The tax on income is one of the biggest sources of revenue to any modern State. In its effort to collect as much as possible to meet its ever-increasing capital expenditure and Welfare State activities, an underdeveloped country like India often amends the existing tax law and sometimes overhauls the entire law to suit its object. On the other hand, the tax-paying citizen tries to save as much as possible either by avoidance or by evasion. While avoidance is legal, evasion is quite illegal. The former is done by taking advantage of loopholes in the enactment and by exercising the ingenuity of the human brain.

The Indian Income-tax Act 1961 is the outcome of this constant tussle between the tax-collector and tax-payer. This new Act is based on the recommendations and the draft Bill submitted by the Law Commission as well as on the report of the Tyagi Commission. The draftsmen have tried to simplify the language and arrange the sections in a more logical order. The Act has, however, grown from 67 sections in 1922 to as many as 298 sections. Though the Government has taken steps to plug the loopholes, it is yet to be seen how far this new enactment has succeeded in that attempt and minimised avoidance and evasion. The frequency with which the State undertakes amendments to the Act is an approximate indication of its success in its battle to collect the maximum revenue.

Coming to the review of the book under reference, the Indian Chamber of Commerce, Calcutta, has been doing a signal service to the business community as well as others all over India by publishing important legislations with explanations and short notes. Although they are not meant to be treatises on the said subjects, they have been of good guidance. The very recent one is the handy publication of the Indian Income-tax Act 1961. There have been many such publications on this subject, but this book is by far the best in the opinion of this humble reviewer.

In the introductory chapter, the authors of the book have brought out the major points of departure from the Act of 1922 which number 31. Besides, the book provides short notes under various sections of the enactment which includes changes from the 1922 Act to the 1961 Act, the case law on the subject, the circulars of the Central Board of Revenue made available to the publishers and last but not least, the various clarifications provided by the Central Board of Revenue on issues raised by the Chamber from time to time. In addition, it contains the Income-tax Appellate Tribunal Rules, forms normally required by companies engaging foreign technicians, and the comparative tables of the old and new sections and *vice versa*.

One word about the price. The book is priced at Rs. 18. The paper, print and the binding are quite good, but the Chamber seems to have included an element of profit in the price which is liable in all probability to income-tax.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

BICYCLE INDUSTRY ENTERS ERA OF CLOSER COMPETITION

CHAIRMAN, MR. ABHIJIT SEN'S STATEMENT

THE Twelfth Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held at Calcutta on Thursday, 29th March 1962. The following are extracts from the statement of Mr. Abhijit Sen, Chairman of the Company:

"In the year under review the Company's overall sales increased by 11 per cent, but profits declined. Though bicycle sales dropped slightly owing to production bottlenecks, a greater production of components and accessories helped to realise the larger turnover. In the main, two factors affected bicycle production —a cut in import licence ceilings, and the failure of some indigenous manufacturers to meet commitments for supply of semi-finished components that could no longer be imported. The reduction in profit can be ascribed to:

"(*a*) The failure of individual indigenous suppliers to meet commitments, which resulted in a disbalance of stocks and in turn led to higher inventories with consequent higher financing charges.

(*b*) Poorer material utilisation, than had been anticipated, as, in many cases, as a result of changing import policies, materials had to be obtained from unknown and untested sources both within the country or abroad.

(*c*) High rectification costs where these non-standard materials had to be consumed.

(*d*) The higher cost of materials where indigenous or D.L.F. buying from America replaced buying from usual sources in Europe.

(*e*) And lastly, the impact of unabsorbed overheads on a turnover, much smaller than planned.

"Most of the factors which adversely affected our operating results in the past year were of a nature where solution was a matter of time and of adjustment to changing patterns of operation—as indeed our activities in the intervening period have tended to show. Indigenous supplies in general have improved remarkably both in respect of quality and in the honouring of commitments.

"Import problems still remain a factor to contend with as the pace of development of ancillary and feeder industries has yet to catch up with the faster developing requirements of the consuming industries. The only predictable features of import policy would seem to be a reduction in ceilings from period to period and a change in sources from which the limited imports could take place, and all production planning now has to start from these premises.

Import Licensing

"Whilst we accept this situation as unavoidable, and have taken whatever steps are within our powers to meet it, there are two aspects of import licensing which we find it difficult to face with equanimity. The first is the fact that the bicycle industry appears to be the only one to have had cuts in import licence ceilings linked with export performance. We wonder why this industry should have been singled out for this distinction. The second is that, in many cases, the policy makers too readily agree to deletion of items from the import list even when indigenous manufacture is very much in the air, leading, at a later stage, to licensing policies having to be reversed, with its consequent delays, added paper work and very often production failures—when a more careful check on the progress of the industries could have made for smoother sailing all round.

"A redeeming feature of the past few months has been the remarkable progress achieved by the steel producing industries and one can now safely assert that almost all categories of rolled or drawn steel required for the bicycle industry are being produced within the country. The bicycle industry is still however far from obtaining all its supplies of steel from local sources in such quantities as would allow utilisation of capacities to maximum advantage but the future of the bicycle industry appears to be more assured than in the immediate past.

"The bicycle industry has now left the easy sellers' market to enter an era of closer competition. Your Company has been lucky that there has been no slackening in demand for its products, and particularly in its major line —bicycles, it enjoys the reputation of marketing the fastest selling brands. In specific components, there is now a tapering off of sales which can be ascribed, in the main, to the unfortunate Government decision of allowing imports of friction parts in very large quantities for small-scale assemblers.

"A question that might arise in this context is why the Company should persist with a large production of components, when the same resources used for making more bicycles in preference to components would have fetched it better returns. The answer lies in the fact that releases of materials are very often earmarked for production of specific components, and so a smaller production of these would not necessarily lead to any increase in bicycle production. We have to accept the fact that, in the larger interests of a planned economy, operational decisions cannot always be taken on the basis of profitability alone.

Capital Issue

"A sanction has been received for a further issue of capital. The Company's future plans envisage expansion of bicycle and chain production and diversification into the manufacture of dynamo lamps and house service meters. The successful implementation of these schemes depends largely on the availability of foreign exchange for import of plant through further foreign participation in the capital of the Company. Realising this, your Directors have been active in exploring the possibility of increased capital participation in the Company by Raleigh Industries Ltd.

"At our invitation, a Raleigh Consultancy team visited our factories in November last—mainly for discussions on expansion schemes. Valuable contributions were made by it to our plans for the future. Raleigh have in the recent past developed new techniques and processes which would lead to more effective use of materials. As a result of the visit, it is proposed to incorporate a number of these new processes into our future scheme of operations.

Organisational Set-up

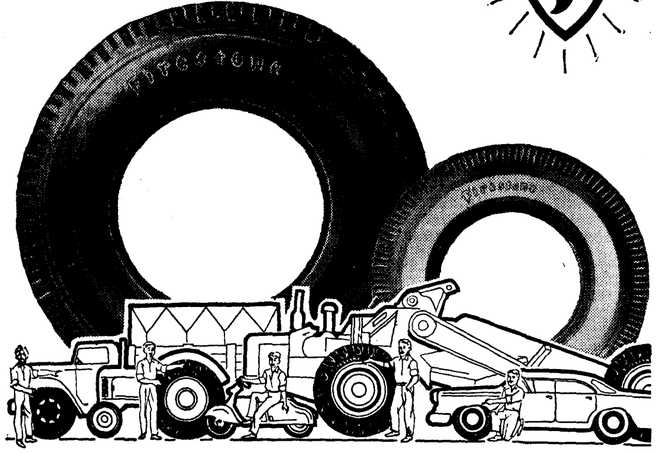
"For sometime, changes in the Company's methods of operation over the past few years had been highlighting the need for radical changes in the Company's organisational structure to improve efficiency and tighten controls. Very recently, changes in the organisational set-up were introduced to meet these changing conditions and whilst it is too early yet to comment on the long-term benefits of this move, the working of the factories in the months following the change has certainly shown marked improvement.

"If the operating results for the year have been disappointing to our shareholders, they have been disheartening for our staff and workers, whose sincere efforts have so often foundered on the rocks of frustration. I would close on a note of thanks to all staff and workers for the effort they have put in and the understanding they have extended to the Company in a year of difficult operations, and share with them the hope of better operations in the future."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

LOOK FOR THIS

'Mark of Quality'



It is your Assurance of Extra Safety and Dependability and only Firestone Tyres have it

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your needs. Every single one bears "The Mark of Quality" —the long-established Firestone symbol of Extra Safety and Dependability.

Specify Firestone and you get—

★ **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.

★ **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions ensures MORE KILOMETRES PER RUPEE from the original tread.

★ **RETREADABILITY** Look after your Firestone tyres—don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of a new expanded manufacturing unit at Vallabh Vidyanagar, Gujarat, in addition to the existing manufacturing unit at Bombay, of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinion expressed in regard to it.

A Copy of the Prospectus together with the copies of the documents specified therein as required under Section 60 (2) of the Companies Act, 1956, has been filed with the Registrar of Companies, State of Gujarat, Ahmedabad, for registration.

Application will be made to the Bombay and/or Ahmedabad Stock Exchanges for permission to deal in and for official quotations of the shares of the Company.

The Subscription List will open at the commencement of Banking hours on 2nd April, 1962 and will close at the close of Banking hours on 7th April, 1962 or earlier at the discretion of the Directors as soon as the subscription to the amount issued to the public have been received, but not earlier than the close of Banking hours on 4th April, 1962.

ELECON ENGINEERING COMPANY LIMITED

INCORPORATED AS A "PRIVATE COMPANY" ON 11TH JANUARY 1960, AND CONVERTED INTO A "PUBLIC COMPANY" BY A RESOLUTION OF THE COMPANY PASSED ON 26TH SEPTEMBER, 1961.

AUTHORISED CAPITAL:

	Rs.
1,00,000 Equity Shares of Rs. 100 each	1,00,00,000

ISSUED AND PAID-UP SHARE CAPITAL:

	Rs.
10,000 Equity shares of Rs. 100 each fully paid-up as follows :	
6,824 shares of Rs. 100 each for consideration other than cash	6,82,400
3,176 Equity shares of Rs. 100 each for cash	3,17,600
Rs.	10,00,000

PRESENT ISSUE:

50,000 Equity shares of Rs. 100 each	50,00,000

OUT OF THE PRESENT ISSUE:

	Rs.
(i) Messrs. Alfred Wiseman & Co., Ltd., London, one of the foreign collaborators, has agreed to subscribe for and will be allotted 2,400 Equity shares of Rs. 100 each	2,40,000
(ii) The Directors, their friends, associates and existing shareholders have agreed to subscribe for and will be allotted 13,100 Equity shares of Rs. 100 each ..	13,10,000
(iii) Agreed to be subscribed by Life Insurance Corporation of India 5,000 Equity shares of Rs. 100 each	5,00,000
Rs.	20,50,000

NOW OFFERED AT PAR FOR CASH FOR PUBLIC SUBSCRIPTION:

29,500 Equity shares of Rs. 100 each	29,50,000

The entire issue has been underwritten.

TERMS OF PAYMENT OF ABOVE SHARES:

	Per share
On application	Rs. 25/-
Within one month from the date of allotment	Rs. 25/-

Balance Rs. 50 per share in two calls of Rs. 25 each, as may be determined by the Board of Directors.

DIRECTORS

Shri NANUBHAI B. AMIN, Chairman, Race Course Road, Baroda— Director of the Alembic Works Ltd., The Jyoti Ltd., Jyoti Calor Emag Ltd., The Sanitex Chemical Industries Ltd., The Baroda Industries Development Corporation Ltd., The Baroda Co-operative Land Mortgage Bank Ltd., etc., Businessman.

Shri HARISHCHANDRA PRASAD, M.L.A., Tanuku, West Godavari District, Andhra Pradesh— Director of the Andhra Sugars Ltd., Sree Akkamamba Textiles Ltd., Hyderabad Chemicals and Fertilisers Limited, Andhra Pradesh Industrial Development Corporation Limited, etc., Industrialist.

PRODUCTION PLANS AND MARKET PROSPECTS

In view of the rapid industrialisation of our country and the formation of several giant projects, the demand for the mechanical handling equipments is increasing tremendously, offering good scope for the products of the Company. In these days of keen competition among the various manufacturers, the reduction of manufacturing cost is a major factor for the success of any industry. As the element of the labour cost is one of the most important factors in the cost of production, it has become very essential for all the industries in general and the larger ones in particular to reduce this element of cost as much as possible. Many new projects like steel plants, Fertiliser Projects, Chemical Plants, Oil Refineries, Coal Mines, Lignite and Ore Mines, Heavy Engineering Plants etc., must necessarily depend on the Conveyors for the handling and movement of the material while the other major industries like Jute Mills, Tea, Textile, Sugar, etc. are also changing over to Mechanical handling, so as to enable them to compete with the selling prices of the competitors from the Industrially advanced countries in the export market. It is proposed not only to increase the productive capacity of the products manufactured at present but also to expand the range of production by undertaking the manufacture of other allied lines like Reduction Gears, Troughing Idlers, etc.

FOREIGN COLLABORATION

MANUFACTURE OF WORM REDUCTION GEAR UNITS. The Company has entered into a Technical Collaboration Agreement with Messrs. Alfred Wiseman & Co. Limited of Birmingham, England, for the manufacture of "WISEMAN" Worm Reduction Gear Units upto 10½" size. The Company is licenced to use the patents of the Wiseman Company and to use the name "Wiseman" on the Reduction Gear Units manufactured by it. WISEMAN has also agreed to supply up-to-date patterns, drawings and information, to train Engineers at their works and also to send their own Engineer to help in the erection and commissioning of the plant. The Company has also been given the right to export the product to other countries. In consideration for the said technical collaboration, the Company will pay to Wiseman free of Indian taxation, a lumpsum payment of £14,000. Patterns supplied by Wiseman will have to be paid for separately at cost. Further, the Company has also entered into a financial agreement with Wiseman by which the latter has agreed to subscribe for fully paid up Equity shares of the value to Rupees 2,40,000 and pay for the same in cash.

MANUFACTURE OF TROUGHING (CONVEYOR) IDLERS. The Company has entered into an Agreement with Messrs. Spencer (Melksham) Limited of Melksham in the county of Wiltshire, England, whereby "Spencer" has agreed to sell to the Company "Spencer's goodwill" in India together with the exclusive right to use the name "Spencer." Spencer has agreed to supply up-to-date patterns, drawings and information, to train Engineers at their Works and also to send their own Engineer if necessary to help in the erection and commissioning of the plant. The Company has also been given the right to export the product to other countries. The Company has agreed to pay to Spencer as consideration money a sum of £10,000, of which a sum of £5,000 has already been paid.

MANUFACTURE OF CONVEYORS

The Company has been manufacturing since last ten years, Mechanical Handling Equipments, such as Belt Conveyors, Bucket Elevators, Slat Conveyors, Screw Conveyors, Gravity Roller Conveyors, etc. The Company will expand considerably the manufacturing capacity of Mechanical Handling Equipments.

PROFITS

Subject to unforeseen contingencies, the Directors are of the opinion that the Company should be able to pay a reasonable dividend from the financial year 1963.

INDUSTRIAL LICENCES

Industrial Licences Nos. L/8-C(2)/12/MEI/61 dated 6th March 1961 and L/8 B(2)/12/MEI/61 dated 4th March, 1961 have been issued by the Central Government for the establishment of the new expanded unit at Vallabh Vidyanagar for the manufacture of Worm Reduction Gears and Mechanical Handling Equipments respectively.

FACTORY PREMISES, CONSTRUCTION OF FACTORY, ETC.

The Company's existing factory premises are situated at I. B. Patel Estate, Goregaon, Bombay. The total area of the land comprises of about 8,540 square yards with structures and other buildings covering thereon an area of 2,040 square yards.

The Company has taken possession of land at Vallabh Vidyanagar, Anand, in the State of Gujarat comprising an area of 15 acres for the construction of the new unit.

The construction of three of the five sheds has already been completed and the production of Mechanical Handling Equipments has already commenced.

The construction of the remaining two sheds is expected to be completed by April/May 1962. The production of Reduction Gears is expected to commence by July/August, 1962. The Company has made arrangement for the purchase of an area in aggregate of 100 acres at Vallabh Vidyanagar, Anand, Gujarat, of which an area of 50 acres is to be utilised for factory buildings and the remaining 50 acres for the construction of a housing colony for the staff and labourers of the factory.

CONTRACTS AND AGREEMENTS

Shri Shantilal I. Patel and Shri Chandrakant H. Amin have been appointed as Managing Director and Resident Director respectively, subject to the approval of the Central Government and will be paid a monthly remuneration of Rs. 2,000 each or a commission equivalent to 5 per cent each of the annual net profit of the Company, whichever is higher.

MINIMUM SUBSCRIPTION AND CAPITAL OUTLAY

The total financial requirements of the Company for the expansion programme are estimated as follows:—

	Rs.
Land, plant and machinery and other assets, including the purchase of technical know-how, etc. (exclusive of the sums already spent on the new project)	44,00,000
Expenses of this issue	2,00,000
Repayment of moneys borrowed by the Company (including a sum of Rs. 7,00,000 spent approximately on the new project)	8,00 000
Buildings for Factory and Office	14,50,000
Working Capital	31,50,000
Rs.	1,00,00,000

It is proposed to meet the above Capital expenditure from the following sources:—

	Rs.
Present issue of shares	50,00,000
Loan from Industrial Credit and Investment Corporation of India Limited	20,00,000
Medium-term loan from The Bank of India Ltd. ..	10,00,000
Deposits against orders	5,00,000
From a Bank in the usual course of business on hypothecation of raw materials, work-in-process, goods, etc.	15,00,000
Rs.	1,00,00,000

SALES AND SALES PROSPECTS

The demand for the products of the Company is growing rapidly as mentioned hereinbefore and after implementing the expansion programme, it is anticipated that the sales figures on a very conservative estimate of various products will be as follows:—

Conveyors	Rs. 35 lakhs	Vallabh Vidyanagar Unit.
Troughing Idlers ..	Rs. 25 lakhs	
Worm Reduction Gears..	Rs. 35 lakhs	
Conveyors	Rs. 25 lakhs	Existing Bombay Unit.

Total .. Rs. One crore and Twenty lakhs.

The present minimum needs of the country of Conveyors and Reduction Gear Units are estimated to be very high which is bound to increase still further in direct relation to the industrial development of the country. The Company has in hand major contracts for the supply of conveying equipments of the value of Rs. 45 lakhs. Another major contract of the value of Rs. 25,00,000 is also being finalised.

Almost all the products of the Company like Conveyors, Troughing Idlers and Reduction Gears are largely being imported at present. When completed and commissioned, this will be the biggest plant in India for the manufacture of Mechanical Handling Equipments. In the light of these favourable factors, having due consideration to the demand and supply of the products, the sales prospects are very bright.

LOAN CAPITAL

The Industrial Credit and Investment Corporation of India Ltd., have agreed in principle to lend to the Company an amount in foreign currencies equivalent in the aggregate to U.S. $2,52,000 (about Rupees Twelve lakhs) as determined by the International Bank for Reconstruction and Development and a sum of Rs. 8,00,000 (Rupees Eight lakhs) to meet a part of the capital cost of setting up an industrial unit at Vallabh Vidyanagar, Anand, Gujarat State, for the production of certain mechanical handling equipment. The loan in foreign currencies will bear interest at 7¼ per cent per annum and the Rupee loan, interest at 6½ per cent per annum and is repayable in half-yearly instalments spread over a period between November, 1963, and November, 1970. The above loans will be secured by a legal mortgage *pari passu* with the mortgage in favour of The Bank of India Ltd., Bombay, who have agreed in principle to grant to the Company a loan of Rs. 10,00,000 (Rupees Ten lakhs), of all present and future moveable and immoveable properties of the Company, subject to the hypothecation of such of the moveables in favour of the Company's bankers as may be required for cash credit and overdraft facilities.

The Bank of India Ltd., Bombay, have also agreed in principle to lend to the Company a medium-term loan of Rs. 10,00,000 (Rupees Ten lakhs only) repayable in yearly instalments spread over a period between 1964 and 1970, and the loan facilities for the working capital to the tune of Rs. 15 lakhs on pledge and hypothecation of raw materials, work-in-process, goods, etc., at the unit at Vallabh Vidyanagar. The loan will carry interest at 3 per cent over Bank rate, with a minimum of 7 per cent per annum. The medium-term loan will be secured by a mortgage of assets as stated above.

The Promoters have agreed to secure for the Company, at the appropriate time and on terms acceptable to the Board of Directors, loan finance to the extent necessary to meet any shortfall between the actual capital outlay on the project on the one hand and the amount of the issue and the amount of loan from I.C.I.C.I. Ltd., and from the Bank of India Ltd., as indicated above on the other, as also to the extent of the amount required for the working capital.

UNDERWRITING COMMISSION

The Underwriters to this issue will be paid an underwriting commission of 2½ per cent on the face value of shares underwritten by them respectively.

RESERVES AND DIVIDENDS

The Company has transferred in the first year of its working a sum of Rs. 91,622 to development reserve and a sum of Rs. 441 is being carried forward to next year after declaring a dividend of 12 per cent. It can be seen from the accounting results of the first year and also the results of the firm taken over by the Company that the returns have been attractive.

BROKERAGE

Brokerage will be paid to members of recognised Stock Exchanges in India and to the Bankers at the rate of 1 per cent on the nominal value of Shares allotted in respect of applications bearing their stamps. Brokerage on the same basis will be paid to the underwriters in addition to the underwriting commission on all allotments made in respect of applications bearing their stamps.

APPLICATION FOR SHARES

Applications for Shares must be for a minimum of five shares or multiples of five shares and must be made on the form accompanying the Prospectus or printed form thereof which can be had from the Company's Bankers and Brokers to the issue.

Application forms duly completed together with the cheques or drafts at the rate of Rs. 25 per share applied for must be lodged before the closing of the subscription list with the office of the Underwriters or official Brokers or at the office of the Company or with any of the Bankers to this issue at their head office or any of their principal branches at the following places, namely AHMEDABAD, ANAND, BANGALORE, BARODA, BOMBAY, CALCUTTA, CAMBAY, COCHIN, COIMBATORE, DELHI, GWALIOR, HYDERABAD, INDORE, KANPUR, MADRAS, MADURAI, NADIAD, NAVSARI, NEW DELHI, POONA, RAJKOT, SURAT, and TRIVANDRUM.

Cheque or Draft accompanying each application must be in favour of "ELECON ENGINEERING COMPANY LTD." Cheques or Drafts must be drawn on a bank in the city in which the application is tendered. No cheques or drafts drawn on banks in other towns will be accepted and the application will be refused.

TAX BENEFITS

According to present tax laws, the Company shall be entitled to benefits in respect of Development Rebate, and shall enjoy tax holiday for five years in respect of profits upto 6 per cent on the capital employed under Section 84 of the Income Tax Act, 1961.

The Shareholders shall also be exempt from tax on dividend paid from the Company's profit exempt under Section 84 and from Wealth Tax on their holdings for five years under Section 5(1) (xx) of the Wealth Tax Act, 1957.

Shareholders which are companies shall also be exempt under Section 99(1) (iv) of the Income Tax Act, 1961 from payment of super-tax on dividends received from the Company, on the working of Vidyanagar unit.

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S ANNUAL STATEMENT

INDIA HAS ACHIEVED REMARKABLE RESULTS IN ITS INDUSTRIAL REVOLUTION

"INDIA has reason to be proud of the progress made in the development of the national economy. Indebted as it is to foreign aid and investment for the success of its first and second Five-year Plans (1951-61) it has still, by its own efforts, achieved remarkable results in what it terms its industrial revolution. Mistakes have been made, as is bound to happen when so much is done so quickly, but fortunately in India, as in all democracies, mistakes can be given publicity and remedied. However, business has increased with such momentum that there is room for both public and private sectors without too much friction."

These are some of the interesting observations made by Mr. Vincent Alpe Grantham, Chairman of the Chartered Bank, in his statement to shareholders circulated along with the Directors' report and statement of accounts of the Bank for the year ended 31st December 1961, to be presented at the annual general meeting at London due on 4th April 1962. In his statement, Mr. Grantham reviews in detail the main economic trends and developments in Asia, the principal region of operation of the Bank. The following is the full text of his statement:

"During 1961 there was no relaxation of the political tension between the two major power groups in the world and the international situation was further complicated by uncertainty regarding the internal relations of one of these groups. In several of the emergent Asian countries there were political crises and crises of confidence which were, in some cases, aggravated by external factors. This pattern of Asian politics, economics and diplomacy, however confusing it may appear to be, is one with which the Bank has become only too familiar and it will be seen from the report which follows that notwithstanding many difficulties the profit-earning capacity of the Bank has been well maintained and indeed enlarged. I would draw your particular attention to the number of new branches that have been opened.

"The favourable condition of the Bank's affairs reflects much credit upon the management both at the centre and throughout the branch establishment.

Tours

"In the spring of last year I visited branches of the Bank in Burma, Thailand, Cambodia, Vietnam, Singapore and Borneo. The tour afforded many opportunities for me to study at first hand economic progress in South East Asia. I saw numerous evidences of the expansion of the Bank in those countries and of the way in which British banking technique has been adapted to serving the needs of domestic commerce and industry. I was greatly impressed by the friendly relationship that existed between our Bank and the peoples of those countries.

"Throughout South East Asia and the overseas territories generally to which the branch organisation extends the Bank is very well served by the staff at all levels and on the tours I have undertaken it has been a pleasure to meet members of the staff. Their loyalty to the institution and their concern for its progress and prosperity are inspiring.

"Mr. Pullen, the Chief General Manager, attended the annual meetings of the I.M.F. and the World Bank which were held in Vienna during the latter half of September and thereafter visited Hamburg, where the Bank has a thriving business.

"During the months of November and December Mr. Hobbs, an Assistant General Manager, visited the branches of the Bank in India and Pakistan and represented Head Office at the opening of our new branch premises in Lyallpur.

"I must record with great regret the retirement of Sir Thomas Strangman, Q.C., from the Board of our subsidiary, The Eastern Bank Ltd. Sir Thomas joined the Board of that Bank in 1928, was Deputy Chairman from 1939-47 and Chairman from 1947-50. We shall all of us greatly miss this old friend and his shrewd judgment and help.

The Irano British Bank

"Our associate in Iran completed its second full year in March, at the end of the Iranian year 1339. After examination of the balance sheet and profit and loss account it was agreed that the recommendation from Tehran that a small dividend should be declared, was justified. The accounts at the end of the last Iranian half-year indicate that trading profits have been maintained at about the level of the previous year and plans are at an advanced stage for the opening of another branch in Tehran.

"Business during the year 1961 was difficult owing to continued tightness of credit and a general lack of confidence among the merchants in the bazaar. A report on Iran is included in the overseas survey.

Allahabad Bank Ltd.

"In December last, the Governor of the Reserve Bank of India indicated to all the Indian scheduled banks that they should aim to achieve a ratio of 6 per cent of capital funds (paid-up capital and published reserves) to deposits, and that until that ratio is achieved, the banks should transfer annually to their published reserves not less than 20 per cent of their declared profits.

"In conformity therewith the Allahabad Bank Ltd. has made the required transfer to Reserve Fund from its declared profits for the year, as you will see from the balance sheet annexed to our accounts, and has taken the further step of calling up the unpaid capital of Rs. 50 per share on the partly-paid ordinary shares. This call, paid on 2nd January 1962, has increased our holding in the equity by Rs. 12,12,450 (£90,934) which will be reflected in our balance sheet for 1962.

"The Allahabad Bank is now making steady progress and it is hoped that later in the year it will be permitted to make a rights issue which will still further strengthen its capital and reserves and add to its earning capacity.

Rights Issue

"Stockholders are now receiving certificates representing the new shares created by the Rights Issue which was the subject of a letter I circulated to the stockholders of the Bank on 11th September 1961. As a preliminary to our making the Rights Issue, which amounted to 1,100,000 shares of £1 each at a price of £2 per share, an extraordinary general meeting was held on 4th October 1961 to sanction an increase in the capital of the Bank. At that meeting the authorised capital was raised to £10,000,000 and of that sum £6,600,000 has now been issued and paid up.

The Bank's Balance Sheet

"In 1960 our balance sheet total reached a record figure and I indicated in the opening remarks of my overseas survey that there was at least a possibility of some recession in world trade which might affect us but, in fact, there has been a further substantial increase in our own figures of £36,938,878, which has brought the balance sheet total to £353,142,076. The most noticeable increase on the liabilities side of the Balance Sheet is that of £24,821,028 in Fixed Deposits, continuing the expansion noticed last year. There has also been a welcome increase in our Acceptances to £16,756,707.

"On the assets side the further rise of £11,128,723 in Advances and Other Accounts to a new record figure of £155,564,528 reflects the continuing demand for bank finance throughout our sphere of operations.

"The Consolidated Balance Sheet total of £408,097,902 shows an increase of £45,338,266 over that of last year.

"I am bound to say to our stockholders that, while we may hope to see our business increase normally as we open new branches and our capital and reserves increase, we should be unwise not to be prepared for lower balance sheet totals as the result of the growth of and competition from local banks which are often able to call upon the support of their Governments and the assistance of bankers and others, British, American and Continental, not usually directly concerned with the banking of the area. We must hope, however, that increased business generally will outweigh this factor.

Consolidated Profit and Loss Account

"The profit we show in the current year of £990,238 exceeds that of last year by £228,322, a substantial increase for the second year running. We have been able to match increased costs with increased income.

"In September last we paid an interim dividend of 7½ per cent, less income-tax, absorbing £252,656 and it is now proposed that out of the balance available a final dividend of 7½ per cent, less income-tax, on a capital which has been increased during the year to £6,600,000 be now paid at a net cost of £303,188.

"The premium of £1,100,000 arising from the Rights Issue has been transferred to Reserve Funds to which we have transferred a further £400,000 from our profits, bringing the total of those funds up to £7,250,000. There remains to be carried forward a balance on Profit and Loss account of £540,648, an increase of £34,394 over that of last year.

"As the result of the new capital arising from the Rights Issue our stockholders have derived benefit and the total payments on account of dividend in the coming year, which, as I have already indicated to you, we hope to maintain at 15 per cent, will show some increase. Costs still show a tendency to rise and we should lack prudence if we did not envisage a halt in the rate of profit increase we have so far enjoyed; but the conservative policy we have adopted in the interests of our depositors should be to the ultimate benefit of our stockholders.

II

OVERSEAS SURVEY

"In Asia today the main concern of Governments is the raising of the living standards of their people and most of the countries in which the Chartered Bank Group has branches are carrying out economic development plans to this end. At first sight some of these plans appear over-ambitious in that too much is being attempted in too short a time, but the rise in population is so rapid that most Asian Governments are having to accelerate the process of development merely to maintain existing living standards, let alone improve them. On the whole progress in recent years have been satisfactory but the main difficulty has been, and will continue to be, shortage of foreign exchange. The industrialised countries of the world have recognised their responsibility in the matter and have given considerable assistance by such means as commodity aid under United States Public Law 480 and grants and loans on a country-to-country or consortium basis. So great, however, are the total requirements, that external aid, save in exceptional cases, can only be marginal and the main source of foreign exchange for economic development in Asia must necessarily be export earnings. Hence there is understandable anxiety over the tendency of the industrialised countries to apply restrictions against imports of low-cost Asian manufactures. Asian countries must be able to export if they are to survive and to deny them this is to negative the benefits of aid.

"Now, too, there is bound to be additional anxiety amongst the Commonwealth countries in Asia until the result of the United Kingdom's negotiations to join the European Economic Community is known. At the moment Commonwealth countries are far from convinced that equal trade in a wider market will be a satisfactory substitute for special privileges in a reduced market, particularly for a developing industrial country. It should, however, not be assumed that the interests of the Commonwealth and the interests of Europe necessarily conflict with one another and the British Government has been at pains to make it clear that there is no question of entering the Common Market unless Commonwealth interests can be adequately secured and it is encouraging at this stage of the negotiations that the representatives of the Community appear to be increasingly amenable to this important stipulation. Another important point to remember is that although the Treaty of Rome is basically an economic agreement it has important underlying political objectives and there is no doubt that Britain's influence in the Community will be greater than if it were to stand aloof, which should be to the ultimate advantage of the Commonwealth.

Cyprus

"Early in the year the Republic of Cyprus joined the Commonwealth and has since, understandably, taken up membership of the World Bank, the International Monetary Fund and various other international agencies, as the Government's five-year programme of economic development (1962-66) announced by the President, Archbishop Makarios, last August, relies on obtaining substantial finance from those organisations and other overseas sources. This plan, although very ambitious, wisely puts the emphasis on agricultural development and the provision of water, for, notwithstanding the importance of the mining industry which is both the largest earner of foreign exchange and the heaviest bearer of taxes, agriculture is the backbone of the Cyprus economy and the future of the Republic will largely depend upon the success of the agricultural programme.

"The immediate problem, however, is to achieve a more satisfactory balance in the country's overseas trade, for imports are increasing rapidly and were last year, double the export earnings. The trade deficit was £21 millions and was, for the greater part, covered by expenditure in connection with the British bases on the island, but the annual contributions from this source may not continue on the same scale and obviously Cyprus has to encourage the development of those local industries which will lessen the need for imported goods. To this end a Government-sponsored development bank is to be established to grant credit facilities to industrial and other development enterprises, and the intention is to create conditions which will attract investment from overseas and encourage the repatriation of the substantial funds which were remitted abroad during the period of political uncertainty before Cyprus gained independence.

"The prudent budgetary policy of the Government should induce confidence and, provided sufficient foreign aid is forthcoming, the development programme will assist the country towards building up a more self-supporting economy. Complete success however will only be achieved if the two major communities co-operate in the national interest to a much greater extent than they have done so far in this early stage of the country's independence. What is needed is more unity in public life, the elimination of unnecessary administrative expenditure and a determination by all to see that the constitution, whatever its defects, is made to work well.

Lebanon

"Twice in the course of the year a new Government took office and shortly after the second change in November the new Government had to deal with an attempted coup d'état. Against this disturbing background it is not surprising that trading conditions were less satisfactory than in the previous year and the market was depressed, in particular by failures amongst those who had taken an over-optimistic view of the building boom.

"Competition between the forty-eight recognised banks is perhaps over-keen because of the limited business available and it is a great pity that Beirut's reputation as a financial centre should have attracted in addition so many outside agents to join in the search for funds seeking an outlet through this market: the result is, of course, uneconomic rates.

"Possibly because of the country's attraction as a holiday centre of easy access from the wealthy Gulf area, the Government feels that it can look forward to an economy strong enough to ensure the success of the five-year development plan, to cost L.L. 450 millions, it has recently introduced. Expenditure will be mainly on irrigation, water supply, roads and electric power but improvements in the port of Beirut are also envisaged.

Iraq

"Iraq is dependent upon its oil production not only for the continued satisfactory state of its economy but also for the country's development, and it is to be hoped that happier relations between the Government and the oil companies will soon be established to ensure that the new five-year economic development plan be successful. Given oil production and oil revenue not less than 1961's increased figures there is every hope that the plan, which includes industrial, agricultural and public works projects, should reach its targets and raise the general standard of living, for Iraq is basically a rich country. Already the wheat and barley crops not only suffice for the people's needs but leave an exportable surplus. The export of dates is another foreign exchange earner and there is no reason why rice, tobacco and cotton should not play a more important part in the future. A wonderful opportunity exists for the Government to make full use of the rich alluvial soil and develop agriculture to an extent that would create a well-to-do peasant community, which in turn would stimulate the demand for local industries, and it would be a great pity if, by wrong emphasis, this aspect were made to take second place to the development of new industries. Industrial development has already gone steadily forward and it is of interest to note that the cement industry is already exporting in considerable quantities.

"Business generally has been quiet and the import licensing system, although not unduly restrictive, was used to keep imports to a lower level than that of 1960 but the resultant running down of stocks in the bazaar has been beneficial.

The Gulf

"*Bahrain:* His Highness Shaikh Sulman bin Hamad al Khalifa, K.C.M.G., K.C.I.E., died in November. He succeeded his father as Ruler in 1942 and under him Bahrain made substantial progress in all administrative fields, including public works, public health and education. His Highness will long be remembered by those who knew him for his courtesy and kindness and will be much missed. He has been succeeded by his eldest son, His Highness Shaikh Isa bin Sulman al Khalifa, who has our best wishes for a happy and prosperous period as Ruler.

"Trade was satisfactory but the development of other ports in the region tends to slow down the rate of expansion of Bahrain's entrepot trade.

"The local production of oil at Bahrain remained steady during 1961 and there were no new drillings worth noting. The refinery throughput, which includes crude from the mainland, reached the record figure of 10.5 million tons. Work on the deep-water jetty was delayed by storms but is now nearly finished and the jetty is expected to be in full use by May 1962. The new airport buildings and the Muharraq Bridge were completed during the year.

"*Doha:* The Qatar State had another quiet year, business again being inhibited by over-stocking in the bazaar and a shortage of cash with the merchants. Stocks however are being reduced mainly through the policy of the Government and the oil companies to make their purchases locally as far as possible. The building boom continued and progress was also made in the construction of the new water reservoir, the distillation plant, the new power station and new roads. The gas pipe line between Dukhan and Doha was completed and a contract for the construction of a new aerodrome runway was awarded.

"Exports of crude oil in 1961 totalled 8.14 million tons, slightly higher than the figure for 1960.

"*Sharjah:* There is again little change to report at Sharjah where the year was uneventful, but local merchants continue to express their pleasure at our having given them banking facilities there.

"*Abu Dhabi:* It is now generally recognised that Abu Dhabi will, within the next few years, begin to receive a very substantial revenue from resources of oil both offshore and on the mainland and it is commendable that energetic action is already being taken by the Government to ensure that the town is developed in an orderly way.

"A survey is being carried out and a town plan prepared, and this and other measures should check land speculation.

"The Eastern Bank opened its branch in Abu Dhabi on 1st October 1961 and will work in improvised accommodation until its final building site has been determined. Notwithstanding this, it will be in a position to give a full banking service to the Ruler and his subjects and to the newly established British and other merchants who have opened offices in anticipation of the transformation that must come in Abu Dhabi.

Hadhramaut

"*Mukalla:* Trade in Mukalla must necessarily remain small and unless oil is found it would be unwise to expect any spectacular change in the area in the near future. Hopes have naturally revived through the granting of a new exploration concession to an American company, but in the meantime, the Quaiti Government goes steadily ahead with a modest three-year development programme covering communications, health service, education and agriculture.

"The Eastern Bank hopes shortly to move into a new building on the sea front at Mukalla, and within a few weeks will open a new office in the Kathiri State at Seiyun.

Aden

"In the Government of Aden Colony the development of representative institutions has continued satisfactorily. Ministerial status has been granted to elected members of the legislature and there has been official encouragement for the formation of responsible political parties. The labour legislation which came into force in August 1960 has continued to work effectively and, despite some evidence of dissatisfaction in certain trade unions, there have been no strikes. Unemployment in the Colony is almost non-existent, largely due to the effect of the expenditure of service personnel and to the extensive building programmes, both civilian and military, which are in progress. Although the entrepot trade continues at a satisfactory level, it is tending to diminish as the efficiency of neighbouring ports improves. For some time to come this reduction will be offset by expenditure arising from the presence in Aden of the armed forces, but there is a danger that the economy will become over-dependent on this source of income, particularly as there is little sign of new industries being developed in the Colony either by foreign investors or by local enterprise.

"In the Western Aden Protectorate the Federation of Arab Amirates of the South, which I mentioned last year comprised ten of the eighteen states in the Protectorate, has quickly gained authority and influence since the federal Government took up residence at Al-Ittihad, the new capital, last April. Although the Government is in its infancy it appears to be operating with commendable efficiency due to some extent to the continued absence of incident on the border between the Protectorate and the Yemen. This quiet may reflect internal difficulties in the Yemen following the attempted assassination of the Imam and the evident deterioration in relations between Egypt and the Yemen, which culminated at the end of the year with the announcement of the dissolution of the association between the two states.

"For the future, there are indications that a closer association will be developed between Aden Colony and the Federation of Arab Amirates of the South, which should have a stabilising influence on the political situation in this important, strategic corner of Asia, and it is also encouraging that the eleventh member to join the Federation was the first member from the Eastern Aden Protectorate.

Iran

"Immediately after his appointment early in May the new Prime Minister, Dr. Amini, announced his intention of introducing a programme for strengthening the economic position of the country both internally and externally, and the efforts of the financial authorities throughout the second-half of the year have met with some measure of success. The mounting inflation of recent years has been arrested and the steady rise in the cost of living has been slowed down. The recently re-constituted central bank, Bank Markazi Iran, under the general directives of the Monetary and Credit Council,

has established effective control over the banking system and already many of the worst features of the recent undisciplined expansion of banking credit have been restricted.

"It has been stated by responsible authorities that this year Iran's earnings of foreign exchange from the oil industry, including sterling sold to the Government by the consortium of operating companies for their local expenditure, will amount to around £130 millions, an increase of some £10 millions over last year.

"It is on this expanded oil production that the success of the third Five-year Plan will depend. The plan is due to start towards the end of 1962 and the framework has been under examination both in Iran and abroad for some time. Its aim is to raise the national product by six per cent annually and to achieve this it is hoped that agricultural production will be increased by extending the areas under dry and irrigated cultivation and by the education of the farmers in modern techniques of pest control and the use of fertilisers. The emphasis will be on small and medium-sized irrigation projects rather than on the multi-purpose high dams, which were the feature of the second plan. Electricity, industry, transport, communications and social services also feature prominently; and in this connection it is interesting that already in 1961 various industrial projects, including a cane sugar refinery, a tyre factory and two vehicle assembly plants came into production. Finance for the plan is being discussed with the World Bank and it is hoped to form an international consortium on the lines of those set up to provide aid to India and Pakistan.

"In the last few months Iran has refunded two-thirds of its total drawings from the International Monetary Fund. Grants and loans have been received from abroad and the balance of payments and foreign exchange reserves are reported by the Bank Markazi to be satisfactory. Granted political stability, the year 1962 should see continued economic progress.

"No review of Iran can be made without mention of land reform which is an issue that may have far-reaching political effects in the country. Local attention is keenly focused on Dr. Amini's efforts in this direction and details of a pilot project in the district of Azarbayjan, planned by Government for early spring, have raised much controversial criticism.

India

"India has reason to be proud of the progress made in the development of the national economy. Indebted as it is to foreign aid and investment for the success of its first and second Five-year Plans (1951-61) it has still, by its own efforts, achieved remarkable results in what it terms its industrial revolution. Mistakes have been made, as is bound to happen when so much is done so quickly, but fortunately in India, as in all democracies, mistakes can be given publicity and remedied. The obvious and more costly mistakes can be indirectly attributed to an over socialistic way of thought and policy, and the increasingly bureaucratic involvement in industry, including state trading, appears in unfortunate juxtaposition to the achievements of the extremely capable and efficient emerging Indian business man. However, business has increased with such momentum that there is room for both public and private sectors without too much friction.

"The visible results of this revolution are the new industrial enterprises appearing in all parts of the country, but less apparent are the tremendous strides in agriculture which have raised the output of foodgrains by 50 per cent to 79 million tons in the last ten years and have helped to turn chronic food shortage and malnutrition to something approaching self-sufficiency. This achievement is all the more commendable when viewed against the background of a population showing an increase of 21.5 per cent during the same period and now reaching a figure of 438 millions.

"The cost of the plans, or the revolution, whichever it be called, is not clear: India no longer has a surplus of foreign exchange and the present level of reserves is barely sufficient for current needs. Now too, the country goes into its third Five-year Plan faced with the additional burden of servicing the substantial debt already incurred and knowing too that only the further vast sums promised by the consortium of countries in the form of aid can make it successful. Fortunately private foreign investment continues at a high level and Government's interest in attracting overseas investment, preferably in conjunction with Indian interests and for industries with export earning potential, was shown in tax concessions in the last budget. Taxation is, however, still very high by world standards.

"To provide information on investment possibilities a quasi-official body, the Investment Centre of India, was formed during the year and its offices in New Delhi and New York and its representatives in London are already doing useful work in providing potential investors with preliminary information and bringing them into touch with Indian interests. More important perhaps than the endeavours to attract foreign investment are the steps being taken to increase exports, but the Government is finding that improved living conditions and a wider diffusion of purchasing power tends to attract production to the home rather than to the overseas market: the pressure to increase wages has also made Indian products less competitive in international markets. Incentive schemes are being tried but if these are to put exporting on an uneconomic basis or necessitate involved forms of subsidies to the producer under the auspices of the State Trading Corporation, perhaps the success will be limited. Then too experience under the bilateral trade agreements with countries mainly in the Soviet bloc are open to criticism, for not always is a true export value received and in some cases rupees of depreciated value are created. The relatively stable domestic price level should make it possible for the introduction of some form of fiscal incentive which will genuinely encourage exports.

"The expanding business in India has led to continued demands for bank finance and the non or slow returns of these funds, coupled with the very large sums owing to commerce and industry by Government, has meant that the banks' ratio of advances to their own deposits continues to be very high. So that the industrial expansion will not be curtailed for lack of funds the bill market scheme has been considerably liberalised and the Reserve Bank has released the additional statutory deposits taken in the previous year. In order to retain and strengthen public confidence in the banking system the Reserve Bank has continued its realistic policy of seeing that the commercial banks are run on sound lines whilst allowing them a reasonable amount of freedom. Efforts are being made to merge some of the smaller and weaker banks with stronger units while a Deposit Insurance Act has been passed under which banking deposits of up to Rs. 1,500 in any one name must be insured from January 1962. There is no doubt that it would suit not only the banks but commerce generally if agreement could be reached on a minimum interest rate for advances and, although the State Bank of India may have particular problems, which in any case we think could be overcome, it is unfortunate that lack of complete unanimity amongst the banks should hold up the completion of a workable agreement. There is, with the acquiescence of the Reserve Bank, a voluntary arrangement by banks for the quotation of maximum rates on deposits and it will be interesting to see whether the compulsory insurance on deposits will cause any change in the present preference of depositors for the larger and sounder institutions.

"I have mentioned with some appreciation the work of the Reserve Bank and I would like to pay a tribute to the fair and open manner in which that institution has always treated foreign banks in India, and it would be a sad day if any political pressure should be allowed to develop to an extent that discrimination against the exchange banks and their operations in India is introduced.

"The political scene has been dominated by the general elections and in this the largest parliamentary democracy of the world, with voters numbering 210 millions, the interest is not in the return of Congress, which is a foregone conclusion, but in the type and strength of the opposition; at the moment there looks little chance of the emergence of an opposition well organised and virile enough to bring drive and purpose into a ruling party which has for some time now shown signs of staleness and internal dissension. Perhaps such a change would bring a much needed improvement in relations with India's neighbours and, by taking weight off the defence budget, would allow the lowering of taxation which may be necessary for continued successful expansion.

Pakistan

"Pakistan has continued to enjoy the benefits of firm but benevolent leadership and the President's already high prestige was further enhanced both at home and abroad as a result of his visit to the United States last July. In October the constitution commission completed its report but no details are to be announced until the drafting of a new constitution has been completed and approved by the President. Government has decided that elections will be held in early summer but, until the new constitution is promulgated, it is not known whether these will be for an assembly whose members will be elected through the basic democracies on their individual merits, or whether voting for candidates representing political parties is contemplated. Steps have also been taken to decentralise the administration, with emphasis on the East Wing, and to confer restricted authority at district and divisional levels.

"Last year I mentioned the improvement in the level of exchange reserves which had made it possible for the Government to permit increased imports of raw materials and consumer goods. The liberalisation of imports succeeded in the twin objectives of sustaining a further increase in industrial production, which benefited by the increased availability of raw materials and spare parts and of reducing price levels. On the other hand, the higher import bill is causing a deficit in the balance of payments. With the growth of population, which the 1961 census revealed was rising by 2.4 per cent per year, a rate higher than was estimated by the planners, there is increased domestic absorption of most commodities, and reduced exportable surpluses. This trend has been particularly evident in the cotton industry, where performance in the export field has been sufficiently disappointing for the Government to set export targets which are being allocated to individual mills according to productive capacity and which have to be fulfilled under pain of financial penalty. In other fields the Government has similarly shown itself well aware of the need to stimulate exports and the licensing of a broad range of imports has now been linked with export performance. At present raw jute and cotton and their products still account for some seventy-five per cent of the country's export earnings and it is necessary, therefore, to widen the range of manufactured goods for export, a process which will obviously take time.

"The country's inability to feed the rapidly expanding population from its own soil has been costly in terms of foreign exchange despite the assistance of the United States in supplying foodstuffs under Public Law 480. Agricultural development is now being stimulated by encouraging the use of fertilisers, improving and extending irrigation and drainage facilities with particular attention to the serious problems of salinity and water logging.

"The burden of financing the second Five-year Plan is substantially eased by foreign aid, for which the Western consortium has committed $945 millions to the first two years of the Plan, and the Government has prudently budgeted for an overall surplus in the current fiscal year. The State Bank of Pakistan has created conditions favourable to economic development and has succeeded at the same time in preserving monetary stability, but the ability of the authorities to control inflation will be further tested as expenditure gets under way on the vast works for the control of the Indus waters. The major contract for construction of the Mangla Dam, at a cost of $350 millions, has already been awarded to an American consortium and tenders for other large works are under study. It is heartening to find that throughout Pakistan there is confidence in the ability of the country to overcome present problems and to make a success of the Five-year Plan. Now that the establishment of industry is being encouraged to a far greater extent in East Pakistan and upcountry in West Pakistan, the benefits of economic development should be more evenly spread over the country at large but a more sombre note must be sounded regarding Pakistan's relations with her immediate neighbours. Hopes that the signing of the Indus waters treaty would provide the opening for a political and economic rapprochement between India and Pakistan have been disappointed, the Kashmir dispute remains unresolved, and the frontier with Afghanistan has been closed following that country's action in severing diplomatic relations.

Ceylon

"Ceylon has had a difficult year. The state of emergency declared last April as the result of a satyagraha campaign initiated by the Tamil community has remained in force, but the special powers conferred on the Government under the emergency have been used recently for dealing with labour unrest rather than communal disturbances. In the economic field the import restrictions introduced early in the year have had a favourable effect on the trade balance, which, if the trend for the first ten months of the year has been maintained, should show a surplus for the year as a whole for the first time since 1956. Unfortunately the trade surplus has evidently been insufficient to cover the payments deficit and, despite support from the International Monetary Fund, the exchange reserves have continued to run down, but at a much reduced rate.

"Ceylon's major problem is one common to many countries in Asia; namely how to support a rapidly expanding population which is increasing at a rate even faster than India's. It has been recognised that a programme of rapid economic development is necessary to meet the situation and a realistic plan has been drawn up. The difficulty is how to find the necessary finance and expertise. The comfortable cushion of foreign exchange reserves which the country possessed a few years ago has disappeared and the present level of external assets is scarcely adequate for current needs. Government expenditure on food subsidies and social services, financed to an excessive extent by budgetary deficits, has created inflationary pressure which has only been partially counteracted by the import of consumer goods on a substantial scale. Consequently, there is at present little or no capital investment to show for the valuable and possibly irreplaceable foreign exchange which has been dissipated. Increased taxation was imposed in the budget introduced last July but, to finance steadily rising Government expenditure, a further expansion of the already inflated public debt is estimated to be necessary.

"In the absence of surplus foreign exchange investment from abroad could be a valuable source of much needed capital and it presumably remains the policy of the Government to welcome such investment. Official assurances have been given that estates and plantations will enjoy freedom from nationalisation but the potential foreign investor will not be encouraged by certain recent developments, namely legislation setting up a Government petroleum corporation to compete with the foreign oil companies, with power to requisition its competitors' installations at will, and the crippling restrictions introduced in the budget discriminating against foreign banks. The high taxation rates levied on profits earned in Ceylon by companies incorporated abroad and on personal incomes is another strong deterrent.

"For some time to come, therefore, the living standards of the population will depend even more than in the past on the staple exports, tea, rubber and coconut products. It is much to the credit of the tea industry that, when final figures are available for the year, it is expected that production will have reached a record level. Unfortunately lower prices during the latter part of the year and intense competition, particularly in Middle East markets, offset the increase in available tea and the aggregate value of shipments for the first ten months of the year was only slightly higher than in 1960. Higher export earnings from coconut oil and copra were offset by reduced exports of desiccated coconut and coconut fibre. Rainfall during the year was considerably higher than normal and rubber production suffered accordingly with a steep fall in the value of exports. The overall improvement in Ceylon's overseas trade during the past year is encouraging, but it is probably too early to hope that the tide of economic deterioration has turned. Any sustained improvement in the present situation will depend on a decisive effort to curb the persistent rise in State expenditure and on a firm attitude by Government to unreasonable labour demands. Business in Colombo has recently been seriously afflicted by a series of strikes, which on 26th December spread to the commercial banks, including the State-owned Bank of Ceylon. At present the banks are managing to maintain a restricted service for their customers and I take this opportunity of expressing to those of our staff in Colombo, who are carrying on in conditions of extreme difficulty, our warm appreciation of their efforts and their loyalty to the bank.

Burma

"In Burma in August last the Minister of Finance and Revenue and National Planning presented to parliament the final version of the second four-year plan covering the years 1961-65. The plan was presented as the first of four consecutive four-year plans, which would double the *per capita* income by 1977. Other objectives were the diversification of agriculture, increased industrialisation beginning with light consumer industries and a more evenly balanced regional development over Burma as a whole. To be successful the plan required an economic growth of roughly seven per cent per annum for the next sixteen years and, viewed from the position today, there would be justification for feeling that Burma, to achieve such targets, will require considerable assistance from abroad both in the form of loans and capital investment.

"The Peoples Government of China during the year gave a loan of £30 millions and the World Bank assisted the Railway Board in its modernisation programme, but approaches by the Chairman of the Investment Committee to the United States, Canada and Britain received little encouragement. Private investment from overseas has also been disappointing although certain British and Western German firms have shown their willingness to participate in joint ventures. It was probably because of the lack of response from abroad to participation in Burma's industries that the Government has further amended the Investment Act to extend the guaranteed period against nationalisation, to eliminate distinction between foreign and Burmese enterprises and to facilitate the transmission of remittances. It is perhaps unfortunate that, coincidentally with these commendable steps, further Burmanisation of British interests should take place, and amongst other things, British firms can no longer handle imports, even from the United Kingdom.

"Any economic growth in Burma must for many years depend upon the extent to which the country's agricultural products earn sufficient foreign exchange not only to pay for necessary imports but also for the plant and machinery needed in the industrial programme and that is why, very sensibly, the Government will invest primarily in agriculture and leave industry mainly to the private sector. In 1961 rice exports, which account for seventy per cent of total export earnings, amounted to the impressive figure of 1,600,000 tons, but even so the country's foreign exchange reserves fell sharply over the year. The Government hopes to reverse this trend by increasing agricultural output and improving communications. Rice production is to be raised by means of mechanisation, extension of irrigation facilities and a wider use of fertilisers, and at the same time encouragement is to be given to the cultivation of ground-nuts, cane sugar, cotton and jute in order to achieve self-sufficiency in those commodities.

"To effect further savings in foreign exchange steps are being taken to increase oil production and a rubber re-planting programme is to be initiated. Whether or not these measures have the desired effect must depend to some extent on settled conditions in the countryside, for of late rebel activities appear to have increased and security conditions generally have deteriorated. Another factor which might materially assist the country in its ambitious programme is a reversal of the policy of state trading, for more and more firms and enterprises are falling into the hands of civil servants with not altogether favourable results.

"One other point of considerable interest is the negotiations in connection with the Japanese reparations, which were resumed in Rangoon in November prior to the goodwill visit of the Japanese Prime Minister. No settlement was reached and it seems that whereas the Japanese mission have been mainly interested in talking about joint ventures and economic co-operation, the Burma Government is holding out for an additional U.S. $200 millions in reparations. So far $75 millions is the highest offer the Japanese have been prepared to make.

Federation of Malaya

"The outstanding political event last year was the crystallisation of the previously vague concept of a confederation of Commonwealth territories in South East Asia and its acceptance by all the Governments concerned as the next logical constitutional development. The initiative was taken by the Prime Minister of the Federation, Tengku Abdul Rahman, who evidently came to the conclusion that his country ought not to remain permanently isolated and that to ensure continued economic growth closer association should be sought with Singapore, North Borneo, Brunei and Sarawak. Politically such a merger would also have obvious advantages, substituting in this important strategic area a strong unitary state for a number of relatively small political entities seriously vulnerable to subversive or external pressure threatening their independence. Together these countries have a chance of surviving and progressing but separately they might be in difficulties. Since the decision to promote the merger was taken rapid progress has been possible, for the countries concerned already have much common ground, particularly the sharing of the same currency. Mutually satisfactory discussions have taken place between the Federation and the British Government and a working party of senior civil servants from Singapore and the Federation have been considering the administrative and financial problems which would arise should the merger take place. The Federation Government has also been at pains to establish closer relations with other neighbouring States in South East Asia and has formed, together with Thailand and the Philippines, the Association of South East Asian States (A.S.A.S.).

"Industrial development in the Federation is now well under way and the number of foreign trade missions visiting the country, particularly in the early part of the year, is an indication of the country's increasing importance as a market for capital equipment and manufactured goods and as a field for investment from abroad. Ninety per cent of the four-hundred-and-fifty acre industrial site at Petaling Jaya has now been taken up and seventy-two industries are operating there, turning out a wide range of products. A new industrial estate is being developed on the northern outskirts of Ipoh, while two oil refineries are in course of construction at Port Dickson. Other manufacturing units using the most modern equipment available are opening up elsewhere and it is significant that a high proportion of the new industrial enterprises benefiting under the Pioneer Industries (Relief from Income-tax) Ordinance are joint ventures bringing in capital from abroad. Apart from the fiscal inducements, the absence of labour trouble, which owes much to sound Government policy in this important respect, is a strong attraction for the foreign investor interested in setting up a factory in the Federation.

"The increasing tempo of trade and industry in the Federation demands an expansion in banking facilities and we have, therefore, felt it necessary to enlarge our own organisation in the country. New branches of the bank have recently been opened at Kuala Trengganu, Kota Bahru and Port Dickson, and our branches in Petaling Jaya and Port Swettenham have been accommodated in new office buildings during the course of the year. We commence the building of a new main office in Kuala Lumpur this year. Deposits with the commercial banks in the Federation have increased, but this expansion has been exceeded by the rise in advances, a trend which, although it needs careful watching, is to be expected in a developing economy. As far as we know the Central Bank of Malaya has not set up any machinery which would enable it to exercise its functions as a lender of last resort.

"Business has benefited from the progress which has been made in improving road communications. The heavy cost of this work will be amply justified in years to come by making possible the development of what have hitherto been virtually unapproachable areas of the country. The steps taken during the course of the year to relieve congestion at the Port Swettenham docks have proved successful and cargoes are now flowing through the port smoothly, but work on the construction of new dock facilities at North Klang Straits has been delayed owing to difficulties in connection with piling operations.

"The overall value of the Federation's exports was lower last year than in 1960, mainly because of the reduction in the price of rubber, the average level of which was the lowest since 1958. Uncertainties over the policy of the United States Government regarding the release of rubber from the strategic stockpile have been a major factor in depressing prices, but assurances have apparently been forthcoming that no action will be taken which is likely to prejudice the position of producers in South East Asia. The high yields now to be expected from trees planted and matured under modern methods will compensate for the lower prices which must be accepted if the natural rubber industry is to compete with the synthetic product, so that last year's reduction in the price level was not as disadvantageous to the Malayan industry as it might appear. Production has

increased over the year and, to assist marketing, a rubber exchange is being established in Kuala Lumpur. International prices for tin, the other major export, have been favourable to producers and shipments increased in volume and value. Following the exhaustion of the buffer stock, the Chairman of the International Tin Council has had discussions with United States Government officials regarding releases from the strategic stockpile. The uncertainty of American intentions in this respect has had some effect on prices. With prospects for both rubber and tin reasonably good, the favourable development of the Federation's economy under the second five-year plan, which covers the period 1961-65, should continue. By adhering firmly to sound fiscal and economic policies the Government has successfully created conditions favourable to trade and industry and it is to be hoped that the imaginative initiative which has been taken in connection with the proposed merger with Singapore and the Borneo territories will be attended with success.

Singapore

"The Government of Singapore has consistently advocated closer association with the Federation of Malaya and therefore welcomed the Federation's proposals for a merger to include the Commonwealth territories in Borneo as well as Singapore and the Federation. Such a merger would obviously benefit Singapore by giving increased scope for the entrepot and other specialised commercial and financial services available in the port, and by providing wider markets for the new industries which are to be established in terms of the four-year development plan (1961-64). Unfortunately those who oppose the merger have chosen to foment labour unrest as a means of political pressure. Trade union activity has been stepped up and there have been strikes in almost every sector of Singapore's economy, including banking. A particularly disturbing feature has been the open contempt shown for law and order.

"It is greatly to the credit of the business community that in what has been, in many respects, a difficult year, overseas trade has been maintained at a satisfactory level. In value the aggregate was lower than in 1960, but only because of the reduction in the price of rubber, a commodity which accounts for a third of Singapore's imports and nearly half the exports and in which even slight fluctuations in price can have an appreciable effect on the trade figures. The overall tonnage of cargo handled by the port increased, and another encouraging feature was the improvement in trade with Indonesia. Following the successful negotiation of a trade pact, a Singapore mission has been established in Djakarta and the Indonesian state trading organisations have set up offices in Singapore so that they themselves can handle and sell their own commodities in the various Singapore markets.

"During the year two United Nations special missions completed studies on various aspects of industrialisation in Singapore and the World Bank has agreed in principle to make loan finance available for projects in the four-year plan. Schemes under consideration include the expansion of water and power supplies, which is of considerable urgency for water rationing had to be introduced last August for the first time. A number of local enterprises increased production last year and preliminary work on the Jurong industrial estate has begun with the construction of approach roads and the preparation of factory sites. If employment opportunities for the rapidly rising population are to be significantly increased it is imperative that Government's efforts to promote industrialisation be successful and local enterprise invest in manufacturing industry rather than trading concerns. This in turn might create an improvement in the labour situation sufficient to restore confidence amongst other potential local and overseas investors.

"The upward trend of commercial and industrial activity has been reflected in increased bank advances. A banking ordinance has recently been passed which, in general, follows similar legislation in the Federation, but in the absence of a central bank in Singapore, confers on the Minister of Finance many of the powers normally exercised by such an institution. The efficient functioning of the clearing house organised by the commercial banks last February has been seriously impaired by a series of labour disputes affecting the banks and the Minister of Finance has now taken advantage of his powers under the banking ordinance to open a clearing house under Government control.

"Provided that relations with Indonesia continue to improve and the negotiations for the merger of the Commonwealth territories in the area proceed favourably, the outlook for Singapore in the coming year could be reasonably bright. Much will depend however on the ability of the Government to cope effectively with the steadily deteriorating labour situation and to persuade the population as a whole of the advantages of the merger when voting takes place in the referendum which has been promised by the Prime Minister on this important subject.

"In August we extended our own organisation in Singapore by opening a new branch at Queenstown.

North Borneo

"Until recent months the people of North Borneo have evinced little interest in politics and the various racial groups have worked together in complete harmony under the present system of Government. This is partly why the proposals which were made a few years ago for a closer association between North Borneo, Brunei and Sarawak failed to make much popular impression. The Greater Malaysia concept on the other hand has stimulated considerable interest and political activity in North Borneo, but unfortunately for the first time in the recent history of the territory local opinion is tending to form on a racial basis because of this important issue. There would be obvious advantages to the individual Borneo territories of associating with others to form a larger political unit, but the main difficulty is that although North Borneo has not yet reached the stage of political development at which the people can be expected to determine their own future, a firm decision will have to be taken within a relatively short period on the merger proposals. It has been agreed by the British and Federation Governments that the views of the people of North Borneo and Sarawak should be ascertained by a commission, which under the chairmanship of Lord Cobbold will make the necessary enquiries in the two territories. Meanwhile the formation of the Borneo free trade area, which came into force in January 1962, with North Borneo and Sarawak as members but with the provision for wider membership, is a practical step towards closer co-operation between the Borneo territories.

"The latest figures available indicate that North Borneo's overseas trade last year showed an increase over 1960 when the trade turnover reached a record level. Higher imports reduced the trade surplus but notwithstanding this, of the main exports, the volume and value of timber shipments have both increased and the larger tonnage of rubber shipped is an indication of the success of the Government's replanting programme. Satisfactory export earnings have been reflected in the sound budgetary position of the Government and as a result it was possible last year to raise the revenue allocation to the development programme to $16 millions. The steady extension of the road system is opening up hitherto remote areas for cultivation and the improvement of harbour facilities is promoting more efficient handling of the Colony's overseas trade. Great hopes are entertained of the productive potential of the Labuk Valley, a survey of which is to be carried out with the assistance of the United Nations.

"Because of immigration from Indonesia and the Philippines the supply of unskilled labour on the east coast is now sufficient to meet demand, but there is still some shortage of skilled agricultural workers, such as rubber tappers, on the west coast. The Colony's economy continues to develop on satisfactory lines and prospects for the coming year seem favourable. I think that all sections of the community recognise and appreciate the full part our bank is playing in this development.

Brunei

"His Highness the Sultan has declared himself personally in favour of the Greater Malaysia concept, but the views of the people of Brunei on this important matter are to be considered before any final decision is made. Because the possible advantages of joining Malaysia have not been explained to the people there is little enthusiasm at the moment for the concept and there is much more popular interest in the elections for the district councils which have been postponed to not later than mid-October 1962. These district councils will in turn elect the sixteen unofficial members of the Legislative Council who are at present appointed by His Highness the Sultan.

"During 1961 legislation was introduced to provide for collective bargaining to improve labour conditions and to institute regulations for the control of labour disputes. This reflects the growing strength of trade unionism in Brunei, but so far there has been no serious labour unrest.

"Some progress with development schemes was made during the year, but only on a relatively small scale and the substantial financial allocation for development purposes was hardly utilised. This year, the second five-year plan is due to be put into operation and it is probable that work will begin on a number of the new development projects which are under consideration but, unlike most states, the major difficulty in Brunei is not lack of finance but shortage of skilled labour created largely by the stringent immigration regulations. As part of the programme to make Brunei self-sufficient in food production, work is due to begin on the construction of an agricultural school, the teaching staff of which is to be recruited from Malaya and elsewhere in Asia. Other development projects which it is hoped to undertake include a flood prevention scheme at Seria.

"In the absence of Government expenditure on development, the purchasing power of the population continues to be severely restricted as practically the whole of the country's earnings accrue to the Government in the form of oil revenue. Oil production is gradually falling and the search for new sources of supply has so far proved unsuccessful, but in relation to the Government's annual recurrent expenditure oil royalties are still substantial, although now exceeded by the investment income derived from surplus funds.

Sarawak

"Lower world prices for rubber, timber and pepper, the main sources of Sarawak's export earnings, have caused a reduction in the Colony's overseas trade and the small deficit in 1960 increased to about M$30 millions last year. Imports at a high level are to be expected in a developing country and, inasmuch as increased purchases abroad last year consisted of machinery and other capital equipment, they will be to the eventual advantage of the economy as a whole. On the export side, rubber shipments suffered sharp reductions in volume and value which more than accounted for the fall in the Colony's overall export earnings. On the other hand, because the tonnage of pepper exported more than doubled last year as compared with 1960 its value was substantially higher despite lower prices ruling. Demand for the Colony's timber, and particularly ramin, continued at a high level while exports of sago flour again increased and shipments of bauxite to Japan have been well maintained.

"It is much to the credit of the financial authorities that, despite lower prices for exports and higher recurrent expenditure than originally anticipated, last year's budget showed a small surplus. An estimated deficit this year is to be partially covered by additional taxation and the record sum of $54 millions is to be spent on development, an increase of almost forty per cent over development expenditure in 1960. Last June the new port at Kuching was officially opened, the old port in the centre of the town then ceasing to function. Priority has been given to the construction of roads, the intention being to extend the road system by eighty to ninety miles each year. The authorities in Sarawak hope that the Borneo free trade area, by opening up a wider market, will stimulate industrial as well as agricultural development, particularly where raw materials are available locally as in the case of fertilisers and cement. The bank has continued to assist the trade and development of the Colony.

"The Greater Malaysia merger proposals appear to have been received favourably in Sarawak and the appointment of the Commission headed by Lord Cobbold, which is to make enquiries and recommendations on this important matter, has stimulated much public discussion of the issues involved.

Indonesia

"In Indonesia an otherwise sombre and complicated scene was lightened by an event that could bring far reaching improvements in the economy provided certain other steps planned or possible for its protection are taken. The event I refer to is the generous amnesty terms offered to the insurgent forces which have virtually brought the rebellion in Sumatra to an end and have substantially restored internal security in most parts of the country. This will not only lessen the cost of the armed forces but should go a long way towards eliminating the smuggling abroad of export commodities and the serious loss of foreign exchange this has caused in recent years. Then too, if we assume, as we perhaps can, that a peaceful solution will be reached over West Irian, further reductions in the defence budget should take place and the running down of the exchange reserves largely caused by the considerable cost of buying foreign military equipment should be halted.

"Having shown that the country's recovery can be rapid I must record that by ordinary economic standards Indonesia has had a disappointing year. The reduction of the reserves was on such a scale that it was clear a drastic restriction on imports would be necessary. Import licences had been given freely in the early part of the year and remedial action came later than might have been expected but a loan from the International Monetary Fund provided some reinforcement for the exchange reserves. The balance could have been restored by good export figures but these suffered a reduction from a variety of causes. The inflationary rise in production costs tended to make the basic commodities from which the country's export earnings are derived uncompetitive in international markets although in the case of rubber the situation has been aggravated by reduced world prices. It is possible too that the state trading organisations are as yet too inflexible in their commercial operations to take full advantage of the available overseas markets. The fundamental cause of the country's economic difficulties is however chronic inflation and an inability as yet to deal with it. This is not through lack of trying on the part of the Government which, if it can carry out its intention of restricting state spending, will bring about a more satisfactory balance between budgetary revenue and expenditure and halt the rapid rise in living costs. An austerity campaign has been initiated and various projects which were to have been undertaken in terms of the eight-year development plan have been postponed for the time being. The plan was introduced in January 1961 and the country's economic potentialities are such that numerous offers of aid have been forthcoming from Governments and private interests abroad. These offers will assist towards covering the foreign exchange expenditure proposed under the plan but excessive reliance on deferred payment facilities will impose a severe burden on the national balance of payments in future years unless steps are taken meanwhile to stimulate an appreciable increase in export earnings. The normal sources of funds for domestic financing of the plan are to be supplemented by a 'guided savings' campaign in which all sections of the population are expected to take part either voluntarily or compulsorily. An important aspect of the plan is the extension of the area under paddy cultivation, for the country's dependence on imported supplies of rice is extremely costly in foreign exchange. The Asian Games which are to be held in Djakarta next August may prove an expensive undertaking but the developments necessary for their success such as new roads, building projects and in particular, hotels, will permanently assist tourism which so many other countries have found to be a useful source of foreign exchange.

"Politically the Republic is fairly quiet. There are ten authorised political parties, all of whom have to show themselves to be in complete agreement with the official beliefs on religion, nationalism and social justice in order to obtain recognition, the objective being the creation of an Indonesian socialist society. In accordance with the concept of guided democracy most of the country's international business is conducted by Government or semi-Government organisations and until expediency or policy causes a reversal of this trend, the scope for the services provided by this bank is very circumscribed. In view of the assistance we have given to Indonesia's foreign trade it is disheartening that in terms of the basic agrarian law we have without receiving compensation had to surrender ownership of our properties some of which we acquired under the present regime.

Thailand

"Under the firm guidance of Field Marshal Sarit's administration Thailand has enjoyed a quietly prosperous year. Minor subversive activity in the north-east of the country was doubtless stimulated by the situation in the neighbouring country of Laos, but the Government has wisely followed up effective repressive measures by giving priority to the economic development of the area which is suited to the production of rice, sugar and other crops. Thailand, agriculturally a land of small-holdings, is in the fortunate position of producing enough food and other commodities to support the population simply but adequately and still have a surplus available for export sufficient in value to meet normal requirements of imported goods. This gives a fundamental stability to the national economy which has enabled Thailand to be one of the few countries in Asia able to sustain over a period of years a free economy with an absence of import restrictions.

"Although as a primary producing country Thailand is vulnerable to fluctuations in crop yields, trade and foreign aid during the past years or two have strengthened the exchange reserves to the point where they are adequate to cope with any such vicissitudes over the next few years. The normal pattern of foreign payments has been a trade deficit more than covered by foreign aid and last year the picture was even brighter than usual as the trade deficit was almost eliminated, largely by substantially increased rice exports. Shipments of rubber and tin have been much the same in volume as in 1960 but export earnings from tin have benefited from the rise in the world price of this commodity, while rubber earnings have suffered a reduction. During the past few years exports of maize, tapioca, flour and jute have grown immensely in importance and jute shipments particularly benefited last year from the partial failure of the Pakistan crop. In view of the strong competition in international markets in basic commodities a Bureau of Standards has been set up for the controlling and improving of the quality of export produce. Imports are still partly covered by American aid but the most significant feature in Thailand's import market is the increasing penetration of Japan, which now accounts for almost one-third of the total figures.

"The Government's financial position is enviably strong with a balanced budget and a marked reduction in borrowing from the central bank. Roughly twenty-one per cent of Government expenditure is allotted to economic development in the current fiscal year and high priority is being given to the improvement of communications, particularly roads, as these are considered a pre-requisite for further development. Although more foreign countries are offering loans and technical assistance for specific projects, efforts to attract foreign capital from private interests have not yet met with any great success and such investment as there is has mainly emanated from interests already established in Thailand. Locally, surplus capital tends to be invested in land and other tangible assets and it is doubtful, therefore, whether local savings will ever be available on a scale sufficient to finance large scale industrial development. In these circumstances, and given the country's inherent stability, Thailand is an attractive field for foreign capital and the way in which foreign enterprises are able to conduct their business without interference or discrimination, providing they respect the laws of the country, is a clear indication of the liberal policy of the authorities towards investments from abroad.

Vietnam

"Such is its importance to the free world that Vietnam's struggle to retain its independence became better and more widely known as it made front page news throughout the world. Even so it is difficult to say how the struggle is going or what exactly is happening in a country now officially stated to be in a state of total war and where guerillas infiltrate almost to the outskirts of Saigon, the capital, and at times seemingly have control of large tracts of the country's rice producing and rubber lands. What does seem clear is that, notwithstanding a further deterioration in the situation since I wrote last year, the tremendously increased efforts by the United States and the good morale and tenacity of the local forces will ensure that the country does not come under communist domination. In some quarters it is felt that the tide has turned and what may be an improving situation could be turned to great effect by a more benevolent administration which sought, above all, to obtain the goodwill and co-operation of its people in order to rally them against the real menace threatening their country. Fortunately there are already encouraging signs in this respect for not only are more thorough measures being taken to protect the rural population but an economic programme, sponsored jointly by the Republic of Vietnam and the United States, seeks to raise their standard of living.

"The deterioration in the security situation has not been the country's only misfortune; unprecedented rains in September and October caused devastating floods, particularly in the south where many lives were lost and extensive damage caused to villages and crops. Fortunately, much of the vital rice crop appears to have been saved and to ensure that it is safely harvested it will be gathered in under military protection. To meet possible shortages additional stocks have been obtained from Thailand and Burma and have been given under Public Law 480 by the United States which will also provide other agricultural commodities.

"In many ways the country's economic performance has been much better than could be expected in these troubled times. The cessation of rice exports is a serious blow to overseas earning although offset to some extent by the United States paying for petroleum imports, but notwithstanding the attacks on plantations and the hazardous transportation risks, exports of rubber have been well maintained. This has enabled Vietnam to continue to finance a substantial part of its imports from its own resources. Rather surprisingly too, trade has not suffered as badly as might have been expected although the security situation has caused stocks to be very slow moving. Little progress has been made in industrial development but we ourselves, in co-operation with other commercial banks, have assisted, with Government encouragement, the financing of an industrial development corporation. There can, however, be little hope of real economic progress until law and order are restored.

Cambodia

"Cambodia's relations with her neighbours have continued to reflect the traditional rivalries in this part of South East Asia, and South Vietnam and Thailand, both pro-Western states, look with apprehension and disfavour on Cambodia's policy of resolute neutrality and its cordial relations with China. Relations with Thailand deteriorated to the extent that, for the second time in three years, diplomatic relations between the two countries were broken off. Relations with Vietnam also worsened, as they were bound to with the continuous accusations of the Saigon press that Cambodia was tolerating "Viet Cong" invasion bases on its side of the border. The situation in Laos has heightened the tension throughout the area and it is a great pity that Cambodia interprets the hostility of its neighbours as part of pro-Western policy, which places another barrier to better understanding between countries which, whatever their differences in outlook and policy, have in common a firm determination to maintain their independence.

"Under the popular direction of the head of state, Prince Norodom Sihanouk, the Government has continued its efforts to improve living standards and to spread the benefits of economic progress throughout the population. There are plans to provide educational facilities for everyone in the country, communications are to be improved in order to open up hitherto remote areas and care is taken to see that even the smallest farmers benefit from the imports of tractors and agricultural machinery. Nor are the cities neglected and in Phnom Penh, the capital, constant improvements are being made at a surprisingly good pace. Many new and attractive houses have been built and proper drainage and sewage is being laid.

"There is no unemployment in Cambodia, nor is there hunger for the country has more than enough rice, fish and vegetables for its small population. Economically too it is in the enviable position of having export earnings from rubber, rice and maize sufficient to cover eighty per cent of its imports with, in addition, foreign aid more than covering the balance. Industry has been reasonably expanded over the last few years and is now passing through a consolidation period before a start is made on the further enterprises such as textile, mills, planned for the new satellite town to be built near Phnom Penh. In July we ourselves opened a second branch in Phnom Penh.

The Philippines

"With the election of President Diosdado Macapagal a breath of fresh air seems to be blowing through the Philippines and not since the days of the late President Magsaysay has the nation had such a rallying point. At his inauguration the new President reaffirmed the strong line he had taken in his election campaign against graft and corruption, and there can be little doubt that much of the popular support he has gained is due to the general

wish to eliminate this insidious evil from the life of the country. The President's decision to act as Secretary of Finance himself and the re-appointment to the new cabinet of the former Secretary of Commerce and Industry indicate the importance attached by the new administration to a sound economic policy and also show an encouraging determination to rise above partisan considerations where vital national interests are at stake.

"The most urgent task confronting the new Government is to check the serious deterioration in the country's economy and to restore some measure of stability. For some time there had been apprehension about the eventual outcome of the exchange decontrol programme, which had been initiated in April 1960. At the outset it was realised that prices were likely to increase as a result of what was, in effect, a devaluation of the peso and therefore, to give the business community time to adjust itself to the inevitable changes in conditions, it was wisely decided to carry out the decontrol programme in stages. I mentioned last year that the first two stages had been successfully accomplished and last March, when the third phase of decontrol was initiated, the Republic's international reserve had risen to approximately $200 millions, so that future prospects then appeared reasonably favourable.

"Subsequently, however, the rise in the general price level gained impetus because of the gradual easing of import restrictions and the fact that most imported goods were no longer being paid for at the old preferred rate of exchange, but at the less favourable free-market rate. The situation was aggravated by a rice shortage which developed in August and September just before the new crop was harvested and, to check a rapid rise in the price of this essential foodstuff, substantial additional supplies were imported. However, realising that uncertainties about official policy were encouraging widespread speculation detrimental to the country's interests, the new Government took immediate steps to secure a stabilisation loan of $300 millions from the United States and, with the assurance of this reinforcement for the Republic's finances, a further phase of decontrol was introduced in January. All imports are now free of quota restrictions and must be paid for at prevailing free-market rates of exchange but, to restrict excessive demand, importers have to make peso deposits, rising to one-hundred-and-fifty per cent for inessential items and customs duties have been adjusted with similar discriminatory intent. These bold measures, which were planned in consultation with the International Monetary Fund, have almost completely abolished exchange control in the Philippines and, with the restoration of economic stability, will do much to create favourable conditions for the foreign investment that is badly needed in heavy industry and in mining.

"In the long run the Republic's main problem is to provide employment opportunities and a rising standard of living for a population which is increasing at the high annual rate of 3.2 per cent. With these objectives in view the President announced a five-year economic development plan under which agricultural production is to be raised in order to attain self-sufficiency in food. The plan will involve increased expenditure in the public sector of the economy, but the Government's view is that the main burden of development must be shouldered by business enterprise. If, as appears likely at present, the new phase of decontrol proves successful, prospects for trade and industry in the Philippines could be more favourable than for some years past.

Hong Kong

"The economy of Hong Kong may be finely balanced but there is no indication of this in the buoyancy of Government's budgetary revenue or in the characteristic manner in which the business community continues industrial expansion in the face of difficulties. It is those difficulties which must bring caution into my remarks after what must be considered another prosperous year although profits generally were lower. They are, in the main, the difficulties of finding and keeping overseas markets for the Colony's expanding industry. This is no new problem for Hong Kong but it is one which could be more difficult to overcome as time goes on and it is doubtful if the G.A.T.T. conference, which opened in Geneva in July last, brought much reassurance.

"At the moment the textile trade, including clothing, accounts for over fifty per cent of the total exchange earnings and the main overseas markets have all a question mark against them. The United Kingdom has given an import quota which should be maintained but there is still a vociferous element in Lancashire demanding its reduction. Over this market, too, hangs the shadow of the Common Market. In the United States the Government is considering the imposition of an import duty on cotton textiles to offset the subsidy paid to American producers of raw cotton and the Indonesian market, which gave Hong Kong considerable help last year with substantial orders, must always be a doubtful market because of its own economic difficulties. In the past the resilience of the business community has overcome such adversities but with the growing threat to its overseas markets it may be increasingly difficult for the Colony to accept Japanese piecegoods for re-export. It is possible, too, that the intensive Japanese investment in the Hong Kong textile and other industries will accentuate the normal expansion to an extent that would create further problems abroad and in local costs. This may seem surprising in view of Hong Kong's population of over three millions, a high proportion of whom are refugees, but notwithstanding the manpower surplus there is still said to be a shortage of skilled labour. The problem of finding overseas buyers does not apply to the textile industry only and the valuable exchange-earning plastic trade may find some of its markets, particularly the United States, becoming overstocked.

"The Government, as usual, has grappled manfully with the problem of housing the refuges and it has also continued its efforts to raise labour conditions in the Colony, although by any standard conditions are already good in the larger industrial units due to enlightened and far-seeing management. The Government is also improving the communications and, by reclamation and industrial planning, making land available for the new factories to be built additional to those that have recently come into operation. Private building has also gone on at a tremendous pace and includes a number of luxury hotels both on the island and on the mainland to cater for the rapidly increasing tourist trade.

"There has been a large increase in the banking system in Kowloon and the New Territories and we ourselves opened new offices in Kowloon, Shamshuipo, Hung Hom and Wong Tai Sin. New banks, too, seem to be opening up all the time on the island and on the mainland and we are relieved to hear that the Government is bringing in legislation to ensure that normal banking standards are observed. For too long now it has been possible for any concern with a small capital to open up in Hong Kong and include 'bank' or 'banking' in its name, and it is to be hoped that the new legislation will set minimum standards for such privilege that will give adequate protection to depositors, local and overseas. If, in so doing, it forces some of the smaller banks to merge it will be a service to the community for Hong Kong is overbanked to an extent that competition for funds is forcing the smaller banks to pay rates for deposits that allow no profitable scope in ordinary banking business. To obtain the high return necessary to cover expenses some of these banks then use the funds in building and other high-paying ventures and thereby lose the liquidity normally considered essential for the safety of their business. Perhaps too, governmental control will indirectly help reduce the over-generous granting of facilities usually present with over-banking, for the attendant lowering of security standards could not only redound adversely on the banks themselves but could possibly damage the good name of the Colony if unworthy enterprises are built up into suppliers and exporters.

China

"A year ago I suggested that the grain imports which China had been obliged to make, following successive bad harvests, would impose a severe strain on the country's exchange reserves and thus cause a contraction in trade with countries outside the Soviet bloc. This has proved to be the case and last year trade with Western Europe, and those Eastern European countries for which figures are available, has been substantially reduced. Nevertheless, the Chinese have lately been showing increasing interest in developing trade with countries outside the Soviet bloc, this trend being evidenced by the recent contract for the supply of British aircraft. High technical quality of the products concerned and generous credit terms would seem to be the dominant factors in obtaining orders from China but the decisive factor is of course China's inability, which it is to be hoped is only temporary, to export to the same extent as in earlier years. The present policy appears to be to balance trade with Western Europe and to earn a surplus on trade with Asia and, in particular, Hong Kong, while reinforcing the foreign exchange reserves by sales abroad of silver and gold.

"As was to be expected, the authorities are concentrating on raising agricultural production and in the industrial field the present emphasis appears to be on consolidation rather than expansion. Food is scarce, and, consistent with efforts to increase exports, consumer goods are also in short supply. There are encouraging indications however, that last year's harvest may have been rather better than originally expected, and if this is so some expansion of China's foreign trade may prove possible in the coming year.

"Our Shanghai office continues to do useful business in connection with the financing of China's overseas trade.

Japan

"In Japan in 1961 it was the economic rather than the political issues that dominated the scene. This is not surprising as the post-war industrial boom was obviously getting out of hand and the mounting bill for the tremendous industrial development in the preceding years had to be met. That bill, that is the external cost of the vast investments in new plant and machinery, was primarily responsible for forcing Japan into a balance of payments crisis. The reserves finally fell only U.S. $338 millions during the year, but at one time the downward trend was so alarming, and as usual in such circumstances internal inflationary pressure was such, that the Government had to take the usual remedial steps of a credit squeeze, high interest rates and more liberal financing for exports. Even with these measures it may be well into 1963 before the Japanese economy is on an even keel, for the country's balance of payments is even less satisfactory than might appear from published figures, which show neither the recent loans by American banks nor the large overseas borrowings of the Japanese banks. Payment of the interest on these borrowings, usually at quite high rates, will offset a substantial portion of the country's exports and make recovery that much more difficult, but with the International Monetary Fund to fall back on and the export potential of a virile and modernised industry the yen should be in no danger.

"It is indeed fortunate for the export drive that Japan's industry is so efficient, for there are signs that current prosperity, with better living conditions and the steady increasing demand for consumer goods, are exerting a strong upward pressure on wages, which otherwise might price Japanese goods out of world markets. Surprisingly too, in a country long used to the so-called burden of over-population, there is now a shortage of manpower in some localities and this too has led to higher wages.

"Perhaps it was also in the interests of its exports, with the hope of reciprocation elsewhere, that Japan has embarked on a more liberal import policy and seventy per cent of all imports are now on the free list. There is, as yet, no marked change in the sections where there is sensitive local competition, but nevertheless the Japanese market, although not an easy one, now offers real opportunities to the manufacturer prepared to spend the necessary time and effort in cultivating it. That British exporters, particularly manufacturers of machinery, are alive to this is shown by the substantial increase in Anglo-Japanese trade during the last twelve months.

"The year has been an exacting one for Premier Ikeda and the policy of his Government has come in for much criticism but there is unlikely to be a serious political clash in front of the spring elections. The budget, which was only passed after an all-night sitting, will seemingly do little to curb spending and it would be unfortunate if Mr. Ikeda's efforts further to raise the standard of living should fail through continued inflation.

New York

"Last year a trade surplus of over $5,000 millions again proved insufficient to carry the heavy burden of foreign aid and overseas military expenditure which the United States balance of payments has to bear in addition to American private investment abroad. The deficit was, however, substantially lower than in 1960 notwithstanding the transfer of large funds abroad on short-term basis in order to take advantage of the higher interest rates ruling in London and elsewhere in Europe. The basic strength of the American economy is such that there is apparently no question of reducing foreign aid commitments and the President has called for vigorous efforts to expand exports to balance foreign payments and fulfil the country's international responsibilities. To facilitate the export drive Congress has been asked to approve new legislation giving the President extensive bargaining powers to negotiate with other countries for the reduction or elimination of tariffs. Meanwhile, the recent agreement to augment the resources of the International Monetary Fund and the closer co-operation which has developed between central banking authorities should help to contain any speculative pressure against the dollar.

"Industrial production in the United States increased during the year and, with business improving, imports have been rising which should benefit producers of industrial raw materials in Asia. Some anxiety in the producing countries has been caused by the possibility that the enormous stockpiles of strategic materials held by the United States Government might be partially liquidated, but assurances have been given that no action will be taken which might disrupt prices or cause difficulty to producers in the smaller countries. Last August the New York agency of the bank was licensed to function as a branch and this had the effect of enlarging to a considerable extent the scope of the financial operations undertaken and the banking services provided by us in New York.

Hamburg

"In Western Germany an increased trade surplus for the year shows the immense basic strength of the economy, although with full employment wage rates are tending to rise and export orders are falling slightly. Whether this tendency will continue may, to a great extent, depend upon the bargaining power of the metal-workers' union, for success with their present demands might have far-reaching effects on wages and costs in almost every industry. Even so, the Institute of Economic Research is of the opinion that in 1962 the Western German economy could absorb a wage and salary increase of about eight per cent and still show a 4½ per cent increase in industrial production and a seven per cent increase in the growth of the gross national product.

"The substantial reduction in the exchange reserves since the re-valuation of the D. Mark last March was due largely to special official transactions, such as advanced repayment of Government debt to the United States and other countries, and assistance to the International Monetary Fund in connection with the Fund's measures to support sterling. Lower interest rates at home encouraged German bankers to move funds abroad and increased aid to under-developed countries also had its effect on the reserves whilst towards the end of the year uncertainty over the Berlin situation was an added factor responsible for the outflow of private funds.

"Politically the Berlin crisis overshadowed all other matters in Western Germany last year and the problem created by the sealing of the boundary between Western and Russian sectors in the city remains unresolved, although fortunately diplomatic exchanges between the two power blocs continued.

"In the general elections held in the Federal Republic in September the Christian Democratic Union, the party in power, failed to get an absolute majority but, after lengthy negotiations, a coalition with the Free Democratic Party was arranged and a new cabinet took office in November with Dr. Adenauer again Chancellor.

"Our own business in Hamburg has continued to expand since we moved into new premises just over a year ago. On January 1st advantage was taken of a change in the West German banking law to raise the status of the bank's Hamburg agency to that of a branch. As a branch the Hamburg office is enabled to conduct a much wider diversity of banking operations within Western Germany than was permitted to the former agency and this dispensation will prove to be valuable to the bank in the event of changes in the direction of trade occurring should Britain join the Common Market.

III

CONCLUSION

"The unsatisfactory state of the United Kingdom's balance of payments has caused the Government to call for a renewed export drive and, as a large part of the business of the Chartered Bank Group is the financing of international trade and as our branch system extends from the eastern Mediterranean to the Pacific Ocean, we have obviously a part to play. We have a first hand and intimate knowledge of the markets of Asia and wonder at times if their promise and potential are too little known to the exporters in this country. It would be unwise for them to take for granted what may be termed the traditional markets for British goods, such as India and Hong Kong, or to view the East as one unit forgetting that each individual market has its own features. Foreign exchange is always scarce and must be spent to the best advantage, which makes exporting to the East a highly competitive business. It is obviously worth studying in view of the fact that the greater part of the world's population lives in the area and rising living standards will stimulate demand for a widening range of products. Certainly, during my tour in the East last year I had brought home to me over and over again the aggressive efforts in salesmanship made by other countries.

"Information about particular markets can be readily obtained from the exchange banks and other organisations but this is only a start. Our manufacturers must not expect to be able to sell only what they are already making. They must find out what each market wants and put themselves in a position to meet those wants. After that the all-important factor is for the manufacturer to be able to meet price and delivery dates in a competitive market, and to arrange finance on terms acceptable to the buyers and equal to those of rival exporters abroad. At the moment much of the export trade is handled by a relatively few large organisations, and for them the Government and banks have progressively made suitable export finance terms available, but more could be done to assist medium-sized and small manufacturing concerns to develop profitable export business. I feel sure that the Export Credits Guarantee Department, which is always helpful and forward-looking, will, with the banks in this country, evolve a scheme to meet the problems of these smaller manufacturers and encourage them to sell abroad."

THE BIG HURRY IN THE WORLD OF ASTRONOMY

Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded: the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

CHAIRMAN'S SPEECH

THE ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

A YEAR OF ACHIEVEMENT—THE PROBLEM OF EXPORTS

Speech delivered by the Chairman, Mr. A. R. Foster, at the Twenty-fifth Annual General Meeting held at Calcutta on Thursday, the 22nd March 1962.

"LADIES AND GENTLEMEN,

"The audited accounts and Directors' report have been in your hands for some time and with your permission I shall take them as read.

"An examination of the accounts will show that the year just passed has been a record one for the Company. Compared to the previous year, there has been a further substantial improvement in turnover and profits, with important contributions from polythene and paints.

Production

"You may recall that in the previous year the polythene plant achieved a production of 4,000 tons against the designed capacity of 3,500 tons. The performance of the plant in the year under review was even better and a total of about 4,700 tons was produced, the increase being due largely to enthusiasm on the part of the technical staff at the plant and continued application of work study methods. Paints production also continued to rise, and would have been even higher, were not production hampered by a shortage of raw materials, which was aggravated by a reduction of import quotas. To overcome the problem, we are increasing our efforts to obtain raw materials from indigenous and rupee sources; whilst a measure of success has been achieved, supply difficulties still hamper production from time to time.

"The other plants at Rishra have also contributed their share to the Company's prosperity and a reference to their performance has been made in the Directors' report.

Sales

"Our sales over the year have reached the record figure of Rs. 6.6 crores as against Rs. 5.4 crores in the previous year. This substantial increase in the volume of our sales would not have been possible without the strenuous efforts of our Selling Agents, Imperial Chemical Industries (India) Private Limited, and the technical services provided by them, and I wish to record our appreciation of their splendid achievement.

"Wherever possible, although the cost of wages and raw materials has risen appreciably, we have reduced our prices in order to pass on the benefits flowing from the increased scale of manufacture to customers. As an example, we reduced the selling price of polythene three times in 1961, making a total of five reductions since the plant started production in 1959.

"Our returns on caustic soda and chlorine, however, continue to be low, partly due to the price ceiling imposed by the Government and partly on account of the rise in the cost of salt, coal and power.

"During the year, excise duties were levied for the first time on polythene and caustic soda and existing excise duties on most of our paint lines were increased. The excise bill for the year shows a rise of nearly 30 lakhs over the previous year. It has not been possible for the Company to absorb all of this substantial increase in manufacturing expenses and a part has had to be passed on to customers.

Exports

"During the year goods worth several lakhs of rupees were exported to neighbouring countries. This is a beginning and we are hopeful of improving our export performance. We are fully alive to the magnitude of the country's foreign exchange problem and of the urgent need for greater exports. It is your Company's intention to do its best to help in Government's export drive. I must point out, however, that the capacity of the relatively young and small chemical industry in this country to play a major part in exports is limited. The chemical industry is essentially one in which large units are needed to achieve low-priced production. Our industry is developing well, but its units are still small by world standards, and we are a long way short of the size necessary to enable us to compete in world markets.

"India must indeed increase her exports, and it is encouraging that Government are considering experimenting with various methods of providing incentives. But we must not overlook that other countries are doing likewise, and there is a danger of a race beginning as to who can provide the best incentives. Long-term, I am convinced that it is in India's best interests to concentrate on increasing her exports of those products for which she has natural advantages, and these are the traditional ones supplemented to an increasing extent by iron ore, steel, etc. These are the industries where the biggest expansion of exports can be expected, and they must be given every encouragement to operate at maximum efficiency and productivity.

Appropriations

"As you will have seen from the accounts, our profit before tax has increased by Rs. 12 lakhs to Rs. 141 lakhs. Tax on the current year's profit is Rs. 52.5 lakhs, a considerable increase over last year's figures because in that year the Company enjoyed substantial tax relief in respect of the development rebate allowances relating to the polythene plant.

"The amount available for appropriation is Rs. 90 lakhs and in the light of these satisfactory results, your Board considers it is justified in recommending that the dividend on the ordinary shares be increased to Rs. 1.50 per share.

"In its efforts to maintain a progressive but consistent dividend policy, the Board has allocated Rs. 26.5 lakhs to dividend equalisation reserve, bringing the total on that account to Rs. 46.5 lakhs. I am sure you will agree that it is essential to safeguard in this manner the maintenance of your future dividends.

"Rs. 14 lakhs has been transferred to general reserve. This is a further provision towards retaining in the business funds with which to assist in financing the projected expansion programme of the Company, with which I shall now deal.

Major Expansion Plans

"With the increasing demands for our products both in the industrial and consumer fields, we have been giving close attention to the question of securing a fair share of the growing markets by expanding output from existing units and establishing new ones.

"Construction on the site for the Rubber Chemicals Project is proceeding at a satisfactory rate and it is expected that the plant will go into production within the next 12 months.

"The Company's Paints Plant has for some time been operating at high capacity and an application is now pending with the Government for permission to expand capacity. In view of Government's desire that expansion be achieved without sterling finances, we are investigating the possibility of obtaining raw materials and machinery from rupee sources and of getting more plant fabricated in India.

"Construction work in connection with the Intermediate Density Polythene Plant, which it is proposed to set up at Rishra to increase production of polythene, has been held up due to delay in obtaining the Capital Goods Licence from the Government. I am glad to say this licence has now been received so that arrangements for design and procurement of plant can now proceed.

"In all these projects and expansions, we are grateful for the encouragement and technical assistance provided by our associates in the U.K., Imperial Chemical Industries Limited.

Staff and Workers

"In view of the rapid progress in technology in other developed countries, it is necessary that our technicians are up-to-date in their knowledge of skills and standards elsewhere. To achieve this, selected members of our staff have been sent overseas for training with our associated companies in the United Kingdom and Australia, whose help to us in this respect has been most valuable.

"Throughout the year your Board's efforts were directed towards improving communication and consultation with our employees in order to maintain our good relations with them, and there now appears to be a greater awareness and appreciation amongst increasing numbers of our workmen that their prosperity is intimately tied up with that of the Company and that to achieve this, effective and willing co-operation is indispensable.

"Following the expiry of the last long-term agreement, we were able to reach, shortly after the end of the year under review, a five-year agreement with the recognised employees' union in conciliation proceedings before the Labour Commissioner, West Bengal. This is the first time that a five-year agreement has been reached in the area and your Board hopes that this will usher in an atmosphere of mutual confidence and understanding, which are so essential for the healthy growth of the Company.

"We are supporting the Workers' Education Scheme organised by the Government of India and our workers have for some time past been receiving training under this scheme.

"We have also continued to promote the recreational activities of our workmen and to provide them with amenities for their welfare.

Directors

"Before turning to the business on the agenda, I must refer to the sad death last year of Mr. J. M. Lall, the late Chairman of the Company. Mr. Lall had presided over the affairs of the Company for only three years, but in that short time he made his presence felt and played a commanding part in all the activities of the Company. With his untimely death, the Company, and indeed, the country sustained a very great loss.

"Another loss suffered by the Company was in the death last November of Sir B. P. Singh Roy, who had been a Director since 1949. His guidance and wise counsel will be sorely missed by his colleagues on the Board.

"Mr. F. G. Lamont, who retires by rotation at this meeting, is not seeking re-appointment. Throughout the period of five years that he has been a Director of the Company, his advice and assistance, particularly on technical matters, has been of very great value to his colleagues on the Board, and it is my pleasant duty to record our thanks for all that he has done.

"Mr. C. E. J. Crawford resigned last year from the Board after having served as a Director for nearly 15 years, and I would like to express the Board's appreciation of the valuable services he rendered during that period.

"Mr. B. R. Goodfellow and Dr. S. B. Cormack have also retired as Directors after many years on the Board and my colleagues and I wish to thank them for the great help they have given in dealing with the problems that have arisen over the years.

"Mr. C. A. Pitts and Dr. E. C. Fairhead retire by rotation and their re-appointment is recommended.

Auditors

"The Company's Auditors, Lovelock and Lewes, retire and have expressed their willingness to be re-appointed at the same remuneration as last year, namely, Rs. 16,000 plus out-of-pocket expenses.

Silver Jubilee

"The silver jubilee of the Company's incorporation will take place on 8th December 1962 and it is your Board's intention to celebrate the occasion in a fitting manner. It is interesting to recall that the Company commenced production on 4th April 1940, when its Caustic Soda/Chlorine Plant went into operation, and our profit in the following year was just over Rs. 2 lakhs.

"We have come a long way since then and we look forward to the future with confidence and resolution.

"And now, before I invite questions from you, I want to thank all of you who have found the time to be present here today."

(NOTE: This does not purport to be a record of the proceedings.)

UNITED BANK OF INDIA LIMITED

CHAIRMAN, DR. N. N. LAW'S SPEECH AT ANNUAL MEETING

NEED FOR MAINTAINING HIGH LEVEL OF LIQUIDITY STRESSED

ONCE again, Dr. N. N. Law, Chairman of the United Bank of India, has emphasised the urgency of maintaining a fairly high level of overall liquidity by the banking system. Addressing the shareholders of the Bank at their Annual General Meeting held at Calcutta on Monday, 26th March 1962, Dr. Law declared that the need for maintaining a reasonable liquidity was particularly important in a developing economy which inhered various contingencies that could not always be forecast with certainty. If the required liquidity had to be preserved, it was necessary, he said, that the income differential of banks must go up without unduly making bank money dearer to producers of goods and services.

The following are excerpts from the speech of Dr. Law:

Bank's Working

"The results for the year 1961 speak for themselves. Deposits have grown by 13.8 per cent over the last year and compares favourably with the rise of 5.2 per cent for all scheduled banks and 10.7 per cent for scheduled banks excluding the State Bank of India. The rise has been well distributed throughout the year, enabling the Bank to add to its investments portfolio and to meet the significant demand for advances without strain. In addition, as in the previous years, your Bank remained a free lender in the call money market in Calcutta almost throughout the year.

"The average ratio of advances to deposits was 68.6 per cent, as against 65.9 per cent in 1960. Of the total advances, 62 per cent was to industries and 28 per cent to trade and commerce; the comparative figures for 1960 were 66 per cent and 26 per cent, respectively. Our advances to industries include those to the small-scale industrial units, aggregating about Rs. 2 crores. You would recall that, in 1960, I informed you about our decision to establish a special section for handling such proposals from small-scale units as could not be entertained in the normal course by our advances department. I am glad to mention here that the section has since been organised and is doing good work in assisting such of the small-scale industrial units as need special attention.

"You have, no doubt, been pleased to note the change in the Bank's dividend trend, made possible by the results of our past years' working. It is recognised that you had to wait for ten years before the turn could take place. But, I hope, you will appreciate that a period of ten years is rather short even in the life of an altogether new bank. This is more so in the matter of consolidating the amalgamation of rather old banks. Amongst various factors, the weight of large overheads, with all its complications, hung on us as a dead load. It was only through extraordinary efforts that the position could be stabilised, and the Bank is thankful to its patrons for enabling it to make these efforts, which, I am happy to say, have further strengthened the Bank's position.

Rate of Interest On Deposits

"In the general sphere of banking business, the obsession of banks with rate of interest on deposits has already raised complications. Higher rates are now being offered on deposits which more rightly should be classified as 'demand.' Facilities for withdrawal on demand (or at very short notice) and a high rate of interest go ill together. There is an urgent need that the nomenclatures of different categories of deposits should be precise and adhered to.

"The unrealistic emphasis on rate of interest has brought about a situation in which the Inter-Bank Agreement, on the rate of interest on deposits, recently came under severe strain; some of the banks considered it to be inequitable for them to be bracketed with larger banks as far as the rate of interest is concerned. Fortunately, however, I am told, the impasse is now over and a settlement has been reached. What, however, is most important to remember in this connection is that, as long as the banks continue to overemphasise the importance of the rate of interest, such situations are bound to occur now and again. It is time that we realised the danger of trying to perpetuate such an unrealistic approach towards developing deposits.

"There may be stray individual cases where growth of deposits might have followed a rise in interest rate, but, if the position is thoroughly analysed, it will, I am sure, be found that such growth has been by way of diversion from other banks rather than by attracting fresh deposits from outside the banking system. When every bank is in a position to compete with another, such gain for an individual bank will ultimately be found to be of only a temporary nature. In such a scramble, however, the net result is that an avoidable additional load is added to the already high operating costs of banks, with no corresponding benefit either to the banks themselves or to the economy at large. I would, therefore, urge on the experienced bankers of the country to give this matter a closer thought.

"Interest rate has only a limited significance in the overall growth of deposits in the banking system as a whole. More important are the quality and efficiency of service and availability of banking facilities. Bank deposit is not to be equated with investment. There is hardly any real outside competition for deposit money.

Deposit Insurance

"During the past year, banking authorities have taken two very significant steps in the field of banking. A scheme for insuring bank deposits has been initiated and steps have been taken to strengthen the capital base of banks. Both these measures give us satisfaction, inasmuch as the ideas were categorically sponsored and supported by us. I dealt at some length with deposit insurance in the past and, you will recall, last year, I also emphasised the need for strengthening the capital base of banks. The measures, however, have significant limitations calling for further study.

"When the Deposit Insurance Bill was introduced in the Parliament, statements sponsoring the Bill seems to have visualised a scope much wider than what would actually result from the implementation of the Act. While the interest of the depositors has been safeguarded, no scheme appears to have been devised to ensure that the small banks in the country can develop and continue to render uninterrupted service. This is very important. Bank borrowers are engaged in genuine production of wealth in one form or another and create employment. It is thus essential in the interest of the economy that the business of these borrowers is not hampered on account of any strain that may be felt by their banks. Unless the smaller banks can be assisted to develop and to work effectively even in the days of strain, the economy will continue to suffer from uncertainty with which the borrowers of these banks will be faced.

Capital Structure

"Coming to the convention that has been established with regard to the capital base of banks in relation to their individual deposits, I welcome the stand taken by the Reserve Bank in this matter. A target has been indicated and a minimum accretion to owned funds has been ensured. I, however, feel that the scheme has been rather inadequate, not to speak of its being self-sufficient.

Liquidity

"Linked with the subject of capital structure of the banks is the question of liquidity. I raise the issue, as I did also last year, not so much to emphasise the formal liquidity as to draw attention to the need for an overall liquidity in the banking system, as well as the liquid character of the Bank's assets. The need for maintaining a reasonable liquidity becomes particularly important in a developing economy, which inheres various contingencies that cannot always be forecast with certainty.

"If the required liquidity has to be preserved—this applies both to the individual banks and to the banking system as a whole—it is necessary that the income differential of banks must go up without unduly making bank money dearer to the producers of goods and services. While maintaining a reasonably liquid position, the need for using the cushion available may arise either in consequence of depreciation of assets, namely, investments and advances, or owing to occasional sharp rises in banks' operating costs or as a result of changes in the bank rate. Further, banks are now required to explore in uncharted fields and are bound to be faced with higher overheads—all these, again, point to the need for raising the ability of banks to add to their internal strength.

Bonds Market

"Since the state of liquidity in the banks' assets, to a large measure, is dependent upon the state of the bonds market and the pattern of financial management in the corporate sector, a treatment of these two aspects is relevant at this stage. The market for Government bonds still continues to be rather limited. On many occasions, we have raised this point and a detailed discussion was made in our banking plan. We consider it necessary to formulate a scheme, under which banks could work as distributors of Government bonds. As long as subscription to the Government bonds by the public reduces bank deposits, the banks cannot be expected to take initiative in dispersing the loans far and wide. On the other hand, the object can be achieved by making specified commercial banks (and such of the co-operative banks as are not sustained by Treasury loans), the exclusive bankers to the Union and State Governments, with an arrangement that collection by way of sale of bonds or of tax money through them will remain in deposit with the concerned banks.

Corporate Financing

"Shiftability, or extinguishment in due course, of a bank credit will depend on the overall effective liquidity in the economy. Such overall liquidity, again, is dependent, amongst others, on the capital base of the corporate enterprises and their profitable functioning. The capital base of these corporations thus need be adequately broadened.

"Last year, I drew your attention to what was said by the Chairman of the I.C.I.C.I. and the then Governor of the Reserve Bank about the propensity to depend too much on borrowed capital right from the beginning of an industrial venture. Such an approach is fraught with grave dangers. Firstly, despite all plans and programmes, many contingencies do remain unobserved when a project is launched. The capital base should be adequate to take care of such contingencies, as and when they occur, so that the technological and operational expectations can smoothly be fulfilled. Too much dependence on borrowed capital, at this stage, may put the entire project out of gear. In such a state, the lender also gets involved and is put to severe strain.

"Secondly, in order to ensure profitable functioning, the industry must be able to modify or expand the project even at an early stage. Also, in view of the quick technological progress being achieved in different parts of the world, every industry must be prepared to be able to modernise their capital equipments at short intervals. With an adequate initial capital base, it should not be difficult for an industrial undertaking to seek credit facility at these stages of expansion or modernisation. But here also, the approach should be to obtain credit as a bridge-over to serve the intermediate stage only before further capital is raised from the market.

Term Financing

"This brings me to the question of term lending by banks. It is a matter of satisfaction that the age-old abhorrence to mixed

(Continued on page 583)

IRRIGATION AND POWER IN THIRD PLAN

UNION MINISTRY'S ACTIVITIES IN 1961-62

ALTHOUGH the State Governments alone are primarily responsible for the planning and execution of irrigation and power projects, the Central Government, too, discharges an important function through its Ministry of Irrigation and Power. This function pertains to the co-ordination of the activities of the State Governments for ensuring the proper development of the irrigation and power potential of the country. The Central Water and Power Commission, working under the Ministry, has been effecting the required co-ordination all these years and progressively enlarging its activities. In the year under review, namely, 1961-62, for instance, two Liaison Units—one at Bangalore and the other at Delhi—were set up to effect proper liaison between the Commission and the State Governments in the matter of the formation of Central Mechanical Units. Earlier, in 1960-61, a special unit was established in the Commission to undertake technical examination of the soil conservation schemes drawn up by the State Governments, watch the progress of the soil conservation measures in river valley catchments and ensure proper co-ordination between the States in this respect.

Power Wing

To reduce progressively the dependence on foreign consultants and minimise expenditure involving foreign exchange, a new organisation has also been set up in the Power Wing of the Commission. This organisation has been charged with the responsibility of handling specialised work relating to engineering, designs and erection of large thermal and hydro power stations. It is expected that, by 1964, the new organisation would be well established so as to be in a position to undertake actual work of erection. The expenditure incurred on the maintenance of this organisation, which will function as a commercial unit would, in due course of time, be recovered from the State Governments and other agencies availing themselves of its services. At present, it is doing specialised work relating to the Neyveli Project (Madras), the Naharkatiya Power Station (Assam) and the Pathratu Thermal Station (Bihar). Another separate unit, known as "super grid cell", has also been functioning in the Commission since July 1961 for undertaking the work in connection with planning and establishment of super-grids. It would thus appear that the Union Ministry of Irrigation and Power, through its Water and Power Commission, has enlarged its activities in recent years beyond mere co-ordination. This is the impression one gets from a perusal of the Irrigation and Power Ministry's report for 1961-62.

Utilisation of Irrigation Potential

The report is also notable for the figures given therein in regard to the creation and utilisation of the additional irrigation potential. It is claimed in the report that, thanks to the measures taken to speed up the utilisation of irrigation potential created by major and medium projects, there was a marked improvement in such utilisation towards the latter half of the second Plan period. The following table, taken from the report, throws light on the irrigation benefits accruing from the first and second Plan schemes:

End of the year	Potential at channel outlets (in million acres)	Gross area irrigated		Net area irrigated (in million acres)
		(In million acres)	Percentage of potential at outlets	
1955-56	6.5	3.1	48	2.9
1956-57	7.4	4.2	58	3.4
1957-58	8.2	5.8	71	4.9
1958-59	9.7	6.5	67	5.9
1959-60	11.5	8.3	72	7.4
1960-61 (estimated) ..	13.0	10.0	76	9.0

If the Ministry's claim is to be believed, the total irrigation potential remaining to be utilised at the end of the second Plan was only about 3 million acres. Again, if the tempo of utilisation is maintained at the same rate in the third Plan period, the additional utilisation is expected to be as much as 12.8 million acres out of the 16.2 million acres (13.8 million acres from the continuing schemes and 2.4 million acres from new schemes) of additional irrigation potential to be created during that Plan period. It may be noted, in this connection, that the third Plan programme for irrigation will involve an outlay of about Rs. 600 crores.

The installed generating capacity in the last year of the second Plan, it may be recalled, reached the level of 5.7 million kw. But this was short of the target by 1.2 million kw. Under the third Plan's power programme, which will involve an aggregate outlay of Rs. 1,040 crores in the public sector and Rs. 50 crores in the private sector for taking the aggregate installed capacity to 13.4 million kw. in the end-year of that Plan, the actual progress in 1961-62 does not seem to be quite satisfactory. According to the Ministry's report, the estimate of additional generating capacity commissioned during the first year of the Plan is only 595,000 kw. Although this achievement does not fall very much short of that year's target of 600,000 kw. by way of additional capacity, it has to be noted that even a small part of the second Plan's shortfall of 1.2 million kw. has not been made good. No wonder, therefore, that power shortage continues in an acute form in several parts of the country.

There is mention in the Ministry's report about the study team which was set up during the year under review for ensuring the implementation, according to schedule, of the power development schemes of the third Plan. This team visited the various States towards the end of 1961 and discussed with them the progress made, the difficulties being experienced in procuring materials, equipment and spares for each scheme and the action to be taken to overcome bottlenecks at various stages. It is expected that, in pursuance of the recommendations of this team, more energetic steps would be taken in the second year of the Plan to expedite the execution of power schemes. Already most of the Sachdev Committee's recommendations pertaining to the additional power requirements of the industrial areas of Bihar and West Bengal were recently accepted by the Government. Another noteworthy development is that the work of detailed load survey undertaken by the various States is being reviewed and consolidated by the Central Water and Power Commission in order to assess more accurately the power requirements of the various regions of the country. It is proposed to review periodically this load survey so as to cover the additional power demands arising from time to time.

River Boards

The constitution of river boards for a number of inter-State rivers may also be expected to deal more effectively not only with the problems of irrigation but also with those of hydel power generation. Already the Union Ministry of Irrigation and Power has addressed the State Governments concerned with such rivers as the Mahanadi, Narmada, Tapi, Mahi, Krishna-Godavari, Sutlej, Beas and Ravi, Yamuna, Cauvery and Ajoy on the subject of establishing river boards. The States concerned with the Mahanadi, Narmada, Tapi and Mahi have so far communicated their readiness to set up river boards for these basins. When the other States concerned with the remaining rivers also follow suit, a big forward step will have been taken in the direction of optimum utilisation of the rivers in question by settling amicably and expeditiously inter-State differences which would otherwise delay plan implementation and thus hold up progress.

TRANSPORT DEPARTMENT'S REPORT

The latest administrative report of the Department of Transport of the Union Ministry of Transport and Communications, namely, that for the fiscal year 1961-62, provides a review of developments and decisions pertaining to roads and road transport, major and minor ports, shipping, inland water transport and tourism.

To take road development first. It is seen from the report that the actual road programmes included in the third Plan will involve an aggregate outlay of about Rs. 324 crores, as against the present provision of Rs. 271 crores. The break-up of the former figure is as follows:

	Rs. crores
Central sector:	
National Highways	48.5
Roads in Sikkim	1.5
Central aid for State roads of inter-State or economic importance ...	30.0
State sector:	
States	218.3
Union Territories	25.7
Total ...	324.0

Efforts will be made, it is stated, to provide funds for the implementation of the above programmes according to the annual budgetary position. The development credit of Rs. 29 crores granted by the International Development Association in June 1961 for the improvement of National Highways in Bihar, West Bengal, Orissa and Maharashtra will raise the overall road programmes ceiling from Rs. 324 crores to Rs. 353 crores.

As for road transport in the public sector, a provision of Rs. 26 crores has been included in the third Plan for the expansion programme of the nationalised road transport undertakings. In addition, a provision of Rs. 10 crores has been made in the Railway Plan for contribution to the capital of Road Transport Corporations.

Central assistance for port development in 1961-62 was rather modest, though it is scheduled to increase further in 1962-63. Provision in the capital Budget (Revised) for 1961-62 for expenditure on the Kandla Ports Project, Gandhidham Township Project, capital works at Visakhapatnam and preliminary work connected with Mangalore and Tuticorin development aggregated Rs. 2.58 crores. In addition there was a provision of Rs. 3 crores for loan assistance to the port of Calcutta. The capital budget for 1962-63 contains a provision of Rs. 3.68 crores on account of Kandla, Gandhidham, Visakhapatnam, Mangalore and Tuticorin. In addition, a provision of Rs. 4.5 crores has been made for the grant of loans to the major ports of Calcutta and Cochin. As for minor ports, schemes costing Rs. 10.8 crores for their development have been included in the third Plan. The provisions in 1961-62 and 1962-63 on their account are Rs. 31 lakhs and Rs. 70 lakhs, respectively, for grant of loans to the State Governments for execution of approved schemes.

In the sphere of shipping, according to the report, the total Indian-owned tonnage as on 1st November 1961 stood at 900,000 g.r.t. as against 850,000 g.r.t. at the end of December 1960. On the allocation of Government cargoes to Indian shipping the report contains the following observation:

"The Shipping Co-ordination Committee continued its efforts to allocate considerable volume of Government-owned/controlled cargoes to Indian shipping. The Chartering Organisation which has now started functioning effectively has done useful work by chartering foreign ships at economical rates when Indian ships are not available for carriage of Government cargoes. During the calendar year 1961, out of a total quantity of 947,179 tons of cargo for which this Shipping Co-ordination Committee and the Chartering Wing have been asked to arrange shipping space, it has been possible to allocate cargoes to Indian ships to the extent of 413,551 tons. During the same period, the foreign tonnage fixed by the Chartering Wing, against the above total, comes to 295,819 tons."

In the public sector, the Shipping Corporation of India Ltd. has drawn up a substantial expansion programme. In addition to its 20 vessels aggregating 148,000 gross tons, the Corporation has under construction or on order another 11 vessels with the Hindustan Shipyard. These vessels would provide an additional gross tonnage of about 100,000. It is expected that these vessels would be delivered before the end of the third Plan and that, by that time, the total tonnage of the Corporation would be about a quarter million gross tons.

Schemes costing Rs. 6.6 crores for inland water transport have been included in the third Plan, while the financial provision is restricted to Rs. 4 crores. Tourist development has been allotted Rs. 8 crores in all in the Central and the State sectors in the third Plan period. Thanks to this outlay, the annual foreign exchange earnings from this source is expected to go up further from the 1960 level of Rs. 20.6 crores.

NEW STEELWORKS IN WALES

The new £200-million Spencer steelworks of Richard Thomas and Baldwins at Llanwern, near Newport (Wales), is expected to be commissioned in June next, although it will be formally opened by Queen Elizabeth only on 26th October 1962.

In its first stage of production, the plant will employ between 5,000 and 6,000 men and will be the only steelworks in the world to use exclusively the "L.D." process of refining iron—by top-blowing pure oxygen into vessels containing molten iron. Initially, the plant is to produce 1,400,000 tons of steel ingots annually, but its total capacity will be 4,000,000 tons a year.

CRANE FOR GENERAL DUTIES

A new mechanical mobile crane with a 7-ton capacity has been produced by K. & L. Steelfounders and Engineering Ltd., Letchworth, Hertfordshire, England, to meet the demand for a competitively priced fast operating unit for general duties.

With full-circle slewing, it is powered by a radiator-cooled diesel engine with electric self-starting and variable speed control operated from the driver's cab. Travel, winch (with engine controlled lowering), derrick and slew motions are independently operated and reversible. The crane is mounted on a self-propelled chassis with four steel restrictor wheels and pneumatic tyres, 4-wheel brakes, power-assisted automatically-corrected steering and differential drive.

A special feature is the power take-off unit which incorporates the clutches for all motions. These are uniform in size and type and readily accessible for adjustment.

NEW PRODUCTS AND PROCESSES

Natural Rubber "Phantoms"

NATURAL rubber "phantoms" to simulate the human body are the latest aid to the study of radiation. By exhibiting similar X and Gamma rays absorption characteristics to living tissue they allow practical measurement to take the place of theoretical calculation. The "phantom" technique, developed by the Natural Rubber Producers' Research Association in conjunction with the Institute of Cancer Research, is arousing considerable interest in Great Britain and is looked upon as a major medical advance, reports the Natural Rubber Bureau in its journal *Rubber Developments*. The use of radiation for medical applications such as diagnostic radiology and radiotherapy has become increasingly widespread in the post-war years. This is mainly due to the introduction of more efficient high energy radiation machines and the availability of large numbers of radioactive isotopes produced by nuclear reactors. As a result an urgent need has arisen for more accurate means of measuring dosages given. It had also become essential to examine in detail the effects of uncontrolled amounts of radiation released as a result of nuclear explosions. Excess radiation can be extremely harmful and the direct measurement of radiation absorption within the body presents a number of problems and is limited to only a few sites. Using a sectionalised rubber phantom, however, measuring instruments can be positioned at will.

A specially compounded natural rubber, the radiological equivalent of human tissue, has been developed which can be cast in a mould with little or no shrinkage, is resistant to a wide range of chemicals, is capable of withstanding repeated sterilisation, and which is unchanged by exposure to high levels of radiation. The difficulty of reproducing bones for the phantoms has been overcome by using dried human bones. When impregnated with the rubber compound these revert, radiologically speaking, to the living equivalent. In casting a body phantom containing a bone structure the impregnation of the bone can be carried out by filling the mould, with the dry bones in position, under a vacuum of around 30 in. of mercury. When the vacuum is released the bones are automatically impregnated and correctly sited in the phantom. The provision of cavities within the castings, simulating natural body cavities and providing spaces for the insertion of measuring instruments, is simply a matter of including removable inserts in the mould. Rubber phantoms will find an immediate application in the more accurate and speedy assessment of techniques for the treatment of certain diseases by radiation, therapy, and may well lead to the successful treatment of a greater number of patients in a given time. They will also yield valuable information when exposed to radiations of the same intensity as those associated with nuclear explosions—for data obtained from phantom reaction is directly translatable to the living body.

Electro-chemical Printing on Metals

A new and extremely simple process has been developed in the U.K. for surface-printing metals by means of stencils which can carry a type-written message, a drawing or even a photograph. Applicable to almost all metals including steel, stainless steel, copper, brass, aluminium. tungsten, etc., the process results in characters or drawings which remain clear even when the metal bearing them is galvanised, case-hardened or heated to 600°C. To apply the process, a stencil is typed out and then placed on a sheet of felt soaked in an electrolyte which is laid on the surface of the metal to be printed. An electric current is passed through the surface of the stencil for six seconds to produce an impression. A generator is provided for direct or alternating current up to 10 or 20 volts. Alternating current with one electrolyte gives a black impression; direct current produces white texts, etc., while if the polarity is reversed, deep etching results. The safety and simplicity of the system makes it easy of application even by semi-skilled labour.

Electronic Micro-scales

Multi-purpose scales are being marketed in Britain for gravimetric, chemical and physical research applications. A major advantage claimed for them compared with conventional mechanical scales is that all results can immediately be recorded on print-out equipment which is generally available. Operating on the basis of electrical compensation, typical applications of the scales are in the determination of weight changes during analyses of evaporation behaviour or of process residues in the petroleum and paper industries, as well as in the preparation of semi-conductor materials. Two designs are available—both with a maximum capacity of one gramme—steps ranging from 0.1 to 10 milligrammes and from 0.2 to 20. Margin of error is within ±0.5 per cent while accuracy can attain ±1 or ±2 micro-grammes, according to design.

Rotary Dryers

The wide range of rotary dryers manufactured by a British firm and successfully used in over 180 applications in the mining, chemical and allied industries, has been extended with the introduction of a fluidised bed dryer. It is not suggested that the fluid bed dryer is the answer to all drying problems, but it is possible to extend its application beyond the field to which it was restricted until fairly recent years. A large pilot plant fluidised bed dryer is in operation at the company's laboratories. This plant has been designed as a flexible unit for the development of more efficient and trouble-free dryers, and for large-scale test work on unusual or difficult-to-handle materials. If necessary the plant can be operated by recirculating and rewetting the dried product in order to make extended test work possible without the necessity for very large samples. This dryer incorporates several novel features resulting from extensive investigations. The geometry of the bed itself is such as to minimise any possibility of build-up of sticky or caked material.

Electrical Level Indicator

A new device likely to be of value to research and development workers is designed for accurate levelling indication and control. It uses as a sensing head an electrolytic cell of novel design, in which the displacement of a bubble in a conducting liquid is monitored by means of three electrodes arranged within the cell so as to constitute a potential-divider in an alternating current bridge circuit. This instrument has been developed jointly by G. V. Planer Ltd., and English Electric Aviation Ltd. It is capable of discriminating displacements from the horizontal of less than one second of arc, and it has a long-term stability of within ten seconds of arc. This device is particularly suited where remote indication is needed. Especially valuable are its simplicity and robustness, and its immunity to the shock imitations which impose themselves on pendulum devices. The equipment, which is portable, is battery-operated and has a transistorised control unit.

Automatic Sisal Cord Tying Machine

An automatic sisal cord tying machine which will place two parallel ties round a bundle in one quick operation is now available from Automatic Strapping Machines, of Ealing, London, W.5. The machine, which is claimed to be capable of tying bundles and packages of all descriptions and of almost any size or shape, uses both light and heavy sisal cord. To operate, it is only necessary to place the article to be tied against the cord and depress the foot pedal, says the maker. No adjustment has to be made for bundles of various sizes and spacing between the two ties can be varied.

Inexpensive Coating for Steel

When steel is heated in a carbon or nitrogen-containing atmosphere—to give it a hard wear-resistant outer skin—some parts, notably those that are to be machined, have to be protected and kept relatively soft. A German firm claims to have developed an inexpensive chemical coating that will do this. Prepared in the form of a thick solution, the coating can be applied by painting, spraying or dipping. When this has been done the water is evaporated, leaving an unbroken layer of protective crystals. The coating can be removed by rinsing in warm water.

Invisible Sewing Thread

Now being manufactured in the United States is an "invisible" sewing thread which is claimed to take its colour from the material. It is made from clear nylon and is said to be particularly useful with plaid and multi-coloured prints. It is also claimed to be proof against tangling and to eliminate the need for changing thread.

Submerged Turbine-generator "Package"

A submerged bulb unit carrying both turbine and generator designed by Karlstads Mekaniska Werkstad and Asea respectively has for some time been operating as an additional power unit at the Skogsforsen power plant on the Atran River, West Sweden. In terms of capital cost and efficiency this type of installation is particularly suitable for semi/fully automatic power stations. The bulb-shaped unit containing the turbine and the generator is mounted concentrically in a tubular shell which forms a conduit for the water. The KMW turbine, which has a rated output of 3,600 kw. at an effective head of 46 ft., has conical guide-vanes and a horizontal shaft runner. This arrangement gives a virtually axial flow through the turbine and is claimed to result in an appreciable improvement in efficiency compared with that of a power unit of conventional design. The generator, which is a horizontal synchronous machine with a rated output of 4,250 kVA, differs from the conventional design in several respects. It has somewhat unusual proportions, the external diameter being restricted by the requirement that the dimensions of the annular flow path should not greatly exceed the diameter of the runner. The manner of cooling the machine is also unconventional, the heat losses being partly conducted away through the stator casing to the water, partly by cooling air circulating axially through the machine and giving its heat to the upstream cone, which has been specially designed to act as a heat exchanger. Access to the interior of the unit, which has an outer diameter of 7 ft. 10 in. and an overall length of 29 ft. 6 in., is through two shafts, fore and aft of the generator. There is sufficient space in the power unit to accommodate several persons for inspection and maintenance. The entire unit is automatic and is operated by remote control from the power company's load-despatch station just south of Gothenburg, 60 miles away from the power plant.

Plastic Stamping Blocks

A Dutch firm at Holland is marketing stamping blocks made of a hard, but nevertheless slightly resilient plastic. During stamping this plastic is indented and laterally distorted, but flattens out immmediately afterwards. The blocks do not crumble or splinter. The use of these blocks ensures that the stamping cutters are subjected to less wear and do not develop the annoying tendency to spring back. Materials such as leather, paper, cardboard, fibreboard and hardboard can be cut well and cleanly on these blocks. Ragged edges are virtually eliminated.

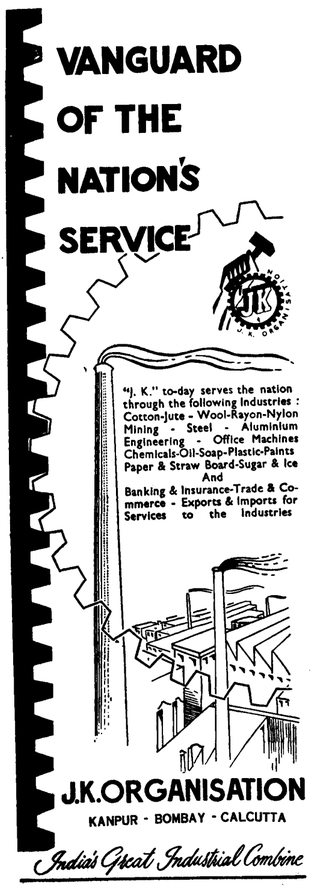
The factory manufactures blocks in all dimensions and in thicknesses of 20 and 35 mm (0.8" and 1.4"). Blocks in other thicknesses can also be supplied to order.

Cable-laying Machine

A tractor-mounted cable-laying machine which, it is claimed, overcomes many of the inherent problems of the operation, has been produced by a British firm, T.T. Boughton and Sons Ltd., Buckinghamshire. When long and heavy cable is being hauled through a pipe, its own weight may set up a damaging strain. This problem is dealt with by the incorporation into the system of a preset pressure release valve which automatically releases the pull on the cable when the strain builds up to the danger point. The valve is set against a specially calibrated gauge for the cable in use. Frequently damage is caused in cable hauling operations by sudden and uneven hauling. This is obviated by the use of a hydraulically operated two-speed, ten-ton bollard winch giving the operator fine, smooth control. Winch control is by means of a two-way valve allowing for full-torque operation variable over the entire speed range. The hydraulic pump and motor are driven by a simplex chain from the pulley position on the tractor. In use, supporting legs are lowered to the ground to carry the weight of the machine and the cable. These are folded away for travelling, when the machine can be carried at the top speed of the tractor.

Computer Control

A new computer system which from two or three relatively small "cabinets" can run an entire chemical, oil, electricity or steel plant, has been announced by a Middlesex firm, International Control System. Designed for industrial processes, the computer has a storage memory up to 130,000 words, a high total among comparative equipment. A programme for running a continuous production plant is written up and put through a small machine which converts it to punched tape. This is fed to the computer which can control several hundred points. In its two main stages, the equipment can first be installed to monitor and submit a "return" on the plant's processes and then further equipment can be brought into play which directly controls operations. At all stages the computer consistently monitors operations and can scan 128 points in 1/25 of a second. It also checks its own circuitry.



THE UNION BANK OF INDIA LIMITED

CAPITAL STRUCTURE TO BE STRENGTHENED

CHAIRMAN'S SPEECH AT THE ANNUAL MEETING

IN response to the Reserve Bank's appeal for strengthening the capital structure of banks, the Union Bank of India Ltd. has decided to increase its paid-up capital from Rs. 60 lakhs to Rs. one crore. A reference to this decision was made in the speech of the Chairman, Mr. K. R. P. Shroff, at the Forty-third Annual General Meeting of the Bank held on Monday, 26th March 1962. The Chairman's speech is notable for its detailed review of the progress registered by the Bank in the last year and observations on the Inter-bank Agreement on rates of interest on deposits.

The following is the full text of the Chairman's speech:

"GENTLEMEN:

"I have great pleasure in welcoming you at this forty-third annual general meeting of the shareholders of the Bank. The Directors' Report for the year ended 31st December 1961, and the audited balance-sheet and profit and loss account as at that date have been in your hands for some time and, with your permission, I take them as read.

New Branches

"The business of the Bank continued to show satisfactory progress. During the year the Bank opened nine new branches, two each in Greater Bombay, Ahmedabad and Calcutta and one each in Nagpur, New Delhi and Hubli, bringing the total number of branches to 61. In pursuance of the policy of widening our representation, it is proposed to open 12 more branches during the current year. The proposed new branches will be opened mainly in places in industrially developing areas. Our policy of branch expansion in keeping with the growing demand for banking facilities in the country has proved worthwhile, as will be evidenced from the all-round increase in the Bank's business. The encouraging response that we receive both at our old and new branches speaks not only for the confidence reposed in the Bank by the public but also for the efficient services rendered by us.

Deposits

"If you will recall, in my speech last year I had drawn your attention to a very disturbing feature in the growth of bank deposits in general. The deposits of banks had continued to rise for over a decade upto July 1960, but this growth was arrested from August 1960 and this agitated the minds of all concerned. I am glad to inform you that this downward trend has since been arrested and, during the year under review, the total bank deposits of all scheduled banks registered an increase of about Rs. 169 crores. Despite very severe competition, the figure of our Bank's deposits stood at Rs. 32.84 crores at the end of the year under review, as against Rs. 28.50 crores at the end of 1960 and Rs. 32.17 crores at the end of 1959.

Inter-Bank Agreement

"It is agreed on all sides that the Inter-bank Agreement on maximum rates of interest on deposits has been beneficial to the banking industry as a whole. The rate of growth in the deposits of the medium-size banks, however, has been lower than that in the case of both big banks and other banks with deposits of less than Rs. 25 crores. Medium-size banks like ours amongst 'A' class banks, i.e., banks with deposits of over Rs. 25 crores, are at a definite disadvantage inasmuch as under the Agreement they have, on the one hand, to compete on equal terms with bigger banks, both foreign and Indian, and on the other, on unequal terms with smaller banks (with deposits of less than Rs. 25 crores) including the subsidiaries of the State Bank of India, which enjoy the concession of quoting a ¼ per cent more on interest rates on deposits. I am glad to inform you that the Indian Banks' Association has realised and accepted the position that in the circumstances a revision of the Agreement is necessary and a Committee of the representatives of the big, medium and small banks, appointed to work out the details, has now announced its findings, recommending a concession of ¼ per cent to medium-size banks, i.e., with deposits of Rs. 25-50 crores. I feel this concession will put our Bank in a competitive position *vis-a-vis* the larger banks.

Total Bank Credit

"The Reserve Bank of India rate remained unchanged at 4 per cent during 1961. The year experienced a continuous pressure on bank credit, mainly from new and growing industries. The total bank credit expanded during the year by Rs. 105 crores and stood at Rs. 1,286 crores at the end of December 1961, and the credit-deposit ratio of all banks stood at 64.85 per cent. Banks in this country will be called upon to play an increasingly important role during the third Five-year Plan and, unless the increase in their deposits keeps pace with the demand for credit, the banking industry of the country will find it difficult to cope with the additional strain.

"Despite heavy and insistent demands for bank credit, your Directors considered it prudent to restrict the advances and, at the end of the year 1961, the advances of your Bank, including bills purchased, stood at Rs. 18.50 crores, maintaining the credit-deposit ratio at 56.3 per cent, which can be considered quite satisfactory.

Investments

"Cash on hand and balances with banks together with our investments in Government and other Trustee securities aggregating Rs. 15.26 crores bear a ratio of 46.48 per cent to the total deposits as against 42.77 per cent in the previous year. Investments in Central and State Governments and other Trustee securities stood at Rs. 8.25 crores at the end of the year. Out of these investments, 50 per cent of the securities mature within a period of five years and 45 per cent between five and ten years.

Foreign Exchange Business

"Our foreign exchange business has also contributed handsomely to our profits. While on this subject, I feel it is appropriate to inform you that the term of office of our Foreign Exchange Manager, Mr. R. J. S. Angus, whose services were so kindly lent to us by our London Correspondents, Westminster Bank Ltd., is due to expire next month. During his short period of service of four years with us, we have had the opportunity of his vast experience and the dynamic force of his executive ability in developing the foreign exchange business on a sound footing. He had done admirable work in the administration and development of our overseas business, and in the organising of our staff training, and has earned our sincere thanks. Wherever he goes our best wishes go with him.

Shortage of Trained Staff

"With the rapid growth of the banking industry which will further intensify during the third Five-year Plan, shortage of trained staff is greatly felt by banks in general. This is largely due to the fact that the banks never provided, in the past, adequate training facilities to their own staff. They are now being faced, all of a sudden, with the growth of banking habit in the country and find it difficult to cope with the increased economic activity in the country, with their present staff. This has, of late, led to piracy of personnel. This is an undesirable feature. I am glad to inform you that we are taking necessary steps to establish a school to train up our own personnel in order to cope with our increased activities.

Insurance of Deposits

"The Deposit Insurance Scheme came into effect from 1st January 1962. Although the cost will fall mainly on sound banks where the depositors do not require any insurance, the banking industry as a whole will materially benefit by the confidence which the scheme will engender in the minds of a large number of small depositors.

Further Capital Issue

"I am sure you are aware of the keen anxiety of the Reserve Bank of India to strengthen the capital structure of banks and its recent exhortation to all scheduled banks to make a conscientious and concerted effort to get the shareholders' money in business into a proper trading relationship to their deposits. Your Directors, who are in full agreement with these views, have decided to increase the paid-up capital of the Bank from Rs. 60 lakhs to Rs. 1 crore by issue of 8 lakh new shares of the face value of Rs. 5 each to the shareholders of the Bank in the ratio of two new shares against the three old shares. Necessary application in this behalf has been made to the Controller of Capital Issues, Government of India, and the issue will be made subject to conditions as may be imposed by the Controller of Capital Issues. Consequent upon this increase in the paid-up capital, the authorised capital of the Bank will be fully subscribed. Your Directors have, therefore, decided to recommend to you to increase the authorised capital from Rs. 1 crore to Rs. 2 crores.

"You are requested to re-elect three of the Directors of the Company, Messrs. Pallonji Shapoorji Mistry, Balkrishna Harivallabhdas and Gopaldas Toolsidas, who retire by rotation and, being eligible, offer themselves for re-election.

"You are also required to appoint Auditors for the ensuing year.

"I should like to record our appreciation of the services rendered by our Local Committees at Calcutta and Ahmedabad. Our relations with the staff have continued to be very cordial. It was perhaps a unique event in the employer-employee relationship in the banking industry in the country that your General Manager, at the request of the employees, presided at the first annual conference of the All-India Union Bank Employees' Federation. I also take this opportunity of thanking, on behalf of the Board and on your behalf, our General Manager, Mr. F. K. F. Nariman, for the very capable manner in which he has discharged his onerous responsibilities during the year. Our thanks are also due to the Deputy General Managers, Mr. D. A. Bijoor, and Mr. S. D. Pardiwala, and other officers and members of the Bank's staff at the head office and branches for the good work they have all done."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Or putting the above in English, importing even one camera from Japan takes a good deal of paperwork. Your Mitsubishi Bank man has the knowledge and the modern facilities behind him to help you eliminate much of this or at least speed it up. He and the Mitsubishi Bank have built a reputation over the past 67 years on their ability to give you all the banking services necessary for successful import-export operations. From paper work to market assessment and credit ratings, the Mitsubishi Bank handles all import-export and everyday banking matters quickly, expertly.

You CUT initial cost by 80% by choosing an AIRCON
EVAPORATIVE CLIMATE CONDITIONER FOR YOUR THEATRE!

Here's an almost theatrical case of reduced rates! An AIRCON Evaporative Climate Conditioner costs you only 1/3rd to 1/10th as much as an equivalent refrigerant air conditioner!

And where a refrigerant air-conditioner consumes 2000 watts per hour, AIRCON needs only 310 watts per hour-comparative running costs are less than 1/6th!

So when you want to give your theatre a welcoming air—*your most economical means is AIRCON*. If the slightest defect in workmanship or material arises in the first year, we shall service it free of charge. Please write to us for any information you may require.

FOOD PRESERVATION INDUSTRY

COST OF RAW MATERIALS HIGH

THE food preservation industry has been making fairly steady progress during the last few years, despite the high cost of raw materials like sugar and packing materials, such as bottles and cans. The output of fruit and vegetable products has risen from slightly less than 20,000 tons at the end of the first Plan to 40,000 tons in 1960-61; the industry has been set a production target of 100,000 tons in the third Plan. The increase in output has been sustained by larger domestic consumption of preserved foods and pickles, etc. Although the recent trends in production is satisfactory, the industry was not able to fulfil the production target of 50,000 tons laid in the second Plan. On the export front, too, its performance has been improving, but the pace has been disconcertingly slow. From about Rs. 42 lakhs in 1957, the export earnings from preserved fruits and vegetables have risen to just Rs. 96 lakhs in the fiscal year 1960-61. During the eight months ended November 1961, exports amounted to Rs. 62 lakhs. Considering the original intention of planners to expand exports of preserved fruits and vegetables by about ten times during the second Plan, the actual improvement noted above should be considered as negligible.

It is also distressing to note that the utilisation of fruits and vegetables by the preservation industry continues to be a small proportion of their total production. It is estimated that, at the end of the second Plan, the annual output of fruits alone was about seven million tons, as against six million tons five years back. On this basis, the average share of fruits used by the industry is less than 10 per cent of the total output. India's production of fruits is by no means large. Indeed, it is inadequate to meet even the minimum needs of its population. It may be interesting to note, in this connection, that the U.S., for instance, produces as much as 35 million tons annually, with at least 75 per cent being utilised for canning and preservation.

Development of Horticulture

Economic literature on production of fruits in India is scarce and scanty. We therefore quote below the following account on the position of horticulture from the third Plan report:

"A number of new schemes were introduced during the second Plan for the development of fruit production. These include provision of financial assistance for planting new orchards and rejuvenating old ones, as well as facilities for training gardeners. During the second Plan, about 166,000 acres of new orchards were planted and about 132,000 acres of old orchards were rejuvenated, and over 4,000 gardeners were trained. The total area at present under fruits and vegetables is estimated to be about 6 million acres, of which nearly one half is under fruit cultivation. In the third Plan, the total area under fruits and vegetables is expected to increase to about 7 million acres. It is proposed to bring 255,000 acres under new orchards and to rejuvenate 250,000 acres under old orchards. Besides continuing schemes already in operation, the plans of States provide for the establishment of progeny orchards with nurseries and garden colonies. The nurseries will help in the supply of planting material of reliable percentage and guaranteed performance.

"For the development of vegetable production, the plans of States provide for supply of improved varieties of seeds, plant protection measures and technical advice. Arrangements are also being made for certification of vegetable seeds."

Plans for developing horticulture will, no doubt, help the fruit preservation industry by making available its chief raw material in larger quantities. It, however, remains to be seen whether larger production will be followed by lower prices. The increase claimed in production of fruits in the second Plan period, however, has had no effect on the upward trend of prices. Considering that the stunted growth of food preservation industry was not due to inadequate supply of fruits and vegetables, it is obvious that there must be other factors responsible for this position. Pointed attention to these was drawn by Mr. K. U. Patel, President of the All-India Food Preservers' Association, in his address at the annual conference of the Association held at Calcutta last week. High in the list is the cost of sugar and containers. According to Mr. Patel, a canner in India has to pay Rs. 40 per maund of refined sugar, as against only Rs. 16 by his confrere in Australia, one of the largest exporters of preserved fruits in the world. Besides, the price of good quality bottles in this country is higher by at least 40 per cent, as compared with that in the U.K. or Australia. With particular reference to sugar, Mr. Patel called upon the Government to allocate this raw material to the industry at world market prices. He said that, if the industry were given sugar at world prices, it would be able to compete in foreign markets with fewer handicaps. This is a longstanding demand of the industry. It could not be conceded when the country was not producing enough sugar to cover its requirements. But now the position has changed considerably. There is a surfeit of sugar and the Government is encouraging exports of sugar at a heavy subsidy. In these circumstances, the food-preservers' demand can be justifiably conceded. Indeed, it would be absurd to turn it down point blank. Mr. Patel contends that, if his demand were met, the export of food products would go up at least three times the present level. The country can now afford to test his contention.

Imports of Machinery

Dearth of imported machinery and equipment needed by the industry for modernisation is also said to be another handicap of the industry. It is argued that foreign buyers of food products do not like hand peeling, hand trimming or visual grading of the material, even though the product is hygienically prepared, good and wholesome. Mr. Patel, therefore, appealed to the Government of India to grant licences for the import of machines which could improve the quality of products, expand production and, in turn, increase exports. He wanted the Government to allocate a minimum quota of Rs. 10 lakhs annually for the import of machinery required by the industry. This does not seem to be a large amount, even taking into account the country's present plight on its balance of payment account. It is worthwhile granting this request, provided Mr. Patel's Association could offer some sort of guarantee that his industry will fulfil a minimum export target.

The Government has already appreciated the industry's case for obtaining its requirements of packing materials at a reasonable price. Thus, tinplate used in making cans is subsidised, the quantum of subsidy being Rs. 500 per ton. Mr. Patel observed that this was insufficient, particularly as a result of a fresh duty of Rs. 200 per ton imposed in March 1961. He appealed to the Government to enhance the subsidy proportionately to make good the loss suffered by higher duty. Another major difficulty of the industry relates to higher sea freight rates. Mr. Patel pointed out that the sea freight charged by the Conference Lines for food products from Bombay to Jeddah, for instance, was higher than that from Japan to that place, although the latter distance is more than double. Besides, freight rate from Calcutta to London is 222 shillings per ton, whereas freight for similar goods from Australia to London, which is double the distance, is only 175 shillings per ton. Mr. Patel also complained of higher railway freights. He appealed to the Railway Board to reduce the freight rates on preserved foods. These suggestions of Mr. Patel also sound reasonable. Surely, his Association should take up the matter of freight rates with the advisory body on freights set up by the Government of India to consider complaints of this nature.

Apart from the high cost of raw materials and prohibitive freight rates, the industry has also been facing scarcity of technical personnel. Mr. Patel observed that today the situation was very "critical," so much so that the industry was not getting suitably qualified personnel, in conformity with the provisions of the Fruits Products Order. The situation could not be improved, he added, unless a larger number of students was given facilities for post-graduate study in food technology. If the position is as acute as that made out by Mr. Patel, his Association itself could do something to improve the position. It could, for instance, come forward with financial assistance to a coup'e of universities which are prepared to provide the necessary facilities for post-graduate students.

One of the largest bulk buyers of food products is Defence Services. The industry, it would appear, has been facing several difficulties in meeting the exacting procedures and specifications laid down by them. Giving a detailed account of such difficulties, Mr. Patel observed as follows:

"During the war, because of the promises made by our Government, a number of factories were established with capacity far in excess of our present demand. The purchases by the Army have been a boom to these factories to a certain extent, but, because of the existing labour laws, there is keen competition among the factories for Army supplies, and in a number of cases, these supplies are made even below cost, so that even partial overheads can be recovered. In this country, the specific varieties of fruits and vegetables suitable for canning are not grown. The outcome of this is that the factories have to fall back upon the *mandis* for their requirements of raw materials. Raw materials bought in *mandis* are grown in many different kinds of soils, from many different kinds, of seeds, from differing root stock, varying weather conditions, and under different conditions of manuring, watering, etc. Due to foreign exchange shortage, the factories are not usually allowed to import machines required to improve production. The factories have, therefore, to satisfy themselves with hand peeling, hand trimming, visual grading and so on and so forth. It is natural, therefore, that complete uniformity in size and shape cannot be maintained. The Defence specifications are very exacting and even go beyond those specifications laid down for products of this industry in some of the advanced countries abroad. If I am permitted to say, the rejections by the Army on grounds such as not of uniform size or of size slightly greater than that specified or for change of colour which occurs during processing, are not quite justified under the present conditions. In case of items like potatoes, spinach or carrots or karela for which there is no civilian demand, the rejection by the Army of completely edible and wholesome food material is a dead loss to the industry as well as in the country. I submit, therefore, that if the products are quite wholesome and perfectly edible and otherwise sound, these should be accepted by the Army even at a slight reduction and not rejected outright as is being done these days.

"In the case of the Army, they are not agreeable to refer the acceptability of the product to one of our National Laboratories, viz., the Central Food Technological Research Institute, Mysore, in case of difference of opinion. I am sure it is not the contention of the Army authorities that their technologists are better or more brilliant than those engaged by our National Laboratories. I submit, therefore, that, in case of rejections, the opinion of our National Laboratory should be taken and, if favourable, the products should be accepted by the Army organisation even at a slightly reduced price as I have suggested before. These products, as is well known, can keep in good condition if stored in a dry and cool place. I understand that this is not usually done by the Army and, in some cases, the goods are exposed to the elements. It is natural that they cannot stand the conditions of storage for which they are not suited. Under the warranty clause which is one-sided, the factories are held responsible for spoilage in such conditions for no fault of theirs, but for the inability of the Army authorities to provide satisfactory storage conditions. To my mind, this is neither fair nor just to the industry."

It is to be hoped that Mr. Patel's complaints will not go unheeded. While there is need for insisting on good quality products for use in the Army, every effort should be made by the Government to remove the legitimate difficulties of the industry. Among the other problems of the industry, mention may be made of some of the rigorous labour laws, which affect efficiency of production. While in all advanced countries like the U.S., the U.K. and Australia the industry is recognised as a seasonal one, this is not the case in India, where it is grouped along with textile mills or engineering industries. Consequently, the industry is forced to carry a load of surplus labour during the off-season, resulting in increased cost of production. Besides, Mr. Patel revealed that the factories were allowed to work only the regular working hours during the fruit growing season and no overtime is allowed. This results in loss of production. If it could be avoided, it would result in a lower cost per unit of production. There is admittedly good need for making labour laws more flexible in the case of an industry dealing with perishable seasonal produce.

FOOD AND AGRICULTURAL SITUATION

The prospects of better agricultural crops during 1961-62 have been forecast by the Union Ministry of Food and Agriculture, in its report for the fiscal year 1961-62 submitted to the Lok Sabha a few days ago. Reports on *kharif* grains of the season have been satisfactory. *Rabi* sowings have also been quite extensive and "a fairly good crop may be expected." Among the commercial crops, the current year's production of groundnut, jute, mesta and sugarcane "is expected to be more" than during last year, but cotton has suffered damage owing to excessive rains in Maharashtra and Madhya Pradesh, followed by a severe cold spell. It may be recalled that the output of foodgrains in 1960-61 touched an all-time record—79.3 million tons, of sugarcane 8.7 million tons (in terms of *gur*) and of cotton 5.4 million bales.

Reviewing the food position in the country in 1961, the report points out that increased production of foodgrains, reduced purchases by Government, steady imports and judicious distribution in the country had a "steadying influence" on the market. The easing of supply position in the open market led to a decline in the demand for foodgrains from Government stocks, which, consequently, recorded a steady improvement. Accordingly, stocks with the Central Government were higher at 2.31 million tonnes at the end of 1961, as compared with 1.94 million tonnes a year back. Following the improvement in the supply and price position, the Government removed last year various restrictions on wheat, including zonal restrictions on its movement and bank credit.

The foodgrains price position during 1961 remained generally satisfactory. The persistent upward trend in the prices of foodgrains, which had presented a serious problem two or three years ago, practically disappeared during the year under review. The average annual all-India index of wholesale prices of cereals was 102 in 1961, as against 105 in 1960, 104 in 1959 and 105 in 1958. Prices of rice throughout 1961 remained lower than those in 1960. The maximum rice price index reached during 1961 was 110, as against 115 in 1960. In the case of wheat, prices during the major part of 1961 remained lower than those in the corresponding months of the previous year; during November-December 1961, however, prices became somewhat higher than in the corresponding period of 1960.

Purchases of rice on behalf of the Central Government in 1960-61 season, according to the report, were confined to the surplus States of the Punjab and Madhya Pradesh. The State Governments also made purchases of rice and paddy, on their own account in Assam, Madhya Pradesh, Orissa, Uttar Pradesh, Jammu and Kashmir and to a small extent in the Union territory of Tripura. Total purchases of rice (including rice equivalent of paddy) in the 1960-61 season (November to October) both by the Central and State Governments amounted to 553,000 metric tons, as compared with 995,000 metric tons in the preceding season. No purchases of wheat were made out of the 1960-61 wheat crop except in the Punjab where the State Government purchased about 20,000 metric tons.

The total quantity of foodgrains imported in 1961 amounted to 3.5 million tonnes (as against about 5.2 million tonnes in 1960). This comprised wheat (3.09 million tonnes), rice 384,000 tonnes) and milo (19,000 tonnes). Of the total quantity of wheat, 396,000 tonnes were accounted for by commercial purchases, about 2.12 million tonnes under P.L. 480 Title I, 416,000 tonnes under the Manganese Barter Agreement with the U.S. and 158,000 tonnes under Colombo Plan aid.

The report, dealing with the Agricultural Department of the Ministry, reveals that intermediaries on land have almost entirely been abolished throughout the country. Out of a total compensation of Rs. 670 crores to be paid to ex-intermediaries, a sum of Rs. 164 crores has been paid so far. Legislation has been enacted in most States for security of tenure and ownership for tenants as well as for regulation of rent. During 1961-62, legislation imposing a ceiling on agricultural holdings was passed by the State Legislatures of Bihar, Gujarat, Madras, Maharashtra and Mysore. Similar legislation had been enacted earlier in other States.

On the question of fertilisers, the report makes a confession that, although demand for nitrogenous fertilisers has been increasing, it has not been able to meet it in full. The demand for 1961-62 is estimated at 2.67 million tons, whereas total availability, including internal production and imports, is only about 1.51 million tons. The production of urban compost, however, is claimed to have gone up from 2.7 million tons in 1960-61 to 2.9 million tons. In addition, it is believed that 15 million acres have been "green-manured" during 1961-62, as against only 11.5 million acres.

During the *rabi* of 1961-62, the intensive agricultural district programme covered 1.45 million acres in the first seven selected districts in Madras, Andhra Pradesh, Bihar, Rajasthan, Madhya Pradesh, Uttar Pradesh and the Punjab. This is 17 per cent of the total cultivated area in the districts. According to the report, the reaction of the farmers has been favourable and a concerted effort is now being made to reach all the farmers in the region to assist them in preparing farm and village development plans. During the *kharif* of 1961-62, about 130,000 farm plans were prepared in all the seven districts, as against 58,000 plans prepared during 1960-61. Measures are under way to extend the programme to the remaining eight States by the *kharif* of 1962.

Giving an account of developments in the field of dairy development, the report says that, for milk supply in cities, nine new dairies have started functioning in 1961-62 and equipment is being installed at nine more. Further progress has been made in construction work in 12 other dairies. Pilot milk schemes, started in previous years, are being continued at 10 centres. The total number of animals colonised in the milk schemes of Calcutta and Madras has increased to 10,000. The daily handling of milk under the Delhi Milk Scheme has increased to about 3,500 maunds and the milk is being distributed through 500 depots and six all-day milk stalls. The Milk Powder Factory at Amritsar is expected to go into production during 1962-63. Equipment is expected to be installed shortly at the second Milk Powder Factory at Rajkot. Buildings are almost ready for the rural creameries at Aligarh and Barauni and a third creamery is to be constructed at Junagadh.

Notices

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 36th Annual General Meeting of the Company will be held at the Registered Office, Dunlop House, 57-B, Free School Street, Calcutta, on Tuesday, the 24th day of April, 1962, at 11.00 a.m., for the following purposes:

1. To consider the Profit and Loss Account for the year ended 31st December, 1961, the Balance Sheet as at that date and the Reports of the Directors and the Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as a special resolution and number 6 as an ordinary resolution.

5. (*As a special resolution*): That this meeting consents to Mr. Jatish Chandra Sen Gupta who has been in the employment of the Company since 1936, a relative, namely, a brother-in-law of Mr. Phani Bhusan Sen Gupta, a Director and Deputy Managing Director (Administration) of the Company, holding and continuing to hold, with effect from 1st January, 1962 an office or place of profit, namely, as an official of the Company at a salary of Rs. 1,025 per mensem and on such terms and conditions as to dearness allowance, increment and other benefits as are applicable to the Company's officials."
6. (*As an ordinary resolution*): "That notwithstanding anything contained in the resolution passed at the General Meeting of the Company held on 24th April, 1951 and the Agreement of the same date between the Company of the one part and Angus Wallace Gillespie on behalf of the Ordinary Shareholders of the other part concerning the Bonus Issue of Ordinary Shares made by the Company in 1951, the Directors of the Company be and are hereby authorised to advertise a notice in *The Statesman*, Calcutta and Delhi, *The Times of India*, Bombay, and *The Hindu*, Madras, calling upon the holders of 375 fractional certificates representing 75 fully paid Ordinary Shares of Rs. 10 each which were issued in connection with the said Bonus Issue and are outstanding and have not been converted into fully paid Ordinary Shares in accordance with the said Agreement, to present to the Company five such certificates or such number thereof in multiples of five within 31st December, 1962 and on such presentation the Directors of the Company be and are hereby authorised to allot to such holders one fully paid Ordinary Share of Rs. 10 in the capital of the Company for five such certificates presented to the Company and that on the expiration of 31st December, 1962 all rights of holders of the said fractional certificates issued in 1951 which have not been converted into fully paid Ordinary Shares on 31st December, 1962 be extinguished and any of the 75 Ordinary Shares represented by 375 fractional certificates as aforesaid not converted on 31st December, 1962 be allotted by the Directors free to such person, company or other body corporate as they may think fit."

By Order of the Board,
P. B. SEN GUPTA,
Director & Secretary.

DUNLOP HOUSE,
57-B, FREE SCHOOL STREET,
CALCUTTA.
29*th March*, 1962.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 11th April to 24th April, 1962, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 11th April, 1962.

An explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been annexed to the Notice issued to the members of the Company.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Company will be held at 12, Mission Row, Calcutta, on Wednesday, the 25th day of April, 1962 at eleven o'clock in the forenoon, for the purpose of considering and, if thought fit, passing the following resolution:—

That subject to such approval of the Central Government as is required by Section 372 of the Companies Act, 1956 being duly obtained this general meeting having taken under consideration the scheme of collaboration between the Company and The Stanton Ironworks Company Limited do sanction the investment by the Company which is thereby contemplated in the purchase or acquisition of shares in the proposed company to be known as IISCO Stanton Pipe and Foundry Company Limited notwithstanding that such investment will exceed ten per cent of the subscribed capital of that Company.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy (who need not be a member of the Company) to attend and, on a poll, to vote in his stead.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12, MISSION ROW,
CALCUTTA-1, 26*th March*, 1962.

Note: An Explanatory Statement as required under the Companies Act, 1956, has been forwarded to the members of the Company.

THE RAMNUGGER CANE & SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Ordinary General Meeting of the Shareholders of The Ramnugger Cane and Sugar Company, Ltd. will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Wednesday, the 25th April, 1962, at 12 noon, to transact the following business:—

1. To receive the Directors' Report and pass the audited Accounts for the year ended 31st August, 1961.
2. To declare a dividend on Preference Shares.
3. To declare a dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.

NOTICE is also given that the Share Transfer Registers will be closed from the 9th April to 25th April, 1962 both days inclusive.

A member who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

By Order of the Board,
ANDERSON WRIGHT, LTD.,
Managing Agents.

CALCUTTA, 22*nd March*, 1962.

JESSOP'S BIG LEAP FORWARD

RESERVES STRENGTHENED FURTHER

A BIG leap forward was staged by Jessop and Company Limited (Secretary: Mr. K. S. Basu, Calcutta) during the year ended 31st October 1961. The highlight of its phenomenal progress was the rise in its sales turnover, which crossed for the first time in its history the Rs. 10-crore mark. The gross profit also exceeded for the first time the Rs. one-crore mark. The profit-margin, which had shrunk in the previous year from 9.8 per cent to 9.4 per cent, rose appreciably to 11.6 per cent.

From Rs. 908.24 lakhs to Rs. 1,200.85 lakhs was the rise in sales turnover, representing an increase of 32.21 per cent over the year on top of an improvement of 37.7 per cent in the previous year. Gross profit went up by Rs. 53.96 lakhs to Rs. 139.71 lakhs, or, percentagewise, by 69.9, as against 31.4 in the preceding year. The cost of raw materials consumed rose from Rs. 631.61 lakhs to Rs. 822.44 lakhs and that of stores, power and fuel from Rs. 28.43 lakhs to Rs. 35.84 lakhs; in addition, there was an increase of Rs. 67.00 lakhs in other expenses. While the higher production costs were due largely to increased operations, the improved profitability reflects the growth in turnover, which, in turn, is an index of the impressive strides India is making in industrialisation. The Company, as a producer of heavy engineering products such as cranes, wagons, coaches, gates, etc., required by the multipurpose irrigation and hydel works, and road rollers, to mention only the most important items, has been recipient of large orders; the only limitation being its own capacity, shortage of raw materials and power. The Company's results for 1960-61 are all the more remarkable, because its production was adversely affected by the power failure in Calcutta this time last year.

After providing Rs. 23.09 lakhs (Rs. 19.28 lakhs a year before) for depreciation and Rs. 48.78 lakhs (Rs. 29.17 lakhs) for taxation, the Directors have, while proposing to maintain the equity dividend at last year's level of 8.58 per cent taxable, transferred to reserves as much as Rs. 51.06 lakhs out of the year's net profit of Rs. 67.84 lakhs. Explaining their conservative appropriation policy, the Directors state that it is necessary, due (*a*) to a very large portion of the accumulated reserves being invested in unquoted shares of doubtful value, which may not be realised for years to come and which the Company is debarred from using in its day-to-day business, and (*b*) to provide more working capital for the greatly increased production potential.

The table below brings out clearly the progress of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1961	1960	1959	1958
Sale proceeds	1,200.85	908.24	650.10	650.78
Other income	9.60	7.10	11.24	14.67
Closing stocks and work-in-progress	662.96	607.89	541.49*	572.18
Cost of raw materials consumed	822.44	631.61	527.04	482.23
Cost of stores, power and fuel	35.84†	28.43†	24.14	15.99
Other expenses	267.13	219.53	167.28	160.95
Gross profit	139.71	85.75	65.22	69.72

† Includes consumption towards repairs to buildings of Rs. 2.09 lakhs in 1960 and Rs. 2.11 lakhs in 1961 and towards repairs to plant and machinery of Rs. 3.91 lakhs and Rs. 5.41 lakhs respectively.
‡ Subject to deduction of tax.

The year's excellent results are due as much to improved production as to satisfactory progress in modernisation and rehabilitation of the plants. Thus, the Directors state:

"Production of box wagons showed a substantial improvement and is expected to rise further. The output of furnished metre-gauge coaches, metre-gauge motor and parcel vans and broad-gauge match trucks improved appreciably. The Company delivered a number of wharf cranes to the ports of Calcutta, Bombay and Madras. The output of electric overhead travelling cranes improved and included two cranes each of 80 tons capacity for the Heavy Electrical Project at Bhopal. The manufacture of the radial gates for the Rihand Dam was completed, and production of the 66 numbers vertical lift gates for the Kosi Barrage was taken in hand. Fabrication of the steelwork and bearings for the Brahmaputra Bridge was also taken in hand after some initial delays in the receipt of the materials. Road rollers production exceeded the target of 200 units to 229 units as against 164 units in the previous year. Manufacture of electric multiple unit coaches, however, ceased from August 1961, as, due to delay in the issue of import licences required, procurement of the special electric and mechanical traction equipment and other materials could not be arranged in time to ensure the continuity of production. It is expected that delivery on the new order of the special trailers for Bombay will commence in June 1962. In the interim period, the coach works have taken up the manufacture of all-welded broad-gauge well wagons and furnished broad-gauge motor and parcel vans. The order book is excellent, and we anticipate that the output for the current year will show an improvement.

"A two-year modernisation programme of the wagon works was taken up during the year. The main works and forge will be rebuilt and modernised to suit the requirements of the manufacture of 8-wheeler wagons in place of 4-wheeler wagons . . . . A substantial expansion of the coach works was completed by a 130-feet extension to the main building. It became necessary, because, on the next order for electric multiple unit coaches, all the bogies will be manufactured at Dum Dum, whereas, on the previous orders they were completely imported. A number of modern machine tools were also installed. A new 80-feet bay 180 feet long was added to structural works to deal with the large increase in orders for welded steelwork. A portion of the large tank in the works is now being filled to allow further expansion of two 80-feet welding bays. Necessitating the construction of piled foundations, this work is not expected to be completed before the end of next year. As regards bogie works, in addition to the installation of a number of machine tools, a new machine bay was added freeing the main bay to concentrate on the building and welding of bogies. Modernisation of the mechanical works, started 5½ years ago, is now nearing completion. The generally accepted international yardstick for obsolescence in machine tools is 10 years. A survey done seven years ago showed that over 40 per cent of the machine tools in the mechanical works were over 15 years old and only 33 per cent under 10 years old. As a result of the modernising and re-equipping of these works, the output increased between 1954 and 1961 from Rs. 28.30 lakhs to Rs. 221 lakhs; an increase of 680 per cent. The new road plant works will go into operation in June this year, freeing capacity at present utilised in the structural and mechanical works for the manufacture of road rollers for other purposes. Arrangements for the manufacture of the transmission of the G.C.S. 10 tons diesel road rollers are now well in hand, and the prototype were expected to be under test in February this year, with the target for full production set by April-May 1962. This will save valuable foreign exchange. In addition, an agreement has been reached with Aveling-Barford Ltd., Grantham, and the necessary licence obtained for the manufacture of a smaller range of diesel road rollers of the 4/6 tons range for which there is a substantial unsatisfied demand.

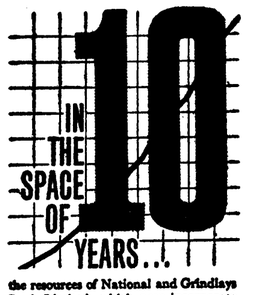
"Since the building of the new road plant works at Dum Dum and the extension of the welding bats in the structural works would take up all the available land, the Directors have decided to purchase nearly 100 bighas of land from the Titaghur Jute Factory Company Ltd. at Titaghur for the construction of a modern Meehanite iron foundry capable of producing 450 tons of finished castings a month. It has also been decided to construct a new works for making a range of modern machine tools which the Company has successfully designed and manufactured and which have given excellent service in its Dum Dum works. These are hydraulic feed cold sawing machines, saw sharpening machines, plate levellers, beam straighteners, guillotines, prees brakes and nibblers. The Directors are also negotiating with a well-known British firm to manufacture the range of their machine tools under licence. Negotiations are also going on with another well-known British firm for collaboration in the manufacture of steelworks duty cranes. This will necessitate the construction of fabricating bays capable of handling up to 80 tons in weight. A new product is also being considered, details of which will be available later."

From the foregoing account, it will be clear that the Company is set on a well-thought-out expansion programme. There are, however, some obstacles in the way, such as electric power crisis, coal and coke crisis and cement shortage, which seriously handicapped production last year and look like persisting for quite some time to come.

The Company has still not got over the legacy of the Mundhra manœuvres and manipulations which have cost it a fortune. The provisional share register prepared last year by the special officer of Richardson and Cruddas showed the holding of the Company at only 455 preference shares and 17,300 ordinary shares as against its actual investment of Rs. 65.36 lakhs in 17,900 preference and 181.000 ordinary shares. It is this loss that is a heavy drag on the Company's finances. Dealing with this issue, the Directors state that, on the basis of legal advice, the Company has filed an application for amendment of its original plaint before the Calcutta High Court and for leave to file a written statement answering the points made by Richardson and Cruddas in its submissions to the Court. The Company has also filed a written statement in the Court in regard to the suit instituted by the Life Insurance Corporation against the same company and others of the Mundhra Group including Jessop itself. None of the civil suits has come up for hearing. The Company's books also show as investments 70,000 ordinary shares of the value of Rs. 7.35 lakhs in Assam Cements Ltd., as against which provisional registration of its name in respect of only 27,500 shares has been approved. The auditors' report says that, on 19th September 1958, Assam Cements Ltd. filed a suit in the Calcutta High Court against, *inter alia*, the Company claiming that the allotment of 27,500 shares to the Company was illegal and not binding on it. The auditors also state in their report that against the dividends declared by Richardson and Cruddas on 21st June 1957, at rates which would produce a total yield of Rs. 2.33 lakhs on the holding shown in the holding company's accounts, no payment has been received by the Company. They have been told that no dividend has been declared by Richardson and Cruddas subsequent to that date. The shares are in the possession of police authorities in Calcutta and Delhi. Thus, the investments of the Company shown at Rs. 75.23 lakhs, have hardly any value.

Nonetheless, thanks to the highly conservative policy followed by the Directors in the distribution of net profit in the past two years, the financial position of the Company has improved perceptibly. The subscribed capital of Rs. 223.99 lakhs, of which Rs. 203.99 lakhs are in equity shares of Rs. 10 each and the balance in preference shares of Rs. 100 each, is supplemented by reserves and surplus of Rs. 199.06 lakhs. The Company's 6.5 per cent debenture-stock 1967 of Rs. 75 lakhs has been allotted to the State Bank of India for a loan of Rs. 15.01 lakhs. The Company has also borrowed Rs. 167.30 lakhs from the same bank under an overdraft facility with a ceiling of Rs. 225 lakhs. The Company's other liabilities and provisions amount to Rs. 570.21 lakhs. In all, its total indebtedness to outsiders is Rs. 752.52 lakhs. As against this, current assets, including book debts but excluding investments (which as already shown by us are of doubtful value), total Rs. 813.79 lakhs. The gross block increased during the year by Rs. 70.77 lakhs to Rs. 389.59 lakhs and depreciation provided for it up to 31st October 1961 works out to Rs. 125.16 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 22.00 *cum-div.*, at which rate they offer, on the *ex-div.* basis, a net yield of 2.7 per cent per annum. The net worth of the Company's shares is a little over Rs. 16 per share, taking the assets at their book value.



the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—100 more than existed ten years ago.

HINDUSTAN LEVER SUFFERS DUE TO PRICE COMPETITION

TURNOVER RISES—MILK PROJECT ON HAND

SEVERE price competition, and the consequent inability to pass on the increase in prime costs and other expenses, have been responsible for the setback in the gross profit of the Hindustan Lever Limited (Chairman: Mr. P. L. Tandon, Bombay) from Rs. 515.33 lakhs to Rs. 488.86 lakhs, despite a satisfactory increase in the turnover from Rs. 46.12 crores to Rs. 49.92 crores during the year ended 31st December 1961. The price competition was felt in *vanaspati* products and toilet preparations. In the former, in addition to price competition the Company was hit by the wide fluctuations in the prices of edible oils; unduly high prices were followed by a steep decline. The quantity of *vanaspati* sold fell from 82,286 tonnes to 75,976 tonnes. In the latter, the imposition of high excise duties on skin preparations pushed up prices to a level which attracted stiff consumer resistance. Soaps and detergents turned out to be the only saving grace for the Company, for not only did their turnover increase but the quantity sold also went up from 83,027 tonnes to 87,937 tonnes.

The performance of the various products during the year is compared with that in the preceding three years in the table below:

(In lakhs of rupees)

	1961	1960	1959	1958
Soaps and detergents (Quantity in tonnes)	22,89.20 (87,937)	19,95.36 (83,027)	17,83.27 (75,073)	11,24.00 (70,894)
Vanaspati, margarine and other foods (Quantity in tonnes)	23,16.83 (75,976)	22,34.88 (82,286)	20,46.92 (82,432)	17,71.00 (74,436)
Toilet preparations	85.32	97.40	86.12	73.00
Glycerine and other by-products	182.60	167.72	149.51	122.00
Groundnut cake and animal feeding stuffs	117.87	116.50	114.19	83.00

The cost of raw materials consumed by the Company rose from Rs. 30.05 crores to Rs. 32.74 crores. Other expenses increased from Rs. 11.12 crores to Rs. 12.49 crores, with the salary bill going up by Rs. 66.17 lakhs to Rs. 334.67 lakhs largely following new wage agreements with the workers' unions. The excise burden was heavier by Rs. 22.72 lakhs at Rs. 329.44 lakhs.

With the decline in profit, the provision for taxation is lower at Rs. 192.76 lakhs, as compared with Rs. 208 lakhs in the previous year, but depreciation claims a larger amount of Rs. 39.40 lakhs as against Rs. 35.33 lakhs. The transfer to development rebate reserve at Rs. 5.30 lakhs is practically unchanged. The dividend, as readers are already aware, is maintained at 26 per cent, taxable. The profit retained in business is, however, less at Rs. 80.69 lakhs in comparison with Rs. 104.70 lakhs in the previous year. The Company exported soaps, *vanaspati* and toilet preparations of the value of Rs. 33 lakhs (Rs. 39 lakhs a year before), glycerine of Rs. 25 lakhs (Rs. 21 lakhs) and oilcake, oils and rosin of Rs. 16 lakhs (Rs. 17 lakhs).

The table below compares the Company's results for 1961 with those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	4,991.82	4,611.86	4,175.19	3,672.99
Other income	20.38	19.73	15.45	13.50
Cost of raw materials consumed	3,273.84	3,004.52	2,659.34	2,386.82
Other expenses	1,249.49	1,111.75	1,031.97	935.62
Of which:				
Salary bill	334.67	278.50	256.36	241.55
Excise duty	329.44	306.72	293.84	257.92
Gross profit	488.86	515.33	504.14	363.85

Retained in business	80.69	104.70	74.67	45.08

* Subject to deduction of tax.

The Company's proposed skimmed milk powder and ghee project at Etah, U.P., is now taking shape. The necessary land for the factory has been acquired and preparation of the site has begun. Meanwhile, a ghee development unit has been set up at Etah and is providing ghee for market tests from cream supplied by the Company's milk collecting centres. The milk project will require approximately Rs. 47 lakhs of foreign exchange. The Industrial Credit and Investment Corporation of India has agreed in principle to grant the Company a loan of Rs. 25 lakhs in foreign currencies and Unilever Limited has agreed in principle to supply the balance. After experimental feeding trials, the Company's cattle feed was launched in the Bombay area in July 1961, and is stated to have made satisfactory progress. The pilot plant has been replaced by one of increased capacity. The Company is planning to increase its pea output during this season. It may be recalled that the Company's Chairman, Mr. Tandon, disclosed in Bombay a month ago an expansion programme for the near future that would run into several crores of rupees. Among the new industrial projects the Company had in mind, one is the preservation of human food initially by dehydration and later by more sophisticated methods. The Company also proposes to establish research departments similar to those in the U.K. and the U.S. Meanwhile, the Company proposes to modernise its existing equipment as far as possible under the limitations imposed by foreign exchange scarcity. The Company has already made an application to the Government for licence to set up a plant for the solvent extraction of cottonseed. Modernisation of soap-making plant in the Bombay factory is on hand, and two mazzoni units have already been installed. A second glycerine still was brought into operation in the Bombay factory. The engineering building at the Calcutta factory has been completed and the expansion of the *vanaspati* factory at Ghaziabad is nearing completion. The total estimated cost of capital projects approved during the past year was Rs. 196 lakhs. All these plans and programmes suggest beyond doubt that the management is taking an optimistic view of the outlook for the Company.

The Rs. 10 fully paid equity shares of the Company are currently quoted at Rs. 70 *cum-div.* and *cum-right*. Assuming that the dividend will be maintained on the increased capital, the net yield works out to about 4 per cent per annum.

BRADY ENGINEERING MAKES GOOD PROGRESS

Encouraging results have been reported by the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co. Ltd., Bombay) for the year ended 31st December 1961. There was an all-round progress in production, sales and profits. With a substantial improvement in the output of pulley blocks and other lifting equipment and the completion and delivery during the year of the first automatic bread plant, which was in progress during the preceding year, proceeds of engineering work have risen quite sharply by Rs. 11.65 lakhs to Rs. 27.90 lakhs, or nearly 70 per cent. The increased sale has been accompanied by a decline in the closing value of the work-in-progress from Rs. 3.07 lakhs to Rs. 1.31 lakhs. Higher production has naturally meant a rise in the cost of raw materials and stores consumed, but the increase in marginal being of the order of Rs. 0.73 lakh to Rs. 9.29 lakhs. Other expenses, on the other hand, have gone up markedly from Rs. 5.46 lakhs to Rs. 7.17 lakhs chiefly because of the advancement in salaries, wages and cost of employee benefits by Rs. 1.35 lakh to Rs. 5.45 lakhs. But, even then, the gross profit has more than doubled to Rs. 9.70 lakhs as compared with Rs. 4.34 lakhs previously. A major portion of this has, however, been absorbed by higher essential provisions, that for depreciation being Rs. 1.19 lakh as against Rs. 0.94 lakh and that for taxation as much as Rs. 3.70 lakhs as against Rs. 1.32 lakh a year ago. Even so, the net profit works out to Rs. 3.97 lakhs, as compared with Rs. 1.74 lakh for 1960, an increase of more than 100 per cent.

A good part of the enhanced profit has been conserved. Thus, the Directors have transferred Rs. 0.25 lakh, as against Rs. 0.13 lakh, to the development rebate reserve and Rs. 1.00 lakh, as against Rs. 15,000 previously, to the general reserve. An additional provision of Rs. 35,335 for depreciation has been found necessary "in order to bring the written-down value of fixed assets fully in conformity with not only the requirement of Section 350 of the Companies Act but also Section 205 thereof." These prior allocations leave a balance of Rs. 2.75 lakhs for the payment of ordinary dividends. In view of the larger sum thus available, the Directors have quite rightly raised the rate of ordinary dividend from Rs. 5.50 per share to Rs. 7.00 per share, subject to deduction of tax, and have, in addition, proposed a bonus of Rs. 2 per share, also subject to deduction of tax. The total disbursement to shareholders will claim Rs. 2.25 lakhs, leaving Rs. 0.49 lakh as a carry forward as against Rs. 0.19 lakh brought in.

The following comparative table presents synoptically the progress achieved by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Proceeds of engineering works	27.90	16.25	10.28	10.04
Work-in-process	1.31	3.07	1.01	0.71
Raw materials and stores consumed	9.29	8.56	3.70	3.47
Other expenses	7.17	5.46	4.62	3.72
Gross profit	9.70	4.34	2.42	3.20

* Subject to deduction of tax.

The authorised, issued and subscribed share capital of the Company consists of 25,000 equity shares of Rs. 100 each. Since Rs. 80.00 per share only have been called so far, on these, the issued and paid-up share capital as at 31st December 1961 stands at Rs. 19.99 lakhs after allowing for Rs. 940 as calls in arrears from others. This is supported by Rs. 4.84 lakhs in reserve giving total capital funds as Rs. 24.83 lakhs. Against these, the net block is worth only Rs. 13.37 lakhs, the gross block being Rs. 23.00 lakhs inclusive of the additions of Rs. 1.40 lakh during the year. The Company thus enjoys a comfortable working capital position, a situation also reflected by the fact that as against current liabilities and provisions amounting to Rs. 9.15 lakhs, current assets, loans and advances aggregate as much as Rs. 20.61 lakhs.

So far as prospects for the current year are concerned, the Directors report that it is as yet too early to give any firm indication of the trend of profits that might accrue. Nevertheless they have assured the shareholders that every effort will be exercised to maintain the results already attained, though they hasten to add that this will be governed by the availability of component parts bought out and import licences for material which is not available indigenously. They further add that no further space is available for expansion on the Company's present site.

The present market quotation for the Rs. 80 paid shares is Rs. 112.00 c.d. On an *x.d.* basis the net yield works out at 5.9 per cent per annum.

Notice

JESSOP & COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5 per cent Cumulative Preference Shares for the half-year ending 30th April, 1962, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 27th April to 1st May, 1962, both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 1st May, 1962 or to their Mandatees.

By Order of the Board,

K. S. BASU,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *23rd March* 1962.

SYNOPSES OF COMPANY REPORTS

Cawnpore Textiles Ltd.

(*Secretaries and Treasurers*: The British India Corporation Ltd., Kanpur, U.P.)

Annual General Meeting—21st April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales (manufactured goods)	1,61,88	1,45,83
Closing stock (manufactured and semi-manufactured goods)	21,27	17,10
Gross profit	26,13	24,27
Transfer to Ex-Managing Agents' remuneration,	Nil	94
" " Secretaries' and Treasurers' remuneration	1,56	57

" " development rebate reserve ..	1,61	99
" " provision for taxation	9,00	6,70
Net profit	10,16	12,02
Adjustments credit (+) or debit (—)	+56	—3,29
Appropriations:		
Total available balance	10,72	8,73*
To adjustment of loss on sales of investments.	1,75	Nil
Transfer to general reserve	5,50	6,00
Proposed dividend (taxable)	3,00	2,16
	(10%)	(7.2%)
Carry forward	47	57

N.B.—Adjustments represent the balance brought forward from the previous year.

* After adjusting the debit balance of Rs. 3,29,800 brought forward from 1959 accounts.

Extracts from the Directors' report: A sum of Rs. 2.5 lakhs has been transferred from investment reserve to general reserve.

Working and Sales: The working of the Mills has been satisfactory and further improvements both in total production and efficiency have been achieved. With a view to maintain the high standard of efficient working and to keep abreast of modern production techniques, capital expenditure to the extent of Rs. 25 lakhs has been sanctioned for the next five years. Commitments for capital expenditure subsequent to the close of the financial year amount to approximately Rs. 16,000.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	95,99,284
Reserves and surplus..	49,46,857	—Depreciation ..	72,92,500
Other liabilities ..	41,59,513	Net block	23,06,784
		Expenditure on machinery under installation	1,071
		Current assets	92,65,255
		Investments	4,78,910
		Cash	54,400
	Rs. 1,21,06,370		Rs. 1,21,06,370

* Paid-up capital consists of 6,00,000 ordinary shares of Rs. 5 each fully paid up. Out of this 3,00,000 shares of Rs. 5 each are made up of Rs. 2 50 in cash and Rs. 2 50 issued as bonus shares. Further 3,00,000 shares of Rs. 5 each are issued as fully paid-up bonus shares. Out of the paid-up capital 3,10,695 ordinary shares are held by the Holding Company—The British India Corporation Ltd., and 4,360 shares by Brushware Ltd., a subsidiary of the Holding Company.

G. Claridge and Co., Ltd.

(*Managing Agents*: Messrs. W. H. Brady & Co., Ltd., Bombay.)

42nd Annual General Meeting—12th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Gross realisation on printing, binding,etc. ..	48,73	38,11
Gross profit	10,38	4,86
Transfer to Managing Agents' remuneration ..	97	37
" " provision for staff gratuity ..	59	40
" " depreciation	1,28	97
" " development rebate reserve ..	52	14
" " provision for taxation	3,67	1,58
Net profit	3,35	1,40
Adjustments	5,68*	41
Appropriations:		
Total available balance	9,03	1,81
To depreciation (being under provision for years 1957 to 1960)	23	Nil
Transfer to general reserve	6,30	15
Proposed dividend (taxable) equity	2,40	1,60
	(30%)	(20%)
Carry forward	10	6

N.B.—Adjustments include the balance brought forward from the previous year and other credit items like excess provisions for bonus and taxation; profit on sale of machinery sold and the amounts transferred from reserves.

* This includes Rs. 3,00,000 transferred from plant rehabilitation reserve; Rs. 1,23,920 transferred from reserve for taxation; Rs. 1,81,896 being depreciation reserve on the opening work-in-process written back and Rs. 3,919 transferred from depreciation reserve.

Extracts from the Directors' report: The year under review has been a successful one for the Press. The Company's turnover for the year has reached a figure of almost Rs. 50 lakhs in spite of the fact that it has used customers' paper worth more than Rs. 5 lakhs.

New machinery to the value of Rs. 3,20,000 has been installed during the year and machinery worth approximately another Rs. 4 lakhs is on the way or should be arriving during the course of the year, the necessary formalities and permission for them having been previously secured. With a view to continuing the modernisation of the plant further applications for Rs. 9 lakhs worth of machinery have been made to the Government of India and recently on that application the Director of Industries, Bombay, has given us an Essentiality Certificate for machinery worth Rs. 4.78 lakhs.

The directors now feel that the present authorised, issued and subscribed capital of the Company of Rs. 8,00,000 is inadequate as compared to the Company's block account standing in the Company's books on 31st December 1961 at Rs. 10,17,268.

The Company has been recently expanding and has also in view a further expansion programme which would require additional capital. It is, therefore, considered necessary that the authorised capital of the Company be increased from Rs. 8,00,000 to Rs. 50,00,000.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,00,000	Gross block	28,78,384
Reserves and surplus..	14,04,011	—Depreciation ..	18,61,116
Other liabilities ..	16,25,809	Net block	10,17,268
		Current assets	26,19,951
		Investments	500
		Cash	1,92,101
	Rs. 38,29,820		Rs. 38,29,820

* Paid-up capital consists of 8,000 equity shares of Rs. 100 each fully paid up. Of the above shares 2,000 shares were allotted as fully paid up pursuant to a contract without payments being received in cash.

Kumergode Estates Ltd.

(*Managing Agents*: Messrs. Peirce, Leslie & Co., Ltd., Mangalore.)

11th Annual General Meeting—31st March 1962.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1961	1960
Coffee sales (amount received from Coffee Board)	4,82	6,69
Gross profit	1,83	2,91
Transfer to Managing Agents' remuneration	11	20
" " depreciation	39	40
" " provision for taxation	39	75
Net profit	94	1,56
Adjustments	15	14*
Appropriations:		
Total available balance	1,09	1,70
Transfer to general reserve	15	75
Proposed dividend (taxable) ordinary ..	70	80
	(17½%)	(20%)
Carry forward	24	15

N.B.—Adjustments represent the balance brought forward from the previous year.

* This includes Rs. 1,152 being excess provision for Central Income-tax for the previous years written back.

Extracts from the Directors' report: *Coffee Crop and Costs*: These are given in the following table with corresponding figures for the previous two years.

Year	Crop (Metric tonnes)	Estate expenditure: Per acre	Estate expenditure: Per metric tonne	All-in cost per metric tonne
		Rs.	Rs.	Rs.
1958-59	172.481	607	2,138	2,679
1959-60	193.192	564	1,781	2,190
1960-61	182.801	547	1,836	2,196

The entire crop for the season was delivered to the Coffee Board and was awarded 2,60,754 points. The valuation taken is Re. 1·90 per point which is equivalent to Rs. 2,718 per metric tonne, and payments received to-date amount to Re. 1.75 per point. Final payment on the 1959-60 crop has been received making a total of Rs. 2.24 per point or Rs. 3,350 per metric tonne for that year.

Estimates—1961-62: The estimates of crop and costs for the current year are as follows:

Crop in metric tonnes	Estate expenditure: Per acre	Estate expenditure: Per metric tonne*	All-in cost per metric tonne
	Rs.	Rs.	Rs.
130.00	546	2,573	2,972

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,00,000	Gross block	9,88,778
Reserves and surplus..	4,14,066	—Depreciation ..	2,17,268
Other liabilities ..	2,24,646	Net block	7,66,510
		Current assets	1,97,916
		Investments	250
		Cash	74,036
	Rs. 10,38,712		Rs. 10,38,712

* Paid-up capital consists of 2,00,000 ordinary shares of Rs. 2 each fully paid up. Of the above, 1,00,000 shares of Rs. 2 each ar allotted as fully paid up by way of bonus shares through capitalisation of reserves.

Kil Kotagiri Tea and Coffee Estates Co., Ltd.

(*Managing Agents*: Messrs. Peirce, Leslie & Co., Ltd., Coimbatore.)

14th Annual General Meeting—5th April 1962.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1961	1960
Income from crops (1960-61) tea and coffee ..	23,87	30,42

Transfer to provision for gratuity	3,00	Nil
" " development rebate reserve ..	3	5
" " capital reserve	Nil	71
" " general reserve	Nil	1,00
To dividends (taxable) 7% C. preference ..	18	18
" additional dividend (taxable) preference..	Nil	6‡
" dividend (taxable) ordinary	4,29	4,29
	(25%)	(25%)
Carry forward	11	15

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

* This includes Rs. 1,46,531 being excess provision for taxation in previous years written back and Rs. 2,74,924 being amount transferred from general reserve.

† This includes Rs. 71,510 being profit on sale of land.

‡ This is the additional preference dividend at 7 per cent. per annum (less tax) for four months from July to October 1960.

Extracts from the Directors' report: *Tea*: A crop of 4,46,673 kgs. 1959-60—4,67,185 kgs.) was harvested at a cost of Rs. 3.60 (Rs. 3.33) per kg. The average net price realised for the year was Rs. 5.17 per kg. as compared with Rs. 5.45 per kg. for 1959-60. The tea crop for season 1961-62 is estimated at 4,55,000 kgs. at an all-in cost of Rs. 3.64 per kg.

Coffee: The crop harvested amounted to 37.379 tonnes (1959-60—165.001 tonnes). The coffee crop for 1961-62 is estimated at 104 tonnes made up of 72 tonnes Arabica and 32 tonnes Robusta.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,77,800	Gross block	31,78,916
Reserves and surplus..	11,14,122	—Depreciation ..	12,97,461
Other liabilities ..	13,15,448	Net block	18,81,455
		Current assets	28,28,357
		Cash	1,97,058
	Rs. 49,06,870		Rs. 49,06,870

* Paid-up capital consists of 6,000 five per cent. preference shares of Rs. 100 each fully paid up and 18,778 equity shares of Rs. 100 each fully paid up.

Empire Dyeing and Manufacturing Co., Ltd.

(*Managing Agents*: Messrs. W. H. Brady & Co., Ltd., Bombay.)

Sixty-second Annual General Meeting—12th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Gross income	51,98	44,35
Gross profit	7,41	7,55
Transfer to Managing Agents' remuneration ..	97	73
" " depreciation	52	39
" " provision for staff gratuity ..	15	20
" " development rebate reserve ..	12	Nil
" " provision for taxation	3,12	3,11
Net profit	2,88	3,22
Adjustments	45	28
Appropriations:		
Total available balance	3,28	3,50
To depreciation (under provision for years 1957 to 1960)	10	Nil
To short provision for taxation on previous year	Nil	15
Proposed dividend (taxable) equity	3,00	3,00
	(33⅓%)	(33⅓%)
Carry forward	18	35

N.B.—Adjustments include the balance brought forward from the previous year and other credit items like excess provision for taxation made in previous year and unclaimed wages written back if any.

Extracts from the Directors' report: The Works have established a good reputation in the Cloth Market for processing superfine goods, mostly of power looms.

At per report of Messrs. Gherzi Eastern Ltd., Textile Technologists, who were appointed to give a report on the latest method of processing, the Company has placed an order for latest type of Stentering Machine of Farnatex make which is scheduled to be delivered to the Works by the end of April 1962.

One complete automatic and two semi-automatic new Dyeing Jiggers have been installed during the year. An order for a Backfilling Machine has been placed and the machine will be received at the Works by end of April 1962.

An application has been made to the Textile Commissioner for Essentiality Certificate to import one complete latest type of J-Box Bleaching Range, which is awaited.

Liabilities	Rs.	Assets	Rs.
Capital*	9,00,000	Gross block	23,03,930
Reserves and surplus..	7,06,676	—Depreciation ..	17,21,700
Other liabilities ..	14,75,291	Net block	5,82,230
		Current assets	13,67,150
		Investments	1,99,000
		Cash	10,23,587
	Rs. 31,71,967		Rs. 31,71,967

* Paid-up capital consists of 60,000 equity shares of Rs. 15 each fully paid up. Of the above shares 43,000 shares were allotted as fully paid up by way of bonus shares.

I.C.I.'S BID FOR COURTAULDS FAILS

The biggest takeover bid in British industrial history, namely that of I.C.I. for Courtaulds, has ended without the I.C.I. being able to achieve its object. The I.C.I. conceded defeat in its £200 million takeover battle, as only 37.4 per cent of Courtaulds' ordinary shareholders had accepted its offer. This was far short of the 51 per cent majority holding which appeared to be the I.C.I.'s more limited aim at the closing stages of the battle. Thus, I.C.I., which sought a complete takeover of Courtaulds, finds itself holding a minority interest of £29.6 million in Courtaulds' £79.1 million equity capital.

Courtaulds' Board of Directors is understandably jubilant over its victory which has prevented Britain's largest man-made fibre unit from being swallowed up by another industrial giant. But it had to pay a heavy price. Courtaulds is reported to have spent as much as £250,000 in fighting the wordy battle with the I.C.I. In addition, it had to make a loan stock distribution amounting to £40 million and pay a capital dividend of 2½ per cent tax-free, in order to induce stockholders to reject I.C.I.'s offer. The Board had also to reveal its future plans to a far greater extent "than any company had ever done," because "it was the only way it could let stockholders know of the real value of their shares."

For the I.C.I., the bid has done anything but good. Its "public image" has suffered, because the failure of the bid—a big setback by itself—is said to have exposed the vulnerable spot of the I.C.I., namely, the man-made fibre section, to strengthen which the Company made the bid for Courtaulds. In other words, the bid was not an exercise in financial empire-building, but was primarily defensive in motive.

The battle is certain to leave a long-lasting effect on the management of Courtaulds whose policy had been criticised by its shareholders as "secretive and niggardly." Observers in London feel that, henceforth, the Board is likely to take the shareholders more into confidence. In fact, some are inclined to think that the pruning of interim dividend by Courtaulds' Board last year and the gloomy predictions made by it at that time—both of which have now been admitted by the Chairman of Courtaulds, Sir John Hanbury-Williams, to have been wrong—might have led I.C.I. to believe that Courtaulds' shareholders could be attracted by short-term financial inducements.

Now that the bid has failed, the question that remains is: what of the future? Will the I.C.I. be content with a minority holding or will it try to acquire a controlling interest by slowly buying up Courtaulds' shares in the market or by yet another bid in future? Although it is difficult to answer these questions precisely at present, the statement made by Mr. Paul Chambers, Chairman of I.C.I., at the general body meeting of shareholders called to approve an increase of capital needed to give effect to the acceptances of its offer, is very significant. Mr. Chambers said that the I.C.I. had, "at present," no intention of buying or selling any Courtaulds' ordinary stock but added that its very large holding in Courtaulds "could never be regarded merely as an investment." This statement, read along with his assertion that "your Directors remain unanimously of the opinion that a full merger of the two undertakings would have been very much in the interest of both bodies of stockholders and also in the national interest," shows that the issue cannot be considered as closed. It is true that "a quiet period of reflection," as Mr. Chambers put it, has come to prevail. But it might prove to be short-lived. The following comment of the *Financial Times*, London, gives an indication of the possible complications that can arise in the future:

"If the Courtaulds stock is not to be regarded as a pure investment, does I.C.I. see it as a means of influencing Courtaulds? And, if the answer to that question is yes, will this influence be directed towards securing full integration at some future date which the I.C.I. Board still wants? For the Courtaulds Board, this is a difficult situation. It will have problems enough in meeting the high profit forecasts produced in answer to I.C.I.'s bid: this alone will almost certainly lead the Company to seek a considerable strengthening of its Board—not an easy matter in current conditions. Moreover, the Board will know that any failure to meet the forecasts, perhaps because Britain's entry to Europe turns out to be tougher than expected, will be ammunition for I.C.I.'s view that only a full merger is in the real interests of stockholders in both companies."

Thus, Britain's "biggest, longest, most bitter and most expensive bid battle" is over: but the problems of the man-made fibre industry, which sparked it off, remain.

COMPANY MEETINGS AND DIVIDENDS

BUDGE-BUDGE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th April 1962. Dividend: *Nil*. Transfer books remain closed from 26th March to 9th April 1962, both days inclusive.

JESSOP AND CO., LTD. Thirtieth Annual General Meeting, Calcutta, 10th April 1962. Dividend: 8.58 per cent or Re. 0.858 per ordinary share, subject to deduction of tax. Transfer books remain closed from 29th March to 10th April 1962, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 10th April 1962. Dividend: 15 per cent or Rs. 15.00 per ordinary share, subject to deduction of tax, payable on and from 16th April 1962.

EMPIRE DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 12th April 1962. Dividend: 33⅓ per cent or Rs. 5.00 per share, subject to deduction of tax, payable on and after 30th April 1962. Transfer books remain closed from 23rd March to 13th April 1962, both days inclusive.

G. CLARIDGE AND CO., LTD. Annual General Meeting, Bombay, 12th April 1962. Dividend: 30 per cent or Rs. 30.00 per share, subject to deduction of tax, payable on and after 30th April, 1962. Transfer books remain closed from 23rd March to 13th April 1962, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 12th April 1962. Dividend: 11½ per cent or Rs. 9.00 per share (including a bonus of Rs. 2.00 per share), subject to deduction of tax, payable on and after 30th April 1962. Transfer books remain closed from 23rd March to 13th April 1962, both days inclusive.

NATIONAL RUBBER MANUFACTURES LTD. Annual General Meeting, Calcutta, 14th April 1962. Dividend: Re. 0.65 per share, subject to deduction of tax. Transfer books remain closed from 26th March to 14th April 1962, both days inclusive.

JAY SHREE TEXTILES LTD. Annual General Meeting, Rishra, District Hooghly—West Bengal, 18th April 1962. Dividend: Re. 1.00 per share, subject to deduction of tax. Transfer books will remain closed from 4th to 18th April 1962, both days inclusive.

BRUSHWARE LTD. Annual General Meeting, Kanpur, U.P., 18th April 1962. Dividend: 8 per cent or Re. 0.80 per share, subject to deduction of tax.

HINDUSTAN LEVER LTD. Annual General Meeting, Bombay, 18th April 1962. Dividend: 26 per cent or Rs. 2.60 per share, subject to deduction of tax. Transfer books will remain closed from 12th to 18th April 1962, both days inclusive.

CAWNPORE TEXTILES LTD. Annual General Meeting, Kanpur, U.P., 21st April 1962. Dividend: 10 per cent or Re. 0.50 per share, subject to deduction of tax. Transfer books will remain closed from 2nd to 21st April 1962, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Second interim dividend of 2½ per cent, subject to deduction of tax (additional to the interim dividend of 2½ per cent subject to deduction of tax, declared on 2nd September 1961), for the year ended 31st March 1962, payable on or after 11th April 1962.

METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD. Interim dividend of 7.5 per cent (inclusive of a special dividend of 1.25 per cent for Silver Jubilee), subject to deduction of tax, on equity shares, for the year 1961-62. This dividend is subject to relief under Section 15C of the Indian Income Tax Act to the extent of 48.5 per cent. The net dividend thus works out to 63.41 nP per equity share.

CANARA INDUSTRIAL & BANKING SYNDICATE LTD. Dividend of 10 per cent on 'A', 'B' and 'C' class Equity shares, subject to deduction of tax, for the year ended 31st December 1961.

BUCKINGHAM AND CARNATIC CO., LTD. Taxable final dividend of 12 per cent (making a total of 18 per cent taxable), for the year 1961.

VASANTA MILLS LTD. Taxable ordinary dividend of 25 per cent or Rs. 25.00 per ordinary share, for the year ended 31st December 1961. Transfer books will remain closed from 16th to 30th April 1962, both days inclusive.

TRAVANCORE RAYONS LTD. Taxable ordinary dividend of 20 per cent or Rs. 2.00 per ordinary share, for the year 31st December 1961. Transfer books will remain closed from 21st April to 13th May 1962, both days inclusive.

OUCHTERLONY VALLEY ESTATES (1938) LTD. Taxable ordinary dividend of 12 per cent or Re. 0.24 per ordinary share, for the year ended 31st October 1961. Transfer books will remain closed from 17th to 30th April 1962, both days inclusive.

MODERN MILLS LTD. Taxable dividend of Rs. 6.00 per ordinary share, for the year ended 31st October 1961.

ARVIND MILLS LTD. Taxable final dividend of Rs. 30.00 per share (making a total of Rs. 45.00 per share taxable), for the year 1961.

RAIPUR MANUFACTURING CO., LTD. Taxable final dividend of Rs. 28.00 per share (making a total of Rs. 40.00 per share, taxable), for the year 1961.

UNITED BANK OF INDIA LIMITED

(*Concluded from page 573*)

banking is fast diminishing and that the banks are making a beginning in the matter of advancing loans to industries on 'term' basis. But in view of the present state of corporate financing, which I have just now discussed, I think a word of caution is necessary.

"A progressive outlook is required and is welcome. At the same time, it is also necessary that the limit is noted and the danger of overstepping the same is realised. I consider that, in allowing term loans, the commercial banks must, first of all, satisfy themselves that the concerned industrial unit has an adequate capital base. Secondly, they must not try to provide more than medium-term finance. It must be recognised that the longer-term financing agencies and the Issue (or Investment) Houses must ultimately undertake to bear the long-term risks. The basically short-term agencies can come into the field only for tiding over the period of transition.

Association Activity

"I have always held the view that it is only through co-ordinated and concerted efforts on right lines that the banks can fulfil their obligations towards development of the economy. On the threshhold of the third Plan and with the complex problems before us, I consider that the need for such actions have never been more urgently felt as now. We are in need of a strong and progressive Banks' Association. Such an association is necessary both for a co-ordinated action on the part of the banks and for generating and guiding a healthy competition amongst themselves. I, therefore, urge that the existing Association should consider formation of a strong Central Federation with residuary authority remaining with the local and sectional organisations of banks."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

INDIA'S NATIONAL INCOME

The national income of India (at 1948-49 prices) was Rs. 12,690 crores in 1960-61 and Rs. 11,850 crores in 1959-60, as compared with Rs. 10,480 crores in 1955-56. The *per capita* income at 1948-49 prices has been placed at Rs. 292.5, Rs. 279.0 and Rs. 267.8 in the three years 1960-61, 1959-60 and 1955-56, respectively. This is revealed by the ninth issue of the annual White Paper on national income just released by the Central Statistical Organisation.

Unlike 1959-60 which, as a result of fall in agricultural output, recorded only a nominal increase in the total national income, the increase in total national income (at 1948-49 prices) during 1960-61 over the preceding year amounted to Rs. 840 crores including an increase of Rs. 360 crores in agriculture alone. The increase registered by the non-agricultural sectors works out at Rs. 480 crores during 1960-61 over the preceding year, as compared with an increase of Rs. 260 crores in 1959-60 over 1958-59. The total national income and the *per capita* income increased by 7.1 per cent and 4.8 per cent, respectively, in 1960-61 over 1959-60.

The trend of net national income since 1950-51 is indicated below:

	Net national output (in Rs. 100 crores)		*Per capita* net output (in Rs.)	
	At current prices	At 1948-49 prices	At current prices	At 1948-49 prices
1950-51	95.3	88.5	266.5	247.5
1951-52	99.7	91.0	274.2	250.3
1952-53	98.2	94.8	265.4	255.7
1953-54	104.8	100.3	278.1	266.2
1954-55	96.1	102.8	250.3	267.8
1955-56	99.8	104.8	255.0	267.8
1956-57	118.1	110.0	293.4	275.6
1957-58	113.9	108.9	279.6	267.4
1958-59	126.0	116.5	303.0	280.2
1959-60	129.4	118.5	304.7	279.0
1960-61 (preliminary) ..	142.0	126.9	327.3	292.5

After adjusting for purely statistical differences between the crop production estimates of 1955-56 and 1960-61, the increase in national income and *per capita* income in real terms amounts to 20.2 per cent and 8.4 per cent, respectively, during the second Plan period.

Expressed at current prices the national income was Rs. 14,200 crores and Rs. 12,940 crores in 1960-61 and 1959-60, respectively, as against Rs. 9,980 crores in 1955-56. The *per capita* income at current prices was Rs. 327.3, Rs. 304.7 and Rs. 255.0 in 1960-61, 1959-60 and 1955-56 respectively. The larger increase at current prices than at constant prices was due to the increase in prices.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 28*th March*

Acute stringency continues to be the story of the short-term money market. The seasonal demand for bank credit is at its peak and, although deposits with banks have gone up in recent months, the expansion in bank credit has already outpaced it. There are hardly any lenders in the inter-bank section, with almost all banks seeking accommodation from the lender of last resort at the highest bank rate, namely, 6 per cent under the three-tier system. The day-to-day call money rate is nominally quoted at 5½ per cent. In Calcutta, it is even higher, viz., 5½ per cent.

The understanding reached by the special committee of the Indian Banks Association in charge of the revision of the inter-bank agreement on deposit rates, to which a reference was made in this column last week, has not yet been officially announced. It is, however, reported that discussions are taking place with the Exchange Banks Association to get their approval to the modifications that have been decided upon. A point not mentioned in this column last week is that the Committee has proposed that the modified agreement should be firm for a period of three years and that no member can revoke it during this period even by giving six months' notice. It is further understood that, even after the three-year period, the agreement will be binding on its members, unless they give six months' notice for any change which they wish to make.

In the meantime, the rates for short-term deposits remain unchanged as follows:

		Per cent
Notice money from public:		
	3 days and more	3
Term deposits:		
(i)	3 to 30 days (inclusive)	3
(ii)	31 to 60 days (inclusive) ...	3½
(iii)	61 to 91 days (inclusive) ...	3½
(iv)	91 days and over but less than 12 months	3½
(v)	12 months and over but less than 24 months	4
(vi)	Two to four years	4½
(vii)	Four to five years	4½
(viii)	Five years and over	5

During the week under review, Rs. 2 crores of 91 days' Government of India Treasury Bills were sold at Rs. 2.610 per cent per annum which was the same as in the previous week. The total amount offered against the tender for these bills was, however, smaller by Rs. 50 lakhs at Rs. 2 crores. 91 days' intermediate Treasury Bills sold from 21st March to 24th March 1962 fetched a mere Rs. 5 lakhs, as against Rs. 15.50 lakhs in the previous week. Sales of both types of bills will be continued in the coming week also.

India's foreign assets declined during the week ended 23rd March 1962 by Rs. 28 lakhs to stand at Rs. 133.74 crores. Of this amount, Rs. 123.86 crores are held in the Issue Department of the Reserve Bank and the balance, Rs. 9.88 crores, in the banking department under balances held abroad.

There was a decline of Rs. 4.66 crores in the Reserve Bank's advances to Scheduled banks against usance bills, the amount outstanding as at 23rd March being Rs. 43.18 crores.

The latest available statement of scheduled banks is for the week ended 16th March 1962. This, as compared with that in the previous week, shows a decline of Rs. 9.91 crores in deposits and of Rs. 1.11 crore in inter-bank borrowings, followed by an increase of Rs. 13.41 crores in bank credit, the total of which is less than Rs. 1,400 crores by Rs. 9 crores only. The total borrowings from the Reserve Bank were Rs. 66.40 crores, an increase of Rs. 19.03 crores over the previous week. Borrowings from the State Bank of India aggregated about Rs. 16 crores of which some Rs. 9 crores were of demand nature. The total cash balances of the scheduled banks were down by Rs. 2.18 crores, but their investments were up by Rs. 6 crores to stand at Rs. 595.62 crores. Almost the whole of this increase in investment was on account of the State Bank of India, the deposits of which had fallen by Rs. 2.71 crores, which practically no change in advances and a decline of Rs. 4.66 crores in cash.

In the gilt-edged market, there have been no new developments. The turnover continues to be restricted and whatever change there has been in the value of Central Government loans has been in the downward direction. Conversion loan, for instance, has fallen by 15 nP to Rs. 70.85. A drop of 5 nP is seen in 3½ per cent 1974 and 3½ per cent 1969. There were, however, some inquiries for 4 per cent short-medium-dated State loans. Thus, 4 per cent 1968 of almost all State Loans have gone up by 15 to 50 nP.

In the foreign exchange markets of the world, there has been a slight fall in the value of the pound sterling, which had, in recent weeks, ruled extremely strong, with rate being very near to the upper limit of external parity. Thus, in the New York foreign exchange market, spot sterling has come down from 281.670-281.700 cents per £ to 281.150-281.190. Similarly, there has been a drop of 0.200 cent in three months' forward, which is quoted at 279.770-279.810 cents at the time of writing. The decline over the week was chiefly due to the reduction in the British Bank rate on the 22nd inst. to 5 per cent from 5½ per cent, to which level it had been cut by ½ per cent only a fortnight before. There has been a slight fall in the value of sterling in the Paris and Zurich exchange markets also. In keeping with this fall in the value of sterling, rupee also has weakened to some extent. The banks' selling rate for spot T.T. on New York has gone up by a rupee to Rs. 476.25 per 100 dollars. Their buying rate for Ready T.T. has also gone up by a like amount to Rs. 472.75. At the time of writing, there has been a slight improvement, with the banks' selling rate coming down by 25 nP to Rs. 476 per 100 dollars. Their buying rate, however, has remained unchanged.

GOLD EASY, SILVER RECOVERS

(From Our Own Correspondent)

BOMBAY, 28*th March*

The bullion market began the week (Thursday the 22nd inst.) on a distinctly firm note, but soon developed a sagging tendency which persisted till almost the close today, when silver staged a slight recovery. The initial firmness was engendered by bull support and covering by shorts, thanks to reports of good offtake in spot. On Friday, however, the market turned easy, with both gold and silver moving downward. The easy trend gathered further momentum in subsequent sessions, due to rumours of a possible resumption of silver coin imports from Tibet and fears regarding large-scale sales of contraband gold. Consequently, values suffered a setback. Even at lower levels, fresh support was lacking. Today, silver evoked scattered inquiries induced by encouraging advices from Delhi and Calcutta. Not only were the earlier losses completely recovered but closing rates were higher than those on Tuesday last week. But gold continued to rule depressed.

Arrivals of gold during the week were higher than in the previous week, the daily average being 9,000 tolas, as against 8,250 tolas. The offtake, too, was slightly higher at 6,400 tolas, as against 6,250 tolas, but still well below the arrivals. In the case of silver, both arrivals and offtake were less, the former at 13 bars (22 bars last week) and the latter at 11 bars (22 bars).

The gold mines in Kolar (Mysore) crushed 552,000 tons of ore yielding 123,000 fine ounces of gold during the first eleven months of 1961-62. The corresponding figures for the whole of 1960-61 were 582,000 tons and 140,000 ounces.

About 300 tolas of contraband gold were confiscated by the customs at Calcutta on the 22nd inst. with this quantity, the total of contraband gold confiscated since the beginning of 1962 is estimated at 22,000 tolas, in addition to several thousand tolas believed to have been smuggled from Goa.

In gold, the *Jeth* (18th June) settlement advanced from Rs. 122.80 to Rs. 123.30 on the 22nd inst. but declined thereafter and touched a low of Rs. 121.25 today before finishing at Rs. 121.30. The *Fagun* settlement went off the board at Rs. 122.45 on the 22nd inst. At this level, the rate for transferring commitments to the *Jeth* settlement was against bulls to the extent of 65 nP, as against 30 nP on Tuesday last week.

Ready gold continued to be at a discount under the forward (*Jeth*), the actual discount increasing from 30 nP last week-end to 65 nP today, when the spot rate stood at Rs. 120.65, as against Rs. 122.50 a week ago.

Forward silver was well supported early in the week, the *Jeth* (19th June) settlement spurting from Rs. 217.50 to Rs. 218.35 on Thursday and the *Fagun* (23rd March) settlement from Rs. 218.10 to Rs. 219.75. As the spread between the two settlements exceeded a rupee, the bulls were obliged to pay a margin of Rs. 300 per bar. The margin was in force on the following day also when the *Fagun* settlement ran out at Rs. 217.85, though the *badli* declined slightly from Re. 1.15 to Re. 1.05. The *Jeth* settlement finished the week at Rs. 217.70, as against Rs. 217.50 on Tuesday last week.

The premium commanded by ready silver over the forward (*Jeth* settlement) rose from 70 nP last week-end to 85 nP today, when the closing spot rate was Rs. 218.55, as against Rs. 218.20 a week ago, the highest and lowest levels touched being Rs. 219 (Thursday and Friday) and Rs. 217.25 (Monday), respectively.

The dollar price of gold in the London bullion market receded from $35.09⅜ to $35.08¼ per fine ounce. The sterling price of gold, however, firmed up further from 249*s.* 2½*d.* to 249*s.* 7½*d.* Forward silver softened by ½*d.* to 84½*d.*, while ready silver was unchanged at 94½*d.*, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	22-3-62 (closing)	High	Low	20-3-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	120.65	122.50	120.60	122.50
*Jeth**	121.30	123.30	121.25	122.50
Sovereign	97.00	—	—	97.00
SILVER				
Ready (.996 fine)	218.55	219.00	217.25	218.20
Jeth†	217.70	218.35	216.40	217.50
London—				
Gold	249*s.* 7½*d.*	249*s.* 7½*d.*	249*s.* 2*d.*	249*s.* 2½*d.*
Silver Ready	84½*d.*	—	—	84½*d.*
Silver Forward	84⅞*d.*	—	—	85*d.*
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.
§ June settlement.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

NO FUTURES TRADING IN COTTON

(From Our Own Correspondent)

BOMBAY, 28*th March*

The Jarilla March 1962 contract went off the board on the 24 inst. at the ceiling rate of Rs. 693 per three quintals. A unique feature of the contract was that not a single bale of cotton was tendered against it. This is the first time in the history of cotton trading in this country that a contract failed to attract any tenders. The contract had a notable career. Trading commenced on 13th July 1961 on an encouraging note at Rs. 604.25 per three quintals. After a brief spell of easiness, induced by favourable crop prospects, which took the quotation down to Rs. 585.50 on 8th August 1961, the contract steadily advanced, following the sharp decline in crop estimate, to touch the ceiling of Rs. 693 by the middle of February. It even pierced the ceiling and commanded an unofficial premium of Rs. 8 above the ceiling rate in private deals. Trading was devoid of all interest towards the close and practically no business passed on many days. Squaring up transactions, after the commencement of the delivery period, involved only meagre quantities.

With the expiry of the March contract, futures trading in cotton has come to a stop in Bombay. The supply position of cotton being what it is, the trade has virtually given up all hopes of getting F.M.C.'s permission for futures trading in current crop. It is still too early to think of the 1963 crop and hence the present vacuum in futures trading is expected to persist for some time.

While the agitation for decontrol of cotton in the next season continues, the trade has noted with interest the statement of Mr. K. C. Reddy, Union Minister for Commerce and Industry that, within a few weeks, the Government would announce "something definite" for relieving the cotton shortage in the country.

In the spot section, mill activity was restricted due to lack of quota. Nevertheless, moderate interest was reported in popular varieties such as Co2, L.147, Laxmi, Kalyan, Surti, Vijay and Digvijay. Spinner demand is expected to broaden when a fresh quota for Indian cotton is released to mills.

In the export section, Bengal *Deshi* prices tended to fall steadily in the absence of export quota. In fact, even some distress selling in terminal market was reported. Among foreign cotton, Sudan is the only cotton which attracted regular and sustained mill interest. Only stray interest was noted in Egyptian cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 650; Gangenagar 693; Nagar Co2 1,635; Hubli Laxmi 1,173; L.147 1,135; Sudan P4L 1,280; G2S 1,635; G4S 1,425; Jinja 1,265.

Cotton furures in the Karachi market suffered a setback during the week under review. Lack of export demand and slow domestic mill interest prompted selling which resulted in a decline in prices. N.T.R.G. May eased from Rs. 72.50 last week-end to Rs. 71.40. The July contract receded by Re. 1 to Rs. 71.50.

Easy conditions prevailed in the Liverpool cotton futures market during the week. Both the American and American type contracts came in for selling by commission houses and local traders. Slow conditions in the yarn and piecegoods market also imparted weakness to the market. Sudan cotton contracts in Liverpool, however, ruled steady, thanks to encouraging advices from Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March 23.95; May 24.15; July 24.35; October 24.15.

American cottoin mixed growth contract: March 24.35; May 24.50; July 24.75 October 24.50.

Sudan: March 31.75, May 30.00; July 29.00.

Modest gains were recorded by cotton futures in New York during the week under review. Renewed trade buying and short-covering in nearby positions led to a mild rally in prices. Firm advices from the spot market also helped sentiment.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	27-3-62	19-3-62	14-3-62
New York spot	35.65	35.65	35.65
March	—	—	33.84
May	34.61	34.51	34.44

CASH INCENTIVES FOR RAYON EXPORTS?

(From Our Own Correspondent)

BOMBAY, 28*th March*

The yarn market is thick with rumours that the present export promotion scheme for art silk piecegoods will be revised soon. The revision contemplated, it is understood, seeks to do away with import licences for art silk yarn and to provide for cash incentives on the basis of actual export business in fabrics. The cash incentives are proposed to be given partly from out of the amounts earned as margins on imported art silk which is distributed by a central pool (the establishment of this pool is envisaged in the revised scheme) and partly from the levy of a cess on indigenous art silk yarn. Evidently, the authorities have been prompted by the need to put an end to the gross misuse of the incentive scheme by some parties who sell away the import licences at fantastically high premia. In some cases, the premium collected is as high as 225 per cent of the face value of licences.

The above rumours have engendered a distinctly bullish fervour to art silk yarns which have registered a handsome rise in values. Over the past week, Amilan yarn (20×1) April delivery has shot up from Rs. 3,365 to Rs. 3,470. June settlement has advanced by Rs. 125 to Rs. 3,550. Spot National Rayons 120 bright cones first grade has spurted by 39 nP to Rs. 14.01 and 150 bright cones first grade by 24 nP to Rs. 11.81. Among imported yarns, 120 Japan has risen by Rs. 28 to Rs. 1,957. 150 Italy has improved by Rs. 21 to Rs. 1,756. 150 Japan is fully maintained at Rs. 1,929, as also 120 Italy at Rs. 1,900.

In contrast to the firmness of art silk yarns, staple fibre yarns are ruling depressed. There has been stray bull liquidation which has brought down values. This is due to the reported sales by some mills recently and poor offtake in consuming centres. 40×1 April contract has declined by Rs. 5 to Rs. 729. June delivery is lower by Rs. 3 at Rs. 741. Spot Kohinoors has eased by 20 nP to Rs. 8.18, Hinds by 15 nP to Rs. 8.10 and Centurys by 13 nP to Rs. 8.12.

Cotton yarns continued to be dull. Business put through is restricted, with values moving narrowly. Twenty counts Gokaks have shed 12 nP to Rs. 22.75. Sixty counts T'Mangals have dropped 50 nP to Rs. 50.50. Other yarns are more or less unchanged.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	23-3-1962	20-3-1962
	Rs.	Rs.
Art silk yarn—		
30/1 Amilan (100 kg.)—		
April	3,470.00	3,365.00
June	3,550.00	3,425.00
120 Japan (per 100 kg.)	1,957.00	1,929.00
150 Japan (per 100 kg.)	1,929.00	1,929.00
120 Italy (per 100 kg.)	1,900.00	1,900.00
150 Italy (per 100 kg.)	1,763.00	1,735.00
Wat. Ray. 150 Bt. 1 (per kg.) ..	11.81	11.57
Staple fibre yarn (40 × 2)—		
April	729.00	734.00
June	741.00	744.00
Kohinoor (per kg.)	8.18	8.38
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	19.00	19.00
20s Modern	22.75	22.87
32s Madura	29.50	29.25
40s T. T. Corin	33.75	33.75
60s T'Mangal	50.50	51.00
80s Mahindra	74.00	74.00

PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 28*th March*

Malabar black pepper moved narrowly during the week with undertone quiet under pressure of selling by holders who wanted to sell as much as they could in export before 31st March, as, otherwise, they had to pay sales tax on holdings in godowns as on that date. A Bill to amend the Kerala Sales Tax Act was referred to a select committee of the Assembly. The enhancement of the tax from 4 to 5 per cent is envisaged on crops like pepper, ginger, cardamom and rubber. Malabar is reported to have accepted some bids from New York at the lower price of $0.34½.

Ungarbled fluctuated between Rs. 312 and Rs. 303.50 and garbled from Rs. 320 to Rs. 310. Business on the Ring was reported to be very thin. May delivery moved between Rs. 336.50 and Rs. 327 and July delivery from Rs. 346.50 to Rs. 338. Calicut was quoted at Rs. 300.

Singapore ruled quiet with very little business for export, owing to her higher cost parity than that of Malabar. Sarawak black special is nominally quoted at Str.$132½ and Sarawak white at Str.$167½.

Spot at New York was down to $0.36½, due to cheaper offerings for Malabar. Grinders are reported to have temporarily withdrawn.

Though the overall picture regarding export of Malabar black is good, inland demand is reported to be poorer than last year.

Ready pepper in Bombay is nominally quoted at Rs. 168 per 50 kilos.

OILSEEDS RALLY AFTER INITIAL FALL

(From Our Own Correspondent)

BOMBAY, 28*th March*

There was a landslide in oilseeds prices early in the week and, though a smart rally was in evidence later, the closing rates today were still below those prevailing a week ago. The initial landslide followed persistent liquidation by bulls in groundnuts, thanks to bearish advices from upcountry centres. At lower levels, there was, of course, brisk demand from vanaspati manufacturers and local crushers. This led to the subsequent recovery. Price movements in other seeds followed the pattern set by groundnuts. Castorseeds ruled easy, owing to protracted absence of encouraging overseas inquiries for castor oil. Linseed were depressed during the earlier part of the week, but strengthened later as a result of better advices from North India. Cottonseeds were featureless. The French Government has fixed the price for Franc zone groundnuts for the 1961-62 season at 105 new Francs per 100 kilos, c.i.f. metropolitan ports basis shelled groundnuts, loose, from the Senegal and the Niger Republics, with three per cent acidity and one per cent allowance for impurities.

Groundnut May 1962 contract slumped from Rs. 226.50 to Rs. 217, before finishing at Rs. 224.75. Khandesh quality declined from Rs. 46.25 to Rs. 44.25 initially, but picked up to Rs. 44.75 today. Oil ex-mill closed 20 nP lower at Rs. 19. Oil

May 1962 contract, which had fallen from Rs. 18.95 to Rs. 18.30, finished at Rs. 18.80.

Castorseed March 1962 contract fell from Rs. 168 to Rs. 161.87 on Saturday. It, however, recovered later to Rs. 165.50. June 1962 contract closed at Rs. 161.50, as against Rs. 165.25. Madras small lost 50 nP to Rs. 33. Oil B.S.S. finished at Rs. 14, after declining earlier from Rs. 14.55 to Rs. 13.85. Oil commercial shed 55 nP to Rs. 13.30.

Among linseed, March 1962 contract moved down in the beginning of the week from Rs. 36.19 to Rs. 35.81, but, on renewed support, it recovered to Rs. 37. Bold ready closed 62 nP higher at Rs. 36.12. Linseed oil, however, shed 20 nP to Rs. 14.90.

Cottonseed April 1962 contract eased by a rupee to Rs. 99.50. July 1962 contract softened by 50 nP, today's closing rate being Rs. 103.25. White, non-white and Berar all fell by 50 nP to Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 28th March as compared with those of the two previous weeks:

	28-3-1962	20-2-1962	14-3-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	224.75	226.50	233.75
Niam bold	45.50	45.50	46.50
Khandesh quality	45.75	46.25	46.75
Oil ex-mill ready*	19.00	19.20	19.55

Kardi seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PLAIN TEAS EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 20*th March*

In sale No. 12 held today, 350,000 kgs. were offered. Teas from the Nilgiri district showed a further seasonal decline in quality, whilst others showed little change from last week. The market opened with good general demand, but, towards the close, there was a slightly easier tendency. Plain and low medium met fair support and sold at around last rates. Plainest descriptions were again easier. There was keen competition for medium and good mediums, particularly those with brighter liquors and these advanced with quality. Highgrowns were again irregular and were considerably easier, buyers following quality. Clean black leaf descriptions were a strong feature of the sale and these sold at prices above list. Teas of unorthodox manufacture met with good support and were often dearer. However, poorer descriptions under this category tended easier. Whole leaf grades were strong, particularly flowery pekoes.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low	4.00-4.40	4.60-4.80
Mediums	4.40-5.20	4.80-5.05
Good mediums	5.20-5.75	5.10.5.45
Nilgiri B.O.P.	5.00-9.55	5.20-6.25

The average price realised in sale No. 12 was Rs. 5.19 per kilo as against Rs. 5.48 in the previous week and Rs. 4.99 in the corresponding sale last year.

A total of 254,000 kgs. was offered in dust sale No. 12 held on the 22nd inst. Quality was well maintained. The market met with fair general demand, but prices for all descriptions were irregular and generally easier. Mediums and good mediums were generally easier by 10 nP, but those with clean leaf appearance met with better support. At the beginning of the sale, plainest descriptions were easier, but, as the sale progressed, these were in demand and closed firm. C.T.Cs; C.T.C. types and legg-cut types were in less demand and sold at irregularly easier rates. Highgrowns sold readily, but these also shared in the downward trend of the market.

The average price realised in dust sale No. 12 was Rs. 4.13 per kilo, as compared with Rs. 4.11 a week ago and Rs. 4.87 in the corresponding sale last year.

Colombo: In the export sale, teas from Western district met with good support and were dearer. Buyers emphasised more on below best uvas which were 5 to 15 cents dearer. Lowgrowns also came to a strong market and sold at rates above last. At the offgrades sale both offgrades and dusts met with good demand. Useful liquoring sorts were dearer whilst others were irregular.

London: North India and other growths: In Monday's sale there was good general demand. With the exception of best Assam C.T.Cs, all others met with strong enquiry and were fully firm.

Ceylon and South Indians: 23,088 packages were offered in Tuesday's sale of which 7,584 packages came from South India. Best Ceylons were irregular, but others met with strong demand and were dearer. There was continued demand for South Indian teas which were firm and frequently sold at dearer rates. Thin liquoring and stalky kinds, however, did not meet the same support.

Before going to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 13: 390,000 kgs. offered. Good general demand. Low medium and medium brokens firm. Similar fannings easier. Good mediums strong enquiry at dearer rates. Best highgrowns strong. Others easier with quality whole leaf in keen demand. Unorthodox fully firm."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 27*th March*

This season's last export sale took place here yesterday. There was good demand for the small quantity of tea on offer. New season's tea sales should start next month, but the quantity that would be shipped would not be significant until June or July. Tea stocks in the United Kingdom in the week ended 3rd March remained unchanged at 145½ million lbs. Considering the low level of stocks in Britain, it was expected that the new season would open with satisfactory pent-up demand. At the same time, prospects for this year's crop are considered satisfactory.

In the eleven months to November 1961, India exported 180.85 million kgs. of tea, showing an increase of 12.77 million kg. over the corresponding period of the previous year. Output in 1961 was higher by 28.35 million kgs. at 348.75 million kgs. as compared to 1960. This means that less than half the increased output found an export outlet. It should also be noted that, although exports increased by 12.77 million kgs., the earnings rose by only Rs. 5.92 crores.

Exports to the U.K. and to the U.S. were higher by 4.63 and 1.61 million kgs. respectively at 108.19 and 9.27 million kgs. Increased shipments were also recorded to other destinations notably the Sudan, Turkey, the U.S.S.R., Iran, Egypt, Iraq, Afghanistan, the Netherlands and Irish Republic. However, India exported less tea to Canada at 5.88 million kgs. (as against 6.45 million kgs. in the previous year), to West Germany 1.42 million kgs. (1.54 million kgs.), to Australia 1.50 million kgs. (2.28 million kgs.), and to New Zealand 460,000 kgs. (560,000 kgs.).

Trade circles were encouraged to note that, contrary to the common belief, actual tea exports to the U.S. had increased in 1961. This shows that tea consumption in that country is picking up. The fact that the increase in exports to that destination was of only 1.66 million kgs. indicates that promotional campaign should be speeded up. With lower exports an almost parallel trend was in evidence in Canada. The F.A.O. reported that the U.K. had increased intake by 19,000 long tons last year, but the fact that the value of the imports declined by £1 million gives an idea of the extent of decline in prices. These figures speak for themselves and give considerable substance to the industry's demand for tax concessions to step up exports along with higher production.

Against this background, trade circles have noted with considerable relief the statement by the Finance Minister in the Lok Sabha, that the demands for tax relief, put forward by the Tea Association of India, were being examined by the Government. Mr. Morarjee Desai thought that the Assam carriage tax was not being extended. The main demand of the Association is the merger of all the internal taxes into one Central excise duty. Practically every producers' organisation in the country has demanded this. The abolition of, or in the alternative, a sizable reduction in the export duty has also been demanded.

Problems facing the industry in general were surveyed by Mr. T. Hardingham, President of the Darjeeling branch of the Indian Tea Association, when he recently addressed the branch. He advocated that to strengthen Indian tea in world markets both the tax structure and wages should be rationalised. He said that the fact that the total area under tea in East Africa, Formosa, Japan, Iran, Turkey, Argentina, Brazil and Peru increased from 240,000 acres in 1946 to 530,000 acres in 1961 should be sufficient to assess the competitive threat to Indian tea from other producing countries. He attributed the low intake of tea by the Continent (which is 40 million lbs. a year for a population of 170 million as compared to the intake by Britain of 520 million lbs. for a population of 52 million) to high taxation there. In West Germany, for example, the tax on tea is as high as 97 per cent *ad valorem*.

The Chairman of the I.T.A., Sir Richard Duckworth, also spoke on the occasion, and declared that the Wage Board recommendations for an interim wage increase were unjust. Any increase, he affirmed, should be based on the current principles of wage fixation depending on the rise in the cost of living on productivity.

Representations to lower the rate of interest of loans which the Tea Board will grant to gardens for replanting and increase in the sum of Rs. 5 crores placed at its disposal for this purpose by the Government of India, have been made. The Tea Board will charge interest of 7 per cent per annum, while the Government will collect from the Tea Board only 4 per cent. In other words, the Tea Board will get 3 per cent as a charge for servicing the loans. This is considered too high and beyond the capacity of the gardens. If the Tea Board were to lower the interest rate to 5 per cent, it would be fair to both the Board and the gardens. The gardens would then avail themselves of the offer.

Dusts on offer during last week's internal sales totalled 30,497 packages which met with good

general demand. Keen competition was offered to the bright liquoring C.T.Cs, prices of which were satisfactory. Fibrous C.T.Cs were easier, while medium C.T.Cs were irregular. Orthodox dusts eased by 15 nP to 20 nP. There were some withdrawals of legg-cut teas, prices of which fell by 15 nP. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.30 to Rs. 7.00, medium Assam C.T.C. dust Rs. 5.30 to Rs. 5.70, legg-cut dust Rs. 4.00 to Rs. 4.80, medium Assam dust Rs. 4.00 to Rs. 4.40, and plain orthodox dust Rs. 3.60 to Rs. 4.10. Leaf offerings amounting to 726 chests were irregular.

During yesterday's export sale, offerings totalled 51,586 packages and were mostly of an end-season character. The general demand was very strong, although prices were irregular. Whole leaf grades were taken up at hardening rates, with bright liquoring teas having clean leaf being fully steady. Since representative selections were not adequate, no quotations can be given.

JUTE GOODS RECEDE

(From Our Own Correspondent)

CALCUTTA, *27th March*

Following reduced interest shown by overseas buyers jute goods depreciated during the week under review, though movement for export was fairly satisfactory, in view of earlier commitments. In fibre, sellers were anxious for business, while mills showed little disposition to purchase the inferior fibre. Consequently, quiet conditions were in evidence. There were indications that foreign buyers were not at all happy at the gain in prices of goods in recent weeks. They did not feel that, in view of depressed conditions in fibre and availability of any amount of fibre to mills at low prices, the upward trend of recent weeks was justified. It should be recalled that bullishness had been a result of covering in ready goods in the bazar when foreign buyers began to show greater interest. At current levels of prices for goods and fibre, working of mills admit of reasonable profits, and consumers abroad have noted that mills are recovering past losses too. Against such a background, foreign buyers think that, if only they support the market staggeringly, prices would fall. This week's drop has only justified such a feeling. In fact, foreign buyers themselves are responsible for lack of stability in market. Earlier in the season, they had put off buying for replenishment of stocks in order to check the price line. When prices fell, they rushed with buying orders. On top of this came the buoying news that U.S. consumption of burlap in January touched as high as 88 million yards, as against 72 million yards in December 1961. The February figure received during this week records consumption at 78 million yards, which, though it did not maintain the improvement recorded in January, was all the same higher by 5 million yards as compared with February 1961. Considering that February is a short working month, trade circles have taken this figure as satisfactory and only confirm that, in view of the competitive nature of prices of jute goods over substitutes, burlap is gradually recovering markets lost to substitutes and bulk handling methods.

It should be a matter of satisfaction for all concerned that, in keeping with their undertaking to the Government to accord reasonable support to the fibre market in an attempt to maintain minimum levels, mills are lifting fibre. In fibre stocks, they have blocked large sums of money and, though their need is to purchase higher grades of fibre just at the present time and stockists are selling these in assortment with the inferior grades, mills have in recent weeks exceeded the maximum purchase quotas. Mills are eager that cultivators should be encouraged to sow at least as large an area under jute as previously, as, with increased demand for goods, mills need all the fibre India can produce. The support which mills are according to fibre is therefore, springing from refined self-interest. No wonder that the Union Commerce Minister, Mr. N. Kanungo, was pleased to tell Parliament on Friday last that, as a result of the adequate steps taken to ensure prices at reasonably economic levels, deliveries for June were quoting Rs. 32 a maund, that is, Rs. 2 higher than the minimum level. This has been made possible as a result of the co-operation which the Indian Jute Mills Association has been extending to Government in an endeavour to maintain the minimum levels. Mr. Kanungo rightly thought that the fact that forward rates were higher than the ready delivery quotations should give sufficient incentive to growers to maintain the present acreage.

While all concerned admit that the industry is playing fair to cultivators, the leftist demand for nationalisation of mills was advocated in the West Bengal Assembly. Dr. B. C. Roy, the Chief Minister, ably replied to this demand. He said that, if the State could spare the sum of Rs. 72 crores which he thought was the investment in mills, this sum could as well be utilised to expand the public sector by starting some new industries. None who speak in favour of nationalisation shows how such a policy would result in solving crisis such as the one being faced better than what has been attempted. State trading in fibre is also often advocated without regard to the huge demand of investment that such a step would involve. Contending that any scheme of State trading in jute would bristle with difficulties, Dr. Roy reminded the members of the Assembly that Pakistan once attempted to introduce State trading in jute and in doing so incurred a loss of Rs. 25 lakhs. The I.J.M.A. had assured the Chief Minister that mills would as far as possible buy the entire crop and store the same in their godowns.

After all that is said and done, the need to improve quality of fibre output is never greater today than before. Cultivators have noted that tossa and middles command attractive premium over jungli and mesta. This should induce them to sow as much area as possible with the former even at a loss of acreage in inferior varieties. It is unfortunate that, as sowing time is approaching, price of tossa seeds is increasing. If only cultivators could get the seeds at fair prices and increased allotments of fertilisers, the coming crop would show a marked increase in the proportion of the superior variety to the inferior grades. Arrivals during the week under review were placed at about 450,000 maunds, but mills' purchases exceeded this quantity to equal almost one week's consumption. Sellers were anxious for business, as they believed that, with plenty of stocks with mills and likelihood of a bumper crop being repeated, the mills would be in a position to prevent any undue rise in prices. Daissee bottoms for April May were quoted at Rs. 32, as against Rs. 33 earlier in the week, with Assam bottoms and Northern bottoms being maintained at Rs. 30 and Rs. 29.50, respectively. Fibre prices in Pakistan were quiet, and concerned at the recent falling trend, the Pakistan Government has drawn up a buffer stock scheme which is being discussed at the conference of jute interests including foreign representatives being held at present in Dacca. The reduction in prices of certain yarns in Dundee as a result of cheaper Pakistan fibre is significant.

The goods market reopened on Thursday last under selling pressure in futures trading springing from speculation. This coupled with the reluctance shown by consumers abroad to support the higher prices led ready hessian 40" 10 oz. to fall from Rs. 55 to Rs. 54.75 and ready B. twills from Rs. 132.50 to Rs. 132. Speculators used this opportunity to cover at lower levels in anticipation of more overseas orders and with ready B. twills at Rs. 133.25 and hessian 40" 10 oz. at Rs. 55 prices recovered. Over the week-end, the news of shipments to Argentina being delayed affected sentiment to pull hessian 40" 10 oz. down to Rs. 54.50. Heavy goods were dull, with B. twills losing almost two points to Rs. 131.50. During yesterday, buying interest developed in the futures markets, and prices recorded all-round gains. Ready B. twills regained to Rs. 133.15 with ready hessian 40" 10 oz. quoting higher at Rs. 55.35.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *27th March*

Firm conditions were in evidence in the metals market here this week. There was acute shortage of copper scrap, although demand was restricted in view of the availability of the virgin metal against permits. Berry scrap was firm at Rs. 546.50 per 100 kgs. and utensil scrap at Rs. 506.25. In London, electrolytic copper eased from £234½ to £234 a ton. Tin, in London, after touching a high of £973 a ton last week, declined to £964½ this week, but soon recovered to £967—£2 higher than the ceiling. Tin was firm at Rs. 1,643.50 per 100 kgs. on local demand. Virgin lead was quiet at Rs. 123 per 100 kgs., but electrolytic zinc ruled steady at Rs. 240.25 per 100 kgs.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, *26th March*

Arrivals of E. I. tanned hides here this week were moderate, and of calf restricted. Clearance was good both for inland trade and export. Inquiries from the U.K. were patchy. Demand was mostly for cow hides inferior fifths in light weights and fourths and fifths in mediums. Importers were offering low prices for other lines, which were not accepted by the tanners. Cow calf fourth in 2 to 2½ lbs. average and top marks run in buff calf 2 lbs. were in demand, but the stocks available were small. Buffalo hides met with good offtake at steady prices.

Inquiries for tanned goat skins were erratic. There was some demand for 8 to 9 lbs. run parcels last week from the Continent, which was out of the market for this average for some time. Inferior selections in all average weights were neglected. Importers were offering low prices for other lines, probably with a view to bring down the price levels. E.I. tanners are finding the raw markets unworkable, and watching the position with caution, reducing the tannery output.

The market for tanned sheep skins ruled dull. Primes and semi-primes were not in demand. There were a few orders for middle class sheep from the Continent at lower prices than in the previous week. Importers in the U.S. were out of the market.

In the German tanned skins public sales, good parcels of goat skins were sold at 3d. less than the Madras current prices; and old lots were neglected. In the London sales, good lots fetched Madras current levels and old parcels were neglected. As regards sheep skins, clearance was poor, and lower ends were neglected and prices declined by 1*s.* to 1*s.* 6*d.*, where sold, on current nominal levels, in the U.K. auctions. In Germany also only a few oddments were cleared, leaving the bulk unsold and incurring storage charges.

GOOD DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, *26th March*

Sugar ruled steadier here this week. Superior bold crystal was in demand from Gujarat and M.P., and small crystal, inferior stuff, attracted Punjab and Rajasthan support. The inferior D29 registered fractional gains. The adequate supply of cane will keep the crushing season on till the end of April. Week-end prices were: Wholesale spot delivery Rs. 106.50 per bag, retail 97 nP per *seer*, mill delivery per maund E29 Simbhauli Rs. 38.19, D29 Amroha Rs. 36.62, Bijnore Rs. 35.25, Meerut Rs. 37.06 and Seohara Rs. 36.62.

The release of fresh monthly quota dampened the sentiment at Muzaffarnagar. Bold crystal eased by 12 nP to 25 nP a maund. Small crystal, however, tended to rise on Punjab and Rajasthan support. In the spot section, offtake improved on seasonal demand. Mansurpur D29 fetched Rs. 105 per bag. Ramlaxman was done lower at Rs. 102 and Sakoti E29 at Rs. 102 to Rs. 102.50 per bag. Mill delivery prices (in rupees per maund) were: A29 Iqbalpur 40.28; Lhakasar 39.60; Mansurpur 40.50; B29 Shamli 39.70; Daurala 40.12; Mawaana 39.87; C29 Deoband 39.41; Daurala 39 and Mansurpur 37.91.

Khandsari was steadier on good demand from Rajasthan and Punjab. *Khandsari* crystal prices improved by 50 nP per maund to Rs. 34.50 per maund. Moist quality *khandsari* was quoted at Rs. 26 to Rs. 31 and superior dry stuff at Rs. 31 to Rs. 33.50 per maund. *Khandsari boora* was quoted between Rs. 36 and Rs. 37 per maund.

Gur ruled quiet during the week, despite reduced daily arrivals of around 1,000 to 1,500 maunds. Demand, too, was slack, and offtake during the week was ten wagonloads by Gujarat. Local stock is now put at 33,000 maunds; the corresponding figure for the last year being 76,000 maunds. *Gur* production is coming to a close. Farmers, still retaining cane supplies, were either rushing them to factories or using them for sowings. Week-end prices of *gur* were: pansera best Rs. 16.50; *dara* Rs. 15.75; *shakker* Rs. 17.50 to Rs. 18.50. *Shakker* gained a rupee a maund due to poor arrivals.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *26th March*

Foodgrains were easy this week on expectations of bumper crops. According to the Union Food and Agriculture Ministry's annual report, due to increased internal production of 80.54 million metric tons as against 75.92 metric tons in 1959-60, reduced purchases by the Government, steady imports and judicious distribution, the Government was able to stabilise prices in 1960-61. Crop prospects for 1961-62 appear to be good. Total internal purchases of paddy and rice on Government account amounted to 5.53 lakh metric tons against 9.95 lakh metric tons in the preceding year. Total are placed at 34.95 lakh metric tons.

Wheat eased further to quote at Rs. 15 a maund for average quality and Rs. 16 to Rs. 17 for better farm produce. Superior best stuff was, however, done up to Rs. 18 a maund due to meagre stocks of about 2,000 maunds with the trade. Demand was slack. Arrivals from rural areas were small because of the fag-end of the season. Harvesting of wheat would begin here in mid-April.

Rice was depressed in sympathy with other grains. Some mainpuri quality flowed into the markets. Week-end prices (in rupees per maund) were: *Mainpuri sela* 19.75, *gadda kutcha* 19.25, *ramajwayan sela* 23, *raimunia sela* 24.50, *basmati sela* 28 to 30 and superior 31 to 34 per maund.

Punjab variety of gram fell by over 50 nP per maund to Rs. 13.25 on easy advices from producing areas of Punjab and U.P. Crop prospects were reported to be excellent following timely winter rains. Barley was quoted lower at Rs. 11.50 and *bejhar* at Rs. 12 per maund with the beginning of arrivals of new grains in the markets. Maize declined to Rs. 8 to Rs. 11 per maund and *bajra* Rs. 13.25 per maund, as stockists were anxious sellers and demand was fast running out. *Juwar* was also quoted lower in the absence of buying support. Other grains were listless.

Among pulses, new peas daily arrivals averaged 100 maunds. They would soon rise. But as quality reaching the market was damp and poor, prices sought lower levels of new to Rs. 9.87 to Rs. 10.35, and of old superior to Rs. 10.75 to Rs. 11 per maund. *Arhar* also eased in sympathy with peas and on selling pressure by stockists. Prices on Monday were: *Arhar* Rs. 13.50, *arhar dal* Rs. 17.50.

New *urd* and *moong* continued to attract good demand. Prices were steady at: Urd Rs. 22 to Rs. 24, *urd dal* Rs. 25 to Rs. 28, *moong* Rs. 18 to Rs. 21, *moong dal* Rs. 21 to Rs. 24, *massor* Rs. 15.50 to Rs. 17.50, *massor dal* Rs. 26. Stocks were: Old peas 2,000, *arhar* 5,000 maunds.

ASIAN CABLES CORPORATION LIMITED

MR. GIRDHARLAL B. KOTAK'S SPEECH AT ANNUAL MEETING

SIGNAL ACHIEVEMENT IN PRODUCTION LAST YEAR—FURTHER EXPANSION PLANNED

MR. Girdharlal B. Kotak, Chairman, Asian Cables Corporation Limited, told the Annual General Meeting in Bombay on Thursday that the optimism he had expressed about the Corporation's working in the last annual general meeting had been fully realised, inasmuch as the Corporation's first cable plant went into production according to schedule, and the first cables produced turned out to be of very good quality as had been proved by the results of the Alipore Test House. More than a million and a quarter core metres of cables had been manufactured uptil now, he said, and added that the production was progressively increasing as more and more skill was being acquired by the operative trainees working on the machines. At the present rate of progress, he expected production to be nearly Rs. 50 lakhs this year.

Dealing with further expansion, Mr. Kotak referred to Project II of the Corporation under which it would manufacture about 1,000 miles of power cables and 360 tons of enamelled copper wires (magnet wires). The most noteworthy feature of the expansion, according to Mr. Kotak, is the manufacture of power cables up to 33 kV, which no other unit in the country is manufacturing at present, as it requires very high order of technique. Kotak and Company, the promoters of Asian Cables Corporation Limited, has been granted a licence by the Government to start a rod rolling mill with a capacity of rolling 20,000 tons per annum per shift together with the other cable manufacturers in Western India.

The following is the full text of Mr. Kotak's speech:

"GENTLEMEN,

"I should not fail to express my happiness to have this opportunity to meet you all once again to review the progress of the Company and the prospects of the industry in which we all have a stake. I may assure you that your presence at this meeting, besides being an evidence of the keen interest that you all evince in the working of the Company, will certainly be a source of inspiration to the management to work more arduously for better achievements. I am reminded here of the assurance that I gave you last year that your confidence in the management will be fully justified by the sustained progress of the Company's undertaking which was soon expected to start yielding results. And I am very happy today to report that the optimism I expressed in the working of the Company at that time has been fully realised in the shape of solid results inasmuch as, firstly, the Company's first cable plant has gone into production according to schedule, and, secondly, the first cables that come out of the factory have turned out to be of very good quality as has been proved by the results of Alipore Test House. As stated by your Directors in their report which is with you, the Enfields' representatives who recently visited the factory were very much satisfied with the processing techniques and also with the quality of the products which according to them was as good as that of Enfield Cables in England.

Production Targets

"More than a million and a quarter core metres of cables have been manufactured uptil now and the production is progressively increasing as more and more skill is being acquired by the operative trainees working on the machines. At the present rate of progress, I expect a production of the value of Rs. 40-50 lakhs during the current year, which would be considered quite satisfactory in view of the fact that this will be the first year of production. Our present production schedule covers cables from the smallest size with 1/1.12 mm. conductor to flexible cables of largest size with 37/2.12 mm. conductor. These popular sizes include (1) braided and compounded cables, (2) tough, braided and compounded cables, (3) tough rubber sheathed cables, (4) glazed cotton braided flexible cords and (5) tough rubber sheathed flexible cords. We have also commenced production of special cables like welding cables and trailing cables; even such specialised cables are now being manufactured by men who have been wholly trained in our factory. We have complete testing facilities in our plant and have full confidence that our cable can withstand all the vigorous tests that may be called for by the various Standard Specifications and we can satisfy any clients' requirements, in regard to rubber insulated cables coming under the purview of our manufacture. Whatever we have already produced have passed the factory test and they are being despatched against orders already secured.

"I may say that this by itself constitutes a signal achievement in the first few months of production, a success which is rarely achieved by any industry in such a short span of time. If this progress is maintained, and I have no doubt about it, we should not be surprised if the Asian Cables very soon capture the confidence of the consuming public—individuals and institutions alike—by their superior quality and perfect workmanship.

"I had given to you a picture of the needs of the country for the electric power at the last annual general meeting. I had then told you that from 6 million kw. target for the second Five-year Plan the third Five-year Plan was to generate about 13.5 million kw. But the Planning Commission looks much further ahead. In the fourth Plan the target for the power generation is expected to be about 30 million kw. and within 20 years the demand for power is expected to be near 400 million kw. All these will need enormous quantity of cables to conduct the power to the consumer. With quality goods in our factory and tremendous demand outside, I feel confident of reasonably good returns on your investment in this Corporation.

Expansion Programme

"In Project II of our Corporation we shall be manufacturing about 1,000 miles of power cables and 360 tons of enamelled copper wires (magnet wires). The most noteworthy feature of our expansion is that our programme covers the manufacture of power cables upto 33 kV, which no other unit is manufacturing at present as this requires very high order of technique. At present the country has to depend for its requirements of 22 kV to 33 kV cables entirely on the imports from foreign countries.

"In this second project to manufacture power cables, we are being helped by two of the world's most well-known and reputed manufacturers viz. Messrs. Phelps Dodge Copper Products International Corporation of U.S.A. and Enfield Cables Limited of U.K., both of whom have long years of experience behind them to ensure our products a high quality. As was remarked by the Hon'ble Shri Morarjibhai Desai, the Union Finance Minister, in his inaugural speech at the factory on 6th November 1961, 'it is because of the robust optimism of your Directors in the future of this cable industry, that they have decided to put up the Company's second plant for power cables when its first plant has just gone into production.' And I am sure that your Directors' optimism about the second phase will also be fully justified by the results which will be achieved during the next few years.

"The drawings, designs and layout for Project II are now ready. The list of machinery has been received from the collaborators and we are applying to the Government for import licences for the machinery both for power cables and enamelled wires.

Rights Share Issue

"You will remember the last extraordinary general meeting held on the 14th November 1961, when it was decided to issue fresh capital of Rs. 1,50,00,000 out of which Rs. 50,00,000 were to be reserved for the foreign collaborators and the balance Rs. 1,00,00,000 was decided to be issued as right shares. At first we had thought that only one right share should be issued against one already held by the existing shareholders and that the balance capital of Rs. 50,00,000 might be offered to the public, thinking that 2 : 1 existing share will be too much of a burden for our shareholders. But prior to the above meeting and also on the day of the meeting several shareholders claimed and pressed for issuing two right shares against one. Though your Board had some apprehension as to the capacity of every shareholder to take up two right shares and thus subscribe three times his original idea of investment, the Board yielded to your wishes. Two right shares against one is a very rare demand on the shareholder and perhaps ours was the first one. But because of your generous support we have been able to achieve results beyond expectations. Rs. 85,00,000 worth of right shares have already been subscribed. Out of this amount your Directors and their friends practically underwrote the shares of the value of Rs. 40,00,000 *without any commission.* Of the balance, Rs. 60,00,000 underwritten, about Rs. 45,00,000 have been subscribed by the existing shareholders and the balance will be taken up by the banks as part of their agreement. This is an achievement for which we can take legitimate pride and we want you also to share it.

Joint Rod Rolling Mill

"I may give one more good news to you. Messrs. Kotak & Co., promoters of Asian Cables Corporation Limited, had applied in the middle of 1960 for an industrial licence to start the rod rolling mill very necessary to a cable plant, with a capacity of rolling 20,000 tons per annum per shift. Similarly two other manufacturers had also applied to the Government. Instead of granting licences to any one of the three applicants, the Government asked the three applicants to join together and start a joint rod rolling mill and in that case the Government would grant a licence. A meeting of the cable manufacturers of this part of India (Western India) was called and all of them agreed to participate in the joint rolling mill and asked Messrs. Kotak & Co. to proceed with the scheme. As a result, the licence to start the rolling mill has now been granted by the Government to Messrs. Kotak & Co. for the joint venture. Tentatively the following cable manufacturers had agreed to join hands:

1. Asian Cables Corporation Limited.
2. Wandleside-National Conductors Ltd.
3. Cable Corporation of India Limited.
4. Shamsher Sterling Cable Corporation Ltd.
5. Henley Cables India Limited.
6. Shri Shakti Trading Co.

"During the course of the short period of the Company's existence, the management did have its trials and tribulations, which it has successfully weathered. I am proud to tell you that with the steadfast devotion of a happy team of loyal staff who have stood to their post with determination, and with the undaunted energy and unwavering faith of your Managing Directors and the Technical and Commercial Manager, we are now not only in safe waters but are cruising along towards a brighter future. I, therefore, take this opportunity to express my thanks, on behalf of the Board and on my own behalf, to the two Managing Directors, the Technical and Commercial Manager, and the staff members who have all worked hard as an organised team in the best interests of the Company."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Modern Mills Ltd., Bombay, proposes to issue, towards the end of this year, subject to the sanction of the Controller of Capital Issues, fresh equity capital of Rs. 46.47 lakhs at par to the shareholders existing then in the proportion of one share of Rs. 50 for every one share held by them. The Company has already been authorised to capitalise reserves of Rs. 15.49 lakhs and issue bonus shares. The bonus issue will be made after the capital is increased. The Company's present paid-up capital is Rs. 46.47 lakhs in equity shares of Rs. 50 each. Its reserves at the end of 31st October 1960 stood at Rs. 49.86 lakhs, of which revenue reserves and carried forward Rs. 30.86 lakhs.

BANKS GETTING UNITED

A SIGNIFICANT point that emerges from the comprehensive speech of Mr. Tulsidas Kilachand, delivered in his capacity as the Chairman of the Indian Banks' Association at its fifteenth annual meeting, is that the banks in India today are more united than ever before. They are also more co-operative with the Reserve Bank and appreciative of the controls placed on their activities. They also realise that in unity lies their strength. All this is evident from the support they are giving to the Indian Banks' Association—I.B.A., for short—which covers all the large Indian scheduled banks, with the notable exception of the State Bank of India, all the medium-sized banks and a majority of the smaller Indian banks. The members of the Association account, according to Mr. Kilachand, for over 95 per cent of the deposits of the Indian scheduled banks. Incidentally, there seems to be a slip in this calculation of Mr. Kilachand, for the deposits of the State Bank of India alone constitute over a third of the Indian scheduled banks' total deposits. What he obviously had in mind was the Indian scheduled banks other than the State Bank. This, however, is only by the way. The most important point is that the State Bank co-operates with the I.B.A. wherever possible and has allowed all its associates to retain their membership of the Association. The Exchange Banks, too, have been working in co-operation with the I.B.A. Further, the Reserve Bank of India has been consulting the I.B.A. on all the important matters concerning banks.

The striking example of the importance attached, and consideration shown, to the I.B.A. by the Reserve Bank is provided by the understanding on the capital-reserve ratio arrived at in the closing months of last year. This highly controversial issue was settled across the table with the I.B.A. and, though there are still some banks which feel that the ratio of six per cent is on the high side, all have accepted it as a desirable goal and are agreed that every effort must be made to reach it as early as possible. The credit for this goes as much to Mr. Tulsidas as to Mr. H. V. R. Iengar, the then Governor of the Reserve Bank. The I.B.A. has also satisfactorily represented the points of view of all banks to the National Industrial Tribunal appointed to settle the disputes between banks and their employees. This is in refreshing contrast to the practice followed in the past when banks presented their cases individually before all the previous Tribunals. A singular feature of the I.B.A. is that, for all the riches its members command, it has only a tiny secretariat, with no research wing of its own or a public relations department. Perhaps, the bankers want to preserve the I.B.A. as an example of a character they are supposed to possess, namely, thrift, secrecy, and simplicity. There are, however, quite a few observers in this country who are inclined to feel that this is being overdone.

Does all this growing unity and understanding among banks mean that a monopolistic trend is gaining ground? Mr. Tulsidas hastened to assure the public that the I.B.A. "does not exist for creating any monopoly or even semi-monopoly for its member banks and that it realises the benefits of competition." This assurance is welcome in so far as it goes. But it must be proved in action. What has cast doubts is not their getting together to solve their common problems, to speak with one voice to the country, the Reserve Bank and the Industrial Tribunals, and to draw up uniform forms and procedure for adoption in the working of banks, functions which are normal for a trade body, but the attempts to regulate the rates of interest payable on deposits and chargeable on advances. Unhealthy competition among banks is doubtless undesirable, as it will undermine the strength of the banking system as a whole. But when does competition become unhealthy and who is to define unhealthy competition? This is the crux of the problem. Again, if almost all banks join together and come to an agreement not only on the maximum rates of interest payable on deposits and the minimum rates of interest on loans, advances and bills purchased and discounted, but also on service charges, the facilities to be provided for the savings bank depositors, etc., what scope will there be for healthy, clean, open competition? The bankers' answer to this question is well known and Mr. Tulsidas reiterated it in his speech. It is that banks should try to get more business by giving better and more varied services to the public and by spreading banking habit in small towns and new towns where there are no banking facilities or the facilities available are inadequate. There is a lot of merit in this argument, but it has its limitations and does not fully satisfy those who wish to see that the banks are not accused of indulging in restrictive practices and that they do not give room for politicians with leftist leanings to find a convenient excuse to nationalise banking. In their understandable anxiety to safeguard their profit-margins and to strengthen their "owned resources," the banks must not be unmindful of the need for eschewing policies and practices which may create a wrong image about them in the public mind.

It is true to say that the number of depositors is far larger than the number of borrowers. It is equally true that, while the borrowers are rich business concerns and businessmen, a very large number of depositors are individuals, most of whom are of modest means. It is also true that almost all banks in India are controlled by the leading industrial houses and the tendency to minimise the cost of bank credit to the extent possible is natural. An agreement seeking to limit the interest rates payable on deposits has, therefore, a greater chance of offending public opinion than the one governing the minimum interest rates on advances. Better and more efficient service to customers may be an important consideration to borrowers, as well as to those who keep current accounts or even savings bank accounts, but it cannot be a great attraction to those who maintain short-term fixed deposits. And it is term deposits that constitute the major portion of the deposits held by the banks. If interest rates on deposits are to be regulated, the agreement must be flexible and the rates fixed must be realistic, having regard to the demand and supply position. The present inter-bank agreement, or the one that has just been modified and is pending ratification, does not have these qualities in full

measure. As was pointed out by us on an earlier occasion, the interest rates on short-term deposits today are far below what they were four years ago, even though the demand for money has outpaced the supply to a much greater extent since then. The observations of Mr. Tulsidas on this question do not recognise the value of interest rates as an incentive for attracting more deposits and as an instrument for minimising waste of capital. More than one authority on capital markets, including Mr. P. C. Bhattacharyya, the new Governor of the Reserve Bank, has maintained that industrial enterprises in this country prefer to live on loan capital on a scale which is not good for their health. Mr. Tulsidas conveniently remained silent on this important issue, even though it directly stems from the defects in the interest rates policy. He was more interested in trying to show that the banks cannot afford any further increase in the rates of interest on deposits on the following grounds:

"Firstly, the establishment expenses of banks will go on increasing, as banks are expanding their activities and establishing more branches and the rapidly increasing number of their employees will have to be given reasonable emoluments. Secondly, with the increase in deposits, which has already taken place and which will take place more in the future, it is necessary for banks to increase their paid-up capital and published reserves. All the banks will have to go to the capital market at intervals in order to raise fresh capital and they cannot succeed in raising it, unless they show increasing profits. Even if the rate of dividend is not raised, increasing capital will mean the payment of larger amounts as dividends and this will need larger profits. Increase in the published reserves will also need larger profits... Finally, it would be necessary for banks to go on increasing their inner reserves. With the expansion of their activities and with the provision by them of increasing finance for industries and exports, banks would have to take greater risks. They cannot shoulder increasing risks without increasing inner reserves..."

All this is true, but what about the depositors? Are they not to have a fair deal? In an economy subjected to creeping inflation, they too must have an incentive to save and invest. Unfortunately for depositors, the Government itself is interested in borrowing at the lowest possible rate. Accordingly, it has also a stake in the inter-bank agreement on deposit rates. Mr. Tulsidas approvingly quoted the British banks' practice of building up inner reserves and the Bank of England's policy of persuading the banks through gentle hints to do what it thought was good for the country, but he seemed to have no admiration for the interest rates policy pursued in that country in recent years.

ECONOMY IN CONSTRUCTION

THE second Plan involved an aggregate outlay of about Rs. 4,700 crores in the public sector. The purely construction-cost part of this outlay was as much as Rs. 2,000 crores—Rs. 800 crores in respect of buildings and Rs. 1,200 crores relating to other construction works. A similar break-up of the proposed financial outlay of Rs. 7,500 crores in the public sector under the third Plan is, however, not available. But, if the same proportions are assumed, it may be broadly estimated that the construction-cost part of the relevant third Plan outlay would be about Rs. 3,200 crores—Rs. 1,200 crores on account of buildings and Rs. 2,000 crores pertaining to other construction works. These broad magnitudes of construction expenditure may seem to be rather excessive, although such expenditure on most of the Plan projects is absolutely necessary. There should be cheaper ways of construction and more dependable advance estimates of cost—estimates which would not have to be revised upward as in the second Plan period when the cost of several projects was put up by 25 to 30 per cent after construction had begun. The question of achieving some economy in construction cost is, therefore, of great relevance, especially in the immediate context of enormous outlays in both public and private sectors.

What the final report on the third Plan has to say on the question is contained in the chapter on "Administration and Plan Implementation." The importance of securing economies in construction is stated to have been considered in consultation with Central Ministries and State Governments and there is, according to the report, "general agreement" on the required measures which are as many as fourteen. The first six pertain to detailed project report, arrangements connected with the essential preliminaries of construction, provision of adequate workshop facilities for repairs and training, balanced use of labour and machine in construction, careful assessment of spare parts required for construction machinery and of other stores and central designing facilities for a project or a group of projects, including buildings. Such meticulous advance planning and creation of some basic facilities will ultimately make for construction according to schedule. It is common sense that, if delay in execution is avoided, there will be no addition to cost on that score. If anything, there will be scope for some positive saving on construction costs. In particular, buildings offer this scope, if they are planned and designed on the basis of functional needs, with provision for optimum space utilisation, standardisation and prefabrication. A judicious choice between the agency of construction and the system of contract can also bring about an appreciable reduction in cost. Here the planners have expressed their preference for departmental construction and construction through voluntary agencies and labour co-operatives so as to avoid unnecessary dependence on contractors. Promptness in payment of running as well as final bills and training of personnel for improving skills and productivity are two other important factors in cutting down costs. Above all, a "cost reduction unit" should form part of each major construction project. This unit should carry out work studies, continuously analyse factors affecting costs, recommend suitable adjustments from time to time in materials, techniques, procedures and organisation, and keep a watch on progress in achieving economies in construction costs.

These, then, are the general principles laid down in the third Plan report for the guidance of administrators of projects. They do not constitute a detailed scheme of cost reduction with a series of specific measures. Such a scheme has, however, been drawn up by the Committee on Plan Projects in a 51-page report just released to the public. It is the emphatic view of the Committee that innovation and improvisation should be stimulated as a necessary complement of planning, that human ingenuity should offset the "rising costs" potential of the Plan in view of huge expenditures incurred and consequent inflationary pressures generated, and that pride in the tradition of increasing levels of national productivity should be inculcated. Cost reduction is a must of planning and the Committee has underlined its importance in the following manner:

"Whether it is a factory or an irrigation scheme, higher cost of construction leads to overcapitalisation and adversely affects the overall efficiency of the scheme. In factories the additional capital expenditure and the extra recurring expenditure on maintenance would have a permanent effect on the cost of the products manufactured. Similarly, in an irrigation scheme, extra construction cost would mean either reduction in the return or increase in water tax."

The Committee has found that, in all cases, a considerable amount of expenditure gets committed at the stage of pre-planning when requirements are decided upon. A logical inquiry into the requirements is, therefore, a necessary first step in the scheme of cost reduction and it must cover the organisational structure as well as the methodology of work proposed to be carried out in the building. It is not the work of an engineer or architect alone. On the other hand, as the Committee sees it, such a study would be the combined function of a committee of experts representing all the technological disciplines connected with the particular undertaking, including work study. An integrated and comprehensive study, covering all the technical, organisational and functional aspects, is also considered necessary for the reason that defective proportioning of facilities results, quite often, in disproportionate amounts being spent on them. Multiple use of facilities and considerations regarding optimum use co-efficient are other factors having a direct bearing on requirements, and these, too, would need to be studied. As the bulk of economy would result in the first stage itself where requirements are crystallised, it is for the authorities to commission a composite study group before any project is taken up. All this, no doubt, is sound advice. But it is doubtful whether the authorities would be in a position to find suitable experts for each team when many such teams would have to be constituted simultaneously for studying the requirements of dozens of projects due to be taken up every year. Unless the Committee on Plan Projects itself develops a cadre of experts in different lines, the ready availability of a sufficient number of personnel for manning the study teams cannot be taken for granted.

The second step in the scheme of cost reduction is one of space planning in the light of certain norms laid down for ensuring economy. What is required here is a space-and-cost analysis of a selected number of constructed buildings for determining "efficiency co-efficients" for planning. The Committee on Plan Projects has evolved, in the light of its 1958 study of "multi-storeyed buildings" constructed till then in the country, certain norms for "design efficiency." These are that the "ancillaries" (such as vertical and horizontal circulation space, toilet blocks, space occupied by structural members) should occupy no more than 25 to 35 per cent of the total built-up space and that the useful area, which is called the "carpet area," should account for 65 to 75 per cent. The fact that the "carpet area" in several multi-storeyed buildings has worked out to only 50-60 per cent of the total built-up area suggests that, with better space planning, somewhat smaller buildings involving correspondingly smaller outlays would have sufficed. The crux of the problem is, therefore, to see how far the proportion of carpet area can be increased in future constructions so as to achieve some further economy in cost. Similarly, in the case of factory buildings, the economies accruing from a good layout (as opposed to a defective layout) would be "built-in ones which accumulate day by day." On the contrary, a disproportionate "spread" on ancillaries or a defective layout may lead not only to added initial cost but also to higher maintenance or operating cost which, being of a continuing nature, will have an adverse effect on the total economy of a project.

The planning of structure has also an important role in the scheme of cost reduction. The correct basis for fixing the type of structure—R.C.C., steel or timber—would be the relative cost, although sometimes the functional requirements may restrict the choice of structure within narrow limits. After selecting the least costly type of structure in the circumstances of each project, further economies in actual construction can be aimed at. For instance, in R.C.C. work further economies can result from a judicious choice of concrete mix for the various components and from several innovations to lighten the structural members. In steel construction, too, several innovations are possible, and these can effect further economies. At the same time, if realistic specifications (such as for bricks, toilet and sanitary fittings and several other items) are laid down at the initial stage itself, there will be no need for any upward revision of cost estimates on their account. A severe limit to expenditure on ornamental frills and non-functional items is equally necessary in the scheme of cost reduction, for, as the Committee on Plan Projects has found, such expenditure has amounted, in a few cases, to as much as 20 to 25 per cent of the total cost of work.

The measures suggested by the Committee for phasing and programming of project execution are particularly necessary because its studies of a number of projects have shown a wide gap between the commitment of financial expenditure and the raising of physical assets. It has also been found that, when the works of different components of a project are not synchronised, the expenditure incurred at each stage remains idle for a long time till the whole project is completed. Since the construction programmes envisaged in the Plan are not much different from any production process, a suitable approach to phasing and programming, so as to have continuity both in planning and in the flow of benefits, is called for on the lines suggested by the Committee. Much work also remains to be done in this country on the impact of various factors of site management (such as, stacking of materials and equipment, disposal of surplus materials, balanced use of labour gangs and mechanised construction activity) on the cost of construction. Sound inventory management is another fruitful source of cost reduction, if it has the twin objective of minimising idle-time caused by shortages of materials and spare parts and keeping down capital investment in inventories, inventory-carrying cost and obsolescence losses. The last, but not the least, important requirements in any scheme of cost reduction are personnel planning and an appropriate organisational and administrative set-up for construction and production agencies. These, however, have been merely highlighted, but not fully examined in relation to their cost-reduction implications, in the otherwise uniformly valuable report of the Committee on Plan Projects.

MARKET GOSSIP

Esso Replaces Stanvac

ON All Fools Day, the Standard-Vacuum Oil Company—Stanvac, for short—jointly owned by the Standard Oil Company (New Jersey) and Socony Mobil Oil Company since 1933, and operating in India and the East as a producer and distributor of petroleum products, took a new name and a new symbol. It has now come to be known as Esso Standard Eastern, Inc., and the sign of the flying red horse has yielded place to an oval insignia with the name Esso in the middle in red script letters. The new company is wholly owned by the Standard Oil Company (New Jersey), which is a public limited company in the U.S., with as many as 685,000 shareholders. No single stockholder owns as much as 3 per cent of the shares, the largest stock-holders being institutions. The changeover from Stanvac to Esso was not decided overnight, but was the result of a careful decision taken in the closing months of 1960. Esso Standard Eastern is a fully integrated enterprise, covering all facets of oil industry: exploration, extraction, refining, transportation and marketing.

Announcing the changeover at a Press conference in Bombay on Sunday last, Mr. J. W. Sinclair, General Manager of Esso Standard Eastern, Inc., claimed that the new arrangement would "not only make for speedier decisions on vital matters but also impart greater flexibility to the organisation," as the management here would have to deal with the Board of only one parent company in the U.S., instead of two as hitherto. He averred that it was the intention of his Company to invest more in this country and expand its activities in all directions. He was hopeful of an early settlement of his Company's differences with the Government of India in regard to the terms of participation. Currently, the Company has plans for establishing (1) a petrochemical industry, in a 50 : 50 partnership with the Government of India, involving an outlay of some Rs. 6.50 crores in the initial stages, and (2) a lubricating plant in which Esso will have 60 per cent interest and Indian investors 40 per cent.

World Coffee Agreement

If everything goes well, a new five-year world coffee agreement will come into force on 1st October next—that is, when the 1962-63 coffee season begins—replacing the present ad hoc agreement which has been in force since October 1959. From all available reports it appears certain that the date schedule will be adhered to. This at any rate is the conclusion one can draw from the account of the deliberations of the 48-nation Coffee Study Group's week-long series of meetings which ended at Washington on Wednesday 28th March. There was, we are told, a "substantial" measure of agreement on the new international scheme, as envisaged in the draft long-term agreement prepared by a special committee of the Study Group. The official *communique* issued at the end of the meetings states that "considerable agreement" has been reached on a number of crucial points, including the necessity for export quotas backed by strict production controls and the limitation of imports from non-participating nations. The *communique* also mentions that efforts will be made to reduce stocks in producer countries and discourage fresh plantings. Further, the hope is expressed that the consumer countries which are included in the plan for the first time would increase their intake.

There was, however, disagreement on two important questions: one, what exactly should be the form of price control and, two, whether the agreement should contain provisions leading to abolition of preferential duties, fiscal levies and other barriers to trade in coffee. The U.S. delegate urged that the latter artificial barriers, especially in the Common Market nations, must eventually be eliminated, but these nations were unwilling to make any promises. Despite this disagreement, the stage may be said to have been prepared for a full-scale world coffee conference. The United Nations is expected to convene such a conference in June next whereat the draft Agreement will be discussed threadbare by both the producing and consuming countries. The salient features of the draft Agreement are:

The Agreement will be administered by an International Coffee Council at Washington, with an Executive Board and an Executive Director.

Export quotas will be fixed for the first three years, based on the estimated total of world imports; in the second half of the third year, the situation will be re-examined to take account of changes in consumer tastes, the price policies adopted and the results of attempts to adjust production to demand.

The penalty for a producing country which in any quarter exports coffee in excess of the quota allocated will be a reduction of double the excess in the quota for the following quarter, more serious penalties being imposed in case of repeated violations.

Consuming countries will have to control imports from countries outside the Agreement.

Minimum selling prices will be fixed each year for the various types and grades of coffee.

Provision is made for setting output targets for producing countries.

An international coffee fund will be constituted out of a levy on each bag of coffee exported which will be used to serve the policy objectives of the Agreement and also to assist in replanting (with other crops) of the present acreage under coffee.

The foregoing brief outline will indicate how restrictive are the provisions of the draft long-term Agreement for coffee. It is not surprising, therefore, that the Government of India is still undecided about the value of participating in this Agreement. A recent New Delhi report averred that the Government has shelved the proposal for the present. The Coffee Board and the majority of planters, however, have strongly advocated India's participation. In support of their stand, they have drawn attention to the possible benefits of reduced tariff on coffee imported by the European countries from the producing nations which will join the Agreement. A note of warning has also been struck to the effect that, if India stays outside the Agreement, its coffee may be denied entry in several consuming countries which are given the right under the draft Agreement to control imports from non-Agreement countries. As against these arguments, there is the distinct disadvantage arising from the production controls provided for in the Agreement. Since India has to depend on commodities like coffee for earning the badly needed foreign exchange, it cannot, it must be emphasised again, be a party to any move that tends to encroach upon its right to regulate its coffee production which, by world standards, is still small. Once the country becomes a member of the World Coffee Agreement, it will have to abide by whatever restrictions that are enforced in the field of either production or export or prices. This is a very important consideration which, it is to be hoped, will be borne in mind by the Government of India when it takes up the question for examination again.

Stainless Steel

The country's requirements of stainless steel, which, like tool or alloy steel, is a high-priced but essential raw material of the utensil manufacturing and other engineering industries, are now met entirely by imports. The proposed Durgapur tool and alloy steel plant in the public sector, with a capacity of 48,000 tons and involving an outlay of Rs. 50 crores, will make available, when constructed, some 17,000 tons of stainless steel. In the private sector, the Tata Iron and Steel Company has also been granted a licence to set up, at Jamshedpur, a similar plant which, in addition to special steels, will produce 20,000 tons of stainless steel. It is not known in which year of the third Plan period both these plants will go into production. Nor is it known whether additional capacity for stainless steel in the private sector, as now proposed, will be licensed soon enough. Since the demand for stainless steel is going up all the time and is expected to reach the level of 50,000 tons in 1965, the process of establishing adequate capacity therefor would have to be speeded up.

In the meantime, may be upto 1964-65, when alone some quantity of indigenous stainless steel is likely to be available, the needs of the industries using such steel may have to be more fully assessed and provided for by imports to the extent possible. The All-India Stainless Steel Industries Association, the fifth annual general meeting of which was held at Bombay on 31st March, has estimated the current demand of the utensil industry alone at 10,000 to 12,000 tons. But the industry's requirements are being met only to the tune of 3,000 tons by way of bartered imports by the S.T.C.—a quantity which is less than the 4,500 tons that had been imported in 1956. Some relief to the industry, which seems to have a lot of unutilised capacity, should be possible partly by increasing the quota for bartered imports by the S.T.C. and partly by encouraging the Association to export the stainless steel scrap and some other commodity which may not otherwise be exported, and to import, in exchange for them, a couple of thousand tons of stainless steel from abroad. Since the principle of such direct barter by the Association has already been accepted by the Government, it only remains to enable the Association to go ahead to the extent possible.

Palm Oil

In view of the high prices of groundnut and coconut oils and the need for conserving the supply of these oils for edible purposes, India has been importing the relatively cheaper palm oil chiefly for use in the manufacture of soaps and other non-edible products. Imports of palm oil has also enabled the country to allow some exports of groundnut oil, as it has been a favourable proposition from the foreign exchange point of view. In 1960-61, India imported palm oil of the value of Rs. 3.53 crores, as against Rs. 2.44 crores in 1957. Developments in regard to palm oil is, therefore, of greater importance to India today than at any time before. The world output of palm oil, it may be noted, has been falling during the last two years. Thus, the total production in 1960-61 was only 685,000 tons, as compared with 718,000 tons in 1959-60. Indications are that the declining trend will continue in 1961-62 as well.

Although the aggregate production has been declining, prices of palm oil have not shown any tendency to harden. On the contrary, they have tended to decline. Thus, palm oil (Sumatra) is currently quoted at £80 per ton in the London market, as against £81 at the beginning of this year and £85 a year ago. The reason for the fall in prices is the smaller demand from Western Europe, following mainly direct competition from marine oils. Besides, large stocks had been accumulated by European dealers in 1960. The weakness of palm oil also reflects to some extent the generally easy conditions in edible oils, following last year's record soyabean crop in the U.S.

CENTRAL BANK FORGES AHEAD

RESERVE FUND STRENGTHENED

THE progress made by the Central Bank of India Ltd. (Managing Director: N. K. Karanjia, Bombay) during the year ended 31st December 1961 is quite impressive. Deposits, advances, gross income and net profit have all recorded a sizable expansion. Even investments and cash balance, as at the close of 1961, are higher and that despite a very marked reduction in borrowings from other banks. As the largest commercial bank in the private sector, the Central has kept up the lead over others. Its achievements in the past year provide an appropriate background to the gracious manner in which the golden jubilee was celebrated in all the principal cities in the country and solid support to the Directors' decision to promote its chief executive, Mr. N. K. Karanjia, to the status of Managing Director. The impression that the Central Bank is an old-fashioned institution is not confined only to a few of its critics, but its performance in recent years, showing a progressive growth in business, should be sufficient to confound them, besides confirming the hackneyed saying: "Old is gold." It is obvious that there must be a lot of dynamism in the Bank behind its old-fashioned facade.

The following table comparing the Bank's progress in 1961 with its performance in the previous three years speaks for itself:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	12,23.21	10,17.79	8,99.95	8,34.77
Of which:

* After deduction of all necessary provisions, including taxation, but excluding depreciation on fixed assets and furniture.
† Tax provision for 1961 not disclosed.
‡ Subject to deduction of tax.
§ Only unencumbered securities are taken into account.
N.A.—Not available.

The deposits are the raw materials of a bank. In a rapidly expanding economy like that of India, the factor that determines the profit of a bank is deposits, for, in the absence of sufficient funds, a bank cannot avail itself fully of the opportunities for raising its advances portfolio and lending to the Governments which, too, have their own projects requiring bank finance. From this point of view, the Bank has been satisfactorily successful. Its deposits have gone up by Rs. 20.67 crores in 1961, as against Rs. 19.26 crores in 1960 and Rs. 18.28 crores in 1959. It may also be noted that deposits of all scheduled banks excluding the State Bank had gone up by approximately Rs. 120 crores or 10 per cent. The growth in Central Bank's deposit has been fully in keeping with this trend. Of the increase of Rs. 20.67 crores, the share of savings bank is only modest being Rs. 2.56 crores, while that of time deposits is as high as Rs. 13.29 crores. The rise in current accounts, call deposits, etc., has been sizable at Rs. 4.92 crores, an experience different from other banks, most of which have reported only a modest rise in this class of least expensive deposits and a substantial growth in savings and time deposits which cost more.

In view of the keen demand for funds from trade and industry during the year under review, the Bank's advances have gone up by a little over Rs. 10 crores over the year to a record level of Rs. 160.99 crores. The credit ratio, however, has shown a slight fall to 73.1 per cent, because of the larger pace of growth in deposits. It is noteworthy that borrowings from other banks have declined sharply from Rs. 15.76 crores to Rs. 6.15 crores. This chiefly accounts for the relatively modest increase in the balance-sheet total. Investments have gone up by well over Rs. 2 crores to Rs. 58.80 crores and so also cash by Rs. 1.22 crore to Rs. 23.91 crores. The market value of all investments are higher than the book value. Both because of the rise in investments and the large reduction in the secured borrowings from other banks, the ratio of investments to deposits has gone up by four points to 25.4 per cent.

TREND OF SHARES

IRREGULARLY UPWARD

(From Our Own Correspondent)

BOMBAY, *5th April*

IRREGULAR, but firm conditions developed on the stock markets this week. The previous week's lull did give way to some active trading. Values improved initially on all-round speculative buying, good follow-up support and short-covering. Mid-week, however, saw a small reaction on some realising. But prices looked up again on renewed support, though closing levels were slightly lower than the week's best levels. The tone at the close was distinctly steady, and the tendency upward.

Several factors instilled a sense of robust confidence in the markets to face the budget uncertainties. The sentiment had already been bolstered up by some favourable observations about the private sector by Prime Minister Nehru at the annual convention of the Federation of Indian Chambers of Commerce and Industry. It was influenced further considerably by rumours, which, having been confirmed by newspaper reports, gained greater strength subsequently, that Mr. Morarji Desai was to continue as the Union Finance Minister in the new Cabinet. A dogmatist otherwise, Mr. Desai has been pragmatic and practical in his approach to the problem of public finance. The present-day preparedness of the private sector to shoulder the responsibility of developing the country industrially is due in no small measure to this approach. Under his tenure, the capital market has revived promisingly. If the revival is to extend further, it is necessary that he continues to hold the finance portfolio. With the re-entry of Mr. T. T. Krishnamachari on the political arena, there have been some misgivings about this. The markets' concern, therefore, was not misplaced. As the week progressed, however, they seemed to have concluded that Mr. Desai would continue as the Finance Minister. And, with this, they also forgot their budget worries. The announcement of the industry-biased import policy influenced the mood of the market deci-

STOCK AND SHARE QUOTATIONS

In order to help readers who have to pay wealth tax, we have purposely incorporated, in the aforesaid section appearing on pages 641 to 648 of this issue, the market quotations of shares as of 31st March 1962, or the last working day of the month for the stock exchanges—Ed.

sively. Good corporate news, a three-week settlement in the principal markets and normal carryover charges, underlying a healthy technical position, were among the other favourable factors. Lastly, as a strange coincidence, there were no unfavourable factors.

The irregular price movements were due only to covert bull operations; bulls sold at improved levels, but were there again to replace their purchases on a setback. This kept the markets on an even keel, leaving also some room for fresh short positions at higher levels. The improvement of markets near the close suggests that bulls have a firm grip now.

* * * *

Dalal Street drew much comfort from (a) the rise of Rs. 2 crores to Rs. 12.89 crores in the turnover and the improvement from Rs. 124.49 lakhs to Rs. 158.37 lakhs in the gross profit of Bombay Dyeing last year, (b) reports of the National Rayon Corporation having entered into an agreement with the Goodyear Tyre Company for the supply of 25,000 lbs. of tire cord in the initial stages at Rs. 12 a kilo, (c) a steep rise in the I.I.S.Co. output in March, with the production of saleable steel rising from 53,600 tonnes to 86,294 tonnes, and (d) a record annual outturn by T.I.S.Co. of 1,317,700 tonnes of saleable steel, with an improvement of 20,000 tonnes in March alone. It ignored the note of caution struck by the Chairman of Finlay Group about the outlook for the fine textile mills, which, however, left these specific shares depressed in an otherwise firm market.

Well supported throughout the week, Steels improved considerably, with Tata Ordinary, helped by the output figures closing with a gain of Rs. 2.25 at Rs. 141.50. Indian Iron advanced from Rs. 25.30 to Rs. 25.55, but reacted to Rs. 25.10 on realising to finish a shade higher on balance at Rs. 25.20. Mukand Iron were up by a full point at Rs. 28.40.

In Textiles, Bombay Dyeing opened with sizable improvement at Rs. 70.70, on heavy short-covering and strong support, forged ahead to Rs. 71, and closed Re. 1.20 higher over the week at Rs. 70.60. Century were marked up to Rs. 635 on active influential support, following the normal book closure carry-over. On realising the shares eased to Rs. 626.50, which seemed to be a higher bottom, but looked up smartly again to close with a gain of Rs. 14.50 at Rs. 631. Standard gained Rs. 31 to Rs. 1,079. Indu Mills' shares were up again, with Deferred done at Rs. 4.06 and Ordinary at Rs. 23.56. National Rayon attracted good support and rose by Rs. 22.50 on balance to Rs. 562.50. Minerva moved up by Rs. 5.50 to Rs. 97 and attracted a margin of Rs. 4.75 per share against bulls. Shreeniwas did not draw much comfort from the encouraging report of the Directors and closed only Rs. 2 higher at Rs. 294. Finlay lost Rs. 11 to Rs. 343 and Gold Mohur Rs. 11.25 to Rs. 285. Tata Mill eased by Re. 1.70 to Rs. 79.50 on heavy profit-taking.

In the Miscellaneous section, Bombay Burmah were actively supported and gained Rs. 6 to Rs. 662.50. Hindustan Motors improved further by 40 nP to Rs. 20.24. Telco by Rs. 4.50 to Rs. 352.50 and Tata Oil by Rs. 3 to Rs. 84. Sirpur Paper lost 28 nP to Rs. 15.52. Shippings continued in demand, with Scindia rising by 44 nP to Rs. 13.44 and Great Eastern by 36 nP to Rs. 14.12. A.C.C. moved up from Rs. 159.25 to Rs. 160.75, but Orissa Cement eased by 36 nP to Rs. 19.24. In the Cash section, Bombay Potteries rose by Rs. 15 to Rs. 215, T. Maneklal by Rs. 35 to Rs. 900, Permanent Magnets by Rs. 50 to Rs. 257.50 and Asian Cables by Rs. 6 to Rs. 116.50. Alembic lost Rs. 35 to Rs. 238.75.

* * * *

In Calcutta, because of the mid-week realising, values showed a mixed price pattern at the close. Sugars enjoyed selective support. Papers were in demand on expansion prospects, Textiles remained in favour with buyers, Coal shares were dull and Teas weak because of a further fall in prices of common tea. Among speculatives, Dunlop Rubber met with good support following the encouraging results for 1961, but G.K.W. continued to lose ground on selling pressure. Dunlop improved from Rs. 43.12 to Rs. 44.37, while GKW declined from Rs. 45.69 to Rs. 41.87, due to disappointment caused by no confirmation of rumours of an early bonus issue. Birla Jute lost 44 nP to Rs. 37.31 on corrective profit-taking, but Howrah closed 50 nP better at Rs. 21.75. Orient Paper were done higher at Rs. 43.65 against Rs. 43.25 a week before, but Shree Gopal slipped down from Rs. 27.31 to Rs. 27. Texmaco showed a loss of 65 nP at Rs. 22.30 as did Indian Cable of 38 nP at Rs. 36.37. Indian Aluminium were better at Rs. 39.50 against Rs. 39.25 a week ago.

In the Cash List, almost all the Jute shares showed further gains. Among noticeable gainers were Alexandra from Rs. 262 to Rs. 305, Alliance from Rs. 104 to Rs. 139, Bally from Rs. 298 to Rs. 306, Barnagore from Rs. 167 to Rs. 179 and Nuddea from Rs. 70.50 to Rs. 77. In Textiles, Bharat Commerce gained 25 nP to Rs. 28.56 and Victoria 81 nP to Rs. 17.81, but Elgin moved down from Rs. 22.69 to Rs. 22.12. In Coals, Bengal lost six points to Rs. 342, but E. India moved up by 50 nP to Rs. 37.50. Among Engineering issues, Burn were a feature and gained Rs. 69 to Rs. 659 on keen support. B.I. Electric looked up from Rs. 39 to Rs. 42.62. Jessop lost 88 nP to Rs. 24.74. Christien Mica, among minings, tacked on further gains from Rs. 12.25 to Rs. 13.12. Ashoka Cement improved from Rs. 8.75 to Rs. 3.91. In the miscellaneous section, Goodyear looked up from Rs. 40.06 to Rs. 40.81. Gwalior Rayon greeted the proposal to increase the output by five tons per day with a rise of Rs. 2 to Rs. 58. Among Paper shares, I.P. Pulp rose from Rs. 21 to Rs. 21.62, Star from Rs. 10.12 to Rs. 11.06 and Titaghur from Rs. 42.25 to Rs. 43.19. In Sugars, Dyer Meakin gained two points to Rs. 49.37 on reports that the Company had enjoyed an advantage of obtaining the necessary cane supplies largely from its own farm.

* * * *

Good support for E.I.D. following an encouraging speech from its Chairman was a feature of the trading in Madras. Textiles, too, attracted attention, notwithstanding the reference to cotton shortage by the Chairman of Madura Mills. The damper was discounted in the face of better working of Binny Group.

E.I.D. improved from Rs. 38.92-xd to Rs. 39.50, which was the *cum-final-div.* closing in the previous week, the final dividend being 14-2/7 per cent, taxable. Deccan also looked up in sympathy from Rs. 9.95 to Rs. 10.05. In Textiles, Premier gained Rs. 10 to Rs. 330 as did Bangalore Woollen to Rs. 267. But Buckingham lost Rs. 3 to Rs. 287. Madura moved up by 55 nP to Rs. 40.65 and Lakshmi by 50 nP to Rs. 166.50. Travancore Rayon were shaded at Rs. 43.75 on disappointing results, but S.I. Viscose were up by Rs. 2.50 to Rs. 185.50. Among Miscellaneous issues, Andhra Cement suffered from Rs. 12.10 to Rs. 9.60, but other Cement shares showed small gains. Travancore Chemicals were active and moved up from Rs. 19.50 to Rs. 20.12. Plantings were neglected. Among Tea shares, a gain of 50 nP to Rs. 13.75 in Highland was contrasted by a loss of 59 nP to Rs. 20.25 in United Nilgiri. Consolidated Coffee looked up from Rs. 17.80 to Rs. 18.12. Among Rubber shares, Travancore slipped down from Rs. 13.12 to Rs. 12.80.

CAPITAL MARKET NEWS

NEW ISSUES

Aditya Mills Limited, a new Calcutta company, is expected to be in the market around the middle of this month to raise Rs. 30 lakhs by way of public subscriptions in 5,000 redeemable cumulative preference shares of Rs. 100 each, carrying dividend at 9.285 per cent free of company's tax but subject to deduction of tax at source, and 25,000 equity shares of Rs. 10 each. Its issued capital will be of Rs. 60 lakhs, of which equity will be Rs. 50 lakhs and the balance preference. A firm allotment of preference shares of Rs. 5 lakhs and ordinary shares of Rs. 10 lakhs has been made to the Government of Rajasthan. The Directors, their friends and associates have subscribed for equity shares worth Rs. 15 lakhs. The public issue has been underwritten, among others, by the Industrial Finance Corporation, the Life Insurance Corporation and the Rajasthan Financial Corporation.

Promoted by Mr. Bhagirath Kanoria, the Company has been granted by the Government of India a licence for setting up a cotton textile mill with 2,500 spindles and 500 looms, in order to rehabilitate the economy of Kishangarh, Rajasthan. The mill is expected to provide employment to over 700 persons. At the outset, the project will involve an outlay of Rs. 148 lakhs. It will be undertaken in two stages; the spinning unit to be taken up first. In the final stage, the outlay will be roughly Rs. 3 crores. Machinery worth Rs. 9 lakhs has been purchased from the U.K. on deferred payment basis. The Industrial Finance Corporation has granted the Company a loan of Rs. 50 lakhs. Construction of the buildings has been speeded up to accommodate the machinery. The Government of Rajasthan has assured the Company of adequate supply of power from the Chambal project. Production is expected to start before the end of this year.

* * * *

Subscription lists for the public issue of Rs. 20 lakhs out of a total of Rs. 35 lakhs in equity shares of Rs. 100 each by the Electrical Instruments Manufacturing Company Ltd. will open on 16th April and close on 28th April, or 20th April. The Directors, their friends and associates have agreed to take up shares worth Rs. 15 lakhs. The public issue has been underwritten by the Industrial Credit and Investment Corporation of India, the Life Insurance Corporation of India, banks and brokers. The Company was established in 1958 for the manufacture of switch gears, which will reach its full capacity of 24,000 pieces a year by the end of this year. It has obtained an industrial licence to manufacture 60,000 A.C. single-phase meters and 24,000 polyphase meters. It also proposes to manufacture house service meters by the end of this year. It has entered into technical collaboration with Valmet Oy., Helsinki, Finland. A new factory will be put up at Naroda, Ahmedabad.

NEW ISSUES SANCTIONED

Seven companies have been authorised by the Controller of Capital Issues to raise capital aggregating Rs. 2.14 crores during the week under review. The folowing are the details of the capital issues by some of these companies.

Pyrotenax India Limited, Bombay, a new company, has been granted consent to issue capital of Rs. 55 lakhs at par. Of this, shares of the value of Rs. 27.50 lakhs will be offered for subscription to Pyrotenax Limited, U.K. The proceeds of the issue will be utilised for the manufacture of pyrotenax mineral insulated copper covered cables.

Larsen & Toubro Limited, Bombay, is to raise Rs. 55 lakhs in equity shares of Rs. 10 each for cash, to be issued at a premium of Rs. 8 per share. The proceeds will be used for financing certain subsidiaries and providing for the working capital. The consent is valid only upto 31st May, 1962.

Bennett Coleman and Company Limited, Bombay, is to issue debentures of Rs. 50 lakhs divided into five thousand 7 per cent redeemable mortgage debentures of Rs. 1,000 each for cash at par. The capital is intended to finance the modernisation and expansion of the Company's printing presses at Bombay, and New Delhi, undertaken in 1961, and for construction of the Company's own building for housing the presses and offices of New Delhi.

(Concluded from previous page)

despite the marked rise in deposits. The cash ratio is only fractionally lower and the overall liquidity ratio is 36.3 per cent, which must be regarded as quite comfortable for a bank of the size and standing of the Central.

The satisfactory utilisation of the Bank's resources is reflected in the growth of gross income (after adjustments of all essential provisions *including* taxation not shown separately for the year under review) which is of the order of Rs. 2 crores or 20 per cent. As the bulk of the increase in deposits has been in time deposits, interest paid shows a rise of about Rs. 93 lakhs. Staff expenses, *including* bonus, have gone up by Rs. 46 lakhs; in view of the excellent results for the year, the shareholders need not grudge this addition, even though they themselves are getting a little less. The most satisfactory feature of the results is that, of the increase of Rs. 49.71 lakhs or about 38 per cent in the net profit, as much as Rs. 37 lakhs have been utilised to raise the transfers to reserves. For the first time after 1948, the reserve fund has now received a credit and that for a sizable amount of Rs. 45 lakhs.

The paid-up capital of Rs. 3.15 crores is now supplemented by reserve fund and other reserves amounting to Rs. 4.13 crores, giving a total of Rs. 7.28 crores of "own funds." The ratio of these funds to deposits is 3.3 per cent, a long way behind the goal of 6 per cent prescribed by the Reserve Bank and voluntarily accepted by all the banks as the ideal to be attained as early as possible.

Under the Reserve Bank's scheme of amalgamations for strengthening the banking system, the Bank took over the Jodhpur Commercial Bank which had one branch, 9 sub-branches and 2 pay offices. In addition, the Bank expanded its own branches, by opening 4 branches, 7 sub-branches and 4 pay offices; it had to close down one of its pay offices as it was found to be unremunerative. These figures suggest that the Bank pursued a rather cautious policy in regard to branch banking, presumably because of the large number of offices it had already established. The total number of offices, as at the close of 1961, is 343, an increase of 59 branches during the second Plan period.

NEWS IN BRIEF

THE Government of India is considering the feasibility of accepting Pakistan's offer to sell 10,000 tons of brick-burning coal per month to northern parts of India.

The six-mile double rail track between Vijayawada and Rayanapad in the Vijayawada-Dornakkal section of the Central Railway was opened last week. The new track will help transport of coal from Singareni collieries to places south of Vijayawada.

The 12,300-deadweight-ton cargo ship *State of Punjab*, the 32nd ship built at the Hindustan Shipbuilding Yard, Visakhapatnam, is being delivered to the Shipping Corporation of India. This is the first ship to leave the yard complete in all respects.

About 600 marine engines costing about Rs. 30 lakhs are proposed to be imported by the State Trading Corporation from Japan under the yen credit. These engines will be allotted to the State Departments of Fisheries for being made available to fishermen's co-operative societies and others.

The Union Ministry of Commerce and Industry has decided to issue "show cause" notices to all industrial licence-holders who have not taken steps towards commissioning the projects during the last one year. Defaulters will be asked to surrender their licences.

India's exports (including re-exports) during the month of February 1962 were lower at Rs. 47.77 crores as against Rs. 51.67 crores in the corresponding month last year. Imports were also lower at Rs. 68.97 crores, as compared with Rs. 82.10 crores. The adverse balance of trade in February was Rs. 21.20 crores, the corresponding figure for February 1961 being Rs. 30.43 crores.

The all-India plastics exhibition, organised by the All-India Plastics Manufacturers' Association at Cross Maidan in Bombay, was inaugurated by Mr. Sri Prakasa, Governor of Maharashtra, on Wednesday this week. The exhibition, which will continue upto the 12th inst., is arranged with the purpose of popularising plastics and educating trade and industry as well as general public about its various applications in industry and other fields.

West German capital in India, amounting to Rs. 2.1 crores, which was frozen during the Second World War, has been released by the Union Government at the request of the Indo-German Chamber of Commerce. While amounts below Rs. 5,000 are allowed to be repatriated by the holders, larger amounts will have to be deposited in non-residents' accounts in India itself and they can be used, with the approval of the Reserve Bank, for buying Indian goods or investments or as loans to Indian firms.

The Government of India has decided to discontinue the sale of prize bonds from 1st July 1962. The Government, however, has decided as a special case to give notice of three months to allow the public a further opportunity to purchase prize bonds. Bonds sold during the three months ending 30th June 1962 will be eligible for participation in the remaining eleven quarterly prize bonds draws, commencing from 1st September 1962. Collection from the sale of prize bonds during 1960-61 amounted to Rs. 15.75 crores. During the 1961-62 fiscal year prize bonds worth only about Rs. 2.85 crores have been sold till February last.

The Inventions Promotion Board of the Ministry of Commerce and Industry gave Rs. 1.15 lakh as financial aid to Indian inventors in different States during the year 1961 to enable them to give practical shape to their ideas or effect improvements in their inventions. This was in addition to the scheme for the award of cash prizes for inventions, the practical value of which has been proved or workability demonstrated. Some of the important inventions that were assisted were Orinthopter or flying cycle (Rs. 5,000), a gadget for running internal combustion engines on kerosine and other cheaper fuel (Rs. 8,000), wet and dry grinder (Rs. 5,000), an improved cardiac monitoring apparatus called Sphygmoterbograph (Rs. 5,000), a new process to obtain photo-transparencies (Rs. 6,000), a new type of induction motor (Rs. 5,000), puncture-proof tyre (Rs. 5,000), and a device to raise water (Rs. 5,000).

A multi-storeyed office building, with a plinth area of about 2.6 lakh square feet, will be constructed at Haddows Road in Madras for housing Central Government offices, at present accommodated in leased and requisitioned buildings in various localities of the city. The building, to be completed by the end of the third Plan, will be mainly seven-storeyed and will have garages, cycle sheds and other amenities. There will also be a rest house with six suites on the top floor. The total office space in the building will be 145,000 sq. ft. which will be available to various offices entitled to accommodation in the general pool at Madras. The total cost of the building is estimated at Rs. 95 lakhs which will be found from the allocation for office buildings to be constructed during the third Plan period.

A new variety of mint plants which gives a higher yield of essential oil than Japanese and Indian mints has been produced as a result of the experiments carried out at the Regional Research Laboratory, Jammu and Kashmir. The essential oil yield of this new variety is five per cent and above, which compares with the three to four per cent yield from Japanese mint. The mint ordinarily grown in India is of poor quality and its yield of oil is not even one per cent. About Rs. 10 to Rs. 15 lakhs' worth of mint oil and about Rs. 80 lakhs' worth of natural menthol are annually consumed by the pharmaceutical, soap and cosmetic and tobacco industries in India. At present India's requirements of these oils are met by imports, mainly from the U.S., Brazil and Japan.

The Government of India has signed an agreement with the British firm, Messrs. Portals Limited, for technical collaboration in setting up a mill for the manufacture of security paper. Portals have been supplying to India for over a century the special kind of paper which is used in the printing of currency and bank notes. The mill, which will be the first of its kind in Asia, will be set up at Hoshangabad in Madhya Pradesh. It is expected to go into production by September 1964. Initially, the mill will have three machines capable of producing about 2,000 tons of paper annually. There will be provision for the installation of a fourth machine at a later date. This will add another 675 tons to the annual capacity. The three-machine mill, in full production, will provide employment to about 600 persons and effect a saving of about Rs. 1.60 crore in foreign exchange now being spent on the import of security paper. A provision of Rs. 5.5 crores has been made for this project in the third Plan, including a foreign exchange component of Rs. 2.4 crores. The mill will be managed as a departmental undertaking of the Ministry of Finance.

Under a new scheme formulated by the Union Government, industrial co-operatives and joint stock companies will be able to obtain credit facilities from the Life Insurance Corporation of India for setting up industrial estates. The L.I.C. loans will be up to 60 per cent of the total cost of an estate. The grant of the loan will, however, be subject to the condition that the co-operative or company should have raised the balance of 40 per cent by way of capital, or partly by way of capital and partly by way of State Government loans. In this respect, the Union Government has advised the State Governments on the desirability of advancing 15 to 20 year-term loans to industrial estates co-operatives and companies to meet the gap between the amount raised by them and the minimum margin stipulated. The State Governments are also required to give hundred per cent guarantee for the loan advanced. The loan will be repayable in not more than 13 annual instalments, the first instalment being payable at the end of three years from the date of loan. It is expected that, during the third Plan period, one hundred co-operative industrial estates would be set up all over the country.

From Abroad

In a bid to promote exports, the U.S. Department of Commerce has decided to open shortly a trade centre at Frankfurt in West Germany. The centre will be run on lines similar to that in London. Similar U.S. trade centres are proposed to be set up at Tokyo, Bangkok, Lagos and Sao Paulo (Brazil).

The British Overseas Airways Corporation has decided to restrict for the time being any further growth in the number of services it operates. Instead, it will direct its efforts to increase the number of passengers, thereby making the aircrafts earn more by getting them better filled. These methods have been taken with a view to improving the profitability of the Corporation's services.

The U.S. Department of Agriculture has announced amendment of an existing agreement signed in May 1960 to permit India to purchase an additional $21.8 million worth, or 350,000 metric tons, of wheat or wheat flour from the U.S. The authorisation, as amended, provides for the purchase of a total of $49.8 million worth (or about 800,000 metric tons) of wheat from the U.S. About 170,000 tons of wheat remain to be purchased of the amount previously authorised.

The Government of British Guiana does not intend to nationalise the bauxite and sugar industries. This was stated by Dr. Cheddi Jagan, Prime Minister, at Georgetown, at a talk with a visiting trade mission from the U.K. He added that, if any private enterprise were nationalised, adequate and fair compensation would be given. The Government, he added, was committed to a mixed economy in which private and public enterprises would exist side by side, "as is the case in India."

A team of Russian experts has submitted to the Government of Ceylon a project report on the establishment of a flour mill in the Colombo port area, with Soviet collaboration. The capital outlay on the project is put at Rs. 183 lakhs, of which Rs. 100 lakhs will be spent from the Russian loan of Rs. 1,420 lakhs. The proposed plant will produce 50,000 tons of flour and 20,000 tons of bran and other by-products. Ceylon imported last year 170,000 tons of wheat flour, valued at Rs. 70 crores.

The Ceylon Petroleum Corporation proposes to buy oil from the United Arab Republic in exchange for Ceylonese tea. A U.A.R. trade delegation is currently in Colombo finalising the terms of the contract. An earlier agreement had laid down that trade between the two countries should be conducted on a bilateral barter basis. It is reported that the price of U.A.R. oil, as in the case of that paid by Ceylon for Russian oil, is 38 cents per gallon, which is about 22 per cent less than the price of oil imported by companies. The Corporation will start selling oil on the 13th inst.

The Pakistan Industrial Development Corporation has announced the setting up of four new jute mills in East Pakistan, in addition to the five already planned. The new mills will increase the number of jute factories to 23, raising total production capacity to 14,000 looms. The four new mills will be set up by private enterprise in co-operation with the P.I.D.C. Each will have 250 looms with provision for doubling its capacity. Three mills which had been planned earlier are expected to be completed by the end of this year, and the construction of the other two is likely to start shortly.

President Kennedy's proposals for a new, liberalised U.S. Trade programme and to replace the 28-year-old Reciprocal Trade Act has been endorsed by an important element of the American textile industry. The resolution adopted by the cotton manufacturers institute says: "We desire to obtain a trade expansion act which will encourage and stimulate international trade and, at the same time, will assure the continuance of the jobs of our American employees, the expansion of our domestic production and will provide for the maintenance of our national security."

The West German Government has decided to establish a development corporation designed to assist small- and medium-sized industries for investing in developing countries. The proposed Corporation, which will be financed from Government aid funds, will enter into temporary partnerships with those enterprises lacking in financial resources to face the risks of setting up subsidiaries in developing countries. Once the initial period of difficulties is over, the Corporation will part with its holding, making funds available for ventures elsewhere. It will have an initial capital of DM25 million. The Corporation is expected to start work in the second half of this year.

A wage settlement directly affecting 700,000 industrial workers, which will give trade unions just half the general wage rise they demanded, was signed last week by the Swedish Employers Confederation and the Swedish T.U.C. Wages are to go up generally by 2½ per cent this year and by a further 2½ per cent next year. In addition, a number of social benefits, including a group life insurance scheme, have been agreed on by both sides. The net effect of this central agreement is said to be an addition of about 3 per cent to the wages bill in each year. Although only 700,000 industrial workers are covered by this agreement, it sets the pattern for all industrial and farm workers in Sweden.

The U.S. Government has authorised two loans aggregating Rs. 57 crores ($120 million) to India. One of the loans, amounting to $100, will be made to the Government of India to finance imports of the critically-needed industrial and agricultural commodities. The recipient of the other credit of $20 million is the Industrial Finance Corporation. Both loans will be channelled through the U.S. Agency for International Development. It will be recalled that the U.S. indicated to the "Aid-India" consortium that it planned to extend foreign exchange loan assistance to the tune of $545 million during the first year of the third Five-year Plan. The two loans now announced bring the total of U.S. credits towards meeting this commitment and India's foreign exchange needs to $428 million. More loans to cover the remainder of the $546 million assistance currently are being processed.

PERSONAL

MR. M. Sen Gupta has been elected Chairman of the Indian Mining Federation, Dhanbad, for the year 1962-63.

Mr. T. M. Bishop and Mr. F. P. Baker have been elected President and Vice-President, respectively, of the Indian Paint Association, Calcutta, for 1962.

Mr. K. M. Campbell has been elected Chairman of the British India Steam Navigation Company Ltd. in the place of Mr. E. J. Pakes who retired at the end of March 1962.

Mr. D. C. Kothari, a prominent businessman and industrialist of Madras, has been elected as the Chairman of the Southern India Millowners' Association, Coimbatore, for the year 1962-63.

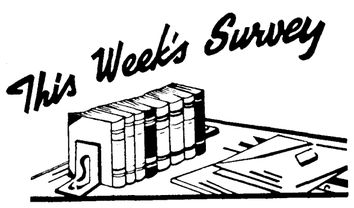
Mr. B. B. Ghosh, until recently Secretary in the Union Ministry of Food and Agriculture, has been appointed Chairman of the Commissioners for the Port of Calcutta *vice* Mr. K. Mitter.

Mr. Vishnu Sahay, I.C.S., Secretary to the Union Cabinet and the Planning Commission, has been appointed a member of the Commission. He will assume charge on the 16th inst.

Mr. Tulsidas Kilachand, Chairman of the Bank of Baroda Ltd., Mr. T. D. Kansara, General Manager of the Bank of India Ltd., and Mr. C. E. Kamath of the Canara Bank Ltd. have been elected Chairman, Deputy Chairman and Honorary Secretary, respectively, of the Indian Banks' Association for 1962-63.

MR. KARAMCHAND THAPAR

We record, with sorrow, the demise of Mr. Karamchand Thapar, the erstwhile President of the Federation of Indian Chambers of Commerce and Industry, whose address at the annual meeting of the Federation was commented upon by us in our last issue. Mr. Thapar, who was 67 at the time of his death in New Delhi on 29th March, hailed from the Punjab, where he started his business career four decades ago, and had extensive interests in industries, such as coal, paper, sugar, textile, engineering, insurance and banking. He was associated with the F.I.C.C.I. for over a quarter of a century, actively participating in its discussions. With his clear grasp of the main issues, definiteness of views and forthright expression, he always played a significant role in the shaping of business opinion.



IMPORT POLICY

BARRING a few procedural changes like the reintroduction of annual licensing, though subject to certain qualifications, the import policy for 1962-63 announced last week-end follows, by and large, the familiar pattern. The restrictive era will thus continue; if anything, the curbs have been tightened a step further. This was only to be expected, with India's total sterling balances continuing to remain at the low level of about Rs. 134 crores, as against Rs. 136 crores a year ago, even after borrowing $250 million (about Rs. 120 crores) from the I.M.F. There have, of course, been certain encouraging trends in foreign trade, but they are not sufficient to warrant any marked departure in the import policy. The adverse balance of trade in 1961 was smaller at Rs. 297 crores, as compared with Rs. 436 crores in 1960. This was mainly the result of a sharp decline in imports by Rs. 105 crores to Rs. 965 crores. Exports at Rs. 668 crores were higher, but by just about Rs. 42 crores. But for the windfall gains, such as higher prices secured for jute goods on account of scarcity of supplies, a condition which has ceased to exist, exports would not have recorded even this improvement. The slow growth in exports only highlights the need for keeping imports under strict control without which the balance of trade position will get out of hand.

A notable feature of the new policy is that it covers the whole year April 1962-March 1963 and, consequently, all applications for import licences will be made on yearly basis, subject to certain conditions. Annual licensing will be done, it is said, "to the extent possible," and will cover mainly the essential requirements of actual users both in the scheduled and non-scheduled sectors. A separate announcement is expected to be made by the Government shortly, indicating the scope of annual licensing. Annual licences, where granted, will be subject to the conditions that only half of such licences can be utilised within the first six months and the other half of the licence will, subject to such change in value and conditions as may be decided upon, be endorsed for utilisation in the second half of the validity of the licence. In other cases, licences will be issued for six-monthly entitlement or requirement as first instalment, and supplementary licences covering next half-yearly entitlement or requirement will be given, after a thorough review of the situation at the end of the first six months.

It will be remembered that annual licensing was introduced in April 1960 in respect of certain specified items. This was only of an experimental nature, but was withdrawn a year later, as it was not considered quite suitable in view of the uncertainty about availability of foreign exchange. The introduction of the present qualified annual licensing is a sequel to the recommendations made by the Mudaliar Committee on foreign trade in its report, released a fortnight ago. This step is to be welcomed to the extent that it will reduce the work of both the applicants and the staff of the Import Trade Control Organisation. Its scope, however, is limited in that annual licensing has been made applicable mainly to actual users, whereas the Committee wanted the scheme to cover all cases. Besides, the provision for a review at the end of the first six months has left unsolved the problem of uncertainty regarding periodical changes in policy. The two main factors that influence the decision on policy changes are: foreign exchange position and progressive indigenous availability of stores. Regarding the second factor, it may be noted that "changes in the pattern of production are by no means so revolutionary as to justify such frequent half-yearly revisions in the import policy," as pointed out by the Mudaliar Committee. The question of foreign exchange situation is, however, more complex, as much depends on the overall policies pursued by the Government.

The actual reduction in imports envisaged now is expected to ensure a saving of a mere one crore of rupees. This is sought to be achieved by a complete ban on ten items, including yeast, arms and ammunition, yarn spuns from silk waste excluding sewing thread, argon gas, polyvinyl acetate resin powder, polyvinyl formal and P.V.C. composition and moulding power. Sizable cuts, ranging upto 50 per cent, have also been made in respect of 55 items. It is explained by official spokesmen that these reductions have been made with due considerations to the progress made by indigenous industry. It is to be hoped that no serious shortages in these items (which include essential raw materials and drugs) will develop, resulting in high prices and black marketing.

Among the other important changes in policy, mention may be made of a provision included, for the first time, to grant actual user import licences for motor vehicle parts to co-operative societies with individual operators as members and having a fleet of 25 vehicles or above. Another new provision contained in the policy is that supplementary licences will be granted to established importers of books for the import of books in sheet form only. This step, it is said, will not only result in saving of foreign exchange but will also provide additional job work to indigenous binding industry. A provision has also been made for allotment of newsprint, "to the extent possible," to meet the requirements of additional circulation of existing newspapers and new newspapers. Besides, with a view to helping the family planning programme, the quotas for rubber contraceptives and medicinal contraceptives, namely, foam tablets, have been liberalised. In addition, the licensing work in respect of a number of items, which was hitherto centralised either at the headquarters of the Chief Controller of Imports and Exports or at post offices, has now been considerably decentralised for the convenience of the trade.

Both industry and trade appear to be generally satisfied with the new policy, which seeks to reconcile several competing claims on the scarce foreign exchange resources and also the need for conserving them as best as possible. The established trade, however, has resented further inroads made into their quotas. But this is an inevitable consequence of the pattern of overall industrial development taking place in the country.

PAINT INDUSTRY

The domestic consumption of paints and varnishes has been steadily going up during the last few years, with the growth in building construction and the development of railways, shipping and bicycles. The paint industry has risen to the occasion by expanding production, diversifying its range of products and improving quality. It has thus been able to meet a substantial part of the domestic demand, apart from sparing some quantities for export. The total output of paints has gone up from about 40,000 tons in 1955-56, the base year of the second Plan, to 52,000 tons by 1960-61. It is encouraging to note that the increase in production has been accomplished more by better utilisation of installed capacity than by mere expansion and development. The present installed capacity is over 72,000 tons, as against about 65,000 tons five years ago. In the organised sector of the industry, there are now 53 units. An important feature of development of the industry is the commencement of manufacture of several new lines, which had been imported previously. These include synthetic adhesives for layer batteries, gasoline-binding paste, synthetic iron oxide pigments, pigment dyestuffs, marine paints, anti-pest finishes, cold cured epicote finishes and paints capable of withstanding very high temperatures.

Although the trend of growth of the industry has been satisfactory, it should not be forgotten that much foreign exchange is still spent on imports of certain varieties of paints and varnishes. Imports of these goods aggregated about Rs. 184 lakhs in 1960-61, as against Rs. 175 lakhs five years before. Considering the level of imports, the exports which the domestic industry has been able to make are only negligible. Shipment of paints and varnishes, which amounted to Rs. 12 lakhs in 1957, improved to Rs. 29 lakhs during the fiscal year 1960-61. But, during the period April to December 1961, they were running at a lower rate, being only Rs. 12 lakhs, as against Rs. 22 lakhs during the corresponding period of the previous year. It is in this context that Mr. P. C. Chanda, President of the Indian Paint Association, referred to the difficulties in the way of exporting paints and varnishes at the annual meeting of the Association held at Calcutta last week. There is, according to him, very severe competition in world markets. He, therefore, expressed doubts whether it would be possible to promote exports of paints through the individual efforts of producers. Accordingly, he advocated collective endeavour for promoting exports, but did not elaborate this point.

An important handicap in the way of exports has been the scarcity and high cost of raw materials. Much work, of course, is being done to ensure adequate supply of essential raw materials. The Government of India has been encouraging the development of such of the industry's raw materials as titanium dioxide, aluminium paste, chrome colours, phthalic cyamine blue, alkyd resins and phenolic resins. The output of these materials has also been steadily increasing. Besides adequate supply of raw materials, sustained research is a prerequisite for reducing cost and ensuring good quality. Mr. Chanda did well to stress this point at the meeting. He appealed to all the paint manufacturers to join the Indian Paint Research Association set up under the ægis of the National Council of Scientific and Industrial Research. The Research Association, it may be noted, plans to put up a laboratory shortly at New Delhi and subsequently another in Bombay. Unless manufacturers join the Research Association and help it financially, it is possible that the Government may, as was hinted by Mr. Chanda, introduce some compulsory levy.

TRADE AND AID

In contrast to the regional thinking that dominates much of the current efforts at economic integration of Western Europe, American views on aid and trade policies reflect a wider perspective and a self-denying attitude which are evidence of the realisation on the part of the U.S. of its moral obligation to help the less fortunate countries and its political and economic responsibilities as the leader of the free world. A clear-cut statement of the American attitude towards trade and aid policies is contained in the address delivered by Mr. George Ball, the U.S. Under Secretary of State, before the German Foreign Policy Society at Bonn this week. Mr. Ball appealed to the member-countries of the European Common Market to join with the U.S. in helping newly-emergent nations to gain a greater share of trade in world markets. Underlining the value of international economic co-operation, the Under Secretary said that the U.S. and the European Economic Community (E.E.C.) should strive together to eliminate preferences so as to permit sound and independent economic growth of the emergent nations. Mr. Ball also emphasised the importance of trade to underdeveloped countries and pointed out that, if the U.S. and the E.E.C. together agree to open their markets to the primary products of the less developed countries on a basis of non-discrimination, they could set the direction for an evolutionary process—a process which would, in the long run, create a healthy world trading environment in which the less developed countries could develop their production for world markets. He, however, warned that the shift to non-discriminatory trade would not be an easy one, since it would require arrangements to make the necessary adjustments easy in nations now dependent on preferences. He expressed the hope that the Common Market countries would resist the temptation to become an isolated trading bloc and that it would feel a growing responsibility for the rest of the free world.

Vigorously defending the new trade legislation proposed by President Kennedy, Mr. Ball said that what the President proposed was not a customs union or a free trade area with the Common Market, but rather that the U.S. and the European countries move towards liberalisation of trade for the good of all. He pointed out that the recent increase in American tariffs on carpets and glasses was the only relief permitted under present U.S. law and that the new legislation, now before the Congress, was designed to provide other solutions for American industries damaged by imports.

The U.S. Under Secretary of State, however, made it clear that his country wholeheartedly supported the Common Market as a "co-equal force for free world security and prosperity."

In an indirect reference to the deteriorating balance of payments position of the U.S., Mr. Ball asserted that Western Europe, which was growing continually stronger and more unified, had not fully assumed that share of the burden of defending the free world and aiding underdeveloped countries which its growing strength warranted. He, therefore, called upon the Western nations to do more for collective defence of the free world and to aid underdeveloped countries. This appeal has special significance in the current context of the continuing heavy gold losses from the U.S. which aggregated $100 million during the week ended 28th March 1962, bringing the total gold losses till that date in the current year to $280 million. Financial experts are of the view that, if this trend were to continue, the outflow of gold from the U.S. this year might exceed last year's figure of $857 million. It is noteworthy that a substantial part of this year's gold outflow from U.S. has gone to Britain.

TEXTILE MACHINERY

As the supplier of a wide range of machinery and equipment to cotton mills, the textile machinery industry occupies a prominent place in all countries. In India, too, the industry, which took firm root only a decade ago, has come to play a vital role. The actual output of textile machinery (in terms of value) is currently running at an annual rate of Rs. 15-16 crores, as against less than a crore of rupees ten years before. Alongside expansion of output, continued efforts have also been made to develop new lines of manufacture and to improve quality. While all this is commendable, still greater, sustained efforts are needed if the industry is to be in a position to meet the expanding requirements of cotton mills in the years to come. An idea of these requirements can be had from the fact that the Government has recently allocated to the mill industry four million additional spindles and 25,000 automatic looms under the third Plan and that there is a heavy backlog of rehabilitation and modernisation. Indeed, it is, as Mr. Pratap Bhogilal aptly remarked while inaugurating the annual meeting of the Association of Merchants and Manufacturers of Textile Stores and Machinery held at Bombay last week, no small undertaking on the part of machinery manufacturers to keep the cotton mill industry's wheels turning.

Viewed thus, it is rather disquieting to be told that the textile machinery industry is confronted with the difficulty of procuring raw materials. The difficulty must certainly be removed forthwith. The three suggestions which Mr. Sohrab K. Khan, President of the Association, put forward, merit due consideration. One, imports of certain special types of steel (required by manufacturers of textile accessories) that are not produced on a commercial basis in the country and readily available must be permitted. Two, the import duty on some raw materials must be reduced. For instance, the raw material required for the production of all-metal reeds bears an import duty as high as 25 per cent *ad valorem* in the case of British manufacture and an additional Rs. 34.45 per ton in respect of non-British manufacture, as against the import duty of only 15 per cent *ad valorem* on finished all-metal reeds. Three, measures should be taken to limit imports, under the Export Promotion Scheme, of such textile auxiliaries as are produced in sufficient quantities in this country.

It well behoves the authorities to give due attention to the problem of securing adequate supplies of components for the textile machinery industry. On its part, the industry should spare no efforts to produce machinery and equipment which "are acceptable to mills in every way." It will do well to ponder the statement of Mr. Bhogilal that every new machinery is the product of intensive research and experiment. Accordingly, only those machinery makers who are able to supply the most up-to-date equipment can hold their own.

SMALL-SCALE INDUSTRIES

Small industries, as defined in National Income Estimates, comprise all manufacturing and processing activities undertaken by household enterprises of factories not registered under the Indian Factories Act, 1948. In other words, they cover all industrial enterprises employing less than 10 workers if using power and less than 20 workers if not using power. The handloom industry, for instance, belongs to the "small enterprises" sector. So do the modern small-scale industries which, according to the definition adopted by the Small-Scale Industries Board, are enterprises employing less than 50 workers with power or less than 100 workers without power and with a capital asset not exceeding Rs. 5 lakhs. The "small enterprises" sector thus includes both traditional and cottage industries and modern small-scale industries working on factory lines. As the estimate of income originating in this sector is still derived indirectly by working out the number of "gainfully occupied" persons in all small enterprises together and the level of average income per occupied person in them, the share of "modern small-scale industries" as such cannot be separately estimated. It is not possible, as of today, to figure out this share in the net output (Rs. 745 crores in 1955-56 and Rs. 773 crores in 1959-60, both at current prices) of the entire small enterprises sector.

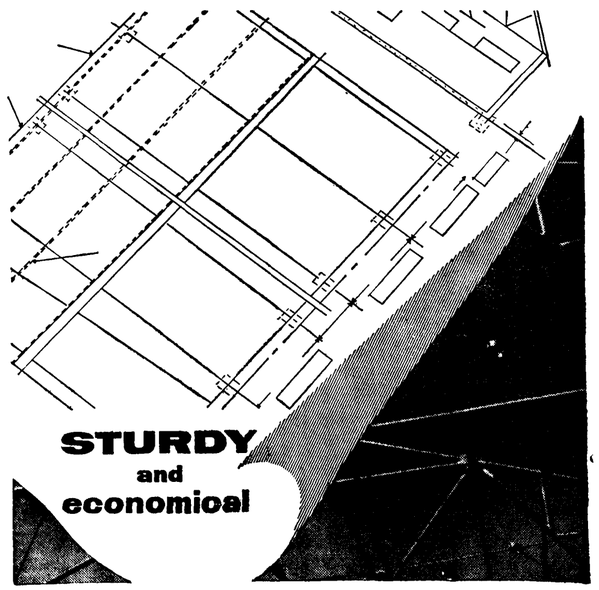
But it is certainly possible to infer from the figures that there has been some growth in "modern small-scale industries" in the second Plan period. This inference is accompanied by the assumption that "traditional small industries" have, at best, remained static during the same period, that is, have neither languished nor advanced. Even after making this assumption, such growth as has taken place in "modern small-scale industries" does not seem to have been anything spectacular. It would be worthwhile to find out through statistical surveys whether an outlay of Rs. 56 crores by the Central and State Governments, besides the estimated private investment of about Rs. 60 crores, on modern small-scale industries and industrial estates during the second Plan period has led to the expected results in terms of output. It would not be patently sufficient to give, as the final report on the third Plan has done, a few instances of growth in production in the small-scale sector, such as the following:

228,000 bicycles produced in 1960, as against 25,500 in 1956.

52,000 sewing machines in 1960, as against 23,600 in 1956.

Rs. 4 crores' worth of ungraded machine tools in 1960, as against Rs. 1.3 crore in 1956.

The third Plan has made a bigger provision for outlays on modern small-scale industries and industrial estates—Rs. 115 crores by the Central and State Governments and an estimated Rs. 135 crores by way of private investment. In view of this fairly large provision for the development of small-scale industries, there is a case for appraising carefully the progress so far made in such industries. It is, therefore, a heartening development that the Government of India has just appointed a perspective planning team for small-scale industries. According to the announcement made by Mr. Manubhai Shah, Union Minister for Industry, at the meeting of the Small-Scale Industries Board on the 3rd inst., the team consists of six foreign economists and planning experts whose services have been arranged by the Ford Foundation. A counterpart team, consisting of Indian officials and economists under the leadership of Dr. P. S. Lokanathan, will work as a part of the international team. It is expected to study and review the existing programmes of development of small-scale industries and suggest improvements on a long-term basis. As Dr. Lokanathan, who is Director-General of the National Council of Applied Economic Research, is heading the Indian part of the team, it may be supported that his organisation will, in some way, assist it in providing a complete picture of current aggregate investment, output and employment in modern small-scale industries and in critically appraising their performance. Given such a critical review, the present team would be in a position to recommend a realistic, economic and well-co-ordinated plan of development. That at least is our hope. It may be noted in passing that a similar team on small-scale industries, arranged by the Ford Foundation in 1954, had paved the way for the further development of such industries in the second Plan period.



prefabricated tubular structures

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 12 ft. 4 in.
SLS/44	44 ft.	10 ft. 1.1/8 in. and 12 ft. 4.1/8 in.

THE CASE FOR CHEAP ENERGY

HEAVY TAXATION LEADS TO HIGH PRICES

FOR modern industrial societies, and for those striving to attain this status, abundant mechanical energy is indispensable. Fuel and power are needed to keep the wheels of industry and transport turning, to bring about new economic development, and to provide the people with the amenities of modern life. Thus, although climatic and other differences naturally have some influence on fuel requirements, there is a close connection between energy consumption per head and standard of living. As against a world average of just over 1,400 kg. of coal equivalent per head, energy consumption in the U.S.A. is nearly six times that figure—well over 8,000 kg. per head. The corresponding averages are 4,900 kg. for the United Kingdom, 2,400 kg. for France, and 1,160 kg. for Japan. Among the countries at the other end of the scale are Turkey with about 240 kg. per head, India with 140 kg., and Nigeria with 40 kg.

If energy is indispensable to economic growth should not cheapness and plenty be the keynotes of Government energy policies? True, cheap energy is not equally important to all industries. The big fuel users, naturally enough, are those which employ high temperature processes, the outstanding example being iron and steel. As a percentage of selling value, expenditure on fuel and power is estimated to be 17 per cent for the iron and steel industry, as much as 29 per cent for cement, where the raw materials are cheap, and 1 to 3 per cent for textiles. However, steel and cement are widely used throughout a modern economy, which is also heavily dependent on transport services. Thus the influence of low, or high, energy costs will in fact be all-pervasive.

Role of Coal

Nevertheless, Governments of Western countries do not pursue cheap energy policies with the single-mindedness that the uninitiated might expect, or the consumer desire. The main reason, in Europe at least, is to be found in the historical role of coal. The industrial revolution was made possible by abundance of coal—or, more accurately, by the proximity of abundant coal and abundant iron ore. Oil grew to maturity largely as the fuel for internal combustion engines, a field in which it competed only indirectly with solid fuel (road transport versus rail). It was not until after the last war that oil began, on any scale, to replace coal as fuel for industry in European countries. It started to do this at a time when the Governments concerned were alarmed at the prospect of a solid-fuel shortage. It succeeded so well that Governments became disturbed at the spectre of unemployment in the mining industry.

In important coal-producing countries such as the U.K. and Germany, the dilemma is reflected in Government policies. While accepting that oil will play a role of increasing importance, certain Governments have sought in recent years to restrain its growth. Import duties and other taxes are the favourite instrument, though the claim is commonly made that they are being imposed purely for revenue reasons. There is no clear line of demarcation between revenue and protective duties; and, whatever the ostensible purpose, it remains true that any tax which raises the price of one fuel will afford some protection to the others.

Taxes on motor gasoline are now almost universal. They have grown with the years and in Europe they now range from the equivalent of roughly 22 pence per imperial gallon in Switzerland to 57½ pence in France. In Japan they are equivalent to about 31 pence, while in the U.S.A. the combined federal and state taxes are of the order of 10 pence per imperial gallon. Taxes on fuel oil are generally of more recent origin. They are levied in most West European countries—Denmark is an exception—and tend to be heaviest in the main coal-producing countries. The highest rate is in West Germany—equivalent to 2.6 pence per imperial gallon, or £2 10*s.* per long ton, on *heavy* fuel oil—though Belgium and the U.K. follow close behind.

It is sometimes argued that the harm done by taxing fuel in this way is negligible: higher energy costs are simply passed on to the buyers of goods or services in the form of higher prices, and the effects are widely diffused. This, however, is a superficial view. Apart from the consideration, mentioned above, that cheap fuel is a powerful stimulant of economic growth, high energy costs may be a significant handicap to exporting industries. The point has been made several times of late in regard to the U.K., which is more dependent on export business than is any other European nation, and where the cost of energy is considerably higher than in some competing countries.

Distorting Effects

Nor is this all. Fuel taxes have distorting effects which should not be ignored. As we have seen, the cost of energy, as a proportion of total costs, varies widely from industry to industry. Hence any tax on fuel will be discriminatory in its effects, hitting some industries much harder than others. This explains why the U.K. iron and steel industry protested so strongly against the tax imposed last year on fuel oil (over £2 a ton), as well as against the Government's refusal to permit the importation of cheap U.S. coal for steelworks use.

Taxes on liquid fuels will, moreover, result in a less efficient use of fuel over-all. One of the most striking results of the post-war switch from coal- to oil-firing has been the marked improvement in fuel economy generally. Taxes on oil obviously hamper this process. To quote a specific example: recent research in North America and the U.K. has shown that the injection of fuel oil into blast furnaces results in a more-than-equivalent saving of coke, besides increasing the daily output of iron. Clearly, however, taxes on oil may rob the process of commercial justification, with the result that the potential saving of fuel is not made.

While there are thus inconsistencies in the attitude of Governments to the subject of energy and its taxation—and certainly differences of approach among the six members of the European Community—there is evidence that the claims of cheap energy are tending to prevail, at least in Western Europe. Since the publication of the far-sighted Robinson report* of 1960, there has been a growing awareness that Europe will inevitably become more and more dependent on imported oil; and that, in these circumstances, lowest costs and freedom of choice for the consumer should be the main objectives of policy. This is in effect an argument for maximum competition in the energy field. Even if coal production has to be sustained for reasons of broad policy, taxation of competing fuels is not the only way to do it. Typical of the liberal view is the plea by M. Marjolin, Vice-President of the E.E.C., to the European Assembly last February—a plea which was accepted—that the maintenance of a reasonable level of coal production in Europe should be achieved by means other than a general rise in energy prices: i.e., by direct subsidy to the relatively few high-cost mines.

WORLD ENERGY CONSUMPTION
(Million metric tons coal equivalent)

	1951	1955	1959	1960	% Increase 1951–60
Solid fuels	1,640	1,820	2,075	2,214	35
Liquid fuels	705	948	1,218	1,318	87
Natural and imported gas	318	397	666	618	94
Hydro and imported electricity	47	59	79	86	83
Total	2,710	3,224	3,038	4,236	56
*Per head**	1,075	1,202	1,345	1,405	31

*Aggregate consumption in *Kilograms per capita.*
Source: United Nations.

No Conflict

Arguments for cheap energy and maximum freedom of choice for the consumer do not apply to the industrialised countries alone. They are equally relevant to the situation of the undeveloped areas of the world. Though these at present use mechanical energy at a much lower rate than do the Western nations, they need, in the interests of economic growth, to use much more. For them, liquid (and other) fuels are an instrument for economic development, and proposals to raise fuel prices by taxes or other restrictive measures should be stoutly resisted. Ease of tax collection is no argument for denying the economy the benefits which cheap energy can bring.

But may there not be a conflict of interest in all this between the oil-consuming and oil-producing countries? Is cheap energy in (say) Western Europe compatible with reasonable prices for crude oil in the Middle East? The answer is that there is no necessary conflict. If energy is dearer than it need be, the main culprit is heavy taxation in consuming countries, certainly not high prices at the producing end. Thus the present posted price for 31° Kuwait crude ($1.59 a barrel) is roughly equivalent to 4 pence per imperial gallon. As compared with this, the wholesale price for regular grade gasoline in the U.K. is 49 pence a gallon, including 33 pence duty, besides the charges needed to cover all the costs of ocean transport, refining, marketing and various overheads. At the other end of the scale, the price for heavy fuel oil is 13.45 pence per gallon, including 2.2 pence duty, subject to substantial discounts for large quantities. A significant lowering of selling prices would thus be possible by the reduction or elimination of taxation, without bringing any pressure to bear on crude oil postings. Lower selling prices would encourage a more rapid growth of oil consumption, which is the best guarantee of larger revenues for "host" Governments.—*By Special Arrangement with Petroleum Press Service.*

Notice

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of Industrial Investment Trust Limited will be held at the Registered Office of the Company at 61, Apollo Street, Fort, Bombay, on Monday, the 7th day of May, 1962 at 4 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Statements of Accounts for the year ended 31st December, 1961.
2. To declare a dividend.
3. To appoint a Director in the place of Mr. Maneklal Premchand, who retires by rotation and to consider, and if thought fit, to pass the following Resolution, of which special notice in writing as required by Section 281 of the Companies Act, 1956, has been received by the Company. Mr. Maneklal Premchand has signified his willingness to stand for re-election:

   "RESOLVED that pursuant to the provisions of Section 281 and other relevant provisions of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 72 years, and who retires by rotation, be and is hereby re-appointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him."
4. To appoint a Director in the place of Mr. A. D. R. Geddis, who retires by rotation and being eligible for reappointment offers himself for re-election.
5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from Monday, the 9th day of April, 1962, to Monday, the 7th day of May, 1962, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member of the Company.

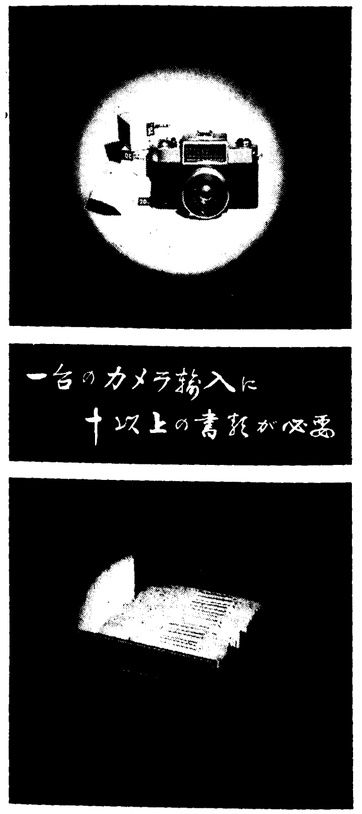
By Order of the Board,
KISHORE M. PREMCHAND,
Director.

BOMBAY, *dated 27th day of March,* 1962.

Notes:—1. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after the 8th day of May, 1962. The dividend warrants will be posted to those shareholders whose names stand on the Register on the 7th day of May, 1962.

2. Change of address, if any, should be notified to the Company immediately.

A copy of this notice and the Explanatory Statement required to be annexed thereto are being circulated to the Members.



Or putting the above in English, importing even one camera from Japan takes a good deal of paperwork. Your Mitsubishi Bank man has the knowledge and the modern facilities behind him to help you eliminate much of this or at least speed it up. He and the Mitsubishi Bank have built a reputation over the past 67 years on their ability to give you all the banking services necessary for successful import-export operations. From paper work to market assessment and credit ratings, the Mitsubishi Bank handles all import-export and everyday banking matters quickly, expertly.

ECONOMIC ANALYSIS OF CENTRAL BUDGET

VENKATACHALAM COMMITTEE REPORTS ON SMALL INDUSTRIES

From Our Special Correspondent

NEW DELHI, *3rd April*

DELHI LETTER

ONE of the innovations of the planning era is the Economic Classification of the Central Budget, which follows the latter's presentation every year. Budgetary policies affect incomes, capital formation and savings but the so-called Budget papers usually conceal much more than they reveal and on these larger matters they are hardly helpful. The economic classification purports to sort out, re-classify and re-group Government transactions into "*meaningful economic categories.*" (One is tempted to remark that the meaning may, however, elude all who are not conversant with the jargon of National Accounts.) So in the system of economic classification adopted by the Department of Economic Affairs, since 1957-58, distinctions are drawn between transactions in goods, services and transfers and financial transactions which affect the net claims of the Government on the rest of the economy. But here there is a snag; the Central Government and its operations are isolated from those of the State Governments, local bodies and all autonomous Central and State undertakings, the latter are treated as the "rest of the economy," along with private individuals and corporations in the private sector. Perhaps another economic classification is necessary to analyse the impact of State Government and municipal budgetary policies, which form part of and derive their inspiration from the larger Central Plan, but it may not be attempted for some time to come.

Capital Formation

The table below summarises the total expenditure, the proportion of final outlays (48 per cent in 1962-63) which represent the direct demand for goods and services for consumption and of capital formation (which includes buildings, machinery and equipment and inventories). The transfer payments are even more than final outlays (Rs. 1,133 crores next year or 52 per cent) and they include current transfers (like interest, grants to States and local authorities and subsidies and pensions) and capital transfers to the States for capital formation, non-departmental commercial undertakings like the railways, P. & T. and Government companies and compensation to displaced persons. Over and above are the investments in shares of Government concerns and others, loans for capital formation to States and local authorities and public undertakings, subscription to international bodies like the I.D.A., purchase of internal gold and other loans.

TABLE I

(Rs. in crores)

	1960-61 (Accounts)	1961-62 (Revised)	1962-63 (Budget)
Total Expenditure	1,706	1,977	2,194
1. Final Outlays	767	915	1,061
(a) *Government consumption expenditure:*			
Wages and salaries	245.6	271.6	293.5
Commodities and services	210.6	253.7	286.8
Sub-total	456.2	525.3	580.3
(b) *Gross Capital Formation:* (Building, Machinery and inventories)	311	390	481
2. **Transfer Payments to the rest of the Economy:**			
(a) *Current transfers* (Interest, Grants, Subsidies)	425	467	513
(b) *Capital transfers* (to States, Government undertakings, etc)	65	77	102
Sub-total	490	537	615
3. **Investments and Loans**	449	525	518

It will be seen that gross capital formation this year will be Rs. 91 crores higher than the revised estimates for 1961-62 and Rs. 170 crores higher than the actuals of the earlier year. Net capital formation is derived by deducting expenditure on renewals and replacements of buildings and machinery and equipment and the following are the details:

TABLE II

(Rs. in crores)

	1960-61 Accounts	1961-62 Revised	1962-63 Budget
1. Construction works	145	177	214
2. Machinery and equipment	58	84	118
3. Increase in inventories	10	28	34
Total Net capital formation by the centre.	213	289	366

The assisted net capital formation through transfers, investments and loans by the Centre to other authorities is shown below:

TABLE III

(Rs. in crores)

	1960-61 Accounts	1961-62 Revised	1962-63 Budget
1. State governments	319	394	439
2. Non-departmental commercial undertakings	211	218	259
3. Local authorities	6	14	17
4. Others	18	16	16
Total	554	642	731

There is much of overlapping here since the investment in all Central public sector undertakings (item 2) is in fact capital formation by the Centre. Anyhow, the total net capital formation adds up to Rs. 1,097 crores in 1962-63, as compared with Rs. 931 crores last year and Rs. 767 crores in the previous one, constituting between 45 and 50 per cent of total Union expenditure. When there is a deficit in the Budget, there will be no savings from current receipts for such investment; the income deficit is nearly equal to the Centre's direct investment. But precautions have to be observed in interpreting these figures because of the tendency for the actual position to vary considerably from the Budget estimates owing to the practice of underestimating revenue and overestimating expenditure (to provide a pretext for additional taxation year after year).

The overall financial position of the departmental commercial undertakings is also estimated in the classification to be as follows:

TABLE IV

(Rs. in crores)

	1960-61	1961-62	1962-63
1. Gross sale proceeds and interest receipts	555	607	634
2. Operating expenses	502	551	582
3. Net profit	53	56	52
(a) Transferred to Government	7	24	14
(b) Retained	46	32	28

The budgetary transactions of the Central Government are expected to generate a total income of Rs. 726 crores this year against Rs. 686 crores last year and Rs. 615 crores the year before.

This other method of looking at the Budget document is still of limited value. A true appraisal of the impact of Government expenditure cannot be restricted to that of the Central Government alone; distinctions now made between capital and current transfers rest on certain arbitrary assumptions such as that ordinary taxes are paid through a cut in consumption and capital taxes are paid out of savings. But it is claimed that the classification estimates the Union's income deficit, the excess of net investment over net savings, the general expansionary impact of the Government's transactions and the amount of private savings to be drawn upon for financing investment. The role of the Government in relation to the rest of the economy can thus be assessed in broad terms.

* * * *

Small Industries

Enthusiasm for small-scale industries has been increasing in official quarters because of the gratifying rate of expansion noticed in certain areas but there is a certain amount of risk in the current assumption that these successes can be multiplied very rapidly by extending small-scale manufacture to more industries and more areas which are relatively underdeveloped. In regarding small industries and their wide dispersal as the answer to the problem of uplifting backward areas and achieving regional balance, there is a danger of overlooking that technical skill and intensive training are needed to maintain high standards of quality. So far, development has been concentrated in the field of engineering industries, in which both traditional skills and new know-how in the use of machine tools and precision instruments has helped. But Mr. Manubhai Shah mentioned, while inaugurating the meeting of the All-India Small-scale Industries Board in New Delhi this week, that the small sector should make headway in chemical industries, a field in which the

(*Continued on next page*)

BRITAIN'S BALANCE OF PAYMENTS

(From Our Own Correspondent)

LONDON, *30th March*

LONDON LETTER

THE most exciting fact to emerge from the Government White Paper on the balance of payments published this week is that the country probably ended 1961 in balance, instead of with a substantial deficit hitherto assumed. The latest Treasury figures are also significant in another respect: they revise the estimates of the balance of payments for the past three years and it all comes out much more in this country's favour. All the official figures carry what is called a "balancing item" which is the amount necessary to account for the difference between the known monetary movements and the figures of trade, other overseas income and expenditure and investments. This balancing item is often uncomfortably large—uncomfortably because it suggests too big an area in which the facts of payments are not known. Indeed, the results of the latest Treasury exercise have been to pull a lot of credit items out of this limbo into the current balance of payments. Thus, even this last year, where the current balance on the official figures still shows a deficit of £70 millions, the balancing item which is a plus of £81 millions is really attributable to current account and not to capital movements, e.g., commissions. That is why, making allowance for this new piece of information, one can say that Britain's payments last year were virtually in balance.

The following table shows the new figures for each of the last three years:

	1959	1960	1961
Current account			
Visible Trade:			
Imports (f.o.b.)	3,611	4,098	3,998
Exports and re-exports (f.o.b.)	3,507	3,507	3,863
Total	—104	—391	—135
Invisibles	+219	+103	+ 65
Current balance	+115	—288	— 70
Balance of Long-term Capital Account	—499	—202	+ 8
Balance of current and long-term capital transactions	—384	—490	— 62
Balacing Item	— 21	+306	+ 81
Balance of monetary movements	+405	+184	+ 19

Between 1961 and 1960, the balance on visible trade improved by £256 millions of which £100 millions was due to reduced imports and £156 millions increased exports. This showed a very satisfactory trend. Unfortunately, invisibles did not go the same way: the Government was responsible for increasing their spending by over £50 millions. Although there were small improvements in items such as shipping, travelling and other invisibles, it only amounted to a surplus of about £15 millions. Thus, overall invisibles showed a deterioration of about £30 millions to offset against the trade improvement. Even so, there was a net improvement of £218 millions. The current deficit balance shown by these figures of £70 millions compares with £288 millions deficit for the year before, which was at one time estimated by the Treasury as £344 millions. The *surplus* for 1959 of £115 millions is less than had at one time been estimated but greater than last year's revision. All these changes are confusing, but it is worthwhile looking at the picture in the round over a number of years from time to time and the picture which emerges now is nothing like as unsatisfactory as would have been assumed six months ago.

The current balance, though, is only part of the story. In all three years, there were heavy capital exports, i.e., the traditional British investments abroad. These were offset by overseas investment in the U.K. which in 1961 reached an exceptionally high figure as a result of the American Ford take-over and repayment of Continental debts amounting to about £200 millions. It is still impossible to isolate hot money movements from permanent investment in a satisfactory manner and one can only record that, exceptionally in 1961, this country was not investing overseas what it had not got. In 1959, there was a net outflow of funds of £405 millions. This was reduced in 1960 to £184 millions, largely represented by a substantial gold inflow (hot money) and in 1961 the balance of monetary movements was actually £90 millions in this country's favour. These figures are impressive witness to the significance to the sterling area of the part which the U.K. still plays as an international banker, working, alas, on inadequate capital.

INDIAN OVERSEAS BANK

DIVIDEND MAINTAINED

THE performance of the Indian Overseas Bank Limited (General Manager: Mr. C. P. Doraikannu, Madras) during the year ended 31st December 1961 was quite encouraging. The Bank's business continued to show steady progress, the gross income earned being higher at Rs. 233.99 lakhs, as against Rs. 226.63 lakhs for 1960, or an increase of Rs. 7.36 lakhs. The entire increase was accounted for by interest and discount earned (+Rs. 7.50 lakhs), whereas income from commission and exchange was a shade lower (−Rs. 0.25 lakh). The whole of the improvement in earnings was, however, neutralised by the rise in expenditure under different heads; thus the cost of staff (excluding bonus) rose by Rs. 5.25 lakhs to Rs. 70.54 lakhs, other expenses by Rs. 1.78 lakh to Rs. 25.73 lakhs, and depreciation by Rs. 1.08 lakh to Rs. 6.79 lakhs. Surprisingly enough, interest paid was up by a mere Rs. 11,000 at Rs. 87.13 lakhs. Even so, the profit (before taxation) for 1961 is at a high level: Rs. 43.80 lakhs, as against Rs. 44.66 lakhs for the previous year.

Unlike the vast majority of banks which departed this year from the usual practice of showing the provision for taxation, the Indian Overseas has made no secret of this provision. Apparently, it believes in other methods of building up its secret reserves.

More than two-fifths of the profit of Rs. 43.80 lakhs has been set apart for taxation, the actual provision being Rs. 18.50 lakhs (same as last year). The sum allocated to reserves is Rs. 9 lakhs, which is less by Rs. 1 lakh as compared with 1960. Bonus to staff takes Rs. 5.50 lakhs (unchanged). The Directors have maintained the dividend at the previous year's level of 14 per cent subject to deduction of tax, the total dividend absorption being Rs. 10.50 lakhs. A larger sum of Rs. 2.23 lakhs has been carried forward, as against Rs. 1.92 lakh.

The following comparative table presents a synoptical view of the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	233.99	226.63	201.12	165.38
Of which:				
Interest and discount earned	167.11	159.61	141.93	112.33
Commission and exchange	65.82	66.07	58.67	52.84
Other income	1.06	0.95	0.52	0.21
Interest paid	87.13	87.02	86.31	65.89
Staff expenses	70.54	65.29	50.13	40.06
All other expenses	25.73	23.95	20.49	18.46
Depreciation	6.79	5.71	4.53	3.37
Profit	43.80	44.66	33.61	28.60
Provision for taxation	18.50	18.50	12.50	12.50
To reserves	9.00	10.00	7.00	6.00

(*Concluded from previous page*)

quality is more difficult to control. Processing of plastic raw materials, dyestuffs, pesticides, paints and varnishes, etc. may provide enormous scope but the methods suggested by him for encouraging growth in these are of doubtful expediency. In plastics, it is proposed to restrict the main raw material manufacturers to convert only 25 per cent of their output while distributing the balance equally between large-scale and small-scale units so as to provide 50,000 tons of plastic materials for the latter to achieve a turnover of Rs. 35 crores. Also, it is proposed to reserve polyethylene films entirely for production in the small-scale sector. How far costs and quality can be controlled, both in the interests of the future of small-scale industries and the task of export promotion, is a point that should not be ignored in the formulation of policies for the small-scale sector in dyestuffs or other new industries like transistors, typewriters, and chemicals. For pesticides, Mr. Shah mentioned acceptance of the I.S.I. marking scheme as compulsory for approved small units; similar requirements should be obligatory for others even if they cater mainly to the domestic market.

The Venkatachalam Committee on the dispersal of industries has examined the question of the criteria to be adopted for location of small industries in backward areas; it considers that a district should be taken as a unit for this purpose and that choice of special areas should depend upon the levels of *per capita* income and consumption, ratio of population to land, incidence of unemployment, etc. It has made out a list of districts (suggested by the States or selected on the basis of information provided by them) and recommends that the State should provide the social and economic overheads and offer certain incentives to encourage small entrepreneurs in order to divert their attention to these areas. It has taken note of the measures taken in Western Europe for depressed areas to give loans, grants, tax incentives and building construction and site improvement and has recommended similar steps. On the question of tax incentives, the Committee thinks that small industries should first pay up all taxes including sales taxes, and then claim refunds. But considering the number of authorities they will have to approach for sales tax, excise, octroi and other municipal levies and customs, this seems a very dubious kind of incentive. Refund-claiming will undoubtedly be one of the small businesses that will be promoted!

The Committee has also suggested freight concessions, subsidised rates of interest for credit, a longer period of hire purchase of ten years (instead of the present seven) and suggests the establishment of special machinery for implementing the scheme. It does not favour the extension of these concessions to industries which normally spring up in new areas after development of overheads—like rice or oil milling and non-mechanised units—but only to those which have a tendency to be located in the developed areas. Since availability of skilled local labour is one of the important factors in the growth of small industry, it is doubtful if the incentives can offset the disadvantage of lack of such personnel in the really backward areas; their role is bound to be marginal. The deciding factors will be access to the market for the products of small industries, especially when they produce ancillary equipment for larger units. There are still some States where small industries have not made sufficient progress and there the question may be one promoting their growth wherever possible rather than of diverting them to the most backward areas. Ultimately this problem can be solved only by the State Governments, but their record so far has been very uneven and earnestness not uniform.

ISSUED BY GOVERNMENT OF INDIA DA 61/801

PROBLEMS OF DEVELOPMENT BANKING

FIRST ASIAN REGIONAL CONFERENCE

UNLIKE commercial banking, which has had a fairly long history, in most underdeveloped countries investment or development banking is of comparatively recent origin. Most of the development banks in Asia, or finance corporations as they are known in India, have been established with the support and co-operation of the Governments of the countries concerned, the International Bank for Reconstruction and Development and the International Finance Corporation. In India, however, the Industrial Finance Corporation and the State Financial Corporations were brought into being without the help of any of these world bodies, though the Industrial Credit and Investment Corporation of India, as well as the Refinance Corporation, owe their birth to outside help. The World Bank convened four years ago a conference of development banks in Washington to facilitate exchange of ideas and experience on problems of development banking. A similar conference, covering the Asian region, was held in Bombay last week, from 29th to 31st March 1962, to be precise. The credit for organising the conference, the first of its kind in Asia, goes to the Industrial Credit and Investment Corporation of India, which also played host to the conference. This meeting of investment bankers was attended by representatives of development banks in Asia, and observers from the World Bank, the I.F.C., the I.D.A., the Commonwealth Development Finance Company of U.K. and the Kreditanstalt of West Germany. Appropriately enough, it was inaugurated by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India.

In his inaugural address, Mr. Bhattacharyya outlined the role played by the Governments and the central banks in establishing development banks in Asian countries and pointed out that this was much more comprehensive than was the case with development banking institutions in industrially advanced countries of the West. In addition to taking initiative in the establishment of such banks, the Governments of these countries, according to the Reserve Bank Governor, had to nurse these institutions during the early period of their growth until they attained financial viability. Governments also exercised a degree of direction, so as to ensure that the institutions channelled their funds into sectors of productive activity in accordance with accepted priorities.

Genesis of I.C.I.C.I.

Tracing the origin of the I.C.I.C.I., Mr. Bhattacharyya said that the Industrial Finance Corporation of India and the State Financial Corporations were originally designed to provide only loan capital and were thus not in a position to meet all requirements of development finance. It was, therefore, felt necessary to create an institution to develop the capital market by stimulating the supply of risk capital through subscription as well as underwriting the issues of joint-stock companies. The Industrial Credit and Investment Corporation was accordingly set up in 1955 in collaboration with the World Bank. Its ownership represented a unique collaboration between the Indian and foreign private interests, both institutions and individuals.

Mr. Bhattacharyya observed that the number of long-term lending institutions in India might give one a specious appearance of overlapping in their field of operations, whereas, in actual fact, the spheres of financial corporations were largely distinct and well co-ordinated both functionally and geographically. They were also developing techniques of participation in larger loans which should result in further co-ordination.

Referring to technical appraisal of projects before rendering assistance, which was one of the subjects for discussion on the agenda of the conference, Mr. Bhattacharyya said that such appraisal was crucial to the efficient operation of all medium and long-term lending institutions. Appraisal of term-loan applications, in his view, had many facets such as assessment of managerial competence, economic prospects of the borrowers' products, technical feasibility of the projects and financial appraisal. The relative weightage to be accorded to each of these elements was a matter for judgment of the lending institution. In a sense, he went on to say, financial appraisal was the most comprehensive of the lenders' tasks. Generally, among underdeveloped countries, the tendency of development banks was to give greater emphasis to the types and value of security available for loans than to assessment of the earnings potential of a project. An important problem in regard to appraisal, said Mr. Bhattacharyya, related to the balance to be maintained between the development criterion, on the one hand, and the criterion of commercial profitability, on the other, in the selection of projects for receipt of financial assistance. This raised the vexed question of identification of projects for receiving financial assistances from among schemes which have been accorded priority. He hoped that discussions at the conference would throw more light on this very important question.

State Assistance

Welcoming the delegates, Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India, traced the growth of development banking in India and referred to some of the common problems faced by development banks in Asian countries. The growth of development banking, particularly in the initial stages, Mr. Mehta observed, was due largely to State assistance. The Government had rendered financial assistance and, in the case of the I.C.I.C.I., had made available, as an initial gesture of encouragement, an interest-free loan. Last year, some tax relief on portions of the profit was also provided to all development banks for building up of reserves.

Emphasising the role of development banks, Mr. Mehta said that, though there were many international institutions for supplying long-term loans for development purposes, the main burden of finding adequate resources for development and making the best use of them rested with the people of the country concerned, that is, in the ultimate analysis, on its national economy. Development banks had a useful role to play in this respect. Although the structure and functions of development banks in different countries were different, reflecting their political and economic conditions, all of them had a common objective, namely, fostering healthy industrial development and therefore they also faced common problems. The most important of these problems was, Mr. Mehta opined, to determine whether a project that seeks finance from a development banks was viable in the long run. Another point of common interest related to the terms on which finance was to be provided once a project was judged viable.

Profitability

The terms which development banks were able to offer also determined the resources they were able to raise, the profitability of their operations and the strengthening of their own position. In many countries, he pointed out, Governments had come forward to provide funds to development banks in some form or other; this arrangement had been useful, in that, while funds had been obtained by development banks at low rates of interest, the Government had the assurance that the funds would be channelled to industries which were viable and suitable for assistance. The profitability of a development bank depended, among other things, on the spread between its lending and borrowing rates. The rates that many banks were able to change depended upon the terms at which other lending institutions provided funds and the general profitability of industry. In many countries, the I.C.I.C.I. Chairman added, the absence of profitable projects had tended to keep the terms charged to the borrowers low. However, the adoption of other activities like underwriting and acquisition of shares often helped to raise the profitability of a development bank.

Another important factor on which the profitability of a development bank depended was, according to Mr. Mehta, the ratio of its owned funds to borrowed funds. Notions regarding a proper balance between owned and borrowed funds varied and the ratio appropriate to any particular country would depend upon several factors such as the risks involved in operations, the period of amortisation of borrowed funds and so on. Moreover, the ratio between owned and borrowed funds, given the share capital, also set a limit to the total operations of a development bank.

Yet another factor determining the profitability of operations of a development bank would be the tax treatment of its profits. In some countries, like Pakistan, Mr. Mehta pointed out, special tax reliefs had been given to development banks. These reliefs were justifiable on the additional ground that development banks were also an instrument to inculcate discipline in the promoters of a venture and, by insisting on standards, brought into being projects which were financially sound. By carrying out an independent examination of a project, it assured itself of the viability of an enterprise. In other words, a development bank ensured planning at the projects level. These were by-products of the operations of a development bank which were equally important to a developing economy.

The foregoing points made by Mr. Bhattacharyya and Mr. Mehta set the tone and provided the framework for the discussions at the conference which brought out some of the salient features and the major problems of development banks in the Asian region. One was the shortage of funds and trained personnel. The former was sought to be remedied by having recourse to borrowers from Government and international agencies, while the latter necessitated recruitment of experts from advanced countries. One of the important functions, which many development banks had set for themselves, was the development of local capital market. With this object in view, many development banks either directly subscribed to the share capital of companies, which sought their assistance, or underwrote their shares. Sometimes, as a condition for underwriting, they also required the companies to convert themselves from private to public limited companies or to offer shares to the public. The rates of interest charged by the development banks varied considerably, from 4 per cent to 9 per cent. As a promotional measure for developing industries, many banks offered rates of interest which were lower than those prevailing in the capital market.

Lack of Trained Personnel

A major issue raised in the course of panel discussions at the conference related to the lack of proper personnel for carrying out scientific appraisal of projects. It was said that many development banks in small countries felt that, in view of the limited scale of their operations and the small size of the countries, they could not afford to keep a large staff competent to deal with all the kinds of industries that sought assistance from them. Some banks followed the practice of keeping technical personnel on their staff, while others had advisory committees. On the question whether the development bank should make a technical appraisal of the projects before advancing loan or whether it should depend upon broad judgment, opinion was divided. Those who favoured judgment suggested that estimates of the future working was dependent on many imponderables and had to be made on assumptions which might not prove to be correct. On the other hand, representatives of a number of development banks felt that, as development banks provided funds over a long period, they had to make a scientific examination of the project, in order to assure themselves of the soundness of the project.

The conference also discussed the domestic problems of development banks, relating mostly to financial resources, the terms on which finances are supplied, and taxation. It was agreed that the ratio of owned funds to borrowed funds depended upon the conditions existing in different countries and could not, therefore, be the same for all time and for all countries. As regards foreign exchange resources, it was stated that almost all countries were faced with the problem of shortage of foreign exchange and felt the need for finance from international and foreign national lending agencies. It emerged from the discussions that the margin between the lending and borrowing rates varied widely from bank to bank. In some cases the margin was only ½ per cent, whereas in some others it was as much as 4 per cent. The consensus of opinion among the delegates was that the development banks, because of their promotional role, should offer finance on reasonable terms.

A discussion of taxation policies in respect of development banks in different countries of the region revealed that the tax treatment received by the Pakistan Industrial Credit and Investment Corporation was the most favourable and advanced. It was agreed that there was need for such and other concessions to raise the profitability of the banks and to foster their promotional importance.

CANARA BANK LTD.

IMPRESSIVE RISE IN DEPOSITS

THE year ended 31st December 1961 was one of all-round progress for the Canara Bank Limited (General Manager: Mr. P. S. Nayak, Bangalore). Much of it was due to an impressive rise in its deposits of nearly Rs. 7 crores or 21.87 per cent from Rs. 30.82 crores to Rs. 37.56 crores as against of merely Rs. 1.89 crore or 6.53 per cent in the previous year. Following a judicious disposition of these funds, assisted by the high level of demand for bank credit, its gross income increased by 14 per cent from Rs. 1.73 crore to Rs. 1.97 crore, as against by 10 per cent in the preceding year, with income from banking business alone increasing from Rs. 1.62 crore to Rs. 1.85 crore. The higher income has pushed up the profit, after tax, from Rs. 12.65 lakhs to Rs. 21.24 lakhs, in spite of substantial rise in staff expenses from Rs. 50.22 lakhs to Rs. 60.74 lakhs and in other expenses from Rs. 21.02 lakhs to Rs. 26.85 lakhs. Outward interest, too, claimed a larger amount, Rs. 85.49 lakhs as against Rs. 78.52 lakhs in the year before. The published reserves have been strengthened by a transfer of Rs. 6.70 lakhs, which works out to 31.5 per cent of the profit after tax, as against 20 per cent expected of banks. In addition, a sum of Rs. 4.50 lakhs has been transferred to the reserve for contingencies. The provision for staff bonus has absorbed Rs. 4 lakhs against Rs. 3.10 lakhs in the previous year. The dividend has been maintained at the 1960 level of 15 per cent per annum, taxable.

The table below gives a fair idea of the Bank's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

Advances increased during the year under review by Rs. 3.76 crores, or 22.6 per cent (against a mere Rs. 75 lakhs, or 4.72 per cent in the previous year) and stood at Rs. 20.39 crores. The credit ratio consequently increased to 54.2 per cent, after having dropped by one full point to 53.9 per cent in the previous year. The Directors, however, state that it was among the lowest in the country, the average during the year for scheduled banks as a whole (excluding the State Bank) being 74 per cent. The proportion of secured advances to total advances was creditably high at 79.79 per cent as against 76.80 per cent in the previous year. Investments, too, attracted a relatively greater attention of the Bank, as 38.2 per cent of the deposits against 33.1 per cent in the previous year found an outlet in this channel, and the portfolio swelled by Rs. 4.14 crores to Rs. 14.38 crores, in contrast to a reduction of Rs. 1.62 crore in the previous year. As the Chairman, Mr. A. D. Pai, points out in his annual statement to the shareholders, this was done to maintain the traditional liquidity of the Bank. The ratio of cash to deposits has dropped from 17.5 per cent to 13.6 per cent but the overall liquidity is as high as 51.8 per cent. The upshot of this policy, however, is a reduction in the percentage of total earnings to total deposits from 5.58 per cent to 5.24 per cent.

As mentioned at the outset, the rise in deposits was the outstanding feature of the Bank's working during the year under review. It was uniform in all types of deposits; time deposits staged an increase of Rs. 3.27 crores to Rs. 17.87 crores against a fall of Rs. 1.40 crore to Rs. 14.61 crores in the previous year; savings banks deposits increased from Rs. 5.64 crores to Rs. 7.71 crores, and current deposits grew at a relatively modest rate, as was the case with almost all banks, from Rs. 10.57 crores to Rs. 11.97 crores. The ratio of the banks' "own funds" to deposits stood as low as 3 per cent at the end of the year as against the accepted conventional goal of 6 per cent which, of course, has to be reached only over a period. It may, however, be noted that a fresh issue of Rs. 25 lakhs in ordinary shares has already been made and oversubscribed. This increase will come into force in the current year.

The Canara Bank, too, has co-operated with the Reserve Bank in implementing its policy of strengthening the banking system through absorption of small sub-standard banks. Thus, it has taken over four banks, three in Kerala State, namely, the Bank of Kerala Ltd., the Seasia Midland Bank Ltd., and the Trivandrum Permanent Bank Ltd., and, one in Andhra, namely, the G. Raghunathmull Bank Ltd., according to the Chairman, the easily realisable assets were sufficient to meet the deposits liabilities fully in the case of the Seasia Midland and Trivandrum Permanent, and partially in the case of the other two. He points out that, after the takeover, considerable progress has been maintained in recovering a sizable portion of the sticky advances of the banks, and it might be possible to pay the depositors of the other two units to a larger extent than was expected initially. The takeover has resulted in an addition of 22 branches. Besides, the Bank itself has opened nine new branches. The total has thus increased from 84 to 115. The number of employees also has gone up from 2,002 to 2,706. The fact that, after the absorption of the four banks named above, there was an increase of 36 per cent in the deposits of the branches taken over within a period of four months is a testimony to the confidence of the public in the Canara Bank's management.

PUBLICATION ON EXCHANGE CONTROL

The Indian Investment Centre has published a second brochure entitled *Exchange Control*. The opening chapter deals with the introduction of exchange control during the Second World War and its subsequent development. This is followed by a chapter giving the administration of exchange control and the jurisdiction of its various offices in India. There are separate chapters on aspects of the control as applied to foreign investment, industrial ventures, foreign personnel and foreign exchange holdings of residents.

Of special importance to foreign investors is the chapter dealing with questions which have been received by the Investment Centre from foreign firms, interested in participating in Indian ventures, and their answers. These cover aspects of foreign investment in India, including definition of residents and non-residents, formalities necessary for investment in Government securities by residents abroad, requirements for approval of a foreign currency loan, repatriation of capital, remittances to India, transfer of earnings abroad by foreign personnel, and holding of foreign exchange and securities.

(Concluded from next column)

the Bank employed its funds in the more profitable outlet of the two channels, as it did in the previous year, its profit would have been still better. The ratio of cash to deposits has dropped from 9.1 per cent to 7.9 per cent, but that of liquid assets as a whole is as high as 43.5 per cent.

The transfer of a large slice of the profit to reserves is in line with the accepted policy of building up "own resources" to a level as would give the conventional ratio of 6 per cent to deposits. Nonetheless, at the end of the year, the ratio of capital and reserves to deposits works out to 4.1 per cent. It would, however, be brought nearer to the desired level with the proposed issue of fresh capital to the tune of Rs. 50 lakhs to the existing shareholders, for which the sanction of the Controller of Capital Issues has been obtained. The authorised capital has also been increased by the general body from Rs. 1 crore to Rs. 2 crores. In accordance with the Reserve Bank's scheme for gradual removal of sub-standard banks with a view to strengthening the banking sector, the Bank absorbed the Catholic Bank Ltd., Pie Money Bank Ltd., Mulki Bank Ltd. and the Peoples Bank Ltd. In the case of the first three, it paid 100 per cent of the deposits. For the last, it has paid 40 per cent of the deposits and efforts are being made to improve this figure. A number of proposals for voluntary amalgamations are before the Bank and expected to be finalised soon. The number of branches improved during the year from 141 to 159.

CANARA INDUSTRIAL AND BANKING SYNDICATE

"OWN FUNDS" STRENGTHENED

THE Canara Industrial and Banking Syndicate Limited (Managing Director: Mr. T. A. Pai, Udipi, Mysore State) has made further progress during the year ended 31st December 1961. The uptrend in aggregate business, as reflected in the balance-sheet total, continued during the year. It stood at Rs. 30.03 crores at the end of the year, showing an improvement of Rs. 7.06 crores over the preceding year and of Rs. 12.95 crores over 1958. Over the year, the gross income improved by 17 per cent from Rs. 1.34 crore to Rs. 1.57 crore. The higher level of advances in 1961 is borne out by the rise of Rs. 3.22 crores to Rs. 15.45 crores in the year-end figure of advances. There was a rise of Rs. 2.77 crores to Rs. 8.94 crores in investments. Income from interest and discount increased again considerably from Rs. 121.40 lakhs to Rs. 142.37 lakhs, on top of an increase of Rs. 21.75 lakhs in the previous year. The Bank earned Rs. 8.65 lakhs against Rs. 7.46 lakhs a year before out of commission and exchange, and Rs. 6.15 lakhs against Rs. 4.99 lakhs from non-banking and other sources. Deposits rose by 30 per cent from Rs. 18.87 crores to Rs. 24.63 crores, as against by 10.4 per cent (from Rs. 17.09 crores to Rs. 18.87 crores) in the previous year. The rise was in all categories of deposits, in fixed from Rs. 12.58 crores to Rs. 16.98 crores, in savings bank from Rs. 3.57 crores to Rs. 4.27 crores and in current and contingency accounts from Rs. 2.71 crores to Rs. 3.39 crores.

The deposits and other external resources attracted an interest charge of Rs. 60.78 lakhs, as against Rs. 52.38 lakhs in the previous year. Other expenses also rose, albeit slightly, from Rs. 14.13 lakhs to Rs. 14.68 lakhs, but staff expenses moved up perceptibly, again, from Rs. 39.93 lakhs to Rs. 46.84 lakhs. In the previous year, they had increased by more than Rs. 9 lakhs. Nonetheless, profit, after providing for depreciation (of Rs. 2.77 lakhs against Rs. 2.18 lakhs in the previous year) but before taxation, is substantially higher at Rs. 32.10 lakhs, as compared with Rs. 25.23 lakhs in the previous year. Like the Indian Overseas, this bank, too, has not hidden its provision for taxation which again claims a large slice of the profit, the actual amount being Rs. 12.25 lakhs against Rs. 9.63 lakhs a year before. Reserves come next and get Rs. 3.50 lakhs more at Rs. 11 lakhs. The provision for bonus to staff is also higher at Rs. 2.25 lakhs as compared with Rs. 1.75 lakh a year before. The investor, however, gets the same return of 20 per cent, subject to tax, half of which is dividend and half bonus.

The table below compares the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount	142.37	121.40	99.65	74.11

RAISING COTTON MILLS' EFFICIENCY

PROPER ENCOURAGEMENT FOR RENOVATION AND MODERNISATION WANTED

FULL one year has elapsed since the third Five-year Plan began, but the progress made by the cotton mill industry in the implementation of its development programme is very poor. This is not surprising, considering that the majority of units in the industry have not been able to lay by sufficient sums of money for financing the modernisation and expansion schemes on the scale required, thanks to severe cost inflation without a corresponding rise in realisations from sales, in view of the voluntary scheme of price fixation. The financial results of some of the leading cotton mills for 1961 which have published their accounts so far no doubt show a perceptible improvement over those for 1960. But the extent of increase has fallen short of the industry's requirements. The latter under the third Plan, it will be recalled, are put at Rs. 250 crores for modernisation and Rs. 160 crores for expansion, or a total of Rs. 410 crores. This large amount, the industry contends, can be found only if certain conditions are created. What these conditions are and how they can be ensured were spelt out by Mr. Pratap Bhogilal, Chairman of the Millowners' Association, Bombay, when he addressed the annual meeting of the Association on Tuesday this week. Mr. Pratap Bhogilal made it clear that, in view of the industry's low profitability *vis-a-vis* other industries it was manifestly impossible for it either to attract equity capital or to save on an adequate scale from its own earnings. He, therefore, urged that the rates of depreciation allowances should be so fixed as to enable the mills to write off their assets, say, within a period of twelve to fifteen years.

These statements of Mr. Bhogilal will hold water only in part. It is, for instance, no longer true to say that cotton mills will not be able to raise fresh equity capital, for there is hardly any good cotton mill the ordinary shares of which are not commanding a good premium in the share markets. Even shares of companies which have not paid a dividend (Central India, for instance) are quoting well above their paid-up values. The Reserve Bank of India's index number of securities (1952-53=100) for cotton textile equities is well over 200—it was 202.1 for the week ended 24th February 1962 and 199.4 for the week ended 24th March 1962—as against 162 a year before, 142 two years before and 111 three years before. Thus, between 1959 and 1962, the market value of cotton textile equities has nearly doubled. In these circumstances and given the present conditions of capital market, there should be no difficulty for the vast majority of cotton mills to raise a good part of their capital requirements. A few of the mills that tried in the recent past have been successful.

Depreciation Allowance

This does not mean that Mr. Bhogilal's plea for a liberal depreciation allowance was unwarranted. The industry's contention is that the depreciation allowances now granted do not take into account the pace at which machinery obsolescence takes place due to the rapidity of technological developments. Further, the percentage rates of allowance in force today were fixed a long time ago on the basis of the estimated life of plant and machinery which works out to 25 years. This, as Mr. Bhogilal said, is an inordinately long period and bears no relation whatever to the computation of the useful life of an industrial asset in other countries. In the U.S., for instance, the Government has reduced, for purposes of tax concession, the useful life of textile machinery from 25 to 15 years and in certain cases even to 12 years. In Japan, the number of "legal durable years" of textile equipment is 17 for spinning, 15 for weaving, and 10 for dyeing and finishing machinery. The textile industry in West Germany also enjoys attractive concessions. The necessity for granting liberal depreciation allowance to the cotton mill industry "can hardly be over-emphasised," to quote Mr. Bhogilal, "particularly in view of the need for the industry being placed in a position to compete in world markets to earn the requisite foreign exchange expected of it for the country's developmental needs." Mr. Bhogilal hoped that "the Tariff Commission, which is presently engaged in examining the cost structure of the industry, will take into consideration the industry's enormous requirements for purposes of financing the scheme of rehabilitation and modernisation when making its recommendations on what constitute fair prices for the products of the mill sector."

Commenting on the Government's plans for raising cotton textile production in the country, particularly for exports, Mr. Bhogilal observed:

"In order to secure an annual output of 9,300 million yards of cloth by all the three sectors by the end of the current Plan, the Government has sanctioned 4 million additional spindles and 25,000 automatic looms. The cost of this extra equipment is estimated at Rs. 200 crores, besides some Rs. 50 crores for purposes of installation and maintenance. The Indian textile machinery industry has made good progress in recent years, both in the physical output and in quality. Today, India produces textile machinery worth Rs. 15-16 crores per annum. It is proposed to raise the rate to Rs. 28-30 crores a year by 1966. Even so, the machinery requirements of the textile industry in the shape of modernisation and expansion are so great that we will have to lean rather heavily on imports for some years to come.

"Looking to the fact that the cotton textile industry is one of the largest earners of foreign exchange for the country and is expected to increase these earnings, and the fact that it is charged with the responsibility of clothing the teeming millions of the country, it is imperative that a sufficiently large allocation of the available foreign credits should be made to the industry to meet its requirements of imported capital goods. Modernisation and reduction of costs are indispensable, if our textiles are to prevail in the overseas markets. While global production and consumption of textiles are on the increase, the quantity of cloth entering the world market has not increased in the same proportion. This seeming anomaly arises from the fact that a good number of former textile importing countries have set up their own textile mills. Many of them have even begun to send out their surplus output, thus contributing to the intensification of the international competition in textiles. While the traditionally exporting countries of the past like the U.K. have shown a definite tendency to reduce the size of the textile industry, iron curtain countries have not only strengthened but have also augmented the productive capacity of their textile industries. Consequently, the pressure of exports from the communist countries has become a noteworthy development."

Specific Pleas

The Millowners' Association Chairman alluded here to the Geneva agreement on world textile trade, but did not indicate how it would affect India. All that he said was this: "How the new scheme will work remains to be seen." Nevertheless, he struck a note of realism when he averred that India's success in export markets would depend mostly upon its own efforts. In particular, Mr. Bhogilal wanted the export incentive scheme to be broad-based and rendered more liberal in the light not only of the Mudaliar Committee's recommendations but also of the far-reaching concessions offered to exporters in countries like Japan and Pakistan. He, however, did well to caution that the industry could not, and should not, indefinitely rely on artificial support in the shape of incentives for promoting exports but galvanise itself by its own strength and that every effort must be made to increase production sufficient to meet the needs of both domestic and foreign markets. The specific pleas he put forward in this context may be summed up as follows:

The industry's production quotas of *dhotis, saris* and printed cloth must be raised at least in proportion to the increased volume of cloth they are required to produce under the second Plan; the production target fixed for fulfilment by 1965-66 is 5,800 million yards, as against about 5,000 million yards in 1960-61.

Top priority should be given to ensure a steady and continuous flow of coal to mills, as well as adequate supply of electricity.

Higher cotton production must be sought through better yields per acre by means of a more extensive use of superior quality seeds, fertilisers and insecticides. For every yard of increase in the *per capita* consumption of cloth, an additional 370,000 bales of cotton are required annually.

The tendency on the part of some labour unions to make extravagant demands should be deprecated. Further additions to workers' remuneration and social amenities must be sought through higher productivity.

The industry owes it to consumers, domestic and foreign, to do everything in its power to improve the quality of its products and to offer them at economic prices. It is only through newer processes and rationalised modes and methods of working that the industry can hope to realise this twofold goal.

Since the fortunes of the cotton mill industry are closely linked to the raw cotton supply position, it was but natural that Mr. Bhogilal should have dilated at some length on this aspect too. He rightly characterised cotton as the industry's bugbear and pointed out how domestic production had consistently lagged behind Plan targets. He estimated the current season's output at a bare 4.3 million bales, as against the requirements of 5.7-5.8 million bales and the third Plan target of 7.0 million bales. He, therefore, stated that the industry has had to lean heavily on imported cotton and warned: "Any serious shortfall in cotton supplies is apt to have repercussions on cotton prices, with the consequent distortion of the cost structure of the textile industry. Such a development should be avoided at all costs in the interests of stabilising the price level." Emphasising the need for raising production, Mr. Bhogilal observed:

"The question of this increase of cotton production either by intensive or extensive cultivation is undoubtedly linked to the return that the farmer gets. The farmer should have the same freedom for obtaining the maximum return on cotton as for other cash crops and, therefore, if it is generally felt that control of cotton prices is a serious deterrent to the farmer for putting in his best efforts for maximising his return from cotton cultivation, I for one would not stand in the way of decontrol of the cotton ceiling prices retaining proper floors for adequate protection of the farmer."

The case presented by Mr. Bhogilal for decontrol of cotton prices is very strange, particularly in the present context of tight supplies. If controls on cotton are removed, prices are bound to shoot up to dizzy heights. Does Mr. Bhogilal want this to happen? At any rate, his plea for decontrol with a view to enabling the farmers to obtain "maximum return" on cotton is contradicted by his own statement made immediately thereafter to the effect that shortage of cotton supplies and rise in prices threaten to aggravate the existing cost inflation.

Price Control Scheme

Mr. Bhogilal referred to the complaints against the industry's voluntary scheme for regulation of cloth and yarn prices and declared that there was no basis for the criticism that the mills had been producing new varieties of cloth with a view to circumventing the control and widening the margin of profit. The term "new variety," he pointed out, was capable of a very wide interpretation. For instance, a mere change in width, or a change from one design to another in printed cloth, or from grey cloth to processed cloth or from one process to another without any alteration in the structure of cloth, namely, counts or reeds or picks, came within the purview of this definition. Stating that these alterations were the usual features of market requirements all over the world, which did not constitute "new variety" in the real sense of expression, he added:

"In my view, a variety is new only when there is a material alteration in the structure of cloth. Judged from this point, the industry in Maharashtra has produced only one new variety a month for every 420 looms installed, as against the permissible rate of one variety for 200 looms, recommended by the Indian Cotton Mills' Federation. Even where a new variety is produced, prices fixed by the Association have been in conformity with the prices of mills' own comparative sorts and, where such comparative sorts are not available, the prices have been fixed in conformity with the prices of comparative sorts of other mills of comparative standing. This being the position, I do not understand how the question of widening the profit margin or for that matter circumventing the voluntary control arises. Moreover, we on our part have asked the trade associations more than once to bring to our notice in confidence any grievances or complaints regarding prices fixed by the Association. So far, there have been no complaints from the trade."

While, generally speaking, the cotton mill industry's voluntary price control scheme has been working successfully, it would appear that a section of mills and traders is circumventing the scheme by way of price manipulations. How else can one explain the high premium on certain varieties of cloth over and above the stamped prices collected by retailers? It was just the other day that this writer went to a shop to buy a pair of *dhotis* manufactured by a well-known group of mills. The stamped price was about Rs. 24, whereas the price actually demanded was Rs. 29. When asked about the difference, the dealer said that it was due to the premium collected by the wholesaler. Several other popular varieties of cloth are also being sold at prices above those marked. Will the Price Fixation Committee of the Millowners' Association investigate the matter and take steps to ensure the satisfactory working of the scheme?

MILL WORKERS' RENEWED CLAIM FOR HIGHER WAGES

TEXTILE EXPORTS AND IMPORTS BOTH FALL

From Our Special Correspondent

MANCHESTER, *27th March*

LEADERS of 120,000 Lancashire cotton workers are shortly expected to make a second bid to get a seven-month-old pay claim approved. Union leaders are to meet employers' representatives in Manchester to talk over the demand for a 10 per cent wage increase. The claim was first made on 11th August last year, and cotton industry chiefs turned it down. Later the employers agreed to further meetings.

MANCHESTER LETTER

Sir Alfred Roberts, Secretary of the powerful National Association of Cardroom Operatives, said: "This matter has been hanging fire long enough." The joint talks are also expected to tackle the question of redundancy payments for employees put out of work by mill closures since the end of the Government-sponsored compensation scheme in 1959.

Rebirth of Cotton Urged

The Lancashire cotton trade needs to be "born again," according to Mr. S. S. Hammersley, Chairman of Cotton and Rayon Spinners Ltd., the Royton Lancashire mill group. Shift-working, he says, is not acceptable to the bulk of Lancashire operatives, but modern machinery needs shift-working. Lancashire mills still run their machinery fewer hours than any other major textile trade in the world. The horizontal structure of the industry was based on bulk supply of staple goods for export markets. The markets have gone, but the outmoded organisation remains, he declares in his annual report.

"Thus the industry has literally to be born again—machinery, labour, organisation—and it cannot successfully be born again if, during the process, it is exposed to unrestricted imports," Hammersley adds. Successful development of a new industry requires protection, Mr. Hammersley observes. "The necessary revolutionary changes to transform the historically ancient Lancashire textile industry to meet modern conditions will be difficult to introduce without some protection."

Lower Shipments—Each Way

Exports of cotton goods are still slipping away as compared with even a year ago, but the flow of foreign arrivals is equally being curtailed. February returns do no more than substantiate the trend already evident throughout the final quarter of 1961 and in the early weeks of the current year. Earnings from cotton yarn and manufactured goods in the first two months of 1962 are already £2,350,000 down on last year's level, but the cost of imports has been reduced by well over £3,000,000.

Cloth shipments seem to have settled down at a figure just above 20,000,000 yards monthly, while yarn exports have lately managed to struggle above the 1,000,000-lb. mark. At the end of two months, cotton cloth sales abroad were 43,207,000 square yards, a drop of nearly 10,000,000 yards on last year, while cotton yarn trade was 2,348,000 lbs., a fall of nearly 850,000 lbs. The only section to make ground is man-made fibre yarn exports which, at 10,468,000 lbs. show a rise of 500,000 lbs. on 1961 and an improvement of 1,400,000 lbs. over the previous year's level.

Arrivals of foreign grey cloth are distinctly lower than in 1961, imports so far being 72,805,000 square yards, as against 113,138,000 square yards. All the leading suppliers have sent smaller quantities, notably India with 29,951,000 square yards, as against 40,949,000 square yards, Hong Kong 8,904,000 square yards, as against 10,747,000 square yards, Pakistan 2,892,000 square yards, as against 3,773,000 square yards, and Japan 4,403,000 square yards, as against 10,813,000 square yards.

Although purchases of finished cotton fabrics from abroad have diminished the decline is not so noticeable. In the two months, they aggregated 22,991,000 square yards, as against 30,554,000 square yards. In contrast, imports of man-made fibre cloth in 1962 have risen by over 2,000,000 yards at 14,036,000 square yards.

So many cross-currents are evident in the existing trade position and—more important—the future outlook, that it becomes increasingly difficult for those directly concerned to assess the prospects and make their plans accordingly. Always the industry seems to be on the brink of developments, yet even when action is taken the situation rarely becomes clearer. The full ramifications of the Geneva agreement are a case in point, as their eventual effect on individual markets cannot be gauged with any accuracy.

Perhaps more immediate, and certainly just as vital, is the attitude of the Continental textile producers towards Britain's entry into the Common Market project. On the one hand, reports indicate a reasonable approach to the complications raised by Lancashire's availability as a dumping ground for yarn and cloth from low-cost areas, but other sources suggest that spinners and weavers across the Channel may take a tougher line before agreement is reached.

Continual negotiations now proceeding at Brussels hinge on the interpretation of the much discussed phrase of "disruption of local industry." It has been reported that the countries of the European Economic Community are satisfied that the Geneva agreement, combined with the British approach, will safeguard their interests.

"Bring Imports Down"

On the other hand, Mr. Arnold Ogden, Chairman of the Townhead Mill, Rochdale, Lancashire, has openly stated that, when British spinners and manufacturers met their E.E.C. counterparts in Paris a fortnight ago, the French and West German textile industries were adamant that they would oppose British admittance to the Common Market unless the present rate of Commonwealth imports was slashed to quotas of approximately the current E.E.C. level of 5 per cent instead of 40 per cent of home production now entering the United Kingdom market.

A great deal has been written about the danger of depressing the industry by adverse comment and Mr. Ogden's picture of "chaotic conditions of mills closing down, short-time working, loss prices and threatened mass unemployment," may be a justifiable exaggeration. At the same time, no one pretends that current circumstances are at all encouraging and the failure of the Government to support the trade during the re-equipment phase is a very sore point with many people whose political allegiances have lately been badly strained.

Call for Commonsense

Another local trade leader who has just outlined the background to the existing situation in an annual report is Mr. Michael Grey, who is one of the industry's chief negotiators. Despite all the adverse circumstances of the past year, he shows some optimism in describing the "positive achievements" gained by the various inter-industry and other agreements to establish ceilings on imports, however high they may be. He also mentions "the signs of the first tentative feelers towards a revival in demand." The vital moment will occur, however, when this long-awaited improvement begins to take shape.

Holiday pay for 45,000 workers in the textile finishing industry in Yorkshire, Lancashire, Derbyshire, Cheshire and parts of Scotland will be increased at Whitsuntide as a result of an agreement between the National Union of Dyers, Bleachers and Textile Workers, and the Textile Finishing Trades Association.

The agreement provides for an extra 1s. 3d. a week to be set aside for men, and 10d. for women, for holidays. Under the industry's sliding scale arrangements, men's wages have increased by 7s. 1d. a week in the last twelve months and another rise is pending.

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION **COMBINES** A **LOOM BUILDING EXPERIENCE** OF **18** YEARS AT CIMMCO WITH OVER **34** YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

Manufactured at Birlanagar, Gwalior

By

CENTRAL INDIA MACHINERY MFG. CO. LIMITED

Offices at:

NEW DELHI • BOMBAY • CALCUTTA • AHMEDABAD • COIMBATORE

THE INDIAN OVERSEAS BANK LIMITED

Registered Office: **151, Mount Road, Madras-2.**

To be submitted to the shareholders of the Company at the Twenty-fifth Annual General Meeting to be held at the Registered Office of the Company, 151, Mount Road, Madras-2, on Monday the 16th April, 1962 at 3-30 p.m.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1961

The Directors have pleasure in submitting herewith the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1961 together with the Auditors' Report.

PROFITS AND THEIR DISTRIBUTION

1960 Rs. nP		1961 Rs. nP
44,66,422.74	Net Profit for the year	43,80,498.72
1,26,011.78	Brought forward from last year	1,92,434.52
45,92,434.52		45,72,933.24

Out of this sum the Directors have made the following appropriations:

18,50,000.00	Provision for Taxation	18,50,000.00
9,00,000.00	Transfer to Reserve Fund	9,00,000.00
50,000.00	Transfer to Development Rebate Reserve	
5,50,000.00	Provision for Bonus	5,50,000.00
33,50,000.00		33,00,000.00

The Directors recommend that the balance be disposed of as under:

1960 Rs. nP		1961 Rs. nP
10,50,000.00	Payment of dividend at the rate of 14 per cent. per annum subject to tax	10,50,000.00
1,92,434.52	Carry forward to next year	2,22,933.24
45,92,434.52		45,72,933.24

2. The Bank's business and profits continue to show good progress. During the year, four branches were opened at Erode, Rampankatta (Mangalore), Tiruvalla and Willingdon Island-Cochin. Subsequent to the date of the Balance Sheet, a branch has been opened at Cuddalore—Old Town.

3. In terms of Section 256 of the Companies Act, 1956, Messrs. M. Ct. Muthiah, Ar. Ramanathan and V. T. Padmanaban retire and being eligible offer themselves for re-election. Under Section 260 of the Companies Act, 1956, read with Article 82 of the Bank's Articles of Association Mr. G. K. Devarajulu, who was co-opted as a Director on the 10th June, 1961, offers himself for re-election.

4. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration. Messrs. Suri & Co., the retiring Auditors are eligible for re-appointment.

By Order of the Board,
M. Ct. MUTHIAH,
Chairman.

MADRAS, 12*th March*, 1962.

BALANCE SHEET AS AT 31st DECEMBER, 1961

Corresponding figures for 1960 Rs.	CAPITAL AND LIABILITIES	Rs. nP	Rs. nP
	1. Capital—		
1,00,00,000	AUTHORISED CAPITAL—1,00,000 Shares of Rs. 100 each	1,00,00,000.00

AUDITORS' REPORT

We have audited the annexed Balance Sheet of The Indian Overseas Bank Ltd., Madras, as at 31st December, 1961 and the Profit and Loss Account for the year ended that date in which are incorporated the returns from 24 branches audited by us and 10 branches audited by other auditors and the unaudited returns from 28 branches for which exemption from the provisions of Section 228 of Companies Act, 1956, has been obtained from the Central Government under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961.

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory.

(b) The transactions of the Bank, which have come to our notice have been within the powers of the Bank.

(c) In our opinion, proper books of account as required by Law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us.

(d) The reports on the accounts of the foreign branches of the Bank audited by the respective qualified auditors have been taken into consideration together with such other particulars and information thereon made available at the Central Office.

(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and returns.

(f) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank, as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended that date.

PLIGHT OF EAST U.P. SUGAR MILLS

RELIEF MEASURES URGED

ONLY last week, we stated in the course of an editorial that it would be nothing but criminal complacency if no clear, calculated steps were taken without any further delay to encourage larger domestic consumption of sugar. Just as those lines were being written, Mr. Noel-Tod, Chairman of the East India Distilleries and Sugar Factories Ltd., was expressing grave concern about the conditions obtaining in the sugar industry at present. Presiding over the annual meeting of the Company, Mr. Noel-Tod apprehended that a further cut in sugar production in the ensuing season (1962-63) was inevitable. That there is no exaggeration in this apprehension will be evident from the huge stocks of sugar lying undisposed with mills—over two million tons. Such huge stocks entail problems of both finance and godown space. Taking the average total works cost per ton of sugar (inclusive of cane cost) as Rs. 625, a rather conservative estimate, the aggregate amount of money locked up by way of undisposed stocks comes to as much as Rs. 125 crores, a staggering figure, indeed. Again, holding stocks involves not merely the problem of storage as such but also that of the right type of storage, for sugar is a commodity which will deteriorate rapidly, if it is not stored properly. Further, as was pointed out by Mr. Noel-Tod, since the sugar made in India is factory white, and not refined, it will not keep indefinitely, however much one may try to store it properly and scientifically.

Finances Strained

The foregoing brief account clearly indicates how severely strained are the finances of sugar mills. It is true that banks are advancing credit to hold stocks, albeit at a fairly high margin of 25 per cent. But such credit also entails a heavy burden of interest charges. Further, not all the factories are able to get adequate bank credit, so that quite a number of sugar mills are said to be finding it difficult to maintain production as well as to meet their obligations to cane growers. It would appear that the position in respect of sugar industry in the eastern part of Uttar Pradesh is particularly disquieting. It may be noted here that there are, in this region, about 33 sugar mills which account for half the total sugar output of U.P. and almost 25 per cent of all-India production. These mills have made a strong representation to the State Government with a warning that, unless substantial relief is given and that too in time, the industry will be "crippled beyond repair."

The East U.P. sugar mills have quoted figures of average annual profit as worked out by the Wage Board for Sugar Industry. The average for the region is put at Rs. 94,000 (after taxes), as against Rs. 4.82 lakhs for West U.P. and Rs. 2.92 lakhs for the Northern region as a whole. This profit, it is pointed out, is too meagre to enable a factory to pay a reasonable dividend on capital, to set aside amounts for modernisation and expansion, to give aid to cane growers for development, to share in the cost of road construction in factory areas, and to take part in various other local developmental activities. Although the Wage Board's attention was drawn to the poor profitability of mills, the Board recommended the same wages to be paid by East U.P. factories, though it suggested that the mill-owners could approach the Central and State Governments for relief to meet the higher cost of production. The position is said to have since deteriorated considerably as a result of the fall in sugar prices after decontrol and most of the East U.P. sugar mills, it is stated, are running under heavy losses. In this connection, the representation says:

"It may be argued that, now that it is a free market, it is the function of the private sector to make profits or losses and that the Government does not come into the picture. But this argument will not be correct. The bulk of the sugar price consists of cane price, excise duty, purchase tax, co-operative commission and wage recommended by the Wage Board enforced by the Government under the Industrial Disputes Act. When the Government wants a certain minimum price of cane to be paid and also certain taxes to be paid, it cannot absolve itself of the responsibility for providing the necessary wherewithal from which the above can be paid. The owners and managements of East U.P. factories are no less efficient than their counterparts in other regions and, so far as managerial skill, initiative and resourcefulness are concerned, the factories in East U.P. have been hit not by lack of managerial efficiency or ability but by factors beyond their control, such as general rural backwardness, caused by extremely low per capita holding and lack of irrigation facilities in the past which have prevented them from expanding their capacity. And they should not be penalised for serving the interests of a vast and backward region for the last 30 years or more at almost a nominal profit and in some years at a loss. The factories of East U.P. are not asking for profits which the mills in Maharashtra and South are earning, but only a reasonable margin which the Tariff Commission itself considered to be fair and for prevention of heavy losses."

Suggested Measures

The East U.P. sugar mills have accordingly urged the State Government to grant immediate "minimum relief." For purposes of relief, the mills have been divided by the spokesmen of the industry into two categories, namely, units with a production quota of less than 11,000 metric tons and those with a quota higher than this figure. In the case of the first group, it may be recalled, the Central Government has recognised the need for special consideration as witness the grant of exemption from 10 per cent cut in output. Since this exemption is not adequate in the changed circumstances of the current season, the adoption of three specific measures is urged. They are (1) remission of two-thirds of cane cess, that is, 12 nP per maund of cane; (2) programme of intensive road development in factory areas without any contribution from factories in view of their uneconomic production; and (3) increase in production quota, implying thereby that no penal excise duty is to be collected from them, if their production exceeds 11,000 tons. For mills with a production quota of more than 11,000 tons, the measures suggested are: (1) remission of cane cess—12 nP per maund on the first 11,000 tons and 6 nP on the balance; (2) intensive road development, the mills' contribution not exceeding 5.2/3 per cent of the total cost, as against 11.1/9 per cent at present; the balance, it is suggested, may be met as follows:

	(In percentages) Existing	Revised
Central Government	33⅓	33⅓
State Government	33⅓	50
Cane Growers	11.1/9	5.2/3
Development Council	11.1/9	5.2/3

The East U.P. sugar mills have also pleaded for arrangement of loans at low rates of interest from the National Industrial Development Corporation for modernisation.

Plea Reasonable

In view of the fact that several mills in East U.P. are situated at distances far away from the cane-growing areas and considering that the mills are incurring losses as a result of higher production cost and reduced realisations from sugar sales, their case for relief deserves to be considered. The peculiar difficulties facing those mills have, in fact, been recognised in the past. In the season 1949-50, for instance, the U.P. Government had exempted the mills from payment of cane cess on the quantity crushed in excess of the 1948-49 figure, the relief thus obtained amounting to over Rs. 14.33 lakhs. Besides, the State Government also distributed among these mills the cess collected from West U.P. factories towards the molasses fund amounting to Rs. 5.11 lakhs. If some such relief is not given to the sugar mills in East U.P., many of them may be closed down completely, thereby throwing out of employment several workers without any alternative means of occupation.

AUDITOR'S REPORT TO THE SHAREHOLDERS

I have audited the foregoing Balance Sheet of The Canara Industrial and Banking Syndicate, Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 34 branches audited by me and the unaudited returns from 125 branches not visited by me for the purpose of this Report.

The Central Government have, by an Order No. 1(15)-CLVI/62, dated 22nd December, 1961, exempted 125 Branches of the Bank from being audited in accordance with the provisions of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1961. In addition to the 34 branches audited by me under the provisions of Section 228, I have also audited 10 exempted branches in December, 1961. I report that :—

(a) I have obtained all the information and explanations which, to the best of my knowledge and belief, were necessary for the purpose of my audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to my notice have been within the powers of the Bank ;

(c) in my opinion, proper books of account as required by law have been kept by the Bank so far as appears from my examination of those books and proper returns adequate for the purpose of my audit have been received from the branches of the Bank ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns ;

(e) in my opinion and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CENTRE AND THE STATE PLANS—I

DEVOTEE OR DONOR?

By Prof. S. Kesava Iyengar

OBJECTIVES of planning are complementary as between the Central and State Governments, the former attaching first priority to heavy industrialisation and the latter to agricultural development. General objectives have been enumerated as in the final third Plan thus: (1) To secure an increase in national income of over five per cent per annum, the pattern of investment being designed also to sustain this rate of growth during the subsequent Plan periods; (2) to achieve self-sufficiency in foodgrains and increase agricultural production to meet the requirements of industry and export; (3) to expand basic industries like steel, chemical industries, fuel, and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of 10 years or so, mainly from the country's own resources; (4) to utilise to the fullest extent possible the manpower resources of the country and to ensure a substantial expansion in employment opportunities; and (5) to establish progressively greater equality of opportunity and to bring about reduction in disparities in income and wealth and a more even distribution of economic power.

The Planning Commission expects the State Governments to adopt "measures to achieve closer integration of the rural with the industrial economy." The States have been allocated substantial grants for agricultural development, depending on co-operative movement, community development, irrigation and power as much as on activities pertaining to cultivation, animal husbandry, fisheries and forests. Those declared in the third Plan of Mysore are typical of objectives and priorities set forth by the States, in general. The objectives are: to accelerate the pace of development achieved by the completion of incomplete projects and to ensure the full utilisation of assets and services already created; to step up agricultural production with a view to achieving self-sufficiency in food, as well as to develop the industries of the State, large, medium and small; to move appreciably forward towards providing minimum amenities in the rural areas such as a drinking-water well, a school-building and an approach road for every village; to undertake progressive measures like land reforms, with a view to reducing economic and social inequalities; to devise ways for the fuller utilisation of our manpower resources as well as to enlarge the areas of employment opportunities; and to provide free and compulsory primary education universally for the age group 6 to 11. The priority in the third Plan are: power, social services, agriculture, minor irrigation and allied subjects, major and medium irrigation, community development and co-operation, industries and minerals, and transport and communications.

Distribution of Outlay

Table I shows how the State Governments propose to devote their main attention to agriculture, 90.32 per cent of total outlay on the subject, and 64.09 per cent of total outlay by States (9.68 and 7.24 per cent, respectively, by the Centre). The Central Government proposes to concentrate on industries, communications and transport (85.72 per cent out of the outlay on the items, and 76.74 per cent of total outlay by the Centre). On social welfare, the outlay does not vary so widely, the respective percentages working at 39.02 and 60.98. As compared with the second Plan, the Central Government proposes to set aside for agriculture, etc. (Rs. 126.61 crores out of Rs. 1,068 crores; the second Plan total outlay was Rs. 530 crores), and irrigation and power (Rs. 137.69 crores out of Rs. 1,662 crores; the second Plan total expenditure was Rs. 860 crores). These figures definitely indicate a desire on the part of the Central Government to entrust much more responsibility than in the past to the States with regard to numerous items contributing to production and welfare like agriculture (in the broad sense), irrigation and power, education, health, electricity schemes, and rural and community development projects. But it is not rare that State Governments feel embarrassed by unreasonable and inexplicable delays by the Planning Commission in according "administrative sanction." A typical example is the complaint of the Mysore Government that, even at seven months after the commencement of the third Plan implementation, the Planning Commission had failed to communicate sanction for seven major and medium projects included in the third Plan, on the fallacious ground that 28 spillover projects from the second Plan should be attended to first, though the Mysore Government had made budget allotments for both spillover projects and seven new projects as early as April 1961.

Inadequate and Unco-ordinated Data

During the second Plan period, total expenditure by the Government of India was Rs. 7,719.34 crores, but Plan expenditure was only Rs. 2,496.84 crores, working at 32.35 per cent. The corresponding figures for the States are Rs. 6,445.10 crores, Rs. 2,103.16 crores and 32.63 per cent. To adjudge Plan progress on the basis of financial targets without reference to total expenditure would be most irrational, but that is just what is happening. So far as the third Plan period figures are concerned, we have Plan budgets with regard to resources, outlays and physical targets, but there is not even an approximate forecast of total receipts or total expenditure during the period, and there is no standard to go by for assessing the comparative size of the Plan in relation to total receipts or expenditure. Failing this, some space has been taken up in this study for examining the relative position of total Government finance and Plan finance in the public sector during the first and second Plan periods, with the hope that such figures may foreshadow trends during the third Plan period.

Figures furnished by State Governments differ from those given by the Planning Commission with regard to third Plan outlay (Rs. 4,009.89 crores and Rs. 3,847.31 crores, respectively). The latter figure is different from Rs. 3,725 crores mentioned in the text of the final third Plan. Tables with regard to transfer of funds from the Centre to States in the April and June 1961 issues of the R.B.I. *Monthly Bulletin* do not tally, although both the tables show total Central assistance (as distinguished from Central aid for State plans). The Government of India Budget (1961-62) shows the figure at Rs. 2,890.77 crores, while the Reserve Bank of India note in the June issue of the R.B.I. *Bulletin* puts the figure at Rs. 2,892.90 crores. Such differences, even if they are small, come in the way of tallying averages and percentages. The States' resources for the third Plan are given as Rs. 1,416 crores in Table VIII and at Rs. 1,462 crores in Table VII. Similarly, with regard to second Plan actual outlay by the States, Tables X and XI vary (Rs. 2,082.56 crores and Rs. 2,103.16 crores, respectively). According to State Budgets, there are Central Plan projects executed by the States. Some "non-Plan" projects are included by the States in their third Plans and, while the financial target is Rs. 7,500 crores, the physical target is put at Rs. 3,847.31 crores for the States, Rs. 174.87 crores for the Union Territories, and Rs. 4,076.35 crores for the Centre, or a total of Rs. 8,098.53 crores. How the upward difference of Rs. 598.53 crores should be made up cannot be guessed even by the most unorthodox financier.

The classification is hard to follow as between "development" and "non-development," between "Plan" and "non-Plan," and between Central total assistance to States and such assistance for Plan projects. Apparently, the significance of "social investment" has not been remembered by the authorities: "development" is directly influenced by total expenditure, including items like famines insurance and civil administration. Tables III, IV and VI reveal the empirical method by which such classification has been arrived at. In the U.S.A. "social investment" is given greater importance than capital outlay, consumption, of course, occupying the pride of place. Inconsistencies referred to here are only samples. Space is too short for amplication.

TABLE I: *Third Plan Outlay: Centre and States*
(In crores of rupees)

	Agriculture, C.D., co-operation, irrigation and power	Industries, minerals, communications and transport	Social services	Total
Centre (x)	264.30	2,803.08	585.31	3,652.69

* The classification of development and non-development expenditure has been done on the basis of broad budget heads.
† Including interest on capital outlay consequently the figures shown under debt services are under-estimates.
‡ Includes interest on scientific and miscellaneous departments, aviation and ports and pilotage.
§ Include appropriation for reduction or avoidance of debt.

TABLE IV: *Development and Non-development Expenditure*
(In crores of rupees)

Item	First Plan	Second Plan	Total for First and Second Plans	1961-62 (B.E.)
Development expenditure:				
Revenue account	1,271.53	2,271.06	3,542.59	647.49
Capital account	735.18	1,359.90	2,095.08	334.20
Total ..	2,006.71	3,630.96	5,637.67	981.69
Non-development expenditure:				
Revenue account	1,145.88	1,698.86	2,844.74	409.87
Capital account	—31.96	69.62	37.67	17.76
Total ..	1,113.93	1,768.48	2,882.41	427.63
Grand Total ..	3,120.64	5,399.44	8,520.08	1,409.32
Percentage of development expenditure to total ..	64.29	67.25	66.17	69.67

Capital account (development) includes expenditure on multi-purpose river valley schemes, irrigation and navigation, schemes of agricultural improvement and research, electricity schemes, road transport, buildings (including roads and water works), industrial development and others.

Capital account (non-development) includes State trading, compensation to landholders on the abolition of Zamindari and other financial transactions.

Note: This article was prepared before the publication of the Third Finance Commission's report and the interim budgets of State Governments.

As mentioned earlier, a bird's-eye view of revenue receipts during the first and second Plan periods is quite essential for an appreciation of the resources potential of the States, apart from Plan resources. Table II reveals the general trend during the past decade.

Taxes on income (including shares allotted by the Central Government) show little improvement from Rs. 300.97 crores in 1951-56 to Rs. 412.96 crores in 1956-61. This had to be expected because the lion's share of taxes on income goes to the Centre. Land revenue receipts were Rs. 329.04 crores in the first Plan, Rs. 465.36 crores in the second Plan and Rs. 103.15 crores in 1961-62 (B.E.). The rate of progression is very slow, and the proposed surcharge on land revenue in Mysore is solitary and light. The only possible explanation for not utilising this head of taxation adequately could be the anxiety of the ruling party to humour the land holders for support in the approaching General Elections. The States' share of Union excise jumped up from Rs. 64.62 crores to Rs. 280.25 crores as between the two Plans and promises still better elasticity in the near future. On the other hand, States' excise has been almost stationary (Rs. 228.42 crores and Rs. 234.91 crores). General sales tax has proved most elastic, springing up from Rs. 298.61 crores to Rs. 547.99 crores and on to Rs. 140.30 crores (1961-62 B.E.). This would be the most important head for additional tax receipts during 1961-66.

With regard to non-tax revenue, the rate of progression is higher than in tax revenue, though the quantum is smaller. Net contribution of public enterprises proved much better than expected, from Rs. 137.70 crores to Rs. 207.79 crores and Rs. 54.43 crores (1961-62 B.E.). Probabilities are that much more could be had for the third Plan from this head than during 1951-61. Corresponding figures with regard to the Central Government are Rs. 115.06, Rs. 210.25 and Rs. 71.54 crores, respectively (excluding railways). Total revenue receipts (from Rs. 2,227.42 to Rs. 4,012.70 and on to Rs. 1,021.37 crores) prove that the degree of elasticity in State revenues has been considerably higher than generally anticipated, and the outlook is even still better. Between the two Plans the percentage increase in revenue receipts works to 57.42 with regard to the Centre and 80.49 in the case of States. Such an improvement has to be discounted to some extent on account of accelerating inflation, but even the net improvement augurs well for the third Plan. Emphasis is being laid on consumption as the criterion for sharing excise duties. Such reforms will further strengthen State finances.

The third Plan bases its main hopes on additional taxation by the States at Rs. 610 crores, at an average of Rs. 122 crores per annum, but the budgets of States for 1961-62 contemplate an addition of only Rs. 17.33 crores. At the time the third Plan was being finalised, the States exhibited great optimism, and it was on their persistence that additional tax revenue of the States was upgraded to Rs. 610 crores. This optimism was due partly to a better consciousness of resources, a higher level of self-confidence, and a desire to look big in the eyes of voters. The anti-climax from Rs. 122 crores to Rs. 17.33 crores is definitely attributable to the complacency of State cabinets and, what is more, the fear of their losing office on account of unpopularity due to sizable additional taxation.

Expenditure

Service expenditure is analysed under "development" and "non-development" sections. Out of the former, the projects which entail "Plan" outlay and those involving "non-Plan" expenditure may perhaps be ascertainable from files in Finance Ministries, but no information is available to the public on such a break-up. It would be more enlightening to study the behaviour of development expenditure in the General budgets rather than in Plan budgets and accounts for the simple reason that the former picture is panoramic and the latter a narrow cross-section. Development expenditure (revenue) rose from Rs. 1,271.53 crores in 1951-56 to Rs. 2,271.06 crores during 1956-61 and is budgeted at Rs. 647.49 crores in 1961-62. The percentage increase between the two Plans works out to 78.68, as compared with 80.49 in revenue receipts. Non-development expenditure increased at a lower rate. Education ranks high in acceleration with Rs. 395.48 crores (first Plan), Rs. 763.25 crores (second Plan) and Rs. 219.48 crores (1961-62 B.E.). Agriculture, veterinary and co-operation started at a lower level and

SPEED IN CIVIL AVIATION

SOME SUGGESTIONS FOR I. A. C.

By Our Aviation Correspondent

TO what extent is speed of flight the paramount selling factor in air transport? How far does it outweigh—if it does outweigh—the factors of price and comfort? These questions, in one form or another, are often debated in aeronautical journals. Nowadays, however, so many people habitually travel by air that questions of this kind are of more than academic interest. Unless the public, through travel associations and by other means, makes its views known, the airlines are likely to shape policies on their own interpretation of what the public wants. It may be of interest, then, to discuss, from a non-technical angle, the questions posed above.

In the first place, however, for the factors of price and comfort, one would like to substitute the more embracing term of "convenience." Within certain narrow limits, the price of air travel, for the foreseeable future, is more or less determined. Unless some enterprising manufacturer builds an aircraft specifically designed to carry the multitude at low fares—an event of which, at present, there are no signs whatever—we shall see little change in the present tariff. Much the same thing can be said of comfort. There are certain standards for first class travel, certain standards for tourist class travel. You can take your choice. You can also rest reasonably assured that those standards will be maintained. Price and comfort, in the circumstances, hardly call for individual attention. Convenience, on the other hand—which, incidentally, embraces both price and comfort—is a factor of far-reaching importance.

What Is Convenience?

Convenience, of course, is a comparative term. It can mean many things to many people. Applied to air transport, to one it might mean that the scheduled times of arrival and departure happen to suit the particular objective of his journey; to another—the tourist, for example—it might simply be the nature of the stop-over concessions and facilities allowed; to the great majority, however, it must, surely, mean the ready availability of services to take him where he wants to go, when he wants to go, in reasonable comfort, at a price he can afford, and with a minimum of fuss.

Let us, at this point, deal very briefly with the question of speed. Like convenience, this is also a comparative term. Some 25 years ago, when the then Imperial Airways introduced their flying-boats and a 3½-day schedule from the U.K. to India, that seemed a miracle of speed. We have advanced considerably since those days. By Air India's Boeing service, we can now make the journey in twelve hours. But—and this, perhaps, is the point—until the airlines embark on a supersonic travel project, we shall go no faster. We have about reached the maximum in subsonic travel.

Speed is an extremely important selling factor. It would be idle to deny this. The history of the air transport business has constantly recorded the public preference, other things being equal, for the fastest schedules. But speed in flight is only an important factor over long distances. Moreover, even over long distances, it is a selling factor only when convenience in other respects is served. If you have an urgent mission in Europe, whilst it may be physically possible to fly there in twelve hours, this will avail you nothing if there are no seats available for three days.

External and Internal

As it happens, however, so far as international services are concerned, the public is fortunate. We can, therefore, for the purposes of this discussion, disregard the question of international travel. Not, of course, because it is less important, but because such is competition on the more important routes, that convenience—in terms of availability, comfort and, within narrow limits, price—is bound to be served. This is all the more the case, because, speed having reached its present maximum, competition will find other channels of expression.

Let us concentrate instead on our domestic services where, in the absence of competition, a very different situation obtains. When, some six years ago, Viscount aircraft replaced Vikings on the trunk routes, the greater speed and, above all, the greater capacity, offered a convenience not to be ignored. Traffic soon doubled. Unfortunately, no adequate provision for an expansion of this order had been made. Instead of ready availability, seats were at a premium. From that time, the convenience of the services suffered a sharp setback. The correspondence columns of the Press saw constant expressions of public annoyance and frustration. Had this state of affairs continued much longer, the popularity of the services, one suggests, would considerably have declined.

With the purchase of four additional Viscounts, the Corporation, temporarily at least, has restored the situation. Mindful of past errors, they are now talking in terms of jet aircraft of double the Viscounts capacity. Thus—or so it is to be assumed—they aim to achieve two major objectives: to increase the speed of travel and to make seats readily available at short notice. It is a reasonable solution. It is not, however, the only solution, nor, necessarily, the best.

Saving Time

Were the Corporation, instead of jetliners, to purchase another half dozen second-hand Viscounts, not only would they conserve a very substantial amount of foreign exchange, but, by increasing frequencies on routes of the greatest traffic density, add considerably to the convience of their services. There are, naturally, objections. Firstly, whilst the convenience of the public might be served, the airlines reigning deity—SPEED—would be left unpropitiated. Should we not, they will indignantly exclaim, be moving with the times! It is a point—but is it as weighty as it appears?

Let us take an example. The flight from Bombay to Delhi averages two hours and forty minutes. The overall journey time, from city centre to city centre, on the other hand, is seldom less than six hours. If it were possible to reduce the time spent on the ground by one hour, it would be tantamount to the introduction of an aircraft twice as fast as the Viscount. Can the "ground time" be so reduced? Almost certainly, it can. The solution lies in changing, or abolishing, some of the cost and time wasting procedures which, like bad habits, have grown up with the airline business.

In the present circumstances, and so long as we have to rely on road transport between airports and city centres, the road journey time can hardly be much reduced. That is something for the future. Here, however, one aims to be severely practical. In that sense, what can be done is to clean up the whole procedure of getting a plane load of passengers and their baggage from one point on the route network to another. One has one's own ideas of how this could be done. To save a detailed explanation, however, we are fortunate enough to have available the outline of a plan which has already achieved excellent results.

An American Example

Eastern Airlines—one of America's leading domestic carriers—has introduced an "Air Shuttle" service between New York, Washington, and Boston. They have abolished reservations, the advanced purchase of tickets, the checking of baggage and waiting for its delivery. They have eliminated all the manpower and facilities involved in the standard, complicated reservations and ticketing procedure. Their system saves not only time but money.

Aircraft leave every hour on the hour. The fare is only slightly less than that on Eastern's bookable services. Arrived at the airport—in the States, the airlines provide no road transport—all that the passenger has to do is to take a boarding pass from a machine, leave his baggage at the loading gate, and embark. He purchases his ticket on the aircraft. On arrival, he obtains his baggage from a self-claim counter. There is no list checking, no queuing, no frills, and no fuss. So popular have these services become that, in the space of nine months, traffic has trebled. Incidentally, of the two-score reasons given by passengers for their preference for Air Shuttle, more than 60 per cent went to "convenience."

This plan, of course, could not be adopted wholesale. Conditions in India differ very widely and in a great many respects from those in the States. A tailor-made model would be required. Even on its busiest routes, I.A.C. could not afford to operate a large number of frequencies—nor would that be at all necessary. However, taking the Bombay/Delhi route as an example, given additional Viscounts, four frequencies a day should be a practical and not uneconomic proposition. Two of these could be bookable, two of the non-reservation variety. It would be an interesting experiment with, as its main purpose, a study of the extent to which the costly reservation and ticketing system could be modified. It is a matter of opinion, but one does suggest that it is worth consideration.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere

ENCOURAGING TREND IN INDUSTRIAL RELATIONS

ANNUAL REPORT OF THE MINISTRY OF LABOUR

AN encouraging picture of industrial relations in the country is presented in the latest annual report of the Union Ministry of Labour. Barring the strike for a few days in the Hindustan Shipyard and the prolonged strife in the Heavy Electricals at Bhopal, a period of comparative calmness prevailed in the public sector during the fiscal year 1961-62 in contrast to the previous year, which witnessed the nation-wide strike of Central Government employees in July 1960. The recognition withdrawn from unions and associations of Central Government employees for participation in the strike was restored in most cases and, consequently, labour situation in the railways, defence and other Central Government departments was normal. Industrial relations in the 47 commercial undertakings in the public sector was also satisfactory, the only exceptions being the two strikes mentioned above and some minor troubles in regard to dock labour, which, fortunately, did not result in any major flare-up.

A notable step towards abolition of contract labour was taken during the year under review with the signing of an agreement between employers and workers under which all workers employed in processes directly connected with the raising, manufacture and despatch of coal and coke were to be direct employees of the principal employer, except in seven specified categories. It was also agreed that all work, except in the specified categories, should be taken over by the principal employers as early as possible but not later than 30th September 1962.

Code of Discipline

The Code of Discipline continued to exercise a restraining influence on industrial relations. The Central Implementation and Evaluation Division set up under the Code received 709 complaints about breaches of the Code in the Central sphere. Details about the sources of these complaints, that is, how many of them were from labour and how many from employers, are not available at the time of writing. However, in 58 per cent, as against 71 per cent last year, of the cases where the Division proposed action, breaches were brought home to the parties and the situation set right and the parties advised to avoid such breaches in future. 17 per cent of the complaints were not substantiated on enquiry and the remaining 25 per cent were under investigation. In a number of cases, the report points out, the central organisations of employers and workers accepted responsibility and asked their constituent members strictly to abide by the Code. The report also claims that the Division succeeded in a number of cases in preventing strikes by persuading the parties to settle their disputes peacefully. In 25 cases, where legal action had been started against employers for contravention of enactments, the breaches were set right through persuasion and the need for legal action avoided.

The screening committees of the Employers' Federation of India screened 23 cases during 1960. In two of them, the parties were persuaded not to file appeals. In the first half of 1961, out of nine cases taken up for screening, the Committees were successful only in three cases. The screening committees of the All-India Organisation of Industrial Employers considered five cases during 1960 of which only one case was not proceeded with by the party. Two more cases were screened in the first half of 1961 both of which were allowed to be taken to the higher courts. Among workers' organisations, the *Hind Mazdoor Sabha* screened five cases in 1960 and allowed all of them to be proceeded with. It took up 10 cases in the first half of 1961 of which 8 were dropped. The United Trades Union Congress was successful in persuading its members in 19 out of 20 cases not to go to higher courts.

Implementation

The Central Implementation and Evaluation Division has so far succeeded in settling 45 per cent of the cases taken up for out-of-court settlement. The implementation machinery at the State level has, however, not been so successful, the percentage of out-of-court settlement achieved by them being only 22. The Central Implementation and Evaluation Division received 30 complaints under the Code of Conduct, as against 35 in 1960 and 59 in 1959. Of these, four complaints did not require any action, eight were not established on enquiry and five referred to the respective State Governments for appropriate action. Of the rest, breaches were brought home to the concerned unions in 10 cases and the remaining three cases were under investigation.

Twenty-nine Joint Management Councils are functioning at present, 11 in the public sector and 18 in the private sector. A tripartite committee on labour management co-operation was set up during the year to review the progress of the scheme and to recommend measures for its extension. The State Governments were asked to set up a special machinery to promote the scheme. The Governments of Rajasthan, Orissa, Madras, West Bengal and the Punjab have already set up the machinery for it. Although no major enactments relating to labour were passed during the year, a number of minor laws were written into the Statute Book. These are Motor Transport Workers' Act, Maternity Benefit Act, Apprenticeship Act and Iron Ore Mines Labour Welfare Cess Act. Amendments were carried out to the Delhi Shops and Establishments Act, the Industrial Employment (Standing Orders) Act and the Minimum Wages Act.

Wage Boards

In regard to wages, a notable development during the year was the setting up of separate Wage Boards for coffee and rubber plantations, besides the wage boards for tea plantations already set up, thus bringing the wage structure in entire plantation industry under study by the Wage Boards. Considerable progress has also been made in respect of the implementation of the awards already given by the textile, cement, and sugar Wage Boards. In the case of textiles, the recommendations have been implemented by 393 (357 fully and 36 partly) out of 416 cotton textile mills. An inquiry is being conducted into the reasons for non-implementation in the remaining units. Out of the 33 cement factories, 23 have implemented the Cement Wage Board's recommendations fully and seven factories are said to have done so partly. Of the 170 sugar factories, 105 have either fully or partly implemented the recommendations of the Sugar Wage Board. Most of the remaining factories are working out the details of implementations. The Jute Wage Board's recommendations for the grant of interim relief have been implemented by all jute mills, except three in U.P., where the matter is pending before the High Court.

Much store has been set by workers' education to promote better industrial relations and healthy trade unionism. The Central Board for Workers' Education has so far set up 13 regional workers' education centres, three of which are residential. The fourteenth centre at Jamshedpur is expected to start functioning shortly. The Board has run three teacher-administrators' courses in which about 135 teacher-administrators have been trained. By the end of October 1961, 1,502 worker-teachers had been trained and another 262 were under training; also 17,089 workers had been trained and 9,254 were under training. A proposal to establish a Central Training Institute is under consideration.

The progress made in the field of social security during the past years was further extended and consolidated during the year. The Employees' State Insurance Scheme was extended to cover 22,845 additional workers, thus bringing the total coverage to 1.69 million workers in 132 centres. Medical care was also extended to about 55,700 more families bringing the total number of families covered under the scheme to 629,000, consisting of over two million beneficiaries. An additional sum of Rs. 2.83 crores was sanctioned for the construction of hospitals and annexes for 1,354 additional beds and 19 dispensaries. This brings the total amount so far sanctioned under the scheme to Rs. 6.23 crores, the total bed strength to 3,286 and the number of dispensaries to 47.

MADURA MILLS CO. LTD.

SPEECH OF CHAIRMAN, DR. RAJAH M. A. MUTHIAH CHETTIAR

POINTED attention to the serious raw cotton supply position in the country and its consequences for the mill industry was drawn by Dr. Rajah M. A. Muthiah Chettiar, Chairman of Madura Mills Company Ltd., in his speech at the Annual General Meeting of the Company held at Madurai on Wednesday, 28th March 1962. He also briefly reviewed the progress made in regard to the modernisation and diversification plans of the Company.

The following is the full text of Dr. Chettiar's speech:

"GENTLEMEN,

"I shall be referring to certain aspects of the Company's accounts for the year to 31st December 1961 which are before you, later in my speech.

"Perhaps the most important item on which I must comment is the cotton supply position. The crop for the year to 31st August 1961, was 54.08 lakh bales. Together with considerable imports of short staple cotton from America, this allowed a carry forward of 22 lakh bales into the current season. However, the consumption this year has been put at 58 lakh bales and the indigenous crop at only 43 lakh bales. You will undoubtedly realise the serious significance of these figures, and will probably be reminded of the difficult conditions which prevailed during the 1959-60 cotton season. There is every indication that these will be repeated this year.

Expansion Scheme

"Demand for our products continued to be strong throughout the year. Although yarn prices were lower, much of the reduction was offset by improved processing resulting from our modernisations. Moreover, our expansion schemes are starting to get under way, as reflected in the increased turnover during 1961. The first of these schemes, at Serampore, went into production in June, and is now running at almost full capacity. Mention was made in my speech last year of further plans. I am now glad to be able to tell you that we have obtained a licence for the installation of 450 automatic looms and ancillary machinery, as a first step in our policy of diversification.

"As in the past, we have continued to take a very active part in export markets, in particular the U.K., and in fact were able to improve on the previous year's figures. However, for the current year, the high cotton prices resulting from the low crop together with a general slackening of demand in Lancashire will make it very difficult indeed to maintain our performance. In January this year, a meeting between representatives of the Lancashire textile industry and the Indian Cotton Mills Federation took place, your Company being represented at the meeting. It was not possible to reach agreement, and the two teams decided to adjourn their meeting. Subsequently of course there has been the meeting of G.A.T.T. in Geneva and it may well be that both U.K. and India will find that the agreement reached there makes further tripartite discussions unnecessary.

"The loan from the National Industrial Development Corporation was duly finalised during the year, and as you will have noted, nearly Rs. 48 lakhs was drawn by 31st December 1961. Further drawings will be made shortly. In addition to this, and as indicated in the Directors' report, we are considering making a debenture issue during this year to meet the cost of the heavy capital expenditure now planned.

"While the net profit for the year is slightly reduced, when compared to 1960, I would draw your attention to the charges for depreciation and development rebate reserve, which have increased by Rs. 11.3 lakhs. If this is taken into consideration and, bearing in mind my earlier remarks regarding prices, I think you will agree that the results are not unsatisfactory. Nevertheless, the need to pursue a conservative dividend policy will be apparent to all so that the heavy investments in development can be met.

"The past year has on the whole been one of welcome harmony with our employees, and staff, which has undoubtedly contributed to the financial results. I would like to express appreciation for their efforts and trust that, in the eventful year to come, we can proceed together to our common goal of prosperity."

Note: *This document does not purport to be a report of the proceedings of the meeting.*

THE AZAM JAHI MILLS LIMITED

ANNUAL STATEMENT OF THE CHAIRMAN, MR. I. J. NAIDU

SATISFACTORY PROGRESS LAST YEAR—SPINDLEAGE TO BE EXPANDED

THE results of the Azam Jahi Mills Limited for the year ended 30th September 1961 were encouraging and indicated progress, the Chairman, Mr. I. J. Naidu, I.A.S., told the Thirty-first Annual General Meeting of the Company, held at Hyderabad on Thursday, 29th March 1962. He said that, after paying wages and providing for bonus, the Company earned a profit of Rs. 23.47 lakhs during the year as against Rs. 6.33 lakhs in the year 1959-60, despite a substantial increase in the cost of cotton, wages and salaries. The rise in the cost of cotton, he explained, was due to higher production of cloth and yarn. Wages rose because of the implementation of the Wage Board recommendations for the full year and due to an expenditure of Rs. 5.5 lakhs on rationalisation of the workload. Mr. Naidu stated that the processing equipment under the modernisation programme was erected and went into production towards the close of the year under review. He said that the Company had received the Government's permission to expand the spinning department by installing 6,000 spindles, which, together with the ancillary equipment, would cost about Rs. 24 lakhs. It would take two to three years to complete the expansion.

The following is the full text of Mr. Naidu's statement:

"GENTLEMEN,

"I have pleasure in welcoming you at this 31st annual general meeting.

"Before I take up the business of the day, I would like to express my appreciation of the very valuable services rendered by Shri R. S. Krishnaswamy, I.C.S., and Shri P. M. Nayak, I.C.S., during their Chairmanship of the Company and Shri I. Ramachandra Rao, I.A.S., as a Director. I have no doubt that you will join me in this.

"The report of the Directors and the accounts for the year ended 30th September 1961 have been in your hands for some time, and I shall, with your permission, take them as read.

Industry Revives

"The cotton textile industry, which was passing for some years through a slump, revived to a satisfactory extent in the year under review. The market and trading conditions were generally good and certainly better than in the previous years. Contrary to the sad experience of the past year, the cotton crop developed beyond general expectation to reach 52¼ lakhs bales in the year 1960-61. Due to strict control in regard to prices and distribution by the Government of India from the very beginning of the season, the availability of the required cotton was not difficult and the prices in general showed a downward trend.

"Although the prices of consumable stores remained high during the year, strict economy was maintained by your management in the use of stores, and therefore, the total expenses were less.

"You will have noticed that the expenses for items of cotton and wages and salaries have shown a substantial increase in the year under review. This is due to increase in the quantum of production obtained and retrenchment benefits paid to workers.

Workload Rationalised

"During this year, by an agreement with the Workers' Union, the workload was rationalised and the surplus workers were paid retrenchment compensation, gratuity and all dues amounting to Rs. 5¼ lakhs. This, you will appreciate, is not a recurring expenditure. I take this opportunity to congratulate the management for bringing the matter of rationalisation to a satisfactory conclusion with the co-operation of the Workers' Union.

"Another reason for the increased wage bill of the year under review was the payment of increased wages at Rs. 6 per worker for the whole twelve months as per the Central Textile Wage Board Award as against payment for nine months only from January 1960 in the previous year. This accounts for an increase of about Rs. 98,000 in the wage bill of the year under review.

"The realisation from cloth and yarn during the year was steady at prices under voluntary control. The total value of sales as well as production has shown a substantial improvement over the previous year. The Company's performance on the export front has, in common with the industry in general, declined. This was due primarily to the quota restrictions imposed on exports to U.K. and the competition from Far Eastern and European countries.

Modernisation

"You have previously been informed that your management had embarked on a programme of modernisation by acquiring such processing equipment as Artos finishing and drying range, tri-raising machine, felt calender, pressure kiers etc. All these machines have been erected and have gone into production towards the close of the year under review.

"In the year 1959-60, the gross trading profit earned was Rs. 6.33 lakhs after providing for workers' bonus, and increased wages as recommended by the Central Wage Board. In the year under review, the gross trading profit, after paying the increased wages and providing for bonus, was Rs. 23.47 lakhs. A further non-trading income was an amount of Rs. 5.03 lakhs received by way of refund of income-tax and corporation tax. From the total available, payments to the extent of Rs. 5.40 lakhs have been made towards retrenchment compensation, etc., to workers and provisions have been made for depreciation, development rebate, reserve for investment and dividend to the shareholders.

"The result of the working of your Company for the year under review, you will observe, is encouraging and indicates progress.

Depreciation

"For the year 1959-60 no depreciation of the block assets was provided, and my predecessor assured you that with the improved prospects of the Company, it would be possible to write off full depreciation in coming years, and today you will have observed that not only the reasonable depreciation for the year under review has been provided but also the entire amount as per Section 350 of the Companies Act amounting to Rs. 16.03 lakhs. Given three to five reasonably good years, it is hoped that the entire arrears of depreciation will be cleared from profits.

Cotton Crop Badly Affected

"It is quite appropriate to inform you here that the cotton crop for the current season of 1961-62 has been badly affected due to heavy monsoon lasting till late in the year 1961. The crop is estimated now at no more than 43 lakhs bales as against 48 lakhs bales estimated in December 1961, and the last season's outturn of 52¼ lakhs bales. This setback to production has caused a steep increase once again in the price of cotton with all its effects on the consumer mills, and their cost of production.

Levy for Exports

"In addition to this, a further levy has now been imposed on the consumption of Indian cotton. The Indian Cotton Mills Federation, in consultation with the Textile Commissioner, Government of India, in order to augment the funds for promotion of exports of cloth and yarn for enhancing foreign exchange earnings of the country, decided that all mills in India should pay to the Federation at a calculated rate per bale of Indian cotton consumed by the mills from 1st January 1962. This is an understanding between the industry and the Government of India. Your mill has to pay at the rate of Rs. 5 per bale of cotton consumed and on this account alone, the Company's earnings will be affected to the extent of about Rs. 1,25,000 per annum.

"Under the Central Textile Wage Board Award, the industry is required to pay another increase of Rs. 2 per worker per month as from 1st January of this year. This additional wage will cost the Company about Rs. 90,000 to Rs. 1,00,000 a year.

Water, Coal Shortage

"As usual your mill has been experiencing acute shortage of water during the summer months, thereby affecting the production of processed goods. Your management is trying to find a permanent solution to this problem with the help of the Warangal Municipality.

"Your Company has been finding it extremely difficult to obtain its full and quality requirement of coal and the management has been making efforts to run your mills fully and without stoppages by obtaining some supplies by road from the newly opened mines at Ramagundam at considerable extra cost.

Additional Spindles

"I am pleased to inform you that your mill has received permission from the Government of India to expand the spinning Department by 6,000 spindles, to enable the mills to spin additional quantities of market yarn. The installation of these additional spindles together with the ancillary equipment is estimated to involve a capital expenditure to the extent of about Rs. 24 lakhs. Your Directors are endeavouring to obtain the required finances for this mill expansion. Even after arranging for funds, it would take two to three years to complete the expansion as the delivery time quoted by makers for most of the machinery is 20 to 24 months. Your Directors are of the view that with this expansion, there will be a further improvement in the earning capacity of this mill.

"Before I conclude, I take this opportunity of expressing our appreciation, on behalf of the Board and all of you, of the services rendered by one and all within the organisation.

Resolution

"Gentlemen, I now propose

"That the report of the Directors and the statement of accounts for the year ended 30th September 1961 be received and adopted."

Note: *This does not purport to be the report of the proceedings of the annual general meeting.*

WAGES AND COSTS

A common theme of the presidential speeches delivered at the annual meeting of many employers' organisations and Chambers of Commerce and Industry during the past few months has been the rising costs in Indian industries. If this is an indication of the increasing cost-consciousness in industry, it is a healthy sign. In a country which is anxious to export more, industry and Government should constantly keep one eye on cost in whatever they do. In fact, even highly industrialised countries, which have established themselves in the export field for many years, do not minimise, much less ignore, the importance of cost of production, as witness the "wage pause" in the U.K.

One of the most important determinants of costs is wages. The rate of increase in wages in relation to productivity exerts a decisive influence on cost and through it the competitive capacity of a firm, industry or country. Keeping wage rises within the limits of the increase in productivity should, therefore, be an essential ingredient of any export promotion policy.

That if wages and costs are not kept within the bounds of productivity, it can create trouble even for the most industrially advanced countries, is clear further from the current predicament of W. Germany. In that country, wages rose by 11 per cent in 1961, whereas productivity increased by only 4 per cent and indications are that the relationship between these two is not expected to change much for the better this year also. This trend in W. German economy is causing growing concern in German industrial and official circles and the whole question of wages and economic policy has become the subject of a national debate. The problem was brought sharply into the focus of public attention by Dr. Erhard, the Economics Minister, who warned the nation, in a radio speech last week, that excessive wage claims and other demands on the national resources could overtax the economy and bring down the country's entire economic, political and social structure. These words, coming as they do from a confirmed optimist like Dr. Erhard, are an indication of the seriousness of the situation.

Although Dr. Erhard's warning was not directed at the trade unions alone, it is generally agreed in Germany that it is "the upward trend of wages in particular which has put an end to the period when German industry had little to fear in terms of cost from its competitors." The problem of this wage cost spiral is not easy to tackle in the political context in W. Germany, because the Constitution guarantees to labour and management the right to negotiate and fight out wage disputes in freedom.

CANARA BANK LIMITED

(INCORPORATED IN INDIA, LIABILITY OF MEMBERS IS LIMITED)
(ESTABLISHED 1906)

Registered Office : MANGALORE
Administrative Office : BANGALORE
Foreign Departments : BOMBAY, MADRAS & CALCUTTA

BOARD OF DIRECTORS:

MR. A. DAMODAR PAI, B.A., B.L., Bangalore (Chairman and Supervising Director).
MR. H. LAXMINARAYANA KAMATH, Merchant, Gangulli, South Kanara.
MR. C. SHRINIVASA RAO, Savkar, Nazar, Mysore State.

MR. C. G. KINI, B.A., C.A.I.I.B.
MR. B. V. BHANDARY, B.A., C.A.I.I.B.
MR. C. E. KAMATH, A.C.A.

AUDITOR
MR. A. UMANATH RAO, B.A., F.C.A. Chartered Accountant.

DIRECTORS' FIFTY-SIXTH ANNUAL REPORT

The Directors have pleasure to submit to the Shareholders the Fifty-sixth Annual Report for the year 1961. After making the usual and necessary provisions including provision for taxation, a sum of Rs. 21,69,539.52 is available for distribution, inclusive of last year's carry forward of Rs. 45 108.78.

The Directors recommend the following appropriations :—

	Rs.	nP
To Preference Dividend at 5.56 per cent. less Company's Tax at 20 per cent.	62,300	00
To Dividend on Equity Shares at 15 per cent. (subject to Tax)	5,40,000	00
To Bonus to Staff	4,00,000	00
To Transfer to Contingencies	4,50,000	00
To Reserve Fund	6,70,000	00
	21,22,300	00
Leaving a balance to be carried forward	47,239	52
	Rs. 21,69,539	52

During the year under Report, the issue of a further equity capital of Rs. 25,00,000 was made, and the Directors are glad to report that applications were well in excess of the issue.

During the year, three banks were taken over by us under Section 45 of the Banking Companies Act, and the selective transfer of assets of one other bank was effected. This has resulted in an addition of 2 branches. To deal with the problems arising in the taking over of these branches, two Regional Offices have been set up in charge of senior managers and inspection of these additional branches twice yearly by independent auditors (in addition to the normal inspection by our inspecting staff) has been arranged.

Four training courses were specially conducted for the staff of the taken over banks by our Staff Training School. In addition, executive staff of the taken over banks were from time to time brought to Administrative Office for refresher courses.

We are glad to report that subsequent to the taking over by us of the branches of the four banks, deposits in those branches increased by over 30 per cent. within an average period of 4 months. Nine new branches were opened during the year at Bagalkot and Vijayesvarapuram—Bangalore in Mysore State; Khar, Santacruz, Parel and Kurla in Bombay, Maharashtra State, and Changanacherry, Kottayam and Trichur in Kerala State. These new branches are making satisfactory progress.

Our offer to train the senior staff of smaller banks in our organisational methods was availed of by several of them who expressed their appreciation of the facilities provided by us.

One Officer of the Bank returned during the year after a refresher course in West Germany in the Deutsche Bank to whom we are thankful for the facilities given by them. Three more officers will be proceeding for Overseas Training during the current year.

The construction of the Administrative Office building is proceeding apace, and it is expected that the building will be ready for occupation before the end of the current year.

The advance/deposit ratio of our Bank during the year under report was, as in previous years, we believe one of the lowest in the Country, our highest being 60.2 per cent. and average being 55.2 per cent. The corresponding figures for Scheduled Banks as a whole (excluding the State Bank of India) were 78.9 per cent and 71.3 per cent respectively.

The Directors thank all Shareholders, Customers and Staff for their co-operation during the year.

(By Order of the Board)
A. DAMODAR PAI,
Chairman.

AUDITOR'S REPORT

I have audited the foregoing Balance Sheet of the Canara Bank Limited, as at 31st December 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from thirty-four branches audited by me and sixty-one branches audited by other Auditors and the following twenty-six branches audited by persons otherwise qualified for appointment as Branch Auditors, who are employees of the Bank, under exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, Order No. 1 (7)-CL. VI/61, Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 30th December 1961. The branches so exempted are :—

(1) Avenue Road—Bangalore ; (2) Chamarajpet—Bangalore ; (3) Cantonment—Bangalore ; (4) Basavanagudi—Bangalore ; (5) Malleswaram—Bangalore ; (6) Narasimharaja Road—Bangalore ; (7) Chickpet—Bangalore ; (8) Vijayesvarapuram—Bangalore ; (9) Tumkur ; (10) Shimoga ; (11) Mysore ; (12) Sirsi ; (13) Chickmagalur ; (14) Mandya ; (15) Udipi ; (16) Bantwal ; (17) Coondapoor ; (18) Karkala ; (19) Gangulli ; (20) Puttur ; (21) Mulki ; (22) Thambu Chetty Street—Madras ; (23) Govindappa Naick Street—Madras ; (24) Mount Road—Madras ; (25) Foreign Department (T. C. Street)—Madras ; (26) Mercara.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing my report in the manner considered necessary by me.

I report that :

(a) I have obtained all the information and explanations which, to the best of my knowledge and belief were necessary for the purpose of audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to my notice have been within the powers of the Bank ;

(c) In my opinion, proper books of account, as required by Law, have been kept by the Bank so far as appears from my examination of those books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank ;

(d) The foregoing Balance Sheet and Profit and Loss Account, dealt with, by this report, are in agreement with the books of account and the returns ;

(e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and, on such basis, the said Balance Sheet gives a true, and fair view of the state of affairs of the Bank as at 31st December 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

MANGALORE, *8th February* 1962

A. UMANATH RAO, B.A., F.C.A.,
Auditor, Chartered Accountant.

THE CENTRAL BANK

SIXTY-SEVENTH REPORT OF THE

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for year ended 31st December, 1961.

The Net Profit for the year, including the sum of Rs. 18,61,470.96 brought forward from the previous year's account, amounts to	Rs.	2,01,36,733 88
The following appropriations have been made :—		
An ad-interim Dividend was paid for the half-year ended 30th June 1961 at the rate of Rs. 2.40 per share subject to tax on 12,60,000 shares	Rs.	30,24,000 00
Amount transferred to Reserve Fund	,,	45,00,000 00
Amount transferred to Staff Gratuity Fund	,,	10,00,000 00
Amount provided for *Bonus to Staff*	,,	60,00,000 00
	Rs.	1,45,24,000 00
The balance of Rs. 56,12,733.88 the Directors propose to recommend to the Shareholders to dispose of as follows :—		
To pay a final Dividend for the half-year ended 31st December 1961 at the rate of Rs. 2.60 per share subject to tax on 12,60,000 shares (making in all 14 per cent. net for the whole year)	Rs.	32,76,000 00
To carry forward to next year's account	,,	23,36,733 88
	Rs.	2,01,36,733 88

The Bank's business during the year under review showed very satisfactory progress. During the year 4 Branches, 7 Sub-Branches and 4 Pay Offices were opened at various centres and one Pay Office had to be closed down as it was found to be unremunerative.

In addition thereto, one Branch, 9 Sub-Branches and 2 Pay Offices were taken over from the Jodhpur Commercial Bank under the Amalgamation Scheme formulated by the Reserve Bank of India.

The Bank completed 59 years of its existence on 21st December, 1961, and celebrations were held at Bombay and at various important centres. The Directors acknowledge with thanks and place on record their appreciation for the innumerable messages of good wishes received from the shareholders, the depositors and the clientele of the Bank.

The Directors record with deep regret the death which took place on the 16th day of July, 1961, of their colleague His Highness Sir Jiwajirao Madhavrao Scindia. They place on record their appreciation of the valuable services he rendered to the Bank.

One of your Directors, Mr. C. P. Wadia, resigned his seat on the Board on 14th March, 1962. Mr. Wadia had been a Director of the Company since 1949. The Board place on record their appreciation of the very valuable services rendered by him during the time he was a Director of the Bank.

Mr. Nani A. Palkhivala and Nawab Prince Mukarram Jah Bahadur were invited to join the Board as Directors in place of the late Mr. Framroze J. Guzdar and His Highness the late Sir Jiwajirao Madhavrao Scindia respectively. Under Article 34 of the Articles of Association they hold office only upto the date of this Annual General Meeting, but are eligible and offer themselves for re-appointment.

OF INDIA, LIMITED

BOARD OF DIRECTORS

Mr. Nityanand M. Wagle was invited to join the Board as additional Director. Under Article 84 of the Articles of Association, he holds office only upto the date of this Annual General Meeting, but is eligible and offers himself for re-appointment.

Mr. Nariman K. Karanjia was invited to join the Board as additional Director and was also appointed as Managing Director of the Company. He holds office only upto the date of this Annual General Meeting, but is eligible and offers himself for re-appointment.

Four of your Directors, Sir Homi Mody, Mr. Chimanlal B. Parikh, Mr. Jaykrishna Harivallabhdas and Mr. Shiavax S. Khambata retire under Article 92 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

The Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is once again drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, the Depositors' Benefit Insurance Co., Ltd. The necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company has not yet been received.

H. P. MODY,
Chairman.

BOMBAY, *14th March*, 1962.

Statement Pursuant to Section 212 of the Companies Act, 1956

(*a*) The Bank's interest in its Subsidiary, The Central Bank Executor and Trustee Company, Limited, as at 31st December, 1961, comprised 2,000 shares of the face value of Rs. 1,000 on each of which Rs. 500 per share has been paid up.

(*b*) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1961, after a transfer of Rs. 15,000 to General Reserve, amounted to Rs. 15,886.57 which has been carried forward in the accounts of the Subsidiary.

(*c*) The net aggregate amount of Rs. 11,76,322.50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 88 branches audited by us, 17 branches audited by other auditors and the unaudited returns from 288 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to Section 228 of the Companies Act, 1956.

We report that :—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(*c*) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us ;

(*d*) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report ;

(*f*) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of Prospectus copies whereof are available at the Registered Office of the Company, Underwriters and Brokers mentioned hereunder.

Consent of the Central Government has been obtained to this issue by an order, of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment and expansion of the Industrial Undertakings, the copies of which are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus having attached thereto the documents mentioned below has been duly delivered for registration to the Registrar of Companies, Bombay as required by Section 60 of the Companies Act, 1956.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF THE BANKING HOURS AT 10-30 A.M. ON THE 16th APRIL, 1962 AND WILL CLOSE AT 1-00 P.M. ON 21st APRIL, 1962 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE 2-30 P.M. ON THE 19th APRIL, 1962.

Applications are being made for listing the Shares of the Company on the Bombay Stock Exchange and Ahmedabad Stock Exchange.

(b) Rs. 25 within one month from the date of allotment.

(c) Balance of Rs. 50 by two calls of Rs. 25 each, provided that the first of such calls shall not be made earlier than 2 months from the date of allotment and that there shall be an interval of at least two months between the two calls.

The shares now being issued will not confer any right to any Dividend that may be declared on the Equity Shares in respect of the Company's financial year ending 31st December, 1961, and will thereafter rank *pari passu* with the existing Equity Shares of the Company save that they will be entitled to Dividend on the capital for the time being paid thereon.

The entire public issue of Rs. 17,50,000 has been UNDERWRITTEN as hereinafter stated by the Investment Corporation of India Limited, Bombay 1.

BOARD OF DIRECTORS

1. **Rao Bahadur MAHADEO BALKRISHNA JAMBHEKAR,** (*Chairman*), Ryewoods, Lonavala. Industrialist.

The letters of consent of Auditors, Bankers, Solicitors, Underwriters and Brokers to this issue to act in their respective capacities have been filed with the Registrar of Companies, Bombay (Maharashtra) along with the copy of the prospectus as required by Sections 60(3)(b) of the Companies Act, 1956. The same have not been withdrawn.

OBJECTS OF THE COMPANY

The Company was incorporated on 4th April, 1939 as a Private Limited Company (which was converted into, and duly registered as a Public Limited Co. on 1st March, 1961) with the objects mentioned in the Memorandum of Association, a copy whereof is appended hereto and forms part of the prospectus. In particular, the main objects of the Company are to manufacture Textile Auxiliaries, Chemicals, Soaps, Preservatives, Surfactants, Synthetic Resins, Carboxy Methyl Cellulose, Penta Chloro Phenols, Nopco Products etc.

MANUFACTURING ACTIVITIES AND LICENCES

(a) Messrs. Sardesai Brothers (whose business was taken over by the Company in or about April 1939) were the manufacturers of Surfactants and Auxiliaries since 1911 and were the Pioneers in this field. The Research department of the Company has made good strides in developing new auxiliary products like—*Non-Ionic* and Anionic Wetting Agents, Synthetic Detergents, Cationic Softeners etc. The Company's products have not only replaced similar imported products in the Indian Market but are now being exported to Middle East and Far Eastern countries.

(b) Carboxy Methyl Cellulose, more commonly known as "CMC," is a universal chemical, used in various industries such as Oil Drilling, Textile, Paper, Rayon, Leather, Soap, Detergent, Rubber, Pharmaceuticals and Insecticides etc. The project of C.M.C. sponsored by the Council of Scientific and Industrial Research was developed on a laboratory scale at Shri Ram Institute for Industrial Research. The Company took up the process from the National Research Development Corporation of India (referred to as N.R.D.C.), at this stage and developed the product further at the pilot plant stage, ultimately succeeding in installing the major manufacturing plant. The Company has to pay 2½% Royalty to N.R.D.C. on the net sales of C.M.C. under the agreement dated 7th June, 1959. This is the first plant of its kind in India and in consideration of the quality product now placed in the market by this Company, the Government of India have now reduced the quota of Established Importers of C.M.C. to only 2½% of their best year imports.

(c) The process for the manufacture of Synthetic Resins and Anti-Crease Finishes has been acquired by the Company, from N.R.D.C. on the terms contained in six agreements hereinafter mentioned, under which the Company has to pay 5% Royalty to N.R.D.C. on the Company's net sales of the said products. The Government of India have now reduced the quota of established importers of these products to only 2½% of their best year imports.

(d) Penta Chloro Phenol and Sodium Penta Chloro Phenate are known as basic Chemicals for preparation of preservatives useful in industries like Textile, Leather, Paint, Wood, Timber, Agricultural Insecticides, Weed Killers etc. for which there is a large potential market. The Company's activities are at present confined to Pilot Plant stage and the fullfledged manufacturing programme will be taken up at a later stage.

(e) Nopco Products

The Company has technical assistance agreement with Nopco Chemical Company, Newark, N.J. New York, U.S.A., who are one of the largest American Manufacturers of Chemical auxiliaries for Rayon, Leather, Paper, Paint, Rubber, Plastics and other industries. This agreement with NOPCO covers the progressive manufacture of their Products by the Company in India, for internal consumption as well as for exports to Burma and Ceylon.

(f) The Company holds following licences for the manufacturing of the undermentioned products, under the Industries (Development and Regulation) Act, 1951.

		Tons
1.	R/19(12)/3 of 31-10-57 Textile Auxiliaries and Chemicals	1,000
2.	L/19(12)N-2/58 of 23-2-58 Pentachloro Phenol and Sodium Pentachloro Phenate ..	120
3.	L/19(12)N-4/59 of 13-2-59 Carboxy Methyl Cellulose	1,200
4.	L/19(12)N-5/59 of 13-2-59 Synthetic Resins —Srifirset Compounds	900
5.	L/19(12)N-16/61 of 20-2-61 Nopco Chemicals .. Quantity included in Auxiliaries.	

(g) As a result of the Capital Expenditure to be incurred from the proceeds of the present issue of shares the Company is confident of attaining its Licensed capacity for the production of Textile Auxiliaries and Chemicals and of Carboxy Methyl Cellulose, and of providing for a substantial expansion of the same for which applications have been made to the Government of India.

In spite of several competitors in the field, the Company has a very wide clientele in the Textile Industry for the Textile Auxiliaries manufactured by it, being one of the oldest manufacturers in India of superior quality products. The improved processes involved in the manufacture of superfine quality Cotton, Rayon and Silk fabrics, have created an increase in demand for the highly technical auxiliaries and the Company has a wide range of products for such processes.

The use of C.M.C. in India in various Industries has been of recent origin but the demand has increased at a rapid rate, and it is at present, estimated to be around 3,500 tons per annum. With the increasing use of this chemical and the expansion of Industries the demand for C.M.C. is expected to increase substantially and being an established producer of a quality product, this Company expects to be able to effect a substantial expansion of production in this line to meet the increased demand. Further, there is a potential export market for C.M.C. manufactured by the Company and negotations in this direction are already in progress.

RESOURCES AND DISBURSEMENTS

The total funds now being raised by the Company will be as follows:

	Rs.
Share Capital agreed to be subscribed by the Directors, and their friends ..	22,50,000
Share Capital of the issue to Public ..	17,50,000
Rs.	40,00,000

This amount of Rs. 40,00,000 will be utilised approximately as under :—

	Rs.
1. Land	60,000
2. Buildings	8,00,000
3. Machinery and Equipment (including Erection charges, Engineering and consultation fees)	17,40,000
4. Working Capital	12,75,000
5. Expenses relating to the present issue, Brokerage and underwriting commission	1,25,000
Rs.	40,00,000

SITE

The Company has a factory in Bilimora in village Devsar, about a mile away from Bilimora Railway Station on Western Railway between Bombay and Surat. The factory is situated on the State High Way and is at a distance of 8 miles from the National High Way No. 8 between Bombay and Ahmedabad. The factory is erected on a plot admeasuring approximately 11 acres of land. The Company has another plot of land admeasuring approximately 5 acres which is proposed to be utilised for construction of quarters for members of staff and for workers.

RAW MATERIALS AND MACHINERY

The major raw materials for Surfactants, Synthetic Resin Finishes, C.M.C. and Pentachloro Phenol are available from indigenous sources and for those items that have to be imported the Company regularly gets Import Licences for essential raw materials. The Company has preferred applications to the Central Government for the Import of Machinery of the value of approximately Rs. 4,50,000 required for the Company's projects.

MARKETS

The factory is situated centrally between Bombay and Ahmedabad, the leading Textile Markets for Surfactants and Resin Finishes. The major consumer for C.M.C. is the Oil and Natural Gas Commission, the drilling operations whereof are concentrated in such places of Gujarat State which are not far off from the factory of this Company. The other consumers for C.M.C. are Textiles, Soaps, Detergents, and Paint Industries which are mainly situated in Bombay, Calcutta and Ahmedabad and are efficiently served by the Regional Offices of the Distributors of the Company.

DISTRIBUTORS

The Company has appointed Sardesai Industrial Agencies Pvt. Limited, Bombay, as the distributors of the various products manufactured by the Company on principal to principal basis. The Company is also negotiating with other leading reputed concerns in the country for the sale and distribution of their products.

UNDERWRITING, BROKERAGE AND EXPENSES RELATING TO THIS ISSUE

(a) The whole of the public issue of Rs. 17,50,000 consisting of 17,500 Equity Shares of Rs. 100 each has been underwritten by the Investment Corporation of India Ltd., Ewart House, Bruce Street, Fort, Bombay-1.

(b) The underwriting commission at the rate of 2½% of the nominal value of 17,500 Equity Shares of Rs. 100 each is payable to the said Underwriters. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their underwriting obligations. The Brokerage will be paid by the Company to the Underwriters and to Member of any recognised stock exchange, at the rate of 1% of the nominal value of the aforesaid 17,500 Equity Shares on the basis of allotment made in respect of applications bearing their stamp.

(c) The expenses relating to this issue are not expected to exceed Rs. 1,25,000 which also include Underwriting commission and Brokerage.

SUMMARY OF FIVE YEARS' WORKING

(In lakhs of rupees)

	Year ended				
	31-12-56	31-12-57	31-12-58	31-12-59	31-12-60
1. Paid-up Capital..	2.50	2.50	2.63	2.63	6.19
2. Sales (Turnover)..	11.53	12.81	13.97	14.26	20.07
3. Net Profit before Taxation ..	Rs. 26,168	Rs. 29,358	Rs. 31,670	Rs. 13,672	Rs. 62,949
4. Total Dividend Paid	12,500 (5%)	12,500 (5%)	13,150 (5%)	6,575 (2½%)	19,088 (5%)

Note: During the year 1961 the paid up capital was Rs. 10 lakhs and the Sales Turnover has been Rs. 45.94 Lakhs (Approx.). The estimated profit is expected to be not less than in the previous year's proportion of profits to turnover.

APPLICATION FOR SHARES

All applications must be for a minimum of five shares or a multiple thereof. Application for shares should be made on the application form attached to the Prospectus (or on a printed copy thereof) and delivered, accompanied by requisite payment, before the close of the subscription list to any of the Company's Bankers at their Head Offices or any of their Branch Offices mentioned on the application forms between 10.30 a.m. and 2.30 p.m. on working days. Further copies of the prospectus and application forms will be available during office hours on working days from the Underwriters and Brokers to this issue. When no allotment is made, the deposit will be returned in full within two months from the date of the closing of the subscription list and where the number of shares allotted is less than the number applied for, the balance deposit will be appropriated towards the amount remaining payable on the shares allotted and any balance remaining thereafter will be returned within the period aforesaid by the Company's cheque on their Bankers at Bombay. Failure to pay any amount due on the shares allotted, when due, will render the shares and previous payments made therein liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

The Share Certificates will be issued within 3 months from the date of allotment.

THE BANK OF MAHARASHTRA LIMITED

CHAIRMAN, MR. V. P. VARDE'S SPEECH AT ANNUAL MEETING

UNHEALTHY COMPETITION AMONG BANKS DEPLORED

THE view that co-ordinated action among banks was lacking and that there was a tendency towards unhealthy competition was, once again, expressed by Mr. V. P. Varde, Chairman of the Bank of Maharashtra Limited, when he addressed the Twenty-seventh Annual Meeting of the Bank held at Poona on Tuesday, 27th March 1962. Mr. Varde regretted that the bigger banks took decisions in the individual interests of their own institutions, without keeping in mind the broader perspective of the needs of national economy, in general, and of Indian banking, in particular. He attributed this feature to the absence of a clear policy at the national level with regard to the development of banking in the country. Characterising the whole approach to the question of determining the size of banks on the basis of working funds or deposits as "entirely irrational," he commended or acceptance the suggestion to classify the banks from the viewpoint of their status and the scope of their operation into different groups such as local, regional, national and international. Mr. Varde reiterated, in this connection, the need for a broad policy statement on the part of the Reserve Bank of India and the Union Government. He also stressed the urgency of eliminating unhealthy competition between banks by the adoption of a uniform system of interest rates.

The following is the full text of Mr. Varde's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you today to the twenty-seventh annual general meeting of the Bank. The Directors' report, balance-sheet and the profit and loss account for the year ended 31st December 1961 have been already printed and circulated to the shareholders. Following the usual practice and with your permission, I shall take them as read.

"The year 1961 was an important one not only for this Bank but for Indian banking in general. The silver jubilee celebrations of the Bank, which started in September 1960, were completed early in 1961.

Amalgamation

"As a result of the decision by the Reserve Bank of India to weed out uneconomic or unsound banks by a scheme of amalgamation with bigger and sounder banks, the Bank of Maharashtra took over in 1961 the assets and liabilities of three banks functioning in the State of Maharashtra, namely, the Bank of Nagpur, the Bank of Konkan and the Bharat Industrial Bank. The depositors of these banks, under the scheme approved by the Government of India, were paid the full amount of their deposits by the Bank of Maharashtra. Steps are being taken to recover amounts out of frozen assets of these banks to enable this Bank to make at least part payments to the former shareholders of the said banks. With the branches taken over from these banks and the three branches opened by us during the year, we are now having 79 branches.

"With the reunion of Goa with the mother country, the Directors decided to open two branches in that area and applied for permission to the Reserve Bank of India. Goa has closer contacts with Bombay and other areas in Maharashtra and it is only proper that this Bank should be allowed to serve that area. I hope that the authorities concerned will accord their permission at an early date.

Capital to be Raised

"With the ever-increasing deposits with the Bank, the Directors decided to broaden the base further by increasing the paid-up capital of the Bank by Rs. 10 lakhs to Rs. 50 lakhs. An application for permission has been made to the Controller of Capital Issues through the Reserve Bank of India. A decision is awaited.

"An unhappy incident affecting the interests of the Bank occurred in July 1961. Due to the breaches in the Panshet and Khadakwasala Dams, there was an unprecedented flood in Poona and our Deccan Gymkhana Branch was submerged under water and the records were damaged. On account of the courage, presence of mind and team work of the staff, it was possible to remove cash, securities and all important documents to a safer place and also to resume normal work within less than 20 days. During the intervening period, with a little strain, we managed to pay cash to needy account-holders. The Directors decided and announced within a week of the calamity that the Bank would advance loans to rehabilitate trade and industry on easy and liberal terms to persons (whether they were customers of the Bank or not) who were affected by the floods. As many as 860 persons have taken advantage of this facility to the extent of about Rs. 28½ lakhs. Our efforts in this respect have been appreciated both in private as well as Government circles. The Bank has contributed a sum of Rs. 5,000 to the Chief Minister's Flood Relief Fund. The Board also appreciated the work of the staff by giving them reward at a function specially arranged for the purpose.

Co-ordinated Action Lacking

"Indian banking has made further progress in 1961. In a planned economy aiming at national development and rapid industrialisation, co-ordinated action in the spirit of co-operation is greatly needed. I regret to have have to say that this is found lacking among Indian banks today and there is a tendency towards unhealthy competition. In my speech last year, I had referred to this matter and suggested that bigger banks, instead of taking unilateral action, should consider what effects their decisions would have on smaller units and that they should function in a manner as would assist younger and smaller banks in the country. What is noticed, however, is that the bigger banks take decisions in the individual interests of their own institution only and not keeping in mind the broader perspective of the needs of the national economy, in general, and of Indian banking, in particular. This is due, in my opinion, to the absence of a clear policy at the national level with regard to the development of banking in the country. Neither the Government of India nor the Reserve Bank of India has in fact made any statement on the overall policy with regard to the future structure or character of the banking sector. Nowhere in the three voluminous plans issued by the Planning Commission does one find any statement of policy on banking which would guide the Indian banker in framing his own policy. It has, for instance, to be clearly determined whether there is scope for the existence of small banks in the country or whether there should be only a few large banks, as officers of some banks which have now grown big have frequently suggested. Big and small are relative terms and, therefore, it will be necessary to determine what content these terms should have.

"The absence of any clear definition has led to a demand for creating a new special category of medium-size banks. The whole approach to the question,—based as it is, on the side of working funds or deposits—(which are liable to fluctuate), is, in my opinion, entirely irrational. It would be much more useful and logical to classify the banks from the viewpoint of their status and the scope of their operation into different groups such as local, regional, national and international. It should not be difficult to define these concepts clearly and lay down detailed criteria for the purpose. While commending this approach, I would again stress the need for a broad policy statement on the part of the Reserve Bank of India and the Government of India on this question. According to me, all those types of banks have a place in the national economy. With the introduction of the deposit insurance scheme and the strict inspection to which the Reserve Bank subjects all the banks, there is no longer any basis for questioning the stability of banks of smaller sizes. It would, therefore, be best for all banks to adopt a uniform system of interest rates; thus eliminating unhealthy competition between them.

"In his last speech as the Chairman of the State Bank of India, Shri Bhattacharya has stressed the need for concerted action on the part of banks for the development of Indian banking and has given the assurance that he is prepared to co-operate in the matter. Now that he has assumed office as Governor of the Reserve Bank, I would appeal to him to take the lead and guide Indian banking in evolving a proper banking structure for the country.

Accounts

"I now turn to the statement of accounts under consideration. You will notice an increase of Rs. 4.42 crores or 29 per cent in deposits during the year. This rise is assuredly a satisfactory one, more so, when the growth in the total of all the scheduled banks works out at about 8 per cent in 1961. Although some part of the growth in deposits was due to the amalgamation of three banks, it cannot be denied that the rise in deposits indicates the confidence of the public on this Bank. On the assets side, there is an increase of Rs. 85 lakhs in investments which are mostly in Government securities. This is in view of our practice of giving adequate security to the depositors by maintaining a high liquidity ratio, although the earnings of the bank are thereby comparatively low. Our ratio of investments to deposits is about 38 per cent. Our cash and bank balances are about 11 per cent of deposits. You will thus observe that the Bank has a liquidity ratio of more than 45 per cent, as against 27½ per cent suggested by the Reserve Bank of India. If we take into consideration the amount with other banks on our account and in call deposits, the ratio will be still better. On the advances side, the increase is to the extent of Rs. 2.93 crores. Due to the increased tempo of industrialisation in Maharashtra, we owe a special duty and responsibility to the industries which look to us for necessary help. Hence this rise was inevitable.

Development of Maharashtra

"Several new industries, big and small, have been coming up in Maharashtra. But most of them continue to be confined to the established industrial regions such as the Bombay-Poona area. The Government of Maharashtra has very rightly set its face against this concentration of industries in particular areas and is keen on developing the State in a balanced manner. It has been paying particular attention in this respect to the industrialisation of such backward areas as Marathwada, Konkan and parts of Vidarbha. The Industrial Development Board is soon to be converted into an autonomous corporation and its main function will be to develop industrial areas in industrially backward regions. The Government has also decided to set up a Small Industries Corporation and this, too, will presumably encourage the growth of small industries in areas which are now mainly agricultural. Moreover, the Government has plans to start industries in what it calls the joint sector in collaboration with private industrialists. In some of his recent speeches, the Chief Minister has referred to this sector and invited industrialists to send to the Government projects for industries to be started in the hitherto undeveloped regions.

"All these efforts are highly praiseworthy and, so far as the development of power resources is concerned, their success seems to be assured. The Bank of Maharashtra has its own part to play in this balanced development of Maharashtra. Apart from the fact that credit facilities will be available through the network of its branches, the Bank thinks that it can make special efforts to meet the financial requirements of private as well as joint sector enterprises in the new areas.

"During the year under report, there is an increase in the amount under premises and safe deposit vaults. This is because of the buildings and vaults taken over by us from the amalgamated banks. For the same reason, there is an increase in the non-banking assets.

"A glance at the profit and loss account will show you that gross income has increased by Rs. 19.16 lakhs. Out of this Rs. 15,30,000 are due to increase in interest received. In the commission and discount account, there is an increase of Rs. 3,65,000 over the previous year. From the increased income, Rs. 7,86,000 represent the increase in interest paid on deposits and Rs. 5,33,000 the increase in expenditure on establishment. Thus, out of the total income, 46.68 per cent represents payments to depositors and 30.18 per cent expenditure on establishment. You will note that this year the net profit has been arrived at after meeting the necessary provision for income-tax. A sum of Rs. 4.90 lakhs has been transferred to statutory reserve and other reserves which is 59 per cent of the profits, as against 20 per cent suggested by the Reserve Bank of India. The Directors have recommended a dividend at 9 per cent taxable—same as last year—a rate 'which you will consider satisfactory' and which I hope can be maintained in future on the capital that may be necessary to be increased from year to year to keep pace with the growth of deposits.

Directors

"During the year, the Board of Directors accepted with regret the resignation of Shri F. D. Pudumjee on grounds of health. He was on the Board of Directors from the very first year. Shri Pudumjee had always taken keen interest in the affairs of the Bank during the last 26 years and the Board of Directors have recorded their grateful appreciation of the meritorious services rendered by him.

"Shri Shantanurao Kirloskar, who was on the Board of Directors, had resigned consequent on his appointment as a Director on the Bombay Circle of State Bank of India in 1956. When the period of his nomination expired last year, we requested him to rejoin us and he was co-opted as a Director in July 1961. The Bank has ever-increasing responsibilities for rendering proper services to the growing number of industries in Maharashtra and the presence of Shri Kirloskar, who is well known as an industrialist not only in Maharashtra but all over India, will be beneficial to us. Shri Vijaysinhrao Dafale, Raja of Jath, was also co-opted at the beginning of 1962 and we are fortunate to have the benefit of his experience. Shri Dafale was a member of the State Assembly for the last five years and has now been elected a member of Parliament. You will thus observe that the Board of Directors are always keen to infuse new and younger blood from different walks of life by inviting men of experience, maturity and responsibility to join the Board. I am sure you will support this policy.

Staff Relations

"During the year under report, our relations with the staff continued to be cordial, and I am glad to report that every employee of whatever rank is inspired with the sole aim of making this institution prosperous and more useful in the service of our country. Although the staff taken over by us from the amalgamated banks is under a scheme of the Reserve Bank of India, for three years, we have granted them increments and certain facilities beyond the scope of the scheme. Rules are being finalised to give benefit to the staff members under the staff benefit fund that was started last year and to which a sum of Rs. 10,000 has been added this year.

"On behalf of the Board and on my own behalf, I convey my best thanks to the entire staff led by our able and popular General Manager, Shri C. V. Joag. But for their willing, enthusiastic co-operation, the Bank would not have made such progress during the short period of 26 years. I am also grateful to the members of the Local Advisory Committees and my colleagues on the Board whose co-operation and guidance made my task lighter and more pleasant.

"I have also to thank the large number of our depositors, clients and shareholders for their ever-increasing confidence in the Board, which has enabled it to carry out the high ideals with which this Bank was established. I have no doubt that, with the continued support of you all, the Bank will grow from strength to strength."

KAMANI ENGINEERING CORPORATION LTD.

KEEN COMPETITION IN EXPORT MARKETS

MR. R. H. KAMANI, CHAIRMAN, CALLS FOR HELP AND ENCOURAGEMENT FROM GOVERNMENT

IN his speech at the Sixteenth Annual Meeting of the Kamani Engineering Corporation Ltd., held at Bombay on Friday, 30th March, Mr. R. H. Kamani, Chairman of the Company, drew attention to the keen competition which specialised engineering goods had to face in foreign markets from established international manufacturers. He called for favourable consideration of the recommendations of the Mudaliar Committee to increase exports. Mr. Kamani briefly reviewed the progress made by the Company in the many facets of its activities and pointed out that the Company was one of the ten firms in the world capable of undertaking electrification of railway traction.

The following is a summary of Mr. Kamani's speech:

Accounts

Referring to the working of the Company as per the balance-sheet and profit and loss account, he said that the results for the year under review were good, with profits before providing for depreciation and Managing Agents' remuneration showing a substantial increase over the previous year. Sales increased to Rs. 2,68,68,131 from Rs. 2,36,89,673.

Enumerating the allocations, Mr. Kamani stated that the allocations included Rs. 1.60 lakhs for Managing Agents' remuneration, as against previous year's figure of Rs. 1.62 lakhs and Rs. 5.85 lakhs for depreciation, as against Rs. 4.89 lakhs for the previous year. The provision for taxation had been increased from Rs. 6.70 lakhs to Rs. 9.25 lakhs and the development reserve from Rs. 0.23 lakh to Rs. 0.40 lakh. The general reserve and gratuity absorbed Rs. 1 lakh and Rs. 0.10 lakh against no absorption in the previous year.

He announced that the Directors have recommended a dividend of 9 per cent (subject to deduction of tax at source) on ordinary shares, as against previous year's 8 per cent (subject to deduction at source). They had also recommended dividend on preference shares. After providing Rs. 4.78 lakhs for the proposed dividend, a sum of Rs. 5,162 has been carried forward against Rs. 3,381 brought in.

Production

The production tempo had further accelerated during the year under review, the production having registered a slight increase over previous year's production, he told the meeting. Remarking on the availability of steel, Mr. Kamani stated that, although the position had somewhat eased, certain lighter sections required for transmission line tower industry continued to be difficult, in spite of which, however, the production reached an all-time record of 2,107 metric tons for December 1961. The production level maintained at present was on an average 50 per cent higher over the year under review.

Mr. Kamani observed that the requirements of transmission lines during the third Five-year Plan will be about 15,000 miles. This will require, according to Mr. Kamani, about 200,000 tons of towers for the third Plan period, during which the generation of electric power will be raised from 5.8 million kilowatts to 11.8 million kilowatts. To achieve these targets, it was absolutely essential that the lighter sections required by the tower industry be made easier, Mr. Kamani added. He informed the shareholders that the Government have already appointed a Study Group to assess, among other things, the capacity in the transmission line tower industry and their development programme and to examine the difficulties experienced by them and he hoped for a good outcome.

Erection

Referring to erection activities, Mr. Kamani stated that the erection department had been further strengthened and expanded and now it was one of the largest units of its kind in the country. New tools and tackles have been designed, tested and put to operation to ensure greater efficiency. During the year under review, the Chairman said, the construction of land route of the 220 kV Koyna-Bombay Transmission Line was completed. This was the first 220 kV line in the country to use one of the largest-size conductors ever used and the terrain, namely, Western Ghats, was one of the most difficult ones. He also informed that at present construction work is going on in various parts of the country, viz., Behrampur, Burdwan, Chakradharpur, Chittaranjan, Daltangunj, Jammu, Nadiad and Villupuram.

Railway Electrification

Mr. Kamani was glad to inform the shareholders that satisfactory progress was being maintained in the execution of this pioneering work and that the most complicated operation of wiring was being carried out to the satisfaction of the authorities without the help of any foreign experts. There were only ten firms in the world today who could undertake such a complicated job and he was glad their firm was one of them.

"Tractamount" Road Roller

Mr. Kamani referred to the successful launching of the production of the completely new and improved Model Mark II "Tractamount" Roller, as a result of experience gained on earlier models already in use in the country, with the active collaboration of Messrs. E. V. Twose (Mfg.) Ltd., England.

Export

It was a matter of gratification to note that the active efforts put in by the Company since about two years had started showing some good results. However, the Company had to face severe competition in the export market from well-established, international manufacturers which was becoming increasingly difficult in the absence of adequate facilities and active support of the Government. Mr. Kamani said that the measures suggested by the Mudaliar Committee are under active consideration of the Government. He felt that it was important that these recommendations and various other progressive measures are implemented by the Government at an early date in order to encourage additional exports of specialised engineering goods like transmission line towers.

Agency Business

Mr. Kamani referred to the agency business as satisfactory and found ample scope for business with the increased tempo of the third Five-year Plan, as was evident from the fact that the Company had recently secured business for Kandla Thermal Power Station in Gujarat valued above Rs. 1 crore. He thanked all the workers and the staff for their good efforts and co-operation and the shareholders for the continued encouragement for the present achievements and bright future.

Note: *This does not purport to be a report of the proceedings of the annual general meeting.*

BUSINESS ORGANIZATION RECONSTRUCTED

BY U. P. VARMA

Price Rs. Seven Only

In spite of Business being based on a principle of profit and gain, it must be subjected to the social discipline to bring in social productiveness. Keeping this in view the traditional and routined line of treatment has been left in the book and provided a changed framework for studying Business Organization.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

MR. G. N. NOEL-TOD ON PROBLEMS OF SUGAR INDUSTRY

NEED FOR ENCOURAGING DOMESTIC CONSUMPTION

AN impressive survey of the problems confronting the sugar industry was made by Mr. G. N. Noel-Tod, Chairman of the East India Distilleries and Sugar Factories Ltd., when he addressed the shareholders at their Sixty-fourth Annual General Meeting held at Madras on Wednesday, 28th March 1962. Drawing pointed attention to the huge surplus stocks of sugar, Mr. Noel-Tod feared that a further enforced cut in production in the coming season was inevitable. He declared that, in view of the high rate of loss per tonne of sugar expected, the long-term future of the industry should not be linked to any idea of exports, unless and until there was a radical rise in world price. Until then, and for at least the next few years, he declared, there seemed to be no alternative to Government facing up to a temporary loss of revenue by reducing the basic excise duty on sugar (to the pre-1957 level of Rs. 111 per tonne, as against Rs. 222 at present) in order to stimulate internal consumption. Mr. Noel-Tod also urged the immediate introduction of a sliding-scale price for cane according to quality. Further, he referred to the Company's schemes for diversification of manufacturing activities. Before concluding his speech, he made an important announcement to the effect that Mr. H. V. R. Iengar, until recently Governor of the Reserve Bank of India, had agreed to take up the appointment of Chairman and Managing Director of the Company.

The following is the full text of Mr. Noel-Tod's speech:

"GENTLEMEN,

"I extend to you a warm welcome to this, the sixty-fourth annual general meeting of the shareholders of this Company. The accounts for the year ended 30th September 1961, together with the Directors' report thereon, have been in your hands for the statutory period and, with your permission, I will take them as read. The sad events which have led to my presiding at this meeting have been recorded in the Directors' report, and it only remains for me to place on record here our profound gratitude to the late Mr. Wonfor and the late Mr. Srinivasan for their outstanding services to the Group over a long period. Mr. Srinivasan, in his speech at last year's meeting, covered extensively the development of the Group since the war, and I am indeed glad that there exists this record of the progress that was achieved under his chairmanship and, before him, that of Mr. Wonfor.

Profit After Tax

"You will have observed from the accounts that the net profit before tax and the net profit after tax have declined slightly as compared with the figures of the previous year. This largely comes about through a sharp increase in interest paid, by reason of the loans it has been necessary to raise to finance the construction of our Compound Fertiliser Factory at Ennore, which increase was forecast in last year's speech, and a decline in profits on sugar, on which I will comment later. On the other hand, I am glad to say that the profits from general merchandising have increased substantially. We are accordingly reaping the benefits not only of the reorganisation of our merchandising business, which has been effected over the past two years, but also of your Board's consistent policy of retaining diversification in our operations, so that, if circumstances are such that one particular side of our business is adversely affected, there remains the opportunity to make good a setback in one direction by an advance in another. You will also have noted that the ratio of total dividend paid to total net profits after tax is less favourable than it was last year, arising in part from the additional amount of dividend payable by reason of the increase in the equity capital which took place in 1960.

"Considering, however, that our Fertiliser Factory at Ennore was under construction during the whole of the period under review and, therefore, no profits accrued therefrom, I do not think that there is any cause for apprehension over the long-term prospects of the Group. In the shorter term, I expect the results for 1961-62 to be generally comparable with those of the year under review, even though little income may be expected during this year from our Ennore Fertiliser Factory. We are, however, confident that this factory will be contributing in full measure to the Group's profits in 1962-63, which means, in fact, that I have confidence that our contractors, Messrs. Simon-Carves, will 'deliver the goods.'

Sugar Industry

"Let me now say something on the subject of sugar. The problems facing the sugar industry have received considerable prominence in the Press for some time now and you must all be aware of the grave situation with which the industry is faced. For the past two years, my predecessor has referred to the mounting surplus of stocks. The position today is that we are only now clearing stocks manufactured during the 1960-61 season which finished in June last year, despite having exported 9,000 tonnes to America in September last year. The whole of our production during the current season to date is lying unsold in our godowns, to a total value, at cost of Rs. 1.5 crore. You will appreciate what a heavy burden this means for the Company, especially at a time when we are engaged in commissioning our new fertiliser factory at Ennore.

"Time and time again, the attention of the authorities has been drawn to the fact, by official representations and in speeches of my predecessor, that cane is planted one year before it is crushed and it is more than desirable that both the grower and the factory should know at the time of planting what will be the amount of cane available and what price will have to be paid for it. For the current season, the Government of India have imposed a 10 per cent cut on production throughout the country, but, by reason of the exclusion of new factories and small factories from the scope of the Ordinance, only a few of the factories in Madras State will fully be affected during this sugar year. Nellikuppam's quota is 30,706 tonnes, as against 34,117 tonnes actually produced last year. We have pointed out clearly to the Government of India, with the support of the Government of Madras, that, as is our usual custom, we have entered into forward contracts with our growers. As things stand at the moment, there may be 60,000 to 70,000 tonnes of cane left standing at the end of the season for which the growers will have no means of disposal, for the manufacture of *jaggery* is practically unknown in the Nellikuppam factory area. I am, however, hopeful that some way out of this impasse will be found, which will be fair both to the growers and to the factory. The Government of India are seized of the position and early orders are awaited.

"Meanwhile, we are still await an announcement of the cane prices for the 1962-63 season and also the quantity of sugar to be produced by individual factories. I fear that a further cut in production next year is inevitable.

Huge Surplus

"As regards the all-India position, you know that the current sugar year started with stocks in hand at all factories in the country amounting to 12 lakh tonnes, rather more than half the normal yearly offtake. Despite the cut of 10 per cent, production this year is likely to amount to between 28 and 30 lakh tonnes. Again, despite the relaxation of control on internal sales of sugar, it seems unlikely that internal consumption will rise to beyond 23 to 24 lakh tonnes, unless Government decide to slash the excise duty. The prospects of exporting more than 5 lakh tonnes of sugar this year are not good. Assuming, however, that 5 lakh tonnes are exported, still the surplus stocks of sugar at the beginning of the next sugar year will be not less than they are at present, which justifies my apprehension of a further enforced cut in production.

"To export the current surplus appears to be the only alternative to dumping the sugar in the sea. The type of sugar made in India is a factory white, as opposed to a refined sugar, and it will not keep indefinitely. In view of the high rate of loss per tonne of sugar exported, I suggest that the long-term future of this industry should not be linked with any idea of exports, unless and until there is a radical rise in world price. Until then, and for at least the next few years, there seems to be no alternative to Government facing up to a temporary loss of revenue by reducing the excise duty on sugar in order to stimulate internal consumption, and so use up the present unproductive excess stock, and by reason of the higher internal consumption gradually restore the quantum of revenue to something approaching its present figure. The present *per capita* annual consumption of sugar in India is 5.5 kilos, as compared with 55 kilos in the U.K. An increase of only 1.2 kilo *per capita* in India will represent an additional consumption of 5 lakh tonnes of sugar. My suggestion in this regard is that, at least as a first step, the basic excise duty may be restored to the pre-1957 level, that is, Rs. 111 per tonne, as compared with the present rate of Rs. 222 per tonne.

Cane Price

"There are other steps which should be taken to remedy the situation. These would involve a radical change in Government's attitude to the industry. One cannot escape from the fact that conditions for the manufacture of sugar at competitive rates are vastly different in different parts of the country, and the present policy of maintaining a high minimum price for sugarcane, this price being paid per tonne dead weight, without regard to quality, is subsidising uneconomic areas at the expense of those more fortunately placed.

"Surely there can be no other agricultural commodity in the world which is paid for irrespective of quality. At last, however, there are indications that the Government of India is being converted to the view that we have propagated for so long that the cane price must be linked to quality. I hope they may go even further than this and appreciate that the best method of getting the right amount of cane grown to give the quantity of sugar the country needs will be to remove controls both from cane price and from sugar price. Factories are dependent for their profit on having adequate supplies of cane and I suggest that their judgment can be relied upon to ensure that enough, but not too much, is paid to secure this end. A natural consequence would, of course, be that, in some areas, the cultivation of the cash crop of cane would give way to the cultivation of food crops, which would be most desirable. If Government cannot, for political reasons, go as far as this, at least the immediate introduction of a sliding scale price, according to quality, will go a long way towards achieving the desired end of lowering the cost of sugar and relating production more closely to consumption.

"While Government have gone so far as to announce that no further licences will be granted for the establishment of new sugar factories or the extension of old ones, I would like to see this policy taken one step further forward by the withdrawal of licences for new factories in respect of which active steps towards their establishment have not yet been taken. Even so, production in South India is likely to rise steeply, inasmuch as six new factories will go into production in the 1962-63 season and at least an equal number appear to have taken active steps towards commissioning units within the next two years.

Refund of Cane Cess

"Although our relations with the Government of Madras have been generally most amicable, and we have received the fullest support from them in most of our difficulties, I must enter a protest against their refusing to refund the cane cess on sugar exported in the last three years. They have claimed that they see no necessity for this refund on the grounds that the Company has received a refund of excise duty. This is so, but, even so, the Company incurred a loss of Rs. 7,67,000 on sugar exported last year. Refund of cess would have amounted to Rs. 79,500. Further, there is an established precedent in that the Government of Madras did refund cane cess on sugar exported in the year 1958, and the Government of India has requested all State Governments to sanction this refund in the interests of helping to solve the superabundance of stocks with which the industry is at present burdened. I do hope, therefore, that our Government here will be able to fall in line with this policy and refund cane cess on exports, past and future.

Price Linking Formula

"Reference was made last year to a contingent liability for the Company to make some further payment on cane crushed since November 1958 under the Price Linking Formula announced by Government, but not yet implemented. Since this Price Linking Formula was first announced, there has been a complete reversal in the fortunes of the industry, and I cannot see how the industry would find it possible to find the cash to pay anything extra in respect of past seasons. It is to be hoped that Government will soon clear the air by announcing what action, if any, they propose taking on the Price Linking Scheme.

"We are still reasonably fortunately situated in the South in that we can sell whatever sugar is released without much difficulty within the period allowed for its sale. Prices, however, are still below those obtaining during the control period. Having regard to the smaller production allowed per factory and the probability that a certain part of the output will have to be exported, without any profit and possibly a loss, there can only be a contraction in the Company's profits arising from sugar. It would be wrong to gloss over the seriousness of the situation, and I can but hope that it will be possible to give you a more reassuring view of the outlook a year hence.

Fertilisers—Further Expansion

"The picture as regards fertilisers is more encouraging and the progress made during the year under review has been referred to in the Directors' report. For the future, the addition of ammonium phosphate from our Ennore factory to the range of fertilisers that we can market should result in a further substantial improvement. The confidence of your Board in the value of this side of our business is illustrated by the fact that we have already applied to the Government of India for permission to double, in due course, the capacity of our Ennore factory. Assuming we obtain the necessary permission, the actual expansion will take place after we have gained some experience in manufacture and marketing of this fertiliser, and, when that time comes, possibly in 1962-63, it will be necessary for your Board to give consideration to ways and means of raising the additional capital required.

"Last year, reference was also made to the issue of a licence by the Government of India to a consortium of two well-known American companies and this Company to erect a fertiliser factory at Visakhapatnam to produce about 350,000 tons of fertilisers per year. Progress on this project has not been quite as much as might have been hoped for, the main stumbling block having been the finding of a suitable site at Visakhapatnam. I believe, however, that, with the co-operation of the Government of India, this problem will soon be solved. The participation of this Company in the capital of the new Visakhapatnam Company will be small compared to the contribution of our two American partners, and it is they who have the major responsibility for the integration of the new factory, receiving, of course, from us all the assistance we can give by way of experience of local conditions and contacts with the Governments concerned. I would like to take this opportunity of expressing my appreciation of the vigour which our American partners are displaying in overcoming initial difficulties, and I can assure them of our continued full support. When the Visakhapatnam factory comes into production, this Company will have an even more important part to play, namely, in the distribution of the product. The distribution of fertilisers is a specialised trade, but I believe that we have the necessary organisation and experience to ensure that the very large production to be expected from Visakhapatnam moves without undue delay into the hands of farmers and so into the soil.

Ceramics—Foreign Collaboration

"As regards ceramics, you will have noted from the report that last year, owing to the necessity to overhaul the thrift kiln, which occurs from time to time, production was reduced. We are still able to sell without any difficulty our total output and during the year substantial progress has been made towards finalising a collaboration agreement with the well-known U.K. manufacturers of ceramic ware, Messrs. Doulton & Co., Ltd. This agreement places at our disposal technical advice of the highest quality from Doulton and, with this advice, we propose to install a third kiln at Ranipet and to improve the quality of our output generally. There have been protracted negotiations with the Government of India as to the exact terms of this agreement, but I am glad to say that these negotiations have now reached the final stage. I would also like to make a special reference to the fact, that, during the year under review, even though Government's final approval to the agreement was still awaited (and is still awaited), our friends, Messrs. Doulton, have without stint given us the most valuable expert advice on various problems.

"I am glad to be able to report that labour relations have, in general, continued to be satisfactory during the year under review. The Sugar Wage Board recommendations have been the subject of detailed negotiations with staff and labour, and it is hoped that we shall shortly be able to conclude a satisfactory settlement with the unions concerned. I am further glad to be able to record my sincere appreciation of the contribution to the maintenance and development of the Group's interests given by all members of the staff and the Directors of your Company. In particular, I should like to take this opportunity of placing on record your Board's gratitude to Mr. P. Hadfield, who relinquishes his appointment of Managing Director on the 31st of this month, for his services to the Group over more than 30 years. Mr. Hadfield recently left Madras to take up the appointment of Managing Director of our London subsidiary, Parry Murray & Co. Ltd. He remains a member of this Board, so that his vast experience and wise counsel will remain at our disposal.

Mr. H. V. R. Iengar

"Finally, you may have noticed in the announcement of my appointment as Chairman of this Company that I myself am nearing the end of my service in India. I am very happy to be able to tell you that Mr. H. V. R. Iengar, lately Governor of the Reserve Bank, has agreed to join the Board of this Company and, later in the year, to take up the appointment of Chairman and Managing Director. Your Directors will, therefore, co-opt him to the Board, and an announcement regarding the date of his becoming Chairman will be made in due course. On this coming about, it is the intention that I shall revert to my previous appointment of Vice-Chairman and Managing Director, until I leave India. Mr. Iengar needs no introduction to you and, for my part, I am very happy to feel that I shall be placing the direction of the Group affairs into such competent hands.

"I would also like to take this opportunity of announcing the following appointments which will be effective from 1st April 1962:

(i) Mr. M. J. Edwards will retire from the Board of Parry & Company Limited, of which he is Chairman, to take up the appointment of Deputy Managing Director of this Company,

(ii) Mr. John K. John, Vice-Chairman of Parry & Company Limited will be appointed Chairman *vice* Mr. M. J. Edwards, and

(iii) Mr. N. G. Bowen, Director of Parry & Company Limited, will be appointed Vice-Chairman *vice* Mr. John K. John.

"I now formally move the adoption of the Directors' report for the year ended 30th September 1961."

The Directors' report and the accounts for the year ended 30th September 1961 were adopted and a final dividend on the ordinary share capital of the Company at the rate of 14-2/7 per cent subject to deduction of Indian tax, was declared for the year ended 30th September 1961 payable on 29th March 1962.

Mr. V. Ramakrishna and Mr. R. Venkataswamy Naidu were re-elected to the Board and the Auditors, Messrs. Lovelock and Lewes, were re-appointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

THE INDIAN BANK LIMITED

FOUNDRY INDUSTRY IN INDIA

LESSONS TO BE LEARNT FROM FOREIGN EXPERIENCE

THERE are at present over 2,000 iron foundries in India. Of these, 450 are situated in West Bengal and nearly 400 in Maharashtra and Gujarat. Punjab has nearly 300 foundries, Uttar Pradesh 215 and Delhi 155. The other States, too, have varying numbers of foundries. The pattern of location of the industry reveals that it is largely concentrated in the two major industrial regions, that is, the Calcutta and Bombay areas. In the South, the industry is concentrated in the Madras and Coimbatore areas. The foundries in the Coimbatore area are mostly specialising in the production of castings for pumps and electric motors. In the North, most of the foundries in the Punjab and Uttar Pradesh have developed on cottage industry lines, producing castings for agricultural purposes and for the production of weights and measures, respectively. The new large-sized foundries that have come up during the last decade in India at the rate of 2 to 3 per year produce quality castings for the automotive and other engineering industries. There are about 20 *mechanised* grey iron foundries which are largely concentrated in the Eastern Zone.

Total Output

As of 1960, the industry's total production of all types of iron castings aggregated 896,000 tons. A break-up of this output figure shows that pressure pipes accounted for 225,000 tons, rain water pipes 25,000 tons and railway sleepers 250,000 tons, while the rest of the items related to commercial utility castings for the use of a number of other industries. The bulk of the production of castings came from a relatively small number of large-sized units, while the production of a large number of small-sized units distributed all over the country accounted for only 20 per cent of the total castings produced.

Besides the iron foundries mentioned above, there are now 15 steel foundries in the private sector, in addition to those in the public sector. The largest consumers of steel castings are the railways; the cement, construction and sugar industries are next in order of importance. It is said that the steel foundries in India are well equipped and comparatively well planned. As of 1960-61, the steel foundry industry produced an aggregate of 36,000 tons of steel castings. In the malleable iron field there are 10 foundries, in the field of high duty iron there are four and in that of alloy iron seven.

Problems to be Solved

The Indian foundry industry, covering both iron and steel castings, is facing today a number of problems. These, according to the Indian Productivity Team which, before going abroad to study the foundry industry in Sweden, U.S.A. and Japan, paid a series of visits to several foundries in India, are summarised below:

(1) Lack of adequate and regular supplies of essential raw materials such as foundry pig iron grade I and II, graded scrap for steel melting and low phosphorous pig iron for the malleable iron industry.

(2) Lack of adequate supply of processed raw materials like high quality silica sand, bonding materials, core oils and binders, etc.

(3) Inadequate development of auxiliary industries to supply to the foundry industry such items as chaplets, moulding boxes, pins and bushes, etc.

(4) The high ash content of coke and the difficulties experienced in getting adequate supplies of coke.

(5) Lack of adequate pattern-making capacity, especially metal patterns and core boxes for mechanised foundries.

(6) Inadequate availability of foundry equipment and machinery from indigenous sources.

(7) High inventory of foundry raw materials and spare parts due to the difficulties in getting regular supplies.

(8) Lack of trained technical hands both at supervisory and non-supervisory levels.

(9) Lack of adequate testing facilities.

(10) Lack of proper incentives based on well-planned schemes by which wages can be linked to production.

(11) The general average deficiency in application and control of process details.

(12) Lack of proper understanding between management and labour towards one single objective of increasing productivity.

With so many difficulties facing it, the foundry industry is still expected to achieve under the third Plan, the following production targets, in both the public and private sectors, together under the third Plan:

1,200,000 tons of grey iron castings,
200,000 tons of steel castings,
20,000 tons of steel forgings.

The actual requirements by the end of the third Plan are likely to be greater still, and the additional capacities proposed to be established largely in the public sector may not be quite sufficient. Whatever be the rate of progress in the industry, the various problems it is currently facing will have to be solved at an early date. Considered from this point of view, the report of the Indian Productivity Team (leader: Mr. N. G. Chakrabarti, Works Manager, Foundry Division, T.E.L.Co., Jamshedpur) on the foundry industry in Sweden, U.S.A. and Japan (published by the National Productivity Council, 38, Golf Links, New Delhi, and priced Rs. 4.50) will be of considerable value to the industry in this country. The more relevant findings and recommendations contained in the report are given in the paragraphs that follow. These pertain to productivity and are applicable to conditions in the foundry industry in India.

The Team's study of the conditions in the foundry industry of the three countries visited by it has enabled it to find out the principal factors, one or more of which have influenced the trends towards higher productivity in those countries. These factors are:

(a) rising labour costs,
(b) the need to prevent inflation,
(c) the need for higher standards of living,
(d) larger demand for castings,
(e) emphasis on quick deliveries,
(f) high degree of international competition from substitute materials, and
(g) the urge to maintain a high degree of technological progress at the national level.

Foundry Productivity

Based on the experience of its study tour, the Team has defined "foundry productivity" as an objective to expend minimum hours per ton of castings produced consistent with high quality. This definition, according to the Team's clarification, does not imply a wage-freeze. On the other hand, it lays emphasis on 'quality'. This implies not only the quality of the finished product but careful quality control at all stages of operations. If this concept of quality is accepted as one of the prime factors, operational costs at all stages will gradually diminish and losses in terms of rejections will also diminish with corresponding increases in productivity. Three steps have been indicated for reaching the objective of higher productivity. The first step is to establish man-hours for every aspect of the operation leading to the end product; these data must be well recorded and treated as the base or zero point. The second step is to ensure that in no case the man-hours for any operation are allowed to increase as a result of negligence. And the next step is to find ways and means of cutting down each of these operational hours. These steps, according to the Team, are applicable to all sizes and types of foundries.

To solve the other problems faced by the foundry industry, the Team has made certain recommendations. According to it, foundry grade pig iron should be produced in quantities which would be slightly surplus to requirements. Many more grades and qualities of foundry pig iron should be produced for the efficient development of alloy iron foundries, including malleable iron foundries. The Indian Standards Institution should formulate a specification for the size of the foundry grade pig iron, so that indigenous manufacturers can start manufacturing it in the requisite size. An adequate number of distribution depots, where adequate stocks of foundry pig iron can be kept, should be opened at the major consuming centres. Proper carbonisation techniques should be adopted to produce coke to the specifications required by the foundries.

The Team has also made some recommendations for improving foundry practices in small foundries. For instance, the existing practice of hand-mixing for the preparation of sand mixtures can be replaced by the use of small-size sand mixing units. The melting practice adopted in small foundries with the aid of indigenous cupolas would need to be improved by working out a better design for cupolas to suit Indian coke with its high ash content and by standardising cupola melting practice for the production of iron castings. The conventional practice of moulding on the foundry floor should be replaced, as far as possible, by box moulding to eliminate low productivity and to avoid high percentage of rejections.

The Team is not in favour of installing expensive automatic plant and machinery without adequate maintenance and servicing facilities. But it favours mechanical aids for handling the cupola charging materials, for manual handling leads to over- or under-charging. Low frequency induction furnaces can also be used to some extent in this country. In view of the expansion proposed in the foundry industry, the Team has emphasised the need for indigenous production of a wide range of foundry equipment, including melting furnaces.

GERMAN EXPERTS' APPRAISAL OF ROURKELA

The six-member German expert delegation, which was on a 10-day visit to India to appraise the working of the Rourkela Steelworks in the public sector, concluded its study on 24th March. The impressions of the delegation, which was led by Dr. W. Janssen of the German Iron and Steel Industries Association, were reported to the Secretary, Department of Iron and Steel, Government of India. The unanimous opinion of the German experts, who had never been connected either personally or through their organisations with the construction of the Rourkela project, was that this steel plant compared favourably with the latest developments in Germany proper. Teething troubles during the running-in period of a technically complicated large unit like the Rourkela steel plant, according to the experts, were normal. In their opinion, the running-in period for the plant must be calculated to last at least two years.

It is gratifying to know, in this connection, that the German industry has already put at the disposal of Hindustan Steel Ltd. a supervisory team of experts for the plant's operation to help bridge the gap from the time of the commissioning of the various plant installations to the time when rated capacities may be reached. These experts have been released by the German industry at short notice and at a time when there is an acute shortage of trained steel personnel in Germany itself. Although no provision had been made in the original contract for such assistance, the German supplier companies have now contributed substantially towards the cost of this team which is expected to support Hindustan Seel's efforts to bring Rourkela upto its rated capacity production.

PAN AMERICAN WORLD AIRWAYS

During the last five years, major gains in the transformation of air cargo from a limited express service to a volume freight operation have been achieved by the Pan American Airways. The Company's revenue cargo ton-miles increased from 92 million in 1956 to 160 million in 1961. For the fourth consecutive year, it carried in 1961 more than 100 million ton-miles of cargo. The growth of cargo volume has paralleled a continuing campaign by Pan American to lower air freight and to attract commodities formerly limited to surface transportation.

Important factors during the five-year period were the introduction of jet transportation, conversion of advanced piston aircraft into freighters, increased emphasis on containerisation, inauguration of preloading systems, and initiation of new marketing and distribution techniques. The jet age has not only revolutionised passenger travel but also added new high-speed cargo lift. Each Jet Clipper carries up to five tons of cargo in its holds with 125 or more passengers in the cabin. Jet Clippers now link 88 cities around the world, bringing markets and manufacturers separated by half the globe within less than a day of each other. Across the Atlantic alone, Jet Clippers this summer will provide a weekly cargo lift of 850 tons. In addition to speedy passenger transport, Jet Clippers have added new dimensions to air distribution by providing daily cargo service around the world, and to Latin America, the Orient, the South Pacific, and Alaska. By surface transportation, some of these points would be six weeks away from their markets.

ANGLO-FRENCH PROJECT FOR SUPERSONIC AIRLINER

Britain and France, according to an announcement by the British Ministry of Aviation on 26th March, have agreed on the principles to govern a possible co-operative programme, with a 50-50 basis and under a joint management structure, for developing and producing a supersonic transport aircraft. The announcement said that the work on the directive requiring the British Aircraft Corporation and Sud Aviation to co-operate on formulating a joint outline project had been completed satisfactorily. They had arrived at a preliminary design for an aircraft with a cruising speed slightly higher than Mach 2 and with a capacity of about 100 passengers.

It is stated that this aircraft could be produced in two versions, one medium-haul and one transatlantic. This would serve as the basis for the possible Anglo-French development of a supersonic airliner. The two companies have just been invited to undertake design study and other preparatory work in order to enable the two Governments to reach a decision.

NEW PRODUCTS AND PROCESSES

Filing Machine

A NEW Italian machine—the Novexor rotary file—makes the slow and expensive hand filing of metals unnecessary and could replace grinding machines for the scraping, squaring and planing of light alloy castings. The machine can be used on a wide range of materials, including steels, cast iron, copper, brass, aluminium and magnesium, wood, leather and plastics. The filing is accomplished without tearing the metal or leaving finishing marks, it is stated, and the machine can be used for smoothing gold, silver and other precious metals and for finishing cores and moulds. Novexor filing machines use filing discs which are rotated on a motor-driven horizontal shaft at speeds depending on the material to be worked. The discs are cut to provide a series of small hardened teeth on the edge or on one face, or on both edge and face. The teeth differ in type, angle and spacing to suit the material to be filed and the type of work. The discs can be sharpened many times. The machine is available in two models. One is a bench machine with a filing disc and adjustable worktable at one end of the shaft which is driven by a 0.6 h.p. motor providing two speeds. It can be fitted with 8-inch or 10-inch diameter filing discs. The other model is a pedestal machine with working positions at both ends of the shaft where there are worktables which can be adjusted in height. The shaft is driven by a 1 h.p. motor providing five speeds. This model is designed to use 10-inch diameter discs only. Filing discs are made in two grades and with a range of filing surfaces.

Annealing Steel Sheets

The annealing of mild steel sheet—removing brittleness—which is essential before sheet can be used for fabricating anything from tin cans to motor car bodies, can now be done in much less time, and at a fraction of the cost with a new plant occupying less than a quarter of the space of the existing plant. This results from a technique recently perfected by the British Iron and Steel Research Association at their Laboratories at Swansea, Wales. The process can produce a variety of sheet qualities without changing the steel formula, which has been necessary until now, and can be adapted to other processes with stainless steel and high carbon steel. It will work with all thicknesses of sheet down to four-thousandths of an inch which is much thinner than what the present plant can deal with. Licences to manufacture the new plant, developed by Birlec-Efco Ltd., of Birmingham, have been granted to a number of firms in Britain. In the new process the heating and cooling cycle is reduced from as much as 150 seconds to five seconds, followed by a 30-minute period in which rolled sheet is allowed to stand at 200 to 300°C., the temperature at which it emerges from the process. For annealing, the strip is preheated in a duct containing lead-bismuth alloy, then heated to about 700°C. by electrical heating and finally quenched to 300°C. in a second duct containing lead-bismuth alloy. High efficiency is obtained with consequent low power consumption, by transferring heat collected in the quench tank to the preheating tank. The technique could be adapted to the annealing of aluminium by using mercury in place of lead alloy.

New Colour Process

Following up the work of Australian Government scientists, a Sydney firm, Electrograph Supply Co. Pty. Ltd., has developed a unit which will print a perfect four-colour reproduction in less than ten minutes without the aid of blocks, plates, screens or cylinders. The Company is one of several in Australia and overseas who have been licensed by the Australian Government's Department of Supply to apply its new method of colour reproduction. The process, known as electrograph, is a development of the already well-established electrical reproduction method, xerography. However, whereas xerography uses a black carbon powder to make the image visible and is, therefore, suitable only for black and white reproduction. The electrograph process employs liquid developers, one for each colour, which enables full colour reproduction and a much finer reproduction of black and white. Reproduction can be made not only on paper but also on a wide variety of other materials such as metals, plastics and timber. The unit manufactured by Electrograph Supply Co. has great appeal in that it reproduces speedily and cheaply. For instance, it enables litho-offset printers to reproduce a colour print at a fraction of the cost and in much less time than is feasible with the conventional machine proving process. An important factor, also, is that whereas it has hitherto been uneconomical to do colour reproduction in runs of less than thousands, the new process enables even single reproductions to be made in several colours at low cost.

Plastic Stereo for Rotary Press

Plastic stereos are being used on rotary presses by Australian newspapers. This dramatic break-through in the printing, stereotyping and advertising fields was announced recently by David Burton Stereo Service, of Sydney, makers of the plastic stereos. The company pioneered in this field in Australia and has been supplying plastic stereos to flat bed printers for over two years, but it has taken three years of experimentation to perfect the techniques for rotary newspaper presses. The announcement that this had been achieved was made only after rigid tests, under all sorts of conditions, by the metropolitan daily newspapers of all the mainland States of Australia. The verdict of the chief stereotyper of one of Sydney's leading dailies was that the stereos were "completely free of headaches" and a major advance in stereotyping. After elaborate tests "under punishing conditions" News Limited, of Adelaide, reported: "We consider that this type of supplied material, used as a substitute for matted stereos, would give the advertiser much better value by giving him much improved reproduction in newspaper advertisements." Advantages of the plastic stereos are:—infinite fidelity of reproduction; unaffected by rough handling; exceptional durability; lower cost than electros and cheaper to transport; runs of more than half a million without appreciable wear; excellent for 4-colour and fine screen reproductions up to 150 screen. One of the largest advertising agencies in Australia is now using plastic stereo.

Coal-cutting Machine

A machine which cuts coal and is operated by remote control without a man on the coal face is now being tested by the British National Coal Board's East Midlands Division. Called the "Collins Miner" the machine was conceived by Mr. H. E. Collins, a former employee of the N.C.B. Manned by 20 men for three shifts, it is claimed that it could produce 1,000 tons of coal a day—the normal output of 300 miners. The "Collins Miner" has been developed by the Coal Board in conjunction with Crawley Industrial Products of Llanelly. It is hoped that the new method will improve the economics of extraction from thin seams which account for an increasing proportion of Britain's reserves of high-quality coal. Equipment for the machine is carried on a train of nine rail-mounted bogies, running along the central roadway, and entirely controlled by one operator. On the front vehicle a cutting unit is mounted which bores at right angles to the roadway. The unit carries its own automatically extending belt conveyor, ventilation ducting and cables for power and control. Fully extended, the cutter will excavate out of the seam a passage of 100 yards long and 6 to 7 feet wide. As each passage is cleared the unit moves forward, leaves a narrow section to support the roof, then repeats the operation. Passages are cleared on both sides of the roadway. The machine's top speed of working is 7 feet a minute, and the ultimate output aimed at is in the region of 350 tons a shift.

Controlling Tubes

A simple, but effective, accessory for the tidy control of rubber tubing in the gas welding industry has been developed and patented by an Australian company, the Commonwealth Industrial Gases Limited, of Sydney, Australia. Known as the Comweld Clip-it, the device enables multiple hoses to be easily clipped together, leading to tidyness in the workshop and a reduction in accident risks. It also enables rubber tubing to be suspended overhead or attached to walls with minimum effort. At present, it is manufactured to fit tubing of 3/16 in. bore (¼ in. outside diameter), but larger sizes will be introduced progressively.

Preserving Milk

A new process of milk treatment, which is being used in Europe, might boost Australia's milk exports to South East Asian countries. The process, called "uperisation," was among the dairy developments investigated by Mr. Roy McDonald, an executive of the Moulded Products group of companies. In Switzerland, he found that "uperised" milk is being sold to consumers up to a month after being packaged. An important "break-through" in packaging methods has been the ability to pack the milk in completely germ-free paper cartons. "Uperised" milk has been certified by dairy experts to have practically the same food value, taste and composition as pasteurised milk.

Bonding Titanium Alloys To Steel

A process for bonding titanium alloys to steel has recently been developed by I.C.I., Britain. A bar of steel is sealed inside a "container" of titanium alloy and hammer forged into plates at 1,050 degrees Centigrade. The plates are then rolled into sheets 0.050 inch thick at 900 degrees Centigrade and annealed at 700 degrees. The final product is a steel sheet completely surrounded by a thin adherent layers of titanium alloy, which for anti-corrosive purposes is said to be just as good as solid titanium. It is claimed that the bi-metal sheets are so well bounded that they can be bent through 180 degrees without the two materials separating.

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than 909 offices waiting to serve you throughout India.

STATE BANK OF INDIA

INDIA'S LEADING BANK.

TEMPO OF ECONOMIC GROWTH IN EUROPE SLOWS DOWN

REAL INCOMES IN SOVIET BLOC HIGHER

THE strident growth in economic activity in Western Europe, which was conspicuous in 1959 and 1960, continues, but the tempo has of late declined perceptibly. This is the main impression that one gains on a perusal of the *Economic Survey of Europe for 1961*, prepared by the U.N. Economic Commission for Europe, Geneva. The volume of national output, according to the authors of the *Survey*, rose in virtually all Western European countries in 1961, with an average increase for industrialised economies of about 4.5 per cent over 1960. This, however, represents a slower pace of growth than in 1960, when the corresponding average was 6.5 per cent. The major factors that led to the decline in the rate of growth were shortage of manpower, lack of excess capacities and a slackening of total demand. But there is no reason to believe that any downturn has actually begun. For, although the rate of growth has slowed down, the *Survey* points out that the pace of advance is still vigorous. It, therefore, does not take a pessimistic view of the prospects. If anything, it reflects a guarded optimism. "There is," to quote it, "little reason to suppose that either demand or output will develop less swiftly in 1962 than in 1961."

A significant feature of 1961, according to the *Survey*, was the disappearance of overseas demand as a factor of growth in Western Europe and the smaller impulse to expansion from intra-regional trade than in the previous year. But investment demand continued to gather strength until the closing months of the year; and though its rate of increase could not fully offset the absence of expanding overseas export demand, investment supplanted exports as the driving force behind the boom. Towards the end of the year, however, a certain slackening in the rate of increase of investment began to set in. At the same time, consumers' demand was growing more buoyant, and, by early 1962, tended to replace investment as the mainstay of expansion.

Industrial Output

The aggregate industrial production in Western Europe moved up by about 4.5 per cent in 1961, as against as much as 9 per cent in the previous year. The slackening of the growth of output was much more marked in some countries than in others. In six countries of the region, industrial output increased by 7 per cent or more (and in some countries faster than in the previous year) and in four (including West Germany) by 5-7 per cent, which represented a slower pace of advance than in 1960. Belgium, and even more the Netherlands and the U.K., saw their production rise less than both the West European average and their own 1960 rates. The *Survey*, however, points out that the pause is only a temporary phase. It observes:

"There is, however, every ground for believing that this lull in the progress of western European industrial production is no more than temporary. Indeed, for all countries in which they are made, official and independent forecasts concur in anticipating a resumed expansion during 1962; and some straws in the wind could already be seen in the closing months of 1961. The pause in the summer and autumn of 1961 appears to have been due to both supply and demand factors, and to their interaction. Demand for some basic materials slackened—partly because of reduced stock-building; and shortages of labour—or, in some instances, capacity—hindered expansion. How far demand, rather than supply, has been the factor moderating, or temporarily halting, the growth of industrial output in some countries is uncertain, but in none of the industrial countries has the slower growth of demand reduced overall activity below the level of full employment, even when output has been running below capacity."

The pace of growth varied from industry to industry. Most of the industries recorded a smaller growth of output, to a greater or lesser degree, but production of building materials rose in most countries as fast as in the previous year, or faster than most other industries (especially in Austria, France, Western Germany and Norway), owing to continuing increase in construction both of dwellings and of non-residential buildings. Within the major industries, however, the experience of the various branches has been very diverse. Such has been the pattern of demand that, in the engineering industry, for example, production of machinery has fared much better than that of transport equipment, and, in all countries, 1960 was a better year for motor vehicles than 1961. Output of cars actually fell in France and the U.K. (respectively by one-tenth and one-fourth). Within the chemicals industry, the petro-chemicals branch increased its output more than others, but even so the increment in production does not seem in most countries to have exceeded 15-20 per cent, which swell below the average annual rate of 30-40 per cent during the past decade. The *Survey* devotes special attention to three industrial branches (steel, forestry products and coal) where production increased "relatively little," or even fell, in 1961 on account of either weakening demand in the consuming industries or stock movements. It concludes that the fall (for very small increase) in steel output in 1961 in all major producing countries of western Europe—except Italy—was due primarily to the swing by steel consumers and merchants from stock accumulation in 1960 and the early part of 1961 to the running down of stocks later in the year. Price expectations seem to have been at the root of the reversal of this stock movement, and the E.C.E. experts believe that the present situation —the outcome of a quite sudden increase in steel-making and finishing capacity at the same time as demand temporarily weakened—is unlikely to last for long. The major factor leading to the reversal of stock accumulation in the pulp industry in 1961 was—as in the steel industry—the exceptionally rapid expansion of capacity as a result of past investment.

During 1961, the coal industry continued the process of adjustment that has gone on for several years—endeavouring to raise productivity and lower costs in the long run, and to bring supply and demand into better balance in the short run, after large increases in pithead stocks earlier. Total demand in western Europe remained very close to the 1960 level so that any further reduction of stocks implied a corresponding cut in output also. This movement was carried farthest in the U.K. but output was also reduced to varying degrees in most E.C.S.C. countries, and notably in Belgium, where uneconomic pits were closed down and stocks further reduced.

A review of the degree of capacity utilisation in industry shows a fall in the U.K. and Western Germany, but rise in Austria and France, and the relationship between employment and labour productivity. The rise in industrial employment in 1961 was in most countries greater than the average for the fifties and there were major shifts of employment within industry. As in earlier years, changes in production and in labour productivity have been closely related. In most industrial branches where production either declined or stagnated in 1960 or 1961, productivity, too, declined.

Foreign Trade

The volume of West European trade continued to rise faster than industrial production, as in previous years. But, in contrast with 1960, the growth of trade was almost wholly due to the steady increase in exchanges within the area, as the trade barriers in the region continued to be lowered. Imports from other region (which in 1960 rose *pari passu* with intra-regional trade) changed little, and exports to them declined. By and large, exports rose in most countries, where industrial output rose most and *vice versa*. The behaviour of imports was more irregular, and having been influenced by such factors as stock movements and harvests, as well as by the growth of total domestic demand. The balance of trade improved significantly in only three countries, and, in over half the countries, the change in the trade balance was negligible. Commenting on the effect of recent developments on European trade, the *Survey* concludes that continued expansion of output and further tariff reductions in the European Economic Community and European Free Trade Association would lead to a further rise in intra-western European trade. It adds that increased import demand from the U.S. is likely to ensure both directly and indirectly—*via* purchases from primary producers—an expansion of world trade from which western Europe itself will undoubtedly gain. An observation of greater importance to countries in this part of the world is that "it is less certain that Western Europe will substantially increase its own imports from the overseas primary producing countries in 1962 and thus provide purchasing power for higher exports to them." This is surely a disturbing thought to countries like India and Pakistan.

Reviewing the latest trends in the balance of payments position of Western Europe, the *Survey* brings out the main feature of the payments situation in Western Europe during 1961: the contrast between the U.K. on the one hand—the only country which had to restrain the growth of output so as to prevent a further decline in reserves—and the rest of Western Europe, especially the E.E.C. countries, on the other. All the E.E.C. countries except the Netherlands earned a surplus on current account larger even than in 1960; and France and Italy continued to add to their exchange reserves. Apart from West Germany and Portugal, no Continental country experienced a significant decline in exchange reserves. The *Survey* examines in some detail the evolution of Western Germany's balance of payments in 1961 and finds that, while the surplus on visible account did not decline for the year as a whole, the rise in exports ceased after mid-year. The West German capital account contributed significantly after the first quarter of 1961 to easing strains in international payments, and net income from invisibles fell. Considering the future of the current balance in Western Germany, the authors of the *Survey* point to a number of influences tending in opposite directions, and they conclude that the overall balance of payments may well revert to a surplus in 1962, though a rather smaller one than in earlier years.

Prospects

Forecasting the prospects for the current year, the *Survey* says that the economic growth will continue in 1962, in most countries at a pace similar to that of last year, and with a slight lessening of pressure in the labour market. On the basis of national budgets, etc., the *Survey* expects an average growth rate of 4 per cent in 1962, and probably more in France and Italy. In the U.K., however, where the increase in output in 1961 was less than 2 per cent, the rate of expansion is unlikely to quicken. It seems that public consumption (including defence) will in most countries be at least as strong a source of expansion as in 1961, notably in Belgium, West Germany, Norway, the Netherlands and Sweden. Gross fixed investment, on the other hand, will probably be a less expansionary force than in 1961 in several countries, particularly Western Germany; but only in a few (except Norway and the United Kingdom, where hardly any increase is foreseen) will total investment demand rise no further. Rising personal income in all countries—the product of higher wages and other factor income, as well as of greater social transfers (as in France, Western Germany and Sweden) —presages a steady increase in consumers' demand. National forecasts anticipate at least as large an expansion of exports as in 1961 and in some countries (particularly the United Kingdom) even envisage a distinct improvement. All countries expect to increase their exports to the United States as a result of its resumed economic expansion and intra-Western European trade should continue to grow. Reviewing the growth of the labour force and of output in the last decade, the *Survey* notes the benefits in terms of manpower of high post-war birth rates and concludes that, in general, supply factors do not appear to be an obstacle to the maintenance of a high rate of economic expansion.

Soviet Bloc

The economic conditions in eastern Europe and Soviet Russia in 1961 were also none-too-encouraging. These economies achieved a average rate of growth (of net material product) of 7 per cent, but this was somewhat less than that foreseen by authorities in nearly all countries, though not much below that realised in 1959 and 1960 either for eastern Europe as a whole (8 and 7 per cent, respectively) and for the Soviet Union (8 per cent in both years). There were several reasons for the absence of any increase in growth rate. Thus, the rates of industrial expansion were everywhere somewhat slower than in 1960, although they were above those planned except in Czechoslovakia and East Germany. Agricultural output was far below the planned levels in all countries except Poland. In other sectors, output generally showed some increase over 1960, but were still generally below planned levels.

The generally disappointing levels of farm output in the Soviet bloc limited the possibilities of raising average living standards. Nevertheless, according to the *Survey*, output of consumers' manufactures and services rose enough to permit increases in the real incomes of wage and salary earners, varying between 2 per cent and 5 per cent from one country to another. Fixed capital formation increased everywhere, except in Hungary; and, in some countries, resources were diverted to defence preparations on a greater scale than originally planned. Foreign trade turnover for the area as a whole rose by about 7½ per cent and everywhere more slowly than in 1960. However, the pattern of development varied considerably from country to country. Poland, Rumania and Albania were the only countries in which the rate of overall economic expansion from 1960 to 1961 was higher than in the previous year. The fall in the overall growth-rate of the Hungarian and Bulgarian economies was due—almost entirely in the first country and mainly in the second—to the poor results in agriculture. In the Soviet Union, the virtual stagnation of global agricultural output has now lasted for three years and the slight declaration of the growth of national income (though to a rate still as high as 7 per cent) seems to have been attributable to some slackening in most major sectors. Virtually the same declaration—and to the same 1961 growth-rate—in Czechoslovakia seems to have reflected a similar rather general slackening and failure fully to reach plan targets, though the rate of growth of farm output fell more sharply in that country than in the Soviet Union. External political problems contributed to the special difficulties of eastern Germany and Albania in 1961.

Global output of industry rose by about 9.5 per cent in eastern Europe and only slightly less in Russia, but the vagaries of the weather —and in several countries problems of peasant incentives in the first year of virtually complete collectivisation—depressed agricultural production throughout the region. The rates of industrial expansion were everywhere somewhat slower than in 1960, but were above those planned, except in Czechoslovakia and East Germany. Industrial output per man rose rapidly in all these countries and were well above planned rates, except in Czechoslovakia and Russia. But the reduction of working hours in the latter countries led to a rise in output per man-hour (by about 11 per cent in Russia). Barring East Germany, where there were shortages of raw materials, fuels and labour during the year, industrial expansion seems to have proceeded smoothly in these communist countries.

Setback in Agriculture

Discussing the year's agricultural results, the *Survey* states that, throughout eastern Europe and in the Soviet Union, the battle for the output objectives set for agriculture in 1965 is now seriously joined; but there was virtually no net advance towards them in 1961 except in Poland, and probably in Albania. Unfavourable weather, especially for spring-sown cereals and root-crops was largely responsible. For the region as a whole, however, yields and output of bread grain (mostly sown in the autumn) seem to have been fairly satisfactory; yields of potatoes and sugar-beet were poor in areas which suffered from the drought but fruit crops in the south were reported as excellent; in general, feed crops have been most adversely affected and give rise to concern about livestock production in the current year.

In the Soviet Union, the planned "substantial increase in the gross cereals crop over that of the bumper year 1958" (141 million tons) was not achieved. But the harvest was about 2 per cent above that of 1960, entirely as a result of the increase in the area of which 1.2 million hectares was in the virgin land region. Last year's summer drought in Siberia and Kazakhstan limited production in these areas; there was apparently a more or less normal crop in the north-western region and a record harvest (35.7 million tons) in the Ukraine. The only exceptions to the general picture of stagnation or slight decline of global farm output in eastern Europe in 1961 are Poland and—on the basis of provisional data—Albania. The extraordinary rise of global output—by over 10 per cent—in the former country was the result of simultaneously favourable conditions in both the crop and the livestock sectors; but in all the other eastern European countries except Albania crop production showed a decline, particularly pronounced in Bulgaria and Hungary.

The plan for 1962 by these countries (except Bulgaria and Czechoslovakia) envisages a slower rate of growth in industrial output than in 1961—6 per cent in Albania, about 8 per cent in the Soviet Union and Hungary, 8½ per cent in Poland, 10 per cent in Bulgaria and Czechoslovakia and 13½ per cent in Rumania. No plan for East Germany has been published so far.

STREPTOMYCIN PLANT

The streptomycin plant at Pimpri, inaugurated by Prime Minister Nehru last week-end, is a major landmark in the development of India's antibiotics industry. The plant, built by the Hindustan Antibiotics Ltd., in technical collaboration with the U.S. firm, Merck and Co., Inc., of Rahway, New Jersey, which has provided expert engineering advice on the design, construction and equipment, besides training Indian technicians both locally and in its plant in the U.S., will produce annually 45 tons of streptomycin and dihydro-streptomycin. The drug, streptomycin, is an effective cure against tuberculosis, a disease that claims the lives of half a million people in this country annually. It also combats dysentery, plague, cholera and other health scourges. The new plant, first of its kind in Asia, is expected to result in a foreign exchange saving of about Rs. 1 crore annually. It is understood that plans are already afoot to double the capacity of the plant, with an additional expenditure of only Rs. 60 lakhs. It may be noted here that the new plant has been financed exclusively from profits derived by the Hindustan Antibiotics Ltd.

Prime Minister Nehru, while inaugurating the plant, made a strong defence of the role of the public sector. He was of the opinion that basic industries had essentially to be in the public sector. If the private sector, which worked for its own profits, got hold of key industries, he observed, it would throttle the national economy. He, however, felt that the private sector should have full scope to start big and small industries. He added, "We, however, cannot leave the people completely at the mercy of the private sector which works for its own good."

Paying tributes to the U.S. collaborators, Prime Minister Nehru observed that it was a happy augury to have had the assistance of the famous Merck and Co. in the establishment of the plant. The collaboration agreement with this Company, it may be noted, provides for the following:

(*a*) The latest strains for streptomycin manufacture and results of research for ten years to come.

(*b*) Complete information about the manufacture of streptomycin and use of Merck's patents for a period of ten years including further researches in the field.

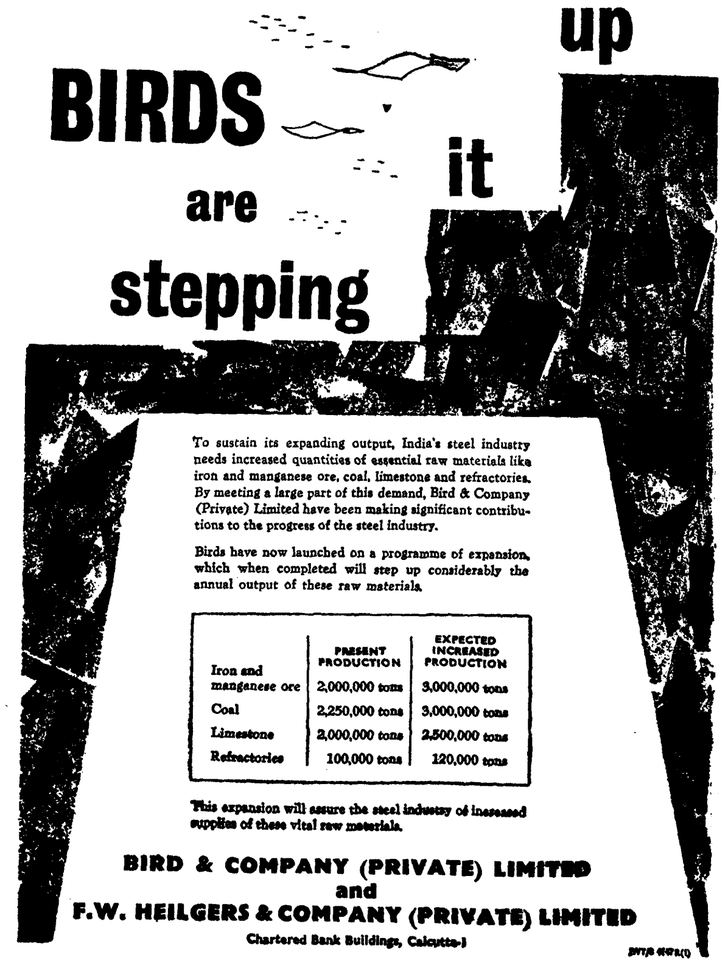
(*c*) Technical advice and assistance in the specifications for equipment and examinations of tenders and purchase of equipment; although tendering and purchase was done entirely by the Hindustan Antibiotics Limited.

(*d*) Merck's technical staff and erection engineer for constructing the plant at Pimpri.

(*e*) For all these services, Mercks were to receive a consultation fee on actual basis, subject to a ceiling of $25,000. In addition, Mercks are to receive 1½ per cent the selling price of streptomycin sold in India for a period of ten years, and 2½ per cent of the selling price of such quantities as may be exported from India.

The new plant is expected to meet half the total requirement of streptomycin in the country. New projects are also under way elsewhere, which will ensure self-sufficiency in this drug within the next few years. Another antibiotics plant, proposed to be set up in the public sector at Rishikesh (U.P.) with Soviet collaboration, is expected to add an annual capacity of 85 tons of streptomycin. A comparatively small plant, with an annual installed capacity of 15 tons, is also expected to go into production in the private sector at Baroda.

The Hindustan Antibiotics Ltd., it may be noted, has been making steady progress during the last few years. The Company, it may be recalled, commenced operations in 1955. It was originally intended to produce 9 M.M.U. of penicillin per annum. But, as a result of improvement in processing techniques and addition of new equipments, its output touched 21 M.M.U. by 1957-58 and rose still further to 40 M.M.U. by 1960-61. Its present total capacity is 45 M.M.U. even which represents only one half of the total domestic requirements of penicillin. The annual turnover of the factory, according to Mr. Manubhai Shah, Union Minister for Industry, is Rs. 345 lakhs, comprising Rs. 156 lakhs received from the sale of penicillin in vials and Rs. 189 lakhs from that sold in bulk for other units for subsequent vialling. Since the establishment of this factory, another unit at Baroda in the private sector, with a capacity of 10 M.M.U. per annum, has commenced production. It has also plans to expand its capacity to 20 M.M.U. A third unit, with a similar capacity (also in the private sector), has been installed in Calcutta and will go into production shortly. The proposed public sector project at Rishikesh will be the biggest in India when completed, with an installed capacity of 140 M.M.U. of penicillin. With all these projects in hand, the day when India will be self-sufficient in basic antibiotic drugs is not far off.



PERFORMANCE OF MAFATLAL GROUP ENCOURAGING

FINANCIAL POSITION SOUND

THE latest annual reports, namely, those for the year ended 31st December 1961, of the three City mills under the management of Messrs. Mafatlal Gagalbhai and Sons, Bombay, namely, the Standard Mills Company Ltd., the Sassoon Spinning and Weaving Company Ltd., and the Mafatlal Fine Spinning and Manufacturing Company Ltd., make encouraging reading. Despite duil trading conditions and price fixations under the industry's voluntary agreement, the turnover of all the three shows further improvement and, with the exception of Mafatlal Fine, the other two have reported a substantial increase in the profit figures. Although the Directors have preferred not to mention it in their report to the shareholders, the group must have encountered favourable trading conditions during the year under report as is evident from the increased turnover and the fact that the closing inventories have shown no material change over their opening values.

Standard Mills

The results achieved by the Standard Mills in 1961 are highly gratifying. The sale proceeds of cloth, yarn and waste have risen by 22.8 per cent, from Rs. 697.06 lakhs to Rs. 855.90 lakhs. Besides, there has been a small increase of Rs. 4.92 lakhs to Rs. 23.80 lakhs in other income. Though closing stocks of finished and processed goods have remained on par with the opening stocks, those of finished goods alone are actually lower by Rs. 7.67 lakhs at Rs. 18.76 lakhs while the goods in process have gained in value by Rs. 9.19 lakhs to Rs. 59.22 lakhs. Expenses have increased in line with higher output and sales, but no more, and the gross profit, therefore, shows an improvement of Rs. 32.86 lakhs to Rs. 176.56 lakhs. Provision for Managing Agents' commission has gone down a little by Rs. 1.65 lakh to Rs. 8.23 lakhs but those for depreciation and taxation have been raised quite substantially. The former gets Rs. 34.05 lakhs as compared with Rs. 28.09 lakhs and the latter Rs. 64.05 lakhs as against Rs. 44.30 lakhs during the preceding year. Accordingly, the net profit has increased moderately by Rs. 10.80 lakhs to Rs. 72.23 lakhs. Transfers to reserves have been stepped up rather substantially from Rs. 23.36 lakhs to Rs. 32.76 lakhs of which Rs. 5.82 lakhs (Rs. 8.52 lakhs) go to the statutory development rebate reserve, Rs. 1.94 lakh (Rs. 2.84 lakhs) to the development rebate reserve, Rs. 10 lakhs (Rs. 6.00 lakhs) to general reserve and Rs. 15 lakhs (Rs. 10 lakhs) to dividend equalisation reserve. After making these prior appropriations and setting aside, as during the previous year, Rs. 0.69 lakh towards preferred dividends in respect of the year, the Directors have proposed the payment of ordinary dividend at the rate of 25 per cent, as against 30 per cent previously, both subject to deduction of tax. Though the rate has been reduced, it has became payable on an enlarged share capital, consequent to the bonus issue during the year and the total dividend distribution therefore amounts to Rs. 38.41 lakhs as against Rs. 32.92 lakhs for 1960. The amount carried forward is higher at Rs. 1.75 lakh as against Rs. 1.38 lakh brought in.

The rapid progress made by the Company during the past four years is presented synoptically in the comparative table that follows.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	855.90	697.06	621.08	601.31
Other income	23.80	18.88	16.63	15.25
Closing stocks	77.98	76.46	53.44	66.07
Raw materials and stores consumed	422.01	342.22	302.89	317.48
Salaries, wages and bonus	208.31	187.82	166.26	160.80
Other expenses	76.34	63.03	52.51	51.92
Gross profit	176.56	143.70	101.84	93.84
Managing Agents' commission	8.23	9.88	7.95	7.45
Provision for—				
Depreciation	34.05	28.09	21.02	17.13
Taxation	64.05	44.30	29.00	41.80
Net profit	72.23	61.43	43.87	27.46
Transfer from reserves				5.00
To reserves	32.76	27.36	10.53	11.59
Dividends—				
Preference	0.69*	0.69*	0.65*	0.48
Ordinary	38.41 (25%)*	32.92 (30%)*	31.88 (22½+4% B.)*	21.95 (20%)
Carry forward	1.75	1.38	0.91	0.02

Following the issue of bonus shares during the year under review, to which reference has already been made, the share capital of the Company has increased to Rs. 165.65 lakhs, of which Rs. 12.00 lakhs are in preference shares and the balance in equities. This is backed by Rs. 272.14 lakhs in reserves and the surplus account. Current liabilities and provisions have increased from Rs. 161.60 lakhs a year ago to Rs. 256.39 lakhs as at 31st December 1961 but these are more than fully covered by the aggregate of investments, current assets and loans and advances amounting Rs. 466.63 lakhs. The gross block is carried in the companies' books at Rs. 495.45 lakhs, including Rs. 41.42 lakhs worth of additions during 1961, and has been written down to Rs. 215.00 lakhs. Adding to this the cost of capital work in progress and machinery in transit or under erection, namely, Rs. 12.54 lakhs, the net block works out to Rs. 227.54 lakhs.

Sassoon Spinning

A still better performance has been put up by the Sassoon Spinning and Weaving Company. Though sales of cloth, yarn, waste, etc. have increased by only 11.3 per cent (as compared with the 22.8 per cent rise reported by Standard) from Rs. 576.15 lakhs to Rs. 641.14 lakhs, the gross profit has increased by over 60 per cent to Rs. 79.82 lakhs from Rs. 49.70 lakhs for 1960. This has been possible because of the rise of only Rs. 2.66 lakhs to Rs. 345.65 lakhs in the cost of raw materials and stores consumed, coupled with a fall of Rs. 10.02 lakhs to Rs. 167.29 lakhs in salaries, wages and bonus. Had it not been for a decline of Rs. 14.93 lakhs in other income, chiefly because of reduced income on account of processing charges, and an increase of Rs. 11.86 lakhs to Rs. 69.63 lakhs in other expenses, the performance of the Company would have been brighter still. As could be anticipated, a large portion of the rise in gross profit has been absorbed by heavier essential provisions, that for the Managing Agents' commission claiming Rs. 4.36 lakhs as against Rs. 3.01 lakhs, for depreciation Rs. 23.17 lakhs as against Rs. 18.40 lakhs and for taxation almost double, that is, Rs. 20.54 lakhs, as compared with Rs. 10.55 lakhs previously. Even then, the net profit shows a handsome improvement of Rs. 14.01 lakhs to Rs. 31.75 lakhs. Transfer to reserves has also been substantially stepped up from Rs. 7.68 lakhs to Rs. 16.61 lakhs. With a large sum still left over, the Directors have quite naturally proposed to raise the rate of ordinary dividend to 20 per cent, subject to deduction of tax, from 17 per cent subject to deduction of tax, a year ago, and this absorbs Rs. 15.08 lakhs.

These interesting operation statistics are presented in the following table with corresponding figures for the previous three years thrown in for the sake of comparison.

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	641.14	576.15	531.98	496.69
Other income	23.42	38.35	49.49	27.92
Closing stocks	48.68	49.85	86.20	43.26
Raw materials and stores consumed	345.65	342.99	326.24	324.89
Salaries, wages and bonus	167.29	177.31	161.11	142.74

Carry forward	0.80	0.25	..	0.05

The Company's balance-sheet as at 31st December 1961 presents a healthy financial position. The share capital of Rs. 75.40 lakhs, all in equity shares of Rs. 10 each fully paid, is supported by reserves amounting to no less than Rs. 146.92 lakhs. The betterment in the cash flow position during the year has resulted in a further reduction in borrowings, the outstanding amount of which is now Rs. 48.44 lakhs. Current liabilities and provisions are placed at Rs. 139.12 lakhs. On the assets side, the net block is worth Rs. 170.01 lakhs, and has been obtained by deducting from a gross block of Rs. 373.84 lakhs, Rs. 203.83 lakhs as the depreciation provided for to date. The gross block is inclusive of Rs. 59.06 lakhs worth of new assets acquired during the year. Buildings under construction and machinery awaiting installation and in transit are collectively valued at Rs. 16.65 lakhs. Investments, current assets and loans and advances aggregate Rs. 223.22 lakhs, thus affording enough cover to loans and current liabilities put together.

Mafatlal Fine

In contrast to the encouraging results reported by Standard Mills and the still better ones by Sassoon Spinning, those achieved by Mafatlal Fine are sure to appear as downright disappointing. For not only have the sale proceeds risen by a meagre Rs. 11.79 lakhs to Rs. 284.49 lakhs but this improvement has been completely washed off by the unexplained and disproportionate rise, from Rs. 118.04 lakhs to Rs. 135.54 lakhs, in the cost of raw materials and stores consumed and a small increase of Rs. 5.11 lakhs to Rs. 31.49 lakhs in other expenses. The gross profit has, therefore, dwindled by Rs. 6.40 lakhs to Rs. 63.07 lakhs, despite an increase of Rs. 2.40 lakhs to Rs. 9.75 lakhs in other income and a rise from Rs. 21.93 lakhs to Rs. 24.46 lakhs in the value of closing inventories. The total prior claim on the gross profit on account of the essential provisions has remained by far unchanged around Rs. 37.16 lakhs, of which Rs. 5.02 lakhs (Rs. 6.01 lakhs) represent the provision for Managing Agents' commission, Rs. 15.51 lakhs (Rs. 11.77 lakhs) for depreciation and Rs. 16.63 lakhs (Rs. 20.05 lakhs) for taxation. The net profit, too, is lower at Rs. 25.91 lakhs as compared with Rs. 31.64 lakhs previously. Transfers to reserves have been halved to Rs. 6.29 lakhs from Rs. 12.55 lakhs and covers a credit of Rs. 3.96 lakhs (as against Rs. 5.67 lakhs last year) to the statutory development rebate reserve, Rs. 1.32 lakh as against Rs. 1.89 lakh to the development reserve and Rs. 1.00 lakh as against Rs. 3.00 lakhs to dividend equalisation reserve. With the increase in the rate of preference dividend from 4.5 per cent to 6.43 per cent, preferred dividends in respect of 1961 claim Rs. 1.86 lakhs as compared with Rs. 1.70 lakhs last year. Ordinary dividend has been maintained at 30 per cent, subject to deduction of tax, and absorbs Rs. 17.40 lakhs.

The progress made by the Company during the four-year period 1958-61 inclusive is set forth in the following comparative table.

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	284.49	272.70	244.91	223.60

* Subject to deduction of tax.

The financial position of the Company, as revealed by its balance-sheet as at 31st December 1961, has distinctly improved. The share capital is unchanged at Rs. 87.00 lakhs but reserves and surplus are higher at Rs. 163.60 lakhs. The secured loan from banks against hypothecation of stocks of raw materials and finished goods has been fully liquidated. Though current liabilities and provisions have increased to Rs. 79.02 lakhs, these are covered twice over by current assets, investments and loans and advances all aggregating Rs. 217.88 lakhs. Inclusive of the addition of Rs. 30.80 lakhs to fixed assets during the year, the gross block now costs Rs. 276.70 lakhs and has been written down to Rs. 106.14 lakhs. Adding to this Rs. 5.50 lakhs as cost of machinery awaiting installation or in transit, the net block works out to Rs. 111.73 lakhs. Investments, current assets, loans and advances together amount to Rs. 217.88 lakhs, or nearly three times the current liabilities, a fact that reveals a highly comfortable working capital position.

The Rs. 100 fully paid ordinary shares of the Standard Mills are quoted in the forward list of the Bombay Stock Exchange at Rs. 1,070 *cum-div.* and fetches, on an *ex-div.* basis, a net return of 1.7 per cent. The present market price of the Rs. 100 paid equity shares of Mafatlal Fine are Rs. 959 *ex-div.*, at which price the net yield works out to about 2.2 per cent. The Rs. 10 paid share of Sassoon is presently quoted at Rs. 68 *cum-div.* Reducing the price to an *ex-div.* basis, the net yield works out to 2.1 per cent.

MAHINDRA AND MAHINDRA BREAKS THROUGH COST INFLATION

NEW COMPANY TO MANUFACTURE TRACTORS

BREAKING through the cost inflation, which crept in perceptibly in the year 1959-60 and reduced the gross profit in spite of a magnificent improvement in the turnover, Mahindra and Mahindra Limited (Chairman: Mr. K. C. Mahindra, Bombay) has staged a smart comeback during the year ended 31st October 1961. The benefits of the larger turnover of Rs. 15.42 crores as compared with Rs. 13.64 crores in the preceding year have adequately filtered down to the level of gross profit, as it has risen from Rs. 58.07 lakhs to the highest ever so far of Rs. 95.32 lakhs. Production of jeeps and allied vehicles showed an improvement of 23 per cent over the previous year. Simultaneously, the cost of materials, stores and tools increased, but modestly, from Rs. 12.75 crores to Rs. 13.16 crores. In the preceding year, production costs had shot up by Rs. 5.30 crores. Clearly, the cost inflation seems to have been controlled during the year under review; the increase, as mentioned before, being due apparently to the greater operations. Costs other than prime costs have, however, shown a greater rise over the year. Thus, the wage bill has gone up by Rs. 19.63 lakhs to Rs. 126.78 lakhs as against Rs. 14.88 lakhs to Rs. 107.15 lakhs in the previous year and other expenses have increased by Rs. 13.13 lakhs to Rs. 106.10 lakhs as against Rs. 5.49 lakhs to Rs. 92.97 lakhs.

The rise in profit has attracted a larger provision for taxation of Rs. 36.80 lakhs as against Rs. 19.60 lakhs a year before, and depreciation claims Rs. 15.38 lakhs as against Rs. 13.06 lakhs. Ignored in the previous year, reserves have been compensated by a transfer of Rs. 10.50 lakhs. The equity dividend has been maintained at the previous year's level of 12.5 per cent, subject to tax, but with a bonus of 2.5 per cent, the actual distribution is higher. Carry forward is adequate at Rs. 2.55 lakhs against Rs. 1.11 lakh brought in.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1961	1960	1959	1958
Sale proceeds*	15,42.28	13,64.16	927.48	17,68.87

* Including cost of vehicles capitalised Rs. 2.88 lakhs (1961), Rs. 1.73 lakhs (1960), Rs. 2.07 lakhs (1959), and Rs. 1.24 lakhs (1958).

† Subject to deduction of tax.

The Directors state that sales of jeep and allied vehicles increased from 6,499 units to 8,133 units during the year and of spare parts commensurate with the greater demand for vehicles. Reduced imports kept steel sales lower as expected, but the targets for the year were achieved, with the railways taking up more than 50 per cent of the Company's imports. Further reduction in steel imports is inevitable and is, in fact, shown in the bookings for the current year, but a cushion for the shortfall is expected to be provided by an improved performance in sales from the Company's controller stockyards covering internal distribution. The machine tool division has been engaged in preliminaries for partial manufacture of some popular but specialised tools handled by it. With the assistance of the Company's associate, a new axle for jeep was engineered and its production undertaken. The basic feature of the design of this front axle is to achieve commonality between the two axles to keep manufacturing costs at a minimum. The front axles are now under production and is said to have performed satisfactorily at stable prices. The Company is purchasing 137 acres of land in Kandivli, suburban Bombay, to centralise jeep manufacturing operations.

Arrangements for tractor manufacture have been completed with International Harvester Export Company of Chicago, Illinois, U.S.A., and its subsidiary in Britain. Permission has been obtained from the Government to proceed with this project. A new company is expected to be formed to undertake the project. In addition to investment, the American associates would furnish a substantial long-term loan to cover the import of plant, equipment and tooling. The alloy steel project of the Company, a detailed survey for which was carried out by its steel division during the year, is expected to take final shape this year. Negotiations for technical collaboration for the project with *Societe D'Electro-Chimie D'Electro-Metallurgie et des Acieries Electriques D'Ugine* are stated to have proceeded very successfully. The Company is now planning for the necessary funds. The plant would be located at Madras. Funds for the Company's project to double its jeep manufacturing capacity to 10,000 units, which is already under implementation, would be provided by the Industrial Credit and Investment Corporation of India and the Life Insurance Corporation of India. In addition, the Company proposes to issue 660,000 ordinary shares of Rs. 10 each for cash at a premium of Rs. 2.50 per share as rights shares to the existing shareholders as on 20th March 1962, in the proportion of one new share for every two shares held. This capital issue is expected to provide funds not only for jeep expansion but also for the alloy steel project and the tractor project. All this underlines a promising long-term outlook for the Company. For the current year, its working so far is said to be satisfactory, with sales of jeep aggregating 1,999 units. Steel bookings are comparatively lower during the first quarter, but it is expected to recover the ground before the year is out. Some other developments are on hand and expected to contribute towards maintaining the overall sales drive.

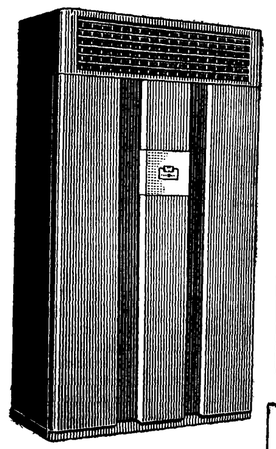
The financial position of the Company is fairly good. Its issued and paid-up capital is Rs. 187 lakhs, of which Rs. 132 lakhs are in equity shares of Rs. 10 each. Reserves and surplus aggregate Rs. 56.22 lakhs. Bank borrowings of Rs. 568.06 lakhs show practically no change over the year. Other current liabilities, together with provisions for tax, dividend, etc., total Rs. 354.48 lakhs. The total indebtedness to outsiders thus amounts to Rs. 922.54 lakhs. As against this, current assets, loans and advances aggregate Rs. 10.01 crores. Investments have increased from Rs. 37.76 lakhs to Rs. 49.31 lakhs but these are not quoted in the market as they are in subsidiaries. The gross block has increased from Rs. 159.30 lakhs to Rs. 174.90 lakhs, and is written down to Rs. 115.29 lakhs.

Among the subsidiary units of the Company, Dr. Beck and Co. (India) Ltd. has successfully commissioned the reaction vessel and started production of synthetic resins for the electrical industry. Otis Elevator Co. (India) Ltd. has submitted expansion plans to the Government and awaits its approval. Machinery Manufacturers Corporation Ltd. fared well and produced 80 to 85 carding engines per month out of the plant originally instituted to produce 50 units. Mahindra Engineering Company Ltd., although showing a loss in the first year's operations, has set up a fine shop for the manufacture of scientific instruments like pyro-meters, flow meters and pressure gauges. Mahindra Sintered Products Ltd. has commenced production of several types of self-lubricating bearings. Mahindra Owen Ltd. has earned enough surplus profit to wipe off the losses and write off the development expenses and has had a satisfactory order book, but Turner, Hoare and Company Ltd. has suffered a loss.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 18.24 *ex-rights, cum-div.* At this rate and on an *ex-div.* basis, they offer a net yield of a little more than 6 per cent per annum.

4 outstanding features

4-way economy



BLUE STAR-WORTHINGTON

Packaged Air Conditioners

5, 7½ and 10 tons

Plus this economy
★ Single units from 5 to 10 tons, cut costs on tonnage
★ Units can operate without ductwork, save installation costs

RESULTS OF McLEOD JUTE GROUP

OUTLOOK FOR CURRENT YEAR ENCOURAGING

IN common with other jute mills in the country, three of the jute companies under the management of Messrs. McLeod and Company Limited, Calcutta, namely, Nellimarla Jute Mills Company Ltd., the Empire Jute Company Ltd., and Presidency Jute Mills Company Ltd., have produced unsatisfactory results for the year ended 31st July 1961 owing chiefly to the acute shortage of raw jute caused by two small crops in succession and sporadic labour trouble leading to petty stoppages and fall in operating efficiency. All the three companies have reported sizable improvements in the value of their turnover—not an unusual occurrence considering the then ruling high prices of jute goods—but this, save in the case of Nellimarla Jute, has not been accompanied by a corresponding rise in the profit and the gross and net profits of the other two companies, therefore, have shown a sharp decline. With reduced net earnings, the Empire Jute and Presidency Jute have been obliged to recommend lower ordinary dividends and, even if Nellimarla has managed to double the dividend to a modest level, of six per cent, subject to deduction of tax, it still stands no comparison with the tax-free dividend of nine per cent paid for 1957.

Nellimarla Jute

The rise of Rs. 71.13 lakhs to Rs. 188.44 lakhs in sale proceeds of Nellimarla Jute has been accompanied by an increase of Rs. 11.72 lakhs to Rs. 31.40 lakhs in the closing stock of gunnies valued at the market price. This has naturally resulted in a widening of the profit-margin despite overall increases in all items of expenditure and the gross profit, therefore, stands improved at Rs. 11.23 lakhs as against Rs. 6.26 lakhs for 1959-60. A large chunk of this has, nevertheless, been claimed by essential provisions which aggregate Rs. 8.33 lakhs in comparison with Rs. 5.76 lakhs during the preceding year. The main increase is reflected in the provision for taxation which gets Rs. 2.50 lakhs as against nil previously. The net profit is higher by Rs. 1.04 lakh at Rs. 3.04 lakhs. After transferring Rs. 0.77 lakh to reserves, as against Rs. 1.64 lakh, and setting aside Rs. 0.39 lakh, as against Rs. 0.48 lakh, for preferred dividend in respect of the year under report, the Directors have, in view of the larger sum available, proposed an ordinary dividend of six per cent subject to deduction of tax, as against three per cent subject to deduction of tax previously.

Empire Jute

Apart from the acute shortage of raw jute and the consequent unprecedented rise in the cost of raw material, three other factors have also contributed to the fall of Rs. 5.72 lakhs to Rs. 8.60 lakhs in the gross profit of the Empire Jute for 1960-61, notwithstanding a rise of 34.7 per cent, or Rs. 41.97 lakhs to Rs. 163.11 lakhs, in the sale proceeds. These are, first, the increase in direct costs due to the implementation, in January 1961, of the recommendations of the Wage Board for the Jute Industry. Secondly, the slight dislocation in mill working owing to the curtailment of supply of electricity. And, thirdly, the increase in overhead cost due to restricted output consequent to power shortage and the block closures effected as a means of conserving the stocks of raw jute. Although the lower gross profit has led to a reduction in the provision for the Secretaries and Treasurers' remuneration from Rs. 1.08 lakh to Rs. 0.40 lakh, and in that for taxation, by as much as Rs. 2.20 lakhs to Rs. 1.70 lakh, the net profit has gone down by more than 50 per cent, from Rs. 4.52 lakhs to Rs. 1.98 lakh only. The Directors have, therefore, been obliged to recommend a lower ordinary dividend of 7.5 per cent, subject to deduction of tax, as against 12.5 per cent, subject to deduction of tax, a year ago.

Presidency Jute

In the context of the difficult conditions experienced by the industry, the operating results of Presidency Jute Mill for 1960-61, will no doubt appear as fairly encouraging when due weight is also given to the fact that the working of the mills during 1960-61 was hampered by an illegal strike leading to closure of the mill for a period of about a month. This was on top of the fall in production consequent to block closures to meet shortage of raw jute. If, therefore, in the face of an increase of Rs. 41.80 lakhs to Rs. 146.22 lakhs in the turnover, the gross profit has gone down from Rs. 7.81 lakhs to Rs. 5.87 lakhs, it is not surprising. Indeed, the decline itself is quite moderate, being of the order of only Rs. 1.94 lakh. Essential provisions are naturally lower, that for the remuneration to Secretaries and Treasurers having declined by Rs. 0.26 lakh to Rs. 0.40 lakh, for depreciation by Rs. 0.28 lakh to Rs. 3.04 lakhs, and for taxation by Rs. 0.16 lakh to Rs. 1 lakh. The net profit, as such, shows a less marked fall from Rs. 2.67 lakhs to Rs. 1.45 lakh. Transfer to reserves has been cut down from Rs. 1.18 lakh to Rs. 0.33 lakh only, whereas transfer from reserves and provisions in excess of requirements has gone up by Rs. 0.15 lakh to Rs. 0.21 lakh. Consequently the reduction in the rate of ordinary dividend has been confined only to a fourth, from eight to six per cent subject to deduction of tax.

The vicissitudes in the fortunes of these three mills during the past four years are well brought out by the comparative table given at the foot of this page.

The financial position of the mills as revealed by their balance-sheets as at 31st July 1961 is still quite strong. The share capital of each company is adequately supported by reserves which in the case of Nellimarla Jute and the Empire Jute decisively exceed the share capital. Although the difficult trading conditions have brought about an increase in bank borrowings, the total of current assets and loans and advances are, in each case, sufficient to cover the loans and current liabilities put together. The fixed assets of the mills have been written down to less than half of their original cost.

The abundance of jute during the present season at economic rates has enabled all the three companies to increase working hours and unseal more looms for operation. It is hoped that the losses previously suffered by them will be more than covered in the remaining months of the current year.

The Rs. 10 fully paid shares of Nellimarla is quoted at Rs. 12.75 cum-dividend. The net yield on an ex-dividend basis works out to 3.4 per cent per annum. The prices of Rs. 10 paid ordinary shares of Empire Jute is Rs. 18.98 ex-dividend on which the net yield works out to about 2.8 per cent. The Rs. 5 fully paid share of Presidency is presently priced at Rs. 6 cum-dividend and fetches a net return of 3.1 per cent on an ex-dividend basis.

(In lakhs of rupees)

DUNLOP RUBBER FARES WELL

TURNOVER AND PROFIT AT FRESH PEAKS

AN impressive recovery in profitability features the results of the Dunlop Rubber Company (India) Limited (Managing Director: Mr. M. L. Boxon, Calcutta) for the year ended 31st December 1961. Thus, the highlight of the results is a rise in both turnover and gross profit to fresh peaks. The percentage of profit after providing for depreciation, taxation and interest to sales has improved from "the abnormally low rate" of 4.1 in 1960 to 5 in the year under review. Turnover has soared from Rs. 30.47 crores to Rs. 32.86 crores. Gross profit has staged a welcome and significant improvement from Rs. 264.64 lakhs to Rs. 348.76 lakhs. Apparently, the Company enjoyed a much bigger market for its products than in the previous year. The factor that favourably influenced the trend of the profit-margin during the year was an insignificant increase of Rs. 5.69 lakhs to Rs. 17.20 crores in the prime costs. This was due partly to increased efficiency and partly to a lower cost of imported rubber. It is in refreshing contrast to the successive increases in prime costs during the preceding seven years (1954-60) at an average annual rate of about Rs. 165 lakhs. This vicious spiral of rising costs ate away practically all the benefits of a steadily increasing turnover all these years; the percentage of profit to sales, on the basis mentioned above, was as low as 3.6 in 1955, still lower at 3.2 in 1956, and no better at 3.7 as recently as in 1958. Between 1957 and 1961, the turnover rose magnificently by 64.5 per cent, from Rs. 19.97 crores to Rs. 32.86 crores. And it was only because the costs inflation could be controlled during the year under review that the gross profit was able to rise commensurate with sales; it rose by 77.2 per cent, that is, from Rs. 194.87 lakhs to Rs. 348.76 lakhs during this period.

The table below gives a synoptical view of the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds	32,85.52	30,46.56	25,87.49	22,27.76
Closing stock of work-in-progress	88.05	85.15	80.25	24.32
Other income	7.32	5.88	4.54	5.21
Cost of raw materials, finished goods, stores and spares	17,20.02	17,14.33	15,15.15	13,48.63
Staff expenses	346.40	307.06	273.74	244.26
Excise duty	603.20	527.60	355.29	253.08
Interest payable	24.43	26.89	20.85	14.74
Other expenses	252.93	226.83	189.15	175.28
Gross profit	348.76	264.64	243.79	202.03
Provision for—				
Depreciation	61.89	58.71	50.99	31.47
Taxation	122.62*	81.37	74.76	88.13
Net profit	164.75	124.56	118.03	82.43
Development rebate reserve	7.50	17.00	17.00	30.00
General reserve	62.50	37.50	30.00	..
Dividends—				
Preference : 8% guaranteed	2.86	2.34	2.57	1.80
5.5% second	2.14	2.13	2.40	1.64
Ordinary	90.00	64.50	64.50	48.75
	(20%)	(21.5%)	(21.5%)	(16.25%)
Carry forward	25.39	24.13	24.03	22.46

Note :—(1) The company issued, in 1960-61, 15 lakh equity shares of Rs. 10 each as fully paid bonus shares, which became eligible to the dividend for the year. (2) From 1959, all dividends are subject to deduction of tax.

* Does not include Rs. 18.75 lakhs being the tax on the bonus shares. It is charged to general reserve.

From the table above, it is clear that the excise burden rose sharply last year from Rs. 527.60 lakhs to Rs. 603.20 lakhs, staff expenses were higher at Rs. 346.40 lakhs as compared with Rs. 307.06 lakhs in the previous year, as were other expenses at Rs. 252.93 lakhs as compared with Rs. 226.83 lakhs. The liability by way of interest moved down from Rs. 26.89 lakhs to Rs. 24.43 lakhs largely because of a welcome decline in bank borrowings from Rs. 171.92 lakhs to Rs. 145.82 lakhs, which attracted interest of Rs. 9.00 lakhs as against Rs. 11.52 lakhs in the previous year. While taxation naturally claims a larger sum of Rs. 122.62 lakhs as compared with Rs. 81.37 lakhs a year before, depreciation also gets nearly Rs. 3 lakhs more at Rs. 61.39 lakhs. The transfer to development rebate reserve has been reduced from Rs. 17 lakhs to Rs. 7.50 lakhs, but that to general reserve has been increased from Rs. 37.50 lakhs to Rs. 62.50 lakhs, obviously to maintain a healthy capital-reserves ratio following the issue of 15 lakh equity shares of Rs. 10 each as fully paid bonus shares during the year under review. Because of the increased capital, there is a small cut in the ordinary dividend from 21.5 per cent to 20 per cent, taxable, but the amount required for this purpose is as high as Rs. 90 lakhs, against Rs. 64.50 lakhs a year before. Still the carry forward is well maintained at Rs. 25.39 lakhs against Rs. 25.13 lakhs brought in.

SYNOPSES OF COMPANY REPORTS

Cawnpore Sugar Works Ltd.

(*Secretaries & Treasurers*: The British India Corporation Ltd., Kanpur, U.P.)

69*th Annual General Meeting*—26th April 1962.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1961	1960
Sales (sugar, molasses, spirit, etc.)	4,19,03	3,56,38
Closing stock	1,28,51	86,45
Sugar excise duty	1,58,46	1,33,85
Gross profit	12,08	20,25
To Secretaries' and Treasurers' remuneration (subject to adjustment)	50	10
Transfer to depreciation	6,80	6,70
,, ,, provision for taxation (agricultural)	6	8
Net profit	22	13,37
Adjustments	2,79	1,23
Appropriations:		
Total available balance	3,01	14,65
To provision for taxation (agricultural) in respect of previous year	2	2
To expenses relating to previous years	33	34
To development rebate reserve	2,19	1,60
To adjustment of loss brought forward	47	12,68
Net debit balance carried forward	—3,70	—4,18

N.B.—Adjustments represent profit on sale of investments; fixed assets provisions no longer required and other credit items.

Extracts from the Directors' report: The crush at the Company's four factories has been appreciably larger than the previous year. The yield obtained, however, except at Padrauna Factory, has been lower, as the crushing started earlier and ended late to enable all the cane diverted to the factories being crushed. The comparative figures of the last two seasons for cane crushed and extractions obtained, are as under:—

Factory	1961		1960	
	Cane crushed Mds.	Recovery %	Cane crushed Mds.	Recovery %
Marhowrah	31,55,629	9.67	21,64,607	10.13
Gauri	34,23,671	10.16	27,41,394	10.37
Padrauna	40,42,372	9.51	40,23,926	9.11
Kathkuiyan	30,02,472	9.34	30,07,414	9.40

The trading results for the year would have been far better had not the Company suffered losses amounting to approximately Rs. 10,84,000 due to export of sugar at prices far lower than the production costs; the implementation of the Sugar Wage Board recommendations, involving the Company in a recurring expenditure of Rs. 6,47,000 per annum and the high amount of interest on overdrafts due to accumulation of heavy stocks. While Gauri and Marhowrah factories made reasonable profits, Padrauna and Kathkuiyan did not come upto expectations thereby offsetting a major part of the profits earned by the other two factories.

The Government of India has introduced control on the price of industrial alcohol and the margin of profit available on sale thereof has been reduced. The manufacture of country spirit is now the mainstay of business of the Marhowrah Distillery.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
*Capital	40,00,000	Gross block	1,32,77,050
Reserves and surplus	75,02,480	—Depreciation	1,04,99,347

Transfer to plant renovation reserve	Nil	5
,, ,, charity fund	..	..
Proposed dividends (taxable) preference	31	30
,, ,, ordinary	4,05	4,86
	(15%)	(18%)
Carry forward	94	85

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The Company is entitled to receive Rs. 5,86,700 under the two incentives granted by the Government, that is, rebate in excise duty on the excess sugar produced over the average of preceding two seasons and remission of cane cess for early start. Under the price linking formula, the Company has debited in the profit and loss account an amount of Rs. 2,76,000 as against Rs. 5,40,000 in last year towards payment of deferred additional price to cane suppliers.

The total quantity of sugarcane crushed was 58.66 lakh maunds with a recovery of 9.63 per cent, the sugarcane price remaining same as last year.

The directors are glad to report that the Lakshmi Industries and Cold Storage has earned a net profit of Rs. 37,928 and the Lakshmi Electricity Undertaking has earned a net profit of Rs. 4,753.

The Government of India have granted an Industrial licence to this Company for expanding the capacity of the mills from 1,800 to 2,100 tons crushing per day. For achieving better efficiency and to replace worn-out machinery, an order for 9-roller milling plant size 36"×72" has been placed with Messrs. Walchandnagar Industries at a cost of about Rs. 25 lakhs.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	80,61,843
Reserves and surplus	24,58,303	—Depreciation	42,70,707

† This includes Rs. 4,917 being items pertaining to previous years.

Extracts from the Directors' report: The directors consider that the result of the working of the current year is satisfactory. The net sales of the Company have increased by about 36 per cent from 127.70 lakhs during 1960 to 173.09 lakhs during 1961. The gross profit has also increased substantially.

New varieties of yarns and fabrics were successfully manufactured and marketed during the year. Reinforced Rubberlined Hose, which is being manufactured in collaboration with Messrs. George Angus & Co. Ltd., England, was sold in larger quantities.

It is expected that with the rapid industrialisation of the country, the demand of the goods manufactured by the Company will further increase. The directors, are therefore, examining the advisability of increasing the production by installing new machines.

New Schemes: The cotton spinning plant of 15,200 spindles is making satisfactory progress. The construction of buildings is practically complete and erection of machinery has already started. This plant is expected to go into production during the third quarter of 1962.

In the last report, mention was also made of the project to manufacture *High Tension Electric Insulators*. Provisional orders for this plant have already been placed. It is expected that the necessary agreements will be shortly signed.

Due to non-availability of import licences, following schemes have not made any progress: (*a*) Synthetic Rubber Oil Seals and (*b*) Malleable Castings, Steel Forgings and Steel Structurals.

The schemes mentioned above as also other new projects are receiving their serious attention. In fact, applications have been made under Industrial (Development and Regulations) Act for some other new projects.

New Capital Issue: New Equity Capital of Rs. 24,59,000, for which permission was received during the last year, has now been offered to the existing shareholders on the basis of one right share for every two existing Equity shares.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	50,08,500	Gross block	1,01,55,365
Debentures	26,75,213	—Depreciation	50,11,365

,, ,, ordinary	2,40	99†
	(20%)	
Carry forward	1,05	26

N.B.—Adjustments represent the balance brought forward from the previous year.

* After adjustment of loss brought forward from 1959 accounts.

† This is the proposed dividend for 1960 but it is not known how much of this is ordinary and how much preference.

Extracts from the Directors' report: The Company has placed orders for purchase of machinery and equipment amounting to Rs. 34.56 lakhs (approximately). The value of the building, plant and machinery show an increase of Rs. 2,96,140 due to additions made.

The directors are pleased to inform that the Company had a quota for installation of 33 plain looms. These looms have been purchased and put to working in the end of the year 1961.

During the year the Company made an application for additional spindles for balancing purpose and the Company got the licence to install additional 4,000 spindles, for which orders have already been placed.

The Company made an application to the National Industrial Development Corporation for grant of loan for modernisation of the existing plant and machinery. The said loan application has been recommended for the grant of Rs. 58.83 lakhs. Very soon this loan will be made available to the Company. The Company has a very ambitious scheme for completely modernising and renovating the existing plant and machinery.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	17,30,000	Gross block	28,98,023
Reserves and surplus	22,28,108	—Depreciation	9,92,137
Other liabilities	33,37,629	Net block	19,05,886
		Current assets	52,82,279
		Investments	62,194
		Cash	45,378
	Rs. 72,95,737		Rs. 72,95,737

* Paid-up capital consists of 12,000 ordinary shares of Rs. 100 each fully paid up; 3,500 five per cent. taxable-redeemable cumulative preference shares of Rs. 100 each fully paid up and 4,500 five per cent. tax-free cumulative second preference shares of Rs. 100 each fully paid up as bonus shares without payment being received and capitalised out of the general reserve. Of the ordinary capital 2,500 ordinary shares are issued as per agreement without payment being received and 1,500 ordinary shares are issued as bonus shares without payment being received and capitalised out of the general reserve.

Notices

5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

6. AND for the purpose of considering, and if thought fit to pass (with or without amendment as may be permissible), the Resolutions set out below as Ordinary or Special as specified below:—

(a) *Ordinary Resolution No. I.*

"RESOLVED that, as authorised by Section 258 of the Companies Act, 1956, the number of Directors of the Company be and it is hereby increased from nine to the maximum of ten permissible under Article 97 of the Company's Articles of Association."

(b) *Special Resolution No. II.*

Special notice of the following Resolution for the appointment of Mr. J. N. Guzder as a Director has been received by the Company from some members, and is hereby given to the members, the appointment being deemed to be in the interests of the Company.

"RESOLVED that pursuant to the provisions of Section 261, and other applicable provisions (if any) of the Companies Act, 1956, Mr. Jamshed Nusserwanji Guzder, who is a Director and Member of Messrs. N. S. Guzder & Company Private Limited (who have been and are shipping, clearing and forwarding the goods of the Company as well as of the Company's subsidiary, Messrs. Nowrosjee Wadia Ginning and Pressing Company Limited, and who have been and are cotton muccadams for the Company, and who also purchase cotton and *kapas* for the Company in certain areas in India on which they receive commission from the Company, and who may, therefore, be deemed to be holding an office or place of profit under the Company and its subsidiary), be and is hereby appointed a Director of the Company."

(c) *Special Resolution No. III.*

"RESOLVED that pursuant to the provisions of Section 314 and other applicable provisions (if any) of the Companies Act, 1956, the consent of the Company be and is hereby accorded to Messrs. N. S. Guzder and Company Private Limited, holding an office of profit under the Company and under its subsidiary Messrs. Nowrosjee Wadia Ginning and Pressing Company Limited for a period of five years in respect of shipping, clearing and forwarding of goods, and as cotton muccadams and for purchasing (on a commission basis) cotton and *kapas* in certain areas in India."

(d) *Special Resolution No. IV.*

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Eastern Cotton Company, Bombay (who are or may be deemed to be "associates" of the Managing Agents of the Company), to be operative as from the 26th day of May 1962, until determined by three months' notice given by either side to the other, in respect of purchases from them of cotton and *kapas* and such other goods in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company, subject to the conditions that the prices of such cotton and *kapas* and such other goods as aforesaid shall be such as are reasonable and/or are approved of by the Directors, and that all payments to be made to the Company by Messrs. Eastern Cotton Company shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. Eastern Cotton Company."

(e) *Special Resolution No. V.*

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Shapoorji Pallonji and Company Private Limited, Bombay (who are or may be deemed to be "associates" of the Managing Agents of the Company),—(subject to any amendments as may be suggested by the Central Government and accepted by the Board and by Messrs. Shapoorji Pallonji and Company Private Limited),—to be operative as from the 26th May 1962, until determined by three months' notice given by either side to the other, in respect of any building, or construction work and any work of repairs and in respect of supply of building materials and such goods in which they trade or do business or may trade or do business, as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors, and that all payments to be made to the Company by Messrs. Shapoorji Pallonji and Company Private Limited shall be made within one month from the date of the sale or supply of any property or any article or the supply or rendering of any service by the Company to Messrs. Shapoorji Pallonji and Company Private Limited."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. IV and V are open for inspection by any member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,

SESHASAYEE BROS. PRIVATE LTD.,
Managing Agents.

27th March 1962.

COMPANY AFFAIRS

(*Concluded from page 630*)

The financial position of the Company is a picture of strength and health. The issued and paid-up capital is of Rs. 52.00 lakhs, of which *Rs. 30 lakhs are in 8 per cent guaranteed cumulative* preference shares of Rs. 100 each, Rs. 40 lakhs in 5.5 per cent second cumulative preference shares also of Rs. 100 each (both being equal to the authorised preference capital); the balance of Rs. 450 lakhs is in equity shares of Rs. 10 each, including Rs. 259.99 lakhs by way of capitalisation of reserves and Rs. 19.99 lakhs for shares allotted as fully paid for consideration other than cash. As against this, reserves and surplus total Rs. 508.13 lakhs, including general reserve of Rs. 329.24 lakhs, share premium account of Rs. 70 lakhs and development rebate reserve of Rs. 71.50 lakhs. The Company has Rs. 204.55 lakhs in 6.5 per cent, debenture-stock *1968-73* secured as a floating charge upon the assets. Bank borrowings, at the end of the year stood at Rs. 145.82 lakhs, secured by hypothecation of stocks. Outstanding interest on these secured loans is shown at Rs. 0.1 lakh. The total liability of secured loans works out to Rs. 350.47 lakhs. In addition, current liabilities and provisions amount to Rs. 381.67 lakhs. The *total liability to outsiders thus aggregates* Rs. 732.14 lakhs, to cover which are available current assets, loans and advances of Rs. 10.88 crores. Debenture-stock redemption fund is shown at Rs. 36.47 lakhs against Rs. 28.47 lakhs in the previous year. Investments are shown at Rs. 4.54 lakhs; those quoted cost the Company Rs. 4.29 lakhs and command a market value of Rs. 4.09 lakhs. The gross block increased during the year from Rs. 10.40 crores to Rs. 10.92 crores, and is very conservatively written down to Rs. 6.31 crores.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 44.62 *cum-div.*, and offer, on the *ex-div.* basis, a net yield of 3.1 per cent per annum.

AZAM JAHI ELUCIDATES LAST YEAR'S RESULTS

Apropos our review of the results of the Azam Jahi Mills Limited for the year ended 30th September 1961, in the issue of 17th March 1962, the Company has elucidated the year's results as follows:

"1. The total cost of cotton increased over the cost of previous year. The Directors in their report mentioned that prices and availability of cotton during the year were satisfactory. The increase in the total cost of cotton was due only to higher production of cloth and yarn that was achieved during the year and this higher production is reflected in the higher realisation from cloth and yarn as appearing in the accounts.

"2. As for the operational expenses, the bulk of the increase is due to payment of Rs. 6 lakhs to workers retrenched during the year towards retrenchment compensation, gratuity, etc. as a result of rationalisation of workload. Rationalisation was mentioned in the report of the Directors. A further increase of about Rs. 1 lakh in wages and salaries was due to the payment of Wage Board Award increase in wages and salaries to workers and clerical staff. In the year under review, this increased wages and salaries were paid for the whole year of 12 months whereas in the previous year the increase was effective for only nine months of the Company's financial year, i.e., for the period from 1st January 1960 to September 1960. It will be observed that the bulk of the increase in operational expenses this year is non-recurring and *the Company will reap the benefit of rationalisation in future years.* It will be appreciated that the higher expenses as commented by you are not disturbing but is the result of increase in production and extraneous payment, etc.

"3. The arrears of depreciation as revealed in the accounts of the year amount to Rs. 36.8 lakhs and the Directors are of the opinion that given a few reasonably good years, the entire arrears will be cleared from the profits.

"4. The Company has been carrying forward depreciation losses in the income-tax assessment records and as such it was not necessary to provide for taxation.

"5. As for Company's position in regard to short-term liability and your comments that liabilities are not adequately covered by current assets, we cannot reconcile with this remark. In our case, current liabilities include a loan capital of Rs. 116 lakhs raised from the bank and a substantial part of it is a long-term loan specifically raised to finance the purchase of block assets such as capital machinery, etc. and we do not think there can be any valid objection to this. It is perfectly open to the borrower to invest the lender's money in fixed assets. A creditor cannot, in our opinion, say that the borrowed loan should be kept only in liquid assets. All that a creditor is concerned is whether his financial interest is fully secured and whether the Company has enough assets either in the shape of fixed or floating assets to meet his loan. Our Company fully satisfies this requirement."

CENTRE AND THE STATE PLANS—I

(*Concluded from page 609*)

the rate of progress has not been satisfactory. The hope is that, with 64.09 per cent of third Plan expenditure by States on agriculture, etc., more effective attention would be paid to this sector which caters substantially to national income. Rural and community development outlay rose from Rs. 51.14 crores in first Plan to Rs. 200.66 crores in second Plan and on to Rs. 55.54 crores (1961-62). Service expenditure on this head increased at a faster rate than education, but evaluation reports do not convey cumulative beneficial results. Under "Famine," the expenditure went down *pro rata* as between the second Plan and 1961-62, showing how the authorities do not understand the vital importance of social security. Details are given in Table III.

On the whole, service expenditure did not improve according to modern standards, though there is good room for economy accompanied by a higher level of efficiency and integrity. The third Plan outlay target of Rs. 3,847.31 crores (including revenue and capital accounts) is not accompanied by even an approximate estimate of total development expenditure (leave alone total service expenditure) during the period.

Table IV contains total development and non-development expenditure, including revenue and capital accounts at Rs. 2,006.71 crores (first Plan), Rs. 3,630.96 crores (second Plan), and is budgeted at Rs. 981.69 crores in 1961-62. As compared with the total expenditure, the percentage figures are 64.29, 67.25, 66.17, respectively, for the two Plan periods combined, and 69.67 for 1961-62 (B.E.). The distinction between "development and non-development" items is by rule of thumb and calls for immediate revision.

Table V contains the relevant data pertaining to consolidated budgetary position. While during the second Plan period the States achieved collectively a revenue surplus of Rs. 42.8 crores, the budgets for 1961-62 forecast a deficit of Rs. 36 crores for a single year. Including revenue and capital accounts, overall deficit was Rs. 86.7 crores in the first Plan period and Rs. 157.6 crores in the second Plan. It is estimated at Rs. 66.6 crores for 1961-62. Cash balances shown in the table include overdrafts, but separate figures are not given! The total deficit of Rs. 244.3 crores (1951-61) was made up by drawing on cash balances (including overdrafts) to the tune of Rs. 145.9 crores and sale of securities fetching Rs. 98.5 crores. Eleven States expected to have negative cash balances as on 31st March 1962, as compared with five States on 31st March 1961! While the progress of total expenditure as between the two Plans from Rs. 2,299.8 crores to Rs. 4,012.7 crores indicates fairly rapid development, the steep drop in cash balances and reserves should be a matter for serious concern, bearing in mind the fact that the net deficit on account of capital transactions during the decade was Rs. 164.6 crores made up from loans. At this rate, the unhealthy habit of the States implicitly looking to the Centre for assistance at any point to any extent may develop, leading to a factual suspension of the sovereignty of States. The preventive step comprises the raising of revenues (both tax and non-tax) by the States in step with the growing tempo of the national economy.

(*To be continued*)

LABOUR

(*Concluded from page 612*)

Besides this, 243 additional beds were reserved bringing the total number of beds so far reserved to 2,731. With effect from 1st April 1962, employers' contribution to the scheme has been raised from 1¼ per cent to 2½ per cent in areas where the scheme has been implemented. The employers contribution in non-implemented areas has been kept unchanged at ¾ per cent.

Membership of the Employees' Provident Fund Scheme showed a further rise and, as at the end of October 1961, the number of subscribers stood at 3.075 million workers in 16,281 establishments. Contributions collected till the end of October 1961 amounted to Rs. 302.89 crores. As against this, refunds to outgoing members and loans amounted to Rs. 84.06 crores.

The report discloses that steps have been taken to give concrete shape to the suggestion for establishing an unemployment relief fund.

hunger strikes IN BANKING HISTORY

In the 3rd Century A. D. the 'hunger strike' was a weapon used in India for the recovery of loans. The method was called "dharna". The creditor posted himself outside the debtor's house and fasted till either the debt was paid or he (the creditor) died. The debtor usually paid up, for fear of being injured by the ghost of the man. Manu the Hindu lawgiver laid down five methods for the recovery of debt: "By moral suasion, by suit of law, by artful management or by customary proceedings a creditor may recover property lent; and fifthly by force."

Today friendliness and co-operation underscore banking transactions, especially when you deal with the Union Bank. The Union Bank has made a creed of *personalised service*, under which every depositor is treated as a Very Important Person. The Union Bank believes that a depositor's savings help not only himself and his family, but also the nation.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit vaults; TELEX contact with countries all over the world.

FORWARD MARKETS BULLETIN
(Monthly)
Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription		Single copy	
In India ..	Rs. 24.00	In India ..	Rs. 2.50
Abroad ..	Rs. 46.00	Abroad ..	Rs. 4.00

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, *4th April*

The past seven days have not witnessed any change in the state of the short-term money market. The turn of the fiscal year has not brought about any abatement in the seasonal pressure of demand for funds. The stringency is as acute as it was a week ago and it looks as though the current busy season, which had started rather late, may last a little longer than usual; it would not be surprising, if it were to continue right up to the end of May.

In the inter-bank section, the day-to-day money rate remains unaltered at 5½ per cent, with borrowers over. Almost every bank is dependent upon the lender of last resort for supplementing their resources to meet the high level of demand for credit from trade and industry. There has been no change in short-term deposit rates which are ruling at the ceilings under the inter-bank agreement.

The results of 91 days' Treasury Bills of the Government of India are also colourless. The amount invited, offered and accepted, all remained at the self-same figure of Rs. 2 crores. This was true also of the average rate of accepted tenders at 2.640 per cent per annum. The response to Intermediate Treasury Bills, which had fallen from Rs. 15 lakhs to Rs. 5 lakhs in the previous week, was much less, having yielded no more than Rs. 2 lakhs. Sales of both the types of Bills are, however, being continued.

The external assets of the Reserve Bank suffered a fall of Rs. 5.96 crores during the week-ended 30th March 1962, to stand at Rs. 129.70 crores. The only other noteworthy change in the Reserve Bank's statement for that week is a contraction of Rs. 2.45 crores in the advances to scheduled banks against usance bills, the total amount outstanding being Rs. 40.73 crores.

The gilt-edged market, too, was listless, with a few transactions stemming mostly from the Provident Fund accounts.

There was a marked improvement in the value of the pound sterling in the foreign exchange markets of the world, particularly in New York and Zurich. Thus, the spot New York on London went up by 0.390 cent to 281.540-281.580 cents per £ and three months' forward by a like amount to 280.160-280.200 cents per £. In Zurich, the spot rate was 12.2.300-12.2.320 Swiss francs to £, as against 12.2.115-12.2.135 a week before. In Bombay, the banks' selling rate for spot T.T. on New York was 50 nP lower at Rs. 475.50 and their buying rate by 75 nP at Rs. 472 per 100 U.S. dollars.

TEAS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, *3rd April*

There was good demand for the dusts offered during last week's tea sales here for internal consumption totalling 29,897 packages. Prices were irregular. Thus, good C.T.C. teas evidenced keen competition and were, as a result, fully firm. Medium C.T.C. dusts possessing clean leaf were irregular, but teas of the bright liquoring type hardened. On the other hand, fibrous secondary descriptions eased. Plain orthodox teas declined, with the falling trend being pronounced in respect of the poorer lots. Although earlier in the sales, the bright liquoring Assams were fully firm, as the sales progressed, prices gave way. Fibrous legg-cut teas came in to an easier market, while the lots having clean leaf were readily absorbed. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.30 to 7.00, medium Assam C.T.C. dust 5.30 to 5.70, medium Assam dust 3.90 to 4.60, legg-cut dust 3.80 to 4.70, and plain orthodox dust 3.45 to 4.00. Leaf on offer totalled 494 packages. The trend was irregular.

The low level of tea stocks in London once again received attention among trade circles during the week. While the qualities fit for export from the last crop in north-east India have been exhausted, as indicated by the export auctions concluded a week ago, dusts mainly of an end-of-season character have not yet been completed. The quantity still awaiting absorption is thought to be insignificant, and the carry-over for the next season will be practically nil. In other words, the higher crop of last year has been readily absorbed. This had led to the logical inference that consumption, both in India and abroad, has increased. Such a reading is only confirmed by a recent F.A.O. study, according to which, while tea output all over the world increased by 7 per cent, consumption rose by 8 per cent. Considering that U.K. stocks are currently about 40 million lbs. lower than at this time last year, it would be no surprise, if final figures reveal a faster progress of consumption.

U.K. buyers possibly regret their slow support earlier in the season in the hope that the full weight of the higher crop would bring about a rapid decline in prices. Actually, for some time prices for exportable teas declined. But when foreign buying increased in order to make up for their earlier shortfall, prices moved up. The anxiety of the U.K. buyers to improve their stock positions is in evidence, in that they are now making keen inquiries about this season's surplus crop. In the coming two months, U.K. stocks will decline at a much faster rate, there being no shipments for replenishment. All these will ensure that the opening of the new season's sales will be marked by keen accumulated demand.

An increase in north-east Indian production is expected this year. However, the increase would not be as large as in 1961. The Indian tea industry should seize the opportunity of increased world demand and, unless replanting and extension of acreage proceed much more rapidly than at present, it is apprehended that India would not be able to derive the full benefit from increased world demand. Gardens are groaning under heavy tax burdens, which do not leave the required funds for development. The time has come for the Government to review the situation more realistically than hitherto and accord tax relief. Otherwise, other producing countries, whose cost of production and extension are cheaper, would steal a march over India. This is all the more important when it is known that, despite the Government's orders to the Tea Board to discontinue internal propaganda, internal consumption is increasing. This is not surprising, since, with rapid industrial development, industrial workers with an urban bias are increasing.

SILVER FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, *4th April*

Silver continued to rule firm during the week under review, while gold suffered a further setback in value. The renewed firmness of silver was due to persistent buying by a leading operator at Calcutta. Arrivals were, of course, larger than in the previous week, the daily average being 26 bars, as against 13 bars. But stockists were holding tight and so prices moved up. It is for the same reason that actual daily average offtake was also low at 9 bars, as against 11 bars. Gold, however, encountered selling induced by heavy arrivals of contraband metal and fears that there would soon be pressure of sales by dealers who have bought large parcels of gold ornaments which are reported to have arrived in recent weeks from Goa. The actual arrivals were, on an average, about 10,500 tolas per day, the corresponding figure for last week being 9,000 tolas. Offtake was rather restricted: 5,800 tolas a day, as against 6,400 tolas.

About 2,700 tolas of contraband gold worth Rs. 3 lakhs were confiscated by the Customs at Bombay on Wednesday last week.

The *Jeth* (18th June) settlement in gold began the week at Rs. 121.20, as against the previous close of Rs. 121.30 and drifted downward to touch a low of Rs. 119.75 today. At this level, some support was forthcoming and the settlement finished at Rs. 119.90.

Ready gold continued to be quoted at a discount under the forward. In fact, the actual discount widened from 65 nP on Wednesday last week to 90 nP today. The spot rate receded in the course of the week from Rs. 120.65 to Rs. 119.

In silver, the *Jeth* (19th June) settlement was well supported, the quotation advancing from Rs. 217.70 to Rs. 219.45 on Monday the 2nd inst. After declining to Rs. 217.95 today, the settlement moved up again to Rs. 218.45 at the close.

Ready silver elicited good enquiries and rose from Rs. 218.55 to Rs. 219.90 yesterday. After easing to Rs. 218.55 today, it finished at Rs. 219.05. At this level, the spot rate commanded a premium of 60 nP over the forward, as against 85 nP last week-end.

The dollar price of gold in the London bullion market receded from $35.08¼ to $35.07¼ per fine ounce. The sterling price also declined from 249s. 7½d. to 249s. 2½d. Both spot and forward silver were quoted on a par at 84½d. Last week, there was a spread of ¼d., the spot standing at 84⅜d. and the forward at 84½d. Silver in New York continued unchanged at 101.50 cents.

The following table shows the trend of prices during the week under review:

	4-4-62 (closing)	High	Low	28-3-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	119.00	120.80	118.85	120.65
Jeth*	119.90	121.25	119.75	121.80
Sovereign	97.00	—	—	97.00
SILVER				
Ready (.996 fine)	219.05	219.00	218.55	218.55
Jeth†	218.45	219.45	217.55	217.70
London—				
Gold	249s.2¼d.	249s.5½d.	249s.2½d.	249s. 7½d.
Silver Ready	84¼d.	84¼d.	84d.	84⅝d.
Silver Forward	84¼d.	84¼d.	84¼d.	84⅝d.
New York—				
Silver	101.50 cents	—	—	101.50 cents

* 18th June settlement. † 19th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED RALLIES

(Messrs. A. Bradley and Co.)

CALCUTTA, *2nd April*

The linseed market showed an upward tendency towards the latter part of the week. There was an appreciable rise in prices. A bullish sentiment prevailed in sympathy with other edible oils and arrivals of seeds from upcountry slowed down. Sellers were reserved. The oil section was firm. Business was done only in ready delivery, as sellers for forward position were not inclined to do any business at these levels.

The oilcake market was unchanged. Some business was done for export for May shipment at slightly lower prices. But sellers were not inclined to do more at these levels.

Ready-April delivery was quoted at Rs. 71 per quintal.

GOOD DEMAND FOR COTTON

(From Our Own Correspondent)

BOMBAY, *4th April*

The vacuum created by the termination of the Jarilla March 1962 contract continues to persist. It is quite unlikely that, with the supply position being what it is, the F.M.C. will permit trading in any other settlement in the current season. Trade quarters hope that the Government would soon make up its mind on the cotton policy for the next season and that permission for trading in new crop would be given early.

In the spot market, there was good demand for such popular varieties as Digjivay, Kalyan, Laxmi, Co2 and L. 147. Price of Vijay, Digvijay and Kalyan, in particular, ruled firm, thanks to mill buying and reduced arrivals. Mill buying would have been more but for the delay in the allotment of an additional 10 per cent of indigenous cotton which has yet to be made although more than three weeks have elapsed since the Cotton Advisory Board recommended it.

Export demand for Bengal *Deshi* continued to be slack, inspite of last week's quota for 70,000 bales. Consequently, purchases by shippers were also slow. Interest in foreign cotton revived, following the release last week of a global import quota for 43,000 bales. Higher grade American cotton was very much in demand. Sudan and East African growths also attracted the attention of mills.

The following are the latest available quotation—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 650; Ganganagar 700; Wagad 851; Kalyan 935; Hubli Laxmi 1,180; Digvijay 1,135, American 1-5/32 G.M. 1,257; American on Sample 1,257, East African B.P. 52, 1,355; B.P. (U.N.U.G.) 1,350-1,370. Sudan G3S 1,450; G4S 1,435.

The Textile Commissioner's requisitioning drive continues to meet with heavy opposition. In fact, official circles in Bombay are concerned at the refusal of certain co-operative societies and traders to comply with the orders of requisitioning passed by the Textile Commissioner and the agitation still being carried on by them against the requisitioning of cotton. Attention is drawn to the fact that the statutory ceiling prices for cotton have been fixed by the Government of India and are applicable to the entire cotton produced in the country, irrespective of whether it is in the possession of the mills, the trade or the co-operative societies. The Textile Commissioner has powers to requisition cotton from any of these holders and compliance with such orders is mandatory.

The co-operative societies, it is pointed out, should realise that the Textile Commissioner has also exercised his powers in the past to relieve them of embarrassing stocks in times of relative plenty. During the cotton season 1959-60, although the overall cotton production was only of the order of 3.75 million bales, there were about 40,000 bales of C.02 cotton with the societies in Gujarat which had no purchasers due to their deteriorated quality and were in danger of becoming a net loss if not sold before the rains. At that time, the Textile Commissioner took special measures to assist the societies and ensured that the entire stocks were sold in time. In order to prevent a similar situation from developing during the 1960-61 season, the Textile Commissioner required mills to purchase five per cent of their cotton quotas in C.02 cotton only, right at the beginning of the season which accounted for about a lakh of bales. As a result, while the accumulation of stocks of other varieties of Gujarat cotton created a problem of disposal, there was no accumulation of C.02 cotton. The Textile Commissioner also persuaded the mills to purchase large quantities of the other varieties of cotton and relieve the societies of their stocks, although the mills had already covered their requirements for normal running as well as for the carryover.

During the present year, official circles point out the situation is different and the Textile Commissioner has now to see that adequate stocks are made available to the mills within the statutory ceilings. It is no longer a question of finding buyers for cotton but of releasing cotton without it being hoarded. It is because cotton is not being released by the societies within the ceiling prices, that the demands for requisitioning are being made by the mills. Even so, the quantities of cotton requisitioned from the societies, as compared to their holdings, are insignificant and the societies obtain for the requisitioned cotton the maximum statutory ceiling price. It is said that the requisitioning of cotton cannot be postponed any longer as the supply position is deteriorating every day. If the co-operative societies do not co-operate, the Textile Commissioner may be compelled to pass such orders as might become necessary, including seizure of stocks of cotton from any holder who has contravened the order and banning the movement of cotton from one area to another.

Advocates of decontrol of cotton in the next season have derived considerable satisfaction from the support they have received from some unexpected quarters. Mr. C. H. Campbell, Chairman of the Finlay Group of Mills, stated, in his annual statement to shareholders of the Gold Mohur Mills, that it was necessary to give the farmer every encouragement and that removal of price control on cotton was only way of doing it. Mr. Pratap Bhogilal, Chairman of the Bombay Millowners' Association, also said much the same thing when he observed, in his address at the annual meeting of the Association held this week that, since it was generally felt that control on cotton prices was a deterrent to the farmer for putting his best effort, he would not stand in the way of removal of ceiling prices.

The easy trend witnessed in the Karachi cotton futures market last week gathered momentum during the week under review. Selling prompted by lack of buying interest by domestic mills and slow export demand led to a decline in prices. The N.T.R.G. May contract eased from Rs. 71.40 to Rs. 69. The July contract declined from Rs. 71.50 to Rs. 69.10. Spot prices, too, were a shade easy.

The following are the latest available quotation—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 62; Punjab *Deshi* 59.25; 4F Punjab Roller 75; S.G. 81; LSS Punjab Roller 77; S.G. 83; 289F Punjab Roller 90; S.G. 98.

The U.A.R. Government has announced its cotton policy for the coming season. The salient features of the policy are (1) The Egyptian Cotton Commission will receive all cotton produced in the country at the price fixed by the Government. The cotton will then be sold to the Cotton Organisation which, in turn, will sell it to the export houses for shipment abroad. (2) Upcountry merchants shall do business on behalf of the E.C.C. for a suitable commission. (3) E.C.C. selling prices shall remain unchanged. It has also been announced that the spot market at Minet El Bassel will be abolished and its staff will be absorbed in Cotton Commission or Cotton Organisation.

Barring the October deliveries of both the American and American type contracts which came in for selling, cotton futures in Liverpool attracted good buying support during the week. Better advices from the yarn and piecegoods market further aided sentiment. Sudan cotton contract were quiet and nominally unchanged. The following are the latest available quotation—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 24.15; July 24.35; October 24.20; December 24.30.

American cotton mixed growth contract: May 24.50; July 24.75; October 24.55; December 24.65.

Sudan: May 30; July 29; September 29.

Cotton futures in New York suffered a setback during the week. Value eased in slow dealings which reflected lack of trading interest in the absence of any fresh incentives. Spot prices, however, continued to be well maintained.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	3-4-62	27-3-62	19-3-62
New York spot	35.65	35.65	35.65
May	34.32	34.61	34.51
July	34.70	34.88	34.78
October	34.27	34.40	34.36

YARN TRADERS WELCOME EXPORT POLICY

(From Our Own Correspondent)

BOMBAY, *4th April*

Traders in yarn have welcomed the new import policy for three important reasons. In the first place, the policy maintains *status quo* in respect of established importers' quotas for art silk yarns, contrary to earlier fears of a possible cut in quotas, as well as in regard to export promotion scheme. Secondly, the policy covers the whole year, instead of six-monthly period as hitherto. Finally, the initial validity period of 12 months applicable to small value licences has been extended to all import licences. Traders are, however, disappointed at the continued exclusion of merchant-exporters from the incentive benefits provided by the export promotion scheme for fabrics. For the scheme as given in the Red Book is merely a reproduction of the notifications by which the scheme was introduced in October 1961 and subsequently amended in February 1962. Consequently, the scheme continues to cover only manufacturer-exporters and not merchant-exporters. Meanwhile, there are persistent rumours in the market that the scheme would soon be revised so as to provide for cash incentives on the basis of actual export business in fabrics, in the place of import entitlements.

The work of distribution of indigenous art silk yarn for primary and apex weavers' co-operative societies, weavers' associations and handloom cloth manufacturers outside the co-operative fold, etc., in Maharashtra State has been entrusted to the office of the Registrar of Co-operative Societies, Industrial Section 22, Wellesley Road, Poona 1. So far, this work was being done by the Indigenous Art Silk Yarn Distribution Committee, Bombay. In future, indigenous art silk yarn will be allotted every quarter to the weavers' co-operative societies, apex societies, weavers' Associations and handloom cloth manufacturers outside the co-operative fold by the Registrar's office on receipt of allotment of quota from the Textile Commissioner. Indigenous art silk yarn is allotted on loomage basis as per the pattern prescribed by the Textile Commissioner.

Renewed rumours regarding revision of the export promotion scheme for art silk fabrics prompted bull buying and frantic short-covering which led to a sharp rise in prices of Amilan yarn (20 x 1). The April delivery jumped up from Rs. 3,470 to Rs. 3,580 and June contract from Rs. 3,550 to Rs. 3,660. In the spot section, National Rayons 120 Bt. cones 1st grade advanced by 36 nP to Rs. 14.37. 150 Bt. cones 1st grade spurted by 29 nP to Rs. 12.10. Among imported yarns, 120 Japan rose by Rs. 27 to Rs. 1,984. 150 Japan, however, was subjected to liquidation by stockists and declined by Rs. 28 to Rs. 1,901. 120 Italy also fell by Rs. 81 to Rs. 1.879 and 150 Italy by Rs. 21 to Rs. 1,735.

Staple fibre yarns ruled dull in the absence of encouraging advices from consuming centres. 40 x 2 April settlement dropped Rs. 2 to Rs. 727. June contract was quiet at Rs. 742. Spot Centurys were neglected at Rs. 8.12, as also Kohinoors at Rs. 8.18.

Among cotton yarns, coarse counts met with good support, while others were dull. Ten counts Moderns hardened by 50 nP to Rs. 19.50. Twenty counts Gokaks picked up 12 nP to Rs. 22.87. 32 counts Madras put on 25 nP to Rs. 29.75.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	4-4-1962	28-3-1962
Art silk yarn—	Rs.	Rs.
20/1 Amilan (100 kg.)—		
April	3,580.00	3,470.00
June	3,660.00	3,550.00
120 Japan (per 100 kg.)	1,984.00	1,957.00
150 Japan (per 100 kg.)	1,901.00	1,929.00
120 Italy (per 100 kg.)	1,819.00	1,900.00
150 Italy (per 100 kg.	1,735.00	1,763.00
Nat. Ray. 150 Bt. 1 (per kg.)	12.10	11.81
Staple fibre yarn (40 x 2)—		
April	727.00	729.00
June	742.00	741.00
Kohinoor (per kg.)	8.18	8.18
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	19.50	19.00
20s Modern	22.87	22.75
32s Madura	29.75	29.50

OILSEEDS RECOVER

(From Our Own Correspondent)

BOMBAY, *4th April*

Under the leadership of groundnuts, oilseeds this week staged a smart recovery from the low levels touched last week. The recovery was aided by bull support. Groundnuts ruled distinctly firm, thanks to persistent buying by local crushers and *vanaspati* manufacturers. Better advices from North Indian mustard markets, too, imparted strength. Moreover, arrivals were limited, as the farmers at upcountry centres appeared to be reluctant to part with stocks at low levels. There was brisk activity in the castorseed section too. It was reported that fairly large orders for castor oil had been received from some communist countries. Besides, the reported crop damage in certain parts of Brazil was bullishly interpreted by the trade, since this would reduce competition for castor oil from that country, especially in the U.S. market. Linseeds ruled steady, despite the large crop harvested during the season. Arrivals of new crop were meagre. In sympathy, cottonseeds were firm.

Groundnut May 1962 contract rose by Rs. 2.37 to Rs. 227.12. Nizam bold spurted by Re. 1.25 to Rs. 227.12. Oil ex-mill put on 25 nP to Rs. 19.25. Oil May 1962 contract closed higher at Rs. 19.05, as compared with Rs. 18.80 last week-end.

Castorseed June 1962 contract advanced by Rs. 3.50 to Rs. 165. September 1962 contract improved by Rs. 2.75 to Rs. 168.37. Castor March 1962, which closed last week at Rs. 165.50, went off the board at the end of the month at Rs. 169.25. Kanpur strengthened by Re. 1.50 to Rs. 33. Oil B.S.S. and Commercial hardened by 40 nP each to Rs. 14.40 and Rs. 13.70, respectively.

Linseed June 1962 contract put on 19 nP to Rs. 37.56. March 1962 contract ran out at the close of the month at Rs. 37. Bold ready gathered 13 nP to Rs. 36.25. Linseed oil picked up 10 nP at Rs. 15.

Among cottonseeds, July 1962 contract improved from Rs. 103.25 to Rs. 105.10, before closing at Rs. 103.75. April 1962, however, fell by Rs. 2 to Rs. 97.50. White, non-white and Berar all gained 50 nP each to Rs. 20.50.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 4th April, as compared with those of the two previous weeks:

	4-4-1962	28-3-1962	20-3-1962
Groundnut	Rs.	Rs.	Rs.
May 1962	227.12	224.75	226.50
Nizam bold	46.75	45.50	45.50
Khandesh quality	47.00	45.75	46.25
Oil ex-mill ready*	19.25	19.00	19.20
Railway receipts*	19.05	18.70	19.00
Oil May 1962	19.05	18.80	18.95
Castorseed			
June 1962	165.00	161.50	165.25
Ready Madras	34.25	33.00	33.50
Ready Kanpur	33.00	31.50	32.00
Oil B.S.S.†	14.40	14.00	14.55
Oil commercial†	13.70	13.30	13.85
Linseed			
June 1962	36.87	37.37	36.19
Bold ready	36.25	36.12	35.50
Oil ready†	15.00	14.90	15.10
Cottonseed			
April 1962	97.50	99.50	100.50
July 1962	103.75	103.25	103.75
Kapas seed	36.00	35.50	35.50
Kardi seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 280 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 20 kilograms and oil per 10 kilograms.

PLAIN TEAS EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *29th March*

A total of 390,000 kgs. was offered in sale 13 on Tuesday, the 27th inst. Nilgiri quality was generally inferior, but medium kinds were about maintained. There was good general demand for most descriptions at around last rates, but Nilgiris and plainest kinds were easier. Nilgiri B.O.Ps were up to Re. 1 lower in price except for a few selected invoices, which were firm to dearer. Fannings in this category were generally lower but there were a few exceptions. Good-medium brokens met with strong enquiry at rates which were firm to dearer, particularly where quality showed an impovement, whilst their fannings remained about steady on last rates. Medium and low medium brokens were well supported and sold at about last rates with any price changes being in buyers' favour. Fannings in these categories, however, often tended easier. Black leaf brokens came to an easier market, but their fannings met with strong demand. Whole leaf grades sold well, particularly medium flowery pekoes. The plainest kinds were irregular and lower in price. C.T.C. and legg-cut descriptions came to a fully firm market.

The quotations per kg. were:

	1962 Rs.	1961 Rs.
Low mediums	4.00-4.40	4.55-4.70
Mediums	4.40-5.25	4.70-4.90
Good mediums	5.25-6.80	4.95-5.30
Nilgiri B.O.P.	5.00-8.85	5.25-8.05

The average price realised in sale No. 13 was Rs. 5.37 per kilo, as against Rs. 5.19 in the previous week and Rs. 4.93 in the corresponding sale last year.

A total of 233,000 kgs. was offered in sale No. 13 held today. The sale opened to a good demand at around last rates, but, as it progressed, an easing was seen. Rates for Travancore and Anamallai dusts often shed up to 25 nP per kilo, but those from the Wynaad were steady. Residual descriptions also came to a firm market, but a further easing in price was seen for C.T.C. and legg-cut sorts. Nilgiri dusts sold well at often enhanced levels.

The average price realised in dust sale No. 13 was Rs. 4.09 per kilo, as compared with Rs. 4.13 a week ago and Rs. 4.73 in the corresponding sale last year.

Colombo: In this week's sale just under 5½ million lbs. were offered and met with a good general demand. Highgrowns sold readily following quality, whilst all medium descriptions came to a strong market and advanced 5-10 cents.

London: North Indian and other growths: In Monday's auction there was good demand and prices were generally firm for all descriptions. Although plain kinds were a shade easier, bright liquoring Africans came to a dearer market. Plain broken pekoe has declined to 3/0½d.

Ceylon and South Indians: 20,007 packages were offered in Tuesday's sale of which 6,744 packages were from South India. Both Ceylons and South Indians met with useful support, but prices were generally irregular and slightly easier.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 14: 370,000 kgs. offered. Useful demand. Low mediums and mediums barely steady. Good mediums strong and dearer. Highgrowns irregular, but generally easier with quality whole leaf strong."

FIRM TONE IN METALS

(From Our Own Correspondent)

CALCUTTA, *3rd April*

Under the impetus of higher advices from the London Metal Exchange and of increased local demand, fully firm tone was in evidence in the metal market here during the week under review. The absence of any liberalisation of base metal imports has been noted with some disappointment, as it had generally been expected that the established importers would be allowed to import and build some stocks, when world prices would be most favourable. However, the foreign exchange shortage being what it is, there is the realisation that nothing better could be attempted. While the issuance of import licences for the year as a whole, is welcomed, there is uncertainty inasmuch as in the first six months only half of the licences be utilised.

Further news of importance to the market has been the *communique* which the International Study Group issued after reviewing the world supply position and demand in regard to zinc and lead. lead. While nations representing about 70 per cent of the world trade in these two metals agreed to limit production on condition that the remaining producing areas would similarly agree to do so, the U.S.S.R. and Poland were expected to suggest and take measures in their own spheres with a view to stabilising, the international zinc market. The U.S.S.R. also undertook that its exports of lead in 1962 would not exceed last year's. The Study Group would meet later next month, when the various representatives would have returned to Geneva with firmer views about the practicability of implementing the Study Group's proposed measures aimed at market stabilisation.

It is anticipated that the new Cabinet's budget proposals would contain fresh taxation at least to the extent of covering the deficit on the revenue side, though a burden of Rs. 100 crores would not altogether be a surprise. Since it is widely believed that the Government does not see scope to increase direct taxation, the new Finance Minister's exploring eyes would fall on enhancement of the excise duties and levying new ones.

In the last year, *ad valorem* excise duty of 10 per cent was levied on copper and brass pipes and tubes. Zinc sheets and brass and copper strips and circles attracted a duty at the flat rate of Rs. 300 per metric ton.

Always eager to include as wide a range of products by stretching interpretation and in their exuberance to enhance the revenues of the exchequer, the local excise authorities ruled that plates and strips included long-length flats and square rods of any size. Since the past one year, the industry is paying excise duty on the latter products under protest. The local excise authorities have now ruled that, according to the definition, brass and copper flats and square rods attract excise duty, only if the thickness of the flats and the size of the square rods is .375" or below. The industry would point out that long-length flats and square rods cannot come within the definition of foils or strips, and would again appeal to the authorities to revise their decision. Meanwhile, it is believed that duty would continue to be paid on squares and flats of .375" and below.

On the London Metal Exchange, during the week, spot copper opened at £234 a ton and, after remaining at that level for quite long, hardened to £234¾ on consumer demand. Copper scrap ruled firm in Calcutta. However, buyers displayed less interest in anticipation of a favourable import policy. Tin, in London, eased from £963 a ton to £959½, as support at the higher level was lacking. This led to losses in the Singapore quotation also. Tin, in Calcutta, was in acute short supply, and therefore, gained further. Virgin lead was unchanged here at Rs. 123 per 100 kgs. In London, the price recovered from £60¾ a ton to £61¼ following the Study Group's proposals. Zinc in London opened at £70⅜ a ton, and gradually eased to £70⅛ following news that the world supply this year would be greater than in 1961.

RAW JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, *3rd April*

Although speculative business was keen and covering business was done on a moderate scale, hessian constructions recorded a modest decline, caused by the sparse interest shown by overseas buyers, while heavy goods fluctuated widely and closed higher on balance. It was believed that business done with overseas buyers during the month of March was satisfactory. Since, however, this can be confirmed only by the level of stocks with mills at the end of March, details were keenly awaited. The importance attached to these figures is all the greater since the same would enable the mills to decide the question whether the unrestricted phase of production should be extended further. Fibre was firm at the minimum levels, but, following the announcement that the Buffer Stock Association would soon extend support, prices in the mofussil trading centres rose above Calcutta's parity. The continuance of dry weather and absence of rain should have been sources of anxiety normally, but, in view of the large offerings mostly of poorer varieties, prices did not harden. Further, the mills are heavily stocked with fibre. Late sowing and harvesting would only mean that mills can exhaust some stocks, thereby releasing godown space for the new crop. That the mills are adequately stocked with fibre would ensure a smooth transition from this season to the next and prices are unlikely to rise. Prices at this time last year, it will be recalled, had reached high levels, so that the working of mills was very uneconomic. The mills have since taken sufficient precaution to prevent repetition of such a development.

The Buffer Stock Association is to commence purchasing for buffer stocks as from this week. Purchases are likely to total 250,000 maunds, mostly of inferior varieties. The Association's Committee has instructed its members to buy at the minimum prices and to store the same in their respective godowns on behalf of the B.S.A. The purchases are to be financed by advances from the State Bank of India. Soon after a committee meeting of the B.S.A. held here last week, it was explained that the Association aimed to ensure a fair return to the grower and to build up stocks of fibre as a cushion against unforeseen failures in future due to climatic conditions. Speaking in the Lok Sabha the other day, the Union Food and Agriculture Minister, Mr. S. K. Patil, contended that the present minimum prices of Rs. 30 a maund could by no means be regarded as an impetus price. He was replying to the communist criticism that the actual cost of production was above Rs. 30. While all concerned would welcome a proper scientific investigation to determine the actual cost of fibre production, it is widely held that the present level of minimum prices will allow a reasonable margin of profit to cultivators.

Considering that mills were hit hard by fibre shortage in recent years and that high prices of fibre gave a fillip to substitutes in foreign markets, it would be illogical to demand of Government permission to export fibre. Speaking at the annual meeting of the Calcutta Hydraulic Press Association, its Chairman, Mr. J. R. Modi, thought that the time was appropriate for Government to allow export of fibre. Such a measure, he said, would be complementary to the Government scheme of stabilising and supporting fibre prices through the establishment of the Buffer Stock Association. Considering the level of prices in Pakistan, it is clear that foreign buyers cannot be found for Indian fibre even at the minimum levels. Further, export demand is mostly in superior grades, while *jungli* and mesta, of which cultivators and bazar dealers have much yet to offer, can best be consumed by mills in India to produce heavy goods. Assuming that India was able to obtain foreign markets for fibre, prices would harden and this would completely upset present balancing in the market. A good and bumper crop does not merely depend upon cultivators sowing a good acreage. Much depends upon the weather. If weather continues to be good after sowing time and floods do not destroy the standing crop, a good harvest can be expected in any year. In the recent past, following a bumper crop, the Government permitted the State Trading Corporation to export a token quantity. It entered into commitments without covering, but, when the time came for covering, prices had risen and it had to ask for extension of delivery date. Even so, the Corporation had to suffer losses. Against such a background, it is unlikely that the Government of India would consider any such hasty measure as exporting fibre.

Conditions in jute goods in recent months have shown a tendency to stabilise. Mills have been able to reduce prices of goods and thus increase exports. Speaking at the annual meeting of the Calcutta Jute Fabric Shippers' Association, Mr. Gopal Toolsidas, the Chairman, welcomed the formation of the Buffer Stock Association, as he said that the B.S.A. aimed at stability and that stability was highly essential to enable shippers to find increased markets for goods. He contended that their performance last year was as good as conditions permitted and urged that the two ways in which they could maintain the present recovery were improvement of quality of fibre and increase in yield per acreage, as well as the re-equipment of mills as rapidly as possible. Trade circles would not entirely agree with the statement made by Mr. N. Kanungo, the Union Commerce Minister, that shortage of ready goods did not affect exports. The high prices for fibre led to increased prices for goods. Foreign consumers postponed entering into commitments and only purchased so as to meet immediate requirements. Such a state of affairs affected exports and sprang from fibre as well as goods shortage. However, it should be said that, now that exports have risen, the decline in exports in a few months has not affected the overall performance of the industry.

Sellers of fibre continued to offer freely and, although mills bought fair quantities, stockists in Cossipore were prepared to dispose fibre at prices below the minimum levels. Arrivals were slightly lower than in the last week. Prices for April-May delivery were quoted at Rs. 30 a maund for Assam bottoms, Rs. 32 for Daissee bottoms, and Rs. 29.50 for northern bottoms. Closely on the heels of India, the Pakistan Government is also favouring the setting up of buffer stocks of fibre. The Government convened last week a conference of all jute interests including representatives of the Association of European Jute Industries, the London Jute Association, the Dundee Jute Importers' Association, and the Association of Jute Spinners and Manufacturers of Dundee. The conference agreed with the feasibility of the creation of buffer stocks, but, as the Pakistan Commerce Minister said at the conference, organisation and finance were problems, a solution for which would have to be found.

On Tuesday last, there was keen speculative interest shown in the futures market, and May B. twills at Rs. 127.05 scored one point with May hessian 40" 10 oz. being fractionally higher at Rs. 50.44. The higher trend hardened prices for ready goods, with B. twills quoting 85 nP higher at Rs. 134 and hessian 40" 10 oz. at Rs. 55.75 gaining 40 nP. The feature on Wednesday was Government interest for B. twills against April delivery. This was followed by covering business, which pushed up ready B. twills to Rs. 134.50. On the other hand, absence of interest led to hessian 40" 10 oz. being pushed down to Rs. 55.50. Although overseas inquiries continued, business taking place on Thursday was conspicuous by its absence. As a result, hessian 40" 10 oz. lost to Rs. 55. However, ready B. twills improved to Rs. 135.25 on modest covering and greater activity in the futures market. The acute shortage in ready goods was clearly discernible on Friday, when B. twills scored by as much as two points to Rs. 137.25. In sympathy, hessian 40" 10 oz. was better at Rs. 54.50. Due date activity in futures set in motion the reverse trend in ready goods where during the week-end, B. twills lost to Rs. 135.25 and hessian 40" 10 oz. to Rs. 53.90. Conditions were fully steady in ready goods yesterday and the continuing squeeze in B. twills forced up the rate as high as Rs. 144. In sympathy, ready hessian 40" 10 oz. picked up to Rs. 54.00.

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *2nd April*

There was no appreciable change in the tempo of the hides and skins market here this week. Export trading was selective and centred round the lower ends in cow hides, for which there was good demand from inland trade as well. Arrivals of cow calf and buff calf were small and prices ruled firm. Importers in the U.S. were probing the market and might enter again, if they find prices attractive in the buff calf section. As E.I. tanners are in a well sold forward position, and as the buying season for raw calf is nearly over, sellers are reserved and are not likely to take on large orders hereafter.

In the tanned goat section, shipment business was small, as importers were not following the prices quoted by tanners at this end. Tanners here are not able to meet the buyers' ideas because prices in the raw centres are not economical for them. There were some inquiries for 8/9 and 11/12 lbs. average goat skins and for middle class sheep skins for export account. Shippers to Japan were slowly covering their earlier sales of sheep skins, with profit, as the market tended to be easy. Prices of raw goat were steady and of sheep skins weak.

The following were the ruling prices (per lb.) in the local market for all-round parcels: Tanned cow hides 8/8½ lbs. average Rs. 2.25 to Rs. 2.35; tanned cow calf 1½/2 lbs. average Rs. 3.75 to Rs. 3.85; tanned buff hides 12/14 lbs. average Re. 1.90 to Rs. 2.00; tanned buff calf 1½/2 lbs. average Rs. 3.20 to Rs. 3.30.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *2nd April*

Foodgrains were quiet here this week. New crop arrivals in markets were still small. While the harvesting of coarse grains has continued in full swing, that of wheat would begin by the end of the current week. The overall crop prospects are considered bright, and another bumper crop is predicted.

Wheat prices here declined modestly and were quoted on Friday at Rs. 15 to Rs. 15.50 a maund for the average quality and up to Rs. 17.50 for the better farm produce. Stocks with the trade at the fag-end of the season were small. Some arrivals from the rural areas were being picked up by the consumers. Sales of imported wheat through State Government sponsored fair-price shops has all along acted as a bearish factor. Rice, however, ruled steady on better consumers' demand with the change in the season. Arrivals of superior basmati quality rice from Saharanpur district increased the local stocks. Week-end prices were:—Rice *mainpuri sela* Rs. 20, *gadda kutcha* Rs. 19.25, *ramajwayan sela* Rs. 20 to Rs. 22, *raimunia sela* Rs. 22 to Rs. 24, *basmati sela* Rs. 25 to Rs. 28, superior Rs. 30 to Rs. 36 per maund.

With trade stocks being limited, arrivals of new crop gram from Punjab were lifted at better prices by the consumers. Barley and *bejhar*, however, eased further, as new crop arrivals increased. Maize was depressed on selling pressure by stockists. Some offtake was reported by east U.P. *Bajra* declined on lack of buying support. Other grains were listless. Week-end prices (in rupees per maund) were:—Gram Punjab 14, *barley* new 10, *bejhar* 10, maize 8 to 11.50, *bajra* 13, *juwar* 14 to 15.50, *guwar* 14, *methi* 27, oats 10.50. *Juwar* arrived from Rajasthan, but prices were steady on revival of demand.

Among pulses, arrivals of new peas were fast increasing, but as old stocks have exhausted, new crop was readily lifted at higher prices for conversion into dal. *Arhar*, too, attracted good demand from east U.P. Stocks here were fast declining and, as, new arrivals would commence only after a month, prices hardened. Crop prospects, however, were poor due to heavy damage to the crop by severe frost in mid-January. New *massor* was traded lower as the quality was poor. *Urd* and *moong* continued steady on good support. Prices on Monday (in rupees per maund) were:—Peas *dara* 10 to 10.50, farm 11 to 11.50, peas *dal* 12.50, *gram dal* 17.50, *arhar* 14.25, *arhar dal* 18, *urd* 22 to 24, *urd dal* 25 to 28, *massor* new 14.25, malka quality 16.50, *dal* 19.50, *moong* 18 to 21, *moong dal* 21 to 24, *moth* 16, *moth dal* 19.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, *2nd April*

Sugar ruled steady here this week on good demand. The quality was in demand from Gujarat, M.P., Saurashtra and Delhi and inferior small crystal from east U.P. and Rajasthan. The prices of D29 quality from the Amroha and Bijnore factories improved by about 25 nP a maund. Production was uninterrupted, thanks to adequate cane supplies. The Government has conceded the cane growers' demand to prolong the crushing season and increase production quotas of mills so that the surplus cane might be crushed. Week-end prices of cane here were:—Wholesale Rs. 106.75 per bag, retail 97 nP per *seer*, mill delivery (per maund) E29 Simbhauli Rs. 38.19, D29 Amroha Rs. 36.69, Bijnore Rs. 35.50, Seohara Rs. 36.75 and Meerut Rs. 37.19.

In Muzaffarnagar, smaller and inferior crystal sugar improved by 25 nP a maund on inquiry from Punjab, Rajasthan and Bombay. Bold crystal prices were unchanged. New sugar prices eased by 6 to 12 nP per maund. Week-end prices were:—Old stuff of 1960-61 season A29 Iqbalpur Rs. 41, Lhaksar Rs. 39.72, Mansurpur Rs. 40.45, B29 Shamli Rs. 39.75, C29 Deoband Rs. 39.34, new sugar D29 Meerut Rs. 38.15, Simbhauli Rs. 38.66, Amroha Rs. 37.62, Dhampur Rs. 38.25.

Khandsari eased following discouraging inquiries. East U.P. showed no interest and demand from other consuming areas was also slack. Stocks were fast improving. Week-end prices were:—Inferior Rs. 27 to Rs. 30, superior Rs. 31 to Rs. 33.25, crystal Rs. 31 to Rs. 34, *Boora* Rs. 34 to Rs. 36 per maund.

Gur ruled quiet. Arrivals dropped to a daily average of 1,000 maunds. Crushing season is coming to a close. Offtake during the week was small at six wagon loads mostly by Gujarat. Cane sowings were still being done and a further increase in the acreage is predicted. Total arrivals of *gur* here during the current season were put at 4.18 lakh maunds as against 4.70 lakh maunds last year. Fall in production was due to poor cane crop which had suffered heavily on account of pests in earlier stages. Week-end prices were:—*Pansera* best Rs. 16.50, *dara* Rs. 14.50 to Rs. 15.25, *balti* Rs. 14.75. *Shakker* prices advanced on good demand in the face of poor arrivals, and were quoted on Monday at Rs. 18 to Rs. 18.75 a maund.

Gur prices were:—*Chaku* Rs. 16 to Rs. 17.75, *pansera* Rs. 16, rusket Rs. 9.50 to Rs. 11.50. After early sharp gains from the week's opening at Rs. 15.11 to Rs. 15.50, *gur baisakh* eased to Rs. 15.23. Trading was fairly heavy.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 30th March, 1962

BANKING DEPARTMENT

LIABILITIES	Rs.	Rs.
Capital paid-up		5,00,00,000

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent (of which only 5 per cent (cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent of the 10 per cent dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent per annum and also to participate in further dividend of 2 per cent per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

C—Cumulative. R—Redeemable. T.F.—Tax-free. R.O.—Redeemable at option.

NEW CENTRAL CABINET

MR. NEHRU'S indisposition does not wholly explain the slight delay in the announcement and swearing-in of the new Union Cabinet, which is essentially a continuation of the old. Changes have been kept to the minimum, except that Sardar Swaran Singh does not go direct to the Ministry of Transport and Communications (vacated by Dr. P. Subbarayan on his appointment as Governor of Maharashtra) but takes over the Railways, moving Mr. Jagjivan Ram to the former. The Railways have certainly needed some dynamism and a fresh approach to their problems; but one may doubt whether this was the proper answer: Sardar Swaran Singh attempted only imperfectly to tackle the problems of coal and steel in his former portfolio, though he was generally practical in his approach. Now he has an opportunity of

derations is an unhealthy sign. The Cabinet has been reduced to the position of the civil service (without having the exacting recruiting tests required for the latter). Mr. Nehru has at the moment lacked the strength to resist the importunities of those whose merits do not recommend them for continuance or promotion; he may have his own ideas about making changes at the proper time, but, on the whole, he has rarely resorted to any drastic changes except when they were forced on him by circumstances. After having deprecated the growing size of State Ministries, he has increased his own Cabinet, without even having the justification of having to reconcile various groups. The North continues to have a dominating position which the D.M.K. will not fail to emphasise; U.P. alone will have four in the Cabinet against an equal number for all the four Southern States; only the Prime Minister and the Home Minister of these can be regarded as in the essential category. It is idle to say that people should avoid thinking on regional lines if there are no indications of change in the right direction. The mere entry of Mr. Subramaniam and the promotion of a few Ministers of State do not prove that youth has been encouraged; there has been no real search for new talent and the average age of the Cabinet continues to be high. Only a few Ministers of State have been dropped, as they deserved to be.

In these circumstances, some staleness, especially in the economic Ministries, seems inevitable. For example, Mr. S. K. Patil has made his policies succeed, but he cannot for ever be dealing with wheat imports and sugar. Continuity may be advantageous in the important fields of Home, Defence, External Affairs and Finance, but it is not so in others. Finally, the question of succession, which is often raised in this context, is no nearer solution than before the elections. Also left open is the issue whether the Cabinet formation indicates a shift to the Left or the Right; it stays as delicately poised as before in the uncertain middle, though it is possible to discern a slight tilt to the Left, because of Mr. Malaviya's complete control over Mines and Fuel. Thus, the General Elections have come to a tame end for the present.

FIVE YEARS OF METRIC SYSTEM

THE twin reform of decimalisation of coinage and standardisation of weights and measures in terms of the metric system has been under implementation, by stages, in India over the last five years. Much has been done during this first half of the ten-year period prescribed for completing what was known to be a complicated and arduous piece of reform, but much else remains to be done in the next five years to effect the change-over fully in all the sectors and sub-sectors of the economy. The present stage in the period of transition is verily the most appropriate one for reviewing the progress so far made and for assessing the tasks which are yet to be completed. Both this review and this assessment are contained in an authoritative publication (*Adoption of Metric System in India—Five Years of Progress*) just released by the Union Ministry of Commerce and Industry. It is a distinct merit of this official report that it does not exaggerate the achievements to-date or belittle the tasks ahead.

The decimal coinage has been in vogue for five years now, and the public has taken to it kindly after an initial period of difficulty in conversion. But the speed with which the old coins could be replaced by the new has depended on the capacity of the Mints, and so, on 30th June 1961, there were still in circulation in the country as many as 3,332 million pice and one-anna coins and 1,148 million quarter-rupee and half-rupee coins, alongside of 4,183 million new coins in denominations of 1 nP, 2 nP, 5 nP and 10 nP and 208 million in those of 25 nP and 50 nP. Judging by the pace of introduction of new coins, there seem to be more decimal coins of smaller denominations in circulation now than anna and pice coins. Moreover, the continued circulation of quarter-rupee and half-rupee coins, it is stated, does not cause any very great confusion, inasmuch as they serve as 25 nP and 50 nP coins. It looks as if the remaining old coins of all denominations are largely in circulation now in rural areas where their complete replacement by the new coins may well take some more time. In any case, in the course of the next five years, the process of progressive demonetisation of the old coins is bound to be completed and the decimal coinage, which makes for easy accounting and is consistent with the metric system of weights and measures, will be the only one in vogue throughout the country.

While the introduction of decimal coinage has been a relatively easy affair, that of the metric system of weights and measures has bristled with difficulties from the very beginning. The complete adoption of metric weights and measures for capacity and length on a specified date would have, in any case, been impracticable for several reasons. First, there was the immense problem of production and distribution of tens of millions of new weights, capacity measures and length measures. Secondly, in many States, there were no enforcement agencies. Thirdly, not all areas and fields of activity were fully receptive to new ideas. In view of these difficulties, it was considered necessary to initiate the reform only in Government departments and undertakings, organised industry and the more progressive areas like urban Bombay, Calcutta and Madras. As a matter of fact, the Government had the discretion under the Standards of Weights and Measures Act of 1956 itself to introduce the new system by convenient stages.

The progress of the reform since 1958, in spite of its gradual character, has been quite impressive and substantial. The major industries, which first voluntarily agreed to take to the new system, have now been required under law to adopt it uniformly so as to cover all the units. But this requirement, as of today, is limited to sales of materials in the case of industries like engineering, cement, salt, paper and paperboard, refractories, coffee, non-ferrous metals, raw rubber, *vanaspati*, paints, biscuits and alcohol, while it covers both purchases of materials and sales of products in the case of other industries like jute, cotton textiles, iron and steel, heavy chemicals, soap, drugs, fertilisers, woollen textiles, tea and tobacco. How the various technical and practical problems presented by the change-over from the previous inch-pound or inch-seer system have been and are being systematically tackled by the industries with the assistance of the Government is an interesting, though long, story in itself. Suffice it to say that, in all the major industries today, prices and quantities are being expressed in metric units and accounts and statistics maintained in the metric system. But at least in two respects, no significant changes have yet taken place. First, there is practically no change in the quality or design of products to conform to the metric system. And, secondly, the bulk of the productive equipment in industry continues to be on the inch-pound system.

The tasks that lie ahead in the industrial sector are, indeed, formidable. While it would be easy to express dimensions in metric units by exact conversion, the full advantages of the metric system cannot be secured by industry so long as the products and equipment are designed mainly on the basis of the inch-pound system. It will be a very complicated and time-consuming task for the industrial units to start designing their equipment and products in metric terms. Moreover, productive equipments already in position must continue to be used to the end of their lives in whatever system they may be designed. Only certain simpler types of weighing and measuring instruments have been standardised so far. There are numerous others yet to be standardised, including appliances like water meter, electric meter and taximeter. According to official opinion, it will need many more years of persistent and continuous effort to see the metric system firmly established in the field of designing in industry. Obviously, the next five years will be too short a period for this purpose.

The metric system has been found to be too slow in establishing itself in the sphere of retail trade. Although metric weights by now are in use in trade in several parts of the country, they are often used in such a way that the main advantages of the metric system are lost. Most people, as the official report states, are able to conceive weights only in terms of the pound or the seer. They continue to ask their grocers, for instance, for a pound of tea or a seer of sugar, and the grocer, using metric weights, weighs out the equivalent of a pound or a seer. The report adds that it will be much easier to both the parties if the customer asks for a kilogram of sugar or half a kilogram of tea. But the same report claims elsewhere that the public has not found it hard to use international names and that "the 'kilo' and the 'gram' have become part of the vocabulary of the man-in-the-street." Surely, this statement, which contradicts the earlier one, has an element of exaggeration in it. It would be nearer the truth to say that the 'kilo', the 'metre' and the 'litre' are catching on rather slowly, in spite of the fact that major industries, sections of trade, public undertakings like the Railways and Posts and Telegraphs, and Customs and Central Excise Departments have adopted the metric system in their dealings with the public. There is, therefore, a big task ahead in the realm of persuasion through publicity. The compulsory introduction of metric length measures all over India with effect from 1st October 1961 and of compulsory metric weights in most parts of India and metric measures of capacity in several of the major cities with effect from 1st April 1962 is bound to get the public to adjust itself to the change more quickly than it has been able to do in the stage of permissive and voluntary or limited adoption of the metric system. If greater attention is also given from now onwards to the education of the school-going population in the metric system, the process of adjustment by the public to the reform of weights and measures will be rendered easier.

COAL INDUSTRY

THE present structure of coal prices in the opinion of representative organisations of the industry, is too restrictive and rigid to permit of any neutralisation of the enhanced operating costs. No better proof is required to substantiate this than the reduction in the profits of the Bengal Coal Company Ltd. in a year (ended October 1961) in which the Company's sales of coal had increased by Rs. 61 lakhs to Rs. 7.5 crores. The problem of ever-increasing costs resulting in reduced profits is one that affects the entire coal industry. But that is not all, for the broad price policy denies to the industry something more than mere cost neutralisation. What is so denied to the industry is no less than "the ability to plough back adequate funds for capital expenditure, to attract new investment and generally to instil into its economy the vitality which is so necessary if it is to discharge the heavy responsibility for production placed upon it in the third Plan." The words within inverted commas are those of Mr. A. D. Ogilvie, Chairman of the Bengal Coal Company Ltd., whose statement to the Company's shareholders is published elsewhere in this issue. Mr. Ogilvie's hope "that a reorientation of (price) policy on more realistic lines will soon be forthcoming so as to afford some real relief" is, of course, shared not only by the entire coal industry but also by the more enlightened sections of coal-using industries which are unable to utilise their capacities more fully for want of adequate supplies of that essential fuel. But the importance and the urgency of the price question which are manifest to the parties concerned must also be rendered "manifest" to the powers-that-be. It is here that the coal industry must expect to go through a protracted ordeal in persuasion, now that Mr. K. D. Malaviya will be handling, in the new Central Government set-up, the coal industry's affairs in addition to those of oil and other mining industries.

That the coal price question may not be approached by the authorities with a sense of urgency is not a piece of unwarranted pessimism, for the snail's pace at which the World Bank loan of $35 million (made available for the use of private collieries ten months ago) is being allocated to individual units is there for all to see as an instance in point. If, even after the lapse of ten months, only 32 out of the 117 project reports submitted by individual collieries have been approved for assistance from the World Bank's line of credit and if even the approved cases have yet to receive the loan amount, the absence of energetic drive in dealing with the problems of the coal industry is all too obvious. The leisurely ways of the bureaucracy thus seem to be largely responsible for the current slow pace of development in the industry. What is required is greater drive here and now from the Government side which alone can solve the coal industry's crucial problems pertaining to prices, foreign exchange, transport and power supply.

MARKET GOSSIP

Attracting Deposits

ONCE again, Mr. G. D. Birla has urged a vigorous drive on the part of banks to increase deposits. Addressing the annual general meeting of the United Commercial Bank Ltd. held at Calcutta on Wednesday the 11th inst., Mr. Birla stated that diversion of bank credit and currency in circulation into banking channels to an extent which would increase the proportion of bank deposits in relation to currency circulation should be the objective of banks, so that they would be in a position not only to meet the demands of industry but also to play their traditional role of subscribing to Government borrowings in a substantial manner. By the "drive to increase deposits," he meant improvement in banking service and opening of more branches in big cities and rural areas. He was, however, not in favour of higher interest rates, as witness his remarks:

"It would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of interest.... It must be remembered that the history of Indian banking is full of instances of small and medium-sized banks which have grown into large banks without any weightage in preferential rates of interest *inter se*. The proposed differentiation in rates of interest on deposits for three types of banks goes against the spirit and foundation of inter-bank agreement. A scramble for deposits through the offer of higher rates of interest would create stresses which might lead to the abandonment of the agreement and reduction in the profit-margin to the point of imperilling the building up of capital funds of banks to anything like the extent to which the banks are committed by the convention agreed to with the Reserve Bank of India. It is only through competitive development and extension of banking services and in the environment of stable interest rates and not in the atmosphere of a rate war that new deposits can be attracted."

The issue pertaining to interest rates is quite a controversial one. Several bankers and economic writers do admit that there should not be a rate war in attracting deposits, but they emphasise that stability in interest rates should not imply pegging of rates at a fixed level for long. The rates fixed, they argue, must be realistic, having regard to the demand and supply position. In fixing these rates, one has necessarily to bear in mind the position of medium-sized banks. It is becoming increasingly evident, as Mr. A. D. Pai, Chairman of the Canara Bank Ltd., observed in the course of his speech at the annual meeting of the Bank recently, that the offering of same rates by big banks (with deposits of Rs. 100 crores and over) and by banks with deposits of over Rs. 25 crores but less than Rs. 100 crores hinders the growth of deposits of the latter group which plays a no less vital role in the economy of the country. The deposits of the middle group have no doubt increased, but figures reveal that the increases are vastly more in the few big banks. The middle-sized banks would certainly have done well if, as Mr. Pai pointed out, they had the latitude to offer slightly higher rates.

Refinance Corporation

The move of the Refinance Corporation for Industry to reorient its activities in various directions is, indeed, commendable. The Corporation, according to the Chairman, Mr. P. C. Bhattacharyya, who spoke at the fourth annual general meeting held at Bombay on Tuesday this week, will engage in some new lines of business which will not merely enlarge the scope of its operations but also generally enhance its usefulness to the economy. The proposed expansion of activities will be widely welcomed especially in the present context of the rapidly increasing medium-term credit needs of industries. With the larger accent on industrialisation in the third Five-year Plan, the commercial banks are being called upon to cater to such needs to a greater extent than before. While the banks are in a somewhat favourable position for dispensing medium-term credit because of their continuous touch with industrial borrowers, they suffer from an inherent limitation, in that their resources consist mainly of short-term funds which cannot be locked up in long-term advances. The banks could, however, usefully undertake to play a larger part in providing medium-term credit, if their resources were supplemented for the purpose. Viewed thus, it is certainly creditable that the Refinance Corporation has decided to expand refinancing facilities to certain banks as well as State Financial Corporations against medium-term loans given by them to medium-sized industrial units in the private sector. It may be noted here that 57 banks, 15 State Financial Corporations and 3 State co-operative banks are eligible for refinancing facilities.

The pressure of demand for medium-term credit emerging from the industrial sector is so great today that the banks are turning more and more to the Refinance Corporation. This is indicated by the accelerated pace of requests for refinance now being received by the Corporation. The number of applications actually received during 1961 was 69 for a total amount of Rs. 11.27 crores, which is almost three times that in the previous year—25 applications for a total of Rs. 4.60 crores; the corresponding figures for 1959 were no more than 14 and Rs. 2.38 crores, respectively.

It is gratifying that the Corporation has agreed in principle to entertain applications for refinancing of loans given jointly by two or more banks or by a bank and a term-lending institution such as the I.F.C., I.C.I.C.I. or a State Financial Corporation. Equally gratifying is the decision of the Corporation to refinance the medium-term part (namely, instalments falling due within 7 to 10 years) of even a long-term loan. Apart from increased business that these changes may attract, they would, as Mr. Bhattacharyya said, assist in bringing about a greater degree of collaboration between medium-term and long-term lending institutions on the lines prevalent in some other countries and enable banks to sanction joint loans in participation with term-lending institutions, by taking over for themselves the earlier maturities which can be refinanced. Two other fresh moves of the Corporation are (*a*) to give such suitable refinancing facilities as the banks may require for extending term-finance to coal mining units and (*b*) to undertake refinancing of medium-term export credits—that is, for periods ranging from over six months to five years—in accordance with the recommendation made last year by the Study Group on credit facilities to exporters. All these measures, together with the extension of refinance facilities to the State financial institutions, will naturally increase the pressure on the Corporation's resources. It is to be hoped that the Central Government will concede the request of the Corporation for further allotment of funds to meet the increased demand.

The progress achieved by the Corporation during the brief period since it commenced functioning in the middle of 1958 is quite notable. As against the refinance facilities aggregating Rs. 20.07 crores sought up to the end of last year, the amount sanctioned comes to Rs. 16.49 crores covering 92 applications received from 17 financial institutions. But the total sum actually disbursed is no more than Rs. 6.97 crores, including Rs. 4.71 crores disbursed during the year 1961. This rather wide gap is attributed to two factors. In the first place, the pace at which borrowers draw on the loans sanctioned to them is somewhat slow. Secondly, in order to save on interest charges, the banks borrow from the Corporation generally when they must replenish their coffers for other uses.

Millowners Worried About Cotton

The dominant theme of the speeches delivered by the chief of the Indian Cotton Mills' Federation, the apex body of millowners, and the Chairmen of Bombay and Ahmedabad Millowners' Associations is the current shortage of cotton. All of them have expressed grave anxiety over the critical supply position which is described, even by official spokesmen, as dangerous. Mr. Bharat Ram, Chairman of the Cotton Mills' Federation, put the problem in its correct perspective when he said that all planning about expansion of spinning and loom capacity, production targets, internal supplies and exports would be illusory, if cotton supply on the scale required were not available. There was unanimity among the three spokesmen for the industry in identifying the problem as the outcome of the sharp fall of over a million bales in production in the current (1961-62) season, the estimate of output being no more than 4.3 million bales, as against 5.4 million bales in 1960-61. They were also agreed that, unless the yield per acre was improved, there was no hope of maintaining a high level of yarn and cloth output on a permanent basis. Indeed, Mr. Bharat Ram rightly described improvement of yield as the crux of the matter. India, he pointed out, had the dubious distinction of having the world's highest acreage under cotton with the lowest yield per acre, the average being a bare 90 lbs., as compared with 540 lbs. in Egypt, 450 lbs. in the U.S., 430 lbs. in Mexico, 270 lbs. in China and the world average of 275 lbs. Even in Pakistan, where conditions are similar to those in India, yield is more than double at 190 lbs. The need for augmenting the productivity of cotton tracts has to be specially stressed because a further expansion of acreage under the fibre offers no solution, inasmuch as such a course would, as Mr. Bharat Ram averred, only shift the shortage from cotton to some other commodity.

Since decontrol has been suggested as a first step for increasing cotton production, the three millowners' representatives had something to say about it, though none positively supported it. Mr. Pratap Bhogilal, Chairman of the Bombay Millowners' Association, conceded that higher production, through extensive or intensive cultivation, was linked to the return the farmer got and that the farmer should have the same freedom for obtaining the maximum return on cotton as for other crops. But he hastened to add that, if control on cotton prices was considered to be a serious deterrent to the farmer in putting his best effort, he for one would not stand in the way of decontrol. Mr. Bharat Ram's observations on this issue were more guarded. He listed some of the arguments put forward in favour of decontrol: the ceilings which were fixed ten years ago have become unrealistic; there are no ceilings on prices of other competing crops; and the farmer has to be adequately rewarded for investments in improved seeds and fertilisers, as well as extra effort. He no doubt agreed that these arguments were strong, but cautioned that, in view of the equally weighty arguments against decontrol, it was necessary to move in this direction with "great caution." Despite repeated promises to undertake an inquiry into the farmer's cost of production, the Indian Central Cotton Committee, Mr. Bharat Ram declared, had not done much and, in the absence of this vital information, it was difficult to pass any judgment as to how far the present ceiling prices had acted as a deterrent to higher production. It was also difficult, in his opinion, to foresee what repercussions decontrol would have on the price trends of cotton, yarn and cloth and what effects it would produce on consumers of cloth and on exports. Further, it was not known, he added, how far decontrol of cotton would, by itself, lead to better yields. Mr. Bharat Ram rightly emphasised that the various solutions proposed to the cotton problem must pass one acid test: would they ultimately result in increasing the yield per acre on the required scale? In this connection, he mentioned the following facts:

"Some 47 per cent of the area under cotton is rain-fed. Being a very delicate crop, cotton is most susceptible to the vagaries of nature, and the yield fluctuates widely from year to year depending almost entirely upon the disposition of the gods of weather. It has varied between 78 lbs. and 93 lbs., except in the year 1960-61 when it reached 111 lbs. And then a good bit of this improvement was due to the production of 171 lbs. per acre of the very short-staple Bengal *Deshi* variety. Among the better varieties, Broach Vijay contributed 145 lbs. per acre, followed by Surti Vijay (144 lbs.), American (128 lbs.) and Dhollera (117 lbs.). These high-yielding varieties accounted for 54 per cent of the land under cotton and gave an average of 134 lbs. per acre. But the remaining varieties, covering 47 per cent of the area under cotton, gave an average of 86 lbs. and pulled down the overall average to 111 lbs. A similar investigation of the 1958-59 crop, when the overall average had dropped to 93 lbs., reveals the interesting fact that these better yielding varieties were grown on 45 per cent of the land, and produced an average of 117 lbs., while the remaining varieties contributed a poor 73 lbs. per acre."

Mr. Bharat Ram put forward three pertinent suggestions. One, it is worthwhile examining the aforesaid aspect carefully with a view to putting more area under those varieties (except Bengal *Deshi*) which have shown consistently higher yields. Two, use of fertilisers must be encouraged. Of the present supply of about 1.1 million tons, the share of cotton is only 30,000 tons. It is necessary to increase substantially the supply of fertilisers to cotton. Three, more irrigated land should be brought under cotton cultivation.

The Chairman of the Federation did well also to urge the Indian Central Cotton Committee and the State Governments "to take far more energetic steps than they have taken so far to fulfil their responsibilities," though he recognised that, in all the schemes of cotton production, the actual execution ultimately lay in the hands of the farmer and, unless he prospered, through better productivity and profitability, nothing worthwhile could happen. "The Indian farmer," to quote him, "has shown his great adaptability to improved methods of cultivation by changing over to the Japanese method of rice cultivation and the Java method of sugarcane cultivation. If the benefits that can accrue to him by changing his traditional approach to cotton cultivation were demonstrated and explained to him by having model farms spread over all the cotton tracts of the country, I am sure a complete transformation can take place. This is another aspect requiring serious attention of the Indian Central Cotton Committee and the State Governments."

Whatever the arguments for or against decontrol of cotton, the question now is whether such a step is desirable, particularly in the present context of tight supplies and when prospects of an assured adequate supply over a reasonable period of time are highly uncertain. If controls on cotton are removed, prices, as we have ere now pointed out, are bound to shoot up. At any rate, decontrol offers no solution to the immediate problem of meeting the mills' requirements of cotton. The solution lies in arrangements for getting more foreign cotton. There is, however, some justification for the plea put forward by advocates of decontrol for the appointment of a high-power cotton commission to go into the whole issue pertaining to the achievement of the third Plan production target of 7.0 million bales.

Neither Mr. Bharat Ram nor Mr. Pratap Bhogilal referred to this plea. It was Mr. Arvind Narottam, the retiring President of the Ahmedabad Millowners' Association, who stated that the suggestion deserved serious consideration. In spite of two Five-year Plans and all the efforts of the Central Cotton Committee and the State Governments, cotton production has failed to keep in step with demand. This in itself justifies a thorough investigation of the factors that inhibit production. Such a commission should not, however, be a purely inquiry body but one which should be vested with sufficient powers to co-ordinate the activities of the various agencies connected with cotton, to demarcate areas in different States for growing specific varieties of cotton, to procure seeds and fertilisers, to make arrangements for their distribution, and to examine the feasibility of growing cotton in fallow lands and take effective steps in this direction.

Modernisation of Mills

A vigorous defence of the cotton mill industry against the strictures passed on it by the Estimates Committee of the Lok Sabha was made by Mr. Bharat Ram. He declared that, in the light of the fact that 294 mills, which together accounted for 82 per cent of the aggregate installed capacity, had invested as much as Rs. 107 crores during the four-year period 1955-59 and had, in the process, increased their borrowings by Rs. 65 crores, it was difficult to understand the Committee's criticism that the industry had not taken timely advantage of the financial assistance offered by the financing agencies like the National Industrial Development Corporation. But he fully

TREND OF SHARES

PROFIT-TAKING ON TAX FEARS

(From Our Own Correspondent)

BOMBAY, *12th April*

STOCK markets could ignore no more their tax fears. This week, they yielded a small part of the ground gained in the recent recovery phase. From the start of the week itself, they made a mixed show; in particular, Bombay wore an optimistic look, while Calcutta tended to drift lower. Near the close, there was an all-round setback on a wave of profit-taking and absence of fresh support. Bears were, however, reserved. Trading was patchy and restricted initially, but revived on the decline in prices.

Sentiment was influenced by rumours of additional taxation of Rs. 100 crores. It was particularly affected by the markets' own fears that the corporation tax might be raised by 2½ nP to 5 nP. Though these rumours seemed to be wild guesses, under the prevailing uncertainties about the size and nature of fresh taxes, they gained quick currency. There was, therefore, a natural tendency among buyers to realise profit and lighten commitments, as also to wait and watch for some time before making fresh purchases even at lower levels. Due to this tendency among operators, some good news from some leading companies fell flat on the markets. In fact, the rise incidental to such news, though small, left greater scope for realising in the shares of the companies concerned. Coming true to the earlier forecasts, the announcement of the new Cabinet, with Mr. Morarji Desai as the Finance Minister, was also discounted by the markets.

The setback being due entirely to the markets' anxiety over fresh taxation assumes no particular significance. Looking to the industrial growth and profits, the current levels of shares are quite attractive for fresh support. But in the absence of any definite clue about the nature of new taxes, trading would tend to be cautious.

* * * *

Dalal Street resisted a downward drift for quite some time in the face of persistent realising by Calcutta, particularly in Indian Iron and Hindustan Motors. In the last two days of the week, it lost ground, ignoring the encouraging results of Century Spinning and Manufacturing Company Ltd. and Kohinoor Mills Company Limited.

Steel shares eased after early firmness. Tata Ordinary receded from Rs. 142.25 to Rs. 139.75 and closed at Rs. 140 against Rs. 141.50 a week before, Indian Iron moved down from Rs. 25.45 to Rs. 24.92 and closed at Rs. 25 against Rs. 25.20 and Mukand Iron declined from Rs. 28.75 to close at Rs. 27.80 against Rs. 28.40.

Bombay Dyeing, a vulnerable spot among Textiles, lost 90 nP at Rs. 69.70. Century greeted the encouraging results for 1961, showing a substantial improvement in sales from Rs. 13.46 crores to Rs. 16.40 crores and in gross profit from Rs. 2.86 crores to Rs. 3.92 crores, as also the maintenance of the gross dividend at Rs. 30 per share on the increased capital, with a rise from Rs. 633 to Rs. 640, but reacted subsequently to Rs. 626.50 to close Rs. 2 lower on balance at Rs. 629. Kohinoor failed to draw much comfort from the rise of Rs. 45.69 lakhs in sales to Rs. 7.20 crores and in gross profit from Rs. 32.19 lakhs to Rs. 59.38 lakhs, and after being done initially at Rs. 317, eased to close Rs. 4.50 lower on balance at Rs. 309.50. The previous week's spurt induced realising in National Rayon and the shares closed eight points lower at Rs. 554.50. Standard lost Rs. 34 at Rs. 1,045, Khatau Rs. 15 at Rs. 477.50, Swan Rs. 17.50 at Rs. 357.50, Gold Mohur Rs. 10 at Rs. 275 and Phoenix Rs. 14 at Rs. 269. Tata Mill, as an exception, showed a gain of Rs. 3 at Rs. 82.50 on support based on the proximity of the results, which were expected to show much improvement. Indore Malwa closed unchanged at Rs. 176, though the dividend for 1961 was increased from Rs. 8.50 to Rs. 10 per share following a rise in sales from Rs. 3.20 crores to Rs. 3.47 crores and in gross profit from Rs. 28.19 lakhs to Rs. 32.70 lakhs.

Miscellaneous issues were featureless. Bombay Burmah eased by Rs. 6.50 to Rs. 656, Premier Construction by Rs. 2 to Rs. 173.50, Premier Automobiles by Rs. 2.50 to Rs. 129.50 and Hindustan Motors by 24 nP to Rs. 20. Amar Dye-Chem at Rs 342.50 and Indian Dyestuff at Rs. 507.50 showed a loss of Rs. 11.25. Shippings eased on selling by the erstwhile buyers. Scindia showed a loss of 44 nP at Rs. 13 and Great Eastern of 32 nP at Rs. 13.80. In the Engineering section, Alcock eased from Rs. 337 to Rs. 330, notwithstanding the rise from Rs. 108.40 lakhs to Rs. 154.78 lakhs in sales and in gross profit from Rs. 14.96 lakhs to Rs. 23.16 lakhs in 1961. Telco eased from Rs. 352.50 to Rs. 348 and Voltas from Rs. 288 to Rs. 283. Other sections showed small losses. Walchand, in Sugars, moved up from Rs. 162 to Rs. 164 on news that the Directors hoped to maintain the dividend this year. Cash shares were dull. T. Manekial lost Rs. 90 at Rs. 810 and Permanent Magnets Rs. 22.50 at Rs. 235. B.I.C. eased by 12 nP to Rs. 10.88, although the 1961 results showed a rise in profit from Rs. 90.93 lakhs to Rs. 1.05 crore. Elecon Engineering Company's Rs. 29.50 lakhs share capital issue was oversubscribed.

* * * *

In Calcutta, values showed generally small to moderate losses. In Forward List, G.K.W. continued to be weak and lost Re. 1.25 further at Rs. 40.62 despite a rise in profit before taxation from Rs. 91.52 lakhs to Rs. 102.92 lakhs in 1961. Other Forward shares showed small losses. But Kesoram suffered heavily from Rs. 33.44 to Rs. 32.19 as did J.K. Rayon from Rs. 23.12 to Rs. 21.37. Shree Gopal and Orient Paper declined respectively from Rs. 27 to Rs. 25.87 and Rs. 43.65 to Rs. 42.15. Textiles were generally easy, with Bharat Commerce coming down from Rs. 28.56 to Rs. 27.62. Bowreah from Rs. 41.87 to Rs. 41 and Dunbar from Rs. 34.87 to Rs. 34. In Coals, Bengal gained two points to Rs. 344 on optimism expressed by the Chairman about the outlook for the company. Jute shares were generally steady, with Fort Gloster gaining Rs. 18 at Rs. 454 and Champadany Rs. 7 at Rs. 140. Engineering issues were easy, with Burn moving down from Rs. 659 to Rs. 651 and Binani from Rs. 13.25 to Rs. 12.62. But quoted *ex-div.*, Jessop rose by 86 nP to Rs. 25. Cements were down, and Dalmia lost 88 nP at Rs. 13.06. Miscellaneous issues were dull. However, Dr. Paul improved from Rs. 16.12 to Rs. 19.50 and East Anglia from Rs. 16.12 to Rs. 19.25. N.I. Cable were up from Rs. 40.56 to Rs. 44.37, but Rallis eased from Rs. 159 to Rs. 155. Papers were easy, with Bengal declining by Re. 1.62 to Rs. 43 and Titaghur by 82 nP to Rs. 42.37. Among Sugars, Cawnpore showed a gain of 75 nP at Rs. 13.62, and in Teas, Marga-Hope moved up from Rs. 11.44 to Rs. 13.06, and Hantapara from Rs. 118 to Rs. 125.

* * * *

Easy upcountry advices accounted for a subdued tone in Madras. Newswise, the rise last year in Cambodia Mills' sales from Rs. 1.18 crore to Rs. 1.33 crore and profit from Rs. 7.56 lakhs to Rs. 8.17 lakhs came against a fall in Vasanta Mills' profit from Rs. 7.41 lakhs to Rs. 5.81 lakhs. However, Cambodia gained 50 nP at Rs. 14, and Vasanta closed steady at Rs. 309. Travancore Rayon and S.I. Viscose came down respectively from Rs. 43.75 to Rs. 42.80 and Rs. 185.50 to Rs. 183.50 and so did Buckingham from Rs. 287 to Rs. 284. Support for Travancore Chemicals was a redeeming feature of trading in the Miscellaneous section, the shares moved up from Rs. 20.12 to Rs. 20.75. Western India Plywoods gained four points at Rs. 207. Other issues were quiet. Among Sugars, Cauvery came down from Rs. 105 to Rs. 103.50. In a subdued Planting section, the rise of 35 nP to Rs. 13.60 in Halleyburia was the only saving grace.

CAPITAL MARKET NEWS

NEW ISSUES

ASIAN Refractories Limited, a new company promoted by the House of Rampuria, is to enter the market shortly with an issue of Rs. 40 lakhs in 7,000 9.3 per cent preference shares of Rs. 100 each and 330,000 equity shares of Rs. 10 each. This new enterprise is designed to meet the rising demand for refractories in the country due to increasing industrialisation, which is in excess of the present indigenous production. The Company is licensed to manufacture 24,000 tons of firebricks and 6,000 tons in silica bricks annually. It has plans to produce, at a later stage, magnesite bricks and chemically bonded bricks. The project is being sponsored in technical collaboration with Messrs. Cekop, a Polish State foreign trade enterprise, which is to provide machinery, plant, design, technical data and personnel as also advise on the erection of the plant. The factory will come up at Hazaribagh, Bihar. The Industrial Finance Corporation of India has sanctioned the long-term loan of Rs. 35 lakhs and agreed to underwrite Rs. 5 lakhs of equity shares. Messrs. Hoare Miller and Company Ltd. has been appointed the sole selling agents of the products of the company. Mr. R. L. Rampuria, Mr. J. L. Rampuria, Dr. S. C. Law, Mr. D. Duncan Smith and Mr. M. L. Pyne are on the company's Board.

Lists for public subscription for 16,000 equity shares of Rs. 50 each, offered by **Supreme Glass Industries Limited,** will open on 16th April and close at the discretion of the Directors but not before 23rd April. The Company is to manufacture glass and glassware such as bottles, jars, tubes, globes, tiles, tumblers, etc. The outlay on the project is estimated at Rs. 10 lakhs. The factory is proposed to be located at Kandivli. Mr. Mohamedally Allabux, Mr. Rahimbhai Rajabali, Mr. Y. N. Bhatia and Mr. Y. A. Kachwalla are the Directors of the company. Messrs. T. Bhatia and Co. is proposed to be appointed as the Managing Agents.

Globe Motors Limited, Delhi, converted into a public limited company in November last, is expected to be in the market in the middle of next month to raise a capital of Rs. 12.25 lakhs in equity shares of Rs. 100 each from the public. The Company has an authorised capital of Rs. 1 crore, of which Rs. 37.75 lakhs is already paid up. The present issue will go to finance the company's new projects. These include the manufacture of 6,000 tons of silico-manganese spring steel and 1,200 tons each of malleable castings and laminated springs for automobiles per year on a single-shift basis. The factory for this is nearing completion at Ballabgarh, near Delhi. The total capital outlay on the project is estimated at Rs. 70 lakhs. The plant is expected to go into production in the middle of this year.

The present issue will increase the paid-up capital to Rs. 50 lakhs. Out of this, Rs. 40 lakhs are proposed to be for Globe Steels, which is managing the present project, and the balance for the company's trading activities. The Punjab State Financial Corporation has granted the Company a loan of Rs. 20 lakhs, half of which it has already received. It has arranged for a loan of Rs. 10 lakhs from bankers.

Electrical Instruments Manufacturing Company Limited, Bombay, is offering for public subscription equity capital of Rs. 20 lakhs in shares of Rs. 100 each out of its total issue of Rs. 35 lakhs. The lists are to open on 16th April and close on 28th April, or earlier at the Directors' discretion, but not before 20th April. The entire public issue has been underwritten by the Industrial Credit and Investment Corporation of India for Rs. 5 lakhs, by the Life Insurance Corporation for Rs. 3.50 lakhs, by the Devkaran Nanjee Banking Company Ltd. for Rs. 5 lakhs, and by stock-brokers for Rs. 6.50 lakhs. The company is setting up a Rs. 65-lakh project at Naroda, near Ahmedabad, for the manufacture of 60,000 A.C. single-phase meters, 24,000 A.C. polyphase meters, 24,000 electric switches up to 200 amp., 1,200 distribution boards and 24,000 iron clad cutouts per year in collaboration with Valmet Oy., Helsinki, Finland. Commercial production of meters is expected to start early next year. It hopes to pay the maiden dividend in 1965. It has been granted a loan of Rs. 10 lakhs by the Industrial Credit and Investment Corporation of India and of a like amount by the Gujarat State Financial Corporation. Its Board includes Mr. Purshottam Kanji (Chairman), Mr. B. V. Mehta, Mr. Narottam Chandulal, Mr. N. M. Chauhan, Dr. Biharilal Kanaiyalal, Mr. Narsimhan Parasu Ram (Managing Director), Mr. Panalal Khemchand Modi (Managing Director), Mr. J. K. Modi and Mr. C. S. Desai.

* * * *

RIGHTS ISSUES

Fuel Injections Limited is expected to issue fresh equity capital of Rs. 5 lakhs and offer it as rights shares to the existing shareholders. It may be recalled that, for financing its expansion programme, the company issued some time ago rights shares of the value of Rs. 10 lakhs and they were fully taken up by the shareholders.

Having been authorised to issue new 250,000 equity shares of Rs. 10 each at par, the Directors of the **Automobile Products of India Limited** desire to avail themselves fully of the opportunity by issuing initially 210,000 shares as rights shares to the existing shareholders in the proportion of one new share for every two shares held by them as on 30th May 1962. The balance of 40,000 shares plus any shares not taken up by the shareholders would be allotted subsequently to those who would have applied for more shares.

Alcock, Ashdown and Co., Ltd. proposes to issue 9,536 equity shares of Rs. 100 each at par as rights shares to the existing shareholders in the ratio of two new shares for every nine old shares held by them to meet partially the cost of its Bhavnagar project and further expansion.

Following the advice from the Controller of Capital Issues to **Kirloskar Brothers Ltd.** that its preference share capital must bear to its equity capital a ratio of one to four, the Company is now issuing fresh equity capital of Rs. 10 lakhs in shares of Rs. 25 each along with the preference capital of Rs. 15 lakhs in 9 per cent redeemable cumulative shares, which has been sanctioned. The proposed issue is to be offered to the existing shareholders as also to the public.

* * * *

FRESH ISSUES SANCTIONED

Four companies are authorised by the Controller of Capital Issues to raise fresh capital aggregating Rs. 88 lakhs within 12 months. Following are the details of the share capital issue by two of the companies.

Devkaran Nanjee Banking Company Limited, Bombay, has been granted permission to issue 100,000 equity shares of Rs. 50 each, to be issued for cash at a premium of Rs. 2 per share. The paid-up capital of the Bank is Rs. 50 lakhs.

Jaipur Metals & Electricals Limited, Jaipur, is to issue fresh capital of Rs. 25 lakhs, in equity shares of Rs. 100 each for cash at a premium of Rs. 15 per share. The proceeds will be utilised for the manufacture of copper conductors, electrical meters, etc. The Company has a paid-up capital of Rs. 35 lakhs.

* * * *

BONUS SHARE ISSUE

Skipping the dividend for the year to 31st December 1961, notwithstanding an increase in profit from Rs. 22.1§ lakhs to Rs. 34.25 lakhs, the Directors of the Commercial Ahmedabad Mills Co. Ltd. have announced a bonus share issue in the proportion of one fully paid share of Rs. 250 each for every six ordinary shares held.

NEWS IN BRIEF

THE Union Ministry of Commerce and Industry has set up a public relations unit to help those who are interested in the promotion of industries under the Industries (Development and Regulation) Act, 1951.

The Government security paper mill proposed to be established at Hoshangabad is expected to go into production from 1964. The mill will have three machines capable of producing 2,000 tons of paper annually.

Following the recommendations made by the Freight Investigation Bureau in Bombay, the homeward freight conference has agreed to reduce the ocean freight in respect of H.P.S. groundnuts in shell exported to U.K.-Continent from 410*s.* to 370*s.* per 1,000 kilos.

The freight rate on mica blocks and splittings shipped from Bombay and Madras ports to Japan has been reduced from 3.25 per cent to 2.25 per cent *ad valorem* net. The revised rate is on a par with the rate obtaining for shipments from Calcutta.

The Government of Kerala has sanctioned a sum of Rs. 1.02 lakh for the experimental scheme in connection with the use of modern fertilisers for coconut cultivation. The scheme will be implemented in seven centres, one each in seven districts.

An agreement for the supply of 500,000 tons of salt per annum to Japan has been concluded by an Indian delegation led by Mr. Govind Narain, Managing Director, the State Trading Corporation, currently touring Japan. The agreement will be valid for two years.

The Rs. 18-crore State-owned Gauhati Oil Refinery produced 6.5 million litres of petrol and 6,600 tons of light diesel oil during the first quarter of 1962. Of the total production, 5.4 million litres of petrol and 3,800 tons of light diesel oil were despatched to Assam, Bihar, W. Bengal and Uttar Pradesh.

The Indian Central Sugarcane Committee has decided to establish a separate organisation to scrutinise cane development schemes. The proposed organisation will function as a standing committee at the Centre. The Central Committee has also urged the setting up of cane development councils in States where no such organisations exist at present.

The Government of India has announced its policy in regard to raw wool export during the April-September 1962 period. Accordingly, exports of raw wool will be allowed on contract and consignment basis against ceilings. In the case of consignment basis, no shipper will be permitted to export more than 100 bales from all ports taken together.

Horn and hoof meal, sterilised animal meal, blood meal, meat meal and fish manure will continue to be licensed freely for export to all permissible destinations till 31st March 1963. According to the Joint Chief Controller of Exports, the existing policy for the export of wood and timber will be continued till further orders.

The Policy (Insurance) Holders Servicing and Research Institute at Calcutta has urged the appointment of a commission consisting of independent statistical experts to find out the total new business done by the Life Insurance Corporation during the last few years and the share of business where the second premiums, particularly in respect of monthly policies, has not been paid at all.

A three-man Indian delegation led by Mr. C. M. Poonacha, Chairman of the State Trading Corporation, has left for Czechoslovakia to conclude an agreement for the supply of Indian iron ore. The agreement is expected to be valid for one year. The delegation will also visit Rumania and Yugoslavia for discussions on the quality and price at which Indian iron ore is to be supplied to these countries this year.

The all-India final estimate of groundnut for 1961-62 puts the total production at 4.68 million tons, representing an increase of 6.6 per cent over the partially revised estimate for the previous year. The area under groundnut during the year is estimated at 15.85 million acres, an increase of 2.5 per cent over the previous year's figure. The yield per acre has risen from 636 lbs. in 1960-61 to 662 lbs. in 1961-62.

Air-India International inaugurated a new jet service to Singapore from Madras with a Comet-4 airliner on the 5th inst. Two weekly jet services will be operated to Singapore and the other to Djakarta. The plane for Singapore will take off from Madras every Thursday and that for Djakarta every Saturday from Bombay. The flight time from Madras to Singapore will be 4½ hours. Another weekly jet service from Bombay to Karachi, Bahrein and Kuwait was inaugurated on the 8th inst.

A conference of the small-scale industrialists of the Western region, comprising the States of Maharashtra, Gujarat and Madhya Pradesh has been convened by the Federation of Indian Chambers of Commerce and Industry. The conference to be held in Madhya Pradesh is expected to discuss, *inter alia*, the administrative and procedural difficulties, problems of raw materials, facilities for transport and communications, credit requirements, marketing and publicity.

In order to help primary producers and small manufacturers, the State Trading Corporation has undertaken a buffer stock scheme for the lac-industry. The Corporation has fixed the floor prices of certain grades of seed lac which is itself a factory product but semi-finished. If the prices tend to fall below these rates, the Corporation is expected, as far as possible, to help stabilise the market. Two procurement centres have been opened, one at Balarampur, West Bengal and the other at Gondia, Maharashtra. Such centres are also likely to be opened in Bilaspur (Madhya Pradesh), Mirzapur (U.P.), Ranchi and Daltonganj (Bihar).

The Government of India, in consultation with the State Governments, has revised the scales of pay for the Indian Administrative Service. The scales are: Junior: Rs. 400-30-500-40-700-E.B.-30-1,000; Senior: (*a*) Time Scale: Rs. 900-50-1,000-60-1,600-50-1,800, and (b) Selection Grade: Rs. 1,800-100-2,000. For the first time, the selection grade has been introduced. Also, the span of the time scale has been reduced from 25 years to 22 years to bring it at par with other Central services. Earlier, the junior grade was from Rs. 350 to Rs. 950 and the senior from Rs. 800 to Rs. 1,800. In addition, there was the dearness allowance. Now there will be no dearness allowance on the pay drawn in the new scales. Except the selection grade, the revised scales have come into force with retrospective effect from 1st April 1960.

The Rourkela steel plant set a new output record in March 1962 by producing 44,287 tonnes of pig iron (38,256 tonnes in February), 44,638 tonnes of ingot steel (35,518 tonnes in February). The slabbing mill produced 32,868 tonnes of slabs (29,243 tonnes in February). There was a total production of 16,403 tonnes of strips, 2,686 tonnes of cold rolled sheet and 7,665 tonnes of plates (14,554 tonnes, 3,505 tonnes and 7,879 tonnes, respectively, in February). Production of pipes aggregated 5,656 tonnes (4,924 tonnes in February). Plates sent out in March aggregated 9,605 tonnes (8,275 tonnes in February). The despatches of hot rolled strips, plates and sheets were 7,559 tonnes (6,919 tonnes in February). Supplies of cold rolled sheets were 2,871 tonnes (2,190 tonnes in February). The total quantity of pipes, both A.P.I. and commercial quality, despatched was 5,041 tonnes (3,359 tonnes in February).

* * * *

From Abroad

The Guinea National Assembly has unanimously adopted a draft law guaranteeing private investment against nationalisation.

The G.A.T.T. Committee for tariff negotiations has decided to put up the closing protocols of the 1960-61 tariff conference, including all attached tariff lists, for final signing by G.A.T.T. parties on 16th July next.

Japan has secured a contract for the supply of 25,500 tons of urea fertiliser worth about $3.5 million to Pakistan in international biddings for the supply of 65,000 tons of the fertiliser called for by the U.S. Agency for International Development.

Italy has liberalised the import policy in respect of 71 items, including chemicals such as bromine and lead oxides, medical supplies, cameras worth 20 dollars or more, flax yarn and ramie yarn, various footwear, sheet-glass, refrigerators, household electrical devices, etc.

The Netherlands State Secretary of Labour Affairs has advised the Netherlands Labour Foundation that employers must raise the pay of their female employees to 85 per cent of men's wages for comparable labour. This new measure will be implemented as soon as collective labour agreements are due for renewal.

The Inter-American Development Bank of Washington has entered into an agreement with the Bank of Italy and a group of Italian banks for the issue of 15,000 million lire (£8.6 million) in bonds. The bonds will be repayable in 20 years and bear interest at 5 per cent. It is the first issue of the Bank on the international market. The Italian banks will purchase the bonds and sell them in the Italian market. The money will be used by the Inter-American banks to finance development projects in Latin American countries.

Turkey's first synthetic yarn factory, proposed to be erected at an estimated cost of £1.4 million at Bursa, is expected to go into production before the end of 1964. The output will be about 300 tons of fine denier yarns per annum. The factory is expected to take up manufacture of nylon type cord required by three vehicle tyre factories that are now being established. Half the estimated cost will be met by a local company and the Industrial Development Bank of Turkey, the other half being invested in the form of machinery and technical know-how by the German firm Badische Anyline Und Soda Fabrik.

An ambitious two-year scheme for the development of the salt industry has been undertaken by the East Pakistan Small and Cottage Industries Corporation. The scheme will involve an expenditure of Rs. 1 crore with a foreign exchange component of Rs. 16.1 lakhs. The location for the project has been selected in the coastal areas of Chittagong at Chakaria and Kutubdia. The scheme which commences operation from July next has been divided into three broad categories, namely, salt production at Chakaria, salt crushing at Chittagong for the preparation of table salt and loans to cottage workers for boosting salt production. It is expected to yield a gross profit of Rs. 15.33 lakhs and a net profit of Rs. 8.1 lakhs which will be utilised for development works.

PERSONAL

MR. Rasiklal C. Nagri has been elected President of the Ahmedabad Millowners' Association for the current year.

Mr. C. D. Wilson, Senior Managing Director and Chairman of Balmer Lawrie and Co., Ltd., has retired after 31 years of service in the Company.

Mr. E. G. Norris, British Deputy High Commissioner-designate at Calcutta, is expected to take over charge sometime in September next.

Mr. Ramanlal M. Shah and Mr. Mulji V. Narsi have been elected President and Vice-President, respectively, of the All-India Stainless Steel Industries Association for the current year.

Mr. Bhawati Prasad Agarwala, Hon. Secretary of the Merchants' Chamber of Commerce, has been elected a Commissioner of the Port of Calcutta for a period of two years.

Mr. M. C. Chagla, former Indian Ambassador in Washington, has been appointed High Commissioner of India to the United Kingdom. He is expected to assume charge next month.

Mr. R. C. Shah and Mr. B. M. Choksi have been elected President and Vice-President, respectively, of the All-India Importers' Association for the current year.

Mr. P. N. Vakil and Mr. M. D. Boovariwala, have been re-elected President and Vice-President, respectively, of the National Association of Purchasing Executives for the year 1962.

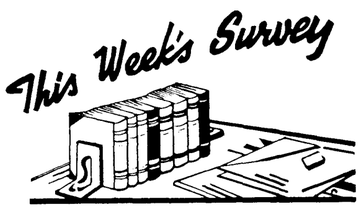
Lala Bharat Ram, Chairman of the Delhi Cloth and General Mills Ltd., has been re-elected Chairman of the Indian Cotton Mills' Federation for the year 1962-63. Mr. Ramnath A. Podar and Mr. G. K. Devarajulu have been re-elected Vice-Chairmen.

Research into machine design at the Textile Machinery Manufacturers' Research Centre at Helmshore, Lancashire, over the past 10 years has increased the rate of production from textile spinning machinery up to three times. In order to achieve this, a number of processes have been eliminated. Machine spaces have been made smaller, speeds have been increased, quantities of material handled have been raised, and automation greatly extended. Schemes that could double production in the next 10 years are now under consideration. Research at the Centre is concentrated on improvements to spinning machinery. Recent developments have included a new design of a fast carding machine, and a new ring that allows spinning speeds to go up by 20 per cent.

After 6½ years of experiments in the small town of Tiel, the Netherlands Ministry of Health officially recognised the favourable effects of adding fluorides to drinking water to reduce tooth decay. It was proved in the test town that the number of cavities among the population was reduced by an average of 40 per cent over the trial period. The Ministry has strongly advised the various municipalities to introduce the new idea. It can be expected therefore—the typical Dutch consciousness for health taken into account—that in the near future the greater part of the people in the Netherlands will get only fluorinated water from the tap. It has been suggested that drug stores stock "neutral" water. However, it would be a somewhat inconvenient and unprofitable business for shopkeepers to store large quantities of water, which costs only ten cents per 100 gallons.

The Aluminium Limited of Canada has announced the merger of its two German subsidiaries, Aluminiumwerke Nurnberg GmbH and Aluminiumwerke Gottingen GmbH, to form a single company under the name of Alcan Aluminiumwerke GmbH. The merger of the companies, which for several decades have been engaged in aluminium fabricating in Germany, has been undertaken in view of the expansion of their business activities and production facilities. In future, the Alcan Aluminiumwerke will operate three plants: Gottingen Works—fabricating aluminium sheet, strip, circles, containers, utensils, impact-extruded cans and general job shop products; Nurnberg Works—producing sand castings, permanent mould and die castings, general automotive castings, including finished pistons. Uphusen Works—making sand castings, permanent mould and die castings.

A plan to build up newspapers, news agencies, radio, educational television and films in the developing countries of Asia, Africa and Latin America has been presented to the U.N. Commission of Human Rights by Mr. Tor Gjesdal, Director of U.N.E.S.C.O.'s Department of Mass Communication. The plan is based on a three-year survey made by the U.N.E.S.C.O. at the U.N.'s request. About 2,000 million people, according to Mr. Gjesdal, lack the barest means of being informed of news at home, let alone of events abroad. No less than 70 per cent of the world's population lack adequate information media. They are without a window on the world and are thus denied effective enjoyment of one of the basic human rights—the right to know. The U.N.E.S.C.O. feels that the basic minimum of information services consists of ten copies of a daily newspaper, five radio receivers and two cinema seats for every 100 inhabitants in any country.



NEPA MILLS

NOT all the industrial undertakings in the public sector in India are uniformly well run. Some of them are not large enough to be economically viable propositions and are, therefore, not quite profitable. To this category belongs the National Newsprint and Paper Mills Ltd. (popularly known as Nepa Mills) which was floated as a private enterprise in 1947, was taken over by the Madhya Pradesh Government in 1950 and brought under the control of the Central Government in 1958. Although private investors had, as at the end of March 1961, a shareholding to the tune of about Rs. 70 lakhs in the concern, theirs was only a minority interest. The major shareholding was of the Government of India which had contributed Rs. 255 lakhs, while that of the Government of Madhya Pradesh was Rs. 170 lakhs in the total paid-up capital of Rs. 495 lakhs. Its record as a public enterprise managed by the Government of India since January 1959 is distressing. This is the unmistakable impression one gets from a perusal of the findings of the Second Lok Sabha's Estimates Committee which had examined the reports and accounts of the undertaking at great length.

The Committee has expressed surprise at the fact that the Mill had not reached its rated capacity of 30,000 tons per annum even by 1960-61, for actual production in that year was only 23,000 tons. Two principal factors were responsible for this under-utilisation of capacity. One was the difficulty in processing the raw material, particularly Salai which had not been well tried except on an experimental scale in the making of mechanical pulp for use, along with chemical pulp from bamboo, in the production of newsprint. And the other reason for the shortfall in production was the inadequate supply of power and steam year after year. Commenting on these explanations, the Committee says:

"Adequate supply of power and steam, technical know-how and suitability of raw material are problems basic and vital to any industry and should have been foreseen and provided for well in time. That they should have remained unsolved all these years is regrettable. Six years (of commercial production) is a long enough period for overcoming the teething troubles of such a concern."

But it must be said in fairness to the authorities in charge of the Nepa Mills that they have been working against odds. All the factors mentioned by the Committee were beyond their control, because the faults were committed by the initial promoters of the project. Actually they have been doing their best at the technical level to make the best of a bad job. If still the performance of the Mill continues to be disappointing in so far as the quality of newsprint and the financial results are concerned, it is something for which they can hardly be blamed. The Consultants, it must be recalled here, had not visualised at the project stage that the colour of the newsprint made from Salai, which had a reddish core, would need improvement, and so they had made no provision in the design for the bleaching of the mechanical pulp. It was only after an expert committee had pointed out the danger of discoloration of newsprint on account of the use of Salai that steps were taken in 1959 or so to install a flexible groundwood bleaching plant. If even this bleaching plant, which seems to have been installed by now, does not produce the expected result by way of whiter and better newsprint, the researchers of the Mill could usefully explore the possibilities of colouring the pulp in lighter shades of blue, yellow or rose. That could give coloured newsprint varieties such as the light rose newsprint used by the London *Financial Times* or the light blue newsprint used by some French newspapers.

That the costs of production of the Nepa newsprint with its unattractive shade and rough finish should have also gone up in recent years is the most distressing part of the story. While the production of newsprint has increased from 21,840 tons in 1958-59 to 23,030 tons in 1960-61, the average cost per ton, instead of coming down with the increase in production, has actually risen at a faster rate from Rs. 801 to Rs. 885. This factor accounts for the relatively high cost of Nepa newsprint (Rs. 1,064 per ton), as compared with the price (Rs. 900 per ton including customs duty) of imported newsprint. Thus, Nepa newsprint costs Rs. 164 per ton more than the imported newsprint which continues to meet nearly three-fourths of the country's requirements and which is far superior in quality, shade and finish. This difference in price is, however, not as large as what obtains between the prices of several other protected industrial goods and those of the corresponding varieties of goods that could be imported.

Considering the circumstances in which the Nepa Mill has been working till now, the Estimates Committee's twin hope that the Mill's present (1960-61) profit (after tax and interest) of 8 per cent of net worth could be increased through greater efficiency and that the price of newsprint could be brought down by stricter control over costs is not likely to be fulfilled in the near future. Nor do some other suggestions of the Committee seem to be realistic. For instance, there is the *implied* suggestion that the exemption now accorded to Nepa newsprint from the levy of excise duty might have to go because more newsprint mills are being set up. At present Nepa newsprint is exempted from the excise duty (Rs. 224 per ton) in respect of supplies to newspapers and printers and publishers of text books. This is some relief to the otherwise reluctant consumers of Nepa newsprint. It would be unwise to deny this relief to them and thereby make Nepa newsprint still more unpopular. The Committee's suggestion is that both the imported and Nepa newsprint could be distributed at equated prices in view of the wide disparity in their prices. This means some indirect subsidy from consumers of imported newsprint to Nepa Mills, for the equated prices, though lower than those of Nepa newsprint, would be higher than those of imported newsprint. If this is done, the Nepa Mills will not feel the compulsion to bring down its cost of production and improve its efficiency. The Committee's third suggestion that the question of utilising bagasse on a large-scale for paper and newsprint should be examined at an early date is also unrealistic in the context of the serious coal shortage from which even the normally coal-consuming industries are suffering. With the expected greater demand for coal relative to its supply throughout the third Plan period, it is doubtful whether the sugar factories would cheerfully part with their bagasse which is mostly burnt away as fuel. The basic difficulty faced by the Nepa Mills is in respect of the raw material. As even Salai, which is a rather poor type of raw material for newsprint, is not being adequately replanted and as bagasse, too, may not be released on any large-scale from the sugar factories, the wisdom of possibly doubling the capacity of the Nepa Mills may be questioned. But, at the same time, there is the question whether the Nepa Mills can ever become a more profitable and economic enterprise without such expansion. That is the dilemma facing the authorities—a dilemma which can conceivably be resolved either by producing, if technically possible, coloured newsprint with the available raw materials or by switching over the Nepa unit to the manufacture of other varieties of paper. Surely, no undertaking, however essential may be the product turned out by it, can go on working at a low profit or at a loss indefinitely.

BRITISH BUDGET

The economic background against which the British Chancellor of the Exchequer, Mr. Selwyn Lloyd, has presented the budget for the current financial year (1962-63) is very much different from that prevailing at the time the budget for 1961-62 was presented a year ago and the emergency measures introduced in the so-called "little budget" in July 1961. Britain's economy has registered a distinct improvement in the past one year. Confidence in the pound sterling, for instance, has been restored, the drain on external reserves has ceased and the exchange rate has moved again in favour of the pound sterling. The balance of payments situation is also better, with exports in 1961 being higher by £156 million as compared with the previous year and imports less by £100 million. The Bank rate, which was stepped up from 5 to 7 per cent in the last week of July 1961, has now been restored, by successive reductions, to the previous level of 5 per cent.

The markedly healthy trends in the economy of Britain thus explain the buoyancy of Government revenues. The estimated total revenue receipts for the year 1962-63 amount to as much as £6,807 million, as against the actual of £6,645 million for 1961-62 which itself was well above the budget estimate of £6,508 million. The expenditure is, of course, expected to rise appreciably, from £6,235 million in 1961-62 (budget estimate was £6,002 million) to £6,364 million in 1962-63. Even so, there will remain a sizable surplus of £443 million, as against the revised and budget figures of £410 million and £506 million, respectively.

Thanks to the improvement in the Government's budgetary position, the Chancellor has accorded some concessions in direct taxation. It is proposed to raise (*a*) the small income relief on investment income for people under 65 years from £300 to £400 a year, and (*b*) income-tax exemption level for old people from £275 to £300 annually for single persons over 65 years and from £440 to £480 for married couples over 65 years. Further, it is proposed to exempt from tax special bounties paid to soldiers who stay on for extended service. Again, the exemption limit for estate duty is to be enhanced from £3,000 to £4,000, with a graded adjustment in the rate up to £6,000. Mr. Lloyd has also promised the removal of house tax from next year onwards. As against these concessions, the Chancellor has proposed to impose, within the present income-tax machinery, a tax on speculative gains in share and property markets. This means that there will be no capital gain tax as had been hinted earlier and the arguments advanced against capital gains tax have gone home.

In the sphere of indirect taxation, the Chancellor has announced small reductions in revenue duties on sugar, cocoa and coffee. Two other important changes in indirect taxes have also been announced. One, the ten per cent surcharge on purchase tax and other duties on most consumer goods have been abolished with effect from the 10th inst. Instead, Parliament will be asked for powers of indirect taxation which would yield in 1962-63 roughly the same as that received from surcharge. Secondly, with effect from 1st May next, there will be a new tax of 15 per cent of the whole value of confectionery such as sweets, soft drinks and ice cream; the actual yield is estimated at £30 million this year and £50 million in a full year.

On the whole, the budget presented by Mr. Lloyd seems to have been welcomed by the industrial and business community, as well as by the public in general. Indeed, a London report describes the budget as a "popular appeal budget."

DEVELOPMENT AID

Addressing the Economic and Social Council of the United Nations a few days ago, Mr. Eugene R. Black, President of the World Bank, reviewed the activities of the Bank and its affiliates, namely, the International Finance Corporation (I.F.C.) and the International Development Association (I.D.A.) in the wider setting of the economic and social effort of the U.N. Apparently, Mr. Black seems to have considered the occasion appropriate for reflecting on the past, in view of the recent adoption by the U.N. General Assembly of a resolution designating the next ten years as "U.N. Development Decade."

A little over a decade ago, Mr. Black pointed out, the World Bank was the only multilateral agency concerned with development finance. Many newer institutions such as the I.F.C. and the I.D.A. have been established since then. But the Bank has maintained its position as the largest single source of development aid. Its lending, which by 1950 amounted to only $750 million (of which two-thirds were given not for development but for post-war reconstruction) now stands at $6,500 million, financing carefully planned and economically productive projects in sixty countries. A remarkable thing about this nearly nine-fold increase in lending is that it has been achieved without making calls on the Bank's member-countries beyond their original paid-up subscriptions (which have so far provided usable funds amounting to about $1,700 million) but by borrowing in the capital markets of the world. Not only has the loan operations but also the range of the Bank's technical assistance services been greatly enlarged; their emphasis being on helping member countries to make the best possible use of the resources available to them.

The Bank has been reinforced by the creation of two separate but associate institutions, namely, the I.F.C. and the I.D.A. The former was established a little over five years ago to foster private industry in developing countries and the latter was brought into existence last year to provide external development capital to countries which, for balance of payments reasons, are unable to raise sufficient finance abroad on conventional terms. The three organisations form an increasingly close-knit team and they are responsible, in no mean measure, for the rapid strides in economic development which has now made it possible for the U.N. General Assembly to set ambitious goals of development for the next ten years.

An idea of the magnitude of the contribution of the World Bank and its affiliates to industrial development can be had from an examination of their activities in one year. According to Mr. Black, during the year ended 30th June 1961, the latest year for which figures are available, the Bank made 27 loans of the total value of $610 million. The I.F.C. made 10 investments of the total value of $6.15 million. The I.D.A. signed its first development credit in May 1961 and, by the end of the following month, had committed a total of $101 million. Total new commitments of the three institutions during the year thus exceeded $717 million. So far during the current fiscal year ending 30th June 1962, the Bank has already lent a total of Rs. 664 million, the I.D.A. has extended sixteen more development credits, amounting to $101 million, and the I.F.C. has made seven investments aggregating $17 million. Many more operations are under way for all the three institutions.

Money, of course, is only one requirement of development. Technical assistance is an equally urgent need. Realising this, the World Bank has sought to match the expansion of its lending operations with an enlargement of its technical assistance activities. Two major innovations made by the Bank in this connection deserve special mention. The first is the Development Advisory Service established in November 1961 and the second rendering help to member-countries to bring promising projects to a stage which qualifies them for aid from the Bank or the I.F.C. The importance of the second service can be realised from the fact that, in the past, many good projects have never been carried out, because the countries concerned lacked the experience or the knowledge or money to hire the experience needed to carry out the engineering and other preparatory work to put the project into execution.

In order to encourage closer co-operation between the I.F.C. and the World Bank, certain amendments have been made to the Charter of the I.F.C. Accordingly, the I.F.C. is now permitted to invest in equity investment and underwrite capital issues in many countries where the capital market is still not developed. In order to make good use of these changes in its Charter, the I.F.C. has now assumed primary responsibility on behalf of itself, the Bank and the I.D.A. for maintaining relations with privately-owned and managed development banks in member-countries. Initiative taken by the I.F.C. in planning financial and technical assistance for these banks could thus lead to the grant of loans by the World Bank or I.D.A. as well as to investment by the I.F.C. itself. Mr. Black indicated that, before long, the member-Governments of the I.D.A. will have to be approached for a replenishment of its funds. The total amount of assistance committed

THE E.I.D./PARRY GROUP BOARD APPOINTMENTS

The East India Distilleries & Sugar Factories Limited and Parry & Co. Limited have pleasure in announcing the following appointments effective from 1st April, 1962:

Mr. H. V. R. Iengar, lately Governor of the Reserve Bank of India, has been appointed a Director of the East India Distilleries & Sugar Factories Limited and will, during May, 1962, take up the appointment of Chairman and Managing Director of the Company. The present Chairman and Managing Director, Mr. G. N. Noel-Tod, will then revert to his previous appointment of Vice-Chairman and Managing Director of the Company, until his retirement from full-time service in India.

Mr. M. J. Edwards has retired from the Board of Parry & Co. Limited, of which he was Chairman, to take up the appointment of Deputy Managing Director of the East India Distilleries & Sugar Factories Limited.

Mr. John K. John, Vice-Chairman of the Board of Directors of Parry & Co. Limited, has been appointed Chairman of Parry & Co. Limited, *vice* Mr. M. J. Edwards.

Mr. N. G. Bowen, Director of Parry & Co. Limited, has been appointed Vice-Chairman of Parry & Co. Limited, *vice* Mr. John K. John.

SLAPPING IN ONE'S OWN FACE

STATE TRADING IN DEVELOPING COUNTRIES

By Compertus

BONN, *9th April*

NATIONAL arrogance has a boomerang effect, it prohibits the desired economic achievements. Public authorities are not interested in balance-sheets. State trading organisations are not flexible enough. But particularly developing countries with a wealth of raw materials are in for the search of new lines of production. The progressing integration of the world market demands fastest reaction and own initiative, both qualities which are lacking in State trading organisations. The officials of such organisations are primarily interested in increasing their personal prestige and in achieving "show-case" successes. The whole economy has to pay for unreasonable economic operations.

State trading concerns prefer deals with other state trading organisations on the basis of traditional offers of goods. This system prohibits the extension of the pattern of goods and the winning of genuine economic independence, because it causes the developing countries to retain their one-crop economies.

Furthermore, state trading functionaries are the horror of international investment financiers. Both private investors and the taxpayers in capital exporting countries are uneasy about the use of the aid contributions they have made.

For many developing countries a state-controlled economy is a demonstration of their power and independence. It begins with the trade. The activity of European trade firms is regarded as a remnant of the colonial era in many developing countries. The nationalisation of trade firms is frequently the first step on the road towards a state-controlled economy. However, some countries have already become aware of the unfavourable consequences: deterioration in quality, higher prices and interruption of profitable business contacts.

Indonesia

In Indonesia, nine state-owned trading companies were founded in 1961. At the same time, the General Management Board, a central authority to co-ordinate and to control the companies, has been established. As regards imports, the companies are mainly engaged in buying wheat flour, textiles, cotton yarn, cotton, fertilisers and paper. The companies can control the distribution, the prices and the transport. Speculative operations of private merchants and importers, which might cause disadvantages for the consumers, are not possible. Other goods are not subject to the exclusive control of the state trading companies. Imports of raw materials, spare parts and capital goods needed by state-owned industrial enterprises are exclusively handled by state-owned trading companies. Private dealers still have a good share in the market for capital goods. In the field of exports, the state-owned trading companies have the task to promote the sales abroad of "weak" goods. About 10 per cent of the country's total exports are handled by state-owned companies.

Burma

State control of imports necessitates the establishment of new organisations: five Joint Venture Corporations (J.V.C.) are to be equipped each with a capital of 10 million Kyats. Three of the five Joint Venture Corporations are reserved for registered import firms. The other two will be available only for those firms whose registration has been rejected or withdrawn so far. About 2,500 registered import firms and about 4,700 firms which had applied for registration as importers have been notified by the Trade Ministry that they can be registered as small dealers for the five new Joint Venture Corporations, with a fixed profit-margin of 17.5 per cent.

Ghana

Ghana has established a state-owned trading company, the Ghana National Trading Corporation. It will be engaged in business operations like the other trading organisations in the country. The Corporation has reserved to itself the right to fix from time to time the kind of domestic products it is going to deal with. So far, the Corporation has taken over the stores of nine companies.

The Société Togolaise d'exportation et d'importation (SOTEXIM) has been established in Lome. The new company will promote Togo's foreign trade and will organise the domestic trade. Its capital has been fixed at 50 million CFA francs. Nine-tenths will be raised by the Togolese Government and one-tenth by the Association of the Sociétés Publiques d'Action Rurales (S.P.A.R.).

Congo

Original plans by Congo to impose state-control on the export of certain kinds of timber, mainly limba, have been abandoned. The Government has realised early enough that such a step would have involved many problems. West Germany is one of the main buyers of limba. The nationalisation would have considerably affected the German timber imports.

Pakistan

All trading companies have been ordered by the Government to "pakistanise" their workers and employees. The firms are to employ only a minimum of foreigners in the future. In the field of industry, the liberal labour market regulations will continue to exist. Trading firms, including banks and insurance companies, will need Government permission in future if they want to hire foreigners or want to prolong contracts with foreigners. Trips by ship or by air for newly hired foreigners can be booked only if the Government permission is submitted to the State Bank. An official ordinance says that foreigners who do not act in compliance with these regulations could expect "considerable difficulties" when transferring their savings to their home countries.

Guinea

The Government of Guinea has ordered the nationalisation of banks and insurance companies. The license granted to the Banque de l'Afrique Occidentale (B.A.O.) to do banking deals has been withdrawn. The Bank's assets and obligations have been transferred to the Banque Centrale de la République de Guinée, that is, the State Bank of Guinea. Private insurance companies had to end their activities in Guinea. They have been told that they had not acted in compliance with the country's laws.

Egypt

July 20th 1962, is the deadline for the nationalisation of private import firms. After that date, private firms are no longer permitted to act as agents of foreign firms.

The Government will control the country's entire economy. The formation and use of capital is to be controlled in accordance with the targets of the economic plans. 400 to 500 enterprises in all sections of the economy have been affected by State intervention. Besides, a number of special State-owned economic organisations, three large, state-owned concerns are handling the controls. These are:

Development Organisation, founded after the Suez crisis, administering 125 companies.

M.I.S.R. Organisations, controlling 95 companies.

Al Nasr Organisations, controlling 92 companies.

(*Concluded from next column*)

interest in investments overseas. Bonn authorities are presently looking for a way which allows to bring Government investment support in line with the principles of a "free market" economy. Ideas are being sorted out and put together to a system which combines private and Government promotion of development aid. A new aspect is coming up: trade promotion abroad with a view on the domestic economic structure. Briefly: better possibilities to write off investments abroad. Removal of adverse effects of anti-double taxation laws. Tax incentives in developing countries are not to be "killed" by national taxation systems in the industrial countries. This is for instance the case in India.

The forecast: public and private development aid funds from the Federal Republic of Germany will go more than previously to reliable partners. Trustworthy addresses attract interest.

NOTES FROM W. GERMANY

LABOUR UNREST AHEAD

BUILDING WORKERS WANT MORE PRIVILEGES

(By A German Correspondent)

BONN, *6th April*

WEST Germany appears to be in for a new period of labour unrest; the Building Workers' Union has announced that it is determined to fight for a number of privileges for its 425,000 members which the employers and the building industry associations are not willing to grant, because they do not want to discriminate their non-unionised workers.

Whether the dispute will lead to regionally-limited or nation-wide strikes is still uncertain. But it is feared that it will almost certainly affect seriously the building industry and its affiliated trades employing roughly 10 per cent of all wage and salary earners in the Federal Republic of Germany.

It all started with a controversy on the draft of a scheme, parts of which optimists even hailed as the beginning of a new era of labour-management relations in West Germany. The scheme had been discussed between Georg Leber, Chairman of the Building Workers' Union, and employers' representatives, following the failure of earlier union attempts to confine wage increases negotiated by the unions to union members, or to impose a "solidarity contribution" on non-union building workers to make them pay "for the benefits the unions have brought them." Briefly, the new scheme provided for the employers to pay a levy of 0.85 per cent of their wage bill into a fund from which the organised workers, but they alone, should draw an annual sum of DM 80 per head to be used as a subsidy for their holidays. At the same time, a special building industry committee was proposed to be formed, on which representatives from the union and the employers would tackle all questions concerning the building industry, present the industry's viewpoint on proposed legislation, and handle public relations concerning common problems.

That part of the scheme which provided for the 0.85 per cent levy was rejected by both the German Employers' Organisations and the German Building Industry Associations. The main argument was that the levy would have put the employers' neutrality in question. The employers and the building industry pointed out that only one in five of West Germany's about 2.2 million building workers is unionised and that, according to West German laws, no worker can be compelled directly or indirectly, to acquire a union card. Closed or union shops do not exist in the Federal Republic.

The wage agreement in the building industry ran out on 1st April, because the Union refused to sign a new one unless the employers gave in on the holiday bonus for union members. Meanwhile, the employers have voluntarily raised the wages for all workers in the building industry—unionised or not—by six per cent, as from the date of expiration of the old wage agreement. An average increase of 5.2 per cent had been proposed in the rejected scheme.

The Union has told its members to accept the employers' offer. But it continues to insist on its claim for an additional holiday pay for its members which it has now increased from DM 80 demanded originally to DM 100. Also, the Union has urged its members to go on an all-out drive "for whatever pay increases you can get."

* * * *

Recession and Aid

The slowing down of the economic growth in the Federal Republic of Germany affects also the development policy. Pessimists doubt whether, the planned public development aid of about 3,000 million D-marks would really be available if the present trend were to continue. However, Bonn development authorities have made one firm promise: 2,500 million D-marks at least will be available annually. Another question is whether the rules fixed for development assistance will remain unchanged. Main emphasis will be laid on assisting in infra-structure projects. The system of technical aid will also be revised: payment of the training of skilled workers in privately financed institutions will be added to the public educational aid.

The effects of current economic trends in West Germany are expected to cause growing

COMPANY LAW AND THE CONCEPT OF A RESPONSIBLE COMPANY

INDUSTRY MUST UNRESERVEDLY ACKNOWLEDGE ITS SOCIAL RESPONSIBILITY

By D. L. Mazumdar, I.C.S.
SECRETARY, DEPARTMENT OF COMPANY LAW ADMINISTRATION

THE traditional view of the joint-stock company as a legal contrivance dies hard. Too many men, both in this country and abroad, who take pride in describing themselves as practical men, and their so-called practical associates, would still like to think of the joint-stock company as a convenient organisational device for the conduct of trade and industry within the framework of a law, which attempts to systematise in a formal way its structure and working methods as well as the inter-relationship between its different structural and functional elements. To the average practitioners of trade and industry, and the operators in the market places, this traditional view of the company seems to constitute the only realistic view of this institution, and yet the truth is that this view is only a projection of the past, which continues to cast its lingering shadow on current thinking and to obscure the emergence of the reality which the joint-stock enterprise represents in the present age—as a living, vital and dynamic social organism, with firm and deep-rooted affiliations with the rest of the community in which it functions, although these affiliations may not be always readily visible to those who are only anxious "to do," and not interested in the meaning or significance of what they "do." It is a tribute to modern advanced thinking in the economic, legal and sociological circles of the Western countries, that it has now been able to bring up to the surface the true character of a company as a social organism, endowed with a dynamic of its own, and with duties and obligations to the rest of the community like any other sociological institution. It is this truth about the real nature of the joint-stock company in the modern world which the new company law in this country attempted to bring home to the practitioners of trade and industry and their professional associations, a few years ago, albeit in somewhat complicated and verbose legal jargon.

Realities of Power and Authority

It is not easy to develop this theme adequately within a few minutes, but I start off by saying that the traditional view of joint-stock company to which I have referred hardly takes into account the realities of power and authority, which the modern company, or corporation as it is called in some countries, exercises in a modern society. The area affected by the decisions of trade and industry may, indeed, extend from a very limited physical area, round a factory or a shop, to the whole world. Practical businessmen may convince themselves that their decisions are taken on so-called "strictly economic" grounds; but they cannot prevent them from having far-reaching "non-economic" social consequences for the wider community. For example, the closure of a large factory in a relatively small geographical area might greatly damage, and indeed destroy, a local community which perhaps grew round it; or the manner of the production and marketing of commodities of key or basic importance might deeply affect the health and happiness of large communities of men and women living their precarious lives hundreds and thousands of miles away from the centres of production. Many examples could be cited of how business decisions have affected not merely the life of a neighbourhood but of the entire regional areas and, in the case of global and international companies or corporations, many areas outside the limits of the national boundaries of the countries concerned. However much those in charge of trade and industry might like to do so, their methods and practices could not be kept isolated from the main streams of life or fail to influence and in their turn be influenced by the nature and direction of these streams. If this broad thesis is accepted, it must follow as a corollary that business must recognise its true character as a living and dynamic social organism and must, therefore, unreservedly acknowledge its social responsibility.

It is to this aspect of the concept of a responsible company that I should like to confine myself. There are at least two other aspects to this concept to which I should have liked to refer, namely, the *legal* and *ethical* aspects of this concept, because company law in most countries particularly our new company law in this country, is primarily concerned with this *legal* aspect of the concept of the responsible company. One of the primary preoccupations of the Department of Company Law Administration is, within the limits of this law, to expound, develop and enforce the legal implications and consequences of this concept. The *ethical* aspect of this concept is deeply enshrined in the thoughts and writings of some of our great national leaders, and I believe is also widely recognised in many sections of the business community in our country, including even those which not infrequently fail to practise what perhaps they believe to be morally right. I have in mind the concept of trusteeship in relation to the working of joint-stock companies, which harks back to some of our ancient teachings and which, in more modern times, Mahatma Gandhi tried throughout his life to promote and develop not, unfortunately, with that measure of ultimate success which he and his other associates had hoped for. Those of you who are interested in the development of Gandhiji's ideas on the subject, to which, at that time, many of our leading businessmen readily subscribed, might like to go through a most edifying account of it in Pyare Lal's *Mahatma Gandhi—The Last Phase, Vol. II.*

Social Aspect

I now turn to the *social* aspect of the concept of the responsible company. What does this particular aspect of the concept of the responsible company mean in terms of market practice and market behaviour? It simply means that the management of companies must acknowledge the fact, not merely as a moral precept but as an article of their practising faith, that they are, ultimately, the servants of society and that management merely in the interest of stock-holders is not the *sole* end of their duties. Secondly, it means that, in the day-to-day conduct of their business, they must adopt and follow methods and practices which fit in with this acknowledgement of their faith and are not repugnant to the social interest. In the traditional view of a joint-stock company, the business man's outlook would usually be almost exclusively production- and profit-oriented. He would probably regard his primary responsibility to be the achievement of ever-expanding production, which calls for operating efficiency, research, incentives to workers and to productivity generally, growth of capital, aggressive sales promotion, and perhaps also low prices. And yet, al these economic efforts can have a stable and lasting base, only if they succeed in attracting the willing support and allegiance of the community which business must necessarily serve. This will be possible, only if the methods and practices adopted to reach these goals do not obscure the view of business as a social function, in which the interests of those who control or manage are deemed to be no more important than those who participate in the processes of production, consumption and the long-term growth of the productive units. In other words, the management of companies must conceive, of themselves in future, more and more, not merely as production, sales or finance managers, but as working trustees not only for workers, suppliers, consumers, but also for the immediate community round them and the wider consuming public whose interests they serve. In this view, the management of companies must in their day-to-day work function as mediators, equitably balancing the legitimate interests of the several principal beneficiaries of corporate activity. Their duty would be to see that the interest of all these groups are fully recognised and protected even as they work from day to day to reach their production targets and marketing goals.

This is no 'wishy-washy' idealistic view of management in a modern society. Many of you may be familiar with the writings of Peter F. Drucker. He was no starry-eyed dreamer but was as close to the problems of management in contemporary society as any 'dyed-in-the-wool' practical businessman could wish to be. In his standard work on *The Practice of Management*, he observed several years ago that "the new demands on the manager of tomorrow are indicated by the seven new tasks." These he listed as follows:

The manager must manage the corporations entrusted to his care by objectives, that is, the short-term as well as the long-term objectives.

He must take more risks and for a longer period ahead.

He must be able to make strategic decisions; not merely technical decisions.

He must be able to build up an integrated team, each member of which is capable of managing and of measuring his own performance and results *in relation to* the common objectives.

He must be able to motivate people. In other words, he must be able to obtain the responsible participation of other managers, of the professional specialists and of all other works in the light of the common short-term and long-term objectives.

He must be able to see the business as a whole and to integrate his function with it.

Lastly, he must be able to relate his product and industry to the total environment, to find what is significant in it and to take it into account in his decisions and actions. Increasingly, he will have to learn to see the economic, political and social developments on a world-wide scale and to integrate world-wide trends into his own decisions.

Checks and Balances

Where does our new company law come into this rough impressionistic picture of the responsible company which I have attempted to project? A little reflection will show that the checks and balances provided in our new Companies Act, through its seemingly complicated requirement of ordinary and general resolutions of shareholders and the prior approval of Government, though intended to serve many different purposes have, as one of their basic objects, the orderly transformation of the traditional joint-stock company into a responsible social organism, closely resembling the projection which I have ventured to present to you. I shall not refer to the other more practical and 'humdrum' purposes for which these checks and balances were designed in the new Companies Act. They must be already known to you. Nor do I have the time now to undertake even a quick sample case-study of those major operative provisions of the Act, which were intended to facilitate the process of transformation to which I have just referred. I shall say only a word about the nature of the instruments which the new Companies Act fashioned to help the joint-stock company to move forward to its new goal. People who are not familiar with the history of our economic development or with the different stages through which joint-stock enterprise has progressed in this country, sometime understandably ask why we rely so much on detailed regulations and try to achieve, through laws and rules, what is left in other advanced countries largely to the judgment of enlightened business leadership. The answer must be obvious. In this context, I would reproduce some extracts from a paper produced on the occasion of a recent business convention held in New Delhi in the autumn of last year, which was attended by representatives of a large number of American business houses. In that paper, the reasons for the incorporation of detailed provisions in the body of our new Companies Act, dealing with many aspects of company management which are admittedly left to the judgment of enlightened business *management in other* advanced countries of the West, are briefly explained in the following words:

First, a somewhat limited acceptance of the principle of social responsibility and social obligations of business in this country, as compared with the widespread and unreserved acknowledgment of this responsibility and the obligations which flow from it in the advanced countries of the world.

Secondly, the relatively tardy growth of the sense of fiduciary responsibility in the *average* company management in this country—I underline the word "average."

Thirdly, the absence in this country of strong and well-recognised financial institutions with long traditions of public service to their credit similar to those operating in the money and capital markets of many other advanced countries of the world, which oversee company flotation and management, thereby rendering statutory regulation of such matters largely superfluous.

Fourthly, the absence in this country of a strong and reasonably unbiassed financial and economic press, served by competent commentators of knowledge, integrity and independence.

Fifthly, the absence in this country of any strong and well-developed public opinion as regards company matters which is prepared to frown severely upon unwarranted deviations from accepted norms of company behaviour and practice.

Lastly, the comparatively slow progress so far made in this country towards professionalisation of the management of joint-stock enterprise

AMERICAN LETTER

NEW FRONTIER THRIVES ON 'INVISIBLE CRISIS'

PROPOSED MEDICAL CARE FOR THE AGED RUNNING INTO DIFFICULTIES

From Our Special Correspondent

NEW YORK, *6th April*

THE United States economy is humming along at a very satisfactory pace. Steel wage contracts have been agreed upon and there, obviously, will be no strike three months hence when the current agreements expire. Moreover, the terms of the new contract are such as to set an example for other industries in that it does not promote an inflationary spiral.

Yet, Administration spokesmen are unhappy about the state of the U.S. economy. This is strictly the state of mind of the men who run the New Frontier, which is President Kennedy's parallel to President Truman's Fair Deal and President Roosevelt's New Deal. It is a propaganda catch-phrase which thrives on crises rather than on well-being.

That's why there is constant reference to the "invisible crisis" prevailing now. If one inquires what "invisible crisis," there are vague references to workers who have been displaced by automation, to the need for retraining these unemployed, to the so-called "distressed areas" which have tabulated more than 6 per cent of the labour force as being out of work. This again is an arbitrary figure.

Such a figure means one thing in a highly industrial area which has slums and it means an entirely different thing in a small community where every worker has his patch of ground, if not a small farm of his own, where acute hardships do not prevail. The designation of distressed areas is another device to create an invisible crisis atmosphere where bold measures of the New Frontier are a primary requirement of Government, which, incidentally, may get votes.

The Resourceful Kennedys

Nearly the entire Kennedy family and their attractive spouses are in the political act and it is skilfully publicised. Films of the First Lady's visit to India and Pakistan were shown for a full hour on one of the major television networks. The warm reception she received has made her a political personality in her own right.

The trip around the world of Mr. Robert Kennedy, Attorney General and the President's brother, have led to suggestions that he might be relieved of his judicial obligations and assume ambassadorial responsibilities and eventually succeed his brother as an incumbent to the White House. The President's youngest brother is running for Senator in the State of Massachusetts to fill the seat vacated by his elder brother. The Kennedys are very active people, indeed.

All of them, directly and indirectly, are propagandising the philosophy of the New Frontier. Some of the Kennedy measures are popular. Some of the President's opponents even admit that the Peace Corps has been a relative success and the Congress is certain to vote continuation and expansion of this programme.

Medical Care for the Aged

One bone of contention which has strong economic implications is the Administration's proposals to start a Federal subsidy programme which would provide medical care for the aged. The proposals are humanitarian in concept and make sense that increasing longevity by sheer logic means greater medical expenses for low-income level senior citizens.

Official suggestions are to put such a scheme under the Social Security system which is already in the red. Twenty-seven Senators and Congressmen made private polls among their constituents if they thought that was a good idea. Only 40 per cent approved and 60 per cent said nay.

A reason for this unexpected opposition to the proposed medical care programme is that, for the past year, a Medical Care Act has been in effect. This is a law under which States may set up systems for such care with the Federal Government helping them to pay the costs. So far, 39 States have signed up for Federal financial help, New York being among them. So far, a total of about 64,700 old people are being taken care of under this arrangement.

There is a restriction under this Kerr-Mills Medical Care Act. Only those who are hard up financially are eligible. The New Frontier claims that this measure is inadequate and should be expanded by hauling all people over 65 years of age into an elaborate Medicare scheme under the Social Security system. Here again the invisible crisis is being conjured up. But, obviously, one year is not enough time to really appraise the worthiness of a scheme, decide to throw it out in the place of a wholly unknown proposal which might have severe fiscal consequences.

Balance of Payments

The U.S. unfavourable balance of payments is also being enlisted by Administration spokesmen for the furtherance of domestic political aims such are more help for the unemployed which is really not related to the problem at all. The crux is overseas spending by the U.S. for bases and their support.

Allan Sproul, retired President of the Federal Reserve Bank of New York, pointed out another side of the balance of payments problem. He referred to the present haughty behaviour of Western European countries which had no compunction of taking U.S. dollars under the Marshall Plan and which now wish consulting and veto power in the International Monetary Fund should the U.S. or any other country wish to borrow French francs, West German marks, Italian lire or other currencies.

The New Frontier spending practices, as against previous Administration theories and predictions, were brought into real focus the other day when a House-Senate committee predicted that the Federal Government would wind up this fiscal year with a deficit of between $4,000 and $5,000 million instead of the $500 million surplus foreseen earlier by President Kennedy.

United Nations News

The U.N. bond issue to stave off bankruptcy—and it probably won't come to that—is still a subject of hot debate although a surprisingly large number of nations have indicated their intent to subscribe. Mr. U Thant, Secretary General, indicated that the world body would have a crisis on its collective hands, if the matter was not going to be resolved soon.

In the meantime, major speeches on the subject have been made in the U.S. Senate. A compromise bond proposal was advanced even though the U.N. was accused of becoming increasingly "a market place for the trading of votes."

The compromise gives President Kennedy wide discretion in choosing how the U.S. may apply a special $100 million appropriation by the Congress to help the U.N. out of its difficulties. He could authorise the purchase of the special U.N. issue of 25-year 2 per cent bonds; he could make a loan as originally demanded by Republican critics repayable in three years at prevailing interest rates; or he could offer the U.N. a combination of the two.

At any rate, the U.S. is as determined as ever to maintain the financial and world integrity of the U.N. and, whatever the comprise is, the world body is certain to be bailed out, no matter how many other countries fail to perform.

—*All Rights Reserved.*

(*Concluded from next column*)

in the view of the *Survey*, "will help to stimulate industrial efficiency at home since, and ability to compete with imports is as important as competitiveness in export markets."

So that all this will not sound like all work and no play, however, the *Survey* concedes that there will be some increase in incomes and even an increase in borrowing on hire-purchase credit. If all goes well with the economy, there will be some cake for those who contribute.

LONDON LETTER

FUTURE OF THE U.K. ECONOMY

ROOM FOR OPTIMISM

(*From Our Own Correspondent*)

LONDON, *6th April*

"THE foremost aim of economic policy in 1962 must be to maintain conditions in which exporters in the United Kingdom can take advantage of the opportunities open to them to achieve a great expansion in their sales." This is the keyline of the pre-Budget Government *Economic Survey* for 1962. Indeed, the emphasis throughout this *Survey* is the importance of expanding exports and the nation can feel encouraged by the assessment which the *Survey* makes of the world background—for there is the market.

What is this world background? In the first place, the trends are that world industrial production will increase broadly at the same rate as last year. In Western Europe, labour and capital are extended and a higher rate of growth is not to be anticipated, but, in the U.S.A. an increase in the expansion in the economy is expected. But, even in Western Europe, consumer demand is rising. Furthermore, the trade of primary producing countries will benefit from the expansion in production within, and the trade between, industrial countries. So their exports and imports will probably rise. Thus, the *Survey* sees the prospects for U.K. exports good to the North American continent, to Europe and to the primary producing countries.

The great point made is that Government policy is directed towards creating the right climate for export expansion. The Government justify their policy of retrenchment last year by pointing out that, "throughout almost the whole of the post-war period, our competitive strength in export markets has been persistently impaired by the tendency for money incomes in this country to rise much faster than national production, and, consequently, for our costs and prices to rise more rapidly than those of some of our chief competitors in export markets."

Forward Looking

If the Government succeed in their incomes policy, then they consider that they will avoid the rising costs but they are aware that the rate of expansion of the U.K. economy is inadequate; they are aware that an expansion involves more imports—hence it must always be tied to more exports. Thus, we get back to the export theme and the third of the tasks set to the National Economic Development Council is: "to seek agreement upon ways of improving economic performance, competitive power and efficiency, in other words, to increase the rate of sound growth": the Government have great expectations of some outcome from the work of this Council. But, clearly, this is not something which is going to have a short-term effect—it is forward-looking beyond 1962.

For this year, the emphasis is on keeping in check the pressure of home demands. The only alarmist note is that this year's favourable opportunities for exports *may not remain*. Hence the need to make the most of them. "If this is done," says the *Survey*, "production could expand without a damaging increase in the pressure of demand upon resources, and without renewed risk to the Balance of Payments."

Stronger External Position

Actually, the forecast on the Balance of Payments indicates an improvement this year. This is based on a lag on import expansion for stock-building, as compared with an expansion in exports. However, this is a short-term asset, as, in time, imports will catch up. So far as external capital movements are concerned, 1962 is not going to be as good as last year, when there were several windfalls. However, the *Survey* concludes that, "on the whole, the prospect seems to be of a stronger external position this year than last."

There is also a threat to those who fear competition and a stimulus to widen markets in the reference to the impending reductions of tariffs, quite apart from those envisaged through joining the Common Market. Tariff reductions,

(*Continued in previous column*)

UNITED COMMERCIAL BANK REPORTS ALL-ROUND PROGRESS

NET PROFIT DOUBLED IN FOUR YEARS

THE United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, since April 1955) has always had some distinguishing features about it. When the industrial and financial genius, Mr. G. D. Birla, Chairman of the Bank, launched it in January 1943, under the general managership of that banking wizard, Mr. B. T. Thakur, he distinguished his bank from the rest by having a subscribed capital of Rs. 2 crores and a paid-up capital of Rs. 1 crore. Few banks in those days were started with such a large capital structure. His idea was to start the U.Co. Bank as a big bank, so that it may enjoy the confidence of depositors in full measure. He was highly successful in realising it, for, within a few years of its coming into being, the U.Co. Bank was one of the big banks in the country. By 1950, the Bank's deposits had grown to Rs. 33.28 crores. Indeed, the Bank had made such a good beginning that, in 1945 itself, that is, two years after commencement, both the subscribed and paid-up capital were doubled, the former to Rs. 4 crores and the latter to Rs. 2 crores.

Another feature of the Bank was the adoption of a conservative policy of profit appropriation. Although profits used to be quite good, the management used to pay only a modest dividend of not more than 4 per cent and conserved the bulk of the profit. It was only after the first ten years that the dividend level was gradually raised, first to 5 per cent, then to 5½ per cent and thereafter by stages, until last year when the dividend level came to reach 12 per cent per annum, taxable. As a result of this conservative policy, the Bank was able to build up its reserve fund quickly, and take it above the paid-up capital of Rs. 2 crores last year.

A third distinguishing feature of the Bank was the importance attached by it to a high level of liquidity, though this meant a somewhat lower profit-margin. A fourth distinguishing feature is its Chairman's speech; Mr. Birla's statements to shareholders at their annual meetings have always contained more meat than those of any other bank chairman in this country. Indeed, it will be no exaggeration to say that, though a comparatively late comer in this field, Mr. Birla gave a lead to other bank chairmen by fearlessly and candidly stating his views on controversial banking and monetary problems, in particular, and economic problems, in general.

All these features still characterise the Bank's working, its statement of accounts for 1961 and the latest annual statement of the Chairman being true to their customary pattern. The Bank's progress in 1961 shows all-round improvement. Deposits, advances, investments, profit, amount of profit retained in business, number of branches, all these have gone up. The liquidity ratio is higher and borrowings from other banks have been sizably reduced. The dividend to shareholders has been kept unchanged at 12 per cent per annum, subject to deduction of tax, a level which is neither so high as to excite the envy of socialists and workers, nor so low as to be unattractive to investors. In the Chairman's statement, published elsewhere in this issue, Mr. G. D. Birla has stated his views on the pressing problems confronting the banks and the country with admirable clarity.

We give below a comparative table showing the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Gross income	5,61.46	5,28.98	4,90.61	4,23.71
Of which: Interest and discount earned	4,10.24	3,79.00	3,62.39	3,08.80
Commission and exchange earned	1,42.38	1,41.73	1,20.94	1,06.55
Other income	8.84	8.25	6.28	8.36
Interest paid	2,60.70	2,52.84	2,46.03	2,17.21
Cost of staff	1,56.35	1,40.85	1,22.96	1,09.57
All other expenses	56.44	53.23	48.84	43.65
Depreciation and repairs	15.36	15.13	11.46	7.91
Provision for taxation				9.00
Net profit	72.61	67.43	60.42	36.38
To gratuity trust fund	4.00			
,, reserve fund	30.00	30.00	27.00	14.00
,, bonus to staff	14.00	13.00	11.00	7.25
Dividend	24.00	24.00	22.00	15.00
	(12%)*	(12%)*	(11%)*	(7½%)
Carry forward	2.07	1.47	1.04	0.62

	As on 31st December			
	1961	1960	1959	1958
Capital	2,00.00	2,00.00	2,00.00	2,00.00
Reserves	2,35.00	2,05.00	1,75.00	1,48.00
Deposits	98,80.40	88,93.87	90,67.88	78,27.97
Borrowings from other banks	2,69.28	9,32.28	4,60.07	5,76.21
Advances	64,20.71	61,38.50	56,25.23	45,15.94
Investments	35,97.22	33,88.29	40,78.53	35,62.87
Cash	8,66.10	9,56.71	10,09.72	8,38.86
Balance-sheet total	145,27.50	149,35.81	145,44.58	114,15.01
Ratio to deposits of—	%	%	%	%
Advances	64.9	69.0	58.2	57.7
Investments†	33.6	27.7	37.4	38.3
Cash	8.7	10.7	10.4	10.7

* Subject to deduction of tax.
† Only the unencumbered portion is taken into account.
Note:—Provision for taxation for 1959, 1960 and 1961 not disclosed.

It will be noted that, over the year 1961, deposits have gone up by about Rs. 10 crores, in refreshing contrast to a decline of Rs. 7.74 crores suffered in 1960. With this increase the deposits are short of the Rs. 100 crore-mark by only Rs. 1.10 crore. The rate of growth in deposits, it may be noted, has been greater than that experienced by the scheduled banks as a whole. The bulk of the rise—Rs. 5.71 crores to be precise—has been under time deposits; the current accounts have risen by Rs. 2.62 crores and the savings bank deposits by Rs. 1.64 crore. Explaining the disposition of the deposits, Mr. G. D. Birla says in his statement:

"The additional deposit resources which accrued to the Bank during the year were utilised primarily to improve the liquid position of the Bank through a considerable reduction of the borrowings from the Reserve Bank of India and the addition of a little over Rs. 2 crores to our holdings of Government securities and secondarily to increase our advances by the moderate amount of Rs. 2.82 crores. As a result of this policy, our quick assets, consisting of cash on hand and with bank, money at call and short notice and free Government securities, all amounting to Rs. 43.31 crores, formed 43.78 per cent of our total deposits. The corresponding figures for the previous year were Rs. 35 crores and 39.4 per cent."

Apparently because of the reduction in borrowings, the increase in interest paid from Rs. 252.34 lakhs to Rs. 260.70 lakhs has only been modest. Again, the policy of maintaining a high level of liquid assets has accounted for a relatively smaller rate of increase in profit as compared with many other banks, the declared net profit having gone up by only Rs. 5.18 lakhs or 7.7 per cent to Rs. 72.61 lakhs. Nevertheless, as compared with the performance in 1958, the net profit has practically doubled. Over the year, the net profit per share has gone up from Rs. 16.75 to Rs. 18.25. This latest figure compares with Rs. 9.25 in 1955 and Rs. 5.75 in 1953. It was Rs. 14.25 in 1956, fell to Rs. 11.25 in 1958, after rising to Rs. 15 in 1957 to which level it returned in 1959. The dividend of Rs. 6 per share for 1961, is thus only a third of the net profit per share for that year.

For the second year in succession, a substantial amount of Rs. 30 lakhs have been added to the reserve fund, bringing the total thereof to Rs. 2.35 crores. There has not been a single year since the inception of the Bank when the Bank has not set apart significant amount to the reserves. But because of the high level of deposits, the ratio of "owned funds" (paid-up capital Rs. 2 crores+reserves Rs 2.35 crores) to deposits has declined from 9.04 per cent to 4.39 per cent. The Directors have, therefore, decided to raise additional capital by issuing 200,000 ordinary shares of Rs. 50 each at a premium of Rs. 25 per share. This will bring a sum of Rs. 1.50 crore and raise the "owned funds" to Rs. 3.85 crores. The consent of the Controller of Capital Issues for this proposal is awaited. Since there are 400,000 shares (held by 5,547 persons) now, the new issue will be in the proportion of one share for every two shares. Assuming that the dividend will be maintained at 12 per cent per annum on the increased capital—a reasonable assumption indeed—the net yield at the present market rate of Rs. 97 c.d. works out to about 5 per cent on the *ex-right* and *ex-dividend* basis.

Nine branches—one more than in 1960—were opened by the Bank during the year under review, bringing the total to 152, as against a mere 89 ten years before.

BRITISH BANK OF THE MIDDLE EAST

A handsome rise of Rs. 2.47 lakhs to Rs. 4.75 lakhs in net profit is disclosed by the statement of accounts of the British Bank of the Middle East pertaining to its operations in India during the year 1961. The rise is especially noteworthy considering that it has occurred despite the increased tax provision of Rs. 6.37 lakhs for 1961, as against Rs. 4.48 lakhs for the previous year. The profit would have been higher still but for enhanced staff expenses (+Rs. 0.65 lakh) and other expenses (+Rs. 0.71 lakh). Interest paid by the Bank to its depositors was, however, lower by almost Rs. 1 lakh, though there was a fresh accretion of more than Rs. 32 lakhs over the year; the total of deposits as at the end of December 1961 stood at Rs. 175.28 lakhs.

The improvement in the profit for the year under review followed a notable increase in the Bank's gross income which amounted to Rs. 35.87 lakhs, as against Rs. 31.25 lakhs earned in 1960. The increase was accounted for both by interest and discount (+Rs. 2.42 lakhs) and by commission and exchange (+Rs. 2.15 lakhs). Other income was also a shade higher. The rise in earnings is quite significant in that it has been achieved notwithstanding the fact that the operations of the Bank in India continue to be confined to only one office (at Bombay). The volume of advances made available by the Bank as at the close of 1961 was lower at Rs. 371.05 lakhs, as against Rs. 435.92 lakhs in 1960.

The deposits of the Bank, as already stated, registered a notable rise of over Rs. 32 lakhs. Thanks to this rise, the Bank could reduce to a marked extent its recourse to borrowings from other banks; the total of these borrowings outstanding as on 31st December 1961 was no more than Rs. 3.00 lakhs, as against Rs. 90.17 lakhs a year before. At the same time, there was a perceptible fall of Rs. 64.87 lakhs in advances.

INDIAN BANK STEADY

PROFIT AND DEPOSITS MAINTAINED

IT is common knowledge that the Indian Bank Ltd. (Secretary: Mr. G. S. Sundaram, Madras) is one of the five medium-size banks which have suggested that the inter-bank agreement on deposit rates has not been beneficial to them and that they should be permitted to quote at least ½ per cent more than the ceiling rates fixed for term deposits, when in actual practice have turned out to be the minimum rates. The Bank's results for the year ended 31st December 1961 fully justify this demand. Thus, in contrast to the sharp rise in the deposits of big banks, the deposits of the Indian Bank have staged only a minor rise from Rs. 39.87 crores to Rs. 40.05 crores. Since borrowings from other banks were more costly, the Bank has been obliged to reduce its reliance on this source. This state of affairs, coupled with the need for maintaining the liquid assets at a fair level, seems to have compelled the Bank to go slow with advances which in turn has meant lower level of profit. Its advances, as at the year-end, are lower at Rs. 25.71 crores, as against Rs. 27.27 crores a year before.

Income from banking business at Rs. 282.24 lakhs is a shade higher, comparing with Rs. 280.69 lakhs. While income from interest and discount has improved from Rs. 229.67 lakhs to Rs. 232.97 lakhs, there has been a setback in earnings out of commission and exchange from Rs. 51.02 lakhs to Rs. 49.27 lakhs. Excepting outward interest, which has come down from Rs. 114.87 lakhs to Rs. 112.74 lakhs presumably because of the decline in borrowings from other banks, expenses have been higher, with those on staff increasing from Rs. 91.83 lakhs to Rs. 94.57 lakhs and those on other heads from Rs. 35.51 lakhs to Rs. 37.18 lakhs.

Even after providing a lower depreciation of Rs. 2.57 lakhs as compared with Rs. 3.14 lakhs a year before, the profit before taxation at Rs. 40.37 lakhs is practically the same as that for the previous year, namely, Rs. 40.32 lakhs. The provision for taxation has claimed Rs. 18.25 lakhs as against Rs. 23 lakhs a year before. Transfers to reserves at Rs. 9.25 lakhs are Rs. 5.25 lakhs more, but, as in the previous year, they do not figure in the balance sheet, presumably because the published reserves already exceed the paid-up capital and the additional appropriations are being utilised to build up secret reserves. The sum of Rs. 9.25 lakhs, it may be noted, includes Rs. 5 lakhs transferred to reserves other than under Section 17 of the Banking Companies Act, 1948. Rs. 1.25 lakh to gratuity reserve and Rs. 3 lakhs to sinking fund. The return to shareholders has been maintained at the previous year's level of 15 per cent per annum (made up of a dividend of 10 per cent and a bonus of 5 per cent) subject to tax. This absorbs Rs. 12.45 lakhs, leaving the carry forward at Rs. 1.49 lakh against Rs. 1.36 lakh brought in.

The table below gives an idea of how the Bank fared in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Interest and discount earned	2,32.97	2,29.67	2,15.85	1,80.36
Commission and exchange	49.27	51.02	46.91	44.16
Other income	5.19	4.98	4.22	5.64
Interest paid	1,12.74	1,14.87	1,16.48	1,07.76
Staff expenses	94.57	91.83	71.87	80.99
Other expenses	37.18	35.51	30.06	26.61
Depreciation	2.57	3.14	2.62	2.50
Profit	40.37	40.32	36.84	21.31
Provision for taxation	18.25	23.00	23.00	6.50
To reserves	9.25	4.00	1.00	7.30
To other appropriations	0.30	0.37	0.20	0.30
Dividend	12.45 (D. 10%+B. 5%)*	12.45 (D. 10%+B. 5%)*	12.45 (D. 10%+B. 5%)*	8.64 (D. 10%+B. 3%)
Carry forward	1.49	1.36	0.80	0.61

	As on 31st December			
	1961	1960	1959	1958
Capital	82.99	82.99	82.99	66.24
Reserves	98.02	88.02	84.02	98.02
Deposits	40,05.11	39,87.18	43,92.73	40,93.17
Borrowings from other banks	98.07	4,47.13	1,55.25	
Advances	25,71.10	27,26.67	28,84.67	23,14.58
Investments	13,07.88	15,01.81	14,38.93	14,19.36
Cash balances	5,18.74	4,98.90	4,99.66	6,54.92
Balance sheet total	51,37.75	54,37.89	56,83.54	50,12.20
Ratio to deposits of—	%	%	%	%
Advances	64.1	68.3	65.7	56.5
Investments	30.1†	26.4†	29.2†	34.7†
Cash	12.9	12.5	11.4	15.5

* Subject to deduction of tax.
† Unencumbered portion.

The decline in advances has brought down the credit ratio from 68.3 per cent to 64.1 per cent. Investments, too, have come down rather perceptibly from Rs. 15.02 crores to Rs. 13.07 crores. The ratio of investments to deposits, however, is higher at 30.1 per cent, as against 26.4 per cent a year before but that is because the unencumbered portion of investments has gone up during the year following a welcome decline in borrowings from other banks from Rs. 447.13 lakhs to Rs. 98.07 lakhs. The cash to deposits ratio, too, is slightly higher at 12.9 per cent, as against 12.5 per cent in the previous year. The liquidity ratio has thus gone up from 38.9 per cent to 43 per cent. The ratio of the Bank's "own funds" to deposits works out to 4.1 per cent, as against the now accepted goal of 6 per cent.

An office of the Bank was opened at Jamshedpur during the year. The Bank took over the Rayalaseema Bank Ltd. from 1st September 1961, and its branches at Anantapur and Bellary are functioning as the branches of the Bank.

NATIONAL RUBBER MANUFACTURERS LIMITED

SUPPLY POSITION OF NATURAL RUBBER UNSATISFACTORY

MR. K. N. MOOKERJEE'S STATEMENT AT ANNUAL MEETING

POINTED attention to the growing shortfall in the supply of natural rubber in the country was drawn by Mr. K. N. Mookerjee, Managing Director, National Rubber Manufacturers Ltd., in his speech at the Sixteenth Annual General Meeting of the Company held at Calcutta on Thursday, 12th April 1962. Thus, while consumption of natural rubber in India in 1961 amounted to 48,319 tonnes, production was of the order of only 26,992 tonnes. The deficit was sure to increase by 1965 when consumption of rubber (natural, synthetic and reclaimed) was expected to rise to 94,000 tonnes. Referring to the licensing policy for new units, Mr. Mookerjee said that the Government should follow a more cautious policy, because it was desirable to allow units already established to utilise their capacity fully and thereby reduce cost.

The following is the full text of Mr. Mookerjee's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure in extending to you all a hearty welcome to the sixteenth annual general meeting of your Company. The Directors' report and audited accounts for the year ended 31st December 1961, have been in your hands for some time now and with your permission I take them as read.

Working Results

"You will have noticed from the Directors' report that not only the upward trend of sales of the Company's products was maintained during the year 1961 but also the percentage of the net profit on sales registered a substantial increase, in spite of adverse factors like some loss of production during the earlier part of the year on account of power shortage, and continued high cost of imported raw materials and indigenous natural rubber. On the basis of the improved working results, your Directors have recommended a preference dividend of 7.80 per cent and an ordinary dividend of 6.50 per cent.

Industrial Progress

"Industrial production in India maintained an upward trend during the year 1961, the general index for the first nine months of the year having reached the level of 180.0, as against 170.3 in 1960, representing an increase of 6 per cent. Against this background, the performance of the rubber manufacturing industry compares favourably, the index for the rubber production being 254.1 (during January-September 1961), as against 236.7 in 1960, representing a rise of 7.35 per cent. Quantitatively, there was a rise in the production of major items of rubber manufactures during 1961 over that of 1960. During the year under review, certain additional units were licensed for the manufacture of cycle tyres and tubes, conveyor belting, industrial Vee belts and rubber moulded goods and certain other units were permitted to effect substantial expansion of their capacity.

A Disquieting Feature

"I feel it will not be out of place here to point out a disquieting feature of the industrial licensing policy for establishment of new units or substantial expansion of capacity by existing units are being issued by the Government rather liberally with adverse effects on the ability of units already in operation or to be established to achieve full utilisation of their respective capacities. This would be clear from the following figures indicating the position regarding the production programme for bicycles and cycle tyres included in the third Plan:

(Figures in million Nos.)

Description	1960-61		1965-66	
	Capacity	Production	Capacity	Production
Bicycles	2.2	1.05	2.2	2.0
Cycle tyres	16.9	11.00	38.6	31.0

"Evidently, although there will be no increase in the manufacturing capacity for bicycles over the third Plan period that for cycle tyres is expected to rise by about two and a half times, while actual production of cycle tyres is likely to register an increase of nearly three times. The average rate of rise in the demand for cycle tyres during the second Plan period was of the order of one million numbers per annum and the overall consumption thereof in the country during 1961 was approximately 11.5 million numbers. In the circumstances, it would be far from correct to place the demand at 31 million numbers by 1965. According to our own estimate, the requirement of cycle tyres by the end of the third Plan period, including export quotas, may not exceed 20 million numbers. If, therefore, licences are issued on the basis of the production target of 31 million numbers, huge capacity will be lying idle, much to the detriment of the interest of the cycle tyre industry in general and of the new comers in particular. Cycle tube production in 1961 amounted to approximately 13.6 million numbers against an anticipated demand for 12 million numbers which resulted in so serious a glut in the market that some of the manufacturers had to curtail or stop production completely. It is, therefore, essential for the Government to follow a more cautious policy in the matter of licensing additional capacities, particularly to new units so as to enable the units already licensed to utilise their respective capacities fully and thereby effect substantial saving in cost.

Expansion Programme

"During the year under review, capital expenditure amounting to Rs. 10.21 lakhs was incurred. In spite of the initial setback due to power shortage production of almost all items increased to cope with higher sales. To render better and quicker service to consumers of the Company's products and to the trade, new sales offices were opened at Ahmedabad, Ludhiana and Hyderabad during 1961.

Export

"During the year under review, your Board of Directors actively pursued a policy of contributing to the country's export drive through progressive increase in the export of the Company's products which reached a record level, being 50 per cent higher than that of 1960. This performance compares favourably with the total export of rubber products from India which was Rs. 54.48 lakhs in 1961, as against Rs. 50.6 lakhs in 1960, representing a rise of 8 per cent. The industrial licensing policy of the Government has indeed an important bearing on export promotion. As I have mentioned earlier, a policy of restricting further expansion of capacity in respect of industrial products before the capacity already licensed is fully utilised, would go a long way in enabling manufacturers to reduce their cost of production by increase in the volume of output and thereby to improve their competitive strength in the export markets.

Raw Materials

"The cost of major raw materials continued to be high during the year under review, except imported natural rubber. The situation was particularly aggravated by the levy of the higher cess of 30 nP per kg. on indigenous rubber from the 1st of April 1961 and enhancement of the rates of customs and excise duties on other raw materials by the Finance Act, 1961.

"The supply position in respect of natural rubber continued to be unsatisfactory during 1961, consumption in India being 48,319 tonnes, against production to the extent of only 26,992 tonnes leading to a deficit of 21,327 tonnes, that is, approximately 45 per cent of consumption. This short-fall as well as the consumption of synthetic and reclaimed rubber to the extent of 9,600 tonnes and 5,929 tonnes respectively were made up by imports. According to official estimates, the aggregate consumption of natural, synthetic and reclaimed rubber is likely to be about 94,000 tonnes by 1965 against which natural rubber production is not expected to be more than 45,000 tonnes so that the deficit would rise to 49,000 tonnes, representing almost 50 per cent of the aggregate consumption. Although part of this gap would be met by indigenous production of synthetic and reclaimed rubber, as per capacities licensed or to be licensed, the deficit in respect of natural rubber will remain, resulting in substantial drainage of scarce foreign exchange resources on account of imports thereof.

"The Estimates Committee of the Lok Sabha, 1961-62, in their report submitted in December 1961, has categorically stated that the measures taken by the Government and the Rubber Board so far proved totally inadequate in making the country self-sufficient in rubber. The Committee has made certain important recommendations for improving the situation. Two of those suggestions, however, require close attention and analysis because they are of very vital significance to the rubber manufacturing industry. In the first place, the Committee has urged that stricter control should be exercised on the use of rubber for the manufacture of non-essential goods. In my opinion, this proposal, if implemented, would amount to a retrograde step unduly penalising the consumers of natural rubber on account of lapses on the part of the Rubber Board in taking effective steps for increasing the production of natural rubber. Besides, this measure is not likely to result in any real saving because the miscellaneous consumers items of rubber products account for not more than 5 per cent of the total rubber consumption. Secondly, the Committee has suggested that the Government should examine the feasibility of the Rubber Board itself importing natural rubber to meet the shortage in indigenous production. I strongly feel that the present system of importing natural rubber directly by rubber manufacturers against import licence should be allowed to continue. Rubber manufacturers have longstanding arrangements with overseas suppliers for getting correct grades of rubber at proper time and at competitive prices and any change therein at this stage would cause serious inconvenience and dislocation of work. In my opinion, before any system of importing rubber by the Rubber Board is considered, the Board should first make dependable arrangement for making available to rubber manufacturers indigenous rubber of correct grades at the controlled rates. The Board should also take all possible steps for proper utilisation of Pool Fund and other funds at its disposal to the mutual benefit of rubber growers and manufacturers. Meanwhile, it is gratifying to note that the Government of India have under consideration a proposal for arranging import of natural rubber from Malaya under rupee payment terms.

"In 1961, other raw materials like cord fabric, bead wire, tube valves, carbon black and rubber chemicals valued at Rs. 7.5 crores had to be imported. It is, however, encouraging to note that, at the end of the third Plan period, India is expected to be substantially self-sufficient in respect of these materials as a result of implementation of certain projects already licensed or proposed to be licensed for the manufacture thereof. Meanwhile, the Government of India have taken a step in the right direction by reverting, with effect from 1st April 1962, to the annual import licensing policy which was suspended after being in force for a single licensing period from April to September 1960.

Acknowledgment

"Before I conclude, I am sure, you will join me in expressing our warm appreciation of the co-operation and support from Messrs. Goodyear India Ltd., as well as the dealers, consumers and suppliers of the Company. On behalf of the Board of Directors and on my own, I have pleasure in expressing our sincere appreciation of the cordial relations maintained between the management and labour and the loyalty and devotion of the officers and staff of the Company throughout the year under review."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

Malayan rubber production in 1961 reached a record level of 738,305 tons, nearly 4 per cent higher than in 1960. The estates produced 431,047 tons and small holders 307,258 tons. The boost in output is the direct result of post-war planting and re-planting schemes which are now bearing increased yields. Sir John Hay, Chairman of Guthries, said at Kuala Lumpur recently that Russia and other associated countries were likely to continue buying large quantities of natural rubber. He described the future as increasingly competitive rather than limited

RENEWED PLEA FOR OVERALL CEILING ON COTTON GOODS IMPORTS

DIRECT APPROACH TO PRIME MINISTER

From Our Special Correspondent

MANCHESTER, 3rd April

MANCHESTER LETTER

NOT deterred by their constant "brush-offs" from the Government, the leaders of the cotton trade in Lancashire are planning to make another assault on London citadels with the aim of gaining their objective of an overall ceiling on imports of retained cotton goods. Spurred on by the knowledge that these arrivals reached a level of nearly 40 per cent of home consumption last year, the instigators of the campaign, which is supported by the official organisations in the producing sections, as well as the trade unions, have already gone into action by approaching Members of Parliament who represent constituencies where the mill towns are situated.

A direct approach to the Prime Minister himself is the next step. Col. J. B. Whitehead, President of the British Spinners' & Doublers' Association, hinted at the annual meeting that a deputation from all sections of the trade would soon be seeking a personal interview with Mr. Macmillan to review the whole future of the industry. Commenting on the post-reorganisation phase and the subsequent deterioration in the position, Col. Whitehead said that confidence had been destroyed and investment had now almost reached a standstill. Although the industry accepted that a proportion of these imports must be taken, particularly from the Commonwealth, for political, economic and humanitarian reasons, the Government had been repeatedly asked to impose a strict overall ceiling on retained imports.

The industry does not deny the assistance given by the Government in supporting the voluntary limitation pacts with Commonwealth countries and imposing quotas and other arrangements elsewhere. It hopes that ratification of the Geneva project to promote orderly development of trade and avoid disruption of established industries will be forthcoming.

Britain's Big Imports

Meanwhile, Mr. Frederick Erroll, President of the Board of Trade, devoted the major portion of a recent speech given to the Association of Economic Representatives, to a dissertation on the Government's policy on imports generally. Britain, he said, was the second largest importing nation in the world, purchasing goods worth roughly £4,500 million a year, and accounting for 10 per cent of the world's imports. One-third of these comprised food and another third was raw materials and other essential commodities needed to support industrial activity in this country. The remaining third consisted of manufactures of one kind or another, including a substantial proportion of goods for further processing.

Dealing specifically with the importation of cotton textiles, Mr. Erroll said that the five-year Geneva agreement was the right way of tackling the problem. Giving less developed countries opportunities to sell their products, in his opinion, increased their resources to buy the capital goods they needed to develop their economies and expand their trade both inwards and outwards.

Perhaps the new campaign now in progress to secure a change of attitude by the Government may be coming at the right time. Mr. Erroll in his speech went on to say: "No one country can afford to pursue in isolation a generous policy towards international trade. There are, however, temptations to all nations to cash in on the benefits of expanding world trade and to avoid the burdens and sacrifices involved in playing a proper part in keeping the momentum going."

Co-operations and goodwill on an international level had been responsible for the great expansion in world trade since the war, he continued, the collective efforts being on a scale quite unheard of in any previous period of history. With a high level of demand and employment, all industrial countries were readier than they were to work for the broadening of international trade. "We depend," said Mr. Erroll, "upon other countries following policies that help a general and continued expansion of world trade. Similarly, other countries depend on us." Was this perhaps a hint of the mailed fist in the velvet glove, which might in due course be withdrawn and used in earnest against some of Lancashire's most obstinate rivals?

Need for Re-birth

Lancashire's now historic re-organisation in 1959 and the subsequent events must have been looked at from almost every angle during the past three years. The situation, however, is viewed in a slightly different manner by Mr. S. S. Hammersley, Chairman of the Cotton and Rayon Spinners group, which comprises the Delta, Rugby and Fernhurst Mills. It is an aspect which could conceivably give the Government an opening to provide the support the industry is seeking, if they were so minded.

"It is commonly accepted that the successful development of a new industry requires protection," says Mr. Hammersley. "It is not so commonly understood that the necessary revolutionary changes to transform the historically ancient Lancashire textile industry to meet modern conditions will be difficult to introduce without some protection." While praising the Government for its foresight in launching the redundancy and re-equipment schemes, Mr. Hammersley criticises it for failing to appreciate the gravity of the basic factors involved in the problem. Having offered to help the trade to buy modern machinery, the politicians apparently consider they have done their share, and are prepared to leave the rest to the trade.

But, as Mr. Hammersley says, modern machinery necessitates shift-working, and this is not acceptable to the bulk of Lancashire's operatives. The industry in this country still runs its textile machinery fewer hours than any other major textile trade in the world. The horizontal structure in Lancashire was based on the bulk supply of staple goods for export markets.

On the Common Market issue, Mr. Hammersley contends that Britain cannot afford to stay out. As far as the cotton trade is concerned, however, he believes that Lancashire takes part in the negotiations with its hands tied. The other countries involved have something to "give away" in the shape of tariffs which can be lowered. Perhaps, he suggests, the Six will propose that Great Britain creates a general tariff against imported textiles in order to protect their back door against low labour cost Asiatic imports.

Switch To The East

If confirmation were needed of the fact that cotton textiles production is shifting steadily from the traditional European centres to the developing Eastern countries, this is contained in the latest figures covering 1960, now issued by the International Cotton Federation. The year itself was one of considerable transformation, as no one in Lancashire needs to be reminded, but the statistics now available offer interesting contrasts between the situation in different regions of the world.

Not suprisingly, total spindleage in place declined sharply during the 1958-60 period from 134,371,000 to 125,867,000. The reduction of spindles in Europe alone exceeded 11,000,000 in the two years, while a rise of 3,000,000 spindles occurred in each of the three years from 1958 onwards showed practically no change. The figure in 1958 was 119,216,000, rising to 119,873,000 in 1959 and declining to 119,134,000 in the following year.

TEXTILES AS EXCHANGE EARNER

RESERVE BANK'S STUDY MISLEADING

WHAT is the contribution that the cotton textile industry in India has made, and will make in the coming years, to the alleviation of the balance of payments problem? This is a question for which it is rather difficult to provide a categorical answer, in view of the paucity of data relating to imports of all raw materials, machinery, spare parts, etc., not to speak of problems like time-lag (that is, between date of import and date of actual utilisation) and valuation. A broad indication can, however, be given of the magnitude of the industry's net position as an earner or a spender of foreign exchange. Such an attempt has been made in the course of a special note on the textile industry, prepared by Mr. S. Kumarasundaram of the Reserve Bank of India and published in the March issue of the Bank's monthly *Bulletin*.

The above study pertains to the entire cotton textile industry, that is, mills and other units of production (obviously handlooms and powerlooms) and covers a period of five years from 1956 to 1960 which incidentally coincides almost with the second Five-year Plan. The position during this period is assessed by making an estimate of the industry's direct contribution to foreign exchange earnings as a result of exports (of piecegoods, yarn, hosiery and waste cotton) and its expenditure on imported inputs (raw cotton and yarn, machinery, dyes, chemicals, fuel oil and lubricants), making allowance also for the domestically produced inputs which have an import-content. The results of the calculations are summarised in the statement at the end of this article. It will be noted therefrom that the total foreign exchange earned from exports during the five years 1956 to 1960 ranged between Rs. 59.2 crores and Rs. 74.2 crores, while import payments oscillated over a wider range—from Rs. 64.7 crores in 1958 to Rs. 111.3 crores in 1960—due to fluctuations in payments for imported cotton which amounted to as much as Rs. 73.0 crores in 1960, as against Rs. 30.6 crores in 1958. Taking the quinquennium as a whole, the cotton textile industry was a net spender of foreign exchange in all the years, excepting in 1959, when it earned a small surplus. The total earnings during the five years were of the order of Rs. 340 crores which were Rs. 90 crores less than the total payments. The actual picture is said to be possibly worse because of the following two factors:

No allowance is made on the payments side for items like steel, electric equipment and electric energy used by the industry, all of which have an import-content.

Foreign exchange remittances of the textile industry for use of patent rights and royalty payments for processes such as sanforising, miniron, 'N-iron' and the like are not taken into account, as the data pertaining to them are not separately available.

The above payments may be negligible, but their inclusion will doubtless alter the payments picture of the cotton textile industry. Even on the basis of present calculations, "it is obvious," to quote the study, "that the industry cannot be considered to be a net earner of foreign exchange." Assuming that exports of cotton piecegoods will be maintained at least at the level of Rs. 60 crores per annum, the study observes: "It would appear that the crucial item in the balancing is the expenditure on imports of foreign cotton. Other items on the payments side have involved a fairly steady rate of annual expenditure and a substantial reduction in them is, perhaps, unlikely in the near future."

The Reserve Bank study then goes on to point out that the heavy imports of cotton textiles—the average annual imports during the late twenties were as much as 2,000 million yards—have now been replaced by the continued heavy imports of raw cotton (long staples) to feed the growing domestic demand for fine and superfine varieties of cloth. The study has, however, failed to point out that, if India were to import 2,000 million yards of cloth today, it would cost the country more than twice the cost of cotton, besides resulting in loss of employment now provided by the manufacture and processing of cloth and yarn that have replaced the imports. The failure to make this qualification by drawing attention to the import saving aspect is likely to give rise to wrong impressions about the textile industry.

Raw Cotton Imports

The average raw cotton imports during the five years ended 1960 were at an annual rate of nearly 700,000 bales, as against 500,000 bales during 1935-40 and 200,000 bales in 1925-30. It is true that the domestic production of longer staple raw cotton (⅞" and above) has gone up appreciably, from just 300,000 bales in 1948-49 to nearly 2.4 million bales in 1960-61: the greater part of the increase occurred prior to 1956-57 since when the rise has been only about 300,000-400,000 bales. But the pace of increase has not been in keeping with the industry's requirements of higher staple cotton, judging from the quality of yarn spun which shows a growing shift to higher counts. Yarn of 21 counts and above accounted for 57 per cent of the aggregate production of yarn in 1960-61, as against 49 per cent (average) during 1957-59, 44 per cent in 1954-56 and 41 per cent in 1951-53. The share of 31 counts and above, which are spun mostly out of cotton with staple length of 1" and above, in 1961 (Jan.-Sept.) was 24 per cent, as against 18 per cent in 1956. The changes, according to the study, reflect mainly the shift in consumer preference in India for the finer types of cloth. Additional production of such types appears to have taken place to a significant extent through the decentralised sector, the delivery of yarn 31 counts and above to this sector having increased from 40 million kg. in 1956 to an annual rate of 88 million kg. during the first nine month of 1961.

Alluding to the position in respect of cotton piecegoods, the study gives the following particulars:

"There is little evidence that the increased domestic production of better *quality* cloth has made any impact on the *quality* of cloth exported abroad. A rough breakdown of the *quality* of cloth exported in 1960 and 1961 shows that some 75-80 per cent of the total consisted of coarse and lower medium varieties of cloth, while another 15 per cent was accounted for by higher medium varieties; the balance of 5-10 per cent represented finer or superfine cloth. The coarse and lower medium varieties are manufactured wholly from domestic cotton. A very large proportion of the higher medium varieties is also in the main made out of Indian cotton. While some admixture of Indian cotton may be present even in finer varieties, it seems that not more than 10 per cent or approximately 60 million yards of cloth exported abroad may involve use of imported cotton. Expressed in terms of raw cotton, this is probably equal to 3 per cent of the average imports of raw cotton. A qualitywise breakdown of exports over a sufficiently long period is not available, but data for the period since 1957 show no significant change in either direction of the *quality* of cloth exported abroad."

The aforesaid study of the Reserve Bank's research section is only good in parts. The way in which conclusions are stated are likely to give rise to misleading inferences. We have already referred to a typical instance. The absence of intimate knowledge about the affairs of the industry in the author is reflected in the conclusion drawn from the increase in the production of fine and superfine counts. The whole of this increase does not reflect the change in consumer preference. To a considerable extent, it reflects the fact that the industry had to spin the cotton that was available. It so happened that, during the years chosen for the study, more foreign cotton had to be imported, as domestic production was insufficient to keep the capacity fully employed and to prevent unemployment in the industry. Another wrong conclusion is reflected in the use of the word "quality" in the paragraph quoted above. In order to distinguish it, we have italicised the word. Coarse and medium counts do not necessarily mean that the quality of goods exported are inferior. Conversely, fine and superfine do not represent higher quality. Apparently, the author of the article has been under the wrong impression that the higher the count the better the quality.

May Be Misunderstood

In the present context of acute shortage of foreign exchange, the purpose of the article is liable to be misunderstood. The unfriendly critics of the industry, of which there are many among the politicians, are likely to twist the conclusions of the Reserve Bank's study to run down the importance of the industry. The author of the study has not even cared to mention the point that, during the period covered by him, the mill industry was not free to buy whatever foreign cotton it wanted, that the quantum and variety of imports were determined by the availability of cotton within the country, and that they were strictly regulated by the Government.

If the cotton mill industry has not been a net earner of foreign exchange, the fault lies not in the industry but in the failure on the domestic cotton front. This fundamental point should not be ignored by those who are eager to seize the findings of the Reserve Bank's study to be quoted against the industry. Another important point to be borne in mind is that the decentralised sector—handlooms and powerlooms—which enjoys most favoured treatment from the Government is the principal consumer of fine and superfine counts of yarn. Accordingly, it will not be wrong to say that the Government's textile policy itself has contributed, to some extent, to the mills' preference for foreign cotton. The Reserve Bank study has, however, done well to stress the urgency of augmenting the domestic production of superior varieties of cotton, for a reversal of the shift in the consumption pattern will not be an easy task. The study has also done well to lay emphasis on exports of finer or more finished varieties of piecegoods, so that the foreign exchange earned per unit of export could be higher.

Foreign Exchange Earnings and Payments of Textile Industry

(In crores of rupees)

	1956	1957	1958	1959	1960	Total
Foreign exchange earnings from exports of:						
Cotton piecegoods	57.0	64.5	46.5	61.3	59.7	289.0
Cotton yarn	2.5	3.4	6.2	4.8	4.4	21.3
Cotton hosiery	0.4	0.5	0.5	0.4	0.4	2.2
Waste cotton	7.6	5.8	6.0	5.1	2.6	27.1
Total receipts	67.5	74.2	59.2	71.6	67.1	339.6
Foreign exchange outlays on:						
Raw cotton*	53.6	48.5	30.6	34.7	73.0	240.4
Twist and yarn	2.7	3.3	1.7	0.8	0.5	9.0

* Inclusive of imports of P.L. 480 cotton.

(Concluded from previous page)

Within the Continental categories, however, the trend towards bigger industrialisation in Asia was pronounced. Spindles in 1958 numbered 32,927,000, but, by 1960, the total was 38,177,000. African spindleage increased by less than 300,000, the quantity of North American plant was virtually unchanged and only 230,000 spindles were added to the mills in South America. In Europe, however, active spindleage fell from 57,799,000 to 51,944,000.

Another way of looking at the same situation, as illustrated by the statistics, is the greater use of raw cotton in Asian mills compared with those in other parts of the world. The mills in Asia accounted for 32 per cent of the world's active spindleage in 1960, but they consumed 38 per cent of the aggregate raw material used. In contrast, Europe, which contained 43½ per cent of the active spindleage, consumed only 35 per cent of world raw cotton supplies. The North American continent had 18½ per cent of the world's spindleage and used 20½ per cent of the raw material.—*All Rights Reserved.*

PLEA FOR DECONTROL OF COTTON

TRADERS SUBMIT MEMORANDUM TO PRIME MINISTER

THE memorandum urging decontrol of cotton, just sent to the Prime Minister, in the combined name of cotton growers and traders, marks the climax of the campaign for decontrol which has been gathering considerable momentum in recent weeks. The sponsors of the memorandum are some prominent cotton traders, who claim that the move for decontrol has the support, overt and, in some cases, covert, of growers, cotton traders, co-operative cotton sales societies, gin and press factory owners and even some millowners. The memorandum carries, according to the sponsors, over 200,000 signatures of growers, traders and co-operative societies from all parts of the country; a copy of it has been forwarded to the Commerce and Industry Minister also. Apart from pleading vigorously for decontrol of cotton, the memorandum also urges the appointment of a high-power Cotton Commission with well-defined, specific functions, by special legislation, if need be, to co-ordinate the activities of the various agencies concerned with the production, marketing and distribution of cotton. The objective of the Commission, according to them, would be to ensure, by the adoption of all conceivable methods, the achievement of the third Plan target for cotton.

Origin of Price Control

Tracing the genesis of controls the memorandum points out that price controls on cotton were introduced in 1943, as a corollary to the imposition of controls on yarn and cloth prices. Controls on yarn and cloth prices have been removed since 1953 but those on cotton continues. Besides, there is no control on prices of competing cash crops or foodgrains. There has been no material change in the ceiling prices fixed for different varieties of cotton since 1951. If, after 18 years of controls, domestic production is still inadequate to meet the demand, the question that arises, according to the memorandum, is this: for whose benefit is price control maintained, especially when there is no control on prices of *kapas* (unginned cotton) and yarn and cloth? It has, according to it not benefited either the grower or the consumer of cloth. As there is no ceiling on prices of groundnut, sugarcane etc., the memorandum goes on to add, their production has increased satisfactorily and, although their prices have gone up by 100 to 200 per cent during the last decade, these increases have not been found to be unreasonable but, on the contrary, have been adjusted to the price of the finished product. Compared with this, the maintenance of the ceiling prices on cotton at the same level as in 1951, has not only not benefited the grower but resulted in considerable loss to him because he has to part with his cotton at prices lower than the ceiling whenever the crop is good and gets only the ceiling prices, fixed a decade ago, when the crop is short even though he has to spend more for cultivation. The position of the merchant or trader under the regime of controls is also unenviable as he has to face the rigours of the Cotton Control Order.

Who Has Benefited?

The consumer of the finished product, namely, cloth, for whose benefit price control is supposed to be maintained, the memorandum argues, is the worst sufferer, as he has to pay today prices which are 200 to 300 per cent higher than those prevailing ten years ago. The nation as a whole has also not benefited by the price control as cotton production has remained more or less stagnant for the last several years, with country being forced to import cotton worth crores of rupees every year. Price control, on the other hand, has led to the mixing of superior varieties of cotton with inferior varieties, thereby undoing the work done by the Central Cotton Committee for the past many years to maintain the purity of seed. It is, therefore, clear, points out the memorandum, that the cotton control policy has proved infructuous, unrealistic and therefore redundant. Hence, says its authors, price control should be removed during the coming season (1962-63) and an announcement to that effect should be made forthwith. The memorandum, however, suggests that the floor prices may be retained, so that the grower may be assured of a fair price in times of larger production. The system of distribution of cotton through quotas to individual mills may also be retained so as to ensure equitable distribution of cotton.

The alternative of an increase in ceiling prices, according to the memorandum, will never get to the root of the trouble and will in fact create more problems than it will solve, as it will set in motion a spiral of rising prices of cloth and yarn which will affect the cost of living and upset the entire wage and cost structure in the country.

The memorandum disputes the contention that decontrol will result in a sharp rise in prices which will hit export of cloth by pointing to the trend of cloth exports during the past few years. Despite a bumper crop of 5.4 million bales during 1960-61 and import of more than one million bales at "pretty cheap rates" and notwithstanding the fact that cotton prices ruled Rs. 100 to Rs. 150 per candy below the ceiling prices and that liberal incentives were given for export, exports of cloth in 1961 aggregated only 575 million yards, as against 695 million yards in 1960 and 814 million yards in 1959. This indicates, says the memorandum, that raw cotton prices are not the only nor the principal factor affecting exports. Rationalisation and modernisation of the textile industry and other devices, rather than cheap cotton, have a decisive role in promoting exports.

Cotton Commission

Removal of ceilings is only the first step, according to the memorandum. Along with it, the Government should appoint a high-power Cotton Commission, consisting of representatives of the various cotton interests with a Cotton Commissioner as its head, for a period of at least ten years. The Commission should be entrusted with the following tasks:

1. To demarcate areas in different provinces for growing different varieties of cotton, according to the soil and water facilities available.

2. To procure cottonseed, for sowing purposes, from Government farms established for the purpose and make arrangements for the distribution thereof to the farmers through *gram panchayats*.

3. To procure fertilisers and make arrangements for the distribution thereof at subsidised rates according to the needs of different areas through *gram panchayats*.

4. To examine the possibility of growing cotton in fallow lands in Mysore, Madras, Orissa and Punjab and take effective steps in that direction.

5. To inquire into the irrigation facilities available at present and the prospects of securing more irrigation facilities either by canal water or by wells so as to produce more than 50 per cent of the cotton crop by irrigation, by the end of the third Five-year Plan.

6. To procure adequate quantities of pesticides and distribute the same subsidised to the growers through Block Development officers or *gram panchayats*.

Apart from these functions, the Cotton Commission should also co-ordinate the work of the Textile Commissioner, the Forward Markets Commission, the Indian Central Cotton Committee, the Ministry of Food and Agriculture and State Agricultural Departments. The Commission should be responsible only to the Central Cabinet.

Economics of Cotton Cultivation

The memorandum contains as a supplement an analysis of the economics of cotton cultivation. It is pointed out therein that the average gross realisation by the cotton grower on irrigated land, on the basis of a yield of 200 lbs. of lint cotton or 7.29 maunds of *kapas*, at the rate of Rs. 45 per maund of *kapas* (or Rs. 1,100 per candy of 784 lbs. f.o.r. Bombay) is about Rs. 328 per acre. Gross realisation on non-irrigated land, on the basis of an yield of 77.73 lbs. per acre of lint cotton or 2.83 maunds of *kapas*, and at the rate of Rs. 40 per (or Rs. 920 per candy of 784 lbs. f.o.r. Bombay) maund of *kapas* is Rs. 113.0. The average gross realisation on irrigated and non-irrigated land, on the basis of a yield of 93 lbs. of lint cotton or 3.4 maunds of *kapas*, is Rs. 143 at the rate of Rs. 42 per maund of *kapas* (Rs. 1,020 per candy of 784 lbs.). This price realisation is near about the average basic ceiling prices of the different varieties and is not true of all seasons but only when prices are at the ceilings. It has been calculated that the minimum expenses, excluding the value of the personal labour of the cultivation and his family, amount to Rs. 160 in the case of irrigated and Rs. 80 in the case of non-irrigated land. This has been worked out as follows:

(In rupees per acre)

	Minimum expenses on	
	Irrigated lands	Non-irrigated lands
Land revenue	2.50	2.50
Ploughing and harrowing	35.00	35.00
Sowing seeds	2.00	2.00
Sowing expenses	7.00	7.00
Picking charges	35.00*	15.00†
Removal of grass and off plants thrice	12.00	12.00
Transport charges to the terminal market	8.00*	3.50†
Terminal tax, weighing charges, commission	7.00*	3.00†
Manure and fertilisers	28.00	..
Watering	24.00	..
Total	160.00	80.00

* For 7 mds. of *kapas*. † For 3 mds. of *kapas*.

The average minimum expenses on irrigated and non-irrigated land works out to Rs. 91 per acre, against a maximum gross average realisation of Rs. 143 per acre, leaving a net income of Rs. 52 per acre, assuming that cotton always fetches the ceiling prices. As 87 per cent of the acreage under cotton is non-irrigated land, the net income to the grower on non-irrigated land is lower still, at only Rs. 33 per acre. As compared with this, net income per acre to the groundnut cultivator works out to Rs. 101. This figure is arrived at as follows:

	1960-61	1959-60
Acreage	154,55,000	148,64,000
Groundnuts (shell) (*in tons*)	43,54,000	39,42,000
Yield per acre (lbs.)	629*	643
Gross realisation (per acre)	..	Rs. 171†
Expenses (per acre approximately)	..	Rs. 70
Net income (per acre)	..	Rs. 101

* Average 636 lbs. or 7.75 mds. of 82.7 lbs. each.
† At the rate of Rs. 22 per maund on 7.75 mds.

Only Solution

On the aforesaid basis, the memorandum argues that, in terms of money, the groundnut cultivator realises per acre more than three times the amount realised by the cotton cultivator. Also, the groundnut crop is completed in three months whereas cotton requires more than six months to mature. The continuance of this state of affairs, adds the memorandum, is not conducive to the maintenance of the present acreage in cotton, let alone increasing it. When prices of the bare necessities of life of the farmer have risen beyond that of cotton, it would be impossible to induce him to grow more cotton on a meagre net annual income of Rs. 33 per acre and that too only in some years when prices rule at the ceilings. The retention of the present ceilings fixed a decade ago on some *ad hoc* basis, the memorandum points out, is to deny the realities on the false assumption that the agriculturists get a decent margin of profit at the present prices and that the industry needs cheap cotton for exporting more cloth and earning foreign exchange. The only realistic and lasting solution to the cotton problem, it is asserted in the memorandum, lies in the removal of ceilings and the appointment of a Cotton Commission for the purposes indicated above.

U.S. EXPORT OF COTTON TEXTILES

The United States last year exported more cotton textiles than it imported, reversing an opposite trend that occurred in 1960. According to the U.S. Department of Agriculture, exports last year were the equivalent of 496,000 bales of cotton compared with an annual total of 486,000 bales in 1960. Imports of cotton textiles, on a raw-fibre-equivalent basis, aggregated 394,500 bales, about 131,000 bales below the record high imports of 1960, but nevertheless were "still the second highest on record." The Department estimates that the United States would carry over about 7,700,000 bales of cotton on 1st August 1962 or 500,000 bales higher than the carryover of a year earlier. It expects that U.S. exports would decline to five million bales this season, 24 per cent below the 6.60 million bales export in 1960-61.

BACKGROUND TO BRITISH BUDGET

REASONS FOR THE QUICK CUTS IN BANK RATE EXPLAINED

By W. T. C. King

EDITOR, BANKER, LONDON

THIS time my monthly letter falls to be written shortly before the introduction of Britain's budget for 1962-63, though it may not emerge from the printers until afterwards. I shall, therefore, focus on recent developments affecting Britain's economy that deserve attention, irrespective of the contents of the budget, and that may incidentally throw light on what the Chancellor of the Exchequer has decided to do.

The first of these developments is the renewed decline in interest rates. Contrary to market expectations at the time of my last letter, the Bank of England rediscount rate was reduced from 6 to 5½ per cent on 8th March, and then was brought down again to 5 per cent only a fortnight later. Not for 30 years has the interval between reductions been so short as this.

On international grounds, the case for getting the Bank Rate down from its unusually high level had, of course, been strong for many weeks; sterling had been pressing close against its upper limit in terms of the U.S. dollar in the exchange market, and funds were flowing strongly towards London. As I recorded last month, the true accretion to the central reserves in February was, with one exception, the biggest monthly increase for many years. But the fact that, in spite of the very strong pull that London was exerting on international balances, the British authorities made no move in Bank Rate in January and February (indeed, the tactics of the Bank of England in the short loan market had served to reverse a fall in Treasury bill rates), had come to be accepted as indicating that the rate would probably not come down until after the budget.

"Closed" Season

The reason for that assumption was that the City had regarded the period shortly before a budget, and even the period immediately following it, as virtually a "closed" season for the Bank Rate. To avoid giving the appearance that the Bank Rate move might be directly associated with the budget—either as a pointer or as a consequence—the authorities have generally allowed a fair interval to elapse on either side. Ten years ago, when the monetary policy was being revived again as an active instrument after almost 20 years of passivity, an increase in the Bank Rate was, indeed, virtually incorporated into the budget policy, and was announced in the budget speech. But the tactics followed since then have seemed to emphasise that this was to be regarded as an exception rather than a precedent. Only on one other occasion, until this year, had the Bank Rate been moved in March—and that was in 1958, when the 7 per cent rate fixed during the sterling crisis of 1957 had run for six months, and could not reasonably be held for the further period of six weeks or more that would have been needed to put its reduction well beyond the budget.

A somewhat similar consideration probably swayed the authorities on this occasion. Early in the year, there had seemed to be domestic reasons for not making any relaxation in monetary policy—notably the uncertainties on the labour front during the closing months of the wages "pause" (which formally ended on 31st March) and before there was any clear evidence of what manner of wage settlements might be expected in the ensuring phase. A further uncertainty, of external as well as domestic significance, concerned the reaction of public opinion to the increases disclosed in Government expenditure—the increase shown first by the large supplementary votes that had to be sought for 1961-62, and then the increase shown in the original estimates (for "supply" expenditure) for 1962-63 over the corresponding estimates tabled 12 months ago.

Government Expenditure Up

These disclosed that the Chancellor had considerably overshot the limit he had set himself last July; he had then undertaken to do his utmost to keep the rise in the 1962-63 estimates within 2½ per cent, measured at constant prices. In fact, the estimates totalled £5,612 million, representing an increase of £385,000,000, or rather more than 7 per cent in money values and one of 4½ per cent after revaluing last year's (original) estimates at this year's rates of pay and prices.

A large part of this increase (and also of the supplementary votes needed for 1961-62) reflected the sharply increased cost of the guarantees to farmers (which largely depends, in any given year, on the trend of prices and the extent of output) and the increased deficit on operation of the (nationalised) railways. The cost of defence will also rise sharply in 1962-63; the estimated total is £1,721 million, and, after allowance for related items included in civil votes, this represents an increase of nearly £100,000,000.

Fortunately, this disappointing evidence of the failure to contain the rise in Government spending (in spite of what the Chancellor called "drastic pruning" of many items of civil expenditure) did not have any discernible adverse psychological effects, either on the wages front or on the performance of sterling. The tide of foreign funds still flowed towards London. The authorities then showed that, having felt it necessary to delay the cut in money rates on these grounds, they were very anxious on international grounds to move as soon as possible. The fact that the interval between the two reductions was so unusually short, and that the second move was made, even so, little more than a fortnight before the budget, demonstrates this very clearly.

Not surprisingly, the sudden drop in official rates provoked an even sharper reaction in market rates. The Treasury bill average allotment rate, having been hoisted to almost 5.9/16 per cent at the first tender in March, dropped by fully 21/32 per cent in the two tenders following the first Bank Rate reduction, and then by 15/32 per cent in the two tenders following the second reduction, carrying the rate down to 4.13/32 per cent by end-March—the lowest point since last May.

Production and Employment

However desirable this movement might have been on external grounds, it plainly would not have taken place if the authorities had thought that there was any longer any immediate threat of inflationary pressures within the domestic economy. The City, therefore, regarded it as aligning with two other developments that were shaping the background for the budget. The first of these was the evidence that, at mid-winter, the economy had, perhaps, eased a little more than had been expected. The seasonally smoothed index of industrial production, after having fallen from its peak of 116 last summer (a point sustained for the three months June-August) to 112 for each of the three months October-December, dropped by a further point, to 111 in January. This further downturn may simply have reflected the exceptionally severe weather in January this year (which the statistical smoothing does not, of course, take into account): unemployment at the January count rose much more than seasonally, and at the ensuing count rose a little less than seasonally. But this explanation was not supported by the trend of notified vacancies remaining unfilled, which indicated an easing in the labour market extending through both these months and into March. Moreover, the quarterly statistics or fixed investment by private industry suggested that downturn that had been expected in the course of 1962 had, in fact, started in the final quarter of last year.

The seasonally corrected figures had, indeed, implied a decline of 10 per cent between the third and fourth quarters. On this evidence, some observers were arguing that, unless and until the hoped-for substantial rise in exports gets under way, the chief dynamic influences on the economy seem likely to be the rise in Government expenditure and the expected further (but moderate) rise in consumer spendings; the seasonally smoother index of retail sales had risen sharply, to a new peak of 118 (1957 equals

MR. G. D. BIRLA'S REVIEW OF BANKING AND ECONOMIC TRENDS

SCRAMBLE FOR DEPOSITS THROUGH HIGHER INTEREST RATES UNDESIRABLE

THE proposed differentiation in interest rates on deposits for three types of banks was criticised by Mr. G. D. Birla, Chairman of the United Commercial Bank Limited, in his statement circulated to the shareholders of the Bank at their Nineteenth Annual General Meeting held at Calcutta on Wednesday, 11th April 1962. The proposed differentiation, Mr. Birla declared, went against the spirit and foundation of the inter-bank agreement. Indeed, he warned that a scramble for deposits would create stresses which might lead to the abandonment of the agreement and reduction in profit-margin "to the point of imperilling the building up of capital funds of banks to anything like the extent to which the banks are committed by the convention agreed to with the Reserve Bank of India." In his opinion, it was only through competitive development and extension of banking services and in the environment of stable interest rates, and not in the atmosphere of a rate war, that new deposits could be attracted. Mr. Birla called upon the banking sector so to conduct its affairs as to leave no room for further official control and regulation over its basic function of inculcating and spreading the banking habit and gathering the surplus funds of the public. Reviewing what he called the prospective development of the Indian economy, he pointed to certain disquieting trends and urged every incentive to Indian enterpreneurs to be a producer of industrial raw materials and to step up exports. He wanted special efforts to attract foreign private capital and energetic action to solve the problems of fuel, power and transport. Touching on resources for the third Plan, he strongly suggested stricter enforcement of tax laws and control over non-development expenditure.

The following is the full text of Mr. Birla's statement:

"GENTLEMEN,

"You will notice from the Directors' report and the accounts of the Bank for the past year now before you that the all-round progress of the Bank has been maintained and our deposits have improved after the slight setback of the previous year.

Deposits

"The deposits at the end of 1961 stood at Rs. 98.90 crores and showed a rise of Rs. 9.96 crores on the previous year's figure of Rs. 88.94 crores. This increase of 11.2 per cent compares with 8.5 per cent by which, after making allowance for the transfer of Rs. 72 crores of P.L. 480 funds from the State Bank of India to the Reserve Bank of India, the deposits of the public with scheduled banks as a whole rose during the same period.

Cash and Securities

"Cash on hand and with banks and money at call and short notice were Rs. 8.66 crores and represented 8.8 per cent of the deposit liability. The additional deposit resources which accrued to the Bank during the year were utilised primarily to improve the liquid position of the Bank through a considerable reduction of the borrowings from the Reserve Bank of India and the addition of a little over Rs. 2 crores to our holdings of Government securities and secondarily to increase our advances by the moderate amount of Rs. 2.82 crores. As a result of this policy, our quick assets consisting of cash on hand and with bank, money at call and short notice and free Government securities amounting to Rs. 43.31 crores formed 43.78 per cent of our total deposits. The corresponding figures for the previous year were Rs. 35 crores and 39.4 per cent.

Profit and Loss Account

"Though the profits for the year have risen from Rs. 67.43 lakhs to Rs. 72.61 lakhs, the extent of the increase would have been greater if we had observed a lower liquidity ratio. In disposing of the profit, the Board have followed the same pattern as last year and transferred Rs. 30 lakhs to the reserve fund, raising it to Rs. 2.35 crores, and added Rs. 4 lakhs to the gratuity trust fund which was newly set up with an initial contribution of Rs. 10,000. After allocating Rs. 14 lakhs for bonus to staff, the Directors have repeated the dividend of 12 per cent less tax.

Capital Deposits Ratio

"The subject of the ratio of paid-up capital and reserves of the banks to their deposits received the attention of the Reserve Bank of India and a proposal was put forward that this ratio should be gradually increased to 7½ per cent and the views of banks were invited. After discussion with the Indian Banks' Association, the Reserve Bank of India finally agreed that the matter should be regulated by a convention rather than by legislation and banks were required to transfer substantial amounts out of profits to published reserves and to supplement this action by increase of capital so as to bring the capital-deposit ratio upto 6 per cent within a reasonable period of time.

"Our Bank has transferred every year substantial amounts to the reserve fund and you will notice from the ten-year record of the Bank's progress annexed to the balance-sheet that the reserve fund has grown from Rs. 67.50 lakhs to Rs. 235 lakhs over a period of ten years. But, in spite of such substantial transfers to the reserve fund, the ratio of paid-up capital and reserve fund to deposits has declined from 9.04 per cent to 4.39 per cent by reason of the steep increase in deposits. It was in the year 1945 that the Bank increased its subscribed capital from Rs. 2 crores to Rs. 4 crores and paid-up capital from Rs. 1 crore to Rs. 2 crores, and the Directors feel that it is now expedient further to strengthen the capital structure of the Bank. With this object in view, the Directors propose to increase the paid-up capital by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and, when the issue is completed, the capital funds of the Bank will improve by Rs. 1½ crores. This proposal can be given effect to only after obtaining the consent of the Controller of Capital Issues for which an application has already been made. You will be advised as soon as possible after the sanction of the Controller is received of the steps which the Directors propose to take to implement the scheme.

"It is a matter of gratification that deposits of the banking system have risen during the year under review, in contrast with the stagnation which characterised the previous year. The rate of growth of 8.5 per cent was, however, not the same as in the first four years of the second Plan period when deposits recorded a growth of 11.2 per cent. It is important that steps should be taken to attract more deposits to the banking system in order that the overlent position disclosed by the scheduled banks' return may be corrected and the banks may be enabled to meet the additional demands for finance that would inevitably arise with the progressive implementation of the third Plan. The introduction of the Deposit Insurance Scheme, despite the fact that the amount of individual insured deposit is only Rs. 1,500, has already infused confidence in the stability of the banking system in rural and non-metropolitan areas where it had received a setback sometime ago and the confidence will be reflected in due course in the speedy growth of deposits of individuals with the banks.

Inter-Bank Agreement on Rates of Interest on Deposits

"A stable structure of reasonable interest rates on deposits is worthy of defence against attacks. In my statements for the last two years, I had referred to the healthy influence of the inter-bank agreement on deposit rates. It is a matter of regret that some banks gave notice last year to resile from the agreement. While there may be room for a modest revision, it would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of interest. Almost all banks have a large network of branches operating all over India and they have attained more or less equal status because of the Deposit Insurance Scheme, the supervision of Reserve Bank of India and the proposed capital-deposit ratio. It is not understandable how a few banks can be given preferential treatment for the purpose of quoting higher rates of interest on deposits simply because their deposits are, for the time being, less than those of some other banks. It must be remembered that the history of Indian banking is full of instances of small and medium-sized banks which have grown into large banks without any weightage in preferential rates of interest *inter se*. The proposed differentiation in rates of interest on deposits for three types of banks goes against the spirit and foundation of inter-bank agreement. A scramble for deposits through the offer of higher rates of interest would create stresses which might lead to the abandonment of the agreement and reduction in the profit margin to the point of imperilling the building up of capital funds of banks to anything like the extent to which the banks are committed by the convention agreed to with the Reserve Bank of India. It is only through competitive development and extension of banking services and in the environment of stable interest rates, and not in the atmosphere of a rate war, that new deposits can be attracted. The non-nationalised banking sector should conduct its affairs in such a manner as to leave no room for further official control and regulation over its basic function of inculcating and spreading the banking habit and gathering the surplus funds of the public.

Mobilisation of Internal Resources

"The third Five-year Plan is a challenge to the banks to meet the demands for finance which its implementation would generate. The Plan envisages a bigger programme of industrial development than its predecessor. At the end of the third Plan, industrial production is expected to increase by about 70 per cent over the level at the end of the second Plan. The general index of industrial production is expected to reach 329 (1950-51=100) in 1965-66, as against 194 estimated for 1960-61. Estimates of the additional bank credit which industrial enterprises might require vary from Rs. 650 crores to Rs. 750 crores and the mean of the two figures may be taken as the probable requirement of industries in the private sector. Currency in circulation is also bound to expand during the third Plan period and we may estimate the rise in circulation to be of the order of Rs. 1,000 crores. As the level of bank deposits at present is on a par with currency in circulation, it could be reasonably assumed that, during the third Plan period, bank deposits would also increase by Rs. 1,000 crores. In the United Kingdom, the ratio of deposits to currency in circulation is 3.1.

"To divert bank credit and currency in circulation into banking channels to an extent which would increase the proportion of bank deposits in relation to circulation should be the objective of banks, so that the banks would be in a position not only to meet the demands of industry but also to play their traditional role of subscribing to Government borrowings in substantial manner. There must, therefore, be a drive to increase deposits by increasing banking service and branches of banks both in big cities and in rural areas. The recent trend in banking is to employ accretions to deposits in financing industry and trade partly because of the increasing demand from industry and trade and partly because of absence of ready market for Government securities. The banks have to build up the portfolio of Government securities so as to improve the liquidity of the banking system. In addition, they are also nowadays called upon frequently to subscribe to capital and debenture issues of various financial institutions and providing long-term finance to industry.

"The third Five-year Plan envisages more and more borrowing by Government and public

bodies and, to make these borrowings successful, attempts should be directed towards making Government securities freely marketable and the position of Reserve Bank and Life Insurance Corporation should be used more towards making securities market really active.

Third Five-year Plan

"Turning to the prospective development in the Indian economy, the third Plan, which nominally at least has been launched, visualises an increase in the national income from Rs. 14,500 crores at the end of the second Plan to Rs. 19,000 crores at the end of the third Plan. For achieving this, the Plan visualises a total investment of Rs. 10,400 crores, of which Rs. 6,300 crores are in the public sector and Rs. 4,100 crores, in the private sector. The ratio of net investment to national income, which is 11 per cent at present, is proposed to be raised to 14 to 15 per cent at the end of the third Plan. Though the Plan is a modest one, I must confess to a feeling of diffidence about its successful fulfilment. The Plan itself appears from every test to be more like a list of programmes and projects than a properly laid out and cohesive chart for progress. What really matter, however, are the targets of agricultural and industrial production. It is not easy to make a correct estimate or, for that matter, any kind of estimate of total production, especially in the private sector. But it is possible to estimate production in some important fields and treat it as a yardstick to measure in a reasonable manner the economic credit of the nation as a whole. If, for instance, the targets for important items like food, agricultural raw materials, fertilisers, cloth, steel, petroleum, power, road and rail transport, coal and capital goods could be achieved at the end of the Plan and measured, they would give a clear idea of the measure of the increased prosperity of the people.

Preponderant Reliance on Foreign Aid

"The circumstances in which the first year of the third Plan has elapsed have been favourable enough, in that record agricultural production (buttressed by import of foodgrains from America under Public Law 480) and sustained increase in industrial production (though the rate of growth was somewhat lower than in the previous year) both ensured that the price situation was under control. But the Plan's reliance on foreign assistance is preponderant, and the experience in the first year has clearly been that the inflow has fallen short of both requirements and earlier assurances that we had obtained. We should be realistic enough to assume that we are unlikely to receive a blank foreign exchange cheque, and also that there will always be a gap between promises and performance in the matter of foreign aid. In the final analysis, it is increased export earnings which will assure the country of continued progress achieved through planning. We cannot surely, for long, sustain increase in production, if our reserves do not even permit the import of industrial raw materials for feeding already existing and involuntarily idle units of production. Every incentive should be provided to the Indian entrepreneur to be a producer of industrial raw materials. Appropriate concessions will undoubtedly pay off in the form of enlarged exports.

Need To Step Up Exports

"Foreign exchange plays an important role in the development plan because we have to import the 'know-how' and equipment for many industries. A careful assessment of the prospects of securing foreign exchange is preliminary to a correct assessment of the success of the Plan targets. Laudable efforts are being made to earn foreign exchange by exports and, although there has been some improvement in this regard, the expansion of our exports is not proceeding at such vigorous rate as to justify full reliance on them. Moreover, there is even a limit to what India can afford to export. To permit exports at the cost of the home market, that is, by starving the Indian consumer, cannot improve the prosperity of the country or the standard of the people. Increase in the exports is, however, inescapable at present. More attention should, therefore, be directed towards finding out ways and means of reducing cost of production of exportable commodities to a competitive level and the factors that account for increase in the cost of such commodities should be investigated and remedied at an early date.

Foreign Aid and Investments

"The second source of foreign exchange is loans and aids which we were receiving from friendly countries during the second Plan period and which we can hope to receive in an increasing measure for the third Plan. The third source, and the most important and durable one, is foreign investments which are coming only in dribblets.

"The total requirement of foreign exchange is likely to exceed the Plan figure and, in my view might go up to Rs. 3,700 crores in place of Rs. 3,200 crores assumed in the Plan. This is a problem of the utmost gravity and should be solved. The answer is not to cut this or that item of the Plan projects; that would cause the collapse of the Plan. In my view, it is not impossible to earn foreign exchange to the extent I estimate, provided we create an atmosphere to earn it. Aids and loans will be major contributory factors for a long time to come, but we must make a special effort to attract private foreign investment and we should also try to raise loans not merely on Government-to-Government level but also in the financial markets of the world. At present, the conditions are not favourable, but an atmosphere must be created in which it would be possible to raise loans in the course of time.

Problems of Fuel, Power and Transport

"Apart from foreign exchange, there are other hurdles to the achievement of the targets. The chief of these are, coal, power and transport, all of which are in short supply thereby hindering the growth of the economy. I feel that there should be no ceiling for power production but that more power should be produced than is adequate to meet the existing demand completely so as to leave a great surplus of supply awaiting the growth of demands from potential consumers. Every concern that needs power for its own consumption should be freely allowed to set up its own plant without any restraint and, if any party can arrange for foreign finance on suitable terms for production of power, he should be allowed to do so. Transport bottlenecks are in a way responsible for fall in production and increased inventory resulting in lock up of funds, which we can ill-afford today. Railways are not able to cope with the increased demands for transport and as such the development of road transport should be encouraged to further supplement the transport needs of the industry at reasonable rates. This alone would give impetus to progress, production and prosperity.

"Administrative delays should also be eliminated and lengthy procedures in granting industrial licences should be very much simplified.

What is the Solution?

"My diffidence also slightly increases in the matter of internal resources for the third Plan. It is no secret that the tax effort for the second Plan, as originally estimated, was, in the end, far exceeded; but not all the projects could be put through, and one of the reasons was inadequacy of internal resources. The fact is that non-Plan expenditure has been allowed steadily to rise. For obvious reasons, and in this case inevitably too, the cost of Defence services rose to Rs. 302 crores in the revised estimates for 1961-62, as against the budget expectation of Rs. 283 crores; and the figure for 1961-62, in the budget, was itself some Rs. 35 crores more than the actuals for 1960-61. It is all very well to term such non-developmental expenditure as essential to the security of this country. We have, however, to recognise the possibility of further drafts on our budgetary resources for 'contingencies' and administration charges. What, then, is the solution?

"Always, the easiest way for Government is to raise fresh taxes. But there is a limit to the forms of taxation that can be introduced and to the rates that can be fixed. As it is, there is an estimate that new taxes introduced in the first year of the third Plan constitute fully one-third of the target for the quinquennium. The caretaker budget for 1962-63 has made clear the prospect of additional imposts. No doubt, the tax targets for the third Plan will be fulfilled. But there is considerable doubt whether additional resources raised by taxes will be available for developmental projects. I strongly suggest that tax enforcement laws are made stricter, so that collections can be tightened up; and the addition to revenues should, I fancy, be surprisingly large. Secondly, greater care than ever before needs to be taken to ensure that there is strict control over non-developmental expenditure, whether it be costs of civil administration or even, if I may be permitted to suggest, defence.

"Lest I be thought unduly pessimistic, let me add that the holding of the third general elections in this country is of portentious significance. The return of Congress to power will have assured our foreign friends that India has a political stability and maturity that is comparable to conditions in countries in which democratic practices have been prevalent much longer. It is, I may remark, stability, both political and economic, which is one of the prerequisites for luring foreign participation in the industrialisation of this or any other country. At the same time, the emergence of the Swatantra Party as the largest body of opposition in the country will have brought home the truth to our foreign friends that democracy is effectively at work in India, in that there is perceptible evidence of the growth of an opposition. Thus, proof of Indian democracy as attested to by the third general elections may conceivably result in greater inflow of foreign assistance, not only on a governmental level, but I hope on the private sector level as well. The Plan must be fulfilled at all costs."

Note: *This does not purport to be a record of the proceedings at the annual general meeting.*

BACKGROUND TO BRITISH BUDGET

(*Concluded from page 666*)

100) in December, and after dropping back by one point in January, had regained the peak in February.

An Odd Outcome

The other major development—and a more surprising one—was the extent of the improvement shown by the official estimates of the balance of payments for the year 1961. Twelve months ago, it may be recalled, our flesh was made to creep by the very large "identified" deficit on current transactions that emerged for 1960 from the new basis on which the balance of payments estimates were being framed. This identified deficit was then put at £344,000,000; but now, after a good more work has been done on the figures, the deficit for that same year is put at £288,000,000. Moreover, each of the deficits estimated quarterly for the first three quarters of 1961 has been revised downwards (from an aggregate deficit of £108,000,000 to one of £61,000,000) and the deficit for the final (and seasonally difficult) quarter is estimated at only £9,000,000, making the full year's deficit £70,000,000. Nor is this the full extent of the estimated improvements. The long-term capital account, normally in large deficit, is estimated to have been shown in 1961 a small net surplus—one of £8,000,000, in contrast with the deficit of £202,000,000 that had been estimated for 1961. The whole of this massive swing was, however, attributable to special transactions; £131,000,000 accrued from the purchase by Ford Detroit of the privately held shares in Ford Dagenham, and £90,000,000 came from advance repayments of debt by West Germany and France, together with the loan from Switzerland.

A substantial part of the revisions of the earlier estimates represents a narrowing down of the balancing item in the accounts—the entry recording the difference between the "identified" deficit on current transactions and long-term capital account, on the one hand, and the net change in "monetary" movements, comprising changes in the gold and exchange reserves and short-term liabilities, on the other. The balancing item between these two "known" quantities had been strongly positive, implying that the errors and commissions may have included, *inter alia*, unrecorded earnings on current account (or overstatement of current payments) or unrecorded borrowings on long-term capital account, including unidentified repatriation of British investments overseas (such, for instance, as some of the British disinvestment that has taken place in South Africa and Rhodesia in recent years). The revisions have identified net credits under both these heads, with the result that the balancing item for 1961 has been brought down to £81,000,000 (that for 1960 was originally £377,000,000, and is still as high as £306,000,000). It is surmised, indeed, that the year's unrecorded current receipts may in themselves have exceeded this £81,000,000. If that were so, it would mean that, thanks to the large special capital receipts, Britain's external account was actually in a small "overall" surplus in 1961—certainly an odd outcome of a year that witnessed the exchange crisis.

We have audited the foregoing Balance Sheet of the Indian Branch of The British Bank of the Middle East, as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Indian Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to Sub-Sections (1) and (3) of Section 211 and Sub-Section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in accordance with the Sixth Schedule to the Banking Companies Act, 1949, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Indian Branch of the Bank so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branch of the Bank dealt with by this report are in agreement with the books of accounts; and

(d) in our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branch of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the Profit of the Indian Branch for the year ended upon that date.

(Sd.) A. F. FERGUSON & CO.,
Chartered Accountants.

BOMBAY, 30th March, 1962.

P. E. H. ALEXANDER,
Manager.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers and Brokers mentioned herein.

A copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, Maharashtra, Bombay, for registration. Consent of the Central Government has been obtained to this issue. Industrial Licences have been obtained from the Central Government for the establishment of this new Industrial undertaking. Applications will be made to the Bombay Stock Exchange and Ahmedabad Stock Exchange for permission to deal in and for quotation of the shares of the Company.

ELECTRICAL INSTRUMENTS MANUFACTURING COMPANY LIMITED

(INCORPORATED ON 21ST APRIL 1961, UNDER THE COMPANIES ACT, 1956)

AUTHORISED CAPITAL:

	Rs.
Divided into 1,00,000 Shares of Rs. 100 each	1,00,00,000

ISSUED SHARE CAPITAL 35,00,000

(1) 13,500 Equity Shares of Rs. 100 each upon which Rs. 25 is credited paid up, payment having been received in cash from the promoters and subscribers to the Memorandum and Articles of Association of the Company and from friends and associates	Rs. 13,50,000	
(2) 1,500 Equity Shares of Rs. 100 each credited as fully paid up and allotted to Messrs. Electrical Instruments Manufacturing Co.	1,50,000	
	15,00,000	15,00,000

PRESENT ISSUE:

Now offered for cash at par for public subscription :	
20,000 Equity Shares of Rs. 100 each	20,00,000
Rs.	35,00,000

UNDERWRITING:

The entire Present Issue offered to the Public for subscription is underwritten as follows :—

	Underwriters' Name and Address	*Amount in Rupees*
1.	The Industrial Credit and Investment Corporation of India Limited, Bombay, 163, Backbay Reclamation, Bombay 1 ..	5,00,000
2.	The Life Insurance Corporation of India, Jeevan Kendra, J. Tata Road, Bombay 1	3,50,000
3.	Devkaran Nanjee Banking Co. Ltd., Horniman Circle, Bombay 1	5,00,000
4.	P. R. Subramanyam, 70-A, Stock Exchange, Apollo Street, Bombay 1	1,50,000
5.	Chandrakant Shivlal Desai, 70, Stock Exchange, Apollo Street, Bombay 1	5,00,000
	Rs.	20,00,000

In the opinion of the Directors, the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

TERMS OF PAYMENT

(a) On application .. .. Rs. 25 per Share.

(b) On allotment .. .. Rs. 25 per Share.

The balance of Rs. 50 per Share in such call, or calls to be made as the Directors may from time to time determine provided that no calls shall exceed Rs. 25 per Share, and that there shall be an interval of at least three months between any two calls.

BOARD OF DIRECTORS

1. **Shri PURUSHOTTAM KANJI (KAKUBHAI),** (*Chairman*). Gilbert Building, Babulnath Cross Road, Bombay-7. Businessman. *Chairman*: Tulsidas Khimji Private Ltd. *Chairman*: Bombay State Finance Corporation. Bombay State Textiles Wage Board. Cotton Textiles Wage Board. Silk Textiles Wage Board. OBJECTS OF THE COMPANY

The Company was incorporated on the 21st April 1961, generally for the purpose *inter alia* set forth in the Memorandum of Association of the Company, a copy of which is attached and forms part thereof and in particular to carry on business as manufacturers of Switch Gears and Electric House Service Meters.

BRIEF HISTORY AND PROSPECT OF BUSINESS

The Electrical Instruments Manufacturing Company, a Registered Partnership Firm, had been carrying on business for the past 3½ years as Manufacturers of Electric Switchgears at their factory in Bombay.

The Company will, in addition, be establishing a Factory at Ahmedabad not only for the expansion of the production of Switchgears but also for the manufacture of House Service Meters for which an Industrial Licence has been granted by the Government of India.

In accordance with Licences issued by the Government of India, the Company proposes to establish an undertaking in Gujarat State for the manufacture of House Service Meters both Single Phase and Polyphase and also Electric Switchgears, Distribution Boards and combined Switch and Fuse Units. The annual production programme of the Company is as follows:—

AC Single Phase Meters upto 10 Amps.	60,000 Nos. per year.
AC Polyphase Meters.. ..	24,000 „ „
Electric Switchgears upto 200 Amps.	24,000 „ „
Distribution Boards	1,200 „ „
Iron clad cutouts	24,000 „ „

The products of the said firm are very well known for their quality and performance and bears I. S. I. markings. The Company has made considerable progress and advancement in the sales and output and the results have been very satisfactory and encouraging year after year. AT PRESENT THE SWITCHES MANUFACTURED BY THE COMPANY ARE BEING SOLD TO VARIOUS ELECTRICITY BOARDS and there is considerable scope for the expansion of the Switch-gear Division and with the fast Industrial Developments in the country and the priority given in the third Five-year Plan for Industries, Power Generation and Housing programme, there is bound to be very high demand for domestic and Industrial type of switches.

The requirements of House Service Meters, both Single Phase and Three Phase, are directly linked to the Electricity Supply, Rural Electrification Scheme and Industrial development in various sectors all of which have been accorded high priority in the third Five-year Plan. According to the revised target in the third Plan additional installed capacity of Electrification is 13.40 million kw. of which 12.9 million kw. are expected to be in commercial production.

The present production in the Industry already falls considerably short of the country's requirements and with the impetus given to power and Industrial development in the third Five-year Plan the demand is bound to increase out of all proportions to present production.

SITE OF THE FACTORY, POWER AND WATER SUPPLY

The Company has secured land for erection of the factory at Ahmedabad and measuring about 25,000 sq. yards at Rs. 2-per square yard, the present price of which has considerably appreciated. This site is only a few yards away from Naroda Railway Station which is 4 miles from Ahmedabad proper. The Government of Gujarat has agreed to make available to the Company the necessary power required and render all assistance to the nascent Industry. Water supply is also available in sufficient quantities near the site.

PLANT AND MACHINERY

The Company has applied to the Government for an Import Licence to cover the cost of the Machinery to be imported. Pending the receipt of the Licences, orders have been placed by the Company for the Plant and Machinery with suppliers in East Germany, Hungary etc., on rupee payment basis.

Orders for the balance of the equipment will be placed after the receipt of the Import Licence to be financed out of the loan in foreign currencies from the Industrial Credit and Investment Corporation of India Limited referred to hereinafter.

TECHNICAL COLLABORATION

The Company has entered into a Technical Collaboration Agreement with Messrs. Valmet Oy, Helsinki, Finland which has been approved by the Government of India. It may be mentioned that Messrs. Valmet are a Government undertaking and enjoy considerable reputation in world markets for the quality of their products.

Under the terms of the Technical Collaboration Agreement the Collaborators will give the Technical know-how for the manufacture of these Meters, supply drawings for the parts and tooling, give practical training in production methods to Indian Engineers at their works and lend services of one of their experts to supervise the initial setting up of the Plant and the commencement of production. The Company has agreed to pay to the collaborators, a total consideration of $15,700 for all the above services. The collaboration agreement also provides for continuous technical inflow of services.

FINANCIAL OUTLAY

The total cost of the Project will be about Rs. 65,00,000 estimated as under:

		Rs.
1.	Land and Building, Plant and Machinery, including erection technical know-how, foreign training etc., Electrical Installation, Motor Car and Transport Vehicles, Furniture fittings, etc., ...	42,00,000
2.	Promotional Expenses, Brokerage, Underwriting and Expenses of Issue	2,03,000
3.	Miscellaneous expenses and contingencies	97,000
4.	Working Capital	20,00,000
		Rs. 65,00,000

The total estimated requirements of Rs. 65,00,000 will be provided as follows:

		Rs.
1.	Share Capital (35,000 Equity Shares of Rs. 100 each)	35,00,000
2.	Loan from I. C. I. C. I.	10,00,000
3.	Loan from Gujarat Finance Corporation	10,00,000
4.	Bank borrowings and Cash accruals.	10,00,000
		Rs. 65,00,000

MINIMUM SUBSCRIPTION

The minimum amount, which in the opinion of the Directors must be raised by issue in shares in order to provide the sums, required to be provided as per paragraph 5 of Schedule II of the Companies Act 1956, and upon which the Directors will proceed to allot shares offered by this Prospectus to the Public Subscription is 20,000. Equity Shares of nominal value of Rs. 20,00,000 from out of the public issue.

UNDERWRITING COMMISSION AND BROKERAGE

Underwriting commission at the rate of 2½% of the face value of the Shares underwritten is payable to underwriters.

In respect of the Shares now offered to the Public, the Company will pay brokerage at the rate of Re. 1 per Share and to Banks and to Members of Registered Stock Exchange on allotment made in respect of applications bearing the stamps of such Banks or Brokers.

Brokerage on the aforesaid basis of Re. 1 per Share, will be payable to the Underwriters in addition to the underwriting commission on allotment in respect of applications made or procured by them provided that the relative forms of applications bear their respective stamps.

INSPECTION OF DOCUMENTS

Copies of Prospectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during the usual business hours, until the subscription list is closed.

APPLICATION FOR SHARES

Application forms properly completed must be lodged together with the amount payable on application before the date of the subscription list with the Bankers to the issue or with their existing main branches at Bombay, Ahmedabad, Delhi, Baroda, Calcutta, Madras, Bangalore, Kanpur, Nagpur, Hyderabad, Surat and Rajkot.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 16th APRIL 1962 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 28th APRIL 1962 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT EARLIER THAN 20th APRIL 1962.

CENTRE AND THE STATE PLANS—II

ESTABLISHMENT OF STATE PLANNING COMMISSIONS OVERDUE

By Prof. S. Kesava Iyengar

CENTRAL assistance consists of two categories: (1) for general purposes and (2) for Plan projects. Under both these heads, such assistance comprises shared taxes, grants and loans. Table VI shows how Plan outlay was only 25.63 per cent of total expenditure in first Plan, 32.56 per cent in second Plan, and 30.21 per cent for the whole decade. The total first Plan outlay works out to 63.52 per cent of the aggregate Central assistance, the second Plan percentage being 72.75 (69.72 for the whole decade). In other words, about a third of Central assistance was on non-Plan account, after covering the entire Plan outlay. On the other hand, Central assistance specifically for Plan projects comes to 38.94 per cent in first Plan, and 49.93 per cent in second Plan. The third Plan target is 60.02 per cent.

It is interesting to compare total development expenditure with Plan outlay. During the first Plan period, Plan outlay was only 44.72 per cent of total development expenditure, the corresponding percentage for the second Plan being 57.92. Thus, the difference between Plan outlay and development expenditure is quite big, and it is hard to understand the connotation of "non-Plan development" expenditure. Figures in Table VI clearly reveal the fact that the distinction between "Plan outlay" and "development expenditure," as also the one between "total Central assistance" and "Central assistance for Plan projects" are uncalled for and warrant an immediate rethinking by the Finance Commission and the Planning Commission. As is evident from Tables VI, VII and VIII, many a reader may wonder why only a moiety of Plan outlay is shown as given by the Centre, while the actual assistance exceeds the total Plan outlay by almost 50 per cent! After all, the respective State Governments administer State development activity in entirety, and the distinction between "Plan and non-Plan" assistance actually hampers the discretion of State Cabinets.

The apportionment of Rs. 7,500 crores resources as between the Centre and States is given in Table VII. The fact that the bulk of Plan resources has to be found by the Centre is borne out by the latter having to find Rs. 6,038 crores and the States only Rs. 1,462 crores. The difference between the third Plan outlay by the States (Rs. 3,725 crores) and net resources (Rs. 1,462 crores) leaves a gap of Rs. 2,263 crores. According to Table VIII, State resources aggregate Rs. 1,416 crores, and Central assistance works out to Rs. 2,309 crores after allowing credit for Rs. 122.31 crores expected from local authorities. Central assistance which amounted to Rs. 160.1 crores in 1951-52 rose to Rs. 770.5 crores in 1960-61 and is put at Rs. 800.95 crores in 1961-62. There are slight differences in the figures given by the Planning Commission in different parts of the final third Plan, and such differences appear inevitably as among Tables VII, VIII and IX.

Collectively speaking, the States borrowed from the public Rs. 162 crores during 1951-56 and Rs. 358 crores during 1956-61, but the target is set at Rs. 325 crores for the third Plan. Obviously, the Government of India does not expect good response from the public under this head, thanks to the heavy burden of taxation. Under small savings, the States expect to play a prominent part with a target of Rs. 387 crores, the Centre's share being Rs. 213 crores. While under other heads, the States expect to make up only Rs. 826 crores out of the total Rs. 7,500 crores required, the target of Rs. 610 crores through additional taxation and bigger surpluses from public enterprises is certainly too ambitious, particularly in view of the State budgets expecting only Rs. 17.33 crores during 1961-62 under this head.

For 1961-62, the first year of the third Plan, among the fifteen States, ten State Governments made proposals for additional taxation in their budgets, the aggregate yield being estimated at Rs. 17.33 crores. State-wise, the yield expected was Rs. 5.21 crores for Uttar Pradesh, Rs. 3.0 crores for Madhya Pradesh, Rs. 2.13 crores for Kerala, Rs. 1.70 crore for Mysore, Rs. 1.35 crore for Rajasthan, Rs. 1.31 crore for Punjab, Rs. 1.0 crore for Maharashtra, Rs. 80 lakhs for Gujarat, Rs. 69 lakhs for Orissa and Rs. 14.5 lakhs for Assam. Two of these States, namely, Gujarat and Kerala, and also Madras announced some tax concessions. The concessions in the case of Kerala were estimated to cost Rs. 15 lakhs; the cost of concessions proposed by the other two States is not available.

While all the ten States proposing additional taxation resorted to stepping up the rates of existing taxation, only four States, namely, Kerala, Orissa, Gujarat and Maharashtra proposed new levies. Kerala proposed a tax on new buildings and a sales tax on foodgrains, Orissa a tax on passenger fares and freight on goods carried by public carriers, and Gujarat and Maharashtra a sales tax on kerosene. Kerala also proposed an additional land tax and Mysore a surcharge on land revenue. As regards enhancement of existing rates, increases were envisaged in sales tax, tax on passenger fares, a tax on motor spirit and entertainment duties. While most of the States proposed increases in the general sales tax, enhancement of tax on passenger fares was proposed by Gujarat, Maharashtra and Rajasthan. The States which announced an increase in sales tax on motor spirit were Assam, Gujarat and Orissa. Four States, namely, Gujarat, Madhya Pradesh, Punjab and Rajasthan proposed to raise entertainment duties. In the case of Uttar Pradesh, which accounts for nearly one-third (Rs. 5.2 crores) of the estimated additional revenue (Rs. 17.3 crores) of all States from the tax proposals, the major part was expected to be raised through the withdrawal of rebate in irrigation rates.

Even with greater vigour after the General Elections in 1962, the chances are that the States may fall far short of the target and the shortfall would have to be found through additional Central assistance. The predominant reason for such failures is that, in actual practice, incentives have been taken away by the Centre and "yes-men" are more and more filling up the ranks of Ministries in States. In States like West Bengal and the Punjab, initiative is growing up, as can be seen from Table XI according to which the Plan outlay differs widely, as approved by the Planning Commission and as adopted by the States. The respective figures are: West Bengal Rs. 250.00 crores and Rs. 346.00 crores, and the Punjab Rs. 231.00 crores and Rs. 298.99 crores.

Table VIII details the proportion of Central assistance to Plan outlay in the States individually. While the collective percentage works out to 60.02, the assistance to individual States ranges from 48.08 for Gujarat to 82.67 for Jammu and Kashmir. In Uttar Pradesh, Central assistance is set at 74.22, while the figure for Orissa is 82.50. Even after the reorganisation of States in 1956, they differ widely in area, population, potential resources and *per capita* income. As such, it would not be incorrect to adjudge the incidence of Central assistance by arithmetical percentages. Regional balance has been accepted as desirable, but the actual figures lead to the fear that personal influence operates much more effectively than socio-economic requirements.

In a brief note like this, it would be impossible to deal with all the fifteen States and observe comparisons and contrasts. But as specimens, the resources of two backward and two forward States are given in Table IX. A noteworthy feature is that U.P. is having the biggest Plan, accompanied by specially liberal Central assistance. In all the four cases, Plan resources at present rates are quite small, and the brunt of outlay is proposed to be met out of additional taxation and increased surpluses in public enterprises. The proportion of additional taxation to total Plan resources is 43.08 per cent collectively, the percentage figure for individual States being 48.48 for Assam, 44.55 for Madras, 82.14 for Orissa and 74.15 for Uttar Pradesh. Madras is strong in net contribution by public enterprises (Rs. 35.1 crores), while U.P. promises well with regard to small savings (Rs. 50 crores). Again, Madras expects to fare well in loans from the public (Rs. 52.9 crores), while, with regard to unfunded debt, U.P. leads with Rs. 17.3 crores.

Tables IX and X contain details of Plan outlay as between the Centre and the States, and as between the second and third Plans. As already mentioned, agriculture (including irrigation and power) takes away 90.32 per cent of total expenditure on the item by the States in the third Plan. As between the second and third Plans, the percentage increase in Plan outlay is 116.03 on agriculture and community development, 90.78 on irrigation and power and 86.10 on social services. The other items are to be attended to predominantly by the Central Government. On the whole, the third Plan outlay by the States will be 84.79 per cent higher than the second Plan figure. This increase will vary from 84.79 to 90.67 per cent according as the second Plan outlay is taken at Rs. 2,082.56 crores (Table X) or Rs. 2,103.16 crores (Table XI).

Table XI is a comparative statement showing the second Plan outlay target and actual outlay, and the third Plan target according to the Planning Commission, and State budget. The third Plan outlay target for the States is Rs. 3,725 crores, which will be higher at Rs. 3,847.31 crores, if the contribution of Rs. 122.31 crores by local authorities is included. In case some projects executed by the States for the Centre, and some "non-Plan projects" are included (this has been done in State budgets), the third Plan outlay by the States amounts to Rs. 4,009.89 crores. Relevant footnotes to Table XI explain the difference. As between the second and third Plans, Plan outlays vary between 136.00 per cent (Rajasthan) and 56.39 per cent (Madras). The States having more than 100 per cent increase in outlay between the second and third Plans are Rajasthan (136), Jammu and Kashmir (127.27), Assam (126.41), West Bengal (123.23) and U.P. (112.39), and then there is a steep drop to 96.05 per cent in the Punjab. As referred to earlier, there are big differences between the Planning Commission and State budget figures with regard to third Plan outlay in the case of West Bengal (+Rs. 96 crores) and the Punjab (+Rs. 67.99 crores). These additional outlays are apparently not approved by the Planning Commission, but included by the respective State Governments.

As in the case of Plan resources, Plan outlays are shown for two backward and two forward States in Table XII. Here again, even after allowing the due margin for bigger population, earlier start, richer resources and more efficient manpower, the impression cannot be brushed aside that Uttar Pradesh excels in Plan activity, and considerations of backwardness should have persuaded the authorities to allot larger outlays for States like Assam, Orissa, Madhya Pradesh and Kerala. In such matters, any mathematical formula is not conceivable, and flexibility is a virtue upheld in the third Plan.

Pious Devotee Or Suspicious Donor?

During the negotiations that preceded the final third Plan, the Governments of Maharashtra and West Bengal in particular, and other States in general, expressed a much higher level of self-confidence than while formulating the second Plan. In the allocation of outlays, the third Plan gives a more important position to States than on previous occasions. In spite of this, it cannot be denied that the general psychology of the Planning Commission is still that of suspicious donor, not of a pious devotee. Time and again, the Planning Commission assumes almost a monopoly of wisdom and it is not infrequent that concern is expressed about the inability of the States to exploit their respective resources and to utilise them economically and effectively. Provision of foreign exchange is agreed to very rarely in the case of State projects and every State Plan project is subjected to administrative sanction by the Planning Commission, resulting in effect in the Planning Commission functioning as a super-Cabinet, almost every week deepening a sense of frustration among the State Cabinets and throwing cold water on their enthusiasm and initiative. Undue delays in disposing of files is common in Yojana Bhavan.

Faith in democracy is a variety of fatalism, but magnificent, with no conceivable alternative. But this general trend has been and is being somewhat blocked by a species of brown colonialism exercised by the Planning Commission. As the Prime Minister declared again and again, if village *panchayats* commit mistakes, it does not matter. They will learn by trial and error. This argument should apply with much greater force to the functioning of State Governments as the hubs of Plan mechanisms. The establishment of State Planning Commissions is overdue, and the sooner the central Planning Commission voluntarily confines itself to advice and co-ordination, the better the auspices for Plan prosperity. Tables in this note testify to the comparative bankruptcy of State Governments, and the trend may become worse during the third and fourth Plans on account of worsening cost inflation, unless a policy of healthy devolution of powers to States is decided immediately and implemented loyally.

(Concluded)

TABLE XII—*Third Plan Outlay: Assam, Madras, Orissa and U.P.*

(In crores of Rs.)

	Assam	Madras	Orissa	U.P.
Agricultural programme ..	12.62	36.98	17.22	32.82

Total ..	1,416.00*	2,431.31†	3,847.31‡	63.20‡ (60.02%*)

*This figure differs from Rs. 1,462 crores listed in the third Plan Final Report (page 100).

†This includes Rs. 122.31 crores contributed by local authorities. Net assistance by the Centre works at Rs. 2,309.00 crores, for the statewise break-up of which information is not available.

‡The financial provision of Rs. 7,500 crores apart, the third Plan has been put at Rs. 8,098.53 crores in physical terms, Rs. 3,847.31 crores by the States and Rs. 4,251.22 crores by the Centre.

‡According to the Planning Commission, out of Rs. 3,725 crores financial outlay by State Governments, Rs. 1,350 crores should be found by State Governments and Rs. 2,375 crores by the Central Government, the percentage of Central assistance working at 63.73. But according to the final third Plan, State resources aggregate to Rs. 1,416 crores, the upward difference being Rs. 66 crores.

THE INDIAN BANK

(ESTABLISHED

Registered Office: INDIAN CHAMBER

DIRECTORS'

(To be submitted to the Shareholders of the Bank at the Fifty-fifth Annual General Meeting

The Directors have the pleasure to submit the Balance Sheet and the Profit and Loss Account of the Bank for the year ended 31st December 1961. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 40,87,400.18 and together with the sum of Rs. 1,36,236.07 carried from the previous year's account, makes a total of Rs. 41,73,636.25.

3. Out of this sum, the Directors have made the following interim appropriations :—

	Rs. nP
An ad-interim dividend at the rate of 5 per cent. and a Bonus of 2½ per cent. (subject to deduction of tax at the prescribed rates) was paid which absorbed	6,22,500.00
Transferred to Sinking Fund	3,00,000.00

The Directors now recommend that the following further appropriations may be made :

To pay a final dividend of 5 per cent. and a Bonus of 2½ per cent. (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15 per cent.	6,22,500.00
To transfer to the Reserve Fund other than under Section 17 of the Banking Companies Act, 1949	5,00,000.00
To provision for taxes	18,25,000.00
To transfer to Gratuity Fund	1,25,000.00
To transfer to buildings account	30,000.00
To carry forward	1,48,636.25
	41,73,636.25

BUILDINGS, ESPLANADE, MADRAS-1.

REPORT

to be held at the Registered Office of the Bank on Wednesday the 25th April, 1962, at 4 p.m.)

4. The Bank rate remained unchanged at 4 per cent.

5. An Office of the Bank was opened at Jamshedpur (Bihar) during the year.

6. By Order of the Central Government under Section 45 of the Banking Companies Act, the Rayalaseema Bank Ltd., was amalgamated with the Bank as from the 1st September, 1961. From that date, the branches of the Rayalaseema Bank Ltd., at Anantapur and Bellary are functioning as branches of the Bank.

7. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Section 256 of the Companies Act, 1956, Directors, Dr. Rajah Sir M. A. Muthiah Chettiar of Chettinad, Sri O. M. SP. L. M. Meyyappa Chettiar, Sri Ramdoss Purushothamdoss and Sri T. Chengalvaroyan retire this year by rotation and they being eligible, offer themselves for re-election.

8. Sri T. Chengalvaroyan resigned his seat on the Board on 3rd November, 1961. In his place Dr. P. V. Rajamannar, D.Litt., LL.D., Chief Justice of Madras (Retired) was co-opted as a Director. Sri C. Ramasubban resigned his seat on the Board on 15th December, 1961. In his place Sri T. Chengalvaroyan was co-opted as a Director.

9. The Directors regret to report the sad demise of Rao Sahib E. M. Muthappa Chettiar, Director of the Bank, on 31st December, 1961. Sri A. Nagappa Chettiar, Industrialist and Exporter, was co-opted in his place.

10. The Directors desire to record their high appreciation of the valuable services rendered by Sri C. Ramasubban and Rao Sahib E. M. Muthappa Chettiar to the Bank as Directors.

We have audited the above Balance Sheet of The Indian Bank Limited as at 31st December 1961 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in Malaya, and Singapore, the accounts of which were audited by auditors qualified under the laws of those countries. We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;

(b) Such information and explanations have been found to be satisfactory;

(c) The reports on the accounts of the branches in Malaya and Singapore audited by the other Auditor have been taken into consideration in making this report;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required, subject to the note appended to the Balance Sheet;

(f) In our opinion,

(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1961,

(ii) the Profit and Loss Account gives a true and fair view of the Profit and Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and

(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and returns.

BENGAL COAL COMPANY LIMITED

REALISTIC REORIENTATION OF PRICE POLICY URGED

CHAIRMAN, MR. A. D. OGILVIE'S STATEMENT

THE coal industry's problems pertaining to transport, power supply and prices are yet to be satisfactorily solved. Unless they are tackled with a sense of urgency, it will be difficult for the industry to achieve its target of production under the third Plan. Mr. A. D. Ogilvie, Chairman of the Bengal Coal Company Limited, has, therefore, done well in dealing with them and offering some constructive suggestions for their solution. The following is the full text of Mr. Ogilvie's statement:

"I have pleasure in reporting to the members of The Bengal Coal Company, Ltd., on the operations of their Company during the year ended 31st October, 1961.

The Year's Results

"Although sales of coal have shown a substantial increase of Rs. 61 lakhs to Rs. 7½ crores, ever-increasing costs have resulted in reduced profits; and this is a problem which, of course, affects the entire coal industry. The gross profit of the Company for the year would in fact have been considerably lower had it not been for the financial assistance receivable in respect of the operation of deep, gassy and difficult mines: this assistance was sanctioned by the Government in February, 1960, to take effect as from 1st September of that year, and in the accounts under review full credit has been taken for the subsidy due for the 14-month period to 31st October, 1961. However, we are only now receiving actual payments in respect of the first quarter of 1961, and I trust that these payments will be accelerated in accordance with recent assurances received from the Government.

"The Board is recommending a final dividend of Rs. 13 per share less tax on the ordinary shares, making Rs. 21 per share less tax for the year. This represents a gross return of less than 6.6 per cent per annum on the capital employed in the Company. The total distribution now recommended on the ordinary capital as increased by last year's rights issue is approximately the same as that made in the previous two years on the smaller capital.

Production

"3,188,709 tonnes of coal were raised during the year—an increase of 92,196 tonnes; but this increase could have been much more substantial had it not been for the general shortage of power experienced in the coalfields and the insufficiency of rail transport. In addition, raisings have been hampered by the lack of essential spare parts for machinery and shortage of explosives. The difficulty arising out of the shortage of spares should be removed when the full benefit of the World Bank assistance is received; but our anxieties regarding explosives can only be lessened when import licences are issued regularly so that supplies are available in good time before the existing stocks are dangerously depleted. In regard to transport and power, the gravity of the present position is well known, and I can only stress the vital necessity of overcoming these two problems if the country is to increase its annual coal production from the current level of under 60 million tonnes to the required figure of at least 97 million tonnes by the end of the third Plan.

Transport

"Whilst our coal stocks at the end of October, 1961, had decreased to a certain extent, stocks again rose in the early months of the current year and this affected production at certain mines. Nevertheless, the position would have been far more serious had not we and consumers taken full advantage of road transport. The lorry weighbridge at Poidih colliery referred to last year has been well utilised, and consideration is being given to the necessity for installing additional weighbridges. It is, however, the contention of the industry and of consumers that planning must be on the basis of all coal being transported by rail, with road transport only supplementing the capacity during peak periods.

"The alterations and extensions to the Parbelia siding have been completed, and I would like to acknowledge the co-operation which we have received from both the Eastern and South Eastern Railways during the year in attending to such matters at our collieries.

Power Supply

"In my predecessor's review last year, considerable reference was made to the necessity for forward planning to assess and meet the demands for power supply. The serious concern which was expressed twelve months ago has unfortunately been fully substantiated by our actual experience since then.

"With generating plant in the coalfields being inadequate to meet demand, there have been during the year a number of restrictions in power supply which have affected coal production.

"I need hardly stress the critical position from the point of view of safety which might arise as a result of such restrictions when electrically operated ventilation fans and winding engines cannot be worked.

"The fact has to be faced that electrical energy is not available for the new motors and machines which we intended to install. So serious is the position that we have decided to install steam winders and fans for certain of our new shafts, even though such steam-operated plant is considered outmoded in other parts of the world: this decision has, however, been forced upon us as a practical necessity, since there is little use in our continuing to obtain large electric motors for which there is no power available.

Sandstowing

"The quantum of sand stowed at our collieries was increased still further to over 1,200,000 tonnes during the year under review. It has always been the Company's policy to give every attention to sandstowing underground, in the interests of both conservation and safety: we now have sandstowing installations at six collieries, and during the current year it is hoped to bring into use two new installations. It is, however, most disappointing that, in spite of assurances received to the effect that full reimbursement of sandstowing costs will be given as far as possible, the net loss to the Company under this heading has more than doubled from the previous year's figure of about Rs. 6 lakhs to a new level of over Rs. 13 lakhs. Since stowing is being undertaken in the interests of all, surely it is not reasonable that the Company should have to bear a loss of this magnitude.

Prices

"Representatives of the coal industry have referred in recent weeks at considerable length to the debilitating effect which the present restrictive price policy is having on the health of the industry. Detailed figures, establishing the extent to which enhanced operating costs still remain to be neutralised, have been made available to the Government. In addition to these specific claims for neutralisation, the broad price policy still denies to the industry the ability to plough back adequate funds for capital expenditure, to attract new investment, and generally to instil into its economy the vitality which is so necessary if it is to discharge the heavy responsibility for production placed upon it in the third Plan.

"Both the importance and the urgency of the price question are manifest, and it is hoped that a reorientation of policy on more realistic lines will soon be forthcoming so as to afford some real relief to the industry.

The Third Plan

"Private enterprise in the coal industry has been given the task of increasing its level of raisings by at least 17 million tonnes during the course of the third Plan. Within this framework your Company's plans have been drawn up on the basis of attaining by the end of the Plan an annual production of at least 4 million tonnes, representing an increase of more than 33 per cent over the level of raisings at the commencement of the Plan. In considering this target it must be remembered that this expansion represents the net increase after absorbing any fall in raisings at individual collieries. For instance, one of our largest mines, Banksimula 11 and 12 pits colliery, will have exhausted two of its seams during the next 12 months or so, and the resultant loss in production amounting to at least 250,000 tonnes per annum will have to be made good from other workings before we continue on the way of attaining our new targets. Our eagerness to subscribe fully to the great expansion envisaged in the third Plan is reflected in our plans to avail very substantially of the assistance being furnished initially by the World Bank for the import of plant and machinery.

"We have plans for stepping up production to a great extent at our existing collieries, particularly at Parbelia, Chinakuri and at Girimint, all of which are producing the much required selected grades of coal; and the completion of the new sandstowing ropeway at Chanch colliery will result in greater output of high grade coking coal.

New Developments

"In the Murulidih property which has been worked for many years, deep shafts are now being sunk to increase substantially the output of coal from this area. Whilst the full benefit of this new project will not be felt until after the end of the current Plan, it is anticipated that a fair level of production of coking coal will be attained by 1965. Our second new development is at Kunustoria, where some shallow workings were undertaken some years ago. Here we are sinking new shafts through which we hope to start raising coal during the course of the next year.

"Over Rs. 1 crore is being spent on these two large projects, and this is a measure of the faith we have in the future, notwithstanding the many existing problems.

Labour and Welfare

"I am glad to be able to report continued satisfactory relations with our labour. For the coal industry as a whole, however, a Wage Board has been set up and is expected to commence its deliberations shortly.

"The construction of new quarters, the installation of water-supply schemes and our programmes for welfare measures have proceeded, even though the actual rate of progress has not been quite as satisfactory as we might have wished; the various shortages of materials, particularly cement, have impeded our efforts to a great extent. However, during the year work was completed on a new sports stadium which will be of considerable value to our labour force in the Poniati area, which will be using this for athletics, football matches and other sport. In February of this year I attended the All-India Coalfields Sports which were held at our stadium in the presence of the Governor of West Bengal; it was a stimulating occasion and the large crowd of many thousands of spectators bore adequate testimony to our employees' enjoyment of these recreational activities.

"It is of interest to note that, in addition to the very large labour force employed at our collieries directly for mining and despatching coal, we also provide permanent work for about 2,400 people who are engaged in operating and maintaining the various departments covering medical, welfare, water-supply, road maintenance, etc.

Staff

"I would like to thank the staff in our coalfields organisation for their support to the Company during the past year. Quite apart from the increased complexity of mining problems, our staff at all levels have to deal with exacting matters relating to labour, legal and other affairs connected with the Company's operations. I wish to express to Mr. F. G. Massmann, our Chief Mining Engineer, and to all other members of the coalfields staff, our deep appreciation of their fine work."

CANARA BANK LIMITED

CHAIRMAN, MR. A. D. PAI'S SPEECH AT ANNUAL MEETING

BANKS NEED INCENTIVES TO BUILD UP INNER RESERVES

THE hope that, in the context of increasing costs, the banks will be provided with appropriate incentives to build up their inner reserves was expressed by Mr. A. D. Pai, Chairman of the Canara Bank Limited, when he addressed the Fifty-sixth Ordinary General Meeting of the Bank held at Mangalore on 22nd March, 1962. Mr. Pai referred to the Inter-bank Agreement on Deposit Rates and explained how the middle-sized banks were virtually sandwiched between big and small banks, the former having the advantage of their size and prestige and the latter of higher rates of interest. He pointed out that the middle-sized banks would have done better if they had the latitude to offer a slightly higher rate. In this connection, he welcomed the appointment of a committee by the Indian Banks Association for examining the question of having a middle category under the Agreement and hoped that the Committee would find a way of resolving the tangle and bringing about an equitable solution necessary for the speedy growth of banking in the country.

The following is the full text of Mr. Pai's speech:

"I have great pleasure in welcoming you to this fifty-sixth annual general meeting of your Bank. The Bank's 56th annual report, balance-sheet as at 31st December 1961, and profit and loss account are already with you for sometime now. I ask your permission to take them as read.

Year of Progress

"1961 has been a year of progress in all spheres of working of your Bank. Against a 4.73 per cent increase in the aggregate deposit liabilities of all scheduled banks, deposits of your Bank have increased by 21.87 per cent, from Rs. 30.82 crores to Rs. 37.56 crores. Last year, the percentage increase was 6.53 per cent.

"Unlike 1960 when time deposits registered a fall, there is a notable increase of 22.31 per cent this year. Current deposits improved by 13.24 per cent, as against last year's 22.90 per cent. Savings bank deposits from Rs. 5.64 crores to Rs. 7.71 crores have shown a heartening increase of 36.70 per cent, as against 30.56 per cent in 1960.

"Substantial increases under savings bank deposits, which is a trend seen in the deposit composition of scheduled banks as well, is a healthy sign. It denotes growth of the banking habit, the emergence of a new class of savers who appreciate good service, simplicity and convenience in banking operations. These depositors have been the backbone of the banking industry and have an important role to play in the developmental activity in the country. Your Bank devotes particular attention to this class of depositors. Small savers, salary and wage-earners are encouraged to open savings bank accounts and attention is paid to prompt service over the counters. In addition to the free transfer facilities previously provided by your Bank to students and charitable institutions, free mail transfers up to Rs. 1,000 per day and facility of making upto 100 withdrawals in a year at the discretion and convenience of the customer are now offered to all savings bank depositors.

Advances and Investments

"Including bills purchased and discounted, advances of your Bank increased by Rs. 3.76 crores or 22.61 per cent during the year (last year 4.72 per cent) and stood at Rs. 20.39 crores. This year's growth also is marked by increased lending for industrial purposes, in keeping with the needs of the times, and a diversification in credit which is a traditional feature of your Bank's advances. A favourable ratio of advances to deposits was kept throughout the year the average, maximum and minimum percentages being 55.2, 60.2, and 49.2, respectively. The corresponding ratio for all scheduled banks ranged between 66 per cent and 79 per cent. Proportion of our secured advances to total advances continues to be high, being 79.79 per cent at this balance-sheet, as against 76.80 per cent and 82.26 per cent, respectively, at the end of 1959 and 1960. Investments which stood at Rs. 10.22 crores at the end of 1960 have increased to Rs. 14.38 crores and constitute 38 per cent of deposits (last year 33 per cent), making for a high liquidity position as usual. During the first nine months of 1960, the Gilt-edged market continued to be dull, while, with the introduction by the Reserve Bank of the three-tier rate for advances to scheduled banks, the securities market became still less active and sometimes even listless. I am happy to state that, despite these features, the market value of your Bank's holdings as on 31st December 1961 was higher than the book value by Rs. 5.60 lakhs.

Earnings, Expenditure and Net Profits

"The gross income of your Bank increased during the year from Rs. 1.73 crore to Rs. 1.97 crore, that is, by 14 per cent, as against a 10 per cent increase in 1960. The net profits of the Bank after providing for taxation amount to Rs. 21.24 lakhs, as against Rs. 12.65 lakhs last year. The percentage of total earnings to total deposits, which is 5.24 per cent (last year 5.58 per cent), is to be considered satisfactory when viewed against the sizable increase in deposits during the year and the comparatively lesser utilisation of these growing funds for advances in an endeavour to maintain our traditional liquidity.

Transfers To Reserves

"The year 1961 witnessed welcome trends in the direction of strengthening the banking structure in the country. The Deposit Insurance Corporation has come into being. It heralds greater assurance to smaller depositors who form the bulk of the depositing public. Again, the Reserve Bank, during the period under review, stressed the need for strengthening the capital funds base of banks and made a timely call to banks to aim at increasing capital funds to at least 6 per cent of total deposits by fresh issue of capital, calling up of uncalled capital and periodical transfers to reserve fund. Very rightly, the Reserve Bank has called upon banks to set up healthy conventions in this regard instead of the more drastic course of bringing about legislation.

"The Reserve Bank has also expressed approval of the general consensus that inner reserves of banks should be strengthened. It is to be hoped that, in the context of increasing costs facing the industry, banks will be provided incentives to build up their inner reserves.

"In full conformity with the Reserve Bank's advice to banks, your Bank is endeavouring to build up its capital funds-deposit ratio, which will no doubt greatly assist the increased future progress of your Bank. I may recall again, in this connection, that the fresh issue of equity capital of Rs. 25 lakhs made during the year met with subscriptions well in excess of the issue. I trust you will no doubt be pleased to note that, after the usual and necessary provisions including provision for income-tax and the proposed transfer of Rs. 6.70 lakhs to the reserve fund, your Bank's reserve fund, together with share premium, stands at Rs. 63 lakhs. Incidentally, I may mention that, as against a transfer of 20 per cent of profits after taxation expected of banks which works out to Rs. 4.25 lakhs in the case of your Bank, a transfer of Rs. 6.70 lakhs to the reserve fund has been recommended by your Board. After recommending a provision of Rs. 4 lakhs for bonus to staff and appropriation to the reserve fund referred to above, your Directors have recommended payment of equity dividend at 15 per cent subject to tax, that is, the same rate as during the last year.

Inter-Bank Agreement on Deposit Rates

"To a fair degree, the Inter-Bank Agreement on Deposit Rates has no doubt gone some way in eliminating unhealthy competition in deposit rates between banks. But it is becoming increasingly evident that the offering of the same rates by the big banks (with deposits of Rs. 100 crores and over) and by banks with deposits of over Rs. 25 crores and less than Rs. 100 crores hinders the growth of deposits of the latter group of banks who play a no less vital role in the economy of the country. These middle-sized banks are virtually sandwiched between the big and small banks.

"The big ones have the advantage of their size and prestige and the smaller banks of higher rates. The deposits of the middle group have no doubt increased, but figures reveal that the increases are vastly more in the few big banks; and middle-sized banks should have done better, if they had the latitude to offer a slightly higher rate.

"In this connection, the move by the Indian Banks' Association in setting up a committee to examine the question about setting up a middle category under the Agreement is greatly to be welcomed. We sincerely hope the Committee will find a way of resolving the tangle and of bringing about an equitable solution so necessary for the speedy growth of banking in the country.

Banks Taken Over and New Branches

"During the year 1961, your Bank took over four small banks, three in Kerala State, namely, the Bank of Kerala Ltd., Trivandrum, the Seasia Midland Bank Ltd., Alleppey, and the Trivandrum Permanent Bank Ltd., Trivandrum; and one in Andhra State, namely, the G. Raghunathmull Bank Ltd., Hyderabad.

"The easily realisable assets were sufficient to meet the deposit liabilities fully in the case of the Seasia Midland Bank Ltd. and the Trivandrum Permanent Bank Ltd., and partially in the case of the other two banks. Your Bank assiduously addressed itself immediately to the task of rehabilitating the affairs of these units.

"And it is a matter for gratification that considerable progress has attended our efforts in recovering a sizable portion of the sticky advances of the banks taken over. With this pace of progress, it may be possible to pay the depositors of the other two units to a larger extent than was expected initially.

"For training the staff absorbed from these banks, two training courses were conducted by the Staff Training School of your Bank, one at Trivandrum and another at Hyderabad. In addition, the supervisory staff in these units are deputed for training in our methods at the administrative office at Bangalore and at our other bigger offices from time to time.

Expansion of Activity

"What is specially gratifying is that your Bank has met with spontaneous response of the public at all the 22 branches of the banks taken over and the surrounding areas, and a steady increase in business has been recorded in all these centres.

"Two regional offices of your Bank, one for Kerala at Trivandrum and another for Tamilnad at Madras, have been set up with experienced senior managers in charge for more effective co-ordination and development of business in these two regions.

"Your Bank's branches, including the nine new branches opened during the year detailed in the annual report, now number 115, as against 84 at the end of 1960. This substantial increase in the number of offices, area of operation and in the number of clients, coupled with the programme of branch expansion that your Bank has in view for 1962, augurs well for the accelerated growth of the Bank during the current year and in the years ahead.

"At the close of the year under review, the personnel of your Bank number 2,706, as against 2,002 and 1,679, respectively, at the end of 1960 and 1959. In 1961, one of our Branch Managers underwent a refresher course with Deutsche Bank Ltd., A. G. Hamburg. Three more Managers have been selected for training in West Germany this year. We are deeply grateful to these foreign bank friends for affording us these facilities.

"Shri K. Narasimha Shenoy of the Bank's G. N. Street, Madras Branch, a former General Secretary of the Canara Bank Employees' Union, was accorded duty leave by your Bank and proceeded as a nominee of the *Hind Mazdur Sabha* for study of labour administration, trade union work, etc., under the Foreign Specialist Trade Union Project of the United States Government.

"We are also availing of the opportunities for training afforded by the Bankers Training College of the Reserve Bank of India at Bombay.

"I thank our shareholders, constituents and staff for the co-operation they have extended during the year."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

THE CANARA INDUSTRIAL AND BANKING SYNDICATE LTD.

CHAIRMAN, DR. T. M. A. PAI'S STATEMENT

BANKING HAS TO EXPAND IF IT IS TO SURVIVE

IN banking, there was only one way, said Dr. T. M. A. Pai, Chairman of the Canara Industrial and Banking Syndicate Limited, in the course of his statement at the annual general meeting of the Bank held at Udipi on Saturday, 31st March 1962, and that was to go forward. Even a static condition without any growth in deposits was likely to react unfavourably on the economy of any bank in the face of mounting expenditure over establishment and other charges. The recent rise in the rates of interest on deposits was indicative of the anxiety of the banking system not to allow the surplus money in the hands of the people to flow into other sectors. This had added considerably to the cost of deposits, he stated, as this rise would ultimately affect the entire deposit structure. The fringe benefits that were now being offered to depositors every day in a competitive spirit by all the banks, he went on, showed the anxiety of banks for competition in service, which alone could help the growth of a bank in the face of agreed rates of interest on deposits.

The following is the full text of Dr. Pai's statement:

"Notable increases in deposits, loans and net earnings to new year-end high levels were the outstanding features of your Bank in the year 1961.

Deposits and Advances

"The total deposits of the Syndicate have increased from Rs. 18.87 crores to Rs. 24.63 crores, a rise of Rs. 5.76 crores, representing 30 per cent increase over the previous year's figures, as against 10.4 per cent rise last year. The number of deposit accounts have increased from 2,56,118 to 3,13,378 showing an increase of 57,260 accounts during the year. This represents an increase of 22 per cent in the number of accounts over the 1960 figures. The rise in deposits has notably been under time liabilities, the preponderance of which has continued in our deposit structure. The time deposits now form 69 per cent of our total deposits as against 67 per cent in 1960 and 68 per cent in 1959. The savings bank deposits have been steady at 17 per cent of the total deposits. Increasing efforts have been made to get a larger number of people to deal with the Bank through regular campaigns for savings bank accounts.

"The total advances including bills discounted stood on 31st December 1961 at Rs. 15.45 crores and were higher by Rs. 3.22 crores over the previous year's figures, representing a rise of 26 per cent. As in previous years, the total advances were about 60 per cent of the aggregate capital, reserves and deposits of the Bank. Secured advances formed 86 per cent of the total advances. While investments in Government Securities formed 31 per cent of the total deposits, advances formed nearly 62 per cent of the total deposits.

Earnings, Expenses and Dividends

"The gross earnings of the Bank have improved from Rs. 1.34 crores in 1960 to Rs. 1.57 crores in 1961, showing an increase of 17 per cent over the previous year's figures and reflect the higher earnings due to the improvement in advances by Rs. 3.22 crores and investments by Rs. 2.77 crores. Interest received on advances and investments and discount on bills discounted, together account for 91 per cent of the Bank's earnings as in 1960. The earnings under commission, exchange and brokerage were 16 per cent higher than in last year and constitute 6 per cent of the total gross earnings. There has been a welcome improvement under collection business handled by the Bank, as evidenced by the figures of bills receivable for collection and acceptances which amounted to Rs. 2.31 crores as on 31st December 1961, as against Rs. 1.85 crores as on 31st December 1960. The net earnings of the Bank which were at Rs. 32.10 lakhs for 1961 were higher than last year by Rs. 6.87 lakhs and amounted to 20 per cent of the gross earnings of the Bank. Interest paid on deposits and borrowings constitute 39 per cent of the gross income, the percentage being the same as in 1960. Establishment charges have taken up 30 per cent of the gross income as in 1960 and were 17 per cent higher than last year. Out of the net earnings of Rs. 32.10 lakhs for the year, 34 per cent amounting to Rs. 11 lakhs have been transferred to reserves and 20 per cent amounting to Rs. 6.53 lakhs is to be paid out as dividends to the shareholders. For payment of tax, an amount of Rs. 12.25 lakhs is set apart, which constitutes 38 per cent of the net income. The dividends payable to the shareholders as a percentage of the capital and reserves will be 6 per cent this year as against 7 per cent last year.

Capital and Reserves

"The advice of the Reserve Bank that the Banks should improve the capital and reserves structure to form at least 6 per cent of the total deposits, is timely. By transferring larger amounts to the reserves and increasing the paid-up capital of the Bank, your Directors are making every effort to improve the percentage for your Bank. From the profits of 1961, an amount of Rs. 11 lakhs has been transferred to the reserves of the Bank as against Rs. 7.5 lakhs last year. This will increase the reserves to Rs. 53,50,000 compared to the paid-up capital of Rs. 48,07,000 as on 31st December 1961. For the first time the Bank's reserves have exceeded the paid-up capital and the total of paid-up capital and reserves now exceeds Rs. 1 crore. Together with this, the capital of the Bank is also being increased and we propose shortly to come out with an issue of fresh capital of Rs. 50 lakhs which will be offered at a premium of 10 per cent to the existing shareholders. Necessary consent of the Controller of Capital Issues has been obtained for this. I am happy that the shareholders have also recently resolved to increase the authorised capital of the Bank to Rs. 2 crores from Rs. 1 crore to enable further increase in the capital structure, which it will no doubt be necessary to issue within a few years in the light of the phenomenal increase in deposits of the Bank in recent years. The various measures that are now being taken in the country to improve the structure of the banking system are to be particularly welcomed. Not only have banks been advised to transfer large amounts to their published reserves, but also build up secret reserves to provide additional strength in any time of stress and strain. Your Bank will endeavour always to do its best to build up these healthy traditions, consolidate its position and build up its strength from year to year.

"Another event which is of particular significance to depositors in the country is the formation of the Deposit Insurance Corporation, which has started functioning from 1st January 1962. Deposits of the Syndicate are covered by the insurance protection afforded by the Corporation.

New Branches

"The total number of branches of the Bank which was 141 as on 31st December 1960 has now improved to 159 with the taking over by us of some banks last year and the opening of new branches. The Bank has continued to place before itself the ideal of extension of banking facilities to towns not already served by banks, in the opening of new branches. We have opened branches at Javali, Siddapur, Ramadurga, and Gundlupet since January last year, all these being places not having any branches of scheduled banks.

Increase in Deposits

"I am glad that there is an increased awareness in the Indian banking system of the compelling need for extension of banking service not only to new areas, but larger sections of the society. Unless banks make a positive effort in reaching larger sections of the people to make them bank-minded and cover a larger sector of the unorganised money market in this country, we would not have done our duty for the country. In banking, there is only one way and that is to go forward and even a static condition without any growth in deposits is likely to react unfavourably on the economy of any bank in the face of mounting expenditure over establishment and other charges. The recent rise in the rates of interest on deposits is indicative of the anxiety of the banking system not to allow the surplus money in the hands of the people to flow into other sectors. This has added considerably to the cost of deposits, as this rise would ultimately affect the entire deposit structure. The fringe benefits that are now being offered every day in a competitive spirit by all the banks, show the anxiety of the banks for competition in service, which alone should help the growth of a bank in the face of agreed rates of interest on deposits. Your Directors have always felt that the progress of a bank should be judged not by the increase in deposits that a bank is able to have during the year, however important this factor is, but by the increasing number of accounts that a bank is able to add to itself. This attitude of ours has been able to help the Bank to increase the number of accounts both under deposits and borrowing accounts from 3,79,685 to 4,74,111 during the last year. While profits of the Indian banks as a whole have been good, the problems before each of us is to reduce the cost of service and pass on this benefit by the increased efficiency of the system to the clientele.

Staff Training

"The Staff Training College established by the Bank has continued to train young men and women joining our services, so as to equip them with the necessary banking knowledge and inculcate in them a spirit of service, for which very great attention is paid. The total number of the employees of the Bank increased during the year from 1,606 in 1960 to 1,933 in 1961. The training of officers is also receiving attention of your Directors and a special scheme of training is now in hand for training of young men for responsible positions at our offices.

Amalgamations

"During the year, under Section 45 of the Banking Companies Act, we were asked by the Reserve Bank of India to take over the Catholic Bank Ltd., Pie Money Bank Ltd., Mulki Bank Ltd. and the Peoples Bank Ltd. In the case of the first three we were able to pay back 100 per cent of the deposits. In the last case, we are sorry, it was not possible for us to offer more than 40 per cent of the total deposits back, though efforts are now being made to improve this figure. A number of proposals for voluntary amalgamations are before us and within a month or two, some of them might be finalised. We are happy, we have been able to absorb these units with ourselves with the least friction and with maximum advantage.

"We are also happy that the Indian Banks' Association proposed to have a convention early this year, where all aspects of Indian banking could be considered. There is a great deal to do together, not only to standardise ourselves, but arrive at an understanding which would help us to achieve the goal of widespread banking in this country.

Inter-Bank Agreement

"Our Bank has been a party to the Inter-bank Agreement with regard to interest rates on deposits. It is indisputable that this agreement among banks has led to healthy traditions being built up. The agreement has been working quite satisfactorily and has stopped the unhealthy practice among banks to secure each other's deposits, by offering higher rates of interest. The recent move among the Indian banks to have an agreement in the matter of rates of interest charged by them on different types of advances is again a step in the right direction, as it is but proper that people all over the country pay the same charges and interest for the money borrowed by them for their trade or industries. A well-knit and well developed banking system must be able to render its services, whether in the matter of accepting of deposits or making advances or collection of bills at fairly the same rates all over the country.

Third Plan

"The third Five-year Plan is now on the anvil and the country's economy must gear itself up to the great size and the potentials of the Plan, if the targets and expectations of the Plan are to be realised. The vast size of the Plan involving an outlay of over Rs. 10,000 crores should bring about great economic prosperity and industrial and agricultural progress during the next five years and it is upto us to see that every co-operation is given in the matter and no effort spared in the great task before us. The banking institutions in the country have to play a most essential and useful role in the financing of the large number of new small industries that are now coming up in the country as ancillary to basic industries and in providing agriculture with the necessary funds for bringing new land into cultivation, so that proper use may be made by the private sector of what the public sector provides. The schemes of the Reserve Bank in the matter of financing of small-scale industries and of the Refinance Corporation, illustrate as to how the Central Bank can assist banks in financing such industrial ventures and contributing to greater production. It is necessary that banks should come forward to avail of these facilities offered by the Reserve Bank and take greater interest in contributing to national development.

"You are no doubt aware that I have retired from the office of Managing Directorship of the Bank in November 1961 and Sri T. A. Pai who was the Deputy Chief Officer has been appointed by the Board as Managing Director in my place. With his characteristic zeal, spirit of service and great ability, I am sure the Bank will continue to make great progress under his stewardship in the years to come.

"I wish to express my sincere thanks to our valued customers for their continued patronage and to the Bank's Directors and shareholders for their enthusiastic co-operation, I am deeply appreciative of the services of Sri T. A. Pai, the Managing Director and the continued hard work and co-operation of the employees during the year. I am confident that with their enthusiasm and continued support, the Syndicate will reach yet another landmark in the coming year."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

NEW ADVANCES IN ATOMS FOR PEACE

A special report, issued by the U.S. Atomic Energy Commission, Washington, summarises new advances in the use of the atom for peace. The 333-page report covers AEC-sponsored research work for the year ended 30th June 1961. It contains a number of previously unreported advances. "The increasing benefits," the Commission says, "cover an ever-broadening range as the versatility of the atom's inherent energy continues to amaze scientist and layman alike." Examples of advances include: (a) successful experiments in sterilising by radiation the larvæ of the cotton boll weevil that could lead to its eradication; (b) testing a form of uranium that acts as both fuel and a thermocouple in an atomic reactor to produce electricity directly; (c) development of a tiny radiation detection that is inserted into the heart to diagnose and pinpoint disorders. Other developments noted include:

New techniques that have improved surgeons' use of radioiodine to trace cancer that has spread from a thyroid cancer and so assist in removing diseased tissue. Through comparative measurements of radioactivity picked up in space by an American satellite and of radioactivity in meteorities found on earth, scientists are estimating the original size of meteors; most of a meteor is burnt up in the earth's atmosphere before striking earth.

An ultrasonic senior device that accurately determines the level of water in very "hot" nuclear reactors, a factor which has a strong bearing on safe operation of reactors using water as a coolant.

VITAMIN 'C' PROJECT

The Government of India has approved a scheme for the production of Vitamin 'C' to be undertaken by the Hindustan Antibiotics Ltd., Pimpri, a public sector undertaking. The project, which is estimated to cost Rs. 60 lakhs, of which Rs. 33 lakhs will be required for import of capital equipment, will manufacture 48 tons of Vitamin 'C' annually. A special feature of this project is that the entire cost will be met by the Hindustan Antibiotics Ltd. from its own resources.

The scheme is based on the processes and research developed in the National Chemical Laboratory, Poona. The starting material would be *sorbitol*, which will have to be imported in the initial stages. The National Chemical Laboratory is working on a process for the indigenous production of sorbitol from glucose. Experiments on laboratory scale for conversion of glucose into sorbitol have been completed at the Laboratory and it is hoped that even before the Vitamin 'C' plant is installed at Pimpri, pilot plant trials for the conversion of glucose to sorbitol would have been completed. In that case, even initial imports of sorbitol will be dispensed with and the product manufactured from the indigenous glucose.

INDIA SUGARS AND REFINERIES LTD.

SPEECH OF CHAIRMAN, MR. RAJESHWARA PATEL

MORE EXPORTS AND HIGHER INTERNAL CONSUMPTION OF SUGAR IMPERATIVE

THE view that the only solution to the problem of sugar surplus lay in the rapid development of export market was reiterated by Mr. Rajeshwara Patel, M.P., Chairman of the India Sugars and Refineries Ltd., when he addressed the shareholders of the Company at their Twenty-eighth Annual General Meeting held at Hospet on Saturday, 31st March 1962. Exports of about 600,000 tons of sugar, Mr. Rajeshwara Patel declared, would enable the industry to function satisfactorily with its present installed capacity. He also urged that, along with efforts to export more, ways and means would have to be devised for bringing about a steady increase in internal consumption also.

The following is the full text of Mr. Rajeshwara Patel's speech:

"GENTLEMEN,

"Before commencing the proceedings of the meeting, it is my melancholy duty to convey to you the news of the sad demise of our Chairman, *Rukn-ul-mulk* S. Abdul Wajid, on 27th November 1961. He had been ailing for some considerable time and, even last year, his health did not allow him to participate in the annual meeting. As mentioned in the Directors' report, he had been associated with your Company from its very inception and for the last 20 years had been the Chairman of the Board. Personally, I moved with him in close intimacy during the last five years and, with every passing year, our friendship found fresh points of contact and concord. In his death, the Company has lost the services and guidance of a mature intellect and mellowed wisdom. I would now request you all to stand up and observe two minutes' silence as a mark of respect to the deceased.

Stocks Mount Up

"It gives me pleasure to welcome you to the twenty-eighth annual general meeting of this Company. The accounts for the year ended 30th September 1961 and the report of the Directors thereon have been in your hands for the statutory period and, with your permission, I shall take them as read. The results contained therein reflect the position that was forecast in my statement at the last annual general meeting, namely, that stocks at our factory would mount up due to the increase in the all-India sugar production.

"You will agree with me that our Company has done well during the year under review. The quantity of cane crushed and sugar produced during the year constitute a record for the factory. While the achievement, by itself, is gratifying, the immediate benefit was largely offset because of smaller releases of sugar. Now that decontrol has come in the wake of overproduction, with very uncertain prospects as to the size of exports, we are entering a period marked by unstable prices and selling pressure. Already the prices have indicated a steep fall and, unless they attain stability, the sugar industry would have to face very serious consequences.

Profit Not Much

"Again, with the falling prices of sugar, the industry has been asked to implement the recommendations of the Central Wage Board for Sugar Industry. Even so, your Company has been the first to adopt and give effect to the recommendations. Added to all these, with the increased cost on labour, stores and spares and also owing to the large carryover of stocks, interest and insurance charges on the large quantity, the profits for the year under review could not be spectacular. It is feared that continuance of these difficult conditions would not permit any better results the next year either.

Sugar Export

"As I mentioned in my statement last year, the only solution of the surplus position of sugar in the country lies in the rapid development of the export market. The little quantity of sugar we are exporting at the moment will not help the country in clearing all the surplus stocks. An outlet for about six lakh tons of sugar at least in the export market would enable the industry to function satisfactorily with its present installed capacity. Along with this effort to export more, ways and means will have to be devised for a steady increase in internal consumption also.

"It is a matter of some satisfaction that the Government, after all, have realised the dangers of overproduction and have decided upon certain measures to combat it. They have, for the time being, stayed the licences for new units to install fresh capacities. They have also put a ceiling to the production of sugar for the season of the existing units. But as we all know, the prosperity of the sugar industry would ultimately depend upon the maximum utilisation of its various by-products. Your Directors' attention has been drawn to this aspect of the problem and they have taken concrete steps to increase the manufacture of by-product like spirit and explore the possibility of better utilisation of bagasse also.

"The Government of India have issued a licence to a Bangalore firm for putting up a paper mill unit in our area. We have already been approached by this firm for concluding an arrangement to supply bagasse to the proposed paper mills and the paper mills would be responsible for supplying our factory with the necessary oil-fired boilers and the requisite oil fuel. No capital expenditure will be incurred by the Company as a result of this changeover. This matter is still in the stage of negotiation and no final decision has been reached so far.

Cane Cess

"Although it was not entirely unexpected, the validation of the Sugarcane Cess Act with retrospective effect has deprived the Company of the anticipated reimbursement of a substantial sum of money consequent on the Supreme Court's declaring the imposition of cess *ultra vires*. However, as indicated in the Directors' report, the matter is now being examined by the Company's legal advisers and the Directors would certainly take appropriate steps according to such legal advice.

"I am happy to inform you that the progress registered by your subsidiary company, the Salar Jung Sugar Mills Ltd., is even more substantial than the previous year. The steady way in which this unit is marching, we feel confident of its future financial stability. And this in turn would become a substantial source of revenue to your Company.

"Two of your Directors, Sarvashri Rajeshwara Patel, M.P., and O. V. Alagesan, M.P., retire under rotation as per Article 105 of the Articles of Association of the Company.

"I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. Finally, I desire to record our warm appreciation of the efficient and devoted work our officers, staff and workers have given you during the last year.

"I now formally move the adoption of the Directors' report and the audited accounts for the year ended 30th September 1961."

The Directors' report and the accounts for the year ended 30th September 1961 were adopted and a dividend on preference shares at 7½ per cent (subject to tax) as calculated in accordance with the Preference Share (Regulation of Dividends) Act, 1960 and a dividend on the ordinary shares at 10 per cent subject to deduction of income-tax were declared for the year ended 30th September 1961, payable on or after 16th April 1962.

Sri O. V. Alagesan and Sri Rajeshwara Patel were re-elected to the Board and the Auditors, Sarvashri R. Narasimhan of Bombay and M. S. Krishnaswami and Jagannathan of Madras, were reappointed.

Note:—*This does not purport to be a report of the proceedings of the general meeting.*

An allotment of 50,000 tons to India is made in the non-quota sugar authorised for purchase and import into the U.S. during the first six months of 1962. This follows the increase of 149,000 tons in the quantity of non-quota sugar authorised for purchase and import during the six months. An additional 25,105 tons still remain to be allocated. The 149,000 tons and the 25,105 tons represent the quantity of sugar authorised for import which was left uncommitted when the U.S. ceased sugar imports from Cuba.

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY, 1943)

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Nineteenth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1961.

The net profit for the year, after providing for taxes and for all known and anticipated charges, and including Rs. 1,46,870.98 brought forward from the previous account, amounts to .. .. Rs. 74,07,428 02

The Directors have transferred Rs. 30,00,000 to the Reserve Fund, Rs. 4,00,000 to the newly constituted Gratuity Trust Fund and provided Rs. 14,00,000 for bonus to staff. They now recommend the payment of a dividend at Rs. 6.00 per share, subject to deduction of tax, which will absorb Rs. 24,00,000, leaving an unappropriated balance of Rs. 2,07,428.02 to be carried forward.

The working of the Bank during the year was satisfactory with the deposits standing at a higher level than a year ago.

During the year branches of the Bank were opened at Dhanbad, Khairthal, Kozhikode, Ghatkopar Bombay), Dharamtalla Street (Calcutta), Kamlanagar (Delhi), Rourkela Bazar and Vikram University (Ujjain).

Having regard to the desirability of increasing the ratio of the paid-up capital and reserve fund to the deposits of the bank the Directors have decided to offer to the shareholders 200,000 shares forming part of the unissued capital of the bank for subscription in cash at a premium of Rs. 25 per share and call up in the first instance half the nominal amount of these shares together with premium. An application has been made to the Controller of Capital Issues for sanction of these proposals and necessary resolutions for giving effect to them will be submitted for your approval after receipt of his consent.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

The Directors retiring by rotation under Article 92 of the Bank's Articles of Association are Mr. M. L. Dahanukar, Mr. P. D. Himatsingka, Mr. A. C. Law and Mr. T. S. Rajam, who offer themselves for re-appointment. Mr. M. L. Dahanukar and Mr. P. D. Himatsingka have both attained the age of 72 years and special notices of resolutions for their re-appointment have been given in terms of Sections 190 and 281 of the Companies Act, 1956.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

On behalf of the Board,
G. D. BIRLA,
Chairman.

BOMBAY, *17th March*, 1962.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1961, and the Profit and Loss Account of the Bank for the year ended upon that date, annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that :

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE NIZAM SUGAR FACTORY LIMITED

MR. I. J. NAIDU ON SUGAR CRISIS

FINANCES OF INDUSTRY HEAVILY STRAINED BY STOCK ACCUMULATION

THE "severe crisis" through which the sugar industry has been passing was highlighted by Mr. I. J. Naidu, I.A.S., Chairman of the Nizam Sugar Factory Limited, in his speech at the Twenty-fourth Annual General Meeting of shareholders held at Hyderabad on Friday, 30th March 1962. Mr. Naidu pointed out that the belated announcement of the Government's decision to cut sugar production had created a problem to many factories that had already contracted as usual for the purchase of normal quantity of cane for crushing in the 1961-62 season. He also alluded to the removal of restrictions on inter-State movement of sugar. The result of this measure, he stated, was reflected in distress selling by some factories of whatever stocks they could dispose of, bringing down the selling price of sugar when the production cost was moving up on account of the implementation of the Wage Board's recommendations and export losses. He said that the large accumulation of stocks had caused a heavy strain on the financial resources of the sugar industry.

The following is the full text of Mr. Naidu's speech:

"I have great pleasure in extending to you a cordial welcome to the twenty-fourth annual general meeting of the Nizam Sugar Factory Limited. The Directors' report and the audited accounts for the year 1960-61, together with the comments of the Comptroller and Auditor General of India thereon under Section 619(4) of the Companies Act, 1956, have been in your hands for some time and, with your permission, I shall consider them as read.

Trends Reviewed

"I shall now briefly review the events that have taken place in the sugar industry since the last annual general meeting. The trend of increased production continued and, in the year 1960-61, production exceeded all previous records, touching a level of 29.8 lakh tons, as against 24.2 lakh tons during 1959-60 which was also a record till that year. This record production could mainly be attributed to the continued policy of the Government of providing incentives and increasing the crushing capacity of the industry. The area under the cane during this year touched a record figure of 57,34,000 acres, as compared with 52,20,000 acres of the last season, and, in terms of cane, the production touched a figure of 8,50,45,000 tons, as against 7,52,01,000 tons, that is, about 13.1 per cent increase over the last year's production. With a carryover of 5.4 lakh tons at the beginning of the season and a record production of 29.8 lakh tons, the sugar industry in the country was saddled with an unusually large stock of 35.2 lakh tons to be disposed of internally as well as in the foreign markets by exporting. Unfortunately the internal consumption has not kept pace with the rate of increased production but remains at about 20.5 lakh tons during the year. The export of sugar has not come up to expectations and about 1.00 lakh tons of sugar only have been exported, thus leaving about a carryover of 13.7 lakh tons at the beginning of 1961-62 season which, you will all agree, is a very huge carryover.

Fears Come True

"The fears expressed by the industry of a serious situation that would arise on account of large accumulation of sugar stocks have come true. The Government of India promulgated the Sugar (Regulation of Production) Ordinance 1961 on 29th September 1961, which has now become an Act, to curtail the sugar production this season by 10 per cent of last year's production, and any excess production over the quota fixed for each factory under this Act is subject to a levy of penal excise duty. The late announcement of the above restriction on production has created a problem to many factories who had already contracted as usual for purchase of normal quantity of cane for crushing in 1961-62 season.

"Further, with a view to affording facilities to factories to sell sugar in increased quantities, restrictions on inter-State movement of sugar were lifted, but control of releases of sugar for sale was retained. The result of this was reflected in distress selling by some factories of whatever stocks they could dispose of, bringing down the selling price of sugar when the production cost of sugar is moving up on account of the incidence of implementation of the Wage Board recommendations and export losses. There has not been any relief in the shape of liquidation of huge sugar stocks. The large accumulation of stocks has caused a heavy strain on the financial resources of the sugar industry. To sum up, the cumulative effect of these factors is that the sugar industry is now passing through a severe crisis.

Working of Factory

"I shall now proceed to review the working of your factory, which has also registered a record production. During the year under review, 6,48,916 tonnes of cane were crushed producing 65,219 tonnes of sugar with a recovery of 10.05 per cent, as against 4,99,670 tonnes (4,91,777 tons) of cane crushed producing 52,021 tonnes (51,199 tons) of sugar with a recovery of 10.41 per cent of the previous year. The factory commenced crushing operations on 7th of October 1960 and the season came to a close on 3rd June 1961. The duration of the season was 251 days which is longer by 37 days than in the previous year. This prolongation is due to the record crushing of 6,48,916 tonnes of cane which is an increase of 1,49,246 tonnes over the crushing of the previous ear. The output of sugar increased from 52,021 tonnes to 65,219.6 tonnes. The recovery has slightly fallen from 10.41 per cent to 10.05 per cent which is mainly due to the prolongation of the crushing season till 3rd June 1961. The factory farms produced and supplied 2,07,354 tonnes of cane, as against 2,28,009 tonnes (2,24,407 tons) in the previous year. The slight decrease in the production of cane on the farms is due to unfavourable climatic conditions.

"Your Company has made a gross profit of Rs. 81,33,275 for the year 1960-61, as against Rs. 1,11,65,834 of the previous year. Deducting Rs. 9,03,919 towards depreciation (including development rebate of Rs. 60,000), Rs. 90,484 for Managing Agency commission and Rs. 27,62,000 for taxation, the net profit is Rs. 43,76,872 which is less by Rs. 19,34,090 when compared to the net profit of Rs. 63,10,962 in the previous year. The decrease in profit this year is mainly due to (1) restricted releases of sugar for sale leading to large accumulation of stocks resulting in heavy loans and payment of increased interest, (2) slight fall in recovery percentage of sugar from cane on account of the season being continued till 3rd June 1961, (3) losses on export of sugar allotted to your Company, (4) additional expenditure on account of implementation of the recommendations of the Central Wage Board for Sugar Industry. There is nothing peculiar about the decline in profits of your Company, as it is the general experience of many sugar factories for reasons stated above.

"The sugar sales during the year aggregated 4,66,783 bags, as against the previous year's sale of 5,00,516 bags. Your Company has incurred loss to the tune of Rs. 23.72 lakhs on the export quota of 70,621 bags allotted to it.

"The minimum price of cane continued to be Re. 1.62 per maund of cane delivered at factory gate. This year also, your Directors have made a provision of Rs. 16,89,082 for extra price for cane at about Rs. 2.58 per tonne.

Dividend

"Your Directors have recommended payment of dividend on preference shares in terms of the Preference Shares (Regulation of Dividends) Act, 1960. Your Company has an income which is exempt from income-tax and, therefore, the grossing-up will be in the same proportion as the non-agricultural profit bears to the total profits of the Company. As per this, this year, the percentage of grossing-up is 23.87. Dividends on preference shares were paid to the shareholders by 31st of December 1961.

"In the case of ordinary shares, the dividend has been recommended at Rs. 5.75 per share of Rs. 25 fully paid, subject to deduction of tax. I am glad to say that the Company has maintained the same rate of dividend as paid during the previous year despite a decrease in profit.

"I am glad to inform you that the expansion scheme of increasing the crushing capacity of both the plants by 1,000 tons launched by your Company a few years back has now been completed and the expanded plant has gone into production this season. The rated crushing capacity of both the mills after expansion is 4,200 tons per day and we are hoping to achieve it fully at the earliest.

Production Quota

"Now I shall deal with the fixation of production quota for 1961-62 season for your factory. The Central Government promulgated the Sugar (Regulation of Production) Ordinance 1961 on 29th September 1961, which has now become an Act, for the regulation of production of sugar in 1961-62 crushing season. This Act came into force on the first day of November 1961. In exercise of the powers conferred by Section 7 of the above Ordinance, the Ministry of Food and Agriculture has made Rules and in terms of which, the production quota for each factory is fixed at 90 per cent of the sugar produced by it during the year 1959-60 or 1960-61 whichever is higher. In the case of your factory which has been granted a licence under the Industries (Development and Regulation) Act 1951, for effecting substantial expansion in its working capacity, but which for any reason was not able upto the close of the year 1960-61 to effect such expansion, it is entitled to a further quantity in terms of Section 3(b) of the rules made under the said Act.

"Before the Ordinance restricting production to 90 per cent of the previous year's production was promulgated your Company had already contracted cane in the normal course to the extent of nearly 7 lakh tons, including Company's own cane of about 2.5 lakh tons. Contract advance to the tune of Rs. 44 lakhs was already paid to the ryots for obtaining supplies of cane to your mills with a view to utilising fully the expanded capacity of both the plants. The Chief Director of Sugar and Vanaspati, Ministry of Food and Agriculture, New Delhi, has, in his order dated 14th March 1962, fixed 58,124.9 tonnes of sugar as the quantity which may be produced by your factory (1st and 2nd plants) during the year 1961-62. This production target, however, falls far short of the expected production of about 65,000 tonnes and your Company is corresponding with the Chief Director of Sugar and Vanaspati in this matter and hopes that the quota now fixed will be revised to cover the expected production this season.

"I am glad to inform you that your Company was one of the first to implement the recommendations of the Central Wage Board for Sugar Industry. About 6,400 employees are benefited and the annual burden on the Company on account of implementing the above recommendations is about Rs. 14.28 lakhs.

Confectionery

"The working results of the confectionery plant show a loss of Rs. 1,64,546, as against Rs. 1,34,615 of the previous year. Competition in this line is very keen and the sales of confectionery has not reached the targeted figure of Rs. 12 lakhs. The agents appointed for pushing sales of our products failed to give the results expected of them and the Company has now taken over this work by its own sales organisation. A well planned advertisement campaign was found very essential, as, without proper publicity, it will be very difficult to push the sales against rival brands who widely advertise their goods. The management now has entrusted this work to Messrs. Bomas Ltd. who are experts having a very high reputation in this field. Further, the required number of delivery vans have also been purchased and placed at the disposal of our sales organisation. It is expected that, this year, the Company will be able to reach a target of sales of Rs. 12 lakhs.

"The position regarding the availability of new tractors has not improved. Your Company is pursuing the matter and it is hoped that a fleet of new tractors will be obtained as early as possible.

"The erection of CO_2 plant is now complete and it is expected to go into production in about a couple of months. Agreements between the Nizam Sugar Factory Limited and the Government Power Alcohol Factory for management

SWITZERLAND AND INTERNATIONAL CAPITAL TRANSFERS

STORY OF A SUCCESSFUL MONETARY POLICY

FROM the monetary point of view, Switzerland has passed through uneasy times of late. As often in periods of political and monetary crisis, since the summer of 1960 she has again and again become the target of international capital movements. World political tensions and confidence crises of a monetary nature have caused the repatriation of Swiss capital from abroad and the transfer of foreign funds to Switzerland. For other countries such capital inflows might have meant a welcome strengthening of monetary reserves; for Switzerland, however, they were anything but welcome since, in view of her extremely strained economy, every increase in the volume of liquid funds available on the domestic market brought with it the danger of additional inflationary impacts.

When, therefore, in July 1960 the first wave of capital movements towards Switzerland occurred, set off by political events in Cuba and the Congo, the Swiss National Bank, as the institution responsible for the monetary and credit policy of the country, could not remain inactive. In order, in the first place, to check the inflow of foreign funds into Switzerland, the Swiss National Bank suggested to the Swiss banks the conclusion of a gentlemen's agreement designed to curb the influx of foreign funds and to decrease already existent foreign balances. Under the terms of this agreement, which came into force on 18th August 1960, the banks concerned undertook no longer to accept foreign funds at sight but only subject to a period of notice of at least three months, these conditions being applied to all sight deposits in Swiss francs received since 1st July 1960; furthermore, the banks agreed not to pay interest on such deposits. Deposits received for a period of less than six months are subject to a commission of 1 per cent per annum. In addition, the banks committed themselves to prevent, as far as possible, the use of new foreign funds for the purchase of Swiss franc investments, such as bonds, shares, property and mortgages. On the other hand, there are exceptional provisions for foreign funds serving the purpose of maintaining and cultivating traditional business relations with clients abroad and enabling the banks to carry out normal commercial operations between Switzerland and abroad. The agreement has since been prolonged for a further period of one year, that is up to 17th August 1962.

With the introduction of the gentlemen's agreement on foreign capital, nothing decisive had yet been done to check the enormous expansion of liquid resources available on the market. In order to absorb at least part of the accrued surplus funds, the Swiss National Bank, in agreement with the Federal Council, sold the banks at the beginning of October 1960 short-term Government securities to the value of 400 million francs, taking interest charges to its own account. The banks took over these securities in proportion to their liquidity. The equivalent of the funds thus withdrawn from the market was credited to the Confederation on blocked account.

A fresh and heavy inflow of foreign exchange occurred in the second half of October in connection with the international rise in gold prices, which was coupled with fears as to the future of the U.S. dollar. This time it was not so much a question of foreign funds, but of transfers originating from the liquidation of Swiss investments abroad.

Massive Inflow of Funds

In March 1961, international capital movements were again focused on Switzerland. After the revaluation of the German mark on 6th March and of the Dutch guilder on the same day, the view was widely held abroad that Switzerland would follow the example of Western Germany and the Netherlands. As a result, sizable capital transfers to Switzerland took place for speculative purposes, causing monetary reserves to grow. In a single day, that is on 6th March the Swiss National Bank had to take over dollars from the market of the value of 800 million francs. Official statements made to the general public to the effect that there was no question of revaluing the Swiss franc had a calming effect, although the rumours of a possible revaluation of the Swiss franc still remained alive for some time. However, in the spring of 1961, international pressure on the pound sterling unleashed new massive capital transfers to Switzerland. The fact that large amounts of money were withdrawn from London and transferred to Switzerland, as well as to other Continental countries, gave birth to the idea of putting part of the funds withdrawn at Great Britain's disposal again, so as to strengthen British monetary reserves and enable the Bank of England to ward off further attacks on the pound. To this effect, the Swiss National Bank opened up a dollar deposit of considerable magnitude with its British sister institution. Furthermore, it sold to the Bank of England appreciable amounts of gold against pound sterling on a forward basis by means of various swap transactions. The sterling amounts thus obtained and covered against exchange rate risks by the forward operation were made available by the central bank to the big Swiss banks for investment in British Treasury Bills.

However, there still remained to be solved the problem of the extremely heavy increase in cash resources at home. Sight deposits held with the central bank by the economy (banks, trade and industry) had grown by more than 1.4 billion francs on account of the heavy inflow of foreign exchange as a result of the DM revaluation and of the sterling crisis. In view of the inflationary dangers inherent in such an expansion of the money supply, the Swiss National Bank was faced with the urgent need to take measures to avoid any detrimental effects of the large expansion of liquid resources on the Swiss economy and, in particular, on the wage and price structure. Thanks to the understanding shown by the big banks, where by far the largest part of the money transfers had accumulated, it was possible to come to an agreement with the institutions concerned whereby the foreign funds transferred to Switzerland subsequent upon the Western German and Dutch revaluations had to be deposited with the central bank on a special blocked account. In principle, the blocking is to be maintained until such time as the funds which have flowed into Switzerland since March are withdrawn.

Surplus Skimmed Off

The Confederation, too, has actively contributed towards cutting down the volume of liquid resources available on the market. Despite large budget surpluses, it has refrained from redeeming existing debts for economic reasons and, having regard to the position of the capital market, depositing any excess funds with the central bank or employing such money for short-term investments abroad. In this way, the surplus in actual purchasing power has been skimmed off appreciably.

Finally, some of the excess funds available on the market have been re-directed abroad by way of capital exports. Foreign loan issues in Switzerland, offered to the public for subscription between summer 1960 and the end of November 1961, amounted to 1.2 billion Swiss francs, not taking into account the credits granted by Swiss banks to foreign borrowers. The Swiss National Bank has, as a matter of principle, exercised its authorisation right with regard to the issue of bonded loans and the granting of banking credits in a liberal fashion.

Thus, the Swiss National Bank has not followed a policy based solely on national considerations; it has also tried to make a contribution towards bringing about normal conditions, and easing monetary tension, on an international plane, wherever and whenever opportunity arose. The transactions concluded with the Bank of England have already been pointed out. There also exists close co-operation with the U.S. monetary authorities on matters affecting monetary policy. Besides this, the Swiss National Bank has been endeavouring for a long time to keep interest rates at a low level and as stable as possible. In order not to encourage further inflows of money and with a view to facilitating, as far as possible, the outflow of funds abroad, it has refrained from interventions in the market which might have caused interest rates to rise.

The success of these monetary endeavours is reflected in the freely disposable balances held by the banks with the central bank. At the end of October 1961, these were distinctly below the level reached at the corresponding time last year, and even somewhat lower than two years ago. Considering the fact that since the summer of 1960 Switzerland has been flooded with foreign exchange to the equivalent of more than 3.5 billion francs, this is indeed a remarkable achievement. The limitation of demand account holdings has resulted from the issue of sterilisation rescriptions, that is short-term Government securities (400 million francs), from the neutralisation of liquid resources of the big banks (1.035 million francs) and from the increase in balances held by the Confederation with the central bank (roughly 500 million francs), which amounts, all in all, to a locking up of funds to the extent of almost 2 billion francs. Apart from this, the expansion in the note circulation has also contributed to the reduction in balances held by the banks with the central bank. If it has been possible to prevent the enormous influx of capital from having serious repercussions on the money and capital market, on interest rates and on the price level, this may largely be ascribed to the abovementioned measures taken by the central bank, to the financial policy of the Confederation and to the willingness of the banks to co-operate.

NIZAM SUGAR

(*Concluded from previous page*)

of the affairs of the Government Power Alcohol Factory by the Nizam Sugar Factory Limited on an agency basis and for supply of steam and molasses are being finalised and will be entered into early. By this arrangement, the Nizam Sugar Factory Limited will supply to the Government Power Alcohol Factory the necessary steam and molasses as well as manage the affairs of the Government Power Alcohol Factory on behalf of the Government of Andhra Pradesh.

"The relations between the management and labour have been satisfactory. Construction of 260 two-room tenements for housing the workers under the Government of India Industrial Housing Scheme is nearing completion. The management is undertaking a further construction of about 130 tenements in the farms for housing the workers.

"Before I conclude, I would like to express my thanks to my colleagues on the Board of Directors for their abiding interest in the affairs of the Company and to the officers, staff and workers of all ranks for their continued co-operation, loyalty and efficiency."

N.B.—*This does not purport to be a report of the proceedings of the general body meeting held on 30th March 1962.*

BUMPER JUTE CROP

The official final estimate of the current (July 1961—June 1962) season's jute crop, issued by the West Bengal Government towards the close of last week, has surpassed all previous expectations and projections. The estimate places the output of raw jute proper, excluding mesta, at the all-time peak level of nearly 6.27 million bales of 400 lbs. each, whereas the expectations hitherto were around 5.00 to 5.25 million bales. The production of 6.27 million bales now estimated represents a significant expansion of 2.29 million bales or 60 per cent as compared with the crop of a little over 3.98 million bales actually harvested in the previous season, that is, 1960-61. Such a marked increase in production is to be attributed largely to the appreciable rise in acreage under jute and partly also to the improvement in per-acre yield. The total area sown to the crop is put at 2,259,000 acres, as against 1,512,000 acres, representing an increase of 49 per cent. The average yield of raw jute per acre is higher at 2.77 bales for the current season, that for 1960-61 being 2.63 bales. Even so, the per-acre yield is very poor as compared with the high yield of 4.00 bales obtained in Pakistan. The State-wise distribution of raw jute excluding mesta production is indicated below:

	Production (Thousand bales)		Acreage (Thousand acres)	
	1961-62	1960-61	1961-62	1960-61
West Bengal	3,352	1,987	1,144	720
Bihar	1,263	850	565	383
Assam	1,131	818	553	399
Orissa	304	199	114	64
U.P.	114	92	38	33
Tripura	105	41	35	15
Total ..	6,269	3,982	2,259	1,512

No estimate of the output of mesta has so far been published.

The record production of jute this season does not necessarily mean that there will be any burdensome surplus at the end of the season, in view of the fact that there were hardly any stocks at the beginning of the season and consumption is running at a high level.

INTERNATIONAL COFFEE SITUATION

PRICES RECOVER, BUT STOCKS STILL HIGH

WORLD coffee prices have staged a marked recovery of late. Uganda Robusta grade in London now stands at 151½s. per cwt., as against 148½s. a month ago, 137½s. early this year and the low level of 131½s. touched early in 1961. The recovery is attributed to pessimistic predictions about the African crop, the size and quality of which are both said to have been seriously damaged by bad weather during winter. It might have also been aided by high hopes that conditions in the world coffee market would be stabilised after the new, long-term Coffee Agreement comes into effect on 1st October next. It is, however, considered unlikely that the upward trend of prices would be maintained in the coming months. This view seems to be justified, what with the great weight of stocks hanging over the world market. The total of these stocks at the end of the 1960-61 coffee season (30th September 1961) amounted to as much as 76 million cwt., which represent about one-and-a-half year's world requirements. Of this quantity, about 53 million cwt. were in Brazil even after 9.5 million cwt. of low quality beans had been destroyed in that country, 7.0 million cwt. in Colombia and 1.4 million cwt. in the Ivory Coast.

Thanks to the huge carryover stocks of 1960-61 and the high level of output expected in 1961-62, the total available coffee supply during the season comes to nearly 162 million cwt. Against this quantity, the estimate of actual consumption is placed at no more than 75 million cwt., so that the excess oversupply is of the order of 87 million cwt.

Output Rises Markedly

The revised estimate of the world coffee crop in the current season (1961-62) as given in the March issue of the Commonwealth Economic Committee's *Tropical Products Quarterly* is 85.77 million cwt., as compared with the figure of 84.50 million cwt. mentioned in the December 1961 issue of the *Quarterly*. The output will be higher still by another two million cwt. at 87.77 million cwt. on the basis of the private estimates of the Brazilian crop which put the yield at 45 million cwt.—some anticipate a crop of 47 million cwt.—as against the official estimate of 43 million cwt. Brazil, it may be noted here, accounts for nearly half the total world output. The second largest producer of coffee is Colombia with an estimated production of 9.21 million cwt. in 1961-62.

The anticipated world coffee crop of 85.76 million cwt. in 1961-62 represents an increase of eight million cwt. as compared with the actual output of 77.76 million cwt. in 1960-61, though it is below the record crop of 93.25 million cwt. harvested in 1959-60. The rise in output is accounted for by Brazil (+7.26 million cwt.), Colombia (+118,000 cwt.), Mexico (+827,000 cwt.), El Salvador (+62,000 cwt.), Gautemala (+88,000 cwt.) and other Latin American countries (+927,000 cwt.). In the Commonwealth group, with the exception of Uganda which reports higher output (+177,000 cwt.), other countries show a fall in output, the actual fall being 466,000 cwt. in India, 61,000 cwt. in Kenya and 141,000 cwt. in Tanganyika. Among African countries, coffee production is estimated lower in Ivory Coast (—335,000 cwt.), Angola (—295,000 cwt.) and others (—82,000 cwt.), Table I below indicates the trend of coffee production in, and exports from, the different countries.

Exports

While the world production of coffee has gone up quite markedly in the past four years—from 68.31 million cwt. in 1958-59 to over 85.76 million cwt. in 1961-62—world exports continue to grow only at a slow pace. The total exports in the calendar year 1961 amounted to 50.11 million cwt. which represents a rise of just 8.43 million cwt. as compared with 1958. Coffee exports from Brazil during 1961 aggregated 20 million cwt., only slightly more than in 1960, while those from Colombia declined by 300,000 cwt. to 6.7 million cwt. Exports from most of the minor Latin American countries were lower. Shipments of coffee from East Africa in 1961 were nearly 5 per cent less than in 1960, consignments from Uganda (this territory accounts for two-thirds of the total) alone declining by 10 per cent. Kenya and Tanganyika, however, exported more coffee, the percentage increase being 13 and 3, respectively.

Indian Coffee Shipments

Coffee exports from India were appreciably higher, the quantity actually shipped in the eleven months ended November 1961 being twice as great as a year earlier (589,000 cwt., as against 288,000 cwt.) and well above the exports of 321,000 cwt. in the whole of 1960. The large increase in exports was due to heavier purchases made by Common Market countries, especially West Germany and Italy, as will be seen from Table II. It may be noted here that consumption of coffee in the Common Market countries has increased in recent years, a trend which is expected to gather momentum in the next few years. Here is what Mr. N. Cuttbert and Mr. W. Black say in the course of a special article published in *The Times* (London) *Review of Industry*:

"Coffee consumption in the six countries of the European Economic Community increased very rapidly during the last decade and Common Market imports now account for about a quarter of world trade. Before the signing of the Treaty of Rome, the six countries had widely different practices in relation to taxes on coffee; the Netherlands imposed no duties at all, but the sum of West German import duties and internal taxes represented more than 25 per cent of the retail price. The Treaty provided for a common external tariff of 16 per cent with the qualification that all imports from associated countries should enter duty-free. In July 1961, the E.E.C. Commission recommended that the external tariff be reduced to 8 per cent and that all internal taxes on coffee should be abolished by January 1965. The reduction in taxes is expected to lead to a large increase in coffee consumption in the Community, particularly in West Germany and Italy where the taxes are heavy. The general consensus of opinion seems to be that consumption in 1965 will be at least 20 per cent above the 1960 level."

The United States continues to be the largest buyer of coffee. Its actual imports during the year 1961 amounted to more than 26.52 million cwt., as against 26.05 million cwt. in 1960. As compared with 1959, the imports were, however, lower by 839,000 cwt. The share of Indian coffee in the U.S. market is very negligible, being less than 0.2 per cent. The quantity of Indian coffee actually imported into the U.S. was a bare 45,000 cwt. which, of course, represents a marked increase as compared with the previous year when it was just 12,000 cwt. The chief competitors for Indian coffee in the U.S. market are Brazil, Colombia, Mexico, Gautemala, as also East Africa and Angola.

Imports of coffee into the U.S. from Brazil in 1961 were 7 per cent and from Colombia 4 per cent less than in 1960. Consignments from Mexico, Gautemala and most of the other minor Latin American countries, on the other hand, showed some increase. Imports from most African countries were also significantly heavier, those from East Africa in particular at 1.5 million cwt. and from Angola at 1.2 million cwt., showing increases of 33 per cent and 28 per cent, respectively. The trend of imports of coffee into other countries is indicated in Table III.

Coffee Prices

Some of the changes in the sphere of coffee prices may now be mentioned. In Uganda, the price of unhulled Robusta (called Kiboko) has been raised by 10 cents to 60 cents per lb. since 22nd January last when the new buying season commenced. This increase is estimated to result in an effective subsidy of 20-30 cents per lb. to the grower and means a further substantial withdrawal from the Price Assistance Fund which now stands at £4.5 million. After the Fund is exhausted, the growers will have to accept the world market price. The reserve price for Robusta has also been enhanced to about 135s. per cwt., sales of off-grade Robustas suspended and the quantities of under-grades available are limited. The export duty on coffee, which is based on the average auction price in the previous month, reflects the favourable movement of prices, rising to 79.47s. per ton in January, the highest figure for any month since November 1960. In January 1960, however, the duty had amounted to 308.53s. and a year earlier to near double that figure. A new declared export price of £152 per ton as from 1st February 1962 has been announced under the Coffee Price Assistance Rules. Suitably increased prices have also been declared for Coffee Marketing Board payments to curing works and scheduled hulleries.

The Ivory Coast Stabilisation Fund has reduced the support price it will pay growers in the current season (that is from 14th December 1961) by 14 francs to 80 African francs per kilo and will no longer repay exporters for storage costs. It has fixed the minimum price for shipments to the U.S. of grade II 1961-62 crop coffee at 19 cents and for those of grade III coffee at 18.25 cents per lb. c.i.f. The Coffee Stabilisation Fund of Cameroun is reported to have borrowed 200 million C.F.A. francs from the Cocoa Fund to assist in financing the current heavy crop (estimated at 915,000 cwt—190,000 cwt. more than in 1960-61). The Togo fund has reduced the support price to producers by 14 francs to 65 C.F.A. francs per kilo.

In Brazil, the *Institute Brasileiro de Cafe* began buying unliberated 1961-62 coffee on 15th January (instead of waiting until mid-March) at the prices announced in May 1961 and will also purchase the unsold balance of the crop remaining in ports on 1st July 1962 at the same

(*Continued on page 693*)

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National D'Escompte de Paris, as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books, and proper returns adequate for the purposes of our audit have been received from the Calcutta Branch;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the audited returns;

(d) the report on the accounts of the Calcutta Branch audited by other Auditor has been forwarded to us and the same has been considered in preparing our report;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

A. F. FERGUSON & CO.,
Chartered Accountants.

BOMBAY, 30th March, 1962.

CENTRE'S OIL ROYALTY DISPUTE WITH ASSAM

IS STATE GOVERNMENT NOT TOO AVARICIOUS?

A DISPUTE, it may be recalled, arose early in January last between the Government of Assam and the Government of India over the new reduced prices fixed for crude oil under the June 1961 agreement between the Central Government and Oil India Private Ltd. The new prices meant, in effect, that Assam's royalty on oil would work out to Rs. 4.80 per ton as against the previous Rs. 7.20 per ton paid by Oil India Private Ltd. It was then pointed out by the Finance Minister of Assam that, if the royalty were to continue to work out to Rs. 7.20 per ton, the royalty rate of 10 per cent (of the well-head value of crude oil) which had been in vogue for the past 60 years would have to be raised. Otherwise, according to the stand taken by the Assam Government, the fall in the yield of royalty would not be compensated and the State would be losing about Rs. 75 lakhs annually on the present production of crude oil in the Nahorkatiya oilfield. The State Government did not stop with a mere protest, for it took the simultaneous step of telling Oil India Private Ltd. (jointly owned by the Burmah Oil Company and the Government of India) that it could not expect to be granted prospecting licences for new areas (1,800 sq. miles) as applied for. This step, it was claimed, was permissible under the Petroleum Concession Rules of 1938. Though these rules were revised in 1948 so as to invest the Union Government with the power to issue oil mining leases, much of the authority in this regard was later delegated to the State. The Assam Government thus claimed to retain the powers of granting new prospecting licences and use them the way it liked. Thus, the Assam Government not only misused the powers given to State Governments for purposes of administrative convenience but was indulging in the short-sighted policy of cutting the nose to spite the face. It was obvious that delays in prospecting would only postpone the benefits that could follow as a result of discovery of oil and gas.

A.O.C.'s Plea

The Assam Oil Company, too, was interested in the dispute. It advanced the plea that the reduced royalty should be applied to its case also, although the Digboi oilfields were not covered by the June 1961 agreement. That agreement, it may be recalled here, had the aim of making Oil India Private Limited a profitable enterprise by lowering the well-head values of crude oil from the Nahorkatiya oilfields from Rs. 72 per ton to Rs. 48 per ton. It was made clear in the agreement itself that its provisions did not apply to the Digboi oilfields of the Assam Oil Company which, unlike Oil India Ltd., was otherwise entitled to discounts. But the Assam Oil Company began to contend that some of its requirements came from Nahorkatiya also and that a parity in rates should be maintained in the cases of both Digboi and Nahorkatiya in view of their proximity (only 24 miles in distance). It was further contended that Digboi, in addition, was even entitled to a special concession, in view of the fact that most of the wells in Digboi had become almost dry and were involving costly methods of extraction. On these grounds, the A.O.C. made its royalty payments at the rate of Rs. 4.80 per ton with effect from June 1961 and, when the State Government served notice on it to pay the balance of Rs. 2.40 per ton by a given period, it requested the Governor of Assam early last month to look into the case and arbitrate.

The dispute between the Centre and the Assam Government took an interesting turn early last month when the Government of India took a firm stand and withdrew, by a notification, the authority it had formerly delegated to the State Government to issue petroleum mining leases. Even then the Assam Government continued to swear by its decision not to allow prospecting licences to Oil India Ltd. It seemed to think that the issue of prospecting licences would ultimately be decided either by a Supreme Court judgment on the West Bengal Government's reference regarding coal or by an amendment of the Constitution as canvassed by the Oil and Natural Gas Commission. Only when it found that the Centre meant business did Chief Minister of Assam announce that the Centre could go ahead with its plans for further oil exploration in Assam. This "gesture," as it was called, was shown by the State Government as a prelude to the further talks proposed to be held in the first week of April.

These talks were held, as scheduled, in New Delhi last week, but turned out to be inconclusive, for the Centre had not finalised its proposals for settling the dispute. The Government of India, it is now clear, is rather anxious to settle with Assam which, according to the latest calculation, will stand to "lose" as much as Rs. 1.8 crore a year in future as a result of the reduction in the well-head value of crude oil. But, at the same time, it is interested in getting the crude for the public sector refineries at an economic price. A possible way-out of this dilemma, it is reported, would be to increase the Assam Government's present nominal share in the Nunmati refinery (run by the Indian Refineries Ltd.). If this is done, it is argued, the Assam Government will get higher profits which will partly compensate for the so-called loss on account of the fall in royalty yield. But, as of today, it is not definitely known whether the dispute between Assam and the Centre will be resolved on these lines. If, however, it is assumed that the Assam Government will get itself reconciled to the reduction in royalty on account of the Nahorkatiya crude, it will not be long before the Assam Oil Company also is allowed to benefit by a lower royalty in respect of the Digboi crude.

Compensating Advantages

It may be finally noted that the so-called "loss" to the Assam Government will be more than made good by a larger absolute yield of royalty, even at the reduced rate, from an increase in the output of crude oil from the existing as well as new oilfields. If, at the same time, Assam is given a larger share in the profits of the Nunmati refinery, it will constitute an extra source of income. It is true that need for more revenue in the context of the third Plan cannot be ignored, but it must be borne in mind that the people of Assam stand to gain many advantages following the Central Government's decision to locate a refinery at Nunmati, though, economically, it would be more advantageous to the rest of the country if the refining of the entire Assam crude were done in Barauni (in Bihar) or in Calcutta. Further, the discovery of large reserves of natural gas, which is the result of search for petroleum, has greatly added to the industrial potentialities of the State and many new industries are being established there. This, in turn, will add to the revenues of the State Government and broaden employment opportunities. Surely, Assam cannot insist on having the best of both worlds.

(*Concluded from next column*)

tons) and demand (1.5 million tons) is not likely to be covered substantially in the immediate future by the private sector to which that task has been assigned. Although a number of schemes for pig iron production has been licensed for an aggregate capacity of 250,000 tons per annum, only the Kalinga's plant at Barbil has so far gone into production. It is equally disturbing to hear that electric furnaces, licensed in the private sector for supplying 200,000 tons of billets to the re-rolling industry, are also not coming up quickly. The question arises here as to why the private sector is not enthusiastically developing the capacities licensed in respect of pig iron foundries and electric furnaces. The Minister himself should have provided the answer and explained reasons for the slow pace of implementation of licensed projects. If these are difficulties in the way of foreign exchange allotment or in the way of securing foreign collaboration, the Government should be aware of them. But the Minister has chosen not to be frank about them. The Iron and Steel Advisory Council, for its part, has also not come to grips with the question. If more positive measures of encouragement are needed in this field, the Government should not hesitate to institute them, for relatively small-sized units in the iron and steel industry cannot be expected to be as economic as the large integrated steelworks.

STEEL OUTPUT IN INDIA

SUPPLY CONTINUES TO BE FAR SHORT OF DEMAND

THE total availability of finished steel in the country in 1961 was nearly 3.84 million tonnes —2.84 million tonnes of indigenous production *plus* 1.00 million tonnes of imports. This was substantially more than the quantity—2.26 million tonnes of indigenous production *plus* 1.10 million tonnes of imports—available in 1960. But the aggregate demand for steel had also gone up from about 5.0 million tonnes in 1960 to nearly 6.0 million tonnes in 1961. There might, of course, have been some inflation in these demand estimates which were based on the indents received for relaxed categories of steel and the orders placed by the various co-ordinating/sponsoring authorities for restricted categories. Even after making allowance for this element of inflation, the position still was one of acute steel shortage in relation to demand, especially in respect of sheets, tinplates and galvanised wire. The steel-using industries, which were feeling the pinch all the time, had, therefore, no relief from the quota system in respect of categories like thinner gauge sheets, wire, baling hoops and tinplates. The supply position of foundry-grade pig iron was, however, a shade better, although it, too, fell short of demand to some extent. The production of such saleable pig iron, it may be noted here, was 1.09 million tonnes in 1960 and 1.14 million tonnes in 1961.

It should be clear from the relevant figures in the foregoing paragraph that domestic production of steel and foundry-grade pig iron even in 1961—a year broadly corresponding to the first year of the third Plan—had not kept pace with the growth in demand. There must have been some justifiable and not-so-justifiable reasons for the slow growth of iron and steel production. But these have not found mention in the report for 1961-62 just released by the Department of Iron and Steel of the Union Ministry of Steel, Mines and Fuel. Even the Minister for Steel, Mines and Fuel, Sardar Swaran Singh, has not thrown much light on the situation in his address at the first meeting, held at New Delhi on 30th March, of the reconstituted Iron and Steel Advisory Council. The reference in his address to Rourkela's "ill luck" and the breakdown of its blooming and slabbing mill in December 1961 is obviously not the whole story. That the serious bottlenecks in the transport of raw materials to the steel plants, in the availability of such materials in requisite quantity and quality and in the supply of power, besides technical shortcomings in some of the public sector steel plants, were largely reponsible for the slow growth of production in the last one or two years, has not been frankly admitted by the authorities.

Immediate Future

But, as usual, they have not failed to paint a rather rosy picture of the near or immediate future. According to the Minister, all the steelworks are now striving hard to achieve production up to their rated capacities. Bhilai, for instance, has produced in January 1962 steel ingots to the tune of 85,000 tonnes against its rated capacity of 83,000 tons per month. Production is improving at Rourkela, although it is only about 40,000 tonnes of ingots now. Durgapur, with only two blast furnaces in operation now, is producing at the rate of 52,000 tonnes of ingots per month, as against the rated capacity of 83,000 tonnes which, however, is for three blast furnaces. Both the Tata Iron and Steel Company and the Indian Iron and Steel Company are going ahead, and their current monthly outputs of ingots steel are about 150,000 tonnes and 80,000 tonnes, representing 90 per cent and 95 per cent of their respective installed capacities. All this should not, however, be taken to mean that the steel supply position relative to demand will greatly improve either in the current year or in the next. It may be well to remember, in this connection, that the first blast furnace at Rourkela is undergoing major repairs and the third coke oven factory and a few tinning lines there are yet to be commissioned. Even at Durgapur the third blast furnace is yet to go into operation. Any expectation of steel production running at a rate close to rated capacity (about 6 million tonnes of ingot steel) in the existing steelworks even in the next year would be wide of the mark.

As for foundry pig iron, the current gap of about 500,000 tons between supply (1 million

(*Continued in previous column*)

NEW PRODUCTS AND PROCESSES

Sheet Metal Pressing

A NEW method of forming sheet metal blanks into complicated shapes, in which the punch and blank-holder of the conventional draw-die have been replaced by a hydraulic draw-press adapter, has been developed and patented by the Swedish Saab Aircraft Company. Known as Fluid-form, the unit can be fitted to any mechanical or hydraulic presses, single-acting or double-acting, with capacities between 100 and 3,000 tons or more, the company reports. While in conventional pressing methods much of the tooling work consists of making the punch and matching the die to fit against it, the Fluid-form flexible diaphragm punch—which also serves as blank-holder—is claimed to reduce tooling costs considerably, by two-thirds if the die is made of cast iron and by nine-tenths if made of reinforced plastics. Though applicable in the manufacture of all kinds of formed articles, the new method is said to be particularly suitable for making parts having an irregular or intricate shape. The Fluid-form unit is comprised of two main parts, the punch or press chamber and the die holder, the latter consisting of a steel ring in which the cylindrical die is centred. The press chamber contains a telescoping piston retained in its upper position by a spring. The lower end of the cylinder is closed by a rubber diaphragm, retained in an annular slot in the cylinder wall and protected from chafing and cutting by an outer wear plate. Since the diaphragm is in contact with the sheet throughout the forming process, the method is claimed to have special advantages in shaping or preforming parts with an unfavourable "contact picture" in which pointed steel blanks may cause deformation when hitting the surface. It can also be used for pressing cavity parts with undercut and for the expansion of components. In the latter case, the diaphragm is replaced by a rubber sack. Among other advantages of the new method, the company says, is that the Fluid-form attachment is easily inserted and removed, making it possible to use the same press alternately for fluid form pressing and conventional pressing. Furthermore, the flexibility of the diaphragm gives complete freedom to use varying sheet thicknesses and thus to press several versions of a part in the same tool, which is of particular importance in experimental and development work.

Self-adhesive Plastic Tape

An Amsterdam, Holland, factory is producing a self-adhesive plastic wrapping tape specially designed for finishing insulated pipelines and protecting different types of tubes against corrosion. The new product can be used in the chemical industry, shipbuilding trade, dye works, laundries, plumbing, gasworks and coal mines. The tape is very strong and slightly elastic. It is impermeable to moisture and is resistant to chemicals and climatic conditions. It must be wound round pipes or tubes in such a way that each return overlaps its predecessor by about 20 per cent. No further finishing or maintenance is necessary. The tape is supplied in thicknesses of 0.3 mm. (0 012") in black and white and 0.15 mm. (0.006") in black and grey. For each thickness there are two standard widths, namely, 5 and 10 cm. (2" and 4"). Rolls come in lengths of 10 or 25 metres (33 ft. and 82 ft). They can also be supplied in special sizes. The factory also manufactures wrapping tape for use in electrical engineering. Colours are black, grey and the phase colours red, yellow, green and blue. For these applications, it is supplied in widths of 15 to 40 mm. (0.6" to 1.56"), while the rolls of 10 or 25 metres are supplied in the form of reels. This strongly adhesive winding tape is also suitable for a wide variety of applications other than those mentioned, such as for packaging and for domestic uses.

Automatic Proof Stress Indicator

New equipment for automatically measuring the proof stress of a metal has been produced by the Boulton Paul Aircraft Ltd., England. It removes the need for the lengthy plotting of load/extension curves previously required for determining proof stress and results in cheaper and faster testing. When used with testing machines operating on a routine basis, the equipment is estimated to halve the labour cost and increase the rate of testing by saving some 25 per cent of the time involved in manual recording of stress measurements. The instrument, which may be fitted to any standard tensile testing machine, is simple to operate, and can be set to give direct readings of 0.05 per cent, 0.1 per cent or 0.2 per cent proof stress as required. The working of the instrument is based on the electronic comparison of two signals—one generated by the load being imposed on the test-piece and the other by its extension. While increasing load is applied to the test-piece, the instrument indicates on the meter when these two signals cease to increase proportionally, by a preset amount equivalent to the excess extension at the required percentage proof load.

Plastic Double Glazing

A cheap and economical device for turning ordinary windows into double windows is now in production by a Norwegian firm. It consists basically of 2 sets of plastic moulding and a sheet of plastic film. The film is high-frequency welded to one set of moulding to form the inner window. The other set of moulding is nailed round the permanent window. The inner window is pressed into the nailed moulding by means of a special tool. One set of moulding is grooved, the other set is tongued, and a completely airtight connection is established between the two mouldings. The fitting of an inner window in autumn takes only a few moments, and likewise the removal of the inner window in spring. The moulding for the permanent window can be fitted by anyone. The inner window is supplied by the producer to measurements supplied by the householder or a local representative. The plastic film, made from P.V.C., is made to special specifications to ensure a material that is particularly strong and flexible, so that it can be stretched into place to ensure a taut fit. The film used is clear as ordinary glass and does not turn yellow from sun exposure. Norsk Plastic Industri, the makers, claims that the plastic inner window can reduce heat loss by as much as 50 per cent. It also is an excellent sound insulator. Apart from domestic use, it is in demand for shop windows, because it reduces condensation and keeps the windows clear and attractive even in frosty weather.

Drying Device for Paper Factory

Manufacturers of paper and paper board may soon be able to save floor space, reduce capital cost and fuel bills and increase production rates by up to ten times. These benefits should stem from a unique application of the well-known fluidised bed technique to the drying stage of paper and board manufacture, which at present takes up most space in the process. The idea originated at the British Paper and Board Industry Research Association at Kenley, near London, and has already been developed to the pilot plant scale. The process has been working satisfactorily with a new design of paper making machine at St. Anne's Board Mills, Bristol. In the trials at Bristol, the new device has successfully dried wet board containing a higher proportion of water than normal and coming from the machine at speeds up to 500 ft. (152.4 m.) a minute. The next stage of development will be to install four more driers into the prototype machine line, with normal drying rollers, and to try to raise the production rate to 5,000 ft. (1,524 m.) a minute, or roughly twice the present maximum rate.

Shoe-making Machine

A British shoe factory, K. Shoes Ltd., Kendal, has installed a new plant which reduces the main processing stage in making women's shoes from three and a half days to three hours. The firm is installing a similar plant for streamlining production of men's shoes and improving quality and consistency of standards. Mulling—the moisturing of the leather uppers to make them pliable for stretching over the lasts—now takes 5 minutes instead of several hours. The new plant includes a paced conveyor for all stages including the final operation of sole laying. After the uppers have been stretched over the lasts they pass through an infra-red heat setting tunnel where the moisture is extracted. By this method the shoes have a better shape and longer life than shoes which have been on the last for three days in the former processes. Fewer lasts are needed, with savings in cost and floor space.

Courtesy Sign for Motorists

An illuminated car courtesy sign, which also acts as a rear window demister, is being manufactured by a motorist Wigton, U.K. The sign, 6 ins. x 3 ins. (15.2 cm. x 7.6 cm.) fits on to the rear window with suction caps and is connected to the lighting system. A switch operated by the driver lights up the wording "Thank You" to show appreciation of courtesy by a driver who has been overtaken. It is claimed not to dazzle when illuminated, and to be seen clearly in daylight or at night. A slide drops behind the worded panel to blank out the sign when desired and the bulb, which can be left burning, acts as a demister for the rear window. Heat rises through an aperture and the metal back of the slide also warms the air around it. The "Thank You" wording can be written in any language.

TATA-JOHNSON

AND THE

PAPER INDUSTRY

Although the pulp and paper industry is expanding rapidly, its output barely meets demand. Many new large-scale plants are therefore necessary. Importing machinery for these plants would be a heavy drain on foreign exchange reserves. A better plan: indigenous production of the machines.

Tata-Johnson's entry into the field is timely. Tata's, collaborating with A. Johnson & Co., a leading Swedish combine, have promoted Tata-Johnson Ltd. The company manufactures pulp and paper machinery with a high indigenous content and incorporating the latest developments in the field.

Technical know-how is provided by Sweden's AB Karlstads Mekaniska Werkstad (KMW), AB Kamyr and AB Rosenblads Patenter, as well as the Cellulose Development Corporation (Celdecor), pioneers in bagasse pulping.

Machinery designed by these leading organizations is manufactured at TELCO's well-equipped works with the close co-operation of Tata-Johnson specialists in Jamshedpur.

THE RIGHT TO ORGANISE—THE OTHER SIDE OF THE MEDAL

EXPERIENCE OF SWITZERLAND

THE right to organise is recognised as a fundamental prerogative of workers in almost all democratic countries. The Philadelphia Declaration of 1944 reaffirmed it as one of the basic principles on which the International Labour Organisation was founded. But its corollary, the right not to organise or, in other words, an individual's right to remain outside an association without suffering any appreciable economic harm, has not been so readily and universally recognised. Four years ago, a sharp controversy was provoked in the U.S. by adoption in some States of what is called "right to work" laws declaring that the right of persons to work might not be dependent, as it was, and still is in fact, under many collective agreements, on membership in labour organisations. Since 1947, 18 States had enacted such laws. It was argued in favour of such laws that to oblige a person to join a trade union in order to obtain or keep a job was incompatible with the principle of individual freedom, whereas its opponents, who were mostly trade unions, disputed the argument and saw in such legislation a threat to union security and the hard-won gains of labour.

In practical terms, the issue boils down to this: whether or not collective agreements could contain clauses making the employment of workers conditional upon their membership in a union. Apart from the basic question whether freedom to join a trade union also includes freedom not to join, there are also certain practical problems arising out of the position of those employers and workers who, though not members of the organisation which are parties to a given agreement, nevertheless desire to share in the advantages which the agreement provides. The system practised in Switzerland in this regard contains some unique features. After the "closed shop clause" had been declared null and void by the Swiss Federal Court, employers organisations and trade unions developed the idea of a "solidarity levy," payable by workers and employers who are not members of the contracting organisation, if they wished to participate in a collective agreement. The Government may also extend collective agreement to outsiders.

Collective Bargaining

An interesting account of the salient features of the Swiss collective bargaining system is given in an article entitled "Union Security and the Scope of Collective Agreements in Switzerland" by Prof. Alexandre Berenstein of Geneva University and published in the latest (February 1962) issue of the *International Labour Review*. "Some very original approaches," to quote Prof. Berenstein, to the question of union security and collective bargaining had been tried in Switzerland. The resulting legal forms, which, like the collective agreements themselves, were the outcome of practical needs, were recently given legislative sanction. The first method, though not peculiar to Switzerland, is the closed shop clause, whereby the contracting parties bring pressure on outsiders to induce or even compel them to join the trade union or employers association which signed the agreement. After this clause was declared null and void by the Federal Court in 1925, and again in 1928, other ways and means were sought to extend the legal scope of collective agreements to outsiders. The result was the evolution of the system of "loyalty to the contract" and the "solidarity levy" whereby collective agreements came to be extended by means of private law, or rather industrial law, instead of by order of the authorities. The system of loyalty to the contract did not require outsiders to subscribe to the clauses of the collective agreement. Employers and workers were considered loyal to the contract, if they belonged to a contracting organisation or to an organisation which, after the conclusion of the collective agreement, had adhered to it or if, without being members of such an organisation, they had pledged themselves individually, with the consent of the contracting parties, to abide by the conditions of the agreement. Thus the scope of the collective agreement was extended through the individual adhesion of outsiders.

But this did not solve the problem. For, under it, outside workers, who were covered by the collective agreement, were in a sense better off than the organised workers because they enjoyed the benefits secured by the agreement without having to pay any trade union dues. The system of loyalty to the contract was, therefore, supplemented by a "solidarity levy" or "trade contribution" which outsiders had to pay in order to be considered loyal to the contract. In fact the whole system of loyalty to the contract was evolved in practice unfettered by any statutory regulation. Legal opinion was divided as to how far the system should be accepted. Some held that the system of "solidarity levies" and of compelling outsiders to pay a deposit could be an "indirect form of pressure on them to join one of the contracting organisations." The Federal Court, however, upheld the legality of the levy. It drew a clear distinction between the closed shop clause, which it had declared illegal earlier, and the principle of loyalty to the contract, which it endorsed.

"Solidarity Levy"

The issues which caused most controversy in the Federal Assembly when the legislation on collective agreements was amended did not involve the actual principles of "contract loyalty" or the "solidarity levy" but rather the situation brought about in Switzerland by the existence of a number of trade unions. In fact, most of the cases dealt with by the Federal Court regarding the blacklisting of a worker by a trade union organisation were concerned not so much with the individual's right to remain outside a trade union or agreement as with the special case of an individual belonging to a union other than the contracting organisation. The system of the "solidarity levy" is now firmly rooted in a number of industries in Switzerland. A number of collective agreements also provide for the payment of deposits by outsiders to ensure that they meet their obligations.

It is thus clear that, for several decades past, the contracting parties to collective agreements in Switzerland had been concerned about the problem of outsiders and had dealt with it in different ways. The union reciprocity clause, according to which the employers bound by the agreement can hire only workers belonging to the contracting trade union and the workers can only take jobs with employers belonging to the contracting employers organisation, which had some support in the early part of the century, has now lost ground for a number of reasons. In some cases, its place has been taken by the closed agreement clause and in other cases by the system of extension by order of the public authority. Each of these methods has drawbacks as well as advantages for the organisations taking part. In selecting their approach, they are governed by a whole series of considerations which reflect the relationship between employers and workers organisations, their relative strengths and the number of outsiders, and the prospects of organising the outsiders, to mention only a few.

WAGES AND COST OF LIVING

The practice of linking wages to cost of living, which is an established method of compensating workers for the rise in living cost in many countries, including India, has fallen out of favour with British employers. A study just completed by the British Employers Confederation has given the finding that wage agreements linking wages to cost of living are inflationary and that, in general, they should be abolished wherever possible. It is noteworthy that the British Government's recent White Paper on incomes had suggested that "less weight" should be given in future wage negotiations to arguments for higher pay based on the cost of living. The B.E.C. study has now gone a step further and suggested that such arguments should be given no weight at all.

This verdict is likely to have an effect on a number of industries and is sure to encourage employers in a number of them to make a determined effort to end wage agreements, many of them of long standing, under which wages are periodically adjusted according to sliding scales based on movements in the index of retail prices. Since a new series of retail price indices are to come into force in January 1963, most of the sliding scale agreements now in force will have to be renegotiated this year, so that their complex "scales" can be readjusted. This will give employers an opportunity to ask the unions to agree to the discontinuance of the system of linking wages to cost of living. If they succeed, it will ultimately affect the pay of about 2 million workers. Some of the major industries in which the "cost of living" wage agreements are in force are: iron and steel, building and civil engineering, boot and shoe manufacture, hosiery and furniture and printing.

The suggestion contained in the B.E.C. study, however, is not likely to receive hundred per cent support even from employers, let alone the workers. For, it is said that some employers, especially in the iron and steel industry, still feel that the system is useful in making minor adjustments in wages according to the cost of living and that it is, therefore, worth retaining. Some others feel that they have a moral obligation to retain the system because according to them, unions had accepted, wage cuts before the war when the cost of living was falling. Wage negotiation in the next few months are expected to indicate how far the suggestion is acceptable to both employers and workers.

The suggestion to abolish the "cost of living" wage agreements is only one of the many conclusions of the B.E.C. study. The main purpose of the study was to evolve a "set of principles" for the guidance of negotiators of individual industries during the period of wage restraint which is expected to follow the pay pause which has just ended, on 31st March 1962, to be precise. Keeping in view the "guiding light" set by the White Paper, namely that the average level of wage increases during 1962 should not exceed 2½ per cent, the study has evolved a set of principles which is a sort of rough and ready guide for wage negotiators representing employers. These principles will not be published but the chief of them, according to the Labour Correspondent of the *Financial Times*, London, are:

1. Settling claims by comparing the rates paid in one industry with those in another is an inflationary process because it leads to "leapfrogging." The practice of granting a group of workers a rise simply because another group has just secured an increase should be abandoned.

2. Wage increases must not lead to price increases. For this reason the only industries entitled to grant rises are those where productivity is expanding. Those whose productivity is static must face the cold, uncomfortable fact that they are not in a position to grant any increases at all.

3. The B.E.C. believes that the Government's "guiding light" of 2-2½ per cent is best expressed in the following general formula—industries which have achieved productivity levels equal to the national average should offer no more than 2½ per cent; those with a figure higher than the national average can offer a little more; and those with lower productivity must offer less.

4. Every effort must be made to raise productivity by fully utilising existing manpower. The drive to eliminate restrictive labour practices must continue, although there is general recognition that, in some industries, such practices can be "negotiated away" only in consultation with the unions.

The most significant point that emerges from these principles is that productivity expansion sets the limit for "safe" wage increases—a point that may well be borne in mind by those who demand and award wage increases in India, too.

NATIONAL RAYON SELLS MORE, BUT EARNS LESS

RS. 150 LAKHS OF DEBENTURES TO BE ISSUED

A PROMISING recovery in sale proceeds, followed by a further setback in gross profit—a consolation turned into an illusion. This, in brief, sums up the results of the National Rayon Corporation Ltd. [Managing Agents: Messrs. Chinai and Company (Private) Ltd., Bombay] for the year ended 31st December 1961. It may be recalled that the Corporation had suffered its first ever setback in sale proceeds from Rs. 752.47 lakhs to Rs. 717.31 lakhs in 1960. During the year under review, it was able to stage a smart recovery to Rs. 810.42 lakhs, showing a sizable improvement over the previous year even after neutralising the decline in that year. The gross profit has, however, dropped further from Rs. 258.59 lakhs to Rs. 243.63 lakhs. For a company which never came down the hill, this must, indeed be disappointing. The setback is, however, due largely to extraneous factors which became unavoidable. The Directors say that the Company had to bear the industry's share of 60 per cent in the additional excise duty levied on rayon yarn in the 1961-62 Union budget and purchase some help under the Export Promotion Scheme by offering yarn at substantially lower price. These factors, together with a general increase in operating costs, the Directors add, largely lowered the profit margin. It is heartening to hear from them that the decline in profit was arrested by a better and more efficient working of the plants.

There was an all-round increase in costs during the year under review—of more than Rs. 3 lakhs to Rs. 127.68 lakhs in raw materials, of about Rs. 24 lakhs to Rs. 132.82 lakhs in stores, spares, power and fuel, and of a little less than Rs. 10 lakhs to Rs. 105.89 lakhs in staff expenses. On top of this, there was an increase of Rs. 55.73 lakhs to Rs. 124.32 lakhs in the excise burden. The Managing Agents' commission has been reduced from Rs. 9.80 lakhs to Rs. 8.96 lakhs. The provision for depreciation has been increased from Rs. 79.17 lakhs to Rs. 85.18 lakhs, presumably because of the addition of Rs. 336.05 lakhs to the gross block during the year under review. The tax liability, estimated at Rs. 53 lakhs, against Rs. 86.50 lakhs a year before, has been provided for at Rs. 41 lakhs, the balance having been drawn from the deferred taxation reserve. This explains the rise in the net profit from Rs. 83.12 lakhs to Rs. 108.49 lakhs. But the increase has been utilised to strengthen the reserve funds. Thus, reserves get as much as Rs. 49.25 lakhs, against Rs. 14.15 lakhs in the previous year. Reflecting the heavy addition to the block account, Rs. 39.25 lakhs, out of the transfers to reserves, go to the development rebate reserve and the balance to the debenture redemption reserve. The ordinary dividend has been maintained at the previous year's level of 22 per cent, subject to tax. The carry forward, however, is much lower at Rs. 0.93 lakh, as compared with Rs. 4.41 lakhs brought in.

The table below brings out the salient features of the Corporation's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958

Carry forward	0.93	4.41	1.66	0.97

* After allowing for Rs. 12 lakhs transferred from deferred taxation reserve.

† Subject to deduction of tax.

The expenses for the year under review include a sum of Rs. 3.05 lakhs by way of donations to political parties: Rs. 1.85 lakh to the Congress party, Rs. 50,000 to Swatantra and Rs. 70,000 to others.

The Corporation has received another licence for importing equipment for further expansion of its rayon yarn capacity. Orders for machinery and equipment have already been placed, and the new equipment is likely to be in operation before the end of this year. The erection of the tire cord plant was completed during the year under report. The usual teething troubles have already been overcome, and the plant would be operating at its normal capacity shortly. The Corporation has already sold 25,000 lbs. of tire cord at Rs. 12 a kilo to the Goodyear Tyre Company in the initial stages, and expects demand from other consumers to come up, since it is the only manufacturing unit so far in the country. Arrangements for expanding the caustic soda chlorine plant have advanced considerably, and the Industrial Credit and Investment Corporation of India has agreed to advance the foreign exchange loan for financing the import of the necessary equipment, for which the import licence is expected soon. The various expansion schemes on hand require additional financial resources. The Directors have, therefore, decided to issue 15-year debentures for a sum of Rs. 150 lakhs carrying interest at 6.5 per cent and ranking *pari passu* with the existing debentures. The rights of the existing debenture-holders are also proposed to be amended by increasing the rate of interest thereon from 5.5 per cent to 6.5 per cent and by extending the date of redemption by seven years in consideration of their agreeing to the issue of the new debentures *pari passu* with them. The Corporation has already entered into an agreement with the International Paper Company of New York, U.S., for technical collaboration, and with Messrs. Brown and Root Inc., Houston, Texas, for rendering all the detailed engineering services for the rayon-grade pulp manufacturing project. Negotiations with the Government of Mysore have reached the final stage, and it is expected that the agreement for exploiting the forest resources would be entered into shortly. An approach has been made to the A.I.D. for the requisite foreign exchange for importing plant and equipment. This ambitious expansion programme is calculated to ensure a bright long-term outlook for the Corporation.

Indicating the growth of the Corporation, its gross block has progressively increased from Rs. 6.85 crores in 1955 to Rs. 16.69 crores in 1961. During the year under report itself, it rose by Rs. 3.76 crores. It has been very conservatively written down to Rs. 9.82 crores. But for the setback in 1960, sales have been higher every year, and increased from Rs. 4.22 crores to Rs. 8.10 crores between 1956 and 1961. The paid-up capital of Rs. 415.36 lakhs, of which equity is Rs. 241.12 lakhs, is supplemented by reserves of Rs. 241.46 lakhs. Secured loans comprise debentures of Rs. 150 lakhs, on which interest accrued amounts to Rs. 4.16 lakhs, and bank borrowings of Rs. 119.50 lakhs against nil in the previous year. Unsecured loans total Rs. 140.29 lakhs. Current liabilities and provisions amount to Rs. 158.26 lakhs. Excluding the debentures, its liability to outsiders aggregates Rs. 418.05 lakhs. Against this, current assets, loans and advances and investments total only Rs. 246.66 lakhs. All this means that even without the proposed debenture issue, the Corporation is heavily under-capitalised in relation to its block account. Sooner or later, the Company will have to issue fresh equity capital, if the present lopsidedness of its financial picture is to be corrected.

The Rs. 100 fully-paid ordinary shares of the Corporation are currently quoted at Rs. 564.50 *cum-div.* and offer, on an *ex-div.* basis, a net yield of 2.8 per cent per annum.

SLIGHT IMPROVEMENT IN BOMBAY DYEING'S PROFIT-MARGIN

PROSPECTS FOR CURRENT YEAR NOT PROMISING

UNHAMPERED by the somewhat dull market conditions, price fixation and growing competition in oversea markets, the turnover and profit of the country's premier cotton textile unit, the Bombay Dyeing and Manufacturing Company Ltd. [Managing Agents: Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay], has shown a further substantial improvement in results for the year ended 31st December 1961. Gross sale proceeds of cloth, yarn, and waste have, by advancing by no less than Rs. 214.70 lakhs over their previous level, reached an impressive figure of Rs. 1,359.18 lakhs. This achievement has been possible in a large measure because of the increase in production of cloth, by approximately 32 lakh yards, through operation of more spindles and looms and a partial third shift run at the Company's Textile Mills. It is also due, to a certain extent, to the new lines of manufacture introduced in the market. Although fixation of prices and a rise in manufacturing cost have had their cumulative effect on profit-margin, the increased turnover has undoubtedly helped the Company to reap a higher gross profit of Rs. 158.37 lakhs as compared with Rs. 124.49 lakhs a year ago. Although such essential provisions as Managing Agents' Commission, depreciation and taxation, aggregating Rs. 100.37 lakhs as against Rs. 74.02 lakhs a year ago, have claimed the lion's share of the gross profit, an increase of Rs. 7.53 lakhs or about 16 per cent is still witnessed in the net profit which now amounts to Rs. 58.00 lakhs. Transfer to the development reserve has been curtailed from Rs. 29.50 lakhs to Rs. 24.83 lakhs but so have been the withdrawals from reserves and provisions from Rs. 14.45 lakhs a year ago to a mere Rs. 2 lakhs. Dividend has been maintained, for the second year in succession, at 14 per cent per annum, subject to deduction of tax, and absorbs Rs. 35.14 lakhs, leaving a carry forward of Rs. 69,669 as against Rs. 65,826 brought in.

The Company's record of achievement during the past four years, 1958-61 inclusive, is contained in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds (gross)	1359.18	1144.48	1080.33	957.03
Other income	28.91	26.26	18.29	14.70
Closing stocks	229.10	222.23	148.49	164.07
Expenses	1168.55	1084.59	935.03	996.06
Excise duty	68.04	35.40	44.17	49.04
Gross profit	158.37	124.49	103.84	90.70
Managing Agents' remuneration	5.65	6.27	6.00	5.03
Provisions for—				
Depreciation	80.52	63.25	54.64	51.43
Taxation	14.20	4.50	15.30	6.50
Net profit	58.00	50.47	29.90	27.74
Transfer from reserves	2.00	14.45	12.30	17.00
To reserves and provisions	24.83	29.50	7.20	30.00
Dividends	35.14 (14%)†	35.14 (14%)†	35.14 (14%)†	25.10 (10%)
Carry forward	0.70	0.66	0.37	0.50

† Subject to deduction of tax.

It will be observed that sale proceeds have consistently increased from Rs. 957.03 lakhs in 1958 to Rs. 1,359.18 lakhs during the year under report. The average rate of rise works out to 12 per cent per annum which can be considered as quite satisfactory. An interesting feature so far as the year under report is concerned is that, despite higher output, the closing inventory has risen quite nominally over the corresponding figure for the preceding year and this may be one of the reasons why the gross profit has been higher. The net profit has also increased in conformity with growing sales but the improvement has been at a much faster rate so that the ratio of net profit to gross sale proceeds shows an increase from 2.9 per cent in 1958 to 4.3 per cent for 1961. It must, however, be borne in mind that 1958 was a year of depression for the cotton textile industry as a whole. Further, even the ratio for 1961 is appreciably lower than that for many other industrial units in this country. Nevertheless, it will not be too optimistic to presume that the Company has now definitely turned the corner and that its heavy investment on modernisation and renovation has started paying dividends.

Those who have been looking forward to an improvement in the Company's financial position as a result of the rapid betterment in its cash flow will no doubt be disappointed to learn that the situation still continues to be strained. It will be recalled that the Company entered upon a large renovation and modernisation programme a few years ago, with a view to raising its competitive power and improving the operating efficiency of its mills. During the past four years alone, new assets worth over Rs. 3.20 crores were acquired, raising the value of the gross block to as high as Rs. 1,221.51 lakhs. Since the Company's share capital remained stationary during these years at Rs. 250.98 lakhs in 10,03,920 ordinary shares of Rs. 25 each and the reserve position showed but little improvement from Rs. 346.38 lakhs as at the close of 1958 to Rs. 379.80 lakhs as at 31st December 1961, practically the entire expansion scheme has had to be financed out of secured and unsecured loans the amount of which currently stands at Rs. 540.37 lakhs or nearly 90 per cent of the Company's own invested funds. Besides these, current liabilities and provisions aggregate Rs. 225.41 lakhs. The total indebtedness amounts to Rs. 765.78 lakhs, as against which there are current assets, including investments, amounting to Rs. 792.70 lakhs. The fixed assets are well written down, the net block being Rs. 603.86 lakhs. The company's net worth works out to Rs. 631 lakhs, an improvement of Rs. 23 lakhs over the year.

There was not much activity in the local cloth market during the year. Government imposed a cut of 5 per cent in prices of cloth in January 1961. The margin between the ex-mill and ceiling prices was increased from 15 per cent to 18 per cent but at the same time mills were asked to make available 25 per cent of their production in popular varieties, to be sold in India at 3 per cent less in the case of coarse and medium and 2 per cent less in the case of fine and superfine varieties.

Exports of Indian cloth showed a steep fall from 692 million yards valued at Rs. 54.4 crores in 1960 to 575 million yards valued at Rs. 46.2 crores in 1961. The chief factor that contributed to this decline was the increased competition from Japan, China, Hong Kong, Spain and Portugal. The Company's exports during 1961 amounted to 51.9 million yards valued at Rs. 5.54 crores, as compared to 59.6 million yards valued at Rs. 6.25 crores in 1960. This reduction was largely due to the Company's exports to Australia—its best overseas market—having dropped by nearly rupees one crore due to the credit squeeze in that country and the Australian Tariff Board inquiry which caused a serious setback to the Company's exports. However, sales to Europe and other export markets were developed during the year, with the result that the Company was able to maintain its position as the largest exporter of cotton textiles in the country, a position which it has enjoyed for about 20 years. It may be noted here that, this year its exports reached 12 per cent in value of the total exports of cloth from India—the largest share so far in the history of the Company.

However, the most important development in the Company's affairs during the year was the placing on the market of crease-resistant fabrics which are branded with the well-known marks "Tebilized" and "Tebilized Double Tested" of Messrs. Tootal Broadhurst Lee Co. Ltd., Manchester, U.K. New qualities manufactured from combed yarns are also now being produced, which it is anticipated will find a good demand in the local, as well as export, market. Experiments are already being conducted for the manufacture of fabrics comprising mixtures of cotton and synthetic fibres such as nylon and terylene and the first samples have already been produced.

As regards prospects for the current year, it will be pertinent to quote what the Directors themselves have to tell the shareholders. They say:

"The cotton season 1961-62 commenced with indications of an adequate supply of Indian cotton, the crop being estimated at 54 lakh bales and a carryover of about 18 lakh bales of indigenous and 4 lakh bales of foreign cotton. However, contrary to expectations, due to unseasonal rains and extensive flood damage, the crop estimate was revised downwards, and the industry requested the Government to re-introduce the compulsory system of surveys to ensure that prices were kept at a reasonable level. The cotton crop this season is now expected to be approximately 43 lakh bales only, and, with the mill demand having risen considerably, the supply position is precarious. Government have recently imposed restrictions on purchases of indigenous varieties of cotton, and mills are permitted to carry stocks equivalent to five months' consumption only. In spite of these stringent controls, the prices of most varieties of Indian cotton have pierced the ceilings.

"Imports of foreign cotton this season have so far amounted to 4.72 lakh bales and 4.43 lakh bales have been licensed for import. Government is making efforts to secure supply of short-staple foreign cotton to fill the gap, but the stringency of foreign exchange and the fact that supplies of American P.L. 480 cotton are not likely to be available till about the end of the current year have put the textile industry in a very difficult position to maintain its production. The shortage of cotton is bound to affect adversely exports to overseas markets."

The present market quotation for the Company's Rs. 25 fully paid ordinary share is Rs. 70.30 *cum-div.* final dividend of Rs. 2.50 taxable. The net yield on an *ex-div.* basis works out to about 3.6 per cent per annum.

MADRAS RUBBER FACTORY

The Madras Rubber Factory Limited [Managing Agents: Young India Agencies (Private), Madras] has got off to a promising start during the first year of its working, namely, the year ended 31st December 1961. It was engaged only in the tread rubber business in that year which it took over for Rs. 25 lakhs from the Madras Rubber Factory (Private) Ltd. with effect from 1st April 1961. The Company realised Rs. 164.48 lakhs from sales and earned a gross profit of Rs. 23.51 lakhs for the period commencing from 16th November 1960 to 31st December 1961. This is sufficient to declare a satisfactory dividend on the entire capital and also to carry forward a substantial amount to the next year. The Company spent Rs. 106.83 lakhs on raw materials and packing materials, Rs. 2.73 lakhs on stores, spares, power, fuel and electricity, Rs. 10.44 lakhs on staff and Rs. 24.91 lakhs on other heads. Managing Agents' commission amounted to Rs. 0.63 lakh; depreciation claimed Rs. 4.58 lakhs; and the provision for taxation was Rs. 9 lakhs. The net profit thus worked out to Rs. 9.30 lakhs. From this, Rs. 0.14 lakh is transferred to development rebate reserve. The dividend on the Rs. 10 fully paid ordinary shares is proposed at 6 per cent, subject to tax, which absorbs Rs. 4.60 lakhs, leaving Rs. 4.56 lakhs to be carried forward. The dividend, it must be noted, is only for the period from the date of allotment, though on the full face value.

The Directors state in their report to the shareholders that tyre production commenced in the very first year of incorporation of the Company. It was thought desirable to start the pilot plant production of Mansfield tyres even before commercial production could be started, and it was installed and commissioned into production within three months after the import licence was granted. At present, 825 x 20 size truck tyres are being produced in the pilot plant and production is being systematically stepped up. Commercial production of tyres and tubes of all varieties is expected to begin later this year. The principal engineers of the Company have already been trained in the plant of Mansfield Tire and Rubber Company, U.S., its collaborators, whose representatives are also training a large number of supervisors and workers in the pilot plant. A fresh team of engineers and rubber technicians has left for training in the U.S. The Company has been sanctioned a loan of Rs. 1 crore by the Industrial Finance Corporation of India and of Rs. 25 lakhs by the Export-Import Bank. It has been successful in competing with overseas manufacturers of tyre compounds, which are being exported to 14 countries in Asia and Africa. Rebate on duty for past exports and also on import licence for raw rubber at concessional terms also on past exports have been obtained. The export organisation is being strengthened to handle the business in tyres. The factory buildings have been completed and the erection of machinery is said to be proceeding at a fast rate. The licensed capacity of the existing factory is 300,000 tyres and tubes per annum, and an application to increase it further has been made to the Government. Preliminary expenses of Rs. 0.15 lakh, share issue expenses of Rs. 3.47 lakhs and expenses incidental to the tyre factory of Rs. 8.31 lakhs, making a total of Rs. 11.93 lakhs, are shown under miscellaneous expenditure on the assets side of the balance-sheet.

Stamco Industries Limited has been authorised to restyle itself as Killick Caribonum Limited following the approval by the Government of India of its technical and financial collaboration agreement with Caribonum Limited, Leyton, London. The British firm has provided considerable advance machinery in addition to technicians for setting up the Company's factory at the Killick Industrial Estate at Kandivli, Bombay.

ORISSA CEMENT LIMITED
RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE Registers of Members and Share Transfers will remain closed from 16th May till 31st May, 1962, both days inclusive, except for recording the share transfers received before the closure of the Registers. The dividend for the year 1961, when declared, will be payable to those Shareholders whose names would appear in the Register of Members as on 31st May, 1962.

By Order of the Board,
S. C. AGGARWAL,
Secretary.

Dated 5th April, 1962.

RESULTS OF BINNY COTTON GROUP

PROFITS AND DIVIDENDS IMPROVE

A LARGER turnover based on a satisfactory level of production has gone a long way in enabling the Buckingham and Carnatic Company Ltd., and the Bangalore Woollen, Cotton and Silk Mills Company Ltd., both belonging to the Binny Group of enterprises, to put up an inspiring show during the year ended 31st December 1961. Although the working results achieved by the two companies differ in minor respects, the ultimate result in respect of both has been the same, namely, a higher net profit and an increase in dividend to equity shareholders.

Buckingham and Carnatic

For the fourth year in succession, the sale proceeds of the Buckingham and Carnatic Company have shown substantial gains over the preceding year and, at over Rs. 12.35 crores, stand higher by Rs. 1.07 crore or 9.2 per cent, than the corresponding figure for 1960. Exports, totalling Rs. 2.02 crores as against Rs. 1.97 crore previously, have not only helped achieve a higher turnover but also have secured for the Company valuable benefits under the Export Incentive Scheme which in turn have been partially responsible in raising other incomes by Rs. 8.97 lakhs to Rs. 40.24 lakhs. A major portion of this improvement has, however, been neutralised by increased production cost which, under most heads, has been higher and is in keeping with the general trend in the country. As a result, the gross profit shows only a marginal rise of Rs. 3.77 lakhs to Rs. 154.28 lakhs. There has been a sizable saving of Rs. 7.56 lakhs in the commission payable to the Managing Agents or Directors for which a provision of Rs. 2.50 lakhs has been made but this also has been more than fully absorbed by an increase of Rs. 3.26 lakhs in the provision for depreciation, and a rise of Rs. 7.35 lakhs to Rs. 46.60 lakhs in that for taxation. Consequent on these increases, the net profit shows a rise of Rs. 1.78 lakh only to Rs. 60.00 lakhs. Out of this, the Directors have transferred Rs. 6.50 lakhs (as against Rs. 5.00 lakhs last year, to the debenture redemption fund, Rs. 6.51 lakhs (as against Rs. 8.00 lakhs) to the statutory development rebate reserve and Rs. 12.80 lakhs (as against Rs. 17.85 lakhs) to the general reserve. The total of these appropriations to reserves at Rs. 25.82 lakhs are Rs. 5 lakhs less than the sum of Rs. 30.85 lakhs conserved last year. After setting aside from this Rs. 2.08 lakhs towards the preference dividend for the year, the Directors have proposed a higher ordinary dividend of 18 per cent (including the interim of 6 per cent), subject to deduction of tax claiming Rs. 32.12 lakhs, or a net of 12.40 per cent. This rate compares favourably with the 10 per cent tax-free dividend for the previous years. The carry forward is Rs. 2.15 lakhs, as against Rs. 2.17 lakhs brought in.

The rapid progress made by the Company during the past four years is well brought out in the comparative table appearing at the foot of this page.

In common with other progressive-minded textile units in the country, the Company entered, some years back, upon an extensive programme of replacements and renovation of its productive capacities. The scheme was continued during the year under report and new assets worth Rs. 71.73 lakhs were added to the fixed assets, bringing the total expenditure on capital account during the past five years to Rs. 3.00 crores. This outlay was clearly too heavy for the Company to be met entirely out of its own resources and, though a debenture loan had already been raised for the purpose, further borrowings from banks and others became inevitable. The Company's financial position is nevertheless quite strong, as will be seen from a scrutiny of its balance-sheet as at 31st December 1961. The share capital of Rs. 199.78 lakhs consists of Rs. 21.30 lakhs in preference shares and Rs. 178.48 lakhs in equities and has a substantial backing of reserves and surplus amounting to Rs. 385.43 lakhs. Total loans, including debentures at Rs. 64.46 lakhs amount to Rs. 171.96 lakhs in addition to current liabilities of the order of Rs. 158.35 lakhs. The gross block, as heavy as Rs. 929.93 lakhs, has been very well written down, to nearly a third of its value, to Rs. 374.48 lakhs. Capital work in progress is worth Rs. 21.95 lakhs thereby giving total net block as Rs. 396.43 lakhs. Investments, current assets and loans and advances, all aggregate Rs. 519.09 lakhs, and exceed the Company's indebtedness to outsiders by a comfortable margin of Rs. 187.79 lakhs.

Currently, the Rs. 100.00 fully-paid ordinary shares of the Company are quoted at Rs. 287.00 *cum*-final dividend. Reducing the price to an *ex-div.* basis, the net yield works out to 4.5 per cent.

Bangalore Woollen

Bangalore Woollens has been more fortunate than its sister concern in that the demand for the Company's products exceeded the output and this has not only raised the sale proceeds by Rs. 45.79 lakhs to Rs. 618.88 lakhs but has also brought about a welcome reduction in closing inventories from Rs. 70.71 lakhs to Rs. 64.35 lakhs. Besides this, production of cotton cloth continued at a high level and that in the silk department was larger in view of the larger supplies of raw material being available. These two factors, supported by a prudent purchasing policy, have quite logically broadened the profit-margin and have lifted the gross profit to Rs. 75.44 lakhs from Rs. 64.51 lakhs a year ago, despite a higher production cost. With the appointment of Managing Director to take over the management of the Company with effect from 1st January 1961, the usual provision for the Managing Agents' commission has been suspended and a small provision of Rs. 0.64 lakh has been made for the commission payable to the Managing Director. Provision for depreciation has remained unchanged at Rs. 15.80 lakhs but that for taxation is substantially higher at Rs. 27.00 lakhs as against Rs. 19.80 lakhs previously. These essential provisions thus absorb an aggregate of Rs. 43.44 lakhs, leaving behind a net profit of Rs. 32.00 lakhs which is the highest the Company has earned during any of the past four years, as will be evident from the comparative table appearing at the end of this review.

This Company, too, has raised the dividend from 10 per cent tax-free to 18 per cent (including interim dividend of 6 per cent) taxable, or 12.40 per cent net. It is noteworthy that the Company could do this after raising the transfers to reserves from Rs. 5.87 lakhs to Rs. 9.90 lakhs.

The financial position of the Company, as reflected in its balance-sheet as at 31st December 1961, continues to be as strong as ever. The share capital of Rs. 127.50 lakhs, of which Rs. 6.00 lakhs are in 6 per cent cumulative preference shares and the balance in equities, is supplemented by Rs. 169.02 lakhs in reserves and surplus. Other liabilities and provisions total Rs. 120.45 lakhs and are more than adequately covered by current assets, loans and advances and investments aggregating Rs. 321.04 lakhs. New assets worth Rs. 19.26 lakhs were added to the block account this year, bringing the cost of fixed assets to Rs. 415.85 lakhs. On deducting from this Rs. 335.46 lakhs being the depreciation provided so far, the net block works out to Rs. 80.39 lakhs. Capital work in progress is valued at Rs. 15.54 lakhs, with the inclusion of which, the total net block comes to Rs. 95.93 lakhs.

The Rs. 100 fully paid shares of the Company are currently quoted at Rs. 267 *cum*-final dividend and fetch a net return of about 5 per cent on the *ex-div.* basis.

COMPANY MEETINGS AND DIVIDENDS

MARSHALL SONS AND CO. (INDIA) LTD. Forty-fourth Annual General Meeting, Calcutta, 23rd April 1962. Dividend: *Nil*. Transfer books remain closed from 9th to 13th April 1962, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Sixteenth Annual General Meeting, Bombay, 23rd April 1962. Dividend: Re. 1.50 per share (includes a bonus of Re. 0.25 per share), subject to deduction of tax. Transfer books remain closed from 2nd to 23rd April 1962, both days inclusive.

PREMIER CONSTRUCTION CO., LTD. Forty-second Annual General Meeting, Bombay, 24th April 1962. Dividend: 33⅓ per cent or Rs. 10.00 per share, subject to deduction of tax, payable on and from 30th April 1962.

SASSOON SPINNING AND WEAVING CO., LTD. Eighty-ninth Annual General Meeting, Bombay, 24th April 1962. Dividend: Rs. 2.00 per share, subject to deduction of tax, payable from 2nd May to 31st July 1962. Transfer books remain closed from 2nd April to 24th April 1962, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Twenty-fifth Annual General Meeting, Calcutta, 25th April 1962. Dividend: 35 per cent or Rs. 3.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 9th to 25th April 1962, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Annual General Meeting, Calcutta, 26th April 1962. Dividend: Re. 1.00 per ordinary share (includes interim dividend of Re. 0.35 per share), subject to deduction of tax. Transfer books remain closed from 12th to 26th April 1962, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Annual General Meeting, Calcutta, 27th April 1962. Dividend: Rs. 3.50 per share (includes interim dividend of Re. 0.70 per share), subject to deduction of tax. Transfer books will remain closed from 13th to 27th April 1962, both days inclusive.

BRITISH INDIA CORPORATION LTD. Forty-second Annual General Meeting, Kanpur, U.P., 28th April 1962. Dividend: Re. 0.35 per share, subject to deduction of tax.

SHRI AMBICA MILLS LTD. Thirty-fifth Annual General Meeting, Ahmedabad, 28th April 1962. Dividend: *Nil*. Transfer books were closed from 10th to 31st March 1962, both days inclusive.

RAJGARH TEA CO., LTD. Annual General Meeting, Calcutta, 30th April 1962. Dividend: Re. 1.35 per share, subject to deduction of tax. Transfer books will remain closed from 6th to 30th April 1962, both days inclusive.

MIM TEA CO., LTD. Annual General Meeting, Calcutta, 30th April 1962. Dividend: Rs. 20.00 per share or 20 per cent, subject to deduction of tax. Transfer books will remain closed from 16th to 30th April 1962, both days inclusive.

MURPHULANI (ASSAM) TEA CO., LTD. Annual General Meeting, Calcutta, 30th April 1962. Dividend: Rs. 2.063 per share, on preferred ordinary shares and Re. 1.50 per share on ordinary shares, both subject to deduction of tax. Transfer books will remain closed from 16th to 30th April 1962, both days inclusive.

W. H. BRADY AND CO., LTD. Forty-ninth Annual General Meeting, Bombay, 30th April 1962. Dividend: Rs. 52.00 per share, subject to deduction of tax, payable on and after 10th May 1962. Transfer books remain closed from 12th April to 2nd May 1962, both days inclusive.

MADRAS RUBBER FACTORY LTD. First Annual General Meeting, Madras, 4th May 1962. Dividend: 6 per cent or Re. 0.60 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 15th April to 4th May 1962, both days inclusive.

SHREENIWAS COTTON MILLS LTD. Twenty-seventh Annual General Meeting, Bombay, 9th May 1962. Dividend: Rs. 20.00 per ordinary share, subject to deduction of tax, payable on and after 10th May 1962. Transfer books remain closed from 10th April to 2nd May 1962, both days inclusive.

RENEWED SETBACK FOR RAZA BULAND SUGAR

DIVIDEND CUT—RESERVES DEPLETED

A REVISED method of evaluating the closing stock and the well-known adverse factors common to all sugar mills in the country have brought about a renewed setback for the Raza Buland Sugar Company Ltd. (Managing Agents: Messrs. Govan Bros. [Private] Ltd., Rampur, U.P.) during the year ended 31st October 1961. The setback is conspicuous, as it has come after a year of fair recovery. Till the previous year, the closing stock of sugar was valued each year at the market or controlled rate (during the controlled period) after deduction of the excise duty and sales commission payable on it. For last year, the Directors have valued it at cost price, which is lower than the market value. And, having fared no better than did the industry as a whole, the Company has carried a much larger inventory of Rs. 91.26 lakhs as compared with Rs. 69.43 lakhs in the previous year. On top of this, there has been a drop in sale proceeds from Rs. 348.75 lakhs to Rs. 333.53 lakhs. The result is a sharp decline in gross profit from Rs. 36.79 lakhs to Rs. 8.68 lakhs. The ratio of profit to sales has fallen abruptly from 10.5 per cent to a ridiculously low level of 2.6 per cent. It would have been lower still but for an increase in income from other sources from Rs. 7.35 lakhs to Rs. 12.11 lakhs. The cost of cane has increased from Rs. 177.54 lakhs to Rs. 180.24 lakhs, staff expenses have moved up from Rs. 28.76 lakhs to Rs. 29.59 lakhs and other expenses from Rs. 77.09 lakhs to Rs. 82.17 lakhs. The higher staff expenses were because of the Wage Board recommendations which were implemented without a rise on that account in the price of sugar.

The provision for depreciation has been increased from Rs. 2.75 lakhs to Rs. 3.27 lakhs, but that for taxation is naturally much lower at Rs. 2.10 lakhs, as against Rs. 18.92 lakhs for the previous year. With a lower profit, the Managing Agents' commission has also fallen from Rs. 3.09 lakhs to Rs. 0.53 lakh. After making these allocations, the net profit works out to Rs. 2.78 lakhs, which is only a fraction of Rs. 12.03 lakhs earned in 1959-60, and is inadequate to pay the dividend, even after pruning it from 12.5 per cent to 10 per cent, subject to tax. The Directors have, therefore, withdrawn Rs. 4.50 lakhs from reserves. As against Rs. 5.78 lakhs transferred to general reserve in the preceding year, the Directors have transferred during the year under review Rs. 10 lakhs to create a gratuity reserve. This is to provide for the liability to the employees, which had been shown so far as a contingent liability and has now been estimated at that figure. The amount for this purpose has been found from the past provisions for taxation.

The table below compares the Company's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1961	1960	1959	1958
Sale proceeds	333.53	348.75	246.29	319.64

Average percentage recovery	9.51	9.67	9.69	10.29

* Subject to deduction of tax.

The Company's production of sugar amounted to 412,000 quintals (one quintal=100 kg. or 220.462 lbs.), showing an improvement of some 3,000 quintals over the previous year. The total cane crushed amounted to 4,343,000 quintals as against 4,237,000 quintals in the preceding year. The average recovery, however, was lower at per cent, as compared with 9.67 per cent. The cane price linking formula entitling cane growers to a deferred payment of cane price in addition to the minimum cane price remained in force, but, as the extent of the deferred cane price has not been finally announced, the liability on that account could not be ascertained and hence it has not been provided for. The basic export quota for the season for the Company's two factories was fixed at 36,451 bags, which fetched in all about Rs. 20.52 lakhs. The Company sold an additional quantity of 51,763 bags for export at the controlled price, as the quality of its sugar was considered superior and well appreciated abroad, particularly in Malaya.

There has been no progress, according to the Directors, in the income-tax assessments since the last report and assessments have been completed only up to the Company's accounting year ended 31st October 1957. Though the writ petition of the Company against the assessment of agricultural income-tax has been rejected by the Allahabad High Court, a directive has been given to the assessing authority for examining whether the lands in question are really subject to the payment of agricultural income-tax. The appeals for agricultural income-tax in respect of the accounting years 1949-50 to 1953-54 pending before the appellate authority have also been remanded back to the Collector, Rampur, for fresh assessment in the light of the High Court's directive.

The development activities of the Company for the provision of irrigation facilities to cane growers in collaboration with the Cane Department of the Government of Uttar Pradesh are continuing, and the response from the growers has been quite encouraging. Licences for increasing the crushing capacity up to 1,500 tons of sugarcane per day of the two factories have been granted. In the light of the target of 3.5 million tons of sugar production laid down in the third Plan and the Government's intention to establish a permanent export market for sugar, the Directors have thought it fit to proceed with the expansion, albeit in a phased manner. Moreover, a unit with a crushing capacity of 1,500 tons per day would be more economic.

The Company's writ application before the Allahabad High Court for the refund of two annas per maund on the price of cane purchased from Tarai area during the season 1955-56 is still pending. The Government has agreed to an increased price of Rs. 30-45 per maund for the quantity requisitioned out of the 1953-54 season's production, and the increase will figure in the current year's accounts.

The financial position of the Company is sound. The paid-up capital of Rs. 65 lakhs is backed by reserves and surplus of Rs. 34.20 lakhs, of which general reserve accounts for Rs. 16.55 lakhs. Borrowings from the State Bank of India have increased from Rs. 36.71 lakhs to Rs. 86.58 lakhs, and are secured by pledge of sugar stocks, stores, spares and gunny bags. The other current liabilities and provisions have come down from Rs. 52.62 lakhs to Rs. 46.48 lakhs. The total indebtedness to outsiders aggregates Rs. 133.06 lakhs to cover which are available current assets, loans and advances of Rs. 166.12 lakhs. Investments have increased from Rs. 12.97 lakhs to Rs. 14.09 lakhs, of which quoted are Rs. 13.29 lakhs and command a market value of Rs. 10.79 lakhs. The gross block increased during the year from Rs. 85.30 lakhs to Rs. 92.55 lakhs and has been written down to Rs. 49.63 lakhs. Expenses on construction in progress are shown at cost at Rs. 2.43 lakhs.

Rs. 10 fully paid ordinary shares of the Company are currently quoted in Delhi at Rs. 9.87 *cum-div.*, and, on an *ex-div.* basis, offer a net yield of 7.6 per cent per annum.

NO RIGHTS SHARES FROM I.I.S.CO. FOR THE PRESENT

In a circular letter issued to the shareholders last week, the Directors of the Indian Iron and Steel Company Ltd. point out that there is no need for an immediate rights share issue in connection with the setting up of the new company called I.I.S.Co.-Stanton Pipe and Foundry Co., Ltd. Giving an idea of the new project, the letter says that it is designed to meet the shortage of spun iron pipe in the country. The new company will be floated with an initial issued capital of Rs. 3 crores, which will be taken up by the I.I.S.Co. and Stanton Iron Works Company Ltd. of the U.K., which is collaborating in the project, in the proportion of two-thirds and one-third. The collaboration agreement has been generally approved by the Government. The scheme is additional to and will not interfere with I.I.S.Co. spun iron pipe making project at Kulti. The design and fabrication of the plant and buildings for the new project would take nearly two years. Hence, the Directors think that the I.I.S.Co. will not be in immediate need of funds for shares in the new company. They, therefore, add that, at an appropriate time, it would be necessary to make a rights share issue on terms and conditions agreed upon with the Controller of Capital Issues. It is not possible to specify at this stage, they say, what these terms and conditions would be. In order to get the approval of shareholders of the project, a general meeting of the Company will be held at Calcutta on 25th April 1962.

BHARAT SURYODAYA MILLS FARES WELL

The Bharat Suryodaya Mills Company Limited (Managing Agents: Chaturbhujdas Kharawala Mohatta and Co., Ahmedabad) has fared well during the year ended 31st December, 1961. Sale proceeds have improved from Rs. 160.12 lakhs to Rs. 176.66 lakhs and the profit has risen from Rs. 12.05 lakhs to Rs. 20.40 lakhs. As a corollary to these better results, the Directors have stepped up the return to ordinary shareholders from Rs. 8 to Rs. 18 per share, inclusive of a bonus of Rs. 6, subject to tax. Allocations include Rs. 4.13 to depreciation, Rs. 5 lakhs to taxation, and Rs. 3.87 lakhs to development rebate. General reserve gets Rs. 1.40 lakhs. The Company installed modern machinery worth Rs. 17.18 lakhs during the year. The block account increased from Rs. 54.27 lakhs to Rs. 76.04 lakhs. Depreciation provided till the year-end amounts to Rs. 31.64 lakhs. The Company's modernisation and renovation scheme is in progress, and orders for other machinery, as also for spinning machinery against the licence for 2,400 additional spindles already received, have been finalised.

PLANTING

(*Concluded from page* 684)

prices. The Federation of Coffee-Growers' Co-operatives has announced that it will be selling the "fine" coffee in its possession, at the rate of 10 per cent per month during the first six months of this year, to markets abroad and not to I.B.C., partly because it expects a shortage of fine coffee from the 1962-63 crop. The I.B.C. has reduced the price at which it sells green coffee to local roasters in Brazil by 25 per cent, in order to balance the rise in roasters' overhead costs. In this way a threatened rise in coffee prices to Brazilian consumers will be avoided. It has informed processors that it is prepared to sell up to a million bags (1.2 million cwt.) of "expurgation" coffee to them at a price of 100 cruzeiros per bag for the extraction of caffein and oils. Brazilian officials have denied that there was any intention to reduce or to abolish minimum prices for registration of any export sales. These prices were, on the contrary, raised at the end of January, though this rise did not affect the actual dollar prices, being merely a readjustment to the new exchange rate of 310 cruzeiros per U.S. dollar.

In Colombia, the Congress has approved a Bill to eliminate the 9 per cent export tax on coffee. A decree regulating the movement of El Salvador's 1961-62 coffee crop provides for a retention quota of 10 per cent and fixes the prices at which this retention coffee may be sold to the *Compania Salvadorena de Cafe*.

The arabica terminal market in Le Havre, which was closed at the beginning of the war, was reopened on 8th February. The robusta market in the same centre had been reopened in November 1954.

France has fixed the import quota for arabica coffee from outside the franc zone during the first half of 1962 at 492,000 cwt., the same figure as for the first half of 1961. The French authorities are reported to have reached agreement to maintain the price at which robusta coffees from their former African colonies will be sold to French importers during 1962 at the same levels as in 1961, that is, not to exceed 3.20 francs per kilo c.i.f. for courant and 3.24 francs for superior. These prices are well above those prevailing for similar coffees elsewhere and constitute a subsidy by France to the coffee producers of its former colonies.

Following the establishment of an office of I.B.C. in Hamburg, officials of Costa Rica and Gautemala have indicated that they will open an office in that city.

The *Federacion National de Cafeteros* of Colombia is planning to establish offices in several European capitals in order to expand coffee exports by means of barter deals.

SYNOPSES OF COMPANY REPORTS

Associated Stone Industries (Kotah) Ltd.

(*Managing Agents*: Rajputana Mining Agencies Private Ltd., Ramganjmandi (W. Rly.)

16*th Annual General Meeting*—Held on 26th March 1962.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1961	1960
Sales (rough and polished stones, paints, cements, etc.)	62,84	45,22
Closing stock	10,73	11,06
Gross profit	15,82	7,89
Transfer to Managing Agents' commission	1,41	82
,, ,, depreciation	1,74	1,06
,, ,, provision for development rebate	28	16
,, ,, provision for taxation	6,20	1,54
Net profit	6,19	4,31
Adjustments	5	6
Appropriations—		
Total available	6,24	4,37
Transfer to provision for charities and donations	Nil	25
,, ,, reserve for doubtful advances to labourers	40	20
Proposed dividends (taxable) C. preference	17	17
,, ,, ,, equity	5,55 (30%)	3,70 (20%)
Carry forward	12	5

N.B.—Adjustments represent the balance brought forward from the previous year.

Extracts from the Directors' report: The Directors have pleasure in announcing that the Company has made an application to the Central Government on 22nd December 1961 for the Licence or Permission for establishment of a Cement Factory at Ramganjmandi, under the Registration and Licensing of Industrial Undertakings Rules. 1952. The total financial commitment under this scheme may come to about Rs. 2,50,00,000.

The production of Kotah Stone uptodate, since the close of the year under report, is comparatively less due to the heavy rainfall in the quarry areas. However, the Directors are confident that their target for production of 2,00,00,000 sq. ft. of Kotah Stone during the year 1961-62 as against the actual production of 1,51,48,734 sq. ft. during the year under report will be achieved.

The Directors have decided to change the accounting year of the Company from 30th September to 31st October.

Accounts in brief as at 30th September 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	20,50,000	Gross block	20,56,614
Reserves and surplus	13,63,304	—Depreciation	10,75,787
Other liabilities	35,28,514		
		Net block	9,80,827
		Current assets	40,87,291
		Investments	4,31,232
		Cash	14,42,468
	Rs. 69,41,818		Rs. 69,41,818

Marshall, Sons and Co. (India) Ltd.

[*Managing Agents*: Marshalls (Direction) Private Ltd., Calcutta.]

44*th Annual General Meeting*—23rd April 1962.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales of machinery	2,69,30	2,27,10
Closing stock	74,88	75,98
Gross profit (+) or loss (—)	+ 3,31	—9,35*
Transfer to Managing Agent's remuneration	5	6
,, ,, depreciation	1,01	1,00
,, ,, development rebate reserve	5	10
,, ,, taxation	Nil	Nil
Net profit (+) or loss (—)	+ 2,20	—9,35*
Adjustments (credit items)	79	3,31
Appropriations:		
Total available balance	2,99	3,31
To gratuities paid to staff	24	91
,, adjustment in respect of previous years	12	22
,, adjustment of loss brought forward	2,63	1,08
Carry forward (debit balance)	—5,64	—8,27†

*Loss after providing for Managing Agents' remuneration.
†Final debit balance carried forward after taking into account adjustments and after making provisions for depreciation; development rebate reserve; payment of gratuities and adjustments relating to previous years.

Extracts from the Directors' report: The accounts show an improvement in the situation for the period ending 30th June 1961, as compared with the preceding periods. This was expected and forecast in the directors' last report which implied that further economy measures were in contemplation. The directors now report that the necessary steps have been taken and the results thereof should be evident at the conclusion of the current trading period. However, much will depend upon the ability to maintain satisfactory and efficient rates of despatch of goods from the Company's suppliers and its godowns.

In spite of the progress towards recovery which has been made, it is regretted that in the best interests of the Company, the Directors are unable to recommend the payment of a dividend for the period ended 30th June 1961.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,50,000	Gross block	19,47,135
Reserves of surplus†	13,54,315	—Depreciation	15,45,088
Other liabilities	1,74,28,367		
		Net block	4,02,052
		Current assets	1,89,85,529
		Investments	1,06,582
		Cash	3,39,019
	Rs. 1,98,33,182		Rs. 1,98,33,182

*Paid up capital consists of 5,25,000 ordinary shares of Rs. 2 each fully paid up: Of the above shares 4,05,804 ordinary shares of Rs. 2 each are allotted for payment in cash and 1,19,196 ordinary shares of Rs. 2 each are alloted as fully paid up pursuant to contracts without payments being received in cash.
†Reserves are shown after deducting the debit balance of Rs. 5,63,688.84 in the profit and loss account and excludes gratuity reserve.

Murphulani (Assam) Tea Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—30th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Tea sales	10,47	7,62
Closing stock	3,58	3,08
Gross profit (+) or loss (—)	+3,26	—51*
Transfer to Managing Agents' minimum commission	Nil	8
,, ,, Secretaries' and Treasurers' commission	15	5
,, ,, depreciation	88	70
,, ,, provision for taxation	75	Nil
Net profit (+) or loss (—)	+1,48	—51
Adjustments	6	88†
Appropriations:		
Total available balance	1,54	37‡
Transfer to general reserve	50	Nil
,, ,, development rebate reserve	8	Nil
To additional dividend for 1959—Preferred ordinary	Nil	1
To proposed dividends (taxable) ordinary	26 (15%)	9 (5%)
,, ,, ,, (taxable) preferred ordinary	41 (20.63%)	21 (10.63%)
Carry forward	29	6

N.B.—Adjustment include the credit balance brought forward from the previous year and other credit items if any.
* Gross loss after providing for Managing Agents' commission; Secretaries' and Treasurers' commission and depreciation.
† This includes Rs. 45,000 transferred from general reserve and Rs. 5,000 being excess tax provision in previous years written back.
‡ After adjusting the loss of Rs. 51,000.

Extracts from the Directors' report: The preferred ordinary dividend of Rs. 2.063 per share, which it is recommended should be paid, includes the additional dividend to which these shares are entitled under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

The results for 1961 reflect the good recovery which the garden has made from the severe droughts which so adversely affected the 1960 crop. The 1961 crop amounted to 1,829 quintals and sold at an average price of Rs. 6.01 per kg. compared with the average of Rs. 5.87 per kg. obtained for the previous year's crop of 1,223 quintals. Capital expenditure in 1961 mainly represents the cost of constructing labour and staff quarters, the purchase of oil firing equipment and an extension of the tea area. The oil firing equipment will be in use from the commencement of the current season, and a further tea extension will be planted out towards the end of 1962.

Estimates for the current season have been framed for a crop of 2,000 quintals.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	3,75,000	Gross block	22,48,531
Reserves and surplus	8,78,207	—Depreciation	8,17,038
Other liabilities	8,21,851		
		Net block	14,31,493
		Current assets	5,87,610
		Investments	3,010
		Cash	52,946
	Rs. 20,75,058		Rs. 20,75,058

* Paid-up capital consists of 20,000 preferred ordinary shares of Rs. 10 each fully paid up in cash; 5,000 ordinary shares of Rs. 10 each fully paid up in cash and 12,500 ordinary shares of Rs. 10 each fully paid, issued by way of bonus shares by capitalisation of general reserve.

Note:—10,676 preferred ordinary shares and 8,147 ordinary shares are held by the Holding Company. No shares are held by the ultimate Holding Company.

Mim Tea Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—30th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Tea sales	8,85	8,51
Closing stock	92	1,48
Gross profit	1,07	1,19
Transfer to Secretaries' and Treasurers' commission	6	3
,, ,, Managing Agents' commission	Nil	6
,, ,, depreciation	21	18
,, ,, depreciation underprovided on block assets sold/scrapped	2	*
,, ,, provision for taxation	31	32
Net profit	47	60
Adjustments	16	12
Appropriations:		
Total available balance	63	72
Transfer to reserves	16†	21‡
Proposed dividend (taxable) ordinary	32 (20%)	35 (22½%)
Carry forward	15	16

N.B.—Adjustments represent only the balance brought forward from the previous year.
* Only a sum of Rs. 489.
† This includes Rs. 830 for development rebate reserve.
‡ This includes Rs. 857 for development rebate reserve.

Extracts from the Directors' report: The 1961 crop of 1,019 quintals was the highest on record, being 25 quintals more than the 1960 record crop. The market was, however, less favourable and the crop sold at an average price of Rs. 8.21 per kg. compared with an average of Rs. 8.33 per kg. for the 1960 crop. As a result of the larger crops which are now being secured, an increase in withering area is desirable and it is hoped to carry out the necessary modifications to the factory building during the 1962-63 cold weather. Capital expenditure incurred during the 1961 season represents the cost of constructing labour and staff quarters and the purchase of factory machinery.

Estimates for the current season have been framed for a crop of 1,000 quintals.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,59,000	Gross block	6,02,756
Reserves and surplus	4,02,622	—Depreciation	2,59,360
Other liabilities	1,71,144		
		Net block	3,43,396
		Current assets	2,72,940
		Investments	2,076
		Cash	1,14,354
	Rs. 7,32,766		Rs. 7,32,766

Tide Water Oil Co. (India) Ltd.

(*Secretaries and Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—27*th April* 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	85,60	70,37
Closing stock	27,07	28,32
Gross profit	4,62	4,54
Transfer to Managing Agents' commission	Nil	34
,, ,, Secretaries' and Treasurers' commission	31	7
,, ,, depreciation	21	18
,, ,, provision for taxation	2,02	1,86
Net profit	2,08	2,09
Adjustments	1,45*	96†
Appropriations:		
Total available balance	3,53	3,05
Transfer to dividend equalisation reserve	50	Nil
Interim dividend (taxable) ordinary	42	42
Proposed final dividend (taxable) ordinary	1,68	1,38
Total dividend %	(35%)	(30%)
Carry forward	93	1,25

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.
* This includes Rs. 20,000 being excess provision for taxation in previous years written back.
† This includes a sum of Rs. 13,041 being dividends forfeited.

Extracts from the Directors' report: Sales showed a satisfactory increase over the previous year but, owing to market conditions, profit margins narrowed. Licensing restrictions continued and present indications are that the licence quota for the current year will not be as large as in the previous two years.

Accounts in brief as at 31st October 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	6,00,000	Gross block	2,46,632
Reserves and surplus	10,81,845	—Depreciation	1,67,627

Carry forward	3,31	2,36

N.B.—Adjustments represent the credit balance brought forward from the previous year.
*On the increased capital of Rs. 98,39,375 and works out to Rs. 45.00 per share of Rs. 125 subject to deduction of tax.
†The dividend for 1960 was on a paid up capital of Rs. 70,28,125 and works out to Rs. 60.00 per share of Rs. 125 subject to deduction of tax.

Extracts from the Directors' report: The Directors trust that the results of the working of the Company for the year will be considered satisfactory in light of the prevailing conditions. An addition of Rs. 1,52,813 has been made to the capital reserve account being the surplus over cost prices of the machinery sold during the year.

The transaction for the purchase of 13,496 spindles and 214 looms from Shri Digvijay Spg. and Wvg. Mills Ltd., Jamnagar, has been finalised and the Company has received an expansion licence for installing the same by increasing the capacity of the Company to that extent. The Company has also received necessary permission from the Textile Commissioner to acquire and instal 214 automatic looms against this licence subject to certain terms and conditions.

The programme of renovation and modernisation of the Company is in progress. During the year under the Report a sum of Rs. 5,52,551 was spent on construction of buildings and a sum of Rs. 37,91,004 was spent on additions of new machinery, equipments etc. This includes uninstalled of previous years installed during the year under report. The Company has placed further orders for purchase of machinery and equipments amounting to Rs. 40,000.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	98,39,375	Gross block	3,20,26,884
Reserves of surplus	2,97,76,424	—Depreciation	1,61,20,552

		Cash	1,09,25,702
		Expenses for new project	5,41,196
	Rs. 6,33,16,603		Rs. 6,33,16,603

*Paid up capital consists of 78,715 ordinary shares of Rs. 100 each fully paid up of which 99,000 shares and 22,490 shares are issued as Bonus shares for consideration other than cash by capitalising from general reserve and share premium account (pursuant to special resolution of the Extraordinary General Meeting held on the 18th day of October 1961) respectively and 14,825 shares are issued for consideration other than cash pursuant to contract.

MONEY COMFORTABLE

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

There has been a sudden and wholly unexpected change for the better in the short-term money market. The supply of floating funds has perceptibly improved, while the pressure of demand for credit on the banks has slightly eased. In the inter-bank section, there have been more lenders than borrowers and the rate for day-to-day money has come down to 4¼ per cent; some transactions have even been reported at 4½ per cent, albeit after clearing hours. Last week, it will be remembered, the inter-bank call money rate was as high as 5¼ per cent, which rate persisted till early Monday this week. Advices from Calcutta also suggest point to a slackening of demand for money. The inter-bank call rate there has come down from 5½ per cent to 4¼ per cent.

The improvement in the supply of funds is mainly due to large payments by the Government following the end of the fiscal year. It is just possible that money may get tighter again after a few days. It is too early to say that the busy season is on the wane.

Barring an increase of Rs. 7 lakhs in the amount offered, there is no other change in the results of the Government of India's Treasury Bills of 91-days' usance. Tenders were invited for Rs. 2 crores and the amount offered was Rs. 2.07 crores, as against just Rs. 2 crores last week. The average rate of accepted tenders remained unchanged at 2.640 per cent per annum. Sales of 91 days' Intermediate Treasury Bills from 4th April to 7th April 1962 fetched only Rs. 1 lakh as against Rs. 2 lakhs in the previous week. Sales of both the types of Bills are to be continued in the next week.

Notes in circulation, according to the Reserve Bank's statement for the week ended 6th April 1962, have shot up by Rs. 62.75 crores. Rupee coin in circulation has also gone up, by Rs. 1.85 crore. Following a decline of Rs. 4.51 crores in balances held abroad, the foreign assets held by the Reserve Bank have come down to Rs. 125.19 crores.

Deposits of banks with the Reserve Bank have gone up by Rs. 13.45 crores and that despite a large decline in their borrowings from the Bank. The item 'other loans and advances' in the Reserve Bank's statement, for instance, reveals a decline of Rs. 25.28 crores, of which Rs. 15.99 crores represent repayment of scheduled banks' borrowings against usance bills. There has been a very large rise of nearly Rs. 15 crores in the Reserve Bank's loans and advances to Governments. Notwithstanding this increase, the deposits of Central Government show a rise of only Rs. 2 crores and those of other Governments a fall of Rs. 9.08 crores.

The scheduled banks' statement for the week ended 30th March 1962 discloses a strident advance of Rs. 27.72 crores in deposits, accompanied by an increase of only Rs. 10.85 crores in bank credit. The balance of the rise in deposits has been utilised to reduce borrowings from the Reserve Bank, the State Bank and other banks.

The gilt-edged market is dull and flat, with no change at all in the rates of either the Central or State loans.

After the substantial gain noted last week in the value of the pound sterling *vis-a-vis* the American and Continental currencies, there has been a slight decline. Thus, the spot rate for sterling on the New York foreign exchange market has come down by 0.200 cent to 281.340-281.380 cents per £. The rate for three months' forward has softened by 0.070 cent, the latest rate being 280.030-280.070 cents per £. The rupee dollar rate has followed the aforesaid movement in the sterling dollar rate. Thus, the banks' selling rate for ready T.T. on New York has gone up by 25 nP to Rs. 475.75 and their buying rate by 50 nP to Rs. 472.50 per 100 dollars.

FOODGRAINS DEPRESSED

(*From Our Own Correspondent*)

HAPUR, 9*th April*

Foodgrains were depressed here this week following the start of new *rabi* crop arrivals. New wheat crop arrivals have, however, yet to flow in.

Wheat prices eased fractionally and, on Monday, were quoted at Rs. 41.54 per quintal and up to Rs. 46.90 per quintal for better farm produce. Old crop arrivals averaged 75 to 100 maunds daily, and were lifted by consumers at the above prices. New crop is likely to move in by the week-end. Stocks of wheat with trade were nominal. Rice ruled quiet, and arrivals were poor mostly of superior *basmati* quality from Saharanpur-Dehradun districts. Seasonal demand was better. Local stocks were estimated around 10,000 maunds. The week-end prices (in rupees per quintal) were: *mainpuri sela* 52.58, *gudda kutcha* 51.90, *ramajwayan sela* 61.64, *raimunia sela* 64.32, *basmati sela* 72.76 to 77.72, superior 80.38 to 96.45.

New gram started arriving from Punjab at an average of 500 maunds daily. The local produce would also arrive soon. Crop prospects are excellent. The Punjab variety traded at Rs. 38.83 per quintal. Barley and *bejhar* were depressed. Although new crop arrivals were still very small, rural demand was dormant, as it was being met at source due to the harvesting period. Maize and *bajra* stockists continued to be anxious sellers, as consumer demand was subsiding. Inferior maize was quoted as low as Rs. 14.07 per quintal. *Juwar*, however was steady, notwithstanding arrivals from Rajasthan which were taken up by a better demand. *Guwar* also attracted support.

In pulses, new peas and old *arhar* continued to attract good demand for conversion into dal, and *prices ruled steady*. New peas arrivals did not improve and were on an average of 1,000 maunds daily. Arrivals in the mofussil markets were, however, reported heavy. New *arhar* arrivals were expected after one month. New *massor* arrivals, being inferior, fetched lower prices. *Urd* and *moong* stayed steady on good support. Prices (in rupees per quintal) were: Peas *dara* 28.80, farm white 34.16, peas dal 34.16, *arhar* 38.16, *arhar dal* 48.90, *urd* 58.94 to 64.30, *urd dal* 66.93 to 75.02, *moong* 48.23 to 56.26, *moong dal* 56.26 to 64.30 and *massor* new 38.64 and old superior 44.17.

BULLION PRICES ADVANCE

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

Both gold and silver recorded a handsome rise in values during the week under review. This was due to good bull support, induced by reports suggesting excellent demand in upcountry centres. The average daily actual offtake in the market was 6,000 tolas of gold and 13 bars of silver, the corresponding figures for the previous week being 5,800 tolas and 9 bars. While offtake was better, arrivals were less: 8,000 tolas of gold, as against 10,500 tolas, and 25 bars of silver, as against 26 bars. At higher levels, there was, of course, profit-taking which, together with unloading by some tired bulls and rumours of large contraband arrivals, led to a fall in prices later in the evening today. Even so, the closing rates were well above those prevailing on Wednesday last week.

In gold, the *Jeth* (18th June) settlement, which had receded from Rs. 121.30 to Rs. 119.90 last week, recovered gradually to touch a high of Rs. 121.95 today. The settlement, however, finished lower at Rs. 121.50. The net rise over the week was Re. 1.60.

Ready gold continued to be at a discount under the forward, though the actual discount declined from 90 nP to 50 nP today when the spot rate stood at Rs. 121.00, as against Rs. 119.90 a week ago. The highest level receded was Rs. 121.45 today.

The *Jeth* (19th June) settlement in silver continued to march upward, from Rs. 218.45 to Rs. 220.20 before finishing at Rs. 219.85. With the rise of Re. 1.40 this week, the net gain in price since business was commenced in this settlement on 7th March 1962 comes to Rs. 4.30.

Ready silver began the week at Rs. 219.50, as against the previous close of Rs. 219.05, and advanced to Rs. 220.95 today. After declining to Rs. 220.50, it finished at Rs. 220.60. At this level, the spot rate commanded a premium of 75 nP over the forward, as against 60 nP on Wednesday last.

The dollar price of gold in the London bullion market improved by ½*d.* to $35.07⅞ per fine ounce. In sympathy with, and following, the firmness of the sterling *vis-a-vis* the dollar, the sterling price hardened by 1⅞*d.* to 249*s.* 4*d.* Ready silver eased by ¼*d.* to 84⅜*d.* Forward silver, however, was unchanged at 84½*d.*, as also silver in New York at 101.50 cents.

The following table shows the trend of prices during the week under review:

	11-4-62 (closing)	High	Low	4-4-62 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.00	121.45	119.80	119.00
*Jeth**	121.50	121.95	120.50	119.90
Sovereign	97.00	97.00	96.75	97.00
SILVER				
Ready (.996 fine)	220.60	220.95	219.25	219.05
Jeth†	219.85	220.20	218.75	218.45
London—				
Gold	249*s.* 5*d.*	249*s.*4*d.*	249*s.*2½*d.*	249*s.*2½*d.*
Silver Ready	84¼*d.*	84½*d.*	84⅛*d.*	84⅛*d.*
Silver Forward	84¼*d.*	84½*d.*	84⅛*d.*	84⅛*d.*
New York—				
Silver	101.50 cents	—	—	—

* 18th June settlement. † 19th June settlement.
N.B.—The quotation for gold is per 10 grams (about 0.86 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

BLACK PEPPER EASY

(*Messrs. Parekh and Co.*)

BOMBAY, 11*th April*

After moving narrowly in the earlier part of the fortnight, Malabar black pepper developed an easy tendency in sympathy with Singapore where Lampong was reported down from Str.$132½ to Str.$120. The erstwhile strong-holders of Lampong pepper are now said to be offering in competition with India. Singapore is seller of Lampong at $0.34½ per lb. c.i.f. New York without much success.

Such somersault on the part of Lampong holders made prospective buyers in the U.S. to withdraw. Most of them are now waiting for the market to stabilise at a lower level. Spot in New York has come down from $0.36½ to $0.35¼ under pressure of selling by Lampong. Malabar is now comparatively higher, as the growers in India are unwilling sellers at lower prices. They are expecting some development in the local market which was until recently disappointing. There were some stray inquiries from East European countries also.

Ungarbled moved between Rs. 310 and Rs. 297½ and garbled from Rs. 317 to Rs. 303. There was rather heavy fluctuation in May delivery which, after going down to Rs. 321, came up to Rs. 332 but went down again to Rs. 323. Calicut was nominally quoting Rs. 290.

Ready pepper in Bombay is nominally quoted at Rs. 165 per 50 kilos.

SPOT COTTON FIRM

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

One more week has passed with no futures trading in Bombay. The prospects for resuming futures business remain still uncertain. However, business in the spot market was fairly good. Mills showed usual interest in such popular varieties as Vijay, Digvijay, Kalyan, Laxmi, Co2 and Surti. Prices continued to rule firm. Mill demand is expected to broaden only when the 10 per cent additional indigenous cotton quota is issued. Good export demand was reported for Bengal *Deshi*. Both Japan and Hong Kong showed keen interest in this cotton. Export sales registered till Monday, the 9th inst., amounted to 38,608 bales. Demand for foreign cotton was well maintained. There was regular enquiry for Sudan, American and Egyptian cotton. Following rumours of the possibility of an import quota for Pakistan cotton, some mills showed interest in these growths. The announcement regarding the barter agreement with the U.S. for the purchase of surplus agricultural commodities against export of Indian sugar had little effect on the market. This was because the quantity of cotton that could be obtained under this arrangement would be small—35,000 to 40,000 bales. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Bengal *Deshi* 668; Ganganagar 730; Khamgaon 925; Hubli Laxmi 1,170; B.P. 52 1,358; B.P. (UNUG) 1,400; Sudan GS 1,725; XPL 1,420; California 1-5/32" 1,290.

The Textile Commissioner issued a warning to co-operative societies and cotton traders in Gujarat that non-compliance with the requisitioning order would invite serious and drastic measures. He pointed out that if the merchants and societies were not co-operating with him in the requisitioning drive he would be compelled to take drastic steps such as sealing of stocks and banning movement of cotton from one area to another. Cotton traders and co-operative societies, however, took strong objection to this warning on the ground there was no defying of the order. In fact, they pointed out, they were co-operating with the Government in the requisitioning drive since the agreement reached at Ahmedabad between the representatives of the Textile Commissioner and the cotton trade and co-operative societies.

A plea for a cautious approach to the question of decontrol was made by Lala Bharat Ram, Chairman of the Indian Cotton Mills' Federation, in his speech at the Annual General Meeting of the Federation held at Bombay this week. Mr. Bharat Ram observed:

"In spite of repeated promises to undertake an enquiry into the farmer's cost of production, the Indian Central Cotton Committee has not done much in this direction and, in the absence of this vital information, it is really difficult to pass any judgment as to how far the present ceiling prices have acted as deterrent to greater production of cotton. It is also difficult to foresee what repercussions decontrol will have on the price trends of cotton, yarn and cloth and what effects that will have on the local consumer and on exports." Mr. Bharat Ram went on to add: "We also do not know how far decontrol of cotton will by itself, result, in bringing better yields; and that really is the crux of the matter. The various solutions that are proposed must pass this acid test: will they ultimately result in increasing the yield per acre on the required scale?"

Meanwhile, the cotton trade has submitted a memorandum, carrying over 200,000 signatures, to the Prime Minister urging decontrol of cotton (for details see page 664).

In contrast to the easy conditions witnessed last week, cotton futures in Karachi ruled distinctly firm during the week under review. Keen domestic mill interest and renewed export demand initiated a general buying movement which led to a smart rally in prices. The N.T.R.G. May contract firmed up from Rs. 69 last week-end to Rs. 73.10. The July contract was marked up from Rs. 69.10 to Rs. 72.80.

Cotton futures in Liverpool suffered a setback during the week. Commission House selling and liquidation by local traders found buyers reserved. Both the American and American type contracts consequently declined. Sudan cotton contracts were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.85; July 24.10; October 24.15; December 24.25.

American cotton one inch staple contract: May 24.20; July 24.50; October 24.50; December 24.60.

Sudan: May 30; July 29.00; September 29.00.

Quiet conditions prevailed in the New York cotton futures market during the week. Values tended to recede, thanks to lower advices from the spot market and lack of any fresh incentives. Export of cotton from the U.S. are expected to register a decline in the current season (1961-62). As compared with 6.6 million bales exported in 1960-61, exports are not expected to exceed 5 million bales in the current season. The trend of exports so far is taken as an indication of this. Registration for export under the payment-in-kind programme aggregated only 3.7 million bales till the middle of March last, as compared with 5.9 million bales in the corresponding period of the previous season.

The following are the latest available quota-

tions from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	10.4-62	3-4-62	27-3-62
New York spot	35.07	35.65	35.65
May	34.30	34.32	34.61
July	34.70	34.70	34.88
October	34.31	34.27	34.40

RAYON EXPORT PROMOTION SCHEME

(From Our Own Correspondent)

BOMBAY, 11*th April*

Two official announcements of import to the yarn market were made this week. They pertain to (a) licensing of art silk yarn under the export promotion scheme for fabrics, and (b) a revised schedule of international prices of art silk fabrics to which are linked the incentives under the scheme. On Friday the 6th inst., the Joint Chief Controller of Imports and Exports issued a notification to the effect that the policy for art silk yarn licensing (under the export promotion scheme) detailed in the import trade control policy book for the year 1962-63 would be effective *only* for a period of three months, that is, up to 30th June 1962, and not for the whole year as mentioned therein. This announcement is interpreted to mean that the existing scheme will be replaced by a new one after June. The revised scheme would contain two notable features, if the recommendations reported to have been made by the Textile Commissioner were accepted by the Government. In the first place, the import entitlements will be replaced by cash incentives on the basis of actual export business in art silk fabrics. Secondly, merchant-exports will also be entitled to participate in the scheme.

The new schedule of international prices of bleached or dyed art silk fabrics (to which incentives under the export promotion scheme are linked), announced by the Textile Commissioner on Monday the 9th inst., has been welcomed by traders. Excepting for changes in respect of velvets, crepes and grey staple fibre fabrics, the previous prices are left unaltered. The prices range from a high of Rs. 99 per kg. in the case of fabrics produced from synthetic yarn 30 denier crimped to a low of Rs. 5.50 for viscose rayon (120 denier and above yarn) and staple fibre mixed fabrics, as well as for fabrics manufactured out of viscose staple fibre yarn (single or double) of any count.

The yarn traders have noted with interest the plea for raising the third Plan production target for staple fibre from 30,000 tons to 100,000 tons, put forward by the Development Council for the Art Silk Industry at its meeting held at Bombay on Tuesday the 10th inst. The Council has also urged free imports of rayon grade caustic soda. Further, it has constituted an Export Promotion Committee and three other sub-committees, one for making recommendations in regard to manufacture of staple fibre, synthetic filament yarn and viscose rayon filament yarn on a priority basis, another for examining the cost structure of new units *vis-a-vis* old units and to decide whether the prices fixed by the Textile Commissioner are sufficiently remunerative particularly for new units, and the third one for considering price differentials between the various deniers of viscose rayon yarn.

The Textile Commissioner has extended the date of receipt of applications for allotment of indigenous art silk yarn to actual users for the half-year April-September 1962 from 15th to 23rd inst. The applications are to be addressed to the Indigenous Art Silk Yarn Distribution Committee, Resham Bhavan, Veer Nariman Road, Bombay.

Art silk yarns continued to rule buoyant on persistent rumours regarding grant of cash incentives for fabrics exports instead of import entitlements. Prices scored further handsome gains. Amilon yarn (20 x 1) April delivery advanced from Rs. 3,580 to Rs. 3,635 and June contract from Rs. 3,660 to Rs. 3,705. Spot 120 Japan spurted by Rs. 101 to Rs. 2,095. 150 Japan climbed up by Rs. 28 to Rs. 1,929. 120 Italy strengthened by Rs. 27 to Rs. 1,846. 150 Italy gathered a rupee to Rs. 1,736. Among indigenous yarns, 120 Bt. cones 1st grade rose by 61 nP to Rs. 14.98. 150 Bt. cones 1st grade hardened by 26 nP to Rs. 12.36.

In the staple fibre yarn section spot rates tended to move up, while forward prices drifted downward. Cotton yarns were dull. Business put through was limited and values moved narrowly.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	11-4-1962	4-4-1962
	Rs.	Rs.
Art silk yarn—		
20/1 Amilon (100 kg.)—		
April	3,635.00	3,580.00
June	3,705.00	3,660.00
120 Japan (per 100 kg.)	2,095.00	1,994.00
150 Japan (per 100 kg.)	1,929.00	1,901.00
120 Italy (per 100 kg.)	1,846.00	1,819.00
150 Italy (per 100 kg.)	1,736.00	1,735.00
Nak. Ray. 150 Bt. 1 (per kg.) ...	12.36	12.10
Staple fibre yarn (40 x 2)—		
April	724.00	727.00
June	737.00	742.00
Kohinoor (per kg.)	8.25	8.18
Cotton yarn (per bundle of 10 lbs.)		
10s Modern	18.75	19.50
20s Modern	25.87	25.87
32s Madura	29.50	29.75
40s T. T. Gorin	33.50	33.75
60s T'Mangal	50.00	50.50
80s Maheshri	74.00	74.00

OILSEEDS DECLINE

(From Our Own Correspondent)

BOMBAY, 11*th April*

After displaying considerable strength for quite some time during this week, oilseeds futures declined near the close on heavy and persistent bull liquidation and some renewed bear pressure. Closing prices were around the lowest levels, and showed small losses over the previous week. Turnover was good, and increased with the decline in prices.

The renewed setback indicates that the recent technical rally from the new low levels has petered out and the downtrend has revived. Groundnut led the rally and also the decline.

Sentiment was influenced by the much larger all-India final crop estimate for the 1961-62 season of 4.68 million tons, showing an increase of 6.6 per cent over the partially revised estimate of 4.35 million tons for the previous season. It was unsettled by reports that the share of Gujarat in the outturn showed substantial improvement over the previous year and even earlier expectations. The rejection by Mr. Manubhai Shah of the portfolio of Minister for Foreign Trade in the new Cabinet also affected the sentiment. The marketmen put off their hopes for an immediate announcement of export promotion measures.

The market resisted successfully heavy bull unloading from Calcutta in the early part of the week. It succumbed later to some nervous selling by operators from Gujarat and Saurashtra, who had supported the market before. Bears seized the opportunity and pressed fresh sales. The setback was more pronounced in groundnut futures. Sellers in castor were reserved because of hopes of some export business in oil with the U.K. Spot prices were quietly steady.

During the week, groundnut May moved between Rs. 229.25, Rs. 231 and Rs. 224.75, castor June between Rs. 165.62, Rs. 166.50 and Rs. 164.25, linseeds June between Rs. 37.12, Rs. 37.50 and Rs. 37.12, and cottonseeds July between Rs. 103.50, Rs. 104.75 and Rs. 103.

The Board of Directors of the Bombay Oilseeds and Oils Exchange Ltd. has requested the Forward Markets Commission to permit hedge trading in groundnut July and groundnut oil July contracts, with the present restriction of a weekly price rise of Rs. 5.50 and 50 nP respectively. The permission is expected to be granted early next week.

The following table shows the closing prices of oilseeds and oils on Wednesday, the 11th April, as compared with those of the two previous weeks:

	11-4-1962	4-4-1962	28-3-1962
	Rs.	Rs.	Rs.
Groundnut			
May 1962	224.75	227.12	224.75
Nimar bold	47.00	46.75	45.50
Khandesh quality	47.50	47.00	45.75
Oil ex-mill ready*	19.50	19.25	19.00
Railway receipts*	19.20	19.05	18.70
Oil May 1962	18.95	19.05	18.80
Castorseed			
June 1962	164.25	165.00	161.50
September 1962	166.75	—	165.62
Ready Madras	88.75	84.25	88.00
Ready Kanpur	32.50	33.00	31.50
Oil B.S.S.†	14.30	14.40	14.00
Oil commercial†	13.60	13.70	13.80
Linseed			
June 1962	37.12	36.87	37.37
September 1962	38.00	37.56	37.37
Bold ready	36.75	36.25	36.12
Oil ready†	15.10	15.00	14.90
Cottonseed			
April 1962	—	97.50	99.50
July 1962	103.00	103.75	103.25
Mijor seed	36.00	36.00	35.50
Karsli seed	24.00	24.00	24.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEAS WELL SUPPORTED

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 5*th April*

In sale No. 14 held on the 3rd inst., 370,000 kgs. were offered. Quality of teas from Nilgiris district showed a further seasonal decline, while teas from other districts were about maintained. The market met with useful demand. Low mediums and mediums evoked useful support and these were quoted barely steady. There was strong demand for good mediums which were frequently dearer and these types sometimes advanced by 20 to 30 nP. Highgrowns continued to elicit irregular support. A few best teas on offer sold at around last rates, though the majority of them were easier with quality. Clean black leaf descriptions sold readily, but prices realised for these were lower than last. Unorthodox descriptions were irregularly easier. Whole leaf grades were a strong feature of the sale, particularly flowery pekoes.

The quotations per kg. were:

	1962	1961
	Rs.	Rs.
Low mediums	4.00-4.40	4.55-4.70
Mediums	4.40-5.20	4.70-4.90
Good mediums	5.25-6.80	4.95-5.30
Nilgiri B.O.P.	5.00-9.40	5.25-8.05

The average price realised in sale No. 14 was Rs. 5.32 per kilo, as against Rs. 5.37 in the previous week and Rs. 4.93 in the corresponding sale last year.

A total of 268,000 kgs. was offered in dust sale No. 14 held today. There was fair general demand, but prices were irregularly easier for most descriptions. Low mediums and mediums declined by 20 to 30 nP and in some cases more. Good mediums were also easier, although these did not register the same drop. Useful colourv liquoring teas from Wynaad, however, met with better support and was quoted steady and so were clean black leaf descriptions. Highgrowns continued irregular and these also shared in the downward trend of the market. C.T.C. descriptions sold readily at slightly easier rates. C.T.C. types and legg-cut types met with less support than of late and sold at rates below last.

The average price realised in dust sale No. 14 was Rs. 4.14 per kilo, as compared with Rs. 4.09 a week ago and Rs. 4.61 in the corresponding sale last year.

Approximately six million pounds were offered during this week. There was less competition for the best and these were substantially lower. Mediums and Uvas were dearer by 5 to 15 cents, while lowgrowns were steady.

London: North Indian and other growths: In Monday's sale there was good general demand but buying was more selective. The best were generally easier by 1*d.* to 2*d.*, while others were firm. Brown Dooars sometimes advanced by 1*d.* to 2*d.*

Ceylon and South Indians: 27,994 packages were offered in Tuesday's sale of which 8,752 packages came from South India. Teas from Ceylon met with less demand and at the close of the sale, these were easier. There was useful support for South Indians, but these were also irregular and easier.

SELECTIVE DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 10*th April*

Dusts on offer during last week's internal tea sales here totalled 28,710 packages, prices of which were irregular according to the quality. Demand was fair, but selective. Orthodox teas declined by 30 nP, and the poor teas met with little or no attention. Fibrous legg-cut teas eased noticeably in an irregular market, but the clean bright liquoring teas were fully firm and closed with small gains. C.T.C. teas, possessing clean leaf apperance, were well supported at lower rates. Fibrous teas showed the largest decline, and yet buyers were not coming forward. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.30 to 6.90, medium Assam C.T.C. dust 5.20 to 5.70, medium Assam dust 3.70 to 4.60, legg-cut dust 3.65 to 4.70, and plain orthodox dust 3.30 to 3.80. Leaf on offer totalled 372 chests and met with buyers at lower rates.

The season's export having been completed, inquiries for shipping space for tea were limited to forward shipment. From these inquiries, it appeared that the new season's tea would move in before the end of this month. Tea stocks, in London, in the week ended 30th March, were unchanged at 145¼ million lbs. which, together with the afloat quantity of 19¼ million lbs., totalled 165 million lbs.—31 million lbs. less than the combined stocks a year ago. Trade circles think that the *per capita* consumption in the U.K. has increased, and is reflected in the increase in imports by 45 million lbs. last year. This, together with the fall in total stocks in the U.K., works out roughly to 1½ lbs. *per capita* increase. This repudiates earlier apprehensions that the British people's tea drinking habit was being interrupted by other beverages, mainly alcoholic drinks.

The fact that India has almost disposed of all teas produced in 1961, when production increased by 74 million lbs., supports the belief that world consumption of tea has improved. According to a recent study, world consumption in 1961 increased by 8 per cent as against the increase in production of 7 per cent. It has been estimated that world consumption will improve further this year. If this estimate proves correct, prices must improve, although world production is also expected to rise. Crop reports from north-east India indicate that the continuance of the dry weather has caused anxiety, and that rains are badly wanted.

The tea industry's case for export incentives was very lucidly presented by speakers at the recent annual meeting of the Indian Tea Planters' Association held in Jalpaiguri on 7th April. In view of the increase in production, prices of common teas fell in 1961. The Association Chairman summed up the plight of the gardens producing mostly common teas, when he said that the problem now was not of an increase in production but of the disposal of the output at a reasonable margin of profit. He thought that India's position as the biggest producer and exporter of tea was being challenged inasmuch as the high price of Indian teas prevented an expansion of shipments from India commensurate with the increase in world consumption. The Chairman pleaded strongly for the abolition of the export duty, which, in 1959-60, yielded to the exchequer as much as Rs. 12.29 crores or 75 per cent of India's total export duty earnings in that year. Since there is no such duty in several other producing countries, its imposition in India is cutting her competitive efficiency. If India's production target of 900 million lbs. by 1965-66 should succeed, the producers would have no hesitation in agreeing with the I.T.P.A.'s Chairman that the Government should help the industry bring down the cost of production, which alone would enable the industry to export more as also sell more at home. The Government's decision on the fiscal relief on exports, recommended by the Mudaliar Committee, is keenly awaited.

Considering the 1961 world production trend, it is clear that all producing countries are vieing with one another to capture the maximum of the world's expanding market for tea. As already stated, the increase in world production in 1961 was fully absorbed by a significant increase in consumption. These trends are likely to be demonstrated again this year. Within a year or two, world consumption would equal production, as in their anxiety to secure greater markets, producing countries are raising output. The F.A.O. recently estimated that by 1966 world production would be 100 million lbs. more than consumption. Although a surplus as huge as this may not actually occur, it should be noted that the present trends are gradually preparing the background for the growth of a surplus. The Government of India does not, however, think that the world surplus would be such as to create a serious problem, as the standard of living in underdeveloped countries is gradually improving and these nations would by and by buy more tea. Trade circles would, however, suggest that rather than being complacent it would be proper for New Delhi to explore the possibilities to revive the International Tea Agreement in order that some sort of international control of further expansion of the tea acreage could be attempted.

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 10*th April*

Keen activity in futures and good covering demand in near and ready delivery goods characterised trading in the jute market during the week under review. As a result, prices were fully firm. Contrary to earlier expectations, buffer stock purchases could not commence as planned, since the State Bank of India, which is financing these purchases, required additional guarantees. It was only during mid-week that a purchase quota of 50,000 bales was announced for the buffer stock. It is expected that, within a week's time, the Buffer Stock Association (B.S.A.) would be fully active. Plenty of low-quality jute continues to be on offer and the B.S.A. has insisted on its members to take up the lower grades in the first instance. However, since the B.S.A. has no storage space, its member mills are expected to store their purchases against the B.S.A. in their own godowns. Mills are already hard-pressed for godowns space and consider open air storage risky. Frequent thunder-showers are expected soon, and the quality of fibre in the open would deteriorate. There is also danger from fire. In addition to purchases on behalf of the B.S.A., mills would continue their own weekly offtake in accordance with the minimum purchase quota as issued by the Indian Jute Mills Association every week.

The delay in the commencement of purchases against buffer stock, coupled with continued large arrivals, imparted easier conditions in the fibre market. The official final estimate of the 1961-62 crop was released in the course of the week, and this was also a factor which depressed fibre prices. Although there was no surprise in the statement that this season's crop has been the biggest in India since Partition, it was believed that the release of the final estimate had been delayed so far in order to avoid any reaction in fibre prices. It was significant that the publication of the final estimate, which puts the yield at 6,269,000 bales representing a remarkable increase of 2,287,000 bales over 1960-61, had been timed for the near-commencement of buffer stock purchases. The average yearly production from 1955 to 1961 was 4,380,000 bales. As is well known, the increase in the last crop has been due to good weather conditions and the sowing of a higher acreage, 2,259,000 acres, as against 1,512,000 acres in the previous season, under the impact of the acute shortage and the very high prices at sowing time in 1961. On an all-India basis, the average production per acre increased from 2.5 bales in 1960-61 to 2.8 bales in 1961-62. Although these figures should be considered satisfactory in comparison, it would be noted that yield per acre is yet very poor. Also, most of the huge increase is claimed by the poorer grades as is only too evident in the acute scarcity now prevailing in the higher grades of middles and tossa. Such a state of affairs brings out to the forefront the need to take measures so that yield per acre as well as quality can be improved. If only cultivators use more fertilisers, the objective can be realised, and it is possible to reduce cost of production, thus paving the way to enable mills to sell goods cheaper.

In view of the increase in demand for goods for both internal consumption and export, no large surplus is expected. Mills are working up to capacity and, considering the trend of demand, it is hoped that the mills will continue to work without restriction either in working hours or looms. The fibre stocks with them will be adequate to enable them to continue the current rate of increased output up to the time when the new crop will be ready for marketing. The buffer stocks which are being built up now will draw surplus from the bazar and are meant to be released to mills in the beginning of the next season in order that fibre prices may be kept within reasonable limits. It is expected that the forthcoming crop will be as satisfactory as the last in regard to both quality and quantity. In view of the lack of rains so far, a late crop is likely in the next season, and this will be very welcome to mills, so that they can consume as much of the current season's crop as possible. It is as such that no mentionable surplus of fibre is expected to be carried over to the next season.

While the trade and industry are eagerly looking forward to the Government of India's decision on the recommendations made by the Import and Export Policy Committee (Chairman: Dr. A. Ramaswami Mudaliar) for fiscal relief as an export promotion measure and it is expected that any such general measure will also benefit and increase export of jute goods, the trade has noted that, according to an analysis in the latest issue of the *Jute Bulletin* of the Indian Central Jute Committee, the crux of the problem is the Pakistan export bonus scheme. This scheme, coupled with the availability of superior fibre at cheaper prices, has been a formidable factor which enables Pakistan mills to compete successfully in foreign markets. Pakistan is implementing a plan to raise the output of jute goods, and it is time that sufficient measures were, in the meantime, taken in order that Indian goods can meet the challenge. The *Bulletin* sums up the situation when it says that prices of goods in India should be such as to offer competition with Pakistan and also to slow down the spread of bulk handling methods and discourage substitution. The analysis welcomes Government's decision to set up a high-level committee to investigate the cost structure of the jute industry and to take suitable measures to increase its competitiveness. While few would dispute that the increased wages in recent years had hardly benefited the industry by increased productivity of labour, there is a strong case for speeding up modernisation and rationalisation of the post-spinning and weaving stages of production in mills.

On Tuesday last, ready B. twills were quoted as high as Rs. 143, following good business and keen covering demand. The April goods were steady at Rs. 133.75, as against Rs. 132 on the previous day. There was also good interest shown in hessian, as a result of which ready hessian 40" 10 oz. hardened from Rs. 54 to Rs. 54.50. There was keen speculative activity in B. twills throughout the week. Covering in ready and near delivery B. twills continued on Wednesday, April goods scoring one point to Rs. 134.75. The April delivery hessian 40" 10 oz. also improved from Rs. 52.50 to Rs. 52.75. On the following day, keen activity in the futures market was in evidence. The covering demand for ready and near delivery goods was also steady. April B. twills spurted to Rs. 135.25 and hessian 40" 10 oz. to Rs. 53. Interest in heavy Cees was also reported. Non-standard constructions, too, met with interest and, on Friday, encouraged by the rumours of imminent orders from Argentina and the U.S., covering business in ready and near delivery goods continued unabated. This forced up hessian 40" 10 oz. to Rs. 53.40, although on profit-taking April B. twills eased fractionally to Rs. 134.75. However, over the week-end, April B. twills advanced to Rs. 136.25 and hessian 40" 10 oz. to Rs. 54.25. Buying in ready goods led to the maintenance of gains. Despite the announcement of lower overall stocks at the end of March, prices eased yesterday, in view of selling pressure in the futures market. Thus, April B. twills declined to Rs. 136 and hessian 40" 10 oz. to Rs. 54. Stocks of hessian decreased by 900 tons, while those of heavy goods and miscellaneous constructions increased by 200 tons and 500 tons, respectively.

In the fibre market, sellers were keen for business. Demand was small as compared with the quantity on offer. Quotations were unchanged as follows: April-May delivery Daissee bottoms Rs. 32 a maund, northern bottoms Rs. 29.50, and Assam bottoms Rs. 30. Following the news of the quota release to buffer stock members, quotations in the mofussil were firm at above Calcutta's parity. Arrivals in Calcutta were fairly satisfactory, and sellers were anxious for business.

BASE METALS EASY

(From Our Own Correspondent)

CALCUTTA, 10*th April*

The easier London advices were reflected in the local base metals market during the week under review. Although there is no change in the import policy in regard to base metals, the stipulation that established importers of tin should charge a profit of not more than 3½ per cent of the *c.i.f.* value caused disappointment to the trade. Such a stipulation already exists in respect of copper and zinc. But, if prices of the virgin metal should correspond to those of scrap, the former would be several times the permissible limit of 3½ per cent of the *c.i.f.* value. In such situation it is clear that the 3½ per cent profit is considered an inadequate compensation for the bother of and investment in business. Moreover, the Government machinery is regarded insufficient to enforce the provision evenly on all concerned. Trade representatives have already urged the Government to reconsider the stipulation.

Another feature of the policy, concerning metal import, is the provision for issuing licences on an annual basis. Its usefulness has been reduced by the fact that only one half the value of the licence can be utilised in the first six months and the remainder in the subsequent six months after getting it endorsed by the licensing authority. Thus, a licencee can enter into irrecoverable commitments only for six months as had been the case before.

On the London Metal Exchange, spot tin opened at £955½ a ton and, after hardening to £959, closed lower on balance at £952. However, the trend was steady in Singapore. In Calcutta, tin met with profit-taking and, as a result, eased from Rs. 1,681 per 100 kgs. to Rs. 1,633.25. While there has been no further development with regard to the procedure for the proposed release of 50,000 tonnes of tin by the United States from its strategic stockpile, and the Government there has not done anything beyond giving the statutory public notice of six months, which incidentally expired on 7th March 1962. Malayan tin producers have insisted that they should be informed in advance of the basis of the U.S. releases. Accordingly, Malaya is expected to put up this demand at the forthcoming meeting of the International Tin Council. If only the terms and, more particularly, the price at which releases are proposed are announced in advance, Malayan producers can have their reactions sent to the U.S. in time. Obviously, Malaya wants to ensure that the U.S.A. does not release tin at a price lower than the present value. It is pointed out that the proposed releases of 50,000 tonnes would equal one year's consumption in the U.S., and that releases of such a magnitude would be a deterrent to Malaya's efforts to increase production as well as investment. It is reasonable to infer that this uncertainty is already restraining Malayan producers to delay further investment. Restarting abandoned mines and opening up new mines would require capital investment of an order which, it has been represented, even the present higher price does not cover.

Spot copper, in London, closed at £234½ a ton as against £234¼ earlier. Prices of copper scrap eased in Calcutta, as releases against permits decreased demand for scrap. In compliance with the Government of India's desire, more and more cable manufacturers are taking to aluminium in place of copper. The Indian Cable Company recently announced that it proposed to make cables above the size of 0.007 sq. in. with aluminium conductor. For the present, the company will continue the use of copper conductors in trailing, flexible, P.I.L.C., welding and control cables. While India is producing aluminium in sufficient quantity to meet internal demand, production of copper is insignificant and, in view of the foreign exchange security, it has not been possible to import copper to meet demand in full.

The demand for lead was poor, and stocks were comfortable. In March, India's imports of lead totalled 3,335 tonnes, representing an increase of 810 tonnes over the previous month. The metal was quiet at Rs. 124 per 100 kgs. In London, spot lead eased from £62¼ a ton to £60¾, as demand for the cash metal was conspicuous by its absence. The supply position in electrolytic zinc has also improved. Imports, in March, were higher at 4,225 tonnes as against 3,860 tonnes in February. The price eased from Rs. 244 per 100 kgs. to Rs. 232.25. In London, the spot quotation closed at £69 a ton, after opening higher at £69¾.

GOOD DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, 9*th April*

Sugar ruled steady here this week on good support. Even the D29 inferior quality was in demand. Stocks of superior bold crystal sugar were small, and prices, consequently, were steady. New produce sugar was quoted higher than the old stuff. Some of the factories in the south have closed their production. But cane supplies here were reported to be enough to keep the season on till the end of the current month. Factories in east U.P. and some other areas have been asked by the Government to crush all available cane. The week-end prices were: Wholesale spot delivery Simbhauli Rs. 106.50, Bulandshar Rs. 103 per bag, retail 97 nP per *seer*, mill delivery per maund E29 Simbhauli Rs. 38.06, Amroha D29 Rs. 36.21, New Rs. 37.75, Bijnore Rs. 35.85, New Rs. 37.50, Seohara Rs. 36.87, New Rs. 38 and Meerut Rs. 37.25 and New Rs. 38.20.

Crystal sugar prices were firm during the week in the Muzaffarnagar market due to good demand. Prospects of 50,000 tons of sugar export to the U.S. further cheered the sentiment. Inferior smaller crystal was in request from Rajasthan, M.P., Punjab and West Bengal, and Saurashtra showed keen interest in moist and damaged variety. Business in new season's produce was limited, as dealers expected cut in the excise duty. The week-end prices (in Rs. per maund) were: Old sugar A29 Iqbalpur 40.25. Lhaksar 39.60, Mansurpur 40.35, B29 Mawana 39.77, C29 Deoband 39.34, D29 Amroha 36.61, new sugar C29 Modinagar 39.34, Dhampur 38.40, Meerut 38.25 and Rohana A29 40.85.

Khandsari was steadier during the week on good demand from east U.P., Rajasthan, Gujarat and M.P. Prices improved fractionally to be quoted on Monday at: Inferior Rs. 27.50 to Rs. 31.50, superior Rs. 31 to Rs. 34, crystal Rs. 32 to Rs. 34 and *boora* Rs. 36 to Rs. 37 per maund.

In ready, while *gur dhaiya* quality was much in request and prices touched new heights up to Rs. 48.23 per quintal, *pansera* quality ruled quiet for lack of demand. Arrivals here declined to an average of 500 maunds, and stocks of with the trade are estimated was around 32,000 maunds. *Gur* production season has nearly ended. Arrivals were out of the stocks retained by producers. The week-end prices of other varieties were: *Pansera* superior Rs. 46.99, *dara* Rs. 42.87 and *shakker* Rs. 48.23 to Rs. 50.91 per quintal.

Prices recorded a firm trend during the week in the Muzaffarnagar market, as *chaku* was in demand from Punjab, Gujarat and M.P. and *pansera* attracted Punjab and Rajasthan support. Rusket prices also hardened and *shakker* was much in request from Rajasthan, Punjab and north Gujarat.

Gur futures ruled firm on continued bull support. *Gur Baisakh* having opened at Rs. 15.23 on last Monday, touched the lowest of Rs. 15.18 the same day, and then improved to Rs. 15.48 on Friday to quote at Rs. 15.44 today.

Cane sowings were still being done in scattered areas, and the land recently vacated from peas and other coarse grain *rabi* crops was being used.

KIPS EXPORT BUSINESS SMALL

(From Our Own Correspondent)

MADRAS, 9*th April*

Arrivals of E.I. tanned hides and calf were moderate in the local market this week. Clearance of hides was slow and of calf brisk. Export business was small, as importers were trying to buy at lower prices. The difference of a penny per lb. has stood in the way of booking business, with sellers holding firmly to their prices. There were inquiries for heavy weight cow calf and all averages in buff calf, but as stocks have been small, trading was patchy. Demand for lower grade cow hides was comparatively good, both for inland and on shipment account.

The tanned skins market was weak due to irregular inquiries for export. Demand for goat skins was sporadic and selective. Lower selections were difficult to sell, and stocks have been accumulating with tanners. Light weights and heavier better grades were in demand in small quantities. Inquiries for prime and semi-prime sheep skins were dormant, but for middle class sheep skins fair because sellers have been meeting the importers' ideas to some extent.

Shipments (in bales) during March were 1,807 of tanned cow hides, 249 of cow calf, 60 of buff hides, 749 of buff calf, 589 of goat skins, and 298 of sheep skins to the U.K., 155 of cow hides, 32 of cow calf, 36 of buff calf, 629 of goat and 223 of sheep skins to the Continental ports; 40 of buffs, 127 of buff calf and 145 of goat skins to the U.S., and eight of goat and 200 of sheep skins to Japan.

Notices

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-ninth Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4.30 p.m. on Wednesday the 16th day of May 1962, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1961.
2. To declare a dividend.
3. To appoint a Director in the place of Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act 1956 has been received by the Company:

   "RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who has attained the age of 81 years and who retires by rotation be and he is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit of 65 years prescribed by Section 280 of the Companies Act 1956 shall not apply to him."

4. To appoint a Director in the place of Mr. Dharamsey M. Khatau, who retires by rotation and is eligible for re-appointment and offers himself accordingly.
5. To appoint the Company's Auditors and also Auditors for the Branches and to fix their remuneration.
6. To consider and if thought fit to pass the following resolution as a Special Resolution:

   "RESOLVED that this Company hereby approves of an additional loan of Rs. 3 lakhs being made to Orient Match Co., Ltd., of Karachi, Pakistan, a body corporate which is under the same management as this Company, at a rate of interest of 2¾ per cent per annum against a charge on the stocks, raw materials, movable assets and book debts of the latter Company and against a guarantee for due repayment of the said loan given by the Swedish Match Company, the Managing Agents of this Company."

7. To consider and if thought fit to pass the following resolution as a Special Resolution:

   "RESOLVED that approval of the shareholders be and is hereby given to Orient Match Co. Ltd. of Karachi, Pakistan, an associate of the Swedish Match Company, the Managing Agents of this Company, using as registered users on matches manufactured and sold by them in Pakistan the *Tekka, Deer & Tiger, Id-Ka-Chand, Ghoda Mark* and *Horse Head* trade marks registered in the name of this Company with the Pakistan Trade Marks Registry on the terms and conditions as set out in the draft agreement placed before this meeting and initialled for identification by the Chairman."

The Transfer Books of the Company will be closed from the 24th day of April 1962 to the 17th day of May 1962, both days inclusive.

By Order of the Board,

A. HYDARI,
Executive Director.

4th April 1962.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY.

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER OF THE COMPANY.

The dividend when sanctioned will be payable at par at all Indian offices of the Central Bank of India Ltd. on and after the 21st day of May 1962 to those shareholders whose names stand on the Register on the 17th day of May 1962 and warrants will be posted in due course to each shareholder at his registered address. Shareholders are kindly requested to notify immediately any change of address.

A copy of the Explanatory Statement issued under Section 173 of the Companies Act 1956 relative to the items of special business set out in the aforesaid Notice has been forwarded to the members of the Company along with the Notice.

THE MODERN MILLS, LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 28th Annual General Meeting of the above Company will be held at its Registered Office at 70, Forbes Street, Bombay-1, on Monday the 30th April 1962, at 4.30 p.m., for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October 1961.
2. To declare a dividend.
3. To appoint Directors in place of those who retire but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,

N. SIRUR & CO. PRIVATE LIMITED,
Managing Agents,
N. D. SIRUR,
Managing Director.

BOMBAY, *20th March*, 1962.

The Transfer Books of the Company will remain closed from 2nd April 1962 to 21st April 1962, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

The dividend when declared will be made payable at State Bank of India, Bombay, from 10th May 1962 to those Shareholders whose names stand on the Register of Members on 21st April 1962. The Dividend Warrants will be made collectable at par at State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

BURN AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Registers of Members and Share Transfer Books for 6 per cent and 7 per cent Preference Shares in the Company will remain closed from the 24th April to the 30th April, 1962, both days inclusive for the purpose of payment of Preference Dividends for the half-year ending 30th April, 1962, on or after the 10th May, 1962, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6 per cent and 7 per cent Preference Shares on the 30th April, 1962 or to their mandatees.

By Order of the Board,

MARTIN BURN LTD.,

F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12, MISSION ROW,
CALCUTTA,
14th April, 1962.

SURVEY

(*Concluded from page* 655)

by the I.D.A. so far is about $200 million and, judging from the applications for assistance under consideration, it is clear that the I.D.A. will have committed all its initial capital before the end of the five years during which these funds become available for disbursement. The main attraction of I.D.A. assistance is that the only cost to the borrower is the service charge of ¾ per cent per annum on amounts withdrawn and outstanding. This is meant for covering I.D.A.'s administrative expenses.

Reference may also be made here to Mr. Black's observations on the terms of assistance to underdeveloped countries. In his view, if the risk of financial difficulties (on account of repayment of loans and servicing them) to the borrowing countries is to be averted and if the momentum of economic development is to be maintained, it is essential that substantial development assistance be made available for long-term periods and at low rates of interest. He concedes that there has been, in recent years, a welcome increase in the number of countries offering large amounts of development aid, but few of the newcomers, in his opinion, have yet brought themselves to the extent needed, to provide at least a part of their aid on appropriately lenient terms. If this situation is not improved, Mr. Black warned, there is a real danger of a stage being reached, when the underdeveloped countries will not be able to accept foreign aid without endangering that very process of orderly economic growth towards which aid is directed.

COMPANY LAW

(*Concluded from page* 658)

which is already an established fact in the leading countries of the West and which has accounted for far-reaching changes in the character and quality of company management in those countries.

Lest there should be any misunderstanding in the minds of anyone, let me hasten to add that the factors listed above were those which accounted for the present form and structure of our Companies Act when it was passed over six years ago. Much has happened since then, and it is only fair to add that we should recognise the noticeable growth in the standards of company formation and company management during the last five years, following the enactment of the new company law, largely perhaps as a by-product of its working and the activities of the Department of Company Law Administration which administers it. Time does not permit my going into this aspect of the question further, and I would conclude with this broad observation that there is no standardised system or pattern of regulation of trade and industry uniformly applicable to all countries. Given a country's commitment to its economic and social goals, every country must fashion for itself the tools of policy most appropriate to its economic and social development. It is because I feel that the concept of the responsible company fits in well with our national commitment to the accepted goals of our economic and social policy, that I have considered it worthwhile to say a few words about it, in relation to the basic law which governs the organisation and working of our organised corporate sector. (*Note*: This article is an adaptation from the speech delivered by the author at the Rotary Club of Delhi a few days ago.)

MARKET GOSSIP

(*Concluded from page* 651)

appreciated the Committee's emphasis on the necessity to tackle the problem of modernisation and rehabilitation of the industry with urgency and seriousness. A very pertinent point he made here was that, apart from paucity of funds, the chief obstacle to modernisation was non-availability of machinery. The order books of indigenous textile machinery manufacturers, we are told, are full for the next one and a half to two years. It is, therefore, necessary to increase the capacity of the indigenous textile machinery manufacturing industry and to permit larger imports, so that the needs of the cotton mill industry could be more adequately and quickly met. The same point was made by Mr. Arvind Narottam also. He said that the mills in Ahmedabad could not maintain the tempo of modernisation because they were not able to obtain licences for importing certain types of machinery and the delivery schedules of indigenous manufacturers were far extended. He asserted that, if necessary assistance was rendered, the industry could quicken the pace of modernisation.

U. S. Silver Bill

Thanks to the overall stability of the silver market in the U.S., the Treasury does not think it necessary to press for action this year on the Bill to repeal the Silver Purchase Acts now before the Congress which has a crowded session. Nonetheless, Congressmen from silver-using States, mostly New England and the North-East, hope to get hearings on silver legislation before the Senate Banking Committee starts within the next few weeks. At the same time, it is not that the Treasury does not regard the Bill as essential. It would, however, prefer to put it off to next year and give priority to more important legislations, notably the Tax Reform Bill, still being attacked and amended in the Senate, and the Bill permitting U.S. participation in the I.M.F. borrowing scheme.

The Treasury has apparently drawn much comfort from a not-too-sensitive behaviour of the internal market. It has largely followed the lead from London. And, even when President Kennedy ordered the withdrawal of the Treasury as a seller of free silver (silver not required as backing for the currency) from the market in November last, the price rose by only 10 per cent. Besides, the U.S. Treasury still has 22 million ounces of free silver which can be used to prevent any violent fluctuations in prices.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIV. No. 2662 BOMBAY, 21st APRIL 1962 PRICE Rs. 2

AN ASTOUNDING CONFESSION

THE statement of Mr. K. C. Neogy, Chairman of the Committee on Transport Policy and Co-ordination, at a New Delhi Press conference last week-end, that it was not possible for him to indicate at this stage as to when the final report would be published, is astounding. Mr. Neogy was candid enough to confess that he was not sure whether the report would be ready at least before the end of the third Plan. Did anyone bargain for such an indefinite delay when the Committee was appointed in July 1959? Indeed, the Committee was expected to finish its labour quickly, so that the Planning Commission, as well as the Government, would have the benefit of its advice for determining the transport policy for the third Plan. From what Mr. Neogy said at the Press conference it seems that one cannot expect even an interim report from the Committee which could be useful to the Administration in tackling the short-term problems. Why does the Committee feel so helpless even after working on the problem for nearly three years? Who is responsible for this ridiculous situation? The explanations given in the Press conference reveal that there is a serious lack of basic information on certain aspects of the transport problem and an acute shortage of expert personnel on the subject. Surely, it need not have taken three years for the Committee to arrive at these conclusions. The note, containing the progress of the work done by the Committee and circulated to the Press at the conference, says that only two out of fifteen State Governments have so far sent in their comments on the preliminary report circulated by the Committee in February 1961. This is deplorable, because, without the views of the State Governments under whose jurisdiction road transport falls, the Committee cannot frame any useful recommendations. The shocking apathy of State Governments to road transport is, however, nothing new. Mr. Raj Bahadur, the Union Transport Minister, had referred to this drawback on a number of occasions in the past. Nevertheless, the Committee ought to have taken energetic steps to shake the State Governments out of their lethargy. It could have sought the co-operation of the Press much earlier, instead of waiting for so long a time. The fact that Mr. Neogy called a Press conference six days ahead of the final Railway Budget for 1962-63 is not without some significance.

In refreshing contrast to the indifference shown by the State Governments to the preliminary report of the Neogy Committee, the Federation of Indian Chambers of Commerce and Industry, New Delhi, and the Associated Chambers of Commerce and Industry, Calcutta, the two apex bodies representing the regional, State and local trade associations in this country, have forwarded their comments. The I.R.T.D.A., an institution specialising in roads and road transport, has also submitted a lengthy reply. So the private sector cannot be accused of having neglected the Neogy Committee. This, however, cannot be said of the Central Government. For it would appear to have failed to provide the Committee with adequate secretariat assistance. It could have arranged, but did not, the supply of outside expertise on transport economics. While it is not clear whether Mr. Neogy had asked the Government to make good these deficiencies, there is enough evidence for the conclusion that the Centre, too, was not very enthusiastic about the Neogy Committee finishing its task expeditiously. The leisurely fashion in which the Committee was handling its task in the name of comprehensiveness seems to have suited the Ministries concerned. After all, the main object in appointing the Neogy Committee was to provide a convenient excuse for not implementing the Masani Committee's recommendations in 1959, many of which were not to the liking of the Railway Ministry. Mr. S. K. Patil, who was then the Minister for Transport and Communications, did not want to do the unpleasant task of joining issue with his colleague in charge of the Railways—Mr. Jagjivan Ram—and, therefore, followed the well-known practice of Governments on such occasions, namely, of appointing another committee and referring the matter to it. If anyone is happy over the predicament of the Neogy Committee, it must be the Railway Ministry, in general, and Mr. Jagjivan Ram, in particular. As the Minister for Transport and Communications now, he has been spared, for a long time, the inconvenient task of taking decisions on suggestions which he had opposed as the Minister for Railways. In the meantime, the country is denied the benefit of development of its transport services in a co-ordinated fashion. This journal never thought that a committee headed by Mr. Neogy would fail so miserably.

The Neogy Committee itself is not free from blame for making its task more complicated than necessary and indulging in the fascinating pastime of riddling the riddle. Apparently baffled by the rival arguments of the road and rail enthusiasts, it got involved in a problem of balancing their respective handicaps, not in maximising their relative advantages and evolving a policy of complementary growth of both road and rail transport. In its marathon preliminary report, prepared after eighteen months of labour and circulated for eliciting public opinion early in 1961, it had raised so many issues on road-rail co-ordination that it is no wonder that the State Governments are taking their own time to answer them. Further, it appears as though the question of road *versus* rail transport is being fought out as in a law court; the presence of a retired financial adviser of the railways in the Committee, instead of helping progress, seems to have retarded it, because of the tendency to build up the Railways' case and demolish that of the roads with all the arguments that can be discovered for either.

In a note circulated at the aforesaid Press conference, the Neogy Committee has added to its already numerous doubts. To give one instance. Should the railway rating structure be based on the principle of cost of service or the value of service as at present? Since more high-rated traffic is being diverted to the roads under present conditions, the Committee seems to feel that the railways should be able to charge what it costs to carry such bulk goods as coal and ore, if they have to earn for their keep and find money for development. This seems an unnecessarily alarmist view, as the scope for such diversion cannot be that large so long as there are limitations to a quick expansion of the number of vehicles on the roads. Besides, there is much room for development of feeder services by agreement with the State Governments. No *radical* change in the system of carrying basic commodities like coal at low rates can be contemplated just yet; a narrow accounting approach to these questions should not disregard the political implications of a policy which may result in inflating the cost of raw materials to distant centres even before they have made beginnings in industrialisation. Only recently, the Mudaliar Committee (not to be confused with the one on export promotion) went into the whole question of freight structure of the Railways and it is doubtful whether the time has come for a wholesale review of the position. Moreover, the Government of India has not been averse to making the Railways pay their way to development by gradually raising charges closer to the cost of the services and the latest Budget, which will have been presented by the time these lines are in print, has given further proof of the intention to follow such a policy.

The desire of the Committee to effect a root-and-branch reform may not be warranted by the nature of the problem. There are many imponderables in the present situation like the future trends in the growth of traffic and the Railways' own inability to carry smalls and less essential goods. The Committee seems to think that it would be able to establish the relative importance of revised priorities, if it could determine the actual cost of the Railways of carrying each and every item of traffic and compare it with the cost of the road operator. It made a great mistake in making this ambitious approach, for it was trying to do the impossible. After embarking on the elaborate inquiry, it has found that the necessary data do not exist even for the Railways, let alone the small truck operator who hardly maintains any accounts worth the name.

The Committee does not seem to have recognised that anything like a perfect solution, or an absolutely sound long-term policy, for transport may be unattainable, because historical factors cannot be ignored in the short-term and the long-term is only a succession of many short ones. An enormous investment has gone into the Railways and more is planned for the next five years; demand estimates are tentative, but there is little doubt that there is scope for both rail and road transport. A common policy has to be evolved, so that available capacity of both is not frittered in wasteful competition but husbanded to produce the best results. Once the main issues are formulated, it should be possible to secure co-ordination through direct high-level political discussions with the States. It must be remembered that the Railways displayed a narrow outlook and deprived the States of their growing revenue from the tax on passenger fares; after that, there is no reason to expect that the States would agree to forgo their authority for regulating road traffic and securing more revenue from both goods and passenger traffic through intensive development of both. As economic development proceeds, it is likely that States and road transport operators will find it more profitable to develop feeder routes. Again, it is idle to talk, as some do, of Constitutional amendments and of more authority to the Centre after the recent controversy over coal rights and oil royalties.

The Committee overlooks the merit of flexibility which enhances the value of the service rendered by the small road operator even when his charges are higher. In its earlier

preliminary report, the Committee went to the length of seriously considering the idea of imposing equal disabilities on road transport as though its task was to arrange a handicap event and not discover the most suitable policy for the entire economy. So it went to such absurd lengths as to inquire whether Railways could be relieved of their existing obligations to provide certain unremunerative services and road services be asked to undertake additional obligations. Nationalisation of the entire road transport system, in order to provide a perfect integration, may appear to be a logical solution, but it is as chimerical as the alternative of allowing Railways freedom to operate as a commercial undertaking merely to compete with road transport on better terms. It is not possible to re-order the whole scheme of things for achieving a notional justice which may mean nothing positive for the economy; nor is it easy to find guiding principles for all time. The country is still in need of bullock carts which play an important role in carrying goods within a range of 50 miles and motor vehicles may have to replace them progressively; the next ten years may see more changes in the development of communications in the rural areas and the problem itself may undergo a change. This may be one of the cases in which the balance of advantage may lie in letting the present situation alone, with such changes as the Transport Ministry, the new inter-State co-ordinating agencies and State Governments may favour on the basis of practical needs. One, therefore, fails to see what good the Committee can do for the country by continuing its labour, especially when it admits that even the next four years will not suffice to complete the task allotted to it.

DECISION-MAKING AND DECENTRALISATION

DEVELOPING countries, especially those emerging suddenly to self-governing status, are generally confronted with expectations which not even the most advanced nations could fulfil. The governments of these countries are expected to perform miracles and conjure up, virtually overnight, a variety of facilities which in developed countries have come into being gradually through private and local initiative over generations. But, even if the requisite resources for meeting development needs can be largely found from internal and external sources, administrative difficulties and deficiencies stand in the way of their effective utilisation. It thus happens that administrative improvement, described as the *sine qua non* in the implementation of programmes of national development, is vigorously sought in several developing countries, including India. If, however, such reform is difficult to achieve, it is, in the main, due to the excessive centralisation that is prevalent in most of the developing countries. The central problem in administrative reform is how to effect deconcentration of administrative authority, both within the ministries themselves and from headquarters to regional offices, and devolution of authority to States and local authorities, that is, how, in short, decisions essential to the rapid implementation of programmes of national development can be more expeditiously made and implemented.

The process of decision-making and its character are of fundamental importance in the context of development. Contemporary concepts and practices in this field, however, leave much to be desired, as will be seen from the relevant section of a United Nations publication* just available. An idea of the present unsatisfactory state of affairs can be had from its findings, some of which are:

(a) In every capital of the world, particularly in those of the developing countries, the congestion of work at the level of the minister's office presents one of the critical problems of public administration. "Let the minister decide" is the all too frequent response of subordinate officials, high and low, on any perplexing question. The minister's time, instead of being saved for his highest duty of taking decisions on major policies and programmes, is being wasted on individual cases.

(b) Although conditions vary greatly from country to country, it has been found that the great bulk of day-to-day decisions in public affairs can properly be taken by career officials, and, indeed, must be taken by them, if the business is to be done without being held up by red-tape.

There is here the question as to how far a minister can delegate decisions to his subordinates. In the opinion of the authors of the U.N. study, a minister would be well advised to delegate decisions to the maximum and support and defend his subordinates whenever he justifiably can. The most effective way to handle the whole problem of delegation (the transfer downwards in a hierarchy of the authority to make decisions) and clearance (the process of referral upwards to the next highest level of authority for approval of policy) would be for the minister and his career officials to meet frequently for constructive discussion, and thus to build up mutual understanding and a good working relationship. As for multiple clearances, where a proposed action or decision requires the review, comment and approval of a number of offices staffed by various types of specialists, the procedure therefor must be well defined, for, otherwise, it can degenerate into a system of multiple delay and inaction. Some of the devices, which have been found helpful in some countries in securing the benefits of multiple clearances without undue delay, would be generally useful to all countries. These are:

1. Placing responsibility for co-ordination on the department or division head and assigning one of his assistants to follow the progress of each action.

2. Defining in writing the precise duties and sphere of competence of each specialised official, so that he does not exceed his powers.

3. Encouraging informal lateral conferences between officials of specialised competence to iron out difficulties and avoid excessive exchanges of inter-office memoranda and paper work.

4. Encouraging the habit of good committee work, where major problems have to be discussed in a more formal way.

5. Devising a method of simultaneous consideration by the various officers concerned by circulating copies of the proposal in question.

6. Preparing, where necessary, a system of flow charts which will reveal the steps needed for a decision in each type of work.

One of the most important requirements in decision-making is the co-ordination of policies which affect more than one ministry. The U.N. study has emphasised, in this connection, the need for establishing, at the top of the governmental structure, a central authority responsible for determining national policies and co-ordinating the formulation of the legislative and administrative programmes relating to them, and for co-ordinating the work of the separate organs of government in the execution of the policies. What is visualised here is, perhaps, a planning body (like the Planning Commission in India) which, after eliciting the views of all ministries and agencies concerned, can match needs against resources and plans and promises for development against capacity. The ultimate objective of such a co-ordinating authority is nothing less that the taking of decisions on policy concerning national development and administration, and its task is one that the government's political leadership cannot delegate.

To go from the field of decision-making or policy-determination to that of execution. One complex aspect of administrative reform covering operations pertains to decentralisation. According to the U.N. study, area administration and decentralisation present some of the greatest complexities and difficulties in the field of public administration. The authors of the study have, therefore, not offered precise formulæ and definite solutions. They have merely suggested alternative avenues to be explored in regard to the two principal forms of decentralisation, namely, "decentralisation to area offices of administration" and "devolution to State and local authorities." Area administration, as defined, involves the deconcentration of responsibility and authority of the Central Government to regional and local units with definite geographical boundaries; this arrangement implies no transfer of final authority from the ministry, whose responsibility continues. Devolution, as defined, means a legal deposit of powers to discharge specified or residual functions with formally constituted State and local authorities; this type of arrangement has a political as well as an administrative character. There is also a form of activity which can make decentralisation more purposeful and can supplement and support both area administration and local government; this is community development—a process whereby people are encouraged to organise and contribute their effort to improve their communities without a statutory transfer of authority. It will be noticed that all these forms of decentralisation are in vogue in this country.

The authors of the U.N. study have made some suggestions in regard to each one of them. As far as area administration is concerned, it has been suggested that the area offices must be staffed by career personnel with the ability and training to give sound decisions on their own responsibility, that the powers given to area officers should be used in such a manner as to relieve the ministry of unnecessary work and that the area officers must be aware of local needs and, in so far as is consistent with ministerial policy and procedures, do what they can to meet them. As for devolution, the suggestions are that local governments should be granted significant functions and powers, and also compatible resources and that supervisory functions of the higher government should be supplemented by a system of technical services and advice to local bodies supplied by a central office. In regard to community development, the general approach suggested has three principal elements, namely, village-level workers to serve as catalysts of self-help effort, timely technical and material help to make the will to self-help effective, and institutional means (local government, co-operatives, etc.) to maintain activities initiated through self-help and extension programmes. All this does not sound strange to people in India, for community development, co-operation, *panchayat raj* are all being tried here. How effective they are would be determined as much by the adequacy of resources as by the availability of competent personnel to man them. The U.N. study, of course, has not gone into too many details. Its findings and suggestions are only of general applicability to countries in different stages of development and with varying local conditions. But, in view of the experience of the expert U.N. missions which, during the past ten years, have noticed the recurrence of similar problems in spite of the differences between the countries covered, the U.N. study under reference constitutes a notable contribution to the solution of problems pertaining to administrative decision-making and decentralisation.

DR. M. VISVESVARAYA

WITH the passing away of Dr. M. Visvesvaraya at Bangalore on Saturday the 14th inst., India has certainly lost a towering personality. So outstanding have been his services to the country and the people that he fully deserved all the honours paid to him both when he was alive and after his death. He lived a full hundred years—he was born on 15th September 1861—and left an indelible mark in several fields of activity, particularly engineering, industrial, economic and administrative fields. Dr. Visvesvaraya began his career as an engineer in the Public Works Department of the former Bombay State way back in 1884 and, within a few years thereafter, he proved himself to be an outstanding engineer. Standing as monuments to his ingenuity, originality and inventing abilities are the block system of irrigation in Bombay, automatic sluice gates at Lake Fife reservoir in Poona, flood control schemes in Orissa, Krishnarajasagar dam in Mysore, and water supply schemes and modern drainage systems in several cities. It was his vision and foresight that gave a powerful impetus to economic planning and industrial growth. Indeed, in planning, Dr. Visvesvaraya was ahead of even the Soviet Government. His book on *Reconstructing India* was published as early as in 1920, that is, long before Russia launched its first Five-year Plan. This book was followed by another, *Planned Economy for India*, in 1934.

Although Dr. Visvesvaraya accorded top priority to education and industrialisation, he stimulated every aspect of life and "hustled the people as never before." Here is what he wrote in 1951: "If any good is to come of independence, a speedy change has to take place in the people's habits, education, knowledge of world affairs and working capacity... India cannot afford to stand still and remain a planless underdeveloped country any longer." Surely, Dr. Visvesvaraya will go down in history as one of the distinguished nation-builders of India and as a shining example of integrity and industriousness for generations to come. The future of India in the comity of nations will be fully assured, if it is blessed with sons of his calibre and character and leaders of his ability and vision.

MARKET GOSSIP

Speculation on the Budget

MR. Morarji Desai must be busy now with the preparation of his tax proposals due to be announced in the evening of Monday next. The City markets, too, are engaged in the same game; only, they are guessing, as usual, as to how he will bridge the gap in the revenue budget, now estimated at Rs. 100 crores. They are all reconciled to heavy taxation. As a precautionary measure, the bulls in the share markets are said to have reduced their load. This has led to a modest, though all-round, recession in values. During the past one week, there has been a growing feeling that direct taxation on both corporations and individuals will go up. The absence of any heavy selling, however, suggests that there are not many with a strong conviction that Mr. Desai will make any material departure from the pattern and philosophy pursued by him in his previous budgets.

But how will the Finance Minister find Rs. 75 crores to Rs. 100 crores by way of additional taxation, if persons with this conviction are not to be disappointed? There are serious limits to exploiting the weapon of excise duties, if the malady of high cost structure in the country is not to be aggravated. Indeed, there are some commodities which are badly in need of relief in excise duties. Sugar and coffee are two typical examples where higher production has to be matched by larger consumption. Because of the continuing wide difference between the ex-mill selling price and the prevailing market price in art silk yarns, a further stiff increase in the excise duty on these may be justified, provided the Finance Minister makes it expressly clear that the mills must pass on the full burden to the buyers. This may yield a tiny sum; still, it can cover only a fraction of the budget gap. Among the customs duties, there is hardly any room to get more revenue by taxing exports. On the contrary, the Finance Minister has already been strongly advised by the Mudaliar Committee to give more incentives for promoting exports. Much imagination is called for in implementing the Committee's proposals, some of which are rather too liberal. But he will do well to concentrate on traditional exports. His aim should be not only to obtain an immediate advantage but also to ensure that, in the long run, India obtains a progressively rising share of the world markets for these goods.

So import duties are the next source to which the Finance Minister can look for a large revenue. Why not raise them by, say, 5 per cent all round? The collection will be easy and, with imports running at the Rs. 1,000 crore level, the revenue may be up by some Rs. 40 crores, if not more. This suggestion, if accepted, will also have the additional advantage of restraining imports and stimulating domestic production. Of course, the case is by no means so simple as all that, for scores of objections can and will be raised against it. But India is now in a position where it has limited choice and has to select the lesser of the two evils. The suggestion thrown here will, perhaps, have the least effect on the cost of living of the common man.

In one respect at least, namely, borrowing programme, the position is more comfortable for the Finance Minister than it was when he presented the interim budget early last month. Conditions in the money market have become perceptibly and prematurely easy. The supply of funds with banks is more than the demand, as witness the fall in the inter-bank call rate from 5¼ per cent less than a fortnight ago to as low as 4 per cent in Bombay—some business was done even at 3¾ per cent on Wednesday this week—and 2¾ to 3 per cent at Calcutta. Many banks are now of the view that, in view of the slower rate of increase in industrial production, the demand for funds in the rest of the year will not be as large as they had expected earlier. Whether this view will be borne out by events is another question. The point to be noted here is that the prevailing conditions in the money market are sufficiently conducive to the belief that the Finance Minister can bank upon a successful borrowing programme this year.

The Search for Cotton

Literally, no stone is being left unturned to get foreign cotton to augment domestic supplies. This is not surprising, because, even on official admission, the cotton supply position in the country has suffered a "dangerous deterioration" and the ratio between supply and consumption has fallen to an extent never before witnessed in the past many years. With the crop estimated at hardly 4.3 million bales, the country needs, according to Mr. Bharat Ram, Chairman of the Indian Cotton Mills Federation, 1.8 million bales of cotton to fill the gap between supply and demand which will cost as much as about Rs. 120 crores in foreign exchange. This underlines the need for resorting to devices other than normal commercial imports, such as rupee payment agreements and barter deals, under which cotton could be obtained without having to pay for it in foreign exchange. The agreement signed this week at Washington between India and the U.S., under which India would sell to that country 50,000 tons of sugar in exchange for cotton, is the fruit of the efforts made in this direction. The actual quantity of cotton that would be available under the deal is not known, but it will be in addition to what India might get under other arrangements with the U.S. But under this barter deal, cotton will have to be secured through normal trade channels. In other words, it will not be supplied from the stocks owned by the Commodity Credit Corporation. No purchase authorisation would be issued, as in respect of P.L. 480 cotton, covering the commodity concerned.

While the chances of getting U.S. cotton under other arrangements are still uncertain, a certain amount of optimism has emerged from the statement of the U.S. Ambassador, Prof. Galbraith, that "there was more than a little hope that cotton will be available to India under P.L. 480." He, however, declined to make any definite commitment as "lengthy discussion" was still going and also because "things would change quickly in Washington."

An alternative source suggested is Pakistan with which India has already entered into a special payments agreement. There are reports, as yet unconfirmed, that India might be able to get 10,000 bales of Pakistan cotton against export of chemicals. Sudan, Peru and Syria are also mentioned as possible sources of additional supplies of cotton, although the quantity and terms under which cotton could be obtained from them are uncertain.

The cotton markets at Bombay and elsewhere have, however, failed to derive any inspiration from these developments. The news of the barter deal with the U.S. has not had any perceptible effect on the trend of prices and the trading sentiment in Bombay which continue to be firm. In fact, the release of an additional 10 per cent of Indian cotton quota to mills recently and news of unwanted showers in certain tracts, where the crop is still being gathered, have imparted further strength to cotton prices.

Bullion Dull

This week was a dull one for the bullion market. With several operators away on account of holidays, business actually put through was rather small and values moved narrowly. The undertone of the market was, of course, firm. Over the week, silver gained 40 nP and gold 25 nP, the closing spot rates on Wednesday being Rs. 221 and Rs. 121.25, respectively. A feature of trading was that ready silver continued to command a premium over the forward, though the actual premium declined slightly from 85 nP to 80 nP, and, in gold, the discount under the forward receded from 50 nP to 5 nP.

Including the gain of 40 nP recorded by silver this week, the total rise since the commencement of the usual busy season for bullion, that is early in March—the season is supposed to last up to the end of June—comes to nearly Rs. 7. The rise reflects the high level of offtake due to festivals and marriages. In gold, too, offtake is high due to the same reasons, but there has not been any improvement in price. On the contrary, a fall of 50 nP is noted. This is not surprising, in view of the heavy arrivals of contraband gold especially from Goa side. One estimate puts the aggregate arrivals since the liberation of Goa in December last at 600,000 tolas.

Mixed Trend in Oilseeds

Mixed trend prevailed in oilseeds futures this week, though at the close the general tendency was subdued and the tone quiet. Groundnut futures were conspicuously and exceptionally weak. Castor and linseed futures, however, evoked support at every small setback and displayed a rallying tendency for quite long during the week, but turned distinctly easy near the close on realising induced by the sustained weakness in groundnut. Cottonseed futures were quietly steady. Over the week, groundnut May closed with sizable losses and the other sections were a shade lower. Groundnut oil futures also lost further ground in line with the trend in groundnut futures.

Sentiment in groundnut futures was adversely affected by the weakness in the spot section due to rising arrivals, lower advices from the growing centres and the approaching maturity of the current May contract. It was also influenced by fears that some tenders might be issued against the maturing contract from the floating stocks of about 4,000 tons of the inferior Kanpur variety. Bulls liquidated heavily in May and switched over to the distant July contract. Saurashtra and Gujarat operators were nervous sellers. The southern interests also apeared as sellers on prospects of a better summer crop. With no incentive in the form of an export policy for groundnut oil, buyers were difficult to find.

Castor futures had quite the opposite story to tell. Even small setbacks in the June contract met with persistent support from speculators and shippers, due to higher spot prices and rumours of a possible barter deal with the U.S. for the export of castor oil, similar to the sugar-cotton deal. The setbacks also strengthened the chances of business in oil with the U.K. which, it was said, had stopped receiving supplies from Rumania. Shippers also covered small lots in spot oil, and this gave a greater meaning to the prospects of some immediate export business. Linseed futures enjoyed support from Calcutta and Punjab, following some improvement in mustard and sarson.

Outlook for Tea

Prospects for world tea industry and trade with particular reference to India are rather confusing to a degree. The U.N. Food and Agriculture Organisation has just reiterated that the "present" trends in output and consumption are likely to upset the delicate balance of the world market with serious repercussions on prices. Not all Indian planters share this view, nor do the spokesmen of the Ministry of Commerce and Industry. Last month, the Union Minister for Commerce said in Parliament to the effect that an examination by experts in the Government revealed that the U.N. study was unduly pessimistic. Among the planters, opinion seems to be veering round to the Government's judgment of U.N. study. Speaking at the recent annual meeting of the Kil Kotagiri Tea and Coffee Estates, Mr. J. N. A. Hobbs, a well-known planter of South India, for instance, declared that the tea market had improved considerably and it might well be that the F.A.O. experts had underestimated the world's consuming capacity. Readers will recall that *Commerce* has held this view for a long time.

Estimates regarding the current rate of actual world tea consumption are not available, but indications are that it is much higher than in the past few years. The quantity of tea consumed in India, the world's largest producer, and other producing countries last year (1961), as the F.A.O. report itself admits, was well above that in 1960. Consumption in importing countries was also higher, as witness the marked increase of 8 per cent in the aggregate world exports; the quantity actually shipped by the five main producing countries (India, Pakistan, Ceylon, Indonesia and East Africa) is estimated at about 480 million kg., as against 441 million kg. in 1960. The upward trend of tea consumption may be expected to gather momentum in the current and ensuing years as well. An encouraging factor that points to such a trend is the proposed entry of Britain into the Common Market which, as Mr. Hobbs said, may lead to a substantial reduction in duties in other European countries and thus pave the way for increased consumption. For, since Britain consumes twelve times as much tea as all the other Common Market countries combined, "it is not likely," to quote him, "that Britain will allow any heavy duties on teas which it imports from the Commonwealth countries" and, at the same time, imports into other Continental countries are relatively small so that a reduction in duties will have little effect on their revenues.

The foregoing account is no doubt encouraging, but it would be dangerous to ignore the severe competition in world tea markets and the slow pace of increase in domestic offtake (just 20 million lbs. a year). Mr. Hobbs did well both to highlight these two factors and to indicate the solutions therefor. The solutions are, one, great efforts to increase overseas propaganda for sale of Indian teas, two, reduction in prices through a downward revision in tax, and, three, avoidance of multiplicity of taxes. The second measure is particularly urgent, inasmuch as the prices of tea (15s. to 20s. and more per lb, in most European countries) are inhibiting consumption. One of the reasons for Indian teas being very expensive, according to Mr. Hobbs, is the heavy incidence of taxes. The actual incidence comes to as much as 53.25 nP per lb. of package tea exported from Calcutta (export duty 20 nP, excise duty 18.18 nP, Assam carriage tax 6.82 nP, West Bengal octroi 6.25 nP and tea cess 2 nP). If the Government is unable to abolish export duty on tea, it must, as Mr. Hobbs urged, at least put tea on a par with all other excisable commodities so as to permit a drawback of duty on teas actually exported.

Taxing Speculative Gains

While a general capital gains tax militates against saving, genuine investment and economic growth, it is inequitable that those who supplement their incomes by speculative gains should escape tax on such gains. It is this consideration, and not the consideration of getting more revenue for the Government, which has prompted the British Chancellor of the Exchequer, Mr. Selwyn Lloyd, to give effect to his proposal, first unfolded in July last, to levy a tax on speculative gains. Accordingly, all short-term gains from purchase and sale of all forms of property with three exceptions will be regarded as income in the ordinary way, that is, being liable to income-tax, surtax and profits tax. The exceptions are (a) movable property such as motor cars, pictures and personal belongings, (b) owner-occupied dwellings, and (c) buildings, tools and machinery used for the vendor's trade. Issue of bonus shares by companies will not attract the tax, whereas rights issues will be treated as if recipients have acquired the rights on the same date as their original shares and tax will be levied, if the new shares are sold within six months of the original purchase. Speculative gains are defined as operations of buying or selling which take place within a period of six months in the case of stocks, shares and commodities and a period of under three years in respect of buildings and land. Even here, two notable concessions are given. In the first place, speculative losses within the specified periods can be set off against speculative profits (but not against ordinary income). Secondly, the losses can be carried forward to subsequent years. The latter concession is quite a generous one, unlike in most other countries where either the losses are not allowed to be carried forward or, where this is allowed, as, for example, in the U.S. for five years, long-term profits are also taxed at a special rate.

It is, however, not clear from the Chancellor's speech whether earned income relief can be claimed against speculative gains. It is also not clear whether the tax will cover some of the more detailed commodity operations which are already springing up on the basis that they can shift a profit earned in one time period into another. The Finance Bill will doubtless give answers to these and such other questions. But doubts are expressed whether the new tax will prove to be fair in detail and administratively practicable. "One suspects," says the London *Financial Times*, "that to tax at upto 17s. 9d. in the £ gains realised within six months and to leave entirely untaxed gains realised after six months and a day is to ask for trouble."

TREND OF SHARES

SAGGING TENDENCY

(From Our Own Correspondent)

BOMBAY, *18th April*

A SAGGING tendency on stale liquidation was discernible in share markets this week. Clipped by a series of holidays, trading was devoid of the normal enthusiasm. Caution, induced by the proximity of the tax proposals under the Central Budget for 1962-63, to be presented in Parliament on Monday, 23rd inst., yielded place to perceptible concern. Activity was mostly in the nature of squaring-up operations, as the bulls were inclined to face the tax proposals with a lighter burden of commitments. The bears, however, were not aggressive. Consequently, losses were small, though widespread. But with the growing belief that a very big dose of taxation was in the offing, sellers far exceeded buyers. One single factor that weighed much in favour of a large fresh tax burden was the anticipated rise in the revenue deficit in the Central Budget from the estimated figure of Rs. 63 crores to around Rs. 91 crores following the Government's recent decision to raise the dearness allowance for Government servants with retrospective effect from November last, which is estimated to cost the exchequer Rs. 18 crores, and the recommendations of the Mudaliar Committee on export promotion which, if accepted, would cost the Government some Rs. 10 crores. The overall deficit is, therefore, expected to rise from Rs. 147 crores to Rs. 175 crores. At the same time, it is a moot point how long and how much more burden industries and individuals could bear to finance the national Plans. Perhaps, the Finance Minister would be obliged to take recourse to some other sources of revenue. Besides, Mr. Morarji Desai has so far been careful enough not to kill the goose that lays golden eggs. It is to be hoped that he will continue to bear this point in mind in framing his new tax proposals next week.

* * * *

Despite some fresh encouraging corporate news, Dalal Street drifted lower during the two working days and closed with moderate losses, with a few exceptions. The Western India Match Co. Ltd. reported for 1961 a drop in sales from Rs. 18.34 crores to Rs. 18.04 crores, but a rise in gross profit of Rs. 13.24 lakhs to Rs. 166.31 lakhs, with the dividend maintained at Rs. 16 per share, taxable. Following a rise in sales from Rs. 2.28 crores to Rs. 2.86 crores during last year, the Victoria Mills showed an increase of Rs. 6.96 lakhs to Rs. 36.85 lakhs in gross profit and maintained the 25 per cent, taxable, dividend on the increased capital. The Tata Mills came out with a higher dividend of Rs. 5.50, as compared with Rs. 5 per share, taxable, for 1961, following improved results. The New Great Eastern Spinning and Weaving Co. Ltd. returned to the dividend list by proposing a 12 per cent, taxable, dividend for 1961, with a nearly twofold rise in gross profit from Rs. 12 lakhs to Rs. 23.93 lakhs and an increase in sales from Rs. 2.35 crores to Rs. 2.90 crores. Lastly, the Tata Oil Mills Co. Ltd. came out with a one-for-two rights share issue. While not only the market ignored this news, the shares of the companies concerned closed lower, except New Great, which recorded a gain of Rs. 11 to Rs. 305 and Victoria, which closed unchanged at Rs. 462.50.

Practically all the speculative counters showed small losses. In the Cash section also, losses predominated. Among the prime movers, Tata Ordinary declined by Re. 1 to Rs. 139, Indian Iron by 24 nP to Rs. 24.76, Bombay Dyeing by 20 nP to Rs. 69.50, Century by Rs. 8 to Rs. 621, Kohinoor by Rs. 2.50 to Rs. 307, Standard by Rs. 7 to Rs. 1,038, Swadeshi by Rs. 6 to Rs. 286.50 and National Rayon by Rs. 8.50 to Rs. 546. Swan slumped from Rs. 357.50 to Rs. 327.50. In the miscellaneous section, Bombay Burmah came down from Rs. 656 to Rs. 651 and Hindustan Motors from Rs. 20 to Rs. 19.60. Among Engineering, Telco shed Rs. 2 to Rs. 346, but Voltas were steady at Rs. 282.50. Alcock came in for heavy selling and lost Rs. 10 to Rs. 320. Shippings continued to lose ground, with Scindia declining by 32 nP to Rs. 12.68. Digvijay Cement unexpectedly eased by Rs. 7 to Rs. 200. A rise of Rs. 50 to Rs. 375 in G. Claridge following reports of a rights share issue was the only saving grace in the Cash List, where minor losses were the general feature.

* * * *

The Calcutta Stock Exchange suffered under the pressure of high carry-forward charges at the settlement last week. The erstwhile buyers were sellers all round. Although prices, wherever changed, showed mostly small losses, the speculative issues bore largely the brunt of the liquidation. Newswise, the lower profit of Rs. 4.98 lakhs as against Rs. 6.69 lakhs for the previous year and the reduced dividend of Re. 1 as against Re. 1.25 per share, taxable, from Albion Plywood for the last year dampened the sentiment. The share lost 6 nP to Rs. 10.56. The excellent report of Union Carbide for 1961, showing a rise in sales from Rs. 8.23 crores to Rs. 9.50 crores and in gross profit from Rs. 168.82 lakhs to Rs. 183.64 lakhs, produced a rise of 75 nP to Rs. 50.50 in the shares of the Company, but did not influence the general sentiment. The setback suffered by Jay Shree Tea in its gross profit from Rs. 61.23 lakhs to Rs. 53.72 lakhs last year and the reduction in the dividend from Re. 1.40 to Re. 1.25 per share, taxable, on the increased capital, weighed more heavily in the minds of the operators than the Company's proposal to issue rights shares. However, there were a few exceptions to the general trend. The decision of the jute mills to work at full capacity up to May-end kept jute shares in demand. Coals evoked support on reports of an early rise in the selling price for coal. Dyer Meakin, in Sugars, were supported on hopes of a bonus share issue, but, at the close, the shares were unchanged at Rs. 49.

Among speculative counters, Burrakur Coal gained 25 nP to Rs. 17.50 and Howrah tacked on small gains to Rs. 21.31 and Birla Jute were but fractionally easy at Rs. 36.62. G.K.W. rallied from Rs. 40.62 to Rs. 41, after a continuous decline recently, but Kesoram came down from Rs. 32.19 to Rs. 31.81. Turning quiet, Paper shares showed small losses, with Shree Gopal losing 31 nP to Rs. 25.56. In the Cash section, among Jute shares, Barnagore were shaded from Rs. 183 to Rs. 175 and Delta from Rs. 192 to Rs. 179. In Coals, E. India gained from Rs. 37.12 to Rs. 37.37 and Raneegunge from Rs. 14.62 to Rs. 15. Other sections were easy and showed small losses.

* * * *

Minor changes in dull trading were a feature of selective activity in Madras. Textiles were easy, Plantings listless and Miscellaneous issues subdued. Among active shares, Mettur Chemicals moved down from Rs. 12.95 to Rs. 12.30, Travancore Chemicals from Rs. 20.75 to Rs. 20.25, Madras Rubber from Rs. 21.50 to Rs. 21.25, F.A.C.T. from Rs. 8.10 to Rs. 8 and Andhra Cement from Rs. 9.90 to Rs. 9.80. The disappointing report of Travancore Rayon depressed the shares from Rs. 42.80 to Rs. 41.62, with S.I. Viscose also receding from Rs. 183.50 to Rs. 180. Buckingham lost two points to Rs. 282. A gain of 50 nP to Rs. 40.25 in E.I.D., in Sugars, was offset by a decline of 65 nP to Rs. 9.65 in India Sugar.

CAPITAL MARKET NEWS

NEW ISSUES

PARTICLE Boards India Ltd., is expected to enter the market next month to raise Rs. 24 lakhs in 16,000 equity shares of Rs. 100 each and 8,000 9.3 per cent tax free preference shares also of Rs. 100 each by way of public subscription for its proposed particle board project in Bombay. Out of its authorised capital of Rs. one crore, the Company is issuing at present Rs. 40 lakhs, of which Rs. 32 lakhs is equity and the balance preference. Of the equity shares, 7,500 will be allotted to the Company's foreign collaborators and 8,500 are to be taken up by the Directors and their friends.

Sponsored by Jolly Brothers (Private) Ltd., the well-known promoters of Anil Hardboards Ltd., the shares of which are very popular on the Bombay Stock Exchange, the Company is licensed to manufacture annually 6,000 tons of particle boards per shift. The factory is to be put up at Bhandup, suburban Bombay, and the construction of the buildings is to start shortly. The Company has an import licence of the value of Rs. 24.65 lakhs, mostly for plant and machinery, the shipments of which are expected to start arriving from the end of the current month. Production is scheduled to start in the first quarter of 1963. Messrs. G. Siempelkamp and Co. of West Germany are providing the necessary technical and financial collaboration for the project. The capital outlay on it is estimated at Rs. 60 lakhs and will be met from the proposed capital issue and a deferred payment loan of Rs. 20 lakhs.

RIGHTS ISSUES

The Directors of the **Tata Oil Mills Company Ltd.** propose to increase the share capital of the Company, subject to the Government's sanction, by the issue of rights ordinary shares of Rs. 25 each at a premium of Rs. 10 per share to the existing shareholders in the proportion of one new share for every two old shares held. They also propose additional debentures, subject to the sanction of the Controller of Capital Issues, of Rs. 50 lakhs, carrying 6.5 per cent interest, subject to tax, and repayable in 1969-74. The issued and paid-up capital of the Company is Rs. 99.96 lakhs, consisting of 29,888 4.5 per cent cumulative preference shares of Rs. 100 each and 2,80,299 ordinary shares of Rs. 25 each. With the proposed new issue, it will rise to Rs. 105.11 lakhs, and so will the share premium account from Rs. 14.93 lakhs to Rs. 28.95 lakhs. The existing debentures are worth Rs. 50 lakhs, carry 6 per cent interest and are redeemable in 1969-74. The proposed additional funds aggregate Rs. 99.05 lakhs and will be utilised towards financing the expansion schemes of the Company and reduce its borrowings, which, as at 31st March 1961, included secured loans of Rs. 295.16 lakhs as against Rs. 216.94 lakhs a year before.

* * * *

G. Claridge and Co. Ltd., Bombay, is to double its issued and paid-up capital to Rs. 16 lakhs by issuing 8,000 rights equity shares of Rs. 100 each at par to the existing shareholders in the ratio of one to one. The new issue is to finance the modernisation of the Company's existing plant and the proposed expansion in terms of larger industrial packaging as also making and printing charts for which the Directors are thinking of installing special machinery.

* * * *

FRESH ISSUES SANCTIONED

The Controller of Capital Issues has authorised four companies, including a public sector corporation, to raise fresh capital totalling Rs. 3.31 crores within a year. Given below are the details of the capital issues by three private sector companies:

The United Commercial Bank Ltd., Calcutta, has been allowed to issue further capital of Rs. 2 crores in two lakh shares of Rs. 100 each, to be issued for cash at a premium of Rs. 25 per share, the amount paid-up being Rs. 50 per share. The present paid-up capital of the Bank is Rs. 2 crores.

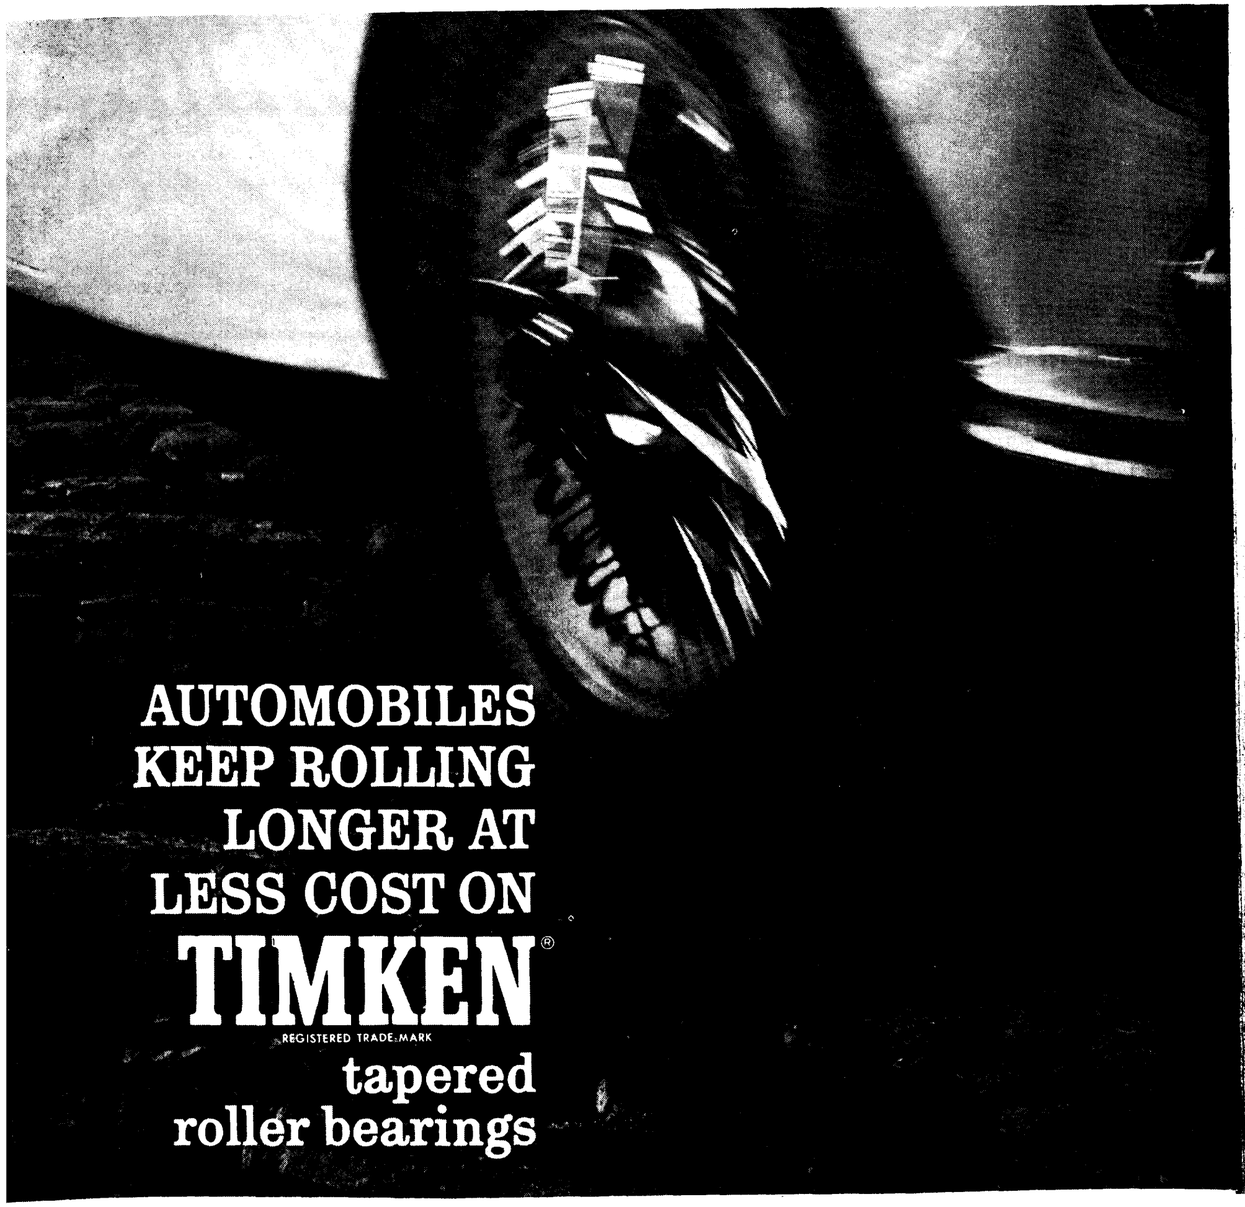
The National Insulated Cable Company of India Ltd., Calcutta, is granted the consent to issue 4,50,000 bonus shares of Rs. 10 each on capitalisation of reserves for Rs. 45 lakhs. The shares are to be offered in the ratio of one bonus share for every two shares held.

The Indian Standard Wagon Ltd., Calcutta, is authorised to issue 1,55,940 bonus shares of Rs. 25 each by capitalising reserves of Rs. 38.99 lakhs. The shares are to be offered to the existing shareholders in the ratio of one bonus share for every share held by them.

HINDUSTHAN MERCANTILE BANK

There has been a sizable improvement in the profit of the Hindusthan Mercantile Bank Limited (Manager: Mr. B. S. Mazumdar, Calcutta) for the year ended 31st December 1961, thanks to a small increase in advances in a refreshing contrast to a perceptible fall in the previous year. The rise is welcome, as it follows the preceding two disappointing years. Thus, after coming down in the previous year from Rs. 155.68 lakhs to Rs. 135.27 lakhs, advances have increased to Rs. 141.75 lakhs during the year under review. The income from interest and discount has gone up from Rs. 9.81 lakhs to Rs. 10.95 lakhs and that from commission, exchange and brokerage from Rs. 1.53 lakh to Rs. 1.64 lakh. The rise would have been more, but for the decline in investments from Rs. 68.10 lakhs to Rs. 63.13 lakhs. Deposits, too, have moved down from Rs. 189.12 lakhs to Rs. 183.83 lakhs. Borrowings from other banks are only Rs. one lakh. Interest paid is lower at Rs. 4.09 lakhs, as compared with Rs. 4.26 lakhs a year before. Other expenses, however, have been higher at Rs. 8.83 lakhs, as against Rs. 7.57 lakhs before. Staff expenses, too, have risen from Rs. 5.47 lakhs to Rs. 5.62 lakhs. Nevertheless, the profit, after depreciation, but before taxation, shows a rise of nearly Rs. one lakh to Rs. 1.68 lakh and has come close to the recent best of Rs. 1.80 lakh, earned in 1957. Notwithstanding this, the Directors have passed over the dividend again, because the bulk of the profit has been swallowed up by taxation. It will be recalled that, barring 1946, for which year the Bank paid a dividend of 4 per cent, the shareholders have had no return since the Bank's inception in 1944. The provision for taxation has been more than doubled from Rs. 50,000 to Rs. 108,000. Transfer to reserve fund has been increased from Rs. 20,000 to Rs. 35,000. These appropriations leave a carry forward of about Rs. 29,000, which compares favourably with Rs. 3,758 brought in.

Following the rise in advances, the credit ratio has expanded from 71.5 per cent to 77.1 per cent. The ratio of unencumbered investments to deposits has moved down from 35.6 per cent to 33.0 per cent and so also of cash to deposits from 19.1 per cent to 16.9 per cent, as cash balances have also slipped down from Rs. 36.16 lakhs to Rs. 31.09 lakhs. The Bank's paid-up capital has been maintained at the previous year's level of Rs. 50 lakhs. Its published reserves stand at Rs. 2.85 lakhs. The ratio of "owned funds" to deposits works out to as high a figure as 28.7 per cent, a little less than five times the accepted goal. During the year, the Bank closed down its branch at Bikaner, as it proved to be an uneconomic unit.



SINCE 1899 Wherever wheels and shafts turn, there is a fight against friction. Helping you win this battle are Timken tapered roller bearings. They practically eliminate friction. Not just in cars, but in trucks, farm equipment, plant machinery—in almost every kind of machine in the world. ■ Timken Company engineers have been working since 1899 in partnership with engineers the world over. Their object is to help design machines that run smoother, run longer, run with less maintenance and cost less. ■ It's the high quality of Timken bearings that delivers this kind of performance. They're precision manufactured of nickel-rich steel and case-hardened to make them resist wear and take shock loads. Quality control from start to finish assures uniform performance. Bring your bearing application problems to the men who proved the tapered roller bearing design. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

STEEL MANUFACTURE EXPORTS

WHILE it is heartening to hear from Sir John Brown, Chairman of Braithwaite and Company (India) Limited, that the Company, in co-operation with its London associates, Braithwaite and Company Engineers Ltd., had more than doubled its exports of pressed steel tank materials to South-East Asian markets last year, after making an encouraging start in the export of some of its products only in 1959, it is disturbing to hear from him that the prospects are uncertain, as further expansion in this field is dependent primarily on the availability of materials, a condition which is difficult to fulfil in the present circumstances. We are sure his concern over the supply position of materials is shared evenly by all the manufacturers of steel products in this country. The problem has become all the more acute, though naturally so, by the numerous development projects, consuming steel in our yet steel-scarce country, enjoying a high priority for the available supply. But Sir John does not despair. As a real entrepreneur, whose function it is to think of way-outs, he has ventured to suggest that some of these projects, especially those which do not have a high import-saving potential may be put back for a few months, so that sufficient steel may be available for export industries. He believes that, if steel-using industries are to be encouraged to go out and find markets for their products, they should be allowed to import as much steel as they need, provided they can show a reasonable certainty of a net gain in foreign exchange. In the circumstances, this seems to be the only alternative and the best incentive for promoting steel products.

It may be asked why this particular awareness about encouraging exports of steel manufactures. The reason, as Sir John points out, is that there undoubtedly exist markets in the neighbouring countries for these products, which will, in the course of time, turn out to be our natural markets. An even more important point made by the Chairman of Braithwaites is that, before devising incentive schemes for exports, the maximum effort should be devoted to creating conditions for the export of goods which can be exported today without too much loss and without incentives, other than relief from import and excise duties. For India is not the only country, as he rightly reminds us, faced with the problem of expanding its exports. It is common sense that, if one does not exploit the opportunities as they present themselves, one will miss the bus and may never get it again. This is particularly true of business opportunities, for someone is always waiting to displace another. If India fails to step in and establish itself in its natural markets abroad, its competitors would establish a firm hold and it would be a pretty difficult task to dislodge them later.

MANAGEMENT ACCOUNTING

A unique feature of the annual speech of the Chairman of *Hindustan Lever* is that it deals every year with a different aspect of the operation of the Company. Last year, the theme of the Chairman's speech was marketing, and the year before transport. This is in keeping with the tradition of the parent organisation, namely, Lever Brothers, United Kingdom. Although the observations of the Chairman are based on the experience of the Company and generally reflect the concept and practices followed in Hindustan Lever, they have a significance and appeal which transcend the limited circle of the Company's shareholders.

The theme of this year's speech of the Chairman, Mr. P. L. Tandon, is accounting and finance. It is difficult to think of a person better qualified to speak on the subject than Mr. Tandon, as he himself is an eminent Chartered Accountant. And it is an eloquent tribute to his talent as a writer of considerable felicity, of which his book *Punjabi Century* published last year bears ample evidence, that he was able to make such a drab subject as accounting so very inating.

"Management accounting is not a luxury; for a growing concern it is a necessity which should cost no more than a good accounting system," said Mr. Tandon emphasising the importance of management accounting. He defined it as "the provision, analysis, reporting and discussion of accounting information as a guide to management in the day-to-day running and future planning of the business as distinguished from the recording part of the accounting function for historical or statutory purposes." It is, in other words, "responsibility accounting," involving supply of all relevant information to different levels of management, which can take action or offer advice based on that information. Management accounting starts where the book-keeping duty of the accounts department ends and it, therefore, represents the next step in the accounting function. Mr. Tandon believes that management accounting is a *must* for any growing progressive concern, for, without it, the management will be deprived of basic financial data on which to make decisions, often involving the choice of one from many alternatives. He does not subscribe to the view that industry in India has not yet reached the stage where it can afford the luxury of management accounting. If it wants to introduce the latest plant and machinery and other techniques, it would be wrong, according to Mr. Tandon, not to get the best out of them by matching them with the latest ideas in accountancy. There is no merit, as he rightly emphasises, in going through the evolution in accounting techniques when it is possible to start where the best have reached. Keeping this in mind, Hindustan Lever, according to Mr. Tandon, has incorporated in its office the latest advances in the techniques and practices of accountancy.

But no system of accountancy, however modern it might be, can yield the best results, if the men who practice it are ill-equipped by knowledge and training to use it most effectively. A great deal of importance is, therefore, attached to the recruitment, training and promotion of accountants by Hindustan Lever. In addition to the observance of rigorous standards in selection of men, there is also a carefully planned development programme designed to give the young accountants experience, wherever possible, on the other sides of the organisation as well. Thus, they are given instruction and training not only in accountancy but also in general management subjects. Emphasising the quality of the personnel manning the accounting department, Mr. Tandon observes:

"We need men of quality in accounts; men who will feel active participants in our management and not just providers of a service. Professional skill is important but for our needs we look for more—for qualities of management, leadership and imagination. During their development, we expose them to the broadening influence of spells in marketing, branches and factories, so that they learn to feel part of a team. The factory accountant should feel that he is helping with the running of the operation, and one working on a project, the excitement of looking ahead. In fact, we want all our accountants to feel that they are sharing in the running and the progress of the Company."

The importance and care which Hindustan Lever devotes to its accounting staff is undoubtedly worthy of emulation by other concerns.

TRADE POLICY

The International Chamber of Commerce has taken a commendably pragmatic and far-sighted stand on the question of trade policies of developed and underdeveloped countries. In a statement on primary products and materials adopted by the Chamber, it has stressed the need for opening world markets for developing countries and has called for a complex of measures to cut across the conflict of interests between the developed and developing countries. Although the Chamber has not specified what these measures should be, it has suggested that the approach to the problem of stability and growth should be not only from the point of view of price stability but also from that of establishing highly export-conscious industries in the developing countries.

Emphasising the importance of a long-term approach to the external payments problem of primary producing countries, the Chamber has suggested that the rich, potential buyers and the developing countries should jointly evolve a solution that would help the developing countries to restore the equilibrium of their economies. It concedes that this suggestion is far from simple in the light of recent experience, but it should not be difficult, in its view, to reconcile the interests of developing countries with those of the industrialised countries.

The Chamber certainly has the interest of the developing countries at heart when it states that trade and fiscal policies in the advanced countries should promote, rather than retard, the progressive diversification of economies of the developing countries. Its reading of the current and prospective character of the world economy, which ultimately conditions the trade and aid policies, is also realistic. According to it, in the years, probably decades, to come, world economy will be characterised by the existence side by side of developed economies and developing economies, with different degrees of profitability, no longer linked by the simple fact that their productions are complementary but by a commonsense of responsibility on the part of the advanced countries to backward countries and by the desire of the latter to industrialise faster. This being so, any improvement in the conditions of operation of international commodity trade must, in the Chamber's view, be based on ever closer and more trustful co-operation between Governments and inter-governmental bodies, on the one hand, and private business circles at the different levels of production, distribution, and consumption, on the other. The Chamber has, however, wisely added that this co-operation should be based on the principle of commercial freedom which alone offers the best prospects for ensuring, in the long run, sustained expansion of economic activity. Another advice given by the Chamber is that there should be co-operation between the donors and receivers of aid, in order to reduce the cost and increase the efficiency of the measures which are bound to be of long duration.

The upshot of this statement of the Chamber, in terms of practical policy, is that developed countries should be prepared to open up their markets for the products of underdeveloped countries, instead of trying to restrict their entry on such dubious grounds as disruption of domestic markets by "low-cost" imports. Only by doing so can they help the developing countries to diversify their economies and reduce their dependence on the exports of a limited number of agricultural products and by exporting more could push through their development plans with less outside help. It is obvious that, to the extent they can stand on their own feet, the need for aid from the developed countries will be reduced.

ROURKELA STEEL STRIKE

To the Rourkela steel plant, misfortunes have been coming in battalions. But the latest one, namely, a strike on the part of workers which has forced the management to declare a lockout, with effect from the 3rd inst., is likely to result in more production losses than any of the previous ills. The daily loss of production, as a result of the Rs. 200-crore steel plant remaining idle, is estimated at Rs. 5 lakhs. Apart from this direct loss, there are also indirect losses arising out of the dislocation of operations of units depending on Rourkela steel such as the Chittaranjan Locomotive Works to which steel plates are supplied by the Rourkela plant.

Conflicting statements have been made by management and workers regarding the real cause of the trouble. The management claims that workers went on strike without giving any notice whatsoever and that the lockout was consequently forced on it. Workers, however, contend that they did not refuse to work, as had been alleged by the management, but were asked to quit the job. This assertion, however, does not sound convincing. That the workers are not blameless is also evident from their admission that some among them had refused to work at certain posts. The reason given for this is that these posts, which are rated higher than their normal jobs, were held by them for nearly three years and still the management did not confirm them in these posts, thus depriving them of the benefits of confirmation. To this contention, the management's answer is that, as a matter of policy, whenever workers are asked to work in posts of higher responsibility than the ones usually held by them, they are paid extra allowance and that confirmation in these posts cannot be demanded as a matter of right. It is, however, not clear as to why temporary adjustments of this nature should have been continued for so long. Red-tape seems to be the only convincing answer. Anyway, it appears that it was the dispute arising out of this issue that was really responsible for the present unpleasant situation in Rourkela. In normal course, it should not be difficult to resolve such a dispute. But the absence of a recognised union would appear to have made a negotiated settlement difficult. Although there are five registered unions, none has been recognised. The question of recognition is said to be still under consideration.

Both the management and workers should share the blame for the causes that precipitated a strike and lockout. The dispute appears to be a simple one. With a little more tact and understanding, it should have been possible for the management to find an acceptable solution. Apparently, it was handicapped by some rigid rules regarding confirmation and promotion. What prevented a suitable amendment of these rules and procedures? Obviously, even an autonomous corporation like the Hindustan Steel is suffering from the same bureaucratic ills of which a Government department is a chronic victim. Nevertheless, the workers were certainly not justified in adopting the course they did, for it indicates that they consider their immediate gain more important than the larger interests of the country as a whole. Industrial workers and others belonging to the working class are the greatest champions of nationalisation and advocates of extension of the public sector. Workers engaged in the public sector undertakings must, therefore, be prepared to put up with the idiosyncrasies of a Government department. They cannot surely hope to have the pleasure of working in a public sector project as well as the privileges which they are normally supposed to enjoy in the profit-making private sector. In these circumstances, their resort to such nefarious methods as go-slow tactics, resulting in lower production, and ultimately to an illegal strike, is not only deplorable but also quite unbecoming.

Now that the lockout has been lifted, it is the duty of all concerned to see that normalcy is restored and the plant is fully commissioned. The management has promised that, barring a few "bad characters," it will take back all workers who had absented from work, provided they submitted a simple letter of regret, and that their continuity of service would be ensured. It has also given an assurance that there would be no victimisation and that the letter of regret would not be used as a ground for taking disciplinary action against them in future. Further, it has promised to consider their grievances. In response to this fair and sporting offer, all but a handful of workers

Why CIMMCO Sakamoto

BECAUSE

★ AUTOMATIC LOOM IS A MUST FOR QUALITY TEXTILES
★ 62% OF COUNTRY'S AUTOLOOMS ARE SAKAMOTO TYPE
★ 25% OF COUNTRY'S AUTOLOOMS ARE OTHER JAP. TYPE

ALSO

★ THESE ARE STURDY IN DESIGN
★ SIMPLE TO SET-UP AND OPERATE
★ TRIED IN COUNTRIES THE WORLD OVER

AND

TECHNICAL COLLABORATION **COMBINES A LOOM BUILDING EXPERIENCE** OF **18** YEARS AT CIMMCO WITH OVER **34** YEARS IN JAPAN.

Specially developed technique of boring frames on assembly ensures of perfect allignment. Improved temple cutter, end cutter and latest mechanised warp stop with efficient brake ensure faultless weaving continuously with minimum efforts.

Manufactured at Birlanagar, Gwalior

AIRCON
Evaporative Climate Conditioners
FOR YOUR INDUSTRY

The initial cost of an AIRCON Evaporative Climate Conditioner is 1/3rd to 1/10th that of an equivalent refrigerant air-conditioner! And comparative running costs? Even less—1/6th the costs of a refrigerant air-conditioner!

And that's not the end of it: hundreds of industries have found that *productivity of workers increases substantially* with AIRCON climate conditioning. So much so that AIRCON installations have paid for themselves within a year!

It's AIRCON for *your* industry! No renovated construction needed, no impractical sealing of rooms needed. Please write to us for more information.

Mark XII 'Air Marshal' is specially designed for industrial sheds, big establishments, canteens and mines. All parts are triply protected against rust. 4-way, 180° directional control. Guaranteed for one year.

PROTECT THE CONSUMER

THE MUDALIAR REPORT—THE REWARD FOR EXPORTS

By Prof. C. N. Vakil

THE Government of India adopted the policy of discriminating protection in 1922. It was realised after considerable agitation that the infant industries of the country could not be developed, unless they received protection. The principle was accepted that selected industries, if they fulfilled certain conditions, could receive protection after due inquiry, mainly in the form of increased tariffs on corresponding imports. This meant that the prices of the imported articles would go up, and such articles would not ordinarily be able to compete against local goods, which by hypothesis it was not possible to produce at a cheaper rate. In other words, the consumer was expected to pay in the form of higher price for articles which were to be manufactured in the country. It was realised that the consumer should not be asked to undergo this sacrifice for all time, and the industry concerned should be able to stand on its own feet in course of time. With this object in view, the protected industry had to go before the Tariff Board at certain intervals, when its progress was reviewed, and the need for continuing protection at the former or at a reduced level was reconsidered. The intention in adopting this method was to eliminate the protection altogether in course of time. The sacrifice of the consumer during the period of protection was accepted because it had certain national advantages. The national wealth of the country increased, more employment was created and an impetus was given to the establishment of modern industries. If the Tariff Commission were to make an estimate of the burden suffered by the consumer all these years for the development of industries under the protective system, it would be an interesting and useful record of the sacrifices of the silent consumer, who is not organised to make himself felt.

Rigid Protection

In recent years, we have been having an entirely different situation. We have embarked on a policy of rapid industrialisation as a part of the planning process. The protection to our growing industries, however, is not in the form of tariffs, with the result that the work of the Tariff Commission in this connection seems to have been considerably reduced. The Tariff Commission works more as a Price Commission determining the prices at which certain controlled commodities should be sold. This is so because the Government has adopted a policy of quantitative import restrictions to meet the continuing foreign exchange crisis. There is a rigid licensing system which makes it possible to import only approved quantities of certain articles. Whereas under a system of tariff protection, the prospect of the competition of the foreign product exists, there is no fear now of such competition.

Under the former system, the foreign manufacturer can compete in the Indian market, even after paying the tariff duty, and, if the local manufacturer is not able to produce quality goods at the protected price, he is likely to suffer. In other words, under such a system there is an incentive to do quality work in order to remain in business so far as the Indian manufacturer is concerned. Such an incentive has now disappeared, because the foreign product is now practically shut off, as only limited quantities of certain goods to fill the gap in local requirements are allowed to enter the country. This gives all the advantages of rigid protection to the Indian manufacturer, as he finds himself free to sell his product in the closed market in the country, without the fear of any competition. Under the system of planning, the local production is adjusted to demand, and the consumer finds that he has no alternative but to buy the product that is manufactured in the country, irrespective of quality and at a price, which he knows is definitely higher than that of corresponding goods made in other countries. The present system of rigid protection by quantitative import restrictions thus makes the consumer pay a much higher price for his requirements without the satisfaction of receiving quality goods. Whereas the organised industrialist is able to take advantage of the new system and exploit the policy of the Government to bring about rapid industrialisation, little attention is paid to the plight of the consumer who is neither organised nor vocal.

Effects on Export Trade

The situation that has been thus created is such that, in spite of the imperative necessity to develop our export markets to meet the foreign exchange requirements of the country, it is found that there is no incentive to enter that field. The Mudaliar Committee describes the situation in the following words:

> "The domestic market, ready at hand, offers more attractive, quick and easy returns. The incentives to efficiency become relatively weak; costs tend to go up, the quality goes down."

On the efforts made in recent years for export promotion, to notice the observations of the Mudaliar Committee are interesting. "The current arrangements," says the Committee, "are no more than mere 'promises' to export. Where the country's future is mortgaged, any casual acceptance of illusory export prospects at their face value is likely to lead to difficulties." These frank observations by a Committee dominated by business interests are revealing.

Rewards for Exports

It is easy to agree with the suggestion of the Mudaliar Committee that a suitable export climate should be created, that this requires willing and enthusiastic co-operation of every sector of the economy, that the State Governments will have to carry the business community with them in this connection, that the promotion of our trade depends upon the merchants and manufacturers and so on. It is, however, not equally easy to agree with the Mudaliar Committee when it lays down a principle for the acceptance of Government on which its constructive recommendations have been based. The principle is enunciated in the following words:

> "The mercantile community cannot be expected to be guided by altruistic or patriotic motives and will expect to receive for its effort in the export market *a return which stands in a reasonable relation with the profits on domestic sales. It would be the Government's responsibility to compensate the trade for its export effort* through selective concessions, fiscal reliefs and other incentives to make the export business worthwhile over the long haul."

The Mudaliar Committee has admitted that the manufacturer is able to make easy profits in the domestic market under the present conditions. It is also admitted that efficiency and quality are at a discount. In view of this admission, it would have been logical for the Committee first to emphasise the need for quality and efficiency on the part of the manufacturer with the maintenance of a reasonable level of prices for the domestic consumer, for whose continuing exploitation the Committee has little sympathy. The implication that the Government should compensate the trade in its export effort in such manner, that the trade should get rewards which stand in a reasonable relation to what it gets in the domestic market, is equal to asking the Government to legalise the existing injustice in the domestic market and to perpetuate the same in the interests of the export trade. Even as the consumer pays for the rigid protection of the Indian manufacturer, it is the consumer, in his capacity as the taxpayer, who is asked to pay more in order that the exporter may be able to receive similar rewards. In other words, the great need of the country for foreign exchange should be allowed to be exploited by the exporter at the cost of the taxpayer. The profits in domestic sales cannot be, on the Committee's own admission, the suitable criterion for calculating the rewards of the exporter, as these are obviously inflated. The exporter should have reasonable profits, but these should not be based on nor should they have relation to the 'unreasonably' high profits that are now in vogue in the domestic market.

It is obvious that the various things which the Government is asked to do will have to be financed from the taxpayer's money. Without going into details, even a brief enumeration of the various steps which the Mudaliar Committee has suggested for the development of exports will indicate the nature of the effort, including cost, that is involved. These are:

(1) revitalisation of administrative machinery, including the strengthening of the staff of the Chief Controller of Imports and Exports, of Indian Trade Missions abroad and so on; (2) increased allocation of raw materials for industry; (3) creation of an Import-Export Stabilisation Fund, with an Export Stabilisation Board to administer it; (4) generous income-tax relief of three types; (5) enlargement of the scope of export promotion by making it easy for the exporter to import without the present restrictions; (6) freight concessions; (7) specific assistance to selected commodities; (8) drawback of import and excise duties; (9) remission of sales tax; (10) help to Indian trade for participation in international fairs; (11) liaison with Indian merchants abroad; (12) Export Risk Insurance and so on.

The Burden of Export Promotion

Whereas the Mudaliar Committee should be congratulated for drawing attention to the need for a countrywide effort for export promotion and for making a variety of suggestions to implement the same, it is unfortunate that such a high-powered committee, with such an able and experienced person as its Chairman, should have failed to see that the cost of the arrangements and incentives that it has proposed would be an undeserved burden on the same unorganised class of the ordinary consumer and taxpayer, who would be called upon to compensate the exporter to the extent of the present profits enjoyed by the manufacturer in the domestic market, under conditions of rigid protection, without any incentive to quality, efficiency or reasonable price. The Mudaliar Committee has done well in referring to the attitude of the State Governments in connection with export promotion and observe that "the nation cannot afford to think and function compartmentally." In the same breath, the Mudaliar Committee should have realised that, in pursuance of a desirable policy, there should be an equitable sharing of the burden of carrying out the same. At a time when the goal is to remove inequality, suggestions which involve the creation of new inequalities cannot be accepted. The export business must be profitable in a reasonable sense of the word, but should not lead to the exploitation of the ordinary citizen in the manner the Committee has suggested.

The fact that some manufacturers or importers export certain commodities at a loss of about 30 per cent in order to earn the entitlement of an import licence for goods in which they are interested is well known. The Government will do well to ascertain the extent of this practice, because it is not likely to help in export promotion; it will merely earn a bad name for Indian products in foreign markets. In any case, this shows the extent of the margin in the local market, because the loss in exports is made good in the domestic market with a comfortable profit in addition. The Committee should have considered effective methods by which such undeserved profits of the industrialist are diverted into an Export Stabilisation Fund. Compulsory exports are not possible; but compulsory diversion of unearned gains by industry because of Government policy is both desirable and possible; and such resources which are now used by individuals in their own interests for exports at a loss, can be turned into an organised national pool to subsidise and encourage exports, in a manner by which Indian goods may have a good name in the foreign market. One of the objects of such policy and the new measures should be to see that the consumer is not asked to pay more than necessary either directly or indirectly.

A TIMID BUDGET

EXPANSIONISM AT A DISCOUNT

(From Our Own Correspondent)

LONDON, 13*th April*

THE general impression about the 1962 Budget is that it is one of No Change. But this is to underestimate it. It is much more than that—it is an anti-expansionist Budget and one which reflects little hope of substantial future improvement in the economy, in spite of the use of many cheerful words. It depresses where it is meant to exhilarate.

LONDON LETTER

By orthodox standards, the year 1961-62 was financially successful. The Budget revenue at £6,645 million was £137 million more than the original estimate. Ordinary expenditure at £6,235 million was £233 million above the original estimate. Nevertheless, since a substantial surplus was planned, the outturn at a surplus of £410 million, which is within £100 million of the estimate, was very satisfactory.

But the Budget nowadays copes with what is called "below-the-line" spending, that is, development spending on borrowed money which naturally affects the *Nation's* financial picture even though it is outside the strict interpretation of the *Government's* financial picture. This below-the-line spending was £620 million, so that there was a deficit in cash term of £210 million, whereas Mr. Lloyd had originally estimated only about £70 million. So the overall deficit has gone up by £140 million.

Finally, since the Government borrowed outside the market £250 million more than it needed (this includes National Savings), it was able to use this amount to reduce Treasury bills and it had no need to appear in the Gilt-edged market.

As regards the future, a great many small exercises in tidying up were arranged but the only items of significance to the public at large were that old people would be allowed to keep more of their income before being taxed and that householders owning their own houses would no longer be taxed on a notional estimate of the income value of the property.

So far as general taxation is concerned, the Chancellor made some reductions in the Purchase Tax, although, at the same time, by some increases and by some widening of the scope to include sweets, confectionery and soft drinks, he made sure he would not lose any income. If children had a vote, the Government would be out of office next year on the strength of this Budget!

It will be recalled that various surcharges were imposed last July in the economic crisis and the Chancellor has now spent some time in taking the surcharge off with one hand and putting it back with the other by declaring a new rate of tax including the original surcharge! This is supposed to be tidy although he could have got his results simply by incorporating the surcharge in the final tax.

A Psychological Tax

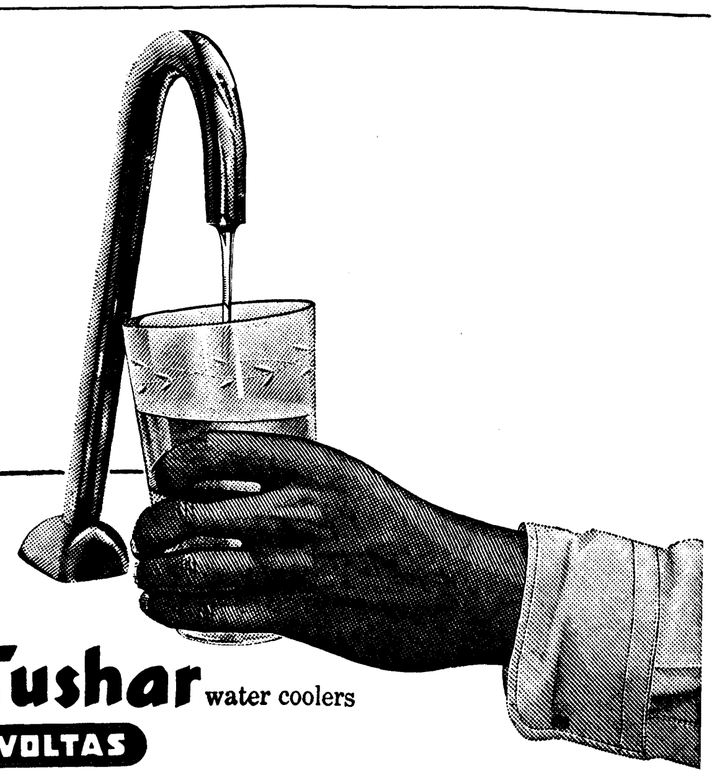
For a long time, the Government have been pressed by the Opposition to do something about business expenses which are allowed for tax and speculative capital gains. On the first one, the Chancellor is still investigating and, on the second, he has now made the first step towards a capital gains tax. The effect of this is that, if land and property on it (but not one's own personal house) has been disposed of within three years, the gain is taxable and, in the case of other property, it is taxable if sold within six months. This "other property" embraces more or less everything except personal effects and movable objects like pictures. This tax does not please even the Government's own supporters, although the Chancellor says there will be no income from it in the current financial year and that he has no idea what income he will get from it in future. It is what might be called a psychological tax, but, in its present form, it is too psychological to impress the Opposition.

In sum, the Chancellor is planning an outturn for the current financial year very much the same as the last. He hopes to have an ordinary Budget surplus of £433 million, though this will be offset by "below-the-line" expenditure of about £500 million, so that, again, he is planning for an overall deficit, including capital expenditure of around £70 million, which he reckons is "right from the general economic point of view."

The Chancellor claims that his proposals as a whole are intended to consolidate a firm base for sound expansion, but everything depends on the interpretation of those words "sound expansion." Last year, the Chancellor took powers in his Budget for what he called "regulators," that is, taxes which he could apply at his discretion in between Budgets to control demand. One of these was a proposed pay-roll tax. This was never imposed and the Chancellor has dropped it in the present Budget; he is only left with his powers to vary revenue duties by 10 per cent. By consolidating his increase of last July, he has retained the right to reimpose a further surcharge and this he is taking powers to do in this year's Budget.

Rise in Living Standard

But now we come to the crucial issue which is that, though the Chancellor is satisfied that conditions for world trade look favourable and that there should be a substantial growth of demand for the type of goods we export, he is obviously looking over his shoulder the whole time for signs of the spectre of inflation. Now he would not be doing this, if the economy was likely to move ahead faster in 1962 than the supposed speed of the spectre. The speed at which the economy will move is to be the subject of special study by the National Economic Development Council; he thinks the latter ought to decide on a reasonable figure and the economy should be planned round that. Now the Western European countries in Paris have settled their target for the decade ahead at a 4 per cent per annum increase, but Mr. Lloyd's Budget, with his estimates for expected revenue and his refusal to diminish any taxes, is clearly planned on the rate of growth of only about half the Paris estimates. In fact, he is not even as bold as the 2½ per cent per annum wage target which he thought reasonable. Although he said that the standard of living next year might be 4 per cent higher than this year in real terms, this and other phrases he used were so vague in their timing that one cannot tell whether he is talking of an increase spread over one year or two years or some period in between. So his improvement in the standard of living seems to be evaluated really in terms of 2 per cent per annum. As the *Economist* has commented, if account is to be taken of the fall in production and national income at the outset of the lifetime of the present Parliament, the Government will only be able to claim credit for about 1 per cent per annum rise in living standard during their period of office!



KIL KOTAGIRI TEA AND COFFEE ESTATES COMPANY LTD.

ANNUAL STATEMENT BY CHAIRMAN, MR. J. N. A. HOBBS

CO-ORDINATED TAX POLICY FOR TEA INDUSTRY URGED

SECRETARIAT DEPARTMENT 25 APR 1962 PUBLIC DEPARTMENT

THE tea industry has been repeatedly urging the Government to adopt some system of co-ordination of tax policies between the Central and State Governments in view of the multiplicity of the taxes now levied on the industry, and it is to be hoped that some workable arrangement will be reached before long. Thus said Mr. J. N. A. Hobbs, Chairman of the Kil Kotagiri Tea and Coffee Estates Company Limited, at the Fourteenth Annual General Meeting of the Company, held at Coimbatore on Thursday, 5th April 1962. "In particular," Mr. Hobbs stated, "we would welcome a merging of the excise duty and sales tax, as is done in the case of tobacco, sugar and other items, for this would relieve the Governments of the extra cost of collecting separate taxes, and of much tedious work involved in paying such taxes." At the same time, he added, the abolition of the sales tax would greatly facilitate active trading.

The following is the full text of Mr. Hobbs' speech:

"I have much pleasure in welcoming you to the fourteenth annual general meeting of your Company.

"The Directors' report and the audited accounts for the year under review have been in your hands for the statutory period and, with your permission, I propose to take them as read. You will have noted that we have presented the annual accounts in revised form this year, which I hope you will consider an improvement on the form used in previous years. If you have any queries on the accounts I shall be glad to answer them later.

Profit

"Due to the small coffee crop harvested, and the lower prices realised on the sale of our teas, the profit for the year, before provision for taxation, amounts to Rs. 5,88,691 compared to Rs. 11,75,668 in the previous year, which was, of course, a record year for the Company. Despite this considerable reduction in profits your Board is recommending the payment of a dividend of 25 per cent, subject to tax, on the ordinary share capital, so as to maintain the same rate of dividend as last year.

"I enclosed with this year's annual report a Chairman's statement reviewing the Company's working during the year just passed, and briefly reporting on the Company's future prospects. Under the circumstances my address can be made much shorter than usual. I would, however, be failing in my duties as your Chairman, if I did not further comment upon the various problems which now face the plantation industry.

"The year 1961 saw record tea and coffee crops in India. The total Indian tea crop amounted to 768.4 million lbs. as compared with 700 million lbs. during 1960. Practically all the tea-producing countries have achieved large increases in crop, and during 1961 the three major exporting countries—India, Pakistan and Ceylon—alone increased output by over 110 million lbs. Early last year, the Food and Agricultural Organisation of the United Nations made a study of production and consumption trends in tea, and have reported that they expect world production to exceed consumption by some 100 million lbs. by 1965. However, we can take some encouragement from the fact that the record 1961 crops appear to have been fully absorbed—even if prices did decline somewhat towards the end of the year. Now, however, the market has improved considerably and it may well be that the F.A.O. experts have underestimated the world's consuming capacity. Let us hope so, at any rate.

Third Plan Prospects

"The third Five-year Plan came into operation during 1961, and the tea industry has been asked to increase production to 900 million lbs. by the end of the Plan period. Whether or not this target will be achieved remains to be seen, as it is not easy to obtain an increase of nearly 25 per cent in production at a time when there is not very much encouragement for new planting. However, this company has taken substantial steps in the planting of tea, and I have no doubt that we shall play our full share in contribution to increased production. In any case, I am not unduly perturbed about the prospects for this company as we make quality teas which should always find interested buyers at comparatively good prices. Nevertheless, from the general point of view of the industry, I am somewhat concerned about the finding of markets for the planned output. Indian teas are already facing very severe competition in world markets and internal consumption is increasing at only about 20 million lbs. per year. It is essential, therefore, that great efforts must be made to increase overseas propaganda for the sale of Indian teas. It is gratifying to see that active steps are at last being taken to promote tea sales in the U.K. by means of propaganda, tea vans, etc. Let us hope that such propaganda will be extended to other European countries, as this will be particularly important in case the U.K. joins the European Common Market.

"It may be that we, in the tea industry, have been unduly apprehensive about the results of such a development. Britain consumes 12 times as much tea as all the other E.C.M. countries combined, and it is not likely that Britain will allow any heavy duties on teas which she imports from the Commonwealth countries. At the same time, the imports into other Continental countries are so relatively small that it appears that a reduction in duties in these countries would have little effect on their revenues. It has been made clear that Britain realises her responsibilities to such countries as India, and can, I am sure, be relied upon not to abandon their interests. I therefore, feel that even if Britain joins the Common Market we will in fact benefit, as it may well lead to substantial reduction in duties in other European countries and thus pave the way for increased consumption. At the present time, tea costs 15s. to 20s. and more per lb. in most European countries, and it is hardly surprising that at such prices consumption should be relatively low.

"Speaking of the high price of teas in Europe, we must admit that Indian teas are by no means cheap, and this factor may have had something to do with the falling off of India's share of imports into the main consuming countries during the past few years. One of the reasons for Indian tea being so expensive is the heavy incidence of taxes and duties, and of the export duty and excise duty in particular. I would, therefore, appeal to the Government to re-examine the possibility of abolishing the export duty and affording further reliefs to the industry to help it face the severe competition which is now being met in world markets. Failing an abolition of the export duty, at least tea should be put on a par with all other excisable commodities so as to permit a drawback of the excise duty on teas actually exported.

Excise Duty—Sales Tax Merger

"The tea industry has been repeatedly urging the Government of India to adopt some system of co-ordination of tax policies between the Central and State Governments in view of the multiplicity of the taxes now levied on the industry, and I can only hope that some workable arrangement will be reached before long. In particular, we would welcome a merging of the excise duty and sales tax—as is done in the case of tobacco, sugar and other items—as this would relieve the Governments of the extra cost of collecting separate taxes, and us of much tedious work involved in paying such taxes: at the same time, the abolition of the sales tax would greatly facilitate active trading. Unfortunately, while the Central Government seems to favour the proposal, certain State Government hesitate to give their approval due to their losing control of some of their sources of revenue.

Outlook for Coffee

"The coffee industry is also passing through a very difficult period due to world overproduction. India's crop alone has increased from 42,180 tonnes in 1956-57 to 67,565 tonnes in 1960-61, and there is every possibility that within the next five years India may produce 80,000 tonnes which the Chairman, Coffee Board, states will result in an export surplus of 45,000 tonnes after making allowance for increases in internal consumption. The Coffee Board experienced difficulty in disposing of approximately one-half of the 1960-61 crop in the export market, and a large proportion of the crop offered for sale abroad was sold at less than the cost of production. The result of this is that the return to the grower for 1960-61 crop is not likely to be much above Rs. 2.00 per point compared to Rs. 2.81 per point five years ago.

"In my address last year, I appealed for a reorganisation of the Coffee Marketing System which was designed to handle about one-third the crop that is now being produced, and I am very glad to say that the Government and the Coffee Board have now accepted some of the proposals put forward from various quarters. Since the beginning of the year, sales for export are being made by open auction instead of by sealed tenders; this seems to have resulted in a noticeable increase in the interest taken by established exporters, and, moreover, a number of new potential buyers, including several foreign coffee trading houses, have appeared on the scene. This is a very healthy sign, and the progress of the new system will be watched with considerable interest. The fact is that the export prices this season have been much better than last year, but it must not be overlooked that the 1961-62 crop will be smaller than last year's, and less stocks available for export could naturally be expected to lead to increased demand and competition.

"The Coffee Board has announced plans to start a cup-tasting unit at Bangalore, and the services of a foreign cup-taster are being secured. It is hoped that this will result in the best coffees being offered for sale abroad, as I consider that the European market can still absorb a sizable quantity of good quality Indian coffee.

Plea for Relief

"I am afraid that I can see no real improvement in the world coffee situation for some years to come, and under the circumstances I feel that the Government should offer some help and encouragement to the industry. I would strongly recommend the abolition of the excise duty to maintain a fair return to the grower, until prices in the world market improve. If this is not possible, I would suggest a direct subsidy on exports and a revision of the excise duty on an *ad valorem* basis.

"In the Chairman's statement enclosed with the annual report, I stated that our 1961-62 coffee crop was estimated at 104 tonnes and our 1961-62 tea crop at 4,55,000 kilograms. I am now pleased to advise you that we have already harvested 77½ tonnes arabica and 30 tonnes robusta. We hope to pick a further 4 tonnes robusta so that our total coffee crop will now be about 111½ tonnes, made up of 77½ tonnes arabica and 34 tonnes robusta. The tea crop is also coming in well, and, at the end of March, we had harvested 25,750 kg. in excess of our estimate for that period; given favourable weather conditions it now seems likely that we will exceed our original estimate for the whole year. Sale prices have also been satisfactory and the average price realised on tea sales to end February amounts to Rs. 5.90 per kg. compared to Rs. 5.45 per kg. for the same period last year.

Current Prospects

"The prospects for the 1962-63 coffee crop are, I regret to say, very disappointing. We were hoping that this crop would be in the region of 95 tonnes, but due to heavy rain in January/February and March, the trees did not get an opportunity to 'winter,' so that we now estimate this crop at 70 tonnes, made up of 50 tonnes robusta and 20 tonnes arabica.

"I would now like to thank on your behalf the general manager, his assistants, the staff and labour for their work during the year. I would also like to thank my fellow Directors for their help and guidance, and finally the Managing Agents, Messrs. Peirce, Leslie & Co., Ltd., for their services."

Note:—*This does not purport to be a report of the proceedings at the annual general meeting.*

FOREIGN ASSISTANCE FOR INDIA

FIRM AUTHORISATIONS SINCE 1951 AGGREGATE OVER RS. 2,143 CRORES

THE deliberations of the forthcoming meeting of the Aid India Consortium, due to be held at Washington sometime next month, and the decisions taken thereat are being awaited with great anxiety and utmost interest. The anxiety is because of the fact that, with sterling balances standing at no more than Rs. 125 crores and with the limited scope for earning more foreign exchange through exports, the country is faced with the grim problem of paying for import requirements to sustain and develop the economy. When the Consortium postponed its decision on further assistance for the third Plan at its previous meeting (held towards the close of January last), high hopes were expressed that, at the ensuing meeting, it would not only extend additional assistance (about $375 million) beyond that already committed ($2,225 million) for the first two years of the Plan but also vote the aid required (about $4,137 million) for the remaining three years as well. But the latest advices from abroad are not very encouraging. It is reported that, lately, there has been an increasing tendency among the West European countries to regard the membership of the Consortium as something too rigid and binding upon them. Indeed, a report suggests that many of these countries have almost accepted the idea, canvassed by Mr. George Ball, U.S. Under-Secretary of State, of channelling all Western development aid through the O.E.C.D. "Mr. Ball's new proposals," to quote a news despatch, "have come to them as an excellent way of transferring their loyalties to the Development Assistance Committee of the O.E.C.D." It is, however, unnecessary to draw pessimistic inferences from these reports, some of which appear to have been inspired by interests with perennial prejudices against India. The tentative promises of help to this country have been based not on any fleeting impressions but on solid appreciation of India's need for rapid economic progress and its pivotal position in Asia and the Far East. Nor has there been any deterioration in the economic conditions in the West to warrant the type of forecasts referred to above. On the contrary, all the nations that have come forward to assist India in implementing its third Plan are doing pretty well.

Be that as it may, the publication of the fifth annual report on *External Assistance* by the Finance Ministry of the Government of India is timely, in that it gives one a consolidated picture of the aid promised and received and provides a fitting background to the forthcoming talks at Washington. According to this comprehensive statistical brochure, the total assistance actually received since 1951 upto the end of December 1961 comes to over Rs. 2,143 crores. This assistance has been made available by the Governments of various countries, international agencies and other organisations, as will be seen from the statement at the bottom of this page. The amount of Rs. 2,143 crores is, however, less than Rs. 2,728 crores mentioned in the fourth annual report which covered authorisations upto the end of December 1960 only. But it is surprising that no explanation for this huge difference of Rs. 585 crores is given in the latest report.

The statement of external aid at a glance excludes (*a*) assistance received in the form of suppliers' credit from Japan, France and Rumania, (*b*) Rockefeller Foundation grants, (*c*) gift shipments from private voluntary agencies in the U.S., (*d*) assistance under Titles I and III of P.L. 480, (*e*) aid from the Netherlands being mostly in the nature of technical assistance, and (*f*) Swiss aid in the form of logging equipment.

Of the foreign aid authorisations aggregating Rs. 2,143.49 crores (including the offers for the third Plan upto the end of December 1961), Rs. 377.68 crores were made in the first Plan period and Rs. 1,411.91 crores in the second Plan period. The aid authorisations since the beginning of the third Plan and upto the close of 1961 amount to Rs. 353.90 crores. Just as there was a carry forward (of more than Rs. 181 crores) of commitments and aid from the first to the second Plan, so also there was a similar, but larger, carry forward of nearly Rs. 700 crores from the second to the third Plan, because the amount of aid actually utilised during the second Plan period was only Rs. 893 crores, as against the sum of Rs. 1,593 crores available for utilisation. The wide gap between promises and fulfilment is attributable partly to the continued delay in the release of funds by the donor countries and partly to the failure of the Government of India and other agencies to implement in an energetic manner the specific projects for which assistance was obtained.

U.S. Aid

Commencing with the wheat loan in June 1951, the U.S. Government has so far allocated to India aid in various forms aggregating Rs. 1,805.33 crores ($3,792 million). Nearly two-thirds of this amount, Rs. 1,144.88 crores to be precise, are accounted for by P.L. 480 and 665 assistance (sale of agricultural commodities against rupee payments), out of which a sum of Rs. 924.35 crores has been given back to the Central Government as loans and grants. Of the balance of Rs. 660.45 crores, the share of loans alone is Rs. 510.78 crores, grants accounting for Rs. 132.18 crores and technical assistance (including support costs) for Rs. 17.49 crores. Approximately 58 per cent of loans, or Rs. 296.22 crores, are repayable in rupees. Besides these, India has also received relief shipments of agricultural commodities under Titles II and III of P.L. 480, third country currency assistance, assistance from private voluntary agencies and grants from philanthropic foundations.

The U.S. aid has supported a wide range of development programmes in close co-operation with the Five-year Plans. The aid received for the first Plan was Rs. 117.31 crores as loans and Rs. 86.16 crores as grants. The allocation for the second Plan was substantially higher at Rs. 327.67 crores by way of loans and Rs. 44.11 crores by way of grants. For the first year of the third Plan, the U.S. Government has allocated (up to the end of December 1961) Rs. 65.80 crores as loans and Rs. 1.91 crore as grants.

Russian Aid

India's development projects have been receiving assistance from the U.S.S.R. since the beginning of 1955. The total authorisations so far amount to Rs. 384.93 crores. Almost the whole of this amount, Rs. 383.78 crores to be precise, is by way of credits which are fully repayable. Of the total loans, Rs. 145.67 crores are for the second Plan and Rs. 238.11 crores for projects included in the third Plan. A small sum of Rs. 1.15 crore has been received by way of grants to finance imports of materials and equipment for the mechanical farm at Suratgarh (Rs. 79 lakhs) and the Institute of Technology at Bombay (Rs. 36 lakhs). The credits bear a comparatively low interest rate of 2½ per cent. Both the payment of interest and the repayments of principal have to be made through exports of commodities to the U.S.S.R. within a relatively short period of 12 years of each credit. The specific projects for which credits have been given are: Rs. 64.71 crores for the Bhilai steel plant, Rs. 59.53 crores for industrial projects (heavy machine building plant, coal mining machinery plant, thermal power station, ophthalmic glass factory and Korba coal fields), Rs. 9.52 crores for five drug projects (antibiotics, synthetic drugs, surgical instruments, phytochemicals, and endocrines and glandular products), Rs. 11.91 crores for Barauni oil refinery and Rs. 238.11 crores for a number of projects included in the third Plan.

United Kingdom

The British Government has so far provided credits to the tune of Rs. 167.33 crores for various projects, as well as grants for supply of books and equipment valued at Rs. 86 lakhs under the Colombo Plan, besides experts and facilities for training Indians abroad. A syndicate of British banks has also advanced a credit of Rs. 15.33 crores for financing the Durgapur steel plant. The Government credits are made available under Section 3 of the U.K. Export Guarantees Act. The rate of interest is the same as that applied by the British Treasury to a loan for a comparable period from the U.K. consolidated Fund plus ¼ per cent as management charge. A welcome feature of the credits is that they are largely not tied to any particular projects. During the second Plan, all credits, excepting those given for the Durgapur steel plant (Rs. 20 crores) and Naharkatiya Pipeline project (Rs. 4 crores) were in the form of general balance of payments loans which could be utilised with flexibility and freedom to sustain the development programme as a whole.

Of the total amount of credits extended so far, Rs. 107.33 crores were made available during the second Plan period, the balance of Rs. 60 crores being counted against the aid of $250 million indicated by the British Government at the Consortium meeting held in May-June 1961 as assistance for the first two years of the third Plan. All the credits have been drawn excepting for a small portion of credit for the oil pipeline and the third Plan £30-million credit for which an agreement was signed on 1st May 1961.

Canada

The total amount of aid allocated by the Government of Canada since the beginning of the Colombo Plan upto 1960-61 was Rs. 106.36 crores. The aid is particularly valuable, inasmuch as the entire aid has been in the form of grants, with the exception of wheat worth $33 million supplied on loan basis in 1957-58 and 1958-59. Also, out of the $56 million aid indicated by Canada at the Consortium meeting, grants account for $36 million and loans for $20 million. These are in addition to wheat grants. The schemes which have received assistance are Canada India Nuclear Reactor (Rs. 4.58 crores), power projects (Rs. 14.40 crores), railways (Rs. 13.70 crores), Bombay road transport scheme (Rs. 2.07 crores), rural electrification (Rs. 1.43 crore), supply of non-ferrous metals (Rs. 23.70 crores), fertilisers (Rs. 2.40 crores) and wheat (Rs. 41.43 crores).

West Germany

Since 1958, the Government of West Germany has provided assistance for various development projects in India, mainly in the form of credits. The total amount of credits authorised so far comes to about Rs. 199.58 crores. Of this, the amount authorised during the second Plan was Rs. 140.06 crores. For the third Plan, the assistance indicated at the Consortium meeting was Rs. 202.38 crores. In addition, the country has also provided assistance in the nature of suppliers' credits. The assistance provided by Germany is the second largest among those indicated at the Consortium meeting. Of this, three credits aggregating Rs. 59.52 crores have already been signed. The first of these (Rs. 27.38 crores) is for refinancing payments under an earlier Rourkela credit. The other two for DM 100 million and DM 170 million have been given as straight balance of payments assistance. The entire amounts have been fully drawn. In the case of the last, a comparatively low interest of 3 per cent has been agreed to and there is also a grace period upto 31st January 1969, the repayment being completed by 31st January 1982. Another significant feature of these two credits as well as the two credits of DM 125.1 million each given in 1960 is that they are completely "untied" as regards both projects and source of procurement. In fact, all the four credits have been given directly as cash loans and India could utilise them in any manner it likes for maintenance of development projects. As the entire money is drawn in one lump, there are no complicated procedures for claiming reimbursement.

Note :—Figures in brackets indicate the assistance given to the private sector.

Japan

An agreement was signed with the Government of Japan on 4th February 1958 for a credit of Rs. 23.81 crores (18 billion yen). The credit has been made available through the Export-Import Bank of Japan for import of capital goods from Japan including equipment for railways, hydro and thermal power generation and transmission, dam construction and coal and ore mining and processing besides ships, port equipment, industrial machinery for manufacture of rayon, pulp, fertiliser and caustic soda, machine tools and such other items as might be mutually agreed upon. The credit bears interest at the normal rate of interest charged by the World Bank. At present, the rate of interest charged is 5¾ per cent. The credit is repayable in ten years, the repayment commencing after the expiry of three years from the date on which 50 per cent or more has been drawn against each separate loan agreement to be completed over the succeeding seven years. The entire amount of the credit has been allocated to various projects and programmes in both public and private sectors. Upto October 1961, 128 loan agreements of the total value of Rs. 22.79 crores had been entered into with the Export-Import Bank of Japan.

France

At the last Consortium meeting held, the Government of France agreed to make available to India credit amounting to Rs. 14.3 crores during 1961-63 to finance import of capital equipment from France. Negotiations regarding the terms and conditions of credit have just been completed. It is proposed to use the credit for import of industrial machinery, power equipment and equipment for oil exploration. A sum not exceeding Rs. 4 crores has been earmarked for the exploration development of petroleum resources. For this purpose, a project agreement was signed on 12th September 1961 between the Oil and Natural Gas Commission and the Institute Francis Du Petrole (I.F.P.) of France. During the second Plan, the French Government had extended a supplier's credit for financing import of capital goods upto about Rs. 24.1 crores, later increased to Rs. 48 crores. The terms of the credit were negotiated separately in each case between the importers and suppliers. The contracts related mostly to supply of power equipment and capital equipment for manufacture of fertilisers, sugar, paper, etc. The Government of France has assigned French experts to India in various fields such as mining, child welfare, machine tool design, bridge construction, serial ropeways, electronics, petroleum and oil and shipbuilding. So far, 27 experts have been assigned to India under the Technical Co-operation Programme. The total number of persons sent to France for training in various fields under the Indo-French Technical Co-operation Agreement upto June 1961 was 84.

Australia

The total amount of aid distributed by Australia under the Colombo Plan for the procurement and supply of commodities and equipment upto the end of June 1961 was Rs. 13 crores. The entire aid is in the form of grants. Of the total figure, approximately Rs. 5.84 crores represents gifts of commodities which have been sold in the Indian market, and the rupee counterpart funds thus generated donated towards capital development projects mutually agreed upon by the Governments of India and Australia. The Government of Australia has, in addition, provided services of technical experts and training facilities for Indians abroad.

New Zealand

The Government of New Zealand has provided capital assistance under the Colombo Plan since 1951-52 in the form of grants. The total amount of aid authorised so far for various projects in India is about Rs. 3.45 crores. A special feature of the grants is that they have been given generally in cash, though, in some cases, equipment has also been provided. Besides a grant of about Rs. 1.47 crores for the All-India Institute of Medical Sciences and £4,200 for Haringhata Seed Farm, aid has been given for a number of milk supply and dairy schemes all over the country. Further, the Government of New Zealand has provided at its own expense services of experts and training facilities abroad for Indian nationals.

Switzerland

By an agreement signed on 30th July 1960, the Government of the Swiss Confederation has agreed to facilitate the opening of transfer credits to the extent of about Rs. 10.9 crores for payments to suppliers in Switzerland for capital goods required for India's development programme. The credit will be provided by a consortium of Swiss banks. Each transfer credit is to be repaid within a period of 10 years from the date it is made use of. No repayment will be required during the first three years and the credit is to be repaid in equal half-yearly instalments over the remaining seven years. The credit is being made available in two instalments of Rs. 6.54 crores and Rs. 4.36 crores. For the first instalment, an agreement was signed on 18th November 1960 with a consortium of Swiss banks. The rate of interest is 3¾ per cent above the official discount rate of the Swiss National Bank. The second instalment of 40 million Swiss francs is yet to be negotiated.

Czechoslovakia

Under an agreement concluded in November 1959, the Government of Czechoslovakia undertook to extend a credit amounting to Rs. 23.1 crores to facilitate import of machinery and equipment for (i) the third stage of the foundry forge plant, (ii) a heavy machine tools building plant and (iii) a heavy electrical plant. The credit carries interest of 2½ per cent per annum and is repayable in eight equal yearly instalments, the first instalment being payable one year after presentation of the final invoice and other documents in respect of the last delivery of machinery for putting the plant into operation. Repayment of the credit will be effected through exports.

Yugoslavia

In order to facilitate purchase and import of capital goods and equipment required for development projects in India, the Government of Yugoslavia agreed in January 1960 to extend a credit upto Rs. 19.05 crores. The particular projects to be assisted under the credit arrangement were to be selected later by mutual consent. The agreement provides that the credit will bear interest at 3 per cent per annum. While it has also been agreed that the repayments of principal will be made in equal and consecutive semi-annual instalments, the exact period of repayment will be the subject of separate negotiation in respect of each contract for the supply of equipment and machinery. It has been agreed that the import of equipment for Yamuna Hydro-electric Project (Stage i) in Uttar Pradesh and the Periyar Hydro-electric Project in Madras will be financed from this credit.

Poland

In May 1960, the Government of Poland agreed to extend a credit of Rs. 14.30 crores for import of machinery and equipment required for industrial projects which were to be selected and mutually agreed upon. The main conditions applicable to the credit were that it would carry interest at 2½ per cent per annum and would be repayable in eight equal yearly instalments commencing one year after the last shipment of machinery required for putting the plant in operation.

The other countries which have extended aid to India are Norway (Rs. 3.19 crores), Italy (Rs. 10.90 crores), Netherlands (not known) and Rumania (credit of Rs. 5.23 crores carrying interest at 2½ per cent and repayable over a period of seven years).

U.N. Agencies

India has also received sizable assistance from the various agencies of the United Nations. The assistance is in the form of services of experts, equipment ancillary to experts and training facilities for Indian nationals in foreign countries. The U.N. Special Projects Fund had approved, upto May 1961, fifteen projects with allocations aggregating $13.74 million.

World Bank

The World Bank has given assistance to the tune of Rs. 373.48 crores, of which aid amounting to Rs. 121.65 crores is earmarked for the private sector. The loans are available for imports from all countries which are members of the Bank as well as from Switzerland. The loans sanctioned for the public sector have been mostly for development programmes in the field of transport and communications and power projects. Besides, the Agriculture Loan of 1949 ($7.20 million) provided for the acquisition of tractors and spares for the Central Tractor Organisation. Out of the total amount of $528.82 million (Rs. 251.82 crores) for the public sector, $377.80 million were for the railways, $5.60 million for Air-India International, $64.00 million for Calcutta and Madras ports, $49.22 million for D.V.C. and $25.00 million for Koyna Hydro-electric Project. Apart from the aid given by it directly, the Bank has also been making a signal contribution to India's development efforts by convening conferences of friendly countries under its auspices and invoking international co-operation with a view to ensuring an adequate and sustained flow of assistance for India's Five-year Plans. The number of countries represented at these conferences has increased since the first conference was held in August 1958. This association of friendly countries, which assumed a special significance with the launching of India's third Plan in 1961, has developed into a well recognised consortium of nations bound by a common desire to enable India to embark on a bold programme of development. The aid already committed by the members of the Consortium, including the World Bank, for the first two years of the third Plan aggregates $2,225 million ($1,295 million for the first year and $930 million for the second year). Of the total, the share of U.S. alone is $1.045 million. This country has also undertaken to make available to India surplus commodities of the value of about $1,300 million.

The International Development Association has sanctioned five credits aggregating Rs. 42.14 crores. The projects covered are national highways, tubewell irrigation (U.P.), two irrigation projects (in Orissa and Gujarat) and drainage-cum-flood-control project (Punjab).

Among the private agencies, the Ford Foundation has given grants aggregating Rs. 21.76 crores from 1951 to 15th July 1961. The total of grants, including fellowships and travel grants made by the Rockefeller Foundation upto 30th September 1961 amounts to Rs. 6.05 crores.

I.F.C. TO INVEST IN GREECE

The International Finance Corporation, Washington, made its first commitment to invest in Greece on 12th April. It will lend $600,000 to Aevol Industrial Company of Organic Fertilizers, S.A. (A.E.V.O.L.), sponsored by Greek, Italian and American interests. The Greek company will operate a plant to convert municipal refuse into a compost which will be fortified to produce an organic base fertiliser. Estimated cost of the undertaking is $1,330,000. The I.F.C. investment will be represented by unsecured dollar notes at 7½ per cent interest, repayable over 10 years. The I.F.C. will hold also a small interest in the common stock of A.E.V.O.L.

A.E.V.O.L.'s plant will be designed and engineered by Fertilia, S.P.A., and Italian company, which already operates a similar plant; Fertilia will also supervise construction. A.E.V.O.L. will use a process developed by the Earp Laboratories, Inc. of the U.S. for converting refuse into organic fertiliser by bacterial decomposition. This process is being used in similar plants in West Germany, Italy, Mexico and Switzerland.

The A.E.V.O.L. plant is expected to commence operations in the first half of 1963. It will be located on the outskirts of Salonika, a city in northern Greece which has a population of 380,000, including its suburbs. The plant is designed to produce about 40,000 metric tons of fertiliser per year, operating 24 hours each day.

Greek soils, we are told, are generally low in organic matter and the country's supply of organic fertiliser is limited. A.E.V.O.L. will expand the nation's supply of organic fertiliser while disposing of the refuse of a large municipality.

I.M.F. CREDIT TO PHILIPPINES

The International Monetary Fund has entered into a stand-by arrangement which authorises the Republic of the Philippines to draw $40.4 million over the next twelve months. The stand-by arrangement follows a drawing of the equivalent of $28.3 million by the Philippines on 23rd January 1962, and is designed to provide continuing support for a programme of exchange reform which was inaugurated at that time. The Philippine authorities have adopted policies designed to achieve and maintain domestic and external equilibrium, and will remain in consultation with the Fund regarding these policies.

IRREGULARITIES IN ART SILK INDUSTRY

ESTIMATES COMMITTEE'S REPORT ANALYSED

IF the Estimates Committee of the erstwhile Lok Sabha found it necessary to pass some severe strictures on the state of affairs prevailing in the spinning and weaving sectors of the art silk industry, the blame lies essentially with the industry. A section of the industry continues to indulge in highly undesirable practices, especially in the distribution of yarn, notwithstanding official threats and warnings. We ourselves had pointed out in these columns a year ago (*vide* page 794 of *Commerce* dated 29th April 1961) that there was something rotten somewhere in the kingdom of art silk industry and urged that a thorough investigation was necessary in order to find out the real causes for the high prices of art silk yarn. We are glad to find that the Estimates Committee of the Second Lok Sabha has suggested, in its 166th report, the full text of which was available to us only last week, that the question of production cost, price, and profit margin of art silk and staple fibre yarn be referred to the Tariff Commission for a detailed examination and report. In support of this plea, the Committee points to the prevailing high prices of art silk yarn as well as to the fact that the prices fixed for indigenous art silk yarn are themselves considerably higher (about 40 per cent) than world prices. Drawing attention to the laxity of control over distribution and prices of indigenous art silk yarn, the Committee has commended for acceptance the following two suggestions:

1. The Textile Commissioner must make surprise token purchases in the open market, in order to check if excessive prices are being charged and follow up cases so detected and established with all possible corrective measures.

2. Measures should be taken to bring to book cases, such as allottees selling away their yarn at a premium and existence of ghost looms which actually remain idle, and order deterrent action, including cancellation of yarn quota, against card-holders.

Alluding to the prices of imported yarn, the Committee regrets the undue laxity in the enforcement of regulation that allottees of imported yarn should not sell it except on the direction issued and at the price fixed by the Textile Commissioner. It feels that imposition of penalty in a few cases of proved irregularity would have gone a long way towards discouraging, and even putting an end to, such malpractices. It wants the Textile Commissioner to take steps to see that the yarn imported by manufacturers or actual users is not irregularly passed on for profit. "The Government," to quote it, "may devise steps to ensure that the imported yarn is used by the manufacturers, handloom owners and actual users and does not find its way into the 'free' market which results in the spiralling up of the prices." Further, it is suggested that regularisation of powerlooms, which has been painfully slow, should be speeded up.

Export Promotion Scheme

The Estimates Committee has also criticised the working of the Export Promotion Scheme for art silk fabrics. Here is what it says:

"The criteria for working out entitlement has undergone frequent changes and had given rise to malpractices like over-invoicing and under-invoicing as the case may be which led to the depletion of very large amount of foreign exchange which the country could ill-afford. It appears to the Committee that either there is no effective machinery to watch the working of the incentive scheme or, if there is one, it has failed in its duty completely. They are of the opinion that a detailed investigation into the circumstances under which the scheme was so manipulated by the exporters and manufacturer-exporters as to result in heavy depletion of foreign exchange may be conducted. Constant watch on the working of the present scheme should also be kept to ensure that there is no abuse of the scheme as was the case with the previous ones."

The abuse of the scheme has not been merely over-invoicing or under-invoicing as the case may be. There has also been a gross misuse of the scheme by some parties who sell away the import licences at fantastically high premia. In some cases, the premium collected is as high as 200-225 per cent of the face value of licences. It is with a view to putting an end to such misuse that the Textile Commissioner is reported to have recommended to the Government replacement of import entitlements by cash incentives on the basis of actual export business in art silk fabrics, the incentives being given partly from out of the amounts earned as margins on imported art silk yarn which is distributed by a central pool and partly from the levy of a cess on indigenous art silk yarn. The Textile Commissioner is also reported to have recommended the inclusion of merchant-exporters in the scheme. It appears that these recommendations may be accepted by the Government and implemented in a few weeks' time. It is, perhaps, for this reason that the Government has stated that the policy of art silk yarn licensing (under the Scheme) detailed in the import trade control policy book for the year 1962-63 will be effective *only* up to the end of June next.

The revision of the Export Promotion Scheme on the lines indicated above, together with the following measures as suggested by the Estimates Committee, will surely give a boost to exports of art silk fabrics:

A time-limit for inspection of art silk fabrics offered for export and for issue of the certificates must be laid down.

The time lag between inspection and issue of entitlement certificates should be reduced.

The plea for reducing the minimum yardage for pre-shipment inspection from 500 yards to 250 yards deserves to be examined.

The Textile Commissioner must evolve a satisfactory procedure for export of post parcels.

A survey of demand for ready-made rayon garments in foreign markets may be undertaken early. The rayon garment industry may also be given necessary facilities for export by the introduction of a suitable scheme of incentives, etc.

Apropos the proposal to set up a Rayon and Synthetic Textiles Development Corporation for promoting exports, the Estimates Committee rightly points out that there is no need for such a Corporation. To quote it again:

"The Committee are unable to appreciate the need for setting up a corporation with functions which are now being performed by the State Trading Corporation and the Export Promotion Council. If, as stated, it is intended to deal in the long run with exports to countries where there is State trading, they fail to see why the State Trading Corporation, which is already in the field and has gained experience in such trade, should not be entrusted with it. As for using it as an agency for importing yarn, there is no reason why the State Trading Corporation which has been handling these imports for several years should be dispensed with in favour of a new undertaking. Besides, the distribution of yarn is stated to have greatly improved since this work was taken over by the Distribution Committee of the Development Council for Art Silk Industry. In the circumstances, they are not convinced of the need to form such a corporation at this stage."

There is considerable force in these observations. It is needless to emphasise, as the Committee itself says, that duplication of machinery for discharging functions already being performed by existing organisations entails unnecessary waste of effort and resources. It should, therefore, be avoided.

Spinning Sector

The Estimates Committee has reviewed briefly the recent trends in the spinning and weaving sectors of the art silk industry. The review reveals that production of art silk yarn commenced in India in 1951. Notable progress was made during the second Plan period and the targets for third Plan are more ambitious as will be seen from the following figures:

(In million lbs.)

	Second Plan		Third Plan target
	Target	Actual production	
Rayon filament yarn	100.0*	47.6	140.0
Staple fibre	56*	18.0	75.0

* Revised targets. Original targets were 68.3 million lbs. of yarn and 32.0 million lbs. of staple fibre.

The bulk of the viscose and acetate rayon yarn production is accounted for by first quality yarn, as the following table shows:

(In thousand kg.)

Quality	Viscose rayon yarn		Acetate rayon yarn	
	Jan.-Aug. 1961	Whole of 1960	Jan.-Aug. 1961	Whole of 1960
First	8,890 (64.6)	9,938 (52.2)	1,063 (79.3)	1,253 (65.2)
Second	2,003 (18.9)	3,789 (20.0)	200 (14.9)	446 (23.1)
Third	670 (4.8)	344 (1.8)	30 (2.2)	43 (2.3)
Fourth	994 (7.2)	3,791 (20.0)	Nil	Nil
Reject	618 (4.5)	1,171 (6.0)	48 (3.6)	183 (9.4)
Total	13,775	19,033	1,341	1,925

Note: Figures in brackets relate to percentage shares.

Special attention has been drawn by the Estimates Committee to complaints from weavers that the quality of indigenous yarn is far from satisfactory in respect of evenness of denier, tensile strength, brightness and lustre, as well as freedom from knots. The Committee was surprised to find that the industry, which had been established ten years ago and which could have easily profited from developments in technique and experience of other countries, had failed, by and large, to produce yarn comparable in quality to imported yarn. It has urged that energetic steps be taken to rectify the defects in the processes of production. And it hopes that the Indian Standards Institution will finalise standards for art silk yarn early and that the mills will readily adopt them.

Weaving Mills

Art silk yarn production, as already stated, commenced in India only in 1951, that is, nearly two decades after the weaving sector started (in 1932) with imported yarn. The production of art silk and mixed fabrics at the end of the second Plan was 550 million yards (of which the share of art silk fabrics proper was 438 million yards, as against 249 million yards in 1955-58 and 190 million yards in 1950-51), whereas the target was 515 million yards. The third Plan target is 775 million yards. The number of authorised powerlooms working on art silk-staple fibre is estimated at 57,000, as against 54,101 at the end of second Plan, 37,727 at the end of first Plan and 25,801 at the commencement of first Plan. In addition, about 13,180 unauthorised non-cotton powerlooms are stated to have applied for regularisation.

The Union Ministry of Commerce and Industry has estimated that, for the existing number of powerlooms and ancillary industries, 120 million lbs. of yarn are required per year. As the current indigenous production of art silk is only 78 million lbs., it means that 42 million lbs. of yarn valued at about Rs. 13 crores have to be imported if the requirement is to be met in full. If yarn is to be issued for all powerlooms, including those which are awaiting regularisation and those which are not claiming quota at present, then the total requirements work out to 175 million lbs. If this requirement is to be met in full, 97 million lbs. of yarn valued at Rs. 30 crores would have to be imported. In view of the tight foreign exchange position, the imports of yarn had been only of the order of Rs. 10.82 crores in 1960-61 and Rs. 10.50 crores in 1959-60 and there was little change of stepping them up. Considering these circumstances, the Ministry has expressed the view that it might be advisable to shift some of the powerlooms working on art silk to cotton. It, however, points out that it might have repercussions on powerlooms and handlooms working on cotton, as the supply of cotton yarn at present is not very abundant. Alluding to this aspect, the Estimates Committee observes:

"The planned entry of powerlooms from art silk in stages into cotton textile industry may not create, in the context of increase in the cotton spinning capacity already licensed as part of the third Plan programme, any disproportionate or insurmountable difficulty of finding adequate cotton yarn for these and other powerlooms and handlooms which are presently working on cotton. The Committee recommend that this matter may be gone into early by Government in consultation with the various sectors of the industry. ... The Committee feel that it would be useful if representatives of all the diverse interests constituting the textile industry were jointly consulted periodically by the Government so as to evolve an agreed pattern of distribution of yarn and manufacture of fabrics."

Modernisation

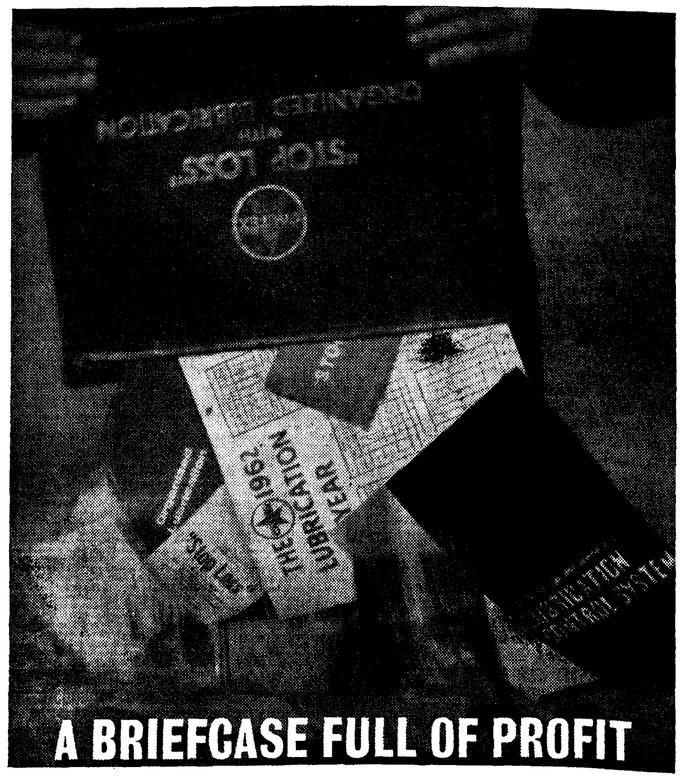
The Committee has drawn attention to the Working Group's report on rehabilitation and modernisation of the art silk industry and its estimate of outlay (Rs. 15 crores) during the third Plan period. It has urged vigorous efforts to develop manufacture within the country of up-to-date machinery for art silk and man-made fibre industry. As for finance for the rehabilitation and modernisation scheme, it observes that the Textile Commissioner's Organisation has not kept itself fully posted with the progress of the scheme and the extent of financial assistance obtained from the I.F.C. and other institutions. It has suggested that a mill-wise plan may be got prepared by the Organisation and the industry assisted by indicating the sources from which suitable machinery could be procured. Incidentally, it is rather distressing to hear from the Committee that the Silk and Art Silk Mills Research Association, which receives substantial grants from Government, has not yet undertaken any research in the field of art silk.

The Estimates Committee is, however, glad to note that attempts are being made to attain self-sufficiency in rayon grade pulp which will result in a saving of substantial foreign exchange. Under the third Plan, several schemes have been licensed for manufacture of rayon grade pulp from bamboo (and soft woods) and cotton linters to the extent of 267,000 tons and 39,300 tons, respectively. The schemes are listed below:

	Location	Capacity (tons)
From Bamboo and Soft woods:		
Gwalior Rayons	Maroor (Kerala)	45,000
Greater Mysore Rayon Grade Pulp and Paper Mills	Siddalgundi (Mysore)	30,000
Rohtas Industries	Badarpur (Assam)	60,000
West Coast Paper Mills	Dandeli (Mysore)	27,000
National Rayons	Nanjangud (Mysore)	30,000
Manjushree Industries	Cachar (Assam)	54,000
South India Viscose	Sirarmughal Village	21,600
Total		267,600
From Cotton Linters:		
Travancore Rayons	Rayonpuram (Kerala)	3,600
Indian Rayon Corporation	Veraval (Maharashtra)	3,600
Sundatta Foods and Fibres	Harihar (Mysore)	4,800
Sirsik Ltd.	Sirpur	1,800
J.K. Cotton	Kanpur (U.P.)	3,600
Mysore Sugar Factory	Mandya (Mysore)	3,300
D.C.M. Mills	Delhi	4,200
Cellulose Products	Kathwada (Gujarat)	7,200
Orient Trading Co.	Broach (Gujarat)	3,600
Purshottam Lall Jhunjhunwala	Kalyan (Maharashtra)	3,600
Total		39,300

The aggregate capital outlay on the aforesaid schemes is estimated at Rs. 50 crores, of which the foreign exchange component is put at Rs. 32 crores. At present, only 1,500 tons of cotton linters are being recovered, whereas the country is estimated to have a potential capacity of collecting as much as 40,000 tons per annum. In this context, the Estimates Committee has highlighted the importance of augmenting collection of linters from indigenous sources to keep imports to the minimum.

Following the sharp criticisms made by the Estimates Committee, the Government of India has issued a special order conferring on the Textile Commissioner wide powers to control production, distribution and price of both domestic art silk yarn and fabrics. In particular, the Textile Commissioner is empowered to fix selling prices of yarn and issue delivery permits against dealers. This move has evoked strong resentment in art silk circles. The President of the Bombay Yarn Merchants Association, Mr. Kantilal Nahalchand, for instance, points out that these powers are so wide that they will create a deadlock in the market. Indeed, he has gone to the extent of warning that business would come to an end and the remedy would prove worse than the disease.



For you...in the CALTEX "STOP-LOSS" Programme

Out of the Caltex Sales Engineer's briefcase comes a sheaf of ideas for cost control through organised lubrication—the Caltex "Stop-loss" Programme.

Start on the programme immediately. You will find that organised lubrication reduces losses in three important directions: production, maintenance and purchasing. The savings will go directly into profits —an average gain of upto 4% safely in the bag.

Ask your Caltex Sales Engineer for information

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

RAISING PRODUCTIVITY OF SUGARCANE

RATIONAL PRICE POLICY URGENT

THE Indian Central Sugarcane Committee urged, at its thirty-first annual meeting held in Patna recently, that the trend towards indiscriminate increase in the area under cane should be discouraged. This is quite a pertinent plea, but the Committee did not care to indicate as to how this desirable end could be achieved. The past ten years have witnessed a very significant expansion in the area under sugarcane, from 4.21 million acres in 1950-51 to nearly 5.58 million acres in 1960-61, according to data published by the Government. Of the rise of 1.37 million acres, the States of Uttar Pradesh and Bihar alone accounted for almost a million acres, the area actually sown to the crop in 1960-61 being 3,424,000 acres in U.P., as against 2,505,000 acres in 1950-51, and 478,000 acres in Bihar, as against 411,000 acres. These two States, it may be noted here, lie in the sub-tropical region which is not quite suitable for achieving maximum results through cane cultivation as the tropical region of the Deccan and South India are.

What is the marked increase in cane acreage due to? The answer to the poser is not far to seek. It is the defective system of paying for cane. Since the agriculturist is assured of a high minimum price for every maund of cane supplied to the sugar mills irrespective of the sugar contained in it, he is concerned only with growing as much cane as possible. In his anxiety, thus, to produce the maximum quantity of cane, he brings under cultivation of this crop whatever land that is readily available and does not bother to assess whether a particular area is really suitable for cane growing. He does not also bother to put in any efforts to improve the quality of cane. This state of affairs is bound to continue so long as the present system of payment is not replaced by a system which links the cane price to both quantity and quality and the price of sugarcane itself is more remunerative than other crops. Unless these defects are removed, the indiscriminate expansion of the area under cane cannot be avoided. The Sugarcane Committee would certainly have evoked much praise if it had boldly suggested such a step.

Progress Not Encouraging

Despite the two Five-year Plans and all the efforts of the Sugarcane Committee and the State Agriculture Departments, the progress in the sphere of cane development has not at all been encouraging. It is true that production of sugarcane has gone up appreciably—from 56.16 million tons in 1950-51 to 85.05 million tons in 1960-61—but the increase has been due to a considerable extent to the marked rise in acreage as noted earlier, so that the productivity of land under cane continues to be poor. It will be seen from Table A given at the bottom that the average yield of cane per acre during the season 1960-61 was no more than 14.83 tons. Although this is a little higher than the figure of 13.33 tons for 1950-51, it is much below the yield obtained in other countries—75 tons in Hawaii, 56 tons in Jawa, 41 tons in Peru, 28 tons in Puerto Rico and 21 tons in the U.S. This low average is largely on account of the poor conditions of cane economy in the major parts of U.P. and Bihar. How these two States compare with States like Maharashtra, Andhra Pradesh, Madras and Mysore in terms of both per-acre yield and recovery per cent is indicated in Table B. The high yield and recovery in Maharashtra State must be attributed greatly to the enormous sums of money and effort put in by the joint-stock sugar mills owning their own cane farms. With the enforcement of ceiling legislation, cane development work will definitely receive a distinct setback.

Vast Scope for Development

A rational cane price policy and a more vigorous scheme of intensive cultivation will undoubtedly result in a much larger output of cane even on a slightly smaller acreage. That there is vast scope for much development will be evident from the high yields obtained in some areas. The all-India sugarcane competition held this year revealed that a per-acre yield of as much as 128.27 tons was obtained in South India and 86.81 tons in the Northern region.

Viewed thus, the Sugarcane Committee did well to emphasise that, while attempts should continue to evolve better varieties of cane and to control pests and diseases, it must also be ensured that the results of research are properly propagated among the cultivators who should be provided the necessary wherewithal to implement the scheme. The Committee took two important decisions: (*a*) to implement schemes such as those designed to check waterlogging through proper drainage, undertake package operations, ensure larger use of pest-free seeds and control of fungi and (*b*) to set up a Standing Committee for scrutinising cane development schemes and progress thereof. Further, it suggested the establishment of cane development councils in every State and appointment of special advisers to look after the development programmes in States.

In any scheme of sugarcane development, attention needs to be focussed particularly on the evolution of those varieties of cane which give good recovery of sugar in both early crushing and late season crushing periods. This aspect was highlighted by Bihar's Chief Minister, Mr. Binodnand Jha, while inaugurating the annual meeting of the Pusa Sugarcane Institute. It is gratifying to hear that the Institute has already taken steps in this direction.

TABLE A: *Sugarcane Under Five-Year Plans*

Year	Area (000 Acres)	Production (Million tons)	Yield per acre (Tons)	Recovery (Per cent.)
1950-51	4,214	56.16	13.33	10.03
First Plan :				
1951-52	4,792	60.68	12.67	9.57

I.S.M.A. ON COAL SUPPLY

A note of warning that the reduction in the monthly coal and coke quota for sugar industry from 691 wagons to 365 wagons during 1962-63 will create a serious situation, leading to dislocation in the mills' uninterrupted working, has been administered by the Indian Sugar Mills Association in a memorandum submitted to the Union Government. The cut, it is stated, is absolutely unjustified, especially when the quota for the industry had already been reduced to the bare minimum and fixed on the basis of actual despatches in the 1960-61 season. According to the Association, twelve new factories are expected to go into production in the current year and some more units next year. For meeting the demands of these units, additional quotas of coal will be required. While, in the circumstances, there is a good case for increasing coal supply, the reduction in quota, the Association says, will only result in completely paralysing the working of factories in the ensuing season. Describing the decision as "discriminatory and unfair," the Association has urged the Government to restore the coal quota to sugar industry.

The U.P. Legislature has passed two important sugarcane bills, one pertaining to purchase tax and the other to regulation of supply and purchase. The Sugarcane (Purchase Tax) Amendment Bill seeks to enable the State Government to grant remission of tax to mills on the cane purchased for crushing even within a radius of ten miles from a factory with a view to saving the excess cane from wastage. It also extends the period for the renewal of licence granted to a *gur, rab* or *khandsari* manufacturing unit till November next. The Sugarcane (Regulation of Supply and Purchase) Amendment Bill seeks to raise the existing strength of the Joint Sugarcane Board for U.P. and Bihar from 24 to 25, as well as to authorise the District Magistrate to nominate an officer to serve as a member on any cane development council falling within his jurisdiction.

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

PRICES, WAGES AND COMPETITIVE CAPACITY

SOME INTERESTING ASPECTS OF U.S. DILEMMA

PRESIDENT Kennedy's angry reaction, strongly objecting to the decision of the U.S. steel companies to raise the price of steel by an average of six dollars per ton, has forced the companies to revoke their decision. It had been estimated that the increase, had it become effective, would have raised the U.S. defence cost alone by $1,000 million, not to speak of the general rise in the price of the products of steel-based industries. Since steel is the pace-setter in the U.S. economy, all prices would have generally increased. In fact, it was the fear that the rise in steel prices would give a new impetus to the inflationary spiral and negative the real gains made by the American economy during the past four years, when price levels were held comparatively stable, that provoked the President to condemn the steel companies in the strongest terms and to initiate immediately legal measures to counter the move under the anti-trust legislation. His own reading of the consequences of the rise in steel price was that it would (1) increase the cost of industrial as well as consumer goods, (2) add to the defence costs, (3) handicap the Government's efforts to induce other industries and labour unions to adopt responsible price and wage policies, (4) undermine the efforts to prevent an inflationary spiral, (5) make it more difficult for the U.S. to compete in world markets and to withstand foreign competition in U.S. markets, and (6) cumulatively contribute to the worsening of the balance of payments position.

Effects on Developing Countries

Any increase in the price of steel would have also reduced the real value of U.S. aid to India and underdeveloped countries both directly and indirectly. The rise in prices of U.S. steel, and plant and machinery would have meant a fall in the volume of goods that could be bought with the dollars given as aid, especially under tied credits. That would be the direct effect. The indirect effect would be a possible increase in the prices of steel and steel-based goods in other parts of the world also. Another indirect effect would be a further worsening of the terms of trade between the industrial and primary producing countries which have consistently been adverse to the latter for several years now.

It was the anxiety of the U.S. administration to hold the price line that induced it to use its good offices to settle the demand of steel workers for higher wages without conceding any significant rise. On 28th March 1962, it will be recalled, the steel wage negotiators reached a tentative agreement on a two-year contract which would leave the wage rates unchanged for the first year, though subject to reopening for the second year. Employers offered fringe benefits at a calculated cost equivalent to 10 cents an hour, raising the cost of labour approximately 2.5 per cent. Commenting on this understanding, the *Monthly Letter* of the First National City Bank of New York for April 1962 says:

"Settlement on these terms will contribute stability not only to steel employment but to the economy as a whole. It sets an example of moderation which, if pursued by industry generally and supported by sound fiscal policies, will make an indispensable contribution to the correction of our worrisome balance of payments deficit and keep inflation in check."

Ill-timed Move

In this context, the action of steel companies, however much justified by their financial position and the need for funds for re-equipment, modernisation and so on, was highly and shockingly tactless, reflecting a nineteenth century *laissez faire* mentality. That the bosses of U.S. steel companies could be so very undiplomatic and had utterly failed to realise the adverse public opinion their decision would provoke is surprising. Their sense of honesty and fair-mindedness has doubtless suffered an irreparable damage, especially as they had given no inkling whatever during the negotiations with the workers of their desire, let alone the move, to increase the prices of steel. No wonder President Kennedy gave full vent to his wrath and boldly set in motion whatever power he had to defeat the decision of the steel managements. That the latter quickly capitulated to their President, however, reflects their wisdom, albeit belated, not to measure their strength against the Administration. The whole episode suggests that, even in a free enterprise system of the U.S. type, a basic industry like steel has to follow policies that will be in tune with the larger national objectives, even if it involves a certain amount of restraint on its profit-margin.

All this does not mean that the steel companies had no convincing case. There is doubtless a basic relationship between prices, costs and competitive capacity. The reason given by the steel companies for their decision was that they had to raise money for modernisation of the industry. If the additional profits resulting from higher prices were ploughed back in the industry, they argued, the inflationary impact of such a policy would be far less than that of a rise in price to meet the increased cost of wages or of raw materials, the usual grounds for raising prices. But it is the wrong timing of their decision to raise the prices of steel that has denied them the support of the public, as well as of the Government.

Wage Costs Compared

Be that as it may, while wages alone do not determine costs or prices or competitiveness, they have a decisive influence on competitive capacity. In fact, American businessmen are

Rise in Hourly Wages in U.S. and Abroad in Local Currencies
Annual rates of increase (Compounded)

	1946-51	1951-56	1956-61
	%	%	%
U.S.	7.6	4.6	3.5
Canada	10.8	5.4	3.8
Switzerland	3.8	2.6	4.1
Italy	11.4	4.8	4.5
U.K.	6.9	7.1	5.9
Japan	N.A.	8.1	5.9
Sweden	10.3	8.7	6.4
France	28.2	7.9	8.3
Germany	10.0	5.6	8.8

said to be wondering whether, in view of the rapid rise in productivity in countries that compete with the U.S. in foreign markets, and their expanding market, which enable them to avail of the economies of mass production that was so long an American monopoly, the U.S. would be able to continue to compete successfully, especially because American wages are presently very much higher than wages in other countries—seven times higher than in Japan, and six times higher than in Italy, for example. A comparison of employment costs in the U.S. and abroad, published in the aforesaid *Monthly Letter* of the First National City Bank of New York, throws some revealing light on the relative level of wages and costs in the U.S. and its competitors. This article provides a useful background to the U.S. Administration's determination to see that there was no further substantial increases in U.S. steel workers' wages. According to the authors of the *Monthly Letter*, although wages are not the whole story, they are a logical starting point for an examination of employment costs. It is risky, in their opinion, to draw conclusions about living standards from an international comparison of wages, because there are radical differences in the ways people live and spend their money. This limitation, however, does not apply to a comparison of wages as a part of the cost of production. The accompanying table, taken from the *Monthly Letter*, gives the rise in hourly wages in the U.S. and abroad during the period 1946-61.

As the table indicates, wages in each of the countries included in the study have been advancing more rapidly over the past five years than those in the U.S. Thus, while the hourly earnings of workers increased by an average of 3½ per cent a year in the U.S. from 1956 to 1961, in the six major Western European countries and Japan the annual rates of increase ranged from 4 to 9 per cent. But, surely, this cannot be of much comfort to the U.S. manufacturers. For, though the recent increase in wages in the U.S. has been slower than during the first post-war decade, its competitive disadvantage remains, and, according to the *Monthly Letter*, will remain for a long time to come.

Wage Rises in W. Europe

It will be noted from the table that the rates of increases over the 1946-51 period were unsustainable for Italy, the U.K., Sweden, France, and Germany. Against the background of the destruction and dislocation caused by the war, these countries found it necessary in 1949 to devalue their currencies. The French franc was further devalued in 1957 and 1958, but, since then, France has been able to maintain exchange stability. Germany has made such rapid strides in productivity over the period 1956-61 as not only to absorb an 8.8 per cent annual rate of increase in wages but also to upvalue the D. Mark by 5 per cent. It should also be noted that none of the wage increases have been sustainable in the sense of being consistent with internal price stability. People in all these countries have suffered some continuing erosion in the purchasing power of their money.

A comparison of the movement of wages in five European countries, namely, the U.K., France, Germany, Italy and Sweden and Japan with that in the U.S. indicates that, except for France, which was affected by devaluations, the broad picture is one of a slow narrowing of the gap in wage costs between these countries and the U.S. Relatively, the most rapid increases have been in Sweden and Germany. In 1961, wages in Germany rose by 11 per cent in terms of D. Marks and, because of the five per cent up-valuation of the mark, 15 per cent in U.S. dollar equivalent.

This is the picture based on direct wages. But one has to view it from the total cost of wages, including the fringe benefits. Studying the position from this angle, the *Monthly Letter* says that differences in total labour costs are often less than what wage comparisons might indicate. For fringe benefits and social security charges abroad add 25, 50, 75 or even 100 per cent to basic wage costs, as compared with about 20 per cent in the U.S. Recent studies by the Statistical Office of the European Economic Community have thrown further light on the extent of fringe benefits in Europe. In Italy, social charges account for nearly half the total cost in the industries studied. In Germany, Belgium and the Netherlands, the proportion is close to one-third. Fringe benefits have tended

to build up layer upon layer over the years and they are still growing. The amount which shows up as direct cost to the employer varies. In France and Italy, most of the burden is borne by the employer, in Britain and Scandinavia the costs are shared through workers' contributions and general taxation.

Determinants of Cost

Competitiveness, as mentioned earlier, does not solely depend on the cost of labour as such. The quality of labour is critically important as is freedom from labour disputes and work stoppages. Cost of raw materials, investment in plant and equipment, efficiency of management, taxes and freedom from bureaucratic red-tape are all important in determining final unit costs. The *Monthly Letter* quotes the findings of a recent study by the National Industrial Relations Board to give an idea of the comparative costs of employment in the U.S. and in competing countries. According to the study, American manufacturers with branches or subsidiaries abroad reported that labour costs abroad were lower than in the U.S. in over two-thirds of the operations surveyed. Yet 58 per cent reported that total unit costs in foreign locations were the same as or higher than in the U.S. Material and other costs more than offset the advantage of cheaper labour in many instances. In the U.K. and Common Market countries, however, total unit costs were said to be generally lower than in the U.S.

A comparison of employment cost means little, unless account is taken of productivity. Until recently, the U.S. had a wide margin of advantage in this respect. Its high wage level was offset by efficiency of production, supported by capital investments ranging from $10,000 to as much as $60,000 per man. This enabled the U.S. to compete throughout the world. In recent years, however, there has been a swift change in the position, as other countries have been able to catch up with the U.S. Thus, while West Europe and Japan have been forging ahead in productivity, the U.S. productivity has slowed down. The President's Council of Economic Advisers, for instance, has estimated that output per man-hour in the private non-farm economy in the U.S., which increased by 2.7 per cent per year in the early post-war period 1947-54, has since been advancing by only 2.2 per cent per annum. Although the rate of increase in wages has also been slower, as shown in the table on page 718, wage increases still exceed productivity gains. In short, unit labour costs continue to rise. Under the influence of foreign competition, prices have not risen proportionately, so that profit-margins have been squeezed, which, in turn, has retarded the pace of new investment. This conclusion supports the contention of steel producers that they need more profit in order to plough back and finance the productivity of their workers.

Productivity

Productivity has gone ahead faster in many leading industrialised countries other than the U.S. The Council of Economic Advisers has presented a comparison based on a somewhat cruder measure of productivity, namely, real gross national product per man-year. This measure gives a 2.2 per cent annual growth rate for the U.S. during the fifties. In contrast, Japan showed an increase of 6.1 per cent per year, Germany and Italy 4½ per cent, Sweden, Norway, the Netherlands and France between 2.8 and 3.6 per cent, while Canada, Denmark and the U.K. lagged behind the U.S. Commenting on these growth rates, the *Monthly Letter* concludes as follows:

"In many industries in Europe and Japan, replacement of war-damaged facilities, plus the rapid expansion of capacity, has resulted in a larger proportion of new and more efficient machinery and equipment. This raises a question as to the sustainability of the faster pace of advance in productivity. At the same time prosperity is tending to uptilt the curves of wage advances in the European Economic Community. Governments with swollen reserves, growing out of balance-of-payments surpluses, have not strongly opposed some degree of increase in their price levels. But we should not take comfort in the thought that our problems will be resolved by unsound fiscal and wage policies elsewhere in the free world. Tolerance of inflation breeds distrust in Government and constriction of loanable funds. Nations that make inflation a way of life can progress only with the help and by the sufferance of countries that protect their supplies of capital for investment by resisting inflationary pressures.

"We have no real alternative to keeping the lid on our wages and prices, meanwhile taking every measure, consistent with financial stability, to induce added investment for progress. The greatest need is to recognise that employment and progress, under our form of enterprise system, depend on profits and that wage restraint is the only way to protect profits, the purchasing power of our money, and the gold reserve, all at the same time."

HINDUSTHAN MERCANTILE BANK LIMITED

DIRECTORS' REPORT

TO THE SHAREHOLDERS, HINDUSTHAN MERCANTILE BANK LTD.

The Directors have pleasure in submitting to you the Audited Accounts of the Bank for the year ended 31st December, 1961, together with the Auditors' Report thereon.

The gross earning of the Bank during the period under review after making appropriations in respect of some irrecoverable accounts aggregating Rs. 62,748.51 nP amounted to Rs. 13,02,995.25 nP and after providing for expenses the net profit for the year comes to .. .. .. Rs. 1,68,130.74 nP

to this has to be added the amount brought forward from the previous year .. .. Rs. 3,758.16 nP

Total .. Rs. 1,71,888.90 nP

which the Directors have disposed of as follows :—

(1)	Transferred to Reserve Fund .. .. Rs.	35,000.00 nP
(2)	Towards Income-tax for 1961 .. .. Rs.	1,08,000.00 nP
(3)	Balance carried forward .. .. Rs.	28,888.90 nP
	Total .. Rs.	1,71,888.90 nP

The business of the Bank during the year 1961 and the results achieved are considered to be satisfactory.

During the period under report Sri Hariram Bubna tendered his resignation from the Board. While relieving him the Directors desire to place on record their appreciation of the sincere and valuable services rendered by him to the Bank.

In terms of provisions of Clauses 90 and 91 of the Articles of Association (1) Sri Bhagirath Kanoria, (2) Sri Promode Ranjan Sarker and (3) Sri Harilal Mehta, the Directors of the Bank, retire by rotation, but being eligible offer themselves for re-election.

During the year our branch at Bikaner which was proving to be an uneconomic unit was closed.

The Directors express their gratitude to the Bank's constituents, Shareholders and members of the Local Advisory Committee for their continued support, co-operation, able help and guidance towards the Bank's development.

The Directors also place on record their appreciation of the services rendered by the Officers and other members of the staff at Head Office and Branches.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,
M. L. JALAN,
Chairman.

CALCUTTA, *20th March*, 1962.

(Continued on next page)

COTTON TEXTILE INDUSTRY ANXIOUS ABOUT ITS FUTURE

RE-EQUIPMENT PROGRAMME HELD UP

From Our Special Correspondent

MANCHESTER, *10th April*

MANCHESTER LETTER

OLD stagers whose memory of Lancashire trade in textiles goes back to the legendary days before the First World War could be forgiven for staring aghast at a sentence in the current annual report of the British Spinners' and Doublers' Association which reads: "The state of trade in the U.K. cotton industry is dominated by the import situation." Yet this is literally true and, more to the point, is likely to remain so unless aid in the shape of Government support is quickly made available. The fact that all sections of the trade—not only spinners and weavers but merchants, finishers and the trade unions as well—are jointly seeking a top level approach to the Government is sufficient proof that the trade is unanimous in its belief that only in this way can some solution be found to the present impasse. Individuals may argue that protectionism is a defeatist policy, but safeguards are certainly required, if another huge slice is not to be lopped off the trade by economic adversity within the next few years.

All this and much more is made abundantly clear in the annual report of the newly-amalgamated trade organisation, the British Spinners' and Doublers' Association. On the credit side, the Government has assisted in establishing certain quotas and even an inter-industry agreement with at least one country outside the Commonwealth. Apparently, the Geneva pact will also receive support.

The debit sector includes additional supplementary quotas for Asian Commonwealth producers, the extent of supplies still arriving from Spain and Formosa and the fact that Western European yarn and cloth has lately been coming in at very low prices, suggesting that much of it is the surplus available from third shift working sold at below cost. "It will be seen that some of these credits are merely the obverse of the debits and it is a question of degree as to whether the balance is moving in Lancashire's favour," comments the report. "The Government must realise that what Lancashire needs more than anything else is a stable base on which to plan its re-equipment and reorganisation of machinery and labour."

Counter-dumping Measures

Hopes that moves to discourage dumping will receive more attention in the future are expressed in the report, which refers to the considerable criticism levelled against the inadequacy of the Customs Duties Act in dealing with dumping and subsidies, and the slowness with which it operates. Earlier this year, representatives of the trade associations in the industry met Board of Trade officials to discuss this thorny problem.

As a result of the talks, according to the report, it is believed that any future application to the Board of Trade under the Act will be dealt with more expeditiously. The British Spinners' and Doublers' Association declares its intention of taking every opportunity of invoking the Act where cases of unfair trading are reported and can be established. Unfortunately, the authorities are not ready to accept representations that the terms of the Act should be extended to allow for action where either a direct or indirect subsidy results from the manipulation of the price of raw materials produced in the exporting country and offered at low prices to the domestic producers there.

Declining Spindleage

After the redundancy scheme and the scrapping of 12,440,000 mule equivalent spindles, the spinning industry was left with 12,900,000 spindles. As is well known, further scrapping and closures of mills have since taken place, while re-equipment plans have been implemented. The latest official figure of machinery in the industry is 12,650,000 mule equivalent spindles. In doubling, 571,000 spindles were scrapped and 1,525,000 left. The present spindleage, says the report, owing to further scrapping or closures, is now 1,357,000.

Nearly 20,000 claims for compensation for employees declared redundant as a result of the scrapping programme were received in the spinning section and 1,400 in the doubling branch. Only 7 per cent were rejected as not meeting the requirements of the agreement and the majority of borderline cases were settled by discussion between the Association and the unions. Only 34 cases went to the Appeals Board for adjudication, of which 16 were unsettled at the end of January.

Figures given by the Association indicating the response to the modernisation scheme are described as "very disappointing indeed." They show that, by mid-February, 325 applications had been submitted for the re-equipment grant in spinning and doubling, covering the installation of machinery and plant valued at £19,750,000. The report points out that these are applications for approval in principle and not applications involving actual expenditure, as some of them may not necessarily be taken up. "The whole progress of re-equipment has been held up by anxiety as to the future of the industry," the Association repeats.

Lower Profits

News from the general industrial front of the country has been disappointing for some time past and many trades have been beset by labour troubles and the keener competition which is being widely experienced. As a result, there will be no particular surprise about the comparative profitability returns published by the *Financial Times* for the first quarter of the current year. Out of over 400 industrial companies issuing returns over this period, profits were reduced by 2 per cent as compared with 1961, while earnings fell by over 10½ per cent. Within the various categories cotton textiles apparently provided the worst record, the profits announced declining by nearly 9½ per cent as compared with the year previously. Again, this will come as no unexpected shock to those who are closely concerned with the industry, in view of the severe trials which are at present being faced and which have persisted for well over 12 months.

Without intending to stress unduly the seemingly insoluble problems which crop up in the cotton trade, the tendency in recent years certainly seems to have been either all to the good or a case of everything going wrong at the same time. Unfortunately, the adverse periods of trade have generally lasted longer than those when comparative prosperity was at hand. Uncertainty, always the bug-bear of any industry, was responsible for keeping business very narrow for at least a couple of years before the reorganisation scheme was launched. Then the price regulation pacts were under review and the inter-industry agreements were being negotiated with Eastern Commonwealth countries. The short-lived era of intense activity, which accompanied the scrapping programme in the producing sections, swung the pendulum violently the other way, but already the trade is suffering intensely from the excesses of that overbuying period.

Everything points to lower profits being earned during the current year, owing to the dual pressure of narrowing margins and fewer actual contracts. A period of extensive short-time in the mills is scarcely the moment to anticipate favourable financial results and there will have to be a pronounced change in the outlook before a silver lining is discernible in the overhanging clouds which are darkening the industry's outlook.

Raw Cotton Situation

It is not unusual for the trade to find itself in a position where everybody seems to be waiting for everyone else to take action; in consequence, something approaching stalemate ensues. This has certainly been the case among raw cotton operators both at home and abroad during the past two or three months, marketing being at a low ebb while the trade awaited news of the latest policy to be adopted by the United States Government as regards pride supports exports, imports and future legislative pro-

As per our Report on the Balance Sheet annexed herewith.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of Hindusthan Mercantile Bank Limited as at 31st December, 1961, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the returns of the branches audited by us either jointly or severally :—

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts together with the notes thereon give the information required by the Companies Act, 1956, in the manner so required for banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended on that date.

HINDUSTAN LEVER LIMITED

CHAIRMAN, MR. P. L. TANDON, EXPLAINS WORKING OF ACCOUNTS AND FINANCE DEPARTMENT

"QUALITY OF ACTIVITY IS JUDGED BY WHAT ITS MEN ARE"

HOW efficient is the accounting and financial department of Hindustan Lever Limited and how it takes an active part in running business and earning profit were highlighted by its Chairman, Mr. P. L. Tandon, when he addressed the Annual General Meeting of the Company held at Bombay on Wednesday, 18th April 1962. This department, Mr. Tandon stated, had a real contribution to make towards the profitability of the Company, the objective being approached in two ways: through an efficient bookkeeping system that maintains historical and statutory records and by providing management with an efficient information and advisory service. He said that the first task might be called maintenance accounting and the second management accounting. He described some of the main features of the whole system and reiterated that, ultimately, the quality of an activity was judged by what its men were. Making a special reference to the price aspect, Mr. Tandon pointed out that price in a competitive market depended on what the consumer was prepared to pay, what competition would permit, and not solely upon the manufacturer's cost of production. Hindustan Lever, he declared, had neither a monopoly nor a captive market, but operated in very competitive areas. Naturally, he added, the margin after variable costs of a group of products must be sufficient to cover all fixed expenses and give a reasonable return on capital employed in producing and selling the products.

The following is the full text of Mr. P. L. Tandon's speech:

"It gives me great pleasure to welcome you to this annual general meeting of the Company. I shall take as read the report and accounts for the year 1961, which have been with you for some time, and, later in the proceedings, I shall be happy to answer any question you may wish to put.

"In keeping with our practice in the past, I shall today tell you something about another side of our organisation, accounts and finance, what is our thinking behind it and how it works.

Real Contribution

"We in Hindustan Lever believe that, if the Company is to be efficient and forward-looking, one essential is that its accounts and finance department must also possess the same attributes. We firmly believe that this department has a real contribution to make towards the profitability of the Company. We approach this objective in two ways: through an efficient bookkeeping system that maintains historical and statutory records, and by providing management with an efficient information and advisory service. The first task may be called maintenance accounting, and the second, management accounting.

"In the old days, an accounts department was content with merely keeping the historical and statutory records in an efficient manner, but, important though these indeed are, a modern accounting department believes its real task to begin from there on; that it has not made its proper contribution unless it goes to the next and important stage of providing a management accounting service.

Maintenance Accounting

"Our accounting management have devoted much time in the past years to the streamlining and simplification of the day-to-day routine accounting, so that this is done with the maximum of accuracy and the minimum of senior management intervention. A system of controls and internal checks has been designed to eliminate the chances of error and fraud and to enable us to work on the principle of reporting by exception. This means that only items calling for special attention are brought to the notice of senior management and not a multitude of routine matters. The enormous volume of clerical reporting, at one time thought essential, has been reduced substantially, though without impairing the necessary degree of control.

"The basic principle which we apply to management information is one of speed balanced against accuracy, and accuracy against its cost. For instance, the approximate results for the month are ready and presented to the board within ten days. If these results were to be prepared with meticulous accuracy, they would not be ready till the end of the following month, but what is prepared in ten days is sufficiently accurate and reliable for the management to decide its course of action quickly. But at the end of each quarter, we take a few more days to prepare the results in order to turn the approximations into actuals.

"As with our management, our accountants are prompt in discharging their responsibility to the shareholders. Over the years, by careful planning and procedural improvements, they have been able to bring the process of the production of year-end accounts into an orderly and well-organised routine, which has reached the stage that the draft accounts covering the calendar year are presented to the Board of Directors in the third week of January. They are audited by the end of the month and, in the middle of February, the results and the Directors' recommendation for dividend are given to the press. By the middle of March, the printed accounts are ready for distribution to our shareholders and our annual general meeting is held in the middle of April. Within twenty-four hours of the annual general meeting, the dividend warrants to the 14,000 odd shareholders are in the post.

The Advantages

"The advantages of this exercise speedily and smoothly done are many: the shareholders receive their accounts and the dividend without delay, and they have the right to do so; management are in possession of the results within a few days of the year end; and the accounts department are free to devote their energies to the problem in hand—the work of the current year.

"Our accountants do not, however, rest on their laurels and have been trying to achieve greater clarity in the published accounts, their constant aim being to give the maximum useful information simply and quickly. In this connection, we welcome the Company Law Administration Department's decision to permit the presentation of the balance-sheet in the modern columnar form which is now favoured by many progressive companies in other countries. We have been in the forefront in advocating the adoption of this modern style of presentation, because we think it presents the significant information in a manner clearer than the old conventional form of balance-sheet. The 'capital employed' and 'employment of capital' form of presentation sets out before our shareholders clearly and precisely the capital they own in the Company and the use to which it is being put. We believe we are the first company in India to produce our accounts in this modern way. There is, however, still scope for improvement. For example, much of the detailed information concerning expenditure at present required by law to be given in connection with the profit and loss account could be simplified and made clearer. Too much detail can obscure facts; giving information in a crystallised manner helps to throw it up more clearly. An important change we would also like to see is that, when you are dealing with accounts in crores of rupees, it seems somewhat pointless to quote the figure to the nearest rupee, when the nearest thousand would still give the true and fair view but help the reader to take in the figures better.

Management Accounting

"This (management accounting) is a term that has acquired an almost mystic quality in recent years. Many people think that it is something quite new and of necessity enormously complicated, involving an expensive system capable of comprehension only by experts. This is not true. It is neither new nor particularly complex. An able and understanding accountant, even in the old days, sometimes went beyond book-keeping and discussed with his management the implication of events and trends in the business in broad financial terms. In time he developed a special advisory role where he was consulted on the moves the business had made and might make. This, in a perhaps more specialised manner, is all that management accounting boils down to. It is the role of the accountant as an adviser or helper, instead of the 'accountant' who feels his task done when the results are ready, or the 'controller' who sees his task only in curbing management within the straight and narrow path of expenditure by the rule, unconcerned whether that expenditure produces the best results.

"For modern conditions, a management accounting system has, however, to be systematised and commensurate advantages are gained only if it is viewed as a whole and carefully planned to meet a particular management's needs. But it can start from simple beginnings and it must always be tailored to the needs of a business: it cannot be taken straight from a text-book and applied to an operation. Management accounting information properly and simply prepared is as readily intelligible to the businessman as to the accountant. A few vital and constructive figures, handwritten on a sheet of paper and clearly presented, may sometimes be better 'management accounting' than an elaborate mechanical or electronic information system, which does not in reality go beyond bookkeeping. The difference, if I may emphasise, is in the approach of the accountant. Is he merely furnishing routine figures to his management, or well designed service and advice?

"It is sometimes argued that management accounting can wait in India: Indian business has not reached the stage where it can afford that luxury. With this we profoundly disagree. For one thing, it is not a luxury; for a growing business, it is a necessity, which should cost no more than any good acounting system. For another, if we are going to introduce the latest in plant and machinery and other techniques, it would be wrong not to get the best out of them by matching it with the latest in accounting thinking. There is no merit in going through the evolution in accounting techniques; we can start where the best have reached.

"I venture next to briefly describe some of the main features of our own system, in the hope that it may be of interest to you. Perhaps, I may start with a definition. By management accounting we understand the provision, analysis, reporting and discussion of accounting information as a guide to our management in the day-to-day running and future planning of the business, as distinguished from the recording part of the accounting function for historical and statutory purposes. Naturally, the recording function will often be the basis of the supply of management information.

Responsibility Accounting

"A management accounting service can best be described as responsibility accounting. It reports information, suited to their responsibilities, to different levels of management who can take action or offer advice based on that information.

"The sheet-anchor of our management accounting service is the annual estimate and budget for the coming two years. They forecast sales, production, capital expenditure, marketing, advertising and administration expenses, leading on to profits, yield on capital employed, and cash flow prediction. They are prepared initially in terms of quantity as well as value at the lowest level of responsibility, where action is taken, and built upward along functional lines. They are finally brought to the Board, at which each Director presents the affairs and plans of his departments. These are, in fact, not forecasts but plans, because there is volition behind them and not just a futurity. They set the standards for the coming year, and performance is then reported against these standards, weekly, monthly and quarterly, varying with the needs.

"Following on from this major document, and flowing naturally from it, are a number of returns prepared at varying intervals catering to the special requirements of management. There is, for instance, a monthly profit and loss report to the Board, weekly and fortnightly margins earned to marketing management, and daily raw materials yields to production management.

"For regular reporting to marketing management, I might add, we believe in the margin after variable costs concept. Variable costs are those which vary strictly with production and sales, and include raw materials and ingredients, packaging, excise duty and distribution. Other expenses like marketing and administration overheads, depreciation, repairs, direct factory labour, advertising and financial items such as interest, are only apportioned to groups of products and not to individual products. Although there are a number of methods for apportionment of fixed costs, they are invariably arbitrary and give widely differing results when taken to individual products and packs. Regular apportionment of fixed costs on an arbitrary basis is of limited value and can even be dangerous as it can mislead.

"Price in a competitive market depends on what the consumer is prepared to pay, what competition will permit, and not solely upon the manufacturers' cost of production. I need hardly add that Hindustan Lever has neither a monopoly nor a captive market, but operates in very competitive areas. Naturally, the margin after variable costs of a group of products must be sufficient to cover all the fixed expenses of the group and give a reasonable return on the capital employed in producing and selling these products; but our week-by-week reporting on movements in the margin only reflects changes in the variable costs. This gives our marketing management realism and flexibility in their pricing policy.

"We treat depreciation and direct factory labour as fixed costs in the short-term: depreciation because it will be a charge to the business for so long as we retain the assets, and direct factory labour because our policy is not to retrench staff during slack periods. However, when considering the costs involved in producing a new product or expanding capacity for an existing one, we look at the total additional or out-of-pocket' costs involved, and these will include depreciation and wages. Also, when reviewing a group of products over the long-term, we assemble all costs directly applicable to that group. Some of this may be arbitrary, but is used only at a point of time and for a specific purpose, and does not form part of the continual appraisal of margins and performance, for which, as I have mentioned before, only the variable costs are taken into account.

Development Accounting

"Apart from reporting to marketing and production management about results and performance, our accounts department offers much service in the field of development of new packs, new products and projects. Whenever our management thinks of something new, they turn to the accountants to study the financial implications. This, in short, is where the accountants and our general management together look ahead to make sure that a change or new development will produce healthy results. It should be underlined that it is not the accountants who dictate the managers' policy; managers must make their own decisions, based upon the information they receive. And they may decide for other perfectly valid reasons to go ahead with the project which has a longer pay-back period, or even has broader economic or social objectives, but they must know where they stand and what they base their decisions on. This is where the accountant can help them.

"I now turn to the organisation and other activities of our finance and accounts department.

Organisation

"The department is controlled by the Financial Director, who has reporting directly to him the chief accountant, the chief internal auditor and commercial managers in charge of our branch offices. But our accounts department is highly decentralised. The operating management of each unit, whether factory or branch, have their own accounts departments reporting directly to the unit heads. They discharge their responsibility for accounting records and also give advice on various aspects of accounts and finance when problems arise locally, and they are expected in general to be full and active members of the local management team. Head office accountants control them very little beyond ensuring that the basic principles are uniform throughout the Company, and the small amount of information they supply to head office is prepared in a manner comparable between units.

"At the head office, there is the chief accountant's department, which has no line relationship with the unit accountants. Its task is to handle general matters like consolidated budgets, annual accounts, taxation, finance, management salaries, pension and provident fund, and the maintenance of day-to-day head office accounting records. Much of the time of the chief accountant's department is spent on specialist service of one kind or another to central marketing and technical management.

Organisation and Methods

"Commonly known as O. & M., this is a specialist department within the chief accountant's department. It concerns itself principally with the improvement of office systems throughout the Company. Most clerical systems are somehow created to meet an urgent or immediate need, and the tempo of modern business is such that, once the need is over and even the situation changed, the people operating the system are so busy with day-to-day operations that they seem never to have time to review the system or to test its efficiency. Each time there is a new demand, a modification is usually made, so that, over a period, the system is encrusted with forms and routine which may have lost their original justification.

"In the circumstances, it is not surprising that O. & M. men can be welcome visitors to a lively manager. Their job is to examine the documentation and work flow from basic principles and take nothing for granted. They ask what is needed, why and when, and they devise a system tailored to meet the special needs of the department which would give the results in a simple and efficient way. Theirs is a patient job of skill in 'selling' themselves, but our management has learnt to appreciate their worth.

Audit

"The internal audit department is an important part of our finance and accounts group and the Chief Auditor reports directly to the Financial Director with unfettered powers of free and frank criticism. Its prime responsibility is to see that the systems and controls are functioning smoothly and that there is no abuse or fraud: but in fact it goes much further. Divorced from the heavy day-to-day routine of departmental responsibilities, it runs over a department's general functioning and makes objective appraisals of where systems and practices may be improved. It will not sit down and design detailed improvements but may suggest that O. & M. be called in.

"We have, of course, our statutory auditors from outside, who state whether the accounts report correctly and fairly the state of the Company's affairs. But internal auditors go further. Being part of the Company, they have responsibility for suggesting improvements that will increase earnings, increase efficiency and reduce expenditure. They in no way interfere with the rights and duties of the statutory auditors, but these are naturally helped by the assurance of a good internal system.

Finance

"As a Company, we believe in development and healthy growth. Between 1956 and 1961, the capital employed in the business increased from Rs. 755 lakhs to Rs. 1,092 lakhs, all provided from our internal resources. Today we are asking you to agree to convert part of our ploughed back profits from reserves to capital through a scrip issue. Naturally, this has been possible through a prudent policy for distribution of profits, which may not appeal to the speculator but gives the shareholders a solid, growing, long-term investment in Hindustan Lever. Normally our finance requirements are highly seasonal, at times we have to resort to short-term borrowings, but, in the long-term, we plan to accumulate our own resources to finance as much as we can ourselves.

"An active duty of the financial accountants is to keep the cash constantly on the screen as it flows through the Company's veins and arteries. They watch and report on its movements every week, and with the help of the operating management make monthly, quarterly, annual and five-yearly 'forecasts, Cash, if its flow is not carefully watched, can soon get tied up in little pockets and lie unused or not used to the best advantage. The accountants and operating management must always keep it on the move to where it is most needed.

"Equally, a watchful eye is kept on the capital employed in both fixed and current assets through quarterly estimates and actuals, and on the return upon the capital so employed. To make it more realistic, for the purpose of this exercise, the fixed assets are not taken at their net book value, as shown in the balance-sheet, but on the basis of their current replacement value with a suitable adjustment for depreciation based on this replacement value. Its realism lies in the fact that it takes into account the changes in the value of money and shows the capital employed in the business by management on present-day value. After all, the historic value of money is not of relevance and, in an economy even as mildly inflationary as ours, a management has to be alert to any depreciation of money.

Men

"As I said in my speech last year when I discussed our marketing, ultimately the quality of an activity is judged by what its men are. We, therefore, place a great deal of importance upon proper recruitment, training and promotion of accountants. Many of them are qualified, but some have been trained by us on the job. There is a carefully planned development programme designed to give the young accountants experience wherever possible on other sides of the organisation as well. We also arrange for them to attend courses both inside and outside the Company, not only on accounting but on general management subjects as well. The training task, however, does not stop here; it goes on to project the accounting services to non-accounting management, to break the mystery and fear that surrounds accounting in the eyes of non-accountants. We run special short courses at our own training centre on finance and accounts, designed to give our factory, marketing, buying and other managers an insight into accounting concepts and techniques that are likely to be of service to them.

"We need men of quality in accounts; men who will feel active participants in our management and not just providers of a service. Professional skill is important but for our needs we look for more—for qualities of management, leadership and imagination. During their development, we expose them to the broadening influence of spells in marketing, branches and factories, so that they learn to feel part of a team. The factory accountant should feel that he is helping with the running of the operation, and one working on a project, the excitement of looking ahead. In fact, we want all our accountants to feel that they are sharing in the running and the progress of the Company.

"I hope you will appreciate from what I have said today that we believe in a strong accounting and financial organisation, taking an active part in running our business and earning profits. There can be no rule about a single system, but we believe that the one we have evolved serves us well. Our accountants are, of course, ever willing to learn and are always seeking ways to improve their service to management."

NATIONAL PROJECTS CONSTRUCTION CORPORATION

LOW LEVEL OF ACTIVITIES AND POOR RESULTS

THE first Plan's experience with the execution of major river valley projects revealed quite a few inadequacies. There was, firstly, the inadequacy of the administrative machinery in the States to undertake the construction of large works. The paucity of private contractors adequately equipped and competent to undertake the execution of such projects was also there. The Central Government, therefore, considered it necessary to establish in the public sector a corporation which would combine the advantages of departmental construction with the flexibility associated with the execution of works by private construction agencies. Such a corporation, it was thought, would solve two problems—one presented by the tendency of project authorities to purchase new machinery and equipment even when serviceable surplus machinery was available on other projects and the other pertaining to the non-utilisation of experienced technicians who became surplus on the project because of the disparity in pay and service conditions in the various States. Thus it came about that the National Projects Construction Corporation was established in January 1957 for the purpose of undertaking execution, among others, of river valley projects in the country.

The expectation at that time was that all the States would participate in this venture. But this has not been fulfilled, for, of the 15 States, as many as seven—Andhra Pradesh, Madras, Mysore, Maharashtra, Gujarat, West Bengal and Orissa—are not participating in it. This is a rather anomalous situation, for 'Irrigation' is in the State List and the capital structure of the Corporation has clearly envisaged participation by all the States. The Estimates Committee of the Second Lok Sabha, which had recently examined the report and accounts of the Corporation, and the report of which was published only a few days ago, was, therefore, constrained to observe that it would have been prudent on the part of the Centre to have moved more cautiously and ensured the participation of most, if not all the States. The Committee was wholly right in this criticism, for, after the formation of the Corporation and between 1957 and 1961, as many as 26 major irrigation and hydro-electric projects were started in the States, of which virtually none was entrusted to the Corporation. Only some portions of work relating to the Rajasthan Canal, Tawa and Kosi Projects—portions such as aqueducts, masonry structures, lining work, submersible bridge, excavation of the foundation dam and construction of barrages—have been handled by it so far. This fact would appear to suggest that the States have not been too inadequately equipped in the second Plan period to undertake major irrigation schemes and hydro-electric projects and that there is a sufficient number of construction agencies in the field.

Objectives Not Achieved

The original justification for the establishment of the Corporation is thus not very much there now. Nor has the Corporation, according to the findings of the Estimates Committee, achieved some of its avowed objectives. For instance, it has not procured and utilised, to any considerable extent, the surplus machinery and equipment from the completed projects, whereas the State Governments were able to secure, between 1956 and 1961, Rs. 6.7 crores worth of such surplus equipment. Secondly, the Corporation has been able to absorb only 26 persons, representing a meagre 0.6 per cent of the total surplus technical personnel released from the completed projects. And thirdly, its objective of combining the advantages of departmental construction with the flexibility associated with the execution of works by private construction agencies has also not been realised to any reasonable extent.

In another respect, too, the Corporation has failed. According to the original conception, the Corporation was to have operated like an ordinary contractor, competing with others in the field. But, in actual practice, it has undertaken works mostly on cost-plus basis and at negotiated rates. This is a radical departure from the system of open competitive tenders. In fact, of the contracts of the value of about Rs. 11 crores secured by it, 71 per cent has been at negotiated rates and 17 per cent on cost-plus basis. The Estimates Committee has criticised this practice strongly, and rightly in our opinion, in the following passage:

"While the Committee appreciate that the Corporation should do standard work, they do not quite see how it can only be done at negotiated rates or on a cost-plus basis. If, as the general belief goes, the private agencies quote at rates which include a high margin of profit, the Committee do not appreciate why the Corporation should not compete successfully with the private agencies and yet secure the contract and turn out standard work. The Committee at any rate feel that the National Projects Construction Corporation should not deviate from the system of competitive tenders as it goes against the basic principle of commercial practice which the Corporation is expected to observe. Any other arrangement like negotiated rates and cost-plus basis would tend to curb the entrepreneurial initiative of the Corporation and would hardly leave any incentive for economy and efficiency in the execution of works. It would also expose the Corporation to the allegation that it is getting a favourable treatment and that but for the negotiated rates it would not be a viable unit. Efforts should, therefore, be made by the Corporation to observe normal commercial practices in the line and to develop its competitive strength and capacity to execute works more economically and efficiently *vis-a-vis* the private contractors. It should not depend entirely on contracts secured on negotiated rates and cost-plus basis."

A related finding is to the effect that the rates quoted by the Corporation were higher than the estimated costs by 7 to 29 per cent whereas, in the case of private contractors, the range was between one and eight per cent. But a salutary effect, according to the Corporation's claim, is that, after its entry into the field, the tenders of private contractors, which were 40 per cent above the estimates, have dropped considerably.

The financial results of the Corporation were also critically examined by the Estimates Committee. The total capital of the Corporation during the period 1957-58 to 1960-61 *vis-a-vis* the value of work done by it is, as follows:

(Rs. in lakhs)

	1957-58	1958-59	1959-60	1960-61
Total capital	88.19	134.77	160.86	179.66
Value of work done ...	40.50	124.00	218.00	257.89
Ratio of total capital to the value of work done ...	1:0.47	1:0.91	1:1.3	1:1.4

The ratio of total capital to the value of work done in each year was not quite favourable. It is stated that, on the basis of 3:5 ratio of turnover on capital, Rs. 2 crores would cover a business of Rs. 7 crores a year. According to this basis, the turnover of the Corporation ought to have been Rs. 6.3 crores in 1960-61. But the actual turnover was much below the normal expectations. No wonder, therefore, that the Corporation's profit has been relatively low. The unsatisfactory position in this regard is clear from the following figures:

	1957-58	1958-59	1959-60	1960-61
Profit (in Rs. lakhs)	3.8	3.7	4.1	2.2
Percentage of profit in relation to total value of work done.	8.1	3.0	1.9	0.9
Dividend (free of tax—per cent.)	1.2	1.7	1.0	1.0

Although the Corporation has thus so far not functioned as profitably and well as it should have, it is claimed to have served one useful purpose. In the opinion of the Estimates Committee, its very existence has curbed the tendency of the private contractors to quote high rates. It is hard to say how far this conclusion is correct, for it suggests that there is no competition among the private contractors and that they all conveniently join together in order to extract the maximum gain they can from the Governments, an assumption which is not wholly convincing. Even if it be true, the better solution would be to encourage more competition in the private sector by creating the necessary climate for it. Even granting that it is better to keep, under the conditions prevailing in this country, a public sector corporation to frighten the private sector units and make them behave properly, it is only commonsense to say that the National Projects Construction Corporation cannot play even this negative role effectively on the basis of its performance so far. The private sector will need something more than a scare crow. Surely, there is so much construction work to be done in this country that the Corporation can play a more useful and gainful part than it has done, if an endeavour is made to execute works with greater speed, efficiency and economy and to maintain, at the same time, a high standard of quality. It is the responsibility of the Ministry in charge of the Corporation to instil these qualities in the management concerned.

4½ PER CENT

ORISSA STATE ELECTRICITY BOARD BONDS, 1972

For Rs. 150 Lakhs

(Payment of Interest and Repayment of Principal Guaranteed by the Government of Orissa)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99 PER CENT

REDEEMABLE AT PAR ON THE THIRD MAY, 1972.

SUBSCRIPTIONS will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Patna, Lucknow, Hyderabad, Cuttack, Berhampur and Sambalpur from the 30th April, 1962 to 2nd May, 1962, both days inclusive. Subscription may however be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices of the State Bank of India mentioned above and at the office of the State Electricity Board, New Capital, Bhubaneswar.

NEW PRODUCTS AND PROCESSES

Better Welding

SEMI-automatic welding by means of a magnetic flux is used in a new process introduced by the British Oxygen Company, of Bridgewater House, Cleveland Row, St. James's London, S.W.1. The magnetic flux is used in association with the usual shield of carbon dioxide gas. Mild steel wire carrying direct current is fed into the welding torch and the flux powder, metered into the gas stream, is attracted to the wire which serves as the welding metal and forms a layer around it. A metering device is joined to the wire feed rolls to ensure a constant proportion of flux to wire. It is claimed that as the flux prevents deoxidation and acts as a refiner, it transforms the cheap mild steel wire into a low-hydrogen, fine-grained weld metal with excellent mechanical properties and is said to result in a better metal deposition rate and better welding.

Versatile Thixotropic Chemical

A special form of aluminium hydroxide is said to be the most thixotropic material yet produced—thixotropy being the property which some substances possess of forming a network when in suspension in a liquid so that the mass appears to be a solid, or gel. Stirring will break up the gel, but it will form again when stirring stops. Another property of the chemical is that it is the only known inorganic thickening or suspending material which is positively charged, which means that the particles can fix themselves to the surfaces of negatively charged substances such as clay, glass and paper. A water dispersion of the chemical, dried on a surface, will form a microscopically thin film which remains stable at high temperature. It has been found effective in binding such fibres as glass, asbestos, rock wool and aluminosilicates. Heat-resistance of firebrick is also increased by treatment with it. Investigations are in progress to determine whether it will improve qualities of bonded plastics, textiles and cosmetics, to mention but a few products.

Automatic Ream Counting

An accurate, simple automatic ream counter has been developed in Britain for the paper industry for use where sheets of paper are being cut from bulk reels. It is mounted directly on the cutting machine and is operated by impulses fed to it by a microswitch attached to the fly-knife shaft. One impulse is provided for each cut. Markers, spray guns or ink rollers may be operated by the unit to provide a mark on the paper at predetermined intervals dependent on the number of sheets required per ream, along the axis of the slitter knives. This produces, after slitting, an ink mark on the edges of the cut, that is on each edge of the cut sheet. When this particular sheet is stacked at the end of the machine, the ink marks show up in the stack indicating a set number of sheets between marks.

Fused Quartz Springs

Coiled springs half the diameter of a human hair, yet stronger than steel and incredibly accurate, are being made from quartz by two Lockheed Missiles and Space Company engineers. The springs are so precise that they can measure how much bacteria gain in weight when they eat. Mr. Wolf Goodman and Mr. Don Caster, engineers on the Polaris submarine-launched missile programme, have mastered the difficult art of coiling the glass-like pure fused quartz into springs which they contend have no equal in achieving measuring accuracies. The Lockheed engineers have developed their proficiency in this scientific and highly specialised hobby in the garage of Goodman's Palo Alto home. The springs are made from fibres pulled from fused quartz—pure sand—and not to be confused with crystalline quartz. Only a few people in laboratories have mastered the skill of coiling quartz into springs because the melting temperature of quartz is around 3,300 degrees F. (steels melt at about 2,700 degrees). And at room temperatures quartz is extremely brittle. The coils are fashioned by wrapping the quartz fibre around a mandrel mounted in a lathe. As the fibre is carefully fed onto the slowly turning mandrel, heat is applied to the fibre with an acetylene torch.

Oscilloscope Pre-Amplifier

Weighing only 19 ounces, a transistorised oscilloscope pre-amplifier covering the frequency range 3 c/s to 100 kc/s is now available. It is manufactured by Marconi Instruments, St. Albans, Hertfordshire, Britain. Measuring 2¾ inches by 4½ inches by 3 inches, it comprises a low consumption 5-transistor circuit on printed boards and an internal 22½-volt battery which provides for several weeks' continuous daily operation. It has a multitude of applications. It permits the direct display of outputs from low-level industrial transducers such as strain gauges, pressure pick-ups and accelerometers; while it can also be used to study residual ripple in power supplies and analyse cross-talk, carrier suppression and noise on telephony circuits.

Dual-purpose Valve

A positive stop valve which is claimed to be completely reliable under severe conditions, and which can also be used to throttle steam flow in a reducing valve by-pass, has been introduced in Britain. Available in several sizes up to 2 in., the new valve will handle steam working pressures up to 200 lb./sq. in. and temperatures up to 500°F. Called the Bailey Bi-Seat-Two, it is designed for "over and under" flow and consists of a nickel alloy main valve and a spring-loaded parabolic plug. Sir W. H. Bailey and Co. Ltd., Albion Works, Patricroft, Manchester, are the manufacturers.

Automatic Slot Machine for Railways

An automatic railway ticket slot machine designed by a Geneva (Switzerland) firm has been tried out in a Swiss railway station. In spite of its small size—it measures just over 3 ft. 3 in. wide by 3 ft. 7 in. high—this new machine is able to print and issue tickets for 32 different destinations, for first and second class, single, double and half fares. It is designed to take coins of 1, 2 and 5 francs and 10, 20 and 50 centimes; it gives the right change, indicates the price to be paid when the passenger presses on the appropriate button, prints and dates the tickets, records and totals the receipts and the number of each sort of ticket sold. This machine, the first of its kind in Switzerland, contains 250 different apparatuses in all and nearly a mile of wiring.

Protective Coating for Steel Alloys

A new coating for special steel alloys undergoing heat treatment is being made by F. W. Berk and Co. of Britain under licence to Rolls-Royce. It is believed to be unequalled in the world, and is used to prevent the corrosion of metal at the high temperature used for stress-relieving. The coating has several variants. All are called Berkatekt. They range in price from £2 a gallon for No. 1 to about £5 a gallon for No. 500. The covering power is roughly 600 square feet to one gallon. Based on bentonite, and for some variants ceramic oxides, Berkatekt has wide uses, especially for titanium and zirconium alloys quite apart from the special steel alloys used in turbines and aircraft.

Electronic System for Checking Timber

An electronic timber measuring system, intended for use with conveyor-type timber sorting machines, is to be produced by a British firm, Honeywell Controls Ltd., Middlesex. The total area of each "parcel" of planks travelling on a conveyor can be measured and permanently recorded automatically during movement. Length and width of individual pieces can be displayed for checking. An official of the firm says: "The system is for hardwood or softwood lengths up to 25 ft. (7.62 m.) and width upto 13 in. (33.019 cms.). It will save a great many man-hours of manual stock-taking and provide a ready check of timber arriving in random lengths. It could be the basis of fully automatic control scheme for measuring and sorting timber.

Plastic Coated Netting

A British company, Rylands Brothers Ltd. is producing a new plastic-coated netting which is believed to be a significant advance on galvanised wire netting as it has a greatly increased life and a smarter finish. The plastic-coated netting combines the protection of galvanising with a coating of a specially durable and resilient plastic, the top grade galvanised core being a second line of defence against atmospheric corrosion. It is claimed that the increase in price over the conventional wire netting is more than counter-balanced by the greater life.

MANCHESTER LETTER

(*Concluded from page 721*)

grammes. The policy of the current Administration, according to reliable American observers, is to attempt to maintain prices at about the loan level. Now it is known that the support price is to be on a similar basis to last year, the way is open for a freer offtake.

Looking ahead to subsequent crops from 1963 onwards, President Kennedy is urging the adoption of plans allowing growers to exceed their acreage allotment by up to 30 per cent, with the idea that these extra supplies should be marketed under arrangements offering the farmer approximately the world market price. The Secretary for Agriculture has declared that changes in cotton price support legislation are needed to reduce Government costs, to enable the fibre to compete more effectively with the synthetics in the domestic market, and to make American cotton more competitive abroad.

No early or dramatic results are expected from the introduction of this programme but, if carried out, it would eventually bring an era of less restrictive trade policies. In the meantime, the general supply position shows no marked change, as the fall in raw cotton production this season has been offset by the increase in opening stocks. The quantity of the raw material available in the United States has declined by about 500,000 bales, owing to a reduced carryover.

Record Acreage

In other countries, a record acreage was planted and new output peaks were anticipated. Sharply curtailed yields in Egypt, India and Uganda, however, resulted in a smaller outturn, although initial stocks were responsible for supplies outside the United States establishing a new record this season. Marked increases in supply have occurred in the Middle East, Central America, Greece, and possibly Brazil, the International Cotton Advisory Committee has disclosed. Consumption in the free world is likely to remain at about the 1960-61 level. Textile production in the United States has lately continued its upward trend, but, in contrast, the mills of Western Europe and Japan have been adversely affected by the familiar stock cycle.

Local traders need not be reminded that the United Kingdom is the most seriously affected area and in the first four months of the current season had absorbed 13 per cent less cotton than in the comparable period. Consumption has also turned down on the Continent, particularly in Western Germany. Tighter production controls in Japan are likely to reduce consumption, but the use of cotton in India reached a new peak during the early months of the season.

Exports of raw cotton may well decline to under 14,000,000 bales, as against over 15,000,000 bales in each of the last two seasons, as a result of the curtailment of output in the manufacturing centres of Western Europe and Japan. The brunt of this decline in trade will be felt by the United States, the shipments of which, it is suggested, may fall to around 5,000,000 bales, a reduction of some 1,500,000 bales on last season. Other suppliers may step up their sales abroad to nearly 9,000,000 bales, an increase of some 500,000 bales.

Incidentally, an interesting development in raw cotton statistical affairs is the decision of the Soviet Union to join the International Cotton Advisory Committee. Although figures from behind the Iron Curtain have long been suspect, direct contact with those responsible may lead to more information being readily available from formerly "estimated" sources.—*All Rights Reserved.*

ANNOUNCEMENT

THE STATE BANK OF JAIPUR

have pleasure to announce the introduction,

as from the 1st May 1962,

of

SPECIAL CREDIT TRANSFER SYSTEM

whereby any customer having a personal account with the Bank will be enabled to use any office of the Bank for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000/- in any one instance FREE OF CHARGE

A deposit relationship with the Bank will entitle the use of the services of any of its 49 offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details

Please contact any office of the State Bank of Jaipur where you will always find a friend.

THE STATE BANK OF JAIPUR

Subsidiary of the State Bank of India

AT THE NATION'S SERVICE

WORLD OUTPUT OF COPRA HIGHER

CONSUMPTION IN WESTERN EUROPE LAGS BEHIND

WORLD production of copra and coconut oil tended to move up in 1961 for the second year in succession, after the distinct setback suffered in 1958 and 1959. According to the F.A.O. world output of copra in 1961 was higher at 3.43 million metric tons, as compared with 3.27 million tonnes in 1960 and the very low figure of 2.76 tonnes in 1959. This level is, however, still below the output of 3.48 million tonnes achieved in 1956. Region-wise, Asia is the largest producer of coconuts, accounting for over 80 per cent of total production, Philippines, Indonesia, India and Ceylon being the major producers, as will be seen from Table I on this page. It may be noted here that since country-wise figures of output from all sources are not available for 1961, they are not given in the table; the period covered in the table is, therefore, only 1956-1960. The following observations on the supply and demand position of copra and coconut oil is based on a comprehensive analysis of recent trends in the development of coconuts, given in the *Coconut Situation*, a publication issued by the U.N. Food and Agriculture Organisation twice a year. The publication seeks to bring together a wealth of basic data on the production and consumption of copra and coconut oil in the different countries, which have not been readily available.

Coconut Oil

With the increase in the output of copra, the outturn of coconut oil has also gone up. Table II shows the trend in the production of coconut oil during the period 1957-61, as compared with the pattern of production of other oils and fats. It would appear that, while production has increased, demand from oil-based industries has tended to flag, particularly in Western Europe, the major market. This is the result of lower consumption of coconut oil by margarine and soap industries. Full statistics on the use of coconut oil, according to the F.A.O. study, are not available for Western Europe, but it appears from partial information that the level of utilisation was materially lower in early 1961 than in 1956-57. Margarine and soap, the two main outlets for coconut oil in Western Europe, were being produced at a somewhat slower rate, and the percentage share of coconut oil in the total ingredients used was sharply lower. The production of margarine in Western Europe expanded rapidly after the war until 1956, but since then, it has not shown any upward trend, as is shown in Table II. Margarine consumption and production tended to decline in years of heavy butter production and low butter prices and to increase when butter prices rise. The year 1961 has been one of heavy butter production in Western Europe, and margarine production in the first half-year was about 920,000 tons, as compared with 960,000 tons in January-June 1960. Production in the first half of 1961 was at an annual rate of about 1,840,000 tons, or 3 per cent less than the 1956-57 average of 1,890,000 tons.

Margarine and Soap

In 1956 and 1957, coconut oil probably accounted for around 25 per cent of the fats and oils used in margarine. Since the fat content of margarine is roughly 80 per cent, the decline of 50,000 tons in margarine production represents in itself a loss of about 10,000 tons (annual rate) in the market for coconut oil. The production of soap in Western Europe showed a downtrend during the 1950's, reflecting the competition of synthetic detergents. Production of soaps in 1960 is estimated to have touched about 1,460,000 tons, or 11 per cent less than the 1956-57 average of 1,635,000 tons and it is likely that the 1961 level has been roughly the same as in 1960. Assuming an average fat content of soap of about 60 per cent, and the presence of about 20 per cent of coconut oil in the fatty ingredients used, the decline in soap production represents a loss of a market roughly 20,000 tons (annual rate) of coconut oil.

Statistics on the use of coconut oil in margarine in the first half of 1961 are available for two of the major Western European producers, the United Kingdom and the Netherlands. In the U.K., coconut oil contributed only 11 per cent of the total fats and oils used in the first half of 1961, as compared with an average of 19 per cent in 1956 and 1957. In the Netherlands, the percentage declined to 16 from 25. If the 1956-57 percentages had been maintained, the use of coconut oil in margarine in the United Kingdom would have been at an annual rate 23,000 tons greater than it actually was, and in the Netherlands 17,000 tons greater. In the case of soap, there was, however, a slight gain in both countries in the percentage of coconut oil used. If the 1956-57 percentage had been maintained about 8,500 tons (annual rate), less coconut oil would have been used in soap in these two countries in the first half of 1961. It is thus seen that coconut oil was being used at a lower annual rate in January-June 1961 than in 1956-57 because of (1) the decline in margarine production in Western Europe (10,000 tons), (2) the decline in soap production in Western Europe (20,000 tonnes), and (3) the decline in the proportion of coconut oil in the ingredients of margarine in the United Kingdom and the Netherlands (40,000 tonnes). But this was partially offset by the increase in the proportion of coconut oil in the ingredients of soap in the United Kingdom and the Netherlands (8,500 tonnes). Thus the net decline in the consumption of coconut oil over the five-year period works out at 61,500 tonnes.

Since Western Germany produces as much margarine as the U.K. and the Netherlands put together, and since the various fats and oils in the international market compete freely with each other in W. Germany as they do in the U.K. and the Netherlands, it is likely that there has been a similar fall in W. Germany in the percentage use of coconut oil in margarine. If so, this would add another 40,000 tons (annual rate) to the result just reached. As pointed out by the F.A.O. study, there is reason to believe, therefore, that on a partial calculation, the use of coconut oil in Western Europe in margarine and soap was at an annual rate about 100,000 tons less in the first half of 1961 than in 1956-57. Table III shows country-wise production of margarine.

These calculations, it may be noted, leave out of account possible changes in the use of coconut oil in margarine in the other countries of Western Europe, which produce about one-third of the margarine in the region. It also leaves out of account a possible increase in the use of coconut oil in biscuits, ice-cream, and chocolate and sugar confectionery in the United Kingdom. This use fell from about 39,000 tons in 1957 to 26,000 tons in 1959 and may well have increased again as a result of the decline since early 1960 in the price of coconut oil. Estimates of this use are, however, not available for the period since June 1960.

Exports

Although the consumption of coconut oil showed signs of moving down in Western Europe, its intake of oil was nevertheless higher in 1961. World exports of copra and coconut oil rose by 17 per cent to 620,000 tonnes (in terms of oil) during the first six months of 1961, as compared with the corresponding period in 1960. It is expected that, during the second half, the rate of increase in exports was smaller. The increase in exports in the first half of 1961 was accounted for mainly by Ceylonese shipment of coconut oil and that of copra by Philippines and Indonesia. Malaya, too, stepped up its exports of coconut oil. Nearly half of the increase in shipments was in the form of coconut oil, mostly from Ceylon and Malaya. As in previous periods, virtually all the increase in exports was reflected in imports into Western Europe. The Netherlands, the U.K., West Germany, Italy and Belgium showed the sharpest increase. Among other countries, imports by mainland China were higher, but those into the U.S. decreased slightly. It is learnt that imports by Venezuela also declined considerably. Table IV shows the trend of exports both in terms of copra and oil.

† Provisional. ‡ Vanaspati output.

Thanks to the increase in production and smaller demand from some industries in Western Europe, the price of coconut oil has tended to sag. Prices of coconut oil tended to look down during the first nine months of 1961 and in the month of October were equal to the previous post-war low reached in August 1952. Straits coconut oil, 3½ bulk, was quoted in the London market at £79½ per ton at the end of October 1961, as against £96 a year before and as much as £139½ by the end of October 1959. The price, however, has moved up subsequently on technical considerations, the latest quotation being £87½ per ton. A major apparent reason for the continued weakness in the price of coconut oil has been the failure of demand in Western Europe to recover fully to the 1956-57 level. Imports into Western Europe in the first half of 1961 were 350,000 tons (including copra in terms of oil). This represented an annual rate of 700,000 tons, which is only 35,000 tons (5 per cent) less than the 1956-57 average. Use, however, apparently was lower by 100,000 tons or more (annual rate). As is pointed out ealier, most of the decline in use is attributable to the smaller percentage share of coconut oil in the total quantity of fats and oils used in margarine. The greater decline in the use of coconut oil than in imports, according to the F.A.O. study, implies that stocks of copra and coconut oil in Western Europe have risen in 1961.

DEVELOPMENT OF FERTILISERS

The third Plan target of stepping up production of nitrogenous fertilisers to one million tons (in terms of nitrogen) is proposed to be achieved by establishing fourteen new fertiliser factories, besides expanding the capacity of the existing ones. Of the 14 new fertiliser projects, four will be in the public sector, while the remaining ten will be mainly in the private sector, although in a few cases, there will be collaboration by the State Governments concerned. When all these projects are completed, there will be at least one fertiliser factory in every State in the country, excepting Jammu and Kashmir.

The Trombay Fertiliser Project designed to produce 90,000 tons will use the oil refinery's gases and naphta; half of the available ammonia will be converted into urea by partial re-cycle process, while the other half is to be utilised for the manufacture of nitro-phosphates through nitric acid treatment of rock phosphate. The Assam Fertiliser factory will produce 325,000 tons of fertilisers using the associated gas produced from the Naharkatia oil fields. This project will be located in Namrup in Assam. The Gorakhpur Fertiliser factory will produce 80,000 tons by using petroleum naphta from the Barauni oil fields. The exact place for locating the fourth public sector project has not yet been finalised. The project, provision for which is included in the third Plan, will produce 80,000 tons of nitrogenous fertilisers. The capacity of the Fertilisers and Chemicals, Travancore (F.A.C.T.) is also proposed to be stepped up by 30,000 tons. Expansion of the steel plants in the public sector proposed to be implemented in the third Plan period will also facilitate some additional production of fertilisers by using their by-products.

The ten proposed new factories in two private sector have been distributed more or less evenly among all the States. Thus, Andhra Pradesh and Madras will have two each, while Gujarat, Mysore, Madhya Pradesh, Rajasthan, Maharashtra and West Bengal will have one each. The two factories for Andhra Pradesh are proposed to be located at Kothagudam and Visakhapatnam. The Kothagudam factory will be based on coal from Singareni and will have a capacity of 80,000 tons. The Visakhapatnam factory will also have a capacity of 80,000 tons and will use naphta as raw material. The factories for Madras State will be at Madras and Tuticorin. The capacity of the factory at Madras will be 8,250 tons. The fertiliser factory for Madhya Pradesh is likely to be located at Itarsi or in any other suitable location in the State. The capacity of this project is likely to be 50,000 tons of fertilisers. Coal from Madhya Pradesh and naphta from the petroleum refineries would form the feed-stock. The factory for Rajasthan will have a capacity of 80,000 tons using gypsum supplies of the State. The West Bengal factory will be located at Durgapur and will be operated by the private sector in partnership with the State Government. It will have a capacity of 58,000 tons. In Gujarat, the proposed factory will have a capacity of 96,000 tons and will be run by the private sector in collaboration with the State Government. For Mysore, the factory is expected to be located at Mangalore, while the factory for Maharashtra will be in the Koyna area.

An International Rice Research Institute, a world centre for research on rice, is being established in the Philippines. The programme of the Institute will include basic and applied research in the fields of varietal experiments, plant protection, agronomy, biochemistry, soil chemistry, microbiology, agricultural engineering and agricultural economics.

KOHINOOR MILLS OUT OF THE WOOD

SMART RECOVERY IN PROFIT-MARGIN

THE Kohinoor Mills Company Ltd. is definitely out of the wood, thanks to the curtain having been rung down, nearly a couple of years back, upon the squabbles and dissensions, which badly divided its Managing Agents, Killick Industries Ltd., Bombay, for quite long. Bearing testimony to this is the further improvement staged by the Company during the year to 31st December 1961, which is highlighted by a smart recovery in the profit-margin (ratio of gross profit to sales) from 4.7 per cent to 8.1 per cent. Coming in the face of "several handicaps," voluntarily imposed and involuntarily attracted by the industry, the improvement is due, in no small way, to the undisturbed attention of the Managing Agents to the Company's affairs.

The gross sales have increased during the year from Rs. 682.22 lakhs to Rs. 728.19 lakhs, or by 6.7 per cent as against 2.5 per cent in the previous year. Gross profit has again risen sharply by 84.5 per cent, as against more than 88 per cent in the preceding year, from Rs. 32.18 lakhs to Rs. 59.38 lakhs and has come close to the recent best of Rs. 59.98 lakhs, earned in 1956. The cost of raw materials and stores has come down from Rs. 385.54 lakhs to Rs. 371.73 lakhs as have staff expenses from Rs. 215.62 lakhs to Rs. 212 lakhs. Other expenses, however, have continued to be higher, with an increase of Rs. 7.26 lakhs to Rs. 82.31 lakhs. The provision for depreciation has been stepped up from Rs. 10.92 lakhs to Rs. 17.02 lakhs and that for taxation from Rs. 4.25 lakhs to Rs. 15.68 lakhs. The Managing Agents' commission has amounted to Rs. 3.97 lakhs, as against Rs. 2.18 lakhs in the previous year. After making these allocations, the net profit has shown a rise of nearly Rs. 8 lakhs to Rs. 22.71 lakhs, and compares quite impressively with a mere Rs. 1.97 lakh earned in 1958. The return to the shareholders has been stepped up again, from 15 per cent to 18 per cent (6 per cent interim + 12 per cent final), subject to tax, giving a net return of 12.6 per cent per annum; it is, however, still well below the tax-free 18 per cent per annum maintained in 1953 and 1957. It is gratifying to find that, unlike in the preceding four years, the Directors have not found it necessary to withdraw any amount to pay the dividend for the year under review. On the contrary, the net profit has been large enough to permit the transfer of Rs. 4.90 lakhs to development rebate reserve.

The table below compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sale proceeds (gross)	728.19	682.22	665.19	634.27
Closing stocks of finished goods and materials in process	88.79	99.84	81.28	134.23
Other income	8.29	7.61	2.47	2.58
Raw materials and stores consumed	371.73	385.54	340.94	372.09
Staff expenses	212.00	215.62	187.39	184.63

Carry forward	0.02	0.21	0.28	0.68

Market value of ordinary share (in rupees):	1962	1961	1960	1959	1958
High	327.50	332.50	372.00	340.00	294.00
Low	303.50	259.50	262.75	231.00	230.50

* Includes Rs. 1.66 lakh, being refund of additional income-tax for 1952.
† Subject to deduction of tax.

The Directors say that, during the first half of the year, cloth and yarn stocks were higher than usual, owing to the price stamping scheme, increased incidence of excise duties on all varieties of fabrics and the imposition, for the first time, of an excise duty on cotton yarn, excepting certain counts in hank form. This duty was applicable to yarn consumed by the mills for weaving as well as to yarn spun for sale. The voluntary control of prices of cloth, involving sale of 25 per cent of the total production as "popular varieties" at prices 2 to 3 per cent lower as compared with similar varieties produced by the mills, as also control on staple fibre yarn up to 44s counts, had a restraining influence. Besides, there was an upward revision in duties on chemicals, dyes, machinery and spare parts. Despite these handicaps, the Directors state, cloth and yarn stocks at the end of the year were reasonably low, which, in other words, means that the Company had a better market for its products and, therefore, fared well. Raw cotton supply was easy initially, but difficult at the end of the year. While the position for the current year appears to be alarming, the Directors add that the mills' position is comparatively satisfactory.

From 1st February 1962, Nahalchand Laloochand (Private) Ltd. and V. S. Apte and Son, the Company's selling agents, relinquished their respective yarn and cloth agencies in line with the Directors' view that, "judging from the present conditions and market trends, it was essential that the mills should begin catering more directly to the consumers." This involved payment of Rs. 1 lakh to Nahalchand Laloochand (Private) Ltd. and of Rs. 1.25 lakh to V. S. Apte and Son as compensation for earlier termination of their respective yarn and cloth selling agencies. Since then, Mr. L. V. Apte, one of the partners of V. S. Apte and Son, has been appointed on the Board of Directors. It is also proposed to include on the Board Mr. Kantilal Nahalchand who became an additional Director of Killick Industries Ltd., the Managing Agents, in February 1962, subject to the approval of the Central Government.

The financial position of the Company is sound. Its paid-up capital of Rs. 100 lakhs, all in equity shares of Rs. 100 each, is backed by reserves of Rs. 107.09 lakhs. Bank borrowings have dropped during the year from Rs. 99.18 lakhs to Rs. 69.12 lakhs, but unsecured loans have increased from Rs. 17.47 lakhs to Rs. 26.73 lakhs. Other current liabilities and provisions amount to Rs. 93.27 lakhs. The total indebtedness to outsiders aggregates Rs. 189.12 lakhs, to cover which are available current assets, loans and advances of Rs. 250.45 lakhs, and investments of Rs. 7.20 lakhs. The gross block increased during the year from Rs. 418.90 lakhs to Rs. 448.96 lakhs, has been written down to Rs. 131.52 lakhs, and inclusive of work-in-progress at Rs. 7.22 lakhs, is shown in the balance-sheet at Rs. 138.52 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at about Rs. 308 *cum*-final-dividend, and, on the *ex-div.* basis, offer a net yield of 4.2 per cent per annum.

UNITED WIRE ROPES LTD.

After transferring Rs. 1.50 lakh from the profit and loss account to the expenditure prior to construction account and providing Rs. 1.541 for depreciation and Rs. 13.021 for taxation, the United Wire Ropes Ltd. [Managing Agents Messrs. C. H. Gandhi and Sons (Private) Ltd., Bombay] has made a loss of some Rs. 13.000 for the year ended 31st December 1961. The Directors state that, after the suspension of acquisition proceedings in respect of lands for companies in general due to a recent Supreme Court judgment, the Company directly purchased about 75,000 sq. yards of land at Panchpakhadi, Thana, near Bombay, which was being acquired by the Government of Maharashtra for location of its factory. Contour survey has been completed, and preliminary building operations are in progress. Necessary building materials have been covered. Power and water sanctioned by the Government are being brought to the site. Against the import licence of the c.i.f. value of Rs. 33 lakhs, the Company has placed orders for plant and machinery with manufacturers in the U.K., West Germany, France and Belgium, and the shipment would start arriving from May 1962, and would be completed by August-September 1962. Orders for indigenous machinery have also been finalised, and it would be delivered in time for erection of the plant and machinery in July this year. The plant, the Directors observe, will go into production as scheduled, that is, by the end of this year. An agreement with the Industrial Credit and Investment Corporation of India for a foreign currencies loan of 6.30 lakhs dollars, or Rs. 30 lakhs, has been executed, and funds are being drawn against this credit for payment for the import of steel wire rope plant, machinery and equipment.

NATIONAL RUBBER'S PROFIT BETTER

DIVIDEND RESUMED

WHEN National Rubber Manufacturers Ltd. (Managing Director Mr. K. N. Mookerjee, Calcutta) entered the capital market towards the close of 1957 to raise additional funds to finance an expansion programme, the Directors of the Company anticipated that the annual turnover on completion of the expansion scheme would amount to over Rs. 3.00 crores. The scheme was duly completed in the latter half of 1960 but the full effect thereof in the form of production upto the installed capacity could not be achieved during 1961, the first full year of expanded capacity. Output of almost all items, nevertheless, has shown some improvement and this has resulted in an increase in the turnover by 11 per cent, from the previous years figure of Rs. 243.01 lakhs to Rs. 270.19 lakhs during the year under report. Though this falls short of the targetted figure of Rs. 3.00 crores by no less than 10 per cent, the blame for it cannot be placed at the doors of the Company, since its production in the year was hampered by a variety of extraneous factors, not excluding power shortage during the first half of 1961.

Despite high raw material prices, the gross profit has grown in tune with the sales and has risen from Rs. 8.53 lakhs to Rs. 13.80 lakhs. Provision for depreciation has been raised slightly from Rs. 5.91 lakhs to Rs. 6.93 lakhs, while no provision has again been made for taxation. The net profit at Rs. 6.87 lakhs is, therefore, substantially higher than the sum of Rs. 2.62 lakhs earned in 1960. After transferring from this Rs. 2.72 lakhs as against Rs. 3.12 lakhs last year to reserves and appropriating Rs. 0.78 lakh, as previously, for dividends on preference shares, the Directors have found enough balance available to resume the payment of the ordinary dividend suspended temporarily a year ago. The equity dividend at 6.5 per cent, subject to deduction of tax, claims Rs. 3.25 lakhs, leaving a slightly higher carry forward of Rs. 0.58 lakh as against Rs. 0.47 lakh brought in.

The vicissitudes in the fortunes of the Company during the past four years are well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1961	1960	1959	1958
Sales	270.19	243.01	200.03	163.46
Other income	1.88	1.19	2.20	1.50

Carry forward	0.58	0.47	0.14	0.97

* Subject to deduction of tax.

The strain to which the Company's financial position has been subjected by the rather too rapid expansion in its activities is fully reflected in its balance-sheet as at 31st December 1961. The Company's own invested funds of Rs. 75.65 lakhs, consisting of Rs. 10.00 lakhs in preference shares, Rs. 50.00 lakhs in equity shares and Rs. 15.65 lakhs in reserves and surplus are far exceeded by secured and unsecured loans aggregating Rs. 145.60 lakhs in addition to current liabilities of Rs. 43.39 lakhs. The total cost of fixed assets is Rs. 116.09 lakhs and has been written down to Rs. 69.57 lakhs as the net block. Current assets, including investments and loans and advances, total Rs. 193.56 lakhs while miscellaneous expenses yet to be written off are placed at Rs. 1.51 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 12.25 and fetch a net yield of 3.7 per cent per annum.

TATA MILLS PAY MORE

The Directors of the Tata Mills Ltd. have raised the dividend for the year ended 31st December, 1961, from Rs. 5 to Rs. 5.50 per share, subject to tax. The profit before taxation and development rebate reserve has gone up from Rs. 32.97 lakhs to Rs. 58.47 lakhs. The provision for taxation is Rs. 16 lakhs against *nil* in the previous year and that for development rebate reserve Rs. 4.50 lakhs against Rs. 7.25 lakhs. The dividend absorbs Rs. 14.43 lakhs against Rs. 13.12 lakhs a year before and reserves get Rs. 23.50 lakhs against Rs. 21.65 lakhs.

MODERN MILLS FARE WELL

NEW CAPITAL TO BE ISSUED FOR ACETATE FLAKE AND YARN PROJECT

MORE sales but a lower profit-margin. This has been the experience of the Modern Mills Limited [Managing Agents: Messrs. N. Sirur and Co. (Private) Ltd., Bombay] during the year ended 31st October 1961, the statement of accounts for which has just been published. In fact, from the point of view of turnover, 1960-61 has been the best in the post-war period. Sales of cloth, yarn and waste during the year improved by Rs. 40.11 lakhs to Rs. 232.40 lakhs, the percentage increase being 20.8 as against 14.8 in the previous year. This expansion, with a fall in the inventory to Rs. 81.64 lakhs from Rs. 83.80 lakhs a year before, indicates a rise in production. The gross profit, however, has increased only at a slower pace, from Rs. 29.12 lakhs to Rs. 33.98 lakhs, or by 16.6 per cent as against 67 per cent in the preceding year. Not only has the profit not moved up commensurately with the rise in sales, the profit-margin (ratio of gross profit to sales) has also moved down, albeit slightly, from 15.1 per cent to 14.6 per cent, though it is well above the 10.4 per cent in 1959. The results for the year under review are, however, more satisfying if they are viewed against those for 1958-59. The gross profit, for instance, has nearly doubled from Rs. 17.41 lakhs to Rs. 33.98 lakhs between 1959 and 1961, and that, too, without any addition to the machinery. But 1958-59 was not such a good year for the cotton textile industry. The Directors state that, apart from the relatively better trading conditions, a drastic change in the pattern and scale of production has been the major factor responsible for the improvement in profit and that strenuous efforts are being made to augment the Company's profitability further.

An idea of the Company's progress in the past four years can be had from the comparative table below:

(In lakhs of rupees)

	For the year ended 31st October			
	1961	1960	1959	1958
Sales of cloth, yarn and waste	232.40	192.29	167.46	170.78
Closing stocks	81.64	83.80	67.36	60.05
Other income	13.06	11.13	9.37	4.00
Cost of cotton, stores and spares consumed	128.27	117.13	98.46	100.54
Staff expenses	55.79	55.61	51.10	48.79
Other expenses	22.26	18.00	17.17	18.38
Gross profit	33.98	29.12	17.41	5.03
Provision for—				
Depreciation	7.84	4.62	4.36	3.37
Taxation	11.80	8.25	0.36	0.43
Managing Agents' remuneration	2.48	2.13	1.29	0.44
Net profit	11.86	14.12	11.49	0.79
Excess provisions written back	..	0.85	4.27	0.12
Transfer from reserves	0.05	..	..	5.15
To reserves	4.70	4.47	8.81	2.19
To gratuity provision	1.07	3.52	1.22	1.20
Dividend	5.58 (12%)*	5.58 (12%)*	4.65 (10%)*	2.79 (6%)
Carry forward	0.30	0.33	0.29	0.32

Market value of ordinary shares (in rupees)	1962	1961	1960	1959	1958
High	84.00	94.00	106.00	60.00	48.00
Low	67.00	63.00	55.00	40.00	46.00

* Subject to deduction of tax.

From the above table, it is clear that the Company's production costs have continued to rise in the past four years. During the year under review, the cost of cotton, stores and spares rose, as compared with the previous year, from Rs. 117.13 lakhs to Rs. 128.27 lakhs, staff expenses from Rs. 55.61 lakhs to Rs. 58.79 lakhs and other expenses from Rs. 18 lakhs to Rs. 22.26 lakhs. It is because of the rise in costs that the gross profit has not kept pace with the sales and the profitability has been slightly affected. The share of premium on cotton quotas under the export incentive scheme in the income from other sources of Rs. 13.06 lakhs is Rs. 2.16 lakhs against Rs. 3.54 lakhs in the previous year. There have been larger allocations to the essential provisions. Thus, depreciation claims Rs. 7.84 lakhs as against Rs. 4.62 lakhs a year before, and taxation Rs. 11.80 lakhs against Rs. 8.25 lakhs. Remuneration to the Managing Agents is Rs. 2.48 lakhs, a few thousands more. The net profit has, therefore, actually come down from Rs. 14.12 lakhs to Rs. 11.86 lakhs. And this has tied down the hands of the Directors from proposing any increase in the return to the shareholders, which has been maintained at 12 per cent per share, subject to tax, though perhaps they would have liked to propose a modest increase, if for nothing else, at least to enhance the investors' interest in their proposal to make a big capital issue. The amount of Rs. 4.70 lakhs, transferred to reserves, is nearly the same as in the previous year.

The current year would witness a sizable increase in the capital structure of the Company, which has been necessitated by its plans for modernisation and expansion of its two mills and more particularly by its proposed acetate flake and yarn project. It may be recalled that the Company had increased the authorised capital from Rs. 1 crore to Rs. 5 crores in the previous year. It has yet to proceed with its sanctioned fresh equity capital issue of Rs. 46.47 lakhs to the existing shareholders by way of one rights share for every share held. This was delayed for certain reasons but will be proceeded with very shortly. Last year, the Directors had proposed to capitalise Rs. 23.24 lakhs and issue one bonus share for every four shares held, including the proposed rights share issue. The rules and conditions prescribed for this by the Controller of Capital Issues did not, however, permit capitalisation of the entire sum of Rs. 23.23 lakhs, and the Company, therefore, obtained consent to the issue of bonus shares up to a limit of only Rs. 15.49 lakhs, which would mean allotment of one bonus share for every six shares held by the shareholders on the increased capital of Rs. 92.95 lakhs following the rights issue.

In addition to these issues, the Company proposes to offer, towards the end of the year, subject to the consent of the Controller of Capital Issues, one new equity share for every equity share held by the shareholders at that time, which will secure nearly Rs. 1.08 crore. Subject to the approval of the shareholders, it also proposes to make a public issue of Rs. 1.5 crore in equity shares and Rs. 75 lakhs in preference shares. The new equity shares aggregating Rs. 2.58 crores are required for financing the proposed acetate flake and yarn project. A part of the proposed public issue would be reserved for foreign participants and the shareholders of Sundatta Foods and Fibres Ltd., who will be offered one new equity share of the Company for every one share, whether equity or preference. The new equity shares would, however, rank for dividend only after the new project goes into production.

It will be recalled that the Company has been licensed to manufacture five million lbs. of cuprammonium rayon yarn and four million lbs. of acetate yarn per annum at Harihar in Mysore State. The Government had approved last year direct negotiation by the Company of an American development loan of six million dollars for the cuprammonium project. Subsequently, it was found that the patents for the continuous process of manufacturing the yarn would soon be expiring in India, that is, in September 1963, and, therefore, the project had to be deferred, and the acetate project taken up immediately, which is now in the concluding stage. The Government has agreed to the Company directly negotiating with the U.S. Government Agency for International Development for a loan of $5 million to cover the chemical portion of the project, for which American collaboration has been assured. For the acetate spinning portion, negotiations are stated to have well advanced for the purchase of equipment from Europe under medium-term deferred credit combined with foreign financial participation. The industrial licence for the chemical portion of the project was originally received in favour of the sister company, Sundatta Foods and Fibres Ltd. Following discussions with the foreign collaborators and financing institutions, it was found more desirable to have an integrated project under one company. The Government's permission was, therefore, obtained to transfer the licence in the name of the Company, which has already received the licence for the acetate spinning portion. The Directors propose to strengthen the financial position of the sister company, in which the Company is to increase shortly its holding to exactly 10 per cent of its subscribed capital, by making a further trade investment of Rs. 12.5 lakhs to make that company a subsidiary unit. They have also sought the shareholders' approval for giving financial assistance to that company up to a limit of Rs. 5 lakhs, subject to the approval of the Government.

The Company's plans for modernisation and expansion of its two mills are under rapid implementation and, when fully implemented, would bring up the net block to over Rs. 1 crore and increase its output. From the current year, a third shift has been instituted in Mill No. 1 and entry made into the sewing thread market. A new large German blow-room line is also on order to replace the old lines. Increased export of yarn from the mill is contemplated to earn import entitlement for the Company. In Mill No. 2, a new Ruti sizing machine was erected during the year to increase the capacity and enable large sale of yarn on sized beams. Application has been made for 10,000 new spindles for balancing the spindleage at the mill with the existing looms. An import licence has been received for 144 automatic looms as expansion under the export promotion scheme, and a firm order will shortly be placed. To feed the automatic looms, 6,160 new spindles are also to be installed. The goal has been set for making the mill a balanced and composite unit of 38,696 spindles and 788 looms. A new Whitin comber set has also been installed to make the mill a combed counts unit. Improvements in finishing and bleaching processes are also proposed to be made.

The financial position of the Company, as at 31st October 1961, is sound. Its subscribed capital of Rs. 46.47 lakhs is supplemented by reserves and surplus of Rs. 48.27 lakhs. Its liability to outsiders aggregate Rs. 144.37 lakhs, including borrowings from banks of Rs. 96.35 lakhs. As against this, current assets, loans and advances total Rs. 156.51 lakhs. Investments of Rs. 3.05 lakhs include those quoted of Rs. 0.16 lakh. The gross block increased during the year from Rs. 151.49 lakhs to Rs. 160.48 lakhs, and has been well written down to Rs. 77.76 lakhs.

The Rs. 50 fully paid ordinary shares of the Company are currently quoted at Rs. 79 *cum-div.* and is ex-right of the proposed new share and bonus share. On the *ex-div.* basis, they offer a yield of roughly 5.6 per cent per annum, free of tax.

COMPANY LAW ADVISORY COMMISSION

The Union Government has reconstituted the Company Law Advisory Commission, following the expiry of the three-year term of office of the Chairman and members of the Second Advisory Commission Mr. K. K. Sharma, a retired judge of the Rajasthan High Court, has been reappointed as the Chairman of the Commission. The other members are: Prof. V. L. D'Souza, retired Vice-Chancellor, Mysore University; Mr. C. C. Chokshi, an ex-president of the Institute of Chartered Accountants of India; Mr. H. L. Khanna, a former president of the Upper India Chamber of Commerce, Kanpur, and Mr. Kali Mukerjee, Working President, Indian National Trade Union Congress, West Bengal Branch.

The Chairman's term of office will be until March 1963 while that of the members will extend up to the end of March 1965. All the members of the Commission, including the Chairman, will work on a part-time basis.

In accordance with Section 411 of the Companies Act, the Advisory Commission is required to inquire into and advise the Government on matters relating to the issue of notifications about the termination of managing agencies in industry and business, applications received by the Government for appointment of managing directors or managing agents, increase in the remuneration of directors, managing directors or managing agents, change in the constitution of the managing agents, variations in the terms of the managing agency agreement, etc. The Commission will also advise the Government on such other matters as may be referred to it by the Government.

During its three-year period of office, the outgoing Commission dealt with 4,725 applications and tendered advice in respect of all applications, except two, by the end of 31st March 1962. The disposal of the remaining two cases was postponed at the request of the parties concerned.

During the last three years, the Commission held 32 sittings in different centres like New Delhi, Madras, Bombay, Calcutta, Bangalore, Ahmedabad and Hyderabad. The largest number of applications considered by the Commission related to Section 326, concerning the appointment or re-appointment of managing agents. The number of such applications was 1,291. The second largest number of applications—1,000, fell under Section 269 relating to appointment of managing or whole-time directors. Section 310, which concerns increase in remuneration of directors, including managing whole-time directors and managers, attracted 892 applications and Section 346 dealing with changes in the constitution of managing agency companies or firms or corporations, attracted 687 applications. The smallest number of applications was received under Section 352 dealing with payment of additional remuneration to managing agents in excess of the limits specified in Sections 198 and 348 of the Act.

SYNOPSES OF COMPANY REPORTS

United Flour Mills Co., Ltd.

(*Managing Agents*: Messrs. Shaw Wallace & Co., Ltd., Calcutta.)

Annual General Meeting—30th April 1962.

Working Results:

	For the year ended 30th November (In thousand rupees)	
	1961	1960
Sales	93,05	1,01,21
Closing stock—		
Wheat	6,53	8,78
Flour	23	42
Gross profit	1,56	4,67
Transfer to Managing Agents' remuneration	12	45
,, ,, depreciation	29	34
,, ,, provision for taxation	81	2,31
Net profit	34	1,57
Adjustments	29	51
Appropriations:		
Total available balance	63	2,08
Transfer to development rebate reserve	2	4
To interim dividend (taxable) ordinary	Nil	75
	(Nil)	(15%)
Proposed final dividend (taxable) ordinary	50	1,00
	(10%)	(20%)
Total dividend	[10%]	[35%]
Carry forward	11	29

N.B.—Adjustments include the balance brought forward from the previous year and other credit items if any.

Extracts from the Directors' report: Trading Conditions.—During the first half of the year, the ban on the inter-State movement of wheat products was lifted, but the extraction percentages of wheat products and the maximum selling prices continued to be controlled by Government.

The market prices of *soojee* and *atta* remained fairly stable throughout the year, but the selling price of *flour* showed a downward trend and has declined further since the close of the year.

Production.—Production during the year was 2,13,412 Quintals (5,71,782 maunds) as compared with 2,28,522 Quintals (6,12,263 maunds during the year ended 30th November, 1960.

Accounts in brief as at 30th November 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,00,000	Gross block	9,11,153
Reserves and surplus	9,72,362	—Depreciation	6,18,898
Other liabilities	7,22,384		
		Net block	2,92,255
		Current assets	12,76,245
		Investments	22,881
		Cash	3,03,415
	Rs. 18,94,746		Rs. 18,94,746

* Paid-up capital consists of 50,000 ordinary shares of Rs. 10 each fully paid up. Of the above 25,000 shares are allotted as fully paid up by way of bonus shares.

W. H. Brady and Co., Ltd.

(*Chairman*: Mr. Pallonji Shapoorji Mistry, Bombay.)

49th Annual General Meeting—30th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales of machinery, engineering supplies, stores and general trading	1,93,90	1,52,43

To additional bonus for 1959 and 1960	2,86	Nil
To superannuation (pension) scheme for officers for past services	3,30	Nil
Transfer to general reserve	5,23	Nil
Proposed dividend (taxable) equity	15,60 (34½%)	15,00 (33⅓%)
Carry forward	2,85	2,85

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: Once again the Company's trading operations were adversely affected by the import restrictions imposed by Government, resulting in a moderate decline, as compared with the previous year, in the gross trading profit and also in commissions earned relating largely to the indenting side of the business.

As some of the managed Companies, with the exception of The Belapur Co., Ltd., earned higher profits during the year there was a small increase in the overall nett managing agency commissions in the year of account.

It is to be noted that there is a sizable reduction in the amount of total dividend received as compared with the previous year. This is due mainly to the fact that the dividend from the Company's investments in The Belapur Co., Ltd., has not been included, as in previous years, since the dividend relating thereto has been declared and paid in 1962.

Reference was made in the last year's report to the fact that (*a*) the Company's property known as "Wilderness Cottage" was sold and also (*b*) that the major part of the Company's holding of shares in The New City of Bombay Manufacturing Company, Ltd., was sold. The substantial profits made in these two directions are reflected in the profit and loss account for the year under review.

It will be noted that certain extraneous expenses were incurred, the important ones being: (*a*) The Company had to pay a sum of Rs. 2,86,191 by way of additional bonus for the years 1959 and 1960 consequent upon a settlement arrived at between the Company and the staff Union and (*b*) A Superannuation (Pension) Scheme for the staff in the Officers' grade was introduced and a lumpsum contribution amounting to Rs. 3,30,060 was paid by the Company to this Scheme.

In the latter part of the year another managed Company, viz. The Brady Engineering Company, Ltd., became a subsidiary of this Company and pursuant to Section 212 of the Companies Act, 1956.

By an agreement dated 23rd November 1961 the Company was appointed Secretaries and Treasurers of Gangapur Sugar Mills Ltd., with effect from 1st July 1961. The Directors have also accepted a proposal from Special Steels Ltd. for the appointment of the Company as its Secretaries and Treasurers subject to the approval of the Central Government which is now awaited.

Since the close of the financial year under review the following commitments affecting the financial position of the Company have been made: (*a*) The Company has agreed to invest in the shares of Botanium Ltd., a Company recently floated, upto an amount of Rs. 1,85,000, and (*b*) On the understanding that the appointment of the Company as Secretaries and Treasurers of Special Steels Ltd. was completed in all respects, the Company has agreed that a sum upto the extent of Rs. 25,00,000 out of the Company's funds be invested partly in Equity Shares of Special Steels Ltd., and partly by way of a loan to be granted to that Company.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	45,00,000	Gross block	10,36,950
Reserves and surplus	80,07,816	—Depreciation	5,87,398
Other liabilities	81,60,825		
		Net block	4,49,552
		Current assets	1,40,87,453
		Investments	52,12,769
		Cash	9,18,867
	Rs. 2,06,68,641		Rs. 2,06,68,641

* Paid-up capital consists of 30,000 equity shares of Rs. 150 each fully paid up. Out of this 14,000 shares were allotted as fully paid by way of bonus shares capitalised from reserve.

The British India Corporation Ltd.

(*Chairman and Managing Director*: Mr. H. S. Chaturvedi, Kanpur, U.P.)

42nd Annual General Meeting—28th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	7,31,91	7,85,89
Closing stock—		
Works-in-progress	1,20,29	82,00
Finished products	1,14,35	1,24,45
Remuneration received from managed companies	7,73	124
Other income	13,04	9,70
Gross profit	1,15,15	98,93
Transfer to depreciation	8,50	7,40
,, ,, development rebate reserve	1,29	60
,, ,, provision for taxation	48,00	46,00
Net profit	57,36	44,93
Adjustments	5,61	8,26*
Appropriations:

Transfer to obsolescence provision for stores and spare parts	7	Nil
,, ,, provision for doubtful debts	1,31	Nil
,, ,, rehabilitation reserve	26,00	20,00
Proposed dividend (taxable) 8% C. preference	8,42†	16,85
,, ,, ordinary	22,75	13,00
	(7%)	(4%)
Carry forward	3,92	3,34

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* This includes Rs. 5,45,000 being provision for preference dividend for 1959 written back since not declared in Annual General Meeting held on 18th May 1960 and amounts written off in previous years and credit adjustments for previous years.

† Preference dividend is calculated at 10.4 per cent. (less tax).

Extracts from the Directors' report: The trading results for the year show steady improvement. Provision for Depreciation amounting to Rs. 8,50,062 has been calculated in conformity with Section 350 of the Companies Act, 1956 as amended, and as clarified by the Department of Company Law Administration.

The income-tax assessments covering the accounting years 1955 to 1959 and the wealth tax assessments for the years 1957 and 1958 have recently been completed resulting in additional demands of Rs. 16,74,412 which have been directly adjusted against "Future Taxation Reserve" previously created for that purpose. Regular appeals have been filed against the income-tax assessments.

Woollen Branches: The working results of the two Woollen Branches have been satisfactory. The total value of production during the year was greater than in 1960 although licences for the import of wool were not issued promptly resulting in a virtual closure of several weeks at the beginning of the year. Licences for the period October 1961 to September 1962 were, however, received in good time. The two Woollen Mills after extensive experiments have succeeded in introducing various blends made of Indian and imported wools which are popular in the market.

Last year the Directors reported that they had under consideration a scheme for the rehabilitation and modernisation of the two Branches. Unfortunately, due to shortage of foreign exchange, it has not been possible so far to obtain the permission of the Government of India for the import licences required. This matter is being pursued as the installation of modern machinery is vitally necessary for the efficient working of the mills.

Cooper Allen Branch: The working of this Branch does not yet show the desired improvement. This is largely due to numerous uncertain factors on which the organised leather industry is still compelled to be heavily dependent. The operational efficiency of the Branch continues to receive the active consideration of the Directors.

Begg, Sutherland & Co., Ltd.: It was reported last year that it had been decided to amalgamate Begg, Sutherland & Co., Ltd., a 100 per cent subsidiary, with the Corporation. The amalgamation scheme was approved by an Order of the Allahabad High Court dated 5th October, 1961 and, accordingly, the assets and liabilities of that company as on 5th October, 1961, were taken over at their book values against the Corporation's investment in Begg, Sutherland & Co., Ltd. The aggregate amount of the net assets so taken over being less than the Corporation's total investment in that company, a loss of Rs. 4,08,560 resulted which has been directly transferred to investment reserve.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,06,00,000	Gross block	3,10,21,523
Reserves and surplus	2,05,14,328	—Depreciation	2,42,53,080
Other liabilities	3,85,62,072		
		Net block	67,68,443
		Block-in-progress	5,98,920
		Current assets	7,60,50,321
		Investments	1,49,85,392
		Cash	12,72,823
	Rs. 9,96,76,400		Rs. 9,96,76,400

* Paid-up capital consists of 81,000—8 per cent. cumulative preference shares of Rs. 100 each and 65,00,000 ordinary shares of Rs. 5 each. Of the ordinary shares 35,36,327½ ordinary shares of Rs. 5 each are issued for payment as to Rs. 1.00 in cash and Rs. 4.00 as bonus shares without payment being received in cash.

Shri Ambica Mills Ltd.

Managing Agents: Harivallabhdas Kalidas & Co., Ahmedabad.)

35th Annual General Meeting—28th April 1962.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales	5,73,45	5,40,32
Closing stock	86,63	84,76
Gross profit	1,53,00	1,41,65
Transfer to depreciation	14,50	14,68
,, ,, development rebate reserve	2,70	2,50
,, ,, Managing Agents' remuneration	8,34	10,85
,, ,, provision for taxation	65,30	58,00
Net profit	62,26	57,62
Adjustments	7,91	93
Appropriations:		
Total available balance	70,17	58,55
Transfer to general reserve	53,00	15,00
,, ,, investment reserve	10,00	5,00
,, ,, staff gratuity reserve	5,00	3,00
Proposed dividends (taxable) 1st C. preference	40	40
,, ,, 2nd C. preference	40	40
,, ,, ordinary	Nil	31,88
	(Nil)	(50%)
Carry forward	1,37	2,87

N.B.—Adjustments include the balance brought forward from the previous year; excess provisions and credits relating to past period.

Extracts from the Directors' report: It is proposed that a sum of Rs. 21,25,300 out of the amount standing to the credit of the general reserve account of the Company be capitalised and to issue bonus shares to persons who are the registered holders of the existing 63,759 ordinary shares of the Company on such date as may be fixed by the Directors, after obtaining the consent of the Central Government under Capital Issues (Control) Order. The requisite Resolution for such capitalisation is proposed to be passed at the annual general meeting of the Company. In view of the proposed capitalisation and issue of bonus shares, the Directors have not recommended distribution of any dividend to the holders of ordinary shares of the Company.

The accounts of Shri Arbuda Mills Ltd., a Subsidiary of the Company have shown further improvement in its working. After providing for full depreciation and development rebate reserve for the year under report, the working result shows a profit of Rs. 22,98,636 which the Directors of the said Company have thought desirable to adjust against the amount of past losses.

Bombay Steel Tubes Ltd., is a subsidiary of this Company. The shareholders are aware that as reported at the last annual general meeting, the Directors have subscribed to the entire new issue of Rs. 70 lakhs (Rupees seventy lakhs) equity shares of that Company and have subsequently taken up the remaining shares from the subscribers to the Memorandum and Articles of Association of that Company with a view to make that Company a full-scale subsidiary of our Company. The Factory of this new Company will be located at Vatva, near Ahmedabad on the Western Railway Broad Gauge line for which necessary land has been purchased and/or acquired. Orders for Machinery have been placed with Messrs. Mannesmann Meer of West Germany, with whom an agreement for Technical Collaboration has been entered into. Contracts for the building work have been entered into and the machinery shipments are expected to begin about May/June 1962.

In view of the Company's present position and likely future expansion, the Directors think it desirable to increase its authorised capital from Rs. 1,00,00,000 (Rupees one crore) to Rs. 3,00,00,000 (Rupees three crores).

Due to continuous shortage of coal supplies to the Textile Industry of Gujarat, the Directors have thought it desirable to go over to oil firing and have already converted three boilers out of four to oil burning.

There are 94,128 spindles and 1,819 looms in the Company's Mills. The Company has obtained necessary permits for addition of 9,600 spindles and 150 looms to the present equipment.

Accounts in brief as at 31st December 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	75,35,900	Gross block	2,79,09,836
Reserves and surplus	4,27,80,925	—Depreciation	1,75,09,252
Other liabilities	1,02,80,759		
		Net block	1,04,00,074
		Current assets	2,47,54,986
		Investments	86,32,138
		Cash	1,68,29,386
	Rs. 6,06,47,584		Rs. 6,06,47,584

* Paid-up capital consists of 63,759 ordinary shares of Rs. 100 each fully paid; 5,600 five per cent. cumulative preference shares of Rs. 100 each fully paid and 7,000 four per cent. tax-free second cumulative preference shares of Rs. 100 each fully paid.

BRAITHWAITE AND CO. (INDIA) LIMITED

PLEA FOR LIBERAL IMPORTS OF STEEL TO PROMOTE EXPORT OF MANUFACTURES

ANNUAL STATEMENT BY CHAIRMAN, SIR JOHN BROWN

SIR John Brown, Chairman of Braithwaite and Company (India) Limited, has expressed the view in the course of his statement to the shareholders, circulated along with the Directors' report and statement of accounts for the year ended 31st December 1961 that, if the steel-using industries are to be encouraged to go out and find markets for their goods ("markets which undoubtedly exist"), they should be allowed to import as much steel as they wish, provided they could show a reasonable certainty of a net gain in foreign exchange. Before invoking incentive schemes for exports, Sir John wants conditions to be created for easily exportable goods. For India is not the only country faced with the problem of expanding her exports, and he feels, therefore, that there is a real urgency about establishing ourselves in our natural markets now rather than waiting for four or five years, by which time the necessary raw materials are expected to be in ample supply indigenously.

The following is the full text of Sir John's speech:

"Following the precedent established last year, I am again circulating with the Directors' report and accounts for the year ended 31st December 1961, the statement which I would otherwise make at the forthcoming thirty-second annual general meeting of the Company.

"I must unfortunately introduce my statement this year on a note of sadness. The death occurred in July last of Mr. R. J. Newman Taylor, who, although he was never employed by this Company, did so much for its development in his capacity as Vice-Chairman and earlier Joint Managing Director of its then parent, Braithwaite and Co. Engineers Limited in the United Kingdom. I had the privilege of knowing Mr. Taylor only for the last five years of his life, but in that time we were in close touch with one another in regard to the affairs of this Company and I welcome this opportunity to pay tribute to his outstanding contribution not only during those five years but, as I have reason to know, previously, which was a combination of foresight and caution based on a lifetime's experience of an industry which has had its ups and downs in the past in this country as elsewhere.

Profits, Taxation and Dividend

"The profit for the year, after providing Rs. 5,72,910 for depreciation, Rs. 32,25,000 for taxation and transferring to the development rebate reserve the sum of Rs. 2,36,690, amounted to Rs. 35,86,414. It will be seen that this represents a substantial increase of some Rs. 15.14 lakhs over the corresponding figure for 1960.

"The figure of profit constitutes a record for the Company, and that it was achieved in the face of continuing difficulties over steel and power supplies only reflect the wisdom of the policy which has been followed over a period of years of limiting the distribution of earnings and ploughing money back into the business by further investment in plant and machinery. This has enabled us to increase our output in certain directions while making the most economical use of the steel which was available. As I indicated last year, this policy of ploughing money back into the business is one which must be continued and notwithstanding the large increase in profits, your Directors, after very careful consideration of all the issues involved, have felt it advisable to recommend the same dividend as was paid in respect of 1960, viz., Rs. 2.50 nP per share, subject to deduction of tax. I shall have more to say later in this statement on the subject of future dividends, when discussing our proposals for financing our expansion programme.

Production, Development and Expansion

"*Clive Works*: As forecast in my statement a year ago, we found that we had insufficient orders to fill the available capacity in the structural shops and this situation was aggravated by delays in receipt of raw materials. The situation improved in the latter half of the year during which the shops were employed in fabrication of the Company's portion of the Brahmaputra Bridge steelwork. Production in the wagon shop was maintained throughout the year at an increasing tempo, and improved availability of materials and components permitted the gradual introduction of a second shift until, by the end of the year, we were obtaining outputs in excess of our planned production. The total number of wagons built in the wagon shop was 1,023, weighing 12,827 tons and to this must be added 124 four-wheeler wagons totalling 907 tons weight which were built in the structural shops in an endeavour to utilise spare capacity there. In the result, the total tonnage output of wagons was 13,733, the highest ever obtained. The development of wagon manufacture during the past two years reflects highly on the efforts of the production staff under the energetic direction of our chief engineer, Mr. J. E. Sawtell, and his organisation within the shops.

"Completion of the buildings and extensions, referred to in my statement, last year, was delayed by the acute shortage of cement from May until after the *Pujah* holidays in October, since when good progress has been made. Work in hand includes the extension of the general office and the development of a new steel stock yard. This has been made possible by the removal of a large amount of erection plant and tackle to the ample space which is available at Angus Works, and, when it is completed, the new stock yard will greatly facilitate handling of raw materials. The extension of the wagon works to provide for the painting of the large bogie motor and parcel vans now under construction has recently been completed and negotiations are in hand for the acquisition on lease from the Commissioners for the Port of Calcutta of an additional area adjoining Clive Works to enable us to further rationalise production of the three types of wagons now in hand.

Delay in New Projects

"I have referred above to the paucity of work in the structural shops; in this connection I must express our disappointment at the delays which have taken place in finalising the terms of the fabrication and erection contracts for the heavy forge and foundry project at Ranchi and the alloy steel plant at Durgapur, in both of which this Company is substantially interested as a constituent of the Braithwaite, Burn and Jessop Construction Company Limited. While agreement has finally been reached after much delay in regard to the terms of the first of these contracts, the second is still outstanding, with the result not only that work cannot proceed but also that capacity earmarked by us for several months which, could the delays have been foreseen, could have been profitably utilised on other work, has remained or will remain idle. There is another and broader aspect of these delays, which, I fear, is too little appreciated, and that is that projects such as these have a very high import-saving potential. Each month's delay in finalising the contracts and getting on with the job means that imports have to be continued eventually for longer than would otherwise be necessary with the result that industry as a whole and particularly that branch of the engineering industry which is dependent on imported components, is prevented from functioning as efficiently as it might otherwise do. I shall have more to say later in this statement in regard to exports: all I would say meanwhile is that energy devoted to finalising construction contracts for projects with a high import-saving potential will greatly assist in creating the atmosphere, which, I am sure, is necessary, if the country's foreign exchange problems are to be successfully tackled.

"*Angus Works*: In addressing you a year ago, I informed you that the terms of a 99-years' lease of these works had recently been agreed. This lease was signed on 13th April, 1961, and during the year a great deal of progress has been made with the rehabilitation and reorganisation of the buildings and plant under Mr. A. D. Morley. Pending finalisation of our foreign exchange loan arrangements, to which reference is made later in this statement, a number of new machine tools have been obtained against rupee payment from agents importing from Eastern European countries and this has enabled us to quote for a wide range of products to recently licensed undertakings seeking component manufacture. We have submitted our applications for import licences in respect of most of the machinery which we require and, we hope that licences will be forthcoming shortly after our foreign exchange requirements have been provided for.

"Progress so far has been most pronounced in the foundry, the output of which is now some 250 tons per month, and, we hope that this will further increase during the current year. Castings up to four tons weight are being supplied and improved techniques are permitting of a continually higher quality and complexity of work being undertaken. Notwithstanding the shortage of foreign exchange with the consequent difficulties in obtaining the necessary equipment, progress has been made with the establishment of a laboratory and, within a few months, this will be fully equipped to undertake all chemical and metallurgical investigations likely to be required in our production processes.

Licence for Cranes

"I informed you last year that the Company had submitted, or was in the process of submitting applications under the Industries (Development and Regulation) Act, 1951, for the manufacture of various types of cranes. We have now received a licence in respect of overhead electrical travelling cranes, steam loco cranes and dock-side level luffing cranes and Government approval has been obtained to the terms of our collaboration agreements with Thomas Smith and Sons (Rodley) Limited and John Smith (Keighley) Limited, both members of the Thomas W. Ward engineering group in the United Kingdom, for the manufacture of their products in India. We have been acquiring experience in the manufacture of overhead travelling cranes for use in our own works and three orders for outside customers have already been booked. We have also quoted the Railway Board for the supply of 10-ton steam loco cranes and are hopeful that an order will be forthcoming before very long.

Finance

"During the year under review, considerable progress was made in finalising the shape and content of the plans for the expansion of the Company's activities. According to present estimates, the capital expenditure involved over the years from 1961 to 1965 will total approximately Rs. 290 lakhs, of which the foreign exchange component is estimated at the equivalent of Rs. 88 lakhs. In addition, the Company's requirements of working capital will increase by some Rs. 100 lakhs, and it has, therefore, been necessary for your Directors to consider ways and means of financing a total outlay of Rs. 3.9 crores.

"So far as the foreign exchange component is concerned, the Industrial Credit and Investment Corporation of India Limited has already sanctioned a foreign exchange loan for the equivalent of Rs. 45 lakhs subject to certain terms and conditions. Application has also been made to the Commonwealth Development Finance Company Limited, London, for a loan for the equivalent of Rs. 43 lakhs, and it is hoped that the terms on which this loan may be granted will be finalised in the near future.

"We have made a careful assessment of the Company's financial requirements in rupees and as far as we can see these will be met by the issue of preference capital to the extent of Rs. 40 lakhs. The necessary application has already been made to the Controller of Capital Issues and having regard to the fact that a dividend will be payable on the preference shares from the date of their allotment and within a year thereof, it is hoped that this issue will prove acceptable to the market. The balance of our requirements of rupee finance will be found from retained earnings and depreciation provisions supplemented as necessary by temporary borrowings from our bankers.

"In order to maintain a balance between the paid-up share capital of the Company and the actual capital employed in its business and also to ensure that the ratio between the proposed preference share issue and the equity capital is established on a reasonable basis, proposals are being submitted to you for the capitalisation of reserves to the extent of

Rs. 43,40,210. This will result in an increase in the equity capital to Rs. 1 crore, but I would particularly direct your attention to the terms of the Board's announcement of this capitalisation issue. The issue is nothing more than a recognition of an existing situation and it cannot by itself in any way increase the Company's dividend-paying capacity. It should not, therefore, be taken to imply an intention on the part of the Board to recommend dividends on the increased capital at the same rate per share as has been paid in the recent past. Indeed, the question of whether, and if so to what extent, the total dividend disbursement can be increased from the present figure of Rs. 14,14,948 must depend on the level of profits from year to year and their relation to the Company's financial requirements for the maintenance and expansion of its business. The foreign exchange loans, if and when they are finalised, will impose an obligation on the Company to provide for their amortisation and similarly a preference share capital redemption reserve account will have to be created to provide for the redemption of the preference capital in due course. While, therefore, it is reasonable to expect that the increasing scale of operations will lead to an eventual increase in profits, it is clear to your Directors that for some years at least the bulk of this increase will have to be set aside for the purposes mentioned.

"The work involved in assessing our financial requirements and in producing the figures and information required in connection with our loan negotiations has thrown a heavy additional burden on our commercial and secretarial departments and I am indebted to Mr. Y. S. Tayal and his staff for the manner in which they have discharged their task.

Exports Doubled

"With the continued co-operation of our London associates, Braithwaite & Co. Engineers Limited, which in this as in other directions I would here gratefully acknowledge, we have in the past year more than doubled our exports of pressed steel tank materials to South East Asian markets and further expansion in this field is dependent primarily on the availability of materials. I have no doubt that practically all of the development projects, which consume steel in India, carry a high priority; but I venture to suggest that until it is appreciated that even some of them, if they do not have a high import-saving potential, must be put back for a few months, it will not be possible to create in the minds of those in charge of the country's industrial effort the necessary mentality which will ensure that the export problem receives all the attention which it undoubtedly demands. If I may say so, I feel that much more effort than hitherto will have to be devoted to the establishment in the immediate future of new markets in neighbouring countries for goods which will, in the years to come, command a natural market abroad without the necessity of devising complicated incentive schemes. I have no objection to incentive schemes and, indeed, they have a very useful role to play in dealing with the problem of the country's exports; but I would suggest that before they are invoked the maximum effort should be devoted to creating conditions for the export of goods which can be exported today without too much loss and without incentives, other than relief from import and excise duties. I do not underrate in any way the difficulties which face Indian exporters, but I would say that at least some of these can be removed, if the right psychological background can be created between the Government and industry. As I have already indicated, I believe that timing in this matter is of the greatest importance and, if the steel using industries are to be encouraged to go out and find markets for their goods—markets which undoubtedly exist—they should be allowed to import as much steel as they wish, provided they can show the reasonable certainty of a net gain in foreign exchange. India is not the only country which is faced with the problem of expanding her exports and that is why I feel that there is a real urgency about establishing ourselves in our natural markets now rather than waiting for four or five years, by which time the necessary raw materials will, we hope, be in more ample supply from indigenous sources.

Labour

"In general, relations with our labour force were amicable throughout the year and this has undoubtedly played a large part in the steady increase in output from the wagon shops, providing the workers with the opportunity to earn a high rate of production bonus. Based on the decision of the Supreme Court in regard to the Company's appeal against the bonus award of the Labour Tribunal in respect of 1957, settlement of the outstanding bonus issues for the years 1958, 1959 and 1960 was effected under a bipartite agreement with the workers' union.

"During the past year, the Company instituted a scheme of long service awards for those retiring or resigning on account of ill-health. The Company also played its part during the National Technical Training Week, held in September last, by organising functions embracing the Company's apprentices and senior students from the technical wings of local schools. The award of a technical scholarship in memory of the late Mr. R. J. Newman Taylor was instituted and a prize scheme for the best apprentice at Clive and Angus Works respectively has been introduced.

Management and Personnel

"Despite shortages of raw materials which in recent years have been the main hindrance to increased output, I foresee that before very long it is the shortage of skilled personnel which will impose limits on our output. I can assure you that the management of this Company has devoted a great deal of time and care to the search for talent, both within the organisation and by recruitment from outside it. Even so, they are under no illusions in regard to future needs. I am happy to say that the challenge of the opportunities presented by the expansion of the Company's business is being met by the younger members of the staff and, although I do not underrate the magnitude of the task which confronts us in the next few years, I am nevertheless confident that under the present management the inevitable difficulties of growth will be overcome.

"During the year, Mr. J. E. Bingham, our Managing Director, was reappointed to that office for a further period of three years from 1st July 1961. While Mr. Bingham is the first to acknowledge the contribution of his colleagues in the management, shareholders will, I know, join with me in an expression of our appreciation of his services during what has been an arduous year. To him, to Messrs. Tayal, Sawtell and Morley and to the senior executives working under them we are particularly obliged for their respective parts in producing the satisfactory results which are now before you. They have been well supported by the staff and workers, to whom also our thanks are due.

Order Book Satisfactory

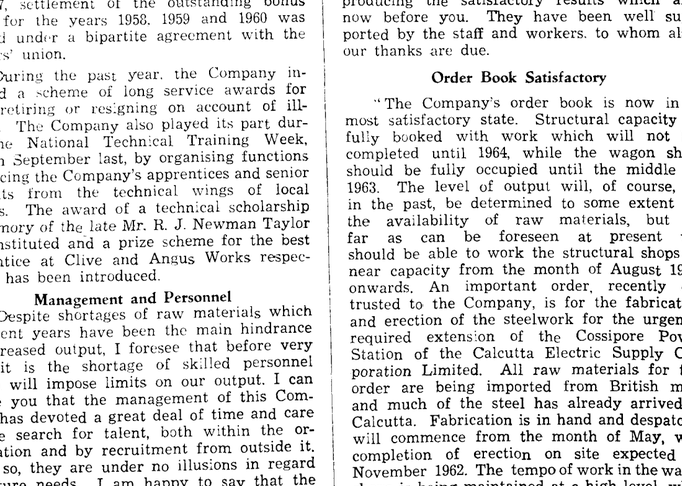
"The Company's order book is now in a most satisfactory state. Structural capacity is fully booked with work which will not be completed until 1964, while the wagon shop should be fully occupied until the middle of 1963. The level of output will, of course, as in the past, be determined to some extent by the availability of raw materials, but as far as can be foreseen at present we should be able to work the structural shops to near capacity from the month of August 1962, onwards. An important order, recently entrusted to the Company, is for the fabrication and erection of the steelwork for the urgently required extension of the Cossipore Power Station of the Calcutta Electric Supply Corporation Limited. All raw materials for this order are being imported from British mills and much of the steel has already arrived in Calcutta. Fabrication is in hand and despatches will commence from the month of May, with completion of erection on site expected by November 1962. The tempo of work in the wagon shops is being maintained at a high level, while orders for the mechanical works are being obtained to match increasing capacity. In these circumstances, it is reasonable to expect a further increase in output in 1962.

"Looking further ahead, we believe that our record of performance to date and the needs of the country's railway system will ensure the receipt of further orders to keep our wagon works fully employed at least until the end of the third Plan period. The rapid industrialisation which is now taking place in India should result in a continually expanding demand for the products of both the structural and mechanical works in the years ahead."

N.B.—*This does not purport to be a record of the proceedings of the above annual general meeting.*

LOOK FOR THIS

'Mark of Quality'



It is your Assurance of Extra Safety and Dependability and only Firestone Tyres have it

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your needs. Every single one bears "The Mark of Quality" —the long-established Firestone symbol of Extra Safety and Dependability.

Specify Firestone and you get—

★ **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.

★ **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions ensures MORE KILOMETRES PER RUPEE from the original tread.

★ **RETREADABILITY** Look after your Firestone tyres—don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

Notices

BRAITHWAITE AND COMPANY (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday, 10th May, 1962, at 11-00 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1961.
2. To declare a dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5 and 6 will be proposed as Ordinary resolutions and numbers 7, 8 and 9 as special resolutions.

5. (*As an ordinary resolution*)

"That the capital of the Company be increased to Rs. 1,40,00,000 by the creation of 3,00,000 Ordinary Shares of Rs. 10 each and of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution No. 8 set out below."

6. (*As an ordinary resolution*)

"(a) That the sum of Rs. 43,40,210 forming part of the undivided profits of the Company standing to the credit of General Reserve be capitalised and that this amount be issued as a capital bonus which shall be applied on behalf of the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of Rs. 10 each in payment in full for 4,34,021 Ordinary Shares of Rs. 10 each and that such 4,34,021 new Ordinary Shares credited as fully paid shall be accordingly allotted to such persons respectively in the proportion of 76,685 new Ordinary Shares for every 10 issued Ordinary Shares then held by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income.

(b) That in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 4,34,021 new Ordinary Shares credited as fully paid up amongst the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them save that where members are entitled to a fraction of a share as a result of the issue of such capital bonus, the Directors shall allot the shares represented by the total number of such fractions to a person or persons appointed by them who shall as soon as practicable sell the said shares and distribute the net proceeds to the said members in proportion to their respective entitlements.

(c) That the draft of the agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this meeting and signed in the margin by the Chairman thereof for the purpose of identification be and the same is hereby approved and that authority be and is hereby given to the execution thereof on behalf of the Company as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 10th day of May, 1962 by a person to be appointed by the Directors in that behalf.

Provided that no part of this resolution shall take effect except in the event of the approval of the Government of India being obtained to the issue of the said capital bonus."

7. (*As a special resolution*)

"That pursuant to section 81 of the Companies Act, 1956, the Company hereby approves of the issue to the public by a Prospectus of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each forming part of the unissued capital of the Company and carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution No. 8 set out below."

8. (*As a special resolution*)

"That the Articles of Association of the Company be altered as follows—

(1) Article No. 4 shall be deleted and the following new Articles adopted in place thereof—

"4. The capital of the Company is Rs. 1,40,00,000 divided into 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each and 10,00,000 Ordinary Shares of Rs. 10 each.

4A. The following provisions shall apply to the Redeemable Cumulative Preference Shares—

(a) The said shares shall confer on the holders thereof the right to receive a fixed cumulative preferential dividend at the rate of 9 per centum per annum (without any deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under Section 194 of the Income-tax Act, 1961, or any statutory modification or re-enactment thereof) on the capital for the time being paid up thereon and the right in a winding up to repayment of capital and arrears of dividend, whether declared or not, down to the commencement of the winding up in priority to the Ordinary Shares in the capital of the Company but shall not confer any further right to participate in profits or assets.

(b) The Company may at any time after 31st December, 1974, on three months' notice to the holders thereof, out of any profits or monies of the Company which may lawfully be applied for that purpose redeem the whole or any part of the said shares at par together with a sum equal to the arrears of the fixed dividend thereon down to the due date for redemption thereof upon giving to the holders of the shares to be redeemed not less than three months' previous notice in writing.

(c) If the Company shall at any time determine to redeem a part only of the said shares for the time being outstanding the shares to be redeemed shall be determined by a drawing to be made at the office in the presence of a Notary Public of which not less than 28 days' notice shall be given to the holders of the said shares who shall be entitled to be present at such drawing."

(2) Article No. 78 shall be deleted and the following new Article adopted in place thereof—

"78. Save as hereinafter provided on a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no Company shall vote by proxy so long as a resolution of its Board under the provisions of Section 187 of the Act is in force.

A member registered in respect of a preference share shall not in respect of such share be entitled to vote at any general meeting of the Company except—

(i) on a resolution placed before the Company in general meeting at the date of which the dividend due on such share or any part thereof remains unpaid in respect of an aggregate period of not less than two years preceding the date of such meeting; or

(ii) on a resolution placed before the Company which directly affects the rights attached to the preference shares in the capital of the Company and for this purpose a resolution for the winding up of the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to such shares."

9. (*As a special resolution*)

"That Article No. 95 of the Articles of Association be altered by the addition of the following proviso at the end of the Article—

'Provided that no remuneration shall be payable to any director until the last day of the month during which the meeting or meetings to which the remuneration relates was or were held and provided further that the remuneration so payable to any director together with the remuneration payable in respect of earlier meetings during the same financial year of the Company shall not exceed the remuneration which would prior to the adoption of this Article as one of the Articles of Association of the Company have been payable to him in respect of the period from the first day of January in that financial year upto the said last day of the month.'"

The Transfer Books of the Company will be closed from the 26th April, 1962 to the 10th May, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared will be made on or after the 17th May, 1962 to those members whose names are on the Company's Register on the 10th May, 1962.

By Order of the Board,

Y. S. TAYAL,
Secretary.

CALCUTTA, 15*th March*, 1962.

Note:—An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the Members of Company.

THE PUNJAB NATIONAL BANK LIMITED

Registered Office:

PARLIAMENT STREET, NEW DELHI

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the Shareholders of the Punjab National Bank Limited, New Delhi, will be held at the Registered Office of the Bank, Parliament Street, New Delhi, on Thursday, the 17th May, 1962, at 4.00 p.m., to transact the ordinary and special business mentioned in the Notice dated 16th April, 1962, and the explanatory statements attached therewith, posted to the Shareholders individually at their registered addresses.

By Order of the Board of Directors,

R. L. TULI,
General Manager.

Dated 16th April, 1962.

N.B.—1. The Transfer Books and the Register of Members of the Company will remain closed from 24th April to 7th May, 1962 (both days inclusive).

2. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. Such proxies on the form should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

3. The dividend when declared will be made payable at the Registered Office of the Company on or after 18th May, 1962 to those Shareholders whose names stand on the Register of Members as on 7th May, 1962, subject to the provisions of the Articles of the Company. Shareholders are requested to intimate the change of address, if any.

GOOD DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 16th April

Good demand was in evidence during the internal consumption sale held here last week. Dusts on offer totalled 28,829 packages. Keen competition was offered to C.T.C. teas, among which the clean bright liquoring lots were a strong feature. Prices of secondary fibrous teas were steady, following improved attention. Good liquoring teas, in the legg-cut group, met with good demand, but other varieties in this category did not attract much support. Plain orthodox teas were marked down, and, even at lower prices, bidders were not responsive. However, bright liquoring Assams were in good demand. The quotations per one kg., inclusive of the excise duty, were: good Assam C.T.C. dust Rs. 6.40 to Rs. 6.90, medium Assam C.T.C. dust Rs. 5.40 to Rs. 5.80, medium Assam dust Rs. 3.70 to Rs. 4.60, legg-cut dust Rs. 3.65 to Rs. 4.70, and plain orthodox dust Rs. 3.15 to 3.70. Leaf on offer, amounting to 826 chests, enjoyed fair demand.

Forward bookings of tea showed a visible improvement during the week, and this indicated that new crop shipments would commence soon. Distressing reports of weather have been received from several tea growing areas. Dry weather continues and rains are earnestly looked forward to. The crop reports for March from the different areas suggest that the prospects in lower Assam and north Cachar are considered to be poor on account of the continuance of very hot weather. The Terai region had reported normal weather and commencement of the season. Although the weather in the Darjeeling area had been dry, immediate prospects are considered fair and the current outturn is normal. In upper Assam, rains were reported in some areas, and the production of new season's tea had commenced. The prevalence of red spider was reported from Panitola.

Commencement of production was reported from central Dooars and certain gardens in western Dooars. In the latter area, leaf prospects were poor. In eastern Cachar, the preponderance of red spider blight was causing anxiety. In the Cachar area as a whole, lack of rains so far discouraged optimism with regard to immediate prospects. Red spider and looper caterpillars were being fought in Goalghat in central Assam.

While the Central Government's taxation proposals for 1962 63 are keenly awaited, and generally a liberal increment in indirect levies is expected, the tea trade looks forward to the implementation of the Commerce Minister's recent statement, according to which the Government would consider reducing or even abolishing the export duty on tea, if it was convinced that such measure would lead to increased exports. If only India could reduce prices of tea, it is claimed, exports can rise.

At the same time, internal consumption is increasing at a rapid pace, despite the suspension of propagational measures by the Tea Board in compliance with Government's directive. Internal consumption was only 93 million lbs. in 1938, or 20 per cent of the production, in that year which was 452 million lbs. Internal consumption has risen gradually since then, and in 1961 increased to 300 million lbs., which was just over 38 per cent of the production totalling 771 million lbs. In other words, internal consumption in the period increased by 222 per cent or at an average of 9 per cent a year. If this rate is maintained—and there is every reason to believe that it would rise—it is reasonable to expect that by 1966 internal consumption would claim as much as 400 million lbs. In other words, of the expected increase of 128 million lbs. in production, internal consumption would absorb the lion's share of 100 million lbs. thus leaving only 28 million lbs. for exports.

A glance at the export figures for 1961 clearly reveals that the country's exports did not rise commensurate with the level of increased output. However, world consumption had increased remarkably. Only a reduction in export prices would lead to greater exports. The industry has to capture new markets, if it were to retain its position as the largest producer and exporter of tea.

SPECULATIVE SUPPORT FOR JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 16th April

Although business in jute goods that took place with overseas countries was small, steady conditions were in evidence, as there was keen speculative support. Overseas buyers were disinclined to follow the rise and, after last week's wide fluctuations, prices settled at lower levels during the week. As expected, the Indian Jute Mills Association announced the decision of mills to extend the unrestricted period of production upto the end of May. Despite increased production, the squeeze in ready goods continues. Production in March aggregated 97,800 tons, representing a rise of 5,600 tons over the previous month. However, stocks at the end of March were fewer by 300 tons at 16,200 tons. This shows that the high level of demand, which has been in evidence since the beginning of the year, was not only maintained in March but registered a further rise. Stocks of goods with mills at the end of February being 61,800 tons, availability in March adding that month's output was 159,600 tons. Stocks at the end of March being 61,500 tons, demand in the month was of the order of 98,100 tons or 300 tons greater than the increased output. Such a situation explains the decision of mills to continue to keep in operation as many looms as possible commensurate with the spinning capacity and availability of electric energy.

Mills outside the I.J.M.A. have also maximised production. The increasing attention which the shares of jute mills is receiving on the Calcutta Stock Exchange is an index to expectations of increased profitability. Simultaneous business in raw jute and goods continue to admit of reasonable profits, thanks to large offers of fibre. It is expected that production in April would be lower than that in March. For, with more holidays, April is a shorter working month. Further, two mills had to suspend production for more than a week earlier in this month, following a labour dispute over the introduction of night shift for a section of workers. The management had to introduce a night shift in the weaving department as a method to get over power shortage, whereupon, as a protest, workers dislocated the manufacturing process and forced the management to declare a lock-out. Trade circles said that the present low stock position in goods was not desirable. Squeeze in ready goods fans speculative enthusiasm, and fluctuations in prices of goods as have occurred recently harm the long-term interests of the industry. It is only too clear that both the I.J.M.A. member-mills and others are not able to satisfy demand in full. With rapid industrial development, internal demand for gunny has increased tremendously.

All these lead to the question whether the time has come for the Government of India to lift the virtual ban on the setting up of new mills. Cultivators complain that mills are not able to absorb the increased fibre output. They also point out that they should be encouraged with prompter lifting of their produce at reasonable prices. While the present slump in prices of inferior varieties of fibre should lead cultivators to pay greater attention to quality, it is generally believed that, at a price of Rs. 30 a maund basis Assam bottoms, cost of production for cultivators would be covered. There has also been a demand for scientific inquiry into the matter. Against such a background, the efforts of the Indian Central Jute Committee to find a solution to the problem should be commended. The economic research section of the Committee has already completed investigations in ten selected areas, and much useful information has been obtained as to the changes in the relative costs of production of jute and paddy, as well as about the relative variations in the cost ratio and the price ratio of these two competing crops over a period of time. A technical committee headed by Dr. B. P. Kedia, Vice-President of the I.C.J.C., will examine the methodology for investigations into the economics of jute growing in West Bengal, Assam and Bihar.

The fact that inquiries in goods from overseas countries have now become small has spotlighted attention on the current level of prices. It was on account of high prices that in 1961 jute goods exports were only 764,500 tons, representing a fall of 33,100 tons as compared with 1960. However, it was significant that, in 1961, export earning from jute goods increased by Rs. 21 crores to Rs. 146 crores. Although prices of goods are now much lower than last year, considering the steep fall in fibre prices, trade circles interpret the present lull in foreign inquiries to the inclination of foreign buyers to wait and see if prices fall further. In the last two to three months, overseas countries have lifted substantial quantities and, therefore, they can afford to wait for some time before entering into fresh commitments. What shipments are being made to the U.S. at present are mostly against earlier contracts and, with fairly heavy stocks, that country is not expected to purchase immediately. It will be remembered that, last year, the U.S. imported a greater quantity of hessian from India than in 1960; perhaps the U.S. desires to go slow in its purchases this year. Last year, China did not buy any heavy goods from India and exports to Australia declined. However, the lower exports of heavy goods did not affect the industry as such, since domestic consumption increased sizably to 273,800 tons. While shipments of hessian to the U.S.S.R. and the Continental European markets were maintained in 1961, there were a substantial fall in the shipments to Argentina, Canada and the U.K.

BOMBAY MARKET REPORTS

As almost all the markets in Bombay were closed on account of holidays during the major part of the week and as this issue of Commerce *has to be printed and posted a day earlier on account of Good Friday, we have not published our customary review of the local money, bullion and commodity markets. A brief account of the main trends is, however, provided under our "Market Gossip" feature*—ED.

Notice

JAY SHREE TEA AND INDUSTRIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the Shareholders of this Company will be held on Friday, the 25th May 1962, at 3 p.m. at the Registered Office of the Managing Agents at 15, India Exchange Place, Calcutta 1, and its agenda has been/will be duly circulated to all the members of the Company in time along with the relevant explanatory statement thereon.

The Share Transfer Registers will remain closed from 7th May 1962 to 25th May 1962 (both days inclusive).

By Order of the Board,

B. C. BIYANI,

Secretary, Company Law.

Registered Office:

INDIA EXCHANGE,

CALCUTTA, 1.

The 7th April 1962.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 16th April

Prices in the local metal market were unchanged during the week under review. Further releases against permits were made, but, as there was no change in the basic shortage, berry scrap was steady at Rs. 551 per 100 kgs. and utensil scrap at Rs. 511.75. On the London Metal Exchange, copper closed firm at £234 a ton, as against the opening of £234½. The decline in warehouse stocks was only expected, since lately European consumer demand from London had been substantial. Consumption of copper within India has steeply increased is too evident from the huge rise in imports. Last month, the imports totalled 10,993 metric tonnes, representing an increase of over 50 per cent compared to the previous month. In March 1961, the imports were only 1,807 tonnes.

The levy of an excise duty can do harm to the industry concerned. This has been amply demonstrated in the case of tinplate. Last year's excise duty of Rs. 200 a ton has raised the price of tinplate to about Rs. 1,500 a ton, against the overseas price of about Rs. 1,100. The high cost of tinplates has affected the tinplate fabricating industry. Speaking at the annual meeting of the Tinplate Fabricators Association here last week, Mr. B. L. Goenka, therefore, rightly urged the Government to withdraw the excise duty. He said that this duty is pushing out tinplate from the packing-materials market, and consumers are showing preference for other materials such as aluminium, paper, plastic and polythene.

In London, electrolytic zinc receded to £69 a ton, after being higher at £69½. The recession followed a decline in demand. In New York, earlier in the week, the rate declined by 1¼ cents a lb. following revision in the price by custom smelters. The price here was around Rs. 232.25 per 100 kgs. Lead was unchanged at Rs. 124 per 100 kgs. On the London Metal Exchange, spot tin, opening at £950 a ton, rose to £958 to close at £955½.

FOODGRAINS TURN EASY

(From Our Own Correspondent)

HAPUR, 16th Apr

Foodgrains in the local market turned easy over the week-end, thanks to a marked increase in arrivals of new rabi grains. Harvesting is nearly complete and, as winnowing and threshing operations are on, new rabi grains arrivals would soon rise and bring down the prices further. There were definite indications of a bumper crop, except in scattered areas, where there were losses to the standing crops due to hailstorm. While wheat old stuff stayed steady at Rs. 42.50 per quintal for the average quality, the superior farm produce was still quoted higher up to Rs. 48.24 per quintal. New wheat reaching here in small quantity was being lifted at lower prices at Rs. 38.85 to Rs. 41.53 per quintal. The quality reaching the market was reported to be poor.

Rice continued quietly steady due to better consumers' support and limited arrivals of *basmati* quality rice. Local stocks at the week-end were around 10,000 maunds. The latest prices (in Rs. per quintal) were: *basmati sela* 66.98 to 75.92, superior 80.38 to 96.43, *mainpuri sela* 51.34, *ramajwayan sela* 56.26 to 58.94, *raimunia sela* 61.62 to 64.30 and *gadda* 51.57.

New gram arrivals from Punjab averaged daily 1,000 maunds. Prices sought lower levels, as crop prospects were good and local arrivals were expected to commence. Barley and *bejhar* arrivals of new produce were still poor, but prices were unchanged during the week, as demand was also slack. Selling pressure in maize and *bajra* continued unabated and prices were, consequently, depressed during the week. *Juwar* and *guwar*, however, attracted better buying support and the stocks, too, were poor. New *methi* arrivals have not yet commenced, and the old stuff prices were almost stationary. Oats arrivals were small and prices unchanged. The prices on Monday (in Rs. per quintal) were:—gram Punjab 37.37, barley 26.80, *bejhar* 24.56 to 26.79, maize 19.09 to 26.79, *bajra* 34.16, *juwar* 37.51 to 41.53, *guwar* 37.51 to 38.18 and *methi* 72.34.

In pulses, new peas arrivals have risen to an average of 2,000 maunds. Arrivals were heavy in mofussil markets also but thanks to good buying support, mainly from Madras, prices stayed steady. The week's offtake aggregated 10 wagonloads mostly to Madras. *Arhar dal* also attracted good demand and the old stocks were fast declining. The new crop was expected after some weeks. New *massoor*, however, was lifted at lower prices due to slack demand. But *urd* and *moong* were steady on good consumer support. Week-end prices (in Rs. per quintal) were:—peas *dara* 28.80, farm 30.30 to 31.15, peas *dal* 33.50, *arhar* 38.18, *arhar dal* 49.87, *urd* 58.94 to 64.30, *urd dal* 66.98 to 75 02, *moong* 50.91 to 53 98, *moong dal* 58.94 to 61.62, *massoor* new 37.51 and *massoor dal* 50.51.

FRACTIONAL GAINS IN SUGAR

(From Our Own Correspondent)

HAPUR, 16th April

Sugar was steady to firm here during the week on good buying support and better export prospects. Prices of all varieties recorded fractional gains. Supply of cane to factories was fast declining, but was still sufficient to prolong the crushing season till the end of the current month. The season in east U.P., is likely to last till the first week of June following the directive from the State Government to the factories to crush all available cane. Week-end prices here were: spot delivery per bag Simbhauli Rs. 106.50, Bulandshar Rs. 103 per bag, retail 97 nP per seer, mill delivery per maund new Simbhauli E29 Rs. 39, D29 Amroha Rs. 38.06, Bijnore Rs. 37.75 and Meerut Rs. 38.40.

Sugar continued firm in Kanpur on support from Calcutta and South. Despite the release of the monthly quota for free sale, prices improved fractionally. Better D29 quality was quoted at Rs. 108.50.

Khandsari prices rose on brisk demand from Punjab, Rajasthan and east U.P. Local demand was also good. Production season is gradually coming to a close. Week-end prices were: moist inferior Rs. 29 to Rs. 32.50, superior Rs. 31 to Rs. 33.50, dry Rs. 32 to Rs. 36 and *boora* Rs. 37 to Rs. 38 a maund.

Superior *gur* prices touched new heights at Rs. 50.91 per quintal on brisk buying support from Punjab. Other qualities were quiet. Daily arrivals have dropped to an average of 300 to 500 maunds and, as production season has nearly ended, arrivals are out of the stocks retained by cultivators. Loading facilities were available. The week's offtake was seven wagonloads mostly to Gujarat. Local *gur* stocks were 32,000 maunds as against 76,000 maunds last year. Scattered sowings of cane were still being done and the *pansera* quality was quoted at Rs. 46.50 to Rs. 48.24 per quintal.

SELECTIVE INQUIRIES FOR KIPS

(From Our Own Correspondent)

MADRAS, 16th April

The Madras kip market ruled steady this week. Arrivals from the tanneries were moderate and the clearance was not brisk. Overseas inquiries were selective and small. Tanners seem likely to shade their ideas of prices a little to stimulate the flow of business. Demand for lower grade cowhides for inland trade was slack and the tone weak. Arrivals of cowcalf and buffcalf skins were comparatively small and demand from the Continent and U.S.A. was negligible.

In the tanned skins section, trading was on a small scale. It is expected that there would be revival of the export trade after the seasonal Easter holidays. There were a few inquiries for middle class sheep and heavy weight goat skins only; and other lines were more or less neglected.

Nominal prices per lb. (in rupees) were: Tanned cow hides (8/9½ lbs. average) 2.25 to 2.30, tanned cow calf (14/2 lbs. average) 3.75 to 3.80, tanned buff hides (12/14 lbs. average) 2.60 to 2.65, tanned buff calf (14/2 lbs. average) 3.20 to 3.30.

G. CLARIDGE AND COMPANY LIMITED

EXPANSION AND MODERNISATION PLANS UNDER WAY

CHAIRMAN, MR. PALLONJI S. MISTRY'S SPEECH AT ANNUAL MEETING

IN his speech at the Forty-second Annual General Meeting of Messrs. G. Claridge and Company Ltd., held at Bombay on Thursday the 12th inst., Mr. Pallonji S. Mistry, Chairman of the Company, briefly outlined the Company's schemes for expansion and modernisation of the printing press. He disclosed that, with a view to bring.ng the share capital into closer relationship with the employed capital, it was proposed to raise the authorised capital of the Company from Rs. 8 lakhs to Rs. 50 lakhs and to issue, no sooner than it is sanctioned, 8,000 equity shares of Rs. 100 each at par to existing shareholders. He also suggested that, in view of the importance of the printing industry, it should be declared a scheduled industry.

The following is the full text of the Chairman's speech:

"I am glad to welcome you all to our forty-second annual general meeting.

"As already stated in the Directors' report, our production figure, which has been continuously mounting, has jumped this year by about Rs. 10 lakhs to almost fifty lakhs of rupees. If we had used our paper for the major job of printing *Span*, we could have exceeded that figure considerably. Our profits have naturally increased with production and the Directors have recommended a substantial increase in the dividend.

Depreciation

"The Directors, as required by the Companies Act, provided depreciation this year of Rs. 1,27,832, as compared with Rs. 97,014 provided last year. They also recommend that from the profits a sum of Rs. 23,084 may be appropriated for depreciation to make up the shortfall between the amounts set aside during previous years and the amount as calculated under Section 350 of the Companies Amendment Act 1960. If these recommendations are accepted our reserves and surpluses will be approximately Rs. 14,04,011.

"I am happy to inform the shareholders that we have come to an amicable settlement with our workers for the payment of this year's bonus and have, in accordance with the agreement arrived at, provided for a bonus of three and a half months' pay in the accounts.

New Machinery Installed

"Additional machinery installed during the course of the year was worth Rs. 3,19,859. Further machinery on order and expected to arrive during the course of this year will be worth about Rs. 4,35,000. We have approached Government to grant us further licences for machinery worth about Rs. 9,00,000, as our intention is to further modernise our plant and to go in for industrial packaging on a larger scale.

"To show to our shareholders the quality of our work, we have, on the third page of the cover, tabulated the prizes awarded to our press during the last five years by the Government of India and the All-India Printers Conference. The copy of the American Ambassador's letter printed on the last page compliments the high quality of work done by our press.

Security Work

"Our press does considerable security work of printing cheques for banks, and, perhaps, we are the largest private printers of bank cheques in this country. Another line in which we are expanding is that of making charts for Kent and other meters. We are contemplating whether we should have special machinery for printing roll charts.

"You will no doubt realise that, with the considerable increase in our production, with such heavy purchases of machinery and with our schemes for further expansion, the Company will need larger funds. Our present authorised and subscribed capital of Rs. 8,00,000 is inadequate as compared to the Company's block account standing in the Company's books. The Company's issued share capital has also to be brought into closer relationship with the capital employed in our press.

"With these ends in view, as you must have noticed from the Directors' report and the resolutions before you, the Directors have recommended that the authorised capital of our Company may now be raised to Rs. 50,00,000. If this is sanctioned, it is the Directors' intention to immediately issue 8,000 further shares of Rs. 100 each at par to the existing shareholders according to the conditions laid down by Section 81 of the Companies Act 1956. The right will also be given to the shareholders, if they so choose, to renounce the shares offered to them in favour of any other person, subject to the approval of the Directors.

Printers' Problems

"The difficulties of our industry are being continuously put before the Government of India by the All India Printers Conference and Government has been examining their suggestions sympathetically. It, however, appears to us advisable that the Government should declare the printing industry, at least as regards the larger presses, as a scheduled industry. I believe this is so in other countries. This will facilitate the industry to take advantage of the highly technical developments that have taken place in this industry abroad. It is not possible to deal with such problems on a State-wise basis and we would strongly urge upon Government to agree to this request of the All-India Printers Conference.

"There is considerable scope for the printing industry to earn foreign exchange if imports of good quality printing materials and machinery to compete in the foreign markets are allowed. Recently, Government has approved a special export promotion scheme for paper and other allied products. Our press intends to take advantage of it and to enrol itself as an exporter under the scheme for enrolment of exporters.

"We would also urge Government to consider liberally the request for imports for the printing industries to replace old machinery and imports of high quality paper and other raw materials which are as yet not fabricated in this country. Even when they can be fabricated in this country, the quality of some of them does not compare favourably with the foreign material and the quantities produced do not suffice for our requirements.

"Lastly, I have the pleasant duty to heartily congratulate on behalf of us all, the management and the staff for a successful year of work and I am sure they will strive to better their performance this year."

SURVEY

(Concluded from page 706)

have reported for duty with effect from the 14th inst.

The Rourkela steel strike and similar work stoppages that have occurred of late should stimulate fresh thinking on the exercise of the right to strike or declare a lockout in large new undertakings involving heavy capital outlay. Just as new undertakings are given exemption for a limited period from the operation of certain labour laws, would it not be advisable to prohibit strikes and lockouts for a specified number of years in undertakings, both in the public and private sectors, in which total investments exceed, say, one crore of rupees? The right to strike or declare a lockout, however fundamental it may be, cannot be permitted to be exercised to the detriment of the national interest. (This principle, as readers are aware, has already been recognised so far as essential services are concerned.) Its curtailment for a limited period does not mean its total denial. If wars can justify the curtailment of freedoms, which are normally considered fundamental, are not the equally urgent economic development needs—our Five-year Plans have often been described as the battle against poverty—sufficient ground for restricting the right to strike or declare a lockout for limited periods?

VOL. CIV. No. 2663 BOMBAY, 28th APRIL 1962 PRICE Rs. 2

THOUGHTS ON TAXATION PROPOSALS

ON more than one occasion businessmen in this country have stated in public that they accept the Congress Party's goal of socialist pattern of society. Mr. Tulsidas Kilachand, for instance, reiterated their acceptance at the last annual meeting of the Federation of Chambers of Commerce and Industry held at New Delhi. They cannot, therefore, criticise Mr. Morarji Desai's new and additional taxation proposals, announced on Monday this week to narrow the budget deficit, on the ground that some of them can be justified only on socialist ideologies. The vast majority of them, with notable exceptions like Mr. H. P. Mody and Mr. B. M. Birla, have also accepted the magnitude of the third Plan, as desirable and necessary. Having done that, they have to give their moral and material support to the Finance Minister in his attempts to raise the resources required in a manner that will be politically feasible and least inflationary. Considering these practical considerations, many of the criticisms of the tax proposals voiced by the spokesmen of the business community sound unrealistic. A typical instance is provided by the contention that the proposals pertaining to direct taxation will prove to be a serious deterrent to the growth of the private sector. This is clear exaggeration. To welcome a vague and undefined socialist pattern and then to condemn a fiscal policy designed to reach that goal is patently inconsistent. In the absence of a strong and economically mature Opposition in Parliament and State Assemblies, the representatives of the business community can be of considerable service to the country if they try to act as the unofficial Opposition by putting forward concrete proposals for raising resources for the Plan and for reducing unessential and unproductive expenditure in both the sectors and by suggesting amendments to official proposals which, while ensuring for the Government the revenue it needs, will soften the harsh edges. Such co-operative Opposition would be more fruitful than mere outright condemnation or exaggeration of the possible effects. It is in this spirit we propose to examine here Mr. Morarji Desai's tax proposals.

Commenting on the interim budget for 1962-63 in our issue of 17th March last, we stated that an increase in taxation of the order of Rs. 75 crores would be necessary and that as there were limits to which indirect taxes could be used to cover the deficit and as they had been relied upon to the extent of about Rs. 55 crores last year, it would be an illusion to think that individuals and corporations would be left alone without being called upon to bear a part of the third Plan and Defence burdens. But the proposed increases in corporation and individual taxation are rather high. As all the assessees affected are not in uniformly affluent circumstances, the hardship caused by the increases will be more severe for some than for others. Among the corporations, those engaged in the production of coal, steel, cement, sugar, paper, electricity and banking, the profit-margins of which are thin, either on account of official pricing policies or the prevailing market conditions, will find a straight increase of 5 per cent in their income-taxation, (from 45 to 50 per cent) quite stiff, while others may find it less burdensome. Even cotton textiles, which are subject to voluntary price control, may feel the adverse effect of this proposal acutely, for it comes on top of a sharp rise in excise duties on the most popular varieties of cloth. The Finance Minister himself expects the textile mills to bear a part of the increase in the excise levy. It is only in the last two years that the cotton mills have been faring somewhat better and it is too soon to subject them to fresh burdens and that too in a year in which they have to pay high prices for raw materials, stores and labour. It has been an irony of India's fiscal and price control policies that the basic industries are subjected to many handicaps which make it difficult for them to attract the capital they need for their expansion, whereas the relatively less essential industries are allowed to enjoy a more favourable position in this respect. This anomaly has now been aggravated.

In his general observations on the trends in the banking system, the Finance Minister expressed concern at the disturbing finding voiced by the Chairman of the I.C.I.C.I. and the present Governor of the Reserve Bank that there was a growing tendency on the part of industrial concerns to have a high ratio of debts to equity capital. He was perfectly right in doing so. But, like the other two eminent leaders in the financial world, he too was content with exhorting the industrialists to rely less on borrowings from banks and others and more on equity capital, besides waxing eloquently on the advantages of spreading the ownership of shares over as large a number of persons as possible. He, however, does not realise that his fiscal and monetary policies alike are not conducive to the growth of these desirable ends. He is not willing to recognise the virtues of higher interest rates and wants to borrow for the Government at the cheapest possible rate. He has now gone a step further and raised the taxes on companies to 50 per cent. This means an extra inducement to companies to resort to more and more borrowings, instead of issuing equity shares, for the cost of borrowed capital is allowed as an item of expenditure for tax purposes. Further, higher corporate taxation means lower net profit and, therefore, smaller surplus for remunerating the shareholders. No management which cares for its reputation in the market would prefer equity capital to borrowed capital, if it is not sure of paying and maintaining satisfactory dividends on the higher capital or finds that the existing dividend rate will have to be cut.

The concessions given to salaried employees and others under personal taxation are negligible, while the fresh burden imposed on them is high. The individuals hit most belong to the middle and upper middle class, the very people who have to pay higher prices for the goods they need to maintain their standard of living on account of the enhanced excise duties and imposition of new ones in the budgets for 1961-62 and 1962-63. They will also be the worst sufferers of the rise in the passenger fares announced in the Railway Budget. Their saving capacity will be adversely affected and so also their enthusiasm for doing hard work. The intelligentsia and the managerial class will suffer most because of the steep increase in the total tax payable on annual incomes of Rs. 15,000 to Rs. 75,000. In the larger interest of efficient economic progress, it would have been desirable, even for a socialist State, not to have curbed the incentives for the middle class as a whole. One may say, as some economists do, that the middle class should change its concept of incentives and mode of living to suit the conditions of an underdeveloped economy with a vast unemployed population. But it is always infinitely easy to preach. The very economists who advocate this philosophy themselves do not follow it in practice.

In theory, arguments similar to those in the foregoing paragraph can be advanced against the tightening of the screw on the rich class. Thus, it can be contended that, by raising the taxes on the high income group—persons belonging to the group will have to pay more wealth tax, more capital gains tax if and when they realise the gains, and more income and super taxes—the entrepreneurial class is being penalised to such an extent that capital formation will suffer a serious setback and that there will be a perceptible slow down in the formation of new companies and expansion of existing enterprises. But, in actual practice, these theoretical assumptions have not been borne out in this country. The reasons are not far to seek. Unlike a salaried middle-class manager, or a technician, a rich man in business cannot afford to get disgusted because of high taxation. If he does, he will get nowhere and ultimately sink into oblivion. Further, a businessman has many other attractions, besides money, to stay in business and expand it wherever possible. Most important among these are power over men and money, status in society and pride of putting up an industry and providing employment opportunities to people. Again, collectively, businessmen realise that there can be no vacuum, that if they do not put up industries, the public sector will do the job and that, in a country like India, if they do not compromise and live with socialism as well as they could, the alternative will be a proletarian dictatorship. More important than all these considerations, the closed economy that India is having because of shortage of foreign exchange, the restricted scope for internal competition because of regulated growth imposed by the exigencies of planning, and a rapidly expanding market, under the stress of rapid economic development, more than compensate the high rate of taxation an entrepreneur has to pay. Again, by and large, an entrepreneur's own investment in industrial projects is relatively small, as he gets the major portion of finance from the individual and institutional investors both within and outside the country. And, fortunately for him, these sources have broadened quite considerably in the past four years. In view of all these considerations, the business community will do well not to trot out the bookish arguments against the taxes on rich individuals but to accept them with good grace. Since its future depends on (a) the growth of small and medium investors, who will be ready to participate with their savings in the enterprises of the private sector, and (b) the existence of a diligent and hard-working middle class, the business community should use its power and influence with the Government to make sure that an appropriate climate is created for strengthening the position of this key class. The working class, however, need not regard this suggestion with hostility, for, apart from the fact that it is well organised, the provision of employment opportunities for

its growing ranks is dependent upon fulfilment of the former condition.

The abolition of the expenditure tax is a very desirable reform, for the reasons ably set out by Mr. Morarji Desai. They deserve to be quoted, if only to place them on the record of this journal:
