The consents in writing of the above named bankers, underwriters, brokers, auditors and legal adviser to act in their respective capacities have been obtained and filed with the Registrar of Companies, Delhi, and none of the said consents has been withdrawn.

UNDERWRITING COMMISSION AND BROKERAGE:

In terms of the agreements arrived at between the Company on the one hand and the Underwriters on the other, the underwriters are entitled to an underwriting commission of 2½ per cent on the nominal value of the Capital underwritten by them.

Brokerage at the rate of Re. 1 per Equity Share will be paid on all allotments made in respect of applications bearing the stamp of a Bank, a recognised Broker, including the Brokers to the issue. Brokerage on the same basis is payable to the underwriters in addition to the underwriting commission on allotments in respect of applications made or procured by them and bearing their respective stamps.

OBJECTS OF THE COMPANY:

The Company has been formed generally for the purposes set out in the Memorandum of Association and, in particular to manufacture barium compounds and salts and the incidental by-products.

COMMENCEMENT OF BUSINESS:

The Company has obtained the Certificate dated 4th September 1961 to commence business, after filing a Statement in lieu of Prospectus.

The Statutory Meeting of the Company is convened on the 2nd March, 1962.

IMPORT OF MACHINERY:

The Company is in possession of a Cash Sterling Import Licence of the value of £102,000 (*vide* Import Licence No. 991626/61 dated the 27th November, 1961) for the import of Machinery and other Capital Equipment.

Firm orders for plant and machinery required for the project have already been placed with the foreign technical collaborators and the necessary advance and letters of credit for full value both in Sterling and in Rupees, have been established in favour of the collaborators. It is expected that the complete delivery, erection and putting into operation of the plant and machinery will take place from nine to twelve months from now.

TECHNICAL COLLABORATION AGREEMENT AND PLANT & MACHINERY:

The Company has entered into a Technical Collaboration and Plant Supply Agreement with L. A. Mitchell Limited, Manchester (U.K.). Under this agreement they have, *inter alia*:

Guaranteed capacity and performance of the plant and machinery.

Guaranteed the quality of the chemicals produced to B.S.S. Standards.

Agreed to provide plant management and staff training for a period of 18 months.

The Project is the first of its kind in India. The plant as envisaged is expected to produce 4,550 tons of Barium Salts and Compounds like Blanc Fixe (Pigment quality), Barium Chloride (Tech. quality), Barium Chloride (B.P. quality), Barium Sulphate (B.P. quality), Barium Nitrate, Barium Carbonate, Barium Hydroxide, etc. Further, for the first time in India, 600 tons of superior grade Sulphur will be recovered annually as by-product. The plant has additional capacity for 1,800 tons of Barium Sulphide. Production cost of Barium Sulphide, Barium Carbonate and Sulphur is expected to be amongst the cheapest in the world. Consequently, the Company is expected to be in a position to compete in the world markets for the sale of Barium Sulphide and Barium Carbonate. These products are utilised in the manufacture of Caustic Soda, Paints, Glass and Ceramics, Pharmaceuticals, Chemical Industries and a number of other industries and also in the manufacture of Ammunition and Explosives.

The production is expected to replace the present imports and the annual foreign exchange saving and earning of this project to the country will be about £300,000.

The Company will also enjoy the Tax benefits applicable to new industrial undertakings.

CAPITAL OUTLAY:

The capital required by the Company to reach the stage of production is estimated as follows:—

	Rs.	Rs.
Payment to L. A. Mitchell Limited, Manchester, for supply of Plant, Equipment, Erection, Technical Know-how, Collaboration, Plant Management and Staff Training, etc. set out in the contract dated the 12th October, 1961		24,60,000
Land, Development of Land, Buildings, other Civil Engineering Works, etc. extra equipment and and provision for increase in process, duty, transport, etc. ...		15,75,000
Pre-Incorporation and Preliminary expenses		1,50,000
Expenses of this Issue:		
Underwriting Commission	1,00,000	
Brokerage	40,000	
Other expenses ...	35,000	
		1,75,000
Working capital		10,00,000
Total ...		53,60,000
SOURCE OF FUNDS:		
Equity Shares		50,00,000
Borrowings from Banks, other sources, etc.		3,60,000
		53,60,000

MINIMUM SUBSCRIPTION:

The minimum subscription in respect of the present public issue on which the Directors will proceed to allot is Rs. 40,00,000. This is the total amount of the present issue offered to the public. Subscription of the amount is assured, as the entire public issue has been underwritten.

PRELIMINARY EXPENSES AND EXPENSES OF ISSUE:

The Preliminary Expenses incurred by the Promoter, Sri P. N. Balasubramanian, in respect of the procurement of the Industrial Licence, Import Licence, investigation of the project and registration of the Company, etc. amounted to Rs. 1,50,000 which amount has been reimbursed to him by the Company.

The estimated amount of expenses of this issue including underwriting commission and brokerage is Rs. 1,75,000, the same are payable by the Company.

AUDITORS' REPORT:

The following is a copy of the Report of the Company's Auditors, V. Sankar Aiyar & Co., Chartered Accountants. They have given their consent to the issue of the Prospectus with the statement included in the form and in the context in which it is included. They have not withdrawn such consent before the delivery of the copy of the Prospectus for Registration.

V. SANKAR AIYAR & CO. Scindia House,
Chartered Accountants. New Delhi,
D/29*th January*, 1962.

The Barium Chemicals Limited,
186, Golf Links,
New Delhi-3.

Dear Sirs,

In accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act, 1956, we report that no accounts of the Barium Chemicals Ltd. have been made up in respect of any period since the incorporation of the Company.

Yours faithfully,
Sd/-
(V. Sankar Aiyar & Co.)

MANAGING DIRECTOR:

Sri P. N. Balasubramanian has been appointed as the Managing Director of the Company under the Articles of Association. The appointment has been approved by the Central Government by its letter dated the 5th December, 1961. The Managing Director will be entitled to a remuneration of 5 per cent of the net profits of the Company. The Central Government has stated that the proposal of paying a minimum remuneration of Rs. 50,000 per annum to him in the event of absence or inadequacy of profits, may be submitted to them after the present issue.

NATURE AND EXTENT OF DIRECTORS' INTEREST:

Sri P. N. Balasubramanian being a Promoter and Managing Director of the Company is interested in the reimbursement of preliminary expenses and the remuneration and sitting fees payable to him as Managing Director.

The Directors other than the Managing Director are interested to the extent of the commission of 3 per cent of the net profits of the Company, which will become payable to them on the special resolution being passed at the Extraordinary General Meeting and the same being approved by the Central Government. Each of the Directors is also interested to the extent of the Shares subscribed, allotted, or to be allotted to him in the Company as also in the sitting fees receivable for attending Board Meetings or Committee Meetings.

Sri S. B. Bilimoria, a Director, is a partner in the firm of Batlivala and Karani and is therefore interested in the underwriting commission and brokerage payable to them.

PAYMENT TO PROMOTERS:

No payment has been made or is proposed to be made to the promoters of the Company except reimbursement of the preliminary expenses incurred by Sri P. N. Balasubramanian. No profits or benefits have been given to any person or promoters of the Company.

STIMULATING OFFTAKE OF TEA

PROMOTION AND TAXATION NEED LOOKING INTO

By K. Ghosh

PRESIDENT, TEA PACKETERS' ASSOCIATION OF INDIA

THERE has been a complete change in the tea market since the formation of the Tea Packers Association of India in the closing months of 1960. The early months of 1961 were dominated by fears of shortage of tea, because of the serious drought affecting many parts of Northern India. These fears proved groundless but prices, including world prices, ruled high. It proved difficult to satisfy many longstanding foreign customers. From July 1961 onwards, it became increasingly obvious that the North Indian season 1961-62 was going to be marked by a bumper crop and the latest figures show an estimated increase this season of some 66 million pounds. South Indian crop also shows a small increase.

Crops in other producer countries, notably Ceylon and Pakistan, are also up and a world increase of 116 million pounds is the latest recorded figure. Prices have accordingly receded and may be estimated at around 70 nP per kg. below last year.

It was natural that this increase in crop should arouse fears, especially as the prices of some plainer tea fell very near to cost of production during December 1961. What is the point, people asked, in producing more tea if this is going to be the result? This 1961 crop is only 770 million pounds. What will happen when the third Plan target is reached—900 million pounds?

I believe that some answer to these questions may be found in the behaviour of the market since January. Support from several overseas countries—old customers like the U.K. and U.S.A. and newer ones like the U.S.S.R. and U.A.R., combined with revived confidence in the internal market, have raised prices to more economic levels.

To fail to grow more tea means to surrender India's place as the premier tea supplier in the world. Without more tea produced, how can this great industry play its part in the expanding economy of our country? We must grow more tea. But must this achievement be accompanied by low prices and poverty or ruin to the weaker gardens? Emphatically not. This unhappy threat can certainly be avoided by two measures —promotion and adjustment of taxation.

Promotion

Dealing first with promotion—we are fully alive to the need for exporting teas more and more, because tea is one of the largest earners of foreign exchange for the country. Considering the urgency of foreign exchange, the Tea Board of India have addressed themselves to the task very seriously and set up various committees to look into ways and means of promoting Indian teas by extensive and effective propaganda in foreign countries. We are glad to note that the Tea Board has already sent Tea Advisers abroad, and more such Tea Advisers are to be sent to study the possibilities of selling more teas in foreign countries. Though the Tea Board are partners in the various Tea Councils abroad, yet, considering the urgency of our need, the steps which they have taken are, in my opinion, in the right direction and we do hope that the Tea Board will send some delegations to study the disappointing consumption of our teas as compared with those of other producing countries, such as Ceylon.

At the present moment, the Tea Board has suspended its propaganda in India. This may not, however, be desirable. May I remind you of the internal demands, particularly of plain teas. When people talk about promotion, their minds almost instinctively go to Government-sponsored promotion. Good though this is, I think more thought, perhaps more credit, should be given to the selling efforts of private traders, large and small. There can be no substitute for these efforts and the trade, particularly the export trade, would collapse without them. It is, therefore, not unreasonable to ask that taxation and other forms of Government participation in the industry be so arranged as to provide the minimum interference with the trader's efforts to sell more and more tea.

These efforts have not been without result. Shipments from North India so far this season are up by some thirteen million pounds. U.A.R., U.S.A., U.S.S.R., Turkey and Australia have all shown welcome increases.

Taxation

No responsible person will deny that a right-thinking and progressive Government must levy taxes. Nor can an industry which holds so high a position in the country's economy as does the Indian tea industry, expect to do other than shoulder its fair share of the burden. But taxation of tea in India is out of line with the trading conditions of the nineteen-sixties. There has been no fundamental change in the basic system of Central taxation since 1953—how different things were then!

Central Government taxation on tea is levied in three separate places: on the garden, at the time of export from our borders and at the time of packing for internal consumption—if the tea is packed. If sold loose, it incurs no further taxation. State Governments also im-

RAISING SUGAR INDUSTRY'S EFFICIENCY

REPLACEMENT AND MODERNISATION URGENT

IF the development of sugar industry in India is to be well balanced, it is imperative that vigorous steps must simultaneously be taken to improve conditions in both the primary stage (that is, sugarcane cultivation) and the secondary stage (that is, manufacture of white sugar in the factory). Although this aspect has been repeatedly stressed for a number of years now and well realised by the powers-that-be, the progress actually made has not been as encouraging as one would wish. Barring some improvement noted in the cane development zones, the yields per acre and the sucrose content in cane continues to be poor. It is, therefore, somewhat gratifying that the cane development schemes are being intensified under the third Five-year Plan at a total estimated outlay of Rs. 12 crores, as against the actual expenditure of Rs. 8 crores in the second Plan and Rs. 7 crores in the first Plan. No serious thought, however, seems to have been so far bestowed on the question of replacement and modernisation of equipment in sugar factories, even after the lapse of almost one year since the commencement of the third Plan. The urgency of this question will be evident from the fact that the existing plants and machinery in most sugar mills were installed nearly three decades ago and have undergone heavy wear and tear and are now due for large-scale replacement and modernisation. Moreover, with the rapid technological advancement in the world, a machine may be rendered obsolescent, long before it reaches the end of its working life, by the invention of new and improved types necessitating its replacement. These aspects have been impressively brought out by the Indian Sugar Mills Association in the course of a special note submitted to the Development Council for Sugar Industry. The note is based on a special study undertaken by the Association.

With a view to making a realistic estimate of the estimated expenditure on rehabilitation and modernisation, the Association arranged for the surveys, by reputed technologists, of 24 sugar mills in different parts of the country. The surveys related to the immediate replacement requirements for the next five years and do not provide for full replacements. Of the 24 units selected, 13 factories have undertaken expansion programmes and, in most cases, the programmes had actually been completed by the time the surveys were made. The sample is, thus, representative of the true conditions obtaining in the sugar industry and gives an accurate and realistic estimate of expenditure on rehabilitation and modernisation by the industry as a whole during the third Plan period.

It is estimated that, on an average, a sugar mill needs about Rs. 50 lakhs to rehabilitate and modernise its equipment alone. The calculation is made on the basis of 1959 prices of plants and machinery as quoted by the two consortiums of sugar mill machinery manufacturers in India. The factories selected for survey and the estimates of expenditure that will have to be incurred by them are given below:

(Rs. lakhs)

Raza 48.35; Maholi 43.18; Baheri 36.64; Rosa 33.22; Seohara 78.40; Dhampur 36.27; Bijnor 35.05; Saharanpur 40.90; Basti 59.05; Captainganj 34.05; Ramkola 61.91; Nawabganj 67.00; Burhwal 36.85; Diamond 71.35; Anandnagar 62.45; Sidhwalia 50.50; Motihari 43.15; Lauriya 53.40; Rajam 53.40; Hassanpur 58.30; Phagwara 27.45; Dabra 44.04; Jaora 44.34; and Mandya 86.55; total 11.95.50.

The above estimates do not include ancillary items and installation costs which together are put at about 25 per cent. It is necessary to provide for these costs, as well as for the subsequent rise in prices said to be of the order of approximately 12 per cent. Thus, the actual expenditure on rehabilitation and modernisation works out to about Rs. 70 lakhs per factory. In this connection, the Association has referred to the following estimates made by the Development Council:

Items of machinery	No. of units	Approximate cost (In lakhs of Rs.)	
		Per unit	Total cost
Mills, including engines, turbines, Edward accumulators, cane knife sets, etc.	Equivalent 30 milling plants	25.00	7,50
Continuous clarifiers	40	1.50	60
Vacuum filters	40	2.50	1,00
High speed automatic centrifugal machines	300	1.00	3,00
Turbo generator sets with switch board cables and other installation for semi-electrification	20×1,000 kw.	5.00	1,00
Boilers	....	6.25	2,50
Other equipment	....	..	9,40
Total	....	..	25,00

These estimates cover 30 milling units and 20 turbo-generators. The total expenditure for 40 units, according to the Association, will be Rs. 28.5 crores, or Rs. 70 lakhs per factory which almost tallies with the one calculated on the basis of the survey data.

The next question is as to how many units within the sugar industry are in need for rehabilitation and modernisation. In order to assess the same, the Association has classified the different units into three groups: (A) units that have not expanded at all; (B) units that have expanded but the actual expansion is only 30 per cent; and (C) units that have effected expansion by more than 30 per cent of their prior capacity. The total number of working mills installed before 1951 is 136, of which 67 fall in category A, 20 in B and 49 in C. The rehabilitation and modernisation outlay is said to be the same, that is, Rs. 70 lakhs per factory, in respect of category A and B mills, whereas it will be lower at Rs. 35 lakhs for C group units. On this basis, the aggregate outlay is estimated at Rs. 78.05 crores.

The foregoing account gives an idea of the magnitude of the problem of rehabilitation and modernisation of the sugar industry. As against the estimated total outlay of over Rs. 78 crores, the resources actually available with the industry are stated to be just a few crores. The problem of meeting the rehabilitation requirements has been rendered particularly difficult in the present context when sugar prices are ruling low and a large part of the money is locked up as working capital, due to the continued heavy accumulations of stocks with most mills. In the circumstances, the Government should, as the Tariff Commission had rightly urged as early as in 1959 (*vide* report on the cost structure of sugar and fair price payable to the industry), make the necessary arrangements for making available financial assistance to the units in sugar industry on lines similar to those made for cotton and jute textile industries for purposes of renovation and modernisation.

SUGAR CONSUMPTION

The Standing Research Advisory Committee of the Development Council for Sugar Industry has constituted a sub-committee to examine in great detail the question of drawing up an intensive programme of research for sugar industry. The appointment of this Committee has followed the suggestion put forward by Dr. V. Subramanyan, Director of the Central Food Technological Research Institute, Mysore, and member of the Standing Committee. In a letter addressed to the Council sometime ago, Dr. Subramanyan underlined the importance of giving "considerable thought" to the need for increasing consumption of sugar and its possible use in the manufacture of chemicals such as citric acid and stable plastic compositions. He also wanted an intensive programme for the increased use of sugar by-products, particularly manufacture of paper from bagasse and utilisation of molasses for various purposes. The relevant observations of Dr. Subramanyan are reproduced below:

"Finding increased use for sugar in various forms in the country itself. Apart from providing incentives for increased consumption of sugar in the homes and in various eating places, we should also try and find various industrial uses for sugar. This will require a good deal of thinking, because, in a fair number of cases, white sugar will have to compete with other raw materials. Thus, metal-free sugar will be a better raw material for the manufacture of citric acid than molasses. The possible use of sugar for attractive and stable plastic compositions has already been thought of and we will have to think of them not only for internal use but also for purpose of export. There is lot of scope for the creation of artistic compositions which may find buyers in other countries. There is considerable scope for

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA,

We, the undersigned Auditors of the State Bank of Travancore appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959 do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1961.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Head Office and the certified returns from Branches, which Returns have been incorporated in the above Balance Sheet and Accounts and report:

(i) that the chitty liabilities and a part of the chitty assets equal to the amount of such liabilities are shown as contra and the balance of "chitty assets over liabilities" is shown under "Other Assets including silver" in the Balance Sheet;

(ii) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(iii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iv) that the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(v) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(vi) that the Profit and Loss Account shows a true balance of profit for the period covered by such account;

(vii) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and

(viii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

TRIVANDRUM, 22nd January, 1962.

HANDICAPS OF TEA INDUSTRY

MR. BAM ON EXPORT DUTY

TEA prices have staged a recovery lately, though the actual extent of recovery has not been marked enough to make up for the losses suffered last year. The latest available average export price at Calcutta is Rs. 4.54 per kg. (exclusive of excise duty), as against Rs. 4.17 early in January and Rs. 4.87 a year before. Similarly, the tea (dust) offered for internal consumption stands at Rs. 4.96, as against Rs. 4.90 and Rs. 5.18, respectively. Tea at Cochin has also tended to move up as the accompanying table shows. The recovery in prices is rather significant, considering that the year 1962 began with a large carryover stock, almost equal to half of last year's record crop of 768 million lbs. It must, however, be noted that, as compared with the previous year, the prices now being realised are lower. Referring to this point, Mr. A. S. Bam, Chairman of the Tea Board, stated, in his speech at the twenty-first annual general meeting of the Calcutta Tea Merchants Association last week, that, in a year of record crop, the average prices realised were "not unreasonable." There is some force in this point, because a larger crop serves to compensate to some extent for the fall in prices. But the most relevant point here is whether this compensating factor is sufficiently strong to cover the ever-rising cost of production, thanks to the pressure of wage demands and the expenditure which the Government social policy enforces. On top of it, there is the multiplicity of local and national taxes. It was to these trends, as well as to the shortage of supplies of necessary raw materials (such as fertilisers and coal) and transport facilities that Mr. N. Stenhouse, President of the Bengal Chamber of Commerce and Industry, drew pointed attention at the last annual meeting of the Chamber.

It is somewhat unfortunate that the handicaps mentioned above are present in an industry which earns for the country considerable foreign exchange—as much as Rs. 124 crores in 1961 out of the aggregate value of all commodities exported, namely, about Rs. 625 crores. How India has been steadily losing its dominant share in world trade in tea was well brought out by Mr. B. C. Biyani, President of the Calcutta Tea Merchants Association. India's share of sales to the most traditional markets, Britain and the U.S., Mr. Biyani declared, was going down, even though offtake by these markets had remained steady or even increased. Competition from other countries like Ceylon and Indonesia, he added, was on the increase and the present operational arena of foreign markets in which India had to fight this competition was by no means an easy terrain. He, therefore, urged that "a very carefully planned export promotion policy" was imperative.

In this connection, Mr. Biyani made a specific reference to the export duty and observed:

"Tea, in spite of being the most conventional of India's export commodities, has been subjected to more than its legitimate share of taxation. The multiplicity of taxes is so designed that the exports of teas from India suffer a serious handicap as compared to the offtake of the commodity within the country. This also tends to give indirect protection to other producing countries, thus enabling them to fill the gap created by reduced exports from India. The export duty over and above the zonal excise creates a handicap of as high as 44 nP per kg. of tea in an average price structure of Rs. 4.50 to Rs. 5 per kg. and works out to approximately 10 per cent. Such a position is difficult to understand viewed against Government's endeavour to encourage exports of even non-traditional items through direct incentives even without charging any excise duty. This burden on export teas is really crippling. To say that an old tax is no tax does not apply in the present circumstances when there is need for a positive approach to export promotion. There is no reason why teas for export should not at least be at par or even better placed in comparison with teas for internal consumption, as far as taxes go, when for other commodities incentives are being offered for export. India today is far from having a monopoly of the world tea markets, which if she had, the present fiscal policy would have had some justification."

Apropos the aforesaid plea of Mr. Biyani, the Tea Board Chairman revealed that the Government was keeping a close watch on the incidence of taxes on tea in the background of adjusting the demand of the Government for more revenues with the industry's plea for relief. The Chairman admitted that grounds might exist for rationalising the taxes on tea, but he stressed that the Government also needed adequate funds for implementing the Plan. And he assured the industry that the Government would consider further relief if warranted by the situation.

It is thus clear that the authorities are still not in a mood to concede the industry's plea for a substantial reduction in export duty on tea. Perhaps the authorities feel that, when the tea industry could export a larger quantity of tea last year (452 million lbs., as against 430 million lbs. in 1960) despite the prevailing export duty, there is no reason why a similar performance cannot be had for the current year. But it must be said that the increase in exports during 1961 was at the expense of price. The average actual realisation from tea sold abroad in 1961 was no more than Rs. 2.66 per lb., as against Rs. 2.81 in 1960. There does not appear to be any wide scope for a marked recovery in export prices, what with the larger supplies from other producing countries like East Africa, Ceylon and Pakistan. By lowering the rate of export duty, the Government can certainly give a great fillip to exports of tea.

It is, however, encouraging to hear from Mr. Bam that effective quality control of tea and appreciable expansion in credit facility to foreign buyers, coupled with wider coverage by the Export Risks Insurance Corporation, have led to fewer complaints from buyers of Indian tea. It is equally encouraging to hear from him that the export outlook for Indian tea is not only not obscure but bright. Here is what Mr. Bam said:

"The export of Indian tea will not suffer by the entry of the U.K. into the European Common Market, as all the Commonwealth countries alike will suffer equally from the import duty that may eventually be levied on tea in the U.K. On the other hand, the possibility of increased intake of tea by the six original members of the E.C.M. may open fresh avenues for the export of Indian tea. Importers in these countries may be sounded in this direction right now.

"The bilateral trade agreements entered into with the U.S.S.R., East European countries, Italy, Egypt, Iraq, Tunisia, Afghanistan, Chile, Morocco and Japan have acted as new outlets for Indian tea. Besides, tea promotional activities, jointly with Ceylon and Indonesia, in the U.S., Canada and West Germany are now supplemented with separate promotional units in the U.K., Australia and Egypt to look after the interest of Indian tea. The steps are proving successful."

It is to be hoped that Mr. Bam's optimistic reading of the situation will be borne out by events. The tea planters, however, do not take such a rosy view, as will be seen from the article on this subject by Mr. K. Ghosh appearing on page 373.

While the world consumption of tea is bound to rise progressively in the coming years, world supply also is fast increasing. India itself will be producing 900 million lbs. of tea by 1966. There is, therefore, no gainsaying the fact that, if the Indian tea industry is to maintain its ability to compete in world markets and sell a progressively larger quantity, it must, as Mr. Stenhouse rightly emphasised, be sustained by an increased internal consumption, too. The consumption of tea in India is currently running at an annual rate of 300 million lbs. There is considerable force in the statement of Mr. Biyani that a big and growing domestic market for tea is a necessity, in that its acts as a cushion against unexpected vagaries of export markets.

REPORT OF THE AUDITORS TO THE STATE BANK OF INDIA

We have examined the foregoing Balance Sheet of the State Bank of Indore as at 31st December, 1961, and also Profit and Loss Account of the Bank for the year ended on that date with the Accounts and Vouchers relating thereto of Head Office and with the unaudited Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts.

We report that—

(i) in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) where we have called for any explanation or information such explanation and information have been given to us and have been found satisfactory;

(iii) the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit; and

(v) the Profit and Loss Account shows a true balance of profit for the year covered by such Account.

INDORE, 19th *January*, 1962.

STATE BANK OF INDIA GROWS FROM STRENGTH TO STRENGTH

SPEECH OF THE CHAIRMAN, MR. P. C. BHATTACHARYYA

NEED FOR GATHERING MORE DEPOSITS STRESSED

THE growth of deposits has to exceed the increase in credit demands, if, as is so essential, the resources needed for financing industry, trade and commerce are not in any way to be curtailed. This point was reiterated by Mr. P. C. Bhattacharyya, Chairman of the State Bank of India, at the Seventh Annual General Meeting of the shareholders of the Bank held at Bombay on Tuesday, 27th February 1962. The following is the full text of Mr. Bhattacharyya's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you all to this Seventh Annual General Meeting of the State Bank of India. The Report of the Central Board of Directors including the Bank's Profit and Loss Account for the year 1961 together with he Bank's Balance Sheet as on 31st December 1961 has already been circulated to you and has been taken as read.

"Following the improvement in 1960, the traditional business of the Bank showed further progress during the year under review. Average advances were higher by about Rs. 50 crores. In India, the advances portfolio reached a peak at Rs. 276.97 crores compared to the peak of Rs. 215.67 crores in 1960. Also, the rise in the lending rates, effected as from 1st October 1960, pursuant to the Reserve Bank's directive had its full impact during the year. Nevertheless, the income from interest and discount showed a small reduction due to the decline in the investment portfolio, cause mainly by the transfer to the Reserve Bank of a further sum of Rs. 72 crores of the U.S. P.L. 480 funds. It will be recalled that arrangements had been made for the transfer of these funds at Rs. 12 crores a month from July 1960 for one year. Simultaneously, there was also a reduction in the interest paid on deposits and the net position was in favour of the Bank.

"The net profit of the Bank, after making the usual and necessary provisions, increased from Rs 2.18 crores in 1960 to Rs. 2.71 crores in 1961. This, I am sure, would be considered satisfactory. The increase in profits has enabled us to raise the appropriation to the Reserve Fund substantially—Rs. 75 lakhs as compared to Rs. 25 lakhs in 1960—as well as to declare a final dividend which, together with the interim dividend distributed during the year, amounts to Rs. 23.00 per share. The net dividend has been completely restored and even improved slightly. The higher appropriation to the Reserved Fund was necessary in order to comply with the request made by the Reserve Bank of India to adhere to the convention which is sought to be built up for strengthening the capital structure of commercial banks. The contribution to the Staff Welfare Fund has also been raised.

Growth of Deposits

"I had stated last year that the demand for bank credit was continually rising and that there was need for making all out efforts to increase the deposits of banks. The experience of last year has confirmed this view. It gives some satisfaction to note that the stagnation which had been witnessed towards the latter part of 1960 soon disappeared and 1961 did show a rise in total deposits of all scheduled banks of about Rs. 169 crores excluding P.L. 480 deposits. This compares favourably with the previous good years. In our case too, the growth in normal deposits over the year was of the order of Rs. 38 crores, which, though somewhat less than in 1960, a year which was unusual, was better than in any of the earlier years. This rate of growth will, however, require to be considerably improved upon, if the banking system is to be geared to meet the demands made on it by the Third Five-year Plan. The Plan postulates that the banking system should not only be able to meet the increasing needs for financing trade and industry, but that it should also contribute to public borrowings to a substantial extent. This is not, however, happening in actual practice. In our case, the accretion to our normal deposits both in 1960 and 1961 had to be fully utilised for financing trade and industry. The same position, I believe, obtained with other banks. This is not wholly satisfactory. Not only might this affect the liquidity of the banking system in the future but the lack of the required support for the securities market would ultimately affect the development of the national economy adversely. It is necessary that the banking system should be able to invest a reasonable proportion of its additional deposits every year in new investments. The growth of deposits has, therefore, to exceed the increase in credit demands, if, as is so essential, the resources needed for financing industry, trade and commerce are not in any way to be curtailed. I would, therefore, emphasise again the need for the banking system to continue the drive for promoting banking habit in new areas and for generally increasing bank deposits, with all the force at its command. Perhaps, the situation demands a concerted effort to increase the deposits by all banks, in a co-operative manner. If this idea commends itself to other banks, we shall be happy to lend support to such a venture.

Effect of Interest Rates

"The question as to the extent to which an increase in interest rates leads to an increase in deposits is very much before the banks at this moment. In my speech last year, I had referred to the fact that, as an experimental measure, the rate of interest on savings bank deposits had been raised by us to see whether this would assist in attracting more deposits from rural and semi-urban areas. I am glad to report that this experiment has shown some good results. The accretion to savings bank deposits during 1961 was of the order of Rs. 8 crores, compared to Rs. 5 crores in 1960, and to an average of about Rs. 2 crores in the earlier years. There is, however, a limit to which deposit rates can be raised, as they have to be in line with the overall structure of interest rates in the country and also take account of the financial position of each individual bank. It is also obvious that a continuous increase in interest rates cannot go on resulting in an increasing growth in deposits. The truth, as usual, lies somewhere in between and just as it is necessary to experiment with interest rates, it is also necessary to try other possible measures such as, better customer service and wider coverage of depositors, if the desired growth in deposits is to be achieved.

Special Credit Transfer System

"One of the measures of customer service recently introduced by us has been referred to in the Annual Report. This is a special credit transfer system, which is intended to cater to certain personal needs of our customers in the lower and middle income groups. The scheme in its present form operates in a limited way. It would, of course, be reviewed in course of time to see how far its scope can be enlarged and whether it can be supplemented by other measures. The large branch expansion programme undertaken by us has already assisted in spreading the banking habit to some extent. We have now embarked on the Second Branch Expansion Programme. This should increase the coverage of our depositors still further. We have also, with the same end in view, made a beginning with the opening of additional suburban branches in big cities. These suburban branches would take the Bank nearer to the homes of the people and enable the Bank to cater to well-knit, compact units of community at a more personal level. The existing congestion and pressure of work at the older branches would be eased at the same time resulting in better customer service at those offices as well.

Branch Expansion

"The Annual Report refers to the recommendations of the Sub-committee appointed last year under the Chairmanship of Professor D. G. Karve for determining the future branch expansion policy of the Bank as well as our Subsidiaries and details the decisions taken in pursuance thereof. It has been decided to take up the major part of the second branch expansion programme towards the latter part of the quinquennium ending 30th June 1965. This would enable us to consolidate the results of the first expansion programme as well as to recruit and train up, sufficiently early, the staff required for the second. We hope to avoid any strain on our staff resources in this manner.

"The Annual Report also details the progress in respect of the other developmental activities of the Bank, and it is unnecessary for me to recapitulate them here. Generally speaking, steady progress is being maintained in all fields. The credit advanced to small-scale industries has increased substantially and so has the assistance given to co-operative institutions. The working results of the Subsidiary banks have also shown further improvement in 1961. Their total deposits and advances have risen and their reserves have been strengthened. The State Bank of Mysore has declared a dividend of 10 per cent as compared to 9 per cent for 1960; the State Bank of Hyderabad and the State Bank of Travancore have maintained their dividends at 6 per cent and 5 per cent respectively; while the State Bank of Bikaner, the State Bank of Indore, the State Bank of Jaipur and the State Bank of Patiala which did not declare any dividends for 1960 have declared dividends of 6 per cent, 8 per cent, 6 per cent and 6 per cent respectively. In the case of the State Bank of Saurashtra no dividend was declared, as it was decided that its internal resources should be strengthened further before it started distribution of its profits.

Staff Training

"You would have gathered from the Annual Report that we have established a Staff Training College at Hyderabad to impart training to the members of our Supervising Staff. The first course is already more than half-way through. We have designed the course in such a way that in addition to being trained in banking in the technical sense, the trainees will also receive instruction and guidance on a variety of subjects of general importance, by means of which they should in course of time turn out as bankers in the widest sense of the term. The College is at present housed in a rented building but planning for the construction of buildings of our own has been started. We have also put into operation a scheme for imparting to the new entrants in the clerical grade a short course of initiation and general training. In addition, as in the past, selected members of our staff are being sent for training at other institutions at home as well as abroad. I hope that all these steps will ultimately lead to an improvement in the quality of our staff and better service to our constituents.

"I would now refer to two important events that have occurred since the commencement of this year. First, the Deposit Insurance Scheme has started functioning from the 1st of January this year. Originally, it had been decided that the deposits of the State Bank of India and its Subsidiaries would be excluded from the purview of the Scheme but that adequate contributions would be made by these banks to the Scheme in the general interest of the banking system. Certain difficulties were encountered in implementing this decision and accordingly, the Scheme finally adopted covers our Bank as well as our Subsidiaries in the same manner as other commercial banks.

Goa

"The other event of significance is the extension of our activities to Goa. Following the taking over of the administration of these territories by the Government of India, arrangements had to be made to meet the banking requirements of the Government and the population of these territories. We accordingly opened a branch of the Bank at Panjim, the capital of Goa, on 2nd January 1962. We have since opened three more branches at Vasco-da-Gama, Margao and Mapuca and one in Daman. One of our officers has also been appointed to act as the Custodian for the purpose of taking over and administering the affairs of the branches of the Banco Nacional Ultramarino. The demand for these services came upon us all of a sudden and I am glad to say that we have been able to meet it with the utmost possible expedition.

"The staff relations in the Bank have been generally good throughout the year. Our staff has continued to be active in organising sports, social and cultural activities at the branches and the Local Head Offices. The Award of the Tribunal that had been set up to adjudicate on the staff demands is not yet out but is expected shortly.

Since Nationalisation of Imperial Bank

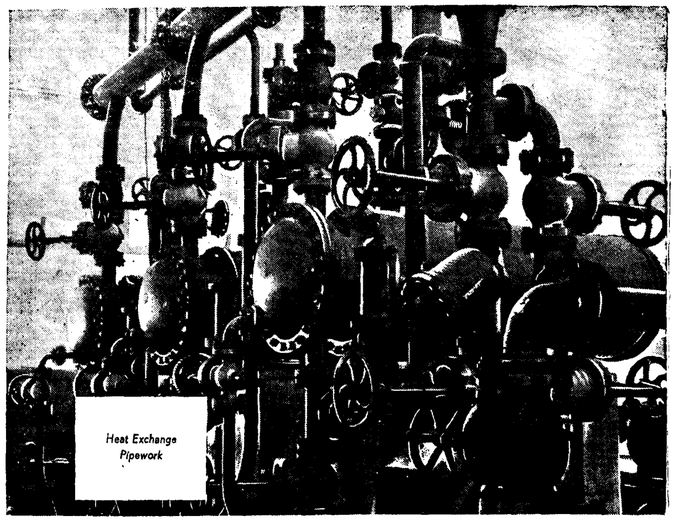
"This is the last occasion when I have the privilege of addressing the shareholders, as I shall be laying down my office and handing over charge tomorrow. I trust, therefore, that you will bear with me, if I make a brief reference to the development of the Bank during the period I have been associated with it. It was barely twenty months after the formation of the Bank on nationalisation of the erstwhile Imperial Bank of India, when I took over on the 1st of March 1957. The experience and traditions inherited from the Imperial Bank no doubt played an important part in the smooth transformation. But I owe a great deal also to the parts played by my predecessors, Dr. John Matthai, who is unfortunately no longer with us, and Shri H. V. R. Iengar, his successor. The total deposits of the Bank in India then stood at Rs. 223 crores, having risen from Rs. 188 crores as at the inception of the Bank. Total deposits exclusive of the P.L. 480 funds now stand at Rs. 361 crores. The advances portfolio has also almost doubled itself and now stands at Rs. 272 crores. The form and content of the credit portfolio has also undergone a considerable change; it is now predominantly industrial, as advances to industry now comprise as high a proportion as 71 per cent of the Bank's total advances as compared to 57 per cent in 1957. The services which the Bank is rendering to the private sector are illustrated by the fact that, of the total advances, about 92 per cent relate to this sector. The developmental activities also gathered good momentum during this period. There are now 959 offices of the Bank in India compared to 538 in December 1956 and 466 at the inception. This wide network of our offices is supplemented by 490 offices of the eight Subsidiaries which the Bank took over during the period. In addition, four minor State-associated banks were amalgamated. The Bank has thus grown from strength to strength. On the basis of deposits, the State Bank of India now ranks fifty-third, amongst the largest banks of, what is called, the free world. It is my earnest hope that the Bank would continue to grow still stronger in times to come and discharge its obligations in all spheres, playing, as it has been, a major role in the development of the national economy.

Need for Hard Work

"All this has, of course, been possible only with the support and the wise counsel I have always received from the Directors on the Central Board as well as from Members of the Local Boards, and because of the team-work of the staff at all levels. I can but express my gratitude to the Directors and Members; in particular, I would like to thank Prof. D. G. Karve, the present Vice-Chairman, who is also relinquishing his office tomorrow, and the Managing Directors, especially Shri S. P. Puri who was associated with me for over four years and has only recently proceeded on leave preparatory to retirement. I must also thank all members of the staff at all levels for their co-operation, and, at the same time, congratulate them on the *esprit de corps* displayed. In the conquest of obstacles and the realisation of objectives, there is no alternative to hard work and single-mindedness. Much more has yet to be done to vouchsafe newer and wider horizons, and the need for hard work is at no time greater than during the coming phase of development not only of the Bank but of the country itself. I am sure, our staff will continue to strive and will meet the increasing demands that will be made on them in future with ingenuity and resourcefulness to achieve the objectives of this great institution.

The New Chairman

"Shri Venkatapplah, who will be taking over from me tomorrow, is not new to the Bank, associated as he has been with us as a Director since its very inception. It gives me very great satisfaction that I shall be leaving this institution in his capable hands, and I am sure, he will receive full support and co-operation from all quarters."



S&L

make it

This is an S & L pipework installation—a part and parcel of the rapidly growing Indian industry.

S & L undertake fabrication and installation of the pipework, as well as the design work entailed in the engineering of the piping systems. Our years of experience gained on projects so far completed in India, plus the extra attention that has made S & L so well-known for quality and dependability, assures you of complete satisfaction.

Whatever your project—a Steel plant, Power Station, Paper Mill, Chemical plant, a single item or a complete installation—call for S & L.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1961.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purposes of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

5th February, 1962.

S. B. BILLIMORIA & CO.,
RAY AND RAY,
Auditors.

It is comparable with the figure of Rs. 78,37,098.89 being the profit for 1960 after deducting provision for taxation Rs. 25,00,000 from the figure of profit, subject to taxation, of Rs. 1,03,37,098.89.

Note :—The Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance Sheet of The Bank of India Ltd. as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 29 Branches have been audited between us and 46 Branches by other Auditors.

(2) We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank ;

(d) the reports on the accounts of Branches audited by others Auditors have been forwarded to us and the same have been considered in preparing this report ;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the audited returns ;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

BOMBAY, 9th *February*, 1962.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1961, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance Sheets copies of the Balance Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1961

The Directors submit the Balance Sheet for the year ended 31st December, 1961. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

	£100		£100

Signed on behalf of the Board,

S. C. KOTHARI,
S. H. BRADFORD, } *Directors.*

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1961, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

NEW PRODUCTS AND PROCESSES

Diesel Truck

A NEW standard diesel truck, with tandem-drive bogie for extra high traction power and intended for heavy road transport of such loads as timber, building elements or machines, is being put on the market by a Swedish firm, AB Volvo, Gothenburg. Called the Titan DD, the truck has a total weight of 22 tons and a loading capacity of 15 tons. The tandem-drive bogie has two rear driving axles. The axles are equipped with no-spin lock differentials with pneumatically operated differential locks in between, which automatically lock the two driving axles in relation to each other on slippery roads. The four-wheel drive and the lock differentials in combination with the wheel suspension are, moreover, reported to result in an unusually low wear on tyres. Tests with the new vehicle have shown that the wear on the eight tyres of the bogie was only about one-third of that on the tyres of a conventional bogie truck under identical conditions. Titan DD is equipped with Volvo's largest diesel engine, TD 96 B, of 195 h.p. The rear axle gears and the five-speed synchromesh gearbox give the truck ten forward and two reverse speeds. The truck has power steering.

Bricks From Fly Ash-clinker

New use of industrial wastes like fly ash and clinker has been developed at the Central Building Research Institute, Roorkee. Bricks suitable for buildings have been prepared from Durgapur fly ash and local clinker by admixture with cement in the ratio 3:6:1 and pressing the mixture into mould at 22 per cent moisture level and 20 tons pressure. The compressive strength and drying shrinkage of such bricks after 28 days of water curing are about 1,175 lb./sq. in. and 0.07 per cent respectively. The bricks may replace ordinary clay bricks in those parts of the country where the quality of clay bricks is poor and the cost is high.

All-purpose Plastic Sheeting

Made in a range of pastel shades and in translucent or opaque material, a new P.V.C. sheeting is being made in Sweden by the Svenska Cellulosa Aktiebolaget Company. It is said to be sufficiently rigid to require no reinforcement, and yet is flexible and can be readily bent and mounted while hot. It is claimed to be flame-proof and easy to work and to be highly resistant to chemical action. Supplied with the necessary accessories, it can be used both by professionals and "do-it-yourself" enthusiasts for the making of various types of roofs and walls, and because it is both decorative and strong it is suitable for display stands and exhibitions.

Transmission System for Tractors

The David Brown 990 Autodrive tractor, reported to be the first of its type in the world fitted with automatic transmission, it is claimed, improves efficiency and productivity by between 10 and 15 per cent. The autodrive system, a unit which is partly hydraulic but predominantly mechanised, is built into a standard 52 b.h.p. David Brown 990 tractor and given two forward speeds—one giving 4 to 16 m.p.h. for light transport and road work and the other providing speeds of 1 to 6 m.p.h. for specialist jobs such as harvesting and cultivation. In operation the tractor virtually "thinks" for itself. The driver simply sets a dial to "automatic" and then engages the selected speed range. The new system selects the lowest speed ratio on starting from rest—thereby minimising the load on the transmission—and then changes automatically and without a pause to the higest and most efficient working speed possible according to load and ground conditions.

Timber Preservation

A British firm who design and construct plants for preserving and fire-proofing timber have further improved their equipment. Their latest vacuum-pressure plants are more compact and have a simplified layout to give a centralised control point for all the process valves, indicating and recording instruments, and electric controls. The plant works at a pressure of 200 lb. per sq. inch and the initial vacuum has been raised to 27/28 in. of mercury. When used for fire-proofing the storage tank is made into two separate compartments, different liquids being isolated for the preserving and fire-proofing processes.

Protective Wrapping for Pipes

A synthetic fabric tape coated with a plasticised coal tar pitch compound has been introduced by a British firm as a protective wrapping for pipes and joints located under corrosive conditions. Known as Denso coal tar tape, it is claimed to be particularly suitable for wrapping pipes buried in very abrasive rubbles, and is highly resistant to mineral, vegetable and animal fats and oils. The metal to be protected has to be thoroughly cleansed of dirt and loose oxide and primed with Denso coal tar primer. The tape is then wrapped around the pipe with the coated side to the metal. A bond between tape and metal is created during wrapping by flame heating and the completed wrap is flame heated and wiped to seal the laps and give a smooth finish.

"Air Curtain" Dampening of Shock Waves

"Air curtain" dampening of shock waves in underwater blasting has recently been tried out in Sweden on a construction project. The equipment was supplied by Atlas Copco, leading compressed-air specialists, who claim that this technique is particularly suitable in blasting operations in the proximity of bridges, piers and other submarine structures. The method was applied in conjunction with the construction of Gotaverken's new Arendal shipyard in Gothenburg. The contractors found that it was necessary to remove a further 500 cu.m. of rock in one of the newly-built and water-filled docks, which could not be emptied, and some sort of dampening was required in order not to damage a pump house at a distance of 50 metres (165 ft.) from the detonation site. Atlas Copco, which has previously pioneered the "bubble method" of keeping shipping lanes ice-free and purifying panting lakes by means of pressing compressed-air out of perforated plastic hoses laid on the sea bottom, adopted a similar technique for creating an air curtain. Three perforated hoses were placed concentrically in a semi-circle round the pump house, a volume of 85 cu.m. (3,000 cu. ft.) of air per minute being instantaneously fed through the hoses at the moment of detonation. The millions of air bubbles rising to the surface formed a protective curtain considerably dampening the shock waves. About 350 kg. of dynamite were used in the short-delay blasting operation. Special care was taken to sink the drill holes in such a way as to minimise the effect of the original shock waves as far as possible.

Quick Casting of Metal Pipes

A quick and efficient method of making cast metal pipes by pumping molten metal straight from a ladle into a vertical, cylindrical die has been developed by Stewarts and Lloyds, 41, Oswald Street, Glasgow, C.1. One end of the die is placed in the metal and the other end is attached to a sealed chamber containing argon, which prevents the metal oxidising. Pressure is then applied to the surface of the metal until it rises in the die to a predetermined height, after which the pressure is released, and most of the metal flows back into the ladle. Because of the low temperature where the metal contacts the die, it solidifies around the inside and remains when the metal from the centre flows back into the ladle. After cooling the tube contracts, and is easily removed from the die, which can then be water cooled, or if a series is being used in rotation, allowed to cool naturally, to achieve the necessary fall in temperature before the next cast.

Coal Crusher

A machine to break coal for coking plants has been made by Fraser and Chalmers Ltd., Erith, Kent. The crusher, powered by a 175 h.p. motor made by the General Electric Co., is the largest in the 'Bradford' range. It will receive run-of-mine coal up to 12 in. in size at a rate of 600 tons an hour and give a product size of 1½ in. Coal enters at one end of the slowly rotating breaker, and is lifted on radial shelves before dropping on to the heavily perforated screen plates and breaking. Broken coal is discharged through the holes in the screen plates while the refuse passes through the machine and is rejected. The screen plates can be changed to give a different product size. Other machines in this range are designed to service smaller plants.

Disposable Syringe

A disposable syringe, moulded in plastics, which can be used once only, is being produced by Needle Industries Ltd., Studley, Redditch, Worcestershire. The firm is now selling about 500,000 a week together with needles which also they manufacture. All syringes and needles are subjected to rigid testing after sterilisation. The syringes are moulded in a plastic called "Diakon" in two sizes, 2 mms. and 10 mms., and are supplied sterile in polythene envelopes giving a doctor or anæsthetist the facility of being able to tear open the envelope and having to hand immediately the completely sterile syringe with or without needle attached for immediate use.

Paints Made With Water

Paint resins that can be thinned to working consistency with water are now being manufactured on a full commercial scale by British Resin Products Ltd., Devonshire House, Piccadilly, London, W.1. They are being used to make weather and corrosion resistant undercoats and high gloss finishing paints for industrial use. To dry, the painted articles have to be baked in a dome sort of an oven. So, at the moment, they can only be used to finish industrial products ranging from typewriters to—it is hoped—aeroplanes and motor cars. These paints release no poisonous or inflammable vapours when they are sprayed or painted. Moreover, spray guns and paint brushes can be cleaned with water and badly sprayed items quickly washed off for a second attempt.

Flexible Insulator

A heat insulating material which is claimed to function at high temperatures (up to 1,000 degrees Centigrade) as well as cork does at ordinary temperatures and yet is both flexible and strong has recently been announced by a French organisation. The material, which can be wound round pipes or shaped to fit refrigerating vessels, is made by packing together a number of thin aluminium or nickel sheets that have been covered on both sides with a fairly thick and continuous layer of oxide. The aluminium insulation is said to be particularly suitable for use in nuclear engineering.

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA:

We, the undersigned Auditors of the State Bank of Jaipur, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at 31st December, 1961.

We have examined the Balance Sheet of the State Bank of Jaipur as at 31st December, 1961, and the Profit and Loss Account for the year ended upon that date with the accounts relating thereto of Head Office and with the Branch Returns duly certified by the Agents, which have been incorporated in the above Balance Sheet and Profit and Loss Account and report:

(i) That, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up, so as to exhibit a true and correct view of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanations and information have been given to our satisfaction;

(iii) that, the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) that, the returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) that, the Profit and Loss Account shows a true balance of profit for the year covered by such Account.

VOLTAS LIMITED WIDENING ITS ACTIVITIES

STATEMENT OF THE CHAIRMAN, MR. J. D. CHOKSI

VITAL ROLE OF DISTRIBUTIVE TRADE IN THE ECONOMY

THE Seventh Annual General Meeting of Voltas Limited was held at Bombay House, Bruce Street, Bombay, on Monday, 26th February 1962. In his statement to shareholders, circulated along with the annual report and audited accounts for the year ended 31st August 1961, Mr. J. D. Choksi, Chairman of Voltas Limited, gave a detailed account of the many-sided activities of the Company and the functioning of its all-India distributing organisation. Pointing out that distribution played a vital role in the economy, Mr. Choksi said that Voltas was widening its activities by adding new lines and new products to its already large distribution portfolio. Though firstly and primarily an importing and distributing concern, manufacturing was, the Chairman said, a major branch of the Company's activities.

The following is the full text of Mr. Choksi's statement:

"This statement on the Company's affairs rounds off a seven year span in this year of the gathering of the Constellations. Not a long period in the life of individuals, much less of corporations; but nonetheless in the ephemeral world of trade and commerce, to which we belong, where fortunes are made and lost every day, it is an innings of respectable dimension.

At this seventh milestone, I propose to describe to you the organisation of the Company, how it works, and enumerate its many-sided activities so that shareholders may have a more clearly defined image of Voltas.

What is Voltas? What do they deal in? A typical answer is: "They are airconditioning people, of course"! This is true as Voltas has become a by-word for airconditioning and refrigeration. However, the important airconditioning and refrigeration department represents only 13 per cent of our gross turnover.

I should describe our Company as firstly and primarily an importing and distributing house. We are not mere selling agents, or even sole selling agents, according to the normal understanding of that term. We purchase from manufacturers as principals and sell to clients in our own name. We normally hold ourselves responsible not only for selling a product, but also for its erection, where it is plant or machinery, and for elaborate after-sales-service. This is an important side of our activities often overlooked. For a buyer, who acquires a piece of complicated equipment, it is important to have the seller provide after-sales-service for many years. The legal restriction of a five-year tenure of distributorship, therefore, is hardly appropriate in our case and should not be made applicable to organisations like ourselves, since most plant and machinery have a longer life than five years and can best be served after sale by the manufacturers or their representatives. This is one of those instances where the Company Law ill serves the Indian importing house, which performs services such as ours, and discriminates against the Indian importing house in favour of his foreign rivals incorporated abroad.

Marketing and Distribution

Marketing and distribution, as far as we can foresee the future, must remain the most important part of our activities, because we are essentially a trading organisation. This trading organisation is divided into two main groups—one 'Engineering' and the other, for want of a better name, called the 'Marketing' group.

The Engineering group consists of six independent divisions, each of which handles a range of products which can be conveniently grouped or brought together into one division and handled as such by the staff of that division. Among these six independent divisions are the airconditioning and refrigeration division, the agricultural and construction equipment division, the mechanical division, the electrical division, the machine tool division and the textile and paper machinery division, each with its own specialists and technicians serving our nation-wide centres and our clients in the remotest parts of the country.

The Marketing group consists of two main divisions—one dealing in drugs and pharmaceuticals and the other in chemicals, vitamins and miscellaneous items of general merchandise.

Each of the divisions to which I have referred, while making use of the Company's central services, such as accounts, publicity, personnel, marketing services, liaison and warehousing, operates on an all-India basis under the control of general management. Each division is headed by a manager with wide operating authority, who is fully responsible for the business results of his division. The sales organisation of each division is tailored to satisfy the requirements of consumers. In some divisions, sales are made direct to the end-users or consumers; in others, the services of dealers, wholesalers, retailers and stockists, are utilised. The operation of some of these divisions depends on the provision of adequate personnel and facilities for continuous after-sales-service where these are required, since, in India, reliable service facilities are few or non-existent. Some divisions maintain a fully equipped all-India service organisation to serve the country-wide needs of our clients. The standing and reputation of our Company is due, in large measure, to the excellent after-sales-service provided to clients, large and small, for a wide range of equipment.

Regional Service

The central organisation, just described, with its trading divisions, is supported by widespread regional service units and stations. For a marketing and distribution organisation of our size and complexity this is essential, if we are to reach every distribution point effectively. We have, over the years, created and built up a network of such regional facilities and services which, we believe, is second to none. Its focal points are the large branches at Bombay, Calcutta, Madras, Delhi and Bangalore, which, in turn, are served by regional offices, area offices and service establishments within the territories of these branches. The branches themselves are again sub-divided into administrative units and into product-wise trading subdivisions. These operate under the control of the branch manager who is the chief representative in the area of the branch within the general framework of the policies laid down by general management and specific policies devised by the divisional managers in regard to the handling of their respective lines and products. Close co-operation is maintained in all important matters, between general management, branches and divisions to achieve speedy and quick service and smooth movement of the various complicated parts of the Voltas organisational machine.

Manufacturing Activities

I have given you a fair picture of the organisation covering our trading operations in the above paragraphs and I should now like to deal with the other major branch of our activities, namely, manufacture. I repeat what I have said on previous occasions that, in the context of our national Plans, the foreign exchange situation and the development of the Indian commonwealth of States within this continent of ours, we are firmly convinced of the necessity of promoting local manufacture. We have endeavoured to achieve this objective in one of three ways:

(i) by bringing about collaboration between foreign associates and suitable Indian manufacturers retaining for ourselves the distributorship of the locally made products in succession to the distributorship of the previously imported products;

(ii) by either ourselves, or our parent body, Tata Sons, associating with other foreign principals as partners in manufacturing ventures;

(iii) by undertaking certain lines of manufacture ourselves.

Local manufacture has made substantial progress. Many of our divisions have today achieved a position where more than 50 per cent of their business is in products of Indian manufacture as for instance, pharma division (94 per cent), machine tools (54 per cent), textile millstores (63 per cent) and airconditioning (52 per cent).

A programme for transfer and expansion of our facilities and lines of manufacture from the restricted area of Chinchpokli to the new Thana unit has been worked out.

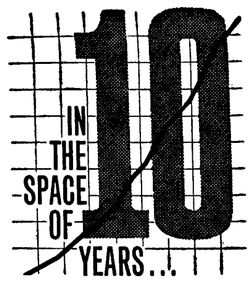
A number of obstacles lie athwart the manufacturing field. A manufacturing licence granted today by the Government does not commit the Government to import essential components and raw materials provided in the phased programme submitted in the licensee's application for manufacture. Consequently, every manufacturer today, who has to rely on even a small amount of imported components and raw materials, lives in constant dread of his requirements being cut substantially if not banned altogether. This is hardly an inducement for the starting up of new enterprises. Even while one appreciates Government's difficulties in the matter of foreign exchange, some way must be found if the country is to progress into ever widening fields of industrial activity. We, for our part, would prefer to see a stricter control over the grant of licences for new manufacturing units, which depend, to some extent, on imports of components and raw materials, rather than have these licensed in the first instance and then come to grief later for want of essential components or raw materials which can only be imported.

Widening Horizon

Your Company has made steady progress over the last few years both in the trading and manufacturing fields. In spite of severe import restrictions leading to the belief, in some quarters, that 'import houses have had it,' we are firmly convinced that there will always be room for a flexible, well balanced and well organised import organisation in India's economy. We refuse to consider our trading activities as a thing of the past or on the wane. On the contrary, we plan to consolidate and expand our position in this field. We hope to retain our pre-eminent position as importers and distributors and, at the same time, to strengthen our industrial base within the country. New fields, new products and an ever widening horizon with increasing pursuits and increasing activities—that is what sums up Voltas. We look forward to the future with well-founded confidence.

Once again, I will close, by expressing our appreciation, on behalf of the Board and all of you, of the excellent services performed by one and all within the organisation during the year."

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*



the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—*100 more than existed ten years ago.*

ELECTRICAL MACHINERY MANUFACTURE

INCREASING SCOPE FOR BOTH PRIVATE AND PUBLIC SECTORS

IT has been said that the manufacture of electrical equipment *closely* follows the planning for power generation. This is only partly true, in that, while the progress of electrical industries during the last decade has been substantial, the dependence of the country on foreign supplies of machinery and equipment has not been wholly eliminated. Still such progress as has been registered is heartening. For instance, the 28 units in the private sector manufacturing electric motors produced very nearly Rs. 10 crores worth of such motors in 1961, as compared with the production of Rs. 4.3 crores by 14 units in 1956. Secondly, power transformers for an aggregate value of Rs. 10.7 crores were manufactured by 17 units in 1961, as compared with Rs. 5.7 crores by 14 units in 1956. Thirdly, 24 units in the latest year manufactured Rs. 5 crores worth of switchgear and controlgear, as compared with just Rs. 45 lakhs by 12 units in 1956. Similarly, production of A.C.S.R. and V.I.R. and P.V.C. cables also registered big increases during the second Plan period. The value of output of A.C.S.R. cables in 1961 was Rs. 9.7 crores, as compared with Rs. 4.5 crores in 1956; the corresponding figures for V.I.R. and P.V.C. cables were Rs. 10 crores and Rs. 3.2 crores, respectively.

Some other features of this progress may be noted here. The feature pertaining to the manufacture of electric motors is that these, at present, are mostly in the small and medium ranges. In the field of transformer production, transformers upto 10,000 K.V.A. and 100 KV are now being manufactured. The demand for distribution transformers is being met almost entirely from indigenous production. In the field of switchgear and controlgear production, various types of electric motor starters are now being manufactured. In the case of low voltage switchgear, oil and air circuit breakers upto 1,200 amps. and also low-voltage iron clad switches and switch fuse units are being manufactured. As for high voltage switchgear, circuit breakers and switchboards upto 11 KV are being manufactured at present. A feature of A.C.S.R. and All-Aluminium Conductors production is that it is meeting, nearly fully, the requirements of power projects.

In the public sector, the Heavy Electricals Ltd., Bhopal, has recently commenced production. In the initial stage, it is to manufacture mainly switchgear from 11 KV to 132 KV, transformers upto 25 M.V.A., capacitors, controlgear and welding sets. Another public sector unit, namely, Hindustan Cables Ltd., Rupnarainpur, is the only firm manufacturing telephone cables now. In 1960, this unit also commenced manufacture of coaxial cables.

Notwithstanding all this progress in the private sector and in the public sector, the electrical industries have still to traverse a long distance, for the manufacture of more complex thinks like turbines, generators and heavier motors and large-size transformers, switchgear and controlgear is to be taken up only in the third Plan period. For instance, the capacity for the manufacture of large motors (higher horsepower and higher voltage motors) is yet to be established. This is being planned in the public sector unit at Bhopal. This unit will also be taking up, in stages, the manufacture of other specialised heavy electrical equipments such as turbo-alternators, hydraulic turbines and generators and large-size power transformers. As the factory at Bhopal, even when expanded for an output of Rs. 50 crores per annum, is not expected to meet the entire requirements of heavy electrical equipment needed for the fourth Plan, two more plants are proposed to be set up in the public sector. One of these would manufacture steam turbo alternators and their auxiliaries upto 25 M.W. and boilers; this is to be set up with Czech collaboration. The other plant envisaged would manufacture steam turbo alternators upto 100 M.W., hydro-electric generating sets and large-size electric motors, including heavy D.C. motors required for steel plants and other industries; this unit is to be set up with Russian collaboration.

By and large, the private sector is expected to concentrate on expansion of its capacity for the production of small and medium-range electric motors, transformers and switchgear and controlgear. Still it will have some scope for establishing capacity for heavier electrical equipment too. The Government has already announced that a few units of modest size in the private sector could be licensed for the manufacture of heavy electrical machinery and equipment. It is expected that, by 1965-66, a minimum annual production of Rs. 25 crores of heavy electrical machinery and equipment can be had from the units in the public and private sectors together. After all, the demand for such heavy machinery and equipment will be more than that target (Rs. 25 crores worth), and so the private sector, too, is expected to expand its capacity and production in the higher ranges. There is, therefore, no ground for the objection, raised by Mr. N. W. Gurjar in his presidential address at the fourteenth annual general meeting of the Indian Electrical Manufacturers' Association held at Bombay on the 24th instant, to the Government's proposals to set up two more heavy electrical factories in the public sector. Mr. Morarji Desai, Union Finance Minister, gave the following pertinent reply to this criticism at the meeting.

"Manufacturers of electrical equipment need have no apprehension about the emergence of a surplus of such products in India. In spite of the establishment of projects for manufacturing heavy electrical equipment in the public sector, growing power generation would push up the demand for electrical equipment. A shortage rather than a surplus is, therefore, likely to prevail for the next 25 years or so."

If the manufacturers are somewhat pessimistic on the score of future expansion, it is because they are currently working at below capacity in several lines. The present under-utilisation of capacity, which is a passing phase, is due to raw material shortages and transport bottlenecks and not to lack of demand. As far as raw materials are concerned, the heavy cuts in import licences for such items as ball bearings, insulation and tool and alloy steel have adversely affected production in the electrical industries. Mr. Gurjar had the following to say on this question:

"So far as raw materials are concerned, there have been heavy cuts in import licences for materials like ball bearings, insulation, tool and alloy steel etc. The supply position of copper wires, strips and bus bars has not been satisfactory and, because of this, the suppliers are not in a position to commit to any definite delivery period. Further, even essential materials like coal and coke which are available within the country could not be procured in time due to transport bottlenecks and shortage in production itself. I may mention here that there have been instances where coke had to be got by road transport over thousands of miles from the collieries in Jharia and I need hardly add how this increases the cost of production. Our accent in the third Plan period will be on the manufacture of special machines and apparatus and of larger ratings operating at still higher voltages. These items, because of their complexity and requirements of highly specialised materials and components, were not attempted during the second Plan period. Besides, by the end of the third Plan period, we have to reach production targets which are almost three times the present production rate. Development of this order will, therefore, necessitate adequate and regular supply of specialised and latest materials (such as in the insulation field) at reasonable price and of good quality. Unless these are rapidly developed in the country, imports are inevitable. Therefore, electrical industries' import needs should be liberally assessed and provided for. The Development Council for Heavy Electrical Industries, I believe, has made an assessment of the import requirements of the electrical industry and I hope the Development Wing will have no difficulty in assuring their regular supply in adequate quantities from imports and indigenous sources."

The Finance Minister, of course, could not find himself in full agreement with the above approach of the Electrical Manufacturers' Association. He emphasised the need for greater import substitution. In this connection, Mr. Desai criticised the tendency on the part of some manufacturers to prefer foreign raw materials and components on the score of their better quality and urged that indigenous substitutes, even of inferior quality, should be increasingly utilised. This advice is, of course, well meant and stems from his anxiety to conserve foreign exchange, but its feasibility can be decided only by experts. Quality of electrical products must be of a high order, if they are to serve the purpose for which they are meant. Poor quality and defective manufacture in vital products such as electrical will in turn affect the quality of production in industries in which they are used, and may lead to breakdowns and accidents that may dearly cost men and money. From the practical point of view Mr. Desai's advice seems to be of a dubious type.

Replying to another criticism by Mr. Gurjar, Mr. Morarji Desai disclosed that delays in sanctioning foreign collaboration agreements were partly deliberate, designed to spur the Indian entrepreneur to seek ways of manufacturing products entirely with indigenous resources and talent. But he also admitted that such delays were partly due to the inefficiency of the bureaucratic machinery.

In Mr. Gurjar's address there was a reference to the duplication of capacity in some lines in the Defence Department. The relevant passage is quoted below:

"In all advanced countries, the Defence Department takes full advantage of the engineering talent and research facilities available in the industries of the country and, when I visualise the spare capacity in the industries, I sometimes wonder why similar advantage is not being taken of the engineering talent and capacity in the private sector in our country also. I am particularly referring to this because a cable and an electric motors factory have been recently started by the Defence Department. I for one feel that such items should be had by the Defence Department from industries already established and, if at all the Department desires to go in for industries, they should go in for such lines as are of vital military importance and which are exclusively used for military purposes only.

"There is nothing wrong in the Department buying designs and drawings of specialised items from foreign firms but I feel it would be more advisable to get them manufactured from the established industries than by putting up separate plants for their manufacture, as, in my opinion it would, in the long run, cost lesser to the exchequer and ultimately to the tax-payer."

The Finance Minister did not refer to this criticism directly in his reply, apparently because it was a controversial issue pertaining to another Ministry of the Government of India. Presumably his general statement that there would be no surplus of electrical machinery and equipment in the foreseeable future and that, therefore, there could be further expansion in both the public and private sectors applied to this situation created by the Defence Production Organisation also.

TABLE 1—*Production of Electrical Units*

Industry	Unit	1961 production (estimated) No. of units	Quantity	Value (in lakhs of rupees)
Electric motors	'000 H.P.	28	680	900
Power transformers	'000 k.v.a.	17	1,722	1,068
Switchgear and controlgears	Rs. lakhs	24	..	500

PAPER MAKING MACHINERY

In a review of the progress of non-electrical machine building industries published on page 249 of *Commerce* dated 10th February 1962, there is a section dealing with paper-making machinery. It is stated therein that the Paper Mill Plant and Machinery Manufacturers Ltd., Bombay, have supplied one 5-ton plant and that another 5-ton plant is in an advanced stage of production. The review, based on an official survey submitted to the recent meeting of the Standing Committee of the Central Advisory Council of Industries, does not cover all the latest developments in the particular unit. According to information just sent to the Company, one 10-ton plant is also being delivered to a paper mill in Madras State and another 10-ton plant is under production for a client in Bombay. The 5-ton plant already delivered and the 5-ton plant in an advanced stage of production and the aforesaid two 10-ton plants are of an aggregate value of Rs. 90 lakhs.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, have as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation in India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C. 2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

Steel girder upon girder, a city for millions rises on the waste lands of yesterday—an architect's vision is transformed from abstraction to the living beauty of edifices in concrete and steel—tons upon tons of steel go into the making of a modern city. Elsewhere, mud hovels yield their place to new housing schemes in the cities and suburbs. All this improvement needs STEEL—all this is ours today and soon will be ours in even greater measure, as there is a little more steel for each of us.

Towards this end, IISCO is working—for more steel to help you and you and you—in serving you we help the Nation and that is our privilege.

PAKISTAN'S SECOND PLAN

A MUCH BIGGER EFFORT THAN THE FIRST

THE primary objective of planning in both India and Pakistan is the same: to improve the economic conditions of the people by promoting balanced and speedier economic development. The problems facing the two countries are also identical. But, while India has adopted full parliamentary democracy as the political framework within which planning is done, Pakistan, under a military regime, now headed by President Ayub Khan, has chosen a different path—that of "basic democracy." The concept of this democracy, however, is vastly different from democracy as is understood and practised in the U.K., the U.S. and India, to mention only a few. It is nothing better than a base laid down by the dictator to sustain his dictatorship.

The first Five-year Plan (actual outlay Rs. 1,330 crores) which lasted from 1955-60, in spite of its many achievements such as doubling of industrial production, and trebling of electric power capacity (in the public sector), failed in its principal objective of raising the national income by at least 15 per cent and *per capita* income by 7 per cent. As population grew much faster than expected and as national income rose by only 11 per cent, *per capita* income did not rise by more than 2 to 3 per cent per annum. The principal reasons for the failure of the Plan in this respect were defects in administrative machinery, stagnation of agriculture, poor efforts to mobilise internal resources and foreign exchange difficulties.

Revised Plan

The Economic Council of the Government of Pakistan in June 1960 accorded its general approval to the objectives, principles and programmes of development in the second Five-year Plan (1960-65) prepared by the Planning Commission. The Plan, after taking into account the objectives and strategy of planning, the availability of resources and the problems of technical and administrative feasibility, proposed an outlay of Rs. 1,900 crores, of which Rs. 975 crores was to be in the public sector, Rs. 325 crores in the semi-public sector (a new classification introduced in the Plan covering Government-sponsored Corporations which draw their finances from both the public and private sectors) and Rs. 600 crores in the private sector. The above figures and the Plan itself were subsequently revised. Under the revised Plan, the total outlay proposed is Rs. 2,300 crores—Rs. 1,240 crores in the public sector, Rs. 379.4 crores in the semi-public sector and Rs. 680.5 crores in the private sector. The following table gives the allocation of expenditure in various sectors:

(In crores of rupees)

	Public sector	Semi-public sector	Private sector	Total	Percentage of total allocation
Agriculture	251.50	..	90.50	342.00	14.9
Water and power	414.00	19.00	6.00	439.00	19.1
Industry	10.00	193.50	308.50	512.00	22.3
Fuels and minerals	17.90	27.10	55.00	100.00	4.3
Transport and communications	261.20	53.30	90.50	405.00	17.6
Housing and settlement	141.00	86.50	113.50	341.00	14.8
Education and training	95.50	..	10.00	105.50	4.6
Health	37.00	..	5.00	42.00	1.8
Social services	8.50	..	1.50	10.00	0.4
Manpower and employment	3.50	..	..	3.50	0.2
Total	1,240.10	379.40	680.50	2,300.00	100

The broad objectives of the second Plan are to (1) increase gross national product by 24 per cent, (2) raise *per capita* income by 13 per cent, (3) expand foodgrain production by 21 per cent, (4) increase industrial production by about 50 per cent, (5) increase exports by 15 per cent, (6) achieve substantial progress towards the target of 3 million new jobs, (7) raise domestic savings rate from 6 per cent in 1955 to 9 per cent through a marginal rate of saving of 25 per cent, (8) bring about a better distribution of incomes between various income groups as well as different regions, (9) accelerate the economic growth of relatively less-developed areas in East and West Pakistan, (10) reorientate and expand educational, health and social welfare facilities and (11) improve housing facilities, particularly for lower-income groups.

Comparison with First Plan

A comparison of the second Plan with the first shows that not only are the allocations under the second Plan substantially higher in absolute terms but the relative share of the various sectors have changed materially. Thus, the share of agriculture has increased from 11 per cent to 15 per cent, that of water and power from 17 per cent to 19 per cent and that of education and training from 3 per cent to 5 per cent. On the other hand, the share of industry, including fuels and minerals, has declined from 31 per cent to 27 per cent and of housing from 19 per cent to 15 per cent. The relative shares of other sectors are more or less the same as in the first plan.

In absolute percentages by sectors of development, outlays in agriculture in the second Plan show an increase of 138 per cent over the first Plan expenditure, education and training 157 per cent, health 200 per cent, manpower and employment and social welfare 170 per cent. These large increases over the first Plan outlays are partly the result of shortfalls in the physical implementation of the first Plan programme. The table below illustrates this:

(In crores of rupees)

Field of development	First Plan (actual expenditure)	Revised second Plan (proposed expenditure)	Percentage increase
	(In 1960-61 prices)		
Agriculture	144.0	342.0	138
Water and power	230.0	439.0	91
Industry, fuels and minerals	410.0	612.0*	49
Transport and communications	228.0	405.0	78
Housing and settlements	258.0	341.0	32
Education and training	41.0	105.5	157
Health	14.0	42.0	200
Manpower, employment and social welfare	5.0	13.5†	170
Total	1,330.0	2,300.0	73

* Industry: Rs. 5,12 crores and fuels and minerals: Rs. 1,00 crores.
† Social services: Rs. 10 crores and manpower and employment: Rs. 3.5 crores.

As regards finances for the Plan, of the total cost of Rs. 2,300 crores Rs. 1,205 crores are to be raised from internal resources and Rs. 1,095 crores from external resources by way of foreign aid, loans and investments.

The Gross National Product is projected to increase by 24 per cent during the Plan period, (that is, 1960-65). Gross investment is projected to double from 10 per cent of the G.N.P. in 1959-60 to nearly 20 per cent by 1964-65. Gross domestic savings are expected to increase from about six per cent of G.N.P. to over nine per cent during the Plan period. The rate of marginal savings implicit in these projections is about 25 per cent. This would help mobilise internal resources of the order of Rs. 1,205 crores, as projected in the Plan. Foreign aid (in the form of grants, loans and private investments) required for the Plan is intended partly to meet the foreign exchange costs of development schemes in the Plan which are estimated at Rs. 845 crores and partly to cover balance of payments deficits of the order of Rs. 250 crores which is estimated to arise as a result of increased import of raw materials and spare parts needed for effective utilisation of industrial capacity.

Additional Taxation

The authors of the Plan do not assume that the resources required for the implementation of the Plan will be easily forthcoming. They have, therefore, proposed additional taxation of the order of Rs. 175 crores. Improving the level of savings, economies in non-development expenditure and increased foreign assistance are the other sources of resources envisaged by the planners.

The planners have laid considerable stress on financial stability. It is for this reason that the Plan seeks to rely principally on orthodox means of financing such as taxation and borrowing from the genuine savings of the people. It is noteworthy that the Plan does not envisage resort to deficit financing at all. It also advocates a decisive switch-over from direct economic controls to a policy of regulation of the economy through suitable fiscal and monetary policies and greater dependence on market mechanism. The table in column two bottom indicates the sources of resources proposed in the Plan.

Sources of Resources
(In crores of rupees)

Items	Total
Domestic savings:	
Of which:	
Revenue surplus	122
Net capital receipts	140
Additional taxation	175
Local bodies	20
Customs and commodity aid	70
P.L. 480 counterpart funds	60
Private savings (including public corporations' own resources)	618
Total	1,205
Foreign aid, loans and investments:	
Of which:	
Project aid and loans	685
Foreign private investment	600
Commodity aid	350
Total	1,095
Grand Total	2,300

The public sector is expected to mobilise Rs. 1,462 crores—Rs. 122 crores from surplus on revenue account, Rs. 140 crores from capital receipts, Rs. 20 crores from local bodies, Rs. 420 crores from sale proceeds of commodity aid and Rs. 60 crores from P.L. 480 counterpart funds, Rs. 525 crores from foreign aid and loans and Rs. 175 crores from additional taxation. Of the Rs. 1,462 crores thus raised, Rs. 1,240 crores will be needed for the public sector programme and the balance of Rs. 222 crores will be made available to the semi-public sector, total outlay for which is estimated at Rs. 379 crores. The balance of Rs. 157 crores are to come from the private sector.

Investment in Private Sector

The private sector's share in total investment under the Plan is Rs. 680 crores, in addition to the Rs. 157 crores expected from it for the semi-public sector, bringing the total investment by the private sector to Rs. 838 crores. Of this, Rs. 220 crores are expected to be available through foreign aid, loans and investments. The balance of Rs. 618 crores will be raised through self-financing, borrowings from the banking system, and issue of capital through the stock exchange. It may be noted here that provision has been made in the Plan for the private sector to borrow up to Rs. 200 crores from the banking system over the Plan period. The stock exchange is expected to mobilise Rs. 50 crores of domestic capital. Breakdown of investments in the private sector is as follows:

In crores of rupees

Agriculture	90.50
Water and power	6.00
Industry	308.50
Fuels and minerals	55.00
Transport and communications	90.50
Housing and settlement	113 50
Education and training	10.00
Health	5.00
Social service	1.50
Total	680.50

The highest priority is attached to increasing agricultural production, by 14 per cent during the Plan period. Foodgrains output alone is to be stepped up by 21 per cent. This is expected to close the gap in foodgrains and make the country self-sufficient in regard to food. The following table indicates the main physical targets of the Plan in the field of agriculture, industry, etc.

	Unit	1959-60	1964-65	Percentage increase
Agricultural production:				
Wheat	'000 tons	3,708	4,329	17
Rice (cleaned)	,,	8,341	10,164	22
Other grains	,,	1,145	1,428	24
Total foodgrains	,,	13,189	15,921	21
Jute	'000 bales	6,000	7,300	22
Cotton	,,	1,666	2,292	38
Sugarcane	'000 tons	16,430	20,800	26
Fish	,,	290	360	24
Power:				
Installed electric power capacity (net)	'000 k.w.	906	1,272	40
Industrial and mineral production:				
Cotton yarn	Mill. lbs.	380	520	36
Jute goods	'000 tons	250	380	52
Cement	,,	1,050	3,000	186

Foreign Exchange Gap

The foreign exchange gap in the Plan, that is, the extent by which foreign exchange earnings (Rs. 1,125 crores) during the Plan period are expected to fall short of the total foreign exchange expenditure (Rs. 2,220 crores) is estimated at Rs. 1,095 crores ($2,300 million). This gap is planned to be closed thus: Rs. 685 crores from project aid and loans, Rs. 60 crores from foreign private investment and Rs. 350 crores from commodity aid. The consortium of aid-giving countries has already promised to meet the full foreign exchange requirements of $945 million during the first (1960-61), second (1961-62) and third (1962-63) years of the Plan, leaving a balance of $1,355 million yet to be met.

FOR A PROGRESSIVE COUNTRY...houses, hospitals, schools...

During the Third Plan period, India will build about 26,00,000 new homes, 96,300 schools and 2,000 hospitals and dispensaries. These great social welfare schemes involve construction work on an unprecedented scale and enormous quantities of cement will be required for this vast building programme.

In order that more cement may be available for these welfare schemes and for the private consumer, the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this. **ACC and Sankar Brand Cements**

FORECASTING BUSINESS CYCLES

NEW U.S. ECONOMIC INDICATORS

By Dr. Geoffrey H. Moore

ASSOCIATE DIRECTOR OF RESEARCH, NATIONAL BUREAU OF ECONOMIC RESEARCH, INC., NEW YORK

NEW indicators to identify upturns and downturns in U.S. business activity are described in a report recently issued by the National Bureau of Economic Research, Inc., of New York City. The National Bureau for a quarter century has devoted a sizable portion of its attention and resources to research on cyclical indicators of revivals and recessions. What has been learned is gathered together in a two-volume work, *Business Cycle Indicators*. The first contains "Contributions to the Analysis of Current Business Conditions," and the second comprises "Basic Data on Cyclical Indicators."

The results of the National Bureau's research are expected to contribute to the progress the United States has already made in reducing the chances of severe economic recessions. A part of this progress is attributable to the establishment of broad programmes for maintaining the purchasing power of those who become unemployed, for insuring deposits against bank failure, for reducing tax liabilities promptly when income declines, and for insuring home mortgages. The Government also has available a variety of fiscal and monetary policies to stimulate business activity in a recession and to control inflationary tendencies during a boom.

Effective action depends, however, on prompt and accurate diagnosis of the economic situation and its future trend, and this requires careful analysis of the systematic factors in the business cycle in the light of their past behaviour and theoretical basis. The record of experience presented in the new study by the National Bureau is designed to promote such an improvement. The study presents a newly developed list of 26 indicators that have been found to be useful as a guide to the overall trend of business. Some of these indicators "lead" (usually reach cyclical highs several months before business cycle peaks, and lows several months before the troughs), some are "roughly coincident" (reach highs or lows at about the same time as the peak or trough in the business cycle), and others "lag" (reach highs or lows a few months after business cycle peaks or troughs). An explanation of this behaviour is given in a series of chapters. Techniques for extracting useful information from the raw data also are described, and the limitations of the methods are assessed.

The new leading group consists of 12 indicators in four categories. Sensitive employment and unemployment indicators include average hours in the workweek and the hiring and layoff rates in manufacturing. New investment commitments, another group that gives early warning signals of recession or recovery, comprise new orders for durable goods, new dwelling units started, contracts for construction of new office, store, and factory buildings, and the net number of new business enterprises. Activities that measure or affect businessmen's expectations regarding the profitability of doing business are the third group, which includes stock market prices, total corporate profits, and bankruptcies. Inventory investment and sensitive raw materials prices make up the fourth category of leading indicators.

Movements in the average workweek usually precede those in the number of persons employed because hours of work can be readily adjusted when demand begins to increase or to fall. New orders for durable goods, such as machinery, since they relate to future rather than to current output, usually begin to rise or to fall several months before the corresponding changes in production or employment.

Nine indicators are classified as roughly coincident. These include broad measures of economic activity: number of persons employed, unemployment rate, industrial production, gross national product (in current and in constant prices), total payments by bank cheques, personal income, retail sales, and wholesale prices. The movements in these aggregates help to define the business cycle and roughly coincide with one another. The industrial production index and non-farm employment are illustrated in the chart. Their movements usually follow those in the leading indicators by several months.

Two of the five lagging indicators are shown: expenditures for new plant and equipment, and labour cost per unit of output. The others are manufacturers' inventories, consumer instalment debt, and bank interest rates on business loans. These types of economic factors usually do not begin to rise until a business upswing has proceeded for several months, and frequently they lag after a downturn as well. These lagging movements nevertheless help to confirm the existence of a recession or a recovery. At times, they foreshadow developments that contribute to reversals in "leading" series, as when a decline in inventories helps to bring about an increase in new orders, or when a decline in unit costs of production produces an increase in profit margins.

Recent figures for each of the 26 indicators, showing high values that reached prior to or during the recession that began in the spring of 1960, together with the lowest figures reached to date, reveal that highs in the leading group occurred mainly in the spring and summer of 1959; in the roughly coincident group, about a year later; and in the lagging group, they are scattered from late 1959 to early 1961. Nearly all the leading indicators reached lows late in 1960 and have shown some improvement since. These have been followed by modest increases in some of the coincident indicators.

This situation provides a factual basis for the conclusion, which must still be tentative, that the recession was at or near its end in the spring of 1961. By comparing the high, low and current figures one can judge the size of the declines associated with the recession as well as the extent of the recovery that has been achieved to date. The recession has proved exceptionally mild.

Numerous tests and appraisals of early warning signals of recession and recovery are described in *Business Cycle Indicators*. One such test involves a comparison of the behaviour of the same list of indicators in the United States and Canada. As a rule, factors that lead or lag behind the business cycle in the U.S. are also found to lead or lag behind the Canadian cycle. Similar tests have been carried out in Japan with broadly similar results. Although the behaviour of a particular indicator depends upon the kind of economic structure and policy of the country concerned, the results described for the United States warrant further study to determine their applicability to other countries.

UMESH YOGA DARSHAN
(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi
(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART
A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES
are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered
An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere

INDUSTRIAL CREDIT AND INVESTMENT CORP. OF INDIA LTD.

CHAIRMAN, MR. G. L. MEHTA'S STATEMENT TO SHAREHOLDERS

POLICY OF ASSISTANCE ELUCIDATED—MORE TAX RELIEF NEEDED

THE Annual General Meeting of the shareholders of the Industrial Credit and Investment Corporation of India Ltd., will be held at the Registered Office of the Corporation, 163, Backbay Reclamation, Bombay 1, on Tuesday, 27th March 1962, at 4 p.m. The following is the statement by the Chairman, Mr. G. L. Mehta, circulated to shareholders along with the Directors' report and statement of accounts of the Corporation for the year ended 31st December 1961:

"I have great pleasure in welcoming you and placing before you the seventh annual report of the Board of Directors of the Corporation for the year ended 31st December 1961.

"On 5th January 1962, I.C.I.C.I. completed seven years of operation. During this period, we have assisted 133 industrial concerns and in the process have developed our own procedures. Industrial development is an inter-related process: no enterprise is self-sufficient. We, ourselves, come to realise this more fully as we build up our portfolio. Industrial development is a chain reaction and has a multiplier effect and we are gratified that I.C.I.C.I.'s finance has been contributing to this growth in various ways.

A Development Bank's Functions

"The business of a development bank like ours is often taken to be merely that of providing finance for industrial projects. While this is true and the need for finance is the basic factor which brings together a development bank and its clientele, I feel that finance is not the only common ground in this relationship.

"The process of development basically consists in drawing into industry a large number of people hitherto engaged in other occupations. It means that a trader or a landlord or a technician decides to become an entrepreneur, that an agriculturist or an artisan decides to become a factory worker. This is what happened in the industrially developed countries a century or two ago, and this is what has been going on in India for some decades, although the pace has been accelerated only during the last few years.

"What is this recent upsurge due to? On the one hand, import cuts and re-direction of channels of trade have closed traditional avenues of vocation for many businessmen. On the other, with sudden curbs on imports, rewards in manufacturing activity have become more attractive; for, much of the recent upsurge in industry is based on import substitution, where demand is assured.

"Recently, however, the situation has been changing. The projects planned on the basis of the 1958 foreign exchange crisis are beginning to yield results, and gradually the supplies of many goods have started to catch up with the demand. The next phase of development will have to be based on the general growth of the economy and will require a much more acute cost-consciousness on the part of the promoters. The search for worthwhile projects will have to be more painstaking, and quick and large profits more difficult to come by.

Appraisal of Applications

"It is in this context that this Corporation's policies and procedures for appraising applications should be judged. I say this because there seems to be a misunderstanding in some quarters about the manner in which we process applications and the time taken in this exercise. I shall try to explain briefly how and why we act as we do.

"What do we want to be assured about? First, about the market. Many promoters base their calculations on the prevalent shortages. However, the project planned by them may come into production two or more years later—which is the time relevant for considering the demand for the product. Moreover, others are likely to have had the same bright idea and, consequently, the market situation in the future is not likely to be the same at the time the project goes into production as it is today. Hence, in assessing the market for a product, we take into account not only the present shortages (as evidenced by high market prices or long waiting lists with manufacturers) but also the likely growth in demand, the scope for further import restrictions and the probable increase in internal supply based on licences given and likely to materialise. Recently, we have taken steps to build up a market assessment cell in our project department, which we trust will go to strengthen our appraisals on the marketing side.

Cost and Means

"Another matter we want to be assured about is the cost of the project and the means proposed to be adopted to finance it. As regards the cost of a project, we have observed that there is generally a tendency to underestimate it. Promoters are prone to ignore a large amount of financial expenditure which is not for 'hardware.' Expenditure on buildings, machinery and equipment is more easily visible than pre-operative items. In fact, we have calculated that such financial expenditure often forms about 30 per cent of the expenditure on what I have called above the 'hardware' of development. Similarly, working capital needs tend to be underestimated. It is for these reasons that we endeavour to obtain a detailed break-up of the cost of a project according to certain standard categories.

"A simple rule which too many promoters tend to ignore is the need to arrange for the total financing of the cost of the project in advance. I referred, in my last annual statement to you, to the tendency of many promoters to keep the equity base small. While we try to consider each case individually and allow for a large debt element in the capital structure where necessary, we feel that a company, particularly a new one, should have a strong equity base, for several reasons: a large equity base keeps the burden of interest low during the unproductive period of the enterprise; and by keeping the borrowing capacity unimpaired, it enables the enterprise to borrow when actual costs go above the estimates, as they normally do; moreover, in the more competitive conditions which are likely to come about, a strong equity base will strengthen the capacity of the entrepreneur to withstand competition and weather temporary adversities. Although such advice on the capital structure may not always be palatable to some promoters, in the long run, it is sure to stand them in good stead.

Stock Markets

"In this connection, I would like to refer to recent developments in the stock markets. After the spurt in 1960, the market for industrial shares has recently quietened down. For quite some time, preference shares have, owing to various factors, been almost orphaned on the market. As we seek to attract investment in industry, it will be necessary to offer investors securities which appeal to their requirements. Financial institutions whose eventual objective (even when they immediately take up shares or grant loans) is to dispose of their holdings on the market and thus to turn over their resources to be able to help newer industries, are interested in seeing that promoters offer securities acceptable to the public. In the more discriminating times ahead, it will be necessary to offer to investors securities like preference shares and debentures with varying features like participation in extra profits, option to subscribe to or convert into ordinary shares and so on. Unless our entrepreneurs are willing to offer such terms, they will find themselves more and more inhibited in their development plans by lack of finance.

"As a financial institution whose profits are dependent on the prosperity of its client, we naturally look closely into the profitability of an enterprise before deciding on our assistance. One factor which governs profitability is the prospective market for the product to which I have alluded earlier. A second factor is obviously the cost of production of the article proposed to be manufactured. Our entrepreneurs have become so used to conditions of artificial scarcity brought about by import and licensing restrictions that the need to produce at economic costs is not adequately recognised. Besides lack of cost control procedure, this is also due to a failure to spread overheads over the maximum possible output. The results are vividly reflected in our performance in the sphere of exports which has failed to keep pace with the requirements of the economy. The somewhat easier supply position in the markets for many products recently has made entrepreneurs more cost-conscious, and I trust this will help not only our exports but also the domestic consumer.

Sanction of Finance

"It is on an independent and careful assessment of all these factors that I.C.I.C.I. takes a decision for providing finance. This necessarily takes time which, in its turn, depends a good deal on the thoroughness with which requisite information and data are supplied and relevant queries answered. On an average, we find that it takes three to four months from the preliminary approach by a client to come to a decision, although in some cases it takes much less.

"But the sanction of finance by I.C.I.C.I. does not end the relationship between the Corporation and its client—rather, it is only the beginning. Legal formalities have to be gone through, agreements signed, import licences obtained, and all the procedures involved in operating an industrial enterprise in a planned and complex economy gone through. The completion of legal formalities alone takes considerable time, as the Company has to satisfy various conditions, titles have to be examined, and so on. On an average, we have found that it takes about six months, after sanction is given, to enter into the Heads of Agreement with a company. This, however, is not a net loss of time, as it is used to push ahead the project further in other respects.

"Some of the formalities which have to be fulfilled before a loan is disbursed—for example, those connected with import control which is intended to prevent imports of goods which can be locally manufactured—cannot be avoided. We ourselves try to expedite decisions where we can. What is more, we try to adjust our procedures so as not to let them come in the way of expeditious carrying out of the project.

"Disbursement of funds is a slow process. Some who look at our liquid funds, perhaps, feel that we are not using our funds fast enough. This is not so. Money, for a development banker, is his raw material and he has to keep a sufficient stock of it to enable him to continue sanctioning finance. Moreover, unlike raw materials where supply is continuous, for a development banker the funds do not ceaselessly flow in—we cannot hope to approach the market for funds every now and then and for small amounts. Hence, we have to carry a stock of funds which will last us a year or more. By now, you will find that our sanctions have more or less caught up with our resources of about Rs. 45 crores.

The Time Lag

"Even after all the legal and procedural formalities have been completed and disbursements have started, it takes quite a while to complete the utilisation of funds and bring the plant to the stage of production. Machinery and equipment are not normally readily available across the counter; delivery periods for equipment are anything from one year to three years or even more. This means that, even when disbursement starts, it has to be spread over a period of two to three years. According to our estimates, out of our sanctions we can expect to disburse about 20 per cent in the first year, about 40 per cent in the second year and about 40 per cent in the third year. But this kind of time lag is inherent in the business of development banking.

"I have spoken at length on all these aspects because the services we provide incidental to the provision of funds are no less important. We have familiarised entrepreneurs with modern practices of preparing project reports to assess the viability of projects. We help them to have a capital structure which, in our view, would stand up to difficult times ... them with their problems with the Government and we watch over the progress of project both during the construction and the operating years. We do so in a helpful and constructive spirit keeping the broad requirements of development in view. Over the years, we have found that our clients have come to understand and appreciate our procedures and the need for them. There is a growing interest among the investing public in industrial growth. The appearance of two financial dailies should help them to judge intelligently industrial prospects.

A Healthy Development

"I should say in fairness that the emphasis which we have been laying over the years on the need to have a full and detailed appraisal of each project and on the desirability of having closer understanding at all stages among the different financing institutions participating in a project is being increasingly appreciated by the various agencies concerned. This is a healthy development in the sphere of industrial finance which should pave the way particularly for financing large-sized projects which could only be carried out with the joint efforts of a number of financing institutions, including the Life Insurance Corporation, commercial banks, investment trusts as well as development banks.

"I had mentioned the total cost of the projects assisted by us in 1960, in my statement to you last year. In 1961, of the gross assistance of Rs. 13.76 crores sanctioned, Rs. 11.94 crores are in respect of new projects. The total cost of these projects would be Rs. 65.49 crores (Rs. 48.66 crores for fixed assets and Rs. 16.83 crores for working capital). This cost will be incurred over the next two or three years. When the units reach full production, the turnover of the projects would be about Rs. 54 crores. The companies will finance the cost of the project by raising ordinary share capital of Rs. 16.72 crores, preference share capital of Rs. 0.81 crore, loans of Rs. 23.07 crores, and bank borrowings and cash accruals of Rs. 24.89 crores. Of the foreign exchange cost of Rs. 10.53 crores for the projects, I.C.I.C.I. has agreed to provide Rs. 7.40 crores.

Raising Resources

"In keeping with our increasing operations, we have been making efforts to increase our resources. In the third quarter of 1960, we were able to obtain from the Kreditanstalt, of the Federal Republic of Germany, a loan of DM 5 million (about Rs. 60 lakhs); other institutions in India have also obtained loans from the Kreditanstalt. This is the first West German credit we have been able to secure and legal formalities for operating it are being worked out.

"In September 1961, when I visited the United States, I initiated discussions for a further substantial loan from the World Bank. Since then, negotiations have been going on both with the World Bank and with the Government of India on various aspects of the loan. I am glad to report that these negotiations have reached an advanced stage. I take this opportunity to express our gratitude to the World Bank for their continued confidence in I.C.I.C.I. I would also like to thank the Government of India for its co-operation and assistance in our work.

"I.C.I.C.I.'s operations have been growing steadily and, as a result, the Corporation's profits before tax increased from Rs. 62.61 lakhs in 1960 to Rs. 74.27 lakhs in 1961. After providing for tax (Rs. 27.75 lakhs), the balance carried to revenue appropriation account is Rs. 46.52 lakhs in 1961, as against Rs. 37.67 lakhs in 1960. As required by Article 163 of the Corporation's Articles of Association, we have set aside Rs. 11.50 lakhs out of this to the special reserve and Rs. 1.00 lakh to the general reserve. We have also transferred the entire amount of realised profit of investment being a sum of Rs. 24.26 lakhs (net) to capital reserve. The Directors recommend a higher dividend at the rate of 6½ per cent, as against 5.75 per cent last year.

Budgetary Relief

"In my last annual statement to you, I had referred to the need for budgetary relief to finance corporations, in view of their important role in industrial development. The Government of India, in its last budget for the year 1961-62, was good enough to give finance corporations some relief in taxation. I should like to express our thanks to the Finance Minister for providing this relief, which will strengthen to some extent the financial position of finance corporations. However, I hope that in view of the increased role envisaged for finance corporations in future, the Government will see its way to provide some suitable incentive to strengthen their financial position.

"For effective implementation of the Plan objectives, mobilisation of capital is required on a much larger scale than in the past. We who are charged with the responsibility of assisting the private sector have a heavy task in future and only through the co-operation of all concerned can we hope to accomplish it. I trust in this constructive endeavour we shall have your good wishes and support.

"Before concluding, I should like to mention that, towards the end of March, a conference is being convened, under the auspices of I.C.I.C.I., of development banks in Asia to discuss various problems of development banks operating in Asia. This conference will be the first Regional Conference of Asian Development Banks and I am sure that, besides the useful personal contacts that would be brought about, the deliberations of the Conference would help to focus attention on various important aspects of development banking in Asia and assist us in our day-to-day tasks."

Save a **nP** *out of every Rupee — to keep prices from going higher!*

Don't say that living costs have to keep climbing. **You** can check Inflation.

One of the main causes of rising prices is **overspending**. If each one of you save only one naya Paisa out of every rupee you earn, you will put a strong brake on inflation.

This will produce Millions of Rupees in savings—money which is badly needed to finance our FIVE YEAR PLANS.

Of course, you get a personal bonus from your extra savings—the feeling of independence and security that a growing bank balance brings....

Sure, all this means a sacrifice. But isn't this worth? If this means continuing prosperity—and keeping it sound?

Thousands of depositors have made a savings account at Canara Banking Corporation Limited as a form of thrift. So, why not **You** also join them?

THE CANARA BANKING CORPORATION LIMITED

DIVIDEND RAISED—EXPANSION CONTINUING

NOTWITHSTANDING the reduction in the selling price of polythene granules and the new and increased excise duties payable on a number of its products, the sale and profit of the Alkali and Chemical Corporation of India Ltd. [Secretaries: Imperial Chemical Industries (India) Pvt. Ltd.] have maintained their upward trend during the year ended 30th September 1961. Sales, less rebates, at Rs. 662.53 lakhs are higher by Rs. 122.64 lakhs or over 22.7 per cent than the previous year's level of Rs. 539.89 lakhs. Likewise, the gross profit has increased by Rs. 19.41 lakhs to Rs. 181.84 lakhs, or a little less than 12 per cent. The disparity in the rates of increase has been mainly due to the large-scale rise in the incidence of excise duty, from Rs. 11.61 lakhs during 1959-60 to Rs. 41.02 lakhs during the year under review, only a part of which could actually be passed on to consumers. The gross profit has been arrived at after allowing the usual items of expenditure as also the cost (Rs. 89.86 lakhs) of polythene granules purchased for the first time during the year. The consideration which necessitated this extra expenditure is explained by the Directors in their report to the shareholders as follows:

"To facilitate the growth of polythene usage in the country, a substantial tonnage of polythene is being imported from Imperial Chemical Industries Ltd., U.K., as a loan over a period of two or three years; the amount of the imports will be liquidated by the export in the future of equivalent quantities of polythene produced at Rishra."

This provides an interesting highlight on the effects of foreign exchange shortage on availability of raw materials in the country and the ingenious methods adopted by manufacturers to overcome them as best as possible.

Side by side with the increase in gross profit, there has materialised a rise in essential provisions, that for depreciation having gone up from Rs. 33.12 lakhs to Rs. 40.56 lakhs and for taxation from Rs. 25.00 lakhs to Rs. 52.50 lakhs. The more than cent per cent increase in taxation is to be attributed in the first instance, to the improvement in the level of profit and, secondly, to the marked decline, from Rs. 57 lakhs to Rs. 21 lakhs, in the amount of the development rebate which the Company can adjust against its taxable profits and the relief to which it is entitled under Section 15C of the Income-tax Act. As a result of these higher prior allocations, the net profit has actually declined by Rs. 15.54 lakhs to Rs. 88.78 lakhs. Transfer to reserves has been pruned from Rs. 78.00 lakhs to Rs. 43.00 lakhs, of which Rs. 2.50 lakhs, as against Rs. 30.00 lakhs, have been credited to the development rebate reserve, Rs. 14.00 lakhs, as compared with Rs. 28.00 lakhs, to the general reserve, and Rs. 26.50 lakhs, as against Rs. 20.00 lakhs, to the dividend equalisation reserve. With a larger sum now available, the Directors have proposed a higher ordinary dividend of Re. 1.50 per share, as compared with Re. 1.20 per share a year ago, subject to deduction of tax in either case.

The following comparative table presents at glance the progress achieved by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958

† Subject to deduction of tax.

The balance-sheet as at 30th September 1961 reflects a comfortable financial position. The issued and subscribed share capital has remained unaltered at Rs. 341.00 lakhs, comprising Rs. 31 lakhs in preference shares and the balance in ordinary shares of Rs. 10 each. The reserves have been augmented further by Rs. 40.34 lakhs and stand at Rs. 198.67 lakhs. Secured and unsecured loans have declined by no less than Rs. 41.30 lakhs and aggregate Rs. 84.23 lakhs. But current liabilities and provisions at Rs. 224.57 lakhs show a sharp rise of Rs. 105.81 lakhs, as compared with the position a year before.

On the assets side, the gross block, at a cost of Rs. 636.11 lakhs, has been written down to Rs. 473.01 lakhs and, with the inclusion of Rs. 53.29 lakhs as the cost of capital-work-in-progress, yields a net block of Rs. 526.30 lakhs. Current assets, loans and advances amount to Rs. 322.17 lakhs or Rs. 13.37 lakhs higher than loans and all current liabilities put together.

Contributions to the year's improved results came from practically all the departments of the Company, though the working and the profit-earning capacity of some continued to be restricted due to certain extraneous factors. The polythene unit operated substantially above the design capacity and made an important contribution to the year's turnover. Production in the paints plant was maintained at a higher level, though a shortage of raw materials, both imported and indigenous, continued. The extensions to the plant taken in hand earlier were completed. The demand for pre-treatment chemicals remained steady. The chlorine and caustic soda unit worked to optimum capacity, but the profit-margin continued to be restricted as a result of the price ceiling fixed by the Government. The "Gammexene" technical BHC unit recorded a further increase of about 25 per cent in production over the previous year. This was made possible by improvements made in the process and plant by the Company's technical staff. The production of insecticidal formulations was also maintained at a high level. The "Alfloc" briquetting plant was started during the year and production of powders increase. Construction work in the setting up of the plant for the manufacture of rubber chemicals made satisfactory progress and some of the plant and machinery was received at the site. The Company continued to seek export markets for paints and chemicals.

The Company has received a licence to increase production of polythene from 3,500 tonnes per annum to 8,500 tonnes per annum by the setting up of a new intermediate density polythene plant. The design work is well in hand, though the capital goods licence has not yet been received. Arrangements are in hand to finance the foreign exchange requirements for the plant by means of a sterling loan. A proposal for extension of a new resin plant has been submitted to the Government.

The present market quotation for the Rs. 10 paid-up share of the Company is Rs. 45.44 *cum-div.* The net yield, on an *ex-div.* basis, works out to 2.4 per cent per annum.

(Concluded from next column)

to be quite satisfactory. Physical shortage of its products, on the one hand, and a greater demand for them in a growing economy, on the other, should dispel doubts about the near-term prospects for the Company.

The issued and paid-up capital of the Company is Rs. 40 lakhs, and includes Rs. 10 lakhs in preference shares. It is supplemented by reserves and surplus of Rs. 31.11 lakhs. The previous year's bank borrowings of Rs. 4.95 lakhs have been paid off. Current liabilities and provisions amount to Rs. 36.80 lakhs, and are well covered by current assets, loans and advances aggregating Rs. 85.78 lakhs, of which cash and bank balances alone are Rs. 20.80 lakhs. Investments amount to a mere Rs. 0.08 lakh. There was an addition of about Rs. one lakh to the gross block, making a total of Rs. 51.52 lakhs and this has been written down to Rs. 22.47 lakhs. Factory building under construction is shown at cost of Rs. 0.22 lakh. The financial position of the Company is thus well balanced.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 30.50 *cum-div.* and offer, on an *ex-div.* basis, a yield of 4.8 per cent per annum, free of tax.

BETTER PROFIT EARN. BY NATIONAL PIPES

DIVIDEND UNCHANGED

NATIONAL Pipes and Tubes Company Ltd. [Managing Agents: Messrs. Associated Industrial Development Company (Private) Ltd., Calcutta] has made further all-round progress during the year ended 30th September 1961. After the two-and-a-half months' strike in the beginning of 1959 hindering the natural improvement in its working during that year, the Company regained its equipoise in the subsequent year. During the year under review, however, it scaled fresh peaks in production, sales and gross profit, and this goes to enhance the investor's confidence in its stability. All the same, the investor might not be jubilant over the Company's working, as the dividend has only been maintained at the previous year's level of 20 per cent, subject to deduction of tax, to which level it was stepped up from 15 per cent, taxable, paid for 1959.

Additional processing plants were put into operation during the year under report, as a result of which production increased. Rise in production is reflected in increased costs of raw materials and stores consumed at Rs. 60.50 lakhs, as against Rs. 56.96 lakhs a year before and larger stocks at close of Rs. 22.50 lakhs against Rs. 13.37 lakhs. Net sales have gone up by more than Rs. 14 lakhs to Rs. 116.19 lakhs. Other expenses are higher at Rs. 21.97 lakhs, as compared with Rs. 19.36 lakhs in the previous year, which only reflects the increased operations of the Company. Gross profit shows an improvement of more than Rs. 5 lakhs to Rs. 31.27 lakhs over the previous year. Among the essential provisions, taxation amounts to Rs. 12 lakhs (Rs. 9.70 lakhs a year before), depreciation to Rs. 2.09 lakhs (Rs. 1.75 lakh) and Managing Agents' remuneration to Rs. 2.68 lakhs (Rs. 2.31 lakhs). The net profit is higher by Rs. 2.30 lakhs at Rs. 14.55 lakhs. Half the distributable profit, Rs. 7.59 lakhs to be precise as against Rs. 5.82 lakhs last year, has been retained in business. Equity dividend takes up Rs. 6 lakhs and preference Rs. 0.72 lakh, leaving Rs. 0.67 lakh to be carried forward against Rs. 0.43 lakh brought in.

The following table compares the Company's working during the past four years:

(In lakhs of rupees)

For some years now, insufficient supply of raw materials has been a cause for concern for the Company. During the past year, this factor restricted full utilisation of the capacity of additional processing plants. According to the Directors, its effects are felt more at present, as production during the first few months of the current year (their report to the shareholders was signed on 29th January 1962) has not come up to expectations. The power supply has also been unsatisfactory. Adequate raw materials and uninterrupted power supply would determine the current year's production, according to the Directors. The expansion scheme for the manufacture of hollow sections could not be fully implemented during the year under review due to the difficulty in securing the import licence for the necessary equipments. To overcome this obstacle, the Company has started negotiations for securing necessary foreign exchange loan to finance the cost of the required plants, and is stated to have been successful in its attempts. In view of this, the Directors feel that it would not be difficult to secure the necessary import licence. Two of the three units licensed to manufacture non-ferrous semis are already in operation. While these would offer competition to the Company, demand for its products is believed

(Continued in previous column)

STATE BANK OF INDORE

ALL-ROUND IMPROVEMENT

THERE has been an all-round, albeit modest, improvement in the results of the State Bank of Indore (General Manager: G. S. Srivastava, Indore) for 1961. This Bank, it will be recalled, became a subsidiary of the State Bank of India from the beginning of 1960; before that, it was known as the Bank of Indore Ltd. Deposits of the Bank, as at the end of the year, are Rs. 2 crores, or 22.7 per cent, higher than those a year before. The gross income is up by a little over Rs. 2.50 lakhs and the profit after taxation at Rs. 6.61 lakhs compares favourably with Rs. 5.78 lakhs for 1960, an increase of 14 per cent. A dividend of 8 per cent, subject to deduction of tax, has been proposed, as against nothing last year. The undistributed surplus is, of course, lower at Rs. 1.02 lakh, as against Rs. 2.74 lakhs brought in, but it must be noted that the transfer to reserve fund has been stepped up from Rs. 1.37 lakh to no less than Rs. 4.08 lakhs, thereby pushing up the amount of this fund to Rs. 11.70 lakhs, a level which is equal to 33.42 per cent of the paid-up capital of Rs. 35 lakhs.

Such in brief are the salient features of the Bank's working in 1961. A more detailed picture is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December

* Based on only unencumbered investments.
** Profit for 1961 is after taxation; for previous years, it is before taxation.
† Subject to deduction of tax.

It will be noted that there has been a striking improvement in the liquidity ratios (that is, ratios of investments and cash to deposits) notwithstanding the expansion in deposits. This has been due chiefly to the substantial fall in the ratio of advances to deposits. Another refreshing feature is the absence of any borrowings from other banks.

The slight fall in the volume of advances *over the year* is attributed to the late commencement of the 1961-62 cottor season and the reported damage to the crop through natural calamities. The growth in deposits is in keeping with the general trend of banking in the country and is traceable to the upward revision of the maximum rates of interest on fixed and savings bank deposits in the first quarter of 1961. The Bank has also been accepting deposits for periods longer than 12 months.

The Bank expanded its branches from 21 to 25, by opening four new offices in rural and semi-urban areas. It has plans to open nine more offices and has already obtained the necessary licence from the Reserve Bank for seven of them. It may be noted here that, under the subsisting agreement in terms of Section 48 of the State Bank of India (Subsidiary Banks) Act, 1959, the Bank is entitled to reimbursement for the full amount of losses of new offices opened after 4th March 1959, for a period of five years and thereafter on a graduated scale. The subsidy expected to be received to the end of 1961 is Rs. 0.48 lakh, credit for which has been taken in the profit and loss account for the year, as against Rs. 0.26 lakh last year.

STATE BANK OF TRAVANCORE

TURNOVER EXPANDS

THE year 1961 was quite an eventful one for the State Bank of Travancore (General Manager: Mr. T. R. Krishnaswami), in that it witnessed a significant expansion in the balance-sheet total, which, as on 31st December 1961, stood at over Rs. 21.62 crores, as against Rs. 12.19 crores a year before and Rs. 10.37 crores two years before. Such an expansion is attributable largely to the amalgamation of three banking companies (Travancore Forward Bank from 15th May 1961 and Kottayam Orient Bank and Bank of New India from 17th June 1961) and partly to the continued developmental activities. As a result of the aforesaid amalgamations, the Bank acquired 112 branches, of which 49 were closed, under a scheme of rationalisation, by integrating them with the other offices of the Bank. For the same reason, the Bank's expansion programme had to be suspended for a few months. Since then, four new branches have been opened and investigation of business potentialities at three centres made, and the opening of branches at these centres is under consideration. The Bank now has 94 branches, with a total staff of 1,613, as against 27 branches with a staff of 431 on 31st December 1960.

Despite the unavoidable losses incurred by the offices of the amalgamated banks due to the fact that the business lost on account of the moratorium had not yet been regained, the gross income earned by the Bank during 1961 was markedly higher at Rs. 74.57 lakhs, as against Rs. 45.45 lakhs for 1960. The improvement was accounted for by both interest and discount earned and commission and exchange, the former increasing by Rs. 22.54 lakhs and the latter by Rs. 4.49 lakhs. The better working results, according to the Chairman of the Bank, are due mainly to extension of additional credit facilities to industrial undertakings, better utilisation of limits by other borrowers and the higher rates of interest charged on advances. The rise in income was, however, more than neutralised by the appreciable rise in interest paid (+Rs. 16.15 lakhs), expenses (+Rs. 17.59 lakhs) and depreciation (+Rs. 0.56 lakh). Even so, the profit after tax for the year under review stands higher at Rs. 8.35 lakhs, that for 1960 being Rs. 7.28 lakhs. The profit together with the Rs. 0.12 lakh brought in brings the total available for distribution to Rs. 8.47 lakhs. The Directors have transferred a larger sum of Rs. 2.32 lakhs (as against Rs. 1.46 lakh in 1960) to the reserve fund, thus following the convention recommended by the Governor of the Reserve Bank. Bonus to staff takes Rs. 1.02 lakh and dividend payments aggregate Rs. 5 lakhs, the rate of dividend being unchanged at the previous year's level of 5 per cent (subject to tax). The balance of Rs. 13,723 has been carried forward.

The following table compares the working results and balance-sheet of the Bank for the year 1961 with those for the three years preceding it:

(In lakhs of rupees)

	For the year ended 31st December

* The figures relate to the Travancore Bank Ltd.
† After taxation. ‡ Before taxation. § Subject to tax. ‖ Free of tax. Investments—only unencumbered portion is taken into account.

It will be seen from the above figures that the credit facilities made available by the Bank during 1961 rose by Rs. 3.18 crores as compared with the previous year. A part of the increase was, of course, accounted for also by the amalgamated banks. It is significant that the Bank was able to extend its advances portfolio without resort to borrowing, as the deposits of the Bank improved to a greater extent—by Rs. 8.81 crores—the amalgamated banks accounting for a part of the increase. Consequently, the credit ratio (that is ratio of advances to deposits) declined from 49.5 per cent at the end of 1960 to 42.4 per cent as on 31st December 1961. In view of the notable increase of Rs. 3.53 crores in cash, the ratio of cash to deposits has gone up from 29.5 per cent to 34.8 per cent, while, notwithstanding an improvement of Rs. 1.86 crore in investments, the investment ratio has dropped from 41.1 per cent to 30.9 per cent.

COMPANY MEETINGS AND DIVIDENDS

RELIANCE FIREBRICK & POTTERY CO., LTD. Annual General Meeting, Calcutta, 9th March 1962. Dividend: 15 per cent or Re. 1.50 per ordinary share of Rs. 10 and Re. 0.375 per ordinary share of Rs. 2.50 per share called up. Transfer books will remain closed from 1st to 9th March 1962, both days inclusive.

NATIONAL PIPES AND TUBES CO., LTD. Annual General Meeting, Calcutta, 12th March 1962. Dividend: 20 per cent or Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 27th February to 12th March 1962, both days inclusive.

EASTERN INVESTMENES LTD. Annual General Meeting, Calcutta, 12th March 1962. Dividend: 14 per cent or Rs. 14.00 per ordinary share, subject to deduction of tax, payable on or after 26th March 1962. Transfer books will remain closed from 5th to 12th March 1962, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 15th March 1962. Dividend: *Nil*. Transfer books will remain closed from 2nd to 15th March 1962, both days inclusive.

BIRDS INVESTMENTS LTD. Twenty-fifth Annual General Meeting, Calcutta, 16th March 1962. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 2nd to 16th March 1962, both days inclusive.

ALKALI & CHEMICAL CORPORATION OF INDIA LTD. Twenty-fifth Annual General Meeting, Calcutta, 22nd March 1962. Dividend: 15 per cent or Re. 1.50 per ordinary share, subject to deduction of tax, payable on or after 22nd March 1962. Transfer books will remain closed from 6th to 22nd March 1962, both days inclusive.

BOMBAY POTTERIES AND TILES LTD. Annual General Meeting, Bombay, 26th March 1962. Dividend: Rs. 15.00 per ordinary share, subject to deduction of tax, payable on and from 12th April 1962. Transfer books will remain closed from 12th to 31st March 1962, both days inclusive.

RAVALGAON SUGAR FARM LTD. Twenty-ninth Annual General Meeting, Bombay, 26th March 1962. Transfer books were closed from 30th December 1961 to 20th January 1962, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 28th March 1962. Dividend: Rs. 2.75 per ordinary share, subject to deduction of tax, payable on or after 18th April 1962. Transfer books will remain closed from 14th to 28th March 1962, both days inclusive.

HENLEY CABLES INDIA LTD. Second Annual General Meeting, Bombay, 28th March 1962. Dividend: *Nil*. Transfer books will remain closed from 15th to 28th March 1962, both days inclusive.

To miscellaneous expenditure and losses written off	Nil	6.60
To dividends	Nil	Nil
Carried forward	1.10	41

N.B.—Adjustments represent only the balance brought forward from the previous year.

* The Managing Agents have waived their remuneration due to them for the year under audit.

† Normal depreciation only has been charged for Plant and Machinery but not for extra shifts.

Extracts from the Directors' report: During the year under report, the Factory worked for a longer period than usual and as such crushed more cane than the previous year, viz., 1,39,393 (1,18,160) tons. Recovery of sugar however was lower than the previous year due to poor sucrose contents in cane on account of adverse climatic conditions and due to the extension of working season into the hot months of May and June. This fall in recovery plus the fall in sugar prices went to reduce the profits. Sugar prices have declined by about Rs. 12 per bag of sugar which is equal to about 10 per cent. This drop has been caused by over-production of sugar in India.

There has been good improvement in the working of the Company during the current year, but in common with the others in the industry, the sugar industry is passing through a severe strain due to accumulated stocks caused by too big a production and lack of demand. The directors hope that the situation will soon improve whereby the present glut in the market will cease and Government takes a pragmatic view and takes quick decisions to save this major agro-industry of the country.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	22,96,910	Gross block	79,26,584

	(14%)	(14%)
Carried forward	2.68	3.49

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 20,000 transferred from provision for taxation no longer required.

Extracts from the Directors' report: *Investments*.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing of Rs. 78,178 for which no quotations are available. The total of the market value of the investments for which quotations are available together with unquoted investments as valued by the directors, exceeds the book value at 31st December 1961, by Rs. 89,19,584.

Issue of Right Shares.—The Directors decided that subject to the consent of the Controller of Capital Issues, the subscribed capital of the Company be increased by the issue of 25,630 equity shares of Rs. 100 each at a premium of Rs. 10 per share for cash, to be offered to the members of the Company holding Equity Shares on the date the offer is made pursuant to Section 81(1) of the Companies Act, 1956, in the ratio of one equity share for every two existing equity shares held. Application for sanction was made to the Controller of Capital Issues and the sanction has been received.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	76,26,000	Investments	1,64,39,389
Reserves and surplus	63,87,467	Cash	2,809

Proposed dividend (taxable) ordinary	2,42 (15%)	3,55 (22%)
Carried forward	68	43

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes a transfer of Rs. 27,000 to provision for doubtful debts and a sum of Rs. 1,630 transferred to reserve for development rebate.

† This represents Rs. 4,00,000 transferred to reserve for replacement; Rs. 1,875 transferred to reserve being additional depreciation and a small sum of Rs. 27 for development rebate reserve.

Extracts from the Directors' report: *Production*: During the year under review on account of the go-slow tactics adopted by the labour, the production and sales were lower than last year.

Labour: Labour conditions remained strained during the period under review and there was a lockout in the factory from 21st May, 1960. Lockout was, however, lifted from 28th May, 1960; but the conditions throughout the period remained unsatisfactory resulting ultimately in the workers' strike from 15th April 1961 to 18th May 1961. Normal working has, however, been resumed from 19th May 1961.

Accounts in brief as at 28th February 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,12,250	Gross block	47,45,647

,, ,, ordinary	15,50 (20%)	15,50 (20%)
Carried forward	31	24

N.B.—Adjustments represent the balance brought forward from the previous year.

* For the period from 1st August 1959 to 30th June 1960.

Extracts from the Directors' report: There was a record crushing of sugarcane during the year. The recovery was, however, slightly lower which was due to longer duration of the season.

During the current year, according to availability of sugarcane in the area, a crushing of about 125 lakh maunds of sugarcane is expected. The Government of India have, however, issued an Ordinance, Sugar (Regulation of Production) Ordinance, 1961, where under quota for production of sugar during the current season will be fixed for every sugar factory reducing the production by 10 per cent of the sugar produced in the previous year. The Government of India is being approached for partial exemption to the Company's factory from the provisions of the Ordinance.

The Government of India allotted a total export quota of 15,316 bags of sugar (including 7,794 bags as mentioned in the last year's report) out of the production of the season 1959-60. The export quota out of the production of the year 1960-61 is expected to be considerably more than last year. As the world prices of sugar are lower, the Company's factory has to suffer a considerable loss on the sugar exports.

The production of the Distillery shows an appreciable increase. Consequently the working results of the Distillery are better. During the current year the production is estimated to be 15 lakh gallons. The Company's Ice Factory worked satisfactorily during the year. The working results of the Oil Mills at Sitapur suffered owing to lower production. The working results of the farms were adversely affected owing to lower yield of cane per acre which was due to adverse seasonal conditions and floods. There has been improvement in the working results of the Vanaspati Factory. The solvent plant installed in the previous year worked satisfactorily. The results of the solvent plant and better realisation of Vanaspati accounted for the improvement in the working results.

The production in the different units of this Company has been as under:—

	1960-61	1959-60
	Maunds	*Maunds*
Cane crushed	1,25,00,000	1,01,50,000
Groundnut oil	20,800	22,400
Own farms cane	6,28,000	6,18,000
Ice	12,600	10,000
	Gallons	*Gallons*
Power alcohol and spirits	14,38,000	11,22,000
	Tonnes	*Tons*
Vanaspati	15,000	15,700
Sugar recovery	9.49%	10.13%

Accounts in brief as at 31st July 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	77,52,210	Gross block	2,33,19,499
Reserves and surplus	97,92,183	—Depreciation	1,58,75,556

To adjustment of loss (for 1960)	4,43	36
Transfer to general reserve	Nil	5
To dividends (taxation) ordinary	2,18 (8%)	Nil
Carried forward	44	¶ 8

N.B.—Adjustments represent the balance brought forward from the previous year.

* Loss after providing for depreciation.

† Rs. 74 only.

‡ Rs. 80 only.

§ This includes Rs. 35,000 transferred from general reserve.

¶ Dividend for 1960 was as follows:—Rs. 20,000 being dividend on 'A' class ordinary shares of Rs. 100 each at 8 per cent taxable and Rs. 8,415 being dividend on 'B' class ordinary shares at Re. 0.12 per share on shares of Rs. 10 each.

Extracts from the Directors' report: The dividend is payable only on those shares which existed as at the close of the year, i.e., 30th June 1961. The new shares which were offered to the public for subscription *vide* Prospectus dated 3rd June 1961, are entitled to dividend out of earnings of the year commencing from the 1st July, 1961 according to the terms of the issue.

The income as shown in the accounts is mainly from the existing business of the Company. The investments have yielded very good returns and the directors are pleased to recommend a sum of Rs. 2,17,875 as dividend to the shareholders for the year.

There were two classes of Ordinary Shares i.e., 'A' Class and 'B' Class in the previous year. During the year they were converted into one class of equity shares and as such all the shares converted from 'A' class and 'B' class ordinary shares participate in the dividend.

The Company issued 5,23,750 equity shares of Rs. 10 each to the public for subscription *vide* Prospectus dated the 3rd June 1961. There was a great response to the issue and the subscription list had to be closed at the close of the fourth day. The allotments were made in consultation with the Stock Exchange authorities in such a manner so that all the applicants to the issue got some shares. The directors have the pleasure to state that the application money received in excess was refunded to the applicants in a record time. The present issued and paid-up capital of the Company is Rs. 1,25,00,000 divided into 12,50,000 equity shares of Rs. 10 each, fully paid-up.

The aforesaid new issue was made for establishing a new industrial undertaking at Kota (Rajasthan) for the manufacture of synthetic yarn like Nylon/Perlon filament yarns and to make the name representative of the industrial activities of the Company its name was changed from "J. K. Investment Trust Ltd." to "J. K. Synthetics Ltd." The progress of the erection of the factory at Kota is quite satisfactory and a number of foreign erectors are on job. The building is almost complete and it is expected that a portion of the factory will start production shortly and the directors hope that the whole plant will be put in operation in the first quarter of 1962. Yarn produced by the Company will be named *Jaykaylon* and *Jaykaylanca*.

After the close of the financial year, this Company has further arranged for a loan of Rs. 10.00,000 from the Rajasthan Financial Corporation, Jaipur.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,25,00,000	Gross block	3,[illegible]
Share application money	1,38,31,477†	—Depreciation	1,[illegible]

Managing Agents.

COCHIN, 1st *March*, 1962.

PROBLEMS OF VANASPATI INDUSTRY

(*Concluded from page* 364)

more stable prices." But, in the last analysis, the industry must, Mr. Tandon took care to add, turn to its logical duty, namely, conversion of its product from a commodity to branded, consumer packs with strong consumer goodwill. Here the industry must do something to put its own house in order by adopting scientific marketing which is, perhaps, its greatest need. Dilating on this point, Mr. Tandon observed:

"*Vanaspati* is not a commodity; it is a branded product. Its every tin bears the name of the manufacturer's brand, reflecting his reputation and skill. This should be carried to the consumer's home. If the manufacturer wins consumer loyalty through assurance of quality of product, organised distribution and marketing, he will be able to lift *vanaspati* out of the state of a commodity and to its rightful place as a proprietary product. Fortunately, the quality of the product is good, but the other aspects of marketing need our urgent attention. The dealer should be helped to do his legitimate job and discouraged from speculating. The manufacturer will then be able to ensure price stability assuring him of a reasonable profit. If we have an organised distribution with distributors guided by our line of policy; if we have our brands—small consumer packs and brands with consumer goodwill—we will then be able to sell even more than today at stable prices to satisfied consumers yielding benefit to all. The industry will also earn the loyalty of the large trading and consuming public, so necessary in our battle against prejudices. I need only add that this has already been achieved in the same industry in advanced countries in the last thirty years."

SUGAR

(*Concluded from page* 375)

increasing the use of sugar by the food preservation industries and we should encourage such use while taking care that there is no risk of abuse. We should not always think of export as the only criterion for giving concessions for the use of sugar.

"There should be more intensive programme for the increased use of the by-products of the sugar industry. It is nearly 40 years since it was first shown by some Indian workers (at the Indian Institute of Science, Bangalore) that bagasse would make a good raw material for paper manufacture. It was, however, only during the last few years that practical application has actually followed. There should be several other uses for bagasse or a pulp made out of it, along with different binders and other accessories, and these lines should be intensively pursued. The use of cane molasses in some attractive form as a source of essential mineral supplements will also be a useful line. This type of use is popular in some sections in the U.S.A. We have not so far been very successful in finding new uses for molasses. This does not mean that we should slacken our efforts. We may again meet with lots of failures, but we should go on working till we can find at least a few possible uses which may develop even after a few years.

"I have repeatedly urged that there should be a drive to promote more research on sugar and by-products of the sugar industry. At the present time, there is not much fresh thinking and the industry itself cannot be expected to think of new programmes. It will be the responsibility of the scientists to think of and to initiate new lines. It is because of this that I have been pleading that the Standing Research Committee should include more scientists and technologists from other disciplines. The Committee should hold one or more sessions exclusively for discussion of new programmes. We may not achieve much in the beginning, but we will certainly make some progress in the course of a few years. The present committee has only a restricted outlook and the meetings are confined only to discussions of a few schemes which are submitted for financial assistance."

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of January 1962, the third month of the current season 1961-62, was 546,000 metric tons, as against 540,000 tons produced in the same month last season. This brings the total production for the season upto 31st January 1962 to 1,138,000 tons (including 56,000 tons produced prior to November 1961 for the current season), as against 1,321,000 tons in the corresponding period last season (including 55,000 tons produced prior to November 1960).

The offtake of sugar from factories during the month of January 1962 was 184,000 metric tons, which included about 641 tons despatched for export, as against 165,000 tons (including 16,000 tons for exports) in the same period last season. The total despatches during the first three months of the 1961-62 season were 590,000 tons (including 32,000 tons for exports), as against 487,000 tons (including 37,000 tons for exports) by the same period last season.

The total closing stock of sugar with factories as on 31st January 1962 was 1,690,000 metric tons, as against 1,382,000 tons on the same date last season.

KEEN DEMAND FOR MONEY

(From Our Own Correspondent)

BOMBAY, 28th *February*

The seasonal stringency in the short-term money market is being acutely felt by banks. More and more of them are looking back on the Reserve Bank for supply of funds, as there are hardly any lenders in the inter-bank market. Nevertheless, the inter-bank call money rate remains unchanged at 4½ per cent per *annum*. One possible explanation for this feature is that most of the banks are presumably in a position to borrow from the central banking institution at 5 per cent and have not yet reached a stage in their indebtedness with the lender of the last resort which attracts the penal rate of 6 per cent. Another surmise is that the number of banks availing themselves of the facilities provided by the Refinance Corporation is greater than it was this time last year. A third explanation is that the level of deposits now is certainly substantially higher than a year ago. The banks, however, are keenly competing for additional deposits, because they know full well that, in the coming months and years, the demand for credit will continue to outstrip the growth of their resources.

Pending the study of the nine-man special committee on the maximum rates of interest on deposits under the all-India inter-bank agreement, the old rates prevail. These are as follows:

	Per cent
Notice money from public:	
3 days and more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days (inclusive)	3½
(iii) 61 to 91 days (inclusive)	3½
(iv) 91 days and over but less than 12 months	3½
(v) 12 months and over but less than 24 months	4
(vi) Two to four years	4½
(vii) Four to five years	4½
(viii) Five years and over	5

It would appear that some of the public sector undertakings are having more liquid funds than they need for the moment. This is reflected in the increase in the amount tendered for 91 days' Central Government Treasury Bills. From Rs. 2.02 crores last week, it has gone up to Rs. 2.35 crores, though the invitation was for the usual Rs. 2 crores only. The average rate of *accepted tenders* has remained unchanged at 2.580 per cent per annum, thereby staying the gradual upward trend that had persisted for four *continuous* weeks. Intermediate Treasury Bills, which, too, are of 91 days' usance, have also fetched a somewhat larger *amount* of Rs. 15 lakhs, as against only Rs. 5 lakhs in the previous week. These two types of short-term borrowing by the Central Government are being continued in the next week also.

In the week ended 23rd February 1962, notes in circulation declined by Rs. 6.89 crores. But as notes held in the Banking Department went up by Rs. 7.36 crores, the total notes issued registered a small rise of Rs. 46 lakhs. Foreign securities held in the Issue Department of the Reserve Bank were reduced by Rs. 3 crores, this withdrawal being balanced by an addition of like amount to the rupee securities. As balances held abroad improved by Rs. 1.96 crore, the total foreign assets suffered a fall of only a little over Rs. 1 crore. Other loans and advances on the assets side of the Banking Department of the Reserve Bank, including loans to scheduled banks against usance bills, declined by Rs. 1.51 crore, of which Rs. 90 lakhs were against usance bills.

The scheduled banks' statement for the week ended 16th February 1962 shows, as compared with that for the previous week, a sharp rise of Rs. 16.71 crores in deposits, the bulk of which has occurred under demand deposits. Inter-bank borrowings also have gone up by Rs. 1.91 crore. Since bank credit is higher by only Rs. 4.05 crores, the impressive rise in deposits has been utilised to reduce the borrowings from the Reserve Bank by Rs. 6.36 crores and raise the total cash position by Rs. 2.20 crores. An increase of Rs. 6.06 crores in money at call and short notice has been offset by a fall of Rs. 6.53 crores in investments.

The statement of affairs of the State Bank of India for the same week shows an increase of Rs. 9.32 crores in deposits and a rise of Rs. 12.43 crores in other assets. Its investments are lower by Rs. 4.96 crores, while its cash position is better by Rs. 1.01 crore. Its advances have gone up by a moderate amount of Rs. 1.44 crore.

The Gilt-edged market has passed another dull and quiet week. There is hardly any turnover in this market nowadays, what little buying there is being on account of provident funds.

In the foreign exchange market, the pound sterling has been fully steady. There is no change whatever in the sterling dollar rate. In the New York market, spot sterling is quoted at 281 510-281.540 cents per £, three months' forward is quoted at 279 700-279 730 cents per £. In the local market, the rupee dollar rate remains unchanged, with banks' selling ready T.T. on New York at Rs. 475.50 and buying at Rs. 472.50 per 100 dollars.

RAW GOAT FIRM

(From Our Own Correspondent)

MADRAS, 26th *February*

There was no appreciable change in the tempo of the hides and skins market during the week. Sellers were finding it difficult to place business for export, as they were unable to obtain replacement values. Raw stocks were out of tanned parity.

Arrivals of tanned cowhides were of moderate volume and clearance was fair-sized. Demand was steady and was for all selections and average weights for shipment to the U.K. and Continent. Stocks of cowcalf were meagre and there were export orders for all weights, with the result that prices ruled firmer in this section. A few sales of top class buff calf were concluded and, as the tanners have been in a well sold forward position, they were not keen to make offers freely.

In view of the high prices of raw goat skins, tanners were not able to take on large orders for exports to the U.S. and Continent, despite steady inquiries for shipment. Important shipments had been effected to East European countries last week. Demand for tanned sheep skins had not revived and the market was weak for all classes, and tanners were not happy over their inventories.

There was no change in the prices of tanned stocks sold in the local market.

RECOVERY IN BULLION

(From Our Own Correspondent)

BOMBAY, 28th *February*

The bullion market continued to present a firm trend in the first three sessions of the week under review, but developed a sagging tendency towards the close on Saturday the 24th inst. which persisted till today when there was a slight recovery. Early in the week, both gold and silver met with good support on report of better offtake and hopes of a further improvement. Consequently, prices staged a rise. The upward trend was halted just *before the market closed on* Saturday when gold encountered selling on rumours of contraband arrivals and silver was subjected to heavy liquidation from two leading professional operators. The declining tendency gathered further momentum in *the subsequent sessions, thanks to* reports that about 15,000 tolas of contraband gold had arrived in the market for disposal. Today, the market *ruled* steady with a slight rise in prices.

The adjustment rates fixed today were Rs. 121.50 per 10 grams of gold and Rs. 213.30 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 121.25 and Rs. 212.75, respectively.

Arrivals of both gold and silver during the week were smaller than in the previous week. The daily average was 5.800 tolas and 8 bars, as against 7.400 tolas and 12 bars. The daily average rate of offtake of gold was lower at 5.800 tolas, as against 6,400 tolas, while that of silver was unchanged at 14 bars.

In gold, the *Fagun* (22nd March) settlement was well supported in the earlier sessions, the quotation advancing from Rs. 122.30 on Wednesday last to Rs. 123.15 on Saturday. Thereafter, the settlement moved down and touched a low of Rs. 121.90 yesterday but recovered to Rs. 122.35 today before finishing at Rs. 122.25.

Ready gold began the week at Rs. 121.40, as against the previous close of Rs. 121.50, and spurted to Rs. 122.75 on the 24th inst. It, however, declined subsequently to Rs. 121.65 today and closed at Rs. 121.75. At this level, the discount under the forward was 50 nP, as against 80 nP on Wednesday last.

The *Fagun* (23rd March) settlement in silver, which had receded from Rs. 213.90 to Rs. 212.90 early on Thursday, recovered to Rs. 214.05 on Saturday. After easing again to Rs. 213 yesterday, the settlement improved to Rs. 213.85 before closing at Rs. 213.70.

Ready silver continued to be quoted at a discount under the forward, though the actual discount declined from Re. 1.15 last week-end to 40 nP *today*. *The ready rate* rallied from the low of Rs. 212.30 on Thursday to Rs. 213.45 on the 24th inst. After declining to Rs. 212.60 on *Monday* and yesterday, it recovered to Rs. 213.45 today, though the closing was lower at Rs. 213.30.

The dollar price of gold in the London bullion *market* receded further from $35.09½ $35.08½, which is said to be the lowest level for nearly a year. Including the fall of 5½ *cents suffered last week*, the net decline over the fortnight comes to 5½d. The decline is attributed to Russian gold sales in Europe and strength of dollar on foreign exchange markets. Ready gold in London was unchanged at 349s. 3d. Ready silver eased by ¼d. to 84⅝d. and forward by ⅝d. to 85½d. The drop followed weakness of silver in New York, the latest available quotation for which is 101.50 cents, as against 102 cents a week ago.

The following table shows the trend of prices during the week under review:

	28-2-62 (closing)	High	Low	21-2-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	121.75	122.75	121.15	121.50
Forward: *Fagun**	122.25	123.15	121.90	122.30
Sovereign	97.25	97.25	96.75	96.75
SILVER				
Ready (.999 fine)	213.30	213.45	212.30	212.75
Forward: *Fagun*†	213.70	214.05	212.90	213.90
London—				
Gold	249s. 3d.	249s. 4d.	249s. 2½d.	249s. 3d.
Silver Ready	84½d.	85¼d.	84½d.	85¼d.
Silver Forward	85½d.	85½d.	85½d.	85½d.
New York—				
Silver	101.50 cents	102.00 cents	101.00 cents	102.00 cents

* 22nd March settlement. † 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

DULL TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 28th *February*

With the delivery period for the Jarilla March contract starting on 1st March and the contract remaining at the ceiling rate there was little scope and no incentive for fresh trading in cotton futures during the week. In fact throughout the week futures trading continued to be dull. The little business passing was largely of a jobbing nature. The March contract ruled at the ceiling rate of Rs. 693 (per three quintals). Even the tendering differences fixed by a Special Committee of the E.I.C.A. on the 22nd inst. did not affect the market. This was because the fixation of tendering differences was only of academic interest as the contract is not likely to attract any sizable tenders in view of the fact that the spot prices are ruling well above the ceiling rates.

Traders' attention has instead turned to the prospects for trading in the August contract. The stage has already been set for trading to commence. The Forward Markets Commission is reported to have approved the amendments, made by the East India Cotton Association, of its bye-laws according to which trading in the August contract are to be conducted. The F.M.C. has now only to give its formal approval which is expected at any moment.

Meanwhile, the F.M.C. has officially announced that, as per the amendments of the bye-laws of the E.I.C.A., the quantum of penalty *plus* the rate at which outstanding sales in hedge contracts have to be settled in the event of the sellers' failure to deliver cotton or in the event of the cotton tendered by the sellers being rejected in supply shall in no case exceed the maximum price of Rs. 693 per three quintals fixed under the Cotton Control Order for the basic cotton of the hedge contract.

In the ready section, since most of the mills have covered their requirements of cotton as per the issued quota, activity was subdued. Nevertheless, moderate interest was evident in such varieties as Vijay, Digvijay, Kalyan, Laxmi, Co2, L. 147, and 197/3. Fairly good business was reported in terminal markets. Prices were well maintained.

Following rumours that the Government might release a fresh quota for Bengal *Deshi*, fine and superfine quality of Bengal *Deshi* were in demand. Actual business done was, however, small. Sustained mill buying continued to be witnessed in Sudan cotton both higher and lower grades. Traders were keenly awaiting the results of the first auction of the new crop Sudan cotton held at Khartoum on the 27th inst. when the Sudan Gezira Board offered 17,500 bales. No information is available at the time of writing as to the results of the auction. Only stray interest was noted in American and Pakistan cotton. Traders noted with interest the encouraging reports about the possibility of getting U.S. cotton. According to latest communication, though P.L. 480 cotton would not be available, some American cotton would be made available to India as loan, the cost of which being repayable with interest in instalments.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 675; Khamgaon 970; Laxmi 1.041; L. 147 1.170; Co2 1,640. *Sudan*: XG3L 1.331; G4L 1,300.

Cotton futures in the Karachi market suffered a setback during the week. Profit-taking induced by last week's spurt in prices and some fresh selling prompted by continued slackness of domestic and export demand led to a decline in values. N.T.R.G. March receded from Rs. 89.10 to Rs. 83.05. The May contract eased from Rs. 80.95 to Rs. 80.

Easy conditions prevailed in the Liverpool cotton futures market during the week. Both the American and American type contracts receded on selling by commission houses and local traders. Lack of domestic demand and lower advices from the yarn and piecegoods market imparted weakness to the market. Sudan cotton contracts ruled subdued. The following are the latest available quotations—in pence per lb. from Liverpool:

American cotton one inch staple contract: March 24.00; May 24.60; July 24.20. October 24.20.

American cotton mixed growth contract: March 24.40; May 24.95; July 25.05. October 24.55.

Sudan: March 31.75; May 30.25; July 29.00.

Fully steady conditions prevailed in the New York cotton futures market during the week. Short covering and commission house support led to a modest rise in values. The Spot market reported good demand for medium and lower goods of good quality cotton. Export demand centred mainly round those qualities which were needed to fill existing commitments.

The U.S. Department of Agriculture has announced a minimum support price of 32.47 cents per lb. gross weight, at average location, for Middling 1" cotton of 1962 crop. This compares with the 1961 crop Middling 1" support price of 33.04 cents per lb. The payment-in-kind (P.I.K.) programme for export of cotton, currently in effect, will be maintained in much the same form in the marketing year beginning 1st August 1962. The initial rate of export payment will be 8.5 cents per lb. for cotton shipped on or after 1st August 1962. The rate will be subject to change without prior notice.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	28-2-62	20-2-62
New York spot ...	35.55	35.55
March	33.50	33.27
May	34.00	33.90
July	34.48	34.38

NO INCREASE IN ART SILK YARN IMPORT QUOTAS

(From Our Own Correspondent)

BOMBAY, 28th *February*

Three official pronouncements of importance to the yarn market were made by Mr. Morarji Desai, Union Minister for Finance, in the course of his speech at a reception accorded to him at Surat on Saturday this week by the Central Development Council for Weaving Industry of Surat. One, the import quota for art silk yarn cannot be increased. Two, the policy adopted for importing high-grade cotton and supplying the same to mills at controlled rates cannot be adopted in the case of art silk yarn. Three, it is not possible to encourage the expansion of the art silk weaving industry owing to stringency of foreign exchange. These observations have not had any effect on the market. On the contrary, art silk yarns have tended to move down. The decline is, perhaps, due to reports that it is proposed to replace the present export promotion scheme for art silk fabrics by a new scheme which envisages, among others, restriction of exports only by export houses registered and recognised for the purpose 150 Italy has declined in the past week by Rs. 4 to Rs. 1,764. 120 Japan is dull at Rs. 1,985. 120 Italy, however has gone up on special support by Rs. 29 to Rs. 1,929. Among spot yarns, National Rayons 150 Bt. cones 1st grade has dropped 11 nP to Rs. 11.97. 120 Bt. cones 1st grade is quiet at Rs. 13.68. Amilan yarn (20 x 1) April contract is quoted at Rs. 3,430, as against Rs. 3,405 last week-end. February contract ran out at Rs. 3,350, as against Rs. 3,320. It is reported that ready stocks are short of the commitments in the forward section.

Staple fibre yarns are quiet. Arrivals are large. Sizable quantities are believed to have been sold recently by some mills. 40 x 2 April contract has dropped Rs. 9 to Rs. 735. February went off the board at Rs. 730, same as last week. Spot Kohinoors have declined by 6 nP to Rs. 8.67. Centurys have eased by 2 nP to Rs. 8.45.

Cotton yarns continue to rule dull. Business put through is restricted, with values moving narrowly. The cotton mills in India produced 162 million lbs. of yarn during the month of January, as against 169 million lbs. in December 1961 and 155 million lbs. in January 1961. The total yarn stocks with mills at the end of January 1962 were 68,600 bales (of 400 lbs. each), as against 80,300 bales a month before and 89,300 bales a year before.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	28-2-1962	21-1-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
February	3,350.00	3,320.00
April	3,430.00	3,405.00
120 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	1,985.00	1,934.00
120 Italy (per 100 kg.)	1,929.00	1,900.00
150 Italy	1,764.00	1,810.00
Nat. Ray. 150 Bt. 1	—	12.08
Staple fibre yarn (40 x 2)—		
February	730.00	30.00
April	735.00	44.00
Kohinoor (per kg.)	8.67	8.73
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	18.50	18.25
20s Modern	23.00	22.75
40s T. T. Corin	34.00	33.50
60s T'Mangal	52.00	52.00
80s Mahindra	75.00	75.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 28th *February*

The oilseeds market ruled distinctly easy during the week under review, as demand for both seeds from local crushers and for oil from shippers were slack. Groundnuts suffered a sharp decline in prices. The decline followed sizable offerings, while *vanaspati* manufacturers and crushers were extremely hesitant to extend support in anticipation of a further fall in prices. The declining trend was aggravated by the persistent weakness of mustard in north Indian markets. Even the imposition of special margins on sellers of mustard seed at New Delhi by the Forward Markets Commission failed to have any significant effect, inasmuch as the recovery in prices of groundnuts was negligible. On Monday, the F.M.C. imposed, as suggested by the Oils and Oilseeds Exchange, a special margin of Rs. 500 per unit on sellers in the mustard seeds May contract whenever the quotation declined below Rs. 30.75 per 40 kgs. It has also put into effect the other suggestion of the Exchange to postpone till further notice outward payments by way of profits accruing to operators on account of favourable fluctuations in prices of mustardseed May contract if the price goes below Rs. 30.75 or rises above Rs. 32.75 per 40 kgs. A revised scheme for claiming release of excise duty on *vanaspati* containing cottonseed oil has been announced by the Government. Accordingly *vanaspati* containing at least seven per cent hydrogenated cottonseed oil will be eligible for a rebate on its cottonseed oil content at the rate of Rs. 60 per tonne. Under the scheme in force at present, the quantum of the incentive for using cottonseed oil to the same extent is Rs. 65 per ton. If a manufacturer uses 10 per cent cottonseed oil under the present scheme, he receives a rebate equal to Rs. 100 per ton of oil.

Meanwhile, the case filed against the local Oilseeds Exchange by certain private parties on the penalty imposed in respect of January 1962 groundnut contract has now entered another stage. Today Mr. Justice Patel at the Maharashtra High Court refused to admit the appeal by Messrs. Mansukhlal Hathising and Co., against the order of Mr. J. R. Vimadalal, Judge, Bombay City Civil Court, rejecting the plaintiffs' notice of motion for an interim injunction to restrain the Bombay Oilseeds and Oil Exchange Limited and its Directors from taking any action against the plaintiffs under the by-laws on the basis that the plaintiffs were in default in not selling their hedge contracts. The plaintiffs' contention was that as the Board of Directors had failed to take into consideration the ready market rate in fixing the rate, the hedge contracts were wagering and that if the plaintiffs had paid any damages or penalty, it would not be recoverable.

Groundnut May 1962 fell by Rs. 4.88 to Rs. 240.62. Nizam bold eased by 62 nP to Rs. 47.50. Oil ex-mill declined by 15 nP to Rs. 19.65.

Castorseeds were subdued, with the prospects for oil exports continuing to remain bleak. March 1962 contract receded by Rs. 3.38 to Rs. 172.37. Madras small fell by 75 nP to Rs. 34.75. Oil commercial lost 65 nP to Rs. 14.35.

Linseed moved down in sympathy with other seeds. The March 1962 contract declined by Rs. 2 to Rs. 37.75. Bold ready retreated from Rs. 42.50 to Rs. 38.75 and linseed oil from Rs. 18.50 to Rs. 17.40.

Among cottonseeds, April 1962 contract closed lower at Rs. 107.75, as against Rs. 108.25 last week-end. July contract shed 50 nP to Rs. 109.75.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 28th February as compared with those of the two previous weeks:

	28-2-1962	21-2-1962	14-2-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	240.62	245.50	243.00
Nizam bold	47.50	48.12	48.50
Khandesh quality	48.25	48.50	48.50
Oil ex-mill ready*	20.00	20.10	19.80
Railway receipts*	19.65	19.80	19.60
Oil May 1962	20.50	20.60	20.45
Castorseed			
March 1962	172.37	175.75	176.00
Ready Madras	31.75	35.37	35.50
Ready Kanpur	33.75	34.25	34.25
Oil B.S.S.†	15.15	15.25	15.40
Oil commercial†	14.35	15.00	14.95
Linseed			
March 1962	37.75	39.75	40.37
Bold ready	38.75	42.50	44.00
Oil ready†	17.40	18.50	19.00
Cottonseed			
April 1962	109.75	110.25	109.50
Niger seed	36.00	36.00	36.00
Kardi seed	24.00	24.00	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER STEADIER

(Messrs. Parekh and Co.)

BOMBAY, 28th *February*

Malabar black pepper ruled steadier with fluctuations rather narrow during the week. There was general lack of speculative elements in Singapore, New York and India. The present improvement in Malabar was due to reports that New York had bought several parcels at about $0.35.

Garbled improved from Rs. 305 to Rs. 310 and ungarbled from Rs. 296 to Rs. 302. March delivery showed a sympathetic improvement but was rather tardy in the absence of any notable speculative fervour. Calicut is quoted at Rs. 290 to Rs. 300.

Singapore was down during the week by Str. $2½, as import of Lampong was resumed after a lapse of several months.

The future appears to be uncertain, as New York buying is patchy and selective. New York is not likely to buy freely until the position of accumulated Lampong stock in both Singapore and Indonesia becomes more clear. Indonesia will have to come in the market, as she cannot afford to accumulate stocks from season to season. A major portion of the stocks of 1960 and 1961 seasons is still unmarketed.

Spot in New York improved from $0.35½ to $0.36¼. Replacement buying by New York was noticed during the week. Growers in India are resisting lower prices, but, if New York does not improve upon its present hand to mouth buying policy, it remains to be seen how long the growers can withhold.

Ready pepper in Bombay is nominally quoted at Rs. 167 per 50 kilos.

QUALITY TEAS RISE

(From Our Own Correspondent)

CALCUTTA, 27th *February*

Good demand for quality teas greeted yesterday's export sales. Export of tea for participation at the London auctions having practically ended, it was natural that bidders on behalf of the U.K. should show greater attention at the Calcutta auctions, which will continue for about three or four weeks more. Considering that the season's output increased by 34 million lbs. to 396 million lbs. as compared with the previous season, internal sales would take place for a longer period. Since the U.K. stocks of tea are now 80 million lbs. lower than last year, attributed to slow purchases earlier in the season in anticipation of a fall in prices, it follows that bidding in U.K. auctions should also be keen now. At last week's auctions there, keen competition was in evidence for quality teas of all origins, particularly from North India, South India, Ceylon and East Africa.

The tea gardens are faced with the problem of rising costs—taxes account for a good portion of the costs—while earnings have declined. It is true that the export duty was reduced by 9 nP per kg. a year ago. But the reduction made no difference to the industry, inasmuch as the exchequer made good this loss of revenue by changing the rate of excise duty. Against this background, it is relieving to be told by the Chairman of the Tea Board, who spoke at the annual meeting of the Calcutta Tea Merchants held here last week, that the industry's plea for relief would receive consideration. The marked fall in exports to the U.K. despite increased production, trade circles stated, has been due to increased competition by Ceylon and East Africa. They pleaded that, unless the export duty was totally abolished and prices of tea were reduced further, they could not hope for retrieving India's position in the U.K.

Although there was good general demand for dusts on offer aggregating 30,521 packages, which were offered at last week's internal sales, prices realised were easier. C.T.C. teas gave way by 20 nP, but the best varieties in this category were firm. Orthodox teas accounted for a decline of up to 20 nP. Legg-cut teas also recorded a similar trend. Quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.40 to Rs. 7.00; medium Assam C.T.C. dust Rs. 5.45 to Rs. 5.90; legg-cut dust Rs. 4.60 to Rs. 5.10; medium Assam dust Rs. 4.30 to Rs. 4.95; and plain orthodox dust Rs. 3.90 to Rs. 4.50.

Leaf on demand aggregating 735 chests were about firm.

There was good general demand for yesterday's export offerings which amounted to 74,242 chests. Orthodox teas were fully steady. B.O.Ps recording a modest addition to prices. Although irregular fannings were generally dearer, clean plain teas were absorbed at firm rates. Teas having stalk and fibre were easier. Good support was accorded to "teas for price." Whole leaf grades were irregular, although steady. Tippy teas were in good demand. In Darjeelings, the flavoury teas were fully firm. Among C.T.Cs, the better lots having good liquor were firm, but others were irregular. Legg-cut teas fell by 10 to 20 nP. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6 to Rs. 6.50; best Assam C.T.C. B.P. Rs. 6 to Rs. 6.50; medium Assam C.T.C. fannings Rs. 5.20 to Rs. 5.60; clean plain pekoe Rs. 4.20 to Rs. 4.40; medium Assam C.T.C. B.P. Rs. 5.20 to Rs. 5.60; plain fannings Rs. 3.60 to Rs. 4.10; and plain B.P. Rs. 3.50 to Rs. 3.80.

TEAS IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 20th *February*

A lesser quantity of 270,000 kgs. was offered in sale No. 8 held today. Quality in general showed little change from last week. A few invoices of mediums were brighter. There was strong but irregular demand. There was strong competition for mediums and good mediums, particularly their brokens which were substantially dearer following quality, sometimes registering advances up to 75 nP per kilo. Plain and low mediums were well supported and were fully firm and those with brighter liquors were sometimes dearer. Highgrowns met irregular support and in a number of cases sold below valuation. A few flavoury invoices however realised enhanced prices. Unorthodox descriptions met with irregular support, the cleaner types selling at dearer rates. Clean black leaf teas continued in demand and were steady and in some cases dearer. Orange pekoes were dearer, whilst flowery pekoes were steady.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low medium	3.85-4.05	4.70-4.85
Mediums	4.10-4.90	4.85-5.15
Good mediums	4.90-6.20	5.20-5.80
Nilgiri B.O.Ps	5.50-11.50	

The average price realised in sale No. 8 was Rs. 5.82 per kilo, as compared with Rs. 5.44 in the corresponding sale last year.

About 271,000 kgs. were offered in dust sale No. 8 held on the 22nd inst. There was good but irregular demand. Plainer varieties, low mediums and mediums were generally easier, but cleaner and black leaf sorts were fully firm and sometimes dearer. Good mediums sold readily, but these declined by 10 to 20 nP. There was good support for highgrowns, but these were also irregular, with quality. Stalky and milled kinds were weaker and often sold at prices below last. C.T.Cs met with irregular demand and were generally easier. C.T.C. types and legg-cut types were well supported and sold at around last rates.

The average price realised in dust sale No. 8 was Rs. 3.96 per kilo, as against Rs. 4.18 a week ago and Rs. 4.94 in the corresponding sale last year.

Colombo: The market met with good demand. Teas from Western districts and Uvas were substantially dearer. Mediums advanced by 5 to 15 cents whilst lowgrowns were dearer by 5 cents. Tippy fannings were well competed for at much dearer rates. At the offgrade sale, offgrades and dusts were in strong demand at dearer rates with the exception of the poorest kinds.

London: *North Indian and other growths*: Monday's sale met with strong demand and prices were dearer throughout the sale. Bright liquoring assams and cachars, particularly their orange fannings, were frequently dearer by 3d. to 6d. Wednesday's sale continued on Monday's trend and prices were fully firm for all descriptions.

Ceylon and South Indians: 27,358 packages were offered in Tuesday's sale of which 9,509 packages were from South India. Ceylons met

with keen competition and were generally dearer, but lowgrown B.O.Ps eased by 1d. There was good demand for South Indians, especially for B.O.P. fanning. Poorer kinds and thin liquoring sorts however met with weak inquiry.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"Sale No. 9: 332,000 kgs. offered. Irregular demand. Low medium, medium and good medium very strong and dearer. Plainest barely steady. Highgrowns very selective demand. Many withdrawals without bid."

JUTE GOODS FIRM UP

(From Our Own Correspondent)

CALCUTTA, *27th February*

Jute goods firmed up during the week under review, following modest business in various constructions on account of both foreign and internal consumption. Further, there were good inquiries for heavy goods and hessian in the near delivery position. This led to short-covering and, despite increased production, the squeeze in ready goods would continue for some time to come. Fibre continued to be quoted at minimum levels, but the feature was that the inferior varieties, particularly mesta and white jute, recovered to be quoted at the minimum levels, and the premium for tossa and middles advanced from 50 nP to Re. 1 to Re. 1.50 a maund. This was reflective of the improved conditions in goods. Although market circles were reluctant to infer too much from the abnormal increase in burlap consumption in the U.S. during January, speculators put this to good use in the expectation that increased buying by that country was imminent in order to build up depleted stocks there. The February consumption figure was keenly awaited before concluding that, in the U.S., a major shift from substitutes and bulk handling methods was evident. The month of January is a good period for burlap consumption in the U.S., but so huge an increase as 15 million yards as compared with January 1961 was a pleasant surprise.

Alarmed at the rapid increase in hessian prices and rightly viewing that such increase would affect U.S. buying, the East India Jute and Hessian Exchange prohibited fresh transactions in standard contract No. 1 pertaining to hessian cloth for February 1962 delivery. Increased consumption in the U.S. accompanied by increased buying by that country was taken as an indication that the U.S. buyers considered existing levels of prices fair and competitive. The squeeze in ready goods is not expected to last longer, in view of the fact that mills have now practically unsealed all looms. Any increase in prices should be resisted, as, otherwise, the trade apprehended that U.S. buyers would do some re-thinking before entering into further commitments. It has been apparent to foreign buyers of both hessian and heavy goods constructions that, with the Government of India's anxiety to see that fibre prices should not be allowed to fall from the minimum levels, there is no chance for a further fall in the prices of goods. The impressive increase in overseas inquiries for hessian and heavy goods that were in the market during the week has been a result of such a realisation. The anxiety of all concerned in not allowing prices of goods to rise springs from a desire that nothing should develop that would lead to a diminution of business. Granting that offtake on foreign account continues to be as satisfactory as at present, it would be necessary for mills to continue in operation the looms that had recently been sealed even beyond the end of March. Fibre stocks with mills are plentiful, and further supplies of good quality jute are restricted. In spite of the increase in the premium and the condition of sellers to part with tossa and middles against acceptances of mesta, mills are finding it difficult to meet their full requirements of the superior varieties. It is thought likely that the Government would release a further quota for import from Pakistan very shortly.

The occurrence of light rains twice during the week has been welcomed by cultivators and the fact that, although expectations of an earlier crop strengthened, the fact that such expectations did not contribute to depressing fibre prices was indicative of the current conditions in the market. This also demonstrates the desire of mills to see that prices should not fall below the minimum levels. Despite heavy stocks of fibre which have entailed mills blocking of considerable funds, mills continue to show interest in offers and actual buying by them during the week corresponding to the weekly quota of 700,000 maunds. The trend of fresh arrivals indicates the unlikelihood of any large increase in daily receipts in this season. Total arrivals in January amounted to 899,000 bales, of which only 36,000 bales were of Pakistan origin. This has brought up total arrivals in this season so far to 3,977,850 bales from India and 274,400 bales from Pakistan, accounting for an increase of 984,600 bales and a decline of 39,650 bales from Pakistan or a total increase of 944,950 bales over the corresponding previous period. Such an increase is in line with the increased crop of this season. It should, at the same time, be noted that, as compared with December 1961, arrivals during January from both Pakistan and India fell by 87,300 bales. This was indicative that the peak of the season had already been touched and the decline had set in even from the month of January. The declining trend of arrivals has been more pronounced in this month than in January. Fibre prices in the Narayanganj market (Pakistan) also firmed up during the week, and all arrivals were absorbed at fractionally rising prices. The firmness was expected to induce cultivators to release more of their holdings. Although the cut in E.P.C. levels was accompanied by increased overseas interests, balers showed greater inclination to enter into commitments.

Squeeze in ready goods induced by short-covering in mostly near delivery hessian pushed ready hessian 40" 10 oz. from Rs. 55.75 to Rs. 56.25 on Tuesday last here. In sympathy, B. twills firmed up from Rs. 126.25 to Rs. 126.75. The announcement of prohibition in February 1962 of contract hessian by the East India Jute and Hessian Exchange Ltd. as from 20th February led to depress prices on Tuesday, despite moderate business in ready goods continuing. Ready B. twills reacted to Rs. 55.25 and B. twills to Rs. 124.75. With ready hessian 40" 10 oz. at Rs. 55 and B. twills at Rs. 123.25 on Thursday, prices eased further, following the realisation that overseas interest would decline if prices hardened. The low levels led to increased short-covering, following the large number of overseas inquiries for both hessian and heavy goods. Also, Government interest in March-April B. twills was considered imminent. These factors pushed up hessian 40" 10 oz. to Rs. 57.25 and B. twills to Rs. 126.50 on Thursday. Over the week-end, there was little actual buying, though short-covering in ready goods continued unabated. Ready B. twills eased to Rs. 125.50 and hessian 40" 10 oz. to Rs. 56.50. Good buying interest was in evidence. There were, besides, good overseas inquiries. Both these factors led B. twills to firm up to Rs. 126.00 yesterday. Hessian 40" 10 oz. was also firm at Rs. 56.35.

In the fibre market, mills showed greater interest in tossa, as a result of which the premium for it gained. Sellers of the same were reserved. The likelihood of release of an import quota from Pakistan very shortly was realised by sellers. However, it was thought that, now that the peak of the season has come and gone off in Pakistan too, there was no likelihood of mills obtaining supplies from that country at current levels. Sellers of indigenous fibre offered tossa and middles in assortment with mesta. March-April quotations were unchanged as follows: northern bottoms Rs. 29.50 a maund; daisee bottoms Rs. 33; and Assam bottoms Rs. 30.

METALS DECLINE

(From Our Own Correspondent)

CALCUTTA, *27th February*

Metals declined earlier during the week under review, but, in response to steady advices from London and Singapore, local quotations, though lower on balance, were firm nevertheless. A feature of the week was the recovery in lead from Rs. 123 per 100 kgs. to Rs. 124. The recovery followed the gain in the London spot quotation from £59 to £60¼ a ton. The rise in London was attributed to heavier demand for cash metal and transactions induced by considered interest. The recovery here was only nominal, as demand was dull. Stocks were plentiful. January imports having been higher at 2,810 long tons, as against 1,350 tons in the previous month. According to London reports, though world demand has risen, the increase in production has outstripped the rise in demand.

In London, tin rose from £948½ to £954 a ton. The rise was maintained subsequently. It was realised that, this year, there would not be any visible change in the overall shortage. World production is estimated at 144,000 tons, as against 136,000 tons in 1961. The response of producers, especially in Malaya, to the increased floor and ceiling prices has been, if anything, hesitant, and as such this year's increase in production would not be more than 8,000 tons. Providing for Soviet exports to this side of the Iron Curtain, this year's total availability is placed at 149,000 tons. As against this, demand is expected to total 164,000 tons; thus shortage to the extent of 15,000 tons is inevitable. However, this shortage would be made good from expected releases from U.S. strategic stockpiles.

It has been known that the U.S. Government is desirous of releasing as much as 50,000 tons from its holdings. The six-month notice to the trade required under the statute governing releases will expire on 5th March. Releases will then depend upon Congressional sanction being accorded. Meanwhile, the U.S. Government has already explained that it is not bound by the price range under the International Tin Agreement, to which it is not a signatory. This means that, if the U.S. so chooses, it can release supplies at below the new price range and thus depress the world price. The U.S. Government's stand in this regard has caused dissatisfaction among Malayan producers. However, considering that the U.S. stockpiles had been built at a time when the price was high, it is to be expected that Washington would give due regard to the new price range. Stocks in London are now about 3,500 tons, as against 10,000 tons a year ago. The fact that the price in London has now firmed up is indicative of the difficult international supply position; it was reported likely that U.S. releases would not be earlier than in June. The stock position in India having shown a comparative improvement as a result of recent arrivals from the Far East, tin in Calcutta eased from Rs. 1,582.50 per 100 kgs. to Rs. 1,574.75.

Copper scrap prices eased after initial firmness. In view of the recent arrivals of virgin metal, scrap met with limited attention, though supplies of the latter were indeed short. Berry scrap eased from Rs. 544.25 per 100 kgs. to Rs. 541.50, but utensil scrap gained from Rs. 495.75 per 100 kgs. to Rs. 501. The State Trading Corporation was reported to be arranging import of 3,000 tons of electrolytic copper wire bars. There was also the news earlier that the Heavy Electricals Plant at Bhopal was requiring 500 tons of brass rods. It is expected that the S.T.C. would be inviting world tenders for the same. In London, copper was fully firm at £235¼ per ton, as against £234 earlier in the week. The rise was due to reports of possible strike in a big Northern Rhodesian mine.

In London, the price of zinc hardened from £69¾ a ton to £70⅜ following good Continental buying. On the other hand, the price here was as low as Rs. 200.75 per 100 kgs., as against Rs. 216 earlier in the week and Rs. 228.25 in the previous week. Demand was at a low ebb, but the stock position increased considerably.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, *26th February*

Owing to continued scarcity of linseed supplies from upcountry, the undertone of the market was steady throughout the week. Very small business was reported, and mills were keen buyers daily for ready seeds, as their stocks had been exhausted.

The oil market was firm in the latter part of last week, due to small stocks in the hands of millers.

The oilcake market was quiet. Offtake during the week was small, in spite of lower prices quoted by sellers. Ready/March was quoted at Rs. 31 per maund.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *26th February*

Foodgrains were easy during the week, following excellent *rabi* crop prospects. More rains on Saturday night have proved beneficial to the standing crop which were already progressing under healthy conditions, thanks to timely winter rains in mid-January. Wheat eased by over Re. 1 per maund to be quoted on Friday at Rs. 16 to Rs. 16.37 for average quality and upto Rs. 18 for best farm variety. Daily arrivals of wheat in the open market were poor, but, as most of local demand was being through fair-price shops, demand too, was slack and stockists were anxious sellers. Local stock of wheat with trade was about 4,000 maunds only.

Rice was steadier, thanks to better demand. Mainpuri quality was still reaching the market and week-end prices were: rice *mainpurisela* Rs. 20; *gadda kutcha* Rs. 19; *ramajwayansela* Rs. 23; *raimunia* Rs. 24; *basmatisela* Rs. 26 to Rs. 30 and to Rs. 34 a maund.

Gram also ran down markedly to Rs. 14.50 to Rs. 15 a maund for best Punjab variety. Punjab advices registered an easy trend and local stock was now normal and beyond 2,000 maunds, with very good crop prospects, thanks to good winter rains. Barley was quoted fractionally lower at Rs. 12.50 and *bejhar* at Rs. 12.50 to Rs. 12.75 a maund according to quality. Standing crop conditions were excellent and bumper crop expected. Maize continued to attract good consumer demand at unchanged prices of Rs. 12 to Rs. 13 per maund and, as maize was still reaching here from Rampur side, local stock was stationary around 12,000 maunds. *Bajra* was loss-Rs. 14.25 and other coarse grains were listless at: *methi* Rs. 26.75; *juwar* Rs. 13.25 to Rs. 14.50; *guwar* Rs. 14; oats Rs. 11.50.

Among pulses, peas and *arhar* drifted lower, as the stockists were anxious sellers and loading facilities were not available. *Dal* also sought lower levels in sympathy. Late peas crop prospects were fair, while *arhar* crop this side is very poor, having suffered badly due to frost early in January. New *urd* and *moong* continued to attract good consumer demand in the face of poor arrivals. Week-end prices (in rupees per maund) were: peas *dara* 12.25; farm 13; peas *dal* 13.75; to 24; *urd dal* 25 to 28; *moong* 18 to 20; *moong dal* 21 to 23; *massor* 15 to 17; *massor dal* 20; *moth* 16; *moth dal* 19.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *26th February*

Sugar ruled quietly steady, thanks to better buying support. While superior bold crystal was much in demand from Gujarat, Madhya Pradesh, Delhi and Saurashtra, inferior was attracting support from Rajasthan and Delhi. After the release of 185,000 metric tons of monthly quota for sale, brisk trading was witnessed. Bold crystal was commanding a premia varying from 8 nP to Re. 1.12 per maund. Production was being continued with vigour in factories on this side and week-end prices here were: wholesale Rs. 106.50 per bag; retail 97 nP to Re. 1 per *seer*; mill delivery per maund E29 Simbhauli Rs. 37.75; D29 Amroha Rs. 36.37; seohara Rs. 36.31; Dhampur C29 Rs. 36.

Sugar was steadier in the Muzaffarnagar market. Buying support was quite good and a quintal, as C29 Deoband was quoted at Rs. 106.50 and D29 Rs. 105.50. Modinager packing of 2 maunds 30 *seers* was being lifted at Rs. 105.50 for D29 quality. Damaged Bijnore D29 quoted lower at Rs. 90 per bag. Mill delivery prices for superior stuff were fully steady.

After modest gains, *khandsari* reacted towards the close of the week, due to slack demand. Wet quality was quoted at Rs. 25 to Rs. 29.50, while dry stuff lifted at Rs. 30 to Rs. 33 a maund. New stocks at Muzaffarnagar were put at 15,000 maunds.

Gur was depressed towards the week-end, as railway loading facilities were not available. Daily arrivals did not improve beyond an average of 3,000 maunds daily, a part of which was being lifted by road and the rest went to stocks, with the result that local stock rose to 20,000 maunds. *Shakkar*, too, drifted lower in the absence of buying support. The week-end prices here were: *pansera* best Rs. 14.12; *dara* Rs. 13.75; *balti* Rs. 14; *shakker* Rs. 16.50 a maund.

Sowings of cane have begun on a large scale and increased acreage is again predicted.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 23rd Feb., 1962

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	5,00,00,000

GEARING TEXTILE INDUSTRY FOR EXPORTS

C.I.M.M.CO.'S CONTRIBUTION

(*Contributed*)

THE Planning Commission envisaged originally a high (comparatively speaking) *per capita* consumption of cloth with the rise in the country's living standard. Although this could not be achieved, a consumption of about 14 yards is likely to have been reached during the second Plan period and has to rise a great deal during the third. Apart from consumption in the country, a more important aspect has been earning of foreign exchange by exports. The textile industry, being a very major industry in the country, should naturally take a leading role in this effort by expanding its capacity to produce not only a larger amount of cloth but also superior textiles to be able to compete in the world market.

One method for expanding capacity could be the multiplication of plant and machinery in proportion to the rise in the desired outturn. This would mean simply increasing the number of units of each type of machines, which, however, is not conducive to improving the quality of the product or incorporating any new ideas into the product designs, so important for getting the clientele in the world market. A practical approach is to switch over to modern plant and produce quality cloth. This requires a great deal of adaptation of the working methods, including a heavy capital outlay and, what is more difficult, changing the attitude of the human material and training them to suit the advanced equipment.

The policies adopted during the last decade, as far as textiles are concerned, have been to avoid automation, because in certain sectors, there was a false feeling that it may result in reduction of employment. It has, however, now been recognised that automation does not result in decrease of employment but increases the type and quality of skills involved.

In order, therefore, to adopt a workable scheme, it is best to start a cycle of improvements with modern equipment that is consistent with possibilities of improving skills and offer the best products for earning the essential foreign exchange. Internally, we have to satisfy our needs with what is left for local consumption. Taking the point of textile machinery like looms, winding machines, etc., a recent development has been adoption of automatic looms as manufactured by reputed firms in Switzerland, Japan, etc., by a number of manufacturers.

The mills in India could not put up a large number of automatic looms for reasons stated above, but, from such figures as are available, it is seen that so far, a large proportion of looms of the Japanese style has been used and installed and, what is more, successfully worked by available skills, even though there has been dearth of skilled personnel, particularly for maintenance of automatic motions.

In view of this trend, the Central India Machinery Manufacturing Company Ltd., which has been manufacturing looms since 1943 and has also produced automatic looms more or less of the Japanese style, has now entered into technical collaboration to produce the Sakamoto type automatic looms under the trade name of "Cimmco-Sakamoto."

In order to employ successfully the Japanese methods of manufacture to achieve quality, a number of machine tools has been installed and quite a few have been designed and locally erected. Japanese experts have been in the country for over a year to help laying out manufacturing details, specifications and methods, in order to ensure that the product turned out conformed to established standards. Since the Sakamoto type looms are alreay well known, and in fact, represent the largest percentage of automatic looms already in use in the country, little difficulty should be experienced by Indian labour and staff employed by the mills in operating them. These looms are not only sturdy but, in fact, exceedingly rigid and, therefore, capable of standing a certain amount of not too good maintenance attention. The looms are capable of taking all the auxiliary motions ordinarily required by the mills. Included therein are negative or positive let-off, feeler or side weft fork, fast or loose reed mechanisms. The underpick arrangement is extremely efficient and smooth working. The mechanism is suitable for attaining any number of picks desired depending upon the texture. For certain type of texture upto 300 picks have been achieved. The mechanical warp stop motion is foolproof, easily maintained and, coupled with a very efficient brake system, assures minimum over-running. The cop changing arrangement, which is battery loaded, efficiently replaces an empty bobbin without interruption or attention of the weaver.

Looms with negative let off motion are already in production and the firm recently displayed at the Indian Industries Fair a 44" and a 60" loom under actual working conditions, producing a fine shirting design and a heavy texture, respectively, entirely satisfactorily.

The C.I.M.M.CO. has also been working on adopting the high speed winding and warping machines in collaboration with a German firm of Messrs. Franz Mullers and hopes to put the machines in the market very shortly.

Although more automatic and higher precision mechanisms are available, the Company has deliberately chosen to work on not so complicated machines at this stage, and it is expected that the production of quality fabrics will find a great impetus with the type of products now taken on hand.

Manufacture of well-known brands in India, apart from the advantage of being already known to the using staff, has the great advantage of service after sales so vital to the needs of the mills. Encouragement to mills which desire to have their men trained on the work and equipment is always given and if advantage of this is taken by the mills concerned, a number of their maintenance problems would certainly become smoother.

STIMULATING OFFTAKE OF TEA

(*Concluded from page 373*)

pose heavy taxation, largely as sales tax but in addition transit taxes have been levied in Assam and West Bengal. Thus, we have a complicated picture of taxes collected at many points, involving a great deal of trouble and inviting a great deal of evasion.

Worse—this complicated pattern of taxation warps and diverts the normal flow of trade. The garden excise is often referred to as a tax on loose tea. This is quite inaccurate. It is a tax on all tea, whether exported or consumed in India. Consider, however, this:

If the tea is exported, a further tax of 44 nP per kg. is payable.

If the tea is packed and consumed in India, a further tax of 40 nP per kg. is payable.

If the tea is sold loose in India no further Central tax is payable.

I am sure that the Central Government do not wish to put the exporter at a disadvantage as compared with more than half of the internal trade, but this, in effect, is what is being done.

I am equally sure that the West Bengal Government has no wish to reduce Calcutta's importance as an international tea centre, but this is steadily taking place. As a result of the West Bengal entry tax and sales tax, tea now moves directly from the gardens to many points in Northern and Western India—may be forty million pounds a year.

The Central Government have repeatedly stated that they have no intention of stopping the development of package tea, which, besides being modern and hygienic, is an industry which creates many jobs, but the effect of the present tea excise can be seen in the very slow growth of the packet tea industry compared with other industries. I feel that taxation on tea must be brought in line with present-day conditions. If the total heavy burden cannot be lightened for the moment, at any rate it must be fairly spread so as to fall equally on all.

The present complicated tax picture could be greatly simplified, thereby reducing the cost of collection, and raising revenue by checking evasion. This equality in burden and simplicity of operation would immediately stimulate exports and go a long way to restore Calcutta's threatened position as a tea centre. In our view, the key to this admittedly complex problem lies in organising the movement of tea in bond from the gardens to warehouses specially registered for this purpose near or in the big selling centres such as Calcutta, Cochin, Amritsar and so on.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2656 BOMBAY, 10th MARCH 1962 PRICE Rs. 2

SOME ASPECTS OF TEA INDUSTRY

THE tea industry's state of affairs was clearly and convincingly presented by Mr. I. F. Morriss, Chairman of the Indian Tea Association, the oldest and the most representative body of tea producers in North-East India, in his speech at its eighty-first annual general meeting held at Calcutta on the 9th inst. A refreshing feature of his treatment was that it was not a mere tale of the well-known problems of this ace foreign exchange earner of India such as heavy incidence of taxation, fear of a large surplus of tea in the coming years and the need for ensuring an expanding export market. To these he did refer, albeit in a more sober tone than some of his confreres in recent weeks; but he devoted a good part of his 34-page speech to other matters, especially labour. And much of it was appreciative of the workers' lot. He readily conceded that "the efficient worker must be made to feel contented and secure in his job." It is gratifying to hear from Mr. Morriss that the past year was a relatively peaceful one for the tea industry. It was "commendably free from industrial disputes." In the 800 separate units belonging to the membership of the I.T.A. producing more than half of India's tea, there were only 47 strikes, of which 35 were settled on the day on which they started and only two lasted for more than four days. This, as he rightly remarked, is a tribute to the plantation managers, the I.T.A.'s labour organisation, the local officials of Government and the trade unions. But, above all, the improved labour relations are a testimony to Mr. G. L. Nanda's labour policy which seems to be yielding slow but steady results.

The I.T.A. Chairman, for instance, admitted the value of the Code of Discipline as a preserver of industrial peace. The conclusion of a three-year bonus agreement covering the whole of North Indian tea gardens also helped to maintain good relations. Under this agreement, bonus is payable only when there are profits and, to take care of lean years, a portion of the bonus declared in years of profit is set aside. A healthy feature of the agreement is that payment of bonus is related to attendance. Mr. Morriss suggested that, in order to discourage illegal strikes and to improve the conduct of workers, some of whom still resort to intimidation and violence against the managerial staff—last year, there were several cases of assault—a provision should be made in future agreements whereby the bonus which normally would have gone to the offending workmen could be placed to a common fund belonging to workers as a whole. This is a good idea, worthy of consideration by the Bonus Commission, which has already circulated its questionnaire to the associations concerned for replies. The appointment of Wage Board and the improved living conditions in the plantations, including decent, modern housing accommodation, better medical facilities, and more amenities for workers in the gardens and factories have also contributed to peaceful labour relations and, what is more, to a perceptible fall in absenteeism. The one factor that is still a source of concern is that, despite improved wages, better living conditions and reduced hours of work, the productivity of workers has not recorded any significant improvement. This, of course, is a feature common to most industries in India, but that is all the more reason for complimenting Mr. Morriss on his thought for quoting the Soviet Prime Minister who recently observed that it would not be enough if wages and productivity marched hand in hand, but productivity must always be one jump ahead of wages.

There is one aspect of labour problem which must receive the attention of all employers, both collectively and individually. And that is family planning. The Indian Tea Association is the first, so far as we are aware, among the employers' organisations to have taken the initiative to spread the message of family planning to the workers of its member-gardens and provide the necessary facilities to the workers for restricting the size of their families. In plantations, in particular, the birth rate is pretty high and, unless it is effectively brought down, the estates will be faced, in the not too distant future, with unemployed adults and adolescents far in excess of the employed. When that happens, the good work that is being consistently done to raise the living standards of workers will be more than offset. Accordingly, Mr. Morriss's appeal to managers and assistants in the plantations to give their fullest support to the family planning campaign, initiated by the I.T.A. with the co-operation and assistance of the Government of India and the Tea Board, is quite pertinent. Indeed, we commend this advice to a wider audience of industrialists. The Federation of Chambers of Commerce and Industry at New Delhi and the Associated Chambers of Commerce and Industry at Calcutta should, in our opinion, lend a helping hand to the Government by emulating the I.T.A.

The I.T.A. Chairman was not pessimistic about the maintenance of supplies to the tea estates. He said that fertiliser supplies had improved, thanks to the energetic action taken by the Tea Board Chairman, Mr. A. S. Bam, whose prompt handling of the industry's requests and representations was generously acknowledged. In fact, Mr. Morriss cheerfully added: "It seems that, in 1962, we should have all that (fertilisers) we want, if we can get it to the garden in time." So transport is the chief, persisting bottleneck of tea gardens, too. But he was hopeful of improvement in this respect also in the coming years, as the Brahmaputra Bridge would be finished next year; this would save a good deal of transit time for supplies and for teas sent by rail. Only, the steamer companies have to make adequate and timely efforts to expand their carrying capacity by adding new vessels. The development of petroleum industry and the discovery of natural gas in commercial quantities in Assam are a blessing to tea gardens there. They promise to ease the fuel supply position. A full-scale experiment on the utilisation of natural gas for the running of tea factories is already taking place.

On the much discussed question of relief in indirect taxation on tea and need for promoting offtake of tea through intensified sales promotion, Mr. Morriss eloquently reiterated the well-known arguments. If, however, what he said does not move the authorities concerned, it will be a case of trying to convince one who refuses to be convinced. The question of indirect taxation on this beverage is a twofold issue. One is multiple taxation, namely, excise duty, sales tax, transit taxes and tea cess and the other is export duty. The suggestion of tea producers is that the internal duties (both Central and State) should be consolidated into one tax which will save them and the Government a lot of very costly and unprofitable accounting and a mass of reconciliation that is at present hindering the advancement of the industry. This is a very reasonable plea, but its implementation involves the co-operation of the State Governments concerned, which may not be readily forthcoming, even if the Centre is willing. But at least the State taxes could be consolidated, so that there may be no more than two levies, that is, the Central excise and sales tax. On taxation on exports, it is necessary for the Union Government to modify its policy of not looking beyond its nose. The logic of planters' demand for reducing the export duty substantially and abolishing it ultimately, as well as for refunding all internal taxes on that portion of tea that is exported, is undeniable, especially in the context of achieving the production target of 900 million lbs. per annum and the export target of 610 million lbs. per annum by the end of March 1966. The most important consideration that must be borne in mind is that taxes on exports of tea constitute an indirect subsidy to competitors of Indian tea. Failure to remove this anomaly without any further delay will only mean that the Government is unwilling to learn until it is too late, as happened in the jute industry.

NONSENSE ABOUT COTTON

THE adoption of a resolution urging decontrol of cotton by the Indian Central Cotton Committee, at its 85th meeting held in the City last week, marks the culmination of the agitation that was being carried on for some time now by a section of traders and some self-appointed representatives of growers. It must be presumed that the sponsors of the resolution had succeeded, through vigorous lobbying, in winning over those members of the Committee representing the Government and the mill industry, for the resolution is reported to have been adopted unanimously. It is surprising that a responsible and informed body as the Central Cotton Committee, which should know more than anybody else the real and main stumbling block in the way of achieving higher production of cotton, has put its stamp of approval on a proposition of dubious value, a proposition which assumes that an upward revision of price will work wonders and transform the present shortage of cotton into a glut. No one, least of all this journal, which believes that carrots will take the donkey farther than sticks, denies that monetary incentive is a must for obtaining higher production. But we part company with the advocates of price incentive when the argument is stretched too far and production is sought to be made a function of price.

The resolution recognises that other measures such as increased availability and use of fertilisers, increased use of pesticides, adoption of improved methods of cultivation and better seed and more irrigation facilities are required for augmenting production. But these by themselves will not, according to it, be effective in raising production, unless an incentive is provided to the farmer to increase his effort and his investment for the production of more cotton per acre.

This argument, on the face of it, looks sound. But the question is whether the present ceiling

prices are so low as to inhibit production or whether other factors are responsible for the fall in production. If the present prices of cotton were so uneconomic as is made out to be, it would certainly have resulted in a sharp decline in acreage under cotton. For which farmer would cultivate cotton when he can get a better return from a competing crop? But experience is to the contrary. Acreage under cotton has remained virtually unchanged over the years at 19 to 20 million acres, which incidentally is the highest in the world. If price exerts a decisive influence on production and acreage, a season of high prices should be followed by a season of large acreage and high production. Conversely, a season of low prices should be followed by one of low acreage and low production. This is hardly the case as the trend of prices and production in this country indicates. In fact, production is largely determined by the cycle of seasons, with high production in a favourable season and low production in an unfavourable one.

The chief, perhaps the only apparently valid, argument put forward for higher ceiling prices is that the ceilings were fixed a decade ago and that they have, therefore, become unrealistic, in view of the rise in the prices of other commodities and the rise in the general price level. What the advocates of higher prices forget is that, when the ceilings were fixed, the ruling prices for cotton were much below them, whereas now the ceilings have become the ruling prices. In fact, the actual market prices are, in many cases, higher than even the ceilings. There have also been quite a few seasons in the past ten years when the prices were well above the ceilings. Further, it is not wholly correct to say that ceilings for all the varieties of cotton have remained unchanged, because they have been raised for a number of them. Is it suggested that the cost of cultivation has gone up so much that even the ceiling prices do not cover the cost of cultivation and still leave a fair margin of profit?

The argument that, since the prices of other cash crops have gone up, cotton prices also should be raised is unacceptable. The object should be not to push up cotton prices to the level of other prices but to bring the latter down, through higher production, to reasonable levels. In any case, the prices of almost all the other agricultural commodities have remained stable in the past one year. It would be a serious mistake to disturb this stability by pushing up the price of cotton and giving a new twist to the inflationary spiral. If the contention is that the cost of living of the farmer has increased with the result that he finds little savings left to invest in cotton cultivation, it is an argument for bringing down the cost of living and not for raising the price of cotton which, through its effect on cloth prices, will only defeat the very purpose which higher prices seek to achieve. Further, the rise in cloth prices, which is sure to follow a rise in the cost of cotton, will hit exports of cloth from India and wipe off any savings in foreign exchange that might accrue as a result of having to import a smaller quantity of cotton. All these disadvantages are in addition to the inflationary impact on the domestic price level of higher cotton and cloth prices. The interests of consumers of cloth should not be lost sight of. It is they who will have to bear the burden of the higher cotton prices, for the mill industry can, in a closed, sellers' market such as the one which India is having now, always pass on the higher price to consumers.

The example of sugarcane is cited in support of the contention that a rise in cotton prices will lead to higher production. Apart from the fact that, in the case of cotton, which is highly sensitive to changes in weather, the efficacy of higher prices to bring forth higher production is far less certain, it must be borne in mind that the position of sugar is far from enviable. Indian sugar, due to its high price, is unsaleable in world markets except at a heavy loss and the domestic consumer is asked to subsidise exports of sugar. In any case, it is now admitted on all hands, more especially by the very interests which now seek higher prices for cotton, that the prices paid for sugarcane are uneconomically high and should be brought down to more realistic levels. The argument that Indian cotton prices are below world parity and therefore need to be revised need not be taken seriously, because it is pointless to compare the prices of cotton in Pakistan or the U.S. where the cost of living and the cost of cultivation are much higher as compared with those in India.

The only sound and lasting solution to the cotton problem lies in securing a higher yield per acre. For doing this the cultivator must be helped with better seed, more fertilisers and better irrigation facilities, so that he will get more return per acre through higher yield rather than through a higher price per bale of cotton. If the cultivators do not have the money to acquire the requisite wherewithals of production, the Government should give them loans in cash or in kind through Agricultural Departments or through co-operatives. This is a difficult task indeed, but there is no short cut to the cotton problem. The easier and the less sure way, namely, a general increase in the price of cotton, will not only accentuate the inflationary pressures in the country, which are now being brought under control, but also prove to be self-defeating.

GROWTH TRENDS IN E.C.A.F.E. REGION

"PRODUCTION gains (in the fifties) in most countries of the E.C.A.F.E. region have been real, although modest; levels of living have risen, although they are still too low; some ground has been covered, although a long road has still to be travelled before a sustained growth and reasonable *per capita* incomes are attained, especially if the developed countries of the world are used as a standard of comparison. Thus, in spite of generous attention to economic development, both within and outside the region, only moderate progress has been achieved." These, broadly, are the conclusions reached in a survey of investment and growth covering the period 1950-59 in Asia and the Far East. The relevant survey, which forms part of the *Economic Survey of Asia and the Far East* 1961, presented this week to the eighteenth session of the U.N. Economic Commission for Asia and the Far East at Tokyo, seems to be fairly objective in its factual findings and forthright in its conclusions. If some of these findings and conclusions are heartening, there are some others which are quite disturbing. So the picture that emerges is a mixed one, with its bright patches and dark spots. And it is also a picture of uneven growth trends in the different countries of the region, as will be seen from the main economic indicators brought together in the table accompanying this article.

Growth Indicators

(1950-59)

Country	Index of Real National Product—1959 (1953=100).	Average rate of product growth (Per cent per annum of real domestic product).	Average growth rate per cent per annum of real *per capita* product.	Average rate of gross fixed domestic capital formation (per cent. per annum of gross domestic product	Incremental capital-output ratio.
Burma (a)	131	5.1	3.9	17.1	3.4
Cambodia	126	4.0	1.3	N.A.	N.A.
Ceylon	121	3.9	1.4	11.3	2.9
China: Taiwan (a) ..	148	7.9	4.2	13.1	1.7
India	116	3.1	1.1	14.9	4.8
Indonesia (a) ..	121	3.6	1.6	6.2	1.7
Japan	162	9.1	7.9	21.6	2.4
Korea, South (c) ..	134	5.1	2.1	12.3	2.2
Pakistan	113	2.6	0.4	7.8	3.0
Philippines	138	6.0	2.7	7.0	1.2
Thailand (b)	128	5.5	1.9	14.4	2.6

(a) 1951-1959. (b) 1952-1959. (c) 1953-1959.

While the figures in the table may generally speak for themselves, some interpretation would still be required in particular cases. For instance, the growth rates of *per capita* income, which are below 2 per cent per annum in Cambodia, Ceylon, India, Indonesia, Thailand and Pakistan, are quite low. It is certainly a matter for concern that the three most populous countries of the region—India, Indonesia and Pakistan—show a slow rate of growth, a declining rate of growth and stagnation, respectively. As for capital formation, only in Japan is it high, while in most other countries of the region it is moderate or low. Calculations of crude incremental capital-output ratios show a median average of around 2.5 which, according to the authors of the E.C.A.F.E. study, agrees with expectation. But, in the case of three countries—India, Burma and Pakistan—the incremental capital-output ratios are high. India's high ratio, it is interpreted, reflects partly unmatured investment and partly the country's strong preference for a highly capital-intensive form of development which, in the short run, has yielded only a slow rate of product growth, while agricultural stagnation largely explains the situation in Pakistan. In the latter country, the average annual agricultural production in the period 1957-60 has represented an increase of no more than 3 per cent over the average annual production in the period 1952-55. The corresponding figure for Burma is 5 per cent. India's agricultural performance, however, has been relatively better with an increase of about 10 per cent. Still, in view of the fact that India's 10 per cent is lower than the percentage increases in agricultural production in several other countries like Japan (29), Philippines (17), Ceylon (12) and Thailand (12), the inference is possible that better agricultural performance in this country would have made for a somewhat higher rate of product growth and a correspondingly lower incremental capital-output ratio.

By and large, the economic indicators reflect the poor performance of most countries. This feature, in the opinion of the authors of the E.C.A.F.E. study, is due to inadequate or misdirected investment. For instance, in some countries lack of attention to agriculture has held back growth, with repercussions also upon industry. But it is also true that, in many countries of the region, agriculture has received much attention not only in total investment but also in the public sector investment programme. Almost a quarter of public investment in the period 1950-59 has gone to agriculture in countries such as India, Thailand, Ceylon and the Philippines. In spite of so much investment, most countries of the region (excepting Japan, Taiwan and the Philippines, have yet to attain high levels of agricultural output commensurate with their needs for adequate food supplies and raw materials for expanding industries. If, however, all this investment in agriculture has turned out to be relatively insufficient, it may be due to the slow progress of intensive cultivation which has been handicapped by inadequate supply of irrigation, fertilisers, improved seeds and modern implements, as well as by poor administration.

As for investment in infrastructure—transport, communications and energy—it is a salutary feature of planning in the countries of the E.C.A.F.E. region that they have accorded the highest priorities to it (the infrastructure). The largest proportions of public investment, and even of national investment, have been devoted to this purpose. In the period 1950-59, investment in transport, communications and power projects has constituted 40 per cent of all public investment in India, 45 per cent in Burma, 30 per cent in Ceylon, 40 per cent in the Philippines and 51 per cent in Thailand. Such high priority accorded to infrastructure has generally been merited, although there are isolated cases of excessive investment. The marked growth in transportation facilities and the doubling of installed capacity for power (from 12,262 megawatts in 1951 to 25,845 M.W. in 1959) in the E.C.A.F.E. region as a whole are no mean achievements. But the progress in these sectors has not been uniformly good in all the countries. India is a typical instance of relatively slow growth in this respect. The E.C.A.F.E. study, however, seems to suggest that investment in infrastructure has been adequate everywhere.

The E.C.A.F.E. study's findings and observations pertaining to the industrial sector are more interesting. The first finding is that public investment in industry has, on the whole, been smaller than in agriculture in the E.C.A.F.E. region. Such industrial investment in the period 1950-59 has accounted for 16 per cent of all public investment in Burma, 13 per cent in India, 6 per cent in the Philippines, 4 per cent in Thailand and 3 per cent in Ceylon. In all these countries, barring the Philippines, public investment in manufacturing industry has been somewhat larger than private investment. This reliance on public enterprise stems in part from the fact that, in the newly industrialising countries, Government can command more financial resources and entrepreneurship than the private sector. Recently, however, countries such as Pakistan and the Philippines have come to consider that the private sector has become strong enough to lessen the need for Government action. These two countries are, therefore, turning over existing State enterprises to private operators. In Japan and other relatively advanced countries, the private sector has been given the larger share of investment in manufacturing industry. It would thus appear that the conflict between the public sector and the private sector obtains only in those countries where the former accounts for a larger share of investment in industry than the latter.

MARKET GOSSIP

Issue Evaded Again

KERB trading in markets, whether it be in shares or commodities, is not such a dire evil as to merit its total prohibition. Nor is it something that can be so eliminated, even with the best will in the world. For whenever something very important happens, there is bound to be a sudden burst of activity in markets, provided they are easily accessible. But that is no excuse why kerb trading should be permitted, as if it were a regular feature of markets. The Government spokesman was, therefore, right in suggesting to stock exchange authorities that they do something effective to minimise the opportunities for kerb trading. The issue figured at the meeting of the Standing Committee of the Stock Exchange Presidents held at New Delhi last week. But, unfortunately, no worthwhile decision was arrived at; the issue was simply left to be decided by the president of each stock exchange. In other words, the Committee has again evaded the issue.

Millions of shares of Courtaulds changed hands on the London Stock Exchange on Wednesday last week (28th February) after the market had officially closed for the day, because an unexpected new offer of I.C.I. in regard to its take-over bid reached the market at 4-30 p.m. Such dramatic developments are few and far between. Even where kerb trading has been declared illegal, breaches of law on such occasions may be justifiably ignored and winked at by the authorities. On Dalal Street, however, kerb trading is a regular and recognised, unofficial session, one hour before the market opens and three hours after it closes. The official session, on the other hand, is of only two and a half hours on week days and one and a half hour on alternate Saturdays. One simple way to keep this evil to the minimum would be to extend the official session, say, from 11 a.m. to 5 p.m., as in Calcutta, where kerb trading has practically stopped. The brokers might argue that they have then no time to enter the day's transactions and write their books. Well, nothing prevents a broker's clerk from noting down the dealings as and when the sub-broker or his authorised clerks put them through in the ring. Again, the frequent and abrupt closures of the market on some silly excuses, such as the death of the badgeholders association's doctor, provide roost to the evil. Stock exchanges are rightly claimed to be an integral part of the credit mechanism and proudly described as the barometer of the economy. If they are so, they cannot afford to go to sleep as and when they like. No bank, for instance, can shut its door on a working day before the specified hour, even if its topmost official or president dies.

All this apart, kerb trading can be reduced to the barest minimum if the stock exchange authorities are determined to do so. They can surely employ a few plain-clothed policemen around the stock market to check the open defiance of the law. They can also mercilessly refuse to ratify the kerb dealings. To do the first, the authorities have enough resources. For the second, they have sufficient authority. The question, therefore, is this: Do the authorities really mean business?

Foreign Investment Insurance

The World Bank has just published a staff study, entitled "Multilateral Investment Insurance," undertaken by it at the instance of the Development Assistance Committee of the Organisation for Economic Co-operation and Development (O.E.C.D.). The study was aimed at ascertaining the need for, and the feasibility of, having multilateral arrangements for insuring risks of a non-commercial character which private investors have to face in investing in foreign countries. Another objective of the study was to find out whether an international investment insurance scheme would really encourage overseas investment and to ascertain the extent to which potential overseas investors are in fact deterred by non-commercial risks.

At present, Governments of the U.S., Japan and the Federal Republic of Germany insure overseas investment of their nationals against certain risks, including expropriation without adequate compensation, inability to repatriate capital or profits and war damage. In recent years, a number of private individuals and organisations have proposed that similar insurance for private foreign investments be made available on an international basis. These proposals prompted the Development Assistance Committee of the O.E.C.D. to ask the World Bank to make the study. The World Bank was chosen for the study presumably for two reasons: (1) Many of the proposals for the multilateral Investment Guarantee Scheme envisaged the World Bank as the administrator. (2) It will promote the basic objective of the World Bank itself, namely, speeding up the flow of private capital to the underdeveloped countries.

The study is based on a questionnaire prepared jointly by the Bank and the International Chamber of Commerce, which has its headquarters in Paris. Its conclusions are based on the responses received from 400 firms and associations in more than twenty countries.

The World Bank staff study has not made any recommendations for or against multilateral investment insurance programme. The explanation for this unhelpful approach is that it is not possible to estimate the amount of additional investment which might be induced by new insurance facilities and there is, therefore, no basis on which to judge whether Governmental financial commitments on the scale required would be justified. The establishment of an effective multilateral programme would, according to the report, raise a number of difficult problems. It has, therefore, sought only to identify and focus attention upon the principal issues which are inherent in the concept of a multilateral investment insurance. In other words, it does not attempt to devise in detail or in outline a specific proposal for a multilateral programme.

Among the issues discussed in the report mention may be made of the possible scope of protection, the type of investments which may be eligible for insurance, membership in the programme and its financing. The question of the administration of the scheme has also not been considered, because, according to the Bank, it is premature to do so before the Governments take a decision to establish a scheme of multilateral guarantee.

Although, as the study has pointed out, it is not possible to estimate the amount of additional investment that is likely to be forthcoming as a direct result of such a scheme, there is no doubt that insurance of the type proposed would attract more investors than would be the case otherwise. The authors of the study could surely have outlined a draft scheme on the basis of certain assumptions. The full text of the report is not yet available, yet it seems to us that the Bank has shirked its responsibility for reasons that are not quite clear and returned the ball to the other court. Governments, especially of underdeveloped countries, who might be the chief beneficiaries of the increased flow of foreign capital, should therefore take the initiative and evolve, with the cooperation of advanced countries such as the U.S.A., the U.K. and West Germany, a workable scheme of multilateral guarantee of foreign investments. The groundwork done by the World Bank in this respect will doubtless be of some help to them.

Garwares Produce Nylon

To the House of Garwares goes the distinction of being the first to manufacture nylon monofilaments and multifilament yarns in India. The multifilament plant at Pimpri near Poona has just commenced operation, a little over three years after the monofilament plant went into production. The plant is said to be completely automatised, with a capacity to produce, when in full swing, about 1.5 ton per day. Since the plant works round the clock throughout the year, the annual output will be of the order of 548 tons. The multifilament yarns are now being produced out of nylon chips imported from abroad. The Company has obtained a licence to install a polymerisation plant for manufacturing the required basic raw material within the country. This plant is expected to start working in about a year's time. The aggregate capital outlay on the entire nylon yarn and polymerisation project is estimated at Rs. 1 crore. The Chairman of the Garware group of concerns, Mr. B. D. Garware, disclosed at a Press conference this week that it was proposed to convert his concern into a public limited company in due course.

The nylon monofilaments (also called nylon bristles) are used for making consumer utility brushes, industrial brushes, fishing lines and nylon guts required by the sports goods industry. The multifilament yarn is utilised for diverse industrial applications such as fishing nets, ropes, hose, tarpaulins, belts, spindle tapes, filter cloth, ribbons, sewing thread and tyre cord. The Fisheries Departments are currently importing nylon yarn (for fish nets) worth Rs. 40 lakhs annually. The estimated demand in 1965-66 is put at Rs. 1 crore. To add to this are the vast Defence requirements. The Pimpri factory of Garwares has two separate divisions for the production of nylon mouldings and nylon rods. The former (nylon bearings, bushings, cams, lever mechanism washers, packing rings, screws and valve sets) are used by the Defence department, as well as in the automobile, textile and hardware industries. These mouldings are heat-resistant and possess outstanding toughness and tensile and flexible strength properties. The nylon rods are essential in the engineering industry for the production of noiseless gears, having impact strength and light weight.

More On I.C.I.-Courtaulds Battle

In an attempt to forestall the failure of its take-over bid for Courtaulds, I.C.I. has announced a number of major moves since we wrote on the subject last week. In a statement issued on 28th February, I.C.I. declared: (1) its share exchange offer was unconditional and any Courtaulds stock offered would be accepted; (2) it would not seek to prevent Courtaulds' promised distribution of loan stock and capital dividend; (3) if the ordinary stock offer were extended beyond 8th March, the alternative loan stock offer would also be extended; and (4) while it hoped for large response to its offer from the shareholders of Courtaulds, it would accept a minority interest in Courtaulds.

The aforesaid statement was marked by a more conciliatary tone than was the case with its previous pronouncements. There was greater emphasis on co-operation and a promise to maintain the "identity and traditions of Courtaulds." It, however, reiterated that full merger of Courtaulds with I.C.I. was by far the best way of strengthening the man-made fibre industry.

Thus, while maintaining its earlier assurance that the bid would not be raised, I.C.I. has, through its latest moves, enhanced the attraction of its offer and cleared, at the same time, the uncertainties about the terms and implications of the offer. This sparked off large-scale dealings in Courtauldas'

(*Continued on next page*)

BANK OF INDIA GOES UP

POLICY OF DYNAMISM PAYS

A SCRUTINY of the detailed statement of accounts of the Bank of India Ltd. for the year ended 31st December 1961 discloses that its performance last year was much more impressive than suggested by the preliminary results published early this year. The all-out effort made by the management, under the inspiring leadership of Mr. T. D. Kansara who became the General Manager only towards the close of 1960, to give a big push to the Bank was highly successful. Its growth rate was greater than that of scheduled banks as a whole or of scheduled banks other than the State Bank of India. Its profits were so sizable that, for the first time since 1956, the Bank could add a substantial sum to the published reserves without having to cut its generous dividend of 20 per cent per annum taxable.

The table below shows the Bank's progress in 1961 against its performance in the three preceding years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	6,09.11	5,23.21	4,55.09	4,46.30
Of which:				
Interest and discount ..	5,09.86	4,40.02	3,90.76	3,86.45
Commission and exchange	88.99	75.32	56.06	52.34
Interest paid	2,60.10	2,17.02	1,99.54	1,94.81
Expenses on staff account .	1,61.21	1,43.36	1,30.80	1,21.12
Other expenses	68.47	53.41	41.11	43.47
Depreciation and repairs ..	6.01	6.04	0.87	1.13
Provision for taxation ..	††	25.00	18.00	25.00
Net profit	113.32	78.87	64.68	60.77
Bonus to staff	19.00	18.00	17.00	16.00
To reserve fund	15.00	..	..	..
To development rebate reserve	3.00	..	..	..
Dividend	60.00	60.00	48.00	48.00
	(20%)*	(20%)*	(16%)*	(16%)‡
Carry forward	29.16	12.85	12.48	12.70

	As on 31st December			
	1961	1960	1959	1958
Capital	3,00.00	3,00.00	3,00.00	3,00.00
Reserves	3,38.00	3,10.00	3,10.00	3,10.00
Deposits	125,02.23	109,43.92	100,09.17	88,27.73
Borrowings from other banks	..	0.42	3,00.00	..
Advances	98,52.62	88,80.92	67,94.02	58,09.20
Investments	22,24.13	20,37.15	29,81.87	24,40.89
Cash	11,50.49	12,08.51	12,19.63	10,53.99
Balance-sheet total ..	147,18.19	133,34.30	118,77.06	101,98.46
Ratio to deposits of—	%	%	%	%
Advances	77.2	78.6	67.5	65.8
Investments	17.7	18.6	26.6†	27.7
Cash	9.1	11.0	12.1	11.9

* Subject to deduction of tax.
†† Not disclosed.
‡ After taking into account investments earmarked against borrowings.

In the past year, deposits of scheduled banks as a whole (excluding transfer of P.L. 480 funds by the State Bank of India to the Reserve Bank) went up by some Rs. 147 crores or 8.2 per cent. The increase in deposits of scheduled banks other than the State Bank was about Rs. 120 crores or about 10 per cent. The deposits of the Bank of India alone moved up by Rs. 15.58 crores or 13.7 per cent. Of this increase, Rs. 9.53 crores were in time deposits, Rs. 4.12 crores in savings bank deposits and only Rs. 1.93 crore in current accounts, contingency, etc. The improvement in savings deposits is striking and apparently reflects the effects of higher interest rates allowed on such funds and provision of more facilities for their holders. The savings bank depositors, for instance, were allowed to draw 100 cheques per year, instead of 50 previously. The marked expansion in deposits as a whole can be attributed to (*a*) vigorous branch expansion, (*b*) modernisation of services, including a new look to the branches and head office, (*c*) intensive advertising, and (*d*) better service to the public.

The past year was one of keen demand for bank credit. Changes over the year give only a rough indication of this trend. But even they are impressive. The advances of scheduled banks as a whole rose by Rs. 104 crores in 1961 and those of scheduled banks other than the State Bank by Rs. 81.16 crores, the percentage increase being about nine and eight, respectively. The Bank of India's advances climbed up more vigorously, the net increase over the year being Rs. 14.66 crores or 15 per cent. In keeping with the nature of the needs of trade and industry, the Bank diversified its advances by increasing its medium-term loans. The major portion of its advances is to industry, the exact share being 60.52 per cent as of 1961; commerce claimed 24.8 per cent and others 14.62 per cent. Among the industrial borrowers, cotton textiles were prominent (19.03 per cent), followed by iron, steel and engineering (15.49 per cent), chemicals, dyes, etc (5.84 per cent), other textiles (4.29 per cent) and sugar (3.85 per cent).

With the great bulk of the rise in deposits used for financing the needs of trade and industry—the credit ratio has jumped up from 76.6 per cent to 77.2 per cent—the Bank could raise its investments in gilt-edged only to a small extent, by less than Rs. 2 crores. Consequently, the ratio of investments to deposits has fallen from 18.6 per cent to 17.7 per cent. The cash ratio, too, has come down from 11 per cent to 9.1 per cent, giving an overall liquidity ratio of 26.8 per cent. The secret of the striking increase in the Bank's net profit, despite the equally sharp rise in all the costs of operation, including the cost of expansion of branch banking, lies in this intensive utilisation of its resources, which, in other words, means nothing more than this: the Bank did its best to be of maximum service to the country.

IRREGULAR TREND IN SHARES

BUYING VERY SELECTIVE

(From Our Own Correspondents)

BOMBAY, 8th March

AN irregular trend was in evidence on the stock exchanges in the country this week. Trading was largely dull, with movements narrow and two-sided. Activity was mostly in the nature of quick bargain hunting, with sellers outnumbering buyers. At the close of the week, the tone was hesitant and a little easier than in the preceding week.

Political considerations were uppermost in the minds of operators. And, from this angle the week began with a bad omen for the markets, as they were shaken, though momentarily, by the military take-over in Burma. Fears that a similar development could possibly occur in this country one day reappeared in the minds of some, but were soon dispelled by the realisation that the successful conclusion of India's third General Elections last week had established the fact that democracy in India has firm roots. The markets, however, could not easily ignore the post-election uncertainties, concerning mainly the formation of the new Union Cabinet, particularly the choice of the next Finance Minister. Their concern was not unfounded, in view of the return to the Lok Sabha of the ex-Finance Minister, Mr. T. T. Krishnamachari, whose name spells for the markets taxation and take-over.

Considering these uncertainties, the erratic performance of the markets was not surprising. Professional operators preferred to wait and watch. Investors looked to the forthcoming new issues. The field was left open to the small fry, who indulged in quick bargain-hunting, and the known bear operators who are ever ready to press sales on mild rallies. Despite this and but for once on Monday, when the rather discouraging corporate news from the Mafatlal Group induced some renewed liquidation, the markets went on plodding throughout the week. It was so because the leading counters had come down to strong support levels to break which heavy selling pressure was lacking. This also explains the markets' ability to survive the latest blow from Mr. Krishnamachari who averred at Madras on Tuesday that progressive nationalisation was inevitable in the country to prevent concentration of wealth in the hands of a few. Closing prices showed mostly small changes either way, with some select issues being conspicuously better on support based either on actual or expected good corporate news. Such bright spots, however, were few and far between.

The market in Bombay opened the new account on a steady note. But the initial steadiness yielded place to slow but steady erosion in values on renewed all-round bull liquidation, caused by selling in textiles following the general disappointment over the performance of the Mafatlal Group of mills. Although the Group's financial results provided a mixed show, with Sassoon Spinning and Weaving reporting a sharp rise in its profit and proposing a higher dividend, the market was disappointed to find that the Standard Mills had proposed to reduce per share dividend following the increase in capital. This was also the experience of New Shorrock, which barely maintained the previous year's progress. The Mafatlal Fine came out with a lower profit, the same dividend and no bonus issue. After having been marked up in Saturday's kerb deals from Rs. 1,110 to Rs. 1,140. Standards were sold down on Monday to Rs. 1,065, and thereafter moved irregularly between Rs. 1,068 and Rs. 1,085 to round off the week at Rs. 1,080 against Rs. 1,125 a week ago. Mafatlal Fine, on the other hand, slumped heavily from Rs. 1,130 to Rs. 1,070 in Saturday's kerb trading, fell further to Rs. 945 on Monday on heavy liquidation and selling pressure, rallied to Rs. 1,002.50 on the following day, but came down again on Wednesday to Rs. 980 to close Rs. 82.50 lower than the previous week at Rs. 992.50. After being done at Rs. 72 on Monday, Sassoons finished the week at Rs. 70.50, one point lower than in the preceding week. This sharp fall in the usually firm and tightly-held Mafatlal shares was a feature of the week's trading not only in the textiles section but the market as a whole.

Among other mill shares, the relatively better performance of the coarse and medium unit of Mafatlals kept Bombay Dyeings in demand at lower levels on hopes of improved results, and the shares consequently wound up the week only 20 nP lower at Rs. 70.50. Rallies in Centurys met with light but persistent pressure. At lower levels, the shares tended to be steady and at close were Rs. 2.50 lower at Rs. 618. Khataus were a bright spot and marked up at one stage from Rs. 475 to Rs. 500 on influential support. At the week-end close of Rs. 491.25, the shares were up by Rs. 16.25. Morarjees and Phoenix were among the principal gainers, the former closing higher by Rs. 6 at Rs. 421 and the latter by Rs. 19 at Rs. 284. At the same time, the favourites, Kohinoors, Svadeshis and Central Indias lacked support and closed with small losses. National Rayon were neglected.

Another factor that influenced the sentiment of the market was the lower steel output figures of T.I.S.Co. and I.I.S.Co. for February. Sellers predominated in these two shares, but were far from aggressive, owing to the current low levels, particularly of Tata Ordinaries. Indian Irons, however declined from Rs. 25.15 to Rs. 24.76 to close at Rs. 24.84 as against Rs. 25.10 last week. Tata Ordinaries moved between Rs. 140.75 and Rs. 139 and finished one rupee lower at Rs. 139.50. Mukand Irons closed with a loss of 15 nP at Rs. 27.75.

Quoted ex-rights, Alcocks, among engineering shares, attracted particular attention and closed at Rs. 349 xr, against Rs. 349 cr in the past week. Having risen by more than 10 per cent over the last clearing rate of Rs. 350 cr (Rs. 305 xr), they attracted the automatic interim margin of Rs. 18.50 per share at the margin "havala" rate of Rs. 342 xr. Barring this scrip, others in this group were dull and quiet for want of support. Telcos closed Rs. 3 lower at Rs. 356.50 and Voltas showed a small loss of Re. 1.70 on the ex-div. close of Rs. 285.50 against Rs. 297 cum-div. a week ago.

Among miscellaneous industrials, Bombay Burmahs recovered from Rs. 639 to Rs. 649 on renewed support at lower levels and closed at the last level of Rs. 645. Premier Constructions and West Coast Papers were well supported; the former showed a gain of Rs. 5 at Rs. 197.50 and the latter of as much as Rs. 14 at Rs. 184. Other issues were quiet and closed with small losses. Hindustan Motors rallied initially from Rs. 20.80 to Rs. 21 but slipped down to close 24 nP lower at Rs. 20.76.

Shippings were idle, but cements and sugars were distinctly steady, with A.C.Cs closing at Rs. 153.75, against Rs. 153 previously and Belapurs rising to Rs. 240 from Rs. 232 a week ago. Maharashtra too improved to Rs. 170 against Rs. 165.50.

In the cash list, Bank shares were steady, with Baroda responding to the fresh capital news by closing 50 nP higher at Rs. 122.50 and India scoring the same gains at Rs. 152.50, as did United Commercials at Rs. 104.50. The cash section was generally steady, though some shaded in sympathy with forward list. The bright spots were Sirdar Carbonic Gas, closing Rs. 45 higher at Rs. 675, Ultra Marine Blues, showing a gain of Rs. 15 at Rs. 190, Hindustan Electrics finishing Rs. 25 higher at Rs. 220, Adarsh Chemicals, being done five rupees higher at Rs. 95 and Synthetics Chemicals showing, on balance, a gain of Rs. 4 at Rs. 222. Rallis India were well supported on persistent rumours of Indian control over the management and finished with a gain of Rs. 6 at Rs. 163.

* * * *

The Calcutta stock market was initially steady, but gradually turned easy on bull liquidation and some bear pressure. Dunlop Rubbers and Indian Coppers were particularly active and attracted support at setbacks on hopes of fresh capital issue by the former and bonus issue by the latter. At the time of writing, Dunlops were done at Rs. 43.44 against Rs. 42.75 a week ago and Indian Coppers at Rs. 5.12 against Rs. 5.07 before. There was a large turnover in Guest Keens which finished at Rs. 45.94 against Rs. 45.75 previously. Birla Jutes were firm, improving from Rs. 34.31 to Rs. 35.25, Shree Gopal Papers, too, evoked support on ideas of better working and closed with a sizable gain at Rs. 28.12, against Rs. 26.31 previously, Indian Aluminiums, however, moved down from Rs. 39.56 to Rs. 39.25. In the cash section, the tone was firm. Philips Carbons were active, following news of fresh capital issue and looked up from Rs. 25.75 to Rs. 27.12 but eased later to Rs. 25.75. Coals were neglected, but Textiles were active, with J.K. Cottons improving from Rs. 22.69 to Rs. 23.06 and Bharat Commerce from Rs. 29.50 to Rs. 30.25. Select miscellaneous issues, jutes and tea shares were well supported.

* * * *

The Madras stock market was steady during the week under review, though at close prices displayed a mixed pattern, with small variations. Among sugars, Deccans closed unchanged at Rs. 10, but Cauverys were one point lower at Rs. 105. E.I.D. finished 50 nP better at Rs. 36.75. Barring Periakaramalais and United Nilgiris, showing gains of 3 nP and 12 nP at Rs. 3.30 and Rs. 21.37, respectively, tea shares were shaded, with Chembra Peaks finishing 5 nP easier at Rs. 3.60, Haileyburias moving down from Rs. 13.25 to Rs. 13.15 and Highlands from Rs. 13.20 to Rs. 13.10. Among coffee shares, Consolidateds were better at Rs. 17.77 against Rs. 17.62 previously and Ouchterlony Valleys at Rs. 3.93, against Rs. 3 a week before. Other shares were steady. Among rubber shares, Midlands showed a loss of 26 nP at Rs. 10.80, while the rest were mostly unchanged. Cannanores were distinctly weak among Textiles and were marked down by Rs. 13 to Rs. 160. Among others, Coimbatore Cottons were easy by Rs. 4.50 at Rs. 258 and Coimbatore Pioneers by Rs. 2 to Rs. 290. Dhanalaxmis moved down from Rs. 262.50 to Rs. 252 and Kotharis from Rs. 13.30 to Rs. 13.15. South India Viscose were done at Rs. 188 against Rs. 190 a week ago. Buckinghams were done one rupee higher at Rs. 263.50, Travancore Rayons 50 nP higher at Rs. 43.80 and Maduras 15 nP higher at Rs. 40.75.

In the miscellaneous section, cements were better, with Orissas showing a gain of 52 nP at Rs. 19.62. Dalmias of 5 nP at Rs. 13.35, Travancores of 30 nP at Rs. 8.20 and India Cements of 5 nP at Rs. 6. Ashok Leylands were done at Rs. 9.35, against Rs. 9.20 previously. Travancore Chemicals improved from Rs. 19 to Rs. 19.37 and Metturs moved up from Rs. 13.32 to Rs. 13.37. Textools were easy at Rs. 187 against Rs. 189 previously, but Tube Investments closed four points better at Rs. 286. Western India Plywoods eased from Rs. 206 to Rs. 204 and Indian Steel Rollings from Rs. 11.87 to Rs. 11.75.

ASSAM HARDBOARDS LIMITED

Assam Hardboards Limited will enter the market on 22nd March 1962 to raise Rs. 24.60 lakhs in equity shares of Rs. 10 each and Rs. 5 lakhs in 9.3 per cent, taxable, redeemable cumulative preference shares of Rs. 100 each by way of public subscription. The lists will remain open till 31st March, but may be closed earlier at the discretion of the Directors, though not before 26th March. The entire issue has been underwritten; the Life Insurance Corporation of India for Rs. 10 lakhs equity and Rs. 5 lakhs preference, the Industrial Credit and Investment Corporation of India for Rs. 9.60 lakhs equity and three share brokers together for Rs. 5 lakhs equity. Out of the public issue, the Company has agreed to the firm allotment of 50,000 equity shares to the L.I.C. against underwriting arrangement. Out of its authorised capital of Rs. one crore, comprising Rs. 75 lakhs in ordinary shares and Rs. 25 lakhs in preference shares, the Company has already issued Rs. 0.80 lakh equity to the signatories to the memorandum and articles of association and Rs. 8.20 lakhs equity to the Directors and their friends. Its present issue is for Rs. 51 lakhs (Rs. 41 lakhs equity and Rs. 10 lakhs preference). Out of this, the Government of Assam has agreed to take up Rs. 5 lakhs preference, the Directors and their friends are taking up Rs. 6.40 lakhs additional equity shares and the Columbia Hardboard Company Inc. of Seattle, Washington, U.S.A., the Company's collaborators, are subscribing to Rs. 10 lakhs in equity shares. The balance of Rs. 29.60 lakhs is offered to the public, as mentioned at the outset.

Incorporated on 25th March 1960, with the immediate object of undertaking the manufacture and sales of hardboards, the Company is now setting up, in collaboration with the American firm, a hardboard plant at Panikhaiti, 14 kilometres from Gauhati, Assam, with an annual capacity of 15,000 tons. The collaborators will supply the plant and machinery, and, for 50,000 dollars, will engineer, in association with Industrial Development Company, Inc., Tacoma, Washington, the plant as also provide the technical know-how and assistance. They have completed the specifications and designs for the main plant and machinery, the shipment of which is expected to be completed within six to eight months. The Government of India has agreed to grant import licence for the plant and machinery for Rs. 61 lakhs against the foreign exchange loan sanctioned by the Industrial Finance Corporation of India (under D.L.F.) to the Company and against the cash subscription to be made by the Columbia Hardboard, subject to the condition that the Company would export 20 per cent of its hardboard production for 10 years. Of the I.F.C. loan, Rs. 51.74 lakhs are in U.S. dollars carrying interest at 8 per cent per annum and the balance of Rs. 8.26 lakhs in rupees at 6 per cent per annum. As for raw materials, the Assam Government has assured the Company continuous supplies of suitable wood and bamboo, available in plenty from the neighbouring ranges, while the required quantity of phenolic resins will be obtained from the plants at Calcutta and that of petroleum wax from the Digboi Oil refineries in the State. The State Government has also instituted proceedings for acquiring 150 acres of land for the Company's factory. Electric power has already been sanctioned by the Assam State Electricity Board. The nearby Brahmaputra river will provide the facilities for transporting rafted wood from the upper regions of Assam and despatching manufactured goods to Calcutta and onward destinations. The plant is expected to be commissioned for production by the end of 1963.

The first project of its kind in East India, the Company is expected to have no difficulty in disposing of production. Including its licensed capacity, the total capacity permitted so far in the country is 35,000 tons, as against an estimated annual demand for 50,000 tons at the end of the third Plan. The total capital outlay on the project is estimated at Rs. 140 lakhs, of which plant and machinery account for Rs. 87.50 lakhs, land and buildings for Rs. 14 lakhs and working capital for Rs. 30 lakhs. This amount is proposed to be met by a capital issue of Rs. 60 lakhs, the I.F.C. loan of Rs. 60 lakhs and bank borrowings of Rs. 20 lakhs.

NATIONAL AND GRINDLAYS BANK LTD.

The Directors of the National and Grindlays Bank Ltd. have recommended a final dividend of 7 per cent less income-tax at 7s. 9d. in the £ for the year ended 31st December 1961. The dividend is payable on 5th April 1962.

(Concluded from previous page)

shares on the London Stock Exchange (as many as 2 million units of stocks are reported to have changed hands on Thursday the 1st inst., the day following I.C.I. announcement). Consequently, the quotation of Courtaulds' stock crossed the 50s. mark to touch 51s. 3d.

But the Board of Courtaulds has not allowed itself to be outsmarted. It has tried to beat its opponent with the latter's own stick. It has advised its stockholders, through country-wide advertisements in newspapers, to reject the offer by destroying all the papers sent to them by I.C.I. Its reasons: "(1) Out of the mass of papers which you (shareholders) have received during these past few weeks, one fact emerges quite clearly—the I.C.I. offers are not good enough. (2) The I.C.I. have such a high opinion of your company that they have progressively increased their offers in order to obtain a shareholding in it as large as you will permit them. (3) Your shares are worth more than I.C.I. are offering." And (4) as if to reassure them the Board has added: "the Company is still receiving postcards (indicating support to Courtaulds' fight against the bid) which now number 48,000 out of the total 180,000."

It is still too early to say what will be the outcome of the fight between the two giants. But it is certain that I.C.I. would not get the 90 per cent assent required to force the merger. However I.C.I.'s declaration that the bid is now unconditional and that it will accept all Courtaulds' shares offered to it is regarded by some as a *volte face* from its earlier stand, as it has brought about a fundamental change in the situation, justifying a fresh look at the issue by the Government. It is pointed out by those who hold this view that, as complete integration for the sake of industrial efficiency was the sole justification for I.C.I.'s original attempt, acquisition of Courtaulds shares by I.C.I. is no longer justifiable. In fact, a new move is reported to be afoot to bring the matter again before Parliament.

NEWS IN BRIEF

OIL is claimed to have been struck at Ghogha near Bhavnagar by the Oil and Natural Gas Commission. The oil is being tested and further drilling is likely to begin soon after the results of the test are available.

The new Maharashtra Legislative Assembly will meet in Bombay on the 15th inst. The Governor will address a joint session of the two Houses on that day. Budget estimates for the year 1962-63 will be presented to the Assembly on the 27th inst.

The Industrial Finance Corporation has sanctioned a loan of Rs. 4 crores for Fertilisers and Chemicals, Travancore (F.A.C.T.) for implementing the expansion programme which is estimated to cost about Rs. 10 crores.

About 2,000 acres of land in Trivandrum, Kottayam, Trichur, Palghat and Wynaad hills of Kozhikode district will be brought under cocoa cultivation under a scheme approved by the Union Ministry of Food and Agriculture.

A Rs. 30-lakh plant for the manufacture of stainless steel welded tubes is to be set up in Bombay by the Chokshi Tube Company. The plant, which has a capacity to produce 500 tons of stainless steel tubes per annum, is expected to go into production early next year. So far the entire requirement of about 750 tons of tubes per annum is being met through imports.

Work has just begun on India's first Rs. 20-crore deep-shaft colliery at Sudamdih near Sindri. The project is designed to exploit high quality coal in collaboration with *Cekop*, the Polish-Government-sponsored firm of consultants. An agreement has been signed with this firm for the supply of Rs. 10-crore worth of machinery, plant and components from Poland at the shortest possible time.

A short-term course in financial control and accounting will be conducted by the Small Industries Service Institute with effect from 2nd April next. The owners of small-scale industrial units or their senior representatives who have undergone training in business management course run by the Institute are eligible for admission. The last date for receipt of applications on prescribed forms is 17th March.

Production of raw rubber in India during 1961 was 26,992 tonnes, as against 25,192 tonnes in 1960, while consumption was 48,319 tonnes, as compared with 45,941 tonnes. Consumption of synthetic and reclaimed rubber was 9,600 tonnes and 5,929 tonnes, respectively, in 1961, as against 6,561 tonnes and 5,327 tonnes in 1960. Imports during 1961 were lower at 21,693 tonnes of natural rubber and 8,992 tonnes of synthetic rubber, as against 22,949 tonnes and 8,460 tonnes, respectively, in the previous year.

The National Coal Development Corporation and the Hindustan Steel Ltd. have reached an agreement over basic principles governing the fixation of prices for the washed coal supplied to the Hindustan Steel by the Kargali washery. The Hindustan Steel will pay to the N.C.D.C. the actual cost of washed coal from November 1958 to September 1961. For the period from 1st October 1961 to 31st March 1963 the price will be fixed on the basis of an average monthly output of 100,000 tonnes of washed coal.

Austria has agreed to grant special import quotas for Indian textiles, valid up to the end of this year. The quotas cover cotton fabrics, mill-made and handlooms, silk handloom fabrics, miscellaneous hand-made silk and woollen textile articles, shawls, scarves, *sarees*, and embroidered shoes, hand-made woollen carpets and Kashmir rugs. The Union Government has designated the Chief Inspecting Officer of the Cotton Textile Fund Committee, Bombay, as the authority to issue quality marking certificates. The procedure already laid down for export of mill-made cotton fabrics to the Continent will apply to the export of these fabrics to Austria.

A National Seed Corporation for organising production, distribution and marketing of improved seeds of hybrid maize, with the Vice-President of the Indian Council of Agricultural Research as Chairman, is being set up by the Union Ministry of Food and Agriculture. It will be registered as a company and will have the Central and State Governments as constituent members. To start with, the Corporation is expected to arrange production of foundation seeds at four centres in the important maize-growing areas. The nuclei of foundation seed production units have already started functioning in the Punjab, Uttar Pradesh and Andhra Pradesh. Work relating to improved seeds of hybrid *jowar* and other foodgrains and edible oilseeds will be taken up by the Corporation a little later.

A company under the name, "Self-Help Industrial Units Private Ltd.," has been formed in Madras to establish an industrial estate and give the benefit of the "Own Your Own Factory" scheme to small *entrepreneurs*. The Company will acquire the necessary land and construct *factory* buildings with the help of the financial facilities provided by Government and credit institutions at low rates of interest. The small *entrepreneurs* can get the buildings on hire purchase against an initial payment of 20 per cent of the cost of land and building in the case of co-operatives and 25 per cent in the case of companies. The balance is to be paid in easy instalments spread over a period of 15 years, with interest at 3 per cent for the first three years which will be progressively higher upto 4½ per cent later.

The U.S. Government has authorised three loans, together amounting to $145.5 million, including $8.5 million in rupees, to India. Of these, a loan of $100 million covers the financing of imports from the U.S. of industrial and agricultural commodities such as fertilisers, non-ferrous metals, synthetic rubber, tyre cord yarn, carbon black, sulphur and spare parts. Another loan of $33.6 million is for the financing of the 250,000 kw. thermal power station near Cambay in Gujarat. The third loan amounting to $3 million is given to the Premier Automobiles to enable it to increase the production capacity. All the three loans are repayable in dollars over a period of 40 years with a ten-year grace period. A credit fee of ¾ per cent per annum will be charged.

* * * *

From Abroad

A trade mission from the United Arab Republic is expected to visit China shortly to negotiate a new trade and payments agreement.

Burma is expected to export approximately 1.6 million tons of rice in 1962. Production is estimated at 6.5 million tons.

The stand-by agreement of the Peruvian Government with the International Monetary Fund has been renewed so as to enable the Peruvian Government to draw a sum of $30 million from the Fund over the next twelve months.

With a view to simplifying frontier formalities, the Common Market has decided to charge a fixed import duty of 10 per cent on all small parcels sent to individuals by post and on goods carried as the personal luggage of travellers.

The three neutral members of the European Free Trade Area, namely, Austria, Sweden and Switzerland, have defined the type of association they are seeking with the Common Market. Accordingly, they will not seek any loose agreement limited to tariffs but will be willing to participate in Europe's economic integration.

The Government of West Germany made available a total of 5,490 million deutschmarks for assistance to the developing countries during 1961. Of this amount, about DM 2,970 million were given to Asian countries, DM 1,260 million to African countries, DM 909 million to European countries and DM 345 million to South America.

PERSONAL

MR. R. P. Smith, Managing Director of the Burmah Oil Co. Ltd., London, has arrived in New Delhi on a brief visit.

Mr. Babubhai M. Chinai, a leading industrialist, has been nominated by the Union Government as a member of the Development Council for Art Silk Industry *vice* Mr. L. N. Welingker.

Mr. A. D. Shroff, Vice-Chairman of the Bank of India Ltd., has been appointed Chairman of the Bank *vice* Mr. Cowasji Jehangir who has retired.

Mr. A. Raghavachari has taken over charge as the General Manager of the State Bank of Jaipur, in place of Mr. S. L. Kothari.

Prof. A. K. Das Gupta has been appointed a Director of the Industrial Finance Corporation of India *vice* Prof. S. K. Basu who has resigned.

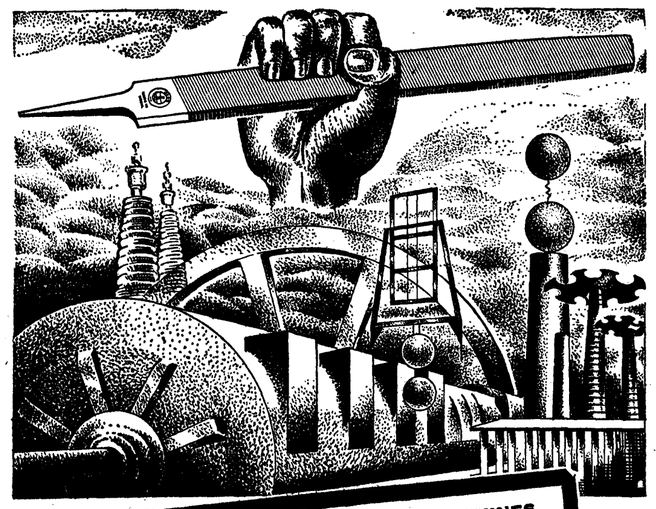
Mr. D. Sandilya, Joint Secretary to the Union Ministry of Commerce and Industry, has been appointed Director of Finance, Heavy Engineering Corporation of India, Ranchi.

Dr. M. S. Krishnan, a former Director of the Geological Survey of India, has been appointed the first Director of the National Geophysical Laboratory, Hyderabad.

Mr. K. B. Lall, Indian Ambassador in Brussels, presented his credentials to Prof. Walter Hallstein, President of the European Economic Community, on the 2nd inst.

Mr. M. V. Madane, Acting Chief Executive Officer, Maharashtra State Co-operative Union, has been appointed to serve on the South-East Asian Regional Education Centre of the International Co-operative Alliance at New Delhi.

Mr. G. R. Kamath, I.C.S., who was Member-Secretary to the Third Finance Commission, assumed charge as Officer on Special Duty in the Union Ministry of Food and Agriculture, with effect from the 2nd inst. He will shortly take over the office of Special Secretary from Mr. V. Shankar who will succeed Mr. B. B. Ghosh as the Secretary of the Ministry.



The thumping of giant presses, the whine of the whirling lathe, the beat of the punch press, the rumble of the conveyor... metal and machines rolling smoothly, producing rapidly, satisfying India's industrial needs, fulfilling the nation's dynamic urge for economic progress... and behind it all, the tiny but indispensable tool, an exclusive JOHN BAKER precision product.

WALCHAND COMMEMORATED

"HE was one of those great men of the country who had dreamt of an industrialised India and who established, one by one, many undertakings not only in one field but in various fields of industrial development." This is the tribute paid by President Rajendra Prasad to the late Mr. Walchand Hirachand, whose bust was unveiled by Mr. G. D. Birla, another industrial pioneer of India, last Saturday at Construction House, Bombay, where the head offices of the Walchand group of concerns are housed. Mr. Walchand was the full embodiment of the philosophy of *karma*. A patriotic zealot, Mr. Walchand was an indefatigable man of will and ambition. Work was worship to him. To industrialise India was his mission, and he dedicated himself to it resolutely.

Mr. Birla, his contemporary, described Mr. Walchand as a great pioneer with an almost "fanatical craze for action and construction." His had been a creative mind, he said, adding that he always utilised the vast resources of his concealed energy for constructive work, with hardly any recreation and no hobby, "except perhaps a little music." Mr. Birla compared him with Mr. Henry Kaiser, a real American *entrepreneur* who has established several major industries in the U.S. virtually from scratch. It is said that, during the war years (1939-45) Mr. Kaiser turned out a ship every alternate day. The comparison was quite apt, for Mr. Walchand made an humble, nay, a firm, beginning of his industrial enterprise with shipping and construction engineering at a time when the odds were very heavy due to India's political subjection and very poor rate of savings in the country.

The will and determination of this pioneering industrialist are best illustrated in the way he founded the shipping industry in India. While on a rail journey, he learnt that a hospital ship called s.s. *Loyalty*, was for sale in Bombay, and he conceived there and then the entire scheme for developing national shipping. He came to Bombay, rushed to the docks to inspect the boat, and before the day was over secured promises from his business friends to join him in finding the price of the vessel. This happened on 17th February 1919. On 27th March 1919, the Scindia Steam Navigation Company Ltd. was registered. And, on 5th April in the same year, the ship, converted into a passenger ship, sailed on its maiden voyage to England carrying the Indian flag. Scindia Steam, Premier Construction, Walchandnagar Industries, Indian Hume Pipe, Hindustan Aircraft, Premier Automobiles, Cooper Engineering, Acme Manufacturing and Ravalgaon Industries are the living monuments of vivid imagination and creative mind of Mr. Walchand. His bust at Construction House will surely be a source of inspiration to the younger generation.

TOBACCO PRODUCTION

As a traditional export commodity, Indian tobacco (unmanufactured) has contributed to a steady, though not very substantial, increase in earnings in recent years. In 1959, the export earnings from this source were Rs. 12.9 crores; in 1960 they were higher at Rs. 14.6 crores. In the first eleven months (January to November) of 1961 they aggregated Rs. 14.6 crores. This steady improvement in earnings seems to have resulted from an increase in the quantum of exports rather than from any increase in the prices realised. For instance, in the fiscal year 1959-60, the exports were to the tune of 41.1 million kg. valued at Rs. 14.5 crores, whereas in the fiscal year 1960-61 they were 47.5 million kg. valued at Rs. 15.7 crores. The increase in the quantum of exports seems, in its turn, to have resulted from an increase in the production of tobacco. It may be noted here that the output of tobacco in 1960-61 aggregated 299 million kg. from an area of 390,000 hectares, as compared with 286 million kg. from an area of 370,000 hectares in 1959-60.

Incidentally, the output and acreage figures mentioned above are revealing when suitably interpreted. It will be found, on calculation, that the acreage under tobacco in 1960-61 represented an increase of 5.4 per cent over that of 1959-60. But the output in 1960-61 represented an increase of only 4.5 per cent over that of the previous year. In other words, the increase in production in 1960-61 was entirely the result of an increase in area. It was not due to any increase in yield. In fact, there was a slight decline in unit-area yield in 1960-61, as compared with the previous year, the figures of yield in the respective years being 766 kg. and 773 kg. per hectare. This decline in yield is hard to explain. It may be recalled, in this connection, that the unit-area yield steadily declined between 1953-54 and 1957-58 but registered an improvement in the next two years. The Indian Central Tobacco Committee's efforts to bring about a substantial improvement in the yield of tobacco without increasing the acreage under that crop do not seem to have succeeded to the extent desired, for the unit-area yield in 1960-61 represents a marginal increase of only about 5 per cent over that of 1953-54, that is, in a period of seven years.

Has the Committee fared any better at least in the matter of improving the quality of tobacco produced in the country? It is well known that a large part of tobacco production in India belongs to inferior varieties. Several of the Committee's research schemes have, therefore, been devoted to popularising the cultivation of superior grades of virginia tobacco required in cigarette manufacture. Here it is not only a question of better quality for certain uses but also one of better money returns to the cultivator for superior grades. To some extent the Committee's efforts in this direction seem to have borne fruit, especially in Andhra Pradesh. While the seventeenth annual meeting of the Committee held at Bombay on the 3rd instant has taken note of the increased returns from a newly-introduced cigarette tobacco variety and an improved variety of cheroot tobacco, it has not indicated whether and to what extent they have been popularised. As improvement in the quality of indigenous tobacco will have the effect of bringing down the imports of certain varieties for cigarette manufacture, it would be relevant to know whether the acreage under superior varieties is substantial now. That it is probably not substantial yet may be inferred from the threefold increase in imports of unmanufactured tobacco in the April-October 1961 period (Rs. 88 lakhs), as compared with the corresponding period of 1960.

MONETARY POLICY

In three lectures on central banking and economic development, delivered in the City last week, Prof. Lester V. Chandler, Chairman of the Faculty of Economics, Princeton University, and this year's Visiting Professor in Monetary Economics at the University of Bombay, had quite a few things to say that are sure to confound theorists in both camps—those of the makers and the critics of monetary policy in underdeveloped countries. He demolished, with simple logic and sound reasoning, some of the pet theories and notions which have been elevated to the status of fetish. Not that the distinguished professor was out on an iconoclastic spree. But if, in the course of putting across to his listeners his thoughts and views on monetary policies in underdeveloped countries, some of the cobwebs of confused thinking and wrong assumptions that had surrounded the subject had to be swept aside, he could not help it.

One of the notable casualties of his rigorous logic is the theory, which has too often misled monetary policy in underdeveloped countries, that monetary expansion for productive investment is not inflationary in the long run. In other words, according to this line of reasoning, no amount of money creation can be inflationary in the long run, if all the newly-created money is used, in the first instance, for productive investment. The proper central bank policy should, therefore, be not to limit the quantity of money created but to ensure that new money is created only for productive investment. On the face of it, this argument sounds impressive. Its crucial part is the assumption that, when the increased output flows into the market prices will fall, presumably, back to the original levels. But this theory, says Prof. Chandler, is completely erroneous. His reason is: There is no assurance that increased money expenditure for capital will increase the supply of real capital. Its results, more often than not, will be (a) competitive borrowing from banks and spending for capital, (b) little or no rise in the supply of real capital, and (c) therefore inflation. Every rise in money value of capital goods serves as a justification for more money creation. It is, indeed, a formula for an inflationary spiral, asserts Prof. Chandler. Even if it is conceded, for argument's sake, that increase in money supply will be matched by an equal increase in the supply of real capital which will permit an increase in real output, the theory is still wrong, according to Prof. Chandler, because the resulting increase in real output will almost certainly be far less than the rise in expenditure incurred to obtain that output through created money. The new money remains at the disposal of the public and will ordinarily be used to increase, by some multiple, the annual rate of expenditure for output.

Prof. Chandler would surely have disheartened those who advocate forced saving (that is, the process through which increase in money supply is used to force the community to consume less and save more) for accelerating the rate of development when he cited a series of conditions which, according to him, are crucial in determining the success or failure of such a policy—conditions which most underdeveloped countries, bent on achieving economic advance and social justice, will find it difficult to fulfil. He, however, does not deny that, under certain favourable conditions, forced saving may indeed increase significantly the rate of real capital formation. But to the extent these conditions—he mentions five—are not met, the rate of inflation will be increased and the attempt to force a higher rate of real saving would be ineffective.

Prof. Chandler does not seem to share the craze for deficit budgets. Commenting upon the decline of the qualities which are generally considered as financial virtues, he says:

"Gone is the sanctity of the annually balanced budget. Even those Governments that are fiscally most responsible feel far freer today than they did a generation ago to incur deficits and, for some of the less disciplined (Governments), deficits have become almost a way of life. More and more Governments have become willing to accept and act upon the economist's advice to use deficit spending in a period of unemployment as a means of stimulating demand and reviving business activity. Fewer have shown a comparable willingness to accept the other part of the prescription, namely, to combat inflationary pressures by running a budget surplus."

Although Finance Ministers might frown at this mild censure of their conduct, Prof. Chandler's observations about taxation and taxable capacity in underdeveloped countries are sure to bring a gleam of delight in the eyes of many of them. In his opinion, the deficiency in private saving in underdeveloped countries could be made up, to some extent, by Governments themselves saving large amounts. They could save by collecting revenues in the form of taxes and net earnings of Government enterprises far in excess of their expenditure for current consumption. At present, very few of the underdeveloped countries take more than 10 per cent of national income as taxes and many take less, whereas taxes absorb 25 to 30 per cent of the national income in the U.K. or the U.S. Prof. Chandler does not accept the contention that the level of savings and taxes are low in underdeveloped countries simply because the *per capita* income is low. He quotes the following words of Prof. W. Arthur Lewis in support of his view that poverty cannot explain the inadequacy of savings in underdeveloped countries:

"No nation is so poor that it could not save 12 per cent of its national income if it wanted to; poverty has never prevented nations from launching upon wars, or from wasting their substance in other ways. Least of all can those nations plead poverty as an excuse for not saving, in which 40 per cent or so of the national income is squandered by the top 10 per cent of income receivers, living luxuriously on rents."

Proceeding, Prof. Chandler makes the following significant point:

"Lewis and many others have pointed out that an important reason for the low ratios of private saving in these countries is the absence or underdevelopment of capitalistic institutions and attitudes. It reflects in part the much lesser importance of business corporations, which do so much of the private saving in highly-developed economies. It also reflects in part the fact that the top income classes lack the high propensity to save that is characteristic of capitalists in the developed countries."

What the Governments are unwilling to do through taxation, Prof. Chandler points out, they are forced to achieve through credit expansion. This leads to inflation. In advocating higher taxation to raise resources for investment, Prof. Chandler seems to lean heavily on the Government's ability to mop up the savings and channellise them to productive investments. His argument assumes that large-scale tax evasion, which will be engendered by high levels of direct taxation, can be successfully tackled and that, in a democracy, the public can be induced to carry a large burden of indirect taxation either through excise duties or manipulation of prices. These are big assumptions as is evident from India's experience. Further, in a mixed economy, the need for providing the incentives necessary to attract risk capital and *entrepreneurs* has to be reconciled with the proposition made by Prof. Chandler. How we wish this distinguished American economist had attempted to reconcile these conflicts and put forward a compromise! Further, inexperienced as most Governments in underdeveloped countries are, they have yet to prove that they can do the investing better than private *entrepreneurs* or can make available the savings collected by it to the most deserving *entrepreneur* in the private sector. Distribution of the investible funds, it may be noted, is not always influenced by economic considerations alone; politics, or, to be more precise, ideology, too plays an important role, with the result that resources may not always be put to the most efficient use.

ARECANUT AND COCONUT

There is so much of geographical and other natural affinity between arecanut and coconut that both are invariably grown in the same areas by the same cultivators. And the problems pertaining to the development of these two crops are to a large extent identical. But somehow the problems have not so far been approached jointly, with the result that there is duplication of effort, not to speak of wastage of funds. Viewed thus, Mr. V. Shankar, I.C.S., Special Secretary in the Union Ministry of Food and Agriculture, certainly struck a note of realism when he urged, in his speeches at the meetings of the Central Arecanut and Coconut Committees held at Bombay last weekend, the need for co-ordinated and concerted efforts to develop the two crops together on lines similar to those of the package programme for oilseeds. Such a co-ordinated approach would, as Mr. Shankar rightly said, yield much better results than those obtained under dispersed energies in respect of each individual commodity.

The demand for arecanut and coconut in the country is continuously expanding. If the rate of indigenous production fails to keep pace with that of demand, there will have to be larger imports which mean spending of more precious foreign exchange. As it is, imports have been quite sizable, valued at about Rs. 1 crore annually in the case of arecanut and Rs. 12 crores in respect of copra. Even if the third Plan production targets of 100,000 tons of arecanut and 5,275 million coconuts fixed for the two crops were fulfilled successfully, there would still be a sizable shortage of supplies. The actual shortage in regard to arecanut, for instance, is expected to be of the order of 30,000-40,000 tons by 1966.

The production performance of the arecanut and coconut industries during the second Plan was not quite encouraging, as will be seen from the following figures:

	Actual Production in 1955-56	Target Fixed for 1960-61	Estimated Production in 1960-61	Target Fixed for 1965-66
Arecanut (tons)	80,823	99,190	93,000	100,000
Coconut (million nuts) ..	4,150	5,020	4,500	5,275

In India, arecanut is one of the most widely used commodities. As Mr. Shankar characteristically described it, it "runs into millions of mouths and provides them with a means of recreation as well as leisure for thinking that is absent generally in the case of other commodities." The value of arecanut can be gauged from the fact that the annual turnover in this nut is as much as Rs. 50 crores. Considering the "large clientele" enjoyed by arecanut, particularly among the poorer classes, and the difficult foreign exchange position, it is gratifying to find that the development expenditure has been steadily growing—Rs. 11 lakhs in the first Plan, Rs. 31 lakhs in the second Plan and Rs. 59 lakhs (targeted outlay) in the third Plan. A peculiar feature of arecanut cultivation to which Mr. Shankar drew attention is the dependence of cultivators on the vagaries of monsoon. Only about 52 per cent of cultivation, we are told, is under irrigated condition and 57 per cent of the crop is subjected to satisfactory or suitable manuring conditions. Mr. Shankar was of the view that, if only the dependence on monsoon was minimised and if efforts to popularise the use of fertilisers were intensified, there would be no need for any other activity, apart from the supply of quality seedlings, etc., not merely to achieve the target but even to exceed it.

In the sphere of coconut cultivation, there have recently been three notable developments. One, the F.A.O. Technical Working Party on Coconut has constituted a small working group to co-ordinate research techniques on investigations into coconut diseases of undetermined causes. Two, statistical surveys are being conducted in the various coconut-growing States for assessing more accurately the area under and yield of coconuts. Three, under a special scheme, the cost of coconut cultivation in Kerala State is being ascertained. The data that would become available as a result of these investigations will surely help, as Mr. Shankar said, place coconut economics on a much sounder basis than at present.

A Central organisation called "the Narmada Valley Authority" similar to the Tennessee Valley Authority in the United States, is to be formed for the development of the water resources of the entire Narmada valley. This was the main suggestion which emerged at a conference of senior officers from Madhya Pradesh, Gujarat, Maharashtra and Rajasthan held at New Delhi recently. The organisation is also expected to be entrusted with the work of preparation and implementation of irrigation and power schemes in the Narmada valley. The projects on the Narmada river at Punasa and at other sites offer a power potential of nearly 1.5 million kw. for use in Madhya Pradesh, Gujarat, Maharashtra and Rajasthan States. It is also pointed out that the Punasa project will comprise four main power works. These are at Punasa having a power potential of 400,000 kw., at Burwaha 200,000 kw., at Harinpal 370,000 kw., and Navgam 500,000 kw. The total estimated cost of development of these sites is about Rs. 50 crores, excluding the transmission system, and that of all sites about Rs. 200 crores.

MEANING OF ELECTION RESULTS

E.C.A.F.E.'S CURIOUS COMMENT ON INDIAN PLAN

From Our Special Correspondent

NEW DELHI, 6th *March*

DELHI LETTER

THE General Elections are over at last, falsifying prophets who predicted a possible postponement due to the planetary conjunction last month. The Congress Party's reverses in two States are not perhaps worse than those in two others at the last elections; if the position could be retrieved in Kerala and Orissa, there is no reason why Rajasthan and Madhya Pradesh should defy solutions in time, particularly since no coalition or control by another party is needed immediately in the latter two. The capital is now engaged in the pastime of analysing the political and economic implications of the electorate's verdict with a view to finding out whether it is in fact a swing of opinion to the Right or to the Left; the kaleidoscopic variety of the opposition groups (it seems inappropriate to describe them as parties) lends support for opposite views; a detached observer may be inclined to go by the results of the elections to the Lok Sabha and take them as an approval of the major role played by the Centre whether in foreign policy or in economic and social development and a mandate for the future for the continuance of the policies indicated for the future.

But some are not content to leave it there; probing further, they interpret the gains of the Swatantra Party and the Jan Sangh as warnings against further movements to the Left; with equal force, others may be justified in pointing out not only the verdict in North Bombay (which only the Right regarded as crucial to its future) but the disquieting trend in Kerala, where the Communists have maintained their support, and the success of the D.M.K. in Madras, which, divorced of its separatist demand, is no party of the *status quo* in social or economic matters notwithstanding its links with the Swatantra Party.

So far as the States are concerned, the protest represented by the vote for non-Congress groups may be interpreted as criticism of local discontents arising out of bad administration, favouritism, communal rivalries and lastly to the pressure of population and unemployment which in the educationally backward States has not led to an extremism of the Left.

Assuming that the constitution of State Ministries has little significance in this broader context but will be of importance only to the stability of the Government in those States, speculation centres only on the composition of the Union Cabinet. It is difficult to see how it can be substantially changed, except in respect of some of the major portfolios allotted to individual Ministers. Undoubtedly, fresh blood and new talent are needed in the economic ministries; the staleness which descended on many of the Ministers in recent years has been there for all to see in the coal and transport difficulties, bad record in housing and health and inadequate performance in export promotion. On the other hand, a combination of good luck and imaginative handling has helped in dealing with the food problem and holding prices during the latter half of the second Plan period; revenues are buoyant, there is less need for deficit financing and foreign aid is less uncertain than when the third Plan was first formulated. The third General Elections have had a far more unsettling effect on the minds of political leaders than either the first or the second and prevented them from concentrating on the tasks on which they were engaged; but this is excusable in any democracy.

If the past is any guide, the indications are that the changes in the Union Cabinet will not be many. Mr. Nehru has rarely made changes, except when it was inevitable, due to resignation or death. Many whose records are undistinguished have continued to stay and even age is no disqualification, in the absence of a policy of strengthening the second rank of leadership; the new team may, therefore, have the familiar faces, if we include Mr. T. T. Krishnamachari also as one of them. There seems to be little point in the question whether the new team will be more to the Left than before, since this depends almost entirely on the attitude of the Prime Minister and there is nothing to indicate that he has changed considerably, though he always reacts to a challenge by placing greater emphasis on socialism. In the last resort his views have always prevailed and they will continue to prevail; the merit of formulating a five-year Plan after elaborate consultations is that policies to be pursued are indicated therein and adherence to them is both a national and in certain respects also an international responsibility and should normally be expected. But if, by any changes, the Prime Minister is able to impart more vigour in implementation, it should be welcomed in the context of the sluggishness in the economy that seems to have set in at the commencement of the third Plan, which is in marked contrast to the tempo at the beginning of the second.

These considerations should narrow down speculation to personalities and to the question whether the formation of the Cabinet will really give any clue to, or influence in any way, the problem of succession about which many are worried. The chances are that it will not; the answer will be given only by the alignment of forces in the various States when the issue does arise for a solution.

* * * *

Criticism of Third Plan

There have been many foreign appraisals of India's Five-year Plans and, except a few extreme opinions like those of Prof. P. T. Bauer, there have not been many serious criticisms of the approach. The World Bank, which has been in close touch with planning at all stages, seemed to understand the motivations behind planning in this country; the I.M.F. was the first to begin this approach with the Bernstein report in 1953. More recently, the three bankers who gave their views on the Draft Outline of the Third Plan showed a sympathetic attitude, though Western opinion is bound to take the view that the private sector should be allowed to take up as much as it can handle so as to let the Government concentrate on the infrastructure—power, transport and even agriculture, besides social overheads like health, education and housing—which in India have assumed greater importance than before. But these differences of emphasis or of approach are well understood here and even appreciated; the World Bank's lending policies also have been based on its order of priorities and when it did not lend money to the public sector industrial projects (like steel plants) or when it declared its intention to support only the private sector coal mines with credits, these have been accepted with good grace, since they, in any case, fell within the scope of the Plan.

There is, therefore, bound to be some curiosity about the unusual vehemence with which the E.C.A.F.E. has suddenly found Indian policies in planning to be seriously at fault for various reasons. Its latest *Survey* is of the opinion that the country did not fully explore avenues which could have secured a more rapid expansion of output with relatively smaller inputs of capital or foreign exchange. As a generalisation, this sounds profound and impressive; and the E.C.A.F.E. had no obligation to indicate the alternative plan which could have found favour with it. Neither the cotton textile industry nor the sugar industry will agree that more should have been produced through handlooms or *khandsari*, in order to reduce the capital-intensity investments. The main objection seems to be against the watchword "Build Machines—Build India." It is supported by the very odd reason that technological changes might make the present investment uneconomic at a later stage and upset the present cost-benefit calculations. The *Survey* does not say when technological change will reach the point of no progress to make investments safe for all time; or it may be that it feels that, since catching up with the advanced countries may be a futile quest in view of automation and electronic computers, it should be abandoned for all time. The E.C.A.F.E., however, is willing to see the "larger social ends" behind the policy decisions of the Government of India, though it sticks to its view that a different investment strategy was desirable; its reports thus promise to be less colourless than before and soon one may expect strong criticisms of the comparative indifference of the other countries of the region to the tasks of economic development.

THE BURST MONEY-BAG

(*From Our Own Correspondent*)

LONDON, 2nd *March*

LONDON LETTER

IN the crisis days of last July, the Chancellor of the Exchequer had assured the country that he would lead the way in economy by limiting an assumed inevitable increase in Government expenditure in the year ahead to 2½ per cent *in real terms*, that is, after making allowance for price increases. By coincidence or otherwise, the same limit of 2½ per cent has been urged by the Chancellor as the maximum by which overall wages ought to be increased in 1962—with a difference that the 2½ per cent is not supposed to be in real terms; it is comprehensive.

Alas for Mr. Selwyn Lloyd's optimism! The spending departments have been stronger than he and in real terms the percentage rise is 4½. In money terms, it is about 7 per cent, the difference being the measure of price inflation over the year. This is what has happened: the new estimates of civil and military expenditure for 1962-63 are £5,611 million which is £384 million more than the estimates put up a year ago and which have, incidentally, been exceeded by over £200 million. Of course, budget estimates do have a way of being exceeded and the Chancellor's estimates for 1962-63 give no guarantee that these will not also in turn be exceeded.

However, the Chancellor, in view of all his strictures about the need for economy Government-wise and nation-wise, felt himself particularly obliged to keep to what he had said and spent many anxious hours considering how best to approach his explanation. In the end, he decided to stand before the House in "sackcloth and ashes" and say that he had done his best—which will no doubt provide an excellent model for industrialists and heads of nationalised industries who will also do their best and find they have to pay more. But Mr. Lloyd made the gap between promise and performance appear less by explaining that, first of all, rises in prices of the sort of goods on which the Government spend their money accounted for only £139 million of the increase, that the 2½ per cent increase in real terms would have permitted him to spend an extra £134 million, and that his overspending was, therefore, £111 million.

Whole Government Responsible

The increase making up the £384 million is, namely, £100 million on defence, £66 million on agricultural support, an extra £43 million on the railway deficit, a mere £15 million extra on roads and the rest on health and welfare. The Chancellor made great political play with the fact that he refused to touch health and welfare as if that was the only choice open to him. Admittedly, the Chancellor is not in control of defence policy, but, if the Government were serious about the overall limitation, they would have to attack not merely the increases proposed but the total budget programmes of the big spending departments. Defence is, perhaps, the Department which is most vulnerable to criticism, though, at the same time, the expenditure itself is inseparable from policy.

A Chancellor, however, is under pressure from all the spending departments and it is impractical to single out one at the expense of others. The onus is not, indeed, on the Chancellor; it is on the Government as a whole if it wishes to adapt its policies to fit in with the sums of money available. In short, the fault is not in the end Mr. Lloyd's but the collective responsibility of the Government. Nevertheless, because of the Chancellor's insistent pleas for economy, the exceeding of estimates of this year would have caused a furore if the House had not got other matters with which to occupy itself. The Chancellor must be grateful to Sir Roy Welensky for having acted as a lightning conductor.

These expenditure estimates now make it unlikely that any reductions in taxation can be looked for in a month's time when the Chancellor is due to present his Budget to the country. On the other hand, the impression is growing that the Government do not feel that they need to exercise further restrictive measures on the economy and that the year ahead is accordingly likely to be one of no change in both fiscal and financial policy.

RECENT TRENDS IN WORLD SILVER

CONSUMPTION RISING MUCH FASTER THAN PRODUCTION

THE industrial, artistic and coinage uses of silver in the free world are currently running at a much faster rate than the pace at which production is expanding, so that the gap between demand and supply is quite sizable. The actual shortage during the calendar year 1961 was nearly 140 million ounces, with the aggregate free world production and consumption estimated at 211.0 million ounces and 350.7 million ounces, respectively. The deficit in supplies was considerably wider than in 1958 when it was of the order of just 64.3 million oz. (production 205.7 million oz. and consumption 270.0 million oz.). This growing gap between output and offtake need not cause any concern about the availability of sufficient silver for industry's future requirements. This at any rate is the view which Messrs. Handy and Harman of the U.S. have reiterated again in their latest (the forty-sixth) *Annual Review* covering the year 1961. "We are," they say, "still of this opinion and, in fact, feel that it is being substantiated by recent market events." They also feel that no further sharp increases in silver prices are likely in the near future, though they admit that fluctuations may be more frequent than in the past. In support of this view, they observe:

"We shall almost certainly see more frequent fluctuations (in prices) during the year 1962 than in the past, but the general trend will depend on the answers to several questions. It is not known when or at what levels speculative holdings will be sold; it is not known what Red China's future policy will be with respect to silver sales; it is not known what our (U.S.) Government's policy will be with respect to remaining free stocks; it is not known how much demonetised coin around the world will be brought out of hoarding by the new higher prices. However, we do know that there are substantial holdings of silver bullion which will ultimately be sold."

U.S. Treasury Stocks

It will be interesting to note here that the U.S. accounts for the bulk of the world's silver holdings. The total Treasury stocks as on 31st December 1961 stood at 1,862.7 million oz. to which are to be added 1,486.4 million oz. held outside the Treasury, or an aggregate of over 3,349 million oz. It will be recalled that, towards the close of November last year, the Treasury Secretary wrote to the President suggesting that, in view of the large and growing aggregate demand for silver, it would not be either wise or feasible to continue to impound a substantial holding of silver bullion in currency reserves. On his recommendation, the President announced that silver should gradually be withdrawn from the monetary reserves. And he directed the Treasury Secretary to suspend further sales of free silver to domestic industry, as well as to suspend the use of free silver held by the Treasury for coinage. He further announced his decision to ask the Congress to repeal all silver purchase legislation, including the transfer tax, thereby ensuring the establishment of a broad free market for trading in silver. Welcoming this move and describing it as "the most significant development" in world silver markets, Messrs. Handy and Harman observe: "The elimination of the United States Treasury as an active market influence has been long anticipated, but the event occurred sooner than generally expected. This action abruptly ended a period of world-wide stability which had lasted nearly three years, the longest such period on record except for war-time, when price controls were in effect."

To revert to the statistical position of silver in the free world. The total consumption of silver in the non-communist countries during 1961, was as already stated, 350.7 million oz., which represents an increase of 8 per cent as compared with the previous year's figure of 325.4 million oz. Of this increase of 25.3 million oz., industrial uses accounted for 12.0 million oz. (+5 per cent) and consumption for coinage for 13.3 million oz. (+13 per cent). The rise in coinage consumption, as Table I at the bottom shows, resulted from an improvement of almost 100 per cent in the quantity used by France and an appreciable increase also in the quantity in the U.S.

The aggregate free world silver output in 1961 amounted to 211.0 million oz., a rise of just a million oz. over 1960. A drop of 25 million oz. in Mexico's output was offset by a rise of 9 per cent in Peru. Changes in other countries were small. Details of production trends are given on Table II, while Table III summarises the uses and sources of silver in the world during 1961. In this connection, Messrs. Handy and Harman have drawn attention to two important trends in world silver economy. One, the U.S. coinage requirements, which account for nearly half of all silver used for coinage, have come from the Treasury's own stocks in the past and, under the President's directive of 23th November 1961, they will continue to come from such stocks in the future. Two, about 40 million oz. of silver represent world speculative holdings during 1961 and an equal quantity is held in inventory accumulations. Communist China sold huge quantities of silver throughout the year, but withdrew from the market when the U.S. Treasury sales were stopped and has not participated since then. No indication is available as to the future policy of China.

With the U.S. Treasury silver no longer available, the New York market has again begun to reflect business done in other centres, particularly London. Generally speaking, the New York price must be more than two cents per ounce above London's to attract silver here, the spread consisting of about 1.5 cent for freight, insurance and financing and over 0.5 cent premium for other than Chinese silver. A large part of the silver available in London, we are told, comprises speculative holdings of Chinese origin. The U.S. citizens are prohibited by law from dealing in this silver and, therefore, the metal eligible for sale in New York commands a premium in London over the published quotations.

Silver Consumption in U.S.

Commenting on silver consumption in the U.S., Messrs. Handy and Harman observe:

"The amount of silver consumed in the United States has been quite stable for the past several years, and this has tended to obscure the many significant new developments which are taking place in the uses of silver in industry. Some of the better known uses for silver have not been increasing and in fact in 1961 declined slightly. These include the use of sterling for silverware and of the types of brazing alloys used in consumer durable goods, such as automobiles, refrigerators, air conditioners and other household appliances. In other areas, however, a wider variety of alloys and more complex compositions are needed to meet the more exacting specifications of industry today. For example, the rapid progress in electronic development and the requirements of our defence programme call for many specialised applications of silver, both for electrical and metal bonding needs. These developments have not resulted in a large increase in the total amount of silver consumed in the United States, because, in many instances, new uses have replaced old ones and, in other instances, new designs have tended to reduce the amount needed for specific applications."

Grand Total	430.7	Grand Total	430.7

The commercial imports of silver into the U.S. during 1961 amounted to 50.6 million oz., as against 56.1 million oz. in 1960, 64.5 million oz. in 1959 and 73.9 million oz. in 1958. In addition, 6.0 million oz. were imported against lend-lease returns. While imports of silver (other than lend-lease) into the U.S. continued to decline during 1961 also, exports from the U.S. continued to rise; they aggregated 34.8 million oz., as against 26.6 million oz. in 1960, 9.2 million oz. in 1959 and 2.7 million oz. in 1958.

The U.S. Treasury free silver stocks declined sharply in 1961 from 123.5 million oz. to 28.5 million oz. Final figures covering Treasury operations in silver for the full year were not available at the time when the annual report of Messrs. Handy and Harman was published. During the first eleven months of the year, the Treasury acquired 12.4 million oz.; the major portion of it (10.4 million oz.) was accounted for by lend-lease silver. The newly mined domestic silver purchased amounted to 200,000 oz. and receipts from melting of uncurrent coins and other sources to 1.8 million oz. The Treasury disposed of 112.7 million oz. of silver during the January-November 1961 period.

Silver Elsewhere

Silver consumption outside the U.S. was higher than in 1961. Activity increased in all the major centres. And, in addition to normal industrial needs, considerable buying was done for speculative purposes and to accumulate inventories as hedge against future requirements. The major developments in a few important other silver markets as recorded in the report of Messrs. Handy and Harman are given below:

U.K.: Sales of Chinese silver were of great importance in the London market. The total sales to Western Europe during 1961 are estimated at 50-55 million oz., of which 5.0 million oz. are to be delivered in the current year. Silver imports into Britain during the eleven months ended November 1961 amounted to 56 million oz.; China alone supplied 38.2 million oz. As against these imports, exports were of the order of 23.2 million oz. The total speculative stocks in private hands in London are estimated at about 30 million oz., besides the 10 million oz. held in inventories as hedge against future requirements.

West Germany: Domestic production is small and the bulk of the country's requirements is imported. The actual imports in 1961 were 40.7 million oz. (excluding imports of 11 million oz. of unrefined silver). China supplied 5.6 million oz. There were also some exports, estimated at 16.9 million oz. No silver was used for coinage last year.

France: The coinage programme continued to be of significance. A total of 23.8 million oz. was used to coins the five-franc piece. Plans for two-franc coins have been cancelled. Imports: 20.1 million oz. (7.4 million oz. from China); exports: 13.8 million oz.

Italy: The coinage programme, authorised in 1958, was continued in 1961. Imports: 10-15 million oz.

Canada: Imports: 8.6 million oz. from the U.S. The imports were in part purchases by the Royal Canadian Mint and in part silver of foreign ownership refined in the U.S. and shipped to Canada prior to sale presumably to avoid silver tax liability. Exports of Canadian silver to the U.S. were 23.1 million oz.

Mexico: Exports: 33.5 million oz. About 80 million oz. of silver remain with the public in the form of demonetised coin.

Japan: Imports: 4.4 million oz. Of the 64 million oz. of war-time confiscated silver, some 4.5 million oz. were scheduled to be returned to private companies; 2 million oz. have already been returned so far. The balance of 60 million oz. was transferred to the Government. A part of this stock has been used for coinage and the Government stocks at the end of 1961 are estimated at about 47 million oz.

India

The annual review of Messrs. Handy and Harman also contains a brief reference to India. There has been no relaxation of ban on silver imports into India and the market continues to be isolated from other world centres. Silver consumption continues to be low largely because of high prices; it is estimated at 1.5 million oz. for 1961, almost the same as the figure for 1960. No further imports of Tibetan silver coins have taken place. The quaternary silver rupee coins are still in the process of being withdrawn. About 330 million of such coins with an estimated total silver content of 60 million oz. are believed to be still in the hands of the public.

INTEREST RATES IN UNDERDEVELOPED COUNTRIES

VIEWS OF PROF. CHANDLER

THE relatively low rates of interest prevailing in the organised capital market in India is a significant and striking feature of the Indian economy. It is undoubtedly true that bank credit today costs more than they used to, say, four or five years ago, that the Government, too, is paying a little more and that the average Bank rate (average of the three tiers) in the 1960-61 busy season was a little above 5 per cent, as compared with 4 per cent since May 1957. But, curiously enough, the rates of interest on deposits by banks are somewhat lower not only as compared with what they were, say, in 1957-58, but also with other interest rates. Again, the rates of interest, whether on bank credit or bank deposits or on Government borrowings, are substantially lower than the comparable rates in some of the developed countries. Since interest is a price paid for savings and therefore performs the role of a stimulator of savings, it might seem ironic that, in a country which stands very much in need of a higher rate of real savings, interest rates should be even lower than in the capital-rich countries of the West and in highly developed Japan in the East. This situation is not so much the result of natural evolution as of a deliberate policy of keeping interest rates low for budgetary and other reasons. Since Government is the largest borrower the yearly cost of servicing the debts has prompted many a Finance Minister to plump for a low rate of interest and yield to the pressure of the law of demand and supply only grudgingly and often only after much damage has been done. The desire to keep the cost of development programmes as low as possible and the prejudice against what are known as *rentier* class have provided additional justification for keeping interest rates at low levels.

Opinion among a section of bankers in this country, however, has for quite some time now been crystallising in favour of higher interest rate in the organised section of the capital market. It has been contended that interest rate should be looked upon primarily as a price for savings and that, whatever the attractions of low interest rate as a means of promoting employment and capital formation, its role as a stimulator of savings should not be lost sight of. Advocates of higher interest rates in this country will be pleased to note that no less an authority on monetary economics than Prof. Lester V. Chandler, Chairman of the Faculty of Economics, University of Princeton, shares their view.

Prof. Chandler, who is just completing a one-year assignment in India as Visiting Professor of Monetary Economics at the University of Bombay, delivered last week a series of three lectures entitled "Central Banking and Economic Development" under the auspices of the University of Bombay. In one of them he made out a very convincing case for higher interest rates in underdeveloped countries. Although the lectures encompassed the entire range of central banking policies in underdeveloped countries, this article confines itself only to that portion of his third lecture relating to interest rate policies. The object of this article is to provide a summary of his arguments for higher interest rates for the benefit of those of our readers who could not hear the brilliant exposition of Prof. Chandler.

Interest is a Price

Put in capsule form, Prof. Chandler's thesis is this: "Many underdeveloped countries pay too much attention to the behaviour of interest rates *per se*; the rates they maintain are both too low and too stable and this retards rather than promotes real saving and capital formation, encourages the waste of scarce capital; and, in these and other ways, endangers economic growth." This conclusion of Prof. Chandler is supported by sound theory and observed facts of monetary experience. In formulating their policies towards interest rates, the monetary authorities should, in Prof. Chandler's opinion, never forget that the interest rate is a price—a price paid by borrowers to lenders for the use of loan funds, or, more basically, a price paid for the use of real resources purchased with loan funds. Like other prices, the interest rate has at least three functions and effects. First, its rationing effect or its regulation of the quantities actually demanded. It functions to bring the quantity of credit actually demanded into equality with the available supply. The second is the supply effect of interest rates—that is, their effect on the quantities of saving that will be supplied. As the reward for saving and lending, higher interest rates tend to encourage saving and lower rates to discourage saving. The third is the income distribution effect. As the price paid for the use of loan funds, the interest rate represents the amount of income paid by borrowers to lenders for the use of funds.

Interest rates policies, according to Prof. Chandler, are likely to be faulty, if they are not based on a realistic appraisal of all three of these effects—namely, the rationing or demand effect, the supply effect and the income distribution effect. In country after country, observed the distinguished Professor, the monetary authorities have failed to consider these effects or have failed to appraise them realistically or have concentrated excessively on one of them to the neglect of others.

A Fallacy

Prof. Chandler does not subscribe to the widespread belief that lower rates of interest inevitably increase the rate of real investment. He no doubt concedes that, other things being equal, lower rates of interest increase the quantity of loan funds demanded for investment purposes. It is even true, he admits, that lower rates of interest will increase the actual rate of real investment, if the effective limitation on investment is lack of demand for loan funds rather than deficient supply. But is the effective limitation on the rate of real capital formation an inadequate willingness of the Government and the private sector to use all the real saving that can be made available, or is the effective limitation the supply of real savings? In most countries, in Prof. Chandler's opinion, it is the latter. It is much more so in underdeveloped, capital-hungry countries. In fact, the combined demands for loan funds by the Government and the private sector at the prevailing rates of interest are far above the available supply of voluntary savings. This is evidenced by excess demands for credit despite various controls to reduce the demand for credit. In many cases, says Prof. Chandler, interest rates would probably have to rise by several percentage points at least to lower the effective demand for credit to the level of the available supply. Within this range, a rise in the rate of interest would actually increase real investment to the extent that it raised the supply of real saving. Thus, the effect of interest rates on the proportion of national income saved becomes a crucial question. Will higher interest rates raise the proportion of national income saved and, if so, how much? In view of the fact that empirical knowledge on this subject is scarce, it is difficult to answer this question with any degree of exactitude. Prof. Chandler, however, does not accept the assumption that, since the income effect and the substitution effect of interest rates tend to cancel each other, interest rates have no effect on saving. In his opinion, real saving and, therefore, real investment can be increased by permitting interest rates to rise to a level at which the effective demand for credit will be no greater or not much greater than the supply of voluntary saving. In many underdeveloped countries, the required rise of interest rates would be not merely a fraction of a percentage, but several percentage points.

Subsidy for Waste

A policy of excessively low interest rates also militate against economic growth in another way. It subsidises wastage of capital. For interest rates so low that they do not reflect the scarcity value of capital and its productivity in alternative uses are, in Prof. Chandler's opinion, "a subsidy for the use of capital and an invitation to its waste." Conversely, higher interest rates, reflecting its scarcity value, would increase the cost of using capital and promote economy in its use.

Prof. Chandler, of course, does not contend that underdeveloped countries should rely solely on market rates of interest to ration or allocate their scarce supplies of savings and capital. There may indeed be, he concedes, sound social grounds for using direct methods, such as selective credit control or the system of licences, to prohibit or limit the use of capital for specific purposes. Such methods can be socially beneficial, if wisely conceived and well administered. They can both hold down the total demand for savings and direct the available savings towards socially useful ends. But they are not complete and adequate substitutes for a realistic level of interest rates for the purpose of promoting growth of real savings, rationing them and economising their use.

Low rate of interest leads to wastage of capital in another way also. In almost any capital project, there is some degree of substitutability of capital and labour. The same output can be produced with less capital and more labour, or more capital and less labour. Every entrepreneur tries to achieve economy in the use of factors by using that combination of capital and labour which will yield the lowest cost of production. What this lowest cost combination will be depends in part on the relative prices of the factors. If interest rates are high relative to wage rates, entrepreneurs will find it more economical to use less capital and more labour. On the other hand, if interest rates are low relative to wages, entrepreneurs are encouraged to use more capital and less labour. In other words, low interest rates give an incentive to entrepreneurs to use capital lavishly, not to economise it. A nation provides a double incentive to waste scarce capital when it simultaneously maintains the interest rate at a level far below the marginal product of capital and also encourage wage rates in the industrial sectors to rise far above the value of labour's output in alternative uses.

Not Inequitable

Prof. Chandler also disputes the argument that higher interest rates, by transferring income from the poor to the rich, accentuates inequality of income. Apart from the fact that interest accounts for only a fraction of the national income, not all interest payments, Prof. Chandler points out, are from the poorer to the richer. In fact, as an economy develops and a larger portion of loans come to be used for productive purposes, many of the interest payments are from richer entrepreneurs to less rich savers. Even if higher interest rates do bring some inequity in income distribution, the damage in this respect, according to Prof. Chandler, is likely to be far less than that which would result from monetary expansion and inflation that would be required to keep interest rates at low levels.

The case for a higher interest rate is applicable with equal force to the Gilt-edged market also. Rates on Government securities are pegged at rates so low relative to those on other securities available in the market that they are unattractive to private buyers with the result that most, if not all, of them come to be held by the Central Bank and by such Government-controlled agencies as provident fund organisations and nationalised life insurance. This clearly inhibits the achievement of one professed objective of most Governments—the creation of a broad market for Government securities. Prof. Chandler appreciates the Government's desire to hold down service charges on the national debt, but, in his view, any advantages on this score are purchased dearly when the low interest rates policy defeats the purpose of developing a broad market for Government securities.

Three Defects

Prof. Chandler points out three main defects for such a policy. First, it imparts an expansionary bias to monetary policy (when private demands for Government securities are absent, or at best very small, the Central Bank must buy more of them, thereby creating bank reserves). Secondly, it deprives the nation of what should be a useful means of promoting and channelling savings. Thirdly, the maintenance of very low rates of interest on Government securities often leads Governments to charge excessively low interest rates on their loans to Government-owned corporations and certain favoured groups in the private sector. Finally, it is inappropriate, according to Prof. Chandler, for provident funds and nationalised life insurance to be used as repositories for large amounts of Government debt whose yield is excessively low. For when the Government uses its powers over these agencies to borrow at rates below those available on comparable securities in the market, it is, in effect, taxing the beneficiaries of the programme. They are forced to subsidise the Government's borrowing. This form of taxation is likely to be erratic and inequitable in its incidence, because it gives little attention to ability to pay. Moreover, this tax may well inhibit the growth of life insurance and discourage the growth of savings in this form.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

UNION BANK OF INDIA

PROFIT HIGHER—CAPITAL TO BE RAISED

THERE has been a handsome rise of Rs. 2.46 lakhs or 12.8 per cent to Rs. 21.62 lakhs in the net profit of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) for the year ended 31st December 1961 as compared with 1960. This improvement is significant especially because it has been achieved notwithstanding a marked increase of Rs. 9.05 lakhs in staff expenses, of Rs. 2.65 lakhs in other expenses and of Rs. 0.39 lakh in depreciation. But these increases have been made good to some extent by the decline of Rs. 4.61 lakhs in interest paid. A noteworthy feature is that the Bank's net profit has doubled in a period of three years.

Despite the improvement in profit, the Directors of the Bank have not stepped up the dividend; they have only maintained it at the previous year's level of 11.2/5 per cent subject to tax. They seem to have done so for two reasons: (1) the proposed issue of right shares amounting to Rs. 40 lakhs and (2) the need to strengthen reserves. The sum allocated out of the published profit for the year 1961 to reserves and contingency account is larger at Rs. 7.50 lakhs, as against Rs. 6.50 lakhs. Bonus to staff takes Rs. 6.25 lakhs (Rs. 5.36 lakhs in 1960) and premises account Rs. 0.50 lakh (same). The amount carried forward is also higher at Rs. 1.45 lakh, as against Rs. 0.93 lakh. Thus, nearly half of the increase in net profit has been devoted to enhance the reserves and the other half to keep the Bank's workers contented.

The following comparative table shows the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	1,85.08	1,88.13	1,67.54	1,82.40
Of which:				
Interest and discount earned	1,32.88	1,33.42	1,26.93	1,08.14
Commission and exchange	42.79	41.03	31.31	21.34
Other income	9.46	8.68	7.30	7.92
Interest paid	58.58	63.19	67.97	64.37
Staff expenses	68.59	59.53	46.77	33.48
Other expenses	33.03	30.38	26.34	18.24
Provision for—				
Taxation	N.D.	8.00	8.00	4.00
Depreciation	3.26	2.87	2.18	1.56
Net profit	21.62	19.16	16.28	10.75
To reserves and contingencies	7.50	6.50	4.00	3.50
,, premises account	0.50	0.50	0.50	0.50
,, bonus to staff	6.25	5.36	5.11	3.15
Dividend	6.84	6.84	6.84	3.96
	(11⅛%)*	(11⅛%)*	(6⅔%)†	(6⅔%)†
Carry forward	1.45	0.93	0.97	1.16

	As on 31st December			
	1961	1960	1959	1958
Capital	60.00	60.00	60.00	60.00
Reserves	50.00	43.50	47.00	43.00
Deposits	32,63.92	28,60.19	32,17.42	24,62.29
Borrowings from other banks			10.00	70.00
Advances	18,50.08	17,41.82	20,57.78	15,77.96
Investments	8,24.97	7,47.87	7,36.60	6,96.32
Cash	7,01.13	4,70.70	5,28.59	3,47.38
Balance-sheet total	43,70.22	39,71.82	43,08.73	33,78.66
Ratio to deposits of—	%	%	%	%
Advances	56.8	60.7	64.0	64.1
Investments	25.1	26.2	22.9	25.4
Cash	21.3	16.5	16.4	14.1

N.D.—Not disclosed. * Subject to tax. † Free of tax.

The gross income earned by the Bank during the year 1961 was higher by Rs. 1.95 lakh at Rs. 185.08 lakhs, but the pace of increase was less than that in 1960 (+Rs. 15.59 lakhs) and 1959 (+Rs. 35.14 lakhs). The rise was accounted for by commission and exchange and other income, the former increasing by Rs. 1.76 lakh and the latter by Rs. 0.78 lakh. Interest and discount earned, however, declined, but by only Rs. 0.59 lakh. It must be mentioned here that the Bank's income continues to be from banking pure and simple and does not include, as in the previous year, any revenue of a capital nature such as profit on sale of investments, bullion, land, etc., revaluation of investments, and income from non-banking assets.

The business of the Bank during the year under review continued to show satisfactory progress. Nine new branches were opened, bringing the total number of branches to 61. Reflecting the continued expansion of business, the advances made by the Bank during the year 1961 rose by more than Rs. 1.18 crore to Rs. 18.50 crores. The Bank could easily meet the credit demands of its clients, as well as to strengthen its investment portfolio (from Rs. 7.48 crores in 1960 to Rs. 8.25 crores in 1961) and cash (from Rs. 4.71 crores to over Rs. 7.01 crores), without any recourse to outside borrowing. For the fresh accretion of deposits was quite sizable—Rs. 4.34 crores; the total of deposits as on 31st December 1961 stood at Rs. 32.84 crores.

The increase in deposits is in refreshing contrast to the decline of Rs. 3.67 crores suffered in 1960 and brings the level of deposits as at the end of 1961 to that witnessed towards the close of 1959. A point that needs to be made here is that the rate of growth in the deposits of the Bank has been lower than that in the case of big banks. Here is some evidence to support the demand of medium banks that they should be allowed to quote ½ per cent more than the big banks under the inter-bank agreement on interest rates on deposits.

As the increase in deposits during 1961 was more appreciable than that of advances, the credit ratio of the Union Bank has receded from 60.7 per cent in 1960 to 56.3 per cent in 1961. It is for the same reason that the ratio of investments to deposits has fallen from 26.2 per cent to 25.1 per cent, while that of cash to deposits has risen markedly from 16.5 per cent to 21.3 per cent. In view largely of the notable expansion in deposits, the balance-sheet total as at the end of 1961 stood at the impressively high level of Rs. 43.70 crores, as against Rs. 39.72 crores a year before and Rs. 43.09 crores two years before.

Following the addition of Rs. 7.50 lakhs made out of the published profit for 1961, the Bank's reserves have risen to Rs. 60 lakhs which is equal to the paid-up capital. The Directors propose, subject to the sanction of the Controller of Capital Issues, to increase the paid-up capital to Rs. 1 crore by issuing 800,000 equity shares of Rs. 5 each at par to existing shareholders in the ratio of two new shares for every three held.

CREDIT CONTROL AMENDED

The Reserve Bank of India has revised two of its directives to banks governing (1) advances against foodgrains (other than wheat on which control was abolished in May 1961) and (2) advances against groundnuts and other oilseeds. The Bank continues the framework of control on these commodities with some relaxation in ceiling limits. The output of foodgrains for 1961-62, in particular of rice, is expected to be much the same as last year and possibly slightly higher. The monthly average of the All-India Index of Rice prices ruled slightly lower during 1961 than in 1960 but in the last two months the index has been slightly higher than last year. In view of the relative stability in the supply and price situation in respect of paddy and rice, it has been decided to allow during 1962-63 (March-February) an increase of 5 per cent in the ceiling limits over the level in the corresponding period in 1961-62 (March-February).

As regards other foodgrains, the permitted levels are maintained at the same levels as in 1961-62 (March-February) and the classification of States into Madhya Pradesh, Uttar Pradesh and other States is also continued.

Although the output of groundnut during 1961-62 is estimated to be higher at about 4.9 million tons (nuts in shell), as against about 4.4 million tons in 1960-61, groundnut prices, both spot and forward, continue to maintain a firm trend. Prices of castorseed and linseed have also showed continued steadiness. Taking account of the increased output of groundnut, the ceiling limits during March 1962-February 1963 have been raised to 105 per cent of the level permitted in the corresponding period in March 1961-February 1962. The directive continues the additional limits made available in the last year's directive to exporters of H.P.S. groundnuts and groundnut oil.

"CENTRAL BANKING LEGISLATION"

A collection of central bank, monetary and banking laws entitled *Central Banking Legislation* has been published under the auspices of the International Monetary Fund. The material contained in the book has been selected and annotated by Mr. Hans Aufricht of the Fund's legal staff. It includes the complete texts in English of central banking and monetary laws of 21 countries and summaries of general banking laws and selected provisions of these laws which are of special significance in the relationship of the central bank to the banking sector. Countries covered in the book are: Australia, Burma, Canada, Ceylon, Costa Rica, Cuba, Dominican Republic, El Salvador, Guatemala, Hohduras, India, Indonesia, Japan, Korea, Mexico, Nicaragua, Nyasaland, Philippines, Rhodesia, Union of South Africa and United Kingdom. Copies may be ordered at $10 each from the Secretary, International Monetary Fund, 19th and H Streets N.W., Washington 25, D.C.

I.M.F. CREDIT TO CEYLON

The International Monetary Fund has authorised a drawing by the Government of Ceylon of pounds sterling equivalent to $11.25 million. The drawing is intended to support the Ceylonese authorities in efforts to overcome a balance of payments deficit which has continued for some years. An earlier drawing equivalent to $11.25 million was made in April 1961.

WOOL EXPORTS FROM INDIA DECLINE

LARGER USE WITHIN THE COUNTRY

INDIAN wool first entered world trade in 1834, when a small consignment of 70,000 lbs. was exported. Foreign demand increased rapidly until the years immediately prior to the last war when exports aggregated almost 70 million lbs. (from undivided India). Now less than half this quantity is going abroad, and this is likely to decline even further. What are the reasons?

Indian wool is commonly classified as "carpet wool," along with the wool grown in Pakistan, in most Middle East countries, much of the Chinese clip and smaller amounts from various other countries. That is not to say that it cannot be used for clothing, but, by and large, most of it is coarser and harsher to the touch than is commonly accepted for this purpose and, if processed on the worsted (as opposed to the woollen) system, gives rise to considerable quantities of waste. On the other hand, the coarseness which is considered a defect in clothing gives a very desirable toughness and springyness to carpets and floor rugs. To some extent, the coarser types of wool are also preferred for hard-wearing blankets. Even before independence, it was recognised that it would be economically advantageous for the country to grow finer types of wool also and various sheep-breeding experiments were started, but without a great deal of success at that time. And so the position was, up to a few years ago, that India used indigenous wool to make carpets and blankets, and exported the balance. Wool for clothing was mostly imported.

Manufacturers Enter Market

Now the position is changing rapidly. To safeguard the national development schemes, it has become imperative to save foreign exchange in all possible ways, and wool is one of many commodities whose import has been cut. Manufacturers are being urged to use more Indian wool in their blends, even if it does make the finished product somewhat coarser and maybe somewhat more expensive. To reinforce the appeal to patriotic feelings, there is also the basic fact that, without using more Indian wool, mills will not be able to run economically on the very limited amount of foreign wool now allotted. Thus manufacturers have entered the market for indigenous wools in a big way and, at the present time, are virtually dictating the price for the superior types of white wool (and Tibetan types too) to the exclusion of the export merchant.

In recent years competition for supplies of wool has been growing from *khadi* spinning and weaving associations also, in an important though not so spectacular way. It is difficult to quote figures because, although statistics of organised wool *khadi* production are available, no one knows what quantity the non-organised spinner or weaver is making. Indeed, it may be that the higher production under official patronage is balanced by a drop in the unofficial section, but, according to wool exporters, the fact that *khadi* production is heavily subsidised is the important factor. Buyers for *khadi* products, they say, can pay higher prices.

Russian Buying

These two factors and one more have led to a persistent fall in exports of raw wool over the past two years. This third factor has been, strangely enough, Russian buying. When, as a result of bilateral trade agreements, Russia entered a market that previously had been dominated by the U.K. and the U.S.A. buyers and supported by those from the Continent of Europe and Australia, it quickly displaced the U.S.A. from second place. But whereas competition from other countries is made up of that of numerous small buyers, Russia acts as one big, single buyer and has a disproportionate influence on the market. Furthermore, the timings and extent of its buying is seldom predictable. Some time ago Russia placed orders for more Bikaner wool than was available in the country. These orders not only forced prices up but also led to adulteration with other wools to make up the quantity required. Now Russian buying is channelled through three important suppliers (to the chagrin of those who have been excluded from the agreement) and such overbuying is not likely to occur again. Nevertheless its influence on prices is still there and often has the effect of holding the level higher than other foreign countries are inclined to pay. Russia, of course, buys in rupees.

Another factor which could become important in the future is the export of finished products made from Indian wool, as part of the drive for foreign exchange. In practice, this can only be carpets which consume some ten million lbs. of raw wool a year.

In spite of the best efforts of promotion councils, there has been no big increase in the export of the handmade article. As the Government seems disinclined to permit the installation of powerlooms to produce machine-made carpets for export (taking the view that this might injure the cottage industry), one can probably safely ignore this industry as a competitor for larger supplies of Indian wool. This is small consolation for the exporter, in view of the other powerful factors which are operating. All he can hope for is an increase in the total quantity available if he is not to be squeezed out of his traditional share. And, in fact, an increase of 20 million lbs. (up to 90 million lbs.) is the third Plan target. This would at least help to satisfy the increasing demand while still leaving a fair quantity of inferior types available for export. But will it be achieved? Maybe—but so far the increase is not fast enough and the strong demand for limited supplies is likely to continue, and with it the decline in India's raw wool exports.

WOOL EXPORTS TO RUSSIA

About 15 million lbs. of raw wool were exported from India to Soviet Russia during the year 1961. This quantity represented almost 40 per cent of the aggregate shipments of wool amounting to 37 million lbs. to all destinations, as against 30 million lbs. in 1960. The U.K. lost its traditional place of chief buyer, but took roughly the same as in the previous year, as did the U.S. and other countries. Because Indian mills increase their buying substantially in the year, the higher export figures can be reconciled only by assuming that the home production of raw wool—currently put at 72 million lbs. greasy—has also increased.

Indian wool exports to Russia since 1956, when it first entered the market, are:

(In million lbs., estimated 80-85 per cent clean)

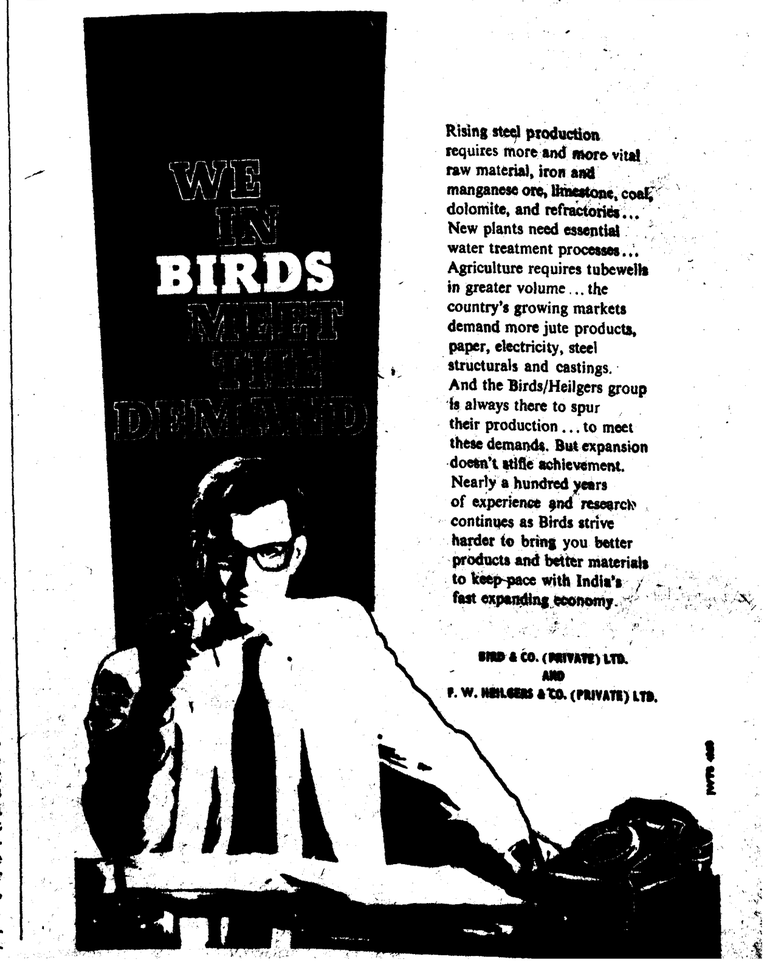
1957	5.7
1958	9.0
1959	6.3
1960	7.8
1961 (provisional estimate)	15.0

"M. 61"—A NEW FIBRE

Courtaulds of Britain have announced another new fibre, modified viscose rayon staple which they have designated "M.61." It is available only as 15 denier and it sells at 27d. a lb. which is competitive with any other fibre sold at present on the market. It is claimed that the new fibre has at least double the wear life of conventional viscose rayon and wool, because it has a better crimp and substantially better elongation. The modified cross section of the fibre is such that, since it is half round and not totally crinkled as normal viscose, it does not hold the dirt in the same way as viscose. The fibre has greatly improved resiliency which reduces the tendency towards flattening noted in the earlier types of all rayon carpeting.

It is reported that carpets are in greater demand in Russia than ever before in both domestic and communal establishments. Large mills are being established in the Soviet Union to make carpets and, by the end of 1965, it is planned to commission more factories in the various parts of the Union. This expansion requires a reliable supply of suitable raw material. The Seven-year Plan targets provide for 13½ million lbs. of carpet wool, of which 10½ million lbs. are to be white wool; this is considerably higher than the 6½ million lbs. needed in 1959. At present, raw material supplies are being met by imports of white wool from India, Afghanistan, Iraq and other Asian and African countries. The Soviet Union is also engaged in raising the production of domestic wool.

Textile fibre consumption among European countries may rise by 2.8 per cent a year over the period 1958 to 1970. This is the finding of the survey conducted by the Organisation for Economic Co-operation and Development. According to the survey the consumption per head will rise by 3 per cent a year over the same period which is less than the target figure adopted by the Organisation recently. The consumption of fibres is expected to reach 10.4 kilos a head by 1965 and 11.4 kilos by 1970. Taking into account the population increase, this will amount to a total consumption of 3,260 million tons in 1965 and 3,680 million tons in 1970.



NO DECISION YET ON WAGE RISE FOR MILL WORKERS

CLOTH IMPORTS RECEDE

From Our Special Correspondent

MANCHESTER, *27th February*

NO decision has been reached on the six-month-old claim for a 10 per cent wage increase re-submitted in Manchester to the employers on behalf of nearly 180,000 cotton spinning and weaving operatives. According to Sir Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, the union spokesman, the millowners contended at the meeting that conditions in the cotton textile industry were worse than in the 1920's and were as bad as many employers could ever remember.

MANCHESTER LETTER

Talks on the claim, which was rejected last September, were adjourned to a later date, to enable the millowners to discuss the position with their respective organisations. Sir Alfred said that the claim had been brought up to date in that subsequent adjustments in the cost of living were included, as well as details of cotton mill profits which had been announced during 1961. "We are not prepared to have our wages based on Asiatic standards," he declared, and said: "We have brought forward certain points which we think are just as important to the employers as ourselves, and which we ought to discuss jointly."

Pattern of the Pact

In the ten days which have elapsed since the terms of the agreement on international trading in cotton textiles were released, those involved in the business have been able to study the formal text, which sets out the arrangements covering the five years beginning in October—provided these are ratified by the respective Governments involved. Couched, as these documents must be, in legal phraseology, with constant reference to significant articles of the General Agreement on Tariffs and Trade, the pact is a formidable statement to absorb but there are certain aspects now unfolded which must have an important bearing on the trend of business in cotton products between the major exporting and importing nations in the future.

From Lancashire's angle, by far the most vital factor is the addendum to the agreement, which offers an escape clause to countries which can already claim to have fulfilled the conditions which qualify for "market disruption." A special codicil to the agreement provides a particular procedure for countries which have experienced "a substantial contraction" in its cotton industry in the decade preceding the establishment of the agreement and those which have been importing a substantial volume of cotton textiles from the less developed territories and Japan in relation to their own domestic output.

There can be no hesitation in declaring that the United Kingdom cotton industry comes within this category. This entitles the Government to make reservations in its acceptance of the arrangement, so that Lancashire should not be bound by certain clauses, notably those which concern the relaxation of quota restrictions and the wider access which, it is proposed, should be given to purchases from low-cost producing areas. A country wishing to make such a reservation has to submit its claim before the beginning of September. If none of the other contracting parties have raised objections in the ensuing month, this reservation would be held to be valid and protocols to the agreement would be attached accordingly. This would release such an importing country from the clause in the pact which permits a rise of five per cent in imports each year after a claim of market disruption has been substantiated.

What "Disruption" Means

Although the official designation of the important phrase "market disruption" is open to some argument, it is as well to repeat the way in which this situation is described under the earlier agreement reached in 1960 by the countries concerned in the negotiations. It is laid down as comprising a sharp and substantial increase or potential increase of imports of particular products from particular sources; the fact that these products are offered at prices substantially below those prevailing for similar goods of comparable quality in the market of the importing country; that there is serious damage to domestic producers or the threat thereof; and the price differentials do not arise from Governmental intervention in the fixing or formation of prices or from dumping practices.

The Cotton Textile Committee established by the 19 countries concerned has a man-sized job on its hands. The fact that the agreement is scheduled to last for five years obviates the frequent renewal of uncertainty about its future implementation, but the operation of the arrangement is to be reviewed each year and a report rendered to the contracting parties.

If one month's returns can establish a pattern for the year ahead, it looks as though both imports and exports of cotton goods into and from the United Kingdom in 1962 will continue the joint downward trend displayed in the second half of last year. Comparisons with the January 1961 figures, however, are particularly misleading, as, at that time, the rate of foreign arrivals had never been higher, and subsequent developments resulted in a marked reduction in purchases from abroad. At all events, cotton cloth imports last month, which aggregated 52,500,000 yards, although the biggest since August, were only slightly above the levels recorded in the intervening months, and as compared with the peak of 82,936,000 yards entering British ports in January last year. The major fall was in supplies of grey goods, which represented 38,510,000 yards, as against 65,677,000 yards.

All the countries named by the Board of Trade as suppliers of grey cloth sent smaller quantities in January this year than last, with the exception of France. Arrivals from India fell from 21,801,000 yards to 13,813,000 yards; from Hong Kong the reduction was from 7,256,000 yards to 5,207,000 yards and from Pakistan from 1,820,000 yards to 557,000 yards. China and Japan also provided lower quantities, and goods acquired from "other foreign countries" were halved at 10,276,000 yards.

Little change occurred in the volume of cotton yarn imported last month as compared with a year previously, the figure being 15,000 lbs. lower at 3,693,337 lbs. More cloth made from man-made fibres was absorbed, however, the total of 7,694,000 yards being nearly one million yards up on January 1961. Reduced sales to West African territories were mainly responsible for a fall of over 8,000,000 yards, as compared with last year in exports of cotton cloth in January 1962, to 21,069,000 yards. In line with recent trends, Australia and New Zealand also curtailed their purchases from this country.

European Millowners' Fears

A new twist has been added to the controversy which still persists about imports, despite the arrangements made to regulate the flow of trade in cotton goods between the major exporting and importing nations. This takes the form of a statement setting out the views of the French cotton trade whose leaders from the outset have been apprehensive about the effect of the United Kingdom joining the European Common Market on the future pattern of textile imports into continental countries.

For some time past, rumblings of discontent have been heard from across the channel. It seems that the Geneva pact has not fully convinced the participants in Europe that their cotton textile industries will be fully safeguarded in the event of Britain entering their economic community. It is suggested that Britain's entry should be delayed for 18 months until the situation in Europe is clearer and that the social conditions inherent in the Treaty of Rome must be accepted by this country. In particular, it is stressed that the same close consideration should be given to the textile problems involved in establishing a basis for Britain's entry as have already been the subject of minute scrutiny in the field of agriculture.—*All Rights Reserved.*

THE UNION BANK OF INDIA LIMITED

(REGISTERED 11TH NOVEMBER, 1919)

APOLLO STREET, FORT, BOMBAY 1

FORTY-SECOND REPORT

GENTLEMEN,

The Directors have pleasure in submitting to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.

	Rs.	nP
The net profit for the year, after providing for taxation and including the sum of Rs. 92,703. 61 nP. brought forward from the last year's account, amounts to	22,54,790	70
The following amounts have been appropriated for the undermentioned purposes:—		
Amount transferred to Reserve Fund under Section 17 of the Banking Companies Act, 1949	6,50,000	00
Amount transferred to Contingency Account	1,00,000	00
Amount written off Premises Account	50,000	00
Amount provided for Bonus to Staff	6,25,400	00
	14,25,400	00
The balance of Rs. 8,29,390. 70 nP., the Directors propose to dispose of as follows:—		
To pay a dividend of 57 nP. per share or 11.2/5 per cent per annum subject to deduction of Tax on 12,00,000 shares	6,84,000	00
To carry forward to next year's account	1,45,390	70
Total .. Rs.	22,54,790	70

The business of the Bank during the year under review continued to show satisfactory progress. The Bank opened nine new Branches—two each in Greater Bombay, Ahmedabad and Calcutta and one each in Nagpur, New Delhi and Hubli.

The Directors beg to report that the deposits which stood at Rs. 28,50,00,000 as at the end of December 1960 rose to Rs. 32,84,00,000 at the end of December 1961. Advances increased from Rs. 17,31,00,000 as at the end of December 1960 to Rs. 18,50,00,000 at the end of December 1961.

The practice hitherto followed by the Bank to provide for taxation by way of appropriations from the net profit has been changed this year and the tax liability has been deducted from the income as one of the usual or necessary provisions.

With the abovementioned transfer of Rs. 6,50,000, the Reserve Fund of the Bank has now reached parity with the Paid-up Capital.

The ratio of Capital and Reserves to Deposits of the Bank which was more than 12 per cent in 1953 went down to less than 4 per cent in 1957. The Capital of the Company was increased in the year 1958 from Rs. 40 lacs to Rs. 60 lacs and the ratio improved a little to 4.20 per cent. With further increase in the Bank's deposits this ratio has since declined to under 4 per cent. In the circumstances, your Directors have decided to increase the Paid-up Capital of the Bank from Rs. 60 lacs to Rs. 1 Crore by issue of 8 lac new shares of the face value of Rs. 5 each at par to the shareholders of the Bank in the ratio of two new shares against three old shares, subject to such conditions as may be imposed by the Controller of Capital Issues, Government of India, to whom necessary application has been made in this behalf.

Consequent upon this increase in the Paid-up Capital, the Authorised Capital of the Bank will be fully subscribed. Your Directors have, therefore, decided to recommend to you to increase the Authorised Capital from Rs. 1 Crore to Rs. 2 Crores.

Pursuant to the Resolution passed at the last Annual General Meeting of the Company, your Bank applied to the Central Government for exemption of all its Branch Offices from the provisions of Section 228 of the Companies Act, 1956, with regard to the auditing of the accounts of the Branch Offices in respect of the year ended 31st December 1961 and the Central Government has, by its Order dated 15th December 1961, granted such exemption. In order to avoid considerable delay and expenses involved in having the accounts of all the Branch Offices of the Bank audited by the Company's Auditors and considering the satisfactory arrangements made by the Bank for surprise inspection and audit of the Branches by the Bank's Statutory Auditors, other well-known firms of Chartered Accountants and by responsible and competent officers of the Bank, your Directors propose to apply for a similar exemption with regard to the auditing of the accounts of the Branch Offices for the year ending with 31st December 1962, to the extent permissible under the Rules framed by the Central Government. Resolutions in this behalf, under Item 7 of the accompanying Notice, are commended to you for approval.

Under the provisions of Section 256 of the Companies Act, 1956, three of the Directors of the Company, Shri Pallonji Shapoorji Mistry, Shri Balkrishna Harivallabhdas and Shri Gopaldass Toolsidass retire by rotation, but being eligible for re-election, offer themselves accordingly.

You will be required to appoint Auditors for the ensuing year and fix their remuneration.

By Order of the Board,
K. B. P. SHROFF
Chairman.

BOMBAY, 19th *February* 1962.

BALANCE SHEET AS AT 31st DECEMBER, 1961.

KIRLOSKAR BROTHERS LIMITED

EXPANSION PLAN WELL UNDER WAY

A NOTE of optimism about the long-term prospects for Kirloskar Brothers Limited was struck by the Chairman of the Company, Dr. D. S. Sardesai, in his speech at the Forty-first Annual General Meeting held at Kirloskarvadi (District Sangli) on Monday, 29th January 1962. The Company, Dr. Sardesai said, had been expanding its facilities continuously with a view to producing more and more of the existing lines of products, as also to taking up new lines of manufacture. He was confident that the Company would continue to keep its position of eminence not only in the production of pumps and agricultural implements but also machine tools and other new products. He, however, emphasised that, until the expansion schemes started paying their way, it was necessary to conserve as much resources as possible which would ultimately be to the advantage of shareholders themselves.

The following is the full text of Dr. Sardesai's speech at the meeting:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you to this meeting. The annual accounts and the Directors' and Auditors' reports for 1960-61 have been in your hands for some time and I take it that you have read the same. I am sure you would like me to review last year's working, take stock of the present and to forecast the Company's future prospects.

"The most outstanding event of the year was the celebration of the golden jubilee of the factory at and the township of Kirloskarvadi on 11th May 1961 at which Shri Yeshwantrao Chavan, Chief Minister of Maharashtra, was the chief guest. The Chief Minister paid a glowing tribute to the founder, the late Shri Laxmanraoji Kirloskar, for his foresight and his daring in starting engineering industry in this part of the country, and especially at a place like Kirloskarvadi which fifty years ago was a desolate and arid wasteland where only cactus thrived and reptiles inhabited. In fifty years, the same spot has turned into a modern industrial township throbbing vigorous activity. As the Chief Minister very aptly put it, Kirloskarvadi had pioneered the industrial development of Maharashtra.

Working Results

"As regards the working results for the last year, I must at the outset point out a change made in this year's presentation of accounts. Until last year, the figures of sales of goods manufactured by the Company and those in which the Company traded used to be shown separately. Owing to amendment in Schedule VI of the Companies Act, 1956, it is now sufficient compliance with the Act if total amounts of sales are shown. These figures, therefore, have not been shown separately. Sales of goods manufactured by the Company increased last year from Rs. 1.45 crore to Rs. 1.65 crore and the trading sales from Rs. 89 lakhs to Rs. 1.50 crore. The total sales have increased by over 34 per cent, while the profits have increased by about 22 per cent. It will be obvious that the increase in profits is not commensurate with the increase in sales. Expenses have gone up largely because of increase in cost of materials, stores and expenses.

"From the accounts you must have noticed that, out of profit of Rs. 10½ lakhs, nearly Rs. 6½ lakhs have been transferred to reserves which is in keeping with the Company's policy of conserving cash resources the need for which is all the more keen today than ever before. The Company has undertaken a vast expansion programme which envisages a capital outlay of nearly Rs. 60 lakhs in the course of the current year. While a part of the resources must be generated internally, the internal resources are not adequate to finance such a huge capital outlay. As you are aware, the Company has taken a loan of Rs. 25 lakhs from the Industrial Credit and Investment Corporation of India Limited for this purpose. The bank loans and unsecured loans have gone up last year as a corollary to the programme of expansion. It is also proposed to issue redeemable cumulative participating preference shares of Rs. 15 lakhs shortly to provide resources for the current year's programme. Under such conditions, I am sure you will agree with the Directors' anxiety to avoid any temptation to increase the dividend now before the vast investments that are now being made start yielding results. I am especially referring to this here as some of you have pleaded for a higher dividend. Some shareholders have inquired why a bonus share was not given on the occasion of the factory's golden jubilee. You will recall that the Company has on the original paid-up capital of Rs. 16 lakhs so far given bonus shares of Rs. 22 lakhs, which is a very creditable achievement in the forty years' life of this Company.

Expansion Programme

"The Company's programme of expansion is making satisfactory progress. The building of the machine tool factory is nearly completed and a good part of the machinery has arrived at the factory. Most of the remaining machinery will be received during the current year and it is hoped that the first few vertical turret lathes assembled in our factory will be placed on the market during the current year. The Company's total investment in this project including current capital will be well over Rs. 1 crore.

"The construction of the factory at Dewas is also proceeding satisfactorily. The main building of the foundry is almost ready and the installation of equipment has also been undertaken. The erection of the machine shop building will start soon and I hope that the factory will start functioning in the course of the current year. While I do not expect any substantial production from this factory in the current financial year, I have every hope that, in the next year, we will have fairly satisfactory manufacturing operations at Dewas, barring, of course, any stoppages owing to scarcity of materials.

"A shareholder has asked why Press accounts are not attached to the Company's accounts. The Press is a proprietary business of the Company and not a subsidiary company. The Press accounts, though kept separate from the accounts of the Company's other manufacturing and other trading operations, are merged at the time of preparing final accounts.

Prospects

"You will now want me to say something about the future prospects. It is hazardous to make forecasts of this nature because there are so many 'buts' and 'ifs' which cannot be so easily forecast. During the last two years, we were faced with one or the other crisis, a slackening of demand due to some of the public projects not being completed according to schedule, and a crisis in transport. Even today, a solution of the transport crisis does not appear in sight. In fact, it looks as if we will have to live with the transport crisis for years to come. The supply of raw materials is not adequate and that of coke is especially critical. Assuming that the position will improve in the near future, I am optimistic of the long-term prospects of the Company, in view of the tremendous expansion of industry and agriculture that will take place during the third Five-year Plan.

"Your Company has been expanding its facilities continuously with a view to producing more and more of the existing lines of products, as also taking up new lines of production. I am sure that your Company will continue to keep its position of eminence not only in manufacturing of pumps and agricultural implements but also in the new lines such as machine tools and other new products. In the immediate future, however, until the expansion schemes start paying their way, we will have to be very cautious about resources and to conserve them as much as possible which will ultimately be to the advantage of the shareholders themselves.

"I do not wish to take your further time and would like to move for adoption the audited accounts for the year 1960-61. However, if you have any queries to make, I would invite you to make them."

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

THE UNION BANK OF INDIA LIMITED—*(Continued)*

Profit and Loss Account for the year ended 31st December, 1961

EXPENDITURE	Rs.	nP	INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Rs.	nP
1. Interest paid on Deposits, Borrowings, etc.	58,57,558	27	1. Interest and Discount	1,32,82,861	22
2. Salaries and Allowances and Provident Fund— Rs. nP			2. Commission, Exchange and Brokerage	43,79,080	81
(i) To the General Manager 43,600 00			3. Rents on Buildings	2,94,568	01
(ii) To the Staff 66,15,989 52			4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	NIL	
3. Directors' and Local Committee Members' Fees and Allowances	68,58,589	52	5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil	
4. Rent, Taxes, Insurance, Lighting, etc.	11,20,225	95	6. Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	NIL	
5. Law Charges	54,038	87	7. Other Receipts	6,51,696	09
6. Postage, Telegrams and Stamps	2,62,517	80			
7. Auditors' Fees	5,500	00			
8. Depreciation on and Repairs to the Banking Company's Property	3,26,445	72			
9. Stationery, Printing, Advertisement, etc.	7,15,189	84			
10. Loss from Sale of or Dealing with Non-Banking Assets	Nil				
11. Other Expenditure	11,28,452	48			
12. Balance of Profit Carried to Balance Sheet	21,62,087	09			
Total .. Rs.	1,85,08,205	13	Total .. Rs.	1,85,08,205	13

This Profit and Loss Account has been prepared in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

Note. 1. Total remuneration to General Manager, including Salaries and Allowances (shown under item 2 of 'Expenditure') and Bonus Rs. 50,600.

The General Manager is allowed the free use of Bank's Motor Car.

2. It was the practice of the Bank to provide for taxation by way of appropriation from balance of profit. This practice has been changed this year and the amount of provision for taxation has been deducted from item (1) of 'Income.' The relative figures of the previous year have not been so altered, and as such are not comparable.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Union Bank of India, Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the unaudited Returns from all the Branches not visited by us for the purposes of this Report. The Central Government have, by an order dated the 15th December, 1961, exempted all the Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961.

We report that

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and said returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

SOME ECONOMIC ASPECTS OF INLAND TRANSPORT

E.C.A.F.E. COMMITTEE'S RECOMMENDATIONS

THE Inland Transport and Communications Committee of the United Nations Economic Commission for Asia and the Far East held a seven-day session in Bangkok in the latter half of last month. At this session were discussed some of the economic aspects of transport. The discussions were based on the relevant working papers prepared by the E.C.A.F.E. Secretariat, first, on the relation of the State to transport in the matter of taxation, secondly, on statistical and accounting procedures for the industry, and thirdly, on freight rates.

The first paper examined the two theories—the cost-spread theory and the marginalist theory—underlying the application of taxes to road transport. The cost-spread theory seeks to establish a "fair" allocation by which Government expenditure on roads is to be financed. The marginalist theory concentrates on an allocation of taxes ensuring the most economic use of available facilities and favours, in essence, the levying of taxes according to the extent of traffic congestion, so that higher taxes are imposed on urban than on rural traffic. The E.C.A.F.E. paper suggests a compromise between the two approaches. But this compromise leans more towards the marginalist theory, the object being to promote the use of rural highways by imposing relatively higher taxes on users of urban or high-density traffic roads. One way of achieving this, according to the paper, would be to impose a higher gasoline tax in urban areas. The paper concludes that road tolls are normally not an economically desirable method of financing highway development except when levied on congested highways.

The Tax Question

The E.C.A.F.E. Committee discussed the above paper and reached some broad conclusions. According to it, motor transport should contribute its fair share to the cost of the road system. But, at the same time, it doubted whether imposition of comparatively higher taxes in urban areas and on congested roads would in effect be fair and practicable in the present state of transport in the E.C.A.F.E. region. The Committee reached the conclusion that most countries of the region would prefer to base taxation of motor vehicles on the cost involved, usually measured by the wear and tear caused by specific vehicles to the road system. The case for taxing non-mechanised slow moving vehicles would, therefore, be in line with this approach. Thus, the Committee has virtually rejected the thesis contained in the working paper.

Another conclusion reached by the Committee is that, in view of the anticipated development of traffic on international highways, it would be desirable for the countries of the region to develop a common approach to road transport taxes. Although the question of taxation is only one aspect of the relationship between public authorities and the transport industry, there are several important and complex problems involved in this relationship. The Committee, therefore, favoured further consideration of this question on the basis of a case study of a specific country.

Cost Accounting

The second E.C.A.F.E. working paper examines cost accounting systems in the trucking and inland water transport industry. It is doubtful about the practicability of introducing standard cost accounting systems for the entire industry, as experience in some countries has shown that, in practice, the rule of thumb methods of calculating freight charges work out closer to real costs than have been previously assumed. There is also a discussion on the collection of statistical data, setting out the type of information which may be obtained on highway transport. The E.C.A.F.E. Committee, after discussing this paper, has emphasised the importance of suitable cost accounting systems for the various branches of the inland transport industry as a basis for improving efficiency and as a means for implementing transport co-ordination policies. It has recommended that this subject be further reviewed by the Highways and Highway Transport Sub-committee and the Inland Waterway Sub-committee, so that some kind of standard accounting system, preferably in the form of a manual for transport operators, be developed. On the question of statistical procedures, the Committee's conclusion is that agreement should be reached on the type of statistical data to be collected and on statistical standards, keeping in view the importance of international comparability.

The third E.C.A.F.E. paper deals with the question of freight rates in trucking and inland water transport. It suggests that, if freight rate schedules are introduced by public authorities, preference should be given to maximum and minimum freight rates as the operator should have some flexibility in fixing the charge for a specific consignment in the light of economic and operational requirements. The paper points out the difficulties of ensuring the observance by small-scale operating units of an officially established freight rate schedule and notes that only in a few instances have legally binding rates been introduced for the trucking and inland water transport industry. On this question, the E.C.A.F.E. Committee is of the opinion that the introduction of rates with a margin between maximum and minimum rates is desirable in the interests of flexibility. It has also stressed the desirability of developing freight rate policies on a common basis in the countries of the region.

Other Conclusions

Among the other recommendations and conclusions of the Committee, particular mention may be made about the following:

(1) Since the E.C.A.F.E. Seminar on Road Passenger Transport held in Madras in October 1961 had served a useful purpose, a similar seminar on highway goods traffic should also be held.

(2) As almost all countries of the region are faced with the need for rapid expansion and improvement of their highway networks, the allocation of revenues from road user taxes alone would not be sufficient to finance road development programmes. It is, therefore essential to allocate funds from general revenues or other sources so that these programmes could be more adequately financed and completed.

(3) Relaxation of import restrictions on vehicles and spare parts would reduce the problem of high operating costs and low vehicle utilisation.

(4) There is still pressing need for increasing the traffic capacity of single-line railway systems. The increasing use of diesel locomotives is, of course, steadily increasing the traffic capacities of railways in the region.

(5) Greater attention to the development of inland water transport is called for. This can be done by improving natural navigable waterways, using larger vessels and developing more efficient port facilities.

(6) There is scope for regional co-operation in developing tourism. The countries of the E.C.A.F.E. region should adopt the new slogan "Visit the Orient Year After Year," so that a continuing process of tourist promotion on a concerted and regional basis could be set in motion.

The E.C.A.F.E. Committee noted with satisfaction that only 500 kilometres remain to be completed in the Asian highway network covering 50,000 kms. It has recommended that international aid be sought in the priority task of completing the missing links. In this connection, the Executive Secretary of the E.C.A.F.E. has been requested to explore the possibility of obtaining from the U.N. Special Fund $1.7 million required for two pre-investment surveys to be made in East Pakistan and Burma and $1 million for equipment in India. In the case of East Pakistan, the proposed pre-investment survey will cover the construction of nine bridges. A similar survey in the case of Burma will cover some new roadway construction, realignment of existing roads and bridge building. In the Indian section of the Asian Highway, $1 million in equipment is needed for widening and completing the route between Silchar and Imphal. The total sum ($2.7 million) now being sought is a fraction of the estimated overall cost (estimated at $128 million for only the eastern portion of the Highway) of the work to be done to complete the missing links. As for the missing links in the western portion of the Highway, the Committee recommended a preliminary reconnaissance survey in Afghanistan, Iran and part of West Pakistan.

As the missing links cover only 500 kilometres, it may be expected that the Asian Highway will be completed in the next few years. When finally completed, it will provide a through route from Teheran in the West to Saigon and Singapore in the East and will be linked by the steamer service between Singapore and Djakarta, to Indonesia. Extending westwards from Iran to Turkey, the Asian Highway will also be linked to the European road system.

FOUNDRY INDUSTRY

Under the third Plan, the foundry industry has been assigned a capacity target of 1.2 million tons of grey iron castings, 200,000 tons of steel castings and 200,000 tons of steel forgings. Included in this target is the proposed new capacity for 139,000 tons of grey iron castings, 76,000 tons of steel castings and 76,700 tons of steel forgings. The larger part of this new capacity will be in the public sector. It will cover castings and forgings in the higher tonnage range for use in heavy machinery manufacture. But a substantial part of the new capacity is expected to come up in the private sector (where there are already 2,000 big, medium and small foundries) to cater to the needs of the automobile industry and machinery manufacturing industries.

But, currently, the foundry industry in the private sector is facing difficulties in the matter of pig iron and hard coke supplies. The shortages of these basic raw materials have been aggravated by the transport bottleneck. Mr. K. Agarwalla, Chairman, Indian Foundry Association, has, therefore, appealed to the authorities for assistance in securing raw material supplies in his speech at the conference of the foundry industry held at New Delhi this week. He has also drawn pointed attention to the question of pig iron price. The recent increase of Rs. 25 per metric ton in the price of pig iron, according to him, has further added to the cost of production in the foundry industry. Hence his request to the Steel, Mines and Fuel Ministry to reconsider the question of pig iron price.

ATOMIC ENERGY PLANT AT TROMBAY

The Atomic Energy Establishment, Trombay, has just issued its report for 1961. The year under review marked an important turning point in the brief history of the development of atomic energy in India. It was early in that year that the Canada-India Reactor and India's third reactor "Zerlina" were both formally inaugurated by the Prime Minister. There was increased construction activity at Trombay during the year when six engineering halls and a building to house the 5.5 million electron volt Van de Graaff accelerator were completed. All the production units at Trombay—the Uranium Metal Plant, the Fuel Element Fabrication Plant, the Heavy Water Reconcentration Plant, the Used Fuel Reprocessing Plant and the Ore Dressing Pilot Plant—were working satisfactorily during the year. On the research and development side, the various divisions—those for nuclear physics, electronics, health physics, technical physics, chemistry, isotopes, radiochemistry, chemical engineering, metallurgy, reactor engineering, biology and health and medicine—were also active. The varied research achievements of these divisions are fully reviewed in the report.

MORE ATOMIC POWER STATIONS FOR BRITAIN

Contracts for two more British atomic power stations were announced in London on 21st February 1962. They are the eighth and ninth in the programme. The Nuclear Power Group will build one at Oldbury-on-Severn, England, where work will start in May. The station will produce 560,000 kw. of electricity. The construction of the two reactors at the other station, at Wylfa, north Wales, will be shared by the remaining two consortia—the United Power Company and the English Electric, Babcock and Wilcox, Taylor Woodrow Atomic Power Group. This station will have an output of 800,000 kw.

At Oldbury the site will be within a few miles of the Berkeley atomic power station (also being built by the same group), where the first reactor will start feeding electricity into the public supply system later this year. The Oldbury station will be the first in Britain to have the reactors and boilers enclosed together in a concrete pressure vessel. This means that radiation round the reactors will be negligible in all conditions of operation, and construction will be cheaper and quicker. Other features of the station that will contribute further to lowering the construction cost will be the incorporation of both reactors in one reactor building, and the use of only two generators (each of 320,000 kw.).

When the Oldbury station goes into service in 1967, the total of Britain's nuclear capacity will add up to nearly 4,000,000 kw.

BRITISH ENGINEERING PRODUCTION AND EXPORTS

Production and exports in the British engineering and electrical industries were higher in 1961 than a year earlier, according to provisional estimates issued by the Board of Trade in London on 27th February 1962. Production increased by 6 per cent and exports by 11 per cent. These figures, it is pointed out, show that expansion in the engineering and electrical industries was more pronounced than in the general level of industrial production. It is in these industries that the greatest volume of investment has taken place in recent years, and this is now beginning to be reflected. The estimates also reveal that while there was a fall in new orders for the home market in the fourth quarter of 1961, new export orders remained at the level of a year earlier. This illustrates the way in which Government policy, by checking home demand, is trying to clear the way for increased exports.

TATA-JOHNSON AND THE PAPER INDUSTRY

Although the pulp and paper industry is expanding rapidly, its output barely meets demand. Many new large-scale plants are therefore necessary. Importing machinery for these plants would be a heavy drain on foreign exchange reserves. A better plan: indigenous production of the machines.

Tata-Johnson's entry into the field is timely. Tata's, collaborating with A. Johnson & Co., a leading Swedish combine, have promoted Tata-Johnson Ltd. The company manufactures pulp and paper machinery with a high indigenous content and incorporating the latest developments in the field.

Technical know-how is provided by Sweden's AB Karlstads Mekaniska Werkstad (KMW), AB Kamyr and AB Rosenblads Patenter, as well as the Cellulose Development Corporation (Celdecor), pioneers in bagasse pulping.

Machinery designed by these leading organizations is manufactured at TELCO's well-equipped works with the close co-operation of Tata-Johnson specialists in Jamshedpur.

NEW PRODUCTS AND PROCESSES

Fibreboard Packs for Bananas

THE first move in a revolutionary change in packing and marketing methods used by the banana industry in Australia occurred recently. An unlidded, corrugated fibre case holding 40 lbs. net weight of ripe bananas, packed in hands, was introduced to the Brisbane markets. Designed as a one-trip, inexpensive container for delivery from ripening rooms to city retailers, its initial appearance was greeted enthusiastically by retailers and consumers alike. Since then, its use has continued to grow in popularity. Main reasons for such quick acceptance by the trade are its ease of handling and the almost complete elimination of damage losses as compared with the old methods of marketing. Previously, bananas in the metropolitan area of Brisbane were sold ripened in bunches or in returnable, secondhand timber cases packed high after ripening. In both instances considerable bruising of the fruit usually occurred during the ripening process and subsequent transport of the ripe fruit. Losses from handling in this manner were reliably estimated to be as high as 18 per cent and seldom below 10 per cent. With the new fireboard cases the bananas are packed in hands cut fresh from the plantation, ripened in the cases and remain untouched until sold to the consumer.

Longer Life Span for Footwear

A simple chemical formula developed by an Australian company is giving new life to the soles and heels footwear, reducing the rate of replacement and generally saving customers money on his or her annual footwear bill. The formula is marketed as the Jumbo Soling Compound, a product of the Jumbo Manufacturing Company of Sydney. Basically the formula combines leather dust with a synthetic rubber and other ingredients to form a liquid which can be readily applied to the sole of any type of footwear. This liquid dries quickly to to form a tough, water-tight skin. The manufacturer claims that by applying his soling compound to the soles of new shoes, and renewing the coating as it wears, the life of the shoes is greatly prolonged. In fact the serviceability of the shoes then depends on the condition of the uppers. This continual process of coating the soles is estimated to be less than the cost of re-soling the shoes by conventional repair methods. The Jumbo Manufacturing Company also makes Jumbo Liquid Leather, another product of the same basic formula but with a higher proportion of leather dust. Liquid Leather is specially suited for heels and toe tips. It is estimated that one small tin of this liquid costs less than one new heel, and contains sufficient quantity to out-last ten new leather heels. The manufacturer claims also that the leather dust used in the compound is actually the toughest portion of the hide and thus provides the lasting qualities claimed for the compound.

Stereoscopic Projector

A stereoscopic projector, claimed to be a major advance in inspection and miniature assembly techniques, has been developed by a British firm, Vision Engineering Ltd. Known as "Stereoscope," it offers freedom from eye-piece fatigue, the position of the user's head being not critical. It can be viewed in day-light and gives a true stereoscopic image and good depth of focus. It has a large field of view 1 in. (2.54 cm.) diameter circle at seven-and-a-half times magnification, which is twice that of a good stereo microscope. Using this projector it is possible to detect surface defects, discolouration, and the presence to foreign matter in small components which are difficult to find using the conventional visual examination methods.

Hydraulic Copying Equipment

Hydraulic copying equipment for quill control of vertical milling machines has been introduced by a British engineering concern specifically for the accurate reproduction of complex three-dimensional shapes such as models and dies. Suitable for the full range of quill type vertical milling machines, the units are designed to take advantage of the higher degree of copying accuracy resulting from direct control of the machine quill. In this equipment, a low quill mass only is under tracer control and cutting takes place with a locked knee slide. The highly sensitive stylus tracing the contours of the model hydraulically controls the cutter to reproduce component forms differing from the master by no more than plus or minus 0.001 in. The equipment consists of two distinct assemblies: (1) the headstock unit, which can be attached for copy milling in a matter of minutes and can be removed with equal facility when it is desired to revert to normal machining. (2) A floor-mounted hydraulic power unit incorporating the pump, motor, relief valve and filter.

New Method of Shoe Production

Equipment new to the U.K. shoe industry and said to be the first to be installed in Europe is now in operation in K. Shoe's factories at Kendal and Askam-in-Furness, Westmorland. It is stated to have increased productivity by 58 per cent without any increase in labour costs. Designed by an American firm, each plant consists of a conveyor carrying lasts (on which the shoes are shaped from leather "blanks") and a system of moisture and heat control which enables the lasts to be used twice a day instead of once every two or three days. Leather requires to be moistened or "humidified" to make it supple enough to be stretched over the last during shoe-making, and the new plant, called Formulast, enables the amount and depth of penetration of moisture into the "uppers" to be mechanically controlled and to be quickly extracted as soon as it has served its purpose. The conveyor carries the lasts at constant speed through the moistening, lasting and making sections and passes through an infra-red heater to remove the moisture before going through another heating section to improve the cementation of the shoe soles. Adequate moistening of the "uppers" takes five minutes instead of several hours and the heat setting method enables shoes to be removed from their lasts within two or three hours instead of up to three days. Each Formulast plant has been designed to produce 5,400 pairs of shoes a week with a labour team of 19 or 20, a "reserve" operator and a foreman. Three Formulast plants (they each cost about £10,000) are now being used by K. Shoes for the production of high-quality women's shoes. A fourth plant for making men's shoes is in course of erection at the Kendal factory and two more are on order. K. Shoes has bought all six plants at cost price and pays the designers a royalty of just over a penny per pair of shoes produced.

Noiseless Riveting Machine

A semi-automatic electric "riveting" machine hsa been developed in Britain using a special composition electrode wire both as the material for the rivet and as the riveting gun. In joining sheet metal for instance, the wire is fed from a magazine to the riveting line. An arc is generated on contact with the sheet and within two seconds the upper sheet and part of the lower one are melted under the point of contact. The resulting hole is filled with material from the electrode wire. Rivets of any dimension may be made by varying current and operating time. In rupture tests of these joints, breakdown was noted in the sheet metal but not the rivets. High productivity and silent operation are claimed.

Flame Resistant Insulation Board

A new flame-retarding insulation board known as No-Flame has been put on the market by The Bowater Organisation, Bowater House, Knightsbridge, London, S.W.1. Claimed to represent a considerable advance on flame-retarding boards produced by surface coating or methods of impregnation, it is made from fibres which have previously been individually treated. As the protection goes right through the thickness of the board, bevelling and perforating do not create vulnerable spots and protection is thus consistent over the entire surface. The board can be decorated with most standard paints without priming. It is available in lengths ranging from 4 to 12 feet and widths of 2, 3 and 4 feet in ¼-inch and ¾-inch thicknesses. Sheets 8 feet by 4 feet are also being made in 1-inch thicknesses.

A New Suturing Instrument

The operation of taking out liver biopsies in experimental animals requires careful close-suturing of the longitudinal abdominal incisions. Usually a continuous stitch at 5 mm. intervals is inserted with thread mounted with either curved or straight surgical needle. The stitching of an incision, which is often 5 to 6.5 cms. in length, needs intense concentration of the part of the worker. Consequently need for an improved needle has been greatly felt. With a view to save time and energy of the worker, an improved suturing needle has been designed at the Central Food Technological Research Institute, Mysore, to release continuous thread from the holder and make stitches, on the pattern of a sewing machine. The instrument consists of a stainless steel tube, to one end of which is fixed a stainless steel groved wheel with the help of a pin. The wheel carries the thread rolled in the grove. A brass rod which holds the needle is fixed at the other end of the tube by screwing. The thread passes through the tube and a fine hole in the needle holder to the eye of the needle at the tip. The instrument can stand repeated sterilisation. Only the needles are changed as and when they get blunt. The needles can also be sharpened and used again. A prototype of the instrument has been tested by some surgeons who have been impressed by its performance. They are also of the opinion that it could be quite satisfactorily used for surgery on human beings as well. The instrument may find extensive use in experimental pathology in animals in suturing the abdominal incisions when liver biopsies are taken from time to time from the same animal. It is of particular use in studying dietary liver damages in switching over from one diet to another in animals for which biopsies are taken at every stage. The instrument may also find use in surgical operations in replacing the usual suturing surgical needle at present in use. The instrument will be of interest to manufacturers of surgical instruments. The demand after some time may be expected to be appreciable.

HE'S GOING PLACES!

He's up-and-coming! People respect him for his intelligence and integrity. His friends admire him, society is proud of him! Always has his head on his shoulders, and his eye fixed on the sky! His money? Safe and sure with THE BANK OF BARODA LIMITED!

Save a nP *out of every Rupee — to keep prices from going higher!*

Don't say that living costs have to keep climbing. **You** can check Inflation.

One of the main causes of rising prices is **overspending**. If each one of you save only one naya Paisa out of every rupee you earn, you will put a strong brake on inflation.

This will produce Millions of Rupees in savings—money which is badly needed to finance our FIVE YEAR PLANS.

Of course, you get a personal bonus from your extra savings—the feeling of independence and security that a growing bank balance brings....

Sure, all this means a sacrifice. But isn't this worth? If this means continuing prosperity—and keeping it sound?

Thousands of depositors have made a savings account at Canara Banking Corporation Limited as a form of thrift. So, why not **You** also join them?

"GROWING LIKE THE BAMBOO"

is how the people of Dandeli described waste—once upon a time.

Today the same maligned bamboo is a respected factor here. It has brought the West Coast Paper Mills to Dandeli, has changed the face of this little village.

Today, Dandeli is a bustling township of 20,000 people. The village elders have almost forgotten the sleepy little village it was—once upon a time.

STERLING AND INTERNATIONAL TRADE—II

THERE CAN BE NO BLUNT ANSWER TO THE QUESTION ON THE STATUS OF THE POUND

By W. F. Crick, C.B.E.

IN the first instalment of this article, I wrote about the steps taken for re-establishing the position of sterling in international trade and finance; but not with any implication that the process has been completed. It is continuing and may be expected to continue, even though setbacks may occur. It is incomplete in the sense that, as already indicated, some restraints are still imposed on the free use of sterling, though nowadays they apply mainly to residents within the sterling area, more particularly within the United Kingdom itself. If, now, we want to form an opinion as to the prospects for the future status of the pound, we have to hark back to the factors which established its former position of dominance and ask ourselves —quite apart from the practicability of further technical steps towards rehabilitation—in what direction these factors, political, industrial, commercial and financial, are operating in our own time. Let us, then, take a look at Britain and the world in the terms of my enumeration of the factors that historically made sterling unique among currencies in its universal acceptance and unquestioned reliability.

Political Alignment

First, the political alignment has altered materially and, as far as can be judged, for a long time to come. And it is still shifting; the lines of demarcation are by no means clear-cut; the world cannot be neatly split into two parts as on the old maps of the western and eastern hemispheres. The balance of power is continually being modified by changing affiliations. Within this variable pattern, the position of the United Kingdom may be put in somewhat dramatic terms which I hope will be excusable in an academic discourse: Britannia no longer rules the waves; gunboats, "reeking tubes and iron shards" can no longer be depended upon to keep "lesser breeds" within "the law" as conceived and laid down by a beneficent Albion.

Passing quickly from this political observation, we have to take note of the upsurge of nationalism as influencing and expressing itself in economic developments. The upsurge is world-wide—it is not by any means confined to newly-emergent political entities. It is to be seen in the establishment of native industries, transport and power undertakings with Government aid or the offer of special inducements to private enterprise. It is to be seen in the establishment of separate currency units—perhaps even in the trend towards decimalisation which threatens to leave £ *s. d.* confined to the British Isles—and in the accumulation by various sterling-area countries of some gold and non-sterling reserves of their own where formerly they were content to rest almost entirely upon the sterling-area pool of ultimate reserves. It is to be seen, oddly enough, in the formation of regional groups, such as the European Economic Community, with customs and trading integration or association and mutual arrangements for promoting industrial expansion at a faster rate than would be attainable by separate effort.

International Organs

Although, however, we have to take account of this trend towards independence as modified by regional grouping, equally we must not overlook the development of international organs which tend to rub down the sharp edges of separatism. I am thinking especially of organisms having practical, mechanical, treaty-promoting and/or disciplinary functions, in particular G.A.T.T., O.E.E.C., I.M.F., and I.B.R.D. Together these organisms confer generalised benefits in terms of economic steadiness and expansion in exchange for modest sacrifices of sovereignty through adherence to internationally concerted rules and regulations. Thus a system is being developed whereby less-endowed and less-advanced countries can lean upon a jointly-controlled supra-national authority and source of aid where formerly they relied upon the uncertain and 'interested' support to be drawn from the strength, goodwill and good behaviour of an individual power.

In line with this process, there have been signs recently, in the United States, the United Kingdom and elsewhere, that, in the monetary field, we may be moving towards the establishment, through transformation of the I.M.F., of a true "central bank of central banks," perhaps with its own currency unit—a system which, in return for increased reserves and liquidity, might come to impose discipline and co-ordination upon central banks very much as the establishment of a central bank in a particular country has come to impose discipline and co-ordination on an assortment of commercial banks. Meanwhile, it is within the new international structure that individual currencies have to find their places, with no one of them occupying a position of dominance at all comparable with that occupied by the pound sterling in former times and by the dollar in early post-war years. It is significant, for example, that the deutschemark, without being an international currency in the sense that sterling and the dollar can be so described, has so strongly coloured the international monetary scene in recent years.

Industrial Factor

Let us turn next to the industrial factor, which I have named as one of the contributors to the former dominance of the pound sterling. The leadership of United Kingdom industry was a feature of nineteenth-century history, but it was natural that, as manufacturing activity developed in other countries, the relative position of the United Kingdom should undergo a marked change. Measurement is difficult if only because of the radical alterations that have taken place in the composition of manufacturing output; but one thing at least is clear, namely, that the proportionate growth in the volume of industrial production in the United Kingdom has been far outstripped, during the present century, by the growth recorded for a number of other countries and for the world as a whole; in other words, Britain's share of the world's industrial output has declined. The change is illustrated by statistics of exports. In the late 'seventies of last century, Britain accounted for nearly two-fifths of the aggregate of world exports of manufactured goods; by the late 'twenties of this century, its share was not much more than one-fifth; and, by the late 'fifties, it was less than one-fifth.

Composition Changing

We shall do well to notice also, in relation to our general theme, that the composition of world trade as a whole has been changing.[1] A larger part of the total consists of processed and manufactured goods, particularly of capital goods. Trade among industrial areas has been growing more rapidly than trade between industrial countries and countries still occupied mainly in selling primary commodities. The old picture of exchange of foodstuffs and raw materials against manufactured products has become less and less truly representative of the pattern of world trade. Taken together, the disappearance of Britain's dominance as a source of manufactured products and the changes in the composition and distribution of the world's trade have tended to weaken the old currency links based upon organised commodity markets and complementary trade. This observation can, perhaps, be related to the slow decline, revealed by statistics covering the past thirty years or so but probably already taking place earlier, in the proportion of total world exports attributable to sterling-area countries.

Commercially, it remains true that a great concentration of international commodity markets is to be found in the United Kingdom—though one has the impression that a larger proportion of world trade than in former times bypasses the organised markets. In shipping, there has been a marked growth of non-British mercantile tonnage, much of it operating on subsidies and other forms of official aid; while the development of air transport has dispersed over many national airlines some of the traffic which would naturally have fallen to British undertakings in the days when everyone and everything moved by sea or land. Financial techniques, too, have been acquired by other countries. And, in general, the outstanding position of the United Kingdom in world trade could hardly have failed to suffer to some extent from the widespread intervention of Governments in trading and financing operations. In international as in domestic business the "public sector" is larger than it was before the Second World War, while Governments everywhere have openly accepted heavier, more positive—and more exacting—economic responsibilities.

The Monetary Prospects

Finally, what are we to say about the monetary and financial elements in the structure of Britain's international position? If you have read the text of President Kennedy's eagerly-awaited message to Congress, in February 1961, on the United States balance of payments and the running down of its gold stock, you will have been struck by the claim, in his expository passage, that "we (i.e. the United States) are the principal banker of the free world" and his reminder of a "special responsibility ... placed upon the United States ... that of maintaining the dollar as the principal reserve currency of the free world." As I have indicated already, I don't know just how you measure the international status of one currency against another, but the statement is one that could never have been made with any claim to realism up to the time of the Second World War. I have mentioned some of the factors contributing to the change in relative positions; and now I am concerned with factors in our own situation which seems likely to influence the direction of future movement.

One of them is the erratic behaviour of our balance of current payments and receipts. If we look no further back than 1950, the annual outturn (on the basis of estimation adopted for most of the period) has ranged between a surplus of £350 million and a deficit of £400 million, with eight years yielding a surplus and three a deficit. The average surplus, on the old basis, works out at nearly £100 million a year, but improved statistics have now shown that this figure overstates the true surplus. At least it is clear that the actual surplus, taking one year with another, has been well below official notions[2] of what is required to cover the flow of new capital investment overseas, external debt repayment and reinforcement of reserves. The United Kingdom has been persistently lending abroad, on balance, more than it could afford on the basis of an uncertain current balance of payments. Some capital has flowed in, particularly from the United States, for more or less permanent investment, but for the rest the excess of lending overseas has been met by expansion of short-term external liabilities in sterling. Thus, although Britain, as already mentioned, appears to have reinstated herself as a "creditor country," she still has to reckon with the well-known risks of "borrowing short" and "lending long." Moreover, methods have changed so radically as to justify the statement that the foreign bond market in London (in the sense of an organism for foreign borrowing by the issue of new bonds) is dead. It has been largely replaced by *ad hoc* national and international organs, wholly or partly provisioned by governmental funds, and by new facilities by way of "medium-term credits" enjoying the support of the lending country's Government.

Importance of London

Switching to another element in past leadership, London still has command, through open but limited market facilities, over a continuous inflow of newly-mined gold; it still has perhaps the most highly developed monetary system and technique in the world; it still has unrivalled skill and adaptability in financial services. But can we say, as we look back over the events of the past decade, that the pound sterling commands the same degree of unquestioned confidence as it did in earlier times?

I do not think a blunt answer to this question is to be trusted. The waxing or waning of world regard for one currency is in part the opposite reflection of fluctuating confidence in another currency, or of obstructions put in the way of the exercise of a free choice among currencies. Never was this better illustrated than in the monetary history of 1960, when the pound sterling was strong in the exchange markets despite a sharp deterioration in the balance of payments and the dollar was weak, though the United States balance of payments was improving. Looking further back, in recent years, the purchasing power of the pound sterling has stood up pretty well to comparison with the record of other currencies; but, over the longer run, depreciation, the 1949 devaluation, successive balance of payments difficulties and recurrent talk of "crisis" have been damaging to the pound as a store of value, whatever may be its proven qualities as a medium of exchange. Progressive convertibility and the stripping away of import controls, though they have gone a long way, have not completely reinstated unquestioning faith in the pound. Even attachment to the sterling-area system, and its value to the interests of the United Kingdom itself, have come under active—and inconclusive—debate in recent years.[3]

I leave you to form your own opinion, on consideration of these complex factors, as to the prospects for the pound sterling as a world currency and for London as—to plagiarise President Kennedy—the principal banker of the free world. What we can all agree upon, I believe, very decidedly is that the pound sterling will never again be what it was—but then, nothing in this world is. We must think less and less of recovering past glories and more and more of building up and consolidating an honoured and rewarding place in the developing structure and changing techniques of international trade and finance. All sorts of ideas are germinating within this field of activity—ideas as to the proper place of supra-national organs including the I.M.F., the provision of international liquidity on an adequate scale and under proper control, the part to be played by gold in monetary arrangements, the working out of joint plans of economic aid in the advancement of underdeveloped parts of the world. A number of deep-seated problems, moreover, have scarcely been approached—the irregularity of ups and downs of business in different countries; the occurrence of wide, obstinate and disturbing divergencies in levels of interest rates; and obstructions in the way of mobility of capital and short-term funds. There is urgent need of closer co-ordination of national monetary policies. We cannot see far ahead. But this at least we can see: that the influence of the United Kingdom through its pound sterling (mid-twentieth-century model) could be much stronger, and its leadership much more fruitful for all concerned, if this country could discover such techniques of monetary policy as would reconcile popular demands upon the economic system—full employment, rising standards of living and so on—with fully assured steadiness in the internal purchasing power and external security of the pound sterling. The search for means of attaining "growth with stability" is at the heart of our problems of policy and practice, alike in internal and international monetary affairs.

(Concluded)

[1] Anyone wishing to study this matter more closely should read, in particular, Chapter 10 of Professor A. J. Brown's *Introduction to the World Economy* (1959) and could study with profit the latest annual report (for 1959) of G.A.T.T., the G.A.T.T. publication (*Haberler report*). *Trends in International Trade* (1958) and the 1959 Wicksell lectures on *Patterns of Trade and Development* by the late Professor Ragnar Nurkse.

[2] For a long while the desired surplus was put at £300-350 million, but in evidence before the Radcliffe Committee the figure of £450 million was substituted.

Pipework installations

by S&L

We undertake fabrication and installation of pipework, as well as the design work entailed in the engineering of piping systems.

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers, and draughtsmen, many of them trained abroad, now provides,

- ★ fabrication of all types of pressure pipework,
- ★ fabrication of bent boiler tubes, superheater elements and coils for all purposes,
- ★ the installation of piping systems for all pressure and temperature conditions.

Whatever your project—a Steel Plant, Power Station, Paper Mill, Chemical Plant, a single item or a complete installation—call for S & L.

ECONOMIC GROWTH OF WESTERN EUROPE SLOWS DOWN

AN ASSESSMENT OF LATEST TRENDS

[The major portion of India's foreign trade is with Western Europe. Accordingly, the latest assessment of economic trends in West Germany, France, Italy, Holland, Belgium and the U.K. and the outlook for them for the current year, made by the Economic Research Department of the ***Chase Manhattan Bank****, New York, and published on this page, will be of great interest to our readers in this country. It will be noted from this review, which is a regular periodical feature of the Chase Manhattan Bank under the title "Report on Western Europe," that the economic growth of Western Europe will continue, albeit at a reduced pace, and that the prospect of a fall in prices of manufactured goods, due to keen competition, is bright. In view of this, it is reasonable to draw the inference that there is not much scope for any rise in the prices of primary produce or of simple manufactures such as cotton textiles and jute goods that are exported to Western Europe. The supply position of these goods is also in favour of buyers.—*ED.]

WESTERN Europe's rapid economic growth since World War II has been interrupted three times by slowdowns in business. The first two of these interruptions (in 1952 and 1958) were followed by periods of business boom. The third is taking place now.

The question is: Will Europe's economic expansion resume in 1962-63 at a rate comparable with that of the 1950's?

Most likely answer is that business will turn up again in 1962, after several months of hesitation, and continue its expansion at a slightly slower rate. Preliminary estimates show that industrial production within the Common Market went up 6-7 per cent in 1961, against a 12 per cent increase the year before. Gross national product probably rose by about 5¼ per cent in terms of constant prices, against 7 per cent in 1960. For 1962, growth in total output is more likely to be on the order of 4 per cent to 5 per cent in the Common Market and something less than that in the United Kingdom.

The 1961 slowdown first made its presence felt late in the spring. It affected chiefly the capital goods industries—steel, in particular. A cyclical downturn in demand for new manufacturing capacity was reinforced by inventory reductions and a drop in exports to the United States. Hopes for an early upturn rest on an anticipated turn-around in inventory policy and a continuing pickup in exports to the reviving U.S. economy.

Investment is holding up well, despite the cyclical downturn in demand for more capacity. This is because the labour shortage has boosted demand for labour-saving devices and automation equipment. Meanwhile, personal consumption has gone up steadily. European consumers are earning more—through higher wages—and they are spending more.

The Common Market has become a strong underlying force for growth. Despite the slowdown, trade among the six member-countries during the first nine months of 1961 increased by 16 per cent. In the 1960's, economic integration may well take the place occupied in the 1950's by post-war recovery. Much of Europe's rapid growth during the 1950's was due to a "catching up" with the trend that had been interrupted by World War II. Knowledge and techniques gained before and during the war were applied at an accelerated rate during the period of recovery.

Today, the Common Market offers a similar opportunity. The emergence of a large mass market is making it possible for European industry to apply at an accelerated rate the techniques of mass production, distribution, and marketing that have been developed in the United States over the past 40 years.

It is too early to tell whether this will make the European economies grow as rapidly as they did during the recovery period. There are, however, several forces at work that could make Europe's future growth somewhat slower than it was in the 'fifties.

Full employment has been reached throughout most of Europe. The few remaining pockets of labour surplus—Greece, Spain, and Southern Italy—continue to shrink as local industries develop or workers emigrate. This means that output cannot be expanded so much by the simple addition of manpower. It also means that labour's bargaining position has improved, and European wages are today rising faster than productivity.

European firms are beginning to feel the squeeze on profit margins. Competition is growing keener, as tariffs fall within the Common Market and as capacity draws closer to demand. Because of the growth of competition, rising wage costs cannot always be passed on to consumers in the form of price increases. After the German and Dutch currency revaluations, many firms in the two countries were forced to absorb the increase in cost resulting from the difference in exchange rates rather than raise their export prices.

Partly as a reflection of the profit squeeze, European stock markets closed the year well below their 1961 highs. Lower profits mean that firms can do less internal financing than in the past, and must draw more heavily on the capital markets for investment funds.

Although the European economies are becoming increasingly interdependent, they still reflect different structures and different economic policies. Since 1958 trade among members of the Common Market has risen steadily—from 30 per cent of members' total trade in 1958 to about 37 per cent in the first nine months of 1961. Consultations among economic ministers and central bankers are bringing European fiscal and monetary policies closer into line with one another.

It is still true, however, that there is no "European" economy. In 1961, the dominant national trends within the Common Market ranged from a moderate slum in industrial production in Holland and West Germany to a strong rise in Italy; while the British economy followed its own course, as yet influenced only indirectly by events on the Continent.

It is, therefore, worthwhile also to look at the national economies, paying particular attention to their differences from the normal pattern of business in 1961 and the special considerations affecting the outlook for 1962.

Investment Slackens in Germany

Business activity in Germany levelled off early in 1961, and industrial production during the year fell below its March peak. Total output for the year was some 5 per cent to 6 per cent above total 1960 output, but this gain was due to the high level which had been reached at the beginning of the year more than to any new advance that took place during 1961.

In 1962, the rise is expected to resume, with real growth in output likely to run between 4 per cent and 5 per cent. But the capital goods boom which drove the German economy for two years has subsided. The rise in new orders for capital goods became progressively slower throughout 1961, and, in August and September, they were running behind the rate of a year earlier. Preliminary estimates show gross fixed investment in German industry rising by about 20 per cent last year, against 23 per cent in 1960.

Much of last year's investment spending was for modernisation and improved efficiency, rather than for expanding capacity. Average capacity of German industry is estimated to have increased by only about 7 per cent in 1961, against the 20 per cent rise in investment. The largest capacity gains were in automobiles, plastics, machinery, electrical and rubber industries.

An important reason for the heavy proportion of capital spending that went into modernisation was the acute labour shortage. By summer the number of unemployed fell below 95,000—and job vacancies remained six times as high. With the large unsatisfied demand for labour, average wages rose by nearly 13 per cent last year—almost twice as much as the gain in productivity.

This tendency has helped to put great pressure on prices. Last year, this pressure was partly offset by the revaluation of the D-mark, which reduced prices for imported goods. Nevertheless, the cost-of-living index in 1961 rose by about 3 per cent.

With growing incomes, consumers have steadily increased their spending. Although more of these expenditures now is going for imported goods and for foreign travel, the rise of consumer incomes is one of the two main causes for optimism in 1962.

The other is exports. German exporters are banking on continuing recovery from the U.S. recession, further expansion in the Common Market, and larger German participation in aid to developing nations to jack up demand for German products.

Despite a large trade surplus, the balance of payments ended last year with a slight deficit. Prepayment of war debts and payments to the International Monetary Fund account for much of the difference.

"Planned" Growth in France

The expectations of French business and Government economists concerning their country's economic future are spelled out boldly in a public document. This is the so-called *Fourth Equipment and Modernisation Plan*, covering the years 1962 through 1965.

The "Plan" is really not a plan at all, in the socialistic sense. French "planning" is largely an exchange of information between private industry and Government and between different branches of private industry. A principal benefit is that it allows corporations to plan their own investments more efficiently. It has also provided a useful forum to plead the case for wage restraint.

The Plan calls for an annual 5.5 per cent growth in real gross national product over the next four years. This rate implies annual increases of 7 per cent in fixed investment; 7.5 per cent in industrial production; 4 per cent in agricultural output; 5.2 per cent in private consumption; and 4.5 per cent in real income per person. Foreign trade is expected to grow by about 6 per cent a year, with imports rising slightly faster than exports.

Three main forces are at work to help the French economy reach these ambitious targets. First is a rise in the labour force. It is estimated that by 1965, France will have added nearly a million new workers—through a natural increase in population and through immigration.

Second, is the delayed impact of large public investments made in the 1950's in hydroelectric plants, natural gas, and inland canals. These investments have been co-ordinated with private investments in many basic industries such as steel, aluminium and oil.

Third, under the influence of the Common Market, French industry has been consolidating itself through mergers. This is helping to strengthen some of the less efficient sectors of the economy.

While the Fourth Plan provides a guide to France's economic future, the immediate outlook depends also on cyclical developments. In 1961, after a brief pause during the early months, the economy continued its upward trend. Strength in both domestic and foreign demand is expected to carry forward into most of 1962.

Nearly all of 1961's trade gains were with the Common Market. Exports to the U.S.—especially automobiles—were very weak until summer. Since then there has been a marked pick-up in U.S. demand as a result of the economic recovery, and exports are expected to keep on rising. In the whole of 1961, exports grew by some 4 per cent—about the same rate as imports.

France's 1961 trade surplus is estimated at over $600 million, a bit larger than a year earlier. Gold and foreign exchange reserves continued to soar. By end-1961, monetary reserves —after prepayment of the remainder of all Government debt abroad—approached $3 billion, about three times the level at the time President De Gaulle's monetary reforms were put into effect.

At home, both investment and consumption are mounting. Private industrial investments have shown the greatest strength, particularly in the mechanical engineering, electrical and chemical sectors. Public investments did not show much change in 1961, but are expected to mount this year. With real wages still on the increase, consumer demand is expected to rise further in 1962.

Italy Moves Ahead

Vigorous internal demand in 1961 pushed Italian industrial production up by an estimated 9 per cent. Meanwhile, the good harvest brought sharp increases in agricultural output over the previous two drought years. Gross national product advanced by about 6 per cent.

"I got your message —and I'm here!"

Everyday, in many places throughout India, a scene like this occurs. A mishap, an accident—and the call goes out for Voltas Service.

On remote farm and distant hamlet, in country town and in urban metropolis, in factory and in office—the Man from Voltas comes promptly in response to that call for aid.

It is these Voltas Servicemen—specialists in their line, trained mechanics and expert technicians, who, with prompt attention and skill, have built and maintained the great Voltas reputation for after-sales service.

Briefly, Voltas' activities comprise:

Marketing and Distribution of goods:
Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.

Manufacture and Development:
Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!

Service:
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Always, where Service is called for... VOLTAS IS THERE

JWT-VT.3054

This year's growth is expected to be almost as great.

Last year's rise in exports—estimated at 13 per cent—was only about half the increase of the year earlier. Exports to the United States have begun to pick up, however, and are expected to strengthen further in coming months. Year-end reductions in the Common Market internal tariffs and the good harvest also promise to help exports.

Imports rose by about 10 per cent last year —after a 40 per cent surge the year before—and Italy's traditional trade deficit narrowed appreciably. With exceptionally large income from services and tourism, Italy's gold and foreign exchange holdings grew by $400 million. This year is expected to bring another payments surplus.

At home, capital investments are expected to remain at a very high level, with an increasing share going for automation. More Government aid for new operations in the South will provide a further stimulus.

Consumer spending continues to expand vigorously, as wages go up and unemployment comes down. Automobile registrations for the first nine months of 1961 were almost 30 per cent higher than the corresponding months of 1960. This year, wages are certain to keep rising, with minimum wage rates probably coming up for renegotiation during the course of the year.

Western Europe's manpower squeeze has now spread to Italy. By mid-1961 unemployment had dropped to 3.5 per cent of the labour force—still the highest rate in the Common Market, but the lowest figure ever recorded in Italy.

Skilled labour is now scarce in most of the industrial North, and some areas complain of an unskilled labour shortage as well. So far, there is no evidence that this has slowed down industrial expansion, however. As in the other countries, its main effect has been to stimulate introduction of labour-saving machinery.

After a period of remarkable stability, the cost of living is creeping upwards under pressure from higher rents and services. Last September, the Government acted to reduce the prices for electricity and certain pharmaceutical items. Lower import duties and the large agricultural output should also help to maintain an equilibrium in 1962.

Investments Soar in Holland

Vigorous demand for investment and consumer goods and exports brought an estimated 4 per cent increase in Dutch G.N.P. for 1961. A high level of economic activity is expected to continue this year; but the growth rate is expected to be somewhat less. Wages and prices are beginning to inch up, after a long period of stability.

The Government's Central Planning Bureau predicts that in 1962, private consumption will rise by 4½ per cent, industrial wages by 6 per cent, and prices by 2 per cent. Last year, prices remained relatively stable, mainly because imports became cheaper as a result of the revaluation.

Industrial production turned down sharply last spring, and drifted lower through the summer and early fall. A part of the slowdown reflected a widespread reduction in the work-week, from 48 hours to 45. The reduction allowed many workers to go on a five-day rather than a six-day week, and the low level of unemployment makes it hard to replace the lost man-hours.

The key to expanding Dutch production is the continued high volume of fixed capital investment. Last year, with the labour supply fully employed, industrial production rose by only 1-2 per cent. Further production increases are now tied closely to the level of investment in more productive machinery.

The volume of investment rose by about 9 per cent in 1961, despite a Government-imposed ceiling on bank credit. Special permits must now be obtained for all new unsubsidised building starts. Nevertheless, fixed capital investment is expected to go up another 8 per cent this year.

Private consumption continues to expand, with spending on consumer durables rising most swiftly. Both higher wages and a considerable increase in instalment sales made this possible. To keep a lid on prices, the Government last August raised the minimum down payments on a wide range of items. Income-tax cuts scheduled for 1961 were postponed until 1962 or 1963. Rising wages, however, promise further vigorous growth in consumer demand this year.

Strong home demand, plus the revaluation, caused imports to grow much faster than exports in 1961. At the close of the third quarter, the trade deficit exceeded $600 million, much wider than in the year before. Income from services and other "invisibles" offset this, however, and gold and foreign exchange reserves at the end of 1961 stood at almost the same level as a year earlier.

This year recovery in the U.S. is expected to boost foreign demand substantially. Lack of spare capacity and vigorous home demand, however, will probably hold the actual increase in exports to about 4 per cent—the same as in 1961. Imports should grow faster, but the rate is not expected to match last year's increase of about 8 per cent.

Belgium Recovers

The Belgian economy enters 1962 in a better state of health than it has enjoyed for some time. The economic effects of the Congo crisis have largely been overcome. Recent domestic industrial investments are beginning to bear fruit. Unemployment is down. Demand at home and from abroad is rising. Prices have remained stable.

After a month-long strike at the start of last year, industry resumed production at a record pace. Industrial production for 1961 is estimated at 6 per cent higher than a year earlier. The number of unemployed declined by more than 25 per cent reaching a new low of under 90,000. The rate of unemployment is now less than 2 per cent of the labour force, and is rapidly ceasing to be a major problem.

Fixed capital investment continues to expand at a brisk pace, and makes up the backbone of home demand. Construction is active for commercial buildings as well as for housing. Foreign firms in Belgium are growing in number, and contribute substantially to the high level of investment.

Consumer demand is also rising, but at a much more moderate pace. Because of unemployment and the already high wage level, new wage boosts last year stayed below the Common Market average.

Prices fluctuated very little, with wholesale prices declining by about 1½ per cent under the influence of lower world prices for raw materials and semi-manufactures. The retail price index remained just below the level at which a 2.5 per cent increase in minimum wages for a number of industries becomes mandatory.

Exports rose by about 4 per cent last year, with the strongest demand coming from the Common Market, particularly Holland and France. Sales to the U.S. declined during the early months, but picked up again in autumn and are expected to expand further. Overall exports are not likely to grow much faster in coming months, however, unless there is a pickup in European demand for steel—which remains the most important export of the Belgium-Luxembourg Economic Union.

Total imports rose by about 7 per cent in 1961. The rate became progressively slower over the year, however. In spite of a much larger trade deficit, gold and foreign exchange reserves increased by more than $150 million, reflecting higher receipts from services and an inflow of foreign capital. This, plus a reduction in the external short-term debt, helped to further strengthen the Belgian franc on the foreign exchange markets.

Although Belgium's situation has already improved, further efforts are planned to put the Belgian economy on a sound foundation and enable it to compete with its strong Common Market partners. The Government's plan "for economic expansion, social progress and financial recovery" aims at a 4 per cent real growth rate over the years 1961-65. Much of the plan's success depends on the continued high level of investrent, on which last year's recovery was based.

Britain at the Crossroads

The beginning of 1962 finds the United Kingdom still grappling with two economic adversaries that have faced it since the war: chronic balance of payments deficit and a relatively slow rate of growth. This year the old problems have been given a new urgency by Britain's changing relationship with Europe.

Early in 1961, Britain's balance of payments deteriorated to a point where serious pressure developed on the pound. Last July, the Government clamped down hard on the domestic economy—to restrain demand at home and promote exports. In addition, Britain bolstered its reserves with a $1.5 billion drawing from the International Monetary Fund.

With this, the pound sterling rebounded from its weak position on the international exchange markets. A return of short-term money further strengthened British reserves. But the long-term balance of payments outlook remains uncertain; although the trade gap narrowed after July, it remained too wide to close with earnings from services and overseas investment.

The credit squeeze initiated in July also helped to check the growth of industrial production. High interest rates caused business to adopt a more cautious inventory policy, and restrictions on consumer credit helped force private consumption down.

Britain's economic future is tied closely to the negotiations with the Common Market now under way in Brussels. The outcome of these negotiations probably will become evident in 1962. If they succeed, Britain could join Europe in 1963.

Entry into the Common Market may be an important part of the answer to Britain's economic ills. British goods would gain wider entry to the fast-growing European markets. More important, home industry would be spurred toward greater efficiency by the prospect of increased competition from abroad.

Common Market membership will not solve Britain's problems automatically, however. Britain is striving to keep the rise of wages in line with productivity gains. The official policy of a "wage pause" suffered a setback in November, when Government electricity workers were granted a 5 per cent wage increase; but it has helped to hold recent advances in British wages well below the European average.

The other part of the equation—raising productivity—may be even more troublesome. The credit squeeze appears likely to continue well into 1962, in order to keep domestic demand from aggravating the balance of payments problem. There are signs that this is causing business to cut back on planned expenditures for new plant and equipment as well.

Hopes for improvement in 1962 are founded on a continuing rise in exports to the United States and Western Europe. If the balance of trade improves sufficiently, the Government will be able to relax its tight grip on the home economy, encouraging the build-up of inventories and heavier consumer expenditure, as well as more capital spending.

Meanwhile, Britain seeks to form a National Economic Development Council of management, labour, and Government to co-ordinate investment plans and reconcile them to the resources available. The goals are growth without inflation and an improvement in the balance of payments.

These goals are especially important in 1962, if Britain is to be ready for Common Market membership which may be not much more than a year away.

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 28th March 1962 (additional to the Interim Dividend of 2½%, subject to tax, declared on 2nd September 1961) in respect of the Company's financial year ending 31st March 1962, of 2½%, subject to tax, payable on or after 11th April 1962 to registered shareholders whose names appear in the Register on 28th March 1962 or to their mandatees.

Transfers received at the Company's Registered Office before close of business on 24th March 1962 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board

B. GRANGER PEARSON
Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA.
7th March 1962.

N.B.—Shareholders should inform the Registrar of any changes in their registered addresses.

BOMBAY POTTERIES AND TILES REPORT BETTER RESULTS

BOTH RESERVES AND DIVIDEND ENHANCED

A SMART rise of Rs. 8.43 lakhs in sales proceeds to Rs. 41.75 lakhs—the highest so far in its history—and a modest increase in the taxable equity dividend from 12.86 per cent to 15 per cent, which restores the net return to the 1958 level of 10 per cent per annum, highlight the results of Bombay Potteries and Tiles Limited (Chairman: Mrs. Kusumbai Motichand Shaha) for the year ended 30th September 1961. In 1960, total production had declined from 2,075 to 1,848 metric tons. During the year under review, it increased sizably to 2,217 metric tons, with sanitarywares amounting to 686 m. tons (527 m. tons in the previous year), glazed tiles to 1,021 m. tons (940 m. tons), insulators to 81 m. tons (53 m. tons), miscellaneous products to 63 m. tons (64 m. tons), refractories to 315 m. tons (229 m. tons), and vitreous tiles to 51 m. tons (35 m. tons). Judged from the cost of raw materials consumed and the finished stocks at close of Rs. 3.82 lakhs and Rs. 1.24 lakh, respectively, against Rs. 3.59 lakhs and Rs. 1.02 lakh in the previous year per unit manufacturing costs appear to have been lower during the year. This apart, higher sales show a greater profitability. And, though the increase in gross profit of nearly Rs. 5 lakhs to Rs. 18.46 lakhs is quite reassuring, it would have reflected the improvement in sales still more impressively but for an increase of Rs. 3.50 lakhs to Rs. 20.46 lakhs in other expenses, of which Rs. 2.40 lakhs was on account of the wage bill. There is a small increase in the provision for depreciation from Rs. 1.08 lakh to Rs. 1.79 lakh, but taxation takes away as much as Rs. 7.50 lakhs against Rs. 6 lakhs in the previous year. The Directors have consolidated the reserves position by retaining more than 73 per cent or Rs. 6.64 lakhs of the distributable profit of Rs. 9.17 lakhs in business against about 61 per cent or Rs. 4.11 lakhs out of the net profit of Rs. 6.57 lakhs in the preceding year.

The following table details the Company's progress over the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds (net)	41.75	33.32	30.03	22.42

* Subject to deduction of tax.

The equipments ordered in the preceding year from the U.S.A. for the Company's expansion programme have already arrived and their erection is progressing satisfactorily under the supervision of an American technician. During the course of this erection, the need for additional equipments to improve further the quality of the articles produced was realised. The suitable machinery is available not from the U.S.A. but from the U.K. and West Germany to import which the Government, however, could not grant the necessary foreign exchange. The Company approached the Industrial Credit and Investment Corporation of India for a loan of Rs. 3.60 lakhs in foreign currencies to meet the cost of the proposed imports. The Corporation has sanctioned the loan and the Company has sought the necessary import licence from the Government, which when received will enable it to complete the loan transaction.

The excise duty of 15 per cent on sanitarywares and of 10 per cent on glazed tiles and other porcelain articles, under the last Union Budget, has pushed up the prices of the Company's products. On the other hand, the Government has granted licences to expand the present capacity of the existing units and also for new units to manufacture products similar to those produced by the Company. In the circumstances, the Company would naturally face keen competition in the years to follow. This apart, following the settlement of the demands of the daily rated workmen, which were pending in the previous year, the wage bill has gone up Rs. 1.07 lakh, in addition to a recurring liability on account of gratuity. For the year under report, the labour has put up a demand for bonus of six months, which is pending before the authorities.

The Government has desired the Company to increase the production of electrical porcelain, as there is a great shortage in the country, which is partly met by imports. The Directors have considered the Government's proposal and asked the technical adviser to prepare a scheme for expansion, and, as a preliminary step, have engaged a consultant in the electrical line.

The financial position of the Company is sound. The paid-up capital is Rs. 24.54 lakhs, comprising Rs. 1.13 lakh in 6.5 per cent (taxable) cumulative first preference shares of Rs. 100 each, Rs. 8.63 lakhs in 4.5 per cent (tax-free) cumulative second preference shares of Rs. 100 each, Rs. 14.18 lakhs in equity shares of Rs. 100 each and liability of Rs. 0.60 lakh on account of forfeited shares. It is supplemented by reserves and surplus of Rs. 18.49 lakhs. The gross block increased during the year by Rs. 10.07 lakhs to Rs. 43.66 lakhs and has been written down to Rs. 26.55 lakhs. Inclusive of furnace at cost of Rs. 4.53 lakhs and dies and blocks written down from Rs. 0.34 lakh to Rs. 0.27 lakh, the net block totals Rs. 31.35 lakhs. Current liabilities and provisions amount to Rs. 18.49 lakhs and are safely covered by cash and bank balances alone of Rs. 21.34 lakhs out of the aggregate current assets, loans and advances of Rs. 29.74 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 196.25 *cum-div.* On the *ex-div.* basis, they offer a yield of 5.4 per cent per annum, free of tax.

UNITED WIRE ROPES LIMITED

United Wire Ropes Limited has made considerable progress with its steel wire rope factory at Thana, near Bombay. After the suspension of acquisition proceedings in respect of lands for companies in general due to a recent Supreme Court judgment, the Company directly purchased about 75,000 square yards of land at Panchpakhadi, Thana, which was being acquired by the Government of Maharashtra for location of its factory. The Company has already obtained possession of the land and completed contour survey, etc. Preliminary building operations such as levelling, filling, etc. are in progress. Necessary building materials like cement, etc. have already been received.

The Company obtained its import licence for a c.i.f. value of Rs. 33 lakhs in October last year. The orders for plant and machinery required from abroad were placed with manufacturers in the U.K., West Germany, France and Belgium. Shipment of the machinery will start arriving in May 1962 and will be completed within four or five months. The orders for the indigenous machinery have also been finalised, and it will be delivered in time for erection. It is expected that the construction of factcry buildings will be completed so as to start erection of plant and machinery in July 1962.

(*Concluded from next column*)

an increase of 25 per cent.

During the period under review, the Company adopted various measures to achieve greater production. These have already started to bear fruit and a production of 2,107 metric tonnes was achieved in December 1961, as against the monthly average production of 1,197 metric tonnes recorded during 1960-61. The orders on hand for towers and structures at the end of the year amounted to 24,021 metric tonnes, as against 11,272 metric tonnes at the close of the previous year.

Export orders from Canada, Thailand and West Indies were completed during the year. The extensive efforts made by the Company during the past two years met with success and export orders have been secured from New Zealand and East and West African countries as well.

In co-operation with its foreign collaborators, the Company has developed an improved model of a road roller which has successfully stood rigorous trials and is now under production.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 17.00 on a *cum-div.* basis. On reducing this price to an *ex-div.* basis, the net yield works out to about 3.9 per cent per annum.

KAMANI ENGINEERING'S RESULTS ENCOURAGING

SHAREHOLDERS GET MORE

THE latest annual report of the Kamani Engineering Corporation Ltd. (Managing Agents: Messrs. Kamani Brothers Private Ltd., Bombay) namely, that for the year ended 30th September 1961, is an encouraging document. The sales, which had suffered a rather bad jolt in 1959, pursued their upward journey and gained, during the year Rs. 31.78 lakhs over and above the rise of Rs. 69.29 lakhs achieved during the previous year. At Rs. 268.68 lakhs, the turnover is thus only Rs. 16.06 lakhs short of the all-time high of Rs. 284.76 lakhs recorded in 1958. The gross profit earned is, however, the highest reported so far and, at Rs. 24.81 lakhs, reflects an improvement of Rs. 3.92 lakhs over the previous year. Provision for Managing Agents' commission has been slightly reduced from Rs. 1.62 lakh to Rs. 1.60 lakh, but those for depreciation and taxation are higher. The former has been stepped up by Rs. 0.96 lakh to Rs. 5.85 lakhs and the latter by Rs. 0.80 lakh to Rs. 7.50 lakhs. Despite these increases, the net profit shows a gain of Rs. 2.18 lakhs to Rs. 9.86 lakhs.

Transfers to reserves and other provisions have gone up from Rs. 22,772 to Rs. 1.50 lakh. Of this, Rs. 40,000 (as against Rs. 22,772 a year ago) have been credited to the development rebate reserve, Rs. 10.000 to the provision for gratuity, as against *nil* and Rs. 1.00 lakh to the general reserve, as against *nil*. Besides, a sum of Rs. 1.81 lakh, as compared with Rs. 90,311, has been written off as expenses not relating to the period under review. Further, Rs. 1.75 lakh has been provided as additional taxation in respect of previous years. After appropriating Rs. 0.73 lakh for the payment of preferred dividends, the Directors have proposed the ordinary dividend at a slightly higher rate of 9 per cent, subject to deduction of tax, as compared with 8 per cent, subject to deduction of tax, a year ago.

The progress made by the Company during the past four years is presented in the comparative table given below:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958

The financial position of the Company, as revealed by its balance-sheet as at 30th September 1961, is moderately strong. The share capital stands at Rs. 59.98 lakhs, of which Rs. 44.98 lakhs are in ordinary shares of Rs. 10 each and the balance in 5½ per cent cumulative preference shares. This is backed by reserves totalling only Rs. 5.24 lakhs. The outstanding amount of secured loans is Rs. 96.86 lakhs, and current liabilities and provisions altogether amount to Rs. 89.92 lakhs. The book values of fixed assets is Rs. 76.96 lakhs including Rs. 9.44 lakhs worth of new assets acquired during the course of the year. On deducting Rs. 37.13 lakhs as depreciation earned to date, the net block works out to Rs. 39.83 lakhs. Current assets, investments, loans and advances aggregate Rs. 212.17 lakhs.

The working of the factory during the year was encouraging. Production of galvanised and painted steel structures continued at a higher level and the Company produced 14.360 metric tonnes during the year under review as against 13,485 metric tonnes previously. The sales value of manufactured products and erection work undertaken amounted to Rs. 235.39 lakhs, as against Rs. 187.94 lakhs, representing

MARTIN BURN REPEATS DIVIDEND

PROFIT-MARGIN, HOWEVER, SHRINKS

THE financial results of Martin Burn Limited (Chairman: Mr. T. Leslie Martin, Calcutta) for the year ended 30th September 1961 do not make satisfactory reading, for the profit-margin has suffered a setback. In refreshing contrast to the falling turnover in the preceding two years, sales no doubt increased during the year under review by as much as Rs. 108.57 lakhs to Rs. 857.88 lakhs and came close to the 1958 peak of Rs. 904.49 lakhs. But this is the only silver lining, which does not conceal the patch of dark cloud that has gathered over the Company in the form of cost inflation and a perceptible decline in its earnings by way of managing agency allowances and commissions. Thus, expenses in 1960-61 shot up by Rs. 103.76 lakhs to Rs. 879.82 lakhs, and about 60 per cent of this rise was due to the increase in the cost of raw materials and general merchandise from Rs. 677.81 lakhs to Rs. 740.90 lakhs. At the same time, allowances and commissions earned by the Company have moved down by Rs. 10.61 lakhs to Rs. 51.13 lakhs. As a result of these adverse trends, the profit-margin, that is, percentage of gross profit to sales and income by way of allowances and commissions has contracted from 10.7 to 9.2.

An investor, however, may not be particularly perturbed by this trend, as the dividend has been comfortably maintained at Rs. 2.75, subject to tax, or Re. 1.93 net on the equity share of Rs. 10. Be that as it may, the results should not come as a surprise to investors, since the Directors had forewarned the shareholders in their report for the previous year (1959-60) that "with the reduced scale of remuneration applicable to the new appointments (the previous agreements expired on 15th August 1960), the total remuneration under this head is likely to decline in future, except to the extent that the decline is offset by improved earnings of the managed companies." Apart from maintaining the dividend as just mentioned, the Directors have also kept up the level of transfer to reserves at Rs. 5 lakhs. In line with the fall in profit, the provision for tax is also somewhat less, but that for depreciation has been raised a bit.

The following table brings out in a nutshell the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sales	857.88	749.31	767.50	904.49
Closing stocks and work-in-progress	197.36	197.07	159.83	126.77
Other income	105.72	113.97	101.68	106.79
Expenses	879.82	776.06	782.88	917.88
Gross profit	83.78	87.22	86.80	93.65

Ordinary	40.46 (D—27.5%)*	40.41 (D—27.5%)*	40.10 (D—27.5%)*	30.86 (D—17.5% +Rs.75 %)
Carry forward	2.46	2.60	2.55	2.45

* Subject to deduction of tax.

The Directors point out in their report to shareholders that the decline in profit was due to fall in earnings by way of managing agency commission, set off partially by improved results of some of the trading departments. They add that of the managed units, those in the engineering group continued to show good results, but the electricity group remained adversely affected by the onerous provisions of the Electricity (Supply) Act, 1948, and the continuous increase in works costs; the railway group showed no material change over the previous year.

Besides acting as a managing house (in the previous year, it was re-appointed as the managing agents for the statutory maximum number of 10 public companies and one private company, and appointed secretaries and treasurers for seven companies), the Company sells and processes various foreign and indigenous products, contracts for construction of buildings, medium and light structures and electrical installations, and manufactures certain electrical engineering products. In view of the declining imports, it has decided to participate in the manufacture of certain engineering products in collaboration with foreign manufacturers. Thus, in collaboration with Vaughan Crane Company Ltd., England, and Burn and Co. Ltd., it formed, in the previous year, Vaughan Burn Crane Company (P) Ltd., which commenced production in that year of cranes, pulley blocks, etc. It would have been a good thing had the Directors thrown further light on the working of this venture in their report for the year under review.

In 1960, the Directors took in Mr. N. R. Pillai, a retired civilian with creditworthy record of service, as the Managing Director for four years, with effect from 1st March 1961. They have since strengthened the Board further by appointing Mr. Romendra Nath Mookerjee, who was until recently an official of the Company, as a whole-time Director for four years from 1st March 1962, subject to the approval of the Central Government and the general body at its annual meeting on 28th inst.

During the year ended 30th September 1960, the holders of Rs. 32,000 4 per cent. Convertible Notes exercised their option to convert their holdings into ordinary shares resulting in an increase in the ordinary share capital of the Company by 1,600 shares and a reduction of Rs. 32,000 in the Convertible Notes outstanding. The total number of ordinary shares subscribed to, as on 1st October 1960, was 14,71,225 and the amount of Convertible Notes outstanding Rs. 5,75,500; the total reserve arising from the surplus on conversion being Rs. 17,12,250. The Notes have since been fully redeemed. The issued capital now stands at Rs. 207.12 lakhs (equity Rs. 147.12 lakhs and preference Rs. 60 lakhs), as against Rs. 206.96 lakhs at the end of the previous year. Reserves and surplus have increased from Rs. 118.93 lakhs to Rs. 123.94 lakhs. Secured loans from banks, with accrued interest, are lower by Rs. 37.78 lakhs at Rs. 81.65 lakhs, but other current liabilities and provisions, however, have grown by some Rs. 40 lakhs to Rs. 584.05 lakhs. The result is that the total indebtedness to outsiders is practically unchanged at Rs. 665.69 lakhs. These are more than adequately covered by current assets (excluding investments, but including book debts) etc. of Rs. 730.28 lakhs. Investments amount to Rs. 196.28 lakhs, these are practically unchanged over the year, but the quoted investments, shown at Rs. 185.34 lakhs against Rs. 184.68 lakhs previously, command a market value of Rs. 310.49 lakhs as compared with Rs. 293.78 lakhs a year before. The gross block increased during the year from Rs. 82.41 lakhs to Rs. 90.45 lakhs and has been written down to Rs. 70.20 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 32.12 *cum-div.*, and give a yield of 6.3 per cent per annum, free of tax, on the *ex-div.* basis.

Notice

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE THIRTIETH ANNUAL GENERAL MEETING of the Members of Jessop & Co. Ltd., will be held in the Committee Room No. 2 of the Bengal Chamber of Commerce and Industry at 6, Netaji Subhas Road, Calcutta-1, on Tuesday, the 10th April 1962, at 11.00 a.m., for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors for the year ended 31st October, 1961.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 29th March to 10th April, 1962, both days inclusive.

By Order of the Board,
K. S. BASU,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *5th March*, 1962.

NOTICE:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

PROFIT OF PHALTAN SUGAR LOWER

FOUR-FOLD CAUSES FOR THE SETBACK

BOTH sales and profit of the Phaltan Sugar Works Ltd. (Managing Agents: Messrs. Mafatlal, Apte and Kantilal Ltd., Bombay) have lost some more ground during the year ended 30th September 1961, but this feature is in conformity with the conditions prevalent in the sugar industry. Sale proceeds of sugar at Rs. 124.15 lakhs are sligthly lower than the previous year's figure by Rs. 5.06 lakhs and are the lowest on record since 1956. Gross profit has reacted even more sharply and has gone down from Rs. 24.05 lakhs to Rs. 14.28 lakhs or by 40.6 per cent. A major portion of this precipitous fall has been attributed by the Directors to four principal causes. In the first instance, the recovery of sugar has registered a fall from 12.7 per cent to 11.7 per cent during the year, owing to adverse weather conditions and "some trouble" in the factory boiling house which was "in no small measure" due to "the plant being very old." Secondly, due to the control on the sale of sugar and the absence of adequate releases, the Company had to carry forward an unreleased stock of 42.6 per cent of the year's production, as against only 22.8 per cent during the previous year. This entailed a severe drain on the Company's resources, both by way of interest and insurance charges. Thirdly, there was a considerable augmentation in the Company's export quota from 2,976 bags during 1959-60 to 16,558 bags during the year under review and this resulted in the realisation of a loss of Rs. 1.89 lakh, subject to final adjustments. And, lastly, the implementation of the recommendations of the Wage Board for the Sugar Industry was instrumental in increasing the wage bill for the year under review.

With the decline in gross profit, there has been a fall in the provision for the Managing Agents' commission, from Rs. 2.00 lakhs to Rs. 1.02 lakh, and in that for taxation, from Rs. 7.40 lakhs to Rs. 3.80 lakhs. Provision for depreciation has, however, gone up by Rs. 0.24 lakh to Rs. 4.14 lakhs. The net profit is lower at Rs. 5.32 lakhs as compared with Rs. 10.75 lakhs a year ago. In view of reduced profit, the Directors have cut the ordinary dividend to Rs. 9.00 per share, or 18 per cent from Rs. 12.00 per share, or 24 per cent for the preceding year, both subject to deduction of tax. Even to cover this reduced dividend, they have found it necessary to withdraw Rs. 3.50 lakhs from the dividend equalisation reserve. The carry forward is lightly higher at Rs. 35,221, as against Rs. 21,809 brought in.

The operating results of the Company for the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds of sugar	124.15	129.21	178.50	169.39
Other income	3.21	3.31	3.70	2.94
Closing stocks	78.56	37.06	14.66	36.88
Excise duty	45.32	41.63	39.60	41.05
Other expenses	40.11	41.41	42.19	45.76
Gross profit	14.28	24.05	47.82	45.70
Managing Agents' commission	1.02	2.00	2.72	2.71
Provision for:—Depreciation	4.14	3.90	3.56	3.30
Taxation	3.80	7.40	0.25	14.50
Net profit	5.32	10.75	14.84	10.26
Transfers from reserves and provisions	3.83	1.06	0.26	
To reserves	0.02	0.23	1.46	0.23
Additional provision for taxation to previous years	—	—	1.00	
Dividend	9.00 (18%)†	12.00 (24%)†	13.50 (27%)†	10.00 (20%)
Carry forward	0.35	0.22	0.64	1.50

† Subject to deduction of tax.

The balance-sheet of the Company as at 30th September 1961 reflects a satisfactory financial position. The share capital of Rs. 50.00 lakhs, all in equity shares of Rs. 50 each, is supported by reserves totalling Rs. 55.53 lakhs. The loan account stands at Rs. 70.46 lakhs, while current liabilities and provisions aggregate Rs. 55.27 lakhs. The book value of fixed assets is Rs. 142.85 lakhs which has been well written down to Rs. 61.07 lakhs. The cost of uninstalled machinery and buildings in progress is Rs. 1.03 lakh, so that total net assets are worth Rs. 62.10 lakhs. Current assets, investments, and loans and advances, etc., amount to Rs. 169.16 lakhs, thereby affording enough cover to all current liabilities put together.

Currently, the Rs. 50.00 fully paid ordinary shares of the Company are quoted on the Bombay Stock Exchange at Rs. 112.70 *ex-div.* The net return on this price works out to 5.6 per cent per annum.

SYNOPSES OF COMPANY REPORTS

Saswad Mali Sugar Factory Ltd.

(*Chairman*: Mr. Shankarrao Bhaurao Raut, Poona.)

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1961	1960
Sales	1,41,54	1,49,64
Closing stock	1,18,52	66,23

To difference in depreciation allowance 1956-57 to 1959-60	2,29	Nil
To dividends (taxable) preference	1,00	1,00
,, ,, ordinary	5,07 (15%)	6,09 (18%)
Carry forward	2	1

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.
* This includes Rs. 2,20,920 being income-tax refund received.

Extracts from the Directors' report: During the year under report, the total quantity of sugarcane crushed was 1,62,619 tons and the total production of sugar was 1,80,658 bags (each bag weighing 2¾ mds.) The recovery of sugar for this year was 11.21.

During the year under review, the sugar production was higher than ever, and consequently rebate in excise duty amounting to Rs. 2,56,447 allowed by the Government as incentive for increase in production was earned. Inspite of this the profit for this year was lower than that of the previous year.

Accounts in brief as at 31st July 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	48,80,800	Gross block	1,01,38,322

N.B.—Adjustments include the credit balance brought forward from the previous year and other credit items.
* Loss after providing for Managing Agents' commission and depreciation.
† Loss carried forward after adjusting the credit balance brought forward from 1960.

Extracts from the Directors' report: The Mills continued to work in accordance with the working time agreement of the Indian Jute Mills Association, and by purchasing loom hours the full complement of 500 looms worked single shift up to 26th November, 1960. Thereafter looms were progressively closed down until only 420 looms were working single shift of 48 hours per week from March, 1961 to the end of July, 1961.

As we mentioned in the directors' last report, these Mills are mainly dependent on locally grown Bimli Jute and the overhead quality of this fibre was lower last year, besides being a much smaller crop than usual. For this reason and because of high and uneconomic prices and restrictions on Bank credit, it was not possible to build up adequate stocks during the short marketing period. Consequently, this Company has passed through an extremely difficult time since the latter part of 1960.

The restrictions on production had a disturbing effect on labour and although modernisation continued in the preparing and spinning departments, the Mill efficiency was far below the standard required. A Central Wage Board for the Jute Industry of India was set-up by the Government of India in August, 1960 and in January, 1961, it recommended an interim increase in wages which has been implemented by this Company. This wages increase, the restrictions in production and block closure have all adversely affected costs.

Due to the unfavourable trading conditions—the Company was operating at a loss from March, up to October, 1961 which is reflected in the

A large jute crop during the current season, available at economic rates has enabled the Mills to increase their production capacity and at the time of writing—296 looms are working 96 hours per week. The present market conditions also allow a reasonable margin of profit and the directors consider that the loss sustained for the year under review will be fully recouped and are confident that the working results for the current year will show a reasonable profit.

Accounts in brief as at 31st July 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,15,000	Gross block	1,26,04,229
Debentures	10,69,000	—Depreciation	74,40,619

Carry forward	51	57

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items if any.

Extracts from the Directors' report: *Investments*: The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges with the exception of certain shares costing Rs. 7,59,192. The total of the market value of the investments for which quotations are available together with the unquoted investments as valued by Directors exceeds the book value at 30th September 1961 by Rs. 13,28,271.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	44,00,000	Investments	66,75,796
Reserves and surplus	9,78,114	Current assets	1,62,950
Other liabilities	15,20,216	Cash	59,584
	Rs. 68,98,330		Rs. 68,98,330

* Paid-up capital consists of 2,00,000 ordinary shares of Rs. 10 each fully paid up (Rs. 7.50 per share called up in cash and Rs. 2.50 per share paid up as capital bonus by capitalisation of reserves) and 24,000—5½ per cent. cumulative preference shares of Rs. 100 each fully paid up in cash.

Coonoor Tea Estates Co., Ltd.

(*Secretaries & Treasurers*: Messrs. Matheson, Bosanquet & Co., Ltd., Belmont, Coonoor.)

35th Annual General Meeting—29th March 1962.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1961	1960
Tea sales	9,81	10,05
Closing stock	1,93	1,96
Gross profit	2,01	3,07
Transfer to Secretaries' and Treasurers' remuneration	12	20
,, ,, depreciation	34	32
,, ,, provision for taxation	70	1,08
Net profit	85	1,47
Adjustments	40*	30†
Appropriations: Total available balance	1,25	1,77
Transfer to development rebate reserve	7	21
,, dividend equalisation reserve	Nil	15
To dividends (taxable) 6% C. preference	9	9
,, interim dividend (taxable) ordinary	42	57
,, final dividend (taxable) ordinary	42 (7½%)	42 (10%)
Total ordinary dividend	42 [15%]	42 [17½%]
Carry forward	25	33

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.
* This includes Rs. 7,500 being excess provision for taxation not required.
† This includes excess provision for taxation of Rs. 743 no longer required.

Extracts from Directors' report: The Company has completed the year with a crop of 3,94,039 lbs. made tea as against the previous year's record crop of 4,04,655 lbs. Unfortunately the slightly lower crop was accompanied by lower sale prices at the Cochin Auctions and this has resulted in a considerable fall in the profits of the Company compared to the previous year.

The total area of the estate is 441.25 acres distributed as follows: Tea in full bearing 384.50 acres; Tea in partial bearing 7.53 acres; Fuel clearings 15.75 acres and Buildings, roads and waste land 33.50 acres.

Cost of Production: The Estate cost of production for the year was Rs. 1.63 (Re. 1.55 for 1960) per lb. against the estimate of Re. 1 57 (Re. 1.49) per lb. Bonus paid to labourers [Rs. 21,111 (Rs. 15,926)] was not included in the estimate.

Selling Price: The net average selling price of the Company's teas for the season was Rs. 2.17 per lb. against Rs. 2.32 per lb. for the previous year. The lower average selling price is due to the easier markets prevailing at the Cochin Auctions where the Nilgiris District average for the year for leaf grades is 18 nP per lb. below 1960.

Estimates for the year 1961-62 have been approved by the Board of Directors and provide for 4,00,000 lbs. of made tea to cost 145.38 nP per lb. including 21.01 nP per lb. for manuring.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,16,420	Gross block	24,06,623
Reserves and surplus	13,55,670	—Depreciation	2,29,383
Other liabilities	3,47,757	Net block	21,77,240
		Current assets	2,25,597
		Investments	2,500
		Cash	15,510
	Rs. 24,19,847		Rs. 24,19,847

* Paid-up capital consists of 1,500 six per cent. cumulative preference shares of Rs. 100 each fully paid up and 56,642 ordinary shares of Rs. 10 each fully paid up. Of the above, 4,086 ordinary shares are allotted as fully paid up by way of bonus shares through capitalisation of reserves.

COMPANY MEETINGS AND DIVIDENDS

Notices

BHARAT COLLIERIES LIMITED

NOTICE

THE SEVENTEENTH ANNUAL GENERAL Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 11, Clive Row, Calcutta-1, on Saturday, the 31st March, 1962, at 11 a.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June, 1961.

(2) To elect a Director in place of retiring Director Sri Balabux Poddar and in this connection to consider and if thought fit to pass the following Resolution with or without modification, of which a Special Notice as required under Section 281 of the Companies Act, 1956, has been received by the Company and is hereby given by the Company to its Members:—

"Resolved that pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Sri Balabux Poddar, who has attained the age of 68 years on 29th December 1961 and retires by rotation, be and is hereby appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(3) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

Explanatory Note of Item (2):

Sri Balabux Poddar having attained the age of 65 years on 29th December 1958 was re-appointed a Director of the Company in its Annual General Meeting held on 31st March, 1959, on a Special Notice received by the Company from a Shareholder and a Resolution duly passed in the said Annual General Meeting specifically declaring that the age limit prescribed under Section 280 would not be applicable to him. He is now due to retire by rotation and a Special Notice has been received from a Shareholder. Sri Balabux Poddar has been on the Board of Directors for a number of years and it is considered advisable in the interest of the Company to avail of his services as a Director of the Company.

Neither the Managing Agents nor any of the other Directors of the Company have any interest in the said Resolution. Sri Balabux Poddar is interested as a Shareholder of the Company and also to the extent of fees and commission receivable as a Director.

The Share Transfer Books of the Company will be closed from 20th March, 1962 to 31st March, 1962, both days inclusive.

By Order of the Board of Directors,

FOR SAHU JAIN LIMITED,

A. K. JAIN,
Managing Director,
Managing Agents.

CALCUTTA
Date, 23rd February, 1962.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Corporation will be closed from 29th March, 1962 to 28th April, 1962, both days inclusive.

By Order of the Board,

R. P. MATHUR,
Deputy Secretary.

General Manager

THE BELSUND SUGAR COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE BELSUND SUGAR COMPANY LTD., will be held at the Registered Office of the Company at 14, Netaji Subhas Road, Calcutta-1, on Friday, the 30th March 1962, at 12 noon, to transact the following:—

ORDINARY BUSINESS:

(1) To receive and consider the Directors' and the Auditors' Reports and to adopt the Audited Accounts of the Company for the year ended 30th September 1961.

(2) To declare Dividend.

(3) To elect a Director in place of Shri Nand Kishore Bajoria who retires by rotation and being eligible offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

(5) (*As a Special Resolution*): "RESOLVED that pursuant to sub-sections (4) and (7) of Section 309 of the Companies Act, 1956, the Directors be and are hereby authorised to continue to receive a commission (to be divided among them in such manner as they shall determine from time to time and in default of determination equally) of 1 per cent of the annual net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the Act for each of the five financial years of the Company commencing from 1st October, 1961."

The Register of Members and the Share Transfer Books of the Company will be closed from 17th March to 30th March 1962, both days inclusive.

By Order of the Board,

Per Pro BANGUR BROTHERS LTD.,

N. P. PANDEY,
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, *15th February,* 1962.

Note: A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(*Pursuant to Section* 173(2) *of the Companies Act,* 1956 *regarding item No.* 5 *of the annexed Notice*)

In terms of Article 111 of the Articles of Association of the Company, all the Directors together were entitled to receive a commission of 1 per cent on the annual net profit of the Company divisible among them in such manner as determined by them and in default of determination equally. This payment of commission was authorised by a Special Resolution passed on 18th November 1957 and duly approved by the Central Government. Such payment could be made for a period of five years from the 1st October 1956, but may be renewed from time to time in accordance with the provisions of statutory enactment in force. Having regard to the duties and responsibilities of the Directors, it is desirable that the commission of 1 per cent on net profits of the Company should continue to be paid to the Directors. A Special Resolution set out in item No. 5 of the annexed Notice authorises the continuance of payment of this commission for a further period of five years commencing from 1st October, 1961.

All the Directors of the Company may be deemed to be interested in Special Resolution referred to above to the extent of the commission receivable by them.

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on Monday the 26th March, 1962, at 4-30 p.m. (S.T.) or immediately after the Class Meeting of the holders of Deferred shares convened on the same day is over, for the purpose of transacting the following business:—

1. To consider and, if thought fit, to pass the following resolution with or without modification as a Special Resolution:—

"That Article 6 of the Articles of Association of the Company be altered in the manner following:—

Add the words:—

"without deduction of Company's tax but subject to statutory deduction at source as per Indian Income-tax Act, 1922, as from 1st October 1960."

after the words "5½% per annum" in sub-clause (*a*) of Article 6.

2. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1961.

3. To declare Dividends on Preference, Ordinary and Deferred Shares.

4. To appoint a Director in place of Shri Lalchand Hirachand who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Lalchand Hirachand who retires by rotation and who is a Director and Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

5. To appoint a Director in place of Shri Govindji Raoji who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Govindji Raoji who retires by rotation and who is a Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

6. To appoint and/or approve the appointment pursuant to Section 281 of the Companies Act, 1956, of Shri Gulabchand Hirachand who is an Ex-officio Director of the Company and who has attained the age of 65 years on 23rd September, 1961, and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

"Resolved that pursuant to Section 281 and other relevant provisions (if any) of the Companies Act, 1956, the appointment of Shri Gulabchand Hirachand, who has attained the age of 65 years on 23rd September, 1961, and who is not liable to retire by rotation being an Ex-officio Director of the Company appointed by the Managing Agents, Messrs. Walchand & Co. Private Ltd., be and is hereby made and/or approved and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

7. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company remained closed as from Saturday the 30th December, 1961, to Saturday the 20th January, 1962 (both days inclusive).

By Order of the Board.

S. S. BORKAR,
Secretary.

Registered Office:

CALCUTTA, *3rd March,* 1962.

LONDON LETTER

(*Concluded from page* 412)

The Treasury has also publicised this week the criteria which the Government use to control public spending: (1) by insisting on value for money through maximum efficiency in the use of public funds; (2) by determining the relative importance of different classes of spending at different times; (3) by allowing special priority to classes of spending that will foster economic growth and improve the country's competitive power; and (4) by examining long-term public expenditure to ensure that it is planned in proper relationship to prospective resources. But, almost in the same breath, it admits that the main classes of expenditure tend to be expanding rather than declining and that public spending is tending constantly to be a growing percentage of the national income. It is far in excess of the mere budget figure and in the current year will probably be about £10,000 million (this includes local Government spending and below-the-line investment spending). Such a sum is 40 per cent of the national income. A Government which sought to be unduly ruthless in limiting overall spending would, therefore, cut at the roots of the national income but, by the same token, it is clear that the Government's influence in controlling national expenditure in relation to resources is increasingly direct and potentially effective.—

All Rights Reserved.

INSTITUTE OF APPLIED MANPOWER RESEARCH
NEW DELHI

The Institute has been set up as a Society for undertaking systematic research in applied manpower problems, e.g., assessment of the requirements of trained personnel for economic development, creation of employment opportunities for new entrants to the labour market, improved utilisation and development of the employed labour force.

Applications are invited from Indian Nationals or natives of Sikkim, Nepal or of former French or Portuguese possessions in India, for the following posts:

(*a*) **2 Heads of Research Divisions** (Rs. 1,300-60-1,600). Candidates should have a degree of a recognised university with a good academic record, at least 5 years' experience of socio-economic research preferably in the manpower or related fields, e.g., economic and educational Planning, employment and training, public administration and management. Candidates will be expected to have knowledge of research methodology and application of statistical techniques to socio-economic investigations;

(*b*) **1 Statistician** (Rs. 1,100-50-1,400). Candidates should have a Master's degree or equivalent qualification in Statistics, Mathematics or Economics with Statistics and at least 5 years' experience of statistical investigation and research in recognised institutions or Government departments or commercial concerns of repute.

(*c*) **4 Research Officers** (Rs. 700-40-1,100-50/2-1,250). Candidates should have at least a second class Master's degree with a good academic record generally and at least 3 years' research experience, preferably in manpower or related fields.

(*d*) **4 Junior Research Officers** (400-400-450-30-600-35-950). Candidates should have at least a second class Master's degree with a good academic career and about two years' experience of analysis and interpretation of data in the socio-economic fields.

(*e*) **4 Research Assistants** (Rs. 325-15-475-20-575). Candidates should have a second class Master's degree or equivalent qualification with a good academic career and preferably some experience of analysis of statistical and other data in the socio-economic fields.

Allowances will be paid as admissible under Central Government rules. *Higher starting salary may be given in deserving cases.*

Candidates should give full *particulars* of age, educational career (Matriculation onwards) with details of subjects studied and division or class secured, research work done so far and publications, posts held with details as regards duration and salary, and minimum pay acceptable.

Apply to:

THE DIRECTOR, DIRECTORATE OF MANPOWER,
MINISTRY OF HOME AFFAIRS,
SOUTH BLOCK, NEW DELHI.

Last Date for Receipt of Applications
21st March, 1962.

DA—618 (4)/61

COST OF BANK CREDIT UP

(From Our Own Correspondent)

BOMBAY, *7th March*

The seasonal pressure on banks for accommodation persists unabated. Most banks are hard put to find the necessary resources and there are hardly any lenders in the inter-bank market. It is said that several banks are in the third tranche, so far as their borrowings from the Reserve Bank are concerned, which attracts the highest Bank rate of 6 per cent per annum. If still the inter-bank call money rate has not yet crossed the 5 per cent level—even today it was nominally quoted at 4¾ per cent, which is the same as last week—it is because borrowers realise that they will have to pay the enhanced rate on their earlier borrowings too. In other words, self-interest has induced the majority of banks not to pay more for call money. It, however, remains to be seen how long they will succeed in following this policy.

There is, of course, no change in the term money rates. The Committee in charge of revision of inter-bank agreement met during the week under review, but could not come to any final conclusions. The main hitch is said to pertain to the definition of a "medium bank." According to one report, the Committee has, however, decided not to include any of the Exchange banks in the definition of medium banks.

A noteworthy development of the week is the decision by one of the big banks, said to be the Bank of Baroda, to raise its rates of interest on advances by one half of one per cent, in order to cover the increase in the cost of its operations. It remains to be seen whether the other banks will follow the lead given by this Bank. Most probably they will. And, if they do, the rates of interest on deposits also will have to be stepped up.

The main features of the results of 91-days' Government of India Treasury Bills are: no increase in the amount offered which was the same as the amount invited, namely, Rs. 2 crores; a rise in the average rate of accepted tenders from 2.580 per cent per annum to 2.585 per cent per annum.

India's foreign assets have declined by Rs. 1.10 crore to stand at Rs. 134.72 crores, according to the Reserve Bank's statement for the week ended 2nd March 1962. Another feature of this statement in which readers may be interested is an increase of Rs. 6.97 crores in "other loans and advances." Of this increase, as much as Rs. 6.23 crores have occurred under loans to scheduled banks against usance bills. This item now stands at Rs. 27.50 crores. At the same time, deposits of banks with the Reserve Bank have fallen by Rs. 4.37 crores to Rs. 76.72 crores.

The Gilt-edged market is practically dead. Very little activity takes place these days. The quotations of almost all the loans are unchanged. Over the week we find that only some of the State loans have shown a slight variation. Thus, all 4½ per cent loans of Maharashtra are lower by 25 nP. A decline of 5 nP is seen in 4½ per cent 1972 issues of Madras, Andhra and Mysore, of 10 nP in 4½ per cent 1972 Punjab and of 15 nP in 4½ per cent 1972 Uttar Pradesh.

In the foreign exchange markets, the pound sterling has been ruling pretty steady throughout the week. The rate for New York on London is, in fact, a shade higher at 281.590-281.620 cents per £, an improvement of 0.080 cent over the week. Three months' forward has gone up by 0.090 cent to 279.790-279.820 cents per £. In India, there has been no change in the banks' selling rate for U.S. dollars. It is still quoted at Rs. 475.50 per 100 dollars for ready T.T. Their buying rate, however, has come down by 25 nP to Rs. 472 per 100 dollars.

READY CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, *5th March*

The kip market ruled steady during the week. Arrivals met with ready clearance. There was brisk trading for export in light weight cow-hides, especially higher selections, but, in the lower ends, importers were counter-offering even the bids made at reduced levels, probably finding that the offtake for inland trade had been meagre, due to the seasonal *Ramzan* holidays. There was selective export demand for cow calf. Demand for buff calf was good. Both U.K. and U.S. importers were making regular inquiries and placing orders. Arrivals of buff hides were small and met with ready buyers.

There was selective support for tanned goat skins—top marks—all averages from the Continent and the U.K., as also for secondary marks in heavy weights from the U.S. Prices ruled firm. Shippers to the Continent were active in the tanned sheep skins middle class section, in the local market, as prices appeared to be low. Demand for prime and semi-prime sheep skins for export was poor and E.I. tanners were quoting low prices to attract business and establish a market. Prices in the raw markets were unchanged.

Shipments during February were: 1,509 bales tanned cow hides, 145 cow calf, 21 buff hides, 585 buff calf, 425 goat and 284 sheep to the U.K. ports; 201 cow hides, 65 cow calf, 65 buff calf, 812 goat and 177 sheep to Continent; 128 buff hides, 334 buff calf and 387 goat to the U.S.A.; 7 goat and 256 sheep skins to Japan.

It will be noted that shipments of tanned goat skins to the Continent and the U.S. were heavy last month, a welcome feature from the point of view of export earnings.

BULLION MARGINS RELAXED

(From Our Own Correspondent)

BOMBAY, *7th March*

This week has been notable for two important developments in the bullion market. They are (*a*) relaxation of special margin restrictions and (*b*) commencement of business in *Jeth* (June) settlement in both gold and silver with effect from today. The two decisions were simultaneously announced yesterday by the Forward Markets Commission. The margin rules have been modified as follows:

Price levels: The level at which special margins are imposed has been raised from Rs. 115 to Rs. 120 per 10 grams of gold and from Rs. 195 to Rs. 215 per kilogram of silver.

Free limits: The free limits have been enhanced from 60 kg. to 120 kg. in gold and from 320 bars to 650 bars in silver.

Nature of limits: The special margins are now applicable only to the outstandings which are in excess of the free limits, whereas hitherto margins were enforced on a member's entire outstanding, including those covered under the free limits, the moment the outstanding position exceeded the stipulated level.

Margin rates: The rates of margins (payable by buyers) will continue unchanged at Rs. 2,000 per kg. of gold and Rs. 300 per bar of silver.

The relaxation in margin restrictions has been widely welcomed by bullion traders, though a section of them feels that it would have been better if the system of special margins had been done away with. The modifications now announced are more or less on the lines indicated by the Bombay Bullion Association when the three-monthly settlements, in the place of the monthly settlements, were introduced for the first time in June 1961. As a result of the modifications, it is hoped that the volume of business transacted in the local market, which has declined appreciably in recent months, will pick up to a great extent.

The bullion market depicted a firm trend in the earlier part of the week on rumours that relaxation of margin rules was imminent and the firmness gathered further momentum after the relaxation was actually announced. Encouraging advices from upcountry centres, particularly in Rajasthan, also imparted strength. Consequently, both gold and silver registered a rise in values. The rise was quite appreciable in the case of white metal—nearly Rs. 3 over the week—while it was just 15 nP in respect of gold. The improvement in prices would, perhaps, have been more marked but for rumours of large arrivals of contraband gold, profit-taking at every rise and poor offtake in the spot section. The daily average offtake during the week was no more than 4,600 tolas of gold and 12 bars of silver, as against 5,800 tolas and 14 bars, respectively, in the previous week, while arrivals were larger—6,000 tolas of gold as against 5,800 tolas, and 17 bars of silver, as against 8 bars.

The *Fagun* (22nd March) settlement in gold began the week at Rs. 122.40, as against the previous close of Rs. 122.25, and moved up to touch a high of Rs. 122.70 on Monday the 5th inst. After declining to Rs. 121.10 yesterday, the settlement rose again to Rs. 122.40 today before finishing at Rs. 122.30. The *Jeth* settlement, business in which commenced today, improved from Rs. 122.45 to Rs. 122.65, but closed lower at Rs. 122.55. The rate for transferring commitments from the *Fagun* to *Jeth* settlement was in favour of bears to the tune of 25 nP.

Ready gold continued to be quoted at a discount under the forward (*Fagun* settlement) throughout the week, though the actual discount declined from 50 nP last week-end to 35 nP today. The spot rate advanced from Rs. 121.75 on Wednesday last week to Rs. 122.40 on Monday the 5th inst. and, after easing to Rs. 121.70 yesterday, recovered to Rs. 122.05 before finishing at Rs. 121.95.

In silver, the *Fagun* (23rd March) settlement met with excellent support and climbed up from Rs. 213.70 on Wednesday last week to Rs. 216.65 today. At this level, profit-taking set in and the quotation declined to Rs. 216.50. Trading in *Jeth* settlement began today at Rs. 215.55. The settlement swiftly rallied on bull support to Rs. 216.20. Unlike the case of gold, the rate for getting the commitments transferred from the *Fagun* to *Jeth* settlement was against bears to the extent of 30 nP.

Ready silver evoked good buying enquiries and rallied from Rs. 213.30 to Rs. 216.40. The closing rate was, however, lower at Rs. 215.95 at which rate the discount under the forward (*Fagun* settlement) was 55 nP, as against 40 nP on Wednesday last week.

The following table shows the trend of prices during the week under review:

	7-3-62 (closing)	High	Low	28-2-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	121.95	122.40	121.70	121.75
Forward: *Fagun**	122.30	122.70	121.10	122.25
Sovereign	97.00	97.25	97.00	97.25
SILVER				
Ready (.996 fine)	216.25	216.40	213.80	213.80
Forward: *Fagun*†	216.50	216.65	214.15	213.70
London—				
Gold	249s.2½d.	249s.3½d.	249s.3d.	249s. 3d.
Silver Ready	84½d.	—	—	84½d.
Silver Forward	85½d.	—	—	85½d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 22nd March settlement. † 23rd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES LISTLESS

(From Our Own Correspondent)

BOMBAY, *7th March*

Listless conditions continued to prevail in the cotton futures market during the week under review. Even the commencement of the delivery period of the current futures contract on the 1st inst. failed to alter the pattern of trading which continued to be extremely dull. In fact, on most days there was no trading at all. Price movements were very narrow. The Jarilla March contract fluctuated bstween Rs. 692.50 and Rs. 693 per three quintals. The fact that not a single bale of cotton was tendered till date against the March contract is an indication of the supply position. Of course, with spot prices ruling, in most cases, above the ceiling, nobody expected any significant volume of tenders.

Prospects for obtaining permission from the Forward Markets Commission for trading in August contract are very bleak. Considering the raw cotton situation in the country it is considered unlikely that the F.M.C. will give assent when there is virtually no cotton to hedge. Operators noted with interest the resolution passed by the Indian Central Cotton Committee at its latest meeting urging decontrol of cotton.

In the spot market mill interest continued to centre round such popular varieties as Vijay, Digvijay, Kalyan, Co2, L.147 and 197/3. At the instance of some mills the Textile Commissioner is reported to have requisitioned substantial quantities of cotton in Gujarat areas. This news coupled with lack of quota tended to restrict mill purchases. Prices were, however, well maintained.

There were renewed inquiries for Bengal *Deshi* in anticipation of export quota. Hopes of a sizable quota have been strengthened following the vigorous plea made at the joint meeting of the Import and Export Advisory Councils by representatives of the trade that an additional quota of at least 75,000 bales of Bengal *Deshi* should be allowed. In view of the good supply of Bengal *Deshi* cotton traders are optimistic that the Government would be easily persuaded to release at least 75,000 bales for export forthwith.

Among foreign cotton, good mill demand continued to be reported for Sudan cotton. Usual interest was noted in American and Pakistan cotton. The plea for large-scale import (at least one million bales) of foreign cotton made at the meeting of the Import and Export Advisory Councils raised hopes that the Government would do something immediately to import foreign cotton.

The East India Cotton Association, with the approval of the Forward Markets Commission, has given permission for the commencement of trading in non-transferable specific delivery contract with effect from 27th February. The varieties in which such trading is permitted are Cambodia (all varieties). Laxmi, Jayadhar, Western and Karungenni grown in Andhra Pradesh, Mysore, Madras and Maharashtra States.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 675; Khamgaon 29/32" 960; Hubli Co2 1,220; Laxmi 1,050; B.P. 52 1,335; Sudan XG3S 1,580; X6S 1,285.

Barring the near months of both the American and American type contracts, which attracted some buying, cotton futures in Liverpool ruled easy during the week. Values receded in selling by commission houses and local traders. Lower advices from the yarn and piecegoods market also imparted weakness to the market. Sudan cotton contracts were subdued. Values, however, remained nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: March 24.25; May 24.45; July 24.60; October 24.10.

American Cotton Mixed Growth Contract: March 24.65; May 24.80; July 24.95; October 24.45.

Sudan: March 31.75; May 30.00; July 29.00.

Modest gains were recorded by cotton futures in New York during the week under review. A sizable volume of Commission House buying and covering found offerings limited. Consequently, prices tended to move up. Bullish weather news from Memphis areas also imparted strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	6-3-62	28-2-62	20-2-62
New York spot	35.65	35.55	35.55
March	33.50	33.50	33.27
May	34.15	34.05	33.96
July	34.46	34.46	34.34

IMPORT OF STAPLE FIBRE

(From Our Own Correspondent)

BOMBAY, *7th March*

The yarn market ruled distinctly easy during the week under review. Art silk yarns were subjected to bull liquidation induced by rumours regarding the abolition of the quota system for the distribution of indigenous yarn. In sympathy with art silk yarns and following reports that the Government of India had decided to import 200,000 bales of staple fibre, staple fibre yarns also drifted downward. The reported decision to import staple fibre is believed to have been prompted by shortages of cotton supplies. The fibre is expected to be distributed to the various cotton mills, so that they can mix it with cotton yarn and produce mixed fabrics. Cotton yarns continued to be dull. Business put through was limited, with values moving narrowly.

Among imported art silk yarns, 150 Japan were marked down by Rs. 55 to Rs. 1,929. 120 Italy fell by Rs. 29 to Rs. 1,900. 150 Italy dropped Rs. 14 to Rs. 1,750. 120 Japan was neglected at Rs. 1,929. Among indigenous yarns, National Rayon 150 bright cones first grade declined by 36 nP to Rs. 11.61. 120 Bright cones first grade eased by 6 nP to Rs. 13.62. Amilan yarn (20 x 1) April contract receded from Rs. 3,430 to Rs. 3,410. June contract was dull at Rs. 3,470.

In the staple fibre yarn (40 x 2) section, spot Centurys encountered selling and receded by 13 nP to Rs. 8.32. Kohinoors moved down from Rs. 8.67 to Rs. 8.38. Citys shed 4 nP to Rs. 5.56. April delivery was somewhat favoured, the quotation improving by Rs. 10 to Rs. 745.

Among cotton yarns, ten counts Moderns were quiet at Rs. 18.50, as also Podars at Rs. 17.62. Twenty counts Gokaks fell by 38 nP to Rs. 22.62. Podars were unchanged at Rs. 21.25 Forty counts T.T. Corins softened by 25 nP to Rs. 33.75. Sixty counts T'Mangals declined by 50 nP to Rs. 51.50. Eighty counts Mahendras eased by a rupee to Rs. 74, while Moderns evoked special support and rose from Rs. 75 to Rs. 76.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	7-3-1962	28-2-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
April	3,410.00	3,430.00
June	3,470.00	
120 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	1,929.00	1,958.00
120 Italy (per 100 kg.)	1,900.00	1,929.00
150 Italy	1,750.00	1,764.00
Nat. Ray. 150 Bt. 1	11.61	11.97
Staple fibre yarn (40 x 2)—		
April	745.00	735.00
Kohinoor (per kg.)	8.38	8.67
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	14.50	18.50
20s Modern	22.62	23.00
32s Madura	29.50	29.25
40s T. T. Corin	33.75	34.00
60s T'Mangal	51.50	52.00
80s Mahindra	76.00	75.00

PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, *6th March*

Malabar black pepper ruled firm during the week in the wake of inquiries from New York which is reported to have bought a sizable quantity at progressively higher prices from $0.35½ to $0.37. Indian growers raised their selling limits as soon as they saw that New York was buyer.

Ungarbled improved from Rs. 302 to Rs. 320 and garbled from Rs. 310 to Rs. 330. March delivery spurted from Rs. 326 to Rs. 340. May was sought after at Rs. 352. Calicut improved to Rs. 315.

Singapore, after touching Str.$132½, improved to Str.$135, with small business as India was underquoting by about 2 cents.

Spot in New York rallied to $0.38 under pressure of buying by grinders whose pipelines are barely covered.

The future of the market solely depends upon the attitude of New York buyers.

Ready pepper in Bombay is nominally quoted at Rs. 169 per 50 kilos.

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *7th March*

For the second week in succession, oilseeds and oils were subdued in the absence of fresh support. A mild rally, however, was in evidence towards the close of the week on hopes of some incentives for groundnut oil exports in the light of the discussions at the meeting of the Import and Export Promotion Advisory Councils held at New Delhi this week. Nevertheless, the closing prices were well below those prevailing a week ago. Groundnuts were featureless, as the *vanaspati* manufacturers and local crushers were hesitant to extend support in anticipation of a further decline in prices. The sentiment was also adversely affected by the decline in export of groundnut oil during the month of February, the quantity actually shipped being only 397 metric tons, as against 3,000 tons in January. Castorseeds, too, ruled easy, despite reports of some offtake of castor oil by Communist countries and higher exports at 1,590 metric tons in February, as against 490 tons in the previous month. For fear of heavy tenders against the maturing contract in castorseeds acted as a damper. There was bull liquidation in linseeds, following weak advices from North Indian mustardseed markets and heavy arrivals from upcountry centres. Cottonseeds were listless.

The groundnut May 1962 contract fell from Rs. 240.62 to Rs. 238.50, before closing at Rs. 238.87. Khandesh quality, which had gone up initially from Rs. 48.25 to Rs. 48.50, moved down to Rs. 48. Oil May 1962 contract lost 50 nP to Rs. 20. Oil ex-mill shed 20 nP to Rs. 19.80 and railway receipts 15 nP to Rs. 19.50.

In the castorseed section, the March 1962 contract fluctuated between Rs. 172 and Rs. 173.50 and wound up at Rs. 172.37. Ready Madras closed lower at Rs. 34.50, as against Rs. 34.75. Oil Commercial declined by 10 nP to Rs. 14.25 and oil B.S.S. by 5 nP to Rs. 15.10.

Both linseed March and June 1962 contracts eased by 19 nP to Rs. 37.56. Bold ready lost Rs. 1.50 to Rs. 37.25. Linseed oil dropped 90 nP to Rs. 16.50.

Among cottonseeds, the April 1962 contract receded by Re. 1.50 to Rs. 106.25. July contract fell by 75 nP to Rs. 109. Bearers and non-whites suffered a loss of 15 nP to Rs. 20.65. Whites shed 5 nP to Rs. 20.65.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 6th March as compared with those of the two previous weeks:

	6-3-1962	28-2-1962	21-2-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	238.87	240.62	245.50
Nizam bold	47.50	47.50	48.12
Khandesh quality	48.00	48.25	48.50
Oil ex-mill ready*	19.80	20.00	20.10
Railway receipts*	19.50	19.65	19.80
Oil May 1962	20.00	20.50	20.60
Castorseed			
March 1962	172.37	172.37	175.75
June 1962	171.87	171.75	173.75
Ready Madras	34.50	34.75	35.37
Ready Kanpur	33.25	33.75	34.25
Oil B.S.S.†	15.10	15.15	15.25
Oil commercial†	14.25	14.35	15.00
Linseed			
March 1962	37.56	37.75	39.75
June 1962	37.56	37.75	38.81
Bold ready	37.25	38.75	42.50
Oil ready†	16.50	17.40	18.50
Cottonseed			
April 1962	106.25	107.75	110.25
July 1962	109.00	109.75	110.25
Niger seed	36.50	36.00	36.00
Kardi seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA DUSTS EASIER

(From Our Own Correspondent)

CALCUTTA, *6th March*

Quality teas continued to attract attention during the export sales held yesterday, while dusts on offer in last week's internal auctions were easier. Tea shipments during the week registered a further decline. The ample liner space available for forward booking is an index in this regard. It was noted that tea stocks in the United Kingdom increased by 2 million lbs. to 143 million lbs. in the week ended 23rd February as compared with the previous week. This increase should be considered insignificant. Now that shipments are declining, a gradual fall in the U.K. stocks is expected. That these stocks are considerably lower than a year ago is indicative of the slow purchases made by the U.K. expecting a decline in prices in view of the larger world output. That British buyers are making an all-out effort to make up for the slow purchases earlier in the season is evident in the keen demand in auctions in London where last week good Assams and Dooars were steady.

Much concern at the decline in demand for Indian tea in the United States has time and again been stressed by spokesmen on behalf of both the industry and the trade. It is thought that, although the price factor should be a cause, quality has also something to do with this trend. Against this background, the trade would desire that Indian blending firms should pay immediate attention to make instant tea. In this respect, Ceylon has stolen a march over India, and that country's first plant for instant tea, being put up by a German firm, will commence operation by the middle of this year.

The need for reducing costs of production and passing on the benefit to the foreign consumer with a view to achieving the export target of 610 million lbs. by the end of 1966 has also been stressed too often. It is not possible to reduce wages, but economic realism should make it possible that any attempt to increase wages should be put off for better times, if not resisted altogether. Against such a background, the report that the Wage Board for the Tea Industry has recommended an interim wage increase for tea garden workers in North India has been noted with alarm. This burden will increase costs of tea by as much as Rs. 30 lakhs a year. Moreover, what is in store for the tea industry in the forthcoming budget cannot be foreseen. Producing organisations have already voiced their strong opposition to the Wage Board's recommendation.

The tea industry in both parts of the country has called on the Government of India to reduce taxes with a view to enabling the industry to regain lost markets. An analysis of export figures has been cited as convincing proof in the demand for the abolition of the export duty. The industry readily admits that it should contribute to the country's resources for carrying out the third Plan, but taxes are so very high that the industry's earning power has started diminishing. At the Tea Trade Association's meeting held in Cochin last week, the Association Chairman, Mr. Watson, urged the Government to abolish the export duty and cess and sales taxes on tea, and replace these with an all-embracing zonal excise duty. He was confident that such a measure would lead to increased exports. He desired that India should intensify promotional campaigns abroad.

Dusts on offer during last week's internal sales aggregated 29,933 packages, which met with good demand at declining prices. Orthodox teas fell by 10 to 15 nP. Legg-cut teas also eased, though the bright liquoring teas registered a small increase in prices. The good C.T.Cs sold well, but a few occasional lines met with an easier trend. Medium C.T.Cs gave way by 20 nP, but the secondary grades were firm. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 7.00; medium Assam C.T.C. dust Rs. 5.40 to Rs. 5.80; legg-cut dust Rs. 4.50 to Rs. 5.80; medium Assam dust Rs. 4.30 to Rs. 4.80; and plain orthodox dust Rs. 3.90 to Rs. 4.40.

Leaf on offer amounting to 810 packages were irregular.

Export offerings during yesterday's sales amounting to 60,456 packages met with good demand. Offerings consisted mostly of end-of-season varieties. Good support was accorded to whole leaf grades, but tippy teas were lower. Plain brokens and fannings were readily absorbed, but those lots containing stalk and fibre eased by 15 nP. Among C.T.Cs, the best teas met with a dearer market and the brokens were subjected to keen competition. The balance of this category eased by 20 nP. Demand for the more fibrous secondary types was very poor. Good liquoring orthodox B.O.Ps and fannings were steady. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.00 to Rs. 6.50 (nominal), best Assam C.T.C. B.P. Rs. 6.00 to Rs. 6.50 (nominal), medium Assam C.T.C. fannings—not quotable and plain fannings not quotable.

MEDIUM TEAS STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *27th February*

A total of 332,000 kgs. was offered in sale No. 9 held today. Quality Nilgiris showed a slight decline, but mediums were useful and often brighter. Demand for medium and lowgrown teas was strong, while Nilgiri B.O.Ps met with only limited inquiry. Highgrown B.O.Ps evoked less demand and there were many withdrawals in this category. Selected fannings, however, were occasionally dearer. Good medium and medium brokens met with keen competition at rates which were generally dearer, particularly those which showed an improvement in quality. Fannings in this category ruled fully firm and often dearer. Low medium brokens were fully firm, whilst their fannings often appreciated in price. Teas of unorthodox manufacture elicited useful inquiry and in some cases were dearer on last rates. Whole leaf grades were well supported and generally dearer.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	4.00-4.20	4.70-4.80
Mediums	4.20-5.10	4.85-5.15
Good mediums	5.15-6.10	5.20-5.60
Nilgiri B.O.P.	5.50-10.20	

The average price realised in sale No. 9 was Rs. 5.48 per kilo, as against Rs. 5.82 in the previous week and Rs. 5.18 in the corresponding sale last year.

About 224,000 kgs. were offered in dust sale No. 9 on Thursday, 1st March. There was good general demand. Black, grainy and exportable kinds met with keen support and were firm to dearer. Medium Travancore and Anamallai teas with fibre inclined easier, whilst Wynaad types evoked better enquiry and sold at around last rates. Fibrous and milled residual grades were the weakest feature of the sale, with poor support, there being a number of withdrawals. Teas of unorthodox description were keenly competed for and were firm to dearer, whereas clean, black dusts continued to rule strong. Highgrown dusts met with strong demand and were dearer, particularly those with quality.

The average price realised in dust sale No. 9 was Rs. 4.06 per kilo, as compared with Rs. 3.96 a week ago and Rs. 4.75 in the corresponding sale last year.

Colombo: Just under 5½ million pounds were offered. Highgrowns were irregular and considerably easier in price, whilst best mediums were also lower. Other types remained firm, with lowgrowns also steady.

London: *North Indian and other growths*: In Monday's auction, there was a strong demand. The rates remained about the same as in last week's sale and there was no quotable change.

Ceylon and South Indians: In Tuesday's sale, 23,426 packages were offered, of which 7,578 packages came to a strong market and were considerably dearer. Lowgrowns advanced by 1d. South Indians also met with good inquiry and were generally firm to dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No. 10*: 351,000 kgs. offered. Irregular and selective demand. Plain and low mediums 10 to 20 nP easier. Medium and good medium fully firm to dearer. Nilgiris neglected, but were sold sometimes dearer. Unorthodox considerably easier."

JUTES IMPROVE

(From Our Own Correspondent)

CALCUTTA, *6th March*

Following increased inquiries from overseas and larger short-covering, both hessian and heavy goods constructions improved during the week under review. The recession in hessian prices that followed the fixation of a maximum price by the East India Jute and Hessian Exchange Ltd. in respect of settlement of February contracts proved short-lived. Speculation was rife and full use was made of the option for changes in contracts for goods already sold by mills. Mills purchased fibre very liberally and, at Calcutta, the minimum levels were well maintained. The good quality fibre continued to command a premium. The tendency of fibre sellers to be reserved was reflected in mofussil prices rising to above Calcutta's parity. Hitherto,

stockists were eager to find buyers, but they now think that it would pay to hold on to as much of their existing stocks as possible. With the impressive increase in foreign orders for goods, it was anticipated that mills would maintain the increased tempo of production. Although mills are adequately stocked with fibre, which is expected to see them through at least up to the beginning of June, their need for replenishment of stock is expected to grow having regard to the existing demand for goods.

It is becoming clear now that fibre prices are susceptible to harden. It is usually towards the end of the season that prices register high levels. The last season's highest levels were touched in March 1961, when shortage was acute and it was becoming evident that mills would have no alternative other than to stagger production. That prices in certain mofussil areas have risen to above Calcutta's parity has not been a complete surprise. Growers have very little yet to be disposed of. In anticipation of an increase in prices, stockists are desirous of inducing cultivators to part with the balance of their holdings now so that the former can benefit from the expected increase in prices and thus write off a portion of the loss being incurred currently. As a result, stockists are reluctant to sell. Now that sowing time is approaching, it is expected that the steady conditions in the mofussil markets will encourage cultivators to sow as big an area as in the last season. The Buffer Stock Agency was reported to be in readiness to enter the market. However, in view of the changing conditions in the market, trade circles thought that it would be hardly necessary for the B.S.A. to commence its activities. Current course of price movement is making it clear that cultivators have not much to sell. If the B.S.A. is not thus to purchase from cultivators, the question as to from whom it will purchase would arise. Surely it is not the Government's intention to invest money in acquiring stocks in the bazar. These stocks have already been acquired from the cultivators.

If only transport facilities can be improved, much of the remaining stocks from the interior can be moved to mills' stations. As and when the Buffer Stock Agency purchases fibre in the mofussil areas, it will have to first find storage facilities. The Agency's operations, it was reported, would be put through by normal trade channels; however, these channels would be expected to store the fibre which they thus purchase from cultivators, until the Agency can finally find the ultimate buyer. In this case, the buying that can be done by normal trade channels would be limited, as fibre bought is not expected to move and storage space would offer a formidable problem. Mills are at present purchasing at the rate of 100,000 maunds a day and, if they continue at this rate of buying, it is expected that, with reduced arrivals, prices are bound to remain firm. Against such a background, the circulation of the news that the Buffer Stock Agency was ready to enter the market, it was thought, sprang from a desire to maintain prices firm without actually the Agency having to commence operations. To such a cause is also attributed the rise in mofussil prices above the minimum levels.

It is pointed out that, since the mills are utilising their maximum capacity for storage of fibre, they can add to their stocks equivalent to consumption. At this rate, all fibre in stock in the bazaar as well as the balance lying with cultivators for marketing is expected to reach mills' godowns by June. As such, there is no point in asking mills to increase their purchases further. A suggestion offered to the Buffer Stock Agency is that, now that it is ready to commence operations, it should buy jute goods from mill's rather than fibre from cultivators. The Agency lacks storage facilities for fibre as well as goods. The goods it thus buys can be continued to be kept with mills until the Agency can find ultimate buyers for the goods. Such a course would increase the demand for goods and, in turn, the demand for fibre would be maintained on an even keel.

During the week, mills showed keen interest in high quality fibre, which commanded a premium ranging from 50 nP to Re. 1 a maund over the minimum prices. While sellers offered an assortment of all varieties, mills were not interested to add to their stocks of mesta. Arrivals during the week were estimated to have fallen from 500,000 maunds to 455,000 maunds. The minimum quota issued by the I.J.M.A. exceeded this quantity. Since the stockists were interested to bring into the bazaar as much of the remaining portion of fibre with cultivators, mofussil rates firmed up and, in certain cases, rose above Calcutta's parity. Quotations in Calcutta for March-April delivery continued unchanged as follows: Northern bottoms Rs. 29.50 a maund; Daissee bottoms Rs. 33.00; and Assam bottoms Rs. 30.00.

Conditions in the Narayanganj (Pakistan) market became steadier during the week as a result of increased support from loose jute buyers as well as overseas customers. This led to an upward revision of E.P.C. prices in regard to certain varieties. At £86 a ton lightnings added £1, with outport tossa scoring to £91 from £87. Cuttings hardened by £2. Demand for cuttings showed an impressive advance. Interest from London was confined to outport tossa and export hearts, prices of which were above the E.P.C. levels.

The goods market opened firm on Tuesday last against the background of increased inquiries from overseas. Ready B. twills hardened from Rs. 126.00 to Rs. 127.50. Short-covering was keen in anticipation of orders from Indonesia and the Middle East. In sympathy, ready hessian 40" 10 oz. gained fractionally to Rs. 56.80. Although on the following day business passing was small, more overseas inquiries were received to push up B. twills to Rs. 127.75 and hessian 40" 10 oz. to Rs 57.50. Covering business was done on a greater scale. It was anticipated that goods in stock with mills as at the end of March would show an impressive decline. On Thursday, against a steady undertone, B. twills rose to Rs. 129 and hessian 40" 10 oz. to Rs. 58.75. There was only scattered business done with overseas buyers on Friday and, since it was clear that the hardening trend would be resisted by buyers, prices closed slightly easier on balance. B. twills were pushed down to Rs. 128.75 and hessian 40" 10 oz. at Rs. 58.00. Ready heavy goods met with keen demand yesterday and continued short-covering, ready B. twills spurted to Rs. 130.75. Sellers were very much reserved. Overseas business, however, was limited. Hessian 40" 10 oz. eased to Rs. 55.00.

PLEA FOR LIBERAL METAL IMPORTS

(From Our Own Correspondent)

CALCUTTA, *6th March*

In response to easier advices from overseas markets and in anticipation of liberal imports of metals in the forthcoming policy announcement, conditions in the base metal market were quiet during the week under review. Further releases of virgin copper against permits and fresh arrivals led to lesser attention for copper scrap, offerings of which were nevertheless few and far between. Utensil scrap was quiet at Rs. 501 per 100 kgs, and berry quality scrap at Rs. 541 per 100 kgs. On the London Metal Exchange, spot copper opened at £236 a ton and eased to £234½ before recovering partially to £235½. Easiness in London was attributed to lower consumer demand.

On the eve of the announcement of the import policy for the six months commencing 1st April, the trade has urged the Government of India to consider to hand back the import of non-ferrous metals to established importers from the State Trading Corporation. It has been pointed out that, now that the profit margin has been narrowed down in view of Government fixation as a result of controlled distribution of imports, much useful purpose would be served by canalising the trade through established importers, who, by virtue of their considerable experience, are in a better position to study foreign market trends and arrange import when prices are most favourable. A plea has also been made to extend the present basic period of 1952-53—1955-56 to include 1956-57 in respect of the imports that are still allowed through usual trade channels.

In view of the increased requirements of the country, the Government has been asked to increase the quota allowed to established importers in respect of copper wrought, sections, pipes and tubes from 12½ to 100 per cent. India has at present two extrusion plants in the private sector—there is also one in the public sector the production of which is, however, reserved for ordnance requirements in the first instance—producing non-ferrous semis such as tubes, pipes, rods, wires, sections of different types, including the delicate ones required by the electrical goods producing industry, angles, hinges, busbars, bushes, cored bars, flats, rolled strips, squares and hexagons. The pioneer plant near Calcutta has enough and more capacity to increase its existing production in both ranges and quantity. Further, it has undertaken considerable expansion, which could not so far be completed owing to want of foreign exchange to cover cost of machinery imports. It has, however, now been able to secure a foreign exchange loan, and it hopes to complete the expansion plan in the near future.

On the other hand, the trade's plea for increasing the quota of established importers in respect of zinc imports from 30 to 60 per cent and that in respect of tin from 40 to 50 per cent as well as for fixing a quota of 25 per cent in respect of lead ingots and pigs is on stronger grounds. As stated, shortage of base metals hampered production in many an industrial unit producing non-ferrous semis and end-use products in the last year. The withdrawal of the ban now in force on the import of German silver/nickel silver scrap and sheets has been urged, and fixation of a quota of 33⅓ per cent has been suggested.

Lead was quiet in the local market at Rs. 124 per 100 kgs. Supplies were plentiful, but demand was hesitant. In London, the quotation for lead gave way from £60¾ to £59½ a ton. Tin weakened from £954 to £951 a ton before recovering to £953½. The local quotation was around Rs. 1,574.75 per 100 kgs., same as last week. Electrolytic zinc in London closed £1⅛ lower on balance at £68¾ a ton.

talking about banks

There is more in banking with the STATE BANK OF INDIA than the mere possession of a bank account—first class service, security and safety and ability to obtain friendly and helpful advice and information when required.

The wide experience of the State Bank is at the disposal of the customers whether their accounts be large or small. The State Bank can be of assistance to your business and its problems. If the business covers a small-scale industry, you will find special attitudes aimed at earnest desire to help. In the co-operative sector too, the Bank has similar attitudes with schemes offering special facilities. Every kind of foreign exchange business is transacted. Why not contact the nearest office?

You will always find a friend at

Cotton Exports from Bombay (by sea)	Period	(In Bales of 180 Kgs.)
	During Dec., 1961	24,577
	During Oct. 1960	30,149
	1st Sept.s to 31st Dec., 1961	58,342
	1st Sept. to 31st Dec., 1960	35,231
Cotton Pressed in India † (In running bales)	Week ended 16th Feb., 1961	(Bales of 392 lbs.) 1,861
	Corresponding week 1961	118 296
	1st Sept. to 16th Feb., 1961–62	1,224,704‡
	Corresponding period, 1960–61	2,210,269
Karachi (Pakistan)— Receipts	1st Sept. to 15th Feb., 1961–62	787,437
	Corresponding period, 1960–61	683,463
Exports	1st Sept. to 15th Feb., 1961–62	287,846
	Corresponding period, 1960–61	316,108

(J) By Rail and Sea. † Incomplete * By Rail, Sea and Road. (b) From Sept. 1961 to Dec., 1961. (a) From Sept. 1960 to Feb., 1961.
— Received. A-Adjusted. ‡ For 1st March only.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares, P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. D.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. /—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share,'.

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 5 per cent per annum and also to participate further dividend of 5 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

HEAVY TAXATION INEVITABLE

A FEATURE of the Central Budget for 1962-63, presented to Parliament by Mr. Morarji Desai, Finance Minister in the outgoing Government, on Wednesday the 14th inst., is its incompleteness. Revenue and expenditure, as also resources and capital outlay have been estimated, leaving the gap uncovered. Even these estimates are provisional, for they may well be revised when the budget is finally presented to the third Parliament which has just been elected. The incomplete and provisional character of the budget is, however, a Constitutional necessity, as all that the outgoing Parliament can do is to give a vote on account to meet the expenditure of the Government until the new Parliament sanctions the budget for the next year. Nevertheless, this interim budget is not without its value. It serves at least two useful purposes. First, it provides an opportunity for the Government to take into account the criticisms and suggestions of the public on the budget estimates while presenting the final budget. Secondly, the deficit forecast for the next year prepares the public psychologically for shouldering the burden of additional taxation. The people now know fairly well how much more taxes they will have to pay in the coming twelve months; only the form and nature of taxes remain to be decided.

Surpluses on revenue account have been a regular feature of actuals and revised estimates of Government of India's finances since 1948-49. It is, therefore, no surprise to find that the deficit of Rs. 33.66 crores in the revised estimates for 1960-61 has turned out to be a surplus of Rs. 51.25 crores in the final accounts for that year. Similarly, the small deficit of Rs. 5.57 crores in the budget for 1961-62, after taking into account fresh taxation of the order of Rs. 57 crores imposed last year, has become a surplus of Rs. 33.96 crores in the revised estimates for the current year. And this surplus will be larger still when the accounts for this year are finalised and shown in the budget to be presented next year. On this score, one may be tempted to argue that no additional taxation at all need be imposed for covering the revenue deficit of Rs. 63.46 crores shown in the budget for 1962-63. But it will not be a correct argument. The crucial thing is not the revenue deficit, but the overall deficit. And this deficit has been expanding. In the budget for 1961-62, it was placed at Rs. 70 crores, but, according to the revised estimates, it is as high as Rs. 121 crores. It is higher still at Rs. 147 crores for the next year. No Government, faced with such a situation, can afford to leave the whole of this deficit uncovered, as it will mean a heavy dose of inflationary financing. Already, according to the *Economic Survey* for 1961-62, "the deficit financing by the Central and State Governments during the current year is likely to be somewhat larger than what was assumed (that is, Rs. 119.3 crores) in the budgets," as the shortfall in small savings is nearly 50 per cent and receipts from external assistance have lagged behind. This is in contrast to the experience in 1960-61, in which year the deficit financing was only Rs. 50.8 crores (revised estimate), that is, less than one-third of the budget estimate of Rs. 159.9 crores. Although the revised estimate of deficit financing for the current year is not yet available, it will be not less than Rs. 170 crores. If allowance is made for the deficit financing by State Governments in 1962-63, the total of such financing in the coming year will easily exceed Rs. 200 crores. The Government has, therefore, no choice but to find additional taxation of the order of Rs. 75 crores at least. Even then, the deficit financing will be about Rs. 125 crores, which, together with that incurred in the current year, will mean that, in the first two years alone, more than 50 per cent of the Rs. 550 crores of deficit financing budgeted for the whole third Plan period will have been covered.

The alternative to a large dose of additional taxation is to cut the Plan outlay. This is neither feasible nor desirable. Last year, almost the whole of the additional taxation was found through indirect taxes. The scope for repeating this method, without facing the serious risk of price inflation, is limited, especially in the context of the need for raising the railway fares and freights discussed in our next article. Whoever happens to be the Finance Minister will, therefore, have to perform the unpleasant task of enhancing the direct taxes, besides tightening the net to prevent tax evasion and tuning up the tax-collecting machinery. There is also one more reason why the direct taxes may be tapped this time. And it is the need to prevent a boom on the stock exchanges. If the final budget does not contain any increase in the incidence of direct taxation, equity values will shoot up like a rocket, a development which, in an economy dominated by leftists, will prove more harmful to the private sector than additional direct taxation. May be, the corporations and individuals in the annual income bracket of Rs. 12,000

mated, and that by a large amount, the receipts from small savings. The experience in the current year has been discouraging. Net collections under this head in the first nine months of 1961-62 were only Rs. 45 crores, as against Rs. 60 crores during the corresponding period of the previous year. Commenting on this trend, the *Economic Survey* says: "While a part of this decline is a correction of the abnormal increase in Post Office Savings Bank deposits in 1960-61 when confidence in commercial banking was disturbed on account of certain bank failures, the fact remains that net collections of small savings during the current year are not likely to come up to the level of Rs. 105 crores for which credit was taken in the budget estimates." And yet in the budget for 1962-63 also, credit has been taken for Rs. 105 crores from small savings. There is no prospect whatever of such a large amount being collected from this source, unless the rates of interest on these investments are raised significantly and the enhanced rates are simultaneously made applicable to the existing holders also, lest they should rush to encash them in order to buy the new certificates. Any day, higher interest rates, as an instrument for raising and obtaining more savings, are preferable to excessive taxation and/or deficit financing.

INTERIM RAILWAY BUDGET

THE Railway Budget for 1962-63, presented by Mr. Jagjivan Ram on the 13th instant to the second Lok Sabha which will be shortly dissolved, is in the nature of an interim budget. Although it incorporates the estimates for the whole year on the basis of existing passenger fares and freight rates and present costs, its main purpose is to facilitate a vote on account for the grant of proportionate supplies for the first three months of the fiscal year, pending approval, by the new Parliament which will be convoked next month, of the regular Railway Budget. The present budget, in spite of its interim nature, is still significant in more ways than one. In the first place, the revised estimates for the fiscal year 1961-62 are pretty close to the gross traffic receipts and working expenses originally estimated in the budget for that year. Secondly, the expected buoyancy in gross traffic receipts in 1962-63 on the basis of existing fares and freight rates will still not mean a substantial net surplus creditable to the Development Fund. And this is a pointer to the need for and the certainty of increases in fares and freight rates in the regular budget which will be presented probably in May next. In fact, what is in store for railway users is quite obvious from Mr. Jagjivan Ram's broad statement that, "unless the railway resources are augmented, a temporary loan from General Revenues of such magnitude as will be able to finance the Fund will be unavoidable." In the light of the Central Budget for 1962-63 referred to in the previous article, there is surely no question of General Revenues going to the rescue of Railways.

If thus the ground is now being prepared for increases in fares and freight rates, there is some justification for it in the none-too-comfortable state of railway finances, as revealed by the revised estimates for 1961-62 and the budget estimates for 1962-63 in comparison with the actuals for 1960-61. It will be seen from the consolidated table appearing as part of this article that two items, namely, appropriation to the depreciation reserve fund and dividend to the Government on the Railway capital-at-charge together account for Rs. 128.2 crores according to the revised estimates for 1961-62, whereas they accounted for only Rs. 100.9 crores in 1960-61. The difference (Rs. 27.3 crores) between the two figures virtually represents the larger part of the net surplus of Rs. 32.0 crores in 1960-61. That much surplus became possible because the allocations to the depreciation reserve fund and the dividend on capital-at-charge in that year were not governed by the relevant recommendations of the Railway Convention Committee of 1960—recommendations applicable only to the five-year period from 1961-62 to 1965-66. As far as 1961-62 is concerned, it is, of course, a heartening feature of the finances in that year that, in spite of the increase of Rs. 20 crores in contribution to the depreciation reserve fund and the higher rate (4.25 per cent) of dividend to General Revenues, the net surplus has turned out to be Rs. 16.5 crores. Considering the twin fact that there was no increase in passenger fares in 1961-62 and that freight adjustments in some lines were only of a minor and marginal character, with practically no significance from the point of view of additional revenue, it may be readily recognised that the estimated surplus of Rs. 16.5 crores is surprisingly substantial. But even this surplus, as the Railway Minister has pointed out, cannot be regarded as satisfactory in relation to an average annual expenditure in the third Plan, of about Rs. 23 crores on works chargeable to the development fund which, strictly speaking, should be built up entirely from the annual railway surpluses.

The budget estimates for 1962-63, too, do not envisage an adequate surplus for allocation to the development fund. The gross traffic receipts—estimated on the basis of a small increase in passenger traffic and an increase of 15 million originating tons in goods traffic over 1961-62—are, of course, expected to be Rs. 524.1 crores at the existing level of fares and rates. An increase of Rs. 22.9 crores in gross traffic receipts in the budget year, as compared with the current year, will, however, be swallowed up entirely by the increases in net working expenses, appropriation to the depreciation reserve fund and the dividend to General Revenues. The increase of Rs. 15.2 crores in working expenses, incidentally, is not due to any addition to wages and salaries. On the contrary, it is due mostly to the increased cost of operation corresponding to the anticipated growth in the level of passenger and goods traffic and the additional cost of repairs and maintenance of assets resulting from the year-to-year increase in the volume of assets and their use. Whatever be the factors responsible for the estimated low surplus of Rs. 13.2 crores, there can be no gainsaying that the amount itself falls very much short of the Rs. 23 crores to be charged to the development fund in the budget year.

It may be roughly figured out from the break-up of the budget allocations for the rolling stock, works and machinery programme that, with net surpluses of Rs. 16.5 crores in 1961-62 (Revised) and Rs. 13.2 crores in 1962-63 (Budget), the aggregate shortfall in allocations in the two years to the development fund will be Rs. 16.3 crores. Is this all the amount that will have to be made good by a possible upward revision in fares and rates? That does not seem to be so, for the present Rs. 1,325-crore third Plan of the railways, which has exceeded the earlier tentative size by Rs. 70 crores, is proposed to be increased further. There is indication to that effect in Mr. Jagjivan Ram's statement which has referred to the likelihood of the target of freight movement (245 million originating tons) being materially exceeded on account of movement of coal first from collieries to washeries and then from washeries to their final consumers. Surely, the additional resources that will be required for financing works on the revenue side may well be substantially more—how much more it is difficult to assess now—in the emerging circumstances. There is, therefore, a case for a judicious upward revision of fares and freights in the interest of a more or less total fulfilment of the goals of a revised Railway Plan which will be expected to remove the transport bottlenecks already in evidence.

Finances of Railways—A Summary

(Rupees in crores)

	Actuals 1960-61	Budget 1961-62	Revised 1961-62	Budget 1962-63
Gross Traffic Receipts* ..	456.80	499.02	501.24	524.10
Working Expenses Net, i.e., after taking credits or recoveries ..	313.24	332.67	330.55	345.74
Net Miscellaneous Expenditure (including cost of works charged to Revenue)	10.69	14.87	13.51	16.35
Appropriation to Depreciation Reserve Fund from Revenue ..	45.00	65.00	65.00	67.00
Tota ..	368.93	412.54	409.06	429.09
Net Railway Revenue ..	87.87	86.48	92.18	95.01
Payment to General Revenues :—				
(a) Dividend on Railway Capital-at-Charge (at 4 per cent. for 1960-61 and 4.25 per cent. for the quinquennium 1961-66) ..	55.86	65.34	63.20	69.35
(b) In lieu of passenger fare tax	..	12.50	12.50	12.50
Net Surplus ..	32.01	8.64	16.48	13.16

* The increased gross traffic receipts from 1961-62 onwards include the element of passenger fare tax merged in railway fares from 1st April 1961 against which a payment of Rs. 12.50 crores is to be made by the Railways annually to the General Exchequer, *during the quinquennium 1961-66*, for transfer to the States.

So much for the budget estimates of the railways which has exceeded the earlier tentative size by Rs. 70 crores, is proposed to be increased further. There is indication to that effect in Mr. Jagjivan Ram's statement which has referred to the likelihood of the target of freight movement (245 million originating tons) being materially exceeded on account of movement of coal first from collieries to washeries and then from washeries to their final consumers. Surely, the additional resources that will be required for financing works on the revenue side may well be substantially more—how much more it is difficult to assess now—in the emerging circumstances. There is, therefore, a case for a judicious upward revision of fares and freights in the interest of a more or less total fulfilment of the goals of a revised Railway Plan which will be expected to remove the transport bottlenecks already in evidence.

Any such case may derive added strength from the fact that the structure of fares and freights has been maintained at a relatively moderate level for the past several years. It may be recalled that the only change in the passenger fares made in the period subsequent to 1951 was in April 1955, when (a) the fares of the air-conditioned class were slightly increased, (b) the old first class was abolished, (c) the old second and inter-classes were renamed as first and second classes, respectively, and (d) some relief to long-distance passengers was given. These adjustments resulted in no appreciable increase in passenger earnings per passenger mile, and the increase in total passenger earnings in the second Plan period was almost entirely due to the increase in the number of passengers carried. In 1957-58, the passengers were, of course, called upon to pay a tax on their fares, but the benefit of this levy was exclusively for the State Governments.

As for freight rates, a complete revision was made in October 1958. The revised freight structure merged in itself the supplementary charge of 12½ per cent brought into force from 1st July 1957 on all freight traffic with exceptions in the case of grains and pulses, newsprint and books, etc. Thanks to the 1958 revision, there came about a further increase, on the average, of about 4 per cent in freight rates—an increase which, incidentally, was much less than the 13 per cent increase suggested by the Railway Freight Structure Enquiry Committee. Subsequently, in 1960-61 a 5 per cent surcharge was levied on goods traffic (excluding postal, military and railways' own traffic and export ore) to meet the increased cost of staff consequent on the acceptance of the Pay Commission's recommendations. Alongside of these increases, concessions in freight rates were also allowed to some 47 commodities to facilitate exports. As of 1960-61, the gross freight traffic receipts registered an increase of about Rs. 140.5 crores over 1955-56, out of which only about Rs. 63.6 crores represent upward adjustments in freight rates, the balance of Rs. 76.9 crores being additional earnings from the growth of traffic. The minor and marginal adjustments effected in freight rates in 1961-62, the first year of the third Plan, resulted in additional earnings of no more than Rs. 1.8 crore per annum.

An appropriate revision of both fares and freights cannot obviously be delayed any longer if the railways are to have more internal resources for their third Plan. But the question is whether the increases are to be some uniform percentages in the case of passenger classes and categories of revenue-earning goods traffic or they are to be differential in their incidence. If the canon of equity is to be applied to fare increase, a lower percentage increase in third class fares and a higher percentage increase in upper class fares would seem to be called for. But if the idea is to discourage unnecessary railway travel as much as possible and effect, at the same time, some increase in passenger earnings, a rather steep increase in third class fares alone may serve that purpose, for third class passenger kilometres represent as much as 95 per cent of all passenger kilometres. In our opinion, it is the latter consideration which is more relevant, because that will enable more rolling stock to be made available for moving goods. The criteria that will have to be applied to freight increase, if it is not to be by a uniform percentage, may present greater difficulties in view of the circumstance that the products of mines (coal, ores, etc.), which are industrial raw materials, account for about 50 per cent of all revenue-earning traffic, that is, traffic other than railway coal and materials. There are, besides, agricultural and forest raw materials for industries, and these account for about 10 per cent of all revenue-earning traffic. How to increase the rates applicable to these vital raw materials without unduly upsetting the cost structure of industries is a question of some complexity, especially in the context of the imperative need for pushing up exports. Much careful thought must, therefore, be bestowed on this problem before the authorities make up their minds.

HOUSE OF BIRLAS

A PARTICULARLY rewarding method of study of the economic history of a country is to trace the origin, growth and development of its leading business and industrial houses. Such studies have been made in the West and they have proved both fascinating and instructive. In India itself, a house worthy of study is the House of Birlas. Few houses have had a more exciting past or have been more intimately connected with national economic progress than this House. When the centenary of this House was celebrated last week (on the 10th inst.), it was certainly something of a national event. Indeed, it may even be regarded as an international event, considering that the centre [illegible]

world respects and recognises the House of Birlas as a leading institution, functioning under a democratic set-up and reflecting the national aspirations of a developing country.

A distinguishing feature of the Birla House is its sense of economic purpose and social mission, representing all that is best in Indian tradition. It is certainly not a mere accident of circumstance that the Birla House has been associated in the public mind with the movement for national freedom. The Birlas have nearly always identified themselves with our national cause and it must be remembered that it would have required a very high spirit of idealism to have been associated with the national movement in pre-independence years. After all, the familiar gibe that many people are in the Congress today for what they can get out of it can certainly not be hurled against the Birlas. They were, as they have always been, with the Congress. It is true that, occasionally, the Birlas may not see eye to eye with the Government in power, but their mental honesty and sincerity of conviction have always been above reproach.

Small wonder, then, that, when Mr. G. D. Birla, the best known member of the family, announced last week that their House would soon set up a large new technological institution near Delhi or the Himalayas to mark the centenary of their House, he was loudly cheered, but few were surprised. The move was in the best traditions of the House itself, with a well-deserved reputation for serving the national cause, in general, and the cause of national educational reconstruction, in particular. On more than one occasion, G.D., as he is affectionately known to his countrymen, has gone on record as emphasising that, though investment in education may yield no immediate return, there is no surer, nor more enduring, way of building up the nation than through education. There can be no greater tribute to the Birlas' spirit of educational idealism than the cultural complex in Pilani (Rajasthan), with its magnificent Arts College and a well-equipped Engineering College. The Birla Educational Trust, together with the Hindustan Charity Trust (which is running an Engineering College at Ranchi), has made a distinct contribution to India's educational progress.

While the Birlas' educational charities are a fine tribute to their continuing interest in national development, it must be remembered that what makes such generosity possible are their large and prosperous business and industrial enterprises. In other words, while the charities are yet another example of what enlightened free enterprise can do, and frequently does, for a country which offers it the right climate, the Birla House which has made these charities represents what Indian intelligence, talent and devotion to duty can achieve in the material sphere, once it is assured even a minimum of that climate. From small beginnings, the House has grown from strength to strength. It has certainly come a long way since the 22-year old Shivnarain Birla came to Bombay a hundred years ago to set up a small business of his own. At first, the business consisted only of trade in commodities. Bullion and *sarafi* business came later. Birla Brothers Ltd., as such, was formed only in 1918. Since then, however, many new enterprises have been added. Perhaps, there is at present no important industry, except steel, in which the Birlas do not have either one or more important units of their own. Their industrial complex includes cotton and flax, textiles, man-made fibres, jute and woollen textiles, paper, automobiles, chemicals, aluminium, heavy and light engineering, sugar mills, coal and food products. The total block capital of the Birla enterprises runs into Rs. 150 crores and their sales aggregate Rs. 200 crores. Nearly 150,000 people owe their employment directly to the Birlas. This excludes numberless people who represent Birlas' concerns or sell Birlas' products and thereby earn sufficient income to lead an independent life.

Associating itself with the innumerable messages of goodwill for the Birla House which poured in on the day of the centenary celebrations from all over the world, including those from the leaders of the countries with centralised economies, this journal expresses the hope that the Birlas will be ever privileged to serve this country with that rare distinction that has earned for them a unique place in our economy. And it may not also be too much to hope that the country will not only retain but foster the climate in which Birlas and other houses of their kind will always be able to make their effective contribution to its economic, social and cultural

MARKET GOSSIP

Centre's Borrowing Programme

ASSUMING that the budget of the new Union Government will not contain any modifications in the interim budget for 1962-63 which Mr. Morarji Desai presented to the Lok Sabha this week, the Centre's open market borrowing for the coming year will involve a total of Rs. 255 crores, exclusive of Rs. 5 crores representing the anticipated receipts from prize bonds. This amount is no doubt higher than the sum of Rs. 225 crores (excluding prize bonds worth Rs. 10 crores) budgeted for the current year (1961-62). It is also true that, in the borrowing programme for 1961-62, there was a shortfall of Rs. 22.83 crores, the actual subscriptions to Central loans aggregating only Rs. 202.17 crores. Nevertheless, the borrowing programme for 1962-63 cannot be considered as heavy and beyond fulfilment.

It is too premature to say whether the Centre will float a single, consolidated loan or more than one loan. But it can be reasonably assumed that the Government will offer the loan or loans partly for conversion of two maturing loans, namely, 2¾ per cent 1962 (issued in 1947) and 3½ per cent 1962 (issued in 1956). The outstanding amounts in respect of the two loans are Rs. 75.87 crores and Rs. 107.27 crores, respectively, or an aggregate of Rs. 183.04 crores. Since the bulk of these loans must be with the Reserve Bank and the State Bank, one can expect that a very large proportion of the maturing loans will be converted. Excluding the conversion amount of Rs. 183 crores, the balance of Rs. 72 crores represents the loan (or loans) that will be offered for cash subscription. This amount is lower by Rs. 14 crores as compared with the difference between the total borrowing planned (Rs. 225 crores) and the amount of outstanding loans (Rs. 139 crores) last year. It is less by nearly Rs. 33 crores as compared with the actual cash subscriptions of Rs. 104.9 crores in 1961.

The important point to be noted here is that the net borrowing to be carried out is smaller than last year. And it is fairly well within the capacity of the State Bank, the L.I.C., Provident Funds and the banks. Fresh accretion of deposits is currently at a much faster rate than this time last year. Between 29th December 1961 and 2nd March 1962, the total deposits of scheduled banks other than State Bank rose by Rs. 21.95 crores (to Rs. 1,393.89 crores, on top of an increase of Rs. 120 crores in 1961, whereas there was actually a fall of Rs. 46 lakhs (to Rs. 1,251.73 crores) in the corresponding period last year. It is true that, in view of the continued expansion of industrial and business activity, demand for bank credit also has gone up. The net rise in the advances of scheduled banks other than State Bank during the first two months of 1962 was Rs. 64.28 crores, as against Rs. 58.00 crores in the same period last year, the total of their advances in the week ended 2nd March 1962 being markedly higher at Rs. 1,084.26 crores, as against Rs. 996.82 crores a year before. Even so, the banks will have some surplus which will continue to be used for buying new Government securities. As at the close of 1961, it may be noted here, scheduled banks' outstanding investments were higher by Rs. 17.36 crores at Rs. 356.03 crores, which was in distinct contract to the sharp fall of Rs. 76.34 crores to Rs. 338.67 crores in the preceding year. Only, the Government will find it necessary to offer higher rates of interest on its borrowings this year (1962) than it did last year, as there has been an all-round increase in the cost of money.

Central Budget At A Glance

(In crores of rupees)

New World Wheat Pact

A new International Wheat Agreement is expected to come into force from 1st August next, if the member-Governments of the International Wheat Council ratify the scheme finalised at Geneva early this week. It will supersede the present Agreement, which came into effect in 1959 and is due to expire in July next, and will probably last for a similar length of time. Under the existing Agreement, importing countries have given an undertaking to buy a certain percentage of their requirements each year from exporting member-countries. All the general provisions of the Agreement, designed to stabilise world wheat price, have been retained in the new arrangement too. The most significant feature of this arrangement is that the Council has agreed to raise the maximum and minimum prices by 12½ cents per bushel, leaving the difference between the two limits unchanged. As a result, the minimum price will be raised from 150 to 162½ U.S. cents and the maximum from 190 to 202½ U.S. cents.

Wheat exporting countries, particularly Canada, have been vociferous in their demand for an upward revision of wheat prices. Their claim is based on the recent upward trend in the wheat market. It may be recalled here that, three years ago, when the present agreement was signed, the surplus stocks held by the four leading exporters, namely, the U.S., Canada, Australia and Argentina, were heavy. At the same time, import demand was lagging behind, owing partly to larger domestic production in Western Europe and partly to a decline in *per capita* bread consumption in most of the highly industrialised countries. But, since then, the demand and supply position has improved considerably during the last one year or so. The major factor behind this improvement has been the fall in production of wheat, particularly in North America, on account of unfavourable weather conditions. According to the Wheat Council, the world output of wheat (excluding that of Russia and China) fell by 14 million tons in 1961, with a sharp drop of 10 million tons in North America alone. Large purchases by China, too, have tilted the balance in favour of sellers. Consequently, the price of wheat has been steadily moving up. During the last three years, the price has been ruling higher than the stipulated minimum. In fact, but for the limit imposed by the Agreement, the ruling market price would have been much higher than it is now. Some idea of the rise in wheat prices can be had from the fact that No. 2 Manitoba wheat in the London market is now being quoted at £28 10*s.* as compared with £27 2*s.* a year ago and £26 19*s.* three years ago.

It is encouraging to hear that Soviet Russia is in a mood to join the Agreement. Russia, it may be noted, has been the only major producer which has not joined the Agreement so far. Once Russia joins the Council, there is nothing to prevent it from gaining a dominant position in any particular market, provided its prices are competitive and it acts within the framework of the Agreement.

"The Modern Bank Rate"

Those who appreciate the mysticism that has traditionally enshrouded the central banks practically in all countries will do well to ponder the interesting observations made by Mr. Bagehot-Lowndes, acting head of the Academy for Central Bankers at Hetheringstoke, Frankfurt (W. Germany), in the course of a lecture on "The Modern Bank Rate" delivered last week-end. Mr. Bagehot-Lowndes does not, of course, suggest that the central banks should "bend" their "traditional rites" to the requirements of what he calls "tedious modern obsession," that is, economic advancement. But he forcefully emphasises that the central banks must be ready to change their form to create the impression that Central banking processes are as dynamic as those of any other aspect of contemporary life. He has illustrated his point by drawing attention to what is being done to preserve the Bank rate in its traditional role through "mystical metamorphosis" in a country in which it has given such poor service that it would otherwise be thoroughly discredited by now. Obviously, he was referring to the Bank rate in the U.K. In this connection, the distinguished banker of West Germany says:

"The subterfuge consists in portraying it as breaking through into a new financial medium—one in which it does not have to abide by the tire-some *rules of financial logic* with which we are familiar. For example, it is held to be endowed with psychological powers when moving in one direction, whereas when moving in the other it may be said to have only a technical connotation. Again, an adjustment of identical size may be held to have internal justification on one occasion but not on another, although the internal situation is officially declared to be exactly the same on both. You will see that this breaks right through the old precept that one cannot face both ways at once—as indeed I notice one financial writer neatly grasped when, after waxing lyrical about the psychological value of a 2 per cent increase in Bank rate last year, he hotly maintained that the 'excessive psychological importance' attached to this weapon should not be allowed to inhibit decreases. Think of the advantages this multilateral *terminological flexibility* confers on the diligent central banker. Since he can appear as irrational as he likes, he is free to follow any course that appeals to him without bothering about the implications. And the more bewildering by ordinary standards of logic his behaviour, the greater the respect he will command."

Baroda Rayon Production Soon

Presiding over the third annual general meeting of the Baroda Rayon Corporation Limited at Udhna, Surat, on last Saturday, in the absence of Maharaja Fatesinhrao P. Gaekwad, ex-officio Chairman, Mr. Babubhai Chinai, a Director, said that the Company would go into production within the next four months. The capacity of the rayon plant would be increased from 6½ tons to 7½ tons of yarn per day on the basis of 100 deniers, or from 7½ tons to 10 tons on the basis of 150 deniers. The licence for importing the necessary machinery was expected to be received very shortly. The imports would be made only under the yen credit, as it was found to be economical.

Referring to the Company's application for the manufacture of caustic soda, the only ancillary chemicals needed in the manufacture of rayon yarn

SHARE MARKETS WEAK

BUDGETS CAUSE MISGIVINGS

(From Our Own Correspondents)

BOMBAY, 15th *March*

STOCK markets closed this week on a distinctly weak note on tired all-round bull liquidation, the effects of which were accentuated by some bear pressure in certain vulnerable counters and absence of support following the presentation of the Central Budget estimates for 1962-63 in the Lok Sabha on Wednesday. The tendency at close was distinctly easy, with a majority of shares showing small to moderate losses over the previous week. Turnover was good only at the fag-end of the week, when activity also tended to be broad-based, as prices sought lower levels.

During the major part of the week, the markets lacked drive either way. Political and fiscal uncertainties left bulls wary. Investors sat on the fence in the hope of a better bargain in future. Stray bull unloading, owing to the failure of the markets to edge up, did produce occasional minor setbacks in some counters. These, however, attracted short-covering, as bears were restrained because of the low levels. The relatively low surplus of Rs. 13.16 crores in the Railway Budget actually paved the way for a further decline in prices. For it induced bears to be on the offensive again and prompted bulls to unload in a declining market.

A setback on the eve of the presentation of the Central Budget estimates left the markets steady on the day they were presented. But, on the subsequent day, that is Thursday, the markets were assailed by grave doubts, as it was realised that the revenue deficit of Rs. 63.46 crores in the budget would bring in its wake large doses of fresh taxation. What will be the nature of fresh imposts is anybody's guess. But it is certain that the burden would be heavy, particularly as the ruling party, back in power with a fresh public mandate for socialism, would not hesitate to start in right earnest in mobilising the resources for the third Plan. It was this realisation that accounted for fresh setback in the markets, though their behaviour was also shaped by settlement considerations; the account ended in Calcutta on Wednesday and is due to be over in Bombay and Ahmedabad on Friday.

To speak definitely about the immediate outlook for the market, one should know precisely what the tax proposals in the budget would be. But there is still nearly a month from now for the tax proposals to be presented in the Lok Sabha. Meanwhile, it is not unlikely that the markets might regain a part of the ground they have lost recently only to make room for a decline later. If they do not, their technical position would remain oversold on the eve of the day when the tax proposals are announced. And, whatever the tax proposals, this one single factor might weigh heavily in favour of a subsequent rally.

During the week under review, steel shares were by far the weakest of all in Bombay. While Tata Ordinary continued to be depressed, Indian Iron succumbed to some heavy liquidation in the latter part of the week. Closing Re. 1.75 lower on balance, Tata Ordinary, which has a book value of Rs. 150.32, made a new low for the year of Rs. 137.75 as against Rs. 138.25 before and came dangerously close to last year's low level of Rs. 135.50, after having been done at Rs. 140.75 earlier in the week. Indian Iron kept steady around Rs. 24.80 till the mid-week, but fell at close to Rs. 24.32 to finish 40 nP lower on balance at Rs. 24.44. Mukand Iron moved down from Rs. 27.90 to Rs. 27.25 and closed with a loss of 25 nP at Rs. 27.50.

Textiles lacked support. The damper here was provided by the bare maintenance of the dividend and no bonus issue by Bombay Dyeing, which were sold down during the week from Rs. 70.50 to Rs. 69, before finishing at Rs. 69.30 against Rs. 70.50 in the previous week. Century looked well supported initially at Rs. 620 and were done up to Rs. 627.50 on Monday, but declined on Thursday to a low of Rs. 610.50 and closed Rs. 2.50 lower on balance at Rs. 615.50. Standard attracted persistent pressure and closed Rs. 17 lower at Rs. 1,063. Svadeshi were easier at Rs. 293 against Rs. 297.50 a week before and so were Kohinoor at Rs. 311.50 against Rs. 315. Despite a substantially higher dividend and encouraging results for the last year, India United Ordinary and Deferred closed 4 nP and 8 nP lower at Rs. 21 and Rs. 3.70, respectively, after having been done during the week at Rs. 21.12 and Rs. 3.80. The bare maintenance of the dividends produced a setback in Finlay from Rs. 377 to Rs. 354 and in Swan from Rs. 435 to Rs. 405. Gold Mohur were untraded after the lower dividend was announced. Shreeniwas were traded up to Rs. 318.50 after the announcement of a higher dividend and a Rights issue, but were subsequently sold down to Rs. 303, and at close were Rs. 9 lower at Rs. 307. Khatau finished Rs. 1.25 lower at Rs. 490, but attracted a margin of Rs. 26.87 against bulls. Apollo were a notable gainer at Rs. 2.60, 32 nP higher than the previous week's closing level, and Morarjee were Rs. 4 higher at Rs. 425. The belief that the burden of additional excise duty, imposed in the last general budget, would reduce the benefits of larger production kept National Rayon relatively subdued, in spite of the proximity of the dividend announcement, and the shares closed only Rs. 5.50 higher at Rs. 547.

Among engineering shares, Alcock reacted on heavy profit-taking and finished Rs. 12 lower at Rs. 328. Other popular counters were dull and neglected, with Telco closing Re. 1 lower at Rs. 355.50, Larsen Re. 1.25 lower at Rs. 40 75 and Voltas Rs. 3.50 lower at Rs. 282.

In the miscellaneous section, Amar Dye-Ghem were a weak spot at Rs. 311.25 against Rs. 355 a week before on heavy selling, which brought in its wake an interim automatic margin of Rs. 17.87 on sellers. Indian Dyestuff moved down from Rs. 545 to Rs. 533.75. Premier Construction fell sharply from Rs. 197.50 to Rs. 176.50, on heavy selling motivated by the cut in the dividend. Among others, Bombay Burmah closed on balance with a loss of Rs. 3.50 at Rs. 641.50. Poly Chem made a loss of Rs. 8.75 at Rs. 218.75. Sirpur Paper lost 32 nP to Rs. 15.64. Wimco were marked down by Rs. 11 to Rs. 391, as the dividend was only maintained. West Coast Paper were firm and attracted a margin of Rs. 8.75 on bulls, though at close there was a small loss of one rupee at Rs. 183. B.B. Petrol showed a gain of 12 nP at Re. 1.50; and came under the automatic margin on buyers at the rate of 7 nP per share.

Shippings were easy, with Scindia closing 20 nP lower at Rs. 12.20 and Great Eastern 4 nP lower at Rs. 12.52. Cements were dull but steady. Sugar shares were firm for some time on support based on rumours of some delay in the implementation of the Maharashtra Land Ceilings Act. At close, however, Belapur were distinctly lower at Rs. 238.50, Maharashtra at Rs. 167, Phaltan at Rs. 120, with losses ranging from one rupee to Rs. 3, but Walchand closed Rs. 6 higher at Rs. 164.

Cash shares showed minor variations, but losses were more widespread. Thus, while Hindustan Electric were tightly held at Rs. 275, Kirloskar Oil Engines at Rs. 54.50 on the news of bonus issue and Zenith Steel at Rs. 15.48, all the three closing with moderate gains, Bombay Burmah (P.P.) declined by Rs. 13.75 to Rs. 267.50, Chemicoat by Rs. 3 to Rs. 163, Ultramarine Blue Rs. 10 to Rs. 180, Universal Dyestuff by Re. 1 to Rs. 55, Synthetics and Chemicals by Rs. 3 to Rs. 219, United Wire Rope by Re. 1 to Rs. 45 and Pesticides by 20 nP to Rs. 4.80. Permanent Magnets were in demand on rumours that the Company had received the raw materials import licence and closed Rs. 10 higher at Rs. 185. Hindustan Lever were steady at Rs. 70, Baroda Rayon at Rs. 122 and Chase Bright Steel at Rs. 10.48.

Bank shares showed small losses; Electrics were quiet; but Insurances were steady.

* * * *

In Madras, some renewed inquiry was visible at lower levels, but the overall performance of the market remained far from satisfactory. Plantings were particularly depressed. Losses were small and scattered over the list. Thus, among tea shares, Chembra were done 8 nP lower at Rs. 3.52, Kil Kot 5 nP at Rs. 5.10 and United Nilgiri 53 nP at Rs. 20.84. Periakaramalai, on the other hand, were done 8 nP higher at Rs. 3.38, closed followed by Heileyburia at Rs. 13.25, with a gain of 10 nP. Among coffee shares, Consolidated showed small change at Rs. 17.80 against Rs. 17.77 a week ago. Strength in Travancore Rayon was a redeeming feature in textiles section, the share closing with a gain of Rs. 2.80 at Rs. 46 on support based on expectations of good corporate news. Other shares were mostly shaded, with Lakshmi closing one rupee lower at Rs. 169, Cannanore Rs. 2 lower at Rs. 158 and South India Viscose 50 nP lower at Rs. 187.50. Miscellaneous issues evoked support at setbacks, but net changes over the week were small and limited to a few shares. Aluminium Industries closed 53 nP lower at Rs. 23.77, Ashok Leyland showed losses of 7 nP at Rs. 9.28 and Mettur Chemical finished at Rs. 13.30 against Rs. 13.37 a week ago. Tube Investment finished four points higher at Rs. 290, and Indian Steel Rolling gained 15 nP to close at Rs. 11.90.

* * * *

After displaying some strength, Lyons Range (Calcutta) closed weak. Support was selective. It was more discernible in jutes on ideas of better working because of the firm advices from the raw jute and jute goods markets. Paper shares were neglected, but teas and coals evoked some selective inquiry at lower levels.

Among speculatives, Birla Jute closed at Rs. 35.31, as against Rs. 35.25 a week before, Burrakur at Rs. 17.62 against Rs. 17.87, Dunlop Rubber at Rs. 43.37 against Rs. 43.44, Guest, Keen at Rs. 45 against Rs. 45.94, Howrah at Rs. 20.37 against Rs. 20.25, Indian Aluminium at Rs. 38.94 against Rs. 39.25, Indian Cable at Rs. 36.50 against Rs. 36.75, Indian Copper at Rs. 5.08 against Rs. 5.12, Jaipur Udyog at Rs. 13.81 against Rs. 13.94, Kesoram at Rs. 33.75 against Rs. 34.19, Orissa Cement at Rs. 19.37 against Rs. 19.69, Rohtas Industries at Rs. 17 against Rs. 17.31, Orient Paper at Rs. 41.85 against Rs. 41.80, Shree Gopal at Rs. 27 against Rs. 28.12 and Texmaco at Rs. 21.35 against Rs. 20.40. Texmaco were firm on influential support, while Shree Gopal suffered on selling pressure.

In the cash section, Banks and Railways were steady. In textiles, Bharat Commerce closed a shade easy at Rs. 29.50 against Rs. 30.25 a week before, J.K. Rayon finished 44 nP higher at Rs. 23.50, but Jayshree closed 19 nP lower at Rs. 17.31 and Cawnpore 25 nP lower at Rs. 9.62. Others were unchanged. Amalgamated Coal were 25 nP better at Rs. 22, but Bengal showed losses of Rs. 2 at Rs. 352. Jute shares made a mixed show, with Bally and Anglo India losing Rs. 2 and Re. 1 respectively at Rs. 278 and Rs. 215, Delta Rs. 7 at Rs. 175, Champdany Rs. 2 at Rs. 125, Gourepore Rs. 10 at Rs. 508, Megna 32 nP at Rs. 12.12 and Fort Gloster Rs. 2 at Rs. 428, while India gaining 19 nP at Rs. 16.31, Kelvin Rs. 3 at Rs. 188, Alliance 50 nP at Rs. 104, Cheviot 37 nP at Rs. 20.37 and Chitavalsah 7 nP at Rs. 12.44.

Among sugars, Cawnpore and Raza lost 18 nP and 44 nP, respectively, at Rs. 12.69 and Rs. 9.87 but Bharat were up by Re. 1.50 at Rs. 15. Brooke Bonds, in teas, were easier by 63 nP at Rs. 14.62, but Dhelakat were better by 37 nP at Rs. 21.87, while Jutlibari were done at Rs. 32 against Rs 34.06 a week before, Methani at Rs. 19.62 against Rs. 19,37, N. Dooars at Rs. 297 against Rs. 291.50 and Tezpore at Rs. 16.37 against Rs. 16.56. Among shippings, Calcutta Steamship were marked up by 57 nP at Rs. 12.94, but India Steamship closed 19 nP lower at Rs. 6.87. Gains of 87 nP in Bellarpore featured trading in an otherwise dull paper section, where Straw Board were done 18 nP lower at Rs. 9.69. Cements, chemicals, insurances and electrics showed minor variations.

Among engineering shares, Burn were a feature at Rs. 589 against Rs. 576 a week before, with Braithwaite showing small gains at Rs. 51 against Rs. 48.37. Britannia Engineering were shaded at Rs. 12 against Rs. 12.12 a week ago, Hindustan Wire at Rs. 8.65 against Rs. 8.81 and Jessop at Rs. 22.75 against Rs. 22.81. J.K. Steel were firm at Rs. 20.25 and showed gains of 31 nP on balance.

Among miscellaneous issues, American Refrigerator closed at Rs. 7 against Rs. 8 a week ago, Associated Match at Rs. 25 against Rs. 25.25, Associated Battery at Rs. 32.37 against Rs. 32.12, Balmer Lawrie at Rs. 281 against Rs. 278, Gwalior Rayon at Rs. 54.25 against Rs. 53.50, Imperial Tobacco at Rs. 15.62 against Rs. 12.94, Hindustan Aluminium at Rs. 15.56 against Rs. 15.94, Indian Oxygen at Rs. 38.75 against Rs. 39.12, Isaac Holdens at Rs. 17.50 against Rs. 17.37, J.K. Synthetics at Rs. 15 against Rs. 14 87, Metal Box at Rs. 63.25 against Rs. 62 25, Philips Carbon at Rs. 26.50 against Rs. 25.75, Sen Raleigh at Rs. 20.06 against Rs. 22.56 and Union Carbide at Rs. 52.50 against Rs. 53.37.

WORLD COTTON PRODUCTION

World cotton production in 1961-62 is now estimated at 46.8 million bales (500 lbs. gross weight), according to the latest estimate by the U.S. Foreign Agriculture Service. This is 0.6 million bales below the estimate made last October as significant reduction in estimates from China, India, Uganda, and several other countries more than offset increases elsewhere, largely in Sudan. The 1961-62 world crop, as revised, is second in size only to last season's all-time high of 47.2 million bales, and exceeds the 1955-59 average by 3.1 million bales. World cotton acreage has increased for the third straight year, and is placed at 83.3 million acres in 1961-62. However, average yield per acre of 270 lbs. is below last year's exceptionally high figure of 280 lbs.

The U.S. per acre yield of 438 lbs. is 8 lbs. below last season and 28 lbs. lower than the record of 466 lbs. in 1958. Harvested acreage is estimated at 15.7 million acres up 2 per cent from 1960. The lower yields about offset larger acreage, so that the 1961 U.S. crop is placed at 14.3 million bales, only 32,000 bales larger than in 1960.

J.K. SYNTHETICS STARTS PRODUCTION

J.K. Synthetics Limited, Kotah, has started production of nylon 6 with its own polymerised raw materials. The plant is most modern, fully automatic and air-conditioned. It is equipped to produce monofilament and multifilament in the finest deniers. It will also produce all types of stretched and textured yarn in multi-colour. It has cost nearly Rs. 2 crores and will save the country foreign exchange to the extent of Rs. 1 crore annually.

(Concluded from previous page)

not produced by the Company's factory, Mr. Chinai said that, in due course, there would be a new chemical plant in the factory.

Mr. Chinai's reply to the criticism that the cost of the project had increased from Rs. 7 crores to Rs. 8 crores was that the estimates had to be revised for several reasons. It was observed that the local suppliers would not be able to supply structural steel materials in time. Therefore, many things were done departmentally, in order to expedite early start of the plant, which involved additional expenditure on machine tools and other machinery for the workshop and ancillary plants. Moreover, the price of the indigenous machinery also had increased particularly with the increase of 5 per cent in the import duty on machinery. Again, the Directors thought it fit to make accommodation for additional building for putting up eight spinning frames to meet the requirements of expansion programme. Civil engineering works also cost more because of the changed designs and drawings submitted by the collaborators. Due to black soft soil, the cost of the foundation work had also gone up. New constructions were raised to cover pilferage and store electrical goods.

Mr. Chinai conceded that the amount invested by the Company in the project would be a little higher than that of the other new units of the rayon industry.

But this increase was only slight, in his opinion, and was due chiefly to the Company having to put up a complete power plant and water treatment plant of larger capacities than required. As compensation for this, the supply of power would be continuous and its cost lower than that of the purchased power.

In order to meet the increase in capital outlay, the Company has applied to the Industrial Finance Corporation of India for a further accommodation of Rs. 50 lakhs. The Company has also made arrangements with its bankers for Rs. 50 lakhs to ensure timely availability of resources. It may be recalled, in this connection, that the Company has received Rs. 1.58 crore from the I.F.C. out of a total loan of Rs. 2.43 crores. The balance is expected to be received shortly. The Company had also raised its capital not long ago from Rs. 3.50 crores to Rs. 4.90 crores to meet the increase in the project estimate and to implement the programme of expanding the capacity of the sulphuric acid plant from 20 tons to 40 tons per day. This programme has been taken up in the first stage itself.

NEWS IN BRIEF

THE Century Flour Mills Ltd., Madras, has secured a licence for the establishment of a biscuit factory, with a capacity of 10 tons a day. The project, the first of its kind, will be implemented with foreign collaboration.

The U.S. Agency for International Development has approved a loan of $35 million for financing the purchase of 125 diesel locomotives by the Indian railways. This brings the U.S. assistance for the expansion and modernisation of Indian railways to $195 million.

The foundation-stone of the administrative block of the proposed antibiotics plant in the public sector near Rishikesh, U.P., was laid last week-end. The Rs. 20-crore plant will be put up by the Indian Drug and Pharmaceuticals Ltd., in collaboration with Soviet Russia.

An official delegation, headed by Mr. B. N. Adarkar, Joint Secretary, Ministry of Commerce and Industry, will leave for Rangoon next week for trade discussions with the Government of Burma. The delegation will explore the possibilities of mutual trade and conclude a new trade agreement.

The Government of India has decided in principle to set up a wage board for the coal-mining industry. The proposed wage board will be asked to review the wage structure in the coal mining industry apart from considering the question of granting gratuity to colliery workers. It is also likely to suggest interim reliefs.

The Lok Sabha has passed a Bill which seeks to enable the various State financial corporations to advance loans to the hotel and transport industries, as also for the development of industrial estates. The limit of loan assistance by the corporations has also been raised to Rs. 20 lakhs in the case of public limited companies and co-operative societies.

The Government of India has appointed a tripartite committee to examine the proposed code of efficiency and welfare in industry. The Committee consists of three representatives each of central organisations of workers and employers as well as one representative each of the Union Ministry of Labour, Ministry of Commerce and Industry and the State Government of Maharashtra. The proposed code of efficiency and welfare, drafted by a committee (Chairman: V. K. R. Menon, Director, I.L.O.—Indian Branch), it may be recalled, was submitted to the Indian Labour Conference in October 1961.

A Bill to amend the Dock Workers (Regulation of Employment) Act in such a way as to provide for the establishment of autonomous dock labour boards has been passed by the Lok Sabha. It also provides for the audit of accounts of such boards, for the issue of directions by the Government to the boards and for inquiry into their working.

The International Development Association, an associate of the International Bank for Reconstruction and Development, has granted a loan of 18.5 million dollars (Rs. 8.82 crores) to the Damodar Valley Corporation. The loan will serve to raise the total installed capacity of the Damodar Valley Corporation power system by 140,000 kw. and help in the expansion of its transmission network in West Bengal and Bihar.

A loan of Rs. 1 crore has been sanctioned by the Government of India for financing the Rs. 7-crore expansion programme of the Mysore Iron and Steel Works at Bhadravati. The Central Government will further advance Rs. 4 crores and the State Government Rs. 2 crores for the project. The expansion programme is designed to increase the capacity of the plant from 45,000 ingot tons to 100,000 ingot tons per annum.

The Central Wage Board for rubber plantation industry (Chairman: Mr. L. P. Dave) has recommended interim increases in the wages of workers with effect from 1st December, 1961. The interim increase ranges from 8 to 15 nP in rates of daily wages of plantation workers in the States of Madras and Kerala. In the case of clerical staff, the increase suggested is about Rs. 10 per month. The Board has also recommended "adequate increase" in prices of rubber taking into account these measures.

A giant Russian oil tanker, the "Bugulma," carrying over 10,000 tons of the "world's finest quality" furnace oil is expected to reach Cochin (Kerala) by this week-end. This is the first shipment of top-quality furnace oil to India from the Soviet Union. The Indian Oil Company has until now been importing from Russia only two products, namely, "Jyoti" kerosene and high speed diesel oil. The imported furnace oil will be used in South India as (1) boiler fuel in industries where adequate supplies of coal are not readily available, (2) bunker fuel for coastal and overseas shipping, and (3) fuel for glass, ceramics and chemical industries.

The Government-owned Indian Oil Company (I.O.C.) will install shortly its first consumer petrol (motor gasoline) pump at Gauhati for the Assam State Transport Corporation's fleet. The I.O.C. has already commissioned 62 high speed diesel (H.S.D.) fuel stations all over India, technically referred to as consumer pumps, which are now supplying substantial quantities of the H.S.D., imported from the Soviet Union, to Railways, State Transport Undertakings and to other major projects under the third Plan. It is learnt that the State-owned oil marketing organisation is now working on plans to commission 350 I.O.C. service-cum-fuel stations all over India within the next three months to retail H.S.D. to trucks and petrol to motorists.

From Abroad

Bolivia proposes to increase the production of tin from the second half of this year. The output of tin in Bolivia, which is world's second largest producer after Malaya, aggregated 20,100 tons in 1961.

The total production of plastics in West Germany exceeded the one-million mark in 1961, for the first time. Output rose by ten per cent over 1960 to 1.8 million tons, but the turnover moved up only by 5 per cent to DM 2,311 million.

The U.S. Supreme Court has ruled that a property-owner, forced to shift his home on account of the noise of low-lying aircraft from a nearby airport, is entitled to compensation. This decision is expected to open the way for new suits worth millions of dollars, involving many airports.

Czechoslovakia will supply plant and machinery for 22 industrial projects in Ghana, under a trade protocol signed between the two countries last week. The projects will be financed out of a £10-million sterling credit granted by Czechoslovakia.

The world output of steel rose by 4 per cent to 375 million tons in 1961, as compared with 1960. The improvement was notable in Japan, with an output of 31 million tons, representing an increase of 7 million tons or 28 per cent over the previous year. Soviet steel output continued its steady rise, reaching 78 million tons, or an 8 per cent increase. In the U.K., however, production was lower by 8 per cent at 25.1 million tons. The U.S. steel output fell by one per cent to 98 million tons.

In a bid to encourage the flow of private capital to developing countries, the West German Government has decided to permit those companies investing abroad to build up tax-free reserves against adverse contingencies which may be set off from their own taxable profits. The tax-free reserves may amount to a third of the equipment and installations required. A scaling down of this proportion is also permissible, depending upon the importance of the project concerned. Investment in holding companies, as also in plantations and other agricultural projects, however, have not been included in the scheme.

PERSONAL

MR. Mauro Calingo has been appointed Ambassador of the Philippines, in India.

Mr. David A. Morse has been re-elected Director-General of the International Labour Organisation, Geneva.

Mr. Igor J. Karassik, Manager of Planning of the Harrison Division of the Worthington Corporation, has arrived in India on a short business tour.

Mr. Krishnaraj M. D. Thackersey has been appointed *Vice*-Chairman of the Bank of India Ltd. in the place of Mr. A. D. Shroff, who has become the Chairman of the Bank.

Mr. AR. Ramanathan, Chairman of Travancore Rayons, has been nominated by the Central Government as Chairman of the reconstituted Development Council for Art Silk Industry for a period of two years. He has also been elected President of the Association of Man-Made Fibre Industry.

The Italian State-owned Oil Corporation, E.N.I., has secured an oil exploration licence in Nigeria covering an area of 5,300 square kilometres, just over 13 million acres. An Italo-Nigerian Company will be formed, with Italy holding 70 per cent and Nigeria 30 per cent. E.N.I. is also expected to build a refinery and establish a sales network. The present licence is the largest granted by Nigeria, barring that given to Shell-B.P. of Nigeria. The output of oil in Nigeria, which was 2.2 million tons in 1961, is expected to touch 3.5 million tons this year and increase further swiftly over the next few years.

The International Monetary Fund has agreed to a drawing by the United Arab Republic of the equivalent of $7.5 million, half of which will be in U.S. dollars and half in deutschemark. As in the case of a U.A.R. drawing last January equivalent to $22.4 million, the new transaction has a repurchase term of one year. The U.A.R. authorities remain in consultation with the Fund regarding the country's balance of payments difficulties. These have been intensified by a sharp decline, due to pests, in agricultural production which has particularly affected the country's cotton export prospects in the current year.

PRESIDENT'S ADDRESS

THE valedictory address of President Dr. Rajendra Prasad, to the last session of India's second Parliament on the 12th inst., was not expected to contain any important policy pronouncements. Even so, the President was expected to review, among others, the main achievements in the field of planning and development, to highlight the problems and difficulties that faced the country, and to indicate how the Government proposed to deal with them. This expectation has only been partially fulfilled for, although the President's address dealt with the progress in the field of agriculture, industry, transport and labour, it was significantly silent on such vital questions as the employment and price situation. It did not give any indication of the progress made or lack of it, in respect of employment creation and abolition of unemployment. In a country where millions are unemployed and where as many look to the Government to provide opportunities to make themselves useful to the country, the absence of any reference to this problem in the President's last address was a serious omission.

Although the President referred to the emergence of stresses and strains as a result of rapid economic advance, and categorically stated that there was no room for complacency or any slackening of effort, the overall picture of the economy painted by him was far more encouraging that the situation really is. Take, for instance, his reference to agriculture. He quoted the rise in the overall index of agricultural production from 128.7 in 1959-60 to 139.1 in 1960-61 but glossed over the critical shortage in such basic commodities as cotton and oilseeds, and the poor progress made in raising the productivity of agriculture. He gave details of some of the steps taken to increase agricultural production such as extension of irrigation to 12.8 million acres of additional land during the third Plan period, improvement of as much as 33 million acres by soil conservation and dry farming methods, establishment of a corporation to organise, on a nation-wide scale, the production, distribution and marketing of seed, setting up of more fertiliser factories and crop production campaigns. But still the fact remains that the increase in agricultural production has not been of an order sufficient to support the industrial expansion on the scale envisaged in the third Plan and to supply the needs of a population which is growing at a rate faster than was anticipated by the planners.

The President's speech refers to the considerable increase in the volume of industrial production and greater diversity in categories of projects but makes only a passing reference to the transport bottleneck and the critical coal and power shortage. In fact, judging from the experience during the first year of the third Plan, it looks as though shortages of transport, fuel and agricultural raw materials will be the major factors inhibiting the fulfilment of the Plan targets. A sense of satisfaction is expressed at the decline in the trade deficit from Rs. 364 crores to Rs. 218 crores during the past year. But this reduction was brought about more through a saving in imports than through any appreciable rise in exports. Indeed, the success of such export drives as have already been launched is not heartening. With increasing competition in foreign markets and mounting costs within the country, the strain on industries is increasing and, unless renewed efforts are made to promote exports through vigorous promotional campaigns abroad and strict control of inflationary pressures at home, the position on the foreign trade front might well deteriorate; at any rate, it will not improve to the extent necessary. These and other problems facing the country could have been put forward by the President with proper emphasis and in the perspective of the long-range growth needs of the country, so that an appropriate psychological atmosphere could be created for the sustained effort and sacrifice that are called for to realise the Plan objectives. It is to be hoped that the President's address to the third Parliament that will shortly be convened will be more objective and balanced in its review and assessment of the economic situation and problems.

COST CONTROL

Much store is being set by productivity improvement to attain higher levels of industrial efficiency. More or less the same result can be obtained through cost reduction, also. This aspect of production is, therefore, as important as, if not more important than, productivity improvement. Accordingly, there is much to be said for the suggestion put forward by Mr. Pravinchandra V. Gandhi, President of the Indian Merchants' Chamber, in his address at the Seminar On Financial Control held at Bombay under the auspices of the Western Regional Council of the Institute of Chartered Accountants, that cost reduction committees should be set up in all the industrial units in the country. Considering the level of industrial development, there is a lack of sufficient cost-consciousness in the country. This is the case in regard to goods produced for both the home and export markets. But cost reduction is all the more important in respect of export goods which have to compete in the foreign markets with goods produced by efficient, highly cost-conscious foreign firms. Cost reduction committees are being set up in the industrially advanced countries, according to Mr. Gandhi, and there is scope and need for such committees in India too. Each industrial unit in the country, the President of the Merchants' Chamber suggested, should, without being indifferent to the elements which push up costs, investigate the reasons for the rise in the prices of products and effect economies wherever and to whatever extent possible.

Another suggestion of Mr. Gandhi is that accounting experts should explore ways and means of developing cost-consciousness in industrial units through a system of financial control. Financial control implies a comprehensive and thorough study of the internal management of an enterprise from the point of view of the effective utilisation of the financial resources. In this country, financial control is still in the process of development and a technique of financial control suited to the needs and circumstances of the country has yet to be developed. While this is essentially the task of the Chartered Accountants, Cost Accountants and other financial experts, no scheme will prove effective if the powers-that-be in the industrial undertakings do not co-operate with the officers concerned and provide them with all the necessary information. In their anxiety to evade taxes, there are several industrial managements in this country who are not keen on having a proper costing system.

ENGINEERING INDUSTRIES

Metallurgical and engineering industries account for about 50 per cent of the aggregate outlay on industries and minerals in the third Plan. With the production of metals (iron and steel and non-ferrous metals) steadily increasing, there will be a larger production in the engineering industries which make use of the primary metals. Already, over the last decade, engineering industries have registered a fourfold increase in production, as compared with a 70 per cent rise in industrial production as a whole. In view of their past and potential growth, engineering industries appear to be a highly suitable candidate for export promotion. This is the considered opinion of Mr. G. L. Mehta who spoke at the annual general meeting of the Engineering Association of India (Western Region) held at Bombay on the 9th instant. As the Chairman of the Industrial Credit and Investment Corporation of India which, up to the end of 1961, had provided assistance to the tune of Rs. 14.2 crores (representing a third of all assistance sanctioned by it) to engineering industries alone, Mr. Mehta must be fully aware of the problems and potentialities of this group of industries. His emphatic view that "it should be possible to spare some part (of engineering production) for export" cannot be lightly brushed aside, for the case he has made out has a compelling logic of its own. This case, in his own words, is as follows:

"At present, with a booming home market, there is no compulsion to export. I feel that, with the stable base provided by the home market, this is the time to build up exports—however unremunerative these may appear in the immediate present. For it may become much more difficult to export when the home market itself becomes difficult. I suggest that the industries take a long view on this (issue) and not be too involved in the present."

This is pretty wholesome advice, coming as it does from one who is fully qualified to give it. But that is not all, for the engineering industries stand in need of being bluntly told that they would have to improve markedly in two directions, namely, creation of their own design facilities and quality production. Mr. G. L. Mehta has, therefore, done well to point out sharply the present shortcomings in the two lines. The lack of indigenous research and design facilities even in many of the large engineering units is something serious, according to Mr. Mehta. Borrowed designs would not do for all time, and so the producers will have to develop their own designs to suit local requirements and to keep up with changing tastes and with trends in other countries. As for the problem of quality, Mr. Mehta has not minced words in the following forthright passage of his address:

"Engineering products are not merely used in factories but many of them—sewing machines, automobiles, and so on—are durable consumer goods. . . As you will realise, every industry depends on consumers' goodwill for its survival and, while it may be possible to sell even shoddy goods in the present times of import control and internal shortages, it would be wrong to assume that such times will continue or that the consumer will be tolerant all the time. It is essential that the engineering industries set to themselves as strict standards as they seek to exact from their own suppliers."

On another question, namely, the equalisation of iron and steel prices at railheads, which has been the subject of controversy, Mr. Mehta has adopted a sound approach. By driving home to the engineering industries the point that the equalised price has helped to decentralise the growth of industries based on iron and steel, Mr. Mehta has sought to convey the idea that the development of such industries outside eastern India would not have been possible otherwise. But the assumption here is that the railways are able to move all the iron and steel and coal and coke required by the engineering industries in different parts of the country. This assumption, however, has not been fulfilled to the required extent in the last one year or so. Nor are the prospects of the railways doing it in the near future bright. Inadequate supplies of vital raw materials and insufficient transport facilities for hauling even the limited supplies have been referred to, time and again, in the proceedings of engineering associations. Mr. J. V. Patel, the outgoing Chairman of the Engineering Association of India (Western Region), also spoke on the same theme with great emphasis. It is needless to reiterate that the raw material requirements of the engineering industrial units, which are situated in regions far away from the principal centres of iron, steel and coal production, would need to be met on some priority basis, so as to remove the just grievances of the manufacturers.

U.S.—SIX TARIFF CUTS

The agreement on reciprocal tariff concessions reached between the U.S. and the European Economic Community (Common Market Six) represents one of the most eventful developments in the sphere of world trade in the post-war period. Under the agreement, which is the result of protracted negotiations held within the framework of the G.A.T.T. since the summer of 1960, the U.S. has secured a tariff concession, on an average, of about 20 per cent for a large number of its products exported to the E.E.C. countries. This concession will serve to reduce the adverse effects of the E.E.C. common tariff on U.S. goods. The U.S., of course, has also conceded reciprocal reductions in its own tariffs on a wide range. But its concessions appear to be of a smaller value than those it has been able to secure from the E.E.C. The U.S. has secured sizable tariff reduction on such goods as automobiles, chemicals and drugs, industrial and electrical machinery, textiles, canned and preserved fruits, as well as fats and oils. In return, it has reduced customs on automobiles, certain categories of machinery and electrical equipment, certain steel goods and glass products.

These concessions, it would appear, are only the beginning of a more ambitious scheme of tariff reductions between the U.S. and the Six. The official *communique* on the subject announced by the U.S. pointed out that the present negotiations were only a "first test of whether the U.S. and the E.E.C. would be able to find a mutual basis for the long-run development of their economic relations." It may be recalled, in this connection, that President Kennedy has already asked the Congress for authorisation to enable him to secure sweeping reciprocal tariff concessions from the E.E.C. The Trade Expansion Bill, now sent to the Congress, seeks to give the President special authority to reduce or eliminate all tariffs on those groups of products, where the U.S. and the Common Market together account for 80 per cent or more of world trade.

The present series of tariff concessions are not confined to the U.S. and the Six alone. They are being extended to other countries also, under the provisions of the G.A.T.T. Since the current concessions cover mainly industrial products, actual benefits will accrue to countries like the U.K., which have a sizable volume of trade in manufactures with the U.S. and the Six. Although the present move is described by some as a vindication of the efficacy of G.A.T.T. as an agency to help reduce tariff barriers, much more remains to be done in this respect. For these reciprocal concessions are of practically no value to developing countries. By their very nature, developing countries are not capable of granting reciprocal concessions to industrialised countries. It is, therefore, of the utmost importance that the G.A.T.T. should pursue with renewed vigour measures to give effect to the resolutions passed at the last Ministerial meeting at Geneva in November 1961 on the question of enlarging prospects for the exports of developing countries. Unless industrialised countries reduce unilaterally tariffs and quantitative restrictions on imports from developing countries, the growth of world trade will continue to be hampered by irksome barriers. In respect of imports of manufactured goods from developing countries, in particular, industrialised countries will have to grant liberal entry, even if this involves some readjustment in their domestic production. Otherwise, trade concessions among industrialised countries inter se will only mean further trade discrimination against less-developed countries, for the products of the latter will then have to face stiffer competition in the markets of the former.

E.C.A.F.E. ON INDIAN PLANNING

In India's first Five-year Plan, it may be remembered, private enterprise accounted for 82 per cent of the total investment in modern industry (including large and medium industry and mining). But the second Plan sharply changed the investment allocation between the private sector and the public sector, the former's share coming down to 47 per cent. This development, according to a case study of India's economic growth in 1950-59 forming part of the (U.N.) *Economic Survey of Asia and the Far East* 1961, led the Government into foreign exchange difficulties, which, to some extent, arose from the investment policy it had adopted. The Government, continues the study, then tried to restrain the private sector, which had fulfilled its allotted task before the allotted time period, in order to bring development in the public sector up to priorities already laid down, rather than change priorities in accord with experience. This is an objective finding to which no exception can justifiably be taken by planners in this country. That the authors of the study are not biased against the Government of India in their evaluation of Indian planning could be inferred from their simultaneous recognition that commitments to projects with long-gestation periods, from which the Government could not possibly withdraw, had already been made. Likewise, they have also recognised that India has gone in for capital-intensive development in the hope that external economies and availability of domestically produced capital goods would ultimately lower capital and foreign exchange coefficients and secure more rapid growth. But, of course, they have, at the same time, raised the doubt whether technological changes might not obstruct this lowering by making the products of current investment obsolescent sooner than provided for in the cost-benefit calculations.

The authors of the E.C.A.F.E. study have also made observations about the conflict between the public and private sectors in India—a conflict arising principally from the sharp change in investment allocation. These findings, which refer objectively to the difficulties faced by the private sector as well as to the advantages enjoyed by it, constitute, in our opinion, a fair and balanced assessment of the situation. This is what they have to say:

"In the period under review, foreign exchange was absorbed in large amounts by capital-intensive 'high priority' projects, all with a heavy import content. Most of these were in the public sector. The private sector, which had gathered considerable momentum for high-yielding, but 'not-so-high priority' projects, remained somewhat starved of both foreign exchange and access to domestic capital. . . . The uphill task of export promotion was left to the private sector which was handicapped by shortages of skilled labour, raw materials and capital goods, by rising costs and by import difficulties arising from the long-term strategy. As against these difficulties, the private sector in India, as in Pakistan, has enjoyed the almost complete protection offered by the licensing of imports. It has paid less than a true market price for its domestic capital. Its imports under licence have been in the nature of a continuous subsidy since the rupee is considerably overvalued."

In spite of the handicaps and thanks to the aforesaid advantages, the private sector in India has performed very well indeed in the fifties. The E.C.A.F.E. study itself has given the finding that "the private sector has also been vigorous, perhaps even more so than the public sector, judging by the fact that it has done better than the public sector in reaching investment goals." The private sector would have bettered this performance if, even within the long-term strategy of the national Plan, greater scope had been provided for investment designed to augment output rapidly, particularly in light industries. That would have meant more industrial production and a somewhat higher rate of growth of national product. The authors of the E.C.A.F.E. study cannot be accused of questioning the basic premise, that is, the heavy industry orientation, of India's Plan. They have merely stated that light industry could have been given greater encouragement, even within the overall long-term strategy for self-reliant and self-generating industrial development, for the more immediate purpose of export promotion. After all, for growth to take place, exports are as important as domestic production of capital goods. An expansion of exports would enhance import capacity (derived from merchandise exports and net services) and make for a more efficient use of domestic resources than import substitution. How deplorably India is behind some other countries in the E.C.A.F.E. region could be easily seen from the figures pertaining to growth of import capacity. This country, as of 1959-60, has increased its import capacity only by 15 per cent since 1953, whereas Ceylon has increased its by 27 per cent, Taiwan by 33 per cent, Indonesia by 32 per cent, Japan by 123 per cent and Thailand by 32 per cent. There can, therefore, be no two opinions on the balanced approach to growth suggested in the E.C.A.F.E. study, with particular reference to India.

THIRD FINANCE COMMISSION'S REPORT

STATES GET MORE FROM CENTRE

THE report of the third Finance Commission and the Government of India's decisions thereon were presented to Parliament on Monday this week by the Union Finance Minister, Mr. Morarji Desai. The Commission, it will be recalled, was appointed on 2nd December 1960 in pursuance of the provisions of Article 280 of the Constitution and the Finance Commission (Miscellaneous Provisions) Act 1951. It was presided over by Mr. Ashok Kumar Chanda, a former Comptroller and Auditor-General of India, and consisted of Mr. P. Govinda Menon (an ex-Chief Minister of Kerala), Mr. D. N. Roy (a retired High Court Judge, Allahabad), Prof. M. V. Mathur (of the University of Rajasthan) and Mr. G. R. Kamat, I.C.S., Member-Secretary. The Commission was required to make recommendations not merely on (*a*) the allocation of income-tax, (*b*) sharing of basic Union excise duties, (*c*) distribution of additional excise duties, and (*d*) payment of grants-in-aid under Article 275(1) of the Constitution, but also on two other aspects, namely, distribution among States of estate duty on property other than agricultural land and allocation of the Rs. 12.5-crore grant payable to States in lieu of the loss suffered by them consequent on the abolition of tax on railway passenger fares. It must certainly be said to the credit of the Commission that it completed its work within the period of twelve months prescribed in the Presidential Order; the Commission held its first meeting on 15th December 1960 and signed the report exactly a year later, on 14th December 1961.

This was the third Finance Commission to be set up after the Constitution was adopted. The first one was constituted in November 1951 with Mr. K. C. Neogy as Chairman; and the second one was in June 1956, under the leadership of Mr. K. Santhanam.

The report of the Chanda Commission is unanimous but for a minute of dissent by the Member-Secretary on the payment of special purpose grant for improvement of communications and inclusion of the State Plans' revenue component in the Commission's scheme of assistance to the States. The Government of India has accepted all the unanimous recommendations, as well as the majority suggestion regarding payment of a special-purpose grant for improvement of road communications. Necessary action to implement these decisions, we are told, is being taken and legislation for the purpose will be introduced in the current session of Parliament. The Government's decisions will hold good for a period of four years from 1st April 1962 to 31st March 1966 (end of third Plan), except in regard to payment of grants in lieu of tax on railway fares which will be effective for five years, that is, since 1st April 1961 when the tax was abolished. The object in reducing the period from five to four years was to synchronise the next Commission's award with that of the fourth Five-year Plan.

Income-tax

The Finance Commission has certainly done its job well. It has sought to meet a good portion of the competing claims of States for a larger devolution of funds from the Centre without impairing the latter's financial position. The State Governments have good reasons to feel gratified at the outcome of the Commission's work. The percentage of net proceeds of taxes on income other than Corporation tax has been raised from 60 to 66⅔ for the States and from 1 to 2½ for Union territories. The Commission has also accorded greater weight to the origin of tax collection as a basis for determining the share of the States. Thus, the share of each State will be calculated on the basis of 20 per cent of collection, as against 10 per cent hitherto. The share fixed on the basis of population, as a consequence, has been reduced from 90 to 80 per cent.

Union Excise

The Commission has, of course, lowered the percentage share of States in the net proceeds of Union excise duties from 25 to 20. But any loss of income from this will be more than made good, since the number of "shareable excise duty articles" has been increased from eight (matches, tobacco, sugar, vegetable products, coffee, tea, paper and vegetable non-essential oils) to 35 by including all articles (other than motor spirit) on which excise was collected in 1960-61, excluding, however, articles (except silk fabrics) on which the yield was below Rs. 50 lakhs a year. The new items included are: kerosene, refined diesel oils and vaporising oils, diesel oil not otherwise specified, furnace oil, asphalt and bitumen, pigments (and colours, paints, enamels, varnishes, blacks and cellulose lacquers), soap, tyres and tubes, rayon and synthetic fibres and yarn, cotton fabrics, silk fabrics, woollen fabrics, rayon or artificial silk fabrics, cement, pig iron, steel ingots, aluminium, tin plate and tin sheets (including tin taggers and cuttings of such plate, sheets or taggers), internal combustion engines, electric motors and parts thereof, electric batteries and parts thereof, electric lighting bulbs and fluorescent lighting bulbs, electric fans, motor vehicles, cycles and parts of cycles other than motor cycles, footwear, and cinematograph films exposed.

It is gratifying to find that, in determining the share of each State, the Commission has, while continuing population as the major factor of distribution of excise revenue, also taken into account the relative financial weaknesses of the States, the disparity in the level of development reached, the percentage of scheduled castes, tribes and backward classes, etc.

Additional Excise Duties

But for some minor adjustments, there is practically no change in regard to the additional excise duties on mill-made textiles, sugar and tobacco which were levied in replacement of States' sales tax. Thus, the entire net proceeds of duties will continue to accrue to the States other than those attributable to Union territories, the share of which is left unchanged at one per cent; the share of Jammu and Kashmir State has, however, been raised by ¼ per cent to 1¼ per cent. The income (derived from sales tax on these commodities during the financial year 1956-57) guaranteed to the States has been increase, albeit slightly, from the present level of Rs. 32.50 crores to Rs. 32.54 crores, so as to include also the yield from silk fabrics subjected to additional excise duty in lieu of States sales tax with effect from 1st April 1961. The excess over the guaranteed amount has been recommended for distribution among the rest of the States partly on the basis of population and partly on percentage increase in their sales tax revenues since 1957-58.

Estate Duty

The Commission has also not suggested any change in the principles governing the distribution of estate duty. The percentages assigned to each State has, however, been revised on the basis of population figures as indicated in the 1961 census. The State-wise distribution of population is given below:

(In millions)

Andhra Pradesh 35.98; Assam 11.86; Bihar 46.46; Gujarat 20.62; Jammu and Kashmir 3.58; Kerala 16.88; Madhya Pradesh 32.39; Madras 33.65; Maharashtra 39.50; Mysore 23.55; Orissa 17.57; Punjab 20.30; Rajasthan 20.15; Uttar Pradesh 73.72; West Bengal 34.97. Total 431.20.

Tax in Lieu of Railway Tax

For the distribution of the Rs. 12.5-crore annual grant payable to States in lieu of their share of tax on railway passenger fares, the Commission has recommended the principle of compensation. Consequently, the States are now placed broadly on the same footing as they were prior to the removal of this tax with effect from 1st April 1961.

Grants-in-Aid

The Chanda Commission has also recommended larger grants-in-aid to States under the substantive portion of Article 275(1) of the Constitution. As against only eleven States which at present receive such grants amounting in all to Rs. 39.5 crores annually (the individual share in crores of rupees is: Assam 4.50; Bihar 4.25; Jammu and Kashmir 3.00; Kerala 1.75; Madhya Pradesh 3.00; Mysore 6.00; Orissa 3.50; Punjab 2.25; Rajasthan 2.5 and West Bengal 4.75), the Commission has recommended an annual payment of grants-in-aid to all States, except Maharashtra. The total amount involved here is Rs. 110.25 crores, made up of Rs. 52 crores for filling the revenue gap in State budgets and Rs. 58.25 crores for covering 75 per cent of the revenue component of State Plans. Mr. Kamat, the Member-Secretary, has, however, dissented from the majority opinion in regard to the second portion of the grants-in-aid. The Government of India has accepted the unanimous recommendation pertaining to the first part, namely, the grant for covering the revenue gap in the budgets. The share of individual States in this aid is as follows:

Andhra Pradesh Rs. 9.00 crores; Assam Rs. 5.25 crores; Gujarat Rs. 4.25 crores; Jammu and Kashmir Rs. 1.50 crore; Kerala Rs. 5.50 crores; Madhya Pradesh Rs. 1.25 crore; Madras Rs. 3.00 crores; Mysore Rs. 6.25 crores; Orissa Rs. 11.50 crores; and Rajasthan Rs. 4.50 crores.

As regards the Plan revenue component grant, the Government, in consultation with the Planning Commission, has come to the conclusion that there will be no real advantage to States in receiving assistance towards their Plan partly by way of statutory grants-in-aid on the basis of the Finance Commission's recommendations and partly on the basis of annual reviews made by the Planning Commission. In support of this conclusion, the Government says:

"The Central assistance is determined after a careful assessment of the overall financial and economic situation and after making such adjustments which changing situations would demand from year to year. It is, therefore, necessary not only to review the financial position of the Centre and the States annually but also to take an integrated view of the entire financial picture of each State, both on revenue and capital accounts, in relation to the State Plan as a whole. The non-acceptance of this recommendation of the Commission will not affect the total amount of Central assistance to the States. The Central assistance to the States, as envisaged in the Plan, will continue to be made available on the basis of annual reviews of the overall financial position and other relevant factors. Government also consider that annual planning and reviews are an essential means of improving performance in all sectors ensuring the fullest effort to raise resources, maintaining a satisfactory balance between differ types of projects and of observing priorities. These purposes will be better served through suitable changes in the existing procedures rather than by converting any portion of Central assistance for the State Plans into statutory grants which, by their very nature, would lack flexibility. The States already enjoy a sufficient degree of freedom in the utilisation of the Central assistance made available to them. Steps will, however, be taken further to simplify the procedures for the release of Central assistance and to make them more flexible."

In holding the above view, the Government seems to have been convinced by the arguments put forward by Mr. G. R. Kamat in his minute of dissent. Mr. Kamat considers that the inclusion of a part of the State Plans' revenue component in the scheme of assistance is open to serious objections and that it has a serious impact on the concept and mechanism of national planning. In his opinion, any grants, even if accompanied by the indication of the broad purpose for which they are made, are, in effect, untied and, therefore, virtually unconditional. The proposal to convert the Plan grants into rigid statutory grants, according to him, is harmful to the planning process and to the execution of the Plan.

Grant for Road Development

Another important aspect on which Mr. Kamat has expressed disagreement relates to the suggestion for the payment of a special purpose grant for the improvement of road communications in certain States. Although a sum of Rs. 324 crores has been provided for in the third Plan for the development of road communications, the Government has accepted the majority view of the Commission, because it appreciates that the financial position of certain States is such that, without special assistance of this kind, it may be difficult for them to make adequate provision for the purpose. Accordingly, annual grants amounting in all to Rs. 9 crores will be made to ten States (Andhra Pradesh, Assam, Bihar, Gujarat, Jammu and Kashmir, Kerala, Madhya Pradesh, Mysore, Orissa and Rajasthan).

Net Effect

It is estimated that, as a result of the Government's acceptance of the Chanda Commission's recommendations, the States together will receive in the next financial year (1962-63) Rs. 35 crores more than what they would have got under the present arrangements. The States' share will definitely be very much more in the subsequent years, thanks to the increase in their share of income-tax divisible pool and the considerable widening of the number of shareable excises.

Two new ships, each of 9,069 g.r.t. which were built by the Hitachi Shipbuilding Co. of Japan for the Great Eastern Shipping Co., have arrived in Bombay. With these additions, the total strength of Indian fleet has gone up to 933,000 g.r.t.

Work on the Rs. 3.5-crore expansion programme of the Mysore Paper Mills, Bhadravati, was started last week. The entire machinery will be designed to work on 100 per cent bamboo pulp produced locally. The expansion scheme is expected to be completed by the end of 1964.

COMMENTS ON FINANCIAL AWARD FOR STATES

MR. KAMAT'S DISSENT SENSIBLE

From Our Special Correspondent

NEW DELHI, 13th March

DELHI LETTER

THE Third Finance Commission's award on the devolution of Central revenues and grants-in-aid to the States was placed before Parliament this week, together with the decision of the Union Government thereon. Though Articles 280 and 281 of the Constitution do not specifically lay down that the recommendations are binding, the convention has been established that they would normally be accepted, in view of the special position of the Commission in determining federal financial matters. On this occasion, however, a difference of opinion within the Commission leading to a dissenting minute by the Member-Secretary, Mr. G. R. Kamat, I.C.S., has made the Government accept the minority view in one matter; but this raises no serious issue of propriety, since the decision involves only the maintenance of the present position instead of a drastic change proposed by the majority for the conversion of the conditional revenue grants for development schemes in the States, made on the basis of periodical review of performance, into unconditional grants without any such appraisal. However much one may regret the difference of opinion which led to this step, Mr. Kamat's dissenting note is impressively lucid and well-reasoned; and, indeed, there is much support for his stand in the majority's views on the budgetary practices of the States and the unsatisfactory nature of their planning and execution.

The basic problem before the Finance Commission was how to transfer more revenues to the States for their increasing responsibilities under the third Plan consistently with the need for resources for the Centre for its own larger role. It is now stated that the additional sum that will be transferred under the Commission's recommendations will be about Rs. 35 crores more next year, as compared with the amount which they would get under the present arrangements. This is the overall position and it cannot be said that this is over-generous, though it is substantial. Much depends on the manner in which the transfer is made and the two previous Commissions made cautious beginnings in providing some elasticity to States' revenues by giving them a share of Union excise duties; it was clear that the scope lay in enlarging this pool of shared revenue. In these matters, the Finance Commission's task was clear-cut; details alone depended on the proportions to be prescribed for States' shares under each revenue head.

After relegating general observations on the problems of States' finances to the end of its report, the Commission has methodically proceeded to give its award according to the Articles of the Constitution. Under Article 269, the estate duty and the erstwhile tax on railway fares (now substituted by a fixed grant) provided little scope for larger transfers to the States. The only thing left to the Commission was to revise the percentage share of each State according to the new population figures for the distribution of the revenue from estate duty on assets other than immovable property.

A revision of the percentage of receipts of income-tax to be distributed among the States has been necessitated by the change in the system of company taxation and the assignment of the entire proceeds of corporation tax to the Centre. State Governments had suggested varying proportions up to 90 per cent; but there is much force in the view taken by the Commission (and even accepted by some of the States) that the Centre should continue to have a stake in the yields of income-tax. On this ground, the modest increase proposed by the Commission from 60 per cent at present to 66⅔ per cent of the total yield seems adequate. On the basis of the Budget estimates for the current year, the divisible pool may be enlarged only by about Rs. 8 crores though there is provisions now for compensatory payments to the States to the extent of Rs. 24.15 crores. On the vexed question whether the distribution should be made on the basis of greater weightage for source of collection or population, the Commission has restored the earlier position, which prevailed after the First Finance Commission's award, of 20 per cent on the basis of collection (instead of 10 per cent at present). Thus, industrial States like Maharashtra and West Bengal are favoured on the sound argument that they should be compensated for the administrative expenditure required for maintaining the environmental conditions for promoting trade and industrial activity.

With transfers on this scale being insufficient, the Commission had no alternative but to expand the field of shared Union excise revenues to do justice to the demands of the States. It has now thrown open almost the entire field of excises for such sharing; instead of 25 per cent on eight items as at present, the States will get 20 per cent on 35 items (except the revenue on motor spirit earmarked for another purpose). On the basis of the Budget Estimates for the current year, this means an increase in the divisible pool from about Rs. 145 crores to about Rs. 325 crores and the States' share will increase accordingly from Rs. 36.24 crores to about Rs. 65 crores. But, since this is an expanding source of revenue in future, State revenues will acquire an element of elasticity so long denied to them by the taxing powers given to them under the Constitution and the reluctance of the Centre to tap the sources mentioned in Aricle 269 except the estate duty and the (now repealed) tax on railway fares.

In distributing this additional amount, the Commission, while agreeing that population should continue to be the major consideration, has taken into account the relative financial positions of the States, the disparities in their development and the percentage of backward people in their population. States like Maharashtra, U.P., West Bengal and Madras will, therefore, be getting far less in proportion to the increase in the pool, while Orissa, which has been favoured in other respects also in the matter of grants under Article 275 and assistance for road development, will be substantially benefited. Reactions to this step remain to be seen, but there is no doubt that some States which have followed prudent fiscal policies will find themselves at a disadvantage.

When it came to the question of grants-in-aid, the Commission found itself divided. It found that it had no time or material at its disposal for the determination of the tax efforts of State Governments, the economy they have effected and efficiency they have sought to achieve. For this purpose, it has suggested the setting up of another independent high-powered Commission; meanwhile, it has recommended that grants should be determined on the basis of the budgetary gap and 75 per cent of the revenue component of their plans. Though at present Central assistance promised for the third Plan would in effect achieve this end, the majority of the Commission felt that the grants should be unconditional and not subject to reviews of performance now conducted periodically by the Planning Commission. In view of Mr. Kamat's dissenting minute, with which perhaps the Union Government was probably in broad agreement, the fixed grants under Article 275 will be restricted only to covering the budgetary gaps; this has naturally favoured those who have consistently showed the largest deficits. Orissa which gets Rs. 11.5 crores and, surprisingly enough, Andhra Pradesh (Rs. 9 crores) have secured enviable windfalls in this manner.

The Commission realised that the knowledged that the gaps will be thus covered by devolution has accentuated the reluctance to tap resources in the rural sector through more land tax, betterment and irrigation levies, that unproductive expenditure has increased and that a greater sense of responsibility in expenditure control was essential. "Under the present dispensation" it points out, "it is likely that the States which have done the least may receive more than they would have otherwise deserved."

Mr. Kamat has in addition pointed out that Economic and Social Planning is a concurrent subject and that the inducement which the Centre gives to the States for planning and executing schemes should not be automatically assured to them; he does not accept the plea of the majority that they should not be made to go before the Centre and plead before it on the strength of their ability and competence. The majority has itself pointed out that there is no planning machinery in the States. And it is well known that only the decisions of politicians determine the contents of the Plan which the Planning Commission has to accept as almost final.

There is also merit in Mr. Kamat's dissent from the recommendation regarding payment of one-fifth of the Central revenues from the excise duty on motor spirit as grants to certain States for development of communications. This also could have been based on approved plans, instead of taking the shape of varying fixed grants as suggested by the Finance Commission which has excluded some States, given more to Orissa and Madhya Pradesh and less to others with equal problems like Rajasthan or Mysore. But the Government has yielded to the majority view on this point; any resulting injustice during the next four years may, however, be overlooked if the backward States make good use of the money and develop their States in a manner that would reduce disparities.

Summary of Finance Commission's Recommendations Accepted by Government

	Share of income-tax*	Share of Union excise duties†	Grant-in-aid under Article 275 (1) (substantive portion)	Special Purpose Grant for improvement of communications	Share of estate duty	Grant-in lieu of tax on Railway fares	Additional duties of excise

* The net proceeds of income-tax, except those attributable to Central emoluments and Union territories are divisible between the Centre and the States. The Commission has increased the share attributable to Union territories from 1 per cent. to 2½ per cent. of the net proceeds.

† Representing net proceeds of Union excise duties on 35 articles recommended by the Commission.

‡ Applies only to tax allocated to other than immovable property.

** Jammu and Kashmir will receive no compensation but 1½ per cent. of net proceeds.

AMERICAN LETTER

FEARS OF STEEL STRIKE RECEDING

OPEN MARKET OPERATIONS IN FOREIGN EXCHANGE

From Our Special Correspondent

NEW YORK, 10th March

OPTIMISM over business conditions in the months ahead is still the by-word. This cheerful note comes from bankers throughout the country who know the mood of their customers. Surveys prove it. A good part of the present psychological lift was generated by Lt.-Col. John Glenn's space flight three times around the world. It has given an unanticipated boost to morale all around. Gone are the inhibitions and sense of inferiority from the days of the first Russian Sputnik.

Fears of a steel strike and a disruption of the economy at the mid-year term, when present wage contracts expire, are subsiding. Negotiations for a peaceful settlement between management and labour have begun already under mild pressure from the Washington Government. Hoarding of steel inventory has been ceasing and market conditions have become more normal than they were a month or two ago.

Stock Exchange

The securities markets have been in the news again and unfavourably so. The Chairman of the New York Stock Exchange turned in his resignation following reports about his personal income-taxes' dispute with the U.S. Treasury Department. It follows the scandals on the American Stock Exchange where the management is now being reorganised. The amazing aspect of it is that the typical investor is not concerned over the Wall Street irregularities. Samplings of opinion show that most people regard these doings as internal institutional affairs which they do not consider to have any bearing on the inherent soundness of American industry, its securities and on the safety of their own holdings and savings.

There is, however, disappointment in some quarters that the U.S. economy is not expanding quite as fast as was expected around the year end. This feeling is shared by Government economists, who made glowing predictions two months ago, as well as by private sources who expected more than has actually taken place.

January has been particularly disappointing, although February was a little better. Figures now available show that, in the first month of the year, there was a drop in production, trade and income. It was wholly unexpected. The weather had a good deal to do with it. In many parts of the U.S., it was unusually severe. Retail sales declined because people stayed home. Included in this category were automobile sales. While they were considerably better than in the corresponding period of 1961, sales have been declining in the last few months.

Bigger Cars Unpopular

Like the railroads, the automotive industry has been imbued with the idea they had a monopoly and could do no wrong. Railroad management made no attempt, really, to adapt its service to changing conditions. Auto management thought that bigger cars with more horsepower and lots of chromium frills would attract the customers. The answer on the latter score has been "no" for several years. The city dweller cannot park such cars any more and in the congested areas and foreign manufacturers, with smaller cars, captured a good deal of the market.

But the prospects for renewed business expansion are fairly good. Government spending is increasing. And so are manufacturing orders for durable goods. Backlogs on the books are growing larger and industrial purchasing agents report better demand for their wares than in the past. Housing starts, while smaller than last autumn, continue at a satisfactory pace.

For the First Time Since the 'Twenties

In order to stem the unfavourable U.S. balance of payments, the Federal Reserve Bank of New York has begun open market operations in foreign exchange. The first purchase covered $50 million worth of French francs. It was for a 245-million francs' credit with Banque de France. Forward cover was provided by both parties and no exchange risk was involved. It was the first such operation since the 1920s.

The general purpose is to accumulate an inventory of foreign exchange which could be used to provide for future sales against dollars should U.S. currency become weak in international markets. The whole plan is for additional defence of the dollar. Heretofore, the operations in foreign currency undertaken by the Federal Reserve have been for U.S. Treasury account and chiefly through the U.S. Stabilisation Fund, a division of the Treasury.

The initial purchase in French francs was for the central bank's own account and on behalf of the 13 reserve banks acting through Federal Reserve Open Market Committee. Such operations in foreign exchange, should they reach large proportions, may be important to business and finance, generally, in the U.S., since they may either supply or take away funds from the money market, just as similar operations do in the realm of Government Securities.

The Elections in India

The Press here gave considerable coverage to the elections in India. The *New York Times* and other leading papers commented particularly on the victory of Mr. Krishna Menon, India's Defence Minister, who is regarded as not being a friend of the U.S. Otherwise, the victory of Prime Minister Nehru's Party was held to be encouraging.

Bombay Firm to Make Electrodes

Power Cables Private Ltd., Bombay, according to an announcement here, has entered into a licensing agreement with Westinghouse Electric International Company to manufacture welding electronics. Production is scheduled to begin by the end of this year, at Company's new plant at Kalyan. Initial production is estimated at 120 million feet a year. It covers all types of mild steel electrodes for manual arc welding. The plant is being equipped with the assistance of a loan from the Agency for International Development, Washington.

De Facto Devaluation of Sterling?

There is much discussion here about possible conversion of the British currency into a decimal system. Since the number of currency units, which would go into a pound sterling, would be reduced or expanded as compared with the present system, there must follow a new pricing structure on all levels of the economy and in British world trade.

Also, unless the precious metal content of the U.K. coinage is changed, a new relationship between precious metals and the decimal currency would have to be established, it is pointed out here.

All these inevitable changes, if and when the decimal system should be adopted, would most likely add up to devaluation of sterling. It may not be called that, of course, and the International Monetary Fund no doubt will keep an eagle eye on the foreign exchange markets during the transition period to see to it that nothing gets out of hand. These are the views on the subject which are being held here.—*All Rights Reserved.*

THE TROUBLE ABOUT BANK RATE

BIGGER REDUCTION WARRANTED

(From Our Own Correspondent)

LONDON, 9th March

ALTHOUGH Bank Rate was cut by ½ per cent to 5½ per cent this week, it is still one of the highest in the world, only exceeded among the important commercial countries by New Zealand and Japan. The average run in Europe is 3½ per cent, while America and Germany both enjoy 3 per cent. The inevitable result is a strong flow of gold into the U.K.

In February, the gold reserve rose by £80 million. The Bank of England aimed to conceal this rise by repaying £75 million of the old I.M.F. credit, leaving a net increase of £5 million. But everyone is becoming so much more educated to the significance of these gold movements that this device does not conceal from the general public that the pound is extremely strong. Admittedly, the strength is based on hot money the flow of which could be reversed without warning but it still makes it difficult for the Chancellor's story of the continued need for anti-inflationary measures to hold weight.

Hot Money

The Chancellor's desire to restrict credit inhibited him from cutting the Bank Rate by more than ½ per cent, for the Treasury is fearful that a 1 per cent cut would have been taken as a signal for a mood of credit relaxation and a weakening of wage restraint. But the result is to maintain these excessively attractive interest rates and so cause hot money to flow in. There are some who take a cynical view of this and, in effect, the Chancellor is joining himself with them, because they are using speculative movements of hot money as part of internal monetary policy. That is, the Chancellor, by using Bank Rate so heavily in defence of his credit restriction, is inevitably obliged to make the City a magnet for international funds and this has an adverse effect on the countries from which the money is flowing which naturally include Germany and the United States, the lowest Bank Rate countries.

Nor does the device of repaying the I.M.F. help, for, as the I.M.F. still operates in individual currencies, when it buys gold from the U.K. it has to sell sterling, hence its stock of sterling for giving credit to other countries is diminished. In effect, not only is the inflow of gold into the U.K. detrimental to the countries from which it flows, but the diversion of this gold flow in turn into the I.M.F. reduces the latter's free sterling.

Domestically, a more serious disadvantage is that this country is paying high interest rates on the useless hot money which comes in and repaying, in advance of time, a cheap I.M.F. loan. Thus, the invisible balance of payments suffers another burden.

An Embarrassing Development

The gold inflow is thus doubly embarrassing; it is embarrassing because it increases the interest charges payable abroad and because it creates a false impression of the strength of sterling. The country would be much better off without it. On the other hand, the Chancellor is not prepared to relax internal credit restrictions other than gently and there is a strong case to be made out for the need for moderation in letting the curbs on borrowing go. Obviously, then, the Chancellor should be relying more on the very powerful holds which he has on the banking system, including that device—which the banks dislike so much—of the special deposits, which, by freezing a part of their cash, lower the ratios against which they can make advances. Such direct measures, as well as the strong persuasion of the Bank of England, ought to achieve everything necessary. The Bank Rate is a clumsy weapon; it needs to be used with moderation and with an eye to long-term domestic factors and very short-term external factors. At the present time, both of these point to a further cut in Bank Rate and the City hopes that the authorities will realise this before the gold flow becomes even more embarrassing.

DENA BANK REPORTS ALL-ROUND PROGRESS

APPROPRIATION POLICY CONSERVATIVE

FOR the Devkaran Nanjee Banking Company Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay) the year ended 31st December 1961 was a highly satisfactory one. It witnessed all-round progress of a substantial nature. As many as eleven new branches were opened during the year to bring the number of branches to 107. The safe deposit vault service was extended to six more branches, bringing the number of branches so served to 29. Steps were also taken to expand the activities of the existing branches. All these bold moves to popularise banking habit are fully reflected in the balance-sheet total which, as at the end of 1961, shows a smart rise to Rs. 56.13 crores from Rs. 48.71 crores a year ago. It is noteworthy that, on the liabilities side, the entire increase has been due to the striking expansion in deposits.

Expansion in banking activity has been responsible for larger income by way of interest and commission from Rs. 163.53 lakhs to Rs. 183.08 lakhs and of commission, brokerage and exchange from Rs. 27.21 lakhs to Rs. 31.44 lakhs. Other receipts have also risen modestly from Rs. 9.46 lakhs to Rs. 10.31 lakhs. In all, there has been a rise of Rs. 24.62 lakhs in the gross income. On the expenses side, the interest paid on deposits, borrowings, etc. has gone up by Rs. 5.09 lakhs to Rs. 98.14 lakhs and so have the staff and other expenses by as much as Rs. 15.35 lakhs to Rs. 96.41 lakhs. Provision for depreciation is also up by Rs. 1.59 lakh to Rs. 4.13 lakhs. But even the profit after providing for taxation as mentioned above and for bonus to employees, which unlike in the previous years, has been included in the cost of services, shows a rise of Rs. 11.60 lakhs to Rs. 26.15 lakhs over the previous year, on a comparable basis. This is a great improvement in the net profit, as it works out to 80 per cent, and is due primarily to the widening of the spread between interest received and the interest paid from 32.1 per cent of the net income during the preceding year to 37.7 per cent for the year under review. Together with Rs. 7.86 lakhs brought forward from the previous year, the sum available for appropriation amounts to Rs. 34.01 lakhs. A good part of this sum, Rs. 15 lakhs to be precise (as against only Rs. 8.00 lakhs), has been transferred to the reserve fund. The dividend has been stepped up only slightly from 8.76 per cent to 11 per cent, the increase taking away only Rs. 1.12 lakh of the rise in net profit. The undistributed surplus is higher by nearly Rs. 6 lakhs at Rs. 13.51 lakhs. It will thus be noted that the Directors have been quite conservative and cautious in distributing the profit.

The rapid improvement in the Bank's affairs during the past four years is clearly brought out by the following comparative table.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount earned	1,83.08	1,63.53	1,26.83	1,07.60

* After providing for taxation and bonus to staff.
† Subject to deduction of tax.
‡ Only unencumbered investments are taken into account.
N.D.=Not disclosed.

The Bank's deposits, as at the close of 1961, have increased quite sharply by as much as Rs. 7.56 crores to Rs. 43.36 crores. Although there has been an all-round improvement in the deposits, the chief contribution has come from the time deposits which have advanced from Rs. 15.98 crores to Rs. 19.77 crores. Savings deposits have moved up from Rs. 8.70 crores to Rs. 10.71 crores and *current* and other accounts from Rs. 11.12 crores to Rs. 12.88 crores. Investments and cash have remained practically stationary around Rs. 12.75 crores and Rs. 4.78 crores, respectively, but advances have spurted from Rs. 24.34 crores to Rs. 30.06 crores, thereby raising the credit ratio further to 69.3 per cent from 67.9 per cent previously.

The paid-up capital of the Bank is Rs. 50 lakhs divided into one lakh ordinary shares of Rs. 50 each and is supplemented by Rs. 75.16 lakhs in the reserves. Despite the large plough back of profits during recent years, the ratio of capital and reserves to total deposits is still as low as 2.9 per cent, as against the 6 per cent limit recommended by the Reserve Bank, because of the swift growth in deposits. It is thus obvious that the Bank will have to increase its capital in the near future.

* * * *

Since this review was written, the Directors of the Bank have proposed to issue new equity capital of Rs. 50 lakhs and offer it to the existing shareholders in the proportion of one new share for one share held by them. The issue will raise the Bank's capital to Rs. 1 crore in ordinary shares of Rs. 50 each, which is the authorised capital. Mr. Pravinchandra Gandhi, Managing Director, told the annual general meeting on Wednesday that the Controller of Capital Issues, to whom the application for issuing the new capital was made, was unlikely to allow the issue to be made at par. The management was, however, trying for as low a premium as possible. The issue is expected to be made before the end of the current year.

Save a 1 नया पैसा 1957

out of every Rupee

— to keep prices from going higher!

Don't say that living costs have to keep climbing. **You** can check Inflation.

One of the main causes of rising prices is **overspending**. If each one of you save only one naya Paisa out of every rupee you earn, you will put a strong brake on inflation.

This will produce Millions of Rupees in savings—money which is badly needed to finance our FIVE YEAR PLANS.

Of course, you get a personal bonus from your extra savings—the feeling of independence and security that a growing bank balance brings....

Sure, all this means a sacrifice. But isn't this worth? If this means continuing prosperity—and keeping it sound?

Thousands of depositors have made a savings account at Canara Banking Corporation Limited as a form of thrift. So, why not **You** also join them?

Administration Office: **MANGALORE**

ESTABLISHED 1906

"PYRAMID"

ALLAHABAD BANK EARNS MORE

PROFIT RISES—RESERVES STRENGTHENED

A FURTHER handsome increase in earnings despite higher operating costs, a notable improvement in net profit, a substantial expansion of deposits, and a sizable rise in liquid assets: these are the highlights of working of the Allahabad Bank Ltd. (General Manager: Mr. M. J. Maclaren, Calcutta) for the year ended December 1961. The net profit for the year, after making allowance for taxation which is not shown separately and depreciation, is Rs. 22.49 lakhs, a rise of Rs. 5.14 lakhs, or nearly 30 per cent, as compared with the profit for the previous year. This improvement has been brought about notwithstanding the sharp increase of Rs. 19.01 lakhs in interest paid, of Rs. 11.75 lakhs in staff expenses and of Rs. 4.16 lakhs in other expenses. These increases have neutralised to a great extent the growth of Rs. 40.28 lakhs in gross income which during 1961 amounted to Rs. 334.12 lakhs, as against Rs. 293.84 lakhs in 1960. Since quite a large part of the profit has been taken away by bonus to staff (Rs. 9.25 lakhs, as against Rs. 8.30 lakhs) and as the Directors have allocated a sizable amount of Rs. 4.50 lakhs to reserves (no such allocation could be made in the past few years), the return to ordinary shareholders could only be maintained at 18 per cent (made up of a dividend of 12 per cent and a bonus of 6 per cent) subject to tax. The Bank has kept up this rate for years; only, it has not been able to make the return tax-free which it was before Mr. Morarji Desai abolished the grossing up system with effect from 1959.

The improvement of over Rs. 40 lakhs in the Bank's gross income for 1960 is shared by both interest and discount earned and commission and exchange, the former rising by Rs. 35.30 lakhs to Rs. 288.23 lakhs and the latter by Rs. 5.03 lakhs to Rs. 43.78 lakhs. The rise in the Bank's earnings is generally in keeping with the trend of banking as a whole.

N.D.—Not disclosed.
* Includes Rs. 27,000 representing the arrears of dividend for the year 1959.
† Subject to deduction of tax.
‡ Only unencumbered investments.

A feature of the Bank's balance-sheet as at the end of 1961 is the absence of any rise in advances. Actually, they are a shade lower at Rs. 31.63 crores, as against Rs. 31.93 crores a year before. This, however, does not necessarily mean that, during the year as a whole, the advances of the Bank were on the low side. The net fall over the year may be due to the delay in the movement of agricultural crops of the current season.

While advances show a fall, the growth of deposits was quite sizable, as much as Rs. 5.46 crores. Even so, the Bank had to borrow from other banks, though the actual borrowings were small at Rs. 8.50 lakhs, as against Rs. 10.82 lakhs a year before and Rs. 127.64 lakhs two years before. In view of the marked increase in deposits without a corresponding rise in advances, the Bank's credit ratio has declined perceptibly from 61.4 per cent in 1960 to 55.0 per cent in 1961. The aggregate investments of the Bank, which are shown in the balance-sheet as hitherto at less than the actual market value, are higher by Rs. 4.93 crores at Rs. 17.52 crores and cash by Rs. 77 lakhs at Rs. 9.86 crores, so that the ratio of total liquid assets to deposits has risen from 41.7 per cent to as much as 47.6 per cent.

The balance-sheet total of the Allahabad Bank as on 31st December 1961 stands at the all-time peak of Rs. 64.61 crores, as against Rs. 59.84 crores on the corresponding date in 1960. As a preliminary to strengthening the capital-deposit ratio, the Directors of the Bank made a final call of Rs. 50 per share on the 29,000 contributary ordinary shares for the purpose of making such shares fully paid. The last date for payment of call money was 2nd January 1962. The calls actually paid by the end of December 1961 was just Rs. 1.56 lakh, and calls unpaid were to the tune of Rs. 12.94 lakhs. Almost the whole of this amount has since been received, so that paid-up capital will now be equal to the issued capital of Rs. 60 lakhs. The capital of the Bank as at the close of 1961 amounted to Rs. 47.06 lakhs, as compared with Rs. 45.50 lakhs a year before, while reserves continued unchanged at Rs. 108.00 lakhs. Including, however, the sum of Rs. 4.50 lakhs allocated out of the published profit for the year 1961, the reserve fund stands higher at Rs. 112.50 lakhs. The undistributed surplus is also more at Rs. 6.10 lakhs, as against Rs. 5.04 lakhs. The ratio of "own funds" to deposits (taking the paid-up capital at Rs. 60 lakhs) is 2.9 per cent, that is, just less than half of the six per cent ideal, recommended by the Reserve Bank and accepted by the banks as a whole, to be attained as early as possible in the coming years.

The Bank opened, during 1961, three new branches and upgraded seven pay offices to full branch status, in order to enable them to compete more effectively for local business. The Bank now has 83 branches and five pay offices.

"THE INDIAN BANKING AND FINANCIAL REVIEW"

This is a new monthly journal, devoted mainly to the discussion of banking and financial problems, published by Camita Publications, 10 Girdhar Nivas, Colaba Road, Bombay 1. (Price: Re. 1.50). It is edited by Mr. B. L. Panjabi, who has an intimate knowledge of both the theory and practice of banking, having been associated with it for well over twenty-five years. The first issue of the journal contains reviews of the recent trends in the different sectors of banking. There are four interesting articles entitled "Second thoughts on deposit insurance," "Should commercial banks dabble in term-lending?," "Hot money: Indian version," and "*Multani* bankers get a break." In the course of a special article, Mr. Pravinchandra V. Gandhi has highlighted the importance of trained efficient personnel at all levels for the development of banking. The journal also contains and includes graphs and statistics relating to banks.

CORRIGENDUM: STATE BANK OF INDORE

On page 377 of *Commerce* dated 3rd March, 1962, in the publication of State Bank of Indore's statement of accounts the item No. 4—rent, taxes, insurance, lighting, etc.—on the expenditure side (in the column for 1960), is to be read as Rs. 5,22,933, instead of Rs. 5,22,993, and the item No. 6—postage, telegrams and telephones—is to be read as Rs. 73,276, instead of Rs. 73,296.

(*Concluded from third column*)

been rejected and which at one time seemed likely to lead to major strike action. Admittedly, this settlement was achieved only at the cost of an agreement that the case of the rail workers will be reviewed again when economic conditions improve, which the workers are presuming to mean later this year. But it is a great gain to have avoided the setting of a pecedent of an obviously excessive immediate increment.

On the costs front, therefore, the prospect for sterling now looks a good deal more promising than many would have guessed it to be a few months back. Unless output rises faster this year than the Government yet appears to be assuring it will do, there may, indeed, still be some net rise in the average level of British costs —but all recent experience suggests that the costs of some of Britain's chief competitors, notably German competitors, may rise further still. There seems a good chance, therefore, that this year Britain will at least hold her own in export markets—and the total volume of business available should be significantly expanded. The first task for Government economic policy must be to ensure, so far as it can, that these opportunities for Britain's exporters will be fully seized.

PROSPECT FOR STERLING BETTER

NEW DEFENCES FOR U.S. DOLLAR

By W. T. C. King
EDITOR OF *THE BANKER*, LONDON

THE behaviour of sterling in the foreign exchange markets during these opening months of 1962 has been in striking contrast to the sombre predictions that were commonly heard in international banking circles in the latter part of last year. Except for a brief fluttering about mid-February, the rate against the U.S. dollar has for some weeks past been quoted at within half a cent of its upper limit—and this in spite of the fact that the British exchange equalisation account has been active in the market as a large purchaser of foreign exchange. The end-February statement of the central reserves of gold and convertible currencies showed these purchases to have been even larger than had been generally expected; after providing for the repayment to the International Monetary Fund of a further £75,000,000, the total reserves still showed a net increase during February of £5,000,000, to £1,223 million, so that the month's true accretion was, with one exception (last October), the biggest for many years. Advance repayments to the I.M.F. of the £535,000,000 drawn by Britain last August now total £225,000,000.

Exports Disappoint

This is the time of year when seasonal factors run in sterling's favour, notably because of receipts into the London pool on account of sales of primary products exported from the overseas Sterling Area. At this time, too, Britain's own current outgoings for imports and for invisible transactions, are normally much below the year's peak. But, seasonal factors apart, it seems clear that the strength of sterling is not any reflection of the state of the current account. The latest figures of Britain's visible trade, those for January, were, indeed, rather disappointing—showing a meagre increase in the seasonally corrected figure for exports to a point still somewhat below the average for 1961 and a sharp rise in imports to a point considerably above the 1961 average. It would be wrong to draw conclusions from a single month's figures, as the exchange market recognised after its monetary fluttering—but the delay in the hoped-for expansion of exports, if not yet worrying, remains disappointing.

Capital Inflow

The major source of the accretion to the reserves is beyond doubt, therefore, a continued and indeed accelerating inflow of capital. One reason for this, and perhaps the most important influence of all, has been the maintenance of the high level of money rates in London. The seven per cent Bank Rate fixed last July was reduced by two small steps last year to six per cent; but the last cut was made as far back as early November. Many City circles fully expected to see the rate come down by at least a further half per cent in the early weeks of 1962, partly because so high a rate limits the authorities' scope for manœuvre and partly because they made it clear many months ago that they did not wish the high rates to act as a magnet for any large influx of mobile foreign money. These expectations led to a sharp drop in the London Treasury Bill rate during January, carrying the average allotment rate down from five and seven-sixteenths per cent to well under five and a quarter per cent by early February. At that stage, however, a combination of factors led the market to conclude that the Bank Rate reduction would be deferred—possibly until after the introduction of the Budget (since announced for 9th April)—and thus provoked a sharp rebound in market rates. By 2nd March, the Treasury Bill rate had been levered up to almost five and nine-sixteenths per cent, thus restoring to the discount market a more normal running profit-margin over its average borrowing costs. (Since this review was despatched, the Bank Rate has been reduced to 5½ per cent, with effect from Friday the 9th inst.—ED.)

U.S. Dollar Not So Weak

According to some commentators, an important ingredient in the strength of sterling has been the continued weak undertone of the U.S. dollar. But this argument is not well supported by some other evidence. In particular, a notable feature of recent months has been the quietening of the bullion market. The London gold price has dipped to 249 shillings and three pence a fine ounce, its lowest for a considerable time, with the corresponding dollar price at no more than 35.06¼. Though it is well known that the London gold market had been subject at times to strong management by the Bank of England, acting in consultation with the United States Federal Reserve authorities, there is no reason to believe that this sharp drop in the price has been deliberately engineered; on the contrary, it appears to reflect a subsidence of the former excitements. If this experience is some measure of international sentiment towards the dollar, it accords reasonably well with other evidence of dollar prospects. Several recent announcements from Washington and New York have shown that a structure of central banking co-operation resembling that which supported sterling after the revaluation of the D-mark last year has been extended to provide important technical facilities for the support of the dollar. The U.S. authorities have made it clear, moreover, that they are prepared to defend the dollar against the pressure of short money movements not only by levering up short money rates in New York but by developing still further the technique of operating in various centres to increase the cost of obtaining forward exchange cover for funds switched out of New York.

Change in Opinion

While international bankers have perhaps not yet fully appreciated the significance of these new defences for the dollar, there is no doubt that many of them have lately been reconsidering the opinions they had formed about sterling. It is no longer fashionable to assert, as was being done in the second half of last year, that "sterling devaluation is only a question of time" or "of course, Britain will be bound to devalue before joining the European Common Market."

In recording this change in international opinion about sterling, I hasten to add I am not myself asserting that there has been any corresponding change in the underlying position of sterling, nor do I mean to imply that I think that the fundamental problem of underpinning sterling is already solved or about to be solved. The main point is that last year's pessimism about sterling on the Continent was overdone.

July Measures Yield Results

Although Britain is still far from its ultimate economic goal of ensuring, over the average run of years, an overall balance, if not an overall surplus, on its balance of payments, and of achieving at the same time a reasonably steady rate of economic growth, its recent experience has disclosed some moderately heartening portents. The measures of last July have had the effect of easing most of the inflationary strains that had been growing up in the economy. Most industries now have a margin of spare capacity, and some a substantial margin; the main limiting factor on expansion is no longer a shortage of skilled labour (even though the unemployment ratio is still no higher than two per cent). Instead, it is set by the volume of orders. The more competitive climate brought about in many trades has reinforced the administrative and other specific measures introduced by the Government with the object of putting a brake on the rise in incomes, especially in wages. Profit-margins have been falling for some time past. The policy of the "wages pause" and the new policy of restraint that is still being devised have unquestionably had the effect of keeping increases in basic rates in some major industries appreciably smaller than they would otherwise have been. The White Paper on incomes policy, published in February, emphasised afresh the need to keep the rate of increase of incomes within the long-term rate of growth of production, and pointed out that, in recent years, that rate has been about two to two-and-a-half per cent a year.

Cost Front

Whilst the Government hopes that the economy may do better than this eventually, for the present it thinks that increases in incomes should be related to this rate of growth. It does not seem likely that the general level of wage increases this year will be kept strictly down to this 'guiding light' average of two-and-a-half per cent, but it may not far surpass it. In a major series of negotiations culminating last month in direct discussions with the Prime Minister himself, the railway workers were persuaded to accept three per cent—an offer which had at first

(*Continued in first column*)

MILLS' CONCERN OVER COTTON SHORTAGE

IMMEDIATE ARRANGEMENTS FOR ADEQUATE IMPORTS URGED

LAST year (1961), it will be recalled, was quite a favourable one for the cotton mill industry, in that the year witnessed a notable rise in output —5,139 million yards of cloth and 1,899 million lbs. of yarn, as against 5,052 million yards and 1,737 million lbs., respectively, produced in 1960. Such an encouraging production performance was due, in large measure, to the comfortable raw cotton supply position, thanks to a good crop of 5.41 million bales harvested in the 1960-61 season, as compared with 3.81 million bales in the 1959-60 season. The cotton crop in the current (1961-62) season has, however, suffered a veritable setback, the latest estimate of yield being placed at as low as 4.30 million bales. It is true that the season began with a larger carryover stock of 2.17 million bales, as against 1.49 million bales in 1960-61. Even so, the total supply for the whole season 1961-62 is well below that for 1960-61, being 6.92 million bales (including 450,000 bales of foreign cotton so far permitted to be imported), as against 7.90 million bales (including the 1,000,000 bales of foreign cotton imported). If allowance is made for two million bales as reasonable running stock, the supply actually available for consumption by mills comes to less than five million bales, whereas consumption is currently running at an annual rate of 5.8 million bales.

Viewed thus, the millowners' concern and the anxiety over the problem of cotton supplies are quite understandable. The Indian Cotton Mills Federation, at its meeting held in the City on the 9th inst., declared that it would not be possible to maintain the current rate of textile production, unless speedy arrangements were made to fill the gap in cotton supplies. Drawing attention to the industry's move to step up, within the last year and a half, its output of yarn by 10 per cent in response to the call for increased production, the Federation warned that, if this tempo could not be maintained, it would, indeed, be a matter for grave concern. It, therefore, decided to request the Government to convene an urgent meeting of the Cotton Textiles Consultative Board to consider the problem.

That the current season's cotton crop would be markedly smaller as compared with the previous season was evident at the beginning of the season itself. Although nearly six months have elapsed since the season began, the Government has announced imports to the extent of only 450,000 bales. It is not as if the Government was not seized of the problem earlier. Indeed, it was. But what could the Government do when the shortage of foreign exchange has been acute all along? It has been trying its best to get more U.S. cotton under P.L. 480, but its efforts have not been fruitful because the surplus of American cotton has shrunk. The country is, therefore, in a very difficult position.

Cotton Prices

Meanwhile, cotton traders and other raw cotton interests have been crying hoarse for removal of the ceiling on cotton prices and abolition of controls. These leaders of raw cotton virtually want to exploit the helplessness in which the country finds itself. This demand, too, was examined by the Committee of the Cotton Mills Federation and a non-committal observation was made, as witness the quotation below from the Press note issued by the Federation's office:

"The Committee also gave consideration to the resolution passed by the Indian Central Cotton Committee recommending the removal of ceiling price on cotton from the next season. The cotton crop had shown wide fluctuations in the last few seasons and this year's crop of 4.3 million bales was a disheartening start to attain the third Plan target of 7.0 million bales. The Committee were anxious that no efforts should be spared to reach the target of cotton production speedily, but whether the proposed removal of ceiling price was the answer to this problem or whether any other methods could be adopted for the purpose required careful examination in the light of the repercussions of any such measures on the national economy. The Committee decided to request Government that this matter should also be discussed at the proposed meeting of the Cotton Textiles Consultative Board."

It is surprising that the Federation has no considered opinion on an issue that vitally affects not only the cotton textile industry but the economy as a whole. Does the Federation feel that an increase in the price of cotton now or the removal of price controls in the midst of acute scarcity will help produce more cotton now and lead to a big increase in the crop in the next season without detriment to other crops? This is not a complex question. Surely, the Federation can command sufficient talent to examine the issue and to come to a decision. Apparently, the members of the Committee either suffer from divided loyalties or consider that it would not be diplomatic to be candid on an issue into which a lot of politics has been imported.

To revert to the Federation's meeting, Mr. Bharat Ram, the Chairman, gave an account of the discussions at the International Cotton Textile Conference held at Geneva in February under the auspices of the G.A.T.T. As a result of the long-term arrangement drawn up there, as Mr. Bharat Ram said, the exporting countries have acquiesced in the continuance of restrictions on imports by the European Economic Community countries which are not warranted by the provisions of G.A.T.T. Further, they have also exposed themselves, in certain circumstances, to the possibility of similar restraints being imposed by other countries which are not doing so at present. But in turn, he averred, there was the promise of enlarged quotas by the E.E.C. countries and an assurance that all countries would work towards speedy elimination of the remaining barriers in international cotton textile trade. Mr. Bharat Ram hoped that, with the emphasis placed in the Geneva agreement on giving increased export opportunities to the developing countries possessing the necessary resources such as raw materials and technical skill, India should be able to secure from France and West Germany adequately enlarged quotas for exports of cotton textiles.

U.S. Restricts Hong Kong Textiles

While it remains to be seen whether the hope expressed by the Federation's Chairman will be fulfilled, the fear that the arrangements governing world trade in cotton textiles evolved by the G.A.T.T. International Textile Conference would strengthen protectionism in markets hitherto free from import restrictions has already proved correct to some extent. On the 2nd of this month, the U.S. Government, for instance, conveyed to the Government of Hong Kong, through the British Embassy at Washington, its request for "restraint" on shipments from Hong Kong of eight categories of textiles (ginghams carded yarn, sheeting carded yarn, twill and sateen carded yarn, fabrics not elsewhere specified, knitshirts other than T shirts and sweatshirts, including infants' sweaters and cardigans, raincoats three-quarter length or over, and all other coats). The request was in accordance with one of the principal provisions of the short-term agreement which lays down that

A participating country, if it finds that unrestricted imports of cotton textiles are causing or threatening to cause disruption of its domestic market, may request the exporting country concerned to restrain, at a specified level not lower than the level prevailing for the twelve-month period ended 30th June 1961, its total exports of any category of cotton textiles causing or threatening to cause such disruption...

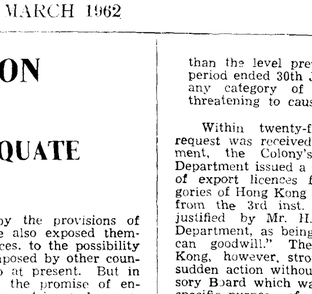
Within twenty-four hours after the U.S. request was received by the Hong Kong Government, the Colony's Commerce and Industry Department issued a notification stopping the issue of export licences for the aforesaid eight categories of Hong Kong textiles to the U.S. with effect from the 3rd inst. The immediate action was justified by Mr. H. A. Angus, Director of the Department, as being "necessary to retain American goodwill." The textile interests of Hong Kong, however, strongly protested against such sudden action without consulting the Cotton Advisory Board which was set up in July last for the specific purpose of offering advice on important issues affecting the industry. "It is inexplicable," to quote a leading Hong Kong daily, "that the Government should choose to ignore the Board and make a 'closed door' decision on a matter which concerns the livelihood of 40 per cent of the Colony's industrial workers." Indeed, immediately after the Government's announcement, about 1,000 workers employed in a number of small mills were dismissed and several others suspended operations. The Cotton Advisory Board held an emergency meeting on Monday this week and, on the recommendations made thereat, the Hong Kong Government announced the same day its decision to issue export licences for cotton textiles in respect of all shipments made in the vessels scheduled to sail on or before the 10th inst. It has also since then forwarded to the U.S. Administration a request for further shipments as an interim measure, pending the outcome of projected consultations. These consultations, it is emphasised, should take place "at the earliest possible date."

The U.S. Administration may not, however, concede the plea of Hong Kong, in view of the mounting pressure from the domestic cotton textile industry. It would not be surprising if the Administration were to make requests for restraints on exports from other countries also, including India, under the pretext of market disruption on account of excessive imports. And it would also not be surprising if similar requests were to come from the other developed countries, too. Indeed, it looks as though the Geneva agreement will serve as an inducement for imposition of res-

(Continued on page 465)

BANKING ADVICE FROM

MANU THE LAW GIVER



Deposit banking in some form or the other existed in India in the second century A.D.

Manu, the law-giver, enjoined people to make deposits with bankers of good repute. "A sensible person should make a deposit only with a person of family, of good conduct, well acquainted with the law, veracious, having many relatives, wealthy and honourable."

The Union Bank of India, established in 1919, has enjoyed the highest reputation in reliability, strength and friendly transactions. The Union Bank prides itself on its unique *personalised service*, under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information, Safe Deposit Vaults; TELEX contact with countries all over the world.

THE UNION BANK OF INDIA LIMITED
Registered Office: Apollo Street, Fort, Bombay 1. 61 branches all over India

OFFTAKE OF COTTON TEXTILES LOW

SIR CUTHBERT CLEGG ON EXPORT MARKETS

From Our Special Correspondent

MANCHESTER, 6th March

MANCHESTER LETTER

TWO economic developments, both of which had a direct and indirect bearing on textile products, coincided last week, the effect being to discourage renewed activity in the market. On a national scale, the admission by the Chancellor of the Exchequer that Government expenditure had risen well above last year's estimates offered a foretaste of how much—and how little—can be expected from the forthcoming Budget statement. Although some commentators are suggesting the likelihood of a series of neutral proposals, it seems self-confident that no relaxation in purchasing power is likely.

For retail users of many types of textiles, the price cuts, averaging about 7½ per cent, announced by Marks and Spencer Ltd., the big retail chain store group made perhaps a bigger impression. The clothing concerned represents an annual turnover of about £20 million and customers, on the basis of previous sales, would save about £1,500,000. This decision, taken at a time when severe pressure on margins is reported from practically every sector of the trade, created some alarm among producers, who feared that they were fighting a losing battle against the constant resistance of distributors when negotiations covering new orders were under discussion.

Improved Techniques

According to the Company, the cheaper prices were made possible as a result of improved techniques adopted by the manufacturers who provide the branded goods for the chain. These techniques, it was stressed, had not only reduced costs but had increased productivity, while lower prices for some raw materials had been a further governing influence in the decision to introduce cheaper retail charges.

The Government, meanwhile, has been under fire, not only from the opposition, but from its own supporters, for its apparent inability to keep the national economy in reasonable shape. Viewed from the standpoint of industrialists, moreover, the frequent changes in emphasis, from restriction to relaxation and back again, are matters of grave concern. For the moment, restriction holds sway and the immediate outlook must indicate a continued reliance on curtailment of expenditure, which scarcely encourages business operations.

Cotton's problems are numerous enough as it is, without having to contend with an economic climate in which traders cannot be blamed for acting with extreme caution. Merchants and buyers generally have had reason to keep their requirements narrow throughout the second half of 1961, and the early weeks of the current year have not provided any incentive to change this policy.

Hand to mouth purchasing which has followed makes it exceedingly difficult for producers to run their mills in an efficient manner. Bearish sentiment lately encountered in the raw material has been an additional restraining factor.

Amid these entirely restrictionist influences, only a super-optimist would expect the offtake to broaden. Local traders are only too anxious to break out of such adverse circumstances, but impetus is sadly lacking. In the mills new machinery is being installed, fresh techniques are being evolved and, order books being as they are, early delivery can be offered. One fortunate feature of the situation is that a substantial build-up of stocks has been avoided during the months of stagnation, and a sudden switch in atmosphere would soon see the industry click into forward gear again.

Promotion, The Aim

Growers of natural fibres are invariably more apprehensive about competition from rayon and synthetics than those whose job it is to turn these raw materials into finished products. In America, the cotton producer thinks in different terms to the textile manufacturer, while in this country and other processing areas the welding together of the industry into a single textile entity has made rapid strides during the past generation. This has been increasingly underlined by recent developments on a structural basis, where employers' organisations have joined forces to represent users of both natural and man-made fibres. Promotional activities in the United States, however, take on a different aspect when the need is to encourage the consumer to stipulate that the goods he buys should be cotton, as opposed to rayon or other similar products.

Quite a fuss can be caused, for example, among the cotton growing fraternity when big distributors make claims for blended towels containing both cotton and rayon, which they contend are superior to a similar item made purely from cotton. The situation is further complicated by the fact that the price of the blended article is substantially cheaper and the prominence given to it in a coast-to-coast mail order catalogue is more than double that of the cotton towel.

Production in 1961

This is the time of the year when numerous statistics covering the previous 12 months flow in from various sources. It is already known that the volume of production in the Lancashire cotton industry in 1961 dropped by 7 per cent as compared with the previous year. Yardage of cloth woven was 4 per cent down, single yarn production dropped by 9 per cent and doubled yarn output was reduced by 12 per cent.

In the textile and clothing industries as a whole, the volume of orders on hand at the end of December was 32 per cent lower than 12 months previously, but net new orders were only 12 per cent down. Deliveries in 1961 were 4 per cent lower than in 1960. In the month of December only, deliveries in 1961 dropped by 7 per cent, but net new orders were two per cent higher than in December 1960. As the Board of Trade invariably points out, when commenting on these returns, the figures for separate months are subject to wide fluctuations, with marked seasonal changes in demand.

During the individual quarters of 1961, for instance, the orders on hand declined by 24 per cent, but it is significant that, in the final quarter, the contracts available for producers were 4 per cent higher than at the basic level of April 1959, before the reorganisation scheme was launched. Net new orders in the last quarter of 1961 were actually 3 per cent higher than in the first quarter, while deliveries last year showed little change, being 4 per cent down in the final quarter compared with the first three months of 1961.

Good Export Markets in Europe

Underdeveloped countries must be allowed to develop, but other developed countries besides Great Britain should take a fair share of their products says Sir Cuthbert Clegg, Chairman of Clegg and Orr Limited, the Lancashire textile group, in his annual statement. Opportunities for the sale of British cotton products in the countries of the Common Market exist and such markets should be much more reliable than some of Lancashire's traditional outlets where political changes, high protective tariffs or payment difficulties have often made exporting difficult or impossible. "We used to be part of a great exporting industry and given fair conditions with our competitors we could do once again a great deal more than we do now," he says.

The industry had suffered in the past year because of the closing of former markets and increasing competition both at home and abroad of goods made by industries in countries where standards of living and wage rates are much lower than in the United Kingdom. In the meantime, millowners must face the fact that current year's profits are unlikely to be as good as last year's, he went on. At present the trade was depressed and fearful—"selling is difficult and prices are low," Sir Cuthbert Clegg added, but demand must increase again before long.

Referring to the reorganisation scheme, Sir Cuthbert said that he was grateful for the extension of a year which the Government has granted for the ordering of new machinery under the scheme, but it would be even better if the scheme could go on longer still. Taking into account the difficulties in finding enough money, it was impossible in the four years which the scheme allows to afford what is required even by firms which had already spent consistently high proportions of their profits on new machinery in past years.

For the future, Sir Cuthbert said that the textile industry was in a stage of great development. New man-made fibres as well as the older natural ones were being used together and fabrics were being produced on new and modern machinery specially adapted for the purpose. In a few years time, the "modernised" mill would be out of date again and its machinery would have to be renewed afresh to bring it up to date. "This is the price of progress," said Sir Cuthbert.

READY REFERENCER AND GUIDE TO COMPANIES ACT

1961 Edition

COTTON REQUISITION FOR MILLS

GUJARAT TRADERS AGREE TO CO-OPERATE WITH GOVERNMENT

THE agitation for the discontinuance of compulsory requisitioning of cotton, which had been going on for some time now only in Gujarat and not in other cotton growing regions, has at least resulted in a compromise formula being evolved. At a meeting held this week at Ahmedabad, representatives of cotton traders and the Textile Commissioner agreed upon requisition by consent and co-operation. A meeting was convened by Dr. Jivraj Mehta, Chief Minister of Gujarat, following the stalemate in cotton trade consequent on the closure of scores of ginning and pressing factories. After prolonged discussion, the meeting unanimously agreed to arrange for the supply of cotton to mills at or below ceiling prices without causing hardships to the growers or dislocating normal trade channels. It was also decided to constitute five committees, one each for the five cotton zones in the State, to advise the Textile Commissioner on the quantity of cotton to be requisitioned and its allocation. The Committees will also assist the Textile Commissioner in obtaining cotton whenever requisitioning became necessary. The advisory committees to be constituted for the five zones, namely, Saurashtra, Surti, Digvijay 'A', Digvijay 'B' and Kalyan zones, will consist of a representative of cotton-growers, co-operative societies, cotton traders, the State Government and the Textile Commissioner.

Crisis Averted

This development is a pleasant surprise. For looking to the trend and tenor of the agitation, it looked as though a deadlock would develop in the marketing of cotton in Gujarat. In fact, it was even reported that some traders were preparing to question the legality of the requisitioning order of the Textile Commissioner in a court of law. According to them, the present practice of mills making a request to the Textile Commissioner for certain specific varieties of cotton and the latter compulsorily acquiring such cottons from the traders at the ceiling prices amounted to an unwarranted encroachment upon the freedom to trade of the merchants. Evidently, they had forgotten that they had lost this freedom long ago through a series of amendments to the Constitution and that similar contests in Law Courts had gone in favour of the Government.

The agitation began when the Textile Commissioner, in response to requests from mills, started requisitioning cotton in selected areas in Gujarat. The contention of the so-called representatives of growers and traders was that requisitioning was uncalled for when cotton was available in the State at or within the ceiling prices. They asserted that there was no hoarding of cotton and that the scarcity of supplies was due to the late arrival of *kapas*. It was also pointed out that most mills asked for requisition, even though they had no difficulty in obtaining cotton at the ceiling price. A perusal of the periodical returns submitted by mills to the Textile Commissioner containing information about the mills' purchase of cotton, ready and forward, the actual delivery taken, the price at which the cotton was purchased, would show, they argued, that mills had no difficulty in getting all the cotton they needed.

It was also pointed out by those who opposed requisitioning that, in several cases, requisitioning, instead of making available cotton at ceiling prices, would have the opposite effect, because traders or growers whose cotton was requisitioned would have to buy *kapas*, over which there was no price control, at whatever price it was available, to honour their commitments. Requisitioning would, therefore, result, according to these critics, in an artificial demand for *kapas* and push up prices of lint cotton.

These were the grounds on which traders and growers in Gujarat demanded abolition of the system of requisition of cotton. If this were not possible, they suggested as an alternative that the Textile Commissioner should not requisition cotton if evidence of sale of the cotton proposed to be requisitioned was produced. As a protest against requisition order and to back the demand for discontinuance of the practice, scores of ginning factories and markets in Gujarat were closed down. In effect, this meant a defiance of the Government order. This defiance was also supported by a section of the cotton trade in Bombay City also. Thus, at a meeting of the Cotton Merchants' and Muccadams' Association held in Bombay last week, the policy of requisitioning was strongly criticised.

Untenable Arguments

Many of the arguments put forward by the cotton interests of Gujarat will not stand the test of scrutiny. The truth is that several merchants, ginners and large growers had speculated in the belief that the Government of India would not have the courage to implement the controls on cotton by carrying them to their logical conclusion. They must have thought that they would have the support of the State Government in their defiance of the Cotton Control Order. When they found that this was not forthcoming, they attempted to browbeat the State Government by staging demonstrations. They have gone wrong in their assumptions. It is gratifying to find that both the State Government and the Central Government did not succumb to these pressures.

The formula adopted at Ahmedabad, according to which requisitioning of cotton will be done by the consent and co-operation of the traders and growers, represents a compromise between the points of view of the trade and the Government. It is not known whether it will be applicable only to Gujarat or to other States as well. If it is applicable to other States, too, it may be asked whether such a decision could be taken at a meeting which was attended by the representatives of growers and traders from one State only.

That is a minor point. What is important is that the cotton interests in Gujarat have at last seen the futility of opposing controls, which are meant for the benefit of the country as a whole. Requisitioning becomes inevitable, when mills are not in a position to get cotton at the ceiling prices. In fact, it is a logical corollary of the policy of price control for cotton. But requisitioning by consent is any day better than requisitioning by compulsion.

TEXTILES

(*Concluded from page 462*)

trictions on imports of cotton textiles into the developed countries. Such restrictions, however, will be a violation of the law of comparative advantage in international trade, namely, that each country should specialise in the production of those goods which it can produce relatively cheaply and import those goods in the production of which foreign countries possess a comparative advantage. The developed countries today are in a stronger position than ever before to observe this economic discipline. They have both full employment and highest living standards in their history. Few would object to any move on the part of the developed countries to withstand foreign competition through achievement of higher efficiency in textile manufacture, as well as to curb imports in case of real dumping. But any attempt to invoke the provisions of the Geneva agreement just for the sake of maintaining domestic production at any cost is bound to retard the growth of production in countries which have comparative advantages in this regard; alternatively, it may lead to surplus world production and all the market consequences thereof.

The Hong Kong Government has turned down the plea of indigenous cotton textile industry and traders for resuming issue of licences for exports to the U.S. of eight categories of textiles on which the U.S. Administration asked for restraint early this month, as is referred to in the article above. This means that the Government wants to follow the letter and spirit of the Geneva agreement. It has informed the textile interests that the U.S. authorities have agreed to hold further consultations on measures appropriate to meet the present situation and warned them against assuming that an agreement to resume shipments will be secured.

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA

We, the undersigned Auditors of the State Bank of Patiala appointed under sub-section (1) of Section 42 of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report upon the Balance Sheet and Accounts of the Bank as at 31st December, 1961.

We have examined the above Balance Sheet and the Profit and Loss Account and the accounts relating thereto of the Head Office and the returns submitted and certified by the Branch Managers, which returns have been incorporated in the above Balance Sheet and accounts and report;

(i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by books of the Bank;

(ii) that where we have called for any explanation or information, such explanation and information have been given to us and have been satisfactory;

(iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(iv) that the returns received from the branches of the Bank have been found adequate for the purpose of our audit;

(v) that the Profit and Loss Account shows a true balance of Profit for the period covered by such account;

(vi) that, in our opinion, the Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law and

(vii) that, in our opinion, books of account have been kept by the Bank as required by law.

MORE ON TEA INDUSTRY

EXPORT DUTY—F.A.O. REPORT—INTERNAL CONSUMPTION

SINCE the commencement of 1962, there has been an improvement in the prices of tea sold for both export and domestic consumption, despite the fact that the 1961-62 season has witnessed a significant rise in production. This fact is quoted by some against the planters' persistent plea for a substantial reduction in, if not abolition of, export duty on tea, a demand consistently supported by this journal, too. Mr. I. F. Morriss, whose speech at the last annual meeting of the Indian Tea Association, Calcutta, was briefly commented in our last issue, made a reference to this particular contention and observed:

"I would agree that a peculiar feature of the tea industry is that we always seem to be able to get rid of our tea, but the prices are often below the cost of production. We have no stocks on hand, and this has tended to obscure the real losses which we sometimes suffer. For example, we are told correctly that we have already disposed of 200,000 more chests of tea in 1961-62 on the Calcutta auctions than we did in the previous year. Therefore, it is argued, our fortunes must be good. Unfortunately, the average price per kilogram in the current season is nearly 70 nP less than the price secured in 1960-61. I have had the figures worked out and it appears that we have earned less in sale proceeds from our 1,900,000 chests this year than we did last year from our 1,700,000 chests. The economic consequences of producing more and of getting less per kilogram might be endured, but, when our production increases and our total sale proceeds decline, the position becomes difficult indeed. It is for this reason that we are apprehensive of the consequences of a target of 900 million pounds at the end of the third Five-year Plan. We may be able to sell this tea, but there is no assurance that India as a whole will receive a reasonable price in return for the extra man-power, coal, timber and transport which will be involved. One way in which we can seek to secure better prices is to increase demand, and it is for this reason that we watch with such interest the efforts made to promote the sale of our teas abroad."

Logical and Right

It is obvious from the foregoing quotation that the case for doing away with the export duty in quick stages, if not at one stroke, has to be viewed not from the immediate angle but from that of the long term. The Government spokesmen have been saying that domestic consumption of tea must be restrained in order to make sufficient surpluses available for export. One way of achieving this objective would be to make the sales for export to be more attractive than those for home consumption. From this angle also, the removal of export duty and the refund of excise duty on teas exported are logically the right measures.

A leading Government official, who has a lot to do with export promotion, once told a representative of this journal that, by abolishing the export duty on tea, the country would earn less foreign exchange per lb. of tea sent abroad and, as such, the solution would bring no net advantage. He further pointed out that there was no guarantee that a reduction in export duty would not be followed by an increase in taxes on consumption in the importing country.

To take the second point first. This is based only on a surmise which may not materialise. If it does, the Government of India will have to protest strongly to the Governments of the countries concerned. The present climate in Europe, America and rest of the developed world, however, is such as to permit the inference that the possibility of duties on consumption of tea and other soft beverages being raised are remote. If anything, the scope for a reduction in such duties is bright, in view of the growing realisation among the developed countries of the need for allowing the underdeveloped countries to expand their exports. Indeed, by reducing the taxes levied on exports, the Government of India will be strengthening its case for easier access to consumers of soft beverages in the developed countries, so that it can sell more tea to them. Since India is a heavy importer of manufactured goods, know-how and capital from these countries, it has a strong case for pressing these countries to facilitate imports of tea which does not in any way adversely affect the employment in their own countries.

As for the argument in regard to loss of foreign exchange, there is surely not much merit in it when one views it against the need for reversing India's shrinking share in the world tea trade. It is a very shortsighted consideration which ignores the clear writing on the wall. In the anxiety to safeguard the country's immediate foreign exchange requirements, one must not sacrifice the future. In the coming years, India will have to sell more tea in the world markets and not less and it must strive hard to see that it gets a progressively increasing proportion of tea consumed in the world. It is hard to believe that taxes intended to curtail consumption at home can have different effects abroad. That apart, the argument itself is not free from fault, for it proceeds on the assumption that the gains flowing from the abolition of the export duty in the shape of larger exports of tea will not be big enough to offset the loss in the value of foreign exchange realised per lb. of tea. Mr. Morriss is convinced that, "if excise duty or export duty is abolished or reduced, an increase in the off-take of Indian tea by foreign buyers can be expected." His reasons for this assertion are:

"First, there is at present no encouragement whatsoever to send out tea when each export is accompanied by the payment of an export duty over and above the excise duty already paid.

"Secondly, the producer who is asked to quote for his teas by foreign buyers is bound to quote a price which will at least cover his cost of production as well as internal taxes which he has to pay. The foreign buyer will see this price, and he will realise that, in addition, he will have to pay the export duty. Inevitably, quality for quality, the Indian producer must quote a higher price than producers who are not handicapped by the need to pay an excise duty and an export duty on teas which are exported."

Time Opportune

Reiterating the planters' arguments for relief in taxation on exports, Mr. Morriss added:

"The chances of the profitable production of 900 million pounds of tea seem to be rapidly waning and, if Indian teas are to be subsidised, Government must be prepared to accept some temporary sacrifice and to give exporters some worthwhile incentive. We are confident that this would have results, not merely in the increase of exports but also, probably even more important in the long run, in the added confidence which it would give to those already in tea in India and to those who but for taxation might be. It cannot have escaped anyone's notice that some of the confidence in the future of tea estates in other parts of the world is less robust than it was, and the present would seem to be the proper time to encourage capital to stay in tea in India, and to attract new capital to the industry."

It is reported that even the Mudaliar Committee on export promotion has laid great stress upon the need for giving fiscal incentives to the major commodity exports. Tea is surely one of them. It remains to be seen to what extent the arguments advanced on this question have convinced the authorities. Some evidence of this should be available at least in the next budget, if not earlier.

Domestic Consumption

Another aspect of tea industry on which much discussion has taken place pertains to domestic consumption. There is no identity of view on this issue also between the Government and the tea industry. "I am rather worried that the internal consumption (of tea) is going up a little too fast." This remark was made by Mr. K. C. Reddy, Union Minister of Commerce and Industry, in his speech at the joint meeting of the Import and Export Advisory Councils at New Delhi on the 5th inst. And that sums up the Government's view. The Government feels that, if domestic consumption of tea were to go up in the coming years as it has been doing in the last few years, it would (*a*) leave a lower surplus for export and (*b*) keep up the prices of tea so high that there would be little room for levying an export duty. There might have been some cause for worry about the availability of enough tea for export had not the third Plan target for tea been raised and production was not rising. But now that neither of these considerations holds good, the Government's stand on this issue is unrealistic. Even if domestic consumption goes up at a fast pace, it is not an undesirable trend. On the contrary, it is quite a welcome trend. India has the land, the know-how, and labour for producing more tea. It can produce all the tea needed by its people as well as for export. That will provide more avenues of gainful employment for its rapidly expanding work force. More consumption of tea will also provide an outlet for sugar, of which the country has plenty, and a great encouragement to milk production.

There is also another very good reason why domestic consumption of tea should not be subjected to any undue restraint. And it is that increase in consumption of tea, especially by industrial workers, white-collared workjng class and rural areas will serve as an antidote to inflation by absorbing a part of the increase in their wages. It will also help them to improve their productivity, as anyone who has some acquaintance of workers in Britain will testify. In short, the attitude of the Government towards this labour-intensive industry, which requires very little foreign exchange for expansion, is surprisingly funny. The sooner this is discarded in favour of an expansionist policy the better for the country as a whole. From this it naturally follows that the Government's policy in regard to promotion of tea consumption in the country is not well founded.

F.A.O.'s Forecast

For well-nigh two years now, planters in this country have been in the practice of quoting an F.A.O. publication, which took a pessimistic view of the prospects for tea, as though it were the Bible. None of them cared to examine critically the basis on which the authors of this report had come to their conclusions. They never bothered to explore the possibility of there being another side to the coin. On the contrary, they used to cite that report to dub the Government's third Plan target as unrealistically too high. It will be recalled that this report anticipates a substantial excess of production over consumption by 1965. It is, therefore, refreshing to find that, on this question, Mr. Morriss could make a slight departure from the stand taken by the other planters in this country. Incidentally, neither Ceylon nor Pakistan nor Indonesia has paid so much attention to this F.A.O. report as planters in this country have done. Be that as it may, Mr. Morriss's approach was rather novel, as will be seen from the following extract from his speech:

"We feel that the existence of this report unchallenged is bound in the years to come to have a depressing effect upon prices. We have, therefore, proposed to the Government of India that the United Nations should be asked specifically to examine this report in all its detail and either confirm or deny the conclusions which have been reached. If the conclusions are denied, then a load will be off our shoulders; if they are confirmed, the question of regulation of production must be taken up on an international level by all concerned. At the recent I.L.O. meeting in Geneva on work on plantations, which was attended by my Deputy Chairman, there was unanimous approval for a vigorous attempt by the United Nations to do what it could to stabilise the prices of plantation commodities, and clearly forecasts of overproduction, unless refuted, can have damaging effects. It is my hope—and my belief—that, if the United Nations accepts and agrees with the F.A.O. conclusions, other producing countries will quickly join with India in an attempt to avoid this danger through the machinery of the International Tea Agreement."

It will be seen that Mr. Morriss has neither accepted nor refuted the F.A.O.'s analysis. Does this mean that the task is beyond the competence and resources of the I.T.A., the U.P.A.S.I., and other associations of tea planters in this country? Can they not find sufficient experts in India and elsewhere in the world to x-ray this publication and give their comments? If necessary, they can seek the co-operation and assistance of the Government of India for this purpose. What will the U.N. do in this matter? The F.A.O. is a part of this world organisation, specialising in food and agriculture. The diplomatic touch of the I.T.A. in its suggestion to the Government of India is, however, quite clear. It wants to use the F.A.O.'s report as an instrument for reviving the International Tea Agreement. But the chances of success of this move are remote, if not absolutely bleak. The political barriers are insuperable and, if India takes the lead in promoting this Agreement, it will lose rather than gain. Besides, no agreement will be possible so long as the surpluses are only in the realm of forecasts. The best thing that India can do is to stop talking about the revival of International Tea Agreement and take energetic measures for winning bigger and more markets abroad for its tea, besides developing the domestic market also.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL BY

ASSAM HARDBOARDS LIMITED

(INCORPORATED ON 25TH MARCH, 1960)

Registered Office: 9, EZRA STREET, CALCUTTA-1

BOARD OF DIRECTORS

Shri G. D. SOMANI, M.P.	Kapur Mahal, Marine Drive, Bombay-1.
Shri NAGARMAL PERIWAL	Raisingnagar, Rajasthan.
Shri BENUGOPAL BANGUR	65, Sir Hariram Goenka Street, Calcutta.
Shri DALE L. SCHUBERT	2112, Crystal Springs Road, Tacoma, Washington, U.S.A.
Shri BASUDEV SOMANI	Shreeniketan, Marine Drive, Bombay-2.
Shri HEMENDRA PRASAD BAROOAH, (Proposed nominee of Assam Government)	Club Road, Jorhat, Assam.
Shri MUKUL HARKISONDASS	Sorab Minar, 5, Carmichael Road, Bombay.
Shri GOVINDNARAIN SOMANI	Kapur Mahal, Marine Drive, Bombay-1.
Shri LEKHRAM PERIWAL	5, Lake Temple Road, Calcutta.

MAIN OBJECT

The main object for which the Company has been established is to install a Hardboard manufacturing plant at Gauhati, Assam, with a licensed capacity of 15,000 Tons per annum.

FOREIGN COLLABORATOR: COLUMBIA HARDBOARD CO. INC., Seattle, Washington, U.S.A.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1961

To

THE MEMBERS OF

DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December 1961. The Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The bank's deposits, at the end of the year have increased to over Rs. 43 crores, the total working funds to over Rs. 48 crores, and the number of accounts to over 2,40,000. Eleven branches were opened during the year—at Pedder Road (Bombay) and Deccan Gymkhana (Poona) in State of Maharashtra, Relief Road and Ellis Bridge (Ahmedabad), Udhana, Petlad, Mehsana, Unjha, Visnagar, Billimora and Keshod, in State of Gujarat—bringing the total number of bank's branches to 107 at the end of 1961. Six Safe Deposit Vaults were opened—at Pedder Road (Bombay), Deccan Gymkhana (Poona), Relief Road and Ellis Bridge (Ahmedabad), Wankaner and Bulsar—bringing the total number of Safe Deposit Vaults to 29. Steps were also taken to expand the activities of the present branches. Your Directors are also happy to state that the Reserve Funds of the bank has now reached the figure of Rs. 75 lakhs.

During the year, the bank took over and merged with itself the Wankaner Bank Ltd., Wankaner, under the scheme of amalgamation sanctioned by the Government of India.

3. The bank has made a net profit, after providing for taxation and bonus to staff, of Rs. 26,15,062.66, which, together with the sum of Rs. 7,86,033.43 brought forward from last year's account, amounts to Rs. 34,01,096.09. Out of this, your Directors have made the following appropriations:

	Rs. nP
To Ad-Interim Dividend for the half-year ended 30th June 1961 at the rate of Rs. 2.00 per share	
To Reserve Fund under Section 17 of the Banking Companies Act	2,00,000.00
and propose to appropriate the balance as under:	15,00,000.00
To Pay a Final Dividend for the half-year ended 31st December 1961 at the rate of Rs. 3.50 per share (making in all 11 per cent. per annum, subject to deduction of tax)	3,50,000.00
and To Carry Forward	13,51,096.09
Total .. Rs.	34,01,096.09

4. In accordance with Article 100 of the Articles of Association, Shri Jayantilal R. Trivedi, Shri Laxmikant S. Dabholkar and Shri Dhirendra Nanjibhai Mehta retire from the Board of Directors by rotation but being eligible offer themselves for re-appointment.

5. You are requested to appoint auditors for the period commencing from the conclusion of annual general meeting until the conclusion of the next annual general meeting and to fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

BOMBAY, 13th *February*, 1962.

(2) *Includes Allowances calculated in accordance with the Income Tax Rules.

(3) The Balance Sheet has been prepared in conformity with Form 'A' and the Profit and Loss Account in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December 1961 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 33 Branches audited by us, 22 Branches audited by other Auditors and unaudited returns from 51 Branches. Exemption from the provisions of Section 228 of the Companies Act, 1956, has been obtained from the Central Government for all the unaudited Branches.

We report that—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) the reports on the accounts of the Branch offices audited by other Auditors, so far as were received till the date of our audit, have been dealt with in the manner considered necessary by us; and

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

ALLAHABAD BANK, LIMITED

(AFFILIATED TO THE CHARTERED BANK)

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited, showing the position of the Bank's affairs as at the 31st day of December, 1961, together with their report.

The result of the working for twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of 27,50,614 36

Out of this there has been paid Dividends and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 18 per cent and 7.80 per cent per annum respectively (both subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) for the six months ended 30th June, 1961, absorbing 3,33,000 00

Leaving an available balance of 24,17,614 36

which your Directors recommend should be disposed of as follows:

	Rs.	nP	Rs.	nP
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Preference Shares for the six months ended 31st December, 1961, at the rate of 7.80 per cent per annum	58,500	00		
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Ordinary Shares for the six months ended 31st December, 1961, at the rate of 12 per cent. per annum	1,33,000	00		
In payment of a Bonus (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Ordinary Shares at the rate of 6 per cent. per annum for the six months ended 31st December, 1961	91,500	00		
Transfer to Staff Pension Fund	1,00,000	00		
Transfer to Reserve Fund	4,50,000	00		
Provision for bonus to Staff	9,25,000	00		
			18,08,000	00
Carry forward to next Account			6,09,614	36

The working of the Bank during the year under review continued to be satisfactory and profit has shown an improvement over the previous year's figure despite a substantial increase in operating costs. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

The Bank has been registered as an insured bank under the Deposit Insurance Corporation Act of 1961, which provides, *inter alia*, that where an order for the winding up or liquidation of an insured bank is made, the Corporation shall be liable to pay to every depositor of that bank an amount not exceeding Rs. 1,500 to rupees of the entire deposits of the Bank in India, excluding deposits of the Central and State Governments as also those of foreign Governments and inter-bank deposits, is being paid by the Bank.

Since the last report, three new branches have been opened at Jullundur Civil Lines, Shiamganj, Bareilly and Gandhibagh, Nagpur, while seven pay offices have been upgraded to full branch status in order to enable them to compete more effectively for local business.

As a preliminary to strengthening the capital/deposit ratio, the Board of Directors of the Bank made a final call of Rs. 50 per share on the 29,000 contributory ordinary shares for the purpose of making such shares fully paid. The last date for payment of call money was 2nd January, 1962.

In accordance with Section 228 of the Companies Act, 1956, as amended, each office of the Bank is required to be audited unless exemption is obtained under the provisions of the relative rules framed by Government. The Board of Directors of the Bank decided not to apply for exemption for any office in respect of the accounts for 1961, and, accordingly, as a departure from previous practice the accounts of each and every office of the Bank as at 31st December, 1961, have been audited by the Bank's Statutory Auditors, Messrs. A. F. Ferguson & Co., or by firms of Chartered Accountants appointed after consultation with them.

Under Article 115, two of the Directors, Mr. M. R. Das and Mr. H. Mackay Tallack, retire from office by rotation but are eligible for re-election.

Mr. H. Mackay Tallack was appointed a Director to fill the vacancy caused by the resignation Mr. G. D. Longhurst.

Mr. J. W. Anson was appointed as an Alternate Director for Mr. M. R. Das during his absence from India.

Auditors will have to be appointed for the year ending 31st December, 1962.

By order of the Board,

I. G. THOMSON,
Chairman.

M. J. MACLAREN,
General Manager.

AUDITORS' REPORT TO THE MEMBERS.

1. We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the audited returns from all the Branches of which 85 Branches have been audited by us and 53 Branches by other auditors.

2. We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CALCUTTA,
The 23rd February, 1962.

ALLAHABAD BANK NOMINEES LIMITED

BALANCE SHEET AS AT 31ST DECEMBER, 1961

Capital Authorised and Fully Paid up—	Rs.	nP		Rs.	nP
50 Ordinary Shares of Rs. 100 each Paid in Cash	5,000	00	Deposited with the Allahabad Bank, Ltd.	5,000	00
	5,000	00		5,000	00

We have audited the foregoing Balance Sheet as at 31st December, 1961, of the Allahabad Bank Nominees Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as at 31st December, 1961.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

Notices

THE EMPIRE DYEING AND MFG. COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-second Annual General Meeting of the Shareholders of the Empire Dyeing and Manufacturing Company, Limited, will be held at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Thursday the 12th April, 1962, at 11-30 a.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1961.
2. To sanction payment of Dividend.
3. To appoint a Director in place of Mr. F. Edwards who retires by rotation in accordance with the Articles of Association of the Company and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956 has been received by the Company:

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. F. Edwards, an officer of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

4. To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Kishore M. Premchand, an associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

5. To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED that (a) Messrs. W. H. Brady & Company, Limited, the Managing Agents of the Company, be appointed as Buying Agents of this Company for a further period of three years from the 1st April 1962, in respect of Machinery and Stores to be purchased by the Company outside India through the Manchester Branch of Messrs. W. H. Brady & Company, Limited, which is being maintained not only for the purpose of transacting business on behalf of this Company or any other company managed by Messrs. W. H. Brady & Company, Limited, but also for its own business not connected with the business of the Company and (b) that Messrs. W. H. Brady & Company, Limited, as such Buying Agents be reimbursed such part of the expenses of maintaining their Manchester Branch in any year as is reasonably attributable to the purchases made on behalf of the Company, not exceeding 2¼ per cent of the total amount of the purchases effected by that Branch for the Company in that year."

6. To consider and if thought fit to pass the following Resolution with or without modification as a Special Resolution:

   "RESOLVED that the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof be and are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association."

7. To appoint Auditors for the current year and to fix their remuneration.

EXPORTING—AT A LOSS?

SALES ABROAD SHOULD BE AS PROFITABLE AS SALES AT HOME

(By A Special Correspondent)

TO read the final draft of the third Five-year Plan is to think that the foreign exchange problem has, for the present at any rate, ceased to exist. The Draft Outline had, rather frankly, stated that "the third Plan will have a large foreign exchange component, and this will have to be financed almost entirely from external sources." Since then, and true to expectation, the Aid India Club, the World Bank and other bodies have substantially underwritten our requirements of foreign exchange during the third Plan period. But, in view of the paucity of our export earnings and continuing pessimism in respect thereof, one would have expected rather more emphasis on the "self-help" side of the picture. Instead of this, one gets the impression that the immediate needs having been satisfactorily "disposed of," the country can sit back and devote itself to longer-term problems. Thus, for example, the chapter entitled "Approach to the third Five-year Plan" makes no mention—except perhaps by implication—of the need for export consciousness. Yet, this is a chapter which deals with an imposing array of priorities, such as agriculture, basic industries, education, price policy, phasing of projects, and even statistical intelligence and programmes of research —some of which, at least, have long-term implications.

By way of contrast, we find, in the earlier chapter on "Long-term Economic Development," the pronouncement that while it is "a basic objective in the strategy of development to create the conditions in which dependence on external assistance will disappear as early as possible" and a very large expansion in exports is essential for this purpose, "the programme for the development of exports in the third Plan aims at *laying a strong foundation for a much larger export effort in the fourth and fifth Plans.*" (Italics mine). Indeed, the tentative target of exports for the year 1970-71 is given as Rs. 1,300-1,400 crores, i.e., more than twice the present level, and about Rs. 500 crores more than that envisaged for 1965-66. Even in respect of the third Plan itself, the target of total exports has been raised from Rs. 3,450 crores in the Draft Outline to Rs. 3,700 crores, without assigning any satisfactory reason therefor.

Whether such optimism is justified in the light of the anticipated growth of the economy, only time can tell; but one is certainly entitled to entertain misgivings as to the adequacy of the export promotion programme outlined in the Plan report. These doubts are not confined to the effectiveness of the programme in actual practice: one often doubts whether, in spite of all the discussions that have taken place and all the advice that has been tendered by experts (both academic and those in the field), we have failed to reach the heart of the matter.

Export Objectives Considered

In the circumstances, the export objectives of the Plan would seem to merit some examination at our hands. These objectives have been listed as under;

(i) restriction of domestic consumption so as to create a surplus for export;

(ii) increasing the profitability of exports *vis-a-vis* sales in the home market;

(iii) increasing the competitiveness of export industries through improvement in productivity; and

(iv) the creation of export consciousness (and hence acceptance of its burdens by all sections of the people) and improvement of facilities for export.

These principles will, to a certain extent, no doubt, meet with approval. Unfortunately, they do not take us far enough. Restrictions on domestic consumption (say, through excise levies) will tend to have an inflationary effect and will react adversely on exports in general. At the same time, the drawbacks usually allowed on exports do help in increasing the profitability of external markets—other conditions (mainly price and quality) being fulfilled. The point is that these aids can help to overcome special disadvantages only and are of little utility when the cost structure itself is high. In other words, increasing the profitability of exports may come to mean little more than decreasing the profitability of sales in the home market, so that the basic difficulty still remains. How does the Plan propose to overcome it?

Here is what we find in the Plan report. "Study groups have been recently set up to consider ways of reducing costs in certain selected industries such as cement, jute, bicycles, electric motors and transformers and rayon. It is proposed to review the more important cost studies undertaken for different industries in recent years with the object of working out the lines along which programmes for cost reduction could be pursued systematically industry by industry." It is also envisaged that economies of scale (and of location) should be taken into account in the licensing of individual units in potential export industries, the level of costs receiving precedence over "certain other considerations which have normally to be kept in view in the scheme of planned development."

What these "other considerations" are has been discussed in some detail in the opening chapter. Here it is necessary to refer to Section V which shows marked preoccupation with the problem of economic power. While it is recognised that existing firms have an advantage over new ones in the matter of facilities for expanding their activities and thus reducing their costs, it is stated that "excessive economic power in relatively few hands and the uses to which it may be put, disturb the balance of power in a democracy, expose the social structure to new strains and tensions, and come in the way of diffusion of economic opportunities." These views would be consistent with what has been quoted in the preceding paragraph on one of two suppositions. Either the proposed low-cost (large-scale) plants must cater to the export market only, or they should be in the public sector. The former is not an entirely new suggestion—it has been proposed for the cotton textile industry, and, indeed, is, in a modified way, already in operation in the form of automatic looms permitted to be installed for export purposes only. (Of course, what may be applicable to a major export industry like cotton textiles when faced with a loss of markets abroad, is not necessarily an ideal solution for new industries seeking a foothold in foreign markets.)

The second alternative, i.e., "the extension of the public sector into fields requiring the establishment of large-scale units and heavy investments," may find increasing support after the success which has attended the operations of Hindustan Machine Tools. This State enterprise has not only "doubled" itself out of its own resources, but has begun exporting its products to European countries.

Short-term Policy Required

Since, however, such specialised plants are not likely to contribute anything to the expansion of exports during the third Plan period, it is necessary to introduce measures which will yield results in the short run. On this score, there is really little that the Plan has to say, though it seems to believe that the steps which have been taken in recent years should yield dividends fairly quickly. Reading between the lines, one feels that the measures in respect of *specific commodities* (like drawbacks and freight concessions) are the ones on which the Planning Commission has fixed its hopes for the present, while steps of a general nature (the formation of Export Promotion Councils and the Export Risks Insurance Corporation, the establishment of Trade Centres abroad, etc.) will strengthen the export base in time for a determined effort during the fourth and subsequent Plans.

It is, thus, not surprising that the only definite statement in connection with the four objectives mentioned above is the possibility of excise duties, which, as we have seen, act as a brake on domestic consumption while simultaneously permitting a price differential in respect of exports. In view, however, of the inadequacy of the "drawback method," even after including refunds of duty on imported raw materials, one should explore the possibility of formulating a scheme which will be simple and yet will be able to kill more than one bird with one stone. Such a scheme alone can come to our rescue in the difficult days that lie ahead.

Any worthwhile system of incentives will have two objectives in view. In case of industries are subject to special handicaps, such as excise duties or the necessity of importing raw materials, the additional burden must be counteracted by suitable drawbacks of duty. If our industries are otherwise competitive, this concession should be sufficient to enable sales in foreign markets. The second requirement is that, if, in spite of such facilities, losses will be incurred by exporting, then the manufacturer should be able to make good his losses through higher prices in the home market. Now, it is to this condition that objection is usually taken—the poor consumer should not be burdened in this fashion, even though the larger interests of the nation would be served thereby.

Incentives or Compulsion?

This conflict between sectional and national interests can, it is hoped, be resolved by giving special incentives which would coax the producer into shouldering the burden himself, instead of passing it on to his fellow countrymen. Take, for example, the system of import entitlement, that is to say, in certain industries, the foreign exchange earned by exports can be used, wholly or partially, for imports of raw materials, machinery or stores. In times of shortages, such as the present, this could be a real advantage to the producer willing to take more risks than his less enterprising competitors, for his production programme would be less likely to suffer from interruption. Unfortunately, the scheme lends itself to abuse (in the form of overinvoicing so as to inflate the entitlement figure, sales of import licences or of the raw materials imported, etc.), and, though it may succeed in raising production within the country, its impact on the foreign exchange reserves is

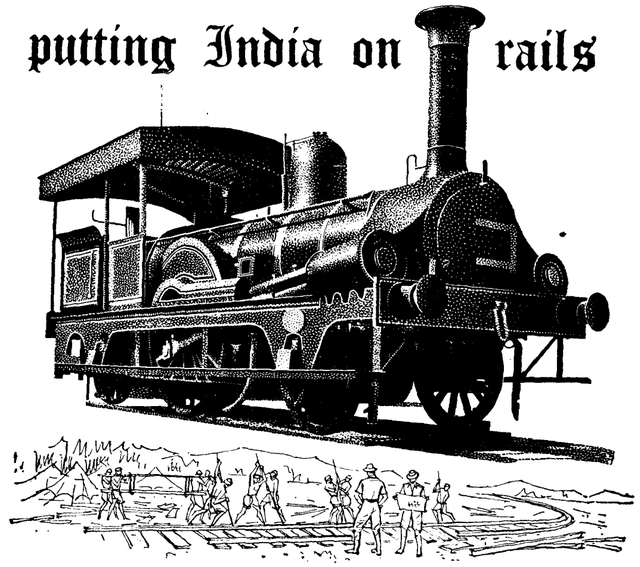
putting India on rails



Featured above is the "EXPRESS", Eastern Railway's first passenger locomotive.

UNTIL the advent of John Gray upon the scene in 1829, the main lines of business of the old-established firm of Burn & Company were house-building and cabinet-making. Gray put the affairs of the young company on a firm foundation and expanded its activities into the new fields of civil and mechanical engineering, iron founding and contracting.

Recognised as India's first railway contractor, Gray laid between the years 1851 and 1859 one hundred miles of permanent way for the East Indian Railway Company stretching over two provinces. Gray's pioneering railway work "reflected great credit on the Firm" and earned the Company good profits which went into the purchase of some land at Howrah on which a foundry and workshops—the nuclei of the present Howrah Ironworks of Burn & Co. Ltd.—were erected.

As a constituent of the Martin Burn Organisation, Burn & Co. Ltd., Howrah, have, among other things, specialised in railway engineering and the large-scale building of rolling stock for the Indian Railways. Since 1904, the Company has produced more than 58,000 four-wheeler units of more than 100 types and over 1,12,000 sets of crossings and switches for India's fast expanding transport system. In addition, from their Structural Shops have come many thousands of tons of fabricated steelwork for the building of railway bridges spanning the great rivers of this sub-continent.

RAISING COMPETITIVE CAPACITY OF JUTE INDUSTRY

GOVERNMENT TO SET UP SPECIAL COMMITTEE

THE Union Minister for Commerce and Industry, Mr. K. C. Reddy, disclosed, in his speech at the joint meeting of the Export Promotion and Import Advisory Council held at New Delhi last week, that he had decided to appoint a committee, under the chairmanship of an Adviser of Planning Commission (presumably Mr. N. C. Srivastava), to go into the problems of jute industry. The industry, the Minister said, apparently by way of justification for one more inquiry, would have to face a number of problems with a view to maintaining its competitive position and increasing exports. And he assured his listeners that the Government would be anxious "to do everything to promote the efficiency of the industry."

The assurance of Mr. Reddy is gratifying, but one wonders whether it is necessary to conduct another inquiry when not only the problems confronting the industry but also the solutions to them are pretty clear. What has, however, been lacking all these days is determined action on the part of the authorities, Central and State. The result is utterly disquieting performance on both production and export fronts. Thus, the actual output of jute goods in 1960-61 (last year of the second Plan) was no more than 1,006,000 tons, which is well below the target of 1,200,000 tons and even lower as compared with the actual production of 1,150,000 tons in 1955-56 (last year of the first Plan). Similarly, in regard to exports, as against the target of 900,000 tons and the actual shipment of 875,000 tons in 1955-56, the quantity exported during the financial year 1960-61 was just 790,881 tons. While the volume of exports has gone down, the value has risen, from Rs. 120 crores in 1955-56 to over Rs. 131 crores in 1960-61. In other words, the unit value of jute goods exported has remained high. The average export price per ton of jute goods in 1960-61 was as high as Rs. 1,657, as against Rs. 1,371 in 1955-56. Such a trend is highly undesirable for two important reasons. First, it will enable Pakistan, which has already successfully captured a large volume of business in India's traditional markets, to make further inroads into these markets as well as others. Secondly, the overseas buyers will turn more and more to alternative packaging media such as paper and plastic bags and bulk handling methods.

Rising Costs

The high level of jute goods prices must be attributed chiefly to the heavy incidence of raw material cost, high level of wages, and enhanced prices of other accessories and stores. Raw jute alone, it may be noted here, accounts for 60 per cent of the total cost of producing jute goods. If the jute industry is to expand its exports or even to maintain them in the face of strong foreign competition and the steady change to substitutes, the sources of raw material must be strengthened and developed, and there must be a continuance of rationalisation in manufacturing processes, as well as in the employment of labour. It is true that notable progress has already been made by the jute industry in modernisation, but there is, as Mr. N. Stenhouse very aptly stated in his presidential address at the last annual meeting of the Bengal Chamber of Commerce and Industry, a steady and relentless pressure for costs to increase which can be neutralised only by greater efficiency. To quote Mr. Stenhouse: "I do not think that official policy has yet finally accepted the hard logic of this situation; and this, I might say, applies also to other industries."

The raw jute production no doubt expanded quite appreciably during the first three years of the second Plan—from 4.10 million bales (of 400 lbs. each) in 1955-56 to 5.20 million bales in 1958-59—but suffered a sharp setback in the subsequent two seasons—4.60 million bales in 1959-60 and 4.03 million bales in 1960-61. Although the jute crop in the current season (1961-62) is estimated higher at 4.5 million bales, there is still a marked leeway which will have to be covered if the third Plan target of 6.2 million bales is to be achieved. All these figures, it may be noted, are exclusive of mesta, an inferior variety of jute, the production of which has been ranging from one million to 1.5 million bales. In 1960-61, it was about 1.15 million bales.

A distressing feature of raw jute cultivation is the low yield per acre. Fifteen years of political independence has hardly made any improvement in this respect. Despite all talk of intensive cultivation, only the surface of the problem has been scratched. The average per-acre yield of jute in 1960-61, the end of the second Plan period, was no more than 1,052 lbs., an increase of just 8 lbs. as compared with the average yield of 1,044 lbs. obtained in 1955-56. It is, however, gratifying that, under the third Plan, the Government of India, in concert with the State Governments and the Central Jute Committee, has launched a programme of intensive cultivation of jute. This programme, Mr. V. Shankar, I.C.S., Special Secretary to the Union Ministry of Food and Agriculture and Chairman of the Jute Committee, claimed when he addressed the twenty-fifth annual general meeting of the Committee held at Calcutta on the 7th inst., was making an impression on the pattern, intensity and productivity aspects of jute cultivation. The current season's jute crop, we are told, is a record one, achieved not only through increased acreage but also through a better outturn per acre.

Jute Committee's Work

Highlighting the work done by the Committee, Mr. Shankar gave the following particulars:

The Jute Agricultural Research Institute has succeeded in evolving a new variety of jute by crossing the tossa with an exotic breed. The hybrid which has all the qualities available to white jute is expected to bring about a revolutionary change in the pattern of jute cultivation in India. The Institute has also evolved a new variety of white jute which is more disease-resistant. The technological research laboratories of the Committee have developed many new uses of jute and mesta sticks, including the manufacture of box-boards, cardboards, photoframes and paper. To overcome the Australian consumers' dissatisfaction with the present woolpack due to the loose jute fibres within the pack getting mixed up with the wool content, these laboratories have evolved a new type of pack which has been sent out to Australia for experiment. The new pack is favourably reported on by users. Efforts at propagating the improved methods have been intensified in all directions. The total quantity of improved seeds distributed has risen to 14,000 maunds from 11,000 maunds in 1960. The area sown with jute has increased from 26,000 acres to 44,000 acres. The jute-growing States have excavated twice as many new retting tanks as in the previous year. There is also a significant improvement in the intake of fertilisers which is really double that of 1960.

Welcoming the entry of the Indian Jute Mills Association into the field of jute development, Mr. Shankar said:

"I think it is an experiment worth watching because, for the first time the industry has transferred its attention from its sheltered, though precarious, existence into the premises of the mills to areas far away in the cultivators' fields. It is a development which, whilst not being unprecedented, certainly constitutes a new departure in jute cultivation, and I am quite sure that the Committee will find in I.J.M.A. achievements undoubtedly an extention of its own."

Mr. Shankar's approach to the issue of raw jute prices is quite rational, as witness his remarks:

"The jute industry owes its obligation to the jute growers to provide adequate incentive within the limits set by the world price for jute manufactures. Tying the cultivator down to his cost of production will be unrealistic, as, in that case, the industry will also have to be tied down to a minimum price. As the premier export industry, jute has to earn the maximum foreign exchange possible in a highly competitive world market. The manufacture of jute will, therefore, have to strike a balance between the needs of the national economy and those of the primary producer. An assurance of a reasonable return for his investment and labour is necessary not only to persuade the grower to maintain his acreage under jute but also to improve the level of efficiency."

There is no denying that raw jute prices must be maintained at reasonable levels in the interests not merely of cultivators but of the industry itself. It has, however, to be emphasised that raw jute should not account for an unduly high proportion of the cost of jute goods production. One may ask: How then can jute be made cheaper for the industry and, at the same time, give the growers a better return for their efforts? The answer to the poser is not far to seek. As was pointed out earlier, the productivity of jute lands continues to be very low, the actual raising of fibre per acre being no more than 2.5 bales (of 400 lbs. each), as against as high as 4.0 bales in Pakistan. It has been established by research that the yield per acre could be stepped up by 50 per cent, if better seeds and fertilisers and improved agricultural methods were used. What is wanted is a major effort on the part of the Government agencies to provide these essentials to jute growers, besides a continuing campaign to drive home the rewards which follow better jute cultural practices.

JUTE MILLS TO CONTINUE WORKING TO CAPACITY

The jute mills will continue to operate the maximum possible number of looms for a further period of one month, that is, up to the end of next month. A decision to this effect was taken by the Committee of the Indian Jute Mills Association on Friday last week. In order to operate the additional looms, the mills have to work their spinning departments on the weekly closed day. Although there is expected to be a slight reduction in the availability of electric power on the weekly closed days from the beginning of April 1962, it is felt that this reduction will not materially affect the ability of mills to run the additional looms now being worked.

The I.J.M.A.'s decision has been prompted by the need to relieve, albeit as a temporary measure, the persistent shortage of ready goods as a result of the continuing unusually high offtake occasioned by the pent-up demand from overseas buyers who had restricted their purchases last year in view of the high prices. Reflecting such high offtake, the stocks of goods lying with mills have declined appreciably; they aggregated 61,400 tonnes towards the end of February 1962, as against 85,200 tonnes a year before. The decline is shared by both hessian and sacking, the stocks of the former receding from 24,400 tonnes (end of February 1961) to 17,000 tonnes (end of February 1962) and those of the latter from 48,500 to 28,800 tonnes, while stocks of "other" jute goods have risen slightly from 12,300 to 15,600 tonnes. The fall in stocks has occurred despite the significant expansion in production during the last few months. The actual output during the four months November 1961 to February 1962 was about 370,000 tonnes, as against 345,600 tonnes in the corresponding months of the previous year.

E.N.I.'S EXPANDING ACTIVITIES

ACHIEVEMENTS OF SIGNOR MATTEI BRILLIANT

By V. S. Swaminathan

[Readers may recall that, in August last year, a deal was negotiated by the Union Ministry of Mines and Fuel with the Italian State-owned oil combine (E.N.I.) for a 12-year $120-million credit from the latter. This credit will be available to India for a variety of purposes, such as the provision of specialised services for oil exploration, the laying of two products pipelines—one connecting the public sector refinery at Barauni with Calcutta and the other connecting the same refinery with Delhi—and the putting up of a gas separation plant in Assam, a petro-chemical project and a lubricating oil plant. Further talks with the E.N.I. pertaining to the economics of products pipelines and the utilisation of the relevant credit for the stipulated purposes are reported to be now under way. In this context, our readers will be interested to know something about the expanding activities of the E.N.I. The article on this page seeks to provide this knowledge.—ED.]

ENTE Nazionale Idrocarburi, or E.N.I for short, was established by the Italian Government in 1953 as a State undertaking to bring together all its existing oil and natural gas interests. Under the astute and masterful presidency of Signor Enrico Mattei, it has grown, within a decade, into an integrated public oil and natural gas enterprise engaged in exploration, production, refining, manufacture of petrochemicals and distribution. As we write S.A.I.P.E.M., an E.N.I. subsidiary, is building, in collaboration with Mannesmann of Germany, the 720-mile long pipeline from Nahorkatiya oilfield in Upper Assam to Barauni refinery in Bihar for Oil India Limited. The E.N.I. group recently granted a credit of $120 million to the Government of India for developing the country's oil and gas industry. What is the background of E.N.I., and what are its activities and achievements to date?

Mammoth Group

The mammoth E.N.I. group carries out its many-sided and far-flung activities through five major subsidiaries, each concerned with a particular branch of the industry. The subsidiaries and their main functions are: A.G.I.P. Mineraria, engaged in oil and gas exploration and production; S.N.A.M., concerned with transportation in all its branches; A.G.I.P., dealing with marketing of petroleum products; A.N.I.C., taking in its stride refining and manufacture of petrochemicals, and A.G.I.P. Nucleare, busy with developing nuclear power. The group has three other companies engaged in ancillary operations. They comprise Nuovo Pignone, fabricating plant and equipment for oil, gas and petrochemical industries; S.N.A.M. Projetti executing design work; and S.A.I.P.E.M., which erects oil and petrochemical plants, and builds pipelines, besides carrying out drilling jobs.

E.N.I. has a 60 per cent interest in A.G.I.P. which was founded in 1926 by Signor Mussolini as a national importing processing and distributing company. It also took over the State's majority holding in A.N.I.C., set up in 1936 to operate the hydrogenation plants at Leghorn and Bari. The group, moreover, absorbed the wholly State-owned S.N.A.M., formed in 1941 to work the natural gas pipeline and distribution system in northern Italy. E.N.I. itself created in 1953 A.G.I.P. Mineraria to serve primarily as the oil and gas exploring and producing company of the group. In 1951, A.G.I.P. Nucleare was set up jointly by A.G.I.P. Mineraria and S.N.A.M. to undertake the study and production of nuclear energy. Finally, Nuovo Pignone, the group's plant manufacturing and engineering company, is owned jointly by A.G.I.P., A.G.I.P. Mineraria and S.N.A.M.

Gas Reserves

Recently A.G.I.P. Mineraria discovered large natural gas fields in southern Italy and Sicily. The natural gas reserves in E.N.I.'s exclusive area in Po Valley in northern Italy are placed at 90,000 million cu.m. In 1960, A.G.I.P. Mineraria produced 6,400 million cu.m. of methane gas, and 674,000 tons of liquid hydrocarbons from the Italian mainland. The Po Valley gas is conveyed through a system of trunk and branch lines and urban supply network covering 5,690 km. It has been decided not to raise Po Valley natural gas output appreciably above the 1960 total, and accord priority to its use for chemical and industrial purposes. In 1959 E.N.I. made a big natural gas discovery at Ferrandina in southern Italy, with reserves of the order of 10,000 million cu.m. More recently, three more gas fields were located at Vasto on the Adriatic coast, at approximately the same latitude as Rome; Pisticci in the extreme south of the Italian peninsula, and at Enna Province in central Sicily, respectively. Gas reserves at Vasto and Pisticci are stated to be of the same order of magnitude as at Ferrandina.

Abroad A.G.I.P. Mineraria is pioneering a new system under which countries owning the resources are associated in the technical and financial side of operations. Under this dispensation, exploration for oil is under way in Iran, Somalia, Sudan, Morocco, Tunisia and Libya. Two oilfields were recently found in the offshore areas in the Persian Gulf and the Gulf of Suez. C.O.P.E., a company in which E.N.I. has a 50 per cent interest, produced 1,900,000 metric tons of oil in 1960. Again, E.N.I. is partner with N.I.O.C. in Iran. And the Iranian offshore field at Bahrgan produced 80,000 tons of oil in 1960 and is scheduled to account for two million tons in 1963.

S.N.A.M. is now at work on new gas networks in southern Italy. In association with Sudpetrol, Oleodotto del Reno, it is building a big central European pipeline to carry crude oil from the port of Genoa to south Germany. This line to Ingolstadt will run from northern Italy northwards through the three cantons of Ticino, Granbunden and St. Gallen and then through the Province of Vorarlberg in west Austria and on through south Germany. A branch will also lead off to the Aigle refinery in Switzerland. On completion, this 1,000 km. long pipeline will have capacity to carry 18 million tons of crude oil a year. S.N.A.M. also owns a tanker fleet aggregating 430,000 deadweight tons, which carried 3.5 million tons of crude oil and products in 1960. In addition, it has its own rail tank wagons and motor vehicles.

In 1960, refineries operated by A.N.I.C. processed 6.5 million tons of crude oil. When new units under construction at Gela and Ferrara in Italy, and Ingoldstadt and Stuttgart in Germany, Mohammedia in Morocco, Bizerta in Tunisia and Teema in Ghana are completed, the group's total annual throughput capacity will approach 20 million tons.

Petrochemicals

A.N.I.C.'s petrochemical plants at Ravenna, based on natural gas, produced 80,000 tons of synthetic rubber and a million tons of nitrogenous fertilisers in 1960. Last year, the output of synthetic rubber was stepped up to nearly 100,000 tons to meet mounting export demands. A.N.I.C. is also building another petrochemical complex adjacent to Ferrandina gas field at an outlay of 35,000 million lire. The Italian Government recently decided to exempt this gas from taxes and royalties so as to attract industries to this underdeveloped area. Of the future production of gas, one-third will be used in A.N.I.C.'s own plant, another third in newly-established local industries, and the balance will be piped for use as town gas to Matera and Bari. The E.N.I. group will manufacture from methane gas synthetic fibres, plastics, acetylene, methanol and other chemicals. It will consume 600,000 cu.m. of gas a day. A Montecatini subsidiary is investing 15,000 million lire in a plant to produce plastics using 300,000 cu.m. of gas a day. Lastly, Societa Ceramica Pozzi of Milan is to make vinyl polymers, methanol, acetylene and caustic soda.

Crude Oil

The Gela project in the south coast of Sicily provides for the conversion of three million tons a year of local crude oil from A.G.I.P. Mineraria's concession in the area into a range of liquid and gaseous hydrocarbons for the manufacture of fuels and chemicals, and petroleum coke for power generation. This is to be executed by A.N.I.C.-Gela company at a total outlay of 150,000 lire to 170,000 million. Of this, 49,000 million lire will be spent on crude oil processing facilities; 36,000 million lire on petrochemical plants; 16,010 million lire on power generation, and the balance for port, airfield and other ancillary construction works. The Gela crude oil is highly asphaltic and sulphurous. Its winning is feasible only with the aid of gas. The justification for this novel and costly undertaking must be seen in Italy's general policy for rehabilitation of the south; the privileges accorded to E.N.I. over other oil producers in Sicily reflects the Regional Government's keen desire to promote the island's economic development. The Gela project will account for 450,000 tons of gasoline, 750,000 tons of gas oil, 170,000 tons of fuel oil, 300,000 tons of bitumen and 60,000 tons of liquefied petroleum gases (L.P.G.); 150,000 tons of ammonium sulphate, 50,000 tons of urea, and 35,000 to 40,000 tons of industrial chemicals based on ethylene and propylene gases and their derivatives. Sulphur extracted from the crude oil will be used in the manufacture of sulphuric acid. Petroleum coke production of 700,000 to 750,000 tons a year will be utilised to generate nearly 1,000 million kw.h of electricity per annum.

Prices of Products

In 1960, A.G.I.P. lowered its petroleum product prices twice, and this, coupled with tax reductions by the Italian Government, gave a stimulus to sales. The latter rose by 28 per cent for gasoline, 12.6 per cent for gas oil, 20.5 per cent for fuel oil and 20.7 per cent for lubricants. A.G.I.P. also markets motor fuels in many other European and African countries, including Austria, Switzerland, Germany, Morocco, Tunisia, Libya, Somalia, Sudan, Kenya, Tanganyika and Ghana. By its aggressive sales activities, and substantial imports of cheap Soviet oil, the group has forced down prices drastically, and is determined to establish itself as a marketer in adjacent countries, notably south Germany, Switzerland and Austria.

Turning to natural gas, its pricing at well head depends on a wide range of factors—quality, the size and duration of the contract, the content of extractable natural gas liquids, royalties and rent payable, etc. Also the Governments concerned have a say in the matter. But the fundamental factor is distance from markets. Pricing is, moreover, influenced by the prices of competing fuels than by the costs incurred in developing a gasfield and transporting the purified gas to markets.

In northern Italy the selling price of gas is normally pegged to the comparable selling price of fuel oil, both calculated on a calorific basis. Tax on fuel oil included in the selling price is 3,028 lire per ton, equivalent to 2,755 lire per 1,000 cu.m. of natural gas, while tax on natural gas is only 1,420 lire. Given E.N.I.'s virtual monopoly in the Po Valley, and its exemption from royalties and concession rents, and that the gas could be economically transported by pipelines to existing areas of potential demand, it is well placed to sell the product at competitive prices. The comparative selling prices of natural gas in north Italy and west Pakistan are given below:—

(In U.S. Cents per 1,000 cu. ft.)

	Italy	*Pakistan*
Field price	20.6	9.3
Residential users	224.0	169.0
Industrial users	59.0	34 to 51

Ardent Believer in State Enterprise

Signor Mattei is an ardent advocate of Government-to-Government dealings in oil. Late in 1960, E.N.I. signed a $200 million contract, under which it has agreed to buy 12 million tons of Russian oil during 1961-64 in exchange for 240,000 tons of steel tubing and 50,000 tons of synthetic rubber. Since the share of the group's marketing subsidiary of the Italian market is nearly 20 per cent (4 million tons a year), the quantities of imported Russian oil will be equivalent to some 75 per cent of A.G.I.P.'s domestic sales of petroleum products. Though this deal is obviously detrimental to Middle East oil producers, the bilateral trade involved was upheld by the group's spokesman, since it helped Italian exports to U.S.S.R. and the Soviet oil was offered at very attractive prices. Under the agreement signed last November, between the Egyptian Government and E.N.I., the latter will grant a credit equivalent to $50 million for oil development projects, including a marine drilling rig, terminal installations and petrochemical equipment.

Secret of Success

Much of the dynamism of E.N.I. springs from the high degree of independence it enjoys. As a State-owned organisation, it has no critical shareholders clamouring for returns to bother about. Its many advantages flow from its virtual monopoly of oil and, particularly, gas in the Po Valley. Its highly lucrative production of natural gas is a pillar of strength

SECOND PLAN ACHIEVEMENTS OF RAILWAYS

MORE PASSENGERS CARRIED THAN EXPECTED

THE Railway Board's latest report is for 1960-61, the last year of the second Plan. It has appropriately reviewed the actual performance of the railways during that Plan period as a whole. This performance, expressed in purely financial terms, has fallen short of the Plan's target to some extent. It may be recalled, in this connection, that the original Plan allotment for the railways was Rs. 1,107 crores. But the actual expenditure over the entire five-year period 1956-61 aggregated only Rs. 1,044 crores. There was thus a shortfall in outlay of Rs. 63 crores, or of about 6 per cent, as compared with the Plan provision. This shortfall, according to the Railway Board, was due, *inter alia*, to the setback in indigenous wagon production on account of the difficulties in procuring matching steel. The actual expenditure under major heads, as compared with the Plan provision, was as follows:

(In crores of rupees)

	2nd *Plan provision*	*Actual expenditure in 1956-61 period*
Rolling stock (excluding stock provided as part of electrification projects)	380	372.6
Track renewals	100	188.8
Bridge works	24	24.8
Gangs bridge	9	7.2
Traffic facilities	186	173.4
Signalling and interlocking works	25	17.3
Workshops (including machinery and plant but excluding those provided as part of electrification projects)	65	45.1
Electrification and other electrical works	65	53.7
Staff quarters and staff amenities	50	49.2
Passenger amenities	15	14.7
New lines and restoration of dismantled lines	66	77.8
Investment in road services	10	5.3
Other specified works	22	30.4
Stores suspense	90*	28.1
Decrease in manufacture suspense	..	— 3.1
Increase in miscellaneous advances	..	3.7
Credits or recoveries:		
(a) Credits for released materials	..	—34.6
(b) Other credits	..	—10.9
Total	1,107	1,043.6

* Includes Rs. 40 crores on account of extra provision for imported steel.

It will be seen from the above figures that the actual five-year expenditure on rolling stock, traffic facilities and workshops aggregated Rs. 591 crores, as compared with the Plan provision of Rs. 631 crores under these three heads. This shortfall in outlay does not seem to have adversely affected the railways' effort to achieve the second Plan's target capacities for freight and passenger traffic. It may be recalled here that the railways were set the task of developing necessary capacity for handling 164.6 million tonnes of originating traffic in 1960-61. But the originating freight traffic in 1960-61 was only 156.0 million tonnes, as compared with 115.9 million tonnes in 1955-56. The Railway Board's contention here is that the railways had, in fact, reached the capacity for coping with the rate of movement of the order of 164.6 million tonnes, as estimated by the tonnage lifted during the second half of 1960-61.

In Terms of Workload

The Railway Board has sought to prove that the railways' performance in the last year of the second Plan was actually better than what had been originally expected of them. Judged by the workload, as measured in tonne-kilometres, the railways handled, according to the Board's calculations, 87,754 million tonne-kilometres of freight during 1960-61, as against 84,743 million tonne-kilometres envisaged in the second Plan, corresponding to the target of 164.6 million tonnes of originating traffic. The increase in tonne-kilometres, in spite of the reduction in originating traffic, occurred as a result of longer average lead of movement of raw materials for the steel plants and coal for other consumers. Although, during the whole second Plan period, the freight traffic had increased by only 35 per cent in terms of originating traffic, it had increased by 47.3 per cent in terms of tonne-kilometres. The corresponding increases in the available locomotive tractive effort, wagon holdings, track kilometrage and in the capital investment were of a small order, thereby indicating, in the opinion of the Railway Board, a more efficient usage of railway assets. As regards passenger traffic, the Plan had originally provided for an increase of only 15 per cent in it. But the actual increase turned out to be about 25 per cent, from 1,275 million originating passengers in 1955-56 to 1,596 million in 1960-61. It is difficult to disagree with the Railway Board in its analysis and interpretation of the railways' performance in the second Plan period. If, still, transport bottlenecks came to the fore in the last year of the Plan, it must have been due to the fact that the traffic offering was more than what had been anticipated.

If the railways were unable to create greater additional capacity for freight traffic, it must have been partly due to the relatively large outlay on badly-needed track renewals. While the second Plan had provided only Rs. 100 crores for track renewals, the actual outlay on them was much higher at Rs. 188.8 crores. In spite of an increase of Rs. 88.8 crores in financial outlay on track renewals, there were shortfalls in physical achievements. As against the planned targets of 12,875 kilometres of rail renewals and 12,875 kilometres of sleeper renewals, only 9,959 kilometres of rails and 11,364 kilometres of sleepers were actually renewed during the Plan period. If still, the financial outlay on track renewals had exceeded the Plan provision, it must have been due to the increases in prices and wages.

Other Results

Among the other physical achievements of the railways' second Plan, the more important ones are the following:

(i) The Chittaranjan Locomotive Works produced, during the second Plan period as a whole, 831 broad-gauge steam goods locomotives.

(ii) A total of 362 route kilometres (1,031 track kilometres) of railway lines was completely electrified during the Plan period. In addition, by the end of the Plan, 528 route kilometres was in an advanced stage of electrification.

(iii) Some 653 kilometres of broad-gauge and 612 kilometres of metre-gauge lines were newly opened during the Plan period. In addition, by the end of the Plan, 1,609 kilometres of broad-gauge and 402 kilometres of metre-gauge lines were in various stages of construction.

While thus far the achievements of the railways' second Plan have been referred to in both financial and physical terms, no reference has been made to their working results over the Plan period as a whole. A consolidated picture of progress pertaining to the latter is provided in the following comparative statistics taken from the Railway Board's reports for 1955-56 (the pre-second Plan year) and 1960-61 (the end-year of the second Plan):

Items	*Unit*	1955-56	1960-61
Passengers originating	Million Nos.	1,297.4	1,615.9
Earnings from passengers	Rs. crores	108.8	132.5
Freight tonnes originating:			
(a) Revenue-earning traffic	Million tonnes	93.8	120.9
(b) Non-revenue traffic	,, ,,	23.8	36.5
Earnings from revenue-earning tonnage	Rs. crores	177.9	281.3
Net Government capital-at-charge	Rs. crores	968.1	1,520.8
Gross receipts	,,	316.3	456.8
Working expenses *	,,	258.2	368.2
Net revenue receipts †	,,	50.3	87.9
Of which dividend to general revenues	,,	36.1	55.9

* Working expenses include suspense and appropriation to depreciation reserve fund.
† Net revenue receipts represent gross receipts *minus* working expenses *minus* net miscellaneous expenditure.

The figure of Rs. 1,520.8 crores in the above table represents the capital-at-charge (Government capital) on loan account. The total investment on railways, as on 31st March 1961, is greater than this, being Rs. 1,870.7 crores. The difference of Rs. 349.9 crores between the two figures represents the investment financed from the railways' own internal resources, such as the depreciation reserve fund (Rs. 94.3 crores) for improvement of assets replaced, the development fund (Rs. 169.8 crores) and revenue surpluses (Rs. 85.7 crores).

One other striking feature of the railways' progress during the second Plan period may be finally mentioned. This pertains to their intake of indigenous equipment and stores. In 1955-56, their purchase of indigenous equipment and stores amounted to Rs. 93.6 crores representing 74.2 per cent of their entire purchase. The corresponding figures for 1956-57, 1957-58, 1958-59, 1959-60 and 1960-61 were Rs. 125.8 crores (73.4 per cent), Rs. 158.5 crores (71.4 per cent), Rs. 167.9 crores (66.1 per cent), Rs. 162.9 crores (82.5 per cent) and Rs. 151.3 crores (85.1 per cent), respectively. The increase, both absolutely and relatively, in the intake by the railways of indigenous equipment and stores in the last two years of the second Plan reflects not only the growing importance of the railways as a market for Indian industries but also the diversification that has come about in the country's structure of industrial production.

INDIAN AIRLINES

PROFIT-MAKING CAPACITY STILL LOW

THE Indian Airlines Corporation has just released its eighth annual report dealing with its activities and results of working in the fiscal year 1960-61. With a small profit for the second year in succession, the Corporation, which had continuously incurred losses from 1953-54 to 1958-59, seems to have turned the corner. But any such inference would need to be qualified by the statement that there is no ground for excessive optimism on the score of its (Corporation's) profit-making capacity. For, after all, the profit (difference between revenue and expenditure) in 1960-61 was only Rs. 4.7 lakhs, as compared with Rs. 7.8 lakhs in 1959-60 and the growth of revenue was not appreciably more than the increase in expenditure. Even this small increase would have come down to a negligible figure but for the reduction in the provision for depreciation from Rs. 100.27 lakhs for 1959-60 to Rs. 98.61 lakhs for the year under review. The following figures bring out, in a nutshell, the working results in the last three years:

(One lakh = 100,000)

Year	Revenue (Rs. lakhs)	Expenditure (Rs. lakhs)	Loss(—) or Profit (+) (Rs. lakhs)
1958-59	1,082.5	1,173.7	—91.2
1959-60	1,195.0	1,187.2	+ 7.8
1960-61	1,306.3	1,301.6	+ 4.7

It may be remembered that passenger fares were increased by the Corporation in 1958-59. This increase has had its full effect in the subsequent two years. But it has accounted only for a part of the increase in revenue. The other part is due to the increase in revenue tonne-kilometres, that is, in the actual traffic (passenger, cargo, mail, etc.) carried on which revenue is earned. It may be noted here that the revenue tonne-kilometres performed increased from 74.0 million in 1958-59 to 78.5 million in 1959-60 and 83.2 million in 1960-61. In order to improve the economics of the Corporation's working, the Government of India has already permitted an increase in fares and freights. It will be recalled that an increase of 10 per cent in the fares in trunk routes and of 5 per cent in feeder routes was brought into force from 1st September 1961. The effect of these increases on the growth of traffic is yet to be known. If the demand for air-booking is any indication, it has so far had no adverse effect on passenger traffic. So far as freight traffic is concerned, the trends are not quite favourable, for the mail carried by the Corporation has only marginally increased from 5,950 tonnes in 1959-60 to 6,107 tonnes in 1960-61 while the cargo carried by it has actually declined from 46,751 tonnes in the former year to 43,157 tonnes in the latter.

Of course, the Corporation is under compulsion to increase its revenue-earning potential somehow, for its expenditure has gone up markedly since 1958-59 and is expected to go up still further. By far the larger part of the increase in expenditure has been and will be on account of wages and salaries. In 1960-61, the wage bill was Rs. 4.0 crores as against Rs. 3.4 crores in the previous year. The increase was due chiefly to the revision of the scales of pay of pilots, radio officers and aircraft maintenance engineers. It was a redeeming feature that the increase in the wage bill was not due to any increase in the number of employees, for, as at the close of 1960-61, there are only 9,561 employees of all categories, as against 9,553 at the close of 1959-60. Even if there is no increase in the number of employees in the years to come, the wage bill is expected to increase further when the terms and conditions of service of other categories of staff are revised. The higher costs of operation and aircraft maintenance have also been there and will continue to account for a good part of the rising expenditure. So, the Corporation was justified in requesting the Government to sanction increases in fares and freight rates which were last determined on the basis of 1957 costs. But the additional revenue that will result therefrom can, at best, only keep pace wih the rising expenditure. The Corporation's expectation that increases in fares and freights will enable it to build up its own reserves so as to reduce the responsibility of Government to finance its capital expenditure is rather optimistic. It is doubtful if the Corporation's re-equipment plans can be adequately financed otherwise than by drawing further from the Government of India which, as of 1960-61, has contributed Rs. 8.48 crores of equity capital and Rs. 8.48 crores of loan capital.

NEW PRODUCTS AND PROCESSES

Measuring Moisture Content of Paper

SHORTLY available will be a meter designed to determine the moisture content of paper and board to within ½ per cent. The meter has a linear scale of measurement of moisture from 2 to 14 per cent. Fully transistorised, light, robust and portable, it gives almost instantaneous readings and is comparatively cheap. Based on the dielectric principle, the instrument which is manufactured in Britain, is less sensitvie than other types to variations in the nature of the paper such as additions of fillers or electrolytes. It uses an inductance-capacitance bridge fed from an oscillator, the bridge being so balanced that variations in the unknown capacitance unbalance it on one side or the other of the balance point. These signals are then passed through a discriminator and an amplifier. In use, the material to be tested rests between the head of the instrument and a sheet of foamed plastic, the head having the measuring electrode in its sole plate. This instrument is expected to have very widespread applications in the textile industry as well as in the manufacture of transparent plastics sheeting.

Versatile Textile Material

Versatile textile materials are being made in Britain by bonding cellulose wadding to both sides of loose webs of nylon or polyester fibre. The resulting non-woven material resists tearing and is soft to handle, while it can be dyed, printed, or made water-repellent and fire-retardant. Production rate can reach almost 600 feet per minute so costs for quantity production are low. The disposable fabrics have been used in hospitals where laundry costs are very heavy and in this application are helping to reduce cross-infection risks. Clothing for industrial workers engaged on dirty work or in areas where there is a radioactive hazard is another use, the garments being cool and comfortable to wear. Trials have been made of sleeping bags and tents made from specially treated fabrics of this type, while they have also been tried out in underwear, pillow cases, dressing gowns, etc.

Sewing Machine Castings

A highly automated shell-moulding department for producing sewing machine arms with an output of 400 castings per day, as compared with 280 from the previous two green sand lines, has been in operation for some time at Husqvarna Vapenfabriks AB, the large South-Swedish engineering industry. Experience has been so favourable that a doubling of the production is being planed. Though comparatively expensive in the initial casting stage, shell-moulding pays off in the final product, since the castings are smoother inside and out, quality is uniform and measurements are more exact. This is of particular importance at Husqvarna, where most of the further operations are automated on the sewing machine transfer line and thus require uniform castings and reference surfaces. In the shell-moulding process, precoated sand is mixed with a binder of synthetic resin, plus a special release agent and hardener. The sand is used only once. Both shell and core moulding machines are completely automatic and pouring takes place from an overhead conveyor. The total time for the complete cycle is approximately 30 minutes, the castings spending two-thirds of this time in the cooling tunnel. Cooling time is governed by the heat of the castings when reaching the semi-automatic shake-out stage.

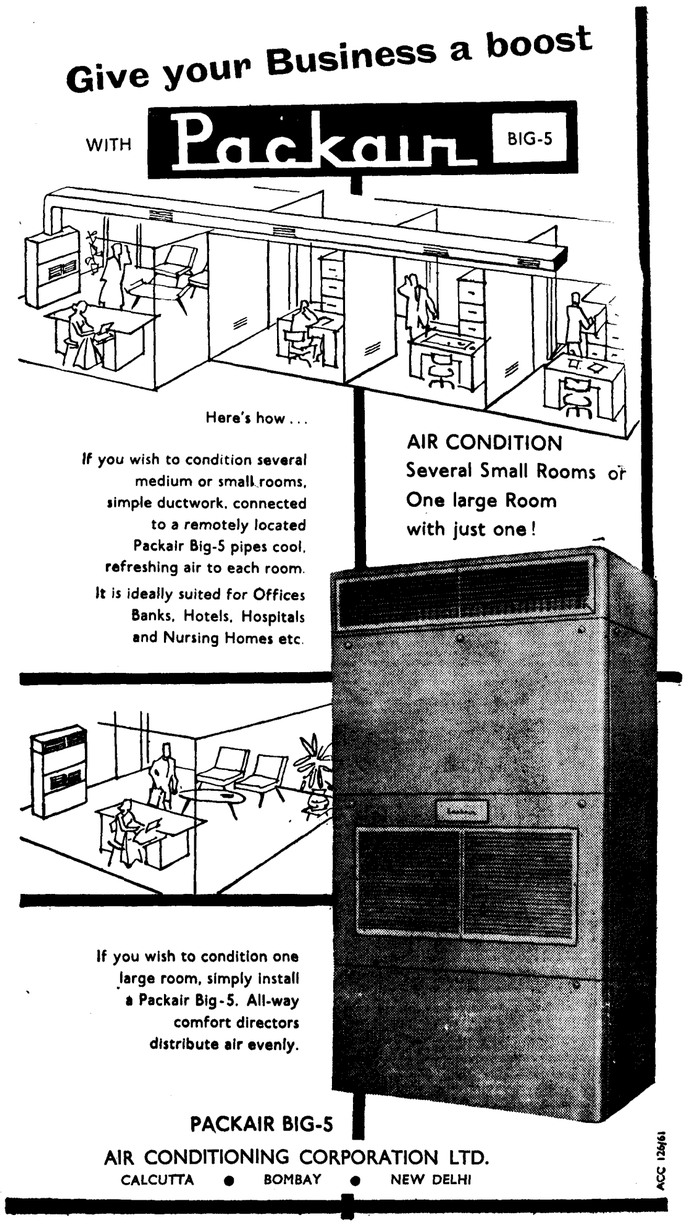
"Electric" Mattress

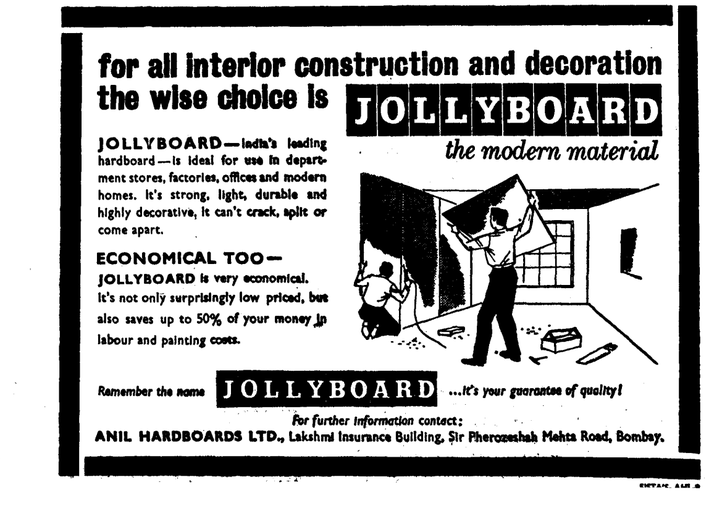
A Dutch matress factory is producing an interior-sprung mattress that can be electrically heated by a heating element fed through a transformer. The element is fitted firmly between the outside layers of the mattress so that it cannot fold or shift its position. A special plug is used for connecting the element to the transformer, which converts the mains voltage of 220 or 125 V to a tension of at most 10 V. The transformer, with separate coil windings, has a switch with three different heat settings, the highest of which gives a consumption of 33 Watts an hour. To bring the mattress to just the right heat, the element should be connected up to the mains an hour or two before bedtime. There is no limit to how long it can be left on for. The mattress is mothproof and requires little attention. The occasional brush-down is quite sufficient.

The heating element was awarded the seal of approval of N.V. tot Keuring van Electrotechnische Materialen (KEMA), (Company for the Testing of Electrotechnical Materials), Arnhem. This means that the device will be checked by KEMA at regular intervals. This electric mattress was also acclaimed by the Dutch Housewives' Association.

Egg-packing Machine

An egg-packing machine, which, at the touch of a switch, can be set to handle almost any type of egg pack and to link in with any form of carton loading system, has been introduced by a British firm, Ben-Nevis Egg-Equipment Ltd., Wiltshire. The new packer, in conjunction with the firm's standard egg grading machine will handle the majority of moulded fibre type containers, and it can also be switched to handle, with equal facility, most of the known inter-locking carboard retail packs which are becoming popular in many parts of the world. The basic function of the machine is to accept eggs in any of four grades as they leave the grader and automatically to fill each carton row by row. Full cartons are then released from the packing head and conveyed to the front of the machine for removal by the operator. At no stage can eggs ever touch each other which eliminates the possibility of breakages or hair cracks.





BONUS AND ITS FUTURE

RECOMMENDATION OF INSTITUTE OF PERSONNEL MANAGEMENT

IT is, indeed, a reflection of the complicated nature of the bonus question and an indirect indication of the task before the Bonus Commission that, even after prolonged discussion, the Indian Institute of Personnel Management, at its twelfth annual conference, which concluded at Ernakulam (Kerala) on the 10th inst., could not arrive at a conclusion on one of the principal subjects on the agenda of the conference, namely, "bonus as part of remuneration to labour and its future in the industrial relations system." A representative sub-committee was, therefore, appointed to evolve a compromise and the conference adopted a recommendation by the sub-committee accepting the position that, in the present set-up, the immediate discontinuance of the system of bonus was not feasible, though it was desirable to eliminate bonus which constituted a constant source of industrial strife. The conference, therefore, suggested that, as a short-term measure, a simple, straight formula for the payment of bonus should be evolved, so that the imponderables, which would normally give rise to industrial disputes, could be avoided. The formula should apply to industrial undertakings both in the public and private sectors. The long-term objective, in the opinion of the conference, should, however, be the payment of an adequate wage supplemented, wherever possible, by incentive schemes linked to productivity and abolition of all other forms of bonus.

Discussions that preceded the adoption of the recommendation reflected the wide range of opinion held on the subject by experts. Mr V. V. Giri, Governor of Kerala (who inaugurated the conference) and a former Labour Minister of the Government of India, pointed out that he was more in favour of ensuring a living wage to workers than in paying a profit-sharing bonus. He, however, conceded that there were practical difficulties in achieving this objective; nevertheless, it should be the goal of both management and trade union.

Presenting, presumably, the labour point of view, Mr. G. Ramanujam, Vice-President of the I.N.T.U.C., said that the system of bonus had come to stay and that the payment of bonus as additional remuneration was going to be a permanent feature in the country's structure of industrial remuneration. The system of bonus, in his view, should be a means of improving labour-management relations and productivity. As regards the future of profit-sharing bonus, Mr. Ramanujam said that a system of real profit-sharing bonus scheme had not come into force in the country. The system in force was, according to him, the deferred wage bonus, although some called it profit-sharing bonus, while some others regarded it as only an addition to wage. Profit-sharing bonus could come into existence, according to the I.N.T.U.C. leader, only when workers were assured of a living wage standard.

The most rational approach to the issue was made by Mr. L. C. Joshi, Labour Adviser to the Bombay Chamber of Commerce and Industry. Mr. Joshi said that the question to be considered was whether bonus which was a war-time legacy and originally meant as a stop-gap arrangement and which bore no relation to productivity but was mainly linked with attendance of labour, should be made a permanent feature of the wage structure. In his opinion, bonus could not be considered a healthy method of remunerating employees. A better method of remunerating employees, he felt, would be to increase the wage levels in stages wherever possible. This could be done with some measure of success in industrial undertakings which were financially stable and which had growth prospects.

Mr. Joshi, however, was realistic enough to admit that the system of bonus, which had remained part and parcel of the wage system for so long, could not be got rid of all of a sudden. If at all such change had to be brought about gradually, it was necessary to evolve a scheme for payment of bonus in fixed ratios to declare profits, subject to a ceiling of three months' basic wages.

Mr. Joshi was opposed to making any discrimination in respect of payment of bonus between employees of the private and public sectors. He considered the argument that employees in the public sector could not claim bonus as a matter of right because profits of these undertakings were to be used for national development was erroneous. The matter could not be viewed differently in the case of public sector undertakings, because labour discontentment had increased due to the wide disparity in the payment of bonus by different private sector undertakings in the same area or even in undertakings under the same management. It was also necessary, according to him, to consider whether the bonus system, if at all it was to continue, should be on a unit basis or industry basis.

As for the mode of payment of bonus, Mr. Joshi suggested that it was desirable that bonus be paid into the provident fund account of the employees, so that it was not spent off as is the case when cash is paid. He did not favour giving bonus in the form of national savings certificates, as these were usually sold by the holders at huge discounts. Mr. Joshi was against paying higher bonus by management to avoid payment of higher taxes, because, in his opinion, the loss of revenue to the exchequer resulting from the payment of higher bonus affected the public, in general, and had to be made good through more direct or indirect taxes.

It is evident from the aforesaid account of the proceedings of the meeting that there was general agreement among the participants that the bonus system was not a desirable method of remunerating labour, but that, in the circumstances obtaining in the country and considering the low level of wages, it could not be abolished forthwith unless a suitable alternative was devised. Now the question is why should a system, which is unsound in principle and which is the cause of considerable friction between management and labour, be allowed to continue on the ground that it had been in force for a long time and that it should not be abolished until the workers were assured a living wage—a concept which, according to a recent Supreme Court decision, should be regarded as continually changing with the change in the economic and social conditions. The actual wage will therefore continue to chase the living wage and this will continue to be cited in support of the plea for the continuance of the bonus system. Since it is admitted, even by some representatives of workers, that bonus payment is not a wholly desirable system, why not replace it with an alternative system of remunerating labour which will not only relate reward more directly to effort but also meet the requirements of a developing economy. What shape and form the alternative scheme should take is a question that can be left to an expert body to examine. It is to be hoped that the Bonus Commission will provide, if not a solution, at least some practical suggestions for dealing with the vexed problem of bonus.

BONUS PACT BY INDIAN OXYGEN

A unanimous agreement was reached between the management of Indian Oxygen Limited and the representatives of its employees throughout India regarding the bonus for the financial years 1960-61 and 1961-62. According to this agreement, bonus in respect of each of the years mentioned above shall be paid to the graded staff, including temporary and casual staff, at the rate of five-twelfths of basic salary/wages earned by them during the respective financial years subject to a minimum of Rs. 230 and a maximum of Rs. 2,300 for those who have earned their full salary/wages for the whole year and on *pro rata* basis for others.

The International Labour Organisation has established in Bangkok, with effect from 1st March, an office for liaison with E.C.A.F.E. The Director of this new office will be Mr. John S. Fox who, since 1959, has been Director of the I.L.O. Asian Field Office in Bangalore, India. I.L.O. has co-operated, along with other specialised agencies of the United Nations, in the work of E.C.A.F.E. since its foundation, but closer, on-the-spot liaison has been deemed necessary in view of the increasing importance in the economic development of countries in the E.C.A.F.E. region of questions in which I.L.O. has special responsibilities and experience.

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION **COMBINES** A **LOOM BUILDING EXPERIENCE** OF **18** YEARS AT CIMMCO WITH OVER **34** YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

Manufactured at Birlanagar, Gwalior

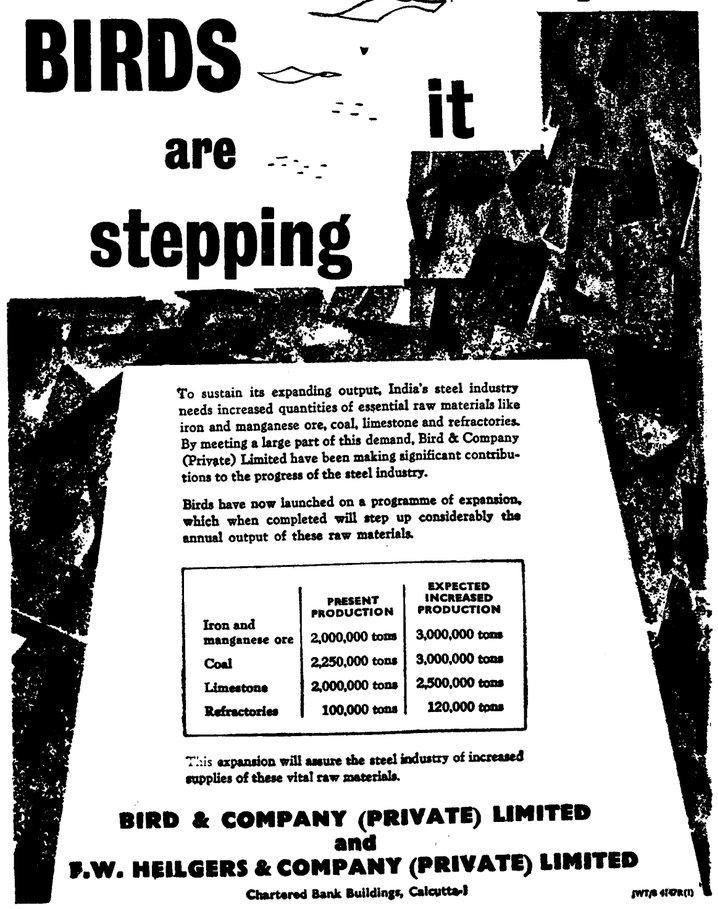
BIRDS are stepping it up



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

ECONOMIC TRENDS IN ASIA

GROWTH OF POPULATION EXCEEDS EARLIER ESTIMATES

THE rapid growth of population, it is well known, has been retarding the pace of economic development in the Asian continent. There is as yet no sign of improvement in the situation. On the contrary, indications are that the population problem is assuming alarming proportions in the countries of the region. *The Economic Survey of Asia and the Far East*—1961, brought out by the U.N. Economic Commission for Asia and the Far East, reveals that the average rate of population growth, on the basis of latest censuses, is as much as 2½ per cent for the region, as against 2 per cent expected until recently on the basis of censuses taken ten years earlier. New censuses, it may be noted, have been taken in Japan, South Korea, Pakistan, the Philippines and Thailand, besides India. Only in Japan has the population growth been well within the earlier trend. In all the others, which account for two-thirds of the region's population, previous estimates, both of absolute population and rate of growth, has turned out to be underestimates. The E.C.A.F.E. Survey adds, significantly enough, that similar results may be found for the remaining countries of the region when they conduct new censuses.

The magnitude of the discrepancies in the old figures, as compared with revised estimates, in respect of both total population and the rate of growth, may be gauged from the country-wise data on population (as in mid-1960) given in the following table:

	Old estimate		Revised estimate	
	Population in mid-1960 (millions)	Growth rate per cent.	Population in mid-1960 (millions)	Growth rate per cent.
India	408.0	1.8	432.6	2.0
Japan	93.6	1.1	93.4	1.1
Korea, South	23.5	1.8	24.8	2.9
Pakistan	88.0	1.4	92.7	2.2
Philippines	22.4	2.6	27.5	3.2
Thailand	22.3	1.9	25.5	3.0

The upward revision in the rates of population growth has serious consequences for the region. It means that past achievements in regard to economic progress are considerably less significant than they appeared to be in terms of gains per head of population. It also implies that future plans for development have to reckon with a greater difficulty than had been considered hitherto, for they will have to be revised to take account of the needs created by bigger annual increases of population in regard to imports, transport requirements, power supply, schools and other social expenditures. More specifically, these new estimates of population and rate of growth have grave implications from the point of view of food supplies. It is, however, some consolation that the total agricultural production in several countries of the region has increased more rapidly than population over the period 1953-57 (average) to 1961. The output of food, in particular, has risen more rapidly. According to the E.C.A.F.E. *Survey*, there is more than the luck of good weather behind these favourable results. They reflect to some extent a real gain in agricultural efficiency, "more especially as the proportion of the working population in agriculture has been falling."

Agricultural Production

The following table shows the movement of indices of agricultural production and population (based 1953-57 average=100) during the period 1958-61.

(Base : 1953-57=100)

	1958	1959	1960	1961*
Foodgrains	99	112	116	121
Starchy roots	111	117	123	122
Sugar (raw value)	121	124	135	145
Oil crops	107	111	105	114
Fibres	109	110	98	113
Tea, tobacco, rubber	105	109	109	108
Aggregate index	102	112	114	120
Population	106	108	110	112

* Provisional.

N.B.—These indices exclude centrally planned economies of the region.

The output of foodgrains, which have a weight of 70 per cent in the total production index, went up by 8 per cent *per capita* over the period 1952-57 to 1961. Output per head of starchy roots, which had risen by 9 per cent by 1960, fell back slightly in 1961. The *per capita* production of sugar went up by about one-third over the whole period, and spectacularly increased in both 1960 and 1961. For the third year in succession, good food crops were harvested in 1960-61 in all the E.C.A.F.E. region, except South Viet Nam and Laos. Thus, a most notable rice harvest of 89.3 million tons, 6 per cent above the 1959-60 level, was accompanied by a record wheat crop of 19.7 million tons, again 6 per cent above the previous year. The total output of other cereals—maize, barley, oats, rye and millets—was also higher in 1960-61, especially millets in India and maize in Thailand. The production of pulses was slightly below the 1959-60 level, but that of oil crops was 9 per cent greater, and a small increase in potatoes almost made up for a small reduction in yams and sweet potatoes. Output of centrifugal sugar was 8 per cent more than the 6.8 million tons produced in 1959-60, big increases in India, China: Taiwan and Thailand more than counterbalancing some decline in Indonesia and the Philippines. It may be noted here that, notwithstanding increased supplies, prices of cereals rose in most Asian countries in 1961. The only important exception, it is stated, was India, where an easier supply position was reflected in lower prices for wheat and rice.

Foodgrains in China

The food production in Mainland China (which is excluded from the general indices) was an exception to the general trend in the region. According to the *Survey*, natural calamities, in both 1960 and 1961, badly affected food supplies and, indeed, appear to have severely retarded the development of the whole economy. In 1960, more than half of the total farmland was affected by severe drought, typhoons, floods, insect infestation or other damage, and there were similar disasters in 1961. Output figures have not been announced for 1960 and 1961 (although grain output in 1961 was reported to be "better" than in 1960, but it is clear that production in both years fell much below the "grain" target of 275 million tons (including potatoes, sweet potatoes, and pulses) which had been set for 1959. Although widespread famine appears to have been averted, many areas had near-famine conditions and almost all had great hardship. The severity of the situation is indicated by a progressive reduction of the grain ration from July 1960, massive imports of foodgrains and the lifting of restrictions on food parcels from abroad.

Apart from sugar, production of cash crops has hardly increased during the past two years in the region. Another disappointing feature of 1961 was the failure of exports of cash crops to increase. Following upon a mild increase in the sale of rubber and a reduction in that of copra came heavy fall in price, which reduced export receipts, particularly of British Borneo, Malaya, Indonesia and the Philippines. Pakistan's exports would also have fallen sharply if a big decrease in jute production, due to bad weather conditions, had not been counteracted by much higher prices.

Industries

Industrial production in the region has been steadily increasing since the recession of 1958, but its rate of growth was smaller in 1961. The rate of growth rose to 19 per cent in 1959, and further to 21 per cent in 1960. In the first half of 1961, the increase was at the rate of 15 per cent, that is, at a lower level than in the previous two years. Much of the increase in industrial production was confined to Japan. It is significant that industrial output in India, which has a weight of 33 per cent in the regional index, has risen only 1.6 times the 1953 level. Explaining the reasons for the wide disparity in the growth of industrial production in India and Japan, the *Survey* observes as follows:

"The disparity between these two major countries is partly explained by the very different growth rates for heavy industries and textile industries. It is the metals and machine sectors that have made the most rapid progress, especially in Japan, where they are well established. But India's recent massive investment in heavy industry has still to yield its full results, owing to an unexpectedly long "gestation period" and to difficulties connected with transport. Meanwhile, textiles, long the most important industry, has tended to decline, because of increasing local competition in the underdeveloped countries that had provided traditional markets, increasing competition by new exporters in all markets and, just recently, "voluntary" quotas placed on exports to advanced industrial countries.

"The general faltering in the rate of industrial growth during 1961—it is not serious—may be largely explained by factors specific to each country. In Japan, the fall was associated with a drastic deterioration in the balance of payments, an aggravation of the labour shortage for some industries and a serious concern, particularly by producers of coal, chemicals and non-ferrous metals, about problems of adjustment to stronger competition, following the Government's decision to hasten the liberalisation of trade. In India also, there had been a deterioration in the balance of payments which had limited capacity to import; transportation bottlenecks, moreover, and shortages of power, hampered cement, steel and other industries, while shortage of raw jute curtailed production of jute manufactures in both India and Pakistan."

Exports

The fall in industrial production was accompanied by a decline in total exports from the region. The total E.C.A.F.E. exports aggregated only $3.6 billion in the first half of 1961, as compared with $3.9 billion in the corresponding period of 1960, $7.6 billion in the whole year 1960 and $7.2 billion in 1959. The decline in exports is attributed to some extent to the slackening of industrial activity in the U.S. and Western Europe. Industrial activity in North America, to which the E.C.A.F.E. region exports one-quarter of its total exports, fell by 5 per cent in the first half of 1961. Besides, in Western Europe, to which the region sells another quarter of its exports, the annual rate of industrial growth, after reaching 7-9 per cent in the previous two years, declined to 6 per cent during the first six months of 1961. These changes, however, did not lead to any significant movement in general indices of export and import prices and also in terms of trade.

The total imports by the region, after changing little in 1958 and 1959, had risen by 16 per cent in 1960, thereby exceeding the 1957 loom level. They continued to rise in the first half of 1961, albeit at a slower rate of 11 per cent. More than two-thirds of the increase in imports is accounted for by Japan, Indonesia and Taiwan. The countries which reduced imports in the first half of 1961 include Ceylon, Burma, Singapore and South Korea. The increase in aggregate imports, it is stated, was financed by a depletion of foreign exchange, especially in Indonesia, Japan and Philippines. The *Survey* adds that problems of balance between aggregate demand and aggregate supply, acute, and a few countries even achieved a high degree of stability in 1961. Such stability was helped by greater success of Governments in raising the level of public and private saving and in avoiding recourse to the banking system for financing their rising expenditures. But Japan's investment boom created a temporary problem, more particularly on the external side, while Indonesia's difficulties with regard to production, exports and public finance have led to a continuing problem of inflation. There was demand inflation, but less severe, in some of the raw material exporting countries, and there was some cost-push inflation in India as well as in Japan. But, if the economies with grave security problems are excluded, the E.C.A.F.E. region was remarkably free from any serious inflationary pressures in 1961.

The U.S. tariff levels which were reduced substantially in the post-war years are now among the lowest of the leading trading nations, according to the Morgan Guaranty Trust Company. Only four countries, including one member of the European Common Market, have a lower average than the U.S. The U.S. weighted average for industrial tariff is 11 per cent as compared with 19 per cent for Japan and Austria, 17 per cent for the U.K. and New Zealand, 16 per cent for Italy and Canada, 15 per cent for France and 14 per cent for the Common Market. On the other hand, West Germany, Sweden and Switzerland and Denmark have lower tariff of 9 per cent, 8 per cent and 6 per cent, respectively.

FALL IN E.I.D.'S PROFIT

LOSS ON SUGAR EXPORT MAIN CAUSE

THE results of the East India Distilleries and Sugar Factories Limited [Secretaries: Parry's Holding (Private) Ltd., Madras] for the year ended 30th September 1961 show divergent trends for the first time in at least the last five years. While the achievements on the production front during the year show further progress, the financial outcome is less satisfactory than in the preceding year and underlines a setback in profitability, in terms of gross profit to sales, from nearly 8 per cent to 6.4 per cent. Thus, during the year under review, 392,151 tonnes of cane were crushed and 34,117 tonnes of sugar produced, as compared with 350,179 tonnes of cane crushed and 31,269 tonnes of sugar produced respectively in 1959-60. Total sale proceeds rose by £1,581,529 above the previous year's all-time peak of £11,168,047 to £12,749,576. But the gross profit has fallen from £890,463 to £825,613.

The decline in profit was due to two adverse factors which cropped up during the year. First, the average recovery of sugar from cane, which had improved further in the preceding year by 0.25 per cent to 8.92 per cent, shrunk to 8.70 per cent. Secondly, of the total sales of 33,910 tonnes, 5,941 tonnes were exported at a loss of £110,053 in relation to internal prices. Moreover, as a result of increased operations, costs rose sharply from £10,354,000 to £12,132,000 and wiped off the advantages scored in production and sales. The burden of excise duty on sugar, however, was somewhat smaller at £545,000, as against £639,000 in the previous year, apparently because of the rebate given on increased production. While lower profit has necessitated a lower provision for taxation at £320,000 against £381,000 in the previous year, after taking into account £15,000 transferred from the taxation equalisation reserve, depreciation has been allocated £18,000 more at £140,000. As a result, the net profit, too, is lower at £361,000 as against £393,000 for 1959-60; the share of the E.I.D. alone works out to £351,000 as against £378,000.

Notwithstanding the setback in financial results, the Directors have maintained the equity dividend at 21-3/7 per cent and that, too, on a higher capital for the whole year as against for only a part of the previous year. The total distribution to equity shareholders, therefore, absorbs £236,000, as against £196,000 last year.

It is noteworthy that the Directors have once again set aside a sizable amount to reserves, as will be observed from the following table bringing out the salient features of the Company's working during the past four years:

(In thousands of £s sterling)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds	12,750	11,168	10,472	10,851

* Subject to deduction of tax.
† Interim dividend only, after deduction of tax.
‡ Subject to payment of final dividend on preference capital.
Z From 1960, when the Articles of Association was amended to change the dividend on preference shares from 7 per cent tax-free to 9 per cent, taxable.

Sales of spirit, carbonic acid gas and chemicals during the year under report remained at a satisfactory level. But, nearly three months' production of ceramics was lost, with a consequent decrease in sales and profit, due to the closure of the thrift kiln for overhaul. Excise duty on ceramics was introduced with effect from 1st April 1961 by the Indian Finance Act of 1961. Sales of fertiliser mixtures maintained an upward trend, but could have been greater had allotments of nitrogenous fertilisers been more freely made by the Government in the first half of the year. The ammonium phosphate plant at Ennore, for which fresh capital was raised in 1960, is expected to go into production in the middle of this year. In merchanting business, turnover increased, and, together with the streamlining of the marketing arrangement undertaken in the previous year, contributed to higher profit margins.

The capital of the Company stands at £1,300,000, comprising equity of £1,100,000 in £1 shares and preference of £200,000, also in £1 shares. Capital reserves include share premium account of £354,809 and total £525,019 as against £506,232, the increase having been due to a transfer of £18,787 from the profits to the development rebate reserve. The revenue reserves, excluding reserves for future taxation amounting to £79,000, have gone up from £1,481,944 to £1,560,834. Thus, reserves aggregate £2,085,853 as against £1,988,176 at the end of the preceding year. Current liabilities at £3,672,727 are practically unchanged over the year, and are comfortably covered by current assets of the order of £6,187,247 of which stocks and work-in-progress are of £2,842,298 and book debts of £3,037,354. Cash and bank balances are no more than £304,471 as against £1,003,512 a year before; the previous year's fat figure is explained by the inclusion of the share issue proceeds which have since been expended on capital assets. Investments are shown at £132,758, of which the quoted trade investments amount to £103,474 and command a market value of £327,313 and the quoted Government securities to £16,933, with a market value of £16,743. The gross block rose during the year from £1,485,222 to £2,379,427 and has been written down to £1,087,284. Inclusive of expenditure on buildings and plant and machinery in course of construction, fixed assets are shown at £1,956,669, an increase of £888,061 over the year.

The £1 fully paid ordinary shares of the Company are currently quoting at Rs. 36.75 *cum-div.* and, on the *ex-div.* basis, offer a yield of 5.8 per cent per annum, free of tax.

PERMANENT MAGNETS LTD.

During the first year of working, upto 31st December 1961, Permanent Magnets Limited (Managing Director: Mr. Kantilal M. Desai, Bombay) incurred an expense of Rs. 1,04,980 and earned an income of Rs. 25,810. Out of the total expenses, Rs. 91,184 have been capitalised under "expenses during construction account" and the balance of Rs. 13,796 is shown in the revenue account. A provision of Rs. 11,700 has been made for taxation. This leaves Rs. 314 to the credit of the profit and loss account, which is carried forward.

The Company has taken possession of 41,928 sq. yards of land at Magathane village, near Borivli. The construction work started at the end of October last. The most difficult part of the construction of the factory is over and the Directors feel that the entire construction would be completed by the end of this month. The total requirements of cement and iron for complete construction are already covered.

Nearly 30 per cent of the imported machinery has arrived in Bombay and the remainder would be on hand by this month-end. Orders for indigenous machinery have been finalised and they would be delivered in time for erection, which is expected to be completed by the end of May this year; the factory would go into production soon thereafter. Mr. Antonio Sevesi, Managing Director of the Centro Magneti Permanenti, which is collaborating in the Company's project, was in Bombay in February to check up the construction work and machinery orders and plan the production programme.

The Company has been assured of power supply from the Koyna project, which would go into commercial production in the middle of April. It is making intensive marketing research and investigations in the demand for permanent magnets. The demand has been found to be sufficiently large to warrant an almost immediate expansion in capacity after the commencement of production.

The Central Government has approved of the appointment of Mr. Kantilal M. Desai as the Managing Director of the Company for five years from 26th November 1960. His remuneration is fixed at 5 per cent commission on the annual net profit, computed according to the Companies Act, subject to a minimum of Rs. 20,000 per annum and perquisites not exceeding Rs. 12,000 annually.

(*Concluded from next column*)

Rs. 118.37 lakhs, of which cash and bank balances amount to barely Rs. 0.73 lakh. Investments are lower at Rs. 17.53 lakhs as compared with Rs. 23.28 lakhs a year before. The issued and paid-up capital of Rs. 72 lakhs, all in equity, includes Rs. 54 lakhs by way of capitalisation of reserves in the past. It is covered by reserves and surplus of Rs. 19.58 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 87 *cum-div.*, and, on the *ex-div.* basis, offer a yield of 5 per cent per annum, free of tax.

AZAM JAHI RAISES DIVIDEND

FINANCIAL POSITION FAR FROM SATISFACTORY

REFLECTING clearly the general buoyancy of the cotton textile industry in the country, despite the system of voluntary price control, the results of the Azam Jahi Mills Limited (Managing Director: Mr. C. S. Tyabjee, Hyderabad) for the year ended 30th September 1961 show a distinct improvement over those for 1959-60. The Company's gross sale proceeds have recorded an impressive rise of Rs. 39.64 lakhs to Rs. 262.68 lakhs, which, incidentally, represent a record level. The gross profit has increased nearly three-fold from Rs. 6.56 lakhs to Rs. 18.07 lakhs, with the result that the Directors have stepped up the ordinary dividend from 4 per cent, taxable, to 6 per cent, subject to tax, bringing the net return (at 4.2 per cent) close to the 5 per cent paid for 1956. Nonetheless, the market has failed to draw any particular cheer from this, as the Rs. 100 fully paid ordinary share continues to quote at a sizable discount of 13 per cent.

This is not inexplicable. For the better results for the year under review have come about not without a disturbing increase in both manufacturing and operational costs. The cost of cotton and yarn consumed rose again steeply from Rs. 118.98 lakhs to Rs. 132.04 lakhs, and other expenses went up from Rs. 104.62 lakhs to Rs. 112.77 lakhs. That there is every possibility of these costs increasing further during the current year is obvious from a significant remark of the Directors in their report. They say: "It should be noted that, in view of heavy monsoon lasting till late in 1961, cotton crop has been badly affected and prices have once again gone higher." In addition to this cost inflation, the Company has been carrying a rather heavy burden of past depreciation, which would have to be provided for from the profits in future.

As against the income-tax basis adopted until the previous year, the arrears of depreciation have now been worked out on the straight line method uniformly over the "specified period," under the option provided under Section 205 of the Companies Act, 1956. As a result of this change in the basis of determining depreciation, the arrears are estimated at Rs. 36.80 lakhs, as against Rs. 71.76 lakhs shown in the previous year's report. The depreciation for the year under review has been fully provided in compliance with Section 205 of the Companies Act, and this absorbs Rs. 16.03 lakhs, inclusive of a special provision of Rs. 9.59 lakhs under the said Section. No provision has been made again for taxation while credit has been taken for Rs. 5.03 lakhs, being the refund of income-tax and corporation tax relating to the previous years. No transfer has been made to the reserve fund, though development rebate reserve gets Rs. 2.60 lakhs against Rs. 0.55 lakh previously. The dividend absorbs Rs. 4.32 lakhs, leaving a mere Rs. 3,120 to be carried forward.

The following table compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds (gross)	262.68	223.04	170.76	192.02

† Subject to deduction of tax.

The financial position of the Company continues to be far from happy. Apart from the inadequately depreciated gross block account, which stands written down at Rs. 134.93 lakhs against the book value of Rs. 216.37 lakhs, which shows an increase of Rs. 11.83 lakhs during the year, the Company's position in regard to its short-term liability is also poor. Liabilities to outsiders make a big total of Rs. 179.24 lakhs, of which Rs. 116.78 lakhs represent bank borrowings. These are inadequately covered by current assets, loans and advances amounting to

(*Continued in previous column*)

MADURA MILLS REPORT HIGHER TURNOVER

RESERVES STRENGTHENED FURTHER

DESPITE lower ceiling prices for yarn, which have been effective throughout the year, the turnover of the Madura Mills Company Ltd. (Managing Agents: Messrs. A. and F. Harvey Ltd., Madurai) continued to expand and touched a new peak during the year ended 31st December 1961. Before making an adjustment of Rs. 209.19 lakhs which was found necessary "to meet the needs of the Company's largest customer"—the reference here is apparently to handloom weavers—gross sales amount to Rs. 1,933.58 lakhs which compare very favourably with Rs. 1,740.52 lakhs for 1960. After making the aforesaid adjustment, sale proceeds amount to only Rs. 1,724.39 lakhs, that is Rs. 16 lakhs less than the figure for 1960. Other incomes have increased by Rs. 10.42 lakhs to Rs. 42.30 lakhs, but the most welcome improvement has been in the closing stocks of yarn and waste which have gone down in value from Rs. 136.52 lakhs to Rs. 75.45 lakhs. The cost of cotton, rayon and stores consumed has declined by Rs. 206.43 lakhs to Rs. 1,043.01 lakhs, but, here again, the figure has been arrived at by reducing the actual figure by Rs. 209.19 lakhs to counterbalance the reduction in turnover referred to earlier. The actual expenditure, therefore, amounts to Rs. 1,252.20 lakhs and forms 66.9 per cent of the gross sale, as against 71.8 per cent previously. This saving in raw material expenses has, however, been quickly lost by the disproportionate rise in the cost of services by Rs. 34.70 lakhs to Rs. 371.18 lakhs and other expenses by Rs. 18.02 lakhs to Rs. 92.83 lakhs, so that the gross profit shows only a marginal improvement of Rs. 1.27 lakh to Rs. 198.61 lakhs.

Provision for Managing Agents' commission has been reduced from Rs. 14.61 lakhs to Rs. 8.00 lakhs and that for taxation from Rs. 71.71 lakhs to Rs. 69.40 lakhs. Provision for depreciation, on the other hand is higher by Rs. 7.22 lakhs at Rs. 32.94 lakhs. The resultant of these changes in essential provisions is a small rise of Rs. 2.97 lakhs to Rs. 88.27 lakhs in the net profit. Taking account of Rs. 7.21 lakhs brought forward and adding Rs. 1.50 lakh as provision for sales tax no longer required, a sum of Rs. 96.98 lakhs becomes available for appropriation. The major portion of this amount has been conserved. Thus, reserves have been strengthened further by the transfer of Rs. 58.28 lakhs (as against Rs. 53.88 lakhs last year) of which Rs. 10.78 lakhs (Rs. 6.38 lakhs) go to the development rebate reserve, Rs. 40 lakhs to the general reserve and Rs. 7.50 lakhs to the loan redemption reserve both of which received similar amounts last year. It is noteworthy that, in three years, the Company has strengthened its reserves by Rs. 132.55 lakhs. In view of the precedence given to ploughing back the profits, the Directors could only maintain the dividend at the modest level of 15 per cent, taxable, which is still far from the 20 per cent, tax-free, dividend, the Company used to pay in the first half of the fifties. That the dividend has been fully covered even after the large amounts set aside for reserves is clear from the fact that the amount carried forward is Rs. 5 lakhs more than the amount brought in.

The rapid strides made by the Company during the past three years to regain the ground lost in the debacle of 1957-58 are very well reflected in the comparative table given below:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale of yarn and waste (gross)	1,724.39	1,740.52	1,240.01	1,537.41
Other income	42.30	31.88	17.85	9.57
Closing stocks	75.45	136.52	60.85	84.67
Raw materials and stores consumed	1,043.01	1,249.44	882.02	1,027.79
Salaries, wages and bonus	371.18	336.48	271.17	340.04
Other expenses	92.83	74.81	63.09	78.88

Transfer to reserves	58.28	53.88	20.39	—49.07*
Dividend	20.23	20.25	21.38	..
	(15%)†	(15%)†	(12½%)†	..
Carry forward	12.45	7.21	2.05	..

* After bringing in the previous years surplus of Rs. 6.02 lakhs the balance of deficit amounting to Rs. 49.07 lakhs was debited to the general reserve.

† Subject to deduction of tax.

A perusal of the Company's balance-sheet as at 31st December 1961 reveals that the financial position of the Company is strong. The share capital, consisting entirely of equity shares of Rs. 15 each stands at Rs. 175.02 lakhs with a backing of Rs. 534.18 lakhs in reserves, including Rs. 100 lakhs representing capital reserve. On the basis of some 11.67 lakh ordinary shares outstanding, the net asset value works out to Rs. 60.77 per share which compares highly favourably with the current market price of Rs. 40.65. Secured loans amount to Rs. 137.83 lakhs in addition to current liabilities and provisions at Rs. 157.80 lakhs and the total of these two together are covered twice over by current assets, investments, and loans and advances, all aggregating Rs. 685.11 lakhs. Inclusive of additions during the year amounting to Rs. 105.03 lakhs the gross block stands at Rs. 765.12 lakhs and has been substantially written down to Rs. 298.61 lakhs. Advances against machinery yet to be allocated are placed at Rs. 21.10 lakhs so as to give a net block of Rs. 319.71 lakhs.

The Company's expansion and modernisation schemes are going apace. In addition to the capital expenditure of Rs. 106.02 lakhs incurred during the year, outstanding commitments, as at 31st December 1961, amounted to Rs. 153.94 lakhs excluding the cost of installation of 450 automotive looms which are planned for the near future. Having regard to the heavy expenditure incurred on these schemes, the Directors propose to issue some debentures during the course of the current year.

At present, the Rs. 15.00 paid ordinary shares of the Company are quoted at Rs. 40.65 *cum-div.* On the *ex-div.* basis, the net yield works out to about 4.00 per cent per annum. The Company is reasonably placed at present in regard to cotton supply and the Directors are making every effort to ensure supplies so as to maintain full production throughout the year.

(*Concluded from next column*)

ly lower, at Rs. 27.62 lakhs as compared with Rs. 30.25 lakhs last year, but that for depreciation has been raised from Rs. 6.51 lakhs to Rs. 7.41 lakhs.

Despite the decline in profit, the Directors state in their report that the results for the year "were good." The expansion programme by which the existing crushing capacity of first and second mills is to be increased by 1,000 tonnes per day was completed and the expanded plants went into production in December 1960 and October 1961, respectively. In order to provide funds for the accumulation of stocks of sugar, due to restricted releases by the Government, the Company had to increase the cash credit limit with the State Bank of Hyderabad from Rs. 175 lakhs to Rs. 250 lakhs. As at the end of June last, the liability on this account was Rs. 165.46 lakhs, against Rs. 92.04 lakhs a year before. Arrangements have also been made with the State Bank of Hyderabad for obtaining a "term loan" of Rs. 1 crore to meet certain deferred payments, such as arrears of cane cess for 1960-61 and managing agency commission payable to the State Government for 1959-60, and also to cover the requirements for capital works.

The financial position of the Company is sound. Out of its issued capital of Rs. 146.40 lakhs (Rs. 110.40 lakhs in equity shares of Rs. 25 each and Rs. 12.00 lakhs in 5 per cent, tax-free, cumulative preference shares of Rs. 25 each and Rs. 24.00 lakhs in 4 per cent, tax-free, cumulative preference shares also of Rs. 25 each), Rs. 145.89 lakhs have been subscribed (Rs. 110.09 lakhs equity and Rs. 12 lakhs 5 per cent preference and Rs. 23.80 lakhs 4 per cent preference). As against this, reserves and surplus aggregate Rs. 130.50 lakhs. Liabilities to outsiders amount to Rs. 606.69 lakhs and are covered by current assets, loans and advances aggregating Rs. 729.38 lakhs. Besides, there are investments shown at Rs. 2.87 lakhs. The gross block increased during the year from Rs. 320.25 lakhs to Rs. 349.89 lakhs, and the depreciation provided so far is as much as Rs. 200.56 lakhs; accordingly the net block works out to Rs. 149.33 lakhs.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 63 *cum-div.*, and, on the *ex-div.* basis, they offer a yield of nearly 7 per cent per annum, free of tax.

NIZAM SUGAR SHARES FATE OF OTHERS

LOWER PROFIT, BUT DIVIDEND SAME

A PERCEPTIBLE fall in both sale proceeds and gross profit, coming after a year of smart recovery when both these rose to record high levels, features the results of the Nizam Sugar Factory Limited (Managing Director: Mr. R. Vithal Rao, Hyderabad) for the year ended 30th June 1961. The fall in profit has taken place despite a rise in production to a record level, because the offtake of sugar failed to keep pace. The recovery of sugar was also lower, though even the reduced recovery per cent was well above the national average. There is nothing peculiar about the decline in the profits of the Company. It is in keeping with the general experience of the sugar industry as a whole and, therefore, casts no reflection on the management of the Company. The setback in financial results, however, leaves the investor unaffected, as the Directors have maintained the equity dividend at 23 per cent taxable, to which level it was raised in the previous year from 21.6 per cent, subject to tax, paid for 1958-59.

The table below compares the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale of sugar and molasses	5,47.18	5,99.12	5,80.54	5,88.58

Additional provision for previous years' taxation	..	9.25	..	..
Development rebate reserve	0.60	0.51	0.90	1.13
To reserves	16.38	26.35	..	10.00
Dividends—				
4% cumulative preference	1.80*	1.15*	1.12*	0.96
5% cumulative preference	0.74*	0.70*	0.70*	0.60
Ordinary	25.39 (23%)*	25.39 (23%)*	23.85 (21.6%)*	19.87 (D. 18% + D. 0%)
Carry forward	0.10	0.04	0.03	1.02
Quantity of cane crushed (tonnes)	6,48,016	4,91,777	4,48,219	5,25,046
Sugar produced (tonnes)	65,219.6	51,199	44,330	55,967
Average recovery	10.06%	10.41%	10%	10.66%

*Subject to deduction of tax

As mentioned at the outset, sales have come down from Rs. 599.12 lakhs to Rs. 547.18 lakhs and gross profit from Rs. 143.84 lakhs to Rs. 94.93 lakhs. Production increased during the year from 51,199 tonnes to 65,219.6 tonnes, with the sugar recovery from cane being 10.05 per cent, as against 10.41 per cent in 1969-60. Cane crushed during the year amounted to 648,916 tonnes, as against 491,777 tonnes in the previous year. The factory's farms produced 207,354 tonnes of cane at an average of 38.27 tonnes as against 40.38 tonnes per acre in the previous year. It will thus be seen that the yield per acre was lower in the year under review.

Rise in production and a drop in sales have left higher closing stocks valued at Rs. 362.11 lakhs; a year before, they were only Rs. 224.08 lakhs. The cost of cane increased by Rs. 37.82 lakhs to Rs. 301.35 lakhs. The burden of excise duty also increased by Rs. 20.30 lakhs to Rs. 166.90 lakhs. Manufacturing expenses, too, rose from Rs. 94.80 lakhs to Rs. 113.80 lakhs. The Wage Board recommendations were implemented in respect of the factory and of plantation employees from 12th November 1960, and the Directors have decided to extend them to the office staff also. The annual running expenditure on account of this is estimated at Rs. 14.28 lakhs. The net result of all this rise in costs is reflected in a lower gross profit of Rs. 94.93 lakhs as compared with the previous year's peak of Rs. 143.84 lakhs. The profit is lower on both sugar manufacturing account at Rs. 81.99 lakhs (Rs. 112.25 lakhs in the previous year) and agricultural operations account at Rs. 14.59 lakhs (Rs. 32.94 lakhs). The loss on confectionery department was slightly higher at Rs. 1.65 lakh against Rs. 1.35 lakh for 1959-60. Owing to the decline in profit, the Directors have transferred only Rs. 16.38 lakhs, as against Rs. 26.35 lakhs a year ago, to reserves. The provision for taxation is natural-

COMPANY MEETINGS AND DIVIDENDS

Sirsilk Ltd.

(*Managing Agents*: Messrs. Birla Brothers Private Ltd., Calcutta.)

Registered Office: Somajiguda, Hyderabad, Andhra Pradesh.

14th Annual General Meeting—31st March 1962.

Extracts from the Directors' report: The profit and loss account, after providing Rs. 12,04,150 (Rs. 11,75,686 for 1960) towards interest on loans and Rs. 36,00,000 (Rs. 14,00,000) for depreciation, and taking into account the amount of Rs. 37,513 (loss of Rs. 3,22,740) brought forward from the previous year, shows a surplus of Rs. 47,843 (Rs. 37,513) which is proposed to be carried forward. In view of the inadequacy of the profits for the year, the full depreciation could not be provided.

The working results, during the year were better than those of the previous year. There was increase in production, as well as in turnover and the fabrics manufactured by the Company fetched better realisations. Efforts are being made to achieve still better working results during the current financial year.

Pursuant to the notification of the Central Government, the price of Alcohol was reduced from 25.08 nP to 20 nP per litre with effect from 3rd May 1961, by the State Government.

The negotiations for technical collaboration to implement the Company's expansion and modernisation programmes are in an advanced stage.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	3,02,00,781	Gross block	5,84,70,605
Reserves and surplus	47,843	—Depreciation	60,00,000
Other liabilities	4,45,59,468	Net block	5,24,70,605
		Current assets	1,67,49,284
		Investments	21,250
		Cash	55,66,953
	Rs. 7,48,08,092		Rs. 7,48,08,092

* Paid-up capital consists of 9,42,738 ordinary shares of Rs. 10 each fully paid up and 2,00,004 six per cent. tax-free cumulative redeemable preference shares of Rs. 100 each fully paid up. Forfeited shares (amount originally paid up) comes to Rs. 7,73,001.

Henley Cables India Ltd.

(*Chairman*: Mr. A. D. Shroff, Bombay.)

Second Annual General Meeting—28th March 1962.

Extract from the Directors' report for the year ended 31st October 1961: During the year ended 31st October 1961, the Company has earned a sum of Rs. 1,60,954 by way of interest on investments in Treasury bills and short-term deposits of funds which could not be immediately otherwise utilised. After making suitable provisions including expenses a loss of Rs. 10,619 has been transferred to the balance sheet. This figure has been arrived at after capitalising items amounting to Rs. 5,06,392 incurred towards the implementation of the project.

Expenditure on raw materials during the year amounted to Rs. 12,30,871. Towards this expenditure the directors arranged for a clean cash credit facility to a limit of Rs. 10,00,000 from the Company's Bankers, and the Company utilised this facility to the extent of Rs. 7,35,000 upto the 31st October 1961. After the close of the financial year the directors arranged with the Bankers to increase the limit of the clean cash credit facility to Rs. 20,00,000. The total amount of the clean cash credit facility availed of as at the date of this report is Rs. 19,11,232. In addition the directors have also arranged with the Bankers for a loan of Rs. 30,00,000 against equitable mortgage of the Company's fixed assets. The total amount borrowed against this loan account as at the date of this report is Rs. 3,00,000.

As at the end of the financial year the total available funds in U.K. principally in short-term deposits with the Company's bankers and in U.K. Treasury Bills were to the sterling equivalent of Rs. 40,69,157. Since the close of the financial year, plant shipments have reduced this balance as at the date of this report to Rs. 28,68,672.

Structural work on the main factory building has been completed and ancillary buildings are either complete or in an advanced stage of construction. Delay was occasioned by the necessity to redesign some of these buildings to cater for an anticipated paucity of both water and electric power from the supply authorities.

The directors report that the majority of the initial plant and machinery required for the commencement of production was received at the factory site prior to the end of the year.

The diesel generator sets ordered in January 1961 to cater for the anticipated non-availability of adequate electric power from public supply have also been received and are now being installed. Although the power these generators supply together with that which will be immediately available from public supply will cater for the factory's requirements in the initial stages of production, full production cannot be attained until further power is available from public supply. Full production may hence suffer if the power from public supply is not available to the factory round about the last quarter in 1962. The Government of Maharashtra and the Authorities concerned have been approached in regard to this matter.

With the approval of the Central Government the Company has purchased certain items of reconditioned plant from the Technical Collaborators in U.K. and they have guaranteed their satisfactory performance. This has resulted in a substantial saving of capital expenditure on plant.

Progress during the year, whilst not as rapid as originally anticipated, has been sufficiently swift of late for the directors to be able to forecast the commencement of production trials in March 1962.

The agreements relating to the know-how, technical aid and trade marks are being finalised. The delay has to some extent been due to the merger of the interest of W. T. Henley's Telegraph Works Co. Limited with Associated Electrical Industries Limited of the United Kingdom, one of the largest and renowned manufacturing groups of electrical equipment in the world. The directors have pleasure to state that Associated Electrical Industries Limited will fulfil the originally agreed obligations with this Company.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,07,25,000	Gross block	10,12,084
P. L. a/c surplus	29,194	—Depreciation	41,887
Other liabilities	18,59,714	Net block	9,71,097

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 1,00,000 transferred from dividend equalisation reserve; Rs. 6,090 being excess bonus provision for 1959-60 credit back and Rs. 15,623 being refund of cess on sugarcane paid in prior years.

† This includes Rs. 1,750 being excess bonus provision for 1959-60 and Rs. 18,653 being refund on cess on sugarcane paid in prior years.

‡ Preference dividend is calculated at 9.3 per cent.

Extracts from the Directors' report: During the year under report the factory commenced sugarcane crushing on 28th November 1960 and stopped it on 15th May 1961. The sugarcane crushed during the season was 1,69,717 metric tons and the sugar manufactured was 1,73,430 bags with a recovery of 10.19 per cent as against 1,08,524 long tons of cane, 1,11,620 bags of sugar and 10.29 per cent recovery for the last season. The cane development schemes adopted by the Directors have yielded good results in that and there has been improvement in both the quantity and quality of the cane supplied to the Factory. The recovery has also been satisfactory in spite of the crushing season extending to the middle of May. This year's production of sugar has been the largest in the history of the Company.

The crushing season 1961-62 has started on 27th November 1961. It is progressing well with good rate of crushing. But this Company will not be able to crush as much quantity as that of the last season due to the 10 per cent cut imposed by the Central Government.

The Sulphuric Acid and Superphosphate Plants have gone into regular production from February, 1961. The Company produced 15,272 tons of superphosphate during the accounting year and sold 12,434 tons. Superphosphate has been well received in the market and the plant is now in continuous full production. This unit is expected to contribute substantially to the current years results.

The Company has made considerable progress in the setting up of the Industrial Alcohol Plant and the Acetic Acid and Acetic Anhydride Plants. All the machinery required for the plant has been received at site and erection work is nearing completion. The plant is expected to go into initial production in the next three months.

The Company is also building a Caustic Soda-Chlorine plant at Kovvur. Civil works and buildings for this plant are under construction. The plant and machinery, orders for which have been placed with the G.D.R. is ready for shipment and is expected at site in the next few months. The plant is likely to go into production about the end of 1962. The Company has also received an Industrial Licence from Government of India for expansion of the Caustic Soda-Chlorine Plant and the directors are now negotiating with foreign suppliers for plant and equipment required for expansion.

The Company has promoted a separate company (Andhra Foundry & Machine Company Ltd., Hyderabad) for establishing a workshop and Spun Pipe and Malleable Pipe Fittings Unit under the Industrial Licences issued to it by the Government of India. The directors have already obtained the sanction for the transfer of those two licences to the new Company and for an investment of Rs. 10 lakhs in its shares by this Company.

The Government of India have issued an Industrial Licence to this Company for the establishment of a Fertiliser Factory at Kothagudem for the production of 2,00,000 tons of Urea per year. This unit is expected to cost about Rs. 25 crores and the Government of India have asked the Company to promote a new Company for undertaking this big project. Considerable progress has been made in obtaining foreign collaboration for this project and necessary steps are being taken to form the new Company and establish the Fertiliser unit at Kothagudem.

The directors have already obtained the shareholders' sanction for subscription to shares of the value of Rs. 25,00,000 by this Company in the Fertiliser Project.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	60,00,000	Gross block	1,64,83,919
Reserves and surplus	30,47,000	—Depreciation	42,36,087
Other liabilities	1,47,30,604	Net block	1,22,47,832
		Current assets	1,10,55,001
		Investments	2,10,000
		Cash	2,64,771
	Rs. 2,37,77,604		Rs. 2,37,77,604

* Paid-up capital consists of 3,00,000 equity shares of Rs. 10 each fully paid and 30,000—6½ per cent. tax-free cumulative redeemable preference shares of Rs. 100 each. The preference shares are redeemable, at the option of the company, after 1st October 1970 on three months, notice.

Asian Cables Corporation Ltd.

(*Chairman*: Mr. G. B. Kotak, Bombay.)

Second Annual General Meeting—29th March 1962.

Extracts from the Directors' report for the period from 1st January to 30th September 1961. During the year under report the Management have indeed worked very hard to complete the work of construction of the factory buildings and erection of the machinery for the cable plant and to take the necessary trial runs. In the erection of the plant and putting through the necessary trial runs, the Company have had the fullest co-operation from its technical collaborators, Messrs. Enfield Cables Ltd., by way of experienced technical personnel deputed to this Company from their factory. While the Company have had its own staff and technical personnel with sufficient experience in the cable industry, the additional help rendered by Messrs. Enfield Cables Ltd. has indeed made matters easier and more expeditious.

Trial runs were commenced in the month of October 1961 and the factory was formally inaugurated on the 6th November 1961, by the Hon'ble Shri Morarjibhai Desai, Finance Minister, Government of India, in the presence of a distinguished gathering, which included Rt. Hon'ble Earl Verulam, Chairman and Managing Director of Messrs. Enfield Cables Ltd., U.K., Mr. Franc Van Kroff of Messrs. Phelps Dodge Copper Products International Corporation, U.S.A., and Mr. T. Takahashi of Messrs. Nitto Boseki Co. Ltd., Japan.

Since then steady progress has been maintained in the training of operatives on the various machines at the factory and establishing standard production schedules. The Company has now commenced production in right earnest. Quite an appreciable quantity of the cables already produced has been and is being used in the electrical installation of the factory and the officers' residential buildings.

The Company has already forwarded samples of the cables to the Alipore Test House, Calcutta, to obtain the necessary test reports from them. Also an application has been made to the Indian Standards Institution, New Delhi and the directors look forward to receiving at an early date the necessary certificates under the I.S.I. Certification Marks Scheme. The Company has already secured advance orders for about six months production through its sole distributors. As soon as the test reports and certificates are received the Company's products will be released in the market.

The accounts period ended 30th September 1961 disclose a loss of Rs. 48,331. After taking into account the credit balance of Rs. 11,765 brought forward the previous period, there is a debit balance of Rs. 36,566 which is carried forward.

It will be noticed that the capital assets of the Company have increased to Rs. 59,08,830 during the period, excluding pre-operational expenses of about Rs. 12,00,000. The directors further report that the right shares have been issued to the existing shareholders and the actual scrutiny of the applications and allotment are in hand.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,93,500	Block	70,95,396
Capital reserve	736	Current assets	9,54,904

* Paid-up capital consists of 50,000 equity shares of Rs. 100 each fully called up. Calls unpaid amount to Rs. 6,500.

EXPORTING—AT A LOSS?

(*Concluded from page 474*)

likely to be small. Our experience with the art silk industry a couple of years ago has revealed the shortcomings of this method and a way out of the dilemma is now being considered in the shape of compulsory exports. It is argued that an industry or firm which uses up foreign exchange is under a moral obligation to do all in its power to replenish the country's reserves and should not mind some losses in this context.

Incentive or Compulsion? Whichever way one looks at the problem, something appears to be lacking. Industry maintains that the incentives so far given are not "real" incentives. It is in favour of tax reliefs (not mere drawbacks) and cover for losses in export. Enforcement of a scheme of compulsory exports would, moreover, cut at the very root of the industrialisation programme by discouraging investment by smaller units and would also nullify the avowed objective of distribution of economic power through widening opportunities for new entrants. How do we face this new dilemma?

In all this talk about making industries competitive, sight has been lost of the fact that an industry is comprised of firms which have different cost structures and that it is only the most efficient ones that can think of exporting their products. And what is of equal importance is that it is *these firms which will make the biggest profits in the home market also.* This follows from the fact that, in conditions of relative scarcity, the price in the market will be determined by the high-cost firms and not the most efficient ones. This elementary principle of economics suggests that even an efficient firm will not like to export if its profits in the home market are substantially higher! Consequently, one must accept the position that such firms should be allowed to make *bigger* profits in the home market to compensate for smaller margins (or losses) in sales abroad. This need not amount to exploitation of the consumer, who has, in any case, to pay the price fixed by the high-cost producer. All that is necessary is to ensure that the manufacturer who is prepared to export secures some *differential advantage in the home market also.* Of course, this does not preclude the possibility of a very large firm—like Jay Engineering Works, in the field of electric fans and sewing machines—exporting at a loss because its overall profits are still considerable.

An Illustration

What emerges finally is that the second objective of our export promotion policy should be modified to read: "profits on exports should be on a par with profits in the domestic market." The exact implications of this approach would be somewhat like this. Suppose an article is sold for Rs. 110 in the home market, inclusive of excise duty (refundable on exports) of Rs. 10. The cost of the efficient producer is Rs. 90, so that he can, if he so wishes, sell in the home market at Rs. 100. He can get an import duty drawback of Rs. 5 on his raw materials and can, thus, sell abroad at Rs. 85. However, the price in the foreign market is Rs. 80 only. Hence for every unit that he sells abroad he loses Rs. 5, while for every unit sold at home he gains Rs. 10 *more* than his competitors. In the circumstances, justice demands that the *relative* loss of Rs. 15 per unit exported be made good in the home market. Since the total drawback in our particular illustration comes to Rs. 15, all that is needed is that this drawback on export should be made admissible for an equal quantity of sales in the home market. In this way, the efficient firm will be encouraged to export half its output and considerable foreign exchange could be earned. (To be accurate, if the above concession is given, *every* firm will be indifferent as between home sales and exports. Half the output of the industry will thus tend to be exported.)

Whether the Finance Ministry will look with favour upon the loss of revenue inherent in this proposal will probably depend upon the magnitudes involved. On the other hand, since there will be some gain to the exchequer from tax on the increased profits, the ultimate loss may not be very great and would be well worth the earnings in terms of foreign exchange. In the final analysis, then, the scheme may commend itself over other forms of assistance such as direct subsidy or tax relief on export profits which, too, involve some burden—perhaps a greater burden—on the exchequer.

E.N.I.'S EXPANDING ACTIVITIES

(*Concluded from page 477*)

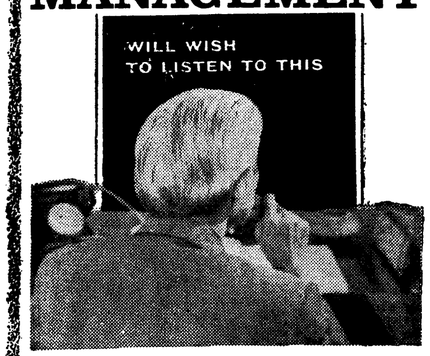
upon which the group's all other activities lean. From this has stemmed its big stake in petrochemicals.

E.N.I. submits its financial accounts annually to the Minister for State Participations, and these are laid before the Italian Parliament. And Signor Mattei's towering personality and political influence are well able to meet any criticism from this quarter. But unlike many holding companies' accounts, the E.N.I. financial data do not reveal the profitability or financial position of the separate operating companies. The group's accounts for the year ended April 1960 show that its (holding company's) net profit was 4,600 million lire. This figure was of the same order as the total dividends received by the E.N.I. from four of its five main operating subsidiaries, but coming mostly from S.N.A.M. and A.G.I.P. Mineraria. For the financial year 1960-61, the net profit of the group was 6,160 million lire Of this, in accordance with its charter, the E.N.I. handed over to the Treasury 4,004 million lire (3,002 million lire in 1959-60), and allocated 1,232 million lire (924 million lire) to ordinary reserves, and 924 million lire (693 million lire) to research, nuclear development, etc. Liabilities totalled 268,900 million lire at 30th April 1961, of which 158,100 million lire consisted of loans and bonds. Total investment in property, plant and equipment during 1960 was 94,300 million lire, bringing the total of the group's investments to 549,100 million lire.

After all, direct financial returns are not the only criteria of E.N.I.'s achievement, or its value to Italy's economy. Its domestic and foreign operations create work for its personnel, and markets for Italian manufactures. The group's subsidiaries fabricate and ship oil equipment, and undertake contract work abroad, such as drilling in Argentine, Spain and France; supply of pipeline material to Persia, Pakistan and Brazil, and refinery equipment to several foreign countries and sell synthetic rubber and nitrogenous fertilisers to China and Russia. In fine, by extending E.N.I.'s interests in a number of directions, and operations in several foreign countries, masterful Signor Mattei has brought it well on to the international oil map.

ASP/LIC-E-17

TOP MANAGEMENT



All over the world, Insurance protection for employees while in service and satisfactory benefits on retirement have become accepted features of sound business management. Life Insurance and retirement incomes are indeed being regarded as a primary need as essential as food, clothing and shelter.

Progressive employers in our country are realising that the introduction of such employee benefits results in improved employer-employee relations, higher efficiency and increased production. An ever increasing number of prudent employers are adopting the Group Insurance and Superannuation Schemes — employee insurance and retirement schemes streamlined and perfected by the Life Insurance Corporation of India.

Today top management wants to know what exactly these Schemes can do for them, what the financial implications are likely to be and what precisely is the nature and scope of the benefits offered. Broadly, the Schemes fall into two categories.

Group Insurance Scheme: offers low cost Life Insurance coverage on a Group basis to employees and gives real security to their dependants.

Superannuation Scheme: provides a source of steady and life-long pension to employees after their retirement (with or without Life Insurance cover).

Some features common to both Schemes are :

1 They can be instituted without any extra cost to the employer

2 Employers' contributions to such Schemes are allowed as normal business expenses for the purpose of income-tax

3 Most of administrative work with regard to these Schemes is done by the Life Insurance Corporation of India.

Special features of Group Schemes :

1 For groups of prescribed size, attractive reduction in premium rate is allowed

2 All the members are covered under a single Master Policy

3 Flexibility—the benefits can increase from year to year.

The Group and Superannuation Schemes create a new atmosphere of employee loyalty and a sense of gratitude. They operate like a voluntarily organised Social Security Insurance in miniature.

Please let our Group Representative come and explain the details to you without any obligation whatsoever.

There is no substitute for LIFE INSURANCE

Notices

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office:

2, India Exchange Place

CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE NINETEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th day of April, 1962, at 4 p.m., to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1961 and Profit and Loss Account for the year ended 31st December, 1961;
2. To declare a dividend;
3. To appoint two Directors in the place of Mr. A. C. Law and Mr. T. S. Rajam who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "Resolved that Mr. M. L. Dahanukar, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "Resolved that Mr. P. D. Himatsingka, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

6. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

7. To consider and, if thought fit, to pass, with or without modification, the following resolutions which will be proposed as Ordinary Resolutions:

   (*a*) That, subject to the consent of the Controller of Capital Issues being received, 200,000 new ordinary shares of Rs. 100 each in the authorised capital of the Company be issued at a premium of Rs. 25 per share on the footing that such new ordinary shares shall rank in all respects *pari passu* with the existing ordinary shares in the Company save and except that they shall not participate in any dividend in respect of any period ended on or prior to 31st December 1961; and that they shall be entitled in respect of the year ending 31st December 1962 to half the rate of dividend that shall be payable on the existing shares.

   (*b*) That the said 200,000 new ordinary shares be offered in the first instance, subject to the approval of the Reserve Bank of India wherever necessary, for subscription for cash to those members of the Company whose names shall appear on the Company's share register on the 11th day of April 1962 in the proportion of one new ordinary share for every two existing ordinary shares then held by such members and so that half, namely Rs. 50, of the full nominal amount of each new share taken up together with the premium, viz. Rs. 25 in respect of each new ordinary share shall be paid to the Company in cash with the acceptance of the offer and before allotment.

   (*c*) That such offer be made by notice as hereinafter mentioned and that any member receiving such offer shall be entitled either to take up by paying therefor all or any of the new ordinary shares so offered to him or to renounce (upon signing a renunciation in such form as shall be prescribed by the Board of Directors) his right to all or any of such new ordinary shares in favour of a nominee or nominees; Provided that such nominee or nominees shall be a member or members of the Company or be approved of by the Board of Directors and that such nominee or nominees shall sign an acceptance of the shares so renounced in such form as shall be prescribed by the Board of Directors and that any such renunciation by a member and acceptance of such nominee or nominees shall be effective only if made upon forms to be supplied by the Company and lodged duly completed with the Company within the time specified together with the sum of Rs. 75 per share in cash (being the proportionate payment of Rs. 50 per share plus the premium of Rs. 25 per share).

   (*d*) That, subject to the approval of the Reserve Bank of India wherever necessary, the said offer be made to the said members by notice specifying the number of shares to which they are entitled and providing that the offer if not accepted within 30 days from the date of offer shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 75 for each new ordinary share so offered shall be made in full with the acceptance of this offer and before allotment.

   (*e*) That any new ordinary shares not taken up by the said members in response to the above offer shall be available for subscription by the members of the Company who take up their rights in full and who desire to apply for additional shares but so that the right to apply for additional shares shall not be renounceable in favour of any other person and the allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller of Capital Issues and, in the case of a non-resident member, further subject to the approval of the Reserve Bank of India.

Note: 1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (*a*) The transfer books of the Bank will be closed from Monday, the 26th March, 1962 to Wednesday, the 11th April, 1962, both days inclusive.

(*b*) The dividend, if sanctioned, will be payable on and after the 12th April, 1962, to those Members whose names appear on the Company's Register on the 11th April, 1962.

(*c*) Dividend Warrants will be posted to the Members at their Registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956

The item of Special Business to be transacted at the Annual General Meeting to be held on the 11th April, 1962 is to consider and pass Ordinary Resolutions for the issue of new ordinary shares.

With a view to further strengthen the capital resources of the Company and in order to increase the ratio of paid-up capital and reserves to total deposits, the Directors propose to raise the subscribed capital of the Company by the issue of 200,000 new ordinary shares of Rs. 100 each in the manner set out in the Resolution.

None of the Directors is interested in the aforesaid resolution except as shareholders of the Company. The General Manager is not in any way interested in the said resolution.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, *the 9th March* 1962.

INDIAN ALUMINIUM COMPANY LIMITED

31, Chowringhee Road

CALCUTTA 16

NOTICE IS HEREBY GIVEN THAT THE share transfer registers of Indian Aluminium Company, Limited will remain closed from 6th April to 27th April 1962, both days inclusive, prior to the Annual General Meeting of the Company to be held at the registered office, 31 Chowringhee Road, Calcutta, on Friday, 27th April 1962, at 11 a.m.

By Order of the Board,
T. D. SINHA,
Secretary.

22nd February 1962.

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Registered Office: **METTUR DAM R.S.**

THE BOARD OF DIRECTORS HAVE DE-clared an interim dividend of 3 per cent tax-free in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960 on preference shares and 7.5 per cent (inclusive of a special dividend of 1.25 per cent for Silver Jubilee) subject to deduction of tax on Equity Shares for the year 1961-62. Both the preference and equity dividends are subject to relief under Section 15C of the Indian Income Tax Act 1922 and the Income-Tax Officer, Salem has determined under Section 18 (3F) that 48.5 per cent of the dividends is exempt from Tax. The net interim dividend will thus be 33 nP or each preference share and 63.41 nP on each equity share. The dividends are payable to the shareholders standing in the registers of the Company as on 28th March 1962.

The dividend warrants will be posted to shareholders on or after 30th March 1962.

As already announced the Register of Members will remain closed from 13th to 28th March 1962, both days inclusive.

EXTREME STRINGENCY IN MONEY

(From Our Own Correspondent)

BOMBAY, 14*th March*

Extremely stringent conditions prevailed in the money market during the week under review. In addition to the usual seasonal demand for funds, the quarterly tax payments aggravated the position. The inter-bank call money rate, which remained unchanged at 4½ per cent until Monday, jumped up to 5 per cent on Tuesday and stayed at that level today (Wednesday) also. Even at this higher rate, lenders were scarce. In Calcutta, the rate was higher still at 5½ per cent. Almost all banks were borrowers from the Reserve Bank of the highest Bank rate, namely, 6 per cent. There was no change in the short-term deposit rates, which are as follows:

	Per cent
Notice money from public:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days (inclusive) ...	3½
(iii) 61 to 90 days	3½
(iv) 91 days and over but less than 12 months	3½
(v) 12 months and over but less than 24 months	4
(vi) Two to four years	4½
(vii) Four to five years	4½
(viii) Five years and over	5

Apropos the increase in the interest rates on advances referred to in this column last week, this correspondent reliably understands that the Bank of Baroda has raised its rate by ½ per cent only on those advances which were unremunerative, that accounts covered by this increase are less than 30 per cent of its total advances and that its average lending rate is still 6½ per cent same as in the case of most banks. No other bank has so far increased its lending rates.

The results of the Government of India's 91 days' Treasury Bills for this week were colourless. The total amount offered at Rs. 2 crores was exactly the same as the amount invited and that offered last week. The average rate of accepted tenders also remained unchanged at 2.585 per cent per annum. Tenders for Rs. 2 crores of these bills have been invited for the next week. There was, however, a striking increase in the absorption of 91 days' Intermediate Treasury Bills. Sales of these bills between 7th March and 10th March 1962 amounted to Rs. 128.75 lakhs. In the corresponding period of last week, sales of these bills were no more than Rs. 3 lakhs.

The statement of affairs of the Reserve Bank of India for the week-ended 9th March 1962 reveals variations in the Issue Department which are normal for the first week of a month. There is thus a large increase of Rs. 42.55 crores in the total notes issued, of which Rs. 38.18 crores constitute the share of notes in circulation. The expansion in note issue is covered on the assets side by boosting up the rupee securities by Rs. 45 crores. A fall of Rs. 2.45 crores is disclosed in rupee coin. This only means that the rupee coin in circulation went up by that amount during the week under review. The foreign securities held in the Issue Department are unchanged at Rs. 123.86 crores, but, as balances held abroad have declined by Rs. 3.21 crores, the total foreign assets are now no more than Rs. 131.51 crores. Other loans and advances, which include the Reserve Bank's advances to the banking system, have gone up by Rs. 6.68 crores. Of this increase, Rs. 4.61 crores have occurred under advances to scheduled banks against usance bills. The total of these advances are at Rs. 32.11 crores.

There have been no developments of any significant nature in the Gilt-edged market. The tone continues to be quiet, there being more sellers than buyers.

There has been a further improvement in the strength of the £ sterling, with the result that, in the local exchange market, the rupee has improved in terms of the U.S. dollar. The Banks' selling rate for ready T.T. on New York is Rs. 475.25 per 100 dollars: this shows a decline of 25 nP over the week. There has been a corresponding fall in the Banks' buying rate for ready T.T. which is now standing at Rs. 471.75 per 100 dollars. In the New York foreign exchange market, spot sterling is quoted at 281.700-281.740 cents per £, the improvement over the week being 0.110 cent. Three months forward also has gone up by a like amount to 280.000-280.040 cents per £.

PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 14*th March*

Malabar black pepper ruled quiet this week, as New York refused to follow the rise.

After touching the highest at Rs. 320, ungarbled came down to Rs. 312, while garbled slipped down from Rs. 330 to Rs. 319. Calicut, after improving to Rs. 320, dropped to Rs. 310.

New York bought a few parcels at $0.37, but withdrew later, and is now reported giving indication at $0.35½. Singapore is steady at Str.$135 for black and Str.$172½ for white. Spot at New York came down from $0.38½ to $0.38.

The outlook depends mainly on the attitude of New York, as Russia and other East European countries are at present out of the market.

Ready pepper in Bombay is nominally quoted at Rs. 170 per 50 kilos.

TURNOVER IN BULLION SMALL

(From Our Own Correspondent)

BOMBAY, 14*th March*

Despite the relaxation of special margin rules, referred to in these columns last week, turnover in the bullion market did not show any improvement during the week under review. The daily average offtake was no more than 5,200 tolas of gold (as against 4,500 tolas last week) and 12 bars of silver (unchanged). For many operators preferred to await the emergence of a clearer picture regarding demand. And several others were not inclined to extend their commitments either way on a large scale, in view of the conflicting reports on contraband arrivals. The actual arrivals of gold this week were higher than those in the previous week, the daily average being 6,600 tolas, as against 6,000 tolas last week. Arrivals of silver, however, were lower at 12 bars, as against 17 bars. Over the week, prices were slightly higher except in the case of forward gold which was a shade easy.

A feature of trading in the forward section was that the rate for transferring commitments from the *Fagun* (March) to *Jeth* (June) settlement continued to be against bulls in gold and bears in silver throughout the week. Actually, in the case of white metal, the rate widened from 30 nP on Wednesday last week to 45 nP today, whereas the *badli* in gold forward declined from 25 nP to 20 nP.

The dollar price of gold in the London bullion market improved from $35.08¾ to $35.08¾ per fine ounce. Ready gold, however, declined from 249s. 2½d. to 249s. 1½d., following the firmness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver continued unaltered at 84⅝d. and 85½d., respectively, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	14-3-62 (closing)	High	Low	7-3-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	122.00	122.20	121.40	121.95
Forward: *Fagun**	122.25	122.45	121.60	122.30
Jeths	122.45	122.65	121.90	122.55
Sovereign	97.00	—	—	97.00
SILVER				
Ready (.996 fine)	216.90	217.35	215.15	216.25
Forward: *Fagun*†	216.85	217.35	215.60	216.50
Jeths	216.40	216.85	215.40	216.20
London—				
Gold	249s. 1d.	249s. 2½d.	249s. 1d.	249s. 2½d.
Silver Ready	84⅛d.	—	—	84⅛d.
Silver Forward	85¼d.	—	—	85¼d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 22nd March settlement. † 23rd March settlement.
§ June settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

FIRM TONE IN METALS

(From Our Own Correspondent)

CALCUTTA, 13*th March*

Firm conditions were in evidence in the local base metals market during the week under review. The assurance given by the Union Commerce Minister, Mr. K. C. Reddy at the joint meeting of the Export and Import Advisory Councils that no cut in essential imports was proposed in the forthcoming licensing period induced trade circles to believe that, considering the tempo of industrial activity and the establishment of new units to produce cables and non-ferrous semi-manufactures, there exists a strong case for stepping up imports of non-ferrous metals substantially.

The recent sanction of a U.S. non-project loan of $100 million to meet the shortage of industrial raw materials has been a happy development. It is stated that this loan will finance imports of U.S. non-ferrous metals, carbon black, tool steels and other raw materials to be purchased on or after 25th April 1962. Since this loan has been sanctioned specifically to ease the shortage of industrial raw materials, it is to be hoped that the quota of non-ferrous metals usually imported from the U.S. would be substantially increased as from 1st April.

In recent months, the Government of India has issued licences to new units to produce non-ferrous semi-manufactures. While existing units complain that shortage of raw materials stands in their way of realisation of the installed capacity, the policy of creating further capacity is not in line with the need to utilise capital as best as possible. If only the existing units could step-up their production on two shifts a day, the country would be able to reduce imports of semis, which cost the exchequer a considerable sum of foreign exchange. The need to review existing capacity and the difficulties against its full realisation is very urgent now, and until such a review is undertaken and conclusions are reached the issue of further licences to new entrants should be kept in abeyance.

On the London Metal Exchange, copper opened at £235¼ a ton and gave way to £234¾ on lack of consumer interest. Although locally copper scrap prices were firm and shortage continued, the possibility of increased imports of virgin metals from the U.S. prevented an upward trend. Tin, in London, after being lower at £955 a ton, recovered to £957. Locally, it was firm at Rs. 1,604.25 per 100 kgs. Electrolytic zinc was also firm, but in London the price closed at £69½ a ton as against £69⅜ earlier. Lead here was quiet at Rs. 123 per 100 kgs., but in London the price recovered to £60½ a ton from £60⅜. During mid-week there was a reaction to £60.

DULL TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 14th March

Conditions in the cotton futures market during the week remained practically unchanged from those obtaining on the preceding seven days. Business dwindled to a trickle, with the daily turnover not exceeding a couple of hundred bales. In fact, no business was done on certain days. The Jarilla March contract was priced at Rs. 692.75 and Rs. 693 (the ceiling) per three quintals. Although there were many tender days since the delivery period commenced on the 1st inst., not a single bale was tendered against the contract to-date. This is in keeping with the general expectation for, with spot prices ruling at, and in many cases, above the ceiling, no one expected that there will be any sizeable tenders.

Traders are disappointed that, although the March contract has virtually run out, official permission has not yet been received for commencement of trading in the next settlement. And the chances of obtaining permission is also considered to be very slender. Attention of operators are currently focussed on the probable outcome of the meeting of the Cotton Advisory Board scheduled to take place on Friday the 16th inst. The Board is expected to consider, *inter alia*, the cotton supply situation, export of Bengal *Deshi*, import of foreign cotton, price control, and quota for indigenous cotton. It is also expected to review the working of the system of compulsory survey of Indian cotton. Trade quarters attach considerable importance to the meeting in view of the current agitation for lifting the controls on cotton prices.

While trading in the futures section was a dull and tame affair, there was a revival of activity in the spot market. Following reports of an accord having reached between the representatives of the trade and the Textile Commissioner (details on page 465 of this issue) many mills, which were keeping off the market, made sizable purchases. The chief varieties in demand were Vijay, Digvijay, Co2, Laxmi, Kalyan, etc. Prices continued to rule at the ceiling levels.

Some export demand was reported for selected varieties of Bengal *Deshi* cotton in anticipation of an export quota. The general expectation is that a quota of 75,000 bales would be released without much delay, possibly soon after the meeting of the Cotton Advisory Board. Interest in foreign cotton was mainly confined to Sudan cotton although East African and American cotton also attracted limited mill buying. Sudan cotton prices have of late showed a declining tendency and they are expected to fall further. Some mills, therefore, preferred to postpone purchases. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 675; Khamgaon 980; Co2 1,200-1,625; Hubli Laxmi 1,173; B.P. 52 1,315; Sudan G3S 1,485; XG2L 1,300; Menufi 1,805; Giza 45 2,150-2,175.

Cotton futures in Karachi market drifted lower during the week. Lack of export demand and slow domestic mill offtake imparted weakness to the market. N.T.R.G. March declined from Rs. 73.75 last week-end to Rs. 72.70. The May contract eased from Rs. 73.75 to Rs. 72.20.

Under an agreement, recently signed between Pakistan and Bulgaria, the former will export cotton, cotton yarn, woollen fabrics, raw jute and manufactured hides and skins to Bulgaria in return for electric motors, ball and roller bearings, iron and steel and chemicals and fertilisers. The agreement will be in force for an initial period of one year and will be automatically renewed for additional periods of one year each, unless either country gives three months prior notice of its termination.

Cotton values in Liverpool suffered a further setback during the week. Both the American and American type contracts declined on light hedging and local liquidation which found buyers reserved. Sudan cotton contracts, however, ruled quietly steady with values nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch cotton: March 24.25; May 24.45; July 24.60; October 24.10.

American cotton mixed growth contract: March 24.65; May 24.80; July 24.95; October 24.45.

Sudan: March 31.75; May 30.00; July 29.

Firm conditions prevailed in the New York cotton futures market during the week. The firmness was due to the continued strength of spot prices and scarcity of sellers. Trade buying and commission house support led to a hardening of values especially of near position which were well supported.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	14-3-62	6-3-62	28-2-62
New York spot	35.65	35.65	35.55
March	33.84	33.50	33.50
May	34.44	34.15	34.05
July	34.72	34.46	34.46

OILSEEDS RETREAT

(From Our Own Correspondent)

BOMBAY, 14th March

Oilseeds suffered a sharp setback during the week under review, thanks to bearish crop reports from major producing centres and absence of encouraging export enquiries for oils. Distinctly weak advices from North Indian mustard markets, too, acted as a damper. Groundnuts were subjected to heavy bull liquidation. Demand for solvent oil was sagging, as industrial consumers are not able to get necessary import licences for chemicals required for refining this type of oil, the production of which has been fast increasing of late. Castorseeds ruled easy as a result of protracted absence of U.S. buying of Indian castor oil. Some enquiries, no doubt, emanated from the U.K., but the business put through was quite limited, since the prices offered were rather unremunerative. There were, besides, rumours that a leading operator was dehoarding a large quantity of oil in Saurashtra. Linseeds encountered heavy selling, owing to large arrivals of new crop from upcountry centres. In sympathy, cottonseeds staged a retreat.

The groundnut May 1962 contract fell by Rs. 5.12 to Rs. 233.75. Khandesh quality eased by Re. 1.25 to Rs. 46.75. Nizam bold shed a rupee to Rs. 46.50. Oil May 1962 contract declined by 45 nP to Rs. 19.55. Oil ex-mill lost 25 nP to Rs. 19.55 and railway receipts 15 nP to Rs. 19.35.

The castorseed June 1962 contract receded by Rs. 5 to Rs. 166.87. The March 1962 contract closed lower at Rs. 168.87, as against Rs. 172.37. Madras small softened by 75 nP to Rs. 33.75, oil B.S.S. by 40 nP to Rs. 14.70 and commercial by 25 nP to Rs. 14.

Among linseeds, the March 1962 contract fell by Re. 1.56 to Rs. 36. The June 1962 contract moved down from Rs. 37.56 to Rs. 36.41. Bold ready declined by Re. 1.50 to Rs. 35.75. Linseed oil sagged by 65 nP to Rs. 15.85.

The cottonseed April 1962 contract eased by Rs. 3.25 to Rs. 103. July 1962 contract went down by Rs. 2.50 to Rs. 106.50. Berars, whites and non-whites shed 5 nP each to Rs. 20.60.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 14th March as compared with those of the two previous weeks:

	14-3-1962	6-3-1962	28-2-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	233.75	238.87	240.62
Nizam bold	46.50	47.50	47.50
Khandesh quality	46.75	48.00	48.25
Oil ex-mill ready*	19.55	19.80	20.00
Railway receipts*	19.35	19.50	19.65
Oil May 1962	19.55	20.00	20.50
Castorseed			
March 1962	168.87	172.37	172.37
June 1962	166.87	171.87	171.75
Ready Madras	33.75	34.50	34.75
Ready Kanpur	32.75	33.25	33.75
Oil B.S.S.†	14.70	15.10	15.15
Oil commercial†	14.00	14.25	14.35
Linseed			
March 1962	36.00	37.56	37.75
June 1962	36.41	37.56	37.75
Bold ready	35.75	37.25	37.75
Oil ready†	15.85	16.50	17.40
Cottonseed			
April 1962	103.00	106.25	107.75
July 1962	106.00	109.00	109.75
Niger seed	35.75	36.50	36.00
Kardi seed	34.00	34.00	34.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

ART SILK YARN RECEDES

(From Our Own Correspondent)

BOMBAY, 14*th March*

Despite the increase of 1d. to 39d. per lb. (f.o.b.) in the prices of all deniers and qualities of viscose yarn effected by the world's major producers from the 6th of this month, art silk yarns in the local market suffered a decline in values during the week under review. The decline followed selling pressure induced by fears of heavy sales by indigenous spinners. These fears stemmed from reports suggesting the possibility of the present distribution scheme being ended in the not too distant future, in view of the encouraging supply position, thanks to the high rate of support estimated at nearly 1.1 million lbs. per week. National Rayons 120 Bt. cones 1st grade fell by 31 nP to Rs. 13.31 per kg. 150 Bt. cones 1st grade dropped 17 nP to Rs. 11.44. Among imported yarns, 150 deniers Italy eased by Rs. 15 to Rs. 1,735 per 100 kg. 120 Italy was quiet at Rs. 1,900. 150 Japan and 120 Japan were both unchanged at Rs. 1,929. Amilan yarn (20 x 1) April contract was subjected to nervous bull liquidation and climbed down from Rs. 3,410 to Rs. 3,333. The June contract receded by Rs. 62 to Rs. 3,408.

In sympathy with art silk yarn and following liquidation by tired bulls prompted by weak advices from consuming centres as well as by fears of enlarged supplies in view of the reported decision of the Government to import staple fibre to make good a part of raw cotton shortage, staple fibre yarns drifted downward. Even the markedly enhanced rebate of 90 nP per kg. on exports of staple fibre fabrics announced by the Government on the 3rd inst., as against only 12 nP hitherto granted, was not of any avail. 40 x 2 April contract suffered a loss of Rs. 8, today's closing rate being Rs. 737. The June contract was quoted at Rs. 747. Spot Citys dropped 9 nP to Rs. 8.25. Centurys shed 7 nP to Rs. 8.25. Kohinoors were neglected at Rs. 8.38.

Cotton yarns continued to be dull in the absence of fresh encouraging news. Business put through was limited, with values moving narrowly. The scarcity of raw cotton affecting yarn output did not have any impact. Traders noted the Indian cotton Mills Federation's plea to the Government for the setting up of modern spinning units for export of yarn in the same was as composite mills are being sanctioned for cloth exports.

About 996,207 kgs. of art silk yarn were imported into Bombay port during the month of February 1962. Other imports were 288,266 kgs. of synthetic yarn, 404 kgs. of staple fibre yarn, 2,514 kgs. of staple fibre and 6,121 kgs. of cotton yarn. During [illegible] month, exports of cotton from Bombay port aggregated 636,594 kgs. and those of cotton sewing thread were 15,281 kgs.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	14-3-1962	7-3-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
April	3,333.00	3,410.00
June	3,408.00	3,470.00
120 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
120 Italy (per 100 kg.)	1,900.00	1,900.00
150 Italy (per 100 kg.)	1,735.00	1,750.00
Nat. Ray. 150 Bt. 1 (per kg.)	11.44	11.61
Staple fibre yarn (40 x 2)—		
April	737.00	745.00
June	747.00	—
Kohinoor (per kg.)	8.38	8.38
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	18.50	18.50
20s Modern	22.75	22.62
32s Madura	29.25	29.50
40s T. T. Corin	33.75	33.75
60s T'Mangal	51.50	51.50
80s Mahindra	74.00	74.00

SELECTIVE BUYING IN TEAS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 6*th March*

A total of 351,000 kgs. was offered in tea sale No. 10 held today. Quality of medium and good medium teas was well maintained, while some teas from the Nilgiris showed a slight decline. The market met with an irregular demand and buyers were rather selective in their purchases. Plain and low mediums met with fair support and often declined by 10 to 20 nP. Mediums were better supported and were fully firm and those with brighter liquors and clean leaf appearance were dearer. There was strong inquiry for good mediums which were often considerably dearer following quality. Highgrowns were a weak feature and there were a number of withdrawals under this category. However, a few selected invoices which sold were sometimes dearer with quality. There was less support than of late for unorthodox descriptions and these sold at much lower rates than last. Whole leaf grades were firm and sometimes dearer.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	3.95-4.15	4.70-4.90
Mediums	4.15-5.10	4.90-5.20
Good mediums	5.15-6.50	5.20-5.60
Nilgiris B.O.P.	5.00-10.90	

The average price realised in sale No. 10 was Rs. 5.25 per kilo, as against Rs. 5.48 in the previous week and Rs. 5.20 in the corresponding sale last year.

Offerings in dust sale No. 10 held on 7th inst. amounted to 227,000 kgs. There was a useful selection of dusts on offer. The market met with good but irregular demand. Plain and low medium descriptions met with fair support, but these were easier wherever the leaf appearance was mixed. Mediums were firm, but, here again, inferior descriptions under this category were easier. There was strong demand for good mediums and these were dearer with quality. Highgrowns were strong and dearer, buyers following quality. Residual and fibrous descriptions were in less demand and were much easier. Powdery C.T.Cs sold at prices below last, while others in this category were firm. C.T.C. types and legg-cut types sold readily, but these were sometimes considerably easier. Black exportable types opened barely steady, though there was better demand for these types as the sale progressed and at the closing of the sale these were dearer.

The average price realised in dust sale No. 10 was Rs. 4.06 per kilo, as compared with Rs. 4.06 a week ago and Rs. 4.87 in the corresponding sale last year.

Colombo: The market met with strong demand. Best uvas, particularly liquoring fannings, were dearer. Best mediums slightly tended easier, whilst others were firm. Small leaf lowgrowns were a little easier. There was good support for Gulf types which were steady. Best liquoring offgrades and dusts were strong and dearer whilst others were about steady.

London: North Indian and other growths: On Monday, there was a strong market and prices were dearer, buyers particularly emphasising medium coloury Assams which were several pence higher. In Wednesday's sale, the market was strong and prices ruled firm on Monday's rates.

Ceylon and South Indians: 27,093 packages were offered in Tuesday's sale, of which 9,236 packages were from South India. There was good demand for Ceylons which were dearer. Teas from South India also were well competed for at dearer rates except the plainest and thin liquoring, stalky sorts. Clean black fannings were a strong feature of the sale.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 11: 350,000 kgs. offered. Good but irregular demand. Plain and low medium fully firm. Mediums and good mediums stronger, and dearer. Highgrowns very irregular, much easier with decline in quality."

QUALITY TEAS IN DEMAND

(From Our Own Correspondent)

CALCUTTA, 13*th March*

Foreign buyers showed keen interest in quality teas included in yesterday's export offerings here. They were evidently aiming at the creation of adequate stocks in order to get through the period between now and before the commencement of the new season. With two more auctions, the current series of export sales is coming to a close. In consonance with the increased crop, sales in this season are higher, though prices realised have been lower compared to the last season. Demand has been higher because foreign buyers had to replenish their stocks. Stocks built in 1959 in foreign countries stood depleted in 1960 in view of the lower crop in India. Tea output is likely to expand further in this year and this is in accord with the Planning Commission's production target of 900 million lbs. by 1966. There have been firm indications that the world is drinking more tea, and, although at the opening of the new season's sales the pent-up demand between April and May would lead to steady conditions, increased offtake would depend on how soon the stocks that are now being built up in overseas countries would begin to decline.

The fact that, as compared to 1959-60 season sales in 1961-62 have been lower indicates that the keen competition being offered by the other producing countries can be met only by reducing cost of production. Against such a background, the trade and industry have encouragingly noted the hope expressed by Mr. K. C. Reddy, Union Commerce Minister, at the joint meeting of the Import and Export Advisory Councils, that the Government would favourably consider the demand for reduction in or abolition of the export duty, if it were assured that, as a result of such a step, there would be an appreciable increase in tea exports. The trade's contention is that the exports would increase within a short time, if only the Government abolishes the duty.

Tea shipments during the week declined further. Tea stocks in the United Kingdom increased by 3 million lbs. to 146.6 million lbs. in the week ended 2nd March. This increase was due to heavier shipments before despatches began to decline in the last two or three weeks. Within two or three weeks, the stocks would begin to decline, and such a decline is a usual feature just on the eve of the new season. For, while weekly arrivals in London would decline, offtake would be maintained and stocks depleted. In last week's sales in London, north India's quality teas commanded good attention, and medium Assam with colourly liquors were the strongest feature. In last week's Colombo auctions, too, demand was good. Such trend in the chief auction centres of the world including Calcutta reflects the need of overseas buyers to replenish their stocks. The Hamburg news report saying that a tea importing firm advertises the reported Japanese scientific discovery that tea drinking is a protection against radio-active fall-out—tannic acid in tea has been claimed to offer resistance to Strontium-90—has been noted with considerable interest here, as, with further likely tests of nuclear weapons in space by the Big Powers, tea may find several new drinkers, willy-nilly!

The trade believes that there is considerable scope for expansion of the tea market in the United States and Canada. While in the eleven months ended November 1961 tea exports from India to Canada declined to 5.85 million kgs. from 6.45 million kgs. previously and those to the U.S.A. increased to 9.27 million kgs. from 7.66 million kgs., the trade thinks that the aptitude of the U.S.A. to drink more tea should be followed up by intensive campaigns. The trade would like the Tea Board to consider the possibility of conducting campaigns in the U.S.A. and Canada similar to those now being conducted by it in England. On 1st March, a £100,000 campaign was inaugurated in Edinburgh by the Tea Board. A notable feature of this promotional effort is the plan to have a self-contained portable kiosk in every town. The kiosk will offer ready tea to visitors. The campaign is indeed a very big effort by the Tea Board. Sir Percival Griffiths, the Advisor in London to the Indian Tea Association, has welcomed the campaign, which, he considers, is very essential in view of the trend of production surpassing consumption.

Dusts offerings during last week's internal sales amounting to 29,971 packages met with good demand. Good C.T.Cs were readily absorbed to realise firm prices. Medium C.T.Cs were in good demand, but prices were irregular. The clear better liquoring sorts, however, were fully steady. Orthodox teas declined by 10 nP to 20 nP and non-wither Dooars by 15 nP to 20 nP. The bright lines were, however, firm. The quotations in rupees per one kg., inclusive of excise duty, were: good Assam C.T.C. dust 6.30 to 7.00, medium Assam C.T.C. dust 5.40 to 5.70, legg-cut dust 4.40 to 5.00, medium Assam dust 4.20 to 4.70, and plain orthodox dust 3.80 to 4.30. Leaf offerings, amounting to 512 packages, were irregular. A quantity of 45,123 packages was offered during the export sale held yesterday. The general demand was good. In the absence of adequate quantity of representative lots, no quotations were given. Prices for the best C.T.Cs and clean bright liquoring orthodox teas recorded gains, while the rest of the market depicted an irregular trend with fahnings giving way.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 12*th March*

Superior bold crystal sugar ruled steady during the week, thanks to buying support from Gujarat, Saurashtra and other areas of the South. Inferior small crystal sugar also tended to rise on good enquiry from east U.P. and Rajasthan side. Crushing of cane by factories continued to be in full swing, as cane supplies were well maintained and recovery of percentage of sugar from cane also improved, as cane was now fully ripe. The week-end prices here were: wholesale spot delivery Rs. 106.50 per bag; mill delivery (per maund) E29 Simbhauli Rs. 37.80; D29 Amroha Rs. 36.44; Seohara Rs. 36.50; Bijnore Rs. 35; Meerut Rs. 36.94.

Sugar continued steady during the week in the Muzaffarnagar market, thanks to good demand in

the face of dwindling stocks, the monthly release had not yet been done for free sale by the Government. Factories, however, were faced with accumulation of stocks. The week-end prices were: crystal spot delivery Mansurpur D29 Rs. 105.25; E29 Sakoti Rs. 102 to Rs. 102.50 per bag; mill delivery per maund Saharanpur D29 Rs. 37; Lhaksar A29 Rs. 39.60; C29 Rs. 37.99.

Khandsari also improved fractionally, thanks to better buying support. New production had again begun, thanks to sunny weather. Crushers, however, were facing fall in cane arrivals. Week-end prices (in rupees per maund) were: moist 26 to 30; superior 30 to 33; crystal 31 to 33.50; *boora* from *khandsari* 35.50 to 36.50 per maund.

Spot *gur* registered good gains during the week, bulls were buyers, as they wanted to rig up prices in the futures section. Loading by railway was restricted. Stockists were building up stocks to despatch as soon as loading facilities were available. Consequently, stocks increased to 26,000 maunds. On the corresponding date last year, they were around 64,000 maunds. Total arrivals of *gur* here during the current season were about 400,000 maunds, as against 450,000 maunds a year before. Week-end prices of *gur* here were: *pansera* best Rs. 16; *dara* Rs. 14.50 to Rs. 15; *balti* Rs. 14; *shakker* Rs. 16 per maund.

Gur also improved in the Muzaffarnagar market during the week on good buying support. Arrivals, however, fell to an average of 4,000 to 5,000 maunds, apart of which went to stocks. Week-end prices were: *Chaku* Rs. 15.25 to Rs. 17; *pansera* Rs. 15.50 to Rs. 16.50; *shakker dara* Rs. 16 to Rs. 17.50; *masala* Rs. 17.50 to Rs. 18.50 per maund.

Gur futures spurted to touch new high levels on vigorous bull support. The *Baisakh* delivery crossed the margin at Rs. 15.25 necessitating the imposition of special margin of Rs. 350 per unit payable by bulls on all outstanding transactions. *Fagun* and *Baisakh* were quoted at Rs. 14.50 and Rs. 15.39, respectively, on Monday, as against the week's opening of Rs. 14.31 and Rs. 14.99.

Cane sowings are now in full swing. There were indications that acreage will increase further this year.

QUIET CONDITIONS IN KIPS

(From Our Own Correspondent)

MADRAS, 12*th March*

E.I. Tanned Hides and Skins market here was quiet last week because most of the tanners were out of Madras for Ramzan holidays. Demand for inland trade also was small. It has been reported that the U.K. importers were selling their earlier purchases at a discount, with a view to cover profitably later, and were indicating lower prices for shipment business. Stocks of calf skins have been small. Inquiries for tanned skins have been patchy. Prices in the raw centres have been firm and higher than the tanned skins export parity. Importers in Japan were showing interest in heavy weight sheep skins.

The next tanned skins public sales would take place on 19th March both in the U.K. and Germany, when 125,000 goat skins and 115,000 sheep skins will be offered in London and 87,000 goat and 45,000 sheep skins in Offenbach for sale. The results are awaited with interest. The following are the nominal prices per lb. in the local market for allround lots: Tanned cow hides 8/8½ lbs. average Rs. 2.30 to Rs. 2.40; tanned cow calf 1½/2 lbs. average Rs. 3.60 to Rs. 3.75; tanned buff hides 12/14 lbs. average Re. 1.90 to Rs. 2 and tanned buff calf 1½/2 lbs. average Rs. 3.25 to Rs. 3.40.

FURTHER RISE IN JUTES

(From Our Own Correspondent)

CALCUTTA, 13*th March*

The keen interest displayed in jute goods by overseas buyers and expectations of continued U.S. support in hessian led to further smart rise in prices here during the week under review. While fibre arrivals continued to fall, the need of mills to purchase more fibre following the Indian Jute Mills Association's decision to extend maximum loomage by one month to April steadied the fibre market. The fact that, despite increased production in January and February, the squeeze in ready goods continues is indicative of the pent-up demand. Earlier in the current season, overseas buyers had restricted their offtake to immediate requirements only and put off replenishment on the hope that prices would decline. This hope, of course, materialised when the increased crop brought down fibre prices. However, now that it has been clear that the declining trend is over and gradually a recovery has set in, overseas interest has increased. The fact that February-end stocks of goods with mills showed only a small increase, despite larger production, shows that demand is surpassing production.

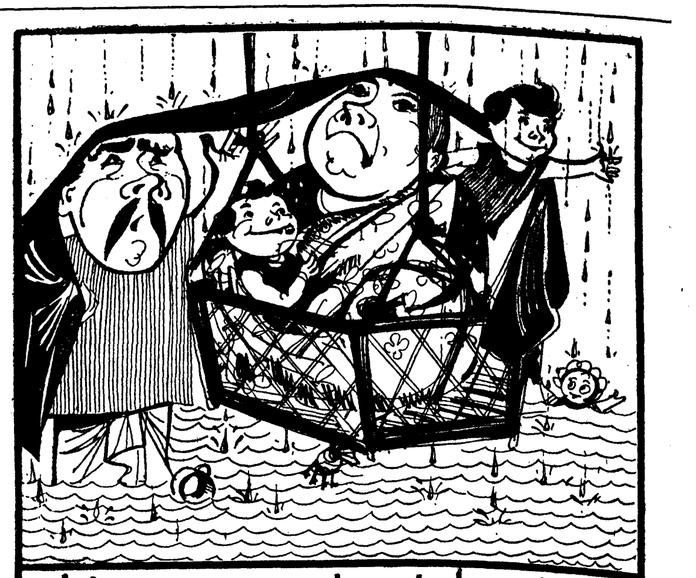
It is becoming clear that, in view of the good overseas demand, the capacity of mills to switch over from sacking to hessian is being fully put to use. Of late, demand for sacking goods has also shown a tendency to improve, and, although the increase in prices of heavy goods during this week was speculative as well as in sympathy with hessian, it should be realised that mills can no longer increase hessian output at the cost of sacking. The only alternative for mills is to keep in production as many of the looms as possible, until the squeeze in ready goods disappears. Although the I.J.M.A. has now extended unrestricted production by one more month, trade circles think that this period would have to be extended further. However, the capacity of mills to put as many looms as possible to work is restricted by their spinning capacity. With the squeeze in ready goods, mills have transferred production to those constructions in which the profit-margin is higher. This has led to an acute shortage of heavy goods and this explains the week's impressive gains in the prices of B. twills and other heavy goods constructions. D.W. flours, cornsacks and heavy Cees command a premium of Rs. 95, Rs. 60 and Rs. 30 a ton over the price of B. twills. Needless to say, hessian admits of the maximum profit, and deliveries up to June are in acute short supply. With good fibre stocks, mills are anxious to fill in their order books even beyond June, but distant demand has not been significant so far.

In order to enable mills to produce goods to their maximum capacity, mills are working their spinning departments in the weekly holiday also, and it is unfortunate that electric power available on holidays would be cut slightly from the beginning of April. However, the I.J.M.A. hopes that this cut should not materially affect the ability of mills to run the additional looms now being worked. Meanwhile, the monthly *Bulletin* of the Indian Central Jute Committee attributes the cause of mills not having been able to work all the looms to the lack of spinning capacity. Spinning departments work 23½ hours a day. This shows that no further increase in yarn output is possible. Now that it has been demonstrated that spinning capacity is below the capacity of the total loomage and that in an emergency it is not possible to keep all the looms in production, the time has come for mills to consider the possibility of increasing spinning capacity further. Trade circles are in full agreement with the view expressed in the *Bulletin* that the demand for jute goods from overseas countries has never been greater except during World War II and the stockpiling boom that followed the outbreak of the Korean war. During the week, purchases by the U.S.A. were satisfactory. The Argentine would need to purchase substantially in the coming few months since that country in 1961 had heavily consumed from stocks. Due to foreign exchange shortage, Argentina had drastically cut down hessian imports in 1961. This apart, the hessian market is being continuously supported by several other countries, notable among whom are the E.E.C. block, Africa, the U.S.S.R., the Middle East group and Central America. However, the position in respect of sacking is not so rosy as hessian. Pakistan mills have been able to undercut Indian quotations, and divert considerable overseas business from Calcutta. If, despite this, Calcutta is selling sacking to overseas buyers, this is due to the inability of Pakistan mills to cater to the increased requirements. Viewed thus, this week's increase in prices of heavy goods has been unfortunate.

Fibre arrivals during this week were estimated at 500,000 maunds, same as in the previous week. Purchases by mills exceeded this quantity. Tossa offered to mills was insignificant in quantity. It was apprehended that stocks of the higher grade fibre in the market were being kept apart in anticipation of higher prices. Even so, the fact emerges that, despite a bumper crop, the increase in the production of the superior grades has been unsatisfactory as compared to mesta and jungli.

Rumours of an imminent Burmese tender for heavy goods were one of the factors for imparting a firm tendency in the goods market on Tuesday last. Although overseas business done was small, ready B. twills were firm at Rs. 130.75. However, earlier in the day, activities in futures trading had pushed up the price. Ready hessian 40" 10 oz. was firm at Rs. 54.35. Overseas inquiries continued to come in both for heavy goods and hessian, and purchases of hessian by the U.S.A. were modest. This highlighted the shortage in ready goods, and explained the gain in B. twills to Rs. 131 and hessian 40" 10 oz. to Rs. 54.75. The market was closed on Thursday, being a public holiday, and when on Friday it was announced that mills would continue up to the end of April the extra looms unsealed recently, prices were pushed up. This information should normally have pulled down prices, but since it focussed market's attention on the need of mills to increase production in order to satisfy an-expanding overseas market, prices improved. Further, the increase in February-end stocks announced on the same day was insignificant. Thus, hessian 40" 10 oz. spurted to Rs. 56.25 and B. twills to Rs. 134. Over the week-end, there was good covering-demand and, with B. twills at Rs. 134 and hessian 40" 10 oz. at Rs. 56.35, prices were fully steady. There was modest covering business done yesterday, and prices for the above two constructions though fractionally lower at Rs. 133.75 and Rs. 56.25 were steady.

Fibre prices were steady and unchanged. The commencement of operation by the buffer stock agency was considered imminent. It has been unfortunate that the fall in prices of some inferior varieties below the minimum level is causing anxiety to the Government. While prices of jungli and mesta have fallen, those of tossa and middles are commanding a premium. While all concerned would readily agree with the official view that prices should be maintained as high as possible in order to ensure good sowing now, it is not a fact that prices have declined much below the minimum levels. Mills are purchasing as much as they can, and current prices should be considered fair considering that cultivators had obtained very high prices in the beginning of the season and in the closing months of the last season, and mills then had sustained heavy losses.



When water comes through the ceiling— call in Stp for the sealing

Yes, Shalimar Tar Stp bituminous based protective materials build up an effective barrier against dampness of ceiling, walls and floors—protect them from acid and alkali action. Why live or work under damp, miserable conditions? Why allow your property to deteriorate around you? Call in the experts from Shalimar Tar to save you and your property from the ravages of dampness.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2658 BOMBAY, 24th MARCH 1962 PRICE Rs. 2

THE COAL QUESTION

MUCH has been said and written about the coal muddle in the past one year and more, and something has doubtless been done to ease the situation of shortage caused, in the first instance, by the transport bottleneck and later by the slower tempo of coal production itself. But the requirements of coal consumers are all the time increasing, and the short-term improvisations have certainly not relieved the overall coal scarcity. The plight of some industrial consumers of coal in particular is already going from bad to worse, and this is patent from two very recent representations made to the authorities. One is by the Indian Merchants' Chamber on behalf of the soda ash manufacturing units in Gujarat, the coal quotas of which are to be drastically curtailed from May next. And the other is by the Engineering Association of India (Calcutta) on behalf of the foundry industry. Throughout 1961, it is said, this industry, not only in the southern States but also in U.P., Bihar, Punjab and Delhi, had received supplies of coke only to the extent of 25 to 40 per cent of their requirements, though the position in respect of West Bengal and Maharashtra was a little better. Since the beginning of the current year, there has been a further deterioration in the situation.

That most of the consuming industries, which had to manage with fitful and inadequate supplies of coal and coke in 1961, will have a still harder time in the current year will be apparent from the proposed allocation of quotas which are to take effect from 1st May next. For instance, the food processing industries will have a monthly quota of only 365 coal wagons, as against their present 691. The fibre industries (cotton textile, jute, etc.), which now have a monthly quota of 9,350 coal wagons, are allotted only 9,121 in the revised scheme of allocation. The steel works, which have been receiving 42,298 wagons of coal a month, will have its quota marginally increased to 42,560. As for engineering industries, the allocation to them will be increased from the present 1,433 wagons a month to 1,672. Plantations will have a monthly quota of 486 wagons, as against their present 460. Even public utilities (mainly power stations) will have no more than 24,685 wagons a month, as against their present quota of 23,512. It is only the heavy industries, which have been receiving 13,605 wagons a month, that will have a substantially bigger allocation of 17,247. Of course, fuller provision is now made for the coal requirements of export industries. Otherwise, the revised allocations, which are based on the anticipated availability of wagons in the different coalfields for loading coal in 1962 with an addition of 5 per cent cushion, do not seem, by and large, to be commensurate with the much higher level of industrial production that should be reached in the current year, if the expected inflationary pressures are to be contained, let alone neutralised (*vide* our short note entitled "Economic Survey 1961-62" on page 499 of this issue).

Why is the coal supply situation going from bad to worse? The reasons are not far to seek. In the first place, there has been a decline in coal production itself, with 13.8 million tonnes in the last quarter of 1961, as against 14.1 million tonnes in the corresponding period of 1960. Production in the whole of 1961 (56.10 million tonnes) was less than the second Plan's (1960-61) target of 60.96 million tonnes. In the first year (1961-62) of the third Plan, actual production seems to have fallen short of the year's target by about 8 to 10 million tonnes. Secondly, the availability of wagons for transporting coal in 1961-62 has also been less than the target therefor. It may be noted, in this connection, that the daily loading was 5,961 wagons during the year, as against the requirement of 7,183 wagons envisaged in the third Plan report. Both these factors—namely, slower tempo of production and inadequate transport availability—have aggravated the coal shortage so far, and they will continue to operate if a more energetic attempt is not made to step up production as well as transport capacity. Such an effort will mean that the third Plan target of 97 million tons (one ton=1.016 metric ton) has to be achieved now in four instead of five years and the daily average number of wagons has to be augmented to correspond to the targets therefor laid down in the third Plan, namely, 8,561 for 1962-63, 9,610 for 1963-64, 11,502 for 1964-65 and 12,339 for 1965-66.

If the coal production target is to be raised by a further 7 to 10 million tons in terms of the Planning Commission's reported re-assessment of demand, it will call for still greater effort on both the fronts—production and transport. According to Mr. B. P. Agarwalla, Chairman, Indian Mining Federation, who spoke at the forty-ninth annual general meeting of the Indian Mining Federation held at Calcutta on the 16th instant, an upward revision of the third Plan target to around 104 million tons is now almost a certainty. In anticipation of this, the private sector collieries have offered to raise 6.8 million tons over and above their share of the additional production of 16.8 million tons in the third Plan and the public sector is contemplating to increase its target of additional production to 23 million tons. The private sector's offer seems to have been approved by the Screening Committee set up by the Coal Controller to examine applications for utilisation of the loan from the World Bank. But the successful implementation of the private sector's target—not only the revised one but even the original one—would depend entirely on the formulation of a sound coal policy without any further loss of time.

The crucial elements of such a policy have been clearly spelt out by Mr. Agarwalla, First and foremost is the factor of transport. Since the shortfall in wagon availability in 1961-62 was largely responsible for the fall in the rate of coal production in that year, this limiting factor should cease to operate in the years to come. Besides removing this basic shortage of wagons, the railways should enlarge line capacity more speedily and also eliminate the wide fluctuations in day-to-day wagon supplies. The second factor is adequate power supply to the collieries. The coal industry now fin

per ton, representing the minimum price increase required. The industry's case for a price increase is *prima facie* worthy of examination, though it is not for us to say whether the increase asked for will be fully justified. But this much can be said. Even if the entire increase is given, it is unlikely to upset unduly the cost structure of consuming industries, for the cost of coal accounts normally for only 2 per cent or so of the cost of their products. In any case, when coal production increases rapidly thanks to the enforcement of more economic prices, other industries will be able to get more timely and adequate supplies of coal. This, in turn, will enable them to achieve their production targets in full and thereby effect some economies in cost as well.

JUTE INDUSTRY—AN IDEAL CO-OPERATOR

THE compliments showered by the Union Finance Minister on the jute industry, when he addressed the annual meeting of the Indian Jute Mills Association at Calcutta last week-end, are well deserved. The industry is certainly "alive to its manifold responsibilities and opportunities." Despite numerous handicaps, it is straining every nerve to maintain production at the highest possible level with due regard to quality. It is also earning for the country much precious foreign exchange; with export earnings of the order of Rs. 146 crores in 1961, which represented more than one-fifth of the aggregate exports amounting to Rs. 668 crores, the jute industry continued to be India's largest foreign exchange earner for the second year in succession. What is more, the industry, through the I.J.M.A., is evincing keen interest in the field of jute development. Above all, the jute industry is a fine example of co-operative endeavour. Its units co-operated together at considerable loss to many individual units to weather the crisis caused by shortage of jute. They have been acting in unison during the last six months to iron out the problems caused by a bumper jute crop, so that the grower of raw jute may receive an economic price for the fruits of his toil. They have decided to act co-operatively to operate a raw jute buffer stock scheme, though, strictly speaking, that should be done by the Government. Considering all this and the vital contribution it makes to the national economy thus, the jute industry is naturally entitled to ask for active Government assistance and encouragement. If the industry is to be "outward-looking and export-oriented," to borrow the Finance Minister's phrase, it must be in a position to compete in all respects on reasonably level terms with the Pakistan industry which is making an all-out bid to augment its production capacity with strong and sustained official support. Given similar encouragement and adequate supply of quality jute, the Indian jute industry will, there is no doubt, meet successfully the challenge posed by competition from Pakistan, what with its longer experience and higher operational efficiency.

What are the problems confronting the jute industry in India? And wherein lie the solutions? For the answers to these posers, one has only to peruse the "lucid and illuminating"—to quote Mr. Morarji Desai again—speech of Mr. D. C. B. Pilkington, the retiring President of the I.J.M.A. Mr. Pilkington dwelt at some length on the recent crisis in jute industry and the achievements of I.J.M.A. in meeting it. Since this aspect has been dealt with in detail on more than one occasion in this journal, it is unnecessary to go into this chapter again. Suffice it to say that, in the face of much ill-informed criticism and hostility, the I.J.M.A. met the jute shortage by a display of self-discipline and much benevolent unity which enabled the industry to keep production going and maintain supply to markets, though at a very heavy financial loss. During the six months from April to September 1961, the losses incurred by the industry exceeded six crores of rupees.

Against the background of two consecutive years of raw material scarcity, it is somewhat encouraging to find that the raw jute supply position is quite comfortable at present, thanks to the improvement in crop, from 4.03 million bales (exclusive of mesta) in 1960-61 to about 5.00 million bales (unofficial estimate) in 1961-62. Inclusive of mesta (a low quality jute), which yielded 1.15 million bales in 1960-61, the total crop is expected to be in the neighbourhood of 6.5 million bales of 400 lbs. each. It is equally comforting to hear that the jute mills continue to operate the maximum number of looms possible. Indeed, Mr. Pilkington claimed that the industry had now turned the corner and he could safely say that the current year would at least be a distinct improvement on 1961, with both production and volume of exports rising substantially. But there is absolutely no room for complacency. For, from the long-term point of view, what is required is, as Mr. Pilkington pertinently stressed, not merely one more large crop but a series of consistently good crops, so that the industry may be assured of a steady supply of raw material at stable and economic prices. For this, there are two essential prerequisites: one, adequate inducement for cultivators to sow sufficient jute and, two, some protection to mills against a crop failure due to adverse weather. Mr. Pilkington reiterated that both these prerequisites could be met through the operation of a buffer stock scheme.

While a buffer stock takes care of the quantitative aspect of raw jute, there remains the problem of quality. The importance of this problem is very obvious, especially for an industry like jute which sells almost 80 per cent of its products in world markets where there is keen competition not merely from our next-door neighbour, Pakistan, but also from alternative packaging media such as paper and plastic bags and adoption of bulk handling methods. Mr. Pilkington did well to focus attention on the need for improving the quality of jute crop. "It is," to quote him, "a task of great magnitude which demands all the resources of the Central and State Governments, if it is to be successfully tackled." The three basic requirements for achieving improvement in quality and greater productivity per acre are supply of improved seeds, adoption of better cultivation techniques, and use of more and balanced fertilisers.

Although the responsibility for meeting all these requirements rests on Governments, it is, indeed, creditable that the jute industry has been playing an active part in creating a climate for higher productivity in the cultivation of raw jute. Last year, it will be recalled, the I.J.M.A. set up a special jute development section. Its work was confined mainly to West Bengal where three development blocks of more than 100 acres each were established to demonstrate intensive cultivation methods to growers. But, lately, the Association has intensified its activities. Besides expanding its operations in West Bengal, it is establishing new blocks in Assam, Bihar, Orissa and Uttar Pradesh, so as to cover fully all the principal jute growing areas on a pilot basis. Further, a scheme for the multiplication and distribution of improved seeds has been drawn up. The industry is happy that the Government of India has accepted the scheme and promised a grant for subsidising sale of improved seeds to cultivators. The I.J.M.A. has also collaborated with the West Bengal Government in a series of fertiliser trials. It is needless to say that, to the extent efforts to raise productivity of jute-growing areas succeed, the competitive capacity of the industry to supply overseas customers with goods at steady, economic rates will increase and, at the same time, the agriculturists also will derive a higher reward for their labour.

The need for strengthening the raw material base of jute industry is all the more pressing, because the fibre constitutes the major element in the industry's cost structure, accounting as it does for as much as 60 per cent of the total cost of producing jute goods. In fact, it is the high cost of the fibre that has neutralised, to a great extent, the three distinct advantages enjoyed by the industry in the field of exports, namely, experience and organisational efficiency acquired over a number of years, modernisation of several mills in recent years involving heavy capital outlay, and production of modern jute machinery within the country itself.

Thus, a reduction in the heavy incidence of raw material cost is urgently required if the jute industry is to compete in foreign markets. No less urgent is the need for further modernisation and continuance of rationalisation in manufacturing processes, as well as in employment of labour. A specific reference to this issue was made by Mr. Pilkington. How rational is his, rather the industry's approach to the problem of rationalisation will be evident from the following extract from his speech:

"In the sphere of rationalisation, considerable progress has already been made; but more remains to be done, if we are to obtain the optimum efficiency in our mills. This is, of course, a matter that comes within the scope of the Wage Board, which, by its terms of reference, is specifically required to bear in mind the desirability of extending the system of payment by results. The Association has, therefore, been conducting a detailed and expert enquiry into the possibility of extending the piece-rate system, since, in the face of the competition that confronts us, it is imperative that any increase in wages should be linked with greater productivity. In the meantime, the process of rationalisation must go on and this demands a reasonable attitude on the part of all concerned. We, for our part, will adhere to the arrangement whereby all rationalisation takes place within the natural wastage of permanent labour force and, from the experience of the past year, I am hopeful that a realistic attitude will also be adopted by the labour.... In adjusting production to the availability of jute last year, we did everything possible to soften the impact on the labour force and, during the two weeks when we had to close down entirely, full lay-off compensation was, of course, paid. Nevertheless, the reduction in working hours due to jute shortage and the staggering of weekly holiday due to power shortage made life difficult for workers and the spirit of accommodation which these adjustments were generally made us, I think, for our future labour relations in the industry and for the continuance of essential rationalisation."

It is to be hoped that the problem of rationalisation in jute industry will continue to be approached by management and labour alike in a spirit of realism and mutual accommodation. Alluding to modernisation, the I.J.M.A. Chairman said:

"Since the end of the war, the industry has been modernising its machinery as fast as it can and, in the preparing and spinning sections, the process is now virtually complete. Most of this modernisation has been financed by the mills out of their own resources, with some help from the National Industrial Development Corporation. But the industry's reserves are now much depleted and, if we are to take advantage of the latest technological developments in the weaving department, we shall need more assistance in the form of loans from the N.I.D.C. and a reasonable allotment of foreign exchange for import of necessary machinery until such time as the machines are manufactured in this country."

Apropos these observations, the Union Finance Minister did admit that further modernisation in coming years was undoubtedly necessary. But he did not give any specific assurances, except to say that the "Government will do everything in its power to co-operate with the industry *in the same way* as it has done in the past" (italics ours). Since the Government is now fully aware of the jute industry's importance to the national economy as a whole and has been quite appreciative of its problems during the last four years in particular, one need not feel disappointed that Mr. Morarji Desai was not more overtly reassuring in his reply.

MR. WAGLE'S SUGGESTION TO MAHARASHTRA

IT is gratifying to find that industrialisation is making good progress in the Maharashtra State. It is good not only in terms of size but also from the point of view of diversification. While textiles and sugar are still the largest industries of the State, engineering (light, heavy, electric and mechanical), pharmaceuticals, dyes and other chemicals, cement, shipping and fishing are also forging ahead. Very soon, the State will have aluminium and newsprint industries also. All this has been possible not only because of the ready availability of infra-structure and other facilities but also because the Government of Maharashtra has been quite helpful to entrepreneurs in meeting their basic requirements. There is, however, still room for improvement in regard to the last mentioned aspect. Mr. N. M. Wagle, the retiring President of the Bombay Chamber of Commerce and Industry, performed the useful function of drawing attention to this point, in his valedictory address at the annual meeting of his Chamber last week-end, which Mr. Y. B. Chavan, Maharashtra Chief Minister, attended as the chief guest. Mr. Wagle deserves to be complimented for having resisted the temptation of dwelling in his speech upon problems of all-India importance and for giving prominence to the pressing problems of industrialists in the State, for it is only appropriate that a regional chamber should pay attention primarily to the affairs of the region concerned. Similar problems do exist in some of the other States also; accordingly, Mr. Wagle's observations will be of interest to a wider audience.

The problem which Mr. Wagle, an ex-I.C.S. official, wanted the Maharashtra Government to tackle expeditiously was to reduce, if not completely eliminate, the exasperating and time-consuming ritual of an entrepreneur having to run from pillar to post before putting up an industry. The preliminaries to be completed for securing an industrial licence are themselves numerous, involving many a trip to New Delhi. What then? Mr. Wagle simplified his task by giving the following quotation from a book. *With Malice Toward None*, by Mr. S. G. Barve, another ex-member of the I.C.S. and now the Finance Minister of the Maharashtra Government:

"Armed with the licence, the entrepreneur will return to his State of origin and will have to look out for land for locating his factory; and, thereafter, arrange for the supply of power, water and possibly a railway siding to the location. Each one of these is apt to become an issue in itself.

"If land cannot be had by private negotiation, he will have to move the State Government for acquiring the land. As regards water-supply, he will have to negotiate with the municipal authorities concerned if he wants to draw on their supplies. Power may be short, as it often is in so many parts of the country, and he will have to obtain an allocation for the requisite power. Likewise, in respect of a railway siding, a telephone connection, etc., he will have to negotiate for the provision of these facilities with the several authorities concerned."

The fulfilment of all these tasks is rendered needlessly more difficult by the behaviour of the service agencies concerned which seem to think that their "administrative mechanics" is an end in itself. What is the remedy? Mr. Wagle's answer was along these lines: First, "there must be authorities at appropriate levels to decide finally issues disputed between different public agencies and departments, for once it is known a difference will be decisively resolved, it will generally not arise in the first instance." Secondly, "a strong and adequately equipped central department" is required "to deal with all other authorities under the State Government and present the entrepreneur with a clear picture of what he can and cannot do, instead of making him go to each separate authority for land, for building permission, etc., etc. This central body should be able not only to correspond with but to issue directions to all other bodies. It should be able to ensure proper compliance with all aspects of Government's policy and regulations, but it should not ask the entrepreneur to waste months of valuable time going from one authority to another." Surely, the implementation of this simple suggestion will not make any onerous demands on the State's resources. On the contrary, it will help speed up the progress of industrialisation, the benefits of which will accrue not only to Maharashtra but to the country as a whole. As readers are aware, delays in implementing approved industrial projects are expensive to the entrepreneur and the country alike. When projects fail to fructify and yield production in time, "imports have to be allowed, until effective supplies materialise in India. Where imports cannot be allowed, several other industries which might be relying on supplies from licensed production are handicapped in their progress. The cost of servicing capital invested, but not effectively used in production, is passed on to the purchaser under present conditions of a closed economy. Finally, there is the loss of tax revenue to the State and Centre." Thus, the importance of Mr. Wagle's plea for "a very bold and thorough approach to eliminate all the delays and bottlenecks which continue to frustrate entrepreneurs willing and capable of undertaking industrial development" cannot be denied or minimised. No wonder then that Mr. Chavan's immediate response to it was helpful and encouraging. It is to be hoped that he will not allow the matter to rest there but take prompt steps to implement the suggestion and thereby earn the credit for setting a good example for other State Governments.

DELHI LETTER

MUDALIAR COMMITTEE REPORT FALLS BELOW EXPECTATIONS

BUT CASE FOR TAX RELIEFS WELL ARGUED

From Our Special Correspondent

NEW DELHI, 21*st March*

IMPORT policies and export promotion measures have been so often discussed in the last few years that the scope for new ideas is not very large. Even so, the report of the Ramaswami Mudaliar Committee presented to Parliament this week falls below expectations in many respects. With the facilities at its disposal, the Committee could have gone deeper into some issues like the problem of underutilised industrial capacity; industry-wise or region-wise breakdown of data might have helped to locate the areas where import policy could have been more liberal if foreign exchange was available. On the recurring controversy over maintenance or development imports, the Committee has repeated the truism that the two are only different facets of the same problem; but was there not scope for indicating, by examples if not by exhaustive enumeration, the cases in which precedence might have been accorded to maintenance imports over capital goods for new units? The order of priority for development imports now suggested by the Committee—power and transport, export-oriented industries, raw material and components industries like alloy steel, and industries using indigenous materials and arranging their own foreign exchange for plant and machinery—is not much different from existing practice. On a number of other matters, the Committee has only recommended further investigations; data on the progress made in the substitution of imported by indigenous materials have not, it seems, been compiled by the Government or the Committee.

More serious is the omission to discuss the role of export duties in relation to export promotion though this was included in the questionnaire; this subject had special relevance to the problems of tea export and an opinion on how far the present rate of duty has affected sales would not have been superfluous. The general criticism of State Governments that they are unmindful or at least unconscious of the effect of their policies on the export drive has been followed by the suggestion that the Centre should take the entire responsibility for sales tax remission and make suitable adjustments with the States. Specific suggestions are only a few in number; decontrol of tea exports, creation of a buffer stock for coffee to stabilise exportable supplies, and income-tax relief to exporters are among the major policy matters as distinguished from the numerous procedural changes which are only of marginal importance to export promotion.

Import Policy

Import policy in recent years is a close approximation to what is feasible among competing claims, in the circumstances of declining reserves, stagnant exports and scanty untied aid to support the balance of paymets. The Committee had no power to frame a national import budget, since Defence imports lay outside its purview; it could only express the opinion that much could be done under Defence production to conserve and earn foreign exchange and that a high-powered body working *in camera* may be asked to go into this matter. Consumer goods, it says, are already severely curtailed in terms of their percentage share to total imports, but this question deserved further probe in the context of the growth of new industries and increase in their output.

"Our general hypothesis," says the report, "is that the present stringent import restrictions and rigid exchange allocations may continue in respect of production destined purely for the domestic market." Its tenability is open to doubt; such "pure" cases are difficult to find and exports in future must increase in those articles in which production for a large internal market can show a decreasing cost per unit and hence a competitive price. There is now a vicious circle of import cuts, low output and high internal prices due to the pull of the internal market. This will remain unbroken so long as the rigid allocations continue. While the Committee cannot in fairness be blamed for not being able to find a way out of this dilemma, its recommendation loses force if it is too general, as when it says "where exports can be really assured, Government should have no hesitation in making available ... raw materials and balancing equipment..." The proposed "selective approach," grant of assistance for stimulating additional exports over normal past performance and detailed technical and policy scrutiny by an inter-Ministerial sub-committee will only pass the problems back to the Development and Export Promotion Councils.

Procedural Modifications

While there are few suggestions for substantive changes in import licensing, procedural modifications suggested therein are of limited importance. Delays are attributed to the complexity of the licensing system and the inability of the staff to cope with the work. *Prima facie*, annual licensing should help simplification and ensure certainty but the conditions which the Committee has suggested to spread exchange remittance over a year, and to facilitate cuts, if needed, in the second half of the year will take away much of its value to the licensee. A longer period of validity for licences and further decentralisation of licensing work—as in newsprint, for example—may help; better public relations and opportunity for applicants to state difficulties are also good as far as they go. The Committee agrees that *ad hoc* licensing, except in an emergency, is undesirable and considers that customs and income-tax clearances could be vastly improved. After having heard the case of the established importers with sympathy, the Committee has been unable to suggest any improvement in their position.

Duly impressed by the magnitude of the problem of export promotion to reach a target of annual exports of Rs. 1,300-1,400 crores, the Committee rightly observes that all the efforts taken so far have touched only a fringe of it; the influence of the internal market is strong; there is no strong export tradition; and promises of exports extracted from new industrial ventures have been honoured only in their breach. The Committee suggests industry-wise and commodity-wise studies of the items that could be or should be released for export, as if such a study did not fall within its own province; it also calls for a strong co-ordinating machinery and a powerful organisation, but does not say whether it should be a separate Ministry as contemplated by the Prime Minister some time ago.

Adventurous Policy Needed

The transition from the present "moderate and often ineffective" export promotion to an "adventurous policy of aids and incentives" which the Committee recommends, should not prove an impossible task, if all that is needed is acceptance and implementation of its three major recommendations. The first is that the Government should underwrite in full the foreign exchange required for manufacturing goods for export; if reallocations of available foreign exchange are not enough for this purpose, friendly countries and even private sources of credit should be persuaded to take an interest in this aspect of assistance. This is, however, not new in principle, since it is implicit in the present system of importing cashew nut in kernel for processing and export and also in the system of manufacture in bonded warehouses.

A Novel Suggestion

The creation of an import-export stabilisation fund and an independent agency—the Export Stabilisation Board—to administer it would transfer the practical problems to other hands. The analogy of the I.C.I.C.I. in the field of industry has been pressed to prove the utility of such an organisation, but the wide range of powers required for its functioning may create some difficulty. The Committee says that "the arrangement would imply the matching of additional import credits with export performance so as to augment both sides of the equation and improve India's balance of payments in the process." The Government may doubt whether its problems would not at least occasionally be complicated, if the new agency is to have control over export earnings, in order to service its obligations and insure itself against default, or if it is given statutory authority to negotiate credits in any part of the world under the guarantee of the Government of India for import of raw materials. These implications require closer study; the whole scheme may be rendered superfluous, if the Government gets a little more aid by way of untied credits and is willing to set apart a portion as a revolving fund under its own direct control for use in the manner suggested by the Committee. Since by definition, the returns on the operation will be quick, there may be no need for the round-about process of dealing with a Board.

Incentives

The case for income-tax relief not only on earnings from additional exports but also on existing earnings in order to provide an incentive for maintaining current export levels in the face of odds, has been well argued by the Committee; the drawback, if any, of its triple relief formula is that the Central Board of Revenue will take a long and hard look at it for possible snags and loopholes for evasion. A 7½ per cent remission on the deemed profits of basic export turnover, plus a tax rebate (on the principle of the development rebate for industry) of about 5 per cent on profits from export to create a reserve from which to finance export promotion efforts, plus a special tax remission of about 10 per cent on the deemed income from additional exports might seem a give-away programme, but it is consistent with the Committee's stand that the mercantile community cannot be expected to be guided purely by altruistic and patriotic motives, especially when there are large profits to be had on internal sales. If compulsory exports are to be ruled out as quite impracticable (as the Committee has promptly done) on the ground that it would lead to distress sales and lower earnings, there is no alternative to an acceptance of income-tax reliefs as proposed by the Committee.

Recognising that tax remission on additional exports may lead to collusion (by an exporter sharing his exports with another to whom the benefit would accrue and then sharing it with the latter), the Committee considers that the scope for abuse will be restricted, because of the continuing interest of an exporter in the remission on

TREND OF SHARES

TECHNICAL RALLY FROM NEW LOW LEVELS

(From Our Own Correspondents)

BOMBAY, 22nd *March*

STOCK markets staged a moderate technical rally this week, after registering generally new low levels on Monday. The rally, hinted at in these columns last week, was overdue, in view of the preceding sharp and 'uncorrected' setback. It was brought about largely by short-covering, though some selective replacement buying was also in evidence. Due to the intervening holidays, which restricted trading, its impact on the price level was, however, limited. Nevertheless, at close, values were well above the week's low levels, and some market leaders showed modest gains. A weak start came to a slightly steady close, with the prospects of the rally extending further in the course of the next week.

The fact that there was yet a month and a half to go for the tax proposals under the new Central budget to be presented influenced the sentiment. Rumours that T. T. K. may not be a member of the Cabinet also helped the recovery to some extent.

The fall on Monday could be described as an extension of the continuing trend before it could be corrected by a rally. That it came off despite normal carry-over charges in the principal markets was, therefore, not surprising. It was brought about by stale liquidation and bear pressure. But it would appear that the bears pressed sales rather to test the strength of the market and, having met with some resistance at lower levels, they thought it best to cover their short-sales. Some misgivings about the budget continued. A section of the operators, who were inclined to believe that there was little scope for direct taxes now, came forth to extend fresh support. The follow-up, however, was cautious and limited. Investment buying was restricted more because of forecasts from some prominent stock brokers of yet lower levels in April.

On Dalal Street, steels were more actively supported because of their relative 'cheapness'. Indian Iron staged a swift rally near the close to Rs. 24.76 from the week's low of Rs. 24.20 and closed on balance with a gain of 28 nP at Rs. 24.72. Tata Ordinary looked up from Rs. 138.25 to Rs. 140 to close at Rs. 139.75, that is, two points higher than last week. Mukand were better at Rs. 27.80, against Rs. 27.50 a week ago.

Close to follow were textiles, which finished with small but widespread gains. Trading here was highlighted by a spurt in Gokak which closed Rs. 14.50 higher at Rs. 235.50. Indu Ordinary recorded a gain of Re. 1.44 at Rs. 22.44 and Deferred of 16 nP at Rs. 3.86. Gokak were keenly supported on reports of better working during last year, while Indu Mills' shares were firm on excellent corporate news. Among others, Bombay Dyeing moved up from Rs. 68.70 to Rs. 70, and closed 50 nP above last week at Rs. 69.80. The oversold position in these shares reflected in no contango at the turn of the settlement induced bears to cover their positions. After having been sold down from Rs. 613.50 to Rs. 605, Century moved up to Rs. 617 to finish 50 nP lower on balance at Rs. 615. Standard rallied from Rs. 1,022 to Rs. 1,053, but, at close, were Rs. 15 lower at Rs. 1,048, as compared with the previous week. Other issues showed small changes either way.

The miscellaneous section largely lagged behind. But select issues like Bombay Burmah and Alcock showed a gain of Rs. 9.50 and Rs. 8 (at Rs. 651 and Rs. 336), respectively over the week. Hindustan Motors improved by 48 nP during the week to Rs. 19.84. Amar Dye-Chem went up by Rs. 8.75 to Rs. 340 and Voltas by Rs. 3 to Rs. 285. After rallying from Rs. 534.50 to Rs. 543.50, National Rayon still showed a loss of Rs. 3.50 over the week. Indian Dyestuff closed Rs. 13.75 lower at Rs. 520. Telco moved up from Rs. 345.50 to Rs. 351, but at close were Rs. 5.50 lower at Rs. 350. Other issues showed minor changes.

Trading in other sections was dull. Cements ruled steady; shippings were a shade better; insurances were firm, banks quiet and sugars and electrics subdued. The cash section was devoid of any particular interest. Changes were small. Camphor, however, rose from Rs. 69 to Rs. 93 on active support and Permanent Magnets closed with a gain of Rs. 8.50 at Rs. 193.50. Kesar Sugar were marked down by Rs. 23.75 to Rs. 256.25.

Jute shares dominated the scene in Calcutta and were keenly sought after on encouraging advices from the raw jute and jute goods markets. While Birla, in the forward list, closed 31 nP higher at Rs. 35.62, among cash shares, Bally gained Rs. 13 to Rs. 291, Budge Budge Rs. 7 to Rs. 142, Burnagore Rs. 5.50 to Rs. 163, Delta Rs. 9 to Rs. 184 and Champdany Rs. 5 to Rs. 130. In the forward list, Dunlop Rubber were 25 nP better at Rs. 43.62 and Texmaco 35 nP better at Rs. 21.70. Other issues showed small losses, with Kesoram closing 75 nP lower at Rs. 33, Guest Keen 25 nP lower at Rs. 44.75 and Indian Cable 38 nP easier at Rs. 36.12.

In the cash section, among textiles, Bharat Commerce were marked down from Rs. 29.50 to Rs. 28.62 and Cawnpore from Rs. 9.62 to Rs. 9.25, followed by Jayshree from Rs. 17.31 to Rs. 16.87. Coals were dull, but Bengal were Rs. 6 lower at Rs. 346 and Equitable Rs. 3 at Rs. 26.94. Engineering shares showed small variations either way, but, among chemicals, Calcutta were conspicuously steady at Rs. 17.25 against Rs. 14.94 a week ago. Miscellaneous issues lacked any drive.

Trading was devoid of any speculative interest in Madras. A generally steady tone was discernible at the close of the week. Among sugars, E.I.D. found buyers at the lower levels and closed Re. 1.50 higher at Rs. 38.50. But Deccan were easier by 10 nP at Rs. 9.95 and Cauvery by Re. 1 at Rs. 106. Among teas, Chembra eased further from Rs. 3.52 to Rs. 3.25, but Highland looked up from Rs. 13.10 to Rs. 13.25. Coffees and rubbers were neglected. In textiles, Bangalore Woollen were easier at Rs. 240 as against Rs. 243 a week back and Travancore Rayon at Rs. 42.25, against Rs. 46. But Buckingham improved from Rs. 264.50 to Rs. 267 and Cannanore from Rs 158 to Rs. 160. Coimbatore Pioneer showed a rise of Re. 1.50 to Rs. 85, while South India Viscose moved down from Rs. 187.50 to Rs. 180.50. Among cements, Andhra closed Rs. 2.60 higher at Rs. 12.10; Orissa, however, eased from Rs. 19.62 to Rs. 19.25. Ashok Leylands were easier at Rs. 9.10 against Rs. 9.28 a week ago and so were Western India Plywoods at Rs. 201 against Rs. 202.

RIGHT SHARES

Dalmia Iron and Steel Company Ltd. proposes to issue further capital of Rs. one crore in ordinary shares of Rs. 10 each. The present subscribed capital of the Company is of Rs. 80 lakhs in equity shares of Rs. 10 each. The new capital is to be raised presumably to meet the requirements for the proposed expansion of the existing spun pipe plant as also to erect a new plant in Maharashtra, for which the Company is negotiating with a French firm for providing financial and technical collaboration. Out of the Rs. one crore issue, shares worth Rs. 60 lakhs are proposed to be issued to the Company's technical collaborators. The balance of Rs. 40 lakhs will be issued to the existing shareholders in the ratio of one share for every two shares held. It may be recalled that the Company issued 400,000 equity shares of Rs. 10 each at par in October 1960.

The Directors of the **Bank of Maharashtra Ltd.**, Poona, propose to increase the Bank's capital from Rs. 50 lakhs paid-up at present, including Rs. 10 lakhs in new shares, to Rs. 2 crores, divided into 400,000 ordinary shares of Rs. 50 each. The capital is being increased following the suggestion from the Reserve Bank of India that banks should strive to maintain capital and reserves at not less than 6 per cent of the total deposits.

Eastern Investments Ltd. is to issue 25,630 rights shares of Rs. 100 each at a premium of Rs. 10 per share to the holders of equity shares as on 12th June 1962, in the ratio of one share for every two shares held. The Company's reserves stood at Rs. 63.87 lakhs, including Rs. 61.20 lakhs general reserve, as on 31st December 1961.

The **New India Assurance Company, Ltd.** proposes to issue, subject the consent of the Controller of Capital Issues, one fully paid bonus share of Rs. 15 each for every five shares held.

(Concluded from previous page)

his own basic export earnings and rebate on the reserve. One must hope that the Government will not dilute these proposals and reduce the benefits intended as incentives. Since the Committee has not favoured the currency retention scheme adopted in Germany, France, Japan and Pakistan, nor total abolition of export duties, this remains the only incentive; its other suggestion that, instead of retention of foreign exchange earnings, exporters may be permitted to import freely any items and resell unwanted goods to others may introduce more complications and lead to bypassing of import control priorities and regulations.

The Committee's other proposals are less controversial. A general rebate of 25 per cent on railway freights on all goods exported may not be selective; it may give benefits where none is needed over and above income-tax reliefs. But it may have a powerful psychological effect in counteracting the attractions of the internal market. In addition to expediting drawbacks of import and excise duties on exports, it is suggested that there should be a remission of sales tax of 2 per cent on export costs, with the Central Government making such readjustments as are necessary with the States. The total loss to the Treasury as a result of all these concessions should not be very large.

Side Issues

On some of the side issues of trade policy like the value of the rupee payments agreements and the role of the State Trading Corporation the Committee has not recorded any important findings; there is nothing to show that rupee agreements have diverted trade as some have alleged. The S.T.C.'s only sin seems to be its poor public relations; barter trading which is also often criticised is regarded as a useful method. India's participation in trade fairs abroad leaves much to be desired; sales promotion through display, not mere exhibiting, is needed but such imagination cannot be expected under official auspices.

The impression one gains is that the impact of the Committee's Report on official policy will not be considerable. The Government is expected to announce its decisions shortly and most of the routine and procedural matters will be accepted. The coming Budget will indicate the extent of income-tax relief to be granted; and, perhaps, more committees will come into being to examine several other suggestions, as, for instance, the one pertaining to the stabilisation fund.

CAPITAL MARKET NEWS

NEW ISSUES

SARDESAI Brothers Limited, Bombay, which was incorporated in 1939 as a private limited company and converted into a public limited company in March 1961, proposes to raise its subscribed capital of Rs. 10 lakhs in equity shares of Rs. 100 each to Rs. 50 lakhs which will be half its authorised capital of Rs. one crore. The Directors and their friends are taking up shares worth Rs. 22.50 lakhs, and the balance of Rs. 17.50 lakhs is being offered to the public at par. The subscription lists will open on 9th April and close on 18th April, or earlier at the discretion of the Directors, but not before 11th April. The entire public issue has been underwritten by the Investment Corporation of India Ltd.

The additional capital is being raised to cover a capital outlay of Rs. 40 lakhs on the Company's expansion programmes. The first unit in the country to manufacture carboxy methyl cellulose (popularly called c.m.c.) under a formula of the Council of Scientific and Industrial Research, adopted on a royalty basis, the Company proposes to double its present annual capacity to 1,200 tons. The product is of standard quality and is used in all the oil drilling operations in the country. Its demand from industries like detergent, insecticides, textiles, paints and others is expected to rise sufficiently to absorb the increased production. The Company also manufactures textile auxiliaries, chemicals, soaps, preservatives, surfactants, synthetic resins and penta chloro phenols. It has also a technical assistance agreement with Nopco Chemical Co., New York, for the progressive manufacture of Nopco products in India for internal consumption as well as for export to Burma and Ceylon. The factory is at Bilimora, Gujarat. Mr. M. B. Jambhekar is the Chairman of the Company.

* * * *

Having received the consent of the Controller of Capital Issues to issue equity capital of Rs. 50 lakhs in shares of Rs. 100 each out of its authorised capital of Rs. one crore of which Rs. 50 lakhs is also in unclassified shares of Rs. 100 each, **TAK Machinery Ltd.,** Bombay, will enter the market on 29th March to raise Rs. 24.50 lakhs by way of public subscription. The lists will close on 4th April, or earlier at the discretion of the Directors, but not before 31st March. A sum of Rs. 25 per share is payable on application and a like amount on allotment, and the balance of Rs. 50 in two equal instalments at an interval of not less than three months. Out of the issue of Rs. 50 lakhs, the Directors, their friends and associates have already subscribed for 7,560 shares, and propose to take up additional 17,940 shares, leaving 24,500 shares to be offered to the public.

The Company has a project for the manufacture of a wide range of lifting and conveying equipment. The production programme is as follows:

Electric overhead cranes 24 per annum, electric hoist blocks 1,600 per annum, portable floor cranes 600 per annum, chain pulley blocks 960 per annum, conveying equipment (capacity to be determined one year after the plant goes into production), steel structurals and trolleys 3,000 tons per annum and grey iron castings 2,400 tons per annum.

Messrs. Fellows Brothers Ltd., England, are collaborating with the Company for manufacturing electric cranes, electric hoists and chain blocks. For producing conveying equipment, the Company is negotiating with a prominent foreign firm for its collaboration. The Company will be the first to manufacture electric cranes in the country. The present production of chain blocks and conveyors in the country is very small. Supply is also restricted because of restricted imports. The Company proposes to widen the range of equipment to be manufactured. Mr. Yogindra N. Mafatlal is the Chairman of the Company.

* * * *

Premier Paper Mills Ltd. proposes to offer for public subscription 12,500 equity shares of Rs. 100 each. The subscription lists will open on 2nd April and close on 11th April, or earlier, but not before 4th April. The Company has an authorised capital of Rs. one crore, consisting of Rs. 75 lakhs in equity shares of Rs. 100 each and Rs. 25 lakhs in redeemable preference shares of Rs. 100 each. Its present subscribed and paid-up capital is of Rs. 12.50 lakhs all in equity shares. The Company has been licensed to manufacture 2,160 tons of pulp and a like quantity of writing, printing and wrapping paper a year. Its plant at Jogeshwari, suburban Bombay, is designed to make writing and printing paper from rice and wheat straw, waste paper and rags. It is expected to go into production in the middle of this year. The Company has purchased an imported paper mill plant with a daily capacity of five to six tons from Paper Mill Plant and Machinery Manufacturers Ltd., the licensees and concessionaires of James Bertram and Son Ltd., Scotland. The plant is an integrated pulp and paper making unit. The Company is likely to secure an import licence for wood-pulp. Mr. A. K. Patel is the Chairman of the Company.

* * * *

Hanuman Tea Co. Ltd., Calcutta, will offer equity capital of Rs. 5 lakhs in shares of Rs. 10 each to the public. The lists will open on 23rd March and close on 30th March, or earlier, but not before 26th March. A sum of Rs. 5 is to be paid on application and the balance on allotment. The Company's total capital issue is of Rs. 10 lakhs in equity, half of which the Directors and their friends have taken up.

NEWS IN BRIEF

THE Life Insurance Corporation of India has opened a main office at Panjim in Goa, with two sub-offices at Margao and Mapuca.

The Madhopur-Kathua rail-line, linking Jammu province of Kashmir State with the rest of the country, is expected to be opened to traffic by March 1964.

The Power Gas Corporation Ltd. in Britain has agreed to give a royalty to the Fertilisers and Chemicals (Travancore) Ltd., Alwaye (F.A.C.T.), on all orders executed by the Corporation for the design and supply of equipment for manufacturing ammonium sulphate from gypsum, a by-product of phosphoric acid.

The Union Government and the Government of Mysore have agreed in principle to the transfer of the Kolar and Hutti gold mines to the administrative control of the Centre, according to Mr. Morarji Desai, Union Finance Minister. The details of transfer and consequential arrangements are under consideration.

An agreement with a British firm for collaboration in the setting up of a heavy structural and vessel works in the public sector in India is being finalised. The project is for the production of 12,500 tons of pressure and other vessels required by the steel fertiliser, oil and similar industries and for 25,000 tons of heavy structural steel works.

A loan of Rs. 1.50 lakh has been granted by the Centre to the U.P. Government for financing expenditure on the construction of transmission lines and sub-stations for the railway electrification programme in the State for the current financial year. The total loans sanctioned so far to the State for this programme, including the current loan, amount to Rs. 31.30 lakhs.

A nine-man team of engineers has left for Moscow to participate in the preparation of the project report for the two-million-ton refinery to be set up at Koyali near Baroda with Soviet collaboration. The team which is led by Mr. M. S. Pathak, Senior Electrical Engineer of the Indian Refineries Ltd., is expected to stay in Moscow for about eight months to finalise the report.

A Rs. 38-lakh spinning mill, the first of its kind to be established in the public sector in India, was declared open at Balarampuram last week by the Chief Minister of Kerala, Mr. Pattom Thanu Pillai. The mill is run by a board of management appointed by the Government of Kerala, with the Director of Industries as Chairman. It has 12,000 spindles and provides employment to 300 persons. The number of spindles is expected to be raised to 12,000 by the end of the third Plan and to 36,000 ultimately.

The Government of India has decided to put into circulation one naya paisa coins in nickel-brass alloy in order to economise in foreign exchange expenditure on imports of copper for coinage purposes. These coins are being made from the metal recovered from the withdrawn nickel-brass coins of the anna-pie series. The new coins will be exactly of the same design, shape and weight as the old ones, but will be yellow in colour.

As a measure of price support for wheat during the next harvest, the Government of India has decided to guarantee a price of Rs. 13 per maund for average quality common varieties of white wheat when delivered at specified *mandis*. If need arises, the Government will buy wheat from farmers at this price. The output of wheat has gone up from 7.7 million tons in 1957-58 to 10.6 million tons in 1960-61 and is expected to have increased further during 1961-62.

The Central Wage Board for tea industry has recommended interim relief for employees of plantations in West Bengal and Assam, with retrospective effect from 1st December 1961. Regarding the daily rated labour in the plantations in these two States (excluding Darjeeling hills and Cachar district), the board has recommended an interim increase in the daily wages of men workers by 8 nP., of women workers by 7 nP and of employable child workers by 4 nP. The corresponding increases for those employed in Darjeeling hills are 10 nP, 8 nP and 5 nP. Workers in the Cachar district, it may be recalled, got a wage increase in June last. For the monthly rated clerical, educational, medical and supervisory staff and artisans in both States, including Cachar, the recommendations are for an increase of Rs. 10 a month and for the other monthly rated staff Rs. 6 a month.

The Government of India has reconstituted the Demographic Advisory Committee with Dr. V. K. R. V. Rao, Director, Institute of Economic Growth, Delhi, as Chairman. The members of the Committee are Prof. P. C. Mahalanobis (Honorary Statistical Adviser, Cabinet Secretariat), Prof. D. R. Gadgil (Director, Gokhale Institute of Politics and Economics, Poona), Dr. P. S. Lokanathan (Director General, National Council of Applied Economic Research), Dr. C. Chandrasekaran (Director, Demographic Training and Research Centre, Bombay) and three officials. The functions of the Committee are to advise on research and studies on inter-relationship between economic, social and population changes and the reproductive pattern, attitudes and motivation affecting the size of the family. The Committee will also give advice on the programme of training and research, keeping in view that it should be of use to assist the Government in taking action in the economic and social fields for developing a sound national programme of reconstruction. It will also co-ordinate demographic research schemes aided by Government, review the progress made in centres receiving financial assistance from the Government and examine and make recommendations on proposals for financial assistance for demographic research.

From Abroad

President Kennedy denied reports that Communist China approached the U.S. Government for supply of wheat. He, however, stated that two U.S. companies had submitted requests for licences to export wheat to China.

It is understood that Soviet Russia will buy 72,000 tons of rubber from Indonesia this year, 30,000 tons from estates and the rest from small holders. Russia is also expected to buy Indonesian tin "in unlimited quantities."

Large shipments of Japanese cars and trucks are expected to be imported into Australia later this year. These imports have been approved by the Federal Government in view of the fact that Japan is purchasing Australian wool.

The West German Government plans to set up a corporation to promote private investments in developing countries. The new Government-owned corporation provides incentives for private investors who support the flow of capital to developing countries.

Nigeria will appeal for foreign loans of £300 million for its six-year development plan, under a Bill to be presented to the Federal Parliament later this month. Total expenditure of the plan is expected to be about £600 million. In 1961, the U.S. announced aid totalling £80 million for Nigeria over the next five years.

West Germany's trade with other members of the Common Market rose from 25 per cent to 33 per cent of the total West German trade between 1958 and 1961. But the share of developing countries in the total West German imports fell from 23.3 per cent to 21.5 per cent and in the total West German exports from 21 per cent to 17.9 per cent.

The Ministry of Industry in Iraq has authorised the operation of a new plant for the manufacture of razor blades by the Razor Blades and Cables Industries Company. Production will start soon. Initial output: 150,000 razor blades a day. Foreign experts are training indigenous personnel. The venture saves foreign exchange expenditure worth $500,000 a year. Production is planned to be extended later.

The European Common Market has authorised Italy to exempt certain products of the lead, zinc and silk industries from the 10 per cent acceleration in internal tariff cuts which came into effect in May 1960. Under Article 226 of the Treaty of Rome, a member-State may ask for authorisation to take measures of safeguard in special cases during the transitional period.

The New Zealand Government has approved in principle the use of privately-held "free" funds held abroad for financing imports. Such imports will not be subject to the present blanket quantitative restrictions. There are many individual holdings abroad of currency and securities, but "free" funds generally represent the finance accumulated by firms in the course of business from sources such as commissions and royalties.

PERSONAL

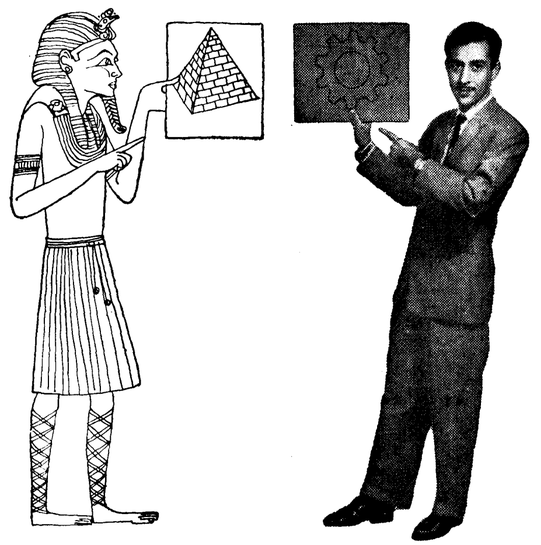
MR. Keshavlal R. Shah and Mr. Shantilal C. Kadakih have been elected President and Vice-President, respectively, of the Paper Traders' Association for the current year.

Mr. H. M. Seervai Advocate-General of Maharashtra, has been appointed Vice-Chairman of the State Bank of India *vice* Prof. Karve, who has assumed charge as a Deputy Governor of the Reserve Bank.

Dr. G. S. Kasbekar, until recently Deputy Director of the General Ordnance Factories and project officer of the new Explosives Factory at Bhandara, has taken over charge as the Managing Director of the Hindustan Antibiotics Ltd., Pimpri, Poona. He succeeds Mr. S. T. Raja, who has been appointed General Manager of the Hindusthan Steel Plant at Rourkela.

Mr. C. L. Bajoria, Chairman, Messrs. McLeod & Co., Ltd., has been elected Chairman of the Indian Jute Mills' Association for 1962. Mr. J. V. Jardine Paterson of Jardine Henderson Ltd. and Mr. D. C. B. Pilkington of Bird & Co. have been elected Deputy Chairman and Vice-Chairman, respectively.

TELL US YOUR JOB—



AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

IMPORT POLICY

THE established trade in this country has been much exercised over the present import policy of the Government under which its proportionate share in total imports has fallen to just less than 10 per cent. It is in this context that the All-India Importers' Association, which held its annual meeting in Bombay on Monday this week, has called upon the Government to help the trade by assigning it a larger role than what has been done so far. A report of the meeting appears elsewhere in this issue. The established trade is apparently justified in claiming a larger share of the growing volume of imports necessitated by the rising tempo of development. But one is at a loss to know how far the Government will be able to heed the importers' plea, considering the overall exigencies of the present economic situation in the country. The candid admission made by Mr. G. L. Mehta, who presided over the aforesaid meeting, that the scope for changing the present conditions in the import trade was limited, therefore, sounds quite unexceptionable. Without mincing words, Mr. Mehta suggested that importers would have to adapt themselves to the conditions of a developing economy and the processes of industrialisation. By saying this, he was, of course, not unaware of the important role of established traders. Only, he probably wanted their eagerness to safeguard their own rights to be tempered by a sense of realism.

Examining the major trends in India's foreign trade, Mr. Mehta concluded, with characteristic objectivity, that the difficulties facing the import trade were "partly due to unavoidable reasons, and partly to factors which are a consequence of policy decisions whose validity is open to criticism." Giving an account of the changing pattern of the import trade induced by "unavoidable factors," he observed as follows:

"India is now in the process of development, and all such processes tend in some degree to dislocate normal channels of operation. Industrialisation, for instance, not only displaces the traditional artisan, but also the traditional importer. As we produce within the country one commodity after another—cement, sugar, cotton-textiles a quarter of a century ago; bicycles, sewing machines, paper and many other chemical and engineering products during the last decade—the established importer in the line loses his vocation. In India, as a result of the various exchange crises, this process has been turned the other way, also, in the sense that import restrictions have created opportunities for internal production. In the course of my association with I.C.I.C.I., many importers have come forward to take up manufacturing lines in which they earlier traded."

Although the structure and pattern of import trade is undergoing radical changes, import trade will still have to play its due role, since, as Mr. Mehta pertinently pointed out, "development leads not to self-sufficiency, but to greater interdependence and reliance on imports." Still, much will depend on the policy pursued by the Government in respect of various aspects of foreign trade. Let us take the case of actual users' licences. Increasing reliance is being made on granting import licences directly to consumers, thereby relegating to the background the services of the import trade. Mr. Mehta was against indiscriminate issue of licences to actual users. He conceded that, in some cases, such as branded goods and components of manufactured goods like automobile parts, it was essential to allow the factory which manufactured and assembled them to import these requirements. But he felt that there was scope for greater use of established channels of trade in respect of goods like dyes and metals, where no such "assembling considerations" were involved. Mr. Mehta's stand is, no doubt, reasonable. But the important question is whether the import trade itself will abide by a voluntary code of conduct and refrain from rigging up prices of imported commodities, which are in short supply in the domestic market. As is well known, past experience in this respect has not been uniformly encouraging.

Mr. Mehta, also made particular reference to the export incentives given by way of import entitlements. In this connection, he made a fervent plea to the manufacturers in this country to step up their productive efficiency commensurate with the demands of competition in world markets, and not wait for artificial incentives. The import entitlement policy, Mr. Mehta pertinently added, was only an index of the inability of Indian industry to export on a purely competitive basis. Mr. Mehta did well to emphasise this point. Import entitlements offer only a short-term palliative. The permanent cure for the export problem, as we have so often emphasised, lies in improving the operational efficiency and reducing the costs in industry and agriculture.

P. & T. DEPARTMENT'S PLANS

Posts and Telegraphs represent a public utility which, covering the entire country as it does, has to meet the needs and requirements of all sections of the public. The Government has lately recognised the need for a machinery which will indicate to it the "consumer reactions" not only in the sense of complaints pertaining to the postal service but also in that of suggestions for improvement of the service. It is this need that is sought to be fulfilled by the recent constitution of the Central Advisory Council of the P. & T. This Council, the first meeting of which was inaugurated by Prime Minister Nehru on the 17th instant at New Delhi, is a 58-member body on which there are representatives from Parliament, the Planning Commission, Commerce and Industry Ministry, those Ministries and Departments of the Central Government which are closely connected with the working of the P. & T. Department, other interests like philately, civil aviation, shipping, press and news agencies, and also the State Governments. While Regional P. & T. Advisory Committees have been functioning since 1949 and helping the administration to ascertain the needs or requirements of various interests, it is for the first time now that an organisation has come into being at the national level for establishing closer relations between the users of P. & T. services and the Administration. This is a promising development in theory—promising from the point of view of bringing about greater efficiency of service through constructive public criticism. But the Council is so unwieldy in size that it is doubtful whether, in actual practice, it will be anything more than another talking shop and whether the service it is likely to render will be commensurate with at least the expenses that will have to be incurred on its periodical meetings.

That the P. & T. service needs to be distinctly improved is quite apparent from the delays in the transmission of telegrams and express delivery letters in particular. Dr. P. Subbarayan, Union Minister for Transport and Communications, has himself admitted that "the speed and expedition with which telegrams are being handled in the Department leave much to be desired and the time interval that elapses between the booking and delivery of telegrams is very much more than what is acceptable to the public." There are also grave mistakes in the delivery of these communications. The remedial measures, recently taken and proposed to be launched, have been detailed by the Minister, and these are:

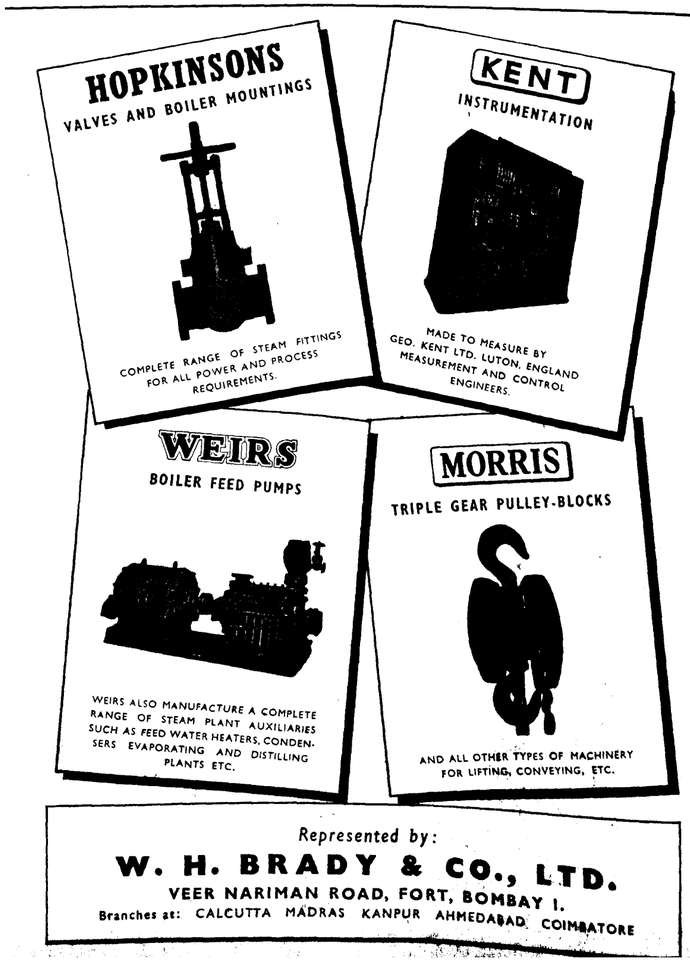
(i) The facility of booking and delivery of ordinary telegrams during the opening hours of the office, an incentive money scheme for the telegraphists to expedite the traffic and a new incentive scheme for task work messengers delivering telegrams—these measures have already been introduced.

(ii) The schemes for registered abbreviated addresses and deposit accounts have been simplified and streamlined.

(iii) Booking of telegrams is to be expedited by authorising payment for telegrams in cash rather than by affixation of stamps.

(iv) Improvement of the telegraph service through provision of Telex equipment, Tape Relay systems, Printergram service, extension of phonogram services and more telephone channels by laying co-axial cables and by installing new Voice Frequency Telegraph Equipment is being actively planned.

But these improvements will, of course, mean additional claims on resources for which



no very generous provision has been made in the third Plan. The allocation in this Plan for posts and telegraphs is just Rs. 78 crores, as compared with an expenditure of about Rs. 51 crores in the second Plan period. As the larger part (nearly Rs. 50 crores) of the proposed third Plan outlay will be absorbed by telephone services and trunk cables, the provision for expanding and improving postal and telegraph services proper is relatively small. The number of telegraph offices in the country is proposed to be increased by a mere 2,000 to 8,450 and the increase (17,000) in the number of post offices will be less than the increase (22,000) in the second Plan period. Even the apparently generous provision for telephones will mean an addition of only 250,000 telephones in the third Plan period, as against an anticipated demand of a million. The P. & T. Department's plans for raising more funds internally for providing nearly twice the quantum of facilities than would be possible with the allocation in the third Plan may well involve big increases in postal rates. Probably some increases are in the offing already and the regular budget in May next is likely to make a beginning in this respect.

ECONOMIC SURVEY 1961-62

Along with the interim budget for 1962-63, presented to Parliament last week, was circulated an economic survey of the current fiscal year. This survey, which happens to cover the first year of the third Plan, highlights the fact that the upward trend in the general level of prices during the second Plan period was arrested and even slightly reversed during 1961-62. What imparted a measure of stability to the price level were two factors—firstly, an increase of more than 8 per cent in agricultural production in the 1960-61 season as compared with the previous season and, secondly, an increase, though relatively small, of 7 to 8 per cent in industrial production in 1961 over 1960. But the happy restoration of some overall stability to the economy in the first year of the third Plan did still not mean the avoidance of imbalances in individual sectors of supply, such as power, transport, coal, steel and some agricultural raw materials like raw jute and oilseeds. These are facts which no analyst of economic trends can ignore. But the attempt of the authors of the *Economic Survey* to explain away these imbalances with the statement that "the restoration of a measure of overall stability to the economy is not inconsistent with the signs of weakness or imbalance in individual sectors," greatly diminishes the force of their admission. Their anxiety to play down the weakness in the industrial situation is quite apparent from their own observation that "these shortages in specific sectors were mainly responsible for the *somewhat* (italics ours) smaller increase in industrial production in 1961 (7 to 8 per cent) than in 1960 (12.1 per cent) or 1959 (8.7 per cent)."

Is it not a disquieting trend that the rate of increase in industrial production in 1961 was less than half of what it should normally have been in a situation of fuller utilisation of installed capacities? It is by no means clear that the "steps initiated during the year to ensure that bottlenecks in individual key sectors might not set up a vicious spiral" have met the twin test of adequacy and timeliness and ensured the prospect of, say, a 27 per cent increase in industrial production in 1962. On a broad reckoning, the capacities are indubitably there for that much increase. The assumption here is that the increase in industrial production in each successive year since 1959 should have been normally running at a rate half as much higher as in the previous year. If the tempo of production does not conform to such a rising rate, it is doubtful whether the general index of industrial production will reach the level of 329, as proposed in the third Plan, in 1965. As pressures on the price level in the coming years may be expected to arise in the wake of increased public spending, it is industrial production, as much as agricultural production, that will have to register an accelerated tempo.

The comfortable situation in the first year of the third Plan in the matter of Government outlays and money supply cannot be expected to continue in the remaining years of the Plan. For one thing, the outlays (development and non-development together) of the Central and State Governments in 1961-62 at about Rs. 2,860 crores (covering both Plan and non-Plan expenditure) have not been very much more than the aggregate outlays of Rs. 2,720 crores in 1960-61. For another, the trend towards an accelerated increase in money supply, which was in evidence in 1959 and 1960, was reversed in 1961 when credit expansion was relatively small. Neither of these factors will be operative in the coming years when Plan outlays in both the public and private sectors are stepped up to reach the investment targets. So it is of the utmost importance that production should keep in step with the expected increases in public and private spending and in money supply from 1962-63 onwards. It is a little reassuring to be told by the authors of the *Economic Survey* that there will be a distinct improvement in the vital sectors like coal, transport, power and steel in the coming year itself. But they also add that the total claims on resources during the coming year—investment outlays in the public and private sectors, requirements of larger exports and increase in consumption consequent upon the growth in population—would be significantly larger than in the first year of the Plan. Even after the growing pressure of demand is partly absorbed by the utilisation of external assistance, there will be large claims on the available resources. The prospect of the country being spared further inflationary pressures in the coming 12 months is thus not bright.

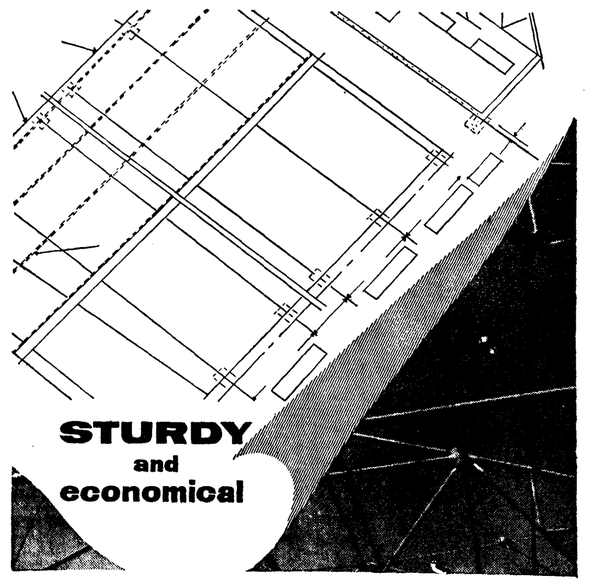
PRODUCTIVITY AND WAGES

The need for relating wage increases to improvements in productivity was emphasised this week by the spokesmen of two leading employers' organisations in the country, namely, Mr. N. M. Wagle, the retiring President of the Bombay Chamber of Commerce and Industry and Mr. E. F. G. Hunter, the outgoing Chairman of the Southern India Employers' Federation, in their speeches at the annual meetings of their respective organisations. Mr. Wagle put the proposition in the following words: "Once the basic economic and social levels applicable to a region, if not the nation, have been established, any future improvement in earnings or leisure (of workers) must be linked to productivity." Observance of this principle, Mr. Wagle contended, was vitally necessary if the competitive capacity of Indian industries in foreign markets were to be maintained. Most industries, he pointed out, were blessed with a large and growing market and if only they could achieve the maximum production of which their plant was capable, they could secure a striking improvement in their competitive capacity at home and abroad, higher profits and better earnings for workers. No impartial observer can take objection to the aforesaid statement. But the snag lies in the first part of it. What is the basic economic and social levels for a particular region? Who is to decide that they have been reached at a given time?

Mr. Wagle did not, of course, suggest that workers should be denied a fair share of the fruits of their labour; only, he wanted that the fruits had to be raised and gathered before they were shared. Like another employer at Calcutta, he too quoted the following words of Mr. N. S. Khrushchev, the Soviet Premier, to show that the importance of labour productivity is being stressed in authoritarian countries as well:

"Labour productivity must be always one jump ahead of the growth of wages... It is clear that the correlation of wages as between truck drivers and tractor drivers is wrong, but we cannot now agree to an upward levelling to wages—first for truck drivers, then for tractor drivers, and then again for truck drivers. The question of wages is a big State question. Their level depends entirely on the output of produce on the productivity of labour in a given society."

Mr. Wagle ventured to suggest that no employer of any standing questioned the moral as well as the political justification for giving workers a fair deal and bringing about an improvement in their standard of living. But he was convinced that this could not be done by legislation which hands out more and more benefits to workers regardless of the profitability and competitive position of the industry. Hitherto, Mr. Wagle observed, higher labour costs could be passed on to domestic consumers who were denied the alternative of cheap imported



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SL5/20	20 ft.	10 ft.
SL5/30	30 ft.	10 ft. and 13 ft. 4 in.
SL5/44	44 ft.	10 ft. 1.1/8 in. and 13 ft. 4.1/8 in.

goods, but now that the industry was required to make a major contribution to export earnings, it was no longer possible to ignore cost considerations. He, therefore, deplored "the present tendency to pick on the best-run units for yet heavier burdens of wages and dearness allowance and fringe benefits like bonus, gratuity, provident funds, etc." He pleaded that this tendency must be controlled, more particularly such benefits as increases in paid holidays, earned, casual and sick leave, which reduce productivity of labour without increasing the worker's earnings.

What Mr. E. F. G. Hunter said also amounts to much the same thing. Emphasising that exports and productivity were closely linked, he pointed out that Indian labour, once regarded as cheap, had become expensive, especially when output was taken into consideration. Wage Boards and Tribunals had been generous in reviewing wage structure, mostly in an arbitrary manner, ignoring the vital factor of productivity. Employers, he maintained, had no objection to paying higher wages, provided the higher wages went hand in hand with higher productivity.

Almost identical views were expressed by both Mr. Wagle and Mr. Hunter on holidays and leave for workers. Both disapproved the too many holidays observed in this country and were agreed that this was a luxury which the country could not afford. According to Mr. Wagle's calculation, the loss of goods and services resulting from a single day's holiday in a city like Bombay is as much as Rs. 150 lakhs. The necessity for reducing the number of holidays is greater in the case of commercial establishments than in the case of Government offices, though here, too, the Government could set an example, unless the Prime Minister's dictum *Aram Haram Hai* has been peacefully laid to rest.

A related issue, to which Mr. Hunter called pointed attention, is the growing absenteeism in industry. Absenteeism, according to him, had increased to an "alarming extent" with the result that, often-times, costly machines were left idle due to lack of workers to handle them. Absenteeism was noted in a chronic form soon after the payment of bonus or arrears of wages and during the marriage season. The case with which even fit persons could obtain medical leave on proportionate wages under the Employees State Insurance Scheme also encouraged absenteeism. There were many in this country, Mr. Hunter pointed out, who preferred half wages for doing nothing to full wages for doing a day's work. What is the solution to this problem of laziness? Mr. Hunter is of the view that labour unions and honest workers themselves should co-operate, in their own interest, with the management in dealing with the question of absenteeism. This is a fair suggestion. For workers, who are regular attenders, find it difficult to get leave when they genuinely need it on account of the large number of absentees. Again, they suffer in regard to their fringe benefits, because absenteeism tells on production and profit. The trade unions must look at this problem from the larger national interest which demands that no shelter be given to laggards.

U.S. ECONOMIC AID

"Where weakness and dependence are not transformed into strength and self-reliance, we can expect only chaos, and then tyranny, to follow." It is with these thought-provoking words that President Kennedy has, once again, underlined the urgency of the U.S. continuing to carry the burden of aiding other nations in a special foreign aid message to the Congress. In this message, the President has reiterated the nation's basic interest in the development and freedom of other nations and requested the Congress to appropriate fresh funds aggregating $4,878 million for foreign assistance programmes for the next fiscal year commencing from 1st July next. This new request is in addition to the $900.4-million development lending and military aid appropriations already authorised under the Foreign Assistance Act of 1961. If sanctioned by the House, it will bring the total to $5,778.4 million. The President does recognise that some of his countrymen are weary of sustaining a continued effort to help other nations. But to such persons, he says:

"I would ask them to look at a map and recognise that many of those whom we help live on the 'front-lines' of the long twilight struggle for freedom—that others are new nations poised between order and chaos—and the rest are older nations now undergoing a turbulent transition of new expectations. Our efforts to help themselves, to demonstrate and to strengthen the vitality of free institutions, are small in cost as compared with our military outlays for the defence of freedom. Yet all of our armies and atoms combined will be of little avail, if these nations fall, unable to meet the needs of their own people and unable to stave off within their borders the rise of forces that threaten our security. This programme—and the passage of this Bill—is vital to the interests of the U.S."

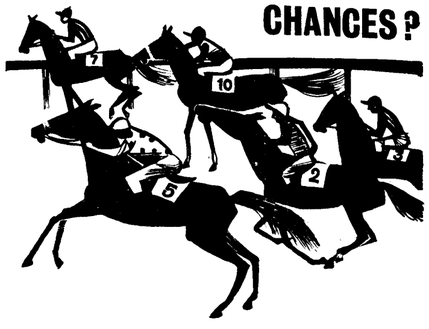
It is to be hoped that the U.S. Congress will ponder these observations and appropriate without any cut the entire funds asked for by the President. If it does, the members of the Congress will surely evoke the grateful thanks people in India, Pakistan and all other developing non-communist countries the world over which have embarked on programmes designed to improve the woefully low living standards of their teeming millions. Incidentally, the U.S. Congress will also be setting an example to other developed countries, especially those which have not been rendering economic assistance on a sizable scale. Replying to a question at his Press Conference last week, President Kennedy himself expressed the hope that other developed nations would do more in the way of helping underdeveloped countries.

Whatever be the quantum of economic aid received by the developing nations, the fact remains that these countries must also be enabled simultaneously to step up their exports of manufactured goods to the developed countries. The Western countries should reduce customs tariff on certain finished manufactures such as textiles and gradually lower the taxes on consumption of goods such as tea and coffee. Such a course of action will expand the markets in the underdeveloped countries for goods produced in the Western cuntries and also facilitate a profitable outflow of private capital (as well as technical know-how) to the developing countries. It will also provide to the developing countries the kind of help that is needed to overcome the special infant industry disadvantages attaching to industrial production for export.

Be that as it may, a brief reference to the economic assistance received by India from the U.S. since June 1951 may be made here. The total commitments of the U.S. under various agreements with the Government of India now stand at Rs. 1,961 crores ($4,118 million). Nearly a third of this total—Rs. 614.8 crores ($1,291.2 million)—represents outright grants which are not repayable at all. The loans repayable in rupees aggregate Rs. 1,056.5 crores ($2,218.6 million), or 53.9 per cent of the total. The repayments do not involve utilisation of India's foreign exchange earnings or export of goods. Only less than 15 per cent of the U.S. aid, that is, Rs. 289.6 crores ($608.2 million) involves repayments in dollars. The greater part of even this amount bears exceptionally low rates of interest and is repayable over a fairly long period. The breakdown of assistance—in crores of rupees, the figures in brackets giving the dollar equivalent in millions—is as follows:

U.S. Agency for International Development Mission's Technical Co-operation Programmes: (*a*) developmental grants (not repayable) 166.0 (348.6); (*b*) loans (repayable in rupees or dollars) 74.3 (156.1); U.S. Agency for International Development: developmental loans (repayable in dollars) 81.7 (171.6); D.L.F. credits (repayable in rupees) 244.5 (513.4); Public Law 480, Title I (grants and loans repayable in rupees) 1,113.0 (2,337.3); Public Law 480, Title II (grants—not repayable) 2.5 (5.2); Public Law 480 Title III (agricultural commodities donated through voluntary agencies—not repayable) 62.4 (143.7); Emergency flood and famine relief grants (not repayable) 2.6 (5.5); Export-Import Bank loans (repayable in dollars) 117.6 (246.9) and Wheat Loan of 1951 (repayable in dollars) 90.3 (189.7); Grand total 1,960.9 (4,118.0).

The growth rate of industrial production in Western Europe continues to show a downward trend. In the third quarter of 1961, it was only 3 per cent as compared with the corresponding period in 1960 and a 5 per cent increase in the second quarter. The overall production index of the world's manufacturing industries (excluding the Communist bloc) showed an annual growth rate of 5 per cent in the third quarter of 1961, as compared with nearly 3 per cent in the second quarter. However, this rise was primarily due to the economic recovery in the U.S.



WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you *can be sure* if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

SOME THOUGHTS ON I.A.C.'S PERFORMANCE

MUST IT GO JET?—PROFIT MARGIN POOR, DESPITE HIGH WORK LOAD

(By Our Aviation Correspondent)

WHATEVER views we may hold on the subject matter, in the presentation of their report and statement of accounts for the financial year 1960-61, the Indian Airlines Corporation deserves to be congratulated. The report—the eighth in series—is well produced, clear, detailed, and, incidentally, rather attractively illustrated. We can certainly not complain of any lack of information. Indeed, such is the wealth of statistics that we have a positive *embarras de choix*.

Primarily, however, let us get the general picture into perspective. The salient feature, without doubt, is the fact that, for the second year in succession, the Corporation has contrived to "keep out of the red." The surplus, admittedly, is small; in fact it amounts to only Rs. 4.68 *lakhs. It would not do,* however, to minimise what is certainly quite an achievement. Only two years previously, in 1958-59, the Corporation incurred a deficit of no less than Rs. 91.19 lakhs. To have *recovered so much ground* in so short a period of time, seems to be a remarkable feat.

Trunk Routes and Rural Routes

What, in fact, has led to this transformation? There has been no major re-equipment during the period, there has been no significant change in the route network, there has been *no retrenchment—on the contrary,* due to staff increments, there has been a sharp rise in the wage bill. The load factor, it is true, has risen by 3 per cent but, in any event, this was at the very high level of 70 per cent in 1958-59. The only possible conclusion is that, apart from any possible contribution made by increased efficiency, the more favourable results are solely attributable to the growth of traffic on the trunk routes.

Unfortunately, we have no separate data for the trunk routes, but, whereas, in 1958-59, the Corporation carried a total of 653,494 passengers, in 1960-61 the figure had risen to 787,187—an increase of more than 133,000. The operating revenue, of course, showed a corresponding increase amounting to about Rs. 2 crores. Whilst one can give no precise figure, the bulk of this traffic growth occurred on the trunk routes. So much one can say with confidence.

An Important Difference

Like some other countries, and notably Australia, India's air traffic flows predominantly between its four major cities. But, between Australia and India, there is a significant difference: whereas the former's population is largely concentrated in the big cities, that is by no means the case in India. The growth of air traffic will, doubtless, conform to the same pattern as at present for some time to come. Nevertheless, although the more provincial and rural routes are now mainly unremerative, and indeed constitute a drain on the revenue earned by the trunk routes, they have a considerable potential and, consequently, are not unimportant to I.A.C.'s future economy.

Does the Corporation take that point of view, or does it tend to concentrate its efforts on the further promotion of traffic on the trunk routes? The report does not throw enough light on that subject. "The major task facing the Corporation," says the Chairman, "is still the replacement of the Dakota fleet. Traffic figures for the past three years show the greatest demand for transportation is on the long trunk routes where, on several sectors, the Viscounts need to be replaced with larger aircraft. Similarly, some of the longer regional routes now served by Dakotas can provide sufficient traffic to justify the use of Viscounts...."

Though logical enough, that is not very illuminating. How soon does the Corporation intend to resolve "the major problem of Dakota replacement"? The Corporation has acquired five Fokker Friendships; five more are on order and will be delivered towards the end of this year and the beginning of 1963. Ten Friendships should serve to replace twenty Dakotas, but that still leaves some thirty odd Dakotas—the major portion of the fleet—in operation and, so far as one can gather, with no specific replacement plan in view.

Re-equipment

What of the trunk routes, where, according to the Chairman, "on several sectors, the Viscounts need to be replaced with larger aircraft"? Definite decisions, apparently, still remain to be taken. The general impression, however, is that the Corporation has a short haul jet in view for this purpose. The Caravelle has been specifically mentioned. In "going jet," the Corporation is, of course, following the modern trend. A great many domestic carriers, both in the U.S.A. and Europe, have ordered, or are considering such short haul jets as the Boeing 727, the BAC One-Eleven, and the Caravelle. In almost all instances, however this choice is mainly influenced by competition. I.A.C. faces no competition and, although the main trunk routes, economically speaking, are probably suitable for jet operation, they are not long *enough to make the time-saving factor of more* than very slight importance.

One has the impression that what the travelling public really wants is greater frequency of service—rather, that is to say, than larger aircraft and reduced frequency. In the circumstances, one would have thought that, as an interim measure for the next few years, it might be wiser to purchase additional Viscounts in the used market. The capital outlay would be very substantially less, the aircraft would serve the same purpose—to relieve congestion on the busiest trunk routes—and, at a later date, could be used to replace Friendships and Dakotas on secondary routes.

Why Profit Low?

Leaving the question of re-equipment, let us turn again to the financial results. A point which must puzzle observers is the very high load factor—73.6 per cent—which the Corporation achieves, *vis-a-vis* the almost nominal surplus balance. Most airlines which achieved such a load factor would be very profitable concerns. I.A.C. is peculiarly situated in that respect. *The three main factors seem to be,* first, and probably of the greatest importance, the comparatively low fare and freight tariff in force; secondly, the high cost of fuel to which is added not only customs duty but also various State sales taxes. These two latter items, incidentally, added Rs. 146 lakhs to the Corporation's fuel bill for the year under review. Finally, I.A.C. *seems to operate* at a disproportionately high overhead cost. This latter item requires, perhaps, a little clarification.

According to the Corporation's own statistics, out of a total annual expenditure of Rs. 13 crores, two crores—or nearly 15 per cent—is expended on functions which, if in some degree necessary, are none the less unproductive. Let us take one or two examples. The Corporation employs a traffic staff of 1,967 employees to whom, in salaries and wages, it pays some Rs. 55 lakhs annually. It does seem to be, shall we say, gilding the lily, to pay out in addition, a sum of Rs. 33 lakhs to booking agents on account of commission. And this is to say nothing of a further sum of Rs. 41 lakhs expended under the head of "traffic and passenger services."

Lavish Administration

To take another item—"General Administration." Under this heading, the expenditure is Rs. 66.82 lakhs and the employees number 619. Nor, apparently, does this take any account of the Financial, Audit, and Statistics staff which number another 1,093. Criticism, possibly, is unjustified, but, on the face of it, the Corporation does seem, in these unproductive departments, to be somewhat lavishly staffed. One cannot help but feel that were I.A.C., on an experimental basis if necessary, and on a few selected routes, to try out a non-reservation service, to modify its ticketing system, and to simplify its system of accounts and audit, some really worthwhile economies might result.

"With the acquisition of more Viscounts and Friendships and a relatively small increase in fares (already effected), the Corporation can look forward with confidence to satisfying the demands of the travelling public and of meeting its own commitments in full." So, on an optimistic note, ends the report for 1960-61. Another year has almost elapsed. In a few months' time, another report will be due. Has public demand, during the current year, been satisfied? Will the financial results be more favourable? One will be most interested to see.

I.C.I. TROUNCED

OPTIMISM ON TRADE PROSPECTS

(From Our Own Correspondent)

LONDON, *16th March*

LONDON LETTER

THIS has not been a very exciting week although it has had its interesting points. First, there has been the failure of the world's largest take-over bid, with I.C.I. admitting defeat when they received only offers for 37½ per cent of Courtaulds' shares. But this is not the end of the story; I.C.I. could quietly buy away more shares on the market later until they got 50 per cent, but the most likely course of events is that, after tempers have cooled, there will be a return to co-operation between the two companies, with I.C.I. being brought into Courtaulds a little more closely than has been the case in the past.

On the stock market, the mildest sort of optimism prevails. The Bank Rate fall naturally boosted Gilt-edgeds and these have gone on rising gently, so that they now stand about 10 per cent higher than in the crisis days of the end of last July. Indeed, another 4 per cent rise will bring them up to the average of a year ago. Equities are also prospering mildly, prices having risen over the week between 1 per cent and 1½ per cent as a result of the feeling that the Chancellor of the Exchequer is going to be fairly neutral when he presents his Budget in three weeks' time.

Trade Figures

The February trade figures have made good apparent showing, the crude adverse balance having dropped from about £100 million in January to about £25 million. This looks well on paper, but it is more important to look at the seasonally adjusted figures. Actually, as far as exports are concerned, the crude figures show the same level as in December (the same length of month allowing for the Christmas holidays), but, on the seasonally adjusted figures, they are £10 million better. On the other hand, imports less re-exports are about £10 million worse.

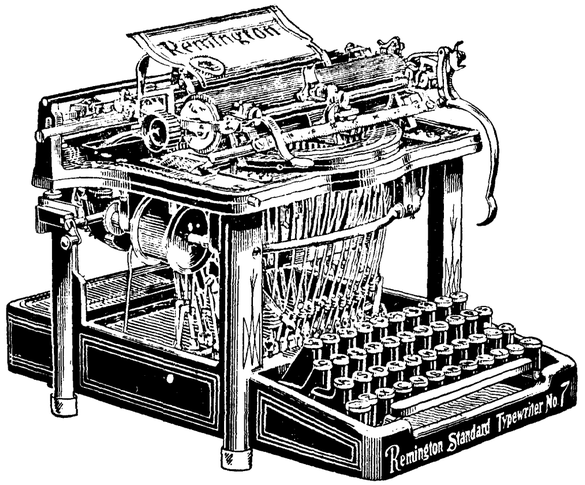
Taking a slightly longer view and again eliminating seasonal variations, exports in the last three months were actually 1 per cent less than in the preceding three months and 2 per cent less than the average for 1961. Yet, nevertheless, there is a general feeling of optimism about the future of the export trend.

Meanwhile, the improvement in the balance of payments has to be brought about by a drop in imports. The latter were ½ per cent less in the past three months, as compared with the preceding three months and also ½ per cent less than the 1961 average. The following table shows the monthly average and the trade balance:

(In million £s)

Monthly average	Exports and re-exports	Imports	Trade balance gross	With imports adjusted to f.o.b.
Dec. 1961-Feb. 1962.	315	356	41	8
Sept. 1961-Nov. 1961.	312	365	53	13
1961 average	320	366	46	6

The trade balance for the past three months thus shows a reasonable improvement as compared with both the average for the year 1961 and for the preceding three months. Indeed, it is almost in balance on visible account and, for the rest, it is a question whether the country is currently showing an invisible surplus. The official trade figures for last year which are due to appear shortly will throw light on this aspect.



Vintage 1900

One of the first typewriters ever sold in India the old Remington Standard No. 7 is now virtually a museum piece. Although a good efficient machine in its day, progress and 'Old Father Time' have passed it by.

Today at the Remington Rand factory at Howrah, (the largest in Asia), new sleek typewriters are rolling off the production line. Already over 1,00,000 machines have been manufactured in India by the Indian Company.

85% of the components of Remington typewriters are manufactured at this factory—with Indian raw materials—by Indian Staff.

Each part of each machine is made to exact universal specifications so that every part is interchangeable no matter where the machine was manufactured.

40 years ago the Remington organisation pioneered the adaptation of Indian languages to their typewriters and today Remington Rand produce typewriter keyboards in 8 regional languages. The blue prints for further languages are under preparation and these typewriters will go into production soon.

SLOWER PACE OF GROWTH IN CAPACITY OF COTTON INDUSTRY

EMPLOYMENT LEVEL SLIGHTLY HIGHER

THE pace of expansion in the size and capacity of Indian cotton mill industry slowed down somewhat during the cotton year ended August 1961, with the exception of weaving sector the capacity of which registered a notable rise. Thus, the actual increase in the number of spindles installed in that year was only 121,230, as against 329,211 in 1959-60, although the number of mills in existence was higher by four, as against three, according to the latest Mill Statement of the Millowners Association, Bombay. Similarly, the paid-up capital of the industry was higher by just Rs. 1.34 crore, as compared with Rs. 4.18 crores. On the weaving side, however, there was a fresh addition of 961 looms during the year, in contrast to the decline of 409 looms in 1959-60.

The Millowners Association, it may be said in passing, has done well to publish the Mill Statement in a book form which facilitates easy reference, unlike the loose unwieldy sheets that were being published all these years. The Statement contains the names of cotton spinning and weaving mills erected or projected in India, as also names of agents or owners, and particulars relating to share capital, spinning and weaving capacities installed and actually working, cotton consumption, workers employed and average number of days worked by each mill during the year 1960-61. It also gives statistical summaries showing the growth of the cotton mill industry in India as a whole, and in Bombay City and Island, Ahmedabad and the combined Maharashtra and Gujarat States since 1919.

Statistical Position

There were in existence at the end of August 1961 as many as 523 mills, as against 519 a year before and 516 two years before. Besides, there were 24 mills which had been registered and/or in course of erection; the corresponding figure for August 1960 was 22. The following table indicates the statistical position of the cotton mill industry in the past three years:

	Year ended 31st August		
	1961	1960	1959
No. of mills in existence†	523	519	516*
Mills remaining idle†	26	30	33
Mills registered and/or in course of erection†	24	22	24
Paid-up capital (Rs. crores)	136.22	134.88	130.70
Spindles installed	13,984,981	13,863,751	13,534,540
Spindles working (first shift only)	12,129,430	11,830,650	11,341,873
Looms installed	206,525	205,564	205,973
Looms worked (first shift only)	184,562	182,203	179,300
Cotton consumption (bales of 392 lbs.)	5,347,554	5,143,356	5,096,446
Workers employed (average number for all shifts)	778,301	766,447	747,856

* Exclusive of two units believed to have been scrapped.
† As on 31st August.

It will be seen from the above table that, in addition to the increase of four mills in the total number of mills in existence, during 1960-61, four other units which had remained idle in the preceding year resumed working. Nevertheless, twenty-six mills continued to remain closed towards the end of August 1961 and two mills were scrapped in Bombay City and Island. Almost all of them may be regarded as too old and cutmoded to be worked economically.

Consequent on the expansion in the size of cotton mill industry, there was an improvement in manpower employed. The average number of workers employed in all shifts during 1960-61 was 778,301, as against 766,447 in the previous year and 747,856 in 1958-59. The total increase in two years thus comes to 30,447 workers, which, however, still did not make up fully for the shrinkage in manpower witnessed during the two years 1957-58 and 1958-59 when the number of workers employed receded by 50,743, from 795,599 to 747,856.

More Capacity Utilised

The expansion in the size of the mill industry during the year under review, as already noted, was accounted for by both the spinning and weaving sides, the number of spindles rising from 13,863,751 to 13,954,981 and that of looms from 205,564 to 206,525. Alongside of such expansion, the year 1960-61 witnessed a more intensive utilisation of capacity than in the previous year. The ratio of spindles working (first shift only) to spindles installed increased from 85.3 per cent in 1959-60 to 86.7 per cent in 1960-61 and that of looms from 88.5 per cent to 89.3 per cent. Still the capacity lying idle was high as 13.3 per cent in the spinning sector and 10.7 per cent in the weaving sector. In view of the larger capacity utilised during 1960-61, the quantity of cotton consumed was higher at 5,347,554 bales (of 392 lbs. each), as against 5,143,356 bales in 1959-60 and 5,096,446 bales in 1958-59.

State-wise Position

The number of new mills that were added to the list of cotton mills during the cotton year ended August 1961 was six, of which three were in Madras, two in Mysore and one in Gujarat. Although the number of mills in existence is less in Maharashtra than in Gujarat, the former State occupies the predominant position on the cotton textile map of India as will be seen from the statement below:

	Existing mills	Idle mills	Spindles installed	Looms installed	Workers employed (all shifts)
Bombay City and Island	63	2	3,225,441	62,880	197,404
Other Maharashtra	37	2	940,312	18,902	61,836
Total Maharashtra	100	4	4,165,753	81,782	259,240
Ahmedabad	72	2	2,131,486	42,319	135,538
Other Gujarat	40	3	859,448	14,830	47,062
Total Gujarat	112	5	2,990,934	57,149	182,600
Rajasthan	11	2	178,324	3,253	9,833
Punjab	6	..	192,794	1,944	7,513
Delhi	7	..	191,916	3,946	18,242
Uttar Pradesh	29	7	874,052	13,884	52,389
Andhra Pradesh	15	..	220,884	1,381	12,000
Madhya Pradesh	20	1	519,432	12,699	42,753
Bihar	2	..	29,572	757	1,329
Orissa	4	..	52,848	1,264	4,861
West Bengal	40	3	623,205	10,941	44,023
Madras	139	..	3,222,700	8,049	102,087
Kerala	14	1	182,548	1,890	7,016
Mysore	21	3	515,474	5,470	27,396
Pondicherry	3	..	84,484	2,116	6,419
Total India	523*	26	13,984,981	206,525	778,301

* This number does not include 24 mills which had either been registered and/or in course of erection.

The above table shows that the Maharashtra State accounts for 19 per cent of the total number of existing mills in India, over 30.5 per cent of the aggregate spindles installed and almost 40 per cent of the total looms in place. Out of the 778,301 workers employed in the whole of the cotton mill sector (all shifts), the share of mills in the Maharashtra State alone comes to more than 33 per cent. Next to Maharashtra, Madras has the largest number of spindles, followed by Gujarat, Uttar Pradesh, Madhya Pradesh and Mysore. In the case of weaving, Gujarat takes the second place, followed by Uttar Pradesh, Madhya Pradesh, West Bengal and Madras.

EXCISE ON TEXTILES

Out of every Rs. 10 that the Government of India gets by way of revenue from excise duties, the share of cotton textiles alone comes to as much as Rs. 1.27. The estimated yield from this source as shown in the budget for the coming financial year (1962-63) at the existing rates is Rs. 62.53 crores, which represents 12.7 per cent of the gross excise duties amounting to Rs. 492.28 crores. Of the sum of Rs. 62.53 crores, basic duties account for Rs. 48.70 crores (fabrics Rs. 44.35 crores and yarn Rs. 4.35 crores) the balance of Rs. 20.38 crores being the share of additional excise duties in lieu of sales tax. The estimated yields from excise duties other than cotton textiles are Rs. 2.50 crores from artificial silk fabrics, Rs. 5.75 crores from rayon and synthetic fibres and yarn, Rs. 85 lakhs from woollen cloth, Rs. 1.30 crore from woollen yarn and Rs. 6 lakhs from silk fabrics. The following are the budget estimates for 1962-63 at the existing rates as compared with the current (1961-62) and previous (1960-61) financial year:

(In crores of rupees)

	1962-63 (Budget)	1961-62 (Revised)	1961-62 (Budget)	1960-61 (Actual)
Fabrics:				
Cotton	44.35	44.35	42.81	45.94
Art silk	2.50	2.40	2.02	2.05
Woollen	0.85	0.80	0.67	0.90
Silk	0.06	0.06	0.06	0.04
Yarn (and fibres):				
Cotton	4.35	4.35	4.72	0.13
Rayon, artificial fibres and yarn	5.75	5.45	4.39	2.82
Woollen	1.30	1.20	0.35	0.02
Additional duties (textiles)	20.38	20.33	20.11	17.01
Total all textiles	79.53	78.94	75.12	68.91
Gross excise duties—all sources	492.28	470.95	434.62	416.35

WORLD SILK

The major problem of silk industry and trade is not the sale of silk material in the world markets but the supply of raw silk to manufacturers. This was the conclusion reached at the annual conference of the International Silk Association held at Nice (France) on the 16th and 17th inst., on the basis of a study of the recent trends in the world silk economy contained in the Association's bulletin. According to this study, the past two decades have witnessed a sharp decline in the world exports of raw silk, the total of these exports in 1959 being no more than 5,624 tons—this was, of course, above the figure of 3,000 tons in 1958—as against 32,539 tons in 1938. The exports during 1960 were slightly higher than in 1959.

Japan dominates the world silk market, though its share of total production has dropped from about four-fifths in 1938 to under two-thirds in 1960, when its raw silk output amounted to 18,048 tons, as against the world total of 31,358

TEXTILE PRODUCTIVITY CONFERENCE

FREER OFFTAKE OF COTTON GOODS BY THE CONTINENT ANTICIPATED

From Our Special Correspondent

MANCHESTER, 13*th March*

MANCHESTER LETTER

TECHNICAL jargon sometimes tends to obscure the usefulness of gatherings such as the productivity conference held at the week-end and organised by the Cotton Board. The mere millman can be baffled by the phraseology of the experts and many shrink from betraying his ignorance of some of the theories advanced. Specialist papers too, can be a little daunting to the uninitiated, but often the spoken word clarifies an apparently difficult sentence and a suitable question elicits a more mundane way of expressing an idea. This was so at the St. Annes conference, where the discussion on the papers given enlivened what might at first sight have been regarded as a rather dull affair.

The moral of the week-end, which had obviously been apparent to the organisers in advance, was that the current setback must not crush the determination of the farseeing elements in the trade to maintain their faith in re-equipment, nor deter them from going ahead with their plans for progress. The theme, indeed, was aptly summed up in the closing stages by Mr. W. T. Winterbottom, who called for an end to the senseless internal competition which always threatens to disrupt the trade when conditions worsen. Many people in the industry have now reconciled themselves to the opinion that a further contraction in the number of active units, though not necessarily in production itself, must follow this phase. This view was repeated by Mr. Winterbottom, whose allegiance to the theme has been marked almost from the outset of the reorganisation scheme. What interested some of his listeners more, perhaps, was his oblique reference to the import situation and the attitude of the authorities. Lancashire's position, he added, was now more clearly recognised at home and abroad than it was six months ago. "I believe far more positive steps will be taken on our behalf to check the drift," he continued.

Expansionist Plans

During the conference, contributions from appropriate sources traced the expansionist plans which might be drawn up by a company seeking to extent its horizons. They ranged from the provision of a suitable labour force, through the need to ensure profit improvement and an adequate order book, to comparisons with other companies and the public image presented by a firm which adopts a "go-ahead" policy. Well to the fore in the ideas put forward by more than one speaker was the essential need for good public relations to be established between any company and its own workers, as well as the outside world. In a labour-starved market, where employees can largely pick and choose their work, and new recruits certainly can, such a view may seem unchallengeable, but bitter experience proves the reverse. There are still far too many concerns which bury their heads in the sand and look on their friends as intruders.

Inter-firm comparisons is another touchy topic, as some units appear to want to remain for ever in their ivory towers. Prejudice, however, is being broken down in numerous instances and comparative returns are being accumulated by specialists in the field, who are then able to draw conclusions from the figures obtained. So far the textile industry is concerned in three such projects. Lancashire firms are participating in an international labour productivity comparison; a pilot cost comparison is being carried out among firms weaving man-made fibres, and a management ratio comparison is nearing completion in cotton spinning. Similar schemes are proposed for the other sections of the trade, under the auspices of the Cotton Board's Productivity Centre.

About Our Neighbours

Finding out about the European Common Market countries is a favourite and vital pastime among industrialists at home and abroad when so much depends on how the project will develop if the United Kingdom joins in. Every available scrap of information is being picked up by interested managements, particularly those in trades like textiles where shipments to traditional areas have been diminishing over the years. Whether it will be possible to regain some ground by challenging our competitors across the Channel on their own territory is not yet clear, but every exporter, if the truth be known, is hopeful, to say the least.

In the latest issue of the *District Bank Review*, a start is made in studying the relative economic development of the members of the Common Market, with contributions from Continental experts surveying the respective conditions in Belgium, France and Western Germany. Later in the year, similar articles will be published on the Italian and Dutch economies and a summing-up of the prospects is promised. More direct details about the textile position are given in the survey on Belgium than in the case of the other two countries now under review. The traditional Belgium textile industries of cotton and wool, it is pointed out, have adjusted themselves remarkably well to world competition. Despite the general rise in wages and the high proportion of small family enterprises, the increase in productivity has been specially marked. On the other hand, the synthetic textile industry is less prominent in Belgium than in the other Common Market countries.

As might be expected, in a country where living standards are relatively high, the allocation of consumer expenditure in the past decade in Belgium has mainly been connected with housing, household eqiupment, recreation, holidays abroad and other matters indicating a desire for material comfort. On the other hand, expenditure on consumer products like food and clothing shows little increase. European integration has already been a distinct advantage to the Belgians, as their industries in the past have suffered from the narrowness of the available home market and the small scale of its enterprises. During recent years, there has been growing evidence of a marked expansion of capital investment, coupled with a quickening of industrial re-equipment.

Progress in France

One of the major post-war developments in relation to textiles, particularly exports, has been the progress made in the French cotton industry. Not only have shipments exceeded those from Lancashire but important gains in productivity have also been secured. The current survey deals with the general industrial situation in France, rather than any particular sector, but reference is made to the influence on the labour force of this century's two major wars. The "active" population, for example, is expected to increase by 1.5 million to 28 million between 1956 and 1966 and by a similar amount during the following ten years.

Up to 1960, the French national effort was devoted to the re-attainment of the best post-war levels of output. Since then, in the space of little more than ten years, industrial production has practically doubled. According to the contributor, French opinion remains almost unanimously hostile to a simple return to some kind of free trade. Although a large part of French opinion is said to favour British and Scandinavian membership in the European Economic Community, there is also widespread apprehension that enlarging the Community may lead to some watering down of its positive aspects and a loss of dynamism due, it is believed, to greater cohesion and integration in a "big economic space."

German Revival

From the desolation and dejection which was Germany after the end of the last war has arisen a powerful and ever-growing industrial nation. Although the progress achieved by the Federal Republic has even been regarded as an "economic miracle," the writers in the survey admit that much of the country's recovery was hastened by non-economic and especially political influences. The increase of capital investment was a notable factor, and already by 1950 the investment ratio was very high by comparison with other countries. Changes in the pattern of consumption in Western Germany underline the rise in the general standard of living. Private demand for semi-luxury consumer durables has increased many times over in the last few years.

Foreign trade became even more important to the German economy after the war, with particular reference to the European Economic Community. In the past decade, a trade surplus of exports over imports was continually attained. The greater part of Germany's external business was done with the Western industrial countries and nearly half of this trade was with other member-States in the Common Market.

Opportunities Across the Channel

Leaders of the trade in Lancashire seem convinced that the advantages of Britain joining the Common Market will far outweigh the possible disadvantages. They are perhaps looking at the prospects through agreeably tinted glasses, but, in theory at least, it should be possible to anticipate a freer offtake in cotton textiles on the Continent, and more resistance to the rival products which must be expected from competitors across the Channel.

Sir Cuthbert Clegg, whose experience in negotiating with representatives of Eastern countries and others makes him an authority on the type of competition to be expected, contends that there must be opportunities for the sale of Lancashire's products in the Common Market countries where wage rates are similar to our own, and standards of living are rising rapidly. He is certainly on sure ground when he comments, in his annual statement as Chairman of Clegg and Orr Ltd., that mutual trade in such a market should be much more reliable than selling to some of Britain's traditional outlets, where political changes, high protective tariffs or payment difficulties have lately made exporting difficult or impossible.

Continual Modernisation

Another subject on which straight talking is required to convince outsiders that local traders are not always complaining, is re-equipment. A lot of hot air has been talked about the so-called failure of Lancashire to modernise, by people whose knowledge of the topic is marginal at best.

Sir Cuthbert points out that the increasing integration of the whole textile industry does not always mean the complete interchangeability of machines. "It uses the new man-made fibres as well as the older natural ones," he says, "and produces fabrics out of them on machinery which often has to be specially adapted or even freshly designed to give the high standards of quality which are demanded." Re-equipment, he rightly observes, has, therefore, to be a continual process. "It is not, as some people seem to suppose, a question of modernising a mill once and for all. In a few years the 'modernised' mill will be out of date again, and its machinery will have to be renewed afresh."—*All Rights Reserved.*

PAYMENT OF DIVIDEND ON PREFERENCE SHARES

NOTICE

IN CONNECTION WITH THE PAYMENT OF the above dividend for the half-year ending 31st March 1962, the Preference Registers of the Company will be closed from the 3rd April 1962 to the 10th April 1962, both days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.,

Secretaries.

CALCUTTA, 14*th March* 1962.

WHO SPEAKS FOR COTTON GROWERS?

TEXTILE COMMISSIONER DEFENDS CONTROLS

WHO speaks for cotton growers? This question has assumed importance, in view of the agitation now being carried on for the decontrol of cotton. Advocates of decontrol vehemently argue that controls have kept cotton price at an uneconomic level and that the cultivators have, therefore, no incentive to grow cotton, especially because other commercial crops such as groundnut, according to them, are far more remunerative. Curiously enough, such arguments come not from growers, who, being the wearers, surely know where the shoe pinches, but generally from traders and other middlemen. We are not aware of the existence of any association genuinely representative of cultivators which can speak with authority for the cotton growers in the country as a whole. In these circumstances, when self-appointed leaders of cultivators profess to speak for millions of growers throughout the length and breadth of the country, one is inclined to question their credentials.

One of the most vociferous champions of decontrol has been a section of the trade and certain co-operative societies in Gujarat. They have gone to the extent of closing down ginneries owned by them and suspending trading in cotton as a protest against the requisitioning order of the Textile Commissioner. Although the Textile Commissioner is reported to have succeeded in persuading these parties to discard the agitational path and to co-operate with the Government to make available cotton to mills at ceiling prices, they are still grumbling. Quite apart from the merits or demerits of the demand, the growing tendency of regional groups and sectional interests to coerce the Government into taking decisions affecting the country as a whole deserves to be severely condemned. Is it that the cotton interests in Gujarat only find the controls on prices and requisitioning irritating? Or do they think that they are more alive to the problems of cotton growers than their confreres in other States? After all, Gujarat is not the only cotton producing State in India. There are other States, too, which are equally large and important producers of cotton and it cannot, therefore, force the Government to take decisions which affect not only cotton growers in other States but also consumers, not to mention the export trade.

That the agitation and demonstration of the kind recently staged at Ahmedabad against requisitioning were unwarranted and uncalled for is evident from the facts mentioned by Mr. W. R. Natu, the Textile Commissioner, at a Press Conference held at Bombay towards the close of last week. In Gujarat, where requisitioning was vehemently opposed, hardly 3,500 bales of Vijay cotton out of a total crop of 400,000 bales have been requisitioned. In the whole country, out of a total crop of 4.3 million bales, only 15,000 bales have been requisitioned. It will thus be seen that only a negligible quantity of cotton has been subjected to requisitioning. All this hue and cry against cotton control is, therefore, of an inspired nature, apparently by interested parties who have been denied the opportunity to indulge in black-marketing.

Requisitioning Justified

Explaining the need and justification for requisitioning cotton, the Textile Commissioner stated that requisitioning had been resorted to only to ensure that the statutory ceiling prices of cotton were maintained and that mills got their supplies within the ceilings fixed by the Government. Requisitioning prevented the pipeline from drying up, as a consequence of the demand for premia by holders of cotton. It was the only weapon in the hands of the Textile Commissioner to maintain the price level within ceilings and it had to be resorted to when prices began to rise steeply.

Mr. Natu deplored—and that rightly—the agitation started by some co-operative societies in Gujarat which wanted controls on cotton to be lifted or, in the alternative, exemptions for co-operative societies from the operation of the ceiling. The Textile Commissioner stated that the Government was at one with the view that co-operative societies should be helped and encouraged as much as possible, as these societies procured *kapas* for ginning from farmers after giving them adequate returns, but emphasised that the ceiling prices fixed for cotton were applicable to the entire cotton produced in the country and must, therefore, include cotton processed by the co-operative societies as well. He could have also added that the co-operatives have been favoured with liberal credit facilities at low rates of interest which are not available to individual farmers and that this, as well as other concessions given to them at the expense of taxpayers as a whole, imposed a moral obligation, over and above the legal obligations, on them to observe the cotton control orders in spirit and letter alike. In fact, we feel that any co-operative which wants to have the cake and eat it at the same time should be firmly told that they will have to face the risk of being disqualified for special concessions.

Dealing with the plea for decontrol, the Textile Commissioner pointed out the possible repercussions of lifting of controls on the price of cloth and yarn. If cloth prices were to work properly under the voluntary price control (now in force), it was necessary, he averred, that the statutory ceiling prices were maintained on the raw materials too, as cotton formed 50 to 60 per cent of the cost of production of cloth. Any increase in the price of cotton, he warned, would adversely affect exports of cloth, because the resulting increase in the price of cloth would undermine the competitive capacity of exports which had to face severe competition in foreign markets.

Case for Decontrol Weak

The Textile Commissioner dealt at length with the arguments put forward for decontrol. He listed five reasons advanced by advocates of decontrol in support of their plea. These are: (1) ceiling prices were fixed in 1950-51; (2) their continuance even after a decade is unrealistic; (3) prices of other commercial crops are not controlled and their prices have increased in the past ten years; (4) the present prices of cotton would lead to diversion of acreage from cotton to other commercial crops; and (5) prices of cloth and *kapas* are not controlled and hence cotton should also be freed from controls.

Answering these arguments, the Textile Commissioner observed that it was not correct to say that ceiling prices were strictly the same today as they were in 1950-51. Some changes were made on various occasions after consulting the growers, the trade and the Indian Central Cotton Committee. Mr. Natu pointed out that price control had two aspects—floor prices and ceiling prices. He wondered why the critics of controls, who had been urging the abolition of ceilings, did not advocate the removal of floors also. Floor prices were in force for many years and they were raised during the current season by Rs. 105 per candy to Rs. 600 for the basic variety. Proportional revision of the floors of other varieties was also made. The Government had also given an assurance that should prices of cotton tend to go below the floors, it would step in and buy cotton at the floor prices.

Bogey of Diversion of Acreage

Answering the argument that controls on cotton prices would lead to diversion of acreage from cotton to other crops, the Textile Commissioner pointed out that, in spite of controls, acreage had progressively increased from 18 million acres to about 19.9 million acres in some years. Again, in spite of the wide disparity in prices during the past three seasons, the area under cotton had been more or less constant at about 19 million acres during these years. There had, of course, been some diversion of area from cotton to groundnut in Gujarat and Maharashtra, but, considering the size of the country, this was negligible. Acreage under cotton was not, according to Mr. Natu, governed, to any large extent, by considerations of price. It was determined by several other factors such as reluctance of farmers to switch over to any other crop and availability of fertilisers and insecticides. In view of these factors,

ASHOK LEYLAND LIMITED, MADRAS

IMPRESSIVE RISE IN VEHICLE PRODUCTION

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR'S SPEECH AT ANNUAL MEETING

ADDRESSING the Thirteenth Annual General Meeting of Ashok Leyland Ltd. held at Ennore, Madras, on 12th March 1962, the Chairman of the Company, Dr. A. Ramaswami Mudaliar, reviewed the progress of the Company during the last five years. With a plant and machinery designed to produce 1,000 vehicles per annum on single shift, the Company was able to produce 2,400 vehicles in 1961 with double-shift working and is expected to turn out 3,000 vehicles that year. Along with the rise in production, there has also been a progressive decline in imported components. Referring to rail-road controversy, the Chairman said that road and all other forms of transport must expand if only to assure the success of India's agricultural and industrial development. This expansion, he pointed out, would bring increased demand for commercial vehicles which would be equal to double the present production targets. The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the thirteenth annual general meeting of your Company.

"The Directors' Report, audited balance-sheet and profit and loss account for the period from 1st January to 30th September 1961 have been circulated to you and with your permission I shall take them as read.

"At the last annual general meeting I referred to the change in the financial year which the Directors decided to make. This is reflected in the balance-sheet and profit and loss account before you which cover a nine-month period only from 1st January to 30th September 1961 and the future financial years will run from 1st October to 30th September inclusive.

"As the profit and loss account shows, the sales for the nine-month period at Rs. 8,11,93,053 are a little less than the figure of Rs. 8,32,66,909 representing sales in the previous twelve months. It is gratifying to note that the value of sales in nine months this year has nearly equalled that in twelve months last year, a result which was achieved mainly by increasing the output of Comet chassis, the average output per month being 170 in 1960, as against 195 during the nine-month period in 1961, an increase of nearly 15 per cent.

"The continuous expansion of the factory is the result of the investment of funds mainly raised by additional share capital and, to some extent, by external credit. There has been only a negligible contribution of funds from the profits of the Company. In an expanding industrial unit, where plant and machinery have been added and additional buildings have been constructed to accommodate the plant and machinery and the increased activities of the Company, it must be obvious that, after providing for depreciation, development rebate and taxation reserve, there will be little left for ploughing profits into the concern. The small surplus remaining after these expenditure have been appropriated for a reasonable dividend. Your Directors are considering ways and means by which there might be a reasonable amount of profit which could be ploughed back into the concern for further expansion.

Impressive Progress

"The progress of your Company during the last five years must be recognised to have been impressive. The rapidly expanding assets have been appropriately depreciated so that the total depreciation up to 30th September 1961 exceed Rs. 98 lakhs. The development rebate stands at Rs. 37.25 lakhs. With a paid-up capital of approximately Rs. 3.45 crores, the gross block on 30th September 1961 was over Rs. 3.76 crores and the total assets on that date included stocks valued at Rs. 3.21 crores. I may mention here that the price charged by the Company for your Comets is the same today as it was in 1955, the difference in selling price being accounted for by the additional customs or excise duties imposed in successive Finance Acts. I am not aware of any other automobile company which has maintained its price at the same level during the last seven years.

"Additional buildings to a value of approximately Rs. 40 lakhs have been erected and additional plant and machinery of a value exceeding Rs. 56 lakhs have been installed during the year under review. These additions represent partly the provision of plant and machinery to carry forward the phased manufacturing programme and partly the buildings, plant and machinery required for the expansion programme to which I referred last year. Buildings required for the expansion of production are nearing completion and the installation of plant and machinery has commenced. I hope that, by the end of the current financial year, i.e. by 1st October 1962, nearly all the machine tools will have been installed and most of the jigs and tooling required for the production of components in accordance with the phased planning will have been supplied. We look forward to the production and sales continuing to increase during 1962 and I trust that in 1963 the expansion programme having been completed, our output of Comet chassis will be at the rate of 5,000 per annum with a 20 per cent excess capacity for the production of spare parts. In addition, engine output will have been increased to provide not only the Comet engines, but also the heavier '600' and '680' types required for chassis and industrial applications.

3,000 Vehicles This Year

"It will not be inappropriate if at this stage of our development I attempt to review the task we have undertaken during the last few years. As I stated, its magnitude is impressive. In 1956, at the commencement of the phased manufacturing programme, it seemed an optimistic estimate that we might within five years reach an output of 1,000 Comets per annum; and with restrictions on gross laden weights in most States, preventing the operation of our goods vehicles, it appeared a most formidable task to sell 1,000 vehicles per annum. However, by the end of 1957, it was clear that demands for our vehicles would exceed our ability to supply. Pending the practibility of a major expansion project, it was decided to introduce double-shift working with the object of increasing production to 2,000 vehicles per annum. It is no small satisfaction to the Board and myself that, with plant and machinery designed to produce 1,000 vehicles per annum with single-shift working, the factory was able to produce nearly 2,400 in 1961 and will probably produce over 3,000 in 1962 with double-shift working. Coincident with the task of increasing production with the plant and machinery currently available and with the progressive deletion of imported components, planning has been in progress since 1959 to give effect to the decision to increase production capacity to 6,000 'Comets' and in addition 1,200 Heavy Duty Engines per annum.

Progress of Foundry

"Ennore Foundries Ltd. has made good progress since your last annual general meeting. Production commenced in November 1961 and, by the end of March 1962, it will supply all the castings required by Ashok Leyland Ltd. which from April 1962 will discontinue the import of castings, including cylinder blocks and heads. From May 1962 progressively surplus capacity will be available for the supply of quality castings to users other than your Company. There are, nevertheless, certain difficulties which Ennore Foundries Ltd. have to face. Steel scrap is in short supply and is expensive, while pig iron available in the country has too high a prosphorous content. These difficulties may be overcome in due course, but while they persist the price of high quality grey iron castings will remain higher than it might otherwise be. Until these difficulties are overcome, it is unlikely that it will be possible to produce iron castings appreciably more cheaply than the landed cost of imported castings. It is hoped that before too long there may be definite plans to produce 'Sponge' iron in India as this would provide an ideal raw material, as an alternative to steel scrap, at an economic price. 'Sponge' iron is obtained by the direct reduction of iron ore by suitable carbonaceous matter; and considerable progress has been made in this new technique, particularly in Germany. Madras has iron ore available at Salem and lignite at Neyveli, which could provide an ideal combination for the production of 'Sponge' iron, which would be very useful not only to iron foundries but also to steel works.

Road Transport

"There has been from time to time discussions about the competition of road transport with rail transport and opinions have been expressed in some quarters that the railway earnings must be protected and that they ought not to be eroded by road transport earnings. A review of present conditions of traffic on rail and road and a reasonable forecast for the future must leave one under no delusion about the necessity for road traffic developing and indeed side by side with the development of rail traffic. It must be clear in the light of recent experience that road and all other forms of transport must continue to expand and that in no other way can the success of India's agricultural and industrial development be assured. This expansion will during the next ten years not only result in the demand for commercial vehicles equalling the combined output of manufacturers but also in increased demand to a figure which may well be 100 per cent more than the existing maximum production targets. The Board has, therefore, decided to go forward with the expansion project with confidence and be ready for such further developments as time and circumstances may demand.

"You will be interested to know that, following requests received from a number of shareholders, we have come to an arrangement with our bankers whereby they will charge us a concessional rate of 1/64 per cent on the total payments to shareholders who encash dividend warrants at any branch of our bank; and this charge will be paid by the Company. This will obviate shareholders having to pay bank charges of naye paise sixty-five per warrant in order to encash them at out-stations.

Visit of Leyland's Chairman

"Since your last annual general meeting, we have had several visits from senior officials of Messrs. Leyland Motors Limited. Mr. West, Deputy Chairman of Leyland, accompanied by Mr. Grimshaw, Leyland's Engineering Consultant came in November 1961; and Mr. Robinson, Leyland's Planning Controller in January 1962. In Februray 1962, we had the pleasure of welcoming Sir Henry Spurrier, Chairman of the Leyland Group, who visited us accompanied by Mr. West and Mr. Grimshaw. I must once more place on record not only our appreciation of the readiness with which our British Associates come to India to assist our efforts, but also of the invaluable advice which we receive from them. I am sure you will wish me to convey to them, and particularly to Sir Henry Spurrier our thanks for all their assistance.

"As Chairman I feel I must refer to one of my colleagues on the Board whose contribution to the progress of your Company has been out standing. I refer to the Managing Director, Mr Collins. His initiative and drive combined with his suavity—an invaluable asset to both in the factory and in relations with Governments—has been a great factor in all our progress.

"I must also record the enthusiastic help and co-operation which the officers, staff and workers of your factory have extended to your Directors. This co-operation has been readily given, indicating the interest of all employees in the development of the factory and the cordial relations which exist. I should like to convey our thanks to them all."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

BID-BOND GUARANTEE

RAILWAY ADMINISTRATION DISCRIMINATES AGAINST PRIVATE INSURERS

THE fear of general insurers that the directive recently issued by the Bombay Municipal Corporation to owners of buildings constructed on plots leased by it to have the fire insurance of such buildings placed with the Indian Insurance Companies Pool (75 per cent of the pool business is allotted to the insurance companies in the public sector) was only the thin end of the wedge has proved true. For a similar directive has been issued by the Railway Administration, which, if implemented, would result in depriving insurers in the private sector of yet another source of business. It is reported that the Railway Administration has decided to accept bid-bond policies insured with only the companies in the public sector doing general insurance business, namely, the Oriental Fire and General Insurance Company, Ltd., Bombay, the National Fire and General Insurance Company, Ltd., Calcutta, and the Asiatic Government Security Life and General Assurance Company, Ltd., Madras. Private sector companies have been issuing such guarantee policies for many years and the latest fiat from the Railways will hit them hard.

It is not known as to what was the immediate provocation for such a decision. Insurance circles are inclined to think that it is part of a calculated policy of strengthening the public sector in insurance at the expense of the private sector by taking away from the latter, one by one, all business that is even remotely connected with a Government or semi-Government body. They are surprised and pained to find that, while on the one hand, the Government and its chief spokesmen decry sectoral thinking, and assert that both the public and private sectors should develop and expand in the national interest, in practice it follows a policy of discrimination against the private sector. Private insurers concede that, in the larger interest of the insurance trade, the public sector companies should be fostered and strengthened, but should this be done, they ask, at the expense of the private sector in insurance, which, whatever may be its defects and shortcomings, have done a pioneering job and built up the industry from scratch to its present position? There is still scope for developing general insurance and for diversifying the scope and range of the covers provided. The public sector companies are large and experienced enough to venture into new and unexplored fields of underwriting. The fact that instead of concentrating their effort on such truly developmental activities, they should exploit any opportunity to grab the business which private insurers have been doing for years, is not regarded by private insurers as a healthy trend.

Association's Protest

Protest against the Railways' move has already been voiced by the Indian Insurance Companies Association, Bombay. In a memorandum sent to the Railway Administration, the Committee of the Association has pointed out that the decision of the Railway Administration to accept only the policies issued by the public sector companies is discriminatory and that there is no reason or justification for interference with an established practice which had benefited both the railways and its customers, not to speak of insurers themselves. The Committee of the Association points out that, to the best of its knowledge, not a single company had failed to honour its obligations as per the terms of its guarantee and it is therefore at a loss to understand the *raison d'etre* of the move. The memorandum has, therefore, requested the Railway Administration to review the position and to restore the *status quo ante*.

Some insurers are optimistic that they would succeed in persuading the Railway Administration to revoke its decision, because representation made by the Association direct and through the Indian Merchants' Chamber to the Bombay Municipal Corporation has borne fruit. The Committee of the Chamber, in a communication to the Municipal Commissioner, Bombay, had made the following plea:

"The Committee of the Chamber have given careful consideration to the representations received in this regard. It is not clear to them as to the reasons which have prompted the issue of the directive in question. Fire insurance business in respect of the buildings in question has been placed with individual insurance companies since last several years and the policies issued by these companies have been accepted by the Corporation and, as far as it is known, there has not been any case of an insurance company having failed to meet its obligations throughout this period.

"Perhaps, the proposal has been mooted in terms of the Pool Agreement providing 75 per cent participation for Government-controlled companies and 25 per cent for companies in the private sector in respect of insurance business under direct or indirect control of Government, Municipalities, Local Bodies, Universities and certain other institutions aided by Government. In the opinion of the Committee, however, insurance of properties constructed by lessees on Improvement Trust plots cannot be deemed to be coming within the purview of the Pool agreement. They, therefore, feel that there is no justification for the issue of the directive to the owners of the buildings constructed on plots leased by the Improvement Trusts that they should insure the buildings in question against the risk of fire by obtaining cover for the same from the Indian Insurance Companies Pool. Such a proposal will only deprive a number of insurance companies of a large source of revenue by precluding them from catering to the needs of the owners of such buildings as they have been doing heretofore."

In response to these representations and impressed by the logic and justice of their plea, the Bombay Municipal Corporation has rescinded its earlier directive and restored the *status quo ante*. Accordingly, lessees are again free to place fire insurance of buildings constructed on plots leased by the Improvement Trust of the Corporation with individual insurance companies of their choice.

REDUCTION IN FIRE PREMIUM RATES

At a two-day meeting which concluded at Bombay on the 16th inst., the Tariff Committee of the General Insurance Council is reported to have tentatively agreed to reduce the fire premium rates by about 15 per cent. The exact percentage of the cut and the date on which the reduced rates will come into force will be fixed at a meeting of the Tariff Committee scheduled to be held at the end of this month at New Delhi. The decision taken at this meeting will be communicated to the Controller of Insurance for approval.

The move for the cut in premium rates would appear to have been mooted by the Controller of Insurance who seemed to have wanted a reduction of as much as 40 per cent in the fire premium rates. The justification advanced for this and previous reductions in fire premium rates is that the margin of profit in the fire portfolio is comparatively on the high side and that this largely accounts for the prevalence of the evil of rebating. Reduction in premium is expected to reduce the profit of fire business and thereby make it impossible to give large rebates in the premium. The insurers' reply to this argument is that a reduction in fire premium will weaken their financial position, as a part of the profit on fire business is being utilised to subsidise the other two main economic lines of business, namely, marine and miscellaneous. They also maintain that rebates cannot be stopped in this manner. For, in spite of successive reduction in fire tariff rates in the past, illegal rebates continued to be growing. The fault, it is pointed out, lies elsewhere and should be remedied by appropriate measures.

TEXTILES

(*Concluded from page 504*)

tons. The next largest producer was China, with something in the region of 7,000 tons, and then Russia, with an estimated output of 2,900 tons. The only West European country to feature prominently on the list was Italy which came fifth with 892 tons, some 150 tons less than India. Neither China nor the Soviet Union has been placed among the leading exporters, but nevertheless theirs are the only industries to have succeeded in increasing their output as compared with 1938. In the case of Russia, the increase is about 1,000 tons and in that of China nearly 2,000 tons. No official figures are, however, available.

Commenting on the recent trends, the *Financial Times*, London, observes:

"Although international trade in silk has dropped disastrously within the last 24 years, Japanese domestic consumption has held up remarkably well. The figure of 15,414 tons for 1960 was actually slightly more than that of 1938. The only other non-Communist countries even to reach four figures were the U.S., France, and Italy. The U.K. was a relatively small importer, taking only 253 tons, though this was more than 100 tons up on 1958. The general pattern of trade undoubtedly remained much the same in 1961, but the decline seems to have been more marked in Western Europe than in the U.S. At the end of November 1961, French imports alone were standing at 27 per cent less than at the same time in the previous year. However, in all the main markets, the manufacturers are attempting to restore silk to popularity through large-scale advertising campaigns. In the advertisements, the unique quality of silk in an age of synthetic fabrics is strongly stressed. A well-known one in the U.S. simply shows a girl in a silk dress under the caption 'Only silk is silk.' It is claimed that these campaigns have already had some success in both the men's and women's fashion fields and that silk underwear may be on the way back."

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

OUTLINE OF CENTRAL BUDGET

REVENUES BUOYANT—CAPITAL OUTLAY LARGE

THE gross revenue receipts of the Government of India for the ensuing financial year (commencing from 1st April next) as estimated in the interim budget presented to Lok Sabha last week stand at the all-time peak of Rs. 1,305.87 crores which represents an increase of as much Rs. 226.76 crores as compared with the revised estimate of Rs. 1,079.11 crores for the current year (1961-62) which itself was well above the budget estimate of Rs. 1,017.95 crores. A good part of this increase, as we shall presently show, reflects the effect of certain important changes in the accounting procedure covering both sides. Even so, the revenues are expected to be buoyant as they have actually been in 1961-62. Despite a marked rise in receipts, the revenue budget shows a sizable deficit of Rs. 63.46 crores in contrast to the surplus of Rs. 33.96 crores disclosed in the revised estimate for 1961-62. This is because of the continuously and rapidly expanding tempo of revenue expenditure which for the coming year is placed at Rs. 1,369.33 crores, that for the current year being Rs. 1,045.15 crores (revised) and Rs. 1,023.52 crores (budget). In addition to the revenue deficit of Rs. 63 crores, the deficit on capital account is of the order of Rs. 84 crores—receipts and expenditure being placed at Rs. 1,331 crores and Rs. 1,415 crores, respectively—so that the overall deficit for 1962-63 is pretty heavy: Rs. 147 crores, as against Rs. 121 crores (revised) and Rs. 70 crores (budget) for 1961-62. The entire deficit is, as is only to be expected, left uncovered, since the main purpose of the budget is to facilitate a vote on account to meet the expenditure of the Government until the new Parliament considers the budget again.

Revenue Estimates

As compared with the budget estimate for 1961-62, the revised estimate of revenue shows a rise of Rs. 61.16 crores. The rise was due mainly to better collections under customs, Union excise duties and corporation and income taxes. Larger imports of machinery and mineral oils as well as the imposition of countervailing duties under the latter accounted for an increase of Rs. 9.96 crores under customs. Union excises are expected to be more by Rs. 38.32 crores, following the general improvement in production and clearances, increase in duty on mineral oils, and better realisations from new excises. With the rapid growth of business and industry, the revenue from income-tax, including corporation tax, is likely to go up by Rs. 28 crores. These improvements have, however, been partly counterbalanced by the increase of Rs. 13.45 crores in the States' share of income-tax and estate duty. Civil expenditure this year is now estimated at Rs. 743.22 crores, as against the original budget of Rs. 742.60 crores, and Defence expenditure at Rs 301.93 crores, as against Rs. 282.92 crores. The increase in civil expenditure is the net effect of variations over a number of heads—debt services, subsidies on sugar exports, movement of coal by sea, States' share of excise duty and transfer of grant under P.L. 480 funds to the Special Development Fund. A part of these increases has been partly made good by a number of savings, particularly under "Social and Development Services" and in grant to States in lieu of their share of income-tax. The increase in the Defence estimates is due mainly to increase in the provision for stores, equipment, transportation and other charges.

The anticipated improvement of Rs. 226.76 crores in revenue estimates for 1962-63 as compared with 1961-62 (revised) is attributed largely to the change in the classification of interest recoveries from States and commercial departments, the amount actually involved being Rs. 149.57 crores. The balance of the increase, Rs. 77.19 crores, is spread over a number of heads, as the accompanying table at the bottom shows. Gross revenue from Union excise duties, for instance, are placed higher by Rs. 21.33 crores at Rs. 492.28 crores, corporation tax by Rs. 8.00 crores at Rs. 168.00 crores and taxes on income by Rs. 6.00 crores at Rs. 148.00 crores. Customs receipts are left unchanged at Rs. 199.60 crores. The revenue receipts from Goa, Diu and Daman are expected to amount to Rs. 5.01 crores.

Out of the gross revenue expenditure of Rs. 1,369.33 crores for 1962-63, civil heads account for Rs. 1,028.66 crores (a rise of Rs. 285.44 crores over the revised estimate of Rs. 743.22 crores for 1961-62) and defence expenditure for Rs. 340.67 crores (rise of Rs. 38.77 crores over 1961-62). Excluding Rs. 151.13 crores on account of changes in accounting classification of interest recoveries and working expenses of commercial departments, the civil expenditure next year shows an increase of Rs. 134.31 crores distributed over a number of heads. The growing volume of both internal and external public debt accounts for a rise of Rs. 12.23 crores. Social and development services will be more by Rs. 14.74 crores and transfer of P.L. 480 grant to the Special Development Fund by Rs. 27 crores. Following the acceptance of the Finance Commission's recommendations, the States' share of Union excise duties will be higher by Rs. 33.43 crores. A sum of Rs. 5.28 crores has been provided for the requirements of the territories of Goa, Daman and Diu, besides Rs. 7.5 crores for payment to the Reserve Bank for withdrawal of escudo currency in these territories. Grants to States show a net increase of Rs. 13.79 crores. Other increases are spread over a number of heads. The net rise of Rs. 38.74 crores in expenditure on Defence Services in the coming year is mainly under Army and Air Force estimates.

Capital Outlay

The current year's budget provides for a total capital outlay of Rs. 454 crores, exclusive of adjustment for transfer of capital assistance from the U.S. to the Special Development Fund. The revised estimate of outlay is Rs. 427 crores, showing a saving of Rs. 27 crores. The saving is the net result of several variations in respect of food purchases, Defence capital outlay, Oil and Natural Gas Commission, Heavy Engineering Corporation, Delhi Capital outlay, National Coal Development Corporation and the Shipping Corporation. But these shortfalls will be partly covered by the increase of Rs. 27 crores on account of Railway capital requirements, Hindustan Steel, Indian Refineries and the Neyvell Lignite Corporation.

The provision for capital outlay next year is Rs. 588 crores, representing an increase of Rs. 161 crores over the current year's revised estimate. The increase is chiefly attributable to the stepping up of Plan outlays in the second year of the Plan. Provision has been made for the requirements of Hindustan Steel, Railways, foodgrain purchases, border roads, Oil and Natural Gas Commission, national highways, Heavy Engineering Corporation, Farakka Barrage Project, Defence capital outlay and Atomic Energy research.

In addition to direct capital outlay, the estimates include Rs. 469 crores this year and Rs. 453 crores next year for loans to States, as against the original provision of Rs. 409 crores. The grant of *ad hoc* loans amounting to Rs. 30 crores to four States to clear their overdrafts with the Reserve Bank at the end of the second Plan and larger ways and means advances to cover the temporary lag in the resources of State Governments explain the larger requirements in the current year. Loans to other parties are now estimated at Rs. 152 crores this year and Rs. 147 crores next year, as compared with the original budget of Rs. 171 crores for 1961-62.

Plan Expenditure

The next year's estimates include a total provision of Rs. 1,107 crores for implementing the Plan, comprising Rs. 192 crores on revenue account and Rs. 915 crores as capital outlay including loans. In addition, the Railways are expected to provide Rs. 26 crores and Hindustan Steel Rs. 30 crores from their own resources. Assistance to States amounts to Rs. 405 crores, of which Rs. 96 crores will be in revenue budget and Rs. 309 crores in capital budget. With the resources of Rs. 283 crores which the States are expected to raise on their part, the outlay on State Plans next year is expected to aggregate Rs. 688 crores. The outlay on Central portion of the Plan is placed at Rs. 758 crores. The total Plan outlay of both Central and State Governments in the coming year will thus be of the order of Rs. 1,446 crores, which means the stepping up of the current year's budgeted outlay of Rs. 1,214 crores by 19.1 per cent. Allowing for possible shortfalls, the actual Plan outlay in the first two years is likely to cover about one third of the target of Rs. 7,500 crores envisaged in the Plan.

Overall Deficit

The overall deficit in the budget for current year had been estimated at Rs. 70 crores, of which Rs. 64 crores were expected to be met by expansion of treasury bills and the rest by drawing down of cash balance. According to the latest assessment, the overall gap is now expected to increase to Rs. 121 crores. This means that, despite the revenue deficit of Rs. 6 crores having been converted into a surplus of Rs. 34 crores and despite a saving of Rs. 27 crores in capital expenditure, the overall gap will be Rs. 51 crores more than the original estimate. This is mainly due to shortfalls in both internal and external borrowings. Net market borrowings, including small savings, will show a drop of Rs. 38 crores, while net borrowings from abroad will be less by Rs. 47 crores. P.L. 480 deposits will also show a shortfall of Rs. 36 crores.

For the next year, credit is being taken for a market borrowings aggregating Rs. 260 crores (including Prize Bonds) and Rs. 105 crores net from small savings. The budget is also assuming a credit of Rs. 455 crores from foreign loans and Rs. 90 crores from P.L. 480 deposits, inclusive of Rs. 50 crores to be transferred from the monies formerly deposited to the State Bank of India.

The overall budgetary position for the coming year is summarised thus: The revenue budget is expected to show a deficit of Rs. 63 crores. Capital outlay will amount to Rs. 588 crores, loans to States and other parties Rs. 600 crores, and debt repayments Rs. 227 crores. The total disbursement of Rs. 1,478 crores is expected to be met to the extent of Rs. 820 crores from internal and external borrowings, Rs. 218 crores from repayment of loans, Rs. 90 crores from investment of P.L. 480 funds and Rs. 203 crores from miscellaneous debt and deposit heads, leaving a gap of Rs. 147 crores.

Finances of Central Government—A Summary

(In crores of rupees)

	1960-61 (Accounts)	1961-62 (Budget)	1961-62 (Revised)	1962-63 (Budget)

AUTOMOBILE ANCILLARY INDUSTRIES

DYNAMIC EXPANSION UNDER WAY

WITH the growth in the production of cars, jeeps and trucks in recent years, the automobile ancillary industries too have registered a proportionate growth. In 1960, for instance, the aggregate production of automobiles was 52,115, while the production of components (excluding tyres, tubes, other rubber items, batteries and ball bearings) in the organised and small-scale sectors together was valued at Rs. 14 crores in the same year. The number of automobiles produced in the first ten months of 1961 aggregated 46,540, while the output of components is estimated to have been of the order of Rs. 17 or Rs. 18 crores in the whole of that year and is currently reported to be running at an annual rate of Rs. 18/20 crores. It is expected to rise to Rs. 35 crores by the end of the third Plan, keeping itself in step with the growth of automobile production to one lakh vehicles (40,000 cars and jeeps and 60,000 trucks with an average indigenous content of 80 to 90 per cent) by the last year of that Plan.

How impressive will be the growth of automobile ancillary industries may be known from the figures of investment. In the automobile plants the current investment is Rs. 24 crores, while in the ancillary sector it is Rs. 6 crores. The additional investment in the third Plan period is expected to be Rs. 76 crores in the automobile plants and Rs. 24 crores in the ancillary sector. As a result of so much additional investment it is envisaged that the ancillary industries will attain the targeted level of production (upwards of Rs. 35 crores without including tyres and tubes, batteries and ball bearings) by the end of the third Plan and turn out the entire range of components amenable to independent manufacture. Readers may be interested to know, in this connection, the more important items which are either in production or have been covered by schemes sanctioned by the Government. These items are:

(i) Engine and engine parts like diesel engines, pistons, piston rings, cylinder liners and engine valves.

(ii) Fuel and fuel injection components like carburettors, fuel pumps, fuel injection system, fuel tank and cap, etc.

(iii) Ignition and electrical parts like spark plugs, ignition distributors, starter motors, dynamo motors, condensers, rotors, electrical bulbs and horns, head and side lamps, armature and voltage regulators.

(iv) Brake and brake system components like master cylinder, wheel cylinder, brake hose and brake shoes.

(v) Clutch and clutch parts like clutch plate, pressure plate, clutch facing and clutch bearing.

(vi) Cooling system components like radiator, radiator cap and radiator hose.

(vii) Chassis and chassis parts such as propeller shaft, axle shaft, King pins, bushings, chassis bracket, laminated springs, coil springs, etc.

(viii) Instruments like speedometers, ampsmeter, oil gauge, petrol gauge and taximeter.

(ix) Tyres, tubes and accessories like tube valve pins, valve bodies and caps.

(x) Auto chemicals like body polish, brake fluid, gasket shellac, radiator cement and soldering fluid.

(xi) Garage equipment like car washers and service station equipment, battery chargers, spanners, hand and foot pumps, screw drivers and rim wrenches.

It is noteworthy that the Government has shown a marked preference for independent ancillaries in licensing new units in the industry. Almost all components and sub-assemblies normally produced by specialised manufacturers outside automobile factories have been licensed in the ancillary sector and many of these items are in production in the country in collaboration with reputed foreign firms. As an automobile consists of four to five thousand parts and as it will be impossible for a single automobile plant to produce such a large number of components economically, the Government of India has lately shown an awareness of the need to develop ancillary capacity for the manufacture of original equipment components, so that the vehicle manufacturers can be relieved, to a considerable extent, of the necessity of continuing in such uneconomic operations of producing components which can be produced more economically by the specialised manufacturers. It is to be hoped that, when the remaining 75 units out of the total of 150 ancillary units borne on the list of the Development Wing go into production, the ancillary industries will begin supplying more original equipment components to the automobile industry, besides supplying spare parts for the replacement purposes of the vehicles on the road.

Already in 1961, according to Mr. Pranlal Patel who delivered the presidential address at the second annual general meeting of the All-India Automobile and Ancillary Industries Association held at Bombay on the 17th instant, a number of important and special components, both for original fitment and for replacement, registered significant increases in production. Among these were pistons, piston rings, gudgeon pins, cylinder liners, valves, fuel injection equipment, gaskets, spark plugs, filters, thin walled bearings, tie rod ends, propeller shafts, wheels, brake linings, clutch facings and a whole range of chassis parts. Mr. Patel also testified to the recent trend of active co-operation from the side of vehicle manufacturers. Their patronage to the products of ancillary industries has been increasing, and this hopeful trend has led Mr. Patel to think in terms of eventual integration of the ancillary industries with the automobile industry so as to fulfil the task of 80 to 90 per cent average indigenous content set for the industry in the third Plan. A factor that will operate as a great help to the ancillary industries in the years to come pertains to standardisation and uniformity, thanks to limiting the manufacture of automobiles to a few makes and models—three for passenger cars, four for trucks, one for 'people's car' (if and when it comes) and one for jeeps.

But the ancillary industries are not without their share of difficulties in common with other industries. The slowness in disposal of applications for import of capital goods and raw materials is one of them. Mr. Manubhai Shah, Union Minister for Industry, who spoke after Mr. Pranlal Patel at the meeting of the Association, admitted that there was a shortage of imported raw materials in spite of the fact that as much as 73 per cent of the country's import bill as a whole was being utilised for imports of raw materials and components. But he did not hold out any hope of further improvement in this respect to the automobile ancillary industries, for which the foreign exchange allocations had doubled in the last two years. On the contrary, he emphasised that the raw material requirements could be met more fully only by increasing exports and earning more foreign exchange. In this connection, he advised the Association to prepare a list of ancillary items that could be exported from year to year, so that some incentives could be given to the firms concerned for the purpose. That the Association itself has been engaged in consultation with the Engineering Export Promotion Council for some time over the question of exports is a hopeful sign.

WATER FROM DESERT

A Japanese has invented a simple device by which water can be obtained even from the desert. According to Mr. Kobayashi, Director of the Japan Electrical Research Institute in Kawasaki City, Kanagawa Prefecture, his invention succeeded in obtaining water from the desert area near Mt. Mihara on the island of Oshima, southeast of Tokyo. During his experiments carried out on the "Japanese Desert" on Oshima, he was able to collect one litre of water from one square meter of sand surface during a 24-hour period. On his way to the international conference on the utilisation of new energy sources held in Rome last August under the sponsorship by the United Nations, Mr. Kobayashi carried out a similar experiment at Quetta, an arid area in Pakistan, and was successful in obtaining almost the same results as the tests conducted on Oshima. Since the experiments have been conducted only in two countries so far, the inventor feels that he must carry out more tests in the deserts throughout the world in order to obtain convincing proof of the success of his invention. The invention is quite simple; the device consists of only a plate of glass within a square frame lined with adiabatic material. The glass is so placed that the solar rays hits the glass at right angle. Moisture forms on the inside surface of the glass plate and finally becomes drops of water which is then collected.

Underground water is present in any area no matter how dry the surface of the ground. This underground water gradually seeps up to the surface through capillary action, but it evaporates into the air almost instantly in arid and hot districts. However, when this device is used, the water, in the form of vapour which rises up to the surface from deep below the ground, becomes saturated in the box and forms moisture on the inside surface of the glass plate. The water obtained from this moisture is natural distilled water which is entirely free from impurities. Water can be obtained by the device even at night when the sun is down. This is because subterranean heat still exists at night due to the surface of the ground having been heated by the sun during the day time. The volume of water obtainable from low areas in a desert is the same as that from higher locations such as sand dunes. This is because the height of the sand dunes is insignificant compared with the depth where the underground water is located. This device, which was reported in a conference concerning the utilisation of solar energy held recently in Tokyo, is reported to have caused quite a sensation. It was also reported that it aroused considerable interest among the participants at the Rome conference last August.

MINERAL PRODUCTION

There was a general increase in the production of minerals, both metallic and non-metallic, during December 1961, according to the statistical summary of mineral production released by the Indian Bureau of Mines. Among the metallic minerals, the output of manganese ore during the month was 104,000 metric tons, which was higher by 1,000 metric tons over the production in November, 1961. The total production of this mineral during 1961, which was 1,204,000 metric tons, was also higher by 5,000 metric tons over that of 1960. Iron ore production during the month was 1,141,000 metric tons.

Among the non-ferrous group of minerals, the output of copper ore increased by 4,404 metric tons to 40,251 metric tons. Lead and zinc concentrates also registered a sizable increase in production during the month. There was an increase in the production of gold from 415 kg. in November to 425 kg. in December, 1961. Output of silver also improved from 440 kg. in November to 550 kg. in December. The total production of silver during the year 1961 exceeded the previous year's output by 44 per cent.

Among the non-metallic minerals, the production of crude mica recorded a sizable increase from 1,889 metric tons in November to 2,470 metric tons in December, 1961. The production of limestone increased by 111,000 metric tons, reaching 1,352,000 metric tons during the month under review. The total output of limestone during 1961 was 14.3 million metric tons, which was higher by 12 per cent as compared to the production during the year 1960.

P.A.L.'S 100,000th VEHICLE

Premier Automobiles Ltd. (Bombay) which has the distinction of having established the first automobile manufacturing factory in the country way back in 1947, celebrated on the 16th instant a proud event in its brief history. The event was the completion of the 100,000th vehicle in the Kurla factory of the Company. Press men who were taken round the different divisions of the factory could see for themselves the big strides made by the company in the manufacture of components for the Fiat cars and Dodge and Fargo trucks. It is indeed remarkable that P.A.L. is now manufacturing nearly 80 per cent of the components of its cars and trucks. These components include engines (both petrol and diesel), chassis frames, axles and transmissions. Among the few components that are still imported, the major one is the car body. There will be no need to import this item when the Company's sheet metal pressing unit goes into production by the end of this year.

As of 1961, Premier Automobiles has reached a high level of annual production, with a turnover of about Rs. 25 crores and an output of 13,000 vehicles. It is also noteworthy that P.A.L. leads the other automobile manufacturing concerns in the country in the number of vehicles so far produced. The day when the Company will turn out a completely Indian-made automobile is not far off. With its elaborate quality control system and its well-equipped laboratories, P.A.L. claims that it is ceaselessly striving to attain and maintain the highest quality at every stage of production. It will be interesting to note here that one out of every six vehicles on the road today is a Premier-built vehicle.

CLEAN AIR FROM POWER STATIONS

Two orders covering the supply and commissioning of 40 flue dust monitors are reported to have been placed with the Electronic Apparatus Division of Associated Electrical Industries Limited by Babcock and Wilcox Ltd. The equipments are to be installed at C.E.G.B. generating stations at West Thurrock and Rugeley in Britain —20 at each site. They are required for the main boiler construction programme.

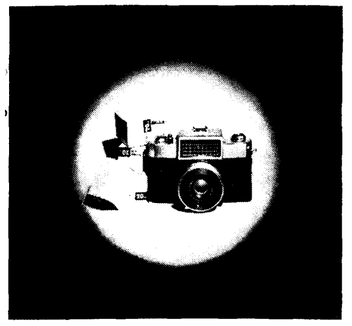
A dust monitor head will be installed in each induced-draft inlet duct and will without change in velocity measure the dust emission from the dust arresting plant before it enters the main duct and chimney stack. When the dust emitted exceeds the accepted level as determined by the Alkali Inspectorate, a warning device fitted to the equipment will operate a flashing light on the boiler control desk so that the operator can take the necessary action.

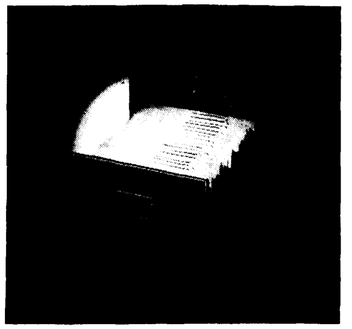
A continuous recording of the dust emission will be provided during the operational period of each boiler. The time between cleaning can be as long as or even longer than 15 months. Prolonged field trials at C.E.G.B. power stations have proved that the A.E.I. flue dust monitor requires little or no maintenance—an important feature in flue dust measurement.

BRITISH STEEL INDUSTRY

British steel production in February this year averaged 415,200 tons a week, almost 9 per cent more than in January, according to estimates issued on the 15th instant by the Iron and Steel Board in London.

Capital expenditure in the British iron and steel industry on major schemes of modernisation and expansion during 1961 was nearly £200,000,000, according to the Board's annual review of capital expenditure. This was 36 per cent more than in the previous year.





Or putting the above in English, importing even one camera from Japan takes a good deal of paperwork. Your Mitsubishi Bank man has the knowledge and the modern facilities behind him to help you eliminate much of this or at least speed it up. He and the Mitsubishi Bank have built a reputation over the past 67 years on their ability to give you all the banking services necessary for successful import-export operations. From paper work to market assessment and credit ratings, the Mitsubishi Bank handles all import-export and everyday banking matters quickly, expertly.

33, Marzban Road, Fort, Bombay-1.
Telephone: 26-5420.

NEW PRODUCTS AND PROCESSES

Fuel Cells as Source of Electric Power

THE fuel cell—a new type of "battery" that converts chemical compounds directly and continuously into electricity—promises to rival the revolutionary capabilities of atomic energy. The fuel cell holds particular promise for electricity-short areas that lack hydro-electric power or cannot afford steam-generating electric power plants. The ingredients of fuel cells—common chemical compounds, a catalytic agent such as bacteria, and sea-water—are plentiful world-wide. One experimental fuel cell that produces enough power to send radio signals more than 15 miles was demonstrated in Washington a few days ago. Its electricity is generated by harmless bacteria feeding on sugar in a 7-inch test tube also containing sea water. Herbert I. Sargacher of New York, President of General Scientific Corporation, recently demonstrated the micro-powered radio transmitter. Just one grain of sugar, he said, is enough to keep the organisms producing electricity for two months or more. Its minute power output is less than half a watt. The device is an outgrowth of research a year ago by Dr. Frederick D. Sisler of the U.S. Interior Department. He found that electrodes planted in ocean mud could pick up electrical energy from micro-organisms at work under the bottom slime. Scientists say that power developed from ordinary chemical compounds worked on by bacteria found in sewage, garbage, and human waste could eventually lead to: (1) Electricity to meet the needs of whole towns at costs less than power produced by conventional means and nuclear reactors. (2) Recovery of minerals; conversion of the sun's energy to power uses; conversion of salt water to drinking water; and the generation of water and oxygen for astronauts aboard spaceships. (3) Conversion of nitrogen from the atmosphere and phosphorus from the sea into useful materials such as food and fertilizer. The great promise of fuel cells lies in the almost inexhaustible store of electric energy locked in chemicals. The big engineering problem lies in efficiently converting and trapping the electrical energy. Theoretically, fuel cells can operate at 80 per cent efficiency, about twice that of conventional electric generating plants.

Asphalt Slabs for Floors in Factories

A Dutch factory is manufacturing asphalt slabs that can be used as floor-covering in factories, barracks, laboratories, stores, schools, hospitals, stations, churches, etc., and on ships. They are not suitable for use in the tropics. The slabs are rolled from asphalt of a special composition and supplied in the standard size of 50 x 50 cm. A compact, jointless floor is obtained by welding the slabs together using a gasoline or propane blow-lamp. They are secured to the floor underneath by means of molten bitumen. The weld seam created by the welding operation will disappear after two or three months' intensive use. This weld seam can also be removed from the floor immediately upon delivery by machine polishing. The slabs, which can be laid on any flat, solid, dry floor, are hard enough to withstand heavy loads and as they are also plastic they will not crack under shock loads. The actual floor that can be rapidly and easily laid with these slabs is dust-free, non-slip and sound-damping. It can be used immediately after laying and requires virtually no maintenance. Local repairs can be readily carried out. The floor affords insulation against currents of up to 30,000 Volts. The slabs are obtainable in black and maroon in three grades, namely, plain, oil-resistant and acid-resistant, and in thicknesses of 6, 8, 10, 12 and 15 millimetres. At a temperature of below 40° C. the acid-resistant grade of asphalt slab is resistant to a variety of acids, such as sulphuric (below 50 per cent), hydrochloric (below 38 per cent), nitric (below 4 per cent), phosphoric (below 25 per cent), formic (below 40 per cent), acetic (below 95 per cent), citric, benezoic, phthalic and oxalic acids; also to inorganic alkalis such as caustic lye, ammonia, soda, solutions of soap, Teepol and salts. As far as organic alkalis are concerned, they are resistant to triethanol amine and, as regards solvents, to methyl alcohol, ethyl alcohol and methylated spirits. In addition, fruit juices, lemonades, alcoholic drinks with or without CO_2 content, formaline, glycol, glycerine, sugar and syrup, urine and manure do not attack the slabs. Where the slabs are required to form a watertight seal, they can be laid two deep so that the seams do not coincide. In the construction of shops and flats they can be used to form an intermediate floor surfacing to keep out cold and damp. The slabs can also conveniently be moulded to form a skirting board.

White Cement from Felspar

White cement is presently manufactured in India using low-iron white clay which is expensive and is not abundantly available. In a process developed at the Regional Research Laboratory, Hyderabad, white clay has been substituted by felspar which is available in plenty. The process consists of sintering the raw mix containing felspar, limestone and gypsum at 900-1050°C. The sintered material is leached for recovery of potassium sulphate, a valuable fertiliser. The sludge is then burnt to obtain cement clinker. The cement produced compares favourably with the imported material. Based on the pilot plant work, the cost of production of white cement in a 50-tons-per-day capacity plant is estimated at Rs. 204.67 per ton as compared to the current market price ranging from Rs. 300 to Rs. 450 per ton. The annual return on investment works out to 23.30 per cent. White cement is used in mosaic tiles and decorative fixtures and for making coloured cements. Till recently the country's entire requirement of white cement was imported and indigenous production of white cement commenced only in 1958. Increased construction activity in the country and the expansion programmes of the existing producers indicate that the potential demand for white cement would be considerable.

Automatic Light-dipping

A simple electronic device which, it is claimed, automatically dips and raises motor vehicle headlights as oncoming vehicles approach and pass, has been developed by a British firm, Television Installation Services Ltd. Control is exercised by light-sensing heads which pick up the beam of the approaching vehicle. The unit also automatically lights and extinguishes parking lights as day-light fades or increases. The device consists of a small 5 in. x 5 in. x 1½ in. (12.7 x 12.7 x 3.81 cms.) deep control unit which fits easily under the dashboard. Five wires from this unit are inter-connected into the vehicle's lighting system. Twin light-sensing heads are attached to the windscreen by a rubber suction pad, and a ball socket joint enables the heads to be adjusted so that the left one scans oncoming traffic while the right one scans vehicles passing from the front. As the light beam from the approaching headlights is picked up by the left-hand sensing head it causes the headlights to be immediately dipped or dimmed. As the oncoming vehicle draws abreast the right-hand sensing head scans its passing lights and causes the dipped headlights to return to full beam. If further traffic is approaching the headlights will remain dipped or dimmed until this traffic has passed.

Stackable Plastic Boxes

A Dutch firm is manufacturing plastic boxes for carrying goods in the foodstuffs and preserves, chemical and metallurgical industries, etc. The dimensions of the boxes are 700 x 450 x 200 mm and they have a capacity of approximately 60 litres. The bottoms are reinforced with wearing edges. They are made of low-pressure polyethylene by injection-moulding. The advantages of this material are its light weight and unbreakableness. They are silent both when being stacked and transported. Their smooth walls and rounded corners make for simple cleaning and their resistance to chemicals is good. They can be used at temperatures from well below zero to over 100° C. The boxes are supplied in two types, i.e., with or without stacking fins attached to the corners on the outside. The boxes with these stacking fins can be stacked on top of each other, while those without fit into each other. The colour of the standard models of both types is natural white, but the boxes can also be supplied in a variety of colours if a certain number are ordered at the same time.

Carbon Stationery Machine

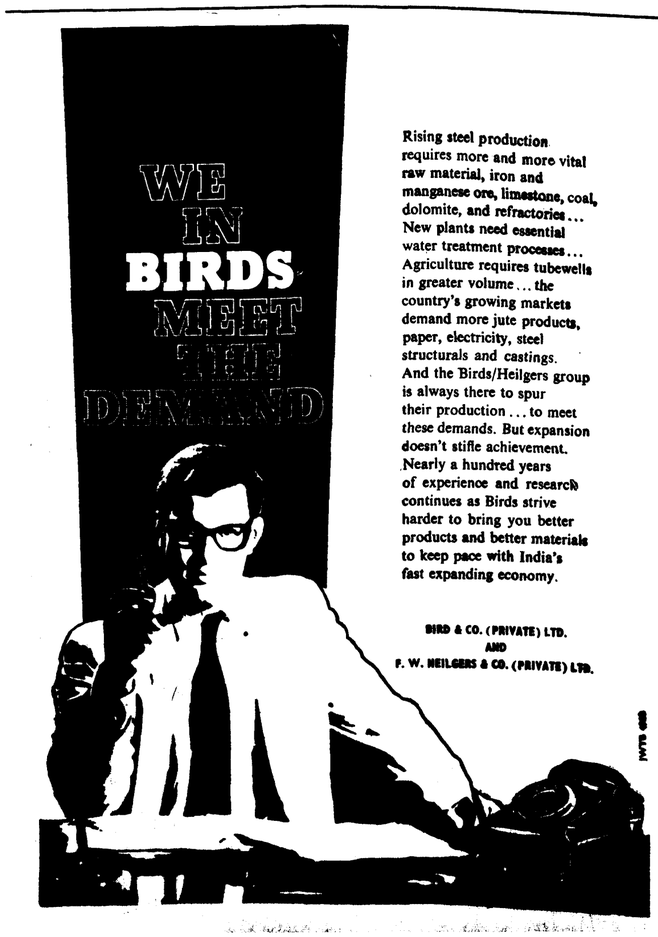
A new carbon stationery machine—a variable size rotary—is to be shown by a British firm, Timsons Ltd. at the International Printing and Paper Fair in Dusseldorf, 5th to 18th May. The machine is for printing and collating multi-part carbon-interleaved sets, either snap-out or continuous. At the Fair it will be restricted to four-part work—that is, four papers and three carbons—but buyers have the option of adding one or two more units, allowing them to produce sets of up to six papers and five carbons in one operation. The press is built on the in-line principle and will take paper webs up to 20 in. (50.7 cm) wide and reels up to 32 in. (81.2 cm) in diameter. The size range on paper length the machine can produce is from 7½ in. (19 cm) to 14 in. (35.5 cm). Printing is from flexible rubber plates using letterpress inks, and speeds are from 15,000 to 18,000 complete sets an hour.

Injector Diesels

A new type injector originally introduced by Leyland Motors Ltd. with their Power-Plus 0.400 diesel engine, is now being fitted on all other automotive diesels produced by the company. The new injector is completely interchangeable with its predecessor as an assembly. It has a number of improved features, including a more robust body, an improved spring location and a smaller, lighter needle.

New Textile Fibre

An Austrian firm, Zellwolle Lenzing A.G., has developed a new, improved viscose fibre. The quality of the so-called "Z"-fibre, production of which already amounts to 40 tons a day and will be raised to 80 tons early in 1962, is 15 per cent higher than that of rayon. It absorbs only very little moisture, has a higher tensile strength, eliminates the risk of thread breakage on spinning, and is suitable for the production of high-quality fabrics at relatively low cost. A further improvement of the quality of viscose fibres by 50-60 per cent is planned for the near future. The company developed all the machines required for the new process in its own engineering department. 70 per cent of the present output is directly exported, while another 15 per cent is sold abroad via the textile industry. The rest of the company's production is absorbed by the domestic market.



Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

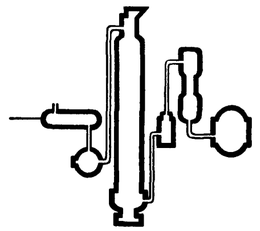
TATA-JOHNSON

NEW RESOURCES FOR THE INDIAN PULP & PAPER INDUSTRY



TATA-KMW
Pulp & Paper Machinery
MADE IN INDIA

You can now obtain your pulp and paper machinery here in India—with a high indigenous content and incorporating the latest developments in the field.

Tata-Johnson produce pulp and paper machinery for large scale mills. Technical know-how is provided by Sweden's *AB Karlstad Mekaniska Werkstad, KMW*, century-old experts, *AB Kamyr*, and *AB Rosenblads Patenter*, as well as the *Cellulose Development Corporation (Celdecor)*, pioneers in modern methods of pulping bagasse and agricultural residue.

Machinery designed by these leading firms is manufactured at TELCO's well-equipped Jamshedpur works.

Tata-Johnson have on their staff pulp and paper specialists with international experience who now work in very close co-operation with the TELCO works engineers.

Projecting, Supply and After Sales Service by:—

TATA-JOHNSON LTD., JAMSHEDPUR

PERFORMANCE OF RAILWAYS

TRENDS IN LAST DECADE ASSESSED

A REVIEW, assessing the performance of the railways during the second Plan period and bringing out the various improvements in railway working over 1950-51 and 1955-56, has been brought out by the Directorate of Statistics and Economic Advice Branch of the Railway Ministry. This has been circulated with the Railway Budget documents. Some of the trends in operating efficiency for part of the current year, 1961-62—the first year of the third Plan period—have also been included. The brochure makes a critical appreciation of the operating performance in the background of the prevailing economic conditions and attempts at a correlation of expenditure with the relevant units of performance, to the extent feasible. While maintaining its essential features as in previous years, the review this year includes certain new items, such as the dominant position occupied by the coal and steel plants' traffic in rail transport; an analysis of the financial results in the second Plan period in some detail; an appreciation of the trend of increasing leads of goods traffic; a clarification of the concept of wagon turnround and the limitations of a comparison of this index as between Railways; and a brief resume of the results of a special study conducted by the Railway Board on the working of the North-eastern and the North-east Frontier Railways whose level of working costs is influenced by special features.

Volume of Traffic

The volume of passenger and goods traffic handled by the Indian Government Railways established a fresh record at the end of the second Plan. The passenger traffic, in terms of passenger kilometres, increased by about 25 per cent in 1960-61, over the level of 1955-56, as against the Plan provision of 15 per cent increase in the passenger transport capacity. This increase in the passenger traffic was made up of the phenomenal growth of the suburban traffic, which went up by about 44.5 per cent during the second Plan period, while the non-suburban passenger traffic increased by 21.7 per cent. On the goods side, although there was a shortfall of 8.6 million metric tons under originating traffic, compared with the second Plan target of 164.6 million metric tons, the tonne kilometres, which reflect more appropriately the workload on the Railways, in fact, showed an increase of 3.6 per cent over the level anticipated at the end of the second Plan. This was in spite of a loss of about 3 million metric tons due to the strike of certain sections of the Central Government employees in July 1960. An important reason contributing to the overall shortfall in originating tonnage, compared with that originally planned, was that the actual distribution of commodities and pattern of movement varied considerably from what was planned, as indicated in Table 1.

The rail freight traffic continued to keep pace with the increase in the industrial and agricultural production. The index of industrial production during the last decade advanced by 70 per cent and that of agricultural production by nearly 46 per cent. The agricultural commodities carried by rail account for 15 per cent of the total originating tonnage. The increase in rail tonnage was of the order of 68 per cent, but that in tonne kilometres of 99 per cent. It would be thus evident that the increase in rail tonnage during the last decade was in consonance with the increased industrial and agricultural production. The increase in tonne kilometres was of the order of 50 per cent more than the increase in rail tonnage, or industrial and agricultural production taken together. The position may be seen in Table 2.

The review has also compared the year-to-year variations in passenger earnings and in the National Income, and has brought out that the ratio of passenger earnings to the National Income has been round about 1.1 per cent in the last decade.

Overall Operating Efficiency

A critical appraisal of the operating efficiency of the Indian Railways is made in detail, in part 'C' of the brochure, under selected indices, representing the various phases of railway working. It has been brought out that more intensive and efficient use is being made of the railway assets, namely, engines, wagons and the track. The relevant data are given in Table 3.

Further, taking 16 selected aspects of operation, with a base index of 100 for each for 1938-39 —the last pre-war year, the figures of composite operating-cum-efficiency index of railway working work out as follows:

1938-39	100.0
1950-51	98.8
1955-56	105.2
1960-61	115.0

Correlation of Expenditure with Performance

Section 'D' reviews the expenditure in relation to performance, and brings out the fact that the controllable expenditure under Demand Nos. 5, 6, 7 and 8—Repairs and Maintenance and Operation of Railways—constituting about 80 per cent of the gross working expenses—has varied generally in conformity with the relevant units of performance; in fact, the indices of performance tended generally to outpace those of the expenditure, as will be evident from Table 4.

An assessment has also been made, in the brochure, of the comparable "expenses-earnings ratio," after eliminating the various extraneous factors both in earnings and expenses. The ratio thus worked out for the year 1960-61 comes to 63.72 per cent against 65.94 per cent in 1955-56 and 67.68 per cent in 1950-51, thus indicating that the financial results for the year 1960-61 were the best—reflecting the effect of the various economies achieved and the strict financial control exercised by the railway administration.

Plan Outlay and Railways' Own Resources

The review also brings out the fact that, during the last decade, the Railways met more than 50 per cent of the total outlay during the two Plan periods from their own resources *vide* details given in Table 5.

The balance of the expenditure was financed from General Revenues, including a loan of Rs. 29.4 crores referred to in the footnote to Table 5. It may be explained here that the expenditure, particularly from out of the Depreciation Fund, was met from the current appropriations as well as from the previous accumulated balances.

Position of Reserve Funds

The review points out that the level of the fund balances at the end of the first and the second Plan periods has necessarily to be viewed in relation to the rate of increase in rates and fares over the same periods and the rate of increase in the main constituents of working expenses. The depletion in the previously accumulated balances was mainly in the depreciation Reserve Fund, which was largely unavoidable during the period of rehabilitation and expansion. This depletion was, in fact, envisaged and provided for in the second Plan, in which, against a contribution to this fund of Rs. 225 crores, a drawal of Rs. 293 crores was shown. The actual drawal was Rs. 320.41 crores. The review points out that, with the adoption of the procedure—since 1st April 1950—of contributing to this Fund an amount estimated as being actually necessary in the next five-year period, this decline in the balance in the Depreciation Reserve Fund is not a matter for serious concern. The average annual rate of contribution to the Depreciation Reserve Fund during the third Plan period from the current railway revenues would be Rs. 70 crores under the accepted recommendations of the Railway Convention Committee 1960. This average annual rate of contribution to Depreciation Reserve Fund would work out to about 2.5 per cent of the total average value of the assets in the third Plan. This corresponds to an overall life of railway assets of about 40 years; and, as many of the railway assets are known to have a life of 40 years or more, a provision for the Depreciation Reserve Fund on an overall average life of 40 years is considered reasonably adequate. There is, however, an indication of the view of the Railway Ministry about the desirability of further strengthening the Fund as railway revenues permit.

It has been brought out in the review that, at the commencement of the third Plan period, after clearance of the loan taken from the General Revenues to finance expenditure from the development fund, the effective balance in the development fund is of the order of Rs. 6.54 crores, and in the Depreciation Reserve Fund of Rs. 19.80 crores, while the Railway Revenue Reserve Fund is intact with a balance of about Rs. 53.44 crores.

The review once again emphasises the progressive increases in the quantum of low-rated traffic carried by the Indian Railways during the last decade. The percentage of tonnage originating of public coal, ores, marbles and stones (including limestone and dolomite), to the total tonnage of all revenue earning traffic has risen as follows:

1950-51	37.1
1955-56	37.4
1960-61	48.3

This percentage is likely to increase further. This factor, coupled with the declining proportion and the diversion, to some extent, of high-rated commodities to other modes of transport, necessarily entails proportionately a lesser rate of increase in the earnings than the increase in the volume of freight traffic.

So far as passenger traffic is concerned, the review brings out the gradually increasing cost of the coaching services, resulting in the expenses exceeding the earnings since 1957-58. In order to carry about 25 per cent more passengers, between 1955-56 and 1960-61, 26.4 per cent more passenger carriages, involving a 23 per cent increase in seating capacity, were provided, but the increase in earnings was of the order of 22.2 per cent only. On the other hand, the average rate charged per passenger per kilometre declined from 1.73 nP in 1955-56 to 1.71 nP in 1960-61, which is partly a reflection of the variation in the composition of the passenger traffic between different classes, leads, etc. During the same period, the cost of hauling a passenger vehicle one kilometre increased by 12.2 per cent on the broad-gauge from 40.1 nP in 1955-56 to 45.0 nP in 1960-61 and 13.7 per cent on the metre-gauge from 39.0 nP in 1955-56 to 44.4 nP in 1960-61. Barring the imposition of passenger fare tax, the proceeds of which accrued to the States, there was no change in the basic passenger fare structure during the past 11 years. Even after the merger of the element of this tax with passenger fares from 1961-62, the Railways are liable to pay to the General Revenues for distribution to the States a fixed annual sum of Rs. 12.5 crores in each of the years of the quinquennial period 1961-66, in lieu of passenger fare tax. The position has thus not changed materially so far as the Railway revenues are concerned.

The review points out that, while it is necessary to cater to the increasing traffic and to ease the overcrowding in passenger trains as far as possible, consistent with the limitations of line capacity and the over-riding needs of goods traffic, the fact that relatively more expenditure is incurred in running additional passenger trains for the purpose should not be lost sight of.

The review clearly brings out that the unavoidable increases in working costs resulting from increasing wages and prices have far outpaced the increases in rates and fares on Indian Railways, as shown in Table 6.

It has been possible to control the increase in passenger fares and freight rates in this manner because the railways have been utilising their assets more and more fully and have brought about various other improvements in operation.

Cost Analysis for Reviewing Freight Levels

In this context, it may be mentioned that it has been decided to strengthen the statistical compilation organisation on Indian Railways, so as to have not only the broad analysis of the cost of passenger services and the average cost of hauling a few important items of goods traffic as already done, but to have more refined cost studies showing the cost of moving selected commodities over varying distances, which will serve as a basis for reviewing freight levels from time to time, particularly as changes occur in the pattern of traffic moving by rail and road.

Capital-Output Ratio

The review proceeds to compare the increase in capital-at-charge with the increases in the physical output measured in terms of freight tonne kilometres or passenger kilometres. The physical output far exceeds the increase in the capital-at-charge. The comparison is even more favourable to the Railways when the capital-at-charge is adjusted for the increases in the prices of materials and wages—the two constituents of the capital-at-charge—as will be seen from the indices, with base 1938-39 equal to 100, given in Table 7.

The performance of the railways during the last 10 years, covering the two Plan periods, has been prominently brought out in a chart incorporated at the end of the review. The net tonne kilometres, which reflect appropriately the workload of the Railways, have increased during this period more than in proportion to the increases in

RAILWAY STATISTICS

Comparable expenditure	100.6	124.3	124.6	130.0
Performance (train miles)	116.4	132.0	134.6	139.5

the growth of capital-at-charge and its three principal constituents, namely, engine, wagon and track, as will be seen from Table 8.

These data would clearly reflect the sustained improvement in operational efficiency of the Indian Railways and the intensive utilisation made of the physical assets.

The Pan-American World Airways has signed with the International Business Machines a $22-million contract for the establishment of a world-wide electronics reservation network. The new system, called the Panamac, will connect 114 cities on six continents with the data processing centre at the Pan-American headquarters in New York. The system, which will enable travellers to obtain bookings from Pan-American offices anywhere in the world within a few seconds, is expected to result in savings of about $2 million annually after deducting actual operating costs of about $1.7 million. It is estimated that the average cost of making each reservation will decline from $2.90 to $2.58.

The European Economic Community is expected to approve shortly a procedure for compulsory prior consultation among Common Market countries over the provision of export credits. The plan has been drawn up by a committee of experts from the Six, the E.E.C. Commission and the European Investment Bank. It will require organisations responsible for export finance to consult each other before granting credit extending over periods of more than five years, that is, beyond the limits laid down by the Berne Union. The E.E.C. will also receive a report from the committee on methods it has studied for harmonising the credit insurance policies of member-countries.

First and Foremost... AMERICAN EXPRESS ARE BANKERS

Everybody knows American Express Travelers Cheques, American Express carefree Travel Service—behind both is American Express Banking—a complete Banking Service in over forty cities.

A Complete Banking Service : Current accounts opened • Fixed Deposits Accepted • Commercial credit established • Foreign Remittances Made • Travelers cheques.

AMERICAN EXPRESS Banking is our first business

AE.B.6.1

UNITED BANK OF INDIA LIMITED

Registered Office: **UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA**

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1961

To be placed before the shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at 4, Clive Ghat Street, Calcutta, on Monday the 26th March 1962, at 11 a. m.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1961 and Profit and Loss Account for the year ended 31st December, 1961 together with the Auditors' Report thereon.

	Rs.	nP
The Profit for the year after making provision for taxation and including the balance of Rs. 2,07,685.45 brought forward from the previous year's account amounts to ..	22,57,694.16	
Out of this amount the following appropriations have been made :		
To Reserve Fund under Section 17 of the Banking Companies Act	4,11,000.00	
Leaving an available balance of	18,46,694.16	
Out of the above the Directors recommend the payment of a Dividend to the shareholders at 6 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing	16,07,000.00	
Balance to be carried forward to next year's account	2,39,694.16	

The Bank's business during the year made satisfactory progress.

During the year under report two branches—one at Behala (Calcutta) and another at Coke-Oven area in Durgapur (West Bengal) were opened.

Tezpur Industrial Bank Ltd., and Cuttack Bank Ltd., were amalgamated with the Bank on 4th September 1961 pursuant to the schemes of amalgamation prepared by the Reserve Bank of India and sanctioned by the Central Government under Section 45 of the Banking Companies Act.

Dr. N. N. Law, Sir C. B. Mehta, Sri T. S. Santhanam and Sri B. N. Chaturvedi retire by rotation and being eligible offer themselves for re-election.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December 1961 and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the bank which have come to our notice, have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1961, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

THREE GOLDEN HORSES....*consistency!*

Consistency is an important word in the production of yarns. A good rayon yarn offers, first and foremost, *consistency*: uniformity, dependability. The most modern of yarn-producing facilities, themselves marvels of operational consistency, produce THREE GOLDEN HORSES Rayon Yarn. And with great *consistency*, the uses for THREE GOLDEN HORSES are increasing. We think you'll agree when we suggest that *consistency* is really the healthy credo of all success, and is desirable in every department of manufacture.

COIR EXPORTS PICK UP

COMPETITION, HOWEVER, CONTINUES TO BE SEVERE

EXPORTS of coir and coir manufactures, which fetch an average of about Rs. 10 crores foreign exchange a year, have tended to pick up of late. This has enabled the Coir Board to paint an encouraging picture of the pattern of exports of coir, in its report submitted to the Lok Sabha last week. It is a matter for gratification that the coir industry, which about a year ago was confronted with heavy stocks and fall in overseas inquiries, has turned the corner at least for the time being, despite heavy odds in world markets. The total exports of coir yarn, fibres and coir manufactures amounted to Rs. 7.27 crores during the first eight months of the fiscal year 1961-62, which compares favourably with Rs. 5.70 crores during the corresponding period of 1960-61. This shows a rate of increase of over 25 per cent. If this rate of increase has been maintained during the remaining period of 1961-62 (for which period figures are not yet available), coir exports would have exceeded the target laid down for the year by the Coir Board. It will be recalled that the Board had set a target of about Rs. 9 crores for 1961-62.

Although the overall performance of coir on the export front was thus satisfactory, there is no room for complacency. For, while exports of coir yarn rose substantially (partly due to larger quantity and partly to higher prices), there has been no perceptible improvement in the offtake of some of the coir manufactures. The reasons for this are many and varied. Several European countries, particularly Holland and West Germany, import coir yarn from India in considerable quantities and manufacture mattings from these imported yarns. These countries have the advantage of employing modernised methods of production. In fact, according to the Export Promotion Advisory Council, India has lost its markets for coir mattings not only in Holland and W. Germany but also in other countries owing to competition from costly but attractive floor coverings produced in those countries. At the same time, even in coir yarn, India is gradually losing its monopoly. Ceylon has now become a major competitor in this field, and is exporting large quantities of coir fibre, yarn and other products. Above all, coir products have to face competition from such other hard fibres as sisal, abaca (Manila), henequen, hemp, etc.

Recent Trends

A detailed analysis of the recent trends in coir exports will serve to show the extent of difficulties faced by exporters of coir manufactures. During the eight months ended November 1961, exports of coir yarns made substantial headway, having touched Rs. 493 lakhs, or an increase of over Rs. 150 lakhs, as compared with the corresponding period in 1960-61. The improvement made in other types of coir has been comparatively small. Shipment of coir mats and mattings have gone up from Rs. 172 lakhs to Rs. 185 lakhs. Export of coir fibres has been almost unchanged at Rs. 10 lakhs. Earnings from the export of coir cordage and ropes actually fell from Rs. 19 lakhs to Rs. 16 lakhs and those from rugs and carpets from Rs. 29 lakhs to Rs. 23 lakhs. The following table shows the trend in exports of coir yarn and manufactures since 1956-57:

(Value in thousand rupees)

	April-November 1961	Twelve months ended March		
		1960-61	1959-60	1956-57
Coir yarn ..	4,02,75	5,38,75	5,38,07	6,70,50
Coir fibre ..	10,29	11,96	9,10	5,61
Mats and mattings ..	1,84,78	2,57,45	2,51,91	2,17,28
Cordage and ropes ..	15,81	27,05	26,80	N.A.
Rugs and carpets ..	23,35	36,52	60,09	88,05
Total ..	7,26,98	8,66,73	8,85,97	9,81,44

N. A.—Not available

The coir industry in India is precariously dependent on exports, with well over half of its total output being sold in world markets. The industry is concentrated in the Kerala State, where backwaters on the West Coast provide natural facilities for retting coconut husks. Coir still remains a cottage industry. Efforts are, however, being made to mechanise the process of production, particularly that for the manufacture of coir goods, under the direction of the Coir Board. Thus steps are being taken for setting up defibrating plants for the manufacture of mattress and bristle fibres, as also plants for the manufacture of rubberised coir articles. These are steps in the right direction. But further investigations must be made on the additional lines along which the industry can be mechanised. Employment considerations are doubtless important; nevertheless, mechanisation to some extent is unavoidable for enabling the industry to compete with products from the modern and up-to-date factories in the highly developed countries. It is necessary to bear in mind that markets once lost cannot be easily regained. The Board will, therefore, have to expedite the process of mechanisation in the industry.

Export Promotion

Several steps are being taken by the Coir Board to promote exports, including publicity campaigns abroad and special incentives for exporters. The Board, for instance, has been participating in various foreign trade fairs and exhibitions and arranging for the display of coir goods. In 1958-59, the Board participated in 12, in 1959-60 in 11, in 1960-61 in 8 and in 1961-62 (April-December) 10 exhibitions in foreign countries. Coir products are displayed in all commercial showrooms opened by the Government of India in foreign countries. The Board has also arranged market surveys to be carried out in foreign countries, namely Holland, Sweden, Denmark, Finland and Norway. A pilot research into the market for coir mattings in the U.K. has been conducted in collaboration with the British Mats and Matting Manufacturers Association, London.

Under the scheme for enrolment of exporters, brought into force with a view to developing confidence among foreign importers about Indian goods and building up healthy and lasting trading relationship between Indian exporters and foreign importers, the Board is the enrolling authority in so far as enrolment of exporters of coir and coir products is concerned. Seventy-nine exporters have so far been enrolled under the scheme. A scheme for the grant of import licence for baling hoops to exporters of coir yarn and fibre on the basis of their exports has been brought into effect from January 1961. Applications covering 856,530 m. tonnes of baling hoops valued at Rs. 7,32,179 have been recommended till the end of December 1961. Amendments have been effected in the Customs and Central Excise Duties Export Drawback (General) Rules 1960 in order to allow drawback of import duty on sisal yarn imported and used in the manufacture of coir products exported. The question of formulating the procedure for determining the sisal yarn content in the coir products exported is being examined by the Directorate of Export Promotion of the Union Ministry of Commerce and Industry.

A special export promotion measure for coir goods, it may be noted here, has been introduced by the Government of India. Under the scheme, administered by the Coir Board, manufacturers-*cum*-exporters of coir yarn and coir products are eligible to receive import licences for raw materials such as dyes, chemicals, sisal yarn, etc., required for the manufacture of coir products, upto a certain percentage of their export earnings. It is learned, however, that the response to this scheme has been poor, owing to the complex procedure involved. It would appear that nobody has so far registered with the Board for taking advantage of the facilities offered. The Government of India will therefore do well to simplify the scheme in order to attract exporters.

GRIEVANCES OF IMPORTERS

PLEA FOR SCRUTINY OF S.T.C.'S ACTIVITIES

A PLEA to set up an expert committee to assess the working of the State Trading Corporation was made by Mr. R. C. Shah, President of the All-India Importers' Association, at the annual meeting of the Association held in Bombay on Monday this week, presided over by Mr. G. L. Mehta, Chairman of the I.C.I.C.I. He felt that it was time that an expert committee ascertained how far the S.T.C. has succeeded in fulfilling its objectives and laid down clearly its field of operation. He was of the view that the S.T.C. should confine its activities to co-ordinating, integrating and supplementing the activities of established importers, "and not supplant and eliminate them from the import trade." He, however, provided no data to show as to how many traders have been rendered unemployed or how many of them have suffered loss of business of any significant dimension as a result of the S.T.C.'s operations. It is, indeed, high time the importers and exporters supported their oft-repeated vague charges against this Corporation by concrete evidence.

Reviewing the activities of the S.T.C. at some length, Mr. Shah expressed concern over its expanding activities. S.T.C.'s imports under the rupee payment agreement, according to him, had not resulted in any saving of foreign exchange. On the contrary, the country had lost heavily by paying high prices for a number of commodities. If at all the S.T.C. could boast of any success, Mr. Shah added, this was due to "the preferential and privileged treatment" that it got from the Government and not by virtue of merits or competitive method it employed. He was, however, glad that the S.T.C. had of late been associating trade bodies with the import and distribution of essential goods. He hoped that this trend would be extended still further to more trade bodies and more commodities.

Established Importers

Mr. Shah called upon the Government to modify its policy in such a way as to raise the share of the established trade in the total import trade. Only 8 per cent of the total imports was now being granted to established importers. It was "paradoxical" that, when the total import bill of the country was rising, services of the people in import trade who had experience, talents and specialised knowledge were not being utilised. Mr. Shah was of the opinion that imports by "new-comers" would be "wasteful, uneconomical," resulting in "frittering away of our scarce foreign exchange." Making a strong case for giving established traders a larger role, he observed:

"The role of the import and distributive trade in our national economy has not been adequately recognised even in high quarters. It is believed that the established importers are static and that they do not move with the times: while some consider that they are mere pensioners. It may be respectfully submitted that this is not a correct approach and does a grave injustice to an important sector of our economy. The importer is more sinned against than sinning and he is as much an honest, straightforward and patriotic a citizen as anyone else in the country, including the politician. Out of many entrepreneurs who have started industries during the last decade, a fairly large number of them belong to the category of established importers. The present industrial edifice owes its growth and success in a large measure to the existence of vast and expanding markets for different commodities built up by the ceaseless and sustained efforts of the import and distributive trade. At the base of this industrial edifice lies the toils, tears and sacrifices of a vast number of small and big dealers and traders engaged in the import and distributive trade. This section of the community is, therefore, a vital part of the body-economic and the specialised services rendered by it are as important and useful as those of any other sector in the economic development of the country. Many small-scale units in several industries have not the necessary experience, knowledge, aptitude and finance to arrange for the importance of their requirements. Even big industrial units find great difficulty in securing essential machinery spare parts or components in emergency or sudden breakdown. It is particularly in these spheres that the services of the established importers are indispensable and can be utilised with maximum advantage. If actual users, the State Trading Corporation, consumers co-operative societies, exporters and other newcomers who are at present preferred for importation are made to recognise the inevitability, indispensability and usefulness of this category of

(*Continued in previous column*)

(*Concluded from next column*)

established importers, most of the difficulties would disappear."

While nothing should be done to deny the rightful place of established importers, it should not be forgotten that the policy of giving important licences direct to actual users has considerable merit, particularly in respect of goods which are in short supply as well as those that are allowed under export incentive schemes.

Notices

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-fourth Annual General Meeting of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on Tuesday the 10th April, 1962, at 4.30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September 1961.
2. To declare dividends on Preference and Equity Shares.
3. To appoint a Director in place of Shri Maneklal Premchand who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

"Resolved that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, Shri Maneklal Premchand who has attained the age of 72 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

To appoint a Director in place of Shri Tulsidas Kilachand who retires by rotation and is eligible for re-appointment.

To appoint a Director in place of Shri Bharat G. Doshi who retires by rotation and is eligible for re-appointment.

To appoint Auditors for the current year and to fix their remuneration.

To consider and, if thought fit, to pass the following resolution with or without modification as an Ordinary Resolution:—

"Resolved that pursuant to the provisions of Section 293 and all other applicable provisions, if any, of the Companies Act, 1956, consent be and is hereby given to the Directors of the Company to sell the Plant and Machinery of the Company's (1) Oil Mill, (2) Hydrogenation Plant, (3) Tin Plant, and (4) Soap Plant at such price and on such terms and conditions as the Directors think reasonable."

To consider and, if thought fit, to pass the following Resolution with or without modification as an Ordinary Resolution:—

"Resolved that in accordance with the provisions of Section 359 and other applicable provisions, if any, of the Companies Act, 1956, the Company hereby authorises Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, to retain all commission and other remuneration earned so far or to be earned by them at any time hereafter as Insurance Agents of the New Great Insurance Co. of India Ltd. or of any other Insurance Companies in respect of contracts of insurance or insurance policies which have been or which may at any time hereafter be entered into by the New Great Insurance Co. of India Ltd. or by any other Insurance Companies with the Company, provided the insurance premium or other charges made by such Insurance Company for insurance of the Company's property, assets and goods are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

To consider and, if thought fit, to pass the following resolution with or without modification as a Special Resolution:—

"Resolved that the Regulations contained in the document submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and are hereby approved and adopted as the Articles of Association of the Company, in substitution for and to the exclusion of the existing Articles of Association."

The Transfer Books of the Company were closed from Wednesday the 31st January, 1962, to Tuesday the 20th February, 1962 (both days inclusive).

By Order of the Board,
S. S. BORKAR,
Secretary.

Registered Office:
CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY-1. *2nd March*, 1962.

Note: (1) A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member.

(2) The Dividends, if sanctioned, will be paid at the Bank of India Ltd., Fort, Bombay, on and from Monday the 16th April, 1962 to those Members whose names stood on the Company's Register as on Tuesday the 20th February, 1962.

(3) Explanatory Statement as required by Section 173 of the Companies Act, 1956 has been separately sent to all Members of the Company.

EASTERN INVESTMENTS LIMITED

ISSUE OF EQUITY CAPITAL

THE BOARD OF DIRECTORS OF THE Company has decided to issue 25,630 equity shares of Rs. 100 each for cash at a premium of Rs. 10 per share, ranking in all respects *pari passu* with the existing equity shares of the Company except that they will not participate in any dividend declared in respect of any period ending on or before the 31st December, 1961.

The new equity shares will be offered for subscription to the holders of the existing equity shares in the capital of the Company whose names appear in the Register of Members of the Company on 12th June, 1962, in the proportion of one new equity share for every two equity shares held by such members on the condition that the full amount of Rs. 100 per share together with the premium amount of Rs. 10 per share shall be payable on application and with a right to renounce all or any of the shares offered to them in favour of any other person and to apply for additional shares. The Letter of Rights accompanied by the appropriate forms will be issued to such members shortly after the 12th June, 1962.

The Register of Members of the Company will be closed from the 5th to 12th June, 1962, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

THE CENTRAL BANK OF INDIA LIMITED

Registered Office:
Central Bank Building, Mahatma Gandhi Road, Fort, Bombay-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FIFTY-FIRST ANNUAL GENERAL MEETING of the Shareholders of THE CENTRAL BANK OF INDIA, LIMITED, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay-1, on Wednesday, the 25th day of April, 1962, at 4 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Report of the Directors and the Audited Accounts for the period ended 31st December, 1961.
2. To declare a dividend.
3. To appoint a Director in place of Sir Homi Mody, who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and, if thought fit, to pass the following Resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

"RESOLVED that Sir Homi Mody, who has attained the age of 80 years and who retires by rotation be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint a Director in place of Mr. Chimanlal B. Parikh, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Mr. Jaykrishna Harivallabhdas, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
6. To appoint a Director in place of Mr. Shiavax Sorabji Khambata, who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible and offers himself for re-appointment and for that purpose to consider, and, if thought fit, to pass the following Resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:

"RESOLVED that Mr. Shiavax Sorabji Khambata, who has attained the age of 65 years and who retires by rotation, be and he is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

7. To consider, and, if thought fit, to pass, according to the provisions of Section 258 of the Companies Act, 1956, the following resolution:

"RESOLVED that the number of Directors of the Company be increased to 11."

8. To appoint a Director in place of Mr. Nani A. Palkhivala, who was appointed a Director of the Company by the Board of Directors and who ceases to hold office according to the provisions of Article 84 of the Articles of Association, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
9. To appoint a Director in place of Mr. Nityanand M. Wagle, who was appointed

a Director of the Company by the Board of Directors and who ceases to hold office according to the provisions of Article 84 of the Articles of Association, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

10. To appoint a Director in place of Nawab Prince Mukarram Jah Bahadur, who was appointed a Director of the Company by the Board of Directors and who ceases to hold office according to the provisions of Article 84 of the Articles of Association, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.

11. (*a*) To appoint a Director in place of Mr. Nariman K. Karanjia, who was appointed a Director and also the Managing Director of the Company by the Board of Directors with the approval of the Reserve Bank of India and who ceases to hold office as Director according to the provisions of Article 84 of the Articles of Association, and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director, and

(*b*) On Mr. Karanjia being appointed a Director, to consider and, if thought fit, to pass, according to the provisions of Section 309 of the Companies Act, 1956, the undermentioned Resolutions, with or without modification, as ordinary resolutions:

"RESOLVED that Mr. Nariman K. Karanjia, who is to be appointed Managing Director of the Company, be paid as such Managing Director the undermentioned remuneration, viz:

Monthly salary of Rs. 5,500 and Rs. 350 per month as car allowance with the right to participate in the Provident Fund, Gratuity and other benefits and to receive the Bonuses that may be sanctioned by the Company for its staff from time to time provided that he shall not be entitled to any further remuneration or sitting or other fees as a Director."

"Further resolved that the above-mentioned remuneration paid to Mr. Karanjia from the date of his appointment as Managing Director by the Board of Directors to the date of this Meeting be and is hereby ratified and confirmed."

12. (*a*) To appoint Auditors to audit the accounts of the Company and such of the Branch Offices of the Company as the Meeting may determine and to fix their remuneration.

(*b*) To consider and, if thought fit, to pass the following Resolution, with or without modification, as a Special Resolution:—

"RESOLVED that pursuant to Section 314 of the Companies Act, 1956, consent of the Company be and is hereby accorded to the appointment of Messrs. A. F. Ferguson & Co., a Partnership firm, one of whose Partners, viz., Mr. Naval Rustomji Mody, is a relative of Sir Homi Mody, a Director and Chairman of the Company, as Auditors of the Company for the period commencing from the conclusion of this Annual General Meeting held in 1962 to the conclusion of the next Annual General Meeting, and for attending to such other work as may be entrusted to the said firm of Messrs. A. F. Ferguson & Co. during the period of their appointment by the Board of Directors of the Company, on remuneration higher than that paid to them at the time when the Special Resolution for their appointment was passed at the Fiftieth Annual General Meeting of the Company held on the 5th day of May, 1961, whereby the Company gave its consent to the said firm of Messrs. A. F. Ferguson & Co. continuing to act as Auditors of the Company and holding an office of profit under the Company as aforesaid, in spite of the said relationship."

(*a*) To consider and decide which Branch Offices of the Company in and outside India, including any Branch Offices which may be opened hereafter, other than those resolved to be audited by the Company's Auditors, shall be audited by persons qualified to act as Auditors, and in that connection to authorise the Board of Directors to appoint, from time to time, in consultation with the Company's Auditors, such persons as are qualified for appointment as Auditors of the Company under Section 226 of the Companies Act, 1956, on such terms and conditions and remuneration as the Board may deem fit, to audit the accounts of such Branch Offices of the Company.

(*b*) To consider and, if thought fit, to pass, with or without modification, the following Resolution for applying for exemption from audit of the accounts of the Company's Branch Offices other than those resolved to be audited respectively by the Company's Auditors and by persons qualified to act as Auditors.

"RESOLVED that the Board of Directors be and is hereby authorised to apply to the Central Government under the Companies (Branch Audit Exemption) Rules, 1961, for exemption from audit of the accounts for the year ending 31st December, 1962, of all Branch Offices, now existing and which may be opened hereafter during the said year ending 31st December, 1962, other than those resolved to be audited respectively by the Company's Auditors and by other persons qualified to act as Auditors from the provisions of Section 228 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, and to agree to such terms and conditions as the Central Government may prescribe in this behalf, and in the event of such exemption being not granted in respect of any of such Branch Offices, then and in such event the Board of Directors be and is hereby authorised to appoint such persons as are qualified to act as Auditors of the Company, in consultation with the Company's Auditors and on such terms and conditions, as the Board of Directors may decide upon from time to time, for audit of the accounts of such last mentioned Branch Offices."

By Order of the Board,

N. K. KARANJIA,
Managing Director.

BOMBAY, *14th March*, 1962.

Note:—A MEMBER ENTITLED TC ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*a*) The Transfer Books of the Company will be closed from Wednesday, the 4th day of April, 1962, to Wednesday, the 25th day of April, 1962 (both days inclusive).

(*b*) Dividend Warrants for the half-year ended 31st December, 1961, will be posted to the Shareholders at their registered address on and after the 14th day of May, 1962. Shareholders are requested to intimate to the Company their change of address, if any, immediately.

(*c*) The Explanatory Statement required under Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

HINDUSTAN LEVER LIMITED

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the Company will be held at the INDIAN MERCHANTS' CHAMBER HALL, 76, Veer Nariman Road, Bombay 1, on Wednesday, 18th April 1962, at 4 p.m., to transact the following business:—

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration for the year ending 31st December 1962.

SPECIAL BUSINESS

5. To consider and if thought fit to pass the following resolution which will be moved as a Special Resolution, namely,

"That the Articles of Association of the Company be amended in the manner following, that is to say,

"In clause 3 of the Articles of Association the figure 8,24,36,000 be substituted for the figure 5,57,00,000 and the figure 82,43,600 be substituted for the figure 55,70,000."

6. To consider and if thought fit to pass the following resolution as an ordinary resolution:

"The sum of Rs. 2,00,00,000 standing to the credit of Development Reserve and Rs. 67,36,000 being part of the amount standing to the credit of Profit and Loss Account, be capitalised and set free for distribution among the holders registered in the books of the Company at the close of business on 10th May 1962 of the existing issued 55,70,000 ordinary shares of Rs. 10 each, fully paid, in the capital of the Company, in the proportion of Rs. 12 for every Rs. 25 nominal amount of ordinary capital then held on the footing that the same be not paid in cash but be applied in paying up in full 26,73,600 ordinary shares of Rs. 10 each in the capital of the Company, such additional ordinary shares to be allotted and distributed, credited as fully paid-up amongst such holders in the proportion of 12 new shares for every 25 existing issued ordinary shares then held; that any of such new shares which on an exact distribution in the proportion aforesaid, would fall to be allotted in fractions be allotted in the name of a Director of the Company upon trust to sell the same and to divide the nett proceeds amongst the shareholders entitled to such fractions *pro rata* in accordance with their rights, and that such new shares as and when issued and fully paid, shall rank *pari passu* with the existing issued ordinary shares, except for any dividend declared in respect of the year ended 31st December 1961."

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

The Transfer Books of the Company will be closed from 22nd March to 24th March 1962 (both days inclusive) and from 12th April to 18th April 1962 (both days inclusive).

By Order of the Board,

S. H. GURSAHANI,
Secretary.

INDIA HOUSE, FORT STREET, BOMBAY 1,
22nd March 1962.

Statement pursuant to Section 173 of the Companies Act, 1956 and Clause 77 of the Articles of Association of the Company in regard to items 5 and 6 of the Agenda.

Item 5: Clause 3 of the Articles has fixed the capital of the Company at Rs. 5,57,00,000 divided into 55,70,000 ordinary shares of Rs. 10 each. This clause has to be amended in the manner set out above to enable the Company to capitalise certain reserves and to issue to the members shares credited as fully paid up as proposed in the resolution in item 6 of the agenda.

Item 6: The Board of Directors consider it desirable that the issued capital of the Company should be brought into closer relationship with the capital employed in the business. For this purpose it is convenient and desirable that Rs. 2,00,00,000 standing to the credit of Development Reserve and Rs. 67,36,000 being a part of the amount standing to the credit of Profit and Loss Account be capitalised and allotted and distributed as proposed in the resolution set out above. No Director of the Company is concerned or interested in the proposed capitalisation except Mr. R. Ramaswami who holds 50 shares in the Company and whose interest or concern in the capitalisation is the same as that of any other shareholder with a similar holding.

Note:—Consent of the Central Government has been obtained to this issue by an order, of which a complete copy is open for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

SEN-RALEIGH'S TURNOVER RISES, BUT PROFIT DECLINES

FRESH CAPITAL ISSUE SOON

SEN-RALEIGH Industries of India Limited (Managing Directors: Abhiji Sen and Sanjoy Sen, Calcutta) has made a mixed show during the year ended 30th September 1961. While there has been a further handsome rise in the sales turnover of Rs. 39.86 lakhs to Rs. 398.24 lakhs, there is a small setback in gross profit from Rs. 44.50 lakhs to Rs. 44.16 lakhs. The slight decline in profit is attributed by the Directors to lower bicycle sales, after an upward trend in the preceding two years, in spite of full order books. The Directors state that the anticipated levels of production could not be reached, owing to shortfalls in supply of semi-finished components, occasioned partly by cuts in import licence ceilings and partly by the failure of indigenous suppliers to meet their commitments. They, however, add that the position in this respect has since improved.

The net profit shows a big drop from Rs. 24.04 lakhs to Rs. 11.48 lakhs due to as large a provision for taxation as Rs. 10.08 lakhs against *nil* in the previous year (the provision of Rs. 0.45 lakh then being against the past liability). Depreciation also claims a larger sum of Rs. 22.60 lakhs as against Rs. 20.01 lakhs a year before. Notwithstanding this, the Directors have proposed to maintain the equity dividend at the previous level of 8 per cent per annum, subject to tax. Only they have had to cut the transfers to reserves, which get Rs. 3.75 lakhs, being the transfer to reserve for repayment of loan, as against Rs. 15.75 lakhs (Rs. 10 lakhs to taxation equalisation reserve and Rs. 3 lakhs to general reserve) in the previous year. The carry forward is substantially lower at Rs. 0.08 lakh as compared with Rs. 1.17 lakh brought in. It is apparent that the Company's profit has now reached the stage when it has to bear the full impact of taxation. The large provision for taxation and the absence of any transfer to the reserve for taxation bear out this inference.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds	398.24	358.38	293.57	212.85

Dividends—				
5 per cent preference	1.95†	1.95†	1.50†	1.50
Ordinary	5.60 (8%)†	5.60 (8%)†	5.60 (8%)†	4.20 (6%)
Carry forward	0.08	1.17	1.61	0.43

* On account of 30 per cent of the preference dividend payable as prescribed by the Preference Shares (Regulation of Dividends) Act, 1960, for the year 1958-59.
† Subject to deduction of tax.

As is evident from the table above, the Company has incurred against higher costs of production. The cost of raw materials has gone up by nearly Rs. 23 lakhs to Rs. 226.10 lakhs, and represents at this level an increase of more than Rs. 67 lakhs over the year 1958-59. Tools, stores and spares consumed during the year cost the Company Rs. 18.01 lakhs, as against Rs. 17.57 lakhs a year before and Rs. 13.07 lakhs two years ago. Other expenses rose during the year from Rs. 117.40 lakhs to Rs. 136.78 lakhs. In the year 1958-59, they were quite low at Rs. 98.41 lakhs. It is clear from all this that the Company has to bear with the unwelcome feature of rapid economic growth, namely, cost inflation. It remains to be seen how successfully the Company will counter this trend through larger turnover and higher productivity. During the year under review, however, the effect of cost inflation on gross profit has been partly mitigated by a much larger income of Rs. 6.16 lakhs, as against Rs. 1.47 lakh a year before and Rs. 0.51 lakh two years ago from other sources.

In our last year's review of the Company's previous year's working, we had pointed out that there was ample scope for the Company to raise fresh equity capital to bring it in line with the assets. The Company has since obtained permission to issue 650,000 ordinary shares of Rs. 10 each at a premium of Rs. 4 per share, and the issue would be made shortly, pending the consideration of offering a part of it to Raleigh Industries Ltd., in order to meet the requirements of large foreign exchange resources for the plans for expanding bicycle production and diversification.

The financial position of the Company as at 30th September 1961 shows a surplus of Rs. 404.96 lakhs of assets over capital and reserves of Rs. 162.02 lakhs. The capital, which is fully issued, is of Rs. 100 lakhs, comprising Rs. 30 lakhs in 5 per cent cumulative preference shares of Rs. 100 each and Rs. 70 lakhs in equity shares of Rs. 10 each. Reserves and surplus total Rs. 62.02 lakhs. The liability to outsiders has increased during the year from Rs. 313.44 lakhs to Rs. 404.95 lakhs. The gross block increased from Rs. 273.09 lakhs to Rs. 288.28 lakhs, as against which depreciation provided so far is Rs. 94.52 lakhs. Inclusive of capital projects in progress of the value of Rs. 31.76 lakhs as against a mere Rs. 3.03 lakhs a year before, the net value of fixed assets is shown at Rs. 225.52 lakhs, as against Rs. 203.93 lakhs a year ago. Investments are unchanged over the last year's level of Rs. 8.54 lakhs. Current assets, loans and advances total Rs. 312.77 lakhs (including cash balances of Rs. 15.43 lakhs), as against Rs. 241.95 lakhs in the preceding year. They are thus well below the current liabilities. This feature clearly brings out the Company's heavy reliance on external finance for its development and expansion. The fresh equity issue will reduce this burden and bring about a healthier financial position.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 20.06 *cum-div.* at which rate they offer, on *ex-div.* basis, a yield of about 3 per cent per annum, free of tax.

As for the outlook, the following extracts from the Chairman's statement will enable readers to form their own judgment:

"The bicycle industry has now left the easy sellers' market to enter an era of closer competition. Your Company has been lucky that there has been no slackening in demand for its products, and particularly in its major line—bicycles, it enjoys the reputation of marketing the fastest selling brands. In specific components, there is now a tapering off of sales which can be ascribed, in the main, to the unfortunate Government decision of allowing imports of friction parts in very large quantities for small-scale assemblers. This should be a passing phase and the replacement market is expected to pick up again when the large accumulation of imported stocks is dissipated. The early entry of your Company into the components market in a large way has allowed it to enjoy the best of a limited market. . . .

"The Company's future plans envisage expansion of bicycle and chain production, development of export model bicycles, expansion of tool room and other services, and diversification into the manufacture of dynamo lamps and house service meters."

The proposed issue of additional capital to Raleigh Industries Ltd., referred to earlier, will enable the Company to meet the foreign exchange requirements of this expansion scheme.

ANNOUNCEMENT

THE STATE BANK OF PATIALA

have pleasure to announce the introduction as from the 1st April, 1962

of

SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE.

A deposit relationship with the Bank will entitle the use of the services of any of its over 50 offices for the free SPECIAL CREDIT TRANSFER FACILITY.

For details,
please contact any office of the State Bank af Patiala where you will always find a friend.

STATE BANK OF PATIALA

AT THE NATION'S SERVICE.

BRAITHWAITES TO ISSUE BONUS SHARES

The ordinary shares of Braithwaite and Company (India) Ltd. (Chairman: Sir John Douglas Keith Brown, Calcutta) have been a firm feature on the Calcutta Stock Exchange for quite some time. Last week, they improved further from Rs. 48.37 to Rs. 51. Support for these shares, in an otherwise weak market, has been forthcoming on ideas of better working and hopes of bonus issue. The market's expectations have now been fully justified. The Directors have decided to capitalise reserves to the extent of Rs 43.40 lakhs and issue of 430,021 ordinary shares of Rs. 10 each as fully paid bonus shares to the existing shareholders in the proportion of 7.6685 new ordinary shares for every 10 ordinary shares held by them. The issue is subject to the sanction of the Controller of Capital Issues, application for which is to be made soon. It will raise the paid-up share capital to Rs. 1 crore, all in equity. Since the authorised capital is of only Rs. 70 lakhs, it, too, will have to be raised to an appropriate level before the bonus issue is made.

The proposed bonus issue is intended by the Directors to bring the share capital more into line with the capital employed in business, having regard to the expansion programme on hand, and to effect a more conventional ratio between the equity capital and the proposed preference capital issue. Whether the same rate of dividend would be maintained on the increased capital would be decided by the Directors in the light of the Company's profit, commitments and requirements in respect of the expansion programme in future.

The Company has fared well during the year ended 31st December 1961. After charging depreciation at Rs. 5.73 lakhs (Rs. 4.02 lakhs in the previous year) and transferring Rs. 2.37 lakhs (Rs. 0.73 lakh) to development rebate reserve, it has earned a substantially higher profit of Rs. 68.11 lakhs as compared with Rs. 37.72 lakhs in the previous year. After providing Rs. 32.25 lakhs (Rs. 17 lakhs) for taxation and transferring Rs. 24.50 lakhs (Rs. 6 lakhs) to general reserve, and adding Rs. 2.84 lakhs brought forward from the previous year, the amount available for disposal is Rs. 14.21 lakhs (Rs. 16.99 lakhs). The Directors have proposed to maintain the dividend at Rs. 2.50 per share, subject to tax, which absorbs Rs. 14.15 lakhs and leaves some Rs. 6,000 to be carried forward.

The Company has embarked upon a Rs. 4-crore expansion programme. Fuller details of the proposed method of financing it will be given in the Directors' report and Chairman's statement, to be published together in April. Meanwhile, the Company has applied to the Controller of Capital Issues for consent to the issue of 40,000 9 per cent redeemable cumulative preference shares of Rs. 100 each. The proposed increase in authorised capital will also have to make allowance for this forthcoming new issue. The Industrial Credit and Investment Corporation of India has agreed, subject to certain terms and conditions, to provide a loan in foreign exchange of the equivalent of Rs. 45 lakhs, and application has also been made to the Commonwealth Development Finance Company Ltd., London, for a foreign exchange loan of Rs. 43 lakhs. The Directors propose to meet the balance of the cost of implementing the expansion programme from the Company's own resources and bank borrowings.

INDIA SUGARS SUFFERS SHARP SETBACK

DIVIDEND SLASHED

THE India Sugars and Refineries Limited (Managing Agents: The India Sugar Agencies (Private) Ltd., Bombay) has suffered a sharp setback during the year ended 30th September 1961. The results for the year are in striking contrast with the Company's performance in the preceding year, which was marked by a larger turnover, despite a small setback in production, and a higher dividend to the equity shareholders. While production during the year under review had improved from 16,006 tonnes to 18,890 tonnes, sales were down with a bang from Rs. 204.53 lakhs to Rs. 127.14 lakhs, the lowest level for the past four years. Consequently, the gross profit has suffered a perceptible fall to Rs. 19.09 lakhs from Rs. 22.50 lakhs in the previous year and Rs. 23.15 lakhs two years ago. The dividend on ordinary shares, which was brought in the past year close to the 1957-58 level of 10 per cent, tax-free, by declaring a taxable 14 per cent dividend (or a net return of 9.8 per cent), has been slashed for the year under review to 10 per cent, subject to tax, or a net of 7 per cent, the lowest for the last decade. It will be interesting to note that, for three years since 1950-51, the Company had paid a net dividend of 25 per cent on equity shares.

The table below clearly brings out how the Company fared in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sale proceeds	127.14	204.53	196.18	133.33
Other income	3.79	4.18	5.57	4.53
Closing stocks of finished goods	67.71	10.53	19.93	22.55
Cost of sugarcane	101.53	88.95	89.89	61.80
Excise duty and gallonage fees	29.23	51.87	53.51	36.59
Other expenses	38.19	35.99	32.58	25.58

To reserves	0.04	5.42	0.70	4.95
Bonus to staff	..	..	1.42*	..
Dividends—				
Preference	0.73†	0.73†	0.82†	0.56†
Ordinary	6.40 (10%)†	8.96 (14%)†	8.00 (12.5%)†	6.40 (10%)
Carry forward	3.17	3.11	5.63	0.25
Cane crushed (tonnes)	206,203	153,133	185,172	136,817
Sugar produced (tonnes)	18,890	16,006	17,647	13,262
Average recovery	9.13%	10.42%	9.53%	9.69%

* For the years 1956-57 and 1957-58.
† Subject to deduction of tax.

The setback suffered by the Company only highlights the industry's sad plight caused by overproduction at exorbitant costs. During the year, the Company crushed a record quantity of 206,203 tonnes of cane (153,133 tonnes a year before) at the cost of Rs. 101.53 lakhs (Rs. 88.95 lakhs) and realised a production of 18,890 tonnes (16,006 tonnes). The average recovery, however, was lower at 9.13 per cent, as against the previous year's improved level of 10.42 per cent. A clearer idea of the rise in prime costs can be had when it is compared with what it obtained two years ago, that is, 1958-59. In that year, sugar production increased by 4,385 tonnes to 17,647 tonnes and the cost of cane crushed went up by Rs. 28.09 lakhs. Production during the year under review went up by 5,628 tonnes over 1957-58 but the cost of cane crushed is higher by as much as Rs. 39.73 lakhs.

Fall in sales has left behind excessively large stocks at the close of the year, at Rs. 67.71 lakhs as against Rs. 10.53 lakhs a year before. Despite a lower gross profit, the Directors have well maintained the essential provisions, with taxation claiming Rs. 4.70 lakhs against Rs. 2.92 lakhs in the previous year. Reserves have, however, been practically ignored. The carry forward is slightly higher at Rs. 3.17 lakhs against Rs. 3.11 lakhs brought in.

Commenting on the year's results, the Directors state:

"Sales were continued to be controlled by Government and, since the releases were very conservative, stocks were piling up and your Company, like other sugar mills in the country, had to carry forward a huge stock on hand. This has, naturally, entailed a severe strain on the Company's resources. After the removal of control on price, movement and distribution of sugar from 27th September 1961, there has been a sudden slump. These adverse factors are reflected in the working results of the year under report and it is apprehended that there would hardly be any improvement in the conditions during the current year."

During the year under report, the Company had to contribute Rs. 1.79 lakh towards the loss on export in the previous year. The loss for the last year, however, could not be determined, as the entire quantity of sugar for export has not been delivered to the Export Agency.

The distillery unit produced 81,662 gallons of spirit, as against 86,740 gallons in the previous year. The Company has obtained the licence for expanding the distillery's present capacity of 600 gallons to 3,000 gallons a day, and steps are being taken to implement the scheme. The Wage Board recommendations were implemented by the Company with retrospective effect from 1st November 1960, resulting in an increase of Rs. one lakh in the wage bill. The cane bonus, agreed to be paid as per the S.I.S.M.A. formula, has been finally worked out at Rs. 9.195 per tonne of cane against Rs. 8.005, reported in the previous report of the Directors. The increase is due to disallowance by the Government of the Company's claim for the grade differential on sugar. Its claim for refund on cane cess has become void—it was held valid in an appeal filed in the Supreme Court in the previous year—following the enactment of the Sugarcane Cess (Validation) Act, 1961.

The Salar Jung Sugar Mills Ltd., a subsidiary, earned a net profit of Rs. 4.33 lakhs during the year ended 30th June 1961, as against Rs. 1.62 lakh in the previous year. It incurred an export loss of Rs. 2.28 lakhs and earned a duty rebate as incentive of Rs. 4.26 lakhs. In the light of the prevailing situation in the industry, the Directors would pursue with caution the scheme for expanding the factory's daily capacity from 600 tonnes to 1,000 tonnes. The Company completed allotment of 320,000 equity shares of Rs. 9 each, of which 319,836 shares went to and have been subscribed for by the holding company. Manjula Confectionery Ltd., another subsidiary unit, did not show any appreciable improvement in its working during the year to 31st August 1961. Its sales organisation is being reconstituted to cover a wider market for the parent Company's products.

The financial position of India Sugars cannot be described as quite strong. For its subscribed and paid-up capital of Rs. 74.98 lakhs (Rs. 63.98 lakhs in equity shares of Rs. 10 each and Rs. 11 lakhs in preference shares of Rs. 100 each) is poorly supplemented by reserves and surplus amounting to Rs. 18.43 lakhs, even after allowing for the fact that Rs. 15.98 lakhs of the equity capital represents capitalisation of reserves. Its liability to outsiders amounts to Rs. 128.43 lakhs, as against Rs. 72.20 lakhs at the end of the preceding year, the increase being largely accounted for by a rise in bank borrowings. As against this, current assets, including book debts but excluding investments, amount to Rs. 112.13 lakhs. Investments have increased from Rs. 35.12 lakhs to Rs. 63.90 lakhs due to the issue of new shares by a subsidiary unit. All but a mere Rs. 5,000 are in subsidiary companies, the shares of which are not quoted in the market. The gross block at the year-end stood at Rs. 84.90 lakhs, as against Rs. 84.67 lakhs a year before. Against it, depreciation provided so far is Rs. 39.07 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 10.30 *cum-div.*, and offer a net yield of about 6.8 per cent per annum, on the *ex-div.* basis.

A joint subsidiary company, formed by Royal Dutch-Shell group, Standard Oil of New Jersey and Netherlands State Mines, has secured rights for the production and sales of Holland's natural gas reserves, estimated at 5 million cubic feet, discovered in 1960. The State Gas Board, which acts as distributor of gas at present, is also expected to be merged with the new company. Most of the gas will go into a national grid to be made available for domestic and industrial uses.

(Concluded from next column)

and advances are together placed at Rs. 56.58 lakhs, some Rs. 3 lakhs below the total of indebtedness to outsiders.

The Company's ordinary shares of Rs. 100 each, fully paid, are currently quoted at Rs. 216.50 *c.d.* Reducing this price to the *x.d.* figure, the net yield works out to 5.46 per cent.

COIMBATORE COTTON'S SALES HIGHER

DIVIDEND RAISED AGAIN

THE Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Singanallur) have completed, as on 31st December 1961, another trading year on an entirely happy note. For notwithstanding the lower ceiling prices of yarn operative throughout the year, the sale proceeds have gained a further Rs. 33.23 lakhs, over and above the rise of Rs. 41.89 lakhs recorded last year, to stand at the impressive figure of Rs. 188.25 lakhs which, incidentally, is the highest ever on record. Although the Directors do not make mention of it in their report—which is the sketchiest that one has ever come across—the Company must have not only fared exceedingly well in the internal market, judging from the decline of Rs. 3.73 lakhs to Rs. 10.10 lakhs in the value of closing inventories, but must have also enjoyed a satisfactory export position, if the tenfold rise, from a mere Rs. 28,851 to Rs. 2.61 lakhs, in the yarn export incentive premium is any indication.

The improvement in the turnover has naturally been followed by an increase in the cost of raw materials consumed, from Rs. 97.56 lakhs to Rs. 115.94 lakhs, as also in other expenses, from Rs. 32.64 lakhs to Rs. 38.71 lakhs. These, however, have been absorbed on a much larger production, with the result that the gross profit has risen by no less than Rs. 6.02 lakhs to Rs. 33.11 lakhs. A bulk of this increase has, however, been absorbed by larger essential provisions, that for Managing Agents' commission receiving Rs. 1.96 lakh as against Rs. 1.63 lakh, for depreciation Rs. 10.20 lakhs as against Rs. 10.12 lakhs, and for taxation Rs. 7.10 lakhs as compared with Rs. 2.30 lakhs a year ago. Consequently, the improvement in the net profit is only marginal, being of the order of Rs. 0.81 lakh, to Rs. 13.85 lakhs before allowing for donations (amounting to Rs. 81,281 as against Rs. 28,687) and bonus for workers in respect of prior years (Rs. 1.61 lakh as against Rs. 0.40 lakh). Following the withdrawal of Rs. 3.00 lakhs during the lean years 1958 and 1959, the dividend equalisation reserve was completely exhausted and the Directors have, therefore, thought it prudent to credit it with a sum of Rs. 1.65 lakh out of the current year's profit. Other reserves, which have been further strengthened, are the development rebate reserve which gets Rs. 3.25 lakhs (Rs. 7.76 lakhs last year) and the gratuity reserve which receives Rs. 0.77 lakh (Rs. 0.28 lakh). With a higher balance now available, the Directors have proposed to raise the ordinary dividend to 16 per cent, subject to deduction of tax, as compared with 12 per cent, subject to deduction of tax. This absorbs Rs. 5.76 lakhs, as compared with Rs. 4.32 lakhs during 1960.

Some of the highlights of the operation of the Company during the past four years are presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	188.25	155.02	113.13	82.90
Other income	3.24	0.78	0.31	0.13
Closing stocks	10.10	13.83	12.73	6.85
Raw materials consumed	115.94	97.56	82.99	57.68
Expenses	38.71	32.64	25.73	21.40

Transfer to reserves	5.68	8.04	3.56	1.25
Dividends	5.76 (16%)*	4.32 (12%)*	2.16 (6%)*	1.13 (6%)

* Subject to deduction of tax.

As revealed by its balance-sheet as at 31st December 1961, the financial position of the Company is rapidly improving. For the first time, the reserves at Rs. 36.56 lakhs have exceeded the paid-up share capital of Rs. 36 lakhs. Secured and unsecured loans have declined perceptibly and amount to Rs. 25.75 lakhs, or Rs. 18.53 lakhs lower than the corresponding figure a year ago, but other current liabilities, including the gratuity reserve, have gone up by Rs. 11.57 lakhs to Rs. 33.26 lakhs. New assets worth Rs. 14.88 lakhs were acquired during the year and this has raised the book value of fixed assets to Rs. 136.86 lakhs. On deducting therefrom the accumulated depreciation of Rs. 61.87 lakhs, the net block works out to Rs. 74.99 lakhs. Investments, current assets, and loans

(Continued in previous column)

WALCHANDNAGAR MAINTAINS DIVIDEND

NEAR PROSPECTS UNCERTAIN

BY itself the decision of the Directors of Walchandnagar Industries Ltd. (Managing Agents: Messrs. Walchand and Company Ltd., Bombay) to maintain the ordinary dividend in respect of the year ended 30th September 1961 at the previous year's level of 15 per cent subject to deduction of tax may not be viewed as anything heartening, but the same fact, when placed against the backdrop of the poor working results reported by the majority of sugar companies with the consequent curtailment in dividends, is sure to give some satisfaction at least. Although the total dividend distribution for 1961 is to be met partially out of the amount of Rs. 5.00 lakhs withdrawn for the purpose from the general reserve, it is to be noted that the year's working as a whole has resulted in keeping the reserve position substantially unchanged at Rs. 1.35 crores.

Sales of sugar and distillery and other products have continued to decline and, at Rs. 280.23 lakhs, is short of the previous year's figure by Rs. 11.10 lakhs. Sales of sugar machinery, on the other hand, has increased from Rs. 105.22 lakhs to Rs. 128.51 lakhs, so that the value of the total turnover is slightly higher by Rs. 12.19 lakhs at Rs. 408.74 lakhs. The gross profit has increased in conformity with the trend of sales and is up by nearly Rs. 2.00 lakhs at Rs. 53.73 lakhs. By far the larger portion of this, however, has been claimed by essential provisions which altogether amount to Rs. 33.40 lakhs as compared with Rs. 21.61 lakhs last year. A major rise has been witnessed in the provision for depreciation, from Rs. 17.90 lakhs to Rs. 28.49 lakhs, due to the heavy capital expenditure incurred during the previous year. The net profit has, therefore, dwindled by Rs. 9.80 lakhs to Rs. 20.34 lakhs. Transfer to the development rebate reserve has been reduced from Rs. 10.21 lakhs to Rs. 4.00 lakhs. But, even then, the balance has fallen short of the requirements of dividend account. The preference dividend of 10 per cent, subject to deduction of tax, takes up Rs. 5.00 lakhs and the ordinary dividend at Rs. 15.00 per share (of Rs. 100 each), subject to deduction of tax, claims Rs. 15.15 lakhs. The Directors have therefore, been obliged, as mentioned earlier, to withdraw Rs. 5.00 lakhs from the general reserve to facilitate the dividend disbursement. A sum of Rs. 1.50 lakh has been carried forward, against Rs. 1.61 lakh brought in.

The working results of the Company for the past four years are set forth in the comparative table given below:

(In lakhs of rupees)

	For the year ended 30th September			
	1961	1960	1959	1958
Sales of sugar and distillery product	280.23	291.33	348.66	315.50
Sales of sugar machinery	128.51	105.22	56.39	39.41
Closing stocks of finished goods and process	183.42	111.91	64.29	70.31
Crops in progress at close	74.37	67.75	58.66	48.31
Expenses	315.75	282.81	272.59	233.11
Excise duty and cess	66.70	70.41	90.79	71.27
Gross profit	53.73	51.75	52.73	60.57
Managing Agents' commission	2.41	3.26	3.77	4.87
Provision for—				
Depreciation	28.49	17.90	13.25	11.90
Taxation	2.50	0.45	8.50	11.85
Net profit	20.34	30.14	27.21	32.45
Withdrawal from reserves and provisions	5.59	0.41	..	..
Transfer to reserves	4.00	10.21	8.20	4.84
Dividends—				
Preference	5.00 (10%)*	5.00 (10%)*	8.77 (10%)*	0.24 (7%)
Ordinary	15.15 (15%)*	15.15 (15%)*	20.20 (20%)*	21.21 (21%)
Carry forward	1.50	1.61	1.78	1.74
Quantity of sugarcane crushed (in tons)	233,554	186,018	205,509	227,487
Quantity of sugar produced (in bags)	274,899	218,422	238,861	262,509
Average recovery (%)	11.77	11.82	11.76	11.66

* Subject to deduction of tax.

It will be observed that, during the year, the Company crushed a record quantity of cane, 2.33 lakh tons as against 1.87 lakh tons during 1960, and produced 2.75 lakh bags of sugar, as compared with 2.18 lakh bags a year ago. If despite these handsome improvements in production, the sales had declined, it was because of the slackness in the releases of sugar by the Government and the sluggish demand for it. In view of this, there has been a large inflation in the value of closing stocks which has gone up by no less than Rs. 71.51 lakhs to Rs. 183.42 lakhs. The recovery of sugar has declined a little from 11.82 per cent to 11.77 per cent, but still it is near about the average for the past four years.

During the course of the year, the Company issued 50,000 equity shares of Rs. 100 each at a premium of Rs. 30 per share. This has raised the paid-up-share capital to Rs. 200.94 lakhs, of which Rs. 50.00 lakhs are in preference shares and the balance, namely, Rs. 150.94 lakhs, in equities. The reserves stand at Rs. 135.11 lakhs, including Rs. 15.15 lakhs in the share premium account. Long-term loans total Rs. one crore and bank borrowings Rs. 139.07 lakhs. Besides, there are current liabilities and provisions aggregating Rs. 230.79 lakhs. With the acquisition of new assets worth Rs. 42.31 lakhs during the year, the gross block now costs Rs. 460.82 lakhs and has been well written down to Rs. 277.21 lakhs. Investments are valued at Rs. 9.31 lakhs and current assets and loans and advances together amount to Rs. 516.79 lakhs. Miscellaneous expenditures and losses yet to be recouped are Rs. 2.60 lakhs. The current assets alone are well in excess of the indebtedness to outsiders. In fine, the financial position of the Company is strong.

As far as the current year is concerned, the prospects are not promising. At the close of the Company's financial year, the Government of India withdrew all controls on sugar, except the release of stocks for sale. Since then, sugar prices have tended to fall, but the Company's sugar being of a superior quality, no serious effect of the price fall has been experienced. In the opinion of the Directors, the quiet conditions in the sugar market are likely to continue, unless there is a substantial increase in export and internal consumption. On the machinery manufacturing side, the Directors anticipate a fall in the demand for sugar machinery due to restrictions on sugar production and the demand for sugar well below the supply. To supplement the activities of the machinery manufacturing division, the Directors have under consideration a proposal to undertake the manufacture of cement and paper plants and mechanical presses. As for the near future, the Company will suffer a substantial deflation in its profit when its sugarcane farms are taken over by the Maharashtra Government.

The Rs. 100 fully paid old equity share is currently quoted on the forward list of the Bombay Stock Exchange at Rs. 165 *cum-div.* and, on the *ex-div.* basis, fetches a net return of 6.5 per cent per annum.

EXCISE REDUCES NATIONAL RAYON'S PROFIT

The additional excise duty on rayon yarn, levied under the Central budget for 1961-62, of which the industry was obliged to bear 60 per cent, is largely to blame for a decline of Rs. 13.29 lakhs in the gross profit of the National Rayon Corporation Ltd. during the year to 31st December 1961. The excise burden shot up from Rs. 68.59 lakhs to Rs.124.32 lakhs. The Directors have, however, proposed to maintain the equity dividend at Rs. 22 per share, taxable, which absorbs Rs. 53 05 lakhs. Taxation claims Rs. 41 lakhs, after accounting for Rs. 12 lakhs drawn from taxation reserve, as against Rs. 86.50 lakhs a year before. Depreciation has been allocated Rs. 85.18 lakhs (against Rs. 79.17 lakhs a year before), managing agency commission amounts to Rs. 5.96 lakhs (Rs. 9 80 lakhs) and donations take away Rs. 3.05 lakhs (Rs. 1.38 lakh). Appropriations are: Development rebate reserve Rs. 39.25 lakhs (Rs. 4.15 lakhs) and debenture redemption fund Rs. 10 lakhs (same). After providing for the dividends, the carry forward is Rs. 0.93 lakh against Rs. 4.41 lakhs brought in.

Sales of yarn during the year rose from Rs. 671.19 lakhs to Rs. 747.52 lakhs and of chemicals from Rs. 46.12 lakhs to Rs. 62.90 lakhs. Total turnover increased from Rs. 717.31 lakhs to Rs. 810.42 lakhs. The Directors state that the diminution in the profit would have been still greater but for the increase in production and better and more efficient working of the plants during the year. Satisfactory progress has been made in regard to the expansion programme, and to provide funds for it the Directors have decided to issue 15-year debentures of the face value of Rs. 150 lakhs, carrying interest at 6 5 per cent, and ranking *pari passu* with the existing debentures, the rate of interest on which is proposed to be increased from 5.5 per cent to 6.5 per cent and whose date of redemption is to be extended by seven years.

Notice

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office:

2, India Exchange Place, CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE NINETEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th April, 1962 at 4 p.m., to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1961 and Profit and Loss Account for the year ended 31st December, 1961;
2. To declare a dividend;
3. To appoint two Directors in the place of Mr. A. C. Law and Mr. T. S. Rajam who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "Resolved that Mr. M. L. Dahanukar, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

   "Resolved that Mr. P. D. Himatsingka, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
6. To appoint Auditors for the current year and to fix their remuneration.

Note: 1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 26th March, 1962 to Wednesday, the 11th April, 1962, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 12th April 1962, to those Members whose names appear on the Company's Register on the 11th April, 1962.

(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 17*th March*, 1962.

N.B.—*This Notice replaces the Notice published in our issue dated* 17*th March* 1962 (vide *page* 487).

UNITED BANK OF INDIA

PACE OF GROWTH SWIFTER

YET another bank to record all-round progress in the year ended 31st December 1961 is the United Bank of India Limited (Managing Director: Mr. B. K. Datta, Calcutta), now in the second year of its second decade. Its published net profit is higher by 30 per cent at Rs. 26.61 lakhs. It has stepped up the dividend from 4.3 per cent, taxable (for 1960), to a little more modest level of 6 per cent, taxable, after enhancing the transfer to published reserves from Rs. 2.93 lakhs to Rs. 4.11 lakhs. Although the dividend level is modestly modest, it takes up Rs. 16.07 lakhs or 60.5 per cent of the net profit. The explanation for this feature is to be found in the fact that it has a paid-up capital of large size, as much as Rs. 2.68 crores, which, together with a reserve fund of Rs. 90.74 lakhs, gives a ratio of "own funds" to deposits of as much as 6.1 per cent, a level that is well above the one (6 per cent) prescribed by the Reserve Bank under the Convention with the banks concluded in December last. Most banks in India, it may be noted, have ratios of 3 to 4 per cent only and will take several years to reach the specified goal. Meanwhile, the United Bank of India's ratio is the highest in India.

A synoptical view of the Bank's progress in the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	297.77	269.81	246.57	219.31

* Subject to deduction of taxation.
† Only the unencumbered portion is taken into account.

The favourable experience of the Bank in working results reflects a sizable growth in the Bank's resources and their utilisation. The latest year-end figures, as compared with those for 1960, suggest that the Bank progressed faster than the Scheduled banks other than the State Bank of India. Its deposits, for instance, have staged a rise of Rs. 7.13 crores, or 13.8 per cent, to Rs. 58.87 crores, as against the 10 per cent increase in those of scheduled banks other than the State Bank. Of this increase, fixed deposits share is Rs. 3.95 crores and that of savings deposits Rs. 2.59 crores. The expansion in the latter is all the more remarkable, because the Bank has been paying no more than one per cent on savings bank account as compared with 3 per cent by the vast majority of banks, including almost all the big banks and Exchange Banks in the country. It is noteworthy that the savings deposits of this Bank at Rs. 20.53 crores are actually some Rs. 5 lakhs more than those of the Bank of India, the total deposits of which are of the order of Rs. 125 crores. The secret of the Bank's success in obtaining a high proportion of savings deposits, despite the significantly lower rate of interest offered by it, is something about which its competitors will be interested to know. It will not be surprising if Dr. N. N. Law, Chairman of the Bank, who has been a strong critic of the advocates of higher rates of interest, chooses to expatiate on this point in his speech to the shareholders early next week.

The advances of the Bank also staged a striking increase of Rs. 5.99 crores, or 19 per cent, to Rs. 37.61 crores, raising the credit ratio from 61.1 per cent to 63.8 per cent. The growth in this portfolio, which is the principal source of the Bank's income, was greater than that (eight per cent) of scheduled banks *minus* the State Bank as well as that (nine per cent) of scheduled banks as a whole. The credit ratio is, however, lower than in the case of most big banks. This is the chief reason why the Bank's profit-margin is relatively lower as compared with the other big banks. Apparently, the management of the Bank prefers to follow a highly cautious policy. This is borne out further by the ratio of liquid assets to deposits which is as high as 43.8 per cent, though it is 2 points lower than that a year before. Surely, now that the Bank is firmly established and the demand for funds from trade and industry is progressively expanding, it could afford to adopt a more dynamic policy of advances without which it will not be able to raise its profits and dividend and put, at the same time, more money into the reserves.

This bank also has done its bit to serve the cause of strengthening the banking system through amalgamation of smaller banks. Thus, on 4th September 1961, the Bank took over the Tezpur Industrial Bank Ltd. and Cuttack Bank Ltd.

SYNOPSES OF COMPANY REPORTS

Dhanalakshmi Mills Ltd.

(Managing Agents: Messrs. M. Najappa Chettiar & Sons, Tirupur.)

30th Annual General Meeting—31st March 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)

Carry forward	3	1

N.B.—Adjustments include the balance brought forward from the previous year and other credit items like transfer from general reserve and unclaimed dividends forfeited.
* The dividend for 1961 is on the increased ordinary capital of Rs. 29,23,562.
† The dividend for 1960 was on a paid-up capital of Rs. 19,49,050.

Extracts from the Directors' report: The factory commenced crushing on the 10th November, 1960 and concluded on the 24th June, 1961 with a record crush of 51,13,465 maunds of cane as compared to 35,07,990 maunds in the previous year. On account of huge supply of cane in the area, the factory had to continue crushing for a longer period in the extreme summer. This led to lower recovery at 9.14 per cent as against 9.47 per cent in the previous year and affected the working results.

The year's working has also been affected due to implementation of the Wage Board recommendations and export loss borne by the Company. The Company's share in the export loss adjusted in the accounts amounted to Rs. 3,18,586.

Previous year's large stock of sugar together with increased production during the season has created problems of finance and storage for the industry. The Government of India announced the decontrol of sugar on 28th September, 1961 and since then the prices of sugar have fallen considerably. The fall in the prices of this Company's sugar has been comparatively less on account of better quality. The different taxes on sugar by the State and the Central Governments come to the extent of about 35 per cent of the realisable value. Keeping in view the interests of cane growers and the industry the Government should take certain suitable steps by reducing the different levies so as to encourage more internal consumption to keep pace with huge stock and production.

Season 1961-62: Simultaneously with the announcement of decontrol, the Government of India also fixed targets of production at 10 per cent below the production level in 1960-61. Accordingly the crushing for the current season is expected to be about 44 lakh maunds.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,23,562	Gross block	57,43,044
Reserves and surplus	11,40,154	—Depreciation	32,69,880
Other liabilities	1,28,11,320		
		Net block	24,73,155
		Block in progress	56,144
		Current assets	1,33,43,123
		Investments	6,03,487
		Cash	3,09,127
	Rs. 1,68,75,036		Rs. 1,68,75,036

* Paid-up capital consists of 3,89,805 ordinary shares of Rs. 7.50 per share called up. Amount paid up on shares forfeited is Rs. 25.

Thirumbadi Rubber Co., Ltd.

(Secretaries & Treasurers: Messrs. Pierce, Leslie & Co., Ltd., Calicut, Kerala State.)

43rd Annual General Meeting—31st March 1962.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1961	1960
Sales of rubber	11,74	14,13
Closing stock of rubber	90	1,52
Gross profit	1,74	2,76
Transfer to Secretaries' and Treasurers' remuneration	19	20
,, ,, depreciation	27	33
,, ,, provision for taxation	73	1,22
Net profit	55	1,01
Adjustments	5,39*	8
Appropriations:		
Total available balance	5,94	1,09
To additional taxation (for previous years)	4	Nil
Transfer to general reserve	Nil	30
,, ,, rehabilitation and development reserve	4,75	Nil
Proposed dividend (taxable) ordinary	1,10	64
	(12%)	(7%)
Carry forward	5	15

N.B.—Adjustments represent the balance brought forward from the previous year.
* This includes Rs. 5,24,001 being profit on sale of assets Calicut Estate.

Extracts from the Directors' report: Calicut *Estate*. This Estate of the Company was sold as from 1st March, 1961 for a sum of Rs. 15,50,001. The sale consideration has been received in full and the relative conveyance deeds are expected to be registered shortly.

Rubber Crops and Costs

Season	*Crop in kgs.*	*Estate cost of production per kg.*	*All-in cost per kg.*	*Average price realised per kg.*
		Rs.	Rs.	Rs.
1958-59	3,28,991	2.59	3.06	3.95
1959-60	3,23,807	2.83	3.39	4.06
1960-61	2,45,549	2.87	3.31	3.76

The crop for 1960-61 includes the crop harvested from Calicut Estate during the period 1st October, 1960 to 28th February, 1961 prior to the sale of the Estate.

As from 1st April, 1961 excise duty on Rubber would be collected from the manufacturers instead of the producers. The statutory prices of the various grades of raw rubber have been proportionately reduced by the Government excluding the duty element from the prices and this change is reflected in the average price realised during the year under review. The price of Centrifuged Latex concentrate of 60 per cent was also brought under control in September, 1960 and this resulted in a reduction of the price that the Company's product was hitherto enjoying. This factor also has contributed towards the reduction of the average price realised during the year.

The crop for 1961-62 is estimated at 1,80,000 kg. to be produced at an all-in cost of Rs. 3.19 per kg. This does not include the crop from 300 acres old seedling rubber under slaughter tapping and the crop from this area is estimated at 1,10,000 kg.

The Company has taken in hand a seven year programme of rehabilitation and development which involves the replanting of 100 acres old rubber and the planting of 50 acres virgin jungle annually from 1961-62 and it has been decided to finance this programme out of the sale proceeds of Calicut Estate.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,15,300	Gross block	15,06,366
Debentures	4,44,000	—Depreciation	1,90,873
Reserves and surplus	10,85,034		
Other liabilities	4,45,609	Net block	13,14,493
		Current assets	2,13,898
		Cash	13,651
	Rs. 28,89,943		Rs. 28,89,943

* Paid-up capital consists of 9,15,300 ordinary shares of Re. 1 each. Of this 1,80,100 shares are allotted as fully paid up pursuant to a contract without payments being received in cash and 3,05,100 ordinary shares are allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

HEAVY DEMAND FOR MONEY

(From Our Own Correspondent)

BOMBAY, *20th March*

There have been no new developments in the short-term money market during the week under review which has been shortened due to a holiday on Wednesday for *Holi*. The demand for money was pretty high, while there was no improvement in the supply of funds. The inter-bank call money rate which had gone up from 4¾ per cent to 5 per cent a week ago moved up further to 5¼ per cent. On occasions, there were even borrowers at 5½ per cent. There has been no change in the term money rates.

It is reported that the sub-committee of nine bankers, appointed to modify the Inter-bank Agreement to accommodate the demand of medium banks, has completed its task, though no announcement has so far been issued by the Indian Banks' Association. The Committee is said to have recommended that the definition of medium banks should cover only those with deposits over Rs. 25 crores but not over Rs. 50 crores and that these banks could offer ¼ per cent more than they are doing now. The Committee is further believed to have recommended that the small banks, i.e., those with deposits of not more than Rs. 25 crores, should be permitted to pay ¼ per cent higher than the medium banks.

Reflecting the extremely stringent conditions in the money market, the 91-days' Treasury Bill rate under tender system has gone up from 2.585 per cent to 2.610 per cent per annum. The total amount offered was Rs. 2½ crores, as against an invitation of Rs. 2 crores. The total amount accepted was unchanged at Rs. 2 crores. Sales of Intermediate Treasury Bills fetched Rs. 15.50 lakhs as against Rs. 128.75 lakhs in the previous week.

MEDIUM TEAS STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *15th March*

A total of 355,000 kgs. was offered in sale No. 11 held on Tuesday, the 13th inst. Quality of mediums and good mediums was maintained but that of Nilgiris was irregular, though a few selected invoices in this category were brighter. There was strong general demand for medium descriptions at enhanced levels, while highgrowns and also the poorest kinds came to a weaker market. A few selected Nilgiri B.O.Ps sold well at slightly below last rates, but the majority were either taken up at a drop of up to Re. 1 or withdrawn from sale; fannings in these categories came to an irregular market but on average were again easier. Good medium brokens were generally about steady, but, where quality was improved they met with keen competition at much dearer rates; fannings in this category were fully firm to 10 nP dearer. Medium and low medium brokens also met with keen enquiry at 10-20 nP and sometimes more, above last rates, whilst fannings in these categories were 5-10 nP dearer. Black leaf brokens came to a fully dearer market, whereas fannings suitable for the Middle East were again fully firm. Whole leaf grades were irregular but were often dearer, particularly flowery pekoes. Plain stalky kinds met with limited inquiry at much lower rates. C.T.C. and legg-cut sorts came to a fully firm to dearer market.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	4.00/4.40	4.70/4.90
Mediums	4.40/5.15	4.90/5.20
Good mediums	5.15/6.70	5.20/5.60
Nilgiri B.O.P.	5.00/10.10	—

The average price realised in sale No. 11 was Rs. 5.48 per kilo, as against Rs. 5.25 in the previous week and Rs. 5.15 in the corresponding sale last year.

A total of 213,000 kgs. was offered in dust sale No. 11 held today. There was good demand, but rates were irregular. Black, grainy, exportable *types* were irregular but sometimes dearer. Plain and low mediums were well supported at sometimes easier rates, whilst mediums were about steady on last. Good mediums were irregular, selected invoices selling well whilst others were easier. Teas of unorthodox description sold readily at about last rates. Highgrown dusts met with keen support, particularly those with quality.

The average price realised in dust sale No. 11 was Rs. 4.11 per kilo, as compared with Rs. 4.06 a week ago and Rs. 4.83 in the corresponding sale last year.

Colombo: Just under 5½ million lbs. were offered and quality generally showed an improvement. There was strong demand particularly for the less highgrowns and mediums, which were dearer, whilst lowgrowns came to a fully firm market. Best liquoring descriptions were slightly easier.

London: North Indian and other growths: In Monday's auction there was strong demand with best C.T.C. firm but medium sorts advanced by 2*d.* to 3*d.*, whilst plainest descriptions were 3*d.* to 4*d.* dearer. Plain broken pekoe has advanced to 3/1*d.*

Ceylon and South Indians: A total quantity of 22,465 packages was offered in Tuesday's sale. Of this quantity, 8,218 packages came from South India. There was quieter demand for Ceylons this week. Low mediums were firm, whilst others sold at irregular prices. Teas from South India, particularly those with coloury, useful liquors, met with good competition and were firm. Others were slightly irregular.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *20th March*

The bullion market depicted a firm trend during the week under review, with both gold and silver tending to move up. There were distinct signs of enlarged demand, especially in upcountry centres. The daily average offtake was 6,250 tolas of gold and 22 bars of silver, as against 5,200 tolas and 12 bars, respectively, in the previous week. Reports regarding seizure of some contraband gold in Bombay also imparted strength. The rise in prices would have been more marked but for the sale of 52 bars of silver by a leading bank on Friday the 16th inst. and increase in arrivals. The actual average daily arrivals were 8,250 tolas of gold and 22 bars of silver, the corresponding *figures for last week being 6,600 tolas and 12 bars,* respectively.

The *Fagun* (22nd March) settlement in gold began at Rs. 122.30, as against the previous close of Rs. 122.25, and rose to Rs. 122.55 today before finishing at Rs. 122.50. The *Jeth* (June) settlement advanced from Rs. 122.45 to Rs. 122.85, though it closed slightly lower at Rs. 122.80. The rate for transferring commitments from the *Fagun* to *Jeth* settlement continued to be against bulls, the actual rate today being higher at 30 nP, as against 20 nP on Wednesday last week.

Ready gold was quoted at a discount under the forward (*Fagun*) early in the week (15 nP on Thursday and 30 nP on Friday) and, after commanding a premium of 5 nP on Saturday, was quoted again at a discount of 5 nP on Monday the 19th inst. It was on a par today. The spot rate rallied from Rs. 122.00 to Rs. 122.55 today before finishing at Rs. 122.50.

In silver, the *Fagun* (23rd March) settlement was well supported and moved up from Rs. 216.85 to Rs. 217.90 on Friday. At this level, profit-taking set in and the settlement declined to Rs. 216.75. Subsequently, it recovered and touched Rs. 218.10 today. The *Jeth* settlement fluctuated between Rs. 216.35 and Rs. 217.50 and wound up the week at Rs. 217.50. The *badli* continued to be against bears, the rate actually increasing from 45 nP to 60 nP.

Ready silver elicited good support and spurted from Rs. 216.90 to Rs. 218.05 on the 16th inst. After receding to Rs. 216.95 on the same day, it rose again and touched Rs. 218.20 today. At this rate, the premium over the forward (*fagun*) was 10 nP, as against 5 nP on Wednesday last week.

The dollar price of gold in the London bullion market advanced by a fraction from $35.08¾ to $35.09⅛ per fine ounce. In sympathy with this trend and due to the continued firmness of the pound sterling *vis-a-vis* the dollar, ready gold improved by 2¼d. to 249s. 2¼d. Ready silver was firm at 84¼d., while the forward eased by ¼d. to 85d. Silver in New York continued unaltered at 101.50 cents.

The following table shows the trend of prices during the week under review:

	20-3-62 (closing)	High	Low	14-3-62 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	122.50	122.55	121.80	122.00
Forward: *Fagun**	122.50	122.55	122.00	122.25
Jeth	122.80	122.85	122.30	122.45
Sovereign	97.00	—	—	97.00
SILVER				
Ready (.996 fine)	218.20	218.20	216.95	216.90
Forward: *Fagun†*	218.10	218.10	216.75	216.85
Jeth	217.50	217.50	216.35	216.40
London—				
Gold	249s.2¼d.	249s.2¼d.	249s.1¼d.	249s. ¼d.
Silver Ready	84¼d.	—	—	84¼d.
Silver Forward	85d.	—	—	85¼d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 22nd March settlement. † 23rd March settlement.
§ June settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York *quotations are per ounce.*

PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, *20th March*

Malabar black pepper moved within a narrow range during the week, garbled between Rs. 230 and Rs. 317 and ungarbled between Rs. 320 and Rs. 307½. March delivery was squared up at Rs. 329. May, after touching Rs. 348, came down to Rs. 330, business being extremely thin. Calicut improved to Rs. 315 but receded later to Rs. 305.

The two notable features of the week were the reduction in freight from Singapore to the U.S.A. on pepper from $80 to $60 and the notification of the Indonesian Government allowing exporters to use 15 per cent of the exchange earned on exports of local produce either for imports or for their payments of services abroad. The latter is likely to increase the prospect of Lampong and Muntok pepper exports in the near future.

Singapore was down at Str.$2½, with activity *small. Spot at New York was also down from* $0.38 to $0.37½, as the grinders refused to follow the rise and in view of the easier advice from India where growers were reported regular sellers at every rise.

Despite sizable export, Malabar pepper seems to have no backbone of its own. As such, the future appears uncertain.

Ready pepper in Bombay is nominally quoted at Rs. 168 per 50 kilos.

COTTON FUTURES LISTLESS

(From Our Own Correspondent)

BOMBAY, *20th March*

Trading in both the futures and spot sections of the cotton market continued to be dull during the week under review. With the Jarilla March contract clinging to the ceiling rate of Rs. 693 (per three quintals) and permission for business in the new settlement yet to be given, there was no incentive for trading. As was expected not a single bale of cotton was tendered against the contract on any of the five notice days that have passed and it is unlikely that any tenders will be issued on the remaining notice days.

The most important development of the week was the meeting of the reconstituted Cotton Advisory Board in the City on the 16th inst. The Board discussed the question of supply and demand of cotton and expressed grave concern over the position of cotton supplies, with particular reference to the period from September to November, during which the available supplies will be exhausted and a new crop will not have arrived. It therefore recommended the import of about a million bales of cotton on an urgent basis so as to arrive into the country by the end of August.

As regards exports, some members of the Board estimated a surplus of Bengal *Deshi* cotton at about 100,000 bales and the Board recommended that further export may be allowed to the extent of 75,000 bales. It was also suggested that mills which wished to purchase more of Bengal *Deshi* cotton may be permitted to do so.

The timing and quantity of the next allocation of indigenous cotton to the mills was considered and the Board recommended that a further quota of 10 per cent should be released by the end of March.

The question of floor and ceiling prices for the next season 1962-63 was considered at length in the context of the increased production of cotton necessary to attain the targets laid down in the third Plan. There was general agreement that an atmosphere should be created which would enthuse the cultivator to put forward his best effort towards the attainment of these targets. The view was expressed that floors have not conferred any tangible benefits on the cultivator and that ceiling prices had operated as a restrictive force. It was suggested by some that ceiling prices should be removed and prices left free to find their natural level according to the forces of supply and demand. On the other hand, it was also argued that this might not be practicable in the context of overall planning and that an increase in the ceiling prices was, therefore, to be preferred. The idea of having a single support price fixed at near about the present ruling price in the market and at which all purchases should be made by the mills was also put forward. The repercussions of an increase in or the removal of ceilings on the prices of cotton, on the prices of cloth and on the competitive position of exports abroad were also referred to by some members. Attention was drawn to the growing need for additional incentives for export promotion of cloth and yarn and the increasing cost of incentive payments. The difficulties in ascertaining precisely the costs of cultivation of cotton were recognised. It was felt by some members that it would not be sufficient to merely provide a price incentive and that more positive steps such as the reservation of areas for cultivation of cotton and the supply of fertilisers, seeds, insecticides etc. required to be taken. The Board was unanimous in recommending that an immediate decision should be taken on the question of the price policy for cotton before the next sowings begin.

In the absence of additional quota for Indian cotton, activity in the spot market was restricted. Moderate mill demand was noted for such varieties as Co2, Laxmi, Vijay L. 147, Digvijay and Surti. Prices of Bengal *Deshi* tended to decline, thanks to the delay in the announcement of export quota. The quota is expected at any moment now. Mill demand for foreign cotton was mainly confined to Sudan cotton. Egyptian and American cotton attracted only stray buying.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri: Bengal *Deshi* 665; Khandesh 1,050; Co2 1,520; American 1,350; Sudan G3S 1,490; G5S 1,310.

Quiet conditions prevailed in the Karachi cotton futures market during the week. Values moved narrowly in routine dealings. Domestic mill demand was slow and export interest moderate. N T R G. March closed the week 20 nP lower at Rs. 72.50. The May contract, however, gained 30 nP over the week to Rs. 72.50. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 66.25; Punjab *Deshi* 63.5; 4F Punjab Roller 76; S.G. 82; LSS Punjab Roller 77; S.G. 83; N.T. Roller 80.50; S.G. 87.50; 289F Punjab Roller 92; S.G. 98.

Cotton futures in Liverpool recorded modest gains during the week. Both the American and American type contracts moved up on buying by local traders and commission houses. Sudan cotton contracts were subdued. Values ruled nominally unchanged.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton one inch Staple Contract: March 24.10; May 24.30; July 24.50. October 24.30.

American cotton mixed growths contracts: March 24.50; May 24.65; July 24.85. October 24.65.

Sudan: March 31.75; May 30.00; July 29.00.

Fully steady conditions prevailed in the New York cotton futures market. Values remained practically unchanged in slow dealings. A limited

volume of commission house selling was absorbed in trade coverings. The continued firmness of the spot prices also imparted strength to the market.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(in cents per lb.)

	19-3-62	14-3-62	6-3-62
New York spot	35.65	35.65	35.65
March	—	33.84	33.50
May	34.51	34.44	34.15
July	34.78	34.72	34.46

ART SILK YARN ALLOCATION

(From Our Own Correspondent)

BOMBAY, 20th *March*

In the report last week, a reference was made to the rumours suggesting the possibility of the present distribution scheme for indigenous art silk being ended in the near future. The rumours have, however, not been confirmed yet, nor have they been denied. At any rate, the scheme will continue to be in force for the coming half-year, that is, April-September 1962. For on Thursday the 15th inst., the Textile Commissioner issued a trade notice indicating the detailed procedure for submission of applications for allocation of indigenous art silk yarn during the aforesaid six-month period. Accordingly, all actual users of art silk yarn are to submit their applications for allocation on or before 15th April 1962 to the Joint Secretary, Distribution Committee for Indigenous Art Silk Yarn, 78, Veer Nariman Road, Resham Bhavan, Bombay 1. In the case of art silk handloom industry situated in the States of Andhra Pradesh, Madras, Maharashtra, Gujarat, Kerala, Orissa, Punjab, Uttar Pradesh and West Bengal, indigenous art silk yarn will, however, be distributed only by the respective State handloom authorities. Likewise, allocation of yarn to ancillary industries such as manufactures of hosiery and embroidery, except manufacturers of gas mantles and cotton textile mills consuming art silk yarn in *sari* borders, etc., and art silk doubling units situated in Delhi area and States of Gujarat, Kerala, Madhya Pradesh, Madras, Maharashtra, Punjab, Uttar Pradesh and West Bengal, will be made by the respective State Directors of Industries.

The continuance of the distribution scheme was interpreted to mean that sales by indigenous art silk producers would, as usual, be on a regulated basis, contrary to fears held before that there would be heavy sales. Consequently and thanks to encouraging inquiries from some consuming centres, particularly Punjab and Banaras, Amilan yarns (20×1) tended to move up. April contract spurted by Rs. 32 to Rs. 3,315 and June position by Rs. 17 to Rs. 3,425. Spot National Rayons 120 Bt. cones 1st grade advanced by 31 nP to Rs. 13.62. 150 Bt. cones 1st grade hardened by 13 nP to Rs. 13.57. Imported yarns were firm, 120 and 150 Japan being both quoted at Rs. 1.929, 120 Italy at Rs. 1,900 and 150 Italy at Rs. 1,735.

Staple fibre yarns were dull. Turnover was extremely limited and values moved narrowly. 40×2 April contract eased by Rs. 3 to Rs. 734. June delivery shed a like amount to Rs. 744. Spot Kohinoors were quiet at Rs. 8.38, as also Centurys and Citys at Rs. 8.25.

Barring a few select counts which tended to look up on special support, activity in the cotton yarn section was considerably restricted, with values practically remaining unchanged. Ten counts Moderns improved by 50 nP to Rs. 19. Twenty Gokaks gathered 10 nP to Rs. 22.87. Forty counts Pioneers put on 25 nP to Rs. 35.25.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	20-3-1962	14-3-1962
	Rs.	Rs.
Art silk yarn —		
80/1 Amilan (100 kg.)—		
April	3,305.00	3,333.00
June	3,425.00	3,408.00
120 Japan (per 100 kg.)	1,929.00	1,929.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
120 Italy (per 100 kg.)	1,900.00	1,900.00
150 Italy (per 100 kg.)	1,735.00	1,735.00
Nat. Ray. 150 Bt. 1 (per kg.) ..	11.57	11.44
Staple fibre yarn (40×2)—		
April	734.00	737.00
June	744.00	747.00
Kohinoor (per kg.)	8.38	8.38
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	19.00	18.50
20s Modern	22.87	22.75
32s Madura	29.25	29.25
40s T. T. Corin	35.75	35.75
60s T'Mangal	51.00	51.50
80s Mahindra	74.00	74.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 20th *March*

Oilseeds suffered a further setback during the week under review on renewed liquidation by local bulls and heavy selling pressure from North Indian operators, following the pronounced easiness of mustard. Further, crop reports from major producing centres were distinctly bearish. And the export outlook for oils continued to be none too encouraging. Groundnuts were particularly depressed as *vanaspati* manufacturers and local crushers were reluctant to extend any support in a declining market. Castorseeds ruled subdued, due to absence of export inquiries for castor oil, and larger arrivals from upcountry centres. Linseed encountered selling induced by the persistent lull on oil export front and expectation of a bumper crop during the current season. In sympathy, cottonseeds drifted lower.

The groundnut May 1962 contract was marked down from Rs. 253.75 to Rs. 226.50. Niamm bold eased from Rs. 46.50 to Rs. 45, before closing at Rs. 45.50. Khandesh quality declined by 50 nP to Rs. 46.25. Oil May 1962 contract dropped 60 nP to Rs. 18.95. Oil ex-mill and railway receipts lost 35 nP each to Rs. 19.20 and Rs. 19, respectively.

Among castorseeds, the June 1962 contract fell by Re. 1.62 to Rs. 165.25. March 1962 receded from Rs. 168.87 to Rs. 166.50 yesterday, but recovered to Rs. 168 today. Madras small closed lower by 25 nP at Rs. 33.50. Kanpur also shed a like amount to Rs. 32.50. Oil B.S.S. and commercial lost 15 nP each, the former to Rs. 14.55 and the latter to Rs. 13.85.

Linseed June 1962 contract softened by 22 nP to Rs. 36.19. Bold ready sagged by 25 nP to Rs. 35.50. Linseed Oil moved down from Rs. 15.85 to Rs. 15.10.

Cottonseed July 1962 contract suffered a setback of Rs. 2.75, today's closing rate being Rs. 103.75. April 1962 contract eased by Rs. 2.50 to Rs. 100.50. Whites, non-whites and Berars shed 10 nP to Rs. 20.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 20th March as compared with those of the two previous weeks:

	20-2-1962	14-3-1962	6-3-1962

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

SUGAR STEADIER

(From Our Own Correspondent)

HAPUR, 19th *March*

Sugar ruled steadier during the week, despite the monthly quota release for free sale by the Government. Superior quality continued to attract good buying support from the South, Rajasthan and Punjab. The inferior quality small crystal was also in request from east U.P. side. Simbhauli E29 quality here registered fractional gains to Rs. 38.19 per maund. The new sugar was also in good demand and the premium increased to Re. 1.50 per maund over the former controlled rates for all A, B, and C29 grades. Even D29 sugar of few factories was being transacted at a premium of Re. 1.25 a maund.

Steady to firm conditions were witnessed in the Muzaffarnagar market during the week under review. Demand was fairly brisk from Punjab, Gujarat, Saurashtra and Rajasthan. Although the Government had not yet released the sugar from the 1961-62 season production, heavy business took place for deliveries to be effected out of the first quota release during April. The Amroha and Bijnore factories producing small inferior crystal, however, offered their new produce at some discount. In the spot section, prices were almost stationary: A29 Mansurpur Rs. 40.50; Lhaksar Rs. 39.60; B29 Daurala Rs. 40; Shamli Rs. 39.70; Lhaksar Rs. 38.97; C29 Buland Rs. 39.12; Daurala Rs. 39.25; D29 Deoband Rs. 38.47; Bijnore Rs. 35.06; Seohara Rs. 36.69; Sakoti Rs. 36.62.

Supplies of cane to factories was still being maintained and crushing was in full swing. Factories in this region were expected to continue till the end of April and, due to accumulation of stocks, they were experiencing storage difficulty.

Khandsari ruled steady on brisk demand from Rajasthan and east U.P. Inquiries were also received from Punjab, Madhya Pradesh and Gujarat. Consequently, prices improved by 25 to 50 nP per maund. Wet *khandsari* was quoted at Rs. 26 to Rs. 30 per maund, while non-crystal and crystal were quoted at Rs. 30 to Rs. 30.50 and Rs. 31 to Rs. 34 per maund.

The *khandsari* manufacturing season is coming to a close and, in order to attract supplies of cane, the manufacturers are paying upto Re. 1.50 per maund.

Gur registered sharp gains during the week on vigorous bull support. Arrivals were small at an average of 1,500 maunds daily average. Loading by rail being mostly restricted, despatches aggregated ten wagonloads, mostly to Gujarat and Bengal and local stock amounted to 30,000 maunds, as against 73,000 maunds on the corresponding date last year. Total arrivals of *gur* here during the current season were 4.12 lakh maunds, as against 4.62 lakh maunds. Cane sowing season is in full swing. The latest prices here were: *pansera* best Rs. 16 to Rs. 17.25; *dara* Rs. 15 to Rs. 16; *balti* Rs. 14.75; *shakker* Rs. 17.50 to Rs. 18.25 a maund.

Gur prices were also firm at Muzaffarnagar during the week, thanks to good buying support from Punjab and Gujarat. *Gur* and *shakker* arrivals averaged 9,000 maunds daily and local stocks were around 100,000 maunds. The latest prices were *Chaku* Rs. 17 to Rs. 19.12; *pansera* Rs. 16 to Rs. 17.25.

Future prices, after early gains, eased sharply at the week-end. Trading in *baisakh* was brisk, while in *jaistha* it was of standing up nature.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 19th *March*

Foodgrains continued to drift lower in the Hapur market during the week, as the stockists were anxious sellers before new produce would start reaching the market by the end of this month. Crop prospects were very bright and another record production was expected this time. According to the Union Food Ministry's review, foodgrains production reached the record level of 79.3 million tons during 1960-61. The imports in that 2.69 million tons of wheat and 650,000 tons of rice. The total number of fair-price shops in the country was 49,000 from which a heavy quantity of grains was distributed either direct to retailers or through State Governments.

Wheat at Hapur registered a fractional fall during the past week to be quoted on Monday at Rs. 15.75 a maund for average quality and upto Rs. 17.25 for better farm produce. Some quantity of wheat did arrive from rural areas during the week but this was lifted by consumers and stocks with trade were estimated around 2,000 maunds. Crop prospects of wheat were reported to be bright and the harvesting of wheat will begin in mid-April or even later.

Rice was also depressed in sympathy with other grains. A small quantity of *mainpuri* quality rice was still reaching the market and stocks, despite better demand, improved slightly to 6,000 maund) were: *mainpuri sela* 19.75; *gadda kutcha mati sela* 28; superior 30 to 34.

Gram registered a fall of over Re. 1 per maund to Rs. 13.25 a maund for Punjab variety on easy advices from Punjab due to bumper crop expectations, thanks to very good timely winter rains. Barley drifted lower to Rs. 11.75 and *bejhar*, too, was quoted at Rs. 12 per maund. Maize stockists were anxious sellers with the result that stocks here declined to 5,000 maunds and prices were depressed around Rs. 11 to Rs. 13 per maund. *Bajra* was quoted lower at Rs. 13.75 a maund in the absence of seasonal demand. *Juwar*, however was steadier around Rs. 14 to Rs. 15.50 per maund on better demand in the face of poor stocks here. Other sections were listless, with *guwar* quoted at Rs. 14, *methi* at Rs. 27 and oats at Rs. 11 per maund.

Among pulses, peas and *arhar* eased during the week, as demand was slack and stockists were also anxious sellers, as new crop arrivals would soon commence. Harvesting of peas has already begun. New *urd* and *moong*, however, continued to attract good buying support and the prices of these stayed steady. Week-end prices (in Rs. per maund) were: peas *dara* 10.75; farm 11; peas *dal* 12.50; *arhar* 14; *arhar dal* 18; *urd* 22 to 24; *urd dal* 26 to 28; *moong* 18 to 21; *moong dal* 21 to 24; *massoor* 16 to 17.50; *massoor dal* 20.

COTTON

(Concluded from page 506)

it was the considered opinion of the Textile Commissioner that "decontrol or higher price does not appear to be a sure guarantee for either increased acreage for cotton or increased yield per acre." In order to increase production of cotton and the earnings of the farmer, what was needed, in Mr. Natu's view, was a rise in the yield per acre.

It will be seen from the foregoing summary of Mr. Natu's observations at the Press Conference, that the views that had been expressed by this journal on this issue from time to time are more or less fully shared by him.

Supply Position Serious

The Textile Commissioner conceded that, in view of the sharp reduction in crop estimate during the current season to 4.3 million bales (for reasons which have nothing to do with the price), as against the earlier estimate of 5.3 million bales, the supply position of cotton had shown a "dangerous deterioration." The position was aggravated by the lower imports of foreign cotton. Consequently the ratio between supply and consumption had deteriorated to an extent never before witnessed during the past many years. The carryover stocks at the end of the season were, therefore, likely to decline by half, that is, to 1.1 million bales from 2.2 million bales at the beginning of the present season.

The Textile Commissioner pointed out, in conclusion, that the Government was sparing no effort to get foreign cotton. But, as the foreign exchange position was very tight, attempts were being made to get cotton on barter basis. Such efforts, however, took more time to bear fruit and it was, therefore, most urgent that the country husbanded its internal production as carefully as possible to cope with the situation and that without disturbing the stability of prices. This is the most sensible conclusion that one could come to and it is gratifying to find that the Textile Commissioner has not allowed himself to be distracted by the high pressure propaganda that is being carried on by some very influential leaders of the cotton trade which even the spokesmen of millowners have been unable to resist.

Note.—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from June 1, 1953. B—Discontinued from June 1, 1957. C—Issued from May 10 1954 to May 30, 1955. E—Progressively repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked E are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of Oct., 1961 amount to 17.60 crores of rupees.

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2659 BOMBAY, 31st MARCH 1962 PRICE Rs. 2

FEDERATION'S MEMORABLE SESSION

THE three-day annual session of the Federation of Indian Chambers of Commerce and Industry, held at New Delhi from 24th to 26th March, provided three major surprises to the business community and the public at large. First and foremost was the unusually warm and pragmatic attitude displayed by Prime Minister Nehru towards private enterprise and its role in an expanding economy; this was something in refreshing contrast to his usual vehement criticism of the private sector and its failings in more recent years. The second surprise was the hard-hitting tone of the presidential address which, this time, was more critical of the Government than in the past. In fact, it was more critical of the Government than Mr. Nehru had ever been of the shortcomings of private enterprise, and so, for the first time in many years, it was the public sector that was in the dock. But the greatest surprise of the session was provided by Mr. G. L. Mehta's luncheon address. It was something of a sensation, for it not only turned the spotlight on the path to its reorientation to suit the Indian context. Thanks to these surprises, the Federation's session this year will go down in its history as one of the memorable ones.

If the Prime Minister was on the defensive and somewhat apologetic at the session, it was because there was some cogent and irrefutable criticism of the Government in Mr. Karamchand Mehra's presidential address to which Mr. Nehru's speech was in the nature of a reply. The critical tone for Mr. Thapar's address was set, at the very outset, by the following observations in it:

"The first two Plans did not reach the target of investment in the public sector and certainly fell short of the targets of production. This was not all due to the insufficiency of finance; it was due in part to the incomplete balance between different sectors of the economy. In consequence, we have shifted from one crisis to another. We witnessed the coal crisis which we have not yet outlived. We witness the power crisis which enfeebles our efforts and interrupts production. We again witness the transport crisis which threatens to live with us for some time."

This line of criticism was buttressed by the very relevant point that "the initial loss in production in any strategic sector gets multiplied through its technical relations with other sectors and affects the rest of the economy through its impact on income and demand." No wonder, therefore, that the slower tempo of development in such key industries and sectors as coal, steel, heavy chemicals, cement, power and transport has slowed down the rate of economic growth in general and that of industrial growth in particular. There is here a lesson for the country. In the words of Mr. Thapar, it is that, "while the rate of economic growth depends upon the rate of investment, the rate at which investment is rendered effectively productive depends upon the degree of economic co-ordination the Plan is able to achieve." That all this criticism was well merited could be easily seen from the Prime Minister's public admission of certain flaws in planning and his statement that the Government could be blamed for the coal, power and transport bottlenecks. Although he thought that, in a developing economy, such shortages were inevitable, he qualified his remark by admitting that they might have been foreseen and provided for. But frank admission of Government's failure to ensure greater advance in the *infrastructure* would not, by itself, mean much, if there is no reordering of priorities and if effective steps are not taken to rectify the mistakes.

The Federation's resolution on economic policy, incidentally, has done well to indicate a certain priority for public sector projects in its suggestion that "the Government must concentrate their full attention on augmenting rail transport capacity, power, and services such as telephones and telegraphs instead of dissipating its limited resources of personnel on a wider front." This suggestion seems to imply that it is the sole responsibility of the Government to provide the *infrastructure* facilities. Since the private sector, too, has been assigned a significant role in the *infrastructure*, it would have been more appropriate if simultaneous emphasis had been laid in the resolution on the need for greater encouragement to road transport and private electricity undertakings in the interests of early removal of the transport and power bottlenecks. The assurance since given by Mr. K. C. Reddy, Union Minister of Commerce and Industry, at the meeting of the Central Advisory Council of Industries, held on 27th March, would appear to suggest that the bottlenecks in the key sectors would be eliminated at an early date. While this is heartening, its value, however, would be known more precisely only if a sound coal policy is evolved here and now, the private electricity undertakings are more liberally permitted to expand and investment in the transport sector is stepped up in the coming year itself. What is urgently required is not only some readjustment of priorities at least in

and as an enlightened and forward-looking leader of business opinion, he is in a better position to call a spade a spade even at the risk of displeasing his listeners. In a way, some of the premises of Mr. Thapar's approach were questioned by Mr. Mehta who thought that "the industry has become pathologically restriction-minded, seeking a large per-unit profit on a small output rather than a small per-unit profit on a large output." In spotlighting the inadequacies and shortcomings of private enterprise, Mr. Mehta's object was probably to set the ball of discussion rolling in a field where the need for a candidly objective self-examination was patent. Farsighted businessmen would hardly demur to such a healthy debate so very necessary in the interests of private enterprise itself.

PROCRASTINATION

DRIFT, drift, drift. This seems to be the policy of the Government of India so far as sugar industry is concerned. Fresh evidence of this conclusion was made available by Mr. S. K. Patil in answer to a question in the Lok Sabha on Wednesday this week. He said that there was no scope for a reduction in the consumer price of sugar, unless there was a downward revision of excise duty. He had made this point on more than one occasion in the past one year. Our records show that he had categorically conceded the need for a reduction in excise towards the close of November last. And yet nothing has been done in this direction so far. Before the General Elections, preoccupation with them was given as an excuse for inaction. Although this explanation was not convincing to us, it was the fashion of the day. But more than a month has elapsed since the election results were announced. The delay in coming to a decision on the question is inexcusable, especially as the Government has power to vary excise duties as and when it likes. In the meantime, stocks of sugar with mills are mounting, locking up bank credit and storage space. The commodity is being bought and sold by the trade on a hand-to-mouth basis; its prices, which had sagged to some extent early this year, have looked up again. The consumer has not had any significant relief, except that he has been spared the trouble of standing in the queue. A more typical instance of incorrigible procrastination by the Government is hard to find.

Or is the delay deliberate? If that were so, Mr. Patil could have clearly told the House that the Government did not intend lowering the excise duty. In the absence of a clear statement to that effect, the only inference that one can draw is that the issue is still under consideration. This may be some consolation to sugar producers whose representative body, the I.S.M.A., has, once again, represented to the Government this week stressing the need for withdrawing the additional excise duty of Rs. 4.12 per maund imposed in May 1957 as a measure to depress domestic consumption to a level in consonance with production. It will not, however, be surprising, if the I.S.M.A. one day finds itself in the position of the parrot that continued its perch on the bough of a silk cotton tree in the fond hope of the beautiful-looking pods turning into sweet juicy fruits. This doubt stems from a significant rider in Mr. Patil's reply to members of the Lok Sabha who were anxious to see a fall in the price paid by the consumer for sugar. He is reported to have said that "he would not favour increasing the consumption of sugar rapidly, because it would seriously affect the consumption of *gur* and *khandsari*, etc.", produced in the cottage industry (the so-called decentralised) sector. This excessive concern for *gur* and *khandsari* suggests that the disadvantages to the economy as a whole of the wasteful utilisation of sugarcane, about which much has been said and written, have not yet been realised by the powers-that-be.

It is useless for sugar manufacturers to wait for the Government to do something for getting them out of the surplus muddle. The surplus gives them a wonderful chance to propagate consumption of more white sugar. They can pool their resources together to launch a country-wide campaign for this purpose and sacrifice a little in their price to stimulate the domestic offtake of sugar. In any case nearly one half of the loss will be borne by the Government, as they will be paying less income-tax and corporate tax. In return, they will gain the goodwill of consumers which they have lost for no fault of theirs in the past two decades but which is of inestimable value. Secondly, they will have paved the way for a rapidly expanding market for their manufacture in the coming years. Thirdly, with the resources released from the disposal of surplus stocks, they can produce more sugar in the next season and hope to make good the losses of this year through a larger turnover. Fourthly, they will have less profit to share with sugarcane growers which in turn will impart a certain amount of reality to the cost of sugarcane. And, fifthly, the uneconomic and inefficient units will have been eliminated, thereby leading the industry to better health. The sugar manufacturers should, therefore, wholeheartedly plump for complete decontrol of sugar, including the control on releases and movement.

Unfortunately, however, the sugar manufacturers are by no means so forward-looking as to accept the aforesaid suggestion. They have been so accustomed to making profits all these years on the basis of a closed market that the climate of keen competition will not suit their health. It is, of course, no use blaming the manufacturers alone. Nearly twenty years of controls have bred and fostered numerous vested interests, in the Central and State Governments, in the industry and among sugarcane growers. A more recent development that has strengthened the hands of the protagonists of controls is the necessity to export sugar even at a heavy loss for earning foreign exchange. Consumers have, therefore, slender hope of getting their requirements of sugar more easily and cheaply than now, even though the country is bursting with heavy stocks.

The observations of Mr. Patil and his deputy, Mr. A. M. Thomas, in Parliament this week give one the impression that they are not in a hurry to dispose of the surplus sugar. They seem to be under the impression that the fall in production of sugar in the 1961-62 season will be greater than expected earlier in the season, that the growth in domestic consumption will be bigger and that the surplus at the end of the season will be of manageable proportion, having regard for maintaining a normal stock of at least two months' consumption, if not a little more. Currently, production has been running 200,000 tons lower than the rate witnessed in the 1960-61 season. Production estimates for the whole season vary, 2.7 million tons at best and 2.5 million tons at worst, as against nearly 3 million tons (2.981 million tons to be precise) in 1960-61. It is said that, apart from the Government's directive to cut production by 10 per cent, which now looks as though it will be fully effective, there has been a pronounced fall in the quality of sugarcane resulting in a lower recovery. In many centres, crushing has already been stopped for more than one reason. At the same time, consumption is optimistically placed at between 2.2 and 2.4 million tons, as compared with 2.09 million tons in the past season. In the first four months of the current season, domestic offtake was higher by 100,000 tons and, if this rate of increase were maintained in the remaining months, domestic consumption could easily be in the neighbourhood of 2.3 million tons. Exports, it is hoped, will be 500,000 tons, as against 245,000 tons. It is, therefore, argued that, if production goes down by 200,000 tons, home consumption goes up by 250,000 tons and so also exports by a like amount, the carryover at the end of the season will be a little over one million tons, as compared with 1.19 million tons at the beginning. There is, however, a certain amount of wishful thinking in these calculations, especially in regard to exports. Even granting there is none and that all the estimates will be borne out by events, a surplus of a million tons of sugar is not a small quantity. It is sufficiently large to give severe headaches. And it would be nothing but criminal complacency if no clear, calculated steps were taken without any further delay to encourage larger domestic consumption.

The exercise in the statistical position of sugar apart, it will be a sheer waste of capital not to utilise fully the capacity that has already been created in the sugar industry and a folly to go on exporting sugar at 50 per cent below the cost of production. Is it suggested by the powers-that-be that sugar production in the 1962-63 season, too, should go down further and touch a level of 2.4 million tons? For only then will the surplus at the end of the next season be of manageable proportion. But such a prospect is unthinkable for the reason just mentioned. Surely, it is not in keeping with the ideals of a socialist government to think in terms of the restrictive practices implied in such a programme. On the contrary, the aim should be to get more white sugar produced at a price that suits the pockets of the lowest income group. India has all the facilities to fulfil this aim. The sugar manufacturers in Maharashtra having their own plantations have amply demonstrated that, given the right methods of growing sugarcane, India can raise the per-acre production of sugar to levels nearer to those in Indonesia, the Philippines, Formosa and Australia. It is only the lack of will and political courage among the leaders of the country that is the greatest impediment to the progress and prosperity of sugarcane growers, producers and consumers of sugar.

MORE HEAT THAN LIGHT

THE resolution on State Trading Corporation, moved by Mr. Pravinchandra V. Gandhi, at the annual session of the Federation of Indian Chambers of Commerce and Industry, New Delhi, contains no points which have not already been said by the trading community. It is certainly an uncompromising indictment of the S.T.C.'s activities. Mr. Gandhi, in his speech, sought to stress that the incursion of the S.T.C. in the import and export trade, as well as in internal distribution, had resulted in supplanting normal trade channels. He, therefore, urged that the S.T.C. should refrain from undertaking actual trading operations and that it should confine itself to other useful activities, such as exploration of export markets, and rendering assistance and guidance to trade in dealing with countries having State-owned trade organisations. These are constructive suggestions, indeed, for there is no reason, in theory, why trading with Communist countries should be a monopoly of a State corporation. In actual practice, however, there is a risk of Indian communists masquerading under the private sector and strengthening their financial position for promoting communism in this country more aggressively. The Communist countries themselves will prefer to buy from and sell to firms managed by fellow-travellers. It is high time our businessmen considered the political implications of this particular demand of theirs.

One of the standing criticisms against the S.T.C. is that it has deprived a large number of traders of their living. But the authors of this criticism have so far failed to provide any statistical proof of real unemployment among traders as a result of the S.T.C.'s operations. There have, of course, been wild allegations. But they are rarely substantiated by facts. One would have expected that at least the Federation, which is India's apex trade body and is equipped with sufficient research facilities, would collect and supply the relevant data showing the extent to which the private sector in trade has been supplanted by the S.T.C. Unless such a study is made and presented forcefully, the Government is not likely to revise its stand. On the contrary, repetition of apparently unsubstantiated allegations may do more harm than good, for the Government can easily turn round and say that the private sector is merely indulging in doctrinairism. We are not unaware of *The Economist* Intelligence Unit's study on the S.T.C. last year, a study now being elaborately and approvingly quoted by the trade in this country *ad nauseam*. This study is mainly of an academic nature and provides, ironically enough, sufficient material for both the protagonists and detractors of the S.T.C. to support their respective claims. At any rate, it does not enlighten one on the exact extent to which the S.T.C. has displaced private trade.

The volume of trade handled by the S.T.C. has, of course, gone up fourfold, from about Rs. 15 crores in 1956-57, the first year of its operation, to an annual average of over Rs. 60 crores in 1960-61, the latest year for which data are available. But this does not provide a clue to the question whether it has made any perceptible inroads into the established trade. For India's total foreign trade during the same period has gone up much faster, that is, from Rs. 1,469 crores to over Rs. 1,700 crores, or an increase of over Rs. 200 crores. It is, therefore, not surprising that the Import and Export Policy Committee (Chairman: Dr. A. Ramaswami Mudaliar) has pointed out, in its report released last week, that "much of the criticism against the S.T.C. stems from a misconception of its role and functions which do not seem to have been fully explained or appreciated." The critics of the S.T.C. could not have also missed the strong defence of the S.T.C. personally made by Dr. Mudaliar at the meeting of the Export-Import Advisory Councils at New Delhi early this month, when he categorically stated: "I have now overcome my initial prejudice against the S.T.C." It is all the more surprising, therefore, that the Federation meeting thought it fit to adopt a resolution on the lines it did and that the mover and the supporters of the resolution should have indulged in the relatively easy game of vitriol.

MARKET GOSSIP

Wider Share Ownership

WHO could have boldly suggested in India before independence that there was need for a movement to spread knowledge about investing in shares of industrial concerns? For not only was the saving potential of the community poor but the investment opportunities actually available were also considerably limited. Indeed, investment in equities was within the means and habits of only a very narrow section. Even as late as in the early fifties, it was fashionable to argue that, with the disappearance of princes and *zamindars*, and with the continued rise in the cost of living of the upper middle class, the stock exchanges would be thin and devoid of support. So strong was this belief that many a share-broker sold his membership card for whatever price it could fetch and took to other lines of business. But all this now seems a far cry. Conditions have changed to a marked extent in recent years, especially since economic planning took firm roots in this country. The various measures of rural reforms which have made individual moneylending to farmers unreliable and uneconomic, the rising prices of urban landed property, rent controls and other legislation in favour of tenant residents, the growing popularity of industrial equities as a source of quick capital profit and the assured markets for industries, thanks to import restrictions and expanding domestic demand, all these have brought new investors to stock exchanges. Those share-brokers who are patient, hard-working and do not mind the trouble involved in serving small, as well as medium, investors are having more business than they can cope with.

Although no reliable estimates of the number of shareholders are available, it can be safely presumed that the number today is very much higher than that, say, 10-12 years ago. To take the instance of some Tata group companies. The number of shareholders has gone up from 28,410 in 1951-52 to 70,948 in 1960-61 in the case of Tata Steel, from 7,869 to 10,732 in Tata Hydro, from 7,446 to 10,897 in Tata Power and from a few hundred to 15,139 in T.E.L.Co. In the case of Bank of Baroda, the number has gone up from 4,138 to 6,570. The total number of shareholders in the whole country is bound to increase further and further in the coming years, what with the expanding tempo of economic activity, rising trend of incomes and the growing anxiety over inflation which prompts many to prefer equities as a better store of value than even gold and houses.

Viewed thus, the importance of bringing greater knowledge and understanding of investment matters to a wider public cannot be stressed too strongly. But the issue has still not received any attention worth mentioning. It is in this context that the deliberations of the "Wider Share Ownership Conference" held at London last week are interesting and also much useful. The Conference was sponsored by the Wider Share Ownership Committee the two principal objectives of which are to popularise investment in shares and to bring pressure on the authorities concerned (stock exchange, Government and others) to make the purchase and sale of shares easier. The Committee consists of industrialists, City men, economists, research specialists and politicians.

When the Conference began, it had before it an interesting report on savings and attitudes to owning shares prepared by Dr. Mark Abrams. The report, which is based on a sample survey of share ownership in Britain during 1962, estimates the number of shareholders at anywhere between 3.20 million and 3.60 million, as compared with 1.75 million in 1962 and 1.25 million in 1948. Approximately an equal number (representing about 11 per cent of non-share owners) have more than £500 each in long-term savings, an amount considered to be the minimum accumulation of savings required before going into share investment. It is thus apparent that the untapped source of savings available for buying shares is substantial, given, of course, the right sort of inducements. The report shows further that young people are particularly interested in buying shares. As is only to be expected, the findings of the survey reveal that most share owners are in the highest social grades and that over half the upper middle class group are investors in shares. Among white-collar workers in the lowest grade earning under £1,000 a year, there are said to be as many shareholders as there are in the highest grade earning twice as much or more. Skilled manual workers earning less than £1,000 a year account for 10 per cent of all shareholders and half of the 1.7-2.0 million persons owning shares value their holdings at less than £500 each.

By 1975, the total of new personal savings in Britain are expected to be about £720 million more than in 1960. It is thought desirable that a large part of this increase should go to support investment in industries and that as large a part as possible should be invested directly, instead of indirectly through institutions. After all, it is an accepted principle that risk capital must be drawn from the widest possible section of the community. This principle, without any political or social implications whatever, is, as Lord Ritchie of Dundee, Chairman of the London Stock Exchange, emphasised in his speech at the Conference, necessary to the future prosperity of the nation. Laying special stress on encouraging small investors, Lord Ritchie said: "We welcome small investors. We welcome small new businesses. ... Something between 18 and 20 per cent of all stock exchange transactions are for amounts of £100 or less. So let us once and for all forget the idea that the small investor is not welcome. Surely, those of us in this room must feel that the form of nationalisation which we should like to see is nationalisation in the sense that everybody owns shares."

While stock exchanges should provide for adequate facilities to small investors, they cannot themselves undertake work designed to ensure wider share ownership which ought to be the function of bodies like the Wider Share Ownership Committee of London. The three aims for the Committee as listed by Mr. S. P. Chambers, Chairman of Imperial Chemical Industries, are: (1) to get public opinion and Government policy more sympathetic to the whole concept of wider share ownership and, in particular, to urge removal of the present harsh tax anomalies; (2) to press for modernisation of institutional machinery for investment to make it more appropriate for the relatively small and scattered investors; and (3) to educate potential investors in the wisdom of suitable investment in private industry.

Dwelling at some length on taxation, Mr. Chambers said: "All savings have an anti-inflationary effect and, if savings are a good thing as a bulwark against inflation and as a means of increasing the capital resources of the country, there should be no discrimination against certain forms of savings, particularly against the forms that go into private industry." This statement, though it is addressed to the British Government, is of equal relevance to India, where, as stated at the outset, more and more people with medium and small incomes are evincing interest in equity investment. This is a trend which must be fostered by suitable tax incentives in the interest of a healthy property-owning democracy.

Sales Tax on Pepper

It is surprising that the Kerala Government should have thought of enhancing the sales tax on export commodities, such as pepper, cashew nuts and ginger, at a time when active consideration is being given by the Central Government for reducing the burden of tax levies on exports in pursuance of the Mudaliar Committee's suggestions. Under the Kerala Sales Tax Amendment Bill, now referred to the Select Committee, the State Government proposes, *inter alia*, to enhance the rate of sales tax from four to five per cent on these commodities. This proposal has come as shock to the exporters. Mr. Vallabhdas V. Mariwala, President of the Pepper and Ginger Merchants' Association, Bombay, has already sent a telegram to the Chairman of the Select Committee appealing to it to drop the move. Drawing pointed attention to the severe competition in world markets for these commodities, Mr. Mariwala has suggested that, instead of imposing a fresh tax burden, there is an urgent need for reducing it. If this cannot be done, the least the Kerala Legislature can do, according to him, is to maintain the *status quo*. Alternatively, he has pleaded for grant of refund of tax on exports, "as is done in several countries and even in some States in India."

There is no exaggeration in Mr. Mariwala's plea. For, of late, spices have been experiencing severe competition in world markets. Pepper, in particular, has been hit hard. India's export of pepper last year suffered a marked setback, owing to growing pressure of supplies from Sarawak. During the nine months ended December 1961, pepper exports amounted to Rs. 435 lakhs, or an annual average of Rs. 580 lakhs, which compare unfavourably with Rs. 850 lakhs earned in the fiscal year 1960-61. Exports of other spices and cashew nuts, too, leave much to be desired. Shipment of ginger fetched Rs. 66 lakhs during April-December 1961, representing an annual rate of Rs. 88 lakhs, as against Rs. 90 lakhs in 1960-61. Export of cashew kernels also is running at a slightly lower rate than that in 1960-61, when it touched about Rs. 19 crores. These facts clearly go to show that the State Government has taken a wrong step at the wrong moment.

But, if the State Government still finds it difficult to reconsider its proposal, there are compelling reasons for granting rebate on exports. We may quote here what the Mudaliar Committee on foreign trade has to say on sales tax, for the benefit of those who have not seen its report: "It has to be recognised," says the Committee, "that most countries give full rebate of sales tax on exported goods, and, if Indian exporters are denied such a relief, our goods will be at a disadvantage in the export market. It is but meet that the State Governments in India, too, play the part." Will the Kerala Government and the Select Committee concerned heed this advice?

Cotton Quota: Belated Wisdom?

The simultaneous announcement of an export quota for 70,000 bales of Bengal *Deshi* and a global import quota of 43,000 bales of cotton stapling 1.1/16" and above but below 1.3/16", made on the 28th inst., has been generally welcomed by the trade and the mill industry. A notable feature of the announcement is that exports of cotton are linked with imports of cotton. The foreign exchange earned on the export of 70,000 bales of Bengal *Deshi*, is earmarked for importing 43,000 bales long-staple cotton. Obviously, this link-up has been necessitated by the difficult foreign exchange position in which the country finds itself today.

Trade quarters, however, point out that the purpose of earning foreign exchange with which to buy foreign cotton could have been better served if the quota had been announced earlier. For Japan, the principal customer of Bengal *Deshi* cotton, is said to have already purchased most of its requirements from Pakistan and is, therefore, now in a position to bargain with India for lower prices. The announcement, it may be noted, was delayed by about two weeks even after the Cotton Advisory Board had recommended that a further quantity of 75,000 bales of Bengal *Deshi* should be allowed for export. This delay seems to have been deliberate, the object being to give mills some more time to cover their requirements. It may be recalled that the Board had suggested that mills, which wished to purchase more Bengal *Deshi* cotton, should be permitted to do so. The Board had estimated that, after taking into account the quantity already released for export, namely, 200,000 bales, the surplus over domestic requirements of Bengal *Deshi* would be of the order of 100,000 and that hence 75,000 bales could be safely allowed to be shipped out of the country. Actually, the Government has thought it fit to be a little more cautious and, therefore, released only 70,000 bales.

Although shippers are optimistic that the export quota could be fully utilised, they doubt whether it would be exhausted as quickly as the previous quota. Current Japanese price ideas are said to be 20*d.* per lb. for superfine qualities and 16*d.* per lb. for fine qualities. At this price, it is pointed out, the earnings on 70,000 bales of Bengal *Deshi* (roughly estimated at Rs. 2.5 to Rs. 3 crores) might be insufficient to buy 43,000 bales of foreign cotton considering the prevailing prices in Sudan which is one of the few countries that are in a position to supply India's needs. Undoubtedly, 43,000 bales do not constitute a lot of cotton in the context of the storage of cotton in this country. But it appears that even this small quantity may not be available for consumption during the current season because the shipment period of Bengal *Deshi* extends upto the end of August 1962 and hence at least a part of the cotton imported out of the proceeds of the present quota would arrive in the country only after that date. Hence the present import quota is unlikely to make any significant impression on the cotton supply situation this season. The Government, according to Mr. K. C. Reddy, Union Minister for Commerce and Industry, is "alive to the problem and is making strenuous efforts to locate the sources of supply through Governmental and non-Governmental agencies." Mr. Reddy told the Central Advisory Council of Industries, at its meeting held this week at New Delhi, that, within a few weeks, the Government would announce "something definite" to relieve the cotton shortage. The trade and the mill industry are eagerly awaiting the news.

World Sulphur Position

India is dependent on imports for almost its entire requirements of sulphur. With the growth in fertiliser and chemical industries, the domestic demand for sulphur has been steadily going up. From about 100,000 tons about five years ago, the annual consumption of sulphur in this country has gone up to about 175,000 tons, with the foreign exchange now spent on imports being about Rs. 3 crores annually. In view of the further expansion of industries envisaged in the third Plan, the annual consumption is expected to go up to as much as 600,000 tons by 1965-66. No deposit of elemental sulphur has, however, been located in the country. But a scheme for the manufacture of sulphur from pyrites is under way at Amjor in Bihar. The scheme, undertaken in the public sector, is designed to produce 84,000 tons of sulphur by the end of the third Plan. It may be noted that eight million tons of pyrites, with 40 per cent sulphur content, have already been proved in the Amjor area, out of total estimated reserves of 384 million tons.

What is important to note here is that there is no possibility of India attaining self-sufficiency in this essential chemical even by the end of the third Plan. Assuming that the proposed new plant goes into full production by 1965-66, the gap between indigenous output and demand will be over 500,000 tons of sulphur; imports will, therefore, have to be continued. It is, indeed, heartening to note that, at least in world markets, there is no scarcity of this material. In fact, world sulphur production is running well ahead of consumption. The total output of sulphur in the free world rose by about 6 per cent to 20 million metric tons in 1961 (half of it being brimstone), as compared with the previous year, according to a report on the sulphur situation prepared by the British Sulphur Corporation. Free world consumption, however, moved up at a slower pace, that is, by about 2 per cent to 18.9 million tonnes, resulting in a surplus of 1.1 million tonnes. The trend was more or less similar in Communist countries as well. They produced 4.2 million tonnes of sulphur in 1961 (about 40 per cent brimstone), which represents an increase of 11 per cent, whereas consumption moved up by only 7 per cent. Stocks have also gone up. Free world brimstone stocks, says the British report, have gone up by 900,000 tonnes, shared mainly by producers in Mexico, France, Canada and the U.S. The slack in consumption is attributed to stagnation of offtake in the U.S. and Western Europe. This, however, should be viewed against the exceptionally large increase in consumption in 1960. At any rate, the importing countries cannot take much satisfaction from the present supply and demand position. For the trend of prices is still one of buoyancy. The reason for this is the prospect of higher rate of consumption growth in the U.S. and Western Europe during the current year

TREND OF SHARES

LULL BEFORE STORM

(From Our Own Correspondents)

BOMBAY, *29th March*

A DISTINCTLY quiet trend prevailed in the share markets during the past seven days. Almost every day price variations were narrower and turnover was lower than on the preceding day. Trading was listless, activity sporadic and patchy, and movements insignificant. But this lull in the markets seems to portend the storm that is in the offing. For rarely have stock markets been not stormy during the few days preceding the announcement of the tax proposals under the Central budget. Buying or selling, based on rumours, 'information' and intuition about the shape of fresh taxes, does keep the markets active on the eve of the budget.

Unexciting though the week was in terms of price movements, it was not devoid of some pre-budget (since the real budget for the market is yet to come) activity. And what is generally described as 'informed' buying did take place in steel shares and select textiles from a certain influential Delhi operator. More significant than this, however, was the small but persistent strong bull support for the pivotal issues at every minor setback due to stray realising. This support was contrasted by the absence of fresh selling. Moreover, though over the week, the markets showed minor changes, they closed at or around the week's best levels. This was partly due to some good corporate news. All this indicates that the storm to come might be in the nature of an upward march.

In Bombay, sectionwise, Steels continued to be in the forefront, with Indian Iron in the limelight. The shares picked up swiftly to Rs. 25, after reacting from Rs. 24.84 to Rs. 24.44, to close with a gain of 16 nP at Rs. 24.88. Tata Ordinary closed 50 nP lower at Rs. 139.25, but were one point above the lowest. Mukand Iron moved down from Rs. 28 to Rs. 27.40 and lost 40 nP on balance.

Textiles came next and were steady, with the 2 per cent increase in the final dividend of Kohinoor to 12 per cent, making a total of 18 per cent against 15 per cent for 1960, providing a cushion. Kohinoor improved from Rs. 311 to Rs. 315, but eased to close with a gain of 50 nP at Rs. 312.50. Minor setbacks in Century strengthened the technical position and evoked fresh support; the shares moved between Rs. 608.50 and Rs. 617 to close Re. 1.50 higher at Rs. 616.50. Standard were also actively supported at setbacks and closed unchanged at Rs. 1,048. Indu Mills' shares were firm, with the Deferred showing a gain of 8 nP at Rs. 3.94 and Ordinary of 56 nP at Rs. 23; the former attracted the automatic margin of 20 nP a share, payable by bulls. But Edward Textiles attracted a margin against bears of Rs. 25 on Saturday and Rs. 10 on Monday per share on a decline of more than 15 per cent from the last clearing rate. At close, the shares were Rs. 82.50 lower at Rs. 370. *Bombay Dyeing*, among the favourites, declined by 40 nP to Rs. 69.40. National Rayon were Rs. 3.50 lower at Rs. 540, after being done at Rs. 546.

The usual lustre was lacking in the Miscellaneous section. Much fancied, Bombay Burmah staged a late rally from Rs. 647 to Rs. 658, after losing some ground initially from Rs. 653 to Rs. 645, and closed with a gain of Rs. 5.50 at Rs. 656.50. Hindustan Motors met with good support and closed steady at Rs. 19.84. Amar Dye-Chem closed Rs. 10 better at Rs. 350. Enquiry for papers brought Sirpur into prominence, with a gain of 52 nP to Rs. 15.80. Telco plodded and so did Voltas to close with small losses. Shippings were unusually firm on rumours of a rise in freight rates, Great Eastern, attracting the automatic margin of 80 nP per share against bulls, closed Re. 1.16 higher at Rs. 13.76. *Scindia* were 60 nP better at Rs. 13. Cements were firm, with Digvijay gaining Rs. 11 to Rs. 207. Sugars were quietly steady. Among Banks, Central gained Re. 1.70 to Rs. 69.50.

The cash section was generally firm. T. Maneklal spurted by Rs. 30 to Rs. 865 on news of participation in the share issue of SLM-Maneklal Industries Ltd. New Standard Engineering gained Rs. 19 to Rs. 248, Synthetics and Chemicals Rs. 10 to Rs. 236, Chemicoat Rs. 10 to Rs. 170, Indian Rayon Rs. 9.50 to Rs. 117 and Zenith Steel Re. 1 to Rs. 16.88. The recent new issues commanded good premium.

* * * *

Handsome gains in almost all the speculative *issues* and continued strength in Jutes featured trading in Calcutta. In the Forward List, noticeable gainers were Birla Jute from Rs. 35.62 to Rs. 37.75, Orient Paper from Rs. 41.80 to Rs. 43.25, Texmaco from Rs. 21.70 to Rs. 22.95, Orissa Cement from Rs. 19.31 to Rs. 19.75, Guest Keen from Rs. 44.75 to Rs. 46.69, Indian Cable from Rs. 36.12 to Rs. 36.75 and Indian Aluminium from Rs. 38.69 to Rs. 39.25. Dunlop lost 50 nP to Rs. 43.12 due to a 1.5 per cent cut to 20 per cent in the dividend on the increased capital. Howrah Jute were shaded by 25 nP to Rs. 21.25.

Expectations of better working of mills sustained the interest in *Jutes*. Bally were marked up further from Rs. 291 to Rs. 298, Barnagore from Rs. 163 to Rs. 167, Fort Gloster from Rs. 427 to Rs. 432, Cheviot from Rs. 21.25 to Rs. 23 and Megna from Rs. 12.75 to Rs. 13.44. Coals, though steady, looked heavy in the absence of any indication in the Railway budget of any hope of an improvement in transport facilities. The Government's inclination to increase the output target failed to encourage the sentiment, as the ability of the industry to increase production has been greatly curbed by the problem of accumulating stocks. Bengal and South Karanpura, however, gained, the former by Rs. 2 to Rs. 348 and the latter by 38 nP to Rs. 7.25.

Among Engineering shares, Braithwaite and Jessop stole the limelight, with gains of Rs. 4.75 and of Rs. 2.81 to Rs. 56.87 and Rs. 25.62, respectively. Christien Mica, among Minings, rose from Rs. 11.62 to Rs. 12.25, and Dalmia, in Cements, improved from Rs. 13.37 to Rs. 13.75. Calcutta Chemical gained 25 nP further to Rs. 17.50 and Bengal Chemical Re. 1 to Rs. 105. Improvement from Rs. 10 to Rs. 20.25 highlighted the trading in the Miscellaneous section, where Hindustan Gas recovered from Rs. 23.94 to Rs. 25.25, Gwalior Rayon added Re. 1.75 to Rs. 56, Hindustan Aluminium looked up from Rs. 15.37 to Rs. 16.87 as did J.K. Synthetics from Rs. 14.81 to Rs. 16.25. Phillips India moved down from Rs. 35.94 to Rs. 33.87 and N.I. Cable from Rs. 43.37 to Rs. 42.87. Among Oils, Indo-Burmah gained 69 nP to Rs. 29.06. Paper shares were well supported, I.P. Pulp gaining Re. 1.75 to Rs. 21, Straw Products 37 nP to Rs. 10.12 and Titaghur 63 nP to Rs. 42.25. Encouraging corporate news kept Jayshree in demand in the textiles section, and the shares gained by 91 nP to Rs. 17.78. But Bharat Commerce lost 31 nP to Rs. 28.31 and Elgin 25 nP to Rs. 22.69 on realising. Rise in Dyer Meakin from Rs. 46.50 to Rs. 47.37 was the only feature in an otherwise dull section. Tea shares were generally neglected.

* * * *

A few bright spots featured trading in a steady market in Madras, where Plantings were neglected and Sugars were dull. Buckingham and Carnatic were conspicuously firm and closed with a gain of Rs. 23 at Rs. 290. Bangalore Woollen followed close, with a rise of Rs. 17 to Rs. 257. Lakshmi and Coimbatore Cotton, among other Textiles, suffered from Rs. 169 to Rs. 166 and from Rs. 216.50 to Rs. 215 on scattered selling. After initial easiness, Travancore Rayon looked up to Rs. 43.80 against Rs. 43.25 a week before and South India Viscose recovered to Rs. 182.50 against Rs. 180.50. Among Sugars, E.I.D. continued to evoke support and closed one point higher at Rs. 39.50.

CAPITAL MARKET NEWS

NEW ISSUES

Elecon Engineering Company Limited, Vallabh Vidyanagar, Gujarat, which was converted into a private limited company two years ago from a 10-year partnership firm and became a public limited company last year, will enter the market on 2nd April to raise Rs. 29.50 lakhs in equity shares of Rs. 100 each by way of public subscription. The lists close on 7th April, or earlier, but not before 4th April. Out of its authorised equity capital of Rs. 1 crore, Rs. 10 lakhs has already been issued and paid up. The Company proposes to issue additional capital of Rs. 50 lakhs, of which the Directors and their friends will take up Rs. 13.10 lakhs, the Company's foreign collaborators Rs. 2.40 lakhs, and the Life Insurance Corporation of India will be given firm allotment of Rs. 5 lakhs in consideration for having underwritten the public issue for a like amount. The entire public issue has been underwritten. In addition to the L.I.C., the Investment Corporation of India has agreed to take up Rs. 7 lakhs, the Central Bank of India Rs. 5 lakhs, the Devkaran Nanjee Banking Company Rs. 5 lakhs, the Bank of India Rs. 3 lakhs and six stockbrokers Rs. 9.50 lakhs.

Exclusively engaged in the manufacture of mechanical handling equipment such as bucket elevators, belt conveyors, screw conveyors, gravity roller conveyors, etc., the Company has its works situated in Goregaon, suburban Bombay. It has received industrial licences to manufacture conveyors and elevators worth Rs. 12 lakhs a year, 2,400 units of worm reduction gears a year and troughing idlers, return rollers, belt conveyors, etc. The manufacture of conveyors and elevators is already being done at the Bombay works, and the turnover last year was Rs. 21 lakhs. To undertake production of other items, the Company has put up another factory at Vallabh Vidyanagar, Anand. It has also been licensed to expand its gears' capacity to Rs. 25 lakhs, conveyors' capacity to Rs. 50 lakhs and troughing idlers' capacity to Rs. 25 lakhs. It has secured the collaboration of Spencer (Melksham) Ltd., England, for troughing idlers, return rollers and belt conveyors and of Alfred Wiseman and Company, Birmingham, England, for worm reduction gears up to 10½" size. The latter company is also collaborating financially as mentioned before.

The Company has installed its own diesel set for supplying 100 kw. of power at Vallabh Vidyanagar. It has also been assured of immediate supply of 200 kVA out of the sanctioned quantity of 700 kVA by the Gujarat State Electricity Board, and the balance would be available by the end of this year. Five factory sheds at Vallabh Vidyanagar have been completed and two more are expected to be ready by May this year. The factory has already commenced production of mechanical handling equipment and would manufacture reduction gears in July-August this year.

The Company's turnover at its Bombay works rose from Rs. 3.74 lakhs in 1957 to Rs. 21 lakhs last year. Along with the Anand plant, it is expected to rise to Rs. 60 lakhs this year and to Rs. 120 lakhs next year, when the new plant will work at full capacity. The Directors are hopeful of recommending the maiden dividend for 1963. The Company has secured Rs. 12-lakh foreign exchange loan and Rs. 8-lakh rupee loan from the Industrial Credit and Investment Corporation of India, and a medium-term loan of Rs. 10 lakhs from the Bank of India. The outlay on the expansion plans is estimated at Rs. 1 crore. Mr. Nanubhai B. Amin is the Chairman of the Company.

* * * *

SLM-Maneklal Industries Ltd., promoted by T. Maneklal Manufacturing Company, Ltd., Bombay, will be in the market some time in the middle of next month to raise Rs. 34.30 lakhs in equity shares of Rs. 100 each way of public subscription. The Company has an authorised capital of Rs. 1 crore, divided into 80,000 equity shares and 20,000 preference shares. It has been authorised to issue equity shares. It is reserving 10,000 shares for its foreign collaborators, Swiss Locomotive and Machine Works, Winterthur, Switzerland. It also proposes to offer 20,000 shares to those shareholders of T. Maneklal whose names appear in its register on 14th April. The allotment to those shareholders is expected to be on the basis of one share for one share held, subject to the discretion of the Directors of SLM-Maneklal. The Directors and their friends are to subscribe for 15,700 shares.

The Company will manufacture diesel engines of 163 H.P. to 655 H.P. The initial output will be 45 engines per year, to be raised to 75 units per shift progressively over three years. It will also produce blowers, watering pumps and compressors. The factory will be located at Vatva, Ahmedabad. The capital outlay on the project is estimated at Rs. 80 lakhs and will rise to Rs. 1 crore as the phased manufacturing programme is completed.

* * * *

Another company to be in the market next month is **Zenith Lamps and Electricals Ltd.**, Madras. It has an authorised capital of Rs. 1 crore, of which Rs. 80 lakhs is in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.3 per cent, taxable, cumulative redeemable preference shares of Rs. 10 each. It proposes to issue equity capital of Rs. 20 lakhs and preference of Rs. 5 lakhs. The Directors and their friends will take up half the issued ordinary capital, and the balance of Rs. 10 lakhs, along with Rs. 5 lakhs preference, will be offered to the public.

The Company has a Rs. 75-lakh project for the manufacture of fluorescent tubes, GLS lamps, mercury vapour lamps, infra-red lamps and projection lamps in technical collaboration with a Hungarian firm. The plant will have a capacity of 1.2 million fluorescent lamps a year on a single-shift basis, which will be equivalent to the total production of such lamps in the country last year. Demand for these lamps is expected to rise to 6 million in 1965. The outlay on land and buildings will be Rs. 7 lakhs and on plant and machinery Rs. 37 lakhs. The Madras Industrial Investment Corporation Ltd. has assured the Company of loans and credits of the order of Rs. 28.50 lakhs.

RIGHTS ISSUES

The Directors of **Bowreah Cotton Mills Company Ltd.** have decided to issue rights shares at par in the proportion of four new equity shares of Rs. 10 each for every 10 equity shares held. This will raise the issued equity capital from Rs. 24 lakhs to Rs. 33.60 lakhs. The Company has also issued preference capital of Rs. 6 lakhs. For the year ended 31st December 1961, the Directors doubled the taxable ordinary dividend to 20 per cent. It remains to be seen whether the same dividend would be maintained on the increased capital, if the rights issue is sanctioned this year.

* * * *

The **Rohit Mills Ltd.**, Ahmedabad, proposes to issue rights shares at par in the proportion of one equity share of Rs. 100 for every five equity shares held. This will raise the issued capital to Rs. 9.75 lakhs. For the year ended 31st December 1961, the Company earned a gross profit of Rs. 34.80 lakhs, which showed an improvement of Rs. 10 lakhs over the previous year. It proposes to maintain the ordinary dividend at the previous year's level of Rs. 10, subject to tax.

NEW ISSUES SANCTIONED

The Controller of Capital Issues has authorised six companies, including one public sector company and two private limited companies, to issue capital of Rs. 2.67 crores within 12 months. Given below are the details of the capital issues by the three public limited companies:

Synthetics and Chemicals Ltd., Bombay, with a subscribed capital of Rs. 4.50 crores in equity shares of Rs. 100 each, has been granted consent to issue further capital of Rs. 1.25 crores divided into 1,25,000 equity shares of Rs. 100 each for cash at a premium of Rs. 20 per share. The proceeds of the issue amounting to Rs. 1.50 crore would be utilised for financing the expansion from 20,000 tons to 30,000 tons per annum of synthetic rubber.

New Central Jute Mills Company Ltd., Calcutta, having a paid-up capital of Rs. 288.98 lakhs, has been accorded consent to issue debentures of the value of Rs. 80 lakhs, carrying interest at 6½ per cent per annum, to be pledged as security for a loan. The proceeds of the loan will be utilised partly for repayment of loan to the U.P. Government and partly for financing improvement and ancillary additions to the chemical fertiliser plant. The debentures will be issued to the registered holders only.

Nithyakalyani Textiles Ltd., Madras, has been granted consent to issue capital of Rs. 20 lakhs, consisting of equity shares of Rs. 16 lakhs and 9.5 per cent cumulative preference shares of Rs. 4 lakhs, for establishing a spinning mill.

NEWS IN BRIEF

THE question of acceptance by India of the recently concluded International Cotton Textile Agreement is still under consideration, according to Mr. Kanungo, Minister of Commerce.

Financial assistance to the tune of Rs. 37 lakhs has been extended by the U.S. Government to the Central Food Technological Research Institute, Mysore, for extension of the project on production of protein-rich foods.

Soviet Russia will buy 25 million lbs. of tobacco from India in 1962 and larger quantities in coming years. This was stated by visiting Soviet trade representative, Mr. Grazdev Trilee, at a meeting of the Indian Tobacco Association at Guntur last week-end.

The Government of India has sanctioned a loan of Rs. 66 lakhs to the Rajasthan Government for financing the Rajasthan Canal Project during 1961-62. A total loan of Rs. 19.95 crores has so far been sanctioned to the State Government since 1957-58 for this project.

A loan of Rs. 2.11 crores has been granted by the Government of India to the Uttar Pradesh Government for financing expenditure on the Rihand Project in 1961-62. The total loans sanctioned since 1954-55 to the State Government, including the current loan, for this project amounts to Rs. 27.97 crores.

The State Trading Corporation has decided to import Rs. 9 lakhs worth of pharmaceuticals and chemicals from Poland during the current year, including Rs. 2 lakhs worth of antibiotic preparations. An agreement to that effect was recently concluded between the Polish Chemical Export Organisation and the S.T.C.

The Sikkim Mining Corporation, a joint venture of the Sikkim Durbar and the Government of India, will commence large-scale production in August next. On the basis of a project report prepared by the Indian Bureau of Mines, the Corporation has commenced work on a small-scale for the exploitation of the copper, lead and zinc deposits in Bhotang and other places in Sikkim.

The Government of India has decided that the operation of the shipyard in Goa should be resumed as early as possible. The Mazagon Dock Company, which is a Government undertaking, has been asked to run the shipyard. Meanwhile, the Goa Administration has appointed a custodian for the shipyard and the employees of the shipyard have been paid their wages for the months of December 1961 and January 1962.

The first of the five units of the thermal power station at Neyveli in Madras State will be commissioned towards the end of next month. Each unit will have a capacity to produce 50,000 kw. of power. The other four units are expected to start functioning by 1964. After meeting the requirements of the Neyveli lignite project, the surplus power available will be fed into the Madras grid.

The National Coal Development Corporation has decided to set up six coking coal washeries during the third Plan period. These are to be at Kathara, Sawang, Chalkari, Ramgarh, Sudamdih and Jhilimili and one mixed coal washery at Karanpura. The total production of washed coal at present is about four million tons per annum. The aggregate requirement of washed coal is estimated at 15 million tons.

India and the U.S. have reached a general agreement to increase the air services between the two countries. Under the agreement, Air-India will be allowed to increase its North Atlantic air services to New York from five to seven flights weekly. At the same time, the two U.S. Flag airlines serving India—Pan American and TWA—will be allowed to increase their flights to that country from a total of six per week to ten.

An Association, styled the Western India Shippers' Association, will shortly be launched in Bombay with the object of bringing together shippers in various parts in Western India for a mutual discussion of various problems affecting shippers with particular reference to exports and for securing organised action on all points of difficulties experienced by shippers in effecting exports, inter alia, bearing on shipping freight, availability of shipping space and regularity of shipping service.

The Government of Maharashtra is considering the development of petro-chemical industries in areas near Bombay. A plan for such development has already been chalked out. It is felt that such petro-chemical industries, which obviously relate to the refineries at Trombay, will establish a close contact with the refineries for their proper working more particularly with regard to the various gases and liquid hydro-carbons to be used as raw materials.

An educational allowance of Rs. 15 per child for secondary and higher secondary classes and Rs. 10 for primary classes, subject to a total of Rs. 50 per month, has been granted to every Central Government servant drawing Rs. 349 or below per month, with effect from the 1st inst. Such allowances are admissible if the child studies in any recognised school away from the station at which the employee is posted and/or is residing. This scheme is expected to cost Rs. 50 lakhs per annum.

The Oil and Natural Gas Commission had drilled 58 wells upto the end of 1961. Of these, 32 wells proved to be oil-bearing, 10 gas-bearing and only eight were dry. The remaining eight wells were still under test. In Ankleshwar, 26 wells were drilled, of which 21 yielded oil. Of the 21 wells drilled in Cambay, six were oil-bearing, eight gas bearing and four were under test. But in the Punjab, two of the four wells drilled proved dry. One well was gas-bearing while another was under test.

An agreement between the National Coal Development Corporation and 'Tjazhpromexport' of Soviet Russia for the setting up of a coal washery at Kathara in Bihar was signed at Ranchi on Monday this week. Under the agreement 'Tjazhpromexport' will prepare a detailed project report and working drawings for a coal washery at Kathara with a capacity of three million metric tons. The washery will supply washed coal to steel plants including the proposed plant at Bokaro, about 15 miles from the washery site.

Negotiations are in progress with the Soviet Union for the import of 100 megawatt power generators for installation in India, according to Mr. Jaisukhlal Hathi, Deputy Minister for Irrigation and Power. A technical team has proceeded to Russia to conduct negotiations and also ascertain whether the generators are cheap and technically suitable to Indian requirements. According to the present proposal, four units of these generators will be imported. Three of them are proposed to be installed at Pathratu in Bihar and the fourth at Neyveli in Madras.

An agreement covering a loan of Rs. 256.8 crores to India from the sale proceeds of agricultural commodities supplied to this country under the fifth U.S. Public Law 480 agreement, which was concluded in May 1960, was signed at New Delhi on the 26th inst., by Mr. L. K. Jha, Secretary to the Union Ministry of Finance, Department of Economic Affairs, and Mr. John Kenneth Galbraith, U.S. Ambassador to India. The loan will be utilised by India to meet the local currency costs of many economic development projects, including hydro-electric and thermal power stations such as Sharavathi, Cambay, Bandel, Amlai and Talcher.

Three refresher training courses for engineers of Central and State Governments, semi-Government bodies and private concerns have been organised at the Forest Research Institute, Dehra Dun, by the National Buildings Organisation of the Union Ministry of Works, Housing and Supply, in timber engineering and technology since the winter of 1959-60. A total number of 34 engineers has attended these courses, which are held annually and are of four to six weeks' duration. These courses help engineers not only to acquire a better knowledge of the properties, advantages and limitations of wood and wood products, but also to keep them fully acquainted with the latest materials and timber engineering techniques, enabling them to utilise the existing sources of timber in the country most suitably and to the best of advantage.

From Abroad

A 16-mile-long plastic pipeline has been laid in Yugoslavia to bring milk daily from the mountain areas of Nova Gorcia in Slovania to a dairy at Tolmin.

France had a trade surplus of NF 714 million in 1961, exports aggregating NF 26,352 million and imports NF 25,638 million. Exports covered imports by 103 per cent in 1961, as against 99 per cent in 1960 and 71 per cent in 1957.

The population of Japan in October 1961 was 94.28 million (46.30 million males and 47.98 million females), representing an increase of 870,000 in one year. But the growth-rate at 0.93 per cent was lower, compared with an average annual increase of 1.17 per cent over the ten-year period from 1950 to 1960. The population density was 255 per square kilometre.

The total value of 74 items now being held in U.S. stockpiles, is estimated at $7,000 million. In terms of quantity, manganese accounts for 9.1 million tons (including surplus of 2.3 million tons), aluminium 1.9 million tons (surplus 729,000 tons), tin 349,000 tons (164,000 tons), copper 1.14 million tons (142,000 tons), rubber 1.09 million tons (342,000 tons), zinc 58 million tons (1.4 million tons) and lead 1.3 million tons (1 million tons).

The Common Market European Development Fund proposes to finance a $1.8-million rural development programme in the Casamance region of Senegal. The project will include the creation of 10 rural development centres, 14 fish processing establishments and a rice research station. Altogether, with this latest outlay, the E.D.F. will have spent about $7 million on investments in this area. Among other E.D.F. investments announced by the Commission last week is a $632,000 project for constructing a national agricultural school at Palimse in Togo and another of $1.1 million for establishing a scientific and biological research institute in the Ivory Coast.

PERSONAL

MR. Shriyans Prasad Jain, Chairman, Dhrangadhra Chemical Works, and Mr. Lala Bharat Ram, Chairman of Delhi Cloth and General Mills, have been elected President and Vice-President, respectively, of the Federation of Indian Chambers of Commerce and Industry, for the year 1962-63.

Mr. Edwin Bernet has been appointed head of Ciba of India Ltd., *vice* Mr. Enrico Arbizzoni, who is retiring at the end of this month after spending 38 years in India.

Mr. Escott Reid, a former Canadian High Commissioner to India, has been appointed a consultant on the staff of the World Bank. He will take up his duties in July 1962.

Mr. A. S. Bam, Chairman of the Central Tea Board, has left for New York. He is leading a delegation to the U.S., Canada, the U.K. and Europe for exploring possibilities of expanding tea exports.

Mr. George D. Woods, Chairman of the Board of the First Boston Corporation, New York City, and Director, Industrial Credit and Investment Corporation of India Ltd., has been elected a Director of Kaiser Industries Corporation.

Mr. A. C. Khanna, Chairman of the Britannia Biscuit Co. Ltd., Calcutta, and Mr. P. Mohanlal of the Parle Products Manufacturing Co. Pvt. Ltd., have been elected President and Vice-President, respectively, of the Federation of Biscuit Manufacturers of India for the year 1962-63.

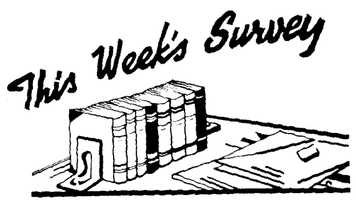
Mr. J. A. Banks and Mr. W. G. N. Geddes, consulting engineers of Babtie Shaw and Morton, Glasgow, have arrived in New Delhi for talks with Government of India officials in connection with the consultancy contract for the Cochin shipyard. Mr. Geddes was a member of the British Shipbuilding Mission which visited this country in 1957 to advise the Government of India on whether a second shipyard should be built.

Mr. John T. Connor, President of Merck and Company, Inc., of Rahway, New Jersey (U.S.), Dr. Antonie T. Knoppers, President of Merck Sharp and Dohme International and Mr. Huskel Ekairele, Chairman of the Board of Merck Sharp and Dohme of India Ltd., have arrived in Bombay in connection with the inaugural ceremony of the streptomycin plant of the Hindustan Antibiotics Ltd., Poona. Merck and Company has provided streptomycin patents and know-how for the new plant, in addition to technical assistance.

Japan's gross national product in the fiscal year 1960 amounted to Y14,664,900 million, per capita income being Y126,594. Reflecting the extraordinary business prosperity in fiscal 1960, Japan's economic growth rate that year was 16.6 per cent nominally and 13.2 per cent in real terms, after adjustments taking in the rise of commodity prices had been made. The combined economic growth rate of Japan during fiscal 1959 and 1960 was a phenomenal 41 per cent—an expansion rate unique in historical annals of the world. The major factors contributing to this economic growth rate were 41.4 per cent increase in equipment investment industries, the 11.9 per cent rise in individual consumption and the 24.1 per cent increase in the construction of private residences. On the other hand, while exports increased by 12.8 per cent, imports also rose by 20 per cent, indicating that the international payments balance a contributing factor in the nation's economic growth rate in 1960, had shrunk to one-fifth of that of the preceding year.

Approximately 400 leading textile industrialists from all over the world are expected to attend a congress organised by the International Federation of Cotton and Allied Textile Industries at Deauville in France from 17th to 23rd June next. The main theme of the Congress will be technical progress and textile marketing. The Congress will hear an address by an eminent French speaker and Dr. Dieterich, in his presidential address, will deal with more general political and economic developments in so far as they affect the cotton and allied textile industries of the world.

After nearly one year's study, including visits to the United Kingdom, Europe, the United States and Japan, the wool marketing inquiry committee in Australia has tabled its report to Parliament. In January 1961, the Australian Prime Minister (Mr. Menzies) set up the committee under Sir Roslyn Philip, a Queensland judge, to inquire into the present systems of marketing and of promoting the sale of the Australian wool clip and also to report on the merits of any other systems. The report recommends no immediate fundamental changes in the auction system of selling (which accounts for 94 per cent of the clip), but does suggest that the system might be improved. It also suggests that a permanent new body of eight people called the Wool Commission should investigate matters for further study. Three new divisions under the Wool Commission are recommended: a promotional division (to replace the present Australian Wool Bureau), a research division (to replace the present Australian Research Committee) and a new marketing division. The Committee found that the wool-growing industry lacked a central organisation for the diverse interests of wool production, marketing, promotion and research. A reserve price scheme has been rejected but the report suggests that price fluctuation could be modified by regulating supplies to meet demand, although production cannot be controlled in Australia.



COAL INDUSTRY

THE coal industry is expected to produce in the second year (1962-63) of the third Plan as much as 68 million tonnes in both the private and public sectors in accordance with the phased programme drawn up by the Coal Controller. This will mean an increase of about 13 million tonnes over the estimated production of 55 million tonnes in 1961-62, that is, the first year of the current Plan. As far as the private sector is concerned, its share of the required increase in production would be possible of achievement if a sound coal policy, broadly on the lines suggested in the recent speech of the Chairman of the Indian Mining Federation, is evolved and implemented without further loss of time, vide our leading article entitled "The Coal Question" in our last issue. The case for such a policy, it would appear, is unassailable now in the light of the speech of the Chairman (Mr. Pran Prashad) of the Indian Mining Association, another representative organisation of the coal industry, at its annual general meeting held at Calcutta on 23rd March. As the representations made on behalf of both organisations are generally alike, it may be taken that the coal industry has spoken with one voice on what needs to be done to quicken the tempo of production, especially in the private sector.

Although the points dealt with in Mr. Pran Prashad's speech and the arguments advanced are generally the same as those which figured in the speech of the Chairman of the Indian Mining Federation, there are at least three aspects which have received particular emphasis in the former's speech. One of these pertains to foreign exchange. It is gratifying to know, in this connection, that 200 expansion projects of individual collieries have already been scrutinised by the Government and that the Screening Committee set up in terms of the World Bank Loan Agreement to examine applications for import licences is expediting its work. But the import licences for coal mining machinery, equipment and spares, even if they are quickly issued, will cover only Rs. 17 crores represented by the World Bank loan to the private sector of the coal industry. While this amount will take care of the foreign exchange requirements of certain new mines for the entire third Plan period, the industry's needs for expansion, replacement and spares will be met only up to the middle of 1963. The foreign exchange needs of the industry beyond that date are estimated at Rs. 11 crores—an amount which the Government has undertaken to provide separately. But, unless steps are taken here and now to enable the industry to raise the rupee resources required for expansion, no early benefit will accrue either from the World Bank loan or from the allocation of foreign exchange by the Government. The question of coal price revision is, therefore, of immediate importance. A cognate problem here is the obstacle faced by collieries in raising funds from bankers and credit institutions because of the restrictions on transfer or mortgage of coal leases under the Mineral Concession Rules as applied to pre-1949 leases. This obstacle would also have to be removed soon, if the expansion projects of individual collieries are not to be held up for want of matching rupee finance at a time when foreign exchange resources are available for utilisation.

Another problem referred to in Mr. Pran Prashad's speech is the delay in the construction of Central Ropeways, for transporting sand to and from the river bed to the collieries for stowing purposes. It is said that there are several hundred million tonnes of coal standing in the form of pillars in the Jharia and Raniganga coalfields. Such coal could be readily extracted only with stowing, and hence the importance of the ropeways. But the Coal Board's project for constructing ropeways, it is distressing to hear, continues to lag behind the schedule laid down some years ago. It is doubtful whether the proposed ropeways will be commissioned even by the middle of 1964. If this crucial project is not expedited somehow, there is the risk that the tempo of expansion in the industry will be retarded.

The only heartening feature of the situation in the coal industry is that labour-management relations seem to be more cordial now. Mr. Pran Prashad's reference to this aspect is a significant pointer to the trend of bipartite negotiations without the necessity of State intervention. Already the conclusion of a bipartite agreement in the last year on the vexed question of contract labour—a question which had been pending since 1956 and which had excited strong feelings on either side—has paved the way for settlement of other outstanding issues on a cordial bipartite basis. If, at the same time, more expeditious steps are taken to meet all the practical requirements for expansion, the coal industry can be depended upon to deliver the goods.

THE CAUSES OF POVERTY

The poverty of national communities, as distinct from that of individual persons, continues to be a subject of anxious debate throughout the world. But enlightened opinion is by no means unanimous either on its nature and symptoms or on the causes thereof. That there is to date no generally acceptable diagnosis of poverty will be seen from the U.S. Ambassador, Mr. J. K. Galbraith's address on "The causes of poverty," delivered at the Gujarat University (Ahmedabad) on the 23rd inst. The address is brief but pregnant and comes straight to the subject with the sparkling observation that poverty has always been thought of as a "disease" but has never been diagnosed as such. In the absence of a clinical diagnosis of nation-wide poverty, there has been current all along only a variety of assumptions as to the causes of privation and stagnation. Mr. Galbraith has categorised in this connection as many as nine "assumed" causes of poverty, which are given below:

(1) The country is poor, because the people are easy-going, idle, unreliable or unambitious.

(2) The country has been kept in poverty by its colonial oppressors.

(3) Poverty is the result of class conflict and exploitation.

(4) Poverty is caused by ignorance.

(5) Poverty is the consequence of war, civil disturbances and misgovernment.

(6) Poverty is the result of insufficient capital.

(7) Overpopulation is a cause of poverty.

(8) Backwardness is a cause of poverty.

(9) People are poor because the country lacks natural resources.

There is an element of truth in each one of these assumptions and the explanations based on them, but not all of them are fashionable or wholly valid. For instance, the first explanation is highly unfashionable now. The second one continues to be somewhat fashionable, though it has increasingly to contend with the fact that in many parts of the world colonialism has come to an end. Nevertheless, if poverty continues, and promises to continue for a long while in these countries, it is because of centuries of colonial rule. The third explanation, which is more fashionable, has behind it a formidable apparatus of dialectic and analysis. But, in the opinion of Mr. Galbraith, one cannot always identify the exploiters. For instance, in India and Pakistan there are millions of small landowning peasants who are very poor and whose poverty is unrelated to enrichment of any landlord, tax-collector, usurer or other visible oppressor. The fourth explanation that poverty is caused by ignorance does not explain much, for there is still the question why some peoples have remained illiterate. As for the fifth explanation, it too does not explain much, for there are some well governed and stable countries—India is a case in point—which are also poor. The sixth explanation that poverty is the result of insufficient capital is, according to Mr. Galbraith, almost a cliche. While he concedes that capital is what rescues a poor country from poverty, there is still the question why some countries, having rich sources of oil or other revenues for investments, continue to be poor. The explanation that overpopulation is a cause of poverty is not accepted by Mr. Galbraith as quite valid, for it is replete with contradictions. For instance, the Netherlands and Belgium have a dense population and high living standard, whereas the people of the Arabian peninsula are few and poor. In regard to the eighth explanation that backwardness is a cause of poverty, Mr. Galbraith says that advanced technology cannot rescue a people from the privation associated with primitive methods of agriculture and industry in the absence of two pre-conditions, namely, education and technical training and availability of capital. The last explanation, too, is not wholly valid, for there are several regions which, though not lacking in natural resources, continue to be poor.

Although Mr. Galbraith thus comes to the conclusion that none of the commonly ascribed causes of poverty can be entirely accepted, he does concede that none can be entirely dismissed either. His own view of poverty is that its causes are extremely varied and are unlikely to be the same in any two cases. What is called for is a "clinical" diagnosis appropriate to each case. Remedies prescribed in the absence of such a specific diagnosis will have no relation to cause. The task in attacking poverty, on the other hand, is to relate the remedy to the contributing causes in the particular situation. If diagnosis is half the cure, then it must be sound and reliable. The point that Mr. Galbraith seeks to convey most emphatically is contained in these words: "We must now and promptly abandon the assumption that there is a single explanation with its fatal presumption that there is a single remedy." This is a conclusion which is at once logical and perceptive—the very opposite of a "bold generalisation" calculated to save people from thought. It is difficult to disagree with Mr. Galbraith in his objective analysis.

PLANNING AND DICTATORSHIP

What is it, economic planning or the lack of it, that leads to authoritarianism in underdeveloped countries? Answering this poser at a Press Conference at Ahmedabad this week, Prof. J. K. Galbraith, the U.S. Ambassador to India, observed that lack of planning in developing countries carried a greater risk of authoritarianism than proper planning. Expressing his views "as an economist" on the fear expressed in some quarters in this country that, with the present tempo of planning, the country was likely to slip politically into an authoritarian regime, Prof. Galbraith remarked:

"One of the remarkable things about our time is the number of things which people will tell you lead to authoritarian regimes, the number of things which are assumed to be dangerous. Planning, public ownership, agricultural price support, trade unions, and large corporations have been accused by different sections of people at different times of leading to authoritarianism. Indeed, I have the impression that whenever somebody wants to denounce something, he says that it is likely to lead to authoritarianism. My own view is that, if the spirit of democracy is deeply implanted in the minds of peoples and in their institutions, if people have a democratic instinct and are committed to constitutional government, that is the important thing. I would even go so far as to say that a country, which has the problem of lifting itself from poverty, providing a better life for its people, is probably running a greater risk of authoritarianism, stemming from discontent, without planning than with proper planning of its resources."

Recent happenings in Asia, Africa and Latin America provide ample evidence to support this conclusion. Country after country in Asia has gravitated to dictatorship of one form or another, not because of sound planning and its effective implementation but because of lack of proper planning and the consequent failure to raise the standards of living of the people and the bungling of politicians. Anyone who looks around Asia and compares the position of India's neighbours with that of India will readily admit that ten years of planned economic development in India has, despite its imperfections, strengthened the democratic forces, instead of weakening them. There is little evidence in history of a country having become authoritarian through planning; on the other hand, total planning and regimentation invariably followed the establishment of dictatorship which came as a sequel to the failure of the rulers to ameliorate the living conditions of the people. Planning, stated simply, is the application of reason in the ordering of the economic affairs of a nation and involves nothing more than the allocation of scarce resources to the most optimum use. That the Tories of Britain, who have been traditionally champions of *laissez faire*, are gradually taking to planning is testimony to the fact that planning, in a democratic framework, if properly done and efficiently implemented, could maximise economic welfare *without* endangering the fundamental freedoms.

BISCUIT INDUSTRY

The growth of biscuit industry in the post-war period has been retarded by several adverse factors like the high cost of raw materials, rather limited domestic demand and severe competition in export markets. The industry, however, appears to have just turned the corner, presumably as a result of the growth in domestic consumption of biscuits and the relative stability in the price of raw materials like wheat and hydrogenated groundnut oil. The prospects for the industry are also quite bright. As pointed out by Mr. A. C. Khanna, President of the Federation of Biscuit Manufacturers of India, at the annual meeting of the Federation held at Delhi last week-end, there is no doubt that the consumption of biscuits will substantially increase in the wake of the expected rise in the standard of living during the third Plan period and the growth in urban population. The present annual *per capita* consumption of biscuits in India is only 0.10 lb., which compares very unfavourably with over 20 lbs. each in the U.S. and the U.K. Viewed against this background, Mr. Khanna's plea to biscuit manufacturers to prepare themselves for long-term planning sounds quite timely and appropriate.

There are 40 units engaged in the manufacture of biscuits in the organised sector, with an aggregate installed capacity of about 31,000 metric tonnes on a single-shift basis. It is encouraging to find that the idle capacity in the industry has been declining quite fast on account of steadily increasing production. The total production in the organised sector is estimated to have gone up to about 26,000 tonnes in 1961, which compares well with about 22,000 tonnes in 1960 and about 15,000 tonnes five years before. Mr. Khanna observed, in this connection, that the increase in production in 1961 was achieved by working several factories on more than one shift and some others to the maximum capacity. He was of the opinion that existing units were capable of fulfilling the modest expansion target of about 10,000 additional tonnes envisaged in the third Plan. He therefore took exception to the licensing of a new major unit in Madras recently. Mr. Khanna's objection, however, does not seem to be very convincing. The licence granted to a Madras firm to set up a plant (with a capacity of about 10 tonnes per day), presumably is based on two considerations. In the first place, in the whole of South India, there is no major biscuit manufacturing unit as of today. The new unit may be able to cater to the regional demand. Secondly, since the proposed firm has secured foreign collaboration, the scheme does not involve much expenditure of foreign exchange. In fact, a unit with foreign collaboration deserves to be welcomed, in that it will be in a position to introduce efficient production techniques, which, in turn, will provide scope for exports of its products to highly competitive world markets.

If Mr. Khanna's contention is that the new unit will aggravate the shortage of certain raw materials and packing materials, etc., the industry has a right to get its grievances redressed by the Government. He mentioned, in this connection, that, from early 1961, the value of import licences for some of the industry's requirements was reduced, although the output has been increasing. He therefore appealed to the Government to grant import licences to the industry on the basis of actual consumption. The industry is, of course, much more concerned over the restriction on imports of machinery required by it for modernisation. Mr. Khanna observed that the industry would require Rs. 40 lakhs of foreign exchange for the import of machinery for the present. In order to meet this requirement, it is essential to explore the possibilities of encouraging the manufacture of machinery within the country. For the time being, however, the Government will do well to come to the aid of the industry by giving licences for imports of machinery. The industry, it may be noted, has to compete in world markets with products coming from advanced countries, which have even adopted techniques of automation in the manufacture of biscuits.

CONFECTIONERY

The third Five-year Plan contains a production target of 25,000 tons for the confectionery industry (including 5,000 tons for the unorganised sector), to be achieved by 1965-66. Although the target is nearly double the actual output of 13,000 tons in 1960 (end of second Plan), it is not beyond the reach of the industry, provided the industry can get adequate supplies of essential raw materials and wrapping paper. Indeed, given these prerequisites and other things remaining favourable, the industry, as Mr. A. L. Goenka, the retiring President of the Indian Confectionery Manufacturers Association, said in his speech at the annual meeting of the Association held at New Delhi on the 23rd inst., may well be able to achieve the target even earlier than 1965-66 as it did in the second Plan period; the actual production in the organised sector even in 1957 was higher than the target of 10,000 tons fixed for 1960-61. This assessment is based on three grounds. In the first place, the aggregate installed capacity of the 44 organised units at present, even on single-shift basis working eight hours a day, is 52,000 tons which is well above the third Plan target of 20,000 tons. Secondly, most of the existing units have expanded their capacity by the installation of modern and up-to-date plants. Finally, technical knowledge and skill have kept pace with expansion, so that the industry can be said to be in a position today to produce quality goods which stand a favourable comparison with those of any other advanced country.

While the confectionery industry has thus witnessed notable development in recent years, there is considerable idle capacity, estimated at as high a level as 70 per cent. Drawing attention to this aspect, Mr. Goenka said that the capacity of 52,000 tons included a very large portion for production of unwrapped sweets, the market for which had been captured by hand-made confectionery, in view of its cheapness. Consequently, the organised sector of the industry, he added, had now to cater mainly to the demand for wrapped goods such as toffees, soft-centred sweets and hard boiled wrapped goods, so that most of the machinery installed for the manufacture of unwrapped goods was lying idle. "This," to quote him, "pushes up overhead expenses and reflects on the cost of production, which, coupled with the high cost of various raw, packing and wrapping materials, results in the high prices of confectionery." Emphasising that the masses in India could ill-afford to purchase, with their very limited resources, quality confectionery at the present high prices, Mr. Goenka declared that a substantial increase in demand (indigenous and export) for quality goods was possible only by a drastic reduction in prices. And he indicated how such a reduction could be brought about. The specific suggestions he put forward were as follows:

Supply of sugar, the basic raw material, at subsidised prices or, in the alternative, exemption of sugar utilised in confectionery production from all internal taxes as is the practice followed in several other countries.

Import licences for printed waxed paper, high speed twist wrapping machines and such other wrapping machinery, and machinery for replacement of worn-out plants, as well as for modernisation.

Export promotional steps like concessional ocean freight rates and elimination of procedural delays through amalgamation of various concessions (rebate on tin plate, railway freight rebate, sugar subsidy and drawback of excise and import duties on raw materials, etc.

Immediate and effective enforcement of the provisions of the Food Adulteration Prevention Act.

Adequate railway booking facilities.

There is, of course, nothing new in the aforesaid suggestions which are a mere repetition of what had been stated in the presidential addresses at the annual meetings of the Confectionery Manufacturers Association for some years now. But, by highlighting them again, Mr. Goenka has only indicated that the repeated requests of the industry for relief have not been of much avail so far. There is at least one suggestion which deserves to be implemented, namely, remission of all taxes in respect of sugar consumed by the confectionery industry. The grant of such a remission does not entail much loss of revenue to the Central and State Exchequers; taking industry's requirement of sugar as 7,000 to 8,000 tons, the actual annual loss of revenue comes to no more than Rs. 22-23 lakhs in the case of excise duty and Rs. 3-4 lakhs in respect of cane cess. The Governments should not grudge this relief, considering the fact that hygienically produced quality confectionery is of great nutritional value and that the industry provides gainful employment to a large number of people.

A PASSENGER FROM CALCUTTA WRITES:

"... Just a line to thank you and KLM for looking after us so well prior to our departure from Dum Dum, and during the flight to London. The service on the plane was excellent and the hostesses charming ..."

This extract is from an unsolicited letter: a photocopy can be obtained from KLM, Calcutta.

For that extra personalised service, there's nothing like flying "the Golden Circle"

to EUROPE by KLM DC-8 JET

Departure : Calcutta Tuesday night
Departure : New Delhi Saturday night
Excellent connections from Amsterdam to the U.K.
Arrival : London, the next day—afternoon.
Also choice of 5 KLM DC-8 flights a week ex Karachi.

Sincerely yours

KLM

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

F.I.C.C.I. COVERS FAMILIAR GROUND

TOO MUCH PREOCCUPATION WITH GOVERNMENTAL POLICIES

(From Our Special Correspondent)

NEW DELHI, *28th March*

DELHI LETTER

THE private sector's role as critic of the Government's failures in planning was the outstanding feature of the thirty-fifth annual session of the Federation of Indian Chambers of Commerce and Industry and the subsequent meeting of the Central Advisory Council of Industries this week. Over the last decade, the two sectors have come much closer together and there has been a broad understanding of their mutually complementary roles in industrial development. Just as the public sector has realised that it cannot by itself accomplish many things, the private sector has found that the Government's investment in power, transport, agriculture and irrigation and in the social overheads like health and education were all necessary to its own growth. The revised Industrial Policy Resolution of 1956 has on the whole worked well and liberal interpretation has enabled the private sector to secure a foothold into reserved fields like the fertiliser industry. Licensing policy for industry may give some headaches but no one has been able to say how it could be dispensed with altogether (though it could be speeded up considerably) under planning and rationing of foreign exchange for imports. Modification of some of the rigours of earlier taxation and provision of institutional financial and other assistance has also helped the private sector, so that the area of differences has been narrowed; and, except for variations of emphasis, the third Plan has been accepted as the best approximation to what both sectors would consider desirable and feasible.

Outspoken Criticism

Viewed in this context, the Federation's recent session may acquire some significance. There was much outspoken criticism in the outgoing President, Mr. Karamchand Thapar's address of the current shortcomings in coal and transport planning. Their details are now quite familiar to the public, having been repeated from the platform of almost every chamber of commerce and business association; that the shortcomings cannot be explained away or denied was also responsible for Mr. Nehru's ready acceptance of the charge as justified. The actual value of this victory can be known only in time. Will it lead to a re-examination of the basic assumptions behind coal and transport planning and to the entrustment of responsibility to more competent men? The next few weeks may provide a partial answer, or at least indicate the extent of the Government's earnestness about solving the problems.

Mr. Thapar was very outspoken on the subject of railway development, even to the point of exaggeration, when he said that we seem to be planning for a transport shortage; though very insufficient, the progress made by the railways cannot be wholly ignored, nor can it be said that the proposed outlay of Rs. 1,325 crores (and further additions now contemplated) could be further expanded indefinitely without affecting other sectors of the economy. Mr. Thapar, however, went on to suggest that it was always desirable to plan for "surplus capacity"!

There were other criticisms, too, from him about "conspicuous investment" when planning decisions are based on other considerations than economic and policy "gets biased or ceases to be straightforward"; he spoke of restraining the "power exercised by myriad functionaries in Government service" and of too many authorities dealing with different aspects of coal and working often at cross purposes. These remarks gradually led up to his concluding observation that it was in the "nature of Governmental activity to overstep the appropriate mark and overtake the field in which it cannot profitably function." Juxtaposed to this criticism was the list of virtues of the competitive system and Mr. Thapar was not apologetic about enumerating them. Being competitive, he said, the system was efficient and progressive; besides its record in industrial production, he claimed that the fruits have been distributed more widely, so that shareholding has broadened. Also pointing out that, while growth in size was a natural consequence of increasing efficiency in the private sector, Mr. Thapar suggested that a State monopoly (as in Russia) was bound to be wasteful and inefficient.

All these provoked no direct response from the Prime Minister who seemed in no mood for a polemical wrangle, but his answer was to reiterate the primacy of social justice under the Constitution and the mandate of the people who voted his party back to power. Warning against being carried away by cliches of either the Left or the Right, the Prime Minister remarked that a private monopoly was undemocratic and should be prevented. Such broad generalities obscured the fact that monopolies as such have not grown in this country to an extent which could justify the current obsession about curbing the size of units even at the risk of depriving them of the economies of large-scale production and competitive capacity in foreign markets. The public may well wonder whether much has been achieved by such parallel exercises in stating the respective points of view year after year at these meetings,

Inhibiting Effects

Although the discussions on the resolutions moved during the session covered current problems, they trod familiar ground since they related to coal and transport, the inhibiting effects of licensing regulations and import cuts, and, finally, to that hardy annual—the State Trading Corporation—which it seems will not be spared even after the favourable verdict of the Mudaliar Committee. By contrast, the luncheon sessions seemed more useful and impressive. Mr. G. L. Mehta tried to make businessmen turn inwards by telling them that they were on probation and had to render account and serve the consumer better. Mr. Martin Rosen of the International Finance Corporation pointed out the possibilities as well as the limitations of assistance from the Corporation to the private sector. Mr. Duckwitz, the West German Ambassador, painted a bright picture of his country's assistance to India.

Whether businessmen cannot do more to provide leadership to themselves and guidance to trade and industry might have been seriously considered. While relations with the Government will continue to be of primary interest, especially because of planning and regulation, they are not the only problems. Is there unutilised capacity which can be put to better use within the limitations of foreign exchange? Can anything more be done to substitute imported materials and components by indigenous ones? Can the cost structure be reduced at all? Is there scope for increasing the volume of employment in the short-term with available resources, so that social stability also can be strengthened? Besides incentives and tax concessions which have been demanded often, are there not many measures which the private sector can devise to increase exports and earn the foreign exchange which they need for their imports? Proper lead on these issues of economic policy would have been welcomed by public

ANNOUNCEMENT

STATE BANK OF TRAVANCORE

(SUBSIDIARY OF THE STATE BANK OF INDIA)

have pleasure to announce the introduction as from the

1st APRIL 1962

of

Special Credit Transfer System

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE.

A deposit relationship with the Bank will entitle the use of the services of any of its 95 offices situated in Kerala and other parts of the country for the free

Special Credit Transfer Facility

For details, please contact any Office of the State Bank of Travancore where you will always find a friend.

T. R. KRISHNASWAMI,
General Manager.

LONDON LETTER

THE GOLD POOL

(*From Our Own Correspondent*)

LONDON, *23rd March*

THE steps to strengthen the International Monetary Fund, following the Central Bankers Conference at Vienna last autumn, are now to be paralleled by the setting up of an International Gold Pool. The purpose in both cases is the same. In a world in which it is desired to leave speculators in currency and gold free, the authorities, who have a vested interest in order and stability must adopt protective devices, otherwise they become the victims of speculation. The best recent example of that speculation in gold was eighteen months ago, when the pressure from private holders on the free gold market forced the price up from around the normal $35 per ounce to over $40 per ounce. At that time, the Bank of England was not prepared to commit its own stock unsupported to kill speculation and at first the Federal Reserve System did not want to do anything. Ultimately, the U.S. authorities agreed to come in and, by freely supplying the market, the price was forced down and the speculation came to an end. But, in 1960 as a whole, out of a total world gold production, including sales by Russia in the world market of $1,350 million, as much as $1,000 million went into private holdings.

In 1961 the continued co-operation between the Bank of England and the Federal Reserve System prevented speculators from indulging in other than brief mild flutters and, out of a somewhat larger world gold production of $1,450 millions (including Russian sales), the absorption into private holdings dropped to $680 millions, the rest—rather more than half —going to swell official reserves.

Holding Market Price

The Pool is being considered between the European Central Banks, who were responsible for the Basle arrangements of last year, and the Federal Reserve Authorities with the Bank of England. The thinking is to hold the market price between the arbitrage limits of eight cents either side of the U.S. buying price, namely, $35.08 and $34.92; the American contribution would be to waive the quarter per cent handling charge which they make at present with gold movements out of the Federal Reserve vaults.

This object would be achieved by the Central Pool to which the member-banks would all contribute a quota of gold just as they contribute currency and gold quotas to the I.M.F. Gold would then be sold to meet a demand and bought if there was a surplus on offer. But it will obviously only improve on the present cooperation between London and New York if the scale is large enough. In London alone last year a sum which has been estimated at a minimum of $500 millions, and which could have been substantially more, was sold. Of course, this included sales to Central Banks although how much is not known. But presumably a fund, to do any good, would have to be in excess of this figure or assured of substantial support, should it be in danger of being used up.

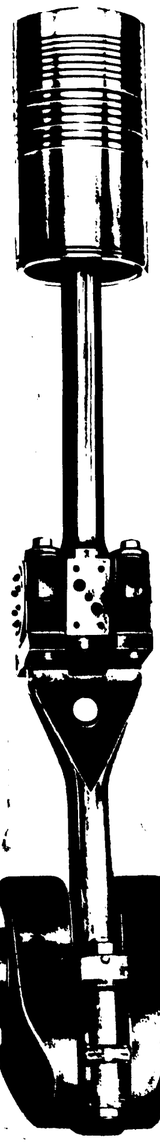
However, the whole plan is by no means precisely formulated, and is still very much under discussion. One cautious thought is that the Fund would only be used—in the true spirit of liberty—to deal with exceptional and irrational movements. But, in practice, one can never tell whether the irrational will not become entirely rational if it is allowed to develop and to have its way with the market. After all, speculators could still speculate on the assumption that the fund would regard their movements as justified and rational as well as temporary, which is another qualification suggested.

If the fund is to be successful, it should surely operate to hold the price within published limits. Then speculators would know that their operations would have to be confined to arbitrage terms.

British industry will stage the largest British Exhibition ever held overseas in Stockholm from 18th May to 3rd June 1962. Some 500 firms will display a wide cross-section of the most up-to-date products which Britain has to offer Scandinavia, ranging from heavy capital equipment to light consumer goods. The exhibits include mechanical handling equipment, earth moving equipment, road-making machinery, motor vehicles, caravans, steel, aero and diesel engines, office equipment, machine tools, chemicals, plastics and electronics. In the consumer field, visitors will see clothing, radio and T.V. sets, cameras, carpets, vacuum cleaners, lawn mowers, fancy goods, gifts and groceries.

FIAT

Fiat marine Diesel engine "Service„ in India



Fiat Stabilimento Grandi Motori, Turin have the pleasure of announcing that, as a result of a cooperation agreement signed with **Scindia Workshop Ltd.,** Bombay, its international organization for technical assistance has been extended to **India.**

In the **Scindia** Workshop of Bombay, a stock of original Fiat spare parts will be set up, thus guaranteeing, with Scindia's personnel assisted by Fiat technicians, a specialized assistance for maintenance, overhaul and repair of **Fiat Diesel engines.**

AMERICAN LETTER

INCREASE IN ECONOMIC ACTIVITY EXPECTED

RUSSIA STILL REFUSES TO MEET U.N. COSTS

From Our Special Correspondent

NEW YORK, 24th *March*

NEARLY all indicators are rising which should mean increased future economic activity. Orders for durable goods have shown an upward trend and the backlog of manufacturers' unfilled orders continues to gain. Retail sales have been up. The Federal Reserve reported that a January poll of consumers shows more families were intending to buy new automobiles this year than since the survey began three years ago.

Applications for Federal Housing Administration mortgage insurance on new homes which are one indicator of future construction activity have been on the highest level in two years. The Veterans Administration appraisals of proposed new homes were up 17 per cent. Retail spending has been relatively stable remaining in the neighbourhood of 80 per cent of spendable income after taxes.

Figures are not yet available regarding the trend of the current balance of payments for the first quarter. The First National Bank of Chicago, among other authoritative sources, suggest that, just as the deficit may have been somewhat overstated in the last quarter of 1961, estimates for the current quarter may exaggerate the expected improvement.

President Kennedy, in one of his recent Press conferences, referred to the U.S. payments position as one of the nation's most serious and pressing economic problems. In addition to the relatively normal flow of funds across borders and oceans, the present condition is brought about by vast overseas spending for armed forces' bases and pay for personnel and their dependents who man them.

U.N. Financial Difficulties

When a loan of $200 million was proposed some time ago to cover the operating deficit of the United Nations, there seemed to be no particular problems. Since only lending by governments to the U.N. was involved, no securities underwriters were in the picture. Orders were given for printing the obligations and the U.N. was planning on handling the distribution itself.

The countries which have either bought bonds or have indicated their willingness to do so, up this writing, are Ceylon, West Germany, the Sudan, Norway, Finland, Australia, Burma, Canada, Denmark, Malaya, India, Iceland, Pakistan, Sweden, Great Britain and the U.S.

Unexpected trouble has arisen in the U.S. Congress which has to approve the transaction. Some members of the House and Senate now suggest that the U.S. loan of $100 million should be at the going rate, presumably about 4 per cent, instead of the original 2 per cent. The Congress admitted that this "worst crisis of the U.N." was brought about, because two-thirds of member-countries are behind in their payments. The small nations can ill afford their dues and additional assessments; large countries like Russia just refuse to pay and this amounts to sabotage.

Other countries refuse to pay, because they do not agree with certain U.N. activities such as the expeditionary forces to keep peace between the Israelis and Jews and to stop the fighting in the Congo—the primary causes for the U.N. deficit.

There is, however, no imminent bankruptcy in store for the World Organisation, however. At the year-end, the U.N. owed $114 million with $93 million in unpaid assessments. Another $142 million in assessments presumably will be paid in 1962. It is by no means a hopeless situation. But the situation does not help staff morale.

Before the month is over, Courts here are expected to complete legal formalities which will change the name and other details of the Standard-Vacuum Oil Company, operating in Eastern countries.

Assets and liabilities will be acquitted jointly by Standard Oil Company (New Jersey) and by Socony-Vacuum. The successor company to Standard-Vacuum will be Mobil Petroleum Company. There will be no interruption of operations. Exact details will be included in my next despatch, after the papers have been signed.

U.S. Export Insurance Programme

Just about a year ago, the groundwork was being laid to establish a joint Government-private-industry operation which would ensure American exports against credit and political risks. Although such schemes have been in operation in other countries for years, this is the first experiment along those lines in the U.S.

In its current phase, the programme here is operative only in the short-term area. This means up to 180 days or in special cases up to one year. The next step will be to expand export insurance to what Washington calls the medium-term field, or from one to five years.

The U.S. scheme resembles closely the procedure followed in the Union of South Africa, where private companies underwrite the credit risks and the Government the political risks. The latter is headed by the Export-Import Bank of Washington. Adoption of this system was made after a study of the methods pursued by the 18-nation Berne Union.

The Berne Union is a loosely organised body of Governments which provide export insurance. Annual meetings in Switzerland provide an exchange of views, differences of opinion may be aired as well as grievances such as alleged over-extension of credit by one country for political reasons to the detriment of exports from other nations.

Heretofore, the U.S. was represented by unofficial observers. Now it is a full-fledged Union-member. The group has persuasive rather than legal powers.

Credit risk coverage is provided by the Foreign Credit Insurance Association, a consortium of more than 60 insurance companies. Out of several hundred applications for export insurance, more than 20 have been processed and binders have been issued which will be followed later by regular insurance policies.

Official emphasis in this programme is being placed on helping small firms with their export business. Spokesmen define "small" as proprietorships and firms whose direct exports in the preceding twelve months were valued at less than $50,000. A special new programme will be offered in the near future by the Ex-Im Bank and the F.C.I.A. It is scheduled to include a special comprehensive guaranty. Details are not yet available. Comparing U.S. credit and political risk coverages with those offered by other countries, the statement may be made that, in some cases, American policy terms are more extensive than those prevailing abroad. In other cases, they are about the same. The country with the longest experience in this field is the United Kingdom. Over the last 40 years, it has acquired some 150,000 case histories on file.—*All Rights Reserved.*

(*Concluded from page 544*)

opinion, but Mr. Thapar briefly said "we are striving in our own way to make the problems easier."

* * * *

Defence Industries

Recently, the Ramaswamy Mudaliar Committee expressed its inability to take Defence imports into account in framing an import policy for the country as a whole and added that a great deal could be done to conserve—and earn—foreign exchange through an integrated policy for the whole economy. The report of the Defence Ministry for 1961-62 gives some details of the progress towards self-sufficiency which it says is conditioned by time and our limited resources. "If the present progress is maintained," it adds, "we may reasonably hope that, as a result of the general development of the country, we should be able, for the most part, to equip our services almost entirely by indigenous production in a few years." Fuller utilisation of machinery and manpower—Defence factories had a large surplus labour force a few years ago—has helped to reduce the cost of production. The total value of the production has gone up from Rs. 14 crores in 1956-57 to Rs. 30 crores in 1960-61 and it is expected to amount to Rs. 39 crores this year.

In a field in which too much secrecy is still observed for security reasons, all that the Ministry is able to vouchsafe is that, on a comparison with the production for the Services five years ago, Defence factories now supply nearly Rs. 18 crores more of products every year and that this represents the foreign exchange saving. Bharat Electronics turned out products worth Rs. 172 lakhs in 1960-61 (as compared with Rs. 6 lakhs five years ago); the Garden Reach Workshops at Calcutta have been taking more orders and the Mazagon Dock Bombay saved (or earned) Rs. 100.81 lakhs in foreign exchange. The indigenous content of the Shaktiman trucks is now about 48 per cent and of tractors about 33 per cent; in both a substantial increase is planned.

The rate of expansion of Defence production capacity is also fairly high, since the cost of new projects sanctioned during the year is placed at Rs. 7.56 crores; many more are under examination including an alloy and special steels plants. The deficiencies, if any, in these schemes can come to light only in the course of audit or through some intrepid questioning in the Lok Sabha when the Third Parliament meets. But this vital aspect of the public sector remains a closed book for the public and it is likely that even the proposed committee of Parliament to supervise public sector undertakings will not be permitted to scrutinise this field closely. That makes it all the more important that the Mudaliar Committee's suggestion for a high-powered inquiry *in camera* should be agreed to, not only to explore the scope for saving foreign exchange but also to assess efficiency in operation and cost control.

Millions of hands like this are reaching eagerly every day for a glass of cool water. ACCOOLER water cooler has the proud privilege of supplying them plenty of cool water—as a matter of fact, as much as they need.

ACCOOLER WATER COOLER

★ Storage and instantaneous type ★ Hygienic and convenient ★ 6 to 40 gallons cooling capacity per hour ★ 10 to 300 gallons storage ★ One year guarantee

this is the time to think about air conditioning

and this is the time to think about Carrier and Voltas

—now, when there's just a signboard on the site that a new factory will soon occupy. Too early? Not at all. Before the architect prepares his design he must know what plans the company has for the building. Plans to air condition it, for instance—since this has so much bearing on the shape and design of a structure.

Why Carrier and Voltas?

Because they bring maximum engineering experience and skill to every air conditioning project. Carrier in the field of manufacture of equipment. Voltas in the field of engineering, installation and service.

Carrier
the people who know air conditioning and refrigeration best

GOLD POOL AND DOLLAR

EXCHANGE STABILITY MAIN OBJECTIVE

EVEN after the lapse of three decades since the collapse of the gold standard, gold continues to present headaches to world monetary authorities. In spite of Keynes's indictment of gold standard as "a barbaric relic" and an "outworn dogma" and the many problems and miseries it gave birth to, the yellow metal has not lost much of its pristine glory. As a store of value and as an index of financial solvency, gold still commands so much value that it often embarasses world monetary authorities and sometimes threatens to endanger their carefully devised policies.

The proposal for an international gold pool put forward by the U.S. Government last week is aimed at protecting the U.S. reserves of gold, which are now no more than $16,710 million, as compared with about $23,000 million at the end of 1957, against an upsurge in demand for gold of the kind witnessed late in 1960. This demand, it will be recalled, resulted in the free market price of gold in London skyrocketing to $40 dollars per fine ounce, as against the U.S. dollar parity and support price of $35 per fine ounce. Unlike the increase in the free market prices of gold in the early post-war years and early 'fifties, when gold used to fetch more than $50 per fine ounce, the spurt in price in October last threatened the stability of the U.S. dollar, because the major currencies of the world had regained their multilateral convertibility and what is more, the West European countries had acquired substantial dollar surpluses and the U.S. balance of payments position had consistently been weak, in the face of declining gold reserves. The situation was saved by the Bank of England and the Federal Reserve Bank acting in concert to sell large quantities of gold in the London market which brought down the price of gold to more normal levels.

The present suggestion involves the creation of a central gold pool presumably out of the gold supplied by the participating countries out of their reserves. Gold will be sold from this pool when the price of gold tends to rise above the upper point of dollar parity. Purchases will be made to replenish the pool stocks. At the moment, the trend is upward and it looks as though this will continue as long as one can foresee. The pool, therefore, must be sufficiently large, if it is to be effective. Its failure to meet the demand at the higher parity will have a more disastrous effect on the U.S. dollar and other currencies than the consequences had not the pool been formed.

Main Advantage

The main advantage of the pool is that it will distribute the burden of gold sales to stabilise the free market price of gold, now largely borne by the U.S., among the countries which contribute to the pool. Even before the latest move, many countries had tacitly agreed not to seek conversion of the surplus dollar held by them into gold through the London market when it was clear that this would generate demand for gold which could not be met without heavily drawing on the U.S. reserves. In effect, this voluntary restraint meant a near suspension of convertibility into gold of officially held dollar. Under the pool system, central banks are being asked to go a step further—"to dip into their existing gold stocks when the private demand for the metal in London is tending to out-distance supply" in order to help the Bank of England which, under the Anglo-American Plan launched towards the close of 1960, is entrusted with the task of limiting the fluctuation in the free market price of gold, to hold the price down without having to draw so heavily on U.S. stocks. In other words, "they are being asked to grant convertibility into gold of privately-owned dollars at the cost of further increasing the size of the U.S. currency element in their resources." The U.S. as its contribution would waive the quarter per cent handling charge for transactions by participating countries. The scheme is thus a further extension of the international financial co-operation between W. European countries and the U.S. to maintain the stability of the dollar and to prevent speculation in gold arising from suspicion about the strength of the dollar.

The new scheme briefly described above is still in a nebulous state. Details such as the size of the pool, the names of participating countries, the basis of fixing the quota of individual countries, etc., are not still available. Our London Correspondent, however, reports, *vide* this week's London Letter on page 546, that the thinking is that the limits of fluctuations in free market price would be fixed at $35.08 and $34.92, that is 8 cents on either side of the official price of $35. Although there is no firm indication as to the probable size of the pool, it is believed that, initially, it would not amount to more than a few hundred million dollars. Financial commentators in London, however, doubt whether the pool could be of much help if confidence outside the central banks of the U.S.'s ability to hold the official price of gold were to be seriously undermined. Expressing this fear, "Lombard," the well-known columnist of the *Financial Times*, London, observes:

"By undertaking to underwrite the dollar in respect of a limited amount of private activity in the gold market, Western European countries could make a further contribution to the work of keeping the dollar boat afloat that should give good value for money. But it is important to understand, that unless greatly extended, such a scheme would not take care of the danger in which the dollar would stand if confidence outside central banks in the ability of the U.S. to go on holding the official price of gold down to the $35 per ounce level were to be seriously undermined. What is still more important is that better arrangements for conditioning the behaviour of the open market in gold do not even begin to provide the answer to the major question mark overhanging the dollar—for how long will central banks in other countries be prepared to go on adding to their existing stocks of inconvertible dollars at a rate of several thousand millions per annum in respect of the deficit in the U.S. balance of payments."

"Lombard" also doubts whether central banks will continue to accept dollar inconvertibility as a good thing and points out the possible complications that might arise if they do not in the following words:

"Bearing in mind that, up to a few years ago, the U.S. was so insistent on all other countries adhering to the currency convertibility system that it wasn't prepared to stockpile more than the most meagre of working balances in their currencies, it has been remarkably successful in putting over the doctrine that unilateral dollar inconvertibility is a good thing for the world. But it seems not unlikely that, in due course, it will discover that other countries are prepared to go on subscribing to this system only if they are given a gold price guarantee in respect of future dollar accumulations. If that happens, Washington will have good cause to wonder whether the gold price policy it has been pursuing was as well-advised as it seems to think it is at the moment."

"Lombard's" Narrow Approach

Obviously, "Lombard" has not appreciated the reasons and motives behind the U.S. proposal. In his anxiety to score a debating point, he has also failed to view it in the larger context of the political and economic relations that exist and should exist between the U.S. and Western Euprope. He seems to resent the minor sacrifice (in the form of temporary acceptance and that for only the central banking institutions of dollar inconvertibility) which Western European countries are called upon to make to keep the dollar boat afloat and to preserve exchange stability in general. What "Lombard" conveniently forgets is that the troubles of the dollar are not of American making; in fact, they are the troubles on European account. The U.S. had been supporting the defence of Western Europe to such an extent in the post-war period that, sooner or later, it was bound to produce strain on the dollar. The fact the U.S. balance of payments on the trade account has always shown a surplus, except in one or two years, in contrast to the deficit in the overall payments position is sufficient evidence of the fact that the weakness of the dollar is due to reasons other than economic. Even today, the U.S. defence expenditure abroad is of the order of $3,000 million. Besides, there has been a large flow of capital out of the U.S. for investment abroad; the bulk of this capital flow has been to Western Europe. Again, for reasons of their domestic economy, individual countries in Western Europe have been following a policy of dearer money; this has aggravated the problem of hot money to the disadvantage of the U.S. which has scrupulously been avoiding imposition of exchange controls and maintaining a policy of free trade.

If, therefore, the main beneficiaries of the massive American military spending abroad and movement of private capital are now asked to share a minor part of the burden of strengthening the dollar, it is only fair that they should gladly do so. The alternatives to this policy of close co-operation, the benefit of which is by no means confined to the U.S., are unthinkable. These are: (1) trade and exchange restrictions by the U.S.; (2) devaluation of the U.S. dollar; (3) a sharp cut-back in the U.S. defence budget. The first and second courses will be economically disastrous to the free world as a whole and the third politically dangerous in the context of the cold war. It is gratifying to find that the Governments of Western European countries are inclined to take a more realistic view of the ramifications of the question of dollar stability than "Lombard" and like-minded commentators on international monetary problems.

The foregoing comments, provoked by "Lombard's" reaction, are only incidental. To revert to the main story, whatever be the efficacy and merits of the "gold pool," there is no doubt that the initial favourable response the proposal is reported to have evoked in free Europe is one more evidence of the readiness on the part of the monetary authorities in the Western world to co-operate with one another in the interest of exchange stability. The I.M.F. is, perhaps, the most outstanding example of such co-operation. The credit for fostering such an attitude must go largely to that pioneer institution which, under the wise guidance of Dr. Per Jaccobson, is in no small measure responsible for the sanity that now prevails in the international monetary field.

FURTHER CUT IN BRITISH BANK RATE

In a fresh bid to check the inflow of 'hot' money to London the British Bank Rate was cut on the 22nd inst. by further half per cent to 5 per cent. The previous reduction from 6 per cent to 5½ per cent was made only two weeks earlier, that is, on 8th inst. The fact that a second cut was made within a fortnight after the first reduction is an indication of the pace of inflow of speculative funds to London mainly from the Continent and, to a lesser extent, from New York. In recent weeks, the flow had been accelerated, thanks to the general belief that the 5½ per cent rate could not be maintained for long and that sooner one invested in British securities, where the yields were high, the better.

The higher interest rates prevailing in London are not the only factor that attracts short-term funds to London. The encouraging prospects for the U.K. economy and the continuing distrust of the dollar which has not been dispelled by the measures recently taken by the Federal Reserve Bank to strengthen dollar such as reciprocal arrangements with the Swiss and French authorities, the addition of $6,000 million to the resources of the I.M.F. and the proposed gold pool, have also been responsible for the influx of hot money. In addition, the transfer of holdings by investors from Canada, following the manipulation of the Canadian exchange rate, would also appear to have been responsible for the increased flow of funds into Britain.

It is doubtful, according to some observers in London, whether even the 5 per cent rate could deter the flow of foreign funds, because the difference in the interest rates prevailing in London and the Continent and American markets is still large. The consensus of opinion in London, therefore, is that hot money will continue to flow in, necessitating a further cut in Bank rate by another half per cent in the near future and also possibly another repayment to the I.M.F.

INVESTMENT CENTRE, NEW DELHI

The Indian Investment Centre at New Delhi has done a pretty good job during the brief period of thirteen months since it commenced functioning on 16th February 1961. The Centre, according to Mr. G. L. Mehta, the Chairman, has already processed and sent abroad 56 project proposals from indigenous concerns seeking foreign collaboration in either new ventures or existing enterprises wishing to expand their activities. It has also received, since the opening of its office in New York in October last, 40 specific project proposals from industrial firms in several foreign countries who desire to enter joint ventures with Indian industrialists. A few proposals have already materialised and others are expected to be finalised in the course of the next two or three months; the latter have reached an advanced stage of negotiations. Besides the project proposals, as many as 1,100 inquiries have been received so far, seeking information concerning joint ventures in India and the services which the Centre can render in bringing about collaboration of the two. These brief facts indicate that the Centre's services are being utilised in a progressively larger measure by both Indian and foreign entrepreneurs.

Some project proposals have been sent to more than one country. Of particular significance is the distinct preference shown by Indian firms for collaboration with American concerns. Thus, out of the total 58 proposa's, 38 have been sent to the U.S., 18 to West Germany and 14 to Britain. Other countries are Japan, Switzerland, France, Sweden, Belgium, Italy, Holland and East Africa.

BANK OF BARODA

PROGRESS MADE IMPRESSIVE

A SHREWD business policy of putting all the available additional resources to the most profitable use, reflected in a simultaneous increase of almost the same order in advances and deposits alike, has resulted in yet another year of further progress for the Bank of Baroda Limited (General Manager: Mr. N. M. Chokshi, Baroda). In keeping with the general trend of banking, the Bank's deposits increased during the year ended 31st December 1961 by Rs. 10.48 crores to Rs. 95.46 crores. Along with this, advances also rose by Rs. 10.19 crores to Rs. 70.37 crores. Against this, investments, the second important asset after advances for a bank, improved by only Rs. 1.77 crore to Rs. 24.90 crores. This bold business policy is also reflected in the rise in the ratio of advances to deposits from 70.8 per cent to 73.7 per cent and a decline in that of investments to deposits from 24.6 per cent to 23.8 per cent. It has pushed up the Bank's gross income after deducting the provisions for taxation, bad and doubtful debts and other contingencies by Rs. 82.18 lakhs to Rs. 513.32 lakhs, with interest and discount earned alone (at Rs. 422.19 lakhs) contributing to an increase of Rs. 66.64 lakhs. Income from commission and exchange moved up from Rs. 73.37 lakhs to Rs. 88.45 lakhs, and so did earnings from other sources from Rs. 2.22 lakhs to Rs. 3.18 lakhs. The table below brings out the Bank's progress in the past four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	5,13.82*	4,31.14*	3,85.88	3,28.89
Of which:

Cash	8.6	9.6	9.7	9.7

* Figures of gross income for 1960 and 1961 are worked out after providing for taxation, bad and doubtful debts and other essential provisions. For 1960, the provision for taxation was Rs. 20 lakhs. For 1961, it is not disclosed.

† Includes Rs. 2.24 lakhs for paying final dividend at the rate of 20 per cent. on the new issue of Rs. 50 lakhs.

‡ Subject to deduction of tax.

§ On the increased capital of Rs. 1.25 crores.

‖ Only the unencumbered portion is taken into account.

A careful study of the table would reveal that not only did the Bank employ its resources in the most profitable channels but these very outlets were more remunerative than in the previous year. For, as against an increase in income from interest and discount of Rs. 44.01 lakhs in the previous year, the increase under this head during the year under review, as mentioned above, was much higher. On the other hand, outward interest rose but modestly by Rs. 22.30 lakhs to Rs. 244.54 lakhs during the year as against by Rs. 18.24 lakhs to Rs. 222.25 lakhs in the preceding year. As a result, the profit during the year under report showed a sizable improvement to Rs. 67.73 lakhs over the preceding year's level of Rs. 40.85 lakhs in spite of an increase in staff expenses from Rs. 120.08 lakhs to Rs. 136.85 lakhs, in other expenses from Rs. 42.42 lakhs to Rs. 55.58 lakhs, and in the provision for depreciation from Rs. 5.55 lakhs to Rs. 9.12 lakhs.

It is good that the Directors have conserved nearly 20 per cent of the profit, Rs. 20 lakhs to be precise, through transfer to the reserve fund; this is the first credit to the published reserves in the past four years. Bonus to staff absorbs as much as Rs. 20.20 lakhs, that is Rs. 3.10 lakhs more than in the previous year. The dividend has just been maintained at last year's level of 17 per cent per annum, subject to tax; and it costs more because of the full year's dividend on the increased capital. The carry forward is higher at Rs. 3.03 lakhs, as against Rs. 1.09 lakh brought in.

Of the increase of Rs. 10.47 crores in deposits to Rs. 95.46 crores, Rs. 4.65 crores have been under fixed deposits standing at Rs. 53.12 crores, Rs. 4.49 crores under savings bank deposits at Rs. 19.71 crores and Rs. 1.34 crore under current deposits at Rs. 22.63 crores. Borrowings from other banks, which had come down in the preceding year from Rs. 496.11 lakhs to Rs. 271.98 lakhs (including Rs. 54 lakhs from the Refinance Corporation of India against Rs. 55 lakhs in 1959), increased during the year to Rs. 355.24 lakhs, the rise being largely due to borrowings from the Refinance Corporation aggregating Rs. 137.55 lakhs. Cash balances at the end of the year show an increase of more than Rs. 3 lakhs over the previous year to Rs. 8.20 crores. The paid-up equity capital of Rs. 1.50 crore is supplemented by reserves amounting to Rs. 1.81 crore, of which the reserve fund accounts for Rs. 1 crore. The ratio of "own resources" to deposits works out to 3.46 per cent, a long way behind the conventional figure of 6 per cent. The Directors have, therefore, decided to increase the paid-up capital by issuing 100,000 equity shares, the terms of which have not yet been disclosed. Simultaneously, the authorised capital is being raised from the present level of Rs. 3.50 crores to Rs. 8.00 crores. In the past 10 years, it may be noted, the paid-up capital has gone up from Rs. 100 lakhs to Rs. 150 lakhs and so also the number of shareholders from 4,138 to 6,570.

In accordance with the Reserve Bank's scheme for gradual removal of sub-standard banks with a view to strengthening the banking sector, the Bank absorbed the New Citizen Bank of India Ltd. with effect from 29th April 1961. It took over the readily realisable assets of the value of Rs. 169.19 lakhs. Under the take-over scheme, after providing in full for its outside liabilities, every depositor of that bank was, in the first instance, given credit of Rs. 250 or the balance in the account, whichever was less, and thereafter to those whose balances were above Rs. 250, the *pro rata* share calculated at Re. 0.66 nP in a rupee in respect of the balance of his account as diminished after the credit of Rs. 250 was given. As a result of this amalgamation, all the 44 offices of that bank started functioning as Bank of Baroda branches, of which three were closed down, as they were found unremunerative. Two branches in Calcutta were amalgamated because of their close proximity. During the year, eight new branches were opened in the country and one branch was opened at Suva in Fiji Islands. Branches at three other places in the country will be opened shortly. The total number of branches, as at the end of this year, including eleven outside India, is 151 as compared with only 51 a decade before. During this ten-year period, the Bank's employees have risen in number from 1,520 to 4,215.

(Concluded from next column)

previous year, whereas bills payable were less by £183,000 at £2.05 million.

It will be seen from the above figures that the balance-sheet total of the Bank (exclusive of the wholly owned subsidiaries which together account for £54.96 million) as at the end of December 1961 stood at the all-time peak of over £353.14 million, representing a rise of £36.94 million as compared with the previous year. The consolidated balance-sheet aggregate (including subsidiaries) is more than £408.09 million, which shows an increase of £45.34 million over that of 1960. The increase is quite significant in that it reflects the economic growth of the areas in which the Bank and its subsidiaries operate. Equally significant is the continued high degree of liquidity maintained by the Bank, thanks to the substantial rise of £15.71 million to £72.79 million in cash balances. This rise has more than made good the fall of £5.04 million to £69.10 million in investments.

CHARTERED BANK DOES WELL AGAIN

BALANCE SHEET TOTAL AT A NEW PEAK

THE Chartered Bank has done well again. The profit of the Bank and its subsidiaries at £990,238 for the year 1961 shows an impressive rise of £228,322 as compared with what had been earned in 1960. The level of profit would be higher still if account were taken of the tax provision (not disclosed) and allocations to inner reserves (also not disclosed). The notable improvement in profit has enabled the Directors further to strengthen the Bank's reserve portfolio, the sum actually allocated being £400,000, as against £250,000 for the previous year. Dividend to shareholders is, however, lower by a fraction at 15 per cent per annum, as against 15½ per cent per annum for 1960. But the return for 1961 is on higher capital. In October 1961, the issued capital of the Bank was increased from £5.5 million to £6.6 million by a rights issue of £1.1 million; this was on top of an increase of £500,000 in the capital a year before (October 1960). The dividend for 1961, therefore, absorbs a larger amount of £555,844, that for the previous year being £497,656. The amount carried forward is also more at £540,648, as against £506,254. This shows that the dividend was fully earned out of the profit for the year under review. It also shows that, if the Directors wanted to maintain the rate of dividend, they could have easily done so.

It is thus evident that the Directors have followed a cautious policy in making allocations out of the published profit for the year under review. Justifying the policy, Mr. Vincent Alpe Grantham, Chairman of the Bank, in his statement to shareholders, say: "Costs still show a tendency to rise and we should lack prudence, if we did not envisage a halt in the rate of profit increase we have so far enjoyed." He, however, states that the conservative policy adopted in the interests of depositors should be to the ultimate benefit of shareholders. The Chairman also points to the benefit derived by shareholders as a result of the rights issue and assures them that the total payments in the coming year on account of dividend, which the Bank hopes to maintain at 15 per cent, will show some increase.

The Bank's main items of liabilities and assets as on 31st December 1961 are compared with those at the close of the preceding three years in the following table:

(In thousand £s sterling)

	As on 31st December			
	1961	1960	1959	1958
LIABILITIES (MAIN)				
Capital	6,600	5,500	5,000	5,000
Reserve fund	7,150	5,700	5,500	5,500
Undistributed surplus	495	470	463	455
Current and other accounts	181,501	181,458	188,855	176,295
Fixed deposits	133,123	106,302	59,578	42,588
Notes in circulation	5,107	4,732	3,869	3,806
Bills payable	2,054	2,237	1,668	1,557
Acceptances (contra item)	16,757	7,524	10,396	7,365
ASSETS (MAIN)				
Cash	72,794	57,085	44,289	48,788
Investments—				
Government and other securities	63,697	69,481	63,821	57,857
Securities lodged against note issue	5,399	4,708	3,945	3,882
Advances	155,565	144,436	116,587	98,809
Bills of exchange	30,518	28,734	22,999	24,130
Bank premises	3,891	3,210	3,180	2,887
Holdings in subsidiaries	2,998	2,897	2,889	2,886
Trade investments	414	416	885	197
Balance-sheet total	358,142	316,208	270,390	243,118

As in previous years so also during 1961, the rise in profit was due to increased credit facilities made available by the Bank, in keeping with the continuing demand for finance throughout the Bank's sphere of operations. The total advances, for instance, were higher by £11.13 million at £155.57 million. Bills of exchange, too, were higher by £6.78 million at £30.51 million. Such a sharp rise in bank credit was possible by the significant expansion in the fixed deposits of the Bank by as much as £24.87 million to £133.12 million. The deposits held in current and other accounts were, however, almost unchanged at £181.50 million (as on 31st December 1961), as against £181.46 million a year before. Acceptances on account of customers show an appreciable increase of £9.23 million, in contrast to the drop of £2.87 million noted in the

(Continued in previous column)

RAW JUTE IN PARLIAMENT

BUFFER STOCK ASSOCIATION FINALISES MECHANISM OF PURCHASE

RAW jute figured prominently, once again, in the Lok Sabha last week, thanks to three Communist members who tabled a calling attention motion which described the current jute situation as being very critical and urged immediate Government action to avert the crisis. The fears expressed by these members were clearly exaggerated. It is true that the supply position of raw jute is highly encouraging, owing to the distinct improvement in the current season's crop. But prices have, by and large, been maintained around Rs. 30 per maund (basis Assam bottom). It is only in certain areas that prices have sagged below this level, but this has largely been due either to poor quality of the fibre or to lack of adequate transport facilities. Nevertheless, the calling attention motion did serve a useful purpose, in that it elicited a clear-cut statement from the Union Minister for Commerce and Industry, Mr. K. C. Reddy. In the course of this statement, Mr. Reddy declared categorically that the Government would not support prices at levels which obtained under abnormal conditions and that prices would be maintained "at reasonably economic levels," so as to give sufficient incentive to growers to maintain the present acreage under jute.

About 30 per cent of the current season's jute crop, we are told, had been sold between July and October 1961 at prices well above Rs. 30 per maund, another 20 per cent during November-December 1961 at or slightly above Rs. 30, and a further 20 per cent in January-February 1962 mostly at Rs. 30. Mr. Reddy said that, throughout this period, mofussil prices had maintained close parity with Calcutta prices and one could reasonably assume that primary producers had received corresponding prices less freight, handling charges and middlemen's commission. Indeed, the Minister averred that the relatively slow rate at which the crop had been marketed this season would reflect the increased holding power of the grower and his confidence in the assurance that jute prices would be held steady throughout the marketing season. Proceeding, he observed:

"The Government is aware of the crucial importance of assuring a good crop in 1962-63 and of preventing periodic variations in the acreage under jute and mesta on account of uncontrolled price fluctuations. This would not, however, mean that it could support prices at levels which obtained under abnormal conditions in the sowing season last year (the highest level touched was Rs. 66.50 per maund in February 1961) when there was an increase in acreage under the impetus of high prices, nor would the Government allow prices to sag to uneconomic levels as was the case during the 1958-59 season when prices touched as low a level as Rs. 20 per maund. The Government is satisfied that, on the whole, jute prices have been maintained."

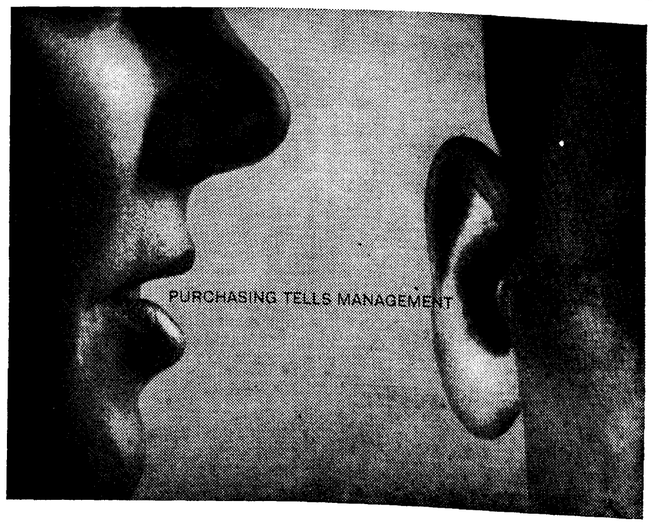
In this connection, Mr. Reddy touched on the measures adopted to sustain jute prices at reasonable levels. The measures include (1) system of minimum quotas for weekly purchases of raw jute introduced by the Indian Jute Mills Association (I.J.M.A.); (2) regulation of imports of low cost cuttings from Pakistan (the imports have been suspended since early December 1961); (3) fixation, by the Forward Markets Commission, of minimum prices for forward raw jute (all varieties) at Calcutta; (4) efforts of mills to step up output of jute goods; (5) increased wagon allotments for jute; and (6) establishment of the Jute Buffer Stock Association.

Although the decision to establish the Jute Buffer Stock Association was taken by the I.J.M.A. Committee many months ago, this body was actually constituted and registered only early this year. The delay was due to certain technical and legal difficulties. The Governing Body of the Buffer Stock Association met at Calcutta on the 23rd inst. and finalised the mechanism of purchase. Since, however, details regarding the deliberations of the meeting and the decisions taken thereat are not available at the time of writing (that is, Tuesday the 27th inst.), it is not known whether the Association will buy direct from jute growers or locally or through any intermediate agencies and whether purchases will be channelised through those mills which are already using the inferior quality fibre. Meanwhile, the financial policy of the Association has been agreed upon and the terms of loans from banks, it is claimed, will reasonably meet its requirements. The State Bank of India will give full advance comprising 85 per cent of the value of raw jute as overdraft for spot raw material and 15 per cent on the basis of Central Government guarantee.

At present, the Buffer Stock Association has members from mills representing 77 per cent of the loom capacity. More mills are expected to join soon and, ultimately, the whole industry will be covered. The Governing Body consists of six members, including the Chairman, who is the Chairman of the I.J.M.A. (Mr. C. L. Bajoria), and three other I.J.M.A. elected members. There is one non-I.J.M.A. member and an honorary member representing the Government (that is, the Jute Commissioner at Calcutta). The Association is expected to make its purchase of its first lot of about 200,000 bales of raw jute shortly.

The operations of the Jute Buffer Stock Association will, surely, be watched with considerable interest. To the extent the Association buys surplus jute which cannot be absorbed by the mills' normal purchases, it will prevent prices from falling to levels that are unremunerative to cultivators and will, at the same time, provide a reserve stock to cushion the industry against any future shortage of raw jute. The jute industry can certainly pride itself on its co-operative efforts to operate a raw jute buffer stock scheme, which, as we said only last week (*vide* editorial on page 494), is normally a function of the Government.

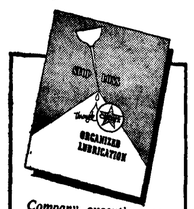
The industry must be under no illusions about the problems involved in operating a buffer stock. For instance, while purchases have to be arranged in such a way as to see that the price benefit goes to growers for whose benefit the scheme is intended, it is necessary to ensure, as Mr. D. C. B. Pilkington, the erstwhile Chairman of the I.J.M.A., very aptly stressed, that this scheme does not unduly encourage the production of an excessive percentage of low quality fibre. Again, care has to be taken to avoid accumulation year by year of more and more jute until the Buffer Stock reaches unmanageable dimensions. If such a trend were to emerge, it might be necessary to regulate the area under jute. This will require close co-operation and understanding between the Government and the industry. Care has also to be taken to see that the story of sugarcane is not repeated and that the price support scheme does not breed complacency among growers and officials so far as tackling the urgent problem of improving the yield per acre is concerned. There are also difficulties such as lack of storage space in mills and presshouses and frequent transport bottlenecks. If these and other problems are solved promptly and satisfactorily as and when they arise, the Buffer Stock will, there is no doubt, succeed in fulfilling its twin objectives: of ensuring regular supply of fibre and, consequently, of maintaining price stability in the jute goods market which is important to overseas customers of jute goods.



The CALTEX "Stop-loss" Programme helps cut plant-wide maintenance costs as much as 15%

"Stop-loss" organises lubrication throughout the plant—from purchasing on through actual application. By specifying multi-purpose lubricants and by eliminating duplication, a "Stop-loss" Programme can reduce the number of lubricants needed by as much as 50%. By streamlining purchasing procedures the programme can cut the number of purchase orders.

Best of all—by assuring proper lubrication to every piece of equipment in the plant, a "Stop-loss" Programme helps extend equipment life. Result—plant-wide maintenance savings upto 15%. *Ask your Caltex Sales Engineer for information.*



Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

COTTON INDUSTRY'S DISCONTENT

OFFICIAL REPLIES STRESS NEED FOR IMPORTS

From Our Special Correspondent

MANCHESTER, 20*th March*

COTTON mills outside Europe are using their machinery in a far more intensive manner than those on the Continent and in the U.K. According to figures released by the International Federation of Cotton and Allied Textile Industries, the proportion of cotton spinning spindles active in European mills as compared with the world total declined by 5 per cent during the period from 1958 to 1960 inclusive.

MANCHESTER LETTER

Spindles operating in Europe at the end of 1960 represented 43½ per cent of those throughout the world, whereas the quantity in Asia and Oceania increased from 27½ per cent of the total in 1958 to 32 per cent by 1960. In other areas only negligible changes occurred. Over the three-year period, there was a reduction of 8.5 million in the world total of installed spindles, as ring spindles accounted for 96½ per cent of the active machinery in 1960 million, however, as compared with 93 per cent in 1958, there was in fact an increase in the productive capacity of the spindles in use even before allowing for the improved efficiency of the more modern plant. The International Federation has obtained information on machinery hours from countries accounting for over 70 per cent of world capacity but excluding China and Eastern Europe.

Machinery Hours

As in the past, the average hours worked per spindle in the U.K. is well below all other countries, being 2,239 spindle hours in 1960, as compared with the peak of 6,979 spindle hours worked in Egypt, 6,971 in Hungary and 6,223 in the U.S. The total number of spinning spindles in place at the end of 1960 was 125,8 million, as against 129,4 million in 1959 and 134,3 million in 1958. The maximum number of active spindles during each calendar year showed little variation, being 119,1 million in 1960, 119,8 million in 1959 and 119,2 million in 1958. The number of looms in place at the end of 1960 was 2,5 million, as against 2,6 million twelve months previously, while the maximum number active during 1960 was 2,4 million.

Confidence—or more correctly the lack of it—remains the keynote of the Lancashire cotton industry's present discontents. In consequence, it was all to the good that the matter should once more be raised in the House of Commons, even if the topic failed to gain any noticeable support from the Government benches.

More discussion on imports did nothing to clarify the position, except to elicit the statement that the future level of arrivals from Commonwealth sources was receiving consideration. Figures of falling manpower in particular areas, the closure of mills, even the oft-repeated proportion of imports against current home production, are only reflections of a sombre picture whose outline is far too well known to cause any undue alarm in official quarters, however much it may depress the spirits of Lancashire traders.

Governmental replies, however, again evaded the issue, stressing the necessity for the country to import goods in order to facilitate the expansion of shipments abroad. Some misconception about the effect of the reorganisation scheme on the labour force also seemed apparent.

Imports "Under Control"

Pointing out that the industry lost 20,000 workers in 1961, the Parliamentary Secretary to the Board of Trade said that scrapping and modernisation was bound to result in a decline in the labour force. Should it be observed that the final date for scrapping spinning and weaving machinery was the end of March 1960?

According to the Government spokesman: "The main sources of imports are now under control." This presumably refers to the inter-industry arrangements with Hong Kong, India, Pakistan and Spain, of which those with the Asian Commonwealth countries expire at the end of this year. But Lancashire traders feel that any resurgence of demand can just as easily lead to a revival of the frantic search for goods from other suppliers outside the charmed circle of those who have voluntarily and temporarily restrained their exports.

Output Still Declining

Diminishing demand for the industry's products while distributors are so cautious in their approach to forward business cannot fail to be reflected in the output from Lancashire's mills. Although the January production totals showed an improvement on the previous month, when lengthy stoppages took place over the Christmas holidays, the fall in the comparative figures of 12 months previously was unmistakable. Even more pronounced, although perhaps it is unfair to compare the overall situation, is the comparison with January 1960, when the big rush was in progress to utilise every available spindle and loom before the completion of the scrapping programme at the end of the first quarter of that year.

The current average weekly output for single yarns is 12,370,000 lbs., as against 14,210,000 lbs. in January 1961 and 15,390,000 lbs. weekly in January 1960. Within the various categories, cotton yarn accounts for a drop of 2,000,000 lbs. weekly on the level two years back, while the output of man-made staple yarns is practically 1,000,000 lbs. down.

A similar story unfolds in the cloth section where the yardage woven in January this year averaged 33,910,000 per week, as against 37,240,000 yards in 1961 and 39,740,000 yards in January 1960. Cotton's share as compared with two years ago has fallen from 26,860,000 yards weekly to 22,000,000 yards weekly, while fabrics manufactured from man-made fibres and mixtures show a reduction of almost 1,000,000 yards per week.

The rate of manpower shrinkage in January was lower than during the final quarter of 1961, with a drop of 480 in the available labour force. The total of 169,040 early last month compares with 184,760 at the end of January 1961 and 191,000 twelve months earlier.

New Master

Mr. Frank B. Eastwood, a chartered accountant, at present in the Finance Division of British Oxygen Company, has been appointed Deputy Master of the Manchester Royal Exchange and will take up his duties on 7th May. He will succeed Mr. E. G. Speakman the present Master and Secretary of the Exchange on his retirement on 4th October after more than 20 years service. The Exchange was the subject of a £2½ million takeover bid 12 months ago when City Centre Properties Limited, the London property group, gained control.—*All Rights Reserved.*

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

HEAD OFFICE: ADELPHI, 119, QUEEN'S ROAD, BOMBAY 1.

FREE WORLD TRADE WITH COMMUNIST BLOC

SOVIET OIL EXPORTS TO WEST EXPECTED TO INCREASE

ONE of the most controversial issues of recent years has been that of Soviet oil exports to the countries of the non-Communist world. It is sometimes overlooked that these shipments (nearly 30 million tons in 1961), though the U.S.S.R.'s biggest single source of foreign exchange, are but part of a much larger whole. In consequence of policy changes since Stalin passed off the scene in 1953 there has been a considerable extension of trading relations between the Communist bloc and the West. This trade, like all commercial exchanges freely entered into, takes place because both parties expect to benefit. It nevertheless entails certain risks which the Western participants need to keep constantly in mind.

It is not surprising that there should be plenty of scope for commercial intercourse between these two great groups of nations. The Sino-Soviet bloc has a rapidly expanding population of over a billion (thousand million) souls, and an aggregate production which, though still valued at no more than $400 billion a year, is nevertheless growing at an annual rate of 10 per cent. True, only one-quarter of the Communist countries' trade is with non-Communist nations, while their sales to the free world still represent under four per cent of the free world's imports from all sources. Nevertheless, these sales, after declining from about $2 billion in 1948 to $1.6 billion in 1953, have nearly trebled in seven years, to a total of about $4.3 billion in 1960; of this total the U.S.S.R. supplied about one-third, its satellites one-half and China one-sixth. The industrialised countries of the West accounted for $2.7 billion of these exports, and its underdeveloped countries for about $1.6 billion. Since Stalin's death, the U.S.S.R. has exported well over a billion dollars worth of gold to cover the deficits in its balance of trade.

Trading Relations

While trading relations across the iron curtain are in general mutually beneficial, they obviously cannot be judged by commercial criteria alone. In the first place, they are normally conducted within the framework of bilateral treaties—agreements in which the two Governments concerned set out certain; short-term commercial objectives. These intergovernment agreements have, however, to be implemented by commercial contracts, the parties to which are not on the same footing. On the one hand, in the case of the U.S.S.R., stands a powerful, monopolistic trading agency, charged with responsibility for procuring, among other things, essential imports needed for the successful prosecution of the current Five-year Plan, and enjoying the direct backing of the state; on the other, very frequently, stands a normal commercial undertaking, seeking a profitable outlet for its wares. That East-West commerce has steadily expanded despite the fundamental differences in attitude between the parties is evidence of the extent to which Western traders and the Communists are prepared to set their opposing doctrines aside and adapt themselves to each other's trading methods.

At this point, however, it is necessary to distinguish between Soviet dealings with the industrialised nations on the one hand and with the underdeveloped countries on the other. The motives governing the trade, the commodities concerned and the risks incurred are different for the two groups. [Incidentally, the U.S.A. plays a very minor role in East-West trade: there is an embargo on U.S. exports to Communist China, while American exports to the bloc as a whole ($89 million in 1959) represent only half of one per cent of the country's total sales abroad.]

It would be a very considerable oversimplification to say that the Communists deal with the industrialised nations for economic reasons and with the underdeveloped group for political reasons: economic and political considerations are not so neatly segregated in the Communist mind. There is, nevertheless, some truth in the contrast. For the fulfilment of their plans, the Russians in particular are anxious to obtain certain raw materials, chemical products, manufactures and particularly machinery and industrial plant from the advanced countries. From the international oil industry's point of view it is a little ironical that their purchases include large diameter line pipe (which they have been procuring in countries as far apart as Sweden, Italy and Japan), rock bits, compressors, pumps, and even petrochemical plants and tankers, much of which will serve to help increase the U.S.S.R.'s oil export capacity.

N.A.T.O. Exports

According to a recent U.S. publication*, which has provided a good deal of material for this article, N.A.T.O. exports to the Sino-Soviet bloc in 1959 were made up as follows (millions of U.S. dollars): manufactured goods 740; machinery and transport equipment 393; chemicals 243; foodstuffs and tobacco 250; raw materials and other items 248, making $1,874 million in all. What to send in exchange has been something of a problem for the Communists. Though they have tried by means of trade fairs and other forms of publicity to get Western buyers interested in their manufactures, they have had only limited success. They have managed to sell relatively small quantities of raw materials and foods; and it is oil which has provided the biggest single export item.

Free World Trade With Sino-Soviet Bloc
(Million U.S. dollars)

	European Satellites	U.S.S.R.	China	Total Bloc	% of all Trade*
Free World Exports to:					
1948	901	534	534	1,969	3.7
1953	678	424	287	1,389	1.8
1958	1,634	1,013	771	3,428	3.6
1959	1,853	1,149	670	3,691	3.6

* The figures express free world exports to, or imports from, the communist bloc as percentages of total free world exports or imports.

On the Communist side, the principal incentive in trading with the industrialised nations of the West has thus been the acquisition of much-needed supplies, including where possible industrial know-how. For the Western exporters, the main incentive has been the lure of market outlets now and, it is hoped, in the future. In Continental Europe there is something of a tradition to look Eastwards for new markets. Trade with the rapidly expanding economies of the East certainly helps to ensure full employment for men and machines in the West, and manufacturers press, even in the face of discouragement from their Governments, to do this export trade. Wherever Western sellers have been prepared to consider the grant of credits, tempting offers of large orders have been held out to them—as in Mr. Khrushchev's famous letter to President Eisenhower in June 1958. Under the credit terms currently granted by private bankers in several west European countries, the Soviet buyer of industrial equipment need pay only 20 per cent of the total cost by the time the plant is tried out in the U.S.S.R., spreading the remainder over a period of five to ten years. Despite all the effort, however, the Communist bloc still takes a comparatively small proportion of the exports of Western industrial nations—the proportion is (e.g.) about 7 per cent for Germany and half that proportion for the U.K.—though it is, of course, significantly higher for particular industries.

So far as the main European nations are concerned, though they are eager to sell to the Soviet bloc, there is as yet no danger of undue dependence on Soviet zone markets. The dependence is considerably greater for a few of the smaller European countries. Iceland, for example, has lately been sending about one-third of its total exports to countries beyond the iron curtain, while the proportion is about one-fifth for Greece and one-eighth for Turkey. In Denmark, the shipbuilders and the farmers would be fairly hard hit by loss of Soviet markets.

Underdeveloped Countries

Dependence on Russian goodwill is much more marked in the underdeveloped countries of Africa, Asia and Latin America, which have been so assiduously wooed by the Kremlin in recent years. In the former colonial areas there is a natural temptation for the Communists to do all in their power to discredit the capitalist competitive system and seek to prove that Communism provides the master key to rapid economic progress. Political penetration is the aim in some countries—those which have impoverished and uneducated masses, a small wealthy class, and an unstable economy, and which therefore seem ripe for a Communist takeover.

As has been shown, total Communist bloc trade is still much smaller with the underdeveloped countries than it is with the industrialised nations. But it usually makes a much more special appeal. It is, moreover, growing rapidly, having risen by about 130 per cent since 1955, against an increase of 75 per cent for the industrialised group. In 1959 (latest figures available) Communist imports from the free countries amounted to $1,019 million, comprising $434 million imported by the European satellites, $402 million by the U.S.S.R. and $183 million by the Communist Far East. The main items imported were: industrial raw materials, including rubber, cotton, wool, hides, skins and copper, and a certain quantity of foodstuffs. The exports total of $839 million in 1959 included $402 million from the satellites, $224 million from the U.S.S.R. and $213 million from China. The biggest single group was machinery and transport equipment, followed by iron and steel, petroleum and products, and a variety of foodstuffs and other items.

For the underdeveloped countries the benefits of such trade are pretty obvious. In some cases it offers them a welcome opportunity to dispose of surplus produce and at the same time relieve their balance of payments problem. Colombia, for example, has thus found outlets for coffee, Egypt for cotton, Greece for tobacco and Iceland or fish. In exchange, they all secure much-needed imports for which payment does not have to be made in foreign currency. Often indeed the capital goods they require are supplied on credit, a typical arrangement being repayment over a 12-year period, with interest at 2½ per cent.

This is a reminder that Communist trade, and especially Russian trade, with the underdeveloped countries is frequently linked with financial and other forms of aid. The policy may be dated from the Soviet grant to Afghanistan in 1954. From then until mid-1961, according to U.S. sources, the Communist bloc had granted economic and military aid totalling $5.9 billion to 26 countries, or which $4.1 billion is classified as economic; of this the Soviet Union has provided about three-quarters. However, little more than one-fifth of the economic aid ($891 million), had been actually drawn by mid-1961, though three-quarters had been allocated to specific projects and the rate of payment was rising sharply.

There is a strong tendency for the Communists to concentrate such aid on what are regarded as key countries in the competitive co-existence rivalry. Almost two-thirds of the above aid has been allocated to four recipients—India, the United Arab Republic (U.A.R.), Indonesia and Cuba. The detailed figures are (in millions of U.S. dollars): India 945; the U.A.R. 802; Indonesia 544; Cuba 357; Afghanistan 217; Iraq 216; Ethiopia 114; Guinea 113. Indonesia, the U.A.R., Iraq and Afghanistan are also the principal recipients of $1.8 billion of military aid.

Technical Aid

Side by side with this financial assistance—which, of course, falls far below that provided by the industrialised countries of the West, and the burden of which is offset to a small extent by Western credits to Russia and her partners—is the supply of technical aid of various kinds. It is estimated that during 1961 9,750 Communist technicians were stationed for periods of one month or more in the 26 countries with which the Communist bloc has aid agreements. Of this total, which is 1,800 above the end-1960 level, 8,200 technicians are classified as economic, and the remainder as military. In the former category, the principal beneficiaries were: Afghanistan 1,910; Guinea 1,200; Yemen 1,180; U.A.R. 1,045; India 640; Cuba 500; Iraq 480. In the military category the main recipients were: U.A.R. 480; Cuba 300; Iraq 285; Afghanistan 260.

Over against the undoubted benefits which the underdeveloped countries derive from commercial intercourse with the Communist bloc, certain disadvantages must be set. A trade agreement between two Governments is only a framework within which trade will be done. In the free world country, buyers and sellers still have to be found. Consequently, countries such as Brazil, Argentina and Burma have found that their actual sales to Russia and its satellites have fallen far below the figures specified in the agreement. In other cases—e.g., Syria, Ceylon and Uruguay—there have been violent year-to-year fluctuations in Communist purchases, which have faced the sellers with the necessity of trying to re-enter markets which they had deserted in favour of the Soviet bloc.

The fear that Communist actions may result in a disruption of the commodity markets haunts many in the West. It follows naturally from the realisation that the prices at which Communist countries compete abroad are not necessarily related to costs of production or normal criteria of profitability. The fear is certainly in the mind of oil producing concerns in the West who know that, in some transactions at least, they have been sharply under-cut by the Russians. In regard to tin and aluminium also, there have been instances where heavy Soviet sales—maybe undertaken with the object of securing foreign exchange in a hurry—have brought about a steep fall in prices. However, as a general rule, the Russians seem to be as anxious as any commercial undertaking to make the best possible trading bargains. This does not, of course, alter the fact that they may, as opportunity offers, use "oil diplomacy" to sow confusion among Western suppliers and to weaken the position of the Western powers in the Middle East.

More serious for the underdeveloped countries is the possibility that the commercial relationship may be abruptly modified or completely severed for political reasons. Moscow has used the threat of trade curtailment to apply political pressure to Finland and Iceland during important election campaigns. Credits to Jugoslavia were cancelled as a mark of political displeasure, and shipments of oil to Israel were cut off at the time of the Suez emergency, despite the existence of a trade agreement. True, other countries also use the trade weapon, but as a reprisal rather than as a means of influencing day-to-day political life.

A country's vulnerability to arbitrary treatment of this kind obviously increases with every increase in the proportion of its trade which is conducted with the Communist bloc. In Africa, for instance, the bloc takes about 25 per cent of Guinea's exports and provides about 45 per cent of its imports, being virtually its sole supplier of petroleum products. Both Guinea and Ghana are heavily dependent on Communist capital for their development programmes. Similarly, about 45 per cent of Egypt's exports—largely cotton—are now sold to the Communist. Cuba has become greatly dependent on Russian and Chinese goodwill as a result of the break with the United States.

Prospects

Will the dependence increase? With the rapid expansion of production in Communist countries, their requirements of the kind of exports offered by the free world's underdeveloped countries is not expected to grow very much. The extent and direction of the trade will therefore be governed increasingly by political considerations. However, if it were to increase at much the same rate as recently, Communist trade (imports plus exports) with the underdeveloped countries could double, to reach $4 to $5 billion by 1965.

So far as the industrialised countries are concerned, the U.S. report cited here reckons that their trade with the Communist bloc may increase from $5.7 billion in 1959 to $7 to $8 billion in 1965, when it would still represent only about 5 per cent of those countries' total trade. It is expected, however, that, while the Soviet bloc's import needs will remain varied, rising demands within the bloc for goods of all kinds will make it increasingly difficult for the U.S.S.R. and its satellites to find exports acceptable to the free world. The corollary is that, because oil is a commodity which every industrial country will need to import on an increasing scale, Soviet oil exports to the West are likely to make further headway during the next few years.—*(By Special Arrangement with the Petroleum Press Service.)*

WORLD SUGAR STOCKS FALL MARKEDLY

F.A.O. STUDY ON CONSUMPTION TRENDS

DESPITE the breakdown of the world sugar quota system, the International Sugar Council continues to keep itself active in arranging for exchange of information on recent trends in sugar market and discussion on the latest statistics. This is in accordance with the understanding reached at the last World Sugar Conference whereat it was decided that the Council should hold a series of meetings during the remaining period of the present Agreement. One such meeting was held at London on Tuesday the 20th inst. At this meeting, the Council accepted its Statistical Committee's view that supplies of sugar likely to be offered on the world market in the current calendar year would do no more than provide a reasonable balance between supply and requirements, in view of the upward trend in world consumption, lower levels of production in a number of countries and other factors. The Council also adopted the estimate of the Committee that the minimum net import requirements of the free market for 1962 would aggregate 11,815,000 metric tons (raw value), which represent an increase of 530,000 tons over the estimate made in September 1961. In addition to this quantity, the U.S. import requirements are put at 4,015,000 tons. The total world market requirements thus come to 15,830,000 tons.

If the aforesaid assessment were to prove correct, there would be a marked depletion of running stocks with mills and traders the world over. In fact, a recent statement by the U.S. Department of Agriculture suggested that the current sugar season (1st September 1961-31st August 1962) would end with a carryover stock of no more than 7.9 million tons (excluding most of the Communist bloc), that is, some two million tons less than the stocks as on 31st August 1961. It is this statement, coupled with the reported sharp decline in Cuban sugar crop from 6.3 million tons in 1961-62 to 4.5 million tons in 1962-63, that has imparted considerable strength to the sugar market, leading to an appreciable recovery in prices. Sugar in London is currently quoted at £24¼ per ton, as against £22 a month ago and less than £20 prevailing in the middle of January 1962. Sugar dealers in London believe that, so far as the more immediate future is concerned, prices will "continue rising gently, with an occasional setback from time to time."

Long-term Trend Uncertain

From the long-term point of view, however, one cannot at all say as to what would be the trend of world sugar prices. Even the Commodities Division of the U.N. Food and Agriculture Organisation has not been able to provide a clear-cut assessment of the outlook for the next few years. In its latest special study entitled *Trends and Forces of World Sugar Consumption*, the F.A.O. merely says:

"The world sugar economy is far from static. Great progress was made during the past decade and further progress can be reasonably anticipated. These projections are on the basis of assumptions concerning price, income and population which are, on the whole, conservative. But it is possible that the tempo of general economic growth will develop with greater momentum; furthermore, there can be structural changes as a result of special consumption promotion efforts which could add substantially to the world demand. On the other hand, severe increases in prices or a general economic recession could not but have profound adverse effects on the world sugar economy. The situation should be kept under frequent review and the outlook should be reappraised at least every two years in the light of new developments."

The above study is mainly the work of Dr. Albert Viton, Chief of the Sugar, Beverages and Horticultural Crops Branch of the F.A.O.'s Commodities Division, assisted by Mr. Franco Pignalosa and other members of the Branch. It is the outcome of a specific project undertaken by the F.A.O. in collaboration with the International Sugar Council and is intended to meet the Council's desire for a comprehensive basic analysis that would serve as a foundation for its future work in the promotion of sugar consumption. The F.A.O. report traces the trends in sugar consumption over the last two decades, in order to examine the factors determining consumption and its rate of growth and, on the basis of this analysis, has tried to give some indications of the likely course of sugar consumption in the years ahead.

The world consumed in 1958 approximately 52.49 million tons of sugar (both centrifugal and non-centrifugal), that is, 19.66 million tons more than in 1949 and 22.79 million tons more than the average pre-war consumption. Countrywise details are given in Table I at the bottom of the page. In one decade, world consumption rose by 64 per cent. or at an annual rate of 5.5 per cent (compound). This is considered to be a "tremendous rate of growth" which is much greater than for all other foods. Exclusive of Soviet Russia, Mainland China and India, sugar (centrifugal) consumption elsewhere advanced from 20.7 million tons in pre-war to 36.3 million tons in 1958, representing an increase of 75 per cent. It is said that the increase is equally impressive, if consumption is adjusted to population growth, as will be seen from the figures given below:

TABLE II—*Sugar (Centrifugal only) Output and Per Capita Consumption*

Period	World sugar production (000 metric tons—raw value)	World population (Millions)	*Per capita* consumption (Kg.)
1898-99—1899-1900	8,130	1,470	5.5
1908-09—1909-10	12,690	1,690	7.5
1923-24—1924-25	19,120	1,870	10.2
1925-29—1929-30	24,740	1,990	12.4
1937-38—1938-39	26,350	2,190	12.0
1948-49—1949-50	28,640	2,440	11.7
1956-57—1957-58	43,020	2,800	15.4
Rate of growth per annum (1898-99—1957-58) ..	2.9	1.0	1.8

Notwithstanding the appreciable expansion in sugar consumption during the last ten years, the average *per capita* consumption for the world as a whole in 1958 was less than 16 kg., as compared with about 50 kg. in the high consuming countries. Even if China, India and Pakistan are excluded, since their extremely low consumption distorts the picture of conditions in the rest of the world, the average for 1958 was only 24 kg. It may be noted here that sugar is consumed in two forms: direct household consumption and as processed foods containing sugar (called industrial or indirect consumption). Some sugar is also used for non-food products, but the quantities have been relatively insignificant until now.

In the low consumption countries, practically all the sugar is used in the direct household form. Incomes are too low to permit large-scale intake of high-cost sugar-containing foods. The percentage of sugar consumed in indirect, industrialised forms rises progressively with rising income and increasing total sugar consumption. This is important both from the standpoint of marketing and of price policy. It is considered doubtful whether a *per capita* consumption of over 40 kg. a year can be maintained by household use alone. In all the high income countries for which data are available, consumption has increased more rapidly in recent years in indirect than in direct forms, as the following examples of some countries show:

(Per cent of total consumption

	Household		*Manufacturing*	
	1958	Pre-war	1958	Pre-war
U.S.A.	49	72	51	28
U.K.	50.6	53.7	49.4	46.3
Australia ...	45*	62	55*	38
W. Germany ...	58	N.A.	42	N.A.

* Relate to 1955.

The actual industrial utilisation of sugar amounted to about 3,685,000 metric tons in the U.S. (1957), 600,000 tons in West Germany (1956-57), 570,400 tons in France (1956-57) and 266,100 tons in Australia (1955-56).

The F.A.O. Study indicates that the general movement of trade liberalisation in the past decade has not penetrated the world sugar economy. Indeed, the trend has been in the opposite direction. The number of countries where sugar prices are administratively regulated has increased. And changes in the structure of controls has seldom been such as to facilitate imports from the world market and to lower retail prices.

The likely course of sugar consumption in the years ahead, according to the F.A.O. report, will be influenced by three important factors: (1) general world economic development which will determine the *per capita* income; (2) tempo of development of countries with a *per capita* income of less than $300 and which have, in general, an average *per capita* consumption of less than 20 kg; in 1957, about 1,250 million people outside the Communist bloc were in this low income and low sugar consumption group; and (3) price factor. Two factors, it is said, have to be examined in analysing the potential changes in the "real" price of sugar (that is, in relation to other foods). They are: one, changes in production and distribution costs and, two, legislative and administrative measures to reduce or increase the incidence of taxation, as well as other financial imposts. The F.A.O.'s finding bearing on these is as follows:

"As to the first, it is probable that the trend of the past few years will continue and sugar will become slightly cheaper relative to other foods, but not by much.

"Far greater are the potentialities for reducing prices as a result of legislative and administrative measures. In 1957, only 30 countries, which accounted for 15.7 per cent of world sugar consumption, had retail prices below 18 U.S. cents per kilogram; the 23 countries with retail prices lower than 16 cents accounted for only 8 per cent of world sugar consumption. In all other countries, financial imposts of various sorts raised prices 50 to 200 per cent above the price range that is indicated, assuming relatively efficient production and distribution costs. The depressing effect of taxation on consumption is the greater, since the highest prices are on the average in low and very low income countries, where the price elasticity is considerable. This analysis indicates that, in many of these countries, the price elasticity of demand is above unity.

"Finally, assumptions have to be made with regard to the impact of other factors. Since many of these factors do not operate in a consistently predictable manner, forecasts are based on the assumption that 'everything else (other than price and income) remains equal.' But structural changes have taken place in the past, and it can be assumed that some structural changes will take place in the future. Special campaigns to promote sugar consumption, adverse dietary publicity, changes in marketing and distribution systems so as to assure that adequate supplies are always available in all remote areas—any of these, and many other factors, could fundamentally affect the consumption pattern of a country. Some of these factors are related to, or find expression in, the trend of economic development. A continuing rise in *per capita* income, for example, is likely to be related to improvement in transportation facilities and the infrastructure of the country. But the immediate effects on sugar consumption of building a road in parts of a country which had been open only to mule tracks or human carriers is very much greater than an increase in consumption that could be anticipated as a result of the slight increase in *per capita* income in the period. Nevertheless, the impact of these factors on the consumption development of the world is not likely to be very great, although they can be of considerable importance in any one country."

Consumption Projections

It is against this background that the authors of the F.A.O. study have made certain interesting projections in regard to future trend of sugar consumption. These projections indicate that, during the next seven years, world consumption of centrifugal sugar will increase by almost 30 per cent or an average annual growth of 3.6 per cent, from 44.8 million metric tons in 1958 to 56.8 million tons in 1965. The estimate for 1970 is placed at 65.8 million tons, a rise of 50 per cent over 1965, or an average annual rate of growth of 3.6 per cent. Since sugar consumption in Communist countries follows different dynamics, the F.A.O. experts have considered it more realistic to attempt an estimate for the free world only. The estimates of sugar consumption by groups of countries at different consumption levels are given in Table III.

The greatest percentage rise in sugar (centrifugal) between 1956 and 1970 consumption is anticipated in countries which have at present a *per capita* consumption of less than 20 kg. a year, as is indicated below:

Consumption group (kg.)	*Per capita increase* (Per cent)	*Total increase* (Per cent)
Less than 5	58-80	105-132
5-10	67-82	117-135
10-20	50	89
20-30	25	56
30-44	11	50
Over 44	5	24

Sugar consumption, according to the F.A.O. study, will make an "appreciable further progress toward equal distribution" between 1956 and 1970. The consumption of the lowest 50 per cent of the world population, which increased from 10 per cent of total consumption in pre-war years to 14.5 per cent in 1957, is expected to reach 20 per cent of total consumption in 1970. At the other extreme, the consumption of the top 20 per cent of world population, which declined from 60 per cent of total to 50 per cent over the period pre-war to 1957, is likely to fall to 44 per cent in 1970.

THE BANK OF BARODA, LIMITED

(ESTABLISHED: 20TH JULY 1908)

(*Registered Office:* **Mandvi, Baroda**)

FIFTY-THIRD ANNUAL REPORT OF THE DIRECTORS.

To be presented to the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at Mandvi, Baroda, on Saturday, the 31st March 1962, at 11-30 a.m.

The Directors have pleasure in submitting this Fifty-third Annual Report together with the Audited Statement of Accounts for the year ended 31st December, 1961.

	This Year Rs. nP	Previous Year Rs. nP
The net profit for the year 1961, after providing for taxes, including Rs. 1,99,357.81 brought forward and after taking Rs. 3,33,143.37 towards depreciation on buildings and furniture amounts to	68,72,553.37	41,68,551.98
An ad-interim dividend at the rate of 14 per cent. per annum, subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June, 1961, which absorbed	10,50,000.00	8,75,000.00
Amount transferred to Reserve Fund	20,00,000.00	Nil
Provision for Bonus to Staff	20,20,000.00	17,10,000.00
	50,70,000.00	25,85,000.00
The Directors now recommend :—		
(a) Payment of a final dividend at the rate of 20 per cent. per annum per equity share (i.e., Rs. 5 per share) subject to deduction of tax at the appropriate rates for the half-year ended 31st December, 1961 making in all 17 per cent. per annum for the year amounting to ..	15,00,000.00	14,74,194.17
(b) and carry forward to the next year's account of the balance amounting to	3,02,553.37	1,00,357.81
	Rs. 68,72,553.37	41,68,551.98

2. The business of the Bank during the year under review continued to be satisfactory

3. Under the Scheme of Amalgamation sanctioned by the Government of India, the New Citizen Bank of India Ltd. was amalgamated with our Bank with effect from 29th April, 1961. As a result after due examination and valuation, our Bank took over the readily realisable assets of the New Citizen Bank of India Ltd., of the value of Rs. 1,69,19,129·11 nP. including immoveable properties situated at Patton Road, Crawford Market, Bombay, and at Kalyan (non-banking asset). As laid down in the Scheme, after providing in full for its outside liabilities, every depositor of that Bank was, in the first place given credit to the extent of Rs. 250 or the balance in the account whichever was less: and in the next place to those whose balances were above Rs. 250, the *pro rata* share calculated at Re. 0·66 nP. in a rupee in respect of the balance of his account as diminished after the credit of Rs. 250 was given. The Board wishes to record its appreciation of the co-operation and assistance received from the Reserve Bank of India in connection with the amalgamation.

4. As a result of the amalgamation of the former New Citizen Bank of India Ltd., all its 44 offices started functioning as our branches. Of these, the branches at Bruce Street (Bombay), Jalgaon (Mahaji Bazar) and Nampur were closed down as they were found to be unremunerative.

5. Because of their nearness to each other, the Bank's branches in Calcutta at Pagoyarutty and Cross Street were amalgamated and shifted to new commodious premises at Malatma Gandhi Road, Calcutta.

6. During the period under review, the Bank put up its own building in East Africa at Kampala (Uganda) at a cost of about Rs. 18,24,000 to house its branch office and a safe deposit vault. This is in addition to the Bank's own building at Nairobi (Kenya) which was put up earlier. The Bank has also started a mobile banking service under the control of its Kisumu (Kenya) branch for the benefit of six surrounding villages.

7. The Bank has applied for and has been granted an exemption from audit under Section 228 of the Companies Act, 1956, in respect of 104 branches in India for the year 1961 and the exemption orders in this regard will be read out to you hereafter. This number includes 13 branches audited by Chartered Accountants Auditors. The remaining branches in India have been either audited by the Bank's Statutory Auditors or All the Bank's branches outside India have been audited by Chartered Accountants who have been competent to act as Company Auditors under the Acts of the respective countries and who have been approved by the Bank's Statutory Auditors.

8. The Bank has opened branches during the year at Chandigarh, Indore (Siyaganj), Jullundur, Ahmedabad (Ellis Bridge), Bombay (Bandra), Calcutta (Bhowanipore), Delhi (Sadar Bazar), Baroda (Industrial Estate) and at Suva in Fiji Islands. A temporary branch was also opened on the grounds of the Indian Industries Fair held in New Delhi in November, 1961. Branches at Godhra, Dehgam and Bareilly will be opened shortly.

9. Shri Tulsidas Kilachand, the Chairman, was out of India for over three months from 16th May, 1961. In accordance with the Article 151 (1) of the Articles of Association, the Board had appointed Shri Ramdas Kilachand as an Alternate Director in place of Shri Tulsidas Kilachand. The Board appreciated and placed on record the valuable services rendered by Shri Ramdas Kilachand during the period in which he acted as an Alternate Director.

10. In accordance with Article 145, four Directors, Shri Tulsidas Kilachand, Lt.-Col. H. H. The Maharaja Fatehsinh Gackwad of Baroda, Shri K. P. Goenka, Shri Narsing Dass Bangur retire by rotation and being eligible, offer themselves for re-election.

11. Shareholders are requested to appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

For and on behalf of the Board,
TULSIDAS KILACHAND,
Chairman.

BOMBAY, *8th February*, 1962.

Note :—(1) The General Manager is allowed the use of the Bank's motor car free of cost.
(2) Provision for taxation has been made out of income.*
(3) Some of the figures of the previous year have been regrouped to make them comparable with those of the current year.

CERTIFICATE PURSUANT TO RULE 6 (6) OF THE COMPANIES (BRANCH AUDIT EXEMPTION) RULES, 1961.

We hereby certify that no material change has taken place in the arrangements made for the audit of accounts of the Branch Offices exempted from audit under Rule 4 (1) (b) of the Companies (Branch Audit Exemption) Rules, 1961, enabling the Chartered Accountants employed by the Bank for the purpose of audit of the accounts of Branch Offices, to visit the Branch Offices and to have access at all times to the books, accounts and vouchers of the Bank maintained at such Branch Offices audited by them and for furnishing all such further information and explanations required by them and that such auditors have carried out the audit of the Branches assigned to them in accordance with the Internal Audit Programme drawn up by them and approved by the Bank's Statutory Auditors.

FOR THE BANK OF BARODA, LIMITED,
TULSIDAS KILACHAND, } *Directors.*
CHINUBHAI CHIMANBHAI, }
N. M. CHOKSHI, *General Manager.*

BOMBAY, *15th February*, 1962.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of Baroda Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 25 Branches audited by us, 25 Branches audited by Branch Auditors and unaudited returns from 104 Branches for which exemption from the provisions of Section 228 of Companies Act, 1956, has been obtained from the Central Government under Rule 4 clauses (a) and (b) of the Companies (Branch Audit Exemption) Rules, 1961.

We report that :—
(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us ;
(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;
(e) the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report ;
(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

PRIVATE ENTERPRISE IN A PLANNED ECONOMY

READJUSTMENT TO SOCIAL CHANGES NECESSARY FOR SURVIVAL

By G. L. Mehta

PRIVATE enterprise in India has now been working within a planned economic system for more than ten years. Although brief, this has been an eventful period in the history of the country and has also witnessed a remarkable development of the private sector. The period is sufficiently long to enable us to have a stocktaking of the past and draw lessons for the future. Such an exercise is essential, because private enterprise is no longer taken for granted as in the last century. Besides, in a planned economy, the criteria by which private enterprise is judged are not the same as in a "free" economy.

Before the advent of planning, private enterprise had an almost unrestricted field in our country. Until the Second World War, such positive steps as were taken to assist industries were few and halting (*the most important being* the policy of discriminating protection), while Government attitude to economic development seemed largely negative. During the last war, certain industries did receive a fillip, but this was largely without a consistent and long-term policy of industrial development.

Mixed Economy

After independence, all this changed. The State has come to adopt a more positive attitude in regard to economic development and has endeavoured to lay down the broad framework of a plan within which such development is to be achieved. The Indian economy is frequently referred to as a "mixed" economy and cannot, perhaps, be easily defined—mixtures can be of several kinds and the economic formulæ are no less varied than those made possible by advances in the medical field. If "mixed" economy is regarded as an "unmixed evil," all economies except, presumably, some totalitarian ones, must be characterised as evil. Indeed, almost all economies are "mixed" in the sense that several functions in a community are performed by Government and others by individual citizens, corporate bodies and voluntary associations. It is the demarcation of responsibilities between the two sectors which distinguishes "mixed" economies. "Unmixed" concentration of both political and economic power in the same hands would be detrimental to democracy as well as genuine socialism. It would be a negation of liberty. As one of the outstanding economists of our day, Prof. Arthur Lewis has observed, "both sides can appeal to history but sensible people do not get involved in any arguments about whether economic progress is due to Governmental activity or to individual initiative. They know that it is due to both and they concern themselves only with asking what is the proper contribution of each." If I were to specify the ingredients which go to constitute our economic system, I would mention three basic constituents, namely, planning, State-ownership of industry and controlled exercise of private enterprise.

Now, we need not be frightened of words any more than enamoured by them—whether it be planning, socialism, vested interests or nationalisation. The principal advantage of planning in developing countries has been, as recognised by international bodies and institutions, that it has helped to give a sense of direction to long-term policies and to enhance the flexibility of short-term programmes. Planning has also been instrumental in providing a general setting for expansion and, in enabling various sectors of the economy to work towards a number of specific objectives. In the present-day world, we can no more condemn *planning as such* because of the risk that it might be carried to extremes any more than we can extol *any kind of planning* irrespective of its content and consequences. Our problem is not one of choosing between an ideal conception of individual freedom and some kind of collectivism but of finding in each case a proper balance between the two. For, the conflict is not so much between "individual freedom" and "collectivism" as between different forms of planning or collective action and between different degrees of freedom, of open as well as concealed power.

Although the conception of a welfare State may be different in different countries and may also change from time to time, its fundamentals can no longer be disputed. The objectives embodied in the Directive Principles of the Constitution of India have to be achieved by democratic processes and without detriment to the national economy. Several years ago, Sir William Harcourt, then Chancellor of the Exchequer, observed in introducing the Death Duty Bill in Parliament, "we are all socialists now." No sensible person can support the unfettered exploitation of economic resources for private gain. No healthy adult citizen has a right to enjoy the fruits of other people's labour without contributing a fair quota of his own. In so far as socialism involves equality of social and educational opportunity, distributive justice, the supremacy of public interest above private gain and diffusion of economic power, few persons with a sense of responsibility and sensitivity would disagree with its basic principles. Priorities are essential to conserve and mobilise economic resources and see that necessities of life for the masses have a precedence over luxury for a few. We, with our cultural traditions, should surely be able to realise that mere pursuit of material gain by itself is empty and that the good society is one in which the human personality is developed to the full.

An Integral Part

That the private sector is an integral part of national economy is widely recognised. In a book entitled *Twentieth Century Socialism*, written by socialists and published a few years ago, the authors say: "the private sector of a socialist economy is not there merely on sufferance to be tolerated on grounds of political expediency with the Sword of Damocles hanging over it in perpetual threats. On the contrary, it has a legitimate and, indeed, a necessary function to perform. Within the limits of equality, there must be opportunities for people to spend as they wish, to own, to initiate and experiment; they must be able to form associations to further their economic interests. In all these areas, the individual must have a chance to act without waiting for the approval of the State." And they go on to observe that "the reason why a socialist economy requires a private sector is because socialists place a value on individual freedom." The private sector in our country has made an important contribution to economic development and is, in fact, a dynamic element in the national economy. All but doctrinaire socialists and devout communists recognise that the criterion of profitability, the price system and the urge of self-enrichment, if they are under effective social guidance and direction, can be effective means for attaining steadily rising standards of living.

Pattern Changing

The whole pattern of our economy is changing. Private enterprise is, however, no longer the private concern of the individual industrialist. It has a public character and a public image; it has to accept obligations and responsibilities both in law and in fact. Within the framework of the Plan, it has provided and can continue to provide initiative and enterprise without which the economy is likely to be stagnant and undiversified. But it is not the profit motive alone that inspires the best of industrialists—it may be the will to power, the joy of creation, a desire for prestige, a sense of rivalry, even the sheer exhilaration of the race. As Keynes said, "If human nature felt no temptation to take a chance, no satisfaction (profit apart) in constructing a factory, a railway, a mine or a farm, there might not be much investment as a result of cold calculation."

So far as State-ownership of industry is concerned, the public sector still constitutes a small part of the organised sector of secondary industry while the private sector embraces a very large part of organised and unorganised industry as well as agriculture and trade and some forms of transport. The net output of Government enterprises and Government administration in national output was 10.3 per cent in 1957-58 which is the last year for which figures are available. It has, no doubt, gone up substantially since 1948-49 but the share of the private sector is still nearly 90 per cent. Moreover, the share of private enterprise in the total industrial production is very large. It was 87.5 per cent in 1957-58, as against 12.5 per cent of the public sector. The share of the private sector—93.4 per cent in 1948-49—has come down to 85.3 per cent in 1956-57. But it is undeniable that the development of the infra-structure has helped the economy and benefited the private sector.

We do not know many things about the dynamism of an expanding economy. What the business community is entitled to ask is that policies are adopted and measures are taken after careful consideration and full public debate and in consonance with our constitutional procedures. Also, the problem is not only of priorities but of allocation of resources. Here, both kinds of enterprises—public and private—should have fair terms and no discrimination and in the sphere in which the private sector operates, it should not be "cramped, cribb'd and confined." Effective planning must seek to minimise interference and pin-pricks and devolve responsibility on industrial units and organisations, labour unions, local bodies and co-operative and voluntary organisations. The main requirement of the present situation is the maximum possible decentralisation and flexibility.

Nationalisation

Nationalisation is no longer regarded by socialists in the West as a panacea for economic ills; it is considered a means which might have to be adopted under certain conditions with proper safeguards for the consumer and the worker. The vicissitudes of democratic politics may impede the adoption of policies which are necessary. Industrialists and traders come more to rely on their capacity to influence some minister or official rather than on their ability to run their enterprise efficiently. The hierarchy of authorities and the complexity of regulations enhance the time-lag between consideration and decision as well as decision and action. The shortest distance in these circumstances is the circle where you go back to where you started! In his last testament, G. D. H. Cole, one of the most eminent socialist thinkers of our century, observed: "I am neither a Communist nor a Social Democrat, because I regard both as creeds of centralisation and bureaucracy, whereas I feel sure that a Socialist Society that is to be true to its equalitarian principles of human brotherhood must rest on the widest possible diffusion of power and responsibility, so as to enlist the active participation of as many as possible of its citizens in the tasks of democratic self-government."

How has the business community in our country responded to conditions of a planned economy? Private enterprise is, if anything, adaptable and it has tried to adjust itself to the conditions in which it has to function. By now, it has acquired the necessary expertise to fill in the various forms which have become an essential part of a regulated economy, it has obtained the necessary knowledge of the ways and by-ways of New Delhi and the labyrinths of Government offices, and it has learnt patience to wait for official decisions. Setting up an industry in India is, in many respects, a time-consuming process, but the rewards of enterprise have been generous and, notwithstanding impediments and irritants, the effort worthwhile. Despite the ups and downs, industrial production as measured by the official index has risen by 70 per cent during the last eleven years and in some industries like chemicals and general engineering, at even a faster rate. This is an achievement of which private enterprise can be reasonably proud.

Balance-sheet

The impact of a planned economy, however, is not so much on the operative aspects of setting up an enterprise as on its substantive aspects: the responsibilities cast on those operating private enterprise and the criteria by which private enterprise is judged. How has private enterprise functioned in these respects?

The balance-sheet, I regret to have to say, is not without blemish. Let me first refer to one aspect of our economic situation: the present scarcity of many goods which seems to be a by-product of planning. Scarcities which have arisen partly because of the acute shortage of foreign exchange and partly owing to the industrial licensing policy which until recently was restricted. The result is that the Indian entrepreneur has been protected not only from outside competition but also from internal competition. Surely, this situation is not a healthy one. On the one hand, prices have tended to rise and shoddy goods have not unoften been produced to take advantage of the scarcities, with the result that the Indian entrepreneur has not earned the consumer's goodwill. Moreover, the shortages have tended to induce a disregard of cost-consciousness in Indian enterprise.

Now this, I suggest, cuts at the very root of the private enterprise system. While maximisation of profits is often cited as the motive force of private enterprise, in the traditional theory this was to be the result of competition and continuous reduction in cost. Besides, the principal merit of private enterprise has been claimed to be its reponsiveness to the consumer—what has come to be called "consumer sovereignty."

Consumer Ignored

I cannot help feeling that the Indian consumer has not had a fair deal during the last twenty years. While at times and to some extent, the shortages may have been avoidable and have been due to factors beyond control, the Indian entrepreneur has not hesitated to take advantage of scarcity conditions in many industries. In many countries, when the price of a commodity rises for any reason, it is taken as a challenge to industry to meet it by increasing production and wiping out shortages. In our country, unfortunately, there has developed a tendency to make the most of such shortages and even try to make them permanent. There is no determined attempt to raise production by increasing efficiency or working more shifts or by exercising self-restraint in charging prices. It is not a question of working on a "loss motive" or of conducting business as a matter of philanthropy. But, having worked so long in difficult times, the industry has become pathologically restriction-minded, seeking a large per-unit profit on a small output rather than a small per-unit profit on a large output.

There is, I suggest, a need for an expansive mood in private enterprise, a keenness to create a market by reaching as large a number of consumers as possible rather than being satisfied with a limited market. It is true that industry itself has not only to put up with several restrictions and controls but has also to bear the burden of imposts and duties which go to enhance the cost of production. Nevertheless, Indian industry has to take a dynamic view of the market and evolve a farsighted concept of profitability. The purchasing power being so low in our country, we have a large number of consumers with small means who have to be catered for. We cannot expect an oasis of prosperity in a vast desert of poverty. After all, private enterprise has, in order to justify its existence, to earn the goodwill of the consumer. Let us not forget that, in a planned economy, private enterprise tends to be judged by criteria different from those in a free enterprise economy.

While, in the nineteenth century, private enterprise was accepted in Europe, America and elsewhere as the best possible form of the economic system, its premises have come to increasingly be questioned both on the ground of the rate of growth as well as its distributive justice. These are the questions which should not be glossed over, but demand serious consideration in the interest of the commercial community itself. So far as the private enterprise system works by decentralising processes of industrialisation and helps to elicit the maximum effort from the people, it is capable of providing a rapid growth of the economy. Moreover, the fiscal system is now sufficiently developed to reduce disparities and inequalities not justified by contribution to the economic system.

Look Around and Look Ahead

We are living today at a time when we must be wary of "the political time-bomb deep in the rapidly changing social pattern" of our nation. If the problem of social change is regarded primarily as a struggle between prosperity and poverty, we shall end up either by the establishment of a ruthless totalitarian system or a corrupt and decadent regime in which all moral values will perish. In few countries is the challenge of the "revolution of rising expectations" more serious than in ours, where we have abysmal poverty and wide disparities of wealth and income, and where we are seeking to plan for social welfare through democratic means. The success of these endeavours rests not only on Government nor will it be achieved by foreign aid, essential as it is. No longer will the mass of people believe that economic disparities are divinely ordained or are the inescapable fruits of *karma*. Two great revolutions have taken place during the last fifty years in the Soviet Union and China, and today over 800 million people are living under Communist rule. In several countries, including our own, Communist ideology is being vigorously preached. The scarcity of the bare necessities of life, the soaring cost of living and wide-spread unemployment all tend to create disaffection towards the established order of society. Who is responsible—Government or businessmen—for this juxtaposition of public penury and private ostentation is of less consequence for the masses than their own plight. The accusing finger is invariably directed towards those who have power and towards those who have the goods of the world.

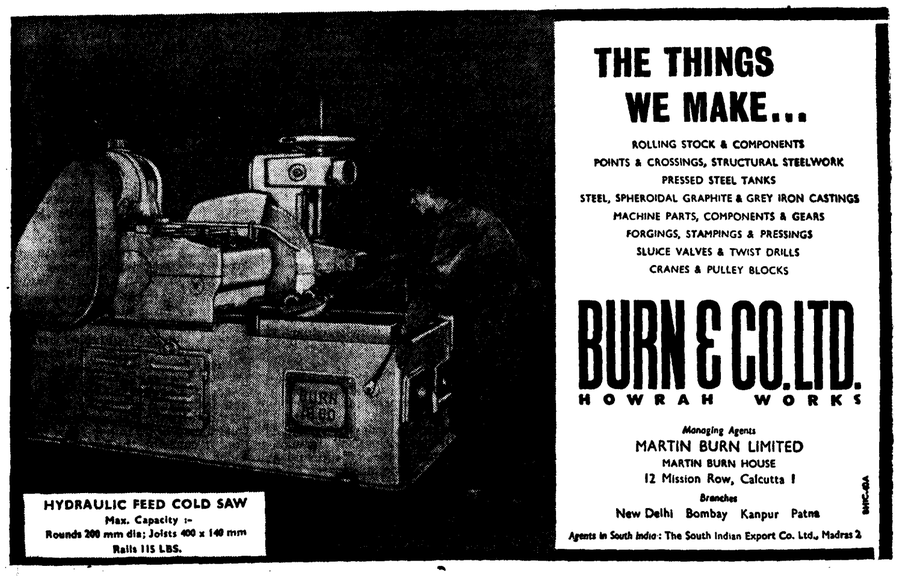
Private enterprise is, therefore, on probation more than ever; how far and in what form it survives will depend mainly on how it acquits itself in changing conditions and serves the newer demands and finer needs of the people. It will no longer be judged merely by its capacity to earn large profits quickly. It will be judged by its utility in contributing to economic growth. It will have to accept social obligations involved in a planned economy and adapt itself to its environment. Industrial concerns will have to be institutional in structure and cannot continue to be simply proprietory and hereditary. Instead of notions of privacy and maximum profit, business will have to conform to standards of administration, organisation and technical proficiency; in other words, business will have to become a profession with all its implied responsibilities. It will have to consider production in terms related to consumption. It will have to recognise that only such income is legitimate profit as is earned in return for entrepreneurship, risk, organising capacity, savings and work. Gain must bear relation to service performed and responsibility undertaken. It will have to develop a sense of partnership with workers by hand and by brain.

Think of the Country First

The American industrialist, Mr. Clarence B. Randall, once remarked that "the time is come for industry to make it clear that what is best for the country will be at the top of the agenda when a board of directors meets to make basic decisions, even though that may cut earnings in the third quarter." No institution, no organisation, will survive if it is concerned only with self-preservation. Business has and should have goals beyond its own existence and material rewards. When we pursue only success and money for their sake, we lose the deeper reasons for living, we sacrifice the end for the means. Business interests have to exercise self-restraint in taking advantage of a situation and come forward where necessary, to prevent abuses. It is the lack of integrity and sense of social responsibility that damage private enterprise far more than occasional ministrial speeches and woolly *obiter dicta* on matters of policy. Business ethics is part of social ethics, not independent of nor different from it. The private sector in the final analysis, will maintain and even improve its status and influence in so far as it shows the capacity to do a better job and conduct itself as a form of public service.

A planned economy demands adaptation and readjustment on the part of various sectors of the community. Violent upheavals are not prevented but hastened by selfishness, corruption and wilful obstruction. Democracy does not mean the acceptance of *status quo*; it only demands that social and economic changes should be achieved by peaceful and constitutional means. A heavy responsibility rests on all those who believe in democracy to help in ensuring that democratic institutions achieve economic welfare. Private enterprise which is dynamic and resilient will, I trust, not be found wanting in the challenge it faces in our developing economy.

[*Note: This article is adapted from the author's address at the Luncheon Session of the Federation of Indian Chambers of Commerce and Industry, New Delhi, on 24th March* 1962.—ED.]



NEW PUBLICATIONS

Managers for Small Industry. By Dr. Joseph E. Stepanek. Published by Asia Publishing House, Bombay. Pages: 256. Price: Rs. 15.

SMALL-SCALE industry is not an anathema to large-scale industry. The International Industrial Centre of the Stanford Research Institute in their research programme is not proceeding on the basis of "for" small industry and "against" large industry. The most suitable combination will depend on circumstances which vary from country to country and also from stage to stage in a given country's development. The S.R.I.'s Centre is also concerned with the methods of fostering "modern" small industry—that is, small factories or artisan workshops in which the best-known technique of production and management suitable for the particular environment are efficiently employed. The key to success in this respect lies in better management. The common characteristics of small industry are: (1) little or no specialisation in management; (2) close personal contact of the manager with all those involved in the business; (3) lack of access to capital through the organised securities market; (4) no dominant position in a major product market; and (5) close integration with the local community by reason of local ownership, management, raw materials sources or markets. The small industry sector has a dominant role even in such industrialised countries as the U.S.A. resorting to mass production and in countries in the process of industrialisation like India, Burma and Indonesia it forms an important sector. In the book under review, Dr. Stepanek has dealt with an important problem, drawing on his experience in developing small industry programmes in various countries like China, Malaya, Pakistan, Ceylon, Iran and India.

The main thesis has been developed on the beliefs that: (1) good management is even more important than efficient and appropriate production technologies; (2) no amount of capital equipment, Government planners and foreign consultants can compensate for a lack of individuals eager and able to seize opportunity to develop; and (3) development may come more rapidly when resources are used not merely to provide land, buildings and equipment, but also to encourage potential entrepreneurs and to prepare entrepreneurs for management.

Initially, managers for small industry become available from a variety of groups, such as artisans and merchants. Later, as the country develops, industrially skilled factory workmen may also join the band; similarly, sons and relatives of small factory owners, who may have served an apprenticeship, are likely to enter the field. Other groups are engineers who have often gained experience in large industry, civil servants with administrative experience and personnel from the armed forces. These people have a number of characteristics such as desire for independence, drive and energy, desire to diversify and innovate, willingness to take risks and technical and managerial knowledge—may be with gaps. For their success, a first must is opportunity. This would depend on social and political environment, external economies such as power system, transport facilities, educational facilities, financial facility and market opportunity. There may be several other problems, but appropriate training arrangements would enable the managers to make better use of opportunities. The major portion of the book is devoted to the management training plans. Three types of courses are envisaged. Short courses to typical managers of small factories, given by staff members of advisory services operated by Government and trade associations, advanced management courses to exceptional managers of rapidly expanding semi-modern factories given by staff members of educational institutions, development corporations and banks; preparatory courses to management candidates by foreign specialists and others; and self-education measures such as self-diagnosis, radio and correspondence courses, discussion groups, etc. Dr. Stepanek has gone into considerable details to give concrete guides for action such as the preparation for the course, selection of candidates, the contents of the course, methods of instruction course materials, course evaluation and follow-up. The arrangements existing in different countries have also been presented in some detail. As this book is the result of considerable acquaintance with the problem, it will be a useful guide to planners and administrators, not to mention small industrialists.

A Survey of Contemporary Banking Trends. By Dr. S. K. Basu, Professor of Industrial Finance and Head of the Department of Economics, Calcutta University. Published by the Book Exchange, 217, Cornwallis Street, Calcutta. Pages: 500. Price: Rs. 18.

This publication, now in its second edition, is devoted to a comparative study of the current trends in the world of banking in respect of theory, practice and legislation. Against the background of post-war developments in the Indian banking world, Dr. Basu has made a critical study of the monetary policies pursued by such underdeveloped countries as Gautemala, Paraguay, the Dominican Republic and the Philippines, besides those in the U.S. and the U.K. The book is divided into three parts. The first part deals mainly with the working of central banks and related questions, such as interest rate policy and selective credit controls. In the second part, the author has examined the recent trends in commercial banking in a number of countries. Subjects dealt with here include (1) changing role of commercial banks and diversification of their activities, (2) nationalisation of banks, and (3) insurance of bank deposits. The subject matter of the next part is the role of international financial institutions, namely, the I.M.F. and the World Bank.

Among the new features of the present edition, it may be noted, the author has examined the contemporary trends in central banking in undeveloped countries not only with reference to Latin American countries but also with reference to the recent developments in African countries like Ghana, Nigeria, Rhodesia and Nyasaland and S.E. Asian countries like Burma, Ceylon, Pakistan and Malaya. The question of non-banking financial intermediaries as a factor in the effectiveness of monetary policy, which has recently received a great deal of attention, has also been studied in some detail. The Radcliffe Doctrine, which has evoked a great deal of controversy, has also been analysed. The entry of the British banks into the field of hire-purchase finance with all its implications has been discussed and the role which Indian banks could play in this new line of business is indicated.

As an empirical study of banking developments the world over, Dr. Basu's work is undoubtedly satisfying. The purely theoretical aspects of monetary policy, however, have not been given sufficient attention. A distinct virtue of the book, however, is that it serves as a virtual compendium of information on various aspects of world banking trends, analysed in their proper perspective, which are not easily accessible to students. Dr. Basu's book, admittedly, is a reliable guide to advanced students of banking.

Community Development in India. By B. Mukerji, I.C.S. Published by Orient Longmans, Bombay. Pages: 312. Price: Rs. 10.

It is now nearly a decade since the programme of Community Development—later called National Extension—has been worked in our country. It may be variously categorised as a process of change, a method to develop themselves, a programme for accomplishing certain activities and as a movement for a progress, with a certain ideological content, for the welfare of the rural communities. A programme with an ideology and a definite objective to achieve has to reconcile theory with practical aspects. The success of a programme with a large ideological background, the practice of which should reveal concrete results particularly in the socio-economic sphere of the rural community, is difficult to achieve. The working of the programme in India had the benefit of criticisms both by international bodies and experts as also from national committees. Mr. Mukerji has attempted in his book a comprehensive analysis of the present position. His criticisms and suggestions are valuable, especially as he was intimately connected with the programme, in various capacities, since the beginning; a member of the Indian Civil Service, he was the Chief Secretary-*cum*-Development Commissioner and later Joint Secretary in the Community Development Ministry.

The Community Development programme is essentially a people's programme, though organised and directed by the administration. It, therefore, called for an orientation in the administrative set-up usual in Governments as well as co-ordination between the different agencies, both official and non-official. As pointed out by the author, in answer to the common criticism, the Government agency should have a very small part to play and that should go on diminishing until it almost ceases. If this goal is to be reached, the Government machinery must undergo changes in its organisational methods of functioning, attitude of the personnel, their equipment and training. The Balwantrai Mehta team reported that there was too much centralised control of the Central Government and suggested many reforms. The implementation of the recommendations have brought about a larger degree of flexibility.

More as a corollary of Community Development, the question of democratic decentralisation has grown up and, incidentally, thrown up many new problems which are discussed in detail in Chapter VI. As many would have observed, the dangers to the *Panchayat Raj* are: leadership, at least in the early stages, will be with people who have vested interests; party politics may enter into local authorities in an ugly shape; there is a grave risk of inefficiency in the administration of the local authorities due to lack of experience; and rivalry and tension between the various levels of local authority are very likely.

A whole chapter has been devoted to indicate the close relationship between Community Development and Co-operation. Mr. Mukerji emphasises that, in the functioning of co-operatives, the interest of the whole community must take precedence over that of a group and that the significance of co-operation lies in its being able to reconcile the interest of the individual with that of the community to some extent. Even in this role, the co-operatives can continue to function with considerable autonomy "like autonomous corporations established by the Government."

Education is a vital part of the scheme for Community Development and not only does it involve the expansion and improvement of primary education, reform and vitalisation of the entire system of general education and a mass drive for adult education, but also the education and training of the workers in the programme, official and non-official. Extension itself means a process of continuous education. In this context, the author points out the inadequate attention paid to two vital aspects, namely, "inservice" and "refresher" training.

The chapter on evaluation and research deserves some attention. The Programme Evaluation Organisation set up by the Planning Commission to do continuous evaluation has come in for criticism on many occasions and the author points out that, in the Organisation, there is a noticeable hesitation "to use at all its judgment and experience (which with passing time should get better and better) in reaching conclusions, for fear that its objectivity may then be questioned. On the part of the authorities the resistance to the Organisation can be noticed in the fact that the Organisation was not expanded appreciably since its creation in 1952. The findings of the evaluation should influence major changes in policy, or in programming or in the methods followed for its implementation, instead of being only laboured use of statistics and too many sectional conclusions.

The book is the result of the intimate association with the programme for nearly a decade. The treatment of the subject is comprehensive and the analysis critical.

Vocational Education in Germany. By Yamunabai Hirlekar. Published by K. S. Hirlekar, Vrindavan, Bombay-14. Pages: 176. Price: Rs. 6.

Germany is almost a synonym for technical excellence. Not many, however, realise that the secret of the scientific and engineering skill of German workers lies in the system of vocational education in that country which transforms raw youth into superb craftsmen. The concept and practice of vocational education in Germany are lucidly described in this little book by the author, Mrs. Yamunabai Hirlekar, who is a noted educationist and social worker of Bombay. She is not new to the subject, being the author of three books on education in West Germany dealing with pre-primary, primary and secondary and university education.

A significant fact about vocational education in Germany, stressed by the author, is the role played by employers' and workers' organisations in organising and supervising vocational education and providing training facilities for young workers. The author draws some lessons for India from Germany's experience and points out that private agencies and voluntary organisations should promote vocational education out of conviction of its vital importance, instead of leaving it to the Government to do. She calls for the formation of an efficient vocational guidance organisation independent of State control.

Income-tax Act 1961 (With short notes). By the Indian Chamber of Commerce, Calcutta. Published by the Oxford Book and Stationery Co., 17, Park Street, Calcutta. Pages: 462. Price: Rs. 18. (In Bombay, copies can be had from Messrs. Charles Lambert & Co., Mahatma Gandhi Road.)
